POPULAR MECHANICS MAGAZINE

WRITTEN SO YOU CAN UNDERSTAND IT

\$641 Buys the Material to Build this Home!

NO MONEY IN ADVANCE!

When you "Build-To-Stay—The Harris Way," you secure the *utmost possible* in Quality, Economy and Service. Why? Simply because you profit directly—*immediately*—by our 24 years' experience. You get the benefit of our practical knowledge as the *originators* of the "Direct-to-You" Home Building Industry. We were the *first* to sell Lumber and Material direct to Home Builders at one small profit. We were the *first* to reduce this vitally important industry to a *perfect system* and extend the benefits uniformly to the people of the nation. *The splendid Harris Home above has 5 rooms, bath, pantry and reception hall in an excellent arrangement. The size is 22 ft. x 26 ft.*

"THE HARRIS WAY"

has exclusive merits—special advantages for the shrewd and careful Home Builder—possessed by no other plan or method. It is the best, safest and most sensible way to build your ideal home *right* without sacrifice of quality—*or the waste of a single penny!* Thousands have built "The HARRIS WAY" with profit and satisfaction.

SEND LUMBER BILLS

Our ten million dollar buying power gives Harris customers an overwhelming price advantage. We can—and do—undersell all others. *The proof? Easy!* Just send us your lumber bills—for any kind of building you may be planning and get *our* prices. Compare them item for item, and let the *test* be the *proof*. Write us today!

BUY YOUR HOME SENSIBLY CUT-TO-FIT—SHIPPED ALL COMPLETE IN ONE CAR

The material used in building all Harris Homes is prepared by us, complete for your use in a way that is instantly—and easily understood. It is sensibly cut-to-fit with *absolute accuracy* and *positive elimination of all waste*. You pay for nothing you do not get—you pay our bed rock low, one-small profit bargain price *only* for what is needed to do the work *right*—"The HARRIS WAY."

Our mammoth material stations, in the heart of the finest lumber tracts are always filled to overflowing with brand new, quality material. These stations are centrally located for quick and economical deliveries, "DIRECT-TO-YOU," no matter where you live, at the *lowest possible freight charge*.

Harris Bros. Co.

Caruso
as Rhodanes
in Aida

Masterpieces of opera by the world's greatest artists

The mere mention of opera suggests Caruso, Alda, Braslau, Calvé, Destinn, Farrar, Gadski, Galli-Curci, Garrison, Gluck, Hempel, Homer, Journet, Martinelli, McCormack, Melba, Ruffo, Schumann-Heink, Scotti, Sembrich, Tetrazzini, Whitehill—the commanding personalities who dominate the operatic stage.

These renowned artists in full realization and acknowledgment that the Victor alone reproduces their art with absolute fidelity, make records for the Victor exclusively.

Any Victor dealer will gladly play any music you wish to hear, and give you a copy of the Victor Record catalog—the most complete catalog of music in all the world.

IMPORTANT NOTICE to LUMBER USERS:

THE SOUTHERN CYPRESS MANUFACTURERS' ASSOCIATION HEREBY INFORMS YOU THAT ALL CYPRESS NOW AND HEREAFTER SHIPPED BY MILLS WHICH ARE MEMBERS OF THE ASSOCIATION WILL BE

**IDENTIFIED
BY THIS MARK**

TRADE MARK REG. U.S. PAT. OFFICE

This registered trade-mark will be, henceforth,

YOUR INSURANCE POLICY OF QUALITY.

It will appear stamped (mechanically and ineradicably) on one end, or both ends, of EVERY board and timber of

CYPRESS "THE WOOD ETERNAL."

CYPRESS FLOORING, SIDING, MOULDING AND SHINGLES, which come in bundles, will bear the same mark on EVERY BUNDLE.

The legal right to apply this epoch-making symbol of strict RESPONSIBILITY IN LUMBER MAKING AND SELLING

is, of course, restricted to those Cypress mills which, by their membership in the Southern Cypress Manufacturers' Association, attest their devotion to its Principles of SERVICE to the CONSUMER and their foresighted appreciation of its open and progressive educational methods.

Only mills cutting "Tide-water" Cypress (within about 200 miles of the coast) are eligible for membership. Cypress grown elsewhere has less of the "Eternal" quality.

Only mills meeting the Association's ideas of scrupulous care in methods of MANUFACTURE, ACCURACY OF COUNT and INTEGRITY OF GRADING, in accord with the user's welfare, belong to the Association. Such mills the Association licenses to

CERTIFY THEIR CYPRESS by applying the registered trade-mark with their identifying number inserted.

TRADE MARK REG. U.S. PAT. OFFICE

BY THIS MARK YOU KNOW THAT IT'S CYPRESS, "THE WOOD ETERNAL," AND WORTHY OF YOUR FAITH. IT IS WELL TO INSIST ON SEEING THIS TRADE-MARK ON EVERY BOARD OFFERED AS "CYPRESS."

TRADE MARK REG. U.S. PAT. OFFICE

Let our ALL-ROUND HELPS DEPARTMENT help YOU MORE. Our entire resources are at your service with Reliable Counsel.

BLUE STREAKS

Burst water pipes on a cold morning! A plumber as quickly as possible! Right then it's mighty good to know one who is prepared to give you emergency service. Of course, he has a motorcycle. But a motorcycle is no better than the tires that carry it.

Goodyear Blue Streaks are known for their utter reliability in business, pleasure, racing and military service. Let them serve you on *your* motorcycle.

Blue Streaks Deliver: Economy, Mileage, Speed, Service. Everywhere—one standard, one quality, one guaranty.

The Goodyear Tire & Rubber Co.

The Automobile Business is Growing

More help needed and big pay. No other business offers such opportunities. It's easy to learn. An Auto Repairman is not a machinist—his work consists of adjustments and re-fitting worn parts, "knowing the principle," that's the thing. One of our students writes: "Before I started with your course I was a clerk at \$50 per month. After finishing I followed your instructions, started a repair shop and cleared \$122 the first month—pretty good for the first month." Let us show you this and many other letters.

LEARN THE Automobile Business during your spare time

WE CAN HELP YOU IN 3 WAYS:

- 1st We can teach you quickly and thoroughly.
- 2nd After we teach you, we have a plan to assist you in getting started in the actual practical line of work and assist you in getting actual driving experience.
- 3rd While we are teaching you we show you how to make money right on the start.

THE DYKE WORKING MODEL

of teaching by mail is a new invention—a new idea—we use real 4 and 6 cylinder engine models—11x11 1/2 inches—on which you can actually see all parts moving—it is the only system of its kind in the world.

This is one of the 7 real models used, in addition to 50 simplified instructions with hundreds of illustrations, charts and manikin.

This is the valve side of the four cylinder model. The other side is the crank and piston side. Turn the crank and all of the real metal parts actually operate. The six cylinder engine model is similar.

This system is endorsed by Barney Oldfield, Elwood Haynes, Chas. Duryea and other motor authorities.

Mr. Dyke has been identified as a pioneer inventor, supply man, etc., with the auto industry since its beginning. He originated the first auto supply Co. and manufactured and marketed the first float type carburetor in America. No other man with such experience is today teaching others.

If we prove to you that we have started hundreds of others into the repair business and as chauffeurs—who had no previous experience and who knew no more about an auto than you do right now—you must admit we can do the same for you. Write me TODAY—NOW—and LET ME PROVE IT.

Write for DYKE'S FREE BOOKLET

It is interesting and instructive in itself. Fully illustrated. Learn how you can get all this training for only \$15. Fill out below or write a postal—but do it NOW.

ALL departments of Popular Mechanics' Magazine purchase manuscripts and pictures—either photographs or drawings. Material is passed upon promptly and payment is made upon acceptance. For the general reading section contributions should relate to new developments in the fields of science, mechanics, invention, and discovery. Photographs may be of any size, providing they are sharp and accompanied by accurate descriptive data.

The Shop Notes and Amateur Mechanics departments use new ideas and kinks for workmen of all crafts and amateurs of all ages, respectively. Pencil sketches are acceptable; descriptions should be brief and in simple language. Address Managing Editor, 6 N. Michigan Ave., Chicago.

LEARN PIANO TUNING

Making Trials of True Tone by Tune-a-Phone

Capitalize YOUR Ability

THE WORLD PAYS FOR SKILL

We teach piano tuning and its allied branches by correspondence. Our patented teaching device, the Tune-a-Phone and other mechanical aids, make it easy and sure.

Write today for FREE illustrated booklet describing the school and its methods.

NILES BRYANT SCHOOL OF PIANO TUNING
28 Fine Arts Inst., BATTLE CREEK, MICH.

Learn Piano Twice Faster By Scientific "Short Cut"

Wonderful Invention now saves you months of time and effort—
Leaves nothing out, but gets you there sooner—Cuts cost in half, too.

You learn more *thoroughly*—play more artistically, more individually—thousands who have tried it say so. Old-fashioned, round-about methods *must yield to scientific, direct methods*. It's the Law of Life.

A Momentous Discovery

After twenty-five years of painstaking, technical research, Dr. Quinn discovered the great Law of Nature that the "vibration waves" of twelve tones in music (Key of E) **exactly coincide** with the "vibration waves" of twelve tones in color. This simple Law of Nature, like all such laws, opened out whole worlds of PRACTICAL BENEFITS—and led to Dr. Quinn's inventing the COLOROTONE.

Easy to Understand—For Beginners or Experts

The COLOROTONE, like all great inventions, is simplicity itself. Children master it as easily as grown people. It brings the same amazing results to experts that it does to beginners. Investigate without cost, by writing today for 64-page free book explaining all about it.

Sweeps Away Century-Old Stumbling Blocks

The important musical subject of Transposition—usually a "night-mare" to students—becomes easy and fascinating by the use of the COLOROTONE. The COLOROTONE enables you to master, from the very beginning of your study the great Liszt System, by which you play every piece in **every key with exactly the same fingering**. Formerly this great time-saver could be taught only to **advance students**. By using the scientific COLOROTONE you start the Liszt System in your **third lesson**—a **tremendous advantage**. And the COLOROTONE has scores of other equally important advantages. Write for free book.

Nothing Else Like It—No Special Music Necessary

There is nothing else even remotely like the COLOROTONE. It stands on the keyboard before you and instantaneously solves, by correct, scientific methods, all kinds of troublesome playing problems. After the first dozen lessons you discontinue using the COLOROTONE. Almost miraculously it has taught you; and you thereafter play without using it. No special music is necessary. You play by note from **any** music.

Surprising Results of Learning By a Scientific System

It's amazing to see how quickly you gain skill at either the piano or organ, and how expressively and feelingly you can play. Men and women who have failed by all other methods have quickly and easily attained success when using Dr. Quinn's COLOROTONE, and his famous WRITTEN METHOD. Dr. Quinn's WRITTEN METHOD (now including the COLOROTONE) is a complete COURSE IN PIANO OR ORGAN for home study. Each of the clearly-written lessons leads you logically, correctly, and systematically to playing skill. The COURSE is fully illustrated with diagrams and drawings showing every position and movement of the fingers, hands, and arms. Thus you rely not on your memory of verbal instructions, which must sometimes be incorrect, but on detailed illustrations and explanations **always before you**. Nothing is, nor can be forgotten. You practise in spare time, at your convenience, in the privacy of your own home. Progress as rapidly or slowly as you wish. All necessary music is included **Free**. Diploma of recognized value is granted.

Endorsed by Distinguished Musicians

Among our graduates are thousands of accomplished amateur players, as well as prominent professional players, successful music teachers and leading composers. The COURSE is endorsed by many distinguished musicians and educators in whose opinion you have the **utmost confidence**.

Investigate Without Cost—Special Offer

Write **today**, using post card, letter or free book coupon, for our new 64-page book explaining everything you want to know about how to study music and learn to play piano or organ in less than half the time usually required. The book gives full particulars of our COURSE and wonderful COLOROTONE and is a possession **worth having**. Special reduced terms this month on account of our Twenty-Fifth Anniversary offer. Investigate without cost or obligation **Now**.

Marcus Lucius Quinn Conservatory of Music
Box 650 KO, Chicago, Ill.

contains 64 pages of vital information about how to study music and learn to play the piano or organ. It explains the great pleasures and social advantages of skill at the piano or organ and tells how you can acquire this skill at half the usual cost and effort by a method of home study which is scientific. It tells how you can become a music teacher and earn \$25 to \$100 weekly. It tells how you can become a professional player at a liberal salary—and how the world's greatest pianists, organists and composers earned their way to Fame, Honor and Wealth. It fully explains everything about Dr. Quinn's wonderful COLOROTONE and his famous WRITTEN METHOD. Send for this remarkable free book at once. No cost or obligation.

DRAKE'S HOME-STUDY BOOKS FOR MECHANICS

Increase Your Earning Power By increasing your knowledge and efficiency. These books, written in non-technical language for Electricians, Engineers, Railroad Men, Telephone Men, Machinists, Automobileists, Carpenters, Plumbers, Sign and Scene Painters, are the best and most practical books ever written. They tell you what you want to know about the practical problems you have to solve every day.

12 ELECTRICAL BOOKS ALL UP-TO-DATE, BOUND IN LIMP CLOTH, POCKET SIZE AND POST PAID, EACH . . . \$1.00

Electric Motors, Direct and Alternating
By PROF. MORETON. 250 pages, fully illustrated. Leather, \$1.50.

Motion Picture Operation—Stage Electric and Illusions. By HORSTMANN AND TOUSLEY. 303 pages, 216 illustrations. Leather, \$2.00.

Alternating Current, Theory, Practice, and Diagrams. By HORSTMANN AND TOUSLEY. 300 pages, fully illustrated. Leather, \$2.00.

Electricians' Operating and Testing Manual. By HORSTMANN AND TOUSLEY. 360 pages, 211 illustrations and diagrams. Leather, \$1.50.

Modern Electric Illumination. By HORSTMANN AND TOUSLEY. 274 pages, 40 illus. and diagrams, 21 tables. Leather, \$2.00.

Wiring Diagrams and Descriptions
By HORSTMANN AND TOUSLEY. 300 pages, 230 illustrations and diagrams. Leather, \$1.50.

Electrical Measurements and Meter Testing
By PROF. MORETON. All meters carefully described. 328 pages, 191 illustrations and diagrams. Leather, \$1.50.

Modern Electrical Construction
By HORSTMANN AND TOUSLEY. 440 pages, 263 illustrations. Leather, \$1.50.

Drake's Telephone Handbook
By PROF. M. REYON, of Armour Institute. 286 pages, 161 illus. and diagrams. Leather, \$1.50.

Armature and Magnet Winding
By HORSTMANN AND TOUSLEY. 260 pages, 153 diagrams and illustrations. Leather, \$1.50.

Electrical Tables and Engineering Data
By HORSTMANN AND TOUSLEY. 300 pages, 150 diagrams, tables and illus. Leather, \$1.50.

Drake's Electrical Dictionary
By P. E. LOWE. 320 pages of electrical words, terms and phrases, carefully defined and explained. Leather, \$1.50.

AUTOMOBILE BOOKS

Brookes' Automobile Handbook (New Edition)

Over 700 pages, of which 400 pages are devoted to practical information on new equipment, 335 illustrations and diagrams. Special articles on carburetors, ignition starting and lighting and every new device used. Pocket size, leather. Price, postpaid, \$2.00

Automobile Starting and Lighting

By Harold P. Manly. Every starting and lighting device in the market is covered in this work in a practical manner, for the owner, operator and repair man. 302 pages, illustrated. Pocket size. Cloth, Postpaid, \$1.00. Full leather, postpaid, \$1.50

Automobile Catechism and Repair Manual

By C. F. Swingle and H. A. Tarantous. The book is divided into two parts. Part I comprises questions and answers. Part II is devoted entirely to automobile repairs. Pocket size. Leather, 165 pages, illustrated. Price, postpaid, \$1.25

Oxy-Acetylene Welding and Cutting, Electric and Thermit Welding

By H. P. Manly. 215 pages, fully illustrated, cloth, \$1.00. Leather, stamped in gold, red edges, \$1.50. The extensive use of the oxy-acetylene flame in welding and cutting has created an active demand for a practical book explaining this process. It includes electric and thermit welding, also a chapter on hand forging and welding.

Scene Painting and Bulletin Art

By Frank H. Atkinson, author of "Art of Sign Painting," "A Show at Show Cards," etc. Covers Principles, Color, Drawing, Scene Painting and the latest in Bulletin Art. Size 9x12. 256 pages, illustrated. Cover stamped in five colors. Postpaid, \$3.00

Published Feb. 1, 1917

FARM BUILDINGS With Plans and Descriptions

By H. A. Shearer. 12mo, cloth. Fully illustrated. Contains full description of the latest and best farm buildings of all kinds. Price, postpaid, \$1.00

Other New Books and New Editions

Practical Gas and Oil Engine Handbook. By BROOKES. 230 Pages. Cloth, \$1.00.

Swingle's Handbook for Steam Engineers and Electricians. 1500 Pages. Leather, \$3.00.

Traction Farming and Traction Engineering. 330 Pages. Cloth, \$1.50.

Operation of Trains and Station Work. By PRIOR. 618 Pages. Leather, \$2.00.

Hodgson's Estimator and Contractors' Guide. 318 Pages. Cloth, \$1.50.

Hodgson's Hardwood Finisher. 320 Pages. Cloth, \$1.00.

Hodgson's Concrete. 520 Pages. 12mo Cloth, \$1.50.

Practical Up-to-Date Plumbing. By CLOW. 310 Pages. Cloth, \$1.50.

Builders' Architectural Drawing Self-Taught. By HODGSON. 336 Pages. 250 Illustrations. 12mo Cloth, \$2.00.

Know Your Car—

It Means Money to You

Audels Automobile Guide—the world's most scientific book on automobiles—will enable you to quickly solve every problem of driving, repairing, locating of trouble. It is recognized as the authority by experts. Its value is unlimited. It tells you everything you should know about your car. Sent to you for free examination.

If you are an Owner

You are losing money every time you run with ill-adjusted Carburetor, with faulty ignition, with your engine at the wrong speed, or with a score of other faults. You may be a careful student of your car and take all the precautions you know of. But unless you know the technical details of driving and operation, and know them right, your car is an expense burden instead of a pleasure.

If you are a Chauffeur

We don't need to mention the things you must have at your fingers' ends in order to manage your car at top efficiency. Here are a few of the points you may be in doubt about:—How to care for batteries and keep them operating at maximum voltage. How to wire a car for Electric Starting, Lighting and Ignition according to the most modern systems. How to overhaul the car. How a car is best lubricated, etc.

If you are a Mechanician

Then more than anyone else you will realize the importance of knowing the details of design of every part of your car. New inventions in design and construction are coming up every day, which puzzle the untrained man. Do you know these things?—Methods of cooling—Timing and Balancing—Designing Clutches—Design of ball and roller bearings, etc.

Audels Automobile Guide

Solves every single one of these problems and solves them in a way that you can understand. It's a value you cannot afford to miss. It will save you many times its cost before you have had it a week.

Text Arranged in QUESTIONS AND ANSWERS

The story is told in the best known way,—in the form of questions you would ask and the answers to them—in plain, practical, everyday language, complete, concise, and to the point. The book is complete, concise, and to the point.

handsomely bound in durable full flexible leather. Pocket Size. It is easy to handle and easy to study. There are 30 chapters covering every single phase of Automobile engineering and Automobile operation. Every chapter is modern, concise, and practical.

Written by Practical Men for Practical Men

There is no idle theory in Audels Automobile Guide. Every paragraph is written to help you in the easiest, most practical way. The chapters on carburetors, ignition, gas engine operation, How to run an Automobile, overhauling the car, Battery Troubles, and Starting and Lighting Systems, are alone worth the price asked for the 30 complete chapters. There are 700 information-full pages, with 550 illustrations that show you in picture just what you want to see.

Sent to You FREE

We don't ask you to take our word for the merits of this book. Seeing is believing, so we will send you the book without deposit. You will say at once that as books go it is worth at least twice what we ask for it. Use it seven days in connection with your car. Then if you are not satisfied that Audels Automobile Guide is positively the best book on the subject, send it back to us. But if on the other hand you decide that you need it, that it is the one book for you, remit us only \$1.50.

Mail This Free Coupon TODAY

Do not delay. Put your name and address on the coupon today. The book will be mailed to you at once for FREE examination. Convince yourself of the wonderful assistance this book will be to you. Send for it today—now.

PARTIAL CONTENTS OF THE 10 GUIDES

No. 1. Contains 240 pages, 246 illustrations. Electrical signs and symbols—static and current electricity—primary cells—conductors and insulators—resistance and conductivity—magnetism—induction coils—dynamo principles—classes of dynamo, etc.

No. 2. Contains 218 pages, 256 illustrations. Armatures—windings—commutation—brushes—motor principles—armature reaction—motor starting—calculations—brake horsepower—selection and installation of dynamos and motors, etc.

No. 3. Contains 276 pages, 280 illustrations. Galvanometers—standard cells—current measurement—resistance measurement—voltmeters—wattmeters—watt hour meters—operation of dynamos—operation of motors, etc.

No. 4. Contains 308 pages, 423 illustrations. Distribution systems—wires and wire calculations—inside, outside, and underground wiring—sign flashers—lightning protection—rectifiers—storage battery systems, etc.

No. 5. Contains 278 pages, 379 illustrations. Alternating current principles—alternating current diagrams—the power factor—alternator principles—alternator construction—windings, etc.

No. 6. Contains 272 pages, 538 illustrations. A. C. motors—synchronous and induction motor principles—A. C. commutator motors—induction motors—transformers—losses, construction, connections, tests—converters—rectifiers, etc.

No. 7. Contains 320 pages, 460 illustrations. Alternating current systems—switching devices—circuit breakers—relays—lightning protector apparatus—regulating devices—synchronous condensers—indicating devices—meters—power factor indicators.

No. 8. Contains 288 pages, 330 illustrations. Waveform measurement—switch boards—alternating current wiring—power stations—turbines—management, selection, location, erection, testing, running, care and repair.

No. 9. Contains 576 pages, 849 illustrations. Telephones—telegraph—wireless—electric bells—electric lighting—photometry—electric railways—electric locomotives—car lighting—trolley car operation, etc.

No. 10. Contains 704 pages, 730 illustrations. Miscellaneous applications—motion pictures—gas engine ignition—automobile self-starters and lighting systems—electric vehicles—elevators—cranes—pumps—air compressors—electric heating—electric welding—soldering and brazing—industrial electrolysis—electro-plating—electro-therapeutics—X-rays, etc.

Also a complete ready reference index of the complete library.

The work of the world today is done by electricity. Electricity runs our machines; transports our goods; lights our homes, shops and factories; heats our buildings—is indispensable in hundreds of ways. Opportunities in electricity are greater than ever before. Exact electrical knowledge means more money and greater success for you.

HAWKINS ELECTRICAL GUIDES

give you ALL the electrical information you want, in the shortest, most concise form—namely, by means of questions and answers and unlimited illustrations. No matter how great or how little your previous knowledge of the subject at hand, you "get the point" at once in Hawkins Guides. They are absolutely complete—brought right up-to-date—the last volumes are just off the press.

FLEXIBLE POCKET-SIZE TEXTS Arranged for Home Study and Reference

They are the handiest books to read and to use, ever produced. In flexible, black covers, leather binding—just the right size—5x6½ inches—to fit in your pocket, so that you can carry each single volume about with you until you have mastered its contents. The whole set fits easily in the hollow of your arm, and still there are actually 3,500 pages and 4,700 illustrations.

10 Practical Volumes. 3500 Pages. 4700 Illustrations

WHAT USERS SAY

"Every Electrician, Operating Engineer or Student who wants to advance himself in the Electrical field should have a set of these books."

JOHN KELLEY, 116 Union St., Newark, Ohio.

"For the man not getting a college training, and even in that case, I can sincerely say I do not believe there is a better set of books on the market today."

LLOYD D. HUFFMAN, Dayton, Ohio.

"We consider Hawkins Electrical Guides the most compact and complete set of electrical references in the market."

NOGGLE ELECTRIC WORKS, Monterey, Cal.

"Hawkins surely knows the art of condensing information."

ELDRIDGE F. BALL, Buckland, Conn.

"I think they should be in the hands of everyone who has anything to do with Electricity."

T. E. MURPHY, Orange, Va.

"For the practical electrician, they are the best books published—worth many times their price."

L. C. WAGNER, Wyoming, Ill.

"I have gained valuable information from them which has helped me directly in my line of work."

HERMAN NOBENBERG, Hoboken, N. J.

"They are wonderful value. Everything is so clear and concise. Even one who had no knowledge of Electricity would have no difficulty in grasping the facts."

F. L. TAYLOR, Amesbury, Mass.

"It is the best work an apprentice can study if he wants to get ahead in his trade. As a reference for the experienced worker HAWKINS ELECTRICAL GUIDES are unexcelled."

I. MCCLELLAN, Chillum, Mo.

I.C.S.
ELECTRICAL ENGINEERS
HANDBOOK

50¢

ELECTRICITY!

HERE'S just the book on Electricity that you need to answer your many questions—to solve your knotty problems, to teach you new kinks, to be your memory for tables, rules, formulas and other Electrical and Mechanical facts that some people try to carry in their heads—and fail.

With this "Little Giant" I. C. S. Electrical Engineer's Handbook in your pocket, tool chest, on your work bench, drawing table or desk, an hour or a day need not be lost "digging up" some forgotten rule, some unfamiliar fact; you'll just turn to the very complete index and get it "in a jiffy." Just a few of the subjects treated are:

Electricity and Magnetism; Electrical Symbols; Batteries; Circuits; Magnets; Direct and Alternating Currents; Dynamos and Motors; Belts; Shafting; Electroplating; Electrical Measurements; Meters; Arc and Incandescent Lamps; Mercury Arc Rectifiers; Transformers; Insulation; Electric Cars; Single and Multiple-Unit Control; Transmission; Rail Welding; Tables of Wires—Sizes, Capacities, etc.—Mathematical Rules, Formulas, Symbols; Tables of Constants, Equivalents, Roots, Powers, Reciprocals, Areas, Weights and Measures; Chemistry; Properties of Metals; Principles of Mechanics; First Aid, etc.

The Electrical Engineer's Handbook is one of 22 I. C. S. Handbooks covering 22 Technical, Scientific and Commercial subjects, all crowded with value. They have the contents of a full-size book condensed into pocket-size ready to go with you anywhere and be at your instant command. They are substantially bound in cloth, red edges, goldleaf stamping, printed from new, clear, readable type on good quality book paper. There is an illustration at every point where a picture will help. Hundreds of thousands have been sold on a money-back guarantee of satisfaction.

The regular price is \$1.25, but for a LIMITED TIME you can buy the ones you want, postpaid, delivery guaranteed, for only 50 cents each.

You Run No Risk! Money Back if Desired!

is easily earned if you possess the knowledge contained in the

Machine Shop Library

Never before in the world's history has there been such activity in machine shop work as there is today. And glancing into the future we see a never-ending increase in this unheard-of activity.

Unlike any other line Unlike those engaged in the average line of work, the services of the efficient machine shop worker are constantly sought. No one familiar with the machine shop field will deny this. The trained man wastes no time in looking for a position. Weigh this in your mind and then decide which trade to learn.

Knowledge, not strength, counts Now more than ever a man's earning power is gauged by his knowledge, rather than by his strength and deftness. More and more is the Machine Shop Library looked upon as a positive and unfailing medium for acquiring easily the knowledge which takes a man to the highest positions in the machine industry of today.

THE STANDARD IN AMERICA

The Machine Shop Library being formed by eight authors, all practical men, who were assisted in this great work by over two hundred other experts from different shops in different parts of the country, is now accepted as the standard in America.

Direct to your home without deposit. Ten days for examination

We not only agree to pay the forwarding expense on the books to you, but to send you return charges if you are not satisfied that the nine volumes will tell you everything you want to know about machine shop practice. Return them for any reason whatsoever. We will not argue. The books speak for themselves. It is nearly impossible for anyone in the machine profession, or anyone who expects to take up the work, to convince himself that he can get along without these books after seeing them. Upon first glance it can be readily observed that they furnish the essentials of success in machine shop work.

Small Monthly Payments After thoroughly satisfying yourself that you need the books send us small monthly payments which you will not miss.

McGraw-Hill Book Co., Inc.

Publishers of Books for Machinists Since 1876
239 W. 39th Street, NEW YORK

**Machine Shop
Practice
Complete**
Not One Cent in Advance

SMALL MONTHLY PAYMENTS

Easily understood The Machine Shop Library contains the plain facts about machine shop practice — facts that you want to know and must know to achieve success. The books are written so clearly, and so carefully illustrated that the very beginner can understand them — and so accurately that thousands of the highest paid machine shop workers in the country are using them as a daily guide.

You can thoroughly master each subject One by one the subjects in machine shop practice are taken up and covered entirely, so that you can master each subject completely. The reader is able to conquer the most difficult problems in machine shop work, because each item of information is carefully and explicitly worked out by men who have actually done the work themselves.

3000 Pages — 3000 Illustrations

The Machine Shop Library contains nine volumes, 6x9 inches. They are beautifully bound in a stout, morocco-grained dark red cloth, having the appearance of leather, and of equal strength. With average care they will last a lifetime.

Just a few minutes of your time each day

Every day you delay sending the coupon below means something to you. You can earn \$25 to \$50 per week just as easy as you can earn a few dollars a week, if you will give up a little of your time each day to the Machine Shop Library. Let us prove this absolutely, at our expense. Return this coupon now. You do not risk one cent.

EARN WHILE YOU LEARN

LEARN WHILE YOU EARN

Leading Electrical Concerns Join America's Foremost School In PRACTICAL ELECTRICITY To Develop TRAINED Men

To meet the extraordinary present-day demand for trained electrical men, a number of big Milwaukee Industrial Concerns have just taken a step without precedent or parallel. They have entered into a contract with this school to give our students part time employment at practical electrical work during their entire course of study.

This gives you an opportunity absolutely unique in the history of technical education—the opportunity to secure a sound, through-and-through training in both the “book” and the “dollars-and-cents” sides of

Commercial and Electrical Engineering

You earn your living expenses while pursuing your studies. Mornings—lectures and laboratory work at school—afternoons—actual practice in the work rooms of the industrial companies. What better start in life could you ask than this chance to acquire a complete, job-insuring technical training under actual wage-earning working conditions, giving you confidence in yourself and a feeling of security in holding your job.

A Permanent Job for Every Graduate

Feeling the tremendous need for more men with the sound, technical training afforded by this school, these same concerns have agreed to employ all our duly qualified graduates at good salaries the moment they receive their diplomas.

To meet this demand we offer the following courses to students with credits in algebra and plane geometry:—

Complete Commercial Engineering	2 yrs.
Electrical Engineering	2½ "
Special Course in Practical Electricity	1 "

Students with only a common school education may finish the complete Commercial Engineering Course in 2½ years, Electrical Engineering in 3 years, Special Course in Practical Electricity 1 year.

Established thirteen years ago, the School of Engineering of Milwaukee stands absolutely alone in the field of electrical and commercial engineering. Has the emphatic and unqualified endorsement of all leading engineering industries. Write at once for full particulars. New term opens April 2nd.

School of Engineering of Milwaukee

SHORTHAND IN 30 DAYS

We absolutely guarantee to teach shorthand complete in only thirty days. You can learn in spare time in your own home, no matter where you live. No need to spend months as with old systems. Boyd's Syllabic System is easy to learn—easy to write—easy to read. Simple. Practical. Speedy. Sure. No ruled lines—no positions—no shading as in other systems. No long lists of word signs to confuse. Only nine characters to learn and you have the entire English language at your absolute command. The best system for stenographers, private secretaries, newspaper reporters and railroad men. Lawyers, ministers, teachers, physicians, literary folk and business men and women may now learn shorthand for their own use. Does not take continual daily practice as with other systems. Our graduates hold high grade positions everywhere. Send today for booklets, testimonials, etc.

Chicago Correspondence Schools

CLEOPATRA TESTING THE POISON

The most beautiful, passionate and faithless woman of antiquity, having first infatuated, then ruthlessly destroyed the great Antony; at the moment of her downfall coolly arranges her own death rather than go to Rome in disgrace. Before taking the poison herself, she watches with keen interest its effect upon her own bodyguard. No more characteristic action could be shown. This is one of the thousands of historical incidents of tragic interest in Dr. John Lord's

Beacon Lights of History

The heirs of Dr. John Lord, the Modern Plutarch, author of the most famous historical work of its kind ever written, have agreed to reduce their royalties so that we are here able to offer you a set of Beacon Lights of History at a price so low you can't afford to miss it. The set is complete in 15 beautiful volumes and contains famous lectures on every great character in history—Cyrus the Great, Julius Caesar, Marcus Aurelius, Cleopatra, Alexander, Hannibal, Napoleon, Washington, and all the Hosts of History who constitute the Beacon Lights of the World.

More Than 1,000,000 Volumes Sold

More than one million volumes of Beacon Lights have been sold and every customer is more than satisfied. Never before has a work of similar nature had so great a sale. Dr. Lord epitomizes the history of the entire world, and groups the historical events around the great Beacon Lights of History—the famous men and women of all nations and races. It is complete and graphic, absorbing and interesting, and holds the reader spellbound with the rapt interest of a stirring tale.

Greatest World History Ever Written

Have you ever watched history's procession from its starting point? Have you seen Egypt rearing her pyramids and other world wonders? Have you looked upon Assyria, Babylonia and Persia rising to their zenith, pour forth their radiance and then sink again into oblivion? Have you marked Greece, her chiseled temples crowning a thousand hills, her genius endowing the world? Has Rome risen before you pre-eminent, her laws supreme, her army invincible, her science mature, and then under the fever of luxury sunk into decay? Have you lived through the cruelty of the middle ages? Have you thrilled over the romance of the age of chivalry? Have you watched the ennobling influence of the Renaissance? Have you stood by as France received her baptism of blood? Have you seen that God-guided group of patriots draft the American Constitution? If you have not, then the pages of this work hold much in store for you. If you would quicken your pulse, enlarge your horizon, cultivate your imagination, stimulate your patriotism, then read the world's story—Beacon Lights.

Here is Our Bargain Offer—Send No Money!

Just fill out and mail attached coupon and we will ship you the complete set Beacon Lights of History for 10 days' examination in your own home. We want you to see these beautiful volumes and to read several of the wonderful lectures, and you can then decide whether or not you wish to buy. If you are satisfied then send \$1.00 only as a first payment and pay the balance \$2.00 per month for only 14 months until our special price of \$29.00 for the silk cloth binding is paid. If you prefer the beautiful $\frac{1}{2}$ morocco, which we strongly recommend, send only \$1.00 as a first payment and \$2.00 monthly for 19 months until the sum of \$39.00 is paid. This binding is so attractive and the reading matter so intensely interesting that we strongly recommend the better binding, but you can have your choice.

Satisfaction Guaranteed

If you are not entirely satisfied in every way then notify us within ten days and we will give you shipping instructions for return of the set. We ship direct from factory to consumer and guarantee satisfaction. How could any offer be more fair?

Trained DRAFTSMEN WANTED!

READ THIS LETTER

If you doubt the great opportunities open to the young men of this generation, read President Morey's letter below. Never before in America were the conditions so favorable.

"I have been asked to state what, in my opinion, will be the opportunities of the next few years for the man who takes up Engineering, Architecture, Contracting, Drafting, etc. I can best forecast the future by looking at the past.

For many years it has been impossible to secure enough trained draftsmen. By trained draftsmen I mean men who can go ahead and do things right. Such men are worth their weight in gold. Good draftsmen, men who are trained right, quickly advance out of the drafting room and become engineers, superintendents, managers, etc., where salaries of \$10,000 or \$15,000 per year are common.

More than a decade ago, with other engineers, I established the Chicago Technical College for the sole purpose of training up good draftsmen for our engineering offices. Since then hundreds of men, now drawing big salaries, have secured their start in our day and evening classes and hundreds of others have become expert draftsmen through home study. I have employed many of them in my own engineering office and have placed the others in equally good positions.

But it is still impossible to get enough trained draftsmen. I have calls for men every day. The engineering firms, architects and contractors associated with me are constantly asking for our graduates. They know what these men can do. Will the call for men continue? It certainly will. America has only begun to realize her possibilities. The next few years will witness a wonderful development of her resources. The demand for trained men will be even greater than heretofore. The young man of today has an opportunity that was undreamed of a few years ago. Will he improve it? The far-seeing ones are already doing so."

Charles W. Morey

President Chicago Technical College
Manager Morey & Co., Engineers

A CHANCE TO LEARN DRAFTING FREE

On account of the rapidly increasing demand for trained draftsmen, President Morey has issued orders that instruction be furnished to a limited number of young men who are inclined along engineering or architectural lines.

The College has set aside a limited number of Free Scholarships and will give the regular 245 Course in Mechanical Drafting, FREE, with any of the Home-Study Courses named in the coupon below. A complete drafting outfit of highest grade is also included. This offer will be withdrawn as soon as allotted number of FREE Scholarships has been awarded. Send NOW for full information—it's FREE!

Big Money in Electricity

The Electrical industries offer wonderful opportunities to boys with a liking for Electricity. The salaries paid to trained men are large, promotion comes rapidly and, best of all, the work is fascinating.

The discovery and development of new lines (such as wireless telegraphy and telephony), from time to time, promise attractive and paying fields to those who wish to specialize. The *will to do* and *Special Training* will bring success to you.

The International Correspondence Schools can help you to become an expert in electrical work, no matter what branch you like best. Thousands of young men have already won success through I. C. S. help. You can do as well as anybody, *if you try*. Everything is made so clear that you can learn in your spare time, regardless of where you live or what your work. No books to buy.

There's big money in Electricity. Get after it by marking and mailing the Coupon today. *Finding out costs you nothing.*

A 'Steel Trap' Memory

One that takes a tight grip on facts, figures, names, details of every kind and hangs onto them through life—that's the kind of memory you ought to have and the kind you can have if you will give me ten minutes of your spare time daily for a few weeks. I will make your mind an infallible classified index of the things it is to your advantage to remember—give you power to concentrate, overcome self-consciousness, enable you to think on your feet, and address an audience intelligently without hesitancy and without notes.

The Key to Success

Stop forgetting

Henry Dickson, Principal, Dickson School of Memory

During the past 29 years I have trained thousands of people to STOP FORGETTING—aided them to greater business and social success—I know positively that the person with a strong, tenacious memory, though he be far behind at the beginning of the race for success, advances and soon outdistances his forgetful rival. The demands of commercial and professional life are so exacting in their details of facts and figures to be remembered, that to succeed or even hold your own you simply must possess a good memory.

Get My Remarkable Memory Test Free

I've had this test—most ingenious and most exclusive memory test ever devised—copyrighted. I'll send it to you, free, also a copy of my book "How to Remember" and tell you how to obtain a copy of my De Luxe edition, "How to Speak in Public," a handsomely illustrated \$2 book, absolutely free.

HENRY DICKSON, Principal, Dickson School of Memory, 1705 Hearst Bldg., Chicago

STAMMERER

Attend no school until you read my book "How To Stop Stammering." A practical, modern Method that kills the fear of stammering. The Hatfield Institute, 109 North Dearborn St., Chicago, Ill.

Voice Thrower 10c

Learn to throw your voice into a TRUNK, under the bed, out in the hall or anywhere. Lots of FUN fooling the Teacher, Janitor, Policeman, Parents, Neighbors, or Friends.

THE VENTRILO

is a little instrument that fits into the mouth out of eight. BOYS or GIRLS can use it. NEVER FAILS! A 32 page book on Ventriloquism sent with the VENTRILO for TEN Cents.

Royal Novelty Co., Dept. 92, So. Norwalk, Conn.

IN 10 WEEKS' SPARE TIME

We can teach you the entire subject by mail and help you to get a good position. ONE MILLION AUTOMOBILES will be built this year. The demand for trained help next spring will be tremendous. **Sample Lessons Free — Write for Them Today** (Owners—we supply competent men.)

Stationary Engineer

Marine Engineer

Locomotive Engineer

AMERICAN TECHNICAL SOCIETY

Everything the Chief Knows!

HERE in seven volumes is all the knowledge you need to pass the examination for a Stationary or Marine Engineer's license, or to obtain a position as Locomotive Engineer. *Every fact* on steam engineering is tabulated and carefully cross-indexed so it is always at your fingers' tips. These great books were written by 27 experts. Seven volumes; 3300 pages (7 by 10 inches); 2500 illustrations, full page plates, diagrams, etc. *Hundreds of valuable tables and formulas.* Handsomely bound in half red morocco, gold stamped. Covers the construction and operation of stationary, locomotive, marine engines, and boilers; the use of gas and gasoline engines for power and locomotion; the transformation of steam and gas power into electricity, and the application of steam and gas power to refrigeration, compressed air, etc.

\$125 to \$250 a Month Are ordinary salaries in the engineering field. With these books you can actually prepare for one of these high-salaried positions during your spare time. A set of books that is invaluable to the steam engineer—or one preparing for one of these high-salaried positions. Send the coupon for free examination.

Steam Engineering

With the growth of the electrical industry and the complicating of steam engines, the chief engineer must have the up-to-date knowledge that is contained in these seven great volumes. If you

would be the chief engineer, this opportunity to get these books is a golden one. Here is all the information you need—and written in simple, easily understood English.

Consulting Service FREE!

In addition to the set of books we also give you—free of all charge—a year's consulting membership in the American Technical Society. This entitles you to the privilege of bringing every perplexing problem to a corps of experts. Ask as many questions as you wish for an entire year.

50c A Week

We will ship you the entire seven volumes, prepaid, right to your own home upon your simple request. Do not pay a penny until

after you have used them for seven days, then send only \$2.00 or return the books at our expense. Pay the balance at the rate of \$2.00 a month—50c a week. The present rock-bottom price of the entire set of books is only \$19.50—a reduction of \$15.50 from the regular price of \$35.00.

Send the Coupon Today

Put your name and address in the coupon now and send it to us. This offer to send the entire set of books, prepaid, is open to every one within the boundaries of the United States and Canada—you cannot afford to pass it by. Act now. This is opportunity.

American Technical Society, Dept. S 1193, Chicago, U.S.A.

American Technical Society

Dept. S 1193 Chicago, U.S.A.

Please send me the seven volume set of the Cyclopaedia of Steam Engineering for seven days free examination. If I decide to buy, I will send \$2.00 within seven days and balance at \$2.00 a month until \$19.50 has been paid. Then you will send me a receipt showing that the set of books and the consulting membership are mine and fully paid for. If I think that I can get along without the books, I will return them after 7 days at your expense.

Sweeney School First in the Field

Owen Magnetic Car Added to Equipment

YOUNG MAN, if you are interested in learning the automobile and tractor business, and earning \$3 a day, up to \$200 a month, you want to come to the school that *Stands in Front*; and now this month's announcement that we have just bought a \$3500 Owen Magnetic Car, to teach our men the principles of the great new change or improvement in electrical transmission, means that this is the *only school* that has an Owen Magnetic and can teach you this remarkable new development. Come to the school that's *Up-to-the-Minute*; the fact that 1400 men this very day are working here proves that we are headquarters for automobile instruction; that we have the prestige; and our men go out from here in six weeks and make good. **YOU CAN'T** account for our success except by the fact that our students succeed when they leave school.

1400 Men Now in School Training for Big Money

THE Sweeney System of teaching the automobile business to men mechanically inclined means in a few words to learn by actually doing the work in a School where you get into the grease to your neck. It is the only way to learn it. And say, you need up-to-date equipment, too. My \$80,000.00 equipment consists of all types of automobiles, from a one cylinder up to the \$3500 Owen Magnetic Car. I actually have these cars here, with their ignition and starting systems, everything complete. It also includes working in different departments under competent instructors, such as electric starters and storage batteries, valve grinding, piston ring fitting, babbitting and bearing departments, also oxy-acetylene welding. My equipment consists of ten oxy-acetylene welding machines; tire vulcanizing, lathe work, gear cutting—in fact, I teach you to properly take care of a car and to repair it, so that you can make almost any part, if you are mechanically inclined, and if during your life you have had that longing to some day be able to fix machinery and work on it, write for my catalog, which describes the Sweeney System of teaching the automobile business; how I put you in the shop with overalls on, make your own tools, and have a competent instructor right at your elbow to first tell you, then show you, and then you do the work yourself. This is so different from the average way of teaching in School. If you are afraid of work or grease don't come here, because when you work on automobiles you get dirty.

Do It Now If you will sign and mail the coupon attached or write me a postcard, I will send you my big free book and full details of my \$50 free Traction Engineering Scholarship. Remember, we have 9 tractors and in our own factory build the Sweeney Iron Horse. This book will survey the whole field and the certificate will entitle you to the \$50 saving in case you enroll this fall. It will not obligate you in any way. As a matter of fact I won't take a cent of a man's money until he has personally inspected the school and has satisfied himself.

The book pictures the wonderful equipment of the Sweeney School. It shows how you are taught, shows the class of men you will associate with, portrays various phases of the automobile industry, explains how, when and where you begin to earn money, in a word, is a complete encyclopedia of the subject. I don't urge you to send for it unless you really want it, but to every young man mechanically inclined I will be very glad indeed to mail it free, together with my regular magazine. Simply send name and address.

E. J. SWEENEY, President

Sweeney Automobile School

Largest and Best Equipped in the World

1162 E. 15th St. KANSAS CITY, MO.

Your chance to *be somebody*, to hold a position of responsibility, to have an income that will provide every comfort of life, is within your reach.

Just one thing keeps you from finding it, grasping it: you're not *prepared*. Through the door of opportunity big jobs are waiting in every field of work. But only trained men will get them.

Don't play blindman's buff with your future! Start today and train yourself to do some one thing better than others.

You can get that training in spare time through the International Correspondence Schools, just as others have done for twenty-five years—just as more than 130,000 ambitious men and boys are doing right now.

Choose your own career. The I. C. S. will train you for the position you want in the work you like best. And you need not lose a day or a dollar in your present occupation.

Tear off that blindfold!

Your chance is here. The time to start is now. The way is to ask the I. C. S. to show you what they can do for you. Mark and mail this coupon—it costs nothing, but the evidence it will bring you will open your eyes.

I. C. S., Box 5555, Scranton, Pa.

LEARN AUTOS

Where Autos are Made

Detroit is a city of motors. Eighty-five per cent of the motor cars in the United States are said to be made here. Here are located 40 or more auto factories, hundreds of parts makers. Detroit *makes* automobiles, *sees* automobiles, *thinks* automobiles day and night. Detroit is the *place* to learn the auto industry, and the Detroit Y. M. C. A. Auto School is the *school* at which to learn it.

Backed by Automobile Factories

The automobile men of Detroit endorse our work without hesitation. The Studebaker, Buick, Hupp, Ford, Packard, Gray Motor, Disco, Zenith, Chalmers, and many others have contributed to our equipment their latest models and designs. Can you ask stronger proof of a school's standing than the fact that the *men who know* give freely their time and money to co-operate with it and aid in its growth.

Not Operated for Profit

The Y. M. C. A. Auto School is not run for profit. Our purpose is to give our students the training necessary to get and hold good paying positions in the rapidly growing automobile industry. Tuition goes to procuring the highest class of instructors and the best of equipment. The automobile business is crying for trained men,—testers, chauffeurs, inspectors, salesmen, assemblers, repair men, bearing scrapers, motor mechanics of every description. Factories, dealers and garages join in the call. We fit you for these positions. Will you take advantage of this opportunity?

Tuition Includes Membership in the "Y"

Tuition at the Y. M. C. A. Auto School is low — and includes a year's membership in the "Y." Our big Club House is at your disposal during time off. Reading rooms, lounging rooms, gymnasium, swimming pool, billiard and pool tables, bowling alleys, with five floors of dormitories and restaurant at low rates. You are assured of not only thorough and competent instruction, but good companionship and clean living conditions with the comforts of home and club life combined.

Don't Visit Detroit Without Seeing Us

You want to consider everything carefully before you enroll for any course of instruction. Come and look us over, whatever purpose brings you to Detroit. Get all the particulars of this school, get the records of our instructors, hear what auto factories and automobile men have to say about us, see for yourself our comfortable quarters and big equipment. We will be glad to see you and show you around whether you enroll or not. Day and night classes. Start at any time. The average time required is 6 weeks for day course, and 12 weeks for night course.

Learn Electricity!

in the Great Shops of Coyne

Practical training is the golden road to quick success. No mere books or theory can fit you to hold the big paying jobs. Here in our great shops you learn Electricity from the bottom up—under actual working conditions—as every great electrical expert must learn to completely master it. Here you handle actual equipment! Here you actually do the work that pays

\$125 to \$300 a Month

Think of the difference! No correspondence! No books and papers! No long hours of tedious grind. The work at Coyne is vibrating with life—charged with electricity. Experts show you everything. They work with you—show you how. You imitate these masters! You learn by doing. It's amazing how quickly you progress. From the simplest door bell to the mighty motors—dynamos—electrical locomotives—everything is mastered with remarkable ease. Hundreds of successful graduates prove this fact. Many finish in 4 to 5 months.

Day or Evening Courses

LOW COST—
EASY TERMS

Come to the great Shops of Coyne. Enter day or evening courses! Nothing bars you! Our tuition is so low it will astound you. You don't have to pay cash! We arrange acceptable easy payments if necessary. All tools and equipment are furnished free. Think of it! Your opportunity to thoroughly learn Electricity is right before you.

FREE Employment Bureau!

Don't let anything stop you! We maintain a Free employment bureau. We help worthy—serious young men get work while studying. We also help place graduates in big jobs.

Learn Mechanics of Aviation

YES, right in your own home, in your spare time, you can learn all the principles, the theory and the mechanics of Aviation. You can prepare yourself for flying, if you wish. Or you can gain all the practical knowledge to equip you to enter the big paying and fascinating business of aeroplane construction and as aero-mechanical engineer. Send the coupon at once! Find out how our wonderful course in Aviation will give you the knowledge necessary to enter this field. Everybody planning to enter the Aviation fields needs the knowledge which this course offers. This is the first time that anyone has had the opportunity to gain this instruction at home—and without great sacrifice of time and expense. Waste no time in sending coupon.

Big Opportunities NOW!

What Course Covers:

Aero History—Aero Physics—Aero Dynamics—Wing Designing and Construction—Aero-plane Assembling—Balloon Building and Operating—Aero-nautical Wireless.

Now is the time for every man who has considered Aviation to get into the field. Each day presents new opportunities. The pioneers are going to reap the rich rewards. Automobile history, railroad history, motion picture history will repeat itself in Aviation. The men who get in early are the men who will amass the fortunes. Right now there are opportunities for men who are experts in the mechanics of Aviation that pay anywhere from \$50 to \$500 a week. In aeroplane factories, government branches, aero societies, repair shops. Only trained men will do. Heretofore this was obtainable only at a great sacrifice of time and expense by field training. Now you may secure this

same training at home—in much shorter time, a mere fraction of the expense, and without interfering with your regular work.

Endorsed by Aviation Authorities!

Leading aviators and flying organizations have endorsed this course as a quick and reliable means of training for the business and practice of Aviation.

Law-Trained Men Rule In Business and Public Life

Who are the best paid among all professional men? **LAWYERS.** Who occupy the highest positions in business life? **LAW-Trained men.** Who are our leading executives

—Governors of States, Congressmen, Senators, Cabinet Officials? Men with **LEGAL** training. And why? Because it is now generally recognized that the **LAW-Trained** man has a keener grasp of affairs and is better able to cope with modern business and civic problems which demand intelligent solution than the man without legal training. Then what profession offers the broadest possibilities for **YOUR LAW**, of course. **LAW** has opened the way to positions of honor and profit for more men than any other profession or business.

Earn \$3,000 to \$10,000 a Year

ACT! Enter this success-winning, big-income-producing profession **NOW!** Today, more than ever before, **LAW** offers the shortest route to the greatest success—and with the least expenditure of time and money. Don't remain in the small-job, small-pay class any longer. Begin **NOW** to build a career of prosperity, power and independence.

Formerly the opportunities to turn a legal education into money were limited to court practice, but today thousands of the choicest places in the field of professional, political and commercial activity are being filled by law-trained men. They are chosen for leadership, because of their grasp of the fundamentals of law; because they know what can be done legally; because their legal training equips them to analyze a proposition and direct and control affairs that cannot be successfully handled by others.

We Train You By MAIL!

at home, in your spare time to acquire a legal training and become a practicing lawyer, successful business man, prominent statesman, or to qualify as a Legal Counselor, retained by big institutions, corporations, etc.—or as Attorney-at-Law, deriving a big income from defending and prosecuting law suits.

Our method of Home Training insures your success—first because the LaSalle text is edited and written in plain, easy-to-understand language. Second, because it is prepared by such noted legal educators as James Parker Hall, Dean of University of Chicago Law School; James DeWitt Andrews, former member faculty Northwestern

FREE Complete Course In Public Speaking

Our training by mail, will positively teach you the fine art of persuasive speech. Every Lawyer—every successful man—should be a forceful speaker. Our Course is prepared by Frederick B. Robinson, A. B., A. M., Ph. D., Professor Public Speaking at College of City of New York. Write and learn how you can **NOW** secure this valuable Course, absolutely free, if you become one of our law students. You owe it to yourself—to your future—to learn all the facts regarding the LaSalle Law Course and how easily you can master it. Mail the coupon and let us send you our two big, illustrated books—valuable "Law Guide" and "Evidence" together with letters from hundreds of our successful law students. Mail coupon **NOW**.

LaSALLE EXTENSION UNIVERSITY,
Dept. 364-F Chicago, Ill.
The World's Greatest Extension University

University, and over 20 Law School Deans; Professors in famous resident colleges, and famous legal authorities of Bar and Bench. Third, because we guarantee to coach free until successful any graduate failing to pass bar examinations.

Money-Back Guarantee Bond

So thorough is the LaSalle Home Study Course—so exceptional has been the success of LaSalle students—that we issue a legal, binding guarantee to refund the entire tuition fee, if after you complete the Course, you are not perfectly satisfied. This guarantee is backed by our entire capital and resources of more than two million dollars, which assures your absolute success. Don't let the lack of ready money interfere—the total cost of this University Grade Course is surprisingly small, and we make easy payment terms to suit you.

We have successfully trained thousands of men and women in law. Among our graduates are men enjoying positions of honor in political, public and business world. It doesn't matter what your vocation is now, we can help you to the same end. Send coupon for facts that tell how.

Modern Law Library Included FREE

14 massive law volumes—"AMERICAN LAW AND PROCEDURE"—standard size—9½x6½ inches—bound in ¼ sheep. All branches of Law are fully covered. This work cost us over \$50,000.00, but is FURNISHED YOU AT ONCE on your enrollment WITHOUT ADDITIONAL COST.

LaSalle Extension University,
Dept. 364-F Chicago, Illinois

Without obligation on my part, send me by return mail, information concerning your Course in Law with the free books, "Evidence" and Valuable Law Guide—also your offer of FREE Course in Public Speaking to students enrolling now.

TYPEWRITE THE NEW WAY!

Free Book Tells How
To Learn
At Home

**80 to 100 Words a Minute
Guaranteed!**

Learn at Home—10 Easy Lessons

A wonderful new method of acquiring skill on the typewriter has been discovered. Almost over night it has revolutionized the whole typewriting situation.

Already thousands of stenographers and other typewriter users who never exceeded thirty to forty words a minute, are writing 80 to 100 words with half the effort and with infinitely greater accuracy than they ever could before, and their earnings have increased in proportion.

Nothing Else Like It

Don't confuse this new way in typewriting with any system of the past. There has never been anything like it before. It is as different from the old touch systems as day is from night. Special *Gymnastic Finger-Training Exercises* bring results in days that ordinary methods will not produce in months. It is the greatest step in typewriting since the typewriter itself was invented—already its success has become nation-wide.

Doubles and Trebles Salaries

Among the thousands of operators who have taken up this system are hundreds of graduates of business colleges and special typewriting courses—many were so-called touch writers—yet there has not been a single one who hasn't *doubled* or *trebled* his or her speed and accuracy, and the salaries have been increased from \$8 to \$15 a week (their former pay) to \$25, \$30 and even \$40 weekly. And the new way is *amazingly easy* for anyone—there are only 10 lessons and they can be quickly learned at home without interfering with your present work.

Valuable Book Free

We cannot describe here the secret principle of this new method. But we have prepared a book which tells all about it in complete detail, which is *free* to those interested if 4c in stamps is enclosed to cover cost of wrapping, mailing, etc. It is a big 32-page book, brimful of eye-opening ideas and valuable information. It explains how this unique new method will quickly make your fingers *strong and dexterous*, bring them under *perfect control*, make them *extremely rapid* in their movements—how in a few short weeks you can transform your typewriting and make it *easy, accurate and amazingly speed*—all this and much more is told in detail. No instruction book ever written, no matter what it cost, ever told so plainly the real **WHY** and **HOW** of expert typewriting.

If you are ambitious to get ahead—if you want to make your work easier—if you want to put more money in your pay envelope—get this book at once. It will be a revelation to you as to the *speed and salary* that is possible to typists. Mail the coupon or a postal today—*Now*. Address, The Tulloss School, 123 College Hill, Springfield, Ohio.

USE THIS FOR BIGGER PAY

THE TULLOSS SCHOOL, 123 College Hill, Springfield, Ohio
Please send me your Free Book about the New Way in Typewriting. This incurs no obligation whatever on my part. I enclose 4c in stamps to cover wrapping, mailing, etc.

Civil Engineers Earn \$1500 to \$5000 a Year!

DON'T take our word for it that these books will fit you to earn \$1500 to \$5000 a year as a Civil Engineer. Get them into your home—free of all charges—and determine their value for yourself. The books themselves, not what we say, must convince you that you need them. Send the coupon now for your free-examination set of the brand-new *Cyclopedia of Civil Engineering*. The demand for Civil Engineers was never greater than today. The enormous development of reinforced concrete construction insures steady employment at big pay to thousands of trained men. The nine thick volumes illustrated above will give you the knowledge you need to qualify for one of these jobs. Send for them today.

50c a Week This trivial sum—less than most of us pay for tobacco—will soon pay the low introductory price of the *Cyclopedia of Civil Engineering*. But you must act now! This liberal offer can't be continued indefinitely, so mail the coupon while you can buy this valuable set at a great reduction—and on the easiest of easy-payment plans.

Use Them 7 Days! Free Consulting Service

The entire nine volumes will be sent to you by prepaid express for seven days' free examination. Don't send a penny—just the coupon! The books are handsomely bound in half red morocco leather, gold stamped, and contain 3909 7 x 10-inch pages and 3099 illustrations, plates, maps, diagrams, etc.

These big, thick volumes contain everything you need to know to become a successful Civil Engineer. They cover surveying, highway construction, railway engineering, earthwork, specifications, estimating, contracts, bridge engineering, masonry, reinforced concrete, water supply, sewers and drains, water power equipment, river and harbor improvements, irrigation engineering, etc., etc. Every line is written in plain, simple English. Every technical point is made perfectly clear.

Don't Send a Penny—Just the Coupon!

All you need to do to get the *Cyclopedia of Civil Engineering* is fill in and mail the coupon. Then the entire nine-volume set will come to you by prepaid express for a full week's examination. If you keep it, send only \$2.00 within seven days, and then \$2.00 a month—50c a week—until the introductory price of \$29.50 has been paid. This is \$15.50 less than the regular price of \$45. If you don't want the books, send them back at our expense and you won't be out a penny.

This is a remarkable opportunity to prepare yourself—in your spare time—for the fascinating, highly-paid work of a Civil Engineer. If you live within the borders of the United States and Canada, fill in and mail the coupon today—now!

American Technical Society, Dept. C1193, Chicago, U.S.A.

With each set of this new *Cyclopedia* we give without charge a year's Consulting Membership in the American Technical Society. This entitles you to the privilege of submitting your perplexing problems to our corps of Civil Engineers. Such a membership regularly costs \$12.00, but in connection with this special offer you don't pay a cent for it. Remember, this service is absolutely unlimited. Ask as many questions as you wish for an entire year. Send the coupon now—see for yourself what this opportunity means to you.

**American Technical Society
Dept. C1193 Chicago, U.S.A.**

Please send me the nine volume set of *Cyclopedia of Civil Engineering* for seven days' free examination. If I decide to buy, I will send \$2.00 within seven days and the balance at \$2.00 a month until \$29.50 has been paid. Then you send me a receipt showing that the set of books and the \$12.00 consulting membership are mine and fully paid for. If I think that I can get along without the books after the seven days' trial I will return them at your expense.

Child Pianist Amazes Audiences

Mother of 13-Year-Old Prodigy Explains Daughter's Remarkable Skill

THE extraordinary skill exhibited by little Mayme Morrison, pianist, in her first public appearance has challenged the wonder of thousands who have heard her. Surprise becomes amazement when her admirers are informed that she never had a teacher, but has acquired her wonderful ability by a new, easy method for learning music at home by mail. Miss Morrison is a pupil of the U. S. School of Music of this city, and her mother was recently invited to tell the story of her daughter's success. The following letter was received in reply:

"Dear Sirs: You can't conceive with what heartfelt thanks I write you concerning my daughter, Mayme. When she began taking lessons from your school she did not even know middle C on the organ. I just thought then how proud I would feel when she had learned to play a few selections correctly. I never grew tired of hearing her practice her lessons, and I took so much pride in her skill that the cares and worries of raising my little family grew lighter. My greatest hopes for Mayme have been more than granted by hearing her play in public with

perfect success, and to hear her audiences praise her. She has also been featured in many concerts, so you see I have great reasons to be glad because she took up your course of music.

"Yours with best wishes,

"(Signed) MRS. MINNIE MORRISON.

"P. S. It was through the letters written by some of your pupils that I was induced to take the course for my daughter, and if you think this letter will do you any good in that respect, you are welcome to publish it."

FREE Lessons MUSIC

New, Easy Method

The most remarkable offer in the history of music schools. No previous study is necessary. You learn, right in your own home and without a teacher, how to play by note and you pay not one penny for your instruction while this offer lasts. Thousands of pupils write like Miss Morrison's mother. Free lessons to a limited number of new pupils to advertise our new system of teaching. Start now and before the winter is over you can be a finished player of your favorite instrument. You can delight your family and friends and be sure of the cordial welcome everywhere extended to those who can entertain. Think of the pleasure you can yourself derive through all the years to come. We grade you before you start and fit your instruction to your special individual needs. All lessons prepared by eminent masters of music. If you came to New York to study under these famous teachers—Wilcox, Kohler, Bickford, Clark, Knoll, Newman—you would have to pay hundreds of dollars for your instruction. Yet on this extraordinary advertising offer these same teachers give you lessons by our new simplified method. Free by mail.

PLAY BY NOTE—ANY INSTRUMENT!

Guitar Cello Clarinet Trombone Piccolo Flute Piano Violin Banjo Organ Cornet Harp Mandolin Sight Singing

LEARN AT HOME

Already thousands have learned music by our new, simple Home Study method. No tiresome, "dry" exercises, no inconvenience, no drudgery, no "trick" music, no "numbers"—but fascinating lessons that even a child learns quickly. Choose your own hours for study and practice.

Act Now!

before it is too late. In return for your Free Instruction all we ask is that you tell your friends about this School and our new, easy Home study method.

Your only expense is postage and for sheet music required for your lessons, averaging less than 15c weekly—about 12c. Send the coupon for our new 32-page book explaining the secret principles of our new system by which many have not only learned to play, but are now making money by teaching others.

Chief
Electrician

YOUR GREAT CHANCE BE A TRAINED ELECTRICIAN

Learn at Home

You wide-awake boys and men—think what a glorious opportunity I offer you! You know that this is the Electrical Age—that the watchword of the day is "Do It Electrically!" The field is widening daily. Each day sees some new electrical discovery, some new application of the magic "juice." Greater and greater grows the need for electrical men! Public utilities, municipalities, manufacturers and contractors are calling for the man who knows electricity. Then why not answer the call, when it means big pay for you and the kind of work you'll be proud of? Why not prepare yourself, when I, a well-known Electrical Expert of many years' experience, offer you this opportunity to learn electricity quickly, thoroughly and expertly at home in your spare time.

Earn \$2400 to \$5000 a Year I Will Teach You Personally by Mail

I am revolutionizing the teaching of electricity. My new personal method of instruction is making a profound impression. You learn during your spare time. If you are working, you can keep on drawing your salary while learning. You can qualify in a short time to command a nice, big salary—\$50 to \$100 a week as a trained electrician! I instruct you personally. I make the whole matter so simple for you that you can't help but learn. I show you not only how to do and supervise electrical work, but also how to estimate on jobs so that you can take contracts at big profits and establish a business of your own if you wish. Don't think that you have to have some electrical knowledge or be employed in some electrical work to take up my instruction. If you are ambitious, and can read and write, I will teach you successfully. My instruction is bound to be practical, as I am a practical electrician.

A. W. Wicks, E. E.

Formerly with the General Electric Co.; former General Manager of company manufacturing Jenney Electric Motors; also formerly with Fairbanks, Morse & Co.; now Consulting Engineer and Director of the Wicks Electrical Institute.

20 Complete Lessons FREE!

Think of it! My personal and individual instructions for 20 lessons without a cent of cost to you if you act quick. No charge to you for these 20 lessons, now or later. I make this sensational offer to secure a few more live students at once, and to prove, too, how quickly I can make you a high-salaried electrician. But you must act at once! This offer is strictly limited. Remember, these free lessons are not merely sample lessons, but are a regular part of my full and complete course in electricity. Send the coupon or drop me a postcard.

Send This Free Coupon Today!

Put your name and address on the free coupon, or a letter, or a postcard, and mail it to me today. I will send you absolutely free, full particulars of my sensational offer of 20 free lessons. I will also send you, postpaid free, my great book on electrical instruction and the opportunities that are open to the electrical man. This is without doubt one of the most remarkable works on the subject ever written. It describes my course and method of instruction in full. You assume no obligations of any kind in sending the coupon. So write today without fail. Send the coupon before you turn this page.

"A Train Load of Books" What Clarkson is Doing for the Book Buyer

IN several hundred thousand libraries, in the homes of people in every walk of life—from the day laborer to the college professor and high government official, from the persons who buy a few books of popular fiction to the persons who pride themselves on having the complete works of all the standard authors in De Luxe Sets artistically printed and bound, almost every book was bought from me. WHY? Because I have no agents and sell you just the book you want—all new—many at a saving of from 50 to 90 per cent. You examine the books in your own home for five days before paying for them. If not satisfied, return them at my expense—and see me nothing.

Sample Prices:

When a Man a Man. Publisher's price, \$1.35. My price, 90c.
Eyes of the World. My price, 50c.
Famous Pictures. \$3.00—\$1.40.
Encyclopedia of Quotations. Pub. price, \$2.50. My price, 80c.
What All Married People Should Know. \$1.00—75c.
Buffalo Bill's Own Story of His Life and Deeds. \$1.50—85c.
Famous Orators. \$2.50—\$1.25.
Law Without Lawyers. Pub. price, \$2.00. My price, 65c.
Shakespeare, 24 vols., 24mo. Limp Leather. \$2.40.
When a Man Comes to Himself—Woodrow Wilson. 50c.
Jiu-Jitsu, or Art of Self-Defense. \$1.25—60c.

