THE SPORT TWIN

40 Pounds of Quiet Power

LIGHT, compact, sturdy, a "twin," and a genuine Evinrude! Look it over. Notice its clean, closely-knit design—its obvious ruggedness. And it performs even better than it looks.

The Sport Twin combines every feature you have wanted in a lightweight, two-cylinder, detachable motor. Instant starting — silent, vibrationless power—and typical Evinrude reliability.

Automatic Reverse and wide sweep of tiller give perfect control of boat and assure safety. Evinrude Tilt-up prevents damage by bottom or snags, makes beaching easy. Evinrude built-in-flywheel magneto, no batteries. Float-feed carburetor.

Ask your sporting goods or hardware dealer about the Sport Twin. Write for new catalog describing the complete Evinrude line of detachable and built-in motors.

Evinrude Motor Company

Blame Yourself

If This Message Doesn't Bring You A Big Salary Increase

LET'S be specific. What do you want in life? You want more money than you're getting. You want your own home, a car, membership in a good club, you want to wear good clothes, educate your children and put away enough money to make you independent. If you are like other men, you want to be your own boss in a position that grows every day in interesting fascination. You want to travel, see the world, and meet the wide-awake people who are doing things.

All right. I'll tell you a quick, easy way to accomplish all this. If you don't take it you are the only loser. You are the only one who will have to face the accusing finger of the man you might have been. If you do take it, you'll thank me the rest of your life for putting this information in your hands. For now it is possible for you to quickly enjoy bigger earnings, and have all the joys in life that your bigger self demands. If this was a guess I couldn't print it. I know it to be a certainty. It is proved by the cases of thousands of other men who have done exactly the same thing. Listen.

What It Brought These Men

Charles Beery, a farm hand of Winterset, Iowa, was offered this chance. He took it and jumped from \$18 a week to a position paying him \$1,000 the very first month. J. P. Overstreet, Denison, Texas, was on the Capital Police Force at less than \$1,000 a year. He wasn't content with a bare living and he jumped to an income of \$1,800 in six weeks. F. Wynn, of Portland, Oregon, an ex-serviceman, wanted the joy of a real success. He earned \$544 in one week. George W. Kearns, working on a ranch for \$60 a month, took the quick road I offer you and in two weeks he earned \$524. Warren Hartle of Chicago was a railway mail

clerk for ten years—in as deep a rut at as low an income as any man could stand. But he wanted success, he longed for the good things of life that he saw other men having. He took my advice and earned over \$7,000 the first year.

The Secret Is Yours

But, of course, you want to know how it's done. I'll tell you. Although none of these men had ever sold a thing in their lives—though many believed that a salesman must be "born"—a salesman—we took them, without experience or training of any kind, and in a short period of time made Master Salesmen of them. Then our Employment Department helped them to select the right position and they were off with a boom to the success they had dreamed of.

The National Salesmen's Training Association can do exactly this for you. If this big organization of Master Salesmen and Sales Managers had raised the salaries of only a few men, then you might call it luck. But we've been doing it for fifteen years, day in and day out. Today we're so accustomed to the amazing increases in salary our members receive that we take them as a matter of course.

There is only one thing I ask of you in return for this offer. Don't let the idea of a big salary, the thought of traveling all around the country and meeting worth-while people, make you think that the job is beyond you. Keep an open, unprejudiced mind on this subject—at least until you have seen the

remarkable book that I want to send you without charge.

Read This Free Book

This book, "Modern Salesmanship," explains why thousands have quickly succeeded in the selling field—how it is easy to make big money once you are in possession of the Secrets of Selling—how you can quickly get these fundamental secrets, apply them and achieve a quick and permanent success. This is the book I will send you, absolutely free of obligation and expense. Read it through and then decide for yourself.

But remember this one thing: This is your opportunity. If you don't realize a big salary increase from this message, you have no one to blame but yourself. Send me the coupon before you turn this page and I'll send "Modern Salesmanship" immediately.

National Salesmen's Training Association
Dept. 12-E, Chicago, Illinois

National Salesmen's Training Association,
Dept. 12-E, Chicago, Illinois.

