It takes *only* 8 weeks to get a big job

O. H. Justus owns a big agency and repair shop at Parkersburg, W. Va. He says "that my schools give motor secrets that will put any man 'on easy street.'"

In the Auto and Tractor Business

Read what these men are doing—here is your big chance to get "on street." Come to these great shops on the biggest FREE offer ever made.

Big Firms Need Trained Men

The Auto and Tractor Business is on the boom. Thousands of trained men will be needed during the next few months. I get calls every day from Garages, Battery Stations, Auto Repair, Welding Shops and other successful concerns for Rahe men. When the big fellows need high grade men they know where to come for them. They want Rahe trained men.

My Training Unusual

Scientific tool training—that's the secret. You do things here according to the latest engineering standards. Thousands of dollars have been spent in modern tools and equipment. That's why my men are at home in the biggest shops in the country. If you want to succeed the way Beimer and Justus and the rest have—qualify by the same method in only eight weeks or stay as long as you like.

I'll Pay Your Railroad Fare and Board You

In order to fill the openings that now exist, I am making an offer no one has ever made before—**Free Railroad Fare, Free Board for eight weeks.**

SAVE
\$50 to \$75

You Save Big Money by acting now. Pack your grip—get on a train—Come to school right now before it is too late—**OR WRITE TODAY.**

Send for **FREE** Book

My big illustrated training book tells how others are succeeding. It tells many things you ought to know about Autos and Tractors. Write for it and my **short time** offer NOW. It soon expires.

Rahe *Auto & Tractor Schools*

CHICAGO
4445 Grand Blvd.

Dept. 901 CINCINNATI
Ninth and Walnut

Emanuel Rushfeldt, Alberta, says: "Earning \$10 a day and only 20 years old."

W. W. Peace gets \$250 a month and expenses operating a tractor in the oil fields.

Louis Beimer at 24 was made foreman over men many years older. That's not luck—it's Rahe training.

Rahe Auto & Tractor Schools,
Dept. 901, (address school nearest you)
4445 Grand Blvd., or Ninth & Walnut,
Chicago, Ill. or Cincinnati, Ohio.

Without any obligation, send me your big free book, "The Evolution of Transportation." Also information regarding special temporary offer.

Ten Mistakes in English

Thousands of people will make ten mistakes in the simple test shown at the right. Try it yourself.

How many will YOU make?

HERE is a simple test of your ability to speak and write English correctly. In the panel at the right you will find thirty simple points of English that come up every day. Yet the average man or woman will make TEN mistakes! Test yourself now. Then compare your answers with those shown in the panel below and see actually just where you stand in your knowledge of English.

Your English Reveals You

Every time you speak or write you show just what you are. Mistakes in English cause others to judge you as a person lacking in education and refinement. Lack of language power prevents you from presenting your thoughts in the strongest possible way. In business and in social life faulty English is an almost insurmountable handicap. No one can afford to make mistakes in spelling, punctuation, or grammar.

Sherwin Cody's New Invention

Why are so many persons deficient in the use of English? Sherwin Cody discovered the reason through scientific tests, which he personally gave to tens of thousands of people. **Most persons do not write and speak good English, simply because they never formed the habit of doing so!** Good English can be made a habit—and like all habits it can be made so instinctive that you will use flawless English at all times.

For many years Mr. Cody, probably the best-known teacher of practical English in America, worked to solve the problem of "How to make correct habits of speaking and writing stick in the

SHERWIN CODY

mind." After countless experiments he finally invented a simple method which actually finds and corrects your mistakes in English and by which you can quickly acquire a real command of English in only 15 minutes a day.

Only 15 Minutes a Day

One of the most striking features of Mr. Cody's method is the speed with which his habit-forming practice drills can be carried out. You write the answers to fifty questions in 15 minutes and correct your work in 5 minutes more. There is no drudgery, no tiresome studying of rules. Mr. Cody's method is as fascinating as playing a game. You concentrate on **your** mistakes and **your** mistakes only, until it becomes "second nature" to speak and write correctly.

New Book on English Free

A book explaining Mr. Cody's remarkable method is ready. If you are ever embarrassed by mistakes in grammar, spelling, pronunciation, or punctuation, if you cannot instantly command the exact words with which to express your ideas, this new free book, "How to Speak and Write Masterly English," will prove a revelation to you. Send the coupon or a letter or postal card NOW.

Here is the Test

Check the form you believe correct. Then compare with the correct answers below.

1. Would You Write—

Between you and I	or	Between you and ME
I HOPE it would come	or	I WISH it would come
WHO shall I call	or	WHOM shall I call
It's just AS I said	or	It's just LIKE I said
How MANY are there	or	How MUCH are there
I WOULD like to go	or	I SHOULD like to go
The FIRST TWO lessons	or	The TWO FIRST lessons
He sat AMONG the three	or	He sat BETWEEN the three
The wind blows COLD	or	The wind blows COLDLY
You will FIND ONLY one	or	You will ONLY FIND one

2. How Do You Say—

evening	EV-en-ing	or	EVE-ning
ascertain	as-cer-TAIN	or	as-CER-tain
hospitable	HOS-pli-ta-ble	or	hos-PIT-able
abdomen	AB-do-men	or	ab-DO-men
majority	MAY-or-al-ty	or	may-OR-al-ty
amenable	a-ME-na-ble	or	a-MEN-able
acclimated	AC-cl-i-mate	or	ac-CL-i-mate
profound	PRO-found	or	pro-FOUND
beneficiary	ben-e-fi-shEE-nary	or	ben-e-FISH-a-ry
culinary	CUL-i-na-ry	or	CU-li-na-ry

3. Do You Spell It—

superCede	or	superSede	repEtition	or	rePitition
receIve	or	receIve	sepArate	or	sepErate
reprIve	or	reprIve	aCoMmodate	or	aCCoMModate
donkEYs	or	donKIEs	traFFicIng	or	traFFICKing
factorIes	or	factorYs	ACSeSible	or	ACCeSSible

ANSWERS

1.

Between you and me
I wish it would come
Whom shall I call
It's just as I said
How many are there
I should like to go
The first two lessons
He sat among the three
The wind blows cold
You will find only one

2.

EVE-ning
as-cer-TAIN
HOS-pli-ta-ble
ab-DO-men
MAY-or-al-ty
a-ME-na-ble
ac-CL-i-mate
pro-FOUND
ben-e-FISH-a-ry
CU-li-na-ry

3.

supersede	repetition
receive	separate
reprieve	accommodate
donkeys	trafficking
factories	accessible

"SEE WHAT PA AND ME
MADE, JUST FOR YOU."

Tide Water
Cypress
"The Wood Eternal"

"A Kitchen-Cabinet, a la Son"

When that boy, who has been so secretive the last few weeks (in collusion with his Dad) finally invites you into the Room of Mystery and exhibits a fine Cypress Kitchen Cabinet, home-made from the working drawings and specifications in Vol. 36 of the world-famous Cypress Pocket Library—well, what will you say? You will be so fond and so proud that you can hardly pick the words to tell it. And your affectionate appreciation, at just that moment, will go far toward making that boy a good man. Never mind if his part of the "job" was not *quite* perfect—just be proud that you have that kind of a boy. Nobody will ever know whether it was he or Father that sent for the Cypress Plan Book, Vol. 36, and of course nobody will ever tell who actually paid for the genuine Cypress boards that were used. But you will remember always that it's "the wood eternal" and that it does not rot nor shrink nor swell nor warp and that is why Cypress is the standard wood in hospitals and other places where they are very particular.

SOUTHERN CYPRESS MANUFACTURERS' ASSOCIATION

1219 Poydras Building, New Orleans, Louisiana
or 1219 Graham Building, Jacksonville, Florida

Insist on TRADE-MARKED CYPRESS at your local lumber dealer's.
If he hasn't it please advise us promptly and we will see that you are supplied.

Aerodynamic Tests, Pendulum Apparatus Used in...	414
Air Liners, Large, Exhibited in Europe	341
Airplane Engine, World's Largest, Test Flight with	340
Airplane, Ordinary, Sets Astonishing Gliding Record	432
Airplane Race, Pulitzer, Minimum Speed of 175 Miles Set for	419
Apple Parer and Corer, Automatic	396
Asphalt Plant, Portable, Built in Three Units	366
Asphalt Resurfacing Heater Mounted on Auto Truck	375
Atoms, Flight of, Photographed, by W. D. Harkins	397
Auger, Earth Boring, Has Relief Valve	414
Automobile Bumpers, Short Pair of, Protect Rear Fenders	396
Automobile Displaces Broncho in Riding Test	352
Automobile Engine, Long Stroke, of Easy Accessi- bility	389
Automobile Fan, Reversible, Saves Frozen Radiators	401
Automobile for Legless Man Is His Own Design	393
Automobile Headlight, Adjustable, Eliminates Glare	392
Automobile Intake Air Heating Device	370
Automobile Mud Splash Guards Tested with White Screens	449
Automobile, New Type Armored, to Hold Men	370
Automobile Polo Game, Homemade Cars Used in	432
Automobile Radiator Bucket, Collapsible	407
Automobile Radiator Temperature Controlled by Driver	390
Automobile Sedan, Lightweight, with Tandem Motors	427
Automobile Step Plate Has Space for Owner's Name Plate	408
Automobile Trucks, City Service, Combine Several Duties	421
Automobile Warning Lights like Railroad System	416
Automobile Wheels, Improved Demountable Rims for	379
Automobile Windshield Cleaner Uses Wind Pressure	448
Automobiles Cross Sahara Desert, by Cleveland Gaines	355
Automobiles, Small, New Rear Spring System for	441
Bag Holding Device Accommodates Various Sizes	391
Bakeries, Wheeled Tray and Truck for	394
Balancing Machine, Simple, in Use in Germany	390
Balloon Device Protects against Lightning	395
Barrel Scale, Revolving Automatic	419
Beach Patrol, New Method of, by Frederick Herr	393
"Bean Town," World's Foremost, Dairen Is	430
Bearings, Limestone, Outwear White Metal Kind	398
Belts, Cartridge, Salvaged for Brass	432
Binocular Magnifier Allows Use of Both Hands	370
Blood Cell Counting, Automatic Machine Helps in	353
Bridge Collapse, Cowlitz, Fatal to Many	342
Bridge, Golden Gate, to Be World's Largest	399
Bridge Thrown across River by Unusual Method	384
Bridge Warning Signs Made Part of Structure	389
Buffalo Herd in Canada "Growing Too Large"	381
Building, Eight Story Office, Built Half at a Time	381
Buttons Made from Powdered Gypsum	412
Cabinet of 48,300 Pieces Takes Years to Make	424
Cable, New Submarine, Seven Miles Long	435
Canal Barges, New Erie, are Electrically Driven	430
Cans, Tin, Made at Home with Simple Outfit	349
Caribou, Treking of The, by Stratford F. Corbett	346
Causeway, Million Dollar, Illuminated for Night Driv- ing at Famous Florida Resort	376
Children's Picture Pages	450
China Burning Kiln Designed for Home Studio Use	432
Civic Features	438

Clover Harvester, Power Driven, Also Threshes	407
Coal, Huge Lump of, Is Largest Ever Mined	394
Comment and Review, by H. H. Windsor	357
Commutator Bar Soldering Machine	395
Concrete Mixer Has Rubber Tired Wheels	384
Concrete Mixing Equipment on Motor Truck Chassis	449
Cookstove with One Burner Suitably Adjustable	399
Crows, Millions of, Menace Canadian Fruit Crop	447
Dam, Huge Power, Projected in Province of Quebec	444
Dam, Hydraulic Fill, Solves Irrigation Problem	431
Decoy Has Space for Parts, and is Easily Carried	424
Dishwasher Has Two Sets of Pumps and Motors	396
Dock Equipment, Efficient, at Manchester, by Major Johnstone Taylor	386
Drug—Synthetic Thymol Cheaper Than Imported Drug	452
Drum Snare Device Equalizes Tension	371
Eaves Trough Hangers, Iron, Easy to Set Up	444
Electricity, Half of World's, Used in United States	396
Envelope Sealer, Automatic, with No Moving Parts	395
Fence Wires, Triangular Metal Clamp for Tightening	448
Flagman Builds Portable House for Winter	428
Flowers and Plants, Protection Laws Asked for	392
Flume, Wooden, Exacting Requirements Met by	440
Football Scoreboard, New, Has Many Attachments	436
Foundation Building on Muddy Site of Shanghai	437
Fountain Made of Towels Seen in French Store	396
Fumigator, Fireless, Kills Flour Moths	422
Furnace Calculator Figures Weight of Alloy Needed	446
Furnace, New, Produces Fine Steel	392
Gasoline Fumes, Permanent Poisoning from	424
Golf Ball, New Design, Has Great Resiliency	400
Golf, Bow and Arrow, Is Latest Diversion	404
Golf Course Tractor Mower and Roller	395
Gorilla Sanctuary Planned for Belgian Congo	452
Hay Bales, Little Machine Weighs and Counts	354
Headstones, Old, Preserved with Coat of Cement	490
Hedgehog Hunting Good Trade and Sport, by Sam E. Conner	378
Helicopter, Latest, Makes Flight	331
Highway, Columbia River, New "Loops" in, by Harace E. Thomas	350
Highway Exhibit, Model and Picture Combined in	398
Hoisting Machines, Recent Improvements in	397
Hose Coupling, Compressed Air, with Check Valve	403
House, Filipino Men Move on Shoulders	428
House Models, Ready Cut, for Builders, by Frank E. Howe	434
Household Devices	442
Ice Caverns, Dachstein, Exploring	405
Ice Chest, Movable, for Hospital Use	376
Incubator, Metal Electric, Also Used as Hover	399
Indian Massacre, Florida Park Commemorates	370
Ink, New Type, Dyes All Acids	408
Irrigation Pipe, Overhead, Oscillates Spray	409
Lamp, Miner's, Eliminates Sparking Troubles	414
Lawn Mower Blades, Spiral Grinding Machine for	381
Light Plant, Minnesota, Alarm Clock Tends	426
Lighthouse, Pacific Coast, Made of Cardboard	428
Lock, Temporary, Fits on Door Jamb	370
Locomotive Crane Saves Headroom in Shop	399
Locomotive, Old, Substituted for Disabled Boiler	429
Lord's Prayer Set on Pica Face with Monotype	352
Lunch Room Serving Counter, Automatic	447
Machine Parts, Small, Fast Counting of	374
Magnet, New Electrical Implement Is Similar to	430

Invents New Way to Cook and Heat

No Dirty Coal and Wood

Mr. B. M. Oliver, St. Louis Heating expert, has invented an amazing New Kind of Heat that turns any range,

heater or furnace into a real gas stove. No more dirty coal or wood to carry and lift—no more clouds of ashes, soot, and smoke—no more sickness from lack of quick fires in damp, changeable Spring. No more roasting kitchens in Summer—no more cold rooms and worries about coal shortages and big prices in Winter.

Cheaper Than Coal or Wood

In one minute you slip this wonderful device into any stove, no matter what kind. Then just turn a valve and you have any degree of heat you want. Burns 95% air, 5% kerosene (cheapest fuel there is). No wicks, no odor, no smoke. Heats, cooks and bakes, quicker and better. Makes old stoves new. Lasts a lifetime. Over 150,000 already in use. Write at once for interesting Free Book "New Kind of Heat," which tells about this amazing invention. If you hurry you will be in time to get Mr. Oliver's Special Low Price Introductory Offer and 30 Days' Free Trial in your own stove. Don't risk losing this offer. Write immediately to

Stop Wondering How I Teach Piano; I'll Show You, FREE

YEAR after year you've seen my advertisement in all the leading publications, offering to teach you piano in *quarter* the usual time. Year after year my school has grown and grown until now I have far more students than were ever before taught by one man. In 1921 over a thousand students *graduated* from my Piano or Organ course and received their diplomas.

Yet when I first started giving piano and organ lessons by mail in 1891 my method was laughed at. Could any conservatory have grown as it has, obtained students in every state of the Union and in fact practically every civilized country of the world unless it produced very unusual and satisfying **RESULTS** for its students? See for yourself what it is that has brought my method so rapidly to the front. Write for free booklet and sample lessons.

Now, for the first time, you can obtain sample lessons without charge. In the past I have always been opposed to sending out free lessons, even to persons who were seriously interested in my course. But my friends have insisted that I give everybody a chance to see for themselves just how simple, interesting and **DIFFERENT** my lessons are, and I have consented to try the experiment *for a short time*. Simply mail the coupon below or write a postcard, and the 64-page booklet and sample lessons will go to you at once absolutely free and without obligation.

Within four lessons you will play an interesting piece on the piano or organ, not only in the original key, but in all other keys as well. Most students practice months before they acquire this ability. It is made possible by my patented invention the Colorotone. Another invention obtainable only from me is my hand-operated moving picture device, Quinn-dex. By means of Quinn-dex you actually see my fingers in motion on the piano, and can learn just how to train your own fingers.

When I say that I can teach you piano in *quarter* the usual time, do not think that this is too good to be true. Modern inventions and improved methods have accomplished just as great wonders in other branches of education. You at least owe it to yourself to *investigate*. Send coupon or postcard at once, before the offer of free sample lessons is withdrawn.

Quinn
Conservatory,
Studio PM 63,
598 Columbia Road,
Boston 25, Mass.

Please send me, without cost or obligation your free booklet, "How to Learn Piano or Organ," free sample lessons, and full particulars of your method.

Copy this Sketch

and Get This Rule

FREE

I AM anxious to find men with desire to become draftsmen. With business picking up everywhere many thousands of draftsmen will be needed at salaries ranging up to \$3,000 and \$3,600 per year.

To every person 16 years or older sending a sketch I am going to mail free and prepaid the Draftsman's Ivorine Pocket Rule shown here. This will come to you entirely with my compliments. With it I will send a 6 x 9 book on "Successful Draftsmanship." If you are interested in becoming a draftsman, if you think you have or may attain drafting ability, sit down and copy this drawing, mailing it to me today, write your name, and your address and your age plainly on the sheet of paper containing the drawing.

Salaries up to

\$250 and \$300 a Month

I am Chief Draftsman of the Engineers' Equipment Co. and I know that there are thousands of ambitious men who would like to better themselves, make more money and secure faster advancement. Positions paying up to \$250 and \$300 per month, which ought to be filled by skilled draftsmen, are vacant. I want to find men who with practical training and personal assistance will be qualified to fill these positions. No man can hope to share in the great coming prosperity in manufacturing and building unless he is properly trained and able to do first class practical work.

I know that this is the time to get ready. That is why I am making the above offer. I can now take and train a limited number of students personally and I will give to those students a guarantee to give them by mail practical drawing room training until they are placed in a permanent position with a salary up to \$250 and \$300 per month. You should act promptly on this offer because it is my belief that even though you start now the great boom will be well on by the time you are ready to accept a position as a skilled draftsman. So write to me at once.

FREE

\$80 Drafting Course

To every student enrolling now I give an opportunity of getting an \$80 drafting course absolutely without cost to him. So send in your sketch today and learn all about this offer.

Mail Your Drawing at Once

— and Get an Ivorine Pocket Rule Absolutely **FREE!**

Ambitious men interested in drafting hurry! Don't wait! This is your opportunity to get into this great profession. Accept the offer which I am making now. Send in your sketch or request for free book and free Ivorine Pocket Rule.

FREE this \$25 Draftsman's Working Outfit

These are regular working instruments—the kind I use myself. I give them free to you if you enroll at once. Don't delay. Send for full information today.

Chief Draftsman, Engineers' Equipment Co., 1951 Lawrence Av. Div. 9353, Chicago

“Wouldn't you like to earn \$100 a week, too?”

“I KNOW you would, Bob—think what it would mean to both of us! It worries me to see you wasting precious months and years when you could make them count for so much.

“Can't you see it, Bob? Don't you see that the reason men get ahead is because they train themselves to do some one thing just a little better than others?

“It isn't that you haven't natural ability—for you have! I know you have. The trouble is, you've never learned how to use it.

“Here's that I. C. S. coupon you've seen so often in the magazines—the same coupon that has brought success and happiness to so many men we know. Won't you send it in for me, Bob?

“If the International Correspondence Schools can raise the salaries of other men, they can raise yours. If they can help other men to win advancement and more money, they can help you, too. I am sure of it.

“Don't let another year slip by and leave you right where you are to-day.

“Let's at least find out how the I. C. S. can help you. Let's send this coupon in right now!”

"Recommended for appointment"

writes a happy
United
Y. M. C. A.
Schools'
student,

formerly of Scranton, Pa., and now in the employ of the United States government.

He was an office clerk, working long hours. He says "the light had dawned" that he was tied down to routine work for all time unless he trained himself. So he decided to devote spare evening hours to our excellent correspondence course in accountancy. He earned a salary increase of 60% before completing his course and in a year qualified for United States Internal Revenue service (Pittsburgh Division) as auditor of income taxes, with a further substantial increase of salary and responsibility.

The course he selected is just one of more than three hundred that we offer, all reasonably priced, all bringing the close personal service that is a feature of United Y. M. C. A. Schools instruction by mail.

Do you want more power, more money, a broader field? Write us about your ambition and get our friendly counsel free. Soon you, too, can be throwing up your hat over the advance you have made.

The Automobile Business is THE Business to Get Into

Twelve Million Automobiles Need Service

Twelve Million Cars, sixty million tires, millions of batteries and electrical systems to overhaul, repair and keep in running order. Get that picture well fixed in your mind, then you can begin to appreciate WHY the AUTOMOBILE Business is THE Business to get into.

Think of the opportunities in the repair and re-sale end of the business alone! Thousands of additional garages, battery repair shops, tire shops and welding shops are needed to care for these millions of cars.

Try to picture in your mind what TWELVE

MILLION AUTOMOBILES mean—a line that would reach one and one-third times around the world! Think what that means as a business opportunity!! Can you think of a better field for ambitious, wide-awake men who have been specially trained for that kind of work?

Earn \$2,000 to \$10,000 Yearly

YOU CAN DO IT! Thousands of M. S. A. S. graduates are doing it right now! Both the manufacture and repair of these machines require skilled men—trained men—men who KNOW. The automobile industry employs millions of men and more are needed all the time. Factories, garages and service stations are continually asking us for M. S. A. S. Trained Men who can fill responsible jobs with good pay. The M. S. A. S. Trained Man doesn't have to worry—and wonder. He KNOWS—and that means SUCCESS.

Courses Complete and Practical

Our courses thoroughly cover every branch of the Automobile Business. And our teaching is made practical through practical training on the actual machines. When you have finished our Course you will be thoroughly trained in the construction, upkeep, repair and operation of autos, trucks, tractors, gas engines and farm lighting plants. That's why M. S. A. S. graduates are always in demand. They are thoroughly trained—they KNOW!

Read What the Auto Factories Say

The letters at the right written by Factory Executives speak for themselves. M. S. A. S. courses are the standard in Automobile training. The M. S. A. S. is the only FACTORY ENDORSED SCHOOL.

to think of the M. S. A. S. in the Auto Center when you think of Automobile Training. This is the Heart of the Auto Industry—the Automobile Center of the World. Practically 79% of the automobiles are made in the Detroit district. This is a big advantage for M. S. A. S. Students. They get the benefit of hearty co-operation from the big factories. They learn manufacturing methods first handed; they listen to lectures and talks by factory men; they learn about cars in a manner impossible away from the factories. That is why M. S. A. S. Trained Men are in demand with big factories and service stations.

Endorsed by Big Factories Read These Letters

Detroit, Mich., U.S.A.

Do not believe you would make any mistake in attending this school if you wish to become thoroughly experienced in the automobile business.

HUDSON MOTOR CAR COMPANY DETROIT, MICH., U. S. A.

This school is thought very highly of by the automobile men of Detroit. You will make no mistake by entering for a course.

BUICK MOTOR COMPANY

We believe the Michigan State Auto School located at Detroit would best meet your requirements, as its course in technical training is most thorough and complete in every detail.

THE STUDEBAKER CORPORATION OF AMERICA

We do not know a better automobile school that we could recommend to you than the Michigan State.

PREDICTS 1923 MOTOR BOOM

Alfred Reeves, of N. A. C. C., Avers, Production Will Far Exceed That of 1922.

Upon his arrival in Detroit Wednesday, after a swing around the factories in New York, Ohio, Indiana, Illinois and Michigan, Alfred Reeves, general manager of the National Automobile Chamber of Commerce, said that motor production this year would exceed 2,400,000 vehicles, or a 10 per cent increase over the previous year's record of 2,185,000. Of this production, about 15 per cent will be trucks and at least 25 per cent will be closed cars.

Among other things brought out by Mr. Reeves were the following:—

—The record sales of 1922—

If it's worth learning it's worth learning right.

Michigan State

303 Auto Bldg. Detroit, Mich.

This Man Makes \$350 to \$400 per Month

in a little
shop of
his own

From uncertain jobs which paid scarcely enough to support his family, to steady earnings of \$350 to \$400 per month; that's the story of what John Grahek accomplished with the help of M. S. A. S. Training. But read his letter reproduced below. It is the story of a man who refused to become discouraged; a man who really wanted to get ahead and had the gumption to START.

Every man who wants to get ahead can find encouragement in Mr. Grahek's letter, for he was just an average fellow. His success is not unusual, but typical of thousands of men of all ages who have been equally successful through M. S. A. S. Training. Thousands of letters from these men tell of their success in the Automobile Business. Every one of them gives M. S. A. S. Training credit for what they have accomplished. And what this Training has done for Mr. Grahek and these thousands of others, it can do for YOU.

The Kind of Men Who Make Good

GRAHEK AUTOMOBILE GARAGE JOHN GRAHEK, Proprietor

AUTOMOBILES, BATTERIES, TIRES and ACCESSORIES

Repairing of Batteries, Electric Starters and Ignitions
A SPECIALTY

Chisholm, Minn.

Michigan State Auto School, Inc.
Detroit, Michigan.

Dear Mr. Zeller:

I wish to let you know that I am doing very well after taking my course in the MICHIGAN STATE AUTO SCHOOL. I am in business for myself. My wages average from \$350 to \$400 a month.

Before I went to your school I hardly made enough for my family to live on.

I surely recommend the MICHIGAN STATE AUTO SCHOOL to any one who would like to get something out of his work and who wishes to get into the automobile business.

With best wishes to all, I remain
Very truly yours,
John Grahek.

Read This Guarantee

We guarantee that a graduate of our Automobile and Tractor Course will be qualified to fill a position as assembler, demonstrator, tester, repair man, auto electrician, chauffeur, tractor operator or farm lighting expert, or we will refund his tuition fee.

This Is Your Opportunity

Don't say you never had a chance. A Big One faces you right now! Get Busy! Don't wait for some one to push you along. Send for our free literature. Learn what other fellows have done, then show the World what YOU can do. Be a Winner. Get Started! Fill out and mail the Coupon NOW—TODAY!

A lot of folks get the idea that a man must be a "natural mechanic" to make good in the Automobile business. Maybe he does have to "like machinery" but he doesn't need to be a mechanic. One of the best graduates we ever turned out was a \$13.50 per week "pencil pusher" who hardly knew what a wheel base was. We changed him into a \$42.50 per week automobile electrician, and he is still climbing.

Another man quit an office job to take our Course—and pushed himself into a \$10,000 per year garage business. Another came here as a High School graduate at 17, and about a year after finishing our Course was making nearly \$5,000 per year in a business of his own. Another real fellow who through hard luck was unable to support his family, borrowed the money to take our Course, and today has a successful business in Minnesota.

All these fellows had Gumption—they had Ambition—they wanted to Get Somewhere!—and they were willing to do the necessary plugging to get there. Mere wishing won't do it—neither will waiting. You must get Action! If you are willing to do that, Our Course will help you Get There!

Good Positions Await Our Graduates

Factories, garages and service stations continually call for M. S. A. S. trained men. These positions pay good salaries and offer excellent opportunity for advancement or to build a business of your own. There are more opportunities for trained men in Detroit and elsewhere than we can fill. Let the M. S. A. S. fit you for the wonderful future of the Automobile business.—A. G. Zeller, Pres.

\$100.00 a Week

He Doubled His Pay

and now enjoys the comforts and pleasures of a real income

Why not double your pay? Thousands of our students have done it and thousands more will do it. You can be one of them. Do not think for a moment that it is luck or pull which brings success and real money—far from it. It is preparing for the big opportunity and knowing what to do when the right time comes that does it. The men who have made successes for themselves were ready when their main chance came. Your main chance, too, will come. Are you ready for it?

Remember the Empty Lot?

The older fellows were playing ball and you were watching, wondering if you would ever get a chance to play. You knew if you only got a chance you would show them. Sure enough, one day they boomed, "Come on, kid, grab a bat!" Your chance at the pill had come. That is the way with life. Your chance at the pill will come, but, if you want to stay on the team, you will have to deliver the goods—and that you can do only if you are prepared. The big money and the permanent job go to the man "who knows."

You Can be the Man "Who Knows"

We will show you how. Without loss to you of a single working hour, we can show you a sure way to success and big pay. A large number of men in each of the positions listed are enjoying their salaries because of our help. We want to help you. Make a check on the coupon against the job you want and we will help you get it. Write or print your name on the coupon and send it in today.

**REVERSIBLE
COLLAR to-day**

For sheer comfort and economy, the Linene Reversible Collar illustrated above is unsurpassed. Note its graceful, rounded lines. BOTH sides are alike, of fine cotton cloth, so that when one side is soiled, reverse, and you have a clean collar. You save money because they stay clean twice as long as expensive collars, and because by wearing both sides they cost less than laundry. These Reversible collars are starch finished, but are light and flexible, and are always smooth around the neck—the most comfortable, economical collar you can buy. Try them and you'll never wear any other kind of collar.

NOW FREE!

The Book That Has Shown Thousands the Way to Amazing Salary Increases

Do you want to leave the rut of routine work for a position that will grow daily in its fascination? Do you want to start right out making more money than you ever thought possible? We have done exactly this for thousands of men. Here is the book which gave them their start. Read how it is now offered to you—FREE!

TAKE this situation: A man who had worked all his life in a routine job at low pay suddenly surprises his friends by moving into a better neighborhood, taking a big house, buying a car and blossoming out as a well-to-do and influential citizen in his new community. How did he do it? What is the secret that he used? Simple enough. He knew that the biggest money in business is in Selling, and though he felt that he couldn't sell a thing, he learned the secrets that make Master Salesmen and then began to make big money.

If only one man had found inspiration enough in this remarkable book to make a brilliant success in the selling field—in a job paying him many times his former salary—then you might call it luck. But thousands have done it.

Your One Chance to Make the Biggest Money of Your Life

Not one of the men whose names appear below had ever sold a thing before—not a dime's worth. If you had told one of them that he could sell he would have laughed at you. Probably he would have come back with the old saw, "Salesmen are born, not made." They were frankly skeptical. Yet every one of these men, through reading this book, discovered the fallacy of this vicious old idea that Salesmen are "born." They learned that Master Salesmen are made! And in this book they found a comparatively easy way to go from low pay to better earnings.

READ!

Charles Berry of Winterset, Iowa, stepped from \$18 a week as a clerk to a position making him \$1,000 the very first month. J. P. Overstreet of Dennison, Texas, read this book, left a job on the Capitol Police Force at a salary of less than \$1,000 a year and in six weeks earned \$1,800. F. Wynn, Portland, Ore., an ex-service man, earned \$554.37 in one week. Geo. W. Kearns of Oklahoma City found in this book a way to jump his earnings from \$60 a month to \$524 in two weeks, and C. W. Campbell learned from it how he could quit a clerking job on the railroad to earn \$1,632 in thirty days.

Simple as A B C

Sounds remarkable, doesn't it? Yet there is nothing remarkable about it. There are certain ways to approach different types of prospects to get their undivided attention—certain ways to stimulate keen interest—certain ways to overcome objections, batter down prejudices, outwit competition and make the prospect act. If you will learn these principles there is awaiting you a brilliant success and more money than you ever thought of earning. This book, "Modern Salesmanship" tells exactly how the National Salesmen's Training Association will make you a Master Salesman.

As soon as you are qualified and ready the Employment Service of the National Salesmen's Training Association will help you to select and secure a selling position as city or traveling salesman. Many of the biggest, most reputable selling organizations in America turn to this Association for their Star Salesmen.

Now Free to Every Man Who Will Act at Once

We are not making any extravagant claims about what we will do for you. We don't have to. The records of the real successes for which we are responsible are so overwhelmingly a testimonial of the fact that any man of average intelligence can become a Master Salesman that we are willing to leave the decision entirely up to you. All of this proof and many important features about Salesmanship are contained in our salary raising book, "Modern Salesmanship." It is yours—FREE. Send the coupon for it today. It will show you how you can quickly become a Master Salesman—a big money maker. It will tell you about the National Salesmen's Training Association system of Salesmanship training that has meant prosperity to so many thousands of men—about the National Demonstration method that gives you actual experience while studying—and all about the fine opportunities that await you in the selling field. If you do not send this coupon we will lose merely the opportunity to train one more Master Salesman. But for you, failure to act may mean that you lose the one big chance of your life to leave forever behind you the low pay of a routine job. It may mean the difference between this and a real success at a big salary. Is it worth 2c to find out? Then mail this coupon NOW.

National Salesmen's Training Association
Dept. 12C, Chicago, Illinois

National Salesmen's Training Association,
Dept. 12-C, Chicago, Ill.

I simply want to see the facts. Send me FREE your Book "Modern Salesmanship" and Proof that I can become a Master Salesman. Also tell how you can help me to a position and send list of lines with openings for Salesmen.

"We pay him \$100 a week"

AND he's worth every cent of it. Came here several years ago asking for a job. He got just that—a small job at a small salary.

"Then I forgot about him—hardly knew he was on the payroll until one day I got a letter from the International Correspondence Schools telling me that he had enrolled for a course of home study. It was remarkable the way he went ahead.

"We pay him \$100 a week now and he's going to be earning even a larger salary some day. I wish we had more men like him."

HOW do you stand when your employer checks up his men for promotion? Does he think of you? Is there really any reason why you should be selected? Ask yourself these questions fairly. You must face them if you expect advancement and more money.

One hour after supper each night spent with the I. C. S. in your own home will prepare you for the position you want in the work you like best.

Yes, it will! Put it up to us to prove it. Without cost or obligation, just mark and mail this coupon.

\$10,000. Master Set AUDEL'S ENGINEERS and MECHANICS GUIDES —

THE BOOKS YOU HAVE
BEEN WAITING FOR

4750 Pages—8754 Illustrations

Just completed—Audel's New Master Set for Engineers
and Mechanical!

Every Engineer, Mechanic and Electrical worker will
welcome this set as a sure source of advancement and higher
pay because of the complete up-to-date information that is
thoroughly and easily explained on every branch of Engineer-
ing and Electrical practice.

Why a \$10,000 Library? Because it would cost the reader
more than \$10,000 together with years of labor and experience
to collect, plan, arrange and prepare for his own study and
ready reference, the vast fund of knowledge printed in this
Master Set.

The entire set costs you only twelve dollars—knowledge
and instruction that has cost thousands of dollars and years
of time—yours for \$12.00—\$1.00 a month.

Study This Brief Table of Contents

Theory, Practice and Operation of
ALL Steam Engines, Valve Motion—
VALVE SETTING—complete in-
formation on ALL engines and pumps—
CORLISS ENGINES and the Theory,
Construction and Operation of all
Steam Engines, including UNIFLOW
and POPPET VALVE ENGINES,
and LOCOMOTIVES—Locomotive-
Marine Engines—Turbines; Rotary
Engines—the Indicator—Lubrication—

LEARN CARTOONING the Right Way

1.

Have your ability trained by the school that has developed many famous cartoonists.

If you like to draw—if you find pleasure in picking up a pencil and paper and trying to make sketches or cartoons, don't regard it merely as a hobby. Have your ability developed and earn a good income as a cartoonist.

2.

Hundreds of nationally known cartoonists, such as Branner of the Chicago Tribune; Blosser, who draws "Freckles and His Friends"; Gene Byrnes, creator of "Reg'lar Fellers"; Thiele of the Sioux City Tribune; Fung, of the Seattle Times and others equally well known, took the Landon Course at home, in their spare time, and fitted themselves for their present positions at salaries ranging from \$50 to \$200 and more per week.

3.

Have YOUR talent developed by the same method

What the above mentioned boys did you can do, with the same training. The Landon method of teaching makes cartooning easy to learn. By means of an extensive series of Big picture charts all the necessary details of ORIGINAL drawing are explained step by step, in a clear and simple manner.

4.

FACTS that determine the superiority of the Landon School:

1. Landon School Students are securing the best cartooning positions which open up everywhere.
2. The picture chart method of instruction was originated and is used exclusively by the Landon School.
3. From the very beginning, the Landon Course teaches ORIGINAL drawing. No copy work.
4. Individual attention and criticism of student's work. Personal coaching whenever necessary.
5. Specialized instruction on how to originate cartoon ideas. This is an exclusive feature of the Landon Course.
6. Practical assistance in securing positions for students and help in marketing their work.
7. The price is within reach of everyone who is ambitious to succeed. Easy payments can be arranged.

5.

Write today for full information about the Landon Course, and sample chart by means of which you can test your own ability. Find out what the possibilities are for YOU in this interesting profession. Please state your age.

If He Had Passed It Up

He Would Still be a Laborer at \$2 a Day. No Money, Nothing Ahead but Hard Work, Longer Hours—and Regrets. But He Didn't Pass It Up

He decided to learn Mechanical Drawing. He buckled down to work with the Columbia School of Drafting. When he had a quiet half hour to spend he spent it—as a wise man spends money—to get full returns.

MADE \$275 EXTRA IN 3 DAYS. He recently received \$275 for one drawing that only took him three days to draw.

NOW HOW ABOUT YOU? Are you working up hill or down? Count the money in your pay envelope next pay day. You'll find the answer there.

MAKE \$35 TO \$100.00 A WEEK. We will train you to be an expert Draftsman in your spare time at home by mail. There's lots of room for you if you act now.

PROMOTION IS QUICK. WE'LL QUALIFY YOU for a high-salaried position in the drafting field and keep you in touch with openings for Draftsmen in the big machine shops, industrial plants and United States Government departments. Men who start as

Draftsmen are often advanced to Chief Draftsmen, Chief Engineers, Production Managers and so on.

GET THE RIGHT TRAINING. Mr. Claffin, the founder and director, stands personally in back of the Columbia School of Drafting. You spend no time in long-winded theories—useless and expensive to you. You start on actual drawing work the day you receive your first lesson.

YOU NEED NO PREVIOUS TRAINING. The course is easy to understand and easy to follow. Many students are qualified even before they complete the course.

SUCCESS CALLS MEN OF ACTION ONLY. If you are a man of action clip the coupon now and show that you are a man of action. Keep right on top of this opportunity to make real money. Don't go looking for a pair of scissors. Tear the coupon off and mail it right now. We have a special offer for those who reply promptly. Get started now.

What We Give You

PRACTICAL PROBLEMS. You are carefully coached in practical Drafting work.

WE HELP YOU GET A JOB. We help you get a position as a practical Draftsman as soon as you are qualified.

PERSONAL INSTRUCTION AND SUPERVISION THROUGHOUT THE COURSE. You receive the personal instruction and help of Roy C. Claffin, president of the Columbia School of Drafting and a practical Draftsman of many years' experience.

DRAFTSMAN'S EQUIPMENT. We furnish you with a full set of Drawing Equipment and Drafting Instruments as shown in the picture below when you enroll. You keep both etc on completing the course.

CONSULTATION PRIVILEGES. You are free to write us at any time for advice and suggestions regarding your success.

DIPLOMA. The diploma we give you on completing the course attests to your proficiency as a Draftsman. It is an "entering wedge" to success.

FREE SUBSCRIPTION TO DRAFTSMAN'S PUBLICATION "THE COMPASS." You are given free a subscription to our helpful, inspiring publication, "The Compass."

U. S. Civil Service Commission Needs DRAFTSMEN

The following are a few of the many positions open in Government Departments from time to time. The salaries are starting salaries, subject to increase. Practically all of them carry a bonus of \$240 a year additional.

Architectural Designer..... \$4,000
Chief Draftsman (Aeronautical) Naval Aircraft Factory, per day... 15.04
Aeronautical Draftsman—Field Service of Navy Department, \$5.20 per day to \$12 per day.

FREE BOOK

Send in this coupon today. Immediately on receipt of it we will send you our book, "Your Future in Drafting," which tells you all about our new method of teaching Mechanical Drawing and gives full details of our special offer to those who reply promptly.

The letter that raised my salary

I certainly was surprised when Mr. Jordan called me into his private office.

"I want to congratulate you, young man," he said, "on the splendid record you are making with the International Correspondence Schools. They have been sending me reports of your progress and this last letter is particularly fine.

"I want you to know that the firm never overlooks a man who cares enough about his work to study it in spare time. Beginning to-morrow, you are to take over Jim Hanna's position at an increase of \$50 a month. I wish we had more men like you."

Employers in every line of business are looking for men with ambition—men who really want to get ahead in the world and are willing to prove it by training themselves to do some one thing well. Prove that you are that kind of a man!

The way is easy. Without cost, without obligation, just mark and mail this coupon and get the full story of what the I. C. S. can do for you!

E.S. GIVENS, 128 Chemical Bldg., Kansas City, Mo.

How to Read Blueprints and Plans.

How to Use the Steel Square Successfully.

What You Should Know About Carpentry and Building.

How to Build a Frame or a Brick Structure.

What You Should Know About Sheet Metal Work.

How to Be a Successful Building Superintendent.

What You Should Know About Heating and Ventilating.

A Thousand Things You Ought to Know

How to Write and Read Building Specifications.

EVERY day in your work you get up against new problems—sometimes it is only some old "sticker" coming in a new way. Just the same, though, it takes a lot of time to figure them out. **Don't do it.** Here's everything worked out for you. Every problem, big or little, that you will meet in a day's work. Hundreds of new ideas and better ways of doing things. Hundreds of ways the other fellows are making money. Hundreds of ways you can make more out of the same work you are doing now.

What You Should Know About Water Supply and Drainage.

CARPENTRY AND CONTRACTING

How to Estimate the Cost of a Building.

Five great big volumes flexibly bound in genuine American Morocco with 2,138 pages and more than 1,000 blueprints, plans, pictures and diagrams. It is the newest, most complete, most practical work of its kind ever published. Twenty-five well-known experts prepared these great books, gathering the material from hundreds of different sources. Every man in the shop and on the job should have them. Written in such plain language that anyone can understand them.

What You Should Know About Plastering and Painting.

7 Days' FREE Examination

Send the coupon for these great Carpentry and Contracting books TODAY. You can't afford to be without them and you don't take any risk at all. The coupon brings the whole set by express collect for a week's free examination. Use the books a week and notify us to get them back if they don't please you. If you like them, send us only \$2.80 and \$3.00 each month thereafter until \$19.80 is paid. If you prefer to pay cash with order, send only \$17.50. The return privilege holds good just the same. Send the coupon NOW. Remember—sending for the books does not obligate you to buy.

AMERICAN TECHNICAL SOCIETY, Dept. G-193, Chicago

I Want 1000 Men For Big Jobs in ELECTRICITY

Previous Experience Unnecessary

L.L. COOKE
CHIEF
ENGINEER

Men trained in Electricity—Electrical Experts are in greatest demand right now. Thousands of men are needed to keep pace with the amazing growth of this Wonderful Industry. The opportunities for advancement and a big success are the greatest ever known. I need more men to prepare for big paying jobs. No matter what kind of work you are doing or how much you earn, Electricity offers you more.

Be a Certificated **Electrical Expert** Earn \$70 to \$200 a Week

Today even the ordinary Electrician—the “screw driver” kind—is making money—big money. But it's the trained man—the man who knows the whys and wherefores of Electricity—the “Electrical Expert” who is picked out to “boss” ordinary Electricians—to boss Big Jobs—the jobs that pay. You, too, can learn to fill one of these jobs—spare time only is needed. Be an “Electrical Expert” earn \$70 to \$200 a week.

Age or Lack of Experience No Drawback

You don't have to be a College Man; you don't have to be a High School graduate. If you can read and write English, my course will make you a big success. It is the most simple, thorough, and Successful Electrical Course in existence, and offers every man, regardless of age, education or previous experience, the chance to become, in a very short time, an “Electrical Expert,” able to make from \$70 to \$200 a week.

I Give You a Real Training

As Chief Engineer of the Chicago Engineering Works I know exactly the kind of training a man needs to get the highest salaries. Hundreds of my students are now earning \$3,500 to \$10,000 a year. Many are successful ELECTRICAL CONTRACTORS.

Your Satisfaction Guaranteed

So sure am I that you can learn Electricity—so sure am I that after studying with me, you too, can get into the “big money” class in electrical work, that I will guarantee under bond to return every penny paid me in tuition if, when you have finished my course, you are not satisfied it was the best investment you ever made.

FREE Electrical Working Outfit, Radio Course and Employment Service

I give each student a Splendid Outfit of Electrical Tools, Materials and Measuring Instruments absolutely FREE. You do PRACTICAL work

AT HOME with this Outfit. You start right in after the first few lessons to WORK AT YOUR PROFESSION in a practical way. I also furnish them supplies, a complete Radio Course, Special Lessons for men going into business for themselves and free employment service and many other things that other schools don't furnish.

Get Started Now; Mail Coupon

I want to send you the “Vital Facts” of the Electrical Industry including my Electrical Book, Proof Lessons and a sample of my guarantee bond all FREE. These cost you nothing and you'll enjoy them. Make the start today for a bright future in Electricity. Send in the coupon—NOW.

PATENTS—Prompt, personal efficient service by an attorney-at-law skilled in all branches of Patent Practice. Over 15 years actual experience; full information upon request. B. P. Fishburne, 331 McGill Bldg., Washington, D. C.

PATENTS—Before disclosing an invention the inventor should write for our blank form "Record of Invention." This should be signed, witnessed and returned to us together with model or sketch and description of the invention and we will give our opinion as to its patentable nature free. Our Three Books mailed free to inventors. Our Illustrated Guide Book, "How to Obtain a Patent," contains full instructions regarding patents. "List of Patent Buyers" sent free, contains unsolicited letters from manufacturers and others who are constantly writing us regarding the purchase or leasing of meritorious patents. We have recently received a number of requests, among which are the following: 45 requests for Miscellaneous Articles in all classes of invention, too numerous to mention. 14 requests for Household Novelties and Specialties. 11 requests for General Novelties and Mail Order Articles. 6 requests for Automobile Accessories and Specialties. 3 requests for Small Metal Articles and Metal Specialties. 2 requests for Radio Accessories and Equipment. 1 request for Amusement Apparatus. 1 request for Refrigerators. 1 request for Tractors and Similar Machines. 1 request for Farmers' Supplies. 1 request for Games. 1 request for Toys. We endeavor to assist our clients in the commercial development of their inventions. Owing to the growth of our business we have established for the benefit of our clients, Branch Offices in New York City at 1067 Woolworth Bldg., Philadelphia at 714 Liberty Bldg., Pittsburgh, Pa., at 514 Empire Bldg., Chicago, Ill., at 1114 Tacoma Bldg., and San Francisco, Calif., at 1010 Hobart Bldg. Victor J. Evans & Co., Main Office, 146 Ninth, Washington, D. C.

PATENTS—"How to Obtain a Patent" is the name of a book which every inventor should have. It will be sent free upon request, and will tell you what you want to know about patents. It contains the whole story. It describes the different parts of the application and explains in simple language the prosecution before the Patent Office. It tells about joint applications, reissues, agreements, assignments, licenses, interferences, infringements, process patents, design patents, trade-marks, and prints and labels. If you are interested in patents either as an inventor, manufacturer or owner of a patent you will enjoy reading this book which was written by a lawyer who has had twenty-five years' experience in patent matters. If you have an invention and will send us a sketch, model or photograph of it we will promptly make a search of the Patent Office records and advise you whether or not, in our opinion, your invention is patentable. Our charge for the service being \$5.00. We feel that our experience of twenty-five years has fitted us to render prompt and efficient service which will merit your confidence. Write today. Talbert & Talbert, 463 Talbert Building, Washington, D. C.

INVENTORS: Send sketch or model of invention for opinion concerning patentable nature and exact cost of patent. Book "How to Obtain a Patent," sent free. Tells what every inventor should know. UNPATENTED ideas can be sold. I tell you how and help you make the sale. Particulars free. Write W. T. Greene, 105 The Atlantic, Washington, D. C.

PATENTS—"How to Obtain a Patent" is the name of a book which every inventor should have. It will be sent free upon request, and will tell you what you want to know about patents. It contains the whole story. It describes the different parts of the application and explains in simple language the prosecution before the Patent Office. It tells about joint applications, reissues, agreements, assignments, licenses, interferences, infringements, process patents, design patents, trade-marks, and prints and labels. If you are interested in patents either as an inventor, manufacturer or owner of a patent you will enjoy reading this book which was written by a lawyer who has had twenty-five years' experience in patent matters. If you have an invention and will send us a sketch, model or photograph of it we will promptly make a search of the Patent Office records and advise you whether or not, in our opinion, your invention is patentable. Our charge for this service being \$5.00. We feel that our experience of twenty-five years has fitted us to render prompt and efficient service which will merit your confidence. Write today. Talbert & Talbert, 463 Talbert Building, Washington, D. C.

PATENTS. If you have an invention which you wish to patent you can write fully and freely to Munn & Co. for advice in regard to the best way of obtaining protection. Please send sketches or a model of your invention and a description of the device, explaining its operation. All communications are strictly confidential. Our vast practice, extending over a period of seventy-seven years, enables us in many cases to advise in regard to patentability without expense to the client. Our Handbook on Patents is sent free on request. This explains our methods, terms, etc., in regard to Patents, Trade Marks, Foreign Patents, etc. "Scientific American" contains Patent Office Notices. Decisions of interest to inventors, and particulars of recently patented inventions. Munn & Co., Solicitors of Patents, 423 Woolworth Bldg., New York; Scientific American Bldg., Washington, D. C.; 891A Tower Bldg., Chicago, Ill.; 611 Hanna Bldg., Cleveland, Ohio; Hobart Bldg., San Francisco, Calif.

Go as High as You Like No Limit to Salaries in Aviation

No other industry offers the wonderful chances for big money-making that the Airplane Industry offers to ambitious men. Many more trained men will be needed to fill big paying jobs. The airplane has come to stay—it will soon be a part of our everyday life. The men who get in now are the ones that will cash in big. Look at the "big fellows" in the automobile game today. They represent power and wealth because they got in early—you can do the same in Aviation and you have an advantage because you can be trained before you start.

A New Seven-Passenger Airplane

A New Job—The Aerial Postman

View in an Airplane Factory

Thousands of Airplane Mechanics Will Be Needed

The airplane industry is going forward by leaps and bounds. Transportation—passenger carrying and mail carrying lines are being opened up everywhere. This means men—men—men! Trained men only are wanted—men who know what's what. Get ready now to make big money. The industry is calling for real red-blooded fellows—heed the call—now is the time to get started—while the industry is still in its infancy.

Here Are a Few Jobs That Will Pay \$50 to \$250 a Week:

MACHINE CO.,
2014-O Oliver Bldg., St. Louis, Mo.**

**Oliver Oil-Gas Burner and Machine Co.,
2014-O Oliver Bldg., St. Louis, Mo.**

Please send me full facts about how I can make at least \$5,000 a year representing you in my territory. Also your plan if I just wish to make big money in my spare time.

Name.....

Address.....

City and State.....

B. M. Oliver

I want to show you how to make \$12 in 15 minutes of your time. Read what I have done for others right on this page.

\$215 IN ONE DAY

Ye Gods—some seller—made \$215 today.

F. W. Bentley of Philadelphia.

BUYS CAR WITH PROFITS

Have earned enough in one month to buy me a new auto.

S. W. Knappes, Cal.

SELLS LIKE BEER IN A DRY TOWN

Am sending today for 7 Oliver's. This is one day's orders (\$82 profit). "Selling like beer in a dry town."

W. H. Drew, Mich.

Yes, all over the country, people working for me, are making that much—and you can do as well. This wonderful invention—the Improved Oliver Oil-Gas Burner sells like wildfire. Already over \$1,000,000 worth have been sold. Representatives just show it, taking about one minute to connect and light it, and this amazing invention sells itself. About 15 minutes work and a good liberal profit is yours. Why Bentley actually made \$215 in one day! And Russell of Conn. made \$3,500 in 5 months. Berger, Ont., makes \$258.50 a week. But no wonder agents are making fortunes!

Try to think what it means to housewives to do away forever with dirty coal and wood—with the soot, ashes, dirt, grime, the drudgery of carrying, lifting, soaking and chopping. In the summertime when every woman dreads the coal fire that stays alight for hours, here is a device that gives her a cool kitchen all day long. Heat, whenever she wants it for cooking, baking, preserving, steaming, etc., right in her own stove, but of the minute she is through with it. Think of the advantage of having instant heat, in damp, changeable Spring, right at the turn of a valve 2 times the heat of coal in Winter, with no worry about prices, strikes or shortages.

BIG PROFITS—SELLS ITSELF

You can see for yourself why Carnegy makes \$1,000 a month—how hundreds of others are making the biggest money of their lives. You don't have to be a salesman. It sells itself and the Big Profits are yours.

BIG MONEY SEASON STARTING

Right now is the very best time you could start. Housewives are thinking of the Summer months ahead. They dread the thought of roasting summer kitchens and jump at a chance to buy this wonderful burner.

Ticket to Chicago FREE

WE pay your railroad fare to Chicago—the Electrical Center of the World—from any place in the United States. Grasp this opportunity to see the country at our expense. Don't stick in one spot—travel—get experience. Come to Coyne—learn electricity in 3½ months. Fit yourself for a big paying job.

Learn Electricity in 3½ Months

Get a complete training so you can make big money as Power Plant Operator, Superintendent, Telephone man, Construction worker, auto, truck or tractor electrician, battery man, radio expert, or you can go into business for yourself as electrical contractor, dealer, auto ignition or battery expert and make from \$3,000 to \$20,000 a year. Hundreds of our graduates today are making big money and you can do the same if you grasp this opportunity—act now.

Great Shops of Coyne

No books or useless theory. You are trained on \$100,000 worth of electrical equipment. Everything from door bells to power plants. You work on motors, generators, house-wiring, autos, batteries, radio, switch-boards, power plants—everything to make you an expert ready to step right into a position paying from \$45 to \$100 a week.

RADIO COURSE FREE. We include the following free with the regular course:

- [1] A complete course in auto, truck and tractor electricity and storage batteries. Greatest outlay of auto, electrical and battery equipment in the country.
- [2] Course in Radio—the marvel of the age. Constructing, installing and operating. You can build your own wireless telephone set.
- [3] A life scholarship in the Coyne school. You can stay as long as you wish and return for further training at any time in the future.

Earn While You Learn! We help students to secure jobs to earn a good part of their expenses while studying.

HOW MUCH do ARTISTS EARN?

WOULD you like to earn \$100 a week as a commercial artist? If you like to draw, you should develop your talent, for well-trained artists earn \$75, \$100, \$150 a week, and oftentimes much more. Beginners who can do practical work soon command \$30 a week.

The Federal home-study course develops your talent on a sure foundation by the **quickest possible method**, and makes the work truly a pleasure. It is the **original, practical course** in commercial art, created by men with more than 25 years' experience in the field, and after 8 years of unequalled success today stands supreme as America's Foremost Course in Commercial Designing. It contains **exclusive lessons** from leading American artists, gives you individual personal criticisms on all lessons and teaches you the methods that make your drawings worth real money.

Send Today for
"YOUR FUTURE"

If you are sixteen years old or more, and in earnest about your future, send today for this book. It is beautifully illustrated, tells every detail about the Federal Course, gives you convincing proofs of its merits and shows work done by Federal Students. Fill out and mail the coupon NOW, kindly stating your age.

\$1,000 Reward For the Capture of This Man

CONVICT 6138, escaped from the State Penitentiary; Name, Charles Condray; age 37; Height, 5 feet 8 inches; Weight, 141 pounds; Hair, light brown; Eyes, gray.