Here are De Luxe Sets, Morocco bound, complete works, many of them at less than 25 cents on the dollar. Hugo, Kipling, Poe, Eliot, Dickens, Thackeray, Stevenson and scores of others.

Key to the Bible. \$3.75—90c.
Library of Wit & Humor. \$1.50—50c.
Huckleberry Finn and Other Mark Twain Books. \$1.75—\$1.25.
Brazz: The Immortal. 2 vols. \$2.25.
History of the World. 8 vols. \$12.00—\$2.75.
Memory: How to Develop. 80c.
Century Book of Health. Pub. price, \$3.50. My price, \$1.50.
New Americanized Encyclopedia, 15 vols., 3-4 Leather. Pub. price, \$75.00. My price, \$14.75.
Century Dictionary and Encyclopedia, 12 vols., 3-4 Leather. Pub. price, \$120.00. My price, \$39.50.
New American Encyclopedic Dictionary, 5 vols., 3-4 Leather. Pub. price, \$21.00. My price, \$4.75.

Get My Big, New Catalogue

My new catalogue, sent free for the asking, tells you how to save 50 to 90 per cent on thousands of books. It is a course in literature, giving nationalities, date of birth and death of authors, the author's life and standing in literature, etc. Hundreds of sets and thousands of single volumes listed. I sell more books direct to the booklover—the individual reader—the rich man who insists upon his dollar's worth—the man who watches his pennies—and sell them for less money—than any other man in America. Every book new and fresh, and guaranteed to please you—you to be the judge. I do not quibble, and would rather have a book or set of books returned at my expense than to have a dissatisfied customer.

FREE BOOK

My 32-Page book "How to Become a Good Penman" is FREE to anyone who wants to write better. Contains copies and information that will help you, and beautiful specimens that will make your eyes twinkle with delight.

WRITE FOR IT—use the coupon below—or a postal will do—but

Send at Once!

If you enclose a stamp, I will write your name on a card with white ink, making one of the prettiest specimens of penmanship you ever saw

F. W. TAMBLYN

418 Ridge Bldg., KANSAS CITY, MO., U.S.A.

"A Wonderful Bargain" "It is now about two months since I began your course, and while I am not quite half through with Business Writing, I am delighted with my improvement, which is quite marked as you will see by comparing my present writing with the specimen written when I began. My parents objected to my taking it up, but now see I'm getting a wonderful bargain."

—CLARENCE P. WEBER, Middletown, Del.

Good Writing Is the Very Foundation of Business Success

I can make a good penman of you at your own home, in your spare time, no matter where you live or how poorly you now write. Ever fail to secure a good position because of poor penmanship? Ever know of better positions you could have stepped into if you only wrote a good hand? If not, you're an exception. The advantage of good penmanship is seen all around us.

I have been teaching penmanship by mail over 20 years. I know that any ambitious person can master penmanship just as quickly and thoroughly by my system at home as if in a schoolroom under the personal instruction of the teacher.

BEGIN NOW to learn good handwriting and be ready for the next better position that comes your way. Learn right at home—in your own room, outside of working hours. Your spare time is all I ask.

I teach Spelling and Letter Writing also.

Mr. Weber's wonderful improvement shown in the specimens above was made in 2 months. Hundreds and hundreds of others in all parts of the country are doing the same.

YOU CAN DO AS WELL

This Brings FREE BOOK

F. W. TAMBLYN, 418 Ridge Bldg., KANSAS CITY, MO.

I am interested in improving my penmanship. Send me your Free Book, "How to Become a Good Penman," postpaid.

Come to Detroit

The Automobile Center and

LEARN THE AUTOMOBILE BUSINESS

DETROIT
trained men get preference and get jobs quickly. No other city can give what Detroit offers. Think what it means to learn in the Michigan State Auto School. Factories endorse our school, glad to employ our graduates or offer them territory in which to sell cars and start garages. Unlimited opportunities. 71% of Automobiles are made in Detroit. You're right in the Heart of the Auto Industry. Men are needed everywhere as testers, repair men, chauffeurs, garage men, and salesmen. Hundreds of our graduates start in business for themselves.

Get Better Job—or—Go in Business

We teach you to handle any auto proposition. You graduate in from ten to twelve weeks. Our equipment is new, up-to-the-minute, and complete. No old, obsolete motors, chassis or electrical equipment used. Students actually build cars from start to finish, getting factory training in assembling, block-testing, road-testing, everything. Special complete course in Oxy-Acetylene brazing, welding and cutting, separate from regular course. Learn to time motors, rebore cylinders, adjust carburetors, magnetos, valves and bearings quickly and accurately. Six-cylinder Lozier, Chal-

mers "6," Detroit "6," Overland, and 8-cylinder King are used for road instruction. We have a new Chalmers "6-30" chassis with 3400-r. p. m. motor, the latest thing out, Willys-Knight 1917 chassis, Saxon "6" 1917 chassis, Studebaker "6" 1917 chassis, Maxwell 1917 chassis, Hudson Super-Six 1917 chassis, Oldsmobile "8" 1917 chassis, Cole "8" 1917 chassis, Briscoe 1917 chassis, Detroit Electric 1917 chassis, Winton "6" chassis. All completely equipped for students to work on. We have more than 25 motors in our block test department—2 cyl., 4 cyl., 6 cyl., 8 cyl., and 12 cyl. Our electrical department is complete, having every standard starting, lighting, and ignition system, including Delco System as used in Buick, Hudson, and Packard Twin "6."

Detroit Is the Place to Learn—Start Any Time

There are 44 auto factories in Detroit and 140 accessories and parts factories. Our students have the privilege of going through any or all of them. We now operate Westinghouse, Auto-Lite and Bijur Service Stations. This has added thousands of dollars' worth of equipment and makes our electrical department unequalled. Students get actual experience in handling all kinds of electrical auto equipment and taking care of trouble. We have just installed a Sprague Electric Dynamometer for block-testing purposes for students' use. Ours is the only Auto

school having this equipment. Auto factories need Dynamometer men constantly. Factories and garages are paying big salaries to men who know how to handle electrical equipment quickly and properly. Detroit is the automobile center. You get practical instruction. School open all the year. Enter classes any time, any day. Three classes daily; morning, afternoon, evening. All instructors are members of the Society of Automobile Engineers (S.A.E.) There is a great demand for Michigan State Auto School students. Auto factories write and phone for men constantly.

Follow the Crowd to the Michigan State Auto School. Come to Detroit

Money-Back Guarantee
We guarantee to qualify you in a short time for a position as chauffeur, repair man, tester, demonstrator, garage man, or automobile dealer, paying from \$25 to \$300 monthly or refund your money. We have constantly more requests for Detroit trained men at \$6000 salaries than we can supply.

THIS IS ONE OF THE JANUARY 1916 CLASSES'

Additional Building and Equipment
Thousands of dollars' worth of new equipment, plenty of room for students to work, at 687-89-91 Woodward Ave., in addition to our building at 11-19 Selden Ave. Our school has grown by leaps and bounds, students come from all over the world. We are constantly adding new equipment. Our electrical department is thorough and complete.

Auto Factories Endorse Our School
The Leading Automobile factories in Detroit, as well as in other cities, endorse our school. They have been watching our school and graduates for years and are satisfied. They are putting their latest model, complete chassis in our school for students to work on. They are employing our graduates in their factories and service stations and assisting them in opening garages and salesrooms. They allow our students to go through their factories. They need trained, competent men and are asking for more of our graduates constantly. The Michigan State Auto School in Detroit, the heart of the Auto Industry, is endorsed by the Leading Auto Factories, is receiving their hearty co-operation. What better endorsement could you ask?

Factory Co-Operation
We have completed arrangements with the Auto factories to put them in touch with men who intend going into business for themselves. Men who know the auto business from A to Z are in biggest demand. Remember, the price of course is based on giving full value. Graduates in the complete auto course are competent to handle farm tractors.

Act Quickly—NOW!
Fill in the coupon; get full particulars, "Auto School News" and New Catalog. All absolutely free. Or better still, jump on the train, as hundreds have done, and come to the "Heart of the Automobile Industry," and learn right. We have no branches. Write or come direct to this school.

EARN \$75. TO \$300. A MONTH

With the New Building and Thousands of Dollars Worth of New Equipment, Our's is the Largest Exclusive Auto School in the Country

We teach the newest and best way to re-bore cylinders as a part of the complete Auto Course. No need to have big, heavy, expensive machines. This is very important instruction.

This is a partial view of our Chassis room showing eight up-to-date chassis for students' use.

These men are getting final instructions after they have taken down and rebuilt a new up-to-date 6 cyl. motor.

A new 12 cyl. motor connected to our Sprague Electric Dynamometer in Block Test Dept. for students' use.

DECEMBER 1916 CLASS IN MECHANICAL LECTURE ROOM

This is the first work a student receives. A 6 cyl. 1917 Saxon "Cut-open" chassis is used to make perfectly clear and practical the first instructions. There were 350 men set for this picture. The Electrical Lecture room is the same size. The classes are divided so that more intense work can be done on each subject. Every man is given personal help and his progress through the school is watched carefully.

This is a section of the Brazing, Welding and Cutting Department. Each man handles the torches and works with an individual outfit.

View showing about 18 motors in the Block Test Department. Sprague Electric Dynamometer shown in center background.

A close view of Saxon "Cut-open" chassis used in Mechanical Lecture room. Hidden parts are cut open and electric lighted.

Students getting personal instructions on Willys-Knight 1917 chassis.

Students making final test on Maxwell 1917 unit power plant motor.

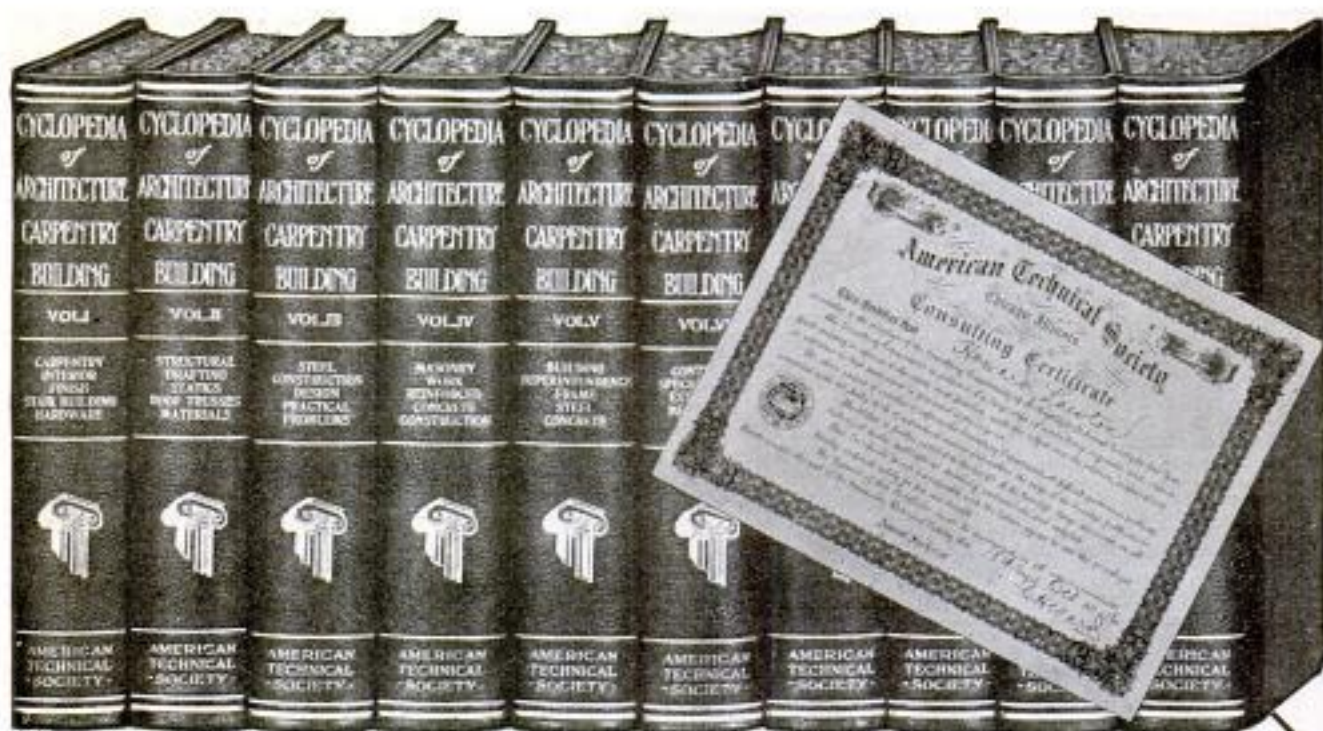

Complete working Delco System as used in Buick, Hudson, and Packard Twin "6."

Battery Charging room, showing lighted switchboard and distilled water rack.

These cuts were all made from actual photographs taken in our school.

50 Cents A Week

FOR this insignificant sum—less than most of us spend for tobacco—this ten-volume Cyclopedia of Architecture, Carpentry and Building is yours. Yes, and with every set is included—**free of charge**—a year's Consulting Membership in the American Technical Society. The Consulting Membership gives you the privilege of submitting your perplexing problems to a corps of experts for a whole year free. This Consulting Membership regularly sells for \$12, and puts at your disposal a wealth of information and the knowledge of men high in the profession.

Fletcher Cunningham, Shreveport, La., writes: "After receiving the books I decided that with their help I could go into the contracting business for myself. I have just closed a contract on which I expect to clear about \$112.00 for two weeks' work."

Use Them Seven Days FREE

The entire ten-volume Cyclopedia will be sent to you by prepaid express upon receipt of the coupon below. Don't send a single penny—just the coupon! Use the books for seven full days before you decide whether or not you want them. If you keep them, you may pay the advertising price of \$24.50 in easy monthly installments of \$2.00—**50c a week**. The regular price of this massive set is \$50.00. Remember, if you don't want the books they may be returned at our expense and you won't be out a penny.

Partial Table of Contents

Mechanical, Free Hand, Perspective and Architectural Drawing, Lettering, Pen and Ink Rendering, The Orders, Superintendence, Strength of Materials, Masonry, Reinforced Concrete, Carpentry, Stone Building, Hardware, Steel Construction, Roof Trusses, Practical Problems, Estimating, Contracts, Specifications, Building Law, Sanitation, Sheet Metal Work, Electric Wiring and Lighting.

Everything About Carpentry and Building

Contained in the Cyclopedia's ten splendid volumes is everything about carpentry and building, from the first rough sketch of the architect to the acceptance of the finished structure. They include wood, stone, steel and reinforced concrete construction; estimating and contracting; interior finishing and decorating; and modern house lighting and sanitation. Every line is written in plain, understandable language—every difficult point is made clear. The books are handsomely bound in half red morocco leather, gold stamped, and contain 4,760 pages (7x10 inches), and 4,000 illustrations, full-page plates, building plans, diagrams, etc. Every subject is cross-indexed so it can be referred to in an instant.

Just Send the Coupon

Don't send us a single penny. Just fill in and mail the coupon. Then we will send the books to you by prepaid express for seven days' free trial. Remember, you don't assume a single obligation—we are glad to have you see the books for yourself before you decide whether or not to buy. This offer is open to anyone within the boundaries of the United States and Canada. Send the coupon today—**now!**

Train for a Job Like This

Don't be content to stay in a job that almost any man can fill. Prepare yourself for a position in a **new profession**—for a position that **needs you**—wants you.

There are 500,000 Firms that need the services of Expert Accountants. There are only 2,000 certified public accountants in America. The field is unlimited; the demand many times greater than the supply; the salary far in excess of that earned in other fields.

**We
Train
You By
Mail**

**Be An Expert
ACCOUNTANT**
At \$3,000 to \$10,000 a Year

**Your Instruction
Will Be Under
Direct
Supervision of
William
Arthur Chase,
C. P. A.**

—in spare time at home to qualify for one of these positions. You can advance as quickly as your time permits.

The expert accountant is the big man in the office—one of the most important factors in the conduct of any business. His knowledge of the innermost secrets of a business makes him indispensable to the boss. He is one of the first men to be consulted in all matters of management and finance and is confidential adviser in important executive affairs. His salary is anywhere from \$3,000 to \$10,000 a year.

Our training is made personal and individual. It takes into consideration your present knowledge or lack of knowledge and is fitted to serve your exact requirements. We prepare you from the ground up; provide complete and comprehensive training according to your individual needs from the simplest bookkeeping principles to the most advanced accounting problems. We will give you whatever training, instruction or review on the subject of bookkeeping you may personally need—and without any extra expense to you.

Small Cost—Easy Terms

In this course all needless text-book theory has been eliminated. It is practical, directly to the point, giving you such instruction as you need in the shortest possible time. The cost is surprisingly small, and the terms so easy that you will scarcely miss the money. You owe it to yourself to learn all the facts about this course and the truly remarkable opportunities it opens up in the business world today. We have published a book which tells the whole story. Explains state examinations, state regulations, salaries paid expert accountants, etc.—also gives complete information regarding the course. We will be glad to mail you a copy free, without the slightest obligation to you. Write your name and address in the coupon, mail it and learn how quickly you can, if you will, say good bye forever to hard grinding work, long hours, low wages with little or no chance for advancement and enter a field where there is plenty of room, where you can give orders instead of take them, and draw a real man's salary. Take the first step now. Mail the coupon today.

LaSalle Extension University, Dept. 364-H Chicago
"The World's Greatest Extension University"

Ex-president of the National Association of C. P. A. Examiners and Ex-Secretary of the Illinois State Board of Examiners in Accountancy, and other experts who rank among the highest. No expense has been spared to make this the easiest-to-understand, simplest to master, and most complete Home Study Accountancy Course ever prepared. It covers thoroughly every phase of Practical Accounting, Theory of Accounts, Auditing, Cost Accounting, Business Organization, Business Management, Business Laws, etc.

Hundreds of accountants, bookkeepers, clerks, cashiers, correspondents and office men in subordinate positions have developed into executives of rare ability and today are commanding handsome salaries—all because of LaSalle training. What we have done for others we can do for you.

The LaSalle Guarantee

We give you a written agreement signed by our Treasurer that upon your satisfactory completion of the course, should you fail to pass the certified Public Accountant's examination held in any state, we will give you special instruction and help—without additional charge—until you do pass. We further agree to refund entire amount of tuition, according to our Guarantee Bond, if dissatisfied with the course.

\$2000—\$5000—\$10,000 a Year

—Men Who Sell Always Command Biggest Incomes

Salesmen are paid highest salaries—because the Salesman is a direct producer of profits. If you are dissatisfied with your present position—salary—if your prospect of advancement is slight—you owe it to your future to investigate the service offered by the National Salesmen's Training Association. A crying need for trained Salesmen exists in the business field today. Where other professions are over-crowded—the Sales field offers unparalleled opportunities to the man of ambition. Big firms are actually bidding for the services of the trained Salesman. Our Employment Bureau has on hand right now more requests for men than it can possibly fill. If you would make success *sure*—train for the selling field. Just how this training may be secured is told in full in our book, "A Knight of the Grip"—a copy of which will be sent without charge if you mail the coupon below.

Be A Salesman

For the Salesman—life is worth living. He travels on finest trains—lives at best hotels—rubs elbows with the big men of the country—is his own boss. While other lines of work are over-crowded with good men—the Trained Salesman is always in demand. He it is who brings in the orders—who makes the dividends possible.

Salesmanship Now Taught By Mail

And *Now* it is possible to study Salesmanship by mail—to learn at home—at the cost of only a few dollars and a bit of your spare time—to fit yourself for success in this remunerative, independence-bringing profession. Many of the Master Salesmen in the country today received their start in N. S. T. A. Training. As Mr. Wood says in his letter reproduced at the right: "I wish I could invest more dollars that would bring me the big returns those invested in your Course did."

We Find Good Paying Positions For Our Members

Every possible problem of Selling is covered in full by our thorough instruction methods. A few of the many subjects covered are—how to approach prospects—how to manage the interview—how and when to close—how to handle sales correspondence—how to be a good mixer. And more than making you a *real Salesman*—we find a good paying position for you. Employers universally recognize the value of N. S. T. A. Training. We not only put you in touch with good positions while you are still a student—but more than helping you secure a connection—we *help you make good*.

"A Knight of the Grip" **FREE** 64-Page Book—Sent

You can mail the coupon below without obligating yourself in any way—and we will mail our big **FREE** illustrated book "A Knight of the Grip" and the large special list of the many lines of businesses in which good positions are now open for Salesmen, paying \$2,500 to \$10,000 a year. Delay may mean opportunity lost. Prepare yourself—Mail the coupon *before you turn the page*. Address nearest office—Dept. 507G.

I Earned \$6,500 This Year

"Last year I only earned \$800 as a clerk. This year I have earned \$6,500 and have been promoted to Sales Manager and done it by studying your Course during spare time. Your Employment Bureau offers one many good positions."—C. W. Birmingham, 4 Lamar Apts., Dayton, Ohio.

From \$80 to \$300 a Month

"From R. R. Accountant at \$80 a month to Salesman at \$300 a month is the result of taking your Course."—C. W. Dumson, 4027 N. Kedvale Ave., Chicago, Ill.

This Man Earns \$100 a Week

He knows how to open up large markets and help his employers outstrip competition in business because he knows how to route shipments, obtain shortest mileage, lowest rates, and quickest deliveries. He knows how to classify goods and reduce transportation costs. His knowledge of traffic laws and transportation saves his employers thousands of dollars annually.

Here's your chance to qualify for the same kind of a position at the same salary. Don't let this chance go by. Few men have this traf-

fic knowledge. The demand far exceeds the supply. In fact, over half a million firms need men who can classify commodities and secure ratings most economically. You can be able to answer this call for trained traffic men quickly by means of the LaSalle Home Study Course. We guide you step by step. With the LaSalle Extension University behind you, you can qualify in a comparatively short time. The expense is so small and the terms so easy you will scarcely miss the money. Qualify for a bigger job—at home—in spare time.

Be a Traffic Man

City..... State.....

There seems to be no limit to the salaries expert traffic men are paid. Some concerns pay their directors of traffic \$10,000 or more a year. Salaries of \$35 to \$100 a week are commonly paid to traffic managers. Splendid positions with high salaries for competent, trained men are open everywhere.

We Train You By Mail For a Big Traffic Job

You need not leave your present position. You may keep on earning while learning.

Our course is recommended and endorsed by railroad executives and big business concerns throughout the country. Your training is under the supervision of a large corps of the most prominent traffic experts in the country, headed by N. D. Chapin, until his present connection with us, Chief of Tariff

Bureau New York Central Lines. The Course gives you also a thorough understanding of Interstate Commerce Laws and prepares you for every duty required of a high grade traffic manager—how to route shipments, obtain shortest mileage, classify goods, secure quickest deliveries and lowest rates—in fact, trains you so that you can qualify for an immediate high-salaried railroad or industrial traffic position.

President

The Training For YOU!

Come to the School of Complete Equipment

— and let me train you to earn big money in the Automobile and Tractor Business. The supply of men to fill the many open positions and waiting opportunities is far short of the demand. Now is the time to start. I'll help you—I'll train you **right**. My success in training thousands of ambitious men is known throughout the country. I have been right here in Kansas City for a number of years and I rightly claim more successful graduates than any similar institution in the world. I am always ahead with complete equipment—with plenty of floor space and more expert instructors. My graduates earn from

\$75 to \$350 a Month

YOU CAN DO THE SAME if you have ambition and determination to learn. **Rahe's Original Practical Method of Automobile Training and Experience** is everywhere recognized as the most efficient method of training ever devised. Remember—it's not theory—there are **no books or printed lessons**. My training is unique and distinctive—it's the **actual doing**—getting into overalls and starting at the bottom under the guidance of expert instructors.

Only a Few Weeks Required

That's all—just a few weeks and you will have a thorough understanding of the basic principles of this wonderful business. You will then be ready for a position, paying good money right from the start—with a world of opportunity before you. My original practical method is all simple and easy. You get the full instruction in easy stages and you have the wonderful advantages of complete equipment—Automobiles, Tractors, Welding Plants, Big Drill Presses, Power Lathes, Forges, etc. Two big garages and repair shops. Cars of all kinds for my students' practical use. Every type of motor is represented in my equipment—block mounted so they are easy to get around, easy to take apart. It's the Rahe method—

Practical—Efficient—Complete

This twin-six motor is block mounted.

Then there are the Eight and many other motors for my

students' special training and experience. These motors are in the practice room. All Types of lighting and self-starting devices—full equipment, so that you learn all easily. Tire vulcanizing, Oxy-Acetylene welding—training and experience in all branches of the automobile business. My students do practical work. They handle welding torches under the guidance of master-welders. Don't bother with any training that gives you only a little—come here and I'll hand you a kit of tools—not printed books.

All types of motors—Block-mounted. Easy to get around.

17 Complete Welding Outfits. Big Demand for Expert Welders.

Both types of Tractors, Kerosene and Gasoline. Big Drills, Big Practice Field

Tractor Engineering

I want to enroll the full capacity of my school a month earlier this year, and to all students enrolling now I am giving a free scholarship for complete instruction in **Tractor Engineering, Power Farming, Gas and Stationary Engineering**. The development of the farm tractor and its growing popularity is second only to the automobile itself. Come and see my large tractor practice field and complete tractor and farm equipment. With this added knowledge you can reap new profits in an entirely new field. Remember—it's **FREE** when you enroll for my automobile course.

Get My 80-Page Catalog

Use the coupon below or post card, but send now for my new catalog. Filled with Copper Engravings of men at work in the various departments—views of equipment—three big buildings and big tractor farm. Let me start you. **Let me help you to be the success you can be**—if you have backbone and ambition. Send for the book at once and read letters from men like yourself—who came to me without previous experience and are now earning big money.

Automobile Engineering

50c a Week

YES, you may get this newly-written automobile library for only 50c a week (\$3 a month.) The five thick volumes—which have just been printed—contain 2200 pages (8½x9¾ in.) and 2000 illustrations, diagrams and charts. Flexibly bound in genuine leather, gold stamped.

Here is the newest and most complete library of automobile repairing obtainable. Every part of the modern automobile is described in simple, easily understood language—every up-to-date repair method is explained. Contains hundreds of pages on ignition, starting and lighting, as well as on welding and vulcanizing. We'll send the books to you prepaid, without a penny down.

And for a limited time we are making an astounding offer. The regular price is \$25.00 but on a limited number of sets, we are making the very special price of \$16.50—and you can pay this rock-bottom price in easy monthly payments.

Shipped Free

On 7 Days' Trial

We'll send you the entire set, prepaid, for seven days' examination. Use the books just as if they were your own. See what it will mean to you to have this set always at your elbow. Then, if you decide you can do without it, send it back at our expense. However, if you decide to buy, send us \$2.00 after seven days and the balance \$2.00 a month.

Partial List of Subjects:
 Explosion Motors, Welding, Motor Construction and Repair, Carburetors and Settings, Valves, Cooling, Lubrication, Fly-Wheels, Clutch, Transmission, Final Drive, Steering, Frames, Tires, Vulcanizing, Ignition, Starting and Lighting Systems, Wiring Diagrams, Shop Kinks, Commercial Garage Design and Equipment, Electric, Storage Batteries, Cars and Buses, Motorcycles, Commercial Trucks, Glossary.

FREE Consulting Service!

With each set we give you, absolutely free, a year's consulting membership in the American Technical Society. The regular price is \$12.00, but you get it free with this set. Put your perplexing problems up to a staff of experts. Ask them any motor question you wish. The solution of one problem might easily be worth more than you pay for the books. Ask as many questions as you wish during the year.

Send the Coupon!

Your name and address on the coupon brings the five books to you, express prepaid, for seven days' free trial. This offer is open to every resident in the United States and Canada. Act quick—while the offer lasts! Send the coupon today—NOW!

American Technical Society Dept. A-1193

From Blacksmith to City Attorney

Income in 5 Months Jumps to more than \$4000 Per Year

"I was appointed City Attorney in June. The salary is only \$1600.00 per year, but the prestige obtained through the appointment brings me a goodly practice. I have recently been retained by a firm of this City and . . . to defend some of their members, and they have sent me a retainer of \$2500.00—I opine that this is not so bad in view of the fact that last May I was blacksmithing for standard trademen's wages. I finished your course and was admitted to the bar in just ten days less than three years. I can never say too much for your school—it is easily worth \$20,000.00 to me—that is the instruction I received through it."

Full name, address and entire letter included in our "Gilt Edge Evidence"—the most remarkable collection of endorsements ever published by any institution of learning.

Why Not be a Lawyer Yourself

Today is the legal age. Scarcely a business move is made until the lawyer is consulted, his opinion secured and carefully weighed. Railroads are demanding legally trained men to handle their intricate interstate commerce laws. Credit men cannot expect to become proficient unless they have a knowledge of the law. Real estate men must know about deeds, abstracts, leases, mortgages, etc. The banker requires a training in banking laws. Every officer of the law will find it to his distinct advantage to know criminal law. Young man, you cannot name a vocation where a thorough legal training will not assist you wonderfully in climbing to the top. And there is not an institution of learning in America where you can acquire such a training more economically, more thoroughly and quicker than through the Extension Course of Law now offered you by the Hamilton College of Law.

\$3,000 to \$10,000 Per Year

are not excessive incomes for the successful attorney-at-law. Many of our graduates are already in this class. Others are prominent young business men, who are studying law as the quickest and shortest route to the top of the ladder. There is a constantly growing demand for bright, legally trained young men. The world is waiting for them to present their credentials. Will you be one of them? Or are you a satisfied man.

What the Hamilton College of Law Offers You

It is the only Law School of its kind in America. It is the ONLY recognized resident law school in the United States conferring Degree of Bachelor of Laws, LL. B.—by correspondence, strictly on the merits of its course. ONLY law school in U. S. conducting standard resident school and giving same instruction by mail.

ONLY law school giving over 500 class-room lectures to its extension students.

ONLY law school giving a full 3-Year, University Law Course, by mail, having an actual faculty of over 30 prominent lawyers in active practice.

ONLY law school in existence giving a Complete Course in Oratory and Public speaking in conjunction with its law course.

Other Excellent Features

Our Law Library consists of 24 volumes of Students' Standard Text Books, two volumes bound together under one cover, making a total of 12 books. These books were prepared at an enormous cost especially for the students of the Hamilton College of Law, by one of the largest and best law book publishers in America. This is the only set of text books ever prepared exclusively for students' use.

We give an absolute written guarantee to prepare our students to pass bar examinations.

Our Course in Oratory and Public Speaking, absolutely free to all Hamilton Students, has been prepared and written by Prof. Oscar G. Christgau, LL. M. (Master of Laws) the regular resident school professor in charge of this work. Knowing law, from a lawyer's standpoint, he has prepared this series of 36 lectures to meet all the requirements of the practicing attorney.

30 Days Free Trial

Let us convince you without it costing you a penny, that we have the only, real, genuine, bonafide Extension Course in Law in America. Mail the coupon and get all the evidence—then judge for yourself. Study with us 30 days, at our expense and be satisfied you are getting more than value received, before obligating yourself.

Hamilton College of Law

© THE TIRE REPAIR BUSINESS

Make big money in this big field. No other field offers such opportunities. Autos run the year around. Tires need constant repairing. Profits are large and work comes easily. Every job is easily and quickly done. There are locations everywhere, right in your home town. We show you how to find best locations. Help you to get jobs paying from \$3.00 to \$6.00 a day if you don't want to open a repair shop. Tire repair shops are as necessary as gasoline stations. Auto owners drive their cars more than ever. They need more work done constantly. Over a Million New Autos put in use this year. More tire repair shops and men will be needed. Get into this big profit business and become Independent.

MAKE \$2500 TO \$10,000 YEARLY

There is no limit to what a man can make. Men are becoming rich in this business. You can start business with small capital. Work comes easily, profits are big, business grows fast. Trained tire repair men get work quickly and hold customers. Our graduates are qualified to handle all makes of Cord Tires and can get factories O. K. School open all the year—Enter classes any day. Graduate in 4 to 6 weeks.

GRADUATES ARE COMPLETELY SATISFIED

San Antonio, Tex., Nov. 4th, 1916.
The Akron Tire Repair School:
Gentlemen: I did not know a thing about an automobile tire when I entered your school. But under the able and plain instructions of your chief instructor, I have mastered the course in tire repairing in the comparatively short time of four weeks. One thing about the Akron Tire Repair School is that it teaches how to repair Silverstone and Goodyear Cord Tires, a feature that the prospective student will not learn in any other tire repair school in existence. That part of the instructions alone has more than repaid me for my long trip to Akron.

Yours, etc.,
A. C. ROSS.

AKRON TIRE REPAIR SCHOOL:

Gentlemen: I must say that you certainly have fulfilled your agreement to the letter. I am fully satisfied. The clear, concise instruction and the carefully supervised practice in your excellently equipped place, will be of great value to me. I think that many tire-repair men already in the business could save themselves money by taking your course, that section which deals with cord tires being alone worth the time spent.

Yours sincerely,
ALEXANDER M. DUNCAN.

Detroit, Mich., October 14th, 1916.

A High School Course In Two Years

YOU men and women who never went to high school will welcome this opportunity to get—in your spare time—the valuable training you missed. A high school course insures greater success in business—is vitally necessary if you want to go to college. And you can now get a thorough high school course in your own home—and complete it in two years!

This simple home-study course covers the same subjects as the leading preparatory schools and high schools, including the subjects required for entrance into all colleges and universities. By this new and simplified method of home instruction you will be able to gain a thorough education that will be of inestimable value—even if you don't intend to go to college. It gives you the foundation that is necessary for later success—and it is within the reach of all.

Use Only Your Idle Hours

The course is so arranged and so written that you may read at home during your idle hours. It was prepared by leading professors and instructors who have made a life work of correspondence instruction, and every line is written so that you can understand it easily and gain from it the maximum amount of good. You will marvel at its completeness. When once you start the lessons, you will be fascinated.

Meets College Requirements

With this new course you can prepare yourself for either a literary or an engineering education. All the required subjects are covered in detail—and you are given just the kind of training that colleges and universities demand. At the present time, we are preparing hundreds of men and women for college—but even if you are not going to college, you should investigate this opportunity to get the fundamental education that you feel the need of every day. Here is an opportunity to get it in your own home—at a small expense and in a short time.

Reach Out for Big Salary Become a **TRAFFIC MANAGER** —and a Member of This Association

Digest of Traffic

The Association has compiled the only digest of traffic ever produced. This work required the co-operation of over three hundred traffic experts—took five years and over \$100,000 has been expended. This great reference and working library is for the exclusive use of its members.

The great European war has suspended the commerce of several of the great nations. America has profited thereby immensely. The U. S. has won the trade thus lost by the European nations and is now supplying the greater part of the world with food, supplies and manufactured articles. It is also furnishing the warring nations with vast quantities of munitions. **MEN ARE REQUIRED** who **KNOW** how to **SHIP** goods.

Thousands of Positions Now Waiting

Never before have there been such a variety and number of splendid opportunities for young, and middle aged, men. This is especially true in manufacturing and in **SHIPPING**. Live men who **START NOW** are assured of **GOOD** salary.

SALARY

The salary of trained traffic men is from \$2,500 to \$10,000 a year. The work is always interesting because it is not routine work. The traffic man is an executive—not a subordinate.

Gorged — Shipments Tied Up

The shipments of food, supplies, manufactured articles, munitions of war, etc., for European and other foreign delivery, are so **LARGE** that the shipping departments of thousands of factories—railroads—warehouses—seaboard wharves—are **GORGED**. In addition our Interstate shipping is tied up. Shippers are crying for help.

Trained Men, Only

These thousands of positions are for **TRAINED** men **ONLY**—men who understand **TRAFFIC**—shipping. Men are wanted who are fully informed—who know how to get **QUICK ACTION**—who know how to **SAVE** freight money.

We Will Train — YOU

Our Association will instruct you—tell you **JUST WHAT** is required—and **JUST HOW** to do it. We give you individual "coaching" and **TRAIN YOU** by our "experience" method.

Don't Delay — Apply NOW

Now is the time—today. It is not difficult to make good—if you don't it will be **YOUR OWN** fault. Send the **COUPON** now for complete instructions by **RETURN MAIL**.

American Commerce Association

Dept. 47, 206 So. Wabash Ave.,

Please Mention Popular Mechanics

"I have watched the progress of the International Correspondence Schools almost from the very beginning, and while their rapid growth might be marvelled at by some, to me it is easily understood because I realize the practical value that is back of it, and know something, too, of the success attained by many ambitious men who have taken I. C. S. courses."

Thomas Edison

Edison Knows!

He knows the worth of spare time study. He knows what stuff men are made of who use their spare hours to train themselves for the bigger jobs ahead. And he knows what the International Correspondence Schools will do for the man with the grit to say, "I will."

All big men who have made their mark in the world had the ambition—the determination—to improve their spare time, to train themselves for big work. Edison did. You, too, can possess power, money and happiness if you'll only make the effort.

Put it up to us without paying or promising. Let us send you the details of others' success through the I. C. S. Mark and mail this coupon now.

Let me think!

HAVE YOU ever been in that distracted state of mind when it seemed impossible to collect your thoughts—when ideas became tangled and confused in your brain—when you seem powerless to **THINK CLEARLY AT A CRUCIAL MOMENT**? Perhaps at some vitally important time this **CONFUSION OF THOUGHT**, to which so many men are victims, has caused you to *lose out* where you might have *won* with *Concentration*.

Learn How To Concentrate

Written by **THERON Q. DUMONT**
World-Renowned Mental Scientist

The writer is one of the world's leading authorities on the subject of mind-culture and mind-science. He has produced many works on this subject, but "**Power of Concentration**," is probably his greatest achievement. You cannot help but admire and appreciate the simple directness and conciseness of the manner in which this marvelous book instructs you.

FREE Examination

All we ask is that you send for this great book **now**—look it over—read a few chapters—and then if it does not impress you as being a **valuable asset to your future career**, simply return it to us and we will consider you under no obligation whatever. This **Liberal Free Examination Offer** makes it easy for you to **convince yourself** of the real worth and amazing helpfulness of this book. See for yourself how it will teach you to build up your **Thought Power** and consequently your **Earning Power**.

This is your opportunity at last to get away from inefficiency of mind and make your brain power a real force for accomplishment. Send the coupon. **Concentrate now** on this slight task. The simple mailing of the coupon of this ad, if followed with **concentration**, is sure to lead to greater things. It will help you to do more, earn more—**be more**. Get this wonderfully instructive book while our Special Offer lasts—examine it carefully—verify what we say about it—then send us the **SPECIAL PRICE OF \$2.00**.

MAIL THIS COUPON
Don't send us a single cent

This Book Teaches You

It is wonderfully well written—expressed so that you can **understand** it. "**Power of Concentration**" is a practical exposition of the rudiments of Thought-Discipline by a **master mind**. You can actually learn from this wonderful book the elements of mind control and development through **Concentration**. You will find the methods of learning how to concentrate are simple and understandable when you read this great book.

Contents:

Here are a few of the chapter titles indicating the nature of the things taught by "**Power of Concentration**":

- ☞ Self mastery and self direction through concentration.
- ☞ A quick way to develop concentration.
- ☞ How to overcome destructive forces.
- ☞ Concentration molds your environments.
- ☞ How to exclude all distracting thoughts.
- ☞ Concentration overcomes bad habits.
- ☞ Business results gained through concentration.
- ☞ Concentration develops courage.
- ☞ Concentration improves your memory.
- ☞ Ideals developed by concentration.
- ☞ Simple rules for happiness and success.
- ☞ Practical methods of developing the will.

This X Will Prove Your Ambition

THIS little "X" has marked the way to success for thousands of ambitious men. It marked the day when they stopped *dreaming* and began *acting*. Merely dreaming about the job ahead won't help you get it. But marking "X" in the coupon proves your ambition—and shows that you are ready to put your dreams into action to earn success.

The job you dream about can be yours. Not through favor or pull or some lucky chance—but through *training*. Thousands are proving it every day.

And it is easy for you to get that training.

It isn't necessary to make a *drudge* of yourself. The first step is to mark your "X" before the job you want, and we will show you the way to success.

Make Your Mark Now

Mark an "X" before the job you want, and mail the coupon to us now. We'll show you your way to success—more simple and easy than you have dreamed. You'll be under no obligation and for the sake of your ambition you should act today. Make your mark now. Send the coupon.

Every man stands on the threshold of SUCCESS

—which life do
YOU
choose?

The decision is with you. You can get the most out of life if you get the most out of yourself. Do you know the full extent of your own powers? There is only one way for you to find out—only one way to master yourself and secure success in life and business.

Look Into Yourself. How? That is the question which is answered as never before in masterful book, "Everybody Ahead" or "Getting the Most Out of Life."

A wonderful new prescription for success by Dr. Orison Swett Marden, whose writings have inspired millions

Dr. Marden is a self-made success, a student of success and a friend and counselor of the Nation's most successful men. Such men as Charles M. Schwab, John Wanamaker, Judge Lindsey, Edwin Markham, Hudson Maxim, Luther Burbank, and others, acknowledge their debt of gratitude to him. 25 years of his life have been spent in studying success. He knows what makes success. He has applied these principles himself. He has taught the principles to thousands of others by teaching them how to look into themselves.

Orison Swett Marden

The man who holds the unchallenged American championship in optimism. Author of a dozen famous upward and onward books, that have been sold by the million. Apostle of the smile. Preacher of the glad hand. Captain of a helpful life—a decidedly successful man.

A few of the absorbing chapters in Dr. Marden's Great New Book—"Everybody Ahead!"

Backing up the Brain; Training for Masterfulness; How to measure your Ability; Foundations of Success; Timidity and Sensitiveness, and how to overcome them; Can you Finance Yourself?; Are you an Original or a Duplicate?; The Quality which opens All Doors; Why Can't I do it?; How to Talk Well—a Tremendous Asset; Are you a Good Advertisement of Yourself; The Man with Initiative; The Climbing Habit; Courage and Self-Faith—How to Cultivate Them; The Will that Finds a Way; Taking Habit into Partnership; Your Giving Up Point; Worry, the Success Killer—How to Cure; Success as a Tonic; Will it Pay to go to College? What other People Think of You and Your Career; When Discouraged What to Do, and other vital subjects.

all charges prepaid (I have Dr. Marden's permission to do this.) You can glance through it or read it all the way through, just as you choose. Even a hasty perusal will prove of profit to you. When at the end of five days you decide to keep the book, forward me \$3.50 and the book is yours forever. Or at the end of that time return the book to me.

Special Limited Offer to Men of Quick Decision

For a limited time only I will send absolutely free to purchasers of "Everybody Ahead" an attractive little copy of the world-famous book, "The Magic Story," bound in half leather. W. P. Werheim, of Pratt and Lambert, Inc., Buffalo, N. Y., said of "The Magic Story"—"This book is worth \$25 to any man, and to some \$2,500." Others have said that it is the most gripping, the most engrossing, the most genuinely inspiring business story ever written. 100,000 copies of "The Magic Story" have already been distributed. This book is FREE to you and yours to keep without extra cost when you remit for "Everybody Ahead." Send the coupon now while the matter is fresh in your mind. One of the very things which may be holding you back in life is that you do not do the things you intend to do. You may intend to send for "Everybody Ahead" and then let the matter slip your mind. Write NOW and you can't forget. Use the coupon. ACT!

Frank E. Morrison, Publisher, Dept. 51, 1133 Broadway, New York

"Everybody Ahead," or "Getting the Most Out of Life"

that means everybody ahead of his present position. This is not the ordinary sermon-like "preachy" sort of a book on "How to Succeed." It goes right to the root of things.

It makes an exhaustive study of every possible cause for failure and prescribes the cure. It not only shows you how to look into yourself, it actually carries you right through yourself and you run up against your failings with a bang and a lot,—and better still, you are made to see the way to overcome them.

Men who thought they knew all their own failings, men who actually considered themselves successful have read this book with astonishment. They were amazed to find weaknesses in themselves the existence of which they never suspected—amazed to find strength which they had never used.

And it is the sort of book that you can easily understand—full of principles that you can actually apply to your own everyday life. Read what some of the world's greatest men say:

Charles M. Schwab says: "I owe a great deal of my success to Dr. Marden's writings."

Luther Burbank says: "Of the many valuable books which you have written this seems to me to be the most valuable and thoroughly practical of them all."

John Wanamaker says that he would have gone without a meal a day if necessary, to save the money to buy one of Marden's books.

Lord Northcliffe says, "I believe that your books will be of immense assistance to all ambitious men."

It Will Cost You Nothing to Read This Book

You would deem it a privilege well worth paying for to read a single chapter of this book. Five minutes spent in reading wherever your eye happens to fall will prove of tremendous advantage to you. AND YOU MAY HAVE THE PRIVILEGE OF READING THE WHOLE 535 PAGES OF THIS BOOK FOR NOTHING.

SEND NO MONEY Simply mail me your name and address on the coupon. I will then send you the book with

SEND THIS COUPON TODAY—SPECIAL LIMITED OFFER

TRAFFIC MEN earn \$3,500 to \$10,000 Yearly

TRAFFIC MANAGER

R. R. TRAFFIC MEN

TRAFFIC BUREAU

COMMERCE CLUB TRAFFIC SEC'y

No other field or profession offers such advantages as are open to trained Traffic Men, Railroads, Factories, Jobbers. Commerce Clubs are taking all the trained men they can find. They are paying from \$3,500 to \$10,000 and more yearly for competent men. There are now more than 95,000 Traffic positions open in all parts of the country. We are training men in a short time to fill these positions. Only spare time is needed. The work is easy to understand; you begin to earn more after your first few lessons. The course is thoroughly practical. Anyone who understands common every day language will succeed. Positions are permanent, with opportunities for continual salary increase.

Learn from Practical Traffic Men

Every one of our instructors are practical, experienced traffic men. Been in the work for years. Made a big success, and are teaching men the things that make success. Every student gets the personal attention of our faculty. Successful graduates prove our claims. One man wrote us: "I saved my firm \$4,000 from August 1st to December 1st." It was his first traffic position and he made good. Our instructors help graduates for two years after they have graduated. We have over 100,000 tariffs on file in our library. Rates, routing and classifications can be quoted from any two points in the U. S., Canada and Mexico. This immense library, together with our practical instructors, gives an advantage found in no other school. Our graduates can handle any problem.

Why Traffic Men Are Needed

Large and Small Factories, Auto Manufacturers and Wholesale Houses are extending their territory. Every

extension means new rates, new routing, a different classification or changed packing methods. The Interstate Commerce Commission and the Railroads are constantly changing rates and classifications. Concerns opening branch houses meet new problems. It takes a trained Traffic man to handle problems like these. Only men who have been in the Traffic business for years, men who have grown up with this big high-salaried business, are competent to train men. The Traffic business will never grow smaller. There will always be a demand for trained, competent Traffic Men.

Post Graduate Course Free Our Students and Graduates have the privilege of coming to our School for Post Graduate Work. They may stay as long as they like. They get actual experience in rates, routing, classification and packing. This work is absolutely free. It is not essential, but is very helpful. This privilege is not found in any other school. **FREE** Our Booklet, "TRAFFIC," color and full information. **FREE** all. **ABSOLUTELY FREE.** Make up your mind now to get started. Get our literature at once.

Traffic Men	Salaries range from \$3,000 to \$25,000 yearly.
Traffic Bureaus	Bureaus make \$2,000 to \$10,000 yearly.
R. R. Traffic Men	Salaries vary from \$1,500 to \$12,000 yearly.
Commerce Club Traffic Secretaries	\$2,500, \$3,000, \$4,500, \$5,000, \$15,000 and up.

MEN WITH VISIONS

James J. Hill was a man with a vision. He saw the possibilities of a railroad through the northwest; he accomplished his vision. Cecil Rhodes visioned an immense railroad in South Africa. He lived to see his vision come through.

Thomas Jefferson saw a vision of the U. S. reaching from ocean to ocean. He accomplished this.

Abraham Lincoln saw great visions in the law practice and by hard knocks reached his goal.

The vision of these great men made it possible for them to stand the hard knocks and overcome every obstacle. They were pioneers and it took a lifetime for them to win out. No one guided them or told them how.

Think of the possibilities for you in the traffic field. Think how quickly you can reach the big salary. Make up your mind to be a traffic man. Get started and don't let anything change your vision. Let our seasoned pioneer practical traffic instructors train you for a big traffic position. It's a vision worth while. Graduates of the Interstate Traffic School are competent to handle any traffic position.

INTERSTATE TRAFFIC SCHOOL, 23 Traffic Bldg., Fort Wayne, Ind., U.S.A.

"I Can Succeed!"

What other men have accomplished through I. C. S. help, I can. If the I. C. S. have raised the salaries of other men, they can raise mine. To me, I. C. S. means "I CAN SUCCEED."

Get the "I Can Succeed" spirit, for the International Correspondence Schools can raise your salary—whether you're a dollar-a-day man or a dollar-an-hour man. No matter where you live, what you now do, or how little time or money you may have, the I. C. S. have a plan and a

Course of Training to fit your needs. Hundreds of thousands of ambitious men have been prepared for and have achieved success through I. C. S. help in the past 25 years—over 130,000 are now studying, getting ready for the big job ahead. Join them and make your life something to be proud of—you can do it. Just mark and mail the coupon TODAY and find out how; it won't obligate you in the least.

Big Money for You in the Automobile Business

Every day offers greater opportunity for the trained man either to start a paying business of his own, or be a repair man, tester, timer, chauffeur, or salesman.

It's EASY to learn, and we make it EASY to pay your way. Write quickly—today—for catalog telling about our course and how we meet you "50-50."

INDIANAPOLIS MOTOR SCHOOL 203 Southeastern Ave. INDIANAPOLIS IND.

Dr. Charles P. Steinmetz says—"There is an enormous field for the electrical workers, but the big opportunities are for the expert, not for the dabbler in electricity."

The Only Way to Learn Electricity

You cannot become an expert in any field by simply reading a book. You must "learn by doing." That's the way electricity is taught at the New York Electrical School. Our concentrated work with actual apparatus under actual conditions will put you abreast of men with from 5 to 10 years' experience in the electrical field. 4500 of our students have gone forth into electrical success.

Learn by Doing

This method makes you an expert, able to command a high salary. All instruction is individual. You go ahead as fast as you can learn. Good students complete the course in seven months. Send today for FREE 64 page book. Tear out this advertisement and mail it with your name and address.

The New York Electrical School

\$100⁰⁰ EARNED BY YOUNG = ARTIST IN 2 DAYS

Conscientious,
careful training by members
of our Faculty made this possible.

Earn \$25, \$35, \$50, \$75 a Week and More

A well-executed drawing of strong appeal in a magazine or catalogue often sells thousands of dollars' worth of merchandise. That's why the business and publishing world pays big prices for good designs and forceful illustrations. That's also why artists with trained ability such as Franklin Booth, Coles Phillips, Leyendecker, James Montgomery Flagg, Fanny Steadman, and others earn extraordinary incomes.

**Federal Course Nine-Tenths Experience,
One-Tenth Theory** Our copyrighted method of home instruction is a proven result-getter. It is fascinating, easy to learn and easy to apply. It fits you to earn money. It is the concentrated experience of well-known, successful commercial artists and advertising experts.

Federal Training Pays!

Walter M. Stickey says: "Before completing my Federal Course I secured my present position on the staff of artists with the Chicago Tribune. I am positive I secured same through what the School has done for me."

Micot J. Bahlwin, Abingdon, Ill., writes: "Though I have completed only the Third Bulletin, the instruction and help you have given me has made it possible for me to earn up to this time, over seven times the cost of the course."

Write Today for "Your Future" Free

This book explains the wonderful opportunities those with training can grasp; tells of the splendid successes Federal Students everywhere are making. It shows how easily you can devote spare time you may now be wasting, to develop a high-salaried ability.

Every young man and woman should read it before deciding on their life work. Parents should read it with the future of their children in mind. Are you living toward a future—or just living? Start today toward a brighter future—a more successful life. Send for this book. Mail the coupon NOW.

Public Speaking Taught at Home

WRITE now for special offer. We train you in spare time, by mail. Be a forceful, compelling speaker—convince men—persuade them to do your will and think your way. Overcome timidity and "stage fright." You can do it. We will show you how you can dominate all who hear you by the sheer force and power of your own personality. You can be the man who guides, directs and controls. No matter where you may be or what the situation, you can be master. Our scientific and intensely practical Course in

Effective Public Speaking and Mental Development

will quickly and easily train you in the privacy of your own home, to become an effective, self-reliant speaker, either in public or in private. It will show you how to talk before your club or lodge—how to make entertaining after-dinner speeches—how to sell more goods with less effort—how to write better letters—how to become an engaging conversationalist—how to enlarge your vocabulary—how to avoid common errors—how to develop supreme self-confidence—a strong, masterful will—a keen, reliable memory. All this can now be yours by following a few easy suggestions that will bring immediate results. There are no tiresome exercises or tedious study.

Special Offer—Write Today

Write at once for full particulars of the Special Limited Offer we are now making. We will also send you free, many interesting facts and pointers (that you can actually use) about the power of effective speech and its relation to your success. Write for particulars while Special Offer lasts.

Dept. 1193 Manhattan Bldg., Chicago, Ill.

Publisher's Announcement

The date on which Popular Mechanics Magazine is due simultaneously on news stands in all parts of the country is the 20th of each month.

The traffic congestion on all railroads is simply unprecedented, and while the Publisher, the distributing News Companies and Railroad Officials are using every possible effort and sparing no expense, it is impossible to maintain our schedule of the 20th at all points every month. It is a condition which simply cannot be entirely avoided.

At such points as the magazine is a few days late, we ask the patience and forbearance of our readers.

Newsdealers are requested not to return unsold copies until the succeeding issue is received, and are reminded of our policy which puts no time limit whatever on returns.

POPULAR MECHANICS MAGAZINE,
H. H. WINDSOR, President.

Chicago, Feb. 5th, 1917.

A CLEAR TRACK TO

SUCCESS!

FOR THE TRAFFIC INSPECTOR

Learn this new profession in 3 to 4 months with our complete course. Prepare for big pay—promotion—success. Railroads everywhere are watching for good traffic inspectors. The training obtained in this work leads to sure opportunities for advancement.

Get Ready for the Success that Awaits You

Earn big pay with short hours. Travel at no expense. Our Employment Bureau helps successful graduates obtain positions. Write now for Booklet G2, giving full information.

FRONTIER PREP. SCHOOL, BUFFALO, N. Y.

I.C.S. NEWS

SCRANTON, PA.

MARCH, 1917

Nearly every draftsman employed by the Warner Gear Company, Muncie, Ind., is a student in the International Correspondence Schools.

More students were graduated from the I.C.S. in 1916 than from any other institution of learning in the United States.

The Standard Motor Construction Company, Jersey City, N. J., has made arrangements with the I.C.S. for the instruction of their employes.

W. G. Ritzer, Montreal, Canada, who enrolled as a clerk, age 19, for the I.C.S. Chemistry Course, has been made head chemist of the Montreal Locomotive Works, Ltd.

The Packard Motor Car Company, Detroit, Mich., has written the I.C.S. that they have positions for 25 I.C.S. trained toolmakers and designers at salaries of \$100 and better per month.

Ira G. Whipple, Topeka, Kans., has been promoted to Assistant Chief Engineer of the Topeka Edison Company. His salary has been increased 150 per cent. since he enrolled for his I.C.S. Course in Steam-Electric Engineering.

The National President of the National Association of Stationary Engineers, Walter H. Damon, Springfield, Mass., became an I.C.S. student while working as an oiler. He is proud of the Schools that helped him climb to the top.

A. M. Bowyer, Indianapolis, Ind., has tripled his salary since he took up his I.C.S. Mechanical Engineering Course. He was a telegraph operator and is now Draftsman for the Nordyke & Marmon Co., makers of Marmon Motor Cars.

James Leroy Stevens, an I.C.S. Civil Engineering student, has been appointed City Engineer of Mishawaka, Ind. He wants as an assistant a young man who has been taking the same I.C.S. Course that prepared him for his new position.

Earnest R. Conrad, Denver, Colo., who enrolled when a bookkeeper, receiving \$15 a week, for the I.C.S. Advertising Course, has been appointed Advertising and Sales Manager of the International Rubber Company and Colorado Tire and Leather Company at \$3,000 a year.

From toolmaker to Vice-President of Engineering of the Packard Motor Car Company is the record of advancement of I.C.S. Student Jesse G. Vincent. He is the designer of the famous "Twin Six" motor. Mr. Vincent says the I.C.S. prepared him for his opportunity.

Robert E. Ramsay has been climbing fast since studying Advertising with the I.C.S. A few years ago he was a clerk in Norfolk, Va. Now he is Advertising Manager of the Art Metal Construction Company, Jamestown, N. Y. He gives full credit to the Schools for his success.

"You Get The Job"

"We've been watching you, young man. We know you're made of the stuff that wins. The man that cares enough about his future to study an I. C. S. course in his spare time is the kind we want in this firm's responsible positions. You're getting your promotion on what you know, and I wish we had more like you."

The boss can't take chances. When he has a responsible job to fill, he picks a man trained to hold it. He's watching you right now, hoping you'll be ready when your opportunity comes.

The thing for you to do is to start today and train yourself to do some one thing better than others. You can do it in spare time through the International Correspondence Schools. Over 5000 men reported advancement last year as a result of their I. C. S. training.

The first step these men took was to mark and mail this coupon. Make your start the same way—and make it right now.

Are You
a
MISFIT
?

—a peg in
a hole?

Do you believe your work is the work you should be doing? Do you know what your services would bring if sold to the best advantage? Few men or women do; because few know for what work they are best fitted. Eight years ago, Grace, now president of Bethlehem Steel, was a Railroad switchman. Now he is one of the highest salaried men in the country—because he found himself.

How to Sell Your Services

How to get the most for your time and effort is a vital question we can help you answer. Nine out of ten are in the wrong position. Our

Free Personal Analysis

will put you right, will put you in the line of work nature intended you to do. We have arranged with one of the leading Vocational Directors to personally analyse men and women who are seeking bigger opportunities. This personal analysis service will be given free to every purchaser of our new book "How to Sell Your Services," by Napoleon Hill. This remarkable book, the first of its kind ever published, contains live, concrete facts; not theories. In it such men as Andrew Carnegie, John Wanamaker, Vice-President Marshall, Champ Clark, John D. Rockefeller, and others of equal prominence tell you how to sell your services. The advice from these men alone is worth many times \$3, the cost of this book.

Advertising & Salesmanship

If your personal analysis shows that you are eligible for our Extension Course in Advertising and Salesmanship, and if you decide to enroll, we will give you a free copy of "How to Sell Your Services." If you purchase this book and later take our course we will allow you full credit for the \$3.00.

Send Coupon and \$3.00 for a copy of the book. If you do not believe that it is the best investment you ever made, return the book. We will refund your money, and give you the personal analysis free.

AMAZING BOOK Of Energy Secrets—Free

Swoboda has published for distribution a remarkable book which explains his system of Conscious Evolution and what it has already done. Write for this book—not because Conscious Evolution has meant so much to 200,000 other men and women, not because there is scarcely a prominent family in the country that hasn't at least one member a pupil of Swoboda, including Chas. E. Hughes, Woodrow Wilson, Rockefeller, the Vanderbilts, the Goulds, the Huntingtons, the Armour, the Cadalys, the Swifts—but write for the book because it means so much to you in multiplied living power, earning power, and resisting power. It is a big book filled from cover to cover with the vital facts about yourself and how you can acquire the degree of perfection in body and mind that you so much desire. It exposes the dangers of excessive deep breathing, excessive exercise, and excessive muscular development.

Regardless of how young you may feel, of how efficient you may think you are—regardless of how active, energetic, and alert you may consider yourself—regardless of how happy, how contented you may pride yourself on being—regardless of how healthy, wealthy, or successful you may be, you cannot afford, in justice to yourself, to miss the interesting and instructive secrets explained for the first time in this startling new book.

DOUBLE DAY PAGE & CO.

The Farmer's Cyclopedic

(Authentic Records, U. S. Dept. of Agriculture)

These 7 big volumes, containing over 5000 pages, 3,000,000 words and hundreds of pictures, give you in condensed but complete form the most valuable data which the government has gathered at this enormous expense.

Verified facts about every branch of farming are given with all theories cut out. Just the methods which have proved best in actual practice are explained. Minutely indexed so that every fact is accessible in an instant.

10 Days' Reading Offer NOW

Sign and mail the coupon with \$1.00. It will bring you this great library of farming facts to examine for 10 days. Pay the net transportation charges. Read the 7 big volumes at your leisure. Then, if you decide to keep them, pay only \$2 monthly payments until \$29.50 is paid. Otherwise return the books to us and we'll return your dollar. Send for the Farmer's Cyclopedic on this special offer and see how this great library answers practically every farming question you may ask. If you have had puzzling failures it will show you how to trace the causes. If you are dissatisfied with your yield of crops, or the results from your dairy, your hogs, your sheep, your poultry or your orchard, it will explain the scientific methods for securing a larger production. One fact may save you from a mistake which might cost 10 times the price of the books. Another may show you how to cut out waste. Still another may tell how to add 25 per cent or more to your profits in some direction you have not thought of. The experience of thousands of successful farmers—gathered and tested by the Government—is now yours at a trifling cost. And 10 days' examination first.

Partial List of Contents:

Feed and Care of Dairy Cows—This alone worth the price.
Feed and Feeding for Beef—A wonderful work.
Diseases and Insect Pests—How to protect cattle and crops against them.
Profitable Hog Raising—A complete theory on the hog.
Success with Sheep—Every question answered.
Poultry Problems Solved—No other books on poultry ever need be read.
Fruit—How to get a larger yield. How to avoid insect pests.

And thousands of other subjects of vital interest and value.

Special!

For one payment extra, you can also have a full year's subscription to *Country Life in America* (regular price, \$4 a year).

Latest Facts and Investigations on Every Farm Product—Insures bigger, better crops with less labor.
Every Phase on Farm Management—From government experiments and researches.
Soils and Fertilization—Make your land yield more.
Farm Buildings—How to plan and build on the farm.
Domestic Science—Comfortable, economical farm housekeeping. Lightens the work of the housekeeper.

TODAY—SEND COUPON WITH ONLY \$1.00
 We will ship the books direct to you. Examine them for 10 days—then decide. Then pay only \$2.00 monthly. You run no risk. So grasp this opportunity to get the benefit of the books while paying for them. Accept while the offer lasts. Mail the coupon.

Valuable Book FREE

With the Cyclopedic you get absolutely free an important Manual written especially as an aid to systematic study by America's famous authority on farming, **Hon. F. W. Coburn**, who says of the Cyclopedic: "It contains the most valuable agricultural information ever gathered together." A complete course in Agriculture ready for you to place on your library shelves—ready to help you to be a better farmer, and to make more money.

Coburn's Advice

Your order gives you the privilege of asking Mr. Coburn for advice at any time. No charge for this—**you get his help and co-operation in addition to the Cyclopedic—when ever you want it.**

Doubleday, Page & Co.
 Dept. 303, Garden City, N. Y.

Send me the complete set of *Farmer's Cyclopedic* (Authentic Records of U. S. Dept. of Agriculture) in 7 big, thick volumes. If I keep the books, I will pay you \$2 monthly until \$29.50 is paid. If not satisfactory, I will tell you so in 10 days and you will tell me where to return the books. I understand that Coburn's Manual and advisory service is free if I keep the Cyclopedic. I enclose \$1.00 as first payment—to be returned if I do not keep the books.

YOUR OPPORTUNITY

- TO LEARN THE AUTOMOBILE BUSINESS
- TO SEE AND KNOW NEW YORK CITY
- TO MAKE FROM \$75 TO \$300 A MONTH
- TO GET INTO A BUSINESS FOR YOURSELF

Get out of that rut into a profitable business. The automobile field offers more opportunities for the **TRAINED MAN** than any industry today—and they are getting bigger every year. **THINK—SERIOUSLY—NOW**—if this isn't just the opportunity you've been seeking. Automobile men are combing the country for trained men for every branch of this mammoth business.

—Learn in New York City—

Visit New York City—see the sky scrapers—the gigantic ocean liners—old Broadway—the Statue of Liberty—the world famous sky line—and the million and one things you have heard people talk about. Right now **YOU ARE** planning to go somewhere to train yourself for a well paying position or a business of your own. This **IS** your opportunity to become thoroughly acquainted with New York and at the same time **SETTLE THE QUESTION OF YOUR FUTURE PAY ENVELOPE.**

Make \$75 to \$300 a Month

This old world won't give you any more than you will walk up and take, but when you step up and say, "I'm after mine," and put "pep" into your action, the world hands it right over. A thorough training in the automobile business immediately puts more money in your pay envelope—and the more you know the bigger the pay envelope.

Our Course—Our Motto

Think of it—a full five weeks' practical course under the most competent instructors available, in the most complete and up-to-date school in the country—right off Broadway in the heart of New York City—Day and Night classes. We have lists of desirable places, conveniently located to school, for you to stay while learning. Our dealings with our students have been our mainstay and built for us the fine school we now have. Everybody gets a square deal and thorough personal instruction.

Be Independent—

Start a Business of Your Own

Once you are trained the **Stewart** way you need not work for the other fellow—you have sufficient knowledge to start a business yourself—in every city there is a great opportunity for the live fellow who will get out and hustle—and there's big money in it.

Don't Delay—Act Quickly— Write Today

Write at once for our catalog giving detailed information about our course—how we help our students. Start any time, but **don't wait** a minute to ask for our catalog which contains just the proposition you have been seeking.

THE STEWART AUTOMOBILE SCHOOL

Department 1, 225 West 57th Street, at Broadway, NEW YORK CITY

Established nine years—the old dependable school. Founded on honor—Prosperes on merit.

Oh, You Skinny!

Why stay **thin** as a rail? You *don't* have to! And you *don't* have to go through life with a chest that the tailor gives you; with arms of childish strength; with legs you can hardly stand on. And what about that *stomach* that flinches every time you try a square meal? Are you a *pill-feeder*?

Do you expect **Health and Strength** in tabloid form—through pills, potions and other exploited piffle?

You can't do it; it can't be done.

The only way to be well is to build up your body—all of it—through nature's methods—not by pampering the stomach. It is not *fat* that is making you a failure; it's that poor, emaciated body of yours; your half-sickness shows plain in your face and the world loves healthy people. So be *Healthy—strong—vital*. That's *living*. Don't think too long; send 4 cents in stamps to cover mailing of my book, "INTELLIGENCE IN PHYSICAL AND HEALTH CULTURE," written by the *strongest physical culture instructor in the world.*

103 Reliable Bldg. Detroit, Michigan

FINLAY ENGINEERING COLLEGE

1001 Indiana Ave., KANSAS CITY, MO. Only School of the Kind in the West

The old reliable, practical, technical college. Courses from the simple Auto to Electrical Engineer. Specialties, Electricity, Steam, Gas. Also Auto-Tractor work. Time required for regular courses, 3 months, 1 year, and 2 years.