I am willing to investigate the opportunity you offer without cost to myself. Please mail me Free Proof that I can become a Master Salesman and qualify for a good sales position. Also send your illustrated book, "Modern Salesmanship," and particulars of membership in your Association and its Free Employment Service. This is all free of cost or obligation.

AVOIDING MISTAKES

MEANS SAVING MONEY

GET VOL. 5—QUICK

Your name on a post-card will do.

When Everybody is
Urging You to
"Build Now,"

now is the time of times to
BUILD RIGHT.

The less you have to spend in building, the more important it is that you secure the longest possible life for your investment. The *more* you spend the more important it is that your money shall represent a definite and permanent investment,

and not have to be spent over again in exasperating repairs. Cypress is "the one best buy" in the entire wood market for those who care what they get for their lumber money. Because it lasts and lasts and lasts and lasts and LASTS. We manufacture Cypress lumber—and are proud of that fact. But—we don't want you to use Cypress except where Cypress, "The Wood Eternal," is *best for you*.

PROBABLY THE BEST THING FOR YOU TO DO
is to write us for a copy of Volume 5 of the internationally famous Cypress Pocket Library.
AND PROBABLY YOU WOULD BETTER "DO IT NOW."

Let our ALL-ROUND HELPS DEPARTMENT help YOU MORE. Our entire resources are at your service with Reliable Counsel.

Southern Cypress Manufacturers' Association
1219 POYDRAS BUILDING, NEW ORLEANS, LA., or 1219 GRAHAM BUILDING, JACKSONVILLE, FLA.

INSIST ON TRADE-MARKED CYPRESS AT YOUR LOCAL LUMBER DEALER'S. IF HE HASN'T IT, LET US KNOW.

"SOME SUMMER SELLER"

Says Slade of N.J.
Have made \$13,500
in 3 months. Some
summer seller.

Every Woman Wants It Low Price—Big Profit

Representatives, salesmen, spare time workers are literally cleaning up fortunes with an amazing new invention—the Oliver Oil-Gas Burner that makes any range just like a city gas stove. No more sweltering summer kitchens, coal, soot or ashes.

Amazing Invention Ends Summer Coal Fires

Right in her own range, the housewife can cook and bake quicker and better than ever before. She turns a valve—just as with city gas—and her own oven regulates to any temperature. Then, the instant she is through the heat is turned off, the kitchen is cool and clean the rest of the day. Saves 65% of all household work. No lifting or carrying dirty coal, wood, ashes—no wicks, no experimenting. Absolutely safe. Last a lifetime.

TURN A
VALVE

\$100 a Week—Spare Time—Easy

You can see how Slade, N. J. made \$13,500 in 3 months. Why Russell makes \$660 a month, J. Carnegie makes \$1,000 a month, how hundreds of others make \$100 a week and more just in spare time. Here is an opportunity to make a Summer's work yield more than you ever made in a whole year. You don't need to be a super-salesman. The Oliver—sells itself. You

OLIVER GIVES take the money. Write at once for full details about our Free Sample Case and **FORDS AWAY** Big Exclusive Territory Offer. Oliver gives Foods away—no contests. Write quick for Big Summer Profits.

Drawing Table Free!

Yes, this is exactly what I am doing. I am giving this drafting table free to you when you enroll as my student. I do this because I want you to have the right kind of Draftsman's Working Outfit — because I want to help ambitious men and boys get ahead. This is the kind you will use when you have completed my course and have become a regular draftsman.

Complete Drawing Outfit FREE

Besides the drafting table I also furnish free the \$25.00 set of regular working instruments shown here. You get both table and instruments free if you enroll at once. I will do everything possible to help you get ahead.

Also FREE \$90 Drafting Course

To my students enrolling now I give an opportunity of getting a \$90 drafting course absolutely without cost to them. This means you need not pay me for my personal instructions or for the complete working outfit.

Salaries up to \$250 and \$300 a Month

Positions paying up to \$250 and \$300 a month which ought to be filled by skilled draftsmen are vacant everywhere. There are in every part of the country ambitious men, who with practical training and personal assistance will be qualified to fill the positions. I can now take and train a limited number of students, guarantee to train them by mail UNTIL placed in a permanent position at a salary up to \$250 and \$300 a month.

