insistent, as in the work of Sandra M. Gilbert and Susan Gubar, has been the understanding of the need for *all* readers—male and female alike—to learn to penetrate the otherwise unfamiliar universes of symbolic action that comprise women's writings, past and present.¹

To have attempted so many difficult questions and to have accomplished so much—even acknowledging the inevitable false starts, overlapping, and repetition—in so short a time, should certainly have secured feminist literary criticism an honored berth on that ongoing intellectual journey which we loosely term in academia, “critical analysis.” Instead of being welcomed onto the train, however, we've been forced to negotiate a minefield. The very energy and diversity of our enterprise have rendered us vulnerable to attack on the grounds that we lack both definition and coherence; while our particular attentiveness to the ways in which literature encodes and disseminates cultural value systems calls down upon us imprecations echoing those heaped upon the Marxist critics of an earlier generation. If we are scholars dedicated to rediscovering a lost body of writings by women, then our finds are questioned on aesthetic grounds. And if we are critics, determined to practice revisionist readings, it is claimed that our focus is too narrow, and our results are only distortions or, worse still, polemical misreadings.

The very vehemence of the outcry, coupled with our total dismissal in some quarters,² suggests not our deficiencies, however, but the potential magnitude of our challenge. For what we are asking be scrutinized are nothing less than shared cultural assumptions so deeply rooted and so long ingrained that, for the most part, our critical colleagues have ceased to recognize them as such. In other words, what is really being bewailed in the claims that we distort texts or threaten the disappearance of the great Western literary tradition itself³ is not so much the disappearance of either text or tradition but, instead, the eclipse of that particular *form* of the text, and that particular *shape* of the canon, which previously reified male readers' sense of power and significance in the world. Analogously, by asking whether, as readers, we ought to be “really satisfied by the marriage of Dorothea Brooke to Will Ladislaw? of Shirley Keeldar to Louis Moore?” or whether, as Kennard suggests, we must reckon with the ways in which “the qualities we have been invited to admire in these heroines [have] been sacrificed to structural neat-

1. In *The Madwoman in the Attic: The Woman Writer and the Nineteenth-Century Literary Imagination* (New Haven: Yale University Press, 1979), SANDRA M. GILBERT and SUSAN GUBAR suggest that women's writings are in some sense “palimpsestic” in that their “surface designs conceal or obscure deeper, less accessible (and less socially acceptable) levels of meaning” (p. 73). It is, in their view, an art designed “both to express and to camouflage” (p. 81).

2. Consider, for example, Paul Boyer's reductive and inaccurate generalization that “what distinguishes ordinary books and articles about women from feminist writing is the feminist insistence on asking the same questions of every work and demanding ideologically satisfactory answers to those questions as a means of evaluating it,” in his “A Case against Feminist Criticism,” *Partisan Review* 43, no. 4 (1976): 602. It is partly as a result of such misconceptions that we have the paucity

of feminist critics who are granted a place in English departments which otherwise pride themselves on the variety of their critical orientations.

3. Ambivalent though he is about the literary continuity that begins with Homer, HAROLD BLOOM nonetheless somewhat ominously prophesies “that the first true break . . . will be brought about in generations to come, if the burgeoning religion of Liberated Woman spreads from its clusters of enthusiasts to dominate the West,” in his *A Map of Misreading* (New York: Oxford University Press, 1975), p. 33. On p. 36, he acknowledges that while something “as violent [as] a quarrel would ensue if I expressed my judgment” on Robert Lowell and Norman Mailer, “it would lead to something more intense than quarrels if I expressed my judgment upon . . . the ‘literature of Women's Liberation.’” [Lowell (1917–1977), American poet. Mailer (b. 1923), American writer of novels and nonfiction—editor's note.]

ness,"⁴ is to raise difficult and profoundly perplexing questions about the ethical implications of our otherwise unquestioned aesthetic pleasures. It is, after all, an imposition of high order to ask the viewer to attend to Ophelia's sufferings in a scene where, before, he'd always so comfortably kept his eye fixed firmly on Hamlet. To understand all this, then, as the real nature of the challenge we have offered and, in consequence, as the motivation for the often overt hostility we've aroused, should help us learn to negotiate the minefield, if not with grace, then with at least a clearer comprehension of its underlying patterns.

The ways in which objections to our work are usually posed, of course, serve to obscure their deeper motivations. But this may, in part, be due to our own reticence at taking full responsibility for the truly radicalizing premises that lie at the theoretical core of all we have so far accomplished. It may be time, therefore, to redirect discussion, forcing our adversaries to deal with the substantive issues and pushing ourselves into a clearer articulation of what, in fact, we are about. Up until now, I fear, we have only piecemeal dealt with the difficulties inherent in challenging the authority of established canons and then justifying the excellence of women's traditions, sometimes in accord with standards to which they have no intrinsic relation.

At the very point at which we must perforce enter the discourse—that is, claiming excellence or importance for our "finds"—all discussion has already, we discover, long ago been closed. "If Kate Chopin's were *really* worth reading," an Oxford-trained colleague once assured me, "she'd have lasted—like Shakespeare"; and he then proceeded to vote against the English department's crediting a women's studies seminar I was offering in American women writers. The canon, for him, conferred excellence: Chopin's exclusion demonstrated only her lesser worth. As far as he was concerned, I could no more justify giving English department credit for the study of Chopin than I could dare publicly to question Shakespeare's genius. Through hindsight, I've now come to view that discussion as not only having posed fruitless oppositions, but also as having entirely evaded the much more profound problem lurking just beneath the surface of our disagreement. That is, that the fact of canonization puts any work beyond questions of establishing its merit and, instead, invites students to offer only increasingly more ingenious readings and interpretations, the purpose of which is to validate the greatness already imputed by canonization.

Had I only understood it for what it was then, into this circular and self-serving set of assumptions I might have interjected some statement of my right to question why *any* text is revered and my need to know what it tells us about "how we live, how we have been living, how we have been led to imagine ourselves, [and] how our language has trapped as well as liberated us."⁶ The very fact of our critical training within the strictures imposed by an established canon of major works and authors, however, repeatedly deflects us from such questions. Instead, we find ourselves endlessly responding to the *riposte* that the overwhelmingly male presence among

4. Kennard, *Victims of Convention*, p. 14. [Dorothea Brooke, the heroine of George Eliot's *Middlemarch* (1871–72), marries Will Ladislaw at the novel's end; Shirley Keeldar, the heroine of Charlotte Brontë's *Shirley* (1849), marries Louis

Moore—editor's note.]

canonical authors was only an accident of history—and never intentionally sexist—coupled with claims to the “obvious” aesthetic merit of those canonized texts. It is, as I say, a fruitless exchange, serving more to obscure than to expose the territory being protected and dragging us, again and again, through the minefield.

It is my contention that current hostilities might be transformed into a true dialogue with our critics if we at last made explicit what appear, to this observer, to constitute the three crucial propositions to which our special interests inevitably give rise. They are, moreover, propositions which, if handled with care and intelligence, could breathe new life into now moribund areas of our profession: (1) Literary history (and with that, the historicity of literature) is a fiction; (2) insofar as we are taught how to read, what we engage are not texts but paradigms; and, finally, (3) since the grounds upon which we assign aesthetic value to texts are never infallible, unchangeable, or universal, we must reexamine not only our aesthetics but, as well, the inherent biases and assumptions informing the critical methods which (in part) shape our aesthetic responses. For the sake of brevity, I won't attempt to offer the full arguments for each but, rather, only sufficient elaboration to demonstrate what I see as their intrinsic relation to the potential scope of and present challenge implied by feminist literary study.

1. *Literary history (and, with that, the historicity of literature) is a fiction.* To begin with, an established canon functions as a model by which to chart the continuities and discontinuities, as well as the influences upon and the interconnections between works, genres, and authors. That model we tend to forget, however, is of our own making. It will take a very different shape, and explain its inclusions and exclusions in very different ways, if the reigning critical ideology believes that new literary forms result from some kind of ongoing internal dialectic within preexisting styles and traditions or if, by contrast, the ideology declares that literary change is dependent upon societal development and thereby determined by upheavals in the social and economic organization of the culture at large.⁷ Indeed, whenever in the previous century of English and American literary scholarship one alternative replaced the other, we saw dramatic alterations in canonical “wisdom.”

This suggests, then, that our sense of a “literary history” and, by extension, our confidence in a “historical” canon, is rooted not so much in any definitive understanding of the past, as it is in our need to call up and utilize the past on behalf of a better understanding of the present. Thus, to paraphrase David Couzens Hoy, it becomes “necessary to point out that the understanding of art and literature is such an essential aspect of the present's self-understanding that this self-understanding conditions what even gets taken” as comprising that artistic and literary past. To quote Hoy fully, “this continual reinterpretation of the past goes hand in hand with the continual reinterpretation by the present of itself.”⁸ In our own time, uncertain as to which, if any, model truly accounts for our canonical choices or accurately explains literary history, and pressured further by the feminists' call for some

7. The first is a proposition currently expressed by some structuralists and formalist critics; the best statement of the second probably appears in Georg Lukács, *Writer and Critic* (New York: Grosset and Dunlap, 1970), p. 119. [On the Hungarian Marxist

critic GYÖRGY LUKÁCS, see above—editor's note.]

8. David Couzens Hoy, “Hermeneutic Circularity, Indeterminacy, and Incommensurability,” *New Literary History* 10, no. 1 (autumn 1978): 166–67.

justification of the criteria by which women's writings were largely excluded from both that canon and history, we suffer what Harold Bloom has called "a remarkable dimming" of "our mutual sense of canonical standards."⁹

Into this apparent impasse, feminist literary theorists implicitly introduce the observation that our choices and evaluations of current literature have the effect either of solidifying or of reshaping our sense of the past. The authority of any established canon, after all, is reified by our perception that current work seems to grow, almost inevitably, out of it (even in opposition or rebellion), and is called into question when what we read appears to have little or no relation to what we recognize as coming before. So, were the larger critical community to begin to seriously attend to the recent outpouring of fine literature by women, this would surely be accompanied by a concomitant researching of the past, by literary historians, in order to account for the present phenomenon. In that process, literary history would itself be altered: works by seventeenth-, eighteenth-, or nineteenth-century women, to which we had not previously attended, might be given new importance, as "precursors" or as prior influences upon present-day authors; while selected male writers might also be granted new prominence as figures whom the women today, or even yesterday, needed to reject. I am arguing, in other words, that the choices we make in the present inevitably alter our sense of the past that led to them.

Related to this is the feminist challenge to that patently mendacious critical fallacy that we read the "classics" in order to reconstruct the past "the way it really was," and that we read Shakespeare and Milton in order to apprehend the meanings that they intended. Short of time machines or miraculous resurrections there is simply no way to know, precisely or surely, what "really was," what Homer intended when he sang, or Milton when he dictated.¹ Critics more acute than I have already pointed up the impossibility of grounding a reading in the imputation of authorial intention because the further removed the author is from us, so too must be her or his systems of knowledge and belief, points of view, and structures of vision (artistic and otherwise).² (I omit here the difficulty of finally either proving or disproving the imputation of intentionality because, inescapably, the only appropriate authority is unavailable: deceased.) What we have really come to mean when we speak of competence in reading historical texts,³ therefore, is the ability to recognize literary conventions which have survived through time—so as to remain operational in the mind of the reader—and, where these are lacking, the ability to translate (or perhaps transform?) the text's ciphers into more current and recognizable shapes. But we never really reconstruct the

9. Bloom, *Map of Misreading*, p. 36.

1. When John Milton (1608–1674) composed his great epic, *Paradise Lost* (1667), he was blind; he therefore dictated the poem to his daughters (whose work as his amanuenses has struck some feminist critics as emblematic). The epics attributed to Homer (ca. 8th c. B.C.E.) are the oldest surviving works of Greek literature [editor's note].

2. John Dewey offered precisely this argument in 1934 when he insisted that a work of art "is re-created every time it is esthetically experienced. . . . It is absurd to ask what an artist 'really' meant by his product: he himself would find different meanings in it at different days and hours and in different stages of his own development." Further,

he explained, "It is simply an impossibility that any one today should experience the Parthenon as the devout Athenian contemporary citizen experienced it, any more than the religious statuary of the twelfth century can mean, esthetically, even to a good Catholic today just what it meant to the worshippers of the old period," in *Art as Experience* (New York: Capricorn Books, 1958), pp. 108–9.

3. In his very influential *Structuralist Poetics* (1975), Jonathan Culler described the "competent" reader as one versed in the literary conventions and other cultural background knowledge that inform the production and reception of literary texts [editor's note].

past in its own terms. What we gain when we read the "classics," then, is neither Homer's Greece nor George Eliot's England *as they knew it* but, rather, an approximation of an already fictively imputed past made available, through our interpretive strategies, for present concerns. Only by understanding this can we put to rest that recurrent delusion that the "continuing relevance" of the classics serves as "testimony to perennial features of human experience."⁴ The only "perennial feature" to which our ability to read and reread texts written in previous centuries testifies is our inventiveness—in the sense that all of literary history is a fiction which we daily recreate as we reread it. What distinguishes feminists in this regard is their desire to alter and extend what we take as historically relevant from out of that vast storehouse of our literary inheritance and, further, feminists' recognition of the storehouse for what it really is: a resource for remodeling our literary history, past, present, and future.

2. *Insofar as we are taught how to read, what we engage are not texts but paradigms.* To pursue the logical consequences of the first proposition leads, however uncomfortably, to the conclusion that we appropriate meaning from a text according to what we need (or desire) or, in other words, according to the critical assumptions or predispositions (conscious or not) that we bring to it. And we appropriate different meanings, or report different gleanings, at different times—even from the same text—according to our changed assumptions, circumstances, and requirements. This, in essence, constitutes the heart of the second proposition. For insofar as literature is itself a social institution, so, too, reading is a highly socialized—or learned—activity. What makes it so exciting, of course, is that it can be constantly relearned and refined, so as to provide either an individual or an entire reading community, over time, with infinite variations of the same text. It *can* provide that, but, I must add, too often it does not. Frequently our reading habits become fixed, so that each successive reading experience functions, in effect, normatively, with one particular kind of novel stylizing our expectations of those to follow, the stylistic devices of any favorite author (or group of authors) alerting us to the presence or absence of those devices in the works of others, and so on. "Once one has read his first poem," Murray Krieger has observed, "he turns to his second and to the others that will follow thereafter with an increasing series of preconceptions about the sort of activity in which he is indulging. In matters of literary experience, as in other experiences," Krieger concludes, "one is a virgin but once."⁵

For most readers, this is a fairly unconscious process, and not unnaturally, what we are taught to read well and with pleasure, when we are young, predisposes us to certain specific kinds of adult reading tastes. For the professional literary critic, the process may be no different, but it is at least more conscious. Graduate schools, at their best, are training grounds for competing interpretive paradigms or reading techniques: affective stylistics, structuralism, and semiotic analysis, to name only a few of the more recent entries. The delight we learn to take in the mastery of these interpretive strategies is then often mistakenly construed as our delight in reading spe-

5. Murray Krieger, *Theory of Criticism: A Tradition and Its Systems* (Baltimore: Johns Hopkins University Press, 1976), p. 6.

cific texts, especially in the case of works that would otherwise be unavailable or even offensive to us. In my own graduate career, for example, with superb teachers to guide me, I learned to take great pleasure in *Paradise Lost*, even though as both a Jew and a feminist, I can subscribe neither to its theology nor to its hierarchy of sexual valuation. If, within its own terms (as I have been taught to understand them), the text manipulates my sensibilities and moves me to pleasure—as I will affirm it does—then, at least in part, that must be because, in spite of my real-world alienation from many of its basic tenets, I have been able to enter that text through interpretive strategies which allow me to displace less comfortable observations with others to which I have been taught pleasurably to attend. Though some of my teachers may have called this process “learning to read the text properly,” I have now come to see it as learning to effectively manipulate the critical strategies which they taught me so well. Knowing, for example, the poem’s debt to epic conventions, I am able to discover in it echoes and reworkings of both lines and situations from Virgil⁶ and Homer; placing it within the ongoing Christian debate between Good and Evil, I comprehend both the philosophic and the stylistic significance of Satan’s ornate rhetoric as compared to God’s majestic simplicity in Book III. But, in each case, an interpretative model, already assumed, had guided my discovery of the evidence for it.⁷

When we consider the implications of these observations for the processes of canon formation and for the assignment of aesthetic value, we find ourselves locked in a chicken-and-egg dilemma, unable easily to distinguish as primary the importance of *what* we read as opposed to *how* we have learned to read it. For, simply put, we read well, and with pleasure, what we already know how to read; and what we know how to read is to a large extent dependent upon what we have already read (works from which we’ve developed our expectations and learned our interpretive strategies). What we then choose to read—and, by extension, teach and thereby “canonize”—usually follows upon our previous reading. Radical breaks are tiring, demanding, uncomfortable, and sometimes wholly beyond our comprehension.

Though the argument is not usually couched in precisely these terms, a considerable segment of the most recent feminist rereadings of women writers allows the conclusion that, where those authors have dropped out of sight, the reason may be due not to any lack of merit in the work but, instead, to an incapacity of predominantly male readers to properly interpret and appreciate women’s texts—due, in large part, to a lack of prior acquaintance. The fictions which women compose about the worlds they inhabit may owe a debt to prior, influential works by other women or, simply enough, to the daily experience of the writer herself or, more usually, to some combination of the two. The reader coming upon such fiction, with knowledge of neither its informing literary traditions nor its real-world contexts, will thereby find himself hard-pressed, though he may recognize the words on the page, to competently decipher its intended meanings. And this is what makes the recent studies by Spacks, Moers, Showalter, Gilbert and Gubar, and others so crucial. For, by attempting to delineate the connections and interrelations

6. Roman poet (70–19 B.C.E.); his *Aeneid* is an epic on the legendary origins of the Roman people [editor’s note].

7. See STANLEY E. FISH, “Normal Circumstances,

Literal Language, Direct Speech Acts, the Ordinary, the Everyday, the Obvious, What Goes without Saying, and Other Special Cases,” *Critical Inquiry* 4, no. 4 (summer 1978): 627–28.

that make for a female literary tradition, they provide us invaluable aids for recognizing and understanding the unique literary traditions and gender-related contexts out of which women write.

The (usually male) reader who, both by experience and by reading, has never made acquaintance with those contexts—historically, the lying-in room, the parlor, the nursery, the kitchen, the laundry, and so on—will necessarily lack the capacity to fully interpret the dialogue or action embedded therein; for, as every good novelist knows, the meaning of any character's action or statement is inescapably a function of the specific situation in which it is embedded.⁸ Virginia Woolf therefore quite properly anticipated the male reader's disposition to write off what he could not understand, abandoning women's writings as offering "not merely a difference of view, but a view that is weak, or trivial, or sentimental because it differs from his own." In her 1929 essay on "Women and Fiction," Woolf grappled most obviously with the ways in which male writers and male subject matter had already preempted the language of literature. Yet she was also tacitly commenting on the problem of (male) audience and conventional reading expectations when she speculated that the woman writer might well "find that she is perpetually wishing to alter the established values [in literature]—to make serious what appears insignificant to a man, and trivial what is to him important."⁹ "The 'competence' necessary for understanding [a] literary message . . . depends upon a great number of codices," after all; as Cesare Segre has pointed out, to be competent, a reader must either share or at least be familiar with, "in addition to the code language . . . the codes of custom, of society, and of conceptions of the world"¹ (what Woolf meant by "values"). Males ignorant of women's "values" or conceptions of the world will necessarily, thereby, be poor readers of works that in any sense recapitulate their codes.

The problem is further exacerbated when the language of the literary text is largely dependent upon figuration. For it can be argued, as Ted Cohen has shown, that while "in general, and with some obvious qualifications . . . all literal use of language is accessible to all whose language it is . . . figurative use can be inaccessible to all but those who share information about one another's knowledge, beliefs, intentions, and attitudes."² There was nothing fortuitous, for example, in Charlotte Perkins Gilman's decision to situate the progressive mental breakdown and increasing incapacity of the protagonist of *The Yellow Wallpaper* in an upstairs room that had once served as a nursery (with barred windows, no less). But the reader unacquainted with the ways in which women traditionally inhabited a household might not have taken the initial description of the setting as semantically relevant; and the progressive infantilization of the adult protagonist would thereby lose some of its symbolic implications. Analogously, the contemporary poet who declares, along with Adrienne Rich, the need for "a whole new poetry beginning here" is acknowledging that the materials available for symbolization and figuration from women's contexts will necessarily differ from those that men have traditionally utilized:

9.

Vision begins to happen in such a life
 as if a woman quietly walked away
 from the argument and jargon in a room
 and sitting down in the kitchen, began turning in her lap
 bits of yam, calico and velvet scraps,

 pulling the tenets of a life together
 with no mere will to mastery,
 only care for the many-lived, unending
 forms in which she finds herself.³

What, then, is the fate of the woman writer whose competent reading community is composed only of members of her own sex? And what, then, the response of the male critic who, on first looking into Virginia Woolf or Doris Lessing,⁴ finds all of the interpretative strategies at his command inadequate to a full and pleasurable deciphering of their pages? Historically, the result has been the diminished status of women's products and their consequent absence from major canons. Nowadays, however, by pointing out that the act of "interpreting language is no more sexually neutral than language use or the language system itself," feminist students of language, like Nelly Furman, help us better understand the crucial linkage between our gender and our interpretive, or reading, strategies. Insisting upon "the contribution of the . . . reader [in] the active attribution of significance to formal signifiers,"⁵ Furman and others promise to shake us all—female and male alike—out of our canonized and conventional aesthetic assumptions.

3. *Since the grounds upon which we assign aesthetic value to texts are never infallible, unchangeable, or universal, we must reexamine not only our aesthetics but, as well, the inherent biases and assumptions informing the critical methods which (in part) shape our aesthetic responses.* I am, on the one hand, arguing that men will be better readers, or appreciators, of women's books when they have read more of them (as women have always been taught to become astute readers of men's texts). On the other hand, it will be noted, the emphasis of my remarks shifts the act of critical judgment from assigning aesthetic valuations to texts and directs it, instead, to ascertaining the adequacy of any interpretative paradigm to a full reading of both female and male writing. My third proposition—and, I admit, perhaps the most controversial—thus calls into question that recurrent tendency in criticism to establish norms for the evaluation of literary works when we might better serve the cause of literature by developing standards for evaluating the adequacy of our critical methods.⁶ This does not mean that I wish to discard aesthetic valuation. The choice, as I see it, is not between retaining or discarding aesthetic values; rather, the choice is between having some awareness of what constitutes (at least in part) the bases of our aesthetic responses

and going without such an awareness. For it is my view that insofar as aesthetic responsiveness continues to be an integral aspect of our human response system—in part spontaneous, in part learned and educated—we will inevitably develop theories to help explain, formalize, or even initiate those responses.

In challenging the adequacy of received critical opinion or the imputed excellence of established canons, feminist literary critics are essentially seeking to discover how aesthetic value is assigned in the first place, where it resides (in the text or in the reader), and, most importantly, what validity may really be claimed by our aesthetic “judgments.” What ends do those judgments serve, the feminist asks; and what conceptions of the world or ideological stances do they (even if unwittingly) help to perpetuate? In so doing, she points out, among other things, that any response labeled “aesthetic” may as easily designate some immediately experienced moment or event as it may designate a species of nostalgia, a yearning for the components of a simpler past, when the world seemed known or at least understandable. Thus the value accorded an opera or a Shakespeare play may well reside in the viewer’s immediate viewing pleasure, or it may reside in the play’s nostalgic evocation of a once-comprehensible and ordered world. At the same time, the feminist confronts, for example, the reader who simply cannot entertain the possibility that women’s worlds are symbolically rich, the reader who, like the male characters in Susan Glaspell’s 1917 short story, “A Jury of Her Peers,” has already assumed the innate “insignificance of kitchen things.”⁷ Such a reader, she knows, will prove himself unable to assign significance to fictions that attend to “kitchen things” and will, instead, judge such fictions as trivial and as aesthetically wanting. For her to take useful issue with such a reader, she must make clear that what appears to be a dispute about aesthetic merit is, in reality, a dispute about the *contexts of judgment*; and what is at issue, then, is the adequacy of the prior assumptions and reading habits brought to bear on the text. To put it bluntly: we have had enough pronouncements of aesthetic valuation for a time; it is now our task to evaluate the imputed norms and normative reading patterns that, in part, led to those pronouncements.

By and large, I think I’ve made my point. Only to clarify it do I add this coda: when feminists turn their attention to the works of male authors which have traditionally been accorded high aesthetic value and, where warranted, follow Olsen’s advice that we assert our “right to say: this is surface, this falsifies reality, this degrades,”⁸ such statements do not necessarily mean that we will end up with a diminished canon. To question the source of the aesthetic pleasures we’ve gained from reading Spenser,⁹ Shakespeare, Milton, and so on, does not imply that we must deny those pleasures. It means only that aesthetic response is once more invested with epistemological, ethical, and moral concerns. It means, in other words, that readings of *Paradise Lost* which analyze its complex hierarchal structures but fail to note the implications of gender within that hierarchy; or which insist upon the inher-

ent (or even inspired) perfection of Milton's figurative language but fail to note the consequences, for Eve, of her specifically gender-marked weakness, which, like the flowers to which she attends, requires "propping up";¹ or which concentrate on the poem's thematic reworking of classical notions of martial and epic prowess into Christian (moral) heroism but fail to note that Eve is stylistically edited out of that process—all such readings, however useful, will no longer be deemed wholly adequate. The pleasures we had earlier learned to take in the poem will not be diminished thereby, but they will become part of an altered reading attentiveness.

These three propositions I believe to be at the theoretical core of most current feminist literary criticism, whether acknowledged as such or not. If I am correct in this, then that criticism represents more than a profoundly skeptical stance toward all other preexisting and contemporaneous schools and methods, and more than an impassioned demand that the variety and variability of women's literary expression be taken into full account, rather than written off as caprice and exception, the irregularity in an otherwise regular design. It represents that locus in literary study where, in unceasing effort, female self-consciousness turns in upon itself, attempting to grasp the deepest conditions of its own unique and multiplicitous realities, in the hope, eventually, of altering the very forms through which the culture perceives, expresses, and knows itself. For, if what the larger women's movement looks for in the future is a transformation of the structures of primarily male power which now order our society, then the feminist literary critic demands that we understand the ways in which those structures have been—and continue to be—reified by our literature and by our literary criticism. Thus, along with other "radical" critics and critical schools, though our focus remains the power of the word to both structure and mirror human experience, our overriding commitment is to a radical alteration—an improvement, we hope—in the nature of that experience.

What distinguishes our work from those similarly oriented "social consciousness" critiques, it is said, is its lack of systematic coherence. Pitted against, for example, psychoanalytic or Marxist readings, which owe a decisive share of their persuasiveness to their apparent internal consistency as a system, the aggregate of feminist literary criticism appears woefully deficient in system, and painfully lacking in program. It is, in fact, from all quarters, the most telling defect alleged against us, the most explosive threat in the minefield. And my own earlier observation that, as of 1976, feminist literary criticism appeared "more like a set of interchangeable strategies than any coherent school or shared goal orientation," has been taken by some as an indictment, by others as a statement of impatience. Neither was intended. I felt then, as I do now, that this would "prove both its strength *and* its weakness,"² in the sense that the apparent disarray would leave us vulnerable to the kind of objection I've just alluded to; while the fact of our diversity would finally place us securely where, all along, we should have been: camped out, on the far side of the minefield, with the other pluralists and pluralisms.

In our heart of hearts, of course, most critics are really structuralists³

1. See *Paradise Lost* 9.424–33 [editor's note].

2. Annette Kolodny, "Literary Criticism," review essay in *Signs* 2, no. 2 (winter 1976): 420.

3. Kolodny uses this term "structuralist" loosely here to refer to critical efforts to uncover the "deep" structures and forms underlying surface

(whether or not they accept the label) because what we are seeking are patterns (or structures) that can order and explain the otherwise inchoate; thus, we invent, or believe we discover, relational patternings in the texts we read which promise transcendence from difficulty and perplexity to clarity and coherence. But, as I've tried to argue in these pages, to the imputed "truth" or "accuracy" of these findings, the feminist must oppose the painfully obvious truism that what is attended to in a literary work, and hence what is reported about it, is often determined not so much by the work itself as by the critical technique or aesthetic criteria through which it is filtered or, rather, read and decoded. All the feminist is asserting, then, is her own equivalent right to liberate new (and perhaps different) significances from these same texts; and, at the same time, her right to choose which features of a text she takes as relevant because she is, after all, asking new and different questions of it. In the process, she claims neither definitiveness nor structural completeness for her different readings and reading systems, but only their usefulness in recognizing the particular achievements of woman-as-author and their applicability in conscientiously decoding woman-as-sign.

That these alternate foci of critical attentiveness will result in alternate readings or interpretations of the same text—even among feminists—should be no cause for alarm. Such developments illustrate only the pluralist contention that, "in approaching a text of any complexity . . . the reader must choose to emphasize certain aspects which seem to him crucial" and that, "in fact, the variety of readings which we have for many works is a function of the selection of crucial aspects made by the variety of readers." Robert Scholes, from whom I've been quoting, goes so far as to assert that "there is no single 'right' reading for any complex literary work," and, following the Russian formalist school, he observes that "we do not speak of readings that are simply true or false, but of readings that are more or less rich, strategies that are more or less appropriate."⁴ Because those who share the term "feminist" nonetheless practice a diversity of critical strategies, leading, in some cases, to quite different readings, we must acknowledge among ourselves that sister critics, "having chosen to tell a different story, may in their interpretation identify different aspects of the meanings conveyed by the same passage."⁵

Adopting a "pluralist" label does not mean, however, that we cease to disagree; it means only that we entertain the possibility that different readings, even of the same text, may be differently useful, even illuminating, within different contexts of inquiry. It means, in effect, that we enter a dialectical process of examining, testing, even trying out the contexts—be they prior critical assumptions or explicitly stated ideological stances (or some combination of the two)—that led to the disparate readings. Not all will be equally acceptable to every one of us, of course, and even those prior

expressions of meaning. Such structures are thought to "generate" the more chaotic (or "inchoate") words and organizations of actual statements [editor's note].

4. Scholes, *Structuralism in Literature*, pp. 144–45. These comments appear within his explication of Tzvetan Todorov's theory of reading. [On the Bulgarian-born French theorist TODOROV, see above—editor's note.]

5. I borrow this concise phrasing of pluralistic

modesty from M. H. Abrams's "The Deconstructive Angel," *Critical Inquiry* 3, no. 3 (spring 1977): 427. Indications of the pluralism that was to mark feminist inquiry were to be found in the diversity of essays collected by Susan Koppelman Cornillon for her early and groundbreaking anthology, *Images of Women in Fiction: Feminist Perspectives* (Bowling Green, Ohio: Bowling Green University Popular Press, 1972).

assumptions or ideologies that are acceptable may call for further refinement and/or clarification. But, at the very least, because we will have grappled with the assumptions that led to it, we will be better able to articulate *why* we find a particular reading or interpretation adequate or inadequate. This kind of dialectical process, moreover, not only makes us more fully aware of what criticism is, and how it functions; it also gives us access to its future possibilities, making us conscious, as R. P. Blackmur put it, "of what we have done," "of what can be done next, or done again,"⁶ or, I would add, of what can be done differently. To put it still another way: just because we will no longer tolerate the specifically sexist omissions and oversights of earlier critical schools and methods does not mean that, in their stead, we must establish our own "party line."

In my view, our purpose is not and should not be the formulation of any single reading method or potentially procrustean set of critical procedures nor, even less, the generation of prescriptive categories for some dreamed-of nonsexist literary canon.⁷ Instead, as I see it, our task is to initiate nothing less than a playful pluralism responsive to the possibilities of multiple critical schools and methods, but captive of none, recognizing that the many tools needed for our analysis will necessarily be largely inherited and only partly of our own making. Only by employing a plurality of methods will we protect ourselves from the temptation to so oversimplify any text—and especially those particularly offensive to us—that we render ourselves unresponsive to what Scholes has called "its various systems of meaning and their interaction."⁸ Any text we deem worthy of our critical attention is usually, after all, a locus of many and varied kinds of (personal, thematic, stylistic, structural, rhetorical, etc.) relationships. So, whether we tend to treat a text as a *mimesis*, in which words are taken to be recreating or representing viable worlds; or whether we prefer to treat a text as a kind of equation of communication, in which decipherable messages are passed from writers to readers; and whether we locate meaning as inherent in the text, the act of reading, or in some collaboration between reader and text—whatever our predilection, let us not generate from it a straitjacket that limits the scope of possible analysis. Rather, let us generate an ongoing dialogue of competing potential possibilities—among feminists and, as well, between feminist and nonfeminist critics.

The difficulty of what I describe does not escape me. The very idea of pluralism seems to threaten a kind of chaos for the future of literary inquiry while, at the same time, it seems to deny the hope of establishing some basic conceptual model which can organize all data—the hope which always begins any analytical exercise. My effort here, however, has been to demonstrate the essential delusions that inform such objections: If literary inquiry has historically escaped chaos by establishing canons, then it has only substituted one mode of arbitrary action for another—and, in this

6. R. P. Blackmur, "A Burden for Critics," *Hudson Review* 1 (1948): 171. Blackmur, of course, was referring to the way in which criticism makes us unconscious of how art functions; I use his wording here because I am arguing that that same awareness must also be focused on the critical act itself. "Consciousness," he avers, "is the way we feel the critic's burden." (Blackmur (1904–1965),

American New Critic—editor's note.)

7. I have earlier elaborated my objection to prescriptive categories for literature in "The Feminist as Literary Critic," critical response in *Critical Inquiry* 2, no. 4 (summer 1976): 827–28.

8. Scholes, *Structuralism in Literature*, pp. 151–52.

case, at the expense of half the population. And if feminists openly acknowledge ourselves as pluralists, then we do not give up the search for patterns of opposition and connection—probably the basis of thinking itself; what we give up is simply the arrogance of claiming that our work is either exhaustive or definitive. (It is, after all, the identical arrogance we are asking our nonfeminist colleagues to abandon.) If this kind of pluralism appears to threaten both the present coherence of and the inherited aesthetic criteria for a canon of “greats,” then, as I have earlier argued, it is precisely that threat which, alone, can free us from the prejudices, the strictures, and the blind spots of the past. In feminist hands, I would add, it is less a threat than a promise.

What unites and repeatedly invigorates feminist literary criticism, then, is neither dogma nor method but, as I have indicated earlier, an acute and impassioned *attentiveness* to the ways in which primarily male structures of power are inscribed (or encoded) within our literary inheritance; the consequences of that encoding for women—as characters, as readers, and as writers; and, with that, a shared analytic *concern* for the implications of that encoding not only for a better understanding of the past, but also for an improved reordering of the present and future as well. If that *concern* identifies feminist literary criticism as one of the many academic arms of the larger women’s movement, then that *attentiveness*, within the halls of academe, poses no less a challenge for change, generating, as it does, the three propositions explored here. The critical pluralism that inevitably follows upon those three propositions, however, bears little resemblance to what Robinson has called “the greatest bourgeois theme of all, the myth of pluralism, with its consequent rejection of ideological commitment as ‘too simple’ to embrace the (necessarily complex) truth.”⁹ Only ideological commitment could have gotten us to enter the minefield, putting in jeopardy our careers and our livelihood. Only the power of ideology to transform our conceptual worlds, and the inspiration of that ideology to liberate long-suppressed energies and emotions, can account for our willingness to take on critical tasks that, in an earlier decade, would have been “abandoned in despair or apathy.”¹ The fact of differences among us proves only that, despite our shared commitments, we have nonetheless refused to shy away from complexity, preferring rather to openly disagree than to give up either intellectual honesty or hard-won insights.

Finally, I would argue, pluralism informs feminist literary inquiry not simply as a description of what already exists but, more importantly, as the only critical stance consistent with the current status of the larger women’s movement. Segmented and variously focused, the different women’s organizations neither espouse any single system of analysis nor, as a result, express any wholly shared, consistently articulated ideology. The ensuing loss in effective organization and political clout is a serious one, but it has not been paralyzing; in spite of our differences, we have united to *act* in areas of clear mutual concern (the push for the Equal Rights Amendment is probably the most

1. “Ideology bridges the emotional gap between

things as they are and as one would have them be, thus insuring the performance of roles that might otherwise be abandoned in despair or apathy,” comments Geertz in “Ideology as a Cultural System,” p. 205.

obvious example).² The trade-off, as I see it, has made possible an ongoing and educative dialectic of analysis and preferred solutions, protecting us thereby from the inviting traps of reductionism and dogma. And so long as this dialogue remains active, both our politics and our criticism will be free of dogma—but never, I hope, of feminist ideology, in all its variety. For, “whatever else ideologies may be—projections of unacknowledged fears, disguises for ulterior motives, phatic expressions of group solidarity” (and the women’s movement, to date, has certainly been all of these, and more)—whatever ideologies express, they are, as Geertz astutely observes, “most distinctively, maps of problematic social reality and matrices for the creation of collective conscience.” And despite the fact that “ideological advocates . . . tend as much to obscure as to clarify the true nature of the problems involved,” as Geertz notes, “they at least call attention to their existence and, by polarizing issues, make continued neglect more difficult. Without Marxist attack, there would have been no labor reform; without Black Nationalists, no deliberate speed.”³ Without Seneca Falls, I would add, no enfranchisement of women, and without “consciousness raising,”⁴ no feminist literary criticism nor, even less, women’s studies.

Ideology, however, only truly manifests its power by ordering the *sum* of our actions.⁵ If feminist criticism calls anything into question, it must be that dog-eared myth of intellectual neutrality. For, what I take to be the underlying spirit, or message, of any consciously ideologically premised criticism—that is, that ideas are important *because* they determine the ways we live, or want to live, in the world—is vitiated by confining those ideas to the study, the classroom, or the pages of our books. To write chapters decrying the sexual stereotyping of women in our literature, while closing our eyes to the sexual harassment of our women students and colleagues; to display Katharine Hepburn and Rosalind Russell⁶ in our courses on “The Image of the Independent Career Women in Film,” while managing not to notice the paucity of female administrators on our own campus; to study the women who helped make universal enfranchisement a political reality, while keeping silent about our activist colleagues who are denied promotion or tenure; to include segments on “Women in the Labor Movement” in our American studies or women’s studies courses, while remaining willfully ignorant of the department secretary fired for her efforts to organize a clerical workers’ union; to glory in the delusions of “merit,” “privilege,” and “status” which accompany campus life in order to insulate ourselves from the millions of women who labor in poverty—all this is not merely hypocritical; it destroys both the spirit and the meaning of what we are about. It puts us, however

2. The Equal Rights Amendment, passed by the U.S. Congress in 1972, failed to become part of the Constitution when fewer than the required 38 states ratified it by the 1982 deadline [editor’s note].

4. The aim of the group meetings at which women discussed their grievances and plans in the late 1960s and early 1970s; these meetings were the origin of “second wave” feminism, the name given to the revival of feminist activism between 1968 and 1975. Seneca Falls: the 1848 Women’s Convention that met in Seneca Falls, N.Y., produced

a “Declaration of Sentiments” (modeled on the Declaration of Independence) that served as a crucial founding document of “first wave” feminism [editor’s note].

5. I here follow FREDRIC JAMESON’s view in *The Prison-House of Language: A Critical Account of Structuralism and Russian Formalism* (Princeton: Princeton University Press, 1974), p. 107: “Ideology would seem to be that grillwork of form, convention, and belief which orders our actions.”

6. Hepburn (b. 1907) and Russell (1907–1976), both American movie stars, played career women in a number of films [editor’s note].

unwittingly, in the service of those who laid the minefield in the first place. In my view, it is a fine thing for many of us, individually, to have traversed the minefield; but that happy circumstance will only prove of lasting importance if, together, we expose it for what it is (the male fear of sharing power and significance with women) and deactivate its components, so that others, after us, may literally dance through the minefield.

1980

JULIA KRISTEVA

b. 1941

Linguist, literary critic, cultural theorist, and psychoanalyst, Julia Kristeva has been one of the central figures of French intellectual life in the late twentieth and early twenty-first century. Kristeva's main contribution to contemporary theory resides in her elucidation of the processes by which preverbal experience—bodily drives and affects—enters into language and activates creative, transformative, and at times revolutionary modes of cultural production. Like other structuralist and poststructuralist theorists—most notably JACQUES LACAN, ROLAND BARTHES, and JACQUES DERRIDA—Kristeva has a long-standing interest in the relationship of subjectivity to language, in how the speaking subject is both constituted through and threatened by the logic of signification. But Kristeva diverges from other contemporary theorists in her insistence on the corporeal origins of subjectivity and of artistic practice. In contrast to the Saussurean linguistic models of Lacanian psychoanalysis, for instance, Kristeva has emphasized the importance of prelinguistic, instinctual, and sensory components of both subjectivity and signification. Indeed, while Kristeva's thinking has undergone major transformations over the past three decades, progressively moving away from abstract linguistics and toward more classically psychoanalytic concerns, her writings nevertheless exhibit a remarkable degree of continuity insofar as they have consistently sought to articulate—without completely departing from language—the force of the body and its drives.

Born in Bulgaria in 1941, Kristeva arrived in France on a doctoral research fellowship in December 1965. Since her francophone parents were not members of Bulgaria's ruling Communist Party, she had been excluded from the foreign-language schools available to the children of the "red bourgeoisie." Nevertheless, she acquired a French as well as a Bulgarian education from an early age by attending two schools—Bulgarian in the morning and French in the afternoon. In Paris she became a student of Roland Barthes and quickly established herself as a major participant in the lively avant-garde milieu of the late 1960s. By the spring of 1967, Kristeva's articles were being published in such leading journals as *Critique*, *Langages*, and *Tel Quel*, and in 1970 she was appointed to the editorial board of *Tel Quel*, the intellectual venue for the young generation of structuralist and poststructuralist theorists. *Tel Quel* was edited by the charismatic writer and theorist Philippe Sollers, whom she later married and with whom she had a son. In 1974 she was appointed professor of linguistics at the University of Paris VII, where she continues to teach.

Besides Barthes, Lucien Goldmann (an influential sociological critic), and CLAUDE LÉVI-STRAUSS, who were her teachers, Kristeva acknowledges intellectual debts to other twentieth-century figures: MIKHAIL BAKHTIN, Émile Benveniste (an important linguist), Jacques Lacan, Melanie Klein (a theorist of pre-Oedipal development), and,

of course, SIGMUND FREUD. With TZVETAN TODOROV, Kristeva brought the work of Bakhtin into prominence in the French context. In 1970 she published an introduction to the French translation of Bakhtin's work on Dostoyevsky, and she combined his concept of "dialogism" (the idea that a text contains language from more than one "world") with FERDINAND DE SAUSSURE's notebooks on anagrams in poetry (which had recently been discovered and were being published by Jean Starobinski in *Tel Quel*) into a general theory of "intertextuality."

The intertextual sense of the multiplicity of origins and meanings in language informs the theory of the sign set forth in Kristeva's first book, *Σημειωτική (Sémeiōtiké): Recherches pour une Sémanalyse* (1969, *Research toward a Sem-analysis*, where *sem* is from the Greek word for "sign"). This was followed in 1974 by *Revolution in Poetic Language*, Kristeva's doctoral dissertation, in which she developed a theory of poetic language based on the writings of STÉPHANE MALLARMÉ (1842–1898) and Isidore Ducasse (better known as the comte de Lautréamont, 1846–1870). We print several sections from this book as our selection, below. The "revolution" in poetic language Kristeva analyzed in the work of these late-nineteenth-century French poets quickly became a revolution brought about by Kristeva herself in the *analysis* of poetic language as such.

Kristeva finds two forces competing for expression in the language of poetry: the symbolic and the semiotic. The *symbolic* is that aspect of language that allows it to refer. It is systematic, propositional, rule-bound, tied to the social order, dependent on a functional separation between the subject and the object, and capable of existing independently of its referent. The linguistics of Saussure focused on this dimension, treating language as a theoretical fiction studied in the absence of any particular speaker. The *semiotic* dimension of language—which cannot be known except in the moments where it breaks through the symbolic—is that aspect that bears the trace of the language user's own body and of the mother's protolinguistic presence—the babbling of the infant who tries out the vocal repertoire before he or she learns to speak, for instance, or the mother's voice prior to the baby's acquisition of language: poetic language in this sense has been called "babble, doodle, and riddle." The "music" of poetry (and indeed prosody itself), Kristeva contends, arises out of this dimension. It is important to avoid two possible misunderstandings of Kristeva's use of these terms. Her "symbolic" is similar to Lacan's, insofar as it is not symbolic of anything—not a collection of meaning-filled symbols as, say, CARL JUNG, might conceive it—but is a *structure*. And "the semiotic" is not the same as *semiotics*, which is the study of the functioning of signs.

In *Revolution in Poetic Language*, Kristeva thus maintains that all signification entails the dialectical interaction of the symbolic and the semiotic. The semiotic represents the discharge of pre-Oedipal instinctual energies and drives within language; it is associated with what Kristeva, following PLATO, designates as the *chora* (literally, "space"; Greek)—receptacle, space, womb. This semiotic *chora*, which "precedes and underlies figuration," is, in turn, connected to the maternal body, to the feminine in general, and to what remains mysterious, unintelligible, and unsignifiable. Kristeva's thesis is that the eruption of the semiotic within the symbolic is what provides the creative and innovative impulse of modern poetic language. Ordinary language use depends on a *thetic* or positing structure (Kristeva borrows the term from the German phenomenologist Edmund Husserl, 1859–1938): that is, it is positional and propositional. Artistic practice, capable of transgressing the thetic boundary between the symbolic and the semiotic, fractures and disrupts established modes of signification so as to retrieve the surmounted semiotic energies and thus create an opening for new, polyvalent cultural meanings. This thetic rupture, then, is profoundly subversive, not only implying an upheaval of art forms (such as that effected by Mallarmé and Lautréamont, according to Kristeva, on traditional literary discourse) but also calling for a reconfiguration of the notion of subjectivity. Distinguishing between the *genotext* (the energies that bring a text about) and the *phenotext* (the linguistic

structure that results), Kristeva tries to capture the trace of what in a subject brings a text into being, not just what the text signifies. The genotext corresponds roughly to Freud's primary (unconscious) processes—a dream's "latent content." But while a dream's "manifest content" obeys only the rule of representability, a text is shaped by all the linguistic and social structures of the symbolic order.

The "revolution" of Kristeva's title therefore both refers to a transformation in poetic practice and heralds the emergence of what Kristeva, throughout her writings, refers to as the *sujet-en-procès*. *Procès*, in French, means both "process" and "trial." Hence, this expression can be translated "subject in process" or "subject on trial." The phrase itself expresses what Kristeva sees as the double bind of subjecthood: it combines the incompatible forces of constant change and constant judgment. The subject both *cannot* and *must* present itself in stasis. The semiotic dimension frees the subject from stasis and, according to Kristeva, "gives us a vision of the human venture as a venture of innovation, of creation, of opening, of renewal" (*Interviews*, 1996).

But the breakthroughs of the semiotic have their dark as well as their playful side. The theories of psychoanalysis have enabled Kristeva—who completed her training as a psychoanalyst in 1979—to analyze in more detail the consequences of those breakthroughs for life and writing. Her many book-length studies—treating horror, anti-Semitism, melancholy, and abjection—attend to the destructive as well as the creative consequences of breaking through the symbolic, which is the repository of civilization in both its repressive and its protective guises. Indeed, for Kristeva psychoanalysis is the *practice* of the difficulty in tearing apart the two "sides." The *abject*, for instance, is as important to the constitution of the "subject" as its "object." The abject is what the subject's consciousness has to expel or disregard in order to create the proper separation between subject and object. The mother splits into two parts: she is the prototype of subsequent objects that the subject will desire or hate, but she is also the despised ground of infantile dependency and bodily need. Another way of putting this is that the abject is still unconsciously desired and thereby transformed into something undesirable, filthy, and disgusting, like the bodily processes for which it stands. Both matter and mother are *abjects* for the fantasy of self-creation.

Kristeva's publications after 1979 thus take an explicitly psychoanalytic approach to what she calls "the maladies of the soul." *Powers of Horror: An Essay on Abjection* (1980; trans. 1982), *Tales of Love* (1983; trans. 1987), *Black Sun: Depression and Melancholia* (1987; trans. 1989), and *New Maladies of the Soul* (1993; trans. 1995) often feature case studies from her clinical practice. At the same time, Kristeva began enlarging and loosening her compact, difficult, and rather abstract style to attempt new kinds of writing. In a special 1977 issue of *Tel Quel* titled *Recherches féminines* (*Research by and about Women*), she published a celebrated essay about motherhood ("Hérétique de l'amour" or "Love's Herethics"; later translated as "Stabat Mater") written in two columns juxtaposed irregularly on the page. She went on to write several novels, the first of which, *The Samurai* (1990), is a thinly disguised account of the *Tel Quel* milieu. Its Japanese title is a wink at the Chinese title used by SIMONE DE BEAUVOIR (an important precursor for Kristeva) for a similar roman à clef, *The Mandarins* (1954).

Kristeva has published more explicitly political writings as well, from her early *About Chinese Women* (1974)—based on a trip to China taken by several members of *Tel Quel* during its period of interest in Maoism—to the later *Strangers to Ourselves* (1989) and *Nations without Nationalism* (1990). In *Strangers to Ourselves*, Kristeva rediscovers Freud's notion of the "uncanny" in the context of the encounter between the self and the "foreigner": by recognizing that the foreignness lies *within* the self, it might be possible, she suggests, to avoid the violence entailed by its projection outward onto others.

"Women's Time" (1979; trans. 1981), a synthesis of Kristeva's analysis of language, the social contract, and feminism, has been much reprinted. It addresses the question of female subjectivity by interrogating the position that women are said to occupy in

the social structure. If, according to Lévi-Strauss, women are circulated on the marriage market between men of different groups like the words of a system of communication, what happens when women are seen not as the *objects* but as the *subjects* of communication? If women have had to bear the sacrificial weight of the social contract in patriarchy, does that mean that lifting the weight of patriarchy would provide free, unfettered enjoyment and fulfillment for women? It is Kristeva's contention that a liberating change in the social order, however necessary and desirable, would nevertheless not give access to the fulfillment whose attainment appears to be blocked by specific structures of subjectivity. The fantasy of wholeness is a function of those obstacles, not something beyond them. Kristeva's ideal could be said to be postfeminist in the sense that it implies the demolition of "Woman" as an identifiable social category. To the extent that feminism depends on the difference between men and women conceived as an *opposition*, she has resisted being called a "feminist." This has estranged her from some feminists committed to an oppositional notion of political action. When asked what constitutes her distinctiveness, however, she responds by calling herself "a female intellectual," committed to exploring the oxymoronic exclusiveness inherent in the traditional understanding of those categories but refusing to conceive of either one as an "identity."

The attempt to bridge the gap between French and Anglo-American feminisms has contributed to the introduction and dissemination of Kristeva's work to the English-speaking world—see, notably, Toril Moi's *Sexual/Textual Politics: Feminist Literary Theory* (1985)—but Kristeva herself tends to view institutionalized forms of feminism (like all institutionalized groups) as totalizing, at times even as totalitarian, forms of cultural discourse. In "Women's Time" she wonders whether feminism is not in the process of becoming a sort of religion; and she remains highly critical of any feminist politics based on universalist or essentialist notions of femininity. Although Kristeva, in Anglo-American writings, frequently gets grouped together with HÉLÈNE CIXOUS and Luce Irigaray as a representative of "French feminism," the three writers are really very different, united only by the extent to which each is influenced by the 1968 upheaval in French society. Yet Kristeva's rich and provocative writings—particularly her reflections on love, abjection, melancholy, maternity, and the preverbal semiotic—are directly relevant to feminist theorists and continue to generate a sizable body of criticism.

Drawing together linguistics, psychoanalysis, political science, and feminism, Julia Kristeva's work has repeatedly revealed aspects of textuality that literary theory is in danger of glossing over. In insisting that the speaking subject's investment in language is neither transcendental nor entirely conscious, she has enlarged, enriched, and complicated our sense of what goes on in a literary text.

BIBLIOGRAPHY

Kristeva's writings first became widely available in English through the publication of the 1980 collection *Desire in Language*, edited by Leon S. Roudiez (who was also responsible for inviting Kristeva to be a regular visitor at Columbia University) and translated by Thomas Gora, Alice Jardine, and Roudiez. This collection, which does not correspond to any book in French, contains essays from her *Sémeiôtiké* (1969) and from *Polylogue* (1977). Margaret Waller's English translation of *Revolution in Poetic Language* (1984) reproduces the first half of the original 1974 French text. The best-known translation of "Women's Time" is by Alice Jardine and Harry Blake, and was originally published in the journal *Signs* 7 (1981). Another translation, slightly updated by Kristeva, was produced by Ross Mitchell Guberman for the English translation of *New Maladies of the Soul* (1995). All of the work that derives from Kristeva's "psychoanalytic" period is deeply literary as well, grappling with such authors as Louis-Ferdinand Céline (1894–1961), Gérard de Nerval (1808–1855), Plotinus (ca. 204/5–ca. 270), and Charles Baudelaire (1821–1867). *Powers of Horror*

(1980; trans. 1982), *Tales of Love* (1983; trans. 1987), and *Black Sun* (1987; trans. 1989) have been influential in literary studies. Among her other writings are *Language: The Unknown* (1981; trans. 1989) and *Time and Sense: Proust and the Experience of Literature* (1994; trans. 1996). Kristeva has also written a number of novels and a series of reflections on the limits of psychoanalysis. Toril Moi's *Kristeva Reader* (1986) and Kelly Oliver's *Portable Kristeva* (1997) present good selections and substantial introductions to Kristeva's writings. Two books contain biographical information: *Julia Kristeva: Interviews*, edited by Ross Mitchell Guberman (1996), and, with a grain of salt, *The Samurai* (1990; trans. 1992).

There exist a number of helpful explications of Kristeva's work. Elizabeth Grosz's *Sexual Subversions: Three French Feminists* (1989) places Kristeva in the context of French philosophy and feminism, and Michael Payne's *Reading Theory: An Introduction to Lacan, Derrida, and Kristeva* (1993) has a chapter devoted to *Revolution in Poetic Language*. John Lechte, *Julia Kristeva* (1990); Kelly Oliver, *Reading Kristeva: Unraveling the Double-Bind* (1993); Anna Smith, *Julia Kristeva: Readings of Exile and Estrangement* (1996); and Anne-Marie Smith, *Julia Kristeva: Speaking the Unspeakable* (1998), all provide overviews of Kristeva's main arguments and concepts. The critical literature on Kristeva is represented in numerous collections of essays, the most notable of which include *Abjection, Melancholia, and Love: The Work of Julia Kristeva*, edited by John Fletcher and Andrew Benjamin (1990); *Body/Text in Julia Kristeva: Religion, Women, and Psychoanalysis*, edited by Dávid Crownfield (1992); *Ethics, Politics, and Difference in Julia Kristeva's Writing*, edited by Kelly Oliver (1993); and *After the Revolution: On Kristeva*, edited by John Lechte and Mary Zour-nazi (1998).

French Feminist Criticism: Women, Language, and Literature by Elissa D. Gelfand and Virginia Thorndike Hules (1985), contains a dated but well-annotated bibliography of the early Kristeva. Joan Nordquist's *Julia Kristeva: A Bibliography* (1995) provides a comprehensive list of Kristeva's books and essays as well as of relevant critical literature published in English.

From Revolution in Poetic Language¹

From Part I. *The Semiotic and the Symbolic*

2. THE SEMIOTIC CHORA ORDERING THE DRIVES

We understand the term "semiotic"² in its Greek sense: σημεῖον = distinctive mark, trace, index, precursory sign, proof, engraved or written sign, imprint, trace, figuration. This etymological reminder would be a mere archaeological embellishment (and an unconvincing one at that, since the term ultimately encompasses such disparate meanings), were it not for the fact that the preponderant etymological use of the word, the one that implies a *distinctiveness*, allows us to connect it to a precise modality in the signifying process. This modality is the one Freudian psychoanalysis points to in postulating not only the *facilitation* and the structuring *disposition* of drives, but also the so-called *primary processes*³ which displace and condense both energies and their inscription. Discrete quantities of energy move through the body of the

1. Translated by Margaret Waller, who occasionally inserts the original French in brackets.

2. In Kristeva's usage, pre-Oedipal—that is, before the infant's discovery of sexual difference—preverbal drives and affects.

3. The most primitive of unconscious mecha-

nisms, according to SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis. "Facilitation" (French *frayage*, from Freud's German *Bahnung*) and "disposition" are the processes that shape habits of desire.

subject who is not yet constituted as such and, in the course of his development, they are arranged according to the various constraints imposed on this body—always already involved in a semiotic process—by family and social structures. In this way the drives, which are “energy” charges as well as “psychical” marks, articulate what we call a *chora*: a nonexpressive totality formed by the drives and their stases in a motility that is as full of movement as it is regulated.

We borrow the term *chora*⁴ from Plato's *Timaeus*⁵ to denote an essentially mobile and extremely provisional articulation constituted by movements and their ephemeral stases. We differentiate this uncertain and indeterminate articulation from a *disposition* that already depends on representation, lends itself to phenomenological, spatial intuition,⁶ and gives rise to a geometry. Although our theoretical description of the *chora* is itself part of the discourse of representation that offers it as evidence, the *chora*, as rupture and articulations (rhythm), precedes evidence, verisimilitude, spatiality, and temporality. Our discourse—all discourse—moves with and against the *chora* in the sense that it simultaneously depends upon and refuses it. Although the *chora* can be designated and regulated, it can never be definitively posited: as a result, one can situate the *chora* and, if necessary, lend it a topology, but one can never give it axiomatic form.⁷

The *chora* is not yet a position that represents something for someone (i.e., it is not a sign); nor is it a *position* that represents someone for another position (i.e., it is not yet a signifier either⁸); it is, however, generated in order to attain to this signifying position. Neither model nor copy, the *chora* precedes and underlies figuration and thus specularization, and is analogous only to vocal or kinetic rhythm. We must restore this motility's gestural and vocal play (to mention only the aspect relevant to language) on the level of the socialized body in order to remove motility from ontology and amorphousness⁹ where Plato confines it in an apparent attempt to conceal it from

4. The term “*chora*” has recently been criticized for its ontological essence by Jacques Derrida, *Positions*, trans. and annot. Alan Bass (Chicago: University of Chicago Press, 1981), pp. 75, 106 n. 39 [Kristeva's note]. Some of the author's notes have been omitted. DERRIDA (b. 1930), French philosopher.

5. One of the later dialogues by the Greek philosopher PLATO (ca. 427–ca. 347 B.C.E.).

6. Phenomenology is a philosophical method restricted to analyzing the intellectual processes of which we are introspectively aware (while ignoring external objects, the question of whose existence is “bracketed”).

7. Plato emphasizes that the receptacle (ὑποδοχείον), which is also called space (χώρα) vis-à-vis reason, is necessary—but not divine since it is unstable, uncertain, ever changing and becoming; it is even unnameable, improbable, bastard: “Space, which is everlasting, not admitting destruction; providing a situation for all things that come into being, but itself apprehended without the senses by a sort of bastard reasoning, and hardly an object of belief. This, indeed, is that which we look upon as in a dream and say that anything that is must needs be in some place and occupy some room . . .” (*Timaeus*, trans. Francis M. Cornford, 52a–b). Is the receptacle a “thing” or a mode of language? Plato's hesitation between the two gives the receptacle an even more uncertain status. It is

one of the elements that antedate not only the *universe* but also *names* and even *syllables*: “We speak . . . positing them as original principles, elements (as it were, letters) of the universe; whereas one who has ever so little intelligence should not rank them in this analogy even so low as syllables” (48b). “It is hard to say, with respect to any one of these, which we ought to call really water rather than fire, or indeed which we should call by any given name rather than by all the names together or by each severally, so as to use language in a sound and trustworthy way. . . . Since, then, in this way no one of these things ever makes its appearance as the *same* thing, which of them can we steadfastly affirm to be *this*—whatever it may be—and not something else, without blushing for ourselves? It cannot be done” (49b–d) [Kristeva's note].

8. A reference to the statement by the French psychoanalyst JACQUES LACAN (1901–1981) that “a signifier represents a subject for another signifier”; see Seminar XI (1964), *The Four Fundamental Concepts of Psychoanalysis* (1973; trans. 1977).

9. There is a fundamental ambiguity: on the one hand, the receptacle is mobile and even contradictory, without unity, separable and divisible: pre-syllable, pre-word. Yet, on the other hand, because this separability and divisibility antedate numbers and forms, the space or receptacle is called *amorphous*; thus its suggested rhythmicity will in a cer-

Democritean rhythm.¹ The theory of the subject proposed by the theory of the unconscious will allow us to read in this rhythmic space, which has no thesis and no position, the process by which signifi²ance is constituted. Plato himself leads us to such a process when he calls this receptacle or *chora* nourishing and maternal,³ not yet unified in an ordered whole because deity is absent from it. Though deprived of unity, identity, or deity, the *chora* is nevertheless subject to a regulating process [*réglementation*], which is different from that of symbolic law but nevertheless effectuates discontinuities by temporarily articulating them and then starting over, again and again.

The *chora* is a modality of signifi²ance in which the linguistic sign is not yet articulated as the absence of an object and as the distinction between real and symbolic. We emphasize the regulated aspect of the *chora*: its vocal and gestural organization is subject to what we shall call an objective *ordering* [*ordonnement*], which is dictated by natural or socio-historical constraints such as the biological difference between the sexes or family structure. We may therefore posit that social organization, always already symbolic, impr²ints its constraint in a mediated form which organizes the *chora* not according to a *law* (a term we reserve for the symbolic) but through an *ordering*.⁴ What is this mediation?

tain sense be erased, for how can one think an articulation of what is not yet singular but is nevertheless necessary? All we may say of it, then, to make it intelligible, is that it is amorphous but that it "is of such and such a quality," not even an index or something in particular ("this" or "that"). Once named, it immediately becomes a container that takes the place of infinitely repeatable separability. This amounts to saying that this repeated separability is "ontologized" the moment a *name* or a *word* replaces it, making it intelligible: "Are we talking idly whenever we say that there is such a thing as an intelligible Form of anything? Is this nothing more than a word?" (*Timaeus* 51c). Is the Platonic *chora* the "nominability" of rhythm (of repeated separation)?

Why then borrow an ontologized term in order to designate an articulation that antecedes positing? First, the Platonic term makes explicit an insurmountable problem for discourse: once it has been named, that functioning, even if it is pre-symbolic, is brought back into a symbolic position. All discourse can do is differentiate, by means of a "bastard reasoning," the receptacle from the motility, which, by contrast, is not being posited as being "a certain something" [*une telle*]. Second, this motility is the precondition for symbolicity, heterogeneous to it, yet indispensable. Therefore what needs to be done is to try and differentiate, always through a "bastard reasoning," the specific arrangements of this motility, without seeing them as recipients of accidental singularities, or a *Being* always posited in itself, or a projection of the *One*. Moreover, Plato invites us to differentiate in this fashion when he describes this, while gathering it into the receiving membrane: "But because it was filled with powers that were neither alike nor evenly balanced, there was no equipoise in any region of it; but it was everywhere swayed unevenly and shaken by these things, and its motion shook them in turn. And they, being thus moved, were perpetually being separated and carried in different directions; just as when things are shaken and winnowed by means of winnowing baskets and

other instruments for cleaning corn . . . it separated the most unlike kinds farthest apart from one another, and thrust the most alike closest together; whereby the different kinds came to have different regions, even before the ordered whole consisting of them came to be . . . but were altogether in such a condition as we should expect for anything when deity is absent from it" (52d–53b). Indefinite "conjunctions" and "disjunctions" (functioning, devoid of Meaning), the *chora* is governed by a necessity that is not God's law [Kristeva's note]. "Corn": wheat.

1. That is, the eternal motion of atoms in haphazard collision postulated by the Greek philosopher Democritus (ca. 460–ca. 370 B.C.E.), a concept here presented as a precursor of the semiotic.

2. Kristeva's coinage: the fact or process of signification, encompassing both the symbolic and the semiotic.

3. The Platonic space or receptacle is a mother and wet nurse: "Indeed we may fittingly compare the Recipient to a mother, the model to a father, and the nature that arises between them to their offspring" (*Timaeus* 50d); "Now the wet nurse of Becoming was made watery and fiery, received the characters of earth and air, and was qualified by all the other affections that go with these . . ." (52d; translation modified) [Kristeva's note].

4. "Law," which derives etymologically from *lex* [Latin], necessarily implies the act of judgment whose role in safeguarding society was first developed by the Roman law courts. "Ordering," on the other hand, is closer to the series "rule," "norm" (from the Greek γνῶμων, meaning "discerning" [adj.], "carpenter's square" [noun]), etc., which implies a numerical or geometrical necessity. On normativity in linguistics, see Alain Rey, "Usages, judgments et prescriptions linguistiques" [Linguistic Usage, Judgment, and Prescription], *Langue Française* (December 1972), 16:5. But the temporary ordering of the *chora* is not yet even a *rule*: the arsenal of geometry is posterior to the *chora*'s motility; it fixes the *chora* in place and reduces it [Kristeva's note].

According to a number of psycholinguists, "concrete operations" precede the acquisition of language, and organize preverbal semiotic space according to logical categories, which are thereby shown to precede or transcend language. From their research we shall retain not the principle of an operational state⁵ but that of a preverbal functional state that governs the connections between the body (in the process of constituting itself as a body proper), objects, and the protagonists of family structure.⁶ But we shall distinguish this functioning from symbolic operations that depend on language as a sign system—whether the language [*langue*]⁷ is vocalized or gestural (as with deaf-mutes). The kinetic functional stage of the *semiotic* precedes the establishment of the sign; it is not, therefore, cognitive in the sense of being assumed by a knowing, already constituted subject. The genesis of the *functions* organizing the semiotic process can be accurately elucidated only within a theory of the subject that does not reduce the subject to one of understanding, but instead opens up within the subject this other scene of pre-symbolic functions. The Kleinian theory⁸ expanding upon Freud's positions on the drives will momentarily serve as a guide.

Drives involve pre-Oedipal semiotic functions and energy discharges that connect and orient the body to the mother. We must emphasize that "drives" are always already ambiguous, simultaneously assimilating and destructive; this dualism, which has been represented as a tetrad⁹ or as a double helix, as in the configuration of the DNA and RNA molecule,¹ makes the semiotized body a place of permanent scission. The oral and anal drives,² both of which are oriented and structured around the mother's body,³ dominate this sensorimotor organization. The mother's body is therefore what mediates the symbolic law organizing social relations and becomes the ordering principle of the semiotic *chora*,⁴ which is on the path of destruction, aggressivity, and

5. Operations are, rather, an act of the subject of understanding [Kristeva's note]. Hans G. Furth, in *Piaget and Knowledge: Theoretical Foundations* (Englewood Cliffs, N.J.: Prentice-Hall, 1969), offers the following definition of "concrete operations": "Characteristic of the first stage of operational intelligence. A concrete operation implies underlying general systems or 'groupings' such as classification, seriation, number. Its applicability is limited to objects considered as real (concrete)" (p. 260) [translator's note].

6. Piaget stresses that the roots of sensorimotor operations precede language and that the acquisition of thought is due to the symbolic function, which, for him, is a notion separate from that of language per se. See Jean Piaget, "Language and Symbolic Operations," in *Piaget and Knowledge*, pp. 121–30 [Kristeva's note].

7. That is, language as an abstract system, as distinguished from the speech or hand signs of any particular language user (*parole*)—a distinction first drawn by the Swiss linguist FERDINAND DE SAUSSURE (1857–1913).

8. The theory of mother-child relations held by Melanie Klein (1882–1960), Austrian-born English psychoanalyst.

9. Such a position has been formulated by Lipot Szondi, *Experimental Diagnostic of Drives*, trans. Gertrude Aull (New York: Grune and Stratton, 1952) [Kristeva's note]. "Tetrad": group of four.

1. See James D. Watson, *The Double Helix: A Personal Account of the Discovery of the Structure of DNA* (London: Weidenfeld and Nicolson, 1968)

[Kristeva's note].

2. The first and second phases of Freud's discussion of infantile sexuality; the "oral" is associated with sucking, the "anal" with the start of toilet training.

3. Throughout her writings, Melanie Klein emphasizes the "pre-Oedipal" phase, i.e., a period of the subject's development that precedes the "discovery" of castration and the positing of the superego, which itself is subject to (paternal) Law. The processes she describes for this phase correspond, *but on a genetic level*, to what we call the semiotic as opposed to the symbolic, which underlies and conditions the semiotic. Significantly, these pre-Oedipal processes are organized through projection onto the mother's body, for girls as well as for boys: "at this stage of development children of both sexes believe that it is the body of their mother which contains all that is desirable, especially their father's penis." *The Psycho-analysis of Children*, trans. Alix Strachey (London: Hogarth Press, 1932), p. 269. Our own view of this stage is as follows: Without "believing" or "desiring" any "object" whatsoever, the subject is in the process of constituting himself *vis-à-vis* a non-object. He is in the process of separating from this non-object so as to make that non-object "one" and posit himself as "other": the mother's body is the not-yet-one that the believing and desiring subject will imagine as a "receptacle" [Kristeva's note].

4. As for what situates the mother in symbolic space, we find the phallus again (see Jacques Lacan, "La Relation d'objet et les structures freu-

death. For although drives have been described as disunited or contradictory structures, simultaneously "positive" and "negative," this doubling is said to generate a dominant "destructive wave" that is drive's most characteristic trait: Freud notes that the most instinctual drive is the death drive.⁵ In this way, the term "drive" denotes waves of attack against stases, which are themselves constituted by the repetition of these charges; together, charges and stases lead to no identity (not even that of the "body proper") that could be seen as a result of their functioning. This is to say that the semiotic *chora* is no more than the place where the subject is both generated and negated, the place where his unity succumbs before the process of charges and stases that produce him. We shall call this process of charges and stases a *negativity* to distinguish it from negation, which is the act of a judging subject (see below, part II).

Checked by the constraints of biological and social structures, the drive charge thus undergoes stases. Drive facilitation, temporarily arrested, marks *discontinuities* in what may be called the various material supports [*matériaux*] susceptible to semiotization: voice, gesture, colors. Phonic (later phonemic), kinetic, or chromatic units and differences are the marks of these stases in the drives. Connections or *fonctions* are thereby established between these discrete marks which are based on drives and articulated according to their resemblance or opposition, either by slippage or by condensation. Here we find the principles of metonymy and metaphor⁶ indissociable from the drive economy underlying them.

Although we recognize the vital role played by the processes of displacement and condensation in the organization of the semiotic, we must also add to these processes the relations (eventually representable as topological spaces) that connect the zones of the fragmented body to each other and also to "external" "objects" and "subjects," which are not yet constituted as such. This type of relation makes it possible to specify the *semiotic* as a psychosomatic modality of the signifying process; in other words, not a symbolic modality but one articulating (in the largest sense of the word) a continuum: the connections between the (glottal and anal) sphincters in (rhythmic and intonational) vocal modulations, or those between the sphincters and family protagonists, for example.

diennes" [Object Relations and Freudian Structures], *Bulletin de Psychologie*, April 1957, pp. 426-30), represented by the mother's father, i.e., the subject's maternal grandfather (see Marie-Claire Boons, "Le Meurtre du Père chez Freud" [Killing the Father in Freud], *L'Inconscient*, January-March 1968, 5: 101-29) [Kristeva's note].

5. Though disputed and inconsistent, the Freudian theory of drives is of interest here because of the predominance Freud gives to the death drive in both "living matter" and the "human being." The death drive is transversal to identity and tends to disperse "narcissisms" whose constitution ensures the link between structures and, by extension, life. But at the same time and conversely, narcissism and pleasure are only temporary positions from which the death drive blazes new paths [see *fraye de nouveaux passages*]. Narcissism and pleasure are therefore inveiglings and realizations of the death drive. The semiotic *chora*, converting drive discharges into stases, can be thought of both as a

delaying of the death drive and as a possible realization of this drive, which tends to return to a homeostatic state. This hypothesis is consistent with the following remark: "at the beginning of mental life," writes Freud, "the struggle for pleasure was far more intense than later but not so unrestricted: it had to submit to frequent interruptions." *Beyond the Pleasure Principle*, in *The Standard Edition of the Complete Psycho-Analytic Works of Sigmund Freud*, ed. James Strachey (London: Hogarth Press, 1953), 18:63 [Kristeva's note].

6. Two figures (dependent on resemblance and association, respectively), most influentially discussed by the Russian-born American linguist ROMAN JAKOBSON in "Two Aspects of Language and Two Types of Aphasical Disturbances" (1956; see above); Lacan (in "The Agency of the Letter in the Unconscious," 1957; see above) and others connected them to Freud's dream-work processes of condensation and displacement, as described in *The Interpretation of Dreams* (1900; see above).

All these various processes and relations, anterior to sign and syntax, have just been identified from a genetic perspective as previous and necessary to the acquisition of language, but not identical to language. Theory can "situate" such processes and relations diachronically within the process of the constitution of the subject precisely because *they function synchronically within the signifying process of the subject himself*, i.e., the subject of *cogitatio*.⁷ Only in *dream* logic, however, have they attracted attention, and only in certain signifying practices, such as the *text*, do they dominate the signifying process.

It may be hypothesized that certain semiotic articulations are transmitted through the biological code or physiological "memory" and thus form the inborn bases of the symbolic function. Indeed, one branch of generative linguistics asserts the principle of innate language universals. As it will become apparent in what follows, however, the *symbolic*—and therefore syntax and all linguistic categories—is a social effect of the relation to the other, established through the objective constraints of biological (including sexual) differences and concrete, historical family structures. Genetic programmings are necessarily semiotic: they include the primary processes such as displacement and condensation, absorption and repulsion, rejection and stasis, all of which function as innate preconditions, "memorable" by the species, for language acquisition.

Mallarmé⁸ calls attention to the semiotic rhythm within language when he speaks of "The Mystery in Literature" ["Le Mystère dans les lettres"]. Indifferent to language, enigmatic and feminine, this space underlying the written is rhythmic, unfettered, irreducible to its intelligible verbal translation; it is musical, anterior to judgment, but restrained by a single guarantee: syntax. As evidence, we could cite "The Mystery in Literature" in its entirety.⁹ For now, however, we shall quote only those passages that ally the functioning of that "air or song beneath the text" with woman:

And the instrument of Darkness, whom they have designated, will not set down a word from then on except to deny that she must have been the enigma; lest she settle matters with a wisk of her skirts; 'I don't get it!'

.....
—They [the critics] play their parts disinterestedly or for a minor gain: leaving our Lady and Patroness exposed to show her dehiscence or lacuna, with respect to certain dreams, as though this were the standard to which everything is reduced.¹

To these passages we add others that point to the "mysterious" functioning of literature as a rhythm made intelligible by syntax: "Following the instinct for rhythms that has chosen him, the poet does not deny seeing a lack of proportion between the means let loose and the result." "I know that there are those who would restrict Mystery to Music's domain; when writing aspires to it."²

7. Thinking (Latin).

8. STÉPHANE MALLARMÉ (1842–1898), French poet.

9. Mallarmé, *Oeuvres complètes* [Complete

Works] (Paris: Gallimard, 1945), pp. 382–87 [Kristeva's note].

1. *Ibid.*, p. 383 [Kristeva's note].

2. *Ibid.*, pp. 383, 385 [Kristeva's note].

What pivot is there, I mean within these contrasts, for intelligibility? a guarantee is needed—

Syntax—

... an extraordinary appropriation of structure, limpid, to the primitive lightning bolts of logic. A stammering, what the sentence seems, here repressed [. . .]

.....
 The debate—whether necessary average clarity deviates in a detail—remains one for grammarians.³

Our positing of the semiotic is obviously inseparable from a theory of the subject that takes into account the Freudian positing of the unconscious. We view the subject in language as decentering the transcendental ego,⁴ cutting through it, and opening it up to a dialectic in which its syntactic and categorical understanding is merely the liminary moment of the process, which is itself always acted upon by the relation to the other dominated by the death drive and its productive reiteration of the “signifier.” We will be attempting to formulate the distinction between *semiotic* and *symbolic* within this perspective, which was introduced by Lacanian analysis, but also within the constraints of a practice—the *text*—which is only of secondary interest to psychoanalysis.

5. THE THETIC: RUPTURE AND/OR BOUNDARY

We shall distinguish the semiotic (drives and their articulations) from the realm of signification, which is always that of a proposition or judgment, in other words, a realm of *positions*. This positionality, which Husserlian phenomenology orchestrates through the concepts of *doxa*, *position*, and *thesis*, is structured as a break in the signifying process, establishing the *identification* of the subject and its object as preconditions of propositionality. We shall call this break, which produces the positing of signification, a *thetic*⁵ phase. All enunciation, whether of a word or of a sentence, is thetic. It requires an identification; in other words, the subject must separate from and through his image, from and through his objects. This image and objects must first be posited in a space that becomes symbolic because it connects the two separated positions, recording them or redistributing them in an open combinatorial system.

The child's first so-called holophrastic enunciations include gesture, the object, and vocal emission. Because they are perhaps not yet sentences (NP-VP),⁶ generative grammar is not readily equipped to account for them. Nevertheless, they are already thetic in the sense that they separate an object from the subject, and attribute to it a semiotic fragment, which thereby becomes a signifier. That this attribution is either metaphoric or metonymic (“woof-woof” says the dog, and all animals become “woof-woof”) is logically secondary to the fact that it constitutes an *attribution*, which is to say, a

3. *Ibid.*, pp. 385–86 [Kristeva's note].

4. The autonomous, abstract subject implicit in perception and cognition, as defined by the German philosopher Edmund Husserl (1859–1938), a founder of phenomenology.

5. Propositional (from *thesis*), also a term from Husserl.

6. Noun-phrase, verb-phrase; nomenclature from the generative and transformational grammar of the American linguist Noam Chomsky (b. 1928).

positing of identity or difference, and that it represents the nucleus of judgment or proposition.

We shall say that the thetic phase of the signifying process is the "deepest structure" of the possibility of enunciation, in other words, of signification and the proposition. Husserl theologizes this deep logic of signification by making it a productive *origin* of the "free spontaneity" of the Ego:

Its *free spontaneity and activity* consists in positing, positing on the strength of this or that, positing as an antecedent or a consequent, and so forth; it does not live within the theses as a passive indweller; the theses radiate from it as from a primary source of generation [*Erzeugung*]. Every thesis begins with a *point of insertion* [*Einsatzpunkt*] with a point at which *the positing has its origin* [*Ursprungssetzung*]; so it is with the first thesis and with each further one in the synthetic nexus. This 'inserting' even belongs to the thesis as such, as a remarkable modus of original actuality. It somewhat resembles the *fiat*,⁷ the point of insertion of will and action.⁸

In this sense, *there exists only one signification*, that of the thetic phase, which contains the object as well as the proposition, and the complicity between them. There is no sign that is not thetic and every sign is already the germ of a "sentence," attributing a signifier to an object through a "copula" that will function as a signified. Stoic semiology, which was the first to formulate the matrix of the sign, had already established *this complicity between sign and sentence*, making them proofs of each other.

Modern philosophy recognizes that the right to represent the founding *thesis* of signification (sign and/or proposition) devolves upon the transcendental ego. But only since Freud have we been able to raise the question not of the origin of this thesis but rather of the process of its production. To brand the thetic as the foundation of metaphysics is to risk serving as an antechamber for metaphysics—unless, that is, we specify the way the thetic is produced. In our view, the Freudian theory of the unconscious and its Lacanian development show, precisely, that thetic signification is a stage attained under certain precise conditions during the signifying process, and that it constitutes the subject without being reduced to this process precisely because it is the threshold of language. Such a standpoint constitutes neither a reduction of the subject to the transcendental ego, nor a denial [*dénégation*] of the thetic phase that establishes signification.

12. GENOTEXT AND PHENOTEXT

In light of the distinction we have made between the semiotic *chora* and the symbolic, we may now examine the way texts function. What we shall call a *genotext* will include semiotic processes but also the advent of the symbolic. The former includes drives, their disposition, and their division of the body, plus the ecological and social system surrounding the body, such as objects

7. Literally "let there be" (Latin); this is the form of God's creative pronouncements in Genesis, in the Vulgate Bible.

8. Edmund Husserl, *Ideas: General Introduction to Pure Phenomenology*, trans. W. R. Boyce Gibson

(London: Allen and Unwin, 1969), p. 342 (Kristeva's note).

9. Linking verb (which joins the subject and predicate).

and pre-Oedipal relations with parents. The latter encompasses the emergence of object and subject, and the constitution of nuclei of meaning involving categories: semantic and categorial fields. Designating the genotext in a text requires pointing out the transfers of drive energy that can be detected in phonematic devices (such as the accumulation and repetition of phonemes¹ or rhyme) and melodic devices (such as intonation or rhythm), in the way semantic and categorial fields are set out in syntactic and logical features, or in the economy of mimesis (fantasy, the deferment of denotation, narrative, etc.). The genotext is thus the only transfer of drive energies that organizes a space in which the subject is not yet a split unity that will become blurred, giving rise to the symbolic. Instead, the space it organizes is one in which the subject will be *generated* as such by a process of facilitations² and marks within the constraints of the biological and social structure.

In other words, even though it can be seen in language, the genotext is not linguistic (in the sense understood by structural or generative linguistics). It is, rather, a *process*, which tends to articulate structures that are ephemeral (unstable, threatened by drive charges, "quanta" rather than "marks") and nonsignifying (devices that do not have a double articulation).³ It forms these structures out of: a) instinctual dyads, b) the corporeal and ecological continuum, c) the social organism and family structures, which convey the constraints imposed by the mode of production, and d) matrices of enunciation, which give rise to discursive "genres" (according to literary history), "psychic structures" (according to psychiatry and psychoanalysis), or various arrangements of "the participants in the speech event" (in Jakobson's notion of the linguistics of discourse).⁴ We may posit that the matrices of enunciation are the result of the repetition of drive charges (a) within biological, ecological, and socio-familial constraints (b and c), and the stabilization of their facilitation into stases whose surrounding structure accommodates and leaves its mark on symbolization.

The genotext can thus be seen as language's underlying foundation. We shall use the term *phenotext* to denote language that serves to communicate, which linguistics describes in terms of "competence" and "performance."⁵ The phenotext is constantly split up and divided, and is irreducible to the semiotic process that works through the genotext. The phenotext is a structure (which can be generated, in generative grammar's sense); it obeys rules of communication and presupposes a subject of enunciation and an addressee. The genotext, on the other hand, is a process; it moves through zones that have relative and transitory borders and constitutes a *path* that is not restricted to the two poles of univocal information between two full-fledged subjects. If these two terms—genotext and phenotext—could be translated into a metalanguage that would convey the difference between

1. Units of sound. The translator previously noted: "'Device' is Kristeva's own choice for the translation of *dispositif*: something devised or constructed for a particular purpose."

2. The translation of Freud's German *Bahnungen*. According to Freud, it was easier to repeat an experience than to have a new one; repetition thus lays down or "facilitates" a pattern for future experiences.

3. To signify something else, language must both

link the sign to the thing (referent) and articulate the two parts of the sign (signifier and signified).

4. See "Shifters, Verbal Categories, and the Russian Verb," in Roman Jakobson, *Selected Writings*, 2 vols. (The Hague: Mouton, 1971), 2:130-47 [Kristeva's note].

5. Chomsky's terms, corresponding roughly to Saussure's *langue* and *parole*: "competence" is knowledge of language as a system; "performance" involves linguistic acts by particular speakers.

them, one might say that the genotext is a matter of topology, whereas the phenotext is one of algebra.⁶ This distinction may be illustrated by a particular signifying system: written and spoken Chinese, particularly classical Chinese. Writing represents-articulates the signifying process into specific networks or spaces; *speech* (which may correspond to that writing) restores the diacritical elements necessary for an exchange of meaning between two subjects (temporality, aspect, specification of the protagonists, morpho-semantic identifiers, and so forth).⁷

The signifying process therefore includes both the genotext and the phenotext; indeed it could not do otherwise. For it is in language that all signifying operations are realized (even when linguistic material is not used), and it is on the basis of language that a theoretical approach may attempt to perceive that operation.

In our view, the process we have just described accounts for the way all signifying practices are generated.⁸ But every signifying practice does not encompass the infinite totality of that process. Multiple constraints—which are ultimately sociopolitical—stop the signifying process at one or another of the theses that it traverses; they knot it and lock it into a given surface or structure; they discard *practice* under fixed, fragmentary, symbolic *matrices*; the tracings of various social constraints that obliterate the infinity of the process: the phenotext is what conveys these obliterations. Among the capitalist mode of production's numerous signifying practices only certain literary texts of the avant-garde (Mallarmé, Joyce⁹) manage to cover the infinity of the process, that is, reach the semiotic *chora*, which modifies linguistic structures. It must be emphasized, however, that this total exploration of the signifying process generally leaves in abeyance the theses that are characteristic of the social organism, its structures, and their political transformation: the text has a tendency to dispense with political and social signifieds.

It has only been in very recent years or in revolutionary periods that signifying practice has inscribed within the phenotext the plural, heterogeneous, and contradictory process of signification encompassing the flow of drives, material discontinuity, political struggle, and the pulverization of language.¹

Lacan has delineated four types of discourse in our society: that of the hysteric, the academic, the master, and the analyst.² Within the perspective just set forth, we shall posit a different classification, which, in certain respects, intersects these four Lacanian categories, and in others, adds to them. We shall distinguish between the following signifying practices: narrative, metalanguage, contemplation, and text-practice.

6. That is, the genotext is the shape taken by existing space, while the phenotext translates the relations discovered into a formal language.

7. See Joseph Needham, *Science and Civilisation in China*, 4 vols. (Cambridge: Cambridge University Press, 1960), vol. 1 [Kristeva's note].

8. From a similar perspective, Edgar Morin writes: "We can think of magic, mythologies, and ideologies both as mixed systems, making affectivity rational and rationality affective, and as outcomes of combining: a) fundamental drives, b) the chancy play of fantasy, and c) logico-constructive systems. To our mind, the theory of myth must be based on trionic syncretism rather than unilateral logic." He adds, in a note, that "myth does not have a sin-

gle logic but a synthesis of three kinds of logic." "Le Paradigme perdu: La Nature humaine" [Paradigm Lost: Human Nature], paper presented at the "Invariants biologiques et universaux culturels" [Biological Invariants and Cultural Universals] Colloquium, Royaumont, September 6-9, 1972 [Kristeva's note].

1. An allusion to *Le Poème pulvérisé* (1947, *The Pulverized Poem*), a volume of prose poems by the French poet René Char.

2. Lacan presented this typology of discourse at his 1969 and 1970 seminars [Kristeva's note].

Let us state from the outset that this distinction is only provisional and schematic, and that although it corresponds to actual practices, it interests us primarily as a didactic implement [*outil*]³—one that will allow us to specify some of the modalities of signifying dispositions. The latter interest us to the extent that they give rise to different practices and are, as a consequence, more or less coded in modes of production. Of course narrative and contemplation could also be seen as devices stemming from (hysterical and obsessional) transference neurosis; and metalanguage and the text as practices allied with psychotic (paranoid and schizoid) economies.³

1974

3. Suggesting parallels between creativity and madness, Kristeva connects narrative with hysteria, contemplation with obsession, metalanguage with paranoia, and textuality with schizophrenia.

LAURA MULVEY

b. 1941

Writer and filmmaker Laura Mulvey is widely regarded as one of the most challenging and incisive contemporary feminist cultural theorists. Belonging to the 1970s generation of British film theorists and independent filmmakers, she came to prominence with "Visual Pleasure and Narrative Cinema," a foundational text in feminist film criticism. This essay, published in 1975 in the vanguard British film journal *Screen* and frequently anthologized since, was groundbreaking as one of the earliest pieces of feminist criticism to go beyond cataloguing images of women in films. Extending the psychoanalytic insights of both SIGMUND FREUD and JACQUES LACAN, Mulvey describes how sexual difference and inequality are inscribed not only in the content or subject matter of a film but in its formal visual apparatus—its characteristic ways of looking—as well.

Born in Oxford, England, Mulvey received a B.A. in history from Oxford University in 1963. In 1972, with Claire Johnston and Linda Myles, she organized the women's events at the Edinburgh Film Festival. She has taught classes at Bulmershe College in Reading, England; the London Institute; the University of East Anglia; Cornell University; the University of California at Davis; and the British Film Institute. She has co-directed several avant-garde films with her husband, Peter Wollen, including *Penthesilea: Queen of the Amazons* (1974), *Riddles of the Sphinx* (1977), *Amy!* (1980), *Crystal Gazing* (1982), and *The Bad Sister* (1983), all of which attempt to undermine conventional cinematic methods of filming women. In addition, her essays on a wide variety of subjects have been published in *Visual and Other Pleasures* (1989) and *Fetishism and Curiosity* (1996).

In 1975 Mulvey's essay on visual pleasure and narrative cinema was revolutionary. It was written at a time when feminist literary criticism was beginning to establish itself as a field of study in many English departments and when women's studies programs were just getting off the ground. Few of the works now considered canonical in feminist literary criticism had been written. Anglo-American feminists, documenting images of women in literature, focused mainly on the content rather than the form of the texts they examined. Furthermore, many were hostile toward psychoanalysis, though a few were already exploring the potential connections between Freud and feminism. In France the theorists who would come to be known in the

United States as the French feminists—JULIA KRISTEVA, HÉLÈNE CIXOUS, and Luce Irigaray—were using psychoanalytic theory as a means of exploring sexual difference and inequality, but their work would not begin to have a significant impact on American feminism until the 1980s.

"Visual Pleasure and Narrative Cinema" describes the manner in which the traditional visual apparatus of mainstream Hollywood "narrative" film looks at women as passive objects subordinated to the male gaze. Using a dense but illuminating psychoanalytic framework, Mulvey explores how the male unconscious shapes the erotic pleasures involved in looking. While she concedes that psychoanalysis might not offer a way out of the inequalities between the sexes or the oppression of women, she argues that it does provide a useful political tool for illustrating the mechanisms of pleasure on which the cinematic objectification of women depends.

According to Mulvey, the visual techniques of cinema afford viewers two contradictory pleasures. First, through the process Freud terms *scopophilia* (pleasure in looking), we enjoy making others the object of a controlling gaze. Second, through a process of identification that parallels Lacan's famous mirror stage (theorized in "The Mirror Stage," 1949; see above), we derive pleasure from identifying with an ideal image on the screen. Both have their origins in infantile processes by which we learned to separate ourselves from others. As described to this point, the two processes seem to structure the visual pleasure of men and women in the same way. However, Mulvey argues that because the male viewer cannot bear the burden of sexual objectification, he (the viewer is specifically male) deflects the tension by splitting his gaze between spectacle and narrative. A woman on-screen typically functions as the primary erotic object for both screen characters and audience members, becoming the object of the dominant, male gaze; as such, she exists outside the narrative illusions of time and space the film creates. At the same time, spectators identify with the male protagonist, who acts within the parameters of time and space—the diegesis—created by the film's story line.

The visual apparatus of mainstream film is further complicated because the process of gazing on the female object of desire is both pleasurable and threatening. While film creates an illusionistic world that allows for the free play of desire, in actuality the viewer is never free from the circumstances that gave rise to those desires within the symbolic social order, especially from the castration complex. The female object of the gaze, because she lacks a penis, is associated with the primordial fear of castration; although that threat initiates the male subject's integration into the symbolic social order, it also creates considerable anxiety. For this reason, the controlling male ego must attempt to escape the threat of castration evoked by the very gaze that gives it pleasure. Mulvey maintains that the male unconscious has two means of disarming the threat. The first is a form of voyeurism—investigating the female, demystifying her, and either denouncing, punishing, or saving her. The second is male disavowal, achieved by the substitution of a fetish object that becomes reassuring rather than dangerous. She examines these processes in the films of the directors Josef von Sternberg (1894–1969) and Alfred Hitchcock (1899–1980).

Before the pleasures of mainstream film can be challenged, Mulvey argues, viewers must be able to break down the cinematic codes that create the controlling male gaze and the illusionistic world that satisfies the desires it invokes. The cinema depends on three looks: that of the camera, that of the audience, and that of the film's characters. It achieves its illusion of truth and reality (mimesis) by denying or downplaying the first two (the material process of recording and the critical reading of the viewer) and by emphasizing the last. Only by disrupting the seamlessness of this whole visual illusion can women's subordination to the male gaze be defied.

The visual dynamics described in "Visual Pleasure and Narrative Cinema" have been widely applied not only to film but to other media as well, including photography, advertising, painting, and television, making this essay a landmark text for visual culture and media studies generally. But Mulvey's description of the male gaze has

not been without its critics—feminists included—who have pointed out its limitations. For many, the spatial logic of the male gaze limits the ways in which vision (and visual pleasure) can be understood. Because the masculine gaze is always posited as the site of mastery and control, while the feminine is marked by submission to the gaze, little room is left within mainstream narrative cinema for resistances or alternative practices. Nor does avant-garde cinema, where Mulvey locates the alternative to the male gaze, offer much evidence of being any more responsive to feminist critique than Hollywood filmmaking. Others argue that her paradigm locks the activity of looking into a traditional Oedipal heterosexuality. Moreover, theories drawing on a visual apparatus based on a gendered split between female object and male voyeur cannot describe the visual pleasure of female viewers, or account for the male gaze at another male. Mulvey herself has recognized the validity of such objections, attempting to address many of them in a later essay, "Afterthoughts on 'Visual Pleasure and Narrative Cinema' Inspired by King Vidor's *Duel in the Sun*" (1981). Despite such criticism, Mulvey's 1975 essay continues to inspire important work in feminist film studies.

BIBLIOGRAPHY

Laura Mulvey has published three books: *Visual and Other Pleasures* (1989) collects her essays on a wide range of topics, *Citizen Kane* (1992) explores what is perhaps the most celebrated American film, and *Fetishism and Curiosity* (1996) examines how the concept of fetishism as it has been developed by Karl Marx and Freud relates to artistic texts. For biographical information on Mulvey, consult the interviews by Jacqueline Suter and Sandy Flitterman, "Textual Riddles: Women as Enigma or Site of Social Meanings? An Interview with Laura Mulvey," *Discourse* 1 (1979), and by Juan Suarez and Millicent Manglis, "Cinema, Gender, and the Topographies of Enigmas: A Conversation with Laura Mulvey," *Cinefocus* 3 (1995).

A great deal of feminist film criticism since 1975 has been written in response to Mulvey's essay. Among the most notable analyses are E. Ann Kaplan, *Women and Film: Both Sides of the Camera* (1983); *Re-vision: Essays in Feminist Film Criticism*, edited by Mary Ann Doane, Patricia Mellencamp, and Linda Williams (1984); Kaplan, *Rocking around the Clock: Music Television, Postmodernism, and Consumer Culture* (1987), which examines MTV and the popular music video, in another extension and critique of Mulvey's argument; and Mary Ann Doane, *The Desire to Desire: The Woman's Film of the 1940s* (1987). An anthology that demonstrates Mulvey's considerable influence on feminist film criticism is *Female Spectators: Looking at Film and Television*, edited by E. Deidre Pribram (1988). Several major psychoanalytic books on film assess Mulvey's contributions, including Kaja Silverman, *The Acoustic Mirror: The Female Voice in Psychoanalysis and Cinema* (1988); *Psychoanalysis and Cinema*, edited by E. Ann Kaplan (1990); and *Femmes Fatales: Feminism, Film Theory, Psychoanalysis*, edited by Mary Ann Doane (1991).

Visual Pleasure and Narrative Cinema

I Introduction

(A) A POLITICAL USE OF PSYCHOANALYSIS

This paper intends to use psychoanalysis to discover where and how the fascination of film is reinforced by pre-existing patterns of fascination already at work within the individual subject and the social formations that have moulded him. It takes as its starting-point the way film reflects, reveals and

even plays on the straight, socially established interpretation of sexual difference which controls images, erotic ways of looking and spectacle. It is helpful to understand what the cinema has been, how its magic has worked in the past, while attempting a theory and a practice which will challenge this cinema of the past. Psychoanalytic theory is thus appropriated here as a political weapon, demonstrating the way the unconscious of patriarchal society has structured film form.

The paradox of phallocentrism¹ in all its manifestations is that it depends on the image of the castrated woman to give order and meaning to its world. An idea of woman stands as linchpin to the system: it is her lack that produces the phallus as a symbolic presence, it is her desire to make good the lack that the phallus signifies. Recent writing in *Screen*² about psychoanalysis and the cinema has not sufficiently brought out the importance of the representation of the female form in a symbolic order³ in which, in the last resort, it speaks castration and nothing else. To summarise briefly: the function of woman in forming the patriarchal unconscious is twofold: she firstly symbolises the castration threat by her real lack of a penis and secondly thereby raises her child into the symbolic. Once this has been achieved, her meaning in the process is at an end. It does not last into the world of law and language except as a memory, which oscillates between memory of maternal plenitude and memory of lack. Both are posited on nature (or on anatomy in Freud's famous phrase⁴). Woman's desire is subjugated to her image as bearer of the bleeding wound; she can exist only in relation to castration and cannot transcend it. She turns her child into the signifier of her own desire to possess a penis (the condition, she imagines, of entry into the symbolic). Either she must gracefully give way to the word, the name of the father and the law, or else struggle to keep her child down with her in the half-light of the imaginary. Woman then stands in patriarchal culture as a signifier⁵ for the male other, bound by a symbolic order in which man can live out his fantasies and obsessions through linguistic command by imposing them on the silent image of woman still tied to her place as bearer, not maker, of meaning.

There is an obvious interest in this analysis for feminists, a beauty in its exact rendering of the frustration experienced under the phallogentric order. It gets us nearer to the roots of our oppression, it brings closer an articulation of the problem, it faces us with the ultimate challenge: how to fight the unconscious structured like a language (formed critically at the moment of arrival of language) while still caught within the language of the patriarchy?

1. The psychoanalytic system in which sexual difference is defined as the difference between having and lacking the phallus; the term has come to refer to the patriarchal cultural system as a whole insofar as that system privileges the phallus as the symbol and source of power. Because of that privilege, women suffer "penis envy" and men suffer the "castration complex" (the fear of every male child that his desire for his mother will be punished by castration by his father; more generally, the fear of becoming "castrated" like women that leads men to cling to masculinity); both terms are originally from the theories of SIGMUND FREUD (1856-1939).

2. Vanguard British film journal, founded in 1969 by the British Society for Education in Film and

Television.

3. In the theories of the psyche put forward by the French psychoanalyst JACQUES LACAN (1901-1981), the Symbolic is the dimension of language, law, and the father; in contrast, the Imaginary is modeled on the preverbal mother-child dyad, or on the relation between an infant and its mirror image.

4. That is, "anatomy is destiny" ("The Dissolution of the Oedipus Complex," 1924).

5. Term used by structuralist and poststructuralist theorists that was coined by the Swiss linguist FERDINAND DE SAUSSURE (1857-1913) to explain the functioning of signs, which he divided into a signifier (the form a sign takes) and a signified (the concept it represents).

There is no way in which we can produce an alternative out of the blue, but we can begin to make a break by examining patriarchy with the tools it provides, of which psychoanalysis is not the only but an important one. We are still separated by a great gap from important issues for the female unconscious which are scarcely relevant to phallogentric theory: the sexing of the female infant and her relationship to the symbolic, the sexually mature woman as non-mother, maternity outside the signification of the phallus, the vagina. But, at this point, psychoanalytic theory as it now stands can at least advance our understanding of the *status quo*, of the patriarchal order in which we are caught.

(B) DESTRUCTION OF PLEASURE AS A RADICAL WEAPON

As an advanced representation system, the cinema poses questions about the ways the unconscious (formed by the dominant order) structures ways of seeing and pleasure in looking. Cinema has changed over the last few decades. It is no longer the monolithic system based on large capital investment exemplified at its best by Hollywood in the 1930s, 1940s and 1950s. Technological advances (16mm and so on) have changed the economic conditions of cinematic production, which can now be artisanal as well as capitalist. Thus it has been possible for an alternative cinema to develop. However self-conscious and ironic Hollywood managed to be, it always restricted itself to a formal *mise en scène*⁶ reflecting the dominant ideological concept of the cinema. The alternative cinema provides a space for the birth of a cinema which is radical in both a political and an aesthetic sense and challenges the basic assumptions of the mainstream film. This is not to reject the latter moralistically, but to highlight the ways in which its formal preoccupations reflect the psychical obsessions of the society which produced it and, further, to stress that the alternative cinema must start specifically by reacting against these obsessions and assumptions. A politically and aesthetically avant-garde cinema is now possible, but it can still only exist as a counterpoint.

The magic of the Hollywood style at its best (and of all the cinema which fell within its sphere of influence) arose, not exclusively, but in one important aspect, from its skilled and satisfying manipulation of visual pleasure. Unchallenged, mainstream film coded the erotic into the language of the dominant patriarchal order. In the highly developed Hollywood cinema it was only through these codes that the alienated subject, torn in his imaginary memory by a sense of loss, by the terror of potential lack in fantasy, came near to finding a glimpse of satisfaction: through its formal beauty and its play on his own formative obsessions. This article will discuss the interweaving of that erotic pleasure in film, its meaning and, in particular, the central place of the image of woman. It is said that analysing pleasure, or beauty, destroys it. That is the intention of this article. The satisfaction and reinforcement of the ego⁷ that represent the high point of film history hitherto must be attacked. Not in favour of a reconstructed new pleasure, which cannot exist in the abstract, nor of intellectualised unpleasure, but to make

6. In film, everything within the frame of a shot, including actors, settings, costumes, action, and lighting.

7. The part of the psyche, as described by Freud, that is conscious, controls behavior, and is in touch with external reality.

way for a total negation of the ease and plenitude of the narrative fiction film. The alternative is the thrill that comes from leaving the past behind without simply rejecting it, transcending outworn or oppressive forms, and daring to break with normal pleasurable expectations in order to conceive a new language of desire.

II *Pleasure in Looking/Fascination with the Human Form*

A The cinema offers a number of possible pleasures. One is scopophilia (pleasure in looking). There are circumstances in which looking itself is a source of pleasure, just as, in the reverse formation, there is pleasure in being looked at. Originally, in his *Three Essays on Sexuality*, Freud isolated scopophilia as one of the component instincts of sexuality which exist as drives quite independently of the erotogenic zones. At this point he associated scopophilia with taking other people as objects, subjecting them to a controlling and curious gaze. His particular examples centre on the voyeuristic activities of children, their desire to see and make sure of the private and forbidden (curiosity about other people's genital and bodily functions, about the presence or absence of the penis and, retrospectively, about the primal scene⁸). In this analysis scopophilia is essentially active. (Later, in 'Instincts and Their Vicissitudes', Freud developed his theory of scopophilia further, attaching it initially to pre-genital auto-eroticism, after which, by analogy, the pleasure of the look is transferred to others. There is a close working here of the relationship between the active instinct and its further development in a narcissistic form.) Although the instinct is modified by other factors, in particular the constitution of the ego, it continues to exist as the erotic basis for pleasure in looking at another person as object. At the extreme, it can become fixated into a perversion, producing obsessive voyeurs and Peeping Toms whose only sexual satisfaction can come from watching, in an active controlling sense, an objectified other.

At first glance, the cinema would seem to be remote from the undercover world of the surreptitious observation of an unknowing and unwilling victim. What is seen on the screen is so manifestly shown. But the mass of mainstream film, and the conventions within which it has consciously evolved, portray a hermetically sealed world which unwinds magically, indifferent to the presence of the audience, producing for them a sense of separation and playing on their voyeuristic fantasy. Moreover the extreme contrast between the darkness in the auditorium (which also isolates the spectators from one another) and the brilliance of the shifting patterns of light and shade on the screen helps to promote the illusion of voyeuristic separation. Although the film is really being shown, is there to be seen, conditions of screening and narrative conventions give the spectator an illusion of looking in on a private world. Among other things, the position of the spectators in the cinema is blatantly one of repression of their exhibitionism and projection of the repressed desire onto the performer.

B The cinema satisfies a primordial wish for pleasurable looking, but it also goes further, developing scopophilia in its narcissistic aspect. The conven-

8. The scene of the child's parents engaged in sexual intercourse. Freud published *Three Essays on the Theory of Sexuality* in 1905 and "Instincts and Their Vicissitudes" in 1915.

tions of mainstream film focus attention on the human form. Scale, space, stories are all anthropomorphic. Here, curiosity and the wish to look intermingle with a fascination with likeness and recognition: the human face, the human body, the relationship between the human form and its surroundings, the visible presence of the person in the world. Jacques Lacan has described how the moment when a child recognises its own image in the mirror is crucial for the constitution of the ego.⁹ Several aspects of this analysis are relevant here. The mirror phase occurs at a time when children's physical ambitions outstrip their motor capacity, with the result that their recognition of themselves is joyous in that they imagine their mirror image to be more complete, more perfect than they experience in their own body. Recognition is thus overlaid with misrecognition: the image recognised is conceived as the reflected body of the self, but its misrecognition as superior projects this body outside itself as an ideal ego, the alienated subject which, re-introjected¹ as an ego ideal, prepares the way for identification with others in the future. This mirror moment predates language for the child.

Important for this article is the fact that it is an image that constitutes the matrix of the imaginary, of recognition/misrecognition and identification, and hence of the first articulation of the I, of subjectivity. This is a moment when an older fascination with looking (at the mother's face, for an obvious example) collides with the initial inklings of self-awareness. Hence it is the birth of the long love affair/despair between image and self-image which has found such intensity of expression in film and such joyous recognition in the cinema audience. Quite apart from the extraneous similarities between screen and mirror (the framing of the human form in its surroundings, for instance), the cinema has structures of fascination strong enough to allow temporary loss of ego while simultaneously reinforcing it. The sense of forgetting the world as the ego has come to perceive it (I forgot who I am and where I was) is nostalgically reminiscent of that pre-subjective moment of image recognition. While at the same time, the cinema has distinguished itself in the production of ego ideals, through the star system for instance. Stars provide a focus or centre both to screen space and screen story where they act out a complex process of likeness and difference (the glamorous impersonates the ordinary).

C Sections A and B have set out two contradictory aspects of the pleasurable structures of looking in the conventional cinematic situation. The first, scopophilic, arises from pleasure in using another person as an object of sexual stimulation through sight. The second, developed through narcissism and the constitution of the ego, comes from identification with the image seen. Thus, in film terms, one implies a separation of the erotic identity of the subject from the object on the screen (active scopophilia), the other demands identification of the ego with the object on the screen through the spectator's fascination with and recognition of his like. The first is a function of the sexual instincts, the second of ego libido.² This dichotomy was crucial for Freud. Although he saw the two as interacting and overlaying each other,

9. Lacan, in "The Mirror Stage" (1949; see above), describes the development of selfhood in children between 6 and 18 months old.

1. A psychoanalytic term; *introjection* is the unconscious process by which the outside world is

taken into the self and represented in its internal structure.

2. Narcissistic libido, a pleasure derived from idealizing the self.

the tension between instinctual drives and self-preservation polarises in terms of pleasure. But both are formative structures, mechanisms without intrinsic meaning. In themselves they have no signification, unless attached to an idealisation. Both pursue aims in indifference to perceptual reality, and motivate eroticised phantasmagoria that affect the subject's perception of the world to make a mockery of empirical objectivity.

During its history, the cinema seems to have evolved a particular illusion of reality in which this contradiction between libido and ego has found a beautifully complementary fantasy world. In *reality* the fantasy world of the screen is subject to the law which produces it. Sexual instincts and identification processes have a meaning within the symbolic order which articulates desire. Desire, born with language, allows the possibility of transcending the instinctual and the imaginary, but its point of reference continually returns to the traumatic moment of its birth: the castration complex. Hence the look, pleasurable in form, can be threatening in content, and it is woman as representation/image that crystallises this paradox.

III Woman as Image, Man as Bearer of the Look

A In a world ordered by sexual imbalance, pleasure in looking has been split between active/male and passive/female. The determining male gaze projects its fantasy onto the female figure, which is styled accordingly. In their traditional exhibitionist role women are simultaneously looked at and displayed, with their appearance coded for strong visual and erotic impact so that they can be said to connote *to-be-looked-at-ness*. Woman displayed as sexual object is the *leitmotif* of erotic spectacle: from pin-ups to strip-tease, from Ziegfeld to Busby Berkeley,³ she holds the look, and plays to and signifies male desire. Mainstream film neatly combines spectacle and narrative. (Note, however, how in the musical song-and-dance numbers interrupt the flow of the diegesis.⁴) The presence of woman is an indispensable element of spectacle in normal narrative film, yet her visual presence tends to work against the development of a story-line, to freeze the flow of action in moments of erotic contemplation. This alien presence then has to be integrated into cohesion with the narrative. As Budd Boetticher⁵ has put it:

What counts is what the heroine provokes, or rather what she represents. She is the one, or rather the love or fear she inspires in the hero, or else the concern he feels for her, who makes him act the way he does. In herself the woman has not the slightest importance.

(A recent tendency in narrative film has been to dispense with this problem altogether; hence the development of what Molly Haskell⁶ has called the 'buddy movie', in which the active homosexual eroticism of the central male figures can carry the story without distraction.) Traditionally, the woman displayed has functioned on two levels: as erotic object for the characters within the screen story, and as erotic object for the spectator within the

3. American choreographer and film director (1895-1976), famous for his musical productions. Florenz Ziegfeld (1869-1932), American theatrical producer, best known for extravagant revues featuring showgirls.

4. The ongoing story or narrative.

5. American film director (b. 1916), best known for his westerns.

6. American film critic (b. 1939); she discusses "buddy movies" in *From Reverence to Rape: The Treatment of Women in the Movies* (1974).

auditorium, with a shifting tension between the looks on either side of the screen. For instance, the device of the show-girl allows the two looks to be unified technically without any apparent break in the diegesis. A woman performs within the narrative; the gaze of the spectator and that of the male characters in the film are neatly combined without breaking narrative verisimilitude. For a moment the sexual impact of the performing woman takes the film into a no man's land outside its own time and space. Thus Marilyn Monroe's first appearance in *The River of No Return* and Lauren Bacall's songs in *To Have and Have Not*.⁷ Similarly, conventional close-ups of legs (Dietrich, for instance) or a face (Garbo)⁸ integrate into the narrative a different mode of eroticism. One part of a fragmented body destroys the Renaissance space, the illusion of depth demanded by the narrative; it gives flatness, the quality of a cut-out or icon, rather than verisimilitude, to the screen.

B An active/passive heterosexual division of labour has similarly controlled narrative structure. According to the principles of the ruling ideology and the psychical structures that back it up, the male figure cannot bear the burden of sexual objectification. Man is reluctant to gaze at his exhibitionist like. Hence the split between spectacle and narrative supports the man's role as the active one of advancing the story, making things happen. The man controls the film fantasy and also emerges as the representative of power in a further sense: as the bearer of the look of the spectator, transferring it behind the screen to neutralise the extra-diegetic⁹ tendencies represented by woman as spectacle. This is made possible through the processes set in motion by structuring the film around a main controlling figure with whom the spectator can identify. As the spectator identifies with the main male protagonist, he projects his look onto that of his like, his screen surrogate, so that the power of the male protagonist as he controls events coincides with the active power of the erotic look, both giving a satisfying sense of omnipotence. A male movie star's glamorous characteristics are thus not those of the erotic object of the gaze, but those of the more perfect, more complete, more powerful ideal ego conceived in the original moment of recognition in front of the mirror. The character in the story can make things happen and control events better than the subject/spectator, just as the image in the mirror was more in control of motor co-ordination.

In contrast to woman as icon, the active male figure (the ego ideal of the identification process) demands a three-dimensional space corresponding to that of the mirror recognition, in which the alienated subject internalised his own representation of his imaginary existence. He is a figure in a landscape. Here the function of film is to reproduce as accurately as possible the so-called natural conditions of human perception. Camera technology (as exemplified by deep focus in particular) and camera movements (determined by the action of the protagonist), combined with invisible editing (demanded by realism), all tend to blur the limits of screen space. The male protagonist is free to command the stage, a stage of spatial illusion in which he articu-

9. Outside the story or the frame of the camera.

lates the look and creates the action. (There are films with a woman as main protagonist, of course. To analyse this phenomenon seriously here would take me too far afield. Pam Cook and Claire Johnston's study of *The Revolt of Mamie Stover*¹ in Phil Hardy (ed.), *Raoul Walsh* (Edinburgh, 1974), shows in a striking case how the strength of this female protagonist is more apparent than real.)

C1 Sections III A and B have set out a tension between a mode of representation of woman in film and conventions surrounding the diegesis. Each is associated with a look: that of the spectator in direct scopophilic contact with the female form displayed for his enjoyment (connoting male fantasy) and that of the spectator fascinated with the image of his like set in an illusion of natural space, and through him gaining control and possession of the woman within the diegesis. (This tension and the shift from one pole to the other can structure a single text. Thus both in *Only Angels Have Wings*² and in *To Have and Have Not*, the film opens with the woman as object of the combined gaze of spectator and all the male protagonists in the film. She is isolated, glamorous, on display, sexualised. But as the narrative progresses she falls in love with the main male protagonist and becomes his property, losing her outward glamorous characteristics, her generalised sexuality, her show-girl connotations; her eroticism is subjected to the male star alone. By means of identification with him, through participation in his power, the spectator can indirectly possess her too.)

But in psychoanalytic terms, the female figure poses a deeper problem. She also connotes something that the look continually circles around but disavows: her lack of a penis, implying a threat of castration and hence unpleasure. Ultimately, the meaning of woman is sexual difference, the visually ascertainable absence of the penis, the material evidence on which is based the castration complex essential for the organisation of entrance to the symbolic order and the law of the father. Thus the woman as icon, displayed for the gaze and enjoyment of men, the active controllers of the look, always threatens to evoke the anxiety it originally signified. The male unconscious has two avenues of escape from this castration anxiety: preoccupation with the re-enactment of the original trauma (investigating the woman, demystifying her mystery), counterbalanced by the devaluation, punishment or saving of the guilty object (an avenue typified by the concerns of the *film noir*³); or else complete disavowal of castration by the substitution of a fetish object or turning the represented figure itself into a fetish so that it becomes reassuring rather than dangerous (hence overvaluation, the cult of the female star).

This second avenue, fetishistic scopophilia, builds up the physical beauty of the object, transforming it into something satisfying in itself. The first avenue, voyeurism, on the contrary, has associations with sadism: pleasure lies in ascertaining guilt (immediately associated with castration), asserting control and subjugating the guilty person through punishment or forgiveness. This sadistic side fits in well with narrative. Sadism demands a story, depends on making something happen, forcing a change in another person,

1. A 1956 American film (dir. Raoul Walsh), starring Jane Russell in the title role.

2. A 1939 American film (dir. Howard Hawks); the female "object" is Jean Arthur.

3. Literally, "black film" (French), a postwar genre characterized by dark settings, by shady or disturbed characters who are alienated and isolated, and by a view of society from its underside.

a battle of will and strength, victory/defeat, all occurring in a linear time with a beginning and an end. Fetishistic scopophilia, on the other hand, can exist outside linear time as the erotic instinct is focused on the look alone. These contradictions and ambiguities can be illustrated more simply by using works by Hitchcock and Sternberg,⁴ both of whom take the look almost as the content or subject matter of many of their films. Hitchcock is the more complex, as he uses both mechanisms. Sternberg's work, on the other hand, provides many pure examples of fetishistic scopophilia.

C2 Sternberg once said he would welcome his films being projected upside-down so that story and character involvement would not interfere with the spectator's undiluted appreciation of the screen image. This statement is revealing but ingenuous: ingenuous in that his films do demand that the figure of the woman (Dietrich, in the cycle of films with her, as the ultimate example) should be identifiable; but revealing in that it emphasises the fact that for him the pictorial space enclosed by the frame is paramount, rather than narrative or identification processes. While Hitchcock goes into the investigative side of voyeurism, Sternberg produces the ultimate fetish, taking it to the point where the powerful look of the male protagonist (characteristic of traditional narrative film) is broken in favour of the image in direct erotic rapport with the spectator. The beauty of the woman as object and the screen space coalesce; she is no longer the bearer of guilt but a perfect product, whose body, stylised and fragmented by close-ups, is the content of the film and the direct recipient of the spectator's look.

Sternberg plays down the illusion of screen depth; his screen tends to be one-dimensional, as light and shade, lace, steam, foliage, net, streamers and so on reduce the visual field. There is little or no mediation of the look through the eyes of the main male protagonist. On the contrary, shadowy presences like La Bessière in *Morocco*⁵ act as surrogates for the director, detached as they are from audience identification. Despite Sternberg's insistence that his stories are irrelevant, it is significant that they are concerned with situation, not suspense, and cyclical rather than linear time, while plot complications revolve around misunderstanding rather than conflict. The most important absence is that of the controlling male gaze within the screen scene. The high point of emotional drama in the most typical Dietrich films, her supreme moments of erotic meaning, take place in the absence of the man she loves in the fiction. There are other witnesses, other spectators watching her on the screen, their gaze is one with, not standing in for, that of the audience. At the end of *Morocco*, Tom Brown has already disappeared into the desert when Amy Jolly kicks off her gold sandals and walks after him. At the end of *Dishonoured*,⁶ Kranau is indifferent to the fate of Magda. In both cases, the erotic impact, sanctified by death, is displayed as a spectacle for the audience. The male hero misunderstands and, above all, does not see.

In Hitchcock, by contrast, the male hero does see precisely what the audi-

4. Josef von Sternberg (1894–1969), Austrian-born American film director; he brought the actress Marlene Dietrich to the United States and featured her in a number of films in the early 1930s. ence sees. However, although fascination with an image through scopophilic eroticism can be the subject of the film, it is the role of the hero to portray the contradictions and tensions experienced by the spectator. In *Vertigo* in particular, but also in *Marnie* and *Rear Window*,⁷ the look is central to the plot, oscillating between voyeurism and fetishistic fascination. Hitchcock has never concealed his interest in voyeurism, cinematic and non-cinematic. His heroes are exemplary of the symbolic order and the law—a policeman (*Vertigo*), a dominant male possessing money and power (*Marnie*)—but their erotic drives lead them into compromised situations. The power to subject another person to the will sadistically or to the gaze voyeuristically is turned onto the woman as the object of both. Power is backed by a certainty of legal right and the established guilt of the woman (evoking castration, psychoanalytically speaking). True perversion is barely concealed under a shallow mask of ideological correctness—the man is on the right side of the law, the woman on the wrong. Hitchcock's skillful use of identification processes and liberal use of subjective camera from the point of view of the male protagonist draw the spectators deeply into his position, making them share his uneasy gaze. The spectator is absorbed into a voyeuristic situation within the screen scene and diegesis, which parodies his own in the cinema.

In an analysis of *Rear Window*, Douchet⁸ takes the film as a metaphor for the cinema. Jeffries is the audience, the events in the apartment block opposite correspond to the screen. As he watches, an erotic dimension is added to his look, a central image to the drama. His girlfriend Lisa had been of little sexual interest to him, more or less a drag, so long as she remained on the spectator side. When she crosses the barrier between his room and the block opposite, their relationship is reborn erotically. He does not merely watch her through his lens, as a distant meaningful image, he also sees her as a guilty intruder exposed by a dangerous man threatening her with punishment, and thus finally giving him the opportunity to save her. Lisa's exhibitionism has already been established by her obsessive interest in dress and style, in being a passive image of visual perfection; Jeffries's voyeurism and activity have also been established through his work as a photo-journalist, a maker of stories and captor of images. However, his enforced inactivity, binding him to his seat as a spectator, puts him squarely in the fantasy position of the cinema audience.

In *Vertigo*, subjective camera predominates. Apart from one flashback from Judy's point of view, the narrative is woven around what Scottie sees or fails to see.⁹ The audience follows the growth of his erotic obsession and subsequent despair precisely from his point of view. Scottie's voyeurism is blatant: he falls in love with a woman he follows and spies on without speaking to. Its sadistic side is equally blatant: he has chosen (and freely chosen, for he had been a successful lawyer) to be a policeman, with all the attendant possibilities of pursuit and investigation. As a result, he follows, watches and falls in love with a perfect image of female beauty and mystery. Once he actually confronts her, his erotic drive is to break her down and force her to tell by persistent cross-questioning.

7. Three American films directed by Hitchcock: *Vertigo* (1958), *Marnie* (1964), and *Rear Window* (1954).

8. Jean Douchet, French film director and critic, author of *Alfred Hitchcock* (1967). Jeffries, temporarily immobilized by a broken leg, is played by

James Stewart; Lisa is played by Grace Kelly.

9. Scottie (James Stewart) is hired to watch Madeleine (Kim Novak), a wealthy man's wife; he becomes obsessed with her, and after her suicide, he finds another woman who resembles her (Judy, also played by Novak).

In the second part of the film, he re-enacts his obsessive involvement with the image he loved to watch secretly. He reconstructs Judy as Madeleine, forces her to conform in every detail to the actual physical appearance of his fetish. Her exhibitionism, her masochism, make her an ideal passive counterpart to Scottie's active sadistic voyeurism. She knows her part is to perform, and only by playing it through and then replaying it can she keep Scottie's erotic interest. But in the repetition he does break her down and succeeds in exposing her guilt. His curiosity wins through; she is punished.

Thus, in *Vertigo*, erotic involvement with the look boomerangs: the spectator's own fascination is revealed as illicit voyeurism as the narrative content enacts the processes and pleasures that he is himself exercising and enjoying. The Hitchcock hero here is firmly placed within the symbolic order, in narrative terms. He has all the attributes of the patriarchal superego.¹ Hence the spectator, lulled into a false sense of security by the apparent legality of his surrogate, sees through his look and finds himself exposed as complicit, caught in the moral ambiguity of looking. Far from being simply an aside on the perversion of the police, *Vertigo* focuses on the implications of the active/looking, passive/looked-at split in terms of sexual difference and the power of the male symbolic encapsulated in the hero. Marnie, too, performs for Mark Rutland's gaze and masquerades as the perfect to-be-looked-at image.² He, too, is on the side of the law until, drawn in by obsession with her guilt, her secret, he longs to see her in the act of committing a crime, make her confess and thus save her. So he, too, becomes complicit as he acts out the implications of his power. He controls money and words; he can have his cake and eat it.

IV Summary

The psychoanalytic background that has been discussed in this article is relevant to the pleasure and unpleasure offered by traditional narrative film. The scopophilic instinct (pleasure in looking at another person as an erotic object) and, in contradistinction, ego libido (forming identification processes) act as formations, mechanisms, which mould this cinema's formal attributes. The actual image of woman as (passive) raw material for the (active) gaze of man takes the argument a step further into the content and structure of representation, adding a further layer of ideological significance demanded by the patriarchal order in its favourite cinematic form—illusionistic³ narrative film. The argument must return again to the psychoanalytic background: women in representation can signify castration, and activate voyeuristic or fetishistic mechanisms to circumvent this threat. Although none of these interacting layers is intrinsic to film, it is only in the film form that they can reach a perfect and beautiful contradiction, thanks to the possibility in the cinema of shifting the emphasis of the look. The place of the look defines cinema, the possibility of varying it and exposing it. This is what makes cinema quite different in its voyeuristic potential from, say, strip-tease, theatre, shows and so on. Going far beyond highlighting a woman's to-be-looked-at-ness, cinema builds the way she is to be looked at into the

1. The part of the psyche, as described by Freud, that develops through the incorporation of the moral standards of the parents and community.

2. In *Marnie*, the title character (Tippi Hedren) is

a habitual thief and liar who steals from her employers and then changes her identity; Rutland (Sean Connery) hires her despite recognizing her.

3. Relying on illusion to convey realism.

spectacle itself. Playing on the tension between film as controlling the dimension of time (editing, narrative) and film as controlling the dimension of space (changes in distance, editing), cinematic codes create a gaze, a world and an object, thereby producing an illusion cut to the measure of desire. It is these cinematic codes and their relationship to formative external structures that must be broken down before mainstream film and the pleasure it provides can be challenged.

To begin with (as an ending), the voyeuristic-scopophilic look that is a crucial part of traditional filmic pleasure can itself be broken down. There are three different looks associated with cinema: that of the camera as it records the pro-filmic event, that of the audience as it watches the final product, and that of the characters at each other within the screen illusion. The conventions of narrative film deny the first two and subordinate them to the third, the conscious aim being always to eliminate intrusive camera presence and prevent a distancing awareness in the audience. Without these two absences (the material existence of the recording process, the critical reading of the spectator), fictional drama cannot achieve reality, obviousness and truth. Nevertheless, as this article has argued, the structure of looking in narrative fiction film contains a contradiction in its own premises: the female image as a castration threat constantly endangers the unity of the diegesis and bursts through the world of illusion as an intrusive, static, one-dimensional fetish. Thus the two looks materially present in time and space are obsessively subordinated to the neurotic needs of the male ego. The camera becomes the mechanism for producing an illusion of Renaissance space, flowing movements compatible with the human eye, an ideology of representation that revolves around the perception of the subject; the camera's look is disavowed in order to create a convincing world in which the spectator's surrogate can perform with verisimilitude. Simultaneously, the look of the audience is denied an intrinsic force: as soon as fetishistic representation of the female image threatens to break the spell of illusion, and the erotic image on the screen appears directly (without mediation) to the spectator, the fact of fetishisation, concealing as it does castration fear, freezes the look, fixates the spectator and prevents him from achieving any distance from the image in front of him.

This complex interaction of looks is specific to film. The first blow against the monolithic accumulation of traditional film conventions (already undertaken by radical film-makers) is to free the look of the camera into its materiality⁴ in time and space and the look of the audience into dialectics⁵ and passionate detachment. There is no doubt that this destroys the satisfaction, pleasure and privilege of the 'invisible guest', and highlights the way film has depended on voyeuristic active/passive mechanisms. Women, whose image has continually been stolen and used for this end, cannot view the decline of the traditional film form with anything much more than sentimental regret.

GAYATRI CHAKRAVORTY SPIVAK

b. 1942

Gayatri Chakravorty Spivak is an unsettling voice in literary theory and, especially, postcolonial studies. She has described herself as a “practical deconstructionist feminist Marxist” and as a “gadfly.” She uses deconstruction to examine “how truth is constructed” and to deploy the assertions of one intellectual and political position (such as Marxism) to “interrupt” or “bring into crisis” another (feminism, for example). In her work, she combines passionate denunciations of the harm done to women, non-Europeans, and the poor by the privileged West with a persistent questioning of the grounds on which radical critique takes its stand.

Her continual interrogation of assumptions can make Spivak difficult to read. But her restless critiques connect directly to her ethical aspiration for a “politics of the open end,” in which deconstruction acts as a “safeguard” against the repression or exclusion of “alterities”—that is, people, events, or ideas that are radically “other” to the dominant worldview. She writes against the “epistemic violence” done by discourses of knowledge that carve up the world and condemn to oblivion the pieces that do not easily fit. Characteristically, she does not claim to avoid such violence herself; rather, she self-consciously explores structures of violence without assuming a final, settled position.

Spivak was born in Calcutta, India, and received her B.A. from the University of Calcutta. She came to the United States and completed her M.A. and Ph.D. in English literature at Cornell University, where PAUL DE MAN was one of her mentors. She has taught at various American universities, including the University of Iowa, the University of Texas, the University of Pittsburgh, and Columbia University. Her earliest important work was her introduction to and translation of JACQUES DERRIDA's *Of Grammatology* (1977), the first of his major books to be rendered in full into English. Spivak played a key role in introducing French “theory” into North American and British literature departments between 1975 and 1982. Almost from the start, she emphasized how deconstruction's interest in the “violence” of traditional hierarchical binary oppositions (between male and female, the West and the rest, etc.) afforded a passage from literary theory to radical politics. Spivak joined feminism's interest in silenced women to a Marxist global concern with the political, economic, and cultural oppression of nonwhite people. The result was a series of highly influential essays that helped set the agenda for feminism and for postcolonial theory in the 1980s and 1990s.

“Can the Subaltern Speak?” may be Spivak's best-known essay; it is certainly her most controversial. First given as a lecture in 1983 and published in different versions in 1985 and 1988, Spivak offers a greatly expanded revision (more than one hundred pages) in her *Critique of Postcolonial Reason* (1999). Our selection offers three sections from this revised version, beginning with the sentence in which Spivak poses a central concern: “the possibility that the intellectual is complicit in the persistent constitution of the Other as the Self's shadow.” Her essay insists “on marking [critics'] positionality as investigating subjects.” Postcolonial critics, like many feminists, want to give silenced others a voice. But Spivak worries that even the most benevolent effort merely repeats the very silencing it aims to combat. After all, colonialists often thought of themselves as well-intentioned. Spivak points to the British outlawing of *sati*, the Hindu practice of burning a widow on her husband's funeral pyre. While this intervention saved some lives and may have given women a modicum of free choice, it also served to secure British power in India and to underscore the asserted difference between British “civilization” and Indian “barbarism.” Hindu culture was driven underground, written out of law, denied any legitimacy. Can today's intellectuals avoid a similar condescension when they represent the oppressed?

Spivak articulates her reasons for her worries in the first part of our selection, applying MICHEL FOUCAULT's understanding of "epistemic violence" to the "remotely orchestrated, far-flung, and heterogeneous project to constitute the colonial subject as Other." Foucault views intellectual power as functioning discursively to produce the very subject over which it then exercises mastery. Of course, no discourse succeeds in obliterating all alternative discourses. Intellectuals have frequently tried to create counterdiscourses that contest the dominant discourses, with the hope of connecting with the oppressed's own acts of resistance. Spivak sees postcolonial studies as a new instance of this attempt to liberate the other and to enable that other to experience and articulate those parts of itself that fall outside what the dominant discourse has constituted as its subjecthood. She asks whether such work can succeed. Can—with or without the intervention of well-intentioned intellectuals—the "subaltern" speak? Her blunt answer is no.

A subaltern, according to the dictionary, is a person holding a subordinate position, originally a junior officer in the British army. But Spivak draws on the term's nuances. It has particularly rich connotations for the Indian subcontinent because the Anglo-Indian writer Rudyard Kipling (1865–1936) so often viewed imperialism from the ambivalent position of the subaltern functionary in the complex colonial hierarchy, caught between detested superiors and feared "natives." The Italian Marxist theorist ANTONIO GRAMSCI later applied the term to the unorganized masses that must be politicized for the workers' revolution to succeed. In the 1980s the Subaltern Studies Group (a collective of radical historians in India with whom Spivak maintains ties) appropriated the term, focusing their attention on the disenfranchised peoples of India. The "subaltern" always stands in an ambiguous relation to power—subordinate to it but never fully consenting to its rule, never adopting the dominant point of view or vocabulary as expressive of its own identity. "One must nevertheless insist that the colonized subaltern *subject* is irretrievably heterogeneous," declares Spivak. Can this difference be articulated? And if so, by whom?

Because subalterns exist, to some extent, outside power, theorists and advocates of political transformation have consistently looked to them as a potential source of change. Marxists speak of and for the proletariat, feminists of and for oppressed women, and anticolonialists of and for third world peoples. In part, Spivak is reacting against the persistent tendency of radical political movements to romanticize the other, especially against the notion that third world peoples must lead the fight against multinational global capitalism. To assign them that role is to repeat colonialism's basic violence, which views non-Europeans as important only insofar as they follow Western scripts. Furthermore, when most of the power resides in the West, why should the least powerful of those caught up in globalization be responsible for halting its advance? Finally, Spivak points out that the suggestion that all third world peoples stand in the same relation to global capitalism and should respond to it in the same way is "essentialist."

Essentialism names the belief that certain people or entities share some essential, unchanging "nature" that secures their membership in a category. In the 1980s, essentialism was the target of much feminist criticism because activists recognized that generalizations about "woman" inevitably exclude some women. One response was "difference feminism," which stressed alliances among women across their differences and hoped to replace a solidarity based on shared essential qualities and experiences. Spivak's landmark contribution to this debate was the concept of "strategic essentialism." In some instances, she argued, it was important *strategically* to make essentialist claims, even while one retained an awareness that those claims were, at best, crude political generalizations. For example, feminists must publicize "the feminization of poverty"—the ways in which employment practices and wages, divorce law and settlements, and social policies ensure that in many societies women make up the majority of poor adults. Of course, many women are not poor, and poverty has causes other than an individual's sex, but to battle effectively against the

poverty of some women requires the strategic essentialism of highlighting the gendered nature of economic inequality.

Leftist intellectuals who romanticize the oppressed, Spivak argues, essentialize the subaltern and thus replicate the colonialist discourses they purport to critique. To replace this leftist fantasy of an untouched or essential purity lodged in a particular group, Spivak reminds us (citing Ranajit Guha, a founding member of the Subaltern Studies Group) that a person's or group's identity is relational, a function of its place in a system of differences. There is no true or pure other; instead, the other always already exists in relation to the discourse that would name it as other.

But does the differential position of otherness afford it some resources it can use to articulate its singularity, its nonidentity with power? Spivak seems doubtful; her historical and political analysis describes Western capitalism and colonialism as triumphant. The whole world is now organized economically, politically, and culturally along the lines of Western discourses. Although those discourses are not perfectly aligned, their multiplicity generally reinforces rather than undercuts the marginalization of nonwhite peoples and the dual marginalization of nonwhite women. Given this bleak picture, Spivak turns (in the second part of our selection) to SIGMUND FREUD in an effort to develop an appropriate model of intellectual work.

Freud furthers the analysis of colonialism by helping us see how the very identity of whiteness itself is created in part through the self-proclaimed benevolence of colonial action. More important, he implicitly cautions us against scapegoating or, conversely, creating saviors. Spivak's "sentence"—"White men are saving brown women from brown men"—serves to justify colonial interventions if white men are taken as saviors and brown men are scapegoated as oppressors (of brown women). A post-colonialist discourse could just as easily scapegoat white men, with the inevitable consequence of presenting either brown men or brown women as the saviors. Spivak thinks that Freud (as both a positive and a negative example, since he himself didn't always avoid scapegoating) can aid us to keep the "sentence" open, to explore the dynamics of the unfolding human relationships without foreclosing narratives by assigning determinate roles. She remains leery of any attempt to fix and celebrate the subaltern's distinctive voice by claims that the subaltern occupies the position of victim, abjected other, scapegoat, savior, and so on. The critic must remain attentive to the fluidity of possible relations and actions. Spivak's discussion of Freud is offered not "as a solution" but "in acknowledgment of these dangers" of interpreting and representing the other.

Neither Freud nor Spivak is silent. They each make various determinate claims and, Spivak says, reveal their "political interests" in those claims. As intellectuals, both are at home (although their belonging is qualified by Freud's being Jewish and Spivak's being a nonwhite woman) within the dominant discourse. The subaltern is not similarly privileged, and does not speak in a vocabulary that will get a hearing in institutional locations of power. The subaltern enters official and intellectual discourse only rarely and usually through the mediating commentary of someone more at home in those discourses. If the problematic is understood this way, it is hard to see how the subaltern can be capable of speaking.

In the third part of our selection, Spivak offers yet a further twist. She tells the story of Bhubaneswari Bhaduri's suicide not as an example of the Indian woman's inability to speak within Western discourse, but to show that Indian discourse has been so battered by the storms of (colonial) history that it, too, offers no resources for successful communication. Bhubaneswari's suicide is misunderstood by everyone, including her own family—and no one in India seems interested in Spivak's return to and reinterpretation of the event. "Unnerved by this failure of communication," Spivak wrote her "passionate lament: the subaltern cannot speak!" Fifteen years later, Spivak comments: "It was an inadvisable remark."

What scraps of comfort has Spivak unearthed in the meantime to challenge her

first, despairing conclusion? She has reminded herself that "speaking" always occurs within the nexus of actions that include listening, responding, interpreting, and qualifying. One's words can be taken up in any number of possible ways. The ongoing effects of an utterance, not its singular expression or any one response, produces its character as a speech act. Much of the point of revisionist history, of returning to scenes of domination and oppression, is to reactivate attempts at speaking that other forces tried to obliterate and keep from having effects. In revisiting Bhubaneswari's suicide, Spivak makes it speak in new ways. To deny that this retelling is a form of speaking would be to hold on to a criterion of "authenticity" that runs counter to Spivak's whole argument about identity. The historian who tries to recover the past should sketch "the itinerary of the trace" that the silenced subaltern has left, should mark the sites where the subaltern was effaced, and should delineate the discourses that did the effacing.

Spivak remains wary of all representations, even while accepting that the opening of "a line of communication" is "to be desired" and "allows us to take pride in our work without making missionary claims." On theoretic and ethical grounds, she insists that any system, any discourse, inevitably excludes something, and she will "reserve" the word *subaltern* to point toward "the sheer heterogeneity of decolonized space." She very much wants the "traces" of those exclusions to haunt us. In every utterance, she urges us to hear the faint whisper of what could not be said. And she asks us to be ready to change our current discourse for a new one that would get closer to what the old one leaves unspoken—although the new discourse will have its own silences. This attunement to the unheard is what Spivak, following the philosopher Bimal Krishna Matilal, calls "moral love."

A persistent complaint against Spivak, aside from her difficult style, is that she leaves us no place to stand. Her political pronouncements are unambiguous, but she steadfastly refuses to advocate solutions beyond an openness to the other that can appear vague, indiscriminating, and indeed theatrical. To continually dismantle one's own assumptions seems itself an act of privilege, a deconstructionist's luxury that few can afford, especially those who have to make decisions here and now (a point somewhat conceded by Spivak in her concept of "strategic essentialism"). As an antidote to complacency, however, Spivak's work is exemplary. She never lets anyone, including herself, smugly assume that he or she is on the side of the angels. Her restless probing is unsettling, but invigorating. Like the stranger whose name is "trouble," she shakes things up and gets them moving. No topic is ever quite the same or quite so easy after Spivak has come through town.

BIBLIOGRAPHY

Spivak's first book was *Myself I Must Remake: The Life and Poetry of W. B. Yeats* (1974). Her later theoretical works include *In Other Worlds: Essays in Cultural Politics* (1987), *Outside in the Teaching Machine* (1993), and *A Critique of Postcolonial Reason* (1999). *The Post-Colonial Critic: Interviews, Strategies, Dialogues*, edited by Sarah Harasym (1990), provides a useful collection of interviews with Spivak; it is perhaps the best place to begin an engagement with her work and contains some biographical information as well. *The Spivak Reader*, edited by Donna Landry and Gerald MacLean (1995), is a one-volume collection of some of Spivak's most influential essays. Spivak is the translator (and author of substantial introductions in both volumes) of Jacques Derrida's *Of Grammatology* (1977) and of the Indian woman writer Mahasweta Devi's *Imaginary Maps: Three Stories* (1995). She is the co-editor, with Ranajit Guha, of *Selected Subaltern Studies* (1988).

Substantial critical analyses of Spivak's work can be found in Robert J. Young, *White Mythologies: Writing History and Writing the West* (1990); Sangeeta Ray, "Shifting Subjects Shifting Ground: The Names and Spaces of the Postcolonial," *Hypatia* 7.2 (1992); Benita Parry, "Problems in Current Theories of Colonial Discourse," in *The Post-Colonial Studies Reader* (ed. Bill Ashcroft, Gareth Griffiths, and

Helen Tiffin, 1995); Asha Varasharajan, *Exotic Parodies: Subjectivity in Adorno, Said, and Spivak* (1995); and Bart Moore-Gilbert, *Postcolonial Theory: Contexts, Practices, Politics* (1997). A bibliography of Spivak's published work appears in *The Spivak Reader*, mentioned above.

From A Critique of Postcolonial Reason

From Chapter 3. History

[CAN THE SUBALTERN SPEAK?]

* * *

In the face of the possibility that the intellectual is complicit in the persistent constitution of the Other as the Self's shadow, a possibility of political practice for the intellectual would be to put the economic "under erasure," to see the economic factor as irreducible as it reinscribes the social text, even as it is erased, however imperfectly, when it claims to be the final determinant or the transcendental signified.¹

Until very recently, the clearest available example of such epistemic violence² was the remotely orchestrated, far-flung, and heterogeneous project to constitute the colonial subject as Other. This project is also the asymmetrical obliteration of the trace of that Other in its precarious Subject-ivity. It is well known that Foucault locates one case of epistemic violence, a complete overhaul of the epistemic, in the redefinition of madness at the end of the European eighteenth century.³ But what if that particular redefinition was only a part of the narrative of history in Europe as well as in the colonies? What if the two projects of epistemic overhaul worked as dislocated and unacknowledged parts of a vast two-handed engine? Perhaps it is no more than to ask that the subtext of the palimpsestic narrative of imperialism be recognized as "subjugated knowledge," "a whole set of knowledges that have been disqualified as inadequate to their task or insufficiently elaborated: naive knowledges, located low down on the hierarchy, beneath the required level of cognition or scientificity."⁴

This is not to describe "the way things really were" or to privilege the

1. This argument is developed further in Spivak, "Scattered Speculations on the Question of Value," in *In Other Worlds: Essays in Cultural Politics* (New York: Methuen, 1987), pp. 154–75. Once again, the *Anti-Oedipus* did not ignore the economic text, although the treatment was perhaps too allegorical. In this respect, the move from schizo- to rhyzo-analysis in *A Thousand Plateaus* was not, perhaps, salutary (Spivak's note). Some of the author's notes have been edited, and some omitted. Spivak here argues against regarding the economic as all-powerful or as negligible; instead, the economic factor has a discernible impact on society and its discourses (the "social text"). In *A Thousand Plateaus* (1980), the French philosopher GILLES DELEUZE (1925–1995) and the French psychoanalyst FÉLIX GUATTARI (1930–1992) argue for a model of knowledge patterned not on plants with roots (as is traditional) but on fungal rhizomes, which lack centralized control or structure; their earlier *Anti-Oedipus: Capitalism and Schizophre-*

nia (1972) critiques both orthodox Marxism and institutional Freudianism. Earlier in her book, Spivak faults them for ignoring sociohistorical specificities, an omission that leads them to posit an essentialized psychological "subject of desire" in place of a historically constituted subject.

2. That is, the forcible replacement of one structure of beliefs with another; the term is borrowed from the writings of the French philosopher and historian of ideas MICHEL FOUCAULT (1926–1984), who meant by *episteme* (literally, "knowledge"; Greek) the underlying structure of knowledge and beliefs during a historical period.

3. See Foucault, *Madness and Civilization: A History of Insanity in the Age of Reason*, trans. Richard Howard (New York: Pantheon, 1965), pp. 251, 262, 269 [Spivak's note].

4. Foucault, *Power/Knowledge: Selected Interviews and Other Writings, 1972–1977*, ed. Colin Gordon (New York: Pantheon, 1980), p. 82 [Spivak's note].

narrative of history as imperialism as the best version of history. It is, rather, to continue the account of how *one* explanation and narrative of reality was established as the normative one. A comparable account in the case(s) of Central and Eastern Europe is soon to be launched. To elaborate on this, let us consider for the moment and briefly the underpinnings of the British codification of Hindu Law.

Once again, I am not a South Asianist. I turn to Indian material because I have some accident-of-birth facility there.

Here, then, is a schematic summary of the epistemic violence of the codification of Hindu Law. If it clarifies the notion of epistemic violence, my final discussion of widow-sacrifice⁵ may gain added significance.

At the end of the eighteenth century, Hindu Law, insofar as it can be described as a unitary system, operated in terms of four texts that “staged” a four-part episteme defined by the subject’s use of memory: *sruti* (the heard), *smṛiti* (the remembered), *sāstra* (the calculus), and *vyavahāra* (the performance). The origins of what had been heard and what was remembered were not necessarily continuous or identical. Every invocation of *sruti* technically recited (or reopened) the event of originary “hearing” or revelation. The second two texts—the learned and the performed—were seen as dialectically continuous. Legal theorists and practitioners were not in any given case certain if this structure described the body of law or four ways of settling a dispute. The legitimation, through a binary vision, of the polymorphous structure of legal performance, “internally” noncoherent and open at both ends, is the narrative of codification I offer as an example of epistemic violence.⁶

Consider the often-quoted programmatic lines from Macaulay’s infamous “Minute on Indian Education” (1835):

We must at present do our best to form a class who may be interpreters between us and the millions whom we govern; a class of persons, Indian in blood and colour, but English in taste, in opinions, in morals, and in intellect. To that class we may leave it to refine the vernacular dialects of the country, to enrich those dialects with terms of science borrowed from the Western nomenclature, and to render them by degrees fit vehicles for conveying knowledge to the great mass of the population.⁷

The education of colonial subjects complements their production in law. One effect of establishing a version of the British system was the development of an uneasy separation between disciplinary formation in Sanskrit studies and the native, now alternative, tradition of Sanskrit “high culture.” In the first section, I have suggested that within the former, the cultural explanations generated by authoritative scholars matched the epistemic violence of the legal project.⁸

Those authorities would be *the very best* of the sources for the nonspecialist

5. Suttee (from the Hindu *sati*, literally “devoted woman”), the Hindu custom of a widow’s being cremated on the funeral pyre of her husband.

6. That is, the British Empire’s imposition of “binary vision” in place of the existing set of beliefs, the “polymorphous” Hindu Law.

7. Thomas Babington Macaulay, “Minute on Indian Education,” in *Selected Writings*, ed. John

Clive and Thomas Pinney (Chicago: University of Chicago Press, 1972), p. 249 [Spivak’s note]. Macaulay (1800–1859), English historian and statesman.

8. In suggesting that the organization and production of knowledge within academic disciplines acts with and reinforces more overtly political and legal accumulations of power, Spivak follows Foucault.

French intellectual's entry into the civilization of the Other.⁹ I am, however, not referring to intellectuals and scholars of colonial production, like Shastri,¹ when I say that the Other as Subject is inaccessible to Foucault and Deleuze. I am thinking of the general nonspecialist, nonacademic population across the class spectrum, for whom the episteme operates its silent programming function. Without considering the map of exploitation,² on what grid of "oppression" would they place this motley crew?