HERE'S WHAT WE TEACH:

Electricity

Steam

Gas

Automobile

SPECIAL 6 WEEKS' COURSES in wiring, Armature winding, Lathe Work, Oxy-acetylene Welding, operation of Steam, Gas, and Electric Machinery.

Any student enrolling in any of the above courses will be entitled to an **AUTO STARTING COURSE FREE**

This Is How We Teach: By books, by models, by professors, by regular shop work and by actual machines in operation. **Make your start to a big salary at once!** Investigate our school before going elsewhere. **ENROLL ANY TIME.** Day and night classes. Anything you want any time you want it. From a week to two years. Spring term begins April 1st. Write for Catalogue F. Address **H. FINLAY, Pres., 1001 Indiana Ave., KANSAS CITY, MO.**

QUEEN OF SHEBA'S VISIT TO KING SOLOMON

The Queen of Sheba's Visit to King Solomon is one of the most famous incidents in the history of the ancient world. The beautiful picture shown herewith from Ridpath's History illustrates but one event of all the thousands in the complete work. Truly it may be said of the merits of this history as was said of the splendor of King Solomon's Court: "The half has never been told." All nations, ancient and modern, are embraced in the world-famed publication

Ridpath's History of the World

DR. John Clark Ridpath is universally recognized as America's greatest historian. Other men have written histories of one nation or period; Gibbon of Rome, Macaulay of England, Guizot of France, but it remained for Dr. Ridpath to write a history of the entire World from the earliest civilization down to the present day.

Price Soon To Be Advanced

ON account of the tremendous increase in the cost of paper and leather, occasioned by the European War, it becomes necessary to advance the price in order to cover the increased cost of manufacture. This is your last opportunity to buy Ridpath's History of the World at our present low price and easy terms of payment. We will name this low price only in direct letters to those who mail us the coupon below. Tear off the coupon, write your name and address plainly and mail now before you forget it. You incur no obligation whatever. We employ no agents as our low price does not permit the payment of an agent's commission. The beautiful sample pages will give you some idea of the splendid illustrations and wonderfully beautiful style in which the history is written.

Six Thousand Years of History

RIDPATH takes you back to the dawn of History, long before the Pyramids of Egypt were built; down through the romantic troubled times of Chaldea's grandeur and Assyria's magnificence; of Babylonia's wealth and luxury; of Greek and Roman splendor; of Mohammedan culture and refinement to the dawn of yesterday. He covers every race, every nation, every time, and holds you spellbound by his wonderful eloquence.

The European War

IF you would know the underlying causes which have led up to this conflict, the great racial antipathies, the commercial rivalries, the sting of past defeats, the vaulting ambitions for world empire, then embrace this opportunity to place this History in your home.

Ridpath's Graphic Style

RIDPATH pictures the great historical events as though they were happening before your eyes; he carries you with him to see the battles of old; to meet kings and queens and warriors; to sit in the Roman Senate; to march against Saladin and his dark-skinned followers; to sail the southern seas with Drake; to circumnavigate the globe with Magellan. He combines absorbing interest with supreme reliability.

Put New Life In Your Engine

A DOSE of Johnson's Carbon Remover—the engine laxative—will increase the power of your car—improve acceleration—stop that knocking sound—quiet your motor—save your batteries—and reduce your gasoline consumption from 12% to 25%.

JOHNSON'S CARBON REMOVER

Is a harmless liquid to be poured into the cylinders. It softens the carbon and releases it from the metal. It then burns, powders and is blown out through the exhaust. Five minutes' time and no labor required. You will save from \$3.00 to \$5.00 over any other method, without loss of time and with very much better results.

If you will use Johnson's Guaranteed Carbon Remover every 1,000 miles you can keep your motor clean and sweet and always at its highest efficiency and you will secure the maximum power and speed from the minimum amount of fuel.

Special Offer

If your dealer cannot supply you with Johnson's Carbon Remover use attached coupon. For a limited time we will include gratis, a half-pint sample of Johnson's Stop-Squeak Oil—our new product. It instantly penetrates between the leaves of springs thoroughly lubricating them and giving perfect spring action.

S. C. JOHNSON & SON, Dept. PA3, Racine, Wis.

I enclose \$1.00 for which please send me, postpaid, enough Johnson's Guaranteed Carbon Remover to thoroughly clean an ordinary four-cylinder motor three times. Also send half-pint of Johnson's Stop-Squeak Oil free.

3683 Girl Diver Clears Rocks by Narrow Margin

NOT long ago a rather interesting problem was encountered in the course of filming a photoplay on the island of Jamaica, in which one of America's foremost women divers assumed the leading rôle. A large concrete tower had been erected on a coral ledge, and from one of its windows, at an elevation of about 45 feet, the performer was to plunge into the sea below. The base of the structure was about 12 feet from the edge of the reef, which it had been estimated could easily be cleared. Instead of being perpen-

dicular, however, the walls slanted back—for the tower was pyramidal—so that in reality the window from which the dive was to be made was about 24 feet from the outer margin of the coral shelf. Measurements and tests of different sorts indicated that it would be extremely hazardous, if not even suicidal, to attempt the feat from the elevation afforded. Six-foot platforms

The Platform from Which the Dive was Made Extended Out Far Enough to Enable the Girl to Clear the Ledge Below. Even at That, the Plunge, Although Picturesque and Graceful, Was Not Devoid of Danger

were therefore built out from the windows and the difficulty overcome. Owing, however, to the influence of a strong wind, the girl managed to clear

the rocks only by a short distance when the dive was at last executed. This was final proof that the plunge as first planned would have been fatal.

CIPHER-WRITING MACHINE

TO GUARD SECRETS

Office Appliances 8/19/16
Letters and telegrams that it would puzzle the most expert European censor to decipher can now be exchanged

This Cipher Typewriter was Made for One of the Allied Governments Now at War: The Disk Which Determines the Cipher and Also Deciphers the Message on Receipt is Placed on the Top Plate between the Ribbon Spools

by business men who wish to keep the contents confidential. A typewriter recently placed on the market not only writes in cipher, but makes its own cipher and offers millions of possible combinations for choice. In general appearance the machine resembles an ordinary typewriter, and to make a cipher the message is written on its keyboard in the ordinary way. The cipher is determined by a detachable plate or disk, containing 30 holes in two concentric circles of 15 holes each. For each of these holes there is a pin and to make a cipher combination these pins may be inserted in or left out of any of the holes, as fancy dictates. Then, in writing the copy, the machine may write an "x" for an "a" the first time it occurs, then a "p," and so on. It is impossible to predetermine what code letters will appear in operating the

machine. To decipher a code message the person receiving the communication must have a complementary disk, with pins properly arranged, and one of the machines to reproduce the message as originally written.

3618

WOOD-CUTTING DIES TAKE PLACE OF SAWS

Especially designed dies are now employed by a St. Louis firm in cutting wood into toys, and the like, instead of fashioning the playthings with saws, as has been the common practice. These dies will cut material up to 3/4 in. thick, whether it is plain wood or made of layers glued together. To make one of these cutting tools, the desired outline is cut in a block and then a steel knife with its edge projecting beyond the block is made to conform to the outline, after which a porous-rubber cushion is fitted over the whole die, so that it incases the knife, and is glued in place. The tool is locked in a chase and attached to a press in the usual manner. When the press is started the rubber cushion strikes the wood first, and is compressed until the knife finally cuts down into the material. The rubber, while under compression, helps to prevent the splitting of the wood, and by pressing against the sides of the knife keeps it rigid, even though it may be a very thin blade. When the die is withdrawn the rubber expels the freshly made blank automatically. With some kinds of wood it is necessary to finish the edges of the blanks, while other material is given a satisfactory edge by the die.

ⒸThe War Department has let contracts for \$5,500,000 worth of Vickers machine guns and accessories, and expects to spend \$4,000,000 more for similar equipment. Apparently the much-discussed Lewis guns are not in favor.

PICTORIAL STORY OF SHACKLETON EXPEDITION

3643

Caught in the Resistless Grip of Two Enormous Floes, the "Endurance," Its Hull Crushed and Masts Sheared Off, Gradually Slipping from View into the Frigid Waters of Weddell Sea, Leaving Sir Ernest Shackleton and His Plucky Party of Antarctic Explorers on a Shifting Ice Pack in a Region of Perpetual Winter: From the Middle of January to the Last Day of November, 1915, the Vessel was Locked in the Ice. Time and Again It was Squeezed Up Out of the Water, Only to Drop Back, as the Pressure was Relieved, into the Jaws of the Eternal Vise That Ultimately Crushed It. The Photograph, One of the Rarest and Most Gripping of the Kind Ever Taken, Illustrates the Turning Point in an Absorbing Adventure. The Dogs Looked On Wonderingly as the Splintered Timbers and Tangled, Frozen Rigging of the Ship Creaked, Groaned, and Then Disappeared. The Men Faced Drifting Ice Fields and a Sea in Which Floated Menacing Mountains of Crystal White

Feeding the Dogs before Their Snow Kennels alongside the Ice-Locked "Endurance." The Picture was Taken in the Midst of the Long Polar Night When for 92 Days the Sun was Hidden below the Horizon. At the Time, the Ship Was Still Intact and All Was Ready to Take the Dogs Aboard the Moment There Were Signs of the Ice Breaking. It Was Not Long, However, Until the Vessel was being Ground to Pieces and the Men were Salvaging the Small Boats, Taking Off Supplies, and Building a Camp on the Floes

The Care of the Dogs Was No Light Occupation, for There Were 70 of Them Requiring Close Attention. Each was Fed According to a Prescribed Program and Periodically Weighed. Thus There Was No Guesswork Concerning Their Physical Condition. If a Dog Gained or Lost Flesh, It was Noted

Miles upon Miles of Snow-Covered Ice and, Fast in the Middle of It, the "Endurance." During the Months That the Drifting Pack Carried the Party Northward, an Enormous Mountain of Ice Doggedly Followed Along, Threatening Time and Again to Batter through the Floes. After Finally Reaching Elephant Island, Shackleton Picked the Six Hardest of the Men to Accompany Him on His Daring Dash of 750 Miles in an Open Boat to South Georgia—and Help. For More than Two Weeks the Men Battled the Sea in Clothes Soaking Wet

The "Endurance" Became Uninhabitable a Month Before It Finally Sank. So in October the Party Established Its Camp on the Ice alongside the Ill-Fated Vessel. When the Latter Finally Disappeared an Attempt to Proceed Northward Met with Failure, and Ocean Camp, Where the Castaways Remained until Three Days after Christmas, was Founded a Few Miles from the Ship's Grave. When Travel toward the North Again Seemed Possible, Dogs and Men Struggled across Rugged Ridges and Hummocks for Five Days. Unsound Ice Made Them Halt at a Point That Became Patience Camp. Pictured Above Is Ocean Camp, and at the Extreme Left Sir Ernest Shackleton

Before Their Tents at Patience Camp, Sir Ernest, and at the Left, Frank Hurley, Photographer of the Expedition. Here the Men Stayed until April. While the Drifting Pack Carried Them Northward. When Clarence Island was Sighted It was Decided to Stake All and Put Out in Open Boats for Elephant Island, Which was Reached after Two Days of Hardship

From Out of Another World, a Sigh! Sir Ernest Shackleton, after Three Disheartening Failures, Coming across the Water to the Dancing, Jubilant Fellows He Left at Elephant Island Four Months Before. The Party had been Assembling Following the Call of "Lunch O," When the Cry, "Ship O," Caused All Hands to Forget the Soup of Seal's Backbone and Seaweed. Signal Fires were Started When the "Yelcho," the Chilean Government Steamer, Hidden from View Here, Appeared to be Passing Them By. Observe That the Overwhelming Joy of Approaching Succor did Not Cause the Photographer to Miss One of the Best Pictures of the Adventure

358c EFFICIENT POWER UNIT
DRAWS HAND TRUCKS

One of the efficient types of power units which is being used in large in-

Tractor Drawing Hand Trucks through Freight Cars Placed Side by Side and Suitably Connected to Form a Passageway from a Loaded Car to a Platform

dustrial plants and in railway freight stations in connection with loading and unloading materials, is shown in the accompanying illustrations. The tractor is electrically driven and is em-

ployed in the same manner as a switch engine. That is, it draws its load to the proper destination, and while the train is being unloaded it is employed in making other hauls. One of the simplest and most satisfactory forms of trucks used with this type of tractor is made by equipping an ordinary hand truck with casters and a patent hitching, or coupling, device. The latter is so constructed that it makes each truck follow almost exactly in the path of the truck ahead of it. This feature is of special importance in large factories and on freight platforms where the little trains often have to wind their way along narrow circuitous passages.

3693

NEW TYPE OF BANK DRIVES
OUT "LOAN SHARKS"

Chgo Tribune Jan 11 '17
By competing with "loan sharks" in the field where they make their greatest profit, namely among unpropertied wage earners who must borrow to meet emergencies, money-lending institutions of a new type are now driving out usurers in New York and elsewhere. These banks enable one whose chief asset is his good character and modest earning power to borrow money at a rate considerably less than loan sharks charge. The New York bank of this type, opened only two years ago, made

A Train Composed of Hand Trucks Equipped with Casters and Coupling Devices Which Make Each Unit Follow in the Track of the One Ahead

over 7,000 loans the first year, averaging \$116 each. Chicago capitalists are considering starting a similar institution. An illustration will explain the methods employed. If a person wishes to borrow, say, \$100, an application is filed attesting to the signer's good character and earning power. He must also get two persons to sign his note. The \$100 is then given him, minus \$6 interest deducted in advance, and a fee of \$2 for investigating his case. He also must

purchase savings certificates at the rate of \$2 per week for 50 weeks, at the end of which time he may use

purchase savings certificates at the rate of \$2 per week for 50 weeks, at the end of which time he may use

them, if he desires, to pay his note. Experience shows that 30 per cent of the borrowers continue their savings accounts after paying off their loans.

3635
**MACHINE-GUN CARRIER
FOR MOTORCYCLES**

A new type of machine-gun carrier, which can be quickly attached to or detached from any standard make of motorcycle, was inspected recently by foreign representatives at the testing field of an eastern firearms company. It consists of a low platform of hard wood, carried on a pair of bicycle wheels and recessed in front to receive the rear wheel of the motorcycle, which is left free to ride up and down over road obstructions. The only connection is at the front of the motorcycle. The gun mounting on the platform is so constructed that a complete circle may be described in operating the machine gun, whether shooting horizontally or in the position required for antiaircraft work.

**ELECTRIC SIGN WORN ON
BACK OF THEATER USHER**

By way of experiment the ushers of a Boston theater have been provided with a new electrical device which aids in showing playgoers to their seats. It consists of a small electric sign which is suspended at the usher's back by means of straps over the shoulders. When the wearer presses a button which is connected with the sign the words "This Way, Please" are illuminated. They serve both to attract the attention of the patrons to the usher who is to wait on them, and to light up the aisle when the theater is in semi-darkness.

3576 TIRE VULCANIZING TAUGHT IN PUBLIC SCHOOLS

Some of the pupils enrolled in the vocational-training classes of the Cincinnati public schools are being taught to repair the tires of their fathers' motor cars. Not long ago an automobile concern loaned some of its equipment to the schools with the result that a thorough course in tire vulcanizing and repair has been established. The work, as one might well imagine, appeals to a large percentage of the boys and therefore the course is a popular one. Parents and teachers are taking advantage of the opportunity to have tires mended cheaply.

It doesn't Take a Young Chap Like This One Long to Master the Vulcanizing Machine

ACCIDENT AND THEN RECORD MARK AIRMAN'S FLIGHT

In landing at the Philadelphia Navy Yard, on League Island, H. W. Blakely—one of the 12 army aero-reserve pilots who recently made the 115-mile test flight from Hempstead Plains, N. Y., to the aforementioned point and return—met with a queer accident. As he was nearing the ground a lens was blown out of his goggles, causing him to strike a flagpole. The machine dropped and turned up on its nose, after encountering a ditch. The pilot, and the passenger he carried, escaped injury, while the craft merely suffered a broken wheel. On the return trip the airman lowered the record for flight between the two points by covering the distance in 72 minutes.

3710 CRUMBLING OF BREAKWATER MAY BE DUE TO SALT

Not long after quantities of rock had been placed in a breakwater at Eureka, Calif., it was found that, on exposure to the salt water, some of the rock began to crumble. The material used was a coarse diorite, an igneous rock of crystalline texture, and apparently it was in excellent condition. However, a microscopic examination showed that the feldspar in the crumbling portions

Mining Scientific Journal

*Mercer Motor Wheel Co. Inc.
 Circle Bldg, 59th St. - Lincoln Pl.
 New York City*

was much decayed. This discovery gave rise to the theory that the alternate submersion and exposure of the ballast, due to the tides, left deposits of salt which entered crevices in the surface and dried. It is believed that tiny crystals formed in this way, by their expansion broke down the rock.

3612

ELECTRIC HARBOR BOAT FOR ARTILLERY ARMORIES

An officer of the New York Coast Artillery has built a miniature electric harbor boat, to furnish a target which will move about on armory floors at a uniform rate of, speed slow enough to give the coast-defense gunners good practice in sighting and ranging by means of "plotting boards." The hull and superstructure of the boat are built over, and conceal, a low steel chassis, or framework, which supports the operating and control mechanism, also the operator, who sits inside and steers the boat about the armory floor. Power is furnished by a storage battery of 10 cells, and the driving apparatus consists of a vehicle-type motor rated at 12 volts, 11 amperes, at 800 r.p.m. By means of a simple control lever, three variations of speed ahead and two variations astern can be had. The maximum speed of the apparatus represents, upon the scale of the armories and the plotting boards constructed for use therein, an actual speed of about 18 knots, or 20³/₄ miles an hour. It enables the artillerymen to have vessel-tracking drills, also drills in tug direction and practice in fort signaling.

This Miniature Boat is Self-Propelled by Electricity and Moves about an Armory Floor to Furnish a Target for Coast-Artillery Practice in Vessel Tracking: The Concealed Operator and Mechanism are Seen Above

MOTOR WHEEL FOR BICYCLES
3592 **FITS ANY MACHINE**

Any make or size of bicycle can be readily transformed into a motorcycle

An Ordinary Bicycle Converted into a Motorcycle by Substituting a Newly Invented Motor Wheel for the Original Rear Wheel

by changing the rear wheel for a new motor wheel invented by a New York man. This attachment includes a heavy 26-in. bicycle wheel, with a 2-hp. motor plant, and a substantial mud-guard designed to fit into the forks of the bicycle after the original wheel is removed. The motor is of four-cycle type, and weighs only 57 lb. It is claimed that it will make about 100 miles to the gal-

lon of gasoline, will climb the steepest grades, and enable the rider to keep up with fast-moving traffic, while none of the extra weight or vibration falls on the bicycle itself, all being carried by the specially constructed wheel. The motor is

*W. Irving Taylor, Coast Defense Officer,
 National Guard.
 Municipal Bldg. New York*

carried on the left side of the wheel, the crank shaft extends through the hub, and a flywheel on the right side incorporates a built-in magneto.

1943

BARREL STRAWBERRY PATCH FOR CITY BACK YARD

A portion of an especially attractive "barrel strawberry patch" is shown in the accompanying illustration. This

see may 1942-117

One of Several "Strawberry Barrels" in a Los Angeles Back Yard: The Patch Occupies About One-Fifth the Space the Same Number of Vines would, Planted in the Ordinary Way

barrel is one of several owned by a Los Angeles man whose back yard was too small to admit of a regular strawberry bed. It was found that these unusual holders occupied about one-fifth as much space as an ordinary patch containing the same number of plants. To utilize a barrel in this manner, holes, about 12 in. apart, were bored in rows in its sides. Several tin cans, with perforated bottoms, were piled one on the other in the center of the barrel and enough dirt thrown about them to fill the receptacle up to the first row of holes. After the dirt had settled sufficiently, strawberry vines were planted in the holes and allowed to hang outside. This process was repeated until the barrel was full and vines had been set in all the holes and on the top. As the soil was added, cans were piled up through the center to provide an irrigation passageway. A hole was bored in the side near the bottom to allow surplus water to drain off.

SHAPE OF ENGLISH BULLET AFFECTS ALUMINUM MARKET

A peculiar circumstance in the manufacture of English rifle bullets is said to be responsible, in part at least, for the increased price of aluminum. Shortly after the outbreak of the war England gave up making round-nose bullets and produced, instead, a pointed variety with a solid-lead point inclosed in a cupro-nickel jacket. Some time later it was discovered that these missiles were not properly balanced for the English type of gun. After many tests the difficulty was overcome by inserting a little aluminum cone, $\frac{3}{8}$ in. high, in the apex of the cartridge jacket. While the weight of a single cone is, of course, almost negligible the total amount of aluminum required for England's rifle ammunition runs into thousands of pounds. It is this unusual demand that is said to have affected the price of aluminum.

1857

SIMPLE FIRELESS COOKER USED IN GERMANY

A fireless cooker of very simple design, which has recently been brought out in Germany, is shown in the accompanying illustration. It consists of an asbestos cylinder, closed at one end, and an asbestos disk large enough to cover the opening in the cylinder. The disk is placed between the gas, or oil, blaze and the dish in which the food is to be cooked, while the cylinder is used as a cover. After the food has boiled properly the fuel is turned off, but the cooking continues, for the asbestos allows the heat to escape very slowly. Since the device is such a poor conductor of heat it can also be used as a cooler, in which case the interior is lined with a damp cloth.

3681 Railway
U. & U.
LARGE BRIDGES ARE SHIFTED QUICKLY

THERE is something more than passing interest to be gleaned from an engineering feat that has been executed at Omaha. A few weeks ago an old four-span, 1,000-ft., 2,750-ton railway bridge extending over the Missouri River and connecting the Nebraska and Iowa shores was replaced with a new one weighing 5,500 tons. The time actually spent in moving the original structure out of the way and slipping the other one onto the piers amounted to 15 minutes, while traffic was actually suspended for less than one hour. The operation is noteworthy because of the size and weight of each of the bridges involved and the fact that they were handled intact instead of in sections. On the upstream and downstream sides of the piers, falsework was erected, in one case to receive the old bridge when it was lifted from its supports, and in the other to carry the new structure during the course of its erection. Five stationary engines and 200 men accomplished the work. Above, the two bridges are shown resting on the falsework, the old one having been moved to the left; and below, the new bridge is in place on the piers.

CONVERTIBLE SHUTTERS

3585 **SERVE AS AWNINGS**

A combination window shutter and awning is being manufactured by a New York City company which per-

A View of Convertible Shutters, Showing the Wooden Strips Nested in the Frames, and Hinged Sections Above

The Shutters Used as an Awning: The Thin Wooden Strips Form Protecting Fans at Either Side

mits freer ventilation than a cloth awning, is much more durable, and need not obstruct the view from within. This article differs from the ordinary shutter in that it has a small upper portion which is attached to the rest of the blind by hinges, and in one side of the lower section nest several

wooden strips, 1/8 in. thick and 2 in. wide, that are held together by a bolt at their upper ends. To convert two of these shutters into an awning they are closed and locked together. After releasing certain catches the lower end is pushed out from the window. This causes two iron braces to drop down and hold the shutters in place, while the narrow wooden strips, nested in the frames, spread out like fans on either side of the window so that the latter is protected on both sides as well as in front. When the blinds are not used as awnings the bracing arms serve as hinges.

3676
MUNICIPAL BATHING BEACH FLOODED FOR SKATING

A popular municipal bathing beach in Chicago was flooded to form an ice rink for skaters this winter, being used for the first time on Christmas Day, when a small preliminary crowd of about 2,000 persons appeared on the ice. The space prepared for skating measured about 300 by 400 ft. The beach was first sprayed over on a cold day with water, which froze quickly and formed a holding surface on the sand. This was then flooded with 1 1/2 in. of water and a satisfactory skating surface of ice resulted, to the delight of residents of the neighborhood. Last summer the beach, with its splendid facilities for bathing, represented the acme of comfort to Chicagoans, and crowds of 50,000 a day were frequent during the heated term.

ARTIFICIAL MOONLIGHT FOR ITALIAN GARDEN

THIS view of a very beautiful and extensive Italian garden on Long Island gives some conception of the unusual lighting system which has been devised by the owner for the purpose of producing the effect of moonlight. Much study and experimenting resulted in installing electric lights having an aggregate of 500,000 cp., at various points in the garden. They are concealed behind shrubs and screens in so skillful a manner that the effect at night is quite suggestive of soft silvery moonlight. The lights make the statuary, fountains, and pergolas stand out in vivid contrast to the surrounding green foliage. The garden, through the center of which runs a beautiful shaded walk, is more than half a mile long.

3714
**ATLANTIC-TO-GULF CANAL
FOR FLORIDA PROPOSED**

Manufacturers Revere
Agitation in various parts of Florida has aroused interest in a proposed system of canals which would provide an inland waterway through the heart of that state from the Atlantic to the Gulf of Mexico. It is hoped that the active support of some 15 counties can be obtained, and that the state legislature will pass a law creating a canal district with full power to carry the work forward. One of the proposed routes would utilize St. John's River to a point well up toward its source, and, in

the opinion of its advocates, would possess enough strategic value to warrant the giving of Federal aid. One of the contemplated routes to the west coast is via Lake Okeechobee and Caloosahatchee River. It is contended, also, that a canal district should be considered in the same light as a road district, and that if the Federal government is to aid good roads it should also assist in canal digging.

Separate curtains for upper and lower berths are a welcome feature of the sleeping cars on an eastern line's new Chicago-New York trains.

OF COAL**

Optical Journal
 A minute examination of coal has recently given rise to an interesting

theory as to how that fuel was formed. Means have been devised for slicing it into sections so thin that they are almost transparent and can be studied to excellent advantage with a microscope. The use of this instrument revealed but little cellular structure in the coal, and where fragments of plants existed, they seemed to merge directly into the noncellular mass. As a result of the study in the course of which these facts were brought out,

the belief has arisen that in the formation of coal vegetable matter was first entirely decomposed, by bacterial action, into a liquid and then other vegetation, not decomposed, became saturated with this liquid and eventually was changed into fuel.

**MOTOR-CAR BRIDGE BUILT
ON NEW SAFETY PLAN**

Safety first has been the guiding principle in the construction of a new bridge which carries an automobile highway over an arroyo, or former river bed, near El Monte, Calif. The bridge has been specially designed for the pre-

Left: Note the Wide Curb That Prevents Cars from Running Too Close to the Heavy Railings. At the Right are Shown the Steel Girders of the Bridge Extended above the Floor Level to Form the Side Railings

CONCRETE CHIMNEY STACK WITH NEW FEATURES

vention of motor-car accidents. Its heavy side girders are extended upward, above the floor level of the bridge, to form the side railings; and in order to prevent motor cars from injury, by "hubbing" the railings or their massive supports, a wide concrete curb is built along the inside of the bridge on both sides of the road. It is said that this type of bridge has the additional advantage of costing less than ordinary types of steel-bridge construction, so that it safeguards the local taxpayer as well as the motorist.

CHICAGO MAY USE WASTE TO MAKE BIG PARK AREA

Chgo. Post 12/13-1914
Until the practical basis for the statement is understood, it sounds truly incredible to declare that, if Chicago so desires, within a few years it can have without cost 1,300 acres of newly made park lands, valued at \$46,000,000. This can all be brought about by utilizing the city's waste, composed of excavated earth, street sweepings, etc., in constructing a strip of land along the lake front. The city's annual waste product is estimated at over 3,000,000 cu. yd., of which about one-half is from private contractors, who, it is believed, would pay a fee for the privilege of dumping their excavations, etc., close to shore. The whole scheme has been worked out by the Chicago Plan Commission, and since the city already has many acres of park area made in a similar manner, the project is receiving favorable consideration. To carry out the work, the city would have to build proper retaining walls, which, it is believed, subsequent revenues would pay for. Bathing beaches and drives would be featured in the new park land.

¶ In the United States only one farm in seven, of over 20 acres, now supports sheep, and consequently we import nearly a third of a billion pounds of wool yearly. If one-fourth of the remaining farms would raise one sheep for each three acres, this big importation could be wiped out by home production.

A concrete chimney, 300 ft. high, built recently at the plant of a Texas smelting company, embodies in its construction a number of new ideas. The shell, or walls, forming a true circle and tapering from 20 $\frac{3}{8}$ in. thick at the bottom to 5 in. at the top, were built up with the aid of patent collapsible, or adjustable, steel forms, used in sections, each 7 ft. 6 in. high. These made it easier to secure the exact amount of tapering required as the chimney rose in height, the concrete being mixed and tamped in the forms. The upper part of the chimney was built with a patent top, including a number of 4-in. pipe inlets, regularly spaced around the stack for the admission of air from the outside. This results in arresting many of the products of combustion carried up with the smoke—which then fall down the chimney into a hopper provided near the base. There are iron doors at the grade

This Chimney Rises 300 Feet into the Air at a Texas Smelter, and was Built of Concrete with Adjustable Steel Forms. The Platforms Seen Part Way Up Furnish Means for Testing the Inside Temperature and the Volume of Smoke

level, through which a railway track runs under the hopper, so that a truck can be run in to remove its contents.

PHONOGRAPH WHICH PLAYS ALL MAKES-OF RECORDS

A phonograph has recently been placed on the market which is equipped with a reproducer so constructed that

A Phonograph Having a Reproducer so Constructed That It can be Set at the Angles Required for Either Vertical-Cut or Lateral-Cut Records

a record of any make can be played without using an attachment. Generally speaking, the grooves on a phonograph disk are made in one of two ways: by lateral vibrations of the sound needle, or by vertical vibrations. One type requires that the reproducer shall be placed at a certain angle, while with the other kind of groove it must be set at an entirely different angle. This re-

producer is so hinged to the tone arm that the needle, or jeweled point, can be set in either of these positions. For one kind of record it can be provided with a fiber or steel needle, while if a record is to be played which requires a diamond point or sapphire ball, either of these can be substituted for the needle.

3660

CITY TURNS COAL DEALER BECAUSE OF FUEL FAMINE

The coal shortage, which in recent weeks has threatened to bring about very serious conditions in many parts of the country, has stimulated agitation for municipal coal mines that would supply the schools and the departments of the local governments with fuel, and, in some cases, would sell to individuals as well. This proposal has already been adopted in Terre Haute, Ind., and a mine four miles from the city has been leased from which coal is sold for \$2.75 per ton. An alderman in Detroit has advocated that that city buy or lease a mine, contending that by so doing the city could save \$3 a ton on its fuel. A similar plan has been proposed in Cleveland. The undertaking is regarded as most feasible for municipalities in or near coal-bearing regions.

Teams Employed in Hauling Coal from Terre Haute's Municipal Coal Mine: The Fuel is Sold to Individuals for \$2.75 per Ton

PAGEANTRY, A CIVIC PASTIME

3648

By HENRY B. RONEY, *Pageant Director*

1071 Keland Av., Chicago.

THERE probably is no more wholesome or educational festivity in which whole communities can participate, than pageantry. Based, as these performances are, upon local history, they become a most effectual method of passing stories of valor and glory, in all their wealth of detail, down the ages. In this country many states are now rounding out their first hundred years of history, as such. Centennial celebrations are an old story in the East, but the Middle West is only beginning to count the cycles of its past. This year Mississippi checks off her first century; next year is Illinois' turn; in 1919, Alabama will celebrate; in 1920, Maine; in 1921, Missouri. Last year, all the country rejoiced with Indiana. One of the most notable celebrations of that state is described in the accompanying article, written by the man who directed the performance. Anyone reading the account of the South Bend pageant can grasp the first principles of adapting such an entertainment to his own local conditions—history, talent, and facilities. He can understand how to go about it and how to carry it out. As Mr. Roney hints, pageants should not savor of commercialism. They are based upon a glorious past which is properly the heritage of every citizen. Their purpose is to promote community spirit and patriotism, and, as suggested in the beginning, to transmit the rich traditions of a vigorous people.—Editor.

WHAT is a pageant? Most people have an idea that it is "some kind of a show," and let it go at that. Broadly speaking, there are but two general forms of pageants. One is a procession of horses, riders, floats, tableaux, vehicles, and footmen, appropriately decorated and costumed, representing incidents, stories, and characters in history, fiction, or allegory. The other is a community drama, enacted in the open by dialogue, pantomime, or both, depicting chronologically actual events in the history of a city or locality, or the story of incidents or characters in mythology, tradition, or fiction, with or without allegory and symbolism, with a great number of participants drawn from the community. And there are, of course, many variants of these two main classifications. It is with the community pageant this article will deal.

Modern pageantry is a growth. Its germ origin dates back five centuries to the semireligious, semisuperstitious miracle and mystery plays on "pageant stages" in the public squares of Old England, a function confined largely to tradesmen. Through the years the idea broadened into the passion plays of Selzach in Switzerland and Oberammergau in Bavaria, religious festivals based on the life and passion of Jesus Christ.

The Oberammergau festivals continue with unflagging solemnity every decade, but the community-pageant idea became more and more secularized with the passing years until it burst

Henry B. Roney

forth in full flower in Sherburne, England, in 1905. Others followed at Warwick, in 1906, and Bury St. Edmunds, in 1907. The latter had 2,000 persons in the cast and a general committee of 450, and it took 600 ladies many weeks of hard work to make the elaborate costumes. These pageants were based on local history running back to the time of Caesar. Thus modern spectacular pageantry as we know it began in 1905 and is less than 12 years old.

In 1908 the pageant germ crossed the Atlantic and took root in Philadelphia, where was held what was claimed to be the first pageant given in the United States, celebrating the 225th anniversary of the founding of the city. The same year Quebec celebrated the 300th anniversary of the founding of the city with a gorgeous pageant lasting several days, enlisting citizenry and military in large numbers. Probably 250 real pageants have been given in this country.

The year 1914 witnessed at St. Louis the climax of American pageantry in vastness of numbers of performers and audience—7,500 actors on a stage area nearly 1,000 feet long and 200 feet deep, performing before an audience of 60,000 people at Forest Park. A guarantee fund of \$125,000 was raised for this the greatest drama ever staged, and which will long stand as the record. Pageants are usually more successful in the medium-sized towns where every interest is enlisted. St. Louis furnishes one of the rare in-

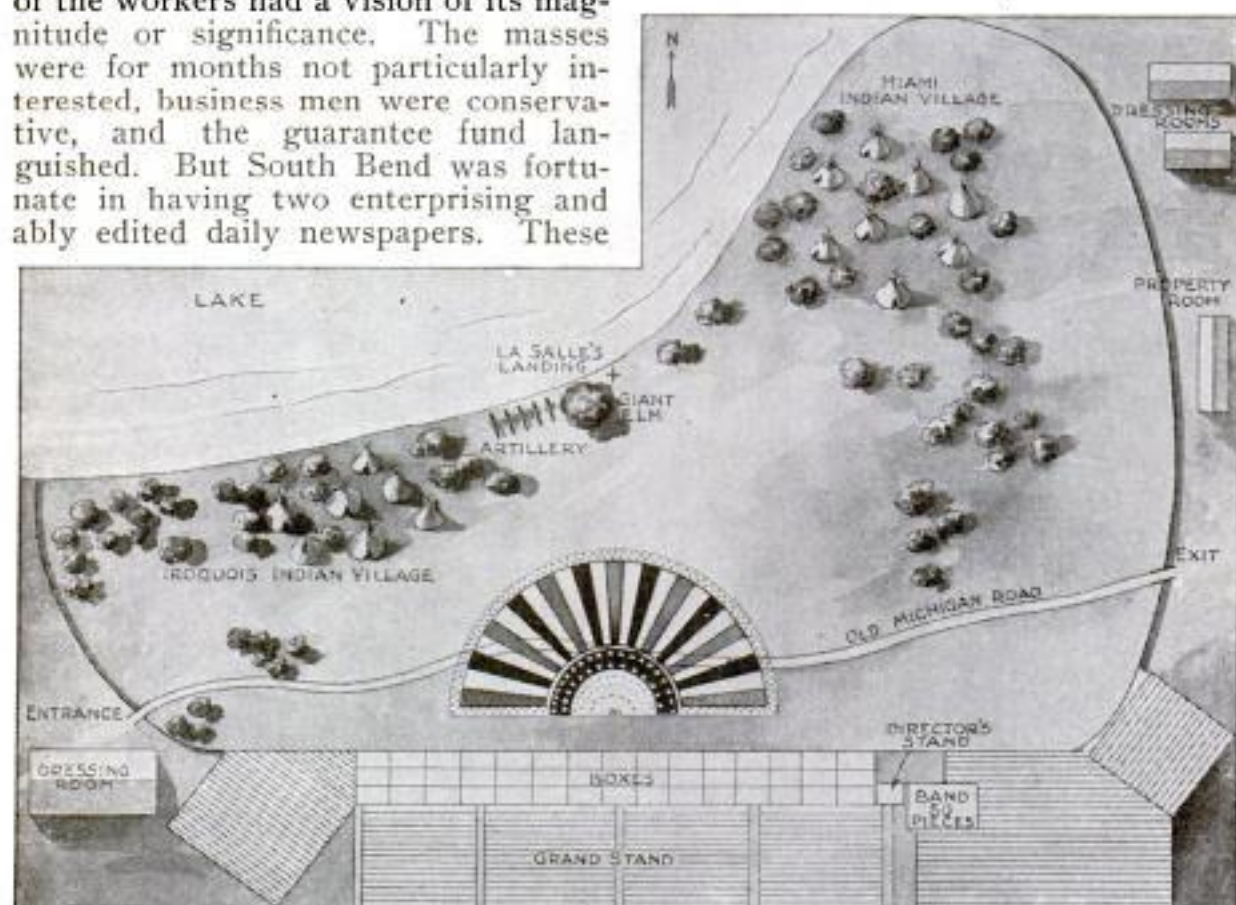

stances of civic unity in a city of the first rank.

In 1916, Indiana celebrated her centennial of statehood at each of her 92 county seats, headed by a county chairman appointed by the governor. Some were modest exercises in schoolhouses, churches, and groves; others were pretentious pageants enlisting hundreds of participants. Local and state history was the dominant theme, and this had long been the subject for study by the 564,252 children in the schools.

The South Bend centennial pageant was in preparation nearly a year. The pageant-writing committee of eight or ten began delving into St. Joseph County history in November, 1915. It entered upon executive work the following April, and the pageant was the first week in October. It was financed by guarantee subscriptions underwritten and accepted at the banks. It was at first slow work. South Bend had never had a pageant, and only a few of the workers had a vision of its magnitude or significance. The masses were for months not particularly interested, business men were conservative, and the guarantee fund languished. But South Bend was fortunate in having two enterprising and ably edited daily newspapers. These

contributed uncounted columns of publicity with lavish disregard of free space, while the board of directors and the committees kept hammering away, appealing to civic pride and enlightening the people. Indifference finally gave way to interest.

Important contracts and other work then had to be put through at white heat to be ready for the opening performance. One glance at the race-track ellipse at Springbrook Park, where the pageant was held, was enough to discourage the veriest optimist. The area of the "stage" for the reenacting of the historical scenes was about 1,000 feet long by 500 feet deep, equal to two large city blocks. One-third of it was low marshy ground. The wide race track was as smooth as a ballroom floor. The rest was rubbish-littered, bare ground denuded of every living bush and tree save one noble elm to redeem the landscape. But the enterprising city of automo-

Plan View of the Race-Track Ellipse and a Marsh as Transformed by the City of South Bend into a Suitable Setting for the Centennial Pageant. The Historical Episodes were Enacted at the Point Where the Sunburst is Shown

These Native Indians Are a Few of Those Who Came from the Government Agency in South Dakota to Help Make the South Bend Pageant a Success. Chief Black Hawk, an Hereditary Chief of Fine Character, Is the Central Figure in the Rear Row

biles, chilled plows, agricultural implements, underwear and woolen mills, sewing machines, watch factories, and a hundred other big industries, stops at nothing when once aroused, and a week later the eve of the pageant opening

saw a transformation that rivaled Aladdin's palace. Fences had been removed, grounds cleared and graded, and a dense forest set out, with an eye to forming good entrances, exits, screens, and backgrounds for the dramatic work. In the

place of the marsh was a beautiful lake made by pumping in water from the St. Joseph River, 15 feet below, by a centrifugal pump throwing 800 gallons a minute. A boat landing was dredged and on this pretty sheet of water the

moonlight reflections of many teepees and camp fires through the trees added a realistic touch to the landscape, while Indian canoes, darting hither and thither, made the illusion complete. After the South Benders awoke and

warmed up to the work, the question of "clearing expenses" went to the background. The only thought was to produce a superb performance on a colossal scale regardless of cost. And they did it.

The permanent concrete grandstand was enlarged to a capacity of 13,000 persons. Nearly every pageant I have witnessed had one great weakness—too much dialogue impossible for the multitude to hear, especially if the wind was blowing. When most of the actors are

Sunburst Formed by the Chorus: The Red and White Rays were Formed by Children Wearing Robes of Those Colors; Blue-Robed Persons Formed the Field of the Half Sun, 48 of Them Carrying White Star-Shaped Umbrellas; in Front, at the Center, Were Grouped the Principals of the Cast

unaccustomed to public speaking, as is usually the case, the inability to understand always stimulates talking and confusion. When pageant books are not furnished free, one-half of the audience will be without them and thus un-

largely children, to contrast the privations and meager educational privileges of pioneer days with the splendid cultural advantages afforded by the modern "School City of South Bend," as it rightly calls itself, and to thrill the

multitude with an outburst of song in the patriotic finale, the only adequate climax to the great scheme.

3. Five cannon from Culver Military Academy, to be fired by electricity in the massed choral effects, and a company of cadets and officer to handle them.

4. A telephone system with ten offices and operators, at dressing rooms, entrances, exits, Indian villages, boat landing, artillery and electric-light chief's stations, with switch-board at the director's station. Some of the dressing quarters and

property rooms were nearly a quarter of a mile apart.

5. A great military band of highest rank, of 50 instruments, rich in reeds, wood winds, tympani, and cathedral chimes, to give day concerts, accompany the big chorus, and to illustrate the scenes with interpretative music—pathetic, stirring, tragical, martial, humorous—furnishing local color according to the story, subconsciously playing upon the emotions of the people and increasing the dramatic effect.

6. An electric baton of original design, hereafter described.

The board of directors approved and authorized every recommendation. Every feature "made good" and justified the large expenditure. It was not a commercial pageant. Some splendid industrial parades were features of the three-days' centennial celebration, but they were uptown and not of the pageant proper. The electric lighting was the most costly and elaborate yet attempted in pageantry. A long bridge

The School Children of South Bend and Vicinity had Read in Their Histories All About the Trading Posts of Pioneer Days, but Since the Great Pageant They Understand Just How Such Posts were Conducted and the Perils Besetting the Men of Old Who Patronized Them

able to follow the story. The pageant committee wisely decided to have the drama almost wholly in pantomime.

Pageant week opened with commemorative services in all the churches, and a union of choirs in a sacred concert in the afternoon at the park. The pageant book was an octavo containing the county's condensed history, and the scenario, divided into 24 episodes running vis-à-vis, and all of the choral music of the pageant. It sold at the trifling sum of 10 cents. Not an advertisement was permitted in the book. Show and street-fair methods were taboo. My plans for the pageant included:

1. A band of real Sioux Indians from the government agency in South Dakota, in native dress under command of Chief Black Hawk, to give war dances, take part in the peace council and lead in the big fight, for no true history can go back very far and get away from the Indian.

2. A chorus of 5,000 or more singers,

Father Marquette Passes on His Last Journey: The Great Missionary to the Indians Was but 38 Years Old at This Time. He Died Shortly after His Passage through St. Joseph County, Indiana. This Sad Episode (1675) was Most Effectively Staged

built on top of the grand stand was filled with searchlights and spot lights, handled by a dozen electricians. Thousands of straw-colored footlights threw a soft amber glow over the enormous stage area, and arc, colored, and bunch lights wherever needed completed the dazzling scheme. The installation of the special lighting cost nearly \$2,000; the band a like amount.

For the patriotic finale the original idea of a living sunburst in national colors was adopted. Five thousand children were to form the radiating "rays," and hundreds of adult singers the "sun." The children were seated on bleachers at either end of the grand stand with their teachers, all previously assigned to certain numbered red, white, or blue rays, according to a diagram given to each singer. They were therefore able to see the entire performance up to the final episode. A telephone message to the artillery station on the shore of the lake sent three signal rockets piercing the sky, and started the singing hosts to their positions to form the rays for the sunburst. Here colored wraps were distributed to the columns to make the red-white-blue-white alternating rays. The stopping points for the head of

the columns were indicated by small red, white, or blue electric transparencies, strung by cable on the ground, indicating the number of the ray of corresponding color. The adult singers, forming the blue field of the half sun, then flowed in from either side, and

48 ladies scattered through the blue raised as many white star-shaped umbrellas. The gorgeous eagle-feathered and beaded Indian chiefs formed a semicircular row inside of this; priests, missionaries and historical characters—La Salle, Joliet, Tonti, Marquette, etc.—followed, and the gigantic sunburst was complete, ready for the choral climax. There were 1,000 in the cast and over 6,000 persons were massed in the closing patriotic tableau.

Cannon were fired by the director while conducting the chorus, by closing a switch, the report coming in exact time on the accented beat of the climaxes at the end of "Old Glory" and "Star Spangled Banner." The effect, not unlike a tremendous bass drum, was

The Electrical Baton, with Which a Great Chorus of 6,000 Persons was Successfully Conducted

startling.

The chorus was directed by an electric baton, a new invention of the director and used on this occasion for the first time. A baton with a tiny electric bulb on the end for conducting

orchestras in darkened theaters is not new, but to direct and hold together a chorus of 5,000 children at night in the open air, is a different proposition. The instrument is triangular, 3 ft. 4 in. long. On one side is a row of blue electric bulbs, on another a row of red, and on the third side a row of white, each giving a continuous shaft of light nearly three feet long. Thumb buttons changed the colors to indicate expression, blue signifying, "sing softly"; red, "sing medium power," and white, "full power." The baton, connected by cable to a five-volt storage battery underneath the director's stand, weighed a little less than three pounds, and was a perfect success. It could be easily seen at the farthest lines of the singing army, and it served the double purpose of arresting the attention of the children by the fascination of its flashing, changing colors.

The South Bend pageant condensed 240 years of intensely interesting local history into a three hours' performance. It lent itself wonderfully to dramatic presentation and had all the elements of a fascinating historical novel. All of the characters of the early priests and missionaries were taken by the faculty and student body of the great University of Notre Dame. Five hundred Indians from the Order of Red Men of Mishawaka and South Bend, led by a score of real Sioux warriors from South Dakota, staged a thrilling fight of 1676 between the Iroquois and Miamis, traditional enemies. Ladies from the auxiliary Order of Pocahontas dressed and painted as squaws, and the youngsters became Indian children. All other episodes were staged by local clubs, military, societies, schools, lodges, and individuals. Five make-up artists from the Chicago Grand Opera Company transformed the pale faces into the aborigines of the forest.

In the wealth of scene and story nothing gave a more powerful tugging at the heartstrings than the prologue which just preceded the great fight. "Father Marquette passes on his last journey, 1675." The intrepid missionary with the hand of Death upon

him, was making his painful way through the wilderness, leaning heavily on a guide, with two companions following, carrying his canoe. They stop to rest, then pursue their slow journey to the landing, followed by the searchlights, while the band intoned the mournfully pathetic "Angelus" of Massenet. Marquette, then in his 38th year, died a few weeks later near St. Joseph, while trying to reach his headquarters at St. Ignace, Upper Michigan.

The landing of La Salle and his retinue, 1679, and their entrance was another splendid scene. A pathetic tragedy was "Jean Beaudoin's run, 1831," showing the young French hero finishing his thrilling run of 160 miles with a broken arm, passing through "the great (Kankakee) marsh" to warn the little village of South Bend of the uprising of Black Hawk and his threats of massacre. Exhausted, he falls in a faint, is revived, and breathes his message. His sweetheart, Poppy Eaton, who has been sent for, comes on horseback at a mad gallop, and he dies in her arms.

Another scene of mournful splendor was "The departure of the Pottawatomies, 1840," where, after the United States government had sold their lands, they were driven out to the Southwest by United States troops. Rounded up by the soldiers and led by Father Bardin, with crucifix raised aloft, the whole tribe with bowed heads and broken hearts slowly took their departure in seemingly countless numbers. The gorgeousness of Indian costumes, from chiefs who led, to the squaws bringing up the rear, presented a scene of aboriginal tribal splendor never equaled in American pageantry. Under the wonderful effects of search and spotlights they disappeared in the far distance. Their camp fires which flickered on the great field of woods and shore died out, and we came back to earth again to realize that it was not fiction but a cruel injustice in our last century's history. And then, on down through the 19th century the episodes marched, showing the first settlements, the burning and rebuilding of Misha-

In This Day of Railroad Trains and Automobiles There Is Little to Remind Us of the Slower and More Picturesque Modes of Travel of 1850. South Bend's Most Illustrious Citizen, Schuyler Colfax, was Impersonated at the Pageant and Appeared in an Old-Time Coach. Colfax Was an Editor. He Served Many Terms in Congress and Was Vice-President under Grant. The Episode of His Return was Staged by a Lodge

Jean Beaudoin Was a Young Frenchman Who Heard of Chief Black Hawk's Plan to Raid the Frontier and Massacre All Whites, Including the Villagers of South Bend. Beaudoin Ran 160 Miles to Warn the Whites. His Arm was Broken en Route and He Died of Exhaustion with His Mission Just Accomplished. His Sweetheart, Poppy Eaton, Heard the News and Came Madly on Horseback, Reaching Her Lover's Side Just as He Expired. This Episode (1831) was Presented by the Notre Dame University, Red Men, Canoe Club, and Woman's Civic League

After Father Jacques Marquette, the Next White Man to Visit the St. Joseph Valley Was La Salle. He Followed the Great Lakes, Coming down Lake Michigan and Turning up the St. Joseph River. With Him Were About 30 Priests, Carpenters, and an Indian Guide. Snow was Falling and They Missed the Portage, the Indian Guide, White Beaver, Being Away Hunting. La Salle Landed and Walked Nearly to Osceola, Looking for the Portage. Staged by Notre Dame University, South Bend Canoe Club, and Red Men

waka, the growth and development of the two cities, with a wealth of local incidents and celebrities, bringing the story down to the present.

One of the most significant features in the South Bend celebration, in addition to the folk dances of all nations at the daily band concert on the courthouse plaza, was the pageant of nations. In this 15 nationalities participated — French, English, Irish, Dutch, Belgians, Scotch, colored, Danish, Italians, Russians, Swedes, Germans, Filipinos, Hungarians, and Polish. While the band played their national airs in turn, they marched by Miss Columbia, guarded by the Army and Navy, deposited their native country's flag, took up the Stars and Stripes

and marched on singing "My Country, 'tis of Thee." It was a polyglot transformation sermon that thrilled.

No large pageant can be put on in a hurry. The details are endless. A year may be required for research, collecting historical data, and writing the scenario—fascinating work, every hour of it. The pageant text is best written in collaboration, as at Oxford and at the University of North Dakota, where different groups of undergraduates each wrote one of the parts. No pageant ever was "perfect." There were hitches at South Bend due to newness and inexperience, but none probably, except the principals, discovered them in that stupendous, colorful, moving panorama of history.

MOTOR-DRIVEN PUMP FOR 3484 FLOODED MANHOLES

When the manholes of the electric-light system in Rochester, N. Y., are

flooded, as often happens in the spring and after heavy rains, a motor-driven pump, carried on

Pump in Position to be Lowered into a Flooded Manhole: An Electric Motor at the Top of the Upright Pipe Runs the Small Pump at the Bottom

one of the light company's electric trucks, is used to remove the water. The apparatus consists of a 1/4-hp. ver-

tical motor and a small centrifugal pump, connected by a 3-in. spiral riveted pipe 7 ft. long. The pipe acts as a support for the motor, and its length permits the pump to be lowered into the water without submerging the motor, while it also conducts the flood water in the manhole from the pump to the street level. The shaft of the motor and the impeller of the pump are connected by a 5/8-in. brass rod running through the 3-in. pipe. The electric truck furnishes power from its battery and carries a small crane, by which the pump can be swung over the manhole and lowered into it by means of a block and tackle.

PORTABLE DISINFECTORS FOR OUR ARMY

The government has recently purchased for our army six disinfectors of a new portable type, each of which is capable of purifying 50 uniforms and kits in 40 minutes. Either steam or formaldehyde and ammonia are employed as germicides. The outfit consists of a 5-hp. upright steam boiler and an airtight chamber, 6 ft. long, mounted on a metal running gear. The rear end of the chamber is provided with a heavy door which can be hermetically sealed. Within is a rack mounted on wheels

*Rochester Railway & Light Co.
Rochester, N. Y.*

Six of These Portable Disinfesting Outfits have been Purchased for the United States Army. Either Dry Steam, or Formaldehyde and Ammonia can be Used as a Germicide. A View of the Air-Tight Door is Shown at the Right

from which clothing can be hung, while small articles can be placed on an iron grating. After the chamber has been filled with dry steam from the boiler for the proper length of time, the garments are dried by a current of sterilized air and are then ready to be removed. Fastened to the side of the disinfesting chamber is a two-compartment tank from which formaldehyde and ammonia gas can be discharged into the inclosure when steam treatment is not desirable. An obvious advantage of an outfit of this sort is that it can be easily moved with the troops by horses or a truck. Several have been sent to Europe since the war began. A New York doctor is the inventor.

ROPE AND CABLE MEASURED BY A MACHINE

A machine that will measure accurately any length from 1 ft. up to 1,000 ft. of any size rope or cable, from the smallest cord up to $1\frac{1}{4}$ -in. Manila rope or wire cable, is now available to those who manufacture or handle such supplies. It consists essentially of a large measuring wheel which is connected to and forms an outside case for registering mechanism, including a dial with two pointers indicating feet and hundreds of feet, respectively. Above there are guide rollers and a weight

wheel to hold the rope in contact with the measuring wheel in its passage through the machine and thus insure the measurement and registration of every foot that passes. When a rope is to be measured, the pointers are set at zero by turning a small knob at the side of the dial, and the end of the rope is inserted between the guide

The Pointers Indicate That 300 Feet of Cable have Passed from a Stock Reel at the Left to the Reel at the Right, Which Has Collapsible Arms for Removal of the Cable

rollers and over the measuring wheel beneath the weight, then carried direct to a reel, by which any length required is pulled through.

IMPROVED GAS HEATER FOR RIPENING FRUIT

Commission merchants often find difficulty in securing the proper de-

fruits. This difficulty is said to be obviated by the use of a new gas heater devised by a Normal, Ill., inventor. The heater is placed on the wall of a banana room and is made in a size to conform to the length

Ripening Bananas with a Gas Heater That Takes the Cold Damp Air from the Floor, Heats It, and Circulates the Heat Evenly over and Down through the Fruit

grees of equable heat in rooms devoted to the ripening of bananas and other

of banana bunches, so that the fruit will not be heated in spots, or cook. An opening at the top, from which the heated air issues, is set about 2 in. above the top of the bunches, so that the heat passes over and down through the bananas, thus ripening them evenly. The gas burners are of the illuminating-flame pattern, to allow more perfect control of temperatures, and also to afford sufficient light in the room through mica windows in front of the heater. One heater is

required to each 1,000 cu. ft. of space in the room to be heated.

PAPER MODEL OF BIG TANK SHOWS STRUCTURAL MERITS

Some of those who are unfamiliar with architectural and construction work possibly do not appreciate the

painstaking care that is quite commonly observed in preparing pasteboard models of residences, office buildings, bridges, and other works, before their erection. These structures in the miniature are not the result of idle toying by ingenious, time-killing craftsmen, but are made for definite, important reasons. Frequently a model will disclose a structural fault, or advantageously demonstrate architectural and engineering merits, that cannot well be brought out by blueprints. An interesting example of this form of work is afforded by a paper model of a 60,000-gal. water tank and 75-ft. steel tower built by an engineer connected with a Pennsylvania steel-construction company for the purpose of demonstrating certain principles to members of the drafting-room staff. The small replica is 32 in. high, the tank is 6 in. in diameter, and all other parts are as nearly proportionate as possible. Except for its wire bracing rods, the model is made entirely of heavy drawing paper. It will support a dry load of about 20 lb. without visible distortion. The steel tower and tank, of which it is a model, has been erected in Idaho.

Several vessels in our navy, now equipped with direct-connected turbines, are to be re-engined, the first being two destroyers, the "Henley" and the "Mayrant," which will be provided with geared turbine units.

CARELESSNESS AT GRADE

3716 CROSSINGS SHOWN

Chicago Tribune 12/27-1916
In view of all the agitation which has marked the safety-first movement in recent years it is rather surprising, to say the least, to find that of those persons who pass over grade railroad crossings probably one-half, or more, fail to look to the right or left before moving across the tracks. This estimate is based on the reported findings of investigators for the California Railway Commission. In observing the drivers of 17,000 motor vehicles it was found that over 69 per cent looked neither way before crossing railway tracks. Something over two per cent looked in one direction only, while the remainder, less than 28 per cent, looked both to the right and left. Of 6,300 pedestrians 49 per cent looked neither way and 15 per cent looked only one way. It is believed that these figures may be taken as fairly typical of the country as a whole. They indicate both the menace of the grade crossing and the need of educating both drivers and pedestrians to greater caution.

3213 AMERICAN STREET SHRINE OF CONCRETE BLOCKS

The site of a proposed church in Providence, R. I., is marked by a street shrine similar to

those to be found in many parts of Europe, except that it is more modern in construction. The material for both the walls and the two pillars which ornament the front is concrete blocks. The upper half of the door is glazed and through it can be seen images, candles, etc. On the front of the door is a brass plate having a slot through which offerings can be deposited.

WIDENED SWEDISH CANAL

CONVERTIBLE PICNIC

OUTFIT FOR AUTOS

3658 OPENED TO TRAFFIC
Commerce Reports 11/23/16

The Trolhättan Canal in Sweden, which was recently opened after being widened and deepened, is a part of the Göta Canal system that extends across the lower end of Sweden and connects Göteborg on the west with the Baltic Sea, at a point about 90 miles south of Stockholm. What has been done to the Trolhättan Canal calls to mind the fact that in recent years Sweden has been actively engaged in adapting many of her waterways, constructed years ago, to large modern vessels. In this way a stimulus has been given to manufacturing centers that are springing up in great numbers to utilize the electrical energy generated by the plentiful waterpower of the country. Trolhätta Falls, which is near the canal bearing similar name, is one of the greatest of these power producers.

STEEL HUMPS AT CROSSINGS
REGULATE TRAFFIC

In the center of Los Angeles street intersections, at which traffic officers are not stationed, hemispherical disks have been bolted to the pavement for the purpose of regulating vehicular travel and preventing corner cutting. A fine is provided by city ordinance for the motorist who fails to keep to the right of these "mushrooms" in piloting his car in the thoroughfares.

torists is so constructed that when it is open, it serves as a table that can be used either inside or outside the car. After the case has been set on edge and opened, a hinged white-enamel leaf can be drawn up into a horizontal position and held in place by two folding legs, thereby serving as a table top. Knives, forks, spoons, and plates are within easy reach in their respective racks in the upper half of the container, while in that portion of the case which acts as one of the supports for the leaf are cups, bottles in spring-held racks, a pickle jar, and a provision box. The case is strongly made of basswood, covered with enameled duck. A similar case, smaller in size, can be had with less elaborate equipment.

Giant Forest, a privately owned tract of mammoth trees in the heart of the Sequoia National Park, has recently been purchased by the government.

Left: Battery of Nine Boilers Installed on Field to Develop Steam with Which to Combat the Flames.
Right: The Heavy Iron Cap was Moved Forward by Horses and Placed over the Well, Snuffing the Blaze and Controlling the Flow

STEAM USED TO EXTINGUISH FLAMING GAS WELL

Milton A. Bangs, Winfield, Kan.

Nine boilers recently furnished a flow of steam used in extinguishing a burning gas well near Blackwell, Okla., which had been ignited by an electric spark. Ten days were spent by a large crew of men in mastering the fire and capping the well, which has a flow of

about 20,000,000 cu. ft. a day. When the steam had reduced the flames sufficiently to permit it, the iron cap—or "snuffer," as it is called in gas-field vernacular—was moved forward by horses and dropped into place over the roaring gasser, thus stopping the waste.

3557 "DAYLIGHT" LAMPS USED IN ART GALLERY

One of the largest installations of "daylight" incandescent lamps thus far

ing galleries is controlled by means of motor-operated louvres, while in the artificial lighting of the museum the use of "daylight" lamps serves to bring out the true color values of the paintings and art objects when the galleries are illuminated for inspection after dark. In order to get as near to natural daylight as possible 150-watt incandescent lamps of a suitable make are used with hooded

This Shows the Arrangement of the Hooded-Reflector "Daylight" Lamps between the Skylight and the Subskylight of the Cleveland Museum of Art

put into service is in successful operation in the new Museum of Art, in Cleveland, Ohio. The system gives a notable degree of control in the distribution of light, both artificial and natural. The admission of sunshine and daylight to the skylights over the paint-

1853 SANITARY CHIP BLOWER NEW DENTAL ACCESSORY

Hygiene preachments have brought about the invention of a dentist's blower which appears to be a real improvement over old types so far as the important question of sanitation is involved. Instead of taking in air through the nozzle, a special valve is provided

Germ-Laden Matter is Not Drawn into the Bulb, for, as Indicated, the Nozzle Has No Intake Valve

next the bulb and a double-acting one used in the tube, so germ-bearing saliva, blood, pus, and decayed matter cannot be drawn in. The instrument is of the usual pattern and, except for the features mentioned, is not dissimilar to those in general use. It is provided with two points and nozzles, so that one set can be sterilized while the other is in use.

3490 ———
SIMPLE FOLDING COT FOR MOTOR TOURISTS

One of the simple and very serviceable cots for use in connection with automobile touring consists of a frame of metal tubing, across which canvas is tightly stretched. The frame is provided with curved feet, which rest on the backs of the seats and are adjustable so that the cot can be used with

A Folding Cot Which Occupies Little Space in an Automobile: It is Adjustable to Cars of Various Lengths and Consists of a Frame of Metal Tubing over Which Canvas is Tightly Stretched

the front seat or elsewhere. A dust-proof bag is provided to cover it. Two of these cots can be used in a car at one time. If desired, they can be equipped with folding legs—a feature which makes them suitable to camp use.

3489 ———
EIGHT-SIDED BARN WITH FOLDING WINDMILL

An Iowa farmer is the proud possessor of a barn built in the shape of an octagon, or with eight sides instead of the customary four, and the barn is surmounted by a windmill of the vertical folding-blade type. At first sight the windmill structure looks like a water tank, especially when the blades

This Eight-Sided Iowa Barn is Topped by a Very Useful Windmill Which Does Many of the Chores

W. L. Thompson,
Gale, Ill.

are closed against the wind and folded into a cylinder. The power of the wind-mill is transmitted from the central shaft by beveled gearing to a line shaft on the floor of the barn, and used to run the silage cutter, wood saw, feed grinder, and other machines that make life easier on the farm.

3274

LOGGING CHUTE IS BUILT OF STEEL RAILS

Mr. B. Woods Malvern, Ark.

Between forest and mill, in an Arkansas lumbering district, a steep hill, which intercepts the route, presented an obstacle in the way of transporting logs expeditiously. The grade was too precipitous to permit mule teams and loaded wagons to pass down it. Instead, however, of meeting the difficulty with a chute of the usual character, one was constructed with

rails and ties. Four steel rails were laid parallel, about nine inches apart, the outer ones slightly elevated, and all of them inclined toward a common center to form a trough deep enough to prevent the logs from jumping out. This provided a slide which would not be reduced to splinters in a short time. A donkey engine was placed at the summit to help pull the logging wagons up the other side of the hill, while at the bottom and at one side of the chute a loading machine was installed to put the logs onto cars bound for the mill.

A two-reel movie has been prepared showing the United States marines in all phases of their daily work. It is announced that the film will be loaned free of charge to the theaters by the Marine Corps Recruiting Service, with a view to increasing enlistments.

BRITONS INSURED AGAINST

GERMAN AIR RAIDS

Official Journal of Patents 11-22-1
One of the recent developments of the European war is the establishment by the British government of a public insurance scheme, whereby any person who desires to insure his house or other property against the risks of air-craft raids or bombardment may do so, either through his local fire-insurance company or the War Risks Insurance Office in London. The premium rates are the same for all parts of the United Kingdom. Dwelling houses and their contents are insured against air craft at a rate equal to about \$1 for \$1,000, and against both air craft and bombardment at the rate of \$1.50. The premiums are 50 per cent higher in the case of business and manufacturing buildings or farming stocks. Unless the owner of property damaged in a raid is thus insured, no claim for damage will be entertained by the government, now that public insurance is in effect.

3551

ANGLE IRON USED FOR FENCE POSTS

Timber for fence posts being scarce and high in price, an Iowa farmer has met the difficulty by making his posts of angle iron.

End posts for the fences on his farm are made of two pieces of angle iron, placed together and set in cement so that they form a trough-shaped post. The uprights are held together by several crosspieces of strap iron, riveted across the back of the post at intervals of about 2 ft. To make the

tightening of the fence easy, cross-bolts are made to turn in their holes and the square heads are caught by latches after the wires are tightened. One piece of angle iron suffices for all other posts besides the end posts. The wires are fastened by short pieces of wire tied into small holes.

Geneva, N. Y.
 First Known Derailment of a Train by an Automobile: This Picture was Taken at Night, by the Aid of an Acetylene Torch, Before the Wreckage was Disturbed. The Collision Occurred Several Hundred Feet beyond the Auto Light, Seen in the Distance; the Rail Which Caused the Derailment Lies Ahead of the Engine

LOCOMOTIVE DERAILED IN AUTO ACCIDENT

The locomotive, tender, and one car of a passenger train on the Lehigh Valley Railroad were derailed in a recent collision with a speeding automobile at a crossing near Geneva, N. Y. The derailment was caused by part of the wrecked car becoming jammed in the frog of a switch, and the engine then plowed its way along an embankment, carrying the wreck of the automobile and a broken rail along with it, until it finally toppled over on its side. Three men were badly hurt, including

the owner of the auto, his chauffeur, and the baggageman of the train. The chauffeur died of his injuries soon after. So far as is known, this is the first case of derailment of a train by an automobile.