Here is the Rule you get FREE

To each young man stating his age when sending a sketch as shown in box at right, I am going to mail FREE AND PREPAID the Draftsman's Ivory Pocket Rule shown here.

Chief Draftsman, Engineers' Equipment Co.
1951 Lawrence Ave., Div. 13-55, Chicago, Ill.

Without any obligation to me please mail your book "Successful Draftsmanship" and full particulars of your liberal "Personal Direction" offer to a few students. Also full information as to how I can get a \$90 Drafting Course Free.

See How Easily You Can Learn to Dance This New Way

If you can do the step illustrated in the chart in lower corner, there is no reason why you cannot easily and quickly master all of the latest steps through Arthur Murray's method of teaching dancing right in your own home.

NO matter how skeptical you may be about being able to learn to dance by mail, this new course will quickly prove to you that you can easily learn without a teacher on the ground to direct your steps—and without music or partner—right at home.

Even if you don't know one dance step from another, these new diagrams and simple instructions will enable you to learn any of the newest dances in an amazingly short time. You don't need to leave your own room—it isn't necessary to go into a dancing class—or to pay large fees for private instruction. All you need to do is to follow the instructions as shown on the diagrams, practice the steps a few times to fix them in your memory and there is no reason why you should not be able to dance on any floor, to either band or phonograph music, and to lead, follow and balance correctly, no matter how expert your partner may be.

Arthur
Murray
Dancing
Instructor
to the
Vanderbilts.

FIRST PART Forward Waltz Step

1. Begin with left foot and step directly forward, weight on left foot.
2. Step diagonally forward to right, placing weight on right foot (see illustration).
3. Draw left foot up to right foot, weight on left. That's all. Simply follow the numbers in the footprints. Master this part before going further.

Learn Any Dance in a Few Hours

Whether you want to learn the Fox Trot, One Step, College Rock, Conversation Walk, Waltz, or any of the newer steps, you won't have the slightest difficulty in doing so through this new method. Then, the very next time dancing starts you can surprise your friends by choosing a partner and stepping right out with perfect confidence that every step you make and every movement is absolutely correct. Arthur Murray guarantees to teach you, or your lessons won't cost you one cent.

More than 90,000 people have learned to become perfect dancers by mail. In fact, about five thousand people a month are becoming wonderful dancers through Arthur Murray's amazing new method.

Good dancers are always the most popular people in their set—they never lack partners and are invited to every social event because dancing is the most pop-

Courtesy Metro Pictures Corp.

Scene from the famous screen version of "The Four Horsemen," showing Rodolph Valentino in one of the wonderful Tango steps.

FREE Three Tango Lessons

Arthur Murray has diagrammed the principal steps in the famous Tango as danced by Rodolph Valentino in such a simplified way that you can quickly and easily master this fascinating dance, after you have the Murray foundation to your dancing. Send for these Tango lessons today and you will soon be able to amaze all your friends with your ability to perfectly dance it.

ular form of recreation, and good dancers are always in demand. But beside this, good dancers always have perfect mental and physical control, ease of manner, poise, are never embarrassed, shy or timid. Very often they meet influential people in this social way who are very helpful to them in business.

FREE The Fascinating Tango

Simply fill in and mail the coupon and Arthur Murray will immediately mail to you the complete 16-lesson dancing course. He will also send you FREE the complete diagrams of three lessons in the tango that was danced in "The Four Horsemen," all just as we have explained it in this advertisement.

When your postman hands the special sixteen-lesson course to you, simply deposit only \$1.00 with him, plus a few cents postage, in full payment. Keep the course for five days. Practice all of the steps, learn everything these sixteen lessons can teach you and prove to your full satisfaction that you have found the quickest, easiest and most delightful way to learn to dance. Then, within five days, if you desire, you may return the course and your dollar will be promptly returned to you. But if you decide to keep the course—as you surely will—it becomes your personal property without further payments of any kind.

Every month thousands of men and women are quickly learning to become fine dancers through Arthur Murray's methods of home instruction. There is no reason why you should not learn just as easily and quickly. This offer is made for a very limited time and may soon be withdrawn, so you must act quickly if you are to accept it. **Arthur Murray, Studio 710, 290 Broadway, New York.**

Arthur Murray, Studio 710, 290 Broadway, New York.