Let us now move to consider the margins (one can just as well say the silent, silenced center) of the circuit marked out by this epistemic violence, men and women among the illiterate peasantry, Aboriginals, and the lowest strata of the urban subproletariat. According to Foucault and Deleuze (in the First World,³ under the standardization and regimentation of socialized capital, though they do not seem to recognize this) and *mutatis mutandis* the metropolitan⁴ "third world feminist" only interested in resistance within capital logic, the oppressed, if given the chance (the problem of representation cannot be bypassed here), and on the way to solidarity through alliance politics (a Marxist thematic is at work here) *can speak and know their conditions*. We must now confront the following question: On the other side of the international division of labor from socialized capital, inside *and* outside the circuit of the epistemic violence of imperialist law and education supplementing an earlier economic text, *can the subaltern speak?*

We have already considered the possibility that, given the exigencies of the inauguration of colonial records, the instrumental woman (the Rani of Sirmur) is not fully written.⁵

Antonio Gramsci's⁶ work on the "subaltern classes" extends the class-position/class-consciousness argument isolated in *The Eighteenth Brumaire*.⁷ Perhaps because Gramsci criticizes the vanguardistic position of the Leninist intellectual,⁸ he is concerned with the intellectual's rôle in the subaltern's cultural and political movement into the hegemony. This movement

9. I have discussed this issue in greater detail with reference to Julia Kristeva's *About Chinese Women*, trans. Anita Barrows (New York: Urizen, 1977), in "French Feminism in an International Frame," in *In Other Worlds*, pp. 136-41 [Spivak's note]. KRISTEVA (b. 1941), Bulgarian-born French philosopher and psychoanalyst.

1. Mahamahopadhyaya Shastri (active 1920s), described by Spivak earlier in the chapter as a "learned Indianist, [and] brilliant representative of the indigenous elite within colonial production."

2. That is, the map of the colonized non-Western world, a map absent from Western thought.

3. The highly industrialized (largely Western) nations in a global economy, which dominate the "underdeveloped" countries of the "third world," many of which are former colonies.

4. Of or pertaining to the "mother country," as distinguished from its colony.

5. In an earlier chapter, Spivak discusses at length how the British in 1815 prevented the widowsuicide of the widow of the deposed leader of the province of Sirmur, arguing that their intervention was based on a misunderstanding of Hindu practice, served the British's administrative needs in Sirmur, was conducted with an almost parodic British reverence for "legality," and completely

obscured the Rani's motives and wishes.

6. Italian Marxist (1891-1937; see above), best-known for his notions of "cultural hegemony" (the manufactured consent that legitimates a dominant group and unifies a society) and the "organic intellectual" (someone, regardless of profession, who directs the ideas and aspirations of the particular social class to which he or she "organically" belongs). In his *Prison Notebooks* (published 1948-51), he applies the word *subaltern* to the proletariat.

7. *The Eighteenth Brumaire of Louis Napoleon* (1852), an analysis by the German social, economic, and political theorist KARL MARX (1818-1883) of the dictatorship (later emperorship) declared by President Louis Bonaparte of France in 1851. Spivak argued earlier in her text that Marx explores the "gap" between "class-position" (a group's location in the economic relations of production) and "class-consciousness" (a group's ability to represent to itself the interests that stem from its class position).

8. That is, the position of the Russian revolutionary V. I. Lenin (1870-1924), contrary to Marx's own theory, that the proletarian revolution must be led by a vanguard (i.e., the Bolsheviks).

must be made to determine the production of history as narrative (of truth).⁹ In texts such as *The Southern Question*, Gramsci considers the movement of historical-political economy in Italy within what can be seen as an allegory of reading taken from or prefiguring an international division of labor.¹ Yet an account of the phased development of the subaltern is thrown out of joint when his cultural macrology² is operated, however remotely, by the epistemic interference with legal and disciplinary definitions accompanying the imperialist project. When I move, at the end of this essay, to the question of woman as subaltern, I will suggest that the possibility of collectivity itself is persistently foreclosed through the manipulation of female agency.³

The first part of my proposition—that the phased development of the subaltern is complicated by the imperialist project—is confronted by the “Subaltern Studies” group.⁴ They *must* ask, Can the subaltern speak? Here we are within Foucault’s own discipline of history and with people who acknowledge his influence. Their project is to rethink Indian colonial historiography from the perspective of the discontinuous chain of peasant insurgencies during the colonial occupation. This is indeed the problem of “the permission to narrate” discussed by Said.⁵ As Ranajit Guha, the founding editor of the collective, argues,

The historiography of Indian nationalism has for a long time been dominated by elitism—colonialist elitism and bourgeois-nationalist elitism . . . shar[ing] the prejudice that the making of the Indian nation and the development of the consciousness—nationalism—which confirmed this process were exclusively or predominantly elite achievements. In the colonialist and neo-colonialist historiographies these achievements are credited to British colonial rulers, administrators, policies, institutions, and culture; in the nationalist and neo-nationalist writings—to Indian elite personalities, institutions, activities and ideas.⁶

Certain members of the Indian elite are of course native informants for first-world intellectuals interested in the voice of the Other. But one must nevertheless insist that the colonized subaltern *subject* is irretrievably heterogeneous.

Against the indigenous elite we may set what Guha calls “the *politics* of the people,” both outside (“this was an *autonomous* domain, for it neither originated from elite politics nor did its existence depend on the latter”) and inside (“it continued to operate vigorously in spite of [colonialism], adjusting itself to the conditions prevailing under the Raj⁷ and in many respects developing entirely new strains in both form and content”) the circuit of colonial

9. That is, a way of seeing the world shared by those individuals won over to the hegemonic view.

1. Antonio Gramsci, *The Southern Question*, trans. Pasquale Verdichio (West Lafayette, Ind.: Bordighera, 1995) [Spivak’s note].

2. Prolonged discourse.

3. That is, by colonial and postcolonial economic and political arrangements that place women and men at odds with one another.

4. A group of radical historians in India—in particular, the editorial collective of the annual pub-

lication *Subaltern Studies* (founded in 1982)—who worked to recover the struggles of the poor independent of elite nationalism and to reconstruct peasant consciousness.

5. Edward W. Said, “Permission to Narrate,” *London Review of Books*, February 16, 1984 [Spivak’s note]. SAID (b. 1935), Palestinian-born American theorist of postcolonialism and political activist.

6. Ranajit Guha, *Subaltern Studies* 1 (1982): 1 [Spivak’s note].

7. British colonial rule in India.

production. I cannot entirely endorse this insistence of determinate vigor and full autonomy, for practical historiographic exigencies will not allow such endorsements to privilege subaltern consciousness. Against the possible charge that his approach is essentialist, Guha constructs a definition of the people (the place of that essence) that can be only an identity-in-differential. He proposes a dynamic stratification grid describing colonial social production at large. Even the third group on the list, the buffer group, as it were, between the people and the great macro-structural dominant groups, is itself defined as a place of in-betweenness. The classification falls into: "dominant foreign groups," and "dominant indigenous groups at the all-India and at the regional and local levels" representing the elite; and "[t]he social groups and elements included in [the terms "people" and "subaltern classes"] represent[ing] *the demographic difference between the total Indian population and all those whom we have described as the "elite."*"

"The task of research" projected here is "to investigate, identify and measure the *specific* nature and degree of the *deviation* of [the] elements [constituting item 3] from the ideal and situate it historically." "Investigate, identify, and measure the specific": a program could hardly be more essentialist and taxonomic. Yet a curious methodological imperative is at work. I have argued that, in the Foucault-Deleuze conversation, a post-representationalist vocabulary⁹ hides an essentialist agenda. In subaltern studies, because of the violence of imperialist epistemic, social, and disciplinary inscription, a project understood in essentialist terms¹ must traffic in a radical textual practice of differences. The object of the group's investigation, in this case not even of the people as such but of the floating buffer zone of the regional elite—is a *deviation* from an *ideal*—the people or subaltern—which is itself defined as a difference from the elite. It is toward this structure that the research is oriented, a predicament rather different from the self-diagnosed transparency of the first-world radical intellectual. What taxonomy can fix such a space? Whether or not they themselves perceive it—in fact Guha sees his definition of "the people" within the master-slave dialectic²—their text articulates the difficult task of rewriting its own conditions of impossibility as the conditions of its possibility. "At the regional and local levels [the dominant indigenous groups] . . . if belonging to social strata hierarchically inferior to those of the dominant all-Indian groups *acted in the interests of the latter and not in conformity to interests corresponding truly to their own social being.*"³ When these writers speak, in their essentializing language, of a gap between interest and action in the intermediate group, their conclusions are closer to Marx than to the self-conscious naivete of Deleuze's pronouncement on the issue. Guha, like Marx, speaks of interest in terms of the social rather than the libidinal being. The Name-of-the-Father imagery in *The Eighteenth Brumaire* can help to emphasize that, on the level of class or group

8. Guha, pp. 4, 8 [Spivak's note].

9. That is, a vocabulary that champions difference and the undecidable.

1. In terms of a search for the "true" or "essential" voice of Indian resistance to the British.

2. As set forth by the German philosopher GEORG WILHELM FRIEDRICH HEGEL in *Phenomenology of*

Spirit (1807; see above): he tells of two self-consciousnesses that confront each other and fight for mutual recognition. One wins the battle and the other loses, but each gets recognition and thereby identifies him- or herself through the eyes of the other.

3. Guha, 1 [Spivak's note].

action, "true correspondence to own being" is as artificial or social as the patronymic.⁴

It is to this intermediate group that the second woman in this chapter belongs.⁵ The pattern of domination is here determined mainly by gender rather than class. The subordinated gender following the dominant within the challenge of nationalism while remaining caught within gender oppression is not an unknown story.

For the (gender-unspecified) "true" subaltern group, whose identity is its difference, there is no unrepresentable subaltern subject that can know and speak itself; the intellectual's solution is not to abstain from representation. The problem is that the subject's itinerary⁶ has not been left traced so as to offer an object of seduction to the representing intellectual. In the slightly dated language of the Indian group, the question becomes, How can we touch the consciousness of the people, even as we investigate their politics? With what voice-consciousness can the subaltern speak?

My question about how to earn the "secret encounter" with the contemporary hill women of Sirmur⁷ is a practical version of this. The woman of whom I will speak in this section was not a "true" subaltern, but a metropolitan middle-class girl. Further, the effort she made to write or speak her body was in the accents of accountable reason, the instrument of self-conscious responsibility. Still her Speech Act⁸ was refused. She was made to unspeak herself posthumously, by other women. In an earlier version of this chapter, I had summarized this historical indifference and its results as: the subaltern cannot speak.

The critique by Ajit K. Chaudhury, a West Bengali Marxist, of Guha's search for the subaltern consciousness can be taken as representative of a moment of the production process that includes the subaltern.⁹ Chaudhury's perception that the Marxist view of the transformation of consciousness involves the knowledge of social relations seems, in principle, astute. Yet the heritage of the positivist ideology¹ that has appropriated orthodox Marxism obliges him to add this rider: "This is not to belittle the importance of understanding peasants' consciousness or workers' consciousness *in its pure form*. This enriches our knowledge of the peasant and the worker and, possibly, throws light on how a particular mode takes on different forms in different regions, *which is considered a problem of second order importance in classical Marxism.*"²

This variety of "internationalist Marxism," which believes in a pure, retrievable form of consciousness only to dismiss it, thus closing off what

4. That is, the Name-of-the-Father, a term used by the French psychoanalyst JACQUES LACAN (1901–1981) to refer to the father in the Symbolic realm (not a biological entity), which marks the child's entrance into language-based experience.

5. Bhunaneswari Bhaduri, discussed later in this section.

6. That is, the history of its constitution as a subject—and hence the erasure of its heterogeneity—by epistemically violent discourses.

7. That is, the contemporary equivalents of the Rani of Sirmur.

8. An allusion to the speech act theory of the English philosopher J. L. AUSTIN (1911–1960), who considered all the actions typically performed in speaking (here the reverse is suggested: an

action serves as an utterance).

9. Since then, in the disciplinary fallout after the serious electoral and terrorist augmentation of Hindu nationalism in India, more alarming charges have been leveled at the group. See Aijaz Ahmad, *In Theory: Classes, Nations, Literature* (London: Verso, 1992), pp. 68, 194, 207–11; and Sumit Sarkar, "The Fascism of the Sangh Parivar," *Economic and Political Weekly*, January 30, 1993, pp. 163–67 [Spivak's note].

1. The sociopolitical program that takes knowledge and meaning to derive solely from what can be empirically observed.

2. Ajit K. Chaudhury, "New Wave Social Science," *Frontier* 16.24 (January 28, 1984), p. 10. Emphasis mine [Spivak's note].

in Marx remain moments of productive bafflement, can at once be the occasion for Foucault's and Deleuze's rejection of Marxism *and* the source of the critical motivation of the subaltern studies groups. All three are united in the assumption that there is a pure form of consciousness. On the French scene, there is a shuffling of signifiers: "the unconscious" or "the subject-in-oppression" clandestinely fills the space of "the pure form of consciousness." In orthodox "internationalist" intellectual Marxism, whether in the First World or the Third, the pure form of consciousness remains, paradoxically, a material effect, and therefore a second-order problem. This often earns it the reputation of racism and sexism. In the subaltern studies group it needs development according to the unacknowledged terms of its own articulation.

Within the effaced itinerary of the subaltern subject, the track of sexual difference is doubly effaced.³ The question is not of female participation in insurgency, or the ground rules of the sexual division of labor, for both of which there is "evidence." It is, rather, that, both as object of colonialist historiography and as subject of insurgency, the ideological construction of gender keeps the male dominant. If, in the contest of colonial production, the subaltern has no history and cannot speak, the subaltern as female is even more deeply in shadow.

In the first part of this chapter we meditate upon an elusive female figure called into the service of colonialism. In the last part we will look at a comparable figure in anti-colonialist nationalism. The regulative psychobiography of widow self-immolation will be pertinent in both cases. In the interest of the invaginated spaces⁴ of this book, let us remind ourselves of the gradual emergence of the new subaltern in the New World Order.⁵

* * *

I am generally sympathetic with the call to make U.S. feminism more "theoretical." It seems, however, that the problem of the muted subject of the subaltern woman, though not solved by an "essentialist" search for lost origins, cannot be served by the call for more theory in Anglo-America either.

That call is often given in the name of a critique of "positivism," which is seen here as identical with "essentialism." Yet Hegel, the modern inaugurator of "the work of the negative," was not a stranger to the notion of essences. For Marx, the curious persistence of essentialism within the dialectic was a profound and productive problem. Thus, the stringent binary opposition between positivism / essentialism (read, U.S.) and "theory" (read, French or Franco-German via Anglo-American) may be spurious. Apart from repressing the ambiguous complicity between essentialism and critiques of positivism (acknowledged by Derrida in "Of Grammatology as a Positive Science"⁶), it also errs by implying that positivism is not a theory. This move allows the emergence of a proper name, a positive essence, Theory. And once again,

3. I do not believe that the recent trend of romanticizing anything written by the Aboriginal or outcaste intellectual has lifted the effacement [Spivak's note].

4. An allusion to the *écriture féminine* (feminine writing) championed by the French feminist HÉLÈNE CIXOUS (b. 1937) and a description of Spivak's method, which folds together various arguments rather than laying them out in a linear

progression.

5. A phrase coined by George Bush (b. 1924; 41st U.S. president, 1989–93) to describe what was needed after the collapse of communism in Eastern Europe to replace East-West cold war rivalries.

6. A section of *Of Grammatology* (1967; trans. 1977 by Spivak), by the French deconstructive philosopher JACQUES DERRIDA (b. 1930).

the position of the investigator remains unquestioned. If and when this territorial debate turns toward the Third World, no change in the question of method is to be discerned. This debate cannot take into account that, in the case of the woman as subaltern, rather few ingredients for the constitution of the itinerary of the trace of a sexed subject (rather than an anthropological object) can be gathered to locate the possibility of dissemination.⁷

Yet I remain generally sympathetic to aligning feminism with the critique of positivism and the defetishization of the concrete. I am also far from averse to learning from the work of Western theorists, though I have learned to insist on marking their positionality as investigating subjects. Given these conditions, and as a literary critic, I tactically confronted the immense problem of the consciousness of the woman as subaltern. I reinvented the problem in a sentence and transformed it into the object of a simple semiosis.⁸ What can such a transformation mean?

This gesture of transformation marks the fact that knowledge of the other subject is theoretically impossible. Empirical work in the discipline constantly performs this transformation tacitly. It is a transformation from a first-second person performance to the constation in the third person.⁹ It is, in other words, at once a gesture of control and an acknowledgement of limits. Freud provides a homology¹ for such positional hazards.

Sarah Kofman has suggested that the deep ambiguity of Freud's use of women as a scapegoat may be read as a reaction-formation to an initial and continuing desire to give the hysteric a voice, to transform her into the *subject* of hysteria.² The masculine-imperialist ideological formation that shaped that desire into "the daughter's seduction"³ is part of the same formation that constructs the monolithic "third-world woman." No contemporary metropolitan investigator is not influenced by that formation. Part of our "unlearning" project is to articulate our participation in that formation—by *measuring* silences, if necessary—into the *object* of investigation. Thus, when confronted with the questions, Can the subaltern speak? and Can the subaltern (as woman) speak? our efforts to give the subaltern a voice in history will be doubly open to the dangers run by Freud's discourse. It is in acknowledgment of these dangers rather than as solution to a problem that I put together the sentence "White men are saving brown women from brown men," a sentence that runs like a red thread through today's "gender and development." My impulse is not unlike the one to be encountered in Freud's investigation of the sentence "A child is being beaten."⁴

7. An allusion to Derrida, one of whose important works is titled *Dissemination* (1972).

8. Process of meaning making, of producing signs. The "sentence," given below, is "White men are saving brown women from brown men."

9. In speech act theory, an utterance that describes a condition, fact, or state of affairs; in contrast, a performative utterance does something (e.g., saying, "I promise to . . ." makes a promise). By writing in the 3d person, Western scholars hide the performative nature of their work, which creates a particular way of seeing the "facts."

1. An example of similarity in structure due to similar development; like the scholars, the psychoanalyst SIGMUND FREUD (1856–1939) turned the performatives of his own 1st-person claims and his

patients' appropriated 2d-person accounts into 3d-personal "empirical" statements of scientific "fact."

2. Sarah Kofman, *The Enigma of Woman: Woman in Freud's Writings*, trans. Catherine Porter (Ithaca, N.Y.: Cornell University Press, 1985) [Spivak's note].

3. A reference both to Freud's work on female hysteria (viewed as a symptom of frustrated sexual desire for a male authority figure) and to *The Daughter's Seduction* (1982), a book by Jane Gallop that describes feminist appropriations of Freud.

4. Freud, "'A Child Is Being Beaten': A Contribution to the Study of the Origin of Sexual Perversion," in *The Standard Edition of the Complete Psychological Works of Sigmund Freud*, ed. James

The use of Freud here does not imply an isomorphic analogy between subject-formation and the behavior of social collectives, a frequent practice, often accompanied by a reference to Reich,⁵ in the conversation between Deleuze and Foucault. I am, in other words, not suggesting that "White men are saving brown women from brown men" is a sentence indicating a *collective* fantasy symptomatic of a *collective* itinerary of sadomasochistic repression in a *collective* imperialist enterprise. There is a satisfying symmetry in such an allegory, but I would rather invite the reader to consider it a problem in "wild psychoanalysis" than a clinching solution.⁶ Just as Freud's insistence on making the woman the scapegoat in "A child is being beaten" and elsewhere discloses his political interests, however imperfectly, so my insistence on imperialist subject-production as the occasion for this sentence discloses a politics that I cannot step around.

* * *

A young woman of sixteen or seventeen, Bhubaneswari Bhaduri, hanged herself in her father's modest apartment in North Calcutta in 1926. The suicide was a puzzle since, as Bhubaneswari was menstruating at the time, it was clearly not a case of illicit pregnancy. Nearly a decade later, it was discovered, in a letter she had left for her elder sister, that she was a member of one of the many groups involved in the armed struggle for Indian independence. She had been entrusted with a political assassination. Unable to confront the task and yet aware of the practical need for trust, she killed herself.

Bhubaneswari had known that her death would be diagnosed as the outcome of illegitimate passion. She had therefore waited for the onset of menstruation. While waiting, Bhubaneswari, the *brahmacārini*⁷ who was no doubt looking forward to good wifehood, perhaps rewrote the social text of *sati*-suicide in an interventionist way. (One tentative explanation of her inexplicable act had been a possible melancholia brought on by her father's death and her brother-in-law's repeated taunts that she was too old to be not-yet-a-wife.) She generalized the sanctioned motive for female suicide by taking immense trouble to displace (not merely deny), in the physiological inscription of her body, its imprisonment within legitimate passion by a single male. In the immediate context, her act became absurd, a case of delirium rather than sanity. The displacing gesture—waiting for menstruation—is at first a reversal of the interdict against a menstruating widow's right to immolate herself; the unclean widow must wait, publicly, until the cleansing bath of the fourth day, when she is no longer menstruating, in order to claim her dubious privilege.

In this reading, Bhubaneswari Bhaduri's suicide is an unemphatic, ad hoc,

Strachey, 24 vols. (London: Hogarth, 1953–74), 17:175–204. For a list of ways in which Western criticism constructs "third world women," see Chandra Talpade Mohanty, "Under Western Eyes: Feminist Scholarship and Colonial Discourses," in *Third World Women and the Politics of Feminism*, ed. Mohanty et al. (Bloomington: Indiana University Press, 1991), pp. 51–80 [Spivak's note].

5. Wilhelm Reich (1897–1957), Austrian psychoanalyst whose *Mass Psychology of Fascism* (1933) exemplifies a radical attempt to psychoanalyze a

whole society.

6. Freud, "Wild' Psycho-Analysis," in *Standard Edition*, 11:221–27. A good deal of psychoanalytic social critique would fit this description [Spivak's note]. Freud warns against "wild" psychoanalysis that jumps to conclusions without the slow accumulation of information and the relationship between patient and therapist necessary for psychoanalytic treatment.

7. Female member of the Brahmin (upper) caste (Hindi).

subaltern rewriting of the social text of *sati*-suicide as much as the hegemonic account of the blazing, fighting, familial Durga.⁸ The emergent dissenting possibilities of that hegemonic account of the fighting mother are well documented and popularly well remembered through the discourse of the male leaders and participants in the Independence movement. The subaltern as female cannot be heard or read.

I know of Bhubaneswari's life and death through family connections. Before investigating them more thoroughly, I asked a Bengali woman, a philosopher and Sanskritist whose early intellectual production is almost identical to mine, to start the process. Two responses: (a) Why, when her two sisters, Saileswari and Raseswari, led such full and wonderful lives, are you interested in the hapless Bhubaneswari? (b) I asked her nieces. It appears that it was a case of illicit love.

I was so unnerved by this failure of communication that, in the first version of this text, I wrote, in the accents of passionate lament: the subaltern cannot speak! It was an inadvisable remark.

In the intervening years between the publication of the second part of this chapter in essay form and this revision, I have profited greatly from the many published responses to it. I will refer to two of them here: "Can the Subaltern Vote?" and "Silencing Sycorax."⁹

As I have been insisting, Bhubaneswari Bhaduri was not a "true" subaltern. She was a woman of the middle class, with access, however clandestine, to the bourgeois movement for Independence. Indeed the Rani of Sirmur, with her claim to elevated birth, was not a subaltern at all. Part of what I seem to have argued in this chapter is that woman's interception of the claim to subalternity can be staked out across strict lines of definition by virtue of their muting by heterogeneous circumstances. Gulari¹ cannot speak to us because indigenous patriarchal "history" would only keep a record of her funeral and colonial history only needed her as an incidental instrument. Bhubaneswari attempted to "speak" by turning her body into a text of woman/writing. The immediate passion of my declaration "the subaltern cannot speak," came from the despair that, in her own family, among women, in no more than fifty years, her attempt had failed. I am not laying the blame for the muting on the *colonial* authorities here, as Busia seems to think: "Gayatri Spivak's 'Can the Subaltern Speak?'"—section 4 of which is a compelling explication of this role of disappearing in the case of Indian women in British legal history.²

I am pointing, rather, at her silencing by her own more emancipated granddaughters: a new mainstream. To this can be added two newer groups: one, the liberal multiculturalist metropolitan academy, Susan Barton's³ great-granddaughters; as follows:

8. In Hindu mythology and religion, one of the many forms of Devi (the divine mother goddess). She is a warrior, often represented with 8 or 10 arms; each hand holds the special weapon of the other gods.

9. Leerom Medovoi et al., "Can the Subaltern Vote?" *Socialist Review* 20.3 (July–September 1990): 133–49; and Abena Busia, "Silencing Sycorax: On African Colonial Discourse and the Unvoiced Female," *Cultural Critique*, no. 14 (win-

ter 1989–90): 81–104 [Spivak's note]. Spivak's original essay was "Can the Subaltern Speak?" in *Marxism and the Interpretation of Culture*, ed. Cary Nelson and Lawrence Grossberg (Urbana: University of Illinois Press, 1988), pp. 271–313.

1. The family name of the Rani of Sirmur.

2. Busia, "Silencing Sycorax," p. 102 [Spivak's note].

3. The daughter whose mother refuses to acknowledge her as her own in Daniel Defoe's

As I have been saying all along, I think it is important to acknowledge our complicity in the muting, in order precisely to be more effective in the long run. Our work cannot succeed if we always have a scapegoat. The post-colonial migrant investigator is touched by the colonial social formations. Busia strikes a positive note for further work when she points out that, after all, I am able to read Bhubaneswari's case, and therefore she *has* spoken in some way. Busia is right, of course. All speaking, even seemingly the most immediate, entails a distanced decipherment by another, which is, at best, an interception. That is what speaking is.

I acknowledge this theoretical point, and also acknowledge the practical importance, for oneself and others, of being upbeat about future work. Yet the moot decipherment by another in an academic institution (willy-nilly a knowledge-production factory) many years later must not be too quickly identified with the "speaking" of the subaltern. It is not a mere tautology to say that the colonial or postcolonial subaltern is defined as the being on the other side of difference, or an epistemic fracture, even from other groupings among the colonized. What is at stake when we insist that the subaltern speaks?

In "Can the Subaltern Vote?" the three authors apply the question of stakes to "political speaking." This seems to me to be a fruitful way of extending my reading of subaltern speech into a collective arena. Access to "citizenship" (civil society) by becoming a voter (in the nation) is indeed the symbolic circuit of the mobilizing of subalternity into hegemony. This terrain, ever negotiating between national liberation and globalization, allows for examining the casting of the vote itself as a performative convention given as constative "speech" of the subaltern subject. It is part of my current concerns to see how this set is manipulated to legitimize globalization; but it is beyond the scope of this book. Here let us remain confined to the field of academic prose, and advance three points:

1. Simply by being postcolonial or the member of an ethnic minority, we are not "subaltern." That word is reserved for the sheer heterogeneity of decolonized space.
2. When a line of communication is established between a member of subaltern groups and the circuits of citizenship or institutionality, the subaltern has been inserted into the long road to hegemony. Unless we want to be romantic purists or primitivists about "preserving subalternity"—a contradiction in terms—this is absolutely to be desired. (It goes without saying that museumized or curricularized access to ethnic origin—another battle that must be fought—is not identical with preserving subalternity.) Remembering this allows us to take pride in our work without making missionary claims.
3. This trace-structure (effacement in disclosure) surfaces as the tragic emotions of the political activist, springing not out of superficial utopianism, but out of the depths of what Bimal Krishna Matilal has called "moral

novel *Roxana: The Fortunate Mistress* (1724). The South African writer J. M. Coetzee uses Susan Barton as the narrator for much (but not all) of his retelling of the Robinson Crusoe story in his novel

Foe (1987), a retelling that Spivak discusses at length in chapter 2 of *A Critique of Postcolonial Reason*.

love." Mahasweta Devi,⁴ herself an indefatigable activist, documents this emotion with exquisite care in "Pterodactyl, Puran Sahay, and Pirtha."

And finally, the third group: Bhubaneswari's elder sister's eldest daughter's eldest daughter's eldest daughter is a new U.S. immigrant and was recently promoted to an executive position in a U.S.-based transnational. She will be helpful in the emerging South Asian market precisely because she is a well-placed Southern diasporic.

For Europe, the time when the new capitalism *definitely* superseded the old can be established with fair precision: it was the beginning of the twentieth century . . . [With t]he boom at the end of the nineteenth century and the crisis of 1900-03 . . . [c]artels become one of the foundations of the whole of economic life. Capitalism has been transformed into imperialism.⁵

Today's program of global financialization carries on that relay. Bhubaneswari had fought for national liberation. Her great-grandniece works for the New Empire. This too is a historical silencing of the subaltern. When the news of this young woman's promotion was broadcast in the family amidst general jubilation I could not help remarking to the eldest surviving female member: "Bhubaneswari"—her nickname had been Talu—"hanged herself in vain," but not too loudly. Is it any wonder that this young woman is a staunch multiculturalist, believes in natural childbirth, and wears only cotton?

1983

GLORIA ANZALDÚA

b. 1942

Mexican American writer and activist Gloria Anzaldúa self-consciously embodies the longings, critical consciousness, and contradictions of so-called identity politics. She both speaks from her perspective as a lesbian Mexican American *and* belies any simple categorization of individuals through their ethnic origins or sexual orientation. We are all mixtures, she insists, and she calls for a new *mestiza* (mixed or hybrid) consciousness to replace "the policy of racial purity that white America practices." Her work simultaneously celebrates and explores the difficulties of multicultural identity.

Anzaldúa comes from a seventh-generation Mexican American family that settled in the Rio Grande Valley in southern Texas. After her father died when she was fifteen, she worked as a farm laborer for a time to help support her family. The only member of her family with any education beyond high school, she received her B.A. from Pan-American University in 1969 and an M.A. in English and education from the University of Texas at Austin in 1972. After teaching at a high school for migrant

workers in Indiana, Anzaldúa returned to Texas to pursue a Ph.D. in comparative literature, but quit when she met resistance to her desire to focus on Chicano (Mexican American) studies. She subsequently did additional graduate work at the University of California at Santa Cruz while teaching at both San Francisco State University and Santa Cruz, where she once again found herself at odds with academic proprieties. Apart from occasional visiting positions at universities, she now devotes herself primarily to writing and social activism. She has received a National Endowment for the Arts Fiction Award as well as the 1991 Lesbian Rights Award.

Anzaldúa's work is important—and has been widely read and taught—not only because she effectively articulates the radical understandings and aspirations of the ethnic, feminist, and gay liberation movements born in the late 1960s and early 1970s, but also because she faces the ambivalences and contradictions of these movements. For literary studies, the most obvious result of such liberation efforts (often referred to as “the new social movements”) has been the overt politicization of teaching and criticism. To the bafflement of many and the outrage of some, reading lists and teaching methods in literature classes have been opened to political scrutiny. A formerly vague and innocuous idea—culture—is now a battleground. At stake is “identity”—especially the relative status accorded different identities within a multi-ethnic society. The new social movements demand not just equal rights and economic opportunity but also respect and recognition. They aim at affirming racial, sexual, and class identities in all their difference from prevailing norms. Anzaldúa's writings speak to this call for affirmation and acknowledgement.

The political energies of the new social movements interacted with developments in literary studies in three especially salient ways. First, the new interest in different identities within American culture arose at the same time that French poststructuralism arrived in literature departments. Although distinct from the “multiculturalist” emphasis on inter- and intracultural differences, the poststructuralist concept of “difference” (especially in the work of JACQUES DERRIDA) provided a favorable theoretical environment for exploring the heterogeneity of identity. In particular, the poststructuralist questioning of boundaries and of the integrity of defined entities encouraged the interest in mixed, hybrid identities found in ethnic theory like Anzaldúa's.

The second conjunction of the new social movements with developments in literary studies centered around the term *voice*. Mid-twentieth-century New Criticism tried to sever the content expressed in literary works from the intention and voice of the author through an insistence on the “intentional fallacy” (see WILLIAM K. WIMSATT JR. AND MONROE C. BEARDSLEY), which states that the narrator in a novel or the speaker in a lyric poem is always a mask, a “persona,” never the author. With the increasing interest of the 1960s in the personal (culminating in feminism's declaration that “the personal is political”) and the growing desire to recover lost and oppressed “voices” in American history, the new social movements stressed the voices of testimony and experience at the exact time when literary critics were striving to reconnect literary expressions to their authors. “Recovery work,” which resurrected neglected or forgotten works by nonwhite, nonmale, and nonheterosexual authors, was combined with a new valuing of narratives of personal experience in both historical and contemporary texts. Anzaldúa's text, in our selection taken from her book *Borderlands/ La Frontera* (1987), mixes cultural analysis with history, private memories, poems, and politics, demonstrating the stylistic possibilities opened up by the new interest in personal voice. Furthermore, her preoccupation with the difficulties faced by writers who use the “master's tongue” (in her case, English) resonates with similar concerns in postcolonial theory. Anzaldúa wants to combat the suppression of Spanish in America by creating a space for Spanish voices within American literature and culture, but she also recognizes that she must use English to reach the widest possible audience. So her literary voice mixes languages as well as genres.

Third, and finally, the dual focus of the new social movements on “identity” and

"culture" coincides with the general shift in literary studies after 1965 from text to context, a movement partly reflected in the broad (and often loosely used) term "cultural studies." The literary work is studied as a product or symptom of its culture or of its author's identity and not as a self-enclosed unit of purely aesthetic elements. In addition, the writing and reading (interpreting) of literary texts are understood as dynamic processes through which identities and cultures are produced, reproduced, maintained, and transformed. Cultural representations are the very stuff of which identities are made, and literature is one crucial arena in which that making is done. As Anzaldúa puts it, "culture" is a "story to explain the world and our participation in it, a . . . value system with images and symbols to connect us to each other and to the planets." She sees her cultural work as the production of a "new" culture, a new story with new images.

Cultural representations, such as the stereotypes that undergird contempt for others who are different, can hurt. They are powerful in every sense of that word, coming to us invested with authority and upheld by the social institutions that promulgate them. Those representations, those images, occupy us; they are ours, they are us. That's what it means to be immersed in a culture. For that reason, Anzaldúa insists that the primary political work is "inner." "The struggle," she writes, "has always been inner, and is played out in outer terrains. Awareness of our situation must come before inner changes, which in turn come before changes in society. Nothing happens in the 'real' world unless it first happens in our heads." This focus on changing images and representations is sometimes called "cultural politics," which means emphasizing the transformation of values and beliefs more than changes in elected officials, laws, or working conditions.

It is not surprising that Anzaldúa and other literary people would put their energy and faith into cultural politics. Words and images are their stock-in-trade, what most influences them, and where they have some chance of wielding influence. But cultural politics in the late-twentieth-century United States was also a direct response to the civil rights movement, which succeeded in changing the laws and institutional structures of a legally racist society. People discovered, however, that abolishing the legality of racism was hardly the same thing as creating a nonracist society. Cultural politics is often criticized as vague, as nonconcrete, as ignoring bread-and-butter issues. But a cultural politics like Anzaldúa's is developed to foreground and contest the nebulous quality of racism and sexism in her America, prejudices that often do not manifest themselves in overt ways yet have persistent concrete effects in the continued poverty of and the differential opportunities in housing, education, and employment available to nonwhites and women.

Anzaldúa's work, then, is largely concerned with conveying what it feels like for a nonwhite, nonheterosexual woman to live in post-civil rights movement North America. She explores the ambiguities and ambivalences lived by a "hyphenated" Mexican American. The United States both is obsessed with this presence of nonwhites in its midst and acts as if they do not exist. On one level, she simply calls for recognition, for the acknowledgment by the culture at large, and Anglos in particular, that she and her people—part Native American, part European, part American—exist. They have been here a long time and are going to be here even longer; meanwhile, "the dominant white culture is killing us slowly with its ignorance." Anzaldúa calls our attention to the 20 million Mexican Americans in the United States.

But on another level, Anzaldúa is arguing that our whole understanding of identity has to be revised. The old notion that we can know who we are by tracing our roots, by referring back to some stable point of origin, has to be abandoned. There is no pure, single source. All identities are hybrids, formed over time through the interaction of multiple cultures and constantly being transformed by new encounters in the "borderlands" between one culture and another. Anzaldúa's work here parallels contemporary postcolonial criticism, particularly that of HOMI K. BHABHA. The nostalgic

demand for unitary, isolated cultures can only do harm in a world in which each of us is always already a mixture and we constantly come into contact with, and must live among, others who are mixed in different ways.

Identity politics is often criticized for its contradictions, especially for joining a celebration of difference with simplistic notions of group solidarity. Anzaldúa's work addresses the complex emotional core of identity politics: the deep desire felt throughout the contemporary world for an identity that can be asserted, recognized, affirmed, and respected in the public sphere. In addition, she describes the very forces of cultural mixing and powerful blindnesses that make an unambiguous, clear identity so attractive, especially to those who are least visible within the current order. In trying to negotiate these contrary pressures and achieve a coherent identity in the face of the myriad cultural influences that shape us, Anzaldúa necessarily becomes a writer of ambiguity and ambivalence. "It makes us crazy constantly," she writes, "but if the center holds, we've made some kind of evolutionary step forward."

BIBLIOGRAPHY

Anzaldúa's books include *Speaking in Tongues: A Letter to Third World Women Writers* (1983), *Borderlands/La Frontera: The New Mestiza* (1987), *Towards a New Consciousness* (1990), and two children's books, *Friends from the Other Side/Amigos del otro lado* (1993) and *Prietita and the Ghost Woman/Prietita y la Llorona* (1996). She is also the co-editor (with Cherríe Moraga) of *This Bridge Called My Back: Writings by Radical Women of Color* (1981) and editor of *Making Face, Making Soul: Creative and Critical Perspectives by Women of Color* (1990), two highly influential collections. The biographical information in Juanita Ramos, "Gloria Anzaldúa," in *Contemporary Lesbian Writers of the United States: A Bio-Bibliographical Critical Sourcebook* (ed. Sandra Pollack, Denise D. Knight, and Pamela Farley Tucker, 1993), can be augmented by the autobiographical reflections found in Gloria Anzaldúa, *Interviews/Entrevistas*, edited by Analouise Keating (2000).

Anzaldúa's work has generated numerous responses that address issues of ethnicity, sexuality, feminism, and identity politics. Recommended are Yvonne Yarbro Bejarano's "Gloria Anzaldúa's *Borderlands/La Frontera*: Cultural Studies, 'Difference,' and the Non-Unitary Subject," *Cultural Critique* 28 (1994); Analouise Keating's *Women Reading Women Writing: Self-Invention in Paula Gunn Allen, Gloria Anzaldúa, and Audre Lorde* (1996); and the three essays on Anzaldúa, by Jennifer Browdy de Hernandez, Dionne Espinoza, and Analouise Keating, in *Other Sisterhoods: Literary Theory and U.S. Women of Color* (ed. Sandra Kumamoto Stanley, 1998). A good, although not complete, bibliography of Anzaldúa's work and responses to it can be found in Ramos's biographical essay cited above.

From Borderlands/La Frontera: The New Mestiza

Chapter 7.

La conciencia de la mestiza:
Towards a New Consciousness

Por la mujer de mi raza
hablará el espíritu.

José Vascelos, Mexican philosopher, envisaged *una raza mestiza, una mezcla de razas afines, una raza de color—la primera raza síntesis del globo.*

He called it a cosmic race, *la raza cósmica*, a fifth race embracing the four major races of the world.¹ Opposite to the theory of the pure Aryan, and to the policy of racial purity that white America practices, his theory is one of inclusivity. At the confluence of two or more genetic streams, with chromosomes constantly "crossing over," this mixture of races, rather than resulting in an inferior being, provides hybrid progeny, a mutable, more malleable species with a rich gene pool. From this racial, ideological, cultural and biological cross-pollination, an "alien" consciousness is presently in the making—a new *mestiza* consciousness, *una conciencia de mujer*. It is a consciousness of the Borderlands.

UNA LUCHA DE FRONTERAS/A STRUGGLE OF BORDERS

Because I, a *mestiza*,
continually walk out of one culture
and into another,
because I am in all cultures at the same time,
alma entre dos mundos, tres, cuatro,
me zumba la cabeza con lo contradictorio.
Estoy norieada por todas las voces que me hablan
simultáneamente.

The ambivalence from the clash of voices results in mental and emotional states of perplexity. Internal strife results in insecurity and indecisiveness. The *mestiza's* dual or multiple personality is plagued by psychic restlessness.

In a constant state of mental nepantlism, an Aztec² word meaning torri between ways, *la mestiza* is a product of the transfer of the cultural and spiritual values of one group to another. Being tricultural, monolingual, bilingual, or multilingual, speaking a patois, and in a state of perpetual transition, the *mestiza* faces the dilemma of the mixed breed: which collectivity does the daughter of a darkskinned mother listen to?

El choque de un alma atrapado entre el mundo del espíritu y el mundo de la técnica a veces la deja entullada. Cradled in one culture, sandwiched between two cultures, straddling all three cultures and their value systems, *la mestiza* undergoes a struggle of flesh, a struggle of borders, an inner war. Like all people, we perceive the version of reality that our culture communicates. Like others having or living in more than one culture, we get multiple, often opposing messages. The coming together of two self-consistent but habitually incomparable frames of reference³ causes *un choque*, a cultural collision.

Within us and within *la cultura chicana*,⁴ commonly held beliefs of the white culture attack commonly held beliefs of the Mexican culture, and both

1. This is my own "take off" on José Vasconcelos' idea. José Vasconcelos, *La Raza Cósmica: Misión de la Raza Ibero-Americana* (Mexico City: Aguilar S.A. de Ediciones, 1961) [Anzaldúa's note].

2. One of the major native groups in Mexico before the arrival of Europeans.

3. Arthur Koestler termed this "bisociation." Albert Rothenberg, *The Creative Process in Art,*

Science, and Other Fields (Chicago: University of Chicago Press, 1979), 12 [Anzaldúa's note]. Koestler (1905–1983), Hungarian-born English novelist, journalist, and critic.

4. Chicanos are portrayed by Anzaldúa as existing between Anglo (white European) U.S. culture and the indigenous Native American culture of both Mexico and the United States.

attack commonly held beliefs of the indigenous culture. Subconsciously, we see an attack on ourselves and our beliefs as a threat and we attempt to block with a counterstance.

But it is not enough to stand on the opposite river bank, shouting questions, challenging patriarchal, white conventions. A counterstance locks one into a duel of oppressor and oppressed; locked in mortal combat, like the cop and the criminal, both are reduced to a common denominator of violence. The counterstance refutes the dominant culture's views and beliefs, and, for this, it is proudly defiant. All reaction is limited by, and dependent on, what it is reacting against. Because the counterstance stems from a problem with authority—outer as well as inner—it's a step towards liberation from cultural domination. But it is not a way of life. At some point, on our way to a new consciousness, we will have to leave the opposite bank, the split between the two mortal combatants somehow healed so that we are on both shores at once and, at once, see through serpent and eagle eyes. Or perhaps we will decide to disengage from the dominant culture, write it off altogether as a lost cause, and cross the border into a wholly new and separate territory. Or we might go another route. The possibilities are numerous once we decide to act and not react.

A TOLERANCE FOR AMBIGUITY

These numerous possibilities leave *la mestiza* floundering in uncharted seas. In perceiving conflicting information and points of view, she is subjected to a swamping of her psychological borders. She has discovered that she can't hold concepts or ideas in rigid boundaries. The borders and walls that are supposed to keep the undesirable ideas out are entrenched habits and patterns of behavior; these habits and patterns are the enemy within. Rigidity means death. Only by remaining flexible is she able to stretch the psyche horizontally and vertically. *La mestiza* constantly has to shift out of habitual formations; from convergent thinking, analytical reasoning that tends to use rationality to move toward a single goal (a Western mode), to divergent thinking,⁵ characterized by movement away from set patterns and goals and toward a more whole perspective, one that includes rather than excludes.

The new *mestiza* copes by developing a tolerance for contradictions, a tolerance for ambiguity. She learns to be an Indian in Mexican culture, to be Mexican from an Anglo point of view. She learns to juggle cultures. She has a plural personality, she operates in a pluralistic mode—nothing is thrust out, the good the bad and the ugly, nothing rejected, nothing abandoned. Not only does she sustain contradictions, she turns the ambivalence into something else.

She can be jarred out of ambivalence by an intense, and often painful, emotional event which inverts or resolves the ambivalence. I'm not sure exactly how. The work takes place underground—subconsciously. It is work that the soul performs. That focal point or fulcrum, that juncture where the *mestiza* stands, is where phenomena tend to collide. It is where the possibility

5. In part, I derive my definitions for "convergent" and "divergent" thinking from Rothenberg, 12-13 [Anzaldúa's note].

of uniting all that is separate occurs. This assembly is not one where severed or separated pieces merely come together. Nor is it a balancing of opposing powers. In attempting to work out a synthesis, the self has added a third element which is greater than the sum of its severed parts. That third element is a new consciousness—a *mestiza* consciousness—and though it is a source of intense pain, its energy comes from continual creative motion that keeps breaking down the unitary aspect of each new paradigm.

En unas pocas centurias, the future will belong to the *mestiza*. Because the future depends on the breaking down of paradigms, it depends on the straddling of two or more cultures. By creating a new mythos—that is, a change in the way we perceive reality, the way we see ourselves, and the ways we behave—*la mestiza* creates a new consciousness.

The work of *mestiza* consciousness is to break down the subject-object duality that keeps her a prisoner and to show in the flesh and through the images in her work how duality is transcended. The answer to the problem between the white race and the colored, between males and females, lies in healing the split that originates in the very foundation of our lives, our culture, our languages, our thoughts. A massive uprooting of dualistic thinking in the individual and collective consciousness is the beginning of a long struggle, but one that could, in our best hopes, bring us to the end of rape, of violence, of war.

LA ENCRUCIJADA/THE CROSSROADS

A chicken is being sacrificed
 at a crossroads, a simple mound of earth
 a mud shrine for *Eshu*,
*Yoruba*⁶ god of indeterminacy,
 who blesses her choice of path.
 She begins her journey.

Su cuerpo es una bocacalle. *La mestiza* has gone from being the sacrificial goat to becoming the officiating priestess at the crossroads.

As a *mestiza* I have no country, my homeland cast me out; yet all countries are mine because I am every woman's sister or potential lover. (As a lesbian I have no race, my own people disclaim me; but I am all races because there is the queer of me in all races.) I am cultureless because, as a feminist, I challenge the collective cultural/religious male-derived beliefs of Indo-Hispanics and Anglos; yet I am cultured because I am participating in the creation of yet another culture, a new story to explain the world and our participation in it, a new value system with images and symbols that connect us to each other and to the planet. *Soy un amasamiento*, I am an act of kneading, of uniting and joining that not only has produced both a creature of darkness and a creature of light, but also a creature that questions the definitions of light and dark and gives them new meanings.

6. One of the two largest ethnic groups in Nigeria; many Caribbean and Latin American blacks come from the Yoruba and have retained elements of their ancestral culture.

We are the people who leap in the dark, we are the people on the knees of the gods. In our very flesh, (r)evolution works out the clash of cultures. It makes us crazy constantly, but if the center holds, we've made some kind of evolutionary step forward. *Nuestra alma el trabajo*, the opus, the great alchemical work; spiritual *mestizaje*, a "morphogenesis,"⁷ an inevitable unfolding. We have become the quickening serpent movement.

Indigenous like corn, like corn, the *mestiza* is a product of crossbreeding, designed for preservation under a variety of conditions. Like an ear of corn—a female seed-bearing organ—the *mestiza* is tenacious, tightly wrapped in the husks of her culture. Like kernels she clings to the cob; with thick stalks and strong brace roots, she holds tight to the earth—she will survive the crossroads.

*Lavando y remojando el maíz en agua de cal, despojando el pellejo. Moliendo, mixteando, amasando, haciendo tortillas de masa.*⁸ She steeps the corn in lime, it swells, softens. With stone roller on *metate* she grinds the corn, then grinds again. She kneads and moulds the dough, pats the round balls into *tortillas*.

We are the porous rock in the stone *metate*
 squatting on the ground
 We are the rolling pin, *el maíz y agua,*
la masa harina. Somos el amasijo.
Somos lo molido en el metate.
 We are the *comal* sizzling hot,
 the hot *tortilla*, the hungry mouth.
 We are the coarse rock.
 We are the grinding motion,
 the mixed potion, *somos el molcajete.*
 We are the pestle, the *comino, ajo, pimienta,*
 We are the *chile colorado,*
 the green shoot that cracks the rock.
 We will abide.

EL CAMINO DE LA MESTIZA/THE MESTIZA WAY

Caught between the sudden contraction, the breath sucked in and the endless space, the brown woman stands still, looks at the sky. She decides to go down, digging her way along the roots of trees. Sifting through the bones, she shakes them to see if there is any marrow in them. Then, touching the dirt to her forehead, to her tongue, she takes a few bones, leaves the rest in their burial place.

7. To borrow chemist Ilya Prigogine's theory of "dissipative structures." Prigogine [b. 1917] discovered that substances interact not in predictable ways as it was taught in science, but in different and fluctuating ways to produce new and more complex structures, a kind of birth he called "morphogenesis," which created unpredictable innovation Harold Gilliam, "Searching for a New World View," *This World*, January 1981, 23

[Anzaldúa's note].

8. *Tortillas de masa*: corn tortillas are of two types, the smooth uniform ones made in a tortilla press and usually bought at a tortilla factory or supermarket, and *gorditas*, made by mixing *masa* with lard or shortening or butter (my mother sometimes puts in bits of bacon or *chicarrones*) [Anzaldúa's note].

She goes through her backpack, keeps her journal and address book, throws away the muni-bart metromaps.⁹ The coins are heavy and they go next, then the greenbacks flutter through the air. She keeps her knife, can opener and eyebrow pencil. She puts bones, pieces of bark, *hierbas*, eagle feather, snakeskin, tape recorder, the rattle and drum in her pack and she sets out to become the complete *tolteca*.¹

Her first step is to take inventory. *Despojando, desgranando, quitando paja*. Just what did she inherit from her ancestors? This weight on her back—which is the baggage from the Indian mother, which the baggage from the Spanish father, which the baggage from the Anglo?

Pero es difícil differentiating between *lo heredado, lo adquirido, lo impuesto*. She puts history through a sieve, winnows out the lies, looks at the forces that we as a race, as women, have been a part of. *Luego bota lo que no vale, los desmientos, los desencuentos, el embrutecimiento. Aguarda el juicio, hondo y enraizado, de la gente antigua*. This step is a conscious rupture with all oppressive traditions of all cultures and religions. She communicates that rupture, documents the struggle. She reinterprets history and, using new symbols, she shapes new myths. She adopts new perspectives toward the darkskinned, women and queers. She strengthens her tolerance (and intolerance) for ambiguity. She is willing to share, to make herself vulnerable to foreign ways of seeing and thinking. She surrenders all notions of safety, of the familiar. Deconstruct, construct. She becomes a *nahual*, able to transform herself into a tree, a coyote, into another person. She learns to transform the small "I" into the total Self. *Se hace moldeadora de su alma. Según la concepción que tiene de sí misma, así será.*

QUE NO SE NOS OLVIDE LOS HOMBRES

"Tú no sirves pa' nada—
you're good for nothing,
Eres pura vieja."

"You're nothing but a woman" means you are defective. Its opposite is to be *un macho*. The modern meaning of the word "machismo," as well as the concept, is actually an Anglo invention. For men like my father, being "macho" meant being strong enough to protect and support my mother and us, yet being able to show love. Today's macho has doubts about his ability to feed and protect his family. His "machismo" is an adaptation to oppression and poverty and low self-esteem. It is the result of hierarchical male dominance. The Anglo, feeling inadequate and inferior and powerless, displaces or transfers these feelings to the Chicano by shaming him. In the Gringo world, the Chicano suffers from excessive humility and self-effacement, shame of self and self-depreciation. Around Latinos he suffers from a sense of language inadequacy and its accompanying discomfort; with Native Americans he suffers from a racial amnesia which ignores our common blood, and from guilt because the Spanish part of him took their

9. Maps of San Francisco's bus and subway routes.

1. Gina Valdés, *Puentes y Fronteras: Coplas Chi-*

canas (Los Angeles Castle Lithograph, 1982), 2 [Anzaldúa's note].

land and oppressed them. He has an excessive compensatory hubris when around Mexicans from the other side. It overlays a deep sense of racial shame.

The loss of a sense of dignity and respect in the macho breeds a false machismo which leads him to put down women and even to brutalize them. Coexisting with his sexist behavior is a love for the mother which takes precedence over that of all others. Devoted son, macho pig. To wash down the shame of his acts, of his very being, and to handle the brute in the mirror, he takes to the bottle, the snort, the needle, and the fist.

Though we "understand" the root causes of male hatred and fear, and the subsequent wounding of women, we do not excuse, we do not condone, and we will no longer put up with it. From the men of our race, we demand the admission/acknowledgment/disclosure/testimony that they wound us, violate us, are afraid of us and of our power. We need them to say they will begin to eliminate their hurtful put-down ways. But more than the words, we demand acts. We say to them: We will develop equal power with you and those who have shamed us.

It is imperative that *mestizas* support each other in changing the sexist elements in the Mexican-Indian culture. As long as woman is put down, the Indian and the Black in all of us is put down. The struggle of the *mestiza* is above all a feminist one. As long as *los hombres* think they have to *chingar mujeres* and each other to be men, as long as men are taught that they are superior and therefore culturally favored over *la mujer*, as long as to be a *vieja* is a thing of derision, there can be no real healing of our psyches. We're halfway there—we have such love of the Mother, the good mother. The first step is to unlearn the *puta/virgen* dichotomy and to see *Coatlapopeuh-Coatlicue* in the Mother, *Guadalupe*.²

Tenderness, a sign of vulnerability, is so feared that it is showered on women with verbal abuse and blows. Men, even more than women, are fettered to gender roles. Women at least have had the guts to break out of bondage. Only gay men have had the courage to expose themselves to the woman inside them and to challenge the current masculinity. I've encountered a few scattered and isolated gentle straight men, the beginnings of a new breed, but they are confused, and entangled with sexist behaviors that they have not been able to eradicate. We need a new masculinity and the new man needs a movement.

Lumping the males who deviate from the general norm with man, the oppressor, is a gross injustice. *Asombra pensar que nos hemos quedado en ese pozo oscuro donde el mundo encierra a las lesbianas. Asombra pensar que hemos, como feministas y lesbianas, cerrado nuestros corazones a los hombres, a nuestros hermanos los jotos, desheredados y marginales como nosotros.* Being the supreme crossers of cultures, homosexuals have strong bonds with the queer white, Black, Asian, Native American, Latino, and with the queer in Italy, Australia and the rest of the planet. We come from

2. Our Lady of Guadalupe, the Virgin Mary (who is said to have appeared to a Native American in that Mexican city in 1531). *Coatlapopeuh-Coatlicue*: Aztec earth goddess who is the mother of the gods.

all colors, all classes, all races, all time periods. Our role is to link people with each other—the Blacks with Jews with Indians with Asians with whites with extraterrestrials. It is to transfer ideas and information from one culture to another. Colored homosexuals have more knowledge of other cultures; have always been at the forefront (although sometimes in the closet) of all liberation struggles in this country; have suffered more injustices and have survived them despite all odds. Chicanos need to acknowledge the political and artistic contributions of their queer. People, listen to what your *jotería* is saying.

The *mestizo* and the queer exist at this time and point on the evolutionary continuum for a purpose. We are a blending that proves that all blood is intricately woven together, and that we are spawned out of similar souls.

SOMOS UNA GENTE

*Hay tantísimas fronteras
que dividen a la gente,
pero por cada frontera
existe también un puente.*

—Gina Valdés³

Divided Loyalties. Many women and men of color do not want to have any dealings with white people. It takes too much time and energy to explain to the downwardly mobile, white middle-class women that it's okay for us to want to own "possessions," never having had any nice furniture on our dirt floors or "luxuries" like washing machines. Many feel that whites should help their own people rid themselves of race hatred and fear first. I, for one, choose to use some of my energy to serve as mediator. I think we need to allow whites to be our allies. Through our literature, art, *corridos*, and folktales we must share our history with them so when they set up committees to help Big Mountain Navajos or the Chicano farmworkers or *los Nicaragüenses*⁴ they won't turn people away because of their racial fears and ignorances. They will come to see that they are not helping us but following our lead.

Individually, but also as a racial entity, we need to voice our needs. We need to say to white society: We need you to accept the fact that Chicanos are different, to acknowledge your rejection and negation of us. We need you to own the fact that you looked upon us as less than human, that you stole our lands, our personhood, our self-respect. We need you to make public restitution: to say that, to compensate for your own sense of defectiveness, you strive for power over us, you erase our history and our experience because it makes you feel guilty—you'd rather forget your brutish acts. To say you've split yourself from minority groups, that you disown us, that your dual consciousness splits off parts of yourself, transferring the "negative" parts onto us. (Where there is persecution of minorities, there is shadow projection. Where there is violence and war, there is repression of

3. Valdés, *Puentes y Fronteras*, 2 [Anzaldúa's note].

4. In the 1980s the U.S. government funded sol-

diers fighting against the Sandinista government of Nicaragua.

shadow.) To say that you are afraid of us, that to put distance between us, you wear the mask of contempt. Admit that Mexico is your double, that she exists in the shadow of this country, that we are irrevocably tied to her. Gringo, accept the doppelganger in your psyche. By taking back your collective shadow the intracultural split will heal. And finally, tell us what you need from us.

BY YOUR TRUE FACES WE WILL KNOW YOU

I am visible—see this Indian face—yet I am invisible. I both blind them with my beak nose and am their blind spot. But I exist, we exist. They'd like to think I have melted in the pot. But I haven't, we haven't.

The dominant white culture is killing us slowly with its ignorance. By taking away our self-determination, it has made us weak and empty. As a people we have resisted and we have taken expedient positions, but we have never been allowed to develop unencumbered—we have never been allowed to be fully ourselves. The whites in power want us people of color to barricade ourselves behind our separate tribal walls so they can pick us off one at a time with their hidden weapons; so they can whitewash and distort history. Ignorance splits people, creates prejudices. A misinformed people is a subjugated people.

Before the Chicano and the undocumented worker and the Mexican from the other side can come together, before the Chicano can have unity with Native Americans and other groups, we need to know the history of their struggle and they need to know ours. Our mothers, our sisters and brothers, the guys who hang out on street corners, the children in the playgrounds, each of us must know our Indian lineage, our *afro-mestisaje*, our history of resistance.

To the immigrant *mexicano* and the recent arrivals we must teach our history. The 80 million *mexicanos* and the Latinos from Central and South America must know of our struggles. Each one of us must know basic facts about Nicaragua, Chile and the rest of Latin America.⁵ The Latinoist movement (Chicanos, Puerto Ricans, Cubans and other Spanish-speaking people working together to combat racial discrimination in the market place) is good but it is not enough. Other than a common culture we will have nothing to hold us together. We need to meet on a broader communal ground.

The struggle is inner: Chicano, *indio*, American Indian, *mojado*, *mexicano*, immigrant Latino, Anglo in power, working class Anglo, Black, Asian—our psyches resemble the bordertowns and are populated by the same people. The struggle has always been inner, and is played out in the outer terrains. Awareness of our situation must come before inner changes, which in turn come before changes in society. Nothing happens in the "real" world unless it first happens in the images in our heads.

5. This history includes U.S. government interventions in various Latin and Central American countries from 1950 to 1990, undermining governments thought to be too leftist and supporting right-wing governments.

EL DÍA DE LA CHICANA

I will not be shamed again
Nor will I shame myself.

I am possessed by a vision that we Chicanas and Chicanos have taken back or uncovered our true faces, our dignity and self-respect. It's a validation vision.

Seeing the Chicana anew in light of her history. I seek an exoneration, a seeing through the fictions of white supremacy, a seeing of ourselves in our true guises and not as the false racial personality that has been given to us and that we have given to ourselves. I seek our woman's face, our true features, the positive and the negative seen clearly, free of the tainted biases of male dominance. I seek new images of identity, new beliefs about ourselves, our humanity and worth no longer in question.

Estamos viviendo en la noche de la Raza, un tiempo cuando el trabajo se hace a lo quieto, en el oscuro. El día cuando aceptamos tal y como somos y para en donde vamos y porque—ese día será de la Raza. Yo tengo el compromiso de expresar mi visión, mi sensibilidad, mi percepción de la revalidación de la gente mexicana, su mérito estimación, honra, aprecio, y validez.

On December 2nd when my sun goes into my first house, I celebrate *el día de la Chicana y el Chicano*. On that day I clean my altars, light my *Coatlatlopeuh* candle, burn sage and copal, take *el baño para espantar basura*, sweep my house. On that day I bare my soul, make myself vulnerable to friends and family by expressing my feelings. On that day I affirm who we are.

On that day I look inside our conflicts and our basic introverted racial temperament. I identify our needs, voice them. I acknowledge that the self and the race have been wounded. I recognize the need to take care of our personhood, of our racial self. On that day I gather the splintered and disowned parts of *la gente mexicana* and hold them in my arms. *Todas las partes de nosotros valen.*

On that day I say, "Yes, all you people wound us when you reject us. Rejection strips us of self-worth; our vulnerability exposes us to shame. It is our innate identity you find wanting. We are ashamed that we need your good opinion, that we need your acceptance. We can no longer camouflage our needs, can no longer let defenses and fences sprout around us. We can no longer withdraw. To rage and look upon you with contempt is to rage and be contemptuous of ourselves. We can no longer blame you, nor disown the white parts, the male parts, the pathological parts, the queer parts, the vulnerable parts. Here we are weaponless with open arms, with only our magic. Let's try it our way, the *mestiza* way, the Chicana way, the woman way.

On that day, I search for our essential dignity as a people, a people with a sense of purpose—to belong and contribute to something greater than our *pueblo*. On that day I seek to recover and reshape my spiritual identity. *¡Antimate! Raza, a celebrar el día de la Chicana.*

EL RETORNO

All movements are accomplished in six stages,
and the seventh brings return.

—I Ching⁶

*Tanto tiempo sin verte casa mía,
mi cuna, mi hondo nido de la huerta.*

—“Soledad”⁷

I stand at the river, watch the curving, twisting serpent, a serpent nailed to the fence where the mouth of the Rio Grande empties into the Gulf.

I have come back. *Tanto dolor me costó el alejamiento.* I shade my eyes and look up. The bone beak of a hawk slowly circling over me, checking me out as potential carrion. In its wake a little bird flickering its wings, swimming sporadically like a fish. In the distance the expressway and the slough of traffic like an irritated sow. The sudden pull in my gut, *la tierra, los aguaceros.* My land, *el viento soplando la arena, el lagartijo debajo de un nopalito. Me acuerdo como era antes. Una región desértica de vasta llanuras, costeras de baja altura, de escasa lluvia, de chaparrales formados por mesquites y hui-zaches.* If I look real hard I can almost see the Spanish fathers who were called “the cavalry of Christ” enter this valley riding their burros, see the clash of cultures commence.

Tierra natal. This is home, the small towns in the Valley, *los pueblitos* with chicken pens and goats picketed to mesquite shrubs. *En las colonias on the other side of the tracks, junk cars line the front yards of hot pink and lavender-trimmed houses—Chicano architecture we call it, self-consciously. I have missed the TV shows where hosts speak in half and half, and where awards are given in the category of Tex-Mex music. I have missed the Mexican cemeteries blooming with artificial flowers, the fields of aloe vera and red pepper, rows of sugar cane, of corn hanging on the stalks, the cloud of polvareda in the dirt roads behind a speeding pickup truck, el sabor de tamales de rez y venado.* I have missed *la yegua colorada* gnawing the wooden gate of her stall, the smell of horse flesh from Carito’s corrals. *He hecho menos las noches calientes sin aire, noches de linternas y lechuzas* making holes in the night.

I still feel the old despair when I look at the unpainted, dilapidated, scrap lumber houses consisting mostly of corrugated aluminum. Some of the poorest people in the U.S. live in the Lower Rio Grande Valley, an arid and semi-arid land of irrigated farming, intense sunlight and heat, citrus groves next to chaparral and cactus. I walk through the elementary school I attended so long ago, that remained segregated until recently. I remember how the white teachers used to punish us for being Mexican.

How I love this tragic valley of South Texas, as Ricardo Sánchez⁸ calls it;

6. Richard Wilhelm, *The I Ching or Book of Changes*, trans. Cary F. Baynes (Princeton: Princeton University Press, 1950), 98 [Anzaldúa’s note].

7. “Soledad” is sung by the group *Haciendo Punto* and *Otto Son* [Anzaldúa’s note].

8. American poet and critic (1941–1995).

this borderland between the Nueces and the Rio Grande. This land has survived possession and ill-use by five countries: Spain, Mexico, the Republic of Texas, the U.S., the Confederacy, and the U.S. again. It has survived Anglo-Mexican blood feuds, lynchings, burnings, rapes, pillage.

Today I see the Valley still struggling to survive. Whether it does or not, it will never be as I remember it. The borderlands depression that was set off by the 1982 peso devaluation in Mexico resulted in the closure of hundreds of Valley businesses. Many people lost their homes, cars, land. Prior to 1982, U.S. store owners thrived on retail sales to Mexicans who came across the border for groceries and clothes and appliances. While goods on the U.S. side have become 10, 100, 1000 times more expensive for Mexican buyers, goods on the Mexican side have become 10, 100, 1000 times cheaper for Americans. Because the Valley is heavily dependent on agriculture and Mexican retail trade, it has the highest unemployment rates along the entire border region; it is the Valley that has been hardest hit.⁹

"It's been a bad year for corn," my brother, Nune, says. As he talks, I remember my father scanning the sky for a rain that would end the drought, looking up into the sky, day after day, while the corn withered on its stalk. My father has been dead for 29 years, having worked himself to death. The life span of a Mexican farm laborer is 56—he lived to be 38. It shocks me that I am older than he. I, too, search the sky for rain. Like the ancients, I worship the rain god and the maize goddess, but unlike my father I have recovered their names. Now for rain (irrigation) one offers not a sacrifice of blood, but of money.

"Farming is in a bad way," my brother says. "Two to three thousand small and big farmers went bankrupt in this country last year. Six years ago the price of corn was \$8.00 per hundred pounds," he goes on. "This year it is \$3.90 per hundred pounds." And, I think to myself, after taking inflation into account, not planting anything puts you ahead.

I walk out to the back yard, stare at *los rosales de mamá*. She wants me to help her prune the rose bushes, dig out the carpet grass that is choking them. *Mamagrande Ramona también tenía rosales*. Here every Mexican grows flowers. If they don't have a piece of dirt, they use car tires, jars, cans, shoe boxes. Roses are the Mexican's favorite flower. I think, how symbolic—thorns and all.

Yes, the Chicano and Chicana have always taken care of growing things and the land. Again I see the four of us kids getting off the school bus, changing into our work clothes, walking into the field with Papí and Mamí, all six of us bending to the ground. Below our feet, under the earth lie the watermelon seeds. We cover them with paper plates, putting *terremotes* on

9. Out of the 22 border counties in the four border states, Hidalgo County (named for Father Hidalgo who was shot in 1810 after instigating Mexico's revolt against Spain under the banner of *la Virgen de Guadalupe*) is the most poverty-stricken county

in the nation as well as the largest home base (along with Imperial in California) for migrant farm-workers. It was here that I was born and raised. I am amazed that both it and I have survived [Anzaldúa's note].

top of the plates to keep them from being blown away by the wind. The paper plates keep the freeze away. Next day or the next, we remove the plates, bare the tiny green shoots to the elements. They survive and grow, give fruit hundreds of times the size of the seed. We water them and hoe them. We harvest them. The vines dry, rot, are plowed under. Growth, death, decay, birth. The soil prepared again and again, impregnated, worked on. A constant changing of forms, *renacimientos de latierra madre*.

This land was Mexican once
was Indian always
and is.
And will be again.

1987

HOUSTON A. BAKER JR.
b. 1943

Since the late 1960s, Houston A. Baker Jr. has been central to the increasing critical and scholarly attention paid to African American literature. Along with detailed criticism of many notable African American writers, Baker's work provides highly influential theoretical paradigms for the study of "vernacular" literatures. His deep commitment to the specificity of African American culture and the dignity of African American experience is combined with an adventurous willingness to constantly reexamine his own critical stance toward that culture and experience. The result has been a body of work exemplary in its engagement with the material studied, with the shifting theoretical landscape, and with the pressing needs of black Americans.

Baker was born in 1943 and raised in Louisville, Kentucky, when that city, like the rest of the American South, practiced racial segregation. "During [my] youth," he writes, "the town was *dangerously* Southern for black ambitions and enterprise (like walking down the street)." Baker attended an honors high school, where he was one of the few black students, then did his undergraduate work at historically black Howard University in Washington, D.C. He received a Ph.D. in 1968 from the University of California at Los Angeles, with a dissertation on Victorian poetry, but he quickly left nineteenth-century British literature behind. Apart from some early essays, Baker has focused on African American literature. He has also published several volumes of his own poetry. Baker first found his voice and subject in his initial jobs as a professor—at Yale University and then the University of Virginia—when he became an early proponent and teacher of courses on black writers. Hired to direct the Afro-

American Studies Program at the University of Pennsylvania in 1974, he was named the Albert M. Greenfield Professor of Human Relations there in 1982. He joined the faculty at Duke University in 1998. He has served as president of the Modern Language Association, and holds honorary degrees from several universities.

In his work, Baker walks a fine line between validating African American writing for the mainstream, nonblack, academic tradition and insisting on the specific differences that mark African American writing as a distinct tradition of its own. He was one of the first academic critics to argue that the standards of judgment used in evaluating white writing were not suitable for judging black writing. His articulation of appropriate standards explained the value of black literature to a previously indifferent (at best) white academy. Similarly, in our selection as elsewhere in his work, Baker's use of "high" theory—the invocation of concepts drawn from G. W. F. HEGEL, KARL MARX, JACQUES DERRIDA, and FREDRIC JAMESON—has the effect of placing black literature on a par with canonical masterpieces that are deemed worthy of sophisticated analysis and prolonged, intensive attention. His explicit use of theory to study African American texts aligns him with HENRY LOUIS GATES JR. and against BARBARA CHRISTIAN among contemporary black literary critics, who have long debated the relevance of European theory and philosophy to black literary studies.

Baker wants to use theory to highlight "the distinctive, the culturally specific aspects of Afro-American literature," not to assimilate black works to the existing canon. His project mirrors the problem faced by black writers themselves: how to use the language of the dominant white culture to express the different realities of African American life. To complicate matters, Baker adopts the theoretical view that language "speaks" the subject, rather than the other way around. Linguistic and literary forms and meanings precede personal experience and its expression by any particular subject. The very experiences of subjects (including that of their own status as subjects) are shaped and produced by those preexisting discursive forms. Within this theoretical perspective, African American literature can be unique only if it is created within a distinctive culture that "speaks" subjects, constitutes experiences, and generates expressions differently than does mainstream culture.

Baker's argument for this distinct African American culture employs Hegel's concept of "determinate negation," which posits that the definition or determination of identity occurs by excluding entities now understood as not part of the self. The importance of this concept for Baker and for theorists of racial, ethnic, gendered, and other social differences cannot be overstated. Mainstream culture achieves its self-understanding and its coherence through defining itself as "not colored": white America achieves its identity by its negative relation to "colored" America. Given this act of exclusion, black America inevitably had to form its own culture. Baker sees his critical task as the description and analysis of that distinctive black culture.

But Baker does not want the concept of black culture that he delineates to be too rigid or simplistic. His epigraph from Ralph Ellison indicates that black "cultural wholeness" is "always in cacophonous motion." For Baker, "Afro-American culture is a complex, reflexive enterprise which finds its proper figuration in blues conceived as a matrix. . . . The matrix is a point of ceaseless input and output, a web of interacting, crisscrossing impulses always in productive transit." Note here the simultaneous commitment to a single "Afro-American culture" and to dynamic, continually productive and transformative actions within that culture. The shift in terminology from "culture" to "matrix" highlights Baker's efforts to describe a unity, a single framework within which all the singularities are held, without suggesting conformity among the parts.

Baker wants to keep difference alive on two levels—between black and white culture, and within black culture—while staying attuned to structuralist and semiotic theories of powerful, holistic cultural "codes" that produce individual events and subjects according to large-scale patterns. To do so, he relies primarily on the idea of the "vernacular." The term itself derives from the special Latin vocabulary of slavery,

meaning a slave who was not bought by the slaveowner but was born into slavery on the master's estate. More generally, it can refer to a nonstandard language or dialect of a place or country. To study the vernacular, for Baker, is to study how a particular language is used by just those speakers who have not been in the social position to use or create the "standard" language. His emphasis on the black vernacular as the dialect of the marginalized, the unheard, connects with similar concerns in contemporary feminist and postcolonial theory, as in the work of HOMI K. BHABHA. How do those whose speech carries no authority and who are usually expected to be silent use the master's language differently than the master himself does? How do they make that language, so often employed to oppress them, serve their own purposes and needs? What resources are to be found within those "nonstandard dialects" created by speakers far from the centers of power?

Baker argues that "the blues" is the vernacular core of black America. In *Blues, Ideology, and Afro-American Literature* (1984), he lyrically details the complex features of this form and then connects particular literary works to its overarching "matrix." For Baker, the vernacular is an expression of the popular as well as the local. "High" art, like "standard" language, understands itself in contrast to "low" forms that exist apart from authoritative institutions such as museums, libraries, and universities. Popular art, like a speech dialect, comes from below and is often anonymous. (We need to distinguish here between "popular art" or "folk art" and the very different "pop culture" produced by the mass media. By their very nature, such media—despite their efforts to capitalize on dialects—cannot produce these localized variants, which are limited to smaller groups.) Jokes, folktales, and traditional songs are good examples of anonymous, popular art forms. Baker wants to activate this popular and anonymous element of the vernacular; he sees the "higher" instances of African American poetry and prose fiction as springing from the fertile ground of an anonymously created blues that serves as a shared vernacular for all African Americans, regardless of class, region, or gender.

What all African Americans share, Baker insists, is the "obdurate 'economics of slavery,'" by which he means the ongoing, centuries-long material, symbolic, and social deprivations suffered by blacks in American society. The blues is a central form of expression created by African Americans as a people in response to racism and its concrete effects. Baker is anxious, however, not to reduce the blues to a simple expression of the experience of oppression. He stresses that any artistic expression, as well as any act of criticism, is "inventive": the raw material of experience is worked on and shaped into artistic form. In the simplest terms, experience doesn't come to us in musical notes. So a translation from experience to art is always part of the process. And because the art forms already exist when a particular artist goes to create a particular blues song, the conventions of the blues to a certain extent shape the forms of experience, rather than raw experience simply dictating its artistic expression.

Baker maintains an allegiance to the concept of "experience"; he does not believe that we perceive only according to established forms. Rather, the meeting of such forms and personal experience is precisely the moment of "invention." Indeed, the artist at times creates new forms; thus Baker's definition of the blues matrix emphasizes the "reflexive." Experience and form mutually influence each other as individual African American artists strive to "achieve a resonant, improvisational, expressive dignity."

Baker's commitments to experience, individual expression, and the unity of African American culture all place him at odds with certain more radical antihumanist versions of poststructuralism, although he invokes the work of such theorists. Like some feminist and postcolonial theorists, Baker retains a stake in the individual subject situated among marginalized groups, a commitment that tempers the usual hostility to the "bourgeois" or "Cartesian" subject found in much poststructuralist work. In addition, Baker's desire to locate a single African American cultural matrix runs athwart work that stresses the nonintegrity of cultural formations. Certainly, his focus

on the blues immediately calls to mind other distinctive African American cultural forms, such as the slave narrative, the oral tradition of black preaching, jazz, and "trash talk" within groups of black men. Are these forms of expression all variants of the "blues matrix," or do we need to think of multiple strands of available forms within a varied African American tradition? And how should we think about borrowings between white and black cultures, since the boundaries between the two are continually crossed? Baker's work since *Blues, Ideology, and Afro-American Literature* has taken up some of these questions, as he has examined rap music and the interaction between modernism and the Harlem Renaissance.

During his career, Baker has attempted to negotiate a number of vexed issues, ranging from the status of African American studies in the university to the relation of African American literature to the wider experience, needs, and cultural resources of all African American people. In joining Hegel to the blues singer Robert Johnson, and in celebrating the blues as an artistic form available to African Americans both as evidence of their unique cultural identity and as a means to express that identity, Baker is being, he tells us, inventive. He is working to create a new social position for black Americans through a re-vision of their cultural achievements.

BIBLIOGRAPHY

Baker's critical books to date are *Long Black Song: Essays in Black American Literature and Culture* (1972), *Singers of Daybreak: Studies in Black American Literature* (1974), *A Many-Colored Coat of Dreams: The Poetry of Countee Cullen* (1974), *Paul Laurence Dunbar, an Evaluation* (1974), *The Journey Back: Issues in Black Literature and Criticism* (1980), *Blues, Ideology, and Afro-American Literature: A Vernacular Theory* (1984), *Modernism and the Harlem Renaissance* (1987), *Afro-American Poetics: Revisions of Harlem and the Black Aesthetic* (1988), and *Black Studies, Rap, and the Academy* (1993). He edited one of the first anthologies of African American literature, *Black Literature in America* (1971), and is a co-editor of *The Norton Anthology of African American Literature* (1996). He has also edited or co-edited many collections of critical essays: *Twentieth Century Interpretations of Native Son* (1972); *Reading Black: Essays in the Criticism of African, Caribbean, and Black American Literature* (1976); with Leslie Fiedler, *English Literature: Opening Up the Canon* (1981); *Three American Literatures: Essays on Chicano, Native American, and Asian American Literature for Teachers of American Literature* (1982); with Patricia Redmond, *Afro-American Literary Studies in the 1990s* (1989); with Patricia Redmond and Elizabeth Alexander, *Workings of the Spirit: The Poetics of Afro-American Women's Writing* (1991); and with Manthia Diawara and Ruth H. Lindeborg, *Black British Cultural Studies* (1996). Biographical information can be found in *Contemporary Black Biography*, vol. 6 (1994).

Two interviews offer a convenient place to begin studying Baker's work: Jerry W. Ward Jr.'s "A Black and Crucial Enterprise: An Interview with Houston A. Baker, Jr.," *Black American Literature Forum* 16.2 (1982), and Michael Bérubé's "Hybridity in the Center: An Interview with Houston A. Baker, Jr.," *African American Review* 26.4 (1992). The range of critical responses to Baker's work includes Michael Awkward, "Race, Gender, and the Politics of Reading," *Black American Literature Forum* 22.1 (1988); Andrea Mueller-Hartmann, "Houston A. Baker, Jr.: The Development of a Black Literary Critic," *Literary Griot* 1.2 (1989); Kwame Anthony Appiah, "The Conservation of Race," *Black American Literature Forum* 23.1 (1989); Sandra Adell, "A Function at the Junction," *Diacritics* 20 (1990); Jo-Anne Cornwell Giles, "Afro-American Criticism and Western Consciousness: The Politics of Knowing," *Black American Literature Forum* 24.1 (1990); Michael Bérubé, "Power Surge: Houston Baker's Vernacular Spectacular," *Village Voice Literary Supplement* 109 (October 1992); and Winston Napier, "From the Shadows: Houston Baker's Move toward a Postnationalist Appraisal of the Black Aesthetic," *New Literary History* 25 (1994).

From Blues, Ideology, and Afro-American Literature: A Vernacular Theory

Introduction

Vernacular, adj.: *Of a slave*: That is born on his master's estate; home-born

Of arts, or features of these: Native or peculiar to a particular country or locality

Other states indicate themselves in their deputies . . . but the genius of the United States is not best or most in its executives or legislatures, nor in its ambassadors or authors or colleges or churches or parlors, nor even in its newspapers or inventors . . . but always most in the common people . . . these . . . are unrhymed poetry. It awaits the gigantic and generous treatment worthy of it.

—Walt Whitman¹

If you see me coming, better open up your door,
If you see me coming, better open up your door,
I ain't no stranger, I been here before.

—Traditional Blues

Standing at the crossroads, tried to flag a ride,
Standing at the crossroads, tried to flag a ride,
Ain't nobody seem to know me, everybody passed me by.

—Crossroad Blues²

In every case the result of an untrue mode of knowledge must not be allowed to run away into an empty nothing, but must necessarily be grasped as the nothing of *that from which it results*—a result which contains what was true in the preceding knowledge.

—Hegel,³ *Phenomenology of Spirit*

So perhaps we shy from confronting our cultural wholeness because it offers no easily recognizable points of rest, no facile certainties as to who, what, or where (culturally or historically) we are. Instead, the whole is always in cacophonous motion.

—Ralph Ellison,⁴ "The Little Man at the Chehaw Station"

. . . maybe one day, you'll find they actually do understand exactly what you are talking about, all these fantasy people. All these blues people.

—Amiri Baraka,⁵ *Dutchman*

FROM SYMBOL TO IDEOLOGY

In my book *The Journey Back: Issues in Black Literature and Criticism* (1980),⁶ I envisioned the "speaking subject" creating language (a code) to be deciphered by the present-day commentator. In my current study, I envision language (the code) "speaking" the subject. The subject is "decentered." My quest during the past decade has been for the distinctive, the culturally specific aspects of Afro-American literature and culture. I was convinced that I had found such specificity in a peculiar subjectivity, but the objectivity of

1. American poet (1819–1892). From the 1855 preface to *Leaves of Grass*.

2. By Mississippi Delta blues singer Robert Johnson (ca. 1911–1938).

3. GEORG WILHELM FRIEDRICH HEGEL (1770–1831), German philosopher; *Phenomenology of Spirit* was published in 1807.

4. African American novelist (1914–1994); this essay was published in 1978.

5. African American poet and playwright (formerly LeRoi Jones, b. 1934); the play *Dutchman* was published in 1964.

6. Chicago: University of Chicago Press, 1980 [Baker's note].

economics and the sound lessons of poststructuralism arose to reorient my thinking. I was also convinced that the symbolic, and quite specifically the symbolically anthropological, offered avenues to the comprehension of Afro-American expressive culture in its plenitude.⁷ I discovered that the symbolic's antithesis—practical reason, or the material—is as necessary for understanding Afro-American discourse as the cultural-in-itself.

My shift from a centered to a decentered subject, from an exclusively symbolic to a more inclusively expressive perspective, was prompted by the curious force of dialectical thought. My access to the study of such thought came from attentive readings of Fredric Jameson, Hayden White, Marshall Sahlins,⁸ and others. While profiting from observations by these scholars, I also began to attend meetings of a study group devoted to Hegel's *Phenomenology of Spirit*.

Having journeyed with the aid of symbolic anthropology to what appeared to be the soundest possible observations on Afro-American art, I found myself confronted suddenly by a figure-to-ground reversal. A fitting image for the effect of my reorientation is the gestalt illustration of the Greek hydria (a water vase with curved handles) that transforms itself into two faces in profile. John Keat's "Ode on a Grecian Urn," with its familiar detailing of the economies of "art" and human emotion, can be considered one moment in the shift.⁹ Contrasting with Keat's romantic figurations are the emergent faces of a venerable ancestry. The shift from Greek hydrias to ancestral faces is a shift from high art to vernacular expression.

The "vernacular" in relation to human beings signals "a slave born on his master's estate." In expressive terms, vernacular indicates "arts native or peculiar to a particular country or locale." The material conditions of slavery in the United States and the rhythms of Afro-American blues combined and emerged from my revised materialistic perspective as an ancestral matrix that has produced a forceful and indigenous American creativity. The moment of emergence of economic and vernacular concerns left me, as the French say, *entre les deux*:¹ suspended somewhere between symbolic anthropology and analytical strategies that Fredric Jameson calls the "ideology of form."²

IDEOLOGY, SEMIOTICS, AND THE MATERIAL

In acknowledging a concern for the ideology of form, however, I do not want to imply that my symbolic-anthropological orientation was untrue, in the

7. Though a great many sources were involved in my reoriented cultural thinking, certainly the terminology employed in my discussion at this point derives from Marshall Sahlins's wonderfully lucid *Culture and Practical Reason* (Chicago: University of Chicago Press, 1976). Sahlins delineates two modes of thinking that have characterized anthropology from its inception. These two poles are "symbolic" and "functionalist." He resolves the dichotomy suggested by these terms through the middle term "cultural proposition," a phrase that he defines as a cultural mediating ground where the material and symbolic, the useful and the inef-fable, ceaselessly converge and depart [Baker's note].

8. American anthropologist (b. 1930). JAMESON (b. 1934), American Marxist literary theorist. WHITE (b. 1928), American historian and narrative

theorist.

9. "Ode on a Grecian Urn" (1819), by the Romantic poet Keats (1795–1821), contrasts the cold perfection of timeless art with the pain experienced by those who live in time.

1. Between the two (French).

2. The "ideology of form" as a description of Jameson's project derives from the essay "The Symbolic Inference; or, Kenneth Burke and Ideological Analysis," *Critical Inquiry* 4 (1978): 507–23. Surely, though, Jameson's most recent study, *The Political Unconscious: Narrative as a Socially Symbolic Act* (Ithaca, N.Y.: Cornell University Press, 1981), offers the fullest description of his views on ways in which cultural texts formally inscribe material/historical conditions of their production, distribution, and consumption [Baker's note].

sense of deluded or deceived.³ This symbolic orientation was simply one moment in my experiencing of Afro-American culture—a moment superseded now by a prospect that constitutes its determinate negation.⁴ What was true in my prior framework remains so in my current concern for the ideology of form. Certainly the mode of ideological investigation proposed by Jameson is an analysis that escapes all hints of “vulgar Marxism” through its studious attention to modern critiques of political economy, and also through its shrewd incorporation of poststructuralist thought.⁵

In chapters that follow, I too attempt to avoid a naive Marxism.⁶ I do not believe, for example, that a fruitful correlation exists when one merely claims that certain black folk seculars are determinate results of agricultural gang labor. Such attributions simply privilege the material as a substrate while failing to provide detailed accounts of processes leading from an apparent substrate to a peculiar expressive form. A faith of enormous magnitude is required to accept such crude formulations as adequate explanations. The “material” is shifty ground, and current critiques of political economy suggest that postulates based on this ground can be understood only in “semiotic” terms. Hence, the employment of ideology as an analytical category begins with the awareness that “production” as well as “modes of production” must be grasped in terms of the sign. An example of a persuasive case for “political economy” as a code existing in a relationship of identity with language can be found in Jean Baudrillard’s *For a Critique of the Political Economy of the Sign*. To read economics as a semiotic process leads to the realization that ideological analyses may be as decidedly intertextual as, say, analyses of the relationship between Afro-American vernacular expression and more sophisticated forms of verbal art. If what is normally categorized as *material* (e.g., “raw material,” “consumer goods”) can be interpreted semiotically, then any collection of such entities and their defining interrelationships may be defined as a text.⁷

In the chapters in this book, however, I do not write about or interpret the *material* in exclusively semiotic terms. Although I am fully aware of insights to be gained from semiotics, my analyses focus directly on the living and laboring conditions of people designated as “the desperate class” by

3. In *The Journey Back*, I define my project as follows: “The phrase [the anthropology of art] expresses for me the notion that art must be studied with an attention to the methods and findings of disciplines which enable one to address such concerns as the status of the artistic object, the relationship of art to other cultural systems, and the nature and function of artistic creation and perception in a given society” (p. xvi). The project’s privileging of “symbolic anthropology” and “art” under the sign *interdisciplinary* involved exclusions that were ironical and (I now realize) somewhat disabling where a full description of expressive culture is sought [Baker’s note].

4. The Hegelian epigraph that marks the beginning of these introductory remarks offers the best definition I know of “determinate negation.” The epigraph is taken from the *Phenomenology of Spirit* [Baker’s note]. “Determinate negation”: the process of defining an entity by indicating what it is not.

5. I have in mind Louis Althusser and Étienne Balibar, *Reading Capital* (London: New Left

Books, 1977), and Jean Baudrillard’s *For a Critique of the Political Economy of the Sign* (1972; St. Louis: Telos Press, 1981) and *The Mirror of Production* (1973; St. Louis: Telos Press, 1975). By “poststructuralist” thought, I have in mind the universe of discourse constituted by *deconstruction*. Jacques Derrida’s *Of Grammatology* (1967; Baltimore: Johns Hopkins University Press, 1976) is perhaps the locus classicus of the deconstructionist project. One of the more helpful accounts of deconstruction is Christopher Norris’s *Deconstruction: Theory and Practice* (London: Methuen, 1982). Of course, there is a certain collapsing of poststructuralism and political economy in the sources cited previously [Baker’s note]. On the French philosophers ALTHUSSER (1918–1990) and DERRIDA (b. 1930), and the French social critic BAUDRILLARD (b. 1929), see above.

6. That is, a Marxism that sees cultural and political phenomena as direct reflections of economic activities connected to material needs.

7. See Baudrillard, *For a Critique of the Political Economy of the Sign* [Baker’s note].

James Weldon Johnson's⁸ narrator in *The Autobiography of an Ex-Colored Man*. Such people constitute the vernacular in the United States. Their lives have always been sharply conditioned by an "economics of slavery" as they worked the agricultural rows, searing furnaces, rolling levees, bustling round-houses, and piney-woods logging camps of America. A sense of "production" and "modes of production" that foregrounds such Afro-American labor seems an appropriate inscription of the material.

THE MATRIX AS BLUES

The guiding presupposition of the chapters that follow is that Afro-American culture is a complex, reflexive enterprise which finds its proper figuration in blues conceived as a matrix. A matrix is a womb, a network, a fossil-bearing rock, a rocky trace of a gemstone's removal, a principal metal in an alloy, a mat or plate for reproducing print or phonograph records. The matrix is a point of ceaseless input and output, a web of intersecting, crisscrossing impulses always in productive transit. Afro-American blues constitute such a vibrant network. They are what Jacques Derrida might describe as the "always already" of Afro-American culture.⁹ They are the multiplex, enabling *script* in which Afro-American cultural discourse is inscribed.

First arranged, scored, and published for commercial distribution early in the twentieth century when Hart Wand, Arthur "Baby" Seals, and W. C. Handy¹ released their first compositions, the blues defy narrow definition. For they exist, not as a function of formal inscription, but as a forceful condition of Afro-American inscription itself. They were for Handy a "found" folk signifier, awakening him from (perhaps) a dream of American form in Tutwiler, Mississippi, in 1903.² At a railroad juncture deep in the southern night, Handy dozed restlessly as he awaited the arrival of a much-delayed train. A guitar's bottleneck resonance suddenly jolted him to consciousness, as a lean, loose-jointed, shabbily clad black man sang:

Goin' where the Southern cross the Dog.
Goin' where the Southern cross the Dog.
Goin' where the Southern cross the Dog.

This haunting invocation of railroad crossings in bottleneck tones left Handy stupified and inspired. In 1914, he published his own Yellow Dog Blues.

But the autobiographical account of the man who has been called the "Father of the Blues" offers only a simplistic detailing of a *progress*, describing, as it were, the elevation of a "primitive" folk ditty to the status of "art" in America. Handy's rendering leaves unexamined, therefore, myriad corri-

8. African American writer (1871-1938), best known for his fictive autobiography (published anonymously in 1912).

9. In *Of Grammatology*, Derrida defines a problematic in which *writing*, conceived as an iterable *differ(e)ance*, is held to be *always already* instituted (or, in motion) when a traditionally designated *Man* begins to speak. Hence, *script* is anterior to speech, and absence and *differ(e)ance* displace presence and identity (conceived as "intention") in philosophical discourse [Baker's note].

1. In 1912, within a few months of each other, Wand (a white band leader), Seals (a black vaudeville performer), and Handy (a black composer) published the first transcriptions of blues songs.

2. The story appears in W. C. Handy, *Father of the Blues*, ed. Arna Bontemps (New York: Macmillan Co., 1941), p. 78. Other defining sources of blues include Paul Oliver, *The Story of the Blues* (London: Chilton, 1969); Samuel B. Charters, *The Country Blues* (New York: Rinehart, 1959); Giles Oakley, *The Devil's Music: A History of the Country Blues* (New York: Harcourt Brace Jovanovich, 1976); Amiri Baraka, *Blues People: Negro Music in White America* (New York: William E. Morrow, 1963); Albert Murray, *Stomping the Blues* (New York: McGraw-Hill Book Co., 1976); and William Ferris, *Blues from the Delta* (New York: Anchor Books, 1979) [Baker's note].

dors, mainroads, and way-stations of an extraordinary and elusive Afro-American cultural phenomenon.

DEFINING BLUES

The task of adequately describing the blues is equivalent to the labor of describing a world class athlete's awesome gymnastics. Adequate appreciation demands comprehensive attention. An investigator has to *be* there, to follow a course recommended by one of the African writer Wole Soyinka's³ ironic narrators to a London landlord: "See for yourself."

The elaborations of the blues may begin in an austere self-accusation; "Now this trouble I'm having, I brought it all on myself." But the accusation seamlessly fades into humorous acknowledgment of duplicity's always duplicitous triumph: "You know the woman that I love, I stoled her from my best friend, / But you know that fool done got lucky and stole her back again." Simple provisos for the troubled mind are commonplace, and drear exactions of crushing manual labor are objects of wry, *in situ* commentary. Numinous invocation punctuates a guitar's resonant back beat with: "Lawd, Lawd, Lawd . . . have mercy on me / Please send me someone, to end this misery." Existential declarations of lack combine with lustily macabre prophecies of the subject's demise. If a "matchbox" will hold his clothes, surely the roadside of much-traveled highways will be his memorial plot: "You can bury my body down by the highway side / So my old devil spirit can catch a Greyhound bus and ride." Conative formulations of a brighter future (sun shining in the back door some day, wind rising to blow the blues away) join with a slow-moving *askesis*⁴ of present, amorous imprisonment: "You leavin' now, baby, but you hangin' crepe on my door," or "She got a mortgage on my body, and a lien on my soul." Self-deprecating confession and slack-strumming growls of violent solutions combine: "My lead mule's cripple, you know my off mule's blind / You know I can't drive nobody / Bring me a loaded .39 (I'm go'n pop him, pop that mule!)." The wish for a river of whiskey where if a man were a "divin' duck" he would submerge himself and never "come up" is a function of a world in which "when you lose yo' eyesight, yo' best friend's gone / Sometimes yo' own dear people don't want to fool with you long."

Like a streamlined athlete's awesomely dazzling explosions of prowess, the blues song erupts, creating a veritable playful festival of meaning. Rather than a rigidly personalized form, the blues offer a phylogenetic⁵ recapitulation—a nonlinear, freely associative, nonsequential meditation—of species experience. What emerges is not a filled subject, but an anonymous (nameless) voice issuing from the black (w)hole.⁶ The blues singer's signatory coda is always *atopic*, placeless: "If anybody ask you who sang this song / Tell 'em

3. Nobel Prize-winning Nigerian writer (b. 1934). The quotation is from his poem "Telephone Conversation."

4. Training, asceticism (Greek).

5. Reflecting its evolutionary history.

6. The description at this point is coextensive with the "decentering" of the subject mentioned at the outset of my introduction. What I wish to effect by noting a "subject" who is not *filled* is a displacement of the notion that knowledge, or "art," or "song," are manifestations of an ever more clearly defined individual consciousness of *Man*. In accord with Michel Foucault's explorations in his *Archaeology of Knowledge* (1969; New York: Har-

per and Row, 1972), I want to claim that blues is like a discourse that comprises the "already said" of Afro-America. Blues' governing statements and sites are thus vastly more interesting in the process of cultural investigation than either a history of ideas or a history of individual, subjective consciousness vis-à-vis blues. When I move to the "X" of the trace and the body as host, I am invoking Mark Taylor's formulations in a suggestive deconstructive essay toward radical christology called "The Text as Victim," in *Deconstruction and Theology* (New York: Crossroad, 1982), pp. 58-78 [Baker's note]. On the French philosopher and historian FOUCAULT (1926-1987), see above.

X done been here and gone." The "signature" is a space already "X"(ed), a trace of the already "gone"—a fissure rejoined. Nevertheless, the "you" (audience) addressed is always free to invoke the X(ed) spot in the body's absence. For the signature comprises a scripted authentication of "your" feelings. Its mark is an invitation to energizing intersubjectivity. Its implied (in)junction reads: Here is my body meant for (a phylogenetically conceived) you.

The blues are a synthesis (albeit one always synthesizing rather than one already hypostatized). Combining work songs, group seculars, field hollers, sacred harmonies, proverbial wisdom, folk philosophy, political commentary, ribald humor, elegiac lament, and much more, they constitute an amalgam that seems always to have been in motion in America—always becoming, shaping, transforming, displacing the peculiar experiences of Africans in the New World.

BLUES AS CODE AND FORCE

One way of describing the blues is to claim their amalgam as a code radically conditioning Afro-America's cultural signifying. Such a description implies a prospect in which any aspect of the blues—a guitar's growling vamp or a stanza's sardonic boast of heroically back-breaking labor—"stands," in Umberto Eco's words, "for something else" in virtue of a systematic set of conventional procedures.⁷ The materiality of any blues manifestation, such as a guitar's walking bass or a French harp's⁸ "whoop" of motion seen, is, one might say, enciphered in ways that enable the material to escape into a named or coded, blues signification. The material, thus, slips into irreversible difference. And as phenomena named and set in meaningful relation by a blues code, both the harmonica's whoop and the guitar's bass can recapitulate vast dimensions of experience. For such discrete blues instances are always intertextually related by the blues code as a whole. Moreover, they are involved in the code's manifold interconnections with other codes of Afro-American culture.

A further characterization of blues suggests that they are equivalent to Hegelian "force."⁹ In the *Phenomenology*, Hegel speaks of a flux in which there is "only difference as a universal difference, or as a difference into which the many antitheses have been resolved. This difference, as a universal difference, is consequently the simple element in the play of Force itself and what is true in it. It is the law of Force" (p. 90). Force is thus defined as a relational matrix where difference is the law. Finally the blues, employed as an image for the investigation of culture, represents a force not unlike electricity. Hegel writes:

Of course, given positive electricity, negative too is given in principle; for the positive is, only as related to a negative, or, the positive is in its

7. The definition of "code" is drawn from *A Theory of Semiotics* (Bloomington: Indiana University Press, 1976). All references to Eco refer to this work and are hereafter marked by page numbers in parentheses [Baker's note]. Eco (b. 1932), Italian literary critic and novelist.

8. Harmonica.

9. *The Phenomenology of Spirit*, trans. A. V. Miller (New York: Oxford University Press, 1977). While it is true that the material dimensions of the dia-

lectic are of primary importance to my current study, it is also true that the locus classicus of the dialectic, in and for itself, is the *Phenomenology*. Marx may well have stood Hegel on his feet through a materialist inversion of the *Phenomenology*, but subsequent generations have always looked at that upright figure—Hegel himself—as an authentic host [Baker's note]. On the German social, political, and economic theorist KARL MARX (1818–1883), see above.

own self the difference from itself; and similarly with the negative. But that electricity as such should divide itself in this way is not in itself a necessity. Electricity, as *simple Force*, is indifferent to its law—to be positive and negative; and if we call the former its Notion but the latter its being, then its Notion is indifferent to its being. It merely *has* this property, which just means that this property is not *in itself* necessary to it . . . It is only with law as law that we are to compare its *Notions* as Notion, or its necessity. But in all these forms, necessity has shown itself to be only an empty word. [p. 93]

Metaphorically extending Hegel's formulation vis-à-vis electricity, one might say that a traditional property of cultural study may well be the kind of dichotomy inscribed in terms like "culture" and "practical reason." But even if such dichotomies are raised to the status of law, they never constitute the necessity or "determinant instances" of cultural study and explanation conceived in terms of *force*—envisioned, that is, in the analytic notion of a blues matrix as force. The blues, therefore, comprise a mediational site where familiar antinomies are resolved (or dissolved) in the office of adequate cultural understanding.

BLUES TRANSLATION AT THE JUNCTION

To suggest a trope for the blues as a forceful matrix in cultural understanding is to summon an image of the black blues singer at the railway junction lustily transforming experiences of a durative (unceasingly oppressive) landscape into the energies of rhythmic song. The railway juncture is marked by transience. Its inhabitants are always travelers—a multifarious assembly in transit. The "X" of crossing roadbeds signals the multidirectionality of the juncture and is simply a single instance in a boundless network that redoubles and circles, makes sidings and ladders, forms Y's and branches over the vastness of hundreds of thousands of American miles. Polymorphous and multidirectional, scene of arrivals and departures, place betwixt and between (*ever entre les deux*), the juncture is the way-station of the blues.

The singer and his production are always at this intersection, this crossing, codifying force, providing resonance for experience's multiplicities. Singer and song never arrest transience—fix it in "transcendent form." Instead they provide expressive equivalence for the juncture's ceaseless flux. Hence, they may be conceived as translators.¹

Like translators of written texts, blues and its sundry performers offer interpretations of the experiencing of experience. To experience the juncture's ever-changing scenes, like successive readings of ever-varying texts by conventional translators, is to produce vibrantly polyvalent interpretations encoded as blues. The singer's product, like the railway juncture itself (or a

1. Having heard John Felstiner in a session at the 1982 Modern Language Association Convention present a masterful paper defining "translation" as a process of preserving "something of value" by keeping it in motion, I decided that the blues were apt translators of experience. Felstiner, it seemed to me, sought to demonstrate that *translation* was a process equivalent to gift-giving in Mauss's classic definition of that activity. The value of the gift of translation is never fixed because, say, the poem,

is always in a transliterational motion, moving from one alphabet to another, always renewing and being *re-newed* in the process. Translation forestalls fixity. It calls attention always to the *translated's* excess—to its complex multivalence [Baker's note]. Marcel Mauss (1872–1950), French anthropologist; in *The Gift* (1925), he outlines gift-exchange as a continual exchange of goods kept in motion by the obligation created to give something in return after one receives a gift.

successful translator's original), constitutes a lively scene, a robust matrix, where endless antinomies are mediated and understanding and explanation find conditions of possibility.

The durative—transliterated as lyrical statements of injustice, despair, loss, absence, denial, and so forth—is complemented in blues performance by an instrumental energy (guitar, harmonica, fiddle, gut-bucket bass, molasses jug, washboard) that employs locomotive rhythms, train bells, and whistles as onomatopoeic references.² In *A Theory of Semiotics*, Eco writes:

Music presents, on the one hand, the problem of a semiotic system without a semantic level (or a content plane): on the other hand, however, there are musical "signs" (or syntagms)³ with an explicit denotative value (trumpet signals in the army) and there are syntagms or entire "texts" possessing pre-culturalized connotative value ("pastoral" or "thrilling" music, etc.). [p. 111]

The absence of a content plane noted by Eco implies what is commonly referred to as the "abstractness" of instrumental music. The "musical sign," on the other hand, suggests cultural signals that function onomatopoeically by calling to mind "natural" sounds or sounds "naturally" associated with common human situations. Surely, though, it would be a mistake to claim that onomatopoeia is in any sense "natural," for different cultures encode even the "same" natural sounds in varying ways. (A rooster onomatopoeically sounded in Puerto Rican Spanish is phonically unrecognizable in United States English, as a classic Puerto Rican short story⁴ makes hilariously clear.)

If onomatopoeia is taken as cultural mimesis, however, it is possible to apply the semiotician's observations to blues by pointing out that the dominant blues syntagm in America is an instrumental imitation of *train-wheels-over-track-junctures*. This sound is the "sign," as it were, of the blues, and it combines an intriguing melange of phonics: rattling gondolas,⁵ clattering flatbeds, quilling whistles, clanging bells, rumbling boxcars, and other railroad sounds. A blues text may thus announce itself by the onomatopoeia of the train's whistle sounded on the indrawn breath of a harmonica or a train's bell tinkled on the high keys of an upright piano. The blues stanzas may then roll through an extended meditative repertoire with a steady train-wheels-over-track-junctures guitar back beat as a traditional, syntagmatic complement. If desire and absence are driving conditions of blues performance, the amelioration of such conditions is implied by the onomatopoeic *training* of blues voice and instrument. Only a *trained* voice can sing the blues.⁶

At the junctures, the intersections of experience where roads cross and diverge, the blues singer and his performance serve as codifiers, absorbing and transforming discontinuous experience into formal expressive instances that bear only the trace of origins, refusing to be pinned down to any final, dualistic significance. Even as they speak of paralyzing absence and ineradicable desire, their instrumental rhythms suggest change, movement, action, continuance, unlimited and unending possibility. Like signification itself,

2. Words that refer to an object by imitating the sounds that object makes.

3. Meaningful arrangements or combinations of smaller expressive units.

4. "Peyo Mercé: English Teacher," by Abelardo Díaz Altaro (1917-1999).

5. Railroad cars with fixed sides and no top.

6. One of the most inspiring and intriguing descriptions of the relationship between blues voice and the sounds of the railroad is Albert Murray's lyrical exposition in *Stomping the Blues* [Baker's note].

blues are always nomadically wandering. Like the freight-hopping hobo, they are ever on the move, ceaselessly summing novel experience.

ANTINOMIES AND BLUES MEDIATION

The blues performance is further suggestive if economic conditions of Afro-American existence are brought to mind. Standing at the juncture, or railroad, the singer draws into his repertoire hollers, cries, whoops, and moans of black men and women working in fields without recompense. The performance can be cryptically conceived, therefore, in terms suggested by the bluesman Booker White, who said, "The foundation of the blues is working behind a mule way back in slavery time."⁷ As a force, the blues matrix defines itself as a network mediating poverty and abundance in much the same manner that it reconciles durative and kinetic. Many instances of the blues performance contain lyrical inscriptions of both lack and commercial possibility. The performance that sings of abysmal poverty and deprivation may be recompensed by sumptuous food and stimulating beverage at a country picnic, amorous favors from an attentive listener, enhanced Afro-American communality, or Yankee dollars from representatives of record companies traveling the South in search of blues as commodifiable entertainment. The performance, therefore, mediates one of the most prevalent of all antinomies in cultural investigation—creativity and commerce.

As driving force, the blues matrix thus avoids simple dualities. It perpetually achieves its effects as a fluid and multivalent network. It is only when "understanding"—the analytical work of a translator who translates the infinite changes of the blues—converges with such blues "force," however, that adequate explanatory perception (and half-creation) occurs. The matrix effectively functions toward cultural understanding, that is, only when an investigator brings an inventive attention to bear.

THE INVESTIGATOR, RELATIVITY, AND BLUES EFFECT

The blues matrix is a "cultural invention": a "negative symbol" that generates (or obliges one to invent) its own referents.⁸ As an inventive trope, this matrix provides for my following chapters the type of image or model that is always present in accounts of culture and cultural products. If the analyses that I provide are successful, the blues matrix will have *taken effect* (and *affect*) through me.

To "take effect," of course, is not identical with to "come into existence" or to "demonstrate serviceability for the first time." Because what I have defined as a blues matrix is so demonstrably anterior to any single instance of its cultural-explanatory employment, my predecessors as effectors are obviously legion. "Take effect," therefore, does not signify discovery in the traditional sense of that word. Rather, it signals the tropological nature⁹ of my uses of an already extant matrix.

Ordinarily, accounts of art, literature, and culture fail to acknowledge their

7. Quoted in Oakley, *The Devil's Music*, p. 7 [Baker's note]. Booker T. Washington (also called "Bukka") White (1906–1971), blues guitarist and harmonica player.

8. I have appropriated the term "negative symbol"

from Roy Wagner's *The Invention of Culture* (Chicago: University of Chicago Press, 1975), p. xvi [Baker's note].

9. Figurative extension.

governing theories; further, they invariably conceal the *inventive* character of such theories. Nevertheless, all accounts of art, expressive culture, or culture in general are indisputably functions of their creators' tropological energies. When such creators talk of "art," for example, they are never dealing with existential givens. Rather, they are summoning objects, processes, or events defined by a model that they have created (by and for themselves) as a picture of art. Such models, or tropes, are continually invoked to constitute and explain phenomena inaccessible to the senses. Any single model, or any complementary set of inventive tropes, therefore, will offer only a selective account of experience—a partial reading, as it were, of the world. While the single account temporarily reduces chaos to ordered plan, all such accounts are eternally troubled by "remainders."

Where literary art is concerned, for example, a single, ordering, investigative model or trope will necessarily exclude phenomena that an alternative model or trope privileges as a definitive artistic instance. Recognizing the determinacy of "invention" in cultural explanation entails the acknowledgement of what might be called a *normative relativity*. To acknowledge relativity in our post-Heisenbergian universe¹ is, of course, far from original. Neither, however, is it an occasion for the skeptics or the conservatives to heroically assume the critical stage.

The assumption of normative relativity, far from being a call to abandonment or retrenchment in the critical arena, constitutes an invitation to speculative explorations that are aware both of their own partiality and their heuristic transitions from suggestive (sometimes dramatic) images to inscribed concepts. The openness implied by relativity enables, say, the literary critic to *re-cognize* his endeavors, presupposing from the outset that such labors are not directed toward independent, observable, empirical phenomena but rather toward processes, objects, and events that he or she half-creates (and privileges as "art") through his or her own speculative, inventive energies and interests.

One axiological² extrapolation from these observations on invention and relativity is that no object, process, or single element possesses *intrinsic aesthetic value*. The "art object" as well as its value are selective *constructions* of the critic's tropes and models. A radicalizing uncertainty may thus be said to mark cultural explanation. This uncertainty is similar in kind to the always selective endeavors of, say, the particle physicist.³

The physicist is always compelled to choose between velocity and position.⁴ Similarly, an investigator of Afro-American expressive culture is cease-

1. That is, a universe governed by the "uncertainty principle" articulated in 1927 by Werner Heisenberg (1901–1976), a Nobel Prize-winning German physicist: it states that one cannot precisely determine both the position and momentum of atomic particles at any one moment. The exact calculations of classical mechanics are thus replaced with statements of probability in quantum mechanics.

2. Pertaining to the branch of philosophy dealing with values.

3. My references to a "post-Heisenbergian universe" and to the "particle physicist" were made possible by a joyful reading of Gary Zukav's *The Dancing Wu Li Masters: An Overview of the New*

Physics (New York: William E. Morrow, 1979) [Baker's note].

4. Zukav, *ibid.*, writes: "According to the uncertainty principle, we cannot measure accurately, at the same time, both the position *and* the momentum of a moving particle. The more precisely we determine one of these properties, the less we know about the other. If we precisely determine the position of the particle, then, strange as it sounds, there is *nothing* that we can know about its momentum. If we precisely determine the momentum of the particle, there is no way to determine its position" (p. 111). Briefly, if we bring to bear enough energy actually to "see" the imagined "particle," that energy has always already *moved*

lessly compelled to forgo manifold variables in order to apply intensive energy to a selected array.

Continuing the metaphor, one might say that if the investigator's efforts are sufficiently charged with blues energy,⁵ he is almost certain to remodel elements and events appearing in traditional, Anglo-American space-time in ways that make them "jump" several rings toward blackness and the vernacular. The blues-oriented observer (the *trained* critic) necessarily "heats up" the observational space by his or her very presence.⁶

An inventive, tropological, investigative model such as that proposed by *Blues, Ideology, and Afro-American Literature* entails not only awareness of the metaphorical nature of the blues matrix, but also a willingness on my own part to do more than merely hear, read, or see the blues. I must also play (with and on) them. Since the explanatory possibilities of a blues matrix—like analytical possibilities of a delimited set of forces in unified field theory—are hypothetically unbounded, the blues challenge investigative *understanding* to an unlimited play.

BLUES AND VERNACULAR EXPRESSION IN AMERICA

The blues should be privileged in the study of American culture to precisely the extent that inventive understanding successfully converges with blues force to yield accounts that persuasively and playfully refigure expressive geographies in the United States. My own ludic uses of the blues are various, and each figuration implies the valorization of vernacular facets of American culture. The Afro-American writer James Alan McPherson is, I think, the commentator who most brilliantly and encouragingly coalesces blues, vernacular, and cultural geographies of the United States in his introduction to *Railroad: Trains and Train People in American Culture*.⁷

Having described a fiduciary reaction to the steam locomotive by nineteenth-century financiers and an adverse artistic response by such traditional American writers as Melville, Hawthorne, and Thoreau,⁸ McPherson details the reaction of another sector of the United States population to the railroad:

To a third group of people, those not bound by the assumptions of either business or classical traditions in art, the shrill whistle might have spoken of new possibilities. These were the backwoodsmen and Africans and recent immigrants—the people who comprised the vernacular level of American society. To them the machine might have been loud and frightening, but its whistle and its wheels promised movement. And since a commitment to both freedom and movement was the basic prom-

the particle from its *position* (which is one of the aspects of its existence that one attempts to *determine*) when we take our measurement. Indeterminacy thus becomes normative [Baker's note].

5. The "blues force" is my translational equivalent in investigative "energy" for the investigative energy delineated by Heisenberg's formulations [Baker's note].

6. Eco (*A Theory of Semiotics*, p. 29) employs the metaphor of "ecological variation" in his discussion of the semiotic investigations of culture to describe

observer effect in the mapping of experience [Baker's note].

7. New York: Random House, 1976. All citations refer to this edition and are hereafter marked by page numbers in parentheses [Baker's note]. McPherson (b. 1943), novelist and short story writer.

ise of democracy, it was probable that such people would view the locomotive as a challenge to the integrative powers of their imaginations. [p. 6]

Afro-Americans—at the bottom even of the vernacular ladder in America—responded to the railroad as a “meaningful symbol offering both economic progress and the possibility of aesthetic expression” (p. 9). This possibility came from the locomotive’s drive and thrust, its promise of unrestrained mobility and unlimited freedom. The blues musician at the crossing, as I have already suggested, became an expert at reproducing or translating these locomotive energies. With the birth of the blues, the vernacular realm of American culture acquired a music that had “wide appeal because it expressed a toughness of spirit and resilience, a willingness to transcend difficulties which was strikingly familiar to those whites who remembered their own history” (p. 16). The signal expressive achievement of blues, then, lay in their translation of technological innovativeness, unsettling demographic fluidity, and boundless frontier energy into expression which attracted avid interest from the American masses. By the 1920s, American financiers had become aware of commercial possibilities not only of railroads but also of black music deriving from them.

A “race record” market flourished during the twenties. Major companies issued blues releases under labels such as Columbia, Vocalion, Okeh, Genett, and Victor. Sometimes as many as ten blues releases appeared in a single week; their sales (aided by radio’s dissemination of the music) climbed to hundreds of thousands. The onset of the Great Depression ended this phenomenal boom. During their heyday, however, the blues unequivocally signified a ludic predominance of the vernacular with that sassy, growling, moaning, whooping confidence that marks their finest performances.

McPherson’s assessment seems fully justified. It serves, in fact, as a suggestive play in the overall project of refiguring American expressive geographies. Resonantly complementing the insights of such astute commentators as Albert Murray, Paul Oliver, Samuel Charters, Amiri Baraka, and others, McPherson’s judgments highlight the value of a blues matrix for cultural analysis in the United States.

In harmony with other brilliant commentators on the blues already noted, Ralph Ellison selects the railroad way-station (the “Chehaw Station”) as his topos for the American “little man.”⁹ In “The Little Man at the Chehaw Station,”¹ he autobiographically details his own confirmation of his Tuskegee music teacher’s observation that in the United States

You must *always* play your best, even if it’s only in the waiting room at Chehaw Station, because in this country there’ll always be a little man hidden behind the stove . . . and he’ll know the *music*, and the *tradition*, and the standards of *musicianship* required for whatever you set out to perform. [p. 25]

When Hazel Harrison made this statement to the young Ellison, he felt that she was joking. But as he matured and moved through a diversity of

9. The Chehaw Station is a whistle-stop near Tuskegee, Alabama. It was a feature of the landscape of Tuskegee Institute, where Ellison studied music (and much else) [Baker’s note].

1. *American Scholar* 47 (1978): 24–48. All citations refer to this version and are hereafter marked by page numbers in parentheses [Baker’s note].

American scenes, Ellison realized that the inhabitants of the "drab, utilitarian structure" of the American vernacular do far more than respond in expressive ways to "blues-echoing, train-whistle rhapsodies blared by fast express trains as they thundered past" the junction. At the vernacular level, according to Ellison, people possess a "cultivated taste" that asserts its "authority out of obscurity" (p. 26). The "little man" finally comes to represent, therefore, "that unknown quality which renders the American audience far more than a receptive instrument that may be dominated through a skillful exercise of the sheerly 'rhetorical' elements—the flash and filigree—of the artist's craft" (p. 26).

From Ellison's opening gambit and wonderfully illustrative succeeding examples, I infer that the vernacular (in its expressive adequacy and adept critical facility) always *absorbs* "classical" elements of American life and art. Indeed, Ellison seems to imply that expressive performers in America who ignore the judgments of the vernacular are destined to failure.

Although his injunctions are intended principally to advocate a traditional "melting pot" ideal in American "high art," Ellison's observations ultimately valorize a comprehensive, vernacular expressiveness in America. Though he seldom loses sight of the possibilities of a classically "transcendent" American high art, he derives his most forceful examples from the vernacular: Blues seem implicitly to comprise the *All* of American culture.

BLUES MOMENTS IN AFRO-AMERICAN EXPRESSION

In the chapters that follow, I attempt to provide suggestive accounts of moments in Afro-American discourse when personae, protagonists, autobiographical narrators, or literary critics successfully negotiate an obdurate "economics of slavery" and achieve a resonant, improvisational, expressive dignity. Such moments and successful analyses of them provide cogent examples of the blues matrix at work.

The expressive instances that I have in mind occur in passages such as the conclusion of the *Narrative of the Life of Frederick Douglass*.² Standing at a Nantucket convention, riffing (in the "break" suddenly confronting him) on the *personal* troubles he has seen and successfully negotiated in a "prisonhouse of American bondage," Douglass achieves a profoundly dignified blues voice. Zora Neale Hurston's³ protagonist Janie in the novel *Their Eyes Were Watching God*—as she lyrically and idiomatically relates a tale of personal suffering and triumph that begins in the sexual exploitations of slavery—is a blues artist par excellence. Her wisdom might well be joined to that of Amiri Baraka's Walker Vessels⁴ (a "locomotive container" of blues?), whose chameleon code-switching from academic philosophy to blues insight makes him a veritable incarnation of the absorptively vernacular. The narrator of Richard Wright's⁵ *Black Boy* inscribes a black blues life's lean desire (as I shall demonstrate in chapter 3) and suggests yet a further instance of the blues matrix's expressive energies. Ellison's invisible man and Baraka's narrator in *The System of*

2. The 1845 autobiography of the African American antislavery activist and writer (1818–1895).

3. African American novelist and anthropologist (1891–1960; see above); *Their Eyes Were Watch-*

ing God was published in 1937.

4. A character in Baraka's play *The Slave* (1962).

5. African American novelist (1908–1960); *Black Boy*, an autobiography, was published in 1945.

*Dante's Hell*⁶ (whose blues book produces dance) provide additional examples. Finally, Toni Morrison's⁷ Milkman Dead in *Song of Solomon* discovers through "Sugarman's" song that an awesomely expressive blues response may well consist of improvisational and serendipitous surrender to the air: "As fleet and bright as a lodestar he wheeled toward Guitar and it did not matter which one of them would give up his ghost in the killing arms of his brother. For now he knew what Shalimar knew: if you surrendered to the air, you could *ride* it."⁸

Such blues moments are but random instances of the blues matrix at work in Afro-American cultural expression. In my study as a whole, I attempt persuasively to demonstrate that a blues matrix (as a vernacular trope for American cultural explanation in general) possesses enormous force for the study of literature, criticism, and culture. I know that I have appropriated the vastness of the vernacular in the United States to a single matrix. But I trust that my necessary selectivity will be interpreted, not as a sign of myopic exclusiveness, but as an invitation to inventive play. The success of my efforts would be effectively signaled in the following chapters, I think, by the transformation of my "I" into a juncture where readers could freely improvise their own distinctive tropes for cultural explanation. A closing that in fact opened on such inventive possibilities (like the close of these introductory remarks) would be appropriately marked by the crossing sign's inviting "X."

TERRY EAGLETON

b. 1943

Satirically paraphrasing MATTHEW ARNOLD's influential view of the ennobling power of literature and culture, Terry Eagleton writes: "If the masses are not thrown a few novels, they may react by throwing up a few barricades." In *Culture and Anarchy* (1869), Arnold claims that art, literature, and culture confer "greatness and a noble spirit" on those who appreciate them, and furthermore are the means to avoid anarchy. In "The Rise of English" (1983), Eagleton argues that literature concerns not simply beauty and spiritual uplift, but the social control of the middle and working classes. Answering a perennial question in literary theory about the role of literature in society, Eagleton bluntly asserts that the discipline of literature, like formal religion, is deeply involved in the reproduction of the dominant social order.

A student of the Marxist literary and cultural critic RAYMOND WILLIAMS, Eagleton has been the foremost Marxist commentator on literary theory in England since the 1980s, as well as a literary journalist, novelist, and playwright. Born in a working-class community in Salford, England, he attended Cambridge University on a scholarship, receiving his B.A. in 1964 and his Ph.D. in 1968. He taught at Cambridge for a year, but since 1969 he has held various appointments at Oxford University, becoming Thomas Warton Professor of English and Literature in 1992. During the politically vibrant late 1960s, Eagleton was active in the Catholic Left—among other

things, he helped found a journal, *Slant*—and he published three books before he was thirty. It was not until the mid-1970s, however, that he established himself as a leading expositor of Marxism within the emerging field of contemporary literary theory, most notably with *Criticism and Ideology: A Study in Marxist Literary Theory* (1976). Extending LOUIS ALTHUSSER's theory of ideology to literature, it propounds a Marxist theory of the text. Against traditional, aestheticist views that literature primarily produces beauty and pleasure, as well as the conventional Marxist view, espoused by LEON TROTSKY, that texts directly reflect social reality, Eagleton argues that texts actively produce ideology rather than merely reflect it.

While his later work frequently returns to questions of aesthetics and ideology, Eagleton subsequently turned away from the pursuit of an overarching theoretical model, or what the American sociologist C. Wright Mills (1916–1962) termed “Grand Theory.” As he remarked in a 1990 interview, “I think that back in the seventies we used to suffer from a certain fetishism of method; we used to think that we have to get a certain kind of systematic method right, and this would be *the* way of proceeding. I think some of my early work, certainly *Criticism and Ideology*, would fall within that general approach.” Rather than dispensing with Marxism, however, he distinguishes between theoretical methods and political goals: “[A] Marxist has to define certain urgent political goals and allow, as it were, those to determine questions of method rather than the other way around.” In eschewing large-scale theoretical models, Eagleton resembles the twentieth-century neopragmatists Richard Rorty, STANLEY FISH, AND STEVEN KNAPP AND WALTER BENN MICHAELS, who insist that method cannot be determined in advance but derives from practice. But whereas they argue that literary studies are politically ineffectual, Eagleton advocates a political focus.

Another element of Eagleton's turn from Grand Theory is his style, which is lively, witty, clear, and frequently opinionated, combining theory and literary journalism. Eagleton unabashedly states his opinions—often in audacious one-liners, such as “deconstruction is the death drive at the level of theory”—and injects humor into his writing. For instance, he concludes his collection of essays, *Against the Grain, Essays 1975–1985* (1986), with a comic song:

Chaucer was a class traitor,
Shakespeare hated the mob,
Donne sold out a bit later,
Sidney was a nob.

.....
There are only three names
To be plucked from this dismal set
Milton Blake and Shelley
Will smash the ruling class yet.

However whimsical, Eagleton's song memorably reinforces his argument for the class orientation of literature, valuing the socially revolutionary rather than the purely aesthetic.

In his *Function of Criticism: From the “Spectator” to Post-Structuralism* (1984), Eagleton declares that contemporary criticism has lost its social purpose and become marginalized through the technocratic fetishizing of Grand Theory. Drawing on the twentieth-century German philosopher JÜRGEN HABERMAS's concept of the public sphere, he notes that modern criticism arose in the eighteenth century in opposition to the absolutist state, and he calls for the renewed oppositional role of criticism in the public sphere. To that end, Eagleton became known as the foremost popularizer of contemporary literary theory in the 1980s. His *Literary Theory: An Introduction* (1983; 2d ed., 1996), from which “The Rise of English” is drawn, was an academic bestseller and probably the most influential introduction to contemporary theory for students and curious readers. It conducts a knowledgeable but fast-paced, readable,

and pithy survey of reader-response and reception theory, structuralism, deconstruction, and psychoanalysis. Rather than presenting a dispassionate history, *Literary Theory* bluntly states Eagleton's preferences and value judgments. Finding fault with most contemporary theories for their lack of attention to politics, he praises Marxist and feminist criticism for their concern with the political effects of literature.

Accessible and polemical, "The Rise of English" illustrates Eagleton's trademark style. Developing some of the concerns of Raymond Williams's "Literature" (1977; see above), this survey of the discipline combines broad historical overview and ideological analysis. Eagleton sees English, which became an academic subject only in the late nineteenth century, as an outgrowth of nationalism as well as a replacement for religion as a crucial ideological apparatus. While lacking nuance, Eagleton's analysis succinctly answers a major theoretical question, proposing that literature has social significance not simply as an innocent, pleasurable entertainment but as a primary means of reinforcing the dominant social order.

In part because of his popularizations of theory, and in part because of the often sweeping, polemical nature of his arguments, Eagleton has occasionally been dismissed by specialist commentators on theory. His influence among theorists is much less pronounced than that of FREDRIC JAMESON, the most prominent U.S. Marxist critic. However, Eagleton has made theory accessible to students and nonspecialists, persistently reminding readers of its social role in the public sphere. He has provided a model for younger literary critics who self-consciously choose to write in a more journalistic mode, turning from the dense language and specialist focus of Grand Theory to address a larger public in discussing cultural issues. The tension in criticism between specialization and accessibility, which itself became a central theoretical issue in the 1990s, mirrors a perennial debate in literary studies—whether literature demonstrates special qualities available only to connoisseurs who have expert knowledge of the tradition, as articulated by the modernist T. S. ELIOT, or whether literature can reach the common reader, in what the Romantic poet WILLIAM WORDSWORTH calls "the real language of men."

BIBLIOGRAPHY

Eagleton has been prolific, writing more than twenty critical books, scores of pieces of literary journalism, several plays, and a novel. In this he follows the model of his teacher Raymond Williams, though he has focused primarily on literary criticism and theory rather than cultural and media studies. Eagleton's early books include *Shakespeare and Society: Critical Studies in Shakespearean Drama* (1967), *Exiles and Emigrants: Studies in Modern Literature* (1970), and *The Body as Language: Outline of a "New Left" Theology* (1970). He also edited collections that reflect his involvement in the Catholic Left, including *Directions: Pointers for the Post-Conciliar Church* (1968) and, with Brian Wicker, *From Culture to Revolution: The "Slant" Symposium, 1967* (1968). In the 1970s and early 1980s he published three works of Marxist theory: *Marxism and Literary Criticism* (1976), a superb short survey of major Marxist critics and debates; the influential *Criticism and Ideology: A Study in Marxist Literary Theory* (1976); and *Walter Benjamin; or, Towards a Revolutionary Criticism* (1981), reassessing Benjamin as a model for Marxist criticism. He also published two works of literary criticism, *Myths of Power: A Marxist Study of the Brontës* (1975; 2d ed., 1988) and *The Rape of Clarissa: Writing, Sexuality, and Class Struggle in Samuel Richardson* (1982), which is notable for its engagement with feminism.

In the mid-1980s Eagleton published the popular overview *Literary Theory: An Introduction* (1983; 2d ed., 1996) and a short history, *The Function of Criticism: From the "Spectator" to Post-Structuralism* (1984), which is perhaps the best place to start reading his work. He also published a short critical introduction, *William Shakespeare* (1986); a collection of his essays, *Against the Grain: Essays, 1975–1985* (1986); and a fine edited collection assessing the influence of his teacher, *Raymond Williams:*

A Critical Reader (1989). In the 1990s, Eagleton published several critical histories, including *The Ideology of the Aesthetic* (1990), an engaging and ambitious account of aesthetic theory from David Hume to Theodor Adorno; the slim *Significance of Theory* (1990), which gathers two lectures and an interesting interview commenting on contemporary theory; *Ideology: An Introduction* (1991), an accessible tour of the development of the concept of ideology; and *The Illusions of Postmodernism* (1996), an attack on key tendencies of contemporary theory. Of Irish ancestry, Eagleton has also shown an interest in Irish culture, especially in *Heathcliff and the Great Hunger: Studies in Irish Culture* (1995) and *Crazy John and the Bishop and Other Essays on Irish Culture* (1998). He continued his lucid expositions of key theoretical ideas in two short volumes, *Marx* (1999) and *The Idea of Culture* (2000). Alongside his own books, he co-edited with Drew Milne a useful anthology, *Marxist Literary Theory: A Reader* (1996). His creative work includes the novel *Saints and Scholars* (1987); a script, *Wittgenstein: The Terry Eagleton Script, the Derek Jarman Film* (1993); and plays, *Saint Oscar and Other Plays* (1997). *The Eagleton Reader*, edited by Stephen Regan (1998), provides an excellent sampler spanning all of Eagleton's work.

Notable comments on Eagleton's views of English and theory include Elaine Showalter's "Critical Cross-Dressing: Male Feminists and the Woman of the Year," *Raritan* 3.2 (1983), which applauds his attention to feminism; Jonathan Culler's review of *Literary Theory*, in *Poetics Today* 5 (1984), which praises Eagleton's efficient history of theory but criticizes his simplistic sense of historical causality; Richard Aczel's "Eagleton and English," *New Left Review* 154 (1985), which usefully situates his work up to *The Function of Criticism*; Steven Helming's "Marxist Pleasure: Jameson and Eagleton," in *Essays in Postmodern Culture* (ed. Eyal Amiran and John Unsworth, 1993), which interestingly compares the two prominent Marxist critics; and R. Boffin's "Used Books," *Critical Quarterly* 37 (1995), which contests Eagleton's claim for "the centrality of literature" as an ideology, reasoning that "if literature was as central to the social order as Eagleton claims, the massive success of his own book [*Literary Theory*] should presage some extraordinary transformation of the social order." *The Eagleton Reader* contains the definitive bibliography of both Eagleton's writings and commentary on his work up to 1996.

From Literary Theory: An Introduction

From Chapter 1. *The Rise of English*

* * *

To speak of 'literature and ideology' as two separate phenomena which can be interrelated is, as I hope to have shown, in one sense quite unnecessary. Literature, in the meaning of the word we have inherited, is an ideology.¹ It has the most intimate relations to questions of social power. But if the reader is still unconvinced, the narrative of what happened to literature in the later nineteenth century might prove a little more persuasive.

If one were asked to provide a single explanation for the growth of English studies in the later nineteenth century, one could do worse than reply: 'the failure of religion'. By the mid-Victorian period, this traditionally reliable, immensely powerful ideological form was in deep trouble. It was no longer winning the hearts and minds of the masses, and under the twin impacts of

1. That is, a system of specific class beliefs, images, values, and practices that functions to reproduce the dominant social order.

scientific discovery and social change its previous unquestioned dominance was in danger of evaporating. This was particularly worrying for the Victorian ruling class, because religion is for all kinds of reasons an extremely effective form of ideological control. Like all successful ideologies, it works much less by explicit concepts or formulated doctrines than by image, symbol, habit, ritual and mythology. It is affective and experiential, entwining itself with the deepest unconscious roots of the human subject; and any social ideology which is unable to engage with such deep-seated a-rational fears and needs, as T. S. Eliot² knew, is unlikely to survive very long. Religion, moreover, is capable of operating at every social level: if there is a doctrinal inflection of it for the intellectual elite, there is also a pietistic brand of it for the masses. It provides an excellent social 'cement', encompassing pious peasant, enlightened middle-class liberal and theological intellectual in a single organization. Its ideological power lies in its capacity to 'materialize' beliefs as practices: religion is the sharing of the chalice and the blessing of the harvest, not just abstract argument about consubstantiation or hyperdulia.³ Its ultimate truths, like those mediated by the literary symbol, are conveniently closed to rational demonstration, and thus absolute in their claims. Finally religion, at least in its Victorian forms, is a *pacifying* influence, fostering meekness, self-sacrifice and the contemplative inner life. It is no wonder that the Victorian ruling class looked on the threatened dissolution of this ideological discourse with something less than equanimity.

Fortunately, however, another remarkably similar discourse lay to hand: English literature. George Gordon,⁴ early Professor of English Literature at Oxford, commented in his inaugural lecture that 'England is sick, and . . . English literature must save it. The Churches (as I understand) having failed, and social remedies being slow, English literature has now a triple function: still, I suppose, to delight and instruct us, but also, and above all, to save our souls and heal the State.'⁵ Gordon's words were spoken in our own century, but they find a resonance everywhere in Victorian England. It is a striking thought that had it not been for this dramatic crisis in mid-nineteenth-century ideology, we might not today have such a plentiful supply of Jane Austen casebooks and bluffer's guides to Pound.⁶ As religion progressively ceases to provide the social 'cement', affective values and basic mythologies by which a socially turbulent class-society can be welded together, 'English' is constructed as a subject to carry this ideological burden from the Victorian period onwards. The key figure here is Matthew Arnold,⁷ always preternaturally sensitive to the needs of his social class, and engagingly candid about being so. The urgent social need, as Arnold recognizes, is to 'Hellenize' or cultivate the philistine middle class, who have proved unable to underpin

2. American-born English poet, critic, and dramatist (1888–1965; see above).

3. The particular veneration of the Virgin Mary by Roman Catholics. "Consubstantiation": the Lutheran doctrine that the body and blood of Christ coexist with the elements of bread and wine during Holy Communion (a point of argument with the Roman Catholic belief in transubstantiation, the literal transformation of the consecrated bread and wine into the body and blood of Christ).

4. Oxford professor and critic (1881–1942).

5. Quoted by Chris Baldick, *The Social Mission of English Criticism, 1848–1932* (Oxford, 1983), p. 105 [Eagleton's note]. "To delight and instruct" are the traditional functions of literature; see HOR-

ACE, *Ars Poetica* (ca. 10 B.C.E.), lines 343–44, above.

6. Ezra Pound (1885–1972), American poet, editor, and critic; notable for his difficulty and abstruse range of literary references. Austen (1775–1817), English novelist.

7. English critic, poet, and school inspector (1822–1888; see above), who greatly influenced modern views of literature. In *Culture and Anarchy* (1869; see above) he divided England into Barbarians (the aristocracy), Philistines (the materialist middle classes), and the Populace; he also opposed "Hellenism" to "Hebraism," favoring the former (and classical Greek culture generally).

their political and economic power with a suitably rich and subtle ideology. This can be done by transfusing into them something of the traditional style of the aristocracy, who as Arnold shrewdly perceives are ceasing to be the dominant class in England, but who have something of the ideological wherewithal to lend a hand to their middle-class masters. State-established schools, by linking the middle class to 'the best culture of their nation', will confer on them 'a greatness and a noble spirit, which the tone of these classes is not of itself at present adequate to impart'.⁸

The true beauty of this manoeuvre, however, lies in the effect it will have in controlling and incorporating the working class:

It is of itself a serious calamity for a nation that its tone of feeling and grandeur of spirit should be lowered or dulled. But the calamity appears far more serious still when we consider that the middle classes, remaining as they are now, with their narrow, harsh, unintelligent, and unattractive spirit and culture, will almost certainly fail to mould or assimilate the masses below them, whose sympathies are at the present moment actually wider and more liberal than theirs. They arrive, these masses, eager to enter into possession of the world, to gain a more vivid sense of their own life and activity. In this their irrepressible development, their natural educators and initiators are those immediately above them, the middle classes. If these classes cannot win their sympathy or give them their direction, society is in danger of falling into anarchy.⁹

Arnold is refreshingly unhypocritical: there is no feeble pretence that the education of the working class is to be conducted chiefly for their own benefit, or that his concern with their spiritual condition is, in one of his own most cherished terms, in the least 'disinterested'. In the even more disarmingly candid words of a twentieth-century proponent of this view: 'Deny to working-class children any common share in the immaterial, and presently they will grow into the men who demand with menaces a communism of the material'.¹ If the masses are not thrown a few novels, they may react by throwing up a few barricades.

Literature was in several ways a suitable candidate for this ideological enterprise. As a liberal, 'humanizing' pursuit, it could provide a potent antidote to political bigotry and ideological extremism. Since literature, as we know, deals in universal human values rather than in such historical trivia as civil wars, the oppression of women or the dispossession of the English peasantry, it could serve to place in cosmic perspective the petty demands of working people for decent living conditions or greater control over their own lives, and might even with luck come to render them oblivious of such issues in their high-minded contemplation of eternal truths and beauties. English, as a Victorian handbook for English teachers put it, helps to 'promote sympathy and fellow feeling among all classes'; another Victorian writer speaks of literature as opening a 'serene and luminous region of truth where all may meet and expatiate in common', above 'the smoke and stir, the din and turmoil of man's lower life of care and business and debate'.² Literature

would rehearse the masses in the habits of pluralistic thought and feeling, persuading them to acknowledge that more than one viewpoint than theirs existed—namely, that of their masters. It would communicate to them the moral riches of bourgeois civilization, impress upon them a reverence for middle-class achievements, and, since reading is an essentially solitary, contemplative activity, curb in them any disruptive tendency to collective political action. It would give them a pride in their national language and literature: if scanty education and extensive hours of labour prevented them personally from producing a literary masterpiece, they could take pleasure in the thought that others of their own kind—English people—had done so. The people, according to a study of English literature written in 1891, 'need political culture, instruction, that is to say, in what pertains to their relation to the State, to their duties as citizens; and they need also to be impressed sentimentally by having the presentation in legend and history of heroic and patriotic examples brought vividly and attractively before them'.³ All of this, moreover, could be achieved without the cost and labour of teaching them the Classics: English literature was written in their own language, and so was conveniently available to them.

Like religion, literature works primarily by emotion and experience, and so was admirably well-fitted to carry through the ideological task which religion left off. Indeed by our own time literature had become effectively identical with the opposite of analytical thought and conceptual enquiry: whereas scientists, philosophers and political theorists are saddled with these drably discursive pursuits, students of literature occupy the more prized territory of feeling and experience. Whose experience, and what kinds of feeling, is a different question. Literature from Arnold onwards is the enemy of 'ideological dogma', an attitude which might have come as a surprise to Dante, Milton and Pope;⁴ the truth or falsity of beliefs such as that blacks are inferior to whites is less important than what it feels like to experience them. Arnold himself had beliefs, of course, though like everybody else he regarded his own beliefs as reasoned positions rather than ideological dogmas. Even so, it was not the business of literature to communicate such beliefs directly—to argue openly, for example, that private property is the bulwark of liberty. Instead, literature should convey *timeless* truths, thus distracting the masses from their immediate commitments, nurturing in them a spirit of tolerance and generosity, and so ensuring the survival of private property. Just as Arnold attempted in *Literature and Dogma* and *God and the Bible*⁵ to dissolve away the embarrassingly doctrinal bits of Christianity into poetically suggestive sonorities, so the pill of middle-class ideology was to be sweetened by the sugar of literature.

There was another sense in which the 'experiential' nature of literature was ideologically convenient. For 'experience' is not only the homeland of ideology, the place where it takes root most effectively; it is also in its literary form a kind of vicarious self-fulfillment. If you do not have the money and leisure to visit the Far East, except perhaps as a soldier in the pay of British imperialism, then you can always 'experience' it at second hand by reading

Conrad or Kipling.⁶ Indeed according to some literary theories this is even more real than strolling round Bangkok. The actually impoverished experience of the mass of people, an impoverishment bred by their social conditions, can be supplemented by literature: instead of working to change such conditions (which Arnold, to his credit, did more thoroughly than almost any of those who sought to inherit his mantle), you can vicariously fulfil someone's desire for a fuller life by handing them *Pride and Prejudice*.⁷

It is significant, then, that 'English' as an academic subject was first institutionalized not in the Universities, but in the Mechanics' Institutes, working men's colleges and extension lecturing circuits.⁸ English was literally the poor man's Classics—a way of providing a cheapish 'liberal' education for those beyond the charmed circles of public school and Oxbridge.⁹ From the outset, in the work of 'English' pioneers like F. D. Maurice and Charles Kingsley,¹ the emphasis was on solidarity between the social classes, the cultivation of 'larger sympathies', the instillation of national pride and the transmission of 'moral' values. This last concern—still the distinctive hallmark of literary studies in England, and a frequent source of bemusement to intellectuals from other cultures—was an essential part of the ideological project; indeed the rise of 'English' is more or less concomitant with an historic shift in the very meaning of the term 'moral', of which Arnold, Henry James and F. R. Leavis² are the major critical exponents. Morality is no longer to be grasped as a formulated code or explicit ethical system: it is rather a sensitive preoccupation with the whole quality of life itself, with the oblique, nuanced particulars of human experience. Somewhat rephrased, this can be taken as meaning that the old religious ideologies have lost their force, and that a more subtle communication of moral values, one which works by 'dramatic enactment' rather than rebarbative abstraction, is thus in order. Since such values are nowhere more vividly dramatized than in literature, brought home to 'felt experience' with all the unquestionable reality of a blow on the head, literature becomes more than just a handmaiden of moral ideology: it is moral ideology for the modern age, as the work of F. R. Leavis was most graphically to evince.

The working class was not the only oppressed layer of Victorian society at whom 'English' was specifically beamed. English literature, reflected a Royal Commission witness in 1877, might be considered a suitable subject for 'women . . . and the second- and third-rate men who [. . .] become schoolmasters.'³ The 'softening' and 'humanizing' effects of English, terms recurrently used by its early proponents, are within the existing ideological stereotypes of gender clearly feminine. The rise of English in England ran parallel to the gradual, grudging admission of women to the institutions of higher education; and since English was an untaxing sort of affair, concerned

with the finer feelings rather than with the more virile topics of *bona fide* academic 'disciplines', it seemed a convenient sort of non-subject to palm off on the ladies, who were in any case excluded from science and the professions. Sir Arthur Quiller Couch,⁴ first Professor of English at Cambridge University, would open with the word 'Gentlemen' lectures addressed to a hall filled largely with women. Though modern male lecturers may have changed their manners, the ideological conditions which make English a popular University subject for women to read have not.

If English had its feminine aspect, however, it also acquired a masculine one as the century drew on. The era of the academic establishment of English is also the era of high imperialism in England. As British capitalism became threatened and progressively outstripped by its younger German and American rivals, the squalid, undignified scramble of too much capital chasing too few overseas territories, which was to culminate in 1914 in the first imperialist world war, created the urgent need for a sense of national mission and identity. What was at stake in English studies was less English *literature* than *English literature*: our great 'national poets' Shakespeare and Milton, the sense of an 'organic' national tradition and identity to which new recruits could be admitted by the study of humane letters. The reports of educational bodies and official enquiries into the teaching of English, in this period and in the early twentieth century, are strewn with nostalgic back-references to the 'organic' community of Elizabethan England⁵ in which nobles and groundlings found a common meeting-place in the Shakespearian theatre, and which might still be reinvented today. It is no accident that the author of one of the most influential Government reports in this area, *The Teaching of English in England* (1921), was none other than Sir Henry Newbolt,⁶ minor jingoist poet and perpetrator of the immortal line 'Play up! play up! and play the game!' Chris Baldick has pointed to the importance of the admission of English literature to the Civil Service examinations in the Victorian period: armed with this conveniently packaged version of their own cultural treasures, the servants of British imperialism could sally forth overseas secure in a sense of their national identity, and able to display that cultural superiority to their envying colonial peoples.⁷

It took rather longer for English, a subject fit for women, workers and those wishing to impress the natives, to penetrate the bastions of ruling-class power in Oxford and Cambridge. English was an upstart, amateurish affair as academic subjects went, hardly able to compete on equal terms with the rigours of Greats or philology,⁸ since every English gentleman read his own literature in his spare time anyway, what was the point of submitting it to systematic study? Fierce rearguard actions were fought by both ancient Universities against this distressingly dilettante subject: the definition of an academic subject was what could be examined, and since English was no more than idle gossip about literary taste it was difficult to know how to make it unpleasant enough to qualify as a proper academic pursuit. This, it might be said, is one of the few problems associated with the study of English which have since been effectively resolved. The frivolous contempt for his subject

displayed by the first really 'literary' Oxford professor, Sir Walter Raleigh, has to be read to be believed.⁹ Raleigh held his post in the years leading up to the First World War; and his relief at the outbreak of the war, an event which allowed him to abandon the feminine vagaries of literature and put his pen to something more manly—war propaganda—is palpable in his writing. The only way in which English seemed likely to justify its existence in the ancient Universities was by systematically mistaking itself for the Classics; but the classicists were hardly keen to have this pathetic parody of themselves around.

If the first imperialist world war more or less put paid to Sir Walter Raleigh, providing him with an heroic identity more comfortingly in line with that of his Elizabethan namesake,¹ it also signalled the final victory of English studies at Oxford and Cambridge. One of the most strenuous antagonists of English—philology—was closely bound up with Germanic influence; and since England happened to be passing through a major war with Germany, it was possible to smear classical philology as a form of ponderous Teutonic nonsense with which no self-respecting Englishman should be caught associating.² England's victory over Germany meant a renewal of national pride, an upsurge of patriotism which could only aid English's cause; but at the same time the deep trauma of the war, its almost intolerable questioning of every previously held cultural assumption, gave rise to a 'spiritual hungering', as one contemporary commentator described it, for which poetry seemed to provide an answer. It is a chastening thought that we owe the University study of English, in part at least, to a meaningless massacre. The Great War, with its carnage of ruling-class rhetoric, put paid to some of the more strident forms of chauvinism on which English had previously thrived: there could be few more Walter Raleighs after Wilfred Owen.³ English Literature rode to power on the back of wartime nationalism; but it also represented a search for spiritual solutions on the part of an English ruling class whose sense of identity had been profoundly shaken, whose psyche was ineradicably scarred by the horrors it had endured. Literature would be at once solace and reaffirmation, a familiar ground on which Englishmen could regroup both to explore, and to find some alternative to, the nightmare of history.

STEPHEN GREENBLATT

b. 1943

The leading proponent of "New Historicism," Stephen Greenblatt became a key figure in the shift from literary to cultural poetics and from textual to contextual interpretation in U.S. English departments in the 1980s and 1990s. Inspired by MICHEL FOUCAULT's historical investigations of medical and penal institutions and his theoretical understanding of power, the New Historicists see the literary work as a vessel tossed in a social sea of competing interests, antagonistic values, and contradictions. For Greenblatt, literary works are "fields of force, places of dissension and shifting interests, occasions for the jostling of orthodox and subversive impulses."

Greenblatt was born in Cambridge, Massachusetts, in 1943 and did his undergraduate and graduate work at Yale University, gaining his Ph.D. in 1969. For more than twenty years, he taught at the University of California at Berkeley, where he was one of the founders of *Representations*, the journal in which much pathbreaking New Historicist work first appeared. He moved to Harvard University in the mid-1990s.

New Historicism, as our selection suggests, begins its quest to be political by denying that any social world is stable and that artworks are separated from the power struggles constituting social reality. The literary work is a player in the competition among various groups to gain their ends, a competition that takes place on many levels. New Historicism accepts Foucault's insistence that power operates through myriad capillary channels; these include not just direct coercion and governmental action but also, crucially, daily routines and language. Because discourse organizes perception of the world by its categorical groupings and because symbols bind social agents emotionally to institutions and practices, conflicts over images resonate throughout the social order. Thus the New Historicist not only pays attention to such discursive disputes in particular texts but also examines how particular texts are addressed to other texts, other discursive orders, in the wider culture. A "cultural poetics" tries to identify the key images—and the values, beliefs, practices, and social structures that those images point toward—of a particular cultural moment. Unlike the old historicist, the New Historicist does not expect that cultural moment to be unified, with the literary text simply reflecting or embodying that unity. Rather, the text is a dynamic interweaving of multiple strands from a culture that is itself an unstable field of contending forces.