3639 — LONGEST RAILWAY TUNNEL IN NORTH AMERICA

The Connaught Tunnel, driven through the Selkirk Mountains in British Columbia, on the line of the Canadian Pacific Railway, was opened for traffic on December 9, and is the longest railway tunnel on the North

American continent. It is exactly 26,400 ft., or five miles, long and carries a double-track line. It shortens the rail route by 4.3 miles, reduces the elevation of the track through the mountain pass by 552 ft., eliminates $4\frac{1}{2}$ miles of snowsheds, and cuts out curves to the extent of seven complete circles. The cost was \$5,500,000, including a ventilating system. Work was started on the main bore Jan. 15, 1914, from both ends. The headings met and passage through the tunnel

was effected Dec. 19, 1915, making a new North American record for rapid work of this character. The tunnel passes under Mount Macdonald, which towers to a height of 6,000 ft. above the new railway grade.

3760 ROARING MOUNTAIN TORRENT GRAVEYARD OF MOTOR CARS

Albert K. Dawson & Brown + Dawson, Stamford Conn
NO story in contemporary history is more replete with dramatic incidents than that of the passage of King Peter and his countrymen into exile, when Serbia's little army gave way before the overwhelming onslaughts of the Germanic hordes. One of the many spectacular episodes that marked this tragic flight across the mountains is narrated by a correspondent who reached the scene of its enactment, in company with the Bulgarian forces, a fortnight later. It is the account of the last of the Serbian war autos; a description of their abandonment and destruction at the end of a road where many refugees began their exhausting climb along the hazardous trails leading into Albania.

Leaving the last city in the line of retreat, touring cars, limousines, trucks, and ambulances were driven along a road that hugs the brink of a precipice as it follows the course of a roaring torrent through the mountain recesses. The opposite side of this road is sealed by almost perpendicular walls of rock. For several miles it proceeds thus, a splendid, picturesque highway. Then abruptly it stops at the foot of a narrow, steep path that wends up the cliff.

When the motor cars reached the end of this road they were no longer of use to the Serbs. Obviously there was but one thing to be done, and that was to destroy the machines so that

they would not fall into the hands of the enemy. So, one by one, their wheels spinning and their unbridled engines roaring as they leaped through the air, the cars were shot over the edge of the rocky bank to dash themselves against the boulders far below. In all some 300 vehicles made this death plunge.

As a car reached a point near the end of the pass and was relieved of its load, the chauffeur turned its wheels toward the precipice, raced the motor, got out, released the brakes, threw in the clutch, and stepped to one side. Over the wall went the machine, making a flying leap out into the air. Then, turning nose down, it fell like a rocket, struck, and flopped end over end, bursting into flames or diving into the water.

When the Bulgarians arrived two weeks later they found the charred and twisted remains of scores of cars strewn along the rock-set bed of the mountain stream. Here and there they were able to recover a tire or two, now and then an uninjured wheel or appliance, and in one instance a fine French limousine that in some strange manner was but slightly damaged. For the most part, however, they found nothing worth salvaging. As the machines had struck the rocks head first, the motors had been demolished. Then as they "pinwheeled" on toward the water, hitting first on one end and then on the other, the tires had burst.

The End of the Road; The Graveyard of the Serbian War Autos is Illustrated by the Picture Above, Which was Drawn from Sketches and Information Supplied by a Correspondent Who Reached This Point in the Mountains with the Bulgarian Forces Two Weeks After the Serbians had Passed It on Their Flight into Albania. It Shows How the Refugees and the Retreating Army Destroyed Their Motor Cars That They might Not Fall into the Hands of the Enemy

HOIST FOR UNLOADING

3597 STREET CARS

A special hoist has been erected by the Detroit United Railway which makes the unloading of street cars from a freight train a comparatively simple task for two men. Without means of this sort a large crew would be required to do the work. The hoist is built over a sidetrack and consists of a strong wooden framework that supports motor-driven right and left-hand drums, around which four lifting chains are wound. After a street car to be unloaded has been moved into place beneath the hoisting apparatus, a heavy beam is placed under each end and

attached to the lifting chains. When the load has been raised free of the flat car the latter can be withdrawn and the street car lowered to the tracks. The hoist is also employed in loading rolling stock and handling ma-

MOTOR HORSE TRAVELS FAST ON SNOW OR ICE

When a North Dakota inventor hitches up his "motor horse," he enjoys a sensation altogether unusual. It was first driven about the streets of Grand Forks and consists essentially of a motor wheel pivoted between a pair of sleigh runners, the rim of the wheel being equipped with studs, or spikes, which furnish rapid traction on either snow or ice. The driver may stand on skis or be seated on a sled or toboggan from 12 to 15 ft. behind the "horse," being drawn along by two ropes, while other lines serve for starting, stopping, steering, and regulating the speed. The complete machine weighs 51 lb. A special gasoline motor is built within and geared directly to the driv-

ing wheel. At one time a distance of 103 miles through deep snow was covered in 3 hr. 12 min. with the driver on skis. Under more favorable conditions much greater speeds have been attained.

H. A. Jonset (I.N.V.)

Box 72

Grand Forks

N.D.

With This "Motor Horse" the Driver has Traveled as Fast as 40 Miles an Hour on Skis, as Seen in the Picture. The Motor is Concealed in the Studded Wheel and Controlled by Lines in the Driver's Hands, Attached to a Lever, as Shown. The Other Lines Serve for Towing

ART GALLERY BUILT LIKE BIG STEEL BRIDGE

New Addition to the Chicago Art Institute, Which Extends across Several Railroad Tracks and Has a Framework Very Much Like a Steel Bridge

An addition recently made to the Art Institute of Chicago constitutes a most unusual art gallery because of the fact that it is really a big inclosed steel bridge spanning a sunken railway right of way. The institute is a symmetrical two-story building in Grant Park, standing close to Michigan Avenue, and at the rear abutting on the sunken tracks of the Illinois Central Railroad. Increasing congestion in the galleries finally made expansion imperative, but an addition could not be erected at either side of the institute without marring its architectural symmetry. In spite of the railway tracks, expansion at the rear was

the most feasible way of gaining more space. Consequently what is virtually a steel bridge was erected across the sunken area. It is 240 ft. long, 50 ft. wide, and two stories high, and cost \$280,000. The addition was an expensive

View of the Sculpture Gallery on the First Floor of the Bridgelike Addition. This Floor is Lighted by Frosted Windows Overlooking the Railway Tracks. The New Section Is 240 Feet Long and 50 Feet Wide

one to construct because its weight had to be supported entirely at the two ends and by a single pier in the center. This involved the sinking of caissons to hardpan, to a depth of approximately 90 ft., so as to minimize the vibrations caused by the passing of trains underneath. The extension increases the gallery space of the institute 40 per cent. Each floor is directly connected with a corresponding level in the main building. The first story is devoted to sculpture and the second to painting. The former is lighted from the sides by sets of double windows, the inner and outer windows being set far enough apart to allow the slanting side beams of the bridgelike frame to pass between them. The glass is frosted to exclude the view of the tracks beneath. The pictures in the upper galleries are finely illuminated by skylights. A feature of the structure is the heating system of the second story, which includes numerous big radiators placed in the loft just under the glass roof.

A Portion of the Loft under the Glass Roof, Showing the Radiators Which Are Part of the Novel Heating System

WORLD WIRELESS SYSTEM BUILT BY INVENTOR

The recently completed wireless station at Funabashi, Japan, is not, as many suppose, part of a government project. The big towers were built as a unit of the Marconi around-the-world system, a private enterprise which has gone far to make wireless a vital as well as convenient factor in international communication. The unusual photographs of the Hawaiian stations, reproduced in the February issue of this magazine, were published by courtesy of the Marconi Company.

ice of the Connecticut River. By attaching a sleigh runner and a seat to the motorcycle, in place of the familiar sidecar, an ideal vehicle for the ice was evolved, and a speed of 50 miles an hour was made with ease, carrying a passenger in the side seat.

3750

PORTABLE METAL BUFFER DRIVEN BY ELECTRICITY

The manual labor involved in polishing fittings, or ornamentations, of brass or other metal can be reduced to

a minimum and considerable time can be saved by using an electrically operated polisher and buffer. The outfit is particularly serviceable in office buildings, hotels, on shipboard, etc. It comprises a 1/4-hp. motor attached

to a leather harness so that it can be carried on the back like a knapsack. Current is obtained through a lamp cord that can be connected with any near-by light socket. The motor drives a 5-ft. flexible shafting, to the end of which either a buffer or emery wheel can be fastened, according to the nature of the work in hand.

CANADA TEARS UP RAILS

FOR ALLIES' USE

One of the numerous ways in which Canada has shown its readiness to meet emergencies created by the war, is in tearing up long sections of railway track in the Dominion, to provide the allied forces on the western front in Europe with needed transportation lines. The plan for collecting the rails, as reported from Ottawa, contemplated the removal of some 300 miles of government-railroad sidings in the East and also long stretches of track

between Edmonton and the Pacific coast where two railways run parallel, the traffic of both lines to be accommodated on the remaining route. The plan, it was said, owed its origin to the British government, which intimated that prompt action of this kind would probably save thousands of lives, and that new rails could not be obtained because of the demand for steel in making munitions. It was estimated in Ottawa that over 1,000 miles of Canadian track would be torn up in response to the appeal.

REAR SIGNAL FOR AUTOS WORKS AUTOMATICALLY

Automobile owners will be especially interested in a recently invented signal device for cars because it operates entirely automatically and is of simple construction. It consists of a small red semaphore bearing the word "Stop," which is normally concealed behind the tail light and rear license number. It

is connected by a flexible cable and a lever with the rod that operates the brake and the instant pressure is applied to the brake pedal—whether the driver intends to slow down or to stop—the semaphore automatically swings up into a horizontal position, in full view of those at the rear. Thus no special thought or movement is required of the driver. When the brake is released the arm drops out of sight. At night the translucent celluloid letters on the signal are lighted by a flash light, which makes them visible for a distance of 200 feet.

CA slide rule, with slides of various sorts that are interchangeable, is now made of white celluloid impregnated with aluminum, giving it a smooth finish not affected by changes of weather.

NATION PAYS FINAL TRIBUTE TO ADMIRAL DEWEY

AMID honors equaled on but few occasions in the country's history, the Admiral of the Navy, George Dewey, hero of Manila, was laid to rest at Arlington, January 20, last. Following a private service at the Dewey residence, the casket was borne under escort of the entire brigade of midshipmen to the Capitol, where it was placed in the rotunda during a simple ceremony which was without an oration. A salute of 19 guns was fired at Fort Myer as the caisson carrying the casket entered the cemetery. When the reading of the service ended, a squad of midshipmen fired three volleys. Taps was blown, and the guns again saluted. The picture above shows the casket being borne down the Capitol steps, while that below was taken as the flag-draped caisson turned into Fifteenth Street from Pennsylvania Avenue on the way to Arlington.

MOTORCYCLE TRANSFORMED 3772 INTO A SLEIGH

One of the neatest of the many methods of using the motorcycle on

Motor Sleigh Contrived by an Inventive Canadian When the Snow Was Too Deep to Run His Motorcycle: A Neat Arrangement of Runners Bolted to the Bare Rims

snowy roads in winter has been devised by a resident of Galt, Ont. He removed the rubber tires from the front wheel of his machine and from the wheel of the attached sidecar, then fitted a shapely runner under each of these wheels and bolted it to the rim. The rubber tire was left on the rear wheel of the motorcycle, for driving purposes, the front runner making a track for the tire. The machine made good progress in a foot of snow.

WHALE MEAT SELLS READILY IN WESTERN COAST CITY

Fresh whale meat is being sold in the markets at Los Angeles, while at Long Beach a fish cannery is preparing and packing it for general consumption. This is the first time, so far as can be learned, that the flesh of the whale has been introduced for the American table. In Japan, however, it forms an important part of the diet for the poorer classes, and in New Zealand large quantities of it are canned for South Sea islanders. A humpback whale will yield as much as 80,000 lb. of meat, in addition to blubber, oil, and bone. The flesh is of coarse grain, and when prepared, has a distinctive flavor that is somewhat similar to that of venison. But besides being palatable, 98 per cent of the material it contains is digestible, a ratio that is seven per cent higher than ordinary beef. The aversion which persons in this country usually manifest when attempts are made to encourage the consumption of things known domestically but not popularly looked upon as foods, has not been experienced in California with whale meat. A few weeks ago, five tons of the meat was retailed in Los Angeles at 14 cents a pound.

3741 FEEDER FOR MOTHERLESS LITTER OF PIGS

The rather difficult problem of feeding a litter of little pigs whose mother

ingenious feeder consisting of a strong wooden rack which holds nine long-

A Chicago Fresh-Air Sanitarium for Babies, Equipped with Woven-Wire Baskets Designed Especially for This Institution. Left, One of the Baskets, Showing How It is Supported. It is Light, Open to the Air, can be Thoroughly Cleansed, and will Not Tip Over Easily

SANITARY WIRE CRADLES FOR BABIES' SANITARIUM

A fresh-air sanitarium in Chicago, where many hundred babies are cared for each summer, has been equipped with cradles designed especially to meet the sanitarium's demand for children's beds that would be light, open to the air, durable, comparatively inexpensive, and capable of being washed thoroughly; that would not tip over easily, and could be stored in a small space. The article finally selected as meeting all these requirements is a woven-wire basket, having high flaring sides, which is suspended by ropes from two posts like a hammock. The beds are finished so that there are no sharp edges or corners on which the little occupants can scratch themselves. In the course of the season many babies occupy the same basket, hence, as often as desired, all the clothing is removed and the wire framework thoroughly cleansed. When not in use, the cradles are removed from their supports and nested into compact stacks. These beds are now being made for use in the home also, and if desired are provided with woven-wire lids that clamp over the tops.

TIGHT SWIVEL COUPLING FOR HOSE

The kinking and twisting which is often so annoying in handling hose and so injurious to the tubing, may be eliminated by use of a patented swivel coupling now on the market. A feature of the invention is that the higher the pressure of the air, water, or steam passing through it, the tighter the joint becomes. The coupling consists of two sets of tubular parts provided with circular members, having lugs and notches, placed radially in such a way that after one tube has been inserted into the other a slight turn will serve to lock them together, without, however, interfering with the swivel action. The parts which lock together are held in place by a coil spring so that they will not accidentally come apart. To disengage the coupling a spring-held sleeve is drawn back and the interlocking members are given a twist. The coupling is provided with special clamps for the hose.

AUTO WHEELS CHANGED FOR 3674 DRIVING IN SNOW

A New Hampshire motorist devised a new plan of running his automobile

Copyright, International Film Service, Inc.
This Novel Grouping of Automobile Wheels, with Chains around Them and Sleigh Runners in Front, Prevented the Car from Sinking into Deep Snow and Made Winter Driving Possible in New Hampshire

during the winter, when he found it difficult with the ordinary arrangement of wheels to plow through the deep snow. He removed the front wheels of his car and set them farther back under the chassis, just in front of the rear wheels, then ran a set of chains around each pair of tandem wheels. A pair of steel sleigh runners, set in the place of the front wheels and connected with the steering gear, completed the arrangement, with which an average speed of 24 miles an hour was made over the winter roads.

3748 — NEW GAME STIMULATES INTEREST IN ALGEBRA

A card game resembling dominoes has been devised by a school superintendent in Clarendon, Ark., which develops in the players alertness in solving simple algebraic problems. The players in turn lay down numbered cards on the table so that at least one number on the newly placed card matches the number on the end of the row already in position. In calculating the score algebraic operations are necessary, for some numbers are positive and some negative.

BAD ACCIDENT SERVES AS WARNING TO KITE FLIERS

That a cotton string may serve as a conductor of electricity, thus making kite flying in the vicinity of high-tension wires a dangerous pastime, is one of the lessons to be learned from the nearly fatal experience of a railroad employe at Burton, Kan. The man was trying to measure the distance by which a certain high-tension line cleared the railroad tracks. He tied a small stone to a cotton string, which he supposed was a nonconductor, and tossed it up over the wire that carried 60,000

volts. The shock he instantly received rendered him unconscious and in the 40 minutes which passed before he was revived he seemed wholly paralyzed. The current left a deep burn on his hand and a lighter one on his forearm. In passing from his body it severely burned his toes and heels and the sides of his feet.

HOLDER FOR CROSSED 3674 FLAGS

A convenient holder for crossed flags, which is very serviceable as an aid in

decorating with national emblems, bunting, etc., is made of a strip of metal folded over at the center so that the two halves lie at right angles to one another. The ends are looped to receive the flagstaves. The device can be fastened in place with one or more screws or nails.

ICE-SKATING RINK OPENED FOR CALIFORNIANS

Skating, by far the most favored of the winter sports, has been introduced in southern California where there are thousands of persons who have never seen ice except in refrigerators and delivery wagons. At Los Angeles a large inclosed rink has lately been opened to the public and is rapidly be-

coming one of the popular places of recreation. To tourists who are escaping the cold of the North, the chance to use ice skates without exposing themselves to severe weather is a new and welcome experience, while to permanent California residents who have never before had a chance to glide and whirl over smooth ice, the institution is a novelty. The rink is 65 by 210 ft. in size.

TRACTOR SNOWPLOW AND STREET GRADER

By a combination of two machines owned by the South Park Commissioners of Chicago, Michigan Avenue and other thoroughfares were rapidly cleared after each heavy snowfall of the passing winter. The first was a motor snowplow, small, compact, and

sturdy, the tractor being of the electric industrial variety now widely used in handling freight. To this was attached as a trailer a street-grading machine, usually drawn by horses, which widened the path cleared by the snow-plow and left a flat smooth surface on the avenue for the automobile traffic which crowds it daily. Two men operated the combined machines, the idea being evolved in the park-board shops.

Inw. E.A. Holland, 226 W 52d, New York

able. The body, which is 46 in. in length and width and 40 in. high, is made of sheet iron, japanned to match the finish of the car with which it is used. It is attached to the rear axle of a machine by means of curved shafts which are supplied with a knuckle joint so that they may be raised or lowered to meet varying conditions. The trailer is supplied without interior fittings when desired. Especially for motor tourists, however, it is equipped with a stove, tent, combination bed and table, drawers, and tanks. Detachable wire baskets designed to be attached at the top and sides are provided if wished.

3817
**RISK POLICY "GUARANTEES"
 FAIR WEATHER**

An out-of-the-ordinary policy, which Lloyd's of London recently issued, guaranteed to reimburse the owners of costly floats and others in Pasadena, Calif., if it rained on the dates of the city's rose tournament. The sum of \$23,000 was to be paid by the British association if as much as $\frac{1}{4}$ in. of rain fell during the hours specified. The premium was \$1,000. Though there was a slight drizzle on one of the days in question it was less than the stipulated minimum. Weather reports for the past 30 years were used by the insurers in calculating their risk.

3540
**MAKING A DAM FOUNDATION
 WATER-TIGHT**

In building a huge dam for the improvement of the city water system of

Worcester, Mass., special precautions were taken to make an underlying ledge of hard granite water-tight, the ledge being more or less broken up by fissures, due to the pressure of a near-by hill. After excavations were made to a foundation apparently sound, steam drills were used to test the ledge from 25 to 30 ft. below the bottom of the excavation. Through the drill holes water was forced at a pressure of 60 lb. to determine if any seams were crossed by the holes. If any of the water escaped, a cement grout of thin mixture was forced into the holes by a

grouting machine under 90-lb. pressure, until the seams and fissures accepted no more. This practically insured the water-tightness of the foundation. In some places the drill holes were carried to a depth of over 70 feet, but fortunately none of the holes ac-

cepted more than about one barrel of cement. The masonry section of the dam is to be 375 ft. long and the whole length, including end sections of earth embankment with masonry-core walls,

In the Center of This Picture Workmen are Seen Applying a Water-Pressure Test to the Granite-Ledge Foundation for a Big Dam, before Forcing a Cement Grout into the Drill Holes, to Fill Seams and Fissures through the Two-Inch Pipes Seen in the Holes

will be 850 ft. It will be 120 ft. in maximum height, 80 ft. thick at the base, and 17 ft. wide at the top, with a longitudinal inspection gallery. The dam will impound 3,000,000,000 gal. of water, thus doubling the storage capacity of the city's gravity supply system.

3212
**CONCRETING DITCHES TO
 CONSERVE THE FIELDS**

In spite of the fact that the first cost is considerable, it has been found profitable to line drainage ditches on certain types of farms with concrete walls, thereby immediately putting a stop to the gradual widening of the water-courses which takes place with each succeeding flood, and preventing the formation of numerous small tributaries. These permanent walls soon pay back much of their cost, particularly where the land is valuable, by permitting the farmer to till right up to the

edge of the ditch, which, if not walled, might have a wide-spreading border of marsh on both sides. The manner of putting in this reinforcing varies with local needs. A common way is to make the course V-shaped, bringing the walls just up to the level of the field and making them several inches thicker at the bottom than at the top. In the ditch of this character shown in the illustration, the dirt bed is but 6 in. wide, while at the top the walls are 6 ft. apart. Another way is to make the sides almost vertical, with the bottom composed of cobblestones, set in concrete. In regions subjected to long dry

A Ditch with a Cobblestone Bottom and Almost Perpendicular Walls is Shown at the Left.

spells, followed by torrential rains, whole communities sometimes find it profitable to cooperate in constructing artificial courses that are almost as big as canals. An example of a California ditch of this character is shown here, which is 5 ft. deep and has walls 18 in. thick at their lower edges. The bottom is paved with cobblestones and concrete.

ATTEMPTED THEFT OF MOTOR CAR SCREAMED BY SIREN

Motor-car thefts have become so alarmingly common that inventors the nation over have turned their attention to the development of devices for the protection of automobiles. One of the most recent of these contrivances is an extremely loud whistle which is blown by exhaust gases of an engine and controlled by a valve mechanism which, when either open or closed, is locked. The sound of

the nation over have turned their attention to the development of devices for the protection of automobiles. One of the most recent of these

contrivances is an extremely loud whistle which is blown by exhaust gases of an engine and controlled by a valve mechanism which, when either open or closed, is locked. The sound of

the siren is distinctive, and the moment the engine is started its scream can be heard blocks away. It can be silenced only by stopping the motor or closing the valve with the key made for it.

3733 —

JAPAN'S RAILWAY GAUGE MAY BE CHANGED

When the railways of Japan were first planned, the narrow gauge of 3 ft. 6 in. was selected for them, because it was cheapest to build and equip and was thought best suited to the country's narrow highways and steep grades. Now the 6,000 miles of Japanese railways, all of narrow gauge, are found to be sadly behind the times, and a movement is on foot to rebuild them to standard gauge, although the cost is estimated at nearly \$450,000,000. At present the trains are slow, the fastest expresses making less than 30 miles an hour, the coaches are low and narrow, and the sleeping cars are cramped and inconvenient; while most of the railway inventions of other nations cannot be used because of the difference in track gauge and size of cars. The director of the imperial railways favors the change, in spite of the cost, and estimates that the main Tokaido line could be converted to broad gauge in 12 years and the other

lines on the main island of Japan within 25 years. The tracks and stations would have to be rebuilt, tunnels widened, and new rolling stock provided; but according to the government director there would be little interruption of traffic. Many business men of the empire oppose the change.

3675

IMPROVED PLOW MAKES UNIFORM FURROWS

By a recent improvement in the construction of plows it is claimed that a remarkably uniform turning of the sod is effected and the plowshare is adjusted automatically when it meets with obstructions. A resident of Janesville, Wis., is the inventor of the new adjusting mechanism. This supports the plowshare flexibly, permits of the regulation of its position by a handle lever, and also allows the plow point to spring back and rise over an obstruction, instead of breaking against it. The plow may be equipped with two shares, which will turn double furrows and do the work in half the time required otherwise. The mechanism is practically self-leveling, there being no adjustments other than the rocking of the front bail to vary the depth of the plow. Thus a level furrow bottom is produced as well as a uniform furrow. Uniformity is insured by a peculiar outward twist, or curve, given to the upper portion or wing of the plowshare, which causes the soil of the furrow to turn over completely, and loosens it up.

These Photographs Show the Evenness and Level Character of the Furrows Made by a New Plow That Works Equally Well When Drawn by Horses or by a Tractor

**STEEP INCLINE NEGOTIATED
 EASILY BY MOTORCYCLE**

During a home-week celebration at Walla Walla, Wash., some time ago, a motor-car dealer erected an incline in

Not Only did a Motorcycle Climb This Incline, but Also It Jumped over the Cornice and Plunged through a Skylight in the Roof Beyond, Shown in the View at the Left

front of his salesroom for the purpose of demonstrating the hill-climbing abilities of certain automobiles. The slanting driveway was extended from the sidewalk curb to the cornice of the one-story building at an angle of about 45 degrees. After several machines had failed in an attempt to reach the top of the incline, a young motorcyclist resolved to try the feat. His machine proved to be even more powerful than he believed. Becoming somewhat confused, he failed to stop the engine at the point he had planned, and instead of dismounting at the top of the incline, he rode entirely over the cornice and part way across the roof of the building. He managed to slide off the seat just in time to escape accompanying the motorcycle as it plunged through a skylight into the salesroom below.

As the result of a canvass of the makers of news-print paper on this continent as to their 1917 plans, it is declared that the proposed increased output of this paper will amount to only 600 tons per day. This would still leave a daily shortage of 300 tons.

**CHINESE BRASS COINS ARE
 MELTED FOR COPPER**

Recent reports from China indicated that a serious monetary situation was developing, due to the enormous export of brass "cash," the coins with square holes in the center that have been the basis of all trade in the interior of China for many generations. The export demand was due to the war-time rise in the price of copper, rendering these brass coins, which usually contain about 89 per cent of copper, more valuable as metal than as a medium of exchange. For some months over 6,000 tons of the coins were exported monthly to Japan alone, where the copper was extracted and shipped, it is said, to the United States. The business was profitable, as the cash were bought in China for about \$12.50 gold per picul of 133 1/3 lb. and were valued in Japan at the equivalent of \$15 gold. The export continues and while there is an enormous quantity of such coins in China the number of cash in circulation at various points in the interior is already far below the requirements of the population, and difficulty is said to be experienced in carrying on ordinary trade.

NEW DIRECTION-FINDING WIRELESS RECEIVER

About 500 feet of wire, strung round a square wooden frame made of boards, and 20 switches by which portions of the wire can be "cut in" or "cut out"—this constitutes the new wireless receiving apparatus with which experimenters in the electrical department of Union College, Schenectady, N. Y., are said to have been able to receive messages during violent storms, and determine the direction from which they come. The wireless waves are received by the wires on this frame just as they are received by antennæ high in the air. They are then transmitted to tuning devices and a telephone receiver in the usual manner. It has been found that by turning the frame about until its axis is in line with the direction of the sending station, the signals are heard most distinctly. This direction-finding fea-

ture, it is believed, will prove of great value in many ways, particularly in cases where several stations are simultaneously signaling one operator, who, to avoid confusion, desires to accentuate one message over another. The

View in an Electrical Laboratory of Union College, Showing the Big Square Wireless Receiving Apparatus Which Operates Regardless of Weather Conditions and with Which can be Determined the Direction from Which a Message Comes

improvement represents an application of certain principles of wireless telegraphy already well known, rather than the discovery of something entirely new.

POLICE CLUB SERVES AS EXTENSION FOR PISTOL

A policeman's club, which is so made that it can also be used as an extension to a pistol barrel, thereby changing the latter into a sort of rifle, has been invented by the sheriff of Alameda County, Calif. The extension has the

HORSE DENTIST'S "PARLOR" OPENED IN PHILADELPHIA

An establishment known as a horse dentist's "parlor" has been opened in Philadelphia, indicating that another specialized task has been added to the already long list of professions dealing with physical ills. The man in charge seeks to do for horses' teeth many of the things that regular dentists do for human teeth. If grain is lodged in a cavity or between a horse's grinders, a double-action pump is employed to force the foreign substance out. When a tooth is badly decayed it is extracted with big forceps. As yet this specialist does not attempt to fill horses' teeth, but in many cases he cleans them periodically. It is pointed out that one in this profession not only does acts of mercy by treating animals' teeth but

he also restores the beasts to a condition in which they can render better service.

3727 —
**TIDES BUILD UP LAND AT
ROCKAWAY POINT**

A chart of Jamaica Bay, N. Y., near the southwestern end of Long Island, has recently been issued by the Coast and Geodetic Survey, which shows marked changes in shore line that the tides and currents have wrought in the past three-quarters of a century. From 1836 to 1908 Rockaway Point advanced westward more than three miles. Since the latter date the action of the ocean seems to have been confined to consolidating the new territory. With the aid of engineers the resorts in the region have taken profitable advantage of the work of nature and have reclaimed much land. The retarding of the "natural growth" of the point is due, it has been found, to the fact that the shore line now approaches close to the deep-water channel. The chart is particularly for yachtsmen and motor-boat owners.

New York Police Officers Learning to Use Wireless Telegraphy in the Police Training School: Note the Instruction Diagrams on Walls and Blackboards and the Sending Apparatus in the Foreground

POLICE OFFICERS TAUGHT USE OF WIRELESS

Instruction in wireless telegraphy is given in one of the classes of the New York Police Department training school, and a wireless apparatus has been set up at headquarters. This is now working with stations in and around New York Harbor and is to be connected with a system of stations in the city. A number of private wireless plants have been placed at the service of the department for emergency work. Motorcycle couriers will carry messages from these plants to the district and precinct offices. There are eight certified wireless operators now on the force and 16 others are under instruction at the training school.

CA Mexican choir and an American choir, standing on opposite sides of the international boundary at Eagle Pass, Tex., on Christmas Eve, alternately sang stanzas of a hymn appropriate to the season.

ADJUSTABLE NONSLIP³³⁷⁵ DEVICE FOR CRUTCH

An attachment has been devised for a crutch, which can be quickly brought into use on slippery walks or pavements, whereas it need not be employed indoors or on other surfaces offering a firm footing. It consists of a sharp-pointed rod that is conveniently fastened to the side of the crutch so that a spring-held handle can be operated by the fingers without the wearer removing his hand from his crutch. By giving the handle a slight turn the rod is released and the point drops down far enough to strike the pavement.

CRUISER AND SUBMARINE GO AGROUND ON BAR

COPYRIGHT, INTERNATIONAL FILM SERVICE

WHILE attempting to salvage the submarine "H-3," which struck a fog-hidden shoal off Eureka, California, last December, the cruiser "Milwaukee," flagship of the Pacific fleet's destroyer force, recently foundered. The "H-3," with two other under-sea fighters and its mother ship, the "Cheyenne," was proceeding from Puget Sound to winter quarters at Mare Island when it went aground near the entrance to Humboldt Bay. For eight hours it was battered by heavy breakers and driven shoreward. Members of its crew, consisting of two officers and 25 men, were buffeted menacingly, but none was seriously injured and all were saved when coast guards after heroic work made fast a breeches-buoy line to the diver. Just a month later the naval career of the "Milwaukee" ended when a heavy current carried the ship onto the same treacherous shoal during a fog. A contributing cause of this disaster was a heavy cable that harnessed the "Milwaukee" to the submarine it had been trying to drag into deep water. Above: ill-fated vessels in breakers; below, rescued submarine crew drying clothes.

accompanying illustration is to be found in what is called the pipe cellar of a filtration plant in Trenton, N. J. The room containing these crossing and intersecting tubes is about 200 feet long. This unusual photograph was secured with the aid of a mirror measuring 7 by 10 in. It was so placed that it cast a bright beam of sunlight down the full length of the passageway.

ⒸThe waste bark which remains after the tannin has been extracted from it for leather work is now being used partly to replace expensive rag stock in the manufacture of felt roofing.

HOW IMPROPER COOLING AFFECTS STEEL RAILS

In an investigation which a consulting engineer for an eastern railway has

reported on to the American Railway Engineering Association concerning the conditions producing transverse fissures in the head of rails, the fact is brought out that in winter the low temperature in which rails are cooled in the mill after rolling apparently is one of the factors which produces hidden defects. It is shown that if some rails are allowed to stand longer than others they are liable to be chilled, and so frequently develop imperfections. The investigation shows, further, that in cooling rails on hot beds often insufficient attention is given to spacing them.

When the rails are placed close together those in the center of the group are affected by the heat of adjacent rails and so acquire an excessive curve in cooling. Such irregular ones require several blows of the hammer used to straighten them out. On the other hand, if the rails are set some distance apart, say, 6 in., they are free from contact with each other and they cool nearly straight. Hence they require only a few light blows to perfect their shape and so are less subject to defects.

LONG, FLOATING RAILROAD BRIDGE ACROSS CANAL

At Paraiso, a point about two miles northwest of Miraflores, a swinging pontoon bridge carries the Panama Railway across Gailard Cut to the west side of the canal where military posts are situated. So that they would not infringe upon the width of the channel,

the abutments for the approaches were established in pockets excavated in the

The Picture Above, Taken While the Construction Work Was Still in Progress, Shows the Long Pontoon and Trestle Drawn along One Side of the Canal

The Floating Bridge Accommodates Railway Traffic between Opposite Banks of the Canal at Paraiso. When Opened, It is Swung Out of the Channel into a Recess

sides of the waterway, while on the east bank a long recess was dug to receive the bridge when open. This harbor extends south

Earl J. Browne, Major, Corps of Engineers, U.S.A.
1709 G St. Wash., D.C.

of the abutments. Since the bridge is pivoted at the northeast corner, it can thus be swung entirely out of the channel when opened. The pontoon is 378 ft. in length and has a width of 55 ft. It is constructed of heavy timbers, fitted with six longitudinal bulkheads, and supplied with a pumping system for discharging bilge water. The deck, which has a sheathing of 4 by 10-in. timbers, calked, is surfaced with asphalt. An apron, 65 ft. long and weighing 150,000 lb., is hinged at each end of the trestle to effect a rail connection with the piers. These members are raised when the bridge is moved, and when lowered for use are locked in place in such a manner that they are held against vertical and lateral movement. A so-called "wild-cat" wheel and chain, installed at the outer end of the structure, permit the bridge to be opened or closed readily when the operating motors are started by the attendants.

CONVENIENT HOUSE BOAT USED ALL YEAR ROUND

A very attractive house boat has been constructed by a resident of Medford, Mass. for use the year round, which is patterned after craft to be found on the Thames River in England.

It is 42 ft. long, 17 ft. wide, and draws 14 in. of water. On the lower deck are six rooms, one of which is a sun parlor, and a bath. On the upper deck are two sleeping rooms and a wide veranda. The boat is electrically lighted, current being generated for storage batteries with the aid of a gasoline engine. This engine also pumps water for the water system. In cold weather the rooms are warmed by steam heat. All of the rooms have beamed ceilings and are tastefully furnished in mission style. The walls are of fiber board.

2842

BUILDS PIPE ORGAN FOR HIS OWN HOME

By rebuilding and adding to an old organ which he purchased from a church in his town, a musician in Girard, Kan. has equipped his home with a pipe organ of excellent quality and pleasing appearance. The old instrument had but one set of keys and its pump was operated by hand. The purchaser built a number of large pipes and a set of pedals, which are played in the same way as keys, and added them to the instrument, that now occupies a prominent place in his living room. In the kitchen a neat cabinet was built to contain a 1/20-hp.

Eight-Room House Boat, Patterned after English Craft, Which is Electrically Lighted, and Steam-Heated

✓ Geo. A. Pennman
Medford, Mass.
(Bldr & Owner)

Motor and Homemade Bellows Installed in a Cabinet in the Kitchen, Which Supply the Organ with Air

motor and the bellows by which the organ is supplied with air. The motor operates two large bellows that force the air into two supplementary bellows instead of directly into the organ. These secondary air chambers are under pressure and serve to maintain a steadier air supply for the pipes. Much ingenuity was shown in making the additional parts and in adding them to the reconstructed organ, which has the appearance of a factory-made instrument.

3291—

DANCE TICKET PREVENTS ERRORS BY PARTNERS

A dance ticket, or tabulator, has been designed, the purpose of which is to prevent confusion in claiming partners at a ball. It consists of a strip of cardboard, about eight inches long, divided by transverse perforations into as many sections as there are dances on the program. Each ticket bears at the top a number which is not duplicated on any other ticket. This number is repeated on each of the sections, which are also numbered in rotation, 1 being at the bottom. Each lady is provided with one of these tabulators and as fast as she fills up her program she presents her future partners with sections of the ticket corresponding to the dances which they have engaged. Later, as the dances are called, the gentlemen present their slips and claim their partner, each in his turn. In this way all errors are avoided, for each slip bears

**ARCH YOKE A FEATURE OF
NEW CLAMSHELL BUCKET**

Eng'g Record 9-2-16

A clamshell bucket has been placed on the market in which have been em-

New Type of Clamshell Bucket Having a Steel Arched Yoke and Other Features Which Give It Compactness and Strength

bodied a number of new features for the purpose of giving it compactness, rigidity, and great closing power. The height of the bucket is considerably less than that of types commonly used. The two halves, or bowls, are pivoted to either end of a steel arched yoke and also linked to each other. The clamshell is closed by means of cables which pass about sheaves situated at the juncture of the two bowls. These working parts are entirely inclosed in a cast-steel case which protects them from dirt, gravel, or the like. When the implement is open it forms a continuous, rigid steel arch that can be dropped from a great height so as to drive its blades into the material to be excavated. The distance between the points where the bowls are joined to the arch and the points where they are linked to the working parts referred to, is sufficient to give the bucket unusual closing power.

TOKYO A GALA CITY IN CROWN PRINCE'S HONOR

IMPRESSIVE oriental pageantry, comparable to that accompanying the Japanese coronation, marked the recent formal proclamation of Japan's 16-year-old crown prince as the heir apparent to the throne. A portion of the vast concourse of subjects who waited for the passing of their future ruler on his way to his installation, as it has been called, is shown here, together with some of the distinctive Japanese decorations that surrounded the plaza at Babasaki Gate. At night the whole city of Tokyo, including these and many other festal adornments, was brilliantly illuminated.

2763

WHAT DID THE CENSOR CUT?

Unusual Prize Contest Interests Persons of Many Nationalities and Occupations

ANNOUNCEMENT OF PRIZE AWARDS

FIRST PRIZE, \$200, Walter W. Baker, ^{274 1376 St}Portland, Ore.

"The practical solution of London's aerial defense came with the discovery that searchlights could be used as range finders. The simple range-finding theory that a measured line forms the basis for computing all distance was applied by pinning an airship on the apex of two shafts of light to prove its exact height and distance from a gun battery by its angle. Immediately the highly theatrical searchlight play, together with the ragged, ineffectual gunfire of early raids, was abandoned and London became a vast mathematical chessboard, with a searchlight at each corner and a battery of high-powered aerial guns in the center of every square; both operating to deliver time shells with such grim orderliness and accuracy that aeroplanes may now practically surround the doomed target without fear of themselves being hit."

SECOND PRIZE, \$100, Charles C. Dunning, Pittsburgh, Pa.

"This has been accomplished by locating powerful searchlights at definitely spaced intervals along radial lines centering at the heart of London. Each light sends out a slightly divergent beam which swings back and forth across a predetermined arc of the sky. This results in the lights along a diameter producing a fan-shaped sector of intense illumination which sweeps across the sky, covering an angle of about 120 degrees. The methodical crossing and recrossing of these light sectors render it impossible for a Zeppelin to avoid being located. Once this has been accomplished, certain lights are detailed to follow the doomed airship while the guns and aeroplanes deliver the deathblows."

MANY thousands of readers were interested in the prize contest announced in the recent December issue of Popular Mechanics Magazine, when cash prizes of \$200 and \$100 respectively were offered for the two best answers to the question, "What Did the Censor Cut?" The question referred to a paragraph deleted by the British censor from Lewis R. Freeman's article, "Bringing Down a Zeppelin," which appeared in the same issue, with the place and extent of the deletion clearly indicated. Contestants were required to write and submit suitable "copy" to replace the matter censored, this being a complete paragraph of about 12 typewritten lines of the usual length.

The December magazine appeared on the news stands November 20th, and the contest closed at midnight Dec. 31, 1916, by which time replies had poured in from 47 of the 48 States of the Union (all but New Mexico); from the District of Columbia (Washington); and from eight of the nine provinces of Canada (all but Prince

Edward Island); while Newfoundland and Porto Rico were also heard from. Time was allowed for all replies mailed up to December 31st to reach the office and only a few late arrivals failed to receive consideration by the judges who decided the contest.

Among the contestants were Americans of all ages and conditions, with a fair sprinkling of women, and representatives of many other nationalities, including Austrian, Belgian, Canadian, Danish, Dutch, English, French, German, Greek, Hungarian, Irish, Italian, Jewish, Japanese, Norwegian, Polish, Russian, Scotch, Swedish, Swiss, and Welsh readers. The occupations of the contestants covered a similarly wide range. Replies were received from a bishop of the Episcopal Church, a well-known brigadier general (retired) of the United States Army, a commander in the United States Navy, the commander of a Pacific coast fort (Coast Artillery), an instructor of the United States War College, a manufacturer of aeroplanes, the city engineer of a large municipality, several

professors in large universities, consulting engineers, newspaper editors, and school superintendents.

While so many nationalities and vocations were represented, the neutrality of the great majority of the replies was remarkable. With few ex-

ceptions the contestants made a serious effort to rewrite Mr. Freeman's censored paragraph. Many of them had a high percentage of merit and received final consideration with the prize-winning paragraphs, which were preferred by the judges.

THE PRIZE WINNERS

WHEN the prize-winning paragraphs had been sifted out from the great mass of manuscripts submitted in the contest, and the awards of the judges were finally made, information was sought regarding the prize winners themselves, and there were more interesting developments as this information came to hand. For while the first prize went to a resident of Portland, Ore., in the far West, the second prize was awarded to the East, in the person of a Pitts-

burgh man; and these two winners were found to represent types of men almost as far asunder as their places of abode.

It needs only a glance at the respective portraits of Messrs. Baker and Dunning to show wherein they differ. The face of the first prize winner is that of a typical out-of-doors man, a lover of the sports of the field, with an adventurous spirit of the pioneer kind—and one is not surprised to learn that Mr. Baker, though by birth a New Yorker, obtained the inspiration for his winning idea from actual hunting experiences in northern India, where he acted as a government interpreter. Later

Walter W. Baker
Winner of First Prize

he traveled throughout the Orient as publicity manager for an amusement enterprise, which he left in Colombo, Ceylon, returning to the United States and taking up his residence three years ago in Portland, where he is now employed by a shipbuilding concern.

The second-prize winner, on the other hand, is essentially a student. Son and grandson of Methodist ministers, Mr. Dunning has spent his years since graduation as an instructor, specializing in physics. In 1910 he received the master of arts degree from his alma mater, Dickinson College, Pa., and is at present in charge of the physics department of the Peabody High School, one of the largest schools of Pittsburgh. He too has served under a government, having spent some time in educational work in Porto Rico for the United States. Mr. Dunning wrote his winning paragraph for the contest, he says, after several days of careful thought on the problem. He hesitated to send it in, doubting its chance of winning a prize, but finally decided to do so, and his letter was received just before the contest closed.

In selecting the winning paragraphs the three judges, without conferring on the matter, each selected Mr. Baker's paragraph as best. Two chose Mr. Dunning's paragraph for second place, and after some discussion, this choice was unanimous.

Mr. Freeman, upon his return from the European war zone, will, undoubtedly, be able to replace the paragraph as he first wrote it. His version, together with those of the two prize winners, will then be published for comparison by our readers.

This Angular Pier has been Erected for Pleasure Purposes at Redondo Beach, California, to Replace an Old Wooden Structure That was Battered to Pieces by the Waves Some Few Years Ago

PIER OF PECULIAR SHAPE BUILT IN CALIFORNIA

Within recent months a recreation pier of unusual form has been erected at Redondo Beach, Calif. It is of reinforced-concrete construction and built much like an open "V." Two diagonal piers, their approaches about 700 ft. apart, project 440 ft. seaward and there converge in a platform that is 200 ft. in width and 160 ft. deep. Erected on this cross pier, the extremity of which is 600 ft. from the shore, is a small sun pavilion and observation tower. The three outer sides of the platform—the base of the so-called "V"—serve as fishing decks, while a landing for pleasure boats extends for a short distance down the seaward side of one of the legs, near the point where it joins the cross pier. At regular intervals along both diagonals, which are 36 ft. wide, and across the shoreward side of the platform, are canopied benches. A continuous promenade, a little over one-half mile in length, is afforded by the shore frontage and pier. Beam and girder type of construction was

followed throughout in designing the work. In length the concrete piles vary from 20 to 85 ft., while their diameters are from 20 in. to 2 ft. The structure was erected to replace an old wooden one, wrecked about three years ago during a severe storm.

SPRAY ATTACHMENT FOR BATHTUB FAUCET

IND. Rep. World 8/1/16
A simple attachment for a bathtub faucet has been designed which produces a horizontal spray and so can be used instead of more expensive shower-bath equipment, or in shampooing the hair. It consists of a metal cap, perforated at one side, and provided at one end with a rubber ball. An opening in this ball permits it to be fitted tightly over the spigot. The article should prove a great convenience to travelers.

**SAFETY IN SAND-BLASTING
 THROUGH NEW DEVICE**

In factories where metal parts are treated with a sand blast in order to

In This Old Method of Sand-Blasting the Workman can Lay Aside the Safety Helmet When He Chooses and Still Do the Work, Though at the Peril of His Health through Inhaling Particles of Sand

produce a smooth surface for painting, as in automobile factories, it has been found difficult to induce the workmen to persist in the use of the safety helmets and other devices adopted. A new method compels the operator to don a safety helmet or he cannot work

at all. This is done by placing the sand-blast work in a compartment of the double-hopper type, while the workman stands outside. The compartment has two doors, one of the ordinary type through which the material is placed inside, and another formed of two sliding metal panels with a canvas curtain hung between them. The operator's safety helmet is made integral with the curtain, so that he cannot see the material inside or work upon it unless he puts his head in the helmet. The parts to be sand-blasted, such as automobile fenders, hoods, and even bodies, are laid on a metal grating in the hopper, under a strong current of air which draws off the finer particles of sand through the top of the hopper, the coarse grains falling to the bottom to be used again. The operator can move along as he works by pushing the sliding doors with his elbows. He sees his work through a fine copper gauze, which is kept clear of sand by the strong suction of air in the hopper. A battery of 12 of these hoppers is installed in one Detroit automobile factory.

¶An alloy of two per cent palladium with silver is said to form a good substitute for platinum in contact and spark devices.

**PHOTOGRAPHS AS BACKGROUNDS FOR
MUSEUM GROUPS**

The use of painted backgrounds for museum groups of mounted animals and birds has become so expensive that photographic backgrounds are being substituted with great success. The director of the Colorado Museum of Natural History, at Denver, originated the idea of using enlarged photographic transparencies as backgrounds for groups of birds and small mammals, and the idea is now being used also in several other institutions. The pictures are of magnificent mountain scenes, typical of the natural habitat of each group displayed.

Each glass transparency forms the back of an exhibit case and is either 26 by 36 or 52 by 36 in. in size. There are already more than 40 such backgrounds, nearly all of them enlarged from 5 by 7-in. negatives. The method of tinting the transparencies is peculiar, but was adopted after other methods were found to apply too much coloring or to produce streaked results. Ordinary tube oil colors are slightly diluted and are applied with the finger tip, which is first made smooth by rubbing it with fine sandpaper. It is desired not to paint the glass picture but only to tint it to resemble nature. Colors are never mixed, as that kills the brilliancy. White is never employed, as the ground glass at the back takes the place of that medium. Shades are obtained by increasing or decreasing the amount of color.

Either artificial or daylight may be used to illuminate the transparency from behind, but electric light is chosen because daylight is too fluctuating. The completed group is viewed by the light which is transmitted through the glass background. The cost of these transparencies is relatively small, that of the smaller size being but \$8.50 each, when bought in half-dozen lots. Tinting approximates an additional \$3 each. The completed groups, exclusive of the case, average about \$50.

A second form of photographic background is employed for 110 groups in the Chicago Academy of Sciences.

These are paper prints, 5 ft. high and 8 to 32 ft. long, enlarged from original negatives, ranging from 4 by 5 to 8 by 10 in. The pictures are taken in the neighborhood of Chicago, often of the very woods, streams, or valleys from

A Mounted Rat Group in the Colorado Museum of Natural History: The Background, with Its Fine Perspective, Is a Transparent Photograph

which the birds or mammals used in the groups were obtained. These backgrounds are absolutely accurate, contain much more fine detail than an artist could be expected to work into a hand-painted canvas, and cost approximately one-fifth of the latter.

Ordinary photographic paper, but of huge proportions, is used for the prints. Special large trays had to be made for developing and other processes, and six men are required to handle each print through the solutions in the trays, to prevent tearing. Each print is pasted upon muslin to strengthen it, and it is then mounted upon a sheet of galvanized iron to give it rigidity and

make it more nearly fireproof. The backgrounds are curved, when set in place within the exhibit cases, so that they cover the back and two sides of

A Photographic Transparency is Here Used to Show a Mounted Winter-Ptarmigan Group in Natural Surroundings

the cases. The mounted birds or small animals are so artfully arranged in front that, together with the natural material, as twigs, grass, and flowers, used in the foreground, they make the observer believe that he is viewing a real outdoor scene.

Each print is tinted by an artist using transparent oil colors, the work being done by artificial light similar to that under which the finished pictures will be displayed. The groups are viewed by reflected light, the electric bulbs being set in a row out of sight above the top of the front of each case. When photographs of the completed groups are desired for illustrative purposes they are made by a ten-minute exposure to the indirect light within the cases.

RIVAL OF POTATO FOUND IN TROPICAL TUBER

Since the much-complained-of high prices have affected potatoes along with other food products, the cultivation of the dasheen, a tropical tuber which has been introduced into the South from Trinidad, will be watched with keen interest. The value of this vegetable, it is believed, will be as a crop supplemental to, rather than a substitute for, potatoes, since it matures some time later than potatoes. The edible portion of the plant consists of a large central corm and a number of small tubers clustering about it. It requires a frostless season of seven months and moist, sandy loam. According to the Department of Agriculture it can be grown as far north as South Carolina. Its food value is comparable with that of the potato, but it contains less water and a greater proportion of protein, starch, and sugar. It can be prepared for table use as potatoes are.

SAFE GAS CONNECTION FOR HOUSEHOLD USE

One of the new devices relied upon by gas men to meet the growing competition of electricity in the home is a system of connecting portable gas appliances which is claimed to be safer than anything yet available in the market. Its basis is a concealing fixture or plate designed as a gas outlet for baseboard, wall, or floor. The union which is a part of the system will also connect to any ordinary gas cock or fixture by means of special

Details of a New Concealing System for Connecting Portable Gas Appliances in the Home

adaptor fittings. One size only is made and the parts are interchangeable, con-

sisting of housing, cock, cover, and union. The housing has lugs for screwing to baseboard or wall, where the fixture is inconspicuous. Notches in the cover plate hold the operating lever in "on" or "off" position. When the gas is "off" and the union is removed, a spring on the plug locks the cock by preventing it from rotating.

3376
**AMERICAN DITCH DIGGERS
CUT BATTLE TRENCHES**

Among the various types of trench diggers employed on the battle fields by Germany and its allies is a big machine of American manufacture which before the war probably was used for cutting drainage ditches or making excavations for pipes and conduits. It is of the same general character as some of those used in many of our own cities for more peaceful purposes. Caterpillar treads enable it to negotiate fairly soft fields in spite of its heavy weight, and when working without interruption it is able to dig a trench of considerable depth at the rate of about 370 ft. an hour, or almost a mile between sunrise and sunset. It is equipped with the usual series of buckets about the circumference of a big revolving wheel and is operated by a gas engine mounted at the front end. The buckets are dumped as they reach the top, the dirt falling onto a belt conveyor and being distributed along one side of the excavation—forming a parapet—as the machine travels ahead. Such an apparatus requires the attention of only three or four men and accomplishes the work of a hundred or more. Its military value is therefore obvious.

**FRENCH RADIATOR BUILT
ON NEW LINES**

Htg. Vent. & Mag.
A French concern has recently placed on the market a new type of radiator especially adapted to hot-water heating systems, which is much smaller than ordinary radiators and, in proportion to its size, gives off more heat. It is made of several coils, or sections, in the usual way. They are, however, wider from front to back than common coils, and so shaped that the sides of the radiator as a whole are marked by deep horizontal depressions. Extending diagonally from front to back are a series of partitions between the coils which serve to throw the warmed air out into the room instead of allowing it to rise straight up. The result of this arrangement is that the upper portion of the radiator is surrounded by air that is no warmer than that around the lower portion, and so its entire surface is put to use to heat the maximum amount of cool air. This form of construction, it is claimed, makes possible a saving of fuel.

FLYING MACHINE AND STEAM ROLLER IN COLLISION

One would imagine it to be safe, in preparing a list of improbabilities, to

A rear-end crash of two so utterly different machines seems extremely incongruous. And yet this is precisely what occurred not long ago at an aviation field near Buffalo. The steam roller was being used on the turf when an airman attempted to make a landing. In doing this he either miscalculated the relative positions of his craft and the heavy roller, or became "object struck," for the nose of the plane was plunged with considerable force against the rear of the other machine. Fortunately no one was badly injured, but the propeller of the

PRESSED-STEEL SURFACE FOR STREET PAVING

In repaving a street in Charlotte, N. C., recently a surface of steel sheets was laid as an experiment, according

to a method invented by a civil engineer of Hammondsport, N. Y. The usual foundation of macadam having been provided, the roadway was overlaid with soft concrete and sheets of pressed steel were then placed upon the concrete and sunk in, making practically a steel road. The sheets were cut and pressed in such a way that tabs protruded on the under side and held the steel surfacing fast in the concrete. The roadway was completed in a shorter

time than it usually takes for similar jobs of paving. The test is reported to have been a perfect success. When the concrete hardened it held firmly the new pavement and was not affected by several weeks of freezing weather

SCULPTOR IN MUD IS NEGRO DOCTOR OF HORSES

While traveling through the blackland district of Texas some time ago, a correspondent, who happened to make a stop at a typical negro cabin, was surprised to find a grinning darky engaged in molding a miniature horse from ebony-colored mud taken from the roadway in front of his shanty. He found that the fellow—a horse doctor by calling—was in fact quite a clever, although totally untrained, "sculptor." Images of dogs, monkeys, pigs, opossums, and other animals, had been fashioned by him in the mud, baked in the sun, and painted in fairly natural colors. Especially good were some of the dogs and monkeys he had molded. In making the former, he had shown considerable appreciation of some of the characteristic postures assumed by hunting dogs and terriers. Among the natives the fellow is known as "Doc Mud."

☐The Bureau of Lighthouses has found by experimenting that at a cost of \$150 a pressed-glass lens for buoys can be made, which is as serviceable as the cut-glass lenses, which cost \$250 more.

WIRELESS TOWER ERECTED WITH COMPRESSED AIR³⁵⁴⁸

Plans for a pneumatically operated portable tower for a wireless outfit have been presented by the inventor to the War Department at Washington. The tower is mounted on an army truck and consists of a series of thin steel tubes which telescope into one another so that when the device is collapsed it is only 10 ft. long. Leather washers give these sections an air-tight fit. To raise the tower it is set upright and connected with an

How the New Battle Cruisers of the United States Navy will Look When Completed: Ships of This Type have been Called "the Luxury of a Rich Power." They Are Larger and Much Faster than Battleships, Mount Guns Almost as Heavy, and Cost More. Four of Them are Included in the Naval Building Program for This Year

BATTLE-CRUISER DESIGNS ARE COMPLETED

Designs for the new battle cruisers of the United States Navy were completed recently and indicate that they will be indeed magnificent craft. Four of them were appropriated for in the naval bill for 1917 and six in all will be laid down under the three-year building program of the navy. They will be larger and more expensive than the latest battleships, having a length of 850 ft. and an enormous horsepower, calculated to give them a speed of 40.3 miles an hour, or about 16 miles faster than the battleships.

MAY EMPTY IDLE CANALS AND USE THEM FOR CARS

Engineering News 11/9-1916

A number of cities in the United States seem to be in a fair way of finding a use for the old, insanitary canals which pass through their midst, taking up valuable space, acting as open sewers, and rendering little or no service because the boat traffic on them is negligible. In Cincinnati it is proposed to utilize a portion of the bed of the Miami and Erie Canal for an interurban route. It is said that in Syracuse the old Erie Canal bed will eventually become the route of the New York Central tracks, and a similar change has been projected for Rochester, N. Y., in which case the canal at that point would be turned into a new channel and the old one used for street-car tracks.

2903

WHIRLING "TANGO GIRL" IS NEW AMUSEMENT DEVICE

In response to the constant demand for amusement devices that offer pleasure seekers new thrills, there has been constructed in a Cincinnati amusement park a new "ride," called the "tango girl." It represents a huge female figure having a skirt that spreads out like a big circular tent. The edge of the skirt is surrounded with a platform having seats for 80 persons.

Huge Figure Called the "Tango Girl" Which Sways Its Patrons from Side to Side and Whirls Them Around as It Moves down the Track

Within the figure is electrical machinery which drives it along a broad track. As it runs down this track, special apparatus is employed to tilt the figure from side to side and occasionally give it an exciting whirl, much to the merriment of those on the edge of the outspread skirt.

**CONVENIENT HOLDER FOR
 NURSING BOTTLES**

A patent has been granted recently for a nursing-bottle holder which is a great convenience to one caring for a child that is being raised on a bottle. The device consists simply of an adjustable wire framework which can be quickly fitted about bottles of various sizes. It has two loops placed at one side which hook onto a strap or cord so stretched across a crib, or baby cab, that the bottle is within the child's reach. When the baby has finished nursing or drops off to sleep, the bottle remains fastened to the cord, instead of falling to one side and being broken or partly emptied of its contents. By

using this simple device it is unnecessary for a mother to remain close by a child while it nurses, nor is it necessary to pick up the bottle repeatedly

A Wire Holder Which Fits about a Nursing Bottle so That It can be Hung from a Strap within Easy Reach of a Baby in a Crib or Cab

after the baby drops it. When the bottle is to be washed the holder can be easily removed.

POPULAR MECHANICS

LARGE ROUND VENTILATORS IN SIDES OF AUTO HOOD

A novel feature in motor-car design-
ing is to be found in the automobile of
a Cincinnati motorist who has cut a

Circular, Screened Ventilators in the Sides of
the Engine Hood Give This Car an
Unusual Appearance

large circular opening in each side of
the engine hood, in place of the usual
ventilators. These apertures are cov-
ered with fine screening which keeps
out most of the dust. When the ma-
chine is driven at high speed the large
volume of air that rushes through the
screens helps materially to keep the
engine cool. The car is of the racing
type, with a low body, and the circular
ventilators give it an unusual and dis-
tinctive appearance emphasized by the
absence of mud guards.

2373 Garage Equip

VULCANIZER THAT CAN BE USED AT THE ROADSIDE

Among the advantages possessed by
a vulcanizer now on the market are that

it occupies comparatively little
space, can be operated out of
doors in the wind, adjusts it-
self to rubber of various thick-
nesses, and is self-locking. The
vulcanizer resembles a seal press in its
construction. The rubber to be re-
paired is pressed between an adjustable

bottom plate and a flat-bottom oil cup.
The latter is raised and lowered by a
lever which holds the cup firmly in
whatever position it is placed. The
cup is heated by oil burned within it,
and is covered with a perforated cap
which prevents the flame from being
blown out by the wind. The device
operates quickly and will vulcanize
patches of various thicknesses equally
well.

3320

FIRE-DEPARTMENT WAGON WITH MANY USES

A recent addition to the equipment
of the fire department in Los Angeles,
Calif., is a motor car called a "squad
wagon," built in the department shops,
and unusual in the completeness of its
equipment. It has five powerful search-
lights, used to assist the firemen in
their work by penetrating smoke and
darkness. Two of these lights are
portable, connected to a reel of 300 ft.
of wire, and can be carried into a burn-
ing building to that distance. These
portable lights are provided with tri-
pods, enabling them to be used in the
manner shown in the photograph. The
car carries storage batteries capable of
furnishing light for seven hours, and a
generator of sufficient power to run all
the lights. The generator is run off
the main drive shaft, with a separate
clutch and silent-chain drive. A switch-
board is conveniently placed over the
generator and the lights can be oper-
ated separately or all together, as re-
quired. A portable oxyacetylene outfit
for cutting metal; a pulmotor for reviv-
ing firemen, or others, overcome by gas
or injury; two smoke helmets, which
enable firemen to work in places dan-
gerously filled with smoke or gas,
stretchers, and numerous other appli-
ances and tools useful in emergencies,
are carried on the car, together with a
reserve supply of gasoline for the fire
engines, extra sections of hose, large
and small nozzles, and an assortment
of increasers and reducers, all being
readily accessible on this well-equipped
squad wagon.

CARS FOR ALASKAN ROADS SHIPPED FROM SEATTLE

Before the close of the shipping season railway passenger cars were loaded aboard a steamer at Seattle and

HOW BUREAU OF MARKETS IS AIDING FARMERS

The secretary of agriculture in his recent report points out that in the three and one-half years in which the

Passenger Cars for the Government's New Railway Lines in Alaska being Loaded onto Steamer at Seattle

Office of Markets and Rural Organization has been in existence it has rendered many important services in the matters of marketing farm produce and of rural finance, and in other agricultural questions. For example, an organization of cooperative fruit growers, corporations, and individual fruit growers has been formed in the Northwest, which aims to secure broader distribution of its products by establishing uniform grades of fruit, and uniform marketing methods. The office has also issued systems of well-tested accounts and records for primary grain elevators and live-stock shipping associations. Systems are being tested for country creameries and cotton warehouses. Monthly cold-storage reports are issued showing the holdings

shipped to Alaska, where they are to be used on the government's new transportation lines. About 85 miles of the latter, extending in two directions from Anchorage, has been constructed. When completed 1,000 miles of new trackage will connect Cordova and Fairbanks as well as the coal fields of the Kuskokwim River district with Susitna and Seward. Linking existing lines, this network will open a section of the country which is rich in natural resources. The late shipment of cars foreshadows another of America's important engineering victories.

of apples, eggs, butter, and cheese throughout the country, together with comparisons with the previous year. The secretary recommends that the name of the office be changed to Bureau of Markets.

**NAVY BUILDS STURDY FERRY
FOR GOAT ISLAND TRIPS**

To take the place of the somewhat unsatisfactory open-deck tugs heretofore plying between San Francisco and the Goat Island-naval training station, the Navy Department has designed

Man Island

Both at Its Bow and Blunt Stern, the "Admiral Glass" Has Generous Deck Space

and recently placed in service an odd little ferry known as the "Admiral Glass." From its stern the vessel has the appearance of a river house boat, but the bow view shows it as quite trim, although a bit unusual in some respects. With a length of 85 ft. it has a 20-ft. beam and 3½-ft. draft. Twin screws are mounted at its square stern and driven by two gasoline engines which give the craft a speed of slightly more than 10 miles an hour. Four-foot passageways extend on either side of the deckhouse, which is fitted with lateral seats. The little craft can carry about 300 passengers, and it is thought that it has freeboard and housing enough for comfort in rough weather, and sufficient deck space fore and aft for ordinary needs when the water is smooth. It is stanchly built and considered quite seaworthy.

3283

FIFTEEN ACRES OF DAISIES UNWELCOME FLOWER BED

Despite the fact that we buy them by the dozen in the cities, paying a dollar or so for a small bouquet, daisies are a menace to the agriculturist, and a patch or field of them is anything but welcome. A Nebraska farmer, near Beatrice, who wished to obtain a good stand of Kentucky blue grass in his pasture, last season instructed a well-known mail-order house to ship him several bushels of seed. He prepared

The Odd Little Ferry That Now Plies between San Francisco and the Naval Training Station at Goat Island

15 acres of land and planted it, exercising particular care. The spring rains came, and following them 15 acres of yellow-centered daisies, a luxuriant crop. The unusual sight attracted motorists from miles around and hardly a day passed without parties stopping to pick armloads of the blossoms. It is not clear how the mistake occurred, but mistake—and a serious one—it was. The company, needless to say, promptly made restitution so that the farmer in the end got a liberal return for his unexpected and undesired crop.

Daisies, Millions of Them, Covered the Pasture Sown to "Blue Grass"

USE FIRELESS STEAM ENGINE FOR SAFETY PURPOSES

In the yards of a wood-preserving plant at Orrville, Ohio, a fireless steam locomotive is employed as a safeguard against conflagrations. The engine is

Instead of being Generated by It, Steam is Pumped into This Engine under High Pressure and in Sufficient Volume to Permit Operation for an Entire Day

fact that one of the first of its kind was the subject of much speculation a few years ago when displayed at an Italian exposition. At that time its practicability had yet to be proved. The locomotive does not generate the steam it uses, for its main part consists of a large cylinder—instead of a fire box and boiler—that holds a sufficient quantity of steam under heavy pressure for eight or more hours of operation. Steam is developed at a power plant and pumped into the reservoir before the beginning of the day's work. The piston cylinders are placed at the rear beneath the cab, instead of at the front of the engine, for the purpose of balance. The locomotive in the yards at Orrville weighs 22

interesting not only because it is of unfamiliar type, but on account of the

tons and pulls about a dozen steel gondola cars, fully loaded.

SWINGING BASKET IN MOTOR BABY'S CRIB ON TOUR

Born while its parents were on a cross-country tour, a Chicago baby has the distinction of having become a motorist at the age of two weeks and of making a trip of several thousand miles in an open car without so much as a whimper. Instead of abandoning their overland journey upon the child's birth, the parents continued it, making their way across desert, mountain, and plains to the Mississippi Valley region from the Pacific coast. Throughout this long tour the baby swung peacefully in a comfortable basket

suspended in the tonneau from braces supporting the top. Each morning it had its bath at some cool stream or lake and a brief sunning while reposed on the top of a boulder or stump.

When Two Weeks Old, This Baby Started on a Motor Trip of Several Thousand Miles with Its Parents, Riding in a Softly Lined Basket Suspended in the Tonneau

3596
HEALING WOUNDS BY WASHING AND
BY MATHEMATICS

Louis R. Freeman, 287 Calif. St., Pasadena, Calif.
BY R. J. BJURSTEDT

UNDOUBTEDLY the most important medical discovery made during the war is that of Doctor Carrel, of the Rockefeller Institute, who, working at a hospital maintained by the institute at Compiègne—just behind the battle line in northern France—has perfected a method of sterilizing wounds, so efficacious that, of the hundreds of patients that have so far been treated by it, only one has died. And this one, it is interesting to know, did not succumb to the original shell wound in the back for which he was brought to the hospital, nor yet on account of the trachea and jugular which he severed with a hastily snatched surgical instrument in an attempt at suicide during a fit of madness, but to a violent attack of pneumonia induced by his exposing himself at an open window in the absence of his attendant.