Easy enough to identify him from his photograph and this description, you may say—but, Condray took the name of "Brown," dyed his hair, darkened his skin, grew a mustache, put on weight and walked with a stoop.

Yet he was captured and identified so positively that he knew the game was up and returned to the penitentiary without extradition. How was it accomplished? Easy enough for the Finger Print Expert. They are the specialists, the leaders, the cream of detectives. Every day's paper tells their wonderful exploits in solving mysterious crimes and convicting dangerous criminals.

More Trained Men Needed

The demand for trained men by governments, states, cities, detective agencies, corporations, and private bureaus is becoming greater every day. Here is a real opportunity for YOU. Can you imagine a more fascinating line of work than this? Often life and death depend on finger print evidence—and big rewards go to the expert. Many experts earn regularly from \$3,000 to \$10,000 per year.

Learn At Home in Spare Time

And now you can learn the secrets of this science at home in your spare time. Any man with common school education and average ability can become a Finger Print Detective in surprisingly short time.

Free Course in Secret Service

For a limited time we are making a special offer of a Professional Finger Print Outfit, absolutely Free and Free Course in Secret Service Intelligence. Mastery of these two kindred professions will open a brilliant career for you.

Write quickly for fully illustrated free book on Finger Prints which explains this wonderful training in detail. Don't wait until this offer has expired. Mail the coupon now. You may never see this announcement again! You assume no obligation. You have everything to gain and nothing to lose. Write at once. Address

STUART'S ADHESIVE PLAPAO-PAD

Inner surface is made adhesive to secure the PLAPAO-PAD firmly to the body, keeping the PLAPAO continually applied and the pad from slipping. No straps, buckles or springs attached. Soft as velvet—easy to apply.

It's the Non-Slipping, yet Non-Rigid Pad and What is Within It That Counts

PATD APRIL 6 1909

FREE to 5,000 Truss Sufferers

To the extent of 5,000 sufferers who may apply I will send, ABSOLUTELY FREE, a sufficient quantity of the Plapao to positively convince them that this is the only logical, common-sense way of treating rupture. Plapao is a highly astringent medication placed within the Plapao-Pad and being absorbed through the skin, creates a wonderful feeling of relief and at the same time tends to strengthen the weakened muscles and thus permanently close the rupture opening. The process of recovery is natural, so you'll have no use for a truss—you can throw it away forever! Old and young have testified under oath that the Plapao-Pads cured their rupture—many of them long-standing, aggravated cases—without delay from work. Patent allowed in U. S. and foreign countries. Awarded Gold Medal at Rome and Grand Prix at Paris.

Send No Money—for a sufficient quantity of the Plapao is sent without charge to enable you to give it a thorough test; you pay nothing for this trial now or ever. Write for it and full information today. Address: Plapao Laboratories, Block 1427 St. Louis, Mo.

PLAY PIANO BY EAR

Be a Jazz Music Master

Anyone who can remember a tune can easily and quickly learn to play popular jazz or American rhythm *by ear* at a very small cost. The new Niagara Method makes piano playing wonderfully simple.

No matter how little you know about music—even if you “have never touched a piano”—if you can just remember a tune, you can quickly learn to *play by ear*. The Niagara Method is entirely new—so simple, so easy and teaches so many little tricks of playing that it just comes natural to pick out any piece you can hum. Why not master our 20 lessons and be playing catchy, jazzy music—all *by ear*—in three months’ time? Thousands of others who could not learn by the old-fashioned method have grasped the Niagara idea readily—and succeeded.

A Simple Secret to Success

No need to devote years in study to learn piano nowadays. Special talent unnecessary. Every lesson is so easy, so fascinating that you just “can’t keep your hands off the piano.” Give it part of your spare time for 90 days and you will be playing and entertaining almost before you realize it. No tiresome scales, no arpeggios to learn—no do-re-mi—no difficult lessons or meaningless exercises. You learn a bass accompaniment that applies to the songs you play. Once learned, you have the secret for all time—your difficulties are over and

You Become Master of the Piano

Even talented musicians are amazed at the rapid progress of Niagara School students and can’t understand why this method was not thought of years ago. Naturally, the Niagara Method is fully protected by copyrights and cannot be offered by any other school. A special service department gives each pupil individual attention.

Learn at
home in
90 days

Be Popular in Every Crowd

One who can sit down at any time *without notes or music*, reel off the latest jazz and popular song-hits that entertain folks, is always the center of attraction, the life of the party, sought after and invited everywhere. Make yourself the center of attraction—master the piano by spending an hour a day studying the fascinating Niagara Method.

As easily as thousands of others have learned, so you too, can learn and profit—not only through the pleasure it provides, but also by playing at dances, motion picture houses and other entertainments.

Decide to Begin Now!

Just spend a part of your spare time with a few easy, fascinating lessons and see how quickly you “catch on” and learn to play. You will be amazed, whether you are a beginner or an advanced student.

Write for interesting, illustrated booklet, “The Niagara Secret”—it describes this wonderful new method of playing piano by ear. This booklet sent FREE.

LEARN TO DRAW AND MAKE MONEY

Study in the **SCHOOL** that has the **LONG ESTABLISHED REPUTATION**

Here is a **SIMPLE WAY** **TRY IT**
To Draw a Comic Face

Take your pencil and draw lightly a square (any size). Then add to it with pencil as shown in the small squares above. Erase all pencil guide lines after the drawing is completed. You can draw any kind of comic face by simply changing the shape of the nose, forehead, chin, etc.

Send in your drawing and let us see what you can do. You may have more natural ability than you think. Some of the **cleverest cartoonists** are former students. They had **no experience** before enrolling, but worked at the lessons **during their spare time**, and found Cartoonist **EVANS' METHOD "easy to learn"** and are now **making good money**. It is not hard to learn to draw **originals** when you are shown in a **practical way**. The method above is only one of many **simple methods** explained in the course.

We don't offer any "grand prizes," or "free materials" to encourage enrollments. The school is endorsed by well known cartoonists because they know the students are handled **right**.

Write today for **Portfolio of EVANS Cartoons** and **full information** about the school, and learn how to draw pictures **which you can sell**. The Course Is Not Expensive.

THE W. L. EVANS SCHOOL OF CARTOONING
821 Leader Bldg. CLEVELAND, OHIO

LEARN AUTO PAINTING

Here is a new uncrowded field. There are about 12 million autos in use in the United States. Two-thirds of these are used cars and need painting. There are but few shops at present and they are poorly managed and prices are not stabilized. Our school, here in Detroit, the auto center of the world, teaches you factory methods and practices. You can put a factory finish on any car. Our instructors have held important positions in auto factories and body plants.

Make \$45 to \$300 Weekly

When you graduate you will be able to hold a **GOOD** factory job or go into business for yourself. Any locality that will support a garage will also support a paint shop. Every car you do is your moving advertisement. It boosts your business and brings others to you. Our graduates have no trouble getting factory or paint shop positions here or anywhere. You can go into business on very small capital. You need only a few brushes and cans of paint. We teach you every operation.

Start Any Time—Any Day

Previous experience unnecessary. Start the day you arrive. You finish in 8 to 12 weeks. Our Welfare Department finds you good room and board when you arrive. The instructions are simple, clear, thorough and complete. Tuition is reasonable, life membership **FREE**. You work on regular jobs getting actual experience.

Get literature and special offer. Write NOW.

THE DETROIT AUTO PAINTING SCHOOL
23 D. A. P. S. Bldg. 426 Superior Street
Detroit, Mich., U. S. A.

DEAFNESS IS MISERY

I know because I was Deaf and had **Head Noises** for over 30 years. My invisible Antiseptic Ear Drums restored my hearing and stopped Head Noises, and will do it for you. They are **Tiny Megaphones**. Cannot be seen when worn. Effective when Deafness is caused by Catarrh or by Perforated, Partially or Wholly Destroyed Natural Drums. Easy to put in, easy to take out. Are "Unseen comforts." Inexpensive. Write for Booklet and my **sworn statement** of how I recovered my hearing.

A. O. LEONARD, Suite 226, 70 5th Avenue, New York City

TOBACCO

Habit Cured or No Pay

Any form, cigars, cigarettes, pipe, chewing or snuff Guaranteed. Harmless. Complete treatment sent on trial. Costs \$1.00 if it cures. Nothing if it fails. **SUPERBA CO., E-41 BALTIMORE, MD.**

NO MORE BALD HEADS

WHEN our **VACUUM CAP** is used a few minutes daily. We accept no pay until you have tried the Cap 60 days and are satisfied. The Vacuum Cap is an appliance that draws the blood to the Hair Roots and starts a new healthy crop of hair. It stops Dandruff, stops the hair from falling out.

Bought by Doctors and men who know that it is the only reasonable **HAIR GROWER** known to science. No Drugs Used. Write for application blank, testimonials, and booklet on "HAIR," sent sealed in plain envelope. **FREE.**

THE MODERN VACUUM CAP CO.
H 559 BARCLAY, DENVER, COLO.

I Guarantee You Results Worth \$1000⁰⁰ in One Year

Money talks! No matter what business you're in or how much you are earning, I absolutely GUARANTEE you at least \$1,000 value within one year—or it won't cost you a cent! If you want the proof—entirely free—simply mail the coupon below.

By A. L. Pelton, "The Man Who Helps People Succeed"

WITHOUT wasting a single word I'll come straight to the point! I've discovered a method that is performing wonders for those who follow it. It isn't a secret! Thousands of the world's greatest men have used it and are using this method to bring them wealth—fame—happiness! But now, for the first time, it's been put down in black and white—so that anybody who has learned to read and write can use it to bring him almost anything he wants.

No longer need you be content with an ordinary job at an ordinary salary! Here's a new, easy, positive way to achieve the kind of success you have always wanted! I'll show you how to acquire the remarkable power to earn more money than perhaps you ever dreamed of, and I absolutely guarantee that it will bring at least \$1,000 value the first year—or it won't cost you a cent.

If you want to know how this method works let's take some actual examples.

A Few Actual Examples

John Watson was born a helpless cripple. His parents were poor. He had little schooling. Yet, despite his handicaps, Watson—that's not his real name, although every word here is true—has become a very rich man: He owns a huge factory in Louisville, Ky., and is consulting engineer for many concerns at \$100 an hour! Recently he refused a \$40,000 a year job. He's an artist, an orator, an inventor, and a lawyer. He had only a brain to start with, yet he won wealth, fame and happiness!

Take Wrigley—the chewing gum king started as a newsboy and now makes many times more money in a day than thousands earn in a year! Douglas, the millionaire shoeman, was a shoemaker's helper. I could mention thousands of others.

Read your history and you'll find that Napoleon, Grant, Lincoln, and countless others became famous by using this simple method. Yet you, too, possess the magic that made millions for Rockefeller, Vanderlip, Schwab and Edison! The ease with which you'll climb will seem miraculous once you learn to use it.

Anyone Can Use It

If you can only read and write you can make this marvelous discovery unlock the doors to the world's greatest treasures! You can learn quickly. And the minute you do, you become more forceful, persuasive, confident. You think better, clearer, quicker. Your success becomes rapid—sure—easy.

Today thousands are using this method to bring them wealth, power, happiness. Results are astounding! Clerks become executives almost over night. Salesmen are doubling and tripling their commissions. Adding \$20, \$40 or even \$100 a week to a man's salary is not at all

unusual. This new method cannot fail. That's why I guarantee you \$1,000 value the very first year!

Will you let me show you the easiest way in the world to get the things you want? Whether it be money, health, power, fame, happiness, I'll show you how to get it!

How It Works

The method is simple, too. Prof. Frank Channing Hadcock, the world famous psychologist, has discovered, after years of patient research, that out of thousands of successful men and women, practically every one possessed certain fundamental qualities which were directly responsible for his success. He found that once a person acquired such qualities as foresight, imagination, will-power, confidence, fearlessness, and thinking ability—his success in life was absolutely certain.

But even more important was the discovery of how **anyone** can easily, quickly and positively develop these characteristics. His whole method is embodied in his great new course, "Mastery of Self," which already has performed thousands of seeming miracles.

Free Book Tells How

I wish I had space enough to tell you all the wonderful things "Mastery of Self" has done for thousands of people. But it is impossible, so we have written a new booklet—"The Power That Compels Success"—which is chock-full of all the things you want to know. This book will show you how to double your power of accomplishment—how to double your ability to think—how to banish your fears, self-consciousness, worries, timidity; how to acquire the courage to do seemingly impossible things—how to think straight—clearly—accurately. It contains some of the most fascinating and marvelous information you ever expected to read—and it's yours absolutely free! Send for it now. It may mean the turning point in your life. It will show you the new easy way to greater health—wealth and happiness! Mail the coupon today. And remember my guarantee of at least \$1,000 value the very first year.

READ THIS AMAZING FREE BOOK IF YOU WANT TO KNOW

- How to attract success.
- How to banish sensitive-ness.
- How to analyze yourself.
- How to acquire nerve force.
- How to make people like you.
- How to create money making ideas.
- How to influence men in business.
- How to get a powerful memory.
- How to conquer fear and worry.
- How to develop a man's courage.

KNOWING HOW is the thing that puts the big pay in the pay-envelope. It's the thing that lifts men out of a poor-paying job into a man's size job with a man's size pay. *The man with the "know how" under his hat always wins out.* No matter what kind of work you are doing, or what you expect to do—you can learn more about that work and get more money for doing it. You don't have to go to school. Neither do you take any special training. One of these home study courses in book form gives you all the "know how" you need.

Some of the world's greatest experts prepared these books just to help ambitious men get ahead. They are written in plain, good old U. S. language that anyone can understand. No puzzling technical terms. Everything is explained. Thousands of pictures, plans, blueprints, diagrams, etc., in each set. Over 100,000 sets have been sold. Pick out a set in line with your ambition and send the FREE TRIAL coupon that brings the books without your sending any money in advance.

This picture shows the Automobile Engineering Books, five volumes closed and one open. The bindings will last a lifetime.

FREE Examination!

Don't send one penny. Just fill out the coupon and mail it. This will bring any set you select (the whole set, not a sample) by express collect. The books will be yours to use as you please for an entire week. You be the judge and decide whether or not they will do for you what they have done for thousands of other men. If you don't think they will help you, send them back at our expense and you won't owe a cent.

75 Cents a Week

Pay only \$2.50 within 1 week if you keep the books and send us \$3 each month until the special reduced price is paid. This amounts to about 16 cents a day. Mail Coupon NOW. You'll be mighty glad you did when pay day comes round.

Your Physical Weakness is a Crime

LIONEL STRONGFORT

Dr. Sargent, of Harvard, declared that "Strongfort is unquestionably the finest specimen of physical development ever seen."

consultation coupon (write other ailments on extra line) on which you want special confidential information and send to me with a 10c piece (one dime) to help pay postage, etc. I'll do the rest. Send for my free book **Right Now TODAY**,

LIONEL STRONGFORT

Physical and Health Specialist

Dept. 208 Founded 1895 Newark, New Jersey

Special Notices—Lionel Strongfort, the World's Famous Athlete and Physical and Health Specialist, has achieved wonderful results with the Principles of Strongfortism. Thousands of pupils throughout the world have testified to the benefits gained under his guidance. He enjoys an excellent reputation in his profession and can be depended upon to do exactly as he promises.

HOW have you cared for your body? Have you prized it as a sacred responsibility as your most precious possession? Have you kept it clean and wholesome, externally and internally, free from the results of abuse and neglect? Are you proud of your physique? Are you a **real** man in the fullest sense of the word?

Or are you a weak ailing creature—one of the thousands who are leading wretched lives—a physical weakling, a failure in the home—in business—in society? Stop and answer these questions frankly and honestly.

Slipping Back—to the Old Habits

Instead of being in the pink of condition and getting the joy out of life as you ought to be, you may be one of those whose violations of natural law have weakened you so that you are degenerating, slipping back into your old, neglectful habits again and have become a wretched human being, shunning society and being shunned—getting old long before your time—sinking through life, dejected, discouraged, hopeless.

Get a Grip on Yourself

If you are one of these victims, let me caution you to call a halt now to this slow suicide. Don't delude yourself with dope and drugs. Day by day you will step farther and farther into the chasm from which there will be less and less hope of rescue. It looks dark and gloomy to you—but cheer up—if you truly desire to win back your health and vigor—if you long to be clean, wholesome and a **real** man—I want to help you—I can help you with

STRONGFORTISM

The Modern Science of Health Promotion

Through my scientific methods I extend a helping hand to all who are in the frightful grip of disease, drugs and dope. Strongfortism reclaims human wreckage. If you feel down and out, it will brace you up, fill you with renewed life and energy, put pep into you and restore your confidence and manhood. It is not an ordinary physical culture course that I give you, but a unique system of individual assistance, which gives permanent health to any one who follows my simple directions. I give you personal attention, pointing out to you the surest, speediest way of recovering. No one need know you are following my methods—all your friends will be astonished at the improvement that has come over you immediately after you begin following my instructions.

I'll Be a Brother to You

Don't be afraid to write me in full confidence as you would to a brother. Everything you tell me will be held in the strictest confidence. I will understand. I know human nature and I know the applications of Natural Law that will free you from the misery of physical weakness and impaired health. Your success with Strongfortism is guaranteed irrespective of your age, sex, occupation or surroundings.

Send for My Free Book

"Promotion and Conservation of Health, Strength and Mental Energy" will bring you a message of hope and good cheer that will mean more to you than anything else in all your life. It's absolutely free. Just mark the subjects on the free consultation coupon (write other ailments on extra line) on which you want special confidential information and send to me with a 10c piece (one dime) to help pay postage, etc. I'll do the rest. Send for my free book **Right Now TODAY**,

"Here's an Extra \$50!"

"I'm making *real* money now! Yes, I've been keeping it a secret until pay day came. I've been promoted with an increase of \$50 a month. And the first extra money is yours. Just a little reward for urging me to study at home. The boss says my spare time training has made me a valuable man to the firm and there's more money coming soon. We're starting up easy street, Grace, thanks to you and the I. C. S."

Today more than ever before, money is what counts. You can't get along on what you have been making. Somehow, you've simply got to increase your earnings.

Fortunately for you there is an unfailing way to do it. Train yourself for bigger work, learn to do some one thing well and employers will be glad to pay you real money for your special knowledge.

You can get the training that will prepare you for the position you want in the work you like best, whatever it may be. You can get it at home, in spare time, through the International Correspondence Schools.

It is the *business* of the I. C. S. to prepare men for better positions at better pay. They have been doing it for 30 years. They have helped two million other men and women. They are training over 150,000 now. And they are ready and anxious to help you.

Here is all we ask—without cost, without obligating yourself in any way, simply mark and mail this coupon.

SHOP WORK with a

CARNES ARTIFICIAL ARM

FOR nearly ten years a Carnes Artificial Arm has kept Mr. Pabbe Yazze of Lawrence, Kan., on the payroll as a draftsman and machinist at a good salary. Thousands of other mechanics, artisans, office workers, farmers and laborers owe their independence to this improved arm.

Life-Like in Action and Appearance

The Carnes Arm cannot be detected from the natural except by close inspection. Its user can dress himself, use knife, fork, pen, pencil and keys; pick up large or small objects, carry grips—in fact, do virtually everything that was possible before. He can bend the elbow of the Carnes Arm, bend and turn the wrist and open and close the fingers at will, even if the amputation is at the shoulder.

192-Page Book FREE. A book of 192 pages, profusely illustrated with photographs showing what can be done with this remarkable invention, will be sent free to any person interested. Send for it now.

CARNES ARTIFICIAL LIMB CO.,

LEARN MODERN BARBERING the SHORT WAY

A Clean, Carefree, Good Paying Business

that you can acquire easily. A trade that enables you to TRAVEL AND SEE THE WORLD, one that pays in tips and commission, in addition to salaries, MORE THAN MOST MEN EARN.

Modern barbering includes the electric hair cutter, the mechanical massage and scientific treatments. It also affords a study—if one desires—on hair and skin, and makes the barber of today a MAN AMONG MEN.

TO BE YOUR OWN BOSS is a worthy ambition. You can own your shop with small capital, and be independent. We equip your place on easy terms.

OUR SHORT PRACTICAL COURSE has more than doubled the earning power for thousands. We can do this for you. The average annual income exceeds most tradesmen's because it is steady work the year around.

Our booklet B, that we mail free, tells how we enable you to EARN WHILE LEARN-

ING, how we put you into the BEST CITY JOBS, how we equip your shop on EASY PAYMENTS; in fact, how we take you just as you are, make your life work easier, better paying and more independent.

We have 33 branch schools in leading cities. We have one near you.

Write any one of the following addresses for our booklet B. Do it today.

Would You Give \$1 for 16 Dancing Lessons *If* —

Learning to become a good dancer made you so popular that everyone would be anxious to have you attend their social affairs,—and if learning to dance the Murray Way gave you poise, ease, self-confidence and helped develop your personality,—would you be willing to pay \$1 for 16 dancing lessons from America's foremost authority on social dancing?

Arthur Murray, instructor to the Vanderbilts and many other fashionable people in America and Europe, has perfected a wonderful new method by which you can learn any of the latest dance steps in a few minutes—and all of the dances in a short time.

Even if you don't know one step from another—or whether you already know some of the steps—through Arthur Murray's method you can easily and quickly master any dance without a partner and without music, right in your own home,—or the lessons won't cost you a cent. More than 90,000 have learned this new easy way. Your own success is guaranteed.

Proof You Can Learn at Home in One Evening

To show you how easily anyone can learn to dance at home, without music or partner, Arthur Murray has consented to send, for a limited time only, his 16 Introductory lessons for only \$1.00.

All you need to do is just fill in and mail the coupon—or a letter will do—enclosing \$1.00 in full payment and the special course will be promptly sent you.

Keep the course for 5 days; and if within 5 days you are not perfectly satisfied in every way, return it and Mr. Murray will return your dollar promptly without question. Learn in Private—Surprise your friends. Act now and be a good dancer soon.

ARTHUR MURRAY, Studio 670, 801 Madison Ave., New York

ARTHUR MURRAY, Studio 670, 801 Madison Ave., New York
To prove that you can teach me to dance in one evening at home, you may send the 16-lesson new course in plain cover. I am enclosing \$1.00 in full payment but it is understood that this is not to be considered a purchase unless the course in every way comes up to my expectations. If within five days I decide to return the course I may do so, and you will refund my money promptly and without question.

Arthur Murray

13th Edition A NEW AND GREATER DYKE'S AUTOMOBILE ENCYCLOPEDIA

Entirely rewritten—rearranged and new illustrations from beginning to end. Mr. Dyke devoted almost two years of constant application to rewriting this book. We are confident that you will agree with us that it is the best book in the world today on the automobile, truck and tractor.

A PRACTICAL BOOK ON THE AUTOMOBILE FOR EVERYBODY

Over 1,200 Pages. Over 4,100 Illustrations
Over 14,000 Lines of Index

This book teaches the underlying fundamental principles of each and every part of an automobile—mechanical and electrical—in a simplified manner, and that is why the largest auto schools are using it as a textbook. Auto owners, students and repair men say that it contains the greatest array of automobile facts ever published in one volume.

This book will teach you to become an expert automobile repairman and also an electrical expert. You will understand fundamental principles, diagnosing troubles, testing, adjusting and repairing. If you were to purchase separate books on the subjects covered the lot would cost about \$21.00. The price of Dyke's book is

YOU Can Become a Chief Electrician

You don't have to attend a technical school to rise high in the Electrical profession. If you have a common school education and are willing to devote a little of your spare-time to home-study, you can easily get into the big-pay Electrical field.

Electricity is the Big-Pay Field

No other line of industry has grown so fast as Electricity. The supply of trained men is always behind the demand. That is why the pay is big. Employers must outbid one another to obtain enough Electrically-trained men. An expert Electrician can easily make from \$50 to \$150 a week or even more. You can get one of these big-pay jobs if you take our

50 Weeks Home-Study Course in Electricity

In less than a year you will know all about Electricity. You will learn just how everything is done and why. Everything is put before you in simple language, and clearly explained with actual photographs. You find it interesting and easy. You rapidly acquire a thorough knowledge of Electricity. You make practical tests and experiments with free laboratory outfit given with every course. And you learn at home—in your spare time—without wasting hours in classrooms, spending your money on long trips or giving up your job.

Mail Coupon Today! It will bring our big free book "Your Future in Electricity"—which describes the wonderful opportunities awaiting you in this big-pay field and how you can easily learn to be an Electrical Expert. Do it—right now!

Big Pay Jobs Open in California

Learn It Right--at National Automotive

Under California's sunny skies, in wonderful Los Angeles, the city that everybody wants to see, is an auto school that's second to none in the country—NATIONAL AUTOMOTIVE, an institution founded away back in 1905 on the big idea of training men to be as near 100% efficient as possible.

It's the expert that always has a job. There's no job today for the half-trained man. It's the expert that earns big pay. And it's NATIONAL AUTOMOTIVE that trains men to be auto experts. Don't be content with an ordinary auto mechanic's training. Get Advanced National Training and be sure of a higher salaried position. You can be an auto expert. There's a big pay job for you in California. Think of it! One out of every five owns an auto. A million autos in the State. Garages are needed. Auto experts are needed. You're needed in this interesting, money-making business.

Learn autos in National Automotive's big, practical training shops. Actual work on Packards, Cadillacs, Fords, etc. Use tools, not books. Expert mechanic instructors give you thorough training. You know autos when you're a NATIONAL graduate.

Like College Life at National Automotive

The big, new National Building is across the street from 130-acre Exposition Park. Stadium, hall grounds, swimming pools, entertainment—all FREE to you. Find out about our special low tuition offer. SEND FOR BIG FREE AUTO BOOK—explains everything. Full of auto facts, and illustrations of auto construction. Tells how you can earn your room and board while learning. How NATIONAL finds YOUR job for YOU. Get this wonderful auto book now—it's FREE. Send the coupon today.

"The Best Hunch I Ever Had!"

"I was feeling pretty blue. Pay-day had come around again and the raise I'd hoped for wasn't there. It began to look as though I was to spend the rest of my life checking orders at a small salary!

"I picked up a magazine. It fell open at a familiar advertisement, and a coupon stared me in the face. Month after month I'd been seeing that coupon, but never until that moment had I thought of it as meaning anything to me. But this time I read the advertisement twice—yes, every word. And this time I tore out the coupon!

"That was the turn in the road for me. The Schools at Scranton suggested a course that would give me a real understanding of our business and they worked with me every hour I had to spare.

"In six months I was in charge of my division. In a year my salary had been doubled! And I've been advancing ever since. Today I was appointed manager of our Western office at \$5,000 a year. Tearing out that coupon three years ago was the best hunch I ever had."

You, too, can have the position you want in the work you like best. No matter what your age, your occupation, your education or your means—you can do it.

All we ask is the chance to prove it. Just mark and mail this coupon. It takes but a moment, but it's the most important thing you can do today. Do it right now!

What Every Criminal Fears!

It's easy enough to make a "getaway"—But, What will he leave behind him?

What will tell the police he has been there?

Just one tiny finger print—and his game is up! He might as well leave his name, address and photograph as leave a finger print at the scene of the crime.

That is why finger print identification has become one of the most important phases of detective work. That is why its uses are being increased every day. That is why ambitious men looking for jobs that offer real opportunity prepare themselves to take up this fascinating work.

There are more jobs now than trained men to fill them. And with the rapid growth of this science, new positions and offices are being created every day.

Be a Finger Print Expert

Learn at home—30 minutes a day for a short time. You need not give up your present occupation while studying this fascinating profession. I am a finger print expert myself and I give you just the kind of training that prepares you to be a finger print expert—that assures you of a position. The finger print expert is always in demand. Get into this big paying profession.

FREE Finger Print Outfit

To those who enroll right now I am going to give absolutely free a professional finger print outfit—the kind that is used by all finger print experts. Besides, a valuable course in Secret Service intelligence is given free to all my students. This information in itself is worth many times the cost of the complete course. But you get it Free.

Write to me today for full information.

You get free the finger print outfit—Secret Service Course is also FREE. Position is guaranteed you. Send in the coupon. Hurry.

U. S. SCHOOL OF FINGER PRINTS
7003 No. Clark St., Dept. 1353, Chicago, Ill.

Positions Guaranteed

In what other line of work can you always be assured of a position? Here is my offer to you. I GUARANTEE YOU A POSITION. As soon as you have finished my course you have a position waiting for you. Get started right now.

U. S. SCHOOL OF FINGER PRINTS
Room 1441, Dept. 1353, 7003 No. Clark St., Chicago, Ill.

Without any obligations whatsoever please send me full information about your "Guaranteed Position Offer—Free Finger Print Outfit." Also tell me how I can become a Finger Print Expert.

a MONTH
 Be a trained Auto Mechanic

This big
FREE BOOK
tells you
how

Cut out the coupon below right **now** and send for your copy of our new **FREE BOOK** that gives you interesting and complete information about our courses in auto mechanics.

BE A TRAINED AUTO MECHANIC
 We'll Make You One in From 6 to 8 Weeks

We teach you how to do things. No time wasted on useless theory. Actually working under the eye of our practical shopmen instructors, we can soon make you a general auto repair man, battery expert, welder, tire expert, auto electrician, tractor engineer, auto salesman or chauffeur. Choose the job you want. They all pay **big**—from \$150 to \$400 a month. The demand for trained auto men is increasing. We help you find a job.

A MAGNIFICENT NEW \$250,000 SCHOOL

Our new, big \$250,000 school building is finished. It is equipped with every practical device for auto construction and repair. It is right in the heart of Washington, the Nation's wonder capital. In your spare time you can see the sights in and around Washington—an opportunity that no one should "pass up."

YOU NEEDN'T PAY A CENT until you, yourself, have made a personal investigation of our school and our methods. Hundreds say that we have the standard automobile training of America. Come and see for yourself.

SEND FOR THE FREE BOOK TO-DAY

The first step is to send for the **FREE BOOK** that describes the training. Don't put it off for a moment. It means your start towards a big pay job. Clip the coupon below right now.

Quick Easy Way
to Become
a MUSICIAN

Learn music by playing actual selections—instead of tiresome exercises. When you've quickly mastered a lesson you've thoroughly learned to play a new musical composition. As simple as A, B, C. As delightful as a fascinating game. You'll astound yourself by your rapid progress. You can surprise friends by performing in public before they even suspect that you've taken up music. You learn real notes, too—no "numbers" or trick music. You learn by mail—in your own home.

Play by NOTE. Piano, Organ, Violin, Cornet, Mandolin, Harp, Cello, Trombone, Flute, Clarinet, Piccolo, Saxophone, Ukulele, Guitar, Harmony and Composition, Banjo, Tenor Banjo, Voice and Speech Culture, Drums and Traps, Automatic Finger Control, etc.

FREE BOOK Shows How you may quickly become a master of your favorite instrument. It also tells about our wonderful invention—"Automatic Finger Control"—whereby your fingers are guided, trained and made so adept that they fall into their proper places almost automatically. Write today before free edition is exhausted. Mention your favorite instrument or whether you prefer vocal. Instruments supplied when needed, cash or credit.

ELECTRICITY

Two-Year Course in Six Months in Your Own Home

The teaching of electricity has been revolutionized. All the mystery and all the complications have been removed. Now, by reading simple, easily understood booklets—fascinating as novels—right in your own home, you can fit yourself for one of the big positions now open.

Thousands of Men Needed Thousands and thousands of men are needed in electricity. The industries of the entire world are more and more coming to depend upon the magic power, electricity. The greatest opportunity of modern times lies before you.

\$70 to \$200 a Week Electrical experts make \$70 to \$200 per week. World Technical men are holding jobs like that now. You can do it, too. You do not need to be a college graduate, or even a common school graduate. The World Technical Course is as simple as A B C. All you need is the ability to read the English language.

\$18 Working Outfit Free There are no extras to buy. No expensive experimental materials to spend money for in the World Technical Course. Every student receives absolutely free an \$18 outfit consisting of seventeen standard tools and instruments, including a genuine motor and voltmeter. You couldn't duplicate the outfit for \$25. But when you start on your way to the \$200 a week job with the World Technical Institute you get the whole outfit free.

Send the Coupon NOW Don't let a minute go by. Find out now about the opportunities in electricity, and how you can qualify for one of the big jobs. Read what men high up in the industry say about the opportunities and the World Technical Institute. No obligation. The coupon brings you full information. Send it in now. Let your ambition guide you—mail the coupon to us today. To delay an instant may mean you will put it off forever. We repeat, SEND THE COUPON NOW.

Announcing The New- Electrical Course

Learn Practical Electricity

FIT YOURSELF FOR ACTUAL WORK

This is the greatest and most interesting news I have ever published. I have spent 15 years and hundreds of thousands of dollars getting ready. Now I announce the opening of what I firmly believe is the world's best equipped and most useful Electric School—and I am teaching Electrical Work by a new system, new—that is for electrical schools, but a system that has proven a world-famous success in teaching auto-mechanics to over 50,000 men—that is, the Sweeney system of Practical Experience; using tools—not books.

Operate and Repair Electric Machinery

What you young men want isn't to be Engineers, or Designers, or Theorists, or Scientists. What you want is the actual ability to go out and install, operate and repair all kinds of Electrical Machinery. How to handle, as a competent workman, Electrical Power Plants, Electric Signs, Farm and City Lighting Plants, Storage Batteries, Radio Sets, Wiring, Electric Driven Machinery of all kinds—such as Elevators, Street Railway Motors, etc. When you get thru this Course, you will know how to handle Electrical Machinery, because I don't fill your head with hazy ideas; but I train your hands with the real work you will be called on to do.

\$150,000 Special Equipment

The Million Dollar Sweeney School has \$150,000 worth of Special Electrical Equipment and teachers specially trained, men who take a personal interest in you—and teach you by the Sweeney System of Practical Experience. Some of this wonderful equipment simply can't be duplicated. For example, a \$50,000 radio broadcasting station (Call W.H.B., famous the world over), and a factory where we build radio sets; a factory where we build storage batteries; a 100-kilowatt complete electric power plant; the largest mechanical electrical sign in America. Look at the pictures on this page. They show some of the material with which you will work.

The Real Way to Learn

Quit thinking about electricity as something "deep" and hard to learn. All I ask is that you like mechanics and realize the opportunities for a man in the electrical business. This is an Electrical age. Train yourself for the countless opportunities that every new day brings. The world is calling for electrical trained men—you don't need to be an engineer or designer or scientist, but you must know how to fix, repair, build, install, operate all kinds of electrical machinery. This is what gets you a real job the minute you are qualified.

Instructor showing student how to control the current as transmitted from over 100 kilowatt generator.

Instructor Hyde giving student practical training on generator.

Rear view of one switch board. Students making repairs under personal direction of instructor Dillon.

Murray Corliss Engine driving a 100 Kilowatt Generator used in lighting the Sweeney Bldg. and furnishing light for our large electric sign which has 4800 electric lights.

Get in for Yourself— Sweeney Men Make Good In Auto Business!

Young man, consider the case of E. M. King. A year ago he was reading an advertisement just as you are doing now. Today Mr. King is independent and prosperous. From farm hand to independent successful business man was his jump in one year

Dear E. J.:

Elida, Ohio, October 28, 1922.

I must write and tell you of the success I have had since I left your school last March.

As soon as I left school, I bought a new Ford Roadster and rigged it up to haul all kinds of tools, and then went right to a man's home to overhaul his car. I had twice the work that I could do. Once I fixed a car in ten minutes that two other mechanics had worked on for six hours. I made enough in four months to buy me a five-ton "White" stone truck and now my daily average is \$75.00 a day.

So you see how well it paid me to come to your School. From a \$3.00 a day farm-hand to a \$75 a day truck owner and operator.

If anyone doubts this statement, I can furnish an affidavit with a hundred signers if necessary. You are welcome to use this letter in any way that you wish that will help the Sweeney School.

Yours respectfully,

Signed: E. M. KING.

Learn Mechanics In 8 Weeks At Sweeney's

I PAY YOUR RAILWAY FARE

I want you to come now—not to wait and postpone—I am making it easy for you—I will help you—the first step is to send for my free catalog.

FREE

The first step is to send me the coupon or write a postcard for my 72-page illustrated catalog. It tells all about this Million Dollar Trade School.

How thousands of men just like you, without any special knowledge, but simply a liking for mechanics, MADE A LIFETIME SUCCESS as a result of this simple training.

I don't care how old you are. I don't care how small your education, for I teach with TOOLS, NOT BOOKS. I need 5000 salesmen and representatives to handle Sweeney batteries and radio supplies. I want managers for branch offices. I WILL PAY YOUR RAILWAY FARE to Kansas City. Write me NOW! No colored students accepted.

E. J. SWEENEY, President.

High School Course in Two Years!

You Want to Earn Big Money!

And you will not be satisfied unless you earn steady promotion. But are you prepared for the job ahead of you? Do you measure up to the standard that insures success? For a more responsible position a fairly good education is necessary. To write a sensible business letter, to prepare estimates, to figure cost and to compute interest, you must have a certain amount of preparation. All this you must be able to do before you will earn promotion. Many business houses hire no men whose general knowledge is not equal to a high school course. Why? Because big business refuses to burden itself with men who are barred from promotion by the lack of elementary education.

Can You Qualify for a Better Position

We have a plan whereby you can. We can give you a complete but simplified high school course in two years, giving you all the essentials that form the foundation of practical business. It will prepare you to hold your own where competition is keen and exacting. Do not doubt your ability, but make up your mind to it and you will soon have the requirements that will bring you success and big money. **YOU CAN DO IT.**

Let us show you how to get on the road to success. It will not cost you a single working hour. Write today. It costs you nothing but a stamp.

LEARN TO PLAY MUSIC THE PHONOGRAPH WAY SCHNEIDER'S SIMPLEX SYSTEM

A Six Year Combined Course for VIOLIN—MANDOLIN—
BANJO-MANDOLIN, via: 2 years Violin, 2 years Mandolin, 2
years Banjo-Mandolin.

For \$9.50

NEW WAY TO PLAY. Most Fascinating, Simplest, Quickest
Method Ever Devised. 30,000 Have Learned to Play Beautifully.
WHY NOT YOU?

**PLAY FOR MONEY
IN TWO MONTHS**

You Learn
to Play or
No Charge

**PLAY BY NOTE
IN A FEW DAYS**

Marvelous New Way to Be a Musician

Nothing ever like it. Each course has lessons for all three instruments. Entire substance of a six year term of lessons "as you would receive them from the average teacher." Put on 6 Phonograph Records (12 sides). We ask you to let us PROVE our statements to your satisfaction or you pay nothing. No previous knowledge of Music required.

Anyone can learn. Send no money. Simply fill in and mail the coupon below. We can furnish instruments when so desired.

HOW IT IS DONE

You just listen to the clear commanding voice on the records while you look at a book—the voice tells you where to look, what to do and how to proceed. You then hear the instruments being played, thereby showing you how it should sound and at the same time the voice tells how and what you should do. Your every action is guided by the voice of F. M. Schneider himself as though he stood before you.

Try this course for five days. No money in advance. See for yourself how easy it is to learn to play music.

Condensing Thoughts Has Made This Course Possible

Each course consists of 6 regular sized double disc phonograph records, 3 small appliances with directions for fitting on your instrument, 1 instruction book, 1 book on "How to Teach."

Records are playable on any machine that will play Victor or Columbia records.

These instructions bring instant results.

Saves being humiliated before a human teacher.

Information given would cost hundreds of dollars the ordinary way.

A MONEY MAKER FOR ADVANCED STUDENTS

Those now studying the violin who wish to teach, will be enabled to earn considerable because this course shows how to teach three instruments, thereby giving a broad field and variety of instruments to teach.

Schneider School of Music, 233 Vermont St., Blue Island, Ill.

Without money in advance send me your complete record course with appliances and books. I will pay the postman \$9.50 plus the small postage charges in full on arrival, with the understanding that I have the guaranteed privilege of returning course, appliances and books and of having my money promptly refunded after 5 days if I am not delighted with results.

Everyone who is looking for

NEW PLAYS FOR CHILDREN

will be interested in this announcement

The greatest plays being written for children today are those coming from the pen of T. C. O'Donnell. Whimsical, full of color and charm, imaginative, these plays make a universal appeal to the child because of their delightful humor and naturalness, and to the teacher because they lend themselves so readily to the very simplest stage. Every play has a well-worked out plot, plenty of action, surprise—and yet can be "put on" in the living room as easily as on a thoroughly equipped stage.

THE "JUST IMAGINE" PLAYS

is the newest series of O'Donnell plays. The first two numbers are just off the press. They are:

"THE SANDMAN'S BROTHER" AND "ANN'S HALF BIRTHDAY"

Through a special arrangement with the publishers we are able to make the first announcement of this series to teachers of expression, grade and high-school teachers, Sunday-school teachers, teachers of dramatics in neighborhood center work, mothers and others interested in clean, wholesome, easily produced plays for little folks from five to twelve years of age.

(Even if you are not interested in producing children's plays, you will find these plays fascinating for the story or bed-time hour.)

Each play is artistically printed and bound—the price, only 50c each, postpaid. Send \$1 today for the two.

**POPULAR MECHANICS BOOK DEPT.
200 E. Ontario St. Chicago, Ill.**

Become An Automotive Electrician

\$75 to \$100 a Week

GET into the highest paying branch of the continually expanding automobile industry. 78% of all automobile repair work is electrical. Yet not one out of fifteen garage men know enough about automotive electricity to cash in on this field. No matter what you now know about automobiles, this is your big chance to quickly qualify for this uncrowded, big money field. \$75 to \$100 a week is gladly paid to men who know how to repair batteries, ignition, lighting and starting systems, magnetic gear shifts, signalling systems and other electrical units.

PREPARE—AT HOME OR IN CHICAGO

Enjoy the thousand pleasures and broadening educational advantages of America's great western metropolis, while you learn a business that will put you far ahead in the Automotive Field.

Visit the immense stockyards. See the great mile long Municipal Pier, the interesting exhibits in the new Field Museum, the old Masters in the Art Institute. Attend the theatres—spend Sundays at your favorite sport. There is no place like Chicago. It is the playground and the Educational Center of the West. Come to Chicago and have the happiest and most profitable visit of your life while you learn Automotive Electricity in America's most practical and thorough school.

PROOF

Earns \$75 to \$100 a Week

I have earned \$75 to \$100 a week ever since I left school.
N. Klecker, Chicago.

Doubles Salary in Two Weeks

Before I went to Ambu my salary was \$30.00 a week. In two weeks I was raised twice to \$60.00. Now doing even better in my own business.
Wm. Deas, Louisiana.

Ambu Course Gets 70% Increase

Earning 70% more than ever before. The course at Ambu did it.
S. K. Kigore Batavia.

Big Dividends in New York

Want to work in largest service station in New York the day after nine men were let out. My course at Ambu is paying big dividends.
Lewis D. Jones, New York.

Ambu Men in Demand

Believe me, they sure grab you off when you say you've been thru Ambu.
J. L. Bailey, Rockford.

Ambu: Then Double Earning

My earning capacity has been more than doubled since my training with Ambu.
R. M. Bernhardt, Greenosette.

\$1000 a Month

I'm starting my own business as my boss has been taking in over \$1,000 clear profit every month.
Wyrose J. Edward

Forced to Open Service Station

After graduation, I set did spare time work. But my reputation spread so fast that I had to open a service station of my own.
Ernest Casares.

Gets 50% More Than Before

With wages going down all over the country my electrical repair business is booming. Thanks to Ambu. My earnings are 50% more than ever before.
Eugene A. Chaput, Holyoke.

Increased Income 4 Times

Have my own shop. Earning four times what I did before I went to Ambu.
Willard W. Ludlow.

NEW EASY WAY TO LEARN In Chicago or at Home

The automobile business is here to stay. The last few years have been only a start. Tremendous additional expansion is on the way. And the highest paid and uncrowded branch of this enormous field needs you. There are plenty of auto mechanics to take up a bearing, tighten a bolt, grind out carbon. But, suppose your starter won't start, your battery won't charge, your lights won't light. Just try to get his aid. They're a Chinese puzzle to the average mechanic. You'll visit from 5 to 10 garages before you find an Automotive Electrician. In a short time you too can become a highly-paid Automotive Electrician who knows his work and his worth—not a dabbler or a guesser. The special method developed by the Ambu Engineering Institute does not saturate you in theories and rules—it shows how to do things and why to do them. Things ordinarily considered complicated are now made amazingly easy.

FREE BOOK ABOUT AUTOMOTIVE ELECTRICITY

12,000,000 cars in America are equipped with electrical units constantly getting out of order and defying the ingenuity of the ordinary garage men. The specialist is the man who makes money today. The Automotive Electrician is a specialist and the demand is far ahead of the supply.

Mail the coupon for FREE book about this big money field. If you want to learn at home the special Ambu Method has made it practical and thorough. If you want to learn at our school in Chicago, a staff of experts (the same men who developed our Home-Study method) will take you in hand. ANY man with a common school education can now become an Automotive Electrician in eight short weeks. The facts about this field are so interesting and can mean so much to you that you should inquire about them right away. A special limited time offer is open now—so mail the coupon at once.

"THE DAUGHTERS OF THE SEA"

BY LAWRENCE WM. PEDROSE,

*617 Pacific Bldg,
Seattle, Wash*

FOR the purpose of making more comfortable and pleasant the hours spent in their home ports by the masters, mates, and pilots of the Pacific, and developing radio broadcasting to their ships while at sea, wives, daughters, and sweethearts of mariners living at Seattle have formed an

organization called the "Daughters of the Sea."

The Daughters of the Sea plan to bring the home closer to the ship, and the radio will be their chief means toward that end. The club has undertaken the fitting up of quarters on the top floor of one of the

city's tall buildings, and is furnishing them with a library, comfortable chairs, smoking accessories, and marine glasses, so that seafarers may watch from the windows the ships making and leaving port.

A powerful radio sending and receiving apparatus is to be installed on the roof of the building, and entertainments, concerts, etc., held in the club rooms will be broadcast to the ships at sea. The personnel of vessels in any storm area will be cheered by the voices of loved ones at home. A practical service also will be maintained; the location of all ships from the home port will be recorded from day to day. The plans also include

the entertainment of visiting captains from other ports of the world. There will be a committee supplying all arriving ships with flowers, and seamen strangers will be provided with comfort and entertainment.

One of the chief duties of members of the new organization is to see to it that every captain has in his ship's quarters the photographs of those dearest to him. Another obligation on the part of members is that of planning pleasant surprises in the homes of mariners when they return from voyages. Eventually, it is expected, the Daughters of the Sea will extend their work to all countries by establishing branch chapters.

INDIA'S TELEPHONE SYSTEM TO HAVE WIDE EXPANSION

The long-distance telephone system of India is having a rapid expansion under the plans of the government telegraph department. The program provides for the line from Bombay to Calcutta, under the Arabian Sea, as the first link, to be followed by one from Bombay to Delhi in the north, close to the Himalayas. These

will be completed in about 12 months. Progress of the work depends mainly on appropriations by the civil divisions, as it is to be done by the provincial governments. With the work complete, Kashmir, just south of wild Turkestan, may be rung up from Bombay, on the Gulf of Bengal, or Cape Comorin on the Indian Ocean.

1322
Electric
NEW MOTOR HAS ONE-PIECE ROTOR WINDING

A departure from standardized electric-motor construction has been made in a rotor winding which is formed in one piece. In the ordinary type of squirrel-cage motor, each bar is individually joined to the end rings, making a number of joints. In the form described, the entire winding consists of an integral sheet of copper, punched, formed, and machine-wrapped around the motor core, the copper bars being swaged into the core slots.

Latest Flying Machine of the Helicopter Type Just After It had Taken Off from the Ground in One of Its Recent Trial Flights: The Machine Has Four Six-Bladed Propellers, Each with a Lifting Capacity of About 1,000 Pounds

LATEST HELICOPTER MAKES FLIGHT

THE latest in the helicopter type of flying machine made its initial flight a short time ago when it remained in the air for 1 minute 40 seconds and reached a height of 8 feet. In several later ascensions the machine, carrying two passengers, rose 3 feet above the ground. Helicopters continue to attract considerable attention on account of their ability to rise vertically from the ground and to land in a small area. While the height attained by this helicopter may not seem very impressive, it can be argued that the first trial trip of the Wrights lasted only 59 seconds. The machine was built at McCook field under the supervision of the inventor, Dr. Geo. de Bothezat, a Russian scientist. It is equipped with four lifting propellers, each having six blades and a diameter of 10 feet, and it has provision for flying horizontally. The machine measures 60 feet from tip to tip and has a total lifting capacity of nearly 4,000 pounds.

MAXIMUM SAFETY CLAIMED FOR NEW STEPLADDER

A maximum degree of safety is claimed for a new folding stepladder built with

widely separated legs and a large working platform at the top. Two benefits are derived from the construction of the legs, one that shaking and upsetting are practically eliminated, and the other that it is possible to place the ladder over machinery or other obstructions. The platform itself provides a large railed-in space on which the workman may stand, confident that he will not fall. There is room enough for a pail or other material, though if desired the back half of the platform may be raised and used for this purpose. This raised portion also serves as an extra step when reaching toward particularly high places.

New Stepladder Which is Claimed to Have a Maximum Degree of Safety: Right, Note the Raised Portion of the Platform; Left, a View Indicating the Stability of the Ladder

972 **IMPROVEMENTS IN HOISTING MACHINES**

In the design of hoisting apparatus, several new features have been incorporated.

For hoists using standard electric motors without solenoid brakes, a patented automatic brake holds the load suspended, preventing it from falling, in case of failure of the electric current. A third-drum extension is provided for converting a double-drum steam or electric hoist into a triple-drum machine. It can be attached to any existing hoist by bolting it onto the main frame. Another innovation is a nonburning friction block, made of metallic asbestos, which is said to increase the efficiency 35 per cent. For use on heavy-duty derricks with long hoists at high speed, the brake flanges are cooled by means of openings through which the air can circulate. An improved cut-steel friction screw with special thread, makes the clutch operate more easily.

Hoist for Use with Standard Electric Motors without Solenoid Brakes, Which Has an Automatic Safety Brake and an Improved Screw That Reduces the Work of Operating the Friction Clutch

SAVING WATER FOR BRAZILIAN STATES

One of the World's Greatest Conservation Projects—Dams and Reservoirs to Hold Back and Store Torrential Rains—Supply for Five Years Required—
Scourge to be Lifted from Stricken Provinces

BY A. S. CHAPMAN

PLANS of the Brazilian government for water storage and irrigation in several states of its territory now being put into execution make them one of the greatest engineering projects ever undertaken in the world. In brief, their object is the reclaiming from drought and making permanently habitable the states of Ceara, Parahyba, Rio Grande do Norte, and parts of Piahy, Bahia, and Pernambuco, in northeastern Brazil, with a population in the neighborhood of 2,500,000. Ever since their first settlement by Portuguese colonists, these states have been subject to periodic droughts, which dried up vegetation, baked the earth hard, killed the live stock, and drove the people from their homes.

Droughts such as those which made these states uninhabitable for years at a time are almost beyond belief in comparison with the ordinary "dry spell" as it is known to us. In 1723, a drought began which lasted for five years. Another, beginning in 1877, had a duration of two and a half years. Yet in spite of these visitations, the country is so fertile under normal conditions, the climate so agreeable, and living conditions so at-

tractive, that the people returned and attempted to make homes again, only to be driven out by another scourge of the same kind.

Following the drought of 1877, Dom Pedro, the last emperor of Brazil, undertook on his own responsibility plans for reclaiming these fertile lands. Work was continued in an intermittent way till now a project is being worked out by two English engineering companies and one New York company.

The problem is not that of conserving rainfall and distributing it during the dry season of the year, but the collection and storage of a total supply sufficient to carry the people and their crops and animals during a prolonged absence of rain. The reservoirs will be called upon with certainty, every five or six years, to furnish a large part of the total supply without replenishment for a period of 30 months. The problem is complicated by many factors. There are occasional seasons when the rainfall is in excess of 60 inches, and the rivers carry tremendous floods. The streams are on steep gradients, and they drain themselves down to the sandy beds soon after the rains

Panorama of East Side of Dam Site at Poco dos Paus, Which Gives Dam and Reservoir: High Hills, Valley, and Watercourse are Included Irrigation. Owing to the Lack of Railways, All Equipment and Build

Left: Boilers Complete Except

cease. There are no snows nor accumulations of ice to melt slowly, no swamps to give up their stores of water gradually. After the rainy season, with its torrential falls running quickly to the sea, comes the regular dry season—perhaps, a drought lasting several years.

The reclamation is executed under the supervision of a special federal department that is in charge of all works to overcome the effects of these prolonged droughts. The first to be undertaken was the construction of a network of railroads and highways, of immediate use to the country and indispensable in carrying on the work. Next came the construction of great reservoirs. Three contracts have been made for the project. One English engineering company has the port works at Fortaleza, Ceara, completion of a dam at Acarape, and construction of dams at

Patu and Quixeramobim, also in the state of Ceara. Another English company has the contract for dams at Gargalheira and Parelhas in Rio Grande do Norte, and for port works at Parahyba. The New York company is administrators for the construction of dams at Poco dos Paus, Oros, Piranhas Piloes, and Sao Gonçalo, in Rio Grande do Norte. All the contracts are identical and call for work to be paid for on a cost-plus basis. The present year should see some of the reservoirs in partial operation.

All of the dams are of the first magnitude, com-

an Idea of the Magnitude of Operation in the Construction of a Single in Its Scope, Converting It into a Lake for Impounding Water for ing Material had to be Moved to the Dam Sites by Primitive Methods. Walkways. Right: Tail Tower

paring with the greatest engineering operations of the world in difficulties of construction. According to present plans, all construction equipment of the American company will be operated by electricity, to be generated by steam boilers using wood for fuel. Dams will be equipped with aerial cableways, concrete-spouting systems, steel derricks, compressed-air drills, and all minor appliances for construction.

To reduce transportation costs, the works will be supplied with cement ground in a mill now under erection at Fortaleza (or Ceara), the unground clinker being bought in foreign markets and transported to Fortaleza in bulk.

The reservoirs constructed by the American engineers will have a total capacity of 120,000,000,000 cubic feet of water. If the full contents of these reservoirs were poured over the land area of Connecticut and one-third of Rhode Island, it would cover them with water to the depth of a foot.

The big project has an important economic value. But for the drought, the states would be fertile and produce abundant crops of rubber and other commodities. Cattle, goats, and sheep are raised in great numbers, and their hides and skins form a considerable article of commerce. But under dry-weather conditions the production of the country is uncertain and the people are likely at any time to be driven out and compelled to seek new homes.

 MECHANICS

6642 Cottage Grove, Chicago
 Tower, triangular trusses will reach out for a distance of 700 feet and form anchorages for the suspension cables of the 4,000-foot span. Only one deck is to be built, and that will be 200 feet above the water level, as compared with the 135-foot clearance of the Brooklyn Bridge of New York.

The bridge will connect Fort Point, on the San Francisco side, with Line Point, in Marin County, on the north. The cost will be about 20,000,000 dollars.

WEED PULLER SAVES BACK
 BENDING OR KNEELING

1396
 A newly devised weed puller makes it possible to rid the lawn of plantains, dandelions, or other weeds without the back-breaking work of bending over to cut them with a knife. With one motion of the hands the puller is opened, another forces it into the ground, and a third pulls the weed. It may be used also in gardens or places hard

to get at by hand. A feature that most home gardeners will appreciate as much as the usefulness of the tool, is that it saves the hands from dirt stains.

Bridge with 4,000-Foot Suspension Span and 6,700-Foot Total Length Which It is Expected will be Built across Golden Gate, San Francisco: Two Piers, to Rest on Rock Ledges 50 Feet below Water Level, will Support the Towers, 1,010 Feet High. The Deck will Be 200 Feet above Water Level

THE FLIGHT OF ATOMS PHOTOGRAPHED

Rev. BY W. D. HARKINS + Mr. R. W. Ryan

Professor of Physical Chemistry, University of Chicago

AN atom is 2,000 times too small to be seen through a microscope and it is apt to stagger the imagination of most people to hear about photographing atoms in flight. Not so long ago an atom was spoken of as the smallest particle of matter, but now it is believed to represent a grouping of electrons around a nucleus, much in the manner that the planets arranged around the sun constitute the solar system.