Any given text for the New Historicist is an attempted intervention in the ongoing struggle to influence or even dominate the cultural field. The critic's own work intervenes in his or her own present, responding to and striving to alter contemporary configurations of power. To explain how Shakespeare's *Richard II* is implicated in the power struggles of its time is both to write a history of the consolidation of power prior to our moment and to awaken today's reader to the conflicts that define our moment. The New Historicists, again following Foucault, often construct narratives in which dispersed and disputed power becomes more insidious, and dominance grows more dominant. They want to emphasize history's contingencies, its fluidity in any given moment, but they also emphasize how history reveals the growth of forms of power that continuously affect subjects' lives.

The tendency to tell similar historical tales of power's expanding reach, coupled with fairly blunt evaluations of literary works as either complicitous with or resistant to power, has opened New Historicism to criticism. Historians have objected that these literary critics read a few nonliterary texts, juxtapose them with plays or novels, and think they are doing history. But such complaints, even when justified in individual cases, largely miss the point. New Historicism is part of a broader sea change in literary studies—and in history as well. Instead of asking what a particular text means in and of itself, New Historicists ask what it *does* within the ensemble of social relations in which it is embedded. Rather than focusing on the masterpiece or on the

author of masterpieces, these critics attempt to understand the lived social reality of the era being studied. And just as New Historicism and cultural studies were beginning to emerge in departments of literature, history departments also were changing. During the late twentieth century, new prominence was given to both social and cultural history, which shift the historians' gaze away from famous actors or grand historical events to ordinary people and their mundane routines. A whole new relation to texts, which were now being read to gain insight into the society from which they sprang, along with a new definition of the goal of historical investigation, has increasingly blurred the disciplinary lines between English and history. As literary critics have become more familiar with this paradigm, they have grown accustomed to delving as deeply into archives as historians; and some historians have begun to adopt the more linguistically nuanced interpretations of sources characteristic of literary critics.

Greenblatt's work, along with that of Louis Adrian Montrose, Stephen Mullaney, Jonathan Dollimore, Catherine Belsey, and numerous other literary critics, has ensured that English Renaissance studies and New Historicism have become inextricably linked. But New Historicists work has also been highly influential in studies of other historical periods, especially nineteenth-century American and British literature. Jerome McGann, for example, though not influenced so directly by Foucault as are members of the *Representations* group, has brought a New Historicist concern with social context to the criticism of British Romantic poetry. By the late 1990s, literary critics seldom explicitly identified themselves as New Historicists, but the emphasis on context over text still prevailed in literary studies.

BIBLIOGRAPHY

Greenblatt's books to date are *Three Modern Satirists: Waugh, Orwell, and Huxley* (1965), *Sir Walter Raleigh: The Renaissance Man and His Roles* (1973), *Renaissance Self-Fashioning: From More to Shakespeare* (1980), *Shakespearean Negotiations: The Circulation of Social Energy in Renaissance England* (1988), *Learning to Curse: Essays in Early Modern Culture* (1990), and *Marvelous Possessions: The Wonder of the New World* (1991). He has also edited important collections of New Historicist work: *Allegory and Representation* (1981), *The Power of Forms in the English Renaissance* (1982), *Representing the English Renaissance* (1988), *New World Encounters* (1993), and, with Catherine Gallagher, *Practicing the New Historicism* (2000). He co-edited, with Giles Gunn, *Redrawing the Boundaries: The Transformation of English and American Literary Studies* (1992), is general editor of *The Norton Shakespeare* (1997), and is a co-editor of *The Norton Anthology of English Literature* (7th ed., 1999).

Jonathan Arac and Barbara Johnson, 1991); Anne D. Hall, "The Political Wisdom of Cultural Poetics," *Modern Philology* 93 (1994); James J. Paxson, "The Green(blatt)ing of America," *Minnesota Review*, n.s., 41-42 (1994); and Simon During, "Post-Foucauldian Criticism: Government, Death, Mimesis," in *Genealogy and Literature* (ed. Lee Quinby, 1995).

Introduction to *The Power of Forms in the English Renaissance*

"I am Richard II. Know ye not that?" exclaimed Queen Elizabeth on August 4, 1601, in the wake of the abortive Essex rising.¹ On the day before the rising, someone had paid the Lord Chamberlain's Men forty shillings to

1. An attempt against the court of Queen Elizabeth I (1523-1603; reigned 1558-1603) in February 1601, led by Robert Devereux (1566-1601),

the 2d earl of Essex. When the citizens of London failed to come to his small army's aid, Essex and his followers fled; Essex was executed for treason.

revive their old play about the deposing and killing of Richard II.² As far as we know, the play—almost certainly Shakespeare's—was performed only once at the Globe, but in Elizabeth's bitter recollection the performance has metastasized: "this tragedy was played 40tie times in open streets and houses."³

The Queen enjoyed and protected the theater; against moralists who charged that it was a corrupting and seditious force, she evidently sided with those who replied that it released social tensions, inculcated valuable moral lessons, and occupied with harmless diversion those who might otherwise conspire against legitimate authority. But there were some in the Essex faction who saw in the theater the power to subvert, or rather the power to wrest legitimation from the established ruler and confer it on another. This power, notwithstanding royal protection, censorship, and the players' professions of unswerving loyalty, could be purchased for forty shillings.

The story of Richard II was obviously a highly charged one in a society where political discussion was conducted, as in parts of the world today, with Aesopian indirection.⁴ Clearly it is not the text alone—over which the censor had some control—that bears the full significance of Shakespeare's play, or of any version of the story. It is rather the story's full situation—the genre it is thought to embody, the circumstances of its performance, the imaginings of its audience—that governs its shifting meanings: "40tie times in open streets and houses": for the Queen the repeatability of the tragedy, and hence the numbers of people who have been exposed to its infection, is part of the danger, along with the fact (or rather her conviction) that the play had broken out of the boundaries of the playhouse, where such stories are clearly marked as powerful illusions, and moved into the more volatile zone—the zone she calls "open"—of the streets. In the streets the story begins to lose the conventional containment of the playhouse where audiences are kept at a safe distance both from the action on stage and from the world beyond the walls. And in the wake of this subversive deregulation, the terms that mark the distinction between the lucid and the real become themselves problematical: are the "houses" to which Elizabeth refers public theaters or private dwellings where her enemies plot her overthrow? can "tragedy" be a strictly literary term when the Queen's own life is endangered by the play?⁵

Modern historical scholarship has assured Elizabeth that she had nothing to worry about: *Richard II* is not at all subversive but rather a hymn to Tudor⁶ order. The play, far from encouraging thoughts of rebellion, regards the deposition of the legitimate king as a "sacrilegious" act that drags the country down into "the abyss of chaos"; "that Shakespeare and his audience regarded Bolingbroke as a usurper," declares J. Dover Wilson, "is incontestable."⁷ But

2. *Richard II* (ca. 1595). The Lord Chamberlain's Men: Shakespeare's theater company.

3. Elizabeth was speaking to William Lambarde the antiquary; see the Arden edition of Shakespeare's *King Richard II*, ed. Peter Ure (1956), pp. lvii–lxii [Greenblatt's note]. "Metastasized": grown (a word usually applied to cancers).

4. Aesop's fables make their point by way of story rather than by direct statement.

5. The ambiguity is intensified by the Queen's preceding comment, according to Lambarde: "Her Majestie. He that will forget God, will also forget his benefactors; this tragedy was played 40tie times in open streets and houses" (Ure, p. lix) [Green-

blatt's note].

6. The English royal dynasty that begins with Henry VII (1457–1509) in 1485 and ends with Elizabeth I.

7. John Dover Wilson, "The Political Background of Shakespeare's *Richard II* and *Henry IV*," *Shakespeare-Jahrbuch* 75 (1939): 47. The condemnation of Bolingbroke is "evident," we are told, "from the whole tone and emphasis of *Richard II*" (p. 48) [Greenblatt's note]. Bolingbroke: the name of Henry IV (1367–1415) before he deposed his cousin Richard II (1367–1400; reigned, 1377–99) in 1399. Bolingbroke's violent rise to power is the subject of Shakespeare's *Richard II*.

in 1601 neither Queen Elizabeth nor the Earl of Essex were so sure: after all, someone on the eve of a rebellion thought the play sufficiently seditious to warrant squandering two pounds on the players, and the Queen understood the performance as a threat. Moreover, even before the Essex rising, the actual deposition scene (IV.i. 154–318 in the Arden edition) was carefully omitted from the first three quartos⁸ of Shakespeare's play and appears for the first time only after Elizabeth's death.

How can we account for the discrepancy between Dover Wilson's historical reconstruction and the anxious response of the figures whose history he purports to have accurately reconstructed? The answer lies at least in part in the difference between a conception of art that has no respect whatsoever for the integrity of the text ("I am Richard II. Know ye not that?") and one that hopes to find, through historical research, a stable core of meaning within the text, a core that unites disparate and even contradictory parts into an organic whole. That whole may provide a perfectly orthodox celebration of legitimacy and order, as measured by homilies, royal pronouncements, and official propaganda, but the Queen is clearly responding to something else: to the presence of *any* representation of deposition, whether regarded as sacrilegious or not; to the choice of this particular story at this particular time; to the place of the performance; to her own identity as it is present in the public sphere and as it fuses with the figure of the murdered king. Dover Wilson is not a New Critic:⁹ he does not conceive of the text as an iconic object whose meaning is perfectly contained within its own formal structure. Yet for him historical research has the effect of conferring autonomy and fixity upon the text, and it is precisely this fixity that is denied by Elizabeth's response.

Dover Wilson's work is a distinguished example of the characteristic assumptions and methods of the mainstream literary history practiced in the first half of our century, and a further glance at these may help us to bring into focus the distinctive assumptions and methods exemplified in the essays collected in this volume.¹ To be sure, these essays are quite diverse in their concerns and represent no single critical practice; a comparative glance, for example, at the brilliant pieces by Franco Moretti and John Traugott² will suggest at once how various this work is. Yet diverse as they are, many of the present essays give voice, I think, to what we may call the new historicism, set apart from both the dominant historical scholarship of the past and the formalist criticism that partially displaced this scholarship in the decades after World War Two. The earlier historicism tends to be monological; that is, it is concerned with discovering a single political vision, usually identical to that said to be held by the entire literate class or indeed the entire population ("In the eyes of the later middle ages," writes Dover Wilson, Richard II "represented the type and exemplar of royal martyrdom" [p. 50]). This vision, most often presumed to be internally coherent and consistent, though

8. The earliest printed versions of individual plays by Shakespeare; the 1st quarto of *Richard II* appeared in 1597, and 2 more in 1598 (the 4th, printed in 1608, contained the deposition scene).

9. A close reader who focuses exclusively on the text as an autonomous whole. See, for example, JOHN CROWE RANSOM and CLEANTH BROOKS (above).

1. An anthology of critical essays on English Renaissance literature.

2. Moretti, "A Huge Eclipse: Tragic Form and the Deconsecration of Sovereignty"; and Traugott, "Creating a Rational Rinaldo: A Study in the Mixture of the Genres of Comedy and Romance in *Much Ado About Nothing*."

occasionally analyzed as the fusion of two or more elements, has the status of an historical fact. It is not thought to be the product of the historian's interpretation, nor even of the particular interests of a given social group in conflict with other groups. Protected then from interpretation and conflict, this vision can serve as a stable point of reference, beyond contingency, to which literary interpretation can securely refer. Literature is conceived to mirror the period's beliefs, but to mirror them, as it were, from a safe distance.

The new historicism erodes the firm ground of both criticism and literature. It tends to ask questions about its own methodological assumptions and those of others: in the present case, for example, it might encourage us to examine the ideological situation not only of *Richard II* but of Dover Wilson on *Richard II*. The lecture from which I have quoted—"The Political Background of Shakespeare's *Richard II* and *Henry IV*"—was delivered before the German Shakespeare Society, at Weimar, in 1939. We might, in a full discussion of the critical issues at stake here, look closely at the relation between Dover Wilson's reading of *Richard II*—a reading that discovers Shakespeare's fears of chaos and his consequent support for legitimate if weak authority over the claims of ruthless usurper—and the eerie occasion of his lecture ("these plays," he concludes, "should be of particular interest to German students at this moment of that everlasting adventure which we call history" [p. 51]).

Moreover, recent criticism has been less concerned to establish the organic unity of literary works and more open to such works as fields of force, places of dissension and shifting interests, occasions for the jostling of orthodox and subversive impulses. "The Elizabethan playhouse, playwright, and player," writes Louis Adrian Montrose in a brilliant recent essay, "exemplify the contradictions of Elizabethan society and make those contradictions their subject. If the world is a theatre and the theatre is an image of the world, then by reflecting upon its own artifice, the drama is holding the mirror up to nature."³ As the problematizing of the mirror metaphor suggests, Renaissance literary works are no longer regarded either as a fixed set of texts that are set apart from all other forms of expression and that contain their own determinate meanings or as a stable set of reflections of historical facts that lie beyond them. The critical practice represented in this volume challenges the assumptions that guarantee a secure distinction between "literary foreground" and "political background" or, more generally, between artistic production and other kinds of social production. Such distinctions do in fact exist, but they are not intrinsic to the texts; rather they are made up and constantly redrawn by artists, audiences, and readers. These collective social constructions on the one hand define the range of aesthetic possibilities within a given representational mode and, on the other, link that mode to the complex network of institutions, practices, and beliefs that constitute the culture as a whole. In this light, the study of genre is an exploration of the poetics of culture.

BARBARA CHRISTIAN
1943–2000

"How does one respond to a language that is tonality, dance, to these voices without mutilating them and turning them into logical progressions, mere intellectual concepts? How does one shimmy back to forms that soar beyond philosophical discourse or jargon?" Writing in "Being the Subject and the Object: Reading African-American Women's Novels" (1990), Barbara Christian poses a series of questions that interrogate not only the utility of theory to the project of African American literature but also the very nexus of literature and philosophy that has occupied literary criticism and theory since PLATO banished the poets from his ideal Republic (see above). While Plato preferred the "truths" of philosophy to the lies of the poets, Christian would seem to agree with SIR PHILIP SIDNEY that literature is superior to philosophy because it offers more dynamic and complex representations of the world. At the same time, Christian rejects the beliefs of "neutral humanists" who would characterize literature as pure expression or as a disinterested search for truth. Because she speaks for an African American literary tradition that has been devalued and excluded from the Western literary canon, she is sensitive to the roles that power and privilege play in determining literary value. The complex interplay between an appreciation of literature as "hieroglyph"—"a figure which is both sensual and abstract"—and a realist's understanding of the politics of literary work characterizes Christian's critical writing.

Born on St. Thomas in the Virgin Islands, Christian attended a Catholic mission school and went on to earn an A.B. cum laude from Marquette University in 1963; from Columbia University she received an M.A. in 1964 and a Ph.D. with distinction in 1970. From 1971 until her death in 2000, she taught English, African American studies, and women's studies at the University of California at Berkeley, where she was the first black woman to receive tenure. She served on the editorial boards of several journals, including *Feminist Studies* (1984–92), *Black American Literature Forum* (1985–90), *Sage* (1987–89), and *Contentions* (1990–2000). Her scholarly honors include the 1994 MELUS award for her contributions to ethnic studies.

In our selection, "The Race for Theory" (1988), Christian deplores the influence that contemporary theory has exerted over the study of literature, especially the study of African American literature. "Theory," by which she means primarily the post-structuralist theories of JACQUES DERRIDA, popularized in the 1980s by such Yale Critics as PAUL DE MAN, purportedly attempts to fix ideas, to prescribe a "set method" for interpreting literary texts. She thus equates theorists with philosophers. But critics—especially critics of the "energetic emergent literatures" by women, African Americans, and third world writers—need to read without preconceived ideas, remaining open to the complex intersections of language, class, race, and gender. More negatively than BELL HOOKS, Christian questions why the elitist jargon and opaque style of postmodern theory, with its proclamation of the death of the author, should become prominent at the same moment when the works of black men and women are just gaining recognition. But unlike hooks, who sees in postmodernism a means of exploring black experience without becoming mired in reductive notions of authentic blackness, Christian fears that theory, because of its abstracting tendencies, will lead to precisely the kinds of monolithic formulations about authenticity that marred the U.S. Black Arts Movements and black cultural nationalism of the 1960s.

Christian identifies herself with an earlier twentieth-century tradition of African American literary critics, who were keenly interested in the practice of literature. Though not immersed in the abstract logic of Western philosophy, these critics—including ZORA NEALE HURSTON, Ralph Ellison, Richard Wright, and LANGSTON

HUGHES—do theorize; but for them, theory is a dynamic rather than static activity, embedded in stories, riddles, proverbs, and play with language (HENRY LOUIS GATES JR. addresses this argument differently and in more detail). Without naming them, Christian sets herself in opposition to critics such as Gates, HOUSTON A. BAKER JR., and hooks, who have defended theory as useful for understanding African American literature. Among theorists she quickly became a symbol of the widespread reaction against the rise of theory in the 1970s.

Christian's critique is related to feminist criticism of theory in the 1980s and 1990s (see ANNETTE KOLODNY). "The Race for Theory" similarly reserves its harshest criticism for poststructuralist French theorists such as HÉLÈNE CIXOUS and JULIA KRISTEVA, who, by the late 1980s, had achieved a kind of authoritative status among academic feminists. Christian questions whether this kind of feminist theory, culled from the practices of first world white women, can be at all relevant to the experiences of nonwhite and non-Western women.

While "The Race for Theory" can be, and has been, criticized for its vagueness, its tendency to tar a disparate set of theoretical discourses with the same brush, and its refusal to engage with the specifics of any particular theory, it does evince a keen understanding of the power relations that structure contemporary academic literary studies. Theory is not simply one literary discourse among others; it is not a neutral, value-free set of ideas. Christian recognizes that postmodern theory is both an ideology and a commodity within academic literary studies—one highly valued in the 1980s and 1990s; endowing a few elite theorists with substantial influence within the academic profession. She attacks the "race for theory" because, as the metaphor implies, it has become an end in itself rather than a means to an end, a way of advancing in the profession rather than a means of understanding literature. "The Race for Theory" stands as a challenge to feminist critics, African American critics, and critics of other "emergent" literatures to understand what might be at stake in their involvement with contemporary literary theory.

BIBLIOGRAPHY

Christian's interest in the development of multiethnic curricula is evidenced by her work as co-editor of the prizewinning *In Search of Our Past: Six Units for the Teaching of a Multi-Ethnic Women's History* (1980). Much of her literary criticism is concerned with delineating and examining a tradition of African American women writers. Her published works include *Black Women Novelists: The Development of a Tradition, 1892–1976* (1980), *Black Feminist Criticism: Perspectives on Black Women Writers* (1985), and *From the Inside Out: African-American Women's Literary Tradition and the State* (1987). Christian was also the editor of "Everyday Use," *Alice Walker: A Casebook* (1994), editor of the contemporary section of the *Norton Anthology of African-American Literature* (1996), and one of three editors of *Female Subjects in Black and White: Race, Psychoanalysis, Feminism* (1997).

In "Kinship and Resemblances: Women on Women," *Feminist Studies* 11.1 (1985), Hortense J. Spillers writes insightfully about Christian's literary criticism, as does JoAnne Cornwell-Giles in "Afro-American Criticism and Western Consciousness: The Politics of Knowing," *Black American Literature Forum* 24.1 (1990). Michael Awkward responds to Christian's critique of theory in "Appropriative Gestures: Theory and Afro-American Literary Criticism," in *Gender and Theory: Dialogues in Feminist Criticism* (ed. Linda Kaufmann, 1989). For useful bibliographic and biographical information on Barbara Christian, see the entry by Nancy Rage Tarcher in *Feminist Writers* (ed. Pamela Kester-Shelton, 1996).

The Race for Theory

I have seized this occasion to break the silence among those of us, critics, as we are now called, who have been intimidated, devalued by what I call the race for theory. I have become convinced that there has been a takeover in the literary world by Western philosophers from the old literary élite, the neutral humanists. Philosophers have been able to effect such a takeover because so much of the literature of the West has become pallid, laden with despair, self-indulgent, and disconnected. The New Philosophers, eager to understand a world that is today fast escaping their political control, have redefined literature so that the distinctions implied by that term, that is, the distinctions between everything written and those things written to evoke feeling as well as to express thought, have been blurred. They have changed literary critical language to suit their own purposes as philosophers, and they have reinvented the meaning of theory.

My first response to this realization was to ignore it. Perhaps, in spite of the egocentrism of this trend, some good might come of it. I had, I felt, more pressing and interesting things to do, such as reading and studying the history and literature of black women, a history that had been totally ignored, a contemporary literature bursting with originality, passion, insight, and beauty. But unfortunately it is difficult to ignore this new takeover, since theory has become a commodity which helps determine whether we are hired or promoted in academic institutions—worse, whether we are heard at all. Due to this new orientation, works (a word which evokes labor) have become texts.¹ Critics are no longer concerned with literature, but with other critics' texts, for the critic yearning for attention has displaced the writer and has conceived of himself as the center. Interestingly in the first part of this century, at least in England and America, the critic was usually also a writer of poetry, plays, or novels. But today, as a new generation of professionals develops, he or she is increasingly an academic. Activities such as teaching or writing one's response to specific works of literature have, among this group, become subordinated to one primary thrust, that moment when one creates a theory, thus fixing a constellation of ideas for a time at least, a fixing which no doubt will be replaced in another month or so by somebody else's competing theory as the race accelerates. Perhaps because those who have effected the takeover have the power (although they deny it) first of all to be published, and thereby to determine the ideas which are deemed valuable, some of our most daring and potentially radical critics (and by *our* I mean black, women, third world) have been influenced, even coopted, into speaking a language and defining their discussion in terms alien to and opposed to our needs and orientation. At least so far, the creative writers I study have resisted this language.

For people of color have always theorized—but in forms quite different from the Western form of abstract logic. And I am inclined to say that our theorizing (and I intentionally use the verb rather than the noun) is often in narrative forms, in the stories we create, in riddles and proverbs, in the play with language, since dynamic rather than fixed ideas seem more to our liking.

1. See, e.g., ROLAND BARTHES, "From Work to Text" (1971; above).

How else have we managed to survive with such spiritedness the assault on our bodies, social institutions, countries, our very humanity? And women, at least the women I grew up around, continuously speculated about the nature of life through pithy language that unmasked the power relations of their world. It is this language, and the grace and pleasure with which they played with it, that I find celebrated, refined, critiqued in the works of writers like Morrison and Walker.² My folk, in other words, have always been a race for theory—though more in the form of the hieroglyph, a written figure which is both sensual and abstract, both beautiful and communicative. In my own work I try to illuminate and explain these hieroglyphs, which is, I think, an activity quite different from the creating of the hieroglyphs themselves. As the Buddhists would say, the finger pointing at the moon is not the moon.

In this discussion, however, I am more concerned with the issue raised by my first use of the term, *the race for theory*, in relation to its academic hegemony,³ and possibly of its inappropriateness to the energetic emerging literatures in the world today. The pervasiveness of this academic hegemony is an issue continually spoken about—but usually in hidden groups, lest we, who are disturbed by it, appear ignorant to the reigning academic élite. Among the folk who speak in muted tones are people of color, feminists, radical critics, creative writers, who have struggled for much longer than a decade to make their voices, their various voices, heard, and for whom literature is not an occasion for discourse among critics but is necessary nourishment for their people and one way by which they come to understand their lives better. Clichéd though this may be, it bears, I think, repeating here.

The race for theory, with its linguistic jargon, its emphasis on quoting its prophets, its tendency towards “Biblical” exegesis, its refusal even to mention specific works of creative writers, far less contemporary ones, its preoccupations with mechanical analyses of language, graphs, algebraic equations, its gross generalizations about culture, has silenced many of us to the extent that some of us feel we can no longer discuss our own literature, while others have developed intense writing blocks and are puzzled by the incomprehensibility of the language set adrift in literary circles. There have been, in the last year, any number of occasions on which I had to convince literary critics who have pioneered entire new areas of critical inquiry that they did have something to say. Some of us are continually harassed to invent wholesale theories regardless of the complexity of the literature we study. I, for one, am tired of being asked to produce a black feminist literary theory as if I were a mechanical man. For I believe such theory is prescriptive—it ought to have some relationship to practice. Since I can count on one hand the number of people attempting to be black feminist literary critics in the world today, I consider it presumptuous of me to invent a theory of how we *ought* to read. Instead, I think we need to read the works of our writers in our various ways and remain open to the intricacies of the intersection of language, class, race, and gender in the literature. And it would help if we share our process, that is, our practice, as much as possible since, finally, our work is a collective endeavor.

2. Alice Walker (b. 1944), African American writer. Toni Morrison (b. 1931), African American novelist and winner of the 1993 Nobel Prize in lit-

erature.

3. That is, theory's dominance over the world's emerging literatures.

The insidious quality of this race for theory is symbolized for me by the very name of this special issue—Minority Discourse⁴—a label which is borrowed from the reigning theory of the day and is untrue to the literatures being produced by our writers, for many of our literatures (certainly Afro-American literature) are central, not minor, and by the titles of many of the articles, which illuminate language as an assault on the other, rather than as possible communication, and play with, or even affirmation of another. I have used the passive voice in my last sentence construction, contrary to the rules of Black English, which like all languages has a particular value system, since I have not placed responsibility on any particular person or group. But that is precisely because this new ideology has become so prevalent among us that it behaves like so many of the other ideologies with which we have had to contend. It appears to have neither head nor center. At the least, though, we can say that the terms “minority” and “discourse” are located firmly in a Western dualistic or “binary” frame which sees the rest of the world as minor, and tries to convince the rest of the world that it is major, usually through force and then through language, even as it claims many of the ideas that we, its “historical” other, have known and spoken about for so long. For many of us have never conceived of ourselves only as somebody’s *other*.

Let me not give the impression that by objecting to the race for theory I ally myself with or agree with the neutral humanists who see literature as pure expression and will not admit to the obvious control of its production, value, and distribution by those who have power, who deny, in other words, that literature is, of necessity, political. I am studying an entire body of literature that has been denigrated for centuries by such terms as *political*. For an entire century Afro-American writers, from Charles Chestnutt in the nineteenth century through Richard Wright in the 1930s, Imamu Baraka⁵ in the 1960s, Alice Walker in the 1970s, have protested the literary hierarchy of dominance which declares when literature is literature, when literature is great, depending on what it thinks is to its advantage. The Black Arts Movement⁶ of the 1960s, out of which Black Studies, the Feminist Literary Movement of the 1970s, and Women’s Studies grew, articulated precisely those issues, which came *not* from the declarations of the New Western philosophers but from these groups’ reflections on their own lives. That Western scholars have long believed their ideas to be universal has been strongly opposed by many such groups. Some of my colleagues do not see black critical writers of previous decades as eloquent enough. Clearly they have not read Wright’s “Blueprint for Negro Writing,” Ellison’s *Shadow and Act*, Chestnutt’s resignation from being a writer, or Alice Walker’s “Search for Zora Neale Hurston.”⁷ There are two reasons for this general ignorance of

4. This essay was originally published in *Cultural Critique* with other papers written for a conference at the University of California at Berkeley titled “Minority Discourse,” held May 29–31, 1986.

5. Novelist, poet, and playwright (born LeRoi Jones, 1934). Chestnutt (1858–1932), writer of short fiction and novels. Wright (1908–1960), novelist.

6. U.S. social and literary movement that began in the mid-1960s and ended in the early 1970s; it

extended the concerns of the civil rights and black power movements into literature, academia, and the arts.

7. Walker’s “Looking for Zora” (1975) was crucial in the “rediscovery” of HURSTON (1891–1960), African American novelist and anthropologist. Both *Shadow and Act* (1964) by the novelist and essayist Ralph Ellison (1914–1997) and “Blueprint for Negro Writing” (1937) by Wright are important pieces of African American criticism.

what our writer-critics have said. One is that black writing has been generally ignored in this country. Since we, as Toni Morrison has put it, are seen as a discredited people, it is no surprise, then, that our creations are also discredited, but this is also due to the fact that until recently dominant critics in the Western World have also been creative writers who have had access to the upper middle class institutions of education and until recently our writers have decidedly been excluded from these institutions and in fact have often been opposed to them. Because of the academic world's general ignorance about the literature of black people and of women, whose work too has been discredited, it is not surprising that so many of our critics think that the position arguing that literature is political begins with these New Philosophers. Unfortunately, many of our young critics do not investigate the reasons *why* that statement—literature is political—is now acceptable when before it was not; nor do we look to our own antecedents for the sophisticated arguments upon which we can build in order to change the tendency of any established Western idea to become hegemonic.

For I feel that the new emphasis on literary critical theory is as hegemonic as the world which it attacks. I see the language it creates as one which mystifies rather than clarifies our condition, making it possible for a few people who know that particular language to control the critical scene—that language surfaced, interestingly enough, just when the literature of peoples of color, of black women, of Latin Americans, of Africans began to move to “the center.” Such words as *center* and *periphery* are themselves instructive. *Discourse, canon, texts*, words as latinate as the tradition from which they come, are quite familiar to me. Because I went to a Catholic Mission school in the West Indies I must confess that I cannot hear the word “canon” without smelling incense, that the word “text” immediately brings back agonizing memories of Biblical exegesis, that “discourse” reeks for me of metaphysics forced down my throat in those courses that traced *world* philosophy from Aristotle through Thomas Aquinas to Heidegger.⁸ “Periphery” too is a word I heard throughout my childhood, for if anything was seen as being at the periphery, it was those small Caribbean islands which had neither land mass nor military power. Still I noted how intensely important this periphery was, for U.S. troops were continually invading one island or another if any change in political control even seemed to be occurring. As I lived among folk for whom language was an absolutely necessary way of validating our existence, I was told that the minds of the world lived only in the small continent of Europe. The metaphysical language of the New Philosophy, then, I must admit, is repulsive to me and is one reason why I raced from philosophy to literature, since the latter seemed to me to have the possibilities of rendering the world as large and as complicated as I experienced it, as sensual as I knew it was. In literature I sensed the possibility of the integration of feeling/knowledge, rather than the split between the abstract and the emotional in which Western philosophy inevitably indulged.

Now I am being told that philosophers are the ones who write literature, that authors are dead, irrelevant, mere vessels through which their narratives ooze, that they do not work nor have they the faintest idea what they are

8. MARTIN HEIDEGGER (1888–1976), German philosopher. ARISTOTLE (384–322 B.C.E.), Greek philosopher. THOMAS AQUINAS (1225–1274), Italian philosopher and theologian.

doing; rather they produce texts as disembodied as the angels. I am frankly astonished that scholars who call themselves Marxists or post-Marxists could seriously use such metaphysical language even as they attempt to deconstruct the philosophical tradition from which their language comes. And as a student of literature, I am appalled by the sheer ugliness of the language, its lack of clarity, its unnecessarily complicated sentence constructions, its lack of pleasurable quality, its alienating quality. It is the kind of writing for which composition teachers would give a freshman a resounding F.

Because I am a curious person, however, I postponed readings of black women writers I was working on and read some of the prophets of this new literary orientation. These writers did announce their dissatisfaction with some of the cornerstone ideas of their own tradition, a dissatisfaction with which I was born. But in their attempt to change the orientation of Western scholarship, they, as usual, concentrated on themselves and were not in the slightest interested in the worlds they had ignored or controlled. Again I was supposed to know *them*, while they were not at all interested in knowing *me*. Instead they sought to "deconstruct" the tradition to which they belonged even as they used the same forms, style, language of that tradition, forms which necessarily embody its values. And increasingly as I read them and saw their substitution of their philosophical writings for literary ones, I began to have the uneasy feeling that their folk were not producing any literature worth mentioning. For they always harkened back to the masterpieces of the past, again reifying the very texts they said they were deconstructing. Increasingly, as *their way*, *their terms*, *their approaches* remained central and became the means by which one defined literary critics, many of my own peers who had previously been concentrating on dealing with the other side of the equation, the reclamation and discussion of past and *present* third world literatures, were diverted into continually discussing the new literary theory.

From my point of view as a critic of contemporary Afro-American women's writing, this orientation is extremely problematic. In attempting to find the deep structures in the literary tradition, a major preoccupation of the new New Criticism,⁹ many of us have become obsessed with the nature of reading itself to the extent that we have stopped writing about literature being written today. Since I am slightly paranoid, it has begun to occur to me that the literature being produced is precisely one of the reasons why this new philosophical-literary-critical theory of relativity is so prominent. In other words, the literature of blacks, women of South America and Africa, etc., as overtly "political" literature was being preempted by a new Western concept which proclaimed that reality does not exist, that everything is relative, and that every text is silent about something—which indeed it must necessarily be.

There is, of course, much to be learned from exploring how we know what we know, how we read what we read, an exploration which, of necessity, can have no end. But there also has to be a "what," and that "what," when it is even mentioned by the new philosophers, are texts of the past, primarily Western male texts, whose norms are again being transferred onto third

9. An approach (championed by CLEANTH BROOKS, W. K. WIMSATT JR., and others) that emphasizes close reading of the text considered as

an autonomous whole; it has greatly influenced teaching from the mid-20th century onward.

world, female texts as theories of reading proliferate. Inevitably a hierarchy has now developed between what is called theoretical criticism and practical criticism, as mind is deemed superior to matter. I have no quarrel with those who wish to philosophize about how we know what we know. But I do resent the fact that this particular orientation is so privileged and has diverted so many of us from doing the first readings of the literature being written today as well as of past works about which nothing has been written. I note, for example, that there is little work done on Gloria Naylor,¹ that most of Alice Walker's works have not been commented on—despite the rage around *The Color Purple*²—that there has yet to be an in-depth study of Frances Harper, the nineteenth-century abolitionist poet and novelist. If our emphasis on theoretical criticism continues, critics of the future may have to reclaim the writers we are now ignoring, that is, if they are even aware these artists exist.

I am particularly perturbed by the movement to exalt theory, as well, because of my own adult history. I was an active member of the Black Arts Movement of the sixties and know how dangerous theory can become. Many today may not be aware of this, but the Black Arts Movement tried to create Black Literary Theory and in doing so became prescriptive. My fear is that when Theory is not rooted in practice, it becomes prescriptive, exclusive, élitish.

An example of this prescriptiveness is the approach the Black Arts Movement took towards language. For it, blackness resided in the use of black talk which they defined as hip urban language. So that when Nikki Giovanni reviewed Paule Marshall's³ *Chosen Place, Timeless People*, she criticized the novel on the grounds that it was not black, for the language was too elegant, too white. Blacks, she said, did not speak that way. Having come from the West Indies where we do, some of the time, speak that way, I was amazed by the narrowness of her vision. The emphasis on *one way* to be black resulted in the works of Southern writers being seen as non-black since the black talk of Georgia does not sound like the black talk of Philadelphia. Because the ideologues, like Baraka, come from the urban centers they tended to privilege their way of speaking, thinking, writing, and to condemn other kinds of writing as not being black enough. Whole areas of the canon were assessed according to the dictum of the Black Arts Nationalist point of view, as in Addison Gayle's⁴ *The Way of the New World*, while other works were ignored because they did not fit the scheme of cultural nationalism. Older writers like Ellison and Baldwin⁵ were condemned because they saw that the intersection of Western and African influences resulted in a new Afro-American culture, a position with which many of the Black Nationalist ideologues disagreed. Writers were told that writing love poems was not being black. Further examples abound.

It is true that the Black Arts Movements resulted in a necessary and important critique both of previous Afro-American literature and of the white-

1. African American novelist (b. 1950), best known for *The Women of Brewster Place* (1983).

2. Walker's 1982 novel was the subject of much controversy among African American critics because of its negative portrayal of black men.

3. African American novelist (b. 1929); *Chosen Place, Timeless People* was published in 1969. Gio-

vanni (b. 1943), African American poet.

4. African American critic (b. 1932). *The Way of the New World* (1975) treats the African American novel.

5. James Baldwin (1924–1987), African American novelist and essayist.

established literary world. But in attempting to take over power, it, as Ishmael Reed⁶ satirizes so well in *Mumbo Jumbo*, became much like its opponent, monolithic and downright repressive.

It is this tendency towards the monolithic, monotheistic, etc., which worries me about the race for theory. Constructs like the *center* and the *periphery* reveal that tendency to want to make the world less complex by organizing it according to one principle, to fix it through an idea which is really an ideal. Many of us are particularly sensitive to monolithism since one major element of ideologies of dominance, such as sexism and racism, is to dehumanize people by stereotyping them, by denying them their variousness and complexity. Inevitably, monolithism becomes a metasystem, in which there is a controlling ideal, especially in relation to pleasure. Language as one form of pleasure is immediately restricted, and becomes heavy, abstract, prescriptive, monotonous.

Variety, multiplicity, eroticism are difficult to control. And it may very well be that these are the reasons why writers are often seen as *persona non grata* by political states, whatever form they take, since writers/artists have a tendency to refuse to give up their way of seeing the world and of playing with possibilities; in fact, their very expression relies on that insistence. Perhaps that is why creative literature, even when written by politically reactionary people, can be so freeing, for in having to embody ideas and recreate the world, writers cannot merely produce "one way."

The characteristics of the Black Arts Movement are, I am afraid, being repeated again today, certainly in the other area to which I am especially tuned. In the race for theory, feminists, eager to enter the halls of power, have attempted their own prescriptions. So often I have read books on feminist literary theory that restrict the definition of what *feminist* means and overgeneralize about so much of the world that most women as well as men are excluded. And seldom do feminist theorists take into account the complexity of life—that women are of many races and ethnic backgrounds with different histories and cultures and that as a rule women belong to different classes that have different concerns. Seldom do they note these distinctions, because if they did they could not articulate a theory. Often as a way of clearing themselves they do acknowledge that women of color, for example, do exist, then go on to do what they were going to do anyway, which ~~is~~ to invent a theory that has little relevance for us.

That tendency towards monolithism is precisely how I see the French feminist theorists.⁷ They concentrate on the female body as the means to creating a female language, since language, they say, is male and necessarily conceives of woman as other. Clearly many of them have been irritated by the theories of Lacan⁸ for whom language is phallic. But suppose there are peoples in the world whose language was invented primarily in relation to women, who after all are the ones who relate to children and teach language. Some Native American languages, for example, use female pronouns when speaking about non-gender specific activity. Who knows who, according to

TEVA (b. 1941).

8. JACQUES LACAN (1901–1981), French psychoanalyst.

gender, created languages. Further, by positing the body as the source of everything French feminists return to the old myth that biology determines everything and ignore the fact that gender is a social rather than a biological construct.

I could go on critiquing the positions of French feminists who are themselves more various in their points of view than the label which is used to describe them, but that is not my point. What I am concerned about is the authority this school now has in feminist scholarship—the way it has become *authoritative discourse*, monologic, which occurs precisely because it does have access to the means of promulgating its ideas. The Black Arts Movement was able to do this for a time because of the political movements of the 1960s—so too with the French feminists who could not be inventing “theory” if a space had not been created by the Women’s Movement. In both cases, both groups posited a theory that excluded many of the people who made that space possible. Hence one of the reasons for the surge of Afro-American women’s writing during the 1970s and its emphasis on sexism in the black community is precisely that when the ideologues of the 1960s said *black*, they meant *black male*.

I and many of my sisters do not see the world as being so simple. And perhaps that is why we have not rushed to create abstract theories. For we know there are countless women of color, both in America and in the rest of the world to whom our singular ideas would be applied. There is, therefore, a caution we feel about pronouncing black feminist theory that might be seen as a decisive statement about Third World women. This is not to say we are not theorizing. Certainly our literature is an indication of the ways in which our theorizing, of necessity, is based on our multiplicity of experiences.

There is at least one other lesson I learned from the Black Arts Movement. One reason for its monolithic approach had to do with its desire to destroy the power which controlled black people, but it was a power which many of its ideologues wished to achieve. The nature of our context today is such that an approach which desires power singlemindedly must of necessity become like that which it wishes to destroy. Rather than wanting to change the whole model, many of us want to be at the center. It is this point of view that writers like June Jordan and Audre Lorde⁹ continually critique even as they call for empowerment, as they emphasize the fear of difference among us and our need for leaders rather than a reliance on ourselves.

For one must distinguish the desire for power from the need to become empowered—that is, seeing oneself as capable of and having the right to determine one’s life. Such empowerment is partially derived from a knowledge of history. The Black Arts Movement did result in the creation of Afro-American Studies as a concept, thus giving it a place in the university where one might engage in the reclamation of Afro-American history and culture and pass it on to others. I am particularly concerned that institutions such as Black Studies and Women’s Studies, fought for with such vigor and at some sacrifice, are not often seen as important by many of our black or women scholars precisely because the old hierarchy of traditional departments is seen as superior to these “marginal” groups. Yet, it is in this context

9. African American poet and essayist (1934–1992). Jordan (b. 1936), African American poet.

that many others of us are discovering the extent of our complexity, the interrelationships of different areas of knowledge in relation to a distinctly Afro-American or female experience. Rather than having to view our world as subordinate to others, or rather than having to work as if we were hybrids, we can pursue ourselves as subjects.

My major objection to the race for theory, as some readers have probably guessed by now, really hinges on the question, "for whom are we doing what we are doing when we do literary criticism?" It is, I think, the central question today especially for the few of us who have infiltrated the academy enough to be wooed by it. The answer to that question determines what orientation we take in our work, the language we use, the purposes for which it is intended.

I can only speak for myself. But what I write and how I write is done in order to save my own life. And I mean that literally. For me literature is a way of knowing that I am not hallucinating, that whatever I feel/know is. It is an affirmation that sensuality is intelligence, that sensual language is language that makes sense. My response, then, is directed to those who write what I read and to those who read what I read—put concretely—to Toni Morrison and to people who read Toni Morrison (among whom I would count few academics). That number is increasing, as is the readership of Walker and Marshall. But in no way is the literature Morrison, Marshall, or Walker create supported by the academic world. Nor given the political context of our society, do I expect that to change soon. For there is no reason, given who controls these institutions, for them to be anything other than threatened by these writers.

My readings do presuppose a need, a desire among folk who like me also want to save their own lives. My concern, then, is a passionate one, for the literature of people who are not in power has always been in danger of extinction or of cooptation, not because we do not theorize, but because what we can even imagine, far less who we can reach, is constantly limited by societal structures. For me, literary criticism is promotion as well as understanding, a response to the writer to whom there is often no response, to folk who need the writing as much as they need anything. I know, from literary history, that writing disappears unless there is a response to it. Because I write about writers who are now writing, I hope to help ensure that their tradition² has continuity and survives.

So my "method," to use a new "lit. crit." word, is not fixed but relates to what I read and to the historical context of the writers I read *and* to the many critical activities in which I am engaged, which may or may not involve writing. It is a learning from the language of creative writers, which is one of surprise, so that I might discover what language I might use. For my language is very much based on what I read and how it affects me, that is, on the surprise that comes from reading something that compels you to read differently, as I believe literature does. I, therefore, have no set method, another prerequisite of the new theory, since for me every work suggests a new approach. As risky as that might seem, it is, I believe, what intelligence means—a tuned sensitivity to that which is alive and therefore cannot be known until it is known. Audre Lorde puts it in a far more succinct and sensual way in her essay "Poetry is not a Luxury":

As they become known to and accepted by us, our feelings and the honest exploration of them become sanctuaries and spawning grounds for the most radical and daring of ideas. They become a safe-house for that difference so necessary to change and the conceptualization of any meaningful action. Right now, I could name at least ten ideas I would have found intolerable or incomprehensible and frightening, except as they came after dreams and poems. This is not idle fantasy, but a disciplined attention to the true meaning of "it feels right to me." We can train ourselves to respect our feelings and to transpose them into a language so they can be shared. And where that language does not yet exist, it is our poetry which helps to fashion it. Poetry is not only dream and vision; it is the skeleton architecture of our lives. It lays the foundations for a future of change, a bridge across our fears of what has never been before.¹

DONNA HARAWAY

b. 1944

In the introduction to her book *Simians, Cyborgs, and Women: The Reinvention of Nature* (1991), Donna Haraway describes her transformation from a "proper, U.S. socialist feminist, white, female, hominid biologist" into a "multiply marked cyborg feminist" whose writings range freely from primatology to epistemology and on subjects from AIDS to feminist science fiction. Haraway's challenging and innovative theoretical work is part of the cultural studies of science and technology, a thriving subdiscipline interested in the history, sociology, and politics of technoscience. Her best-known text, "A Manifesto for Cyborgs" (1985), has been hailed as the central text of cyberfeminism—a new and often iconoclastic wave of feminist theory and practice that is seeking to reclaim technoscience. As she attempts to understand the place of technology within a postmodern, socialist feminism, Haraway argues that far from being antithetical to the human organism, technology is a material and symbolic apparatus that is already deeply involved in what it means to be human. The old political strategies—Marxist, liberal, and conservative—have become obsolete in the face of a global technoscience that is outpacing the ethical and political mechanisms we have devised for containing it. Her landmark essay is a call for "reconstructing socialist-feminist politics . . . through theory and practice addressed to the social relations of science and technology." In this manifesto, she introduces the mysterious boundary creature and new myth: the cyborg, a "hybrid of machine and organism" that, for Haraway, becomes a metaphor for the "disassembled and reassembled, post-modern collective and personal self" of contemporary cultural theory suited to the West's late capitalist social order.

Haraway's educational history illuminates the broad range of her scholarship. With the aid of a Boettcher Foundation scholarship, she earned a degree in zoology and philosophy in 1966 from Colorado College, where she also fulfilled the requirements for an English major. She studied philosophies of evolution in Paris for a year on a Fulbright scholarship before beginning graduate studies in biology at Yale University;

in 1972 she earned a Ph.D. for an interdisciplinary dissertation on the functions of metaphor in shaping twentieth-century research in developmental biology. She has taught at the University of Hawaii and Johns Hopkins University and has been a professor in the History of Consciousness Program at the University of California at Santa Cruz since 1980, where she teaches feminist theory and science studies. She is also an affiliated faculty member in the Women's Studies, Anthropology, and Environmental Studies Boards at Santa Cruz.

"A Manifesto for Cyborgs" attempts to appropriate the resources of contemporary technoscience as a means of constructing "an ironic political myth faithful to feminism, socialism, and materialism." The positive icon of this new feminist mythology is the cyborg, the hybrid creation of modern science—part human, part machine. Like the feminist theorist GLORIA ANZALDÚA, Haraway is interested in exploring those boundaries, borders, and borderlands where our jumbled personal and collective identities are constructed and contested. By adopting the cyborg as a political myth, feminism, she believes, might be able to initiate effective political action without recourse to essentialism or identity politics; she argues "for *pleasure* in the confusion of boundaries and for *responsibility* in their construction." Identity is multiply configured during postmodern times. While Anzaldúa investigates boundary confusion in geographical space and racial identity, Haraway explores and affirms the breakdowns in three crucial boundaries that have resulted from post-World War II technoscience: those between human and animal, organism and machine, and the physical and non-physical.

Because they are situated on the boundary between organism and machine, Haraway argues, cyborgs do not participate in the various traditional mythologies that have defined the West. Most pernicious among these are the myths of essential identity and original unity—the myth of the garden of Eden, a belief in a pure, coherent social identity that separates the truly human from animals, machines, and other races and ethnic groups. Haraway joins postmodern feminists such as JUDITH BUTLER and EVE KOSOFKY SEDGWICK in the critique of essentialism, arguing that totalizing formulations of pure identity often associated with Marxism, the feminism of Catharine MacKinnon, and other movements are based on exclusion and marginalization. Because the cyborg is postgender, post-Western, post-Marxist, and post-Oedipal, it serves as a viable image for a new partial and heterogeneous subjectivity that reconceptualizes identity politics. Cyborgs, being "wary of holism, but needy for connection," offer a new kind of community and politics based not on unity but affinity, not on the party but on the coalition, not on the totalized conception of the category "woman" (central to many feminisms) but on partial explanations based on a careful understanding of difference. Haraway warns that "difference" is not inherently liberating: "some differences are playful; some are poles of world historical systems of domination."

Haraway's post-Marxist call for new political strategies follows from her perception of new forms of political domination. The old forms of domination endemic to an industrial society—to white patriarchal capitalism—are rapidly being rendered obsolete by new technologies. The emerging new networks of power, which she calls the "informatics of domination," are adapted to technoscientific economies based on information systems. Haraway's focus on the metaphor of the cyborg does not, as a few of her critics have unfairly charged, ignore the real material oppression of women worldwide—their poverty and exploitation; it is not a flight away from the "real world" into a poststructuralist utopia, even though her poststructuralist language is very difficult and highly theoretical. Her exploration of the informatics of domination rests on an analysis of the social and material relations of science and technology. These real and frequently oppressive relations include the "homework economy" (that is, the restructuring and feminization of the workplace), encroaching privatization and the loss of public life, growing insecurity even among the well-to-do, cultural impoverishment, and the "failure of subsistence networks for the most vulnerable."

Haraway has been criticized for the exuberance with which she embraces the "monstrous" mixed identity of the cyborg, but her enthusiasm is usually qualified by sobering discussions of the various impacts of modern technoscience on our lives. Her cyborg myth, which recognizes that monsters always mark the limits of community, attempts to integrate women and machines into a new "science" fiction. Writing and language, she argues, are crucial to the new technology and to the new cyborg politics. She advocates, however, not the "dream of a common language" embraced by ADRIENNE RICH or the purified *écriture féminine* (feminine writing) described by HÉLÈNE CIXOUS, but a "powerful infidel heteroglossia," derived from MIKHAIL BAKHTIN, that enables us to theorize the complications of language, the frustrations of communicating experience, and the necessity of negotiating rather than policing boundaries that are becoming increasingly unstable.

BIBLIOGRAPHY

Haraway's dissertation appeared as *Crystals, Fabrics, and Fields: Metaphors of Organicism in Twentieth-Century Developmental Biology* (1976). Her "Manifesto for Cyborgs" (1985), first published in the journal *Socialist Review*, has been reprinted more than fifteen times. *Primate Visions: Gender, Race, and Nature in the World of Modern Science* (1989), Haraway's second book, examines the cultural and ideological ramifications of twentieth-century primatology. In addition, she has published two collections of her essays: *Simians, Cyborgs, and Women: The Reinvention of Nature* (1991) and *Modest_Witness@Second_Millennium.FemaleMan@Meets_OncoMouse™* (1997).

Among the earliest evaluations of Haraway's influential work are Istvan Csicsery-Ronay Jr.'s "The SF of Theory: Baudrillard and Haraway," *Science Fiction Studies* 18 (1991), and Allison Fraiberg's "Of AIDS, Cyborgs, and Other indiscretions: Resurfacing the Body in the Postmodern" (1991), published in the online journal *Postmodern Culture* (vol. 1), together with a response by David Porush. A 1993 special issue of the journal *Genders*, titled *Cyberpunk: Technologies of Cultural Identity*, examines the ways in which Haraway's analysis of the cyborg figures in several cyberpunk texts. For more advanced evaluations of Haraway's manifesto, see Chela Sandoval, "Re-Entering Cyberspace: Sciences of Resistance," *Dispositio/n: American Journal of Cultural Histories and Theories* 19 (1994), and Linda Howell, "The Cyborg Manifesto Revisited: Issues and Methods for Technocultural Feminism," in *Postmodern Apocalypse: Theory and Cultural Practice at the End* (ed. Richard Dellamora, 1995). William Grassie offers a reading of Haraway's feminist philosophy in "Cyborgs, Trickster, and Hermes: Donna Haraway's Metatheory of Science and Religion," *Zygon* 31 (1996). Rosi Braidotti's "Cyberfeminism with a Difference," *New Formations* 29 (1996), uses Haraway's notion of the "informatics of domination" to investigate the politics of cyberfeminism. Jonathan Crewe examines Haraway's use of postmodern theory in "Transcending the World: Haraway's Postmodernism," *Signs* 22 (1997). Csicsery-Ronay returns to his analysis of Haraway in "The Cyborg and the Kitchen Sink; or, The Salvation Story of No Salvation Story," *Science Fiction Studies* 23 (1998). A useful bibliography of writings by and about Haraway can be found in *The Cyborg Handbook*, edited by Chris Hables Gray, with Heidi J. Figueroa-Sarriera and Steven Mentor (1996); it also contains a foreword written by Haraway.

A Manifesto for Cyborgs: Science, Technology, and Socialist Feminism in the 1980s

An Ironic Dream of a Common Language¹ for Women in the Integrated Circuit

This essay is an effort to build an ironic political myth faithful to feminism, socialism, and materialism. Perhaps more faithful as blasphemy is faithful, than as reverent worship and identification. Blasphemy has always seemed to require taking things very seriously. I know no better stance to adopt from within the secular-religious, evangelical traditions of United States politics, including the politics of socialist-feminism. Blasphemy protects one from the moral majority within, while still insisting on the need for community. Blasphemy is not apostasy. Irony is about contradictions that do not resolve into larger wholes, even dialectically, about the tension of holding incompatible things together because both or all are necessary and true. Irony is about humor and serious play. It is also a rhetorical strategy and a political method, one I would like to see more honored within socialist feminism. At the center of my ironic faith, my blasphemy, is the image of the cyborg.

A cyborg is a cybernetic organism, a hybrid of machine and organism, a creature of social reality as well as a creature of fiction. Social reality is lived social relations, our most important political construction, a world-changing fiction. The international women's movements have constructed "women's experience," as well as uncovered or discovered this crucial collective object. This experience is a fiction and fact of the most crucial, political kind. Liberation rests on the construction of the consciousness, the imaginative apprehension, of oppression, and so of possibility. The cyborg is a matter of fiction and lived experience that changes what counts as women's experience in the late twentieth century. This is a struggle over life and death, but the boundary between science fiction and social reality is an optical illusion.

Contemporary science fiction is full of cyborgs—creatures simultaneously animal and machine, who populate worlds ambiguously natural and crafted. Modern medicine is also full of cyborgs, of couplings between organism and machine, each conceived as coded devices, in an intimacy and with a power that was not generated in the history of sexuality. Cyborg "sex" restores some of the lovely replicative baroque of ferns and invertebrates (such nice organic prophylactics against heterosexism). Cyborg replication is uncoupled from organic reproduction. Modern production seems like a dream of cyborg colonization of work, a dream that makes the nightmare of Taylorism² seem idyllic. And modern war is a cyborg orgy, coded by C³I, command-control-communication-intelligence, an \$84 billion item in 1984's U.S. defense budget. I am making an argument for the cyborg as a fiction mapping our social and bodily reality and as an imaginative resource suggesting some very fruit-

1. A reference to the feminism of ADRIENNE RICH (b. 1929), author of "Compulsory Heterosexuality and Lesbian Existence" (1980; see above) and of a 1978 collection of poetry titled *The Dream of a Common Language*.

2. A system of industrial management, devised by the American inventor and engineer Frederick Taylor (1856-1916), that seeks to maximize workers' efficiency in order to optimize production.

ful couplings. Foucault's biopolitics³ is a flaccid premonition of cyborg politics, a very open field.

By the late twentieth century, our time, a mythic time, we are all chimeras, theorized and fabricated hybrids of machine and organism; in short, we are cyborgs. The cyborg is our ontology,⁴ it gives us our politics. The cyborg is a condensed image of both imagination and material reality, the two joined centers structuring any possibility of historical transformation. In the traditions of "Western" science and politics—the tradition of racist, male-dominant capitalism; the tradition of progress; the tradition of the appropriation of nature as resource for the productions of culture; the tradition of reproduction of the self from the reflections of the other—the relation between organism and machine has been a border war. The stakes in the border war have been the territories of production, reproduction, and imagination. This essay is an argument for *pleasure* in the confusion of boundaries and for *responsibility* in their construction. It is also an effort to contribute to socialist-feminist culture and theory in a post-modernist, non-naturalist mode and in the utopian tradition of imagining a world without gender, which is perhaps a world without genesis, but maybe also a world without end. The cyborg incarnation is outside salvation history.

The cyborg is a creature in a post-gender world; it has no truck with bisexuality, pre-Oedipal symbiosis,⁵ unalienated labor,⁶ or other seductions to organic wholeness through a final appropriation of all the powers of the parts into a higher unity. In a sense, the cyborg has no origin story in the Western sense; a "final" irony since the cyborg is also the awful apocalyptic *telos* of the "West's" escalating dominations of abstract individuation, an ultimate self untied at last from all dependency, a man in space. An origin story in the "Western," humanist sense depends on the myth of original unity, fullness, bliss and terror, represented by the phallic mother from whom all humans must separate, the task of individual development and of history, the twin potent myths inscribed most powerfully for us in psychoanalysis and Marxism. Hilary Klein has argued⁷ that both Marxism and psychoanalysis, in their concepts of labor and of individuation and gender formation, depend on the plot of original unity out of which difference must be produced and enlisted in a drama of escalating domination of woman/nature. The cyborg skips the step of original unity, of identification with nature in the Western sense. This is its illegitimate promise that might lead to subversion of its teleology as star wars.⁸

The cyborg is resolutely committed to partiality, irony, intimacy, and perversity. It is oppositional, utopian, and completely without innocence. No

3. A term used in *The History of Sexuality* (1976) by the French philosopher and cultural historian MICHEL FOUCAULT (1926–1984) to describe the social mechanisms of power that regulate the body, extending the methods of power and knowledge over life itself.

4. The branch of philosophy concerned with the nature of being. Chimera: in Greek mythology, a female monster with a lion's head, a goat's body, and a serpent's tail; more generally, any monster made of incongruous parts.

5. In psychoanalytic theory, a period of maternal dependence, narcissistic identification, and polymorphous erotic drives that occurs during earliest infancy, preceding the Oedipal phase when con-

flict with the father and the social order emerge. This period of intense attachment to the maternal has been of great interest to contemporary feminist psychoanalytic theorists (e.g., JULIA KRISTEVA and HÉLÈNE CIXOUS).

6. In Marxist theory, labor that does not occur within the exploitative relationships of slavery, feudalism, colonialism, or capitalism.

7. For example, see Klein's "Marxism, Psychoanalysis, and Mother Nature," *Feminist Studies* 15 (1989).

8. The Strategic Defense Initiative, proposed by President Ronald Reagan in 1983, to create a shield against incoming missiles.

longer structured by the polarity of public and private, the cyborg defines a technological polis based partly on a revolution of social relations in the *oikos*, the household. Nature and culture are reworked; the one can no longer be the resource for appropriation or incorporation by the other. The relationships for forming wholes from parts, including those of polarity and hierarchical domination, are at issue in the cyborg world. Unlike the hopes of Frankenstein's monster,⁹ the cyborg does not expect its father to save it through a restoration of the garden; i.e., through the fabrication of a heterosexual mate, through its completion in a finished whole, a city and cosmos. The cyborg does not dream of community on the model of the organic family, this time without the Oedipal project.¹ The cyborg would not recognize the Garden of Eden; it is not made of mud and cannot dream of returning to dust. Perhaps that is why I want to see if cyborgs can subvert the apocalypse of returning to nuclear dust in the manic compulsion to name the Enemy. Cyborgs are not reverent; they do not re-member the cosmos. They are wary of holism, but needy for connection—they seem to have a natural feel for united front politics, but without the vanguard party.² The main trouble with cyborgs, of course, is that they are the illegitimate offspring of militarism and patriarchal capitalism, not to mention state socialism. But illegitimate offspring are often exceedingly unfaithful to their origins. Their fathers, after all, are inessential.

I will return to the science fiction of cyborgs at the end of this essay, but now I want to signal three crucial boundary breakdowns that make the following political fictional (political scientific) analysis possible. By the late twentieth century in United States scientific culture, the boundary between human and animal is thoroughly breached. The last beachheads of uniqueness have been polluted if not turned into amusement parks—language, tool use, social behavior, mental events, nothing really convincingly settles the separation of human and animal. And many people no longer feel the need of such a separation; indeed, many branches of feminist culture affirm the pleasure of connection of human and other living creatures. Movements for animal rights are not irrational denials of human uniqueness; they are clear-sighted recognition of connection across the discredited breach of nature and culture. Biology and evolutionary theory over the last two centuries have simultaneously produced modern organisms as objects of knowledge and reduced the line between humans and animals to a faint trace re-etched in ideological struggle or professional disputes between life and social sciences. Within this framework, teaching modern Christian creationism should be fought as a form of child abuse.

Biological-determinist ideology is only one position opened up in scientific culture for arguing the meanings of human animality. There is much room for radical political people to contest for the meanings of the breached boundary.³ The cyborg appears in myth precisely where the boundary

9. That is, the creature constructed in Mary Shelley's novel *Frankenstein* (1818), who begs his creator for a mate.

1. Psychoanalysis describes the task of early childhood—the formation of a distinct ego or identity—as separation from the mother, accomplished through the Oedipal stage in which the paternal figure intervenes between the mother-child dyad.

2. Haraway alludes to Soviet history. Vanguard

party: party intended to lead and control the revolution of the workers (e.g., the Bolshevik Party, established during the Russian Revolution). "United front politics": coalitions (e.g., the united fronts set up by the Comintern during the 1930s).
3. Useful references to left and/or feminist radical science movements and theory and to biological/biotechnological issues include: Ruth Bleier, *Science and Gender: A Critique of Biology*

between human and animal is transgressed. Far from signaling a walling off of people from other living beings, cyborgs signal disturbingly and pleasurable tight coupling. Bestiality has a new status in this cycle of marriage exchange.

The second leaky distinction is between animal-human (organism) and machine. Pre-cybernetic machines could be haunted; there was always the specter of the ghost in the machine.⁴ This dualism structured the dialogue between materialism and idealism that was settled by a dialectical progeny, called spirit or history, according to taste. But basically machines were not self-moving, self-designing, autonomous. They could not achieve man's dream, only mock it. They were not man, an author to himself, but only a caricature of that masculinist reproductive dream. To think they were otherwise was paranoid. Now we are not so sure. Late-twentieth-century machines have made thoroughly ambiguous the difference between natural and artificial, mind and body, self-developing and externally-designed, and many other distinctions that used to apply to organisms and machines. Our machines are disturbingly lively, and we ourselves frighteningly inert.

Technological determinism is only one ideological space opened up by the reconceptions of machine and organism as coded texts through which we engage in the play of writing and reading the world.⁵ "Textualization" of everything in post-structuralist, post-modernist theory has been damned by Marxists and socialist feminists for its utopian disregard for lived relations

and Its Themes on Women (New York: Pergamon, 1984); Elizabeth Fee, "Critiques of Modern Science: The Relationship of Feminist and Other Radical Epistemologies," and Evelyn Hammonds, "Women of Color, Feminism, and Science," papers for Symposium on Feminist Perspectives on Science, University of Wisconsin, 11-13 April 1985 (proceedings to be published by Pergamon) (Ruth Bleier, ed., *Feminist Approaches to Science* (New York: Pergamon, 1986)); Stephen J. D. Knorr-Cetina and Michael Mulkay, eds., *Science Observed: Perspectives on the Social Study of Science* (Beverly Hills, Calif.: Sage, 1983); Bruno Latour and Steve Woolgar, *Laboratory Life: The Social Construction of Scientific Facts* (Beverly Hills, Calif.: Sage, 1979); Robert M. Young, "Interpreting the Production of Science," *New Scientist*, vol. 29 (March 1979), pp. 1026-28. More is claimed than is known about room for contesting productions of science in the mythic/material space of "the laboratory": the 1984 Directory of the Network for the Ethnographic Study of Science, Technology, and Organizations lists a wide range of people and projects crucial to better radical analysis; available from NBSSTO, P.O. Box 11442, Stanford, CA 94305 [Haraway's note]. Kuhn (1922-1996), American historian of science; his book that some view as starting modern social studies of science is *The Structure of Scientific Revolutions* (Chicago: University of Chicago Press, 1962).

of domination that ground the "play" of arbitrary reading.⁶ It is certainly true that post-modernist strategies, like my cyborg myth, subvert myriad organic wholes (e.g., the poem, the primitive culture, the biological organism). In short, the certainty of what counts as nature—a source of insight and a promise of innocence—is undermined, probably fatally. The transcendent authorization of interpretation is lost and with it the ontology grounding "Western" epistemology.⁷ But the alternative is not cynicism or faithlessness, i.e., some version of abstract existence, like the accounts of technological determinism destroying "man" by the "machine" or "meaningful political action" by the "text." Who cyborgs will be is a radical question; the answers are a matter of survival. Both chimpanzee and artifacts have politics, so why shouldn't we?⁸

The third distinction is a subset of the second: the boundary between physical and non-physical is very imprecise for us. Pop physics books on the consequences of quantum theory and the indeterminacy principle⁹ are a kind of popular scientific equivalent to the Harlequin romances as a marker of radical change in American white heterosexuality: they get it wrong, but they are on the right subject. Modern machines are quintessentially microelectronic devices: they are everywhere and they are invisible. Modern machinery is an irreverent upstart god, mocking the Father's ubiquity and spirituality. The silicon chip is a surface for writing; it is etched in molecular scales disturbed only by atomic noise, the ultimate interference for nuclear scores. Writing, power, and technology are old partners in Western stories of the origin of civilization, but miniaturization has changed our experience of mechanism. Miniaturization has turned out to be about power; small is not so much beautiful as pre-eminently dangerous, as in cruise missiles. Contrast

6. Fredric Jameson, "Postmodernism, or, The Cultural Logic of Late Capitalism," *New Left Review*, July/August 1984, pp. 53-94. See Marjorie Perloff, "'Dirty' Language and Scramble Systems," *Sulfur* 11 (1984), pp. 178-83; Kathleen Fraser, *Something (Even Human Voices) in the Foreground, a Lake* (Berkeley, Calif.: Kelsey St. Press, 1984).

A provocative, comprehensive argument about the policies and theories of "post-modernism" is made by Fredric Jameson, who argues that post-modernism is not an option, a style among others, but a cultural dominant requiring radical reinvention of left politics from within; there is no longer any place from without that gives meaning to the comforting fiction of critical distance. Jameson also makes clear why one cannot be for or against post-modernism, an essentially moralist move. My position is that feminists (and others) need continuous cultural reinvention, post-modernist critique, and historical materialism; only a cyborg would have a chance. The old dominations of white capitalist patriarchy seem nostalgically innocent now: they normalized heterogeneity, e.g., into man and woman, white and black. "Advanced capitalism" and post-modernism release heterogeneity without a norm, and we are flattened, without subjectivity, which requires depth, even unfriendly and drowning depths. It is time to write *The Death of the Clinic*. The clinic's methods required bodies and works; we have texts and surfaces. Our dominations don't work by medicalization and normalization anymore; they work by networking, communications redesign, stress management.

Normalization gives way to automation, utter redundancy. Michel Foucault's *Birth of the Clinic* [1963], *History of Sexuality*, and *Discipline and Punish* [1975] name a form of power at its moment of implosion. The discourse of biopolitics gives way to technobabble, the language of the spliced substantive; no noun is left whole by the multinationals. These are their names, listed from one issue of *Science*: Tech-Knowledge, Genentech, Allergen, Hybritech, Compupro, Genen-cor, Syntex, Allelix, Agrigenetics Corp., Syntro, Codon, Repligen, Micro-Angelo from Scion Corp., Percom Data, Inter Systems, Cyborg Corp., Statcom Corp., Intertec. If we are imprisoned by language, then escape from that prison house requires language poets, a kind of cultural restriction enzyme to cut the code; cyborg heteroglossia is one form of radical culture politics [Haraway's note]. On the American Marxist literary critic JAMESON (b. 1934), whose works include *The Prison-House of Language* (1972), see above. "Heteroglossia": an allusion to the highly influential theories of MIKHAIL M. BAKHTIN (1895-1975).

9. That is, the theory formulated in 1927 by the German physicist Werner Heisenberg that one cannot specify both the position and momentum of a particle.

the TV sets of the 1950s or the news cameras of the 1970s with the TV wrist bands or hand-sized video cameras now advertised. Our best machines are made of sunshine; they are all light and clean because they are nothing but signals, electromagnetic waves, a section of a spectrum. And these machines are eminently portable, mobile—a matter of immense human pain in Detroit and Singapore. People are nowhere near so fluid, being both material and opaque. Cyborgs are ether, quintessence.

The ubiquity and invisibility of cyborgs is precisely why these sunshine-belt machines are so deadly. They are as hard to see politically as materially. They are about consciousness—or its simulation.¹ They are floating signifiers moving in pickup trucks across Europe, blocked more effectively by the witch-weavings of the displaced and so unnatural Greenham women,² who read the cyborg webs of power very well, than by the militant labor of older masculinist politics, whose natural constituency needs defense jobs. Ultimately the “hardest” science is about the realm of greatest boundary confusion, the realm of pure number, pure spirit, C³I, cryptography, and the preservation of potent secrets. The new machines are so clean and light. Their engineers are sun-worshippers mediating a new scientific revolution associated with the night dream of post-industrial society. The diseases evoked by these clean machines are “no more” than the minuscule coding changes of an antigen in the immune system, “no more” than the experience of stress. The nimble little fingers of “Oriental” women, the old fascination of little Anglo-Saxon Victorian girls with doll houses, women’s enforced attention to the small take on quite new dimensions in this world. There might be a cyborg Alice³ taking account of these new dimensions. Ironically, it might be the unnatural cyborg women making chips in Asia and spiral dancing in Santa Rita whose constructed unities will guide effective oppositional strategies.

So my cyborg myth is about transgressed boundaries, potent fusions, and dangerous possibilities which progressive people might explore as one part of needed political work. One of my premises is that most American socialists and feminists see deepened dualisms of mind and body, animal and machine, idealism and materialism in the social practices, symbolic formulations, and physical artifacts associated with “high technology” and scientific culture. From *One-Dimensional Man* to *The Death of Nature*,⁴ the analytic resources developed by progressives have insisted on the necessary domination of technics and recalled us to an imagined organic body to integrate our resistance. Another of my premises is that the need for unity of people trying to resist worldwide intensification of domination has never been more acute. But a slightly perverse shift of perspective might better enable us to contest for

1. Jean Baudrillard, *Simulations*, trans. P. Foss, P. Patton, P. Beitchman (New York: Semiotext(e), 1983). Jameson (“Postmodernism,” p. 66) points out that Plato’s definition of the simulacrum is the copy for which there is no original, i.e., the world of advanced capitalism; of pure exchange [Haraway’s note]. On the French social critic and theorist BAUDRILLARD (b. 1929) and the Greek philosopher PLATO (ca. 427–ca. 327 B.C.E.), see above.

meanings, as well as for other forms of power and pleasure in technologically-mediated societies.

From one perspective, a cyborg world is about the final imposition of a grid of control on the planet, about the final abstraction embodied in a Star War apocalypse waged in the name of defense, about the final appropriation of women's bodies in a masculinist orgy of war.⁵ From another perspective, a cyborg world might be about lived social and bodily realities in which people are not afraid of their joint kinship with animals and machines, not afraid of permanently partial identities and contradictory standpoints. The political struggle is to see from both perspectives at once because each reveals both dominations and possibilities unimaginable from the other vantage point. Single vision produces worse illusions than double vision or many-headed monsters. Cyborg unities are monstrous and illegitimate; in our present political circumstances, we could hardly hope for more potent myths for resistance and recoupling. I like to imagine LAG, the Livermore Action Group,⁶ as a kind of cyborg society, dedicated to realistically converting the laboratories that most fiercely embody and spew out the tools of technological apocalypse, and committed to building a political form that actually manages to hold together witches, engineers, elders, perverts, Christians, mothers, and Leninists⁷ long enough to disarm the state. Fission Impossible is the name of the affinity group in my town. (Affinity: related not by blood but by choice, the appeal of one chemical nuclear group for another, avidity.)

Fractured Identities

It has become difficult to name one's feminism by a single adjective—or even to insist in every circumstance upon the noun. Consciousness of exclusion through naming is acute. Identities seem contradictory, partial, and strategic. With the hard-won recognition of their social and historical constitution, gender, race, and class cannot provide the basis for belief in “essential” unity. There is nothing about being “female” that naturally binds women. There is not even such a state as “being” female, itself a highly complex category constructed in contested sexual scientific discourses and other social practices. Gender, race, or class consciousness is an achievement forced on us by the terrible historical experience of the contradictory social realities of patriarchy, colonialism, and capitalism. And who counts as “us” in my own rhetoric? Which identities are available to ground such a potent political myth called “us,” and what could motivate enlistment in this collectivity? Painful fragmentation among feminists (not to mention among women) along every possible fault line has made the concept of *woman* elusive, an excuse for the matrix of women's dominations of each other. For me—and for many who share a similar historical location in white, professional middle

class, female, radical, North American, mid-adult bodies—the sources of a crisis in political identity are legion. The recent history for much of the U.S. left and U.S. feminism has been a response to this kind of crisis by endless splitting and searches for a new essential unity. But there has also been a growing recognition of another response through coalition—affinity, not identity.⁸

Chela Sandoval, from a consideration of specific historical moments in the formation of the new political voice called women of color, has theorized a hopeful model of political identity called “oppositional consciousness,” born of the skills for reading webs of power by those refused stable membership in the social categories of race, sex, or class.⁹ “Women of color,” a name contested at its origins by those whom it would incorporate, as well as a historical consciousness marking systematic breakdown of all the signs of Man in “Western” traditions, constructs a kind of post-modernist identity out of otherness and difference. This post-modernist identity is fully political, whatever might be said about other possible post-modernisms.

Sandoval emphasizes the lack of any essential criterion for identifying who is a woman of color. She notes that the definition of the group has been by conscious appropriation of negation. For example, a Chicana or U.S. black woman has not been able to speak as a woman or as a black person or as a Chicano. Thus, she was at the bottom of a cascade of negative identities, left out of even the privileged oppressed authorial categories called “women and blacks,” who claimed to make the important revolutions. The category “woman” negated all non-white women; “black” negated all non-black people, as well as all black women. But there was also no “she,” no singularity, but a sea of differences among U.S. women who have affirmed their historical identity as U.S. women of color. This identity marks out a self-consciously constructed space that cannot affirm the capacity to act on the basis of natural identification, but only on the basis of conscious coalition, of affinity, of political kinship.¹ Unlike the “woman” of some streams of the white women’s movement in the United States, there is no naturalization of the matrix, or at least this is what Sandoval argues is uniquely available through the power of oppositional consciousness.

Sandoval’s argument has to be seen as one potent formulation for feminists out of the worldwide development of anti-colonialist discourse, i.e., discourse dissolving the “West” and its highest product—the one who is not

8. Powerful developments of coalition politics emerge from “third world” speakers, speaking from nowhere, the displaced center of the universe, earth: “We live on the third planet from the sun”—*Sun Poem* by Jamaican writer Edward Kamau Brathwaite, review by Nathaniel Mackey, *Sulfur*, 11 (1984), pp. 200–205. *Home Girls*, ed. Barbara Smith (New York: Kitchen Table, Women of Color Press, 1983), ironically subverts naturalized identities precisely while constructing a place from which to speak called home. See esp. Bernice Reagan, “Coalition Politics, Turning the Century,” pp. 356–68 [Haraway’s note]. On the African American feminist critic SMITH (b. 1946), see below.

Consciousness,” Ph.D. qualifying essay, UCSC, 1984 [Haraway’s note].

1. bell hooks, *Ain’t I a Woman?* (Boston: South End Press, 1981); Gloria Hull, Patricia Bell Scott, and Barbara Smith, eds., *All the Women Are White, All the Men Are Black, But Some of Us Are Brave: Black Women’s Studies* (Old Westbury, Conn.: Feminist Press, 1982). Toni Cade Bambara, in *The Salt Eaters* (New York: Vintage/Random House, 1981), writes an extraordinary post-modernist novel, in which the women of color theater group, *The Seven Sisters*, explores a form of unity. Thanks to Elliott Evans’s readings of Bambara, Ph.D. qualifying essay, UCSC, 1984 [Haraway’s note]. On the African American feminist critic HOOKS (b. 1952), see below.

animal, barbarian, or woman; i.e., man, the author of a cosmos called history. As orientalism is deconstructed politically and semiotically, the identities of the occident destabilize, including those of feminists.² Sandoval argues that "women of color" have a chance to build an effective unity that does not replicate the imperializing, totalizing revolutionary subjects of previous Marxisms and feminisms which had not faced the consequences of the disorderly polyphony emerging from decolonization.

Katie King has emphasized the limits of identification and the political/poetic mechanics of identification built into reading "the poem," that generative core of cultural feminism. King criticizes the persistent tendency among contemporary feminists from different "moments" or "conversations" in feminist practice to taxonomize³ the women's movement to make one's own political tendencies appear to be the *telos* of the whole. These taxonomies tend to remake feminist history to appear to be an ideological struggle among coherent types persisting over time, especially those typical units called radical, liberal, and socialist feminism. Literally, all other feminisms are either incorporated or marginalized, usually by building an explicit ontology and epistemology.⁴ Taxonomies of feminism produce epistemologies to police deviation from official women's experience: And of course, "women's culture," like women of color, is consciously created by mechanisms inducing affinity. The rituals of poetry, music, and certain forms of academic practice have been pre-eminent. The politics of race and culture in the U.S. women's movements are intimately interwoven. The common achievement of King and Sandoval is learning how to craft a poetic/political unity without relying on a logic of appropriation, incorporation, and taxonomic identification.

The theoretical and practical struggle against unity-through-domination or unity-through-incorporation ironically not only undermines the justifications for patriarchy, colonialism, humanism, positivism, essentialism, scientism, and other unlamented -isms, but *all* claims for an organic or natural standpoint. I think that radical and socialist/Marxist feminisms have also undermined their/our epistemological strategies and that this is a crucially valuable step in imagining possible unities. It remains to be seen whether all "epistemologies" as Western political people have known them fail us in the task to build effective affinities.

It is important to note that the effort to construct revolutionary standpoints, epistemologies as achievements of people committed to changing the world, has been part of the process showing the limits of identification. The acid tools of post-modernist theory and the constructive tools of ontological

2. On orientalism in feminist works and elsewhere, see Lisa Lowe, "Orientation: Representations of Cultural and Sexual 'Others,'" Ph.D. thesis, UCSC; Edward Said, *Orientalism* (New York: Pantheon, 1978) [Haraway's note]. On the Palestinian-born American critic SAID (b. 1935), see above.

3. To categorize or classify.

4. Katie King has developed a theoretically sensitive treatment of the workings of feminist taxonomies as genealogies of power in feminist ideology

and polemic: "Prospectus," in *Gender and Genre: Academic Practice and the Making of Criticism* (Santa Cruz, Calif.: University of California, 1984). King examines an intelligent, problematic example of taxonomizing feminisms to make a little machine producing the desired final position: Alison Jaggar, *Feminist Politics and Human Nature* (Totowa, N.J.: Rowman & Allanheld, 1983). My caricature here of socialist and radical feminism is also an example [Haraway's note].

discourse about revolutionary subjects might be seen as ironic allies in dissolving Western selves in the interests of survival. We are excruciatingly conscious of what it means to have a historically constituted body. But with the loss of innocence in our origin, there is no expulsion from the Garden either. Our politics lose the indulgence of guilt with the naïveté of innocence. But what would another political myth for socialist feminism look like? What kind of politics could embrace partial, contradictory, permanently unclosed constructions of personal and collective selves and still be faithful, effective—and, ironically, socialist feminist?

I do not know of any other time in history when there was greater need for political unity to confront effectively the dominations of "race," "gender," "sexuality," and "class." I also do not know of any other time when the kind of unity we might help build could have been possible. None of "us" have any longer the symbolic or material capability of dictating the shape of reality to any of "them." Or at least "we" cannot claim innocence from practicing such dominations. White women, including socialist feminists, discovered (i.e., were forced kicking and screaming to notice) the non-innocence of the category "woman." That consciousness changes the geography of all previous categories; it denatures them as heat denatures a fragile protein. Cyborg feminists have to argue that "we" do not want any more natural matrix of unity and that no construction is whole. Innocence, and the corollary insistence on victimhood as the only ground for insight, has done enough damage. But the constructed revolutionary subject must give late-twentieth-century people pause as well. In the fraying of identities and in the reflexive strategies for constructing them, the possibility opens up for weaving something other than a shroud for the day after the apocalypse that so prophetically ends salvation history.

Both Marxist/socialist feminisms and radical feminisms have simultaneously naturalized and denatured the category "women" and consciousness of the social lives of "women." Perhaps a schematic caricature can highlight both kinds of moves. Marxian socialism is rooted in an analysis of wage labor which reveals class structure. The consequence of the wage relationship is systematic alienation, as the worker is dissociated from his (sic) product. Abstraction and illusion rule in knowledge, domination rules in practice. Labor is the pre-eminently privileged category enabling the Marxist to overcome illusion and find that point of view which is necessary for changing the world. Labor is the humanizing activity that makes man; labor is an ontological category permitting the knowledge of a subject, and so the knowledge of subjugation and alienation.

In faithful filiation, socialist feminism advanced by allying itself with the basic analytic strategies of Marxism. The main achievement of both Marxist feminists and socialist feminists was to expand the category of labor to accommodate what (some) women did, even when the wage relation was subordinated to a more comprehensive view of labor under capitalist patriarchy. In particular, women's labor in the household and women's activity as mothers generally, i.e., reproduction in the socialist feminist sense, entered theory on the authority of analogy to the Marxian concept of labor. The unity of women here rests on an epistemology based on the ontological structure of "labor." Marxist/socialist feminism does not "naturalize" unity; it is a possible achievement based on a possible standpoint rooted in social

relations. The essentializing move is in the ontological structure of labor or of its analogue, women's activity.⁵ The inheritance of Marxian humanism, with its pre-eminently Western self, is the difficulty for me. The contribution from these formulations has been the emphasis on the daily responsibility of real women to build unities, rather than to naturalize them.

Catharine MacKinnon's version of radical feminism is itself a caricature of the appropriating, incorporating, totalizing tendencies of Western theories of identity-grounding action.⁶ It is factually and politically wrong to assimilate all of the diverse "moments" or "conversations" in recent women's politics named radical feminism to MacKinnon's version. But the teleological logic⁷ of her theory shows how an epistemology and ontology—including their negations—erase or police difference. Only one of the effects of MacKinnon's theory is the rewriting of the history of the polymorphous field called radical feminism. The major effect is the production of a theory of experience, of women's identity, that is a kind of apocalypse for all revolutionary standpoints. That is, the totalization built into this tale of radical feminism achieves its end—the unity of women—by enforcing the experience of and testimony to radical non-being. As for the Marxist/socialist feminist, consciousness is an achievement, not a natural fact. And MacKinnon's theory eliminates some of the difficulties built into humanist revolutionary subjects, but at the cost of radical reductionism.

MacKinnon argues that radical feminism necessarily adopted a different analytical strategy from Marxism, looking first not at the structure of class, but at the structure of sex/gender and its generative relationship, men's constitution and appropriation of women sexually. Ironically, MacKinnon's "ontology" constructs a non-subject, a non-being. Another's desire, not the self's labor, is the origin of "woman." She therefore develops a theory of consciousness that enforces what can count as "women's" experience—any-

5. The feminist standpoint argument is being developed by: Jane Flax, "Political Philosophy and the Patriarchal Unconsciousness," in Sandra Harding and Merrill Hintikka, eds., *Discovering Reality* (Dordrecht: Reidel, 1983); Sandra Harding, "The Contradictions and Ambivalence of a Feminist Science," ms.; Harding and Hintikka, *Discovering Reality*; Nancy Hartsock, *Money, Sex, and Power* (New York: Longman, 1983) and "The Feminist Standpoint: Developing the Ground for a Specifically Feminist Historical Materialism," in Harding and Hintikka, *Discovering Reality*; Mary O'Brien, *The Politics of Reproduction* (New York: Routledge & Kegan Paul, 1981); Hilary Rose, "Hand, Brain, and Heart: A Feminist Epistemology for the Natural Sciences," *Signs*, vol. 9, no. 1 (1983), pp. 73-90; Dorothy Smith, "Women's Perspective as a Radical Critique of Sociology," *Sociological Inquiry* 44 (1974), and "A Sociology of Women," in J. Sherman and E. T. Beck, eds., *The Prism of Sex* (Madison: University of Wisconsin Press, 1979).

The central role of object-relations versions of psychoanalysis and related strong universalizing moves in discussing reproduction, caring work, and mothering in many approaches to epistemology underline their authors' resistance to what I am calling post-modernism. For me, both the universalizing moves and the versions of psychoanal-

ysis make analysis of "women's place in the integrated circuit" difficult and lead to systematic difficulties in accounting or even seeing major aspects of the construction of gender and gender social life [Haraway's note]. Haraway's main target in object-relations theory is Nancy Chodorow's influential book *The Reproduction of Mothering* (1978).

6. Catharine MacKinnon, "Feminism, Marxism, Method, and the State: An Agenda for Theory," *Signs*, vol. 7, no. 3 (1982), pp. 515-44. A critique indebted to MacKinnon, but without the reductionism and with an elegant feminist account of Foucault's paradoxical conservatism on sexual violence (rape), is Teresa de Lauretis, ["The Violence of Rhetoric: Considerations on Representation and Gender," *Semiotica* 54 (1985), pp. 11-31], special issue on "The Rhetoric of Violence," ed. Nancy Armstrong. A theoretically elegant feminist social-historical examination of family violence, that insists on women's, men's, children's complex agency without losing sight of the material structures of male domination, race, and class, is Linda Gordon, [*Heroes of Their Own Lives* (New York: Viking, 1988)] [Haraway's note]. MacKinnon (b. 1946), an American legal theorist, is best known for arguing in favor of local ordinances against pornography.

7. Logic oriented toward an end.

thing that names sexual violation, indeed, sex itself as far as "women" can be concerned. Feminist practice is the construction of this form of consciousness; i.e., the self-knowledge of a self-who-is-not.

Perversely, sexual appropriation in this radical feminism still has the epistemological status of labor, i.e., the point from which analysis able to contribute to changing the world must flow. But sexual objectification, not alienation, is the consequence of the structure of sex/gender. In the realm of knowledge, the result of sexual objectification is illusion and abstraction. However, a woman is not simply alienated from her product, but in a deep sense does not exist as a subject, or even potential subject, since she owes her existence as a woman to sexual appropriation. To be constituted by another's desire is not the same thing as to be alienated in the violent separation of the laborer from his product.

MacKinnon's radical theory of experience is totalizing in the extreme; it does not so much marginalize as obliterate the authority of any other women's political speech and action. It is a totalization producing what Western patriarchy itself never succeeded in doing—feminists' consciousness of the non-existence of women, except as products of men's desire. I think MacKinnon correctly argues that no Marxian version of identity can firmly ground women's unity. But in solving the problem of the contradictions of any Western revolutionary subject for feminist purposes, she develops an even more authoritarian doctrine of experience. If my complaint about socialist/Marxian standpoints is their unintended erasure of polyvocal, unassimilable, radical difference made visible in anti-colonial discourse and practice, MacKinnon's intentional erasure of all difference through the device of the "essential" non-existence of women is not reassuring.

In my taxonomy, which like any other taxonomy is a reinscription of history, radical feminism can accommodate all the activities of women named by socialist feminists as forms of labor only if the activity can somehow be sexualized. Reproduction had different tones of meanings for the two tendencies, one rooted in labor, one in sex, both calling the consequences of domination and ignorance of social and personal reality "false consciousness."⁸

Beyond either the difficulties or the contributions in the argument of any one author, neither Marxist nor radical feminist points of view have tended to embrace the status of a partial explanation; both were regularly constituted as totalities. Western explanation has demanded as much; how else could the "Western" author incorporate its others? Each tried to annex other forms of domination by expanding its basic categories through analogy, simple listing, or addition. Embarrassed silence about race among white radical and socialist feminists was one major, devastating political consequence. History and polyvocality disappear into political taxonomies that try to establish genealogies. There was no structural room for race (or for much else) in theory claiming to reveal the construction of the category woman and social group women as a unified or totalizable whole. The structure of my caricature looks like this:

8. A Marxist term referring to an individual's tendency to view reality in ways congruent with the interests of the dominant orthodoxy rather than in ways that reflect his or her own class interest.

Socialist Feminism—

structure of class//wage labor//alienation

labor, by analogy reproduction, by extension sex, by addition race

Radical Feminism—

structure of gender//sexual appropriation//objectification

sex, by analogy labor, by extension reproduction, by addition race

In another context, the French theorist Julia Kristeva claimed women appeared as a historical group after World War II, along with groups like youth. Her dates are doubtful; but we are now accustomed to remembering that as objects of knowledge and as historical actors, "race" did not always exist, "class" has a historical genesis, and "homosexuals" are quite junior. It is no accident that the symbolic system of the family of man—and so the essence of woman—breaks up at the same moment that networks of connection among people on the planet are unprecedentedly multiple, pregnant, and complex. "Advanced capitalism" is inadequate to convey the structure of this historical moment. In the "Western" sense, the end of man is at stake. It is no accident that woman disintegrates into women in our time. Perhaps socialist feminists were not substantially guilty of producing essentialist theory that suppressed women's particularity and contradictory interests. I think we have been, at least through unreflective participation in the logics, languages, and practices of white humanism and through searching for a single ground of domination to secure our revolutionary voice. Now we have less excuse. But in the consciousness of our failures, we risk lapsing into boundless difference and giving up on the confusing task of making partial, real connection. Some differences are playful; some are poles of world historical systems of domination. "Epistemology" is about knowing the difference.

The Informatics of Domination

In this attempt at an epistemological and political position, I would like to sketch a picture of possible unity, a picture indebted to socialist and feminist principles of design. The frame for my sketch is set by the extent and importance of rearrangements in worldwide social relations tied to science and technology. I argue for a politics rooted in claims about fundamental changes in the nature of class, race, and gender in an emerging system of world order analogous in its novelty and scope to that created by industrial capitalism; we are living through a movement from an organic, industrial society to a polymorphous, information system—from all work to all play, a deadly game. Simultaneously material and ideological, the dichotomies may be expressed in the following chart of transitions from the comfortable old hierarchical dominations to the scary new networks I have called the informatics of domination:

Representation

Bourgeois novel, realism

Organism

Depth, integrity

Heat

Biology as clinical practice

Simulation

Science fiction, post-modernism

Biotic component

Surface, boundary

Noise

Biology as inscription

Physiology	Communications engineering

Racial chain of being	Neo-imperialism, United Nations humanism
Scientific management in home/fractory	Global factory/Electronic cottage
Family/Market/Factory	Women in the Integrated Circuit
Family wage	Comparable worth ¹
Public/Private	Cyborg citizenship
Nature/Culture	Fields of difference
Cooperation	Communications enhancement
Freud	Lacan ²
Sex	Genetic engineering
Labor	Robotics
Mind	Artificial Intelligence
World War II	Star Wars
White Capitalist Patriarchy	Informatics of Domination

This list suggests several interesting things.³ First, the objects on the right-hand side cannot be coded as “natural,” a realization that subverts naturalistic coding for the left-hand side as well. We cannot go back ideologically or materially. It’s not just that “god” is dead; so is the “goddess.” In relation to objects like biotic components, one must think not in terms of essential properties, but in terms of strategies of design, boundary constraints, rates of flows, systems logics, costs of lowering constraints. Sexual reproduction is one kind of reproductive strategy among many, with costs and benefits as

1. The concept that male and female workers holding different jobs that are comparable in difficulty and responsibility should receive equal pay. “Family wage”: a wage high enough that a single (usually male) bread winner can support a family.

2. JACQUES LACAN (1901–1981), French psychoanalyst; he argued that the unconscious is structured like a language and claimed to be the intellectual heir of SIGMUND FREUD (1856–1939), the Austrian founder of psychoanalysis.

3. My previous efforts to understand biology as a cybernetic command-control discourse and

organisms as “natural-technical objects of knowledge” are: “The High Cost of Information in Post-World War II Evolutionary Biology,” *Philosophical Forum*, vol. 13, nos. 2–3 (1979), pp. 206–37; “Signs of Dominance: From a Physiology to a Cybernetics of Primate Society,” *Studies in History of Biology* 6 (1983), pp. 129–219; “Class, Race, Sex, Scientific Objects of Knowledge: A Socialist-Feminist Perspective on the Social Construction of Productive Knowledge and Some Political Consequences,” in Violet Haas and Carolyn Perucci, eds., *Women in Scientific and Engineering Professions* (Ann Arbor: University of Michigan Press, 1984), pp. 212–29 [Haraway’s note].

a function of the system environment. Ideologies of sexual reproduction can no longer reasonably call on the notions of sex and sex role as organic aspects in natural objects like organisms and families. Such reasoning will be unmasked as irrational, and ironically corporate executives reading *Playboy* and anti-porn radical feminists will make strange bedfellows in jointly unmasking the irrationalism.

Likewise for race, ideologies about human diversity have to be formulated in terms of frequencies of parameters, like blood groups or intelligence scores. It is "irrational" to invoke concepts like primitive and civilized. For liberals and radicals, the search for integrated social systems gives way to a new practice called "experimental ethnography" in which an organic object dissipates in attention to the play of writing. At the level of ideology, we see translations of racism and colonialism into languages of development and underdevelopment, rates and constraints of modernization. Any objects or persons can be reasonably thought of in terms of disassembly and reassembly; no "natural" architectures constrain system design. The financial districts in all the world's cities, as well as the export-processing and free-trade zones, proclaim this elementary fact of "late capitalism." The entire universe of objects that can be known scientifically must be formulated as problems in communications engineering (for the managers) or theories of the text (for those who would resist). Both are cyborg semiologies.⁴

One should expect control strategies to concentrate on boundary conditions and interfaces, on rates of flow across boundaries—and not on the integrity of natural objects. "Integrity" or "sincerity" of the Western self gives way to decision procedures and expert systems. For example, control strategies applied to women's capacities to give birth to new human beings will be developed in the languages of population control and maximization of goal achievement for individual decision-makers. Control strategies will be formulated in terms of rates, costs of constraints, degrees of freedom. Human beings, like any other component or subsystem, must be localized in a system architecture whose basic modes of operation are probabilistic, statistical. No objects, spaces, or bodies are sacred in themselves; any component can be interfaced with any other if the proper standard, the proper code, can be constructed for processing signals in a common language. Exchange in this world transcends the universal translation effected by capitalist markets that Marx analyzed so well.⁵ The privileged pathology affecting all kinds of components in this universe is stress—communications breakdown.⁶ The cyborg is not subject to Foucault's biopolitics; the cyborg simulates politics, a much more potent field of operations.

This kind of analysis of scientific and cultural objects of knowledge which have appeared historically since World War II prepares us to notice some important inadequacies in feminist analysis which has proceeded as if the

organic, hierarchical dualisms ordering discourse in "the West" since Aristotle still ruled. They have been cannibalized, or as Zoe Sofia (Sofoulis) might put it, they have been "techno-digested." The dichotomies between mind and body, animal and human, organism and machine, public and private, nature and culture, men and women, primitive and civilized are all in question ideologically. The actual situation of women is their integration/exploitation into a world system of production/reproduction and communication called the informatics of domination. The home, workplace, market, public arena, the body itself—all can be dispersed and interfaced in nearly infinite, polymorphous ways, with large consequences for women and others—consequences that themselves are very different for different people and which make potent oppositional international movements difficult to imagine and essential for survival. One important route for reconstructing socialist-feminist politics is through theory and practice addressed to the social relations of science and technology, including crucially the systems of myth and meanings structuring our imaginations. The cyborg is a kind of disassembled and reassembled post-modern collective and personal self. This is the self feminists must code.

Communications technologies and biotechnologies are the crucial tools recrafting our bodies. These tools embody and enforce new social relations for women worldwide. Technologies and scientific discourses can be partially understood as formalizations, i.e., as frozen moments, of the fluid social interactions constituting them, but they should also be viewed as instruments for enforcing meanings. The boundary is permeable between tool and myth, instrument and concept, historical systems of social relations and historical anatomies of possible bodies, including objects of knowledge. Indeed, myth and tool mutually constitute each other.

Furthermore, communications sciences and modern biologies are constructed by a common move—the *translation of the world into a problem of coding*; a search for a common language in which all resistance to instrumental control disappears and all heterogeneity can be submitted to disassembly, reassembly, investment, and exchange.

In communications sciences, the translation of the world into a problem in coding can be illustrated by looking at cybernetic (feedback controlled) systems theories applied to telephone technology, computer design, weapons deployment, or data base construction and maintenance. In each case, solution to the key questions rests on a theory of language and control; the key operation is determining the rates, directions, and probabilities of flow of a quantity called information. The world is subdivided by boundaries differentially permeable to information. Information is just that kind of quantifiable element (unit, basis of unity) which allows universal translation, and so unhindered instrumental power (called effective communication). The biggest threat to such power is interruption of communication. Any system breakdown is a function of stress. The fundamentals of this technology can be condensed into the metaphor C³I, command-control-communication-intelligence, the military's symbol for its operations theory.

In modern biologies, the translation of the world into a problem in coding can be illustrated by molecular genetics, ecology, socio-biological evolutionary theory, and immunobiology. The organism has been translated into problems of genetic coding and read-out. Biotechnology, a writing technology,

informs research broadly.⁷ In a sense, organisms have ceased to exist as objects of knowledge, giving way to biotic components, i.e., special kinds of information processing devices. The analogous moves in ecology could be examined by probing the history and utility of the concept of the ecosystem. Immunobiology and associated medical practices are rich exemplars of the privilege of coding and recognition systems as objects of knowledge, as constructions of bodily reality for us. Biology is here a kind of cryptography. Research is necessarily a kind of intelligence activity. Ironies abound. A stressed system goes awry; its communication processes break down; it fails to recognize the difference between self and other. Human babies with baboon hearts evoke national ethical perplexity—for animal-rights activists at least as much as for guardians of human purity. Gay men, Haitian immigrants, and intravenous drug users⁸ are the “privileged” victims of an awful immune-system disease that marks (inscribes on the body) confusion of boundaries and moral pollution.

But these excursions into communications sciences and biology have been at a rarefied level; there is a mundane, largely economic reality to support my claim that these sciences and technologies indicate fundamental transformations in the structure of the world for us. Communications technologies depend on electronics. Modern states, multinational corporations, military power, welfare-state apparatuses, satellite systems, political processes, fabrication of our imaginations, labor-control systems, medical constructions of our bodies, commercial pornography, the international division of labor, and religious evangelism depend intimately upon electronics. Microelectronics is the technical basis of simulacra, i.e., of copies without originals.

Microelectronics mediates the translations of *labor* into robotics and word processing; *sex* into genetic engineering and reproductive technologies; and *mind* into artificial intelligence and decision procedures. The new biotechnologies concern more than human reproduction. Biology as a powerful engineering science for redesigning materials and processes has revolutionary implications for industry, perhaps most obvious today in areas of fermentation, agriculture, and energy. Communications sciences and biology are constructions of natural-technical objects of knowledge in which the difference between machine and organism is thoroughly blurred; mind, body, and tool are on very intimate terms. The “multinational” material organization of the production and reproduction of daily life and the symbolic organization of the production and reproduction of culture and imagination seem equally implicated. The boundary-maintaining images of base and superstructure,⁹ public and private, or material and ideal never seemed more feeble.

I have used Rachel Grossman’s image of women in the integrated circuit to name the situation of women in a world so intimately restructured through

the social relations of science and technology.¹ I use the odd circumlocution, "the social relations of science and technology," to indicate that we are not dealing with a technological determinism, but with a historical system depending upon structured relations among people. But the phrase should also indicate that science and technology provide fresh sources of power, that we need fresh sources of analysis and political action.² Some of the rearrangements of race, sex, and class rooted in high-tech-facilitated social relations can make socialist feminism more relevant to effective progressive politics.

The Homework Economy

The "new industrial resolution" is producing a new worldwide working class. The extreme mobility of capital and the emerging international division of labor are intertwined with the emergence of new collectivities, and the weakening of familiar groupings. These developments are neither gender- nor race-neutral. White men in advanced industrial societies have become newly vulnerable to permanent job loss, and women are not disappearing from the job rolls at the same rates as men. It is not simply that women in third-world countries are the preferred labor force for the science-based multinationals in the export-processing sectors, particularly in electronics. The picture is more systematic and involves reproduction, sexuality, culture, consumption, and production. In the prototypical Silicon Valley, many women's lives have been structured around employment in electronics-dependent jobs, and their intimate realities include serial heterosexual monogamy, negotiating child-care, distance from extended kin or most other forms of traditional community, a high likelihood of loneliness and extreme economic vulnerability as they age. The ethnic and racial diversity of women in Silicon Valley structures a microcosm of conflicting differences in culture, family, religion, education, language.

Richard Gordon has called this new situation the homework economy.³ Although he includes the phenomenon of literal homework emerging in con-

Haber, ed., *The Women's Annual, 1981* (Boston: G. K. Hall, 1982); Judith Gregory and Karen Nussbaum, "Race against Time: Automation of the Office," *Office: Technology and People 1* (1982), pp. 197-236; Frances Fox Piven and Richard Cloward, *The New Class War: Reagan's Attack on the Welfare State and Its Consequences* (New York: Pantheon, 1982); Microelectronics Group, *Microelectronics: Capitalist Technology and the Working Class* (London: CSE, 1980); Karl Staller, Barbara Ehrenreich, and Holly Sklar, *Poverty in the American Dream* (Boston: South End Press, 1983), including a useful organization and resource list [Haraway's note].

nection with electronics assembly, Gordon intends "homework economy" to name a restructuring of work that broadly has the characteristics formerly ascribed to female jobs, jobs literally done only by women. Work is being redefined as both literally female and feminized, whether performed by men or women. To be feminized means to be made extremely vulnerable; able to be disassembled, reassembled, exploited as a reserve labor force; seen less as workers than as servers; subjected to time arrangements on and off the paid job that make a mockery of a limited work day; leading an existence that always borders on being obscene, out of place, and reducible to sex. Deskilling is an old strategy newly applicable to formerly privileged workers. However, the homework economy does not refer only to large-scale deskilling, nor does it deny that new areas of high skill are emerging, even for women and men previously excluded from skilled employment. Rather, the concept indicates that factory, home, and market are integrated on a new scale and that the places of women are crucial—and need to be analyzed for differences among women and for meanings for relations between men and women in various situations.

The homework economy as a world capitalist organizational structure is made possible by (not caused by) the new technologies. The success of the attack on relatively privileged, mostly white, men's unionized jobs is tied to the power of the new communications technologies to integrate and control labor despite extensive dispersion and decentralization. The consequences of the new technologies are felt by women both in the loss of the family (male) wage (if they ever had access to this white privilege) and in the character of their own jobs, which are becoming capital-intensive, e.g., office work and nursing.

The new economic and technological arrangements are also related to the collapsing welfare state and the ensuing intensification of demands on women to sustain daily life for themselves as well as for men, children, and old people. The feminization of poverty—generated by dismantling the welfare state, by the homework economy where stable jobs become the exception, and sustained by the expectation that women's wage will not be matched by a male income for the support of children—has become an urgent focus. The causes of various women-headed households are a function of race, class, or sexuality; but their increasing generality is a ground for coalitions of women on many issues. That women regularly sustain daily life partly as a function of their enforced status as mothers is hardly new; the kind of integration with the overall capitalist and progressively war-based economy is new. The particular pressure, for example, on U.S. black women, who have achieved an escape from (barely) paid domestic service and who now hold clerical and similar jobs in large numbers, has large implications for continued enforced black poverty *with* employment. Teenage women in industrializing areas of the third world increasingly find themselves the sole or major source of a cash wage for their families, while access to land is ever more problematic. These developments must have major consequences in the psychodynamics and politics of gender and race.

Within the framework of three major stages of capitalism (commercial/early industrial, monopoly, multinational)—tied to nationalism, imperialism, and multinationalism, and related to Jameson's three dominant aesthetic periods of realism, modernism, and post-modernism—I would argue that

specific forms of families dialectically relate to forms of capital and to its political and cultural concomitants. Although lived problematically and unequally, ideal forms of these families might be schematized as (1) the patriarchal nuclear family, structured by the dichotomy between public and private and accompanied by the white bourgeois ideology of separate spheres⁴ and nineteenth-century Anglo-American bourgeois feminism; (2) the modern family mediated (or enforced) by the welfare state and institutions like the family wage, with a flowering of a-feminist heterosexual ideologies, including their radical versions represented in Greenwich Village around World War I; and (3) the "family" of the homework economy with its oxymoronic structure of women-headed households and its explosion of feminisms and the paradoxical intensification and erosion of gender itself.

This is the context in which the projections for worldwide structural unemployment stemming from the new technologies are part of the picture of the homework economy. As robotics and related technologies put men out of work in "developed" countries and exacerbate failure to generate male jobs in third-world "development," and as the automated office becomes the rule even in labor-surplus countries, the feminization of work intensifies. Black women in the United States have long known what it looks like to face the structural underemployment ("feminization") of black men, as well as their own highly vulnerable position in the wage economy. It is no longer a secret that sexuality, reproduction, family, and community life are interwoven with this economic structure in myriad ways which have also differentiated the situations of white and black women. Many more women and men will contend with similar situations, which will make cross-gender and race alliances on issues of basic life support (with or without jobs) necessary, not just nice.

The new technologies also have a profound effect on hunger and on food production for subsistence worldwide. Rae Lessor Blumberg estimates that women produce about fifty per cent of the world's subsistence food.⁵ Women are excluded generally from benefiting from the increased high-tech commodification of food and energy crops, their days are made more arduous

4. That is, the division of life into the public sphere of work and the private sphere of the home, where authority was said to be held by men and by women, respectively.

(Totowa, N.J.: Rowman & Allanheld, 1983). Thanks to Elizabeth Bjrd, "Green Revolution Imperialism," I & II, ms. UCSC, 1984.

The conjunction of the Green Revolution's social relations with biotechnologies like plant genetic engineering makes the pressures on land in the third world increasingly intense. AID's estimates (*New York Times*, 14 October 1984) used at the 1984 World Food Day are that in Africa, women produce about 90 per cent of rural food supplies, about 60-80 per cent in Asia, and provide 40 per cent of agricultural labor in the Near East and Latin America. Blumberg charges that world organizations' agricultural politics, as well as those of multinationals and national governments in the third world, generally ignore fundamental issues in the sexual division of labor. The present tragedy of famine in Africa might owe as much to male supremacy as to capitalism, colonialism, and rain patterns. More accurately, capitalism and racism are usually structurally male dominant [Haraway's note]. The Green Revolution: the Western campaign that introduced high-yield varieties of specific staple crops and promoted pesticides to increase food production in developing countries.

because their responsibilities to provide food do not diminish, and their reproductive situations are made more complex. Green Revolution technologies interact with other high-tech industrial production to alter gender divisions of labor and differential gender migration patterns.

The new technologies seem deeply involved in the forms of "privatization" that Ros Petchesky has analyzed, in which militarization, right-wing family ideologies and policies, and intensified definitions of corporate property as private synergistically interact.⁶ The new communications technologies are fundamental to the eradication of "public life" for everyone. This facilitates the mushrooming of a permanent high-tech military establishment at the cultural and economic expense of most people, but especially of women. Technologies like video games and highly miniaturized television seem crucial to production of modern forms of "private life." The culture of video games is heavily oriented to individual competition and extraterrestrial warfare. High-tech, gendered imaginations are produced here, imaginations that can contemplate destruction of the planet and a sci-fi escape from its consequences. More than our imaginations is militarized; and the other realities of electronic and nuclear warfare are inescapable.

The new technologies affect the social relations of both sexuality and of reproduction, and not always in the same ways. The close ties of sexuality and instrumentality, of views of the body as a kind of private satisfaction- and utility-maximizing machine, are described nicely in sociobiological origin stories that stress a genetic calculus and explain the inevitable dialectic of domination of male and female gender roles.⁷ These sociobiological stories depend on a high-tech view of the body as a biotic component or cybernetic communications system. Among the many transformations of reproductive situations is the medical one, where women's bodies have boundaries newly permeable to both "visualization" and "intervention." Of course, who controls the interpretation of bodily boundaries in medical hermeneutics is a major feminist issue. The speculum⁸ served as an icon of women's claiming their bodies in the 1970s; that hand-craft tool is inadequate to express our needed body politics in the negotiation of reality in the practices of cyborg reproduction. Self-help is not enough. The technologies of visualization recall the important cultural practice of hunting with the camera and the deeply predatory nature of a photographic consciousness.⁹ Sex, sexuality, and reproduction are central actors in high-tech myth systems structuring our imaginations of personal and social possibility.

For an analysis of scientific women's storytelling practices, especially in relation to socio-biology, in evolutionary debates around child abuse and infanticide, see Donna Haraway, "The Contest for Primate Nature: Daughters of Man the Hunter in the Field, 1960-80," in Mark Kann, ed., *The Future of American Democracy* (Philadelphia: Temple University Press, 1983), pp. 175-208 [Haraway's note].

8. A medical instrument used in vaginal examinations; feminist books such as *Our Bodies, Ourselves* (3 eds. in the 1970s) advocated self-examination.

9. For the moment of transition of hunting with guns to hunting with cameras in the construction of popular meanings of nature for an American urban immigrant public, see Donna Haraway, "Teddy Bear Patriarchy," *Social Text*, [no. 11 (winter 1984-85)], pp. 20-64; Roderick Nash, "The Exporting and Importing of Nature: Nature-Appreciation as a Commodity, 1850-1980," *Perspectives in American History*, vol. 3 (1979), pp. 517-60; Susan Sontag, *On Photography* (New York: Dell, 1977); and Douglas Preston, "Shooting in Paradise," *Natural History*, vol. 93, no. 12 (December 1984), pp. 14-19 [Haraway's note].

Another critical aspect of the social relations of the new technologies is the reformulation of expectations, culture, work, and reproduction for the large scientific and technical work force. A major social and political danger is the formation of a strongly bimodal social structure, with the masses of women and men of all ethnic groups, but especially people of color, confined to a homework economy, illiteracy of several varieties, and general redundancy and impotence, controlled by high-tech repressive apparatuses ranging from entertainment to surveillance and disappearance. An adequate socialist-feminist politics should address women in the privileged occupational categories, and particularly in the production of science and technology that constructs scientific-technical discourses, processes, and objects.¹

This issue is only one aspect of inquiry into the possibility of a feminist science, but it is important. What kind of constitutive role in the production of knowledge, imagination, and practice can new groups doing science have? How can these groups be allied with progressive social and political movements? What kind of political accountability can be constructed to tie women together across the scientific-technical hierarchies separating us? Might there be ways of developing feminist science/technology politics in alliance with anti-military science facility conversion action groups? Many scientific and technical workers in Silicon Valley, the high-tech cowboys included, do not want to work on military science.² Can these personal preferences and cultural tendencies be welded into progressive politics among this professional middle class in which women, including women of color, are coming to be fairly numerous?

Women in the Integrated Circuit

Let me summarize the picture of women's historical locations in advanced industrial societies, as these positions have been restructured partly through the social relations of science and technology. If it was ever possible ideologically to characterize women's lives by the distinction of public and private domains—suggested by images of the division of working-class life into factory and home, of bourgeois life into market and home, and of gender existence into personal and political realms—it is now a totally misleading ideology, even to show how both terms of these dichotomies construct each other in practice and in theory. I prefer a network ideological image, suggesting the profusion of spaces and identities and the permeability of boundaries in the personal body and in the body politic. "Networking" is both a feminist practice and a multinational corporate strategy—weaving is for oppositional cyborgs.

The only way to characterize the informatics of domination is as a massive

intensification of insecurity and cultural impoverishment, with common failure of subsistence networks for the most vulnerable. Since much of this picture interweaves with the social relations of science and technology, the urgency of a socialist-feminist politics addressed to science and technology is plain. There is much now being done, and the grounds for political work are rich. For example, the efforts to develop forms of collective struggle for women in paid work, like SEIU's District 925,³ should be a high priority for all of us. These efforts are profoundly tied to technical restructuring of labor processes and reformations of working classes. These efforts also are providing understanding of a more comprehensive kind of labor organization, involving community, sexuality, and family issues never privileged in the largely white male industrial unions.

The structural rearrangements related to the social relations of science and technology evoke strong ambivalence. But it is not necessary to be ultimately depressed by the implications of late-twentieth-century women's relation to all aspects of work, culture, production of knowledge, sexuality, and reproduction. For excellent reasons, most Marxisms see domination best and have trouble understanding what can only look like false consciousness and people's complicity in their own domination in late capitalism. It is crucial to remember that what is lost, perhaps especially from women's points of view, is often virulent forms of oppression, nostalgically naturalized in the face of current violation. Ambivalence toward the disrupted unities mediated by high-tech culture requires not sorting consciousness into categories of "clear-sighted critique grounding a solid political epistemology" versus "manipulated false consciousness," but subtle understanding of emerging pleasures, experiences, and powers with serious potential for changing the rules of the game.

There are grounds for hope in the emerging bases for new kinds of unity across race, gender, and class, as these elementary units of socialist-feminist analysis themselves suffer protean transformations. Intensifications of hardship experienced worldwide in connection with the social relations of science and technology are severe. But what people are experiencing is not transparently clear, and we lack sufficiently subtle connections for collectively building effective theories of experience. Present efforts—Marxist, psychoanalytic, feminist, anthropological—to clarify even "our" experience are rudimentary.

I am conscious of the odd perspective provided by my historical position—a Ph.D. in biology for an Irish Catholic girl was made possible by Sputnik's⁴ impact on U.S. national science-education policy. I have a body and mind as much constructed by the post-World War II arms race and cold war as by the women's movements. There are more grounds for hope by focusing on the contradictory effects of politics designed to produce loyal American technocrats, which as well produced large numbers of dissidents, rather than by focusing on the present defeats.

The permanent partiality of feminist points of view has consequences for our expectations of forms of political organization and participation. We do

3. The division of the Service Employees International Union that represents librarians and civic employees.

4. The first artificial satellite, launched by the

Soviet Union on October 4, 1957; its launch spurred the United States to invest in science and science education and to begin the space race.

not need a totality in order to work well. The feminist dream of a common language, like all dreams for a perfectly true language, of perfectly faithful naming of experience, is a totalizing and imperialist one. In that sense, dialectics⁵ too is a dream language, longing to resolve contradiction. Perhaps, ironically, we can learn from our fusions with animals and machines how not to be Man, the embodiment of Western logos.⁶ From the point of view of pleasure in these potent and taboo fusions, made inevitable by the social relations of science and technology, there might indeed be a feminist science.

Cyborgs: A Myth of Political Identity

I want to conclude with a myth about identity and boundaries which might inform late-twentieth-century political imaginations. I am indebted in this story to writers like Joanna Russ, Samuel Delany, John Varley, James Tiptree, Jr., Octavia Butler, Monique Wittig, and Vonda McIntyre.⁷ These are our storytellers exploring what it means to be embodied in high-tech worlds. They are theorists for cyborgs. Exploring conceptions of bodily boundaries and social order, the anthropologist Mary Douglas should be credited with helping us to consciousness about how fundamental body imagery is to world view, and so to political language.⁸ French feminists like Luce Irigaray and Monique Wittig, for all their differences, know how to write the body, how to weave eroticism, cosmology, and politics from imagery of embodiment, and especially for Wittig, from imagery of fragmentation and reconstitution of bodies.⁹

American radical feminists like Susan Griffin, Audre Lorde, and Adrienne Rich have profoundly affected our political imaginations—and perhaps restricted too much what we allow as a friendly body and political language.¹ They insist on the organic, opposing it to the technological. But their symbolic systems and the related positions of ecofeminism and feminist paganism, replete with organicisms, can only be understood in Sandoval's terms

5. Marxist dialectics relates society's cultural sphere (its politics, arts, philosophy, and religion) directly to its socioeconomic foundations, depicting society—including its apparent contradictions—as a coherent total system.

6. Haraway alludes to the French philosopher JACQUES DERRIDA (b. 1930), who deconstructs Western logos (literally, "word; discourse, reason"; Greek) and its partial conception of "Man."

7. Katie King, *The Pleasure of Repetition and the Limits of Identification in Feminist Science Fiction: Reimaginings of the Body after the Cyborg*, California American Studies Association, Pomona, 1984. An abbreviated list of feminist science fiction underlying themes of this essay: Octavia Butler, *Wild Seed*, *Mind of My Mind*, *Kindred*, *Survivor*; Suzy McKee Charnas, *Motherlines*; Samuel Delany, *Tales of Neveryon*; Anne McCaffrey, *The Ship Who Sang*, *Dinosaur Planet*; Vonda McIntyre, *Superluminal*, *Dreamsnake*; Joanna Russ, *Adventures of Alix*, *The Female Man*; James Tiptree, Jr., *Star Songs of an Old Primate*, *Up the Walls of the World*; John Varley, *Titan*, *Wizard*, *Demogr* [Haraway's note].

8. Mary Douglas, *Purity and Danger* (London: Routledge & Kegan Paul, 1966), *Natural Symbols*

(London: Cresset Press, 1970) [Haraway's note].

9. French feminisms contribute to cyborg heteroglossia. Carolyn Burke, "Irigaray through the Looking Glass," *Feminist Studies*, vol. 7, no. 2 (1981), pp. 288–306; Luce Irigaray, *Ce sexe qui n'en est pas un* [The sex which is not one] (Paris: Minuit, 1977); L. Irigaray, *Et l'une ne bouge pas sans l'autre* [One does not move without the other] (Paris: Minuit, 1979); Elaine Marks and Isabelle de Courtivron, eds., *New French Feminisms* (Amherst: University of Massachusetts Press, 1980); *Signs*, vol. 7, no. 1 (1981), special issue on French feminism; Monique Wittig, *The Lesbian Body*, trans. David LeVay (New York: Avon, 1975; *Le corps lesbien*, 1973) [Haraway's note]. On the French writer WITTIG (b. 1935), see above.

1. But all these poets are very complex, not least in treatment of themes of lying and erotic, decentered collective and personal identities. Susan Griffin, *Women and Nature: The Roaring Inside Her* (New York: Harper & Row, 1978); Audre Lorde, *Sister Outsider* (Trumansburg, N.Y.: Crossing Press, 1984); Adrienne Rich, *The Dream of a Common Language* (New York: Norton, 1978) [Haraway's note].

as oppositional ideologies fitting the late twentieth century. They would simply bewilder anyone not preoccupied with the machines and consciousness of late capitalism. In that sense they are part of the cyborg world. But there are also great riches for feminists in explicitly embracing the possibilities inherent in the breakdown of clean distinctions between organism and machine and similar distinctions structuring the Western self. It is the simultaneity of breakdowns that cracks the matrices of domination and opens geometric possibilities. What might be learned from personal and political "technological" pollution? I will look briefly at two overlapping groups of texts for their insight into the construction of a potentially helpful cyborg myth: constructions of women of color and monstrous selves in feminist science fiction.

Earlier I suggested that "women of color" might be understood as a cyborg identity, a potent subjectivity synthesized from fusions of outsider identities. There are material and cultural grids mapping this potential. Audre Lorde captures the tone in the title of her *Sister Outsider*. In my political myth, Sister Outsider is the offshore woman, whom U.S. workers, female and feminized, are supposed to regard as the enemy preventing their solidarity, threatening their security. Onshore, inside the boundary of the United States, Sister Outsider is a potential amidst the races and ethnic identities of women manipulated for division, competition, and exploitation in the same industries. "Women of color" are the preferred labor force for the science-based industries, the real women for whom the worldwide sexual market, labor market, and politics of reproduction kaleidoscope into daily life. Young Korean women hired in the sex industry and in electronics assembly are recruited from high schools, educated for the integrated circuit. Literacy, especially in English, distinguishes the "cheap" female labor so attractive to the multinationals.

Contrary to orientalist stereotypes of the "oral primitive," literacy is a special mark of women of color, acquired by U.S. black women as well as men through a history of risking death to learn and to teach reading and writing. Writing has a special significance for all colonized groups. Writing has been crucial to the Western myth of the distinction of oral and written cultures, primitive and civilized mentalities, and more recently to the erosion of that distinction in "post-modernist" theories attacking the phallogocentrism² of the West, with its worship of the monotheistic, phallic, authoritative, and singular word, the unique and perfect name.³ Contests for the meanings of writing are a major form of contemporary political struggle. Releasing the play of writing is deadly serious. The poetry and stories of U.S. women of color are repeatedly about writing, about access to the power to signify; but this time that power must be neither phallic nor innocent. Cyborg writing must not be about the Fall, the imagination of a once-upon-a-time wholeness before language, before writing, before Man. Cyborg writing is about the power to survive, not on the basis of original innocence, but on the basis of seizing the tools to mark the world that marked them as other.

2. A Derridean term applied to the male-centered values and mode of reasoning—philosophy—characteristic of Western culture from ancient Greek times to the present.

3. Jacques Derrida, *Of Grammatology*, trans. and introd. G. C. Spivak (Baltimore: Johns Hopkins

University Press, 1976), esp. part II, "Nature, Culture, Writing"; Claude Lévi-Strauss, *Tristes Tropiques*, trans. John Russell (New York: Criterion Books, 1961), esp. "The Writing Lesson" [Haraway's note]. For this text by the French structural anthropologist LÉVI-STRAUSS (b. 1908), see above.

The tools are often stories, retold stories, versions that reverse and displace the hierarchical dualisms of naturalized identities. In retelling origin stories, cyborg authors subvert the central myths of origin of Western culture. We have all been colonized by those origin myths, with their longing for fulfillment in apocalypse. The phallogocentric origin stories most crucial for feminist cyborgs are built into the literal technologies—technologies that write the world, biotechnology and microelectronics—that have recently textualized our bodies as code problems on the grid of C³I. Feminist cyborg stories have the task of recoding communication and intelligence to subvert command and control.

Figuratively and literally, language politics pervade the struggles of women of color; and stories about language have a special power in the rich contemporary writing by U.S. women of color. For example, retellings of the story of the indigenous woman Malinche, mother of the mestizo “bastard” race of the new world, master of languages, and mistress of Cortés⁴ carry special meaning for Chicana constructions of identity. Cherríe Moraga in *Loving in the War Years* explores the themes of identity when one never possessed the original language, never told the original story, never resided in the harmony of legitimate heterosexuality in the garden of culture, and so cannot base identity on a myth or a fall from innocence and right to natural names, mother’s or father’s.⁵ Moraga’s writing, her superb literacy, is presented in her poetry as the same kind of violation as Malinche’s mastery of the conquerer’s language—a violation, an illegitimate production, that allows survival. Moraga’s language is not “whole”; it is self-consciously spliced, a chimera of English and Spanish, both conqueror’s languages. But it is this chimeric monster, without claim to an original language before violation, that crafts the erotic, competent, potent identities of women of color. Sister Outsider hints at the possibility of world survival not because of her innocence, but because of her ability to live on the boundaries, to write without the founding myth of original wholeness, with its inescapable apocalypse of final return to a deathly oneness that Man has imagined to be the innocent and all-powerful Mother, freed at the End from another spiral of appropriation by her son. Writing marks Moraga’s body, affirms it as the body of a woman of color, against the possibility of passing into the unmarked category of the Anglo father or into the orientalist myth of “original illiteracy” of a mother that never was. Malinche was mother here, not Eve before eating the forbidden fruit. Writing affirms Sister Outsider,

4. Hernán Cortés (1485–1547), Spanish explorer who conquered Mexico. Malinche: an Aztec chieftain’s daughter who was Cortés’s interpreter as well as his mistress.

5. Cherríe Moraga, *Loving in the War Years* (Boston: South End Press, 1983). The sharp relation of women of color to writing as theme and politics can be approached through: “The Black Woman and the Diaspora: Hidden Connections and Extended Acknowledgments,” an International Literary Conference, Michigan State University, October 1985; Mari Evans, ed., *Black Women Writers: A Critical Evaluation* (Garden City, N.Y.: Doubleday/Anchor, 1984); Dexter Fisher, ed., *The Third Woman: Minority Women Writers of the United States* (Boston: Houghton Mifflin, 1980); several issues of *Frontiers*, esp. vol. 5 (1980), “Chicanas en el Ambiente Nacional,” and vol. 7 (1983),

“Feminisms in the Non-Western World”; Maxine Hong Kingston, *China Men* (New York: Knopf, 1977); Gerda Lerner, ed., *Black Women in White America: A Documentary History* (New York: Vintage, 1971); Cherríe Moraga and Gloria Anzaldúa, eds., *This Bridge Called My Back: Writings by Radical Women of Color* (Watertown, Mass.: Persephone, 1981); Robin Morgan, ed., *Sisterhood Is Global* (Garden City, N.Y.: Anchor/Doubleday, 1984). The writing of white women has had similar meanings: Sandra Gilbert and Susan Gubar, *The Madwoman in the Attic* (New Haven: Yale University Press, 1979); Joanna Russ, *How to Suppress Women’s Writing* (Austin: University of Texas Press, 1983) [Haraway’s note]. For the American critics ANZALDÚA (b. 1942), GILBERT (b. 1936), and GUBAR (b. 1944), see above.

not the Woman-before-the-Fall-into-Writing needed by the phallogocentric Family of Man.

Writing is pre-eminently the technology of cyborgs, etched surfaces of the late twentieth century. Cyborg politics is the struggle for language and the struggle against perfect communication, against the one code that translates all meaning perfectly, the central dogma of phallogocentrism. That is why cyborg politics insist on noise and advocate pollution, rejoicing in the illegitimate fusions of animal and machine. These are the couplings which make Man and Woman so problematic, subverting the structure of desire, the force imagined to generate language and gender, and so subverting the structure and modes of reproduction of "Western" identity, of nature and culture, of mirror and eye, slave and master, body and mind. "We" did not originally choose to be cyborgs, but choice grounds a liberal politics and epistemology that imagines the reproduction of individuals before the wider replications of "texts."

From the perspective of cyborgs, freed of the need to ground politics in "our" privileged position of the oppression that incorporates all other dominations, the innocence of the merely violated, the ground of those closer to nature, we can see powerful possibilities. Feminisms and Marxisms have run aground on Western epistemological imperatives to construct a revolutionary subject from the perspective of a hierarchy of oppressions and/or a latent position of moral superiority, innocence, and greater closeness to nature. With no available original dream of a common language or original symbiosis promising protection from hostile "masculine" separation, but written into the play of a text that has no finally privileged reading or salvation history, to recognize "oneself" as fully implicated in the world, frees us of the need to root politics in identification, vanguard parties, purity, and mothering. Stripped of identity, the bastard race teaches about the power of the margins and the importance of a mother like Malinche. Women of color have transformed her from the evil mother of masculinist fear into the originally literate mother who teaches survival.

This is not just literary deconstruction, but liminal transformation. Every story that begins with original innocence and privileges the return to wholeness imagines the drama of life to be individuation, separation, the birth of the self, the tragedy of autonomy, the fall into writing, alienation; i.e., war, tempered by imaginary respite in the bosom of the Other. These plots are ruled by a reproductive politics—rebirth without flaw, perfection, abstraction. In this plot women are imagined either better or worse off, but all agree they have less selfhood, weaker individuation, more fusion to the oral, to Mother, less at stake in masculine autonomy. But there is another route to having less at stake in masculine autonomy, a route that does not pass through Woman, Primitive, Zero, the Mirror Stage and its imaginary.⁶ It passes through women and other present-tense, illegitimate cyborgs, not of Woman born, who refuse the ideological resources of victimization so as to have a real life. These cyborgs are the people who refuse to disappear on

6. Haraway alludes to Lacan's "Mirror Stage" (1966; see above), which describes the stages of identity formation during childhood; the "Imaginary," modeled on the relation between an infant

and its mirror image, precedes entrance into the "Symbolic" (the dimension of language, law, and the father).

prosthetic devices, intimate components, friendly selves. We don't need organic holism to give impermeable wholeness, the total woman and her feminist variants (mutants?). Let me conclude this point by a very partial reading of the logic of the cyborg monsters of my second group of texts, feminist science fiction.

The cyborgs populating feminist science fiction make very problematic the statuses of man or woman, human, artifact, member of a race, individual identity, or body. Katie King clarifies how pleasure in reading these fictions is not largely based on identification. Students facing Joanna Russ for the first time, students who have learned to take modernist writers like James Joyce or Virginia Woolf⁹ without flinching, do not know what to make of *The Adventures of Alyx* or *The Female Man*,¹ where characters refuse the reader's search for innocent wholeness while granting the wish for heroic quests, exuberant eroticism, and serious politics. *The Female Man* is the story of four versions of one genotype, all of whom meet, but even taken together do not make a whole, resolve the dilemmas of violent moral action, nor remove the growing scandal of gender. The feminist science fiction of Samuel Delany, especially *Tales of Neveryon*,² mocks stories of origin by redoing the neolithic revolution, replaying the founding moves of Western civilization to subvert their plausibility. James Tiptree, Jr.,³ an author whose fiction was regarded as particularly manly until her "true" gender was revealed, tells tales of reproduction based on non-mammalian technologies like alternation of generations or male brood pouches and male nurturing. John Varley constructs a supreme cyborg in his arch-feminist exploration of Gaea, a mad goddess-planet-trickster-old woman-technological device on whose surface an extraordinary array of post-cyborg symbioses are spawned.⁴ Octavia Butler writes of an African sorceress pitting her powers of transformation against the genetic manipulations of her rival (*Wild Seed*), of time warps that bring a modern U.S. black woman into slavery where her actions in relation to her white master-ancestor determine the possibility of her own birth (*Kindred*), and of the illegitimate insights into identity and community of an adopted cross-species child who came to know the enemy as self (*Survivor*).⁵

Because it is particularly rich in boundary transgressions, Vonda McIntyre's *Superluminal*⁶ can close this truncated catalogue of promising monsters who help redefine the pleasures and politics of embodiment and feminist writing. In a fiction where no character is "simply" human, human status is highly problematic. Orca, a genetically altered diver, can speak with killer whales and survive deep ocean conditions, but she longs to explore space as a pilot, necessitating bionic implants jeopardizing her kinship with the divers and cetaceans. Transformations are effected by virus vectors carrying a new developmental code, by transplant surgery, by implants of micro-electronic devices, by analogue doubles, and other means. Laenea becomes

cue, no matter how many times a "Western" commentator remarks on the sad passing of another primitive, another organic group done in by "Western" technology, by writing.⁷ These real-life cyborgs, e.g., the Southeast Asian village women workers in Japanese and U.S. electronics firms described by Aihwa Ong, are actively rewriting the texts of their bodies and societies. Survival is the stakes in this play of readings.

To recapitulate, certain dualisms have been persistent in Western traditions; they have all been systemic to the logics and practices of domination of women, people of color, nature, workers, animals—in short, domination of all constituted as *others*, whose task is to mirror the self. Chief among these troubling dualisms are self/other, mind/body, culture/nature, male/female, civilized/primitive, reality/appearance, whole/part, agent/resource, maker/made, active/passive, right/wrong, truth/illusion, total/partial, God/man. The self is the One who is not dominated, who knows that by the service of the other; the other is the one who holds the future, who knows that by the experience of domination, which gives the lie to the autonomy of the self. To be One is to be autonomous, to be powerful, to be God; but to be One is to be an illusion, and so to be involved in a dialectic of apocalypse with the other. Yet to be other is to be multiple, without clear boundary, frayed, insubstantial. One is too few, but two are too many.

High-tech culture challenges these dualisms in intriguing ways. It is not clear who makes and who is made in the relation between human and machine. It is not clear what is mind and what body in machines that resolve into coding practices. Insofar as we know ourselves in both formal discourse (e.g., biology) and in daily practice (e.g., the homework economy in the integrated circuit), we find ourselves to be cyborgs, hybrids, mosaics, chimeras. Biological organisms have become biotic systems, communications devices like others. There is no fundamental, ontological separation in our formal knowledge of machine and organism, of technical and organic.

One consequence is that our sense of connection to our tools is heightened. The trance state experienced by many computer users has become a staple of science-fiction film and cultural jokes. Perhaps paraplegics and other severely handicapped people can (and sometimes do) have the most intense experiences of complex hybridization with other communication devices. Anne McCaffrey's *The Ship Who Sang*⁸ explored the consciousness of a cyborg, hybrid of girl's brain and complex machinery, formed after the birth of a severely handicapped child. Gender, sexuality, embodiment, skill: all were reconstituted in the story. Why should our bodies end at the skin, or include at best other beings encapsulated by skin? From the seventeenth century till now, machines could be animated—given ghostly souls to make them speak or move or to account for their orderly development and mental capacities. Or organisms could be mechanized—reduced to body understood as resource of mind. These machine/organism relationships are obsolete, unnecessary. For us, in imagination and in other practice, machines can be

7. James Clifford argues persuasively for recognition of continuous cultural reinvention, the stubborn non-disappearance of those "marked" by Western imperializing practices; see "On Ethnographic Allegory" [in James Clifford and George E. Marcus, eds., *Writing Culture: The Poetics and*

Politics of Ethnography (Berkeley: University of California Press, 1986), pp. 98–121] and "On Ethnographic Authority," *Representations*, vol. 1, no. 2 (1983), pp. 118–46 [Haraway's note].

8. A 1969 novel by McCaffrey (b. 1926).

a pilot by accepting a heart implant and a host of other alterations allowing survival in transit at speeds exceeding that of light. Radu Dracul survives a virus-caused plague on his outerworld planet to find himself with a time sense that changes the boundaries of spatial perception for the whole species. All the characters explore the limits of language, the dream of communicating experience, and the necessity of limitation, partiality, and intimacy even in this world of protean transformation and connection.

Monsters have always defined the limits of community in Western imaginations. The Centaurs and Amazons⁷ of ancient Greece established the limits of the centered polis of the Greek male human by their disruption of marriage and boundary pollutions of the warrior with animality and woman. Unseparated twins and hermaphrodites were the confused human material in early modern France who grounded discourse on the natural and supernatural, medical and legal, portents and diseases—all crucial to establishing modern identity.⁸ The evolutionary and behavioral sciences of monkeys and apes have marked the multiple boundaries of late-twentieth-century industrial identities. Cyborg monsters in feminist science fiction define quite different political possibilities and limits from those proposed by the mundane fiction of *Man and Woman*.

There are several consequences to taking seriously the imagery of cyborgs as other than our enemies. Our bodies, ourselves; bodies are maps of power and identity. Cyborgs are no exceptions. A cyborg body is not innocent; it was not born in a garden; it does not seek unitary identity and so generate antagonistic dualisms without end (or until the world ends); it takes irony for granted. One is too few, and two is only one possibility. Intense pleasure in skill, machine skill, ceases to be a sin, but an aspect of embodiment. The machine is not an *it* to be animated, worshiped and dominated. The machine is us, our processes, an aspect of our embodiment. We can be responsible for machines; *they* do not dominate or threaten us. We are responsible for boundaries; we are they. Up till now (once upon a time), female embodiment seemed to be given, organic, necessary; and female embodiment seemed to mean skill in mothering and its metaphoric extensions. Only by being out of place could we take intense pleasure in machines, and then with excuses that this was organic activity after all, appropriate to females. Cyborgs might consider more seriously the partial, fluid, sometimes aspect of sex and sexual embodiment. Gender might not be global identity after all.

The ideologically charged question of what counts as daily activity, as experience, can be approached by exploiting the cyborg image. Feminists have recently claimed that women are given to dailiness, that women more than men somehow sustain daily life, and so have a privileged epistemological position potentially. There is a compelling aspect to this claim, one that makes visible unvalued female activity and names it as the ground of life. But *the* ground of life? What about all the ignorance of women, all the exclusions and failures of knowledge and skill? What about men's access to daily

7. In Greek mythology, female warriors. Centaurs: creatures with the body of a horse and the torso and upper body of a man.

8. Page DuBois, *Centaurs and Amazons* (Ann Arbor: University of Michigan Press, 1982); Lorraine Daston and Katharine Park, "Hermaphrodites in Renaissance France," ms., n.d.;

Katharine Park and Lorraine Daston, "Unnatural Conceptions: The Study of Monsters in 16th and 17th Century France and England," *Past and Present*, no. 92 (August 1981), pp. 20–54 [Haraway's note].

competence, to knowing how to build things, to take them apart, to play? What about other embodiments? Cyborg gender is a local possibility taking a global vengeance. Race, gender, and capital require a cyborg theory of wholes and parts. There is no drive in cyborgs to produce total theory, but there is an intimate experience of boundaries, their construction and deconstruction. There is a myth system waiting to become a political language to ground one way of looking at science and technology and challenging the informatics of domination.

One last image: organisms and organismic, holistic politics depend on metaphors of rebirth and invariably call on the resources of reproductive sex. I would suggest that cyborgs have more to do with regeneration and are suspicious of the reproductive matrix and of most birthing. For salamanders, regeneration after injury, such as the loss of a limb, involves regrowth of structure and restoration of function with the constant possibility of twinning or other odd topographical productions at the site of former injury. The regrown limb can be monstrous, duplicated, potent. We have all been injured, profoundly. We require regeneration, not rebirth, and the possibilities for our reconstitution include the utopian dream of the hope for a monstrous world without gender.

Cyborg imagery can help express two crucial arguments in this essay: (1) the production of universal, totalizing theory is a major mistake that misses most of reality, probably always, but certainly now; (2) taking responsibility for the social relations of science and technology means refusing an anti-science metaphysics, a demonology of technology, and so means embracing the skillful task of reconstructing the boundaries of daily life, in partial connection with others, in communication with all of our parts. It is not just that science and technology are possible means of great human satisfaction, as well as a matrix of complex dominations. Cyborg imagery can suggest a way out of the maze of dualisms in which we have explained our bodies and our tools to ourselves. This is a dream not of a common language, but of a powerful infidel heteroglossia. It is an imagination of a feminist speaking in tongues to strike fear into the circuits of the super-savers of the new right. It means both building and destroying machines, identities, categories, relationships, spaces, stories. Though both are bound in the spiral dance, I would rather be a cyborg than a goddess.

1985

BARBARA SMITH

b. 1946

A pioneer of black feminist and lesbian criticism, Barbara Smith was an early voice calling attention to black women's writing. Despite the achievements of the women's liberation movement and the civil rights movement during the politically vibrant 1960s, critics soon began to point out limitations: the feminist movement seemed to speak primarily from the perspective of white, middle-class, heterosexual women, and

the civil rights movement for black men. Charging in her famous 1977 essay "Toward a Black Feminist Criticism" that "All segments of the literary world—whether establishment, progressive, Black, female, or lesbian—do not know, or at least act as if they do not know, that Black women writers and Black lesbian writers exist," Smith assumed the task of establishing a distinctive tradition of black women's writing and a specifically black feminist and lesbian criticism.

Barbara Smith was born in Cleveland, where she became involved in the civil rights movement as a high school student in the 1960s. After earning a B.A. from Mount Holyoke College in 1969 and an M.A. from the University of Pittsburgh in 1971, she was active in the emerging black feminist movement; in 1974 she became one of the founding members of Boston's Combahee River Collective, a black feminist group named after Harriet Tubman's guerrilla campaign of 1863 that freed more than 750 slaves. Smith taught as an instructor at the University of Massachusetts (1976–81) and has held several visiting professorships, but she has primarily worked outside the academy, as a writer, editor, publisher, and activist. In 1980, with the poet Audre Lorde, she co-founded Kitchen Table/Women of Color Press, the first publishing collective organized by women of color. She was the director of the press from 1984 through 1995, when she left to write full-time. During the 1990s, she held fellowships at the Schomburg Center for Research in Black Culture, the Bunting Institute at Radcliffe College, and the Center for Lesbian and Gay Studies at the City University of New York.

The 1970s were an especially rich time for black women's writing, witnessing the beginning of the careers of a generation of writers of prose and poetry that includes Toni Morrison, Toni Cade Bambara, Alice Walker, Audre Lorde, and June Jordan; the formation of organizations such as the Combahee River Collective, which provided an alternative to mainstream feminism; and the recovery of earlier writers, such as ZORA NEALE HURSTON (1891–1960). This renaissance of black women's literature inspired the black women's liberation movement. Its members held a wide range of views but agreed that women of color experience oppressions different from those of white women and black men, because of their race, sex, sexuality, and economic status. They were thus committed to the liberation of black women from racism, sexism, heterosexism, and classism in culture as well as politics.

In "Toward a Black Feminist Criticism," Smith points out the glaring absence of scholarship on black women's writing, which she links to black women's invisibility in the mainstream feminist movement. Feminists initially tried to create a sense of solidarity by emphasizing the universality of women's experiences and the bond forged by their differences from men. To correct the limitations of this universalizing assumption, Smith calls for a redefinition of the goals of the women's movement and for an autonomous black feminist movement. Surveying the treatment of black women authors by book reviewers and literary critics, Smith accrues evidence of black women's invisibility. She quotes from both black and white male critics who ignore or denigrate black women's literary accomplishments, and points out that even feminists such as Elaine Showalter and Patricia Meyers Spacks omitted women writers of color from the influential studies they published in the 1970s.

In addition to faulting critical practices, Smith enumerates principles for a black feminist approach that would show more positively "the profound subtleties of this particular body of literature." A black feminist critic should (1) explore both sexual and racial politics in black women's writing; (2) assume that there is an identifiable literary tradition; (3) decipher the common themes, motifs, and concepts in black women's literature that derive from writers' political, social, and economic experiences; (4) examine the specific black female language in this literature; (5) demonstrate an existing tradition that does "not try to graft the ideas or methodology of white/male literary thought upon the precious materials of Black women's art"; (6) try to be innovative and daring, following the model of black women's literature; and,

perhaps most important, (7) assert the political implications of a literary work and its connections to the situation of black women.

Drawing upon these principles, Smith devotes a substantial portion of the essay to a reading of Toni Morrison's novel *Sula* (1973) from the new perspective of black lesbian feminism, focusing on the relationships between women. It is regarded as a pioneering analysis of the novel, though some scholars criticized what they saw as a fabrication of lesbian themes. Deborah McDowell, in her influential overview "New Directions for Black Feminist Criticism" (1980), praises Smith but faults her definition of lesbianism as vague and reductive, overlooking *Sula's* "density and complexity." However, Smith is careful to note that Morrison did not intend readers to view the relationship between the two main characters, Sula and Nel, as lesbian, and that her reading of the lesbian overtones in their relationship exemplifies how a black lesbian feminist perspective might deepen our understanding of the nuances and political possibilities of a text.

In the years following the essay's publication, diverse feminists have taken up Smith's challenge to build their own literary and political traditions. Smith provided a model for later writers who stressed the differences among women, including the black feminist Deborah McDowell, the white lesbian feminist BONNIE ZIMMERMAN, the Native American feminist PAULA GUNN ALLEN, and the third world feminist GLORIA ANZALDÚA. In "What Has Never Been: An Overview of Lesbian Feminist Criticism" (1981; see below), Zimmerman cites "Toward a Black Feminist Criticism" as one of the origins of lesbian feminist literary criticism, and McDowell accords it a prominent place in inaugurating black feminist criticism.

In more recent years, a key debate in feminism has concerned essentialism, with most feminists opposing the view that gender, ethnic, and racial identities are determined by biological essences rather than by cultural differences. Some have criticized Smith's insistence on a separate literature and criticism for black women as "essentialist." Smith has met this charge with some impatience, dismissing it as a narrow academic debate resulting from "the new scholasticism" and "obscurantist academic theory," and arguing that regardless of the issue of essentialism, she "share[s] an objective political status with other Black females in this country, a political status that is not substantially altered by economic or educational variables." Intended as a consciousness-raising piece to call attention to the common ground black women share, "Toward a Black Feminist Criticism" combines groundbreaking scholarship and a commitment to black feminist activism.

BIBLIOGRAPHY

"Toward a Black Feminist Criticism" was first published in 1977 in the lesbian feminist literary magazine *Conditions*, and it has since been widely anthologized. In 1981 Smith co-edited (with Gloria T. Hull and Patricia Bell Scott) a pioneering anthology of black feminism, *All the Women Are White, All the Blacks Are Men, but Some of Us Are Brave*. Drawing on a later issue of *Conditions*, Smith edited, with Lorraine Bethel, a pioneering anthology of black lesbian feminist writings, *Home Girls: A Black Feminist Anthology* (1983). In 1984, she coauthored (with Elly Bulkin and Minnie Bryce Pratt) *Yours in Struggle: Three Feminist Perspectives on Anti-Semitism and Racism*. Smith's *The Truth That Never Hurts: Writings on Race, Gender, and Freedom* (1998) collects a wide array of her writings from the 1970s through the 1990s, including well-known critical essays such as "Toward a Black Feminist Tradition" and "The Truth That Never Hurts: Black Lesbians in Fiction in the 1980s," essays on race politics in the United States, and her firsthand accounts of "working for liberation."

Deborah McDowell's influential survey "New Directions for Black Feminist Criticism" (1980), an important early response to Smith, praises Smith's pathbreaking work while noting its limitations. Hazel Carby, in *Reconstructing Womanhood: The Emergence of the Afro-American Woman Novelist* (1987), acknowledges the impor-

tance of Smith's essay as a manifesto but criticizes its belief in "an essential black female experience and an exclusive black female language." Though disagreeing on the necessity of theory, Barbara Christian's "But What Do We Think We're Doing Anyway: The State of Black Feminist Criticism(s) or My Version of a Little Bit of History" credits Smith's role in establishing black women's literature; the essay is included in the anthology *Changing Our Own Words: Essays on Criticism, Theory, and Writing by Black Women* (ed. Cheryl A. Wall, 1989), which is dedicated "To the community of black women writing and to Barbara Smith for pointing 'towards a black feminist criticism.'" In an argument against Barbara Christian's "Race for Theory" (1987; see above), Mich ael Awkward's "Appropriative Gestures: Theory and Afro-American Literary Criticism," in *Gender and Theory: Dialogues on Feminist Criticism* (ed. Linda Kaufman, 1989), invokes Smith's essay as demonstrating the importance of theory, proposing that it might be improved by engaging reader-response theory. An interesting update examining Smith's continuing relevance is Deborah G. Chay's "Rereading Barbara Smith: Black Feminist Criticism and the Category of Experience," *New Literary History* 24 (1993), which also includes a short response from Smith.

Toward a Black Feminist Criticism

For all my sisters, especially Beverly and Demita

I do not know where to begin. Long before I tried to write this I realized that I was attempting something unprecedented, something dangerous, merely by writing about Black women writers from a feminist perspective and about Black lesbian writers from any perspective at all. These things have not been done. Not by white male critics, expectedly. Not by Black male critics. Not by white women critics who think of themselves as feminists. And most crucially not by Black women critics, who, although they pay the most attention to Black women writers as a group, seldom use a consistently feminist analysis or write about Black lesbian literature. All segments of the literary world—whether establishment, progressive, Black, female, or lesbian—do not know, or at least act as if they do not know, that Black women writers and Black lesbian writers exist.