Nothing approaching perfect sterilization of any but the most superficial wounds had ever been effected from the time of the great pioneer, Doctor Lister, down to the beginning of the war, when the infliction of deep and terrible wounds at a rate many thousand times greater than through the ordinary accidents of peace time, made the need of such sterilization vital and immediate. It was to the discovery and perfection of some means of sterilizing wounds—and especially

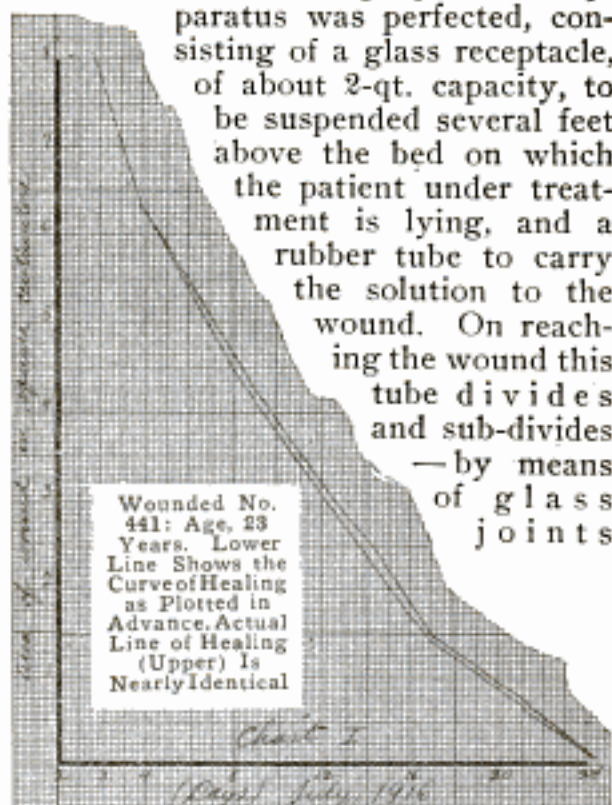

the yawning, lacerated tears left by shell fragments—that the genius of Doctor Carrel was directed. Working in time of peace, with nothing but dogs and cats and mice and guinea pigs to experiment with, the remarkable method which this distinguished surgeon and scientist has evolved might well have been imperfect at the end of many years; with real men—breathing, bleeding men—at his disposal in an endless stream, his object was practically accomplished before the first anniversary of the war came around. That is to say, the "Méthode Carrel" as practiced today was put in operation in the hospital maintained by the Rockefeller Institute under the supervision of the French Red Cross at Compiègne over a year ago; the interim has been employed in perfecting certain minor details, in bringing it to the attention of other hospitals, and in training visiting surgeons in the working of it. Among the latter, it is interesting to note in passing, has been the head of one of the great railway and smelter hospitals at Pueblo, Colo., who has made preparations to put the "Méthode Carrel" into operation there at the earliest possible moment.

To effect the complete sterilization of a wound Doctor Carrel came to the conclusion that it would be necessary to carry the antiseptic to all parts,

Pierre du Nouy, Who has Discovered a "Law of Cicatrization," Which Makes It Possible to Calculate the Exact Day upon Which a Wound will Heal

rather than only to the surface, as has been the case with the practices hitherto followed. For this purpose an apparatus was perfected, consisting of a glass receptacle, of about 2-qt. capacity, to be suspended several feet above the bed on which the patient under treatment is lying, and a rubber tube to carry the solution to the wound. On reaching the wound this tube divides and sub-divides—by means of glass joints

and elbows—into smaller tubes, which are buried in the torn and lacerated flesh under treatment. The small tubes are closed at the ends and perforated at intervals of every half inch or so with small round holes, so that whenever the solution is allowed to enter them the slight pressure which it is under from the elevation of the receptacle above the bed forces it out into and through all parts of

Wounded No. 378: Age, 27 Years. Wounded in the Thigh; Lower Line, Calculated Healing; Upper Line, Actual Curve of Healing. Infected from the Sixth to the Tenth, but Overtook Calculated Curve on Removal of Infection and Healed on Day Reckoned in Advance

the wound. Any excess of the solution drains off—carrying with it the germs of infection, and is absorbed by bandages, which are changed every time the wound is flushed—usually about every two hours.

The antiseptic, on which the great chemist Dr. Henry D. Dakin worked for many months, performing hundreds of experiments before perfecting it, is a .5-per-cent solution of hypochlorite of soda. It is death to the bacteria of infection, on the one hand, and, on the other, absolutely un-irritating to the tender flesh which it must permeate in its hunt for the poison. This solution has the added advantage that something like 35 liters of it can be made at the cost of a franc, or at the rate of about two cents a gallon.

The decrease of the bacteria of infection in the most terrible wounds under treatment by this "flushing" method astonished even Doctor Carrel and his assistants until they came to take its continued success as a matter of course. The bacteria are simply killed and washed away, where, under other treatments, they were left to be taken up by the already vitiated blood. The new way reduces the infection and, of course, hastens healing. Legs and arms that no surgeon would ever have dreamed of treating by anything but amputation in the past, are not only healed in from one to three weeks, but healed so thoroughly as to retain all their former usefulness. Men that would have been cripples for life—if they had been saved at all—under the usual treatments have gone from the Compiègne hospital direct to their regiments, appearing shortly after on the firing line. Indeed, men have left

the "Ambulance Carrel" and been back again with new wounds inside of a fortnight. One such, who was taken with his second wound—a horrible close-range shell gash rapidly turning into gaseous gangrene—to another hospital where the "Méthode

Carrel" was not in use, made such a protest against the amputation of a leg, which he insisted Doctor Carrel could save, that, at the risk of his life, he was sent back to his "first love" at Compiègne. It is gratifying to be able to record that his faith was rewarded. His wound—I saw a color picture of it on a screen thrown from a Lumière slide—though it became for a time one of the worst gaseous gangrene sores ever known, rapidly yielded to the Carrel treatment, and the man was about to be discharged with almost the complete use of the wounded leg when I visited the hospital a few weeks ago.

The accompanying photograph, showing a leg and foot under treatment by the "Méthode Carrel," gives some idea of the astonishing cases that are successfully handled. The unlucky *poilu* to whom it belonged was literally lifted by a shell which struck at his feet and exploded. By some inexplicable trick of fate he escaped complete disintegration, only this leg and foot being caught in one of the freakily spread "jets" from the explosion. A hundred times over it appeared a case for amputation 6 in. above the knee, for not only were both large bones of the leg shattered, but practically every one of the numerous small bones of the foot were either broken or displaced. "The foot and part of the lower leg were simply a pulp," one of Doctor Carrel's assistants told me. "From what we had done in the past, I felt sure we could save the man's life without amputation, but I could not conceive how the member we preserved could be worth preserving. Both myself and Doctor X— were for amputation; but Doctor Carrel thought otherwise.

And, as it turned out, *he* was right, as he always is somehow. It was, of course, absolutely impossible to bring the leg through as good as it was; but what we *did* save was a member which, with the help of very light and readily adjustable braces, is fully 100 per cent better than any artificial limb could ever be."

Perhaps in no military hospital in Europe is the coöperation between clinic

Bacteriologist Taking a "Smear" from Which to Determine by Microscopic Study the Progress of the Elimination of the Infection in a Shell-Shattered Foot and Leg under Treatment by the "Méthode Carrel"

and laboratory so complete as in the "Ambulance Carrel." A "smear" for microscopic examination is taken once a day from every wound under treatment, and a careful record is kept of the decrease in the bacteria of infection. Should these fail to decrease, the microscope reveals the fact even before it would have been notice-

able through a retardation in the rate of healing, and means are at once taken to find what is wrong and apply the remedy. The very day that the laboratory reports that a wound is free of infection, a longer and completer "flush" is given it with the solution, and it is closed for good. No provision for "draining" is necessary, as suppuration is at an end. It is even practicable—and apparently desirable—to close a bacteria-free wound over a knitting bone. Once the infection is gone, the bone appears to knit all the faster for having the flesh closed over it.

So nearly perfect is the action of the Carrel method, so regular is the healing of a normal wound under treatment by the Dakin solution, that it has been found possible to determine in advance the exact day upon which the healing process will be completed. Just as an eminent chemist was given the task of discovering the best solution, so was a mathematician of great ability set that

of discovering this so-called "law of cicatrization or healing." Pierre du Nouy, who bent his energies to this phase of investigation at the instance of Doctor Carrel, found at the outset that the rate of the healing of a wound of an otherwise healthy man under the Carrel treatment varied according to his age, and, unless the man had malaria or the germs of some blood disease in his system, was apparently little affected by anything else. The size of the wound, of course, was an element to be reckoned with, and, basing his calculations upon that and the age of the man, du Nouy was able to work out a decimal which he calls the "index of cicatrization." Putting this "index" into a lengthy algebraic formula in which all the other values are "constants," he gets a result which is the number of days the wound—under normal conditions—should take to heal.

The du Nouy law of cicatrization now enters into the regular practice of the "Méthode Carrel." One of the first things done after a patient enters the hospital is to take a tracing of his wound and compute its exact area in square centimeters. With only that and the age of the man to go by, du Nouy plots a curve on a chart showing the exact size that the wound *should* be at the normal rate of healing every day until it is finally closed. How this is done is shown on the two accompanying charts, on each of which the lower curve is the one plotted in advance to show the rate at which the wound *should* heal, and the

upper line is the curve showing how it actually *did* heal. Ninety-nine per cent of the cases are similar to that shown on chart I, where the curve of cicatrization as plotted in advance is practically identical with the actual curve of healing. That is to say, the wound not only actually healed on the date reckoned in advance, but its size on every one of the intervening days was also according to the preliminary reckoning.

At rare intervals one finds cases like that shown on chart II, where a wound starts to heal as plotted, and then—through accidental infection or some other cause—refuses to continue healing, or even gets worse and grows larger. But here appears the most astonishing thing of all; for when the cause of the retardation has been discovered and removed, the wound, as though ashamed of the trouble it has caused, begins to heal faster than ever and always regains the lost ground and closes as per schedule.

The one regrettable fact that there is to record in connection with the remarkable triumphs attendant upon the practice of the "Méthode Carrel" is the slowness with which it has been taken up by the regular military hospitals of France. The British Admiralty is arranging to use it, physicians from America and Italy have come to study it, and yet the French themselves appear extremely reluctant to adopt a system which—if installed in all of the hospitals of the republic—would save hundreds of lives, thousands of limbs, and millions of francs every month.

3347 IMMENSE GENERATORS IN A MOTOR FACTORY

The largest electrical power-generation plant of its kind in the United States has been completed recently at a motor factory in Detroit. The plant is run on direct current throughout and has a rating of 65,000 kilowatts, total load, at 250 volts. This includes six new generators said to be the largest of their voltage ever built, each having

a rating of 4,000 kilowatts at 80 revolutions per minute. They are of the commutating-pole type with compound field construction. The armature, 15 ft. 6 in. in diameter, carries about a ton and a half of copper in coils, while the commutator, 9 ft. 6 in. in diameter, contains over two tons of copper. Other parts contain a ton and a half more, making a total exceeding five tons of copper used in the construction of one of these machines. The shaft

FLOOD PROTECTION FOR RIVER-BED WELLS

A series of 12 wells located in the bed of the San Diego River, Calif., is protected against flood damage by wedge-shaped structures of heavy timber and railroad iron, placed in front of each of the wells, with the nose of the wedge pointed upstream. While

the river is dry in summer, it often becomes a torrent in the winter season, when the superstructure covering each well, with air-lift apparatus, is liable to be torn out by floating débris. In constructing the protecting wedges, three 30-lb. rails were first driven to a depth of about 24 ft. in the sands at each well, and the wedge was completed with heavy planks. Each wedge extends 6

Timber Wedges Provided to Protect Wells in a Dry California River Bed against Flood Damage in Winter

ft. below the surface of the sand and 6 ft. above, thus forming a barrier against shifting sands as well as floating débris.

City Hall, San Diego, Calif.*

AMUSEMENT-RESORT BOOTH MADE OF REDWOOD LOGS

At Venice, one of the popular sea-side resorts of southern California, a concession booth has been constructed

This Queer-Looking Structure Consists of Two Massive Redwood Logs, Hollowed and Joined Together

from parts of a giant redwood tree. In order to transport them from the forest, two massive trunk segments had to be cut into sections, like a pie. These "slices," covered with the natural bark, were later assembled and the building erected by placing one of the hollowed logs on end and laying the other flat. The two were then connected and doorways provided.

3571 — *W. H. Kane & Anderson* CLAMP FOR PAPER HANGER'S UNHANDY OUTFIT

Among the troubles of the paper hanger in the past has been that of carrying and keeping together his pasteboards, straightedge, and trestles. This is eliminated by a new clamp, or

Kane & Anderson
1113 E. 55th St., Chgo.

This Shows How the Paper Hanger's Outfit is Securely Fastened Together for Carrying with the New Clamp Bolted through the Boards

pair of clamps, with adjustable carrying straps, recently devised by a Chicago firm. Before applying the clamps for the first time the straightedge is laid longitudinally in the center of the boards, in the carrying position, and holes for bolts are bored 11 in. on either side from the middle, through boards and straightedge, so that the clamps when adjusted and bolted tight are 22 in. apart and the entire outfit, including trestles, is securely fastened together.

3506 FOLDING STEEL STAND FOR SIGNAL LANTERNS

A folding steel lantern stand now being used by contractors, pavers, etc., is a big improvement over the makeshift supports which are commonly employed to hold lanterns that mark open ditches and the like. The stand somewhat resembles a camera tripod, and

Folding Steel Stand to Which a Sign and a Lantern can be Attached: The Lantern can be Locked to the Frame so That the Latter cannot be Folded Up

extending downward from its apex is a hook on which the lantern is hung. A steel arm is provided that can be inserted through the lantern frame and locked to the stand in such a way that the latter cannot be folded up, nor can the light be removed. This feature lessens the possibility of the device being stolen. At the upper end of the framework is a detachable plate to which a sign can be attached if desired, so that the stand can also be of use by day.

Fighting a Gas-Well Fire with Streams of Water Which are Directed from behind Hastily Erected Screens of Corrugated Iron

FIGHT GAS-WELL FIRE FROM BEHIND SCREENS

Many valuable holdings in the Goose Neck oil fields of Texas were seriously endangered recently when a gas well in the midst of several oil wells caught fire. Streams of water were directed toward the spouting flame and the surrounding ground was flooded, in the fight to gain control of the blaze. That the men might get close to the intensely hot fire, large shields, covered with corrugated iron, were hastily erected, and from behind these the streams of water were controlled.

DREDGE PROPELLED EIGHT MILES WITH ITS DIPPER

A dredge boat on the Mississippi River was bereft of its tug not long ago, and as its crew was anxious to get back to port the clumsy craft, which was without any regular propelling machinery, was drawn upstream eight miles by means of its dipper. The method employed was to run the dipper out to the end of its boom, lower it until it had sunk into the bed of the stream, and then draw the dredge forward a few feet, with the bucket serving as an anchor. By repeating this process again and again, slow but steady progress was made, and the destination was reached after eight hours of labor.

SMALL SHACKS ON RUNNERS USED BY ICE FISHERMEN

Fishing through the ice is one of the sports enjoyed in midwinter by the farmers in the lake region of the north woods. Instead of erecting a canvas screen to shelter them from the wind and cold, they usually construct a small shanty and attach runners to one side of it so that it can be tipped onto them and moved from place to place with the aid of a horse.

When Fishing Grounds are Changed, the Cabin is Tipped onto the Runners and Hitched to a Horse

INDICATOR SIMPLIFIES TESTING OF STEEL

A new device for determining when the critical point has been reached in the heat treatment of steel simplifies a process which in some instances has required the use of special laboratory

A Device Which Indicates When the Critical Point has been Reached in the Heat Treatment of Steel by Testing It for Its Magnetism

apparatus and the services of skilled men. What is called the critical point is arrived at by raising the temperature of a steel furnace until a chemical combination takes place between the iron and the carbon which are being heated. When this critical point is reached the steel loses the magnetism which it formerly possessed. It is this phenomenon that is taken advantage of when using the new testing device. The instrument consists of a long rod, electrically connected with a transformer, and having at one end magnetic coils which are inserted into the furnace so that a contact is made with the steel. The rod is provided with a magnetic indicator near its handle end. When this member shows that the steel has become entirely nonmagnetic then the workman using the testing device knows that the critical point has been reached and can regulate further treatment accordingly.

3207 MILLS BUILD LARGE DAM TO INSURE WATER SUPPLY

Storage capacity of the west branch of the Penobscot River in Maine has been immensely increased by the construction of a 700-ft. solid-concrete dam by a paper company to insure a sufficient supply of water for its pulp and paper plants at Millinocket. The new dam replaces an old wooden structure and is 92 ft. in extreme height. It creates a storage lake, or reservoir, some 40 square miles in area, and is situated at the head of the Ripogenus Gorge, the outlet of a lake of that name. This is an ideal location for a dam, lying between two mountains. Water is raised at the new dam 60 ft. above its former height, which was about 20 feet over the normal lake surface. Seven former lakes and ponds have been eliminated in forming the new storage lake, which when filled is expected to guarantee an ample water supply for the mills during a two-year period of slight rains. The dam is 64 ft. thick at its base, and has a 16-ft. roadway on top. There are four deep-water gates, 9 by 12 ft., for use in regu-

lating the flow of water. These are operated electrically.

Many million feet of logs are driven down the Penobscot River each season, and provision is made for handling these at the dam by means of a sluice at the eastern end. This sluice is of solid concrete, 450 ft. long, with a drop of about 25 degrees.

The greatest problem which confronted the engineers in this work was that of getting material and supplies to the dam site, which is 46 miles from the nearest railroad station, including 15 miles of water transportation by ferry. Freight carriage over the 31 miles of rough "tote" road was \$10 a ton, and before any work was done on the dam the engineers built a good macadam road to bring in material by motor trucks and so lessen the freight charges. The road cost the company \$250,000, but reduced freight expense to \$2 a ton. Every paper mill and saw-mill in the vicinity, of which there are about 20, will be benefited by the new road and the new dam.

Snubbing One of the Big Motor Trucks Loaded with Building Material down Cyrus Hill on the Way from Lily Bay to the Site of the New Dam at Ripogenus Gorge, near Millinocket, Maine

Thirty-One Miles of This Kind of Highway was Built through the Heart of the Maine Wilderness to Facilitate Transport of Material for the Dam

INSPECTORS FIND PRAIRIE HUT IN CHICAGO

What could be more incongruous than the presence of a typical western-Kansas sod house within the corporate

Because of Its Insanitary Condition, This Sod House at Chicago has been Condemned by the City Health Department

limits of Chicago? Such a dwelling was discovered some weeks ago by inspectors from the department of health. The hut, a flat-roofed structure of aged appearance, was condemned because of its lack of sanitation facilities. It had been occupied by a family of six persons.

1751 — CONCRETE-BLOCK MACHINE HAS SPECIAL FACEPLATE

A faceplate for a concrete-block machine has been devised by a resident of Indianapolis which makes grooves on the front of the blocks so that each one appears to be made of several smaller blocks. This effect is produced by ribs that are inserted through slots

Concrete-Block Machine Having a Faceplate with Removable Ribs Which Make Each Block Appear to be Composed of Several Small Ones

in the faceplate. While the block is still in the machine the ribs are withdrawn from the plate, leaving smooth

Chas. E. Phillips

Indianapolis, Ind.

clean-cut grooves. These serve as air passages and prevent any suction that might cause the concrete to stick to the plate. This invention makes possible the use of larger blocks than would be appropriate for many building purposes, because the markings give the impression that much smaller units have been used.

3516 — TEACHING ARITHMETIC BY MECHANICAL DEVICE

Arithmetic is now being taught by means of a mechanical device which, it is claimed, enables pupils to read the sum of figures without adding them, just as they read words without spelling out the letters one at a time. Thus it is said to be just as easy to teach a child that in addition 9-8-3 spells 20 as that c-a-t spells cat. The apparatus has an inner and an outer cylinder, the former covered with combinations or groupings of figures for giving drills in addition, subtraction, multiplication, and division, while the outer cylinder has 20 sliding shutters, the openings of which expose problems. As the inner cylinder is revolved and the problems pass the openings, the pupils call out the answers. The construction is heavy sheet metal, with the exception of the chart of figures and the shutters, these being made of heavy cardboard and fiber material. Noiseless rollers enable the machine to be moved about easily.

3662 — WANT TOPOGRAPHIC ATLAS OF COUNTRY COMPLETED

See. am. 11-25-16
A committee, of which a Harvard professor is the head, has been formed to aid, by all practical means, in hurrying to completion the topographic atlas of the United States. The Geological Survey has devoted many years of ex-

cellent service to preparing these detailed maps, but the task is so great that only 40 per cent of the country has been covered and now some portions of the records are so old as to be of questionable value. From the point of view of national defense, and for many other reasons, a more speedy prosecution of the work is to be urged.

3431

AUTO PROCESSION PASSES THROUGH OHIO SEWER

Seventeen motor cars recently carried a party of city officials and newspaper men through a long storm-water sewer at Columbus, Ohio. The occasion was the formal inspection of the underground passage, a mile and a half in length, which had just been completed to connect the south side of the municipality with the Scioto River for drainage purposes. Nearly two hours were consumed in making the excursion, which was not without incident. The machines were lowered down a steep incline, one by one, with block and tackle, into the mouth of the sewer. After the procession had got well under way one of the leading cars developed engine trouble. This caused a halt, and because the motors of the other cars were allowed to run idly for a while, the passage soon became filled with noxious fumes. Several members of the party escaped through a manhole, while the others coughed and stuck it out until the disabled machine was repaired and the trip resumed.

The Machines were Lowered, One at a Time, with Block and Tackle down a Steep Incline into the Sewer

When the End of the Underground Passage was Reached the Cars Forded the Scioto River

FOREST RANGER GIVES UP HORSE FOR MOTORCYCLE

A forest ranger, whose route lies over many miles of mountain trail not far from Los Angeles, now uses a

Forest Ranger in Southern California Riding over a Rocky Trail on a Motorcycle, Which He Found More Serviceable Than a Horse, and Less Expensive

motorcycle instead of a horse on the journeys which he must take to watch for forest fires and for violators of the fish and game laws. The change in mounts has enabled him to cover the distance in half the time which was required formerly. The machine used is light in weight but with a strong engine, which drives it easily up the steep rocky inclines. Before the motorcycle could be used to the best advantage it was necessary to blast away a few boulders along the path and to grub out some shrubs and bushes.

This Shows How an Airman Flying at the Speed Now Attained by Aeroplanes might Give Timely Warning The Flier is Seen Outstripping the Windstorm Whose Ominous Finger Points Downward in the

PREFER METAL AMERICAN

3544 FLAG TO CLOTH ONE

Because flags of silk or bunting, no matter how good the material, will eventually become faded and torn in spite of the best care, a resident of Boone, Ia., has designed a metal flag which has proven a very satisfactory substitute. It is not angular and inar-

tistic as might be supposed, for the hollow tubing, special wire cloth, brass, tin, and copper of which it is made are combined so skillfully that at a little distance it looks exactly like a cloth flag unfurled by a moderate breeze. The wire cloth is used in such a way that it allows the wind to pass through it, thereby reducing the wind pressure. In spite of the materials used, it is comparatively light. An American flag of this sort flies from the top of a tall bank building in Boone, and it has been found to possess many advantages over a cloth emblem. It needs to be taken down but once in two or three years to receive a fresh coat of paint and remains gracefully unfurled even when there is no wind. It serves as a weather vane and never becomes ragged or twists about the staff.

Metal Flag Which Flies from the Top of a Bank Building in Boone, Iowa

3582
HOW AEROPLANES MAY GIVE WARNING OF STORMS

It is now no uncommon thing for American airmen to outstrip an on-rushing storm in the course of their long and speedy flights, and it is possible that the time is not far distant when due warning of the approach of cyclones and other dangerous storms may be regularly given by aeroplane in the manner pictured above by the imagination of the artist. The machine seen in the illustration, with its trailing smudge as a daylight storm signal and

F. C. Wardall

of a Storm's Approach to the Inhabitants of a Countryside Threatened by Hurricane, Cyclone, or Tornado. Distance, While the People Warned by His Signal Seek Refuge in Cyclone Cellars and Basements

its speed of, say, 120 miles an hour, would be able to warn the inhabitants of a wide stretch of territory, in time for them to seek the shelter of basements and cellars, before the arrival of the storm spreading destruction in the distance. By night, the aeroplane, flying low so that the noise of its engine would be plainly heard and with a signal flare of light, might be equally effective as a life-saver in sections subject to cyclonic storms. At any rate the imaginary scene depicted by the artist is well within the bounds of possibility as an actual occurrence of the near future.

2633

GREASE-SPREADING DEVICE FOR THE CHICKEN COOP

As young chickens peck at the grain in a new type of feeding tray lately devised, their heads come in contact with a wick and are daubed with grease. The preparation, consisting of lard and kerosene, is a specific for vermin and its application in this manner saves much time and labor. The wick is circular in shape, supported above the tray, and kept supplied with grease by a reservoir, which is of such capacity that it requires filling only occasionally.

NEW TYPE OF DAVIT PASSES
GOVERNMENT TESTS

One seaman unaided is able to lower a loaded lifeboat quickly and, unless the sea is heavy, safely, with a new type of davit that has lately passed Federal tests at Portland, Ore. Al-

many of those who have seen the apparatus demonstrated have been impressed with its practicability. This does not seem strange when it is known that in actual tests one man has lowered a loaded boat to the water in 48 seconds. The davit has two straight arms that swing in an arc of 90°.

The Two Davits are Connected by a Shaft and Operated Simultaneously with a One-Man Crank

At the upper extremity of each there is a sheave over which the rope passes to a drum. Obviously it is used in pairs, but each set is connected by a shaft so that a crank on either davit operates the separate mechanisms in unison. In normal position the arms are upright. After a boat has been loaded, one of the operating cranks is turned until the craft is raised several inches. The gears are then shifted so that the arms are lowered and the

though it is more complicated mechanically, and doubtless more expensive to install, than the kind in general use,

boat swung free from the ship. The two drums are unreeled simultaneously until the lifeboat touches the water.

2567

PORTABLE FOLDING LADDER FOR ORCHARDS

A portable folding ladder, especially convenient for use in orchards, has

two members, each having rungs, which are fastened together like a step-

ladder. This portion of the device is mounted on a framework which resembles an elongated wheelbarrow except that it has two wheels at the front end instead of one. One of the legs of the ladder is pivotally fastened to the front end of the support. If desired the ladder can be folded up and laid full length in the barrow or it can be

Folding Ladder Which can be Moved About on Its Barrowlike Support, Either in an Upright Position, as Shown on the Left, or Folded Up, as Shown Above

been devised by a California fruit grower. The ladder itself consists of

wheeled about in an upright position from tree to tree.

PHILADELPHIA GOLF COURSES AND CLUBHOUSES

Actively Enrolled with the United States Golf Association, and Possessing an 18-Hole Course That Puts Interest into Every Stroke, the Pine Valley Golf Club, Sumner, New Jersey, Has No Closed Season. The Links Roll and Slope, Rise and Drop, and Include Hills and Knolls of Every Variety. The Clubhouse, as may be Seen from the Picture Above, is a Comfortable, Roomy Residence That is Artistically Designed and Beautifully Situated. The Course Has No Hole That is Dull, for Each Has a Different Kind of Approach. Incidentally the Fairway before the Seventh Green, Pictured at the Left, is the Only Stretch of Really Flat Ground to be Found on the Links

Philadelphia has Responded to the Popular Clamor for Public Golf Courses by Establishing a Very Good One in a New Park That has been Opened at the Western Extremity of the City. Two Unpretentious, but Convenient and Well-Arranged Clubhouses, One Intended Solely for Men and the Other for Women, have been Erected. The Links Extend over a 100-Acre Tract of Land That is Broken with Hills, Valleys, and Small Streams. Cobb's Creek, After Which the Park and Course have been Named, has to be Cleared on Five Different Drives. One of the Holes Guarded by the Water, the Third, is Pictured Below at the Right. The Result of a Poor Approach Shot Here can be Clearly Understood

LAWN-TRIMMING TOOL MADE WITH ADJUSTABLE BLADE

For trimming grass along the edges of a sidewalk and around shrubbery

The Wheel Follows the Outer Edges of a Sidewalk so That the Knife Cuts a Straight Groove

and flower beds, an implement has been introduced which materially lessens the work that is usually connected with such operations. It consists of a curved knife, held in an adjustable mounting at one side of a flanged wheel, attached at the end of a long handle. The margin of a sidewalk serves as a track for the wheel and as the tool is pulled the knife makes a straight, clean cut about an inch and a quarter wide and of the same depth.

Arkansas stockmen, during recent cold weather, used electricity to warm the molasses which they mixed with the stock food. The sirup was placed in a vat, which in turn was set in a larger receptacle containing water. Three electric heaters immersed in the water were used to thaw out the molasses, after which one kept it at the right temperature.

SOLDER WORKMEN'S TIME CHECKS TO LUNCH PAILS

Brass time checks have been the means by which the timekeeper for an eastern contracting firm identified a large number of laborers in the concern's employ who could speak scarcely a word of English. However, much confusion was created by the fact that the men frequently lost or misplaced these important bits of metal, so the company hit upon the plan of soldering the checks to the workmen's dinner pails. From that time on no checks were lost or forgotten.

3439

DRAFTSMAN'S RULER FOR MAKING DOTTED LINES

Neat dotted lines can be made as rapidly and accurately as plain ruled lines by using a special draftsman's ruler which has its two edges faced on one side with a corrugated strip of brass. The ruler is used in connection with a ruling pen to which a little device called a leg is fastened. This leg extends downward to within a short distance of the pen point, and when the pen is drawn along the edge of the ruler, the leg rides over the corrugations, causing spaced gaps in the line. One set of corrugations is spaced uni-

A Ruler with a Corrugated Brass Facing on Each Edge: By Using a Pen with an Attachment Which Rides over the Corrugations, Dotted Lines can be Drawn

formly throughout, while with the other, the ridges are separated by alternately wide and narrow gaps.

 At Times Several Hundred Armadillo Shells are Strung on Wires or Laid on the Ground to be Dried
 by the Hot Rays of the Sun

**ARMADILLO FARM IN TEXAS
 SOURCE OF SHELL BASKETS**

Many of the armadillo baskets shown in the display windows of city shops come from a farm on the Texas frontier, instead of the jungles and plains of South America, as is probably the popular impression. Although these queer mail-clad animals occur chiefly in the forests of Surinam and Brazil, a few species are found as far north as Texas, and these are the ones whose buckled-plate shells are dried, varnished, polished, and shipped as novelties to the northern cities. The armadillo is usually nocturnal, and therefore is most often hunted at night with lanterns much as the negroes of the South search for opossums. They are harmless and offer no fight when captured. The body of the giant armadillo, a species known in the tropics, is about a yard long.

**POWDER PLANT HAS CHUTES
 FOR FIRE ESCAPES**

Fire escapes in the form of large metal chutes have been provided by a powder company at Carney's Point, N. J., for the safety of the men working in its smokeless-powder plant. Just under the second-story windows of the numerous small structures in which the men work, are fire-escape plat-

View of Smokeless-Powder Plant at Carney's Point, New Jersey. Showing the Large Metal Chutes Which Serve as Fire Escapes for the Workmen

forms from which lead several of the metal chutes, placed at a sharp angle.

*E. I. Du Pont de Nemours
 Powder Co.
 Wilmington, Del.*

In an emergency the men can run through the windows and slide safely to the ground in an instant. The dangers of handling smokeless powder are not as great as popularly supposed, for it does not explode like black powder but instead burns rapidly. Consequently the company has taken every precaution against fire. So convenient are the chutes that many men use them daily when leaving the plant.

FRENCH MOTOR HOE RUN 3430 BY OIL ENGINE

F. P. Mann

Among recent improvements in agricultural machinery

An interesting machine shown by the Ivel Agricultural Motors, Limited, of Biggleswade, is a motor-hoe which can be used either in fields, orchards, gardens, or vineyards. The machine is so narrow that it can pass through a space only 25½ in. wide. The engine shown has magneto ignition, and is rated at 2½ horse-power. This firm also show the 24-horse-power agricultural tractor to which the Royal Agricultural Society's silver medal was awarded in 1904. This tractor is capable of hauling a three-furrow plough, or cultivators, reapers, binders, and mowers, whilst it can also be used for driving fixed machinery. The engine has two cylinders, and can be operated either with paraffin, petrol, or alcohol. Both magneto and accumulator ignition are provided.

are also worked by the motion of the motor and the machine when traveling. It is made in two sizes, with 2¾ or 4-hp. engine, and the depth of the hoe is adjustable. The machine has received various awards in France and Great Britain, among them a diploma from the Royal Agricultural Society.

"IVEL-BAYCHE"

This New Motor Hoe Is a French Invention Which Works Rapidly without Damage to Growing Crops and Is Easy to Handle

UNIQUE SOUTHERN SCHOOL FOR SUGAR EXPERTS

The sugar-cane growers of Louisiana and likewise the educational interests of that state several years ago recognized that the proper development of the sugar-cane industry called for special technical training which no institution in the country was adequately equipped to give. This led to the founding of what is known today as the Audubon Sugar School, which is a part of the Louisiana State University at Baton Rouge. To this splendidly equipped institution have been brought leading sugar experts of the country and its enrollment includes students from sugar-producing lands in distant parts of the globe. While the most of the students' work is done in Baton Rouge, nevertheless the school's experiment station at Audubon Park, New Orleans, plays a very important part in the course and offers items of keen interest to visitors. The sugar school is unique in this country in respect to the completeness of its course in sugar engineering, which stresses equally the engineering and chemical sides of the manufacture of sugar and lays particular emphasis on the engineering methods by which chemical processes can be carried out.

To properly prepare young men to be sugar experts, five years of study is required. Speaking generally, the technical work is divided into three groups, chemistry, mechanical engineering, and agriculture, with about 90 per cent of the work being confined to the first two groups. The work in chemistry teaches the student the scientific processes in manufacturing sugar. The mechanical engineering prepares him to handle with skill the expensive and complicated machinery used in sugar factories. The agricultural work trains him so that he can manage a sugar estate on which there is a variety of crops in addition to cane, and where live stock must be looked after.

Each student must spend 10 weeks of both his fourth and fifth year either at the experiment station at New Or-

 Los Angeles

The "Devil's Dance Floor," a Beautiful but Very Dangerous Stretch of Motor Road in San Bernardino County, near Ontario, California

3449

NEW MOTOR HIGHWAY SCENE OF MANY ACCIDENTS

One of southern California's motor roads has proved so treacherous that it is known as the "Devil's Dance Floor," and is to be reconstructed. It consists of a two-mile stretch of asphalt pavement near Ontario, in San Bernardino County. During the first six months it was open to traffic it was the scene of about 80 accidents. These smash-ups resulted in the death of five, and the serious injury of 32, persons. The highway extends across a low sweep of foggy land between two ranges of hills, and at night invariably becomes damp and slippery, while the roads connecting it at either end are dry because they are surfaced with a different material. As cars glide off the latter pavements onto the wet asphalt, especially when traveling rapidly, they are prone to skid, strike the ground bordering the road, and often turn turtle. One unusual accident occurred when a physician's car crashed against a telephone pole, snapping it off and hurling a lineman, at work at the top, into the tonneau of the machine. The driver was badly hurt and the other man's skull fractured. The highway commission has decided to overcome the difficulty by giving the stretch a corrugated-concrete surface.

APPARATUS FOR TESTING AEROPLANE PROPELLERS

An apparatus, used to ascertain whether or not aeroplane propellers have the proper balance, has been brought out by a well-known English firm. The device fastens to the wall by means of a bracket and embodies a rocking arm that swings on knife-edges. Projecting from the arm is a mandrel on which the propeller to be

W. & T. Avery, Loko Foundry, Birmingham, Eng.

Device Which Shows Whether or Not the Blades of an Aeroplane Propeller Balance Properly

tested is placed. The balance or lack of balance in the air screw is shown by a pointer and quadrant. When the balance is perfect the indicator remains perpendicular and points to zero. A means of control is provided which prevents undue swing of the apparatus, caused by the inertia of the propeller. The screw can be turned around to test the balance in any position, without removing it from the mandrel. The apparatus may also be employed in testing individual layers that go to make up a propeller.

3524 ———
HANDY SCOOP TRUCK FOR ROLLS OF PAPER

Rolls of printing paper are frequently damaged by improper methods

Heavy Rolls of Print Paper, Six Feet High and Weighing Almost a Ton, are Easily Handled with This New Truck and Its Swivel Scoop

of handling from railroad cars to the pressroom, and in the pressroom itself while being shifted about. To eliminate this damage, which is expensive, a new truck has been designed and patented by a paper-mill superintendent, and has already proved its value. Its general form is that of the familiar hand truck, but it is furnished with a tilting, scoop-shaped steel shoe, which

receives the lower end of an upright roll of paper and enables it to be laid upon the truck quickly, easily, and safely. The upper end of the roll rests on a shaped cradle which forms part of the truck.

3581 ———
X-RAY USED TO PROVE AGE OF BOY IN COURT

To physicians connected with the juvenile court of Cincinnati was recently assigned the unusual task of determining the age of a lad by the use of the X-ray. According to the laws of Ohio a boy, 17 or younger, comes under the jurisdiction of the juvenile court, whereas one, 18 or over would be tried, on a criminal charge, in the criminal court. The parent of the boy claimed that he was 17, while the physicians were strongly of the opinion that he was 18 or older. To settle the question X-ray photographs were taken of the bones of his arms and lower limbs. It is a fact, well recognized by the medical profession, that in the transition from childhood to maturity these bones undergo a change that is quite distinct. The photographs in this case showed such a development of bony tissue as to prove conclusively that the boy was 18 years old or over, and consequently his case was turned over to the criminal court.

IMPROVED ROTARY MOTOR FOR AUTOMOBILES

see *Mech 15-358-854*
 A rotary motor for automobiles, which received mention in this magazine some time ago, has been since developed by its inventor, a resident of Sandusky, Ohio, and was recently given a hard road test from which it is said to have emerged successfully. A car equipped with an 18-hp. engine of this type was driven from Los Angeles, Calif., to Chicago, and completed the trip, it is claimed, with a record of 22½ miles of travel per gallon of gasoline. The car complete weighed 3,000 lb. Advantages claimed for this motor include lightness, freedom from vibra-

Left: A Rotary Motor Installed on an Automobile Chassis. Above: The Lightness of an 11-Horsepower Engine of This Type is Demonstrated—the Inventor can Carry It under His Arm. Right: The Photograph, Which was Exposed for Five Minutes, Shows the Lack of Vibration with Engine Running

tion, and the elimination of the water-cooling system. Its design is a departure from the usual wheel plan of rotary motors. It is built with either five or any odd number of cylinders, arranged like the barrels of a revolver, each parallel with and clustering around the main shaft. The parts of the cylinders being identical, one cam actuates all valves in succession and one ignition ring serves for firing all the cylinders. By this arrangement, a flywheel effect is obtained without straining the mechanism or interfering with lubrication. *Burner*

PORTABLE GAS PLANT FOR 3505 COOK STOVES

Any cook stove or range can be converted into a gas stove in a few minutes' time by means of a portable gas burner recently placed on the market, which generates gas from coal oil or kerosene and can be installed without the aid of a mechanic. It consists of a simple set of two combined gas generators and burners with valve connections, as shown in the illustration. These burners are placed in the fire box of the stove, connection with the regulating valves being easily made through the stove doors or draft holes by two small, flexible metal pipes. Steel brackets on each end of the burner base

hold the burners rigid in the stove and can be adjusted to any depth or width of fire box. The coal-oil supply tank, of any size from one gallon up, is hung by a hook or nail to the wall near by and connected by a flexible metal feed pipe to the regulating valves. Gas is generated from the oil by the heat within a few seconds after opening the valves and lighting one or both of the burners. The appliance can also be used in heating stoves of the base-burner type.

CURIOUS BRIDGE ON THE MEXICAN BORDER

Crossing the boundary line between the United States and Mexico, at Tia Juana, there is a queer ramshackle

This Temporary Double Trestle Serves as a Railway Bridge across the Mexican Border. Note the Rails on Either Side of the Open Center

bridge, built as a temporary substitute for a structure that was washed away by the floods a year ago. It bridges an arroyo and is simply a double trestle, with open space in the center, but serves all kinds of traffic, including the trains of the Mexican Central Railway, automobiles, pedestrians, horse-men, and even herds of cattle and flocks of sheep. Each trestle carries one of the rails of the railway track, the construction being such that trains and automobiles straddle the open space when crossing, and all other traffic must get off the bridge. The structure is 400 ft. long and has a safety platform for pedestrians built out on each side near the center.

ⒸAn observation station in Venice is said to be equipped with electrical microphones with which watchers can detect the approach of Austrian airmen as soon as they leave Trieste, some 60 miles away, and so give the city ample warning.

SPARK FROM MAN'S BODY CAUSES GARAGE FIRE

When a resident of Dubuque, Iowa, wearing a fur coat and rubber boots, walked hurriedly to his garage on a cold morning recently, he did not realize that his movements were storing up a dangerous amount of electricity in his body. But the fact was that the friction of his arms against the coat caused a certain amount of static electricity to be generated, and this was stored in the man's body because it was insulated from the ground by his rubber boots. When he sought to prime the motor of his car with a mixture of gasoline and ether, using a metal squirt can—probably of copper, which is a good conductor of electric current—the can was brought so close to the motor that a spark was produced between it and the priming cup, igniting the gasoline. The can exploded, throwing the flaming liquid over both man and car. The man escaped with severe burns, but the car and garage were completely destroyed.

EAR PHONE ELIMINATES FOREIGN NOISES

An ear phone for the deaf has been designed with a view to eliminating the rumbling and grating noises which are so annoying to many deaf persons using sound-magnifying instruments. The transmitter is worn in an exposed "ANDERPHONE"

The Transmitter and Battery are Here Shown Worn under a Bolero. Right: Cross Section of Transmitter Showing Roundabout Path Which Sound Waves Travel. The Black Portion Is the Drumhead

Carl Anderson Electric Co.
1402 Broadway at 3
Copyright material

Front and Side Views of Shingled Band Stand Erected in One of Denver's Large Parks. The Iron Benches Arranged before the Structure Furnish Seating Accommodations for 2,000 Persons

position in the usual manner. The sound waves enter through small holes in its face but do not strike the diaphragm directly on account of a protecting wall of steel, which diverts the waves out toward the circumference and thence around to the opposite side of the hollow instrument. Here the waves strike what is called the drum-head, which throws them against the diaphragm. Heretofore, in attempting to eliminate foreign noises, attention has been centered on the microphone, but in this transmitter the sound is altered before it strikes that sensitive member. The drumhead also helps to modify the sound. It is made of brass, rubber, ivory, glass, lead, or other material, according to the sharpness of tone desired. The character of its curve and its thickness are varied according to the needs of the wearer.

3003

GREEN-SHINGLE BAND STAND IN CITY PARK AT DENVER

Iron benches with seating capacity for about 2,000 persons are arranged before a rather attractive band stand erected in the City Park at Denver, where, during the warm months, public concerts are held frequently. The structure is about 65 feet in width and 35 feet high, its exterior finished with green shingles and trimmed in white. The foundation is built of green-glazed brick, and the piers at the sides of tapestry brick. Boxes of blooming flowers extend across the front margin

of the platform, forming a beautiful screen, while others, placed in the windows at the sides of the building, contribute refreshing touches of color. Beneath the arched dome, the platform furnishes sufficient space for about 50 musicians, and at the rear ample dressing-room accommodations are provided.

3547

NEW CONCRETE MIXER RUN BY FOOT POWER

Foot power is employed to run a new small-sized mixer for use in preparing concrete, mortar, and the like. A seat is provided for the operator who revolves the mixing cylinder by means of pedals, while the dumping of the contents through an end spout is controlled by levers. If preferred, two men instead of one can be employed as

A Concrete Mixer, Having a Capacity of from Three to Five Yards of Mortar, Which is Operated by Foot Power

*Green Mch. & Bldg. Co.
Salt Lake City,
Utah*

operators. The machine is ball-bearing throughout and is equipped with a heavy flywheel, so that mixing can be accomplished with much less effort than with a hand-power machine. The capacity of this outfit is from three to five cubic yards.

3630

FIREMEN'S CATS TRAINED TO DESCEND BRASS POLE

A fire company in Boston possesses two pet cats which are especially popular with all the men because they have learned to respond to a fire alarm by sliding down the brass pole in the station just as the firemen do when descending from their sleeping quarters on the second floor to the trucks below.

On hearing the gong the agile creatures will jump to the polished metal rod and throw their legs about it, much as they do when descending a small tree, and

then slide to the floor below like a flash. The pets seem to quite enjoy the trick, as the accompanying photograph shows.

3663

NEW X-RAY APPARATUS AIDS SURGERY

A. T. N. *Jan 1916*
A new X-ray apparatus has been developed in one of the casualty-clearing stations in France, which according to reports appears to supplement present-day X-ray photography at the point where the latter ceases to perform effectively. In other words, in photographing certain hidden parts of the

body a type of picture is obtained which has not been procured heretofore. It is said that in this new work an attempt is not made to delineate such dense tissues as bone, but living organs instead, pictures of which can be obtained with remarkable clearness, showing at a glance by what gross lesions the organs are affected. For example, the wounds in any organ can be pictured. The blood vessels of the brain can be shown, together with a blood clot, if one exists, while the actual substance of the brain is not shown. The apparatus is described as working as long as the body is alive, and even until molecular death has occurred, but after that it does not work.

3572

FILM REWINDER WITH NEW SAFETY FEATURES

An automatic film rewriter has been devised to lessen the dangers of the necessary process of rewinding moving-picture films after every exhibition. It will take films of any make, and was recently approved by the National Board of Underwriters. The machine entirely incloses the film when rewinding, and is driven by an electric motor, also fully inclosed. The construction is simple, there being two cast-aluminum magazines supported on uprights with a heavy iron base. The larger magazine contains the reels, and conforms to their shape; the smaller contains the motor. Reels of any size, up to 2,500 ft. of film, can be rewound. The machine stops automatically when the rewinding of any reel is complete, or if the film should break during the process.

Automatic Film Rewinding Co.,
Harrisburg, Penna.

**PHONOGRAPH MUSIC SPEEDS
 UP TYPEWRITING PUPILS**

The theory has been advanced that just as music helps a soldier to march with more vigor so also it should speed up a person's typewriting. and in conformity with this idea a phonograph has been installed in the typewriting room of the High School of Commerce in Omaha. The instrument stands in the corner of the room and while the pupils practice on their machines a variety of selections is played on it. The aim is to relieve the monotony of

the drill and so prevent the young people from becoming fatigued too quickly. The music is for practice only and is not intended as a permanent feature in connection with practical typewriting.

Pupils in Typewriting Class in Omaha High School of Commerce Practicing on Their Machines While a Phonograph Plays Various Selections

3438
**MOTOR LIFEBOAT IS BUILT
 FOR OCEAN LINER**

Some little attention has been drawn to a motor lifeboat lately constructed in England for one of the Canadian Pacific steamships. The craft, which is 30 ft. in length and 9 ft. 4 in. of beam, is equipped with a three-cylinder, 25-hp. motor that gives it a speed of about 10 miles an hour and sufficient reserve power to tow several lifeboats of the usual type. Buoyancy chambers are installed fore and aft beneath the water-tight decking as well as under the side seats. A cushion of canvas-covered cork also extends around the hull flush with the gunwales. While the boat is not intended to be of the self-righting type, it is provided with a 500-lb. iron keel which gives it unusual stability. Provision has been made for the

installation of a wireless set, which will be housed in a small cabin to be erected forward. The motor is completely covered. Amidships, on either board, relieving trunks with suitable valves are placed, to facilitate the prompt dis-

Seaworthy Motor Lifeboat Built in England and Designed More Especially for Towing than Carrying Purposes. It will be Used by an Ocean-Going Passenger Vessel

charge of shipped water. When fully loaded the boat shows good freeboard. It has successfully passed the rigid tests of the board of trade.

TRAFFIC SIGNS ADORNED WITH FLOWER BOXES

Many towns and cities have signposts at the intersection of important

Flower Boxes at the Base of Traffic Signposts Which Give an Artistic Touch to the Street Intersections

streets, for the purpose of keeping the traffic moving in the right way. Few communities, however, have realized

that these posts can be utilized to beautify the streets, but in Valparaiso, Ind., flower boxes have been built about the bases of the posts. In them hardy flowers have been set out which seem to have thrived. The bit of color in the midst of the glare of the broad, hard pavement is very pleasing.

3156—

BRICK-WALLED STALLS IN AUTO-TESTING SHED

Connected with an automobile factory in Detroit is a large building so constructed that the engines of 30 or more cars can be tested in it at one time. The structure resembles a public garage with a broad passageway leading down the center, while on either side are numerous stalls. These are separated one from the other by solid brick walls so that a running engine in one compartment can be heard only faintly in the adjoining compartments. This arrangement makes it possible for a large force of experts to examine engines at one time, each being so shut off from the rest that he can readily detect a foreign sound in the car he is testing. The walls also serve to greatly diminish the fire risk.

Engine-Testing Building Connected with a Detroit Automobile Factory in Which the Fire Risk is Minimized by the Brick Walls Separating the Compartments. Here, at One Time, Several Experts can Test an Engine without being Disturbed by the Noise from Other Engines

STREET ROLLER OPERATED BY ELECTRICITY

A heavy roller which is operated by electricity is employed by the street-railway managers of St. Louis in the construction of pavement adjacent to their car tracks. Electricity is used because it is both convenient and economical for this particular work. The machine has two heavy rollers, to one of which is geared a regular street-car motor. Suitable provision is made for speed variation. Power is obtained for the motor through a cable which is hooked over the trolley by means of a long pole. The circuit is completed by a second cable connecting the motor with one of the rails. These two leads are each nearly 100 ft. long and so allow the machine

ample range of movement without shifting the connections. When not in use they are wound on a reel mounted on the framework of the machine. The roller is carried to the scene of operation on a flat car and then,

Roller Used on the Streets of St. Louis Which Derives Its Power from a Near-By Trolley Wire, View at Left Showing How the Cable is Attached to the Trolley Wire

under its own power, descends on an incline platform to the street. It is likewise loaded by its own power.

3296

CLASSIC TEMPLE AND HUGE RELIEF MAP IN GUATEMALA

In the city of Guatemala, in Central America, a beautiful classic edifice has been erected, called the Temple of Minerva. It was built in commemoration of the educational progress which has been made in that country, due in part to the recent expenditure of several millions for public instruction. The structure, like the Greek temples after which it is patterned, is without walls, the massive roof being supported by Ionic columns. It stands in a large open area not far from a most unusual

relief map, which covers a quarter of an acre of ground and reproduces in remarkable detail the physical features of the Republic of Guatemala. A special observation platform has been erected near by.

View Showing the Ionic Temple in the City of Guatemala, Central America, and, in the Foreground, a Portion of a Relief Map Which Covers a Quarter of an Acre

PULL-SOCKET OUTFIT FOR INDIRECT LIGHTS

Most of the indirect-lighting fixtures in the market do not permit of the use of the convenient pull-socket, or but-

New Socket for Use with Pull Chain. The Lower Pictures Show How It is Applied to Indirect-Lighting Fixtures

ton, switches which have become so popular. But a new arrangement for this purpose has appeared in which a pull socket with its chain guide fits snugly into the bottom of the bowl of an indirect fixture, and protrudes through it just enough to enhance the artistic effect. The socket has a threaded bead on which a shade holder can be readily mounted. The bottom chain guide, with a pull chain hanging only the necessary length below the bowl, provides a most convenient form of local control. This style of socket can also be used on a side-wall fixture by attaching it directly to a nipple extending from the outlet.

ⒸAn English investigator is reported to have found that the electrification to which wool is subjected is not, as was supposed, due solely to friction among the fibers, but is also caused by drying, followed by the lowering of the temperature.

CITY PLANNING AIDED BY FLYING BOATS

Photographs of Santa Barbara, Calif., were recently taken from a flying boat to be used in working out an elaborate plan for beautifying that city and as a help in examining possible locations for a proposed sewer outfall. The irregular topography of the region was well depicted in these pictures, and they show at a glance the city's position with relation to the sea and the mountains. The success of the effort has suggested to engineers that the same method might be employed on an even larger scale, as for example, in the region of the Colorado River, which changes its channel at many points after each flood and leaves bottomless lakes of mud, that can be traversed neither on foot nor by boat. To obtain by surveying the information that pictures taken from a flying boat would supply, would often require weeks of work.

Engr. Record 11/11/1916

2112

ELECTRIC DIRECTION ARROW FOR AUTOS

An automobile direction indicator has been devised consisting of a movable arrow, enameled red, which attaches to the front fender. It is operated by electromagnets, current for which is obtained from the regular batteries, and is

controlled by a switch attached to the steering wheel. When a motorist approaches a street intersection and desires to turn to the right, for example, he indicates this to the traffic officer, or others in the street, by pointing the arrow to the right. At night the device is illuminated from within. At the head of the arrow is a red lens and at the tail a green lens so that in the darkness there may be no confusion as to the position of the indicator.

Guess Who's Here: That Is One of the Ways Those Participating in a Cotillion of Advertising Characters of National Renown Helped to Make the Evening an Unusual and Lively One

TOTS AND GROWN-UPS OF AD WORLD IN LIVELY GAMBOL

Franklin One of the country clubs in a Chicago suburb recently entertained its members and guests with a most interesting cotillion. All of the participants appeared costumed to represent advertising characters of magazine, newspaper, and billboard fame. Nearly all of the well-known children and grown-ups of the advertising world, even those of dusky hue, unconventional attire, and bygone days, were impersonated. Obviously the evening proved one of rollicking fun, so refreshing a departure was it from the conventional affairs that repeat themselves throughout the social seasons year after year. No one, unless appropriately costumed, was permitted on the floor until a late hour. Thereby the spirit of the frolic was carried out without being marred by the presence of evening apparel. So successful, and so simple to execute, was this convention of trade-mark characters, that it seems to offer unlimited opportunities for use elsewhere.

Prizes for the best make-ups, as well as for the winners of possible guessing contests, are ideas that might be incorporated.

HAND-MADE HORSESHOES AS GOOD-LUCK PIECES

The hobby of an expert horseshoer in Martinsburg, Pa., is the making of miniature horseshoes which are scarcely larger than a dime and weigh about six grains. They are of steel and are hammered out with great skill. Their exact size is shown in the accompanying illustration. The maker of these tiny emblems of good luck has presented one to each crowned head of Europe and to a large number of noted persons in this country. The usual

reward for each gift is an autograph letter. In the course of years the smith has made a large and interesting collection of autographs from these letters of thanks.

BREATHING MASK DESIGNED AS DISEASE PREVENTIVE

To provide a means of safeguarding against the transmission of bronchial and allied diseases, a respiratory shield

When Worn by a Dentist or a Barber the Respiratory Shield Lessens the Danger of Either the Operator or the Patient Breathing the Foul Air Exhaled by the Other

is made for barbers, dentists, and others whose work brings them in close contact with many persons daily. The device, which is made of aluminum and celluloid, fits over the nose and has two air passages with openings near the ears of the wearer. In inhaling and exhaling, air is drawn and discharged at the sides of the face instead of at the front. Provision is made within the shield for holding cotton saturated with disinfectant, so that the air exhaled from the lungs is sterilized as it is discharged, and that drawn in by inhalation purified before reaching the nostrils.

BIRD FLIES LONG DISTANCE WITH ADDRESS

A rancher living near Red Lodge, Mont., last August brought down with his rifle a large bird, probably some species of hawk, which was flying over his place. On picking up the creature he discovered that it had been stunned by the shot but was otherwise unin-

jured. Instead of killing it he tied to its neck a little bottle in which he sealed a paper bearing his name and address. Two months later a letter came from Bogota, Colombia, South America, signed by one Luis Felipe Rulda, saying that he had shot the bird carrying the Montana man's address. Red Lodge and Bogota are considerably more than 3,000 miles apart by a direct air route, and this incident shows in an unusual and striking way what great distances birds travel.

FIRE-ALARM BOX DESIGNED TO BE MEDDLER-PROOF

A special fire-alarm box has been invented by a Philadelphia municipal employe, the purpose of which is to prevent malicious or mischievous persons sending in false fire alarms. The box requires no key and is equipped with an outer and an inner door, both of which must be opened before an alarm can be turned in. The outer door is unlatched by pulling down a lever which serves as a handle and is held in position by a spring within the box. This lever operates a simple mechanism that rings a big gong fastened to the inside of the door. Hence the door cannot be opened without sounding this gong, the noise of which is very apt to summon a policeman or passer-by. Persons inclined to send in false alarms purposely will not be apt to take chances with this device.

**SPORTSMAN'S CHART SHOWS
GAME LAWS SIMPLIFIED**

On the back of the hunting licenses issued by the state of Wisconsin has lately been printed a chart which shows in a very clear and simple manner the open and closed seasons for game to be found in the state. The names of fishes, birds, and beasts are listed in a column at the left of the chart, and following each are 12 small squares representing the 12 months of the year. The months or portions of months in which it is lawful to hunt or fish the creatures named are indicated in white, while all the rest of the squares are black. At the right of the squares are data about the bag limit for various kinds of game. Other information is given

below. Formerly the licenses had no charts, the dates for the various open seasons being stated in printed form. In addition to the diagram is a table showing the time of sunrise and sunset for each day in September, October,

Open Spaces Indicate Open Season.	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC	BAG LIMIT.

**WATER SYSTEM KEEPS CAR
RADIATOR WELL FILLED**

With a view to preventing the overheating of an automobile engine due to lack of sufficient water in the radiator, a water system has been devised which keeps the radiator full at all times. The system does not require refilling, except perhaps after a long interval, and can be installed in any car. The apparatus consists of a tank containing a condensing coil, which is installed under one of the seats or on the running board, and is connected by a copper tube with the overflow of the radiator. After connections have been made the radiator is filled with water and the tank filled halfway, and all

and November, hunting and fishing being unlawful when the sun is below the horizon. Charts similar to this are used in Europe.

caps are screwed down tight. On high speed or when climbing a hill, the water heats and expands quickly, causing the steam and water to flow through the copper tube into the condensing coil and tank. When the speed

A Water System for Automobiles of Any Make Which Keeps the Radiator Well Filled and Requires No Refilling

of the engine lessens and the water cools, the vacuum created draws the water back into the radiator, which thus is kept full at all times regardless of changing conditions.

DISAPPEARING FOOTLIGHTS FOR SCHOOL OR CHURCH

Footlights especially adapted to meet the requirements peculiar to the platforms in schools, churches, public

When Not in Use These Footlights may be Turned Down so That the Platform is Not Obstructed When Used for Other than Entertainment Purposes

halls, or theaters also used for other purposes, are being made in sectional form. In addition to providing efficient illumination when in use, they have the advantage of being out of the way when not needed, and when a platform is being employed for other than entertainment purposes. The sections are inserted in a gutter cut for them in the floor, their tops, when turned down, completely covering the space and forming an inconspicuous, solid panel that is flush with the surrounding platform. Each of these covers is hinged so that it may be turned up somewhat like a trapdoor. The lamps, arranged in galvanized-iron reflectors attached to the under side of the panels, are brought into position and raised a trifle more than three inches above the floor when this is done. The sections are made in lengths of from 10 feet to five feet, and are provided with either single or double rows of lamps.

OXYGEN OBTAINED FROM AIR WITH NEW CATALYZER

La Nature 6-3-1916

From an authentic source it has been learned that a French authority has produced a chemical compound which, when maintained at a certain high temperature, readily absorbs oxygen from the atmosphere and liberates it upon being subjected to a current of superheated steam. Several catalytic agents of this kind have been found commercially impracticable, but considerable importance seems to be attached to this latest method of tapping the world's storehouse of oxygen. It is understood that the compound consists of a plumate and a sodium permanganate, the former salt preventing the mixture from losing its porous consistency. Air, freed of carbonic acid, is directed into a chamber containing the catalyzer. Oxygen is absorbed and the nitrogen expelled. After air has been blown into the tank for a few minutes, the supply pipe is closed and superheated steam turned in, liberating the element, which is collected in a gasometer. Since the chemical absorbs and liberates the gas at the same temperature, the operation is a quick and economical one.

enough, however, to be worthy of note. The bursting charge, instead of being black powder, or some other common explosive, consists of certain chemicals and liquid oxygen held in separate chambers. When these are united, by means of a lever and spring mechanism actuated by what is apparently a percussion detonator, the chemical reaction results in an instantaneous explosion. Another important thing is that compressed air, not powder, is used in firing the shell from a gun. A six-inch projectile of this type weighs 72 pounds.

3124 HOW WEIGHT OF ENGINES IS BEING LESSENED

By Master Mechanic

One of the problems which has arisen in connection with the great increase in the size and power of locomotives has been how to lessen the tremendous stresses produced by the reciprocation, or revolution, of various heavy parts. In at least one type of powerful engine constructed in recent years an attempt was made to counteract these stresses by especially constructed counterweights. This effort was pronounced unsuccessful in many important respects, because it subjected the engine, and also the track, to new but equally serious strains. In recent months engine designers have turned their attention to the question of lighter construction. The use of forged and rolled-steel pistons has been proposed as one means of securing the desired lightness without sacrificing strength. These pistons are made solid and are cut with one or more dovetail grooves in the face, in which are inserted segments of malleable bearing metal, that is hammered firmly into place. Another means of lightening reciprocating parts of big engines has been to use hollow piston rods.

During the past winter, when there was a shortage of fuel in many places, a manufacturing plant in Stoneboro, Pa., met an emergency by having coke shipped to it by express. One consignment weighed 8,100 pounds.

A recently patented eraser for the cap of a fountain pen, ink pencil, or the like, consists of a small two-edged blade mounted on a plunger. A slit is cut in the side, and another in the end, of the cap to be fitted with this device. The blade is nested in the cap so that it can be pushed in or out through the end slot by means of a knob that extends through the side slot. When the pen is not in use the cap, with its eraser concealed, is placed over the writing end of the pen in the usual manner. In some cases the fountain-pen caps now in use are not long enough to be provided with this device.

3364 NEW GOLF COAT PERMITS FREE ARM MOVEMENT

Free action of the arms and shoulders, something much desired by golfers, can be enjoyed if one wears a coat, having special sleeves, which has been put on the market recently by a ~~Detroit~~ firm. The sleeves are attached at the shoulders and back by means of plaits which automatically fold inward when not expanded. When an ordinary coat is worn, a full swing of a golf club causes the garment to bind across the shoulders, while with this coat there is entire freedom of movement. In design the article resembles a Norfolk coat. The plaited inserts are so made as not to seem bulky. The garment is suited to motoring, trapshooting, and other pastimes, as well as golf.

SANITARY NECK PROTECTOR FOR USE IN BARBER SHOPS

A sanitary bib or protector has been designed to be worn about the neck of a person being barbered, the special

features of which are that it prevents hair from falling inside the clothing at the neck; and it is made of washable material so that each person may be provided with a clean protector. The article is really composed of two bibs of similar size and shape attached to a single collar band and having free ends that interlap at the front. The band is provided with several clasps so positioned that the protector can be adjusted to any desired size. The apron thrown about the person wearing the bib is tucked in between the cloths.

2688

VOCATIONAL TRAINING FOR MEN IN THE ARMY

Vocational training in the army, according to the 1916 report of the secretary of war, is to be given added emphasis. The recent National-Defense Act provides that opportunity shall be given soldiers in active service to receive educational instruction that will increase their military efficiency and enable them to return to civil life better equipped for industrial, commercial, and general-business occupations. Many men enlist in the army for but a single term and then, on returning to civil life, find themselves handicapped as compared with young men who have given all their time to their chosen work. Particularly in the stations of the Coast Artillery substantial progress has been made in the matter of educational work, and it is predicted that a mode of army life having many desirable features will be developed.

SCHOOLS INSTRUCT PUPILS IN CIVIC BETTERMENT

Better citizens and an improved city are apparently the aims of educators at

schools have been banded into a quasi organization known as the Improvement League. It is a part of their routine work to act as sanitary inspectors, and under the supervision of their instructors visit scores of places about the city in quest of unhealthful and detrimental conditions. Garbage disposal and the work of the health and police departments have been studied, poor sections of the city visited and housing conditions investigated, and bakeries, groceries, and other food-distributing business places inspected. When either unsavory or particularly commendable situations are found, photographs are taken, notes made, and reports filed with the teachers.

Fence Extension at Tidewater Stream

By B. FRANCIS DASHIELL

PREVENTING stock from passing around the end of a fence between adjoining fields at a tidal-river bank proved difficult until the fence extension, shown in the sketch and the diagram, was built. It adapts itself to the varying heights of the water, and may even be used in a lake, or a river of not too swift current and with little floating debris, to meet the varying depths of the water in different seasons.

A fence of woven wire, graded down to the bottom to keep out smaller stock, was built to extend a short distance from the shore line at low water. A post was set, about 25 ft. beyond the last fence post, so that it projected above the surface at high water, and was guyed strongly. A slide rod of round iron was fitted to

each of these posts, as shown in the diagram, being made long enough in each case so that the ends extended beyond the limits of the water's vertical movement. A barbed wire was fitted with

suitable floats of wood, and provided with rings to engage the slide rods. It was stretched into place as shown, and was made free to float easily with the change in the water level.

The Barbed Wire is Supported by Floats and Accommodates Itself to the Changing Water Level

Planting Bulbs Conveniently

To set out a large number of bulbs is quite a job, especially when they are to be planted in a lawn which should not be injured. I used a 2-in. iron

pipe about 2 ft. long, with the end ground sharp, to cut the holes for the bulbs. A mark was painted on the pipe, 4 in. from the cutting end, so that

Sectional Diagram Showing the Arrangement of the Fence, Posts, and the Barbed-Wire Barrier

I could easily drive it down to the proper depth. After the bulb was dropped in the hole the earth was replaced by rapping the pipe. This necessitated only a slight cutting of the lawn.—A. E. Holaday, Naugatuck, Connecticut.

Sharpening Scissors on a Grinding Wheel

Scissors may be sharpened quickly and effectively on a grinding wheel,

The Blades are Ground to a Feather Edge, and This is Removed by Cutting Carefully into a Piece of Paper

and this method is especially useful where several pairs are to be put into shape. Hold the scissors on the wheel, as shown in Fig. 1, the direction of the wheel being as indicated in Fig. 2. A feather edge, or extension, will be produced, as suggested in Fig. 3. Test the edge to make certain that a slight feather edge is ground throughout the cutting edges of both blades. This may be done by passing the finger nail along the edge, as in Fig. 4. Then remove the feather edges by using the scissors in cutting paper; apply oil to the edges before closing them or using them in this manner. The feather edges will be removed smoothly, leaving a sharp cutting edge.—R. B. S., Philadelphia, Pa.