Air that is not too dry, confined in a cylinder and alternately compressed and expanded under the action of a piston, will produce a mist of minute water particles similar to a rain cloud. If the cylinder is vertical, and the head and upper part of the walls are made of glass, and with sufficient illumination, this phenomenon can be seen with the naked eye as the miniature fog settles toward the piston.

In further developing the apparatus, the terminals of an electric circuit of high voltage are connected at the top and

bottom of the cylinder and in circuit with a device that makes contact at the proper instant during the stroke of the piston. Charged helium atoms, or nuclei, emanating from a speck of radioactive material, called polonium, located on the side of the cylinder, are projected through the air, and about 200,000 minute water drops deposited in the path of each helium atom, each making what appears like the trail of a tiny skyrocket. The helium nuclei, or part atoms, travel at a speed 20,000 times that of a rifle bullet, and as they pass through the atoms in the air, they bump into the atom parts, called electrons, knocking them out of the atoms, which is called ionizing or charging the atoms, producing the effect seen in the trails in one of the illustrations. On

each electron thus knocked out, and on each ion left by tearing an electron out of an atom, a minute water drop deposits itself. A great number of these drops, as described above, constitute each atom

Appearance of Upper Glass Portion of Cylinder When Brilliantly Illuminated, at the Instant Atom Tracks are Formed: Note Collision between Two Atom Nuclei Shown by Forked Trail at the Left

track, which when illuminated by a powerful arc light, are extremely bright. When one of the helium nuclei collides with the nucleus of another atom, the result is similar to one billiard ball hitting another, but usually it shoots through 400,000 atoms without striking a nucleus.

A motion-picture camera can be mounted directly above the top of the cylinder and arranged to operate in synchronism

with the movements of the piston so as to photograph each series of flights as it occurs. It is interesting to note that out of 30,000 tracks photographed, only one indicated a nearly direct collision between a helium nucleus and the nucleus of another atom. By measuring the angles of incidence and deflection shown in such a collision, it is possible to compute the diameter of the atom nucleus involved.

year, which is summer, 16,000 coolies are employed in stevedoring pursuits at the busy port. One of the most important articles of export is linseed, which is brought by mule team or train to the docks. One sack or box at a time is carried by each coolie. Checking is done with sticks. When a coolie picks up a parcel and places it on his shoulder, he is given a wooden stick about the size of a lead pencil. At the end of his journey, the coolie deposits his burden and gives the tally stick to another checker. By counting the sticks at the end of the day, the exact number of sacks that have been loaded or unloaded is known.

1144 TEAM OF 30 ANIMALS HAUL HEAVY WHEAT LOAD

Driving single-handed a team of 20 horses and 10 mules, hitched to a wagon train loaded with more than 1,000 bushels of wheat. Ralph Morehouse, of Alberta, has established what is said to be a record in western Canada. The trip was made recently over a 22-mile stretch from his ranch near Buffalo Hills to a grain

elevator at Vulcan, Alta., where, without unhitching any of the animals, the entire load was disposed of in 1 hour 17 minutes. In turning corners, Morehouse, ignoring the leading teams, swung the hind teams over the pulling cable and started them in the proper direction. These animals would then pull the lead teams until they, too, were headed in the direction desired. About 2,000 persons gathered to watch the performance.

The Wagon Train Entering Vulcan: In Turning the Corners Encountered from This Point On, the Driver Swung the Hind Teams over the Hauling Cable, and Forced These Teams to Pull the Other Animals Until They, Too, were Headed in the Direction Desired

LARGE AIR LINERS EXHIBITED IN EUROPE

K+H

AT the present time there is a good deal of activity along the lines of developing safe and comfortable airplanes for the established and contemplated passenger routes in Europe. Above is a picture of the first German passenger plane that has arrived in England since the war, shown soon after landing near London, after a flight from Berlin. It is a large all-metal monoplane, and this was a trial trip for a permanent service between the two countries. At the right can be seen a portion of the cabin and one of the propellers of the Breguet "Leviathan," a giant commercial plane which was exhibited at a recent aero show in Paris. The "Leviathan" is equipped with the comforts of an overland train. The interior of a giant passenger airplane exhibited at the show, is shown below. The apparent passengers and attendants are really wax figures, placed in the cabin to give an idea of the comfort and security that a modern air liner affords.

NAME-FINDING GUIDE FOR TELEPHONE DIRECTORY

An index-guide system with which names in a telephone directory are found much more quickly than at present is being tried by the Chicago Telephone Company. At the front of the book is a page having printed in a vertical column along its outer edge a series of letters and subdivisions, beginning with A at the top and running to Ku at the bottom; while a page at the back is printed with the rest of the alphabet similarly subdivided. Extending across the front edge of the book are parallel lines marking these divisions, the beginning of each letter and its subdivisions being indicated by special vertical marks. To find the name Harris, for example, the finger is placed at "Ha" in the vertical column, run along the parallel lines to the special mark, and the book opened at that place.

Left and Right are Shown the Front and Rear Key Pages of the Index-Guide System Which has been Proposed for Use with the Telephone Directories of Large Cities

1385

COWLITZ BRIDGE COLLAPSE FATAL TO MANY

The folly of persisting in the use of a bridge after it was known to be unsafe had a demonstration at Kelso, Wash., when a bridge, built in 1907 and known to be weak, fell into the turbulent water of the Cowlitz River, carrying at least 100 people and 10 automobiles with it. The exact number who went down will never be known, and it is likely that the loss of life, at least 25, will remain only an estimate, as it is expected that comparatively few of the bodies will be recovered.

The bridge crashed at 5 o'clock in the afternoon in the early darkness, when a tie cable, anchoring one of the great steel cables at the east end of the bridge, parted without warning. With the screech of metal racing through the pulleys of the towers, the cable snapped out over the river. The west span wavered and leaned far out over the river, where the current caught it and with a single wrench dragged towers and drawspans into the stream.

Kelso is an industrial town in the lumber district. Near by, on the opposite side of the Cowlitz, a great lumber company is establishing another town to be known as Longview. The disaster occurred just after the day's operations had

ended at Longview and hundreds were hurrying homeward to Kelso, accounting for the heavy load on the bridge at the time. Those close to the ends of the bridge felt it begin to fall and scrambled to safety. Most of those on the bridge, however, were plunged into the river. There were heroic rescues, and many succeeded in clinging to the wreckage until help reached them.

The day after the collapse, rescue crews pulled apart the tangled timbers and cables and hoisted out the automobiles, but failed to find the body of a single victim. All had been swept away by the swift current. The junction of the Cowlitz River with the Columbia is just two miles below Kelso, so it is likely that most of the victims were carried into the Columbia and, probably, to sea.

The work of clearing out the debris was facilitated by the use of a new bridge, not yet completed, a short distance downstream from the old one. This structure caught much of the wreckage, and power hoists were used to lift from the river automobiles and other salvage. Within perhaps two months, the new bridge would have been ready and the old one abandoned.

Several Views of Folding Portfolio, the Partitions of Which are Connected with Cloth Plaited like the Blades of a Fan, and Pivot at the Back

folio which can be carried about or used as a file on the corner of the desk. The case is 9 inches wide, and the partitions are connected with plaited cloth like the blades of a fan, and pivot at the back. One style has a leather flap which snaps over the edges, preventing the contents from falling out when carried, while on the desk this piece is slipped under and out of the way. The portfolio is particularly convenient for sorting small clippings, cartons, or miscellaneous data required for quick reference. Another advantage is that when on the desk it conceals contents of a private nature.

The carbide type carries a gear-wheel for sparking a flint and thereby igniting the gas, but working conditions have made it a source of trouble to the miner. If his hands are wet or greasy, the moisture or oil may be carried to the flint by the gear wheel, spoiling its action. A new lamp avoids the troublesome sparking wheel by using a snap light. Moisture and oil have no effect, and even gloves do not interfere with lighting the lamp. The inventor has also put a small plunger at the base of the water outlet, for pushing away the sludge which tends to form there.

Captive Balloon Equipped for Protection against Lightning and Static Electricity: The Cone-Shaped Discharger on the Topmost Part Connects, through Flat Braided Copper-Wire Conductors around the Bag, to the Haul-Down Cables Which are Grounded to an Iron Pipe

DEVICE PROTECTS BALLOONS

AUTOMATIC ENVELOPE SEALER

323 AGAINST LIGHTNING

1096 WITH NO MOVING PARTS

In order to afford protection against lightning and the static electricity of the clouds, for captive balloons and kite balloons, used in securing meteorological data, a radio engineer of the United States Navy Department has developed a new apparatus. The discharging element is a vertical conductor located on the topmost part of the balloon and connected with suitable conductors to the down-haul cables, which are grounded to an iron pipe driven into the ground. To prevent the balloon circuits from being affected by the atmospheric discharge, a carbon resistor of 5,000 ohms is connected in series with the cables. The discharger consists of a leather cone with a copper tip fastened to it by means of copper rivets, and the conductors around the body of the balloon are of flat braided copper. It is said that one balloon equipped with this rig will lend considerable protection to a number of others in its immediate vicinity. This protective system has already been installed on eight balloons.

Automatic in action, a new envelope sealer is operated by simply passing the envelope through the sealer with a single movement of one hand. The envelope flap is lifted, the gum moistened, and the envelope sealed without any hand pressure. The sealer can be screwed to a desk or table. It has a reservoir for water and a moistening pad that is easily re placed or removed for the purpose of cleaning.

WHEN THE CARIBOU TREK

Migrating Herds of Wild Caribou Delay Alaskan River Steamers and Interfere with Domesticated Reindeer—Government Drives Latter to New Feeding Grounds, 1,100 Miles Away

BY STRATFORD F. CORBETT

IN the Yukon district of Canada, and in Alaska, are thousands upon thousands of caribou, large, splendid animals, defiant of man's efforts to domesticate them. So many of them are there, in fact, that herds swimming the Yukon have seriously interfered with the progress of river steamers en route to Dawson City. Captains have found that, until they have passed, it is useless to attempt going ahead—even though the delay might be a matter of hours.

During these stops, many of the animals are shot by passengers, for a caribou in water is quite helpless. But in spite of relentless hunting by white man and Eskimo alike, the vast herds still continue to be the largest evidences of wild-

It is interesting to note that one of the principal reasons for this move was to take the reindeer herd, considered one of the finest in Alaska, out of the vicinity of the annual caribou migrations. The reindeer is closely related to the caribou, and, if permitted, they will run together and interbreed. The offspring of this union, however, is not a reindeer, but a caribou with all the nomadic instinct of its prototype. Hence the precaution of the government agency.

The drive was over snowy tundra and mountainland, the herders native Eskimo. Near Bethel, on the Kuskokwin River, the first rest was made. Then the reindeer, foraging as they went, were driven leisurely to the foothills of the McKinley Mountains, where another halt was called. After four months, they continued to Mt. McKinley Park and thence on to Cantwell Station.

It was while resting near Bethel that one of the most exciting incidents of the journey occurred. Early one morning, a passing herd of caribou was sighted. In a few minutes the entire herd of reindeer became nervous, restive, and eager to break away. The herders, working heroically, ran here and there endeavoring to calm the animals and distract their attention. Yet, in spite of their best efforts, a hundred or

more of the deer succeeded in breaking away and joining their wilder brothers.

Then followed a strenuous chase across country, in which the guards, assisted by men from the reindeer station in the vicinity, recovered all but fifteen of the truant deer. Throughout the rest of the drive, the greatest difficulty encountered was in keeping the herd intact. That more were not lost was due entirely to the skill and watchfulness of the herders.

Men were first employed for work of this kind in 1892, when the Federal government imported 80 reindeer from Siberia. Introduced primarily to take the

The Dotted Line Indicates the Route Taken in Driving the Reindeer from Goodnews Bay to Cantwell, While the Black Line Shows the Path of the Caribou Migrations. The Black Pyramids Represent Reindeer Stations

animal life in existence in the Far North. As they trek, each year, through forest and mountain stream on their long journey to new feeding grounds, they present a strange and magnificent spectacle.

Another great migration of a slightly different nature, but throwing interesting sidelights on the habits of the caribou, recently took place under the direction of the Alaskan division of the Bureau of Education. The herd, in this case, was a band of 1,500 reindeer owned by the government, and the route lay from Goodnews Bay, on the Bering Sea, to Cantwell Station, in the Broad Pass District.

"Herds swimming the Yukon have seriously interfered with the progress of river steamers en route to Dawson City. Captains have found that, until they have passed, it is useless to attempt going ahead . . ."

The Reindeer Herd as It Appeared en Route to Cantwell: The Drive was Made Leisurely So the Animals could Forage for Their Food as They Traveled

Left: The Summer Home of a Government Herder: The Boy with the Lasso in His Hand is Practicing, That He, Too, may Some Day Become a "Reindeer Man"

place of the depleted wild-game resources of the territory, the reindeer has now become an economic factor in the development of Alaska. It is well known that to the native the reindeer has long symbolized food, clothing, shelter, and a means of transportation.

Now, with the aid of the white man, there is being developed the reindeer industry, the most tangible evidence of which is found, perhaps, in the fact that reindeer meat can now be purchased in many of the larger cities of the Pacific coast. It was principally to make the markets of the United States more accessible to Alaskan reindeer men that the government established the large herd in the Broad Pass country.

In the expectation that it will be possible to slaughter the male reindeer of this and other herds, meat-chilling plants are being constructed at various points in Alaska, including Cantwell Station in the Broad Pass district, so that the herds can be driven to these plants, the meat prepared for shipment, and carried to the States in refrigerator vessels.

An indication of what the future may develop, is to be found in the reports of privately operated refrigerator plants, which show that during the winter there

were shipped 6,200 carcasses, as compared with 1,800 in the preceding year.

The most serious, perhaps the only serious, menace to successful reindeer raising are migrating caribou herds, and so it is that government agents are wont to exclaim, "When the caribou treks, watch out!"

ADOPT ZONING SYSTEMS IN SMALLER TOWNS

Many of the country's smaller towns and villages are adopting zoning systems, according to the Department of Commerce. In the entire country 109 cities, towns, and villages were zoned on Jan. 1, 1923, as compared with 55 for the same day last year. Of those zoned in 1922 there were 14 towns with populations of from 5,000 to 10,000, while 12 had 5,000 inhabitants or less. The state of New Jersey ranks highest in the number of places zoned, New York being second, and California third.

SECRET CONVERSATIONS BY RADIO "SUPERPHONE"

The apparently impossible feat of transmitting conversation while confining it to the speaker and the person for whom it is intended has been accomplished recently in Washington. It was done by a combination of the "superphone," the invention of Maj. Gen. George C. Squier, chief signal officer of the army, and the principle of using electric light or telegraph wires, as in the receiving station at Chatham, Cape Cod.

"Wired wireless" and high-frequency alternating current traversing telegraph or light wires, are used in connection with an ordinary microphone at the transmitting end. The message is picked up by radio instruments and directed into a telephone receiver at the other end. A number of conversations may be carried on simultaneously over the same wires. Where secrecy is important, as in military or business matters, the invention's value is apparent.

By Combining the "Superphone" with "Wired Wireless," the Operator is Talking from the Georgetown Power Station to the Bureau of Standards in Washington, Five Miles Away

TIN CANS MADE AT HOME WITH SIMPLE OUTFIT

Among the interesting devices lately put on the market, is one for making tin cans at home. It consists of three small

machines that are easily fastened to any workbench. A piece of tin, previously cut to size and

shape, is formed by the first machine into a cylinder which is next put into the "seamer," where it is held by a glass clamp, while the 1/8-inch lap joint is sweated together with solder and a hand soldering copper. The third machine is used for flanging the ends of the cylinder and in crimping on the circular pieces of tin that form the bottom and top of the can. This equipment is comparatively inexpensive, and was developed to meet an insistent demand from localities where the cost of a can factory is not warranted or to which the transportation charges on empty cans are excessively high.

Price - \$100.00 for set of three machines.

With This Simple Device, Tin Cans may be Made and Soldered, Saving the High Cost of Shipping. From Left to Right, the Machines Are the Crimper, That Puts on the Ends, the "Seamer," and the Shaper

NEW LOOPS IN COLUMBIA RIVER HIGHWAY

1314

By HORACE E. THOMAS *911 Duackley Ave
Portland, Ore.*

ONE of the most spectacular sections of road in the United States was completed recently as a portion of the upper Columbia River Highway in Oregon. It is known as the Rowena Loops and is quite as striking as any of the older sections of this great highway which wind down the gorge of the Columbia River from the plains of eastern Oregon to the Pacific Ocean, piercing the Cascade Mountains at the only place where this lofty barrier is broken.

In addition to its scenic beauty, the Columbia River Highway is becoming of national importance as a link in one of the great transcontinental routes. The Columbia Highway itself now extends from Pendleton to the sea, a distance of 340 miles, of

which 219 miles is continuous hard-surface pavement and the rest macadam. At Pendleton it connects with the Old Oregon Trail, a road which follows the route taken by the ox teams that took the early pioneers into the West and which joins the Lincoln Highway at Salt Lake City.

For 90 miles east from Portland the Columbia River Highway penetrates the Cascade Range. Rowena Loops is on the eastern side of the mountains, beyond Hood River and between Mosier and Rowena. It was completed and paved a few months ago.

The construction of Rowena Loops was a dangerous and exacting engineering feat. The roadway is cut in the side of a rock cliff with precipitous sides dropping to the Columbia

From the Summit "A," 750 Feet above Sea Level, to "B," a Distance of 2,500 Feet, the Grade Averages Three per Cent, and from "B," at an Elevation of 680 Feet, the Road Drops to 130 Feet at "C"

This Panorama of the Loops Gives a Good Idea of the Beauty of the Surrounding Country, and the Care Which has Been Taken in Its Construction. The Total Cost of the Highway, the Entrance to One being Built of Stone, Was Approximately \$185,000, and the Cost of Paving the Section About \$90,000.

Near the Top of the Rowena Loops, Showing How the Road has been Cut through Solid Rock and Made to Wind about the Edge of the Cliff: Note, Too, the White Fence Guards Which are Built at Curves in the Highway and Other Possible Points of Danger

been Taken in Keeping the Average Grade of the Road below Five per Cent. The Complete Cost of the Grading Inserted at the Left and Right Are Picturesque Views of Two Tunnels on the While the Other Is Entirely without Artificial Support

River hundreds of feet below. The view of the Columbia, which is visible for many miles in either direction, is one of entrancing beauty, but at places the traveler is likely to be more concerned with the deep cañon into which he would plunge if his machine left the highway. There is no real danger, though, for the construction is of the most permanent kind, and where it skirts the edge of the cliff, a low stone barrier protects the autoist.

Rowena Loops covers a distance of 2.75 miles, and in that distance rises from an elevation of 130 feet to 750 feet above sea level. Skillful engineering has kept the grade to a minimum, so that it averages about three per cent, with none of it more than five per cent. In most places the roadbed was cut from solid rock, as is indicated by the fact that of a total of 138,000 cubic yards of excavation, 105,000 was rock. The grading alone cost over 180,000 dollars.

**LORD'S PRAYER SET ON PICA
325 FACE WITH MONOTYPE**

The Lord's Prayer has been set on a piece of pica type in a box one-sixth of an inch square with a monotype machine in a Philadelphia shop. The inscription consists of 225 capitals, four commas, four periods, one semicolon, and two dashes. The letters are .006 of an inch high. Duplicates were made and distributed by the company, but because of the delicacy of the type no attempt was made to print the inscription.

**1293
AUTO DISPLACES BRONCHO
IN RIDING TEST**

In the one-time wild and woolly West, riding the bucking automobile may give way to the honored test of skill in horsemanship—riding the bucking broncho. For it has been found that a seat on the radiator of a small auto with the wheels off center gives all the thrills of a broncho-busting contest, with an element of novelty. In a recent performance of this sort in California, a saddle was placed on the hood, and a prize of \$25 offered for riding two blocks. At 10 miles an hour, the rider had difficulty; at 15 miles, he went off. With the hub of each of the wheels of the car removed and reset 2 inches off center, it gives a realistic imitation of the bucking broncho, though, having no reins, the rider is, perhaps, even more helpless than on the "ornneriest" animal.

End of Compressed-Air Tank Inclosing Wind Tunnel Used in Testing Models of Airplanes: The Opening Shown is Closed by a Door Weighing Two Tons, Opening Inward. The Tank Operates under an Average Pressure of 300 Pounds per Square Inch

1341
NEW WIND TUNNEL IN HUGE COMPRESSED-AIR TANK

The wind tunnel recently completed for experimental work by the National Advisory Committee of Aeronautics, will operate in the greatest compressed-air tank yet built. The 5-foot diameter tunnel is inclosed within a steel tank, 15 feet in diameter and 34 feet long. The walls of the cylinder, which is designed for an average working pressure of 300 pounds per square inch, are made of plates 2¼ inches thick. At the ends and along one side are platforms and observation windows from which may be viewed the instruments in the test chamber. A fan located inside the chamber can be regulated from the outside to give the desired wind velocity. Test of models, which may have a span up to 2 feet, will yield data comparable to those from a full-sized airplane by eliminating the "scale effect" that is common to wind tunnels.

Members of the Expedition are Shown Here Conversing with Natives about the Difficulties Which might be Encountered. Though Many of the Tribes Were Friendly, There Was Also Danger of being Attacked by One of the Numerous Bands of Desert Robbers

MOTOR CARS CROSS SAHARA DESERT

By CLEVELAND GAINES

FIVE motor cars, all equipped with special endless-tread drives of rubber to plow through the deep sand, and some mounted with machine guns to repel anticipated attacks from desert robber bands, recently completed a journey across the Sahara Desert of approximately 2,000 miles, from Tuggurt, in Algeria, to Timbuktu, in French West Africa.

The caravan left Tuggurt on December 18, last year, but first, in order to insure a proper supply of fuel, water, and food, other cars were sent ahead as far as Insala to establish depots, while a similar outfit left Dakar in the south and approached north to a military station at Kidal. The expedition proper then set forth, arriving at Timbuktu on January 7, just 20 days later, the time being several months faster than average camel time for the same distance.

The cars had, in addition to the endless-tread arrangement, a platform at the back for holding two gasoline storage tanks. These tanks each had a capacity of 35 gallons. Water tanks containing 13 gallons, and aluminum chests filled with ammunition, food, tools, and other necessities, were also carried. A tent for each car, and a motion-picture camera outfit completed the equipment. Trial

tests had shown that the sand had no effect on the lubrication or operation of the motor, nor were any modifications in the radiator or any other part of the machine found necessary. The drive itself consisted of two wheels, several

The Figures Represent the Approximate Distances in Miles between the Various Stations along the Route. Some of the Regions Traversed Were Little Known to Man. This Was Particularly True of the Section between Tit and Kidal

feet apart, around which was stretched the rubber belt, with smaller intermediate wheels between the two helping to distribute the load.

Above: Fully Equipped Car of the Expedition Proper. Right: One of the Gasoline-Supply Cars Sent Ahead of the Main Party

While no part of the journey could be considered devoid of hardship, it was from the Ahaggar Mountains to Tit and Kidal that travel was especially difficult. This region is practically unknown, and the route had to be determined by compass. Tuggurt to Wargla is a vast, sandy desert with some vegetation; from Wargla for some distance south, a somewhat similar coun-

try, then for miles there is nothing but barren desert until the Ahaggar Range is reached. After that comes the "great unknown," also called the "land of thirst," and finally more sandy stretches with occasional vegetation, to Burrum on the Niger, and Timbuktu.

One of the principal reasons for the trip was to determine whether or not the cars would be practicable for desert travel, though data of a scientific nature were also collected.

The Natives had Seen No Car of This Description Before and Were Curious to Learn Just How It was Constructed and How It would Run through the Sand. The Little Group Shown Here Also Thought It Was Quite Proper to Bring a Pet Ostrich Along

COMMENT AND REVIEW

[These pages were printed January 27, 1923.]

THE count of the death toll from revolvers and automobiles for 1922 is completed and rolls up the astounding total of 10,000 from pistols and revolvers, and about the same number from automobiles. In both counts many hundred, if not several thousand, who died weeks or months after the accident, and in the case of revolvers, many more who were killed and the bodies concealed and not yet found, were not included.

*Pistols and
Automobiles
Kill 20,000*

Following the article in this magazine on revolvers, a few months ago, I received many letters, some couched in evidently sincere but bitter terms, protesting against the article and what it proposed. In some cases, such as explorers, woodsmen, frontiersmen, and some hunters, I frankly admit a law prohibiting the manufacture and use of such small arms would unquestionably work a great hardship. Some of the protests sounded rather foolish, such as the farmer in Connecticut who must have a revolver "to defend himself against snakes, skunks, and hawks." In the case of the skunks, most of us will agree a long-range weapon would be more advisable, and when it comes to hitting snakes and hawks, most people will regard a shotgun as likely to score a larger number of hits.

The chief of police of Los Angeles seems to think guns should be freely and generally toted, but he is quite the exception among police officials, especially of large cities.

The ease of smuggling, or of making revolvers at home, was likened by many to the inefficiency of the enforcement of the 18th amendment. But this is not true. It is manifestly much easier to make "home brew," which can be done with a teakettle, than to make a revolver of sufficient accuracy to be worth having. While one undoubtedly can be homemade with a few simple tools, the output from this source would be in the ratio of about 1 revolver to 10,000 gallons of "moonshine."

Anyway, the murderous killing goes on, and is now estimated to be in the ratio of 1 murder to each 10,000 population, each year. In other words, the average risk of either being murdered or killed by auto, is 1 in each 5,000 population, yearly, or in terms of 10 years, at this same rate, your chance of being killed is 1 in 500.

If a single city of 20,000 were wiped out in an instant, the entire world would gasp; but this decimation is so regular and so diffused, few outside the immediate relatives and friends are much affected. It is almost impossible to safeguard machinery under the best conditions, and with most skillful operators, to the point of absolute safety. It seems impossible to insure that the more than 10 million drivers who operate the 10 million automobiles, shall each and all possess the mental balance, training, eyesight, judgment, and skill to preclude any loss of life. It is far, very far, from human possibility. The chief trouble rests not so much on the lack of these qualifications, necessary as they are, but rather in a selfish indifference of the great potential power they control, and the lack of thought that the least relaxation to carelessness may cause a death any minute. Even the most careful have their moments of unconscious disregard. Appeals for safety first undoubtedly are very helpful; the road signs marking grades, railroads, curves, etc., are good, and should be uniform in all states. But as men working in powder mills become careless, so men and women, boys and girls driving cars, come to think more of caution as it affects their own bodies, and less of others. The only thing which will check, for it can never wholly cure, the evil, will be greatly increased and rigidly enforced penalties for killing and maiming people, even unintentionally. The story of the chauffeur arraigned in court for running over a woman, illustrates the mental attitude of many. He pleaded he commenced sounding his horn when the woman was still some distance away. When the judge asked if he used his brake he replied, "I never thought of that, your honor."

Indianapolis proposes to submit all persons arrested for auto speeding to an insanity test, and to keep them in padded cells pending the decision. Better far to decide that point before the license is issued. And it can be done. The Yellow Cab Co., of Chicago, submits every applicant for position of driver to a test which begins with good physical health, and includes eyesight, 92-per-cent good, heart and lungs perfect, no epilepsy in family, and no insanity as far back as grandparents. The inspection is nearly three times as severe as insurance companies demand. And the company has found 5,000 men competent to qualify. Aside from all moral obligations to the public it serves, the resulting freedom from accidents amply repays all the cost of examination and investigation.

This may be taking unusual precautions, but sooner or later some such condition, though less severe, will have to be imposed upon all drivers, of both public and private cars.

NEVER in our history had anything to be sold received the urge and publicity which was put forth to dispose of Liberty bonds and war stamps. Every paper and magazine was full of display advertisements and columns of reading notices. Trainloads of printed circulars were sent broadcast, every billboard and available wall was plastered with posters, and both men and women orators spoke from theater platforms, pulpits, vehicles, and soap boxes. It was a most remarkable course in educating the masses to buy securities, in which were enlisted—chiefly voluntary—the best advertising talent in the country—which means in all the world.

Blue-Sky Stocks

Millions of people who never in their lives had bought a share of stock or a bond, became bondholders. The number of these is placed at 20 million. Like many other things, the second time was easier than the first, and almost before the war was over, and the appeal to buy government bonds ceased, there sprang up an army of unscrupulous schemers who took advantage of the psychological condition to market their worthless "securities." The public, having in mind and sight the fortunes which the war conditions had brought to many, almost overnight, were easy marks for plunder. Most anything which could be made to read like a get-rich-quick enterprise found willing listeners, and a ready and welcome reception. Oil and mines were the most favored subjects, and to make it easy for everybody to get in—on the ground floor, of course—many of these shares were offered at a price as low as one dollar, or even a few cents each.

The "clean-up" by these fraudulent promoters is estimated at anywhere from two to three billion dollars since the war closed. The conservative estimate for 1922 is placed at five hundred million dollars, very little if any of which is now, or ever likely to be, worth the paper on which the shares are printed. It is a terrible drain, as a large percentage of it comes from people who cannot afford to lose.

Some of the states already have what are known as "Blue-Sky Laws," which make it difficult to issue or sell fake securities. In other states there is so much latitude permitted incorporators, it is very easy to juggle a few hundred dollars worth of land into alleged assets represented by the hundreds of thousands or even millions. Bankers and other reputable financial institutions have tried constantly to caution the public against being robbed in this genteel manner, but too often the very ones they tried to warn, have been made to believe the warning came from some selfish or ulterior motive. And so this semilegalized or apparently legalized system is still going on. This magazine has repeatedly urged in the past, that before investing any funds in an enterprise of which your knowledge is limited to its own advertising matter, or its glib salesman, you submit the proposition to your banker. And even if you do not have a bank account, there are few bankers in the whole United States that will not cheerfully give a few minutes to even the poorest man, to tell him if the proposition is bad, or how to find out. Few of us would have the temerity to amputate our own leg or try our own case at law; we seek the counsel of men experienced in such matters. In consulting a banker the only difference is the service doesn't cost us anything.

RECORDS show that fully four per cent of all the boys and girls born in this country are left-handed from birth. An English scientist believes that the ratio is much higher in his country and around 10 per cent. The doctors are able to explain the physical condition of nerves which makes it natural for a child to use its left hand in preference to the other, but as to the cause of this condition they can only say, Nature willed it so.

What Causes Stuttering?

However, a most curious result has been discovered where attempts are made to force a left-handed child to use its right hand instead. Not in all cases, to be sure, but as far as the investigation has gone, a surprisingly large number of cases have been found, where parents or teachers used severe measures to force the use of the right hand, in which the child became a stutterer or had an impediment of speech. These varied in degree from a few years to life, and from acute stuttering to an impediment quite slight and hardly noticeable in ordinary conversation, but greatly aggravated under excitement.

It has been interesting to me, when coming in contact with people having impeded speech, to ask them if they were originally left-handed, and forced at home and in school to use the right hand. So far no one has been offended at such a personal question but all have shown great interest. In the instance of the most acute case of stuttering I have ever known, and whom I met daily for several months, the man could scarcely make himself understood and would appear at times almost to choke in the effort to articulate. Today he can shoot and throw a stone with unusual accuracy with his left arm, and very poorly with his right. He told me that during six or seven years, as a child, he was severely thrashed almost every day, both at home and in school, as his father was determined to "break him of the habit of using the wrong hand." In this case I judge both father and son possessed the same unyielding spirit—the son certainly has it now, and thinks, acts, and works with the speed of a hair trigger—but the father evidently dominated with his parental authority and strength.

Thus far nearly four out of five cases of impeded speech I have investigated, turn out to have been left-handed in childhood. Several left-handed persons, on whom no special effort was made to change, show no evidence of retarded utterance.

Scientists declare that it is much better not to try to force a left-handed child to become right-handed; that, if he does not readily and easily accept the change, to let nature have its way, and that in reversing nature, a mental-nervous clash arises which apparently in the majority of cases shows its disapproval of such outside interference by a greater or less disturbance of the speaking function. In these days we are becoming more enlightened and considerate in such matters as compared with 30 or more years ago, but it is pitiful to reflect on the thousands of cases, probably hundreds of thousands, where thoughtless, though well-meaning parents stifled and killed the natural inclination and individuality of promising, budding ambition, God-implanted.

It will be a greatly appreciated favor if any of our readers, knowing instances of people naturally left-handed, would report whether the effort to make them right-handed had any effect upon their speech or not.

AN editor is known by his readers to be absolutely misinformed on subjects in which they disagree with him; and the average reader is doubtless entitled to his doubts many times, but it remains apparently for the city salesman to really demonstrate, in almost brutal fashion, the completeness of the editorial mental density.

*How
Not to
Sell*

Having had occasion the past three months to purchase a great variety of office-building supplies, this hitherto unsuspected condition has been effectually demonstrated in my own case.

The first disillusion came with the salesman who represented letter-filing cases. Having stated our requirements, in terms of approximate number of letters daily, the young man

looked wise, considered a minute, and decided what we needed was their C. S. 1.

"What is C. S. 1?" I inquired.

"Why," came in a somewhat grieved and condescending tone, "that's our letter file you want."

"Is it made of paper, metal, or wood?" I ventured.

"Oh, in case you are considering metal you want our F. D. X. and probably two N. C. O. for each F. D. X."

"Some of our manuscripts are pretty long," I confessed.

"In that event you will need F. D. X. with two N. C. O. for transfer for ordinary correspondence; and P. L. 1, with R. I. P. transfer for manuscripts."

By this time I recovered a little of my lost nerve and remarked, "Young man, what you say strikes me as R. O. T. What I am trying to buy is office furniture, not alphabets. If you will only talk Greek, Turkish, Armenian, or western Chinese, our translator could probably get a little intelligence out of it, as to the material, size, operation, capacity, color, and price of your goods."

"But," quoth he, "those are our catalog numbers."

"Sorry," I replied, "that I have not subscribed to your catalog all these years and hence am a bit shy on its terms; but do you want your pay P. D. Q., or W. W. R., and should it be, O. V. P., N., B. C., or S.?"

It was his turn to register ignorance, but he managed to say, "I don't get you."

"Well, these are our trade terms; P. D. Q. means immediately; W. W. R.,

when we're ready; and O. V. P. is our verbal promise; N. means notes; B. C. is bank check, and S. stands for 'simoleons'. I'm a bit surprised a lively young salesman like you is not familiar with our private marks for these things."

After a questioning which would have done credit to a lawyer on cross-examination, I managed to worm out of him the size, capacity, material, color, and cost of his various file cases, but it was like pulling back teeth with tweezers, and he seemed to realize he had grossly betrayed secrets belonging exclusively to his firm.

If he had been the last and only one, these lines would never have been written. But, unfortunately, he merely opened the ball. They came in droves; fine, clean, bright-faced, earnest young fellows; every one good to look at; and all talking the same catalog lingo which, of course, was unintelligible to me. Even when I got down to scrubbing brushes one tried to sell me F. H. B., which turned out to be "fiber and hog's bristles," and when the stuff came, C18 turned out to be some kind of a mop.

With scarcely an exception they all reeled off yards of (to me) utterly meaningless trade letters and numbers with a confident air of profundity which at first was amusing but quickly became exasperating. My conclusion was that if these young salesmen were selling my goods I would get some friend to send for one of them, and I would sit concealed where I could hear their puzzle talk and then I would go home, call the boys all in, and give a few first easy lessons in salesmanship, or buy a course in some correspondence school for each of them, or both.

H. H. WINDSOR

NEW CENTRAL POLICE STATION COMPLETED — IN DETROIT

Prisoners' quarters occupy the two top floors of the new central police station recently opened in Detroit. It is thought that this arrangement will be more healthful and, at the same time, will have a moral effect for the better on those who may be confined there. Another means used to carry out this latter idea is the prisoners' entrance. This is built adjoining the police garage, from which the prisoners enter a private reception room and thence go up in a special elevator, removed from the other occupants of the building. Telephone equipment enabling a message to be transmitted over 50 lines at once, and a powerful radio outfit, are other new features. The station is nine stories high and cost about 1,700,000 dollars.

☐ A \$2,000,000 wireless plant, operating direct to Australia and England, will be built at Vancouver, B. C.

A Smoke Bomb Set Off by One of the Life Guards at Long Beach, California, Signals the Operator of a Launch, Who Immediately Starts toward the Distressed Bather

NEW METHOD OF BEACH PATROL

By FREDERICK HERR

WITH more than five miles of beach and surf-bathing facilities, Long Beach, Calif., has the largest bathing beach on the Pacific coast. More than 100,000 weekly gather here from Los Angeles and other parts of southern California, and Sunday crowds during the summer months have reached as high as 70,000 in one afternoon.

To train and equip an efficient life-guard corps for the adequate protection of such vast numbers of bathers, had long been a subject of study to the Long Beach municipal authorities. The old plan of stationing life guards at intervals along the beach and the various piers, and making rescues by launching a boat from shore, had been in practice for many years. This system offered a certain amount of safety, but fell short of the perfection which was the aim of the authorities.

After experimenting with various methods of life-guard arrangement, a system was devised that has no counterpart either on the west coast or elsewhere in the United States.

Under the supervision of Squire Duree, commissioner of parks and recreation of the town, the so-called "Duree system" was adopted. The beach is divided into nine life-saving districts. The system involves the use of smoke bombs to signal the pending rescue of a bather who has ventured into treacherous water. A look-

out is on guard at the end of an 1,800-foot pier, which extends into the ocean midway between the nine life-saving stations. A 21-foot power launch, equipped with first-aid necessities, pulmotor, and stretcher bearers, is moored at the end of the pier, ready to be dispatched to any part of the sea front at a moment's notice. When a life guard is about to make a rescue and needs assistance, he sends up a smoke bomb. The lookout at the pier's end sees this signal, and immediately sets forth with the launch to the scene of trouble.

It has been found from experience that a boat can approach a bather in distress more rapidly and more safely from the sea side than were it to set out from shore through the breakers. When a bather has been picked from the sea and is in immediate need of medical assistance, a white flag is hoisted on the power boat. This is the signal of distress for the men on the pier to communicate with a doctor. In many cases the prompt arrival of the physician, made possible by the distant signals, has saved lives.

The system is taking hold in the East and will be put into effect at some of the east-coast resorts next summer. Its application was explained in detail at the World's Congress of Community Service, at Atlantic City, in August last year, and was indorsed as a decided step forward in life-saving.

LEGLESS MAN DRIVES CAR OF HIS OWN DESIGN

A small automobile that can be driven by a legless man, was recently designed by a New Yorker who lost the use of both legs during service in the Mexican-border campaign. The machine, which was successfully demonstrated at the Institute for Crippled and Disabled, in New York City, is a motor-driven, three-wheeled vehicle, 76 inches long and 32 inches wide, and can carry three persons. All the controls are hand-operated.

As many as 50,000 persons in France have wireless outfits in their homes, according to a report recently published by the post and telegraph department.

WEEDER FOR DRY FARM LANDS CUTS WIDE SWATH

For use on western dry farm lands, during the fallow year, a weeder with two blades, cutting a 9-foot swath, is now

on the market. The machine is mounted on two widely separated wheels with an axle offset eccentrically for its whole length. This axle supports an iron frame, the center portion of which extends forward rectangularly. Suspended from this frame, and on either side of the forward extension, are the two cutting blades. From his seat above the frame the driver swings the offset axle forward and down, setting the blades just below the ground with a lever at his right-hand side, while other levers enable him to regulate the pitch of the blades, or to return them to their raised position. The implement saves about one-half the time usually required for this work.

Weeder for Use on Dry Farm Lands: The Levers, Seen Handy to the Driver's Seat, Raise and Lower the Cutting Blades That are Suspended below the Frame of the Machine

BRIDGE THROWN ACROSS RIVER BY UNUSUAL METHOD

Logging operations in the big timber tracts of British Columbia frequently call upon the engineers for emergency exhibitions of their skill. In an operation on the Cheakamus River, it became neces-

sary to put a single span across 130 feet of raging torrent. The approaches and piers were first constructed, then a single truss was built of timbers, those in the sills, or lower chords, being single sticks, 20 by 26 inches. A spar tree used in one setting of the logging operations stood right alongside the pier on one side of the river. The completed truss was run out on rollers until it nearly balanced on the pier. The carriage on the sky line was run out to the outer end of the truss, a heavy steel cable was fastened to that end, and the truss was carried across just as a log would have been handled. The end was then dropped on the pier at the other side. The actual time required to swing the truss was not more than a few minutes.

In the Photograph Above, the Completed Truss is Shown as It Appeared Just before being Pulled Out of, and over, the River

This Picture of the Truss was Taken as Its Right End Reached a Point About Midstream. A Few Moments Later It was Dropped in Place on the Piers, Which had Already been Constructed

Motor-Driven Device for the Automatic Control of Temperature and Pressure: Note the Two Solenoids on the Swinging Escapement Arm, That Operate the Pawls; at the Right Is the Timing Device

1189 AUTOMATIC VALVE REGULATOR HAS GREAT FLEXIBILITY

The feature of a new valve regulator is its accuracy over a wide range. It is adapted to the automatic control of temperature or pressure, for a variety of service in connection with the use of oil and gas-burning systems, electric and steam-heated apparatus, refrigeration apparatus, and compressed-air and vacuum lines. It is designed so that each individual adjustment of the control valve can be made a small part of the total movement, and with a time element that allows one adjustment to take effect before the next can be made. The escapement, which directly controls the movement of the valve and by means of which the adjustments are made, consists of a ratchet-and-pawl mechanism governed by two solenoids mounted on a swinging arm hung from the ratchet shaft. A timing device capable of fine adjustment, constantly interrupts the circuit that energizes the solenoids. A small motor transmits power through a worm and gear and an adjustable cam to the lever arm on the escapement. The solenoid circuit is connected to a temperature or pressure element located in the apparatus which it is desired to control.

Free medical advice by radio is to be given ships at sea by the Bureau of Public Health Service. It is expected that most requests for advice will come from vessels not carrying a ship's doctor.

1217 MACHINE FOR SOLDERING COMMUTATOR BARS

All motors and generators using commutators have a very large number of joints that must be soldered, and for doing this a machine has been designed that will solder all the segments of a commutator at once, making better joints, it is said, than when this work is done by hand. Burners are provided which can be adjusted for either natural or artificial gas, and they are covered with a jacket to protect the operator from the heat. The products of combustion may be piped to the outside. During soldering, the armature is held stationary by the machine, the position being independent of any skill of the operator. Hand and foot controls are located within convenient reach of the man using the machine.

**NEW IMPLEMENT DIGS, PICKS,
AND SACKS POTATOES**

A recently invented potato harvester combines simplicity with adaptability to different ways of handling the potatoes after they are dug. It can be used to dig, pick up, and load the potatoes into a wagon or into sacks as a continuous operation; as a plain digger, or just for the purpose of picking up the potatoes. It consists of a drum, 8 feet in diameter and 7 feet wide, built up of hardwood slats spaced about 1 inch apart on iron hoops, with iron spirals inside, to which are attached the digging disks. As the drum is pulled along the ground, the action of the spirals picks up the potatoes and carries them to a basket which is automatically inverted at the top of the drum. The absence of gears and other mechanisms makes the harvester very light and easy to maintain.

The "X" below the Gateway of Another Tomb in the Center, Marks the Entrance to the Recently Discovered Tomb of Tutankhamen

TREASURES OF ANCIENT THEBES IN NEW-FOUND TOMB

By R.C. Folger *Fol*

TREASURE that has been variously estimated to be worth from \$15,000,000 to \$40,000,000, has recently been brought to light upon the opening of a tomb believed to be that of Tutankhamen, who ruled in Egypt over 3,000 years ago.

The first objects to greet the eyes of the entrants to the tomb, were three magnificent state couches, each made of gilt wood with exquisite carvings and decorated with a lion's head and other emblematic figures. On these rested gilt beds also beautifully carved and inlaid with ivory and jewels, and a number of boxes of rare workmanship. These boxes were inlaid with ivory and ebony with gilt inscriptions. One box, hung with painted hunting scenes, contained royal robes richly embroidered, precious stones, and golden sandals. Beneath one of the couches was the state throne of Tutankhamen, the first of the thrones of ancient Egypt revealed to modern eyes and re-

ported to be one of the most beautiful objects of art ever discovered. There were also four chariots richly decorated with gold and studded with semiprecious stones, the charioteer's apron of leopard's skin still hanging from the seat. Two life-size statues of the king, holding a golden stick and mace, stood facing each other, the features delicately carved and the head-dress studded with gems. A number of quaint-looking musical instruments made of gilt bronze were in the rooms. There were also alabaster vases with a very intricate design of an unknown origin, and some handsome pieces of glazed art pottery. Quantities of provisions for the dead were found packed in boxes, according to the peculiar custom of the times. Among these was some embalmed beef, in containers resembling huge Easter eggs, which was in an excellent state of preservation though not wholly palatable. In one of the boxes were rolls

COPYRIGHT IN THE UNITED STATES

It Was in the Tomb of King Tutankhamen, the Successor of the Famous Akhenaten and Smenkhkara, Who Were Co-Unearthed were Found. The New-Found Tomb Lies below That of Rameses VI, and Its Discovery Is a Credit to Ceased Their Search. It will Be Interesting to Learn What Is in the Unexplored Portion of the Tomb That

of manuscript which are expected to yield much valuable archaeological information.

The second of the two first chambers, connected by an open doorway, was in such a state of confusion as to indicate that the tomb had not remained undisturbed after the doors had been sealed, following the funeral rites to the dead king. Furniture and other objects, similar to those found in the first chamber, were piled high, and closely packed in a manner that led the investiga-

tors to believe that part of the funeral paraphernalia had been hurriedly removed to this chamber to keep it from thieves.

What lies beyond the sealed doors of a third chamber lends interest to the discovery, for it is there that the two figures of the king stand guard. It is hoped this may turn out to be the actual burial chamber of Tutankhamen and the members of his family, but until the material has been cleared from the other chambers, this question cannot be settled.

Front of an Ancient Theban Temple—Covered with Hieroglyphs—Unearthed at Luxor by the Discoverers of Tutankhamen's Tomb

BY THE SPHERE, LONDON

Regents in Egypt from 1375 to 1358 B. C., That Some of the Greatest Treasure and Relics of Antiquity Ever the Persistence and Instinct of the Men Who have Kept Digging Away at the Mound Years after Earlier Explorers Lies beyond the Second Chamber. This was Closely Packed with the Funeral Paraphernalia of Tutankhamen

The tomb lies below that of Rameses VI, which was discovered a few years ago, and is chambered out of the rock in a low hill formed at the foot of a cliff in the famous Valley of the Tombs of Kings, located near the site of ancient Thebes. There are also the tombs of other kings that have been discovered in this hill. It is remarkable that the entrance to Tutankhamen's tomb is so close to grounds where scores of workmen and many a skilled excavator must have passed

while engaged in search for the secrets of the Theban necropolis. Perhaps its very nearness to these already explored sites led them to think that there was no need to search the unexplored strata below.

Entrance to the Recently Discovered Tomb Which has Remained Unopened for Over 3,000 Years: Note the Descending Row of Steps

The discovery is the result of the persistence of Lord Carnarvon and his two assistants, Howard Carter and B. Callender, who for 16 years have been following the discouraging work abandoned by those who made the earlier discoveries. In dig-

ging among the stones below the entrance to the tomb of Rameses VI, they uncovered what was to their experienced eyes traces of an opening in the wall. Continued digging disclosed a carefully hidden and tightly sealed door. This doorway opened into a stairway of some 16

steps, and a passageway, about 25 feet long, at the end of which was another door even more securely sealed than the first. After the second door had with difficulty been opened and the three men managed to squeeze through, they were rewarded by the sight of the first chamber.

1045
BINOCULAR MAGNIFIER ALLOWS USE OF BOTH HANDS

An improvement over the single magnifying glass worn like a monocle by watchmakers, jewelers, and others who do close work, is seen in a new binocular magnifier.

This device, which is built like the modern prism binocular, is held on by a band that passes around the head and enables the wearer to use both eyes simultaneously,

both hands being free for work. A small electric light with a condensing lens provides illumination for intricate work.

1136
INTAKE-AIR HEATING DEVICE FOR AUTOMOBILE MOTORS

Easily installed between the carburetor and the intake-manifold flanges, a device designed for the delivery of gas and air mixtures of proper proportions and temperature to the cylinders of internal-

Air-Heating Device Installed on an Automobile Engine, Showing Its Controlling Attachment to the Carburetor-Throttle Rod, and the Auxiliary Control for Fine Adjustment

combustion engines, is now on the market. Like other devices of the kind, it operates in connection with the hot exhaust manifold, and is said to keep the intake manifold at a temperature of about 150° F., thus insuring complete vaporization of the gasoline in the mixture. It is controlled by the carburetor-throttle rod, to which it is attached, and has an auxiliary dash control for fine adjustment.

394
SAFETY DEVICE FILLS NEED OF TEMPORARY LOCK

Sometimes the need is felt for a temporary lock to be used on doors or windows of a summer cottage, or other building, and then detached and taken away.

Locks on the doors may be out of commission and a feeling of greater security will be enjoyed with an additional lock. Such a lock is provided by a new safety device which

may be attached with nails or screws or by pressing into the door jamb. It is said to be so strong that it will withstand the pressure of three men.

1027
ARMORED CAR OF NEW TYPE TO FOIL HOLDUP MEN

An armored car for the foiling of hold-up men has a body entirely constructed of armor plate, fitted with bulletproof glass windows, windshield, and side wings, the whole closely resembling an ordinary town car or limousine. A steel-armored safe has been built into the rear, or inclosed part of the machine, which is designed to carry only two passengers, the

DEVICE EQUALIZES TENSION OF DRUM SNARES

A device for equalizing the tension of the strings of a snare drum has recently been patented.

It consists of a steel arm running across the drum head and extending a few inches beyond at each side. The

snare wires are fastened at both ends in such a way that all of them have an equal tension, and retain this whether the device is released or not.

INVENTION ADDS TO SAFETY OF SHIPS AT SEA

By means of an apparatus for producing extra-sonorous waves, it is hoped to reduce the danger of collision and of ships running aground at sea. A spark emitted from an ordinary radio-broadcasting outfit is transformed by the new apparatus into sound waves that travel through the water at a speed of nearly 5,000 feet a second. The same device registers the echo returned from an obstacle and transforms it into electrical oscillations which are also recorded by the instrument.

IMPROVED PILE DRIVER IS SIMPLE AND EFFECTIVE

A homemade pile driver, constructed in the short space of three hours from some 2 by 4 and 4 by 4-inch lumber and a few bolts, proved to be as practical to operate as it is economical to build, to the resourceful contractor who devised it. Two 4-by-4's formed the

4-inch lumber bolts, practical to build, to contractor it. Two 4-by-runways for

Effective Pile Driver Constructed in Three Hours' Time from Stock Lumber, and Fastened to the Rear of a Contractor's Truck

the 2,500-pound hammer, which was raised by a cable passed through a sheave at the top and wound around the drum of a winch on a motor truck.

IMPROVED PROPELLER DESIGN

1352 APPLIED TO SHIPS

What is called a contra-propeller has been applied to ships in Europe and has effected an increase of 12 to 18 per cent in propulsive force. It consists of a number of blades—usually six—affixed to the rudder stem about 18 inches behind the main propeller in such a way as to turn the revolving stream of water coming from the main propeller, into a straight flow, this action being responsible for the increase in propulsive effect upon the ship. It is said, also, that the vibrations

of the ship are decreased, and the steering qualities improved, while the ability to run astern is undiminished. The idea can be applied to reduce the quantity of fuel consumed, instead of increasing the speed. The contra-propeller is designed to break should anything come between it and the main propeller.

MAGNETIC INDICATOR USED IN TEMPERING STEEL

It is a well-known fact that drill steel, in order to be tempered for the greatest possible toughness and resistance to wear, should be quenched at the lowest possible temperature above the critical point, which is the point at which the structure of the steel changes. This point coincides with that at which steel loses its magnetism, and advantage has been taken of this coincidence in the production of a magnetic indicator to assist the blacksmith in quenching his steel at the proper point. The indicator consists of a brass or bronze casing, inside which is a horseshoe magnet hung on a pivot at its point of balance. At the top is a small window, and a white indicator tab which is so balanced that when the bottom of the magnet is pulled forward the top will strike a lever and push the indicator into view. A shelf at the bottom of the casing is used as a rest for the steel. When the blacksmith judges the steel to be approaching the critical stage, he rests the

Left: Magnetic Indicator with Cover On, and a Drill Bit on the Shelf. Right: Cover Removed, Showing Horseshoe Magnet

heated end on this shelf, and if the tab does not show in the window, he knows the steel is ready for quenching.

HEDGEHOG HUNTING GOOD TRADE AND GOOD SPORT

1260

BY SAM E. CONNER, 486 Turner St.
Auburn, Maine

TRAPPING hedgehogs does not sound like a very attractive pursuit, but a man in Maine has found it to be a profitable business, as well as one that has an element of danger, and therefore offers excitement in excess of that which comes to a rabbit or fox hunter. While it is not generally known, there is a steady demand for these ugly-looking creatures from all sections of America and Europe. They are desired for zoos and menageries, both private and public, and country-fair and street venders, who use them to aid in selling preparations, disposed of under the name of hedgehog oil, hedgehog liniment, and like titles, provide still another market.

All of these buyers are in constant need of the hedgehogs, for the animals do not live long in captivity. This man has been catching hedgehogs more than 20 years and has shipped thousands of them. In a single month, a few years ago, he shipped three tons; and one shipment to England, which, by the way, is one of the largest customers for hedgehogs, in the spring of 1922, required four horses to haul it to the railroad station.

The trapping is all done in the summer and at night. The best time for catching the animals is between 9:00 p. m. and 2:00 a. m., and there is no better hunting ground than an apple orchard. The

hedgehogs come there to feast upon the apples, of which they are exceedingly fond. The outfit for catching them consists of an old washboiler, the cover

fastened on one side by means of a wire hinge; a long pole, and a pair of heavy gauntlet gloves for protection against the quills, which the animal has a disagreeable habit of "throwing" when in danger. The pole is used to dislodge the hedgehog from the tree limb on which it may be found. Once the animal is on the ground, the trapper must step lively or his prize is gone. Clumsy as it looks, the hedgehog makes a quick getaway when frightened, and the darkness of night is a further help to it. It is a rush forward, a quick throw of the boiler over the escaping animal, a deft overturning of the boiler, and closing of the cover. It is all over in a jiffy, providing the trapper's aim is good. A specially constructed box, lined with galvanized iron, is part of the outfit, and is used for taking the night's catch back home.

Ordering various qualities and sizes of steel by number will soon be a general practice in the United States, if plans of engineering organizations materialize. The present method requires long and detailed specifications. Germany, Switzerland, and several other European countries already use number systems.

vised tray and the "counting-by-five" system used by an Illinois manufacturing company. With three fingers of one hand and two of the other, the operator sweeps the small parts rapidly into the container until it is filled with the correct number.

TOYS OF AMERICAN INDIANS EXHIBITED BY MUSEUM

Crude dolls, tiny imitation horses, and other playthings recently put on exhibition by the U. S. National Museum, indicate that the children of the American Indian played with toys in a manner very similar to the practice of present-day children. Animal dolls appear to have been most popular. A wild duck which an Eskimo had stuffed for his baby and a beaver fitted with an imitation tail of leather, are among the more original ones.

American Indians

RURAL MAIL BOX SWINGS AROUND IF HIT

If struck by a moving vehicle or other object, a new rural mail box revolves about its supporting pole, and by the force of gravity swings back to its normal position. The keynote of the arrangement is found in a wide metal disk around the pole, beneath the box, which is tipped at an angle, and, at its lowest end, connected to the bottom of the box. Smaller bands hold the box to the pole.