To prove that I can learn to dance at home in one evening, you may send the sixteen-lesson course and the Three Fascinating FREE Tango lessons in plain cover, and when my postman hands it to me I will deposit with him only \$1.00, plus the few cents postage, in full payment. If, within five days, I decide to do so, I may return the course and you will refund my money without question.

“He’s Already Patented Four Inventions”

FUNNY thing too . . . When he first came here he was just an ordinary worker. For a time, when things were slack, I even thought that we might have to let him go.

“Then, gradually, I noticed an improvement in his work. He seemed to really understand what he was doing.

“One day he came into my office and said he had worked out a new arm for the automatic feeder. I was a little skeptical at first, but when he started explaining to me, I could see that he had really discovered something. And when I started questioning him, I was amazed. He certainly did know what he was talking about.

“So we sat down and talked for over an hour. Finally, I asked him where he had learned so much about his work. He smiled and took a little book from his pocket.

“‘There’s no secret about it,’ he said. ‘The answer’s right here. Four months ago I saw one of those advertisements of the International Correspondence Schools. I had been seeing them for years, but this time something inside of me said, *Send*

in that coupon. It was the best move I ever made—I knew it the minute I started my first lesson. Before, I had been working in a sort of mental fog—just an automatic part of the machine in front of me. But the I. C. S. taught me to really understand what I was doing.’

“Well, that was just a start. Three times since he has come to me with improvements on our machines—improvements that are being adopted in other plants and on which he receives a royalty. He is certainly a splendid example of the practical value and thoroughness of I. C. S. training.”

Every mail brings letters from students of the I. C. S. telling of advancements and larger salaries won through spare-time study. There’s still a chance for you, if you will only make the start.

Just fill out and mail the coupon printed below and, without cost or obligation, get the full story of what the I. C. S. can do for you. To-day—not To-morrow—is the day to take that first definite step toward Success.

These inventors and many others once studied with the I. C. S.

JESSE G. VINCENT

Vice-President of Packard Motor Car Co., inventor of the Packard Twin-Six and co-inventor of the Liberty Motor.

JOHN C. WAHL

First vice-president of The Wahl Co., inventor of the Wahl Adding Machine, the Eversharp Pencil and the Wahl Fountain Pen.

W. J. LILLY

Inventor of the Lilly Mine Hoist Controller.

H. E. DOERR

Chief Mechanical Engineer, Scullin Steel Co., St. Louis.

WANTED-
for murder!

**\$1,000
Reward!**

In a dirty, forelorn shack by the river's edge they found the mutilated body of Genevieve Martin. Her pretty face was swollen and distorted. Marks on the slender throat showed that she been brutally choked to death. Who had committed this ghastly crime?

Crimes like this are being solved every day by Finger Print Experts. We read in the papers of their exploits, hear of the mysteries they solve, the rewards they win. Finger Print Experts are the heroes of the hour.

**Not Experienced Detectives —
Just Ordinary Men**

Within the past few years, scores of men—men with no police experience, men with just ordinary grade school educations—have become finger print experts. You can become a finger print expert, too. Can you imagine a more fascinating line of work than this? More trained men are needed. Here's your real opportunity.

**Learn Identification
Secrets**

More and more the detection of crime resolves itself into a problem of identification. You can learn the methods of the famous identification experts. You can learn the science of Finger Print Identification—right at home in your spare time.

T. G. Cooke,
President

FREE For a limited time, we are making a special offer of a Professional Finger Print Outfit absolutely free and FREE course in Secret Service Intelligence. Mastery of these kindred professions will open up a brilliant career for you.

This coupon will bring you FREE book and details of this great offer. Don't wait until the offer has expired. Fill in the coupon now. Mail it today.

Man—the Miracle Worker

He has wrested from the universe its most wonderful secrets—he reads the story of the distant star, translates the history of life from the record of the rocks—he watches the delicate organs working in the body and the processes of the brain—he has conquered the air, the sea, the bowels of the earth—he has defeated death by defeating disease—

and Now This Whole Thrilling Story Is Told for You with Nearly a Thousand Magnificent Illustrations

In all the world's fiction—romance—history—there is nothing so fascinating as this absorbing story of how man has conquered the universe, solved its mysteries, put its forces to work. From the dawning mind of the caveman to the wizardries of the twentieth-century scientist, his achievements have been almost unbelievable. And at last, this amazing romance is yours in one flowing, simple, accurate story.