Hinged Drawer Front Is Convenient

A large drawer in a bench was used for tools of various sizes, and it was difficult to remove those placed in the back of the drawer. As a result most of the tools were placed in the front part, often making it inconvenient to open the drawer. The front of the drawer was arranged to swing forward on hinges, and compartments were provided so that the tools had to be put in carefully. This increased the usefulness of the drawer and made it easier to get at the tools.—Charles C. Brabant, Detroit, Mich.

Hood on Chimney Increases Draft

Large smokestacks are often provided with an arrangement near the top to increase the draft. I devised the one shown in the illustration for use on a residence chimney, and it gave good results. A hood of sheet metal was built around the top of the chimney, flaring out to a spread of 15 in. from the bricks, and with an opening of about 3 in. at the upper end. The resulting draft through the hood has a tendency to draw the air and smoke up out of the

This Hood on a Chimney Increases the Draft and Tends to Overcome Down Draft

chimney, counteracting down draft.—James E. Noble, Toronto, Ont., Can.

Ⓒ Draftsmen will find a strip of string solder convenient as a spline for laying out irregular curves

Hardening Small Carbon-Steel Tools

Special care must be taken in the tempering of small tools of carbon steel. A small gas furnace, inclosed, with a chamber for the heating of the tools, is desirable, but a coal or coke fire properly banked is satisfactory. The fire must be burned down to a bed of live coals, and it is best to insert a section of tubing into the fire to protect the tools from the direct blast. The quenching heat may be determined accurately by instruments, but where these are not available, the use of a magnet is suggested. When the magnet no longer has an attraction for the steel being heated at the part in the fire, the proper point for quenching may be determined by permitting the steel to remain in the fire a few moments longer. The point at which the magnet ceases to attract is about 1,425° F., and the best heat for tempering is 10° above that temperature.

Cracked and damaged tools in the hardening process frequently result from the failure to relieve the strain on the steel after quenching, and the moment that it has cooled sufficiently to harden. While still grasping the tool in the cooling bath, the instant that the tremor from the sudden plunge stops, the piece should be withdrawn quickly, and permitted to cool in the open air. The steel will still be too hot to hold in the hand. This is only necessary, of course, when the steel is not to be drawn to temper on the original heating.—A. Dane, Pottstown, Pa.

Saving a Fallen Tree at a River Bank

Continued high water softened a river bank in a park, so that several trees toppled over into the water for want of good root anchorage. A willow at one point was especially desirable, and it was brought back to its former position by the method described. High up on the trunk, well out over the water, a threaded eyebolt, B, was sunk into the tree, and a good bearing secured by means of a large

washer screwed down tightly with a nut. This afforded a hold for a double

A Fallen Tree at a River Bank was Raised and Braced by the Method Shown

block, while a single block, A, was roped to a near-by tree. Then tackle was adjusted between the blocks, and the free end thereof hitched to a triple set of blocks and tackle, C and D, secured to a tree at some distance from the river bank. This gave a good purchase, and a horse hitched to this second tackle could exert a very heavy pull upon the fallen tree. By careful work the tree was brought to its former position without a mishap. The raised tree was permanently tied to the tree that held the single block by means of stout wire connecting the eyebolt G, in the former, with an eyebolt, H, sunk into the latter. This wire I was run through the eyes in four strands and twisted to the proper tension with a stick, J. The tree was also anchored to the base of a near-by elm.—C. L. Meller, Fargo, N. D.

Make it a rule to reset the tailstock on a lathe immediately on completing a taper job.

Gravity Water System

for a Summer Cottage or Camp

By G.E. Kastengren

THE gravity water system described in this article and shown in the illustrations was built for a summer home in the Olympic Mountains. The principles underlying its construction, and the general details, may be used directly or with slight adaptation in various other mountain or rolling-hill regions, or other places where a suitable flow of water is available. The source of the water supply was a small spring-fed creek, with a minimum flow of 15 gal. a minute, and situated at an elevation of 800 ft. above the house to which the water was conducted, as shown diagrammatically in the large illustration. The water is conveyed a distance of 1,440 ft. and is stored in a 25-bbl. oak cask, obtained from a brewery for \$15. This was set at an elevation of 92 ft. above the house, on a strong platform built of logs, across

flume, constructed as shown in the detail sketch. Views of the flume and of the tank are shown in the photographs reproduced in the headpiece. A pipe line conducts the water from the storage tank to the house.

Galvanized-iron pipe, secondhand, was obtained for the pipe line and other pipe sections and fittings, 2-in. and 1½-in. pipe being used. It was conducted from the bottom of the tank, as shown, and joined with the usual unions. At the end near the house, a 1½-in. nozzle was placed, for fire protection and sprinkling. The joints were made with various fittings to accommodate the line to the ground, with a minimum of supports. A globe valve was fitted at the outlet from the tank and a ladder was provided in lieu of a depth gauge in the tank.

To convey the water from the intake to the tank, I devised a flume of the special type shown in detail, and it proved well suited to the conditions. It leads through a heavy forest of fir and cedar, and occasional windfalls, especially during the winter, are likely to break parts of it. It was therefore necessary to construct the flume so that it could be repaired easily and quickly. It is made in sections of 16-ft. length. They are not nailed together, but the lower end of each rests on the upper end of the next section below, and a broken section may thus be quickly replaced. Since the area for the passage of the water would be reduced considerably at the joints if they were set together as originally made, portions were cut away by beveling the adjoin-

a gully, about 4 ft. deep and leading almost directly to the house. This made unnecessary a great deal of excavation otherwise essential, as an excellent trench was thus provided for the pipe line. The water is conveyed from the intake to the tank by means of a

ing ends, as shown by the dotted curves in the detail sketch. The lower edge of the cover was beveled to a distance of about 3 in. at the upper end of each section. The upper edges of the trough were beveled similarly at the lower end of each section. The ends were telescoped, as shown, and the covers of the adjoining sections set to cover the joints on top. The lower portion of the flume was made of two strips, one 1 by 4 in. and the other 1 by 5 in., nailed together, and a calking string was inserted in the joint. The cover board is 1 by 6 in., and serves to brace the sections. It is nailed down and further reinforced by galvanized-wire stays, tightened around the sections as shown. No difficulty was experienced with the sagging of the sections as the cover and trough, joined rigidly, form a strong hollow beam. The capacity of the flume is about that of a 3-in. pipe, and 20 board ft. of lumber were required for each section.

The sections were all built at the house and carried to their places over a hastily broken trail. The work was planned systematically so that all of the pieces were cut first, and the similar parts and processes handled at the same time. The most difficult part of the work was the carrying

of the sections to their destinations, and in this work it is well worth while to make a fairly good trail.

The plans for this system include extension of the pipe line 250 ft. up the hill with $2\frac{1}{2}$ -in. pipe, con-

The Water is Conducted by a Wooden Flume from a Spring to the Storage Tank, and Then to the House by a Pipe Line

nected to a larger tank there. This will give a head of 255 ft., for the development of 500 watts of electric current, during the hours when lights or power are needed. A minimum flow of 25 gal. a minute is available for this purpose. The cask will be used in this arrangement as formerly,

a $\frac{3}{4}$ -in. pipe line being installed to conduct the water to the house. This will not interfere with the power line by reason of the use of a regulating valve, opened only when water is needed for the cask. The cost of this installation, exclusive of labor, was \$109, and the investment has increased the utility of the place immensely, and enhanced its value probably \$800. A valuable consideration also is the added security of the wooden buildings from the danger of fire.

Snow-Melting Device for Roofs

When three feet of snow fell in a region unaccustomed to heavy snow-

Damage to Glass Roofs was Avoided by Melting the Snow in a Heavy Snowfall as It Drifted on the Roof

falls much damage was done and several roofs collapsed under the strain. Many glass-roofed greenhouses suffered. The owner of several such buildings saved his property from damage by further snowfalls by extending the steam pipes that heated the interior, through the roof, as shown in the illustration. With a good head of steam in the boilers, he kept the pipes hot, and as fast as snow drifted on the glass roofs it melted away.

Reboring a Large Gear without Machinery

It was desired to rebores a gear, 40 in. in diameter, fitted to a 2-in. shaft, to fit a 2 $\frac{1}{8}$ -in. shaft, and the local shops were not equipped with

machinery suitable for this work. The rigging shown in the diagram was set up, and the job completed in a short time with success, and without the use of ordinary boring, or special machinery. The gear was placed on two strong shop horses, and bolted to the floor, leveled carefully, so that the

bored bearing in it was vertical. A hardwood block was bolted to the floor directly below the bearing hole, and a 2-in. hole was bored into it. Strong braces were set against the gear. A vertical boring shaft was fitted to the bearing hole as follows: A 2-in. shaft, C, was bored to fit a $\frac{5}{16}$ by 2 $\frac{1}{8}$ -in. piece of tool steel, tempered and ground, and set at an angle, as at A-B, so that the end A became a cutter. The lower end of the shaft was set in the hole at F, which extended through the floor. The inclination of the cutter gave the cutting edge a $\frac{1}{16}$ -in. lead, and the hole was bored true by centering the cutting bar at the beginning of the cut. A ring, E, 2 $\frac{1}{8}$ in. in diameter, was fitted on the shaft and acted as a follower. Power was applied on the arm D, 5 ft. long.—L. M. Drake, Daytona, Florida.

Push Button Varies Tone of Electric Horn

In residential sections the loud blast from an electric automobile horn is an unnecessary nuisance, but on long

stretches of country road, at sharp turns, or in crowded, noisy city streets a penetrating blast is often desirable. A push button designed to control the horn's tone at the operator's will can be constructed easily, as indicated in the diagram. The usual push button A has a contact point, C, and a spring-brass strip, B. When the button A is pushed downward, C and B make contact, and a circuit is established through the battery and horn. A second brass strip, D, similar to B, is added, and placed above B. A small resistance is then placed in series between C and D. The amount of this resistance can be determined by experiment. The horn is operated as follows: A pushes D against B, and a high-resistance circuit through the battery and the horn is es-

tablished. The horn then gives the subdued tone. A slightly harder push on A will bring B in contact with C, cutting out the resistance, and impressing full battery voltage on the horn. A full-toned warning will thus result.—K. M. Coggeshall, Webster Groves, Missouri.

Straightedge Arched for Leveling Concrete

When troweling the surface of a concrete walk, or similar area, many of the strokes start or end in the center of the panel. Care is necessary to prevent the center from becoming lower than the edges, forming a lodging place for water. If the straightedge, used to strike off a level surface before troweling, is arched, a level walk will be more easily obtained. The arching of the under side of the straightedge gives a slight crown, and subsequent troweling brings the surface down to a level.—J. J. O'Brien, Buffalo, N. Y.

Preventing Back Draft in Fireplace

If a fireplace smokes, or does not "draw" properly, the cause may usually be found in that the portion known as the choke is too large. To remedy this quickly and at slight cost a false back is provided in the fireplace, as shown in the sketch. A sheet of tin plate is fastened to the back wall, a few inches above the hearth level, and extended upward, on a slight forward curve, to a point about 2 in. above the lower edge of the facing. This sheet should be the full width of the back wall. At the lower edge it is nailed to the mortar and at the top it is fastened to a cross rod. Cut the sheet the width of the back wall of the fireplace, and of a length corresponding to the vertical distance to be covered, allowing 1 in. to be used for a loop on the cross rod. A right-angle turn of 2 in. is then made on each end of the rod, which is 4 in. longer than the width of the fireplace, forming a springing resistance against the walls. The lower edge of the apron is then nailed, the sheet of

metal being curved as shown. The opening into the flue can thus be reduced in size as desired, by moving the

The Draft in a Fireplace may be Regulated to Prevent Smoking by Means of the Adjustable Sheet-Metal Guard

cross rod, care being taken to create just the necessary draft to prevent smoking.—Charles Alma Byers, Los Angeles, Calif.

Indicator Holder with Five Positions

Having purchased an indicator, I found that I needed a number of attachments to make any considerable use of it. These were expensive, so I made the holder shown in the illustration, and was able to do many kinds of work with it. It has five positions for the indicator, as shown by the numbering on the sketch. The holder was made of a $\frac{3}{8}$ by $\frac{3}{8}$ by $1\frac{1}{2}$ -in. strip of machine steel. The holes in it were tapped to fit a thread by means of which it was supported in its various

This Simple Holder Enlarged the Usefulness of an Indicator without Special Attachments

positions. The holder is fastened to the indicator by means of a thumb-screw set in hole No. 6.—Arthur Whittier, Norwood, Mass.

Safety-First Alarm System for Shops

In emergencies it is often desirable to stop the machinery in a shop quickly,

and, if the establishment is a large one, a signal arrangement between the engine room and the shop is practical. Serious accidents or loss of life may thus be averted. A simple arrangement which any workman could use in an emergency is shown in the sketch. The box with its code lettered to be seen at a distance should be located so that it may be reached quickly, and painted a conspicuous color.—J. R. Minter, Washington, Ind.

Auxiliary Vise Jaw for Holding Irregular Pieces

A block of hard wood, shaped to match the upper end of the vise jaw and pivoted at the center, as shown in the sketch, will add to the usefulness of many vises. The block will

adjust itself to pieces of unequal width and will save needless wear on the vise, as the block may be quickly renewed when worn out.

Anchor Bent from Round Bar

A form of anchor that can be made easily from a bar of round iron is shown in the sketch. The original was made of 2-in. bar iron, but the method of forming the anchor can be applied to

smaller stock for use on a rowboat or other small craft. The ends of the rod

are heated and upset by striking them on the end. They are then pointed as shown, and the bar is bent into shape with an eye at the top to fit a ring.—J. Harger, Honolulu, H. I.

Electrical Ground Made of Flowerpot

A ground suitable for wireless apparatus, lightning arresters, and similar electrical devices, may be made quickly

as shown in the sketch. The heavy copper wire of the ground is fitted into a large flowerpot, and a wire is fixed to its end to hold it in place. The bottom of the pot is covered to a depth of about 1 in. with cement. Rock salt is then poured in and a disk of sheet zinc is imbedded in it in contact with the wire. A 1-in. layer of cement is poured in on top. Salt will draw moisture and for this reason a ground made as described will give good results. The clay flowerpot tends to hold the moisture.—A. Gemmill, Ansonia, Conn.

Rodent-Proof Support for Corncrib

To prevent the inroads of rats and mice, and, at the same time, provide a

substantial support, a foundation for a corncrib was made of 8-in. tile set in concrete, as shown in the sketch. The tile was placed with the flange down, and a 1/2-in. iron rod was imbedded in the concrete with which it was filled. A galvanized-iron cap was fitted over the top and the iron rod passed through it to form a substantial fastening for the sills of the crib.—R. W. Smith, Minneapolis, Minn.

Adaptation of Motorcycle for Home and Shop Use

By J. H. SEEGER

A MOTORCYCLE that is used only for transportation or pleasure jaunts is not giving the fullest service to its owner. By providing suitable rigging and devices, all easily made in the home workshop, I use my motorcycle the year round, for a large variety of home and shop duties. The arrangement shown in Fig. 1 permits the use of the engine for driving a cooling fan, an emery grinder, and an ice-cream freezer. Many other home and farm machines may be driven similarly. The work of wash day made lighter by the use of the motorcycle engine is shown in Fig. 2, and a detail of the driving pulley in Fig. 3. The machine fitted to a truck for use on railroad tracks is shown in Fig. 4. The vehicle is not impaired for its ordinary use, and the devices used with it are quickly disconnected.

The installation for the grinder and freezer was made in the shop. The grinder is a handy shop machine and is driven at great speed and with sufficient power for most ordinary grinding. The fan on the opposite spindle of the grinder is used to cool the engine when it is used for continuous duty on work other than the driving of the grinder. If it is desired to cool the engine while grinding, the fan should be incased for the safety of the operator. The freezer, or other light machine, such as a churn, is connected to a line shaft by gearing. Other suitable means of transmitting the power are readily installed. The drive pulley on the engine is $4\frac{1}{2}$ in. in diameter, and the pulley on the line shaft 13 in. The drive pulley was supported by braces of strap iron, fixed to the engine as shown in the detail view.

In connecting the engine to the washing machine and the wringer, it is necessary to gear the speed down considerably, hence large pulleys are used, and a further reduction made between

the line shaft and the pulleys on the shafts of the wringer and the washing machine. The pulley below the machine is 10 in. in diameter. In all of these arrangements, the motorcycle

FIG. 1
Grinder, Fan, and Ice-Cream Freezer Driven by a Motorcycle Engine, the Speed Adjusted by Pulleys and Gears

must be mounted on a strong rear-wheel stand, or other rigid frame, from which it may be released easily. If necessary, the frame may be bolted to the floor, as in the workshop installation. The sprockets, chains, and other

FIG. 2
The Work of Wash Day Made Lighter by the Belting of Motorcycle to the Washing Machine and Wringer

machine parts used, were picked up from old machines, separators, farm tools, and similar devices, at practically no expense.

The car for use on railroad tracks is of simple construction. It will carry three workmen, and operates smoothly

FIG. 3

and speedily, even in bad weather. Three flanged wheels, like those commonly used on small hand cars, were used. An iron bar, fitted with a small roller bearing against the inner side of the rail, guards the motorcycle from slipping off the rail in taking a curve.

The rear wheel only comes into contact with the rail, and furnishes satisfactory traction with the ordinary rubber tire. It can be raised to operate the engine, without traveling, by the usual stand. The car and the framework supporting the carrying rack are arranged to be set up or removed quickly for use with the motorcycle,

FIG. 4

Motorcycle Rigged to Run on Railroad Tracks and Accommodating Three Persons

by bolt fastenings. This enables the rider to travel a part of his journey on rail, and the rest over roads, in an emergency.

CA piece of heavy cardboard, about 6 in. square and having a $\frac{1}{2}$ -in. hole through it, is useful in locating splinters or small particles of foreign matter in the hand. Hold the hand in front of a strong light and locate the splinter by observation through the opening.

Focusing and Caring for Headlights

The adjustment of headlights should be made at night and without interference from other light. The vehicle should be headed toward a wall, or other similar surface, with the lamps 10 ft. from it. If the lamps are properly focused, the light thrown on the surface will be in the form of a circle, about 3 ft. in diameter, and having a very bright spot in the center, 3 or 4 in. in diameter. When this is not the case, the lamps are out of focus and should be moved forward or backward in the reflectors. If they are too far back, the rays of light will diverge, so that a large area is illuminated, but the light will be unsatisfactory for driving; if they are too far away from the reflectors, the rays of light will converge, so that there will be excellent light, a few feet ahead of the car, but not satisfactory for driving.

An adjustment of the lamps for maximum illumination on a point 150 ft. from the car will give good results for general driving. The two reflectors should be so adjusted that they will throw their light directly ahead of the car, and slightly toward the ground. Lamps having concentrated filaments are desirable, as a better focus is possible, in that the light is confined to a small spot. If the reflectors are dirty, they may be cleaned by rubbing them lightly with a piece of fine cotton dipped in alcohol. Rub from the outer edge toward the center or the reverse, never around the reflector.—P. D. Norem, Chicago, Ill.

Wire Substitute for Latticework

Fine galvanized-iron wire mesh may be used with good effect to replace old-style wood latticework in inclosing the lower portions of a porch, stairs, or similar places. It makes a satisfactory appearance, and if well painted, will last longer than wood. It is also easily fitted and fastened in place. Climbing plants are afforded a good hold, and the fine mesh keeps out small animals.—James M. Kane, Doylestown, Pa.

Motor Attachment and Brake for Sewing Machine

A small battery motor using a current of about six volts was fitted to a sewing machine and provided with a brake and pedal, as shown in the sketch. The arrangement gave thorough satisfaction and was constructed in a short time, with materials readily available. The motor was bolted to a wooden base, which was in turn connected to a block support with a strap hinge. A stop was provided to keep the base in a horizontal position, and a coil spring was fitted under it, to hold it down, except when the foot is pressed upon the pedal. The motor was belted to the pulley on the end of the spindle of the machine, and a brake pad of wood was fitted to the base, to engage the flywheel. The pedal is connected to the back end of the base with a hinge, and pressure upon it, in front of its pivotal point, causes the base and motor to be raised, releasing the belt and bringing the machine to a quick stop by the action of the brake. The machine may thus be stopped without shutting off the current to the motor, but a small switch should be mounted near the operator to control the current supply. A small trans-

The Motor is Controlled by Pressure on the Pedal, the Brake at the Same Time Acting on the Flywheel

former may be used to reduce 110-volt lighting current, or it may be supplied by a storage battery.

Always joint a saw to insure a straight cutting edge before filing the teeth.

Adaptable Jig for Turning Pulleys in a Lathe

After several castings for light pulleys had been broken while attempting to turn them up in a lathe by the com-

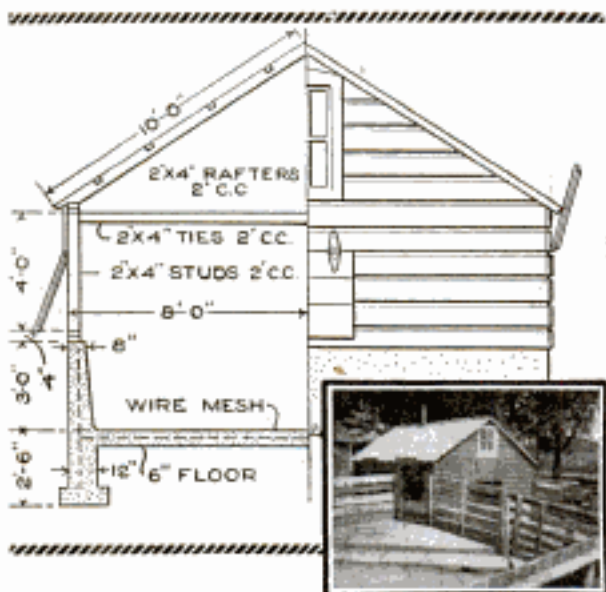

The Eccentric Disks and the Ring Equalize the Strain in Turning Up Light Pulleys in a Lathe

mon method of mounting them on an arbor and faceplate with a stud, the device shown in the sketch was made, and proved satisfactory. A faceplate was turned up and threaded to fit the lathe spindle. Two disks provided with studs, set close to their edges as shown in the detail sketch, were fixed to the faceplate with machine bolts, so as to pivot easily. They were mounted eccentrically. An equalizing ring was made and fitted over the disks and studs, as shown. The operation of turning up the pulleys was then carried out as follows:

The pulley was mounted on an arbor and placed on the faceplate so that each of the studs rested against a spoke, with the ring in position. The pressure of the spokes against the studs forces them against the ring, which equalizes the strain, giving a uniform pull on opposite sides of the pulley. The faceplate may be used for various sizes of pulleys, by drilling and tapping holes at suitable distances from the center, to accommodate the studs. Three disks for very light pulleys may also be used.

Roofed Watering Tank of Concrete

A large concrete watering tank, having a frame superstructure over it, was found practical on an Iowa farm. Its

The Concrete Watering Tank was Built at the Center of the Barnyard, Giving Access to Stock in the Various Sections

large size enabled the farmer to use plenty of water in spite of adverse weather when the windmill could not be operated. The roof over the water kept it cool in summer, and aided in keeping the water supply pure. The original was made 16 by 20 ft., but the method of construction may be applied readily to smaller tanks.

A strong foundation of concrete, having a 24-in. footing and a 12-in. wall, tapering to 8 in. at the top of the tank, was poured in forms and served as the tank proper. The 6-in. floor and the walls were reinforced with heavy wire mesh. The tank was made to extend 3 ft. above the floor level, and bolts were set into the top of it, to provide a fastening for the frame portion. The lat-

ter was made of 2 by 4-in. material, with double pieces for the sills. The rafters and other details are of standard construction. Windows were set in the gables, for light and ventilation, and several doors, to be raised in opening them, were fitted in the sides and ends. The sides and ends were finished with matched siding, set horizontally.

The openings are spaced in relation to the fenced parts of the barnyard, so that each type of cattle has separate access to the tank. The tank was set in the center of the adjoining sections of the barnyard for this purpose.

The top of the concrete wall should be leveled carefully, to provide a satisfactory foundation for the frame structure. The tank should be finished, especially inside, with a smooth coating of a creamy mixture of cement and water, three days after pouring the concrete in the forms, the latter being removed at that time. The intake and overflow pipes must, of course, be provided for when the forms are set up.

Platform Facilitates Taking Down of Automobile

A platform used in an automobile factory, and which has practical applications for use in repair shops and garages, is shown in the illustration. After the car has been tested and certain parts removed it runs onto the platform and down the incline, where it drops onto a truck, resting on its axles. The car uses its own power in this process, and the same platform is used to unload the chassis when it is painted and ready for the body, the process being reversed.

The Automobile is Run onto the Platform by Its Own Power and Set on the Truck for Taking Down before Painting the Chassis

Indoor Air Supply for Furnace Heating Systems

Many hot-air furnace heating systems provide for two sources of fresh-air supply. In moderately cold weather an outdoor intake is used while during severe cold spells, or when the wind is in such a direction that it blows into the intake, air is drawn from a duct in the basement. The air taken in from this source is not desirable, hence a better plan of using already warmed air is to take it from a duct connected with the front hall, rather than the basement.

A Book Fumigator and Sterilizer

Of recent years public libraries and schools have come to realize the danger of books as germ carriers. In larger institutions, special rooms and apparatus may be fitted up for this purpose, but in smaller ones, sterilizing books is a problem. The book fumigator shown was designed so that an ordinary carpenter could make it at moderate expense, and is suitable for use in a large room without incommoding the occupants.

Excessive and continued heat provides a fairly certain method of sterilizing a book, but this treatment is so severe that the bindings are usually injured. If the books are placed as shown, in a suitable cabinet, with the covers spread apart so that the leaves swing free, and are then subjected to a strong fumigating gas overnight, excellent results may be obtained. The fumigator consists of a closely fitted cabinet, divided vertically by a central partition. The two doors are paneled, and each one carries two strong crossbars. Instead of being hinged directly to the cabinet each hinge is fastened to a square block, which in turn is hinged to the sides. This arrangement permits the doors being forced against a strip of felt extending around each door casing. The method of clamping the doors is shown. When not in use, the bars stand vertically. If more pressure is required,

give these bars one or more half turns to the right. The inside space should be closely papered and the exterior

The Books are Arranged in the Cabinet with Leaves Exposed for Thorough Fumigation

varnished, or shellacked. The shelves may be made adjustable, greatly increasing the utility of the cabinet.

To provide the fumigating gas, place a few spoonfuls of formaldehyde solution in a saucer, and just before closing the doors drop a little permanganate of potash or chlorinated lime into the solution, which will immediately generate a powerful germicidal gas. The common sulphur torch or formaldehyde generator involving a flame should not be used.—John D. Adams, Phoenix, Ariz.

Ⓒ Gasoline and kerosene used in mixtures should be kept well stirred because the kerosene will otherwise settle.

Base for Swage Block

The usefulness of a swage block is considerably increased if it is set upon a strong and easily portable base. In

This Strong Frame Increased the Usefulness of the Swage Block

many shops this tool is set on a wooden block, or placed upon any makeshift available. I devised the base shown from 5-in. channel bars and 3 by 3-in. angle iron. The channel bar was mitered at the corners to form a frame, as shown in the plan. Four legs were riveted to it and braced at the bottom with angle iron. Portions were cut out of the upper flange of the channel bar, as at B, C, D, and E, to fit the block, in two positions. When it is desired to use it in a horizontal position, the block is rested on the channel-bar frame.—A. E. Dowden, Worcester, Mass.

Storage Areas Marked on Floors

The method used in a large warehouse to keep the piles of stored goods from encroaching on the aisle space is as follows: A white 2-in. stripe is painted on the floor bordering the space which must be kept clear, such as trucking aisles, approaches to fire exits, and valves controlling the automatic

sprinkler system. Special attention is called to valves by lettering the name on the floor with a large arrow pointing to the valve.

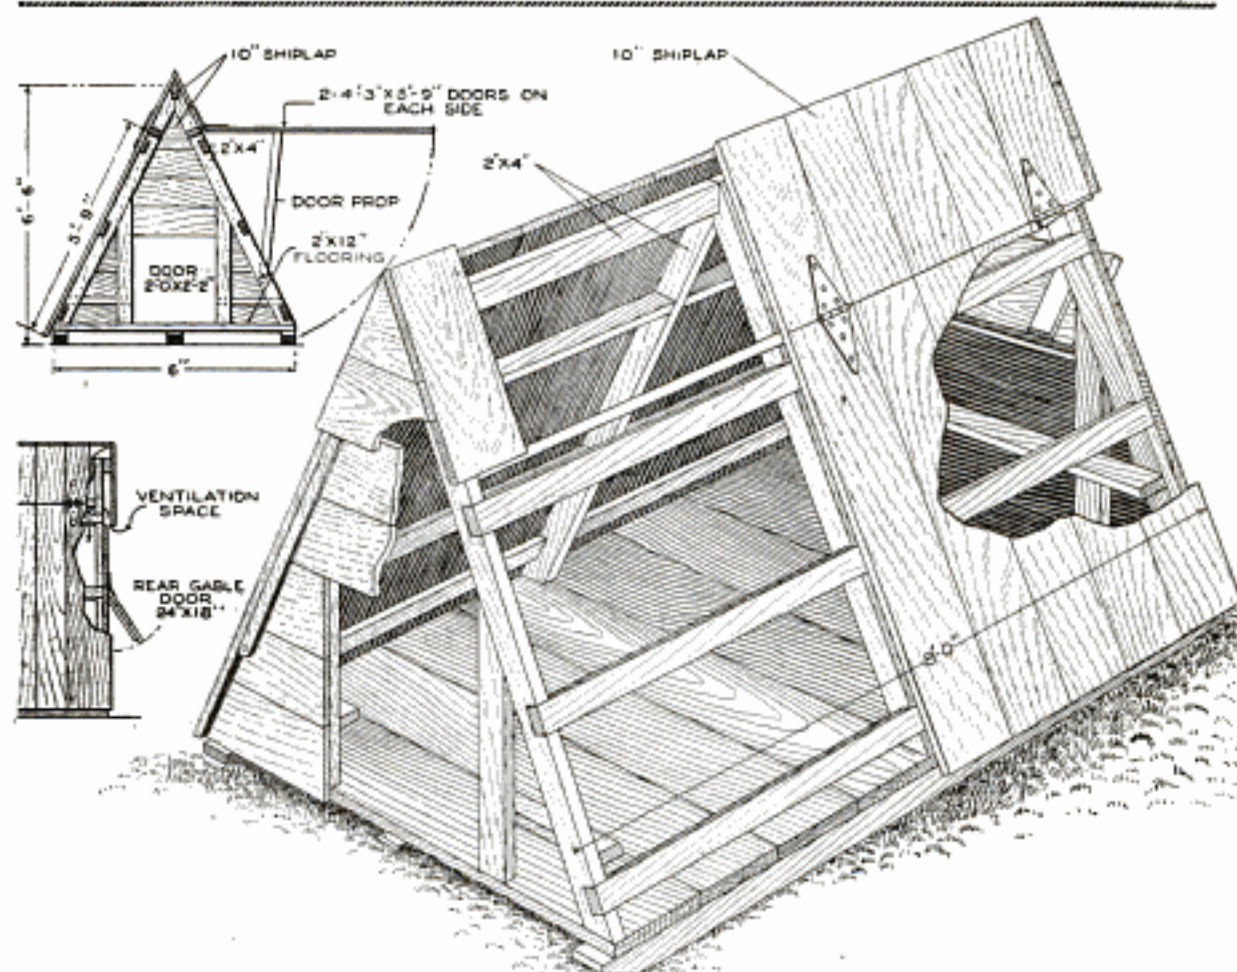

High-Speed Foot-Power Grinder

An old bicycle wheel, weighted with a lead pipe around its rim, was used to provide a flywheel for the bench grinder shown in the sketch. The ratchet part of a coaster-brake bicycle hub was used for the axle and ratchet device. The axle was mounted in the brace at the end of the workbench, and the support for the grinder was set on the bench in line with the flywheel. A rope was used as a belt and runs in the grooved rim of the wheel. Holes were cut in the top of the bench to permit the rope belt to pass through. The ratchet device was arranged between the flywheel and the brace on the bench, a block being set against the brace to bring the ratchet out sufficiently to make room for the treadle. The latter was pivoted in the rear leg of the bench, and a section of bicycle chain fixed to it as shown, to act with the ratchet. A coil spring, like those used on doors, was fastened to the end of the drive chain and to the end of the treadle. The high gearing of the belt from the large drive pulley

Parts of a Coaster Brake from a Bicycle were Used to Make This High-Speed Grinder, Fitted to the End of the Workbench

to the small one on the grinder gives great speed, which is desirable in a small grinder of this type.—N. Michels, Chicago, Ill.

This Portable Hog House may be Constructed Readily in the Farm Workshop and Provides a Clean, Well-Ventilated Shelter

An Individual Hog House

Farmers will find the individual hog house shown in the sketch practical, since it is easy to build, and can be moved from place to place readily on the skids provided. The frame is built up of 2 by 4-in. stuff, braced with $\frac{7}{8}$ -in. strips. Three A-frames give the main support to the house, and the cross braces are notched into them. It is 8 ft. long and 6 ft. wide, with a door at one end, and ventilating doors on the sides and the other end. The frame is covered with siding, shiplap, or plain $\frac{7}{8}$ -in. boards. The floor is of heavy planks. The construction provides for ventilation spaces at the gables of the ends, as shown in the lower detail sketch. The side doors are hinged at the top and can be raised and set under props fastened to the ends of the house, permitting the air and sunlight to enter

freely, and making it convenient to clean. Fenders should be built around the inside, about 8 in. above the floor, to protect the young shoats.—W. E. Frudden, Charles City, Iowa.

Drawing the Temper in Small Taps and Reamers

The proper way to hold a tap or reamer in drawing the temper is with the threaded, or fluted, end in a round pair of tongs, the squared end to the flame. Draw the tool to the proper degree at the point. When drawn to the proper color, quench it in oil or lukewarm water. This gives the cutting part of the tool the hardness necessary for standing up under the cut, and the shank the strength and toughness necessary to prevent breaking. For tapping cast iron, draw to a light straw, and for steel, to a light brown.

Powerful Wrench Used in Dismantling Large Pipe Line

In removing a line of about 4,000 ft. of 6-in. and 8-in. pipe with screwed joints which had been in place for

This Rigging Is Useful in Taking Down Pipe Structures and may be Adapted for Assembling Pipe

about five years, the pipe wrench shown in the illustration was rigged from a steamboat jack and a 12 by 12-in. timber, 6 ft. long. With this rig it was possible for one man to start the joints on 8-in. pipe. The device offers suggestion for use in joining or disassembling other large and small-pipe structures.

In operation, the wrench was placed astride the pipe, and centered over the coupling. Then the chains were given several turns around the pipe and over the sheaves at the ends, and hooked into the special hooks on the ends of the jack. The screw was given a few turns' hold in each sleeve at the start. Then, by means of the handle and ratchet, the chain was quickly tightened up and the joint broken, in most cases with a jump. The sleeves are kept from turning over by the short bars on the bottom of the hooks. The short diagonal pieces on each side rest against the pipe and take the pull of the chains. The handle used was about 3 ft. long. Two short pipe handles at each end provide means for carrying the device from place to place. For clearness, the chain is shown on one-

half of the sketch only, the other half being the same. This rig could also be used for tightening joints in pipe laying by reversing the chains and the diagonal pieces or braces.—E. C. Entler and James Ryan, Keokuk, Ia.

Solid-Tire Rubber for Making Heels

When the rubber-block tires on the motor trucks of a large company are renewed, the old tires are returned to the garage with the vehicle fitted. The workmen trim the rubber blocks to $\frac{7}{8}$ in. thickness on the band saw, cut them to the shape of rubber heels, and nail them to their shoes. These inexpensive heels afford much comfort, and are an aid to safety in that they give a more secure footing, and withstand heavy wear.—Theodore J. Becker, Kansas City, Mo.

Gauge for Plastering Trowel

Plaster, stucco, cement, and similar finishes applied in layers of uniform thickness, can be applied quickly and easily with a trowel fitted with gauges like the homemade ones shown in the sketch. They are of $\frac{1}{16}$ -in. sheet iron, and provided with slots to fit the ends of the trowel, so as to make the layer of plaster $\frac{1}{8}$, $\frac{1}{4}$, or $\frac{1}{2}$ in. thick, as desired. The gauges are fastened with knurled screws. After the roughing application is made, the surface of the plaster must be smoothed with a plain trowel to remove the tracks of the gauges.—Alfred J. Miller, Albuquerque, N. M.

Scissor blades may be kept at the proper tension by placing a small flat spring under the head of the screw which holds the parts together.

Title Stamp for the Drafting Room

Every draftsman well knows the tediousness of lettering in the drawing titles by hand. There is, also, an unavoidable lack of uniformity, when there are several draftsmen employed. A standard title, applied to the drawings by means of a hand stamp, shown in the sketch, and permitting of filling in to suit the particular job, overcomes these difficulties in a practical and efficient manner. The drawing for the title should be made three times the size of the zinc etching, which is to be made from it, and used in the stamp. Ordinary printing ink is used on the cut.

A suitable base for the stamp is made of a piece of wood, 5 in. wide and 16 in. long. The lever, to hold the cut or type block, is 3 in. wide and 16 in. long, one end being hinged to the base. The type block is fastened to the lever with screws, as shown, and a piece of blotting paper is placed under the drawing when an impression is to be made. Ink is kept in a tube, and a small quantity spread on a piece of plate glass, from which it is worked onto the roller, and applied to the type block. The stamp applied to trac-

A Standard Type Block for the Titles of Drawings is Mounted in the Stamp for Convenient Application to Tracings

ings will reproduce white on blueprints, and will be clean-cut, in distinction to the blurred appearance of titles printed with a rubber stamp.—E. E. Stevenson, Los Angeles, Calif.

Handy Containers for Distilled Water

Having use at times for a large quantity of distilled water and not wishing to go to the expense of purchasing

Distilled Water was Kept in Large Bottles Provided with a Siphon Tube

the amount of block tin necessary to line a tank sufficiently large, I hit on the following scheme: I had a number of 5-gal. bottles—the spring-water kind—and I fitted each of these with a three-hole cork; two of the holes, A, receive glass tubing, and the third, B, is plugged loosely with cotton, in order to allow the entrance of air and at the same time keep out dust. Each piece of glass tubing was bent in two right angles, and was of such a length that it reached to the bottom of each bottle and allowed the bottles to stand close together. When the first bottle was partly filled with distilled water, from a still, it was easy to run some into the second bottle by siphoning through the glass tube. Later on the water was conducted into the other bottles in order. They were placed on a shelf, and a glass tube, with rubber tubing and a pinchcock, conducted the water as needed from a fourth hole, C. This is an inexpensive means of providing storage for a large supply of water.—William G. Kennedy, Albany, New York.

☞ Care in the handling of lathe centers will save regrinding them and prevent inaccuracies from damaged points.

Spring Stripping Attachment for Power Presses

By GEORGE P. BREITSCHMID

A FORM of stripper widely used on power punch presses, to remove the product after the dies have been applied, is that fixed to the die by means of four screws. Such a device was in use in a large manufacturing establishment using many presses, and proved costly from various considerations: The device was dangerous to the workman; caused great wear on tools; required that dies be frequently dressed, and made it impossible to see the work in process as readily as is desirable. Cost of production was high, and the profit of the operators was relatively low because their production quantity was kept down. By the introduction of the simple spring stripping device shown in the illustrations, together with jigs for the economical production of its many variations, a striking improvement was made in all of these points. The stripper consists of a flat steel plate, cut to provide clearance for the punch, and is shown fixed to the ram of the press in Fig. 1. The stripper, shown at A, has an opening at its center for a punch of oblong face, a slight clearance being provided all around its edge. The stock of the punch is fixed in the central opening of the ram B, and is clamped by means of the screws. A jig for boring and counterboring the stripper, for fastening it to the ram, is shown in Fig. 2; three views of a jig for marking the center opening with clearance for the punch are shown in Fig. 3, together with details of the adjustable handle.

The ram of the press B was first bored for two heavy screws, C, and counterbored at the top and bottom, the heads S of the screws being counter-sunk at the top and chambers provided at the bottom for $\frac{5}{16}$ -in. square helical springs, D, of tool steel, $1\frac{1}{16}$ -in. pitch, tempered. The latter are compressed between the collars E and the upper surface of their chambers, by the pressure of the ram in operation. They are adjusted by means of a steel rod,

inserted in the cross-bored sockets. The action of the springs upon the stripper, which is fixed to the lower ends of the large screws by means of smaller ones, is to thrust the punched work from the punch. The stripper is made of $\frac{3}{8}$ -in. machine steel; the length is standard, 8 in., as shown in Fig. 1, and the holes in it are bored 6 in. apart on centers. The width may be suited to the dies.

The jig for boring and counterboring the strippers accurately and uniformly, so that they may be used interchangeably on various presses, is shown in Fig. 2. It consists of a metal base, F, to which are fitted clamps, G, held in place by screws. The clamps are adjustable at the slots in them, and the blank from which the stripper is to be made is fitted under the clamps, the ends of the blank being set against two stops, H. Hardened steel bushings, J, are fitted into the base as guides for the boring of the stripper. The smaller holes are bored on 6-in. centers, with the base inverted. The counterboring is done with the base in the position shown. The stripper is indicated by the dotted outline.

The jig for marking the opening in the stripper, through which the punch passes, and for allowing the necessary clearance of $\frac{1}{16}$ in. all around the punch, is shown in Fig. 3, in top, front, and side views.

The device consists of a base, K, carrying a vertical post, L, dovetailed to a vertical sliding member, M. The latter can be adjusted vertically and tightened in position by the threaded rod N, which is held firmly by the spring plate O. The plate is shown in detail at the upper part of Fig. 3.

In operation, the stripper, drilled by the use of the jig shown in Fig. 2, is fitted over the pins P, which fit snugly into the holes in the stripper. The sliding gauge Q is moved to hold the edge of the stripper, the jaw R being undercut to hold the stripper down as

well as from the side. The punch S, inserted into its holder, or a split bushing if the punch has a small shank, is

now be fastened into place on the ram of the press, as shown in Fig. 1.

The stripper is made of varying

The Spring Stripper Makes for Safety, Economy in Production, and a High Grade of Work on Power Presses. Fig. 1 Shows the Stripper Fixed to the Ram of the Press. A Jig for Boring the Fastening Holes in the Stripper is Shown in Fig. 2, and a Jig for Marking the Clearance Hole for the Punch is Shown in Fig. 3, with Details of Parts

placed in the clamp of the sliding member M. It is lowered to rest upon the stripper blank, and, with a scribe, a line is scratched around the punch on the surface of the stripper. Clearance of $\frac{1}{16}$ in. all around is allowed, and the clearance hole is drilled out and filed smooth. The stripper may

widths to accommodate it to different jobs, but since the fastening holes and the length are standard, the jigs may be used for a large variety of work. The stripping attachment may be fitted to various types of punch presses, and is suitable for blanking, perforating, or bending operations.

Wall Crane for Small Shop or Garage

In garages and machine shops where it is necessary to handle heavy machine parts, a small crane saves much time and effort. The illustration shows a wall crane, built largely of 2-in. pipe and fittings, that can be made readily, and has a wide range of use if properly located on the shop wall. The dimensions may be varied to suit special conditions, and a length of about 10 ft. for

the arms is satisfactory. This size will lift objects weighing up to 1,000 lb. with safety. The arms of the bracket are fitted at their upper and lower ends into tees, to form a right angle, and to give a fastening at the top for the brace, which is an iron rod. It is fixed at its upper end to a plug screwed into the tee, and at its lower by bolting it to the turned-up end of the horizontal member. The vertical support is carried at its lower end in an elbow, and near its upper end in a tee, fitted into

a flange and bolted to the wall. A suitable trolley and tackle may be pro-

This Wall Crane, Made of Pipe and Fittings, will Carry a Load Up to 1,000 Pounds, if Carefully Made

vided either by making the pulleys and fittings or purchasing them.—Thomas W. Benson, Philadelphia, Pa.

Truck Arranged for Hauling Long Stock or Ladders

Under traffic laws in various localities, vehicles are not permitted to carry long articles that extend over 5 ft. at the rear, without hanging on a danger signal. To overcome this, and for convenience in handling long beams, lumber, etc., a transportation company fitted its trucks with doors in the front end, permitting long pieces to be passed through and extend along the radiator, as shown in the illustration. This helps

Beams, Planks, and Other Long Objects are Carried Conveniently by Reason of the Door

to balance the load and prevents it from dragging along the road.—J. C. Grindell, St. Louis, Mo.

Repairing Ratchet on Steering Post

On account of the severe wear on the steering-post ratchet of a "jitney" driver's automobile, he was forced to devise a method of using the worn ratchet in an emergency. He wound a heavy brass wire around it, the wire resting in each of the cogs. The follower engaged the wire just as it had the ratchet teeth, and the repair was so satisfactory that it was unnecessary to replace the part.

Cap for Screwdriver Reduces Marring of Work

The slipping of a screwdriver from the slot of a screw being fastened into a finished surface usually results in a severe injury to the finish. This condition was met in automobile work in putting screws into highly finished surfaces on bodies and other fittings. The screwdriver, shown in the

illustration in several forms, was devised for the purpose of overcoming this, and proved quite satisfactory. The lower end of the screwdriver, in the simplest form, was ground as shown at the left, and a sleeve fitted over it, as shown above. The sleeve was made fixed for certain kinds of work, and movable on a pin and spring for work requiring this adjustable feature. The screw is driven in the usual manner. For larger screws, the sleeve was enlarged at its lower end, as indicated in the lower sketches. The device is useful also in driving screws in rough work, enabling the workman to work quickly with less danger of the driver slipping from the slot.—Charles C. Brabant, Detroit, Mich.

Draw enameled wire between a folded piece of sandpaper to remove the insulation.

Garden Plow Made of Pick-Up Material

By T. T. STURGEON

THE labor of spading a garden of even moderate size is sufficient to warrant the person who undertakes the job in making a hand plow like that shown in the illustration, for it will serve many years, with reasonable care. I made one worth about \$5 at an outlay of 25 cents, gathering the necessary wood and metal from among old machine parts and pick-up material.

An old wheelbarrow provided the 16-in. wheel. The handles were made from a $\frac{7}{8}$ by 4-in. strip of spruce, 5 ft. long. They were marked on the strip so that one of the curved grips was at each end, on opposite edges. The curved parts of the grips were cut with a keyhole saw, and when a kerf long enough to admit a large rip saw was cut, the board was ripped into the two handles. They were smoothed and the grips trimmed with a sharp knife. A section of broomstick was cut for the upper brace. The lower one is made of a strip of iron, $\frac{1}{4}$ by $1\frac{1}{4}$ by 12 in., drilled for $\frac{1}{4}$ -in. bolts, and bent at right angles, $1\frac{1}{2}$ in. from each end. Drill a $\frac{1}{4}$ -in. hole at the middle, to engage a bolt on which the vertical strip is supported, and adjusted to the operator, as shown in Fig. 1.

Cut a strip, $\frac{1}{4}$ by $1\frac{1}{4}$ by 18 in., for the vertical support, shown in Fig. 5. Drill four $\frac{1}{4}$ -in. adjusting holes, 1 in. apart, at the upper end, and three $\frac{1}{4}$ -in. holes at the lower end for fastening the strip to the moldboard, as shown in Fig. 3. Drill a $\frac{5}{16}$ -in. hole at the $7\frac{1}{2}$ -in. mark, for bolting the strip to the braces, the other ends of which are fitted on the $\frac{3}{8}$ by 10-in. bolt used as an axle. Cut the two braces 14 in. long, of $\frac{1}{4}$ by $1\frac{1}{4}$ -in. strips, and drill a $\frac{3}{8}$ -in. hole in

the forward end of each, to fit the axle, and a $\frac{5}{16}$ -in. hole in the opposite ends, 1 in. from the ends in each case. Cut

This Hand Garden Plow was Made of Old Material, a Shovel being Used for the Making of the Moldboard

a strip, $\frac{1}{8}$ by $\frac{3}{4}$ by 12 in., for the land-side, as shown in Fig. 2, bent under the moldboard, and bolted to it. The proper angle can best be bent after the moldboard is made and fitted.

The method of marking the shape of the moldboard on the blade of an old shovel is shown in Fig. 4. Make a pattern of cardboard, marking it into 1-in. squares. Draw the shape of the moldboard by tracing the outline through the corresponding squares, using the diagram as a guide. Mark the position of the bolt holes, for fastening it to the vertical support, indicated by the dash lines at the right. Cut out the pattern and trace around it on the shovel, using the thickest part for the point of the share. Cut out the outline, smooth the edges, and point up the cutting edge. Drill holes for fastening the moldboard to the vertical strap with $\frac{1}{4}$ -in. bolts,

and for the fastenings to the landside, with $\frac{3}{16}$ -in. bolts.

Curve the moldboard into shape and fit it to the various supports so that it sits properly, as shown in Fig. 1, seen from the furrow side, in Fig. 2, from the rear, and in Fig. 3, from the land side. Bend the 12-in. strip into shape, as shown in Fig. 2, and bolt it into place, to form the landside. Assemble the parts, being careful that the wheel and landside are set in line, as shown in Fig. 2, and that the rear edge of the latter is raised slightly, as in Fig. 3. The plow should be given a coat of paint, and the cutting parts made smooth, and oiled.

An Interesting Water Telescope

A water telescope is easy to make and will afford much pleasure in exploring plant or animal life in comparatively shallow water. The device is made by fitting a heavy glass disk into the end of a round metal tube, about 2 in. in diameter. The glass is fitted between two rings of metal, preferably with a small flange set against the glass. A waterproof cement is used to fix the glass between the rings. To use the "telescope," rest it on the side of a boat or other convenient place at the water, and set the lower

end, containing the glass, under the water. Remarkably clear views may be had in this way.—S. Leonard Bastin, Bournemouth, England.

Writing on a Moving Train

Writing legibly on a fast-moving train is difficult to a person unaccustomed to it. The railroad conductor knows the trick of it and manages to get along quite satisfactorily. He prefers to write in a standing position and holds his right elbow firmly against his side. The reason for this is that in a sitting posture there is too much lateral movement in the trunk of the body, while in a standing position this is more easily controlled. When the arm swings freely, as in ordinary writing, several joints of the body are affected in the process, each of which is capable of its own motion. Holding the elbow against one's ribs "breaks" these motion tendencies, except that of the wrist, which movement is necessary in writing, and thus the pencil, or pen, is more easily controlled.

The same principles modified apply in using a typewriter on a moving train. Many traveling men, news correspondents, and others, carry portable typewriters and do much of their writing while traveling on trains, not to mention the various railroad and government men who travel in office cars and necessarily must get out their correspondence en route. It is extremely difficult to execute neat typewriting on a moving train with free-arm movement, even though the central portion

of the car where the vibration and swing is less severe, is selected. As I am employed in such capacity, I had to evolve some plan to expedite the work. I am able to do typewriting quite rapidly by resting the palm of the hands, near the wrists, against the front edge of the typewriter frame surrounding the keyboard, and using the swing of the fingers instead of that of the whole arm, as in ordinary typewriting.—Victor Labadie, Dallas, Tex.

A Revolving Window Display

A jeweler attracted passers-by and not a few customers by placing a revolving display in his window,

which was kept in motion by means of the arrangement shown in the sketch. A 10-in. cut-glass bowl was placed, upside down, near the front of the show window. An inverted tumbler was set upon it and a small tin box was pivoted on the tumbler by means of a needle soldered inside of it. Six arms of wire were soldered to the box, and watches were suspended from them. The carefully balanced frame revolved easily on the point of the needle. It was kept in motion by the draft from a fan hidden behind a mirror.—H. S. Hart, Shreveport, La.

A Horse-Drawn Sod Cutter

The cutting of a considerable area of sod is tedious work when done by hand, and it is difficult to make the sections of uniform thickness and size. These important features are provided for by the use of the homemade sod cutter shown in the sketch. To start a cut

across a meadow or lot, a notch is cut in the turf for the blade, and the device is set into place, stamping it down to give a good start. The operator stands

With This Device Sod may be Cut Quickly and of Uniform Width and Thickness

on the plank in front of the blade, and a little practice will soon determine the best position for ease in operation. When a cut has been completed, the cutter is dragged to a fresh starting place, the driver turning it over on the upper side. The strips are cut into suitable lengths and piled conveniently for removal with a stone boat or wagon.

The device may be made of any suitable width; 15 in. between the inner edges of the blade, and the latter set to cut a depth of about $2\frac{1}{2}$ in., being desirable. The board is a 2-in. plank, about 4 ft. long. The blade should be set with the cutting edge slanting slightly downward so as to make the device "bite" into the ground. A smaller cutter may be made for use by boys, several of whom may draw it.—F. H. Sweet, Waynesboro, Va.

Homemade Talking-Machine Cabinet

An old six-foot folding screen, three-ply $\frac{1}{4}$ -in. panels from a packing box,

This Cabinet was Made by an Amateur Woodworker at a Cost of \$16.35 for Materials

and parts from secondhand talking machines, were used to make the cabinet shown in the photograph reproduced. The screen was cut down to form a

framework of the desired height for the sides and back. Other parts of the screen were used for the frames of the doors on the front, and for the top. The

panels were made from a good quality of three-ply stock, with a hardwood face, which was scraped, sandpapered, and brought to a very smooth finish. The material happened to have a pretty grain, and this added to the effect when it was stained and varnished. Pieces of this stock were used for the sounding horn and for other interior fittings, such as the shelves for records and the drawer below the horn. Space is provided for a large supply of records.

A secondhand two-spring motor, a turntable, and a sound arm from a disk machine were fitted into the cabinet, and gave excellent service. Care in staining the woodwork, shel-lacking, and varnishing it with several coats, gave the cabinet almost a commercial finish, and at a cost of \$16.35 for all materials.

Eggshells as Flowerpots

A novel method of caring for small plants until they are ready to be set out in the garden is shown in the photograph reproduced. Holes were bored in the bottom of the till of an old trunk and eggshells fitted into them. Seeds

them. The arrangement is compact, and when the plants are ready for planting, the shells may be broken, and the plants set without disturbing the roots.—Charles Darlington, Des Moines, Ia.

Seeds were Planted in the Eggshells, Which were Broken without Disturbing the Roots When Transplanted

were planted in the shells and the names of the varieties were marked on

A Recording Annunciator Target

In rifle practice it is often desirable to provide a target which will indicate to the marksman when the bull's-eye is struck. The device shown in the sketch, arranged behind an ordinary card target, has given satisfactory results on a private range, and can easily be adapted for other uses.

Referring to Fig. 1, A indicates a wooden base, 4 by 8 by $\frac{1}{2}$ in., on which is mounted a strap hinge, B, $6\frac{1}{2}$ in. long, by means of a block, $1\frac{3}{8}$ in. high. An opening, C, $1\frac{1}{2}$ in. in diameter, is provided in the base, and a plate, D,

$1\frac{3}{4}$ in. square, is riveted to the strap hinge opposite to the opening. An electromagnet, E, obtained from an electric bell, is mounted upon the base under the small end of the hinge. A standard, F, provided with a cross arm, G, is secured upon the base between the opening and the magnet. A thumb-screw with a locknut extends through the cross arm, engaging the rear side of the strap hinge, and permits an adjustment of distance between the core of the magnet and the surface of the hinge. A bell or buzzer, H, is connected as indicated, through the battery circuit. The electromagnet is connected through the battery and push button J.

The strap hinge normally rests against the electromagnet. The force of any projectile passing through the opening against the plate closes the bell circuit and indicates to the marksman that the bull's-eye has been hit. By the closing of the magnet circuit, the strap hinge is drawn again into normal position and the bell circuit is broken. Figure 2 shows a front view of the circuit-closing device. The device may be mounted in any suitable box, as suggested in Fig. 3. The front

Fig. 1 The Bullet Forces the Hinge against the Thumb-screw, Causing the Bell to Ring

of the box is covered with sheet metal, $\frac{1}{16}$ in. thick, and the standard target card is mounted thereon.—John B. Brady, Washington, D. C.

CA convenient method of holding paper in a roll is to fasten a wire clip at each end near the edge of the piece.

Scraper for Tennis Court

In order to level and scrape a tennis court, which was in bad condition, the two-man scraper shown in the sketch

A Tennis Court was Smoothed and Leveled by the Use of This Scraper, Made Quickly of Rough Lumber

was made. It is built of rough lumber, and a metal shoe is fixed to the lower edge of the scraping blade at the rear. The bearing at the front is on a flat-bottom sled of wood, and the depth of the cut is regulated by pressure on the handle. The scraping blade is set at an angle, as shown in the smaller sketch. By lifting the handle slightly, the operator is able to deposit dirt in holes so that when the court is rolled they are filled evenly. Where a large number of courts are to be smoothed, the device may be adapted and made large enough to be drawn by a horse.—Edward R. Smith, Walla Walla, Wash.

Barrel Staves as Springs for Play Auto

I made springs for a small foot-power automobile by using barrel staves joined together in the shape of pointed oval wagon springs. Two strong staves were nailed together at each end and braced with a block where they were nailed. Two of these springs were placed over the rear axle and one of them was set over the front axle extending in the direction of its length. The wooden springs made the automobile ride comfortably.—Charles Delbridge, St. Louis, Mo.

A Sail-Rigged Wind Motor

By E. R. HENDERSON

AMPLÉ power for driving light machines in a repair shop was obtained by the use of a wind motor like that shown in the sketch and in the detail drawings. The device has numerous other applications, particularly as a substitute for wind motors that require a high tower, as in the driving of a pump. As an interesting and inexpensive means of providing power for a home or boy's workshop, or as an

experimental device, the motor is also worth while making. The materials used are easily obtainable, and the construction can be carried out with ordinary tools, for the most part. The driving connections may be obtained from old machine parts. The dimensions given are for a motor of considerable size, and may, of course, be reduced proportionately for a lighter machine. If the device is made by boys, the framework and

other parts should be made one-half as large as the sizes indicated. The wood used should then be three-fourths as thick as that shown. The roof of the structure upon which the device is mounted must be well braced and strong enough to stand the strain. The sails are headed toward the wind, like

those on a sailboat, when the motor is at rest, by means of a control rod, F, shown in the working drawing.

The main structural portion is a vertical beam, or tower, tapered at the ends and built up of 1 by 1-in. rods, strongly braced, especially in the lower portion, as indicated. It is 14 ft. high, and built around an 18-in. square board, A, notched at the corners to receive the posts. A similar 14-in. square, B, is

built into the lower portion. The lower end of the tower is pivoted on the ridge of the roof on a hollow shaft made from a section of iron pipe, D, and provided with a metal bearing washer, E. The pipe D is split at its upper end, as shown in detail, and fastened to the wooden plate B. The control rod F passes up through the pipe D, and is fixed to the control wires, reaching the sails, by means of a leather strap, from which an iron swivel, C, is

suspended, as shown in the detail at the left. The ends of the strap pass over pulleys, fixed to the lower side of the plate A, and connect with the sail-control wires. Spiral wire springs are attached to the wire connected to each end of the strap, as shown only at the right sail beam, and aid in controlling

This Novel Wind Motor Developed Power for the Driving of Machines in a Repair Shop, and can be Made in Various Sizes for Work or Play Purposes

The Method of Construction is Shown in Detail: By Using the Perspective Sketch in Connection with These Working Drawings, the Arrangement of the Parts is Readily Understood

the sails. These springs are adjusted so that when the control rod is drawn down to its lowest extent, the sails will be with the edge "into the wind," thus neutralizing each other, and causing the sail beam to be at rest.

The sail beam extends 9 ft. out from the center of the tower, and is built up of three pieces. The center section extends through the tower, above the plate A, and the brace beam, which crosses it at right angles, as shown in the perspective sketch and also at the detail of the strap arrangement. The center section is of 1 by 4-in. stock, and the end portions are of 1 by 2-in. stuff, fastened securely, as shown at detail G. The sails are supported on masts, 1 in. square, pivoted at their junctions with the sail beam, as shown

at detail G, and in guy-wire plates at their extreme ends, as shown at detail J. The fastening and bracing of the gaffs at the mast ends is also shown at J.

The canvas sails are 4 by 4 ft., and mounted on the booms, gaffs, and masts. The ends of the booms nearest the masts are weighted with lead, as shown at detail G, and extend beyond the masts. The outer ends of the booms are joined in pairs, and connect to the spring and strap control. The guy wires N, of No. 18 wire, supporting the masts are fixed to the ends of the sail beam and to the ends of the brace beam, as shown in the sketch and the working drawing. The fastening at the ends of the sail beam is made as shown at detail H, which also shows

one of the coil springs. All of the braces for the masts should be fitted carefully, so as to have the proper tension without interfering with the action of the sails, before the tower is set into its place. The device should be tested on the ground, with the pivot shaft set in a suitable support, before attempting to mount it on a roof, or other structure. The support for the bearing should be fitted into the roof, as shown. The power from the shaft is transmitted to the bevel gears, and from them to the drive shaft and the belted pulley.

The main tower is supported on the roof by means of strong guy wires, set over four built-up guy towers of 1 by 1-in. wood, and 12 ft. long, as shown in detail L. The towers must be set so

that the sail beam has proper play, and be secured firmly to the roof. The top of the main tower is fixed to the guy wires by means of a guy plate, shown in detail K. A plan of the arrangement of the sail beam, brace beam, and sail booms is shown at detail M. The sail beam is braced by No. 12 guy wires, O, attached at the top of the main tower, at the junction of the two sections of the beam, and similarly at the bottom of the main tower. The fastenings of the wires and braces should be made carefully, and they should be examined thoroughly both before and after the device is mounted in place. Grease the pivoted and other moving parts, and start the device slowly, bringing the sails into the wind as required for the desired speed.

Lawn Benches Made from Old Bedsteads

Old bedsteads were converted into serviceable lawn, or porch, benches, as shown in the photograph reproduced, by the addition of a suitable seat. prop-

Painted Green, These Rebuilt Bedsteads Served as Lawn Benches

erly supported. The transformation was a simple one. Only the foot and headpieces of the bedsteads were used. The front legs and other pieces were made from other wood. The front legs are of square stock, about $2\frac{1}{2}$ by $2\frac{1}{2}$ in. The crosspieces, supporting the wide board seats, are mortised into the legs and fastened with glue and screws. The seat is fastened from the under side by cleats. The lumber was carefully planed and sandpapered so that the benches presented a smooth finish

when painted green, to match other outdoor furniture.—F. E. Tuck, Nevada City, Calif.

Repairing Wood-Wind Instruments

Wood-wind instruments sometimes "leak" at the joints or keys and make playing of the instrument difficult. Many such instruments are made in sections, with ends that telescope to form a tight fit. This fit is maintained by the use of a cork band cemented around the tenon end of the telescoping joint. The renewal of these cork joints, and the addition of new pads on the keys, will make an old instrument nearly as good as it was when new, so far as playing is concerned, provided the work is correctly done and the wood of the sections themselves has not cracked. Many musicians have spare time and can do this work themselves. The outlay for materials for the job is from 75 cents to \$1.00. A small alcohol, or even a kerosene, lamp and an old knife, or old file, are required.

All traces of the old cork on the joint can be removed with sandpaper, leaving it as shown at the left. The cork comes in strips of about the proper thickness, and wide and long enough to allow for trimming. The ends of the

strip should be beveled to make a $\frac{1}{4}$ -in. lap joint.

A small quantity of the cement is heated over the lamp and six drops poured on the joint; then with the end of the file, which should be heated also, it is spread to give an even, thin coating. The beveled ends of the strip are similarly treated. By working quickly and carefully, the coating on the joint and strip are brought to a plastic state by holding in the flame, and the strip is quickly laid in place. Before the cement has time to harden, press the cork in, forming a neat joint. Bind a rag around the cork, leaving it until the cement is thoroughly set.

The corked joint will be too large to go into the joining section of the instrument. File and sandpaper it to a twisting fit. Though the cork should be truly cylindrical, it may be tapered a trifle smaller at the forward end. A coating of tallow applied to the joint will make it easy-fitting, but air-tight and moisture-proof.

The pads are disks of felt incased in thin sheepskin. After long usage, they become too hard to make an air-tight fit. Repadding should, therefore, be anticipated. Shellac will give good results in putting on pads. It is heated until liquid and poured into the key recess. The new pad is pressed into the liquid shellac, care being taken to have it well

The Cork is Fitted Carefully into Place, and Glued

centered. For different keys, it will be necessary to use varying quantities of shellac to make the pad sit higher or lower, as required.—Donald A. Hampson, Middletown, N. Y.

☞ A simple method of bracing a screen door is to stretch a stout wire diagonally across the lower portion of it.

Rustic Trellis to Shade Door or Window

Proper preparation in the early spring will make it possible for the householder to shade doors and win-

Rustic Trellises are Easily Constructed and When Covered with Vines Add to the Attractiveness of the Home

dows from the hot summer's sun by means of inexpensive rustic trellises that add not a little to the beauty of the home. A suggestion for a trellis at a doorway and one for a window are shown in the illustration. They are made of straight tree trunks and small limbs, having the bark on them. The curved portions of the window trellis may be made easily by using twigs that are somewhat green. Morning-glories, or other suitable climbing plants, may be trained over the trellises.—J. G. Allshouse, Avonmore, Pa.

Making Scale Enlargements with a Rubber Band

For reducing or enlarging maps, and similar drawings of irregular design, the device shown in the illustration will replace the ordinary instruments, and enable the draftsman to turn out a

given amount of work in much less time than required when proportional dividers are used. The materials needed are an eraser, a rubber band,

This Simple Device Is Useful in Enlarging or Reducing Drawings and Maps

two pins, two thumb tacks, and a few drops of rubber cement. From the eraser two pieces are cut, as shown in the sketch, about $\frac{1}{4}$ by $\frac{1}{2}$ by $1\frac{1}{4}$ in. Cut deep slits in each end of these pieces. Insert the end of the rubber band, cut at the splice, in one of these slits and place a thumb tack in the other. A pin is thrust through the eraser and trimmed close, to prevent the thumb tack from tearing the eraser. Cement the slits with rubber cement, and place the assembled device under a book weight, until the cement has set.

Assuming that a contour map is to be enlarged, the rectangular divisions of the original map, ordinarily section lines or the boundaries of quarter sections, are drawn on the larger sheet as a base for the reproduction. Place the device on the original map, as indicated, the edge of the rubber band touching a "horizontal" section line between two "vertical" ones, the rubber band under slight tension. On the black surface of the band, dot white

points, with water color, along the section line at which the contour lines intersect it. Also place a dot at each end of the band to indicate the position of the two "vertical" section lines between which the band is set.

Transfer the device to the same relative position on the enlargement, stretching the rubber band. Make dots at each end, denoting the "vertical" section lines, for the corresponding lines on the enlargement. The series of intermediate points along the band will be in the same relative position on the enlargement as they were on the original. They can be connected on the enlargement with as accurate a result as obtained by the use of proportional dividers, and more rapidly.