BURROS CARRY PIPES MAILED AS PARCEL POST

The Pipes Carried by These Burros were Sent by Parcel Post by a California Road Contractor. When He Found This would Be Cheaper than to Do the Transporting Himself

Finding that transporting corrugated-iron culvert pipe to an isolated region between the Klamath Mountains and the Pacific coast would cost much more than he had planned, a California road contractor solved the problem by mailing it. The postal authorities making the delivery through the rugged country had to resort to burros, two sections of pipe being strapped to each animal. The shipment was to be used in building a road through that region, to be called the Klamath River Forest Road.

New Apparatus for Heating Asphalt Pavements Which are to be Resurfaced: Connected to the Steel-Plated Hood, Shown Here Resting on the Ground, Are Oil Burners, and Air-Blast Pipes Which Blow the Flame Downward

1254
HEATER ON AUTO TRUCK USED IN RESURFACING ASPHALT

An improved apparatus for heating asphalt pavements which are to be resurfaced, is mounted on a small auto truck. Behind the driver's seat is arranged an air tank, a blower, a fuel-oil tank, and an air-heating chamber with oil burners, connected to a steel-plated hood. Both hood and heating chamber are raised or lowered by a hydraulic hoist, while coil springs, attached to a high metal frame, counterbalance this weight and permit the hood to rest gently on the pavement. The capacity of the machine is said to be about 1,000 square yards per eight-hour day.

1361
WELD SPECIAL STEEL SURFACE TO MACHINE PARTS

Encouraging results have been obtained from experiments conducted to determine the practicability of welding special steel to ordinary machine-steel working parts. This was shown in the case of some internal-combustion motor valves to which was welded a thin layer of chrome-steel alloy, the valve being finished in the usual way. Tests made under actual operating conditions failed to show any defects, and a micrographic examination disclosed no weakening of the joint. This corresponds to the practice of welding special steel bits to shanks of ordinary steel.

1289
VENDING MACHINE SELLS HOT SHELLED PEANUTS

Delivering shelled peanuts hot into the hand of the purchaser who drops a coin in it, is the novel feature of a new vending machine, which is designed to be placed in cigar stores, railroad stations, or other public and semipublic places. It weighs eight pounds, and the electric current which keeps the peanuts warm also flashes out a light at intervals. Two to three cents for a 10-hour day is claimed to be the cost of current. It takes about half an hour to heat the reservoir full of peanuts, and thereafter they are kept automatically at the right temperature.

MILLION-DOLLAR CAUSEWAY ILLUMINATED FOR NIGHT DRIVING AT FAMOUS FLORIDA RESORT

BRILLIANTLY lighted, the million-dollar concrete causeway, $3\frac{1}{2}$ miles long, that connects Miami, Fla., with the beach across Biscayne Bay, has been opened to the public recently. The driveway, which takes the place of a wooden bridge, is 105 feet wide, has a double automobile roadway, a two-way drive for heavy traffic, and the track of an electric line in the middle. Twelve thousand motor cars a day is a common record here.

Electric lights, giving sufficient illumination for driving at 30 miles an hour with lights dimmed, are placed on poles 30 feet above the surface, 400 feet apart on the straightaway course, and 300 feet apart on the curves. Lamps of 250 candlepower are used.

Absence of guide posts and fences on the sea wall made driving dangerous till these lights were installed. A thorough trial proves that they make driving safe, with the flood of light that they give.

1222 W. Kingsley Noble, American
Museum of Natural History,
New York City

ODD REPTILES *from* SANTO DOMINGO

By E. A. Higgins, Archivist
S. C., New York.

View of Reptile-Ridden Island in a Salt Lake, 160 Feet below Sea Level, on the Island of Haiti, near Santo Domingo, Capital of the Dominican Republic: Here the Explorer Found Great Numbers of Rhinoceros Iguanas and Other Queer Representatives of the Reptile Class

A LARGE collection of curious reptiles has been brought recently to the American Museum of Natural History in New York, by Dr. G. Kingsley Noble, who, accompanied by Mrs. Noble, spent three months in Santo Domingo at the head of a scientific expedition which went there to hunt and study its reptile fauna.

Doctor Noble, who is an authority on these animals, had often heard stories of unusual specimens which were said to live in that region. Therefore it was with great interest that he set out on the expedition, which was organized by the American Museum of Natural History and financed by the Angelo Heilprin Fund. And he met with odd experiences and odd reptiles, too. The experiences, of course, are not on exhibition, but the reptiles are,

many of them alive, some in jars, and some mounted.

The most interesting creatures in the collection, from a natural-history standpoint, are 40 living rhinoceros iguanas. These are the largest lizards in the world. They grow to a length of 5 feet and attain great weight, and are more like the

The Rhinoceros Lizard in Profile: This Animal Grows to a Length of Five Feet and Corresponding Weight, and Is Very Fierce and Fearless When Disturbed

great prehistoric reptiles than any known living creature. They acquire their name from three hornlike growths that project from the ridge of the nose like the horn of the rhinoceros, and are the only lizards possessing them. Their peculiar feet, resembling the talons of an eagle, are another unusual characteristic. This enormous lizard is very fierce, even in captivity, and nature has armed it with sharp teeth and a strong, swiftly

Native with Captured Giant Iguana: The Dog at the Native's Feet Is of Very Gentle Disposition, but Assists with Enthusiasm in the Hunt

striking tail. When thoroughly roused, the rhinoceros iguana presents an alarming spectacle. Opening wide its large jaws, it reveals a mouth lined with glistening black skin and rimmed with short, sharp teeth which are reinforced by two great crushers set far back in the roof, while its round, white tongue lies at the bottom like a marble. Its dull eyes flash with rage, its tail lashes rapidly, and it sometimes rises to such a pitch of fury that it leaps directly at its enemy.

This strange lizard comes from a strange place. Doctor Noble found it on an island near Santo Domingo which was situated in a salt lake 160 feet below the level of the sea. The island was uninhabited except for reptiles, and these completely overran it. Although the native dog is a frail-looking creature, it is the only one which will go near the hideous iguana. Oddly enough, however, it enters into the hunt with much zest and

shows great courage in tracking down and holding the smaller lizards until the hunter arrives. The larger lizards are "too much" for the dogs, and they are usually shot by the hunter after they have been rounded up. At times an imprudent dog will even follow an iguana into its cave, but backs out swiftly, badly scratched and bitten, and yelping its chagrin. Moreover, a dog which has once been attacked by an iguana usually loses its nerve and is of no further value in hunting.

The minute tree frog, which is so small as to be scarcely visible on the tip of a man's finger, is a neighbor of the rhinoceros iguana. The bottom of a pill box would seem like a large ballroom floor to several of these tiny frogs, seated in it. Yet, incredible as it may seem, its loud, bold note can be heard at a distance of almost half a mile.

Doctor Noble captured two other kinds of tree frogs which are the first of their species ever brought to this country. For want of better names, they have been called the "barking frog" and the "poison-gas frog." The barking frog is heard only at night, when it climbs high up in the trees and barks loudly. One frog was traced by its barking, and a photograph was taken at the instant a flashlight was turned on it. Later, when an attempt was made to seize it, it startled its captors and proved its versatility by open-

At the Other End of the Line of Reptiles Found in Haiti Stands the Minute Tree Frog, Here Shown Sitting on the Tip of a Man's Finger. Below, at the Right, Are Two Specimens of the "Poison-Gas Frog," Turned Over on the Back to Show the Sucking Disks on Their Toes, Which Enable Them to Run up a Tree as Easily as a Fly up a Wall

ing its mouth and squealing like a pig. This in itself was an unprecedented performance, as every other species of frog keeps its mouth closed in making sounds. The barking frog seems to start life with the firm intention to be original, for its first act is to emerge from its shell a fully-formed frog, evidently disdaining the tadpole stage through which other species pass.

But Doctor Noble's most spectacular capture is the poison-gas frog. This weird, nightmarish version of our modest little domestic tree toad is as much a giant among its kind as is the rhinoceros iguana, for it attains a weight of 10 pounds and is larger than any tree frog

known. Owing, possibly, to the snake-ridden character of its habitat, the poison-gas frog is supplied with protective devices unheard of among land animals. Its toes are supplied with disks, or suckers, which enable it to run up a tree as easily as a fly runs up a wall. The legs are extraordinarily long—twice the length of the body. Thus it is able to make long jumps from one branch to another, even leaping straight into the air, at times, to reach upper branches. Its most unusual means of defense, however, is the ability to eject in times of danger, a corrosive, volatile secretion which envelops it like a cloud, and at the same time chokes and burns its enemy.

1089

IMPROVED DEMOUNTABLE RIM FOR MOTOR-CAR WHEELS

An improved motor-vehicle wheel, with a demountable rim that can be installed without the use of lugs or bolts, is about to be placed on the market. Around the outer face of the felly of the wheel, just beneath the rim, there is an annular groove nearly half the thickness of the felly and about a third of its width. Around the top of the felly is an encircling metal band, flanged at one end, and stepped down at the other to fit into the bottom of the groove. On this felly band fits the rim, which may be of the straight-side or clincher type to accommodate the tire. The flange on the felly band holds the rim on one side, and it is clamped on the other side by a similar flange on a ring that tightly fits the felly groove into which it is driven. A wheel thus equipped presents a very neat appearance.

ELECTRICAL SHAVING OUTFIT
HEATS WATER IN CASE

FRENCH TRY NEW MACHINE
FOR PRINTING STAMPS

~~1188~~
An electrical shaving outfit which heats water in the same small case that holds

A machine that prints, perforates, numbers, cuts, counts, and makes up into bundles 3,000 sheets of 100 stamps, each hour, has recently been installed by French postal authorities. In the Bureau of Printing and Engraving similar work is done with several machines, one printing and gumming the stamps while others are engaged in perforating and cutting them into sheets. With the exception of the gumming, which is done beforehand, the French machine combines all these steps and, as may be expected, turns out the finished product at less cost. Only two operators are required, while as many as 12 were needed previously.

Above: Shaving Outfit, the Case of Which Is an Electric Water Heater. Right: Appliances Neatly Packed in Case

the brush and soap in nickelplated tubes, a beveled mirror, safety razor, and extra set of blades, is now available. When these accessories have been lifted from the case and water placed within it, an extension cord carrying either 110, 150, or 220 volts, is attached to the proper combination of contacts of the heating element in the lower half of the case, and the water is raised to the desired temperature in one minute.

and holds a cubic yard of snow. It is stated that the crane has loaded three 5-ton trucks in 10 minutes.

1031 STUMPS MADE INTO PAPER BY NEW PROCESS

In order to utilize pine stumps on cut-over and burned-over timber lands in the South, a process has been devised that converts this material into acceptable grades of paper. The stumps are first put through a machine that removes any charcoal that may be on them, and then go to machines that cut them into small chips. The tar, turpentine, and resin are next extracted, and the residue converted into a pulp from which the paper is made.

1178 SPIRAL GRINDING MACHINE FOR MOWER BLADES

For sharpening any size of lawn-mower blade, a recently patented spiral grinder is composed of a motor-driven emery wheel mounted on a table that moves along guides on top of the supporting base of the machine. Brackets connected to this base have means for holding the lawn-mower cutters without removing the reel, so that the emery wheel of the grinder lines up with the cutter blade of the mower. Between the emery wheel and the mower blade, there is an engagement which, as the grinder moves along on its guides, causes the blade to revolve, and thus the grinding wheel traverses the entire length of the blade.

1202 EIGHT-STORY OFFICE BUILDING BUILT HALF AT A TIME

A new office building being erected in Detroit has one half already occupied while the other half is still under construction.

The Left Half of This Building is Completely Finished and Occupied by Tenants, While the Second Half is Still under Construction

struction. For various reasons, it was decided that completing and fully equipping the corner half would be a better plan than to wait until the whole building was ready for interior finishing. This unusual arrangement enables the owners to realize an immediate return on the offices of the completed section.

1337 BUFFALO HERD IN CANADA "GROWING TOO LARGE"

Because the buffalo herd in the National Park at Wainwright, Alta., is "growing too large," sportsmen in the vicinity are anxious that an open season on buffalo be declared next year. It is said that the plan has been suggested to the National Parks Board, and that favorable action is expected. A somewhat similar arrangement proposed for this year fell through, when it was found that the animals were suffering and losing weight from the unusually cold weather. The herd, reputed to be one of the largest in existence, numbers more than 8,000 and is increasing rapidly.

**PORTABLE RIVETER WORKS
THROUGH MANHOLE**

1228

A portable riveting machine, designed for driving up the last heads in boilers

Portable Riveter, with a Capacity of 100 Tons, Designed for Driving Up the Last Heads in Boilers through the Manhole

through the manhole, has recently been put on the market. The machine has the form of a large "Y," with the pneumatic actuating mechanism extending from the left to the right arm, and the stake running parallel to the leg. The dies are vertically arranged, and the machine rocks about a point near the center of gravity. The reach of the unit is from 14 to 18 inches; the gap 35 inches; cylinder diameter 18 inches, and the die stroke 5 3/4 inches. The capacity is 100 tons, and the weight about 9,000 pounds.

946

**RUBBER "GLASS" ONE OF NEW
LINE OF PRODUCTS**

Rubber "glass," or transparent rubber, is one of an interesting number of new products that have recently been developed as the result of a discovery of a compound which permits ordinary commercial solutions of rubber and celluloid to form a permanent mixture. About 10 per cent of rubber in celluloid results in a very resilient product, and about 10 per cent of celluloid in rubber produces a

substance having relatively high tensile strength and waterproof qualities. The rubber in the mixture can be treated, by a special process, to any degree of vulcanization without impairing the transparency of the product. Any desired color can be had by the aid of coal-tar dyes. Great possibilities are suggested in the way of surgical rubber goods, hot-water bottles, bathing caps, windows for motor vehicles, and the like.

**FEDERAL-AID ROAD SYSTEM
NEARLY OUTLINED**

1363

In outlining the 187,000 miles of road comprising the Federal-aid system of highways, it has been arranged that not more than seven per cent of the total road mileage of any one state be included. Not to exceed three-sevenths of this will be designated as primary or interstate highways, and the remainder secondary or intercounty highways. The plans cover a 15 to 20-year construction program, with provision for enlargement at the end of that time.

**PISTON-CENTERING MACHINE
IS RAPID AND ACCURATE**

A machine in the form of a compact drill press specially designed for centering engine pistons, and adjustable to any size of casting up to 6 inches, is now on the market. On the horizontal circular table of the machine are four vertical, adjustable fingers. Over these the casting is slipped with a loose fit, and then, by turning a disk gently to the left, all four fingers expand till they bear lightly on the casting walls. On an arm above the piston is the drill spindle, which is pulled down by a lever, and the piston is accurately centered by the drill. The machine is then in condition for centering any number of similar castings, without further adjustment. The machine can also be used as a speed drill.

Greek Women Doing the Family Washing in Stone Sarcophagi Over 2,000 Years Old, near Khasia

GREEKS USE ANCESTRAL TOMBS AS WASHTUBS

Near Khasia, a little village 10 miles northwest of Athens, Greek peasant women do their washing in stone sarcophagi that are at least 2,200 years old. Washtubs of any kind, owing to the scarcity of wood and metals in Greece and the poverty of the peasants, are rarely to be seen in the country villages, and, for this reason, the women of Khasia, possessors of these ready-to-hand washtubs, are doubtless greatly envied by their less fortunate sisters in the neighboring villages who wash their clothes in the stream.

CONCRETE MIXER HAS RUBBER-TIRED WHEELS

A new concrete mixer, now being offered for contractors' use, is mounted on a rubber-tired two-wheel truck so that it can be easily and quickly moved from one job to another. Whereas the usual portable type of mixer cannot be hauled faster than about 10 miles an hour, this one will trail behind a light auto truck at a speed of 30 miles an hour. A leg, set on the ground when the mixer is in use, supports it in a level position. It travels noiselessly and without jarring, and is no hindrance to traffic.

TRUCK RIDES RAILROAD TRACKS OR HIGHWAYS

A big auto truck has been recently developed which runs with equal ease on railroad tracks or smooth highways, and turns from one to the other without difficulty. For rail travel, its wheels are equipped with flanges inside of

track, the pilot is raised, automatically disengaging the steering apparatus, so that the driver can turn the front wheels and run onto the highway, without stopping or otherwise interfering with the travel.

The pilot wheels are carried in

Front End of Motor Truck with Pilot About to be Lowered for Rail Travel: Four Coil Springs Hold the Pilot Wheels in Engagement with the Rails, After They have been Lowered

the rubber tires, and a special pilot truck is arranged in front, which, when let down to the rails, locks the steering mechanism. When about to leave the

The New Double-Duty Motor Truck Running off the Track and onto a Smooth Road: The Lifting of the Pilot Wheels Unlocks the Steering Mechanism of the Motor Truck

front of the front axle and attached to it by a ball and socket joint. When these wheels are lowered onto the rails, the lifting device automatically applies tension through four coil springs, making it impossible for the wheels to bounce off or leave the rails while in motion. When the pilot wheels are engaged with the rails, an automatic device locks the standard steering gear in such a way that the pilot entirely controls the truck front wheels. By using this method of control, it is possible to pass frogs, switches, and highway crossings without any danger of the truck getting out of alignment with the rails while riding on the rubber tires.

In the attachment of the pilot, the possibility of its breaking and dropping down on the highway while the truck is traveling has been carefully considered, and provision made for the truck to be steered in the ordinary manner.

By MAJOR JOHNSTONE TAYLOR

c/o The Bunglads, Shrewsbury, England

THE inland city of Manchester, Eng., has dockage for the largest ocean-going vessels afloat. This, as is well known, is made possible by the \$60,000,000 ship canal, opened in 1894, that connects the city with the sea, 35 miles away. During the last 28 years Manchester has gradually developed from an inland city to the third largest seaport of the United Kingdom in point of tonnage. This has resulted, as much as from any one thing, from the unwavering policy of dispensing with any manual handling of goods. The 44 warehouses of the port can accommodate 500,000 tons of perishable goods, be-

sides 500,000 bales of wool, 100,000 bales of cotton, 40,000 barrels of liquor, and 4,000 tons of tobacco, and they have 1,000,000 cubic feet of cold-storage capacity. All antiquated methods of handling this vast quantity and variety of goods have been from the first avoided, and in their place have been adopted the most modern mechanical means, such as electric cranes, belt conveyors, gravity runways, overhead cranes, and electric and pneumatic hoists. In unloading a shipment of American cotton, for instance, a series of overhead electric traveling cranes, each with an operator in its

The Docks at Manchester are Fully Equipped with Modern Labor-Saving Devices, Many of Them Ingenious and Unfamiliar to the General Public. Below are Shown Some of the Cranes Used in Transporting Bulky Loads

cab, hoist the bales from the cars, and travel rapidly to the storage warehouse, where the bales are dumped conveniently for arrangement by hand. Meat going into cold storage is handled similarly. Sacks of all kinds of goods are unloaded from the railroad cars onto a conveying belt, which carries them rapidly to the interior of the warehouse, and then, with an adjustable hoisting extension, deposits them in piles of any required shape or height. Wooden boxes or cases are conveyed on roller runways by gravity, and are then transferred to belt conveyors

that deliver them for loading onto railroad cars.

There are many other ingenious and efficient means of handling freight with the greatest facility and dispatch, all of which have made it possible for a new inland port to surpass all but two of the largest and oldest seaports of the United Kingdom, and to place it in the ranks of the largest.

☐ Total savings deposits in the United States at the end of 1922, were \$1,500,000,000 greater than on Dec. 31, 1921.

STEEL MATTRESSES REINFORCE CONCRETE ROADS

series of looped steel bars, all parallel and equally spaced. Other steel bars are laid across the upper and lower sides of these looped bars, and are wired to them, thus forming a rigid mattress of reinforcing bars. This is placed on the dug surface of the road, followed by others made in the same way. The concrete is then poured and the surface leveled off with boards in the usual way. It is said that the mattresses are not expensive and that little time is sacrificed, in view of the improvements gained by their use.

The Illustration Above Shows One of the Mattresses About to be Laid on the Roadbed. At the Right Is a View of Another Section of the Road After the Frames have been Filled with Concrete. The Workmen in the Foreground are Leveling the Surface with Boards in the Usual Way

In concrete-road building a new method of making the reinforcement is said to have been found to be economical, and effective in preventing damage by frost. After the road has been dug up for a depth of about 10 inches, and its surface rolled smooth, a large rectangular steel frame is placed above it. Upon this are laid a

portion to the bore, accompanied by means of restricting the inlet valve so that the charge fills the cylinder at less than atmospheric pressure. This results in more complete expansion, with lower temperatures and greater facility for cooling. One of these new engines, that has been demonstrated in an automobile over several thousand miles of travel, has four cylinders with a 3½-inch bore and 7-inch stroke, which develops 25 brake horsepower at 1,500 revolutions per minute. It is said to have proved to be economical in fuel consumption, and to have been always very easily cooled. An outstanding feature of the design is the means of accessibility. It is of the L-head type, entirely inclosed in a rectangular case, the whole of which on the valve side is easily removable. All the valve tappets and guides can then be taken out at one time, making it exceptionally easy to attend to the operating parts of the engine.

in Philadelphia that they add rather than detract from the appearance of the structures. This effect is obtained by having the notices molded into small ornamental panels rising slightly above the regular side walls. Those warning of a live wire read, "Danger—Live Wire—Keep Off."

MONSTER SMOKESTACK STANDS 257 FEET IN HEIGHT

A monster smokestack which stands 257 feet in height, thus taking rank among the tallest in the country, has recently been completed for the University

Reinforced-Concrete Stack, 257 Feet High, Recently Completed for the Power Plant of the University of Kansas

of Kansas, at Lawrence. The reinforced-concrete stack was erected to serve the new heating and power plant recently completed at a cost of \$300,000. On a clear day it is said that Topeka, some 40 miles west, and Kansas City, about 46 miles east, can be plainly seen from the top. The square brick stack of the old power plant, built in 1908 to a height of 127 feet, then considered great, is entirely overshadowed by the new chimney. It will furnish draft for eight boilers having a combined rating of 2,100 horsepower.

LAWS ASKED FOR PROTECTION OF FLOWERS AND PLANTS

The success of Vermont in preserving wild flowers and plants, as game is protected, and preventing their extinction, has aroused an interest among botanists and lovers of wild flowers which may result in more legislation for their protection. Commercial collectors were found to be responsible for the extermination of wild flowers and rare plants. A law passed by the Vermont legislature prohibits commercial collecting and restricts botanists to two specimens of each plant in a year. The very existence of orchids, arbutus, and rare alpine plants was threatened. Other states are suffering from the same abuse. Such ferns as the climbing fern in Connecticut and the hart's tongue in New York, are endangered by the draining of swamps and the opening of quarries.

ADJUSTABLE AUTO HEADLIGHT ELIMINATES THE GLARE

A new automobile headlight that eliminates the glare, and throws the light always in one and the same place, has been thoroughly tested with, it is said, very satisfactory results. The lights are automatically adjustable, being fastened to a rod that swings in bearings at each end of the machine. They are counterbalanced by weights that may be slid along an arm to change the center of gravity of the mounting to suit the motorist. When once set, the lights automatically adjust themselves so that in going up or down grade, they throw light directly onto the road, instead of into the air in the former case, or into the eyes of an approaching driver in the latter.

Automobile Headlights Which Automatically Adjust Themselves So That in Going up or down Hill, the Light is Directly on the Road

MOTHER SHIP FOR "BLIMPS" DISCHARGING ONE OF ITS BROOD

THE above picture shows one of the naval observation balloons being unloaded for transfer ashore from the U. S. S. "Wright," which was converted into a carrier for "blimps." The decks of the ship were cut away so that the hull could receive several seagoing balloons, which have to be carefully bedded down in order to prevent injury to the balloon fabric and permit them to be easily launched into the air.

HUGE LUMP OF COAL IN UTAH THE LARGEST EVER MINED

A gigantic lump of coal, believed to be the largest ever mined, has been placed

proved to be a difficult job. At first 11 horses were hitched to the wagon on which the coal was placed—five in front and three on either side. As the horses did not possess sufficient strength, the five at the front of the wagon were retained, and a five-ton motor truck was attached to the wagon tongue, while 20 men were used as ballast for the truck. Then the huge sample of Utah's coal fields slowly ascended the Main Street grade to the capitol. The block is 5 feet square by 10 feet long and weighs 22,900 pounds, exclusive of the bands of iron which form its crate.

Huge Lump of Coal, Supposed to Be the Largest Ever Mined, being Placed in Position for Exhibition at the Utah State Capitol in Salt Lake City: It Contains 250 Cubic Feet, and Weighs 22,900 Pounds

on exhibition at the Utah State capitol. It was taken from a seam 30 feet in thickness and 3,000 feet underground. A machine was used to undercut it, and the ends and back were sheared by hand. The approximate cost of getting out the coal, mining it, loading it, transporting it, unloading, hauling to the capitol, and placing it in the exhibition room on the main floor, was \$2,000. To get the coal to the capitol after reaching Salt Lake City,

ported to turn out steel that produces castings comparable with those obtained from the crucible process. A high temperature is obtained in the furnace by the use of preheated air for mixing with the hot gas from the producers, and the molten steel is run into a large ladle heated nearly white-hot before it is poured into the molds. Such strong and accurate castings have been made, that they can be used in place of bronze forgings.

PRODUCES
FINE STEEL

Over 11 Tons of Coal in a Single Lump Loaded onto a Wagon in Salt Lake City: To Haul It up the Steep Street Grade to the Capitol It was Found Necessary to Help the Five Horses by Hitching to the Wagon Tongue the Five-Ton Motor Truck, Carrying 20 Men as Ballast

Combination of Tractor-Driven Roller and Mower That Cuts 80 Acres of Grass a Day on a Golf Course: The Five 30-Inch Mowers Cut a Swath 142 Inches Wide, and Are Flexible Enough to Conform to Irregularities in the Ground

TRACTOR MOWER AND ROLLER FOR GOLF COURSES

The latest power equipment for maintaining the fairways and roughs of golf courses consists of a tractor from which the front wheels have been removed and an extension frame or wheel truck substituted. The wheel truck is designed so that mowing units and various other implements for work on golf courses can be attached. Five 30-inch mowing units can be attached to this truck at one time, three in line in front and two following directly back of them. These will cut a width of 142 inches and will mow up to 80 acres in a day. An 18-hole course can be "manicured" with this outfit in two days. Rollers can be attached to the tractor and pulled at the same time.

The mowing units can be detached easily and the tractor used for many other kinds of work requiring motor power about the golf course or in city parks. In fact, it is claimed that with this equipment a golf club can eliminate every horse and half of the men required to maintain its course. The tractor travels at a speed of about three miles an hour.

The attachment of the mowing units is flexible so they can conform to rolling ground, clipping the grass on saucer-shaped ground, on the inside of bunker banks, around steep banks, etc. The two end units can be raised and held securely in an upright position for cutting in nar-

row places or between trees, for transporting over rough ground or going through gates. The outfit is easily operated by one man.

NEW SHORT PAIR OF BUMPERS PROTECTS REAR FENDERS

Projecting beneath the rear end of the auto frame to a point beyond the rear fenders, a new set of bumpers has been made to protect the fenders in case of a collision from behind. The bumpers are curved, double strips of metal fastened about the bolts that hold the rear springs to the auto frame. While they afford the same protection as the usual long bumper, they are not in the way of the rear tire carrier or gasoline tank, nor when jacking the car. They are also lighter

Only a Wrench is Needed to Install These Bumpers Which, though Light, Afford Adequate Protection for the Fenders

and less costly than the ordinary rear bumper. Only a wrench is needed to install them.

DISHWASHER HAS TWO SETS OF PUMPS AND MOTORS

939

An automatic dishwasher having two independent sets of pumps and electric

motors as a precaution against shut-downs during the rush hours, is now available. In operation, an endless belt, driven by either motor, draws a tray or carrier of dishes into one end of the washer every 10 seconds.

The dishes remain under a first spray for this period, and are then drawn along until they rest beneath a second spray, where they remain for the same length of time, after which the belt carries them out at the other end of the machine. The trays in which the dishes are placed have wooden frames for the china to rest upon instead of the usual cast-iron kind, thus eliminating one cause of breakage. A large hotel has cut in half its yearly bill for broken dishes by using a machine of this improved type.

Automatic Dishwasher for Restaurant and Hotel Use, Which Has Duplicate Driving Motors and Pumping Units to Guard against Break-down, and Wooden Trays to Reduce Breakage

HALF OF WORLD'S ELECTRICITY USED IN UNITED STATES

1316

Recently compiled figures show that of the total 115,000,000,000 kilowatt-hours of electrical energy produced in the world during 1920, the United States consumed about one-half but that in per-capita consumption Switzerland led with 700 kilowatt-hours. Of the amount used in the United States, about 15 per cent

was for lighting purposes, and the balance for industrial activities. It is estimated that one out of every 16 persons who inhabit the world, lives in an electrically lighted dwelling, and that of the nearly 500,000,000 horsepower available from the waterfalls of the world, about one-twentieth part is being utilized. Only a little more than one-third of the electric power at present produced in this country is derived from hydroelectric sources.

Electrical World 1/6/23

AUTOMATIC APPLE PARER AND CORER

1170

A new motor-driven machine that represents years of development, is said to core and pare 30 apples a minute, automatically performing all the operations except placing the apple on the holding fork at the start. Three of these forks are provided, and they revolve from the loading position to the one where the apple is cored and pared, and then to the point where the cored and pared apple is discharged. The paring knife operates somewhat like a safety razor and adapts itself to the contour of the apple.

Motor-Driven Machine Which Automatically Cores and Pares 30 Apples a Minute: All the Operator Does Is to Place the Apples on the Holding Fork

Goodell Co, Antwerp, N.H.

A Scene near Alta Luz on the Railway between Mexico City and Vera Cruz: It is Expected Work will Soon Start on the Electrification of 30 Miles of This Mountain Road, Which Is Part of the Oldest Railway System in Mexico

MEXICO'S SCENIC RAILROAD TO BE ELECTRIFIED

BY GEORGE F. PAUL,

*900 Ellsworth Bldg.
Chicago*

GREAT interest is attached to the announcement just made by the Mexican Railway Company that it will soon start work on the electrification of 30 miles of single track between Esperanza and Orizaba, on the main line between Mexico City and Vera Cruz.

This is the first main-line steam-road electrification to be undertaken in Mex-

ico, and is on the oldest railway system in the country. On the eastern slope of the mountains the grades run as high as five per cent, and traffic is steadily increasing, making it difficult to maintain service up to standard under present conditions. It has been carefully estimated that results will pay for the entire cost of electrification within five or six years.

A Point above the Clouds on the Railway between Mexico City and Vera Cruz, Which Reaches a Height of 9,000 Feet above Sea Level at One Place: When Modernized, It is Predicted This Route will Be a Favorite with Tourists

The system will be operated by direct current at 3,000 volts. The power is to be supplied by a company which has a modern hydroelectric plant a few miles from the city of Orizaba. For this mountain service ten 150-ton locomotives will be required. They will be interchangeable for freight and passenger service. An automatic substation will be one of the features of the new equipment. The road climbs from sea level, at Vera Cruz, to a height of 9,000 feet, a few miles east of Esperanza.

This section, between Esperanza and Orizaba, is one of the great scenic delights of Mexico. Few mountain roads can surpass it, for at Esperanza the traveler is on the bleak tableland of the interior and at Orizaba he is among the orange groves and coffee plantations.

Viewed from the dizzy heights of Boca del Monte, the valley below suggests a delicate piece of patchwork, with soft browns and greens and grays blended to form a harmonious whole. The road itself that wriggles along the rugged mountainside, is one of man's greatest achievements. Spidery trestles span bottomless gorges; a foaming torrent rushing along its depth makes the beholder dizzy. He readily understands why this great gap is called the Barranca del Infiernillo (the Ravine of the Little Hell), and appreciates the better the smiling contrast of the glorious valley of La Joya (the Gem).

It can readily be predicted that when this scenic road is modernized, it will prove a favorite route for visitors from distant lands.

1298 ———
**LIMESTONE BEARINGS OUTWEAR
WHITE-METAL BEARINGS**

Street-car bearings of limestone are reported to have had a life of 35,000 to 45,000 miles in a service where those made of white metal lasted 6,000 to 7,000 miles. White metal is poured into a mold around the limestone and the latter bored out with a diamond tool. The porous stone absorbs oil, and in use quickly takes on a polished surface.

1162 ———
**COMBINE MODEL AND PICTURE
IN HIGHWAY EXHIBIT**

Combining a model of road-building work and an oil painting so skillfully that an observer is unable to detect where the two join, is the result achieved recently by a model maker and an artist who were employed by the U. S. Bureau of Roads, to prepare an exhibit for the Brazilian Centennial Exposition now being held at Rio de Janeiro. The model, which is 25 feet in length and 8 feet in depth, displays a gravel-type road, suitable for Brazilian conditions, with a concrete bridge in the foreground and a gravel pit in the background. Behind this, the painting, which

**COOKSTOVE WITH ONE BURNER
SUITABLY ADJUSTABLE**

A cookstove that will burn gas, gasoline, or kerosene, and has all the burners in one oval-shaped pipe that can be swung

under any part of the cooking top of the stove, is being manufactured in England. Underneath the top of the stove is a flat iron box of nearly the same size. The swinging burner is in close contact with the bottom of the box. The stove has four, six, or eight potholes with disks, which, if removed, are immediately replaced by cooking utensils to preserve the heat in the box. The stove can be connected with a copper boiler, and will thus furnish hot-water service.

**PRESERVE OLD HEADSTONES
WITH COAT OF CEMENT**

1125

A process that will probably result in the reclamation and preservation of old headstones in many cemeteries throughout the United States has been found by a Vermont man. Not satisfied with a copper cap he had previously devised, he conceived the idea of incasing the markers in a thin layer of cement, thus protecting the sides and back of the stone, and leaving only the chiseled wording on the front exposed.

The Stones, after being Coated with Cement on the Sides and Back, the Front being Left Untouched So That the Faint Inscriptions may Still be Read

The old headstones, marking the resting places of some of the country's early pioneers, were first removed from the cemetery and carefully and thoroughly cleaned, special attention being given to

Side View, Showing the Condition of the Headstones before being Treated: This Type of Marker is Seldom Used at Present

cracks in the stones where the constant exposure to the weather had split them.

A wooden form was then made, somewhat larger than the dimensions of the stone to be treated. On the inside was placed a lining of zinc, so that the stone, when finished, would have a smooth surface. The ends, of course, were made to conform to the tops of the stones, which in some cases were semicircular and in others leaf-shaped.

At this stage the stone itself was laced on the sides and back with 1/4-inch iron mesh to form a reinforcement for the rolled edges and back. Next, cement and a fine grade of sand were mixed and poured into the form to a height of 2 inches. Upon this mixture the stone was placed, face up, then "puddled" into the cement until it squeezed up between the sides and top of the stone and the form.

1279

**GOLF BALL OF NEW DESIGN
HAS GREAT RESILIENCY**

Maximum resiliency when driving and sufficient "rigidity" when putting, are merits said to be combined in a new make of pneumatic golf ball. The ball has a hollow center with a cross, or "wagon-spokes" arrangement, of rubber through it. Thus, while having enough elasticity to permit a long drive, the ball is hard enough to provide the proper resistance for accuracy on the putting green.

1092

**BUILD ELABORATE EQUIPMENT
FOR MUD-BATH CURE**

Elaborate equipment for the taking of mud-bath cures, has recently been installed in one of the finest hotel-sanitariums in this country. Tubs of imitation Italian marble, fashioned after the ancient couch baths of the Romans, are located in rows in the large main bathroom. In each tub, 8 inches of mud, brought from an adjacent sterilizing and preparation room, is placed and the steam turned on underneath. When the tub

temperature reaches 95 to 100°, according to the physician's orders, the bath is ready. While the patient is reclining in the mud, a special ventilating system is constantly forcing fresh and warmed air up through vents in the flooring to the base of the tubs. It then passes up and around the hollow-tile sides, escaping through holes near the top, thus providing the patient with plenty of fresh air.

REVERSIBLE AUTO FAN SAVES FROZEN RADIATORS

An automobile fan is now being introduced with adjustable blades that reverse the flow of air through the radiator so that in cold weather the radiator will be kept from freezing by warm air from the engine. It is made with a hub that fits the standard fan pulleys, into which the rounded end of the fan blades fit. A small pin through this rounded portion fits into one or the other of two recesses in the hub, according to the direction of air flow desired, and two small springs prevent the pins from slipping out.

Left: Automobile Fan with Adjustable Blades for Reversing Flow of Air through Radiator. Right: Fan Installed in Car

SIMPLE WIRE-TYING MACHINE BINDS PACKAGES RAPIDLY

A wire-tying machine that tightens the wire around any kind of shipping case or container, twists the wire, and cuts it off neatly, is now on the market. When strapping a package, the end of

Wire-Tying Machine for Binding Packages: The Upright Handle Tightens the Wire, and the Crank Handle Ties It and Cuts It Off

the wire is put in the slotted end of a holding post, through a latch for retaining the machine in place, and also through a second binding post. The wire is then passed around the package in any desired way, and after being brought back through the holding posts, it is slipped into a notch in a ratchet wheel with which, by means of an upright handle, all the slack in the wire is taken up. By turning a crank handle three times, the wire is tied and cut off.

DEVICE PREDETERMINES STABILITY OF SHIPS *England*

A novel instrument for ascertaining, correctly and in advance, the stability of a ship with a given cargo or ballast, or both, has been devised by a Scotchman. It consists of a diagram of a vessel, with scales along the vertical and horizontal sides. Weights connected with the scales may be adjusted to different positions on the diagram to represent the cargo arrangement, and by reference to two sets of curves on a chart furnished with the instrument, the stability and trim of the ship are quickly predetermined. Another advantage is that it enables the shipmaster to predict the effect of fuel consumption.

Arrangement of Charts and Weights by Means of Which the Stability of a Ship can be Readily Found for a Given Cargo or Ballast Loading, or a Combination of Both, and the Vessel Trimmed to Suit

NEW TYPE OF WINCH MOUNTED ON A TRACTOR

NEW ELECTRIC LOG FIXTURE OF SHIP'S HULL
 By CARL PALMBLAD *E. C. 3, England.*

A NEW ship's log which is electrically operated has recently been given its first trials in England, where it was developed by a former officer of the Russian navy.

There is no line connected with the instrument, for the log proper is not thrown overboard, but is fixed to the hull of the ship at a depth where there can be neither wave nor propeller disturbance. It may be briefly described as follows: The part outside the hull contains a terminal contact for insulated wires running to the electrical supply and to the indicating apparatus; a spring, also insulated, engages this contact and also the commutator, 20 revolutions of which represent a mile; the motion of the shaft of the rotator, which is in the form of a four-bladed propeller,

The Electric Log, Greatly Exaggerated in Size, as Installed in a Ship

is transmitted, through a double worm and wheel, to the commutator. As no packing is used around the rotator shaft, the resistance to its rotation is constant at all speeds and practically negligible. The indicating dial is graduated to record distances from .05 to 10,000 miles. There is also a panel with a table of speeds, a voltmeter, and three switches, for connecting the voltmeter to the battery for test; to throw the dial mechanism into the circuit, and to connect a buzzer, which signals every twentieth of a mile, so that the ship's speed can be obtained with the aid of a stop watch.

The new log was first tested over a carefully measured half-mile course on the Serpentine, Hyde Park, London, when it was fitted

Parts of the Log and Recording Apparatus: Left, Outboard Part Disassembled, with Rotator and Contact Spring to the Right of It; Center, Recording Dial with Switch Panel and Speed Table Below; Right, the Log Proper Complete

to a rowboat, which was pulled over the course at a constant speed of about 3 miles an hour. Later it was taken to Portsmouth and tested on a submarine. Several runs over a nautical mile, at varying speeds, were made there, with highly accurate results.

"With this log," says the inventor, "correctness to a fraction of a foot per mile has been easily obtained, and this correctness stands for any speed of a ship. The majority of navigators up to the

present have been inclined to charge all errors of the log to the account of the current, and therefore we have had rather misleading information regarding the currents. Navigators have been trying to do their best and have checked their log by the revolutions of the ship's propellers—but the first rough weather has upset all their calculations, and at the very time when there was the greatest need for reliable information, the log was obviously showing false."

The Wedding Party as It Appeared to Those Who had Gathered in the Exposition Hall: The Booth Was Soundproof and Connected with a Broadcasting Station

THOUSANDS SEE AND HEAR RADIO WEDDING

What is believed to be the first performance of its kind occurred in Pittsburgh recently when a wedding ceremony was performed in a large glass booth, visible to thousands attending an electrical exposition, while radio apparatus broadcast the words spoken to those at the show and countless others listening in. The booth, specially constructed for the occasion, was soundproof and connected by telephone to a station at East Pittsburgh, where the sending apparatus was located. Loud-speaker receivers in the exposition hall carried the words to those who had gathered there.

1212 BOW-AND-ARROW GOLF IS LATEST DIVERSION

Playing golf with bows and arrows, instead of the usual clubs and balls, is the latest diversion in the sporting world. Golfers of no mean ability have been defeated by as many as 20 strokes in contests with archers who shoot arrows from the tees to the cups. With the bow and arrow, "drives" of 250 and 300 yards are said to be a common occurrence, while the accuracy of approach to the greens would make any golfer envious. One thing is certain, any archer making the rounds of a course is never troubled by the "ball" overrunning the putting green. Neither do wet greens and fairways, nor the scientifically placed bunkers and traps, prove a hindrance to his game, or to the serenity of his temper.

TRACTOR FITTED TO PUSH OR HAUL FREIGHT CARS

Equipped with a standard coupling device at the rear and a heavy perforated steel plate at the front, a tractor has been made which can both push and haul freight cars with equal ease. Switching with various kinds of tractors has been a steadily growing custom in industrial yards, but this is the first time these practical features have been adopted. Numerous advantages

are claimed for a tractor so equipped, greater convenience, and cheaper cost of upkeep being the two most emphasized. As many as seven loaded cars have been pulled at one time, although the engine is of a type not unusual on tractors, and no attempt was made to give it greater power or improve it in any way.

The Tractor, Fitted to Push or Haul Freight Cars, is Shown Here Backing into a String of Cars Which It Is to Move. The Automatic Coupling Device Makes It Possible for the Tractor to Complete This Operation with a Speed Equal to That of a Locomotive

COUPLING WITH CHECK VALVE FOR COMPRESSED-AIR HOSE

A patented automatic air-hose valve takes the place of a globe valve, and at the same time acts as a coupling in compressed-air lines. In one half of the coupling is a check valve so constructed that it is held closed on its seat by the pressure from the air line. Two projections beyond the valve seat, with a cross pin between them, form a protection for the seat when this half of the coupling is dragged across the ground at the end of the hose. The cross pin also forms a pivot for hooking on the other half of the coupling, when

Top: Automatic Hose Coupling Which Takes the Place of a Globe Valve in an Air Line. Bottom: Sectional View of the Coupling

the two halves are coupled and locked together by means of an eccentric clamp-

MECHANICS

ing ring. When this is done, a projection on the hose-shank half of the coupling pushes the valve open and admits the air pressure.

1307 "PICK UP" RADIO MESSAGES 100 FEET UNDERGROUND

"Picking up" radio messages with a receiving set installed 100 feet underground in a mine, from a broadcast station 18 miles away, is the latest wireless achievement. The set was located not far from the point where the light and power wires entered the mine, and when removed to some distance from these, the signals were found to diminish in force and clearness. Although the tests did not actually lead to any practical method of using wireless waves for underground communication, they did prove clearly that electromagnetic waves, contrary to the former theory, may be made to travel through solid strata. The fact that radio signals were detected below the surface of the earth, will doubtless be sufficient evidence of possible transmission through the ground, to encourage further experiments.

1091 AUTO-STEP PLATE HAS SPACE FOR OWNER'S NAME PLATE

Using a triangular open space left in the center of a new auto-step plate, the owner may now buy and insert his own name plate. Two other features of the step plate are a raised rear guard, to protect the side shields, extending lengthwise above the running board, and a small shoe scraper built into the plate at its outer edge.

Proper packing of bolts, nuts, washers, and rivets for shipment to Chile is an important matter, because freight is transhipped to barges in the open roadsteads, and it is urged that shippers send these materials to that market in heavy double sacking or iron containers rather than wooden kegs.

LOCOMOTIVE CRANE SAVES HEADROOM IN SHOP

Large Gap Crane Which Allows the Locomotive to be Hoisted Well Up between the Crane Girders, Thereby Saving Considerable Headroom in Repair and Erection Shops: This Idea can be Made to Effect Considerable Economies in the Design of New Plants

1155
The gap crane adapted to locomotive repair or erecting shops saves 15 to 18 feet of headroom, which in the case of new shops will effect a considerable saving in the building cost. In this design, the girders that form the bridge are spaced, and the trolleys that carry the hoists are arranged, so as to allow the locomotive to be hoisted well up between

the girders. Each of the two trolleys is equipped with two hoists instead of one, as in the usual crane, and the crane can be fitted with lighter auxiliary hoists for general shop service. In a shop equipped with this type of crane, the messenger cranes are placed above, where the lift-over operation does not interfere with the crane running the full length of the shop.

926

OVERHEAD IRRIGATION PIPE OSCILLATES SPRAY

An oscillating arrangement for overhead irrigation pipes has been designed by the Department of Agriculture of Massachusetts. The mechanism, run automatically by the pressure of the incoming water, reverses the pipe from right to left and back again so that the plants on each side receive the benefit of the spray. Formerly it has been the practice to turn the pipe over by hand, or spray the water on one side only. About a minute is required for the complete movement of the pipe.

The Oscillating Device Shown at the Right Turns the Pipe from Left to Right So That the Stream Reaches Both Sides of the Garden. It can Also be Made to Spray One Side Continuously.

heavy, may be handled in an efficient manner with a block-and-tackle arrangement. The boxes, usually of metal, are first perforated in three places so that the hooks of a saddle appliance may be inserted. This saddle is raised or lowered by a rope and pulley. Thus the bulky boxes are easily taken down or replaced on the higher shelves.

☞The "Leviathan," now being reconditioned at Newport News, will be placed in transatlantic service on June 1, this year, according to a tentative arrangement made by the Shipping Board.

1093 **RAIL-GRINDING MACHINE USES FLAT STONES**

A grinding machine for resurfacing worn rails, recently put in use by the Boston street railway, differs from the common type in that the grinding wheel is replaced by four flat stones, mounted in a reciprocating holder that is driven by a connecting rod and crankshaft geared to an electric motor. Two handwheels regulate the pressure between the rail and the stones, which are supplied with water from a tank at the side of the machine. When in operation, the machine rests on two small wheels, from which the load is transferred, by means of a crank-operated gear and sector, to two large wheels when it is desired to move it. Although slower than the older method, a true surface is produced, insuring a more permanent repair of the track, and consequently economy.

1086 **UKULELE FINGERBOARD SLIDE TRANSPOSES TO ANY KEY**

Placed on the fingerboard of a ukulele and held by spring pressure against the strings, a metal slide is so constructed that it can be shifted, thus transposing to any desired key. A transposing chart is furnished with the slide, which can be put on or taken off in a second. It is said to improve the tone and make fingering easy. It can be used on all stringed instruments of the banjo type.

UGLY NORDHOFF BECOMES BEAUTIFUL OJAI

1122

By C. MORAN

Jan

THE transformation of a shack-and-shanty town into a place of architectural delight, virtually overnight, is the accomplishment of the citizens of Ojai, Calif. Cement turned the trick.

The town—formerly called Nordhoff—was a typical frontier settlement. Ramshackle buildings lined the main street. Treacherous mud-holes filled the road. Then, as if touched by a magic wand, the town was changed into a thing of beauty. The shacks and shanties are still there, but they wear a disguise. A long, Spanish arcade hides their ugliness. A stately Spanish tower rises above and incloses the post office. Across the road a low wall with arches surrounds a natural park, tennis courts, and clubhouse. Smooth boulevards, towering shade trees, riding paths, country places, hotels, and homes with wide verandas and beautiful vistas, have been built.

One of the town's leading citizens had a vision. He purchased 10 acres of land on the side of the street opposite the stores, laid out the park, and built the pergola along the street. The storekeepers were quick to see the contrast between their old worn-out buildings, and began a campaign of improvement. A

uniform arcaded concrete front connecting all the stores was built. At a cost of a few hundred dollars, each storekeeper soon found himself the owner of a building not only of considerably greater value but also of more attractive appearance.

A Store Building on Main Street in the "Shack-and-Shanty" Town of Nordhoff, California, before Its Transformation: Similar Buildings Lined the Whole Street

The post office was faced with cement and the tower built over it. A new hotel along the same architectural lines was erected, and visitors found some inducement to remain in the town instead of passing quickly through.

The whole undertaking furnishes encouraging proof that the craving for beauty pervades even smaller communities, whose former isolation, perhaps, was the only reason why this spirit has not

View of Main Street in the Renamed Town Ojai: The Improved Appearance of the Street Is Striking, Despite the Fact That the Buildings Themselves were Not Materially Altered but Only Concealed from View by an Arcade of Cement Construction, as Seen to the Left. The Tower on the Church, However, Is an Addition to the Old Structure

This Picture Offers a Closer View of the Arcade behind Which are Hidden the Old Business Buildings, of Which That to the Extreme Left Is the Post Office. The Smooth Condition of the New Cement Street Is Also Apparent. The Pergola and Vaulted Entrances on the Other Side Lead to the New Park

before expressed itself in visible improvement.

The entire work cost \$50,000. Nordhoff was an eyesore; Ojai is a popular resort. Other communities use it as a pattern.

COMPRESS POWDERED GYPSUM 129 TO MAKE BUTTONS

Buttons are now being made of powdered gypsum, which is first compressed to the desired shapes in molds and then dampened with a fine spray of water to effect a "setting," or hardening, process. It is said that buttons are manufactured economically, rapidly, and with exceeding exactness in this manner, in addition to which they possess great durability. Buttons may also be made by this method from burnt magnesite, or from a mixture of burnt magnesite and gypsum. If burnt magnesite is used, the hardening must be done with a chloride-of-magnesium solution, the result being an especially strong and durable material.

1238 A NEW MILITARY SELF-LOADING RIFLE

BY CAPTAIN EDWARD C. CROSSMAN

SEVERAL years ago a board of navy officers made the surprising discovery that a perfectly strong and well-designed navy rifle for one of the battleships would unlock its massive breech and open itself when fired with the light charges used for saluting, but when used with the high-pressure full-service charges, would remain as firmly locked as the

vault of a great city bank during the hours of darkness.

The resulting line of investigation terminated in the application for a patent by Commander Blish on a form of breech-locking device for big and little guns which would remain firmly locked during the high and dangerous pressure of the explosion in the gun chamber, but would

then unlock itself and permit the breech to open when the pressure had fallen to a safe point, and the projectile had left the barrel.

A great American arms factory has produced two arms using this queer principle, one of them the now well-known sub-machine gun, the other a self-loading infantry rifle submitted to several testing boards of the American army. The little submachine gun, using pistol cartridges, has been adopted by many American police forces, and was the "machine gun" forming the cargo of the steamer billed to Ireland and seized a year or two ago in New York harbor.

The Thompson self-loading infantry rifle is less well known, as it has been made only in experimental form for test by the ordnance boards of our army. This rifle, designed by the former assistant chief of ordnance, and using the Blish patents, fires the 1906 U. S. Army cartridge, fed from a box magazine, which is in turn loaded by the regulation army clip, with which we are all familiar.

As submitted to the army board, the rifle was made with the retractor, or recoil spring, in a tubular housing in the rear of the breech mechanism proper. The bolt is locked by a modification of the Blish principle, in this case turning out of engagement with the receiver shoulders when chamber pressure and friction have fallen to a low enough point to free the engaging surfaces. The little brother of the infantry rifle, the sub-machine gun, makes use of a wedge-shaped locking bolt, sliding at nearly right angles to the bolt of the rifle and lying below it.

Retraction of the bolt, to load the first shot from the magazine, is accomplished by a bolt handle at the rear of the receiver, but after this first cartridge is

loaded into the chamber, the rifle requires no further aid than a pull of the trigger for each shot until the 10-shot magazine is empty.

Unlike the submachine gun, there is no device to change the fire to truly automatic—that is, fire continuing as long as the trigger is held back and the magazine contains ammunition. The heavy recoil of the infantry service cartridge and the relatively light weight of the rifle would make the arm unmanageable with automatic fire. Even the 17-pound Browning rifle for this ammunition requires very short bursts of automatic fire to keep its bullets in the vicinity of the object fired at.

As the Blish principle is based upon friction and as friction is a variable, depending upon the presence of grit or grease, both the submachine gun and the Thompson self-loading infantry rifle require oil for their successful working. The inventors argue that, as motor cars and their engines operating at lower speeds and with less heat than is developed by smokeless powder, require oil, there is no sound reason why the automatic or semiautomatic war gun should not also be oiled.

Whether oil can be successfully used on a rifle intended for issue to the ordinary infantry private remains a question, in view of the dirt and neglect that mark the use of the infantry rifle in actual fighting.

☐ An accurate spirit level with the bubble constant at all ordinary temperatures, in which the proportion of air and liquid and the shape of the bubble tube are so arranged that a variation in temperature affects only the cross-sectional area and not the length of the bubble, has just appeared.

machines on street-car tracks in the business district, a Los Angeles car company is directing an appeal to the drivers themselves. Each week a new series of posters, placed at the front and rear ends of the cars, urge the motorists to keep off the tracks, or at least to keep moving if on them. One reading, "Mr. Autoist: Give the Street Car Riders Fair Play—Please don't Block Traffic—Thanks!" and another, "Mr. Autoist: Street Car Riders Are in a Hurry, Too.—Be Fair—Thanks!" may be taken as typical of the series.

1310 PAINT MADE WITHOUT OIL
 CHEAP AND DURABLE

Paints and varnishes of various kinds in which oil or shellac will not be required as a mixing body, or medium, may now be made by a recently discovered process. The new paints and varnishes can be produced at approximately half the cost of those now on the market, according to the inventor. In addition, the product is said to present the same appearance as oil paint, to have no noticeable odor, and not to blister in the hottest sun, nor crack at low temperatures.

PENDULUM APPARATUS IS USED
 IN AERODYNAMIC TESTS

A pendulum apparatus for making aerodynamic experiments such as testing airplane models, has been developed with a view to the needs of those who do not have access to a wind tunnel, since it can be easily and cheaply constructed from materials available in any engineering workshop. The model is carried in a tubular frame at the lower end of a hollow pendulum, 12 feet long, which is suspended from a pivot on the ceiling. With the pendulum in motion the lift force of the model is measured by the deflection of the pendulum and indicated by a pencil mark on a piece of paper on the floor. The drag can be calculated from reduction in height of the pendulum swing. The apparatus can also be used for plotting the pressures on the surfaces of the model.

EARTH-BORING AUGER HAS RELIEF VALVE

An auger that has recently been introduced abroad for the purpose of boring holes for fence posts and poles, has an ingenious valve arrangement in the wing that allows earth to pass through while boring, and keeps it from going back into the hole when the auger is pulled out. A toothed guard pushes stones out of the way of the valve. A size that can be handled by one man without unduly tasking his strength, will make holes ranging from 2 to 15 inches in diameter and about 7 feet deep.

The Folding Auto Bed Which Forms an Integral Part of the Camping Outfit: The Webbing is So Arranged That It Remains Taut after Long Use

Here is Shown the Entire Framework of a Two-Bed Tent, Weighing Only a Few Ounces and Nesting in Telescoping Tubes. On the Ground is One of the Beds Folded

pine and nonstretching webbing, weigh 32 pounds, and when folded occupy only a small space. The braces are carried in two brass tubes which are partly telescoped and used as the ridgepole when the tent is to be erected.