For whites, this specialized lack of knowledge is inextricably connected to their not knowing in any concrete or politically transforming way that Black women of any description dwell in this place. Black women's existence, experience, and culture and the brutally complex systems of oppression which shape these are in the "real world" of white and/or male consciousness beneath consideration, invisible, unknown.

This invisibility, which goes beyond anything that either Black men or white women experience and tell about in their writing, is one reason it is so difficult for me to know where to start. It seems overwhelming to break such a massive silence. Even more numbing, however, is the realization that so many of the women who will read this have not yet noticed us missing either from their reading matter, their politics, or their lives. It is galling that ostensible feminists and acknowledged lesbians have been so oblivious to the implications of any womanhood that is not white womanhood and that they have yet to struggle with the deep racism in themselves that is at the source of their ignorance.

I think of the thousands and thousands of books, magazines, and articles which have been devoted, by this time, to the subject of women's writing and

I am filled with rage at the fraction of those pages that mention Black and other Third World women. I finally do not know how to begin because in 1977 I want to be writing this for a Black feminist publication, for Black women who know and love these writers as I do and who, if they do not yet know their names, have at least profoundly felt the pain of their absence.

The conditions that coalesce into the impossibilities of this essay have as much to do with politics as with the practice of literature. Any discussion of Afro-American writers can rightfully begin with the fact that for most of the time we have been in this country we have been categorically denied not only literacy but the most minimal possibility of a decent human life. In her landmark essay, "In Search of Our Mothers' Gardens," Alice Walker discloses how the political, economic, and social restrictions of slavery and racism have historically stunted the creative lives of Black women.¹

At the present time I feel that the politics of feminism have a direct relationship to the state of Black women's literature. A viable, autonomous Black feminist movement in this country would open up the space needed for the exploration of Black women's lives and the creation of consciously Black woman-identified art. At the same time a redefinition of the goals and strategies of the white feminist movement would lead to much-needed change in the focus and content of what is now generally accepted as women's culture.

I want to make in this essay some connections between the politics of Black women's lives, what we write about, and our situation as artists. In order to do this I will look at how Black women have been viewed critically by outsiders, demonstrate the necessity for Black feminist criticism, and try to understand what the existence or nonexistence of Black lesbian writing reveals about the state of Black women's culture and the intensity of *all* Black women's oppression.

The role that criticism plays in making a body of literature recognizable and real hardly needs to be explained here. The necessity for nonhostile and perceptive analysis of works written by persons outside the "mainstream" of white/male cultural rule has been proven by the Black cultural resurgence of the 1960s and 1970s and by the even more recent growth of feminist literary scholarship. For books to be real and remembered they have to be talked about. For books to be understood they must be examined in such a way that the basic intentions of the writers are at least considered. Because of racism Black literature has usually been viewed as a discrete subcategory of American literature, and there have been Black critics of Black literature who did much to keep it alive long before it caught the attention of whites. Before the advent of specifically feminist criticism in this decade, books by white women, on the other hand, were not clearly perceived as the cultural manifestation of an oppressed people. It took the surfacing of the second wave of the North American feminist movement² to expose the fact that these works contain a stunningly accurate record of the impact of patriarchal values and practice upon the lives of women, and more significantly, that literature by women provides essential insights into female experience.

1. Alice Walker, "In Search of Our Mothers' Gardens," *Ms.*, May 1974 [Smith's note]. Some of the author's notes have been edited. Walker (b. 1994), African American novelist, poet, and activist.

2. That is, feminists of the 1960s and later; the "first wave" was made up of feminists engaged in the battles for women's suffrage, education, and legal autonomy in the 19th century.

In speaking about the current situation of Black women writers, it is important to remember that the existence of a feminist movement was an essential precondition to the growth of feminist literature, criticism, and women's studies, which focused at the beginning almost entirely upon investigations of literature. The fact that a parallel Black feminist movement has been much slower in evolving cannot help but have impact upon the situation of Black women writers and artists and explains in part why during this very same period we have been so ignored.

There is no political movement to give power or support to those who want to examine Black women's experience through studying our history, literature, and culture. There is no political presence that demands a minimal level of consciousness and respect from those who write or talk about our lives. Finally, there is not a developed body of Black feminist political theory whose assumptions could be used in the study of Black women's art. When Black women's books are dealt with at all, it is usually in the context of Black literature, which largely ignores the implications of sexual politics. When white women look at Black women's works they are of course ill equipped to deal with the subtleties of racial politics. A Black feminist approach to literature that embodies the realization that the politics of sex as well as the politics of race and class are crucially interlocking factors in the works of Black women writers is an absolute necessity. Until a Black feminist criticism exists we will not even know what these writers mean. The citations from a variety of critics which follow prove that without a Black feminist critical perspective not only are books by Black women misunderstood, they are destroyed in the process.

Jerry H. Bryant, *The Nation's* white male reviewer of Alice Walker's *In Love and Trouble: Stories of Black Women*, wrote in 1973:

The subtitle of the collection, "Stories of Black Women," is probably an attempt by the publisher to exploit not only black subjects but feminine ones. There is nothing feminist about these stories, however.³

Blackness and feminism are to his mind mutually exclusive and peripheral to the act of writing fiction. Bryant of course does not consider that Walker might have titled the work herself, nor did he apparently read the book, which unequivocally reveals the author's feminist consciousness.

In *The Negro Novel in America*, a book that Black critics recognize as one of the worst examples of white racist pseudoscholarship, Robert Bone cavalierly dismisses Ann Petry's classic, *The Street*.⁴ He perceives it to be "a superficial social analysis" of how slums victimize their Black inhabitants. He further objects:

It is an attempt to interpret slum life in terms of *Negro* experience, when a larger frame of reference is required. As Alain Locke has observed, "*Knock on Any Door* is superior to *The Street* because it designates class and environment, rather than mere race and environment, as its antagonist."⁵

3. Jerry H. Bryant, "The Outskirts of a New City," *Nation*, November 12, 1973, p. 502 [Smith's note].

4. The best-known book (1944) by the American novelist Petry (1908-1997). Bone (b. 1924), American literary critic specializing in African American literature.

5. Robert Bone, *The Negro Novel in America* (New Haven: Yale University Press, 1958), p. 180. *Knock on Any Door* is a novel by Black writer Willard Motley [Smith's note]. Locke (1886-1954), influential black philosopher and critic.

Neither Robert Bone nor Alain Locke, the Black male critic he cites, can recognize that *The Street* is one of the best delineations in literature of how sex, race, and class interact to oppress Black women.

In her review of Toni Morrison's *Sula*⁶ for the *New York Times Book Review* in 1973, putative feminist Sara Blackburn makes similarly racist comments:

Toni Morrison is far too talented to remain only a marvelous recorder of the black side of provincial American life. If she is to maintain the large and serious audience she deserves, she is going to have to address a riskier contemporary reality than this beautiful but nevertheless distanced novel. *And if she does this, it seems to me that she might easily transcend that early and unintentionally limiting classification "black woman writer" and take her place among the most serious, important and talented American novelists now working.*⁷ (Italics mine)

Recognizing Morrison's exquisite gift, Blackburn unashamedly asserts that Morrison is "too talented" to deal with mere Black folk, particularly those double nonentities, Black women. In order to be accepted as "serious," "important," "talented," and "American," she must obviously focus her efforts upon chronicling the doings of white men.

The mishandling of Black women writers by whites is paralleled more often by their not being handled at all, particularly in feminist criticism. Although Elaine Showalter⁸ in her review essay on literary criticism for *Signs* states that "the best work being produced today [in feminist criticism] is exacting and cosmopolitan," her essay is neither. If it were, she would not have failed to mention a single Black or Third World woman writer, whether "major" or "minor," to cite her questionable categories. That she also does not even hint that lesbian writers of any color exist renders her purported overview virtually meaningless. Showalter obviously thinks that the identities of being Black and female are mutually exclusive, as this statement illustrates:

Furthermore, there are other literary subcultures (black American novelists, for example) whose history offers a precedent for feminist scholarship to use.⁹

The idea of critics like Showalter *using* Black literature is chilling, a case of barely disguised cultural imperialism. The final insult is that she footnotes the preceding remark by pointing readers to works on Black literature by white males Robert Bone and Roger Rosenblatt!¹

Two recent works by white women, Ellen Moers's *Literary Women: The Great Writers* and Patricia Meyer Spacks's *The Female Imagination*, evidence the same racist flaw.² Moers includes the names of four Black and one Puer-torriqueña writer in her seventy pages of bibliographical notes and does not deal at all with Third World women in the body of her book. Spacks refers to a comparison between Negroes (*sic*) and women in Mary Ellmann's *Think-*

6. The second novel (1973) by Morrison (b. 1931), who in 1993 became the first black woman to be awarded the Nobel Prize in literature.

7. Sara Blackburn, "You Still Can't Go Home Again," *New York Times Book Review*, December 30, 1973, p. 3 [Smith's note].

8. Prominent American feminist literary critic (b. 1941), who in *A Literature of Their Own* (1977) defined a specifically female tradition of the English novel.

9. Elaine Showalter, "Literary Criticism," *Signs* 1

(1975): 460, 445 [Smith's note].

1. American critic and journalist (b. 1940).

2. Ellen Moers, *Literary Women: The Great Writers* (Garden City, N.Y.: Anchor Books, 1977); Patricia Meyer Spacks, *The Female Imagination* (New York: Avon Books, 1976) [Smith's note]. These books by the American feminist critics Moers (1928-1979) and Spacks (b. 1929) were pioneering works in establishing a canon of women's writing.

ing about Women³ under the index entry "blacks, women and." "*Black Boy* (Wright)" is the preceding entry. Nothing follows. Again there is absolutely no recognition that Black and female identity ever coexist, specifically in a group of Black women writers. Perhaps one can assume that these women do not know who Black women writers are, that like most Americans they have little opportunity to learn about them. Perhaps. Their ignorance seems suspiciously selective, however, particularly in the light of the dozens of truly obscure white women writers they are able to unearth. Spacks was herself employed at Wellesley College at the same time that Alice Walker was there teaching one of the first courses on Black women writers in the country.

I am not trying to encourage racist criticism of Black women writers like that of Sara Blackburn, to cite only one example. As a beginning I would at least like to see in print white women's acknowledgment of the contradictions of who and what are being left out of their research and writing.⁴

Black male critics can also act as if they do not know that Black women writers exist and are, of course, hampered by an inability to comprehend Black women's experience in sexual as well as racial terms. Unfortunately there are also those who are as virulently sexist in their treatment of Black women writers as their white male counterparts. Darwin Turner's discussion of Zora Neale Hurston in his *In a Minor Chord: Three Afro-American Writers and Their Search for Identity* is a frightening example of the near assassination of a great Black woman writer.⁵ His descriptions of her and her work as "artful," "coy," "irrational," "superficial," and "shallow" bear no relationship to the actual quality of her achievements. Turner is completely insensitive to the sexual political dynamics of Hurston's life and writing.

In a recent interview the notoriously misogynist writer Ishmael Reed⁶ comments in this way upon the low sales of his newest novel:

But the book only sold 8000 copies. I don't mind giving out the figure: 8000. Maybe if I was one of those young *female* Afro-American writers that are so hot now, I'd sell more. You know, fill my books with ghetto women who can *do no wrong*. . . . But come on, I think I could have sold 8000 copies by myself.⁷

The politics of the situation of Black women are glaringly illuminated by this statement. Neither Reed nor his white male interviewer has the slightest compunction about attacking Black women in print. They need not fear widespread public denunciation since Reed's statement is in perfect agreement with the values of a society that hates Black people, women, and Black women. Finally the two of them feel free to base their actions on the premise that Black women are powerless to alter either their political or their cultural oppression.

3. An early (1968) work of second-wave literary criticism, by Ellmann (1921-1989). *Black Boy* (1945) is the autobiography of the African American novelist Richard Wright (1908-1960).

4. An article by Nancy Hoffman, "White Women, Black Women: Inventing an Adequate Pedagogy," *Women's Studies Newsletter* 5 (spring 1977): 21-24, gives valuable insights into how white women can approach the writing of Black women [Smith's note].

5. Darwin T. Turner, *In a Minor Chord: Three*

Afro-American Writers and Their Search for Identity (Carbondale: Southern Illinois University Press, 1971) [Smith's note]. HURSTON (1891-1960), writer of fiction and folklore whose works were long neglected.

6. African American novelist (b. 1938), known for his satirical and experimental fiction.

7. John Domini, "Roots and Racism: An Interview with Ishmael Reed," *Boston Phoenix*, April 5, 1977, p. 20 [Smith's note].

In her introduction to "A Bibliography of Works Written by American Black Women" Ora Williams quotes some of the reactions of her colleagues toward her efforts to do research on Black women:

Others have reacted negatively with such statements as, "I really don't think you are going to find very much written," "Have 'they' written anything that is any good?" and, "I wouldn't go overboard with this woman's lib thing." When discussions touched on the possibility of teaching a course in which emphasis would be on the literature by Black women, one response was. "Ha, ha. That will certainly be the most nothing course ever offered!"⁸

A remark by Alice Walker capsulizes what all the preceding examples indicate about the position of Black women writers and the reasons for the damaging criticism about them. She responds to her interviewer's question, "Why do you think that the black woman writer has been so ignored in America? Does she have even more difficulty than the black male writer, who perhaps has just begun to gain recognition?" Walker replies:

There are two reasons why the black woman writer is not taken as seriously as the black male writer. One is that she's a woman. Critics seem unusually ill-equipped to intelligently discuss and analyze the works of black women. Generally, they do not even make the attempt; they prefer, rather, to talk about the lives of black women writers, not about what they write. And, since black women writers are not—it would seem—very likable—until recently they were the least willing worshippers of male supremacy—comments about them tend to be cruel.⁹

A convincing case for Black feminist criticism can obviously be built solely upon the basis of the negativity of what already exists. It is far more gratifying, however, to demonstrate its necessity by showing how it can serve to reveal for the first time the profound subtleties of this particular body of literature.

Before suggesting how a Black feminist approach might be used to examine a specific work, I will outline some of the principles that I think a Black feminist critic could use. Beginning with a primary commitment to exploring how both sexual and racial politics and Black and female identity are inextricable elements in Black women's writings, she would also work from the assumption that Black women writers constitute an identifiable literary tradition. The breadth of her familiarity with these writers would have shown her that not only is theirs a verifiable historical tradition that parallels in time the tradition of Black men and white women writing in this country, but that thematically, stylistically, aesthetically, and conceptually Black women writers manifest common approaches to the act of creating literature as a direct result of the specific political, social, and economic experience they have been obliged to share. The way, for example, that Zora Neale Hurston, Margaret Walker,¹ Toni Morrison, and Alice Walker incorporate the traditional

There is an expanded book-length version of this bibliography: *American Black Women in the Arts and Social Sciences: A Bibliographic Survey* (Metuchen, N.J.: Scarecrow Press, 1973) [Smith's note]. Williams

(b. 1926), an African American professor of English, published a revised and expanded edition in 1978.

9. John O'Brien, ed., *Interviews with Black Writers* (New York: Liveright, 1973), p. 201 [Smith's note].

1. African American poet and novelist (1915-1998).

Black female activities of root-working, herbal medicine, conjure, and midwifery into the fabric of their stories is not mere coincidence, nor is their use of specifically Black female language to express their own and their characters' thoughts accidental. The use of Black women's language and cultural experience in books by Black women *about* Black women results in a miraculously rich coalescing of form and content and also takes their writing far beyond the confines of white/male literary structures. The Black feminist critic would find innumerable commonalities in works by Black women.

Another principle which grows out of the concept of a tradition and which would also help to strengthen this tradition would be for the critic to look first for precedents and insights in interpretation within the works of other Black women. In other words she would think and write out of her own identity and not try to graft the ideas or methodology of white/male literary thought upon the precious materials of Black women's art. Black feminist criticism would by definition be highly innovative, embodying the daring spirit of the works themselves. The Black feminist critic would be constantly aware of the political implications of her work and would assert the connections between it and the political situation of all Black women. Logically developed, Black feminist criticism would owe its existence to a Black feminist movement while at the same time contributing ideas that women in the movement could use.

Black feminist criticism applied to a particular work can overturn previous assumptions about it and expose for the first time its actual dimensions. At the "Lesbians and Literature" discussion at the 1976 Modern Language Association convention Bertha Harris² suggested that if in a woman writer's work a sentence refuses to do what it is supposed to do, if there are strong images of women and if there is a refusal to be linear, the result is innately lesbian literature. As usual, I wanted to see if these ideas might be applied to the Black women writers that I know and quickly realized that many of their works were, in Harris's sense, lesbian. Not because women are "lovers," but because they are the central figures, are positively portrayed and have pivotal relationships with one another. The form and language of these works are also nothing like what white patriarchal culture requires or expects.

I was particularly struck by the way in which Toni Morrison's novels *The Bluest Eye* and *Sula*³ could be explored from this new perspective. In both works the relationships between girls and women are essential, yet at the same time physical sexuality is overtly expressed only between men and women. Despite the apparent heterosexuality of the female characters, I discovered in rereading *Sula* that it works as a lesbian novel not only because of the passionate friendship between Sula and Nel but because of Morrison's consistently critical stance toward the heterosexual institutions of male-female relationships, marriage, and the family. Consciously or not, Morrison's work poses both lesbian and feminist questions about Black women's autonomy and their impact upon each other's lives.

Sula and Nel find each other in 1922 when each of them is twelve, on the brink of puberty and the discovery of boys. Even as awakening sexuality

2. American lesbian novelist (b. 1937). The Modern Language Association: the primary North American professional organization for scholars in English and foreign literatures; at its annual convention, papers are presented in hundreds of panels.

3. Toni Morrison, *The Bluest Eye* (1970; reprint, New York: Pocket Books, 1976) and *Sula* (New York: Alfred A. Knopf, 1973). All subsequent references to *Sula* will be designated in the text [Smith's note].

"clotted their dreams," each girl desires "a someone" obviously female with whom to share her feelings. Morrison writes:

For it was in dreams that the two girls had met. Long before Edna Finch's Mellow House opened, even before they marched through the chocolate halls of Garfield Primary School . . . they had already made each other's acquaintance in the delirium of their noon dreams. They were solitary little girls whose loneliness was so profound it intoxicated them and sent them stumbling into Technicolored visions that always included a presence, a someone who, quite like the dreamer, shared the delight of the dream. When Nel, an only child, sat on the steps of her back porch surrounded by the high silence of her mother's incredibly orderly house, feeling the neatness pointing at her back, she studied the poplars and fell easily into a picture of herself lying on a flower bed, tangled in her own hair, waiting for some fiery prince. He approached but never quite arrived. But always, watching the dream along with her, were some smiling sympathetic eyes. Someone as interested as she herself in the flow of her imagined hair, the thickness of the mattress of flowers, the voile sleeves that closed below her elbows in gold-threaded cuffs.

Similarly, Sula, also an only child, but wedged into a household of throbbing disorder constantly awry with things, people, voices and the slamming of doors, spent hours in the attic behind a roll of linoleum galloping through her own mind on a gray-and-white horse tasting sugar and smelling roses in full view of someone who shared both the taste and the speed.

So when they met, first in those chocolate halls and next through the ropes of the swing, they felt the ease and comfort of old friends. Because each had discovered years before that they were neither white nor male, and that all freedom and triumph was forbidden to them, they had set about creating something else to be. Their meeting was fortunate, for it let them use each other to grow on. Daughters of distant mothers and incomprehensible fathers (Sula's because he was dead; Nel's because he wasn't), they found in each other's eyes the intimacy they were looking for. (pp. 51-52)

As this beautiful passage shows, their relationship, from the very beginning, is suffused with an erotic romanticism. The dreams in which they are initially drawn to each other are actually complementary aspects of the same sensuous fairy tale. Nel imagines a "fiery prince" who never quite arrives while Sula gallops like a prince "on a gray-and-white horse."⁴ The "real world" of patriarchy requires, however, that they channel this energy away from each other to the opposite sex. Lorraine Bethel explains this dynamic in her essay "Conversations with Ourselves: Black Female Relationships in Toni Cade Bambara's⁵ *Gorilla, My Love* and Toni Morrison's *Sula*":

I am not suggesting that Sula and Nel are being consciously sexual, or that their relationship has an overt lesbian nature. I am suggesting, however, that there is a certain sensuality in their interactions that is rein-

4. My sister, Beverly Smith, pointed out this connection to me [Smith's note.].

5. African American writer of fiction and screen-

plays (1939-1995) as well as activist; the short story collection *Gorilla, My Love* was published in 1972.

forced by the mirror-like nature of their relationship. Sexual exploration and coming of age is a natural part of adolescence. Sula and Nel discover men together, and though their flirtations with males are an important part of their sexual exploration, the sensuality that they experience in each other's company is equally important.⁶

Sula and Nel must also struggle with the constrictions of racism upon their lives. The knowledge that "they were neither white nor male" is the inherent explanation of their need for each other. Morrison depicts in literature the necessary bonding that has always taken place between Black women for the sake of barest survival. Together the two girls can find the courage to create themselves.

Their relationship is severed only when Nel marries Jude, an unexceptional young man who thinks of her as "the hem—the tuck and fold that hid his raveling edges" (p. 83). Sula's inventive wildness cannot overcome social pressure or the influence of Nel's parents who "had succeeded in rubbing down to a dull glow any sparkle or splutter she had" (p. 83). Nel falls prey to convention while Sula escapes it. Yet at the wedding which ends the first phase of their relationship, Nel's final action is to look past her husband toward Sula,

a slim figure in blue, gliding, with just a hint of a strut, down the path towards the road. . . . Even from the rear Nel could tell that it was Sula and that she was smiling; that something deep down in that liteness was amused. (p. 85)

When Sula returns ten years later, her rebelliousness full blown, a major source of the town's suspicions stems from the fact that although she is almost thirty, she is still unmarried. Sula's grandmother, Eva, does not hesitate to bring up the matter as soon as she arrives. She asks:

"When you gone to get married? You need to have some babies. It'll settle you. . . . Ain't no woman got no business floatin' around without no man." (p. 92)

Sula replies: "I don't want to make somebody else. I want to make myself" (p. 92). Self-definition is a dangerous activity for any woman to engage in, especially a Black one, and it expectedly earns Sula pariah status in Medallion.

Morrison clearly points out that it is the fact that Sula has not been tamed or broken by the exigencies of heterosexual family life which most galls the others:

Among the weighty evidence piling up was the fact that Sula did not look her age. She was near thirty and, unlike them, had lost no teeth, suffered no bruises, developed no ring of fat at the waist or pocket at the back of her neck. (p. 115)

In other words she is not a domestic serf, a woman run down by obligatory childbearing or a victim of battering. Sula also sleeps with the husbands of

6. Lorraine Bethel, "Conversations with Ourselves: Black Female Relationships in Toni Cade Bambara's *Gorilla, My Love* and Toni Morrison's

Sula," unpublished paper written at Yale University, 1976 [Smith's note].

the town once and then discards them, needing them even less than her own mother did for sexual gratification and affection. The town reacts to her disavowal of patriarchal values by becoming fanatically serious about their own family obligations, as if in this way they might counteract Sula's radical criticism of their lives.

Sula's presence in her community functions much like the presence of lesbians everywhere to expose the contradictions of supposedly "normal" life. The opening paragraph of the essay "The Woman-Identified Woman" has amazing relevance as an explanation of Sula's position and character in the novel. It asks:

What is a lesbian? A lesbian is the rage of all women condensed to the point of explosion. She is the woman who, often beginning at an extremely early age, acts in accordance with her inner compulsion to be a more complete and freer human being than her society—perhaps then, but certainly later—cares to allow her. These needs and actions, over a period of years, bring her into painful conflict with people, situations, the accepted ways of thinking, feeling and behaving, until she is in a state of continual war with everything around her, and usually with herself. She may not be fully conscious of the political implications of what for her began as personal necessity, but on some level she has not been able to accept the limitations and oppression laid on her by the most basic role of her society—the female role.⁷

The limitations of the *Black* female role are even greater in a racist and sexist society, as is the amount of courage it takes to challenge them. It is no wonder that the townspeople see Sula's independence as imminently dangerous.

Morrison is also careful to show the reader that despite their years of separation and their opposing paths, Nel and Sula's relationship retains its primacy for each of them. Nel feels transformed when Sula returns and thinks:

It was like getting the use of an eye back, having a cataract removed. Her old friend had come home. Sula. Who made her laugh, who made her see old things with new eyes, in whose presence she felt clever, gentle and a little raunchy. (p. 95)

Laughing together in the familiar "rib-scraping" way, Nel feels "new, soft and new" (p. 98). Morrison uses here the visual imagery which symbolizes the women's closeness throughout the novel.

Sula fractures this closeness, however, by sleeping with Nel's husband, an act of little import according to her system of values. Nel, of course, cannot understand. Sula thinks ruefully:

Nel was the one person who had wanted nothing from her, who had accepted all aspects of her. Now she wanted everything, and all because of *that*. Nel was the first person who had been real to her, whose name she knew, who had seen as she had the slant of life that made it possible to stretch it to its limits. Now Nel was one of *them*. (pp. 119–120)

⁷ New York Radicalesbians, "The Woman-Identified Woman," in *Lesbians Speak Out* (Oakland: Women's Press Collective, 1974), p. 87 [Smith's note].

Sula also thinks at the realization of losing Nel about how unsatisfactory her relationships with men have been and admits:

She had been looking all along for a friend, and it took her a while to discover that a lover was not a comrade and could never be—for a woman. (p. 121)

The nearest that Sula comes to actually loving a man is in a brief affair with Ajax and what she values most about him is the intellectual companionship he provides, the brilliance he “allows” her to show.

Sula’s feelings about sex with men are also consistent with a lesbian interpretation of the novel. Morrison writes:

She went to bed with men as frequently as she could. It was the only place where she could find what she was looking for: *misery and the ability to feel deep sorrow*. . . . During the lovemaking she found and needed to find the cutting edge. When she left off cooperating with her body and began to assert herself in the act, particles of strength gathered in her like steel shavings drawn to a spacious magnetic center, forming a tight cluster that nothing, it seemed, could break. *And there was utmost irony and outrage in lying under someone, in a position of surrender, feeling her own abiding strength and limitless power*. . . . When her partner disengaged himself, she looked up at him in wonder trying to recall his name . . . waiting impatiently for him to turn away . . . *leaving her to the postcoital privateness in which she met herself, welcomed herself, and joined herself in matchless harmony*. (pp. 122–123; italics mine)

Sula uses men for sex which results, not in communion with them, but in her further delving into self.

Ultimately the deepest communion and communication in the novel occurs between two women who love each other. After their last painful meeting, which does not bring reconciliation, Sula thinks as Nel leaves her:

“So she will walk on down that road, her back so straight in that old green coat . . . thinking how much I have cost her and never remember the days when we were two throats and one eye and we had no price.” (p. 147)

It is difficult to imagine a more evocative metaphor for what women can be to each other, the “pricelessness” they achieve in refusing to sell themselves for male approval, the total worth that they can only find in each other’s eyes.

Decades later the novel concludes with Nel’s final comprehension of the source of the grief that has plagued her from the time her husband walked out:

“All that time, I thought I was missing Jude.” And the loss pressed down on her chest and came up into her throat. “We was girls together,” she said as though explaining something. “O Lord, Sula,” she cried, “girl, girl, girlfriend.”

It was a fine cry—loud and long—but it had no bottom and it had no top, just circles and circles of sorrow. (p. 174)

Again Morrison exquisitely conveys what women, Black women, mean to each other. This final passage verifies the depth of Sula and Nel’s relationship and its centrality to an accurate interpretation of the work.

Sula is an exceedingly lesbian novel in the emotions expressed, in the definition of female character, and in the way that the politics of heterosexuality are portrayed. The very meaning of lesbianism is being expanded in literature, just as it is being redefined through politics. The confusion that many readers have felt about *Sula* may well have a lesbian explanation. If one sees *Sula's* inexplicable "evil" and nonconformity as the evil of not being male-identified, many elements in the novel become clear. The work might be clearer still if Morrison had approached her subject with the consciousness that a lesbian relationship was at least a possibility for her characters. Obviously Morrison did not *intend* the reader to perceive *Sula* and Nel's relationship as inherently lesbian. However, this lack of intention only shows the way in which heterosexist assumptions can veil what may logically be expected to occur in a work. What I have tried to do here is not to prove that Morrison wrote something that she did not, but to point out how a Black feminist critical perspective at least allows consideration of this level of the novel's meaning.

In her interview in *Conditions: One* Adrienne Rich⁸ talks about un consummated relationships and the need to reevaluate the meaning of intense yet supposedly nonerotic connections between women. She asserts:

We need a lot more documentation about what actually happened: I think we can also imagine it, because we know it happened—we know it out of our own lives.⁹

Black women are still in the position of having to "imagine," discover, and verify Black lesbian literature because so little has been written from an avowedly lesbian perspective. The near nonexistence of Black lesbian literature which other Black lesbians and I so deeply feel has everything to do with the politics of our lives, the total suppression of identity that all Black women, lesbian or not, must face. This literary silence is again intensified by the unavailability of an autonomous Black feminist movement through which we could fight our oppression and also begin to name ourselves.

In a speech, "The Autonomy of Black Lesbian Women," Wilmette Brown comments upon the connection between our political reality and the literature we must invent:

Because the isolation of Black lesbian women, given that we are super-freaks, given that our lesbianism defies both the sexual identity that capital gives us and the racial identity that capital gives us, the isolation of Black lesbian women from heterosexual Black women is very profound. Very profound. I have searched throughout Black history, Black literature, whatever, looking for some women that I could see were somehow lesbian. Now I know that in a certain sense they were all lesbian. But that was a very painful search.¹

Heterosexual privilege is usually the only privilege that Black women have. None of us have racial or sexual privilege, almost none of us have class privilege; maintaining "straightness" is our last resort. Being out, particularly out in print, is the final renunciation of any claim to the crumbs of "toler-

8. American poet, essayist, and lesbian feminist. (b. 1929; see above).

ance" that nonthreatening "ladylike" Black women are sometimes fed. I am convinced that it is our lack of privilege and power in every other sphere that allows so few Black women to make the leap that many white women, particularly writers, have been able to make in this decade, not merely because they are white or have economic leverage, but because they have had the strength and support of a movement behind them.

As Black lesbians we must be out not only in white society but in the Black community as well, which is at least as homophobic. That the sanctions against Black lesbians are extremely high is well illustrated in this comment by Black male writer Ishmael Reed. Speaking about the inroads that whites make into Black culture, he asserts:

In Manhattan you find people actively trying to impede intellectual debate among Afro-Americans. The powerful "liberal/radical/existentialist" influences of the Manhattan literary and drama establishment speak through tokens, like for example that ancient notion of the *one* black ideologue (who's usually a Communist), the *one* black poetess (who's usually a feminist lesbian).²

To Reed, "feminist" and "lesbian" are the most pejorative terms he can hurl at a Black woman and totally invalidate anything she might say regardless of her actual politics or sexual identity. Such accusations are quite effective for keeping in line Black women writers who are writing with integrity and strength from any conceivable perspective, but especially ones who are actually feminist and lesbian. Unfortunately Reed's reactionary attitude is all too typical. A community which has not confronted sexism, because a widespread Black feminist movement has not required it to, has likewise not been challenged to examine its heterosexism. Even at this moment I am not convinced that one can write explicitly as a Black lesbian and live to tell about it.

Yet there are a handful of Black women who have risked everything for truth. Audre Lorde, Pat Parker, and Ann Allen Shockley have at least broken ground in the vast wilderness of works that do not exist.³ Black feminist criticism will again have an essential role not only in creating a climate in which Black lesbian writers can survive, but in undertaking the total re-assessment of Black literature and literary history needed to reveal the Black woman-identified women that Wilmette Brown and so many of us are looking for.

Although I have concentrated here upon what does not exist and what needs to be done, a few Black feminist critics have already begun this work. Gloria T. Hull at the University of Delaware has discovered in her research on Black women poets of the Harlem Renaissance⁴ that many of the women

3. Audre Lorde, *New York Headshop and Museum* (Detroit: Broadside Press, 1974); *Coal* (New York: Norton, 1976); *Between Our Selves* (Point Reyes, Calif.: Eldolon Editions, 1976); *The Black Unicorn* (New York: Norton, 1978). Pat Parker, *Child of Myself* (Oakland: Women's Press Collective, 1972); *Pit Stop* (Oakland: Women's Press Collective, 1973); *Womanslaughter* (Oakland: Diana Press, 1978); *Movement in Black* (Oakland: Diana Press, 1978). Ann Allen Shockley, *Loving Her*

(Indianapolis: Bobbs-Merrill, 1974) [Smith's note]. All Americans: Lorde (1934-1992), poet and essayist; Parker (1944-1989), poet; and Shockley (b. 1927), novelist.

4. Vibrant movement of the 1920s and early 1930s encompassing literature and the visual and performing arts; Harlem in New York City was then the cultural capital of black America. Major literary figures of the Harlem Renaissance include Alain Locke, LANGSTON HUGHES, and Hurston. Hull (b. 1944), scholar and poet, a pioneer in African American feminist studies.

who are considered "minor" writers of the period were in constant contact with each other and provided both intellectual stimulation and psychological support for each other's work. At least one of these writers, Angelina Weld Grimké,⁵ wrote many unpublished love poems to women. Lorraine Bethel, a recent graduate of Yale College, has done substantial work on Black women writers, particularly in her senior essay, "This Infinity of Conscious Pain: Blues Lyricism and Hurston's Black Female Folk Aesthetic and Cultural Sensibility in *Their Eyes Were Watching God*," in which she brilliantly defines and uses the principles of Black feminist criticism. Elaine Scott at the State University of New York at Old Westbury is also involved in highly creative and politically resonant research on Hurston and other writers.

The fact that these critics are young and, except for Hull, unpublished merely indicates the impediments we face. Undoubtedly there are other women working and writing whom I do not even know, simply because there is no place to read them. As Michele Wallace states in her article "A Black Feminist's Search for Sisterhood":

We exist as women who are Black who are feminists, each stranded for the moment, working independently because there is not yet an environment in this society remotely congenial to our struggle—[or our thoughts].⁶

I only hope that this essay is one way of breaking our silence and our isolation, of helping us to know each other.

Just as I did not know where to start I am not sure how to end. I feel that I have tried to say too much and at the same time have left too much unsaid. What I want this essay to do is lead everyone who reads it to examine *everything* that they have ever thought and believed about feminist culture and to ask themselves how their thoughts connect to the reality of Black women's writing and lives. I want to encourage in white women, as a first step, a sane accountability to all the women who write and live on this soil. I want most of all for Black women and Black lesbians somehow not to be so alone. This last will require the most expansive of revolutions as well as many new words to tell us how to make this revolution real. I finally want to express how much easier both my waking and my sleeping hours would be if there were one book in existence that would tell me something specific about my life. One book based in Black feminist and Black lesbian experience, fiction or non-fiction. Just one work to reflect the reality that I and the Black women whom I love are trying to create. When such a book exists then each of us will not only know better how to live, but how to dream.

1977

for Sisterhood," *Village Voice*, July 28, 1975, p. 7 [Smith's note]. Wallace (b. 1952), African American critic.

BARBARA JOHNSON

b. 1947

Barbara Johnson is known as a translator in various senses of the word. She is the celebrated translator of JACQUES DERRIDA's *Dissemination* (1972; trans. 1981); and she is also one of the earliest and most interesting translators of structuralist and poststructuralist theory into literary insights. Often praised for her "lucidity" and "clarity," she has nevertheless emphasized, again and again, the unavoidable and necessity of linguistic complexity and difficulty in formulating intractable problems. For her, language cannot be extricated from what is problematic; language is not simply *about* problems, it *participates in* them.

Born in 1947 near Boston, she was the first of four children. Her father was a school principal and her mother a librarian. She attended Oberlin College (1965–69), majoring in French, and completed a Ph.D. in French at Yale University in 1977. Her studies at Yale took place at a complicated intersection of politics and criticism; while the effects of the 1969 student strike against the Vietnam War and the trial of Black Panther Bobby Seale in New Haven lingered, the "Yale School" of academic literary theory was developing, and, around 1968, there had exploded onto the scene "French Theory"—a shorthand designation for structuralism and poststructuralism in many fields. The "Yale School" was the label by which the academic and popular press referred to a group of male literary critics (PAUL DE MAN, HAROLD BLOOM, Geoffrey Hartman, J. Hillis Miller) who were all interested in Romanticism and who often incorporated structuralist and poststructuralist perspectives in their work. At the same time, the works of Derrida, JACQUES LACAN, and other French theorists were gaining recognition, but because most had not yet been translated into English, French departments provided one of the first points of entry into the American academy for their revolutionary ideas. The challenge of translating between one context and another thus itself became part of the theoretical enterprise.

Johnson's work has been profoundly engaged with and by the work of a number of teachers and colleagues; both at Yale, where she taught French and comparative literature from 1977 to 1983, and at Harvard University, where she has taught French, comparative literature, and English since 1983; in particular, PAUL DE MAN (her thesis director at Yale) and colleagues Shoshana Felman (at Yale), HENRY LOUIS GATES JR. (at both Yale and Harvard), and Marjorie Garber (at Harvard). Her first book, published in France in 1979, examined the prose poems of the nineteenth-century French writers CHARLES BAUDELAIRE and STÉPHANE MALLARMÉ. Titled *Défigurations du langage poétique: la seconde révolution baudelairienne* (*Disfigurations of Poetic Language: The Second Baudelairean Revolution*), it analyzed the significance of Baudelaire's turn to prose after the publication of his one book of lyric verse, *Les Fleurs du mal* (*Flowers of Evil*). Johnson's second book, *The Critical Difference: Essays in the Contemporary Rhetoric of Reading* (1980), which ranged more widely over theory, quickly followed. The word *difference* in the title is meant to name two different conceptions of difference and the tension between them: binary difference in its traditional sense (prose and poetry, male and female, etc.); and Derridean *différance*, a nonidentity within each term that is concealed or repressed in the process of establishing opposition. Johnson named these "the difference between" and "the difference within," terms that have entered the critical lexicon.

The Critical Difference collected what might be called Johnson's first "allegories of theory": the essays focused on the process of finding in literary texts preoccupations that have become newly readable through new theoretical perspectives. Rather than viewing theory as something applied to the text, she contends that theoretical questions already inhabit the text. The theory can draw them out, and, perhaps, provide the means of analyzing the text's resistances to the very theory that illuminates it.

Theory thus becomes a subset of literature: a process of formulating a knowledge the literary text is presumed to store. The key words of the theory are themselves *words*; they are therefore subject to the same play, seriousness, and instability that literary texts can give to all words. What constitutes "literature," however, is not fixed but constantly changing, a function of the kinds of questions asked of it: what is "stored" in the text both is and isn't in it. As the text and the theory interact, the two constantly shift ground. Johnson's reading of Hermann Melville's *Billy Budd*, our selection, sees Melville's short novel as deeply preoccupied by the same issues about language that occupied FERDINAND DE SAUSSURE (1857–1913) and J. L. AUSTIN (1911–1960). *Billy Budd* is a particularly good example of a text fissured by conflicting assumptions about words: the final revision was never finished by Melville, and competing versions of it have been published posthumously. Another well-known essay from *The Critical Difference*, "The Frame of Reference," examines the influential analyses, by Lacan and Derrida, of EDGAR ALLAN POE's story "The Purloined Letter" (1844) and meditates explicitly on the structure of mutual framing between text and theory.

In 1981 Johnson published her translation of Derrida's *Dissemination*, with a much-cited introduction. In 1982 she edited an issue of *Yale French Studies* titled *The Pedagogical Imperative: Teaching as a Literary Genre*. In this collection of essays, such authors as Derrida, de Man, Felman, Jane Gallop, and JEAN-FRANÇOIS LYOTARD explored not how to teach literary texts but how literature depicts teaching, and how "the literary" and "the pedagogical" are linked.

In 1980 a student introduced Johnson to the work of ZORA NEALE HURSTON (1891–1960); aided by a series of conversations with Henry Louis Gates Jr., Johnson became one of the first scholars to apply French literary theory to African American texts. Hurston was a particularly productive novelist for this enterprise, since her rhetorical virtuosity and folkloric imagination were at odds with the kinds of realist texts that dominated the canon of African American literature. Feminists, prompted by the writer Alice Walker's essays of the mid-1970s about Hurston's importance to the literary tradition of black women, were beginning to rethink both the canon and canonical aesthetics through Hurston's novels and folktales. The resultant boom in Hurston studies contributed to a change in African American studies itself, epitomized by Gates's *The Signifying Monkey: A Theory of Afro-American Literary Criticism* (1988). Johnson's two essays on Hurston appear in her collection *A World of Difference* (1987), a book in which she attempts to think deconstructively about a wide set of questions. For example, the often-reprinted essay "Apostrophe, Animation, and Abortion," which ends the book, brings together in striking ways literature (lyric poetry) and law (the abortion debates).

In 1991 Johnson co-edited a volume titled *Consequences of Theory*, whose contributors attempted to refute the notorious assertion, made by STANLEY FISH in his *Doing What Comes Naturally: Change, Rhetoric, and the Practice of Theory in Literary and Legal Studies* (1989), that theory has no consequences. There followed in 1993 *Freedom and Interpretation*, Johnson's edited volume of the Oxford Amnesty Lectures of 1992, part of a project designed to raise money for Amnesty International. The lecturers invited to Oxford that year had been asked by the organizers to address what happens to the idea of "human rights" in an age of the "deconstruction of the subject." Johnson's introduction attempts to analyze what is at stake in the question, especially when its two elements are viewed as not simply opposed. This volume belongs to the larger investigation of the relations between deconstruction and politics; a topic hotly debated at the time.

Johnson's own lectures on literary theory given at Bucknell University yielded *The Wake of Deconstruction* (1994), in which she discusses the questions deconstruction had both awakened and left in its wake, especially after the double "death" of Paul de Man (his literal death in 1983, followed by the revelation in 1987 of his collaborationist journalism). The two lectures, "Double Mourning and the Public Sphere" and "Women and Allegory," analyze the conflation of deconstruction, political cor-

rectness, and identity politics, which had all become strangely and wrongly linked in the public mind.

In the late 1990s, a series of attacks on feminism and on women's studies programs led Johnson to write about the status of ambivalence within oppositional movements. She argues in the introduction to *The Feminist Difference* (1998) that the trap of unanimity, even when called forth by a common target, is ultimately impoverishing except on specific and strategic occasions. The debates within feminism—among black and white feminists, among lesbians and heterosexuals, among women from different classes or different countries—had revealed that the strength of the feminist movement lay not in unity but in the ability to face differences and conflicts and still go on, and that it was the continued functioning of the powers being contested (even *within* feminists themselves) that made going on so difficult. The essays in *The Feminist Difference* take up the issues raised in the book's subtitle—*Literature, Psychoanalysis, Race, and Gender*—and are loosely structured around paired texts.

Our selection, from "Melville's Fist: The Execution of *Billy Budd*" (1979), weaves together Melville's writing strategies with the tale he is telling. In addition, it examines the early critical literature surrounding Melville's text, which can be seen to act out the problems found within the work. The problem brought to crisis by the plot—Billy Budd's murder of John Claggart—is an outgrowth of issues of representation exemplified by the two characters. "Handsome is as handsome does," the saying applied to Billy, presupposes the ideal of an absolute correspondence (Saussure calls it "motivation") between a sign and its meaning, a signifier and a signified. In contrast, "His portrait I essay, but shall never hit it," the narrator's admission about his representation of John Claggart, presupposes an unbridgeable gap between the two parts of the sign. Captain Vere, whose role is to judge ("read") the resulting confrontation, must negotiate between these two theories of the sign—the "motivated" versus the "arbitrary"—in relation to the legal "forms" or conventions under which he is obliged to operate. Johnson frames the tale in the context not only of linguistic theory but also of relations between literature and law. For Captain Vere cannot pronounce upon the "text" before him without at the same time, as J. L. Austin would put it, "doing things with words."

"Melville's Fist" is a good example of what we might call the literary life of theory. The essay both provides an intricate close reading of a text and discovers, within the text, questions the theory is attempting to discuss. It is all too easy to think of theory as a body of knowledge rather than as an approach to insoluble problems. By uncovering general preoccupations that are "in" the text even though they could *not*, in the same form, have been "in" Melville's mind, Johnson explores the questions that the text and the theory implicitly share—questions about motivation, intention, action, and law. In finding Saussure and Austin already impossibly within Melville, she suggests that a reader can achieve a closeness to texts that is based not on accuracy (as measured against some fixed standard or truth) but on intimacy (as results from getting to know how something works).

In describing the processes by which forces of uncertainty are institutionalized as certainties—and thus, as theories—Johnson once lamented that "nothing fails like success" (*A World of Difference*). The "linguistic turn" in the human sciences during the twentieth century has in some ways been superseded and critiqued, but Johnson remains unconvinced that the project of accounting for the role of language can ever really become outmoded. We need to find, she implies, not something "beyond the linguistic turn" but a way to keep being surprised by it.

At Harvard University, Johnson has been named the Fredric Wertham Professor of Law and Psychiatry in Society, a title reflective of her ongoing interdisciplinary work. Like SAMUEL TAYLOR COLERIDGE's Ancient Mariner, whom she cites as a model teacher, she seems determined to repeat the story of the importance of language in widely differing contexts. But the lesson she derives from the Mariner about pedagogy

is not simple: "Teaching," she writes in her introduction to *The Pedagogical Imperative*, "is a compulsion to repeat what one has not yet understood."

BIBLIOGRAPHY

Barbara Johnson is the author of *Défigurations du langage poétique* (1979), *The Critical Difference* (1980), *A World of Difference* (1987), *The Wake of Deconstruction* (1994), and *The Feminist Difference* (1998). She edited *The Pedagogical Imperative* (1982); with Jonathan Arac, *Consequences of Theory* (1990); and *Freedom and Interpretation* (1993), and in 1981 she translated Jacques Derrida's *Dissemination*. Johnson is currently engaged in two large projects. "Moses and Intertextuality: Sigmund Freud, Zora Neale Hurston, and the Bible," an essay from the first—"Moses and Multiculturalism"—has been published in *Poetics of the Americas* (ed. Bainard Cowan and Jefferson Humphries, 1997). Two essays from the second, "Persons & Things," have been published: "Anthropomorphism in Lyric and Law," *Yale Journal of Law and the Humanities* 10.2 (1998), and "Using People: Kant with Winnicott," in *The Turn to Ethics* (ed. Marjorie Garber, Beatrice Hanssen, and Rebecca L. Walkowitz, 2000).

Johnson's *The Wake of Deconstruction* contains introductory essays by Harold Schweizer and Michael Payne on her work, as well as the text of an interview. An earlier interview was published by Imre Salusinszky in *Criticism in Society* (1987). There is a detailed (though unannotated) bibliography in *The Wake of Deconstruction*.

From Melville's Fist: The Execution of Billy Budd

The Plot against the Characters

The plot of Melville's *Billy Budd*¹ is well known, and, like its title character, appears entirely straightforward and simple. It is a tale of three men in a boat: the innocent, ignorant foretopman, handsome Billy Budd; the devious, urbane master-at-arms, John Claggart; and the respectable, bookish commanding officer, Captain the Honorable Edward Fairfax ("Starry") Vere. Falsely accused by Claggart of plotting mutiny aboard the British man-of-war *Bellipotent*, Billy Budd, his speech impeded by a stutter, strikes his accuser dead in front of the Captain, and is condemned, after a summary trial, to hang.

In spite of the apparent straightforwardness of the facts of the case, however, there exists in the critical literature on *Billy Budd* a notable range of disagreement over the ultimate meaning of the tale. For some, the story constitutes Melville's "testament of acceptance,"² his "ever-lasting yea,"³ his "acceptance of tragedy,"⁴ or at least his "recognition of necessity."⁵ For others, Melville's "final stage" is, on the contrary, "irony":⁶ *Billy Budd* is consid-

1. Herman Melville, *Billy Budd* [a posthumous, unfinished, much-revised novella first published in 1924], in "Billy Budd, Sailor," and *Other Stories*, ed. H. Beaver (New York: Penguin Books, 1967). Unless otherwise indicated, all references to *Billy Budd* are to this edition, which reprints the Hayford and Sealts Reading Text [except as indicated, all notes are Johnson's]. 6. J. Schiffman, "Melville's Final Stage: Irony," *American Literature* 22 (1950): 128-36.

ered a "testament of resistance,"⁷ "ironic social criticism,"⁸ or the last vituperation in Melville's "quarrel with God."⁹ More recently, critical attention has devoted itself to the fact of ambiguity itself in the story, sometimes deploring it,¹ sometimes revelling in it,² and sometimes simply listing it.³ The ambiguity is attributed to various causes: the unfinished state of the manuscript, Melville's change of heart toward Vere, Melville's unreconciled ambivalence toward authority or his guilt about paternity, or the incompatibility between the "plot" and the "story."⁴

* * *

Most studies of the story tend to begin, after a few general remarks about the nature of good and evil, with a delineation of the three main characters: Billy, Claggart, and Vere. As Charles Weir puts it, "The purely physical action of the story is clear enough, and about its significant details there is never any doubt. . . . It is, therefore, with some consideration of the characters of the three principal actors that any analysis must begin."⁵ "Structurally," writes F. B. Freeman, "the three characters *are* the novel" (p. 73).

Melville goes to great lengths to describe both the physical and the moral characteristics of his protagonists. Billy Budd, a twenty-one-year-old "novice in the complexities of factitious life," is remarkable for his "significant personal beauty," his "reposeful good nature," his "straightforward simplicity," and his "unconventional rectitude." But Billy's intelligence ("such as it was," says Melville) is as primitive as his virtues are pristine. He is illiterate, he cannot understand ambiguity, and he stutters.

Claggart, on the other hand, is presented as the very image of urbane, intellectualized, articulate evil. Although "of no ill figure upon the whole," something in Claggart's pallid face consistently inspires uneasiness and mistrust. He is a man, writes Melville, "in whom was the mania of an evil nature, not engendered by vicious training or corrupting books or licentious living, but born with him and innate, in short, 'a depravity according to nature'" (p. 354). The mere sight of Billy Budd's rosy beauty and rollicking innocence does not fail to provoke in such a character "an antipathy spontaneous and profound."

The third man in the drama, the one who has inspired the greatest critical dissent, is presented in less vivid but curiously more contradictory terms. The *Bellipotent's* captain is described as both unaffected and pedantic, dreamy and resolute, irascible and undemonstrative, "mindful of the welfare of his men, but never tolerating an infraction of discipline," "intrepid to the verge of temerity, though never injudiciously so" (p. 338). While Billy and Claggart are said to owe their characters to "nature," Captain Vere is shaped mainly by his fondness for books:

5. Charles Weir Jr., "Malice Reconciled," in *Critics on Melville*, ed. Theodore Rountree (Coral Gables: University of Miami Press, 1972), p. 121.

He loved books, never going to sea without a newly replenished library, compact but of the best. . . . With nothing of that literary taste which less heeds the thing conveyed than the vehicle, his bias was toward those books to which every serious mind of superior order occupying any active post of authority in the world naturally inclines: books treating of actual men and events no matter of what era—history, biography, and unconventional writes like Montaigne,⁶ who, free from cant and convention, honestly and in the spirit of common sense philosophize upon realities. (p. 340)

Vere, then, is an honest, serious reader, seemingly well suited for the role of judge and witness that in the course of the story he will come to play.

No consideration of the nature of character in *Billy Budd*, however, can fail to take into account the fact that the fate of each of the characters is the direct reverse of what one is led to expect from his "nature." Billy is sweet, innocent, and harmless, yet he kills. Claggart is evil, perverted, and mendacious, yet he dies a victim. Vere is sagacious and responsible, yet he allows a man whom he feels to be blameless to hang. It is this discrepancy between character and action that gives rise to the critical disagreement over the story: readers tend either to save the plot and condemn Billy ("acceptance," "tragedy," or "necessity"), or to save Billy and condemn the plot ("irony," "injustice," or "social criticism").

In an effort to make sense of this troubling incompatibility between character and plot, many readers are tempted to say of Billy and Claggart, as does W. Y. Tindall, that "each is more important for what he is than what he does. . . . Good and bad, they occupy the region of good and evil."⁷ This reading effectively preserves the allegorical values suggested by Melville's opening chapters, but it does so only by denying the importance of the plot. It ends where the plot begins: with the identification of the moral natures of the characters. One may therefore ask whether the allegorical interpretation (good vs. evil) depends as such on this sort of preference for "being" over "doing," and, if so, what effect the incompatibility between character and action may have on the allegorical functioning of *Billy Budd*.

Interestingly enough, Melville himself both invites an allegorical reading and subverts the very terms of its consistency when he writes of the murder: "Innocence and guilt personified in Claggart and Budd in effect changed places" (p. 380). Allowing for the existence of personification but reversing the relation between personifier and personified, positioning an opposition between good and evil only to make each term take on the properties of its opposite, Melville thus sets up his plot in the form of a chiasmus:⁸

Billy	\	Innocence
Claggart	/	Guilt

This story, which is often read as a retelling of the story of Christ, is thus literally a cruci-fiction—a fiction structured in the shape of a cross. At the moment of the reversal, an instant before his fist shoots out, Billy's face

7. "The Ceremony of Innocence," in *Great Moral Dilemmas in Literature, Past and Present*, ed. R. M. Melver (New York: Harper and Row, 1956), p. 75.

8. A rhetorical figure in which the elements of the second of two parallel clauses are inverted, forming a kind of X, or Greek chi (e.g., "Eat to live, don't live to eat") [editor's note].

seems to mark out the point of crossing, bearing "an expression which was as a crucifixion to behold" (p. 376). Innocence and guilt, criminal and victim, change places through the mute expressiveness of Billy's inability to speak.

If *Billy Budd* is indeed an allegory, it is thus an allegory of the questioning of the traditional conditions of allegorical stability. The fact that Melville's plot requires that the good act out the evil designs of the bad while the bad suffer the unwarranted fate of the good indicates that the real opposition with which Melville is preoccupied here is less the static opposition between evil and good than the dynamic opposition between a man's "nature" and his acts, or, in Tyndall's terms, the relation between human "being" and human "doing."

Curiously enough, it is precisely this question of "being" versus "doing" that is brought up by the only sentence we ever see Claggart directly address to Billy Budd. When Billy accidentally spills his soup across the path of the master-at-arms, Claggart playfully replies, "Handsomely done, my lad! And handsome *is* as handsome *did* it, too!" (p. 350; emphasis mine). The proverbial expression "handsome *is* as handsome *does*," from which this exclamation springs, posits the possibility of a continuous, predictable, transparent relationship between "being" and "doing." It supposes that the inner goodness of Billy Budd is in harmonious accord with his fair appearance, that, as Melville writes of the stereotypical "Handsome Sailor" in the opening pages of the story, "the moral nature" is not "out of keeping with the physical make" (p. 322). But it is precisely this continuity between the physical and the moral, between appearance and action, or between "being" and "doing," that Claggart questions in Billy Budd. He warns Captain Vere not to be taken in by Billy's physical beauty: "You have but noted his fair cheek. A mantrap may be under the ruddy-tipped daisies" (p. 372). Claggart indeed soon finds his suspicions confirmed with a vengeance: when he repeats his accusation in front of Billy, he is struck down dead. It would thus seem that to question the continuity between character and action cannot be done with impunity, that fundamental questions of life and death are always surreptitiously involved.

In an effort to examine what it is that is at stake in Claggart's accusation, it might be helpful to view the opposition between Billy and Claggart as an opposition not between innocence and guilt but between two conceptions of language, or between two types of reading. Billy seemingly represents the perfectly *motivated* sign; that is, his inner self (the signified) is considered transparently readable from the beauty of his outer self (the signifier).⁹ His "straightforward simplicity" is the very opposite of the "moral obliquities" or "crookedness of heart" that characterizes "citized" or rhetorically sophisticated man. "To deal in double meanings and insinuations of any sort," writes Melville, "was quite foreign to his nature" (p. 327). In accordance with this "nature," Billy reads everything at face value, never questioning the meaning of appearances. He is dumbfounded at the Dansker's suggestion, "incomprehensible to a novice," that Claggart's very pleasantness can be interpreted as its opposite, as a sign that he is "down on" Billy Budd. To Billy, "the

9. The sign was divided into *signified* (the meaning conveyed) and *signifier* (the symbol or sound that conveys that meaning) by the Swiss linguist FERDINAND DE SAUSSURE (1857-1913), who argued

that in language, the relation between the two is *arbitrary*; to the extent that the signified determines the signifier, the sign is *motivated* [editor's note].

occasional frank air and pleasant word *went for what they purported to be*, the young sailor never having heard as yet of the 'too fair-spoken man' " (pp. 365–66; emphasis mine). As a reader, then, Billy is symbolically as well as factually illiterate. His literal-mindedness is represented by his illiteracy because, in assuming that language can be taken at face value, he excludes the very functioning of *difference* that makes the act of reading both indispensable and undecidable.

Claggart, on the other hand, is the very image of difference and duplicity, both in his appearance and in his character. His face is not ugly, but it hints of something defective or abnormal. He has no vices, yet he incarnates evil. He is an intellectual, but uses reason as "an ambidexter implement for effecting the irrational" (p. 354). Billy inspires in him both "profound antipathy" and a "soft yearning." In the incompatibility of his attributes, Claggart is thus a personification of ambiguity and ambivalence, of the distance between signifier and signified, of the separation between being and doing: "apprehending the good, but powerless to be it, a nature like Claggart's, . . . what recourse is left to it but to recoil upon itself" (p. 356). As a reader, Claggart has learned to "exercise a distrust keen in proportion to the fairness of the appearance" (p. 364). He is properly an ironic reader, who, assuming the sign to be arbitrary and unmotivated, reverses the value signs of appearances and takes a daisy for a mantrap and an unmotivated accidental spilling of soup for an intentional sly escape of antipathy. Claggart meets his downfall, however, when he attempts to master the arbitrariness of the sign for his own ends, precisely by falsely (that is, arbitrarily) accusing Billy of harboring arbitrariness, of hiding a mutineer beneath the appearance of a baby.

Such a formulation of the Budd/Claggart relationship enables one to take a new look not only at the story itself, but at the criticism as well. For, curiously enough, it is precisely this opposition between the literal reader (Billy) and the ironic reader (Claggart) that is reenacted in the critical readings of *Billy Budd* in the opposition between the "acceptance" school and the "irony" school. Those who see the story as a "testament of acceptance" tend to take Billy's final benediction of Vere at face value: as Lewis Mumford puts it, "As Melville's own end approached, he cried out with Billy Budd: God Bless Captain Vere! In this final affirmation Herman Melville died."¹ In contrast, those who read the tale ironically tend to take Billy's sweet farewell as Melville's bitter curse. Joseph Schiffman writes: "At heart a kind man, Vere, strange to say, makes possible the depraved Claggart's wish—the destruction of Billy. 'God bless Captain Vere!' Is this not piercing irony? As innocent Billy utters these words, does not the reader gag?" (p. 133) But since the acceptance/irony dichotomy is already contained within the story, since it is obviously one of the things the story is *about*, it is not enough to try to decide which of the readings is correct. What the reader of *Billy Budd* must do is to analyze what is at stake in the very opposition between literality and irony. This question, crucial for an understanding of *Billy Budd* not only as a literary but also as a critical phenomenon, will be taken up again in the final pages of the present study, but first let us examine further the linguistic implications of the murder itself.

1. *Herman Melville* (New York: Harcourt, Brace, and World, 1929), p. 357.

The Fiend That Lies Like Truth

If Claggart's accusation that Billy is secretly plotting mutiny is essentially an affirmation of the possibility of a discontinuity between being and doing, of an arbitrary, nonmotivated relation between signifier and signified, then Billy's blow must be read as an attempt violently to deny that discontinuity or arbitrariness. The blow, as a denial, functions as a substitute for speech, as Billy, during his trial, explains: "I did not mean to kill him. Could I have used my tongue I would not have struck him. But he foully lied to my face and in presence of my captain, and I had to say something, and I could only say it with a blow" (p. 383). But in striking a blow in defense of the sign's motivation, Billy, paradoxically enough, actually personifies the very *absence* of motivation: "I did not mean. . . ." His blow is involuntary, accidental, properly unmotivated. He is a sign that does not mean to mean. Billy, who cannot understand ambiguity, who takes pleasant words at face value and then obliterates Claggart for suggesting that one could do otherwise, whose sudden blow is a violent denial of any discrepancy between his being and his doing, thus ends up radically illustrating the very discrepancy he denies.

The story thus takes place between the postulate of continuity between signifier and signified ("handsome is as handsome does") and the postulate of their discontinuity ("a man's trap may be under the ruddy-tipped daisies"). Claggart, whose accusations of incipient mutiny are apparently false and therefore illustrate the very doublefacedness which they attribute to Billy, is negated for proclaiming the very lie about Billy which Billy's act of negation paradoxically proves to be the truth.

This paradox can also be stated in another way, in terms of the opposition between the performative and the constative functions of language.² Constative language is language used as an instrument of cognition—it describes, reports, speaks *about* something other than itself. Performative language is language which itself functions as an act, not as a report of one. Promising, betting, swearing, marrying, and declaring war, for example, are not descriptions of acts but acts in their own right. The proverb "handsome is as handsome does" can thus also be read as a statement of the compatibility between the constative ("being") and the performative ("doing") dimensions of language. But what Billy's act dramatizes is precisely their radical *incompatibility*—Billy performs the truth of Claggart's report to Vere only by means of his absolute and blind denial of its cognitive validity. If Billy had understood the truth, he would not have performed it. Handsome cannot both be and do its own undoing. The knowledge that being and doing are incompatible cannot know the ultimate performance of its own confirmation.

Melville's chiasmus thus creates a reversal not only between the places of guilt and innocence, but between the postulate of continuity and the postulate of discontinuity between doing and being, performance and cognition. When Billy's fist strikes Claggart's forehead, it is no longer possible for knowing and doing to meet. Melville's story not only reports the occurrence of a particularly deadly performative utterance; it itself *performs* the radical incompatibility between knowledge and acts.

All this, we recall, is triggered by a stutter, a linguistic defect. No analysis

2. The distinction between *constative* and *performative* language was developed by the English philosopher J. L. AUSTIN (1911–1960) [editor's note].

of the story's dramatization of linguistic categories can be complete without careful attention to this glaring infelicity. Billy's "vocal defect" is presented and explained in the story in the following terms:

There was just one thing amiss in him . . . , an occasional liability to a vocal defect. Though in the hour of elemental uproar or peril he was everything that a sailor should be, yet under sudden provocation of strong heart-feeling his voice, otherwise singularly musical, as if expressive of the harmony within, was apt to develop an organic hesitancy, in fact more or less of a stutter or even worse. In this particular Billy was a striking instance that the arch interferer, the envious marplot of Eden, still has more or less to do with every human consignment to this planet of Earth. In every case, one way or another he is sure to slip in his little card, as much as to remind us—I too have a hand here. (pp. 331–332)

It is doubtless this Satanic "hand" that shoots out when Billy's speech fails him. Billy is all too literally a "*striking* instance" of the workings of the "envious marplot."

Melville's choice of the word "marplot" to characterize the originator of Billy's stutter deserves special note. It seems logical to understand that the stutter "mars" the plot in that it triggers the reversal of roles between Billy and Claggart. Yet in another sense this reversal does not *mar* the plot, it *constitutes* it. Here as in the story of Eden, what the envious marplot mars is not the plot, but the state of plotlessness that exists "in the beginning." What both the Book of Genesis and *Billy Budd* narrate is thus not the story of a fall, but a fall into story.

In this connection, it is not irrelevant to recall what it is that Claggart falsely accuses Billy of: precisely of instigating a *plot*, of stirring up mutiny against the naval authorities. What Claggart is in a sense doing by positing this fictitious plot, then, is trying desperately to scare up a plot for the story. And it is Billy's very act of denial of his involvement in any plot that finally brings him *into* the plot. Billy's involuntary blow is an act of mutiny not only against the authority of his naval superiors, but also against the authority of his own conscious intentions. Perhaps it is not by chance that the word "plot" can mean both "intrigue" and "story": if all plots somehow tell the story of their own marring, then perhaps it could be said that all plots are *plots* against authority, that authority is precisely that which creates the sense of its own destruction, that all stories necessarily recount by their very existence the subversion of the father, of the gods, of consciousness, of order, of expectations, or of meaning.

But is Billy truly as "plotless" as he appears? Does his "simplicity" hide no division, no ambiguity? As many critics have remarked, Billy's character seems to result mainly from his exclusion of the negative. When informed that he is being arbitrarily impressed for service on a man-of-war, Billy "makes no demur" (p. 323). When invited to a clandestine meeting by a mysterious stranger, Billy acquiesces through his "incapacity of plumply saying *no*" (p. 359). But it is interesting to note that although Billy thus seems to be "just a boy who cain't say no,"³ almost all the words used to describe him are negative in form: in-nocent, un-conventional, il-literate, un-

3. A reference to the song "I Cain't Say No," from the Richard Rodgers and Oscar Hammerstein II musical *Oklahoma!* (1943; film, 1955) [editor's note].

sophisticated, un-adulterate, etc. And although he denies any discrepancy between what is said and what is meant, he does not prove to be totally incapable of lying. When asked about the shady visit of the afterguardsman, he distorts his account in order to edit out anything that indicates any incompatibility with the absolute maintenance of authority. He neglects to report the questionable proposition even though "it was his duty as a loyal blue jacket" (p. 362) to do so. In thus shrinking from "the dirty work of a telltale" (p. 362), Billy maintains his "plotlessness" not spontaneously but through a complex act of filtering. Far from being simply and naturally pure, he is obsessed with maintaining his own irreproachability in the eyes of authority. After witnessing a flogging, he is so horrified that he resolves "that never through remissness would he make himself liable to such a visitation or do or omit aught that might merit even verbal reproof" (p. 346). Billy does not simply exclude the negative: he represses it. His reaction to questionable behavior of any sort (Red Whiskers, the afterguardsman, Claggart) is to obliterate it. He retains his "blank ignorance" (p. 363) only by a vigorous act of erasing. As Melville says of Billy's reaction to Claggart's petty provocations, "the ineffectual speculations into which he was led were so disturbingly alien to him that *he did his best to smother them*" (p. 362; emphasis mine).

In his *disgustful recoil* from an overture which, though he but ill comprehended, he *instinctively knew* must involve evil of some sort, Billy Budd was like a young horse fresh from the pasture suddenly inhaling a vile whiff from some chemical factory, and by repeated snortings trying to *get it out* of his nostrils and lungs. This frame of mind *barred all desire* of holding further parley with the fellow, even were it but for the purpose of gaining some enlightenment as to his design in approaching him. (p. 361; emphasis mine)

Billy maintains his purity only through constant, though unconscious, censorship. "Innocence," writes Melville, "was his blinder" (p. 366).

It is interesting to note that while the majority of readers see Billy as a personification of goodness and Claggart as a personification of evil, those who do not tend to read from a psychoanalytical point of view.⁴ Much has been made of Claggart's latent homosexuality, which Melville clearly suggests. Claggart, like the hypothetical "X—," "is a nut not to be cracked by the tap of a lady's fan" (p. 352). The "unobserved glance" he sometimes casts upon Billy contains "a touch of soft yearning, as if Claggart could even have loved Billy but for fate and ban" (p. 365). The spilling of the soup and Claggart's reaction to it are often read symbolically as a sexual exchange, the import of which, of course, is lost on Billy, who cannot read.

* * *

The Deadly Space Between

While Billy thus stands as a performative riddle (are his actions motivated or accidental?), John Claggart is presented as an enigma for cognition, a man "who for reasons of his own was keeping *incog*" (p. 343; emphasis mine).

4. See especially Rollo May, *Power and Innocence* (1972), and, more recently, EVE KOSOFKY SEDGWICK, *Epistemology of the Closet* (1990) [editor's note].

Repeatedly referred to as a "mystery," Claggart, it seems, is difficult, even perilous, to describe:

For the adequate comprehending of Claggart by a normal nature these hints are insufficient. To pass from a normal nature to him one must cross "the deadly space between." And this is best done by indirection. (p. 352)

Between Claggart and a "normal nature," there exists a gaping cognitive chasm. In a literal sense, this image of crossing a "deadly space" in order to reach Claggart can be seen almost as an ironic prefiguration of the murder. Billy does indeed "cross" the "space" between himself and Claggart by means of a "deadly" blow. The phrase "space between" recurs, in fact, just after the murder, to refer to the physical separation between the dead Claggart and the condemned Billy:

Aft, and on either side, was a small stateroom, the one now temporarily a jail and the other a dead-house, and a yet smaller compartment, leaving a *space between* expanding forward. (p. 382; emphasis mine)

It is by means of a deadly chiasmus that the spatial chasm is crossed.

But physical separation is obviously not the only kind of "deadly space" involved here. The expression "deadly space between" refers primarily to a gap in cognition, a boundary beyond which ordinary understanding does not normally go. This sort of space, which stands as a limit to comprehension, seems to be an inherent feature of the attempt to describe John Claggart. From the very beginning, Melville admits: "His portrait I essay, but shall never hit it" (p. 342). What Melville says he will *not* do here is precisely what Billy Budd *does* do: hit John Claggart. It would seem that speaking and killing are thus mutually exclusive: Billy Budd kills because he cannot speak, while Melville, through the very act of speaking, does not kill. Billy's fist crosses the "deadly space" *directly*; Melville's crossing, "done by indirection," leaves its target intact.

This state of affairs, reassuring as it sounds on a moral level, is, however, rather unsettling if one examines what it implies about Melville's writing. For how reliable can a description be if it does not hit its object? What do we come to know of John Claggart if what we learn is that his portrait is askew? If to describe perfectly, to refer adequately, would be to "hit" the referent and thus annihilate it; if to know completely would be to obliterate the very object known; if the perfect fulfillment of the constative, referential function of language would consist in the total obliteration of the object of that function; then language can retain its "innocence" only by giving up its referential validity. Melville can avoid murder only by grounding his discourse in ineradicable error. If to cross a space by indirection—that is, by rhetorical displacement—is to escape deadliness, that crossing can succeed only on the condition of radically losing its way.

* * *

The cognitive spaces marked out by these eclipses of meaning are important not because they mark the limits of interpretation but because they function as its *cause*. The gaps in understanding are never directly perceived as such by the characters in the novel; those gaps are themselves taken as

interpretable signs and triggers for interpretation. The lack of knowledge of Claggart's past, for example, is seen as a sign that he has something to hide:

Nothing was known of his former life. . . . Among certain grizzled sea gossips of the gun decks and forecandle went a rumor perdue⁵ that the master-at-arms was a *chevalier* [Melville's italics] who had volunteered into the King's navy by way of compounding for some mysterious swindle whereof he had been arraigned at the King's Bench. *The fact that nobody could substantiate this report was, of course, nothing against its secret currency.* . . . Indeed a man of Claggart's accomplishments, without prior nautical experience entering the navy at mature life, as he did, and necessarily allotted at the start to the lowest grade in it; a man too who never made allusion to his previous life ashore; these were circumstances which *in the dearth of exact knowledge* as to his true antecedents opened to the invidious *a vague field for unfavorable surmise.* (p. 343; emphasis mine)

In other words, it is precisely the absence of knowledge that here leads to the propagation of tales. The fact that nothing is known of Claggart's origins is not a simple, contingent, theoretically remediable lack of information; it is the very *origin* of his "evil nature." Interestingly, in Billy's case, an equal lack of knowledge leads some readers to see his origin as divine. Asked who his father is, Billy replies, "God knows." The divine and the satanic can thus be seen as metaphysical interpretations of discontinuities in knowledge. In *Billy Budd*, a stutter and a tautology serve to mark the spot from which evil springs.

Evil, then, is essentially the misreading of discontinuity through the attribution of meaning to a space or division in language. But the fact that stories of Claggart's evil arise out of a seemingly meaningless gap in knowledge is hardly a meaningless or innocent fact in itself, either in its causes or in its consequences. Claggart's function is that of a policeman "charged among other matters with the duty of preserving order on the populous lower gun decks" (p. 342). As Melville points out, "no man holding his office in a man-of-war can ever hope to be popular with the crew" (p. 345). The inevitable climate of resentment surrounding the master-at-arms might itself be sufficient to turn the hypothesis of depravity into a self-fulfilling prophecy. As Melville puts it, "The point of the present story *turn[s] on the hidden nature of the master-at-arms*" (p. 354). The entire plot of *Billy Budd* could conceivably be seen as a consequence not of what Claggart *does*, but of what he *does not say*.

It is thus by means of the misreading of gaps in knowledge and of discontinuities in action that the plot of *Billy Budd* takes shape. But because Melville describes both the spaces and the readings they engender, his concentration on the vagaries of interpretive error open up within the text the possibility of substantiating quite a number of "inside narratives" different from the one with which we are explicitly presented. What Melville's tale tells is the snowballing of tale-telling. It is possible, indeed, to retell the story

5. Unattributable [editor's note].

from a point of view that fully justifies Claggart's suspicions, merely by putting together a series of indications already available in the narrative:

1. As Billy is being taken from the merchant ship to the warship, he shouts in farewell, "And good-bye to you too, old *Rights-of-Man*." Lt. Ratcliffe, who later recounts the incident to Claggart (as is shown by the latter's referring to it in making his accusation to Vere), interprets this as "a sly slur at impressment in general, and that of himself in especial" (p. 327). The first information Claggart is likely to have gleaned on Billy Budd has thus passed through the filter of the Lieutenant's interpretation that the handsome recruit's apparent gaiety conceals resentment.

2. When Billy resolves, after seeing the flogging of another novice, "never to merit reproof," his "punctiliousness in duty" (p. 346) is laughed at by his topmates. Billy tries desperately to make his actions coincide with his desire for perfect irreproachability, but he nevertheless finds himself "getting into petty trouble" (p. 346). Billy's "unconcealed anxiety" is considered "comical" by his fellows (p. 347). It is thus Billy's obsessive concern with his own perfection that starts a second snowball rolling, since Claggart undertakes a subtle campaign of petty persecutions "to try the temper of the man" (p. 358). The instrument used by Claggart to set "little traps for the worryment of the foretopman" is a corporal called "Squeak," who, "having naturally enough concluded that his master could have no love for the sailor, made it his business, faithful understrapper that he was, to foment the ill blood by perverting to his chief certain innocent frolics of the good-natured foretopman, besides inventing for his mouth sundry contumelious epithets he claimed to have overheard him let fall" (p. 357). Again, Claggart perceives Billy only through the distortion of an unfavorable interpretation.

3. With this impression of Billy already in his mind, Claggart proceeds to take Billy's spilling of the soup across his path "not for the mere accident it assuredly was, but for the sly escape of a spontaneous feeling on Billy's part more or less answering to the antipathy of his own" (p. 356). If this is an over-reading, it is important to note that the critical tendency to see sexual or religious symbolism in the soup scene operates on exactly the same assumption as that made by Claggart: that what appears to be an accident is actually motivated and meaningful. Claggart's spontaneous interpretation, hidden behind his playful words ("Handsomely done . . ."), is not only legitimate enough on its own terms, but receives unexpected confirmation in Billy's naive outburst: "There now, who says that Jemmy Legs is down on me!" This evidence of a preexisting context in which Claggart, referred to by his disrespectful nickname, has been discussed by Billy with others—apparently a number of others, although in fact it is only one person—provides all the support Claggart needs to substantiate his suspicions. And still, he is willing to try another test.

4. Claggart sends an afterguardsman to Billy at night with a proposition to join a mutinous conspiracy of impressed men. Although Billy rejects the invitation, he does not report it as loyalty demands. He is thus protecting

the conspirators. Claggart's last test has been completed: Billy is a danger to the ship. In his function as chief of police, it is Claggart's duty to report the danger. . . .

This "reversed" reading is no more—but certainly no less—legitimate than the ordinary "good vs. evil" interpretation. But its very possibility—evoked not only by these behind-the-scenes hints and nuances but also by the "garbled" newspaper report—can be taken as a sign of the centrality of the *question of reading* posed not only *by* but also *in* the text of *Billy Budd*. Far from recounting an unequivocal "clash of opposites"⁶ the confrontation between Billy and Claggart is built by a series of minute gradations and subtle insinuations. The opposites that clash here are not two *characters* but two *readings*.

Three Readings of Reading

It is no doubt significant that the character around whom the greatest critical dissent has revolved is neither the good one nor the evil one but the one who is explicitly presented as a *reader*, Captain Vere. On some level, readers of *Billy Budd* have always testified to the fact that it is reading, as much as killing, that is at the heart of Melville's story. But how is the act of reading being manifested? And what, precisely, are its relations with the deadliness of the spaces it attempts to comprehend?

As we have noted, critical readings of *Billy Budd* have generally divided themselves into two opposing groups, the "testament of acceptance" school on the one hand and the "testament of resistance" or "irony" school on the other. The first is characterized by its tendency to take at face value the narrator's professed admiration of Vere's sagacity and the final benediction of Vere uttered by Billy. The second group is characterized by its tendency to distance the reader's point of view from that of any of the characters, including the narrator, so that the injustice of Billy's execution becomes perceptible through a process of reversal of certain explicit pronouncements within the tale. This opposition between "acceptance" and "irony" quite strikingly mirrors, as we mentioned earlier, the opposition within the story between Billy's naiveté and Claggart's paranoia. We will therefore begin our analysis of Melville's study of the nature of reading with an examination of the way in which the act of reading is manifested in the confrontation between these two characters.

It seems evident that Billy's reading method consists in taking everything at face value, while Claggart's consists in seeing a mantrap under every daisy. Yet in practice, neither of these methods is rigorously upheld. The naive reader is not naive enough to forget to edit out information too troubling to report. The instability of the space between sign and referent, normally denied by the naive reader, is called upon as an *instrument* whenever that same instability threatens to disturb the *content* of meaning itself. Billy takes every sign as transparently readable as long as what he reads is consistent with transparent peace, order, and authority. When this is not so, his reading

6. J. M. Murry, "Herman Melville's Silence," *Times Literary Supplement*, July 10, 1924, p. 433.

clouds accordingly. And Claggart, for whom every sign can be read as its opposite, neglects to doubt the transparency of any sign that tends to confirm his own doubts: "the master-at-arms *never suspected the veracity*" (p. 357) of Squeak's reports. The naive believer thus refuses to believe any evidence that subverts the transparency of his beliefs, while the ironic doubter forgets to suspect the reliability of anything confirming his own suspicions.

* * *

But what of the third reader in the drama, Captain Vere? What can be said of a reading whose task is precisely to read the *relation* between naiveté and paranoia, acceptance and irony, murder and error?

* * *

In order to analyze what is at stake in Melville's portrait of Vere, let us first examine the ways in which Vere's reading differs from those of Billy Budd and John Claggart:

1. While the naive/ironic dichotomy was based on a symmetry between *individuals*, Captain Vere's reading takes place within a social *structure*: the rigidly hierarchical structure of a British warship. While the naive reader (Billy) destroys the other in order to defend the self, and while the ironic reader (Claggart) destroys the self by projecting aggression onto the other, the third reader (Vere) subordinates both self and other, and ultimately sacrifices both self and other, for the preservation of a political order.
2. The apparent purpose of both Billy's and Claggart's readings was to determine *character*: to preserve innocence or to prove guilt. Vere, on the other hand, subordinates character to action, being to doing: "A martial court," he tells his officers, "must needs in the present case confine its attention to the *blow's consequence*, which consequence justly is to be deemed not otherwise than as the *striker's deed*" (p. 384).
3. In the opposition between the metaphysical and the psychoanalytical readings of Billy's deed, the deciding question was whether the blow should be considered accidental or (unconsciously) motivated. But in Vere's courtroom reading, both these alternatives are irrelevant: "Budd's intent or non-intent is nothing to the purpose" (p. 389). What matters is not the cause but the consequences of the blow.
4. The naive or literal reader takes language at face value and treats signs as *motivated*; the ironic reader assumes that the relation between sign and meaning can be *arbitrary* and that appearances are made to be reversed. For Vere, the functions and meanings of signs are neither transparent nor reversible but fixed by socially determined *convention*. Vere's very character is determined not by a relation between his outward appearance and his inner being but by the "buttons" that signify his position in society. While both Billy and Claggart are said to owe their character to "Nature," Vere sees his actions and being as meaningful only within the context of a contractual allegiance:

Do these buttons that we wear attest that our allegiance is to Nature? No, to the King. Though the ocean, which is inviolate Nature primeval, though this be the element where we move and have our being as sailors, yet as the King's officers lies our duty in a sphere correspondingly natural? So little is that true, that in receiving our commissions we in the most important regards ceased to be natural free agents. When war is declared are we the commissioned fighters previously consulted? We fight at command. If our judgments approve the war, that is but coincidence. (p. 387)

Judgment is thus for Vere a function neither of individual conscience nor of absolute justice but of "the rigor of martial law" (p. 387) operating *through* him.

5. While Billy and Claggart read spontaneously and directly, Vere's reading often makes use of precedent (historical facts, childhood memories), allusions (to the Bible, to various ancient and modern authors), and analogies (Billy is like Adam, Claggart is like Ananias⁷). Just as both Billy and Claggart have no known past, they read without memory; just as their lives end with their reading, they read without foresight. Vere, on the other hand, interrogates both past and future for interpretative guidance.

6. While Budd and Claggart thus oppose each other directly, without regard for circumstance or consequence, Vere reads solely in function of the attending historical situation: the Nore and Spithead mutinies⁸ have created an atmosphere "critical to naval authority" (p. 380), and, since an engagement with the enemy fleet is possible at any moment, the *Bellipotent* cannot afford internal unrest.

The fundamental factor that underlies the opposition between the metaphysical Budd/Claggart conflict on the one hand and the reading of Captain Vere on the other can be summed up in a single word: history. While the naive and the ironic readers attempt to impose upon language the functioning of an absolute, timeless, universal law (the sign as *either* motivated or arbitrary), the question of *martial* law arises within the story precisely to reveal the law as a *historical* phenomenon, to underscore the element of contextual mutability in the conditions of any act of reading. Arbitrariness and motivation, irony and literality, are parameters between which language constantly fluctuates, but only historical context determines which proportion of each is perceptible to each reader.

* * *

There is still another reason for the uncertainty over Vere's final status, however: the unfinished state of the manuscript at Melville's death. According to editors Hayford and Sealts,⁹ it is the "late pencil revisions" that cast the greatest doubt upon Vere; Melville was evidently still fine-tuning the

7. A man who is struck down dead in front of Peter for lying to God (Acts 5.3-5) [editor's note].

8. Uprisings in the British fleet in 1797. Spithead is an anchorage off Portsmouth's harbor (south England); the Nore is a sandbank at the mouth of

the Thames River [editor's note].

9. Editor's introduction, *Billy Budd, Sailor* (Chicago: University of Chicago Press, 1962); see esp. pp. 34-35.

text's attitude toward its third reader when he died. The ultimate irony in the tale is thus that our final judgment of the very reader who takes history into consideration is made problematic precisely by the intervention of history: by the historical accident of the author's death. History here affects interpretation not only within the content of the narration but also within the very production of the narrative. And what remains suspended by this historical accident is nothing less than the exact signifying value of history itself. Clearly, the meaning of "history" as a feature distinguishing Vere's reading from those of Claggart and Budd can in no way be taken for granted.

Judgment as Political Performance

In the final analysis, the question is not: what did Melville really think of Captain Vere? but rather: What is at stake in his way of presenting him? What can we learn from him about the act of judging? Melville seems to be presenting us less with an *object* for judgment than with an *example* of judgment. And the very vehemence with which the critics tend to praise or condemn the justice of Vere's decision indicates that it is judging, not murdering, that Melville is asking us to judge.

And yet Vere's judgment is an act of murder. Captain Vere is a reader who kills, not, like Billy, *instead* of speaking, but rather, precisely *by means of* speaking. While Billy kills through verbal impotence, Vere kills through the very potency and sophistication of rhetoric. Judging, in Vere's case, is nothing less than the wielding of the power of life and death through language. In thus occupying the point at which murder and language meet, Captain Vere positions himself precisely astride the "deadly space between." While Billy's performative force occupies the vanishing point of utterance and cognition, and while the validity of Claggart's cognitive perception is realized only through the annihilation of the perceiver, Captain Vere's reading mobilizes both power and knowledge, performance and cognition, error and murder. Judgment is precisely cognition functioning as an act. It is this combination of performance and cognition that defines Vere's reading not merely as historical but as *political*. If politics is defined as the attempt to reconcile action with understanding, then Melville's story offers an exemplary context in which to analyze the interpretive and performative structures that make politics so problematic.

That the alliance between knowledge and action is by no means an easy one is amply demonstrated in Melville's story. Vere indeed has often been seen as the character in the tale who experiences the greatest suffering: his understanding of Billy's character and his military duty are totally at odds. On the one hand, cognitive exactitude requires that "history" be taken into consideration. Yet what constitutes "knowledge of history"? How are "circumstances" to be defined? What sort of causality does "precedent" imply? And what is to be done with overlapping but incompatible "contexts"? Before deciding upon innocence and guilt, Vere must define and limit the frame of reference within which his decision is to be possible. He does so by choosing the "legal" context over the "essential" context:

In a *legal view* the apparent victim of the tragedy was he who had sought to victimize a man blameless; and the indisputable deed of the latter,

navally regarded, constituted the most heinous of military crimes. Yet more. The *essential right and wrong* involved in the matter, the clearer that might be, so much the worse for the responsibility of a loyal sea commander, inasmuch as he was not authorized to determine the matter on that *primitive* basis. (p. 380; emphasis mine)

Yet it is precisely this determination of the proper frame of reference that dictates the outcome of the decision: once Vere has defined his context, he has also in fact reached his verdict. The very choice of the *conditions* of judgment itself constitutes a judgment. But what are the conditions of choosing the conditions of judgment?

* * *

If Vere names the Absolute—as opposed to the martial—by means of quotations and allusions, does this not suggest that the two alternative frames of reference within which judgment is possible are not Nature and the King, but rather two types of textual authority: the Bible and the Mutiny Act?¹ This is not to say that Vere is “innocently” choosing one text over another, but that the nature of “Nature” in a legal context cannot be taken for granted. Even Thomas Paine,² who is referred to by Melville in his function as proponent of “natural” human rights, cannot avoid grounding his concept of nature in Biblical myth. In the very act of rejecting the authority of antiquity, he writes:

The fact is, that portions of antiquity, by proving every thing, establish nothing. It is authority against authority all the way, till we come to the divine origin of the rights of man, at the Creation. Here our inquiries find a resting-place, and our reason a home.³

The final frame of reference is neither the heart nor the gun, neither Nature nor the King, but the authority of a Sacred Text. Authority seems to be nothing other than the vanishing-point of textuality. And Nature is authority whose textual origins have been forgotten. Even behind the martial order of the world of the man-of-war, there lies a religious referent: the *Bellipotent's* last battle is with a French ship called the *Athée*.⁴

Judgment, then, would seem to ground itself in a suspension of the opposition between textuality and referentiality, just as politics can be seen as that which makes it impossible to draw the line between “language” and “life.” Vere, indeed, is presented precisely as a reader who does not recognize the “frontier” between “remote allusions” and current events:

In illustrating of any point touching the stirring personages and events of the time he would be as apt to cite some historic character or incident of antiquity as he would be to cite from the moderns. He seemed unmindful of the circumstance that to his bluff company such remote allusions, however pertinent they might really be, were altogether alien to men whose reading was mainly confined to the journals. But consid-

1. An act first passed in 1689, which in fact applied only to the army; even the Articles of War of 1749, to which Vere also and more appropriately alludes, give him more latitude than he claims [editor's note].

2. English-born American revolutionary and political theorist (1737–1809) [editor's note].

3. Thomas Paine, *The Rights of Man* (Garden City, N.Y.: Anchor Press, 1973), p. 303.

4. *Atheist* (French) [editor's note].

erateness in such matters is not easy to natures constituted like Captain Vere's. Their honesty prescribes to them directness, sometimes far-reaching like that of a migratory fowl that in its flight never heeds when it crosses a frontier. (p. 341)

Yet it is precisely by inviting Billy Budd and John Claggart to "cross" the "frontier" between their proper territory and their superior's cabin, between the private and the political realms, that Vere unwittingly sets up the conditions for the narrative chiasmus he must judge.

As was noted earlier, Captain Vere's function, according to many critics, is to insert "ambiguity" into the story's "oversimplified" allegorical opposition. Yet at the same time, it is precisely Captain Vere who inspires the most vehement critical oppositions. Captain Vere, in other words, seems to mobilize simultaneously the seemingly contradictory forces of ambiguity and polarity.

In his median position between the Budd/Claggart opposition and the acceptance/irony opposition, Captain Vere functions as a focus for the *conversion* of polarity into ambiguity and back again. Interestingly, he plays exactly the same role in the progress of the plot. It is Vere who brings together the "Innocent" Billy and the "guilty" Claggart in order to test the validity of Claggart's accusations, but he does so in such a way as to effect not a clarification but a reversal of places between guilt and innocence. Vere's fatherly words to Billy are precisely what triggers the ambiguous deed upon which Vere must pronounce a verdict of "condemn or let go." Just as Melville's readers, faced with the ambiguity they themselves recognize as being provided by Vere, are quick to pronounce the Captain vicious or virtuous, evil or just; so, too, Vere, who clearly perceives the "mystery" in the "moral dilemma" confronting him, must nevertheless reduce the situation to a binary opposition.

It would seem, then, that the function of judgment is to convert an ambiguous situation into a decidable one. But it does so by converting a difference *within* (Billy as divided between conscious submissiveness and unconscious hostility, Vere as divided between understanding father and military authority) into a difference *between* (between Claggart and Billy, between Nature and the King, between authority and criminality). A difference *between* opposing forces presupposes that the entities in conflict be knowable. A difference *within* one of the entities in question is precisely what problematizes the very *idea* of an entity in the first place, rendering the "legal point of view" inapplicable. In studying the plays of both ambiguity and binarity, Melville's story situates *its* critical difference neither within nor between, but precisely in the very question of the *relation between the two* as the fundamental question of all human politics. The political context in *Billy Budd* is such that on all levels the differences *within* (mutiny on the warship, the French revolution as a threat to "lasting institutions," Billy's unconscious hostility) are subordinated to differences *between* (the *Bellipotent* vs. the *Athée*, England vs. France, murderer vs. victim). This is why Melville's choice of historical setting is so significant: the war between France and England at the time of the French Revolution is as striking an example of the simultaneous functioning of differences within and between as is the confrontation between Billy and Claggart in relation to their own internal divisions.

War, indeed, is the absolute transformation of *all* differences into *binary* differences.

It would seem, then, that the maintenance of political authority requires that the law function as a set of rules for the regular, predictable misreading of the "difference within" as a "difference between." Yet if * * * law is thus defined in terms of its repression of ambiguity, then it is itself an overwhelming example of an entity based on a "difference within." Like Billy, the law, in attempting to eliminate its own "deadly space," can only inscribe itself in a space of deadliness.

But if judging is always a *partial* reading (in both senses of the word), is there a place for reading beyond politics? Are we, as Melville's readers, outside the arena in which power and fees are exchanged? If law is the forcible transformation of ambiguity into decidability, is it possible to read ambiguity *as such*, without that reading functioning as a political act?

Even about this, Melville has something to say. For there is a fourth reader in *Billy Budd*, one who "never interferes in aught and never gives advice" (p. 363): the old Dansker. A man of "few words, many wrinkles," and "the complexion of an antique parchment" (p. 347), the Dansker is the very picture of one who understands and emits ambiguous utterances. When asked by Billy for an explanation of his petty troubles, the Dansker says only, "Jemmy Legs [Claggart] is down on you" (p. 349). This interpretation, entirely accurate as a reading of Claggart's ambiguous behavior, is handed down to Billy without further explanation:

Something less unpleasantly oracular he tried to extract; but the old sea Chiron, thinking perhaps that for the nonce he had sufficiently instructed his young Achilles,⁵ pursed his lips, gathered all his wrinkles together, and would commit himself to nothing further. (p. 349)

As a reader who understands ambiguity yet refuses to "commit himself," the Dansker thus dramatizes a reading that attempts to be as cognitively accurate and as performatively neutral as possible. Yet however neutral he tries to remain, the Dansker's reading does not take place outside the political realm: it is his very refusal to participate in it, whether by further instruction or by direct intervention, that leads to Billy's exclamation in the soup episode ("There now, who says Jemmy Legs is down on me?"). The transference of knowledge is not any more innocent than the transference of power. For it is precisely through the impossibility of finding a spot from which knowledge could be all-encompassing that the plays of political power proceed.

Just as the attempt to "know" without "doing" can itself function as a deed, the fact that judgment is always explicitly an act adds a further insoluble problem to its cognitive predicament. Since, as Vere points out, no judgment can take place in the *Last Assizes*,⁶ no judge can ever pronounce a Last Judgment. In order to reach a verdict, Vere must determine the consequences not only of the fatal blow, but also precisely of his own verdict.

5. In Greek mythology, the greatest of the Greek warriors at Troy and the hero of Homer's *Iliad* (ca. 8th c. B.C.E.); Chiron, a centaur, was his teacher

[editor's note].

6. Session of the superior court in English counties [editor's note].

Judgment is an act not only because it kills, but because it is in turn open to judgment:

"Can we not convict and yet mitigate the penalty?" asked the sailing master. . . .

"Gentlemen, were that clearly lawful for us under the circumstances, consider the consequences of such clemency. . . . To the people the foretopman's deed, however it be worded in the announcement, will be plain homicide committed in a flagrant act of mutiny. What penalty for that should follow, they know. But it does not follow. *Why?* They will ruminate. You know what sailors are. Will they not revert to the recent outbreak at the Nore?" (p. 389)

The danger is not only one of repeating the Nore mutiny, however. It is also one of forcing Billy, for all his innocence, to repeat his crime. Billy is a politically charged object from the moment he strikes his superior. He is no longer, and can never again be, plotless. If he were set free, he himself would be unable to explain why. As a focus for the questions and intrigues of the crew, he would be even less capable of defending himself than before, and would surely strike again. The political reading, as cognition, attempts to understand the past; as performance, it attempts to eliminate from the future any necessity for its own recurrence.

What this means is that every judge is in the impossible position of having to include the effects of his own act of judging within the cognitive context of his decision. The question of the nature of the type of historical causality that would govern such effects can neither be decided nor ignored. Because of his official position, Vere cannot choose to read in such a way that his reading would not be an act of political authority. But what Melville shows in *Billy Budd* is that authority consists precisely in the impossibility of containing the effects of its own application.

As a political allegory, Melville's *Billy Budd* is thus much more than a study of good and evil, justice and injustice. It is a dramatization of the twisted relations between knowing and doing, speaking and killing, reading and judging, which make political understanding and action so problematic. In the subtle creation of Claggart's "evil" out of a series of spaces in knowledge, Melville shows that gaps in cognition, far from being mere absences, take on the performative power of true acts. The *force* of what is not known is all the more effective for not being perceived as such. The crew, which does not understand that it does not know, is no less performative a reader than the Captain, who clearly perceives and represses the presence of "mystery." The legal order, which attempts to submit "brute force" to "forms, measured forms," can only eliminate violence by transforming violence into the final authority. And cognition, which perhaps begins as a power play against the play of power, can only increase, through its own elaboration, the range of what it tries to dominate. The "deadly space" or "difference" that runs through *Billy Budd* is not located *between* knowledge and action, performance and cognition: it is that which, within cognition, functions as an act; it is that which, within action, prevents us from ever knowing whether what we hit coincides with what we understand. And this is what makes the meaning of Melville's last work so . . . *striking*.

BONNIE ZIMMERMAN

b. 1947

"Beginning with nothing," Bonnie Zimmerman announces in "What Has Never Been: An Overview of Lesbian Feminist Criticism" (1981), "this generation quickly began to expand the limitations of literary scholarship by pointing to what had been for decades 'unspeakable'—lesbian existence." Arising out of the social and cultural movements of the 1960s, feminist criticism by the late 1970s was a controversial but widely recognized practice in contemporary literary criticism and theory. As it gained institutional recognition, however, many within the feminist movement began to question the assumption of a monolithic feminism based on the commonality of women's experience. In particular, lesbian-identified women and women of color, such as Bonnie Zimmerman, BARBARA SMITH, and GLORIA ANZALDÚA, argued that the Anglo-American feminist movement spoke largely from the standpoint of white, heterosexual, middle-class women, tending to take that perspective as universal while ignoring differences in race, sexuality, or class. Aiming to remedy this limitation, Zimmerman's "What Has Never Been" is a defining document of lesbian-focused literary criticism, staking out a new area of feminist scholarship.

Born in Chicago, Zimmerman studied philosophy at Indiana University, earning a B.A. in 1968, and English at the State University of New York at Buffalo, where she earned her Ph.D. in 1974. She held several temporary academic positions in the Chicago area, but since 1978 she has taught at San Diego State University, where she was active in establishing a women's studies major, then a rare offering in the curriculum; she has frequently served as chair of the women's studies department. Zimmerman was also one of the first openly lesbian professors in the American academy, and, linking her politics and scholarship, she pioneered the development of interdisciplinary courses studying lesbian literature, history, and theory.

While the feminist and sexual liberation movements of the 1960s seemed to dispel negative biases against alternative sexualities, lesbian theory and literary criticism were still marginalized a decade later in course offerings and in academic scholarship. As Zimmerman laments in "What Has Never Been," even feminist forums were reluctant to acknowledge the worth of lesbian theory; when not condemned, it usually received only token mentions. Although the essay begins with this criticism, "What Has Never Been" embraces the opportunity to establish a new field and to bring lesbian studies out of the "closet." For Zimmerman, this scholarly transformation has political as well as professional consequences, fostering a sense of lesbian identity and community.

Grounded in encyclopedic research, "What Has Never Been" traces the origins of lesbian feminist literary criticism, reviews definitions of lesbianism, inventories a lesbian literary canon, and suggests a "lesbian aesthetic." Looking to the future, it also assesses the difficulties, outlines the tasks, and anticipates the challenges that face lesbian feminist literary critics. One of the main challenges that Zimmerman identifies is "heterosexism"—the assumption in mainstream feminism and in culture at large that heterosexuality is the one natural way to express sexual or affectional attachment. She details the heterosexist assumptions that dominate feminist literary anthologies, journals, and books of literary criticism, in particular faulting such prominent feminists as Elaine Showalter, SANDRA M. GILBERT, and SUSAN GUBAR, whose well-known studies of women writers fail to note female companions and lesbian attachments. Further, she claims that anthologies ignore prominent lesbian writers, that surveys omit lesbianism as a theme or perspective, and that analyses either disregard or vilify lesbian characters and themes in literature. To overcome heterosexist biases, she calls for lesbian theorists to develop their own resources to build a canon and a critical approach.

In building a distinctive canon and criticism, Zimmerman sees a central theoretical problem in the definition of "lesbian" and whom that term includes or excludes. Some modern critics, like Catherine Stimpson, lean toward a narrow definition predicated on sexual intimacy, while others, like the feminist poet and critic ADRIENNE RICH, advocate a more expansive category. Rich's concept of a "lesbian continuum" encompasses all women who have intense women-identified bonds, which might be social or political rather than sexual. This problem of definition mirrors a perennial one in theory, particularly in those studies based on identity: if they are exclusive, then such definitions might reproduce biases and static categories of thought; whereas if they are too expansive, then they might gradually erase meaningful distinctions. Although Zimmerman admires the flexibility of Rich's "continuum," she ultimately cautions against it, arguing that it diminishes a sense of lesbian difference and specificity; instead, she advocates Lillian Faderman's definition that identifies as lesbian those women who have affectionate attachments with other women, usually in a romantic couple.

Once the lesbian critic has settled this theoretical problem, her primary responsibilities, according to Zimmerman, are to identify lesbian texts and to build a literary tradition. This first involves a task of recovery, because many lesbians were historically constrained to write in "code" to avoid public ostracism. As an example of building a canon, Zimmerman cites Barbara Smith's famous lesbian reading (see above) of the African American novelist Toni Morrison's *Sula* (1973), arguing against the need for biographical evidence or proof of authorial intention. Once a canon is established, she hopes lesbian critics can go on to analyze the images and stereotypes of lesbians in literature and to examine the stylistics of lesbian writing, culminating in defining a specifically lesbian aesthetic. In some ways, Zimmerman's template for developing lesbian criticism parallels the course of early feminist criticism, which in the 1970s worked to construct a canon of women's writing (or what Elaine Showalter called a "literature of their own") and to critique literary stereotypes of women, and in the 1980s moved to examine specific characteristics of *écriture féminine* (female/feminine writing or style), in the phrase of the French feminist HÉLÈNE CIXOUS.

Zimmerman concludes by anticipating problems that might face lesbian critics. Although she celebrates the radical edge of lesbian separatism and its resistance to dominant hierarchies, she also foresees that lesbian criticism must be flexible and pluralistic to avoid stagnation and dogmatism. Another problem is naiveté about the universality of the lesbian experience. Much as critics challenged mainstream feminism of the 1970s for representing as universal an experience that excluded lesbians and women of color, Zimmerman challenges the new lesbian criticism to allow for specificity and diversity, especially in recognizing race and class differences. Despite these caveats, she closes on a hopeful note, finding that lesbian studies constitutes one of the most exciting areas of contemporary theory because of its exploration of "what has never been."

While "What Has Never Been" has been widely praised for helping to establish the field of lesbian literary criticism, some critics have offered emendations of specific points, such as Zimmerman's compromise definition of what qualifies as lesbian literature. In a later book, *The Safe Sea of Women: Lesbian Fiction, 1969–1989* (1990), Zimmerman herself narrows its scope, asserting that although some leeway must be granted in identifying lesbian fiction of the nineteenth and early twentieth centuries, contemporary fiction should be classified as "lesbian" if it has (1) an author who has declared herself as a lesbian, (2) a main character who acknowledges her lesbian orientation, or (3) a story that puts love between women at its center. Lillian Faderman argues that this set of rigid criteria excludes many contemporary novels that might also be productively considered lesbian literature.

Although, as Zimmerman surmises in a 1992 essay, "Lesbian theory is much more evident throughout current literary criticism than it was in 1981," in recent years a new debate has surfaced: its relation to queer theory. Drawing on poststructuralist

and psychoanalytic critiques of subjectivity and identity, proponents of queer theory, such as JUDITH BUTLER, argue that lesbian feminist criticism assumes a tacit essentialism—the belief that identity derives from a determinate essence, rather than from cultural circumstances and conventions. Updating her *défense* of a distinctive lesbian criticism, Zimmerman argues against subsuming lesbian studies within gay or queer studies, cautioning that such a theoretical move dissolves the ties between lesbianism and feminism and obliterates the specificity of lesbian identity and a lesbian aesthetic. “What Has Never Been” remains a landmark call for developing a distinctively lesbian feminist criticism.

BIBLIOGRAPHY

First published in 1981 in the influential journal *Feminist Studies*, “What Has Never Been: An Overview of Lesbian Feminist Literary Criticism” has since been widely anthologized. In *The Safe Sea of Women: Lesbian Fiction, 1969–1989* (1990), Zimmerman constructs a canon of contemporary lesbian fiction written during the gay liberation movement, analyzing its symbols and stereotypes. She has published many articles and also edited two influential collections and one reference work solidifying the field of lesbian studies: *Professions of Desire: Lesbian and Gay Studies in Literature*, co-edited with George Haggerty (1995); *The New Lesbian Studies: Into the Twenty-First Century*, co-edited with Toni A. H. McNaron (1996); and *Lesbian Histories and Cultures*, the first of the two-volume *Encyclopedia of Lesbian and Gay Histories and Cultures*, co-edited with George Haggerty (2000). In *Around 1981: Feminist Literary Theory* (1992), Jane Gallop assesses the place of “What Has Never Been” in the development of feminist criticism. Lillian Faderman, in “What Is Lesbian Literature? Forming a Historical Canon,” in *The New Lesbian Studies* (cited above), modifies Zimmerman’s definition of the lesbian novel. In “‘Gone Are the Days’: Bisexual Perspectives on Lesbian/Feminist Literary Theory,” *Feminist Studies* 61 (1999), Ann Kaloski Naylor discusses Zimmerman’s negotiation between essentialism and deconstruction. A brief biography and bibliography of Zimmerman appear in *Gay and Lesbian Literature* (ed. Sharon Malinowski, 1994).

What Has Never Been: An Overview of Lesbian Feminist Literary Criticism

In the 1970s, a generation of lesbian feminist literary critics came of age. Some, like the lesbian professor in Lynn Strongin’s poem, “Sayre,”¹ had been closeted in the profession; many had “come out” as lesbians in the women’s liberation movement. As academics and as lesbians, we cautiously began to plait together the strands of our existence: teaching lesbian literature, establishing networks and support groups, and exploring assumptions about a lesbian-focused literary criticism. Beginning with nothing, as we thought, this generation quickly began to expand the limitations of literary scholarship by pointing to what had been for decades “unspeakable”—lesbian existence—thus phrasing, in novelist June Arnold’s words, “what has never been.”² Our process has paralleled the development of feminist literary criticism—and,

1. Lynn Strongin, “Sayre,” in *Rising Tides: Twentieth Century American Women Poets*, ed. Laura Chester and Sharon Barba (New York: Washington Square Press, 1973), p. 317 [Zimmerman’s note]. Some of the author’s notes have been edited, and some omitted.

2. June Arnold, “Lesbian Fiction,” in *Lesbian Writing and Publishing*, special issue of *Sinister Wisdom* 2 (fall 1976): 28 [Zimmerman’s note]. Arnold (1926–1982), American novelist and publisher who founded a lesbian feminist press, Daughters Inc., in 1972.

indeed, pioneering feminist critics and lesbian critics are often one and the same. As women in a male-dominated academy, we explored the way we write and read from a different or "other" perspective. As lesbians in a heterosexual academy, we have continued to explore the impact of "otherness," suggesting dimensions previously ignored and yet necessary to understand fully the female condition and the creative work born from it.

Lesbian critics, in the 1980s, may have more questions than answers, but the questions are important not only to lesbians, but to all feminists teaching and criticizing literature. Does a woman's sexual and affectional preference influence the way she writes, reads, and thinks? Does lesbianism belong in the classroom and in scholarship? Is there a lesbian aesthetic distinct from a feminist aesthetic? What should be the role of the lesbian critic? Can we establish a lesbian "canon" in the way in which feminist critics have established a female canon? Can lesbian feminists develop insights into female creativity that might enrich all literary criticism? Different women, of course, answer these questions in different ways, but one set of assumptions underlies virtually all lesbian criticism: that a woman's identity is not defined only by her relation to a male world and male literary tradition (as feminist critics have demonstrated), that powerful bonds between women are a crucial factor in women's lives, and that the sexual and emotional orientation of a woman profoundly affects her consciousness and thus her creativity. Those critics who have consciously chosen to read as lesbians argue that this perspective can be uniquely liberating and can provide new insights into life and literature because it assigns the lesbian a specific vantage point from which to criticize and analyze the politics, language, and culture of patriarchy:

We have the whole range of women's experience and the other dimension too, which is the unique viewpoint of the dyke.³ This extra dimension puts us a step outside of so-called normal life and lets us see how gruesomely abnormal it is. . . . [This perspective] can issue in a worldview that is distinct in history and uniquely liberating.⁴

The purpose of this essay is to analyze the current state of lesbian scholarship, to suggest how lesbians are exercising this unique world view, and to investigate some of the problems, strengths, and future needs of a developing lesbian feminist literary criticism.⁵

One way in which this unique world view takes shape is as a "critical consciousness about heterosexual assumptions."⁶ Heterosexism is the set of values and structures that assumes heterosexuality to be the only natural form of sexual and emotional expression, "the perceptual screen provided by our [patriarchal] cultural conditioning."⁷ Heterosexual assumptions abound

3. A disparaging term for a lesbian, reclaimed by lesbians as a positive self-description.

4. Sandy Boucher, "Lesbian Artists," in *Lesbian Art and Artists*, a special issue of *Heresies* 3 (fall 1977): 48 [Zimmerman's note].

5. This survey is limited to published and unpublished essays in literary criticism that present a perspective either sympathetic to lesbianism or those explicitly lesbian in orientation. It is limited to literature and to theoretical articles (not book reviews). The sexual preference of the authors is, for the most part, irrelevant; this is an analysis of lesbian feminist *ideas*, not authors. Although the

network of lesbian critics is well developed, some major unpublished papers may have escaped my attention [Zimmerman's note].

in literary texts, such as feminist literary anthologies, that purport to be open-minded about lesbianism. When authors' biographies make special note of husbands, male mentors, and male companions, even when that author was primarily female-identified, but fail to mention the female companions of prominent lesbian writers—that is heterosexism. When anthologists ignore historically significant lesbian writers such as Renée Vivien and Radclyffe Hall⁸—that is heterosexism. When anthologies include only the heterosexual or nonsexual works of a writer like Katherine Philips or Adrienne Rich⁹ who is celebrated for her lesbian or homo-emotional poetry—that is heterosexism. When a topically organized anthology includes sections on wives, mothers, sex objects, young girls, aging women, and liberated women, but not lesbians—that is heterosexism. Heterosexism in feminist anthologies—like the sexism of androcentric¹ collections—serves to obliterate lesbian existence and maintain the lie that women have searched for emotional and sexual fulfillment only through men—or not at all.

Lesbians have also expressed concern that the absence of lesbian material in women's studies journals such as *Feminist Studies*, *Women's Studies*, and *Women and Literature* indicates heterosexism either by omission or by design. Only in 1979 did lesbian-focused articles appear in *Signs* and *Frontiers*.² Most lesbian criticism first appeared in alternative, non-establishment lesbian journals, particularly *Sinister Wisdom* and *Conditions*,³ which are unfamiliar to many feminist scholars. For example, *Signs'* first review article on literary criticism by Elaine Showalter⁴ (1975) makes no mention of lesbianism as a theme or potential critical perspective, not even to point out its absence. Annette Kolodny, in the second review article in *Signs* (1976), does call Jane Rule's *Lesbian Images* "a novelist's challenge to the academy and its accompanying critical community," and further criticizes the homophobia in then-current biographies, calling for "candor and sensitivity" in future work.⁵ However, neither this nor subsequent review articles familiarize the reader with "underground" sources of lesbian criticism, some of which had appeared by this time, nor do they explicate lesbianism as a literary theme or critical perspective. Ironically, more articles on lesbian literature have appeared in traditional literary journals than in the women's studies press, just as for years only male critics felt free to mention lesbianism. Possibly, feminist critics continue to feel that they will be identified as "dykes," thus invalidating their work.

The perceptual screen of heterosexism is also evident in most of the acclaimed works of feminist literary criticism. None of the current collections of essays—such as *The Authority of Experience* or *Shakespeare's Sis-*

8. English poet and novelist (1880–1943), whose work is openly lesbian; her best-known novel is *The Well of Loneliness* (1928), which was banned in England as obscene. Vivien (1877–1909), born Pauline Tarn, in London; French writer of poetry and prose.

9. Contemporary American lesbian feminist poet and critic (b. 1929; see above). Phillips (1623–1664), English poet who celebrates female love and equality.

1. Male-centered.

2. Leading feminist scholarly journals; all began publication in the 1970s.

3. Founded in 1976 and 1977, respectively.

4. A leading American feminist literary critic (b. 1941); Showalter's pioneering *A Literature of Their Own: British Women Novelists from Brontë to Lessing* (1977) was instrumental in establishing a female canon.

5. Annette Kolodny, "Literary Criticism: Review Essay," *Signs* 2 (1976): 416, 419 [Zimmerman's note]. KOLODNY (b. 1941), influential American feminist literary critic. Rule (b. 1931), American-born Canadian novelist; *Lesbian Images*, a collection of essays, was published in 1975.

ters⁶—includes even a token article from a lesbian perspective. Ellen Moers' *Literary Women*,⁷ germinal work as it is, is homophobic as well as heterosexist. Lesbians, she points out, appear as monsters, grotesques, and freaks in works by Carson McCullers, Djuna Barnes (her reading of *Nightwood* is at the very least questionable), and Diane Arbus,⁸ but she seems to concur in this identification rather than call it into question or explain its historical context. Although her so-called defense of unmarried women writers against the "charge" of lesbianism does criticize the way in which this word has been used as a slur, she neither condemns such antilesbianism nor entertains the possibility that some women writers were, in fact, lesbians. Her chapter on "Loving Heroism" is virtually textbook heterosexism, assuming as it does that women writers only articulate love for men. Perceptual blinders also mar *The Female Imagination* by Patricia Meyers Spacks which never uses the word "lesbian" (except in the index) or "lover" to describe either the "sexual ambiguity" of the bond between Jane and Helen in *Jane Eyre*,⁹ nor Margaret Anderson's relationship with a "beloved older woman." Furthermore, Spacks claims that Gertrude Stein, "whose life lack[ed] real attachments" (a surprise to Alice B. Toklas), also "denied whatever is special to women" (which lesbianism is not?).¹ This latter judgment is particularly ominous because heterosexuals often have difficulty accepting that a lesbian, especially a role-playing "butch," is in fact a woman. More care is demonstrated by Elaine Showalter who, in *A Literature of Their Own*, uncovers the attitudes toward lesbianism held by nineteenth-century writers Eliza Lynn Linton and Mrs. Humphrey Ward.² However, she does not integrate lesbian issues into her discussion of the crucial generation of early twentieth-century writers (Virginia Woolf, Vita Sackville-West, Dorothy Richardson, and Rosamond Lehmann³ among others; Radclyffe Hall is mentioned, but not *The Well of Loneliness*), all of whom wrote about sexual love between women. Her well-taken point that modern British novelists avoid lesbianism might have been balanced, however, by a mention of Maureen Duffy, Sybille Bedford, or Fay Weldon.⁴ Finally, Sandra Gilbert and Susan Gubar's *The Madwoman in the Attic* does not even index lesbian-

6. Edited by the influential feminist literary critics and collaborators SANDRA M. GILBERT (b. 1936) and SUSAN GUBAR (b. 1944) (1979). *The Authority of Experience* (1977), edited by Arlyn Diamond and Lee R. Edwards.

7. *Literary Women: The Great Writers* (1976), pioneering feminist work by Moers (1928–1979).

8. American photographer (1923–1971). McCullers (1917–1967), American novelist and short story writer. Barnes (1892–1982), American journalist and novelist best known for her novel *Nightwood* (1936).

9. The 1847 novel by Charlotte Brontë (1816–1855); Helen and the young Jane meet at boarding school (where Helen dies).

1. Spacks, *The Female Imagination* (New York: Avon Books, 1975), pp. 89, 214, 363 [Zimmerman's note]. Anderson (1886–1973), American editor, publisher, and writer; the "older woman" was the French actress and singer Georgette Leblanc (d. 1941), with whom she had a 20-year relationship. In 1907 the American modernist poet and novelist Stein (1874–1946) met the American

Toklas (1877–1967) in Paris, where they lived together for the rest of her life.

2. Both women were successful English novelists; while Linton (1822–1898) caricatured women working toward suffrage as lesbians, Ward (1851–1920), who was also antisuffrage, in her fiction valorized intimate friendships between women.

3. All English novelists: WOOLF (1882–1941) and Sackville-West (1892–1962) had a romantic relationship in the late 1920s; the lifework of Richardson (1873–1957) was a 13-volume novel sequence, *Pilgrimage* (1915–38), that attempted to convey feminine consciousness in a feminine style (to which the description "stream of consciousness" was first applied); and Lehmann (1901–1990) in her first novel, *Dusty Answer* (1927), portrayed an adolescent lesbian relationship.

4. English novelist, playwright, and critic (b. 1931). Duffy (b. 1933), English lesbian novelist, poet, and playwright and socialist activist. Bedford (b. 1911), German-born English novelist and biographer.

ism; the lone reference made in the text is to the possibility that "Goblin Market" describes "a covertly (if ambiguously) lesbian world."⁵ The authors' tendency to interpret all pairs of female characters as aspects of the self sometimes serves to mask a relationship that a lesbian reader might interpret as bonding or love between women.

Lesbian critics, who as feminists owe much to these critical texts, have had to turn to other resources, first to develop a lesbian canon, and then to establish a lesbian critical perspective. Barbara Grier who, as Gene Damon, reviewed books for the pioneering lesbian journal *The Ladder*, laid the groundwork for this canon with her incomparable, but largely unknown *The Lesbian in Literature: A Bibliography*.⁶ Equally obscure was Jeannette Foster's⁷ *Sex Variant Women in Literature*, self-published in 1956 after having been rejected by a university press because of its subject matter. An exhaustive chronological account of every reference to love between women from Sappho and Ruth⁸ to the fiction of the fifties, *Sex Variant Women* has proven to be an invaluable starting point for lesbian readers and scholars. Out of print almost immediately after its publication and lost to all but a few intrepid souls, it was finally reprinted by Diana Press in 1975. A further resource and gathering point for lesbian critics was the special issue on lesbian writing and publishing in *Margins*, a review of small press publications, which appeared in 1975, the first issue of a literary journal devoted entirely to lesbian writing. In 1976, its editor, Beth Hodges, produced a second special issue, this time in *Sinister Wisdom*. Along with the growing visibility and solidarity of lesbians within the academic profession, and the increased availability of lesbian literature from feminist and mass-market presses, these two journal issues propelled lesbian feminist literary criticism to the surface.⁹

The literary resources available to lesbian critics form only part of the story, for lesbian criticism is equally rooted in political ideology. Although not all lesbian critics are activists, most have been strongly influenced by the politics of lesbian feminism. These politics travel the continuum from civil rights advocacy to separatism; however, most, if not all, lesbian feminists assume that lesbianism is a healthy lifestyle chosen by women in virtually all eras and all cultures, and thus strive to eliminate the stigma historically attached to lesbianism. One way to remove this stigma is to associate lesbian-

7. American writer, teacher, and librarian (1895–1981).

8. The biblical figure who swore she would be parted from her mother-in-law, Naomi, only by

death (Ruth 1:15–17). Sappho (b. ca. 612 B.C.E.), Greek lyric poet who was at the center of a band of women who worshipped Aphrodite and the Muses; it is because of the intensity of the feelings for her companions, expressed in her poems, that the English word for female homosexual was coined from the name of her home island, Lesbos.

9. In addition, networks of lesbian critics, teachers, and scholars were established through panels at the Modern Language Association's annual convention and at the Lesbian Writer's Conference in Chicago, which began in 1974 and continued for several years. Currently, networking continues through conferences, journals, and other institutionalized outlets [Zimmerman's note]. The MLA is the primary North American professional organization for literary scholars in English and foreign languages; its annual convention includes hundreds of panels, which are forums at which academic papers are presented.

ism with positive and desirable attributes, to divert women's attention away from male values and toward an exclusively female *communitas*. Thus, the influential Radicalesbians' essay, "The Woman-Identified Woman," argues that lesbian feminism assumes "the primacy of women relating to women, of women creating a new consciousness of and with each other. . . . We see ourselves as prime, find our centers inside of ourselves."¹ Many lesbian writers and critics have also been influenced profoundly by the politics of separatism which provides a critique of heterosexuality as a political institution rather than a personal choice, "because relationships between men and women are essentially political, they involve power and dominance."² As we shall see, the notion of "woman-identification," that is, the primacy of women bonding with women emotionally and politically, as well as the premises of separatism, that lesbians have a unique and critical place at the margins of patriarchal society, are central to much current lesbian literary criticism.

Unmasking heterosexist assumptions in feminist literary criticism has been an important but hardly primary task for lesbian critics. We are more concerned with the development of a unique lesbian feminist perspective or, at the very least, determining whether or not such a perspective is possible. In order to do so, lesbian critics have had to begin with a special question: "When is a text a 'lesbian text' or its writer a 'lesbian writer'?"³ Lesbians are faced with this special problem of definition: presumably we know when a writer is a "Victorian writer" or a "Canadian writer." To answer this question, we have to determine how inclusively or exclusively we define "lesbian." Should we limit this appellation to those women for whom sexual experience with other women can be proven? This is an almost impossible historical task, as many have noted, for what constitutes proof? Women have not left obvious markers in their private writings. Furthermore, such a narrow definition "names" lesbianism as an exclusively sexual phenomenon which; many argue, may be an inadequate construction of lesbian experience, both today and in less sexually explicit eras. This sexual definition of lesbianism also leads to the identification of literature with life, and thus can be an overly defensive and suspect strategy.

Nevertheless, lesbian criticism continues to be plagued with the problem of definition. One perspective insists that

desire must be there and at least somewhat embodied. . . . That carnality distinguishes it from gestures of political sympathy for homosexuals and from affectionate friendships in which women enjoy each other, support each other, and commingle their sense of identity and well-being.⁴

1. Radicalesbians, "The Woman-Identified Woman," in *Radical Feminism*, ed. Anne Koedt, Ellen Levine, and Anita Rapone (New York: Quadrangle, 1973), and extensively reprinted in women's studies anthologies [Zimmerman's note]. Radicalesbians: American group of lesbian separatists, formed in 1970 largely in reaction to discrimination against lesbians within the women's movement (particularly the National Organization for Women), which cast lesbianism as a political choice (defining a lesbian as "the rage of all women condensed to the point of explosion"); members

included the novelist and poet Rita Mae Brown and the writer and activist Karla Jay.

2. Charlotte Bunch, "Lesbians in Revolt," in *Lesbianism and the Women's Movement*, ed. Nancy Myron and Charlotte Bunch (Baltimore: Diana Press, 1975), p. 30 [Zimmerman's note].

4. Catharine R. Stimpson, "Zero Degree Deviancy: A Study of the Lesbian Novel," unpublished

A second perspective, which might be called a school, claims, on the contrary, that "the very meaning of lesbianism is being expanded in literature, just as it is being redefined through politics."⁵ An articulate spokeswoman for this "expanded meaning" school of criticism is Adrienne Rich, who offers a compelling inclusive definition of lesbianism:

I mean the term *lesbian continuum* to include a range—through each woman's life and throughout history—of woman-identified experience; not simply the fact that a woman has had or consciously desired genital experience with another woman. If we expand it to embrace many more forms of primary intensity between and among women, including the sharing of a rich inner life, the bonding against male tyranny, the giving and receiving of practical and political support . . . we begin to grasp breadths of female history and psychology which have lain out of reach as a consequence of limited, mostly clinical, definitions of 'lesbianism.'⁶

This definition has the virtue of deemphasizing lesbianism as a static entity and of suggesting interconnections among the various ways in which women bond together. However, all inclusive definitions of lesbianism risk blurring the distinctions between lesbian relationships and non-lesbian female friendships, or between lesbian identity and female-centered identity. Some lesbian writers would deny that there are such distinctions, but this position is reductive and of mixed value to those who are developing lesbian criticism and theory and who may need limited and precise definitions. In fact, reductionism is a serious problem in lesbian ideology. Too often, we identify lesbian and woman, or feminist: we equate lesbianism with any close bonds between women or with political commitment to women. These identifications can be fuzzy and historically questionable, as, for example, in the claim that lesbians have a unique relationship with nature or (as Rich also has claimed) that all female creativity is lesbian. By so reducing the meaning of lesbian, we have in effect eliminated lesbianism as a meaningful category.

A similar problem arises when lesbian theorists redefine lesbianism politically, equating it with strength, independence, and resistance to patriarchy. This new political definition then influences the interpretation of literature: "If in a woman writer's work a sentence refuses to do what it is supposed to do, if there are strong images of women and if there is a refusal to be linear, the result is innately lesbian literature."⁷ The concept of an "innately" lesbian perspective or aesthetic allows the critic to separate lesbianism from biographical content, which is an essential development in lesbian critical theory. Literary interpretation will, of course, be supported by historical and biographical evidence, but perhaps lesbian critics should borrow a few insights from New Criticism.⁸ If a text lends itself to a lesbian reading, then

paper [Zimmerman's note]. Later published as "Zero Degree Deviancy: The Lesbian Novel in English," *Critical Inquiry* 8 (winter 1981): 363–80.

8. A formalist approach (championed by CLEANTH BROOKS, WILLIAM K. WIMSATT JR., and others) that emphasizes close reading of the text considered as an autonomous whole; it has greatly influenced teaching from the mid-20th century onward.

no amount of biographic "proof" ought to be necessary to establish it as a lesbian text. Barbara Smith, for example, interprets Toni Morrison's *Sula*⁹ as a lesbian novel, regardless of the author's affectional preference. But we need to be cautious about what we call "innately" lesbian. Why is circularity or strength limited to lesbians, or, similarly, why is love of nature or creativity? It is certainly not evident that women, let alone lesbians, are "innately" anything. And, although it might require a lesbian perspective to stress the dominant relationship between Nel and Sula ("All that time, all that time, I thought I was missing Jude"), it is difficult to imagine a novel so imbued with heterosexuality as lesbian.

Almost midway between the inclusive and exclusive approaches to a definition of lesbianism lies that of Lillian Faderman in her extraordinary overview, *Surpassing the Love of Man: Romantic Friendship and Love Between Women From the Renaissance to the Present*. Faderman's precise definition of lesbianism provides a conceptual framework for the four hundred years of literary history explored by the text:

"Lesbian" describes a relationship in which two women's strongest emotions and affections are directed toward each other. Sexual contact may be a part of the relationship to a greater or lesser degree, or it may be entirely absent. By preference the two women spend most of their time together and share most aspects of their lives with each other.¹

Broader than the exclusive definition of lesbianism—for Faderman argues that not all lesbian relationships may be fully embodied—but narrower than Rich's "lesbian continuum," this definition is both specific and discriminating. The book is slightly marred by a defensive, overexplanatory tone, caused, no doubt, by her attempt to neutralize the "intense charge of the word *lesbian*"; note, for example, that this charged word is omitted from the title.² Furthermore, certain problems remain with her framework, as with any that a lesbian critic or historian might establish. The historical relationship between genital sexuality and lesbianism remains unclear, and we cannot identify easily lesbianism outside a monogamous relationship. Nevertheless, despite problems in definition that may be inherent in lesbian studies, the strength of *Surpassing the Love of Men* is partially the precision with which Faderman defines her topic and chooses her texts and subjects.

This problem of definition is exacerbated by the problem of silence. One of the most pervasive themes in lesbian criticism is that woman-identified writers, silenced by a homophobic and misogynistic society, have been forced to adopt coded and obscure language and internal censorship. Emily Dickinson³ counseled us to "tell all the truth / but tell it slant," and critics are now calculating what price we have paid for slanted truth. The silences of heterosexual women writers may become lies for lesbian writers, as Rich warns: "a life 'in the closet' . . . [may] spread into private life, so that lying

(described as *discretion*) becomes an easy way to avoid conflict or complication."⁴ Gloria T. Hull recounts the moving story of just such a victim of society, the black lesbian poet Angelina Weld Grimké, whose "convoluted life and thwarted sexuality" marked her slim output of poetry with images of self-abnegation, diminution, sadness, and the wish for death. The lesbian writer who is working class or a woman of color may be particularly isolated, shackled by conventions and, ultimately, silenced "with [her] real gifts stifled within."⁵ What does a lesbian writer do when the words cannot be silenced? Critics are pointing to the codes and strategies for literary survival adopted by many women. For example, Willa Cather⁶ may have adopted her characteristic male persona in order to express safely her emotional and erotic feelings for other women. Thus, a writer some critics call antifeminist or at least disappointing may be better appreciated when her lesbianism is taken into account. Similarly, many ask whether Gertrude Stein cultivated obscurity, encoding her lesbianism in order to express hidden feelings and evade potential enemies. Or, on the other hand, Stein may have been always a declared lesbian, but a victim of readers' (and scholars') unwillingness or inability to pay her the close and sympathetic attention she requires.⁷

The silence of "Shakespeare's [lesbian] sister"⁸ has meant that modern writers have had little or no tradition with which to nurture themselves. Feminist critics such as Moers, Showalter, and Gilbert and Gubar have demonstrated the extent and significance of a female literary tradition, but the lesbian writer developed her craft alone (and perhaps this is the significance of the title of the lesbian novel about novel writing, *The Well of Loneliness*). Elly Bulkin's much-reprinted article on lesbian poetry points out that lesbian poets "have their work shaped by the simple fact of their having begun to write without knowledge of such history and with little or no hope of support from a woman's and/or lesbian writing community."⁹ If white women can at least imagine a lesbian literature, the black lesbian writer, as Barbara Smith demonstrates, is even more hampered by the lack of tradition: "Black women are still in the position of having to 'imagine,' discover and verify Black lesbian literature because so little has been written from an avowedly lesbian perspective."¹ Blanche Wiesen Cook points out further that all lesbians are affected by this absence of tradition and role models, or the limiting of role models to Hall's Stephen Gordon. She also reminds us that our lesbian foremothers and networks were not simply lost and forgotten; rather, our past has been "erased," obliterated by the actions of a hostile society.²

It would appear then that lesbian critics are faced with a set of problems that make our work particularly delicate and problematic, requiring caution,

sensitivity, and flexibility as well as imagination and risk. Lesbian criticism begins with the establishment of the lesbian text: the creation of language out of silence. The critic must first define the term "lesbian" and then determine its applicability to both writer and text, sorting out the relation of literature to life. Her definition of lesbianism will influence the texts she identifies as lesbian, and, except for the growing body of literature written from an explicit lesbian perspective since the development of a lesbian political movement, it is likely that many will disagree with various identifications of lesbian texts. It is not only *Sula* that may provoke controversy, but even the "coded" works of lesbian writers like Gertrude Stein. The critic will need to consider whether a lesbian text is one written by a lesbian (and if so, how do we determine who is a lesbian?), one written about lesbians (which might be by a heterosexual woman or a man), or one that expresses a lesbian "vision" (which has yet to be satisfactorily outlined). But despite the problems raised by definition, silence and coding, and absence of tradition, lesbian critics have begun to develop a critical stance. Often this stance involves peering into shadows, into the spaces between words, into what has been unspoken and barely imagined. It is a perilous critical adventure with results that may violate accepted norms of traditional criticism, but which may also transform our notions of literary possibility.

One of the first tasks of this emerging lesbian criticism has been to provide lesbians with a tradition, even if a retrospective one. Jane Rule, whose *Lesbian Images* appeared about the same time as *Literary Women*, first attempted to establish this tradition. Although her text is problematic, relying overly much on biographical evidence and derivative interpretations and including some questionable writers (such as Dorothy Baker³) while omitting others, *Lesbian Images* was a milestone in lesbian criticism. Its importance is partially suggested by the fact that it took five years for another complete book—Faderman's—to appear on lesbian literature. In a review of *Lesbian Images*, I questioned the existence of a lesbian "great tradition" in literature, but now I think I was wrong.⁴ Along with Rule, Dolores Klaich in *Woman Plus Woman* and Louise Bernikow in the introduction to *The World Split Open* have explored the possibility of a lesbian tradition,⁵ and recent critics such as Faderman and Cook in particular have begun to define that tradition, who belongs to it, and what links the writers who can be identified as lesbians. Cook's review of lesbian literature and culture in the early twentieth century proposes "to analyze the literature and attitudes out of which the present lesbian feminist works have emerged, and to examine the continued denials and invalidation of the lesbian experience."⁶ Focusing on the recognized lesbian networks in France and England that included Virginia Woolf, Vita Sackville-West, Ethel Smyth, Gertrude Stein, Radclyffe Hall, Natalie Barney, and Romaine Brooks,⁷ Cook provides an important outline of a les-

bian cultural tradition and an insightful analysis of the distortions and denials of homophobic scholars, critics, and biographers.

Faderman's *Surpassing the Love of Men*, like her earlier critical articles, ranges more widely through a literary tradition of romantic love between women (whether or not one calls that "lesbian") from the sixteenth to the twentieth centuries. Her thesis is that passionate love between women was labeled neither abnormal nor undesirable—probably because women were perceived to be asexual—until the sexologists led by Krafft-Ebing and Havelock Ellis⁸ "morbidity" female friendship around 1900.

Although she does not always clarify the dialectic between idealization and condemnation that is suggested in her text, Faderman's basic theory is quite convincing. Most readers, like myself, will be amazed at the wealth of information about women's same-sex love that Faderman has uncovered. She rescues from heterosexual obscurity Mary Wollstonecraft, Mary Wortley Montagu, Anna Seward, Sarah Orne Jewett, Edith Somerville, "Michael Field," and many others, including the Scottish school-mistresses whose lesbian libel suit inspired Lillian Hellman's *The Children's Hour*.⁹ Faderman has also written on the theme of same-sex love and romantic friendship in poems and letters of Emily Dickinson; in novels by Henry James, Oliver Wendell Holmes, and Henry Wadsworth Longfellow;¹ and in popular magazine fiction of the early twentieth century.²

Faderman is preeminent among those critics who are attempting to establish a lesbian tradition by rereading writers of the past previously assumed to be heterosexual or "spinsters." As songwriter Holly Near expresses it: "Lady poet of great acclaim / I have been misreading you / I never knew your poems were meant for me."³ It is in this area of lesbian scholarship that the most controversy—and some of the most exciting work—occurs. Was Mary Wollstonecraft's passionate love for Fanny Blood, recorded in *Mary, A Fiction*,⁴ lesbian? Does Henry James dissect a lesbian relationship in *The Bostonians*? Did Emily Dickinson address many of her love poems to a woman, not a man? How did Virginia Woolf's relationship with Vita Sackville-West and Ethel Smyth affect her literary vision? Not only are some lesbian critics increasingly naming such women and relationships "lesbian," they are also

women's suffrage. Barney (1876–1972), American lesbian writer whose Paris salon attracted famous writers and artists for 60 years.

suggesting that criticism cannot fail to take into account the influence of sexual and emotional orientation on literary expression.

In the establishment of a self-conscious literary tradition, certain writers have become focal points both for critics and for lesbians in general, who affirm and celebrate their identity by "naming names," establishing a sense of historical continuity and community through the knowledge that incontrovertibly great women were also lesbians. Foremost among these heroes (or "heras") are the women who created the first self-identified lesbian feminist community in Paris during the early years of the twentieth century. With Natalie Barney at its hub, this circle included such notable writers as Colette,⁵ Djuna Barnes, Radclyffe Hall, Renée Vivien, and, peripherally, Gertrude Stein. Contemporary lesbians—literary critics, historians, and layreaders—have been drawn to their mythic and mythmaking presence, seeing in them a vision of lesbian society and culture that may have existed only once before on the original island of Lesbos. More interest, however, has been paid to their lives so far than to their art. Barnes's portraits of decadent, tormented lesbians and homosexuals in *Nightwood* and silly, salacious ones in *The Ladies Almanack*⁶ often prove troublesome to lesbian readers and critics. However, Elaine Marks's perceptive study of French lesbian writers traces a tradition and how it has changed, modified by circumstance and by feminism, from the Sappho of Renée Vivien to the amazons of Monique Wittig.⁷

The problems inherent in reading lesbian literature primarily for role modeling is most evident with Hall—the most notorious of literary lesbians—whose archetypal "butch," Stephen Gordon, has bothered readers since the publication of *The Well of Loneliness*. Although one critic praises it as "the standard by which all subsequent similar works are measured," most contemporary lesbian feminists would, I believe, agree with Faderman's harsh condemnation that it "helped to wreak confusion in young women."⁸ Such an extraliterary debate is not limited to lesbian novels and lesbian characters; I am reminded of the intense disappointment expressed by many feminists over George Eliot's⁹ disposal of Dorothea Brooke in *Middlemarch*. In both cases, the cry is the same: why haven't these writers provided us with appropriate role models? Cook may be justified in criticizing Hall for creating a narrow and debilitating image for lesbians who follow, but my reading of the novel (and that of Catherine Stimpson in an excellent study of the lesbian novel) convinces me that both Hall's hero and message are highly complex.¹ In looking to writers for a tradition, we need to recognize that the tradition may not always be a happy one. Women like Stephen Gordon exist alongside characters like Molly Bolt, in Rita Mae Brown's *Rubyfruit Jungle*,² but lesbians may also question whether or not the incarnation of a "politically cor-

rect" but elusive and utopian mythology provides our only appropriate role model.

As with Hall, many readers and critics are strongly antipathetic to Stein, citing her reactionary and antifeminist politics and her role-playing relationship with Alice B. Toklas. However, other critics, by carefully analyzing Stein's actual words, establish, convincingly to my reading, that she did have a lesbian and feminist perspective, calling into question assumptions about coding and masculine role playing. Cynthia Secor, who is developing an exciting lesbian feminist interpretation of Stein, argues that her novel *Ida* attempts to discover what it means to be a female person, and that the author profited from her position on the boundaries of patriarchal society: "Stein's own experience as a lesbian gives her a critical distance that shapes her understanding of the struggle to be one's self. Her own identity is not shaped as she moves into relation with a man."³ Similarly, Elizabeth Fifer points out that Stein's situation encouraged her to experiment with parody, theatricality, role playing, and "the diversity of ways possible to look at homosexual love and at her love object."⁴ Deirdre Vanderlinde finds in *Three Lives* "one of the earliest attempts to find a new language in which to say, 'I, woman-loving woman, exist.'⁵ Catharine Stimpson places more critical emphasis on Stein's use of masculine pronouns and conventional language, but despite what may have been her compromise, Stimpson feels that female bonding in Stein provides her with a private solution to woman's mind-body split.⁶

Along with Stein, Dickinson's woman-identification has drawn the most attention from recent critics, and has generated considerable controversy between lesbian and other feminist critics. Faderman insists that Dickinson's love for women must be considered homosexual, and that critics must take into account her sexuality (or affectionality). Like most critics who accept this lesbian identification of Dickinson, she points to Susan Gilbert Dickinson as Emily's primary romantic and sexual passion. Both Faderman and Bernikow thus argue that Dickinson's "muse" was sometimes a female figure as well as a male.⁷ Some of this work can be justifiably criticized for too closely identifying literature with life; however, by altering our awareness of what is possible—namely, that Dickinson's poetry was inspired by her love for a woman—we also can transform our response to the poetry. Paula Bennett daringly suggests that Dickinson's use of crumbs, jewels, pebbles, and similar objects was an attempt to create "clitoral imagery."⁸ In a controversial paper on the subject, Nadean Bishop argues forcefully that the poet's marriage poems must be reread in light of what she considers to have been Dickinson's consummated sexual relationship with her sister-in-law.⁹

The establishment of a lesbian literary tradition, a "canon," as my lengthy discussion suggests, has been the primary task of critics writing from a lesbian feminist perspective. But it is not the only focus to emerge. For example, lesbian critics, like feminist critics in the early seventies, have begun to analyze the images, stereotypes, and mythic presence of lesbians in fiction by or about lesbians. Bertha Harris, a major novelist as well as a provocative and trailblazing critic, considers the lesbian to be the prototype of the monster and "the quintessence of all that is female; and female enraged . . . a lesbian is . . . that which has been unspeakable about women."¹ Harris offers this monstrous lesbian as a female archetype who subverts traditional notions of female submissiveness, passivity, and virtue. Her "tooth-and-claw" image of the lesbian is ironically similar to that of Ellen Moers, although from a lesbian rather than heterosexual point of view. But the very fact that Moers presents the lesbian-as-monster in a derogatory context and Harris in a celebratory one suggests that there is an important dialectic between how the lesbian articulates herself and how she is articulated and objectified by others. Popular culture, in particular, exposes the objectifying purpose of the lesbian-as-monster image, such as the lesbian vampire first created by Joseph Sheridan LeFanu's 1871 ghost story, "Carmilla," and revived in early 1970s "B" films as a symbolic attack on women's struggle for self-identity.² Other critics also have analyzed the negative symbolic appearance of the lesbian in literature. Ann Allen Shockley, reviewing black lesbian characters in American fiction, notes that "within these works exists an undercurrent of hostility, trepidation, subtlety, shadiness, and in some instances, ignorance culling forth homophobic stereotypes."³ Homophobic stereotypes are also what Judith McDaniel and Maureen Brady find in abundance in recent commercial fiction (such as *Kinflicks*, *A Sea Change*, *Some Do* and *How to Save Your Own Life*⁴) by avowedly feminist novelists. Although individuals might disagree with McDaniel and Brady's severe criticism of specific novels, their overall argument is unimpeachable. Contemporary feminist fiction, by perpetuating stereotyped characters and themes (such as the punishment theme so dear to prefeminist lesbian literature), serves to "disempower the lesbian."⁵ Lesbian, as well as heterosexual, writers present the lesbian as Other, as Julia Penelope Stanley discovered in prefeminist fiction: "the lesbian character creates for herself a mythology of darkness, a world in which she moves through dreams and shadows."⁶ Lesbian critics may wish to avoid this analysis of the lesbian as Other because we no longer wish to dwell upon the cultural violence done against us. Yet this area must be explored until we strip these stereotypes of their inhibiting and dehumanizing presence in our popular culture and social mythology.

Lesbian critics have also delved into the area of stylistics and literary theory. If we have been silenced for centuries and speak an oppressor's tongue, then liberation for the lesbian must begin with language. Some writers may have reconciled their internal censor with their speech by writing in code, but many critics maintain that modern lesbian writers, because they are uniquely alienated from the patriarchy, experiment with its literary style and form. Julia Penelope Stanley and Susan Wolfe, considering such diverse writers as Virginia Woolf, Gertrude Stein, Kate Millett, and Elana Dyke-woman,⁷ claim that "a feminist aesthetic, as it emerges out of women's evolution, grounds itself in female consciousness and in the unrelenting language of process and change."⁸ In this article, the authors do not call their feminist aesthetic a lesbian feminist aesthetic, although all the writers they discuss are, in fact, lesbians. Susan Wolfe later confronted this fact: "Few women who continue to identify with men can risk the male censure of 'women's style,' and few escape the male perspective long enough to attempt it."⁹ Through examples from Kate Millett, Jill Johnston,¹ and Monique Wittig, she illustrates her contention that lesbian literature is characterized by the use of the continuous present, unconventional grammar and neologism; and that it breaks boundaries between art and the world, between events and our perceptions of them, and between past, present, and the dream world. It is, as even the proponents of this theory admit, highly debatable that all lesbian writers are modernists, or that all modernists are lesbians. If Virginia Woolf wrote in nonlinear, stream-of-consciousness style because she was a lesbian (or "woman-identified") how does one explain Dorothy Richardson whose *Pilgrimage*, despite one lesbian relationship, is primarily heterosexual? If both Woolf and Richardson can be called "feminist" stylists, then how does one explain the nonlinear experimentation of James Joyce or Alain Robbe-Grillet,² for example? The holes that presently exist in this theory should not, however, detract from the highly suggestive overlap between experimental and lesbian writers. Nor should we ignore the clear evidence that many contemporary, self-conscious lesbian writers (such as Wittig, Johnston, Bertha Harris and June Arnold) are choosing an experimental style as well as content.

This development of a self-conscious lesbian literature and literary theory in recent years has led a number of critics to investigate the unifying themes and values of current literature. Such an attempt has been made by Elly Bulkin, who traces the various sources of contemporary lesbian poetry, analyzes "the range of lesbian voices," and advises feminist teachers how to teach lesbian poetry. Mary Carruthers, in asking why so much contemporary feminist poetry is also lesbian, observes that the "lesbian love celebrated in contemporary women's poetry requires an affirmation of the value of femaleness, women's bodies, women's sexuality—in women's language."³ Jane Gurko and

Sally Gearhart compare contemporary lesbian and gay male literature, attempting to discern to what extent one or the other transforms heterosexual ideology. They claim that, unlike gay male literature, lesbian literature "does express a revolutionary model of sexuality which in its structure, its content, and its practice defies the fundamental violent assumptions of patriarchal culture."⁴ There is a danger in this attempt to establish a characteristic lesbian vision or literary value system, one that is well illustrated by this article. In an attempt to say *this* is what defines a lesbian literature, we are easily tempted to read selectively, omitting what is foreign to our theories. Most contemporary lesbian literature does embrace a rhetoric of nonviolence, but this is not universally true: for example, M. F. Beal's *Angel Dance*⁵ is a lesbian hard-boiled detective novel and Monique Wittig's *Le Corps lesbien* is infused with a violent eroticism that is, nonetheless, intensely nonpatriarchal. Violence, role playing, disaffection, unhappiness, suicide, and self-hatred, to name a few "taboo" subjects, all exist within the lesbian culture, and a useful criticism will have to effectively analyze these as *lesbian* themes and issues, regardless of ideological purity.

Lesbian feminist criticism faces a number of concerns that must be addressed as it grows in force and clarity. Among these concerns is the fact that this criticism is dominated by the politics of lesbian separatism. This is exemplified by the following statement from *Sinister Wisdom*, a journal that has developed a consistent and articulate separatist politics,

'lesbian consciousness' is really a point of view, a view from the boundary. And in a sense every time a woman draws a circle around her psyche, saying 'this is a room of *my own*.' and then writes from within that 'room,' she's inhabiting lesbian consciousness.⁶

The value of separatism which, I believe, has always provided the most exciting theoretical developments in lesbian ideology, is precisely this marginality: lesbian existence "on the periphery of patriarchy."⁷ Separatism provides criticism, as it did for lesbian politics, a cutting edge and radical energy that keeps us moving forward rather than backward either from fear or complacency. Those critics who maintain a consciously chosen position on the boundaries (and not one imposed by a hostile society) help to keep lesbian and feminist criticism radical and provocative, preventing both from becoming another arm of the established truth. At the same time, however, it is essential that separatist criticism does not itself become an orthodoxy, and thus repetitive, empty, and resistant to change. Lesbian criticism, as Kolodny has argued about feminist criticism, has more to gain from resisting dogma than from monotheism.⁸ Understandably, those critics and scholars willing to identify themselves publicly as lesbians also have tended to hold radical politics of marginality. Exposing one's self to public scrutiny as a lesbian may

in fact entail marginality through denial of tenure or loss of job, and those lesbians willing to risk these consequences usually have a political position that justifies their risk. However, to me it seems imperative that lesbian criticism develop diversity in theory and approach. Much as lesbians, even more than heterosexual feminists, may mistrust systems of thought developed by and associated with men and male values, we may, in fact, enrich our work through the insights of Marxist, structuralist, semiotic, or even psychoanalytic criticism. Perhaps "male" systems of thought are incompatible with a lesbian literary vision, but we will not know until we attempt to integrate these ideas into our work.