After the points are indicated upon the enlargement, the reproducing device is removed and the surface of the rubber band cleaned instantly by touching it with a moist cloth. The exposed part of the rubber band is a variable, and the device can be made with this dimension adapted to the work. It is capable of enlarging or reducing at a ratio not greater than six to one, above which the rubber band approaches its elastic limit.—H. L. Wiley, Seattle, Wash.

Signal Telegraph with Green and Red Lights

By arranging a circuit with batteries, lights, and keys, as shown in the diagram, a signal telegraph may be made that will afford much pleasure to boys and may be used for practical purposes. The keys A and B are wired into the circuit with a battery C and a

red and a green incandescent lamp. A simple set of signals may be devised easily so that messages may be sent in the code.—James R. Townsend, Itasca, Texas.

Laying Out a Horizontal Sundial Plate

To make a sundial accurately it is necessary to lay out the lines for the particular locality where it is to be used, as a dial will vary slightly according to the latitude. The parts may be made of wood, metal, or stone. A good method is to have a bronze casting made from a wooden pattern. The lines may be cut with a lathe and planer in a machine shop, or engraved by hand.

The illustrations show how the dial is made. The lines, as indicated in Fig. 1, should be laid out very carefully, first on a pattern. Draw a horizontal line near the top which represents the six-o'clock line, A-VI, in Fig. 2. Then lay out another line AH, at right angles to A-VI. Take a point C at any convenient place and construct the right-angled triangle ABD. The angle CAB should be equal to the degree of

FIG. 1

Lay Out the Dial Plate Symmetrically, Allowing Space for the Style

latitude of the place. The angle CBD equals CAB. Take a compass and set it to a radius equal to the side BD, and draw the quadrant DF from E. From D draw the line DG out for same distance and parallel with A-VI. Now divide the quadrant DF into six equal parts. Draw the lines E1, E2, E3, etc., and where they intersect the line DG, draw the lines from A, as A-I, A-II, A-III, etc. These are the hour lines. Divide each of the six divisions of the quadrant into four parts, and draw the lines, as shown between the 3 and 4 divisions. These are the 15-minute

parts. Each of these parts may be divided in turn, and this is best done by eye, unless the dial is quite large.

This will complete one-half of the

The Dial is Mounted Horizontally with the High End of the Style toward the North

dial. The other half is done in the same manner, leaving a space between the line AH and its corresponding line for the other side of the dial. This space should be equal to the thickness of the upright shadow-casting piece, or style. The style has its base equal in length to the line AH, and its angle, S, equal to the latitude, or the angle CAB. It is mounted in the space with the high end at 12 o'clock. It may be fastened to the dial with screws passing through the base. Mount the dial horizontally on a suitable pedestal. The style should be exactly north and south, with 12 o'clock toward the north. The dial will be fast or slow over clock time. This is corrected by consulting

FIG. 3
Diagram for Marking the Dial and Making the Style

an almanac and setting the clock accordingly from the dial. A correction plate may thus be made and mounted on the pedestal.—F. B. Walters, Baltimore, Md.

Wire-Mesh Support for Flower Centerpiece

Pansies, violets, or other short-stemmed flowers cannot easily be shown to advantage in a table centerpiece unless properly supported. By placing a frame of wire mesh in the dish, as shown in the sketch, the stems of the flowers may be set in the openings, giving a neat and effective display.—Victor Carpenter, South Bend, Ind.

False Bottom for Emptying Wastebasket

In order to avoid handling paper and other material which sometimes sticks in a wastebasket, I arranged a false bottom in the receptacle, as shown in the sketch. A hole was cut in the bottom of the basket and a square board, nearly as large as the bottom, was fitted over it, and a leather handle provided. The basket may be emptied quickly by forcing out the false bottom, without the hands touching the contents.—Harold Laughlin, Reading, Michigan.

Making Use of Refrigerator in Winter

By fitting a 3-in. pipe into the lower part of a refrigerator so that a draft of cool air from outdoors is available in cold weather, it may be used without ice for a considerable part of the year. The top is left open slightly, and a piece of cheesecloth is tied over the outside end of the pipe, to prevent dust from entering. A tin shutter is placed on the inside of the refrigerator to close

the pipe in extremely cold weather. This arrangement has proved quite satisfactory for the winter storage of food.—R. R. Dowsley, Prescott, Canada.

Inkwell Base Made from Fuse Socket

Workers in the munitions industry frequently devise small useful or ornamental objects in imitation of, or from, discarded parts on which they work. The inkwell shown in the sketch was made from a rejected fuse socket of a shrapnel shell. It was fitted with a glass container and fastened into a wooden base.

Valve-Bottom Pail for Dipping Water

An ordinary pail may be converted into a convenient device for dipping water by fitting a valve into the bottom, as shown in the sketch. Fasten a piece of soft leather to the bottom of a block, 3 in. square, and fix this to the bottom of the bucket by means of a small hinge. By pushing the bucket bottom down into the water, the latter rises up through the valve until the bucket is full. By lifting it the valve is closed. This device fitted to a tall milk pail is especially convenient.—R. S. Matzen, Fort Collins, Colo.

A Shoe-Polishing Strop

It is awkward to shine one's shoes with a long strip of cloth as is done by a shoe shiner to produce a high polish. An effective substitute method is to suspend from the wall a strip of cloth, about 5 in. wide, doubled to a length of 30 in., and rub the shoes on it before putting them on.

A Photographic Printing Machine

By L. B. ROBBINS

A PRINTING machine for "gas-light" papers, to be used in localities not equipped with gas or electricity and where printing is to be done after daylight, is shown in the sketch. The measurements given are only approximate, as conditions will determine its size. That shown is made as follows: First procure a 6½ by 8½-in. or 8 by 10-in. printing frame. Remove the brass clips from the pad and fasten one end of the pad to the frame, by a pair of small hinges, with the glass in the frame. Procure a box, about 12 by 15 in., by 8 in. deep, with one side open. Cut a rectangular opening through the 12 by 15-in. side a bit smaller than the printing frame, and secure the frame in place over the opening with screws. Saw a slot ¾ in. wide through the top of the box—the end nearest the hinged end of the printing frame pad—running it the full width and about 3 in. from the front.

Nail cleats along the inside of each side of the box, placing them vertical and parallel, and about ¾ in. apart, so as to form a slide groove in conjunction with the slot. This groove is to receive a frame or curtain constructed of stock, 2 in. wide and ½ in. thick. The outside dimensions of the curtain are a trifle smaller than the inside measurements of the box itself. Cover the frame with orange paper, and when finished insert it through the slot in the top of the box. Build a frame as indicated, on the outside of the box. Along the inside of

the uprights fasten cleats, thick enough to come flush with the ends of the slot. These serve to steady the curtain when raised. Make a suitable baseboard and secure the box to it. Then with sheet tin construct a lamp house extending from the back of the box and of sufficient size to accommodate a round-wick lamp. Leave an opening in the top to admit the chimney, provide holes for ventilation, and a door by which the lamp may be adjusted. When completed, paint the interior of the box and lamp house white, to intensify the printing quality of the light.

Tie a piece of stout cord to a screw eye inserted in the upper end of the sliding curtain, lead it through two pulleys fastened as shown, and down to the hand lever. The latter is pivoted at the rear end by a bolt. Attach a spring to the lower end of the hinged pad on the printing frame. This holds the pad out of the way when not in use. A curtain-

Photographic Printing may be Done Rapidly by the Systematic Use of This Machine

roller spring is suitable for this purpose.

To operate the machine, place the negative and paper in position, and, with the left hand, bring the pad down. Pull down the hand lever with the right hand, raising the orange curtain. When the required exposure is made, release the lever, shutting off the direct light. While nearly all light is shut out by means of the lamp house, the paper may be handled safely and easily by means of that admitted through the orange curtain. By systematic ar-

rangement and handling of materials, it is surprising what an amount of work can be turned out by the aid of this machine, especially if one person attends to the exposing and another to the developing.

A Small Variable Condenser

The condenser shown in the diagram combines the large capacity of a fixed condenser with the gradual capacity

variation of a variable one. It is suitable for a wireless receiving circuit, or to shunt around the vibrator of an induction coil, by making the units considerably larger. It is made up of several fixed condensers, connected in parallel, a lever being the means whereby the capacity is varied. Five or more units may be used, each being a small condenser, built up of 10 sheets of waxed paper and nine sheets of tin foil. A convenient size for the tin foil is 6 by 4 in., and for the paper, $5\frac{1}{2}$ by $4\frac{1}{2}$ in. The latter should be a good grade of very thin linen paper and should be carefully prepared by dipping it in hot paraffin. The sheets of tin foil and paper in each unit are piled up alternately, allowing about $\frac{1}{2}$ in. on each tin-foil strip to project beyond the paper for making connections. The pile is covered with heavy paper, and a heated flatiron is passed on the top of each unit until the paraffin begins to melt. Upon cooling, the units are compact.

The connections necessary are shown in the diagram. The condenser units C, D, E, F, G, each have one side connected to a common terminal A. The

other sides of the condensers are connected to the copper strips H, J, K, L, M. They are $\frac{1}{2}$ in. wide and $\frac{1}{16}$ in. thick. A copper lever, $\frac{1}{8}$ by $\frac{1}{2}$ by 8 in., is pivoted on one end so that it will connect two or more of the condensers in parallel. The pivoted end is connected to the terminal B. The dotted line shows different positions of the lever. The apparatus is mounted in a wooden box.—Peter J. M. Clute, Schenectady, N. Y.

Lighting a Candle without Touching the Wick

A candle may be lighted without the match flame touching the wick, as follows: Light the candle, let it burn a bit; then blow it out. A small column of smoke will rise from the wick. Touch the match flame to this, a little above the wick, and it will ignite, travel down, and relight the wick from the burning oil gas.

Emergency Lifting Device of Rope and Lever

When block and tackle, chain hoists, or similar equipment are not at hand,

the simple arrangement shown in the sketch is useful for lifting heavy loads. Make the lever A of a piece of 2 by 4-in. stuff, and cut notches into it for the ropes, as indicated. From a suitable support, B, fix the ropes C and D to the lever A at the proper notches, permitting the ends C-1 and D-1 to be drawn down and

the rope E to the load W, and suspend it from the lever A at the proper notch by means of a loop, E-1. To raise the load, bear down on the end of the lever when it is in its original position A-1, bringing it to the position A-2. This will bring the lower rope to position E-2. Draw up the slack in rope D, to bring the loop to position D-2, and fasten it. Then lift the lever A from its position A-2, to the position A-3, and draw up the slack in rope C to bring the loop up to position C-2. The lower rope will be brought to position E-3. By repeating this process, the load may be raised gradually. The ropes may, of course, be of various lengths within the range of the support and the operators.

Mucilage Brush and Container Made of a Test Tube

An ordinary test tube, about $\frac{5}{8}$ by 6 in. in size, may be made into a mucilage container and brush that economizes the material and does not get the fingers sticky. The end of the tube is covered with a piece of soft cloth after the tube is filled, as shown in the sketch. A convenient way to care for the device is to keep it in a small tumbler.—A. H. Carrington, Trenton, N. J.

Holder for Household Ice Pick

An ice pick is often a source of danger, if left lying about the home, and should be kept at a place convenient to the ice box, where it will not be likely to cause injury. The small bracket on which the ends of the roller curtain are supported is a satisfactory holder for the pick. It may be fastened to the wall with nails, or screws, so that the pick may be suspended in the center hole.—Robert J. Donnelly, Cincinnati, Ohio.

Swing Made of Hickory Sapling

A swing, so durable that it has become a virtual landmark, was made from a long, straight hickory sapling suspended from the limb of a tree. The sapling was split part of its length, as shown in the illustration, and a bolt put through it to prevent the upper portion from cracking. The lower end was smoothed off, so as not to injure the hands, and mortised through a slab of wood, as shown in the detailed sketch. A safe hook from which to suspend the swing is suggested. It is made from a bolt fixed through the limb and curled at the hook end so that the swing may be taken down in bad weather.—Hubert Kann, Pittsburgh, Pa.

Match Safe of Miniature Cannon Shell

The match safe shown in the sketch was made by a worker in a munitions plant. The container was shaped like a small cannon shell and was set into a bracket supported on a prettily grained board, stained and varnished, and supported by a chain.—J. H. Moore, Hamilton, Can.

Reel for Use with Seed-Planting Guide String

Many gardeners derive as much pleasure from the orderly arrangement of the plants in their "farms" as from

any other feature of this home diversion, and I am one of them. In order to facilitate the planting I made a reel like that shown in the sketch. The frame is of wood, and the reel is made of a piece of broomstick to which two small tins, or box covers, are nailed. A wire handle made of a long nail is fitted to one end, and a shoulder hook is used as a stop for the handle when it is desired to check the line. A screw eye driven into the back of the frame holds it at various heights on the stake. This device is far superior to the common use of two stakes for the planting cord.—James M. Kane, Doylestown, Pennsylvania.

Kinks on the Care of Umbrellas

Deriving long use from an umbrella depends in part on proper selection, care of the cloth and frame, and precautions against loss or theft. A silk cover is desirable to shed rain, and a cotton one for a sunshade. The hot sun dries out the silk and heats the metal ribs under it, quickly destroying it. If silk is used for sun protection, wet the cover occasionally. Always

set an umbrella to dry, handle down, if there is not space to dry it open.

A broad ribbon loop on the handle of a woman's umbrella permits carrying it on the wrist and prevents forgetting it. An umbrella with a removable handle can be folded into a suitcase, and putting the handle in the pocket when leaving the umbrella in any public place makes it less liable to theft. An umbrella should bear the name and address of the owner.

A Bell-Ringing Mail Box

The annoyance of watching for the arrival of the mailman was overcome by the fitting of an electrical alarm to the mail box, as shown in the sketch.

A strip of metal, A, was pivoted in the box and weighted on one end. A bell, B, was wired to dry cells in the box below the container for the mail. When the mail is dropped in the box the end A is forced down, forming an electrical contact and completing the circuit from the cells C through the wire D and back through the wire E. When the mail is removed the weight raises the metal strip.—James E. Noble, Portsmouth, Canada.

A Simple Polarity Indicator

An ordinary compass, fitted flush in a wooden frame as shown in the sketch, forms the basis for the polarity indicator described. The N, or north, and S, or south, points of the compass should run lengthwise with the frame, with the former on the end farthest from the binding posts, C and D. Five turns of No. 18 gauge, or any similar, wire are wound lengthwise around the frame and over the compass. The ends of the wires terminate at the two bind-

ing posts. Begin at C and wind toward the compass, binding the wire at D.

If the two ends of a wire are free, and it is desired to know whether there is any current present, and if so, its polarity, fasten one wire to the post C and the other to D. Before connecting the wires, hold the compass and frame in such a way that the needle is over the N point on the compass dial. If, after the wires are connected, the needle moves, there is a current flowing. If the needle is deflected toward

the east, the negative wire is on C; if it is deflected toward the west, the positive wire is on C. When it is desired to ascertain the polarity of a wire, which is covered by a floor, ceiling, or molding, hold the compass as explained, and either directly above or below the wire. Then turn on the current. If the instrument is above the wire, the wire extending parallel with it north and south, and the needle is deflected toward the west, the current is flowing from the north to the south end of the wire. If the wire runs east and west and the needle is deflected to the west, the current is running from west to east.

If the wire runs on a diagonal between the directions mentioned, and the needle is deflected toward the west, the current is flowing from the quadrant between N and W on the compass dial toward the quadrant between S and E. If the instrument is held over the wire and the needle is deflected toward E, the polarity is the opposite to that last indicated. Should the instrument be held below the wire, if the needle goes toward W, it is equivalent to going toward E when above the wire.—H. Sterling Parker, Brooklyn, New York.

¶If the white of an egg is used to seal an envelope which has no mucilage on the flap, it cannot be opened by steaming it.

Flash Light Used as a Bedroom Night Light

To save groping about in the dark for my flash light when suddenly awakened in the night, I devised the arrangement shown in the sketch and by which a "flash" is used as a wall night light, without lessening its common uses. The holder B and the board A are of wood, and into the box is fitted a metal clip, C, to hold the light. A round hole of proper size is cut through the top of the box and the light set through it so that the bottom end rests in the clip, the tin ferrule pressing against it firmly. A light spring, D, makes contact with the upper terminal of the push switch without closing it. The apparatus is fastened to the wall, and insulated wires, soldered, one to the clip C, and the other to the spring D, are connected to a switch placed in a convenient position. This switch replaces that on the light. The ceiling serves to reflect and distribute the light rays.—B. L. Dobbins, Harwich, Mass.

Pie-Plate Gas Heater

A satisfactory gas heater to take the chill out of the air in a small room by fitting a pie plate over a gas burner was made by me, as shown in the sketch. The wires which formerly held the glass shade were fitted into holes punched in the rim of the plate. It could thus be removed quickly when not needed and the glass shade put back in place.—Morris Tinsky, Chicago, Illinois.

DISTINCTIVE ARCHITECTURE IN MODEST HOUSE

RELIEF from the monotony of stereotyped lines has been attained in a residence of moderate cost erected in one of Chicago's suburbs. Boulders form the foundation, porch, and garage walls, and support a large sleeping porch that overhangs the veranda. The main walls are finished in brick, that is surmounted by the tile of the steep-sided roof. Steps at either end of the porch give access to the front door, which opens into a large living room. The garage, a part of the building, is connected with the kitchen. Adequate light, roomy closets, a conveniently located toilet, and a general absence of waste space are attractive points pertinent to the arrangement. The cost of construction is about \$3,600.

How I Raised My Earnings from \$30 to \$1000 a week

*The Story of a Young Man's
Remarkable Rise, as Told by Himself*

THREE years ago I was earning \$30 per week. With a wife and two children to support it was a constant struggle to make both ends meet. We saved very little, and that only by sacrificing things we really needed. Today my earnings average a thousand dollars weekly. I own two automobiles. My children go to private schools. I have just purchased, for cash, a \$25,000 home. I go hunting, fishing, motoring, traveling, whenever I care to, and I do less work than ever before.

What I have done, anyone can do—for I am only an average man. I have never gone to college, my education is limited, and I am not "brilliant" by any means. I personally know at least a hundred men who are better business men than I, who are better educated, who are better informed on hundreds of subjects, and who have much better ideas than I ever had. Yet not one of them approaches my earnings. I mention this merely to show that earning capacity is not governed by the extent of a man's education and to convince my readers that there is only *one* reason for my success—a reason I will give herein.

One day, a few years ago, I began to "take stock" of myself. I found that, like most other men, I had energy, ambition, determination. Yet in spite of these assets, for some reason or other I drifted along without getting anywhere. My lack of education bothered me, and I had thought seriously of making further sacrifices in order to better equip myself to earn more. Then I read somewhere that but few *millionaires* ever went to college. Edison, Rockefeller, Hill, Schwab, Carnegie—not one of them had any more schooling than I had.

One day something happened that woke me up to what was wrong with me. It was necessary for me to make a decision on a matter which was of no great consequence. I knew in my heart what was the right thing to do, but something held me back. I said one thing, then another; I decided one way, then another. I couldn't for the life of me make the decision I knew was right.

I lay awake most of that night thinking about the matter—not because it was of any great importance in itself, but because I was beginning to discover myself. Along towards dawn I resolved to try an experiment. I decided to cultivate my will power, believing that if I did this I would not hesitate about making decisions—that when I had an idea I would have sufficient confidence in myself to put it "over"—that I would not be "afraid" of myself or of things or of others. I felt that if I could smash my ideas across I would soon make my presence felt. I knew that heretofore I had always begged for success—had always stood hat in hand, depending on others to "give" me the things I desired. In short, I was controlled by the will of others. Henceforth, I determined to have a strong will of my own—to demand and command what I wanted.

But how shall I begin? What shall I do first? It was easy enough for me to determine to do things—I had "determined" many times before. But this was a question of will power, and I made up my mind that the first step was to muster up enough of my own will power to stick to and carry out my determination.

With this new purpose in mind I applied myself to finding out something more about will power. I was sure that other men must have studied the subject, and the results of their experience would doubtless be of great value to me in understanding the workings of my own will. So, with a directness of purpose that I had scarcely known before, I began my search.

The results at first were discouraging. While a good deal had been written about the memory and other faculties of the brain, I could find nothing that offered any help to me in acquiring the new power that I had hoped might be possible.

But a little later in my investigation I encountered the works of Prof. Frank Channing Haddock. To my amazement and delight I discovered that this eminent scientist, whose name ranks with James, Bergson and Royce,

had just completed the most thorough and constructive study of will power ever made. I was astonished to read his statement, "The will is just as susceptible of development as the muscles of the body!" My question was answered! Eagerly I read further—how Dr. Haddock had devoted twenty years to this study—how he had so completely mastered it that he was actually able to set down the very exercises by which anyone could develop the will, making it a bigger, stronger force each day, simply through an easy, progressive course of Training.

It is almost needless to say that I at once began to practice the exercises formulated by Dr. Haddock. And I need not recount the extraordinary results that I obtained almost from the first day. I have already indicated the success that my developed power of will has made for me.

But it may be thought that my case is exceptional. Let me again assure you that I am but an average man, with no super-developed powers, save that of my will. And to further prove my contention, let me cite one or two instances I have since come across, which seem to show conclusively that an indomitable will can be developed by anyone.

One case that comes to my mind is that of a young man who worked in a big factory. He was bright and willing, but seemed to get nowhere. Finally he took up the study of will training, at the suggestion of Mr. W. M. Taylor, the famous efficiency expert of the Willys-Overland Company, and in less than a year his salary was increased 800%. Then there is the case of C. D. Van Vechten, General Agent of the Northwestern Life Insurance Company, Cedar Rapids, Iowa. Just a short time after receiving the methods in will development suggested by Prof. Haddock, he felt that they would be worth from \$3,000 to \$30,000 to him.

Another man, Mr. H. D. Ferguson, residing in Hot Springs, Ark., increased his earnings from \$40 a week to \$90 a week in a remarkably short space of time after he began the study of will training. These are but a few—there are many other equally amazing examples which I personally know about. And aside from the financial gain, this training has enabled thousands to overcome drink and other vices almost overnight—has helped overcome

sickness and nervousness, has transformed unhappy, envious, discontented people into dominating personalities filled with the joy of living.

Prof. Haddock's lessons, rules and exercises in will training have recently been compiled and published in book form by the Pelton Publishing Co., of Meriden, Conn. Mr. Pelton has authorized me to say that any reader who cares to examine the book may do so without sending any money in advance. In other words, if after a week's reading you do not feel that this book is worth \$3, the sum asked, return it and you will owe nothing. When you receive your copy for examination I suggest that you first read the articles on: the law of great thinking; how to develop analytical power; how to perfectly concentrate on any subject; how to guard against errors in thought; how to drive from the mind unwelcome thoughts; how to develop fearlessness; how to use the mind in sickness; how to acquire a dominating personality.

Some few doubters will scoff at the idea of will power being the fountainhead of wealth, position and everything we are striving for, and some may say that no mere book can teach the development of the will. But the great mass of intelligent men and women will at least investigate for themselves by sending for the book at the publisher's risk. I am sure that any book that has done for me—and for thousands of others—what "Power of Will" has done—is well worth investigating. It is interesting to note that among the 150,000 owners who have read, used and praised "Power of Will," are such prominent men as Supreme Court Justice Parker; Wu Ting Fang, Ex-U. S. Chinese Ambassador; Lieut.-Gov. McKelvie of Nebraska; Assistant Postmaster-General Britt; General Manager Christeson, of Wells-Fargo Express Co.; E. St. Elmo Lewis; Governor Arthur Capper of Kansas, and thousands of others.

As a first step in will training, I would suggest immediate action in this matter before you. It is not even necessary to write a letter. Use the form below, if you prefer, addressing it to the Pelton Publishing Company, 13-F Wilcox Block, Meriden, Conn., and the book will come by return mail. This one act may mean the turning point of your life, as it has meant to me and to so many others.

PELTON PUBLISHING COMPANY

13-F Wilcox Block, Meriden, Conn.

I will examine a copy of "Power of Will" at your risk. I agree to remit \$3 or return the book in 5 days.

ALADDIN Houses Save \$200 to \$800

Think of the big saving you can make building this ideal, attractive home on the Aladdin System! You can buy this cozy bungalow home complete for \$989. Notice the floor plan. It contains large living room, large dining room, convenient, work-saving kitchen, three bed rooms and bathroom. Aladdin saves every owner of this home \$200. All material is cut to fit, ready to nail in place—no waste of lumber or labor. The big book "Aladdin Homes" No. 180 gives full information and illustrations of this and a hundred other homes. Send stamps today for your copy.

Dwellings, Bungalows, Garages

Get a copy of the big book "Aladdin Homes" No. 180. You will be delighted with the many illustrations, floor plans and descriptions of truly American homes; attractive dwellings of many types, snug and cozy bungalows built on California lines; low priced summer cottages, garages, etc. And Aladdin prices for complete material—cut-to-fit—will surprise you and show big savings over regular market prices. Don't delay—send for your copy of this book now!

What You Get Aladdin price includes all lumber, millwork, flooring, outside and inside finish, doors, windows, shingles, lath and plaster, hardware, locks, nails, paint, varnishes. Your home is shipped in a sealed box car, complete. Ready-Cut, ready to erect. Safe arrival of the complete material in perfect condition is guaranteed. Floor plan arrangement and complete description of the house shown above will be found in the Aladdin Book of Homes. Send stamps today for the book, "Aladdin Homes," No. 180.

The Fruits of Understanding

Throughout the vast area of this country prevails a common tongue. The whole of Europe hardly exceeds our territory, yet Europe has more than a score of nationalities and many different languages.

In the United States the telephone, as exemplified by Bell System, renders a matchless service in its mastery of distance and in encouraging the use of a universal language. This accomplishment is in spite of the great influx of population from every country in the world.

In Europe the independent countries, separated by barriers of language,

and lacking efficient telephone service, suffer from inadequate facilities for inter-communication.

We now talk from the Atlantic Coast to the Pacific, and eliminate more than three thousand miles. In Europe, contending with a babel of voices and unrelated telephone systems, a bare quarter of that distance has been bridged with difficulty.

The ideal of the Bell System has been day by day to extend its service in the interest of all telephone users. Its efforts have resulted in providing the facilities to unite cities and rural districts in true American democracy.

A Dollars and Cents Proposition

The greater proportion of that vast army of Goodyear Tire users—the largest single group of tire-buyers in the world—acts from a purely business motive.

They buy Goodyear Tires because they expect more from Goodyear Tires for the dollars they give—and they *get* more.

Get more—in miles, in comfort, in satisfaction—in untroubled travel, in unblemished service, in downright *tire value*.

All the effort, the activities, the aims of the tremendous Goodyear factories are centered upon producing a quality product in which these virtues shall be unfailingly present.

There is no groping, no uncertainty in the process. Accomplishment now is as sure as mathematics.

Any Goodyear Tire will prove this—and on your car, will prove it to *your* economic benefit.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

Clean Your Plugs This Easy Way

Patent Pending
Reg. U. S. Pat. Office

Fill the tube half full of gasoline—
screw the plug into the bushing
at the end—then shake.

That's all you have to do to clean
your plugs when you use the

CHAMPION "MINUTE" Spark Plug Cleaner

In a minute or two you can clean a
whole set.

Think what an improvement over the
dirty, grimy task it used to be!

You don't even have to take the plugs
apart.

The needles in the tube pick the carbon
off the porcelain and the gasoline dis-
solves the oil.

The Champion "Minute" Cleaner saves a
whole lot of time, temper and trouble.

It's a worry-less, work-less way of clean-
ing your plugs.

You want a Champion "Minute" Cleaner.
Get one now.

Comes packed in a wooden carrying case.

For sale by your jobber or dealer.

If not, please write to us.

Western Electric Portable Sewing Machine

In designing this wonderfully compact machine every disadvantage of the old-fashioned sewing machine was thrown aside. You don't have to pedal it—a pressure on the foot control starts the motor, regulates the speed and stops motor instantly. You can sew all day without tiring—and at a cost of about one-half cent an hour for current.

It is never in the way, for it can be put on the closet-shelf when not in use. You can use it wherever there is an electric light socket. In its essential parts it is a full-sized, high-grade sewing machine capable of as fine work as any machine. And the cost is less than that of most any of the well-known makes of foot-power machines.

If your lighting company, electrical dealer or department store cannot show you this wonderful machine, send coupon to nearest office.

For the "One Woman" Top

RAYNTITE Single Texture Top Material

Rayntite is more than the ideal one-man top material. It is also ideal for the "one-woman" top.

All far-sighted automobile manufacturers recognize the growing importance of the woman in the choice of cars.

Witness the increase in the use of colored bodies, graceful designs, ornamental interiors of closed cars, and moorish finish Fabrikoid for upholstery.

A Rayntite top is light enough for the average woman to handle, yet guaranteed not to leak for one year, and built to last as long as the car.

Trade Authority Tells of Trend

From the show number of *The Automobile* of January 4, 1917, we clipped the following:

long in arriving.

Tops Are Lighter

Tops are tending to be lighter. The old-fashioned top consisted of two layers of material, each being thick and massive. Now there are many cars with only one thickness of material, just as waterproof, less attractive to dust, and a good third lighter.

Why make your car top heavy, and the "one-man" top a joke, by using material twice as heavy as it needs to be?

Now Made in Two Varieties

RAYNTITE No. 1—Single texture with Fabrikoid surface—and

RAYNTITE No. 2—Single texture with Fairfield Rubber surface.

Each is guaranteed one year against leakage.

If the car you are considering is not topped with Rayntite, find out whether you or your wife can really handle the one-man top.

Samples of either variety on request

Du Pont Fabrikoid Company

WILMINGTON, DELAWARE

The World's first and only Practical Moving Picture Camera for the Amateur

Movette Will Get YOU!

See what a famous young inventor has done! He has turned the world of photography topsy-turvy! No more dead, still pictures for you. Now you can make motion pictures—pictures that pulsate with the action and light of life—easier than an ordinary snapshot.

Every Dealer Sells It—You Can Buy It Everywhere!

Easier than a snapshot?—YES! No focusing—no adjustments. Sight your object in the finder—then turn the crank. Movette has got it for you—for all time—any time

The scene is yours. You can make it re-live itself all over again—in clear cut, true-to-life action pictures—next week, next year—yes, twenty years from now!

See the flashing, dimpled smile of Baby—now grown to manhood or womanhood! Review the glorious days of childhood! See Father and Mother in almost flesh-and-blood reality.

And think of it! Movette is so simple—so "foolproof"—a child can operate it. It's the scientific wonder of the age.

Movette takes 50 feet of action pictures for \$1.50—equal to two minutes of the best professional film. Sixteen hundred snapshots in all—EVERY ONE PERFECT; 32 for 3c.—anyone of which can be enlarged for 25c. Send the coupon for full details of this newest fascinating sport.

SAXON ROADSTER

A CAR COMPLETELY EQUIPPED WITH EVERY MODERN FEATURE

Never Before So Fine a Car At So Low a Price

You may think you've seen big motor car values before. But you've never seen the equal of this car—this new series Saxon Roadster.

It's the biggest dollar-for-dollar value ever put on the market.

Look at the body lines—pure stream-line design of faultless beauty. Look at the finish—glossy lustre of ever-newfreshness.

And then watch it perform on the road. Note how smoothly the motor pulls "on high" or "in low." Note how the car holds the road when you've got the accelerator button glued to the floor boards.

Look at the number and quality of its features—every one a costly car attraction. This new series Saxon Roadster you'll

observe has a Wagner 2-unit starting and lighting system. There's none better to be had.

Then there's the three-speed transmission; 30 inch by 3 inch tires; demountable rims; high-speed Saxon motor, Continental manufacture; Reichenbach carburetor; Hyatt Quiet bearings; honeycomb radiator; Atwater-Kent ignition system; long cantilever springs of fine vanadium steel; new style top; 40-inch wide seat; electric horn; speedometer; extra tire carrier; ventilating windshield, and twenty more refinements.

The Saxon Roadster is \$495; Saxon "Six" Touring Car, \$865; Six Sedan, \$1250, f. o. b. Detroit. Canadian Prices—Six Cylinder Touring Car, \$1175; Touring Sedan, \$1675; Four-Cylinder Roadster, \$665. Price of special export models, "Six," \$915; Four, \$495; f. o. b. Detroit.

Offer

No Money In Advance

Don't hesitate. You can get this famous Ranger Motorbike or any other bicycle you want without one cent in advance—without paying express charges—without obligation or delay of any kind.

There's no string to this proposition whatsoever. Just your mere request brings the bicycle of your choice—the size you want, the color you want, equipped in every particular to suit you.

When the bicycle comes, you can decide to keep it on our 30-Day Free Trial Plan or send it back at our expense. We won't try persuasion, or importune you to buy and keep the bicycle. The bicycle in your own hands, under every day use, under all conditions, must sell itself to you, or we'll take it back, and we won't charge you one cent for the use of it. Don't miss this offer. Mail us coupon now—send for this wonder bicycle—the Ranger Motorbike.

The Greatest Bicycle Ever Built

We have spared no expense to make this the grandest bicycle in the world. How well we have succeeded you can judge by noting its wonderful construction. But it is not only in construction that the Ranger Motorbike excels. It also answers the cry for SPEED. It furnishes extra riding COMFORT. Its ENDURANCE is remarkable. It is a BEAUTY in appearance. Altogether it stands without a rival—master of every occasion, on country roads, on steepest hills, on city boulevards, on field and track.

Note This Wonderful Equipment Free

You'll simply fall in love with every detail—the Special Curved Motorcycle Frame with Reinforcing Top Bar, the Front Fork reinforced with Truss, the Steel Tool Box between Top Bars, which looks exactly like gasoline tank on motorcycles. Carrying out further the motorcycle idea, we have added a sturdy Platform Carrier, Quick Action Stand, and new Motorbike Handle Bars, Grips and Pedals. Special Features are: Coaster Brake, Motorbike Saddle, Improved Brampton Roller Chain, Quick Detachable Mud Guards, Electric Light, Auto Hand Horn, Sampeon Tires. These luxurious fittings represent \$25 worth of actual value not found on any bicycle. We give you also FREE, \$5 Outfit described on this page.

Special—Now If you want this grandest of all Motorbikes or any other model in the Ranger line, including \$5 Premium Set, 5-Year Guarantee, Accident Insurance sent to you FREE—don't delay. Send coupon and get Big Bicycle Book showing scores of styles, sizes, colors from which to choose the model you like best. We'll ship the bicycle of your choice freight charges fully prepaid to your town. If it doesn't please you, don't take it. If it suits you fully and you believe it is the grandest bargain and greatest bicycle ever offered, you may keep it according to our 30-Day Free Trial Plan.

Fill out and send Coupon at once—while our liberal Introductory Offer prevails. No obligation whatever. Write today sure.

Why Jones Bought An Indian Motorcycle

SUNDAYS and holidays were long days for Jones. After he had read the papers, time hung heavily on his hands.

His chief diversion was sitting on the front porch and watching happy, outdoor-loving boys, men, and elderly gentlemen spin down the road on Indian Powerpluses, Light Twins, and Bicycles.

A lot of machines went by — most of 'em red. Seemed like *everybody* rode Indians. Why shouldn't *he* be an Indian rider, too, and put in his Sundays and holidays as a *real* man should? Acting on the idea, Jones bought a 1917

Indian Motorcycle With Powerplus Motor

There's a 1917 Indian for everybody—young or old. For advanced motorcyclists, the Big Twin with Powerplus Motor with its matchless power, speed, cleanliness, quietness, comfort, stamina, and mechanical simplicity. For those desirous of modified speed and power, but Indian soundness of construction, the easily controlled Light Twin with Four Cycle Opposed Motor. For Bicycle enthusiasts, the Electrically Equipped Indian Bicycle with its Indian

Motorcycle streamline effect—and ten other 1917 model Bicycles from \$26 to \$45.

Take those short spins and long tours you've longed to take. Spend your spare hours outdoors, under the blue sky, in the health-giving, blood-making open. The Indian way is the quickest most comfortable, surest, easiest, most economical, highest quality way. Over 16 consecutive years of engineering thought and initiative behind whatever Indian model you buy.

Send for 1917 Indian Catalog, specifying the model you're most interested in

HENDEE MANUFACTURING COMPANY, 710 State Street, Springfield, Mass.

(Largest Motorcycle Manufacturers in the World)

**One Day—
Well and Strong—**

**The Next—
An Accident Did This!**

DON'T think it's safe to insure yourself against accident some time next week or next month or next year. It isn't. Accident isn't going to wait till *you* get ready. Out of a clear sky—*always* out of a clear sky—it comes like a clap of thunder and strikes down one man in seven each year.

You may be that one in seven—this year. You will have no warning and you will have no time to prepare when the accident comes.

Now is the time—now—while you are well—while you are thinking about it—today—this minute. Send this coupon. Make yourself safe—

AETNA-IZE

Three cents a day between you and worry about money. On this \$10 Combination three cents a day will bring, if you are in a "Preferred" occupation and under 50 years of age, \$1,250 to \$3,250 in case of death by accident; \$5 to \$10 weekly income for disability due to accidental injuries, plus \$1,000 to \$3,000 for loss of two limbs or eyes; or the income plus \$500 to \$1,500 for loss of one hand, foot or eye; or \$250 for death from any cause. You can make these amounts as much larger as you like by paying more than

three cents daily. (\$50 added to above payments for death if you insure while under 40 years of age.)

It means nothing to you to spend 3 cents a day now. It may mean much to get the return from AETNA later on. Don't be forced to say, "I wish I had Aetna-ized while I had a chance."

**Send this coupon today,
while the chance is here.**

A Motorcycle Aristocrat

The Progressive Lightweight at a Popular Price

You've waited for this; you want it; it's ready for you. Look where you will, you cannot find a lightweight, low-priced motorcycle that has the originality in design, the quality in construction and the beauty in finish and workmanship of the Cleveland Lightweight.

It is the only motorcycle that has a straight line worm drive with no auxiliary gears or chains to transmission or magneto. Weighing about 150 pounds and designed by automobile engineers, it has the lowest center of gravity, the fewest number of parts and the finest specifications of any light motorcycle on the market. Silent, clean, easy to ride as a bicycle, safe and comfortable, it is the universal motorcycle.

Specifications:

Two-stroke motor; two-speed transmission; multiple disc clutch; Bosch magneto; S. K. F. ball bearings; Firestone non-skid tires; Brown & Barlow carburetor; aluminum castings; drop forged frame fittings; non-gran bronze; straight line worm drive; demountable power unit; spring fork; automatic lubrication; heat treated alloy steels; full motorcycle guarantee; price \$160.00; with Kick Starter \$170.00. F. O. B. Cleveland. Dealers wanted.

*The Cleveland
Lightweight*

Almost Free Transportation

Making 75 miles on a gallon of gasoline, the Cleveland Lightweight opens up every travelled road, in the city or country, for business or pleasure, at a negligible expense; cheaper than street cars or railroad fare; no limitations in distance or destination.

THE CLEVELAND MOTORCYCLE MFG. CO.
7202 Platt Avenue, Cleveland, Ohio

The Wing Piano
and Player Piano

On Four Weeks' Trial

Yes, we'll ship you on 4 weeks' absolutely free trial a Genuine highest grade Wing piano **DIRECT** from **our own factory, freight prepaid**. The most surprising—most amazing offer ever made. An offer that puts you on the same footing as the largest piano dealer—and at the very **rock-bottom DIRECT** wholesale factory price. Since 1868—for 40 years—we have been building Wing Pianos, renowned everywhere for their sweetness of tone and sterling merit—and we now make you this greatest of all offers on the Wing, guaranteed for 40 years.

We will allow you to use any Wing piano—your own choice of 38 superb new styles in any shade of mahogany, walnut or oak—in your own home for four full weeks at our expense. A Wing Upright, a Wing Grand or a wonderful Wing Player-Piano that plays all the greatest concert and opera selections (you can play it perfectly the first day without taking music lessons).

No Money Down —Not a Cent of Freight

We ask no money down—nothing on arrival—no freight either way—no deposit. Just choose any Wing from our large catalog. We employ **no salesmen** of any kind to visit and annoy you. We'll ship the instrument **no money down—freight prepaid**. While the piano is in your home use it just as if you owned it. Compare with description in the Wing catalog—but note the **rock-bottom direct-wholesale-factory price** is quoted in the personal letter to you. Play the piano—let your friends play it. Examine it carefully—thoroughly—inside and outside. Take music lessons on it if you like. Note the perfect **bell-like** tone, the remarkable easy regularity of the action, the deep resonance of the base, the timbre of the treble—note all this—then—

At the end of the 4 weeks' trial, if you wish, you may return the piano at our expense. We pay return freight to New York. Not a penny to pay for the pleasure of using the piano four weeks. No salesmen to influence you—you and you alone are to judge. Now write for the piano book (free).

Valuable Book on Pianos—Free

"The Book of Complete Information About Pianos"

The New York World says: "This is a book of educational interest everyone should own." Would you like to know all about pianos—how they are made, how to judge the fine points of quality and price in buying a piano? Then send the coupon for the piano book which we are sending **FREE** for the present. This book of 149 pages tells about materials, manufacture, assembling, patented devices and what they do, all about sound-board, action, case, in fact every detail connected with a fine, high-grade piano. Tells how to answer the arguments of piano salesmen. This magnificent 149 page book is a complete encyclopedia on the piano; the most complete and costly book ever published on the piano business.

(Est. 1868)

Neolin Saves Money Neolin Saves Feet

YES, Neolin is better than leather—a fact apparent enough when leather was good—and increasingly apparent now that leather quality is *not*.

Particularly apparent, for instance, to those who can least afford to buy inferior leather—and who so invariably are forced to get it.

For Neolin is always the same—on a Ten Dollar Shoe—on a Three Dollar Shoe.

Offering the same wear, providing the same modern appearance-standard.

Remaining the same saver of your own and your children's shoe-bills.

Neolin the last-long sole—the waterproof and winter-proof sole. Neolin which is foot-easing, pliant, flexible, springy and needs no breaking in. Which never cramps a foot and never draws one. Which *does* grip. Which doesn't slip.

For grown-ups and children. On new shoes or for new soles. Retailers or shoe-repairers have Neolin Soles or can get them—and they cost no more.

To avoid imitations, *mark* that mark; stamp it on your memory: Neolin—

FAIR LIST PRICES

FAIR TREATMENT

What "Cord" Means In GOODRICH SILVERTOWN CORD TIRES

TO settle exactly what the carelessly used, much abused term 'cord tire' really means, we have here stripped back the thick, tough tread of a Silvertown Cord Tire, and laid bare its flexible *two-ply, rubber-saturated, cable-cord* body.

Mark the sturdy *size* of the cord, and that it is *cross-wrapped round* the tire into a base of *two layers* Only.

As *each extra ply* in a tire means *extra* internal heat, which is the great tire destroyer. — Silvertown with but two plies is bound to outlast *many-ply* tires with their *multiplied* heat

Seek this durability with elegance, comfort, freedom from tire trouble, mileage, in Silvertowns marked with the RED-DOUBLE-DIAMOND. You *cannot afford* to be without them.

The B.F. Goodrich Company Akron, Ohio

*Also makers of the famous fabric tires
Goodrich Black Safety Treads*

Heat Your Home The Moistair Way!

Could Your Family Live in a Dry Kiln?

Hardly! Yet thousands exist under conditions *little better!*

Cold weather arrives. Doors and windows are shut *tight*. Fresh air is excluded. The heat is turned on—and the whole family hibernates! Now for a winter of hot, stuffy air—air with the dryness of a dry-kiln—unhealthy, dangerous! The air is breathed over and over! It fairly reeks with "dead" gases—poisonous, disease breeding. And then come coughs, colds, headaches, lung diseases, sickness, inefficiency—and the doctor.

Avoid all this! When you build or replace your present heating plant see that your heating system furnishes healthful air; that is, fresh, warm, moist air.. Install a

ROUND OAK Moistair Heating System

The Only Heating System that Automatically Ventilates and Humidifies

The Round Oak Moistair Heating System solves the heating problem for a lifetime! It floods your home with cheery warmth and comfort, regardless of outside blizzards. It cuts down your fuel bills—burns any fuel. It keeps your house free from dirt, dust and coal gas. It is convenient, cleanly, easy to operate—has nothing to ever get out of order. It sends an ever-changing current of warm *fresh* air circulating through the house. And besides all this, it Automatically humidifies—keeps the air both fresh and moist.

SAVES FUEL BY THE TON

Warm, fresh air properly humidified as it is by the Round Oak, is more comfortable at 68 degrees than dry air at 75 degrees. The saving of 7 degrees thus effected by the Round Oak Automatic Humidifier and other features listed opposite literally means a fuel saving of **one ton in every nine.**

Consider that more 60,000 Round Oak Systems are in use and that **every one**, so far as we know, is giving satisfaction. Reflect that they are backed by 46 years of experience and that they are made by the makers of the famous Round Oak STOVE—then

WRITE for VALUABLE FREE Book and Heating Plan

Handsome illustrated book describes this modern plant. With book goes a blank, which filled out and returned to us will shortly bring you a scientific Heating Plan drawn by expert engineers to meet your exact requirements. Cost of installation, etc., goes with Plan. And with no obligations to you. Send coupon NOW! With book we also send name of nearest authorized dealer selling and installing Round Oak Moistair Heating Systems. Many dealers sell on easy payments. To get the genuine, look for the trade-mark which shows the Round Oak Indian.

Stroke 4-inch
Net Price \$68.00

8 H. P. Bore $3\frac{1}{4}$ inch Stroke
4-inch Net Price \$120.00

16 H. P. Bore $3\frac{1}{4}$ inch Stroke
4-inch Net Price \$240.00

THREE new engines for 1917, more refined, more powerful but with Roberts Dependability built right into them. Neat, compact, extremely simple, the Roberts Motor is an ideal power plant for YOUR boat.

Ask Your Boatbuilder What He Thinks About Roberts Motors

He will give you expert advice, he has had an opportunity of comparing Roberts Motors with others, he has seen Roberts Motors in daily use for the past ten years. He will tell you that he is hardly ever called upon to replace a part of a Roberts Motor, that he does less repair work on Roberts Motors than any two others, despite the fact that there are more Roberts Motors in use in his district than any other.

In other words, he will prove with facts that the Roberts Motor is a dependable, powerful and simple motor to use in YOUR boat, a motor that is completely modern, quiet, free from vibration and absolutely reliable. Full details will gladly be supplied if you will write to the factory at Sandusky.

I want you to realize also that it is my earnest effort and intention to give you full honest value for every dollar that you spend with me. This is the only way I can succeed. My advertisement has appeared in this magazine continuously for more than four years.

I am building up my business on the foundation of good value and square dealings. I am saving thousands of satisfied customers thousands of dollars, by supplying perfect—late style—visible writing—typewriters, at remarkably low prices.

All my transactions are handled throughout by personal correspondence. I assure you every courtesy and consideration in your dealings with me. Your order will have my prompt, careful, personal attention. I will be glad to do business with you.

Harry A. Smith

TYPEWRITER SENSATION

Free TRIAL—Use As You Pay

Send me only \$2.00 a month until the low total price of \$34.15 is paid, and the machine is yours

This is absolutely the most generous typewriter offer ever made. Do not rent a machine when you can pay \$2.00 a month and own one. Think of it—Buying a \$100.00 machine for \$34.15. Cash price, \$32.30. Never before has anything like this been attempted.

Standard Visible SMITH Model No. 6

Perfect machines, Standard Size, Keyboard of Standard Universal arrangement, writing 84 characters—universally used in teaching the touch system. The entire line of writing completely visible at all times, has the tabulator, the back spacer; in fact, every late style feature and modern operating convenience. Comes to you with everything complete, tools, cover, operating book and instructions, ribbon, practice paper—nothing extra to buy. You cannot imagine the perfection of this beautiful typewriter until you have seen it. I have a thousand of these perfect latest style Model No. 6 typewriters at this bargain price, and each purchaser fortunate enough to secure one of these beautiful machines must try it out in home or office for five days before deciding to buy. I will send it to you F. O. B. Chicago for five days' free trial. It will sell itself, but if you are not satisfied that this is the greatest typewriter bargain you ever saw, you can return it at my expense. You won't want to return it after you try it—you cannot equal this wonderful value anywhere.

H. A. SMITH
Room 510-231 N. Fifth Ave.
CHICAGO, ILL.

Ship me a No. 6 Smith F. O. B. Chicago, as described in this advertisement. I will pay you the \$28.00 balance of the SPECIAL \$34.15 purchase price, at the rate of \$2.00 per month. The title to remain in you until fully paid for. It is understood that I have five days in which to examine and try the typewriter. If I choose not to keep it I will carefully repack it and return it to the express agent. It is understood that you give the standard guarantee for one year.

You Take No Risk—Put In Your Order Now

When the typewriter arrives deposit with the express agent \$6.15 and take the machine for five days' trial. If you are convinced that it is the best typewriter you ever saw, keep it and send me \$2.00 a month until my bargain price of \$34.15 is paid. If you don't want it, return it to the express agent, receive your \$6.15 and return the machine to me. I will pay the return express charges. This machine is guaranteed just as if you paid \$100.00 for it. It is standard. Thousands and thousands of people own and use these typewriters and find them the best ever manufactured.

The supply at this price is very limited, the price will probably be raised when my next advertisement appears, so don't delay. Fill in the coupon today—mail to me—the typewriter will be shipped promptly. There is no red tape. I employ no solicitors—no collectors—no chattel mortgage. It is simply understood that I retain title to the machine until the full \$34.15 is paid. You cannot lose. It is the greatest typewriter opportunity you will ever have. Do not send me one cent. Get the coupon in the mails today—sure.

6 Months To Pay 6

Tailor-Made To-Measure

Send for Measurement Blank and Cloth Samples Today

This is the most sensational Tailor-Made Suit Offer ever made. You can now have any garment you want—cut and fit in the very latest style—to your individual measurements—and from your own choice of the season's latest patterns, novelties, checks, stripes, etc.—and take **six months to pay** for it, if, after trying it on, you decide to keep it.

Think what this means to you. No longer need you pay exorbitant cash prices for best Tailor-Made Clothes. We positively give you six months' credit and save you from \$15 to \$25 on any suit you may order. Furthermore, we will send you any suit you may want on receipt of

Only \$1.00

Send coupon for free Style Book which explains this wonderful offer. No matter what price, style or pattern suit you may want, we will make it to your order and send it to you on receipt of **only \$1**. After suit arrives and you are convinced that it is the biggest bargain you ever heard of, you may pay the balance of our rock-bottom price on easiest, most liberal credit terms ever devised.

Even if you don't need a suit of clothes right away, don't fail to send for this wonderful book. It gives inside facts about Tailor-Made Clothes that you should know. Tells you how to judge quality; how Stanley-Rogers Clothes are Tailor-Made of the best materials throughout—highest grade interlinings, body and sleeve linings, ivory buttons, carefully hand-sewed buttonholes, etc. Book also shows you how to take your own measurements to insure a perfect fit—and proves to you that we actually

Save You \$15 to \$25

on any garment you may order. We buy all materials in enormous quantities, direct from the mills, at rock-bottom prices. We do our own designing, cutting and tailoring. And by making every suit in our mammoth establishment and selling direct to the man who wears the clothes, we eliminate all waste and save you the dealer's profits.

\$1,000 Reward

We will give \$1,000 in gold to anyone who proves that we do not make to order all our men's clothes to individual measurements of each customer. We study your figure from the measurements you send us and meet your individual requirements so that, whether you be tall or short, stout or thin or "just medium," you will be fitted perfectly because each garment is specially made for each person.

FIGHTING TRIM

WHETHER your battle is fought in the trenches, behind an office desk or in the home *you need to keep fit.*

It's comparatively easy for the soldier to keep up to scratch. The civilian—man or woman—has a harder task. Sedentary habits, insufficient exercise, too much food and too much hurry about eating it, combine to cause a more or less chronic condition of constipation.

Don't think you can dispose of constipation with a cathartic pill. Laxatives and cathartics cause more constipation than they cure and their persistent use is likely seriously to undermine your health.

NUJOL relieves constipation effectively and has none of the objections which are common to all drug remedies. It acts as an internal lubricant, preventing the bowel contents from becoming hard and facilitating the normal processes of evacuation.

NUJOL, put up in pint bottles only, is sold at all drug stores. Refuse substitutes—look for the name NUJOL on bottle and package.

THIS Cut Coal Cost \$ 50.00 HERE

With a Great Deal More Comfort Into the Bargain!

Open space all around this big 10-room house. And in a part of the country where the mercury tries to drop clear through the glass in winter. Makes no difference to the Williamson UNDERFEED, though. A fifty dollar coal-saving and more comfort in spite of it all. Read the letter:

*"Mine is a ten-room house, and always cost me over \$100 to heat with the old boiler. This winter cost \$50 with the UNDERFEED, and we had a great deal more comfort, 72 or over in the coldest weather. A fuel saver, time saver and dirt saver."
(Signed) DR. W. J. MORGAN, Mineral Point, Wis.*

WILLIAMSON UNDERFEED Furnaces Boilers Cut Coal Bills $\frac{1}{2}$ to $\frac{2}{3}$ Guaranteed

Please let this fact sink in: A $\frac{1}{2}$ to $\frac{2}{3}$ saving in coal cost is actually guaranteed with the Williamson UNDERFEED, whether you heat with warm air, hot water, steam or vapor.

That is partly because the UNDERFEED burns the cheaper grades of coal as effectively as others burn the costlier grades. That's a big saving at the very outset—money you save by keeping it in your pocket. Another reason is the scientific principle of combustion. In the UNDERFEED coal is fed from below. The hot, clean fire is always on top—never smothered or chilled by fresh coal being dumped on. All smoke, soot and gas must pass up through the fire and so be transformed into clean, usable, effective heat.

No waste whatever. No clinkers. No partly burned coal. No soot-encrusted pipes.

Money-Saving Book Free

And a boy of twelve can operate the UNDERFEED successfully. No stooping. All done from a standing position. There's an interesting book, "From Overfed to UNDERFEED," which pictures and describes it all. Free for the asking. Simply send coupon. It will save you many a dollar when you come to install that new heating system. Remember, $\frac{1}{2}$ to $\frac{2}{3}$ coal cost actually guaranteed with a Williamson UNDERFEED. Send the coupon, now.

6 Railroads Use This Typewriter

These great railway systems each use from 250 to 500 Model 5 L. C. Smith Visible Typewriters. When such great railroads as the Baltimore & Ohio, C. M. & St. Paul, Chicago & N. W., C. B. & Q., Chicago, B. I. & P. and the N. Y. Central adopt this Typewriter, need you go farther in your search for a modern, dependable writing machine? Their work requires a Typewriter of great efficiency; they found it in this Model 5 which we now offer to you.

We Use 500 Visible 5's

Our own nation-wide Factory-to-Family business requires in serving our two million customers 500 Model 5 L. C. Smith's in our correspondence departments. We have used this Typewriter exclusively for years. We know how it responds to every conceivable demand made upon it by modern business. Therefore we offer you a Typewriter in this Model 5 which our own experience tells us will give you absolute satisfaction.

Get the Introductory Price On Model 5 L. C. Smith Typewriters

In the brief time which has passed since we contracted with the Model 5's makers to distribute this Typewriter throughout the United States on a Factory-to-Family plan, we have found Typewriter users eager to learn of our money-saving plan and to accept it. We want some one in every community to soon have a Model 5. To that person we will name for introductory purposes a "special" Factory-to-Family price. Ask today for that "special" price and all the details of this genuine factory-rebuilt Model 5 L. C. Smith. You will appreciate so much the bargain gotten in this Typewriter that you will gladly recommend our offer to your friends. Hence the "special" price.

100 New 5's Made Each Day

More than a million Typewriters have been made by the makers of the Model 5. They are makers of long experience. Each day they make 100 new Model 5's. Here then, in the factory-rebuilt Model 5 we offer you, is a down-to-the-minute Typewriter. Tens of thousands of this same Model 5 are in daily use by scores of America's greatest institutions. Get the price and terms on the Model 5.

BECOME AN EXPERT ACCOUNTANT

The Profession that Pays Big Incomes

Never before have there been so many splendid opportunities for trained accountants—men whose training combines a knowledge of Auditing, Cost Accounting, Business Law, Organization, Management and finance. Few professions offer better opportunities to young men of ambition and intelligence. The tremendous business growth of this country has created a rich field for the expert. There are only 2,000 Certified Public Accountants to do the work of the half million concerns needing their services. The expert accountant is also needed today in every big executive organization.

Knowledge of Bookkeeping Unnecessary To Begin

If you are ambitious, we will train you for one of these big positions. Our course and training is under the personal supervision of William Arthur Chase, Ex-President, National Association of C. P. A. Examiners, Ex-Secretary Illinois State Board of Accountancy, and other experts who rank among the highest who will give you whatever training, instruction or review on the subject of bookkeeping you may personally need—and without any extra expense to you. Our big, free book on the accountancy profession fully explains how we train you from the ground up, according to your individual needs, from the simplest bookkeeping principles to the most advanced accounting problems. All text material supplied in the course has been especially prepared in clear, easy-to-understand language, so you can readily master the principles by home-study.

Small Cost—Easy Terms

Mail the coupon now and get our free book which fully describes our expert training course and tells all about our Money-Back Guarantee, C. P. A. examinations, state regulations, salaries, and incomes, and how you can qualify for a high-grade accounting position without interference with your present job. Send in the coupon and find out how we have helped over 100,000 ambitious men, and learn what we can do for you.

Remarkable Book FREE

A prominent Chicago Executive says: "Get this book (Ten Years' Promotion in One), even if it costs you \$5.00 for a copy." Let us send it to you FREE, with literature explaining how you can train for a Higher Accountancy job without interference with your present duties. Send coupon today—NOW.

Brooks' Rupture Appliance

Has automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lies. Durable, cheap. Sent on trial to prove it. Protected by U. S. patents. Catalogue and measure blanks mailed free. Send name and address today.

C. E. BROOKS, 126 State St., Marshall, Mich.

You Take No Risk

This Razor is
GUARANTEED FOR LIFE

This Shumate "Barber" razor is so good that we dare guarantee it to you for life. Here's the reason—the blade is made from Tungsten Alloy Steel, which takes a keener edge than any ordinary steel can—and it holds it. You can use it for years without honing. The secret of this wonderful steel is *ours* alone, and we guard it jealously.

Here's our *unqualified guarantee*: Buy a Shumate "Barber" razor and use it—not once, but as long as you like. If you say after an exacting trial that you don't like it, we'll exchange it *without a word*.

Sent postpaid, \$2.00

In remitting, mention your dealer's name, and a chamois lined, rust-proof case will be included with your razor.

State whether you want light, medium or heavy blade. Heavy blade for very strong beards.

Established 1884
Output 6,000 razors daily

Let Us Send You a Conn Instrument Like Those used in Sousa's Band

WRITE today for the Conn Book and see handsome illustrations of all the Conn instruments that we will send to you on 10 days' trial. These instruments are actually the *master products* of the great instrument maker. Conn is the maker of all kinds of band instruments and practically every famous bandman in America uses a Conn instrument. Sousa's, Washington Marine, Pryor's, Conway's and hundreds of other bands of international fame use Conn instruments. Practically every grand prize offered during the last generation has been won by Conn instruments when they were in competition with the world at the great exposition.

And these are the instruments that will be sent to you on 10 days' trial.

Convenient payments in small amounts may be arranged.

3 Prime Reasons for -

The Supremacy of BISSELL'S Vacuum Sweeper

First, the carpet sweeper element, embodying the merit of all Bissell sweepers.

Second, adequate suction produced by three powerful bellows pumps.

Third, the mechanically correct and clever union of brush action and suction plus real workmanship. The soft bristle brush gently agitates the nap of rugs and carpets, sweeping the coarser substances into the litter-pan and leaving the fine dust in perfect condition to be pumped up through the suction nozzle.

Used regularly, Bissell's Vacuum Sweeper keeps rugs and carpets thoroughly clean in a sanitary manner, preventing the accumulation of dirt which necessitates drastic cleaning methods.

Bissell's Carpet Sweeper is the greatest household convenience ever invented, the device that has saved millions of women from the drudgery of sweeping. Except for kitchen or porch, discard your broom and use a Bissell's for little sweeping jobs that must be done two or three times daily. It makes housework easy.

Vacuum Sweepers \$7.50 and \$9. "Cyclo" Bull-Bearing Carpet Sweepers, \$3 to \$5.50. A trifle more in the West, South and Canada. Booklet on request. **BISSELL CARPET SWEEPER CO.** Oldest and Largest Exclusive Mfrs. of Carpet Sweeping Devices in the World. Dept. 339, GRAND RAPIDS, MICH. Made in Canada, too. (314)

INSURED
THE SCOTT ROOF

Protected Against Fire Loss

Here is positively the biggest roofing value ever offered. The only roofing that can with certainty be guaranteed to last 10 years and absolutely guaranteed against fire loss.

We will refund every penny if Asteroid Roofing gets brittle, cracks, becomes soggy, rots, warps or pulls apart at the seams — no matter how intense the heat or cold — or if subjected to heavy rains or snows.

"ASTEROID" PREPARED ROOFING

is so pliable and resilient it accommodates itself to all weather conditions, in any climate. It contains no coal tar. Is made of genuine asphalt with a base of pure wool felt. Has smooth surface, the appearance of rich, grain leather. Comes in 1, 2 and 3 ply. Nails and cement free. Can be laid over old shingles.

Get Our Freight Paid Prices

Send for Free Book and Special Freight Paid Prices — on the best, most durable, greatest fire-resisting roofing the world has ever known. Costs less than inferior prepared roofing. Write for facts. **THE SCOTT ROOFING & MFG. CO.** 300-350 Culvert Street CINCINNATI, OHIO

Tobacco Habit BANISHED

in 48 to 72 Hours

Immediate Results

Trying to quit the tobacco habit unaided is a losing fight against heavy odds, and means a serious shock to your nervous system. So don't try it! Make the tobacco habit quit you. It will quit you if you will just take Tobacco Redeemer according to directions.

It doesn't make a particle of difference whether you've been a user of tobacco for a single month or for 50 years, or how much you use, or in what form you use it. Whether you smoke cigars, cigarettes, pipe, chew plug or fine cut or use snuff Tobacco Redeemer will positively remove all craving for tobacco in any form in from 48 to 72 hours. Your tobacco craving will begin to decrease after the very first dose—there's no long waiting for results.

Tobacco Redeemer contains no habit-forming drugs of any kind and is the most marvelously quick, absolutely scientific and thoroughly reliable remedy for the tobacco habit.

Not a Substitute

Tobacco Redeemer is in no sense a substitute for tobacco, but is a radical, efficient treatment. After finishing the treatment you have absolutely no desire to use tobacco again or to continue the use of the remedy. It quiets the nerves, and will make you feel better in every way. If you really want to quit the tobacco habit—get rid of it so completely that when you see others using it, it will not awaken the slightest desire in you—you should at once begin a course of Tobacco Redeemer treatment for the habit.

Results Absolutely Guaranteed

A single trial will convince the most skeptical. Our legal, binding, money-back guarantee goes with each full treatment. If Tobacco Redeemer fails to banish the tobacco habit when taken according to the plain and easy directions, your money will be cheerfully refunded upon demand.

Let Us Send You Convincing Proof

If you're a slave of the tobacco habit and want to find a sure, quick way of quitting "for keeps" you owe it to yourself and to your family to mail the coupon below or send your name and address on a postal and receive our free booklet on the deadly effect of tobacco on the human system, and positive proof that Tobacco Redeemer will quickly free you from the habit.

STOP USING A TRUSS

Do Away With Steel And Rubber Bands

FREE TRIAL

Inner surface is made adhesive to secure the PLAPAO-PAD firmly to the body, keeping the PLAPAO continually applied and the pad from slipping. No straps, buckles or springs attached. Soft as velvet—easy to apply.

It's the Non-Slipping, yet Non-Rigid Pad and What is Within It That Counts

PATD APRIL 6 1909

FREE to 5,000 Truss Sufferers

To the extent of 5,000 sufferers who may apply I will send, ABSOLUTELY FREE, a sufficient quantity of the Plapao to positively convince them that this is the only logical, commonsense way of treating rupture. Plapao is a highly straining medication placed within the Plapao-Pad and being absorbed through the skin, creates a wonderful feeling of relief and at the same time tends to strengthen the weakened muscles and thus permanently close the rupture opening. The process of recovery is natural, so you'll have no use for a truss—you can throw it away forever! Old and young have testified under oath that the Plapao-Pads cured their rupture—many of them long-standing, aggravated cases—without delay from work. Patent allowed in U. S. and foreign countries. Awarded Gold Medal at Rome and Grand Prix at Paris.

Send No Money—for a sufficient quantity of the Plapao is sent without charge to enable you to give it a thorough test; you pay nothing for this trial now or ever. Write for it and full information today. Address Plapao Laboratories, Block 1427 St. Louis, Mo.

PATENTS THAT PROTECT and PAY

Send for FREE BOOKS.

WATSON E. COLEMAN, Patent Lawyer, 624 F St., Washington, D. C.

Read the following strong testimonials as to my work and promptness:

PERU, ILLINOIS, November 29, 1916.
I wish to thank you very much for the prompt and proper attention you have given my case. I have taken out patents before through other attorneys who have taken nearly two years to get an allowance. **ELMER A. BENSON.**

WOODBURN, OREGON, Dec. 13, 1916.
I express many thanks for your excellent work and promptness in getting my patent. It was put through even quicker than I expected. **G. S. MCGONEGAL.**

JAMESTOWN, N. Y., Dec. 19, 1916.
I wish to thank you for your prompt attention and services rendered me while I was in Washington. I have been engaged in numerous business deals requiring the services of attorneys but I have not as yet been able to find any firm that ever gave me the prompt attention and quick results as you gentlemen have. **F. D. NEWBERRY, Broker.**

THE SANITARY MAUSOLEUM COMPANY
Incorporated.

READING, PA., Nov. 28, 1916.
I wish to thank you for the promptness in which you handled this patent matter as it has been handled in a better way than anything I have ever had go through the Patent Office. **THE SANITARY MAUSOLEUM COMPANY,**
By **U. J. SMITH, (Gen. Mgr.)**

NEW YORK, December 6, 1916.
I must congratulate you on your very prompt and efficient service in securing my patent. Rest assured my appreciation of same runs very high, and I shall, with the greatest amount of pleasure and pride, recommend you to anyone that I may know or meet who may have something to patent and who needs a real patent attorney.
CALEB A. MORALES, 623 West 207th St., New York.

AMERICAN SHEET AND TIN PLATE COMPANY,
FARRELL WORKS.