One of the advantages claimed for this

or "kitchenette," a canvas-covered aluminum chest that serves both as a cupboard and a stove stand. The sides are so made that they can be extended to furnish a windshield for the stove, while the whole outfit can be hung on the rear wall of the tent, set up on the ground anywhere, or

placed on the auto running board. Still another practical piece of camp equipment included is a webb-topped table, which can be adjusted and used as a chair.

669

HEIGHT AND WEIGHT TOLD BY NEW SLOT MACHINE

In a novel improvement of the ordinary weight machine, the scale is placed in the middle of the upright section, which in this case is glass-covered. Above the scale is painted a series of horizontal lines, at the left of which appear small black squares. When the coin is inserted, the weight shows as usual, and the squares drop, each revealing a height corresponding to its horizontal line. The center of the eyes being on a level with the top of the ears, height is indicated by the horizontal line upon which vision alights.

ing, a green light shows constantly, but when the brakes are applied, the green signal is extinguished and a red one flashes a warning to following motorists. Two sets of green and red lights are used, one set for daylight driving and the other for night travel, the former being more powerful so that they may be plainly seen in the sunlight. Interlocking shutters are provided for each pair of lights and the signal has two 1-inch red side lights.

1151 AUTOMATIC MEASURING AID FOR USE OF CHEMISTS

Measuring small quantities of fluids, such as is required of chemists or those

engaged in similar pursuits, has been facilitated by the introduction of an automatic appliance. The outfit, which may be clamped onto the neck of a bottle, or other container, or attached to a stand or bench, consists of a compressed-air cylinder actuated by a rubber bulb, the cylinder in turn operating a syringe.

To the bottom of the syringe a rubber tube may be affixed, this tube extending into the bottle or other vessel from which the liquid is to be taken. A regulating, adjustable nut on the cylinder may be manipulated so as to control the amount of fluid drawn up when the bulb is pressed, this measured amount being then ejected from the tip, or nozzle, of the syringe when the bulb pressure is released. The apparatus will be particularly useful in places where a large number of routine tests are performed.

SCIENTIFIC METHODS IN THE UTILIZATION OF WOOD

SCIENTIFIC methods in the utilization of wood are believed to be as profitable and as practical in the forest as in the later stages of manufacture, this fact being illustrated in the accompanying picture. Some of these methods are: the cutting of "low stumps" so as to secure maximum log lengths; the peeling of felled logs to facilitate seasoning and to minimize insect or fungus attack, and leaving the small growth of sufficient desirable seed trees to insure reproduction. The slash, or trimmed-off branches, is burned as soon as it is cut from the trees, together with all underbrush. This clearing of the ground aids in "skidding out" the logs, and also leaves it in a condition that will not favor fires which might sweep the cut-over land and retard a second growth of timber.

SCENIC ARTISTS MAKE CLEVER STAGE EFFECTS

793 The realistic scenes and spectacular theatrical effects shown on the stage and

in Turkish rugs, and the effect on the imagination seemed all that could be desired.

In making artificial trees, of which one was to be hollow and house a man-sized owl, the trunk was made of laths, rattan hoops, wire-bound into form, and loosely covered with canvas, which was soaked with glue and squeezed into ridges, corresponding to bark and knurls. Florists' moss, stuck into the wet glue, gave a final touch of realism. A trick elephant was made up of a canvas-covered skeleton formed of flexible ribs and strands of rattan, over which cardboard was laid, and the whole properly painted. It was arranged that the men, who were to support the form on their shoulders and furnish the legs of the animal, should operate the ears, eyes, and tail by means of strings, and manipulate the flexible trunk with the aid of a rod, so as to pick up articles, like a bottle. Various trappings of Oriental design were put on to give a final touch of realism to the animal.

Ⓢ A race track to be used in trying out new types of cars is to be built by motor-car builders and the Automobile Club of France in a wooded district north of Paris. It is planned to acquire 900 acres and make the track from four to six miles long.

Clever Young Scenic Artist and His Wife Busily Engaged in Painting One of Their Striking Settings for a Comic-Opera Production

on the screen are not often what they seem to be, and it is interesting to know a little of the way they are created by clever scenic artists and craftsmen.

The work of two young artists who design and paint the scenery for a western comic-opera company, is attracting considerable attention for the type of their scenery, which is based on the psychology of the relation of colors to moods and actions; to suggest rather than reveal. In a comic opera, of Oriental setting, for instance, in one scene they used designs and colors found

REVOLVING BARREL SCALE IS AUTOMATIC

419

Jacksonville Fla

There has lately been invented a revolving scale for the automatic filling of barrels with an accurately weighed quantity of oil or other liquid. Two distinct weighing elements are mounted on a frame that surrounds a vertical shaft, with the intention that one barrel will be filling while another is being removed. Each scale has a tare beam and poise and a separate blade and poise for the liquid, which is automatically shut off when the desired amount has run into the container. The filled barrel is quickly revolved to the unloading position while an empty barrel is swung under the filling spigot.

Revolving Scale for Filling Barrels with Oil and Other Liquids: When the Desired Amount has Run In, the Flow is Automatically Shut Off, and the Scale is Then Turned Halfway Around

663

STORE FRONT IS BUILT WITH STONES AND SPLIT LOGS

A store front of cobblestones and split logs has been built by a Pacific-coast retailer of outdoor equipment in an attempt to create a suitable atmosphere for the display of his goods. Carrying out the rustic theme, in the interior of the store,

desks, shelving, and other fixtures have been made of split logs, and model camps set up as in actual use.

MINIMUM SPEED OF 175 MILES SET FOR PULITZER RACE

It was decided that an airplane not capable of making better than 175 miles an hour would be ineligible to compete in the 1923 Pulitzer Cup races, at a recent meeting of the National Aeronautic Association. At the same time the maximum landing speed for this race was fixed at 75 miles an hour. On account of the dangers of making abrupt turns at such extraordinary speeds, and the inability of the heart to force blood to the brain against the centrifugal force that occurs, the committee has arranged for the race to be four laps around a 50-kilometer equilateral triangle with two towers at the angles so as to insure a wide turn.

One of the Homemade Auto-Polo Cars Used in an Exciting Contest: Neither Cars nor Players Suffered Injuries in the Strenuous Game

In staging an auto-polo contest not long ago, students at the University of Indiana used some light cars that they rigged up to withstand the hard knocks of that strenuous game. The chassis was stripped of all the nonessentials, and equipped with an iron bumper in front and one large iron hoop front and rear. In spite of hard crashes, no damage or accidents occurred.

**FIRELESS FUMIGATOR KILLS
1034 FLOUR MOTHS**

Fumes emanating from a noncombustible powder, are circulated by means of an electric fan in a new method of exterminating flour moths that are such a nuisance in mills where flour is processed and stored. The powder is placed on a fireless and well-insulated electric hot-plate that drives off the volatile constituents, leaving a residue to be thrown away. This method is said to assist in the eradication of other insects that have a tendency to infest flour mills, by stupefying them so that they can be easily collected.

Fireless Electric Fumigator Reported to Be Effective in Destroying Insects That Infest Flour Mills

559 **CARTRIDGE BELTS SALVAGED FOR BRASS**

Huge quantities of cartridge belts, said to have cost the government \$1.75 each,

have been burned in the furnaces of a smelting and refining company, to salvage their brass content. The value of the brass in each is about 1½ cents. As is well known, these belts consist mainly of heavy canvas, the only brass being in the snaps and clasps. Thus, the ratio of the initial bulk to the ultimate concentration is striking. The metal obtained from a pile of belts that would cover the area of an ordinary city block, may be contained in a bin of but a few cubic yards' capacity.

SMOKE PREVENTION IN CHICAGO UNION STATION

BY ROBERT H. MOULTON, *Comm. L.**Board of Trade, Chicago*

ONE of the most serious problems to be faced in the construction of modern railway terminals is that of abolishing the smoke nuisance created by loco-

which overhang the station tracks at a number of street crossings. Because of the peculiar construction of the station, it was known that, if smoke and gases

Upper Left: Locomotive Stack Discharging Smoke through Experimental Slots in Roof of Test House. Above: Locomotive in Test House Built to Determine Best Way of Eliminating Smoke Nuisance in New Union Station at Chicago

Outside View of Structure in Which Smoke Tests were Conducted: It was Built to Create, as Nearly as Possible, Conditions That would Exist in the Train Shed

motives while standing in the train sheds. Special devices on locomotives, mechanically operated ducts, and others operated by the blast from the locomotives, have all proved more or less unsatisfactory. Therefore, in constructing Chicago's new \$60,000,000 Union Station, the engineers decided to experiment along new lines.

For this purpose they erected a special structure which was, in effect, a section of the viaducts that pass over the depressed tracks in the train shed and those

were permitted to accumulate under these viaducts, they would quite likely sift into the concourse and produce an extremely undesirable condition in one of the most used and important spaces in the entire station, which would be difficult to remedy later.

The test house, as it was known, represented a two-track section with just room enough for a single locomotive and with a curtain which could be dropped at each entrance in order to create conditions as they would be in the station itself, and so make the tests more thorough.

It was decided in the beginning that the only device which would be entirely satisfactory would be one that could perform its function entirely independent of the locomotive under all conditions of standing and running, and which could

also be installed in a manner that would not require any structural changes in the viaduct design.

Accordingly, a design was made of a system of open slots in the ceilings of the viaducts over the track center line. These slots were continuous in length, except where broken by the bottom of the flange of the viaduct girders, and were first made 30 inches wide at the bottom and 12 inches at the top, the space under the floor of the viaduct and above the ceiling being used as a gas or smoke chamber, and these chambers in turn connected to a series of flues and ducts leading to ventilating fans.

The device worked successfully from

the start, the only trouble being that, when the locomotive was laboring very hard, the smoke and gas had such great velocity that they would slightly overcome the suction of the fan, with the result that a small quantity of smoke escaped down through the smoke duct over the next track.

This difficulty was overcome by the use of a suction-flue design with the openings in the form of a continuous slot at the top and a baffle arranged to stop the smoke and gases from passing this point and at the same time guiding them into a slot, the space below the flue being closed. The experiments have shown the engineers that the device is practical.

1308 **PERMANENT POISONING FROM
GASOLINE FUMES**

Symptoms all the way from drowsiness to a state of talkativeness and foolishness, commonly called a "jag," have been found to result from working where gasoline fumes arise and the ventilation is not adequate. Inhaling the fumes, according to the United States Public Health Service, brings about sooner or later what is termed "gasoline poisoning." This disease results in blurred vision, constant dryness of the throat, insomnia, constipation, loss of appetite, extreme nervousness, and other conditions, depending upon the temperament of the individual and whether or not the poisoning is in a mild, acute, or chronic form.

Using the Grading Machine Shown Above, Eight Sizes of Pecan Nuts can be Quickly Sorted. The Nuts Pass from the Hopper onto Rollers, with Various-Sized Openings between Them, Thence along Gutters Leading to Baskets on the Ground

1159
SORT EIGHT SIZES OF PECANS WITH GRADING MACHINE

Eight sizes of pecan nuts, ranging from $\frac{1}{2}$ inch to $1\frac{1}{4}$ inches, are quickly graded with a new machine. The nuts are dumped into a hopper at the top, and then fall by gravity into seven channels in front, the bottom of these being made of steel rollers with graded openings. As these rollers slowly revolve, the nuts work down until they pass through their respective openings, and thence along special gutters leading to baskets on the ground. A large hand-turned wheel with a belt transmission to the rollers is the only power used.

ALARM CLOCK IS LIGHT TENDER IN MINNESOTA VILLAGE

Yes, that's a fact! It's done in the village of Elba, Minn., and the arrangement by which the clock is made to perform this duty is simplicity itself.

The village light plant is a small hydro-electric one, driven by a turbine set in the tailrace of the village mill. Each day, before going home for his evening meal, the miller winds and sets the alarm of the clock to go off at 11:00 p. m. When the time arrives, the alarm goes off, and by means of a cord, a trigger is pulled. This moves a hinged lever sufficiently to permit a heavy spring to recoil and pull its support away from a brace, which, up to the appointed time, holds the turbine

lever in open position. When this brace falls, the lever automatically assumes the

Crude but Thoroughly Practical Apparatus Which was Devised by a Miller to Extinguish the Lights in a Minnesota Village Automatically

closed position, thus shutting off the power and extinguishing the lights.

Ⓐ practical standard of night illumination for automobile license tags is being sought by the U. S. Bureau of Standards. The tests will determine the nature of light needed to make the tags visible at a reasonable distance.

NEW WATER-SUPPLY SYSTEM
PROPOSED FOR MANILA

The water-supply system of Manila, P. I., considered inadequate for many years, must soon be enlarged or replanned entirely, according to the manager of the metropolitan water district. At a meeting of the Manila Chamber of Commerce three projects were proposed, the first to improve the present leaky reservoir, the second to construct two new large dams and a new pipe line, and the third to build a dam in connection with the Angat River, from which the water would be brought to the city by a tunnel. The capacity of this latter project, which seems to be the most favored of the three, would be 80,000,000 gallons and would take care of the city's needs for many years to come. Although subject to continual repairing, the present reservoir still has a leakage of 9,000,000 gallons a day.

MOUNTAINSIDE MINE WORKINGS SHOWN BY AERIAL PHOTO

THE large scale on which surface mining of copper is conducted, is vividly shown by a photograph taken from an airplane which flew over a large mining property at Bingham, Utah. The picture shows so clearly the series of terraces formed by the steam shovels cutting their way into the side of the mountain, that the engineers use it as a means of planning future operations. It is only by large-volume mine operation such as this, where thousands of tons of crude ore are taken out daily, and by the complementary milling equipment, that the present development of the extensive deposits of low-grade copper ores has been economically possible.

LIGHTWEIGHT AUTO-SEDAN WITH TANDEM MOTORS

With the object of increasing its power and range of operation, a standard lightweight automobile has two of its regular motors installed in tandem upon an extension of the chassis of the car. Each motor has its independent carburetor and ignition system, and the standard radiator serves both of them. This construction about doubles the power of the car, and necessarily greatly increases the wheel base, which becomes as much as 138 inches. One car so constructed is said to have operated well in a number of road tests, and the builder predicts better results from this construction in the future.

The "Logan," a Discarded United States Army Transport Which has been Sold by the Government and will be Converted into a Floating College by Its New Owners: The Yearly Fee at This Floating School will Be \$3,000, and Each Year will Include a Trip around the World

ARMY TRANSPORT TO BECOME FLOATING COLLEGE

The former United States army transport "Logan," one of several of the old-timers in the transport service, is to be converted into a floating college, on which American youths, from 13 to 18 years of age, will be given high-school and college courses at sea. Each year's studies will be conducted in the usual school months, from September to May, during which time the "Logan," or whatever the transport's new name may be, will cruise completely around the world, its home port being Baltimore. This will be the first time that a privately owned American vessel has been used for purposes of this kind, though the United States government and other governments as well, by means of training ships, have given educational advantages to youths while on long cruises.

The "Logan" has just been purchased by a syndicate of Georgia capitalists, who have subscribed funds to finance the deep-sea collegiate experiment. The transport was delivered to their representative at San Francisco in November, last year, and was sent to Baltimore to be refitted as a school ship. Navigation, seamanship, and foreign trade also will be taught on board, in addition to the regular high-school and collegiate branches, but unless students so desire, they need

not take these three courses. The ship will start on its first educational cruise at the beginning of September, this year, and students entering will matriculate for full four-year courses.

Prof. Zebulon Judd, dean of the Alabama Polytechnic Institute, has been named head of the educational department, and Captain Williams, who has been in command of the "Logan" for 12 years, is to remain in charge. The plan back of the project is to give the students practical first-hand knowledge of geography, history, commerce, and peoples. The floating school will be expensive, since, according to present announcements, the cost of each nine months aboard the ship will be \$3,000 for each boy registered.

1283 OLD LOCOMOTIVE SUBSTITUTES FOR DISABLED BOILER

During the busy season at a plant the loss of a week's production was threatened by a boiler being put out of commission. The emergency was met by obtaining from the nearest roundhouse an old locomotive that served the purpose of generating steam to keep the plant going, although it had reached the point where it was unfit for active road service.

NEW BARGES FOR ERIE CANAL ARE ELECTRICALLY DRIVEN

A type of barge, recently developed at Buffalo, N. Y., is expected to revolutionize inland water travel. This new vessel was designed primarily for use on the Erie Barge Canal, but it can, and ultimately will, be used upon other inland waterways of the country, such as the Ohio, Mississippi, Missouri, and other shallow streams which will be navigable to these fast, light-draft, electric-driven boats.

The boat is of entirely new design, and it has required many years of intensive study to bring it to a successful completion. It is a double-decker, with a length over all of 272 feet, and a width of 42 feet. The bottom is flat, and along its center is built an open tunnel running nearly the entire length of the hull. The water contained in this tunnel—120 tons of it, to be exact—serves as ballast. In reality, this tunnel divides the hull into two parts, each containing 42 airtight compartments with bulkheads, thus making the boat practically unsinkable.

Something new in the way of a steering apparatus has been evolved for use on it. This consists of four swinging pontoon rudders, two at each end of the hull, which make it possible to take sharp turns or warp into dock very quickly. It has two pilot houses, one at each end, from either of which the boat can be controlled. The 12 by 16-foot gangplank can be lowered at any point along the banks of a river, and produce or merchandise can be taken aboard very conveniently. Docking facilities are necessary only at towns and cities where large quantities of freight are handled. At these points loading and unloading are done with electric trucks.

Motive power is furnished by the very latest type of Diesel engine, electric generators and motors, and all auxiliary machinery is electric. Two propellers are used, one at each end of the boat, and each of these can be lowered or raised according to the depth of water navigated. A refrigerator system with a capacity of three carloads is another feature of the boat.

The cost of building a boat of this type is \$150,000, of which 75 per cent represents machinery and labor-saving devices. A comparison of this new boat with the old type now in use is rather interesting. The average size of the latter has a deck area of about 1,425 square feet; the crew's living quarters are generally antiquated, and the boats have to be towed. The new type has every possible convenience—hot and cold running water, staterooms, a splendid kitchen and dining room, baths and showers, with electric lights in all parts of the boat, and it possesses about 15 times the deck area of the older boats. And, most important of all, the building cost per square foot is practically the same.

NEW ELECTRICAL IMPLEMENT 1303 SIMILAR TO MAGNET

An electrical device which has the curious similarity to a steel magnet, that it is permanently charged with positive electricity at one end and with negative at the other, and that, if broken into pieces, each part retains this polarity, has been made by a Japanese university student. The process of manufacture is rather involved, but the finished product consists of a rod or bar of a special dielectric material, and is called an "electret," the name being derived from electricity in the same manner as magnet from magnetism.

ASTONISHING GLIDING RECORD SET IN ORDINARY AIRPLANE

An aerial gliding record, recently set by a French military airman, is remarkable not only for the length of time he remained in the air—7 hours 3 minutes—but also by reason of the fact that he accomplished the feat in an ordinary army plane. The performance took place in Algeria, northern Africa, and the plane was in no way altered except that the propeller was immobilized by means of wedges. Besides, the plane carried 500 pounds of extra weight in addition to its normal fuel and oil supply.

AUTOMATIC VENDING MACHINE DISPENSES SOFT DRINKS

A novel application of the idea long used in the familiar penny-in-the-slot chewing-gum and peanut-vending machines, has been made for the automatic dispensing of soft drinks. The purchaser drops his coin in the slot, pulls the operating lever, and shortly receives a sanitary paper cup into which the proper portions of flavoring sirup and carbonated water have been discharged. A supply of flavoring sirup is kept in a glass container on top of the machine, and the carbonated-water drum is placed in the bottom part of the case on which the machine is mounted.

The Design of a House being Carried Out by Placing Together Sections of the Building, Made to a Scale of One-Half Inch to the Foot: This Scheme Enables the Prospective Builder to Produce a Model for His House with Any Desired Interior Arrangement and General Appearance. The Sections are Made of Cardboard

SUPPLEMENTING THE ARCHITECT AND DRAFTSMAN

BY FRANK B. HOWE

A SYSTEM which not only is of value to the architect and the draftsman, but also enables the home builder, who probably can tell little from plans and blueprints, to see exactly what his finished house will look like, has been patented and used to advantage in the West.

The inventor of the system is also the inventor of a method of building ready-cut houses, and this work led him to develop a "unit" system. This new type of house consists of standard sections, which can be fitted together and arranged in any one of innumerable combinations, instead of the limited number of styles of ready-cut houses. Hence the prospective builder can visualize his own plans and style of house, yet have the advantage of the low cost of materials which the quantity production of the factory-built house affords. The

inventor has made his system of designing conform to these standard sections. However, there seems to be no reason why the method should be restricted to that field only. It is easily applicable to any other.

Plan of a Six-Room House with a Porch, Standard Sections

The plan is nothing more than a glorified doll-house building. Sections of siding, roof, partition, etc., are supplied, reduced to a scale of 1/2 inch to 1 foot, and built of cardboard. The intending builder takes these pieces and with them builds miniature houses according to his taste, until he gets a style and appearance that suit him. He

sees just what his house will look like when it is done, for the miniature pieces are cut exactly to scale.

When a model house that suits the buyer has been put together, he simply turns it over to the builders and says, "Go ahead." There is much less need of blueprints and wash drawings; and no hope-

Two Completed Miniature Models of Houses: The Full-Size Buildings are Erected in Accordance with the Models with Standard Sections That Correspond on an Enlarged Scale with the Cardboard Sections of Which These Models are Constructed. The Latter Sections Are Interchangeable, Permitting Great Variation in Design

less endeavor on the part of the architect to convey to the amateur mind what the house is going to look like. Instead, the builder of the house puts his model together exactly as he wants the house to look. If anyone in the family has a liking for painting, different color combinations for the rooms can be tried out by painting the model with water colors. A furniture company cooperates by supplying little models of various pieces of furniture, all made exactly like the

1319

NEW SUBMARINE POWER CABLE IS SEVEN MILES LONG

A seven-mile submarine cable, reported to be the largest and longest ever employed for this purpose, has just been laid across San Francisco Bay to bring additional hydroelectric power into San Francisco and reduce the load on the steam-driven plants. It is a three-conductor cable, slightly over $\frac{3}{4}$ inch in diameter, and at 11,000 volts will be capable of transmitting 10,000 kilowatts. Because of its unusual size, the cable was not placed on reels but was shipped from the factory in nine gondola cars in which it was coiled in 4,800-foot lengths. These lengths were later spliced together into one 38,500-foot length which was coiled on a special cable-laying barge. This method has long been used for telegraph and telephone cables but never before for a power cable.

Consuming 102 pounds per person, America in 1922 established a record as a sugar-eating nation, according to data collected by a large refining company. The figures were based on an estimated population of 110 million.

original and corresponding to the scale of the house.

In short, the resourceful inventor plans to offer his customers a method of seeing just what kind of houses they are getting, before they get them.

Claiming that radio aerials attached to light poles or stretched across light wires were too dangerous to be tolerated, the head of the Kansas City light and power plant ordered more than 300 torn down.

**SIMPLE BALANCING MACHINE
IN USE IN GERMANY**

1269

In rapidly rotating parts, such as pulleys, flywheels, crankshafts, and rotors, it has long been the practice in this country to establish in them as perfect a dynamic balance as possible, apart from any simply static balance, and to do this, elaborate and expensive balancing machines are necessary.

In a new method, recently put into practice in Germany, the body to be tested is mounted in two bearings, fitted to vertical springs so that, when rotating, if there are any unbalanced parts the body will oscillate. When being tested, the body is driven till it reaches a high speed, when the driving power is cut off, and the body is allowed to run freely in the flexible bearings. As it gradually slows down, the oscillations are recorded graphically by means of an indicator coupled to the rotating body. The whole operation is repeated with the work rotating in an opposite direction. By this means the necessary balancing weights are easily determined in two or three comparative tests.

For bodies rotating at high speed, a third and even a fourth balancing operation, similar to the first, is advisable.

Above: Rear of Football Scoreboard, Showing the Wheels That are Revolved to Change the Notices on the Front of the Board. Below: Front of Board as It Appears When in Use

ments for displaying the score. The board is mounted within easy "reading distance" of the spectators and has revolving disks that indicate the "quarter," whose "ball" it is, what "down" and how many "yards to go," whether or not it is the "last five minutes," and also the total score by quarters. The result of every play during the game is wigwagged from the sidelines by a cadet, the signals being interpreted at the board by another cadet, who orders the changing of the marking mechanism in accordance with the progress of the contest, thus giving the spectators timely information.

New Building of the Hongkong and Shanghai Bank Which Has Sheet Piling Surrounding the Foundation

Corner of New Bank Building: Opposite to It Is the Customhouse, the Foundation of Which was Endangered

While not in quite so precarious a predicament as a house built upon sand, Shanghai, China, is not much better off, for it is a city built upon mud, and very slimy mud at that. From this, naturally, results a great deal of difficulty with foundations for heavy structures. The first step necessary before erecting the superstructure of anything like a large building, is to surround the whole foundation with a wooden inclosure like the cofferdam used in laying the foundation

Driving Sheet Piling by Man Power for the Purpose of Holding the Slimy Mud in Place beneath the Foundation of the New Bank Building in Shanghai

of a bridge pier. While erecting a large reinforced-concrete building recently on the river front of Shanghai, the foundation of the neighboring large customhouse began to move, on account of the displacement of the slimy mud by the weight of the new building. It was necessary to sink heavy upright timbers, like sheet piling, along the walls of the customhouse, and to tie them together with long steel rods to prevent the pressure of the mud from forcing them outward.

1128

BENCH CLAMP MAKES HAND VISE MORE USEFUL

A hand vise of recent design that has a grip capacity up to 1½ inches, is furnished with a bench clamp that greatly increases its usefulness for home and shop work. Applied to a bench, the vise can be turned to any point in a circle to suit the convenience of the user. The ball-end handle for tightening the jaws, instead of the wingnut commonly used on hand vises, is an added feature.

The Usefulness of the Hand Vise is Increased by Means of the Bench Clamp Which Fastens It to a Bench Where It can be Turned to Any Point in a Circle

EXACTING REQUIREMENTS MET BY WOODEN FLUME

View Showing the Curve of 100-Foot Radius to Which This Wooden Flume was Constructed in Spite of the Fact That It was Pronounced by Many to Be Impossible

A wooden flume was recently built to conform to conditions that had been considered by some as being impossible of execution. The flume, which was elliptical in section with the bottom forming a curve of about 10-foot radius and the sides one of 6-foot radius, was constructed on a curve of 100-foot radius. The length of the section was 200 feet, and after 100 feet of the flume had been laid, the thickness of the staves was reduced from $2\frac{1}{4}$ inches to $1\frac{1}{8}$ inches, requiring a very difficult joint to be made. The principal staves of this flume were made of carefully selected kiln-dried Douglas fir.

745 ROTARY PLOWS PREPARE SOIL FOR SUGAR CROP

A powerful machine that plows and pulverizes the ground to a depth of 20 inches, and opens up furrows for the planting of sugar cane, has lately been shipped to Porto Rico for trial under actual working conditions. A heavy hinged

they reach the full depth. The soil is not turned over as with the ordinary plow, but the lumps are forced against one another so that they are broken up. The machine is driven through gears by means of a 100-horsepower gasoline engine, and

when plowing to a depth of 20 inches, will prepare about one acre of light soil an hour. The plows cut more than the width of the machine.

Side View of Powerful Machine Recently Built for Tillage of Sugar-Cane Soil in Porto Rico: Note Inclined Plow Frame

frame at the rear carries two sets of plows arranged in a circle and geared to revolve in opposite directions. The plows rotate on an incline so that they enter the ground gradually, going deeper as they move toward the rear until

This Chart was Designed in the Form of a Horse Race to Add Interest to a Safety-First Drive at a Large Cement Plant. Each Day a Department Passed without an Accident was Marked by an Advance of One Square on the Chart

916
"FAKE" HORSE RACE AIDS SAFETY-FIRST DRIVE

A novel contest was recently staged in a large cement plant, the object being to eliminate accidents. The contestants were the employes of the nine departments of the plant. They were divided into nine groups, each provided with a horse, and the contest was entitled "safety horse race."

The horse of each department was started from "scratch" on a chart divided into squares. Each square on the chart represented a day. For each day in which no accident occurred in a department, the horse representing that department was advanced one day, or a square on the board. The horses all had names, some of them indicating the work or special hazard in the particular department represented.

For minor accidents which were a little too serious for first-aid treatment only, one-half day was marked off, and for accidents requiring only first-aid treatment, the department lost one-fourth of a day.

The human element is a strong factor in 90 per cent of the accidents, it is claimed, and it was for the purpose of overcoming this human-element problem that a concerted drive to eliminate accidents, by instilling unusual interest in it, was worked out in this manner.

912
NEW REAR-SPRING SYSTEM FOR SMALL CAR

A new rear-spring system for light-weight cars is said to act in the capacity of a shock absorber or snubber in lessening the effects of a jolt when one of the rear wheels drops into a depression or strikes an obstruction, as well as to serve the primary function of the usual spring which it replaces. It consists of two separate cantilever springs, the ends of each being attached to the rear axle and

the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 13.5 million (19.5% of the population) (ONS 2002).

There is a growing awareness of the need to address the needs of older people in the UK. The Department of Health (2000) has published a strategy for older people, which sets out a vision for the future of care for older people. The strategy is based on the following principles:

• Older people should be able to live in their own homes for as long as possible, and to be supported to do so.

• Older people should be able to live in their own homes, and to be supported to do so, in a way that is safe, secure, and of good quality.

• Older people should be able to live in their own homes, and to be supported to do so, in a way that is affordable.

• Older people should be able to live in their own homes, and to be supported to do so, in a way that is accessible.

• Older people should be able to live in their own homes, and to be supported to do so, in a way that is inclusive.

• Older people should be able to live in their own homes, and to be supported to do so, in a way that is empowering.

• Older people should be able to live in their own homes, and to be supported to do so, in a way that is enabling.

• Older people should be able to live in their own homes, and to be supported to do so, in a way that is enabling them to live their lives to the full.

• Older people should be able to live in their own homes, and to be supported to do so, in a way that is enabling them to live their lives to the full.

Talking Machine Which Presents a Distinct Departure in the Design of These Instruments and Adds to the Beauty of the Home Furnishings

Combined Hook and Button Which Provides an Easy and Efficient Means of Fastening Suspenders or Belt

1140 TRAVELING MIXER SERVES BATTERY OF VATS

A traveling mixer has been designed that eliminates the necessity of an individual stirring device for each tank or vat in a plant where a large number are used in the same or similar stages of the process. It consists of a traveler suspended from a single rail that carries the agitator drive, which is fitted with an extension shaft long enough to accommodate the deepest tank to be served. To

the lower end of the shaft is fastened a heavy-duty rotor or paddle wheel. It is driven by an electric motor.

the lower end of the shaft is fastened a heavy-duty rotor or paddle wheel. It is driven by an electric motor.

1174 IMPROVED WATERING TROUGH HEATED BY TWO LAMPS

The water need never freeze in a new trough designed to be heated by two small lamps. Of medium capacity and lined with galvanized iron, there is nothing unusual in the construction of the tank, except that beneath what would ordinarily be the bottom of the trough,

The Water in This Trough is Kept from Freezing by Two Lamps in a Lower Compartment, One Section of Which is Shown Open

is a long compartment, built somewhat in the nature of a false bottom, and it is here that the lamps are placed. In addition to the heating feature is a float-and-valve arrangement which keeps the trough always filled.

1211 HUGE POWER DAM PROJECTED IN PROVINCE OF QUEBEC

For the development of 1,200,000 horsepower, a dam is to be built at the Grand Discharge from Lake St. John, the headwaters of the Saguenay River, in the Province of Quebec. In the erection of the dam an expenditure of \$12,000,000 is contemplated. A Quebec development company has announced its intention of making use of the water power in two large mills to be erected for the manufacture of wood products and paper.

584 IRON EAVES-TROUGH HANGERS THAT ARE EASY TO SET UP

For eaves troughs, or hanging gutters, wrought-iron supports that can be connected to the rafters, or nailed against ogee moldings, have recently been patented. In both cases each support is connected to a channel-iron shank which is perforated at short intervals along its whole length for bolting to it a bracket for the gutter. The

shanks are of different lengths, enabling the roofer to arrange them so that the gutter can be given a suitable slope. There are no crossbars over the top of the trough, and nothing to hold leaves or other rubbish, and thus interfere with the drainage.

□An independent police force under the direct command of the president has been formed with the thirty-odd policemen detailed at the White House. The new organization will wear a uniform of navy-blue serge, and will probably become a permanent institution.

Apparatus for Skimming Waste Fuel Oil from the Surface of the Water in the Harbor of Baltimore, Maryland: On Board the Scow Is a Pump in Connection with the Hose, the Intake End of Which is Suspended from the End of the Boom. The Tank Is for Separating the Oil from the Water

FUEL-OIL SKIMMING DEVICE FOR BALTIMORE HARBOR.

To keep Baltimore harbor free from floating fuel oil, which is a constant fire menace, the city authorities have constructed an effective skimming apparatus. It consists of a suction pump mounted on a scow and connected with a hose which is slung overboard with its intake end suspended from a boom and held just below the surface of the water. When the pump is in operation, water and oil, after being sucked through the hose, are discharged into a settling tank on board the scow. In this tank, when the water has been separated from the oil by settling, it is discharged through an outlet pipe, and the oil is then removed for storage in barrels. This oil-skimming scow will be operated in the same manner as a fire boat, being maintained at a permanent station, ready at a moment's notice to respond to calls sent in by the inspector who patrols the harbor for the detection of oil.

MACHINE WASHES AND DRIES RESTAURANT SILVERWARE

The flat silverware of restaurants, hotels, or other large catering establishments may be quickly washed and dried with a new improved machine. It consists of a copper cylinder, about 3 feet in diameter and 6 feet long, laid lengthwise

on a low stand. A removable section is at the top of the cylinder, and beneath are three compartments, the first two fitted with perforated baskets which revolve on racks, while the third is connected with a fan and a radiator just under it. In use, the silverware is placed in the baskets of the first compartment and revolved through a hot washing solution, then removed to the second, where it is whirled about in a rinsing solution, and finally put into the drying chamber, where the heated air evaporates all the moisture.

**CHAIR-ARM WRITING BOARD
 HAS DRAWER FOR PAPERS**

A new portable writing "desk" consisting, roughly, of a rectangular board so padded that it may rest on the arms of a chair without marring the finish, has been especially

Below, the "Desk" is Shown in Use, and Above with Its Top Opened, Displaying the Drawer for Writing Material, and the Book Rest

fitted with a drawer for holding writing material. This drawer runs lengthwise under the forepart of the desk and is reached by lifting the upper surface of the board, hinged at the front edge. Another feature is a small finger, on the edge nearest the writer, which may be swung up to serve as a book rest.

**NOVEL MEANS FOR DISPOSING
 OF SURPLUS WATER POWER**

In many water-power stations it is necessary to provide for the escape of surplus water, and in high-head installations this causes trouble, especially in instances where there is no natural channel of easy gradient for the escape of the water. In such cases this difficulty has been overcome in England by the use of a hydraulic brake. This consists of a ring of small nozzles mounted around a cast-iron box, which is placed in the center of a shallow concrete basin. The water is delivered by a pipe to this box, from which it escapes in the form of radial jets. The eddy currents established when the basin is full of water dissipate the energy, and the water flows quietly over the brim of the basin to the tailrace. Brakes of this kind

have been built that handle 18 cubic feet of water per second with a head of 500 feet in a basin only 20 feet in diameter and 6½ feet high.

**FURNACE CALCULATOR FIGURES
 WEIGHT OF ALLOY NEEDED**

A calculator of the circular slide-rule type has been marketed to simplify the work of determining the quantity of ferro-alloy or pig-iron addition necessary to a furnace charge of a given mixture. It consists of a large and a small circular disk, and one segmental disk, on which are provided scales for weight of charge, percentage of alloy or carbon to be added, grade of alloy, and efficiency of absorption, per cent melting loss, and weight of alloy addition.

**NEW POSITION INDICATOR
 FOR TROMBONE SLIDE**

Of great help to the student is a new attachment for the trombone that not only indicates the position of the slide but also points on a scale to the corresponding note. The position is indicated on a revolving spool on which is wound a wire that is attached to the trombone slide. This spool is geared to a pointer that moves around a drum above the spool. On the outside rim of the drum

Complete Assembly of the Indicator is Shown and Noted on the View of the Trombone. Below, the Various Parts are Shown Enlarged and Partly in Section

are printed scales, and the indicator always points to the note corresponding to the position of the slide. The device is readily attachable and detachable.

AUTOMATIC SERVING COUNTER FOR LUNCH ROOMS

An automatic serving counter for lunch rooms and restaurants is intended to eliminate the need of waiters. When the customer enters a restaurant where one of these appliances is installed, he finds a clean tray, having tiny wheels, and a menu card before his seat. After checking off his order on the card, which is later used as a pay check, he places it on the tray, pushes a button, and the wheeled tray travels on a track to the kitchen. Here, the cook fills the order and sends the tray back to the counter. At the completion of the meal, when the customer rises from his seat, the tray travels again to the kitchen with the soiled dishes.

Automatic Serving Counter, Showing How the Wheeled Trays are Operated over Tracks to Bring the Food from the Kitchen and to Carry Back the Soiled Dishes: Insert Shows One of the Wheeled Trays

MILLIONS OF CROWS MENACE CANADIAN FRUIT CROP

Although more than 70,000 crows have been killed in British Columbia in the last two years, and thousands more are being slaughtered each month, the Game Conservation Board of that province estimates that there are still 7,000,000 of

these birds within its borders. The crows, according to the board, not only destroy corn and fruit crops, but, in feeding upon the eggs of the smaller insect-eating birds, harm the farmer to an extent that cannot be calculated. To encourage the shooting of these pests, a bounty of 20 cents is paid for each crow. Owls and eagles are paid for at the rate of \$1 each.

ent. Francis Luchie, Heriot Bay, B.C.

MOTOR-TRUCK TRANSMISSION FLEXIBLY-SUPPORTED

In an extra-long motor truck, where the transmission is located at the center of the frame in order to shorten the unsupported length of the drive shaft, the transmission has to be carried on two parallel cross members, the ends of which must be connected to the side members of the frame. If such end connections are rigid, any torsion of the frame when riding over rough roads will be transmitted to the transmission case, and in order to take care of this, special joints between the cross members and the

frame have been devised, and are the subject of a recent patent. The cross members carrying the transmission case are hinged at each end, where they connect to the side members of the frame.

Flexible Support for the Transmission Case in the Center of the Frame of an Extra-Long Motor Truck: The Cross Members Carrying the Transmission Case are Hinged at Each End to Provide Thorough Flexibility

In one case, the hinges act longitudinally, and in the other transversely, so that there is flexibility in both directions.

**ENDLESS-TREAD TRACTORS
BUCK SNOW IN UTAH**

The United States mails for the Uinta Basin in northeastern Utah, an isolated agricultural empire of more than 25 villages and a population of many thousands, are being forced through the snow-muffled mountain passes in automobile trucks piloted by a fleet of track-laying tractors, this winter.

Heretofore the basin has been served with the mails—when it was served—from Colorado points in a very round-about way; in fact the towns of Vernal, Roosevelt, and Duchesne, which are among the best country towns in Utah, have often been without mail for weeks when the snow was deep in the mountains.

An immense amount of parcel-post matter goes into the basin, including such articles as building bricks, certain forms of lumber, all kinds of merchandise and foodstuffs, and in fact everything a thriv-

ing region needs. A stoppage of the mails even temporarily causes a great accumulation at Price and Helper, the railroad supply points.

The crest of the divide on the road to Duchesne is nearly 9,000 feet above sea level, and for nearly 20 miles the snow sometimes accumulates several feet in depth. The tractors have been shuttled over the pass continually since the first deep snow of the winter, often going through rather than over the snow, but managing to pack a roadway for the passage of the heavy mail trucks.

The trucks, however, lose their traction in the tractor tread, and the latter are thus used to tow the trucks over the hump. As a demonstration, recently, two tractors hauled a train of seven loaded parcel-post trucks and one touring car over the summit, where but a few hours previously the snowdrifts had been 10 feet in depth and the general layer 4 or 5 feet deep.

**TRIANGULAR METAL CLAMP
FOR TIGHTENING WIRES**

A metal clamp for taking up the slack in fence wires, and thus tightening them, has recently been patented. The clamp is in the form of a small triangular plate with fingers at one corner for engaging the wires and extensions at the other corners. In the center of the plate is a square hole for the insertion of a tool by

Triangular Clamp for Taking Up the Slack in Fence Wires, Operated by Inserting a Tool in the Square Hole in Center of the Plate, and Twisting the Wire

means of which the wire is twisted, until the two extensions can be bent over it, clamping the wire in a triangular loop.

**MUD-SPLASH GUARDS TESTED
WITH WHITE SCREENS**

1271

Automobiles fitted with various devices for preventing mud splashing were run through a muddy lane and past white screens, in a recent contest held by the British Royal Automobile Club. None of the guards was considered sufficiently efficient to merit an award, though more than 36 were entered in the trial. Among the many types seen was a flangelike attachment that revolved with the wheel, a hanging curtain suspended from the hub cap, and a curtain device supported by braces running to the auto frame. The screens, however, recorded large splashes with all of them, and, in addition to failing in this first essential, some of the guards proved altogether too heavy to be practical for common use.

**CONCRETE-MIXING EQUIPMENT
ON MOTOR-TRUCK CHASSIS**

To facilitate road-building work, a complete concrete-mixing outfit has been recently installed upon the chassis of a motor truck. The mixer, which is of one-bag capacity, is driven by the engine of the truck. The charging hopper is pivoted to the front of the truck, and the measured aggregates are conveniently loaded into the hopper when it is resting with one end on the ground. By means of pulleys and cables, it is then swung up to the mouth of the mixer, which discharges the concrete from the rear end of the truck. The outfit can be driven rapidly from job to job, and in road building keeps up easily with the progress of the work.

**MATTRESS CARRIED IN TRUNK
UNFOLDS INTO BED**

638

A trunk and a bed have been combined in a large boxlike container, capable of holding a folded mattress and a number

Top: Mattress Removed from, and Placed on Top of, the Trunk, Showing Bedding Drawers. Bottom: Outfit Packed for Traveling

of drawers. When traveling, the mattress fits against and keeps the drawers closed. In preparing the combination for a bed, the trunk is placed on its side and the mattress taken from the end, thus giving access to the bedding in the drawers. A comfortable bed may then be made up on the top of the trunk, providing a convenient means for accommodating a guest.

SOAP IN FORM OF SHEETS FOR INDIVIDUAL WASH

Intended for office buildings, shops, and public places generally, a new "sheet soap" is dispensed from cabinets in somewhat the same manner as paper towels. The sheets are about 2 by 3 inches, and may be folded or rolled repeatedly, without tearing. It is claimed, in addition, that the sheets will not attract insects, and may be printed for advertising purposes. Another form of soap is like a tablet and can be crushed open, permitting the user to spread it as a paste over his hands.

975

GORILLA SANCTUARY PLANNED FOR BELGIAN CONGO

1240
A great jungle sanctuary for gorillas is to be mapped out in the Lake Tanganyika region of the Congo by an American scientist, working for the Belgian government. Here the huge beasts are to be left entirely unmolested. It is probable that only zoologists and others with a special permit from the government will be allowed to visit the region.

SYNTHETIC THYMOL CHEAPER THAN IMPORTED DRUG

1249
Synthetic thymol, which is a drug used extensively as an antiseptic and in the treatment of the hookworm disease, is being made by chemists in this country, from a waste product of the paper industry. It is said to cost only about one-half as much as the drug imported from India, where it is obtained from a plant.

Dept. of Agriculture
In addition to being fined, traffic violators of Sioux City, Ia., are required to spend two hours in a special class in which they are made to study and recite a long list of traffic rules.

STATION TRUCK ADAPTS ITSELF TO PLATFORM

An improved truck used for hauling baggage and express around the plat-

18 inches. This permits loading and unloading of heavy and bulky articles from points at different heights above the railroad platform. A crank, easily operated by one man, turns a worm and gear attached to a drum, from which cables connect to levers that bear against the four corners of the truck platform, thus effecting the raising or lowering.

Above: New Station Truck Raised to Height of Floor in Baggage Car. Right: Man in the Act of Elevating the Truck Floor, Which can be Raised and Lowered through a Range of 18 Inches

forms of railroad stations, has for its main feature a provision for raising and lowering the truck floor through a range of

Cheap Cistern Made of Vitrified Clay Pipe

By LOUIS DAVIS

A SANITARY, substantial, and economical cistern can be constructed of 36-in. vitrified clay pipe, in the manner indicated in the drawing.

After the excavation is completed, a substantial base is made by laying a brick floor on the bottom and pouring a 6-in. layer of concrete over this. While the concrete is still soft, two units of 36-in. vitrified clay pipe, each with side outlet, are set into it and connected as shown. The connection is also covered with concrete to prevent any possible leakage. After the base has hardened, the other units of pipe are placed in position and cemented at the joints.

A filter is made by filling the lowest unit of one section with a mixture of fine and coarse gravel and charcoal. A wire strainer is inserted in the side outlet, and some coarse gravel and stones are placed around it, to hold it in position and to prevent the fine gravel and particles of charcoal from passing into the other section. The filter unit is covered with a circular piece of

galvanized screen wire, held in place by bricks, as shown in the drawing.

The covers are made of 2-in. boards, nailed together to make a double thickness. A pump is fastened on the cover of the section containing the filtered water, and is fitted with a galvanized pipe extending to within an inch or two of the bottom.

A float gauge is attached to the other cover; this consists of a cedar ball and block connected by a length of No. 10 copper wire. The wire passes through a hole in the cover. When the water reaches the wooden block, it causes it to float and pushes up the ball, indicating that the well is full. A shut-off should, of course, be fitted in the downspout leading to the cistern, so that, when the latter is full, the water can be diverted to a drain.

A Two-Section Farm Rain-Water Cistern Constructed of 36-Inch Vitrified Clay Pipe: It Is More Sanitary than Most Cisterns

A well of greater capacity can be made by adding sections, excavating deeper than is shown in the drawing.

This type of cistern is very sanitary, as it is immune from soil and rodent contamination, and there can be no seepage.

Furthermore, as the usual walling, bricking, and cement plastering are eliminated, considerable expense is avoided. A two-section cistern of this type can be built for approximately \$100 and is virtually indestructible; it will not cave in, cannot be penetrated by tree roots, and is not affected by moisture.

Wrench for Turning Large Pipe

The wrench shown in the illustration can be made in a very short time, and is

A Simple Wrench, Consisting of a Lever and a Wooden Disk, Makes a Good Substitute for a Large-Size Pipe Wrench

of great value when one is confronted with a job requiring the use of a large pipe wrench, a tool that is usually not carried in the mechanic's tool box.

It consists of a lever made of $\frac{3}{4}$ -in. bar stock, bent to the shape indicated, and a wooden disk that fits loosely in the end of the pipe and has a hole drilled through it, off center, to fit the end of the lever. The manner of using the tool is obvious from the illustration.

Drilling True Holes in Turret Lathe

The drill holder shown in the drawing will be found a very convenient means of drilling a hole true in the turret lathe.

Any attempt at drilling a deep hole with a long drill, without previous preparation, will nearly always end in a "drunken" or untrue hole. A twist drill has a certain amount of spring, and if the hole is started slightly out of true, the error will increase with the depth of the hole. A

short, stubby drill makes an ideal centering tool for starting a drill, but since the number of holes in the turret will not always allow the use of this, the same effect has been obtained by the use of this holder. The shank of the holder is turned to fit the turret, and left a little larger on the front end; a circle, the same diameter as that of the drill to be used, is scribed on the nose of the tool, and a punch mark made on the circumference of the circle. A hole, about $\frac{1}{4}$ in. in diameter, is then drilled, parallel with the axis of the holder, from this mark; thus, when the holder is bored for the drill, a semicircular groove is left along the top of the hole. A $\frac{1}{4}$ -in. round-headed pin is driven into a hole drilled in the shank of the drill; this slides in the groove just mentioned. Near the rear of the holder, a hole, about twice the diameter of the pin in the drill, is drilled. The holder is then tapped for a knurled screw. This screw has a hole, the same size as the pin in the drill, drilled a short distance into the point. When in use, the screw is loosened and the drill pushed back until the pin enters the hole drilled in the back of the holder. The work is then centered and drilled part way; then the drill is pulled out until the pin touches the knurled screw, when the latter is tightened onto it and the work drilled to the proper depth.

Setting Work in Power Hacksaw

Most power hacksaws have a length-gauge attachment of some sort to be used when cutting off a large number of pieces. To use this, however, when cutting off an occasional piece, requires too much time, and it is the usual practice to measure off the length wanted, file a mark, and set the saw to this. This method also takes time, as the saw frame must be lowered and lifted, and the piece adjusted in the vise, until the mark lines up with the saw. The drawing shows a simple fixture that is designed to be attached to the fixed jaw of the vise, so that the operator can set up a piece very quickly. The body of the fixture is screwed to the vise and has

its upright part slotted, a hole about twice the width of the slot being drilled at the top. Next, a piece of cold-rolled steel is grooved so that the smaller diameter will fit into the slot, and the larger diameter easily into the hole at the top of the slot. This horizontal piece holds a piece of saw blade at one end and is threaded on its opposite end for a nut, which bears against a spring and washer. The fixture should be attached to the vise in a position that will bring the piece of saw blade into the exact position of the saw blade in the frame of the machine. After the work has been set, the horizontal arm is pulled up until it enters the hole, in which position it can be pushed out of the way.

Valve Wrench for Oxygen Tanks

Opening the valves of oxygen tanks, usually a more or less difficult job by hand, can be done very easily by means of the wrench shown in the illustration. It is made by cutting out a piece of $\frac{1}{8}$ or $\frac{3}{16}$ -in.

boiler plate with a cutting torch, to the shape shown, and then brazing or welding the shank or tang in a 6-in. length of $\frac{3}{4}$ -in pipe, flattened to fit the tang. Three $\frac{5}{16}$ -in. pins, 1 in. long, are welded to the face of the tool so that they will fit in the notches of the hand-wheel.—A. S. Jamieson, Springfield, Mass.

Making Rigid Crates

No method of joining the corner members of a crate is alone sufficient to give rigidity to a crate. Some kind of bracing across the faces is necessary.

Figure 1 shows a kind of bracing found in many crates sent to the U. S. Forest Products Laboratory for testing. Although this construction appears to be very strong, partly because of the amount of material used, it has been demonstrated by actual tests that crates so made are very weak when a diagonal strain is applied, and are therefore apt to "weave" and "skew" during transportation. Fig. 2 shows a crate with diagonal braces on six sides. This kind of bracing gives maximum strength for a minimum amount of lumber used. It has been found that crates so braced can withstand, with much less distortion, a diagonal strain twice as great as that applied

to crates braced as shown in Fig. 1. Fig. 3 shows a combination of cross bracing

Figure 1: Common Crate. Figure 2: Bracing Giving Maximum Strength with Minimum Lumber. Figure 3: Type Recommended for Rigid Material

and diagonal bracing that is recommended for use with products that need protection on the sides, and that are rigid enough in themselves to withstand stresses in the direction in which the crate is weak.

Solid sheathing on all faces does not make a crate so rigid as diagonal bracing, except, perhaps, sheathing made of wide boards, with tighter joints than usually obtained. The crate with common sheathing might withstand as great a load, but the distortion caused by that load would be greater than in a crate with diagonal braces, and would, ordinarily, be great enough to cause damage to the contents.

Protector for Plow Handles

A flat-iron guard, bent and attached on the outside of a plow handle as shown in the illustration, protects the handle from being broken or splintered

while dragging the plow on its side over the ground, the customary way of moving a plow for short distances.—J. Howard Hughes, Henriette, Tex.

Rewinding Machine for Motion-Picture Films

A spring motor, taken from an old phonograph, has been used for several

upon a wooden angle plate, as shown in the photograph, so that its shaft extends horizontally through the plate; this shaft is provided with an extension to hold the film reel. It is necessary to provide a dog

Left: Rear View of Film-Rewinding Machine, Showing How the Phonograph Motor is Attached. Right: Front View, Showing Reel in Place

years in the laboratory of a western photographer for rewinding motion-picture films.

The phonograph motor is mounted

on the shaft, with the tail fitting in one of the holes of the film reel for the purpose of driving it. The brake on the phonograph motor enables the operator to start or stop at will, to run slowly while examining the film, or fast while taking it up.—F. J. Hiscock, Cody, Wyo.

Drilling Out Broken Cylinder-Head Screws

A frequent job in the garage is that of drilling out broken cylinder-head screws. To do this, without the danger of spoiling the threads of the hole in the cylinder block, the drill should be guided by a bushing, fitted into the hole in the cylinder head. The bushing should fit snugly, so that light tapping is necessary to remove it. Its length should be equal to the depth of the hole in which it fits, and its inside diameter should be the same as the root diameter of the threaded end of the capscrew; this can be determined by consulting a table of tap and drill sizes.

The broken screw is chipped off flush with the surface of the cylinder block. The cylinder head is then put in place, and held by two or three screws. After the broken screw has been drilled out,

the cylinder head is removed, and the hole is tapped to its original size, to clear it from the remainder of the screw. Care must be taken to back out the tap frequently to clean out the broken pieces. The bushing should be hardened to prevent it from wearing quickly. It can then be used indefinitely.—Fred H. Wadden, New Glasgow, Can.

Submerged and Exposed Concrete

Concrete laid under water will set much better than concrete laid in air. This is due to the fact that a far better hydration of the lime results in submerged work than in ordinary work, where the concrete dries out quickly. Work that is exposed to air, such as walks and driveways, should be kept covered for several days with old wet carpet or canvas, or even with moist earth, to prevent it from drying out too quickly.

Demagnetizing Watches

When a watch is brought within the magnetic field of a powerful generator or magnet, it frequently occurs that the hairspring becomes magnetized, and renders the watch useless.

To demagnetize it, pass a shoestring, or a similar cord, through the bow of the watch and bring the ends together. Suspend the watch by holding the doubled shoestring in one hand, and twist the string tightly by turning the watch with the other hand. Then place the watch close to the field magnets of the generator, or to the magnet, and allow the string to unwind, which will cause the watch to revolve. While the watch is revolving, gradually draw it away from the generator or magnet, so that when it stops revolving, it will be out of the magnetic field. The watch will thus be completely demagnetized. The explanation of this is that the revolving movement of an object in a magnetic field prevents its molecules from assuming any definite arrangement or relation to each other, as they do when the object is at rest in a magnetic field.

If one has no access to a strong magnet or generator, a magnetic field can be created by forming a hollow coil, 3 to 4 in. in diameter, of about 200 turns of No. 16 insulated copper wire. Connect a flatiron or incandescent lamp in series with the coil and pass the house current through the circuit, which will set up a strong magnetic field inside of and around the coil. Hold the watch suspended on a twisted shoestring inside of the coil and gradually draw it out, while it is revolving.—R. R. Spencer, Denver, Colo.

Enlarging Holes in Wood

To enlarge a hole with an ordinary wood bit, fit a wooden plug, about 1 in. long, with its grain running lengthwise, into the hole. Drill a small hole in the center of the plug to admit the screw end of the bit. Then drill as usual, as if the wood were solid. When the cutting edge of the bit strikes the plug, it will not cut it easily, as the grain runs lengthwise, and, as the plug does not fit tightly, it will be pushed through the hole, guiding the bit. The plug may be greased if the work permits, and can be used repeatedly for holes of the same size.—Adolph Rietter, Marinette, Wis.

Loading Pipe onto Trucks

By using the simple method shown in the photograph for loading pipe onto a truck, the work is accomplished in less than one-half the time otherwise required.

A Method of Loading Pipe onto a Truck That Enables the Work to be Accomplished in One-Half the Time Otherwise Required

A 6 by 6-in. beam is carried crosswise under the truck in specially made U-irons. When the truck is to be loaded, this beam is pulled out so as to project a few feet beyond the side. Then, by lifting one end of the pipe so that the center is rested on the beam, it is an easy matter to swing first one and then the other end onto the truck.