The Outline of Science

Edited by J. Arthur Thomson

Professor in the University of Aberdeen, Scotland

What a stupendous task to tell the whole marvelous story in terms so simple that anyone can understand—to tell it accurately and fully in a work priced low enough to be within the reach of all—to illustrate it with authentic photographs and drawings! Yet Professor Thomson and his associates have done this—giving you the cream of the world's scientific genius in a plain story, simply told—a story that scores of thousands are eagerly reading—that must have a place in every cultured home.

DR. FRANK CRANE SAYS: "The Outline of Science ought to be in the place of honor and of daily use in every civilized family. It contains the fundamentals of what every growing mind should know. If you can possibly get the money, buy this book and read it, not cursorily as you would other books, but diligently, faithfully and daily. Here are the foundations of our civilization. Here is the stuff of which all respectable thinking is composed."

Four splendid volumes—beautifully bound, stamped in gold. Nearly 1,000 magnificent illustrations. Each volume 7½ in. wide, 10½ in. deep, 1¾ in. thick. Rich paper and new, large, readable type.

**Examine It
FREE**

Own It on Easy Terms

The publishers will deliver to your home, before you pay a dollar, the four superb octavo volumes of this work for five days' examination. If you keep them, make a first payment of \$1.00 and nine monthly payments of \$2.00—\$19.00 in all—or one cash payment of \$18.00—as you prefer. Send the attached coupon with no money and see for yourself the entertainment and instruction that is here for every man, woman and child.

Take -Autos

Learn the Auto and Tractor Business. Learn a trade. Eight weeks course leads to employment. Free Railway fare to Kansas City. Wonderful offer to you from world famous Million-Dollar trade School. Free Radio Course.

Hundreds of Good Jobs paying \$50.00 a Week and More are open to Sweeney Trained Men. You need no PREVIOUS Experience. I train you in 8 weeks with tools, not books.

The AUTOMOBILE BUSINESS is America's greatest industry. It employs twice the capital of all the National banks in the United States. In 1922 people paid ONE BILLION FOUR HUNDRED AND NINETY MILLION DOLLARS for cars, over SIX HUNDRED MILLIONS FOR TIRES, and over SEVEN HUNDRED MILLION DOLLARS for parts and accessories. Yet this great business is just beginning. In ten years there will be over 23 million pleasure cars alone. That is about one for every family. Trained mechanics are in demand. Hundreds of thousands of men are needed not only as mechanics but as salesmen, garage owners, tire repairers, dealers, demonstrators, chauffeurs, etc. How can you learn and get into this great business?

SWEENEY System of Practical Instruction

is the ONLY WAY to learn if you want to save time and money and be properly trained. You get this at the WORLD'S greatest trade school, the MILLION DOLLAR SWEENEY SCHOOL and you get it nowhere else.

FREE RAILWAY FARE. If you will come now I will help by paying your railway fare from any point in the U. S. to the Sweeney School. I will also give a FREE RADIO COURSE to all who answer this ad. I want you to come now in order to have things your own way this spring. The first step is to send for my Free Catalog. Get all the facts.

FREE Simply send name today for my big 72-page catalog. Shows hundreds of pictures of men at work in the school. Tells all about wages, profits, opportunities in auto and tractor business. Explains step by step how you learn. Interesting letters from graduates telling how they made good. Shows how men come from all over the world to this big school. Makes you want to join the crowd. Tells everything you want to know about it, including all new radio details. No cost, no obligation. Clip the coupon, or a postcard will do. Get the catalogue now—that's the first step. Don't put it off one minute. No colored students accepted.

Your Pick or Electricity

I made my first announcement of this course in practical electricity by RADIO BROADCAST on the occasion of the 15th anniversary of the school, when we broke the World's Record by a 12-hour continuous program. Telegrams, letters, telephone calls came in from everywhere asking for details.