Similarly, lesbian criticism and cultural theory in general can only gain by developing a greater specificity, historically and culturally. We have tended to write and act as if lesbian experience—which is perceived as that of a contemporary, white middle-class feminist—is universal and unchanging. Although most lesbians know that this is not the case, we too often forget to apply rigorous historical and cross-cultural tools to our scholarship. Much of this ahistoricity occurs around the shifting definitions of lesbianism from one era and one culture to another. To state simply that Wollstonecraft "was" a lesbian because she passionately loved Fanny Blood, or Susan B. Anthony was a lesbian because she wrote amorous letters to Anna Dickinson,⁹ without accounting for historical circumstances, may serve to distort or dislocate the actual meaning of these women's lives (just as it is distorting to *deny* their love for women). There are also notable differences among the institution of the *berdache* (the adoption by one sex of the opposite gender role) in Native American tribes; *faute de mieux*¹ lesbian activity tolerated in France (as in Colette's *Claudine* novels); idyllic romantic friendships (such as that of the famous Ladies of Llangollen²); and contemporary self-conscious lesbianism. I do believe that there is a common structure—a lesbian "essence"—that may be located in all these specific historical existences, just as we may speak of a widespread, perhaps universal, structure of marriage or the family. However, in each of these cases—lesbianism, marriage, the family—careful attention to history teaches us that differences are as significant as similarities, and vital information about female survival may be found in the different ways in which women have responded to their historical situation. This tendency toward simplistic universalism is accompanied by what I see as a dangerous development of biological determinism and a curious revival of the nineteenth-century feminist notion of female (now lesbian) moral superiority—that women are uniquely caring and superior to inherently violent males. Although only an undertone in some criticism and literature, any such sociobiological impulse should be questioned at every appearance.

The denial of meaningful differences among women is being challenged, particularly around the issue of racism. Bulkin has raised criticisms about the racism of white lesbian feminist theory. She has written that

if I can put together—or think someone else can put together—a viable piece of feminist criticism or theory whose base is the thought and writ-

9. American orator, playwright, and abolitionist (1842–1932), who had a romantic friendship with Anthony (1820–1906), American abolitionist who became a leader of the women's suffrage movement.

1. For want of anything better (French).

2. Nickname of Lady Eleanor Butler (1739–1829) and Sarah Ponsonby (1755–1831), two English women who in 1778 defied their families' wishes to live together in Llangollen Vale, in north Wales, where they received visits from many distinguished writers (including WILLIAM WORDSWORTH).

ing of white women/lesbians and expect that an analysis of racism can be tacked on or dealt with later as a useful addition, it is a measure of the extent to which I partake of that white privilege.³

Implicit in the criticism of Bulkin and other antiracist writers is the belief that lesbians, because of our experience of stigma and exclusion from the feminist mainstream, ought to be particularly sensitive to the dynamic between oppression and oppressing. White lesbians who are concerned about eradicating racism in criticism and theory have been greatly influenced as well by the work of several black lesbian feminist literary critics, such as Gloria T. Hull, Barbara Smith, and Lorraine Bethel. Such concern is not yet present over the issue of class, although the historical association of lesbianism with upper-class values has often been used by left-wing political groups and governments to deny legitimacy to homosexual rights and needs. Lesbian critics studying the Barney circle, for example, might analyze the historical connections between lesbianism and class status. Lesbian critics might also develop comparisons among the literature of various nationalities because the lesbian canon is of necessity cross-national. We have barely explored the differences between American, English, French, and German lesbian literature (although *Surpassing the Love of Men* draws some distinctions), let alone non-Western literature. The paucity of lesbian scholars trained in these literatures has so far prevented the development of a truly international lesbian literary canon.

As lesbian criticism matures, we may anticipate the development of ongoing and compelling political and practical concerns. At this time, for example, lesbians are still defining and discovering texts. We are certainly not as badly off as we were in the early seventies when the only lesbian novels in print were *The Well of Loneliness*, *Rubyfruit Jungle*, and Isabel Miller's *Patience and Sarah*.⁴ However, texts published prior to 1970 are still difficult to find, and even *The Well of Loneliness* is intermittently available at the whim of publishers. Furthermore, the demise of Diana Press and the apparent slowdown of Daughters (two of the most active lesbian publishing houses) leaves many major works unavailable, possibly forever. As the boom in gay literature subsides, teachers of literature will find it very difficult to unearth teachable texts. Scholars have the excellent Arno Press series, *Homosexuality: Lesbians and Gay Men in Society, History, and Literature*, but, as Faderman's monumental scholarship reveals, far more lesbian literature exists than anyone has suspected. This literature needs to be unearthed, analyzed, explicated, perhaps translated, and made available to readers.

As lesbian critics, we also need to address the exclusion of lesbian literature from not merely the traditional, but also the feminist canon. Little lesbian literature has been integrated into the mainstream of feminist texts, as evidenced by what is criticized, collected, and taught. It is a matter of serious concern that lesbian literature is omitted from anthologies or included in mere token amounts, or that critical works and Modern Language Association panels still exclude lesbianism. It may as yet be possible for heterosexual feminists to claim ignorance about lesbian literature; however, lesbian critics

should make it impossible for that claim to stand much longer. Lesbianism is still perceived as a minor and somewhat discomfiting variation within the female life cycle, when it is mentioned at all. Just as we need to integrate lesbian material and perspectives into the traditional and feminist canons, we might also apply lesbian theory to traditional literature. Feminists have not only pointed out the sexism in many canonical works, but have also provided creative and influential rereadings of these works; similarly lesbians might contribute to the rereading of the classics. For example, *The Bostonians*, an obvious text, has been reread often from a lesbian perspective, and we could reinterpret D. H. Lawrence's antifeminism or Doris Lessing's⁵ compromised feminism (particularly in *The Golden Notebook*) by relating these attitudes to their fear of or discomfort with lesbianism. Other texts or selections of texts—such as Rossetti's "Goblin Market" or the relationship between Lucy Snowe and Ginevra Fanshawe in *Villette*⁶—might reveal a subtext that could be called lesbian. Just as few texts escape a feminist revision, few might evade a lesbian transformation.

This last point—that there is a way in which we might "review" literature as lesbians—brings me to my conclusion. In a brief period of a few years, critics have begun to demonstrate the existence of a distinct lesbian aesthetic, just as feminists have outlined elements of a female aesthetic. Certain components of this aesthetic or critical perspective are clear:

Perhaps lesbian feminist criticism [or literature, I would add] is a political or thematic perspective, a kind of imagination that can see beyond the barriers of heterosexuality, role stereotypes, patterns of language and culture that may be repressive to female sexuality and expression.⁷

A lesbian artist very likely would express herself differently about sexuality, the body, and relationships. But are there other—less obvious—unifying themes, ideas, and imagery that might define a lesbian text or subtext? How, for example, does the lesbian's sense of outlaw status affect her literary vision? Might lesbian writing, because of the lesbian's position on the boundaries, be characterized by a particular sense of freedom and flexibility or, rather, by images of violently imposed barriers, the closet? Or, in fact, is there a dialectic between freedom and imprisonment unique to lesbian writing? Do lesbians have a special perception of suffering and stigma, as so much prefeminist literature seems to suggest? What about the "muse," the female symbol of literary creativity: do women writers create a lesbian relationship with their muse as May Sarton⁸ asserts? If so, do those writers who choose a female muse experience a freedom from inhibition because of that fact, or might there be a lack of creative tension in such a figurative same-sex relationship? I feel on solid ground in asserting that there are certain topics and themes that define lesbian culture, and that we are beginning to define a lesbian symbolism. Lesbian literature may present a unified tradition of thematic concerns such as that of unrequited longing, a longing of almost cosmic totality because the love object is denied not by circumstance or

chance, but by necessity. The tension between romantic love and genital sexuality takes a particular form in woman-to-woman relationships, often articulated through musings of the difference between purity and impurity (culminating in Colette's study of variant sexuality, *The Pure and the Impure*⁹). Lesbian literature approaches the theme of development or the quest in a manner different from that of men or heterosexual women. Lesbian literature, as lesbian culture in general, is particularly flexible on issues of gender and role identification; even *The Well of Loneliness* hints at the tragedy of rigid gender roles. Because of this flexibility, lesbian artists and writers have always been fascinated with costuming, because dress is an external manifestation of gender roles lesbians often reject. As we read and reread literature from a lesbian perspective, I am confident we will continue to expand our understanding of the lesbian literary tradition and a lesbian aesthetic.

This essay has suggested the vigor of lesbian criticism and its value to all feminists in raising awareness of entrenched heterosexism in existing texts, clarifying the lesbian traditions in literature through scholarship and reinterpretation, pointing out barriers that have stood in the way of free lesbian expression, explicating the recurring themes and values of lesbian literature, and exposing the dehumanizing stereotypes of lesbians in our culture. Many of the issues that face lesbian critics—resisting dogma, expanding the canon, creating a non-racist and non-classist critical vision, transforming our readings of traditional texts, and exploring new methodologies—are the interests of all feminist critics. Because feminism concerns itself with the removal of limitations and impediments in the way of female imagination, and lesbian criticism helps to expand our notions of what is *possible* for women, then all women would grow by adopting for themselves a lesbian vision. Disenfranchised groups have had to adopt a double vision for survival; one of the political transformations of recent decades has been the realization that enfranchised groups—men, whites, heterosexuals, the middle class—would do well to adopt that double vision for the survival of us all. Lesbian literary criticism simply restates what feminists already know, that one group cannot name itself “humanity” or even “woman”: “We’re not trying to become part of the old order misnamed ‘universal’ which has tabooed us; we are transforming the meaning of ‘universality.’”¹ Whether lesbian criticism will survive depends as much upon the external social climate as it does upon the creativity and skill of its practitioners. If political attacks on gay rights and freedom grow; if the so-called Moral Majority² wins its fight to eliminate gay teachers and texts from the schools (it would be foolhardy to believe they will exempt universities); and if the academy, including feminist teachers and scholars, fails to support lesbian scholars, eradicate heterosexist values and assumptions, and incorporate the insights of lesbian scholarship into the mainstream; then current lesbian criticism will probably suffer the same fate as did Jeannette Foster's *Sex Variant Women* in the fifties. Lesbian or heterosexual, we will all suffer from that loss.

SUSAN BORDO

b. 1947

Susan Bordo epitomizes feminist efforts to detail the oppression of women and the resources available for resistance. Although strongly influenced by MICHEL FOUCAULT, Bordo is wary of theory and the academy. She advocates a politically active feminism. Writing in a steely, lucid prose that reaches out to nonacademic audiences, she works against both cultural self-congratulation ("you've come a long way, baby") and the abstractions of French feminism. She insists on the practical consequences for women's daily lives of feminism's analyses of contemporary culture. Bordo's work on the physical shaping of women's bodies by cultural forces introduces a crucial gendered element into contemporary literary and cultural theory's interest in the processes involved in the formation of social subjects.

Bordo was educated at Carleton College and the State University of New York at Stony Brook, from which she received her Ph.D. in 1982. She has taught at Le Moyne College and the University of Kentucky. Trained as a philosopher, she now describes her work as "gender studies," which is "part of cultural studies." "But neither gender studies nor cultural studies," she writes, "can be of much significance unless they reach outside the academic world." She calls the "slow unlearning" of the "language" and "arrogance" of the academy her "second and ongoing education."

Bordo's early work explored the exclusionary use of terms such as "rationality" and "objectivity" in the philosophical tradition. Like others studying what came to be called "feminist epistemology," she argued that knowledge is not something achieved by a pure mind that "distances" itself from the object it studies. Rather, knowledge is "embodied," produced from a "standpoint" by a body that is located as a material entity among other material entities. Her work participates in an emerging field called "body studies."

Not all bodies are alike. Different bodies are assigned to different locations, are represented differently in prevailing cultural codes, and are accorded different authority as producers of knowledge. One crucial way to differentiate bodies is, of course, gender. Bordo turns her attention to the ways in which the body is a "text of culture." Prevailing and enforced cultural notions of gender differences are inscribed on the body, as it shapes itself to fit conventions of proper appearance, deportment, and physical activity.

Psychoanalytic feminists tend to discuss the shaping of the girl's body and of her relation to it in generalized terms that posit a triangular familial relation (mother-father-daughter) and an overarching patriarchal Law (the law of the father, compulsory heterosexuality, or the incest taboo). Bordo eschews this focus on the family, contending instead that a variety of social forces converge in the shaping of bodies—and that this constellation of forces shifts over time and from one society to another. The decline in hysteria and the recent rise in anorexia and bulimia point to changes in the cultural nexus within which bodies are produced. Like others who adopt a "social constructivist" position, Bordo argues that the body does not have a fixed and enduring nature; bodies are plastic and change in response to the social demands placed on them.

Bordo follows other contemporary feminists (such as Elaine Showalter, and SANDRA M. GILBERT and SUSAN GUBAR) in noting that women over the past two hundred years are more prone than men to suffer from a number of illnesses that occupy an ill-defined terrain between the physical and the psychological. In our selection from her book *Unbearable Weight* (1993), Bordo focuses on three such illnesses: hysteria (extreme emotional excitability), anorexia (inability or refusal to eat), and agoraphobia (inability to enter public places). She strives to demonstrate that these "pathologies of resistance" mark the ways individual women *both* insert their bodies into "the

network of practices, institutions, and technologies" within which bodies are produced *and* struggle against those very networks.

Her analysis of anorexia provides an example of this doubleness. Contemporary women in the United States, Bordo argues, are pulled in multiple directions as competing demands are made on them. The anorectic's refusal to eat is tied directly to the peculiar "double bind" in which today's young woman is placed. She is expected to emulate the impossibly thin body that is presented as the ideal in countless media images, while she is also urged—in a kind of demonic parody of feminism—to take control of her own life, to be strong, to become a superwoman. The conflicting message is that only one ideal is acceptable, but you are supposed to be your own woman. Anorexia for Bordo is not solely, as in some popular accounts, the result of an obsession with thinness; it is also, crucially, a comprehensible response to powerlessness. The young woman dramatically enacts her powerlessness by playing the female role to its extreme, making its destructive underpinnings obvious. Paradoxically, this strategy also secures for her a modicum of power as she gains control over her appetite and directly resists (albeit in a self-destructive way) the family, friends, and therapists who urge her to eat.

Bordo is careful to say that cultural images are not everything. "Anorexia," she writes, "clearly contains a dimension of physical addiction to the biochemical effects of starvation." But like Foucault, she focuses on the discourses through which society produces, understands, defines, and interprets the female body. Social codings of beauty, of motherhood, of sexual modesty or its opposite place the individual woman in relation to the prevailing images and conventions. Even if that relation is one of negation and resistance, the power of the categories is still felt as the individual struggles against them. Every body is marked by its relation to the "constitutive mechanisms" of a "power" that "shapes." Femininity, for Bordo, is ideology (a culture's dominant notions of the feminine) inscribed on the body.

In presenting anorexia as a parodic demonstration of the destructive energy stored in our cultural categories, Bordo appears close to JUDITH BUTLER's influential discussion of how homosexual cross-dressing "troubles" gender categories. But Bordo has been sharply critical of Butler because she believes that Butler vastly underestimates the suffering the parodic body endures and vastly overestimates the cultural or political effectiveness of parody. Anorexia, as analyzed by Bordo, may be an eloquent bodily articulation of the unreasonable demands our society places on women, but that articulation through parody can hardly be celebrated or encouraged when its practical effects "utterly defeat rebellion and subvert protest." Anorexia is self-destructive and does nothing in itself to alter the cultural order that calls it forth. Action, Bordo insists, must come on other fronts, especially those of feminist critique and feminist political activism. In this respect, Bordo self-consciously looks back to the feminism of the late 1960s and early 1970s as a model.

The fundamental dispute between Bordo and Butler, or more widely between Anglo-American and French-oriented feminisms, rests on the question of how political and cultural transformation should be attempted. Bordo honors "female praxis": individual and collective action with clear, conscious goals that are pursued through a series of purposive strategies. Similarly, she aims for subjects who are reasonably at home in their bodies, who can experience their bodies as aligned with their purposes and aspirations in life. The anorectic demonstrates how difficult American culture makes it for women to achieve such selfhood and such a relation to their bodies, but the example of the anorectic does not lead Bordo to think the basic goal unattainable. French feminists and those influenced by them believe that such desires for self-unity are themselves symptoms of the repressive patriarchal cultural order of intelligibility that must be transformed. All ideals of coherence, of unity, of conscious control must be problematized if we are not to repeat endlessly the enforcement of differences that characterizes existing male cultural domination. The two sides share the conviction that cultural codings are powerful and that feminism begins with an

analysis of how those codings exercise power, especially over the ongoing social construction of bodies. Their disagreements over the site of the most effective cultural and political interventions continue to resonate throughout feminist theory.

BIBLIOGRAPHY

Bordo is the author of *The Flight to Objectivity: Essays on Cartesianism and Culture* (1987), *Unbearable Weight: Feminism, Western Culture, and the Body* (1993), and *Twilight Zones: The Hidden Life of Cultural Images from Plato to O.J.* (1997). Chapter 5. The Body and the Reproduction of Femininity

RECONSTRUCTING FEMINIST DISCOURSE ON THE BODY

The body—what we eat, how we dress, the daily rituals through which we attend to the body—is a medium of culture. The body, as anthropologist Mary Douglas has argued, is a powerful symbolic form, a surface on which the central rules, hierarchies, and even metaphysical commitments of a culture are inscribed and thus reinforced through the concrete language of the body.¹ The body may also operate as a metaphor for culture. From quarters as diverse as Plato and Hobbes to French feminist Luce Irigaray,² an imagination of body morphology has provided a blueprint for diagnosis and/or vision of social and political life.

The body is not only a *text* of culture. It is also, as anthropologist Pierre Bourdieu and philosopher Michel Foucault³ (among others) have argued, a *practical*, direct locus of social control. Banally, through table manners and toilet habits, through seemingly trivial routines, rules, and practices, culture is "*made* body," as Bourdieu puts it—converted into automatic, habitual activity. As such it is put "beyond the grasp of consciousness . . . [untouchable] by voluntary, deliberate transformations."⁴ Our conscious politics, social commitments, strivings for change may be undermined and betrayed by the life of our bodies—not the craving, instinctual body imagined by Plato, Augustine, and Freud,⁵ but what Foucault calls the "docile body," regulated by the norms of cultural life.⁶

5. SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis. AUGUSTINE (354–430), Christian theologian. The three thinkers all evidenced a disgust with the body, especially the female body [editor's note].

6. On docility, see Michel Foucault, *Discipline and Punish* (New York: Vintage, 1979), pp. 135–69. For a Foucauldian analysis of feminine practice, see Sandra Bartky, "Foucault, Femininity, and the Modernization of Patriarchal Power," in

Throughout his later "genealogical" works (*Discipline and Punish, The History of Sexuality*), Foucault constantly reminds us of the primacy of practice over belief. Not chiefly through ideology, but through the organization and regulation of the time, space, and movements of our daily lives, our bodies are trained, shaped, and impressed with the stamp of prevailing historical forms of selfhood, desire, masculinity, femininity. Such an emphasis casts a dark and disquieting shadow across the contemporary scene. For women, as study after study shows, are spending more time on the management and discipline of our bodies than we have in a long, long time. In a decade marked by a reopening of the public arena to women, the intensification of such regimens appears diversionary and subverting. Through the pursuit of an ever-changing, homogenizing, elusive ideal of femininity—a pursuit without a terminus, requiring that women constantly attend to minute and often whimsical changes in fashion—female bodies become docile bodies—bodies whose forces and energies are habituated to external regulation, subjection, transformation, "improvement." Through the exacting and normalizing disciplines of diet, makeup, and dress—central organizing principles of time and space in the day of many women—we are rendered less socially oriented and more centripetally focused on self-modification. Through these disciplines, we continue to memorize on our bodies the feel and conviction of lack, of insufficiency, of never being good enough. At the farthest extremes, the practices of femininity may lead us to utter demoralization, debilitation, and death.

Viewed historically, the discipline and normalization of the female body—perhaps the only gender oppression that exercises itself, although to different degrees and in different forms, across age, race, class, and sexual orientation—has to be acknowledged as an amazingly durable and flexible strategy of social control. In our own era, it is difficult to avoid the recognition that the contemporary preoccupation with appearance, which still affects women far more powerfully than men, even in our narcissistic and visually oriented culture, may function as a backlash phenomenon, reasserting existing gender configurations against any attempts to shift or transform power relations.⁷ Surely we are in the throes of this backlash today. In newspapers and magazines we daily encounter stories that promote traditional gender relations and prey on anxieties about change: stories about latch-key children, abuse in day-care centers, the "new woman's" troubles with men, her lack of marriageability, and so on. A dominant visual theme in teenage magazines involves women hiding in the shadows of men, seeking solace in their arms,

her *Femininity and Domination* (New York: Routledge, 1990); see also Susan Brownmiller, *Femininity* (New York: Ballantine, 1984).

7. During the late 1970s and 1980s, male concern over appearance undeniably increased. Study after study confirms, however, that there is still a large gender gap in this area. Research conducted at the University of Pennsylvania in 1985 found men to be generally satisfied with their appearance, often, in fact, "distorting their perceptions [of themselves] in a positive, self-aggrandizing way" ("Dislike of Own Bodies Found Common among Women," *New York Times*, March 19, 1985, p. C1). Women, however, were found to exhibit extreme negative assessments and distortions of body perception. Other studies have suggested that women are judged more harshly than men when they deviate from dominant social standards of

attractiveness. Thomas Cash et al., in "The Great American Shape-Up," *Psychology Today*, April 1986, p. 34, report that although the situation for men has changed, the situation for women has more than proportionally worsened. Citing results from 30,000 responses to a 1985 survey of perceptions of body image and comparing similar responses to a 1972 questionnaire, they report that the 1985 respondents were considerably more dissatisfied with their bodies than the 1972 respondents, and they note a marked intensification of concern among men. Among the 1985 group, the group most dissatisfied of all with their appearance, however, were teenage women. Women today constitute by far the largest number of consumers of diet products, attenders of spas and diet centers, and subjects of intestinal by-pass and other fat-reduction operations.

willingly contracting the space they occupy. The last, of course, also describes our contemporary aesthetic ideal for women, an ideal whose obsessive pursuit has become the central torment of many women's lives. In such an era we desperately need an effective political discourse about the female body, a discourse adequate to an analysis of the insidious, and often paradoxical, pathways of modern social control.

Developing such a discourse requires reconstructing the feminist paradigm of the late 1960s and early 1970s, with its political categories of oppressors and oppressed, villains and victims. Here I believe that a feminist appropriation of some of Foucault's later concepts can prove useful. Following Foucault, we must first abandon the idea of power as something possessed by one group and leveled against another; we must instead think of the network of practices, institutions, and technologies that sustain positions of dominance and subordination in a particular domain.

Second, we need an analytics adequate to describe a power whose central mechanisms are not repressive, but *constitutive*: "a power bent on generating forces, making them grow, and ordering them, rather than one dedicated to impeding them, making them submit, or destroying them." Particularly in the realm of femininity, where so much depends on the seemingly willing acceptance of various norms and practices, we need an analysis of power "from below," as Foucault puts it; for example, of the mechanisms that shape and proliferate—rather than repress—desire, generate and focus our energies, construct our conceptions of normalcy and deviance.⁸

And, third, we need a discourse that will enable us to account for the subversion of potential rebellion, a discourse that, while insisting on the necessity of objective analysis of power relations, social hierarchy, political backlash, and so forth, will nonetheless allow us to confront the mechanisms by which the subject at times becomes enmeshed in collusion with forces that sustain her own oppression.

This essay will not attempt to produce a general theory along these lines. Rather, my focus will be the analysis of one particular arena where the interplay of these dynamics is striking and perhaps exemplary. It is a limited and unusual arena, that of a group of gender-related and historically localized disorders: hysteria, agoraphobia, and anorexia nervosa.⁹ I recognize that these disorders have also historically been class- and race-biased, largely (although not exclusively) occurring among white middle- and upper-middle-class women. Nonetheless, anorexia, hysteria, and agoraphobia may provide

8. Michel Foucault, *The History of Sexuality*, vol. 1, *An Introduction* (New York: Vintage, 1980), pp. 136, 94.

9. On the gendered and historical nature of these disorders: the number of female to male hysterics has been estimated at anywhere from 2:1 to 4:1, and as many as 80 percent of all agoraphobics are female (Annette Brodsky and Rachel Hare-Mustin, *Women and Psychotherapy* [New York: Guilford Press, 1980], pp. 116, 122). Although more cases of male eating disorders have been reported in the late eighties and early nineties, it is estimated that close to 90 percent of all anorexics are female (Paul Garfinkel and David Garner, *Anorexia Nervosa: A Multidimensional Perspective* [New York: Brunner/Mazel, 1982], pp. 112–13). For a sophisticated account of female psychopathology, with particular attention to nineteenth-century disor-

ders but, unfortunately, little mention of agoraphobia or eating disorders, see Elaine Showalter, *The Female Malady: Women, Madness and English Culture, 1830–1980* (New York: Pantheon, 1985). For a discussion of social and gender issues in agoraphobia, see Robert Seidenberg and Karen De-Crow, *Women Who Marry Houses: Panic and Protest in Agoraphobia* (New York: McGraw-Hill, 1983). On the history of anorexia nervosa, see Joan Jacobs Brumberg, *Fasting Girls: The Emergence of Anorexia Nervosa as a Modern Disease* (Cambridge: Harvard University Press, 1988). ["Hysteria": a psychoneurosis marked by emotional excitability. The word derives from the Greek word for womb; it was thought that such ailments were peculiar to women and caused by disturbances of the uterus—editor's note.]

a paradigm of one way in which potential resistance is not merely undercut but *utilized* in the maintenance and reproduction of existing power relations.¹

The central mechanism I will describe involves a transformation (or, if you wish, duality) of meaning, through which conditions that are objectively (and, on one level, experientially) constraining, enslaving, and even murderous, come to be experienced as liberating, transforming, and life-giving. I offer this analysis, although limited to a specific domain, as an example of how various contemporary critical discourses may be joined to yield an understanding of the subtle and often unwitting role played by our bodies in the symbolization and reproduction of gender.

THE BODY AS A TEXT OF FEMININITY

The continuum between female disorder and "normal" feminine practice is sharply revealed through a close reading of those disorders to which women have been particularly vulnerable. These, of course, have varied historically: neurasthenia² and hysteria in the second half of the nineteenth century; agoraphobia and, most dramatically, anorexia nervosa and bulimia in the second half of the twentieth century. This is not to say that anorectics did not exist in the nineteenth century—many cases were described, usually in the context of diagnoses of hysteria³—or that women no longer suffer from classical hysterical symptoms in the twentieth century. But the taking up of eating disorders on a mass scale is as unique to the culture of the 1980s as the epidemic of hysteria was to the Victorian era.⁴

The symptomatology of these disorders reveals itself as textuality. Loss of mobility, loss of voice, inability to leave the home, feeding others while starving oneself, taking up space, and whittling down the space one's body takes up—all have symbolic meaning, all have *political* meaning under the varying rules governing the historical construction of gender. Working within this framework, we see that whether we look at hysteria, agoraphobia, or anorexia, we find the body of the sufferer deeply inscribed with an ideological construction of femininity emblematic of the period in question. The construction, of course, is always homogenizing and normalizing, erasing racial, class, and other differences and insisting that all women aspire to a coercive, standardized ideal. Strikingly, in these disorders the construction of femininity is written in disturbingly concrete, hyperbolic terms: exaggerated, extremely literal, at times virtually caricatured presentations of the ruling feminine mystique. The bodies of disordered women in this way offer themselves as an aggressively graphic text for the interpreter—a text that insists, actually demands, that it be read as a cultural statement, a statement about gender.

1. In constructing such a paradigm I do not pretend to do justice to any of these disorders in its individual complexity. My aim is to chart some points of intersection, to describe some similar patterns, as they emerge through a particular reading of the phenomenon—a political reading, if you will.

2. An emotional and psychic disorder characterized by easy fatigability and often by lack of motivation, as well as feelings of inadequacy (editor's

note).

3. Showalter, *The Female Malady*, pp. 128–29.

4. On the epidemic of hysteria and neurasthenia, see Showalter, *The Female Malady*; Carroll Smith-Rosenberg, "The Hysterical Woman: Sex Roles and Role Conflict in Nineteenth-Century America," in her *Disorderly Conduct: Visions of Gender in Victorian America* (Oxford: Oxford University Press, 1985).

Both nineteenth-century male physicians and twentieth-century feminist critics have seen, in the symptoms of neurasthenia and hysteria (syndromes that became increasingly less differentiated as the century wore on), an exaggeration of stereotypically feminine traits. The nineteenth-century "lady" was idealized in terms of delicacy and dreaminess, sexual passivity, and a charmingly labile and capricious emotionality.⁵ Such notions were formalized and scientized in the work of male theorists from Acton and Krafft-Ebing⁶ to Freud, who described "normal," mature femininity in such terms.⁷ In this context, the dissociations, the drifting and fogging of perception, the nervous tremors and faints, the anesthetics,⁸ and the extreme mutability of symptomatology associated with nineteenth-century female disorders can be seen to be concretizations of the feminine mystique of the period, produced according to rules that governed the prevailing construction of femininity. Doctors described what came to be known as the hysterical personality as "impressionable, suggestible, and narcissistic; highly labile, their moods changing suddenly, dramatically, and seemingly for inconsequential reasons . . . egocentric in the extreme . . . essentially asexual and not uncommonly frigid"⁹—all characteristics normative of femininity in this era. As Elaine Showalter points out, the term *hysterical* itself became almost interchangeable with the term *feminine* in the literature of the period.¹

The hysteric's embodiment of the feminine mystique of her era, however, seems subtle and ineffable compared to the ingenious literalism of agoraphobia and anorexia. In the context of our culture this literalism makes sense. With the advent of movies and television, the rules for femininity have come to be culturally transmitted more and more through standardized visual images. As a result, femininity itself has come to be largely a matter of constructing, in the manner described by Erving Goffman, the appropriate surface presentation of the self.² We are no longer given verbal descriptions or exemplars of what a lady is or of what femininity consists. Rather, we learn the rules directly through bodily discourse: through images that tell us what clothes, body shape, facial expression, movements, and behavior are required.

In agoraphobia and, even more dramatically, in anorexia, the disorder presents itself as a virtual, though tragic, parody of twentieth-century constructions of femininity. The 1950s and early 1960s, when agoraphobia first began to escalate among women, was a period of reassertion of domesticity and

dependency as the feminine ideal. *Career woman* became a dirty word, much more so than it had been during the war, when the economy depended on women's willingness to do "men's work." The reigning ideology of femininity, so well described by Betty Friedan and perfectly captured in the movies and television shows of the era, was childlike, nonassertive, helpless without a man, "content in a world of bedroom and kitchen, sex, babies and home."³ The housebound agoraphobic lives this construction of femininity literally. "You want me in this home? You'll have me in this home—with a vengeance!" The point, upon which many therapists have commented, does not need belaboring. Agoraphobia, as I. G. Fodor has put it, seems "the logical—albeit extreme—extension of the cultural sex-role stereotype for women" in this era.⁴

The emaciated body of the anorectic, of course, immediately presents itself as a caricature of the contemporary ideal of hyperslenderness for women, an ideal that, despite the game resistance of racial and ethnic difference, has become the norm for women today. But slenderness is only the tip of the iceberg, for slenderness itself requires interpretation. "C'est le sens qui fait vendre," said Barthes, speaking of clothing styles—it is meaning that makes the sale.⁵ So, too, it is meaning that makes the body admirable. To the degree that anorexia may be said to be "about" slenderness, it is about slenderness, as a citadel of contemporary and historical meaning, not as an empty fashion ideal. As such, the interpretation of slenderness yields multiple readings, some related to gender, some not. For the purposes of this essay I will offer an abbreviated, gender-focused reading. But I must stress that this reading illuminates only partially, and that many other currents not discussed here—economic, psychosocial, and historical, as well as ethnic and class dimensions—figure prominently.⁶

We begin with the painfully literal inscription, on the anorectic's body, of the rules governing the construction of contemporary femininity. That construction is a double bind⁷ that legislates contradictory ideals and directives. On the one hand, our culture still widely advertises domestic conceptions of femininity, the ideological moorings for a rigorously dualistic sexual division of labor that casts woman as chief emotional and physical nurturer. The rules for this construction of femininity (and I speak here in a language both symbolic and literal) require that women learn to feed others, not the self, and to construe any desires for self-nurturance and self-feeding as greedy and excessive.⁸ Thus, women must develop a totally other-oriented emotional

3. Betty Friedan, *The Feminine Mystique* (New York: Dell, 1962), p. 36. The theme song of one such show ran, in part, "I married Joan . . . What a girl . . . what a whirl . . . what a life! I married Joan . . . What a mind . . . love is blind . . . what a wife!" [From *I Married Joan*, an NBC sitcom (1952–55)—editor's note.]

5. In Jonathan Culler, *Roland Barthes* (New York: Oxford University Press, 1983), p. 74. [BARTHES (1915–1980), French literary critic—editor's note.]

6. For other interpretive perspectives on the slenderness ideal, see "Reading the Slender Body" in *Unbearable Weight* (1993); Klm Chernin, *The Obsession: Reflections on the Tyranny of Slenderness* (New York: Harper and Row, 1981); Susie Orbach, *Hunger Strike: The Anorectic's Struggle as a Metaphor for Our Age* (New York: W. W. Norton, 1985).

7. A psychological predicament in which a person receives from a single source conflicting messages that allow no appropriate response. First coined in 1956 by the Scottish psychologist R. D. Laing in his study of schizophrenic children, the term is now used more broadly [editor's note].

8. See my "Hunger as Ideology" in *Unbearable Weight* for a discussion of how this construction of femininity is reproduced in contemporary commercials and advertisements concerning food, eating, and cooking.

economy. In this economy, the control of female appetite for food is merely the most concrete expression of the general rule governing the construction of femininity: that female hunger—for public power, for independence, for sexual gratification—be contained, and the public space that women be allowed to take up be circumscribed, limited. * * * [S]lenderness, set off against the resurgent muscularity and bulk of the current male body-ideal, carries connotations of fragility and lack of power in the face of a decisive male occupation of social space. On the body of the anorexic woman such rules are grimly and deeply etched.

On the other hand, even as young women today continue to be taught traditionally "feminine" virtues, to the degree that the professional arena is open to them they must also learn to embody the "masculine" language and values of that arena—self-control, determination, cool, emotional discipline, mastery, and so on. Female bodies now speak symbolically of this necessity in their slender spare shape and the currently fashionable men's-wear look. * * * Our bodies, too, as we trudge to the gym every day and fiercely resist both our hungers and our desire to soothe ourselves, are becoming more and more practiced at the "male" virtues of control and self-mastery. * * * The anorectic pursues these virtues with single-minded, unswerving dedication. "Energy, discipline, my own power will keep me going," says ex-anorectic Aimee Liu, recreating her anorectic days. "I need nothing and no one else. . . . I will be master of my own body, if nothing else, I vow."⁹

The ideal of slenderness, then, and the diet and exercise regimens that have become inseparable from it offer the illusion of meeting, through the body, the contradictory demands of the contemporary ideology of femininity. Popular images reflect this dual demand. In a single issue of *Complete Woman* magazine, two articles appear, one on "Feminine Intuition," the other asking, "Are You the New Macho Woman?" In *Vision Quest*,¹ the young male hero falls in love with the heroine, as he says, because "she has all the best things I like in girls and all the best things I like in guys," that is, she's tough and cool, but warm and alluring. In the enormously popular *Aliens*, the heroine's personality has been deliberately constructed, with near-comic book explicitness, to embody traditional nurturant femininity alongside breathtaking macho prowess and control; Sigourney Weaver, the actress who portrays her, has called the character "Rambolina."²

In the pursuit of slenderness and the denial of appetite the traditional construction of femininity intersects with the new requirement for women to embody the "masculine" values of the public arena. The anorectic, as I have argued, embodies this intersection, this double bind, in a particularly painful and graphic way.³ I mean *double bind* quite literally here. "Mascu-

2. That is, a feminine version of the excessively masculine hero (played by Sylvester Stallone) of the popular Rambo movies: *First Blood* (1982), *Rambo: First Blood Part II* (1985), and *Rambo III* (1988). *Aliens* (1986), a film directed by James Cameron [editor's note].

3. Striking, in connection with this, is Catherine Steiner-Adair's 1984 study of high-school women, which reveals a dramatic association between

problems with food and body image and emulation of the cool, professionally "together" and gorgeous superwoman. On the basis of a series of interviews, the high schoolers were classified into two groups: one expressed skepticism over the superwoman ideal, the other thoroughly aspired to it. Later administrations of diagnostic tests revealed that 94 percent of the pro-superwoman group fell into the eating-disordered range of the scale. Of the other group, 100 percent fell into the noneating-disordered range. Media images notwithstanding, young women today appear to sense, either consciously or through their bodies, the

linity" and "femininity," at least since the nineteenth century and arguably before, have been constructed through a process of mutual exclusion. One cannot simply add the historically feminine virtues to the historically masculine ones to yield a New Woman, a New Man, a new ethics, or a new culture. Even on the screen or on television, embodied in created characters like the *Aliens* heroine, the result is a parody. Unfortunately, in this image-bedazzled culture, we find it increasingly difficult to discriminate between parodies and possibilities for the self. Explored as a possibility for the self, the "androgynous" ideal ultimately exposes its internal contradiction and becomes a war that tears the subject in two—a war explicitly thematized, by many anorexics, as a battle between male and female sides of the self.⁴

PROTEST AND RETREAT IN THE SAME GESTURE

In hysteria, agoraphobia, and anorexia, then, the woman's body may be viewed as a surface on which conventional constructions of femininity are exposed starkly to view, through their inscription in extreme or hyperliteral form. They are written, of course, in languages of horrible suffering. It is as though these bodies are speaking to us of the pathology and violence that lurks just around the corner, waiting at the horizon of "normal" femininity. It is no wonder that a steady motif in the feminist literature on female disorder is that of pathology as embodied *protest*—unconscious, inchoate, and counterproductive protest without an effective language, voice, or politics, but protest nonetheless.

American and French feminists⁵ alike have heard the hysteric speaking a language of protest, even or perhaps especially when she was mute. Dianne Hunter interprets Anna O.'s⁶ aphasia, which manifested itself in an inability to speak her native German, as a rebellion against the linguistic and cultural rules of the father and a return to the "mother-tongue": the semiotic babble of infancy, the language of the body. For Hunter, and for a number of other feminists working with Lacanian categories, the return to the semiotic level is both regressive and, as Hunter puts it, an "expressive" communication "addressed to patriarchal thought," "a self-repudiating form of feminine discourse in which the body signifies what social conditions make it impossible to state linguistically."⁷ "The hysterics are accusing; they are pointing," writes Catherine Clément in *The Newly Born Woman*; they make a "mockery of culture."⁸ In the same volume, Hélène Cixous speaks of "those wonderful hysterics, who subjected Freud to so many voluptuous moments too shameful to mention, bombarding his mosaic statute/law of Moses with their carnal, passionate body-words, haunting him with their inaudible thundering

impossibility of simultaneously meeting the demands of two spheres whose values have been historically defined in utter opposition to each other.

denunciations." For Cixous, Dora, who so frustrated Freud, is "the core example of the protesting force in women."⁹

The literature of protest includes functional as well as symbolic approaches. Robert Seidenberg and Karen DeCrow, for example, describe agoraphobia as a "strike" against "the renunciations usually demanded of women" and the expectations of housewifely functions such as shopping, driving the children to school, accompanying their husband to social events.¹ Carroll Smith-Rosenberg presents a similar analysis of hysteria, arguing that by preventing the woman from functioning in the wifely role of caretaker of others, of "ministering angel" to husband and children, hysteria "became one way in which conventional women could express—in most cases unconsciously—dissatisfaction with one or several aspects of their lives."² A number of feminist writers, among whom Susie Orbach is the most articulate and forceful, have interpreted anorexia as a species of unconscious feminist protest. The anorectic is engaged in a "hunger strike," as Orbach calls it, stressing that this is a political discourse, in which the action of food refusal and dramatic transformation of body size "expresses with [the] body what [the anorectic] is unable to tell us with words"—her indictment of a culture that disdains and suppresses female hunger, makes women ashamed of their appetites and needs, and demands that women constantly work on the transformation of their body.³

The anorectic, of course, is unaware that she is making a political statement. She may, indeed, be hostile to feminism and any other critical perspectives that she views as disputing her own autonomy and control or questioning the cultural ideals around which her life is organized. Through embodied rather than deliberate demonstration she exposes and indicts those ideals, precisely by pursuing them to the point at which their destructive potential is revealed for all to see.

The same gesture that expresses protest, moreover, can also signal retreat; this, indeed, may be part of the symptom's attraction. Kim Chernin, for example, argues that the debilitating anorexic fixation, by halting or mitigating personal development, assuages this generation's guilt and separation

9. Clément and Cixous, *The Newly Born Woman*, p. 95. [Dora: the pseudonym of the patient discussed in Freud's *Dora: An Analysis of a Case of Hysteria* (1904). The case has attracted much feminist attention because Freud discounts what seems the fairly obvious sexual abuse of the young Dora by several older men in her circle while imputing various deviant sexual desires to Dora herself. The French feminist CIXOUS (b. 1937) wrote a play about Dora—editor's note.]

2. Smith-Rosenberg, *Disorderly Conduct*, p. 208.

3. Orbach, *Hunger Strike*, p. 102. When we look into the many autobiographies and case studies of hysterics, anorectics, and agoraphobics, we find that these are indeed the sorts of women one might expect to be frustrated by the constraints of a specified female role. Sigmund Freud and Joseph Breuer, in *Studies on Hysteria* (New York: Avon, 1966), and Freud, in the later *Dora: An Analysis of a Case of Hysteria* (New York: Macmillan, 1963), constantly remark on the ambitiousness, independence, intellectual ability, and creative strivings of their patients. We know, moreover, that many

women who later became leading social activists and feminists of the nineteenth century were among those who fell ill with hysteria and neurasthenia. It has become a virtual cliché that the typical anorectic is a perfectionist, driven to excel in all areas of her life. Though less prominently, a similar theme runs throughout the literature on agoraphobia.

One must keep in mind that in drawing on case studies, one is relying on the perceptions of other acculturated individuals. One suspects, for example, that the popular portrait of the anorectic as a relentless overachiever may be colored by the lingering or perhaps resurgent Victorianism of our culture's attitudes toward ambitious women. One does not escape this hermeneutic problem by turning to autobiography. But in autobiography one is at least dealing with social constructions and attitudes that animate the subject's own psychic reality. In this regard the autobiographical literature on anorexia, drawn on in a variety of places in *Unbearable Weight*, is strikingly full of anxiety about the domestic world and other themes that suggest deep rebellion against traditional notions of femininity.

anxiety over the prospect of surpassing our mothers, of living less circumscribed, freer lives.⁴ Agoraphobia, too, which often develops shortly after marriage, clearly functions in many cases as a way to cement dependency and attachment in the face of unacceptable stirrings of dissatisfaction and restlessness.

Although we may talk meaningfully of protest, then, I want to emphasize the counterproductive, tragically self-defeating (indeed, self-deconstructing) nature of that protest. Functionally, the symptoms of these disorders isolate, weaken, and undermine the sufferers; at the same time they turn the life of the body into an all-absorbing fetish, beside which all other objects of attention pale into unreality. On the symbolic level, too, the protest collapses into its opposite and proclaims the utter capitulation of the subject to the contracted female world. The muteness of hysterics and their return to the level of pure, primary bodily expressivity have been interpreted, as we have seen, as rejecting the symbolic order of the patriarchy and recovering a lost world of semiotic, maternal value. But *at the same time*, of course, muteness is the condition of the silent, uncomplaining woman—an ideal of patriarchal culture. Protesting the stifling of the female voice through one's own voicelessness—that is, employing the language of femininity to protest the conditions of the female world—will always involve ambiguities of this sort. Perhaps this is why symptoms crystallized from the language of femininity are so perfectly suited to express the dilemmas of middle-class and upper-middle-class women living in periods poised on the edge of gender change, women who have the social and material resources to carry the traditional construction of femininity to symbolic excess but who also confront the anxieties of new possibilities. The late nineteenth century, the post-World War II period, and the late twentieth century are all periods in which gender becomes an issue to be discussed and in which discourse proliferates about “the Woman Question,” “the New Woman,” “What Women Want,” “What Femininity Is.”

COLLUSION, RESISTANCE, AND THE BODY

The pathologies of female protest function, paradoxically, as if in collusion with the cultural conditions that produce them, reproducing rather than transforming precisely that which is being protested. In this connection, the fact that hysteria and anorexia have peaked during historical periods of cultural backlash against attempts at reorganization and redefinition of male and female roles is significant. Female pathology reveals itself here as an extremely interesting social formation through which one source of potential for resistance and rebellion is pressed into the service of maintaining the established order.

In our attempt to explain this formation, objective accounts of power relations fail us. For whatever the objective social conditions are that create a pathology, the symptoms themselves must still be produced (however unconsciously or inadvertently) by the subject. That is, the individual must invest the body with meanings of various sorts. Only by examining this productive process on the part of the subject can we, as Mark Poster has put it, “illuminate the mechanisms of domination in the processes through which mean-

4. Kim Chernin, *The Hungry Self: Women, Eating, and Identity* (New York: Harper and Row, 1985), esp. pp. 41–93.

ing is produced in everyday life"; that is, only then can we see how the desires and dreams of the subject become implicated in the matrix of power relations.⁵

Here, examining the context in which the anorexic syndrome is produced may be illuminating. Anorexia will erupt, typically, in the course of what begins as a fairly moderate diet regime, undertaken because someone, often the father, has made a casual critical remark. Anorexia *begins in*, emerges out of, what is, in our time, conventional feminine practice. In the course of that practice, for any number of individual reasons, the practice is pushed a little beyond the parameters of moderate dieting. The young woman discovers what it feels like to crave and want and need and yet, through the exercise of her own will, to triumph over that need. In the process, a new realm of meanings is discovered, a range of values and possibilities that Western culture has traditionally coded as "male" and rarely made available to women: an ethic and aesthetic of self-mastery and self-transcendence, expertise, and power over others through the example of superior will and control. The experience is intoxicating, habit-forming.

At school the anorectic discovers that her steadily shrinking body is admired, not so much as an aesthetic or sexual object, but for the strength of will and self-control it projects. At home she discovers, in the inevitable battles her parents fight to get her to eat, that her actions have enormous power over the lives of those around her. As her body begins to lose its traditional feminine curves, its breasts and hips and rounded stomach, begins to feel and look more like a spare, lanky male body, she begins to feel untouchable, out of reach of hurt, "invulnerable, clean and hard as the bones etched into my silhouette," as one student described it in her journal. She despises, in particular, all those parts of her body that continue to mark her as female. "If only I could eliminate [my breasts]," says Liu, "cut them off if need be."⁶ For her, as for many anorectics, the breasts represent a bovine, unconscious, vulnerable side of the self. Liu's body symbolism is thoroughly continuous with dominant cultural associations. Brett Silverstein's studies on the "Possible Causes of the Thin Standard of Bodily Attractiveness for Women"⁷ testify empirically to what is obvious from every comedy routine involving a dramatically shapely woman: namely, our cultural association of curvaceousness with incompetence. The anorectic is also quite aware, of course, of the social and sexual vulnerability involved in having a female body; many, in fact, were sexually abused as children.

Through her anorexia, by contrast, she has unexpectedly discovered an entry into the privileged male world, a way to become what is valued in our culture, a way to become safe, to rise above it all—for her, they are the same thing. She has discovered this, paradoxically, by pursuing conventional feminine behavior—in this case, the discipline of perfecting the body as an object—to excess. At this point of excess, the conventionally feminine deconstructs, we might say, into its opposite and opens onto those values our culture has coded as male. No wonder the anorexia is experienced as liberating and that she will fight family, friends, and therapists in an effort

Standard of Bodily Attractiveness for Women," *International Journal of Eating Disorders* 5 (1986): 907-16.

to hold onto it—fight them to the death, if need be. The anorectic's experience of power is, of course, deeply and dangerously illusory. To reshape one's body into a male body is *not* to put on male power and privilege. To *feel* autonomous and free while harnessing body and soul to an obsessive body-practice is to serve, not transform, a social order that limits female possibilities. And, of course, for the female to become male is only for her to locate herself on the other side of a disfiguring opposition. The new "power look" of female body-building, which encourages women to develop the same hulky-like, triangular shape that has been the norm for male body-builders, is no less determined by a hierarchical, dualistic construction of gender than was the conventionally "feminine" norm that tyrannized female body-builders such as Bev Francis for years.

Although the specific cultural practices and meanings are different, similar mechanisms, I suspect, are at work in hysteria and agoraphobia. In these cases too, the language of femininity, when pushed to excess—when shouted and asserted, when disruptive and demanding—deconstructs into its opposite and makes available to the woman an illusory experience of power previously forbidden to her by virtue of her gender. In the case of nineteenth-century femininity, the forbidden experience may have been the bursting of fetters—particularly moral and emotional fetters. John Conolly, the asylum reformer, recommended institutionalization for women who "want that restraint over the passions without which the female character is lost."⁸ Hysterics often infuriated male doctors by their lack of precisely this quality. S. Weir Mitchell described these patients as "the despair of physicians," whose "despotic selfishness wrecks the constitution of nurses and devoted relatives, and in unconscious or half-conscious self-indulgence destroys the comfort of everyone around them."⁹ It must have given the Victorian patient some illicit pleasure to be viewed as capable of such disruption of the staid nineteenth-century household. A similar form of power, I believe, is part of the experience of agoraphobia.

This does not mean that the primary reality of these disorders is not one of pain and entrapment. Anorexia, too, clearly contains a dimension of physical addiction to the biochemical effects of starvation. But whatever the physiology involved, the ways in which the subject understands and thematizes her experience cannot be reduced to a mechanical process. The anorectic's ability to live with minimal food intake allows her to feel powerful and worthy of admiration in a "world," as Susie Orbach describes it, "from which at the most profound level [she] feels excluded" and unvalued.¹ The literature on both anorexia and hysteria is strewn with battles of will between the sufferer and those trying to "cure" her; the latter, as Orbach points out, very rarely understand that the psychic values she is fighting for are often more important to the woman than life itself.

TEXTUALITY, PRAXIS, AND THE BODY

The "solutions" offered by anorexia, hysteria, and agoraphobia, I have suggested, develop out of the practice of femininity itself, the pursuit of which is still presented as the chief route to acceptance and success for women in

8. Showalter, *The Female Malady*, p. 48.

9. Smith-Rosenberg, *Disorderly Conduct*, p. 207.

1. Orbach, *Hunger Strike*, p. 103.

our culture. Too aggressively pursued, that practice leads to its own undoing, in one sense. For if femininity is, as Susan Brownmiller has said, at its core a "tradition of imposed limitations,"² then an unwillingness to limit oneself, even in the pursuit of femininity, breaks the rules. But, of course, in another sense the rules remain fully in place. The sufferer becomes wedded to an obsessive practice, unable to make any effective change in her life. She remains, as Toril Moi has put it, "gagged and chained to [the] feminine role," a reproducer of the docile body of femininity.³

This tension between the psychological meaning of a disorder, which may enact fantasies of rebellion and embody a language of protest, and the practical life of the disordered body, which may utterly defeat rebellion and subvert protest, may be obscured by too exclusive a focus on the symbolic dimension and insufficient attention to praxis. As we have seen in the case of some Lacanian feminist readings of hysteria, the result of this can be a one-sided interpretation that romanticizes the hysteric's symbolic subversion of the phallogentric⁴ order while confined to her bed. This is not to say that confinement in bed has a transparent, univocal meaning—in powerlessness, debilitation, dependency, and so forth. The "practical" body is no brute biological or material entity. It, too, is a culturally mediated form; its activities are subject to interpretation and description. The shift to the practical dimension is not a turn to biology or nature, but to another "register," as Foucault puts it, of the cultural body, the register of the "useful body" rather than the "intelligible body."⁵ The distinction can prove useful, I believe, to feminist discourse.

The intelligible body includes our scientific, philosophic, and aesthetic representations of the body—our cultural *conceptions* of the body, norms of beauty, models of health, and so forth. But the same representations may also be seen as forming a set of *practical* rules and regulations through which the living body is "trained, shaped, obeys, responds," becoming, in short, a socially adapted and "useful body."⁶ Consider this particularly clear and appropriate example: the nineteenth-century hourglass figure, emphasizing breasts and hips against a wasp waist, was an intelligible *symbolic* form, representing a domestic, sexualized ideal of femininity. The sharp cultural contrast between the female and the male form, made possible by the use of corsets and bustles, reflected, in symbolic terms, the dualistic division of social and economic life into clearly defined male and female spheres. At the same time, to achieve the specified look, a particular feminine *praxis* was required—straitlacing, minimal eating, reduced mobility—rendering the female body unfit to perform activities outside its designated sphere. This, in Foucauldian terms, would be the "useful body" corresponding to the aesthetic norm.

The intelligible body and the useful body are two arenas of the same discourse; they often mirror and support each other, as in the above illustration. Another example can be found in the seventeenth-century philosophic conception of the body as a machine, mirroring an increasingly more automated

6. Foucault, *Discipline and Punish*, p. 136.

productive machinery of labor. But the two bodies may also contradict and mock each other. A range of contemporary representations and images, as noted earlier, have coded the transcendence of female appetite and its public display in the slenderness ideal in terms of power, will, mastery, the possibilities of success in the professional arena. These associations are carried visually by the slender superwomen of prime-time television and popular movies and promoted explicitly in advertisements and articles appearing routinely in women's fashion magazines, diet books, and weight-training publications. Yet the thousands of slender girls and women who strive to embody these images and who in that service suffer from eating disorders, exercise compulsions, and continual self-scrutiny and self-castigation are anything *but* the "masters" of their lives.

Exposure and productive cultural analysis of such contradictory and mystifying relations between image and practice are possible only if the analysis includes attention to and interpretation of the "useful" or, as I prefer to call it, the practical body. Such attention, although often in inchoate and theoretically unsophisticated form, was central to the beginnings of the contemporary feminist movement. In the late 1960s and early 1970s the objectification of the female body was a serious political issue. All the cultural paraphernalia of femininity, of learning to please visually and sexually through the practices of the body—media imagery, beauty pageants, high heels, girdles, makeup, simulated orgasm—were seen as crucial in maintaining gender domination.

Disquietingly, for the feminists of the present decade, such focus on the politics of feminine praxis, although still maintained in the work of individual feminists, is no longer a centerpiece of feminist cultural critique.⁷ On the popular front, we find *Ms.* magazine⁸ presenting issues on fitness and "style," the rhetoric reconstructed for the 1980s to pitch "self-expression" and "power." Although feminist theory surely has the tools, it has not provided a critical discourse to dismantle and demystify this rhetoric. The work of French feminists has provided a powerful framework for understanding the inscription of phallogentric, dualistic culture on gendered bodies, but it has offered very little in the way of concrete analyses of the female body as a locus of practical cultural control. Among feminist theorists in this country, the study of cultural representations of the female body has flourished, and it has often been brilliantly illuminating and instrumental to a feminist rereading of culture.⁹ But the study of cultural representations alone, divorced from consideration of their relation to the practical lives of bodies, can obscure and mislead.

Here, Helena Mitchie's significantly titled *The Flesh Made Word* offers a striking example. Examining nineteenth-century representations of women,

7. A focus on the politics of sexualization and objectification remains central to the anti-pornography movement (e.g., in the work of Andrea Dworkin, Catharine MacKinnon). Feminists exploring the politics of appearance include Sandra Bartky, Susan Brownmiller, Wendy Chapkis, Kim Chernin, and Susie Orbach. And a developing feminist interest in the work of Michel Foucault has begun to produce a poststructuralist feminism oriented toward practice; see, for example, Irene Diamond and Lee Quinby, *Feminism and Fou-*

cault: Reflections on Resistance (Boston: Northeastern University Press, 1988).

8. At first a mass-market magazine (founded 1972) that also took a fairly consistent feminist approach, *Ms.* became more and more like a traditional "woman's magazine" before folding in 1989. It was revived in an advertising-free form closer to its original in 1990 [editor's note].

9. See, for example, Susan Suleiman, ed., *The Female Body in Western Culture* (Cambridge: Harvard University Press, 1986).

appetite, and eating, Mitchie draws fascinating and astute metaphorical connections between female eating and female sexuality. Female hunger, she argues, and I agree, "figures unspeakable desires for sexuality and power."¹ The Victorian novel's "representational taboo" against depicting women eating (an activity, apparently, that only "happens offstage," as Mitchie puts it) thus functions as a "code" for the suppression of female sexuality, as does the general cultural requirement, exhibited in etiquette and sex manuals of the day, that the well-bred woman eat little and delicately. The same coding is drawn on, Mitchie argues, in contemporary feminist "inversions" of Victorian values, inversions that celebrate female sexuality and power through images exulting in female eating and female hunger, depicting it explicitly, lushly, and joyfully.

Despite the fact that Mitchie's analysis centers on issues concerning women's hunger, food, and eating practices, she makes no mention of the grave eating disorders that surfaced in the late nineteenth century and that are ravaging the lives of young women today. The practical arena of women dieting, fasting, straitlacing, and so forth is, to a certain extent, implicit in her examination of Victorian gender ideology. But when Mitchie turns, at the end of her study, to consider contemporary feminist literature celebrating female eating and female hunger, the absence of even a passing glance at how women are *actually* managing their hungers today leaves her analysis adrift, lacking any concrete social moorings. Mitchie's sole focus is on the inevitable failure of feminist literature to escape "phallic representational codes."² But the feminist celebration of the female body did not merely deconstruct on the written page or canvas. Largely located in the feminist counterculture of the 1970s, it has been culturally displaced by a very different contemporary reality. Its celebration of female flesh now presents itself in jarring dissonance with the fact that women, feminists included, are starving themselves to death in our culture.

This is not to deny the benefits of diet, exercise, and other forms of body management. Rather, I view our bodies as a site of struggle, where we must *work* to keep our daily practices in the service of resistance to gender domination, not in the service of docility and gender normalization. This work requires, I believe, a determinedly skeptical attitude toward the routes of seeming liberation and pleasure offered by our culture. It also demands an awareness of the often contradictory relations between image and practice, between rhetoric and reality. Popular representations, as we have seen, may forcefully employ the rhetoric and symbolism of empowerment, personal freedom, "having it all." Yet female bodies, pursuing these ideals, may find themselves as distracted, depressed, and physically ill as female bodies in the nineteenth century were made when pursuing a feminine ideal of dependency, domesticity, and delicacy. The recognition and analysis of such contradictions, and of all the other collusions, subversions, and enticements through which culture enjoins the aid of our bodies in the reproduction of gender, require that we restore a concern for female praxis to its formerly central place in feminist politics.

HOMI K. BHABHA

b. 1949

A prominent figure in postcolonial studies, Homi K. Bhabha has infused thinking about nationality, ethnicity, and politics with poststructuralist theories of identity and indeterminacy. Drawing on a wide range of theorists, particularly the deconstructive philosopher JACQUES DERRIDA, Bhabha's essay "The Commitment to Theory" (1989) revises conventional notions of nationality and the colonial subject, showing how both are shifting, hybrid cultural constructions. It also provides a powerful argument for the importance of theory, for the indelible link between theory and politics, and for the use of poststructuralist theory in the tacitly anti-imperialist cause of postcolonial studies.

Bhabha was born two years after India gained national independence from British colonial rule, and his life exemplifies some of the hybrid subject positions of the postcolonial world. He was raised in the Parsi community of Bombay, India, where his father was an important constitutional lawyer. After receiving a B.A. from Bombay University, he traveled to England to earn his M.A., M.Phil., and D.Phil. from Oxford University. Beginning in 1978, he taught at Sussex University for sixteen years; he also held visiting appointments in the United States at Princeton University and the University of Pennsylvania during the late 1980s and early 1990s. In 1994 he became Chester D. Tripp Professor in the Humanities at the University of Chicago, moving in 2001 to Harvard University.

Postcolonial criticism arose in the wake of the turbulent struggles for national independence of many African, Asian, and Latin American countries that were under the rule of European colonial empires through the middle of the twentieth century. Many early anticolonialist critics promoted autonomous, nationalistic literary traditions to counteract the cultural as well as material domination of imperialism. Later, postcolonial theorists turned to analyze the ideological bases of colonial domination. Perhaps the two most influential figures in this development of contemporary postcolonial theory were EDWARD W. SAID and GAYATRI CHAKRAVORTY SPIVAK. In *Orientalism* (1978; see above), a foundational text of postcolonial studies, Said diagnosed the paths of cultural domination that projected non-Western people as the "Other." In "Can the Subaltern Speak?" (1988; see above), Spivak argued that postcolonial subjects have no voice under the dominant regime of colonial discourse.

Extending the work of Said and Spivak, Bhabha starts with a deconstructive critique of the dichotomies of the West and the Orient, the center and the periphery, the empire and the colonized, the oppressor and the oppressed, and the self and the other. He borrows but adapts Derrida's analysis of how binary oppositions structure Western thought, arguing that such dichotomies are too reductive because they imply that any national culture is unitary, homogeneous, and defined by "fixity" or an essential core. Instead, Bhabha proposes that nationalities, ethnicities, and identities are dialogic, indeterminate, and characterized by "hybridity"—one of his key terms. In "The Commitment to Theory," he defines hybridity as what "is new, *neither the one nor the other*," which emerges from a "Third Space." To reinforce this fluid sense of nationality and identity, Bhabha employs a vocabulary of process-oriented terms, including *dialogic*, *translation*, *negotiation*, *in-between*, *cross-reference*, and *ambivalence*.

Although "the wit and wisdom of Jacques Derrida" (as he calls it in another essay) is fundamental to his work, Bhabha draws on a wide array of twentieth-century theorists throughout "The Commitment to Theory." Building on the influential concept of nations set forth by Benedict Anderson in *Imagined Communities* (1983), Bhabha stresses how nationality is narratively produced, rather than arising from an intrinsic essence. From MIKHAIL BAKHTIN, he takes the concept of dialogue to stress that colonialism is not a one-way street but entails an interaction between colonizer and col-

onized. Regarding identity, he draws on FRANTZ FANON's psychoanalytic model of colonialism and JACQUES LACAN's concepts of "mimicry" and the split subject, arguing that there is always an "excess" in the cultural imitation that the colonial subject is forced to produce. This mimicry in turn both revises colonial discourse and creates a new, hybrid identity for the colonial subject.

The goal of Bhabha's theorizing of hybridity is not simply to modify the terms of debate in postcolonial studies but to make a political intervention. In general, Bhabha contends that theory is not separate from or opposed to political activism, but works hand in hand with it. Employing a deconstructive reversal of the opposition between textuality and the world, Bhabha claims that political events—he uses the example of a famous British strike—are in fact textual and discursive, often generated and spurred by "oppositional *cultural practices*." More specifically, the concept of hybridity militates against "restrictive notions of cultural identity" that result in political separatism, as seen in nationalistic movements or in identity politics. For Bhabha, hybridity fosters the larger goal of "socialist community" while acknowledging cultural differences. Such socialist community arises from the solidarity of different groups and movements working in coalition to create a new, progressive hegemony, as STUART HALL similarly urges.

Although preoccupied with postcolonialism, "The Commitment to Theory" also addresses another field of critical debate. In its unabashed advocacy of poststructuralist theory, Bhabha tacitly responds to many critics of the 1980s and 1990s. Their attacks came both from within the academy—epitomized by STEVEN KNAPP AND WALTER BENN MICHAELS's "Against Theory" (1982; see below) and BARBARA CHRISTIAN's "Race for Theory" (1988; see above)—and from outside, in claims that theory was too obscure, detracted from literature, and represented a solipsistic academic pursuit. Like PAUL DE MAN's "Resistance to Theory" (1982), which asserts theory's philosophical inevitability, "The Commitment to Theory" offers a staunch defense; but unlike de Man, Bhabha argues for theory's political relevance.

While rooted in contemporary debates, "The Commitment to Theory" also takes part in the larger tradition of defenses of literary practices, which starts with ARISTOTLE's defense of poetry in the *Poetics* (see above) and extends to nineteenth- and twentieth-century defenses of criticism, such as OSCAR WILDE's claims for the artistic value of criticism, "The Critic as Artist" (1890; see above), and JOHN CROWE RANSOM's argument for the value of professional criticism, "Criticism, Inc." (1938; see above). Such works shield literature and criticism against accusations that they lack utility, social relevance, and moral good. Bhabha updates the tradition by declaring the political efficacy of literary theory.

This debate continues to the present day, and Bhabha has frequently been criticized for his embrace of theory at the expense of practice, his dense jargon, and his copiously allusive writing style. His sharpest critics have come from the Left, taking to task his view of politics as textual. In particular, the Marxist critic Aijaz Ahmad has criticized him for detaching politics from specific locations and political situations. Ahmad also upbraids him for ignoring class and caste, charging that Bhabha's concept of hybridity applies more aptly to privileged postcolonial intellectuals who have gained success in the Western world, like Bhabha himself, than to those in colonial situations. Other commentators, more concerned with theoretical consistency, have noted that the notion of a hybrid identity is too broad and amorphous, applying ultimately to all identities. But within the context of debates in postcolonial studies, the concept of hybridity has decisively altered static thinking about nations and identities.

BIBLIOGRAPHY

Bhabha's reputation primarily rests on his essays, many of which are collected in his book *The Location of Culture* (1994), which includes "The Commitment to Theory." He has also edited an influential anthology on the cultural construction of nationality,

Nation and Narration (1990). In a different register from his academic work, he writes on art and culture as a regular contributor to *Artforum* and to the British public radio network.

Bhabha is the subject of a growing body of criticism. Robert Young's "The Ambivalence of Bhabha," in *White Mythologies: Writing History and the West* (1990), is a useful discussion of Bhabha's overall project. From the left, Aijaz Ahmad's "The Politics of Literary Postcoloniality," *Race and Class* 36.3 (1995), sternly criticizes Bhabha's philosophical conception of politics and his elision of the concrete structural relations of class and caste. Bart Moore-Gilbert, in *Postcolonial Theory: Contexts, Practices, Politics* (1997), situates Bhabha's work among that of other prominent postcolonial theorists and comments on its "babelian" or many-voiced performance. Anthony Easthope's "Bhabha, Hybridity, and Identity," *Textual Practice* 12.2 (1998), uncovering its Derridean roots, criticizes the amorphous nature of "hybridity." The collection *Hybridity and Postcolonialism: Twentieth-Century Indian Literature*, edited by Monika Fludernik (1998), assesses the varying uses of "hybridity" and includes a useful chapter by Fludernik on "The Constitution of Hybridity."

The Commitment to Theory

I

There is a damaging and self-defeating assumption that theory is necessarily the elite language of the socially and culturally privileged. It is said that the place of the academic critic is inevitably within the Eurocentric archives of an imperialist or neo-colonial West. The Olympian realms of what is mistakenly labelled 'pure theory' are assumed to be eternally insulated from the historical exigencies and tragedies of the wretched of the earth.¹ Must we always polarize in order to polemicize? Are we trapped in a politics of struggle where the representation of social antagonisms and historical contradictions can take no other form than a binarism of theory vs politics? Can the aim of freedom of knowledge be the simple inversion of the relation of oppressor and oppressed, centre and periphery, negative image and positive image? Is our only way out of such dualism the espousal of an implacable oppositionality or the invention of an originary counter-myth of radical purity? Must the project of our liberationist aesthetics be forever part of a totalizing Utopian vision of Being and History that seeks to transcend the contradictions and ambivalences that constitute the very structure of human subjectivity and its systems of cultural representation?

Between what is represented as the 'larceny' and distortion of European 'metatheorizing' and the radical, engaged, activist experience of Third World creativity,² one can see the mirror image (albeit reversed in content and intention) of that ahistorical nineteenth-century polarity of Orient and Occident which, in the name of progress, unleashed the exclusionary imperialist ideologies of self and other. This time round, the term 'critical theory', often

1. An allusion to *The Wretched of the Earth* (1961; see above), by the Martinique-born French psychoanalyst and postcolonial theorist FRANTZ FANON (1925-1961).

2. See C. Taylor, "Eurocentricism vs. New Thought at Edinburgh," *Framework* 34 (1987), for an illustration of this style of argument. See particularly

footnote 1 (p. 148) for an exposition of his use of "larceny" ("the judicious distortion of African truths to fit western prejudices") [Bhabha's note]. Third World: "underdeveloped" nations, many of which were formerly colonies of "First World" nations (countries of the industrialized West).

untheorized and unargued, is definitely the Other, an otherness that is insistently identified with the vagaries of the depoliticized Eurocentric critic. Is the cause of radical art or critique best served, for instance, by a fulminating professor of film who announces, at a flashpoint in the argument, 'We are not artists, we are political activists?' By obscuring the power of his own practice in the rhetoric of militancy, he fails to draw attention to the specific value of a politics of cultural production; because it makes the surfaces of cinematic signification the grounds of political intervention, it gives depth to the language of social criticism and extends the domain of 'politics' in a direction that will not be entirely dominated by the forces of economic or social control. Forms of popular rebellion and mobilization are often most subversive and transgressive when they are created through oppositional *cultural* practices.

Before I am accused of bourgeois voluntarism, liberal pragmatism, academicist pluralism and all the other '-isms' that are freely bandied about by those who take the most severe exception to 'Eurocentric' theoreticism (Derideanism, Lacanianism,³ poststructuralism . . .), I would like to clarify the goals of my opening questions. I am convinced that, in the language of political economy, it is legitimate to represent the relations of exploitation and domination in the discursive division between the First and Third World, the North and the South. Despite the claims to a spurious rhetoric of 'internationalism' on the part of the established multinationals and the networks of the new communications technology industries, such circulations of signs and commodities as there are, are caught in the vicious circuits of surplus value that link First World capital to Third World labour markets through the chains of the international division of labour, and national comprador⁴ classes. Gayatri Spivak is right to conclude that it is 'in the interest of capital to preserve the comprador theatre in a state of relatively primitive labour legislation and environmental regulation'.⁵

I am equally convinced that, in the language of international diplomacy, there is a sharp growth in a new Anglo-American nationalism which increasingly articulates its economic and military power in political acts that express a neo-imperialist disregard for the independence and autonomy of peoples and places in the Third World. Think of America's 'backyard' policy towards the Caribbean and Latin America, the patriotic gore and patrician lore of Britain's Falklands Campaign or, more recently, the triumphalism of the American and British forces during the Gulf War.⁶ I am further convinced that such economic and political domination has a profound hegemonic influence on the information orders of the Western world, its popular media and its specialized institutions and academics. So much is not in doubt.

3. The influential poststructuralist lines of thinking inspired by, respectively, the French deconstructive philosopher JACQUES DERRIDA (b. 1930) and the French psychoanalyst JACQUES LACAN (1901-1981).

4. Native intermediary employed by a European business to supervise native employees.

5. G. C. Spivak, *In Other Worlds* (London: Methuen, 1987), pp. 166-67 [Bhabha's note]. GAYATRI CHAKRAVORTY SPIVAK (b. 1942), U.S.-based Indian postcolonial theorist.

6. The international conflict (1990-91) triggered

by Iraq's August 1990 invasion of oil-rich Kuwait; a U.S.-led coalition decisively defeated the Iraqi forces. The Falklands Campaign: a brief, undeclared war in 1982 between Great Britain and Argentina over control of the Falkland Islands (off the coast of Argentina), occupied and administered by the British since 1833; the ignominious defeat of the Argentine forces led to a landslide victory for Prime Minister Margaret Thatcher's Conservative Party in that year's parliamentary elections in Britain (and to the fall of the military government in Argentina the following year).

What does demand further discussion is whether the 'new' languages of theoretical critique (semiotic, poststructuralist, deconstructionist and the rest) simply reflect those geopolitical divisions and their spheres of influence. Are the interests of 'Western' theory necessarily collusive with the hegemonic role of the West as a power bloc? Is the language of theory merely another power ploy of the culturally privileged Western elite to produce a discourse of the Other that reinforces its own power-knowledge equation?

A large film festival in the West—even an alternative or counter-cultural event such as Edinburgh's 'Third Cinema' Conference⁷—never fails to reveal the disproportionate influence of the West as cultural forum, in all three senses of that word: as place of public exhibition and discussion, as place of judgement, and as market-place. An Indian film about the plight of Bombay's pavement-dwellers wins the Newcastle Festival⁸ which then opens up distribution facilities in India. The first searing exposé of the Bhopal disaster is made for Channel Four.⁹ A major debate on the politics and theory of Third Cinema first appears in *Screen*, published by the British Film Institute. An archival article on the important history of neo-traditionalism and the 'popular' in Indian cinema sees the light of day in *Framework*.¹ Among the major contributors to the development of the Third Cinema as precept and practice are a number of Third World film-makers and critics who are exiles or *émigrés* in the West and live problematically, often dangerously, on the 'left' margins of a Eurocentric, bourgeois liberal culture. I don't think I need to add individual names or places, or detail the historical reasons why the West carries and exploits what Bourdieu² would call its symbolic capital. The condition is all too familiar, and it is not my purpose here to make those important distinctions between different national situations and the disparate political causes and collective histories of cultural exile. I want to take my stand on the shifting margins of cultural displacement—that confounds any profound or 'authentic' sense of a 'national' culture or an 'organic' intellectual³—and ask what the function of a committed theoretical perspective might be, once the cultural and historical hybridity of the postcolonial world is taken as the paradigmatic place of departure.

Committed to what? At this stage in the argument, I do not want to identify any specific 'object' of political allegiance—the Third World, the working class, the feminist struggle. Although such an objectification of political activity is crucial and must significantly inform political debate, it is not the only option for those critics or intellectuals who are committed to progressive

7. A showcase for films by Latin American, African, Middle Eastern, and Asian filmmakers at the Edinburgh International Film Festival; Bhabha is referring to the 40th festival (August 11–13, 1986).

8. Arts festival in northeastern England.

9. A British commercially supported network, created in 1982 and intended to increase the representation of minorities on television; it is known for high-quality dramas and documentaries. "Bhopal disaster": the leakage of tons of poisonous gas in December 1984 from a pesticide plant in central India owned by Union Carbide, a U.S. multinational, which was one of the worst industrial disasters in history; thousands died and tens (perhaps hundreds) of thousands were injured.

1. See T. H. Gabriel, "Teaching Third World Cin-

ema," and Julianne Burton, "The Politics of Aesthetic Distance—Sao Bernardo," both in *Screen* 24.2 (1983), and A. Rajadhyaksha, "Neo-traditionalism: Film as Popular Art in India," *Framework*, nos. 32 / 33 (1986) [Bhabha's note].

2. PIERRE BOURDIEU (b. 1930), French sociologist; one of his key terms is "symbolic capital," the tools used by individuals and institutions within a given environment to gain dominance and thus to reproduce themselves over time.

3. Someone (regardless of profession) who directs the ideas and aspirations of the particular social class to which he or she "organically" belongs, as described by the Italian Marxist theorist ANTONIO GRAMSCI (1891–1937). "National culture": a term associated with Fanon.

political change in the direction of a socialist society. It is a sign of political maturity to accept that there are many forms of political writing whose different effects are obscured when they are divided between the 'theoretical' and the 'activist'. It is not as if the leaflet involved in the organization of a strike is short on theory, while a speculative article on the theory of ideology ought to have more practical examples or applications. They are both forms of discourse and to that extent they produce rather than reflect their objects of reference. The difference between them lies in their operational qualities. The leaflet has a specific expository and organizational purpose, temporally bound to the event; the theory of ideology makes its contribution to those embedded political ideas and principles that inform the right to strike. The latter does not justify the former; nor does it necessarily precede it. It exists side by side with it—the one as an enabling part of the other—like the recto and verso of a sheet of paper, to use a common semiotic analogy in the uncommon context of politics.

My concern here is with the process of 'intervening ideologically', as Stuart Hall describes the role of 'imagining' or representation in the practice of politics in his response to the British election of 1987.⁴ For Hall, the notion of hegemony implies a politics of *identification* of the imaginary.⁵ This occupies a discursive space which is not exclusively delimited by the history of either the right or the left. It exists somehow in-between these political polarities, and also between the familiar divisions of theory and political practice. This approach, as I read it, introduces us to an exciting, neglected moment, or movement, in the 'recognition' of the relation of politics to theory; and confounds the traditional division between them: Such a movement is initiated if we see that relation as determined by the rule of repeatable materiality, which Foucault describes as the process by which statements from one institution can be transcribed in the discourse of another.⁶ Despite the schemata of use and application that constitute a field of stabilization for the statement, any change in the statement's conditions of use and reinvestment, any alteration in its field of experience or verification, or indeed any difference in the problems to be solved, can lead to the emergence of a new statement: the difference of the same.

In what hybrid forms, then, may a politics of the theoretical statement emerge? What tensions and ambivalences mark this enigmatic place from which theory speaks? Speaking in the name of some counter-authority or horizon of 'the true' (in Foucault's sense of the strategic effects of any apparatus or *dispositif*⁷), the theoretical enterprise has to represent the adversarial authority (of power and / or knowledge) which, in a doubly inscribed move, it simultaneously seeks to subvert and replace. In this complicated formulation I have tried to indicate something of the boundary and location of the event of theoretical critique which does not *contain* the truth (in polar opposition to totalitarianism, 'bourgeois liberalism' or whatever is supposed to repress it). The 'true' is always marked and informed by the ambivalence of

5. The notion of hegemony—the manufactured consent that legitimates a dominant group and unifies a society—derives from Gramsci.

6. M. Foucault, *The Archaeology of Knowledge*, [trans. A. M. Sheridan] (London: Tavistock, 1972), pp. 102–5 [Bhabha's note]. MICHEL FOUCAULT (1926–1984), French philosopher and historian of ideas.

7. Apparatus, device (French).

the process of emergence itself, the productivity of meanings that construct counter-knowledges in *medias res*,⁸ in the very act of agonism, within the terms of a negotiation (rather than a negation) of oppositional and antagonistic elements. Political positions are not simply identifiable as progressive or reactionary, bourgeois or radical, prior to the act of *critique engagée*,⁹ or outside the terms and conditions of their discursive address. It is in this sense that the historical moment of political action must be thought of as part of the history of the form of its writing. This is not to state the obvious, that there is no knowledge—political or otherwise—outside representation. It is to suggest that the dynamics of writing and textuality require us to rethink the logics of causality and determinacy through which we recognize the 'political' as a form of calculation and strategic action dedicated to social transformation.

'What is to be done?' must acknowledge the force of writing, its metaphoricity and its rhetorical discourse, as a productive matrix which defines the 'social' and makes it available as an objective of and for, action. Textuality is not simply a second-order ideological expression or a verbal symptom of a pre-given political subject. That the political subject—as indeed the subject of politics—is a discursive event is nowhere more clearly seen than in a text which has been a formative influence on Western democratic and socialist discourse—Mill's essay 'On Liberty'.² His crucial chapter, 'On The Liberty of Thought and Discussion', is an attempt to define political judgement as the problem of finding a form of *public rhetoric* able to represent different and opposing political 'contents' not as a priori preconstituted principles but as a dialogical discursive exchange; a negotiation of terms in the on-going present of the enunciation of the political statement. What is unexpected is the suggestion that a crisis of identification is initiated in the textual performance that displays a certain 'difference' *within* the signification of any single political system, prior to establishing the substantial differences *between* political beliefs. A knowledge can only become political through an agonistic process: dissensus, alterity and otherness are the discursive conditions for the circulation and recognition of a politicized subject and a public 'truth':

[If] opponents of all important truths do not exist, it is indispensable to imagine them . . . [He] must feel the whole force of the difficulty which the true view of the subject has to encounter and dispose of; *else he will never really possess himself of the portion of truth which meets and removes that difficulty*. . . Their conclusion may be true, but it might be false for anything they know: they have never thrown themselves into the *mental position* of those who think differently from them . . . and consequently they do not, in any proper sense of the word, *know the doctrine which they themselves profess*.³ (My emphases)

It is true that Mill's 'rationality' permits, or requires, such forms of contention and contradiction in order to enhance his vision of the inherently pro-

8. In the middle of things (Latin); usually, in the midst of a narrative.

9. Engaged criticism (French), a term associated with the French philosopher, playwright, and political activist JEAN-PAUL SARTRE (1905–1980).

Russian Marxist revolutionary V. I. Lenin.

2. Published in 1859 by the English philosopher and social reformer John Stuart Mill (1806–1873).

3. J. S. Mill, "On Liberty," in *Utilitarianism, Liberty, Representative Government* (London: Dent and Sons, 1972), pp. 93–94 [Bhabha's note].

gressive and evolutionary bent of *human* judgement. (This makes it possible for contradictions to be resolved and also generates a sense of the 'whole truth' which reflects the natural, organic bent of the human mind.) It is also true that Mill always reserves, in society as in his argument, the unreal neutral space of the Third Person as the representative of the 'people', who witnesses the debate from an 'epistemological distance' and draws a reasonable conclusion. Even so, in his attempt to describe the political as a form of debate and dialogue—as the process of public rhetoric—that is crucially mediated through this ambivalent and antagonistic faculty of a political 'imagination', Mill exceeds the usual mimetic sense of the battle of ideas. He suggests something much more dialogical: the realization of the political idea at the ambivalent point of textual address, its emergence through a form of political projection.

Rereading Mill through the strategies of 'writing' that I have suggested, reveals that one cannot passively follow the line of argument running through the logic of the opposing ideology. The textual process of political antagonism initiates a contradictory process of reading between the lines; the agent of the discourse becomes, in the same time of utterance, the inverted, projected object of the argument, turned against itself. It is, Mill insists, only by effectively assuming the mental position of the antagonist and working through the displacing and decentering force of that discursive difficulty that the politicized 'portion of truth' is produced. This is a different dynamic from the ethic of tolerance in liberal ideology which has to imagine opposition in order to contain it and demonstrate its enlightened relativism or humanism. Reading Mill, against the grain, suggests that politics can only become representative, a truly public discourse, through a splitting in the signification of the subject of representation; through an ambivalence at the point of the enunciation of a politics.

I have chosen to demonstrate the importance of the space of writing, and the problematic of address, at the very heart of the liberal tradition because it is here that the myth of the 'transparency' of the human agent and the reasonableness of political action is most forcefully asserted. Despite the more radical political alternatives of the right and the left, the popular, common-sense view of the place of the individual in relation to the social is still substantially thought and lived in ethical terms moulded by liberal beliefs. What the attention to rhetoric and writing reveals is the discursive ambivalence that makes 'the political' possible. From such a perspective, the problematic of political judgement cannot be represented as an epistemological problem of appearance and reality or theory and practice or word and thing. Nor can it be represented as a dialectical problem or a symptomatic contradiction constitutive of the materiality of the 'real'. On the contrary, we are made excruciatingly aware of the ambivalent juxtaposition, the dangerous interstitial relation of the factual and the projective, and, beyond that, of the crucial function of the textual and the rhetorical. It is those vicissitudes of the movement of the signifier,⁴ in the fixing of the factual and the closure of the real, that ensure the efficacy of strategic thinking in the discourses of *Realpolitik*. It is this to-and-fro, this *fort / da*⁵ of the symbolic

4. The symbol or sound that conveys meaning (what is conveyed is the signified), as described in the analysis of signs by the Swiss linguist FERDI-

NAND DE SAUSSURE (1857–1913).

5. Gone / here (German). In *Beyond the Pleasure Principle* (1920), SIGMUND FREUD describes how

process of political negotiation, that constitutes a politics of address. Its importance goes beyond the unsettling of the essentialism or logocentricism of a received political tradition, in the name of an abstract free play of the signifier.⁶

A critical discourse does not yield a *new* political object, or aim, or knowledge, which is simply a mimetic reflection of an a priori political principle or theoretical commitment. We should not demand of it a pure teleology of analysis whereby the prior principle is simply augmented, its rationality smoothly developed, its identity as socialist or materialist (as opposed to neo-imperialist or humanist) consistently confirmed in each oppositional stage of the argument. Such identikit⁷ political idealism may be the gesture of great individual fervour, but it lacks the deeper, if dangerous, sense of what is entailed by the *passage* of history in theoretical discourse. The language of critique is effective not because it keeps forever separate the terms of the master and the slave,⁸ the mercantilist and the Marxist, but to the extent to which it overcomes the given grounds of opposition and opens up a space of translation: a place of hybridity, figuratively speaking, where the construction of a political object that is new, *neither the one nor the other*, properly alienates our political expectations, and changes, as it must, the very forms of our recognition of the moment of politics. The challenge lies in conceiving of the time of political action and understanding as opening up a space that can accept and regulate the differential structure of the moment of intervention without rushing to produce a unity of the social antagonism or contradiction. This is a sign that history is *happening*—within the pages of theory, within the systems and structures we construct to figure the passage of the historical.

When I talk of *negotiation* rather than *negation*, it is to convey a temporality that makes it possible to conceive of the articulation of antagonistic or contradictory elements: a dialectic without the emergence of a teleological or transcendent History,⁹ and beyond the prescriptive form of symptomatic reading where the nervous ties on the surface of ideology reveal the 'real materialist contradiction' that History embodies. In such a discursive temporality, the event of theory becomes the *negotiation* of contradictory and antagonistic instances that open up hybrid sites and objectives of struggle, and destroy those negative polarities between knowledge and its objects, and between theory and practical-political reason.¹ If I have argued against a

his 18-month-old nephew would throw a spool tied to a piece of yarn, saying "Fort," and then pull it back in, saying "Da"; for Freud this game was a way for the child to work out his anxiety about his mother's absence. In "The Mirror Stage" (1949; see above), Lacan argues that the game is about the child's entry into the Symbolic (the structure of language itself).

6. "The free play of the signifier," like "logocentrism" (the privileging of speech, the assumption that knowledge is organized around some central Truth), is a concept developed by Jacques Derrida in *Of Grammatology* (1967; see above).

7. Likeness of a person's face constructed from descriptions (used by the police to help identify a suspect).

8. An allusion to the Master-Slave dialectic developed by the German philosopher GEORG FRIEDRICH WILHELM HEGEL in *Phenomenology of Spirit*

(1807; see above), which describes two self-consciousnesses that confront each other and fight for mutual recognition; each identifies him- or herself through the eyes of the other as ruler and ruled.

9. That is, a process of change through contest of opposites that—unlike in the systems of Hegel or KARL MARX (1818–1883), in which the dialectic plays a key role—does not necessarily lead to a predetermined end.

1. For a significant elaboration of a similar argument, see E. Laclau and C. Mouffe, *Hegemony and Socialist Strategy*, [trans. W. Moore and P. Cammack] (London: Verso, 1985), chap. 3 [Bhabha's note]. Ernesto Laclau (b. 1935), Argentine political theorist, and Chantal Mouffe (b. 1943), Colombian political theorist, are known for their elaboration of "post-Marxism."

primordial and previsionary division of right or left, progressive or reactionary, it has been only to stress the fully historical and discursive *différance*² between them. I would not like my notion of negotiation to be confused with some syndicalist sense of reformism because that is not the political level that is being explored here. By negotiation I attempt to draw attention to the structure of *iteration*³ which informs political movements that attempt to articulate antagonistic and oppositional elements without the redemptive rationality of sublation or transcendence.⁴

The temporality of negotiation or translation, as I have sketched it, has two main advantages. First, it acknowledges the historical connectedness between the subject and object of critique so that there can be no simplistic, essentialist opposition between ideological miscognition and revolutionary truth. The progressive reading is crucially determined by the adversarial or agonistic situation itself; it is effective because it uses the subversive, messy mask of camouflage and does not come like a pure avenging angel speaking the truth of a radical historicity and pure oppositionality. If one is aware of this heterogeneous emergence (not origin) of radical critique, then—and this is my second point—the function of theory within the political process becomes double-edged. It makes us aware that our political referents and priorities—the people, the community, class struggle, anti-racism, gender difference, the assertion of an anti-imperialist, black or third perspective—are not there in some primordial, naturalistic sense. Nor do they reflect a unitary or homogeneous political object. They make sense as they come to be constructed in the discourse of feminism or Marxism or the Third Cinema or whatever, whose objects of priority—class or sexuality or ‘the new ethnicity’—are always in historical and philosophical tension, or cross-reference with other objectives.

Indeed, the whole history of socialist thought which seeks to ‘make it new and better’ seems to be a different process of articulating priorities whose political objects can be recalcitrant and contradictory. Within contemporary Marxism, for example, witness the continual tension between the English, humanist, labourist faction and the ‘theoreticist’, structuralist, new left tendencies. Within feminism, there is again a marked difference of emphasis between the psychoanalytic / semiotic tradition and the Marxist articulation of gender and class through a theory of cultural and ideological interpellation.⁵ I have presented these differences in broad brush-strokes, often using the language of polemic to suggest that each position is always a process of translation and transference of meaning. Each objective is constructed on the trace of that perspective that it puts under erasure; each political object is determined in relation to the other, and displaced in that critical act. Too often these theoretical issues are peremptorily transposed into organizational terms and represented as sectarianism. I am suggesting that such contradictions and conflicts, which often thwart political intentions and make the

2. Derrida's term, drawing on the two senses of the French verb *différer*, that combines spatial difference and temporal deferral.

3. Repetition; Derrida applies the term to the repetitive structure of signification.

4. For a philosophical underpinning of some of the concepts I am proposing here see R. Gasché, *The Tain of the Mirror* (Cambridge, Mass.: Harvard University Press, 1986) [Bhabha's note].

“Sublation”: in Hegel, the negation but partial incorporation of an element in the dialectic process.

5. The term used by the French Marxist philosopher LOUIS ALTHUSSER (1918–1990) to refer to how ideology “hails” or creates individuals as subjects, in “Ideology and Ideological State Apparatuses” (1970; see above).

question of commitment complex and difficult, are rooted in the process of translation and displacement in which the object of politics is inscribed. The effect is not stasis or a sapping of the will. It is, on the contrary, the spur of the negotiation of socialist democratic politics and policies which demand that questions of organization are theorized and socialist theory is 'organized', *because there is no given community or body of the people whose inherent, radical historicity emits the right signs.*

This emphasis on the representation of the political, on the construction of discourse, is the radical contribution of the translation of theory. Its conceptual vigilance never allows a simple identity between the political objective and its means of representation. This emphasis on the necessity of heterogeneity and the double inscription of the political objective is not merely the repetition of a general truth about discourse introduced into the political field. Denying an essentialist logic and a mimetic referent to political representation is a strong, principled argument against political separatism of any colour, and cuts through the moralism that usually accompanies such claims. There is literally, and figuratively, no space for the unitary or organic political objective which would offend against the sense of a socialist *community* of interest and articulation.

In Britain, in the 1980s, no political struggle was fought more powerfully, and sustained more poignantly, on the values and traditions of a socialist community than the miners' strike of 1984–5.⁶ The battalions of monetarist figures and forecasts on the profitability of the pits were starkly ranged against the most illustrious standards of the British labour movement, the most cohesive cultural communities of the working class. The choice was clearly between the dawning world of the new Thatcherite city gent and a long history of the working man, or so it seemed to the traditional left and the new right. In these class terms the mining women involved in the strike were applauded for the heroic supporting role they played, for their endurance and initiative. But the revolutionary impulse, it seemed, belonged securely to the working-class male. Then, to commemorate the first anniversary of the strike, Beatrix Campbell,⁷ in the *Guardian*, interviewed a group of women who had been involved in the strike. It was clear that their experience of the historical struggle, their understanding of the historic choice to be made, was startlingly different and more complex. Their testimonies would not be contained simply or singly within the priorities of the politics of class or the histories of industrial struggle. Many of the women began to question their roles within the family and the community—the two central institutions which articulated the meanings and mores of the *tradition* of the labouring classes around which ideological battle was enjoined. Some challenged the symbols and authorities of the culture they fought to defend. Others disrupted the homes they had struggled to sustain. For most of them there was no return, no going back to the 'good old days'. It would be simplistic to suggest either that this considerable social change was a spin-off from the class struggle or that it was a repudiation of the politics of class

6. A yearlong struggle, sometimes violent, between the U.K.'s Conservative government and the National Union of Mineworkers, which went on strike after the government announced that it would close uneconomic coal pits; the union defeat capped Margaret Thatcher's efforts, begun

when she became prime minister in 1979, to impose legal restrictions on British unions.

7. English journalist, feminist, and socialist (b. 1947); the *Guardian* is a major daily newspaper in England.

from a socialist-feminist perspective. There is no simple political or social truth to be learned, for there is no unitary representation of a political agency, no fixed hierarchy of political values and effects.

My illustration attempts to display the importance of the hybrid moment of political change. Here the transformational value of change lies in the rearticulation, or translation, of elements that are *neither the One* (unitary working class) *nor the Other* (the politics of gender) *but something else besides*, which contests the terms and territories of both. There is a negotiation between gender and class, where each formation encounters the displaced, differentiated boundaries of its group representation and enunciative sites in which the limits and limitations of social power are encountered in an agonistic relation. When it is suggested that the British Labour Party should seek to produce a socialist alliance among progressive forces that are widely dispersed and distributed across a range of class, culture and occupational forces—without a unifying sense of the class for itself—the kind of hybridity that I have attempted to identify is being acknowledged as a historical necessity. We need a little less pietistic articulation of political principle (around class and nation); a little more of the principle of political *negotiation*.

This seems to be the theoretical issue at the heart of Stuart Hall's arguments for the construction of a counter-hegemonic power bloc through which a socialist party might construct its majority, its constituency; and the Labour Party might (in)conceivably improve its image. The unemployed, semi-skilled and unskilled, part-time workers, male and female, the low paid, black people, underclasses: these signs of the fragmentation of class and cultural consensus represent both the historical experience of contemporary social divisions, and a structure of heterogeneity upon which to construct a theoretical and political alternative. For Hall, the imperative is to construct a new social bloc of different constituencies, through the production of a form of symbolic identification that would result in a collective will. The Labour Party, with its desire to reinstate its traditionalist image—white, male, working class, trade union based—is not hegemonic enough, Hall writes. He is right; what remains unanswered is whether the rationalism and intentionality that propel the collective will are compatible with the language of symbolic image and fragmentary identification that represents, for Hall and for 'hegemony'/'counter-hegemony', the fundamental political issue. Can there ever be hegemony enough, except in the sense that a two-thirds majority will elect us a socialist government?

It is by intervening in Hall's argument that the necessities of negotiation are revealed. The interest of Hall's position lies in his acknowledgement, remarkable for the British left, that, though influential, 'material interests on their own have no necessary class belongingness.'⁸ This has two significant effects. It enables Hall to see the agents of political change as discontinuous, divided subjects caught in conflicting interests and identities. Equally, at the historical level of a Thatcherite population, he asserts that divisive rather than solidary forms of identification are the rule, resulting in undecidedabilities and *aporia*⁹ of political judgement. What does a working woman put first? Which of her identities is the one that determines her political choices? The

9. Difficulty, logical impasse (a term often used in deconstructive criticism to indicate the point in a

text where inherent contradictions render interpretation undecidable).

answers to such questions are defined, according to Hall, in the ideological definition of materialist interests; a process of symbolic identification achieved through a political technology of imaging that hegemonically produces a social bloc of the right or the left. Not only is the social bloc heterogeneous, but, as I see it, the work of hegemony is itself the process of iteration and differentiation. It depends on the production of alternative or antagonistic images that are always produced side by side and in competition with each other. It is this side-by-side nature, this partial presence, or metonymy of antagonism, and its effective significations, that give meaning (quite literally) to a politics of struggle *as the struggle of identifications* and the war of positions. It is therefore problematic to think of it as sublated into an image of the collective will.

Hegemony requires iteration and alterity to be effective, to be productive of politicized populations: the (non-homogeneous) symbolic-social bloc needs to represent itself in a solidary collective will—a modern image of the future—if those populations are to produce a progressive government. Both may be necessary but they do not easily follow from each other, for in each case the mode of representation and its temporality are different. The contribution of negotiation is to display the ‘in-between’ of this crucial argument; it is *not* self-contradictory but significantly performs, in the process of its discussion, the problems of judgement and identification that inform the political space of its enunciation.

For the moment, the act of negotiation will only be interrogatory. Can such split subjects and differentiated social movements, which display ambivalent and divided forms of identification, be represented in a collective will that distinctively echoes Gramsci’s enlightenment inheritance and its rationalism?¹ How does the language of the will accommodate the vicissitudes of its representation, its construction through a symbolic majority where the have-nots identify themselves from the position of the haves? How do we construct a politics based on such a displacement of affect or strategic elaboration (Foucault), where political positioning is ambivalently grounded in an acting-out of political fantasies that require repeated passages across the differential boundaries between one symbolic bloc *and an other*, and the positions available to each? If such is the case, then how do we fix the counter-image of socialist hegemony to reflect the divided will, the fragmented population? If the policy of hegemony is, quite literally, *unsignifiable* without the metonymic representation of its agonistic and ambivalent structure of articulation, then how does the collective will stabilize and unify its address as an agency of *representation*, as representative of a people? How do we avoid the mixing or overlap of images, the split screen, the failure to synchronize sound and image? Perhaps we need to change the ocular language of the image in order to talk of the social and political identifications or representations of a people. It is worth noting that Laclau and Mouffe have turned to the language of textuality and discourse, to *différance* and enunciative modalities, in attempting to understand the structure of hegemony.² Paul Gilroy also refers to Bakhtin’s theory of narrative when he describes the performance of black expressive cultures as an attempt to transform the relationship between performer and crowd ‘in *dialogic* rituals so

1. I owe this point to Martin Thom [Bhabha’s note].

2. Laclau and Mouffe, *Hegemony and Socialist Strategy*, chap. 3 [Bhabha’s note].

that spectators acquire the active role of participants in collective processes which are sometimes cathartic and which may symbolize or even create a community' (my emphasis).³

Such negotiations between politics and theory make it impossible to think of the place of the theoretical as a metanarrative claiming a more total form of generality. Nor is it possible to claim a certain familiar epistemological distance between the *time and place* of the intellectual and the activist, as Fanon suggests when he observes that 'while politicians situate their action in actual present-day events, men of culture take their stand in the field of history'.⁴ It is precisely that popular binarism between theory and politics, whose foundational basis is a view of knowledge as totalizing generality and everyday life as experience, subjectivity or false consciousness,⁵ that I have tried to erase. It is a distinction that even Sartre subscribes to when he describes the committed intellectual as the theoretician of practical knowledge whose defining criterion is rationality and whose first project is to combat the irrationality of ideology.⁶ From the perspective of negotiation and translation, *contra* Fanon and Sartre, there can be no final discursive *closure* of theory. It does not foreclose on the political, even though battles for power-knowledge⁷ may be won or lost to great effect. The corollary is that there is no first or final act of revolutionary social (or socialist) transformation.

I hope it is clear that this erasure of the traditional boundary between theory/politics, and my resistance to the *en-closure* of the theoretical, whether it is read negatively as elitism or positively as radical supra-rationality, do not turn on the good or bad faith of the activist agent or the intellectual *agent provocateur*. I am primarily concerned with the conceptual structuring of the terms—the theoretical / the political—that inform a range of debates around the place and time of the committed intellectual. I have therefore argued for a certain relation to knowledge which I think is crucial in structuring our sense of what the *object* of theory may be in the act of determining our specific political *objectives*.

II

What is at stake in the naming of critical theory as 'Western'? It is, obviously, a designation of institutional power and ideological Eurocentricity. Critical theory often engages with texts within the familiar traditions and conditions of colonial anthropology either to universalize their meaning within its own cultural and academic discourse, or to sharpen its internal critique of the Western logocentric sign, the idealist subject, or indeed the illusions and delusions of civil society. This is a familiar manoeuvre of theoretical knowledge, where, having opened up the chasm of cultural difference, a mediator or metaphor of otherness must be found to contain the effects of difference.

4. F. Fanon, *The Wretched of the Earth* (Harmondsworth: Penguin, 1967), p. 168 [Bhabha's note].

5. A Marxist term referring to an individual's ten-

dency to view reality in ways congruent with the interests of the dominant orthodoxy rather than in ways that reflect his or her own class interest.

6. J.-P. Sartre, *Politics and Literature*, [trans. J. A. Underwood, J. Calder] (London: Calder and Boyars, 1973), pp. 16–17 [Bhabha's note].

7. An allusion to the work of Foucault, which investigates the interrelation of political power and disciplines of knowledge.

In order to be institutionally effective as a discipline, the knowledge of cultural difference must be made to foreclose on the Other; difference and otherness thus become the fantasy of a certain cultural space or, indeed, the certainty of a form of theoretical knowledge that deconstructs the epistemological 'edge' of the West.

More significantly, the site of cultural difference can become the mere phantom of a dire disciplinary struggle in which it has no space or power. Montesquieu's Turkish Despot, Barthes's Japan, Kristeva's China, Derrida's Nambikwara Indians, Lyotard's Cashinahua pagans⁸ are part of this strategy of containment where the Other text is forever the exegetical horizon of difference, never the active agent of articulation. The Other is cited, quoted, framed, illuminated, encased in the shot/reverse-shot strategy of a serial enlightenment. Narrative and the *cultural* politics of difference become the closed circle of interpretation. The Other loses its power to signify, to negate, to initiate its historic desire, to establish its own institutional and oppositional discourse. However impeccably the content of an 'other' culture may be known, however anti-ethnocentrically it is represented, it is its *location* as the closure of grand theories, the demand that, in analytic terms, it be always the good object of knowledge, the docile body of difference, that reproduces a relation of domination and is the most serious indictment of the institutional powers of critical theory.

There is, however, a distinction to be made between the institutional history of critical theory and its conceptual potential for change and innovation. Althusser's critique of the temporal structure of the Hegelian-Marxist expressive totality, despite its functionalist limitations, opens up the possibilities of thinking the relations of production in a time of differential histories. Lacan's location of the signifier of desire, on the cusp of language and the law, allows the elaboration of a form of social representation that is alive to the ambivalent structure of subjectivity and sociality. Foucault's archaeology of the emergence of modern, Western man as a problem of finitude, inextricable from its afterbirth, its Other, enables the linear, progressivist claims of the social sciences—the major imperializing discourses—to be confronted by their own historicist limitations. These arguments and modes of analysis can be dismissed as internal squabbles around Hegelian causality, psychic representation or sociological theory. Alternatively, they can be subjected to a translation, a transformation of value as part of the questioning of the project of modernity in the great, revolutionary tradition of C. L. R. James—*contra* Trotsky⁹ or Fanon, *contra* phenomenology and existentialist psychoanalysis. In 1952, it was Fanon who suggested that an oppositional, differential reading of Lacan's Other might be more relevant for the colonial condition than the Marxisant¹ reading of the master-slave dialectic.

It may be possible to produce such a translation or transformation if we

8. Bhabha gives examples of cultural others used by French cultural critics and philosophers to further their own arguments: Charles-Louis de Secondat, baron de la Brède et de Montesquieu (1689–1755), employs the "Turkish Despot" in his *Persian Letters* (1721), which satirizes French society; his observations on Japan, presented in *Empire of Signs* (1970), convinced ROLAND BARTHES (1915–1980) that some signs have no signified; JULIA KRISTEVA (b. 1941) treats China in *About Chinese Women* (1974); in *Of Grammatology*, Derrida finds in CLAUDE LÉVI-STRAUSS's anthropolog-

ical descriptions of Brazil's Nambikwara in *Tristes Tropiques* (1955; see above) evidence of internal resistance to coercive naming practices; and JEAN-FRANÇOIS LYOTARD (1925–1998) discusses the storytelling of the tribal Cashinahua of Peru in *The Postmodern Condition* (1979).

9. LEON TROTSKY (1879–1940), Russian Marxist revolutionary and theorist. James (1901–1989), Trinidadian political activist and critic of colonialism.

1. Marxism-influenced. Bhabha is referring to Fanon's *Black Skin, White Masks* (1952).

understand the tension within critical theory between its institutional containment and its revisionary force. The continual reference to the horizon of other cultures which I have mentioned earlier is ambivalent. It is a site of citation, but it is also a sign that such critical theory cannot forever sustain its position in the academy as the adversarial cutting edge of Western idealism. What is required is to demonstrate another territory of translation, another testimony of analytical argument, a different engagement in the politics of and around cultural domination. What this other site for theory might be will become clearer if we first see that many poststructuralist ideas are themselves opposed to Enlightenment humanism and aesthetics. They constitute no less than a deconstruction of the moment of the modern, its legal values, its literary tastes, its philosophical and political categorical imperatives. Secondly, and more importantly, we must rehistoricize the moment of 'the emergence of the sign', or 'the question of the subject', or the 'discursive construction of social reality' to quote a few popular topics of contemporary theory. This can only happen if we relocate the referential and institutional demands of such theoretical work in the field of cultural difference—*not cultural diversity*.

Such a reorientation may be found in the historical texts of the colonial moment in the late eighteenth and early nineteenth centuries. For at the same time as the question of cultural difference emerged in the colonial text, discourses of civility were defining the doubling moment of the emergence of Western modernity. Thus the political and theoretical genealogy of modernity lies not only in the origins of the *idea* of civility, but in this history of the colonial moment. It is to be found in the resistance of the colonized populations to the Word of God and Man—Christianity and the English language. The transmutations and translations of indigenous traditions in their opposition to colonial authority demonstrate how the desire of the signifier, the indeterminacy of intertextuality, can be deeply engaged in the postcolonial struggle against dominant relations of power and knowledge. In the following words of the missionary master we hear, quite distinctly, the oppositional voices of a culture of resistance; but we also hear the uncertain and threatening process of cultural transformation. I quote from A. Duff's² influential *India and India Missions* (1839):

Come to some doctrine which you believe to be peculiar to Revelation; tell the people that they must be regenerated or born again, else they can never 'see God'. Before you are aware, they may go away saying, 'Oh, there is nothing new or strange here; our own Shastras³ tell us the same thing; we know and believe that we must be born again; it is our fate to be so.' But what do they understand by the expression? It is that they are to be born again and again, in some other form, agreeably to their own system of transmigration or reiterated births. To avoid the appearance of countenancing so absurd and pernicious a doctrine, you vary your language, and tell them that there must be a second birth—that they must be twice-born. Now it so happens that this, and all similar phraseology, is preoccupied. The sons of a Brahman have to undergo

2. Alexander Duff (1806–1878), Scottish missionary to India from the Free Church of Scotland.

3. Sutras, or precepts summarizing Vedic teach-

ings; the Vedas are the sacred literature of Hinduism.

various purificatory and initiatory ceremonial rites, before they attain to full Brahmanhood. The last of these is the investiture with the sacred thread; which is followed by the communication of the Gayatri, or most sacred verse in the Vedas. This ceremonial constitutes, 'religiously and metaphorically, their second birth'; henceforward their distinctive and peculiar appellation is that of the twice-born, or regenerated men. *Hence it is your improved language might only convey the impression that all must become perfect Brahmans, ere they can 'see God'.*⁴ (My emphasis)

The grounds of evangelical certitude are opposed not by the simple assertion of an antagonistic cultural tradition. The process of translation is the opening up of another contentious political and cultural site at the heart of colonial representation. Here the word of divine authority is deeply flawed by the assertion of the indigenous sign, and in the very practice of domination the language of the master becomes hybrid—neither the one thing nor the other. The incalculable colonized subject—half acquiescent, half oppositional, always untrustworthy—produces an unresolvable problem of cultural difference for the very address of colonial cultural authority. The 'subtile system of Hinduism', as the missionaries in the early nineteenth century called it, generated tremendous policy implications for the institutions of Christian conversion. The written authority of the Bible was challenged and together with it a postenlightenment notion of the 'evidence of Christianity' and its historical priority, which was central to evangelical colonialism. The Word could no longer be trusted to carry the truth when written or spoken in the colonial world by the European missionary. Native catechists therefore had to be found, who brought with them their own cultural and political ambivalences and contradictions, often under great pressure from their families and communities.

This revision of the history of critical theory rests, I have said, on the notion of cultural difference, not cultural diversity. Cultural diversity is an epistemological object—culture as an object of empirical knowledge—whereas cultural difference is the process of the *enunciation* of culture as 'knowledgeable', authoritative, adequate to the construction of systems of cultural identification. If cultural diversity is a category of comparative ethics, aesthetics or ethnology, cultural difference is a process of signification through which statements of culture or *on* culture differentiate, discriminate and authorize the production of fields of force, reference, applicability and capacity. Cultural diversity is the recognition of pre-given cultural contents and customs; held in a time-frame of relativism it gives rise to liberal notions of multiculturalism, cultural exchange or the culture of humanity. Cultural diversity is also the representation of a radical rhetoric of the separation of totalized cultures that live unsullied by the intertextuality of their historical locations, safe in the Utopianism of a mythic memory of a unique collective identity. Cultural diversity may even emerge as a system of the articulation and exchange of cultural signs in certain early structuralist accounts of anthropology.

Through the concept of cultural difference I want to draw attention to the common ground and lost territory of contemporary critical debates. For they

4. Rev. A. Duff, *India and India Missions: Including Sketches of the Gigantic System of Hinduism* (Edinburgh: John Johnstone; London: John Hunter, 1839), p. 560 [Bhabha's note].

all recognize that the problem of cultural interaction emerges only at the signifiatory boundaries of cultures, where meanings and values are (mis)read or signs are misappropriated. Culture only emerges as a problem, or a problematic, at the point at which there is a loss of meaning in the contestation and articulation of everyday life, between classes, genders, races, nations. Yet the reality of the limit or limit-text of culture is rarely theorized outside of well-intentioned moralist polemics against prejudice and stereotype, or the blanket assertion of individual or institutional racism—that describe the effect rather than the structure of the problem. The need to think the limit of culture as a problem of the enunciation of cultural difference is disavowed.

The concept of cultural difference focuses on the problem of the ambivalence of cultural authority: the attempt to dominate in the *name* of a cultural supremacy which is itself produced only in the moment of differentiation. And it is the very authority of culture as a knowledge of referential truth which is at issue in the concept and moment of *enunciation*. The enunciative process introduces a split in the performative present of cultural identification; a split between the traditional culturalist demand for a model, a tradition, a community, a stable system of reference, and the necessary negation of the certitude in the articulation of new cultural demands, meanings, strategies in the political present, as a practice of domination, or resistance. The struggle is often between the historicist teleological or mythical time and narrative of traditionalism—of the right or the left—and the shifting, strategically displaced time of the articulation of a historical politics of negotiation which I suggested above. The time of liberation is, as Fanon powerfully evokes, a time of cultural uncertainty, and, most crucially, of signifiatory or representational undecidability:

But [native intellectuals] forget that the forms of thought and what [they] feed . . . on, together with modern techniques of information, language and dress, have dialectically reorganized the people's intelligences and *the constant principles (of national art)* which acted as safeguards during the colonial period are now undergoing extremely radical changes. . . . [We] must join the people in that fluctuating movement which they are *just* giving a shape to . . . which will be the signal for everything to be called into question . . . it is to the zone of *occult instability* where the people dwell that we must come.⁵ (My emphases)

The enunciation of cultural difference problematizes the binary division of past and present, tradition and modernity, at the level of cultural representation and its authoritative address. It is the problem of how, in signifying the present, something comes to be repeated, relocated and translated in the name of tradition, in the guise of a pastness that is not necessarily a faithful sign of historical memory but a strategy of representing authority in terms of the artifice of the archaic. That iteration negates our sense of the origins of the struggle. It undermines our sense of the homogenizing effects of cultural symbols and icons, by questioning our sense of the authority of cultural synthesis in general.

This demands that we rethink our perspective on the identity of culture.

5. Fanon, *The Wretched of the Earth*, pp. 182–83 [Bhabha's note].

Here Fanon's passage—somewhat reinterpreted—may be helpful. What is implied by his juxtaposition of the constant national principles with his view of culture-as-political-struggle, which he so enigmatically and beautifully describes as 'the zone of occult instability where the people dwell'? These ideas not only help to explain the nature of colonial struggle; they also suggest a possible critique of the positive aesthetic and political values we ascribe to the unity or totality of cultures, especially those that have known long and tyrannical histories of domination and misrecognition. Cultures are never unitary in themselves, nor simply dualistic in the relation of Self to Other. This is not because of some humanistic nostrum that beyond individual cultures we all belong to the human culture of mankind; nor is it because of an ethical relativism which suggests that in our cultural capacity to speak of and judge others we necessarily 'place ourselves in their position', in a kind of relativism of distance of which Bernard Williams has written at length.⁶

The reason a cultural text or system of meaning cannot be sufficient unto itself is that the act of cultural enunciation—the *place of utterance*—is crossed by the *différance* of writing. This has less to do with what anthropologists might describe as varying attitudes to symbolic systems within different cultures than with the structure of symbolic representation itself—not the content of the symbol or its social function, but the structure of symbolization. It is this difference in the process of language that is crucial to the production of meaning and ensures, at the same time, that meaning is never simply mimetic and transparent.

The linguistic difference that informs any cultural performance is dramatized in the common semiotic account of the disjuncture between the subject of a proposition (*énoncé*) and the subject of enunciation, which is not represented in the statement but which is the acknowledgement of its discursive embeddedness and address, its cultural positionality, its reference to a present time and a specific space. The pact of interpretation is never simply an act of communication between the I and the You designated in the statement. The production of meaning requires that these two places be mobilized in the passage through a Third Space, which represents both the general conditions of language and the specific implication of the utterance in a performative and institutional strategy of which it cannot 'in itself' be conscious. What this unconscious relation introduces is an ambivalence in the act of interpretation. The pronominal I of the proposition cannot be made to address—in its own words—the subject of enunciation, for this is not personable, but remains a spatial relation within the schemata and strategies of discourse. The meaning of the utterance is quite literally neither the one nor the other. This ambivalence is emphasized when we realize that there is no way that the content of the proposition will reveal the structure of its positionality; no way that context can be mimetically read off from the content.

The implication of this enunciative split for cultural analysis that I especially want to emphasize is its temporal dimension. The splitting of the subject of enunciation destroys the logics of synchronicity and evolution which traditionally authorize the subject of cultural knowledge. It is often taken for

6. B. Williams, *Ethics and the Limits of Philosophy* (London: Fontana, 1985), chap. 9 [Bhabha's note].

granted in materialist and idealist problematics that the value of culture as an object of study, and the value of any analytic activity that is considered cultural, lie in a capacity to produce a cross-referential, generalizable unity that signifies a progression or evolution of ideas-in-time, as well as a critical self-reflection on their premisses or determinants. It would not be relevant to pursue the detail of this argument here except to demonstrate—via Marshall Sahlins's *Culture and Practical Reason*—the validity of my general characterization of the Western expectation of culture as a disciplinary practice of writing. I quote Sahlins at the point at which he attempts to define the difference of Western bourgeois culture:

We have to do not so much with functional dominance as with structural—with different structures of symbolic *integration*. And to this gross difference in design correspond differences in symbolic performance: between an *open, expanding* code, responsive by *continuous* permutation to events it has itself staged, and an apparently *static* one that seems to know not events, but only its own preconceptions. The gross distinction between 'hot' societies and 'cold', development and underdevelopment, societies with and without history—and so between large societies and small, expanding and self-contained, colonizing and colonized.⁷ (My emphases)

The intervention of the Third Space of enunciation, which makes the structure of meaning and reference an ambivalent process, destroys this mirror of representation in which cultural knowledge is customarily revealed as an integrated, open, expanding code. Such an intervention quite properly challenges our sense of the historical identity of culture as a homogenizing, unifying force, authenticated by the originary Past, kept alive in the national tradition of the People. In other words, the disruptive temporality of enunciation displaces the narrative of the Western nation which Benedict Anderson so perceptively describes as being written in homogeneous, serial time.⁸

It is only when we understand that all cultural statements and systems are constructed in this contradictory and ambivalent space of enunciation, that we begin to understand why hierarchical claims to the inherent originality or 'purity' of cultures are untenable, even before we resort to empirical historical instances that demonstrate their hybridity. Fanon's vision of revolutionary cultural and political change as a 'fluctuating movement' of occult instability could not be articulated as cultural *practice* without an acknowledgement of this indeterminate space of the subject(s) of enunciation. It is that Third Space, though unrepresentable in itself, which constitutes the discursive conditions of enunciation that ensure that the meaning and symbols of culture have no primordial unity or fixity; that even the same signs can be appropriated, translated, rehistoricized and read anew.

Fanon's moving metaphor—when reinterpreted for a theory of cultural signification—enables us to see not only the necessity of theory, but also the restrictive notions of cultural identity with which we burden our visions of political change. For Fanon, the liberatory people who initiate the productive instability of revolutionary cultural change are themselves the bearers of a

7. M. Sahlins, *Culture and Practical Reason* (Chicago: University of Chicago Press, 1976), p. 211 [Bhabha's note].

8. B. Anderson, *Imagined Communities* (London: Verso, 1983), chap. 1 [Bhabha's note].

hybrid identity. They are caught in the discontinuous time of translation and negotiation, in the sense in which I have been attempting to recast these words. In the moment of liberatory struggle, the Algerian people destroy the continuities and constancies of the nationalist tradition which provided a safeguard against colonial cultural imposition. They are now free to negotiate and translate their cultural identities in a discontinuous intertextual temporality of cultural difference. The native intellectual who identifies the people with the true national culture will be disappointed. The people are now the very principle of 'dialectical reorganization' and they construct their culture from the national text translated into modern Western forms of information technology, language, dress. The changed political and historical site of enunciation transforms the meanings of the colonial inheritance into the liberatory signs of a free people of the future.

I have been stressing a certain void or misgiving attending every assimilation of contraries—I have been stressing this in order to expose what seems to me a fantastic mythological congruence of elements. . . . And if indeed therefore any real sense is to be made of material change it can only occur with an acceptance of a concurrent void and with a willingness to descend into that void wherein, as it were, one may begin to come into confrontation with a spectre of invocation whose freedom to participate in an alien territory and wilderness has become a necessity for one's reason or salvation.⁹

This meditation by the great Guyanese writer Wilson Harris on the void of misgiving in the textuality of colonial history reveals the cultural and historical dimension of that Third Space of enunciations which I have made the precondition for the articulation of cultural difference. He sees it as accompanying the 'assimilation of contraries' and creating that occult instability which presages powerful cultural changes. It is significant that the productive capacities of this Third Space have a colonial or postcolonial provenance. For a willingness to descend into that alien territory—where I have led you—may reveal that the theoretical recognition of the split-space of enunciation may open the way to conceptualizing an *international* culture, based not on the exoticism of multiculturalism or the *diversity* of cultures, but on the inscription and articulation of culture's *hybridity*. To that end we should remember that it is the 'inter'—the cutting edge of translation and negotiation, the *in-between* space—that carries the burden of the meaning of culture. It makes it possible to begin envisaging national, anti-nationalist histories of the 'people'. And by exploring this Third Space, we may elude the politics of polarity and emerge as the others of our selves.

LENNARD J. DAVIS

b. 1949

A pioneer of disability studies, Lennard Davis broke theoretical ground in 1995 with his book *Enforcing Normalcy: Disability, Deafness, and the Body*, calling attention to an aspect of identity that until then had "been relegated to a sideshow, a freak show at that, far away from the academic midway of progressive ideas and concerns." The son of deaf parents, Davis melded personal experience and contemporary theoretical training to cast new light on representations of disability and on the concepts of normalcy that buttress those representations. "Visualizing the Disabled Body: The Classical Nude and the Fragmented Torso," a chapter from *Enforcing Normalcy*, criticizes mainstream images of the ideal and the normal body, showing their dependence on the fragmented and monstrous body of early childhood fantasy.

Davis was born in the Bronx, New York, to immigrant, working-class Jewish parents. He attended Columbia University, where he was involved in the student rebellion in 1968, receiving a B.A. in 1970 and a Ph.D. in 1976. He wrote his doctoral dissertation under the supervision of EDWARD W. SAID and also attended courses in the early 1970s at the École Pratique des Hautes Études in Paris, where he studied with ROLAND BARTHES. Davis taught at Columbia from 1977 to 1985 and held several visiting posts until 1992, when he gained a professorship at Binghamton University of the State University of New York. In 2000 he moved to the University of Illinois at Chicago to become head of the English department and one of the architects of a new program, the first of its kind, in disability studies. Davis published his first two books on the history and theory of the novel, but his research interests shifted in the early 1990s when he became a member of CODA (Children of Deaf Adults). Thereafter he focused on deafness and disability, co-founding the Modern Language Association's Committee on Disability Issues in the Profession and writing on these topics in academic venues as well as more popular ones such as the *Nation* and the *New York Times*.

Like the studies of gender, sexuality, race, and ethnicity that have become prominent in recent decades, disability studies focuses on identity, the way that identity relates to the body, and the social constructions of marginality and normality. It draws on a wide array of twentieth-century theoretical sources, including psychoanalysis, cultural studies, feminism, and especially body studies. Beginning with the work of MICHEL FOUCAULT, who examined the disciplining and medicalization of the body as a form of social control, the body has emerged as one of the central theoretical categories of recent years, often replacing the concern with subjectivity that was prominent in the 1970s and 1980s. In particular, feminist theorists such as HÉLÈNE CIXOUS and SUSAN BORDO have exposed the frequently negative body images enforced on women. In a different vein, DONNA HARAWAY's "Manifesto for Cyborgs" (1985; see above) has also influenced disability studies by promoting a postmodern view of the body as a technologically constructed "cyborg."

Demonstrating how the body is a social construction rather than a universal constant, Davis—and disability studies—starts with a critique of "normalcy," which functions to stigmatize as abnormal those with different or limited abilities. In *Enforcing Normalcy*, he traces the history of the idea of the normal, which was born in the eighteenth century with eugenics and statistics, mandating that people fit within the limits of a "normal curve." Before that time, Davis argues, the "ideal" was the primary model in Western culture; this concept assumed that all bodies were less than ideal, and there was less stigma attached to disability. Some disability theorists trace the emphasis on the normal body to industrial capitalism, which required a standardized body for factory work and labeled the disabled body as abnormal, relegating it to marginal status. In our own era we have seen the rise of the "normal ideal," especially

in Hollywood movies, which depict ideal bodies as normal and less-than-ideal bodies as abnormal.

"Visualizing the Disabled Body" analyzes the depiction of disability and normalcy in art, literature, and film. Beginning with a striking comparison between a famous Greek statue, the Venus de Milo, and a contemporary woman with disabilities, Davis questions our aesthetic and social preconceptions that lead us to think an armless statue beautiful and a living woman without arms ugly, deformed, and de-erotized. He looks at the ideal body in the classical art form of the nude and considers the interplay between the ideal Venus and the monstrous Medusa in Greek mythology. After deconstructing this dichotomy, he investigates the images of disability prevalent in a range of works of art and literature, including Mary Shelley's novel *Frankenstein* (1818), the photography of Diane Arbus (1923–1971) and others, and films such as *Frankenstein* (1931) and *Born on the Fourth of July* (1989). Davis finds that the "visual arts have done a magnificent job of centralizing normalcy and of marginalizing different bodies," and hence excel at their socially coercive role of "enforcing" normalcy.

Turning to psychoanalysis, Davis draws on JACQUES LACAN's notion of the primordial "fragmented body" to understand the persistent creation of disabled bodies. The abnormal body suggests that one's coherent identity is actually a dreamlike construction that merely conceals the fundamentally fragmentary nature of identity. As Davis puts it, "wholeness is in fact a hallucination." In particular, Davis considers *Frankenstein* in terms of the fragmented, grotesque body. In an innovative reading, he sees the scientist's creation as representing a person with disabilities. The creature is horrible because he is a composite made from disparate body parts, thereby literalizing the notion we hold from early infancy of the primordial, fragmented body.

Disability theorists like Davis aim not only at making a theoretical intervention but at changing community views of disability and removing its social stigma. Just as feminism, queer studies, and African American studies arose out of political movements, so disability studies is connected with a political movement, one that seeks greater rights for people with disabilities. Part of its goal is to redefine disabled people as a minority group. As Davis passionately argues, "people with disabilities have been an oppressed and repressed group. People with disabilities have been isolated, incarcerated[,] . . . institutionalized, and controlled to a degree probably unequal to that experienced by any other minority group. As fifteen percent of the population, people with disabilities make up the largest physical minority within the United States." Construed as one among many minority groups, disabled people can demand equal treatment as a matter of human rights whose denial is a form of unjust discrimination.

One problematic question for disability theorists is that of definition. The central critique launched by disability studies aims to break down the dichotomy of abled/disabled and normal/abnormal, offering instead a broad conceptual continuum encompassing persons of varying abilities. At the same time, disability is cast as a specific identity defined narrowly enough that most people (e.g., the nearsighted) are not considered disabled. This second tactic invokes "the disabled" as a category designed to convey minority status and legal rights. The tension between wide and narrow definitions of disability mirrors a tension in other identity-based studies—whether focusing on race, ethnicity, gender, or sexuality—between deconstructing conventional categories that marginalize them and asserting a separate status to remedy losses of rights. Perhaps it reflects less a contradiction than a two-pronged strategy, at once aiming ideologically to dispel prejudice and pragmatically asserting the rights of those injured by prejudice. In concentrating on these tasks, Davis's work and disability studies compellingly reconfigure concepts of identity, the body, and normalcy.

BIBLIOGRAPHY

Lennard Davis's writings on the novel include *Factual Fictions: The Origins of the Novel* (1983; rpt. 1997), a study of the origin of the novel in relation to other genres, such as journalism and history, and *Resisting Novels: Ideology and Fiction* (1987), which examines the ideological suasion of fiction. He also co-edited with his spouse, M. Bella Mirabella, *Left Politics and the Literary Profession* (1990). Davis's *Enforcing Normalcy: Disability, Deafness, and the Body* (1995) and his edited anthology *The Disability Studies Reader* (1997) both stake out the field of disability studies. Davis also edited his parents' correspondence, published as "*Shall I Say a Kiss?*": *Courtship Letters of a Deaf Couple, 1936–38* (1999), which conveys the experience of two deaf people in England just before World War II. In addition to his academic work, he has published articles in mainstream magazines, including the *Nation*, the *New York Times*, *McCall's*, *Redbook*, and *Parents*. The best biographical source about Davis is his autobiography, *My Sense of Silence: Memoir of a Childhood with Deafness* (2000), which explores the political and psychological issues surrounding disability.

Davis's investigation of the origin of the novel has received significant attention, most notably a feminist expansion in Catherine Gallagher's *Nobody's Story: The Vanishing Act of Women Writers in the Marketplace, 1679–1820* (1995). Surveying the emergence of the field, Rachel Adams's "Enabling Differences: New York in Disability Studies," *Michigan Quarterly Review* 37 (1998), praises Davis's critique of normalcy but criticizes his "overwhelming accumulation of examples" and theoretical sources, finding that he insufficiently bridges the "differences between deafness and other forms of physical impairment." Focusing on deafness, Brenda Jo Brueggeman draws on Davis's work in *Lend Me Your Ear: Rhetorical Constructions of Deafness* (1999) and "Writing Insight: Deafness and Autobiography," *American Quarterly* 52 (2000).

2. One of the zoological works of the Greek philosopher (384–322 B.C.E.; see above), whose works

set the course of Western science for centuries.

3. Japanese dancer, teacher, and choreographer (1928–1986); his style featured dancers with distorted, emaciated bodies, shaved heads, and white-plastered faces.

for minor scarring visible only up close. The big toe of her right foot has been cut off, and her torso is covered with scars, including a particularly large one between her shoulder blades, one that covers her shoulder, and one covering the tip of her breast where her left nipple was torn out.

Yet she is considered one of the most beautiful female figures in the world. When the romantic poet Heinrich Heine saw her he called her 'Notre-Dame de la Beauté.'⁴

He was referring to the Venus de Milo.⁵

Consider too Pam Herbert, a quadriplegic with muscular dystrophy, writing her memoir by pressing her tongue on a computer keyboard, who describes herself at twenty-eight years old:

I weigh about 130 pounds; I'm about four feet tall. It's pretty hard to get an accurate measurement on me because both of my knees are permanently bent and my spine is curved, so 4' is an estimate. I wear size two tennis shoes and strong glasses; my hair is dishwater blonde and shoulder length.⁶

In this memoir, she describes her wedding night:

We got to the room and Mark laid me down on the bed because I was so tired from sitting all day. Anyway, I hadn't gone to the bathroom all day so Mark had to catheterize me. I had been having trouble going to the bathroom for many years, so it was nothing new to Mark, he had done it lots of times before.

It was time for the biggest moment of my life, making love. Of course, I was a little nervous and scared. Mark was very gentle with me. He started undressing me and kissing me. We tried making love in the normal fashion with Mark on top and me on the bottom. Well, that position didn't work at all, so then we tried laying on our sides coming in from behind. That was a little better. Anyway, we went to sleep that night a little discouraged because we didn't have a very good lovemaking session. You would have thought that it would be great, but sometimes things don't always go the way we want them to. We didn't get the hang of making love for about two months. It hurt for a long time.⁷

I take the liberty of bringing these two women's bodies together. Both have disabilities. The statue is considered the ideal of Western beauty and eroticism, although it is armless and disfigured. The living woman might be considered by many 'normal' people to be physically repulsive, and certainly without erotic allure. The question I wish to ask is why does the impairment of the Venus de Milo in no way prevent 'normal' people from considering her beauty, while Pam Herbert's disability becomes the focal point for horror and pity?

In asking this question, I am really raising a complex issue. On a social level, the question has to do with how people with disabilities are seen and

4. *Our Lady of Beauty* (French). Heine (1797–1856), German Romantic poet and journalist.

5. Famous classical statue of Aphrodite, Greek goddess of love (2d c. B.C.E. copy of a 4th c. original), found on the island of Melos in 1820; it is now displayed in the Louvre, the national art museum of France. The Romans called this god-

dess Venus.

6. In S. E. Browne, D. Connors, and N. Stern, eds., *With the Power of Each Breath: A Disabled Women's Anthology* (Pittsburgh: Cleis Press, 1985), p. 147 [Davis's note]. Some of the author's notes have been edited, and some omitted.

7. *Ibid.*, p. 155 [Davis's note].

why, by and large, they are de-eroticized. If, as I mentioned earlier, disability is a cultural phenomenon rooted in the senses, one needs to inquire how a disability occupies a field of vision, of touch, of hearing; and how that disruption or distress in the sensory field translates into psycho-dynamic representations. This is more a question about the nature of the subject than about the qualities of the object, more about the observer than the observed. The 'problem' of the disabled has been put at the feet of people with disabilities for too long.

Normalcy, rather than being a degree zero of existence, is more accurately a location of bio-power, as Foucault⁸ would use the term. The 'normal' person (clinging to that title) has a network of traditional ableist assumptions and social supports that empowers the gaze⁹ and interaction. The person with disabilities, until fairly recently, had only his or her own individual force or will. Classically, the encounter has been, and remains, an uneven one. Anne Finger describes it in strikingly visual terms by relating an imagined meeting between Rosa Luxemburg and Antonio Gramsci,¹ each of whom was a person with disabilities, although Rosa is given the temporary power of the abled gaze:

We can measure Rosa's startled reaction as she glimpses him the misshapen dwarf limping towards her in a second-hand black suit so worn that the cuffs are frayed and the fabric is turning green with age, her eye immediately drawn to this disruption in the visual field; the unconscious flinch; the realization that she is staring at him, and the too-rapid turning away of the head. And then, the moment after, the consciousness that the quick aversion of the gaze was as much of an insult as the stare, so she turns her head back but tries to make her focus general, not a sharp gaze. Comrade Rosa, would you have felt a slight flicker of embarrassment? shame? revulsion? dread? of a feeling that can have no name?²

In this encounter what is suppressed, at least in this moment, is the fact that Rosa Luxemburg herself is physically impaired (she walked with a limp for her whole life). The emphasis then shifts from the cultural norm to the deviation; Luxemburg, now the gazing subject, places herself in the empowered position of the norm, even if that position is not warranted.

Disability, in this and other encounters, is a disruption in the visual, auditory, or perceptual field as it relates to the power of the gaze. As such, the disruption, the rebellion of the visual, must be regulated, rationalized, contained. Why the modern binary—normal / abnormal—must be maintained is a complex question. But we can begin by accounting for the desire to split bodies into two immutable categories: whole and incomplete, abled and disabled, normal and abnormal, functional and dysfunctional.

In the most general sense, cultures perform an act of splitting (*Spaltung*,³

8. MICHEL FOUCAULT (1926–1984), French philosopher and historian of ideas; the study of bio-power (as a political technology for manipulating the body) is a major theme in his work.

9. A term associated with the psychoanalytic theory of JACQUES LACAN (1901–1981) and, more specifically, with Lacan-influenced film studies (e.g., LAURA MULVEY's 1975 "Visual Pleasure and Narrative Cinema," above).

1. Italian Marxist philosopher (1891–1937; see above). Luxemburg (1871–1919), German Marxist

revolutionary.

2. Anne Finger, "Comrade Luxemburg and Comrade Gramsci Pass Each Other at a Congress of the Second International in Switzerland on the 10th of March, 1912," unpublished manuscript, 1994 [Davis's note].

3. Crack; splitting, division (German). The term is used by SIGMUND FREUD (1856–1939) in discussing psychosis and fetishism, especially in "Splitting of the Ego in the Process of Defense" (1940) and "Fetishism" (1927; see above); more important for

to use Freud's term). These violent cleavages of consciousness are as primitive as our thought processes can be. The young infant splits the good parent from the bad parent—although the parent is the same entity. When the child is satisfied by the parent, the parent is the good parent; when the child is not satisfied, the parent is bad. As a child grows out of the earliest phases of infancy, she learns to combine those split images into a single parent who is sometimes good and sometimes not. The residue of *Spaltung* remains in our inner life, personal and collective, to produce monsters and evil stepmothers as well as noble princes and fairy godmothers.

In this same primitive vein, culture tends to split bodies into good and bad parts. Some cultural norms are considered good and others bad. Everyone is familiar with the 'bad' body: too short or tall, too fat or thin, not masculine or feminine enough, not enough or too much hair on the head or other parts of the body, penis or breasts too small or (excepting the penis) too big. Furthermore, each individual assigns good and bad labels to body parts—good: hair, face, lips, eyes, hands; bad: sexual organs, excretory organs, underarms.

The psychological explanation may provide a reason why it is imperative for society at large to engage in *Spaltung*. The divisions whole/incomplete, able/disabled neatly cover up the frightening writing on the wall that reminds the hallucinated whole being that its wholeness is in fact a hallucination, a developmental fiction. *Spaltung* creates the absolute categories of abled and disabled, with concomitant defenses against the repressed fragmented body.

But a psychological explanation alone is finally insufficient. Historical specificity makes us understand that disability is a social process with an origin. So, why certain disabilities are labeled negatively while others have a less negative connotation is a question tied to complex social forces (some of which I have tried to lay out in earlier chapters). It is fair to say, in general, that disabilities would be most dysfunctional in postindustrial countries, where the ability to perambulate or manipulate is so concretely tied to productivity, which in itself is tied to production. The body of the average worker as we have seen, becomes the new measure of man and woman. Michael Oliver, citing Ryan and Thomas (1980), notes:

With the rise of the factory . . . [during industrialization] many more disabled people were excluded from the production process for "The speed of factory work, the enforced discipline, the time-keeping and production norms—all these were a highly unfavorable change from the slower, more self-determined and flexible methods of work into which many handicapped people had been integrated."⁴

Both industrial production and the concomitant standardization of the human body have had a profound impact on how we split up bodies.

We tend to group impairments into the categories either of 'disabling' (bad) or just 'limiting' (good). For example, wearing a hearing aid is seen as much more disabling than wearing glasses, although both serve to amplify a deficient sense. But loss of hearing is associated with aging in a way that

the point made here, Lacan makes the concept fundamental to subjectivity itself. Other psychoanalysts who developed Freud's notion of *Spaltung* in the directions suggested by Davis include Melanie Klein (the child's splitting of objects) and Bruno Bettelheim (the link between the split and

fairy tales).

4. J. Ryan and F. Thomas, *The Politics of Mental Handicap* (Harmondsworth: Penguin, 1980), citd. in Michael Oliver, *The Politics of Disablement: A Sociological Approach* (New York: St. Martin's, 1990), p. 27 [Davis's note].

nearsightedness is not. Breast removal is seen as an impairment of femininity and sexuality, whereas the removal of a foreskin is not seen as a diminution of masculinity. The coding of body parts and the importance attached to their selective function or dysfunction is part of a much larger system of signs and meanings in society, and is constructed as such.

'Splitting' may help us to understand one way in which disability is seen as part of a system in which value is attributed to body parts. The disabling of the body part or function is then part of a removal of value. The gradations of value are socially determined, but what is striking is the way that rather than being incremental or graduated, the assignment of the term 'disabled,' and the consequent devaluation are total. That is, the concept of disabled seems to be an absolute rather than a gradient one. One is either disabled or not. Value is tied to the ability to earn money. If one's body is productive, it is not disabled. People with disabilities continue to earn less than 'normal' people and, even after the passage of the Americans with Disabilities Act, 69 percent of Americans with disabilities were unemployed.⁵ Women and men with disabilities are seen as less attractive, less able to marry and be involved in domestic production.

The ideology of the assigning of value to the body goes back to preindustrial times. Myths of beauty and ugliness have laid the foundations for normalcy. In particular, the Venus myth is one that is dialectically linked to another. This embodiment of beauty and desire is tied to the story of the embodiment of ugliness and repulsion. So the appropriate mythological character to compare the armless Venus with is Medusa.⁶ Medusa was once a beautiful sea goddess who, because she had sexual intercourse with Poseidon at one of Athene's temples, was turned by Athene into a winged monster with glaring eyes, huge teeth, protruding tongue, brazen claws, and writhing snakes for hair. Her hideous appearance has the power to turn people into stone, and Athene eventually completes her revenge by having Perseus kill Medusa. He finds Medusa by stealing the one eye and one tooth shared by the Graiae until they agree to help him. Perseus then kills Medusa by decapitating her while looking into his brightly polished shield, which neutralizes the power of her appearance; he then puts her head into a magic wallet that shields onlookers from its effects. When Athene receives the booty, she uses Medusa's head and skin to fashion her own shield.

In the Venus tradition, Medusa is a poignant double. She is the necessary counter in the dialectic of beauty and ugliness, desire and repulsion, wholeness and fragmentation. Medusa is the disabled woman to Venus's perfect body. The story is a kind of allegory of a 'normal' person's intersection with the disabled body. This intersection is marked by the power of the visual. The 'normal' person sees the disabled person and is turned to stone, in some

5. *New York Times*, October 27, 1994, A22 [Davis's note]. The Americans with Disabilities Act was passed in 1990.

6. The pairing of beauty with ugliness is further carried out in Venus's marriage to Vulcan, who is himself both ugly and disabled by his lameness. Lameness tends also be associated in an ableist way with impotence—as it is, for example, in W. Somerset Maugham's [1915 novel] *Of Human Bondage* [Davis's note]. Davis gives one version of the myth. In most accounts, Medusa is one of

three monstrous sisters, the Gorgons; because she is the only mortal among them, the hero Perseus (the son of Zeus and Danaë) is able to kill her, once he has obtained supernatural aids—winged sandals and the wallet into which he could put Medusa's head—with the unwilling help of the Graiae, the Gorgons' sisters. Poseidon is the Greek god of the sea; Athene (Athena), the Greek goddess of war, the arts and crafts, and wisdom. Vulcan is an Italian fire-god, identified with the Greek Hephaestus, god of fire and especially the forge.

sense, by the visual interaction. In this moment, the normal person suddenly feels self-conscious, rigid, unable to look but equally drawn to look. The visual field becomes problematic, dangerous, treacherous. The disability becomes a power derived from its otherness, its monstrosity, in the eyes of the 'normal' person. The disability must be decapitated and then contained in a variety of magic wallets. Rationality, for which Athene stands, is one of the devices for containing, controlling, and reforming the disabled body so that it no longer has the power to terrorize. And the issue of mutilation comes up as well because the disabled body is always the reminder of the whole body about to come apart at the seams. It provides a vision of, a caution about, the body as a construct held together willfully, always threatening to become its individual parts—cells, organs, limbs, perceptions—like the fragmented, shared eye and tooth that Perseus ransoms back to the Graiae.

In order to understand better how normalcy is bred into ways of viewing the body, it might be productive to think about the body as it appears in art, photography, and the other visual media. There has been a powerful tradition in Western art of representing the body in a way that serves to solidify, rather early on in history, a preferred mode of envisioning the body. This tradition, identified by Kenneth Clark, has been most clearly articulated in the 'nude.' The nude, as Clark makes clear, is not a literal depiction of the human body but rather a set of conventions about the body: 'the nude is not the subject of art, but a form of art.' Or, as he says, the nude is 'the body re-formed.'⁷ If that is the case, then the nude is really part of the development of a set of idealized conventions about the way the body is supposed to look.

While some nudes may be male, when people talk about 'the nude' they most often mean the female nude. Lynda Nead, in a feminist correction of Clark, points out that 'more than any other subject, the female nude connotes "Art."⁸ And in that tradition, the Venus becomes the vortex for thinking about the female body. The Venus is, rather than a subject, a masculine way of fashioning the female body, or of remaking it into a conceptual whole.

I emphasize the word 'whole,' because the irony of the Venus tradition is that virtually no Venuses have been preserved intact from antiquity. Indeed, one of the reasons for the popularity of the Venus de Milo was that from the time it was discovered in 1820 until 1893 when Furtwängler's⁹ scholarship revealed otherwise, the statue was, according to Clark, 'believed to be an original of the fifth century and the only free-standing figure of a woman that had come down from the great period with the advantage of a head.'¹

The mutilation of the statues is made more ironic by the fact that their headless and armless state is usually overlooked by art historians—barely referred to at all by Clark, for example, in the entirety of his book. The art historian does not *see* the absence and so fills the absence with a presence. This compensation leads us to understand that in the discourse of the nude, one is dealing not simply with art history but with the reception of disability, the way that the 'normal' observer compensates or defends against the presence of difference. This is a 'way of seeing' not often discussed in art criti-

cism. Of course, one can consider that art historians are really just making the best of a bad situation, but it is possible to make a number of further observations.

First of all, the headlessness and armlessness of Venuses link them, structurally, with the Medusa tradition. Many of these Venuses have in effect been decapitated. There seems to be a reciprocal relationship between the decapitations of Medusa in myth and of Venus in reality. It seems that the Venus is really only made possible in coordination with the Medusa—that Aphrodite can romp because Medusa can kill. So it is a fitting dialectic that Medusa's beheading is contained within every broken Venus. The speechlessness of the art historian about the mutilation of his objects of beauty and desire is the effect of his metaphoric transformation to stone. This lapsus² in speech is really an avoidance, a wish to avoid the castrating, terrifying vision of Medusa—the disabled, the monster, who is also the disabler. In a larger sense, as Nead suggests, all visions of the female nude, particularly in the Venus tradition, are attempts by male artists and critics to gird themselves against the irrationality and chaos of the body—particularly the female body:

It begins to speak of a deep-seated fear and disgust of the female body and of femininity within patriarchal culture and of a construction of masculinity around the related fear of the contamination and dissolution of the male ego.³

In thinking about disability, one can extend this argument and say that the fear of the unwhole body, of the altered body, is kept at bay by depictions of whole, systematized bodies—the nudes of Western art. The unwhole body is the unholy body. Or as Kaja Silverman points out⁴ about images of the body in film, society creates a 'protective shield' that insulates it against the possibility of mutilation, fragmentation, castration.

Indeed, the systematization of the body by artist and critic suggests a linearity, a regularity, a completeness that belie the fragmentary, explosive way the body is constitutively experienced. Clark exemplifies this systematic approach in discussing the Esquiline Venus of the fifth century, the first embodiment of these conventions.

But she is solidly desirable, compact, proportionate; and, in fact, her proportions have been calculated on a simple mathematical scale. The unit of measurement is her head. She is seven heads tall; there is the length of one head between her breasts, one from breast to navel, and one from the navel to the division of the legs . . . fundamentally this is the architecture of the body that will control the observations of classically minded artists till the end of the nineteenth century.⁵

The amnesia of art historians to the subject of mutilation and decapitation (the Esquiline Venus has no head) is not accidental. The most we get from

5. Clark, *The Nude*, p. 75 [Davis's note].

Clark in his entire book is one wistful mention of a Greco-Roman depiction of the three graces as 'a relief in the Louvre, headless, alas.'⁶ The 'alas' speaks volumes. This amnesia, this looking away from incompleteness, an averting of the attention, a sigh, is the tip of a defensive mechanism that allows the art historian still to see the statue as an object of desire. So the critic's aim is to restore the damage, bring back the limbs, through an act of imagination.⁷ This phenomenon is not unlike the experience of 'phantom limb,' the paradoxical effect that amputees experience of sensing their missing limb. In the case of the art historian, the statue is seen as complete with phantom limbs and head. The art historian does not see the lack, the presence of an impairment, but rather mentally reforms the outline of the Venus so that the historian can return the damaged woman in stone to a pristine origin of wholeness. His is an act of reformation of the visual field, a sanitizing of the disruption in perception.

This is the same act of imagination, or one might say control, that bans from the nude the representation of normal biological processes. For example, there are no pregnant Venuses, there are no paintings of Venuses who are menstruating, micturating, defecating—lactating and lacrimating⁸ being the only recognized activities of idealized women. There are no old Venuses (with the exception of a Diana by Rembrandt⁹). One might think of a pregnant Venus as a temporarily disabled woman, and as such banned from the reconstruction of the body we call 'the nude.' Clark distinguishes between prehistoric fertility goddesses, like the Willendorf Venus,¹ images of fertility and pregnancy, and the differently ideal Grecian versions which are never pregnant. As Nead notes, 'Clark alludes to this image of the female body [the Willendorf Venus] as undisciplined, out of control; it is excluded from the proper concerns of art in favor of the smooth, uninterrupted line of the Cycladic [Greek] figure.'² As artists and art historians shun the fluids and changes in shape that are incompatible with the process of forming the 'regular' body, the evidentiary record of mutilated Venuses must be repressed by a similar process.

A cautionary word must be said on the decapitated and armless Venuses. While it is true that male statues equally are truncated, the incompleteness of the female statues suggests another obvious point that has been repressed for so long—violence. Did all these statues lose their arms and heads by sheer accident, were the structurally fragile head and limbs more likely to deteriorate than the torso, were there random acts of vandalism, or was a particular kind of symbolic brutality committed on these stone women? Did

6. *Ibid.*, p. 91 [Davis's note]. The Graces: daughters of Zeus, they personified beauty and grace, and were the constant attendants of Aphrodite/Venus.

7. This phenomenon corresponds to the filmgoer's experience of watching stories of disability. As Martin Norden points out, when disability is depicted in film, there is a strong tendency to erase or fix the "problem" by the end of the film (*Cinema of Isolation: A History of Physical Disability in the Movies* [New Brunswick, N.J.: Rutgers University Press, 1994], pp. 59ff.). For instance, no one recalls that Luke Skywalker in *Star Wars* [*The Empire Strikes Back*, 1980] lost his lower arm in a

battle with his father, Darth Vader. At the end of the film, a techno-intensive prosthesis is fitted on his stump, and for the sequels he acts as if his hand had grown back. No short-circuits or balky fingers are ever a problem in the sequels [Davis's note].