FARRELL, PA., Nov. 9, 1916.
I have received my patent and wish to now state that your services have been highly satisfactory in every way. Your speed and accuracy in presenting the application and, above all, your very courteous replies to my questions surely impressed me. **H. V. HAINES.**

ROCHESTER, PA., October 12, 1916.
I could not have selected a better man or men for my patent business. You surely live up to your motto "prompt and proper attention." There are surely no dead ones in your office. **W. E. SPRATLEY, R. 1.**

PHILADELPHIA, PA., Oct. 13, 1916.
I received my patent on hoisting apparatus and thank you very much for having secured it in so short a time. I shall gladly recommend you as a patent attorney.
JOSEPH QUINN, 8634 N. 3rd St.

EAST ST. LOUIS, ILL., Aug. 26, 1916.
I acknowledge receipt of your letter enclosing notice of allowance of my application for patent. It is needless to say I am very much pleased with the dispatch in which you have handled this matter and any future business will be surely turned over to you. **L. C. ELLIS, 2917 Virginia Place.**

HILLSDALE, ORE., Aug. 11, 1916.
Allow me to assure you that I appreciate the quick and efficient way in which you have handled my patent work. I shall recommend you to my friends. **O. A. KRATZ.**

SUNBURY, PA., December 7, 1916.
I received my patent papers today for which please accept my congratulations. You surely did good work in getting out my drawings and specifications and it did not take you long to do it, and it was done right, too.

H. A. YEABICK, 229 S. 3rd St.

SULPHUR, KY., July 17, 1916.
I sincerely thank you for your integrity and executive ability which we don't think can be surpassed by any attorney in Washington. **BENJAMIN F. HAWKINS.**

THE R. C. MAXWELL CO.

TRENTON, N. J., July 7, 1916.
We are very well pleased with the manner in which you have handled our business and if anything should come up in the future we know of no other than yourself with whom we would like to trust our patent business.

THE R. C. MAXWELL CO.
By **R. C. MAXWELL, President.**

ABBY W. HODGE

Investor and Manufacturer of
Hodge's Road Plane, "The Plane That Planes!"

CHROMWELL, IND., July 3, 1916.
I greatly appreciate the work you did for me on the patent on the road drag. By securing as broad claims as you did, I was able to organize a stock company for \$40,000.00 and we are now placing on the market the best road drag in the world and now have orders on hand for more than we can supply. None of the stock is for sale. **ABBY HODGE.**

GUNN MUSIC HOUSE
794 Woodward Avenue, Detroit.

DETROIT, MICH., Oct. 14, 1916.
The tracker mechanism for player pianos works fine and I have as good as sold it. I only wish the other patent attorneys were of the hustling class, but they are far and few such as you. **J. R. DENOVELLES.**

SHELDON LEAVITT, M. D.
4665 Lake Ave., CHICAGO

April 23d, 1916.
I am both pleased and surprised at the grasp of the situation you have shown and the clear way in which you have put the matter. I appreciate as well the promptness and courtesy shown. **SHELDON LEAVITT.**

RUPERT, IDA., May 1, 1916.

I wish to thank you for the good work and promptness in securing my patent on the animal trap. I am well satisfied and was surprised to learn how quickly it went through. **D. W. SHEPARD.**

HUNTER BROTHERS
Hotel Advertising Agents.

ANN ARBOR, MICH., January 3, 1917.
We take pleasure in acknowledging receipt of Letters Patent and desire to express our gratitude to you for the prompt and satisfactory manner in which you handled our case. **W. T. HUNTER.**

MANNINGTON, W. VA., February 9, 1916.

My papers to hand today concerning my patent. You sure did get it through in record time. Filed the papers September 15, 1915, and on February 8, 1916, patent was granted. Many thanks for your diligent attention to the business. **GEORGE W. LONG.**

INVENTIONS WANTED

Manufacturers and Private Individuals Want to Buy Patents for New and Useful Inventions. Read and See if You Can Supply the Demand

A firm of patent attorneys located in Washington, D. C., is making a specialty of finding parties who wish to buy inventions. They supply the names and addresses of these parties to their clients free of charge. In this way they help the inventor and at the same time help themselves, because the inventors who wish to find patent purchasers will naturally turn to them when in need of a patent attorney. The method employed in finding patent purchasers is very simple. These patent attorneys have the following advertisement constantly appearing in some of the leading newspapers of the country.

"MANUFACTURING OPPORTUNITIES—Our clients have numerous patented devices of excellent merit which can be purchased outright or manufactured on royalty; write for information and also our book on patents. CHANDLEE & CHANDLEE, Washington, D. C."

The replies to this advertisement run into the thousands, and these attorneys have them classified according to the kind of inventions that are wanted. As soon as an inventor applies for a patent through this firm they send him a list of those persons who have asked for patents in the class to which his invention belongs. This is a straight business proposition, both the inventor and the attorneys getting the benefit of the plan. The files of these letters from patent purchasers are open for personal inspection by inventors or other interested parties at all times. Here are copies from some of these letters recently received:

Chandlee & Chandlee, Washington, D. C.

Gentlemen: Replying to yours in the Chicago Tribune. If you have anything of merit on file in the hardware line we should be interested in hearing from you. We prefer either an office or automobile specialty. Yours truly,
Modern Appliance Co.

Gentlemen: In accordance with your ad in Chicago Tribune, I wish you would please send me particulars of any meritorious patents your clients have for disposal appertaining particularly to small farm implements or attachments. I would also be interested in new automobile accessories and if possible would prefer to know the royalty or manufacturing proposition desired by your client. Awaiting the favor of your reply.
Yours very truly, J. E. Stevens.

Gentlemen: We have large factories and desire to add to our manufactures patented articles that abundant capital may make profitable; metal goods, stamped, drawn, etc. When you know of something you can recommend, please address
J. Fred. Pierson, Pres. Pierson & Co.

Here are some more inventions that have been requested in letters received by Chandlee & Chandlee: Track cleaners for car lines, a guard to prevent breaking of lamp chimneys, improved oil burner for locomotives and furnaces, improved light weight gas engines, hot plate lifter, bucket that may be emptied without tipping, improved milking machine, a simple machine for making concrete tiles, sewer pipes, fly trap, improved window screen that may be adjusted to windows of different sizes.

Inventions of all kinds are wanted by the parties who have written to Chandlee & Chandlee. Their book, "What to Invent," which will be sent free of charge to any address, is made up entirely of articles that have been requested in letters received as a result of the above mentioned advertisement. Their book, "How to Obtain a Patent," will also be sent free of charge. Write for these two books.

Here Are Examples of What Some of Their Clients Have Done with Their Inventions:

A "Little Idea" Sold 135,000 Horse Collars—Made Inventor a Small Fortune

George B. Goetz, Ranson, West Virginia, has been making leather horse collars for years. He also made a few canvas horse collars. The canvas collars were much cheaper. But, they would not hold their shape. Then—leather prices advanced. The necessity for a cheaper collar made Mr. Goetz turn his attention to stiffening canvas collars. The idea of adding a steel band came to him. It cured the defect. Where he sold only a few dozen canvas collars each year he has in the past seven months sold more than 135,000 canvas collars. And yet he only made a small improvement.

This "Little Idea" is Bringing Fine Royalties to the Inventor

E. P. Hoffman, of Uniontown, Pa., noticed boys playing with pasteboard milk bottle stoppers and collecting quantities of them. The thought occurred to him, "Why not provide a use for the stoppers?" The result was the toy pistol shown. You may say it is not much of an invention, but the royalties he receives from the Arcade Manufacturing Co. are entirely satisfactory to him.

A Nice Weekly Income for Mr. Knapp

In almost every housefurnishing store in the United States you will find on sale this simple little fruit and jelly strainer. It consists of a metal bracket that may be secured to the back of a chair to support a jelly strainer into which is poured the material to be strained and from which it will drip into a suitable vessel placed on the seat of a chair. Probably very few people know that a man named Knapp invented it. But Mr. Knapp and the manufacturer know just how many dollars this little thing brings to Mr. Knapp each week in royalties.

Chandlee & Chandlee have been practicing before the United States Patent Office for twenty-one years. Remember, the books "What to Invent" and "How to Obtain a Patent," will be sent to you free of charge. Write for them.

If you have an invention, send them a rough sketch and description of it for a free report regarding patentability. Address Chandlee & Chandlee, 1011 F St., Washington, D. C.

WANTED IDEAS

Inquiries from Manufacturers and Other Buyers of Patents
Who Are Looking for Good Ideas

Protected by Owen Patents

Are constantly being received. Hundreds of ideas are wanted—a market exists for them to-day. YOURS may be one of them. Send for my free books and see for yourself—read the requests for inventions protected by me. Many are simple. You can help supply this demand.

As soon as my clients' rights are protected I aid in every practicable way, without charge, to sell. Their applications are advertised free—their patents are called to the attention of the proper prospective buyers—every necessary thing is done. Get my booklets and see.

THESE ARE FREE

You will incur no obligation by writing me. A simple request will bring them to you—the finest, most reliable and instructive patent books published. A postal will do.

"Successful Patents"—a 72 page guide book, tells how to proceed; describes my advantageous business methods; gives references, testimonials, etc.

"Stepping Stones"—gives hundreds of hints of inventions wanted; articles from interviews of noted authorities; tells the truth about prizes for inventions.

"Patent Promotion"—tells you how to sell; why some inventors fail; discusses the value of your idea; how I aid my clients; manufacturing aids furnished you; recent successful patents, etc.

"Patent Buyers"—Publishes letters, and abstracts of letters, from over 400 of the many manufacturers, and other patent buyers, who wish to buy, or obtain on royalty, Owen Patents on innumerable inventions of interest to them.

You will also be sent from time to time, as new inventions are wanted, full information concerning them. Only in this way can you keep up to date.

WRITE FOR THESE TO-DAY—Advice costs nothing. All communications confidential. Your work will receive my personal supervision—but my fees are no higher than others.

Results Speak Loudest—But Here Are Some References

RICHARD B. OWEN 9-303 OWEN BLDG.
WASHINGTON, D.C.

Inventors submitting their inventions to me are protected in a tangible manner until their applications are filed.

Nuts for You to Crack

Invent something for which a demand exists—for which there is a waiting market. Here are abstracts from a few recent requests—hundreds are published in full in my literature. Can you invent any of these? Watch this list each month.

An investor with money writes, "I am looking for a window burglar alarm or something small that will be a fair seller."

A large manufacturer wants patents upon "novelties, machines, etc., which could be retailed from one cent to fifty dollars."

A financier wants to purchase inventions—along the lines of toys, household and office novelties, and mechanical devices which could be handled by a mail order house."

Still another manufacturer wants to get in communication with any clients of mine "that have obtained patents on tricks, puzzles, or novelties." They also state "we are always interested in any new articles of this kind and are in a position to place anything of a practical nature on the market." There is a big field for the right article.

SPECIAL FREE REPORT

Send sketch or model of your invention for free report on patentability, practicability, etc.

PATENTS TRADE-MARKS AND COPYRIGHTS

LARGEST PATENT FIRM
IN THE WORLD

SPECIAL OFFER

Free Opinion as to Patentability

Before sending your invention to any attorney or manufacturer or disclosing your invention, write for our free blank form **PROOF OF CONCEPTION** in order to protect your invention and secure your rights. This should be signed and witnessed and returned to us, together with a model or sketch and description of your invention, and we will give a **FREE OPINION** as to the patentability of the invention. If we report the invention patentable we will furnish a Certificate of Patentability.

VICTOR J. EVANS

This Certificate of Patentability, together with our blank form Proof of Conception will protect the inventor and serve as proof of the invention until the case can be filed in the U. S. Patent Office.

Obtaining Assistance for Inventors—Our certificate is of great assistance to inventors who require financial aid to obtain patents.

OUR FIVE BOOKS MAILED FREE

(See Coupon Below)

to any address. Send for these books—the finest publications ever issued for free distribution.

How to Obtain a Patent

Our illustrated eighty-page Guide Book is a book of reference for inventors and contains 100 mechanical movements, illustrated and described. Tells how to invent for profit.

What to Invent

Contains a valuable list of inventions wanted and suggestions concerning profitable fields of inventions; also information regarding prizes offered for inventions amounting to **One Million Dollars**

Millions in Trade-Marks

Shows the value of Trade-Marks and information regarding unfair competition.

We Advertise Our Clients' Inventions Free in a list of Sunday newspapers, in manufacturers' journals and in World's Progress. Sample Copy Free. We save you time and money in securing patents. After the patent is granted we assist you to sell your patent.

List of Patent Buyers

Contains requests from manufacturers, mail order houses and promoters for patents secured by us and suggestions as to **New Ideas** they wish to purchase. We place our clients in touch with capital free of charge. We have recently received over 300 requests from manufacturers.

Foreign Patents

We have direct agencies in all the principal foreign countries and secure foreign patents in the shortest possible time and at the lowest cost. Write for our illustrated Guide Book on Foreign Patents, sent free to any address.

WANTED NEW IDEAS

Prepare Now to meet the Demands of Industry in All Fields for New Ideas and New Inventions. We are constantly receiving requests from manufacturers who consult us when purchasing patents for inventions in all lines. We invite manufacturers and promoters to address our Sales Department regarding the purchase or leasing of a number of meritorious patents secured by us.

LANCASTER & ALLWINE
REGISTERED ATTORNEYS
SERVICE

OUR CO-OPERATION

With an inventor is, **First**, to help him establish his rights before sending a sketch, drawing or model to any attorney; **Second**, to give a frank opinion whether it will pay to patent his idea, based upon our extensive knowledge of the patent laws, manufacturers' wants and facilities; **Third**, to obtain for him on reasonable terms, a patent that absolutely protects; and, **Fourth**, advise and assist him in making the invention a source of profit by outright sale, territorial grants, obtaining royalty, or the independent manufacture of the invention.

**DON'T
LOSE
YOUR
RIGHTS**

Before disclosing the invention to anyone, sign, witness and deposit in our fireproof safe, the form "Evidence of Conception" and establish your rights. A completed sample form in our book shows you clearly how to protect your invention. All are free. Just ask for them on a postcard or simply mail coupon below.

Without charge or obligation, we will give you our frank opinion on any questions you may put to us touching on patent, trade mark and copyright matters. You may ask, "Should I protect myself by a patent, or register under the trade mark or copyright laws? What kind of a patent should I obtain? What will it cost? Will it sell?" and many other questions that may occur to you. These are vital points to consider, and questions will be cheerfully answered. If you want suggestions on what to invent, in our **Bulletins of Improvements Wanted**, which are sent free to all on our mailing list, you will find the wants of progressive manufacturers and valuable information. All matters are held strictly confidential, and personal services are assured by our **Service Guarantee Contract**. References: 2nd National Bank, Washington, D. C.; John P. Roth Packing Co., Cincinnati, Ohio; Duskill Mop Co., Paducah, Kentucky; North Capitol Savings Bank, Washington, D. C. Listed in the Bankers' and Brokers' Directory.

Four New Booklets for Inventors

Chock full of ideas and practical advice. Tell what to invent and where to sell it. "Patents and Patent Possibilities," and "Practical Suggestions for Inventors" are bristling with facts that every inventor should have. They explain how many of my clients have made money from patents procured by me. What I have done for them I can do for you. If you have **inventive genius** and the **will power** to use it. The "**Inventors Loose Leaf Record File**" will enable you systematically to preserve evidence to prove priority of invention on your part in the event of a controversy. These booklets are unlike anything ever issued for inventors, they were prepared with the idea of **Service**. If you are interested in inventions send for these books; they are free while they last. My service is individual, prompt, efficient and satisfactory. (16 years' experience). I am frank in my opinion on the value and patentability of inventions. Every expedient is employed to secure patents at the least possible cost.

Compare It With a Diamond

*If You Can Tell the Difference
—Send it Back at Our Expense*

THESE new, man-made gems will be a revelation to you. After centuries of research, science has at last produced a gem of dazzling brilliance that so closely resembles the diamond that you'll not be able to distinguish it. You may see it for yourself—without charge.

We will send you any of the Lachnite Gems that you may select for a ten days' free trial. We want you to put it to every diamond test. Make it cut glass—stand the diamond file, fire, acid—use every diamond test that you ever heard about. Then, if you can distinguish it from a diamond, send it back at our expense. Write for our new, free jewelry book.

Pay As You Wish

If you wish to keep the remarkable new gem, you may pay the rock-bottom price at the rate of only a few cents a day. Terms as low as 3½ cents a day without interest. No notes, mortgages or red tape. You pay only the direct, rock-bottom price—a mere fraction of what a diamond costs.

Set in Solid Gold

Lachnite Gems are never set in anything but solid gold. In our new jewelry book you will see scores of beautiful rings, La Vallieres, necklaces, stick pins, cuff links, etc., etc. from which you have to choose.

Send Coupon For New Jewelry Book

American Supremacy In Machinery

This supremacy has been gained and held by quantity production, enabling American manufacturers to dominate the world-market in spite of paying the highest wages. It is the toolmaker that has made this quantity production possible.

In the constant search for better tools, a most noteworthy advance is made in the design of the Gun Tap shown below. Here is a tap in which *breakage is almost entirely eliminated*. Think of that for a minute, remembering that the breakage of ordinary taps runs about 90%.

The Gun Tap cuts with a shearing action, the only true cutting, and a new feature in taps. This makes it the easiest cutting tap on the market. It shoots the chips ahead—whence the name "Gun" Tap—instead of jamming them into the flutes. Thus the flutes can be shallow, and this, with the easy cutting, makes it almost unbreakable.

For further information as to these details, its unequalled accuracy, and the possibilities of increasing production, send for Bulletin entitled "The 'Gun' Tap."

COW CONQUERS AIRMAN—A dispatch from Kiev, Russia, states that when a German aeroplane landed in a field near Lutsk, a terrified cow charged the propeller with its horns and smashed it up, with the result that the airman and his machine were captured.

The record price of five pesos (\$2.50) for admission to a moving-picture show was paid recently at Buenos Aires at the first performance of a recently released American spectacle of great magnificence.

HARRISON & CO., 81 New St., New York

Every Builder and Contractor Needs this Level

10 Days' Free Trial

We have been makers of transits and levels since 1868 and our instruments are the standard of the world. Prove the superior quality of the Aloe Convertible Level by giving it a 10 days free trial. Use it on your every-day work laying out buildings, leveling up foundations, walls and floors, aligning, shafting walls, piers, etc., for getting angles or levels anywhere.

Easy Monthly Payments

If you decide to keep it, the instrument will earn its way while you make monthly payments so small that you hardly feel them. Costs no more than to pay all cash. No red tape about it, no embarrassing questions, everything confidential.

Aloe Convertible Level

is the finest instrument ever offered at anywhere near its price. Permits taking of sights both above and below the horizontal. For taking vertical sights it is provided with a special convertible bracket rigidly and permanently attached to the cross bar. The telescope is fitted with permanent axis which rests in bracket bearings and is held by clasp easily and quickly released.

Aside from being a level, it is a modified transit that permits a much wider range of work than is possible with the ordinary architect's level. With it the man without technical training can obtain the same absolutely accurate results as the expert. Write today for descriptive circular.

A. S. ALOE CO.,
620 OLIVE ST., ST. LOUIS, MO.

HOW TO OVERCOME RED TAPE—From time to time, a story comes along from "Somewhere in England" or "Somewhere in France," or "Somewhere elsewhere," which shows that the "official routine of the official department" is receiving much buffeting in these times. A certain commander on a certain front decided, after careful thought, that he needed certain things, and needed them very much, says the Christian Science Monitor. He sent his list to headquarters, and, after a long delay, came a sheaf of official forms full of detailed inquiry as to why he wanted each thing he had asked for. The commander thought over the matter for a day or two. Finally he took his courage in both hands, and a

"YANKEE"
TOOLS
Make
Better
Mechanics

YOU'LL not need to take work apart or remove surrounding sections to drill holes if you have this "Yankee" Ratchet Hand Drill No. 1530.

It works in places and under conditions where it is impossible for other drills to operate. It's the ingenious "Yankee" Ratchet Shifter that does the trick.

There are five adjustments to this drill, con-

trolled by position of Ratchet Shifter. First notch, Plain Drill; second, left-hand ratchet; third, right-hand ratchet; fourth, double ratchet; fifth, gears locked.

The wonderful double ratchet movement is a big time-saver on many jobs. Here every crank movement forward and back, even through so small an arc as one inch, causes the drill to cut continuously.

"YANKEE" Ratchet Hand Drill

No. 1530—Price, \$3.25 Measures only 10½ inches, weighs 1¼ pounds. Magazine in detachable handle for drill points. You purchase drill points as needed. Three-jaw hardened steel chuck holds round shanks up to 3/16" diameter.

Your Dealer Can Supply You

BARNYARD FOWLS IMITATE HISS OF FLYING SHELLS—A singular and very interesting fact has been chronicled in an English publication recently, says *Our Dumb Animals*. A soldier, stationed at a farm in France, in a letter states: "We often hear the sound of a shell coming and yet there is no burst." He eventually traced this sound to the fowls in the farmyard—first to a hen, afterward to a cock. They had learned to make the noise since the war began; and the French farmer told him they often kept it up for a long time—surely a most curious instance of bird mimicry. The fact is vouched for by an authority, however.

Prest-O-Lite
for
Motorcycles

Solves Your Lighting Problem

Prest-O-Lite is the solution to your motorcycle lighting problem. It will give you brilliant, dependable, convenient light at least cost and perfect service and satisfaction at all times and under all conditions.

Enables you to ride at night with ease, comfort and safety, at any speed. Gives you a clear vision of the road ahead—will not suddenly blow out or fail you when you need it most. Road shocks, jolts and vibration do not injure it—is as sturdy as your motorcycle.

Aside from these advantages, it is thoroughly simple to operate and costs little to buy and use.

Easily, Quickly Attached

To any make of motorcycle you can quickly and easily attach Prest-O-Lite. Necessary equipment can be readily obtained at your dealer's. He can probably make you a special price on "A Prest-O-Lite tank, a lamp and a good mechanical horn." This is the equipment that will give you the greatest satisfaction in strenuous service.

Our literature on motorcycle lighting will prove of great interest to you. It is yours for the asking.

THE BUELL
EXPLOSION WHISTLE

New Design Signal Rules the Road

A whistle—not a horn. More easily controlled than any other type of warning device—possesses wider sound range—utters a low musical 3-tone chime to gain attention in "close quarters"—or abrupt, penetrating "shrill" when instant action is imperative. Operates directly by explosion through priming cap. No soot. No dirt. No clogging. No cleaning. **Never** fails. **Absolutely** dependable. No disadvantages. **Costs nothing to operate**—nothing for repairs. **Outlets** car. Easily installed. **Amazingly** low cost considering high state of mechanical perfection—and protection positive operation assures. Thousands used. Every motorist needs it for **certainty, safety, economy.** Send now. Prepaid upon receipt of \$4.25 for single tone or \$6.00 for chime. Money back in 30 Days if not satisfied.

No Money In Advance

This Marvelous Camera on FREE TRIAL!

Only 10,000 of these marvelous, instantaneous picture-taking and making cameras to be sent out absolutely on approval without a penny in advance just to prove that it is the most wonderful invention—the camera sensation of the age. So you must send for it quick! Don't think of it—the new Mardel-ette takes and makes finished pictures

INSTANTLY!

You press the button, drop card to developer and in one minute take out a perfect, finished post card photo, 2 1/2x 3 1/2 inches in size. Camera, itself, is about 4 1/2x3 1/2 inches. Loads in daylight 16 to 20 post cards at one time. No film—no plates—no dark room. Not a bit of the mess and bother of the ordinary kodak or camera. It is instantaneous photography. Universal focus lens produces sharp pictures at all distances. Pictures develop and print automatically. Can't overdevelop; results simply amazing.

WE TRUST YOU

No difference who you are, where you live or what your age, we will send you the complete "Mardel-ette" outfit absolutely on approval and give you 10 days to test it. If not satisfactory return it. But when you see what elegant pictures it takes—so quick, so easy, with no trouble at all—if you wish to keep it just simply send us \$1.95 per month until our special price

of only \$5.00 is paid. Easy Payments—no References. No red tape of any kind. Monthly payments so small you'll not notice them. Lots of fun and big profits. No Experience Required. Plain instructions and everything complete with outfit so you can begin taking pictures the moment it arrives. We guarantee that even a child can operate it. Mail coupon right now. No risk or obligation to keep camera.

The Chicago Ferrotype Co., Box 348, Ferryville Bldg., Chicago, Ill.

Send me at once one complete model Mardel-ette Camera outfit, including supply of post cards and instructions. I agree to examine and test it thoroughly and if satisfied keep it and pay you \$1 a month until your special price of \$5 is paid. Otherwise I will return it at the end of 10 days.

RECTIFIERS for garages. All sizes. Charge from alternating current 1 to 8 batteries. \$12.00 upwards. AMERICAN BATTERY CO., 1137 Fulton St., Chicago. (Est. 1881)

An airman narrowly escaped death recently when he attempted to drop a wreath near the coffin of another airman, who had been killed a few days earlier, at San Diego, Calif. A gust of wind drove the iron wiring of the wreath against the motor, short-circuiting the ignition circuit and thus stopping the engine. By skillful volplaning, however, the airman descended safely on the bay.

Oxy-Acetylene Welding and Cutting

Operator welding sheet metal chemical container. All seams, flanges and nipples were welded by the Prest-O-Lite Process.

Welded Tanks Are Leak-Proof and Cost Less

A large manufacturing company constructed a number of tanks, like that shown above, to contain a searching chemical liquid. All seams and joints were welded. Searching tests proved the tanks positively leak-proof. Besides this important advantage, the tanks cost much less to make by welding than by other methods.

This is a typical instance of the all-around usefulness of the oxy-acetylene process. In thousands of shops and factories, it is displacing the rivet, bolt and threaded joint on a large variety of work.

In routine production, it is invaluable—simplifying construction, lowering costs, giving neater and more permanent work.

For "on the spot" repairs, it is unequalled. Also profitable for reclaiming and putting back into service valuable "waste" material from your junk pile.

Prest-O-Lite PROCESS

Employs both gases (acetylene and oxygen) in portable cylinders. Prest-O-Lite Dissolved Acetylene (ready-made carbide gas) is backed by Prest-O-Lite Service, which insures prompt exchange of full cylinders for empty ones. Provides dry, purified gas, insuring better welds, quicker work, and lower cost, and also avoids the large initial outlay and heavy depreciation incurred in making crude acetylene in a carbide generator.

Necessary equipment is not expensive. We furnish high-grade welding apparatus for \$60 (Canada, \$75); acetylene service at additional cost. Adaptable for oxy-acetylene cutting by the addition of special cutting blow-pipe. Thorough instructions are furnished free to every user of Prest-O-Lite Dissolved Acetylene—any average workman who understands metals can learn the process quickly and easily.

Send for literature on the Prest-O-Lite Process, illustrating the economies now being effected in your own or similar lines of work.

Get Into the Welding Business

There is a wide and growing demand for oxy-acetylene welding. It offers a splendid opportunity for enterprising mechanics to get into a live and highly profitable business of their own. Write for details.

SPEEDIER THAN THE AVERAGE LAUNCH

A big claim? Yes. Exaggeration? Not a particle. That the famous 2-cylinder Koban is speedier than the average launch is borne out by the experience of thousands of Koban users in all parts of the world.

The Great 2-CYLINDER KOBAN ROWBOAT MOTOR

A Koban owner at Madison, Wis., writes: "We can easily pass a good number of the larger launches on the lakes."

Another user says: "There was not another outboard motor on the lake that could keep up with us."

Develops a full 3 H. P. Makes 10 to 12 miles an hour on a good-sized boat. Insures wonderful fuel economy. Starts, reverses, "picks up" and throttles down with perfect ease. The 2 opposed cylinders fire simultaneously, neutralizing all vibrations.

Send for Catalog showing 1917 Models.

Write for particulars today.

Hildebrandt Baits Hook and Land 'Em

USE Hildebrandt Baits and catch fish. Made in 302 sizes and kinds—three styles—six finishes, any size. Interchangeable flies—reversible "Spin so Easy" blades suitable for any kind of fishing. Send for a Free 1917 Tackle Catalogue, shows our entire line in actual sizes and colors. A two cent stamp brings it.

John J. Hildebrandt Co., 1343 High St., Logansport, Ind.

OTTAWA ENGINES Kerosene-Gasoline

With my Kerosene Engine you can get more power from a gallon of 6c Kerosene than you can from a gallon of 20 or 25 cent gasoline in any gasoline engine. No cranking, no batteries, easy to start, easy to operate.

Valuable Free Book Every farmer who owns an engine or expects to buy one should know how to figure exactly what an engine is worth—Why I use the valve in the head design, the off-set cylinder construction and larger valves.

90 DAYS' TRIAL.
10-YEAR GUARANTEE
Largest sold direct from factory to user. Before you buy any engine get my newest and best book and money saving offer. Write today. **GEO. E. LONG,**
OTTAWA MFG. CO.
536 King St. Ottawa, Kans.

10 Days Free Trial

YES, we will send you the Violin of your choice for full 10 days' free trial. Play on it—test it in every way before you decide whether you wish to buy or not. Compare it with other instruments—then if you are not more than satisfied. Send it back at our expense. You do not pay us a penny for the use of the violin. Write for circular.

Your Choice of Instruments

Write today for our new Violin catalog and see handsome illustrations in full color of all the superb instruments that you have to choose from. There you will find illustrated products of the leading violin makers of the world—

Rare Old Violins

Our collection of rare old violins is one of the largest in America. Write today for Special Art Catalog.

Farny, Bander, Glier, Heberlein, Fiedler, Wurlitzer and many others. Violins of the highest grade, as well as those of moderate prices—all special values. Priced from \$2.75 to \$50.00, and from \$50.00 to \$250.00.

WURLITZER

200 years of instrument making

Get the benefit of our mammoth facilities for buying in large quantities. The house that supplies the United States Government now makes a startling money-saving offer direct to you. Write for circular.

Pay as You Wish

If you decide to keep the violin you have selected after you have tested it out for ten full days, pay the rock bottom price at the rate of only a few cents a day. No red tape. No collectors or mortgages. Your credit is good with the House of Wurlitzer.

10c a Day

now buys this superb Lyric Cornet. Exquisite triple silver-plated long model Lyric Cornet direct to you on a startling offer. Ten days free trial before you decide to buy. Liberal allowance for old instruments. Write today for 225-page Catalog—showing 2581 instruments that you have to choose from.

Send the Coupon

Put your name and address on the coupon now and indicate catalogue matter you wish us to send you. Absolutely no obligation in sending the coupon. Do it now. Find out about the startling money-saving offer we are making. Write today—send Coupon or a Letter or a Post-card.

Of Course You'll Want a Boat

"JOIN IN THE NATION'S MOST
POPULAR SPORT—
BOATING"

WATER AUTOMOBILING will be the big sport this season. Those who like to be out of doors have learned that the lake, ocean and river have a charm all their own that crowded boulevards and dusty roads cannot equal. You will want your boat to be a Mullins not only because

MULLINS STEEL BOATS CAN'T SINK

but also because beauty of design and efficient and dependable power plants properly installed, have given Mullins boats an enviable reputation for comfort, service and speed.

Built of tough steel having greater resistant qualities than one-inch oak planking, powered with 2 and 4-cycle engines bearing world-famous name plates, Silent Underwater Exhaust, Mullins boats can't leak, water log, dry out, warp or open at the seams and never require calking.

There are now more than 65,000 enthusiastic owners of Mullins boats. Forty models now ready for delivery.

Let us send you our big catalog of steel and wooden motor boats, rowboats and canoes—free.

"NEW-SKIN"
TO PREVENT
INFECTION

"New-Skin" For Hang-nails

"I applied New-Skin to a laceration of the skin near a finger-nail," writes a sportsman, "and like it so well that I am going to take a supply for a big-game hunting trip."

At all druggists, in 10c. and 25c. sizes.

NEWSKIN CO., NEW YORK

"I'll Tell You What's Holding
YOU Down, Jim"

"To be frank, you're short on headwork. You are good at packing and nailing up boxes, but many of our men can do as well. What we need right now is a Traffic Manager—a man who knows freight and express rates, classifications, and routing of shipments. Such a man could save us thousands of dollars every year, and we could well afford to pay him a good salary. But you can't fill that job—you haven't the training. If you had looked ahead of your job and prepared in spare time for such work, there would be a good position with a good salary open to you right now."

For 25 years the International Correspondence Schools have been a good friend to men situated like Jim. No matter where you live, what your work, how little education or spare time you have, the I. C. S. can help you get ready for advancement and better pay. Without obligating yourself, just mark and mail the coupon and find out how.

TEAR OUT HERE

1320-1370 Eggleston Avenue Cincinnati, Ohio

"Dad, Why Don't We Have Bicycles?"

"There's Bob and his father going for a spin on their new wheels. Just think how fine it would be if we had bicycles.

"You could ride yours to the office every day, and I could go to school on mine. I wouldn't mind running errands for Mother if I had a bicycle. And on Sundays we could go for long rides in the country. Wouldn't it be swell, Dad? And it would be great exercise, too."

But Be Sure You Get a MIAMI-MADE Bicycle

No other bicycle on the market has combined in one bicycle all the special features you find in MIAMI-MADE Bicycles.

Light, yet sturdy enough to withstand the hardest wear, easy riding, perfectly balanced, and with an equipment that is the best that money and experience can produce, a MIAMI-MADE is the only kind you want.

There Are Four Lines of MIAMI-MADE Bicycles

The Miami, the Hudson, the Flying Merkel and the Racycle. Each one has special distinctive features that you will like.

Oh, Fellows there's a "Harley-Davidson Bicycle"

That's what the boys will all say when you ride by on your new Harley-Davidson bike. Built in the same splendid way as the Harley-Davidson motorcycle—the machine that has led them all for more than 15 years, smashing record after record for speed and endurance.

The new Harley-Davidson is a bicycle to be proud of—a beauty from handle bar to tire tread. The very finest equipment throughout. The model in the picture—the "Motorcycle"—has Firestone non-skid, black-tread, red side-wall, motorcycle-fabric tires which sell for \$9 a pair.

CYCLEMOTOR CORPORATION ROCHESTER NEW YORK

THE ONLY 2-STROKE HIGH-SPEED BIKE MOTOR

10 Cents a Day

Here you can get any known musical instrument sent to you for full 10 days' free trial in your home. And every article is offered at the rock-bottom price. You will be astonished at these values. And then—this rock-bottom price may be paid at the rate of only a few cents a day. Ten cents a day buys an exquisite triple silver-plated Lyric Cornet.

But first write for our new catalog.

WURLITZER

100 years of instrument making

The name "Wurlitzer" stamped on musical instruments has stood for the highest quality for nearly two centuries. We are manufacturers of every known musical instrument and every one is sold direct to you at the rock-bottom, direct-from-the-manufacturers price. We supply the U. S. Government.

10 Days' Free Trial

Try out the instrument of your choice in your own way before you decide to buy. Compare it with other instruments. Test it. Use it just as if it were your own. Then after the free trial—either pay a little each month or send it back.

Your Choice of Instruments

On this great special offer you have over 2000 instruments to choose from. Any one of these will be shipped to you for 10 days' free trial in your own home. The Cornet, Violin, and Saxophone illustrated here are but three out of thousands of remarkable offers that are being made.

Send the Coupon But first put your name and address on the coupon now and get our big, new catalog absolutely free. Just state what instrument you are interested in and we'll send you the big 194-page book FREE and prepaid.

Please Mention Popular Mechanics

These cuts are made from photos showing comparative growth of pear trees from Spring of 1913 to August, 1914, Bellefont Orchards, Inc., Norfolk, Va.

Save a Year or More

Experience demonstrates that trees planted in blasted ground grow faster—are healthier—and bear earlier than trees planted in spade dug holes. Prove this fact for yourself by using

Save Your Shade Trees

Life is difficult for city trees. Side walks and pavements limit moisture area and check their growth. Die-back destroys them. Prevent this destruction by blast-rejuvenation. If instructions are carefully followed this work can be safely done within a few yards of houses or water mains. Find out how now

DU PONT

Red Cross Farm Powder

when planting trees. First year results will surprise you. First year losses average 3% compared with 33% of spade set trees. The reason is simple, logical and practical. Blasting shatters the heavy "hard-pan" under the top soil and provides for better rootage, increased nourishment and greater moisture control.

Don't Pot Your Trees

Give them a chance to grow and expand. Our big book tells how. It's a revelation in the use of Red Cross Farm Powder in orchard or farm. Write today for Handbook of Explosives No. 248.

I Want 200 Exceptional Men

I have openings right now for men of mechanical ability—who want to be something better. If you have "stick-to-it-iveness"—determination to succeed—a little money—I will teach you the best business now open to young men.

A Nation-Wide Demand

Through national advertising I have created a nation-wide demand for my Standardized Tire Repair Service. Right now there are at least 200 important centers where autoists are demanding my service and cannot get it. I want good men for these centers. I sell you a machine to do this work—you become its sole owner. I teach you either by mail or in my FREE training school. You become an expert—you know the construction—the inner mechanism of the tire and tire building. If you have a little selling ability—your success is assured. Auto owners will flock to your place of business—they will give you the preference because they know you are a trained man.

BIG PROFITS

There is almost no limit to the profits. You can add accessories to your line and sell tires besides repairing them. I am prepared to help you do this. If you see no metal sign of the "Man and Machine" write me personally and I'll tell you how to get started. Don't delay—write me today.

Big Money In AVIATION

Send the coupon below at once. Find out about the big opportunities that are awaiting you in this newest industry. The day of aviation is here! It is no longer a science or a stunt—it is a business! Fame, fortune is awaiting those who are the pioneers in this new field. Get in early. Start now at salaries of from \$50 to \$250 a week as an aero engineer—and grow to independence with a rapid expansion of the industry.

Everywhere aviation experts are in demand. Government and private enterprises are taking up aviation seriously. They need men who know.

NOW You May Learn At Home!

Yes, you may learn the science of aviation right in your home and in your spare time. No longer need you sacrifice time and money by years of practical experience on the flying field. Send the coupon and find out how we have condensed into a short course, all the knowledge which is necessary to equip you to take your place upon the field as a practical aero engineer. We will tell you just how you can save years of time and much money. We will show you how you can gain this knowledge in your spare time, at home, without interfering with your regular work.

This Partial List

shows you the character of the subject which our course covers:

Physics of the Air
Dynamics of the Air
Wing and Aeroplane Designing and Construction
Balloning (covers building and operating of balloons)
History of Aeronautics, etc.

International Flyer Teaches You Personally

A famous aviator, who has won laurels for flying, both here and abroad, supervises the instruction of every one who takes this course. You have the privilege at all times of free consultation with this aviator. Write now and get full particulars.

Send Coupon—Free Information

No matter in what business you are now engaged, if you are mechanically inclined, or interested in aviation, you should at least find out, *now*, about this great course. Learn the opportunities that are opening every day for trained aero engineers and get particulars of this course which revolutionizes the training of aviation experts. We are making a special offer now. Write for this information *while it lasts*.

Making Cement Drain Tile

Here is a chance for every ambitious man to make big money—to own and operate a factory—to join the ranks of America's biggest money-makers. No previous experience is necessary and but little capital. You start with this machine—the Richmond. It makes Cement Tile. Works easy. Tile requires no burning like clay tile—no tamping. Makes 1500 to 2500 perfect tile a day.

Every Farm Needs Under-Drainage

Under drainage means earlier and easier cultivation besides perfect insurance of crops. It removes the surplus water from the land. It pays big dividends—increases value of land 30% to 300%. Thousands of acres right around you need Cement Tile for this purpose.

ENORMOUS DEMAND. Millions to be spent. You can share in this mammoth fortune, if you write at once.

FREE BOOK—FREE TRIAL

Let us tell you all about this big profitable business—this great business opportunity open to you. Our Free Book explains the business from A to Z—tells how Cement Tile is made—how it is sold, and how we help you make a success. Get our liberal, No-Money-Risk Free Trial Offer. Send a postal or letter Now.

I Want To Make You A Present of This Acorn Uni-Lite!

And I Am Organizing an Army of Money-Winners! Do You Want to Join?

**300
Candle
Power**

Yes—you get the Uni-Lite without paying a penny for it.

But that's not all! I want to help you join my army of money-winners—my big band of men who are "coining money" without interfering with their present work—without doing much of anything except calling on their fellow townspeople and talking neighbor-like to them.

I want to tell you all about it. But, before I can do that, I want you to send me your name and address on the coupon (or a post card) so I will know where to mail you complete information telling you how you get your Acorn Uni-Lite free.

The Light That Shames Electricity

A new and astonishing light. Thousands exported to foreign countries every month! Adopted by U. S. forces along border! Gives brilliant, steady radiance equal to the combined light of 20 ordinary lanterns or lamps. Burns 15 hours on one filling! Costs only 1/4 of a penny per hour. Burns common kerosene or gasoline. Storm-proof, bug-proof, rain, sleet and snow-proof. Use as a lamp—or carry as a lantern. Handsome in finish—neat in design—durable in construction. A wonderful light for in and around homes—farms—garages—barns—shops—in camps—driving on dark roads—boating—for night watchmen—hunters, railroad men, etc. And my New 1927 Offer tells you how you can get one free.

Just Answer This Ad—Just Follow My Plan—I'll Show You and Back You!

Just the same as I have done for thousands of other men—men just like yourself. It's no trick at all. Anyone can succeed with this plan for making money. It's simple and straightforward. I'll tell you all about it, just as soon as you send me your name and address. Don't put this off. Do it now. It won't take a minute.

\$4.00 each**

Like the elephant in might, in length of life, in rugged, genial service. Vitalic Tires are to the bicyclist what elephant hide is to the elephant as he roves the jungle, immune from splintered trees and hostile claws. Vitalic Tires mean safeguarded going over bad roads—a dependable armor against stones, ruts, time and wear. Vigor and value from tread to tube. Resilience blends with resistance in the stern, double thick, motorcycle tire fabric. Send for testing section—note the triply-twisted thread. Examine each layer of rubber and fabric—thicker than elephant hide.

VITALIC Bicycle Tires

Vitalic Brigadier
\$2.50 each

Three great tires bear the great name *Vitalic*. Each wholly worthy the name. Each sturdy, long-lived—good for thousands of miles. Each easy to recognize. The *Vitalic De Luxe*, with heavy V-shaped suction non-skid all-white tread, brings you enormous friction-resisting tire-evity—\$4.00 each. The *Vitalic Brigadier* is a stalwart tire with white, heavy, studded tread and gray walls, built for hard knocks for those

Real Foot Ease on Vitalic Pedal Rubbers

Vitalic Pedal Rubbers put new ease—new energy—into pedaling. Best for a quick getaway. Restful on long jaunts.

Vitalic Grips Save Slips and Cramp

Once you ride with Vitalic Grips, you'll never change. Big enough and with just enough yield.

There's Life and Last to Vitalic Inner Tubes

They're without flaw or weakness. Layer upon layer of lively, long-lived rubber. Full of vim and vitality.

Vitalic Automobile Tires, Too

Please Mention Popular Mechanics

If This White Cross Vibrator Could Talk, It Would Say:

I am used by the builders of the world.
 I help add years to your life and life to your years.
 I am the great exerciser and stimulator of circulation.
 I believe I can prove this to you with one demonstration.
 I improve Health and Beauty—*Let me do it for you!*
 I put strength and endurance into weak muscles and nerves—*Let me do it for you!*
 I put rosy cheeks on women without paint or powder—*Let me do it for you!*

You should read some of the hundreds of wonderful letters written about me by people who have experienced remarkable benefit. Nothing short of genuine appreciation could prompt such conservative people to make these statements voluntarily. But take nobody's word for it. *Try me yourself.*

To Those Who Think They Can't Afford Me

I am not an expense, I am an investment. By helping you keep well and improving your energy, I create money. I have a way of making your brain more clear so that it hits on all cylinders. That "tired feeling" runs away. You go to work with the better strength that your highest ambitions yearned for. Doctors, sanitariums and hospitals have found Vibration so successful that most of them keep me in their office. Vibration tones all the organs. It stimulates and builds up without medicine. It helps to make better health and good health is the only basis of a big brainy mind. You are entitled to perfect health. I want you to use me to help obtain it. I want you to feel at least once in your life the exhilaration of better circulation and health. Our combination outfits give you three of the greatest natural curative agents in the world—vibration, faradic and galvanic electricity. Can be connected to electric light socket as easily as a lamp, or will operate on its own powerful batteries.

Send for Free Book "Health and Beauty"

The man or woman that desires better health, better circulation, and better complexion, stronger nerves and muscles, and a better formed figure, should mail the coupon attached for the free book, "Health and Beauty." This book describes and illustrates how health, beauty and development can be obtained in the privacy of your home through White Cross Electric Vibrator. If your health is not right up to the minute, ask for this book.

THE EXPO WATCH CAMERA

The most wonderful and ingenious Camera made

It is but little larger than a watch, which it closely resembles. You can carry the Expo about in your pocket and take pictures without any one being the wiser.

One Cent a Picture

The Expo loads in daylight with 10 or 25 Exposure Films, costing 15c and 25c respectively, and thus the picture taking part of a whole day's outing may be had for a very nominal sum — One cent a picture.

Easy to Manipulate

It is simplicity itself to operate. Takes pictures through the lens, where the Rapid Fire Lens is located. The photos (5/8x1/8) may be enlarged to any size.

Operated as quick as a flash Time and instantaneous shutters; Enclosed by amateurs and professionals the world over. Thoroughly practical—printing and developing of films just the same as ordinary cameras—in daily use by the police, newspaper reporters, detectives, and the general public. Important hints have been secured with the Watch Camera by enterprising reporters. Produces clear, sharp negatives indoors or outdoors equal to any camera on the market, size or price notwithstanding. Sold Under a Positive Guarantee.

MAILED TO ANY ADDRESS IN THE WORLD

JOHNSON SMITH & CO., 7155 North Clark Street, CHICAGO

JAPANESE ROSE BUSHES

The Wonder of the World

Japanese Rose Bushes bloom all the year round. Just think of it. Six weeks after planting the seed, the plants will be in full bloom. It may not seem possible, but we positively guarantee it to be so. They will bloom every ten weeks, Summer or Winter, and when three years old the bush will be a mass of roses, bearing from five hundred to a thousand roses on each bush. The flowers are in three shades—white, pink, and crimson. The plants will do well both in and out doors. We guarantee at least three bushes to grow from each packet of seed. Price, 10c packet, 3 pkts. for 25c postpaid.

Shoo Fly Plant

A very remarkable botanical curiosity you should have. Though quite odorless, flies will not remain in a room where it is grown. Bears very pretty blossoms, summer and winter. Grows rapidly from seed. SEEDS 15c, packet, 3 for 40c, postpaid.

Weather Plant

NATURE'S WEATHER PROPHECY By mysterious changes that take place, this remarkable plant accurately forecasts the weather many hours in advance. Will grow anywhere all the year around. An interesting house plant. Bears large, fragrant, pink, butterfly shape flowers. SEEDS, 15c packet, 3 for 40c, postpaid

GROUND ALMONDS

Amazingly Prolific—Easily Grown From Seed The Ground Almond has a flavor that is MOST EXCELLENT, resembling the coconut. The meat is snow white, covered with a shell or skin of brown color. It grows close to the surface and anything from 200 to 300 Almonds may be expected from a single pot. There is no trouble whatever in growing anywhere and in any kind of soil. May be planted any time, and in eight or ten weeks from time of planting you will have an ENORMOUS CROP of the MOST DELICIOUS ALMONDS YOU EVER TASTED. SEEDS 15c Pkt.

Perfume Plant

Blooms only at night, giving forth the most delightful scented fragrance for quite a distance. Grows on a bush or garden. Also valuable because of rare perfume made from it. SEEDS, 10c pkt., 3 for 25c.

Musk Plant

Another charming floral novelty of the sweet scented variety. Equally suitable as house plant or garden. Makes the most delightful perfume. SEEDS, 10c pkt., 3 for 25c.

The Wonderful Sensitive Plant

The Marvel of the Philippine Islands. Almost human in its nervous susception. Leaves curl, and fronds droop when touched. Apparently resents interference; it dislikes strong odors, and is painfully affected by artificial heat and electricity. Has graceful foliage and fluffy pink flowers. It is a handsome shrub for house or garden and very curious and interesting; blooms all the year round. SEEDS 15c pkt., 3 pkts. for 40c postpaid

NITTO'S PLANT & FLOWER FOOD

NITTO'S PLANT FOOD is clean, odorless, and highly concentrated. It is used in liquid form on all kinds of plants, shrubs, roses, ferns, bulbs, berries, lawns, fruit, flower and vegetable gardens. It changes ill-nourished plants into LUXURANT BEAUTIFUL ones, producing masses of blooms that will equal any. Causes plants to bloom early and ahead of others. Your friends will marvel at your success. Makes no difference how healthy or how delicate your plants may be. Nitto's Plant Food will bring out New Fallage and Flowers, and cause a Marvellous Transformation. 15c, 3 for 40c

Johnson Smith & Co., 7155 N. Clark St., Chicago Only Concern of its Kind in America

Automatic Repeating Rifle

Fires 20 Shots in One Loading

This is a regular size automatic revolver. Shoots B. B. shots obtainable anywhere, same as other rifles and guns. Repeats 20 times with one loading. Hand-somely finished in gun metal. No caps or load necessary, as it works with a spring and shoots with rapidity and accuracy. Simply load with 20 B. B. shot, then press the trigger. Nothing to explode — absolutely harmless and safe. Remember, it is not a mere toy, but the same size and shape as a REGULAR AUTOMATIC. Sent complete with a round of shot for ONLY 25c postpaid. Extra shot, 10c a package.

Only 25c Postpd

It is simplicity itself to operate. Takes pictures through the lens, where the Rapid Fire Lens is located. The photos (5/8x1/8) may be enlarged to any size. Operated as quick as a flash Time and instantaneous shutters; Enclosed by amateurs and professionals the world over. Thoroughly practical—printing and developing of films just the same as ordinary cameras—in daily use by the police, newspaper reporters, detectives, and the general public. Produces clear, sharp negatives indoors or outdoors equal to any camera on the market, size or price notwithstanding. Sold Under a Positive Guarantee.

THE FIGHTING DREADNAUGHT

Sensationally Realistic! Exact Model of Modern Warship

The greatest toy sensation of the day. The Fighting Dreadnaught is an exact model of Uncle Sam's latest fighting monster. It carries eight big guns, each of which flashes, at correct intervals, from twelve to twenty times. Extra ammunition always obtainable. Absolutely harmless. Can be operated indoors or out. Now, boys! Here's your chance to see a battleship in action, and the best of it is you can OWN the ship and command the firing yourself! By having two or more Battleships, you can arrange EXCITING NAVAL BATTLES in your own home. Price of Warship and Ammunition, 15c, three for 40c, or a fleet of 12 ships for \$1.50 postpaid. Extra Ammunition, 5 cents per pkg.

Nu-Face Masks

12 COMPLETE DISGUISES FOR 95 CENTS, 85c on and off in an instant. No end of fun. Puzzle your friends. ABSOLUTELY UNRECOGNIZABLE. They change the shape of your face beyond belief. Cool and comfortable. For Parties and Masquerades. Pairs, Car Edden, Mask Balls, Amateur Theatricals, they are simply immense. There are SIX MASKS FOR UPPER HALF OF FACE, AND SIX FOR LOWER, as follows: 101, Clown; 102, Sherlock Holmes; 103, Foxy Grandpa; 104, The Colonel; 105, The Firt; 106, The Smiler; 201, The Count; 202, The Doctor; 203, The Scept; 204, The Babe; 205, Weary Willie; 206, Mr. Dookey. Price, 10c each, or the complete set of 12 Masks for only 95c postpaid.

Money Grows if rightly planted

A Yearly Income For Every Man and Woman

Would you invest a moderate amount in monthly, quarterly or semi-annual installments to suit your convenience if you felt assured it would earn for you an income from \$1000.00 to \$5000.00 annually according to your investment? This without a stroke of work on your part. You do not have to leave your present business or employment unless you choose.

A Dixie Estate of fancy grapefruit, oranges and avocados should do this for you after it begins bearing. Past and present prices for these fruits prove this a very CONSERVATIVE STATEMENT.

Picture for yourself a cozy home in balmy Florida, beneath beautiful skies, among flowering shrubs and luxuriant money-producing fruit trees. SUCH IS A DIXIE ESTATE, which awaits you whenever your inclination draws you to it.

Invest Now—While You Can

We will plant only a few hundred of these Dixie Estates and bring them into bearing for their fortunate owners. Will you be one? Think of this great and unparalleled opportunity!!!

TERMS—3 TO 6 YEARS' TIME IF YOU WANT IT

You are not paying out or spending your money, but saving and investing it in a safe, money-making property—a highly developed fruit grove, which according to statistics should within a few years bring you a substantial income. Think what this really means to you—figure it out for yourself.

A DIXIE ESTATE IS FUTURE INSURANCE

Here is an investment which must appeal to every man and woman. Even if you already have an independent income, you cannot afford to miss this chance to own a Dixie Estate.

Citrus fruit and avocado trees are long lived. This is not a temporary investment, but one which will enhance in value yearly as its earnings increase. Compare this with any investment you have ever heard of—you will have to admit a similar offer has never before been made.

You Are Planting Money Rightly When You Invest in Dixie Estates

LOCATION—The best in all Florida, near Tampa—70,000 population, growing so rapidly that it is destined to become the Los Angeles of the South. Dixie Estates are near paved boulevards, railroad stations, schools and churches.

SOIL—You could not buy better land for fruit growing no matter how much you paid for it.

CLIMATE—Most healthful and charming the year round.

THE TREES—All budded, pedigreed stock, grown by experts. Owning extensive nurseries and having years of experience, enables us to develop these Dixie Estates in the most approved, up-to-date manner.

Fancy oranges and grapefruit are well known money-producers, when brought into bearing by expert, scientific methods. The Avocado (commonly called alligator pear) is known as the aristocrat of fruits. In winter they sell at \$1.00 to \$2.00 each in northern markets. It is no doubt the highest priced fruit known.

The Thomas Nurseries, Inc.

8th Floor, Tower Bldg., Dept. PM, Chicago, Ill.

You are offered an unheard of opportunity to derive a splendid YEARLY INCOME FOR A COMPARATIVELY SMALL INVESTMENT. The proof is what you want!!! We have it and will gladly send it to you FREE.

Your Dixie Estate receives expert and scientific care and attention for four years. Thereafter if you do not wish to take personal charge we will care for your Dixie Estate—its development and marketing of fruit indefinitely—for a percentage of the profits. You receive the benefits of this truly marvelous proposition even if you never intend to live in Florida.

Every reader of this magazine will want a Dixie Estate after reading our illustrated booklet—therefore act at once and be certain of obtaining one of the limited number to be planted. Mail the attached coupon today. We will mail you full information—FREE.

Own a splendid money-making Dixie Estate in the most attractive, most healthful, and delightful district to be found anywhere in America.

An All-around Companion— the Bicycle

A good, dependable, knock-about friend, useful in work, unequalled in sport.

A health builder, a time saver, a convenience and a recreation. Such is the

Columbia Bicycle

Why is it that year after year these bicycles, the first to be made in America, maintain their leadership, and steadily grow in popularity?

The reason is plain: Columbia bicycles have proved themselves—behind them is a service record of thirty-nine years. All that is best and most progressive in bicycle construction is found on them.

Another thing: People are more interested in bicycling than ever before. They are devising ways and means to offset the influences of workday confinement—to get recreation out in the open—and to make the most of their holiday and leisure moments.

To attain these ends there is nothing more ideally adapted to the needs of man than the bicycle. And the bicycle is yet to be made that can serve these needs more satisfactorily and dependably than the Columbia.

Your dealer will show you a complete line of new models. Ask to see the Superb, Arch Bar, Roadster and Juvenile. Prices from \$60.00 to \$26.00. Send today for catalog.

AIR RIFLES

TEMCO

"Our foreman reports it the best electric drill he has tried."

Any way, it's a mighty good tool. It works fast and does much besides drilling in metal and wood. It also taps threads, drives and draws screws, grinds valves, and sharpens small tools.

An auto repair man says he occasionally puts his Temco Tool in a vise and uses it as a motor, driving a small lathe from its pulley. It is one of those intensely practical tools that save time and money in big and little factories everywhere, in maintenance departments, public buildings, repair shops, etc.

5 sizes weighing 9 to 19 pounds

Capacities to 1/2 inch drilling in steel. One and two speed, and instant motor reverse type—direct or alternating current. From dealers and jobbers, or direct

WANTED! WE WANT 300 AGENTS AT \$35 TO \$70 A WEEK

NEW INVENTION—just out. Needed in every home every day. Patent just applied for. Nothing else like it. Supplies what every housewife has wished for for years. Perfected after long experimental work by mechanical experts. Low priced—anyone can use it—**sells on sight**. We want three hundred representatives at once—men or women hustlers—to advertise, accept orders and manage deliveries for our new **Quickedge Knife and Shear Sharpener**. Sharpens any kitchen knife, paring knife, carving knife, bread knife or shears and scissors in **ten seconds**. Agents are taking orders at every house—**wiring for rush shipments**. Write today for this opportunity to make \$10 to \$20 every day.

MAKE \$300 NEXT MONTH

This little machine is a mechanical masterpiece. A child can use it. Just put knife in slot—turn crank—**grinds automatically**—draws blade to keen, sharp, perfect, lasting edge **at absolutely correct bevel for daily use**. Nothing to adjust—nothing to change, nothing to get out of order—**absolutely guaranteed**—will last for years. Once they see it and use it, women will not do without it for several times its cost. One agent wrote: "It was easier for me to learn to sell the **Quickedge** than it was to learn to tear open my pay-envelope in my former dollar-a-day job." Get out of the dollar-a-day class. Get this position, where profits start the first day.

No Experience Required Just take one of the machines to any house and show it—give a ten-second demonstration upon the dulllest knife in the house; **the order is yours right on the spot; instantly**.

No talking necessary. No argument. The machine simply sells itself, **and stays sold**. Every customer becomes your friend. They tell others, your profits double and multiply. Leave one hundred on trial over night. Collect the cash for every one of them next day. **The machine will do its own talking**; it is so easy to operate, no explanations or instructions are necessary. Secure your county now; **free**. Get started right now and

Make as Much Money Next Week as These Men are Making Now

J. C. Lewis, of Kansas, says: "**I have sold one hundred Sharpeners in four days.**" Hobart Kerr, of Md., writes: "The women can hardly wait till they get them." Herbert Cain, of Ky., sold nine after supper. At the end of his first day, J. W. Gordon, of Pa., writes: "I sold two dozen, and **I sold to every one I saw.**" Wm. G. Hall, of N. J., says: "I think it is great. I sold six in about one-half hour. The machine is a mighty fine proposition. **I am a mechanic and I know what I am talking about.**" Peter Courtland, of Mich., writes: "I received your sharpener and opened it in a barber shop. I ground his shears and I got an order for one right on the spot." H. A. Henkel, of Va., says: "I have examined it and find it a wonderful little machine. **The workmanship is simply perfect.**" Frank King, Colo., says: "Sample received Saturday. Sold ten today. Sell to most every house." Forest Webb, of Pa., says: "Went out Monday afternoon for about three hours and received one dozen orders. **Profit \$12.00.**" H. Tillery, of Tenn., wrote: "I took three orders first hour. When you sharpen an old, dull knife, dull as a hoe, in less than a minute, **they sit up and look.**" Ray Carter, of Mass., writes: "I went out two days and have orders for thirty sharpeners." **Profit \$30.00 for first two days.** John Durr, of Wis., also says: "**I have sold thirty in two days.**"

You can make this money. **Send now. Territory free.**

BERNARD-HEWITT & COMPANY

424-434 So. Green St.

Desk F23

CHICAGO, ILLINOIS

Much Depends on the Rear Tire

THE rear tire gets all the strain of starting and stopping, all the traction, most of the slewing and slipping, most of the weight and sometimes all the weight of an extra passenger.

Firestone

MOTORCYCLE TIRES

are designed and constructed as if they were all to be used as rear tires, that is they are built to resist the greatest strains, the emergency strains.

Extra fabric, extra rubber, 30 per cent more angles against skid, mean to you more confidence, more safety, more comfort, and to your mount greater efficiency, speed, and road grip, less skidding, slipping and vibration.

These leading manufacturers furnish Firestone Tires on their machines without extra charge.

MOTORCYCLISTS

**Make this Chart your guide
Look for it on your dealer's wall**

YOUR Oil runs low. You stop for a fresh supply.

You now come to a vital question. What oil will the dealer supply you? Will it be just "oil"—or will it be the correct lubricant for *your* engine?

Among thousands of dealers this is what happens:

The dealer asks the make of your motorcycle. He runs his finger down the Vacuum Oil Company's Chart (shown above in miniature) until he finds your motorcycle's make and model. Then he supplies you with the grade of Gargoyle Mabiloils specified for your motorcycle by the Chart. This oil will effectively seal your

piston rings against power-waste, gasoline-waste and oil-waste.

Why are thousands of dealers placing such reliance in this Chart?

Experience has taught them that something like 50% of all engine troubles are due to incorrect lubrication.

They realize that scientific lubrication is a problem for specialists. Since the dealer has neither time nor equipment for studying this intricate subject he draws on the experience of a recognized authority.

That is why you find on his walls the large Chart of Recommendations, issued by the Vacuum Oil Company.

If you inquire about the Chart you will find this:

The Vacuum Oil Company for 50 years have specialized in scientific lubrication. Today their world-wide leadership in lubrication matters is unquestioned in scientific circles.

For years their Chart of Recommendations has been recognized as the only standard guide to correct automobile and motorcycle lubrication.

In keeping this Chart up to date, each new model of every motorcycle is carefully analyzed. This work involves lengthy and painstaking engineering study by the Vacuum Oil Company's Board of Engineers. The recommendations of this Chart are proven correct by repeated practical tests.

But nothing has given dealers such faith in this chart as their experience with the oils themselves. For no one knows better than the dealer how difficult it is to secure efficient lubrication—and how much efficient lubrication means.

Write for new 56-page booklet containing complete discussion of your lubrication problems, list of troubles with remedies and complete Charts of Recommendations for Automobiles, Motorcycles, Tractors and Marine Engines.

In buying Gargoyle Mobiloils from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container. If the dealer has not the grade specified for your motorcycle, kindly write our nearest branch, giving dealer's name and address.

VACUUM OIL COMPANY

Rochester, N. Y., U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world.

Domestic Branches:

Detroit New York Philadelphia Minneapolis Boston Chicago
Indianapolis Pittsburgh Kansas City, Kan. Des Moines

Correct Motorcycle Lubrication

Explanation: The four grades of Gargoyle Mobiloils for engine lubrication, purified to remove free carbon, are:

- Gargoyle Mobiloil "A"
- Gargoyle Mobiloil "B"
- Gargoyle Mobiloil "E"
- Gargoyle Mobiloil "Arctic"

In the Chart below, the letter opposite the motorcycle indicates the grade of Gargoyle Mobiloils that should be used. For example, "A" means "Gargoyle Mobiloil A," "Arc" means "Gargoyle Mobiloil Arctic," etc. For all motorcycle transmissions use Gargoyle Mobiloil "C." The recommendations cover all models of the same make, unless otherwise noted.

Why Slave for Wages Now?

MONEY CALLS YOU HERE

M-Answer and be Happy

This Puts New Joy Into Living for Men or Women

We can tell you the names of hundreds of men and women, representing us, who are now proud to write us of the cash profits they are making like the following:

"Bought an Automobile"

—writes a young man from Texas in December.

"Paid for My Home"

—wrote a good, ambitious woman from Pennsylvania in October.

"First Life Success"

—wrote a man of forty-five whose previous business had failed to make him money.

"Paid College Course"

—says a young man now well equipped with this special business all his own, representing us.

We Tell You How

Everything is made plain and simple and easy for you to start at once. If you are the right person for this opportunity there is no reason why you should not be just as successful as hundreds of others are being.

Please do not fail to investigate and find out.

If this were not a fine, clean-cut and independent line of money-making work we would not offer it to you. This may be truly the very best offer and opportunity of your lifetime. It certainly costs you nothing to find out. Our reputation and standing in the commercial world is behind this offer.

Write Today

What You Have Wished

\$ DOLLARS in cash, bringing plenty and regular income, may now be yours very easily, on part time or all of your time, if you accept this wonderful opportunity. You, like hundreds of others, young or old, men and women, may this way gratify

The Ambition to Play You can be your own boss. Stop slaving long hours for wages. Divide your hours of recreation and work to suit your own good judgment on when and where to go after immediate cash profits that are waiting for you.

The "Big Joys" of Life A limited number of opportunities to represent one of the largest concerns in America and be independent on the increasing profits from your work should allow you to now begin to get some of the "Big Joys" of living.

Live Anywhere—Go Anywhere Stay where you are, or travel as you please. Wherever you are or go, we tell you from the start just how and where the biggest money-making possibilities can easily be found.

Start At Once Our new 1917 special proposition is yours for the asking. If you are not the right man or the right woman to be successful we will tell you so when you tell us about yourself and your wishes after you get our splendid proposition — sent at once postpaid, free, no matter where you live.

No Experience Needed Please do not get the idea that we want experts. We would rather have good, live, honest men or women with ambition to better themselves and be absolutely independent, than to make this offer to ordinary so-called "experts" without imagination or push in their systems. Write today.

of intense interest and gripping power. It is a book of instruction to be read, remembered, and kept for reference. It should be in your hands. Everyone should know what the Violet Ray is and what it will do. We will give away this entire edition of the book free. Send coupon or your name on a postcard and get it free.

Charming Story of the Marvelous Violet Ray

Truth is indeed stranger than fiction. The true story of the Violet Ray is a revelation of the result of secret labors that have gone on in the world-famous laboratories for 46 years. The scientific world stood in awe when the brilliant colors of the Violet Ray were shown for the first time, leaping out of a glass vacuum and penetrating the human body with a refreshing sensation never known before. It purified air and water. It created ozone. It penetrated every substance and destroyed germs and bacteria everywhere. How to use this new, wondrous influence for the benefit of humanity? This was the task the scientists set before themselves. After 46 years of labor and research the story of their wonderful discoveries is now charmingly told in the book *Virayo* by a fellow scientist. You will understand the importance of this book when we quote one sentence from one of the world's greatest electrical masters. He said: "The Violet Ray is the kindest gift of nature that science has conferred upon humanity."

One of many uses of Violet Ray At the University of Chicago and Union League Club.

VIOLET RAYS AT "U" TANK TO ROUT GERMS

Violet Rays will purify the waters of the Ida Noyes natatorium, the girls' swimming tank at the University of Chicago after this. One of the three large Violet Ray purifying machines in the country is being installed there. One of the others is in the far west and the third is in the tank at the Union League Club, Chicago. As the water flows into the tank the Violet Rays will kill the germs in it.—*Chicago Tribune.*

The greatest value of the Violet Ray is in the home and for personal use. The small *Virayo*, the new perfected Violet Ray machine has hundreds of uses in the home for every member of the family as told in the booklet *Virayo*.