A Powder-Loading Tool

When tamping powder into a hole for blasting a large tree, or similar purposes, trouble is usually experienced in pressing the powder down firmly without damaging the fuse. To overcome this difficulty, a tool like that illustrated can be used. It is made from a long bolt, a ring of flat stock being welded around the end to form a boss the size of the hole. A groove is cut in this, as shown, so that the fuse will slide in this groove without being damaged, while the powder is being tamped.

When tamping powder into a hole for blasting a large tree, or similar purposes, trouble is usually experienced in pressing the powder down firmly without damaging the fuse. To overcome this difficulty, a tool like that illustrated can be used. It is made from a long bolt, a ring of flat stock being welded around the end to form a boss the size of the hole. A groove is cut in this, as shown, so that the fuse will slide in this groove without being damaged, while the powder is being tamped.

Cutting Grooves on a Power Saw

The illustration shows how grooves of varying width and depth can be cut very

A Practical and Timesaving Method of Cutting Grooves of Varying Depth and Width in Wood, with a Power Saw

quickly on a circular saw with a wooden table.

A wooden strip is tacked at an angle across the table; this angle determines the width of the groove. Tilting the table up and down determines the depth of the groove, and the work is pressed along the edge of the guide strip as usual.

A woodworker who specializes in dentists' tool cabinets and work of a similar nature, where it is necessary to cut a great number of grooves, finds this a very practical and timesaving method.

Clips Hold Connecting-Rod Shims

Small brass clips of the kind shown in the illustration have been found to be of

considerable assistance for holding connecting-rod shims in place while replacing the caps. The shims on one bolt are held in place with a clip while other shims are being put on the opposite bolt, and these are also held by a clip while the cap is put in place and the nuts are turned on. The clips are pulled off just before the cap is tightened.

Simple Blower for Sawdust

After experiencing considerable trouble owing to accumulation of sawdust in a sawmill, the following scheme was devised to blow the sawdust away: The sawdust was led into a 15-ft. wooden pipe, and steam pressure was applied behind the sawdust to blow it through. The wooden pipe was made from four 1 by 4-in. boards nailed together. A 1/2-in. steam pipe was led to a point opposite the center of the end of the pipe, and about 3 in. away from it. The steam blast picked up the sawdust, forced it through the pipe and blew it to a point 40 ft. from the farther end.—E. C. Smith, Barney, Ga.

Tailstock Adapter for Standard Tapers

When there is frequent need of turning tapered work in the lathe, to standard or identical tapers, it is difficult to set over the tailstock every time, and always to obtain the correct amount of setover.

The drawing shows an adapter that clamps to the end of the tailstock quill and carries an offset center, permanently set for turning a certain taper, such as that of the machine handle shown.

The adapter body, of cast iron, is counter-bored to a push fit over the quill, and the counterbore assures that it is set in the same position each time. A cast lug, bearing against the end of the tailstock, fixes the longitudinal position of the adapter, while it is prevented from rotating, as well as set for its angular position, by means of a setscrew, the end of which is turned down to fit into the quill keyway.

The offset dead center is made of drill rod, with the point hardened and tempered. It is set into the adapter body at an angle, so that it will line up with the center line of the work. This angular setting allows a slight adjustment of the amount of taper, by moving the center in or out and then clamping it in place by means of the heavy setscrew provided for the purpose.

For work having a very slight taper, the construction of the adapter body must be modified by extending it beyond the end of the quill, to allow room for the insertion of the dead center without interfering with the quill.—H. H. Parker, Oakland, Calif.

Tool Marks Circumference by Measuring Diameter

The tool illustrated is valuable to the sheet-metal worker, as it shows the circumference of a circle at once, by measuring its diameter, thus effecting a considerable saving in time, in making cylinders, and the like, and eliminating calculation.

The construction of the tool is simple. It consists of two lengths of $\frac{1}{4}$ -in. iron rod, flattened at the joint and drilled for a snug-fitting rivet. The center of the joint is exactly 9 in. from one end and 28.27 in. from the other, which is the ratio of the diameter of a circle to its circumference. A slide rod, riveted to one leg, below the joint, so as to move freely, but without shake, and passing through a swivel on the other leg, locks the tool at any desired measurement. Measurements may be taken from a full-size drawing or from metal parts already made. While the dimensions given in the drawing cover a tool suitable for average work, it can be made as large or as small as desired, providing the proper ratio of leg lengths from joint to ends is maintained.

Marking Dismantled Machines

When dismantling machines for repair, it is always wise to place an identifying mark on various parts before removing them, so as to avoid mistakes in replacing them and to save time in reassembling. It is often difficult to distinguish the correct marks from other similar marks that have been made either acci-

dentally during use, or purposely during previous repairs. A method that makes it easy to distinguish the correct marks is to punch a circle around them

A Steel Die Stamp That Punches a Circle around Identifying Marks on Parts of Machinery Dismantled for Repair

with a steel die stamp of the kind shown in the illustration.

This stamp consists of two short pieces of steel tubing, a capscrew, and a nut. One piece of tubing is ground on the end to a cutting edge and this end is case-hardened. The other end of this piece and the entire length of the other piece of tubing are tapped so that the capscrew can be screwed in to hold both pieces together. The nut is run onto the screw between the tubes. This makes the tool solid so that it will sustain the tapping of a hammer. The nut in the center makes it easier to press the cutting edge squarely on the work, and the hexagonal shape of the screw head and nut prevents the tool from rolling when laid down.—Harry Moore, Montreal, Can.

Turning Heavy Shafts

The method shown in the illustration makes it easy to turn a heavy shaft around. By placing the end of a crowbar under one of the nuts on a coupling and using the hub of the coupling as a fulcrum, sufficient leverage is obtained to turn the shaft around.

Board Supports Auto Body

The malleable castings, trussed by two rods that extend crosswise under the chassis, that support the running boards

A Plank Support Prevents Running Boards and Dust Shields from being Bent by the Blocking Used during Repairs

of a light car, have been dispensed with on the latest models, and two supports, made of channel iron, bent to the shape indicated in the drawing, have been substituted for them. This change of construction necessitates a change in the method of supporting the body while removing the rear end for repair.

If the usual method is employed, of blocking under the running boards, the latter, and the dust shields, are bent and otherwise damaged. To prevent this, a strong plank with blocks of wood securely attached to the ends, as indicated, has been found very satisfactory. The blocks fit on the outer edges of the running boards as shown, and prevent them from spreading apart when the car is jacked up and blocks placed under the plank.

Emergency Index Plate

In the course of experimental work on a spring motor, it was found necessary to use a 24-pitch pinion having 11 teeth. As no index plate for this size of pinion was available, the following method was used to make the pinion:

The index plate was removed from the miller and shellacked to the center of a smooth piece of wrapping paper, 3 ft. square. A circle of 3-ft. diameter was drawn on the paper, concentric with the circumference of the index plate. With

the dividers, the circumference of the 3-ft. circle was divided into 11 equal parts, and radii drawn with a sharp-pointed pencil to the center; this was, of course, done as accurately as possible. The paper was then trimmed off to the size of the index plate, after which the latter was replaced in the miller. A surface gauge was clamped to the machine so that its scriber touched one of the radii, near the circumference. The locating finger of the head, which was adjustable, was set in place in one of the notches. After a cut had been made in the pinion blank, the index plate was set with the scriber at the next radius line in the same way as before, the finger moved into another notch and fastened, and a second cut made. In this way all 11 teeth were cut.—Dexter W. Allis, Whitman, Mass.

A Lathe Center-Hole Mandrel

For light turning in the lathe, a mandrel with a taper shank, fitting into the live-center hole, is a useful attachment, as no faceplate and dog are then needed, and the cutting tool can work up close to the end of the mandrel. If the live-center hole is true, the taper shank may be fitted and the mandrel body finish-turned and ground while in place. Under such conditions the mandrel should run true whenever replaced, but in any event, the best way is to scribe a line or make a chisel mark on the shank in line with a corresponding mark on the face of the

nose. In replacing the mandrel, the two marks are made to register, and the mandrel should then run true, even if the hole is slightly "out."

Several mandrels of different lengths and diameters, to suit the work at hand, may be made; they should be center-drilled for the tailstock center, though short pieces could be finish-turned, by taking light cuts at fairly high speed, without the use of the tailstock-center support. The mandrel body is preferably hardened and ground in place, but the temper of the shank should be drawn until soft enough to scrape; then Prussian blue is used for testing the fit in the center hole, and the shank is scraped until it fits accurately all over. It will hold tightly enough for all ordinary work.

Circular Yard Saves Brooder Chicks

In my first years of experience in raising brooder chicks I used an inclosed "yard," 10 ft. sq., that could be moved about to give the chicks a space of fresh grass occasionally. While watching the chicks one day, I noticed that several of them, that appeared to be suffering from the cold wind, would run along one side of the inclosure until they came to a corner, where they remained, huddled together as if they could go no farther. I picked them up, placed them in the brooder, and returned to watch the yard again.

As soon as the cool breeze again swept over the yard, another dozen or more huddled together in one corner.

Satisfied that the corners were to blame, I placed all the chicks in the brooder, and rebuilt the yard in the form of a circle. The chicks were then released into this yard, and, when desirous of returning to the warmth of the brooder, simply followed the fence until they came to the open door. The result was that the loss of chicks due to chilling was greatly reduced.—G. E. Hendrickson, Argyle, Wis.

A Handy Auto-Cleaning Tool

A stiff scrubbing brush, such as commonly used about the house, with a piece of stiff sheet metal fastened to one

end to serve as a scraper, makes a very convenient tool for cleaning the inaccessible parts of an automobile chassis. By mounting the brush on the end of a handle, as indicated in the drawing, almost any part of the machine, even the oil pan, can easily be freed of mud and dirt without the necessity of crawling underneath the car. The scraper will be found particularly convenient for removing accumulations of road tar, and dislodging clods of mud on the brake mechanism and frame, the brush being then used to clean the scraped surface.

Farm Tractor Used as Snowplow

Following a snowstorm that blockaded traffic in a Kansas town, a farm tractor

A Tractor Used to Clear the Snow from the Streets in a Kansas Town after a Heavy Snowstorm: The Work was Accomplished by One Man at the Rate of Three Miles per Hour

was used to clear the streets. The blade of a road-grading machine was attached at an angle under the frame, as shown. A roadway, 20 feet wide, was cleared in two trips, the snow being pushed to both sides of the road. The work was accomplished by one man at the rate of three miles per hour.

Wagon-Wheel Rim Puller

During dry weather, wagon-wheel rims have a tendency to slip to one side or the other of the fellyes, owing to the shrinking of the wood. Where this occurs,

it is necessary to force them back into place, a job usually done with a heavy hammer. A better tool for the purpose, made from a $\frac{3}{4}$ -in. iron or steel rod, is shown in the illustration. A 5-in. length of the same material is welded to the

rod, near one end, and both arms are forged as shown. In use, the hooked arm is caught on the side of the rim, and the longer arm pressed against the felly.

Tool for Removing Handles from Files

In shops where a box of files is carried around from one job to another, each one is not fitted with a handle, because of the space that this would require. Two or three handles are used, and these are usually knocked off and then fitted to other files, as required. Using the files themselves to do this, as is commonly done, is very injurious to the teeth, as both faces are scraped together, and furthermore, the files are frequently broken in this way. The photograph shows a simple tool for removing the handles. It is made of flat stock with a tapered slot cut in one end. By holding this tool in one hand, to grip the file, as shown, it is an easy matter to pull the handle off with the other hand.

Ball-Bearing Guide Roller for the Band Saw

Anyone who has used the band saw as a woodworking tool is familiar with the troubles that result from a loose roller guide. The usual method of making these guides is to mount a hardened roller on a hardened pin, but, after a few months of operation, wear causes the roller to "wobble." This defect, however, is not found in the ball-bearing roller shown, which is practically everlasting, and, besides, is adjustable in three directions.

The roller is made of tool steel,

machined with a groove around its circumference. The cold-rolled steel yoke is drilled and tapped for $\frac{1}{2}$ -20 screws, the points of which are ground to an included angle of 90° , as shown in the drawing. Quarter-inch steel balls are nested into the raceway with a liberal amount of grease, to make them stick until the roller is assembled. Adjustment for play and proper running fit is obtained by tightening the screws, which should be made of hardened tool steel, and be a tight fit in the yoke. When, after using, looseness develops in the guide roller, the slack can easily be taken up.

A Brace for Overhead Lagscrews

Much of the difficulty and danger connected with erecting or removing overhead line shafting is eliminated if the lagscrews are loosened or tightened with a brace of the type shown in the illustration.

The brace is made of pipe, bent to the shape indicated, and extends from the floor to the ceiling. At the bottom end an extension leg fits loosely inside of the pipe; this leg has a coil spring around it, and a collar and small point are turned at its lower end. A pin, driven into the leg through a slot cut in the pipe, keeps the leg from falling out, and also allows the brace to adjust itself to suit the height of different line shafts. Two slots are cut opposite each other in the top end of the brace, to allow the insertion of a pin-driven socket wrench.—S. A. McDonald, Brooklyn, N. Y.

Labels Made of Adhesive Plaster

It is often difficult, and sometimes impossible, to stick gummed-paper labels to oily or rough surfaces. In such cases, a strip of adhesive plaster, properly lettered in ink, makes an excellent substitute, as it will stick to almost any surface. Adhesive plaster can also be used satisfactorily to fasten samples to the outside of boxes.—Thos. W. Benson, Philadelphia, Pa.

Friction Clutch Substitute for Ratchet

A friction clutch, of the type illustrated in the drawing, is used in place of a ratchet when it is not advisable, or possible, to use the latter. The clutch consists of two double-leaf springs, fastened to a hub block as indicated. Double-leaf springs are used, as they are stiffer than

single-leaf springs and do not add to the friction when working in the reverse direction. There are several advantages gained by using this type of clutch. It is well balanced and therefore does not give a one-sided pull, which

wears the shaft and bearings. Another feature is its reversibility; by simply turning the hub block over, the operation of the clutch is reversed.

Measuring beyond Capacity of Micrometer

A shop kink that will enable the mechanic to get the micrometer measurement of large bushings and similar cylindrical work when only small micrometers are at hand, is shown in the drawing. The anvils of the two instruments are placed together and inserted inside the cylinder, with the spindles in contact against the outside wall. The correct measurement is the sum of the two readings.

Colored crayons are recommended instead of water colors for tinting drawings. The crayon should be rubbed on the drawing lightly and spread by means of a soft brush dipped in gasoline. The color does not readily rub off, although, unless the paper is very porous, it may be erased with a soft rubber.

Shortening Valve Stems

The illustration shows a simple method of shortening valve stems without removing them.

Raise the valve high enough to allow the insertion of a flat file under the stem, as shown. The tension of the valve spring will hold the stem solidly against the file teeth. Turn the valve with the valve grinder; this will grind away the end of the stem in contact with the file. Remove the file occasionally and test with a feeler gauge to keep the clearance within the proper limits.

Simple Clamp Holds Timbers

The illustration shows a serviceable clamp for holding together the ends of timbers of uniform width while putting in bolts or screws, or accomplishing other work that requires the timbers to be held in position firmly. A clamp of this type has been used by a builder for holding 6 by 6-in. beams temporarily while bolting them together.

A length of iron rod is bent to a U-shape, as shown, to straddle the beams. Both ends of the rod are turned over to form hooks to fit over the edge of the cam plate. The cam is cut from a piece of steel plate. Raising the handle to a vertical position tightens the clamp, and bringing the handle slightly over the center position locks it. The length and thickness of the iron rod, and also the thickness of the steel plate, depend on the work for which the clamp is to be used.—G. A. Luers, Washington, D. C.

MAKING GLASS SIGNS BY SANDBLASTING

By JAMES TATE

COMPARATIVELY few persons, aside from the limited number engaged in the commercial side of the work, are aware of the possibilities latent in the process of decorating glass by means of the sandblast.

The process is a simple one, and with some artistic talent, and the proper facilities for the work, there is no reason why any reader could not build up a good business in this field.

The first necessity, of course, is some form of sandblast machine. These are made commercially in a wide variety of types, but the man starting on a small scale may use any of the homemade forms shown in Figs. 1 to 3 with perfect satisfaction. It is assumed, of course, that a supply of compressed air is available; for experimental work, this may be furnished by a small garage compressor, or even by a more simple apparatus, consisting of a tank capable of withstanding a pressure of about 60 lb. per square inch and a hand air pump.

The pressures used in sandblasting vary from 8 to 60 lb. per square inch; the higher the pressure, within these limits, the better, as, with a high pressure, the sand is projected against the work with greater force and velocity, and the abrasive action of the sand is heightened, thus lessening the time required for the work.

A word about the sand used will be pertinent here; any clean, sharp sand will answer for the purpose, although there are a number of dealers around the country who can supply special sand for the work. Sand of various grades of fineness should be kept in stock, as the texture of the "frosting" on the glass can be varied by their use. For example, with a coarse sand, the surface of the treated portions of the work will be quite rough to close inspection, while, if a very fine sand is used, the surface will be practically smooth. The sand used should be chosen with regard to the character of the work to be done, using very fine sand for such work as monogramming tableware and similar small pieces, and coarser sand for door panels, large signs, and

the like. The use of the coarse sand for large work will also speed up the work considerably.

The equipment shown in Fig. 1 is made, for the most part, of pipe and fittings, with a few feet of rubber hose, and a hopper for the sand. The size of the latter, of course, may be varied to suit individual desires, space, or type of work. The sand is fed from the hopper by gravity, and the flow may be controlled by means of a sliding shut-off valve fitted in the bottom of the hopper, or by a butterfly valve in the $\frac{3}{4}$ -in. pipe below it. This control valve has been omitted in the drawing, for the sake of simplicity.

The outfit shown in Fig. 2 has proved to be very practical for this work. The sand tank is made from an old range boiler, which is quite suitable for use with pressures not exceeding 20 lb. per square inch. If higher pressures are employed, it is recommended that a new range boiler be used; these are usually tested to 150 lb. per square inch, and will thus stand pressures up to 60 lb. with an ample margin of safety. Before using an old boiler it would be well to have it tested to about 75 lb., and thereafter use it for not more than 20 lb., using a gauge, as shown, to insure that this pressure will not be exceeded.

Practically all of the piping used is $1\frac{1}{2}$ in., and it will be noted that the tank is not completely filled with sand, an air space being left at the top, and a connection from the air pipe made to this space. This puts the sand under pressure, and insures a steady flow. A cross may be used instead of the tee shown below the tank, and the lower outlet plugged; then, if the sand valve becomes choked, the plug may be unscrewed, and a wire run through the valve, to clear it. The pipe at the nozzle is reduced to $\frac{1}{2}$ in., and a valve must be provided in the line between the sand and air tanks. When filling the tank, the sand should always be run through a fine sieve, to remove foreign matter and small pebbles, as the former might choke the valves or pipes, and the latter break the work, and the tank should not be filled higher than the level shown,

Figures 1 to 3: Simple Forms of Homemade Sandblast Machines, Made, for the Most Part, of Pipe and Fittings. Figures 4 to 7: The Various Steps in Making a Glass Sign by the Sandblast Process. Figure 8: A Few Examples Illustrative of the Wide Variety of Decorative Work to Which the Process may be Applied

to prevent sand from choking the air pipe.

The equipment shown in Fig. 3 is very simple, and may be used for a variety of small work. Only the details at the sand box are shown, as the other connections are the same as those shown in the preceding figures.

It is a peculiar quality of the sandblast that soft, yielding materials, such as paper, lead foil, etc., are not attacked or abraded nearly as quickly as hard ones like glass. This makes it possible to protect, by means of masks, the parts of the glass that are not to be acted upon by the sand. The masks are usually made of lead foil; brown paper can be used, but the foil is preferable. A supply of suitable foil can be obtained from any florist.

Figures 4 to 7 show the various steps in the work of making a plain sign; this example, while a simple one, completely illustrates the process.

The glass having been cut to the proper size, a pencil sketch of the lettering, the exact size of the work, is made on good paper. The sketch is laid on a piece of carbon paper, the coated side of the latter being up, as shown in Fig. 4, and the outline of the letters gone over again with a stylus or medium-hard pencil. This leaves a carbon impression of the lettering on the back of the sketch sheet.

The glass is now coated with melted beeswax, a sheet of foil placed on it, and rubbed into close contact with a piece of hard felt, or the rounded edge of a piece of leather belting. The glass should be kept warm while this is being done—by laying it on a radiator, for instance—so that the foil will adhere firmly to the wax. When this is done, the foil is also coated with wax. Both applications of wax may be made with an ordinary paintbrush. The sketch, with the carbon impression down, is laid on the waxed surface of the foil, in the proper position, and rubbed all over with the bottom of the bowl of a spoon, or a like article, then lifted off. This leaves the carbon lettering on the wax surface, as in Fig. 5.

The foil is then cut, along the lines of the lettering, with a mat knife, or photographer's etching knife, and the cut-out portions removed by inserting the point of the knife under the foil. The foil, when stripped, brings with it practically all the wax on the glass, and leaves the sign as shown in Fig. 6, ready for sandblasting.

If the work in hand is a sign that must be "printed" in reverse, the foregoing

procedure is varied a little—no carbon paper is employed. The sketch is made with a soft, black pencil, placed, face down, on the waxed foil, and rubbed as described before; this leaves the reversed lettering, in pencil, on the wax, and the foil is cut as before. This makes a rather nice effect, after the work is done, as the lettering is read through the glass.

The sandblasting is simplicity itself, consisting in nothing more than directing the blast of sand and air against the exposed glass. The sandblast is capable of producing any effect from a light surface frosting to a very deep etching, or even to cutting completely through the glass. The method of handling the blast for best results depends upon several factors, and can best be learned by experience.

Any kind of glass can be used in the process, although, for signs and work of a similar character, plate glass is preferable. Particularly pleasing results, for some purposes, especially where a light is used behind the sign, are obtained by using what is known to the trade as "flashed" blue or ruby glass. In this, the color is only on, or rather a part of, the surface, and, when the letters are frosted as described, they stand out white against a sharply contrasting background.

The samples of work shown in Fig. 8 indicate but a few of the many uses to which this process may be put. Glass is not the only material that may be decorated by means of the sandblast; metals and woods may also be treated exactly as described. Wood, being softer than glass or metal, will require more time than either, but very elaborate effects can be produced in it, providing the design is deeply blasted, say, to a depth of about $\frac{3}{16}$ in. In all work of this character, the result, of course, will depend almost entirely upon the artistic talent of the worker.

It is essential, in this work, that the eyes, nose, and throat be protected against flying particles of sand. The simplest method of doing this is to wear close-fitting goggles, and tie a moistened handkerchief or sponge over the nose and mouth. Special helmets may be obtained also, with an air hose that is led to a source of pure air. An old army gas mask, which is obtainable from any of the so-called army stores about the country, can be adapted to this purpose and will make a very good helmet.

☛ A general principle in fastening members together with wood screws is to hammer them before final tightening.

An Invisible Tank Repair

An excellent method of repairing punctured gasoline tanks is shown in the illustration. After the repair is finished, it is practically invisible, and very strong.

A rectangular opening is cut at the spot where the puncture occurs, and two metal plates are cut to form a patch for this opening. One plate, which may be of any convenient thickness, is cut slightly larger than the opening, so that it laps about $\frac{1}{2}$ in. over the edges. The other plate is cut to fit exactly in the opening, and its thickness must be the same as the thickness of the tank wall. A wire is soldered at right angles to the center of the larger plate, as shown, so that it can be held firmly against the inside of the opening. The edges of this plate are tinned with solder, and it is then slipped through, and drawn into place. The smaller plate has a hole drilled in its center to fit over the wire and is pushed down into the opening against the inner plate. Solder is applied between the plates along the edges, and a blowtorch is then used to sweat the two plates together. The wire is pulled out after melting the solder that holds it,

An Inconspicuous and Strong Repair for a Punctured Gasoline Tank Made by Sweating Two Plates Together

and the small hole in the outer plate is filled with solder.

Adjustable Wheelbarrow Handles

The difficulty of handling a wheelbarrow with a heavy load is eliminated by providing it with a set of adjustable handles. This enables the body to be lowered, to suit a high load, or, in other words, to lower the center of gravity. Although wheelbarrows differ in size and design, they can all be reconstructed along the lines shown in the drawing.

The original handles are cut off where the sideboards end. Two plow handles, straight style, are swung on a pivot rod fastened just underneath this point. This

rod is run through small wooden blocks, A, fastened on each side of the body with

Wheelbarrow Handles That can be Raised or Lowered and Locked as Desired, Make It Easy to Handle Heavy Loads

3-in. wood screws. A quadrant-shaped wing is hinged on each leg to swing toward the inside; these are 1 in. thick, and 6 in. wide at the top. The curvature of the wings depends on the radius of the handle and can be marked off accurately, before sawing, by holding a pencil in the proper position, near the lower end of the handle, while moving it. Three or more slots are cut in a radial line with the pivot on which the handle moves. Hinges, bent and mounted on blocks at the end of the handles as shown, fit into the slots in the wings. A wooden rod runs through the lower end of both handles. A two-piece brace is hinged to the inside of the wings in the position indicated. The two parts of this brace are connected by a hinge, which holds them together firmly, yet allows them to be pulled outward by means of the pull rod that is attached to the front side of one piece. When the pull rod is released, both pieces are instantly brought back into their end-to-end position by a coil spring, connected to the brace and to the underside of the wheelbarrow. To change the pitch of the handles, they are unlocked by pulling the pull rod; then, after moving the bent hinges to another slot, the handles are locked by releasing the pull rod.—R. B. Cutler, Springfield, Vt.

A Folding Horse

The photograph shows a folding horse that has been found to be of great con-

A Folding Horse, Consisting of Four Members, That Takes Little Space When Folded, and Proves Very Convenient around the Shop and Garage

venience around the shop or garage. The tray, attached to the lower cross rail, is used to hold tools and materials such as

screws and nails; it is an added convenience, but can be omitted if desired.

The upper cross rail is fastened to the legs with hinges, so that the three members can be folded compactly, as shown. The hinges are attached to the underside of the rail, and to the braces nailed to the upper end of the legs, on the inside. The corresponding braces on the outside fit under the extending ends of the cross rail when the horse is set up, to prevent the legs from swinging out at more than 90° from the rail. The lower rail fits between the legs in notches cut for this purpose. When folded, this horse takes up very little space and may be carried from job to job in an automobile.—Donald W. Clark, Buffalo, N. Y.

Bench-Lathe Lap Operated with Rubber Bands

A simple but effective method of making an ordinary bench lathe work automatically is shown in the accompanying photograph. In this case the lathe happens to be used for lapping a small hole through a diamond wire-drawing die. The toolholder A moves back and forth while the work revolves. The movement is kept up by means of a cam, C, and rubber band, E. The cam C is driven by a

Lapping Diamond Wire-Drawing Dies in a Bench Lathe: The Toolholder is Reciprocated by Means of a Cam and Rubber Bands

belt, D, and bears against the vertical post B. At every half turn the cam pushes the toolholder away from the work. At the other half turn of the cam, the rubber band E pulls it back toward the work. The band E also holds the toolholder down in the V-pulley in front

of the tailstock. A second rubber band, H, keeps the toolholder down in the rear V-pulley.

A common sewing needle, ground and lapped to the correct size, is used to lap the hole through the diamond. A thin paste, made of diamond dust and oil, is applied to the end of the needle and the hole. The movement of the lap in and out of the hole enables the paste to flow into the latter, and keeps the end of the lap covered. Once the lathe is arranged as shown, and started, it is only necessary to keep the lap well supplied with paste. In the shop where this method was employed, it required only one-third of one man's time, per day, to attend to 20 machines.—E. F. Lake, Detroit, Mich.

Proper Use of the Nipple Chuck

Many a good mechanic will spoil a perfectly good short nipple, after threading it in the chuck, by trying to unscrew it by means of a pipe wrench gripping the newly cut threads. The nipple, with threads cut on one end, is screwed into the nipple chuck, consisting of a piece of pipe of the same size as the nipple, and about a foot long, with an ordinary pipe sleeve or long coupling screwed on for about two-thirds of its length.

The nipple, having one end threaded,

will bottom against the pipe and prevent it from screwing too far into the sleeve when the die is rotated. All this is common practice; it is the removal of the completely threaded nipple without spoiling the thread that constitutes the trick. Instead of catching the threads with the pipe wrench and crushing them, the wrench is applied to the sleeve and turned far enough to separate the abutting ends of the pipe, where the nipple can easily be unscrewed by hand.—Edwin J. Bachman, Fullerton, Pa.

A Sphere-Turning Tool

The illustration shows a tool that will finish a ball in one operation, except for cutting off the work on either side of the shank. It consists of a tube made of solid steel. The inside diameter is drilled out to the measurement required. Two slots are cut opposite each other on the

end where the drilling is finished, as this end is usually more true to size than the end where the drilling is begun. For greater accuracy, the hole should be ground to size. The width of the slots is equal to the diameter of the

shank desired, and the depth about two-thirds greater than the diameter of the sphere to be turned. A handle may be made to hold the smaller sizes, as for model work, so that the tool can be held in the hand and steadied on the hand toolrest while pressing it against the stock as it turns. Small balls can be made in one operation. Work of larger size should first be roughed off in the ordinary way, as this is quicker and saves wear on the tool.

A tool of the above description was used for turning one hundred 2½-in. balls, with shanks, that had to be finished accurately to size. In this case the tool was tapered on the inside, from the rear, to give it a better cutting edge. It was held stationary on a V-block in the toolrest of the lathe, the end being held on a dead center also clamped to the toolrest.

Starting Nuts in Slots

The tool shown in the illustration has proved of considerable assistance in placing washers and starting nuts on bolts located in a hole, or slot, so deep that one cannot get at them with the fingers.

The tool is made of a short length of ⅜-in. steel rod of the same diameter as the bolt threads. A groove is cut around it near one end, to allow a spring-wire ring, or retainer, to be snapped in. This ring is

cut so that it can be compressed in the groove, to allow a washer to be slipped over it. When released, the retainer will spread out and prevent the washer from slipping off. The end of the rod, near the retainer, is cupped so that it will fit on the round end of a bolt. The other end of the rod is threaded to the same pitch as the nut to be screwed in place; only a few threads are required. A sleeve, made of steel tubing, and fitting neatly on the rod, is cut and bent to grip the nut.

The tool is loaded for use by pushing a washer over the spring retainer, and screwing a nut on the threaded end. Then the cupped end of the tool is rested on the end of the bolt, and the sleeve is pushed down, forcing the washer over the retainer and onto the bolt. The other end of the tool is then placed in the slot, and the nut is screwed on the end of the bolt. While the threaded end of the tool is being unscrewed from the nut, the hook on the sleeve is held against it, to prevent it from being screwed off again.

Warming the Gas-Engine Lubricator

During cold weather, when oil thickens in the oil cup of a gas engine, preventing proper lubrication, place an old tin can upside down over the oil cup. Punch a hole in the bottom of the can to allow the feed-regulating lever to project. The heat and steam rising from the water hopper enter the tin can and keep the oil warm. The can also prevents chaff and dirt from sticking to the oil-cup glass.

Hydraulic Scale for Crane

The hydraulic scale shown in the illustration is a novel adaptation of hydraulic pressure as a means of weighing directly

A Hydraulic Scale for Use on a Crane as a Safeguard against Overloading, Which can be Readily Detached

any machinery or parts lifted by a crane. It is not necessary for a workman to attend to this scale, as there are no sliding weights or springs needed. The entire scale weighs only about 30 lb., and is interposed between the load and crane hook so that it registers every load that the crane carries, and thus safeguards the equipment against overloads.

A cylinder, about $3\frac{3}{4}$ in. in inside diameter, is fitted with a piston provided with cup-leather packing, as shown. The piston rod is $1\frac{1}{2}$ in. in diameter, and the effective piston area is thus about 10 sq. in. The cylinder contains oil, and a pressure gauge, on which the pressure reading is shown in pounds per square inch, is connected to it. The weight of a load is obtained by multiplying the pressure-gauge reading by 10, which can be done mentally in an instant.

Facing Mixtures for Concrete Work

Many workers in concrete are more or less of the impression that the familiar, and frequently hideous, smooth, gray, monotonous, and uninteresting surface left by the forms is the only effect obtainable. However, a surface almost identical in appearance with granite or

other pleasing stonework may be produced in a simple and inexpensive manner. This is accomplished by using a thin facing of cement mixed with small crystals of crushed quartz, or similar materials of different colors.

If the section is thin, say up to 4 in., it generally would not be too expensive to cast it entirely of the facing concrete, which is composed of 1 part of white cement to 2 parts of the crushed quartz. However, if the portion to be poured is more than 4 in., so that the expense of using the quartz particles for the entire thickness would be too great, a thickness of about $1\frac{1}{2}$ in. of the finer materials will be found sufficient, and a less expensive and coarser mixture can be used for the rest of the piece. This is accomplished by placing a piece of expanded metal, of the smallest available mesh, inside the forms and about $1\frac{1}{2}$ in. from the face. The facing mixture, prepared as previously explained, is then poured into this small outside space until it has piled up about a foot deep, when it is rammed down well with a rod. As the mixture begins to run through the expanded metal, the common concrete mixture, composed of the usual materials, is poured into the space between the expanded metal and the back of the form, until it has piled up to a point several inches below the facing mixture.

It is very important that the front, or facing concrete be always kept at a greater height than the backing concrete while the pouring is being done, so as to prevent any of the latter from running forward and getting into the front part of the mold, thus spoiling the effect. Also, the facing mixture should be mixed "dry," so that it will not flow too easily. A dry mix is one that uses just enough water to hydrate the cement.

A variety of finishes is possible. The form may be stripped while the concrete is still "green" or incompletely hardened, and the surface wire-brushed so as to show the quartz and produce a rough effect, or it may be ground down until absolutely smooth, when it will take the appearance of polished granite. Still another possible method is to bush-hammer it in lines, either narrow or wide.—Gilbert I. Stodola, New York City.

☞ In grinding, a fast work speed will wear out the wheel faster than a slower work speed. The work speed should be adjusted so as to secure the longest life of wheels consistent with efficient production.

Tin-Can Pigeons Catapulted by Simple Machine

By JOHN EDWIN HOGG

SHOOTING at flying targets is an alluring pastime, but the cost of clay pigeons, and machines for throwing them, is usually too high for the amateur. However, one need not, for this reason, abandon the idea of enjoying the sport, since with a little ingenuity, an excellent catapult can be constructed from material that is available everywhere and

can be procured at a very small cost. By using such a homemade catapult to hurl tin cans, as much sport can be provided for the marksmen as with the expensive purchased machines, with the additional advantage of eliminating the cost of clay pigeons. If there is plenty of clay available in the vicinity, it may be found desirable to use lumps of thoroughly dried

Above: The Enthusiastic Marksmen Strap the Catapult on the Running Board of a Small Car, to Convey It to the "Hunting Grounds." Below: Loading the Catapult; All That Is Necessary Is to Draw the Arm Down, Catch It to the Base by the Bolt, and Place the Cans on the End

clay instead of tin cans, as these lumps, upon being hit in the air by a bullet, are shattered and thus give visible proof of having been hit.

In appearance, the catapult, as made by an ingenious trapshooter of Alhambra, Calif., is not very different from the type of catapult used in medieval times; it is, however, somewhat modernized in

As soon as one of the marksmen calls out "pull," the cord is pulled, and the targets are hurled into the air with considerable force. They are frequently thrown to a height of 100 ft., and remain in the air long enough to give the marksmen sufficient time to shoot four or five times. The cord that releases the bolt can be pulled by foot, or, if desired, by a small

Above: The Catapult Loaded, and About to be Released; a Cord Pulls Out the Bolt and Releases the Arm. Below: A Snapshot, Showing How Effectively the Device Operates; the Load can be Thrown as High as 100 Feet, Giving the Marksmen Time to Shoot Four or Five Times

that the motive power is supplied by a pair of discarded automobile inner tubes, attached to the top of the upright, and to the throwing arm.

When the arm is brought down against the base, the tubes are placed under tension. The end of the arm is then hooked to the base by a common door bolt, fastened to the end of the base, that can be released by pulling a cord. The tin cans are then loaded on the end of the arm as shown in one of the photographs.

boy, who will usually be only too eager to do so. By changing the tension of the tubes, the height can be varied to suit the taste of the marksmen. When the targets hit the ground, the process is repeated.

The construction of the catapult is quite simple, and is shown very clearly in the photos. The frame is made of 2 by 10 and 2 by 4-in. planks. The base is about 8 ft. long. The catapulting arm is a little shorter than the base, and one

end is hinged securely to the latter. The arm, after release, is suddenly arrested when it strikes the top piece of the frame, throwing the cans into the air.

Emergency Plug for Crankcase

Having broken off the drain plug under the crankcase of an automobile, while driving over a rough road, and not having a large-size cork to substitute for the plug, a quick repair was made with an old inner tube. The tube was cut across, and a small piece, about 4 in. wide, was cut from one end. The small piece was folded and placed directly over the hole, the remainder of the tube being stretched tightly over the folded piece, and wired firmly to the frame on each side. It was found that this plug was quite effective, and it was used for a week before a new drain plug was obtained.—George Auringer, New Rockford, N. D.

Novel Lamp Shade

The illustration shows an inexpensive but beautiful lamp shade that is well worth the slight trouble of making. A

wood or metal frame of the desired size and shape is constructed as indicated, each side of the frame being rabbeted, or bent, to hold two sheets of clear glass, separated from each other about $\frac{1}{4}$ in. Glass bottles, and broken glass ornaments of all colors, are crushed into

small fragments, which are thoroughly mixed and packed between the glass sheets. After all the sections are filled with the fragments, the frame is fastened together and mounted on the lamp. It will be found that a beautiful tint results when the light is turned on.—Marshal South, Oceanside, Calif.

Runners for the Wheelbarrow

Pushing a heavily loaded wheelbarrow through deep or crusted snow is hard work, but if runners are substituted for the wheel, the task becomes easy.

Obtain two equally wide and thick bar-

rel staves. Cut out triangular blocks of 2 by 8-in. wood. Place the blocks on the concave side of the barrel staves, and fasten with wood screws, countersinking

By Substituting a Pair of Runners for the Wheel of a Barrow, It Is Easier to Push a Load through Snow

rel the heads. Fit a trunnion, made of pipe, to the top of each block by means of flat-iron brackets, as shown. After removing the wheel from the barrow, pass the trunnion through the brackets and the wheel bearings to serve as a pivot. The runners should be braced securely by means of two iron rods, passed through the blocks, as shown, and fastened by means of nuts, inside and out.

Skirt on Barrel Fools Rodents

Light, roughly constructed barrels, such as are made for shipping lime, are often used as containers for animal feed, and the like, but are not immune to mice and rats. To prevent the rodents from getting at the contents by climbing over the side, tack a skirt of heavy paper, or fairly wide and thin sheet metal, around the bilge of the barrel, as shown in the illustration.—Louis Schneider, Clinton, Miss.

Removable Foot Scraper

The ordinary foot scraper, although simple to make, is often a source of dan-

A Removable Foot Scraper That Is Both Practical and Safe. Left: Scraper Swung Out of the Way and Held by a Pipe Strap Screwed on the End of the Step Above. Right: Scraper in Use

ger, especially to children, because one is apt to catch the foot in it, especially when

mounting the steps carelessly from the side. It has been found, however, that a removable foot scraper, of the type shown in the photograph, not only retains the advantage of simplicity, but is comparatively safe, as it is easily swung out of the way when not required.

The scraper consists of three parts: two short lengths of $\frac{1}{2}$ -in. pipe, and a strip of flat iron or steel. Slots are cut in the ends of the pipes and the steel strip is fitted and riveted in place. The pipes fit in $\frac{1}{2}$ -in. holes drilled in the end of a step. When not in use, as in fine weather or when the children are playing around the steps, the scraper can either be removed entirely or can be swung around and one leg

screwed on the end of the step above.—Glen McWilliams, Detroit, Mich.

Hints for Amateur Motion-Picture Operators

Direct current is preferred to alternating current for arc lighting in motion-picture projection, as it gives a clearer and steadier light. The carbons used should be soft, as soft carbons are much superior to hard ones with soft centers. The tighter the carbons are held, the better the light will be. After the carbons heat up, the ends can be brought much closer together than at first.

The mechanism of a motion-picture projector is delicate, although not frail, and frequent oiling is necessary. If a part of the machine breaks, do not try to substitute something for the broken part; this usually only means more trouble, and more annoyance to the spectators. Close the show, and replace the broken part with a new one.

Clearness of the picture depends largely upon the screen. A sheet hung across the room is not satisfactory, as the surface is never perfectly smooth, and the slightest breeze will wrinkle and bulge it, causing the picture projected on it to become distorted. A good screen can be purchased at a very reasonable price, and the investment will be repaid by better pictures.

One thing that especially tries the patience of an audience is the delay involved in changing reels in one-machine booths. To avoid this operation as much as possible, obtain reels that are about

twice as large as the ordinary reels, and wind the film of two small reels on a larger one, connecting the ends. It is necessary, of course, to rewind the film twice, so that the parts will be projected in proper sequence, and to use a large reel in the lower magazine.—Thomas Duncan, Des Moines, Ia.

Fastening Automobile-Hood Covers

To keep automobile-hood covers neatly in place, drill a small hole through the

lower flange of the hood, about 3 in. from each corner, and insert a small eyebolt in each hole. Cut slits in the hem of the hood cover to fit over the eyebolts. Run a wire, about $\frac{3}{16}$ in. in diameter, through each hem and through the eyebolts.

Then tighten the eyebolts with the nuts; this will draw the cover smoothly and tightly over the hood.—John A. Blaker, West Auburn, Mass.

Movable Overhead Irrigation System

A very convenient overhead irrigation outfit is made by spacing four buggy wheels about 15 ft. apart along a line of galvanized-iron pipe of approximately the same diameter as the axles. One end of the pipe should be capped and the other threaded for a hose connection. Holes are then drilled at suitable intervals along the center of the pipe. Small standpipes, placed at 50-ft. intervals along one side of the plot to be watered, will provide a fine overhead irrigating system for which but 25 ft. of hose will be needed. The entire system is easily moved wherever it is needed. The illustrations show an outfit of this type in operation on

A Movable Irrigation Outfit Made from Perforated Pipe and Four Buggy Wheels: It is Shown Watering an Alfalfa Patch. Standpipes, 50 Feet Apart, Make It Possible to Use Only 25 Feet of Hose

an alfalfa patch, in which the standpipes are set in the middle of the plot. The sprinkler is moved down one side and up the other, and serves an area 90 ft. wide.—S. D. Hooper, Spokane, Wash.

Eliminating Scratch from Phonograph Records

It has been found that the objectionable scratching of phonograph records can be eliminated to a great extent by applying lycopodium powder, obtainable at any drug store for a few cents an ounce. This powder is extremely fine and will penetrate the smallest pores. When used on phonograph records, it fills up the minute crevices that cause the scratching. The record should be warmed a little before applying the powder, and afterward allowed to cool thoroughly.—C. I. Reid, Millersburg, Pa.

Cleaning Piano Keys

Yellow keys on a piano give the keyboard a very unrepresentable appearance. After some experimenting, it has been found that the original whiteness can be restored by applying a weak solution of nitric acid and water.

Add 1 oz. of nitric acid to 12 oz. of soft

water. Be sure to pour the acid into the water, and do so very slowly, stirring with a stick at the same time. Apply the solution sparingly to the keys, taking care that no acid gets on the black keys, on the woodwork, or between the keys. Rub the keys with a piece of cheesecloth to remove the stain. Then wash off all traces of the acid with a piece of flannel dipped in clean water, and wipe with a dry cloth.

It is sometimes necessary to give the keys two applications.

The solution may be put in a rubber-corked bottle, and kept for future use if desired. As nitric acid is a corrosive poison, the bottle should be marked to distinguish it from others, should be kept entirely out of reach of children, and should not be allowed to touch the fingers.

Harvesting Ice

A layer of snow lying on the surface of ice that is to be harvested, acts as a blanket and retards the formation of new ice underneath. It is therefore necessary to dispose of this snow. The simplest way to do so is to flood the ice field with water; this dissolves the snow, and upon freezing, forms a new layer of ice over the old ice.—John M. Smith, Chicago, Ill.

Making Cement Steps Safe in Winter

Owing to the accumulation of ice on the surface of cement steps during winter, they not infrequently cause accidents.

An Iron Frame, Provided with Wooden Treads, Eliminates the Danger Caused by Ice Accumulating on the Surface of Concrete Steps

The danger can be eliminated, to a large extent, by covering the steps with a frame, as shown in the illustration.

Two lengths of flat iron are bent to conform to the shape of the steps, and 1 by 1½-in. wooden strips are bolted across them, as shown. The strips are spaced about ¾ in. apart. Hinges are screwed to the riser of the upper step on the porch, so that the whole frame can be swung up when it is necessary to clean the steps. The hinges should have loose pins, so that the frame can be detached entirely when the winter is past.

Window-Shade Brackets Used for Hinges

Ordinary brackets that are used on window shades have been found to make good hinges for the covers of small boxes

and tool chests. The brackets are bent to make them fit around the corners, as indicated. The ears of each bracket are screwed to the cover, and the brackets are pivoted on wood screws driven in-

to the sides of the box.—Harold Jackson, Kankakee, Ill.

Pen Drawings from Photographs

To produce a neat pen drawing from a photograph, carefully trace and shade the photograph with India ink, using a very fine and flexible pen point. When dry, immerse the print in a solution of sodium oxide, then in a solution of tincture of iodine and water, just enough iodine being added to the water to give the solution a bloody color. When the print is immersed in this solution, the iodine immediately attacks the emulsion of the print. After remaining in the iodine bath for a few minutes, until the back turns blue, the print is transferred to a hypo bath, which bleaches out the iodine, the lines of the sketch remaining unaffected. While the print is immersed, care must be taken not to touch the drawing, as the India ink will easily rub off in water.

Substantial Fireproof Chimney

A substantial fireproof chimney was built by a tinner at a cost far lower than that of an ordinary brick chimney. It consists of 8-in. clay tile, concrete, and 28-in. lengths of galvanized-iron pipe, 14 in. in diameter. The tile and pipe are set in a concrete base and the 3-in. annular space between them filled with concrete.—H. V. Smith, Wauseon, Ohio.

Preserving Inner Tubes

The motorist will find the purchase of an inner-tube bag, or box, to be an excellent investment; or a wrapping of soft cloth, placed around the tube in such a manner that the folds of the rubber cannot chafe against each other, will add considerably to the life of the tube. Tubes, even repaired ones that are carried as spares, should never be thrown carelessly into the tool box, where they are likely to be injured by the sharp cutting edges of the tools and rendered useless for an emergency.

Building a Two or Three-Step Spider-Coil Receiver

BY F. L. BRITTIN

THE type of instrument described in this article is very similar to the one-step receiver described in the February number, and it is recommended that the reader study that article, if he has not already done so, before attempting the construction of the sets described here. In fact, this is essential, because, as the spider coil employed is identical in construction in all three instruments, no attempt is made herein to give instructions for winding.

The condensers used in these instruments are also the same as those used in the one-step receiver. Rotary-plate condensers may also be used, of course, but, when using this type, the rotary plates, in the feed-back condenser, must be connected to the aerial, and, in the tuning condenser, to the ground. These condensers are plainly marked in both circuits.

The rheostat used in the detector-tube filament circuit should be of the vernier type, as a close adjustment of the filament current is necessary at this point, to obtain the best results from the detector tube. The rheostat for the first step is of the ordinary type, in the two-step set, and that for the second step of the jack type. In the three-step set, all amplifier-tube rheostats are of the jack type.

Jacks and plugs, with ordinary rheostats, can be used in both circuits, if desired, but the jack rheostats are now generally available, and have certain advantages that make their use desirable.

It will be noted, in the two-step set, that the set only operates on either of the amplifying steps, and not on the detector; this set was purposely designed in this manner, to make its operation simpler for the amateur, who is interested only in receiving from the broadcasting stations.

In the design of the three-step instrument, however, the circuit is so arranged that the detector can be used alone, or in combination with one, two, or three steps of amplification, as the operator desires.

The first and second steps are the ones most used, the second always with a loud speaker. The loud speaker shown in the photo of the three-step outfit is highly recommended for the reception of broadcast matter. The horn is of "die-cast" wood, used in combination with a popular and efficient type of microphone, and is free from the characteristic vibration and overtones of the metal horn.

The audio-frequency transformers used in both instruments have a 10-to-1 winding for the first step, and a 5-to-1 winding for the second step. The third-step transformer, in the three-step set, has a 3-to-1 winding. These transformers are of the shielded type.

In both instruments, there are six binding posts, for the phones, at the front of each panel, connected by a brass strip at the rear. These permit the use of either phones or a loud speaker, as desired. It will be found, when using a loud speaker, that it is best to disconnect the phones.

The panel used for the two-step set is $\frac{3}{8}$ by 6 by 21 in. in dimensions, and that for the three-step instrument $\frac{3}{8}$ by 6 by 24 in.—both of bakelite. All holes should be drilled before any instruments are mounted, and all connections must be carefully soldered, the enamel being scraped from enameled wire before soldering; this last may seem a useless warning, but cases are on record where a soldered joint was made on enameled wire, without first scraping it, and, as the cut ends of the wires were not covered by the solder, each wire was insulated from the other—and the builder was highly indignant because he could not get any results from his set.

Use plain solder and a good soldering paste, tin the copper well, and use only enough solder to insure a good connection. Wire the various units neatly, using No. 14 tinned copper wire, covered with "spaghetti" tubing, and remember that the shorter the connections, the greater the efficiency of the instrument.

The detector tubes used are U.V.-200, and the amplifier tubes U.V.-201. Detector tubes vary; some will oscillate at a lower filament temperature than others. If the operator finds that he must burn the filament at an excessive brilliancy in order to make it oscillate, a small extra inductance can be inserted in the circuit. Make a small form, similar to that used for the large spider coil, and on it wind six turns of the same wire as used in the large coil. Wind the wire under and over every other "tooth," not skipping one as in the large coil.

Note carefully, on the two-step wiring diagram, the point where the lead from the tickler switch is soldered to the wire leading from the detector plate to the primary of the 10-to-1 transformer, and locate the same point on the instrument.

Between this point, and the trans-

former, cut the wire, and solder the leads from the small inductance to the ends, so that the coil will be in series. Only one tube in 20 or 30 needs this treatment, but it is well to know it.

The best type of aerial to use with these instruments is either a two-wire, 75-ft., flat-top antenna, or a single wire, 125 ft. long. It should be at least 40 ft. above ground. No. 14 copper wire is used for the aerial, the lead-in, and ground connections.

A few words on the operation of the instruments will, no doubt, be welcomed by the amateur.

The instruments will tune over a range of from 150 to 400-meter wave lengths. Supposing, for example, it is desired to tune in a station broadcasting at 360 meters. Set the primary-switch lever on the third or fourth point from the left, the grid-switch lever on the lowest point, and the tickler-switch lever on either of the two lower points. These are the usual positions, using an aerial as specified. The tuning is now done by means of the condensers. Turn the rheostats of the detector and first steps, burning the filaments no brighter than necessary. A point on the vernier rheostat will be found where the signals will come in best; vary the tuning by means of the

tuning condenser until it is as perfect as possible, increasing the voltage on the first-step tube, if necessary. "Smoothing-out" is accomplished by varying the capacity of the feed-back condenser. If more volume is desired, the second step may be switched in.

Most of the fine tuning is done with the tuning condenser, and by the proper adjustment of the voltage of the various tubes, especially the detector. A good guide for the proper adjustment of the tubes is to increase the voltage until a hiss is heard in the phones, then reduce the voltage until the hiss just disappears; this is the point of best operation, and, especially when receiving distant stations, this adjustment is important.

Use a 6-volt, 60 or 80 ampere-hour storage battery as A-battery, and keep it well charged. Buy the best possible B-batteries—cheap ones are a waste of money; good B-batteries should last approximately a year.

The instruments may be inclosed in cabinets, as shown in the photos, if desired, and this is recommended. The author's experience with these instruments has been highly satisfactory, and they are recommended to amateurs who want an efficient instrument at a reasonable price.

Homemade Reliners

It is an easy matter to make excellent and serviceable liners, that will add hundreds of miles to the life of a set of tires, from old fabric tires. If properly made and cemented in place, these liners will hold the worst blow-outs, and

Homemade Reliners, Made from the Three Inner Plies of Old Fabric Tires, Greatly Increase the Mileage of a Set of Tires

make it possible to use tires until the tread and most of the fabric are worn off. It is almost impossible to puncture tires fitted with these liners.

To make a reliner, use an old fabric tire of the same size as the tire in which the reliner is to be fitted—a cord tire will not do. The condition of the tread and the outer plies of fabric is of no importance, as only the three inner plies are used. Neither does one bad blow-out matter, as the joint can be made at this place.

Cut the beads off both sides of the tire. The reliner will be 1 in. or more longer than the inside circumference of the tire, and it is necessary to make a diagonal cut across it. This can be done at the place where a blow-out or other weak part happens to be. Separate the three inner plies from the remainder of the fabric and the tread, using two pairs of pliers to start this operation. After a few inches have been separated, one part can be held in a vise, or placed on the floor and held under the foot, while the other part is pulled off. To make a feather edge on the reliner, to prevent chafing of the inner tubes, cut a strip, $1\frac{3}{4}$ in. wide, along the edge of the first ply, and pull it off, as indicated. Care must be taken not to cut the ply underneath. Then cut a strip from the second ply, about 1 in.

wide, and pull this off in the same way. Let the third ply remain as it is. Feather the ends of the reliner the same way.

The reliner is then ready to be inserted in the tire. Wash the inside of the tire to remove the talc or soapstone. Apply a thin coat of rubber cement to the back of the reliner and press it against the inside of the tire. After replacing the inner tube and putting the tire on the rim, inflate to the usual pressure, or about 5 lb. less, and let the car stand for a few hours before using.

The writer has picked up old worn-out tires on the desert roads in the western part of the country, and found it possible to use them from 300 to 1,500 miles, after fitting them with reliners made as described. To get the best results in using these reliners, insert them in the tires while the latter are still in fairly good condition, and before the tread becomes too badly worn. Reliners of any kind, however, should never be used in new tires, as they tend to stiffen them, and damage the tire in a manner similar to underinflation. Besides, the additional weight and thickness produce more heat, interfere with proper radiation, and cause the inner layers of fabric to be chafed and burned. In old tires, where bad breaks are present in the side walls, reliners will usually prove of benefit, enabling them to be used for many more miles before they finally give out.—F. L. Denton, Pasadena, Calif.

Preventing Birds from Scattering Seed

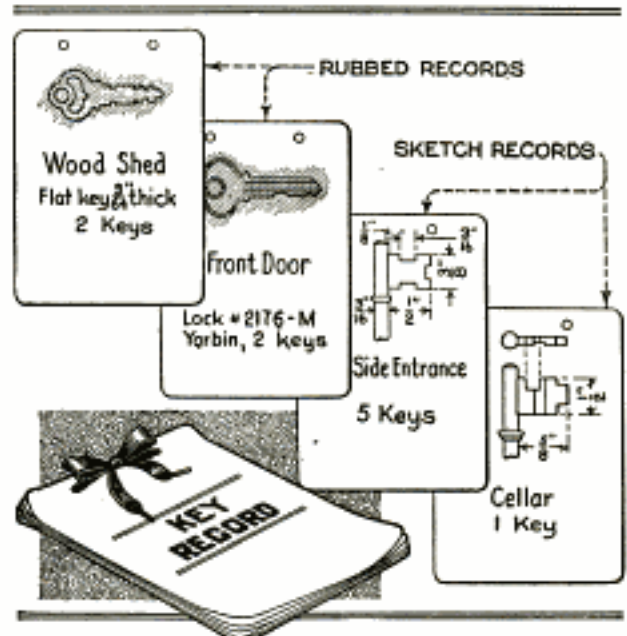

The old idea of tying a bag around the lower part of a bird cage, or running a gathered band of cloth around it to prevent the bird from scattering seed over the floor, is considerably improved by the method shown in the illustration. Small pieces of sheet brass, or other sheet metal, about 1 in. wide and 3 in. long, are bent as shown, and soldered

to the four corners of the cage, to hold strips of glass, 3 in. wide, in place. These strips present a much neater appearance than either bag or runner.