2. Nead. *The Female Nude*, p. 19 [Davis's note].

vandals, warriors, and adolescent males amuse themselves by committing focused acts of violence, of sexual bravado and mockery on these embodiments of desire? An armless woman is a symbol of sexual allure without the ability to resist, a headless nude captures a certain kind of male fantasy of submission without the complication of the individuality and the authority granted by a face, even an idealized one. We do not know and will probably never know what happened to these statues, although the destruction of the Parthenon³ figures has been documented as done by occupying soldiers. The point is that the violence against the body, the acts of hacking, mutilation and so on, have to be put in the context we have been discussing. An act of violence against a female statue is constitutively different from that against a male statue—and these are acts that can be placed in a range of terrorist acts against women during war. Such acts create disabled people, and so, in a sense, these Venuses are the disabled women of art. To forget that is again to commit acts of omission of a rather damning nature.

Of course, a statue is not a person. But as representations of women, the Venus statues carry a powerful cultural signification. The reaction to such statues, both by critics and other viewers, tells much about the way in which we consider the body both as a whole and as incomplete. One point to note is that the art historian, like Clark, tends to perform a complex double act. On the one hand, the critic sees the incomplete statue as whole, imagines the phantom limbs in order to defend against incompleteness, castration, the chaotic or 'grotesque body,' as Peter Stallybrass and Allon White have, using Bakhtinian terminology, called it.⁴ On the other hand (if indeed our standard is *two* hands), the critic and the artist are constantly faced with the fragmentary nature of the body, analyzing parts, facing the gaze of the missing part that must be argued into existence.

The model for the fragmentary nature of the nude is best illustrated by the famous story of Zeuxis, as told by Pliny.⁵ When Zeuxis painted his version of Aphrodite, he constructed her from the parts of five beautiful young women of his town of Kroton. His vision of the wholeness of Aphrodite was really an assemblage of unrelated parts. Likewise, the critic in regarding the whole nude must always be speaking of parts: 'their torsos have grown so long that the distance from the breasts to the division of the legs is three units instead of two, the pelvis is wide, the thighs are absurdly short.'⁶ The whole can only be known by the sum of its parts—even when those parts are missing. John Barrell has detailed the reactions of eighteenth-century men to the Venus dei Medici, and noted how they tended to examine every detail of the statue.⁷ Edward Wright, for example, tells observers to 'strictly examine every part' and a typical account read thus:

3. The chief temple to Athena, built (447–432 B.C.E.) on Athens' Acropolis; the Acropolis was seized by the Turks in 1458, and during a Venetian bombardment in 1687 the explosion of a powder magazine in the temple destroyed the center of the building. Many sculptures decorated the structure.

4. See Peter Stallybrass and Allon White, *The Politics and Poetics of Transgression* (Chicago: University of Chicago Press, 1987) [Davis's note]. The Russian theorist MIKHAIL BAKHTIN (1895–1975) discusses the "carnivalesque" and the "grotesque body" in *Rabelais and His World* (1965).

5. Pliny the Elder (23/4–79 C.E.), Roman historian and scientific encyclopedist; he gave this account of the Greek painter Zeuxis (active in Athens ca. 400 B.C.E.) in his *Natural History* 35.36.

Venus dei Medici: a Roman copy (1st c. B.C.E.) of a Greek original (4th c. B.C.E.), discovered in Rome in the 16th century (now in the Uffizi, Florence).

One might very well insist on the beauty of the breasts. . . . They are small, distinct, and delicate to the highest degree; with an idea of softness. . . . And yet with all that softness, they have a firmness too. . . . From her breasts, her shape begins to diminish gradually down to her waist; . . . Her legs are neat and slender; the small of them is finely rounded; and her feet are little, white, and pretty.⁸

Another carped:

The head is something too little for the Body, especially for the Hips and Thighs; the Fingers excessively long and taper, and no match for the Knuckles, except for the little Finger of the Right-Hand.⁹

These analyses perform a juggling act between the fragmentation of the body and its reunification into an hallucinated erotic whole.¹ In imagining the broken statues, the critic must mentally replace the arms and the head, then criticize any other restoration, as does Clark in attacking the reconstruction of the Venus of Arles: 'the sculptor Girardon² . . . not only added the arms and changed the angle of the head, but smoothed down the whole body, since the King was offended by the sight of ribs and muscles.'³ The point here is that the attempt of the critic to keep the body in some systematic whole is really based on a repression of the fragmentary nature of the body.

One might also want to recall that for the Greeks these statues, while certainly works of art, were also to be venerated, since they were representations of deities. For the Greeks, Aphrodite was not a myth; she was a goddess whose domain was desire. It somehow seems appropriate that the ritualistic or reverential attitude toward these statues, pointed out by Walter Benjamin,⁴ indeed their very appearance in stone (which Page duBois sees as a cultic representation of the bones of the female spirits⁵), has been reproduced in the attitude of that most secular of worshippers, the art critic. For the Venus has a double function: she is both a physical and a spiritual incarnation of desire. In that double sense, the critic must emphasize her spiritual existence by going beyond her physical incarnation in fallible stone, and her mutilations, to the essential body, the body of Desire, the body of the Other.

We can put this paradox in Lacanian terms. For Lacan, the most primitive, the earliest experience of the body is actually of the fragmented body (*corps morcelé*).⁶ The infant experiences his or her body as separate parts or pieces, as 'turbulent movements.' For the infant, rather than a whole, the body is an assemblage of arms, legs, surfaces. These representations / images of frag-

6. The term *corps morcelé* is a bit more vivid than "fragmented body," the now-standard translation of the term into English. *Morceler* is defined as "to divide up into pieces." It more actively carries the concept of chopping, cutting, or hacking. Thus the *corps morcelé* might more accurately be called "the cut-up body." However, I will retain the standard usage, for the sake of uniformity [Davis's note].

mented body parts Lacan calls *imagos* because they are 'constituted for the "instincts" themselves.'

Among these *imagos* are some that represent the elective vectors of aggressive intentions, which they provide with an efficacy that might be called magical. These are the images of castration, mutilation, dismemberment, dislocation, evisceration, devouring, bursting open of the body, in short, the *imagos* that I have grouped together under the apparently structural term of *imagos of the fragmented body*.⁷

The process that builds a self involves the enforced unifying of these fragments through the hallucination of a whole body, 'a Gestalt, that is to say, in an exteriority,' as Lacan has pointed out. The process 'extends from a fragmented body-image to a form of its totality . . . and, lastly, to the assumption of the armour of an alienating identity.'⁸ When the child points to an image in the mirror—at that stage Lacan calls 'the mirror phase'—the child recognizes (actually misrecognizes) that unified image as his or her self. That identification is really the donning of an identity, an 'armor' against the chaotic or fragmentary body.

In this sense, the disabled body is a direct *imago* of the repressed fragmented body. The disabled body causes a kind of hallucination of the mirror phase gone wrong. The subject looks at the disabled body and has a moment of cognitive dissonance, or should we say a moment of cognitive resonance with the earlier state of fragmentation. Rather than seeing the whole body in the mirror, the subject sees the repressed fragmented body; rather than seeing the object of desire, as controlled by the Other, the subject sees the true self of the fragmented body. For Lacan, because the child first saw its body as a 'collection of discrete part-objects, adults can never perceive their bodies in a complete fashion in later life.'⁹ This repressed truth of self-perception revolves around a prohibited central, specular moment—of seeing the disabled body—in which the 'normal' person views the Medusa image, in which the Venus-nude cannot be sustained as a viable armor. In Lacanian terms, the *moi*¹ is threatened with a breaking-up, literally, of its structure, is threatened with a reminder of its incompleteness. In a specular, face-to-face moment, the ego is involved in what J. B. Pontalis calls 'death work,' which involves the 'fundamental process of unbinding [of the ego], of fragmentation, of breaking up, of separation, of bursting.'² Thus the specular moment between the armored, unified self and its repressed double—the fragmented body—is characterized by a kind of death-work, repetition compulsion in which the unified self continuously sees itself undone—castrated, mutilated, perforated, made partial. In this context, it is worth noting that the Venus tradition involves castration at its very origin. Aphrodite is said to have been born from the foam of Uranus's genitals which Cronus threw into the sea after castrating his father.³ The dynamic is clear. Male mutilation is

3. Robert Graves, *The Greek Myths* (New York: Penguin, 1957), p. 49 [Davis's note]. Uranus (literally "Sky" in Greek), the first ruler of the world, was born from Gaia (Earth); Cronus was the young-

mitigated by the creation of the desirable female body. The disabled body is corrected by the wholeness of the constructed body of the nude. But, as has been noted, the emphasis on wholeness never entirely erases the foundation of the Venus tradition in the idea of mutilation, fragmented bodies, decapitation, amputation.

If we follow these terms, the disabled Venus serves as an unwanted reminder that the 'real' body, the 'normal body,' the observer's body, is in fact always already a 'fragmented body.' The linking together of all the disparate bodily sensations and locations is an act of will, a hallucination that always threatens to fall apart. The mutilated Venus and the disabled person, particularly the disabled person who is missing limbs or body parts, will become in fantasy visual echoes of the primal fragmented body—a signifier of castration and lack of wholeness. Missing senses, blindness, deafness, aphasia, in that sense, will point to missing bodily parts or functions. The art historian in essence dons or retains the armor of identity, needs the armor as does Perseus who must see Medusa through the polished shield. The art historian's defense is that mirror-like shield that conjures wholeness through a misrecognition linking the parts into a whole.

What this analysis tells us is that the 'disabled body' belongs to no one, just as the normal body, or even the 'phallus' belongs to no one. Even a person who is missing a limb, or is physically 'different,' still has to put on, assume, the disabled body and identify with it.⁴ The disabled body, far from being the body of some small group of 'victims,' is an entity from the earliest of childhood instincts, a body that is common to all humans, as Lacan would have it. The 'normal' body is actually the body we develop later. It is in effect a Gestalt—and therefore in the realm of what Lacan calls the Imaginary. The realm of the 'Real' in Lacanian terms is where the fragmented body is found because it is the body that precedes the ruse of identity and wholeness. Artists often paint this vision, and it often appears in dreams 'in the form of disjointed limbs, or of those organs represented in exoscopy . . . the very same that the visionary Hieronymus Bosch has fixed for all time.'⁵

In understanding this point, we can perhaps see how the issue of disability transcends the rather narrow category to which it has been confined. Just as, I claim, we readers are all deaf, participating in a deafened moment, likewise, we all—first and foremost—have fragmented bodies. It is in tracing our tactical and self-constructing (deluding) journeys away from that originary self that we come to conceive and construct that phantom goddess of wholeness, normalcy, and unity—the nude.

One might even add that the element of repulsion and fear associated with fragmentation and disability may in fact come from the very act of repressing

gest of their children (and was himself overthrown by Zeus).

4. Irving Kenneth Zola pointed out that people with disabilities are mostly born into "normal" families. Thus they are socialized into an ableist culture and have to adopt their disabled identity. "We think of ourselves in the shadows of the external world. The very vocabulary we use to describe ourselves is borrowed from the society. We are deformed, dis-eased, dis-abled, dis-ordered, ab-normal, and most telling of all an in-valid"

("Communication Barriers between 'the Able-Bodied' and 'the Handicapped,'" in *Psychological and Social Impact of Physical Disability*, ed. Robert P. Marinelli and Arthur E. Dell Orto [New York: Springer, 1984], p. 144) [Davis's note].

5. Lacan, "The Mirror Stage," p. 4 [Davis's note]. "Exoscopy": a view from the outside. Bosch (ca. 1460–1516), Dutch painter whose best-known works feature grotesque figures that sometimes combine human, animal, vegetable, and inanimate parts.

the primal fragmentariness of the body. As Freud wrote, 'the uncanny is in reality nothing new or foreign, but something familiar and old-established in the mind that has been estranged only [in] the process of repression.'⁶ The feelings of repulsion associated with the uncanny, *das Unheimlich*, the unfamiliar, are not unlike the emotions of the 'normal' when they are visualizing the disabled. The key to the idea of the uncanny is in its relation to the normal. *Heimlich* is a word associated with the home, with familiarity—and with the comfortable predictability of the home. The disabled body is seen as *unheimlich* because it is the familiar gone wrong. Disability is seen as something that does not belong at home, not to be associated with the home. Freud notes that the terror or repulsion of the uncanny is ambivalent, is found precisely in its relation to and yet deviance from the familiar. That the uncanny can be related to disability is made clear when Freud cites specifically 'dismembered limbs, a severed head, a hand cut off at the wrist' as *unheimlich*.⁷ What is uncanny about dismemberment seems to be the familiarity of the body part that is then made *unheimlich* by its severing. As Freud wrote, 'the *unheimlich* is what was once *heimisch*, homelike, familiar; the prefix "un" is the token of repression.'⁸

But in this equation I think Freud is actually missing the earlier repression of the inherently fragmentary nature of the original body *imago*. The homeyness of the body, its familiarity as whole, complete, contained, is based on a dynamic act of repression. Freud is assuming that the whole body is an *a priori* given, as he had done with the concept of the ego. But as Lacan has shown more than adequately, the ego is a multifaceted structure to be understood in its philosophical complexity. Likewise the ground of the body, its materiality given by Freud, needs a re-analysis. The route of disability studies allows for this revisioning. In this process, the *heimisch* body becomes the *unheimlich* body, and the fragment, the disabled parts, can be seen as the originary, familiar, body made unfamiliar by repression. Dominant culture has an investment in seeing the disabled, therefore, as uncanny, as something found outside the home, unfamiliar, while in fact where is the disabled body found if not at home?

I have been concentrating on the physical body, but it is worth considering for a moment the issue of madness. While mental illness is by definition not related to the intactness of the body, nevertheless, it shows up as a disruption in the visual field. We 'see' that someone is insane by her physical behavior, communication, and so on. Yet the fear is that the mind is fragmenting, breaking up, falling apart, losing itself—all terms we associate with becoming mad. With the considerable information we have about the biological roots of mental illness, we begin to see the disease again as a breaking up of 'normal' body chemistry: amino acid production gone awry, depleted levels of certain polypeptide chains or hormones. Language production can become fragmentary, broken, in schizophrenic speech production. David Rothman⁹ points out that in eighteenth- and nineteenth-century America, insanity was seen as being caused by the fragmented nature of 'modern' life—particularly the pressures brought to bear on people by a society in which economic boundaries were disappearing. This fragmenting of society pro-

duced a fragmentation of the individual person. So the asylums that sprung up during this period recommended a cure that involved a removal from the urban, alienated, fragmented environment to rural hospitals in which order and precision could be restored. 'A precise schedule and regular work became the two characteristics of the best private and public institutions. . . . The structure of the mental hospital would counteract the debilitating influences of the community.' As Rothman notes, 'Precision, certainty, regularity, order' were the words that were seen as embodying the essence of cure.¹ The mind would be restored to 'wholeness' by restoring the body through manual labor. However, needless to add, one had to have a whole body to have a whole mind. The general metaphor here continues to be a notion of wholeness, order, clean boundaries, as opposed to fragmentations, disordered bodies, messy boundaries.

If people with disabilities are considered anything, they are or have been considered creatures of disorder—monsters, monstrous. Leslie Fiedler has taken some pains to show this in his book *Freaks*.² If we look at Mary Shelley's *Frankenstein*,³ we find some of the themes we have been discussing emerge in novelistic form. First, we might want to note that we have no name for the creation of Dr Frankenstein other than 'monster.' (This linguistic lapsus is usually made up for in popular culture by referring to the creature itself as 'Frankenstein,' a terminology that confuses the creator with the created.) In reading the novel, or speaking about it, we can only call the creature 'the monster.' This linguistic limitation is worth noting because it encourages the reader to consider the creature a monster rather than a person with disabilities.

We do not often think of the monster in Mary Shelley's work as disabled, but what else is he? The characteristic of his disability is a difference in appearance. He is more than anything a disruption in the visual field. There is nothing else different about him—he can see, hear, talk, think, ambulate, and so on. It is worth noting that in popular culture, largely through the early film versions of the novel, the monster is inarticulate, somewhat mentally slow, and walks with a kind of physical impairment.⁴ In addition, the film versions add Ygor, the hunchbacked criminal who echoes the monster's disability in his own. Even in the recent film version by Kenneth Branagh, the creature walks with a limp and speaks with an impediment.⁵ One cannot dismiss this filtering of the creature through the lens of multiple disability. In order for the audience to fear and loathe the creature, he must be made to transcend the pathos of a single disability. Of course, it would be unseemly for a village to chase and torment a paraplegic or a person with acromegaly. Disabled people are to be pitied and ostracized; monsters are to be destroyed; audiences must not confuse the two.

4. According to Norden, Robert Florey, a writer who contributed to the original *Frankenstein*

script, came up with the idea of having Dr. Frankenstein's assistant Fritz break into a medical school to steal a brain. He finds the "normal" brain the doctor wanted but then drops it and takes one marked "abnormal" instead [Davis's note]. The French-born writer and director Florey (1900–1979) worked on the best-known (though not earliest) film version, directed by James Whale (1931).

5. *Mary Shelley's Frankenstein* (1994), which also starred the Irish director Branagh (b. 1960) as Victor Frankenstein.

In the novel, it is clear that Dr Frankenstein cannot abide his creation for only one reason—its hideous appearance. Indeed, the creature's only positive human contact is with the blind old man De Lacey, who cannot see the unsightly features. When De Lacey's family catches a glimpse of the creature, the women faint or run, and the men beat and pursue him. His body is a zone of repulsion; the reaction he evokes is fear and loathing. The question one wants to ask is why does a physical difference produce such a profound response?

The answer, I believe, is twofold. First, what is really hideous about the creature is not so much his physiognomy as what that appearance suggests. The *corps morcelé* makes its appearance immediately in the construction of the monster. Ironically, Dr Frankenstein adapts Zeuxis's notion of taking ideal parts from individuals to create the ideal whole body. As he says, 'I collected bones from charnel houses. . . . The dissecting room and the slaughter-house furnished many of my materials.'⁶ From these fragments, seen as loathsome and disgusting, Frankenstein assembles what he wishes to create—a perfect human. It is instructive in this regard to distinguish the Boris Karloff incarnation of the creature⁷—with the bolt through his neck—or Branagh's grotesquely sewn creature; from the image that Mary Shelley would have us imagine. Dr Frankenstein tells us:

His limbs were in proportion, and I had selected his features as beautiful. Beautiful—Great God! His yellow skin scarcely covered the work of muscles and arteries beneath; his hair was of a lustrous black and flowing; his teeth of a pearly whiteness; but these luxuriances only formed a more horrid contrast with his watery eyes, that seemed almost of the same colour as the dun white sockets in which they were set, his shrivelled complexion and straight black lips.⁸

What then constitutes the horror? If we add up the details, what we see is a well-proportioned man with long black hair, pearly white teeth, whose skin is somewhat deformed—resulting in jaundice and perhaps a tightness or thinness of the skin, a lack of circulation perhaps causing shriveling, watery eyes and darkened lips. This hardly seems to constitute horror rather than, say, pathos.⁹

What is found to be truly horrifying about Frankenstein's creature is its composite quality, which is too evocative of the fragmented body. Frankenstein's reaction to this living *corps morcelé* is repulsion: 'the beauty of the dream vanished, and breathless horror and disgust filled my heart.'¹ Frankenstein attempted to create a unified nude, an object of beauty and har-

6. Mary Shelley, *Frankenstein, or The Modern Prometheus* (Oxford: Oxford University Press, 1990), pp. 54–55 [Davis's note]. Prometheus, the Titan punished for giving mortals fire stolen from the gods, is sometimes also credited with creating the human race from mud.

7. In *Frankenstein* (1931), *Bride of Frankenstein* (1935), and *Son of Frankenstein* (1939); the English actor Karloff (born William Henry Pratt, 1887–1969) is best remembered for his roles in these and other horror films.

8. Shelley, *Frankenstein*, p. 57 [Davis's note].

9. Indeed, one could argue that this function of horror films is to remove the element of pity in the

visual transaction between "normal" viewer and disabled object. In the place of pity, pure repulsion is made allowable by turning the object with a disability into a criminal, a horror, a monstrosity. While everyone may enjoy a good horror movie now and then, there is a case to be made that horror films involving physically disabled characters are in fact the equivalent of racist films. The counterbalanced compassionate films showing people with disabilities triumphing over their disability is just the other moment of the same dialectic [Davis's note].

1. Shelley, *Frankenstein*, p. 57 [Davis's note].

mony—a Venus, in effect. He ended up with a Medusa whose existence reveals the inhering and enduring nature of the archaic fragmented body, endlessly repressed but endlessly reappearing.

Why does the appearance of the monster produce so powerful an affect? Routinely, one might view a deformed person, even a multiply deformed one, without desiring to kill that person. Here we see a man whose skin is strange or unnatural being transposed into the category 'monster.' The element of skin reminds us that the monster as a disturbance in the visual field is linked to the tactile field. The disruption in the skin's surface immediately translates into a threat of touching, of being touched. The idea of touch always initiates a dialectic of attraction and repulsion, of fear, hatred, or erotic attraction. Indeed, from a psychoanalytic viewpoint there is not much difference between these choices. So, inevitably, the disabled body becomes a site of the erotic, as instantly it is perceived in either the Venus or the Medusa scenarios.² In Shelley's novel, after the creation, Dr Frankenstein has rather a peculiar response—he goes to sleep and has a dream about his fiancée:

I thought I saw Elizabeth, in the bloom of health, walking in the streets of Ingolstadt. Delighted and surprised, I embraced her, but as I imprinted the first kiss on her lips, they became livid with the hue of death; her features appeared to change, and I thought that I held the corpse of my dead mother in my arms; a shroud enveloped her form, and I saw the grave-worms crawling in the folds of the flannel.³

The rather incredible set of associations made by Dr Frankenstein would take pages to explore thoroughly, but what we might want to note here is that the immediate flight from the Medusa image of the monster's fragmented body leads immediately to the Venus body of Elizabeth, seen as frankly erotic. However, upon the first sexual contact the Venus myth immediately deconstructs, and Elizabeth's body initially changes to a corpse, then to the decomposing corpse of Frankenstein's dead mother. The visual leads to the tactile, which then contaminates the normal body. And all these moments lead back to the decomposing, fragmenting body. Later in the novel, when the creature demands a spouse, Frankenstein again creates the fragmented, now female, body. But at the last minute 'trembling with passion, [I] tore to pieces the thing on which I was engaged.'⁴ Frankenstein's explicit reason for failing to give the monster a mate is fear that a race of deformed creatures would populate the earth and threaten the human race.⁵ Thus the risk of the erotic touch, of the frankly erotic agenda for the creature, is seen as a contaminating danger to 'normal' people. So, the fragmented body is hacked up, exploded, into the fragments that make it up.

The work of Didier Anzieu, a psychoanalyst, might help to amplify how touch and skin contribute to the concept of the disabled body. Frankenstein's creation is driven out largely because of the nature of his skin, his covering,

2. Women with disabilities are often the target of sexual or physical abuse; children with disabilities or Deaf children are often the victims of child abuse. This impulse to touch is unfortunately seen quite dramatically in these situations [Davis's note].

3. Shelley, *Frankenstein*, p. 58 [Davis's note].

4. *Ibid.*, p. 168 [Davis's note].

5. Later in the century Alexander Graham Bell

would raise the same specter in regard to a deaf race taking over should deaf people be allowed to marry each other [Davis's note]. Bell (1847–1922), the Scottish-born American inventor best known for producing the first telephone, was keenly interested in the education of the deaf and in eugenics; Davis is referring to his *Memoirs upon the Formation of a Deaf Variety of the Human Race* (1884).

made hideous by its color, texture, and incompleteness. Anzieu postulates that skin is in effect an *imago* of the ego. As such, when the infant hallucinates the whole body, he or she actually uses the concept and the reality of skin as a metaphor for wholeness, completeness, total enveloping of a unitary self. The skin is in effect a 'narcissistic envelope.' As Anzieu notes:

the boundaries of the body image (or the image of the body's boundaries) are acquired in the course of the child's detaching itself from its mother and they are to some degree analogous to the Ego boundaries which Federn has shown as being de-cathected in the process of depersonalization.⁶

For Anzieu, the skin is the metaphor and the reality of the intact ego. Any perforation or alteration of the skin's entirety signals the deconstruction of the concept of unity, of envelopment.

In my view, the skin that has been torn from the body, if it is preserved whole, represents the protective envelope, the shield, which one must take from the other in phantasy either simply to have it for oneself or to duplicate and reinforce one's own skin.⁷

The disabled body presents in both visual and tactile terms the rupture of the skin-ego, whether that disruption is lack of limbs or dysfunction of sensory organs. Indeed, seeing is related to touching, as Freud has noted, as is hearing—each of which connects an observer to an object that may be out of range of touch. Anzieu tries to account for a prohibition on touching in Western culture, citing biblical injunctions, Christ's *noli me tangere*,⁸ incest and masturbation prohibitions, and even Freud's renunciation of touching as a therapeutic technique. The point to be made is that touching involves the contact of one's ego, literally in this case, with the ego of the object. In the case of the perceptual realms involved in the disability transaction between subject and object, the specular moment leads to the tactile moment. Thus, touching represents an opening up of the ego, a kind of risk that the envelope may fail to contain the subject because of the moment of contact. 'The prohibition on touching separates the region of the familiar, a protected and protective region, from that of the strange, which is troubling and dangerous.'⁹ Our touch is familiar, but the touch of the Other is *unheimlich*; so the disabled touch is seen as both contagious and erotic.

That this touch is eroticized and connected with the Oedipal moment is significant.

The most primitive form of the tactile prohibition seems to run: do not stay clinging to the body of your parents . . . [but] the Oedipal prohibition reverses the elements of the prohibition on touching: what is familiar, in the first sense of familial, becomes dangerous . . .¹

8. Do not touch me (Latin), a quotation from the Vulgate. These are the words of Jesus to Mary Magdalene after his resurrection (John 20.17).

9. Anzieu, *The Skin Ego*, p. 146 [Davis's note].

1. *Ibid.*, pp. 146–67 [Davis's note]. Oedipal moment: the point at which, in Freud's schema, the boy internalizes the prohibition against incest (fearing castration as the potential punishment); the name is borrowed from the Greek myth of Oedipus, who, ignorant of their identities, killed his father and married his mother.

Around the Oedipal moment swirl the images of castration, mutilation, and a general prohibition against 'generalized contact, i.e. on the embracing, conjoining and confusing of bodies.' Touch represents a fragmenting of the body, a threat of mutilation, and a fear of losing one's boundaries, one's bodily integrity. In this sense, touching the creature, touching the disabled body, is both an erotic lure and a self-destructing gesture.

We can return, again, to the Venus, neatly enclosed in its marmoreal skin and thus representing an unperforated body, despite the mutilations that have disfigured it. Most of the visual arts eschew disability and disabled images, except perhaps for the romanticized images around madness. The work of Mary Duffy, a contemporary artist without arms, provides one notable exception to this reluctance to think of Venuses without arms as the equivalent of Medusa. In the first plate of a photographic series entitled *Cutting the Ties that Bind*, we see a standing figure draped entirely in white cloth against a dark background so that the figure beneath the drapery is not visible. In the second plate, the drapery is partially removed so that it covers mainly the thighs and legs revealing to us a female body, the artist's, without arms. The figure is clearly meant to reproduce the Venus de Milo in the flesh. The third picture in the series shows the figure stepping away from the drapery with a triumphant smile. The work serves to show how the female disabled body can be reappropriated by the artist herself. Duffy writes:

By confronting people with my naked body, with its softness, its roundness and its threat I wanted to take control, redress the balance in which media representations of disabled women [are] usually tragic, always pathetic. I wanted to hold up a mirror to all those people who had stripped me bare previously . . . the general public with naked stares, and more especially the medical profession.²

The Medusa gaze is rerouted so that it comes not from the object of horror, the monstrous woman, but from the gaze of the normal observer. It is the 'normal' gaze that is seen as naked, as dangerous. And unlike Perseus slaying Medusa by holding up a mirror, it is now the 'object of horror' who holds the mirror up to the 'normal' observer.

This reappropriation of the normal gaze was further carried out by the photographer Jo Spence. Recognizing the inherent and unstated pose of normalcy imposed by the camera and by the photographic session, Spence revisioned her photography to be capable of representing the nude model as a person with disabilities. Her work, detailed in many shows and in her book *Putting Myself in the Picture: A Political, Personal, and Photographic Autobiography* (1986), partly focuses on her mastectomy. Spence links this operative and post-operative process to an understanding and participating gaze that seeks to touch, not recoil from, bodily changes. In addition to the simple fact of the partial mastectomy, Spence includes in her work photographs and texts that question assumptions about age and beauty. Her body is middle-aged, irregular, and defies the canons of ideal feminine beauty. Her work is involved with 'explaining my experience as a patient and the contradictions between ways in which the medical profession controls women's bodies and the "imaginary bodies" we inhabit as women.'³

Political, Personal, and Photographic Autobiography (London: Camden House, 1986), p. 156 [Davis's note].

The visual arts have done a magnificent job of centralizing normalcy and of marginalizing different bodies. As we have seen, initially the impulse came from a move to idealize the body and make up the perfect body out of perfect sub-units. Then with the rise of hegemonic normalcy, the impulse veered from ideal to normalizing representations. Either of these paradigms pushes the ordinary body, the abnormal body, out of the picture. Photographer David Hevey has written about the paucity of images of the disabled in photographic anthologies. He concludes that 'disabled people are represented but almost exclusively as symbols of "otherness" placed within equations which take their non-integration as a natural by-product of their impairment.'⁴ When he looked for any images of disabled people, he found either medical photographs in which the 'patients' appear 'passive and stiff and "done to", the images bear a bizarre resemblance to colonial pictures where "the blacks" stand frozen and curious, while "whitey" lounges confident and sure,'⁵ or images like those of Diane Arbus⁶ that show the disabled as 'grotesque.' Ungrotesque, routine pictures of disabled people in advertising, 'art' photography, films and so on are hard to find. With the same regularity that bodies of color were kept out of the mainstream (and even the avant-garde) media in the years before the civil rights movement, so too are disabled bodies disqualified from representing universality.

One of the ways that visual images of the disabled have been appropriated into the modernist and postmodernist aesthetic is through the concept of the 'grotesque.' The word was used by Bakhtin to describe the aesthetic of the Middle Ages, which reveled in presenting the body in its nonidealized form. The grotesque, for Bakhtin, was associated with the common people, with a culture that periodically turned the established order upside down through the carnival and the carnivalesque. Gigantic features, scatological references, inverse political power were all hallmarks of the grotesque—an aesthetic that ultimately was displaced by humanistic notions of order, regularity, and of course power during the Renaissance.

While the term 'grotesque' has had a history of being associated with this counterhegemonic notion of people's aesthetics and the inherent power of the masses, what the term has failed to liberate is the notion of actual bodies as grotesque. There is a thin line between the grotesque and the disabled. Hevey examines, for example, how critics have received Diane Arbus's photographs of the disabled. Susan Sontag⁷ writes that Arbus's 'work shows people who are pathetic, pitiable, as well as repulsive, but it does not arouse any compassionate feelings.' Later she adds, 'Do they see themselves; the viewer wonders, like *that*? Do they know how grotesque they are?'⁸ The grotesque, in this sense, is seen as a concept without the redeeming sense of class rebellion in Bakhtin's formulation. Here it is simply the ugly, what makes us wince, look away, feel pity—more allied with its dictionary definition of 'hideous,' 'monstrous,' 'deformed,' 'gnarled.' Though artists and writers may use the grotesque, they rarely write about that state from the subject position of the disabled. The grotesque, as with disability in general, is used as a meta-

phor for otherness, solitude, tragedy, bitterness, alterity. The grotesque is defined in this sense as a disturbance in the normal visual field, not as a set of characteristics through which a fully constituted subject views the world. One problem with terms like 'disability' and 'the grotesque' is that they disempower the object of observation. The body is seen through a set of cultural default settings arrived at by the wholesale adoption of ableist cultural values.

In no area is this set of cultural values related to the visual more compelling than in film. Film is a medium whose main goal, one might say, is the construction and reconstruction of the body. The abnormal body plays a major role in the defining of the normal body, and so one might assume that film would be concerned with the issue of disability. Martin F. Norden has recently published the most complete account to date of disability in the film industry, *The Cinema of Isolation: A History of Physical Disability in the Movies* (1994). The remarkable thing about this book is the staggering number of films that have been made about the issue of disability. When I first began to consider the issue of how the disabled body is depicted in film, I came up with my own list of twenty or so films, and I thought that I would mention the occasional way in which the disabled were included in a film industry that mainly focused on the normal body. In other words, I thought I was dealing with a parallel situation to, say, the depiction in cinema of African-Americans—a marginalized group who rarely appeared in Hollywood films until recently and, if they did, played mainly minor characters or supernumerary roles.

But the facts about the depiction of disability are quite the opposite of what I had thought. The film industry has been obsessed with the depiction of the disabled body from the earliest silent films. The blind, the deaf, the physically disabled were singled out from the very beginning of cinema. Norden finds movies about disability from as early as 1898, and the earliest reeler silent films of the period 1902–1909 include such representative titles as *Deaf Mute Girl Reciting 'Star Spangled Banner'* (1902), *Deaf Mutes' Ball* (1907), *The Invalid's Adventure* (1907), *The Legless Runner* (1907), *The One-legged Man* (1908), *The Hunchback Brings Luck* (1908), *The Little Cripple* (1908), *A Blind Woman's Story* (1908), *The Blind Boy* (1908), *The Cripple's Marriage* (1909), *The Electrified Humpback* (1909); to name only a few. Later multi-reeler silent films routinely told the stories of the disabled. D. W. Griffith made a few disability-related films; culminating his efforts in the famous *Orphans of the Storm* (1921) in which two hapless sisters (Lillian and Dorothy Gish),⁹ one of whom is blind, try to survive on the streets of Paris. But the noteworthy fact about this film is not merely its disability-related content but that Griffith's version was the *fifth* filmic remake of the 1874 French play *Les Deux Orphelines*.¹ With film only in its infancy, this particular disability story had been told afresh approximately once every four years from 1900 through 1921.

Norden's book lists about six hundred disability-related films in its index, a far cry from my twenty or so. And if one stops and thinks about the subject, one realizes that films concerning people with disabilities are almost always

9. The American sisters Lillian (1896–1993) and Dorothy Gish (1898–1969), who had long careers in film and on stage, were important actresses in early motion pictures—especially the silent films

of the pioneering American director Griffith (1875–1948).

1. *The Two Orphans*, by Adolphe d'Ennery and Eugène Cormon.

playing at any given time. For example, at the moment I write this sentence on 5 January 1995, I can go see movies about the deaf Beethoven in *Immortal Beloved*, the linguistically deprived girl in Jodie Foster's *Nell*, the emotionally impaired monarch in *The Madness of King George*, and of course the lovable, mentally challenged *Forrest Gump*. In recent years films like *My Left Foot*, *Lorenzo's Oil*, *Rainman*, *Children of a Lesser God*, *Elephant Man*, *Mask*, *Awakenings*, *Stanley and Iris*, to name only a few better-known films, have become major hits. In addition to films centrally about disabled people, there are hundreds of films in which characters, mainly evil, are depicted as using wheelchairs, missing limbs or eyes, walking with a limp, stuttering, and so on.

The point that Norden's book made clear to me is that the cinematic experience, far from including disabilities in an ancillary way, is powerfully arranged around the management and deployment of disabled and 'normal' bodies. Disabled stories, stories of people's bodies or minds going wrong, make compelling tales. But more than that, as with any obsession, there has to be an underlying reason why films are drawn obsessively to the topic of disability. In order to understand why film makers routinely incorporate disabled bodies into films, it might be relevant to ask what else routinely appears in films. The answer is more than obvious: sex and violence. While it is fashionable for liberals to decry the violent content of films, and conservatives to decry the sexual, it might be more accurate for them to think of films as vehicles for the delivery of images of the body in extreme circumstances. The inherent voyeuristic nature of film makes it a commodity that works by visualizing for viewers the body in attitudes that it is otherwise difficult to see. Few people in quotidian life see couples making love on a regular basis, but that is a routine experience to filmgoers. Likewise, most middle-class citizens rarely see dead, mutilated, bleeding bodies, but the average viewer has no shortage of such images.

So films, one could say, are a streamlined delivery system that produces dramatically these bodily images in exchange for a sum of money (as the Coca-Cola industry can be said to be a system for delivering caffeine and sugar, or as cigarettes are really time-release delivery systems for nicotine administration). As novels were seen to be mechanisms for the cultural production of normativity, so films have to be seen in the same regard, with the addition that the phantasm of the body is particularly subject to these normativizing activities.

Films enforce the normal body, but through a rather strange process. The normal body, invented in the nineteenth century as a departure from the ideal body, has shifted over to a new concept: the normal ideal. This normal ideal body is the one we see on the screen. It is the commodified body of the eroticized male or female star. This body is not actually the norm, but it is the fantasized, hypostatized body of commodified desire. In order to generate this body and proliferate its images, films have constantly to police and to regulate the variety of bodily differences. These bodies are the modern equivalents of the nude Venuses, and to keep them viable, to think on and obsess about them, the Medusa body has constantly to be shown, reshown, placed, categorized, itemized, and anatomized. In short, we cannot have Sharon Stone without Linda Hunt; we cannot have Tom Cruise without Ron Kovic;² we cannot have the fantasy of the erotic *femme fatale's* body without

having the sickened, disabled, deformed person's story testifying to the universal power of the human spirit to overcome adversity. As Norden points out, when films about disabled people are made, more often than not the disabled characters get cured by the end of the film.³ The tension between the whole and the fragmented body, between the erotic, complete body and the uncanny, incomplete body, must be constantly deployed and resolved through films.

* * *

Throughout this chapter, I have tried to show that the concept of disability is a crucial part of the very way we conceive of and live in our bodies. In art, photography, film, and other media in which the body is represented, the 'normal' body always exists in a dialectical play with the disabled body. Indeed, our representations of the body are really investigations of and defenses against the notion that the body is anything but a seamless whole, a complete, unfragmented entity. In addition to the terms of race, class, gender, sexual preference and so on—all of which are factors in the social construction of the body—the concept of disability adds a background of somatic concerns. But disability is more than a background. It is in some sense the basis on which the 'normal' body is constructed: disability defines the negative space the body must not occupy, it is the Manichean binary⁴ in contention with normality. But this dialectic is one that is enforced by a set of social conditions and is not natural in any sense. Only when disability is made visible as a compulsory term in a hegemonic process, only when the binary is exposed and the continuum acknowledged, only when the body is seen apart from its existence as an object of production or consumption—only then will normalcy cease being a term of enforcement in a somatic judicial system.

HENRY LOUIS GATES JR.

b. 1950

A prolific and tireless advocate of African American literature and culture, Henry Louis Gates Jr. has played a vital part in establishing an African American literary canon and in creating a distinctive African American literary theory that simultaneously combines deconstructive criticism with African literary tradition. One of the most protean of contemporary critics, he has also helped build institutional structures to study African American literature and has disseminated his views of race and

culture through mainstream media, writing for such magazines as *Newsweek* and the *New Yorker* and frequently appearing on television. His diverse roles have made him one of the best-known academic critics in America. "Talking Black: Critical Signs of the Times" (1988) sets out his credo for present-day African American literary theory, which borrows from but revises mainstream theory with infusions of African American modes of thought and vernacular discourse.

Gates was born and raised in Keyser, West Virginia. After high school, he attended Potomac State Community College but was encouraged by an English instructor to transfer to Yale University, from which he received his B.A. in 1973. While an undergraduate (1970–71), Gates traveled to Africa on a fellowship, visiting fifteen countries and learning about African culture. On his return to the United States he worked as a director of student affairs for the West Virginia gubernatorial campaign of John D. Rockefeller IV, later writing his senior honors thesis on the campaign. He received Mellon and Ford Foundation fellowships that enabled him to undertake graduate study at Cambridge University, where he earned his M.A. in 1974 and Ph.D. in 1979. At Cambridge he worked with the Nigerian writer Wole Soyinka, who exposed him to Yoruba myths and interpretive modes. While in England he also began a journalistic career, working as a London correspondent for *Time* magazine from 1973 to 1975. In 1975 he returned to the United States, attending Yale Law School for a month before changing paths to pursue literary studies. He began teaching at Yale in 1976 as a lecturer in English; by the time he left, in 1985, he had become a full professor and had received several prestigious awards, including a 1981 MacArthur Fellowship. After teaching at Cornell University (1985–90), where he was appointed the Du Bois Professor of Literature in 1988, and a year at Duke University, in 1991 he moved to Harvard University as professor of English and as W. E. B. Du Bois Professor of the Humanities, chair of the department of Afro-American studies, and director of the W. E. B. Du Bois Institute for Afro-American Research. The institute, where he has gathered a remarkable faculty of black scholars from several disciplines, has provided the institutional base for his many projects.

Gates's work shows the influence of the two poles of his education: the sophisticated reading practices and deconstructive literary theories of the critics affiliated with Yale University in the 1970s, such as PAUL DE MAN, JACQUES DERRIDA, and Geoffrey Hartman, and the indigenous African tradition of literature and interpretation introduced to him by Soyinka. His early critical writing draws on an array of contemporary theory, from sources as diverse as MIKHAIL M. BAKHTIN, NORTHROP FRYE, and Derrida, which he applies to readings of African American literature in an attempt to revalue it and to construct a canon. In his innovative book *The Signifying Monkey: A Theory of African-American Literary Criticism* (1988), he melds the post-structuralist theory of signification rooted in the linguistics of FERDINAND DE SAUSSURE with the African vernacular tradition of "signifyin(g)," deriving from Yoruba oral literature. The latter tradition is evident in present-day practices such as "the dozens" (a game of verbal one-upsmanship) and jazz improvisation. Gates stresses that he uses theory provisionally; his intention is "to develop theories of criticism indigenous to our literatures" by drawing on "black textual tradition." His deployment of post-structuralism enables him to define race as a function of linguistic and cultural differences rather than as a natural or essential property. In literature, he explains in *Signifying Monkey*, "blackness" is not a transcendental property but is "produced in the text itself only through a complex process of signification."

By blending contemporary Euro-American theory with African tradition, Gates positions himself as an intermediary between dominant Anglo-American and minority African American literary cultures. In advocating theory alongside the black tradition, his work parallels that of the African American critic HOUSTON A. BAKER JR., although Baker primarily draws on African American rather than African sources. Against the conservative view that African American literature lacks aesthetic merit and is valuable only as a social report, Gates urges us to gauge it on its own aesthetic terms,

within the vernacular black tradition. Using these criteria, he establishes an African American canon. Against radical black separatist arguments for the exclusive study of African American literature, or Afrocentrism, Gates argues instead for "cultural tolerance," and he freely makes use of mainstream literary theory as a means to specific ends. Between traditionalists and radicals, between assimilationists and separatists, and between antitheorists and theorists, Gates negotiates a middle path. His ultimate goal is institutional as well as theoretical. As he puts it in our selection, he aims to forge a place for black writing and criticism in "the broader, larger institution of literature."

"Talking Black" exemplifies Gates's intermediary role, drawing on two competing poles in African American cultural politics—assimilationist and separatist—as well as asserting the status of black writing in mainstream literary culture. Characteristically, Gates calls for simultaneously using critical theory and injecting African American tradition. He foregrounds the example of the early African American intellectual and religious leader Alexander Crummell (1819–1898), who advocated studying classical languages and obtaining a traditional white education. Most African American critics view this position as overly accommodating, and Gates distances himself from it, stressing that his amalgam of contemporary theoretical approaches and black tradition transforms the theory it employs. "Talking Black," which originally appeared in the New York–based weekly the *Village Voice*, also exemplifies Gates's efforts to bridge the gap between the specialized sphere of academic criticism and the public sphere of journalism, efforts that have been remarkably successful.

This middle-of-the-road position has helped win Gates a high degree of public visibility and success, but it has also generated much criticism. Traditionalists believe that the effort to create a separate African American canon degrades the Western canon, whose value, they argue, has been confirmed over time. Some dedicated theorists see Gates's mainstream writings as a watering-down of his scholarship. On the other hand, some African American critics consider his use of sophisticated theory to be elitist—an argument made by BARBARA CHRISTIAN in "The Race for Theory" (1988; see above). At a further extreme, separatist Afrocentrist critics consider it a means of accommodating white culture, in effect claiming that Gates has become a latter-day Crummell. Other radical critics judge that he focuses too exclusively on literature and culture rather than on the material conditions of African Americans. Gates unapologetically defines his role as that of a literary critic and argues that attention to black literary tradition and heritage carries an implicit politics, fostering greater cultural recognition for African Americans. Ironically, Gates's intermediary position, both intellectual and stylistic, fuels his popular influence as well as the attacks of his most cogent detractors.

BIBLIOGRAPHY

Gates first had an impact on literary studies through his editorial work: he rediscovered the earliest novel by an African American, Harriet E. Wilson's *Our Nig: Or, Sketches from the Life of a Free Black, in a Two Story White House, North* (1983), which had been privately printed in 1859. He also edited three important anthologies of contemporary criticism: *Black Literature and Literary Theory* (1984), which opens with an important introduction by Gates, "Criticism in the Jungle," that assesses the state of African American literary criticism; *Race, Writing, and Difference* (1986), which includes an influential introduction on the importance of race and the concept of difference in literary studies; and *Reading Black, Reading Feminist: A Critical Anthology* (1990). Gates's first two books of his own, *Figures in Black: Words, Signs, and the "Racial" Self* (1987), a collection of essays, and *The Signifying Monkey: A Theory of African-American Literary Criticism* (1988), which won the 1989 American Book Award, innovatively combine poststructuralist literary theory and indigenous African literary sources.

Gates's writing then shifted to address larger, more mainstream, audiences, as exemplified by the essays collected in *Loose Canons: Notes on the Culture Wars* (1992), which includes "Talking Black." In 1994 he published an informative autobiography focusing on his childhood, *Colored People: A Memoir*. He next published a dialogue with the African American philosopher and critic Cornel West, *The Future of the Race* (1996), which examines the social possibilities for African Americans in the late twentieth century. *Thirteen Ways of Looking at a Black Man* (1997) gathers a series of Gates's essays on significant contemporary African American figures, such as Harry Belafonte and General Colin Powell. In 1999 he wrote and narrated the six-part television series *Wonders of the African World*, which was accompanied by a book of the same title (1999).

One of Gates's major goals is to increase the institutional presence of African American writers; thus he and Nellie Y. McKay were general editors of *The Norton Anthology of African American Literature* (1997). He is the editor of the Schomburg Library of Nineteenth-Century Black Women Writers, the Amistad Critical Studies in African American Literature (with K. Anthony Appiah), and the Black Periodical Literature Project, and he has edited or co-edited more than twenty volumes of African American writing and criticism on African American literature and culture. He also oversaw the rebirth of the pioneering journal *Transition*.

Joyce A. Joyce's " 'Who the Cap Fit': Unconsciousness and Unconscionableness in the Criticism of Houston A. Baker, Jr., and Henry Louis Gates, Jr.," *New Literary History* 18 (1987), charges Gates with elitism; it drew a sharp answer from Gates, distinguishing the different voices he uses in academic and public forums and contending that Joyce exhibits what de Man labeled "the resistance to theory." In "Henry Louis Gates, Jr., and African American Literary Discourse," *New England Quarterly* 62 (1989), Wahneema Lubiano offers a balanced assessment of Gates's theory, which she defines as "precisely a theory of literary history" and argues against the charge that it is apolitical. Kenneth W. Warren's "Delimiting America: The Legacy of Du Bois," *American Literary History* 1 (1989), criticizes Gates's reliance on the image of professionalistic pluralism "to establish some non-political notion of black unity." Ronald Judy, in *(Dis)forming the American Canon: African-Arabic Slave Narratives and the Vernacular* (1993), revises Gates's concept of "signifyin(g)," rerouting the tradition through Arabic and other sources. Sandra Adell, in *Double-Consciousness / Double Bind: Theoretical Issues in Twentieth-Century Black Literature* (1994), relevantly compares Gates and Baker. A severe political critique comes from Adolph L. Reed, in *W. E. B. Du Bois and American Political Thought: Fabianism and the Color Line* (1997); Reed castigates Gates, especially in his later work, as a center-right apologist and a "representative Negro" in the manner of Booker T. Washington.

Talking Black: Critical Signs of the Times

For a language acts in diverse ways, upon the spirit of a people; even as the spirit of a people acts with a creative and spiritualizing force upon a language.

—ALEXANDER CRUMMELL,¹ 1860

A new vision began gradually to replace the dream of political power—a powerful movement, the rise of another ideal to guide the unguided, another pillar of fire by night after a clouded day. It was the ideal of "book-learning"; the curiosity, born of compulsory ignorance, to know and test the power of the cabalistic letters of the white man, the longing to know. Here at last seemed to have been

1. African American Episcopalian minister (1819–1898), who earned a degree from Cambridge University (1853) and cultivated scholarship among young blacks.

discovered the mountain path to Canaan; longer than the highway of Emancipation and law, steep and rugged, but straight, leading to heights high enough to overlook life.

—W. E. B. DU BOIS,² 1903

The knowledge which would teach the white world was Greek to his own flesh and blood . . . and he could not articulate the message of another people.

—W. E. B. DU BOIS, 1903

Alexander Crummell, a pioneering nineteenth-century Pan-Africanist,³ statesman, and missionary who spent the bulk of his creative years as an Anglican minister in Liberia, was also a pioneering intellectual and philosopher of language, founding the American Negro Academy⁴ in 1897 and serving as the intellectual godfather of W. E. B. Du Bois. For his first annual address as president of the academy, delivered on December 28, 1897, Crummell selected as his topic "The Attitude of the American Mind Toward the Negro Intellect." Given the occasion of the first annual meeting of the great intellectuals of the race, he could not have chosen a more timely or appropriate subject.

Crummell wished to attack, he said, "the denial of intellectuality in the Negro; the assertion that he was not a human being, that he did not belong to the human race." He argued that the desire "to becloud and stamp out the intellect of the Negro" had led to the enactment of "laws and Statutes, closing the pages of every book printed to the eyes of Negroes; barring the doors of every school-room against them!" This, he concluded, "was the systematized method of the intellect of the South, to stamp out the brains of the Negro!"—a program that created an "almost Egyptian darkness" [which] fell upon the mind of the race, throughout the whole land."

Crummell next shared with his audience a conversation between two Boston lawyers which he had overheard when he was "an errand boy in the Anti-slavery office in New York City" in 1833 or 1834:

While at the Capitol they happened to dine in the company of the great John C. Calhoun,⁶ then senator from South Carolina. It was a period of great ferment upon the question of Slavery, States' Rights, and Nullification; and consequently the Negro was the topic of conversation at the table. One of the utterances of Mr. Calhoun was to this effect—"That if he could find a Negro who knew the Greek syntax, he would then believe that the Negro was a human being and should be treated as a man."

"Just think of the crude asininity," Crummell concluded rather generously, "of even a great man!"

The salient sign of the black person's humanity—indeed, the only sign for

2. African American historian and sociologist (1868–1963; see above), co-founder of the NAACP and the foremost voice of black protest in the early 20th century. Both his epigraphs are from chapter 1 of *The Souls of Black Folk* (1903).

3. A believer in the innate unity of all black Africans and their overseas descendants; more especially, one active in the movement for the unity and independence of African states (as was Du Bois, beginning in 1900 with the Pan-African Congress in London).

4. A learned society for African Americans that promoted civil rights through scholarly work on African American culture and history.

5. An allusion to one of the plagues said to have been brought by God against the Egyptians who were holding the Israelites in slavery (Exodus 10.21–23).

6. Prominent American political leader (1782–1850) and the 7th U.S. vice president (1825–32); he was a strong advocate of states' rights and of slavery.

Calhoun—would be the mastering of the very essence of Western civilization, of the very foundation of the complex fiction upon which white Western culture had been constructed. It is likely that “Greek syntax,” for John C. Calhoun, was merely a hyperbolic figure of speech, a trope of virtual impossibility; he felt driven to the hyperbolic mode, perhaps, because of the long racist tradition in Western letters of demanding that black people *prove* their full humanity. We know this tradition all too well, dotted as it is with the names of the great intellectual Western racialists, such as Francis Bacon, David Hume, Immanuel Kant, Thomas Jefferson, and G. W. F. Hegel.⁷ Whereas each of these figures demanded that blacks write poetry to prove their humanity, Calhoun—writing in a post-Phillis Wheatley⁸ era—took refuge in, yes, Greek syntax.

In typical African-American fashion, a brilliant black intellectual accepted Calhoun’s challenge. The anecdote Crummell shared with his fellow black academicians turned out to be his shaping scene of instruction. For Crummell himself jumped on a boat, sailed to England, and matriculated at Queens’ College, Cambridge, where he mastered the intricacies of Greek syntax. Calhoun, we suspect, was not impressed.

Crummell never stopped believing that mastering the master’s tongue was the sole path to civilization, intellectual freedom, and social equality for the black person. It was Western “culture,” he insisted, that the black person “must claim as his rightful heritage, as a man—not stunted training, not a caste education, not,” he concluded prophetically, “a Negro curriculum.” As he argued so passionately in his speech of 1860, “The English Language in Liberia,” the acquisition of the English language, along with Christianity, is the wonderful sign of God’s providence encoded in the nightmare of African enslavement in the racist wilderness of the New World. English, for Crummell, was “the speech of Chaucer and Shakespeare, of Milton and Wordsworth, of Bacon and Burke, of Franklin and Webster,”⁹ and its potential mastery was “this one item of compensation” that “the Almighty has bestowed upon us” in exchange for “the exile of our fathers from their African homes to America.” In the English language are embodied “the noblest theories of liberty” and “the grandest ideas of humanity.” If black people master the master’s tongue, these great and grand ideas will become African ideas, because “ideas conserve men, and keep alive the vitality of nations.”

In dark contrast to the splendors of the English language, Crummell set the African vernacular languages, which, he wrote, have “definite marks of inferiority connected with them all, which place them at the widest distances from civilized languages.” Any effort to render the master’s discourse in our own black tongue is an egregious error, for we cannot translate sublime utterances “in[to] broken English—a miserable caricature of their noble

7. Major thinkers who generally (save the slaveholding Jefferson) are not thought of as “racialist”: Bacon (1561–1626), English philosopher, scientist, and statesman; HUME (1711–1776), Scottish philosopher and historian; KANT (1724–1804), German idealist philosopher; Jefferson (1743–1826), drafter of the Declaration of Independence, Founding Father, and 3d president (1801–09) of the United States; HEGEL (1770–1831), German idealist philosopher.

8. The first black American woman poet in the United States (ca. 1753–1784), born probably in

Senegal and sold as a slave to a Boston family.

9. Crummell names English and American men famed for their skill with words: the English poet Geoffrey Chaucer (ca. 1343–1400) and the poet/dramatist William Shakespeare (1564–1616); two poets, John Milton (1608–1674) and WILLIAM WORDSWORTH (1770–1850); two philosopher/statesmen, Bacon and EDMUND BURKE (1727–1797); and two American politicians, the popular author, inventor, and ambassador Benjamin Franklin (1706–1790) and the great orator Daniel Webster (1782–1852).

tongue." We must abandon forever both indigenous African vernacular languages and the neo-African vernacular languages that our people have produced in the New World:

All low, inferior, and barbarous tongues are, doubtless, but the lees and dregs of noble languages, which have gradually, as the soul of a nation has died out, sunk down to degradation and ruin. We must not suffer this decay on these shores, in this nation. We have been made, providentially, the deposit of a noble trust; and we should be proud to show our appreciation of it. Having come to the heritage of this language we must cherish its spirit, as well as retain its letter. We must cultivate it among ourselves; we must strive to infuse its spirit among our reclaimed and aspiring natives.

I cite the examples of John C. Calhoun and Alexander Crummell as metaphors for the relation between the critic of black writing and the broader, larger institution of literature. Learning the master's tongue, for our generation of critics, has been an act of empowerment, whether that tongue be New Criticism, humanism, structuralism, Marxism, poststructuralism, feminism, new historicism,¹ or any other "ism." Each of these critical discourses arises from a specific set of texts within the Western tradition. At least for the past decade, many of us have busied ourselves with the necessary task of learning about these movements in criticism, drawing upon their modes of reading to explicate the texts in our own tradition.

This is an exciting time for critics of Afro-American literature. More critical essays and books are being produced than ever before, and there have never been more jobs available teaching Afro-American literature in white colleges and universities. In a few years, we shall at last have our very own Norton anthology,² a sure sign that the teaching of Afro-American literature is being institutionalized. Our pressing question now becomes this. In what languages shall we choose to speak, and write, our own criticisms? What are we now to do with the enabling masks of empowerment that we have donned as we have practiced one mode of formal criticism or another?

There is a long history of resistance to (white) theory in the (black) tradition. Unlike almost every other, the Afro-American literary tradition was generated as a response to allegations that its authors did not, and *could not* create literature, considered the signal measure of a race's innate "humanity." The African living in Europe or in the New World seems to have felt compelled to create a literature not only to demonstrate that blacks did indeed possess the intellectual ability to create a written art, but also to indict the several social and economic institutions that delimited the "humanity" of all black people in Western cultures.

So insistent did these racist allegations prove to be, at least from the eighteenth to the early twentieth century, that it is fair to describe the subtext of the history of black letters in terms of the urge to refute them. Even as late as 1911, when J. E. Casely-Hayford³ published *Ethiopia Unbound* (the "first" African novel), he felt it necessary to address this matter in the first two

1. Major critical schools of 20th-century U.S. literary studies.

2. *The Norton Anthology of African American Literature* (1997), whose general editors were Gates

and Nellie Y. McKay.

3. Ghanaian lawyer, writer, and advocate of African nationalism (1866-1930).

paragraphs of this text. "At the dawn of the twentieth century," the novel opens, "men of light and leading both in Europe and in America had not yet made up their minds as to what place to assign to the spiritual aspirations of the black man." Few literary traditions have begun with such a complex and curious relation to criticism: allegations of an absence led directly to a presence, a literature often inextricably bound in a dialogue with its harshest critics.

Black literature and its criticism, then, have been put to uses that were not primarily aesthetic; rather, they have formed part of a larger discourse on the nature of the black, and of his or her role in the order of things. The relation among theory, tradition, and integrity within black culture has not been, and perhaps cannot be, a straightforward matter.

Despite the fact that critics of black literature are often attacked for using theory and that some black readers respond to their work by remarking that it's all Greek to them, it is probably true that critics of Afro-American literature are more concerned with the complex relation between literature and theory than ever before. There are many reasons for this, not the least of which is our increasingly central role in "the profession" precisely when our colleagues are engulfed in their own extensive debates about the intellectual merit of so much theorizing. Theory, as a second-order reflection upon a primary gesture, has *always* been viewed with suspicion by scholars who find it presumptuous and even decadent when criticism claims the right to stand on its own: theoretical texts breed equally "decadent" theoretical responses in a creative process that can be very far removed from a poem or a novel.

For the critic of Afro-American literature, this process is even more perilous because most of the contemporary literary theory derives from critics of Western European languages and literatures. Is the use of theory to write about Afro-American literature merely another form of intellectual indenture, a mental servitude as pernicious in its intellectual implications as any other kind of enslavement? The key word implied in this panel discussion⁴ is *integrity*. To quote the *Oxford English Dictionary's* definition of the word, does theorizing about a text or a literary tradition "mar," "violate," "impair," or "corrupt" the "soundness" of an "original perfect state" of a black text or of the black tradition? To argue that it does is to align oneself with the New Critics⁵—who often seem not to have cared particularly for, or about, the writing of Afro-Americans—and with their view that texts are "organic wholes" in the first place. This is a critical error.

The sense of "integrity" as it seems to arise in the Afro-American tradition is more akin to the notion of "ringing true," or to Houston Baker's⁶ concept of "sounding." (One of the most frequently used critical judgments in the African-American tradition is "That just don't sound right," or, as Alice Walker puts it in *The Color Purple*,⁷ "Look like to me only a fool would want to talk in a way that feel peculiar to your mind.") That is the sense that black nationalists⁸ call on here, without understanding how problematic this can

4. The panel "Integrity and the Black Tradition," where this essay was originally presented at the 1987 convention of the Modern Language Association (the primary North American professional organization for scholars in English and foreign languages and literatures).

5. Those literary interpreters (CLEANTH BROOKS, WILLIAM K. WIMSATT JR., etc.) who emphasize close reading of the text as an autonomous ("organic") whole; they dominated Anglo-American

criticism in the mid-20th century.

6. A leading African American literary theorist (b. 1943; see above).

7. A 1982 novel by Walker (b. 1944), African American novelist and poet.

8. Those who advocate a separatist black culture and political organization, a stance associated with the black power and Black Arts movements of the 1960s through mid-1970s.

be. Doubleness, alienation, equivocality—since the turn of the century at least, these have been recurrent tropes for the black tradition.

To be sure, this matter of criticism and “integrity” has a long and rather tortured history in black letters. It was David Hume, after all, who called Francis Williams,¹ the Jamaican poet of Latin verse, “a parrot who merely speaks a few words plainly.” Phillis Wheatley, too, has long suffered from the spurious attacks of black and white critics alike for being the *rara avis*² of a school of so-called mockingbird poets, whose use of European and American literary conventions has been considered a corruption of a “purer” black expression, found in forms such as the blues, signifying, spirituals, and Afro-American dance. Can we, as critics, escape a “mockingbird” relation to theory? And can we escape the racism of so many critical theorists, from Hume and Kant through the Southern Agrarians and the Frankfurt school?³

Only recently have some scholars attempted to convince critics of black literature that we can. Perhaps predictably, a number of these attempts share a concern with that which has been most repressed in the received tradition of Afro-American criticism: close readings of the texts themselves. My advocacy of theory’s value for such readings is meant as a prelude to the definition of critical principles peculiar to the black literary traditions, related to contemporary theory generally and yet, as Robert Farris Thompson³ puts it, “indelibly black.” I have tried to work through contemporary theories of literature not to “apply” them to black texts, but to transform by translating them into a new rhetorical realm—to re-create, through revision, the critical theory at hand. As our familiarity with the black tradition and with literary theory expands, we shall invent our own black, text-specific theories, as some of us have begun to do. We must learn to read a black text within a black formal cultural matrix, as well as its “white” matrix.

This is necessary because the existence of a black canon is a historically contingent phenomenon; it is not inherent in the nature of “blackness,” not vouchsafed by the metaphysics of some racial essence. The black tradition exists only insofar as black artists enact it. Only because black writers have read and responded to other black writers with a sense of recognition and acknowledgment can we speak of a black literary inheritance, with all the burdens and ironies that has entailed. Race is a text (an array of discursive practices), not an essence. It must be *read* with painstaking care and suspicion, not imbibed.

I have tried to employ contemporary theory to defamiliarize⁴ the texts of the black tradition: ironically, it is necessary to create distance between reader and texts in order to go beyond reflexive responses and achieve critical insight into and intimacy with their formal workings, I have done this to respect the “integrity” of these texts, by trying to avoid confusing my experience as an Afro-American with the act of language that defines a black text.

9. Jamaican poet (1700–1770).

1. Rare bird (Latin).

2. German social and aesthetic theorists who gathered at Frankfurt’s Institute for Social Research (founded in 1923); prominent members include THEODOR ADORNO and MAX HORKHEIMER. Southern Agrarians: also known as the Fugitives, a group of Southern poets and critics (many, including JOHN CROWE RANSOM, were associated with Vanderbilt University in the 1920s) who were politically conservative and viewed works of liter-

ature as autonomous verbal structures; their manifesto was *I’ll Take My Stand: The South and the Agrarian Tradition by Twelve Southerners* (1930).

3. African American art historian (b. 1932).

4. A term from the Russian formalist Viktor Shklovsky (1893–1984); defamiliarization is the process through which an object of art “makes strange” what is familiar, so our response to it is not routine and it can be appreciated not as imitative but as an independent work.

This is the challenge of the critic of black literature in the 1980s: not to shy away from white power—that is, literary theory—but to translate it into the black idiom, *renaming* principles of criticism where appropriate, but especially *naming* indigenous black principles of criticism and applying them to our own texts. Any tool that enables the critic to explain the complex workings of the language of a text is appropriate here. For it is language, the black language of black texts, that expresses the distinctive quality of our literary tradition. Once it may have seemed that the only critical implements black critics needed were the pom-pom and the twirled baton; in fact, there is no deeper form of literary disrespect. We will not protect the “integrity” of our tradition by remaining afraid of, or naive about, literary theory; rather, we will inflict upon it the violation of reflexive, stereotypical readings—or non-reading. We are the keepers of the black literary tradition. No matter what theories we embrace, we have more in common with each other than we do with any other critic of any other literature. We write for each other, and for our own contemporary writers: This relation is a critical trust.

It is also *political* trust. How can the demonstration that our texts sustain ever closer and more sophisticated readings *not* be political at a time when all sorts of so-called canonical critics mediate their racism through calls for “purity” of the “tradition,” demands as implicitly racist as anything the Southern Agrarians said? How can the deconstruction of the forms of racism itself not be political? How can the use of literary analysis to explicate the racist social text in which we still find ourselves be anything *but* political? To be political, however, does not mean that I have to write at the level of a Marvel comic book. My task, as I see it, is to help guarantee that black and so-called Third World literature⁵ is taught to black and Third World and white students by black and Third World and white professors in heretofore white mainstream departments of literature, and to train students to think, to read, and to write clearly, to expose false uses of language, fraudulent claims, and muddled arguments, propaganda, and vicious lies—from all of which our people have suffered just as surely as we have from an economic order in which we were zeros and a metaphysical order in which we were absences. These are the “values” which should be transmitted through critical theory.

In the December 1986 issue of the *Voice Literary Supplement*; in an essay entitled “Cult-Nats Meet Freaky-Deke,” Greg Tate⁶ argued cogently and compellingly that “black aestheticians need to develop a coherent criticism to communicate the complexities of our culture. There’s no periodical on black cultural phenomena equivalent to *The Village Voice* or *Artforum*, no publication that provides journalism on black visual art, philosophy, politics, economics, media, literature, linguistics, psychology, sexuality, spirituality, and pop culture. Though there are certainly black editors, journalists, and academics capable of producing such a journal, the disintegration of the black cultural nationalist movement and the brain-drain of black intellectuals to white institutions have destroyed the vociferous public dialogue that used to exist between them.” While I would argue that *Sage*, *Callaloo*, and *Black American Literature Forum* (BALF) are indeed fulfilling that function for academic critics, I am afraid that the truth of Tate’s claim is irresistible.

5. Literature from the “underdeveloped” countries, many of them former colonies, now dominated by highly industrialized “first world” (largely

Western) nations in a global economy.

6. African American cultural critic and journalist.

But his most important contribution to the future of black criticism is to be found in his most damning allegation. "What's unfortunate," he writes, "is that while black artists have opened up the entire 'text of blackness' for fun and games, not many black critics have produced writing as fecund, eclectic, and freaky-deke as the art, let alone the culture, itself. . . . For those who prefer exegesis with a polemical bent, just imagine how critics as fluent in black and Western culture as the postliberated artists could strike terror into that bastion of white supremacist thinking, the Western art [and literary] world[s]." To which I can only say, echoing Shug in Alice Walker's *The Color Purple*, "Amen. Amen."

Tate's challenge is a serious one because neither ideology nor criticism nor blackness can exist as entities of themselves, outside the forms of their texts. This is the central theme of Ralph Ellison's *Invisible Man* and Ishmael Reed's *Mumbo Jumbo*,⁷ for example. But how can we write or read the text of "Black Theory"? What language(s) do black people use to represent their critical or ideological positions? In what forms of language do we speak or write? Can we derive a valid, integral "black" text or criticism or ideology from borrowed or appropriate forms? Can a black woman's text emerge "authentically" as borrowed, or "liberated," or revised, from the patriarchal forms of the slave narratives, on the one hand, or from the white patriarchal forms of the sentimental novel, on the other, as Harriet Jacobs and Harriet Wilson attempted to do in *Incidents in the Life of a Slave Girl* (1861) and *Our Nig* (1859)?⁸ Where lies the liberation in revision, the ideological integrity of defining freedom in the modes and forms of difference charted so cogently by so many poststructural critics of black literature?

For it is in these spaces of difference that black literature has dwelled. And while it is crucial to read these patterns of difference closely, we must understand as well that the quest was lost, in a major sense, before it had even begun, simply because the terms of our own self-representation have been provided by the master. It is not enough for us to show that refutation, negation, and revision exist, and to define them as satisfactory gestures of ideological independence. Our next concern must be to address the black political signified, that is, the cultural vision and the critical language that underpin the search through literature and art for a profound reordering and humanizing of everyday existence. We must urge our writers and critics to undertake the fullest and most ironic exploration of the manner and matter, the content and form, the structure and sensibility so familiar and poignant to us in our most sublime form of art, black music, where ideology and art are one, whether we listen to Bessie Smith or to postmodern and poststructural John Coltrane.⁹

Just as we must urge our writers to meet this challenge, we as critics must turn to our own peculiarly black structures of thought and feeling to develop our own languages of criticism. We must do so by drawing on the black vernacular, the language we use to speak to each other when no outsiders are around. Unless we look to the vernacular to ground our theories and

7. The best-known novel (1972) by Reed (b. 1938), African American novelist and poet. *Invisible Man* (1952) is the masterpiece of Ellison (1914–1994), African American writer of fiction, essays, and criticism.

8. Accounts of slave life by Jacobs (1813–1877)

and Wilson (1808–ca. 1870). Jacobs writes of hiding for nearly 7 years in a small, cramped attic; this is the "garret" to which Gates later refers.

9. American jazz saxophonist and composer (1926–1967). Smith (ca. 1898–1937), American blues singer.

modes of reading, we will surely sink in the mire of Nella Larsen's quicksand,¹ remain alienated in the isolation of Harriet Jacob's garret, or masked in the received stereotype of the Black Other helping Huck to return to the raft, singing "China Gate" with Nat King Cole under the Da Nang moon, or reflecting our bald heads in the shining flash of Mr. T's² signifying gold chains.

We must redefine theory itself from within our own black cultures, refusing to grant the racist premise that theory is something that white people do, so that we are doomed to imitate our white colleagues, like reverse black minstrel critics done up in whiteface. We are all heirs to critical theory, but critics are also heir to the black vernacular critical tradition as well. We must not succumb, as did Alexander Crummell, to the tragic lure of white power, the mistake of accepting the empowering language of white critical theory as "universal" or as our only language, the mistake of confusing the enabling mask of theory with our own black faces. Each of us has, in some literal or figurative manner, boarded a ship and sailed to a metaphorical Cambridge, seeking to master the master's tools. (I myself, being quite literal-minded, booked passage some fourteen years ago on the *QE2*.³) Now we must at last don the empowering mask of blackness and talk *that* talk, the language of black difference. While it is true that we must, as Du Bois said so long ago, "know and test the power of the cabalistic letters of the white man," we must also know and test the dark secrets of a black discursive universe that awaits its disclosure through the black arts of interpretation. For the future of theory, in the remainder of this century, is black indeed.

1988

1. *Quicksand* (1928) was the first novel by the African American writer Larsen (1891–1964).

2. Lawrence Tureaud (b. 1952), popular African American television and film actor of the 1980s, generally seen in a Mohawk haircut and copious gold jewelry. Huck: title character of Mark Twain's *Adventures of Huckleberry Finn* (1884), who is helped by the runaway slave Jim back to the raft traveling down the Mississippi River. Cole (1919–1965), innovative African American pianist and leading popular singer of the 1950s and 1960s,

who had a small role (and sang the title song) in the 1957 film *China Gate* (dir. Samuel Fuller), which was set in the last days of the French war in Vietnam; Da Nang, in central Vietnam, later became a major American military base.

3. *Queen Elizabeth 2*, a Cunard liner put into service in 1969; though now used primarily for cruises, it provides the only regularly scheduled luxury passenger service across the Atlantic. Gates pursued his graduate studies at Cambridge University.

EVE KOSOFSKY SEDGWICK

b. 1950

In the 1992 preface to the second edition of *Between Men: English Literature and Male Homosocial Desire* (1985), Eve Sedgwick writes about the emergence in the late 1980s and early 1990s of queer theory, a new paradigm of literary theory that owes its productivity to the "gorgeous generativity, the speculative generosity and daring, the permeability, and the activism that have long been lodged in the multiple histories of queer reading." In the aftermath of the famous Stonewall riots, when gay men and lesbians fought back against a police raid on a gay bar in New York City in the summer

of 1969, and often under the umbrella of feminist and then gender studies, increasingly vocal gay and lesbian liberation movements took shape. In the 1970s, the work of literary theorists such as ADRIENNE RICH, BONNIE ZIMMERMAN, BARBARA SMITH, GLORIA ANZALDÚA, Louie Crew, and Rictor Norton had begun to define a gay and lesbian studies movement in the academy based on the identity politics that had well served both feminists and civil rights activists. The 1980s, however, saw a reappraisal of political strategies and the emergence of a "highly productive queer community whose explicit basis [was] the criss-crossing of the lines of identification and desire among genders, races and sexual definitions." By the early 1990s, it was possible to talk about queer theory as a vital new area of literary theory, built on the pioneering work of theorists such as MICHEL FOUCAULT, JUDITH BUTLER, MONIQUE WITTING, and Sedgwick herself; its aim was to expose incoherencies in the supposedly stable definitions of male and female sexuality, to include not only gay and lesbian but also transgendered subjects, and to explore topics such as cross-dressing, gender ambiguity, and transsexuality.

Born in Dayton, Ohio, Sedgwick received her B.A. from Cornell University and went on to earn an M.Phil. and in 1975 a Ph.D. from Yale University. She has taught at a number of colleges and universities; since 1998, she has been a Distinguished Professor of English at the Graduate Center at the City University of New York. She has held major fellowships from the Mellon Foundation (1976–78), the Bunting Institute at Radcliffe College (1983–84), the Guggenheim Foundation (1987–88), and the National Humanities Center (1991–92).

In *Between Men* Sedgwick explores the phenomenon of *homosociality*, a term she applied to the social bonds formed between persons of the same sex. While these bonds can be distinguished from homosexuality—sexual desire between persons of the same sex—they exist on a continuum with it. The structures of male and female homosocial bonds are, Sedgwick argues, quite distinct. The continuum between male homosocial and homosexual desire is disrupted by the often intense homophobia (fear of homosexuality) that marks rituals of male bonding in our culture. But the opposition between homosocial and homosexual is much less pronounced, much less dichotomous, observes Sedgwick, for women than it is for men (see, for instance, Adrienne Rich's famous notion of a "lesbian continuum" in "Compulsory Heterosexuality and Lesbian Existence," above). *Between Men* examines how male homosociality gets constructed and reflected in European literary texts from 1750 to 1850. In particular, Sedgwick is interested in the ways in which homosocial desire is constituted in Western literature between men whose bonding is forged through their rivalry over a woman who mediates their relationship and deflects any taint of homoeroticism. A popular example of this phenomenon might be the triangle formed between Arthur, Guinevere, and Lancelot in Arthurian literature.

In *Epistemology of the Closet* (1990), Sedgwick points out that the versions of modern lesbian and gay history recounted by gay liberation movements following Stonewall were all based on a metaphor of "the closet," which created what she calls the regime of the "open secret" and has dominated lesbian and gay life for more than a century. She suggests that this regime, with its contradictory and constraining rules about privacy and disclosure, public and private, awareness and ignorance, has shaped the way in which many questions of value and epistemology (knowledge) have been conceived and addressed not only in gay subculture but in modern Western society as a whole. In her book's introduction, which she titles "Axiomatic," Sedgwick explores this problem through seven "axioms." The second axiom, included in our selection below, argues that while sexuality and gender may be implicated in one another, they constitute conceptually distinct realms. To treat sexuality as a part of gender perpetuates heterosexist assumptions about sexuality, foreclosing other as yet unarticulated ways of understanding. For Sedgwick, it follows that while lesbian, gay, and anti-homophobic scholarship have much to learn from feminism, one cannot assume that

the interests of the various actors coincide. Any alliances among movements to end oppression are strategic and political, not necessarily natural.

Sedgwick's criticism exhibits the strong influence of feminist, Foucauldian, and deconstructive (see JACQUES DERRIDA) modes of analysis and, like many poststructuralist critics, she writes in a philosophical prose that is often challenging. Yet while some critics have voiced the familiar complaint about the impenetrability of poststructuralist prose, others have been more concerned with the political stakes involved in her argument. Some fear that queer theory seeks to dissolve familiar identity categories such as gay and lesbian, creating an apolitical movement that ignores the real material conditions of gay life. Others suspect that queer theory will once more render women and lesbians invisible under the guise of a gender-neutral politics. These vexing political issues aside, Sedgwick's groundbreaking theoretical work raises important questions about the limits of identity politics, as it reshapes our understanding of the relationships between literature and sexuality.

BIBLIOGRAPHY

Sedgwick's books of criticism and theory to date are *The Coherence of Gothic Conventions* (1980), *Between Men: English Literature and Male Homosocial Desire* (1985), *Epistemology of the Closet* (1990), *Tendencies* (1993), and *A Dialogue on Love* (1999). She has also published a volume of poetry, *Fat Art, Thin Art* (1994). She has edited *Performativity and Performances* (1994), with Andrew Parker; *Shame and Its Sisters: A Silvan Tompkins Reader* (1995); *Gary in Your Pocket: Stories and Notebooks by Gary Fisher* (1996); and *Novel Gazing: Queer Readings in Fiction* (1997), the first collection of queer criticism of the novel.

One of the earliest critiques of *Between Men* was David Van Leer's "Beast of the Closet: Homosociality and the Pathology of Manhood," *Critical Inquiry* 15 (1989). Another valuable article is Blakey Vermeule's "Is There a Sedgwick School for Girls?" *Qui Parle: Literature, Philosophy, Visual Arts, and History* 5 (1991). A number of interviews with Sedgwick have appeared in print, including Sarah Chinn, Mario DiGangi, and Patrick Horrigan, "A Talk with Eve Kosofsky Sedgwick," *PreText: A Journal of Rhetoric and Theory* 13 (1992), and Jeffrey Williams, "Sedgwick Unplugged (An Interview with Eve Kosofsky Sedgwick)," *Minnesota Review* 40, n.s., (1993). Tim Dean's "On the Eve of a Queer Future," *Raritan* 15 (1995), examines Sedgwick's later writing. For bibliography consult Joan Nordquist, *Queer Theory: A Bibliography* (1997).

From Between Men: English Literature and Male Homosocial Desire

From Introduction

I. HOMOSOCIAL DESIRE

The subject of this book is a relatively short, recent, and accessible passage of English culture, chiefly as embodied in the mid-eighteenth- to mid-nineteenth-century novel. The attraction of the period to theorists of many disciplines is obvious: condensed, self-reflective, and widely influential change in economic, ideological, and gender arrangements. I will be arguing that concomitant changes in the structure of the continuum of male "homosocial desire" were tightly, often causally bound up with the other more visible changes; that the emerging pattern of male friendship, mentorship, entitlement, rivalry, and hetero- and homosexuality was in an intimate and

shifting relation to class; and that no element of that pattern can be understood outside of its relation to women and the gender system as a whole.

"Male homosocial desire": the phrase in the title of this study is intended to mark both discriminations and paradoxes. "Homosocial desire," to begin with, is a kind of oxymoron. "Homosocial" is a word occasionally used in history and the social sciences, where it describes social bonds between persons of the same sex; it is a neologism, obviously formed by analogy with "homosexual," and just as obviously meant to be distinguished from "homosexual." In fact, it is applied to such activities as "male bonding," which may, as in our society, be characterized by intense homophobia, fear and hatred of homosexuality.¹ To draw the "homosocial" back into the orbit of "desire," of the potentially erotic, then, is to hypothesize the potential unbrokenness of a continuum between homosocial and homosexual—a continuum whose visibility, for men, in our society, is radically disrupted. It will become clear, in the course of my argument, that my hypothesis of the unbrokenness of this continuum is not a *genetic* one—I do not mean to discuss genital homosexual desire as "at the root of" other forms of male homosociality—but rather a strategy for making generalizations about, and marking historical differences in, the *structure* of men's relations with other men. "Male homosocial desire" is the name this book will give to the entire continuum.

I have chosen the word "desire" rather than "love" to mark the erotic emphasis because, in literary critical and related discourse, "love" is more easily used to name a particular emotion, and "desire" to name a structure; in this study, a series of arguments about the structural permutations of social impulses fuels the critical dialectic. For the most part, I will be using "desire" in a way analogous to the psychoanalytic use of "libido"²—not for a particular affective state or emotion, but for the affective or social force, the glue, even when its manifestation is hostility or hatred or something less emotively charged, that shapes an important relationship. How far this force is properly sexual (what, historically, it means for something to be "sexual") will be an active question.

The title is specific about *male* homosocial desire partly in order to acknowledge from the beginning (and stress the seriousness of) a limitation of my subject; but there is a more positive and substantial reason, as well. It is one of the main projects of this study to explore the ways in which the shapes of sexuality, and what *counts* as sexuality, both depend on and affect historical power relationships.³ A corollary is that in a society where men

1. The notion of "homophobia" is itself fraught with difficulties. To begin with, the word is etymologically nonsensical. A more serious problem is that the linking of fear and hatred in the "-phobia" suffix, and in the word's usage, does tend to prejudge the question of the cause of homosexual oppression: it is attributed to fear, as opposed to (for example) a desire for power, privilege, or material goods. An alternative term that is more suggestive of collective, structurally inscribed, perhaps materially based oppression is "heterosexism." This study will, however, continue to use "homophobia," for three reasons. First, it will be an important concern here to question, rather than to reinforce, the presumptively symmetrical opposition between homo- and heterosexuality, which seems to be implicit in the term "heterosexism." Second, the etiology of individual people's attitudes toward male homosexuality will not be a

focus of discussion. And third, the ideological and thematic treatments of male homosexuality to be discussed from the late eighteenth century onward do combine fear and hatred in a way that is appropriately called phobic. For a good summary of social science research on the concept of homophobia, see Stephen M. Morin and Ellen M. Garfinkle, "Male Homophobia," in *Gayspeak: Gay Male and Lesbian Communication*, ed. James W. Chesebro (New York: Pilgrim Press, 1981), pp. 117–29 [except as indicated, all notes are Sedgwick's].

2. Psychic drive or energy associated with the sexual instinct but also inherent in other mental desires and drives [editor's note].

3. For a good survey of the background to this assertion, see Jeffrey Weeks, *Sex, Politics, and Society: The Regulation of Sexuality Since 1800* (London: Longman, 1981), pp. 1–18.

and women differ in their access to power, there will be important gender differences, as well, in the structure and constitution of sexuality.

For instance, the diacritical⁴ opposition between the "homosocial" and the "homosexual" seems to be much less thorough and dichotomous for women, in our society, than for men. At this particular historical moment, an intelligible continuum of aims, emotions, and valuations links lesbianism with the other forms of women's attention to women: the bond of mother and daughter, for instance, the bond of sister and sister, women's friendship, "networking," and the active struggles of feminism.⁵ The continuum is criss-crossed with deep discontinuities—with much homophobia, with conflicts of race and class—but its intelligibility seems now a matter of simple common sense. However agonistic the politics, however conflicted the feelings, it seems at this moment to make an obvious kind of sense to say that women in our society who love women, women who teach, study, nurture, suckle, write about, march for, vote for, give jobs to, or otherwise promote the interests of other women, are pursuing congruent and closely related activities. Thus the adjective "homosocial" as applied to women's bonds (by, for example, historian Carroll Smith-Rosenberg)⁶ need not be pointedly dichotomized as against "homosexual"; it can intelligibly denominate the entire continuum.

The apparent simplicity—the unity—of the continuum between "women loving women" and "women promoting the interests of women," extending over the erotic, social, familial, economic, and political realms, would not be so striking if it were not in strong contrast to the arrangement among males. When Ronald Reagan and Jesse Helms⁷ get down to serious logrolling on "family policy," they are men promoting men's interests. (In fact, they embody Heidi Hartmann's definition of patriarchy: "relations between men, which have a material base, and which, though hierarchical, establish or create interdependence and solidarity among men that enable them to dominate women.")⁸ Is their bond in any way congruent with the bond of a loving gay male couple? Reagan and Helms would say no—disgustedly. Most gay couples would say no—disgustedly. But why not? Doesn't the continuum between "men-loving-men" and "men-promoting-the-interests-of-men" have the same intuitive force that it has for women?

Quite the contrary: much of the most useful recent writing about patriarchal structures suggests that "obligatory heterosexuality" is built into male-dominated kinship systems, or that homophobia is a *necessary* consequence of such patriarchal institutions as heterosexual marriage.⁹ Clearly, however convenient it might be to group together all the bonds that link males to

4. Distinctive; serving as a distinguishing feature [editor's note].

5. Adrienne Rich describes these bonds as forming a "lesbian continuum," in her essay "Compulsory Heterosexuality and Lesbian Existence," *Signs* 5 (1980): 631–60. [RICH (b. 1929), American feminist poet and essayist; for this essay, see above—editor's note.]

males, and by which males enhance the status of males—usefully symmetrical as it would be, that grouping meets with a prohibitive structural obstacle. From the vantage point of our own society, at any rate, it has apparently been impossible to imagine a form of patriarchy that was not homophobic. Gayle Rubin writes, for instance, “The suppression of the homosexual component of human sexuality, and by corollary, the oppression of homosexuals, is . . . a product of the same system whose rules and relations oppress women.”¹

The historical manifestations of this patriarchal oppression of homosexuals have been savage and nearly endless. Louis Crompton makes a detailed case for describing the history as genocidal.² Our own society is brutally homophobic; and the homophobia directed against both males and females is not arbitrary or gratuitous, but tightly knit into the texture of family, gender, age, class, and race relations. Our society could not cease to be homophobic and have its economic and political structures remain unchanged.

Nevertheless, it has yet to be demonstrated that, because most patriarchies structurally include homophobia, therefore patriarchy structurally *requires* homophobia. K. J. Dover’s recent study, *Greek Homosexuality*, seems to give a strong counterexample in classical Greece. Male homosexuality, according to Dover’s evidence, was a widespread, licit, and very influential part of the culture. Highly structured along lines of class, and within the citizen class along lines of age, the pursuit of the adolescent boy by the older man was described by stereotypes that we associate with romantic heterosexual love (conquest, surrender, the “cruel fair,” the absence of desire in the love object), with the passive part going to the boy. At the same time, however, because the boy was destined in turn to grow into manhood, the assignment of roles was not permanent.³ Thus the love relationship, while temporarily oppressive to the object, had a strongly educational function; Dover quotes Pausanias in Plato’s *Symposium* as saying “that it would be right for him [the boy] to perform any service for one who improves him in mind and character.”⁴ Along with its erotic component, then, this was a bond of mentorship; the boys were apprentices in the ways and virtues of Athenian citizenship, whose privileges they inherited. These privileges included the power to command the labor of slaves of both sexes, and of women of any class including their own. “Women and slaves belonged and lived together,” Hannah Arendt writes. The system of sharp class and gender subordination was a necessary part of what the male culture valued most in itself: “Contempt for laboring originally [arose] out of a passionate striving for freedom from necessity and a no less passionate impatience with every effort that left no trace, no monument, no great work worthy to remembrance”;⁵ so the contemptible labor was left to women and slaves.

The example of the Greeks demonstrates, I think, that while heterosexu-

1976), chap. 1.

4. K. J. Dover, *Greek Homosexuality* (New York: Random House–Vintage, 1980), p. 91. [Dover’s quotation is from PLATO, *Symposium* 184d—editor’s note.]

5. Hannah Arendt, *The Human Condition* (Chicago: University of Chicago Press, 1958), p. 83; quoted in Adrienne Rich, *On Lies, Secrets, and Silence: Selected Prose, 1966–1978* (New York: Norton, 1979), p. 206.

ality is necessary for the maintenance of any patriarchy, homophobia, against males at any rate, is not. In fact, for the Greeks, the continuum between "men loving men" and "men promoting the interests of men" appears to have been quite seamless. It is as if, in our terms, there were no perceived discontinuity between the male bonds at the Continental Baths and the male bonds at the Bohemian Grove⁶ or in the board room or Senate cloakroom.

It is clear, then, that there is an asymmetry in our present society between, on the one hand, the relatively continuous relation of female homosocial and homosexual bonds, and, on the other hand, the radically discontinuous relation of male homosocial and homosexual bonds. The example of the Greeks (and of other, tribal cultures, such as the New Guinea "Sambia" studied by G. H. Herdt⁷) shows, in addition, that the structure of homosocial continuity is culturally contingent, not an innate feature of either "maleness" or "femaleness." Indeed, closely tied though it obviously is to questions of male vs. female power, the explanation will require a more exact mode of historical categorization than "patriarchy," as well, since patriarchal power structures (in Hartmann's sense) characterize both Athenian and American societies. Nevertheless, we may take as an explicit axiom that the historically differential shapes of male and female homosociality—much as they themselves may vary over time—will always be articulations and mechanisms of the enduring inequality of power between women and men.

Why should the different shapes of the homosocial continuum be an interesting question? Why should it be a *literary* question? Its importance for the practical politics of the gay movement as a minority rights movement is already obvious from the recent history of strategic and philosophical differences between lesbians and gay men. In addition, it is theoretically interesting partly as a way of approaching a larger question of "sexual politics": What does it mean—what difference does it make—when a social or political relationship is sexualized? If the relation of homosocial to homosexual bonds is so shifty, then what theoretical framework do we have for drawing any links between sexual and power relationships?

1985

From Epistemology of the Closet

From Introduction: Axiomatic

AXIOM 2: THE STUDY OF SEXUALITY IS NOT COEXTENSIVE WITH THE STUDY OF GENDER; CORRESPONDINGLY, ANTIHOMOPHOBIC INQUIRY IS NOT COEXTENSIVE WITH FEMINIST INQUIRY. BUT WE CAN'T KNOW IN ADVANCE HOW THEY WILL BE DIFFERENT.

Sex, gender, sexuality: three terms whose usage relations and analytical relations are almost irremediably slippery. The charting of a space between

something called "sex" and something called "gender" has been one of the most influential and successful undertakings of feminist thought. For the purposes of that undertaking, "sex" has had the meaning of a certain group of irreducible, biological differentiations between members of the species *Homo sapiens* who have XX and those who have XY chromosomes. These include (or are ordinarily thought to include) more or less marked dimorphisms of genital formation, hair growth (in populations that have body hair), fat distribution, hormonal function, and reproductive capacity. "Sex" in this sense—what I'll demarcate as "chromosomal sex"—is seen as the relatively minimal raw material on which is then based the social construction of *gender*. Gender, then, is the far more elaborated, more fully and rigidly dichotomized social production and reproduction of male and female identities and behaviors—of male and female *persons*—in a cultural system for which "male / female" functions as a primary and perhaps model binarism affecting the structure and meaning of many, many other binarisms whose apparent connection to chromosomal sex will often be exiguous or nonexistent. Compared to chromosomal sex, which is seen (by these definitions) as tending to be immutable, immanent in the individual, and biologically based, the meaning of gender is seen as culturally mutable and variable, highly relational (in the sense that each of the binarized genders is defined primarily by its relation to the other), and inextricable from a history of power differentials between genders. This feminist charting of what Gayle Rubin refers to as a "sex / gender system,"¹ the system by which chromosomal sex is turned into, and processed as, cultural gender, has tended to minimize the attribution of people's various behaviors and identities to chromosomal sex and to maximize their attribution to socialized gender constructs. The purpose of that strategy has been to gain analytic and critical leverage on the female-disadvantaging social arrangements that prevail at a given time in a given society, by throwing into question their legitimative ideological grounding in biologically based narratives of the "natural."

"Sex" is, however, a term that extends indefinitely beyond chromosomal sex. That its history of usage often overlaps with what might, now, more properly be called "gender" is only one problem. ("I can only love someone of my own sex." Shouldn't "sex" be "gender" in such a sentence? "M. saw that the person who approached was of the opposite sex." Genders—insofar as there are two and they are defined in contradistinction to one another—may be said to be opposite; but in what sense is XX the opposite of XY?) Beyond chromosomes, however, the association of "sex," precisely through the physical body, with reproduction and with genital activity and sensation keeps offering new challenges to the conceptual clarity or even possibility of sex / gender differentiation. There is a powerful argument to be made that a primary (or *the* primary) issue in gender differentiation and gender struggle is the question of who is to have control of women's (biologically) distinctive reproductive capability. Indeed, the intimacy of the association between several of the most signal forms of gender oppression and "the facts" of women's bodies and women's reproductive activity has led some radical feminists to question, more or less explicitly, the usefulness of insisting on a sex / gender distinction. For these reasons, even usages involving the "sex / gender sys-

1. Gayle Rubin, "The Traffic in Women: Notes toward a 'Political Economy' of Sex," in *Toward an Anthropology of Women*, ed. Rayna Reiter (New

York: Monthly Review Press, 1975), pp. 157–210 [except as indicated, all notes are Sedgwick's].

tem” within feminist theory are able to use “sex/gender” only to delineate a problematical *space* rather than a crisp distinction. My own loose usage in this book will be to denominate that problematized space of the sex/gender system, the whole package of physical and cultural distinctions between women and men, more simply under the rubric “gender.” I do this in order to reduce the likelihood of confusion between “sex” in the sense of “the space of differences between male and female” (what I’ll be grouping under “gender”) and “sex” in the sense of sexuality.

For meanwhile the whole realm of what modern culture refers to as “sexuality” and *also* calls “sex”—the array of acts, expectations, narratives, pleasures, identity-formations, and knowledges, in both women and men, that tends to cluster most densely around certain genital sensations but is not adequately defined by them—that realm is virtually impossible to situate on a map delimited by the feminist-defined sex/gender distinction. To the degree that it has a center or starting point in certain physical sites, acts, and rhythms associated (however contingently) with procreation or the potential for it, “sexuality” in this sense may seem to be of a piece with “chromosomal sex”: biologically necessary to species survival, tending toward the individually immanent, the socially immutable, the given. But to the extent that, as Freud argued and Foucault² assumed, the distinctively sexual nature of human sexuality has to do precisely with its excess over or potential difference from the bare choreographies of procreation, “sexuality” might be the very opposite of what we originally referred to as (chromosomal-based) sex: it could occupy, instead, even more than “gender” the polar position of the relational, the social/symbolic, the constructed, the variable, the representational (see Figure 1). To note that, according to these different findings, *something* legitimately called sex or sexuality is all over the experiential and conceptual map is to record a problem less resolvable than a necessary

Figure 1. Some Mappings of Sex, Gender, and Sexuality

2. MICHEL FOUCAULT (1926–1984), French philosopher and historian of ideas. SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis [editor’s note].

choice of analytic paradigms or a determinate slippage of semantic meaning; it is rather, I would say, true to quite a range of contemporary worldviews and intuitions to find that sex / sexuality *does* tend to represent the full spectrum of positions between the most intimate and the most social, the most predetermined and the most aleatory, the most physically rooted and the most symbolically infused, the most innate and the most learned, the most autonomous and the most relational traits of being.

If all this is true of the definitional nexus between sex and sexuality, how much less simple, even, must be that between sexuality and gender. It will be an assumption of this study that there is always at least the potential for an analytic distance between gender and sexuality, even if particular manifestations or features of particular sexualities are among the things that plunge women and men most ineluctably into the discursive, institutional, and bodily enmeshments of gender definition, gender relation, and gender inequality. This, too, has been posed by Gayle Rubin:

I want to challenge the assumption that feminism is or should be the privileged site of a theory of sexuality. Feminism is the theory of gender oppression. . . . Gender affects the operation of the sexual system, and the sexual system has had gender-specific manifestations. But although sex and gender are related, they are not the same thing.³

This book will hypothesize, with Rubin, that the question of gender and the question of sexuality, inextricable from one another though they are in that each can be expressed only in the terms of the other, are nonetheless not the same question, that in twentieth-century Western culture gender and sexuality represent two analytic axes that may productively be imagined as being as distinct from one another as, say, gender and class, or class and race. Distinct, that is to say, no more than minimally, but nonetheless usefully.

Under this hypothesis, then, just as one has learned to assume that every issue of racial meaning must be embodied through the specificity of a particular class position—and every issue of class, for instance, through the specificity of a particular gender position—so every issue of gender would necessarily be embodied through the specificity of a particular sexuality, and vice versa; but nonetheless there could be use in keeping the analytic axes distinct.

An objection to this analogy might be that gender is *definitionally* built into determinations of sexuality, in a way that neither of them is definitionally intertwined with, for instance, determinations of class or race. It is certainly true that without a concept of gender there could be, quite simply, no concept of homo- or heterosexuality. But many other dimensions of sexual choice (auto- or alloerotic,⁴ within or between generations, species, etc.) have no such distinctive, explicit definitional connection with gender; indeed, some dimensions of sexuality might be tied, not to gender, but *instead* to differences or similarities of race or class. The definitional narrowing-down in this century of sexuality as a whole to a binarized calculus of *homo-*

1984), pp. 307–8.

4. Based in eroticism focused on the other. "Autoerotic": based in eroticism focused on the self [editor's note].

or heterosexuality is a weighty fact but an entirely historical one. To use that fact accomplishes as a reason for analytically conflating sexuality per se with gender would obscure the degree to which the fact itself requires explanation. It would also, I think, risk obscuring yet again the extreme intimacy with which all these available analytic axes do after all mutually constitute one another: to assume the distinctiveness of the *intimacy* between sexuality and gender might well risk assuming too much about the definitional *separability* of either of them from determinations of, say, class or race.

It may be, as well, that a damaging bias toward heterosocial⁵ or heterosexual assumptions inheres unavoidably in the very concept of gender. This bias would be built into any gender-based analytic perspective to the extent that gender definition and gender identity are necessarily relational between genders—to the extent, that is, that in any gender system, female identity or definition is constructed by analogy, supplementarity, or contrast to male, or vice versa. Although many gender-based forms of analysis do involve accounts, sometimes fairly rich ones, of intragender behaviors and relations, the ultimate definitional appeal in many gender-based analysis must necessarily be to the diacritical⁶ frontier between different genders. This gives heterosocial and heterosexual relations a conceptual privilege of incalculable consequence. Undeniably, residues, markers, tracks, signs referring to that diacritical frontier between genders are everywhere, as well, internal to and determinative of the experience of each gender and its intragender relations; gender-based analysis can never be dispensed with in even the most purely intragender context. Nevertheless it seems predictable that the analytic bite of a purely gender-based account will grow less incisive and direct as the distance of its subject from a social interface between different genders increases. It is unrealistic to expect a close, textured analysis of same-sex relations through an optic calibrated in the first place to the coarser stigmata of gender difference.⁷ The development of an alternative analytic axis—call it sexuality—might well be, therefore, a particularly urgent project for gay / lesbian and antihomophobic inquiry.

It would be a natural corollary to Axiom 2 to hypothesize, then, that gay / lesbian and antihomophobic inquiry still has a lot to learn from asking questions that feminist inquiry has learned to ask—but only so long as we don't demand to receive the same answers in both interlocutions. In a comparison of feminist and gay theory as they currently stand, the newness and consequent relative underdevelopment of gay theory are seen most clearly in two manifestations. First, we are by now very used to asking as feminists what we aren't yet used to asking as antihomophobic readers: how a variety of forms of oppression intertwine systemically with each other; and especially how the person who is disabled through one set of oppressions may *by the same positioning* be enabled through others. For instance, the understated demeanor of educated women in our society tends to mark both their def-

5. A term used to describe social bonds between persons of different genders, by analogy with *homosocial*, the notion Sedgwick explores in *Between Men* (1985; see above) [editor's note].

6. Distinctive; serving as a distinguishing feature [editor's note].

7. For valuable related discussions, see Katie King, "The Situation of Lesbianism as Feminism's

"Magical Sign: Contests for Meaning and the US Women's Movement, 1968–1972," *Communication* 9 (1986): 65–91, special issue, "Feminist Critiques of Popular Culture," ed. Paula A. Treichler and Ellen Wartella; and Teresa de Lauretis, "Sexual Indifference and Lesbian Representation," *Theatre Journal* 40 (May 1988): 155–77.

erence to educated men and their expectation of deference from women and men of lower class. Again, a woman's use of a married name makes graphic at the same time her subordination as a woman and her privilege as a presumptive heterosexual. Or, again, the distinctive vulnerability to rape of women of all races has become in this country a powerful tool for the racist enforcement by which white people, including women, are privileged at the expense of Black people of both genders. That one is *either* oppressed or an oppressor, or that if one happens to be both, the two are not likely to have much to do with each other, still seems to be a common assumption, however, in at any rate male gay writing and activism,⁸ as it hasn't for a long time been in careful feminist work.

Indeed, it was the long, painful realization, *not* that all oppressions are congruent, but that they are *differently* structured and so much intersect in complex embodiments that was the first great heuristic⁹ breakthrough of socialist-feminist thought and of the thought of women of color.¹ This realization has as its corollary that the comparison of different axes of oppression is a crucial task, not for any purpose of ranking oppressions, but to the contrary because each oppression is likely to be in a uniquely indicative relation to certain distinctive nodes of cultural organization. The *special* centrality of homophobic oppression in the twentieth century, I will be arguing, has resulted from its inextricability from the question of knowledge and the processes of knowing in modern Western culture at large.

The second and perhaps even greater heuristic leap of feminism has been the recognition that categories of gender and, hence, oppressions of gender can have a structuring force for nodes of thought, for axes of cultural discrimination, whose thematic subject isn't explicitly gendered at all. Through a series of developments structured by the deconstructive understandings and procedures sketched above, we have now learned as feminist readers that dichotomies in a given text of culture as opposed to nature, public as

8. Gay male-centered work that uses more complex models to investigate the intersection of different oppressions includes Gay Left Collective, eds., *Homosexuality: Power and Politics* (London: Allison & Busby, 1980); Paul Hoch, *White Hero Black Beast: Racism, Sexism, and the Mask of Masculinity* (London: Pluto, 1979); Guy Hocquenghem, *Homosexual Desire*, trans. Daniella Dangour (London: Allison & Busby, 1978); Mario Mieli, *Homosexuality and Liberation: Elements of a Gay Critique*, trans. David Fernbach (London: Gay Men's Press, 1980); D. A. Miller, *The Novel and the Police* (Berkeley: University of California Press, 1988); Michael Moon, "The Gentle Boy from the Dangerous Classes: Pederasty, Domesticity, and Capitalism in Horatio Alger," *Representations*, no. 19 (summer 1987): 87-110; Michael Moon, *Disseminating Whitman* (Cambridge: Harvard University Press, 1990); and Jeffrey Weeks, *Sexuality and Its Discontents: Meanings, Myths, and Modern Sexualities* (London: Longman, 1980).

9. Explanatory, serving as an aid to problem solving [editor's note].

1. The influential socialist-feminist investigations have included Michèle Barrett, *Women's Oppression Today: Problems in Marxist Feminist Analysis* (London: Verso, 1980); Zillah Eisenstein, ed., *Capitalist Patriarchy and the Case for Socialist Feminism* (New York: Monthly Review Press, 1979); and Juliet Mitchell, *Women's Estate* (New

York: Vintage, 1973). On the intersections of racial with gender and sexual oppressions, see, for example, Elly Bulkin, BARBARA SMITH, and Minnie Bruce Pratt, *Yours in Struggle: Three Feminist Perspectives on Anti-Semitism and Racism* (New York: Long Haul Press, 1984); BELL HOOKS [Gloria Watkins], *Feminist Theory: From Margin to Center* (Boston: South End Press, 1984); Katie King, "Audre Lorde's Lacquered Layerings: The Lesbian Bar as a Site of Literary Production," *Cultural Studies* 2, no. 3 (1988): 321-42; Audre Lorde, *Sister Outsider: Essays and Speeches* (Trumansburg, N.Y.: Crossing Press, 1984); Cherríe Moraga, *Loving in the War Years: Lo que nunca paso por sus labios* (Boston: South End Press, 1938); Cherríe Moraga and GLORIA ANZALDÚA, eds., *This Bridge Called My Back: Writings by Radical Women of Color* (Watertown: Persephone, 1981; rpt. ed., New York: Kitchen Table, Women of Color Press, 1983); and Barbara Smith, ed., *Home Girls: A Black Feminist Anthology* (New York: Kitchen Table, Women of Color Press, 1983). Good overviews of several of these intersections as they relate to women and in particular to lesbians, can be found in Ann Snitow, Christine Stansell, and Sharon Thompson, eds., *The Powers of Desire: The Politics of Sexuality* (New York: Monthly Review/New Feminist Library, 1983); Vance, *Pleasure and Danger*; and de Lauretis, "Sexual Indifference."

opposed to private, mind as opposed to body, activity as opposed to passivity, etc. etc., are, under particular pressures of culture and history, likely places to look for implicit allegories of the relations of men to women; more, that to fail to analyze such nominally ungendered constructs in gender terms can itself be a gravely tendentious move in the gender politics of reading. This has given us ways to ask the question of gender about texts even where the culturally "marked" gender (female) is not present as either author or thematic.

The dichotomy heterosexual/homosexual, as it has emerged through the last century of Western discourse, would seem to lend itself peculiarly neatly to a set of analytic moves learned from this deconstructive moment in feminist theory. In fact, the dichotomy heterosexual/homosexual fits the deconstructive template much more neatly than male/female itself does, and hence, importantly differently. The most dramatic difference between gender and sexual orientation—that virtually all people are publicly and unalterably assigned to one or the other gender, and from birth—seems if anything to mean that it is, rather, sexual orientation, with its far greater potential for rearrangement, ambiguity, and representational doubleness, that would offer the apter deconstructive object. An essentialism of sexual object-choice is far less easy to maintain, far more visibly incoherent, more visibly stressed and challenged at every point in the culture than any essentialism of gender. This is not an argument for any epistemological or ontological privileging of an axis of sexuality over an axis of gender; but it is a powerful argument for their potential distinctness one from the other.

Even given the imperative of constructing an account of sexuality irreducible to gender, however, it should already be clear that there are certain distortions necessarily built into the relation of gay/lesbian and antihomophobic theory to a larger project of conceiving a theory of sexuality as a whole. The two can after all scarcely be coextensive. And this is true not because "gay/lesbian and antihomophobic theory" would fail to cover heterosexual as well as same-sex object-choice (any more than "feminist theory" would fail to cover men as well as women), but rather because, as we have noted, sexuality extends along so many dimensions that aren't well described in terms of the gender of object-choice at all. Some of these dimensions are habitually condensed under the rubrics of object-choice, so that certain discriminations of (for instance) *act* or of (for another instance) *erotic localization* come into play, however implicitly and however incoherently, when categories of object-choice are mobilized. One used, for instance, to hear a lot about a high developmental stage called "heterosexual genitality," as though cross-gender object-choice automatically erased desires attaching to mouth, anus, breasts, feet, etc.; a certain anal-erotic salience of male homosexuality is if anything increasingly strong under the glare of heterosexist AIDS-phobia; and several different historical influences have led to the de-genitalization and bodily diffusion of many popular, and indeed many lesbian, understandings of lesbian sexuality. Other dimensions of sexuality, however, distinguish object-choice quite differently (e.g., human/animal, adult/child, singular/plural, autoerotic/alloerotic) or are not even about object choice (e.g., orgasmic/nonorgasmic, noncommercial/commercial, using bodies only/using manufactured objects, in private/in public,

spontaneous / scripted).² Some of these other dimensions of sexuality have had high diacritical importance in different historical contexts (e.g., human / animal, autoerotic / alloerotic). Others, like adult / child object choice, visibly do have such importance today, but without being very fully subsumed under the hetero / homosexual binarism. Still others, including a host of them I haven't mentioned or couldn't think of, subsist in this culture as nondiacritical differences, differences that seem to make little difference beyond themselves—except that the hyperintensive structuring of sexuality in our culture sets several of them, for instance, at the exact border between legal and illegal. What I mean at any rate to emphasize is that the implicit condensation of “sexual theory” into “gay / lesbian and antihomophobic theory,” which corresponds roughly to our by now unquestioned reading of the phrase “sexual orientation” to mean “gender of object-choice,” is at the very least damagingly skewed by the specificity of its historical placement.

1990

DICK HEBDIGE

b. 1951

Dick Hebdige combines sharp yet sympathetic analysis of youth subcultures with lucid articulations of the theoretical and political commitments of cultural studies. Cultural studies can sometimes seem to include almost anything; Hebdige's work—along with that of STUART HALL—exemplifies the approach in its British incarnation. In his hands, a specific relation to the Marxist tradition, a fundamental grounding in semiotics, and an attention to marginalized subcultures combine to generate an analysis that is distinct both from sociological investigations of deviance and from mainstream literary criticism of printed texts.

From a London working-class family, Hebdige studied at the celebrated University of Birmingham Centre for Contemporary Cultural Studies. He taught at Goldsmith's College of the University of London from 1984 to 1992 before moving to the United States to become dean of Critical Studies at the California Institute of the Arts.

The title of our selection, “From Culture to Hegemony” (1979), summarizes the historical and theoretical trajectory that created British cultural studies. As Hebdige relates, British intellectuals RAYMOND WILLIAMS and Richard Hoggart began in the late 1950s to search out redeeming cultural resources to set against what they deplored in contemporary society. They built on the idea, which Williams traces back to nineteenth-century social critics such as SAMUEL TAYLOR COLERIDGE and MATTHEW ARNOLD, that culture provides a repository of values and ideals against which the present can be judged. Williams especially was eager to expand this cultural repository to include the communal practices, values, and beliefs of ordinary people. As Williams came to realize, an anthropological notion of culture as “a whole way of life” and an artistic notion of culture as the works that embody the tradition's highest achievement coexist in a sometimes productive but often confusing tension.

Realizing that this tension arises because both Williams and Hoggart continue to

use culture as a standard of excellence, Hebdige substitutes the semiotic analysis of culture that he derives from ROLAND BARTHES for their moral project. Thus culture in the Arnoldian sense of identifying the best or the highest drops out of the picture. And because culture refers primarily to the semiotic element of all human activities, the term is not hopelessly vague. The basic claim of semiotics is that every object, practice, and relation within human societies is enmeshed in a systematic web of codes and conventions that constitute the specific item's value and meaning. Different societies vary not just in what they do, but in how they understand and value what they do. Cultural studies attends to the significance attached to various objects and activities in a particular society and to the linguistic and symbolic processes through which significance is produced in that society.

There are two other important consequences of this semiotic turn. First, literary texts and other artworks tend now to be neither more nor less important than any other cultural artifact or practice. The emphasis on *how* cultural meanings are produced renders moot the question of their intrinsic interest or aesthetic value. This merger of literature into the wider cultural field explains the widespread perception that cultural studies poses a threat to literary criticism. Second, the turn connects British cultural studies to French poststructuralism, especially in elevating social codes to a position of importance over individual speakers. Meanings are assigned within language, not by selves but systems, and things come to us already laden with meanings.

Many British cultural studies writers, however, retain a Marxist populism that wants to celebrate the creative and resistant political agency of ordinary men and women. As a result, Hebdige is less ready than are some French theorists to jettison all faith in small-scale action and choice. Hence his focus on "subcultural style," which can be defined as the creative variations that come into existence as marginal groups put into actual practice the meanings made available by preexisting dominant codes. In the terms of FERDINAND DE SAUSSURE's influential linguistic theory, style is *parole*, the individualized utterances of actual speakers: though they use the words and grammatical structures of the already-existing *langue* (language system), they still have considerable latitude in how they combine its elements at any particular moment.

The concept of ideology within the Marxist tradition provides a theoretical account of the social production of significances. As our selection makes clear, British cultural studies retains the Marxist insistence that the prevailing ideas, beliefs, and values in society are those of the dominant class. But this definition of ideology is now recast through the encounter with French theory: From Roland Barthes, Hebdige takes the idea that ideology "naturalizes," making dominant beliefs, habits, practices, and social structures seem inevitable. From LOUIS ALTHUSSER, British cultural studies takes the notion that ideology is the "lived relation" of the subject to social institutions (the family, school, law, etc.).

Depicted as fundamental and unconscious, as a set of routines and rituals reproduced by daily life and enforced by social institutions, ideology could easily be seen as all-powerful, susceptible to neither contestation nor revision. British cultural studies responded to this tendency with its most significant theoretical contribution: recourse to the concept of hegemony. *Hegemony*, a term first used in this context by the Italian Marxist ANTONIO GRAMSCI, introduces contestation, power differentials, and collective action into the social and cultural fields traversed by ideology. Our selection provides Hebdige's very influential account of hegemony, which subsequent writers have modified in various ways.

For Gramsci, hegemony is "manufactured consent." Different groups compete for power, and success in ruling always depends in part on the assent of large parts of the population to the dominant group's legitimacy. To win that assent, competing groups must produce overarching visions of society that explain their particular group's place, the place of other groups, and the goals and goods that underwrite

their use of power—visions produced much more consciously than either traditional or revisionist notions of ideology allow. The existence of competing groups—organized not solely according to class, as traditional Marxism insists, but also according to such variables as ethnicity, race, gender, region, and religion—ensures that there are always various hegemonic visions in circulation, enjoying different degrees of consent among different groups.

Hebdige highlights three components of hegemony. First, though the theory of hegemony underscores that brute power cannot ensure long-lasting dominance, the necessary consent from the governed is won by all other means, fair and foul: arguments, emotional appeals, images, and symbols. Thus, any analysis of cultural meanings must consider where and how such meanings were produced in relation to various groups' bids for dominance at a particular time.

Second, hegemony is a site of struggle at the level of social language. Hebdige combines the Marxist emphasis on conflict with the semiotic focus on the ongoing production of meaning to argue that "the struggle between different discourses, different definitions and meanings . . . is therefore always, at the same time, a struggle within signification: a struggle for possession of the sign which extends to even the most mundane areas of everyday life." Thus, even a hegemonic vision that has acquired relative dominance is always "a moving equilibrium," keeping its balance only by shifting continually to meet its various challengers.

Third and finally—here we find another hallmark of British cultural studies—Hebdige uses this conflictual model of hegemony to emphasize the mobility of signs. The same object—a safety pin, for example—can acquire an entirely new meaning when it is placed through a teenager's earlobe instead of through an infant's diaper. "Commodities can be symbolically 'repossessed' in everyday life, and endowed with implicitly oppositional meanings." Cultural studies scholars see not passive consumers or silent majorities but opposition and resistance in contemporary populations, as they focus on the creative "resignification" of received commodities, practices, institutions, and values.

Yet, as Hebdige notes, such symbolic repossessions are not in themselves acts of political resistance. Though "implicitly" oppositional, they do not directly challenge the powers that be. In particular, the challenges made by youth subcultures, notably punks, are "expressed obliquely, in style." (For Hebdige, youth *style* encompasses slang, dress, music, and dance.) He suggests that the disenchanting young can become effective political agents only if they are given some self-understanding of the larger social field.

More pessimistically, Hebdige hints at one moment that the styles of youth subcultures themselves impede political action. "The objections [to the dominant culture] are lodged, the contradictions displayed (and, as we shall see, 'magically resolved') at the profoundly superficial level of appearances: that is, at the level of signs." This view of symbolic resolution as foreclosing the desire for "real" action—which derives directly from CLAUDE LÉVI-STRAUSS's theory of myth—is also found in FREDRIC JAMESON's influential book *The Political Unconscious* (1981), but has fallen into disfavor since the 1980s. It seems odd for Hebdige to dismiss resolutions on the level of the sign as somehow not real, as not addressing contradictions on a level that truly matters, when most of his chapter argues for the importance of signs. Moreover, an uneasiness at viewing the activities of consumers as either inchoate or misplaced resistance, requiring the intellectual to transform them into something truly political, has significantly affected the development of cultural studies, especially in North America. To be sure, simply celebrating a group's creativity and its acts of resistance leaves everything as it is within a contemporary scene that hardly appears transformed by various acts of "symbolic repossession." Yet we should also wonder at this point just how we would be able to detect social transformation at all. What yardstick would differentiate "real" or "substantial" from "superficial" changes? Hebdige has no answers to this key question. At issue is the relation of

the aesthetic to the political. A concern with style is, after all, a traditional aesthetic concern. To what extent is style—or any kind of artistic expression—an articulation of a political position or, more dramatically, a potentially transformative political act?

BIBLIOGRAPHY

Hebdige's books to date are *Subculture: The Meaning of Style* (1979), *Cut 'n' Mix: Culture, Identity, and Caribbean Music* (1987), and *Hiding in the Light: On Images and Things* (1988).

In a series of essays responding to and growing out of Hebdige's work, Angela McRobbie has questioned the male focus of the subcultures Hebdige describes and has pondered the political effectiveness of subcultural resistance. See her "Settling Accounts with Subcultures: A Feminist Critique," *Screen Education* 34 (1980); "Postmodernism and Popular Culture," *Journal of Communication Inquiry* 10 (1986); and "New Times in Cultural Studies," *New Formations* 13 (1991). Further reactions to Hebdige's work can be found in Anne Beezer's "Dick Hebdige, *Subculture*," in *Reading into Cultural Studies* (ed. Martin Barker and Anne Beezer, 1992); Vincent B. Leitch, *Cultural Criticism, Literary Theory, Poststructuralism* (1992); and Neil Nehring, *Flowers in the Dustbin: Culture, Anarchy, and Postwar England* (1993).

From Subculture: The Meaning of Style

Chapter 1.

From Culture to Hegemony

CULTURE

Culture: cultivation, tending, in Christian authors, worship; the action or practice of cultivating the soil; tillage, husbandry; the cultivation or rearing of certain animals (e.g. fish); the artificial development of microscopic organisms, organisms so produced; the cultivating or development (of the mind, faculties, manners), improvement or refinement by education and training; the condition of being trained or refined; the intellectual side of civilization; the prosecution or special attention or study of any subject or pursuit. (*Oxford English Dictionary*)

Culture is a notoriously ambiguous concept as the above definition demonstrates. Refracted through centuries of usage, the word has acquired a number of quite different, often contradictory, meanings. Even as a scientific term, it refers both to a process (artificial development of microscopic organisms) and a product (organisms so produced). More specifically, since the end of the eighteenth century, it has been used by English intellectuals and literary figures to focus critical attention on a whole range of controversial issues. The 'quality of life', the effects in human terms of mechanization, the division of labour and the creation of a mass society have all been discussed within the larger confines of what Raymond Williams has called the 'Culture and Society' debate.¹ It was through this tradition of dissent and criticism that the dream of the 'organic society'—of society as an integrated, meaningful whole—was largely kept alive. The dream had two basic trajectories.

1. Raymond Williams, *Culture and Society* (Penguin, 1961) [Hebdige's note]. WILLIAMS (1921–1988), British Marxist literary critic.

One led back to the past and to the feudal ideal of a hierarchically ordered community. Here, culture assumed an almost sacred function. Its 'harmonious perfection' was posited against the Wasteland of contemporary life.²

The other trajectory, less heavily supported, led towards the future, to a socialist Utopia where the distinction between labour and leisure was to be annulled. Two basic definitions of culture emerged from this tradition, though these were by no means necessarily congruent with the two trajectories outlined above. The first—the one which is probably most familiar to the reader—was essentially classical and conservative. It represented culture as a standard of aesthetic excellence: 'the best that has been thought and said in the world,'³ and it derived from an appreciation of 'classic' aesthetic form (opera, ballet, drama, literature, art). The second, traced back by Williams to Herder and the eighteenth century,⁴ was rooted in anthropology. Here the term 'culture' referred to a

. . . particular way of life which expresses certain meanings and values not only in art and learning, but also in institutions and ordinary behaviour. The analysis of culture, from such a definition, is the clarification of the meanings and values implicit and explicit in a particular way of life, a particular culture.⁵

This definition obviously had a much broader range. It encompassed, in T. S. Eliot's words,

. . . all the characteristic activities and interests of a people. Derby Day, Henley Regatta, Cowes, the 12th of August, a cup final, the dog races, the pin table, the dart-board, Wensleydale cheese, boiled cabbage cut into sections, beetroot in vinegar, 19th Century Gothic churches, the music of Elgar. . . .⁶

As Williams noted, such a definition could only be supported if a new theoretical initiative was taken. The theory of culture now involved the 'study of relationships between elements in a whole way of life.'⁷ The emphasis shifted from immutable to historical criteria, from fixity to transformation:

. . . an emphasis [which] from studying particular meanings and values seeks not so much to compare these, as a way of establishing a scale, but by studying their modes of change to discover certain general causes or 'trends' by which social and cultural developments as a whole can be better understood.⁸

Williams was, then, proposing an altogether broader formulation of the relationships between culture and society, one which through the analysis of

2. Matthew Arnold, *Culture and Anarchy* (1868) [Hebdige's note]. ARNOLD (1822–1888), English poet and critic.

3. *Ibid.*

4. Raymond Williams, *Keywords* (Fontana Books, 1976) [Hebdige's note]. Johann Gottfried von Herder (1744–1803), German historian and philosopher who was one of the first writers to use the term "culture" to designate the distinctive ways of life of different peoples.

5. Raymond Williams, *The Long Revolution* (Penguin, 1965) [Hebdige's note].

6. T. S. Eliot, *Notes toward a Definition of Culture* (Faber and Faber, 1963) [Hebdige's note]. ELIOT

(1888–1965), American-born English poet and literary critic. Derby Day: the day of the Derby Stakes, a major horse race in England run every May. Henley Regatta: annual amateur rowing races held near Oxford, which begin in June. Cowes: Cowes Week, annual yacht races held off the Isle of Wight in late July. 12th of August: opening of grouse-hunting season. "Cup": major soccer tournament. "Pin table": pinball machine. Edward Elgar (1857–1934), English composer.

7. Williams, *The Long Revolution* [Hebdige's note].

8. *Ibid.* [Hebdige's note].

'particular meanings and values' sought to uncover the concealed fundamentals of history; the 'general causes' and broad social 'trends' which lie behind the manifest appearances of an 'everyday life'.

In the early years, when it was being established in the Universities, Cultural Studies sat rather uncomfortably on the fence between these two conflicting definitions—culture as a standard of excellence, culture as a 'whole way of life'—unable to determine which represented the most fruitful line of enquiry. Richard Hoggart⁹ and Raymond Williams portrayed working-class culture sympathetically in wistful accounts of pre-scholarship boyhoods (Leeds for Hoggart, a Welsh mining village for Williams¹) but their work displayed a strong bias towards literature and literacy² and an equally strong moral tone. Hoggart deplored the way in which the traditional working-class community—a community of tried and tested values despite the dour landscape in which it had been set—was being undermined and replaced by a 'Candy Floss³ World' of thrills and cheap fiction which was somehow bland and sleazy. Williams tentatively endorsed the new mass communications but was concerned to establish aesthetic and moral criteria for distinguishing the worthwhile products from the 'trash'; the jazz—'a real musical form'—and the football—a wonderful game—from the 'rape novel, the Sunday strip paper and the latest Tin Pan drool.'⁴ In 1966 Hoggart laid down the basic premises upon which Cultural Studies were based:

First, without appreciating good literature, no one will really understand the nature of society, second, literary critical analysis can be applied to certain social phenomena other than 'academically respectable' literature (for example, the popular arts, mass communications) so as to illuminate their meanings for individuals and their societies.⁵

The implicit assumption that it still required a literary sensibility to 'read' society with the requisite subtlety, and that the two ideas of culture could be ultimately reconciled was also, paradoxically, to inform the early work of the French writer, Roland Barthes, though here it found validation in a method—semiotics—a way of reading signs.⁶

BARTHES: MYTHS AND SIGNS

Using models derived from the work of the Swiss linguist Ferdinand de Saussure⁷ Barthes sought to expose the *arbitrary* nature of cultural phenomena,

9. English literary critic (b. 1918) and a founding figure of cultural studies at the University of Birmingham in England.

1. Richard Hoggart, *The Uses of Literacy* (Penguin, 1958); Raymond Williams, *Border Country* (Penguin, 1960) [Hebdige's note].

2. Although Williams had posited a new, broader definition of culture, he intended this to complement rather than contradict earlier formulations: "It seems to me that there is value in each of these kinds of definition. . . the degree to which we depend, in our knowledge of many past societies and past stages of our own, on the body of intellectual and imaginative work which has retained its major communicative power, makes the description of culture in these terms if not complete, then at least reasonable. . . there are elements in the 'ideal' definition which . . . seem to me valuable" (*The Long Revolution*) [Hebdige's note].

3. Cotton candy.

4. Williams, *The Long Revolution* [Hebdige's note].

5. Richard Hoggart, "Literature and Society," *American Scholar*, spring 1966 [Hebdige's note].

6. Terrence Hawkes, *Structuralism and Semiotics* (Methuen, 1977) [Hebdige's note]. BARTHES (1915–1980), semiotician and literary critic.

7. In his *Course in General Linguistics*, Saussure stressed the arbitrary nature of the linguistic sign. For Saussure, language is a system of mutually related values, in which arbitrary "signifiers" (e.g. words) are linked to equally arbitrary "signifieds" ("concepts . . . negatively defined by their relations with other terms in the system") to form signs. These signs together constitute a system. Each element is defined through its position within the relevant system—its relation to other elements—through the dialectics of identity and difference. Saussure postulated that other systems of significance (e.g. fashion, cookery) might be studied in a similar way, and that eventually linguistics would

to uncover the latent meanings of an everyday life which, to all intents and purposes, was 'perfectly natural'. Unlike Hoggart, Barthes was not concerned with distinguishing the good from the bad in modern mass culture, but rather with showing how *all* the apparently spontaneous forms and rituals of contemporary bourgeois societies are subject to a systematic distortion, liable at any moment to be dehistoricized, 'naturalized', converted into myth:

The whole of France is steeped in this anonymous ideology: our press, our films, our theatre, our pulp literature, our rituals, our Justice, our diplomacy, our conversations, our remarks about the weather, a murder trial, a touching wedding, the cooking we dream of, the garments we wear, everything in everyday life is dependent on the representation which the bourgeoisie *has and makes us have* of the relations between men and the world.⁸

Like Eliot, Barthes' notion of culture extends beyond the library, the opera-house and the theatre to encompass the whole of everyday life. But this everyday life is for Barthes overlaid with a significance which is at once more insidious and more systematically organized. Starting from the premise that 'myth is a type of speech', Barthes set out in *Mythologies* to examine the normally hidden set of rules, codes and conventions through which meanings particular to specific social groups (i.e. those in power) are rendered universal and 'given' for the whole of society. He found in phenomena as disparate as a wrestling match, a writer on holiday, a tourist-guide book, the same artificial nature, the same ideological core. Each had been exposed to the same prevailing rhetoric (the rhetoric of common sense) and turned into myth, into a mere element in a 'second-order' semiological system.⁹ (Barthes uses the example of a photograph in *Paris-Match* of a Negro soldier saluting the French flag, which has a first and second order connotation: (1) a gesture of loyalty, but also (2) 'France is a great empire, and all her sons, without colour discrimination, faithfully serve under her flag'.)

Barthes' application of a method rooted in linguistics to other systems of discourse outside language (fashion, film, food, etc.) opened up completely new possibilities for contemporary cultural studies. It was hoped that the invisible seam between language, experience and reality could be located and prised open through a semiotic analysis of this kind: that the gulf between the alienated intellectual and the 'real' world could be rendered meaningful and, miraculously, at the same time, be made to disappear. Moreover, under Barthes' direction, semiotics promised nothing less than the reconciliation of the two conflicting definitions of culture upon which Cultural Studies was so ambiguously posited—a marriage of moral conviction (in this case, Barthes' Marxist beliefs) and popular themes: the study of a society's total way of life.

This is not to say that semiotics was easily assimilable within the Cultural Studies project. Though Barthes shared the literary preoccupations of Hoggart and Williams, his work introduced a new Marxist 'problematic' which

form part of a more general science of signs—a semiology [Hebdige's note].

SAUSSURE (1857–1913), founder of structuralist linguistics. His *Course* was first published in 1916.

8. Roland Barthes, *Mythologies* (Paladin, 1972) [Hebdige's note].

9. *Ibid.* [Hebdige's note].

1. The fashionable status of this word has in

recent years contributed to its indiscriminate use. I intend here the very precise meaning established by Louis Althusser: 'the *problematic* of a word or concept consists of the theoretical or ideological framework within which that word or concept can be used to establish, determine and discuss a particular range of issues and a particular kind of problem' (Louis Althusser and Étienne Balibar,

was alien to the British tradition of concerned and largely untheorized 'social commentary'. As a result, the old debate seemed suddenly limited. In E. P. Thompson's² words it appeared to reflect the parochial concerns of a group of 'gentlemen amateurs'. Thompson sought to replace Williams' definitions of the theory of culture as 'a theory of relations between elements in a whole way of life' with his own more rigorously Marxist formulation: 'the study of relationships in a whole way of *conflict*'. A more analytical framework was required; a new vocabulary had to be learned. As part of this process of theorization, the word 'ideology' came to acquire a much wider range of meanings than had previously been the case. We have seen how Barthes found an 'anonymous ideology' penetrating every possible level of social life, inscribed in the most mundane of rituals, framing the most casual social encounters. But how can ideology be 'anonymous', and how can it assume such a broad significance? Before we attempt any reading of subcultural style, we must first define the term 'ideology' more precisely.

IDEOLOGY: A LIVED RELATION

In the *German Ideology*,³ Marx shows how the basis of the capitalist economic structure (surplus value, neatly defined by Godelier as 'Profit . . . is unpaid work'⁴) is hidden from the consciousness of the agents of production. The failure to see through appearances to the real relations which underlie them does not occur as the direct result of some kind of masking operation consciously carried out by individuals, social groups or institutions. On the contrary, ideology by definition thrives *beneath* consciousness. It is here, at the level of 'normal common sense', that ideological frames of reference are most firmly sedimented and most effective, because it is here that their ideological nature is most effectively concealed. As Stuart Hall puts it:

It is precisely its 'spontaneous' quality, its transparency, its 'naturalness', its refusal to be made to examine the premises on which it is founded, its resistance to change or to correction, its effect of instant recognition, and the closed circle in which it moves which makes common sense, at one and the same time, 'spontaneous', ideological and *unconscious*. You cannot learn, through common sense, *how things are*: you can only discover *where they fit* into the existing scheme of things. In this way, its very taken-for-grantedness is what establishes it as a medium in which its own premises and presuppositions are being rendered *invisible* by its apparent transparency.⁵

Since ideology saturates everyday discourse in the form of common sense, it cannot be bracketed off from everyday life as a self-contained set of 'political opinions' or 'biased views'. Neither can it be reduced to the abstract

5. Stuart Hall, "Culture, the Media, and the 'Ideological Effect,'" in J. Curran et al., eds., *Mass Communication and Society* (Edward Arnold, 1977) [Hebdige's note]. HALL (b. 1932), leading figure in British cultural studies.

dimensions of a 'world view' or used in the crude Marxist sense to designate 'false consciousness'.⁶ Instead, as Louis Althusser has pointed out:

. . . ideology has very little to do with 'consciousness'. . . . It is profoundly *unconscious*. . . . Ideology is indeed a system of representation, but in the majority of cases these representations have nothing to do with 'consciousness': they are usually images and occasionally concepts, but it is above all as *structures* that they impose on the vast majority of men, not via their 'consciousness'. They are perceived-accepted-suffered cultural objects and they act functionally on men via a process that escapes them.⁷

Although Althusser is here referring to structures like the family, cultural and political institutions, etc., we can illustrate the point quite simply by taking as our example a physical structure. Most modern institutions of education, despite the apparent neutrality of the materials from which they are constructed (red brick, white tile, etc.) carry within themselves implicit ideological assumptions which are literally structured into the architecture itself. The categorization of knowledge into arts and sciences is reproduced in the faculty system which houses different disciplines in different buildings, and most colleges maintain the traditional divisions by devoting a separate floor to each subject. Moreover, the hierarchical relationship between teacher and taught is inscribed in the very lay-out of the lecture theatre where the seating arrangements—benches rising in tiers before a raised lecturer—dictate the flow of information and serve to 'naturalize' professorial authority. Thus, a whole range of decisions about what is and what is not possible within education have been made, however unconsciously, before the content of individual courses is even decided.

These decisions help to set the limits not only on what is taught but on *how* it is taught. Here the buildings literally *reproduce* in concrete terms prevailing (ideological) notions about what education *is* and it is through this process that the educational structure, which can, of course, be altered, is placed beyond question and appears to us as a 'given' (i.e. as immutable). In this case, the frames of our thinking have been translated into actual bricks and mortar.

Social relations and processes are then appropriated by individuals, only through the forms in which they are represented to those individuals. These forms are, as we have seen, by no means transparent. They are shrouded in a 'common sense' which simultaneously validates and mystifies them. It is precisely these 'perceived-accepted-suffered cultural objects' which semiotics sets out to 'interrogate' and decipher. All aspects of culture possess a semiotic value, and the most taken-for-granted phenomena can function as signs: as elements in communication systems governed by semantic rules and codes which are not themselves directly apprehended in experience. These signs are, then, as opaque as the social relations which produce them and which they re-present. In other words, there is an ideological dimension to every signification:

6. A Marxist term referring to an individual's tendency to view reality in ways congruent with the interests of the dominant orthodoxy rather than in

ways that reflect his or her own class interest.

7. Louis Althusser, *For Marx* (Vintage, 1970) [Hebdige's note].

A sign does not simply exist as part of reality—it reflects and refracts another reality. Therefore it may distort that reality or be true to it, or may perceive it from a special point of view, and so forth. Every sign is subject to the criteria of ideological evaluation. . . . The domain of ideology coincides with the domain of signs. They equate with one another. Whenever a sign is present, ideology is present too. Everything ideological possesses a semiotic value.⁸

To uncover the ideological dimension of signs we must first try to disentangle the codes through which meaning is organized. 'Connotative' codes are particularly important. As Stuart Hall has argued, they ' . . . cover the face of social life and render it classifiable, intelligible, meaningful.'⁹ He goes on to describe these codes as 'maps of meaning' which are of necessity the product of selection. They cut across a range of potential meanings, making certain meanings available and ruling others out of court. We tend to live inside these maps as surely as we live in the 'real' world: they 'think' us as much as we 'think' them, and this in itself is quite 'natural'. All human societies *reproduce* themselves in this way through a process of 'naturalization'. It is through this process—a kind of inevitable reflex of all social life—that *particular* sets of social relations, *particular* ways of organizing the world appear to us as if they were universal and timeless. This is what Althusser means when he says that 'ideology has no history' and that ideology in this general sense will always be an 'essential element of every social formation.'¹

However, in highly complex societies like ours, which function through a finely graded system of divided (i.e. specialized) labour, the crucial question has to do with which specific ideologies, representing the interests of which specific groups and classes will prevail at any given moment, in any given situation. To deal with this question, we must first consider how power is distributed in our society. That is, we must ask which groups and classes have how much say in defining, ordering and classifying out the social world. For instance, if we pause to reflect for a moment, it should be obvious that access to the means by which ideas are disseminated in our society (i.e. principally the mass media) is *not* the same for all classes. Some groups have more say, more opportunity to make the rules, to organize meaning, while others are less favourably placed, have less power to produce and impose their definitions of the world on the world.

Thus, when we come to look beneath the level of 'ideology-in-general' at the way in which specific ideologies work, how some gain dominance and others remain marginal, we can see that in advanced Western democracies the ideological field is by no means neutral. To return to the 'connotative' codes to which Stuart Hall refers we can see that these 'maps of meaning' are charged with a potentially explosive significance because they are traced and re-traced along the lines laid down by the *dominant* discourses about reality, the *dominant* ideologies. They thus tend to represent, in however

8. V. N. Volosinov, *Marxism and the Philosophy of Language* (Seminar Press, 1973) [Hebdige's note]. Valentin N. Volosinov (1895–?), a critic in Leningrad during the 1920s and a colleague of MIKHAIL BAKHTIN (1895–1975). Scholars disagree about the authorship of *Marxism and the Philosophy of Language* (first published in 1927 under Volosinov's name); some argue that the book is

really by Bakhtin, others by Volosinov (who is believed to have died in the purges of the 1930s).

obscure and contradictory a fashion, the interests of the *dominant* groups in society.

To understand this point we should refer to Marx:

The ideas of the ruling class are in every epoch the ruling ideas, i.e. the class which is the ruling *material* force of society is at the same time its ruling *intellectual* force. The class which has the means of material production at its disposal, has control at the same time over the means of mental production, so that generally speaking, the ideas of those who lack the means of mental production are subject to it. The ruling ideas are nothing more than the ideal expression of the dominant material relationships grasped as ideas; hence of the relationships which make the one class the ruling class, therefore the ideas of its dominance.²

This is the basis of Antonio Gramsci's³ theory of *hegemony* which provides the most adequate account of how dominance is sustained in advanced capitalist societies.

HEGEMONY: THE MOVING EQUILIBRIUM

'Society cannot share a common communication system so long as it is split into warring classes' (Brecht,⁴ *A Short Organum for the Theatre*).

The term hegemony refers to a situation in which a provisional alliance of certain social groups can exert 'total social authority' over other subordinate groups, not simply by coercion or by the direct imposition of ruling ideas, but by 'winning and shaping consent so that the power of the dominant classes appears both legitimate and natural.'⁵ Hegemony can only be maintained so long as the dominant classes 'succeed in framing all competing definitions within their range',⁶ so that subordinate groups are, if not controlled, then at least contained within an ideological space which does not seem at all 'ideological': which appears instead to be permanent and 'natural', to lie outside history, to be beyond particular interests.⁷

This is how, according to Barthes, 'mythology' performs its vital function of naturalization and normalization and it is in his book *Mythologies* that Barthes demonstrates most forcefully the full extension of these normalized forms and meanings. However, Gramsci adds the important proviso that hegemonic power, precisely *because* it requires the consent of the dominated majority, can never be permanently exercised by the same alliance of 'class fractions'. As has been pointed out, 'Hegemony . . . is not universal and "given" to the continuing rule of a particular class. It has to be won, reproduced, sustained. Hegemony is, as Gramsci said, a "moving equilibrium" containing relations of forces favourable or unfavorable to this or that tendency.'⁸

In the same way, forms cannot be permanently normalized. They can always be deconstructed, demystified, by a 'mythologist' like Barthes. Moreover, commodities can be symbolically 'repossessed' in everyday life, and endowed with implicitly oppositional meanings, by the very groups who originally produced them. The symbiosis in which ideology and social order, production and reproduction, are linked is then neither fixed nor guaranteed. It can be prised open. The consensus can be fractured, challenged, overruled, and resistance to the groups in dominance cannot always be lightly dismissed or automatically incorporated. Although, as Lefebvre has written, we live in a society where '... objects in practice become signs and signs objects and a second nature takes the place of the first—the initial layer of perceptible reality,' there are, as he goes on to affirm, always 'objections and contradictions which hinder the closing of the circuit' between sign and object, production and reproduction.⁹

We can now return to the meaning of youth subcultures, for the emergence of such groups has signalled in a spectacular fashion the breakdown of consensus in the post-war period. In the following chapters we shall see that it is precisely objections and contradictions of the kind which Lefebvre has described that find expression in subculture. However, the challenge to hegemony which subcultures represent is not issued directly by them. Rather it is expressed obliquely, in style. The objections are lodged, the contradictions displayed (and, as we shall see, 'magically resolved') at the profoundly superficial level of appearances: that is, at the level of signs. For the sign-community, the community of myth-consumers, is not a uniform body. As Volosinov has written, it is cut through by class:

Class does not coincide with the sign community, i.e. with the totality of users of the same set of signs of ideological communication. Thus various different classes will use one and the same language. As a result, differently oriented accents intersect in every ideological sign. Sign becomes the arena of the class struggle.¹

The struggle between different discourses, different definitions and meanings within ideology is therefore always, at the same time, a struggle within signification: a struggle for possession of the sign which extends to even the most mundane areas of everyday life. To turn once more to the examples used in the Introduction, to the safety pins and tubes of vaseline,² we can see that such commodities are indeed open to a double inflection: to 'illegitimate' as well as 'legitimate' uses. These 'humble objects' can be magically appropriated; 'stolen' by subordinate groups and made to carry 'secret' meanings: meanings which express, in code, a form of resistance to the order which guarantees their continued subordination.

Style in subculture is, then, pregnant with significance. Its transformations go 'against nature', interrupting the process of 'normalization'. As such, they are gestures, movements towards a speech which offends the 'silent majority', which challenges the principle of unity and cohesion, which contradicts the myth of consensus. Our task becomes, like Barthes', to discern the hidden

9. Henri Lefebvre, *Everyday Life in the Modern World* (Allen Lane, 1971).

2. Safety pins, as Hebdige points out in his introduction, can be used for body piercings; and vaseline can be used during sexual activities.

messages inscribed in code on the glossy surfaces of style, to trace them out as 'maps of meaning' which obscurely re-present the very contradictions they are designed to resolve or conceal.

Academics who adopt a semiotic approach are not alone in reading significance into the loaded surfaces of life. The existence of spectacular subcultures continually opens up those surfaces to other potentially subversive readings. Jean Genet, the archetype of the 'unnatural' deviant, again exemplifies the practice of resistance through style. He is as convinced in his own way as is Roland Barthes of the ideological character of cultural signs. He is equally oppressed by the seamless web of forms and meanings which encloses and yet excludes him. His reading is equally partial. He makes his own list and draws his own conclusions:

I was astounded by so rigorous an edifice whose details were united against me. Nothing in the world is irrelevant: the stars on a general's sleeve, the stock-market quotations, the olive harvest, the style of the judiciary, the wheat exchange, the flower-beds, . . . Nothing. This order . . . had a meaning—my exile.³

It is this alienation from the deceptive 'innocence' of appearances which gives the teds, the mods, the punks⁴ and no doubt future groups of as yet unimaginable 'deviants' the impetus to move from man's second 'false nature'⁵ to a genuinely expressive artifice; a truly subterranean style. As a symbolic violation of the social order, such a movement attracts and will continue to attract attention, to provoke censure and to act, as we shall see, as the fundamental bearer of significance in subculture.

No subculture has sought with more grim determination than the punks to detach itself from the taken-for-granted landscape of normalized forms, nor to bring down upon itself such vehement disapproval. We shall begin therefore with the moment of punk and we shall return to that moment throughout the course of this book. It is perhaps appropriate that the punks, who have made such large claims for illiteracy, who have pushed profanity to such startling extremes, should be used to test some of the methods for 'reading' signs evolved in the centuries-old debate on the sanctity of culture.

1979

3. Jean Genet, *The Thief's Journal* (Penguin, 1967) [Hebdige's note]. The French writer of novels and plays (1910–1986) was marked as "deviant" as a homosexual and a convicted thief.

4. Three phases in British youth subcultures of the postwar era. The teddy boys of the middle 1950s to early 1960s joined an Elvis Presley-style appropriation of black rhythm-and-blues with highly artificial, almost Edwardian, clothes. The

mods of the 1960s were "working-class dandies," symbolized by the Carnaby Street look of 1965–66. The punks of the late 1970s aggressively staged their position as alienated outcasts, with rough music, deliberately nonglamorous clothes, and piercings, hair dyes, and tattoos that assaulted prevailing notions of bodily beauty.

5. Barthes, *Mythologies* [Hebdige's note].

STEVEN KNAPP

WALTER BENN MICHAELS

b. 1951

b. 1948

"The whole enterprise of critical theory is misguided and should be abandoned," declared Steven Knapp and Walter Benn Michaels stunningly, in their famous essay "Against Theory" (1982). While the advent of structuralist and poststructuralist theory in the late 1960s was attacked by traditionalists who bemoaned the loss of a proper focus on literature, by the 1980s "theory" had become a dominant mode in literary studies, spurring a renaissance of critical writing. "Against Theory" announced doubts within the ranks of a generation of younger critics about the impending establishment of theory, asserting a revisionary attitude that came to be called "neopragmatism." To some extent, it represented a struggle within theory between the deconstructive approach promoted by the "Yale School" (particularly PAUL DE MAN, whom Knapp and Michaels discuss at length), arguably the most influential theoretical approach through the late 1970s and early 1980s, and newly developing approaches such as New Historicism, represented by Knapp and Michaels's then-colleague at Berkeley, STEPHEN GREENBLATT. Although it did not put a stop to work in theory, "Against Theory" set off one of the most vibrant debates of the 1980s and augured the shift to critical methods with a more practical focus—notably, New Historicism and cultural studies—that became prominent from the late 1980s onward.

"Against Theory" appeared early in the academic careers of both its authors. At the time of its publication, Knapp was a beginning assistant professor of English at the University of California at Berkeley, having received his B.A. from Yale University in 1973 and Ph.D. from Cornell University in 1981. Michaels had been in the English Department at Berkeley only a few years longer; he received his B.A. in 1970 and Ph.D. in 1975 from the University of California at Santa Barbara. Each subsequently published two books and took positions at Johns Hopkins University: Michaels, who became an influential practitioner of New Historicist approaches to American literature, joined Hopkins's Department of English in 1987, and Knapp was appointed dean of the School of Arts and Sciences in 1994 and provost and vice president for academic affairs in 1996.

Before poststructuralism changed the Anglo-American critical landscape, literary theory was dominated by New Criticism; perhaps its most programmatic and influential statement was WILLIAM K. WIMSATT JR. AND MONROE C. BEARDSLEY's "Intentional Fallacy" (1946; see above). Wimsatt and Beardsley made the case that critics should not concern themselves with the "intentions" of authors (including their beliefs, personal attitudes, and life histories) but should focus on the literary work itself. Their polemical goal was to displace the biographical, historical, and impressionistic criticism prevalent during the early part of the century. "Against Theory" is similarly intended to articulate a new conception of literary study. Like "The Intentional Fallacy," it attempts to clear the ground for a better kind of literary study by refuting a fallacy that threatens to distract critics from their proper function. It argues against what might be called "the theoretical fallacy": the assumption that arguments about abstract principles and general methods, once resolved, will reliably guide the practice of literary criticism. According to Knapp and Michaels, criticism is an activity that cannot be governed by transcendent principles; rather, it is a "practice," prior to and not determined by any guiding theory.

Knapp and Michaels draw especially on the critique of interpretation developed by STANLEY FISH. Although Fish himself is criticized at the end of "Against Theory," his perceived error is the failure to be fully consistent with his own argument about the inconsequentiality of theory. This position is usually called *antifoundationalism*, and it draws on the American philosophical tradition of pragmatism. Pragmatism has never been precisely defined, but its adherents generally assert that theoretical con-

cepts (such as meaning and truth) derive their substance or content from actual human practices, not logical principles. Fish's and Knapp and Michaels's revision of pragmatism inspired a movement called "the new pragmatism" or "neopragmatism." "Against Theory," arguing the pointlessness of any theoretical formulation of the practical activity of literary interpretation into abstract dichotomies like meaning and intention, is one of its key manifestos.