What you young men want isn't to be Engineers, or Designers, or Theorists, or Scientists. What you want is the actual ability to go out and install, operate and repair all kinds of Electrical Machinery. How to handle, as a competent workman, Electrical Power Plants, Electric Signs, Farm and City Lighting Plants, Storage Batteries, Radio Sets, Wiring, Electric Driven Machinery, of all kinds, such as Elevators, Street Railway Motors, etc. When you get through this Course, you will know how to handle Electrical Machinery, because I don't fill your head with hazy ideas; but I train your hands with the real work you will be called upon to do.

\$150,000 Special Equipment

The Million Dollar Sweeney School has \$150,000 worth of Special Electrical Equipment and teachers specially trained, men who take a personal interest in you—and teach you by the Sweeney System of practical Experience. Some of this wonderful equipment simply can't be duplicated; for example, a \$50,000 radio broadcasting station (Call WHB, famous the world over), and a factory where we build radio sets; a factory where we build storage batteries; a 100-kilowatt complete electric power plant; the largest mechanical electrical sign in America, etc.

SWEENEY System of Practical Instruction

Quit thinking about electricity as something "deep" and hard to learn. All I ask is that you like mechanics and realize the opportunities for a man in the electrical business. This is an Electrical age. Train yourself for the countless opportunities that every new day brings. The world is calling for electrically trained men—you don't need to be an engineer or designer or scientist, but you must know how to fix, repair, build, install, operate all kinds of electrical machinery. This is what gets you a real job the minute you are qualified.

FREE Railway fare to Kansas City

STEP UP!

**Bigger Job
More Money**

"I have made another step up and am now advertising manager of the *Grand Junction (Colorado) News*," writes an enthusiastic United Y. M. C. A. Schools' student.

Two years ago he began devoting evening hours to the study of a United Y. M. C. A. Schools' correspondence course. He was not depending on pull or luck to get ahead. He believed that when he was qualified for a bigger job, the opportunity would come to "step up."

This Colorado student's letter is a fair specimen of hundreds that come to us.

It's not difficult to "step up" if you have ambition and the kind of training employers want. Will you let us tell you how you can move upward steadily by simply making use of your spare hours?

Some of our 300 Correspondence Courses

What Are You Thinking About?

Day-dreaming led many a man to make plans that brought him big success. Don't be ashamed when your thoughts are wandering away, when you dream that you are a leader of men—a doer of big things in the business world—a builder of lasting structures. Your day-dreams are an indication of your ambition and of your desire to accomplish things. The man who never dreams has no imagination, he will not get very far. But you can make your dreams real—You can materialize your ambition.

Just dreaming alone won't do. Hitch your dreams up to facts and you will go far. You will get the facts through special training along the line in which you want to succeed. And the place to get just that training is the American School. This is proven by the quarter of a century of successful experience we have in helping many thousands of men and women gain an enviable place in the business and social life.

Another reason why the American School is the place to get your training—it is not a business corporation but a chartered Educational Institution, incorporated not for profit.

Space here is too limited to tell you of all the advantages you will gain by getting your training from the American School, but the coupon will bring you full information and a descriptive book, without cost or obligation to you. Fill out and mail the coupon NOW, while you are thinking about it. No agents will bother you.

GUIDES SENT FREE FOR YOUR O. K.

\$1 PER MONTH

“Worth ten times their price.” “I wouldn’t send them back for a handful of diamonds.” “I congratulate you on their excellence.” “Helped me to two raises in four months.” “Better than a school of instruction.” “Studied them when I was laid up and got further ahead than if I’d been on the job.”

These are the words of gratitude that come to us by every mail from Electrical workers. There is no short cut to genius. But there are sign posts all along the road to success. **Hawkins Electrical Guides** find these sign posts for you. It is so easy to pay for the **Guides** that you will scarcely miss the monthly payments.

HAWKINS ELECTRICAL GUIDES

Do you want to know the facts about the following electrical subjects? They are all covered in Hawkins Electrical Guides.