Keeping a Key Record

It is a wise precaution to keep a key record such as shown in the illustration, in order to eliminate the necessity of

A Key Record Containing "Rubbings" and Sketches of the Keys, and Such Data as Numbers and Designation of Locks to Which Keys Belong

taking locks off the doors, to fit keys to them when the originals have been lost.

The key record illustrated consists of a loose-leaf book containing the "rubbings" and sketches of the keys; also such information as the key numbers, manufacturers' names, the designation of the locks to which the keys belong, and if possible, the exact dimensions of the keys. To make a distinct and accurate outline of a tumbler or flat key on paper, put the key under a sheet of paper and rub over the surface with a soft pencil. Some keys have grooves running parallel to the shank; the width and depth of these must be recorded accurately. Since keys with round shanks are more difficult to shade than flat keys, they are measured with calipers and a scale, and are then sketched accordingly. The thickness of the shank and the exact location of the collar must be shown.

Measuring Diameter without Calipers

To measure the outside diameter of a pipe, shaft, or like object, when no calipers are available, tie two nuts or screws to the ends of a length of string and throw one end over the object. When the ends stop swinging, measure the distance between the cords. The measurement thus obtained is sufficiently close for ordinary work.

Drawing Staff Lines for Music

The device shown in the illustration enables anyone to draw staff lines on ordi-

Above: Staff-Ruling Instrument in Use, Showing How the Special Ruler and Inker is Used. Below: Ruling Instrument Proper, and Patterns for Both Instruments

nary paper, and thus produce music paper that is equal, for all practical purposes, to the commercial article.

The ruling instrument is illustrated in

the lower left-hand corner. It is cut from a piece of $\frac{1}{16}$ -in. sheet brass, 5 in. long and $\frac{3}{4}$ in. wide. At one end, 5 slits are cut, $\frac{5}{8}$ in. long and $\frac{1}{8}$ in. apart, and $\frac{1}{16}$ in. from one side a short slit is cut. Five of the prongs are twisted at right angles, as indicated. The sixth prong is bent as shown, to form a lip that will bear against the edge of a ruler.

Using this instrument, carbon paper, and a ruler, very good music paper may be made, but the carbon lines are apt to rub off, so the combined ruler and inker, shown at the upper right, was developed. This makes permanent lines. It is made from a sheet of $\frac{1}{16}$ -in. brass, $1\frac{1}{2}$ in. wide and 7 in. long, cut as shown. The ears at the ends are $1\frac{1}{8}$ in. long, and about $\frac{1}{2}$ in. wide, and are bent back as shown, and slit to take a wide typewriter ribbon, which is passed through the

slits and drawn taut. The lip of the ruling instrument slides on the straight edge, and the prongs on the typewriter ribbon. —H. P. Tevonian, New York City.

Automatic Cut-Out for Audion Bulbs

Many vacuum detector and amplifier bulbs are damaged by allowing an excess of current to flow through the filament. Fuses are unreliable because the exact fusing point is seldom known to the operator,

and even a small excess in the flow, if continued, will result in injury to the bulb. An automatic cut-out that will prevent this is shown in the diagram. The only extra equipment necessary is a

small adjustable spring-type relay of from 75 to 250 ohms' resistance, and with the contacts arranged to break when the relay is operated.

The relay is wired in the filament circuit in the manner shown. An ammeter is required to make the proper adjustment of the relay, and should be connected in series with the filament at the point X.

All the resistance on the rheostat should be cut in to start with; if the relay operates at this point, put enough tension on the armature spring to keep it inoperative. Resistance should then be cut out of the circuit slowly, the ammeter being watched for the maximum current flow that the manufacturer has specified for the particular bulb being used. Should the relay operate before that point is reached, more tension should be put on the spring, and if necessary, the armature should be set back farther from the core. This adjusting should be continued until the relay operates at the point of maximum allowable current as shown by the ammeter, and fails to operate at any lower point. The ammeter can then be removed from the circuit. Thereafter, whenever too much resistance is cut out on the rheostat, the relay will operate, cutting off the current from the filament. By cutting the resistance in again, the relay will drop back to normal, and the filament will again be lighted. The adjustment of the relay should be checked by means of the ammeter whenever a change in bulbs is made.

☛ Broom handles make good rollers for moving heavy boxes and other flat-bottomed articles.

First-Aid Kit Carried in Gunstock

Hunters who are accustomed to carry a first-aid kit with them will find the method of keeping the kit in the gunstock very convenient. The butt plate is removed, and the gunstock hollowed out between the screw holes, to provide space for the kit, which consists of such articles as a caustic pencil, plaster, absorbent cotton, iodine, a tourniquet, and a roll of cotton gauze. After these articles have been inserted in the gunstock, the metal butt plate is screwed down again over the opening.—Fred J. Pooler, Waterville, Me.

Tapping Radio Coils

In the construction of radio coils, one should never attempt to bare the wire and make taps after the coils have been wound. This method is not only difficult but shows poor workmanship. The proper method is to make the taps during the winding process. Do not scrape the wire bare with a knife, which frays the braiding or sewing, but hold the portion to be tapped over the flame to char about 1 in. of the cotton or silk insulation. Then rub the copper with a piece of fine sandpaper or emery cloth until the wire is bright. Double the bare part and give it one full twist around. Having formed all the taps in this way, solder to them the wires that lead to the switch points.

The Correct Method of Tapping Radio Coils by Charring the Insulation and Twisting the Bare Wire in a Loop While Winding the Coil

When completely finished, slip lengths of rubber tubing over the joints to make a neat-looking job. No. 16 or 18 copper wire should be used for leads from the taps to the switch points.—E. J. Bachman, Fullerton, Pa.

Guide Prevents Drawers from Binding

The sides of a drawer are often planed down to eliminate binding, but usually this only increases the tendency to "cant." An excellent way of preventing drawers

from binding or canting, is to provide each drawer with an additional guide, as shown in the drawing. The guide consists of a narrow strip of wood nailed

Binding and "Canting" of Drawers are Eliminated by Providing an Extra Slide in the Center

crosswise under the center of the drawer; it slides between two other strips that are fastened to the frame as shown.

Kinks for the Tire User

An inner shoe, made from part of a tin sign picked up along the road, proved to be an excellent repair for a large blow-out. The piece of tin, 8 in. wide and 12 in. long, was made to fit snugly inside of the casing. The ends of the tin were allowed to project over the beads, and a length of old tube, slit open, was slipped around the inner tube to prevent the tin from cutting or chafing it. When the tire was inflated, the tin shoe reinforced the weak part of the casing effectively, and the repair, although intended to be only temporary, lasted as long as the tire, and did not cause any trouble. I now carry several of these tin "shoes," and some sections of inner tubes, in readiness for future blow-outs.

Small holes and cuts in casings should be filled with some "liquid rubber," a thick preparation that solidifies upon exposure to air. It can be procured at most any cycle shop. This treatment will help lengthen the life of a tire considerably, as it prevents small sharp stones from entering the cuts and penetrating the casing, and also prevents water from coming in contact with the fabric. The coating will wear off, and must therefore be renewed occasionally.

It will be found that the cutting of rubber is greatly facilitated if the blade of the knife is kept wet.—William J. Helm, Tampa, Fla.

Portable Shelving for Closets

The portable shelving shown in the illustration can be installed in any closet, and can be removed in a short time with-

Portable Shelving for Closets That does Not Mar the Walls and can Readily be Removed When Necessary

out any trouble; it will not mar the walls, as no nails are used.

Obtain four pieces of 1 by 2-in. wood, as long as the closet is high. Drill $\frac{1}{2}$ -in. holes every 6 in. along the wide side, and saw out slots, as shown, to fit the $\frac{1}{2}$ -in. wooden rods that support the shelves. Set the four uprights against the side walls of the closet and insert the top and lower shelves first. The shelves keep the uprights tightly against the walls, and are made to fit snugly by cutting out the corners as shown. Only one side wall is shown in the drawing, for the sake of simplicity.—P. A. Dasche, Astoria, N. Y.

Improving Clutch Screw on Light Car

The adjusting screw that bears on the neutral cam of a light car, and is used to throw the engine into neutral automati-

cally when the lever is pulled back, is quickly worn out and hence must be replaced frequently. The cause is that the end of the screw that makes contact with the cam is rather small. If the screw head is

rounded, as shown in the illustration, and the screw is turned in from underneath, so that the head bears on the cam, it will last longer than if merely dressed and replaced as before, as the area of contact is much larger, and will not need adjustment so often.

Novel Method of Bailing Small Boats

With an 8-ft. length of common garden hose as the only implement, water can be bailed out of small boats in a simple manner. The hose is first filled completely with water by submerging it, then one end is held under the water with the left hand. The hose is grasped, near the middle, with the right hand, and, with a quick, rotary motion, the free end is made to whirl around the head. This will throw the water out of the hose, but as fast as the water is discharged, more is drawn in, making the flow continuous. It is astonishing to note how much water can be removed in a few minutes by this method.—D. C. Cox, Pittsfield, Mass.

Screen-Door Patch

To cover a hole in a screen neatly and effectively, cut a rectangular piece of screen a trifle larger than the hole, and pull one or two wires from each edge. Bend the ends of the projecting wires

over as shown in the illustration. This may be done by placing on the patch a piece of thick cardboard of the same shape, but a little smaller, and then bending the ends of the wires against the sides of the cardboard.

Place the patch over the hole so that the points will project on the other side of the screen, and flatten them down toward the center of the patch.—P. F. Schecker, St. Marys, Kan.

Simple Repair for Dished Wheel

After a front wheel of a car had been badly dished in an accident, it ran untrue and consequently caused uneven wear on the tire. To remedy this, I took out the hub bolts and hub, replaced the latter from the other side of the wheel, and drew the hub bolts up tightly. The wheel, repaired in this way, ran perfectly true, and it was found unnecessary to purchase a new one.—A. Bronson, Argyle, Wis.

A MERRY-GO-ROUND FOR THE ICE

BY L. B. ROBBINS

EXHILARATING sport is furnished open-air enthusiasts by the novel ice merry-go-round described in this article. The device, although it reminds one of an ice boat, is, however, a new departure in ice coasting, the novelty consisting in the fact that the merry-go-round, which is itself stationary, swings the riders, who are carried on sleds, in circles around it. When desired, the cord or rope that holds the sled to one of the revolving arms, is released, and the sled with its rider is sent flying off over the ice. With a good breeze blowing, the merry-go-round revolves with considerable speed, yet is perfectly safe, if constructed according to the instructions. It can be built by anyone who has some knowledge of tools and how to use them, and who pos-

sesses enough ingenuity for details of construction.

The device consists, essentially, of three parts: the base, the revolving arms, and the sails. The construction of the base is shown in the plan and side elevation, Figs. 1 and 4, and the details of the lower works in Fig. 5. To make the base, cross two pieces of 2 by 6-in. spruce, 6 ft. long, at right angles to each other to form four legs. The surfaces of these crosspieces should be flush, which can be accomplished by half-lapping them at the junction. Bore a $\frac{1}{2}$ -in. hole through the end of each leg so that a long spike can be driven through it and into the ice. Bolt the crosspieces together, and screw a $1\frac{1}{2}$ -in. pipe flange over the exact center of the joint, as shown in Fig. 5. Thread a 6-ft. length of $1\frac{1}{2}$ -in.

An Ice Merry-Go-Round That Provides All the Exhilarating Sport of the Ice Boat on a Pond or Small Lake: It is Equipped with Four Sails That Keep It Revolving at Considerable Speed. To Stop, the Sleds are Disengaged by Releasing the Ropes, and a Simple Form of Brake, Operated by a Long Lever, is Applied

pipe on one end, and screw it into the flange, so that it will stand exactly vertical; this is the shaft around which the arms are to revolve. Next rivet four iron braces to an iron collar, as shown. Slip the collar over the $1\frac{1}{2}$ -in. pipe, and bolt the lower end of the braces to the legs, the bracing being fitted so that the top of the collar will reach about $1\frac{1}{2}$ ft. above the flange. Just above this collar, slip on another, provided with a set-screw. Then saw off part of a large pipe cap to form a shallow cup, about $\frac{3}{4}$ in. deep, and cut a circular hole in its bottom so that it can be slipped over the pipe to rest on the second collar. This forms a race for the ball bearing that supports the revolving arms; the balls should project a trifle above the edge of the cup. If available, a roller or ball thrust bearing should be used at this point.

The revolving arms consist of two 16-ft. lengths of 2 by 6-in. straight-grained spruce planks. Cross them at right angles to each other in the same way as the base legs. Do not half-lap them, however, as this would greatly impair their strength, but set one directly on the other, and bolt them together, countersinking the bolt heads. Then fasten four wooden braces around the center as indicated, lapping the ends so as to make them lie horizontal. Bore a $1\frac{3}{4}$ -in. hole in the center of the joint, and bolt a 2-in. pipe flange to the upper timber directly over the hole. Thread a 3-ft. length of 2-in. pipe on both ends, screw one end into the flange, and fit the other end with a coupling. Fasten four wire stays to eyes welded to the coupling, or through holes drilled in the side and to eyebolts on the revolving arms. These stays should be provided with turnbuckles. On the underside of the joint of the revolving arms, bolt a wooden disk, about 18 in. in diameter, and drill a $1\frac{3}{4}$ -in. hole in the exact center, so that it will line up with the hole in the pipe flange on the other side. Then screw a large steel washer, about 6 in. in diameter, with a $1\frac{3}{4}$ -in. hole in the center, to the wooden disk. This washer rides on the steel balls in the race.

With some one to assist, pick up the revolving-arm assembly and place it over the $1\frac{1}{2}$ -in. pipe on the base. The metal washer will then rest on the steel balls, and about 3 or 4 in. of $1\frac{1}{2}$ -in. pipe will project above the coupling on the 2-in. pipe. Fit a collar over the $1\frac{1}{2}$ -in. pipe, with about $\frac{1}{16}$ -in. play between it and the coupling on the 2-in. pipe. Drill a

$\frac{1}{2}$ -in. hole through both collar and pipe and bolt or pin them together.

A mast and sail is located on the end of each revolving arm. The mast is made of 2 by 3-in. spruce, 7 ft. long. After rounding or chamfering the edges, square off the end and taper it; also taper the whole mast toward the top. Saw a square hole in each arm about 1 ft. from the end, for the mast to fit in. Make a mast step by bolting three blocks together, as indicated in Fig. 3. Cut another square hole in the lowest block, in line with the one above, and step the mast, which will be held quite securely.

The booms can be made of lighter spruce. They should be provided with jaws, made of flat iron, to fit loosely around the mast. The sails are all of equal size, triangular shape, 6 ft. at the leach or mast side and 5 ft. along the foot or boom. Use 8-oz. white ducking and double-hem the edges. Sew in eyelets, about 6 in. apart, along the boom edge, and larger eyelets along the leach, to take mast rings. The mast rings can be made of stiff wire or can be purchased ready-made. Lace the bottom edge of the sail to the boom with stout braided cord. After placing the masts and sails in position, connect the outer ends of the booms, with lengths of rope, to the eyebolts that hold the wire stays. The ropes should be just long enough to prevent the sail from swinging out too far when gybed, or swung out. The correct position is shown in Fig. 1. Fasten a long bolt through each arm, as a stop for the boom when the sail is filled, and provide a large hook on the end of each arm to hold the rope that is fastened to the sled.

When completed, assemble the merry-go-round on smooth ice of sufficient thickness. Set the base on the ice and drive spikes down full length. Additional strength and stability will be obtained by heaping snow around the spikes and legs, splashing water over it, and allowing it to freeze.

Figure 1 indicates clearly how the merry-go-round works, the various positions of the sails being shown. Two of the sails are always catching the wind; one is completely filled just before the one ahead of it is gybed.

The sleds are equipped with strong rope, about 20 ft. long; one end is tied to the sled, while the other end is held in the hand, and the middle section, or bight, is slung over the hook on the end of the revolving arm. A better method of releasing the sled would be to have

Figure 1: Plan Showing Base, Revolving Arms, and Braces; Also Positions of Sails in Relation to the Wind. Figure 2: Detail Showing Wood and Metal Disks on Revolving Arms. Figure 3: Squared Foot of Mast and Detail of Mast Step. Figure 4: Side Elevation, Showing Assembly of Merry-Go-Round. Figure 5: Detail of Lower Works. Figure 6: Detail of Upper Works

the sled ropes fastened to the arm, and attached to a screweye in the front of the sled by a slip knot, firmly tied, or by one or two turns around a hook. Then, when the rope is released, and the sled flies off, there is no danger of its being overturned by a long, hanging rope getting under the runners.

It is necessary to provide some kind of brake for stopping, especially when a strong breeze blows. A practical way

to do this is to provide means of raising the whole revolving assembly, after all the sleds have been released, so that the coupling on the 2-in. pipe bears tightly against the upper collar on the 1½-in. pipe. This can be done in a number of ways, and one will quickly suggest itself to the builder.

By raising the booms of all four sails and lashing them to the masts, the merry-go-round can be kept at rest.

Protection of Concrete Curbs

The photograph shows a simple method that has been employed to protect the

A Runway Used by a Gardener to Protect Concrete Curbing from being Damaged When Pushing a Heavily Loaded Wheelbarrow over It

concrete curbs of garden walks from being damaged by a wheelbarrow passing over them.

Two short 2 by 12-in. planks, fastened end to end by means of large hinges, are laid across the curb. No matter how heavily loaded a wheelbarrow may be while passing over the runway, no damage will result to the curb. In addition to this, the work of the gardener is considerably lightened.

Heat Shield for Range

Many fires in residences can be attributed to the fact that the kitchen range is placed too close to the woodwork or wall behind it. As a precaution against this danger, a sheet of metal is usually tacked to the wall. However, this is not at all satisfactory or effective as the metal, being an excellent conductor of heat, transmits the heat to the wood under it, and also prevents the radiation of heat from the wood.

A shield that has been found very efficient is arranged as follows: A piece of galvanized sheet iron, about 30 in. wide and 1 ft. longer than the range, is hung between the range and the wall. The sheet iron is suspended by means of two small angle brackets screwed to the top of the wainscoting, behind the stove. The shield is attached to the brackets with stove bolts, placed through the screw holes in the ends of the brackets, and through small holes punched in the shield.

The air between the wall and the shield rises upon being heated, and the space is continually filled with cooler air from underneath, so that the woodwork cannot become very hot.—W. S. Standiford, Youngstown, Ohio.

Safety Car Curtains Made of Wire Mesh

While motoring with small children in the rear seat, it is necessary to watch the youngsters continually, to prevent them from falling out. This constant watchfulness was entirely eliminated by one tourist, who used common wire mesh to cover

Wire Mesh Covers the Open Sides of the Car, and Prevents Children from Falling Out

the open sides of the rear seat, as shown in the photograph.—Jane Fredrickson, Los Angeles, Calif.

Pencil Sharpener Makes Dowels

Our woodworking department was called upon to make several thousand small pointed dowels, and no cutter of the proper size was available. As it was necessary to turn the work out at once, a small rotary pencil sharpener was pressed into service, and was found to perform the work satisfactorily. The sharpener was fastened to a board, and a small wooden pulley substituted for the crank. The board was then fastened to a high-speed machine so that the small pulley was pressed against the belt. By employing this method, the job was finished completely in less time than it would have taken to make a cutter. The pencil sharpener stood up well, considering the hard use to which it was put.—Charles Thiel, N. Andover, Mass.

Winter Use for the Electric Fan

The illustration shows an excellent method of disposing of the fumes produced by a gas or oil heater, when there is no chimney near, and when the heater is used on the first floor of the house.

Connect one end of a flue to the top of the heater, as shown, and pass it through a hole in the floor into the basement. The hole in the floor must be lined with asbestos. Pass the lower end of the flue through a hole cut in the side of a lard pail, or similar container, laid horizontally on a table. An elbow is fitted on the end of the flue, the open end of the elbow being pointed toward the open end of the pail, and fitted as exactly as possible in the center of the latter. Cut a hole in the end of the pail, equal in diameter to the guard of a small electric fan, which is placed directly behind the hole. When the fan is operated, the strong current of air causes a strong draft in the flue.

The cost of running the fan is about the same as that of burning a 40-watt lamp.

A Homemade Primer

The illustration shows a simple primer for a car using a pressure gasoline feed. Cut the gasoline pipe leading to the car-

A Simple Primer for Automobiles That Have a Pressure Gasoline Feed: It is Operated by Turning a Small Knob on the Dash

buretor, and braze a tee in it, about 1 in. from the carburetor. Drill and tap the intake manifold as shown, and screw in a small petcock. Connect the petcock and tee with a length of copper pipe as shown. Rivet an iron rod loosely to the petcock valve, and bring it through the dash. Fit a handle or knob to the end. The primer can then be operated by the driver. A quick opening and closing of the valve will provide sufficient gasoline to start the engine in one or two turns.

A Simple Pigeon Trap

The trap shown in the illustration is built in one of the upper corners of a pigeon house. It is 1 ft. square, and has a wooden floor, two screen sides, and an open top. A small hole, that just allows a pigeon to pass through, is cut in one side, as indicated.

A few grains of corn are thrown on the floor of the trap to attract the birds. After a pigeon has alighted in the trap and eaten the corn, it finds the small opening and passes through it into the house. It is impossible for the pigeon to escape by returning through the trap, as the hole in the screen allows only the body to pass through without the wings spread.—Herman Kurth, New York City.

An Easily Made Variable Condenser

A simple and efficient variable condenser that can be made by any amateur radio operator at slight cost is shown in the il-

A Simple Type of Variable Condenser That Meets a Variety of Requirements in the Amateur's Radio Laboratory, is Easily and Inexpensively Built

lustration. Many times the experimenter needs a small-capacity condenser but does not care to buy one of the rotary type for the work in hand. This condenser will answer all requirements, and if constructed as described, the capacity will be approximately .0005 microfarad. The base may be of hardwood or bakelite, and the supporting blocks, or saddles, are made of 5/8-in. bakelite, with a small binding post screwed into one end of each. The brass tube is 1/8 by 1 1/4 by 8 in., and has an inside diameter of 1 1/8 in.; it should be clamped securely to the supporting blocks. The sliding unit is an ordinary 8-in. test tube with an inside diameter of 1 in. A sheet of heavy tinfoil, such as used by florists in the preparation of floral designs, 3 1/2 by 7 1/2 in. in size, is then fitted around the inside of the test tube, and a short lead soldered to it and to the inner end of the knob bolt shown; a long flexible lead is then soldered to the bolt at the end of the knob and connected to the binding post. This lead must be of sufficient length to allow the test tube to be withdrawn. A short length of wire is soldered to the brass tube at the rear and connected to the remaining binding post.

Suspended Rattrap Proves Efficient

To get results in catching rats, hang a spring-snap rattrap on the wall so that it will clear the floor about 4 1/2 in., which is just high enough to enable the rat to reach the bait by standing on its hind legs. When the trap springs, either the back or the neck of the rat is broken. Common brown laundry soap has proved to be an excellent bait for these spring traps.—W. Norman Fox, Atlantic City, New Jersey.

Using "Canned Heat" in Small Torch

It very often happened that I found the fuel in my small alcohol torch had evaporated when I needed it and had no additional fuel on hand, so I bought a tin of "canned heat," and poured the contents, while melted, into the torch. Now when I wish to solder, I hold the wick end downward, and apply a lighted match to the end of the metal tube, causing sufficient fuel to be melted to saturate the wick so that it will ignite. If the flame dies down, it can instantly be revived by holding the torch down so that the flame will heat the tube.—J. R. Weyrich, Washington, D. C.

Repairing Electric-Heater Elements

To repair a break in the resistance element of a heating appliance, straighten the ends of the wire for about 1/2 in., and scrape them clean. Take a short length of 3/32-in. brass rod and drill two small holes through it, about 1/8 in. apart, and pass the ends of the resistance wire through each hole twice, as shown. Close the holes down on the wires by hammering the rod. The resulting job will be neat and very effective. Merely twisting the wires around each other does not insure a good electrical connection, as the oxidation of the wire tends to insulate the wires, and solder cannot be used.

Cutting Ice from Watering Tanks

The tool shown in the illustration has been found to be more useful than an ax to cut ice from watering tanks. It consists of an old plow tooth, riveted to a length of 3/4-in. pipe. A plow tooth 5 in. wide is most suitable; it is cut off at the point where the sides begin to taper, and is sharpened to a cutting edge. The pipe is flattened at the end riveted to the plow tooth, and the other end is bent to form a handle. This tool is also of assistance for fitting ice cakes in the ice house.

PRIZE OFFERS AND ANNOUNCEMENTS

1268 FOUR PRIZES FOR THE BEST STUDIES IN THE ECONOMIC FIELD

In order to arouse interest in the study of topics relating to commerce and industry, and to stimulate those who have a college training to consider the problems of a business career, a committee composed of five prominent men connected with various universities and newspapers has been enabled, through the generosity of Hart, Schaffner & Marx, of Chicago, to offer four prizes for the best studies in the economic field. The committee proposes six different subjects, but a competitor is not necessarily confined to these topics, and may choose any other subject, which must, however, first be approved by the committee. There are two classes, A and B, the latter to include only those who, at the time the papers are sent in, are undergraduates of any American college, and the former any other American without distinction. In class A there will be a first prize of \$1,000, and a second prize of \$500. In class B the prizes are \$300 and \$200, respectively. There is no limit as to the length of the papers, and they should be sent on or before June 1, 1923, to Prof. J. Laurence Laughlin, University of Chicago, Chicago, Ill.

MAGAZINE'S BUREAU OF INFORMATION

1382 ANSWERS OVER 19,000 INQUIRIES

Nearly 20,000—to be exact 19,842—inquiries were received by the Bureau of Information of Popular Mechanics Magazine in the year 1922, an increase of 7,762 over the preceding year. Of these inquiries more than 19,000 were answered by letter, while 133 were answered by telephone, and 17 by telegraph.

All walks of life from day laborer to college professor are found among the questioners, many of them, too, living in far-away corners of the globe, southern Australia, Africa, and Alaska being often heard from. India is another country taking an interest in American products, though, according to the number of inquiries received, artificial limbs constitute the Indian's chief point of interest.

Two questions frequently asked are, "Where can I buy a 'divining rod' for locating minerals or buried treasures?" and, "Can you furnish us with details concerning the prize for perpetual motion?" Once in a while some man writes asking where he can find a wife.

1326 ENCOURAGEMENT OF UNKNOWN WRITERS REASON FOR LITERARY CONTEST

The belief that there may be in this country "greater poets than have yet been heard from and writers as excellent as any that have lived," is given as the reason for a \$1,500 literary contest to be held by the New Pearson's magazine. Nine prizes are offered, three for the best short stories submitted, and an equal number for the best poems and best essays. It is suggested that the stories approximate 5,000 words, the poems 300 lines, and the essays 3,500 words. With the exception of the essays, which must be confined to "What Is Wrong with American Journalism?" there are no limitations as to theme or treatment. The closing date is May 1, 1923, at noon, and the address of the magazine, 799 Broadway, New York City.

1384 PRIZE FOR MIDSHIPMAN SHOWING BEST QUALITIES OF LEADERSHIP

A sword will be given annually to the midshipman at the U. S. Naval Academy who has given best evidences of leadership, and who has contributed most to the loyalty of the service. The award is to be made by the superintendent of the academy on behalf of the class of 1897, which has provided a trust fund of \$2,000 for that purpose. A member of the class graduating this year will receive the first award.

AMERICAN-SCANDINAVIAN SOCIETY

1373 TO AWARD SCHOLARSHIPS

Twenty traveling scholarships of at least \$1,000 each will be awarded this year by the American-Scandinavian Foundation to worthy students desiring to study in the universities of Denmark, Norway, and Sweden. Candidates must have received the equivalent of the training usually given for a bachelor's degree, must be of American parentage, and must be nominated by faculty members of the college or school they are attending.

The students chosen will be permitted to select any line of work they care to follow, and may attend school in any of the Scandinavian countries. All applications must reach the secretary of the Foundation at 25 W. 45th St., New York City, before March 15.

PRIZE AWARDS FOR NEW OCCUPATIONS FOR SHUT-INS

FIRST PRIZE, \$100

Bertha Graves*Morey

327 West Fourth Street, Ottumwa, Ia.

A New Method of Designing, Making, and Selling Artificial Flowers from Various Materials.

SECOND PRIZE, \$50

Mrs. E. W. Hitchcock

Hannawa Falls, N. Y.

Plan for Organizing and Operating an Employment and Information Bureau by a Shut-In.

THIRD PRIZE, \$25

R. S. Andrews

221 South Kenilworth Ave., Oak Park, Ill.

Plan and Directions for Making Scrapbooks for General and Special Purposes on a Commercial Basis.

THE suggestions on which these prizes were awarded will be printed in the future issues of Popular Mechanics Magazine. In addition to the prize-winning articles, from the long list of suggestions, many others have been selected for publication in Popular Mechanics Magazine which will be paid for at regular rates. A large amount of valuable material for the occupation of shut-ins will be made available through this magazine.—Editor.

When answering prize offers please mention Popular Mechanics Magazine

CLEARING HOUSE AIDS SCIENTISTS ENGAGED IN RESEARCH WORK

1266

Persons engaged in scientific research wishing to communicate with others working along similar lines, now have available a comprehensive clearing house through which information leading to this end may be obtained. The service is supplied by a special bureau of the National Research Council, which has installed a personnel file of 14,000 names, together with a cross index listing the character of investigations being carried on. This latter record shows that research work is now under way in practically all branches of science, including agriculture, animal biology, astronomy, and geography. The council also has a bibliographic service for any who may desire to take advantage of it.

Research information service

SUNDAY SCHOOL STAGES "AUTO RACE" TO INCREASE ATTENDANCE

1329

Washington, D.C.

An interesting attendance contest was recently put on with success by the Sunday school connected with the First Presbyterian Church of Fort Wayne, Ind. A large map of the Lincoln Highway, marked by lines every 50 miles, was placed on the front wall of the school, and each class assigned a card bearing the photograph and name of some popular racing car. Starting from San Francisco the cars were advanced each Sunday a distance proportionate to the attendance of the class for that day. Decreases in the number of pupils present meant that the cars were sent back for a corresponding number of miles. The contest closed when the first car reached New York.

FIVE THOUSAND DOLLARS FOR WINNER OF MOTORBOAT RACE IN SOUTH

1389

Boats, placing in a motorboat race to be run between Miami Beach, Fla., and Havana, Cuba, next winter, will receive \$10,000 in prizes, the money being donated by the city of Havana. The winner will be awarded \$5,000, the runner-up \$3,000, and the third \$2,000. The Chamber of Commerce of Miami will supply additional information.

STUDENTS INVITED TO WRITE ESSAY ON ECONOMIC SUBJECT

1388

Two prizes, of \$1,000 and \$500, respectively, are offered by Alvan T. Simonds, a member of the board of directors of the United States Chamber of Commerce, for the best essays written by students of a high school, trade school, or normal school on "The Lack of Economic Intelligence, and Some of the Injuries It has Caused to Individual and General Welfare in the United States Since 1860."

For particulars address the Simonds Economic Prize Contest, 470 Main St., Fitchburg, Mass.

CONTESTS PREVIOUSLY ANNOUNCED

Medals, Diplomas, and Money Awards: Announced August issue, 1921; awards offered by the Franklin Institute. The Franklin medal is for workers in technology; the Elliott-Cresson is for original research work and invention; the Howard N. Potts is for important development of previous discoveries and inventions. Each award consists of a gold medal with a diploma. There are also a silver medal, and a Certificate of Merit awarded for meritorious discoveries, and cash premiums for certain work in optics.

One Million Francs for Best Motor: Announced January issue, 1922; closes June 1, 1923; address, Aero Club of France, Paris.

Research Thesis by a Woman: Prize \$1,000; announced October issue, 1921; awarded annually; address, Dr. Lillian Welsh, Goucher College, Baltimore, Maryland.

Annual Commercial Airplane Contest for "Italy's Great Trophy": Announced July issue, 1922; address, Aero Club of Italy.

Best Novel by an American Author: Prize \$2,000; announced August issue, 1922; closes March 1, 1923; address, Harper & Brothers, New York City.

National Contest for Professional Musicians: Announced January issue, 1923; closes March 1, 1923; address, Mrs. Charles A. McDonald, 205 Shorb Ave., Canton, Ohio.

Best Treatise Regarding Immortality: Prize \$1,000; announced January issue, 1923; closes Dec. 1, 1923; address, Contest Editor, 2 West 47th Street, New York City.

Awards to Further Science of Electricity: Medals and prizes, amounting in all to about \$20,000; announced February issue, 1923. For particulars address General Electric Company, Schenectady, N. Y.

For Best Paper on Technical Phase of Aeronautics: Prize \$125; closes March 31 of each year. Announced February issue, 1923; address Royal Aeronautical Society of England, 7 Albemarle St., London, W. I., England.

Names for Great Lakes Steamers: Two prizes of \$50 each; announced February issue, 1923; suggested names must reach the company before the opening of navigation season in 1924; address the Detroit and Cleveland Navigation Company, Detroit, Mich.

For Best Work by American Chemist: An annual award of \$25,000; announced February issue, 1923; address the Allied Chemical and Dye Corporation, New York City.

Best Short Story or Poem: Prizes \$100 and \$25; announced January issue, 1923; closes March 1, 1923; address, Contest Secretary, Kansas City Chapter, Missouri Writers' Guild, Kansas City, Mo.

Articles on Chemistry: Prizes \$50 and \$25; announced January issue, 1923; closes May 1, 1923; address, Secretary, Canadian Institute of Chemistry, Toronto, Ont.

QUICK ACTION OF TRUCK DRIVER SAVES LOAD

More like a scene from a motion-picture comedy than a bit of real life is the plight of the rather distressed young man shown here engaged in holding a truck's load of empty vegetable crates. It happened in Seattle, Wash., during a recent cold spell. Shooting along the avenue the driver underrated the skidding possibilities of the street-railway tracks. The result was that the load took a list to one side, whereupon the driver hopped out and began a heroic fight to prevent the crates from toppling over. Fortunately some passers-by came to his assistance, and the load was finally righted. Taking exceptional care to keep at a safe distance from the street-railway tracks, the driver completed the trip without further mishap.

The Bell System's transcontinental telephone line crossing Nevada.

Highways of Speech

Necessity made the United States a nation of pioneers. Development came to us only by conquering the wilderness. For a hundred and fifty years we have been clearing farms and rearing communities where desolation was—bridging rivers and making roads—reaching out, step by step, to civilize three million square miles of country. One of the results has been the scattering of families in many places—the separation of parents and children, of brother and brother, by great distances.

To-day, millions of us live and make our success in places far from those where we were born, and even those of us who have remained in one place have relatives and friends who are scattered in other parts.

Again, business and industry have done what families have done—they have spread to many places and made connections in still other places.

Obviously, this has promoted a national community of every-day interest which characterizes no other nation in the world. It has given the people of the whole country the same kind, if not the same degree, of interest in one another as the people of a single city have. It has made necessary facilities of national communication which keep us in touch with the whole country and not just our own part of it.

The only telephone service which can fully serve the needs of the nation is one which brings all of the people within sound of one another's voices.

Magic

Lies in pretty teeth—Remove that film

Why will any woman in these days have dingy film on teeth?

There is now a way to end it. Millions of people employ it. You can see the results in glistening teeth everywhere you look.

This is to offer a ten-day test, to show *you* how to beautify the teeth.

Film is cloudy

Film is that viscous coat you feel. It clings to the teeth, enters crevices and stays. When left it forms the basis of tartar. Teeth look discolored more or less.

But film does more. It causes

most tooth troubles. It holds food substances which ferment and form acid. It holds the acid in contact with the teeth to cause decay.

Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea.

You leave it

Old ways of brushing leave much of that film intact. It dims the teeth and, night and day, threatens serious damage. That's why so many well-brushed teeth discolor and decay. Tooth troubles have been constantly increasing. So dental science has been seeking ways to fight that film.

A new-type tooth paste has been perfected, correcting some old mistakes. These two film combatants are embodied in it. The name is Pepsodent, and by its use millions now combat that film.

Two other foes

It also fights two other foes of teeth. It multiplies the starch digestant in the saliva. To digest starch deposits on teeth which may otherwise cling and form acids.

It multiplies the alkalinity of the saliva. To neutralize mouth acids which cause tooth decay.

Lives altered

Whole lives may be altered by this better tooth protection. Dentists now advise that children use Pepsodent from the time the first tooth appears. It will mean a new dental era.

The way to know this is to send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

See and feel the new effects, then read the reasons in the book we send.

Cut out the coupon now.

Pepsodent PAT. OFF.
REG. U.S.

WURLITZER

200 YEARS OF MUSICAL INSTRUMENT MAKING

Wurlitzer Saxophones

The most popular of all wind instruments. Improvements in fingering and special conical bore make Wurlitzer Saxophones the easiest to play and unusual for rich tone values. Blows and fingers so easily that playing is as simple as whistling a tune.

Wurlitzer Cornets

Noted for accurate pitch, and clear even tones in both soft and loud playing. Valve pistons individually ground to insure smooth, easy action and absence of leakage. Once "lipping" is mastered very little practice is required to play simple band music.

Wurlitzer Violins

The Wurlitzer collection of Old Violins is internationally famous. Wurlitzer modern violins are made by experts, and accurately patterned after Stradivarius, Guarnerius, and other famous models. We especially urge young people to take up the violin.

Any Musical Instrument

On Trial

WURLITZER will send you *any instrument* for a week's trial in your own home. No obligation to buy — no expense for the trial — you do not risk a penny. Wurlitzer instruments are known the world over for artistic quality and excellence of workmanship. Used by the greatest musicians, bands, and orchestras. The house of Wurlitzer has made the finest musical instruments for over 200 years.

Easy Payments

Payments are conveniently arranged in small monthly sums — a few cents a day will pay. All instruments to you at lowest factory prices. Special combination offers on complete musical outfits — velvet lined case, all accessories, self-instructor, etc. — everything you need at practically the cost of the instrument alone.

Send for New Illustrated Catalog!

The greatest musical catalog ever published! Over 3,000 articles — every known instrument described and illustrated — many of them shown in full colors. No matter where you live, you can buy Wurlitzer instruments direct by mail the same as at any of the 27 Wurlitzer stores.

Send the coupon today!

Wurlitzer Stringed Instruments

Wurlitzer banjos, guitars, mandolins, ukeleles, etc. are made with particular attention to close fit at all joints, to give true vibration and full resonance. Stringed instruments are the easiest of all for beginners to "pick up" — some can become good players almost without effort.

Wurlitzer Trap Drum Outfits

Every conceivable drummer's trap is included in the Wurlitzer outfits — nothing is lacking. A sense of rhythm usually means that playing the trap drums will be almost instinctive.

Wurlitzer Trombones

Tone remarkable for sonority and clearness, absolutely pure in all registers. Slides are drawn to a great hardness and perfect line, insuring easy action and perfect intonation.

Harris Homes Beautiful

Harris Home No. 1006, above, with 5 rooms and bath, size 30 ft. x 29 ft. 6 ins. is but one of more than a hundred beautiful, practical designs built many times with big economy in best residential districts.

FREE! Every prospective home builder should have this new plan book of Harris Homes Beautiful. More than a hundred designs—bungalows, cottages, residences. Explains the money saving advantages of our guaranteed Ready-Cut and Not Ready-Cut home building systems; the splendid quality of Harris Home building material; our liberal plan offers which save you from 50 to 100 dollars right at the start.

Presto-Up, Bolt-Together Garages
The wonder buildings of the age. Wonderful because they are so simple. Complete to the last detail, with all windows, doors and hardware in place. Come to you in sections, painted and ready to bolt together. Quickly and easily erected in a few hours. Our new, free Presto-Up, Bolt-Together Garage Book is now ready. Mail coupon for your copy.

Numerous attractive designs, both single and double models, in every desired size, priced upwards from \$129.00.

Hot Water, Steam, Warm Air

Complete steam, and hot water heating systems—pipe and pipeless furnaces planned for you by experts and guaranteed to heat your home comfortably, economically and efficiently. Our big stocks insure quick shipment of everything needed to the last fitting. Capable engineers are waiting to help you. Send a rough sketch of your building showing size and location of rooms, number and size of windows and doors, height of ceilings and full information will be sent to you promptly.

Builders' Hardware

Locksets, butts and a complete line of builders' hardware of every description. All new modern designs featuring best construction, latest style and newest finishes. The complete line is illustrated, described and priced wonderfully low in our big building material book. Mail coupon for your copy today.

Lighting Fixtures

A complete line of lighting fixtures carefully chosen in sets for all rooms. Everything needed to wire your home. See them in our new book.

Every Piece Guaranteed
 To Give Absolute Satisfaction

50 Useful Pieces
 High Grade Aluminum

\$1 ONLY Here is your chance to try for a whole month a Handsome, Useful, and High-Grade Panellied Aluminum Set at my risk. Send the coupon and first payment today. The complete set will be sent you immediately. Learn the big difference between percolator coffee and coffee-pot coffee; enjoy the richer aroma, the finer flavor, the clearer color. Know the many uses of the Big Combination Roaster. See for yourself how it saves fuel, time and labor. Experience, by daily use, the pleasure in handling and the profit in using all the pieces. Enjoy the spick-and-span appearance the 50 pieces give your kitchen. This Colonial Panellied Aluminum Set must be its own salesman. You must be entirely satisfied with its High Quality, its Low Price, and its Easy Terms. If your satisfaction is not thorough, no matter how much you have used the set during the 30 days, you can return it. Your first payment and all transportation costs will be refunded. The trial will not cost you a penny. **Important!** Every piece in this set is genuine high-grade, pure aluminum, mirror-like in finish, with a polish that cannot wear away, seamless, sanitary, and easy to clean. Will not flake, crack, chip or peel. **EACH AND EVERY PIECE IS GUARANTEED TO GIVE ABSOLUTE SATISFACTION.** Heats rapidly and evenly, and so saves fuel. Heavier and better than ordinary grades. These pieces are heavy, extra hard high-grade Aluminums, and will give years of hard, bloodless, Faithful Service. All the articles are of a large serviceable size. This set must not be confused with ordinary sets that include many useless thin pieces. You must judge this set by its big value, rather than its little price. And this you can do during your 30 Days' Free Trial. Price Last Year \$23.75, which we have slashed to rock bottom. Order No. PA2550. Terms: \$1 with order, \$1 monthly. Total price \$11.95. Will be shipped by express unless otherwise requested.

1088 Diamond Bargains

YES—1088 of the best diamond bargains you have ever seen. See these—also hundreds of diamonds and other jewels in the latest issue of "The Diamond Bargain List." Send today for this money-saving book. See the wonderful offerings that give amazing opportunities to purchase diamonds and other bargains at special low prices.

60% of Market Price

will Buy Diamonds Here

Here's why we can offer such remarkable values: This famous 75 year old firm—rated at over \$1,000,000.00 capital—the largest and oldest diamond banking institution of its kind in the world, has made loans on diamonds, watches, and jewels in excess of \$25,000,000.00.

Why Pay Full Prices Costs Nothing to See

We now have thousands upon thousands of unpaid loans and other special advantage bargains that we must sell to get back our cash. Loan Value—not market value is our price basis on unpaid loans. Send now for Bargain List. Don't delay. Learn all about the startling offerings that you can get at a fraction of their real value. The Buys of a lifetime. Costs nothing to see.

FREE—On Approval!

The "Buys" of a Lifetime!

At our risk—we send you any bargain you wish for absolutely free examination. No red tape. No reference required. No obligation. Compare it carefully. Have it valued any way you wish. Don't buy unless satisfied you can not match the bargain at 60 per cent more. If you decide not to buy, you are not out one penny. See how much we can save you—or see how much more we can give at other's prices.

As Low As \$60 Per Carat

Not all, but some. Yes, some even lower priced, also finest gems obtainable at higher per carat, but proportionately low Bargain Prices. Get a diamond now around half its market price.

Send for Latest List of Diamond Loans

Entirely different from the ordinary catalog. You will find hundreds of Diamond Bargains described in full detail with exact weight, color, quality, etc., which hardly any others do. You know what you're buying before you buy. Besides the Bargain List tells of Guaranteed Loan Values, unlimited exchange privilege at full price paid, and complete details of free examination offer.

Use Coupon Now!

Or just send name. Postal will do. We'll send our latest Bargain List. It's free. No obligation. No expense. Write now.

Your European Trip need cost you little ~ ~

IF YOU are planning a trip to Europe learn today at what a moderate expense you can have the vacation of your life! Your Government has prepared a booklet of suggested itineraries and their costs. It is now possible to go to Europe and return on one of the finest ships afloat, first class passage, spending three weeks abroad, for only \$750!

Great Government Ships

U. S. Government ships, operated to Europe by the United States Lines, are marvels of luxury, speed and safety. A voyage on the famous George Washington, the President Harding, or President Roosevelt, constitutes a supremely memorable experience. The ships ply between New York and Plymouth, Cherbourg and Bremen. You should know about them. You will be proud of your ships, and the unsurpassed service they offer at low cost.

Kentucky's Finest Good Old Melon Sweet Green River Tobacco

Direct From Factory to You At Money Saving Prices

The finest genuine Homespun Smoking Tobacco Green River's Famous Fertile valley can produce—nature's finest, air-cured, pure, natural leaves—with that good old lasting flavor and fragrance—just as nature intended it to be—sweet—pure—satisfying. Aged and mellowed in the wood for years as only we Kentuckians know how to do it. Its old melon sweet, natural flavor and smoothness cannot be equalled. Comes to you as pure as when it left the field years ago—no dope—no flavoring. Guaranteed free from chemicals and adulterations. Simply ground up ready for the old pipe—the most satisfying smoke you ever had. Sold direct from factory to you at lowest prices ever offered.

A Trial Costs You Nothing

To quickly introduce our famous Green River Tobacco, to every reader of this magazine, we are making a special offering for a short time only of two \$1-lb. cans for only \$1.00. Send no money. Just send now your name and address and pay postman \$1.00 and postage on delivery. If after thirty days' trial you are not absolutely satisfied, your money will be refunded. This offer is absolutely guaranteed, so don't hesitate to make the test.

Comes in three blends—mild, medium or strong. In ordering state which blend you prefer. This tobacco must be just as represented. Must satisfy you or your money will be refunded without quibble or question. Rush your order today, sure.

OWENSBORO TOBACCO CO.
Dept. 119, Owensboro, Ky.

Two brothers, Alton and William Livingston, both born with Club Feet, were treated at McLain Sanitarium with the splendid results set forth by their mother in this letter:

My oldest boy, Alton, was treated for Club Feet when 3 yrs. old at the McLain Sanitarium with such satisfactory results that when William was born with Club Feet, 10 years later, we took him to McLain's when 11 wks. old. 8 wks. later we brought him home with straight, perfect feet. Inquiries gladly answered.

MRS. CLARENCE LIVINGSTON,
205 Washington St., Salisbury, Maryland

Pictures show William at 11 weeks, and his present condition.

CRIPPLED CHILDREN

You may know some. Tell their parents of the McLain Sanitarium, a thoroughly equipped private institution devoted exclusively to the treatment of Club Feet, Infantile Paralysis, Spinal Diseases and Deformities, Diseases of the Joints, Wry Neck, etc., especially as found in Children and young adults. Write for their book, "Deformities and Paralysis," and "Book of References," mailed free.

Amazing Bargain!
Lincoln Wren House \$1.00
Unusually attractive bird house—that ONLY wrens can use. Looks like a miniature log cabin. Made of wood, tinted a soft brown color that attracts the wren, whose song is melodious and beautiful; song-log ways make it a favorite. It destroys large numbers of obnoxious insects. The equal of wren houses costing \$5.00 to \$7.00. And yet because we build in tremendous quantities—we are able to sell, knocked down, for only \$1.00—prepaid. (West of Denver and Canada \$1.25.) Attract wrens—they liberally repay attention. Send \$1.00 for each Lincoln Wren House you want. If you aren't delighted—money back. Write now. (Dealers write for proposition.)
John Lloyd Wright, Inc., 709 N. Wells St., Chicago

AMERICAN SCHOOL OF MUSIC, 50 Lakeside Building, CHICAGO

Different from all others—the NEW BENJAMIN

AIR RIFLE

Made on a different principle from all other Air-Rifles.

The Benjamin is really a strong air-pump used to compress the air in the air chamber to any degree of power desired. From one to six strokes of the pump give all the force necessary. Each additional stroke gives increased power. The Benjamin works on the same principle as all air-drills and air-hammers—with this difference:

You control the shooting force as you desire. Look at this block of hardwood. It shows how Benjamin power is regulated as you wish.

You can't have accidents with a Benjamin. It's safe, always, because you control the power. The Benjamin never loses shooting force, and has no springs to get out of order or shake your aim. Write us for an interesting folder about this wonderful air-gun.

If your dealer does not handle same, send direct to factory.

(PRICE \$5) POSTPAID

BENJAMIN AIR-RIFLE & MFG. CO., 615 N. Broadway, St. Louis, Mo.

Ask your dealer for demonstration.

**Get This Wonderful Ring. If You Can Tell It From a Genuine Diamond Send It Back**

These amazing, beautiful CORODITE diamonds positively match genuine diamonds in every way—same blazing flash and dazzling play of living rainbow fire. They, also, stand the diamond tests, including terrific acid test of direct comparison. Lifetime experts need all their experience to see any difference. Prove this yourself.

Wear a Corodite Diamond 7 DAYS FREE

Make this test. Your risk nothing. Wear a genuine Corodite and a diamond side by side on the same finger for 7 days. If you or your friends can tell the difference, send it back; you won't be out a single penny. That's fair enough. If you keep the ring, price printed here is all you pay. No installments. Remember, Corodites alone have the same cutting as genuine stones.

No. 1—Ladies' Solitaire 14K Gold S. Ring \$2.84
No. 2—Gents' Heavy Belcher 14K Gold S. Ring \$3.49
No. 3—Gents' Massive Hexagon Gray Ring \$4.27
No. 4—Ladies' Hand-Carved Basket Setting, platinum finish \$3.96
No. 5—Ladies' Tiffany Bridal Blossom Engraved \$3.54

Caratage gems. Beautiful mountings of new modern design. Choice of gold or latest white platinum finish. Unqualified 20-year guarantee. Hand-some all-leather case free with each ring.

SEND NO MONEY Keep your money right at home. Just send name, address and number of ring wanted and also as shown by slip of paper, fitting and to end around finger joint. Your ring will come by return mail. When ring arrives deposit amount shown above with postman. If you decide not to keep ring after 7 days' wear, send it back and your money will be immediately returned. Send today.

EDWARDS
"REO" Metal Shingles
Absolutely rust-proof — edges as well as sides. Not the space of a pin point exposed to weather. Also fire and lightning proof. Reduce insurance. Outlast building. Need no repairs — end all roofing expense. Easy to lay — one man can do the work — hammer and nails only tools needed. Lay over old shingles if desired. Patent Interlocking Device makes water tight seams — all nail heads covered — no rust or leaks possible.
Exclusive "Tightcote" Process
Put all Edwards Galvanized Roofing in a class by itself. Bend, twist, strike it with a hammer as much as you like — you can't loosen or crack off the galvanizing — due to our "TIGHTCOTE" process which practically makes zinc covering a part of the metal sheet. No other galvanized roofing can withstand this test.
FREE Roofing Book Don't buy roofing until you get our big free book, describing Edwards famous "Tightcote" Roofings, Sidings, and Ceilings, and our lowest factory prices. We sell you direct and save you in-between dealers' profits. Write for Roofing Book No. 160.

ATKINS

METAL CUTTING SAWS

Get This FREE Book on Saws

THIS new edition of "Saws in the Shop" just off the press, gives you all the latest information on metal cutting and shop practices. It tells how to speed up the work and get longer and better service from your saws. Gives complete information on selecting the right saw for every job. Shows Atkins metal cutting saws and machines, and explains their use. Also, contains scores of helpful hints and tables. This book is based on the experience of practical saw makers and users. It is valuable to every man in the shop. Send for it NOW.

Atkins "Non-Breakable" Hack Saw Blades cut faster, run easier, hold their edge longer, and do not break. They save you time, money and labor on every metal cutting job. "Saws in the Shop" tells you all about them. When you write for the book enclose 10 cents and tell us what metal you cut and we'll send you a sample blade.

Saws for Every Use

No matter what saws you need for cutting wood or metal, Atkins Saws will do the work quicker, easier and better. Write for our booklets on any saws you require.

Whoops, Boys! It Beats 'em All

When you hop into your Auto-Wheel Coaster, with real steel disc wheels, roller bearings, and spin down the street, you go right ahead of the gang—race or no race!

An Auto-Wheel is the speediest coaster you ever saw. Goes so easy it almost runs itself. That's due to the patented self-contained roller bearings—and they are thoroughly greased at the factory.

Auto-Wheel

Is sturdily built—steel disc wheels with rubber or steel tires; specially constructed hound brace that makes steering easy and safe; auto type hub caps, just like on Dad's machine. It has a brake,—'n everything. Also comes with spoke wheels—all wheels interchangeable. The Auto-Wheel is built to withstand years of hard play and work.

Below is Auto-Wheel's Junior Companion—The Auto Cart—for your little brother or sister. Substantially built just like the Auto-Wheel Coaster.

Write for catalog. It shows all models and sizes and explains the mechanical construction. If you send the names of three coaster wagon dealers in your town, telling which ones sell the Auto-Wheel Coasters, we will give you a year's subscription free to the Auto-Wheel Spokes-man, a dandy magazine for fellows like you.

**Auto-Wheel Coaster
Company, Inc.**
North Tonawanda, N. Y.

I WILL sell you any Emblem Ring, Button, Pin or Charm of any Secret Society, and guarantee to save you 50%. Quality and workmanship the highest. Full-sized Charms like our 1 1/4 inches high, any Society, heavy Solid Gold, each \$13.75. Gold Emblem, \$8.00. Gold Filled, \$4.25. Agents wanted.

Johnson Smith & Co., 1218 Washington Ave. Dept. 944, Racine, Wis.

ditions, was the disturbed condition of a little gland called the prostate. And now a certain Scientist has discovered a wonderful new hygienic principle that has already been used with phenomenal success by thousands of men in restoring this little gland to health. Many cases are reported where relief was obtained when a surgical operation had seemed the only recourse.

What this Discovery Can Mean to You

An authoritative medical treatise says that 85% of all men past a certain age suffer with a disorder of this gland. If you experience any of the conditions mentioned—have chronic constipation or prostatic disorders—you should not delay in finding out about this discovery. Do not let "approaching age" encroach upon your mental and physical vigor and alertness. If you will write at once you can get Free an interesting booklet called, "Why Many Men Are Old at 40," written by the scientist who discovered this new method. Don't risk your health by delay. There is no obligation. Simply send name and address, mentioning ailment, if you want specific information. Address.

THE ELECTRO THERMAL CO., 2119 MAIN ST., STREUBENVILLE, OHIO

PATENTS TRADE-MARKS AND COPYRIGHTS

SPECIAL OFFER — Free Opinion as to Patentable Nature

Before disclosing an invention, the inventor should write for our blank form "Record of Invention." This should be signed and witnessed and if returned to us together with model or sketch and description of the invention, we will give our opinion as to its patentable nature.

Our Three Books Mailed FREE to Inventors

OUR ILLUSTRATED GUIDE BOOK

HOW TO OBTAIN A PATENT

Contains full instructions regarding Patents, Trade-Marks, Foreign Patents. Our Methods, Terms, and 100 Mechanical Movements illustrated and described; Articles on Patent Practice and Procedure, and Law Points for inventors.