"Against Theory" has two primary targets that Knapp and Michaels take to represent contemporary theory: hermeneutics, exemplified by E. D. HIRSCH JR., and deconstruction, exemplified by Paul de Man. Knapp and Michaels set them at different ends of the same spectrum: Hirsch is seen as advocating a positive theory of interpretation, which holds that discovering authorial intention provides a key to meaning, whereas de Man argues for a negative theory of interpretation, which holds that intention is never available and thus reliable interpretation can never be obtained. For Knapp and Michaels, both Hirsch and de Man falsely separate intention and meaning, concepts embedded in each other and impossible to discuss in isolation.

A significant feature of "Against Theory" is the forcefulness and clarity of its writing, which seemed to invite a direct response (and implicitly to reproach the sometimes difficult prose of much poststructuralist theorizing); indeed, counterarguments were soon launched, and nine were gathered in *Against Theory: Literary Studies and the New Pragmatism* (1985). With some outrage, the American critic Daniel T. O'Hara claims that Knapp and Michaels jeopardized the advances literary study had made under the auspices of theory, "only to return us to [the world] of our grandfathers, the world of the New Critics and the gentlemen-scholars of literary history," who narrowly concern themselves with practical readings. Arguing that theory serves a purpose as "a heuristic or regulative ideal of critical activity," O'Hara warns of the dangerous institutional consequence of "Against Theory": "by clearing the air of theory [it has] also taken away from students the means necessary to do criticism at all."

In a more sympathetic response, the leading American pragmatist philosopher Richard Rorty endorses Knapp and Michaels's critique of theory as providing a foundation for practice but disagrees with their call to "eliminate the 'career option' of writing and teaching theory." Like O'Hara, Rorty believes that such a move would harm English departments, and he notes that theory provides "an opportunity to discuss philosophy books—as well as novels, poems, critical essays, and so forth—with literature students." Stanley Fish agrees that "it is time to admit what everyone knows: theory has consequences; not, however, because it stands apart from and can guide practice but because it is itself a form of practice," with "all the political and institutional consequences of other practices."

One of the central problems of "Against Theory" is its use of the word *theory*. At key points Knapp and Michaels carefully define what they mean by the term—any attempt to guide or regulate critical practice by general principles standing outside or above human interests, beliefs, and practices. They oppose this kind of theory but acknowledge the value of certain noninterpretive theoretical approaches, such as the technical, formally focused field of narratology. At other moments, however, they seem to dismiss wholesale any version of theory. This rejection is troublesome, since, as some critics have noted, it would be difficult to see Knapp and Michaels's essay itself as anything other than what is commonly called theory.

Whatever the limitations of Knapp and Michael's argument, "Against Theory" codifies some assumptions of its authors' generation. As "The Intentional Fallacy" marked a turn from biographical, historical, and impressionistic approaches to literature, so "Against Theory" signals a turn away from dense philosophical considerations toward practical, cultural criticism. In its wake, the production of "theory," as Knapp and Michaels narrowly define it, has lessened—the result not of theory's inadequacy but (ironically) of its success, as it has become commonplace in the discourse of almost all contemporary criticism. While Knapp and Michaels provide a salutary reminder

not to overvalue theory, the debate over whether they overreacted in dismissing theory from critical practice continues.

BIBLIOGRAPHY

Knapp is best known for his "antitheory" argument; his other work includes *Personification and the Sublime: Milton to Coleridge* (1985) and *Literary Interest: The Limits of Anti-Formalism* (1993). Both books are based in practical criticism and readings of literary works, but each addresses what might be considered theoretical topics—allegory and the definition of literature, respectively. Michaels, after gaining attention with "Against Theory," has become one of the most prominent Americanists of his generation, examining the historical context of late-nineteenth-century American literature in *The Gold Standard and the Logic of Naturalism: American Literature at the Turn of the Century* (1987) and provocatively considering modernism and multiculturalism in *Our America: Nativism, Modernism, and Pluralism* (1995). He also edited, with Donald E. Pease, the collection *The American Renaissance Reconsidered* (1985).

"Against Theory" precipitated a cascade of responses, rejoinders by Knapp and Michaels, and follow-ups. It originally appeared in the leading theory journal *Critical Inquiry* 8.4 (1982). A set of responses, "For and Against Theory," with contributions by E. D. Hirsch Jr. and six others, appeared in *Critical Inquiry* 9.4 (1983), along with "A Reply to Our Critics" by Knapp and Michaels. A further symposium, "Pragmatism and Literary Theory," appeared in *Critical Inquiry* 11.3 (1985), composed of Stanley Fish's "Consequences," Richard Rorty's "Philosophy without Principles," and Knapp and Michaels's "Reply to Richard Rorty: What Is Pragmatism?" All these essays were reprinted as a book, *Against Theory: Literary Studies and the New Pragmatism*, edited by W. J. T. Mitchell (1985). Subsequently, Knapp and Michaels published a sequel, "Against Theory 2: Hermeneutics and Deconstruction," *Critical Inquiry* 14.1 (1987). Notable later responses to Knapp and Michaels are mainly by philosophers: Stanley Cavell, "The Division of Talent," *Critical Inquiry* 11.4 (1985); George M. Wilson, "Again, Theory: On Speaker's Meaning, Linguistic Meaning, and the Meaning of a Text," *Critical Inquiry* 19.1 (1992), with Knapp and Michaels's "Reply to George Wilson"; David Couzen Hoy, "Intentions and Law: Defending Hermeneutics," with a rejoinder by Knapp and Michaels, in *Legal Hermeneutics: History, Theory, and Practice* (ed. Gregory Leyh, 1992); and John Searle, "Literary Theory and Its Discontents," *New Literary History* 25.3 (1994), with Knapp and Michaels's "Reply to John Searle," plus Searle's "Structure and Intention in Language: A Reply to Knapp and Michaels."

Against Theory

1.

By "theory" we mean a special project in literary criticism: the attempt to govern interpretations of particular texts by appealing to an account of interpretation in general. The term is sometimes applied to literary subjects with no direct bearing on the interpretation of individual works, such as narratology, stylistics, and prosody.¹ Despite their generality, however, these subjects seem to us essentially empirical, and our argument against theory will not apply to them.

Contemporary theory has taken two forms. Some theorists have sought to ground the reading of literary texts in methods designed to guarantee the

1. The specialized study of narrative structure, literary style, and versification, respectively.

objectivity and validity of interpretations. Others, impressed by the inability of such procedures to produce agreement among interpreters, have translated that failure into an alternative mode of theory that denies the possibility of correct interpretation. Our aim here is not to choose between these two alternatives but rather to show that both rest on a single mistake, a mistake that is central to the notion of theory per se. The object of our critique is not a particular way of doing theory but the idea of doing theory at all.

Theory attempts to solve—or to celebrate the impossibility of solving—a set of familiar problems: the function of authorial intention, the status of literary language, the role of interpretive assumptions, and so on. We will not attempt to solve these problems, nor will we be concerned with tracing their history or surveying the range of arguments they have stimulated. In our view, the mistake on which all critical theory rests has been to imagine that these problems are real. In fact, we will claim such problems only seem real—and theory itself only seems possible or relevant—when theorists fail to recognize the fundamental inseparability of the elements involved.

The clearest example of the tendency to generate theoretical problems by splitting apart terms that are in fact inseparable is the persistent debate over the relation between authorial intention and the meaning of texts. Some theorists have claimed that valid interpretations can only be obtained through an appeal to authorial intentions. This assumption is shared by theorists who, denying the possibility of recovering authorial intentions, also deny the possibility of valid interpretations. But once it is seen that the meaning of a text is simply identical to the author's intended meaning, the project of *grounding* meaning in intention becomes incoherent. Since the project itself is incoherent, it can neither succeed nor fail; hence both theoretical attitudes toward intention are irrelevant. The mistake made by theorists has been to imagine the possibility or desirability of moving from one term (the author's intended meaning) to a second term (the text's meaning), when actually the two terms are the same. One can neither succeed nor fail in deriving one term from the other, since to have one is already to have them both.

In the following two sections we will try to show in detail how theoretical accounts of intention always go wrong. In the fourth section we will undertake a similar analysis of an influential account of the role interpretive assumptions or beliefs play in the practice of literary criticism. The issues of belief and intention are, we think, central to the theoretical enterprise; our discussion of them is thus directed not only against specific theoretical arguments but against theory in general. Our examples are meant to represent the central mechanism of all theoretical arguments, and our treatment of them is meant to indicate that all such arguments will fail and fail in the same way. If we are right, then the whole enterprise of critical theory is misguided and should be abandoned.

2. *Meaning and Intention*

The fact that what a text means is what its author intends is clearly stated by E. D. Hirsch when he writes that the meaning of a text "is, and can be,

nothing other than the author's meaning" and "is determined once and for all by the character of the speaker's intention."² Having defined meaning as the author's intended meaning, Hirsch goes on to argue that all literary interpretation "must stress a reconstruction of the author's aims and attitudes in order to evolve guides and norms for construing the meaning of his text." Although these guides and norms cannot guarantee the correctness of any particular reading—nothing can—they nevertheless constitute, he claims, a "fundamentally sound" and "objective" method of interpretation (pp. 224, 240).

What seems odd about Hirsch's formulation is the transition from definition to method. He begins by defining textual meaning as the author's intended meaning and then suggests that the best way to find textual meaning is to look for authorial intention. But if meaning and intended meaning are already the same, it's hard to see how looking for one provides an objective method—or any sort of method—for looking for the other; looking for one just is looking for the other. The recognition that what a text means and what its author intends it to mean are identical should entail the further recognition that any appeal from one to the other is useless. And yet, as we have already begun to see, Hirsch thinks the opposite; he believes that identifying meaning with the expression of intention has the supreme theoretical usefulness of providing an objective method of choosing among alternative interpretations.

Hirsch, however, has failed to understand the force of his own formulation. In one moment he identifies meaning and intended meaning; in the next moment he splits them apart. This mistake is clearly visible in his polemic against formalist critics who deny the importance of intention altogether. His argument against these critics ends up invoking their account of meaning at the expense of his own. Formalists, in Hirsch's summary, conceive the text as a "piece of language," a "public object whose character is defined by public norms." The problem with this account, according to Hirsch, is that "no mere sequence of words can represent an actual verbal meaning with reference to public norms alone. Referred to these alone, the text's meaning remains indeterminate." Hirsch's example, "My car ran out of gas," is, as he notes, susceptible to an indeterminate range of interpretations. There are no public norms which will help us decide whether the sentence means that my automobile lacks fuel or "my Pullman dash[ed] from a cloud of Argon." Only by assigning a particular intention to the words "My car ran out of gas" does one arrive at a determinate interpretation. Or, as Hirsch himself puts it, "The array of possibilities only begins to become a more selective system of *probabilities* when, instead of confronting merely a word sequence, we also posit a speaker who very likely means something" (p. 225).

This argument seems consistent with Hirsch's equation of meaning and intended meaning, until one realizes that Hirsch is imagining a moment of

2. E. D. Hirsch Jr., *Validity in Interpretation* (New Haven, Conn., 1967), pp. 216, 219. Our remarks on Hirsch are in some ways parallel to criticism offered by P. D. Juhl in the second chapter of his *Interpretation: An Essay in the Philosophy of Literary Criticism* (Princeton, N.J., 1980). Juhl's position will be discussed in the next section. All

further citations to these works will be included in the text [Knapp and Michaels's note]. Some of the authors' notes have been edited, and some omitted. HIRSCH (b. 1928), American literary theorist and cultural commentator. JUHL (b. 1946), American literary theorist.

interpretation before intention is present. This is the moment at which the text's meaning "remains indeterminate," before such indeterminacy is cleared up by the *addition* of authorial intention. But if meaning and intention really are inseparable, then it makes no sense to think of intention as an ingredient that needs to be added; it must be present from the start. The issue of determinacy or indeterminacy is irrelevant. Hirsch thinks it's relevant because he thinks, correctly, that the movement from indeterminacy to determinacy involves the addition of information, but he also thinks, incorrectly, that adding information amounts to adding intention. Since intention is already present, the only thing added, in the movement from indeterminacy to determinacy, is information *about* the intention, not the intention itself. For a sentence like "My car ran out of gas" even to be recognizable as a sentence, we must already have posited a speaker and hence an intention. Pinning down an interpretation of the sentence will not involve adding a speaker but deciding among a range of possible speakers. Knowing that the speaker inhabits a planet with an atmosphere of inert gases and on which the primary means of transportation is railroad will give one interpretation; knowing that the speaker is an earthling who owns a Ford will give another. But even if we have none of this information, as soon as we attempt to interpret at all we are already committed to a characterization of the speaker as a speaker of language. We know, in other words, that the speaker intends to speak; otherwise we wouldn't be interpreting. In this latter case, we have less information about the speaker than in the other two (where we at least knew the speaker's planetary origin), but the relative lack of information has nothing to do with the presence or absence of intention.

This mistake no doubt accounts for Hirsch's peculiar habit of calling the proper object of interpretation the "author's meaning" and, in later writings, distinguishing between it and the "reader's meaning."³ The choice between these two kinds of meaning becomes, for Hirsch, an ethical imperative as well as an "operational" necessity. But if all meaning is always the author's meaning, then the alternative is an empty one, and there is no choice, ethical or operational, to be made. Since theory is designed to help us make such choices, all theoretical arguments on the issue of authorial intention must at some point accept the premises of anti-intentionalist accounts of meaning. In debates about intention, the moment of imagining intentionless meaning constitutes the theoretical moment itself. From the standpoint of an argument against critical theory, then, the only important question about intention is whether there can in fact be intentionless meanings. If our argument against theory is to succeed, the answer to this question must be no.

The claim that all meanings are intentional is not, of course, an unfamiliar one in contemporary philosophy of language. John Searle, for example, asserts that "there is no getting away from intentionality," and he and others have advanced arguments to support this claim.⁴ Our purpose here is not to add another such argument but to show how radically counterintuitive the alternative would be. We can begin to get a sense of this simply by noticing how difficult it is to imagine a case of intentionless meaning.

Suppose that you're walking along a beach and you come upon a curious

Reply to Derrida," *Glyph* 1 (1977): 202 [Knapp and Michaels's note]. Searle (b. 1932), American philosopher of mind and of language.

sequence of squiggles in the sand. You step back a few paces and notice that they spell out the following words:

A slumber did my spirit seal;
I had no human fears:
She seemed a thing that could not feel
The touch of earthly years.⁵

This would seem to be a good case of intentionless meaning: you recognize the writing as writing, you understand what the words mean, you may even identify them as constituting a rhymed poetic stanza—and all this without knowing anything about the author and indeed without needing to connect the words to any notion of an author at all. You can do all these things without thinking of anyone's intention. But now suppose that, as you stand gazing at this pattern in the sand, a wave washes up and recedes, leaving in its wake (written below what you now realize was only the first stanza) the following words:

No motion has she now, no force;
She neither hears nor sees;
Rolled round in earth's diurnal course,
With rocks, and stones, and trees.

One might ask whether the question of intention still seems as irrelevant as it did seconds before. You will now, we suspect, feel compelled to explain what you have just seen. Are these marks mere accidents, produced by the mechanical operation of the waves on the sand (through some subtle and unprecedented process of erosion, percolation, etc.)? Or is the sea alive and striving to express its pantheistic faith? Or has Wordsworth, since his death, become a sort of genius⁶ of the shore who inhabits the waves and periodically inscribes on the sand his elegiac sentiments? You might go on extending the list of explanations indefinitely, but you would find, we think, that all the explanations fall into two categories. You will either be ascribing these marks to some agent capable of intentions (the living sea, the haunting Wordsworth, etc.), or you will count them as nonintentional effects of mechanical processes (erosion, percolation, etc.). But in the second case—where the marks now seem to be accidents—will they still seem to be words?

Clearly not. They will merely seem to *resemble* words. You will be amazed, perhaps, that such an astonishing coincidence could occur. Of course, you would have been no less amazed had you decided that the sea or the ghost of Wordsworth was responsible. But it's essential to recognize that in the two cases your amazement would have two entirely different sources. In one case, you would be amazed by the identity of the author—who would have thought that the sea can write poetry? In the other case, however, in which you accept the hypothesis of natural accident, you're amazed to discover that what you thought was poetry turns out not to be poetry at all. It isn't poetry because it isn't language; that's what it means to call it an accident. As long as you thought the marks were poetry, you were assuming their intentional character. You had no idea who the author was, and this may have tricked you into thinking that positing an author was irrelevant to your ability to read

Validity in Interpretation.
6. Pervading spirit.

the stanza. But in fact you had, without realizing it, already posited an author. It was only with the mysterious arrival of the second stanza that your tacit assumption (e.g., someone writing with a stick) was challenged and you realized that you had made one. Only now, when positing an author seems impossible, do you genuinely imagine the marks as authorless. But to deprive them of an author is to convert them into accidental likenesses of language. They are not, after all, an example of intentionless meaning; as soon as they become intentionless they become meaningless as well.

The arrival of the second stanza made clear that what had seemed to be an example of intentionless language was either not intentionless or not language. The question was whether the marks counted as language; what determined the answer was a decision as to whether or not they were the product of an intentional agent. If our example has seemed farfetched, it is only because there is seldom occasion in our culture to wonder whether the *sea* is an intentional agent. But there *are* cases where the question of intentional agency might be an important and difficult one. Can computers speak? Arguments over this question reproduce exactly the terms of our example. Since computers are machines, the issue of whether they can speak seems to hinge on the possibility of intentionless language. But our example shows that there is no such thing as intentionless language; the only real issue is whether computers are capable of intentions. However this issue may be decided—and our example offers no help in deciding it—the decision will not rest on a theory of meaning but on a judgment as to whether computers can be intentional agents. This is not to deny that a great deal—morally, legally, and politically—might depend on such judgments. But no degree of practical importance will give these judgments theoretical force.

The difference between theoretical principle and practical or empirical judgments can be clarified by one last glance at the case of the wave poem. Suppose, having seen the second stanza wash up on the beach, you have decided that the “poem” is really an accidental effect of erosion, percolation, and so on and therefore not language at all. What would it now take to change your mind? No theoretical argument will make a difference. But suppose you notice, rising out of the sea some distance from the shore, a small submarine, out of which clamber a half dozen figures in white lab coats. One of them trains his binoculars on the beach and shouts triumphantly, “It worked! It worked! Let’s go down and try it again.” Presumably, you will now once again change your mind, not because you have a new account of language, meaning, or intention but because you now have new evidence of an author. The question of authorship is and always was an empirical question; it has now received a new empirical answer. The theoretical temptation is to imagine that such empirical questions must, or should, have theoretical answers.

Even a philosopher as committed to the intentional status of language as Searle succumbs to this temptation to think that intention is a theoretical issue. After insisting, in the passage cited earlier, on the inescapability of intention, he goes on to say that “in serious literal speech the sentences are precisely the realizations of the intentions” and that “there need be no *gulf* at all between the illocutionary intention and its expression.”⁷ The point, however, is not that there *need* be no gulf between intention and the meaning

⁷ Searle, “Reiterating,” p. 202 [knapp and Michaels’s note].

of its expression but that there *can* be no gulf. Not only in serious literal speech but in *all* speech what is intended and what is meant are identical. In separating the two Searle imagines the possibility of expression without intention and so, like Hirsch, misses the point of his own claim that when it comes to language "there is no getting away from intentionality." Missing this point, and hence imagining the possibility of two different *kinds* of meaning, is more than a theoretical mistake; it is the sort of mistake that makes theory possible. It makes theory possible because it creates the illusion of a choice between alternative methods of interpreting.

To be a theorist is only to think that there is such a choice. In this respect intentionalists and anti-intentionalists are the same. They are also the same in another respect: neither can really escape intention. But this doesn't mean the intentionalists win, since what intentionalists want is a guide to valid interpretation; what they get, however, is simply a description of what everyone always does. In practical terms, then, the stakes in the battle over intention are extremely low—in fact, they don't exist. Hence it doesn't matter who wins. In theoretical terms, however, the stakes are extremely high, and it still doesn't matter who wins. The stakes are high because they amount to the existence of theory itself; it doesn't matter who wins because as long as one thinks that a position on intention (either for or against) makes a difference in achieving valid interpretations, the ideal of theory itself is saved. Theory wins. But as soon as we recognize that there are no theoretical choices to be made, then the point of theory vanishes. Theory loses.

3. *Language and Speech Acts*

We have argued that what a text means and what its author intends it to mean are identical and that their identity robs intention of any theoretical interest. A similar account of the relation between meaning and intention has recently been advanced by P. D. Juhl. According to Juhl, "there is a logical connection between statements about the meaning of a literary work and statements about the author's intention such that a statement about the meaning of a work is a statement about the author's intention." Juhl criticizes Hirsch, as we do, for believing that critics "*ought* to . . . try to ascertain the author's intention," when in fact, Juhl argues, "they are necessarily doing so already" (*Interpretation*, p. 12). But for Juhl, these claims serve in no way to discredit theory; rather, they themselves constitute a theory that "makes us aware of what we as critics or readers are doing in interpreting literature" and, more crucially, "provides the basis for a principled acceptance or rejection of an interpretation of a literary work" (p. 10). How is it that Juhl derives a theory from arguments which seem to us to make theory impossible?

What makes this question particularly intriguing is the fact that Juhl's strategy for demonstrating the centrality of intention is apparently identical to ours; it consists "in contrasting statements about the meaning of a literary work created by a person with statements about the meaning of a text produced by chance, such as a computer poem" (p. 13).⁸ But Juhl's treatment

8. In fact, Juhl employs the same poem we do—Wordsworth's "A Slumber Did My Spirit Seal"—in his own treatment of accidental "language" (*Interpretation*, pp. 70–82). The device of contrasting intentional speech acts with marks pro-

duced by chance is a familiar one in speech-act theory [Knapp and Michaels's note]. "Speech-act theory": that branch of philosophy, pioneered by the English philosopher J. L. AUSTIN (1911–1960), that focuses on the actions performed in linguistic

of examples like our wave poem reveals that his sense of the relation between language and intention is after all radically different from ours. Like Hirsch, but at a further level of abstraction, Juhl ends up imagining the possibility of language prior to and independent of intention and thus conceiving intention as something that must be added to language to make it work. Like Hirsch, and like theorists in general, Juhl thinks that intention is a matter of choice. But where Hirsch recommends that we choose intention to adjudicate among interpretations, Juhl thinks no recommendation is necessary—not because we need never choose intention but only because our concept of a literary work is such that to read literature is already to have chosen intention.

Discussing the case of a “poem” produced by chance (“marks on [a] rock” or “a computer poem”), Juhl points out that there is “something odd about *interpreting* [such a] ‘text.’” However one might understand this text, one could not understand it as a representation of “the meaning of a particular utterance.” We agree with this—if it implies that the random marks mean nothing, are not language, and therefore cannot be interpreted at all. But for Juhl the implications are different. He thinks that one *can* interpret the random marks, though only in the somewhat specialized sense “in which we might be said to ‘interpret’ a sentence when we explain its meaning to a foreigner, by explaining to him what the individual words mean, how they function in the sentence, and thus how the sentence *could* be used or what it *could* be used to express or convey” (pp. 84–86).

Our point is that marks produced by chance are not words at all but only resemble them. For Juhl, the marks remain words, but words detached from the intentions that would make them utterances. Thus he can argue that when a “parrot utters the words ‘Water is pouring down from the sky,’” one can understand that “the words mean ‘It is raining’” but deny that the “parrot *said* that it is raining” (p. 109). It is clear that, for Juhl, the words continue to mean even when devoid of intention. They mean “*in abstracto*” and thus constitute the condition of language prior to the addition of intention, that is, prior to “a speaker’s utterance or speech act.” In literary interpretation, this condition of language is never operative because, Juhl claims, “our notion of the meaning of a literary work” is “like our notion of the meaning of a person’s speech act,” not “like our notion of the meaning of a word in a language” (p. 41).

Implicit in Juhl’s whole treatment of meaning and intention is the distinction made here between language and speech acts. This distinction makes possible a methodological prescription as strong as Hirsch’s, if more general: when confronted with a piece of language, read it as a speech act. The prescriptive force of Juhl’s argument is obscured by the fact that he has pushed the moment of decision one step back. Whereas Hirsch thinks we have to add intentions to *literature* in order to determine what a text means, Juhl thinks that adding intentions to *language* gives us speech acts (such as literary works) whose meaning is already determinate. Juhl recognizes that as soon as we think of a piece of language as literature, we already regard it as a speech act and hence the product of intention; his prescription tells us

exchanges; Austin distinguished the locutionary act (saying something meaningful), illocutionary act (employing this language for some purpose),

and perlocutionary act (having an effect on listeners or readers).

how to get from language in general to a specific utterance, such as a literary work.

But this prescription only makes sense if its two terms (language and speech acts) are not already inseparable in the same way that meaning and intention are. Juhl is right of course to claim that marks without intention are not speech acts, since the essence of a speech act is its intentional character. But we have demonstrated that marks without intention are not language either. Only by failing to see that linguistic meaning is always identical to expressed intention can Juhl imagine language without speech acts. To recognize the identity of language and speech acts is to realize that Juhl's prescription—when confronted with language, read it as a speech act—can mean nothing more than: when confronted with language, read it as language.

For Hirsch and Juhl, the goal of theory is to provide an objectively valid method of literary interpretation. To make method possible, both are forced to imagine intentionless meanings or, in more general terms, to imagine a separation between language and speech acts. The method then consists in adding speech acts to language; speech acts bring with them the particular intentions that allow interpreters to clear up the ambiguities intrinsic to language as such. But this separation of language and speech acts need not be used to establish an interpretive method; it can in fact be used to do just the opposite. For a theorist like Paul de Man,⁹ the priority of language to speech acts suggests that all attempts to arrive at determinate meanings by adding intentions amount to a violation of the genuine condition of language. If theory in its positive or methodological mode rests on the choice of speech acts over language, theory in its negative or antimethodological mode tries to preserve what it takes to be the purity of language from the distortion of speech acts.

The negative theorist's hostility to method depends on a particular account of language, most powerfully articulated in de Man's "The Purloined Ribbon." The essay concerns what de Man sees as a crucial episode in Rousseau's *Confessions*,¹ in which Rousseau attempts to interpret, and thereby to justify, a particularly incriminating speech act. While working as a servant, he had stolen a ribbon from his employers. When accused of the theft, he blamed it on a fellow servant, Marion. In the passage that interests de Man, Rousseau is thus concerned with two crimes, the theft itself and the far more heinous act of excusing himself by accusing an innocent girl. This second act, the naming of Marion, is the one that especially needs justifying.

Rousseau offers several excuses, each an explanation of what he meant by naming Marion. But the explanation that intrigues de Man is the surprising one that Rousseau perhaps meant nothing at all when he said "Marion." He was merely uttering the first sound that occurred to him: "Rousseau was making whatever noise happened to come into his head; he was saying nothing at all."² Hence, de Man argues, "In the spirit of the text, one should resist all temptation to give any significance whatever to the sound 'Marion.'" The

1778).

2. Paul de Man, "The Purloined Ribbon," *Glyph* 1 (1977): 39; all further citations to this work will be included in the text [Knapp and Michaels's note].

claim that "Marion" was meaningless gives Rousseau his best defense: "For it is only if . . . the utterance of the sound 'Marion' is truly without any conceivable motive that the total arbitrariness of the action becomes the most effective, the most efficaciously performative excuse of all" (p. 37). Why? Because, "if the essential non-signification of the statement had been properly interpreted, if Rousseau's accusers had realized that Marion's name was 'le premier objet qui s'offrit,'³ they would have understood his lack of guilt as well as Marion's innocence" (p. 40).

But de Man is less interested in the efficacy of the "excuse" than he is in what it reveals about the fundamental nature of language. The fact that the sound "Marion" can mean nothing reminds us that language consists of inherently meaningless sounds to which one adds meanings—in other words, that the relation between signifier and signified is arbitrary.⁴ Why does de Man think this apparently uncontroversial description of language has any theoretical interest? The recognition that the material condition of language is inherently meaningless has no theoretical force in itself. But de Man thinks that the material condition of language is not simply meaningless but is also already "linguistic," that is, sounds are signifiers even before meanings (signifieds) are added to them. As a collection of "pure signifier[s]," in themselves "devoid of meaning and function," language is primarily a meaningless structure to which meanings are secondarily (and in de Man's view illegitimately) added (p. 32). Thus, according to de Man, Rousseau's accusers mistakenly added a meaning to the signifier "Marion"—hearing a speech act where they should have heard only language. This separation of language and speech act is the precondition for de Man's version of the theoretical choice.

De Man's separation of language and speech acts rests on a mistake. It is of course true that sounds in themselves are meaningless. It is also true that sounds become signifiers when they function in language. But it is not true that sounds in themselves are signifiers; they become signifiers only when they acquire meanings, and when they lose their meanings they stop being signifiers. De Man's mistake is to think that the sound "Marion" remains a signifier even when emptied of all meaning. The fact is that the meaningless noise "Marion" only *resembles* the signifier "Marion," just as accidentally uttering the sound "Marion" only *resembles* the speech act of naming Marion. De Man recognizes that the accidental emission of the sound "Marion"⁵ is not a speech act (indeed, that's the point of the example), but he fails to recognize that it's not language either. What reduces the signifier to noise and the speech act to an accident is the absence of intention. Conceiving linguistic activity as the accidental emission of phonemes, de Man arrives at a vision of "the absolute randomness of language, prior to any figuration or meaning": "There can be no use of language which is not, within a certain perspective thus radically formal, i.e. mechanical, no matter how deeply this aspect may be concealed by aesthetic, formalistic delusions" (pp. 44, 41).

By conceiving language as essentially random and mechanical, de Man gives a new response to the dilemma of the wave poem and suggests a fuller account of why that dilemma is central to theory in general. Our earlier

3. The first object that presented itself (French).

4. The sign was divided into *signified* (the meaning conveyed) and *signifier* (the symbol or sound that conveys that meaning) by the Swiss linguist FER-

DINAND DE SAUSSURE (1857–1913), who argued that in language, the relation between the two is *arbitrary* (to the extent that the signified determines the signified, the sign is *motivated*).

discussion of the wave poem was intended to show how counterintuitive it is to separate language and intention. When the second stanza washed up on the beach, even the theorist should have been ready to admit that the poem was not a poem because the marks were not language. But our subsequent discussions of Juhl and de Man have revealed that theory precisely depends on not making this admission. For Juhl, the accidental marks remain language, but language *in abstracto* and hence inherently ambiguous. The wave poem thus presents a positive theorist like Juhl with a choice between the multiple meanings of intentionless marks and the determinate meaning of an intentional speech act. Since the point of positive theory is to ground the practice of determining particular meanings, the positive theorist chooses to read the marks as an intentional act. But when a negative theorist like de Man encounters the second (accidental) stanza, it presents him with a slightly different version of the same choice. For de Man the marks are not multiply meaningful but essentially meaningless, and the choice is not between one intentional meaning and many intentionless meanings but between intentional meaning and no meaning at all. Since, in de Man's view, all imputations of meaning are equally groundless, the positive theorist's choice of intention seems to him pointless. In apparent hostility to interpretive method, the negative theorist chooses the meaningless marks. But the negative theorist's choice in fact provides him with a positive methodology, a methodology that grounds the practice of interpretation in the single decisive truth about language. The truth about language is its accidental and mechanical nature: any text, "properly interpreted," will reveal its "essential nonsignification" (p. 40). For both Juhl and de Man, proper interpretation depends upon following a methodological prescription. Juhl's prescription is: when confronted with language, read it as a speech act. De Man's prescription is: when confronted with what seems to be a speech act, read it as language.

The wave poem, as encountered by a theorist, presents a choice between two kinds of meaning or, what comes to the same thing, two kinds of language. The issue in both cases is the presence or absence of intention; the positive theorist adds intention, the negative theorist subtracts it.⁵ In our view, however, the relation between meaning and intention or, in slightly different terms, between language and speech acts is such that intention can neither be added nor subtracted. Intention cannot be added to or subtracted from meaning because meanings are always intentional; intention cannot be added to or subtracted from language because language consists of speech acts, which are also always intentional. Since language has intention already built into it, no recommendation about what to do with intention has any bearing on the question of how to interpret any utterance or text. For the nontheorist, the only question raised by the wave poem is not *how* to interpret but *whether* to interpret. Either the marks are a poem and hence a speech act, or they are not a poem and just happen to resemble a speech act. But once this empirical question is decided, no further judgments—and

5. At least this is true of the present generation of theorists. For earlier theorists such as W. K. Wimsatt and Monroe C. Beardsley, the objective meanings sought by positive theory were to be acquired precisely by *subtracting* intention and relying on the formal rules and public norms of language.

This, of course, is the view they urge in "The Intentional Fallacy" [Knapp and Michaels's note]. "The Intentional Fallacy" (1946; see above) is a programmatic theoretical statement by the American New Critics. WIMSATT (1907–1975) AND BEARDSLEY (1915–1985).

therefore no theoretical judgments—about the status of intention can be made.

4. *Theory and Practice*

Our argument so far has concerned what might be called the ontological side of theory—its peculiar claims about the nature of its object. We have suggested that those claims always take the form of generating a difference where none in fact exists, by imagining a mode of language devoid of intention—devoid, that is, of what makes it language and distinguishes it from accidental or mechanical noises and marks. But we have also tried to show that this strange ontological project is more than a spontaneous anomaly; it is always in the service of an epistemological goal.⁶ That goal is the goal of method, the governance of interpretive practice by some larger and more principled account. Indeed, theoretical controversy in the Anglo-American tradition has more often taken the form of arguments about the epistemological situation of the interpreter than about the ontological status of the text. If the ontological project of theory has been to imagine a condition of language before intention, its epistemological project has been to imagine a condition of knowledge before interpretation.

The aim of theory's epistemological project is to base interpretation on a direct encounter with its object, an encounter undistorted by the influence of the interpreter's particular beliefs. Several writers have demonstrated the impossibility of escaping beliefs at any stage of interpretation and have concluded that theory's epistemological goal is therefore unattainable. Some have gone on to argue that the unattainability of an epistemologically neutral stance not only undermines the claims of method but prevents us from ever getting any correct interpretations. For these writers the attack on method thus has important practical consequences for literary criticism, albeit negative ones.⁷

But in discussing theory from the ontological side, we have tried to suggest that the impossibility of method has no practical consequences, positive or negative. And the same conclusion has been reached from the epistemological side by the strongest critic of theoretical attempts to escape belief, Stanley Fish.⁸ In his last essay in *Is There a Text in This Class?*, Fish confronts the "final question" raised by his critique of method, namely, "what implications it has for the practice of literary criticism." His answer is, "none whatsoever":

That is, it does not follow from what I have been saying that you should go out and do literary criticism in a certain way or refrain from doing it

6. That is, it is governed by a particular theory of knowledge.

7. Negative theory rests on the perception of what de Man calls "an insurmountable obstacle in the way of any reading or understanding" (*Allegories of Reading* [New Haven, Conn., 1979], p. 131). Some theorists (e.g., David Bleich and Norman Holland) understand this obstacle as the reader's subjectivity. Others (like de Man himself and J. Hillis Miller) understand it as the aporia between constative and performative language, between demonstration and persuasion. In all cases, how-

ever, the negative theorist is committed to the view that interpretation is, as Jonathan Culler says, "necessary error" (*The Pursuit of Signs* [Ithaca, N.Y., 1981], p. 14 [Knapp and Michaels's note]). Bleich (b. 1940) and Holland (b. 1927) are American reader-response critics; Miller (b. 1928) and Culler (b. 1944) are American deconstructive critics. "Aporia": difficulty, logical impasse (a term often used in deconstructive criticism to indicate the point in a text where inherent contradictions render interpretation undecidable).

8. American literary theorist (b. 1938; see above).

in other ways. The reason for this is that the position I have been presenting is not one that you (or anyone else) could live by. Its thesis is that whatever seems to you to be obvious and inescapable is only so within some institutional or conventional structure, and that means that you can never operate outside some such structure, even if you are persuaded by the thesis. As soon as you descend from theoretical reasoning about your assumptions, you will once again inhabit them and you will inhabit them without any reservations whatsoever; so that when you are called on to talk about Milton or Wordsworth or Yeats, you will do so from within whatever beliefs you hold about these authors.⁹

At the heart of this passage is the familiar distinction between "theoretical reasoning" and the "assumptions" or "beliefs" that inform the concrete "practice of literary criticism." Where most theorists affirm the practical importance of their theories, Fish's originality lies in his denial that his theory has any practical consequences whatsoever. But once theory gives up all claims to affect practice, what is there left for theory to do? Or, since Fish's point is that there is nothing left for theory to *do*, what is there left for theory to *be*? Understood in these terms, Fish's work displays the theoretical impulse in its purest form. Stripped of the methodological project either to ground or to undermine practice, theory continues to imagine a position outside it. While this retreat to a position outside practice looks like theory's last desperate attempt to save itself, it is really, as we hope to show, the founding gesture of all theoretical argument.

Fish's attack on method begins with an account of belief that is in our view correct. The account's two central features are, first, the recognition that beliefs cannot be grounded in some deeper condition of knowledge and, second, the further recognition that this impossibility does not in any way weaken their claims to be true. "If one believes what one believes," Fish writes, "then one believes that what one believes is *true*, and conversely, one believes that what one doesn't believe is not true" (p. 361). Since one can neither escape one's beliefs nor escape the sense that they are true, Fish rejects both the claims of method and the claims of skepticism. Methodologists and skeptics maintain that the validity of beliefs depends on their being grounded in a condition of knowledge prior to and independent of belief; they differ only about whether this is possible. The virtue of Fish's account is that it shows why an insistence on the inescapability of belief is in no way inimical to the ordinary notions of truth and falsehood implicit in our sense of what knowledge is. The character of belief is precisely what gives us those notions in the first place; having beliefs just is being committed to the truth of what one believes and the falsehood of what one doesn't believe. But to say all this is, as Fish asserts, to offer no practical help or hindrance to the task of acquiring true beliefs. We can no more get true beliefs by looking for knowledge than we can get an author's meaning by looking for his or her intention, and for the same reason; knowledge and true belief are the same.

So far, this argument seems to us flawless. But Fish, as it turns out, fails

9. Stanley Fish, *Is There a Text in This Class? The Authority of Interpretive Communities* (Cambridge, Mass., 1980), p. 370; all further citations to this work will be included in the text [Knapp and

Michaels's note]. John Milton (1608–1674) and William Butler Yeats (1865–1939) are, like Wordsworth, canonical writers of English poetry.

to recognize the force of his own discussion of belief, and this failure is what makes him a theorist. It commits him, ultimately, to the ideal of knowledge implicit in all epistemological versions of theory, and it leads him to affirm, after all, the methodological value of his theoretical stance. Fish's departure from his account of belief shows up most vividly in his response to charges that his arguments lead to historical relativism. The fear of relativism is a fear that the abandonment of method must make all inquiry pointless. But, Fish rightly says, inquiry never seems pointless; our present beliefs about an object always seem better than any previous beliefs about the same object: "In other words, the idea of progress is inevitable, not, however, because there is a progress in the sense of a clearer and clearer sight of an independent object but because the *feeling* of having progressed is an inevitable consequence of the firmness with which we hold our beliefs" (pp. 361–62).

As an account of the inevitable psychology of belief, this is irreproachable. But when he later turns from the general issue of intellectual progress to the particular case of progress in literary criticism, Fish makes clear that he thinks our psychological assurance is unfounded. Our present beliefs only *seem* better than earlier ones; they never really *are*. And, indeed, the discovery of this truth about our beliefs gives us, Fish thinks, a new understanding of the history of literary criticism and a new sense of how to go about studying it. According to what Fish calls the "old model" for making sense of the history of criticism, the work of critics "like Sidney, Dryden, Pope, Coleridge, Arnold" could only be seen as "the record of the rather dismal performances of men . . . who simply did not understand literature and literary values as well as we do." But Fish's new model enables us to "regard those performances not as unsuccessful attempts to approximate our own but as extensions of a literary culture whose assumptions were *not inferior but merely different*" (pp. 367–68; our emphasis).

To imagine that we can see the beliefs we hold as no better than but "merely different" from opposing beliefs held by others is to imagine a position from which we can see our beliefs without really believing them. To be in this position would be to see the truth about beliefs without actually having any—to know without believing. In the moment in which he imagines this condition of knowledge outside belief, Fish has forgotten the point of his own earlier identification of knowledge and true belief.

Once a theorist has reached this vision of knowledge, there are two epistemological ways to go: realism and idealism.² A realist thinks that theory allows us to stand outside our beliefs in a neutral encounter with the objects of interpretation; an idealist thinks that theory allows us to stand outside our beliefs in a neutral encounter with our beliefs themselves. The issue in both cases is the relation between objects and beliefs. For the realist, the object exists independent of beliefs, and knowledge requires that we shed our beliefs in a disinterested quest for the object. For the idealist, who insists that we can never shed our beliefs, knowledge means recognizing the role beliefs play in *constituting* their objects. Fish, with his commitment to the primacy of beliefs, chooses idealism: "objects," he thinks, "are made and not

1. Fish names the major English poet-critics up to the 20th century: SIR PHILIP SIDNEY (1554–1586), JOHN DRYDEN (1631–1700), ALEXANDER POPE (1688–1744), SAMUEL TAYLOR COLERIDGE (1772–

1834), and MATTHEW ARNOLD (1822–1888).

2. In philosophy, idealism holds that only mental entities are real; perceptual realism holds that material things exist independently of us.

found"; interpretation "is not the art of construing but the art of constructing" (pp. 331, 327). Once he arrives at epistemological idealism, Fish's methodological payoff immediately follows. Knowing that "interpreters do not decode poems" but "make them," "we are free to consider the various forms the literary institution has taken and to uncover the interpretative strategies by which its canons have been produced and understood" (pp. 327, 368). By thinking of the critic as an idealist instead of a realist, Fish is able to place literary criticism at the very center of all literary practice:

No longer is the critic the humble servant of texts whose glories exist independently of anything he might do; it is what he does, within the constraints embedded in the literary institution, that brings texts into being and makes them available for analysis and appreciation. The practice of literary criticism is not something one must apologize for; it is absolutely essential not only to the maintenance of, but to the very production of, the objects of its attention. [p. 368]

We began this section by noting that Fish, like us, thinks that no general account of belief can have practical consequences. But, as we have just seen, *his* account turns out to have consequences after all. Why, then, is Fish led both to assert that his argument has no practical consequences and to proclaim its importance in providing a new model for critical practice? The answer is that, despite his explicit disclaimers, he thinks a true account of belief must be a *theory* about belief, whereas we think a true account of belief can only be a *belief* about belief.³ The difference between these two senses of what it means to have a true account of something is the difference between theory and the kind of pragmatist argument we are presenting here. These two kinds of positions conceive their inconsequentiality in two utterly different ways. A belief about the nature of beliefs is inconsequential because it merely tells you what beliefs are, not whether they are true or false in particular or in general. From this point of view, knowing the truth about belief will no more help you in acquiring true beliefs than knowing that meaning is intentional will help you find correct meanings. This is not in the least to say that you can't have true beliefs, only that you can't get them by having a good account of what beliefs are.

Fish's *theory* about beliefs, on the other hand, strives to achieve inconsequentiality by standing outside all the practical commitments that belief entails. It is perfectly true that one can achieve inconsequentiality by going outside beliefs but only because, as Fish himself insists, to be outside beliefs is to be nowhere at all. But of course Fish doesn't think that his theory about beliefs leaves him nowhere at all; he thinks instead that it gives him a way of arriving at truth, not by choosing some beliefs over others but by choosing beliefless knowledge over all beliefs. The truth of knowledge, according to Fish, is that no beliefs are, in the long run, truer than others; all beliefs, in the long run, are equal. But, as we have noted, it is only from the standpoint of a theory about belief which is not itself a belief that this truth can be seen. Hence the descent from "theoretical reasoning" about our beliefs to the actual practice of believing—from neutrality to commitment—demands that

3. Fish calls his account a "general or metacritical belief" (*Is There a Text in This Class?*, p. 359; cf. pp. 368-70) [Knapp and Michaels's note].

we forget the truth theory has told us. Unlike the ordinary methodologist, Fish wants to repudiate the attempt to derive practice from theory, insisting that the world of practice must be founded not on theoretical truth but on the repression of theoretical truth. But the sense that practice can only begin with the repression of theory already amounts to a methodological prescription: when confronted with beliefs, forget that they are not really true. This prescription gives Fish everything theory always wants: knowledge of the truth-value of beliefs and instructions on what to do with them.⁴

We can now see why Fish, in the first passage quoted, says that his position is "not one that you (or anyone else) could live by . . . even if you [were] persuaded" by it. Theory, he thinks, can have no practical consequences; it cannot be lived because theory and practice—the truth about belief and belief itself—can never in principle be united. In our view, however, the only relevant truth about belief is that you can't go outside it, and, far from being unlivable, this is a truth you can't help but live. It has no practical consequences not because it can never be *united* with practice but because it can never be *separated* from practice.

The theoretical impulse, as we have described it, always involves the attempt to separate things that should not be separated: on the ontological side, meaning from intention, language from speech acts; on the epistemological side, knowledge from true belief. Our point has been that the separated terms are in fact inseparable. It is tempting to end by saying that theory and practice too are inseparable. But this would be a mistake. Not because theory and practice (unlike the other terms) really are separate but because theory is nothing else but the attempt to escape practice. Meaning is just another name for expressed intention, knowledge just another name for true belief, but theory is not just another name for practice. It is the name for all the ways people have tried to stand outside practice in order to govern practice from without. Our thesis has been that no one can reach a position outside practice, that theorists should stop trying, and that the theoretical enterprise should therefore come to an end.

1982

4. In one respect Fish's prescription is unusual: it separates the two theoretical goals of grounding practice and reaching objective truth. It tells us

what is true and how to behave—but not how to behave in order to find out what is true [Krupp and Michaels's note].

BELL HOOKS

b. Gloria Jean Watkins, 1952

bell hooks first emerged in the 1980s as a trenchant critical voice among African American intellectuals. Her wide-ranging essays about American culture offer critiques on issues ranging from the academy to the environmental crisis, from the media to masculinity, from racism to sexism, while exploring the unique problems and perspectives of black women and the underprivileged. Within feminism, much of her writing has been devoted to articulating the intersections of race, class, and gender

oppression. In *Feminist Theory: From Margin to Center* (1984) she writes, "Feminism is the struggle to end sexist oppression. Its aim is not to benefit solely any specific group of women, any particular race or class of women. It does not privilege women over men. It has the power to transform in a meaningful way all our lives."

Born into a rural black working-class family in Hopkinsville, Kentucky, Gloria Jean Watkins suffered a turbulent childhood but found inspiration in books and solace in imagination. When, as an adult, she took the name "bell hooks," it was to honor her outspoken great-grandmother and the legacy of her past. hooks received a B.A. from Stanford University in 1973, an M.A. from the University of Wisconsin in 1976, and, in 1983, a Ph.D. from the University of California, Santa Cruz. She taught African American studies at Yale University and English and women's studies at Oberlin College from 1988 until 1993. Since 1993 she has taught in the English department of the City University of New York Graduate Center.

hooks gained prominence as a social critic with the publication of her first book, *Ain't I a Woman: Black Women and Feminism* (1981), begun when she was only nineteen and published while she was still a graduate student. An extremely prolific writer, she has published more than a dozen books since then on topics as varied as feminist theory, racism, film, art, spirituality, and cultural studies. With the publication of *Bone Black: Memories of Girlhood* (1996) and *Wounds of Passion: A Writing Life* (1997), she turned to the genre of autobiography to explore more fully her interest in capturing "the authority of experience" that she examines in our selection, "Postmodern Blackness." Like Cornel West, with whom she collaborated on *Breaking Bread: Insurgent Black Intellectual Life* (1991), hooks has sought a niche as a public intellectual on the Left, attempting to reach a wider audience outside of academia for her cultural criticism while remaining connected to her underclass black community. As an essayist, she follows in the rich tradition of twentieth-century black intellectuals such as W. E. B. DU BOIS, C. L. R. James and ZORA NEALE HURSTON, although doubtless hooks would also include in any list of intellectual forebears earlier black women such as Anna Cooper (the nineteenth-century author of *A Voice from the South by a Black Woman of the South*) and Sojourner Truth.

In "Postmodern Blackness," which appears in her *Yearning: Race, Gender, and Cultural Politics* (1990), hooks asks why African Americans should have any interest in "postmodern theory." She applies this label to the philosophic critique of modernity that celebrates difference and otherness, that advocates radical liberation and political equality, that finds fault with rigid concepts of identity, and that criticizes so-called master narratives (for example, those about the inevitable progress of human reason, the eventual triumph of the proletariat, or the ending of the world on Judgment Day). For hooks and other cultural critics, postmodernity also evokes late-twentieth-century postindustrial society with its job restructuring, ubiquitous media and popular culture, and new social movements and protest groups. Like BARBARA CHRISTIAN, hooks believes that the abstract philosophical discourse of postmodernism—as defined by French theorists such as JACQUES DERRIDA, JEAN-FRANÇOIS LYOTARD, and JEAN BAUDRILLARD—is dominated by white male intellectuals. These academic elites speak to one another, oblivious to the concerns of black people. Despite its invocation of "difference," she argues, postmodernism is exclusionary: while using the concepts of difference and marginality to legitimate itself in the face of accusations of irrelevance, it seems unwilling to engage the experiences or writings of the truly marginalized—black women, for example. In its celebration of indeterminacy and free play in language and in its focus on deconstructing identity, postmodernism fails to offer useful analyses of the power relations that shape discourse. Without "adequate concrete knowledge" of and contact with oppressed and marginalized groups, white theorists risk impeding rather than supporting "radical liberation struggle."

Because she discerns in those silenced by the "master narratives" of Western culture a "yearning"—what she describes as a "longing for critical voice"—hooks, unlike Christian and some other minority intellectuals, is not willing to abandon postmod-

ernism to the intellectual elites. She identifies the intersection of "identity politics" and the postmodern critique of human essence as a particularly significant site of struggle for African Americans, who, she argues, need to resist outmoded notions of essential blackness in much the same way as feminist critics have contested the idea of the essentially female (see JUDITH BUTLER, MONIQUE WITTIG, and JULIA KRISTEVA). hooks is critical of the concept of essential blackness whether imposed from without as racist stereotype or from within as prescription for an "authentic black identity," an identity that refuses to recognize the multiplicities of black experiences that ground "diverse cultural productions." At the same time, hooks argues, the postmodern critique of essence ought not to be used to dismiss black and feminist identity politics. hooks worries about the potential within postmodernist discourse to deny a critical voice to those who have been "subjected to" colonization or domination. She is suspicious that the postmodern call to dismantle identity comes at a historical moment when subjugated people are beginning to assert their own identity and to act collectively in its name. hooks's solution is to embrace the postmodern critique of essentialism while emphasizing the traditional humanistic "authority of experience."

The dangers hooks exposes in the discourse of postmodernism are real, though it is worth noting that hooks here treats "postmodernism" as a single set of monologic discourses that mean the same thing to everyone. Postmodern theory is a wide-ranging and diverse set of practices, texts, and discourses no more easily reducible to one set of essential meanings than is "blackness." Both terms in hooks's title must be seen as equally under interrogation, and much work remains to be done to understand the relations between them. Greater precision about the complex meanings within postmodern discourse of such terms as *identity*, *subjectivity*, and *experience* might break the impasse she describes between a desire to reclaim a common black history, culture, and experience and the need to avoid imposing restrictive and damaging stereotypes on diverse experiences. hooks is in agreement with the best "oppositional practices" of postmodernism, however, when she suggests that it is in the gaps, ruptures, and contradictions of Western master narratives that the struggles for liberation and for coalition politics will discover effective forms of resistance and new forms of community.

BIBLIOGRAPHY

hooks's critical writing, mainly essay collections, include, on feminist theory, *Ain't I a Woman: Black Women and Feminism* (1981), *Feminist Theory: From Margin to Center* (1984), *Talking Back: Thinking Feminist, Thinking Black* (1989), and *Sisters of the Yam: Black Women and Self-Recovery* (1993); on race, *Breaking Bread: Lysurgent Black Intellectual Life* (with Cornel West, 1991), *Black Looks: Race and Representation* (1992), and *Killing Rage: Ending Racism* (1995); on teaching, *Teaching to Transgress: Education as the Practice of Freedom* (1994); on film, *Reel to Real: Race, Sex, and Class at the Movies* (1996); and on cultural studies, *Yearning: Race, Gender, and Cultural Politics* (1990), *Outlaw Culture: Resisting Representation* (1994), and *Art on My Mind: Visual Politics* (1995). Her memoirs—*Bone Black: Memories of Girlhood* (1996), *Wounds of Passion: A Writing Life* (1997), and *Remembering Rape: The Writer at Work* (1999)—are good sources of information on her life. For a biographical sketch, see Lara Dieckmann's entry in *Significant Contemporary American Feminists: A Biographical Sourcebook* (1999).

A few critical articles on hooks have appeared. Of most interest to students of literary criticism are Cassie Premo, "When the Difference Becomes Too Great: Images of the Self and Survival in a Postmodern World," *Genre* 28 (1995), and Clive Thomson, "Culture, Identity, and Dialogue: bell hooks and Gayatri Chakravorty Spivak," in *Dialogism and Cultural Criticism* (ed. Thomson and Hans Raj Dau, 1995). hooks's essays about teaching have also been of interest to critics, including Tom Fox, "Literacy and Activism: A Response to bell hooks," *Journal of Advanced Composition*

14 (1994); Joyce Irene Middleton, "bell hooks on Literacy and Teaching: A Response," *Journal of Advanced Composition* 14 (1994); and Gary Olson and Elizabeth Hirsh, "Feminist Praxis and the Politics of Literacy: A Conversation with bell hooks," in *Women Writing Culture* (ed. Olson and Hirsch, 1995). Bibliographical information on hooks may be found in Genevieve Fabre's "Selected Bibliography of Essays on Black Women and Black Feminist Criticism," *Revue Française d'Études Américaines* 24 (1986), as well as in the Schomburg Center for Research in Black Studies' *Bibliographic Guide to Black Studies* (1995).

Postmodern Blackness

Postmodernist discourses are often exclusionary even as they call attention to, appropriate even, the experience of "difference" and "Otherness" to provide oppositional political meaning, legitimacy, and immediacy when they are accused of lacking concrete relevance. Very few African-American intellectuals have talked or written about postmodernism. At a dinner party I talked about trying to grapple with the significance of postmodernism for contemporary black experience. It was one of those social gatherings where only one other black person was present. The setting quickly became a field of contestation. I was told by the other black person that I was wasting my time, that "this stuff does not relate in any way to what's happening with black people." Speaking in the presence of a group of white onlookers, staring at us as though this encounter were staged for their benefit, we engaged in a passionate discussion about black experience. Apparently, no one sympathized with my insistence that racism is perpetuated when blackness is associated solely with concrete gut level experience conceived as either opposing or having no connection to abstract thinking and the production of critical theory. The idea that there is no meaningful connection between black experience and critical thinking about aesthetics or culture must be continually interrogated.

My defense of postmodernism and its relevance to black folks sounded good, but I worried that I lacked conviction, largely because I approach the subject cautiously and with suspicion.

Disturbed not so much by the "sense" of postmodernism but by the conventional language used when it is written or talked about and by those who speak it, I find myself on the outside of the discourse looking in. As a discursive practice it is dominated primarily by the voices of white male intellectuals and/or academic elites who speak to and about one another with coded familiarity. Reading and studying their writing to understand postmodernism in its multiple manifestations, I appreciate it but feel little inclination to ally myself with the academic hierarchy and exclusivity pervasive in the movement today.

Critical of most writing on postmodernism, I perhaps am more conscious of the way in which the focus on "Otherness and difference" that is often alluded to in these works seems to have little concrete impact as an analysis or standpoint that might change the nature and direction of postmodernist theory. Since much of this theory has been constructed in reaction to and against high modernism, there is seldom any mention of black experience or writings by black people in this work, specifically black women (though in

more recent work one may see a reference to Cornel West, the black male scholar who has most engaged postmodernist discourse). Even if an aspect of black culture is the subject of postmodern critical writing, the works cited will usually be those of black men. A work that comes immediately to mind is Andrew Ross's chapter "Hip, and the Long Front of Color" in *No Respect: Intellectuals and Popular Culture*;¹ while it is an interesting reading, it constructs black culture as though black women have had no role in black cultural production. At the end of Meaghan Morris' discussion of postmodernism in her collection of essays *The Pirate's Fiancée: Feminism, Reading, Postmodernism*, she provides a bibliography of works by women, identifying them as important contributions to a discourse on postmodernism that offer new insight as well as challenging male theoretical hegemony.² Even though many of the works do not directly address postmodernism, they address similar concerns. There are no references to works by black women.

The failure to recognize a critical black presence in the culture and in most scholarship and writing on postmodernism compels a black reader, particularly a black female reader, to interrogate her interest in a subject where those who discuss and write about it seem not to know black women exist or even to consider the possibility that we might be somewhere writing or saying something that should be listened to, or producing art that should be seen, heard, approached with intellectual seriousness. This is especially the case with works that go on and on about the way in which postmodernist discourse has opened up a theoretical terrain where "difference and Otherness" can be considered legitimate issues in the academy. Confronting both the absence of recognition of black female presence that much postmodernist theory re-inscribes and the resistance on the part of most black folks to hearing about real connection between postmodernism and black experience, I enter a discourse, a practice, where there may be no ready audience for my words, no clear listener, uncertain then, that my voice can or will be heard.

During the sixties, the black power movement was influenced by perspectives that could easily be labeled modernist. Certainly many of the ways black folks addressed issues of identity conformed to a modernist universalizing agenda. There was little critique of patriarchy as a master narrative among black militants. Despite the fact that black power ideology reflected a modernist sensibility, these elements were soon rendered irrelevant as militant protest was stifled by a powerful, repressive postmodern state. The period directly after the black power movement was a time when major news magazines carried articles with cocky headlines like "Whatever Happened to Black America?" This response was an ironic reply to the aggressive, unmet demand by decentered, marginalized black subjects who had at least momentarily successfully demanded a hearing, who had made it possible for black liberation to be on the national political agenda. In the wake of the black power movement, after so many rebels were slaughtered and lost, many of these voices were silenced by a repressive state; others became inarticulate. It has become necessary to find new avenues to transmit the messages of black liberation struggle, new ways to talk about racism and other politics of

2. Meaghan Morris, *The Pirate's Fiancée: Fem-*

nism, Reading, Postmodernism (London: Verso, 1988).

domination. Radical postmodernist practice, most powerfully conceptualized as a "politics of difference," should incorporate the voices of displaced, marginalized, exploited, and oppressed black people. It is sadly ironic that the contemporary discourse which talks the most about heterogeneity, the decentered subject, declaring breakthroughs that allow recognition of Otherness, still directs its critical voice primarily to a specialized audience that shares a common language rooted in the very master narratives it claims to challenge. If radical postmodernist thinking is to have a transformative impact, then a critical break with the notion of "authority" as "mastery over" must not simply be a rhetorical device. It must be reflected in habits of being, including styles of writing as well as chosen subject matter. Third world nationals, elites, and white critics who passively absorb white supremacist thinking, and therefore never notice or look at black people on the streets or at their jobs, who render us invisible with their gaze in all areas of daily life, are not likely to produce liberatory theory that will challenge racist domination, or promote a breakdown in traditional ways of seeing and thinking about reality, ways of constructing aesthetic theory and practice. From a different standpoint, Robert Storr makes a similar critique in the global issue of *Art in America* when he asserts:

To be sure, much postmodernist critical inquiry has centered precisely on the issues of "difference" and "Otherness." On the purely theoretical plane the exploration of these concepts has produced some important results, but in the absence of any sustained research into what artists of color and others outside the mainstream might be up to, such discussions become rootless instead of radical. Endless second guessing about the latent imperialism of intruding upon other cultures only compounded matters, preventing or excusing these theorists from investigating what black, Hispanic, Asian and Native American artists were actually doing.³

Without adequate concrete knowledge of and contact with the non-white "Other," white theorists may move in discursive theoretical directions that are threatening and potentially disruptive of that critical practice which would support radical liberation struggle.

The postmodern critique of "identity," though relevant for renewed black liberation struggle, is often posed in ways that are problematic. Given a pervasive politics of white supremacy which seeks to prevent the formation of radical black subjectivity, we cannot cavalierly dismiss a concern with identity politics. Any critic exploring the radical potential of postmodernism as it relates to racial difference and racial domination would need to consider the implications of a critique of identity for oppressed groups. Many of us are struggling to find new strategies of resistance. We must engage decolonization as a critical practice if we are to have meaningful chances of survival even as we must simultaneously cope with the loss of political grounding which made radical activism more possible. I am thinking here about the postmodernist critique of essentialism as it pertains to the construction of "identity" as one example.

3. Robert Storr, "The Global Issue: A Symposium," *Art in America* 77 (1989): 88.

Postmodern theory that is not seeking to simply appropriate the experience of "Otherness" to enhance the discourse or to be radically chic should not separate the "politics of difference" from the politics of racism. To take racism seriously one must consider the plight of underclass people of color, a vast majority of whom are black. For African-Americans our collective condition prior to the advent of postmodernism and perhaps more tragically expressed under current postmodern conditions has been and is characterized by continued displacement, profound alienation, and despair. Writing about blacks and postmodernism, Cornel West describes our collective plight:

There is increasing class division and differentiation, creating on the one hand a significant black middle-class, highly anxiety-ridden, insecure, willing to be co-opted and incorporated into the powers that be, concerned with racism to the degree that it poses constraints on upward social mobility; and, on the other, a vast and growing black underclass, an underclass that embodies a kind of walking nihilism of pervasive drug addiction, pervasive alcoholism, pervasive homicide, and an exponential rise in suicide. Now because of the deindustrialization, we also have a devastated black industrial working class. We are talking here about tremendous hopelessness.

This hopelessness creates longing for insight and strategies for change that can renew spirits and reconstruct grounds for collective black liberation struggle. The overall impact of postmodernism is that many other groups now share with black folks a sense of deep alienation, despair, uncertainty, loss of a sense of grounding even if it is not informed by shared circumstance. Radical postmodernism calls attention to those shared sensibilities which cross the boundaries of class, gender, race, etc., that could be fertile ground for the construction of empathy—ties that would promote recognition of common commitments, and serve as a base for solidarity and coalition.

Yearning is the word that best describes a common psychological state shared by many of us, cutting across boundaries of race, class, gender, and sexual practice. Specifically, in relation to the post-modernist deconstruction of "master" narratives, the yearning that wells in the hearts and minds of those whom such narratives have silenced is the longing for critical voice. It is no accident that "rap" has usurped the primary position of rhythm and blues music among young black folks as the most desired sound or that it began as a form of "testimony" for the underclass. It has enabled underclass black youth to develop a critical voice, as a group of young black men told me, a "common literacy." Rap projects a critical voice, explaining, demanding, urging. Working with this insight in his essay "Putting the Pop Back into Postmodernism," Lawrence Grossberg comments:

The postmodern sensibility appropriates practices as boasts that announce their own—and consequently our own—existence, like a rap song boasting of the imaginary (or real—it makes no difference) accomplishments of the rapper. They offer forms of empowerment not only in the face of nihilism but precisely through the forms of nihilism itself:

an empowering nihilism, a moment of positivity through the production and structuring of affective relations.⁴

Considering that it is as subject one comes to voice, then the postmodernist focus on the critique of identity appears at first glance to threaten and close down the possibility that this discourse and practice will allow those who have suffered the crippling effects of colonization and domination to gain or regain a hearing. Even if this sense of threat and the fear it evokes are based on a misunderstanding of the postmodernist political project, they nevertheless shape responses. It never surprises me when black folks respond to the critique of essentialism, especially when it denies the validity of identity politics by saying, "Yeah, it's easy to give up identity, when you got one." Should we not be suspicious of postmodern critiques of the "subject" when they surface at a historical moment when many subjugated people feel themselves coming to voice for the first time? Though an apt and oftentimes appropriate comeback, it does not really intervene in the discourse in a way that alters and transforms.

Criticisms of directions in postmodern thinking should not obscure insights it may offer that open up our understanding of African-American experience. The critique of essentialism encouraged by postmodernist thought is useful for African-Americans concerned with reformulating outmoded notions of identity. We have too long had imposed upon us from both the outside and the inside a narrow, constricting notion of blackness. Postmodern critiques of essentialism which challenge notions of universality and static over-determined identity within mass culture and mass consciousness can open up new possibilities for the construction of self and the assertion of agency.

Employing a critique of essentialism allows African-Americans to acknowledge the way in which class mobility has altered collective black experience so that racism does not necessarily have the same impact on our lives. Such a critique allows us to affirm multiple black identities, varied black experience. It also challenges colonial imperialist paradigms of black identity which represent blackness one-dimensionally in ways that reinforce and sustain white supremacy. This discourse created the idea of the "primitive" and promoted the notion of an "authentic" experience, seeing as "natural" those expressions of black life which conformed to a pre-existing pattern or stereotype. Abandoning essentialist notions would be a serious challenge to racism. Contemporary African-American resistance struggle must be rooted in a process of decolonization that continually opposes re-inscribing notions of "authentic" black identity. This critique should not be made synonymous with a dismissal of the struggle of oppressed and exploited peoples to make ourselves subjects. Nor should it deny that in certain circumstances this experience affords us a privileged critical location from which to speak. This is not a re-inscription of modernist master narratives of authority which privilege some voices by denying voice to others. Part of our struggle for radical black subjectivity is the quest to find ways to construct self and identity that are oppositional and

4. Lawrence Grossberg, "Putting the Pop Back into Postmodernism," in *Universal Abandon: The Politics of Postmodernism*, ed. Andrew Ross (Min-

neapolis: University of Minnesota Press, 1988), p. 181.

liberatory. The unwillingness to critique essentialism on the part of many African-Americans is rooted in the fear that it will cause folks to lose sight of the specific history and experience of African-Americans and the unique sensibilities and culture that arise from that experience. An adequate response to this concern is to critique essentialism while emphasizing the significance of "the authority of experience."⁵ There is a radical difference between a repudiation of the idea that there is a black "essence" and recognition of the way black identity has been specifically constituted in the experience of exile and struggle.

When black folks critique essentialism, we are empowered to recognize multiple experiences of black identity that are the lived conditions which make diverse cultural productions possible. When this diversity is ignored, it is easy to see black folks as falling into two categories: nationalist or assimilationist, black-identified or white-identified. Coming to terms with the impact of postmodernism for black experience, particularly as it changes our sense of identity, means that we must and can rearticulate the basis for collective bonding. Given the various crises facing African-Americans (economic, spiritual, escalating racial violence, etc.), we are compelled by circumstance to reassess our relationship to popular culture and resistance struggle. Many of us are as reluctant to face this task as many non-black postmodern thinkers who focus theoretically on the issue of "difference" are to confront the issue of race and racism.

Music is the cultural product created by African-Americans that has most attracted postmodern theorists. It is rarely acknowledged that there is far greater censorship and restriction of other forms of cultural production by black folks—literary, critical writing, etc. Attempts on the part of editors and publishing houses to control and manipulate the representation of black culture, as well as the desire to promote the creation of products that will attract the widest audience, limit in a crippling and stifling way the kind of work many black folks feel we can do and still receive recognition. Using myself as an example, that creative writing I do which I consider to be most reflective of a postmodern oppositional sensibility, work that is abstract, fragmented, non-linear narrative, is constantly rejected by editors and publishers. It does not conform to the type of writing they think black women should be doing or the type of writing they believe will sell. Certainly I do not think I am the only black person engaged in forms of cultural production, especially experimental ones, who is constrained by the lack of an audience for certain kinds of work. It is important for postmodern thinkers and theorists to constitute themselves as an audience for such work. To do this they must assert power and privilege within the space of critical writing to open up the field so that it will be more inclusive. To change the exclusionary practice of postmodern critical discourse is to enact a postmodernism of resistance. Part of this intervention entails black intellectual participation in the discourse.

In his essay "Postmodernism and Black America," Cornel West suggests that black intellectuals "are marginal—usually languishing at the interface of Black and white cultures or thoroughly ensconced in Euro-American settings." He cannot see this group as potential producers of radical postmod-

5. The title of a 1977 collection of essays of feminist criticism, edited by Arlyn Diamond and Lee R. Edwards.

ernist thought. While I generally agree with this assessment, black intellectuals must proceed with the understanding that we are not condemned to the margins. The way we work and what we do can determine whether or not what we produce will be meaningful to a wider audience, one that includes all classes of black people. West suggests that black intellectuals lack "any organic link with most of Black life" and that this "diminishes their value to Black resistance." This statement bears traces of essentialism. Perhaps we need to focus more on those black intellectuals, however rare our presence, who do not feel this lack and whose work is primarily directed towards the enhancement of black critical consciousness and the strengthening of our collective capacity to engage in meaningful resistance struggle. Theoretical ideas and critical thinking need not be transmitted solely in written work or solely in the academy. While I work in a predominantly white institution, I remain intimately and passionately engaged with black community. It's not like I'm going to talk about writing and thinking about post-modernism with other academics and/or intellectuals and not discuss these ideas with underclass non-academic black folks who are family, friends, and comrades. Since I have not broken the ties that bind me to underclass poor black community, I have seen that knowledge, especially that which enhances daily life and strengthens our capacity to survive, can be shared. It means that critics, writers, and academics have to give the same critical attention to nurturing and cultivating our ties to black community that we give to writing articles, teaching, and lecturing. Here again I am really talking about cultivating habits of being that reinforce awareness that knowledge can be disseminated and shared on a number of fronts. The extent to which knowledge is made available, accessible, etc. depends on the nature of one's political commitments.

Postmodern culture with its decentered subject can be the space where ties are severed or it can provide the occasion for new and varied forms of bonding. To some extent, ruptures, surfaces, contextuality, and a host of other happenings create gaps that make space for oppositional practices which no longer require intellectuals to be confined by narrow separate spheres with no meaningful connection to the world of the everyday. Much postmodern engagement with culture emerges from the yearning to do intellectual work that connects with habits of being, forms of artistic expression, and aesthetics that inform the daily life of writers and scholars as well as a mass population. On the terrain of culture, one can participate in critical dialogue with the uneducated poor, the black underclass who are thinking about aesthetics. One can talk about what we are seeing, thinking, or listening to; a space is there for critical exchange. It's exciting to think, write, talk about, and create art that reflects passionate engagement with popular culture, because this may very well be "the" central future location of resistance struggle, a meeting place where new and radical happenings can occur.

JUDITH BUTLER

b. 1956

Judith Butler's *Gender Trouble: Feminism and the Subversion of Identity* (1990), arguably the most influential theoretical text of the 1990s, is a founding document of queer theory and a key statement of "performative" accounts of cultural meaning. Butler's work distills forty years of French theory—from pioneer feminist SIMONE DE BEAUVOIR to JULIA KRISTEVA, and from JACQUES LACAN and LOUIS ALTHUSSER to JACQUES DERRIDA and MICHEL FOUCAULT—to explore how gendered identity is socially produced through repetitions of ordinary daily activities. Her goal is to uncover the assumptions that "restrict the meaning of gender to received notions of masculinity and femininity." In opening up "the field of possibility for gender," Butler aims for a feminism that avoids "exclusionary gender norms" in its portrayal of acceptable identities.

Trained in philosophy, Judith Butler received her undergraduate and graduate degrees at Yale University. She has taught in interdisciplinary programs, first at Johns Hopkins University and then at the University of California at Berkeley. *Gender Trouble* made her something between a celebrity and a cult figure, especially in gay and lesbian subcultures, and she has responded by jealously guarding her personal life from public scrutiny.

Key for Butler is the insistence that nothing is natural, not even sexual identity. Feminists have sometimes distinguished between "sex" as the anatomical difference between male and female bodies and "gender" as the meanings attached to those bodily differences in various cultures. Butler argues that even anatomical differences can be experienced only through the categories and expectations set out by the culture's signifying order. Moreover, anatomical differences are mapped to expectations about sexual desire, specifically to society's "compulsory heterosexuality" (a term Butler borrows from ADRIENNE RICH), which posits that there are two sexes and that desire runs from one sex to the other. Our culture's understanding of sexuality is ill-equipped, therefore, to recognize bodies that confound the strict binary division between male and female, or desires that cross, combine, or otherwise fail to conform to a fairly narrow understanding of sex as genital intercourse between two people, one "naturally" female, the other "naturally" male.

Following Foucault's work in *The History of Sexuality* (1976), Butler stresses that modern culture sees sexuality as a fundamental constituent of identity. Our sex and our sexual desires and activities are profound indices of who we are. Butler hopes—like many contemporary critical theorists—to reveal that the seemingly "natural" is actually socially constructed and, thus, contingent. The established and conventional connections between anatomy and desire, and between sexual activities and ascriptions of identity, are not inevitable; they have been different in other cultures and in other historical eras, and they are open to revision or, to use one of Butler's favorite words, "resignification." The meanings and categories by which we understand and live our daily existence can be altered.

Such alteration does not come easily, however. "Those naturalized and reified notions of gender that support masculine hegemony and heterosexist power" are written into our very psyches as well as into the dominant institutions of political and social life. Butler follows the accounts of subject formation found in Foucault and Lacan. For Foucault, discourse (the articulated categories of thought) orders knowledge along lines that produce subjects open to power's control. Such power, he stresses, works at the level of daily routine. For Lacan, individuals achieve an identity, a recognized place in the social order, by passing into the Law (the culture's signifying order)—at the cost of creating the unconscious and establishing a permanent split, an alienation of self from desire, within the subject.

To Foucault's account of power's "micro-physics" and Lacan's description of subject formation, Butler adds Derrida's understanding of "performative speech acts." She believes "the performative" offers her a model of action within theories that often seem to allow subjects no room for resistance to power. Derrida develops his notion of the performative in an essay on J. L. AUSTIN, the twentieth-century Oxford philosopher who invented the term, and in a later debate with the American philosopher John Searle. Austin comes from an Anglo-American tradition (dating back to John Locke) that sees the meaning of language as grounded in the way that words refer to already existing objects. I speak of a certain blue chair, and my words are meaningful and true insofar as they conform to the facts of the matter. But Austin realized that some utterances are creative: they make something come into existence, rather than referring to something that already exists. Anyone who makes a promise, or a judge who sentences someone to prison, creates a fact (the promise, the sentence) through the act of speaking. Such speech acts are performatives.

Surprisingly, as Austin pursues this notion he finds it increasingly difficult to distinguish performatives from referential speech acts. Derrida picks up on this difficulty and adds the concepts of "citation" and "repetition" to the analysis. Every speech act, Derrida argues, succeeds in meaning anything at all only by virtue of its "citing" previous uses of the term it now employs. In other words, language works because the speakers of that language have a prior knowledge of its terms and its prevailing usages (both syntactic and semantic). Every new speech act is a repetition, using old words and structures in this new instance. There are thus fairly strict limits on novelty. An utterance that departs too far from received understandings will be incomprehensible. But exact repetition does not occur very often either. After all, we are using the old words in new contexts. Each separate use of a word tweaks it in this or that direction in relation to a variety of pressures: the context, the audience, conscious or unconscious purposes. Thus, each speech act has a performative dimension; instead of repeating or referring to preexisting meanings in its "citation" of a previously used word, it alters, if always within limits, the meaning of that word. Languages are reproduced, are kept alive and functioning, through innumerable acts of use; but those acts also constantly change the language. Most changes are inadvertent by-products of use, but some may be conscious, such as contemporary efforts to abandon "man" as the generic word referring to all human beings.

Butler proposes that we understand "sex" and "gender" as citational repetitions. Various cultural discourses converge in a prevailing (although never fully homogeneous or monolithic) understanding of what "boy" and "girl," "man" and "woman" signify. Individual actions then "cite" these meanings, playing off them in various ways. Power functions pervasively through these meanings. The little boy learns that his crying is not masculine; he must grow into his masculinity by imitating the behavior designated as "male" to the point that such behavior becomes "second nature." The little girl learns that some ways of acting make her a tomboy, and she is encouraged to dress the part of "femininity." In Butler's view, we feel our way into these roles, slowly establishing (under the watchful eyes of powerful social forces) the way we will occupy them. Given our prevailing categories, we experience this process as discovering our identity. Butler believes identity is a trap, a hardening into rigid, binarized categories of much more fluid and heterogeneous possibilities. She calls for actions that will "resignify" our received meanings—actions that will lead to a "proliferation" of the "constitutive categories" into which all selves are now constrained to fit.

The costs of identity's straitjacket, Butler believes, are high—both for those who fit the categories comfortably and those who don't. "Deviants" (such as homosexuals, bisexuals, hermaphrodites, or other less recognizable nonidentities) are inevitable, according to Butler, although her reasons for this claim are not completely clear. For her, discursive power is never fully effective. It cannot create all individuals in its preferred image, in part because any social field is traversed by various discourses,

none of which ever achieves full domination. In any case, compulsory heterosexuality cannot erase all nonheterosexual desires or acts. But the price paid by those labeled deviant for such desires and acts—in internalized guilt and external sanctions—is exorbitant. On the side of “normality,” heterosexual identity can be achieved only through the forceful exclusion or “disavowal” of all nonheterosexual desires, in keeping with commonplace obsessional notions of identity as consistent in all places and at all times. Socially, this disavowal is expressed through homophobia and other discourses of “abjection” (Kristeva’s famous term) that single out deviants as worthy targets of aggression and punishment.

Butler calls for a loosening of the categories, a relaxation of our fixation on identity. Power uses identity to latch onto us, and normative identity calls for a homogeneity too difficult to live. A change of this type can be seen as therapeutic—and in keeping with SIGMUND FREUD’S goal of moderating the strictures of conventional morality and its excessive internal voice, the superego. But Butler’s attack on identity also has specifically political dimensions. She believes that feminism has been hurt by its attempt to find an identity that would designate something common to everyone in the movement. She calls instead for a coalitional politics that avoids the fights over purity (of identity, of doctrine, of commitment) that often tear apart movements dependent on complete agreement among members over long periods of time. Thus, while Butler’s work grows out of feminism, she is against any “identity politics” that sees political groupings and beliefs as grounded in a shared identity, whether ethnic, racial, sexual, national, or economic. All forms of identity politics, she believes, are prone to aggressions used to enforce rigid consistencies.

How do we begin to loosen the hold of identity, especially at a time when the passions attached to identity and its preservation are fervent and pervasive? An initial step, Butler says, is to make evident identity’s construction; it is not inevitable (even if social power hardly leaves us much freedom to choose our ways of being in the world). Identity is not something planted in us³ to be discovered, but something that is performatively produced by acts that “effectively constitute the identity they are said to express or reveal.” At the end of *Gender Trouble*, Butler advocates parody in general and drag performances in particular because such “subversive” performances “destabilize the naturalized categories of identity and desire.” It is here that queer theory makes its appearance. Such theory is interested in ‘any and all acts, images, and ideas that “trouble,” violate, cross, mix, or otherwise confound established boundaries between male and female, normal and abnormal, self and other. In a limited sense, the goal is to create more space for and recognition of the various actions performed daily in a social landscape blinded and hostile to variety. But the broader goal is a general troubling, an attempted unfixing, of the links between acts, categories, representations, desires, and identities.

The main objections to Butler’s position echo the objections often made to post-structuralist work. Key questions focus on agency, power, and ethics, while a difficult style and specialized terminology seem to guarantee a small audience for work that aims to have political consequences. To what extent does Butler believe that conscious, purposive action is possible if she posits an all-encompassing discursive power that shapes us at such a deep, unconscious level? How are we to understand “compulsory heterosexuality,” “masculine hegemony,” “phallogocentrism” (Derrida’s term for the masculine power at the origin of the Law), and other terms by which she designates power? Have there been societies in which these forms of power have not been dominant? Is the formation of subjectivity entirely a matter of the self’s relation to power, or do intersubjective relationships have any important role to play? What enables the critical enterprise itself, the ability to describe the processes of subject formation? Within ongoing debates over the details, however, a new interest in violations of received categories and the performative reproduction and transformation of culture attests to Butler’s impact on literary studies.

BIBLIOGRAPHY

Butler's first book, *Subjects of Desire: Hegelian Reflections in Twentieth-Century France* (1986), traces French theories of subject formation as influenced by the nineteenth-century German philosopher G. W. F. Hegel. Her books after *Gender Trouble* (1990)—*Bodies That Matter: On the Discursive Limits of "Sex"* (1993), *Excitable Speech: A Politics of the Performative* (1996), and *The Psychic Life of Power: Theories in Subjection* (1997)—address various objections to her work and further develop her performative model of subject formation. Also of interest is Butler's *Antigone's Claim: Kinship between Life and Death* (2000). She has co-edited two important collections: with Joan W. Scott, *Feminists Theorize the Political* (1992); and with Linda Singer, *Erotic Welfare: Sexual Theory and Politics in the Age of Epidemic* (1993). Limited biographical information can be found in "Preface (1999)" in the tenth anniversary edition of *Gender Trouble* (1999).

Two excellent places to start in exploring the responses occasioned by Butler's work are Peter Osborne and Lynne Segal's "Gender as Performance: An Interview with Judith Butler," *Radical Philosophy* 67 (1994), and *Feminist Contentions: A Philosophical Exchange* (1995), which presents a debate among Butler, Seyla Benhabib, Drucilla Cornell, and Nancy Fraser, all leading women philosophers. For a good sampling of other responses to Butler's work, see Susan Bordo, "Postmodern Subjects, Postmodern Bodies," *Feminist Studies* 18.1 (1992); Shane Phelan, "Social Constructionism, Sexuality, and Politics," *Women and Politics* 12.1 (1992); John McGowan, "Thinking about Violence: Feminism, Cultural Politics, and Norms," *Centennial Review* 37.3 (1993); Debra Silverman, "Making a Spectacle: Or, Is There Female Drag?" *Critical Matrix* 7.2 (1993); Biddy Martin, "Sexualities without Gender and Other Queer Utopias," *Diacritics* 24.2-3 (1994); and Pheng Cheah, "Mattering," *Diacritics* 26.1 (1996).

From Gender Trouble

From Preface

Contemporary feminist debates over the meanings of gender lead time and again to a certain sense of trouble, as if the indeterminacy of gender might eventually culminate in the failure of feminism. Perhaps trouble need not carry such a negative valence. To make trouble was, within the reigning discourse of my childhood, something one should never do precisely because that would get one *in* trouble. The rebellion and its reprimand seemed to be caught up in the same terms, a phenomenon that gave rise to my first critical insight into the subtle ruse of power: the prevailing law threatened one with trouble, even put one in trouble, all to keep one out of trouble. Hence, I concluded that trouble is inevitable and the task, how best to make it, what best way to be in it. As time went by, further ambiguities arrived on the critical scene. I noted that trouble sometimes euphemized some fundamentally mysterious problem usually related to the alleged mystery of all things feminine. I read Beauvoir¹ who explained that to be a woman within the terms of a masculinist culture is to be a source of mystery and unknowability for men, and this seemed confirmed somehow when I read Sartre² for whom all desire, problematically presumed as heterosexual and masculine, was

1. SIMONE DE BEAUVOIR (1908-1986), French existentialist and feminist writer.

2. JEAN-PAUL SARTRE (1905-1980), French existentialist philosopher.

defined as *trouble*. For that masculine subject of desire, trouble became a scandal with the sudden intrusion, the unanticipated agency, of a female "object" who inexplicably returns the glance, reverses the gaze, and contests the place and authority of the masculine position. The radical dependency of the masculine subject on the female "Other" suddenly exposes his autonomy as illusory. That particular dialectical reversal of power, however, couldn't quite hold my attention—although others surely did. Power seemed to be more than an exchange between subjects or a relation of constant inversion between a subject and an Other; indeed, power appeared to operate in the production of that very binary frame for thinking about gender. I asked, what configuration of power constructs the subject and the Other, that binary relation between "men" and "women," and the internal stability of those terms? What restriction is here at work? Are those terms untroubling only to the extent that they conform to a heterosexual matrix for conceptualizing gender and desire? What happens to the subject and to the stability of gender categories when the epistemic regime of presumptive heterosexuality is unmasked as that which produces and reifies these ostensible categories of ontology?

But how can an epistemic/ontological regime be brought into question? What best way to trouble the gender categories that support gender hierarchy and compulsory heterosexuality? Consider the fate of "female trouble," that historical configuration of a nameless female indisposition, which thinly veiled the notion that being female is a natural indisposition. Serious as the medicalization of women's bodies is, the term is also laughable, and laughter in the face of serious categories is indispensable for feminism. Without a doubt, feminism continues to require its own forms of serious play. *Female Trouble* is also the title of the John Waters film that features Divine, the hero/heroine of *Hairspray*³ as well, whose impersonation of women implicitly suggests that gender is a kind of persistent impersonation that passes as the real. Her/his performance destabilizes the very distinctions between the natural and the artificial, depth and surface, inner and outer through which discourse about genders almost always operates. Is drag the imitation of gender, or does it dramatize the signifying gestures through which gender itself is established? Does being female constitute a "natural fact" or a cultural performance, or is "naturalness" constituted through discursively constrained performative acts that produce the body through and within the categories of sex? Divine notwithstanding, gender practices within gay and lesbian cultures often thematize "the natural" in parodic contexts that bring into relief the performative construction of an original and true sex. What other foundational categories of identity—the binary of sex, gender, and the body—can be shown as productions that create the effect of the natural, the original, and the inevitable?

To expose the foundational categories of sex, gender, and desire as effects of a specific formation of power requires a form of critical inquiry that Foucault, reformulating Nietzsche,⁴ designates as "genealogy." A genealogical critique refuses to search for the origins of gender, the inner truth of female

3. *Hairspray* (1988) and *Female Trouble* (1974), films by the independent producer/director John Waters (b. 1946). Divine (born Harris Glenn Milstead, 1945–1988), a 300-pound cross-dresser

who starred in many of Waters's films.

desire, a genuine or authentic sexual identity that repression has kept from view; rather, genealogy investigates the political stakes in designating as an *origin* and *cause* those identity categories that are in fact the *effects* of institutions, practices, discourses with multiple and diffuse points of origin. The task of this inquiry is to center on—and decenter—such defining institutions: phallogocentrism and compulsory heterosexuality.⁵

Precisely because “female” no longer appears to be a stable notion, its meaning is as troubled and unfixed as “women,” and because both terms gain their troubled significations only as relational terms, this inquiry takes as its focus gender and the relational analysis it suggests. Further, it is no longer clear that feminist theory ought to try to settle the questions of primary identity in order to get on with the task of politics. Instead, we ought to ask, what political possibilities are the consequence of a radical critique of the categories of identity. What new shape of politics emerges when identity as a common ground no longer constrains the discourse on feminist politics? And to what extent does the effort to locate a common identity as the foundation for a feminist politics preclude a radical inquiry into the political construction and regulation of identity itself?

From Chapter 3. *Subversive Bodily Acts*

* * *

BODILY INSCRIPTIONS, PERFORMATIVE SUBVERSIONS

“Garbo ‘got in drag’ whenever she took some heavy glamour part, whenever she melted in or out of a man’s arms, whenever she simply let that heavenly-flexed neck . . . bear the weight of her thrown-back head. . . . How resplendent seems the art of acting! It is all *impersonation*, whether the sex underneath is true or not.”

—Parker Tyler, “The Garbo Image,”
quoted in Esther Newton, *Mother Camp*.⁶

Categories of true sex, discrete gender, and specific sexuality have constituted the stable point of reference for a great deal of feminist theory and politics. These constructs of identity serve as the points of epistemic departure from which theory emerges and politics itself is shaped. In the case of feminism, politics is ostensibly shaped to express the interests, the perspectives, of “women.” But is there a political shape to “women,” as it were, that precedes and prefigures the political elaboration of their interests and epistemic point of view? How is that identity shaped, and is it a political shaping that takes the very morphology and boundary of the sexed body as the ground, surface, or site of cultural inscription? What circumscribes that site as “the female body”? Is “the body” or “the sexed body” the firm foundation on which

5. A term coined by the American feminist poet ADRIENNE RICH (b. 1929) to indicate society’s injunction against all homosexual desires and acts. “Phallogocentrism”: a term coined by the French philosopher JACQUES DERRIDA (b. 1930) for the patriarchal dominance of sexuality and the legal

system.

gender and systems of compulsory sexuality operate? Or is "the body" itself shaped by political forces with strategic interests in keeping that body bounded and constituted by the markers of sex?

The sex/gender distinction and the category of sex itself appear to presuppose a generalization of "the body" that preexists the acquisition of its sexed significance. This "body" often appears to be a passive medium that is signified by an inscription from a cultural source figured as "external" to that body. Any theory of the culturally constructed body, however, ought to question "the body" as a construct of suspect generality when it is figured as passive and prior to discourse. There are Christian and Cartesian precedents⁷ to such views which, prior to the emergence of vitalistic biologies in the nineteenth century, understand "the body" as so much inert matter, signifying nothing or, more specifically, signifying a profane void, the fallen state: deception, sin, the premonitional metaphors of hell and the eternal feminine. There are many occasions in both Sartre's and Beauvoir's work where "the body" is figured as a mute facticity, anticipating some meaning that can be attributed only by a transcendent consciousness, understood in Cartesian terms as radically immaterial. But what establishes this dualism for us? What separates off "the body" as indifferent to signification, and signification itself as the act of a radically disembodied consciousness or, rather, the act that radically disembodies that consciousness? To what extent is that Cartesian dualism presupposed in phenomenology⁸ adapted to the structuralist frame in which mind/body is redescribed as culture/nature? With respect to gender discourse, to what extent do these problematic dualisms still operate within the very descriptions that are supposed to lead us out of that binarism and its implicit hierarchy? How are the contours of the body clearly marked as the taken-for-granted ground or surface upon which gender significations are inscribed, a mere facticity devoid of value, prior to significance?

Wittig⁹ suggests that a culturally specific epistemic *a priori* establishes the naturalness of "sex." But by what enigmatic means has "the body" been accepted as a *prima facie* given that admits of no genealogy? Even within Foucault's essay on the very theme of genealogy, the body is figured as a surface and the scene of a cultural inscription: "the body is the inscribed surface of events."¹⁰ The task of genealogy, he claims, is "to expose a body totally imprinted by history." His sentence continues, however, by referring to the goal of "history"—here clearly understood on the model of Freud's "civilization"—as the "destruction of the body" (148). Forces and impulses with multiple directionalities are precisely that which history both destroys and preserves through the *entstehung* (historical event) of inscription. As "a volume in perpetual disintegration" (148), the body is always under siege, suffering destruction by the very terms of history. And history is the creation of values and meanings by a signifying practice that requires the subjection

7. In the dualistic system of the French philosopher René Descartes (1596–1650), spirit and matter are mutually exclusive.

8. A philosophical method restricted to analyzing the intellectual processes of which we are introspectively aware (while ignoring external objects, the question of whose existence is "bracketed").

9. MONIQUE WITTIG (b. 1935), French feminist

novelist.

10. Michel Foucault, "Nietzsche, Genealogy, History," in *Language, Counter-Memory, Practice*, ed. Donald F. Bouchard, trans. Donald F. Bouchard and Sherry Simon (Ithaca: Cornell University Press, 1977), p. 148 [Butler's note]. Some of the author's notes are edited, and some omitted.

of the body. This corporeal destruction is necessary to produce the speaking subject and its significations. This is a body, described through the language of surface and force, weakened through a "single drama" of domination, inscription, and creation (150). This is not the *modus vivendi* of one kind of history rather than another, but is, for Foucault, "history" (148) in its essential and repressive gesture.

Although Foucault writes, "Nothing in man [*sic*]—not even his body—is sufficiently stable to serve as the basis for self-recognition or for understanding other men [*sic*]" (153), he nevertheless points to the constancy of cultural inscription as a "single drama" that acts on the body. If the creation of values, that historical mode of signification, requires the destruction of the body, much as the instrument of torture in Kafka's *In the Penal Colony*² destroys the body on which it writes, then there must be a body prior to that inscription, stable and self-identical, subject to that sacrificial destruction. In a sense, for Foucault, as for Nietzsche, cultural values emerge as the result of an inscription on the body, understood as a medium, indeed, a blank page; in order for this inscription to signify, however, that medium must itself be destroyed—that is, fully transvaluated into a sublimated domain of values. Within the metaphors of this notion of cultural values is the figure of history as a relentless writing instrument, and the body as the medium which must be destroyed and transfigured in order for "culture" to emerge.

By maintaining a body prior to its cultural inscription, Foucault appears to assume a materiality prior to signification and form. Because this distinction operates as essential to the task of genealogy as he defines it, the distinction itself is precluded as an object of genealogical investigation. Occasionally in his analysis of *Herculine*,³ Foucault subscribes to a prediscursive multiplicity of bodily forces that break through the surface of the body to disrupt the regulating practices of cultural coherence imposed upon that body by a power regime, understood as a vicissitude of "history." If the presumption of some kind of precategorical source of disruption is refused, is it still possible to give a genealogical account of the demarcation of the body as such as a signifying practice? This demarcation is not initiated by a reified history or by a subject. This marking is the result of a diffuse and active structuring of the social field. This signifying practice effects a social space for and of the body within certain regulatory grids of intelligibility.

Mary Douglas' *Purity and Danger* suggests that the very contours of "the body" are established through markings that seek to establish specific codes of cultural coherence. Any discourse that establishes the boundaries of the body serves the purpose of instating and naturalizing certain taboos regarding the appropriate limits, postures, and modes of exchange that define what it is that constitutes bodies:

ideas about separating, purifying, demarcating and punishing transgressions have as their main function to impose system on an inherently untidy experience. It is only by exaggerating the difference between within and without, above and below, male and female, with and against, that a semblance of order is created.⁴

2. A 1919 story by Franz Kafka (1883–1924), Austrian writer who was born and lived most of his life in Prague.

3. *Herculine Barbin*, a 19th-century French hermaphrodite whose memoirs were published in

1978 with an introduction by Foucault (discussed by Butler earlier in this chapter).

4. Mary Douglas, *Purity and Danger* (London: Routledge and Kegan Paul, 1969) p. 4 [Butler's note]. Douglas (1921), Italian-born anthropologist.

Although Douglas clearly subscribes to a structuralist distinction between an inherently unruly nature and an order imposed by cultural means, the "untidiness" to which she refers can be redescribed as a region of *cultural* unruliness and disorder. Assuming the inevitably binary structure of the nature/culture distinction, Douglas cannot point toward an alternative configuration of culture in which such distinctions become malleable or proliferate beyond the binary frame. Her analysis, however, provides a possible point of departure for understanding the relationship by which social taboos institute and maintain the boundaries of the body as such. Her analysis suggests that what constitutes the limit of the body is never merely material, but that the surface, the skin, is systemically signified by taboos and anticipated transgressions: indeed, the boundaries of the body become, within her analysis, the limits of the social *per se*. A poststructuralist appropriation of her view might well understand the boundaries of the body as the limits of the socially *hegemonic*. In a variety of cultures, she maintains, there are

pollution powers which inhere in the structure of ideas itself and which punish a symbolic breaking of that which should be joined or joining of that which should be separate. It follows from this that pollution is a type of danger which is not likely to occur except where the lines of structure, cosmic or social, are clearly defined.

A polluting person is always in the wrong. He [*sic*] has developed some wrong condition or simply crossed over some line which should not have been crossed and this displacement unleashes danger for someone.⁵

In a sense, Simon Watney has identified the contemporary construction of "the polluting person" as the person with AIDS in his *Policing Desire: AIDS, Pornography, and the Media*.⁶ Not only is the illness figured as the "gay disease," but throughout the media's hysterical and homophobic response to the illness there is a tactical construction of a continuity between the polluted status of the homosexual by virtue of the boundary-trespass that is homosexuality and the disease as a specific modality of homosexual pollution. That the disease is transmitted through the exchange of bodily fluids suggests within the sensationalist graphics of homophobic signifying systems the dangers that permeable bodily boundaries present to the social order as such. Douglas remarks that "the body is a model that can stand for any bounded system. Its boundaries can represent any boundaries which are threatened or precarious."⁷ And she asks a question which one might have expected to read in Foucault: "Why should bodily margins be thought to be specifically invested with power and danger?"⁸

Douglas suggests that all social systems are vulnerable at their margins, and that all margins are accordingly considered dangerous. If the body is synecdochal for the social system *per se* or a site in which open systems converge, then any kind of unregulated permeability constitutes a site of pollution and endangerment. Since anal and oral sex among men clearly establishes certain kinds of bodily permeabilities unsanctioned by the hegemonic order, male homosexuality would, within such a hegemonic point of view, constitute a site of danger and pollution, prior to and regardless of the

cultural presence of AIDS. Similarly, the "polluted" status of lesbians, regardless of their low-risk status with respect to AIDS, brings into relief the dangers of their bodily exchanges. Significantly, being "outside" the hegemonic order does not signify being "in" a state of filthy and untidy nature. Paradoxically, homosexuality is almost always conceived within the homophobic signifying economy as *both* uncivilized and unnatural.

The construction of stable bodily contours relies upon fixed sites of corporeal permeability and impermeability. Those sexual practices in both homosexual and heterosexual contexts that open surfaces and orifices to erotic signification or close down others effectively reinscribe the boundaries of the body along new cultural lines. Anal sex among men is an example, as is the radical re-membering of the body in Wittig's *The Lesbian Body*.⁹ Douglas alludes to "a kind of sex pollution which expresses a desire to keep the body (physical and social) intact,"¹¹ suggesting that the naturalized notion of "the" body is itself a consequence of taboos that render that body discrete by virtue of its stable boundaries. Further, the rites of passage that govern various bodily orifices presuppose a heterosexual construction of gendered exchange, positions, and erotic possibilities. The deregulation of such exchanges accordingly disrupts the very boundaries that determine what it is to be a body at all. Indeed, the critical inquiry that traces the regulatory practices within which bodily contours are constructed constitutes precisely the genealogy of "the body" in its discreteness that might further radicalize Foucault's theory.²

Significantly, Kristeva's discussion of abjection in *The Powers of Horror* begins to suggest the uses of this structuralist notion of a boundary-constituting taboo for the purposes of constructing a discrete subject through exclusion.³ The "abject" designates that which has been expelled from the body, discharged as excrement, literally rendered "Other." This appears as an expulsion of alien elements, but the alien is effectively established through this expulsion. The construction of the "not-me" as the abject establishes the boundaries of the body which are also the first contours of the subject. Kristeva writes:

nausea makes me balk at that milk cream, separates me from the mother and father who proffer it. "I" want none of that element, sign of their desire; "I" do not want to listen, "I" do not assimilate it, "I" expel it. But since the food is not an "other" for "me," who am only in their desire, I expel *myself*, I spit *myself* out, I abject *myself* within the same motion through which "I" claim to establish *myself*.⁴

2. Foucault's essay "A Preface to Transgression" (in *Language, Counter-Memory, Practice*) does provide an interesting juxtaposition with Douglas's notion of body boundaries constituted by incest taboos. Originally written in honor of Georges Bataille, this essay explores in part the metaphorical "dirt" of transgressive pleasures and the association of the forbidden orifice with the dirt-covered tomb. See pp. 46-48 [Butler's note]. Bataille (1897-1962), French novelist and philosopher.

3. Kristeva discusses Mary Douglas's work in a

short section of *The Powers of Horror: An Essay on Abjection*, trans. Leon Roudiez (New York: Columbia University Press, 1982), originally published as *Pouvoirs de l'horreur* (1980). Assimilating Douglas's insights to her own reformulation of Lacan, Kristeva writes, "Defilement is what is jettisoned from the *symbolic system*. It is what escapes that social rationality, that logical order on which a social aggregate is based, which then becomes differentiated from a temporary agglomeration of individuals and, in short, constitutes a *classification system or a structure*" (p. 65) [Butler's note]. JULIA KRISTEVA (b. 1941), French feminist literary critic and psychoanalyst.

4. *Ibid.*, p. 63.

The boundary of the body as well as the distinction between internal and external is established through the ejection and transvaluation of something originally part of identity into a defiling otherness. As Iris Young has suggested in her use of Kristeva to understand sexism, homophobia, and racism, the repudiation of bodies for their sex, sexuality, and/or color is an "expulsion" followed by a "repulsion" that founds and consolidates culturally hegemonic identities along sex/race/sexuality axes of differentiation.⁵ Young's appropriation of Kristeva shows how the operation of repulsion can consolidate "identities" founded on the instituting of the "Other" or a set of Others through exclusion and domination. What constitutes through division the "inner" and "outer" worlds of the subject is a border and boundary tenuously maintained for the purposes of social regulation and control. The boundary between the inner and outer is confounded by those excremental passages in which the inner effectively becomes outer, and this excreting function becomes, as it were, the model by which other forms of identity-differentiation are accomplished. In effect, this is the mode by which Others become shit. For inner and outer worlds to remain utterly distinct, the entire surface of the body would have to achieve an impossible impermeability. This sealing of its surfaces would constitute the seamless boundary of the subject; but this enclosure would invariably be exploded by precisely that excremental filth that it fears.

Regardless of the compelling metaphors of the spatial distinctions of inner and outer, they remain linguistic terms that facilitate and articulate a set of fantasies, feared and desired. "Inner" and "outer" make sense only with reference to a mediating boundary that strives for stability. And this stability, this coherence, is determined in large part by cultural orders that sanction the subject and compel its differentiation from the object. Hence, "inner" and "outer" constitute a binary distinction that stabilizes and consolidates the coherent subject. When that subject is challenged, the meaning and necessity of the terms are subject to displacement. If the "inner world" no longer designates a topos,⁶ then the internal fixity of the self and, indeed, the internal locale of gender identity, become similarly suspect. The critical question is not *how* did that identity become *internalized*? as if internalization were a process or a mechanism that might be descriptively reconstructed. Rather, the question is: From what strategic position in public discourse and for what reasons has the trope of interiority and the disjunctive binary of inner/outer taken hold? In what language is "inner space" figured? What kind of figuration is it, and through what figure of the body is it signified? How does a body figure on its surface the very invisibility of its hidden depth?

From Interiority to Gender Performatives

In *Discipline and Punish* Foucault challenges the language of internalization as it operates in the service of the disciplinary regime of the subjection and subjectivation of criminals. Although Foucault objected to what he

6. Place (Greek).

understood to be the psychoanalytic belief in the “inner” truth of sex in *The History of Sexuality*, he turns to a criticism of the doctrine of internalization for separate purposes in the context of his history of criminology. In a sense, *Discipline and Punish* can be read as Foucault’s effort to rewrite Nietzsche’s doctrine of internalization in *On the Genealogy of Morals* on the model of *inscription*. In the context of prisoners, Foucault writes, the strategy has been not to enforce a repression of their desires, but to compel their bodies to signify the prohibitive law as their very essence, style, and necessity. That law is not literally internalized, but incorporated, with the consequence that bodies are produced which signify that law on and through the body; there the law is manifest as the essence of their selves, the meaning of their soul, their conscience, the law of their desire. In effect, the law is at once fully manifest and fully latent, for it never appears as external to the bodies it subjects and subjectivates. Foucault writes:

It would be wrong to say that the soul is an illusion, or an ideological effect. On the contrary, it exists, it has a reality, it is produced permanently *around, on, within*, the body by the functioning of a power that is exercised on those that are punished [my emphasis].⁷

The figure of the interior soul understood as “within” the body is signified through its inscription *on* the body, even though its primary mode of signification is through its very absence, its potent invisibility. The effect of a structuring inner space is produced through the signification of a body as a vital and sacred enclosure. The soul is precisely what the body lacks; hence, the body presents itself as a signifying lack. That lack which *is* the body signifies the soul as that which cannot show. In this sense, then, the soul is a surface signification that contests and displaces the inner/outer distinction itself, a figure of interior psychic space inscribed *on* the body as a social signification that perpetually renounces itself as such. In Foucault’s terms, the soul is not imprisoned by or within the body, as some Christian imagery would suggest, but “the soul is the prison of the body.”⁸

The redescription of intrapsychic processes in terms of the surface politics of the body implies a corollary redescription of gender as the disciplinary production of the figures of fantasy through the play of presence and absence on the body’s surface, the construction of the gendered body through a series of exclusions and denials, signifying absences. But what determines the manifest and latent text of the body politic? What is the prohibitive law that generates the corporeal stylization of gender, the fantasied and fantastic figuration of the body? We have already considered the incest taboo and the prior taboo against homosexuality as the generative moments of gender identity,⁹ the prohibitions that produce identity along the culturally intelligible grids of an idealized and compulsory heterosexuality. That disciplinary production of gender effects a false stabilization of gender in the interests of the heterosexual construction and regulation of sexuality within the reproductive domain. The construction of coherence conceals the gender discontinuities that run rampant within heterosexual, bisexual, and gay and lesbian

9. In chapter 2 of *Gender Trouble*.

contexts in which gender does not necessarily follow from sex, and desire, or sexuality generally, does not seem to follow from gender—indeed, where none of these dimensions of significant corporeality express or reflect one another. When the disorganization and disaggregation of the field of bodies disrupt the regulatory fiction of heterosexual coherence, it seems that the expressive model loses its descriptive force. That regulatory ideal is then exposed as a norm and a fiction that disguises itself as a developmental law regulating the sexual field that it purports to describe.

According to the understanding of identification as an enacted fantasy or incorporation, however, it is clear that coherence is desired, wished for, idealized, and that this idealization is an effect of a corporeal signification. In other words, acts, gestures, and desire produce the effect of an internal core or substance, but produce this *on the surface* of the body, through the play of signifying absences that suggest, but never reveal, the organizing principle of identity as a cause. Such acts, gestures, enactments, generally construed, are *performative* in the sense that the essence or identity that they otherwise purport to express are *fabrications* manufactured and sustained through corporeal signs and other discursive means. That the gendered body is performative suggests that it has no ontological status apart from the various acts which constitute its reality. This also suggests that if that reality is fabricated as an interior essence, that very interiority is an effect and function of a decidedly public and social discourse, the public regulation of fantasy through the surface politics of the body, the gender border control that differentiates inner from outer, and so institutes the “integrity” of the subject. In other words, acts and gestures, articulated and enacted desires create the illusion of an interior and organizing gender core, an illusion discursively maintained for the purposes of the regulation of sexuality within the obligatory frame of reproductive heterosexuality. If the “cause” of desire, gesture, and act can be localized within the “self” of the actor, then the political regulations and disciplinary practices which produce that ostensibly coherent gender are effectively displaced from view. The displacement of a political and discursive origin of gender identity onto a psychological “core” precludes an analysis of the political constitution of the gendered subject and its fabricated notions about the ineffable interiority of its sex or of its true identity.

If the inner truth of gender is a fabrication and if a true gender is a fantasy instituted and inscribed on the surface of bodies, then it seems that genders can be neither true nor false, but are only produced as the truth effects of a discourse of primary and stable identity. In *Mother Camp: Female Impersonators in America*, anthropologist Esther Newton suggests that the structure of impersonation reveals one of the key fabricating mechanisms through which the social construction of gender takes place. I would suggest as well that drag fully subverts the distinction between inner and outer psychic space and effectively mocks both the expressive model of gender and the notion of a true gender identity. Newton writes:

At its most complex, [drag] is a double inversion that says, “appearance is an illusion.” Drag says [Newton’s curious personification] “my ‘outside’ appearance is feminine, but my essence ‘inside’ [the body] is masculine.” At the same time it symbolizes the opposite inversion; “my appearance

'outside' [my body, my gender] is masculine but my essence 'inside' [myself] is feminine."¹

Both claims to truth contradict one another and so displace the entire enactment of gender significations from the discourse of truth and falsity.

The notion of an original or primary gender identity is often parodied within the cultural practices of drag, cross-dressing, and the sexual stylization of butch/femme identities. Within feminist theory, such parodic identities have been understood to be either degrading to women, in the case of drag and cross-dressing, or an uncritical appropriation of sex-role stereotyping from within the practice of heterosexuality, especially in the case of butch/femme lesbian identities. But the relation between the "imitation" and the "original" is, I think, more complicated than that critique generally allows. Moreover, it gives us a clue to the way in which the relationship between primary identification—that is, the original meanings accorded to gender—and subsequent gender experience might be reframed. The performance of drag plays upon the distinction between the anatomy of the performer and the gender that is being performed. But we are actually in the presence of three contingent dimensions of significant corporeality: anatomical sex, gender identity, and gender performance. If the anatomy of the performer is already distinct from the gender of the performer, and both of those are distinct from the gender of the performance, then the performance suggests a dissonance not only between sex and performance, but sex and gender, and gender and performance. As much as drag creates a unified picture of "woman" (what its critics often oppose), it also reveals the distinctness of those aspects of gendered experience which are falsely naturalized as a unity through the regulatory fiction of heterosexual coherence. *In imitating gender, drag implicitly reveals the imitative structure of gender itself—as well as its contingency.* Indeed, part of the pleasure, the giddiness of the performance is in the recognition of a radical contingency in the relation between sex and gender in the face of cultural configurations of causal unities that are regularly assumed to be natural and necessary. In the place of the law of heterosexual coherence, we see sex and gender denaturalized by means of a performance which avows their distinctness and dramatizes the cultural mechanism of their fabricated unity.

The notion of gender parody defended here does not assume that there is an original which such parodic identities imitate. Indeed, the parody is *of* the very notion of an original; just as the psychoanalytic notion of gender identification is constituted by a fantasy of a fantasy, the transfiguration of an Other who is always already a "figure" in that double sense, so gender parody reveals that the original identity after which gender fashions itself is an imitation without an origin. To be more precise, it is a production which, in effect—that is, in its effect—postures as an imitation. This perpetual displacement constitutes a fluidity of identities that suggests an openness to resignification and recontextualization; parodic proliferation deprives hegemonic culture and its critics of the claim to naturalized or essentialist gender identities. Although the gender meanings taken up in these parodic styles are clearly part of hegemonic, misogynist culture, they are nevertheless

1. Newton; *Mother Camp*, p. 103 [Butler's note].

denaturalized and mobilized through their parodic recontextualization. As imitations which effectively displace the meaning of the original, they imitate the myth of originality itself. In the place of an original identification which serves as a determining cause, gender identity might be reconceived as a personal/cultural history of received meanings subject to a set of imitative practices which refer laterally to other imitations and which, jointly, construct the illusion of a primary and interior gendered self or parody the mechanism of that construction.

According to Fredric Jameson's "Postmodernism and Consumer Society," the imitation that mocks the notion of an original is characteristic of pastiche rather than parody:

Pastiche is, like parody, the imitation of a peculiar or unique style, the wearing of a stylistic mask, speech in a dead language: but it is a neutral practice of mimicry, without parody's ulterior motive, without the satirical impulse, without laughter, without that still latent feeling that there exists something *normal* compared to which what is being imitated is rather comic. Pastiche is blank parody, parody that has lost its humor.²

The loss of the sense of "the normal," however, can be its own occasion for laughter, especially when "the normal," "the original" is revealed to be a copy, and an inevitably failed one, an ideal that no one *can* embody. In this sense, laughter emerges in the realization that all along the original was derived.

Parody by itself is not subversive, and there must be a way to understand what makes certain kinds of parodic repetitions effectively disruptive, truly troubling, and which repetitions become domesticated and recirculated as instruments of cultural hegemony.³ A typology of actions would clearly not suffice, for parodic displacement, indeed, parodic laughter, depends on a context and reception in which subversive confusions can be fostered. What performance where will invert the inner/outer distinction and compel a radical rethinking of the psychological presuppositions of gender identity and sexuality? What performance where will compel a reconsideration of the *place* and stability of the masculine and the feminine? And what kind of gender performance will enact and reveal the performativity of gender itself in a way that destabilizes the naturalized categories of identity and desire.

If the body is not a "being," but a variable boundary, a surface whose permeability is politically regulated, a signifying practice within a cultural field of gender hierarchy and compulsory heterosexuality, then what language is left for understanding this corporeal enactment, gender, that constitutes its "interior" signification on its surface? Sartre would perhaps have called this act "a style of being," Foucault, "a stylistics of existence." And in my earlier reading of Beauvoir,⁴ I suggest that gendered bodies are so many "styles of the flesh." These styles all never fully self-styled, for styles have a history, and those histories condition and limit the possibilities. Consider gender, for instance, as a *corporeal style*, an "act," as it were, which is both intentional

3. The manufactured consent that legitimates a dominant group and unifies a society, as theorized by the Italian Marxist ANTONIO GRAMSCI (1891-1937).

4. In chapter 1 of *Gender Trouble*.

and performative, where "*performative*" suggests a dramatic and contingent construction of meaning.

Wittig understands gender as the workings of "sex," where "sex" is an obligatory injunction for the body to become a cultural sign, to materialize itself in obedience to a historically delimited possibility, and to do this, not once or twice, but as a sustained and repeated corporeal project. The notion of a "project," however, suggests the originating force of a radical will, and because gender is a project which has cultural survival as its end, the term *strategy* better suggests the situation of duress under which gender performance always and variously occurs. Hence, as a strategy of survival within compulsory systems, gender is a performance with clearly punitive consequences. Discrete genders are part of what "humanizes" individuals within contemporary culture; indeed, we regularly punish those who fail to do their gender right. Because there is neither an "essence" that gender expresses or externalizes nor an objective ideal to which gender aspires, and because gender is not a fact, the various acts of gender create the idea of gender, and without those acts, there would be no gender at all. Gender is, thus, a construction that regularly conceals its genesis; the tacit collective agreement to perform, produce, and sustain discrete and polar genders as cultural fictions is obscured by the credibility of those productions—and the punishments that attend not agreeing to believe in them; the construction "compels" our belief in its necessity and naturalness. The historical possibilities materialized through various corporeal styles are nothing other than those punitively regulated cultural fictions alternately embodied and deflected under duress.

Consider that a sedimentation of gender norms produces the peculiar phenomenon of a "natural sex" or a "real woman" or any number of prevalent and compelling social fictions, and that this is a sedimentation that over time has produced a set of corporeal styles which, in reified form, appear as the natural configuration of bodies into sexes existing in a binary relation to one another. If these styles are enacted, and if they produce the coherent gendered subjects who pose as their originators, what kind of performance might reveal this ostensible "cause" to be an "effect"?

In what senses, then, is gender an act? As in other ritual social dramas, the action of gender requires a performance that is *repeated*. This repetition is at once reenactment and reexperiencing of a set of meanings already socially established; and it is the mundane and ritualized form of their legitimacy.⁵ Although there are individual bodies that enact these significations by becoming stylized into gendered modes, this "action" is a public action. There are temporal and collective dimensions to these actions, and their public character is not inconsequential; indeed, the performance is effected with the strategic aim of maintaining gender within its binary frame—an aim that cannot be attributed to a subject, but, rather, must be understood to found and consolidate the subject.

Gender ought not to be construed as a stable identity or locus of agency from which various acts follow; rather, gender is an identity tenuously constituted in time, instituted in an exterior space through a *stylized repetition*

5. See Victor Turner, *Dramas, Fields, and Metaphors* (Ithaca: Cornell University Press, 1974). See also Clifford Geertz, "Blurred Genres: The Refi-

guration of Thought," in *Local Knowledge: Further Essays in Interpretive Anthropology* (New York: Basic Books, 1983) [Butler's note].

of acts. The effect of gender is produced through the stylization of the body and, hence, must be understood as the mundane way in which bodily gestures, movements, and styles of various kinds constitute the illusion of an abiding gendered self. This formulation moves the conception of gender off the ground of a substantial model of identity to one that requires a conception of gender as a constituted *social temporality*. Significantly, if gender is instituted through acts which are internally discontinuous, then the *appearance of substance* is precisely that, a constructed identity, a performative accomplishment which the mundane social audience, including the actors themselves, come to believe and to perform in the mode of belief. Gender is also a norm that can never be fully internalized; "the internal" is a surface signification, and gender norms are finally phantasmatic, impossible to embody. If the ground of gender identity is the stylized repetition of acts through time and not a seemingly seamless identity, then the spatial metaphor of a "ground" will be displaced and revealed as a stylized configuration, indeed, a gendered corporealization of time. The abiding gendered self will then be shown to be structured by repeated acts that seek to approximate the ideal of a substantial ground of identity, but which, in their occasional *discontinuity*, reveal the temporal and contingent groundlessness of this "ground." The possibilities of gender transformation are to be found precisely in the arbitrary relation between such acts, in the possibility of a failure to repeat, a de-formity, or a parodic repetition that exposes the phantasmatic effect of abiding identity as a politically tenuous construction.

If gender attributes, however, are not expressive but performative, then these attributes effectively constitute the identity they are said to express or reveal. The distinction between expression and performativeness is crucial. If gender attributes and acts, the various ways in which a body shows or produces its cultural signification, are performative, then there is no pre-existing identity by which an act or attribute might be measured; there would be no true or false, real or distorted acts of gender, and the postulation of a true gender identity would be revealed as a regulatory fiction. That gender reality is created through sustained social performances means that the very notions of an essential sex and a true or abiding masculinity or femininity are also constituted as part of the strategy that conceals gender's performative character and the performative possibilities for proliferating gender configurations outside the restricting frames of masculinist domination and compulsory heterosexuality.

Genders can be neither true nor false, neither real nor apparent, neither original nor derived. As credible bearers of those attributes, however, genders can also be rendered thoroughly and radically *incredible*.

STUART MOULTHROP

b. 1957

By the late 1990s almost all American college and university students had access to the Internet, and many schools required incoming students to own a personal computer. The reliance on this technology represents a vast change in education and particularly in the production and transmission of written texts. Many predict that just as the printing press revolutionized writing, thinking, and education, so the spread of electronic media will revolutionize writing, publishing, and our very perception of written texts. Stuart Moulthrop's "You Say You Want a Revolution? Hypertext and the Laws of Media" (1991; rev. 1993) reviews the history and development of hypertext, assesses its possibilities, and sketches some of its links with postmodernist theory.

Born in Baltimore, Maryland, Moulthrop received his B.A. from George Washington University in 1979 and his Ph.D. from Yale University in 1986. He has taught at Yale, the University of Texas at Austin, and the Georgia Institute of Technology; since 1994 he has been on the faculty of the School of Communications Design of the University of Baltimore. He co-edited the innovative online humanities journal *Postmodern Culture* from 1995 to 1999, overseeing a pioneering hypertext special issue of the journal in 1997. In a series of essays written through the 1990s, Moulthrop was among the first analysts of the new electronic media and their relation to literature and theory, and one of the first practitioners of hypertextual fiction.

Hypertexts—a term coined by Theodor Nelson in 1965—are electronic documents connected by links that the reader can activate. The reader uses a software viewer or browser that recognizes links as commands and thus can open the document anchored by the link. These documents can be not only writings but photographs, audio files, drawings, or any other digitized materials; the reader can choose which links to follow, interacting with and activating the work. Hypertext changes the act of reading so that each text includes diverse other texts, promoting a version of what the poststructuralist theorist JULIA KRISTEVA has termed "intertextuality" as a matter of course. Unlike books, hypertexts make possible the juxtaposition of other media and support a mode of connection that does not depend on traditional linear, hierarchical models. In perusing hypertexts, one finds multiple pathways of reading.

Hypertext matured in the 1990s with the advent of the World Wide Web, which expanded the possible links to an incalculable number and held out the promise of new kinds of writing, a revisionary aesthetics of pastiche, new disciplinary arrangements, and a more democratic politics. Several writers, the novelist Robert Coover and Moulthrop himself among them, have explored the possibilities and implications of the medium for fiction. Influenced in part by WALTER BENJAMIN (especially "The Work of Art in the Age of Mechanical Reproduction," 1936; see above) and by the Canadian media critic Marshall McLuhan (1911–1980), who argue that media are not neutral carriers but influence social thought and organization, many intellectuals believe that hypertext heralds a paradigm shift away from the age of the codex or printed documents to a more democratic and interactive way of thinking.

Moulthrop both values the transformative potential of hypertext and criticizes its indiscriminate promotion. For him, particular strengths of hypertext include its ability to constructively disrupt traditional thinking practices, its ability to make visible the assumptions and practices that structure both reading and social life, and its ability to produce more critical readers. Moulthrop's writings invoke the metaphor of a "breakdown" or "crash" to express the arresting power of hypertext, a power founded on structural instability. Cybertexts—texts in virtual writing space—are "structures for breakdown, ways of thinking critically and creatively about all the plausible, deceptive constructions we find in cyberspace," he writes in one essay. Breakdowns violate

reader expectations, change the predicted course of reading, and open up possibilities for new paradigm shifts; they promote a radical form of what the Russian formalists (such as BORIS EICHENBAUM) termed "defamiliarization." In another essay, Moulthrop argues that "the act of reading in hypertext is constituted as struggle: a chapter of chances, a chain of detours, a series of revealing failures," a struggle that yields pleasure and counters the centralizing power of the system in which electronic writing takes part. In his own published hypertexts, the medium serves to destabilize the reader's complacency. His *Victory Garden* (1991), focusing on the Gulf War of 1991, uses hypertextual language to engage U.S. political culture. In "Hegirascope" (1995), another attempt to situate the reader in a "structure for breakdown," timed links—that is, links that appear only for a set period of time—construct a world that changes on its own as the reader attempts to control it.

In "You Say You Want a Revolution," our selection, Moulthrop reviews the early history of hypertext and sorts through the disparate views of its possibilities. He does not embrace the claim that hypertext by itself will bring about a revolution in culture or reading; rather, hypertext provides a way of talking about ambiguous impulses in postmodern culture. For Moulthrop, hypertext enhances textuality: it does not displace literacy, as some fear, but works to counter "post-literacy" in the age of television. Surprisingly, it retrieves many elements of typographic culture. Moulthrop notes the possible danger of hypertext's being controlled by large corporations, but he suggests that emerging technology may shatter such constraints.

Relying on a broad range of references, Moulthrop shows how hypertext is linked with contemporary poststructuralist theory, particularly in its promotion of intertextuality and the active engagement of the reader. This engaged reader resembles the one sought by ROLAND BARTHES when he praised the more active "writerly text" over the conventional "readerly" work meant to be passively consumed. Moulthrop also notes a parallel with deconstructive theory in hypertext's disruption of language. And he explains that hypertext realizes JEAN BAUDRILLARD's notion of the simulacrum, because the writing on a computer monitor is not physically "there" in the same way that printed text exists on a page—hypertext is virtual, "always a simulacrum for which no physical instantiation exists." Making another poststructuralist connection, Moulthrop suggests that hypermedia embodies GILLES DELEUZE AND FÉLIX GUATTARI's notion of the rhizome, a sprawling network that has no origin, end point, trajectory, or hierarchy.

While some critics celebrate hypertext for its promise of new paradigms, new art, and new political practice, others decry it for the same reasons. Some lament the loss of print culture and the simple pleasures of reading a book. Neil Postman, an American critic of culture and education, argues that interactive media stupefy the public, displace active writing and thinking, and deny the real social world outside the machine; like most who hold these views, he sees computer-mediated games as exemplifying these points. Others, more hopeful about the technological trend, criticize today's hypermedia as not going far enough in challenging traditional aesthetic and political paradigms. Though it appears to undermine readerly passivity, its openness and interactivity are limited to preset choices determined for the reader. Other critics worry about corporate and government controls on a medium intended to promote free and unlimited exchange. In his self-consciously balanced assessment of hypertext, Moulthrop notes that we should be both hopeful about its future and skeptical—borrowing from postmodern writers, he uses the word "paranoid"—about the ongoing development of hypermedia; as he warns, "it seems equally possible that our engagement with interactive media will follow the path of reaction, not revolution."

BIBLIOGRAPHY

Stuart Moulthrop has written numerous essays on hypertext, among them "Rhizome and Resistance: Hypertext and the Dreams of a New Culture," in a pioneering anthology, *Hyper / Text / Theory* (ed. George Landow, 1994); "Traveling in the Breakdown Lane: A Principle of Resistance for Hypertext," in a special issue of the journal *Mosaic* 28 (1995); "Media Matters: Technologies of Literary Production"; "Decorating the Corpse: Hypertext after the Web," the introduction to a 1997 special issue of *Postmodern Culture* on hypertext that Moulthrop edited; "No War Machine," in the anthology *Reading Matters: Narrative in the New Media Ecology* (ed. Joseph Tabbi and Michael Wutz, 1997); and "Everybody's Elegies," the concluding response to the collection *Passions, Pedagogies, and Twenty-first Century Technologies* (ed. Gail E. Hawisher and Cynthia L. Selfe, 2000). A practitioner of as well as a commentator on hypertext, Moulthrop is the author of some of the earliest hyperfictions, including *Victory Garden* (1991); "Dreamtime" (1992); "Hegirascope" (1995); "The Color of Television," with Sean Cohen (1996); "Hegirascope 2" (1997); and "Reagan Library" (1999).

In "Trivializing or Liberating? The Limitations of Hypertext Theorizing," *Mosaic* 32 (1999), David Miall criticizes Moulthrop and other advocates of hypertext, finding that claims on its behalf have been too universalizing, have too reductively deprecated print literature, and have misunderstood the nature of literary reading. J. Yellowlees Douglas, *The End of Books—Or Books without End? Reading Interactive Narratives* (2000), examines the possible advantages of hypertext over print fiction, noting the multiple openings and endings of Moulthrop's hypertexts. Many sources for hypertext, aptly enough, are on the World Wide Web.

You Say You Want a Revolution? Hypertext and the Laws of Media

When this essay first appeared, all of two years ago,¹ very few people outside the information sciences had heard of **hypertext**, a technology for creating electronic documents in which the user's access to information is not constrained, as in books, by linear or hierarchical arrangements of discourse. This obscurity had always seemed strange, since **hypertext** has been around for a long time. Its underlying concept—creating and enacting linkages between stored bits of information—originated in 1945 with Vannevar Bush, science advisor to President Roosevelt, who wanted to build a machine called Memex² to help researchers organize disparate sources of knowledge.³ Bush's design, based on microfilm, rotating spools, and photoelectric cells, proved impractical for the mechanical technologies of the late 1940s. But when electronic computers arrived on the academic scene a few years later, Bush's projections were quickly realized. In a sense, all distributed computing systems are **hypertextual**, since they deliver information dynamically in response to users' demands.⁴ Indeed, artificial intelligence researchers cre-

tic Monthly, July 1945, pp. 101–8; and George Landow, *Hypertext: The Convergence of Contemporary Critical Theory and Technology* (Baltimore: Johns Hopkins University Press, 1992), pp. 14–15 [Moulthrop's note].

4. Jay Bolter, *Writing Space: The Computer, Hypertext, and the History of Writing* (Fairlawn, N.J.: Erlbaum, 1990), pp. 9–10 [Moulthrop's note].

ated the first **hypertextual** narrative, the computer game called "Adventure," in order to experiment with interactive computing in the early 1960s.⁵

It was about this time that Theodor Holm Nelson,⁶ a sometime academic and a dedicated promoter of technology, coined the term "**hypertext**." Nelson offered plans for a worldwide network of information, centrally coordinated through a linking and retrieval system he called Xanadu. In a trio of self-published manifestoes (*Computer Lib*, *Dream Machines*, *Literary Machines*), Nelson outlined the structure and function of Xanadu, right down to the franchise arrangements for "Silverstands," the informational equivalent of fast-food outlets where users would go to access the system. (This was long before anyone dreamed of personal computers.) Nelson's ideas got serious consideration from computer scientists, notably Douglas Englebart, one of the pioneers of users interface design. Englebart and Nelson collaborated at Brown University in the early 1970s on a **hypertext** system called FRESS, and a number of academic and industrial experiments followed.⁷ To a large extent, however, the idea of **hypertext**—which both Bush and Nelson had envisioned as a dynamic, read/write system in which users could both manipulate and alter the textual corpus—was neglected in favor of more rigidly organized models like distributed databases and electronic libraries, systems that operate mainly in a read-only retrieval mode. To Nelson, **hypertext** and other forms of interactive computing represented a powerful force for social change. "Tomorrow's **hypertext** systems have immense political ramifications," he wrote in *Literary Machines*. Yet no one seemed particularly interested in exploring those ramifications, at least not until the mid-1980s, when the personal computer business went ballistic.

1987: the *annus mirabilis*⁸ of **hypertext**. Many strange and wonderful things happened in and around that year. Nelson's underground classics, *Computer Lib* and *Dream Machines*, were published by Microsoft Press; Nelson himself joined Autodesk, an industry leader in software development, which announced plans to support Xanadu as a commercial enterprise; the Association for Computing Machinery sponsored the first of its international conferences on **hypertext**; and most important, Apple Computer began giving away HyperCard, an object-oriented **hypertext** system, to anyone who owned a Macintosh personal computer. HyperCard is the Model T⁹ of **hypertext**: relatively cheap (originally free), simple to operate (being largely an extension of the Macintosh's graphical user interface), quite crude compared to more state-of-the-art products, but still enormously powerful. In the late 1980s it seemed plausible that HyperCard and other personal computer applications would usher in a new paradigm for textual communication, the logical step beyond desktop publishing to all-electronic documents containing multiple pathways of expression.

It has now been six years since that great unveiling of **hypertext** and no such "digital revolution" has arrived. At one point, sources in the personal computer industry foresaw a burgeoning market for "stackware" and other **hypertextually** organized products; nothing of the kind has materialized.

tion and Survey," *Computer* 20 (1987): 17–41 [Moulthrop's note].

8. Year of wonders (Latin).

9. That is, like the first mass-produced automobile, the Model T Ford (1908–27). Containing both data and code (computer instructions), HyperCard enabled its objects (data) to interact.

Instead, the most commercially ambitious application of HyperCard in electronic publishing has been the Voyager Company's line of "Expanded Books," based exclusively on print titles and carefully designed to duplicate the look and function of traditional books.¹ True, the hypertext concept has finally received some attention from humanist academics. Jay David Bolter's *Writing Space* (1991) outlines a historical view of hypertext as the successor to print technology—and with Nelson's *Literary Machines* is one of the first studies of hypertext to be presented in hypertextual form. George Landow's *Hypertext* (1992) places developments in electronic writing within the context of poststructuralist criticism and postmodern culture (and is also due to appear shortly as a hypertext). The spectre of hypertextual fiction has even been raised by the novelist Robert Coover in the *New York Times Book Review*.² But paradoxically (or as fate would have it), this recognition comes when hypertext is no longer what one of my colleagues calls a "bleeding edge" technology. Indeed, much of the cachet seems to have bled out of hypertext, which has been bumped from the limelight by hazier and more glamorous obsessions: cyberspace, virtual reality, and the Information Highway.

5 Such changes of fashion seem a regular hazard of the postmodern territory—taking *post modo* at its most literal, to mean "after the now" or *the next thing*. Staring down at our desktop, laptop, or palmtop machines—which we know will be obsolete long before we have paid for them—those of us within what Fred Pfeil calls the "baby-boom professional-managerial class" will always desire *the next thing*.³ Not for nothing have we updated *Star Trek*; our true space Odyssey, into a "Next Generation."⁴ We are the generation (and generators) of nextness. Or so Steve Jobs' once assumed, somewhat to his present chagrin. Possibly hypertext, like Jobs's sophisticated NeXT computer, represents an idea that hasn't quite come to the mainstream of postmodern culture, a precocious curio destined to be dug up years from now and called "strangely ahead of its time." Unfortunately, as Ted Nelson can testify, hypertext has been through this process once before. A certain circularity seems to be in play.

6 Perhaps the problem lies not in our technologies or the things we want to do with them, but in our misunderstanding of technological history. Some of us keep saying, as I note in this essay, that we need a revolution, a paradigm shift, a total uprooting of the old information order: an apocalyptic rupture of "blessed break," as Robert Lowell once put it.⁶ And yet that is not what we have received, at least so far. Maybe we suffer this disappointment because we do not understand what we are asking for. What could "revolution" mean in a postmodern context? We might look for answers in Baudrillard, Lyotard, Donna Haraway, or Hakim Bey;⁷ but Hollywood, as usual, has

Odyssey" was the subtitle of Stanley Kubrick's science fiction film *2001* (1968).

5. Co-founder of Apple Corporation (b. 1955), who left Apple in 1985 after a power struggle and founded NeXT Corporation, producing a highly advanced computer that was a commercial failure; Jobs returned to Apple in 1996.

6. In "For the Union Dead" (1959), by the American lyric poet Lowell (1917–1977).

7. Moulthrop names theorists of postmodernism: the French philosopher JEAN BAUDRILLARD (b. 1929) argues that in postmodernism, representa-

the best line. J. F. Lawton's screenplay for *Under Siege*,⁸ last summer's Steven Seagal vehicle, includes an enlightening exchange between a CIA spy-master (played by Nick Mancuso) and a rebellious terrorist formerly in his employ (Tommy Lee Jones). The spook chides the terrorist, reminding him that the sixties are over, "the Movement is dead." Jones's character replies: "Yes! Of course! Hence the name: 'Movement.' It moves a certain distance, then it stops. Revolution gets its name by always coming back around—in your face."

Perhaps hypertext is just another movement. On one level, it is hard to discriminate among hypertext, virtual reality, and next year's interactive cable systems. All three seem to move in the same general direction, attempting to increase and enrich our consumption of information. But as Andrew Ross has noted, undertakings of this type may have large consequences.⁹ Potentially at least, they threaten to upset the stability of language-as-property—a possibility with great political ramifications indeed. It might therefore be dangerous to dismiss hypertext as merely a local movement, an initiative as dead as the social agendas of the sixties from which it partly sprang. Considering the vicissitudes of hypertext's history, we might indeed call it a "revolution"—if revolution is something that comes full circle, escaping repression to smack us smartly in the face. Such being the case, however, is this revolution something our culture genuinely wants? When it comes to information technologies, what *do* we want? Why are we moving in circles? What is this figure we are weaving, twice or thrice,¹ and what enchantment or enchantment do we wish to contain?

The original Xanadu (Samuel Taylor Coleridge's) came billed as "A Vision in a Dream," designated doubly unreal and thus easily aligned with our era of "operational simulation" where, strawberry fields,² nothing is "real" in the first place, since no place is really "first."³ But all great dreams invite revisions, and these days we find ourselves perpetually on the re-make. So here is a new Xanadu™, the universal hypertext system proposed by Theodor Holm Nelson—a vision which, unlike its legendary precursor, cannot be integrated into the dream park of the hyperreal. Hyperreality, we are told, is a site of collapse or implosion where referential or "grounded" utterance becomes indistinguishable from the self-referential and the imaginary. We construct our representational systems not in serial relation to indisputably

tion has been replaced by a simulation of reality that leads to "hyperreality"; for the French philosopher JEAN-FRANÇOIS LYOTARD (1925–1998), postmodernity is characterized by the collapse of all explanatory master narratives; the American feminist HARAWAY (b. 1944) presents a "cyborg" vision of culture in her best-known essay, "A Manifesto for Cyborgs" (1985; see above); and Hakim Bey (pseudonym of Peter Lamborn Wilson) is a philosopher and radical cultural critic whose influential zine publications are collected in T.A.Z.: *The Temporary Autonomous Zone, Ontological Anarchy, Poetic Terrorism* (1991) and elsewhere.

9. Andrew Ross, *Strange Weather: Culture, Science, and Technology in the Age of Limits* (New York: Verso, 1991), p. 88 [Moulthrop's note].

1. An echo of the final lines of "Kubla Khan" (1797, pub. 1816), by the English Romantic poet

SAMUEL TAYLOR COLERIDGE (1772–1834): "Weave a circle round him thrice, / And close your eyes with holy dread, / For he on honey-dew hath fed, / And drunk the milk of Paradise." The poem, a "vision" that Coleridge claimed to have written in an opium dream, is set in Xanadu, a mythical place.

2. An allusion to the Beatles' song "Strawberry Fields Forever" (pub. 1967; words and music by John Lennon and Paul McCartney), which tells of a place where "Nothing is real" (the actual Strawberry Field is a park in Liverpool, England). The title of this essay quotes the beginning of their song "Revolution" (1968): "You say you want a revolution / Well, you know / We all want to change the world."

3. Jean Baudrillard, *Simulations*, trans. Paul Foss, Paul Patton, and Phillip Beitchman (New York: Semiotext(e), 1983), p. 10 [Moulthrop's note].

"real" phenomena, but rather in recursive and multiple parallel, "mapping on to different co-ordinate systems."⁴ Maps derive not from territories but from previous map-making enterprises: all the world's a simulation.

This reality implosion brings serious ideological consequences, for some would say it invalidates the informing "master narratives" of modernity, leaving us with a proliferation of incompatible discourses and methods.⁵ Such unchecked variation, it has been objected, deprives social critique of a clear agenda.⁶ Hyperreality privileges no discourse as absolute or definitive; critique becomes just another form of paralogy,⁷ a countermove in the language game that is techno-social construction of reality. The game is all-encompassing, and therein lies a problem. As Linda Hutcheon observes, "the ideology of postmodernism is paradoxical, for it depends upon and draws its power from that which it contests. It is not truly radical; nor is it truly oppositional."⁸

This problem of complicity grows especially acute where media and technologies are concerned. Hyperreality is as much a matter of writing practice as it is of textual theory: as Michael Heim points out, "[i]n magnetic code there are no originals."⁹ Electronic information may be rapidly duplicated, transmitted, and assembled into new knowledge structures. From word processing to interactive multimedia, postmodern communication systems accentuate what Ihab Hassan calls "immanence" or "the intertextuality of all life. A patina of thought, of signifiers, of 'connections,' now lies on everything the mind touches in its gnostic (noö) sphere . . ."¹⁰ Faced with this infinitely convoluted system of discourse, we risk falling into technological abjection, a sense of being hopelessly abandoned to simulation, lost in "the technico-luminous cinematic space of total spatio-dynamic theatre."¹¹ If all the world's a simulation, then we are but simulacral subjects cycling through our various iterations, incapable of any "radical" or "oppositional" action that would transform the techno-social matrix. Even supposedly resistant attitudes like "cyberpunk," as Andrew Ross has observed, tend to tail off into cynical interludes where the rules of the game go unquestioned.¹²

Of course, this pessimistic or defeatist outlook is hardly universal. We are far more likely to hear technology described as an instrumentality of change or a tool for liberation. Bolter, Drexler, McCorduck, and Zuboff all contend¹³ that post modern modes of communication (electronic writing, computer networks, text-linking systems) can destabilize social hierarchies and promote broader definitions of authority in the informational workplace. Heim

points out that under the influence of these technologies "psychic life will be redefined."⁵ But if Hutcheon is correct in her observation that postmodernism is non-oppositional, then how will such a reconstruction of order and authority take place? How and by whom is psychic life—and more important, political life—going to be redefined?

These questions must ultimately be addressed not in theory but in practice; which is where the significance of Nelson's new Xanadu lies. With Xanadu, Nelson invalidates technological abjection, advancing an unabashedly millenarian vision of technological renaissance in which the system shall set us free.⁶ In its extensive ambitions, Xanadu transcends the hyperreal. It is not an opium vision but something stranger still, a business plan for the development of what Barthes called the "social space" of writing,⁷ a practical attempt to reconfigure literate culture. Xanadu is the most ambitious project ever proposed for hypertext or "non-sequential writing."⁸ Hypertext systems exploit the interactive potential of computers to reconstruct text not as a fixed series of symbols, but as a variable-access database in which any discursive unit may possess multiple vectors of association.⁹ A hypertext is a complex network of textual elements. It consists of units or "lexias,"¹ which may be analogous to pages, paragraphs, sections, or volumes. Lexias are connected by "links," which act like dynamic footnotes that automatically retrieve the material to which they refer. Because it is no longer book-bounded, hypertextual discourse may be modified at will as reader/writers forge new links within and among documents. Potentially this collectivity of linked text, which Nelson calls the "docuverse," can expand without limit.

As Nelson foresees it, Xanadu would embody this textual universe. The system would provide a central repository and distribution network for all writing: it would be the publishing house, communications medium, and great hypertextual Library of Babel.² Yet for all its radical ambitions, Nelson's design preserves familiar proprieties. Local Xanadu outlets would be Silverstands™, retail access and consulting centers modeled after fast-food franchises and thus integrated with the present economy of information exchange. Xanadu would protect intellectual property through copyright. Users would pay per byte accessed and would receive royalties when others obtained proprietary material they had published in the system. The problems and complexities of this scheme are vast, and at the moment, the fulfilled Xanadu remains a "2020 Vision," a probe into the relatively near future. But it is a future with compelling and important implications for the post-modern present.

The future, as Disney and Spielberg have taught us, is a place we must

12

13

14

come "back" to.³ The American tomorrow will be a heyday of nostalgia, an intensive pursuit of "lost" or "forgotten" values. Xanadu is no exception: Ted Nelson sees the history of writing in the 21st century as an epic of recovery. His "grand hope" lies in "a return to literacy, a cure for television stupor, a new Renaissance of ideas and generalist understanding, a grand posterity that does not lose the details which are the final substance of everything."⁴ To a skeptical observer, this vision of Xanadu might suggest another domain of the postmodern theme park. Gentle readers, welcome to Literacyland!

5 But on the other hand, this vision might add up to more than just a side-show attraction. Nelson foresees a renovation of culture, a unification of discourse, a reader-and-writer's paradise where all writing opens itself to / in the commerce of ideas. This is the world in which all "work" becomes "text," not substance but reference, not containment but connection.⁵ The magnitude of the change implied here is enormous. But what about the politics of that change? What community of interpretation—and beyond that, what social order—does this intertextual world presume? With the conviction of a true Enlightenment man, Nelson envisions "a new populism that can make the deeper understandings of the few at last available to the many."⁶

6 What is *populism*?—another of Nelson's infamous neologisms (e.g., "hypermedia," "cybercrud," "teledildonics"), in this case a portmanteau combining "populism" with "elite." The word suggests the society-of-text envisioned by theorists like Shoshana Zuboff and Jay David Bolter, a writing space in which traces of authority persist only as local and contingent effects, the social equivalent of the deconstructed author-function.⁷ A "populite" culture might mark the first step toward realization of Jean-François Lyotard's "game of perfect information," where all have equal access to the world of data, and where "[g]iven equal competence (no longer in the acquisition of knowledge, but in its production), what extra performativity depends on in the final analysis is 'imagination,' which allows one either to make a new move or change the rules of the game."⁸ This is the utopia of information-in-process, the ultimate wetware dream of the clerisy: discourse converted with 100 percent efficiency into capital, the mechanism of that magical process being nomology or rule-making—admittedly a rather specialized form of "imagination."

7 At least two troubles lurk in this paradise. First, the prospect that social / textual order will devolve not unto the many but only to a very few; and more important, that those few will fail to recognize the terms of their splendid isolation. Consider the case of the reluctant computer dick Clifford Stoll, whose memoir, *The Cuckoo's Egg*, nicely illustrates these problems. Stoll excoriates "cyberpunks," electronic vandals who abuse the openness of scientific computing environments. Their unsportsmanlike conduct spoils the

9. Intelligentsia (a term introduced by Coleridge).

information game, necessitating cumbersome restrictions on the free flow of data. But Stoll's definition of informational "freedom" appears murky at best. He repeatedly refers to the mainframe whose system he monitors as "his" computer, likening cybernetic intrusions to burglaries. Digital information, as Stoll sees it, stands in strict analogy to material and private property.

Private in what sense? Stoll professes to believe that scientists must have easy access to research results, but only within their own communities. He is quick to condemn incursions by "unauthorized" outsiders. There is some sense in this argument: Stoll repeatedly points out that the intruder in the Stanford mainframe might have interfered with a lifesaving medical imaging system. But along with this concern comes an ideological danger. Who decides what information "belongs" to whom? Stoll's "popular elite" is restricted to academic scientists, a version of "the people" as *nomenklatura*,¹ those whose need to know is defined by their professional affiliation. More disturbingly, Stoll seems unaware of the way this brotherhood is situated within larger political hierarchies. Describing a meeting with Pentagon brass, he reflects: "How far I'd come. A year ago, I would have viewed these officers as war-mongering puppets of the Wall Street capitalists. This, after all, was what I'd learned in college. Now things didn't seem so black and white. They seemed like smart people handling a serious problem."²

Here is elite populism at its scariest. Though he protests (too much) his political correctness, Stoll's sense of specialist community shifts to accommodate the demands of the moment. He observes repeatedly over the course of the memoir that he is finally "coming of age" as a working scientist. When in Fort Meade,³ Stoll does as the natives do, recognizing agents of Air Force Intelligence, the National Security Agency, even the CIA and FBI as brothers-in-craft. After all, they are "smart" (technologically adept) and "serious" (professional). Their immediate goal seems legitimate and laudable. They are just "handling" a problem, tracking down the intruder who has violated the electronic privacy of Stoll's community (and, not coincidentally, their own). They are the good policemen, the ones Who Are Your Friends, not really "Them" after all but just a quaint, braid-shouldered version of "Us."

Stoll is not troubled that these boon companions live at the heart of the military-industrial complex. He disregards the fact that they seem aware of domestic communications intercepts—in phone conversations, Stoll's CIA contact refers to the FBI as "the F entity," evidently to thwart a monitoring program.⁴ Stoll does task his agency buddies for sowing disinformation and managing dirty wars,⁵ but this critique never gets much past the stage of rhetorical questions. In fact Stoll seems increasingly comfortable in the intelligence community. If the data spooks turn out to be less interested in freedom of scientific speech than in quashing a security leak, Stoll has no real objection. His own ideals and interests are conveniently served in the process.

What leads to such regrettable blindness, and how might it have been

1. Political elite (Russian).

prevented? These may be especially pertinent questions as we consider entrusting our literate culture to an automated information system. The spooks are not so easily conjured away. It is no longer sufficient to object that scientists and humanists form distinct communities, and that Stoll's seduction could not happen in our own elect company. The old "Two Cultures"⁶ paradigm has shifted out from under us, largely through catholic adoption of technologies like data networks and **hypertext**. Networks are networks, and we can assume that most if not all of them will eventually engender closed elites. Fascism, as Deleuze and Guattari instruct, is a matter of all-too-human desire.⁷ What can shield humanist networks, or even the "generalist" networks Nelson foresees, from the strategy of divide and co-opt? What might insulate Xanadu from those ancestral voices prophesying war?⁸

The answer, as forecasters like Pamela McCorduck, K. Eric Drexler, and Andrew Ross point out, may lie in the **hypertext** concept itself—the operating principle of an open and dynamic medium, a consensual canon with a minimum of hierarchical impedances and a fundamental instability in those hierarchies it maintains. Visionary and problematic as it may seem, Nelson's idea of "populitism" has much to recommend it—not the least of which is its invitation to consider more carefully the likely social impact of advanced communication systems. In fact **hypertext** may well portend social change, a fundamental reshaping of text production and reception. The telos of the electronic society-of-text is anarchy in its true sense: local autonomy based on consensus, limited by a relentless disintegration of global authority. Since information is now virtually an equivalent of capital, and since textuality is our most powerful way of shaping information, it follows that Xanadu might indeed change the world. But to repeat the crucial question, how will this change come about? What actual social processes can translate the pragmatics of Nelson's business plan into the radicalism of a **hypertext** manifesto?