Electrical signs and symbols—static and current electricity—primary cells—conductors and insulators—resistance and conductivity—magnetism—induction coils—dynamic principles—pieces of dynamo—armatures—windings—commutator brushes. Motor principles—armature reaction—motor starting—calculations—breaks—horse power—selection and installation of dynamos and motors—galvanometers—standard cells—current measurement—resistance measurements—voltmeters—wattmeters—watt-hour meters—operation of dynamos—operation of motors. Distribution systems—wires and wire calculations—inside, outside and underground wiring—sign flashers—lightning protection—rectifiers—storage battery systems. Alternating current principles—the power factor—alternator principles—alternating construction—windings. A. C. Motors—synchronous and induction motor principles—A. C. commutator motors—induction motors—transformers;

losses, construction, connections, tests—converters—rectifiers. Alternating current systems—switching devices—circuit breakers—relays—lightning protector apparatus—regulating devices—synchronous condensers—indicating devices—meters—power factor indicators—wave form measurement—switch boards. Alternating current, wiring power stations—turbines, management, selection, location, erection, testing, running, care and repair—telephones, telegraph—simultaneous telegraphy and telephony—wireless—electric bells—electric lighting photometry. Electric railways—electric locomotives—car lighting—trolley car operation—miscellaneous applications—motion pictures—gas engine ignition—automobile self-starters and lighting systems, electric vehicles. Elevators—cranes—pumps—air compressors—electric heating, electric welding—soldering and brazing—industrial electrolysis—electro-plating—electro-therapeutic—X-rays.

Also a complete 126-page ready reference index of the complete library. This index has been planned to render easily accessible all the vast information contained in the 10 Electrical guides. There are over 13,500 cross references. You find what you want **instantly**.

If He Had Passed It Up

He Would Still be a Laborer at \$2 a Day. No Money, Nothing Ahead but Hard Work, Longer Hours—and Regrets. But He Didn't Pass It Up

He decided to learn Mechanical Drawing. He buckled down to work with the Columbia School of Drafting. When he had a quiet half hour to spend he spent it—as a wise man spends money—to get full returns.

MADE \$275 EXTRA IN 3 DAYS. He recently received \$275 for one drawing that only took him three days to draw.

NOW HOW ABOUT YOU? Are you working up hill or down? Count the money in your pay envelope next pay day. You'll find the answer there.

MAKE \$35 TO \$100.00 A WEEK. We will train you to be an expert Draftsman in your spare time at home by mail. There's lots of room for you if you act now.

PROMOTION IS QUICK. WE'LL QUALIFY YOU for a high-salaried position in the drafting field and keep you in touch with openings for Draftsmen in the big machine shops, industrial plants and United States Government departments. Men who start as

Draftsmen are often advanced to Chief Draftsmen, Chief Engineers, Production Managers and so on.

GET THE RIGHT TRAINING. Mr. Claffin, the founder and director, stands personally in back of the Columbia School of Drafting. You spend no time in long-winded theories—useless and expensive to you. You start on actual drawing work the day you receive your first lesson.

YOU NEED NO PREVIOUS TRAINING. The course is easy to understand and easy to follow. Many students are qualified even before they complete the course.

SUCCESS CALLS MEN OF ACTION ONLY. If you are a man of action clip the coupon now and show that you are a man of action. Keep right on top of this opportunity to make real money. Don't go looking for a pair of scissors. Tear the coupon off and mail it right now. We have a special offer for those who reply promptly. Get started now.

What We Give You

PRACTICAL PROBLEMS. You are carefully coached in practical Drafting work.

WE HELP YOU GET A JOB. We help you get a position as a practical Draftsman as soon as you are qualified.

PERSONAL INSTRUCTION AND SUPERVISION THROUGHOUT THE COURSE. You receive the personal instruction and help of Roy C. Claffin, president of the Columbia School of Drafting and a practical Draftsman of many years' experience.

DRAFTSMAN'S EQUIPMENT. We furnish you with a full set of Drawing Equipment and Drafting Instruments as shown in the picture below when you enroll. You keep both sets on completing the course.

CONSULTATION PRIVILEGES. You are free to write us at any time for advice and suggestions regarding your success.

DIPLOMA. The diploma we give you on completing the course attests to your proficiency as a Draftsman. It is an "entering wedge" to success.

FREE SUBSCRIPTION TO DRAFTSMAN'S PUBLICATION "THE COMPASS." You are given free a subscription to our helpful, inspiring publication, "The Compass."

U. S. Civil Service Commission Needs

DRAFTSMEN The following are a few of the many positions open in Government Departments from time to time. The salaries are starting salaries, subject to increase. Practically all of them carry a bonus of \$240 a year additional.