OUR TRADE-MARK BOOK

Shows the value and necessity of trade-mark protection and gives information regarding Trade-Marks and unfair competition in trade.

OUR FOREIGN PATENT BOOK

We have direct agencies in all foreign countries and secure foreign patents in the shortest possible time and at the lowest cost.

LIST OF PATENT BUYERS SENT FREE

IDEAS WANTED: Send for LIST OF PATENT BUYERS containing unsolicited letters from Manufacturers and others WISHING TO BUY meritorious patents. There is a great demand for NEEDED INVENTIONS. We endeavor to assist OUR clients in the commercial development of their inventions.

SPECIALIZATION—OUR STAFF

The field of invention is so vast that it is impossible for any one man to become an expert in all classes of invention. For this reason we employ a number of patent lawyers and mechanical experts selected for their special knowledge and ability in certain lines of invention.

THE VALUE OF YOUR PATENT

depends on the skill and care with which your case is prepared and prosecuted in the United States Patent office. That every case receives our best efforts, and that our work is done skillfully and thoroughly, is evidenced by the many unsolicited letters of commendation that we receive constantly from our clients. We will furnish upon request lists of clients from any state in the Union for whom we have secured patents.

Our New York, Philadelphia, Pittsburgh, Chicago and San Francisco Offices

We have established for the benefit of our clients Branch Offices in New York City, Philadelphia, Pa., Pittsburgh, Pa., Chicago, Ill., and San Francisco, Cal. These branch offices located in these large commercial cities together with our Main Office located near the U. S. Patent Office, in Washington, enable us to more promptly handle the business of our clients, particularly as the branch offices are in constant touch with the Main Office.

WANTED IDEAS

Inquiries from Manufacturers and Others Who Are Looking for Good Ideas

PROTECTED BY PATENTS

are constantly being received. Manufacturers are always interested in any new device for which there is a market, which fills a long felt need, which makes production possible at a lower cost, or which will do the work BETTER. There is undoubtedly a great demand today for really worth while inventions.

Your First Step

If you have an idea, send immediately for my blank form "TO RECORD YOUR INVENTION." You should serve your own best interests by filling out and signing this form before you disclose your invention TO ANY ONE. This document will help you determine and establish evidence of invention before filing an application in the U. S. Patent Office. A copy, with full instructions, will be gladly sent free on request.

NEW BOOK "SUCCESSFUL PATENTS" SENT FREE

Every man who has an invention, or ever hopes to have one, should send for a copy of my book "SUCCESSFUL PATENTS." It tells what everyone should know about patents, trademarks, copyrights, etc. It describes my methods, fees and terms, gives information relative to assignment or sale of rights, and instructions in detail. Mail coupon today for a free copy of this book or a post card request will do.

To the Man with an Idea

I offer a comprehensive, experienced, efficient service for his prompt, legal protection, and will endeavor to aid him in the commercial development of his proposition—my service is distinguished by over 12 years' successful practice, and by thousands of satisfied clients and by reasonable fees.

Send sketch, or model, and description, for advice as to cost, opinion as to its patentable nature, etc. Preliminary advice gladly furnished without charge.

Great Inventors Now Teach You How to Invent

How to develop, patent and market your ideas; amazing new course teaches science of invention by mail.

Every man, woman, and child is born with *creative imagination*. Some develop this faculty to a greater degree than others, and those who develop it to the *greatest* extent are successful inventors. Invention is an orderly process of the mind, which combines two or more known facts to produce a new fact. Anyone who develops the right mental process can become an inventor. Every successful inventor has this type of mind, developed by constant experience over a period of perhaps many years. Heretofore those who succeeded in the field of invention had to discover all the principles themselves. But, now, just as any student of medicine, law, or engineering can take full advantage of all the recorded experience in these fields of study, so can YOU take the same kind of short cut to the habits of thought, and the methods of work required of successful inventors.

Raymond Francis Yates
author of the New Course in Inventive Science, in collaboration with 18 other inventors. Mr. Yates is known throughout the country as Editor of scientific magazines, writer of hundreds of articles and inventor of many practical devices and machines.

Edison says: "Invention should be taught as a profession." Every inventor realizes the hopelessness of groping in the dark for the habits of thought and methods of work required for successful invention. Trying to invent without knowing the fundamental requirements of invention is like trying to build a bridge without knowing engineering.

Don't Waste Ideas! Every man at some time or other has an idea for something he would like to invent, but his mind doesn't know how to work. He doesn't know what to do about it—doesn't know how to think along inventive lines—and soon someone whose mind is trained along inventive lines invents just the thing you may have thought of.

Registered Attorneys

SERVICE

**DON'T
LOSE
YOUR
RIGHTS**

Without charge or obligation, we will inform you on any questions you may put to us touching on patent, trade mark and copyright law, not requiring research. You may ask: "Should I protect myself by a patent, or register under the trade mark or copyright laws? What kind of a patent should I obtain? What will it cost? Will it sell?" and many other questions that may occur to you. These are vital points to consider, and questions will be cheerfully answered.

IMPROVEMENTS WANTED

Ask for copies of unsolicited letters from parties desiring to purchase outright new inventions and patents or to obtain licenses to manufacture and sell on a royalty basis.

EVIDENCE OF CONCEPTION

Before disclosing your invention to anyone send for blank form "Evidence of Conception", to be signed and witnessed. A sample form together with printed instructions will show you just how to work up your evidence and establish your rights before filing application for patent. As registered patent attorneys we represent hundreds of inventors all over the U. S. and Canada in the advancement of inventions. Our schedule of fees will be found reasonable. The form "Evidence of Conception", sample, instructions relating to obtaining of patents and schedule of fees sent upon request. Ask for them—a postcard will do.

It's a sturdy, well built, highly efficient launch, sold at a remarkably low price.

Write now — for specifications, dimensions, our low price, and complete information.

Tom Brown
as he appears
in "Ty-Toy"

Be the "Tom Brown" of Your Town

You may have the talent to develop into a Saxophone wizard like Tom Brown, of the famous Tom Brown's Clown Band, the highest priced musical act, and enjoy this most pleasant of vocations. Buescher Instruments have helped make famous Tom Brown, Paul Whiteman, Joseph C. Smith, Clyde C. Doerr, Bennie Krueger, Dan Russo, Paul Specht, Carl Fenton, Ross Gorman, Arnold Johnson, Nathan Glantz and thousands of others. \$500 to \$1,000 weekly for but two hours a day is not uncommon for musicians of such ability to earn.

BUESCHER True-Tone Saxophone

The Buescher Saxophone is so perfected and simplified that it is the easiest of all musical instruments to learn. It is the one instrument that everyone can play—and it wholly satisfies that craving everybody has to personally produce music. You can learn the scale in an hour's practice, play popular music in a few weeks and take your place in an Orchestra or Band within 90 days, if you so desire. Nothing can take the place of a Saxophone for home entertainment, church, lodge, school. It increases the pleasure you get out of life, increases your popularity and your opportunities.

Saxophone Book FREE

After nearly 300 years' supremacy, string instruments are almost entirely displaced by Saxophones in all nationally popular orchestras. Our Free Saxophone Book tells which Saxophone takes violin, cello and bass parts, and many other things you would like to know. Ask for your copy.

Buescher Band Instrument Co.

TIRES WITH 500 NAIL HOLES LEAK NO AIR

Mr. N. E. Coats of Chicago has invented a new puncture-proof inner tube, which, in actual test, was punctured 500 times without the loss of any air. Increase your mileage from 10,000 to 12,000 miles without removing this wonderful tube from the wheel, and the beauty of it all is that this new puncture-proof tube costs no more than the ordinary tube, and makes riding a real pleasure. You can write Mr. N. E. Coats at 333 West 47th St., Chicago, as he wants them introduced everywhere. Wonderful opportunity for agents. If interested write him today.

An Amazingly Easy Way to Own a Radio Set

Good Radio sets are expensive—but here's the opportunity to buy the very best on such easy terms that you can afford to have the best.

The air is full of music—pick out the concert which pleases you—listen to a dozen concerts in one evening. Lectures by the most famous speakers—sermons by world-renowned preachers. Baseball scores, returns from the prize fights, news reports of the day sent out hourly by leading newspapers, bed time stories for the little tots. A blessing to the sick, invalids or shut-ins. Brings the world to your door. Far more entertaining than anything else you could buy.

So simple a child can operate—nothing to learn—turn a couple of dials and you have a concert—turn again and you have another. Nothing to buy—the "SENSITONE" comes complete, including "A" and "B" batteries, head phones, vacuum tube and complete aerial equipment.

SENSITONE

Regenerative Radio Receiving Set

Only \$15 Down—\$10 a Month

A Thoroughly Reliable Set, manufactured by the Klitzken Radio Mfg. Co., under the Armstrong License (U. S. Patent No. 1,113,149 and pending letter patent 807,388.)

Shelbyville, Mo., hears concerts in Havana, Cuba. A user in Winnipeg, Can., listens to Los Angeles, Calif., while Stanton, N. D., hears Ft. Worth, Texas, and Schenectady, N. Y. A party in Denver, Colo., hears concerts from Havana, Cuba. Let us send you copies of hundreds of such letters. A payment of only \$15.00 cash and \$10.00 monthly brings the "SENSITONE" to you.

Sign the coupon to-day and your receiver will go forward at once.

HAROLD R. WAKEM & CO.

835 W. Washington Blvd. Chicago, Ill.

Please ship me one complete "Sensitone" Radio Receiving Set as described above, for which I agree to pay \$15.00 here-with and \$10.00 per month until the full purchase price of \$95.00 is paid. Set to remain the property of Harold R. Wakem & Company until fully paid for.

Regenerative Radio Set — *Manufactured under Armstrong Patents*

Easy Payments

Radio Outfit Complete

No Accessories to Buy. Lamp, Head Phone and Batteries are included

FIRST get this straight. This outfit is absolutely complete. Batteries, tube, vario coupler, condenser, rheostat. The aerial, connections and head phones are contained in the outfit. Nothing more to buy. Nothing to assemble. No experience necessary. All bother and muss done away with. Even the costly, inconvenient storage battery.

You will be receiving in half an hour after this outfit arrives. Just string the single wire aerial from the house to barn or tree or post — attach the ground wire to radiator or water pipe. Then you are ready! Tune in on the wonderful Concerts, Grand Operas, and speeches that are now filling the air all about you. Get news flashes, stock and market reports before newspaper publication. Hear famous ministers preach their Sunday sermons. Everything broadcasted by scores of stations within reach of your home is yours without expense or bother when you have this splendid set installed in your home.

This regenerative receiver is manufactured for us by the Precision

Equipment Co., under Armstrong

U. S. Patent No. 1,115,149

For only \$15.00 down and small monthly payments you can enjoy all the marvelous advantages of this wireless age. The air you breathe at this very moment is alive with radio waves just waiting for you to pick them up. There is something for the entertainment and education of every member of the family at almost every hour of the day and evening. But without a radio outfit you are deaf to it all.

Remember, there are scores of different types of radio sets sold at all kinds of prices. If you buy a cheap set,

its short range, limited selective qualities, and lack of clear loud tone will soon fail to satisfy you. This is a high-grade *Regenerative Receiver*, made under the same Armstrong patents as the highest priced receivers.

Everyone will marvel at the clear toned music and voice you will be able to receive right at the start. Your home concerts will be the envy of friends and neighbors who are trying to receive with inferior sets. You will get stations far beyond their range. You can tune out powerful nearby stations that your friends cannot get rid of.

Send Coupon Today

Satisfaction Guaranteed

Fully illustrated circular gives full details—sent free. But why wait for that? You are missing the greatest thrill of your life. Have your outfit at once. All you have to do is to fill in and mail the coupon with your money order for \$15.00. The outfit will be shipped promptly, and may be returned anytime within 10 days if not entirely satisfactory. You may pay for it as you enjoy it. Only \$10.00 a month. How easy it is! Don't put it off a single day. Mail the coupon NOW — or mail postcard requesting illustrated circular.

A New Radio Achievement

Since the beginning of general radio broadcasting, Air-Way engineers have unceasingly striven to simplify design, and to rectify operation, so that a receiving set could be made which the average man or woman could easily "tune in" with and get the most pleasing and uninterrupted results.

Out of this research, experiment and application to an ideal, the new Air-Way Radio Frequency Sets have come as an answer to the great and insistent public demand for **genuine quality** of radio reception.

Air-Way
TOLEDO

By **genuine quality** we mean good, full, natural tone, loud and distinct; with sharpness of tuning, which gives protection against interference from other stations, and allows you to hold and enjoy quietly the station you desire to hear; with ease of tuning, which makes the instrument practical and dependable in the home for all the family; and with long range, which multiplies the pleasures and opportunities of radio possession.

This Beautiful Four Tube Set Only \$50

This instrument is not only a remarkable value, but it is a new radio achievement, marking a distinct advance in the science of radio reception. In it the long sought success in the use of Radio Frequency Amplification has been accomplished.

And in this achievement Air-Way engineers have not only embodied skill and genius of design, but have given that care and precision to the manufacture of each and every part which is the only certain guarantee of true quality.

Air-Way Type F Receiving Set is a four-tube instrument. It has one step of Radio Frequency, Detector, and two steps of Audio Frequency amplification, compactly housed in a cabinet artistic in its simplicity of line and beauty of finish. This is a long-range receiving set that can be operated to its full capacity by the different members of the family. It thus meets every practical and pleasurable need for genuine quality of reception upon all the avenues of radio broadcasting.

Jobbers should address our Wholesale Dept.: The Zinke Company, 1323 S. Michigan Blvd., Chicago, Ill.

To Dealers: Although this new Type F Set was only announced in January, our big factories are already taxed to capacity by the spontaneous demand for this nominally priced genuine quality instrument. This set will give you unchallenged radio leadership. Wire your orders for delivery through your jobber.

In Toledo homes on this set broadcasting is reproduced from the distant stations of Denver, Los Angeles, Dallas, Minneapolis, Duluth, Newark, Atlanta and Havana. It is suitable either for head phones or loud speaking apparatus, and the volume and quality of tone is a genuine surprise to those accustomed to ordinary radio instruments.

To market this valuable instrument at the nominal price of only \$50 is a notable example of Air-Way policy to give to the public the advantages of scientific production economy in the Air-Way factories.

In price and merit this instrument is distinctly in a class by itself—clearly the outstanding value on the radio market.

Have your dealer get this fine instrument for you at once. Catalog, illustrating and describing Air-Way Receiving Sets together with all parts for those who build their own sets, will be mailed free, postpaid, upon request. Give name of your dealer and send for this catalog today.

Do You Want a Real Headset?

*The Dictograph is the Best Headset
in the World at Any Price*

This is the same supreme Dictograph Headset that has always sold for \$12—same in quality, same in guarantee, same in everything but the price—\$8 complete. Made by the makers of the world standard Dictograph Products—the marvelous "Acousticon" for the Deaf, the famous Detective Dictograph, the Dictograph System of Interior Telephones and the Dictograph Radio Loud Speaker for the Home.

Read a few of the many letters we have received from Dictograph Headset users. You, too, can enjoy the utmost in Headsets if you own one.

U. S. Marine Hosp. No. 43,
Ellis Island, N. Y.

"The undersigned has for the past sixteen years been an amateur, commercial, and government operator, and has used every known make of radio receiver on the market. On April 21st, one of your Type R-1 3000 ohm receivers was purchased and it can be safely said without dispute that they are absolutely the best radio receivers on the market today; bar none."

C. H. West, U. S. P. H. S.

LAPORTE, IND.

"I wish to compliment you on the 3000 ohm Headset you now have on the market retailing at \$12.00 (now \$8.00). I have been experimenting with the radio game for the past year. In my experience I have tried out 14 different headsets, including the which I purchased for \$16.50. I at last have found the ideal phone where tone quality excels, and harshness is eliminated, and I cannot express myself in words as to the wonderful results I have obtained."

J. T. Bachman.

Go to your dealers today and listen in with this supreme instrument. Note the difference. Buy two or three Dictograph Headsets and let the rest of the family enjoy your set. Always insist on Dictograph Products. **They are fully guaranteed.**

Dealers:—The Dictograph is the fastest selling Headset on the market today. Order through your jobber or write direct for names of authorized distributors.

Facts from the Factory

This radio game is just as much fun at our end as it is at yours. There's genuine satisfaction in knowing that our radio parts and radio sets will "deliver the goods" to some eager experimenter, or unfailingly convey a message of international importance to the ear of a waiting world.

At the SIGNAL plant we never forget that if we scrimp on material or slight our work then someone will surely be disappointed, and perhaps a despairing call for help may be made in vain.

So it is our joy to perform each operation, little or big, with the utmost of conscientious precision, knowing, thus, that no life can ever be charged against defective SIGNAL apparatus.

Radio equipment bearing the name of SIGNAL may safely be depended upon for good, honest service.

SIGNAL Vernier Rheostat
The first successful vernier using a single knob control. Fine adjustment is easily obtained. Simple in design and sturdy in construction.

Furnished with or without knob and pointer, so dial to match others of set may be used.

Skunk: A menace to the chicken yard. Unsettling in fighting that are not considered exactly fair.

RETAIL PRICE
including tax \$15.00
Stevens "Visible Loading." An accurate .22 Cal. Repeater. You know when it is loaded, and you know when it is empty.

**A steady hand
—a clear eye
and a sturdy Stevens rifle—**

Knocking over a skunk, keeling over a rabbit, or bringing down a red squirrel—doesn't make any difference. If you're holding a Stevens and sighting straight, you've got your game every shot.

For a Stevens is always accurate.

When a Stevens barrel is bored or drilled, the final cutting removes less than one-half of a thousandth of an inch. It's slow, painstaking work—but when finished there's not a flaw—that Stevens barrel is accurate.

And the same painstaking care is given to every detail—to getting a handsome finish; to striking just the right balance. Once you get the feel of a Stevens, you'll hate to lay it down.

Handsome guns are these Stevens—the new 1923 Stevens special finish places them among the best looking guns at any price.

And Stevens turns out these sturdy, accurate, good-looking shotguns and rifles at unusually modest prices.

Ask at your dealer's or write for the interesting catalog describing in detail the Stevens complete line of rifles and shotguns.

New Style Oliver Now Ready
The New 1923 Model

Send now for complete details on the wonderful new Oliver Typewriter—NOW READY—"The Quiet Speedster"—the new 1923 model.

More than 1,000,000 Oliviers have been made and sold. That fact alone is proof of the service and satisfaction rendered by this typewriter. And now comes the crowning achievement of twenty-eight years' experience in building typewriters—"The New Quiet Speedster."

NEW FEATURES

1—Three-Bank Standard Keyboard The new Oliver is equipped with a standard three-bank keyboard. Any operator who operates a standard three- or four-bank keyboard can operate the new Oliver without practice, without loss of speed or output.

2—Silent Action The new Oliver is practically silent in its action.

3—Velvet-like Touch The very slightest touch moves the keys of the new Oliver.

And, besides, the Oliver is the most durable typewriter you can obtain anywhere. You get this wonder typewriter at the famous Oliver money-saving price.

\$50 Saved and the World's Best Typewriter shipped to you direct

If there ever was a machine worth \$100 or more it is the new Oliver "Quiet Speedster." Because of high manufacturing efficiency and because we have no money-eating branch offices or organizations, we can save money in the producing and selling of this machine. You get the benefit of these economies. You can save over \$30 on the Model 11, or, if you prefer, you can save \$50 on the Model 9, which is the same as the Model 11, less a few of the more recent improvements.

Oliver No. 9 with 1923 Model Standard Three-Bank Keyboard—the highest class machine—Monthly price \$85.00. Net cash price

\$49.50

Oliver No. 11 Newest Improvements. Monthly payment price \$75.00. Net cash price

\$67.50

Free Trial The new Oliver will be shipped to you for a week's free trial. Use it in every way you know how. Put it to every test. If not satisfied, simply send it back at our expense. If you decide to keep it, pay on terms as low as \$5 a month. Get the complete details of the free trial offer.

Catalog FREE SEND NOW

for the beautifully illustrated catalog just off the press. It tells you all about Models No. 9 and No. 11. Orlando is Calling You

Do you want to get away
From the grind of every day—
From the drudgery of things you have to do?
Do you want to settle down
Near a lively, busy town,
Where the joy of living will appeal to you?

Do you want to scent the breeze
Coming through the orange trees?
Do you want to hear the birds call—loud
and clear?
Are you seeking perfect health
That's combined with certain wealth
And an income from an orange grove each
year?

Do you want a piece of land
That will grow to beat the band
All the different garden crops that you
enjoy?

Do you want to make a "Nest,"
And a permanent bequest
For the future welfare of each girl and boy?

Do you want a sunny clime
Where there's fishing all the time?
Where there's ducks and deer and quail
and other game?

Where the summer climate's cool,
And within each lake and pool,
You can swim in January—just the same?

Do you want to buy this land
On an easy-payment plan,
With about your monthly outlay for cigars?
Do you want to read a book
That will make you want to look
On the finest land that lies beneath the
stars?

Send a letter right away;
Put it in the mail to-day,
We will send this Booklet absolutely FREE.
After you have read it through,
If a thought occurs to you—
Just address another letter here to me.

We will answer, straight and true,
Questions that occur to you.
We have nothing to evade or to conceal.
On an Orange County Farm
Life will take on added charm,
And you'll never lack a dollar—nor a meal.

Send for our Big, FREE Illustrated Book—
"TWENTY ACRES AND PLENTY." It
tells of almost unbelievable profits made
from trucking and fruit-growing in our
part of FLORIDA. Also about sick-and-out-
of-work Clauses, and other protective fea-
tures of our contract. Address Sylvester
E. Wilson, Dept. J 13, Orlando, Florida.

EASY FOR YOU TO OWN A FINE INSTRUMENT!

YEARS ago the famous King Brass Instruments were sold only for cash to famous musicians. But now due to our easy payment plan anyone can own one of these wonderful instruments.

SAVE MIDDLEMAN'S PROFITS

Simply order direct from the factory. You save middleman's profit—and you get a fine, new, sound-laboratory tested, acoustically perfect King Instrument. With it goes our guarantee plus free factory-service.

IT'S EASY TO OWN A KING

Rebuilt instruments, refinished to look like new, we sell for cash at low prices. New instruments on the easy payment plan. Thus it's "easy to own a King". Send for our latest complete catalog and list of special bargains.

Swear Off Tobacco

Tobacco Habit Banished Let Us Help You

Quick Results

Trying to quit the tobacco habit unaided is often a losing fight against heavy odds, and may mean a serious shock to your nervous system. So don't try it! Make the tobacco habit quit you. It will quit you if you will just take Tobacco Redeemer according to directions.

It doesn't make a particle of difference whether you've been a user of tobacco for a single month or 50 years, or how much you use, or in what form you use it. Whether you smoke cigars, cigarettes, pipe, chew plug or fine cut or use snuff—Tobacco Redeemer will positively remove all craving for tobacco in any form in a few days. Your tobacco craving will usually begin to decrease after the very first dose—there's no long waiting for results.

Tobacco Redeemer contains no habit-forming drugs of any kind and is marvelously quick, scientific and thoroughly reliable.

Not a Substitute

Tobacco Redeemer is in no sense a substitute for tobacco, but is a radical, efficient treatment. After finishing the treatment you have absolutely no desire to use tobacco again or to continue the use of the remedy. It helps to quiet the nerves, and will make you feel better in every way. If you really want to quit the tobacco habit—get rid of it so completely that when you see others using it, it will not awaken the slightest desire in you—you should at once begin a course of Tobacco Redeemer treatment for the habit.

Results Absolutely Guaranteed

A single trial will convince the most skeptical. Our legal, binding, money-back guarantee goes with each full treatment. If Tobacco Redeemer fails to banish the tobacco habit when taken according to the plain and easy directions, your money will be cheerfully refunded upon demand.

Let Us Send You Convincing Proof

If you are a slave of the tobacco habit and want to find a sure, quick way of quitting "for keeps" you owe it to yourself and to your family to mail the coupon below or send your name and address on a postal and receive our free booklet on the deadly effect of tobacco on the human system, and positive proof that Tobacco Redeemer will quickly free you from the habit.

Made \$1400 First Season

Made it with an Ideal Lawnmower Grinder

Let Mr. Brown tell his own story:

The Fate-Root-Heath Co., Windsor, Can.
Plymouth, Ohio.

Gentlemen: I have made over \$1400.00 with the Ideal Lawnmower Sharpener since I bought it last June. My boy, 14 years old runs it as good as I can. I have built me a nice shop with this money in which to sharpen mowers this year. I did 700 mowers at \$2.00 for each mower, and this year I expect to do 2000 mowers.

A. Brown.

E. W. McCormick, of Saginaw, Mich., writes:

Five years ago I purchased from you an Ideal Lawnmower Grinder with which I ground over 5000 mowers. If I could not buy another I would not take \$1000 for it.

E. W. McCormick.

WRITE FOR CATALOG

and little booklet, "LET GEORGE SAY IT." It tells the stories of profit as the boys tell it. Mr. Brown bought early, made \$1400 by fall, and built a new shop with the money. Write today.

THE FATE-ROOT-HEATH CO.
PLYMOUTH, OHIO

"Been on a vacation Bill?"

"No, Jim—I've stopped smoking. Gained six pounds in a week. You know how I used to smoke—a package of cigarettes and a cigar or two a day—it sure had some hold on me. But I'm cured—took a scientific home to-

bacco treatment—fixed me up in two weeks.

"Wasn't hard on me at all—noticed improvement the first day—I feel like a new man. It didn't interfere with my work—didn't leave any druggish after-effects—the money I saved in the last two weeks has paid for the treatment alone.

"Why don't you take it? It has cured men like you and me for over forty years—it is a doctor's individual prescription that sure fixes you up. Just send the coupon for full information NOW. No obligation. All correspondence is strictly confidential."

THE KEELEY INSTITUTE
Dwight - - - Illinois

The Keeley Institute, Dwight, Ill.

Say whether lady's or gentleman's. When it arrives, simply deposit \$1.75 with mailman. Order today. Deposit promptly returned if not satisfied after 5 days.

SHEIK AHMED, Rand McNally Bldg., Dept. 83, Chicago

Your Wrist Wasn't Made With a Ratchet

That's why "YANKEE" Ratchet Screw-drivers *were* made—to save your muscles from the strain of gripping and letting go the handle dozens of times in driving each screw. Save time, too.

Just grasp the handle and twist it to and fro. Your first good grip need not be relaxed until the screw is all the way home. It's like winding your watch.

To *draw* screws, move ratchet shifter to back notch. A finger-touch does it. To make tool rigid, move shifter to center notch.

"YANKEE" Ratchet Screw-drivers

No. 10—(Illustrated). Blades of best cast steel, specially tempered, ground, polished and tested. Blade lengths 2, 3, 4, 5, 6, 8, 10 and 12 inches.

No. 11—Same as No. 10, except that ratchet shifter moves *across* barrel.

No. 15—(Illustrated). Has handy knurled thumb turn for starting small, wobbly screws. Blade lengths 2, 3, 4, 5, 6 and 8 inches.

Write today for Free Tool Book

Illustrates and describes all the ingenious "Yankee" Tools for saving time and labor and doing otherwise impossible jobs.

NORTH BROS. MFG. CO., Philadelphia, U. S. A.

"YANKEE" TOOLS

Make Better mechanics

Elto

3 H.P. Fast Light Twin
"As light as right"

FULL 3 H. P. by piston displacement. That's a full extra H. P. over any other outboards in the light-weight class—the needed extra H. P. to give speed to sea-worthy boats, to buck currents, winds and tides. The Elto is the most powerful light-weight and has greatest H. P. per pound over all outboards.

Built around big bearings—Elto's 21 square inches of perfection-ground, case-hardened crankshaft and connecting-rod bearings give almost double the bearing area of other light-weight motors. Trust Ole Evinrude, the pioneer designer of outboards, to build "as light as right" at no sacrifice of power or durability.

Safe Rudder Steering—no chance of dangerous pivot turning. Easy tiller rope steering from any part of boat. No shaky steering handle. **Instant starting.** No ropes needed. Hot spot battery starts the Elto on first quarter turn. Atwater-Kent Unisparker prevents "juice wastage." Battery lasts full season. Every hardware store a service station. No parts to be returned for re-magnetizing. **Folding rudder.** Goes in carrying case without taking apart. Write for catalog.

Dealer and Demonstration Agents—

The Elto is the fast, powerful, durable outboard that builds you a permanent business. A profitable proposition if your territory is open. Write today.

A Home and Income For You in Sunny Florida

Be Independent—Own a Grapefruit and Orange Grove—A Truck or Poultry Farm. Increase Your Income

You Can Start a Grove Today Under Our New Plan

Develop a profit-earning fruit farm without leaving your present position—provide for your future. A small payment now and a few dollars invested each month.

A profit-producing fruit grove is a permanent investment and provides protection against old age.

THE RIGHT LAND IN THE RIGHT LOCATION AT THE RIGHT PRICE

We Have It—Any Size Farm

These splendid lands are suburban to Tampa, the metropolis of South Florida. Here you find the most healthful, the most delightful climate in North America. For ten years we have been right here helping develop Hillsboro—the banner agricultural County of Florida, and we are still here to serve you and to help you obtain the farm you want, on very easy payments extending over 2 or 3 years' time to suit.

Groves Developed for Non-Residents

If you want to remain in your present position for a few years we can develop a grapefruit and orange grove for you. When you are ready we will clear your land, furnish fruit trees, plant and care for your grove until you are ready to look after it.

We Raise Our Own Guaranteed Citrus Trees in Our Own Nurseries

This insures every purchaser the best fruit trees that can be grown. This also insures a successful grove. We can save you money on planting and caring for your grove.

\$300.00 to \$500.00 Per Acre Profit

This is not an unusual return for truck farmers in the Famous Tampa district. All kinds of vegetables can be grown. Big prices are paid for early potatoes, Winter cabbage, Bermuda onions, tomatoes, celery and dozens of other vegetables during the Winter and early Spring, when the north is covered with ice and snow. Strawberries, Melons, and other small fruits also yield large profits.

Write for Facts About Sunny Florida

IT COSTS YOU NOTHING TO LET US PROVE TO YOU that we have the land you want—in the location you want—at a price you can afford to pay and on the easiest terms you can imagine. Let us show you.

Fill out and mail us the coupon today and receive our large descriptive book FREE!

? WHERE WERE YOU ?

When all those thousands of other bright "up-and-comers" were writing for the Pressed Metal Book? (It tells how to capitalize your own ingenuity—how to get cash for your clever thoughts.)

From all over the nation they came, and still are coming. It seems that almost everybody is suddenly (and most intelligently) interested in PRESSED METAL. Can you suggest some new way to utilize its practically unlimited usefulness and economy?

Just remember that Pressed Metal is *anything* that can be produced by stamping from sheets of steel, brass, aluminum, copper or any other useful metal.

The Pressed Metal Industry today totals about \$20,000,000.00 a year. When it realizes its full field of utility by a wider public knowledge of its value as a public service, it will crowd ten times that annual output.

Pressed Metal is one of the greatest blessings that American mechanical genius has given the world.

Pencil tips are Pressed Metal. Auto and truck frames are Pressed Metal. Battery boxes, auto-bodies, washing machines and door-knobs are mostly Pressed Metal. You begin to get an idea of its wonderful range of use.

SELL US AN IDEA

of some new and practical way to utilize Pressed Metal. The Pressed Metal Trade Extension Council will promptly pay for every acceptable suggestion approved by our Engineering Advisory Board.

Please do not trifle with this, as our purpose is serious and constructive and in the public interest. The membership of the undersigned Council includes many of the largest manufacturing corporations in the United States and their purpose and plans are broad, businesslike and practical.

The Plan briefly outlined above is already releasing the *hidden genius* and *practical intelligence* now bottled up in thousands of ambitious workers.

After you receive the *PRESSED METAL* booklet, which, of course, you will write for immediately, you will follow this schedule:

1st: Get your inspiration, either by a flash or by deliberate study. 2nd: Formulate it so that it is perfectly plain. Sketch it if it will help any. 3rd: Send it *with no money and no references*, to the Pressed Metal Trade Extension Council, as undersigned, and await the decision of the Pressed Metal Engineering Advisory Board. If you—but *our space is used up*—so you will have to get the rest of it out of the Pressed Metal Booklet.

Write Right Away for the Free

It contains full explanation of what we want from you and how you can get it to us in the way most profitable to you. It tells you

HOW TO CAPITALIZE YOUR MECHANICAL TALENT

or inventive genius—or maybe just your "good old common-sense." It tells all the conditions and the amounts to be paid for the successful ideas, and also how to protect yourself against misappropriation of your creative thoughts by others. WRITE TODAY. (A post card will do, but please make it easily legible so it can be properly filed and acknowledged.) Address

DEPT. A **PRESSED METAL TRADE EXTENSION COUNCIL**

\$53,000,000.00 Lost in 1922!

By Raised Checks, Forgeries and Alterations

DO YOU PROTECT YOUR CHECKS?

Yes! No! Yes! No! Which?

AT YOUR PLACE OF BUSINESS

Yes 50% No 50% In which class are you?

AT YOUR HOME, CLUB, HOTEL, OR WHEN YOU ARE SHOPPING? NO!

\$53,000,000.00?

It might be of interest to you to know that in 70% of the above amount of checks tampered with, the crook followed the line of least resistance by altering the PAYEE'S NAME and substituting the word BEARER, CASH, CURRENCY, PAY-ROLL OR ANY OTHER NAME. If you had a check lost or stolen could you stop payment on it, if the above alteration had occurred? NO!

Could your bankers stop payment on it? NO!

The crook can change the date and even the number of the check to make the job safer and complete.

HOW CAN A BANKER STOP PAYMENT ON SUCH A CHECK?

How many machines on the market can protect the payee's name?

How many machines on the market can protect the date?

WITH A SECURITY CHECK PROTECTOR FOUNTAIN PEN YOU CAN PROTECT NOT ONLY THE AMOUNT, LEGAL LINE, AND PAYEE'S NAME BUT ALSO THE DATE AND THE NUMBER OF YOUR CHECK, DOING THE WORK JUST AS EFFICIENTLY AS THE MOST EXPENSIVE CHECK WRITER ON THE MARKET

ANY TIME—ANY PLACE

The knife-edged steel cutting wheel macerates the paper and any changes or alterations will swell up the pulp causing the ink to spread and making check entirely worthless.

Do You Protect Your Checks?

Order a "SECURITY" today.

A \$3.00 check or money order will bring you one of these wonderful writing instruments (if you prefer a small size pen), \$4.00 if you prefer a medium size pen, and \$5.00 if you prefer a large size pen in either long or short models. If you send cash, register your letter.

ABOVE ALL, DO NOT FORGET THE AMOUNT, \$53,000,000.00.

And you are liable to be the next victim.

In addition to this unique, novel and practical feature, the "SECURITY" has four

other equally important new features of merit not embodied in any other pen on the market. IT HAS an air cushion, double channel feed bar that ends forever the curse of leaks and blots. IT HAS a screw pressure filling mechanism that insures a large supply of ink and prevents air bubbles. IT HAS a tempered gold pen, made by a special process in our own factory, tipped with hard iridium and ground into a ball point. ALSO A ROLLED GOLD SPRING CLIP that prevents wear or tear of your pocket and is attached or removed by a pressure of one finger.

In addition to the above we give you an unconditional written guarantee of free repairs for five years covering every part of the pen if such repairs are made necessary by reason of defective materials or workmanship.

TEAR OUT THE COUPON AND MAIL IT IN TODAY.

High Grade Specialty Salesmen Wanted

If you are a wide awake, ambitious, hard working, enthusiastic, and high pressure salesman and are looking for permanent and profitable business connections; if you have pep and plenty of it, perseverance and stick-to-it-iveness we have a very interesting proposition for you. Write us today. Remember there are MILLIONS OF MEN AND WOMEN WHO WRITE CHECKS and MANY MORE MILLIONS who WRITE. They are all good prospects for the "SECURITY".

Bench Lathe No. 125
Price \$36.00

This lathe puts any handy man in the mechanic's class

Mr. Punch says—

"Show me a man who owns a bench lathe and I'll show you a man who was born to handle tools—a man with the instinct of a true craftsman."

Slide Rest No. 132
Price \$17.00
Countershaft No. 130
Price \$12.00

The difference between being merely a handy man and an amateur mechanic is often a matter of owning or not owning a bench lathe.

The man with a good bench lathe is generally able to handle most any kind of turning or boring job—often saving himself money as well as time, and having a lot of fun in the bargain.

The Goodell-Pratt Bench Lathe illustrated is just about the right size for amateur mechanics. Length over all, 25 inches. Height, 11½ inches. Swing, 7 inches. Extreme distance between centers, 12 inches.

With this lathe is included an adjustable Tee Rest, a Slotted Face Plate, a Saw Arbor and a Drill Chuck with a No. 1 Morse Taper Shank. The chuck holds round shanks of all sizes from 0 to ¼ inch.

Just One of 1500 Good Tools

If you are familiar with the Goodell-Pratt line, you know that there is a tool made for almost every conceivable kind of a job that an amateur mechanic might want to tackle.

Each of the 1500 Goodell-Pratt Tools is made for good workmen by good workmen—toolsmiths who have spent their lives in the business.

Write for complete details concerning the Goodell-Pratt Bench Lathe, and whatever other tools in which you are interested.

GOODELL-PRATT

1500 GOOD TOOLS

COOK-BAKE-HEAT

With Amazing New Invention

Just Like Using City Gas

Turn a valve for any heat. No wicks, no smoke, no odor.

A St. Louis man has invented a wonderful new kind of heat that gives better heat for cooking, baking and heating, right in your own stove, the whole year round. Does away entirely with the mess, dirt and drudgery of coal and wood fires. Keeps kitchen cool all summer, for it gives any degree you want, off and on, at the turn of a valve—and cheaper than wood or coal.

Does Away With Dirty Coal and Wood

\$215 in One Day

Is what Bentley, our Philadelphia agent made. J. Carney, S. Dakota, writes, "Making \$1000 a month." A. M. Russell says, "Averaged \$600 for last six months." R. Berger made \$255 per week. Others make \$75 to \$150 a week Spare or Full Time.

If you want to earn \$40 to \$200 a week in spare time, write me.

Oliver Gives Fords Away

I am giving Fordways to representatives who produce. The big selling season is just ahead. Write at once while you can get Exclusive Territories with private selling rights. Get Free Sample Case Offer. Address, Mr. E. M. Oliver, 2048C Oliver Bldg., St. Louis, Mo.

Mr. Oliver calls his wonderful invention the Oliver Oil-Gas Burner because it burns 95 per cent air and only 5 per cent kerosene (coal oil), the cheapest fuel there is. No wicks, no odor, no smoke. It can be slipped right into the firebox of any stove, without changes, in one minute, by any one. Absolutely safe. It lasts a lifetime.

Keep Kitchen Cool in Summer—

Think of the work this wonderful device saves, the whole year round. In summer you can cook three meals a day, using your own trusty old range, you can preserve, can fruits, and bake any time you want to and still have a cool kitchen—you don't have to turn the heat on until the minute you are ready for it. The instant you are through you can turn the heat off—leaving your kitchen cool and clean. No more burned, soggy, or underbaked food. A perfect oven, moderate or hot as often and as long as you want it.

In damp, changeable Spring or jumpy Fall weather, you have instant heat right at your finger tips—much or little, by simply turning a valve.

30 Days Free Trial

Don't be a slave to coal and wood. Right now Mr. Oliver is making a Special Low Introductory

Price—and a 30 Day Free Trial Offer. He wants every housewife to use his invention in her own stove—to see for herself how much better it cooks, heats and bakes—how it eliminates two-thirds of household work.

FREE BOOK—MAIL COUPON

By mailing the coupon below you will be entitled to this offer and will get the full facts about it—also, an interesting Free Book, "New Kind of Heat." Get this wonderful all season heat installed at once. Thousands will mail this coupon. Don't risk losing Mr. Oliver's offer. Mail the coupon right now.

THE PROPER AND MOST EFFICIENT WAY TO REPAIR FORD CARS TRUCKS AND TRACTORS

Here is a book that presents the information given in the Ford Service Course for Superintendents and Service Managers of Ford Agencies at the home plant in Detroit. It gives you information which cannot be secured otherwise outside the Ford plant. It describes for dealers, repairmen, garage mechanics and owners the proper and most efficient way to repair the products of the Ford factories.

Published April, 1922

FORD CAR, TRUCK AND TRACTOR REPAIR

By **Alfred A. Good**

Formerly Director, Ford Motor Company's Service School

328 pages, pocket size, flexible, 32 Illustrations

PRICE \$2 POSTPAID

There have been a number of books written on the Ford car; but they only tell what the average Ford driver or mechanic already knows. This book gives you real practical information that shows you just how to locate troubles quickly and how to remedy them efficiently. It gives you a complete understanding of the mechanical principles underlying the operation of Ford cars, trucks and tractors—a thorough knowledge of the mechanical and electrical action of every unit of these machines—an explanation of how to get at the cause of the various troubles—and a step-by-step description of repair operations. The book covers the Ford car, truck and tractor in such a way that the mechanic who reads it is ready to answer any question concerning them which may be put to him by anyone.

Sent to any address postpaid upon receipt of price by

Make A Gas Range out of Your Old Stove in Five Minutes

FOR HEATING STOVES

The Standard Oil Burner fits any heating stove. Heats your living rooms in a few minutes on the coldest day. Think of keeping your home at an even, beautiful temperature all day, without constant filling, shaking and poking.

IDEAL FOR FURNACE

The Standard Oil Burner can be installed in any hot air, pipeless, steam or hot water furnace. So simple and safe a child can light and regulate it. Clean, even heat all over the house, all the time.

Think of it! Your old coal or wood stove can be made into a regular gas range in less time than it takes to tell you about it. You don't have to alter your stove one bit. You don't even have to bore a hole or insert a bolt. Just set a marvelous new kind of burner in your fire box, attach it to a tank of coal oil by means of a copper tube, turn a valve, strike a match, and instantly you have a heating flame as steady, reliable and easy to adjust as city gas, at one-third the cost.

WHY HOME-MADE GAS IS CHEAP

The burner mentioned above is the Standard Oil Burner, a wonderful device that mixes 96% air and 4% kerosene (common coal oil) to form a gas whose heat is two or three times as great as that from coal or wood, and as convenient and easily controlled as city gas. You get instant heat at the turn of a valve. There's no waste of fuel or time in starting a fire. Light it only when you need it—no need to "keep the stove going" to save building a new fire, like you do with coal and wood. No need to sweat and slave in a hot kitchen all summer.

SPECIAL PRICE AND 30 DAYS' TRIAL

to the first user of a Standard Oil Burner in your community. Act quickly and get the benefit

SAVES HOURS OF DRUDGERY

The Standard Oil Burner saves you all the exhausting, disagreeable work of carrying heavy buckets of coal, splitting firewood and hauling dirty ashes. Burning gas does away with smoke, soot and dirt—makes your housework easy and lessens your weekly wash. Your meals are prepared quicker. With the Standard, you don't have to stay in the kitchen constantly while food cooks. A turn of the valve regulates the heat. Once installed, you'll wonder how you ever did without a Standard.

of this generous offer. Make this trial on our absolute Money-Back Guarantee.

POPCORN AND PEANUT MACHINES

for Economical Transportation**\$525***f. o. b. Flint, Mich.*

What Transportation Means to Civilization

Civilization is the result of interchange of individual thought and the product of thought.

This interchange depends entirely on transportation.

For transportation of products or people in the mass, major transportation units such as ships and railroad trains are most economical, yet limited to fixed ocean lanes or tracks on the land.

The automobile has passed the railroad in passenger transportation, and will soon surpass it in transportation of merchandise. It is not limited to mass movements nor fixed routes, but oper-

ates economically even for a single person or for few products, over highways and byways. It links city and country, pioneer settlements with railroad trunk lines, and unites all America in one co-operative community.

In supplying the public with modern, fully equipped automobiles that deliver the utmost per dollar in economical transportation and average the lowest cost per mile, we feel that we are an important factor in still further extending the benefits of civilization and progress to every home in America.

Let Me Tell You About My New Improved Throttling Governor ENGINE

NEW CATALOG — NOW READY

I HAVE brought out a simple, efficient, Throttling Governor Engine. It is particularly desirable NOW, for general power use, and will be in big demand for years to come—when low grade fuels will of necessity be largely used. In producing this new engine, I have worked out every detail of design and construction so as to provide an engine that does not require an expert to handle it—starts without cranking.

Years Ahead—Dollars Better!

I consider the New Improved WITTE the most wonderful Throttling Governor engine of its time—the crowning achievement of 38 years of practical engine building experience.

The New Improved WITTE

**Is Different—Better—Less Parts—More Power—Less Cost
Operates on Either Kerosene, Gasoline, Distillate or Gas**

New Sizes, 2, 3, 5, 7, 10, 15 and 25 H-P. BOSCH Magneto or Battery as specified

SOLD ON A LIFETIME GUARANTEE—CASH OR TERMS

Think of having economical and adaptable power for years to come—an engine so simple in construction a boy can understand it. Power increased or decreased at will by merely turning a thumb screw.

Takes Less Space Weighs Less

Mechanically correct in every particular—every part carefully designed—made of the best materials—accurately machined and easily interchangeable. Superior accuracy and workmanship throughout applies to every engine or outfit in the WITTE line.

Engines and Outfits All Throttling Governor

The WITTE catalog gives complete description of Stationary and Portable Engines—Log and Tree Saws—Cord Wood and Pole Saws—Power Boring Machines—and WITTE "Power-Lite" Plants that furnish both energy and electricity for farm and suburban use.

2 H-P Pulls 2½ at normal speed
or 3 H-P at maximum speed
COMPLETE — READY TO USE
(Columbia Battery)

\$45.00
F. O. B.
Kansas City

At Pittsburgh \$49.50

At San Francisco \$57.00

**OTHER SIZES AND STYLES
AT PROPORTIONATE PRICES**

You can order one of these superior engines or outfits with full assurance that it will give you longer and better service than any engine of equal rating, while my prices are extremely favorable as you will find.

Tell Me What You Want

If you have a particular need, write me for special information as to your power requirements. Bear in mind that the WITTE is an engine for every conceivable power use, winter or summer, anywhere.

Send for My New Catalog and Price List

Get acquainted with the New Improved WITTE—the power you need for today and for the future. It is the engine you will eventually buy and use because of its wonderful simplicity and low cost. Whether you order one now, or not, do me the favor of investigating the many improvements and advantages offered.—ED. H. WITTE.

ELECTRICITY

Needs You To Boss Jobs Like This

Be a **Certificated Electrical Expert**
EARN \$3500 to \$10000 a Year

Some Features of My Course That Have Revolutionized Home Study Training

1. Practical Instruction—no useless, high-sounding theory.
2. Free Electrical Outfit—Finest outfit ever sent out for home experiment.
3. Free Employment Service.
4. Free Consulting Service.
5. Free Engineering Magazine.
6. Free use of my Electrical Laboratory.
7. Extra Courses Free.—Radio—Electrical Drafting.
8. Spare time work—Special earn-while-you-learn lessons.
9. Reduced prices on all Electrical Supplies.
10. Cash Refund Guarantee Bond.

These features are all explained in my big Free Book.

IT'S a shame for you to earn less than \$100.00 a week when trained Electrical Experts are in such great demand. You ought to get more. You can get more.

Cooke Trained "Electrical Experts" earn \$70 to \$200 a week. Fit yourself for one of these big paying positions. Get into a line of work where there are hundreds and hundreds of opportunities for advancement and a big success.

What's YOUR Future? Today even the ordinary Electrician—the "screw driver" kind—is making money—big money. But it's the trained man—the man who knows the whys and wherefores of Electricity—the "Electrical Expert"—who is picked out to "boss" ordinary electricians—to boss the Big Jobs—the jobs that pay up to \$10,000 a year.

Age or Lack of Experience No Drawback

You don't have to be a College Man; you don't have to be a High School graduate. My Course in Electricity is the most simple, thorough and successful in existence, and offers every man regardless of age, education or previous experience, the chance to become, in a very short time, an "Electrical Expert," able to make from \$70 to \$200 a week.

I Give You a Real Training As Chief Engineer of the Chicago Engineering Works I know exactly the kind of training a man needs to get the best positions at the highest salaries. Hundreds of my students are now earning \$3,500 to \$10,000. Many are now successful ELECTRICAL CONTRACTORS.

Your Satisfaction Guaranteed So sure am I that you can learn Electricity—so sure am I that after studying with me, you, too, can get into the "big money" class in electrical work, that I will guarantee under bond to return every single penny paid to me in tuition if, when you have finished my course, you are not satisfied it was the best investment you ever made.

FREE-Electrical Working Outfit-FREE

I give each student a Splendid Outfit of Electrical Tools, Materials and Measuring Instruments absolutely FREE. I also supply them with Drawing Outfit, examination paper, and many other things that other schools don't furnish. You do PRACTICAL work at HOME. You start right in after the first few lessons to work at your profession in a practical way—make extra money while you learn.

Get Started Now - Mail Coupon

I want to send you an Electrical Book and Proof Lessons both FREE. These cost you nothing and you'll enjoy them. Make the start today for a bright future in Electricity. Send in coupon—NOW.

FREE—Book on Wood Finishing

S. C. JOHNSON & SON, Dept. P. A. 3,
Racine, Wis. (Canadian Factory—Brantford)
Please send me free and postpaid your instruction book on Wood Finishing and Home Beautifying.

My dealer is.....

My Name.....

My Address.....

City & State.....

This book explains how inexpensive soft woods may be finished so they are as beautiful and artistic as hard wood. Tells what materials to use and how to use them. Includes color charts—gives covering capacities, etc. It is the work of experts beautifully illustrated in color. Fill out and mail this coupon.

Tells How to Brighten Up Your Home

WELL finished furniture, woodwork and floors add materially to the beauty and attractiveness of your home. You, yourself, can easily re-finish dingy, shabby, scratched wood. Our method involves practically no expense. All you need is a little time, a brush and

JOHNSON'S WOOD DYE

Johnson's Wood Dye is very easy to apply—it goes on easily and quickly, without a lap or a streak. It penetrates deeply, bringing out the beauty of the grain without raising it—dries in 4 hours and does not rub off or smudge.

Johnson's Wood Dye is made in fourteen beautiful shades, all of which may be easily lightened or darkened—full directions on every label.

\$100 Brings 9x12^{FT} Congoleum Rug and 3 Small Rugs to Match—

All Four only

\$15⁹⁵

Less than the Price of One

The price of the famous Congoleum Gold Seal Art Rug is just as well known, absolutely as standard, as sugar, salt or flour used to be.

Go anywhere, look everywhere, in stores, catalogs, magazines and newspapers—and once more refresh your memory of the actual universal standard price of a full size Gold Seal Congoleum Art Rug.

Here we bring you not one rug alone, but four—and all four for less than the regular price of one. A full room size, 9 foot by 12 foot, Congoleum Rug and three small companion Congoleum Rugs to match—each small rug 18 x 36 inches.

30 Days Free Trial

We'll send all four rugs on trial for 30 days. We want you and urge you to put them down on the floor and use them for a whole month—free of expense and without promise or obligation of any kind.

We guarantee that if you would rather return the rugs after making this kind of a trial, just say so and send them back. We will refund to you every penny of transportation charges, both going and coming.

Pay Little by Little Take a Full Year

And that's not all! No matter who you are, or where you live—regardless of your circumstances—we'll send all four rugs immediately, without waiting, red tape or bother, for just a dollar pinned to the coupon.

And we'll wait a year for the balance of the money. If you keep your rugs after making a 30 day's trial, you can pay little by little, almost as you please, taking a full year. That's the way we sell everything.

The Most Famous of All Congoleum Patterns

Congoleum Gold Seal Art Rugs are rapidly becoming the national floor covering—universally used in the kitchen, bathroom and dining room in good homes.

They lay flat from the very first moment without fastening. They never curl or kick up at edges or corners. No need to tack them down. Dirt cannot accumulate underneath.

Less work. Congoleum floors mean less worry and no back breaking drudgery. Dirt, ashes, grit, dust or mud cannot "grind into" Congoleum Rugs, because the surface is hard and does not absorb. A damp rag keeps a Gold Seal Congoleum Art Rug clean and doesn't hurt it.

Waterproof. These rugs are guaranteed waterproof. There is no burlap in Gold Seal Congoleum Art Rugs for water to rot. The surface is hard and smooth and wear resisting.

This stunning pattern is a superb tile design that looks exactly like the finest mosaic tile that you have ever seen, in lovely robins' egg blue and stone gray colorings. Such a rug in your kitchen will change the appearance of the whole room. In the dining room it gives an effect impossibly beautiful to describe. For a bedroom it is the most appropriate pattern imaginable. For the bathroom it is absolutely ideal.

This Offer Ends in 30 Days Send Your Dollar NOW

We cannot hold this offer open long. We make it for quick action to prove to you our ability to sell you similar bargains in all kinds of house furnishings from collar to garret, on the same wonderful terms.

Clip the Coupon and pin a Dollar to it.

No. D4C408 9 ft. x 12 ft. Genuine Congoleum Gold Seal Art Rug and 3 companion rugs to match, ea. 18 x 36 in. **\$15.95**

FREE

Mail Postcard for Book of 10,000 Bargains

This Congoleum Rug bargain is just a sample of the ten thousand other bargains in our great big furniture book. A postcard will bring it to you free for the asking. It shows everything for the home. It is probably the largest book of the kind published. A great many things are shown in their actual colors.

Always a Year to Pay

You never need to ask for credit. It's the way we sell everything. And we always loan articles free for a whole month before you need to decide.

A Few Departments

Wood Beds	Steel Beds	Curtains
Furniture	Clocks	Sewing
Linens	Floor	Machines

MEAD Ranger BICYCLES

World Leaders in style, popularity, service and durability.

Golden Brown—with Ivory white trim—is the predominant color scheme that easily identifies these handsome bicycles on the road.

30 Days' Free Trial

exclusive features. If at the end of thirty days you

See for yourself the values found in Ranger bicycles with their complete equipment of accessories and extras. Send to-day for catalog and select the model you prefer. Ride it thirty days, test its speed, sturdy qualities, de luxe equipment and want to return it for any reason, send it back and you will not be out one cent.

Factory-to-Rider When you buy a Ranger you are dealing direct with the makers at Factory Prices. Your "Ranger" is waiting for you. The breath of Spring is in the air. Write for our catalog today. When we get your order your bicycle will leave on a fast express train (all charges prepaid) packed in a waterproof paper bag and enclosed in a strong wooden crate. Safe delivery in perfect condition guaranteed.

There are 44 styles, colors and sizes in the famous line of **RANGER Bicycles** a model to suit every taste and any pocket book.

5-Year Guaranty Every Mead "Ranger" is warranted for five years. This means we make good trouble arising from any defect in workmanship or material at no cost to you. Our guaranty is a written contract—we are directly responsible for the satisfaction and general performance of your bicycle because we made it.

12 Months to Pay If not convenient to pay cash for your "Ranger" bicycle, we will ship it to you at once and arrange with you to accept twelve small monthly payments which will enable you to take advantage of our rock-bottom factory-to-rider cash price with only a slight amount added to cover the cost of extra bookkeeping. Parents frequently advance the initial payment and energetic boys and girls save and earn the later small monthly payments.

Tires and Equipment

Our big free catalog illustrates and describes parts, equipment and sundries that our more than a million riders may need. All are carefully selected from the leading parts makers of the world, to Save You Money at our Factory Prices.

Get this FREE Catalog

We have a copy all ready for you and it will be sent as soon as we receive the coupon in the lower corner of this page. If you prefer send a postcard—only write your name and address plainly. Turning the pages of the "Ranger" catalog is like walking down the aisles of the largest and greatest of bicycle stores seeing bargains, new ideas and conveniences that you never saw or heard of before.

Send No Money Ask for the big catalog and full particulars of our Factory Prices, marvelous offers and Easy Payment terms. Read especially about our extra \$5.00 FREE Premium set which goes with every "Ranger" bicycle.