The complete answers lie with future history. In one respect, Ted Nelson's insistence that Xanadu become an economically viable enterprise is exemplary. We will discover the full implications of this technology only as we build, manage, and work in **hypertextual** communities, starting within the existing constraints of information capitalism. But while we wait on history, we can try a little augury. In trying to theorize a nascent medium, one is reduced to *playing* medium, eking out predictions with the odd message from the Other Side. Which brings us to the last work of Marshall McLuhan, a particularly important ancestral voice from whom to hear. At his death, McLuhan left behind notes for an enigmatic final project: the fourfold "Laws of Media" which form the framework for a semiotics of technology.⁹ The Laws proceed from four basic questions that can be asked about any invention:

6. A phrase coined by the English novelist and physicist C. P. Snow (1905–1980), who saw a clear difference between how those working in the sciences and those working in the humanities think.

7. Gilles Deleuze and Félix Guattari, *Anti-Oedipus: Capitalism and Schizophrenia*, trans. Robert Hurley, Mark Seem, and Helen R. Lane (New York: Viking, 1977), p. 26 [Moulthrop's

note]. DELEUZE (1925–1995), French antirationalist philosopher; GUATTARI (1936–1992), French psychiatrist and poststructuralist philosopher.

8. Coleridge, "Kubla Khan," line 40.

9. H. Marshall McLuhan and Eric McLuhan, *The Laws of Media: The New Science* (Toronto: University of Toronto Press, 1988) [Moulthrop's note]. Marshall McLuhan (1911–1980), Canadian cultural historian and influential theorist of media.

- What does it enhance or intensify?
- What does it render obsolete or displace?
- What does it retrieve that was previously obsolete?
- What does it produce or become when taken to its limit?

As McLuhan demonstrates, these questions are particularly instructive when applied to pivotal or transforming technologies like printing or broadcasting. They are intended to discover the ways in which information systems affect the social text, rearranging sense ratios and rewriting theories of cultural value. They reveal the nature of the basic statement, the "uttering or 'outring'" that underlies mechanical extensions of human faculties. If we put Xanadu and hypertext to this series of questions, we may discover more about both the potential and the limits of hypertext as an agency of change.

1. What does hypertext enhance or intensify?

According to McLuhan's standard analysis, communications media adjust the balance or "ratio" of the senses by privileging one channel of perception over others. Print promotes sight over hearing, giving us an objectified, perspectival, symbolized world: "an eye for an ear."¹ But this approach needs modification for our purposes. Hypertext differs from earlier media in that it is not a new thing at all but a return or *recursion* (of which more later) to an earlier form of symbolic discourse, namely print. The effect of hypertext thus falls not simply upon the sense channels but farther along the cognitive chain. As Vannevar Bush pointed out in the very first speculation on informational linking technologies, these mechanisms enhance the fundamental capacity of *pattern recognition*.²

Hypertext is all about connection, linkage, and affiliation. Formally speaking, its universe is the one Thomas Pynchon had in mind when he defined "paranoia" as "the realization that *everything is connected*, everything in the Creation—not yet blindingly one, but at least connected. . . ."³ In hypertext systems, this ethos of connection is realized in technics; users do not passively rehearse or receive discourse, they explore and construct links.⁴ At the kernel of the hypertext concept lie ideas of affiliation, correspondence, and resonance. In this, as Nelson has argued from the start, hypertext is nothing more than an extension of what literature has always been (at least since "Tradition and the Individual Talent"⁵)—a temporally extended network of relations which successive generations of readers and writers perpetually make and unmake.

This redefinition of textuality gives rise to a number of questions. What does it mean to enhance our sensitivity to patterns in this shifting matrix, to become sensitized to what Pynchon calls "other orders behind the visible?" Does this mean that hypertext will turn us into "paranoids," anxious interpreters convinced that all structures are mysteriously organized against us? What does interpretive "resistance" mean in a hypertextual context? Can

such a reading strategy be possible after poststructuralism, with the author-function reduced (like Pynchon himself) to a voiceless occasion for deconstructive "writing"?⁶ Perverse though it may seem, hypertext does increase the agonistic element in reading. Early experience with hypertext narrative suggests that its readers may actually be more concerned with prior authority and design than are readers of conventional writing. The apparent "quick-liming of the author" does not dispel the aura of intention in hypertext.⁷ The constantly repeated ritual of interaction, with its reminder of discursive alternatives, reveals the text as a made thing, not monologic perhaps but hardly indeterminate. The text gestures toward openness—*what options can you imagine?*—but then swiftly forecloses: some options are available but not others, and someone clearly did the defining long before you began interacting. The author persists, undead presence in the literary machine, the inevitable Hand that turns the time. Hypertextual writing—at least when considered as read-only or "exploratory" text⁸—may thus emphasize antithetical modes of reading, leading us to regard the deconstructed system-maker much in the way that Leo Bersani describes the author of *Gravity's Rainbow*: as "the enemy text."⁹

28 So perhaps we need a Psychiatrist General's Warning: Interacting With This Hypertext Can Make You Paranoid—indeed it must, since the root sense of paranoia, a parallel or parallax gnosis,¹ happens to be a handy way to conceive of the meta-sense of pattern recognition that hypertext serves to enhance. But would such a distortion of our cognitive ratios necessarily constitute pathology? In dealing with vast and nebulous information networks—to say nothing of those corporate-sponsored "virtual realities" that may lie in our future—a certain "creative paranoia" may be a definite asset. In fact the paragnosticism implicit in hypertext may be the best way to keep the information game clean. Surrounded by filaments and tendrils of a network, the sojourner in Xanadu or other hypertext systems will always be reminded of her situation in a fabric of power arrangements. Her ability to build and pursue links should encourage her to subject those arrangements to inquiry. Which brings us to the second of McLuhan's key questions:

2. What does hypertext displace or render obsolete?

29 Though it may be tempting to respond, *the book, stupid*, that answer is negligible. The book is already "dead" (or superseded) if by "alive" you mean that the institution in question is essential to our continued commerce in ideas. True, the cultural indications are ambiguous. Irving Louis Horowitz argues that reports of the book's demise are exaggerated; even

1. Knowledge (Greek). Parallax: the apparent displacement of an object when observed from two points of view. The roots of *paranoia* are the Greek words *para* (near) and *nous* (mind, reason). *Paragnosticism* later in this paragraph is Moulthrop's coinage to denote deep skepticism.

in an age of television and computers, we produce more books each year than ever before.² Indeed, our information ecology seems likely to retain a mix of print and electronic media for at least the next century. Yet as Alvin Kernan recently pointed out, the outlook for books in the long run is anything but happy.³ As the economic and ecological implications of dwindling forests come home, the cost of paper will rise precipitously. At the same time, acidic decay of existing books will enormously increase maintenance costs to libraries. Given these factors, some shift to electronic storage seems inevitable (though Kernan, an analog man to the last, argues for microfilm).

Yet this change in the medium of print does not worry cultural conservatives like Kernan, Neil Postman, or E. D. Hirsch nearly so much as the prospect that the decline of the book may terminate the cultural dominance of print. The chief technological culprit in Kernan's "death of literature" is not the smart machine but the idiot box. "Such common culture as we still have," Kernan laments, "comes largely from television."⁴ But the idiot box—or to be precise, the boxed idiot—is precisely the intellectual problem that **hypertext** seems excellently suited to address. In answer to McLuhan's second question—what does **hypertext** render obsolete?—the best answer is not *literacy* but rather *post-literacy*. As Nelson foresees, the development of **hypertext** systems implies a revival of typographic culture (albeit in a dynamic, truly paperless environment). That forecast may seem recklessly naive or emptily prophetic, but it is quite likely valid. **Hypertext** means the end of the death of literature.

Here the voice of the skeptic must be heard: *a revival of literacy?—read my lips: not in a million years*. Even the most devoted champion of print is likely to resist the notion of a Gutenberg renaissance.⁵ In the West, genuine literacy—cultural, multicultural, or simply functional—can be found only among a well-defined managerial and professional class. At present that class is fairly large, but in the U.S. and U.K., world leaders in *laissez-faire* education, it is contracting noticeably. So it must seem foolish to imagine, as Ted Nelson does, a mass consumer market for typographic information, a growth industry based on the electronic equivalent of the local library.

Indeed, should Xanadu become a text-only system (which is not intended), its prospects would be poor in the long run. There are however other horizons for interactive textuality—not just **hypertext** but another Nelsonian coinage, "hypermedia." Print is not the only means of communication deliverable in a polysequential format articulated by software links. In trying to imagine the future of **hypertext** culture, we must also consider interactive multimedia "texts" that incorporate voice, music, animated graphics, and video along with alphabetic script.⁶ **Hypertext** is about connection—promiscuous, pervasive, and polymorphously perverse connection. It is a writing practice

ideally suited to the irregular, the transgressive, and the carnivalesque. Culturally speaking, the *promiscuity* of hypertext (in the root sense of “a tendency to seek relations”) knows no bounds of form, format, or cultural level. There is no reason to assume that hypertext or hypermedia should not support popular as well as elite culture, or indeed that it might not promote a “populite” miscegenation of discourses.

But what can this mean—talking books in homeboy jive? Street rap mixed over Eliotic scholia? Nintendo with delusions of cinema? Or worse, could we be thinking of yet more industrial light and magic,⁸ the Disneyverse of eyephones and datagloves where YOU (insert userName) ARE IN THE FANTASY? Perhaps, as one critic of the computer industry recently put it, interactive multimedia must inevitably decay to its lowest common denominator, “hyper-MTV.”⁹ According to this analysis, the linear and objectifying tendencies of any print content in a multimedial text would be overwhelmed by the subjective, irrational, and emotive influence of audio/video. This being the case, hypertext could hardly claim to represent “a cure for television stupor.”

But Nelson’s aspiration should not be so easily set aside as merely a vision in a dream. Hypertext does indeed have the power to recover print literacy—though not in quite the way that Nelson supposes; which brings us to the third of McLuhan’s queries:

3. What does hypertext retrieve that was previously obsolete?

Xanadu and similar projects could invite large numbers of people to become reacquainted with the cultural power of typographic literacy. To assert this, of course, is to break with McLuhan’s understanding of media history. It is hard to dispute the argument of *Understanding Media* and *The Gutenberg Galaxy*¹ that the culture of the printing press has entered into dialectic contention with a different ethos based on the “cool” immediacy of broadcasting. But though that diagnosis remains tremendously important, McLuhan’s cultural prognosis for the West holds less value. McLuhan saw clearly the transforming impact of “electric” technologies, but perhaps because he did not live much beyond the onset of the personal computer boom, he failed to recognize the next step—the recursion to a new stage of typographic literacy through the syncretic medium of hypertext.

It is crucial to distinguish recursion from return or simple repetition, because this difference answers the objection that print literacy will be lost or suppressed in multimedia texts. Recursion is self-reference with the possibility of progressive self-modification.² Considered for its recursive possibilities, “writing” means something radically different in linked interactive compositions than it does in a codex book or even a conventional electronic document. Literacy in hypertext encompasses two domains: the ordinary

grammatical, rhetorical, and tropological space that we now know as "literature," and also a second province, stricter in its formalisms but much greater in its power to shape interactive discourse. This second domain has been called "writing space";³ a case might be made (with apologies to those who insist that virtual reality is strictly a non-print phenomenon) that it also represents the true meaning of *cyberspace*.

Walter Benjamin observed with some regret that by the 1930's, any literate European could become an author, at least to the extent of publishing a letter or article in the newspapers.⁴ With no regrets at all, Ted Nelson envisions a similar extension of amateur literary production in Xanadu, where all readers of the system can potentially become writers, or at least editors and commentators. The First Amendment guarantee of free speech, Nelson points out, is a *personal* liberty: anyone may publish, and in Xanadu everyone can. Nelson bases his prediction of revived literacy on the promise of a broadly popular publishing franchise.

This vision is limited in one crucial regard. Nelson treats print essentially as the *content* of his system, which is taking a rather narrow view. In describing Xanadu as a more or less transparent medium for the transmission of text, Nelson overlooks the fact that alphabetic or alphanumeric representation also defines the *form* of Xanadu, and indeed of any *hypertext* system. This neglect is consistent with the generally broad focus of Nelson's vision, which has led him to dismiss details of user-interface design as "front-end functions" to be worked out by the user.

Design details, whether anterior or posterior to the system, cannot be passed over so easily. In fact the structure and specifications of the *hypertext* environment are themselves parts of the docuverse, arguably the most important parts. Beneath any *hypertext* document or system there exists a lower layer that we might call the *hypotext*. On this level, in the working implementations of its "protocols," Xanadu is a creature of print. The command structures that govern linkage, display, editing, accounting, and all the other functions of the system exist as digital impulses that may be translated into typographic text. They were written out, first in pseudo-English strings, then in a high-level programming language, finally as binary code. Therefore Xanadu at its most intimate level is governed by all those features of the typographic medium so familiar from McLuhan's analysis: singular sequentiality, objectivity, instrumentality, "left-brained" visual bias, and so on. The wonder of *hypertext* and hypermedia lies in their capacity to escape these limitations by using the microprocessor to turn linear, monologic typography recursively back upon itself—to create linear control structures that militate against absolute linear control.

In recognizing the recursive trick behind *hypertextual* writing, we come to a broader understanding of electronic literacy. Literacy under *hypertext* must extend not only to the "content" of a composition but to its *hypotextual* "form" as well—e.g., the way nodes are divided to accommodate data structures and display strategies, or the types of linkage available and the ways they are apparent to the reader. Practically speaking, this means that users of a *hypertext* system can be expected to understand print not only as the

4. Noted in "The Work of Art in the Age of Mechanical Reproduction" (1936; see above), by

BENJAMIN (1892–1940), German literary critic and aesthetician.

medium of traditional literary discourse, but also as a meta-tool, the key to power at the level of the system itself.

41 Ong and McLuhan have argued that television and radio introduce "secondary orality," a recursion to non-print forms of language and an "audile space" of cognition.⁵ By analogy, hypertext and hypermedia seem likely to instigate a *secondary literacy*—"secondary" in that this approach to reading and writing includes a self-consciousness about the technological mediation of those acts, a sensitivity to the way texts-below-the-text constitute another order behind the visible. This secondary literacy involves both rhetoric and technics: to read at the hypotextual level is to confront (paragnostically) the design of the system; to write at this level is to reprogram, revising the work of the first maker. Thus this secondary literacy opens for its readers a *cyberspace* in the truest sense of the word, meaning a place of command and control where the written word has the power to remake appearances. This space has always been accessible to the programming elite, to system operators like Clifford Stoll and shady operators like his hacker adversary. But Nelson's 2020 Vision puts a Silverstand in every commercial strip right next to McDonald's and Videoland. Vice President Gore's information "Superhighway"⁶ would bring cyberspace even closer. If Xanadu succeeds in re-awakening primary literacy as a mass phenomenon, there is reason to believe that it will inculcate secondary literacy as well.

42 But like any grand hope, this technopiate dream of a new literacy ultimately has to confront its man from Porlock.⁷ Secondary literacy might well prove culturally disastrous. The idea of a general cyberspace franchise, in which all control structures are truly contingent and "consensual," does summon up visions of informatic chaos. "Chaos," however, is a concept we have recently begun to understand as something other than simply an absence of "order": it is instead a condition of possibility in which new arrangements spontaneously assemble themselves.⁸

13 Taking this neo-chaotic view, we might inquire into the positive effects of secondary literacy in a postmodern political context. In outlining a first move beyond our recent "depthless," ahistorical quiescence, Fredric Jameson calls for an "aesthetic of cognitive mapping," a "pedagogical political culture" in which we would begin to teach ourselves where we stand in the networks of transnational power.⁹ At this moment, as the West reconsiders its New World Order in the aftermath of a war for oil reserves,¹ we seem in especially urgent need of such education. But a cultural pedagogy clearly needs something more than the evening war news, especially when

"New World Order": a phrase coined by George Bush (b. 1924; U.S. president, 1989–93) to describe what was needed to replace East-West cold war rivalries after the collapse of communism in Eastern Europe.

reporters are confined to informational wading pools. We require not only a sensitivity to the complex textuality of power but an ability to intercept and manipulate that text—an advanced creative paranoia. This must ultimately be a human skill, independent of technological “utterance”; but the secondary literacy fostered by **hypertext** could help us at least to begin the enormous task of drawing our own cognitive maps. Here, however, we verge on the main question of **hypertextual** politics, which brings up the last question in the Toronto² catechism:

4. What does **hypertext** become when taken to its limit?

Orthodox McLuhanite doctrine holds that “every form, pushed to the limit of its potential, reverses its characteristics.”³ Media evolution, in McLuhan’s view, proceeds through sharply punctuated equilibriums. “Hot” media like print tend to increase their routinization and determinism until they reach a limit (say, the prose of the late 19th century). Beyond that point, the overheated medium turns paradoxical, passing almost instantly from hot to super-cool, bombarding readers with such a plethora of codings that conventional interpretation collapses. Structure and hierarchy, the distinguishing features of a hot medium, reduce to indeterminacy. The plurality of codes overwhelms hermeneutic certainty, the “figure” of a univocal text reverses into polysemous “ground,” and we reach the ultima Thule of Gutenberg culture, *Finnegans Wake*.⁴

44

But though McLuhan had much to say about the reversal of overheated media, he left the complementary possibility unexplored. What happens to already cool or participatory media when they reach their limits? True to the fourth law, their characteristics reverse, but here the effect is reactionary, not radical. Radio, for instance, begins in interactive orality (two-way transceiving) but decays into the hegemony of commercial broadcasting, where “talk radio” lingers as a reminder of how open the airwaves are not. Television too starts by shattering the rigid hierarchies of the Gutenberg nation-state, promising to bring anyplace into our living rooms; but its version of Global Village turns out to be homogenous and hegemonic, a planetary empire of signs (as we say in Atlanta, “Always Coca-Cola”).⁵

45

Hypertext and **hypermedia** are also interactively cool, so following this analysis we might conclude that they will undergo a similar implosion, becoming every bit as institutionalized and conservative as broadcast networks. Indeed, it doesn’t take McLuhanite media theory to arrive at that forecast. According to the economic logic of late capitalism, wouldn’t the Xanadu Operating Company ultimately sell out to Sony, Matsushita, Philips, or some other wielder of multinational leverage?

46

Such a self-negating “reversal” may not be the only possible outcome, however. What if the corporate shogunate decide not to venture their capital? What if business leaders realize that truly interactive information networks

47

2. Beginning in 1963, McLuhan was director of the University of Toronto’s Centre for Culture and Technology.

3. McLuhan, *Laws of Media*, p. viii [Moulthrop’s note].

4. The 1939 novel by Irish writer James Joyce, arguably the most experimental and difficult long

work of fiction in Western literature.

5. Coca-Cola was invented in Atlanta, Georgia, in 1886; “Always Coca-Cola” was an advertising slogan. “Global Village”: McLuhan’s term for the interconnected world that would result from the linking of electronic information media.

do not make wise investments? This conclusion might be supported by memory of the nastiness Sears and IBM stirred up when they tried to curtail user autonomy on their Prodigy videotex system.⁶ This scenario of corporate rejection is not just speculative fabulation, but the basis for a proposed modification to McLuhan's fourth law. Media taken to their limits tend to reverse, but not all media reverse in the same way. The case of a complex, syncretic, and fundamentally interactive medium like **hypertext** may involve a "reversal" that does not bring us back to the same-as-it-ever-was—not a reversal in fact but a recursion (*déjà vu*) to a new cultural space.

48 We have entered into a period of change in reading and writing that Richard Lanham calls a "digital revolution." As this revolution proceeds (if it is allowed to do so), its consequences will be enormous. The idea of **hypertext** as a figment of the capitalist imagination, an information franchise in both Nelson's and Lyotard's senses, could well break down. Though Xanadu may in fact open its Silverstands some day, **hypertext** might not long remain a commercial proposition. The type of literacy and the kind of social structure this medium supports stand fundamentally against absolute property and hierarchy. As we have hinted, **hypertext** and **hypermedia** peel back to reveal not just an aesthetics of cognitive mapping but nothing less than the simulacral map-as-territory itself: the real beginnings of cyberspace in the sense of a *domain of control*.

49 "Cyberspace. A consensual hallucination experienced daily by billions of legitimate operators, in every nation . . . A graphic representation of data abstracted from the banks of every computer in the human system."⁸ William Gibson's concept of a cybernetic workspace, laid out in his dystopian novel *Neuromancer*, represents the ultimate shared vision in the global dream of information commerce. For all its advancement beyond the age of nation-state capitalism, Gibson's world remains intensely competitive and hierarchical (for nation-state-substitute the revived *zaibatsu*). *Neuromancer* is *Nineteen Eighty-Four* updated for 1984, the *future* somewhat gloomily surveyed from Reagan's America.⁹

50 There is accordingly no trace of social "consensus" in Gibson's "consensual" infosphere. In his version of cyberspace, the shape of vision is imposed from without. "They" control the horizontal, "They" control the vertical.¹ Of course there must be some elements of chaos, else Gibson would be out of business as a paperback writer; so he invents the "cyberspace cowboy," a hacker hero who plays the information game by what he likes to call his own rules. But though cowboys may attempt to unsettle the system, their incursions amount at best to harassment and privateering. These forms of enterprise are deemed "illegal," though they are really just business by another

7. Lanham, "The Electronic Word," p. 268 [Moulthrop's note].

8. William Gibson, *Neuromancer* (New York: Ace, 1984), p. 51 [Moulthrop's note]. This science fiction novel is often credited with being the first work of "cyberpunk" fiction.

9. That is, the conservative America of the presi-

dency (1981–89) of Ronald Reagan (b. 1911). *Zaibatsu*: family-owned industrial and financial cartels that became powerful in late-19th-century Japan. *Nineteen Eighty-Four* (1949), novel by the English writer George Orwell (Eric Arthur Blair) depicting a totalitarian society.

1. A reference to the television science fiction anthology *The Outer Limits* (1963–64), whose opening voice-over contained the sentences, "We will control the vertical. We will control the horizontal."

name ("biz," in Gibson's parlance), inventiveness and competitive advantage being the only effective principles of operation.

Gibson's dark dream is one thing—in effect it is a realization of McLuhan's prophecy of reversal, an empowering technology turned into a mechanism of co-optation and enslavement. But perhaps Ted Nelson's 2020 Vision of **hypertextual** literacy is something else. If not a utopian alternative, Nelson's project may at least provide a heterotopia, an otherplace not zoned in the usual ways for property and performativity. Cyberspace as Gibson and others define it is a Cartesian² territory where scientists of control define boundaries and power lines. The Xanadu model lets us conceive instead a decentered space of literacy and empowerment where each subject acts as *kubernetes* or as Timothy Leary says, "reality pilot," steering her way across the intertextual sea.³

Nelson's visions of the future differ crucially from Gibson's. In Xanadu we find not consensual illusion but genuine, negotiated consensus. The pathways and connections among texts would be created on demand. According to Nelson's plans to date, only the most fundamental "back end" conventions would be strictly determined: users would be free to customize "front end" systems to access information more or less as they like. Xanadu thus possesses virtually no "canons" in the sense of a shelf of classics or a book of laws; the canons of Xanadu might come closer to the musical meaning of the word—congeries of connections and relationships that are recognizably orderly yet inexhaustibly various. The shifting networks of consensus and textual demand (or desire) in Xanadu would be constructed by users and for users. Their very multiplicity and promiscuity, one might argue, would militate powerfully against any slide from populism back toward hierarchy.

Nelson's visionary optimism seems vindicated, then. Xanadu as currently conceived—even in its status as Nelson's scheme to get rich very slowly—opens the door to a true social revolution with implications beyond the world of literature or mass entertainment. Xanadu would remove economic and social gatekeeping functions from the current owners of the means of text production (editors, publishers, managers of conglomerates). It would transfer control of cultural work to a broadly conceived population of culture workers: writers, artists, critics, "independent scholars," autodidacts, "generalists," fans, punks, cranks, hacks, hackers, and other non- or quasi-professionals. "Tomorrow's **hypertext** systems have immense political ramifications, and there are many *struggles* to come," Nelson warns.⁴ This is an understatement of cosmic proportions.

But it would be a mistake to celebrate cybernetic May Day⁵ without performing a few reality checks. Along with all those visionary forecasts of "post-hierarchical" information exchange,⁶ some hard facts need to be

2. Dualistic; characterized by the strict distinction between mind and body proposed by the French philosopher René Descartes (1596–1650).

3. Timothy Leary, "The Cyberpunk: The Individual as Reality Pilot," in *Storming the Reality Studio: A Casebook of Cyberpunk and Postmodern Fiction*, ed. Larry McCaffery (Durham: Duke University Press, 1992), p. 247 [Moulthrop's note]. Leary (1920–1996), an American psychologist, is best known for promoting the use of hallucinogens.

Kubernetes: helmsman (Greek), the origin of the word "cybernetics" (and hence all subsequent cyber- coinages).

4. Nelson *Literary Machines* 3/19 [Moulthrop's note].

5. That is, a day celebrating a successful revolution (the Second Socialist International in 1889 designated May Day as a holiday for labor).

6. Zuboff, *In the Age of the Smart Machine*, p. 399 [Moulthrop's note].

acknowledged. The era of the garage-born computer messiah has passed. Directly or indirectly, most development of hardware and software depends on heavily capitalized multinational companies that do a thriving business with the defense establishment. This affiliation clearly influences the development of new media—consider an influential paper on “The Rhetoric of Hypertext” which uses the requirements of a military training system to propose general standards of coherence and instrumental effectiveness for this medium.⁷ Technological development does not happen in cyberspace, but in the more familiar universe of postindustrial capital. Thus to the clear-headed, any suggestion that computer technology might be anything but an instrument of this system must seem quixotic—or just plain stupid.

55 Before stepping off into cyberspace, we do well to peel off the futurist headgear and listen to some voices in the street. No one wants to read anymore: “books suck, Nintendo rules.” Computers are either imperial business machines or head toys for yuppies. Anyone still interested in “mass” culture needs to check out the yawning gap between the rich and the debt-payers, not to mention the incipient splintering of Euro-America into warring ethnicities and “multicultural” tribes. And while we’re at it, we might also do some thinking about our most recent global conflict, wargame-as-video-game with realistic third-world blood, a campaign in defense of economic imbalance and the West’s right to determine political order in the Middle East. Perhaps we are using the word “revolution” far too loosely. Given the present state of political and cultural affairs, any vision of a “populite” future, or as John Perry Barlow has it, an “electronic frontier,”⁸ needs hard scrutiny. Revolution, as Tommy Lee Jones reminds us, is what you find *in your face*.

56 Do we really want a revolution? Are academic and corporate intellectuals truly prepared to dispense with the current means of text production and the advantages they afford in the present information economy? More to the point, *are we capable* of overturning these institutions, assuming we have the will to do so? Looking back from the seventies, Jean Baudrillard criticized the students of Paris ’68⁹ for assuming control of the national broadcast center only to reinstate one-to-many programming and the obscurantist focus of the “media event.” The pre-revolutionary identity of television swiftly reasserted itself in the midst of radical action. The seizure was a sham, Baudrillard concludes: “Only total revolution, theoretical and practical, can restore the symbolic in the demise of the sign and of value. Even signs must burn.”¹⁰ Xanadu as Nelson imagines it does promise to immolate certain cultural icons: the entrepreneurial publishing house, the codex book, the idea of text as unified, self-contained utterance. Taken to its limits, hypertext could reverse / recourse into a general medium of control, a means of ensuring popular franchise in the new order of virtual space. Public-access Xanadu might be the last hope for consensual democracy in an age of global simulation.

57 Or it might not: we do well to remember that Ted Nelson’s vision comes cleverly packaged with assurances that copyright and intellectual property

7. Patricia Carlson, “The Rhetoric of Hypertext,” *Hypermedia 2* (1990): 109–31 [Moulthrop’s note].

8. See Bruce Sterling, *The Hacker Crackdown: Law and Disorder on the Electronic Frontier* (New York: Bantam, 1992) [Moulthrop’s note]. Barlow (b. 1947) is a co-founder of the Electronic Frontier Foundation, which works to protect the rights of those in cyberspace and to encourage the broader

spread of computer-based technologies.

9. In May 1968, students and workers in Paris and throughout France staged protests and a general strike that paralyzed the country; it was a turning point in French political culture.

10. Jean Baudrillard, *For a Critique of the Political Economy of the Sign*, trans. Charles Levin (St. Louis: Telos, 1981), p. 163 [Moulthrop’s note].

shall not perish from the earth. Some signs would seem to be flame-resistant. The vision of Xanadu as cyberspatial New Jerusalem is conceivable and perhaps eligible, but by no stretch of the imagination is it inevitable. To live in the postmodern condition is to get along without the consolation of providential fictions or theories of historical necessity. This renunciation includes the "Laws of Media," whose force in the final analysis is theoretical and heuristic, not normative. As Linda Hutcheon observes, postmodernism undermines any attempt at binary distinction. To invoke the possibility of a "post-hierarchical" information order, one must assert the fact that all orders are contingent, the product of discursive formations and social contracts. But this postulate generates a fatally recursive paradox: if all order is consensual, then the social consensus may well express itself against revolution and in support of the old order. The term "post-hierarchical" may some day turn out to carry the same nasty irony as the words "postmodern" or "postwar" in the aftermath of Desert Storm: welcome back to the future, same as it ever was.

In the end it is impossible to dismiss Nelson's prophecies of cultural renovation in Xanadu; but it is equally hard to predict their easy fulfillment. Xanadu and the hypertext concept in general challenge humanists and information scientists to reconsider fundamental assumptions about the social space of writing. They may in fact open the way to a new textual order and a new politics of knowledge and expression. However, changes of this magnitude cannot come without major upheavals. Responsibility for the evolution of hypertext systems as genuine alternatives to the present information economy rests as much with software developers, social scientists, and literary theorists as it does with legislators and capitalists. If anything unites these diverse elites, it might be their allegiance to existing institutions of intellectual authority—the printed word, the book, the library, the university, the publishing house.

It may be, as Linda Hutcheon asserts, that though we are incapable of direct opposition to our native conditions, we can still criticize and undermine them through such postmodern strategies as deconstruction, parody, and pastiche.² Secondary literacy might indeed find expression in a perverse turn about or within the primary body of literate culture. But it seems equally possible that our engagement with interactive media will follow the path of reaction, not revolution. The cultural mood at century's end seems anything but radical. Witness President Bush's attacks on cultural diversity (or as he saw it, "political correctness") in higher education. Or consider Camille Paglia's memorable "defense" of polyvalent, post-print ways of knowing, capped off by a bizarre reversal in which she decrees that children of the Tube must be force-fed "the logocentric and Apollonian side of our culture."³ Given these signs and symptoms, the prospects for populite renaissance do not seem especially rosy. "It is time for the enlightened repression of the children," Paglia declares. Yet in the face of all this we can still find visionary

2. Hutcheon, *A Poetics of Postmodernism*, pp. 120–21 [Moulthrop's note].

3. Neil Postman and Camille Paglia, "She Wants Her MTV! He Wants His Book!" *Harper's*, March 1991, 44ff. [Moulthrop's note]. Apollonian: rational, as opposed by the German philosopher

FRIEDRICH NIETZSCHE (1844–1900) to the "Dionysian," or ecstatic. "Logocentric": tending to privilege words and universal reason over other forms of rationality; a term associated with the French philosopher JACQUES DERRIDA (b. 1930), who applies it to the privileging of speech over writing.

souls who say they want a textual, social, cultural, intellectual revolution. In the words of Lennon:

Well, you know . . .
We all want to change your head.⁴

The question remains: which heads do the changing, and which get the change

1991, 1993

Selected Bibliography of Theory and Criticism

This selected bibliography of theory and criticism consists of six parts: (1) a bibliography of theory and criticism bibliographies; (2) a list of theory anthologies divided into periods; (3) a historically subdivided list of histories of criticism; (4) a short list of theory glossaries, encyclopedias, and handbooks; (5) a brief list of introductions and guides to criticism and theory; and (6) succinct descriptive bibliographies of sixteen contemporary critical schools and movements. All sources are in English.

VI. MODERN AND CONTEMPORARY CRITICAL SCHOOLS AND MOVEMENTS

Each of the following sixteen entries on modern and contemporary critical schools and movements, listed in alphabetical order, follows a set pattern of five paragraphs. The first paragraph identifies groundbreaking and influential texts, while the second covers informative introductions, overviews, and histories. Paragraph three represents the breadth of the school by listing selected anthologies and readers. Where

reference sources such as area-specific bibliographies, handbooks, dictionaries, or encyclopedias exist, they are listed in the fourth paragraph. The final paragraph highlights well-received crossover texts that mark fruitful intersections between schools and movements. Not surprisingly, these five categories of texts overlap. All sources are in English.

African American Criticism and Theory
 Asian American Criticism and Theory
 Chicano/Chicana Studies
 Cultural Studies
 Deconstruction and Poststructuralism
 Feminist Criticism and Theory
 Formalism
 Gay and Lesbian Criticism and Queer Theory
 Marxism
 Native American Studies
 New Historicism
 Phenomenology and Hermeneutics
 Postcolonial Criticism and Theory
 Psychoanalytic Theory
 Reader-Response Criticism
 Structuralism and Semiotics

African American Criticism and Theory
 Significant twentieth-century African American criticism and theory begins with the works of the Harlem Renaissance and the related protest tradition, including such texts as James Weldon Johnson's preface to *The Book of American Negro Poetry* (1922), one of the earliest discussions of race and form; Langston Hughes's "Negro Artist and the Racial Mountain" (1926); W. E. B. Du Bois's "Criteria of Negro Art" (1926); and Richard Wright's "Blueprint for Negro Writing" (1937), a seminal point of origin for the vernacular theorizing that culminated in Stephen Henderson's highly influential introduction to *Understanding the New Black Poetry* (1973). Another phase of African American theory and criticism emerges in the 1960s with the Black Arts movement. Groundbreaking characterizations of the Black Aesthetic appear in Amiri Baraka's *Home: Social Essays* (1966), which chronicles Baraka's personal shift from phenomenology to black aesthetics; Hoyt Fuller's "Toward a Black Aesthetic" (1968); and Larry Neal's "Black Arts Movement" (1968). In the late 1970s and 1980s a younger generation of academic intellectuals began to critique the assumptions behind the Black Aesthetic and to incorporate structuralist and post-structuralist insights, as demonstrated in Robert B. Stepto, *From Behind the Veil: A Study of Afro-American Narrative* (1979); *Afro-American Literature: The Reconstruction of Instruction* (1979), edited by Dexter Fisher and Robert B. Stepto; Houston A. Baker Jr., *Blues, Ideology, and Afro-American Literature: A Vernacular Theory* (1984); and Henry Louis Gates Jr., *The Signifying Monkey: A Theory of Afro-American Literary Criticism* (1988). The 1970s and 1980s mark the first appearance of feminist works, including especially Barbara Smith, "Toward a Black Feminist Criticism" (1977); Angela Davis, *Women, Race, and Class* (1981); Alice Walker, *In*

Search of Our Mother's Garden: Womanist Prose (1983); bell hooks, *Feminist Theory: From Margin to Center* (1984); Audre Lorde, *Sister Outsider: Essays and Speeches* (1984); and Barbara Christian, *Black Feminist Criticism: Perspectives on Black Women Writers* (1985).

For brief introductions, see two essays by Henry Louis Gates Jr.: "African American Criticism," in *Redrawing the Boundaries: Transformation of English and American Literary Studies* (1992), edited by Stephen Greenblatt and Giles Gunn, and " 'Ethnic and Minority' Studies," in *Introduction to Scholarship in Modern Languages and Literature* (1992), edited by Joseph Gibaldi. *Afro-American Literary Study in the 1990s* (1989), edited by Houston A. Baker Jr. and Patricia Redmond, provides an overview of theoretical issues and problems in the field. Joyce A. Joyce's provocative *Warriors, Conjurers, and Priests: Defining African-Centered Literary Criticism* (1994) can be read as an introduction to the Black Aesthetic and a critique of Eurocentric approaches to African American literature. This book may be profitably read in conjunction with Sandra Adell's *Double Consciousness/Double Bind: Theoretical Issues in Twentieth-Century Black Literature* (1994), which focuses on the extent to which modern and contemporary black literature and criticism are already implicated in the Western tradition of literature and philosophy. For a survey of the pivotal critical writings of the black nationalist movement in the 1960s, see Sandra Hollin Flowers, *African American Nationalist Literature of the 1960s: Pens of Fire* (1996). And for a history of the literary and political debates that have appeared in African American journals and little magazines from 1900 to the early 1970s, see *Propaganda and Aesthetics: The Literary Politics of Afro-American Magazines in the Twentieth Century* (1979), edited by Abby A. Johnson and Ronald M. Johnson.

Two famous early collections of various essays that have had an enduring impact on subsequent black criticism and theory are *The New Negro* (1925), edited by Alain Locke, and *The Negro Caravan* (1941), edited by Sterling A. Brown, Arthur P. Davis, and Ulysses Lee. Anthologies including essays of theory and criticism from the perspective of the Black Arts movement include *Black Fire: An Anthology of Afro-American Writing* (1968), edited by Amiri Baraka and Larry Neal; *Black Expression: Essays by and about Black Americans in the Creation of Art* (1969), edited by Addison Gayle Jr.; and most notably *The Black Aesthetic* (1971), also edited by Gayle. For collections of essays reflecting later poststructuralism-influenced developments, see *Black Literature and Literary Theory* (1984) and "Race," *Writing, and Difference* (1986), both edited

by Henry Louis Gates Jr. Among important early collections of feminist essays are *Sturdy Black Bridges: Vision of Black Women in Literature* (1979), edited by Roseann Bell et al.; *All the Women Are White, All the Blacks Are Men, But Some of Us Are Brave* (1981), edited by Gloria Hull, Patricia Bell Scott, and Barbara Smith; *Home Girls: A Black Feminist Anthology* (1983), edited by Barbara Smith; and *Black Women Writers, 1950-1980: A Critical Evaluation* (1984), edited by Mari Evans. Significant feminist collections that address later developments are *Changing Our Own Words: Essays on Criticism, Theory, and Writing by Black Women* (1989), edited by Cheryl A. Wall; *Reading Black, Reading Feminist: A Critical Anthology* (1990), edited by Henry Louis Gates Jr.; *Words of Fire: An Anthology of African American Feminist Thought* (1995), edited by Beverly Guy-Sheftall; the various essays in *Other Sisterhoods: Literary Theory and U.S. Women of Color* (1998), edited by Sandra Kumamoto Stanley; and *The Black Feminist Reader* (2000), edited by Joy James and T. Denean Sharpley-Whiting. For a general anthology with historical scope, see *African-American Literary Criticism, 1773-2000* (1999), edited by Hazel Anneth Ervin. *Within the Circle: An Anthology of African American Literary Criticism from the Harlem Renaissance to the Present* (1994), edited by Angelyn Mitchell, represents the spectrum of twentieth-century African American literary and cultural criticism, while *African American Literary Theory: A Reader* (2000), edited by Winston Napier, provides an extensive range of materials from the last half of the twentieth century, especially the closing decades.

For an annotated bibliography of major theoretical and critical works in African American literary and cultural studies, see A. LaVonne Brown Ruoff et al., "African American Literature," in *Redefining American Literary History* (1990), edited by Ruoff and Jerry W. Ward Jr. A respected resource for information on African American literature, theory, and criticism is *The Oxford Companion to African American Literature* (1997), edited by William Andrews, Frances Smith Foster, and Trudier Harris.

On the intersection of African American theory with Marxism, see, for example, Harold Cruse's famous *The Crisis of the Negro Intellectual* (1967) and *Rebellion or Revolution?* (1968). In *The Journey Back: Issues in Black Literature and Criticism* (1980), Houston A. Baker Jr. combines structuralism with the concerns of African American literary theory. Barbara Christian, *Black Women Novelists: The Development of a Tradition, 1892-1976* (1980); Barbara Smith, *The Truth That Never Hurts: Writing on Race, Gender, and Freedom* (1988); Hazel W. Carby, *Reconstructing Womanhood: The Emergence of the Afro-American Woman Novelist* (1987); and Deborah E. McDowell, *"The Changing Same": Black Women's Literature, Criticism, and Theory* (1995) variously mark the intersections between feminism and African American

theory. Michele Wallace's *Black Popular Culture* (1992), edited by Gina Dent, combines African American theory with cultural studies. For exemplary linkings of African American theory with feminism, psychoanalysis, and rhetoric, see Cláudia Tate, *Domestic Allegories of Political Desire* (1992) and *Psychoanalysis and Black Novels: Desire and the Protocols of Race* (1998), and Barbara Johnson, *The Feminist Difference: Literature, Psychoanalysis, Race, and Gender* (1998). For texts of black-British cultural studies that intersect with the concerns of African American studies, see Paul Gilroy, *The Black Atlantic: Modernity and Double Consciousness* (1993); *Black British Cultural Studies: A Reader* (1996), edited by Houston A. Baker Jr., Manthia Diawara, and Ruth H. Lindberg; and Kobena Mercer, *Welcome to the Jungle: New Positions in Black Cultural Studies* (1994), which includes lesbian and gay studies, queer theory, psychoanalysis, and postcolonial studies. On the meeting points of African American literary theory, feminism, and postmodern cultural studies, see Michael Awkward, *Negotiating Difference: Race, Gender, and the Politics of Positionality* (1995). Philip Brian Harper's *Are We Not Men? Masculine Anxiety and the Problem of African American Identity* (1996) explores issues of queer theory and gender studies within the context of African American theory. *Female Subjects in Black and White: Race, Psychoanalysis, Feminism* (1997), edited by Elizabeth Abel, Barbara Christian, and Helene Moglen, makes connections between black and white feminists via psychoanalysis.

Asian American Criticism and Theory

The term "Asian American," which came into use in the 1960s as an expression of solidarity and cultural nationalism, covers both Asian immigrants and North America-born people of Asian descent. Asian American literature—a broad and contested category—encompasses writings by Americans whose ancestry is Bangladeshi, Burmese, Cambodian, Chinese, Filipino, Japanese, Korean, Indian, Indonesian, Laotian, Nepali, Pakistani, Sri Lankan, Thai, and Vietnamese. An influential theoretical statement on Asian American literature is the introduction to *!!!!!!! An Anthology of Asian American Writers* (1974), edited by Frank Chin et al. The groundbreaking full-length critical study of Asian American literature as a distinct academic field is Elaine Kim's *Asian American Literature: An Introduction to the Writings and Their Social Contexts* (1982), which treats Chinese, Japanese, Korean, and Filipino literatures. Influential feminist Asian American works of theory and criticism include Trinh T. Minh-ha's *Woman, Native, Other Writing, Postcoloniality and Feminism* (1989) and Amy Ling's *Between Worlds: Women Writers of Chinese Ancestry* (1990).

Sau-Ling Cynthia Wong's *Reading Asian American Literature: From Necessity to Extravagance* (1993) can be used as a sophisticated theoretical introduction to current issues and problems in the

study of Asian American literatures. Also useful as an introduction to theoretical issues is Jeffery Paul Chan et al., "An Introduction to Chinese-American and Japanese-American Literatures," in *Three American Literatures: Essays in Chicano, Native American, and Asian-American Literature for Teachers of American Literature* (1982), edited by Houston A. Baker Jr. For an excellent survey of the field, see King-Kok Cheung, "Re-viewing Asian American Literary Studies," in her edited compendium, *An Interethnic Companion to Asian American Literature* (1997).

Prominent collections of Asian American theory and criticism include *Reading the Literatures of Asian America* (1992), edited by Shirley Geok-Lin Lim and Amy Ling; *Asian Americans: Collages of Identities* (1992), edited by Lee C. Lee; and *Ideas of Home: Literature of Asian Migration* (1997), edited by Geoffrey Kain. For feminist anthologies, see *This Bridge Called My Back: Writings by Radical Women of Color* (1981), edited by Cherríe Moraga and Gloria Anzaldúa, which includes essays by Mitsuye Yamada and Nellie Wong; *Making Waves: An Anthology of Writing by and about Asian American Women* (1989) plus *Making More Waves: New Writing by Asian American Women* (1997), both edited by Asian Women United of California; and *Other Sisterhoods: Literary Theory and U.S. Women of Color* (1998), edited by Sandra Kumamoto Stanley.

For bibliographies of theory and criticism, see King-Kok Cheung and Stan Yogi's *Asian American Literature: An Annotated Bibliography* (1988), as well as the more recent survey by Cheung in her edited *Interethnic Companion*.

On cultural studies and Asian American theory, see the essays in Rey Chow's *Writing Diaspora: Tactics of Intervention in Contemporary Cultural Studies* (1993). King-Kok Cheung's *Articulate Silences: Hisaye Yamamoto, Maxine Hong Kingston, and Joy Kogawa* (1993) combines Asian American criticism with insights from poststructuralism and feminism. For a highly esteemed synthesis of Asian American theory with Marxism, feminism, cultural studies, poststructuralism, and postcolonial theory, see Lisa Lowe's *Immigrant Acts: On Asian American Cultural Politics* (1996), which provides useful frameworks for studying Asian American culture "transnationally." The various essays in *Q & A: Queer in Asian America* (1998), edited by David L. Eng and Alice Y. Hom, explore the interconnections between Asian American theory and gay, lesbian, and queer theory.

Chicano/Chicana Studies

Focused on the literature, history, and culture of Mexican Americans, "Chicano/Chicana" studies is a part of "Hispanic American" studies, which concentrates more broadly on the study of all Spanish-speaking peoples who were born in, or have immigrated to, the United States, including particularly Latinos/Latinas, Cubanos/Cubanas, and Puertorriqueños/Puertorriqueñas. During the specifically

Chicano movement of the 1960s, Américo Paredes's seminal study "*With His Pistol in His Hand*": A Border Ballad and Its Hero (1958) emerged as a major critical reference, providing a model of Chicano cultural analysis. An early influential theoretical reflection on literary and historical methods is Joseph Sommers's "From the Critical Premise to the Product: Critical Modes and Their Applications to a Chicano Literary Text" (1977). Sommers, along with Tomás Ybarra-Frausto, edited a significant group of essays focusing on theory and applied analysis, *Modern Chicano Writers: A Collection of Critical Essays* (1979). Cherríe Moraga's *Loving in the War Years: Lo que nunca pasó por sus labios* (1983); *Beyond Stereotypes: The Critical Analysis of Chicana Literature* (1985), edited by María Herrera-Sobek; and Gloria Anzaldúa's *Borderlands/La Frontera: The New Mestiza* (1987) are three landmark texts of Chicana feminist theory. Highly influential are two works by José David Saldívar, *Dialectics of Our America: Genealogy, Culture Critique, and Literary History* (1991) and *Border Matters: Remapping American Cultural Studies* (1998), both of which unite a Marxist-poststructuralist strain of Chicano/Chicana studies with issues in cultural studies.

For an overview of Chicano and Hispanic studies as a whole, including literary, historical, and cultural matters as well as research opportunities, see the essays in the first volume of *Recovering the U.S. Hispanic Literary Heritage* (1993), edited by Ramón Gutiérrez and Genaro Padilla, as well as those in the second volume, with the same title (1996), edited by Erlinda Gonzales-Berry and Chuck Tatum. Useful as advanced introductions and surveys are *Three American Literatures: Essays in Chicano, Native American, and Asian-American Literature for Teachers of American Literature* (1982), edited by Houston A. Baker Jr.; *Redefining American Literary History* (1990), edited by A. LaVonne Brown Ruoff and Jerry W. Ward Jr.; and *Chicano Cultural Representations: Reframing Critical Discourses*, a special issue of *Cultural Studies* 4 (1990), edited by Angie Chabram and Rosa Linda Fregoso.

For early collections of contemporary Chicano criticism, see the Chicano pieces in *Minority Language and Literature: Retrospective and Perspective* (1977), edited by Dexter Fisher; *New Directions in Chicano Scholarship* (1978), edited by Ricardo Romo and Raymond Paredes; and *The Identification and Analysis of Chicano Literature* (1979), edited by Francisco Jiménez. Important collections of feminist essays include *The Bridge Called My Back: Writings by Radical Women of Color* (1981), edited by Cherríe Moraga and Gloria Anzaldúa, which contains essays by Norma Alarcón, Moraga, and Anzaldúa, among others; *Chicana Voices: Intersections of Class, Race, and Gender* (1986), edited by Teresa Córdova et al.; *Living Chicana Theory* (1998), edited by Carla Trujillo; and the various essays in *Other Sisterhoods: Literary Theory and U.S. Women of Color* (1998), edited by Sandra Kumamoto Stanley. Two useful later collections of Chi-

cano criticism and theory are *Retrospace: Collected Essays on Chicano Literature* (1990), edited by Juan Bruce-Novoa, and the influential *Criticism in the Borderlands: Studies in Chicano Literature, Culture, and Ideology* (1991), edited by Héctor Calderón and José David Saldívar.

For bibliographies of theoretical and critical texts, see Ernestina N. Eger, *A Bibliography of Criticism of Contemporary Chicano Literature* (1982); Roberto G. Trujillo, *Literature Chicana: Creative and Critical Writings through 1984* (1985); Teresa McKenna, "Chicano Literature," in *Redefining American Literary History* (1990); and especially the influential texts of 1991 and 1998 by Saldívar cited at the end of the first paragraph of this section and Calderón and Saldívar's collection, *Criticism in the Borderlands*.

On Chicano criticism in relationship to Marxism and poststructuralism, see Ramón Saldívar's oft-cited *Chicano Narrative: The Dialectics of Difference* (1990). José E. Limón's *Mexican Ballads, Chicano Poems: History and Influence in Mexican-American Social Poetics* (1992) links the concerns of Chicano/Chicana studies with those of New Historicism. Essays by various writers on queer theory and Chicano/Chicana studies can be found in *Entiendes? Queer Readings, Hispanic Writings* (1995), edited by Emilie L. Bergmann and Paul Julian Smith. Alfred Arteaga's *Chicano Poetics: Heterotexts and Hybridities* (1997) examines intersections of literary and social forces from the combined perspectives of gender, race, postmodern, and postcolonial studies. The intersections among cultural studies, feminism, and Chicano/Chicana studies are explored in Alviana E. Quintana's *Home Girls: Chicana Literary Voices* (1996), as well as in *Chicana/o Latina/o Cultural Studies: Transnational and Transdisciplinary Movements*, a special issue of *Cultural Studies* 13 (1999), edited by Angie Chabram Dernerseian.

Cultural Studies

Most contemporary cultural studies has its roots both in British cultural studies developed during the 1960s and 1970s and in French structuralism and poststructuralism of the same decades. The founding texts of the British line are Richard Hoggart, *The Uses of Literacy* (1957); Raymond Williams, *Culture and Society, 1780–1950* (1958), which is a history of British cultural criticism from Edmund Burke to George Orwell; and E. P. Thompson, *The Making of the English Working Class* (1963). Also important is the University of Birmingham's famous Centre for Contemporary Cultural Studies (CCCS), a groundbreaking research institute founded by Hoggart in 1963 and administered by Stuart Hall during the 1970s that generated such pioneering works as Dick Hebdige, *Subculture: The Meaning of Style* (1979); Stuart Hall et al., *Culture, Media, Language: Working Papers in Cultural Studies, 1972–1979* (1980); Paul Gilroy, *There Ain't No Black in the Union Jack* (1987); and the belated but landmark manifesto by Richard Johnson, "What Is Cultural Studies Any-

way?" *Social Text* 16 (1986–87). Key French contributions include Roland Barthes, *Mythologies* (1957; trans. 1972); Louis Althusser, *For Marx* (1965; trans. 1969); Michel Foucault, *Discipline and Punish* (1975; trans. 1977) and *The History of Sexuality*, vol. 1 (1976; trans. 1978); Pierre Bourdieu, *Distinction: A Social Critique of the Judgment of Taste* (1979; trans. 1984); Jean Baudrillard, *Simulations* (1983); and Michel de Certeau, *The Practice of Everyday Life* (1980; trans. 1984). Much of contemporary cultural studies, especially the British line, is an offshoot of modern Western Marxist theory, which provides many of its founding sources, including especially the work of Antonio Gramsci in his *Prison Notebooks* (written 1929–35; selections trans. 1971) and the various studies of the Frankfurt School, particularly Max Horkheimer and Theodor W. Adorno's *Dialectic of Enlightenment* (1944; trans. 1972). (On Marxist theory and criticism, see below.) Cultural studies in Australia extends the British and French lines in pioneering and productive directions, evident in the sampler *Australian Cultural Studies: A Reader* (1993), edited by John Frow and Meaghan Morris. For a collection of texts of U.S. cultural studies, see *American Cultural Studies: A Reader* (2000), edited by John Hartley and Roberta E. Pearson.

Graeme Turner's *British Cultural Studies: An Introduction* (2d ed., 1996) provides a succinct yet comprehensive introduction to contemporary British cultural studies, including a short history of its development and discussions of its central areas of inquiry. Other wide-ranging introductory treatments include Patrick Brantlinger, *Crusoe's Footprints: Cultural Studies in Britain and America* (1990); Antony Easthope, *Literary into Cultural Studies* (1991); Fred Inglis, *Cultural Studies* (1993); Jere Paul Surber, *Culture and Critique: An Introduction to the Critical Discourses of Cultural Studies* (1998); and Patrick Fyery and Nick Mansfield, *Cultural Studies and Critical Theory* (2d ed., 2000). Martin Barker and Anne Beezer's *Reading into Cultural Studies* (1992) offers a critical overview of the most influential texts in the tradition of cultural studies, and Steven Best and Douglas Kellner's *Postmodern Theory: A Critical Interrogation* (1991) assesses the contributions of the leading French poststructuralist cultural theorists. "Forum: Thirty-Two Letters on the Relation between Cultural Studies and the Literary," published in the journal *PMLA* 112.2 (1997), offers a substantial sampling of North American literature professors' views of how cultural studies relates to literary studies. For detailed histories on the development of British cultural studies, see Ioan Davies, *Cultural Studies and Beyond: Fragments of Empire* (1995); Dennis Dworkin, *Cultural Marxism in Postwar Britain: History, the New Left, and the Origins of Cultural Studies* (1997); and Tom Steele, *The Emergence of Cultural Studies, 1945–1965: Cultural Politics, Adult Education, and the English Question* (1997).

Important anthologies representing the wide-

ranging concerns and methods of cultural studies include the pioneering *Culture, Ideology, and Social Process: A Reader* (1981), edited by Tony Bennett et al.; *Cultural Studies* (1992), edited by Lawrence Grossberg, Cary Nelson, and Paula A. Treichler; *English Studies/Cultural Studies: Institutionalizing Dissent* (1994), edited by Isaiah Smithson and Nancy Ruff, which explores the intersection of cultural studies with rhetoric and composition; *Disciplinarity and Dissent in Cultural Studies* (1996), edited by Cary Nelson and Dilip Gaonkar, which tracks the various receptions of cultural studies by academic disciplines; and *The Cultural Studies Reader* (2d ed., 1999), edited by Simon During. Two anthologies focusing on attempts to define cultural studies are *What Is Cultural Studies? A Reader* (1996), edited by John Storey, and *Studying Culture: An Introductory Reader* (2d ed., 1997), edited by Ann Gray and Jim McGuigan. On cultural studies and race in Britain, see *Black British Cultural Studies: A Reader* (1996), edited by Houston A. Baker Jr., Manthia Diawara, and Ruth H. Lindenberg. Among the many early influential CCCS casebooks worth serious consideration are *Resistance Through Rituals: Youth Sub-Cultures in Post-War Britain* (1976), *Policing the Crisis: Mugging, the State, and Law and Order* (1978), *Women Take Issue* (1978), and *The Empire Strikes Back: Race and Racism in 70s Britain* (1982).

Bibliographies of limited scope are available in the anthologies by During and by Gray and McGuigan mentioned in the preceding paragraph. For a more comprehensive bibliography, see Storey's anthology. In *Keywords: A Vocabulary of Culture and Society* (rev. ed., 1983), Raymond Williams provides an influential dictionary.

Cultural studies has served as an inclusive meeting ground for many kinds of critical projects. On specifically Marxist approaches to cultural studies, see Raymond Williams's *Marxism and Literature* (1977) and especially the essays by various hands in *Marxism and the Interpretation of Culture* (1988), edited by Cary Nelson and Lawrence Grossberg. For pioneering postcolonial work in cultural studies, see Edward W. Said's *Orientalism* (1978), as well as Gayatri Chakravorty Spivak's influential postcolonial feminist work in *In Other Worlds: Essays in Cultural Politics* (1987). *Writing Culture: The Poetics and Politics of Ethnography* (1986), edited by James Clifford and George Marcus, develops connections between cultural studies and anthropology, following the trail blazed by Clifford Geertz in *The Interpretation of Cultures: Selected Essays* (1973). On cultural studies and feminism, see especially Meaghan Morris, *The Pirate's Fiancée: Feminism, Reading, Postmodernism* (1988); Janice Radway, *Reading the Romance: Women, Patriarchy, and Popular Literature* (1991); and Anne Balsamo's synoptic "Feminism and Cultural Studies," *Journal of the Midwest MLA* 24.1 (1991). Feminist cultural studies focusing on film in relationship to psychoanalysis—an area of intense study—include Laura Mulvey, *Visual and Other*

Pleasures (1989); Kaja Silverman, *The Acoustic Mirror: The Female Voice in Psychoanalysis and Cinema* (1988); and Mary Ann Doane, *Femmes Fatales: Feminism, Film Theory, Psychoanalysis* (1991). More general studies of media, including film and television, are found in *Logics of Television: Essays in Cultural Criticism* (1990), edited by Patricia Mellencamp, and *Technoculture* (1991), edited by Constance Penley and Andrew Ross. On cultural studies approaches to contemporary popular culture, see Andrew Ross, *No Respect: Intellectuals and Popular Culture* (1989); *Rethinking Popular Culture: Contemporary Perspectives in Cultural Studies* (1991), edited by Chandra Mukerji and Michael Schudson; and Lawrence Grossberg, *Dancing in Spite of Myself: Essays in Popular Culture* (1997). For cultural studies and science studies, look to the essays of Donna Haraway, notably those in *Her Simians, Cyborgs, and Women: The Reinvention of Nature* (1991). In *The Black Atlantic: Modernity and Double Consciousness* (1993), Paul Gilroy links cultural studies with Afrocentric concerns broadly construed. James J. Sosnoski, *Modern Skeletons in Postmodern Closets: A Cultural Studies Alternative* (1995), develops a view of literary theory inspired by cultural studies. For cultural studies in relationship to feminism, lesbian criticism, and black feminist criticism, see the sizable collection of essays in *Feminist Cultural Studies* (2 vols., 1995), edited by Terry Lovell.

Deconstruction and Poststructuralism

Deconstruction and poststructuralism both emerged in the 1960s and 1970s as critiques of phenomenology and structuralism. Though the terms *deconstruction*, *poststructuralism*, and sometimes *postmodern theory* are often used interchangeably, they are not synonymous. Whereas deconstruction is a philosophical school initiated by Jacques Derrida, poststructuralism is a broad movement that concerns itself with all of the arts and human sciences, embracing a wide variety of critical projects. If deconstruction can be said to have a clear beginning, it is perhaps best marked by the penultimate essay of Derrida's *Writing and Difference* (1968; trans. 1978), "Structure, Sign, and Play in the Discourse of the Human Sciences," which was originally presented as a paper at a celebrated 1966 Johns Hopkins University conference on structuralism. But more important from the perspective of literary theory and criticism are two other works by Derrida: *Of Grammatology* (1967; trans. 1976), which mounts a wide-ranging critique of structuralism and offers an extended analysis of Jean-Jacques Rousseau, and *Dissemination* (1972; trans. 1981), which provides exemplary textual analyses of Plato, Stéphane Mallarmé, and Philippe Sollers. The early development of deconstruction in the United States occurred in the influential works of the Yale School, notably Harold Bloom, *The Anxiety of Influence* (1973); Paul de Man, *Allegories of Reading: Figural Language in Rousseau, Nietzsche, Rilke, and Proust* (1979); Geoffrey Hartman, *Crit-*

icism in the Wilderness (1980); Barbara Johnson, *The Critical Difference* (1980); numerous articles of the 1970s by J. Hillis Miller, some revised in *Fiction and Repetition: Seven English Novels* (1982); and Shoshana Felman, *Writing and Madness: Literature, Philosophy, Psychoanalysis* (1985). The most influential texts of the groundbreaking phase of French poststructuralism, which often focuses on Marxism and psychoanalysis, include Louis Althusser, *For Marx* (1966; trans. 1969); Jacques Lacan, *Écrits* (1966; trans. 1977); and Gilles Deleuze and Félix Guattari, *Anti-Oedipus: Capitalism and Schizophrenia* (1972; trans. 1977). For exemplary early poststructuralist accounts of literature, see Roland Barthes, *S/Z* (1970; trans. 1974), and Julia Kristeva, *Revolution in Poetic Language* (1974; trans. 1984). Beyond this early phase emerges an influential line of poststructuralist feminism that includes Luce Irigaray, *Speculum of the Other Woman* (1974; trans. 1985), and Hélène Cixous and Catherine Clément, *The Newly Born Woman* (1975; trans. 1986). Finally, one highly influential strand of French poststructuralism foregrounds cultural critique; see Jean Baudrillard, *The Mirror of Production* (1973; trans. 1975); Michel Foucault, *Discipline and Punish* (1975; trans. 1977); and Jean-François Lyotard, *The Postmodern Condition: A Report on Knowledge* (1979; trans. 1984).

For an accessible introduction to deconstruction, see Christopher Norris, *Deconstruction: Theory and Practice* (1982). For more sophisticated introductions, see Jonathan Culler, *On Deconstruction: Theory and Criticism after Structuralism* (1982), and Vincent B. Leitch, *Deconstructive Criticism: An Advanced Introduction* (1983). Steven Best and Douglas Kellner's lucid *Postmodern Theory: Critical Interrogations* (1991) offers a critical introduction to the leading poststructuralist theorists, as does John Sturrock's earlier *Structuralism and Since: From Lévi-Strauss to Derrida* (1979). A useful general introduction to poststructuralism is Madan Sarup's *Introductory Guide to Poststructuralism and Postmodernism* (2d ed., 1993). Toril Moi's celebrated *Sexual/Textual Politics* (1985) critically compares and contrasts French feminist poststructuralism with Anglo-American humanistic feminist criticism, providing an introductory overview in the process. For a historical account of events specifically in England, see Anthony Easthope, *British Post-Structuralism Since 1968* (1988). Eve Tavor Bannet's *Structuralism and the Logic of Dissent* (1988) places French poststructuralism within the historical and social contexts of the 1960s, while Patrick Ffrench's *Time of Theory: A History of "Tel Quel" (1960-1983)* (1995) offers an extensive history of French poststructuralism focusing on members of the *Tel Quel* group and their influential journal, which early on published the work of Kristeva, Barthes, and Derrida, among many others. See also Peter Starr's *Logics of Failed Revolt: French Theory after May '68* (1995) for a discussion of major figures. Art Berman's *From the New Criticism to Deconstruction: The Reception of Structuralism*

and Post-Structuralism (1988) presents a historical overview of the U.S. reception of French poststructuralism, chronicling the critical interactions between poststructuralism and American literary criticism.

An important, early collection from the Yale School is Harold Bloom et al.'s *Deconstruction and Criticism* (1979), which gathers essays by Jacques Derrida and the four leading first-generation American members, Bloom, de Man, Hartman, and Miller. See also *A Recent Imagining: Interviews with Harold Bloom, Geoffrey Hartman, J. Hillis Miller, Paul de Man* (1986), edited by Robert Moynihan. *Deconstruction: A Reader* (2000), edited by Martin McQuillan, offers a collection of essential essays representing the range and depth of deconstruction, including nine pieces by Jacques Derrida. For general anthologies of poststructuralist work, see *Textual Strategies: Perspectives in Post-Structuralist Criticism* (1979), edited by Josué Harari; *Untying the Text: A Post-Structuralist Reader* (1981), edited by Robert Young; and *On Signs* (1985), edited by Marshall Blonsky. John P. Muller and William J. Richardson's casebook, *The Purloined Poe: Lacan, Derrida, and Psychoanalytic Reading* (1988), collects celebrated essays by Lacan, Derrida, and Barbara Johnson on reading Edgar Allan Poe. For readers on Derrida, see *A Derrida Reader: Between the Blinds* (1991), edited by Peggy Kamuf; *Acts of Literature* (1992), edited by Derrick Atttridge; and *The Derrida Reader: Writing Performances* (1998), edited by Julian Wolfreys. Introductory readers on individual poststructuralists include *A Barthes Reader* (1982), edited by Susan Sontag; *The Foucault Reader* (1984), edited by Paul Rabinow; *The Kristeva Reader* (1986), edited by Toril Moi; *Jean Baudrillard: Selected Writings* (1988), edited by Mark Poster; *The Hélène Cixous Reader* (1994), edited by Susan Sellers; and *The Portable Kristeva* (1997), edited by Kelly Oliver. *The "Tel Quel" Reader* (1998), edited by Patrick Ffrench and Roland-François Lack, presents wide-ranging poststructuralist essays from various members of the *Tel Quel* group.

For early general bibliographies of poststructuralism, see the Harari anthology noted in the preceding paragraph and Joan M. Miller's *French Structuralism: A Multidisciplinary Bibliography with a Checklist of Sources for Louis Althusser, Roland Barthes, Jacques Derrida, Michel Foucault, Lucien Goldmann, Jacques Lacan, and an Update of Works on Claude Lévi-Strauss* (1981).

The developments of deconstruction and poststructuralism involve a very large number of offshoots and hybrids; some of the more influential and interesting of which are mentioned here. Roland Barthes's *Pleasure of the Text* (1973; trans. 1975) offers a poststructuralist approach to reader-response theory, while Michel Foucault's *History of Sexuality*, (vol. 1, 1976; trans. 1978) provides an early pioneering poststructuralist exploration of sexuality and gender. Edward W. Said's landmark *Orientalism* (1978) joins poststructuralism to

postcolonial theory, and Fredric Jameson's *Political Unconscious: Narrative as a Socially Symbolic Act* (1981) expounds a Marxian theory of interpretation significantly informed by poststructuralist insights. On the intersection of poststructuralist psychoanalysis and feminism, see the essays by many hands collected in Shoshana Felman's *Literature and Psychoanalysis—The Question of Reading: Otherwise* (1982); Jane Gallop's *Thinking through the Body* (1988) also articulates connections between poststructuralism and feminism, producing an especially influential hybrid. John D. Caputo's *Radical Hermeneutics: Repetition, Deconstruction, and the Hermeneutic Project* (1987) innovatively recasts phenomenological hermeneutics in a deconstructive mode. Gayatri Chakravorty Spivak's *In Other Worlds: Essays in Cultural Politics* (1987) mixes deconstruction together with Marxism, feminism, and postcolonial theory. In *The Signifying Monkey: A Theory of African-American Literary Criticism* (1988), Henry Louis Gates Jr. famously combines African-American literary studies with Yale-style deconstruction. On the institutional and disciplinary implications of deconstruction in relationship to postmodern theory, see Jeffrey T. Nealon, *Double Reading: Postmodernism after Deconstruction* (1993). For the intersections of deconstruction and pragmatism, see the essays collected in Chantal Mouffe's *Deconstruction and Pragmatism* (1996). Judith Butler's landmark *Gender Trouble: Feminism and the Subversion of Identity* (1990) develops new connections among French poststructuralism, feminism, and queer theory; in *The Psychic Life of Power: Theories in Subjection* (1997), she negotiates the vexing problem of subject formation in Nietzsche, Foucault, Althusser, and Freud. *Inside/Out: Lesbian Theories/Gay Theories* (1991), edited by Diana Fuss, offers a wide range of poststructuralist perspectives on sexuality, gender, and queer theory. For especially sophisticated applications of poststructuralist procedures to more recent postcolonial theory, see Homi K. Bhabha, *The Location of Culture* (1994). Diane Elam's *Feminism and Deconstruction: Ms. en Abyme* (1994) memorably highlights the intersections of Derridean philosophy and feminist theories, while Chris Weedon's *Feminist Practice and Poststructuralist Theory* (2d ed., 1996) discusses links among feminism, poststructuralism, and cultural studies.

Feminist Criticism and Theory

For a collection of early modern feminist theory and criticism, see *Women Critics, 1660–1820: An Anthology* (1995), edited by the Folger Collective on Early Women Critics. The beginnings of modern feminist theory are variously marked by such important texts as Virginia Woolf, *A Room of One's Own* (1929); Simone de Beauvoir, *The Second Sex* (1949; trans. 1953); Betty Friedan, *The Feminine Mystique* (1963); and Kate Millett, *Sexual Politics* (1969). Slightly later groundbreaking texts of academic American feminist literary criticism include Ellen Moers, *Literary Women* (1976); Elaine Sho-

walter, *A Literature of Their Own: British Women Novelists from Brontë to Lessing* (1977); Judith Fetterley, *The Resisting Reader: A Feminist Approach to American Fiction* (1978); Lillian Robinson, *Sex, Class, and Culture* (1978); and Sandra M. Gilbert and Susan Gubar, *The Madwoman in the Attic: The Woman Writer and the Nineteenth-Century Literary Imagination* (1979). Important works in the British tradition from this period include Juliet Mitchell, *Psychoanalysis and Feminism: Freud, Reich, Laing, and Women* (1974); Mary Jacobus, *Women Writing and Writing about Women* (1979); and Michèle Barrett, *Women's Oppression Today: Problems in Marxist Feminist Analysis* (1980). Influential short pieces of contemporary French feminist theory from the 1970s appear in the classic *New French Feminism: An Anthology* (1980), edited by Elaine Marks and Isabelle de Courtivron, and important full-length contemporaneous works include Luce Irigaray's *Speculum of the Other Woman* (1974; trans. 1985) and Hélène Cixous and Catherine Clément's *Newly Born Woman* (1975; trans. 1986). For many indispensable feminist contributions from women of color and lesbian authors, see the sections on African American Criticism and Theory, Asian American Criticism and Theory, Chicano/Chicana Studies, Gay and Lesbian Criticism and Queer Theory, Native American Studies, and Postcolonial Criticism and Theory.

For accessible introductions to feminist criticism and theory, see K. K. Ruthven, *Feminist Literary Studies: An Introduction* (1984); *Making a Difference: Feminist Literary Criticism* (1985), edited by Gayle Greene and Coppélia Kahn; and Mary Evans, *Introducing Contemporary Feminist Thought* (1997). A more advanced introduction is Chris Weedon's *Feminist Practice and Poststructuralist Theory* (2d ed., 1996). Toril Moi's *Sexual/Textual Politics: Feminist Literary Theory* (1985) and Jane Gallop's *Around 1981: Academic Feminist Literary Theory* (1992) offer informative accounts of the early stages of contemporary feminist theory's development, while Imelda Whelehan's *Modern Feminist Thought: From the Second Wave to "Post Feminism"* (1993) surveys later trends. Susan Gubar's *Critical Condition: Feminism at the Turn of the Century* (200) casts a skeptical and critical eye on recent developments in feminist theory, focusing in particular on the latter's relationship to African American, postcolonial, and poststructuralist theory.

A widely used comprehensive anthology of feminist literary criticism and theory is *Feminisms: An Anthology of Literary Theory and Criticism* (2d ed., 1997), edited by Robyn R. Warhol and Diane Price Herndl. Wide-ranging retrospective collections tracing the history and development of contemporary feminist theory include *New Feminist Criticism* (1985), edited by Elaine Showalter; *Changing Subjects: The Making of Feminist Literary Criticism* (1993), edited by Gayle Green and Coppélia Kahn; and *The Second Wave: A Reader in Feminist Theory* (1997), edited by Linda Nicholson, which gathers

major feminist essays covering a forty-year period. On the various waves of feminism, see *Generations: Academic Feminists in Dialogue* (1998), edited by Devoney Looser and E. Ann Kaplan. The reader *Conflicts in Feminism* (1990), edited by Marianne Hirsch and Evelyn Fox Keller, offers a clear sense of contemporary debates within feminist theory; similar readers include *Destabilizing Theories: Contemporary Feminist Debates* (1992), edited by Michèle Barrett and Anne Phillips; *Feminist Literary Criticism* (2d ed., 1995), edited by Mary Eagleton; and *The Feminist Reader: Essays in Gender and the Politics of Literary Criticism* (2d ed., 1998), edited by Catherine Belsey and Jane Moore. For a provocative dialogue on these debates, see the essays by Judith Butler, Drucilla Cornell, and others in *Feminist Contentions: A Philosophical Exchange* (1995), edited by Seyla Benhabib et al. Essays foregrounding issues of race and gender can be found in *This Bridge Called My Back: Writings by Radical Women of Color* (1981), edited by Cherríe Moraga and Gloria Anzaldúa; *Making Face, Making Soul—Haciendo Caras: Creative and Critical Perspectives by Feminists of Color* (1990), edited by Gloria Anzaldúa; *Reading Black, Reading Feminist* (1990), edited by Henry Louis Gates Jr.; *Other Sisterhoods: Literary Theory and U.S. Women of Color* (1998), edited by Sandra Kumamoto Stanley; and *The Black Feminist Reader* (2000), edited by Joy James and T. Denean Sharpley-Whiting. Important collections focusing on the relationship between feminist theory and politics are *Coming to Terms: Feminism, Theory, Politics* (1989), edited by Elizabeth Weed, and *Feminists Theorize the Political* (1992), edited by Judith Butler and Joan W. Scott. Explorations of the futures of feminist theory are collected in *New Feminist Discourses: Essays in Literature, Criticism, and Theory* (1992), edited by Isobel Armstrong, and *Listening to Silences: New Essays in Feminist Criticism* (1994), edited by Elaine Hedges and Shelley Fisher Fishkin. *Scattered Hegemonies: Postmodernist and Transnational Feminist Practices* (1994), edited by Inderpal Grewal and Caren Kaplan, addresses global concerns of feminism. On feminism, environmentalism, and literary analysis, see *Ecofeminist Literary Criticism: Theory, Interpretation, Pedagogy* (1998), edited by Greta Gaard and Patrick D. Murphy. *French Feminism Reader* (2000), edited by Kelly Oliver, collects selections from the French feminist theory most influential in the English-speaking world.

Useful reference sources on feminist terminology include Elizabeth Wright, *Feminism and Psychoanalysis: A Critical Dictionary* (1992); Maggie Humm, *The Dictionary of Feminist Theory* (2d ed., 1995); and Carol G. Gould, *Key Concepts in Critical Theory: Gender* (1997). For comprehensive treatments of terminology and key figures in feminism, followed by relevant bibliographies, see Elizabeth Kowaleski-Wallace, *Encyclopedia of Feminist Literary Theory* (1997). Among bibliographic resources are Wendy Frost and Michele Valiquette, *Feminist Literary Criticism: A Bibliography of Journal Arti-*

cles, 1975–1981 (1988); Joan Nordquist, *Feminist Theory: A Bibliography* (1992); and Maggie Humm, *An Annotated Critical Bibliography of Feminist Criticism* (1987) and *A Reader's Guide to Contemporary Feminist Literary Criticism* (1994).

Feminist criticism and theory has productively combined with other schools and movements. In *The Daughter's Seduction: Feminism and Psychoanalysis* (1982), Jane Gallop offers an early U.S. feminist exploration of Lacanian psychoanalysis; a complementary work also drawing race studies into its orbit is *Female Subjects in Black and White: Race, Psychoanalysis, Feminism* (1997), edited by Elizabeth Abel, Barbara Christian, and Helene Moglen. Linking the concerns of feminism with those of queer theory are Eve Kosofsky Sedgwick's *Between Men: English Literature and Male Homosexual Desire* (1985) and the essays in *Feminism Meets Queer Theory* (1997), edited by Elizabeth Weed and Naomi Schor. On the intersections of deconstruction and feminism, see Barbara Johnson, *A World of Difference* (1987), and Diane Elam, *Feminism and Deconstruction: Ms. en Abyrme* (1994). Influential interdisciplinary works of feminist film theory and criticism include *Revisions: Essays in Feminist Film Criticism* (1984), edited by Mary Ann Doane et al.; Teresa de Lauretis, *Alice Doesn't: Feminism, Semiotics, Cinema* (1984); *Feminism and Film Theory* (1988), edited by Constance Penley; Kaja Silverman, *The Acoustic Mirror: The Female Voice in Psychoanalysis and Cinema* (1988), and Laura Mulvey, *Visual and Other Pleasures* (1989). *Feminism and Foucault* (1988), edited by Irene Diamond and Lee Quinby, establishes fruitful connections with one of poststructuralism's leading theorists. On the intersection of postmodernism and feminism, see *Feminism/Postmodernism* (1990), edited by Linda J. Nicholson, and *Feminism and Postmodernism* (1994), edited by Margaret Ferguson and Jennifer Wicke. *Men in Feminism* (1987), edited by Alice Jardine and Paul Smith, and *Engendering Men: The Question of Male Feminist Criticism* (1990), edited by Joseph A. Boone and Michael Cadden, both consider the roles of men in feminism. For links between feminism and Marxism, see Rita Felski, *Beyond Feminist Aesthetics: Feminist Literature and Social Change* (1989); *Women, Class, and the Feminist Imagination: A Socialist-Feminist Reader* (1990), edited by Karen Hansen and Ilene Philipson; Teresa Ebert, *Ludic Feminism and After: Postmodernism, Desire, and Labor in Late Capitalism* (1996); and *Materialist Feminism: A Reader in Class, Difference, and Women's Lives* (1997), edited by Rosemary Hennessy and Chrys Ingraham. Pioneering feminist texts by women of color include Barbara Christian, *Black Women Novelists* (1980); bell hooks, *Ain't I a Woman: Black Women and Feminism* (1981); Paula Gunn Allen, *The Sacred Hoop: Recovering the Feminine in American Indian Traditions* (1986); and Gloria Anzaldúa, *Borderlands / La Frontera: The New Mestiza* (1987). *Theorizing Feminism: Parallel Trends in the Humanities and Social Sciences*

(1994), edited by Anne C. Herrmann and Abigail J. Stewart, explores a wide range of interdisciplinary work linking gender studies with race, class, sexuality, and postmodern studies. For influential feminist studies concerned with the sciences, see Sandra Harding, *The Science Question in Feminism* (1986), and Donna J. Haraway, *Simians, Cyborgs, and Women: The Reinvention of Nature* (1991). On the link between feminism and postcolonial studies, see Gayatri Chakravorty Spivak, *In Other Worlds: Essays in Cultural Politics* (1987); Trinh T. Minh-ha, *Woman, Native, Other: Writing, Postcoloniality, and Feminism* (1989); and Julia Emberley, *Thresholds of Difference: Feminist Critique, Native Women's Writings, Postcolonial Theory* (1993). Works exploring autobiographical approaches to feminist theory include *The Private Self: Theory and Practice of Women's Autobiographical Writings* (1988), edited by Shari Benstock; *Life/Lines: Theorizing Women's Autobiography* (1988), edited by Bella Brodzki and Celeste Schenck; Nancy Miller, *Getting Personal: Feminist Occasions and Other Autobiographical Acts* (1991); Lee Gilmore, *Autobiographics: A Feminist Theory of Self-Representation* (1994); and *Women, Autobiography, Theory* (1998), edited by Sidonie Smith and Julia Watson. Judith Butler's often-cited *Bodies That Matter: On the Discursive Limits of "Sex"* (1993) creatively merges feminism, psychoanalysis, poststructuralism, and queer theory. *American Feminist Thought at Century's End: A Reader* (1993), edited by Linda Kauffman, marks the influences of feminist theory on other schools and movements, including sexuality and gender studies, psychoanalytic criticism, postcolonial studies, and cultural studies.

Formalism

The major formalist approaches to literature stem from early- and mid-twentieth-century British, American, and Slavic traditions. The Anglo-American tradition of formalism had as a harbinger T. S. Eliot's "Tradition and the Individual Talent" (1917), which was soon followed by his influential formalist statements in "Hamlet and His Problems" (1919) and "The Metaphysical Poets" (1921). Groundbreaking texts of British formalism include I. A. Richards's *Principles of Literary Criticism* (1924) and William Empson's *Seven Types of Ambiguity* (1930). Landmark texts in the American formalist tradition include John Crowe Ransom's essay "Criticism, Inc." (1937); his subsequent work *The New Criticism* (1941); and Cleanth Brooks's *Well Wrought Urn: Studies in the Structure of Poetry* (1947). Of equal canonical status for American New Criticism is W. K. Wimsatt Jr. and Monroe C. Beardsley's later *The Verbal Icon: Studies in the Meaning of Poetry* (1954). Apart from the New Critics, the Chicago School developed a neo-Aristotelian approach to formalism, which is on display in their collection *Critics and Criticism: Ancient and Modern* (1952), edited by R. S. Crane, as well as in Wayne C. Booth's *Rhetoric of Fiction*

(1961). Encompassing the diverse work of the Moscow Linguistic Circle, the Leningrad-based Society for the Study of Poetic Language (OPOYAZ), and, to a certain extent, the Prague Linguistic Circle, the Slavic formalist tradition includes such influential texts as Viktor Shklovsky's "Art as Technique" (1917), Vladimir Propp's *Morphology of the Folktale* (1928; trans. 1958), and early pieces by Roman Jakobson collected in his *Language in Literature* (1987), edited by Krystyna Pomorska and Stephen Rudy. Inspired by structural linguistics, the Slavic tradition eventually turned toward structuralism and semiotics, as exemplified in Jan Mukavovsky's "Note on the Czech Translation of Šklovskij's *Theory of Prose*" (1934). The Slavic tradition and the Anglo-American tradition meet for the first time in René Wellek and Austin Warren's celebrated formalist handbook for students, *Theory of Literature* (1949).

For an introduction to the major figures, issues, and problems in Anglo-American formalism, see Murray Krieger, *The New Apologists for Poetry* (1956). On the Southern wing of the New Critics, see Louise Cowan, *The Southern Critics: An Introduction to the Criticism of John Crowe Ransom, Allen Tate, Donald Davidson, Robert Penn Warren, Cleanth Brooks, and Andrew Lytle* (1971), and Mark Jancovich, *The Cultural Politics of the New Criticism* (1993). For a succinct statement of the principles of New Criticism, see Cleanth Brooks, "New Criticism," in *The Princeton Encyclopedia of Poetry and Poetics* (enlarged ed., 1974). Cleanth Brooks and Robert Penn Warren's *Understanding Poetry* (1938) and *Understanding Fiction* (1943), which have gone through many printings, are influential textbooks that introduce New Critical methodologies. Chris Baldick's *Social Mission of English Literary Criticism, 1848-1932* (1983) offers a historical overview of the British formalists, while Grant Webster's *Republic of Letters: A History of Postwar American Literary Opinion* (1979) provides a detailed history of American formalism. Tony Bennett's *Formalism and Marxism* (1979) gives a brief introduction to the Russian formalists. For a more sophisticated introduction, see Peter Steiner, *Russian Formalism: A Meta-poetics* (1984). Victor Erlich's *Russian Formalism: History—Doctrine* (3d ed., 1981) is the definitive history of the Russian formalists, while Jurij Striedter's *Literary Structure, Evolution, and Value: Russian Formalism and Czech Structuralism Reconsidered* (1989) provides a useful survey. For a history of the Prague School, see F. W. Galan, *Historic Structures: The Prague School Project, 1928-1946* (1985). A suggestive comparison is developed by Ewa M. Thompson in *Russian Formalism and Anglo-American Criticism* (1971).

The New Criticism and Contemporary Literary Theory: Connections and Continuities (1995), edited by William J. Spurlin and Michael Fischer, assembles a collection of influential essays from first-generation New Critics as well as from their prominent self-proclaimed critics of the 1970s and 1980s; it includes essays reassessing the value of

New Criticism for the 1990s. For representative selections from the Chicago School, see the abridged edition of *Critics and Criticism: Essays in Method* (1957), edited by R. S. Crane. Anthologies of Russian work include *Russian Formalist Criticism: Four Essays* (1965), edited and translated by Lee T. Lemon and Mario J. Reis; *Russian Formalism: A Collection of Articles and Texts in Translation* (1973), edited and translated by Stephen Bann and John E. Bowlt; and *Formalism: History, Comparison, Genre* (1978), edited and translated by L. M. O'Toole and Ann Shukman. A Prague School Reader on *Aesthetics, Literary Structure, and Style* (1964), edited and translated by Paul L. Garvin, and *The Prague School: Selected Writings, 1929-1946* (1982), edited by Peter Steiner and translated by various hands, collect definitive works from the Prague School.

Chris Baldick's *Criticism and Literary Theory: 1890 to the Present* (1996) includes detailed individual bibliographies of the major British and American formalists, while Webster's *Republic of Letters* provides in-depth bibliographical profiles of the most influential American formalists. *Profession 82* (1982), edited by Richard I. Brod and Phyllis P. Franklin, offers a bibliographical survey of the Chicago School. For a bibliography of Russian formalism, see Erlich's *Russian Formalism*, and for a bibliography of Prague School work consult Galen's *Historic Structures*.

As a movement concerned with the autonomy of art and with intrinsic criticism, formalism generally does not lend itself to crossover projects: To sample a formalism that expands to interdisciplinary issues, see Kenneth Burke's work, particularly his *Philosophy of Literary Form: Studies in Symbolic Action* (1941). I. A. Richard's *Practical Criticism* (1929) marks a turning of formalist experiment to reader-response theory, whereas René Wellek and Austin Warren's *Theory of Literature* (1949) draws on both the phenomenological tradition and the history of literature. For a polemical engagement with post-structuralism by a latter-day formalist, see Murray Krieger, *Poetic Presence and Illusion: Essays in Critical History and Theory* (1979). Wayne Booth's *Critical Understanding: The Powers and Limits of Pluralism* (1979) is a formalist attempt to lay down pragmatic pluralistic principles by which to negotiate a complex world of contending critical methods, while Steven Knapp's *Literary Interest: The Limits of Anti-Formalism* (1993) is a latter-day defense of formalism.

Gay and Lesbian Criticism and Queer Theory

A pioneering text of gay theory, which emerged from the gay liberation movement of the 1960s, is *Out of the Closets: Voices of Gay Liberation* (1972), edited by Karla Jay and Allen Young. Early gay and lesbian criticism, which often focused on studying affirmative images, includes such texts as the special issue of the journal *College English* 36 (1974) titled

The Homosexual Imagination, edited by Louie Crew and Rictor Norton; Jane Rule, *Lesbian Images* (1975); Roger Austen, *Playing the Game: The Homosexual Novel in America* (1977); and Vito Russo, *The Celluloid Closet: Homosexuality in the Movies* (1981). Contemporary gay and lesbian criticism and queer theory frequently acknowledge three formative French influences: Guy Hocquenghem, *Homosexual Desire* (1972; trans. 1978); Michel Foucault, *The History of Sexuality* (3 vols., 1976-84; trans. 1978-86), and Monique Wittig, *The Straight Mind* (1980; trans. 1992). Also important are Adrienne Rich's "Compulsory Heterosexuality and Lesbian Existence" (1980) and Marilyn Frye's *Politics of Reality: Essays in Feminist Theory* (1983). The undisputedly groundbreaking text separating early gay-affirmative image studies from a newer, theoretically minded academic movement is the highly regarded *Between Men: English Literature and Male Homosexual Desire* (1985), by Eve Kosofsky Sedgwick. Subsequent influential works include *Men in Feminism* (1987), edited by Alice Jardine and Paul Smith; *AIDS: Cultural Analysis, Cultural Activism* (1988), edited by Douglas Crimp; Sedgwick, *Epistemology of the Closet* (1990); Judith Butler, *Gender Trouble: Feminism and the Subversion of Identity* (1990); and *Queer Theory*, a special issue of the journal *Differences* 3 (1992); edited by Teresa de Lauretis, which offers a pioneering collection devoted to the speculative work of expanding gay and lesbian studies to broader queer horizons.

Annamarie Jagose's *Queer Theory: An Introduction* (1996) makes an accessible starting point, while Lee Edelman's *Homographesis: Essays in Gay, Lesbian, and Theory* (1994) may serve as a more advanced introduction. Terry Castle's *Apparitional Lesbian: Female Homosexuality and Modern Culture* (1993) can be read as a theoretical and historical introduction to the lesbian in literature. For a survey of the diverse interests and issues of gay and lesbian criticism, see *Professions of Desire: Lesbian and Gay Studies in Literature* (1995), edited by George E. Haggerty and Bonnie Zimmerman. *The Gay 90s: Disciplinary and Interdisciplinary Formations in Queer Studies* (1997), edited by Thomas Foster, Carol Siegel, and Ellen E. Berry, provides an overview of queer studies. Historical treatments include the pioneering *Gay American History* (1976), by Jonathan Katz; Martin Duberman; and Martha Vicinus; their subsequent continuation, *Lesbian and Gay Almanac* (1983); *Hidden from History: Reclaiming the Gay and Lesbian Past* (1989), by George Chauncey Jr.; and the documentary anthology *We Are Everywhere: A Historical Sourcebook of Gay and Lesbian Politics* (1997), edited by Mark Blásius and Shane Phelan.

The Lesbian and Gay Studies Reader (1993), edited by Henry Abelové, Michele Aina Barale, and David M. Halperin, is the leading anthology of the field, collecting the most significant English language work up to its publication date; *Lesbian and Gay Writing: An Anthology of Critical Essays*

(1990), edited by Mark Lilly, focuses on work by gay and lesbian critics on gay/lesbian authors. *Inside/Out: Lesbian Theories, Gay Theories* (1991), edited by Diane Fuss, is an influential anthology; others are *Queering the Renaissance* (1994), edited by Jonathan Goldberg, and *Negotiating Lesbian and Gay Subjects* (1995), edited by Monica Dorenkamp and Richard Henke, which continues the work of Fuss's anthology. Important women-identified collections include *Lesbian Texts/Contexts: Radical Revisions* (1990), edited by Karla Jay and Joanne Glasgow; *New Lesbian Criticism: Literary and Cultural Readings* (1992), edited by Sally Munt; *Sexual Practice, Textual Theory: Lesbian Cultural Criticism* (1993), edited by Susan J. Wolfe and Julia Penelope; and *The Lesbian Postmodern* (1994), edited by Laura L. Doan. For two readers on the politics of homosexuality and culture, see *Fear of a Queer Planet: Queer Politics and Social Theory* (1993), edited by Michael Warner, and the literary and historically situated *Cultural Politics—Queer Reading* (1994), edited by Alan Sinfield. Activist theoretical perspectives are offered by the contributors to *Activating Theory: Lesbian, Gay, and Bisexual Politics* (1993), edited by Joseph Bristow and Angela R. Wilson, and to *Playing with Fire: Queer Politics, Queer Theories* (1996), edited by Shane Phelan. For critical applications of queer theory to a wide range of British, French, and American novels, see *Novel Gazing: Queer Readings in Fiction* (1997), edited by Eve Kosofsky Sedgwick.

Bibliographies of gay and lesbian criticism and queer theory are available in Fuss's anthology, *Inside/Out*; Linda Garber, *Lesbian Sources: A Bibliography of Periodical Articles, 1970–1990* (1993); Sharon Mallinowski, *Gay and Lesbian Literature* (1995); and Joan Nordquist, *Queer Theory: A Bibliography* (1997). Other useful bibliographical resources include Wayne R. Dynes, *Homosexuality: A Research Guide* (1987); Dolores Maggiore, *Lesbianism: An Annotated Bibliography and Guide to the Literature, 1976–1986* (1988); and Simon Stern, "Lesbian and Gay Studies: A Selective Bibliography," *Yale Journal of Criticism* 3 (1989).

Gay and lesbian criticism and queer theory, like many other contemporary schools and movements, often draw from and advance other theoretical perspectives. To sample such combinations, see, for personal criticism, *Life/Lines: Theorizing Women's Autobiography* (1988), edited by Bella Brodzki and Celeste Schenck; for ethnicity and race studies, *Making Face/Making Soul—Haciendo Caras: Creative and Critical Perspectives by Feminists of Color* (1990), edited by Gloria Anzaldúa; for feminist theory, *Angry Women* (1991), edited by Andrea Juno and V. Vale; for postcolonial criticism, *Nationalisms and Sexualities* (1992), edited by Andrew Parker et al.; for psychoanalytic theory, *Sexuality and Space* (1992), edited by Beatriz Colomina and Jennifer Bloomer; and for cultural studies, *Queer Representations: Reading Lives, Reading Cultures* (1997), edited by Martin Duberman.

Marxism

The history of Marxist criticism includes distinct, sometimes contending, projects and traditions. Marx himself did not compose a work of literary criticism or theory. Important early Russian groundbreaking texts are Georgi Plekhanov's *Art and Society* (1912; trans. 1936) and Leon Trotsky's *Literature and Revolution* (1924; trans. 1925). Influential German contributions to Marxist theory and criticism include the works of the Frankfurt School, especially Max Horkheimer and Theodor Adorno's *Dialectic of Enlightenment* (1944; trans. 1972) and the work of a critic closely associated with the school, Walter Benjamin, particularly *Illuminations* (1968), a posthumous collection of essays. The Chinese tradition of Marxist criticism arises out of the work of Mao Zedong, whose articles, speeches, and reports are collected in *On Literature and Art* (1958). In *The Historical Novel* (1937; trans. 1962), the Hungarian György Lukács famously sets out to develop a socialist aesthetic based on a Hegelian understanding of the European tradition. In the essays collected in *Brecht on Theatre* (1964), Bertolt Brecht opposes the realist approach to aesthetics represented by Lukács, advocating instead avant-garde experimentation. Other landmark texts of Marxist criticism include the British cultural studies texts of Raymond Williams, such as *Culture and Society, 1780–1950* (1958); the psychoanalytical structuralist works of the French philosopher Louis Althusser, particularly *Lenin and Philosophy and Other Essays* (1971); Richard Ohmann's *English in America: A Radical View of the Profession* (1976), which pioneered the critique of the university English department as a hegemonic institution; and the synthesizing theoretical books of the American Marxist literary critic Fredric Jameson, most notably *The Political Unconscious: Narrative as a Socially Symbolic Act* (1981). Much contemporary work in Marxist criticism draws on parts of *The Prison Notebooks* (written 1929–35; selections trans. 1971) of Antonio Gramsci and *The Dialogic Imagination* (1975; trans. 1981) of Mikhail M. Bakhtin, whose initial impact came decades after they were written.

Terry Eagleton's *Marxism and Literary Criticism* (1976) provides a concise introductory overview of key issues in Marxist criticism. Tony Bennett's *Formalism and Marxism* (1979) is a brief critical survey of issues in post-Althusserian criticism, offering also a short history of how a political understanding of aesthetics arises out of the work of the Russian formalists. More advanced introductions to Marxist criticism include Fredric Jameson, *Marxism and Form* (1971); Dave Laing, *The Marxist Theory of Art: An Introductory Survey* (1978); and Pauline Johnson, *Marxist Aesthetics* (1984). Informative histories of Marxist literary theory include Peter Demetz's *Marx, Engels, and the Poets: Origins of Marxist Literary Criticism* (1967) and Henri Arvon's *Marxist Esthetics* (1970; trans. 1973). Perry Anderson's *Considerations on Western Marxism* (1984) is

a brief but rich intellectual history of the emergence of a culturally oriented Marxist tradition. In *The Dialectical Imagination: A History of the Frankfurt School* (1973), Martin Jay offers an authoritative history of the Frankfurt School, while Mark Poster's *Existential Marxism in Postwar France* (1975) provides a knowledgeable account of philosophical and cultural developments from Jean-Paul Sartre to Louis Althusser. For other useful historical studies, see Alan A. Wald, *The New York Intellectuals: The Rise and Decline of the Anti-Stalinist Left from the 1930s to the 1980s* (1987), and Ted Benton, *The Rise and Fall of Structural Marxism* (1984).

There are a number of informative anthologies of Marxist criticism. *Marx and Engels on Literature and Art* (1973), edited by Lee Baxandall and Stefan Morawski, gathers many of the most important passages of literary criticism written by Marx and Engels and also provides a theoretical and historical introduction. *Marxism and Art: Writings in Aesthetics and Criticism* (1972), edited by Berel Lang and Forrest Williams, and *Marxism and Art: Essays Classic and Contemporary* (1973), edited by Maynard Solomon, collect numerous important essays that focus, for the most part, on pre-Althusserian critical issues. *Aesthetics and Politics* (1977), edited by the New Left Review, contains a selection of essays by Theodor Adorno, Walter Benjamin, Ernst Bloch, Bertolt Brecht, and György Lukács, as well as commentary in an afterword by Fredric Jameson. Later critical developments are addressed in *An Anthology of Western Marxism: From Lukács and Gramsci to Socialist Feminism* (1989), edited by Roger Gottlieb; *Contemporary Marxist Criticism* (1992), edited by Francis Mulhern; *Marxist Literary Theory: A Reader* (1996), edited by Terry Eagleton and Drew Milne; and *Marxism beyond Marxism* (1996), edited by Saree Makdisi, Cesare Casarino, and Rebecca Karl. Essays presented at two celebrated fin de siècle conferences on Marxism are assembled in *Marxism and the Interpretation of Culture* (1988), edited by Cary Nelson and Lawrence Grossberg, and *Whither Marxism?* (1995), edited by Bernd Magnus and Stephen Cullenberg.

James W. Russell's *Marx-Engels Dictionary* (1980), Jozef Wilczynski's *Encyclopedic Dictionary of Marxism, Socialism, and Communism* (1981), and especially Tom Bottomore's *Dictionary of Marxist Thought* (2d ed., 1991) are useful resources for students unfamiliar with Marxist terminology. Lee Baxandall's *Marxism and Aesthetics* (1973) and Chris Bullock and David Peck's *Guide to Marxist Literary Criticism* (1980) offer substantial bibliographies. Baxandall is international in scope, while Bullock and Peck focus primarily on Britain, the United States, and Canada.

Because Marxist criticism attends to social history, it has proven useful to many contemporary critical schools and movements, ranging from feminism and race studies to postcolonial theory and cultural studies. Conversely, Marxist critics often synthesize other critical movements. V. N. Voloshinov's *Marxism and the Philosophy of Language*

(1929; trans. 1973), for example, attempts to demonstrate the value of Marxist criticism for linguistics and language theory, while Herbert Marcuse's *Eros and Civilization: A Philosophical Inquiry into Freud* (1955) is one of several important Frankfurt School attempts to wed Marxist cultural criticism and psychoanalysis. Louis Althusser in *For Marx* (1965; trans. 1969) incorporates psychoanalytic and structuralist insights into the Marxist project, as does Fredric Jameson in *The Political Unconscious: Narrative as a Socially Symbolic Act* (1981). Michael Ryan's *Marxism and Deconstruction: A Critical Articulation* (1982) establishes fruitful points of contact between Marx and the deconstructive philosophy of Jacques Derrida. Antonio Negri's *Marx Beyond Marx* (1979; trans. 1984) and Ernesto Laclau and Chantal Mouffe's *Hegemony and Socialist Strategy: Towards a Radical Democratic Politics* (1985) reflect the advent of post-Marxism in their transformation of traditional Marxist concepts. Nancy Hartssock's *Money, Sex, and Power: Toward a Feminist Historical Materialism* (1983) allies feminist and Marxist theory, while Gayatri Chakravorty Spivak's *In Other Worlds: Essays in Cultural Politics* (1987) combines Marxism and feminist studies with deconstruction, post-colonial theory, and cultural studies. Slavoj Žižek's *Sublime Object of Ideology* (1989) is an influential text at the intersection/crossroads of psychoanalysis, philosophy, and Marxist cultural and economic theories. Aijaz Ahmad's *In Theory: Classes, Nations, Literatures* (1992) situates postcolonial studies within Marxist paradigms, as does Ranajit Guha's *Dominance without Hegemony: History and Power in Colonial India* (1997).

Native American Studies

Before the advent of the American Indian literary renaissance during the 1960s, Native American studies was confined largely to anthropological and linguistic research on oral literatures; examples include Daniel G. Brinton, *Aboriginal American Authors and Their Productions* (1883); Franz Boas, *Race, Language, and Culture* (1910); and Paul Radin, *The Trickster: A Study in American Indian Mythology* (1956). Occasionally, literary studies of oral literatures was combined with ethnographic criticism, as in Roy Harvey Pearce's *The Savages of America: A Study of the Indian and the Idea of Civilization* (1953) and Richard Slotkin's later *Regeneration through Violence: The Mythology of the American Frontier, 1600-1860* (1973). In the late 1970s a series of groundbreaking book-length studies emerged that treated the writings of the American Indian literary renaissance as "literature"; among them were Charles R. Larson, *American Indian Fiction* (1978); Alan R. Velle, *Four American Indian Literary Masters: N. Scott Momaday, James Welch, Leslie Marmon Silko, and Gerald Vizenor* (1982); *Studies in American Indian Literature* (1983), edited by Paula Gunn Allen; and Kenneth Lincoln, *Native American Renaissance* (1983). Pioneering revisionist ethnographic approaches also

appeared at this time, best exemplified by Dell Hymes's "In Vain I Tried to Tell You": *Essays in Native American Ethnopoetics* (1981). Yet another significant development was the emergence of a line of feminist works; see especially Paula Gunn Allen, *The Sacred Hoop: Recovering the Feminine in American Indian Traditions* (1986).

For general introductions to the field, see A. LaVonne Brown Ruoff, *American Indian Literatures: An Introduction. Bibliographic Review, and Selected Bibliography* (1990), as well as the earlier *Three American Literatures: Essays in Chicano, Native American, and Asian-American Literatures for Teachers of American Literature* (1982), edited by Houston A. Baker Jr. For introductions to the theory of Indian oral literatures, see Dennis Tedlock, *The Spoken Word and the Work of Interpretation* (1983); William Clements, *Native American Verbal Art: Texts and Contexts* (1996); and Karl Kroeber, *Artistry in Native American Myths* (1998). David Murray, *Forked Tongues: Speech, Writing, and Representation in North American Indian Texts* (1991); Louis Owen, *Other Destinies: Understanding the American Indian Novel* (1992); Robert A. Warrior, *Tribal Secrets: Recovering American Indian Intellectual Traditions* (1995); and Jace Weaver, *That the People Might Live: Native American Literatures and Native American Community* (1997) can be read as introductions to the theory of Native American written literatures. An accessible introduction to critical methodology is Greg Sarris's *Keeping Slug Woman Alive: A Holistic Approach to American Indian Texts* (1993). Two works by Arnold Krupat, *The Voice in the Margin: Native American Literature and the Canon* (1989) and *The Turn to the Native: Studies in Criticism and Culture* (1996), serve as wide-ranging introductions to the theoretical debates and issues in the field as a whole, while a third, *Ethnocriticism: Ethnography, History, Literature* (1991), introduces an influential interdisciplinary approach to Native American literature.

For a collection of critical essays on Native American texts from 1630 to 1940, see *Early Native American Writing: New Critical Essays* (1996), edited by Helen Jaskoski. *Literature of the American Indians: Views and Interpretations* (1975), edited by Abraham Chapman, is an important collection of essays covering nearly a hundred years of traditional ethnographic criticism. For various collections of revisionist ethnographic criticism, see *Traditional Literatures of the American Indian: Texts and Interpretations* (1981), edited by Karl Kroeber; *Smoothing the Ground: Essays on Native American Oral Literature* (1983), edited by Brian Swann; *Reading the Fire: Essays in the Traditional Indian Literature of the Far West* (1983), edited by Jarold Ramsey; *Critical Essays on Native American Literature* (1985), edited by Andrew Wiget; and *Recovering the Word: Essays on Native American Literature* (1987), edited by Brian Swann and Arnold Krupat. *Other Sisterhoods: Literary Theory and U.S. Women of Color* (1998), edited by Sandra Kumamoto Stanley,

presents a number of feminist essays. Collections that focus largely on literary concerns include the theoretically informed *Narrative Chance: Postmodern Discourse on Native American Indian Literatures* (1993), edited by Gerald Vizenor; *New Voices in Native American Literary Criticism* (1993), edited by Arnold Krupat; *Native American Perspectives on Literature and History* (1995), edited by Alan R. Velie; and *Critical Perspectives on Native American Fiction* (2d ed., 1997), edited by Richard F. Fleck.

Informative bibliographies of theory and criticism include A. LaVonne Brown Ruoff's "American Indian Literature," in *Redefining American Literary History* (1990), edited by Ruoff and Jerry W. Ward Jr., and the more extensive contemporaneous bibliography published in Ruoff's *American Indian Literature*.

For a discussion of Native American studies in relationship to gender studies and gay and lesbian studies, see the essays in *Two-Spirit People: Native American Gender, Identity, Sexuality, and Spirituality* (1997), edited by Sue Ellen Jacobs, Wesley Thomas, and Sabine Lang, as well as Lang's *Men as Women, Women as Men: Changing Gender in Native American Cultures* (1998). Gerald Vizenor's *Fugitive Poses: Native American Indian Scenes of Absence and Presence* (1998) articulates a version of Native American studies connected with a variety of deconstructive and poststructuralist theorists. On Native American studies and feminism, see Kathleen M. Donovan, *Feminist Readings of Native American Literature: Coming to Voice* (1998). For an example of personal criticism focused on the concept of identity, see Louis Owens, *Mixedblood Messages: Literature, Film, Family, Place* (1998).

New Historicism

The term "New Historicism"—a contested phrase from its inception in the 1980s—refers either narrowly to the historical criticism of early modern cultures linked with Stephen Greenblatt and some of his colleagues or, more broadly, to a diverse critical movement concerned (as Greenblatt is) with structuralist and poststructuralist approaches to literary and cultural history inspired by several landmark works, namely Pierre Bourdieu, *Outline of a Theory of Practice* (1972; trans. 1977); Clifford Geertz, *The Interpretation of Cultures* (1973); Hayden White, *Metahistory: The Historical Imagination in Nineteenth-Century Europe* (1974); and Michel Foucault, *Discipline and Punish: The Birth of the Prison* (1975; trans. 1977). Also instrumental in prompting a "turn toward history" in the 1980s are Louis Althusser, *Lenin and Philosophy and Other Essays* (1971); Raymond Williams, *Marxism and Literature* (1977); Edward W. Said, *Orientalism* (1978); Frank Lentricchia, *After the New Criticism* (1980); and Fredric Jameson, *The Political Unconscious: Narrative as a Socially Symbolic Act* (1981). The groundbreaking text of New Historicism in the narrow sense of the term, is Stephen Greenblatt's *Renaissance Self-Fashioning: From More to Shake-*

speare (1980). Two programmatic statements by Greenblatt on the New Historicism are his introduction to an edited collection, *The Power of Forms in the English Renaissance* (1982), and "Toward a Poetics of Culture" in his *Learning to Curse: Essays in Early Modern Culture* (1991). Regularly cited as authoritative theoretical accounts of New Historicist tenets are two essays by Louis A. Montrose: "Renaissance Literary Studies and the Subject of History" (1986), subsequently revised as "Professing the Renaissance: The Poetics and Politics of Culture" in *The New Historicism* (1989), edited by H. Aram Veeser, and "New Historicism," in *Redrawing the Boundaries* (1992), edited by Gilles Gunn and Stephen Greenblatt. Frequently associated with Greenblatt and Montrose, although distinguished by a Marxist materialist component in her work, is Catherine Gallagher, whose book *The Industrial Reformation of English Fiction: Social Discourse and Narrative Form, 1832–1867* (1985) explores post-Romantic topics and texts. In the broader sense of the term, leading early examples of New Historicism emerged during the 1980s in many subdisciplines and fields. In American studies, for instance, "New Americanist" work appeared, including Michael Paul Rogin, *Subversive Genealogy: The Politics and Art of Herman Melville* (1983); Sacvan Bercovitch and Myra Jehlen, *Ideology and Classic American Literature* (1986); Lawrence Buell, *New England Literary Culture from Revolution through Renaissance* (1986); Walter Benn Michaels, *The Gold Standard and the Logic of Naturalism: American Literature at the Turn of the Century* (1987); Eric J. Sundquist, *To Wake the Nations: Race in the Making of American Literature* (1993); and *Revisionary Interventions into the American Canon* (1994), edited by Donald E. Pease. In medieval studies, influential works include Lee Patterson's *Negotiating the Past: The Historical Understanding of Medieval Literature* (1987) and *The New Medievalism* (1991), edited by Marina S. Brownlee, Kevin Brownlee, and Stephen G. Nichols. In Renaissance studies, a radical historicism indebted to Raymond Williams's influential idea of cultural materialism developed mainly in Britain, as reflected in the groundbreaking *Political Shakespeare: New Essays in Cultural Materialism* (1985), edited by Jonathan Dollimore and Alan Sinfield. In Romanticism, historicism figured prominently in Jerome McGann's *Romantic Ideology: A Critical Investigation* (1983) and Marjorie Levinson et al.'s *Rethinking Romanticism: Critical Readings in Romantic History* (1989).

For a brief introduction, see Paul Hamilton's "New Historicism" in his survey of twentieth-century historical approaches titled *Historicism* (1996). A more extensive introduction is John Brannigan's *New Historicism and Cultural Materialism* (1998). *New Historicism and Renaissance Drama* (1992), edited by Richard Wilson and Richard Dutton, offers a critical survey of New Historicism in relationship to Renaissance studies, while Brook Thomas's *New Historicism and Other Old-Fashioned Topics* (1991) provides a critical account of the gen-

eral trend toward historicism. For an excellent survey of New Historical developments in the broadest sense of the term, see the essays collected in *New Historical Literary Study: Essays on Reproducing Texts, Representing History* (1993), edited by Jeffrey N. Cox and Larry J. Reynolds. Also useful as a survey on New Historicism broadly conceived is Jeremy Hawthorn's *Cunning Passages: New Historicism, Cultural Materialism, and Marxism in the Contemporary Literary Debate* (1996). Catherine Gallagher and Stephen Greenblatt's *Practicing New Historicism* (2000) provides a sophisticated and readable reflection on the theory, practice, and historical development of New Historicism.

Two standard anthologies are *The New Historicism* (1989) and *The New Historicism Reader* (1994), both edited by H. Aram Veeser. For an earlier collection of essays committed to exploring social and historical dimensions of literary works, see *Historical Studies and Literary Criticism* (1985), edited by Jerome J. McGann. *Historical Criticism and the Challenge of Theory* (1993), edited by Janet Lavarie Smarr, provides a selection of essays that demonstrate self-reflexive historical literary study, while *New Historicism and Cultural Materialism: A Reader* (1996), edited by Kiernan Ryan, collects various essays that focus on the distinctions between the cultural poetics of New Historicism and the materialist critique promoted by British cultural materialism.

For bibliographic assistance, see the 1994 Veeser anthology (*The New Historicism Reader*), as well as the texts mentioned above by Wilson and Dutton (*New Historicism and Renaissance Drama*) and especially by Ryan (*New Historicism and Cultural Materialism*).

The practices of New Historicism lend themselves to many diverse critical projects. Prominent among these are two series of books published by the University of California Press under the titles *Representations* and *The New Historicism: Studies in Cultural Poetics*. The first reprints back issues from the leading New Historicist journal *Representations*—for example, *The Making of the Modern Body: Sexuality and Society in the Nineteenth Century* (1987), edited by Catherine Gallagher and Thomas Laqueur. The second series, edited by Stephen Greenblatt, includes a wide-ranging line of books, such as José E. Limón, *Mexican Ballads, Chicano Poems: History and Influence in Mexican-American Social Poetics* (1992); Christopher Craft, *Another Kind of Love: Male Homosexual Desire in English Discourse, 1850–1920* (1994); Catherine Gallagher, *Nobody's Story: The Vanishing Acts of Women Writers in the Marketplace, 1670–1820* (1994); and Frank Lestringant's work in postcolonial theory and criticism, *Cannibals: The Discovery and Representation of the Cannibal from Columbus to Jules Verne* (1994; trans. 1997).

Phenomenology and Hermeneutics

The first major works of phenomenological aesthetics were by Roman Ingarden, *The Literary Work of Art* (1931; trans. 1973) and *The Cognition of the*

Literary Work of Art (1937; trans. 1973). Also groundbreaking for phenomenological theory is Martin Heidegger, "The Origin of the Work of Art" (1935), later collected in his important *Poetry, Language, Thought* (1971). A less theoretical, applied form of phenomenological literary criticism crystallized in the Geneva School, whose most influential works include Marcel Raymond's *From Baudelaire to Surrealism* (1933; trans. 1949) and Georges Poulet's four-volume *Studies in Human Time* (1949–68; 2 vols. trans., 1956–59). U.S. phenomenological criticism is best represented by J. Hillis Miller's *Poets of Reality: Six Twentieth-Century Writers* (1965). Modern philological hermeneutics emerged in the United States with E. D. Hirsch Jr.'s landmark *Validity in Interpretation* (1967) and was developed in his *Aims of Interpretation* (1976). While hermeneutics and phenomenology combined fruitfully in several short sections of Martin Heidegger's *Being and Time* (1927; trans. 1962), the linkage culminated in the work of Hans-Georg Gadamer, in the monumental *Truth and Method* (1960; trans. 1975, rev. 1989) and subsequent writings. Later important combinations of phenomenology and hermeneutics can be found in the writings of the German school of reception aesthetics located at the University of Constance, especially Hans Robert Jauss's *Aesthetic Experience and Literary Hermeneutics* (1977; trans. 1982).

For a brief introductory overview of the Geneva School, see J. Hillis Miller, "The Geneva School: The Criticism of Marcel Raymond, Albert Béguin, Georges Poulet, Jean Rousset, Jean-Pierre Richard, and Jean Starobinski" (1966), collected in his *Theory Now and Then* (1991). A full-length account of Geneva criticism is provided by Sarah Lawall's *Critics of Consciousness: The Existential Structures of Literature* (1968). Georges Poulet's "Phenomenology of Reading," which first appeared in *New Literary History: A Journal of Theory and Interpretation* 1.1 (1969), is an influential theoretical statement. For a more comprehensive introduction to phenomenological criticism in general, including Ingarden and Heidegger as well as the Geneva School, see Robert R. Magliola, *Phenomenology and Literature: An Introduction* (1977). Richard Palmer's *Hermeneutics: Interpretation Theory in Schleiermacher, Dilthey, Heidegger, and Gadamer* (1969) offers a highly regarded historical introduction to hermeneutics, as does Jean Grondin's *Introduction to Philosophical Hermeneutics* (1991; trans. 1994). Other helpful texts include David Couzens Hoy, *The Critical Circle: Literature, History, and Philosophical Hermeneutics* (1978); Roy J. Howard, *Three Faces of Hermeneutics: An Introduction to Current Theories of Understanding* (1982); and William Ray, *Literary Meaning: From Phenomenology to Deconstruction* (1984). For a concise survey of modern hermeneutics, with a concluding focus on Gadamer's significance for literary theory, see Joel C. Weinsheimer, *Philosophical Hermeneutics and Literary Theory* (1991). Kathy Eden's *Hermeneutics and the Rhetorical Tradition: Chapters in the Ancient Legacy and Its Humanist Perception* (1997)

locates a historical basis for hermeneutics in classical theories of rhetoric. Gerald L. Bruns's *Hermeneutics: Ancient and Modern* (1992) covers a broad spectrum of key figures and topics in the tradition of literary and philosophical hermeneutics.

For a reader in phenomenological criticism, see *The French New Criticism: An Introduction and Sampler* (1967), edited by Laurent Le Sage, and especially *European Literary Theory and Practice: From Existential Phenomenology to Structuralism* (1973), edited by Vernon W. Gras. Useful general readers in hermeneutics include *The Hermeneutic Reader: Texts of the German Tradition from the Enlightenment to the Present* (1985), edited by Kurt Mueller-Vollmer; *The Hermeneutic Tradition: From Ast to Ricoeur* (1990), edited by Gayle L. Ormiston and Alan D. Schrift; and *Rhetoric and Hermeneutics in Our Time: A Reader* (1997), edited by Walter Jost and Michael J. Hyde. A wide-ranging collection of essays by many hands focusing on the implications of Heidegger's postmetaphysical thought for literary studies is *Martin Heidegger and the Question of Literature: Toward a Postmodern Literary Hermeneutics* (1979), edited by William V. Spanos. *Hermeneutics: Questions and Prospects* (1984), edited by Gary Shapiro and Alan Sica, covers contemporary hermeneutics in relationship to philosophy, literature, and social science.

A bibliography of phenomenological and hermeneutical criticism may be found in *The Cambridge History of Literary Criticism*, volume 8, *From Formalism to Poststructuralism* (1995), edited by Raman Selden. Also useful are the earlier bibliographies in Palmer's *Hermeneutics* and Grondin's *Introduction to Philosophical Hermeneutics*, as well as that in *The Existential Coordinates of the Human Condition: Poetic-Epic-Tragic: The Literary Genre* (1984), edited by Anna-Teresa Tymieniecka.

Gaston Bachelard's works, such as *The Poetics of Space* (1958; trans. 1964), offer a unique combination of phenomenology and psychoanalysis. For the intersections of phenomenology and formalism, see René Wellek's essays on the ontology of the literary work in *Concepts of Criticism* (1963), particularly "Concepts of Form and Structure in Twentieth-Century Criticism." Phenomenology and deconstruction meet in Joseph N. Riddel, *The Inverted Bell: Modernism and the Counterpoetics of William Carlos Williams* (1974). In *The Act of Reading: A Theory of Aesthetic Response* (1976; trans. 1978), Wolfgang Iser articulates a theory of reader response indebted to the phenomenological aesthetics of Ingarden. Mario J. Valdés's *Shadows in the Cave: A Phenomenological Approach to Literary Criticism Based on Hispanic Texts* (1982) places phenomenology in dialogue with ethnic studies. Hans Robert Jauss's *Toward an Aesthetic of Reception* (1982) combines hermeneutics with historicist reception theory. For the intersections of hermeneutics, structuralism, and semiotics, see T. K. Seung, *Structuralism and Hermeneutics* (1982) and *Semiotics and Thematics in Hermeneutics* (1982). Paul Ricoeur's *Time and Narrative* (3 vols., 1983–85; trans. 1984–88), particularly volume 2, links

hermeneutics and narratology, and John D. Caputo's *Radical Hermeneutics: Repetition, Deconstruction, and the Hermeneutic Project* (1987) crosses hermeneutics with deconstruction. Richard Rorty's *Essays on Heidegger and Others* (1991) explores, among other things, the points of contact between pragmatism and Heideggerian hermeneutics.

Postcolonial Criticism and Theory

The late-twentieth-century emergence of postcolonial criticism and theory out of colonial politics and experience is manifested in such key early texts as Aimé Césaire, *Discourse on Colonialism* (1950; trans. 1972); Frantz Fanon, *Black Skin, White Masks* (1952; trans. 1967) and *The Wretched of the Earth* (1961; trans. 1963); and Ngũgĩ wĩ Thiong'o, *Homecoming: Essays* (1972). The groundbreaking texts of postcolonial criticism and theory as an academic field are Edward W. Said's *Orientalism* (1978); Gayatri Chakravorty Spivak's *In Other Worlds: Essays in Cultural Politics* (1987), which also makes a significant contribution to feminist theory; and Homi K. Bhabha's essays of the 1980s collected in *The Location of Culture* (1994). Exemplary works focused on reading literature within colonial contexts include Selwyn R. Cudjoe's *Resistance and Caribbean Literature* (1980) and Barbara Harlow's *Resistance Literature* (1987). During the 1990s two notable lines of theoretical inquiry emerged in postcolonial studies. The first, focused on theories of nationalism, includes such founding texts as Benedict Anderson's *Imagined Communities: Reflections on the Origins and Spread of Nationalism* (2d ed., 1991) and Partha Chatterjee's *Nationalist Thought and the Colonial World: A Derivative Discourse* (2d ed., 1993). Theorizing globalization is the central concern of the second line of inquiry; among its most important texts is Arjun Appadurai's *Modernity at Large: Cultural Dimensions of Globalization* (1996).

For introductions to postcolonial theory, see Bill Ashcroft, Gareth Griffiths, and Helen Tiffin, *The Empire Writes Back: Theories and Practices in Postcolonial Literature* (1989); Leela Gandhi, *Postcolonial Theory: A Critical Introduction* (1998); Ania Loomba, *Colonialism/Postcolonialism* (1998); Robert Young, *Postcolonialism: An Historical Introduction* (1999); and *A Companion to Postcolonial Studies* (1999), edited by Sangeeta Ray and Henry Schwarz. A brief introductory statement is provided in Homi K. Bhabha's "Postcolonial Criticism" in *Redrawing the Boundaries* (1992), edited by Stephen Greenblatt and Giles Gunn. An important full-length introduction is Ella Shohat and Robert Stam's *Unthinking Eurocentrism: Multiculturalism and the Media* (1994). Robert Young's *White Mythologies: Writing, History, and the West* (1990) may be read as an advanced introduction and critique of Western historiography. Bart Moore-Gilbert's *Postcolonial Theory: Contexts, Practices, Politics* (1997) provides a critical overview of the three major postcolonial theorists, Said, Spivak, and

Bhabha. On the pivotal role of Said's and Spivak's work in postcolonial studies, see *Edward Said: A Critical Reader* (1992), edited by Michael Sprinker, and *The Spivak Reader: Selected Works of Gayatri Chakravorty Spivak* (1996), edited by Donna Landry and Gerald MacLean. For historical background, see *Colonial Discourse and Post-Colonial Theory: A Reader* (1994), edited by Patrick Williams and Laura Chrisman, which gathers critical and theoretical pieces from the 1950s to 1990s that represent the scope of debates in postcolonial studies. More on the history of colonial discourse can be found in three additional respected works: *Europe and Its Others* (2 vols., 1985), edited by Francis Baker et al., which contains some of the founding essays of postcolonial criticism; Eric Hobsbawm, *Age of Empire* (1987); and *After Colonialism: Imperial Histories and Postcolonial Displacements* (1994), edited by Gyan Prakash.

Influential readers and anthologies of postcolonial criticism include "Race," *Writing, and Difference* (1985), edited by Henry Louis Gates Jr., a collection of some major voices in the field; *Nation and Narration* (1990), edited by Homi K. Bhabha, which takes as its touchstone the ambivalence over nationhood; *The Post-Colonial Studies Reader* (1994), edited by Bill Ashcroft, Gareth Griffiths, and Helen Tiffin; and *Colonial Discourse/Postcolonial Theory* (1994), edited by Francis Barker, Peter Hulme, and Margaret Iversen. The later *Contemporary Postcolonial Theory: A Reader* (1996), edited by Padmini Mongia, provides a generous selection of key articles that address central issues in the field, while *Rethinking Postcolonialism: A Critical Reader* (1999), edited by David Theo Goldberg and Ato Quayson, combines new with seminal texts. For readers on the connections between postcolonial theory and practice, see *Third World Women and the Politics of Feminism* (1991), edited by Chandra Talpade Mohanty, Ann Russo, and Lourdes Torres; *The Decolonization of Imagination: Culture, Knowledge, and Power* (1995), edited by Jan Nederveen Pieterse and Bhikhu Parekh; and *The Post-Colonial Question: Common Skies, Divided Horizons* (1996), edited by Ian Chambers and Lidia Curti, which focuses on the key concept of hybridity.

Definitions of theoretical terms and a useful bibliography are provided by Bill Ashcroft, Gareth Griffiths, and Helen Tiffin's *Key Concepts in Post-Colonial Studies* (1998). For other helpful bibliographies, see the following readers cited above: Williams and Chrisman, *Colonial Discourse and Post-Colonial Theory*; Ashcroft, Griffiths, and Tiffin, *The Post-Colonial Studies Reader*; and Mongia, *Contemporary Postcolonial Theory*; see also Gandhi, *Postcolonial Theory*.

As is the case with other contemporary schools and movements, postcolonial theory and criticism contain many crossover or interdisciplinary texts. Said's *Orientalism* and Bhabha's *Location of Culture* develop contrasting poststructural approaches to postcolonial issues, the former employing Fou-

cauldian theory, the latter a Derridean deconstructive methodology. Bhabha's work also possesses a heavy psychoanalytic component. Spivak's *In Other Worlds* weaves Marxism and feminism into postcolonial studies in pioneering ways. For more on the relationship between Marxism and postcolonial studies, see the essays by diverse hands in *Marxist Theories of Imperialism: A Critical Survey* (1980), edited by Anthony Brewer, as well as Raymond Williams's *Politics of Modernism: Against the New Conformists* (1989), which includes a revealing interview with Said. Ashis Nandy's *Intimate Enemy: Loss and Recovery of Self under Colonialism* (1983) is an exemplary text marking the intersection of psychoanalysis and postcolonial studies. Sara Suleri's *Meatless Days* (1989) approaches feminist postcolonial studies from the perspective of personal criticism, as does Trinh T. Minh-ha's *Woman, Native, Other: Writing, Postcoloniality, and Feminism* (1989). A much-debated, resolutely Marxist critical account of postcolonial theory's intersections with various contemporary schools and movements appears in Aijaz Ahmad's *In Theory: Classes, Nations, Literatures* (1992). Anne McClintock's *Imperial Leather: Race, Gender, and Sexuality in the Colonial Conquest* (1994) connects psychoanalytic, feminist, and Marxist discourses. The various essays in the interdisciplinary *Dangerous Liaisons: Gender, Nation, and Postcolonial Perspectives* (1997), edited by Anne McClintock, Aamir Mufti, and Ella Shohat, promote the utility of multiple approaches, especially feminist ones. E. San Juan Jr.'s *Beyond Postcolonial Theory* (1997) takes issue especially with Bhabha and Spivak, arguing for a more politically activist stance.

Psychoanalytic Theory

Sigmund Freud's work is the primary source of psychoanalytic theory for literary intellectuals, followed closely by the work of Jacques Lacan and, to a lesser extent, Carl Gustav Jung. The authoritative English translation of Freud's work was done under the direction of James Strachey, *The Standard Edition of the Complete Psychological Works of Sigmund Freud* (24 vols., 1953–74). English translations of Lacan's most influential works include *Écrits: A Selection* (1977) and *The Four Fundamental Concepts of Psychoanalysis* (1978), both translated by Alan Sheridan; and *Feminine Sexuality: Jacques Lacan and the école freudienne* (1983), translated by Jacqueline Rose, who edited the book with Juliet Mitchell. The standard English translation of Jung's work is by R. F. C. Hull, *The Collected Works of C. G. Jung* (20 vols., 1954–92). Three foundational essays in the psychoanalytic understanding of literature are Freud's "Creative Writers and Daydreaming" (1908), Jung's "On the Relation of Analytical Psychology to Poetry" (1922), and Lacan's "Seminar on Poe's 'Purloined Letter'" (1966).

Robert N. Mullinger's *Psychoanalysis and Literature: An Introduction* (1981) provides an elementary introduction to psychoanalysis and psy-

choanalytic criticism. For a broad introduction to Freud, see J. N. Isbister, *Freud: An Introduction to His Life and Work* (1985). Malcolm Bowie's *Lacan* (1991) introduces Lacanian theory in a clear, accessible manner, as does Teresa Brennan's *History after Lacan* (1993). For advanced introductions, see Elizabeth Grosz, *Jacques Lacan: A Feminist Introduction* (1990), and Slavoj Žižek, *Looking Awry: An Introduction to Jacques Lacan through Popular Culture* (1991). A basic introduction to Jungian criticism is provided by Bettina L. Knapp's *Jungian Approach to Literature* (1984). For a concise overview of Freud and Lacan, see chapter 4 of Kaja Silverman, *The Subject of Semiotics* (1983); for a critical overview of Freud, Lacan, and Jung, as well as Freud's famous critics Gilles Deleuze and Félix Guattari, see Elizabeth Wright, *Psychoanalytic Criticism: A Reappraisal* (rev. ed., 1998). *Holland's Guide to Psychoanalytic Psychology and Literature-and-Psychology* (1990) by Norman Holland offers a historical overview of psychoanalytic criticism from the perspective of clinical psychoanalysis. For a historical account of the rise and influence of Lacanian theory, see Elisabeth Roudinesco, *Jacques Lacan and Co.: A History of Psychoanalysis in France, 1925–1985* (1990), and Sherry Turkel, *Psychoanalytic Politics: Jacques Lacan and Freud's French Revolution* (2d ed., 1992). An influential critical overview of post-Lacanian French psychoanalytic feminists—Julia Kristeva, Hélène Cixous, and Luce Irigaray—appears in the closing half of Toril Moi's *Sexual/Textual Politics: Feminist Literary Theory* (1985). A broad chronicle is available in Reuben Fine's *History of Psychoanalysis* (1990).

For a Freud reader, see *Writings on Art and Literature* (1997), edited by Neil Hertz. *Literature and Psychoanalysis* (1987), edited by Edith Kurzweil and William Phillips, collects a broad historical range of essays in psychoanalytic criticism, by authors from Freud to Julia Kristeva. Other introductory collections include *Introducing Psychoanalytic Theory* (1982), edited by Sander L. Gilman; *Everything You Wanted to Know about Lacan (But Were Afraid to Ask Hitchcock)* (1992), edited by Slavoj Žižek; and *Psychoanalytic Literary Criticism* (1994), edited by Maud Ellmann. For advanced collections of psychoanalytic criticism, see *Psychoanalysis and the Question of the Text* (1978), edited by Geoffrey Hartman; the Lacanian *Literature and Psychoanalysis: The Question of Reading: Otherwise* (1981), edited by Shoshana Felman; and *Psychoanalytic Criticism: A Reader* (1996), edited by Sue Vice. *The Purloined Poe: Lacan, Derrida, and Psychoanalytic Reading* (1988), edited by John Muller, brings together celebrated essays by Lacan, Jacques Derrida, and Barbara Johnson on interpreting Edgar Allan Poe's "Purloined Letter." For a collection of archetypal criticism written near the close of the twentieth century, see *Jungian Literary Criticism* (1992), edited by Richard Sugg.

Helpful reference sources on the terminology of psychoanalysis include Jean Laplanche and J.-B.

Pontalis, *The Language of Psycho-analysis* (1967; trans. 1973); John P. Muller and William J. Richardson, *Lacan and Language: A Reader's Guide to "Écrits"* (1982); Elizabeth Wright, *Feminism and Psychoanalysis: A Critical Dictionary* (1992); and Dylan Evans, *An Introductory Dictionary of Lacanian Psychoanalysis* (1996). Another resource is John Bristow's *Sexuality* (1997), which focuses on the critical uses and abuses of that concept. Bibliographic assistance is available in Norman Kiehl, *Psychoanalysis, Psychology, and Literature: A Bibliography* (2 vols., 1982; suppl., 1990); Joseph P. Natoli and Frederik L. Rusch, *Psychocriticism: An Annotated Bibliography* (1984); and Holland's overview, *Holland's Guide*. On Freud, see Alexander Grinstein, *Sigmund Freud's Writings: A Comprehensive Bibliography* (1977). Bibliographies of Lacan include Joan Nordquist's *Jacques Lacan: A Bibliography* (1987) and Michael Clark's *Jacques Lacan: An Annotated Bibliography* (1988). For a bibliography of Jungian criticism, see Jos Van Meurs, *Jungian Literary Criticism, 1920-1980: An Annotated Critical Bibliography of Works in English (with a Selection of Titles after 1980)* (1988).

Psychoanalytic theory readily combines with other critical methods and approaches. Wide-ranging links between psychoanalysis and feminist theory are developed in several provocative collections: see, for example, *The (M)Other Tongue: Essays in Feminist Psychoanalytic Interpretation* (1985), edited by Shirley Nelson Garner, Claire Kahane, and Madelon Sprengnether; *Feminism and Psychoanalysis* (1989), edited by Richard Feldstein and Judith Roof; and *Between Feminism and Psychoanalysis* (1989), edited by Teresa Brennan. Harold Bloom's earlier *The Anxiety of Influence: A Theory of Poetry* (1973) joined psychoanalysis and Yale School deconstruction. Significant, widely-varied Marxist extensions of psychoanalytic theory include Herbert Marcuse, *Eros and Civilization: A Philosophical Inquiry into Freud* (1955); Louis Althusser, *Lenin and Philosophy and Other Essays* (1971); and Fredric Jameson, *The Political Unconscious: Narrative as a Socially Symbolic Act* (1981). Myth criticism, which occupied a prominent place in the interim between the stagnation of the New Criticism and the rise of postformalist theories in the 1960s, derived largely from psychoanalytic theories, most notably in such different classic books as Joseph Campbell, *The Hero with a Thousand Faces* (1949); Northrop Frye, *Anatomy of Criticism: Four Essays* (1957); and Leslie Fiedler, *Love and Death in the American Novel* (1960). Influential early poststructuralist readings of psychoanalysts include Jacques Derrida, "Freud and the Scene of Writing" (1966); Gilles Deleuze and Félix Guattari, *Anti-Oedipus: Capitalism and Schizophrenia* (1972; trans. 1977); Luce Irigaray, *Speculum of the Other Woman* (1974; trans. 1985) and *This Sex Which Is Not One* (1977; trans. 1985); and Julia Kristeva, *Revolution in Poetic Language* (1974; trans. 1984) and *Powers of Horror: An Essay on Abjection* (1980; trans. 1982). For intersections of psychoanalysts

and narratology, see the essays in *Lacan and Narrative: The Psychoanalytic Difference in Narrative Theory* (1983), edited by Robert Con Davis, as well as Peter Brooks's *Reading for the Plot: Design and Intention in Narrative* (1984). Psychoanalysis from a postcolonial perspective is most famously presented in Frantz Fanon's *Wretched of the Earth* (1961; trans. 1963), particularly its concluding case studies. Intersections of psychoanalysis and reader-response criticism are explored in Norman Holland's books, most notably *Poems in Persons: An Introduction to the Psychoanalysis of Literature* (1973). Judith Butler's *Gender Trouble: Feminism and the Subversion of Identity* (1990) critically extends psychoanalysis, breaking new ground for poststructuralist feminist queer theory. The broad influence of psychoanalysis on various theoretical schools and movements, particularly feminism, Marxism, and deconstruction, is exhibited in the essays collected by Richard Feldstein and Henry Sussman in *Psychoanalysis and . . .* (1989).

Reader-Response Criticism

Among the influential forerunners of the rise of reader-response criticism in the 1960s and 1970s are I. A. Richards's *Practical Criticism: A Study in Literary Judgment* (1929), Louise Rosenblatt's *Literature as Exploration* (1937), and the phenomenological work of the Geneva School from the 1930s to the 1950s, summed up in Georges Poulet's later "Phenomenology of Reading" (1969). Arising largely in opposition to such formalist notions as the "affective fallacy," the diverse founding texts of U.S. reader-response criticism include Stanley E. Fish, *Surprised by Sin: The Reader in Paradise Lost* (1967); Norman Holland, *The Dynamics of Literary Response* (1968); David Bleich, *Readers and Feelings: An Introduction to Subjective Criticism* (1975); Jonathan Culler, *Structuralist Poetics: Structuralism, Linguistics, and the Study of Literature* (1975); Louise Rosenblatt, *The Reader, the Text, the Poem: The Transactional Theory of the Literary Work* (1978); and Judith Fetterley, *The Resisting Reader: A Feminist Approach to American Fiction* (1979). Particularly important for U.S. reader-response criticism is Fish's essay "Literature in the Reader: Affective Stylistics" (1970). Developed in Germany during the 1960s and 1970s, the Constance School of reception aesthetics gained attention through two books by Wolfgang Iser, *The Implied Reader: Patterns of Communication in Prose Fiction from Bunyan to Beckett* (1972; trans. 1974) and *The Act of Reading: A Theory of Aesthetic Response* (1976; trans. 1978), as well as through Hans Robert Jauss's *Aesthetic Experience and Literary Hermeneutics* (1977; trans. 1982). Influential statements of French poststructuralist reader-response theory appear in Roland Barthes's *S/Z* (1970; trans. 1974) and his *Pleasure of the Text* (1973; trans. 1975).

Steven Mailloux's *Interpretive Conventions: The Reader in the Study of American Fiction* (1982) provides an introductory critical survey of five influ-

ential theories of reader response and develops a sociological model of reading. On German reader-oriented criticism, see Robert C. Holub, *Reception Theory: A Critical Introduction* (1984). For more general introductions to reader response, see Elizabeth Freund, *The Return of the Reader: Reader-Response Criticism* (1987), and Richard Beach, *A Teacher's Introduction to Reader-Response Theories* (1993).

Representative collections of works in the tradition of reader-response criticism are available in *New Perspectives in German Literary Criticism* (1979), edited by Richard Armacher and Victor Lange; *Reader-Response Criticism: From Formalism to Post-Structuralism* (1980), edited by Jane Tompkins; and *The Reader in the Text: Essays on Audience and Interpretation* (1980), edited by Susan Suleiman and Inge Crosman.

For bibliographies on reader-response criticism, see the anthologies by Tompkins and by Suleiman and Crosman cited in the previous paragraph, as well as Mailloux's *Interpretive Conventions* and Beach's *Teacher's Introduction*.

Reader-response criticism is a pluralistic and heterogeneous movement, encompassing many different critical projects. For a formalist approach to reader-response, see Wayne Booth, *Rhetoric of Fiction* (1961; 2d ed., 1983). On the links between psychoanalysis and reader-response criticism, see Norman Holland, *Five Readers Reading* (1975). Culler's *Structuralist Poetics* and Michael Riffaterre's *Semiotics of Poetry* (1978) mark the various intersections of reader-response and structuralism, as does Gerald Prince's *Narratology: The Form and Functioning of Narrative* (1982). Semiotics and reader response also combine in Umberto Eco, *The Role of the Reader: Explorations in the Semiotics of Texts* (1979). Paul de Man's *Allegories of Reading: Figural Language in Rousseau, Nietzsche, Rilke, and Proust* (1979) articulates a theory of reading from the point of view of deconstruction. On the relationship of neopragmatism to reader response, see Steven Knapp and Walter Benn Michaels, "Against Theory," *Critical Inquiry*, 8 (1982). Mary Louise Pratt's "Interpretive Strategies/Strategic Interpretations: On Anglo-American Reader-Response Criticism," *Boundary 2* 11 (1982) presents a critique of reader-response theory from a Marxist perspective, while Robert Scholes's *Textual Power: Literary Theory and the Teaching of English* (1985) unites ideological analysis with reader-response and structuralist methods. The intersection of feminism and reader-response criticism is marked by the often-cited *Gender and Reading: Essays on Readers, Texts, and Contexts* (1986), edited by Elizabeth A. Flynn and Patrocínio P. Schweickart. On the application of sociological methods of cultural studies to reception issues, see Janice Radway's celebrated *Reading the Romance: Women, Patriarchy, and Popular Literature* (1984). Robert C. Holub's *Crossing Borders: Reception Theory, Poststructuralism, Deconstruction* (1992) develops connections between poststructuralist theory and reader-

response criticism, while Judith Still and Michael Worton's *Textuality and Sexuality: Reading Theories and Practices* (1993) explores links among feminism, gender studies, and reader-response criticism. Steven Mailloux's *Rhetorical Power* (1989) and his *Reception Histories: Rhetoric, Pragmatism, and American Cultural Politics* (1998) represent a latter-day reader-response criticism that intersects with cultural studies.

Structuralism and Semiotics

In Europe the seminal groundbreaking text of structuralism and semiotics is Ferdinand de Saussure's posthumously published collection of lecture notes, *Course in General Linguistics* (1915), which presents the first structuralist approach to language, superseding traditional philological and historical modes of analysis. In America the philosopher Charles Sanders Peirce undertook similar contemporaneous work, as seen particularly in the scattered writings collected in *Peirce on Signs: Writings on Semiotic* by Charles Sanders Peirce (1991), edited by James Hoopes. Early applications of structuralist method to the study of literature were made by the Russian formalists in the 1920s and, more fully, by the Prague School of linguistics between the world wars. Important in this regard are the various essays of Roman Jakobson collected posthumously in *Language in Literature* (1987), as well as the articles by Jan Mukatovský translated into English in *The Word and Verbal Art* (1977) and *Structure, Sign, and Function* (1978). Various highly regarded nonliterary applications of structuralist method include Claude Lévi-Strauss, *Structural Anthropology* (1958; trans. 1963); Louis Althusser, *For Marx* (1965; trans. 1969); and Hayden White, *Metahistory: The Historical Imagination in Nineteenth-Century Europe* (1973). For leading examples of literary theory inspired by structural linguistics, see Jakobson, "Closing Statement: Linguistics and Poetics" (1960); Käte Hamburger, *Logic of Literature* (2d ed., 1968; trans. 1973); and Michael Riffaterre, *Semiotics of Poetry* (1978); all of which can be instructively compared with Northrop Frye's earlier attempt to put literary criticism on a scientific footing in *Anatomy of Criticism: Four Essays* (1957). Important works in the tradition of narratology, the structuralist study of narrative, include Lévi-Strauss, "The Structural Study of Myth" (1955); Tzvetan Todorov, *Poetics of Prose* (1971; trans. 1977); Gérard Genette, *Narrative Discourse: An Essay on Method* (1972; trans. 1980); and A. J. Greimas, *Maupassant: The Semiotics of the Text* (1976; trans. 1988). Roland Barthes's *Mythologies* (1957; trans. 1972) and Bob Hodge and Gunther Kress's *Social Semiotics* (1988) are admired examples of semiotics, the application of structural linguistics to the world of cultural phenomena.

Jonathan Culler's *Ferdinand de Saussure* (rev. ed., 1986) provides a lucid and concise introduction to the basic principles of Saussure's structural linguistics.

tics, while his award-winning *Structuralist Poetics: Structuralism, Linguistics, and the Study of Literature* (1975) offers a sophisticated introduction to structuralism and its applications to literary study. A more succinct, basic introduction, Terence Hawkes's *Structuralism and Semiotics* (1977) gives an excellent overview of major trends, schools, and figures. In *The Prison-House of Language: A Critical Account of Structuralism and Russian Formalism* (1972), Fredric Jameson expounds a Marxist critique of structuralism and formalism, while also providing an introduction to their key concepts. *Structuralism: An Introduction* (1973), edited by David Robey, and *Structuralism and Since* (1979), edited by John Sturrock, provide interdisciplinary introductions to structuralism. Robert Scholes's *Structuralism in Literature: An Introduction* (1974) focuses on the role of structuralism in literary studies, while Wallace Martin's *Recent Theories of Narrative* (1986) surveys the field of narratology. A well-known advanced introduction to semiotics is Umberto Eco's *Theory of Semiotics* (1976). For an international overview of semiotics, see R. W. Bailey, *The Sign: Semiotics around the World* (1978). A historical and theoretical account of the Prague School is available in F. W. Galan's *Historic Structures: The Prague School Project, 1928-1946* (1985). Thomas A. Sebeok's brief *Semiotics in the United States* (1991) gives an anecdotal history of American semiotics, while Françoise Dosse's *History of Structuralism* (2 vols., 1991-92; trans. 1997) comprehensively details the history of French structuralism, with considerable attention to the many disciplines involved.

Structuralism: A Reader (1970), edited by Michael Lane, represents the range and depth of structuralist works by providing a collection of multidisciplinary essays, as does the compact classroom favorite, *The Structuralists: From Marx to Lévi-Strauss* (1972), edited by Richard T. and Fernande M. De George. For an influential anthology that simultaneously introduced French structuralism and poststructuralism to many Americans, see *Sciences of Man: The Structuralist Controversy* (1970), edited by Richard Macksey and Eugenio Donato, later reprinted as *The Structuralist Controversy: The Languages of Criticism and the Sciences of Man* (1972). *On Signs: A Semiotic Reader* (1985), edited by Marshall Blonsky, is a well-organized collection of essays on theoretical and practical semiotics, illustrating, among other things, the wide-ranging cultural uses of semiotics. *Semiotics: An Introductory Reader* (1986), edited by Robert E. Innes, collects classic European and American statements on semiotics. Definitive works of the Prague School are collected in *A Prague School Reader on Esthetics, Literary Structure, and Style* (1964), edited by Paul L. Garvin, and *The Prague School: Selected Writings, 1929-1946* (1982), edited by Peter Steiner. For collections of essays from the field of narratology, see *Narrative/Theory* (1996), edited by David H. Richter, and *Narratolo-*

gies: New Perspectives on Narrative Analysis (1999), edited by David Herman.

For scholarly definitions of terminology, consult Oswald Ducrot and Tzvetan Todorov, *Encyclopedic Dictionary of the Sciences of Language* (1972; trans. 1979); A. J. Greimas and Joseph Courtés, *Semiotics and Language: An Analytical Dictionary* (1979; trans. 1982); and Paul Bouissac, *Encyclopedia of Semiotics* (1998). For narratological terminology, see Gerald Prince, *A Dictionary of Narratology* (1987), and Mieke Bal, *Narratology: Introduction to the Theory of Narrative* (2d ed., 1997). Vincent Colapietro's *Glossary of Semiotics* (1993) is an elementary source of definitions. Roland Barthes's *Elements of Semiology* (1964; trans. 1968) offers a terse technical exposition of semiotic methods for advanced students. For a bibliography of selected influential French figures in structuralism, see Joan M. Miller, *French Structuralism: A Multidisciplinary Bibliography with a Checklist of Sources for Louis Althusser, Roland Barthes, Jacques Derrida, Michel Foucault, Lucien Goldmann, Jacques Lacan, and an Update of Works on Claude Lévi-Strauss* (1981). Josué Harari's more general bibliography, *Structuralists and Structuralisms: A Selected Bibliography of French Contemporary Thought* (1971), charts the impact of French structuralism on philosophy, anthropology, and psychoanalysis, as well as on literature.

The structuralist method has found applications in many contemporary critical schools and movements. A widely influential structuralist approach to psychoanalysis appears in Jacques Lacan's *Écrits* (1966; trans. 1977) and his *Four Fundamental Concepts of Psychoanalysis* (1973; trans. 1977). On structuralism and Marxism, see Fredric Jameson, *The Political Unconscious: Narrative as a Socially Symbolic Act* (1981). For the New Historicism, Michel Foucault's work, especially *Discipline and Punish: The Birth of the Prison* (1975; trans. 1977), pioneers important structuralist modes of history writing, even though Foucault himself resisted being classified as a structuralist. Also important to the New Historicism in this regard is Hayden White's *Tropics of Discourse: Essays in Cultural Criticism* (1978). Edward W. Said's *Orientalism* (1978) extends Foucault's structuralist methods to post-colonial criticism and theory. Two texts that mark the rich intersections of semiotics, psychoanalysis, and literary theory and criticism are Julia Kristeva's *Desire in Language: A Semiotic Approach to Literature and Art* (1980) and Kaja Silverman's *Subject of Semiotics* (1983). On the relationship between semiotics, Marxism, and psychoanalysis, see Rosalind Coward and John Ellis, *Language and Materialism: Developments in Semiology and the Theory of the Subject* (1977), and Jean-Joseph Goux, *Symbolic Economies: After Marx and Freud* (1990). Elizabeth A. Meese's (*SEM*)erotics: *Theorizing Lesbian Writing* (1992) links semiotics to lesbian theory and criticism.