Architectural Designer..... \$4,000
Chief Draftsman (Aeronautical) Naval Aircraft Factory, per day..... 15.04
Aeronautical Draftsman—Field Service of Navy Department, \$5.20 per day to \$12 per day.

FREE BOOK Send in this coupon today. Immediately on receipt of it we will send you our book, "Drafting—Your Success," which tells you all about our new method of teaching Mechanical Drawing and gives full details of our special offer to those who reply promptly.

BE A RAILWAY TRAFFIC INSPECTOR

Most Interesting Position With Unlimited Opportunities

By **GLEN O. TREGO**

"Having completed the course in Railway Traffic Inspection about nine months ago and having received a position within a few days thereafter (it was furnished me as guaranteed by the Institute) I now feel it my duty to express my gratitude for the help which was extended to me after I began work.

"And that was far more than I expected.

"I find Railway Traffic Inspection to be the most interesting position with unlimited opportunities that any man could wish for. I find that being a Railway Traffic Inspector does not only enable a man to receive higher positions in railways, but it also verses one so he is more capable of conducting any kind of business which may be chosen for the future.

"I must admit that the price paid for the course of Railway Traffic Inspection is the best investment I ever made."

POSITION GUARANTEED

Earn Up to \$250 Per Month Expenses Paid

GUARANTEE

Our guarantee states that tuition will be refunded to you, if upon graduation, position is not obtained paying at least \$110 per mo. and expenses.

You are practically your own boss as Railway Traffic Inspector. You can travel or remain near home; steady, pleasant, outdoor work; something new every day. Many opportunities for advancement through contact with leading railway officials.

EASY TO QUALIFY

Any average man can prepare in three months' spare-time study at home for this fascinating profession. Start at \$110 per month or more, expenses paid. Our guarantee assures you of a position; you take absolutely no risk.

Send for Particulars Today (Get our free Booklet No. D-63, giving full details and easy terms. Don't wait - send coupon now.)

A Big Raise in Salary!

Is Very Easy to Get, If You Go About It in the Right Way

You have often heard of others who have doubled and trebled their salaries in a year's time. You wondered how they did it. Was it a pull? Don't you think it. When a man is hired he gets paid for exactly what he does, there is no sentiment in business. It's preparing for the future and knowing what to do at the right time that doubles and trebles salaries.

Remember When You Were a Kid

and tried to ride a bike for the very first time? You thought that you would never learn and then—all of a sudden you knew how, and said in surprise: "Why it's a cinch if you know how." It's that way with most things, and getting a job with big money is no exception to the rule, if you know how.

We Will Show You How

Without loss to you of a single working hour we can show you a sure way to success and big pay. A large number of men in each of the positions listed are enjoying their salaries because of our help—we want to help you.

Make check on the coupon against the job you want and we will help you to get it. Write or print your name on the coupon and send it in today.

Get Into The AUTOMOBILE BUSINESS

Greater opportunities are opening every day in this wonderful field. This year will add another two million cars to the more than twelve million now in use. Nearly sixty-five million tires to repair, more than twelve million batteries and electrical systems to keep in running order. Keep these facts in mind and you can quickly realize WHY the Automobile Business is THE Business to get into.

No matter where you go you will find a need for additional garages, battery repair shops, tire shops, welding shops, etc. to handle all this work.

Can you think of a better business for wide-awake, ambitious fellows who are specially trained for this work? Have a business of your own, and do the service work on these cars.

Make \$2000 to \$10,000 Yearly

—and those are conservative figures. Some of our graduates do even better. Thousands of them are making good money today. Good jobs await our graduates in the big auto factories, or in garages and service stations. They continually ask for M. S. A. S. Trained Men. Then there are thousands of opportunities to go in business for yourself. The man who is trained at the M. S. A. S. doesn't have to worry. He KNOWS that his FACTORY ENDORSED TRAINING will get him the right place in the Automobile Business. Prepare yourself now to have a business of your own.

Courses Complete, Practical—Endorsed by Auto Manufacturers

Our Courses thoroughly cover every branch of the Automobile Business. Students are given actual work on various kinds of machines. They are made thoroughly familiar with every part and its operation. Factory executives and service men assisted in arranging our courses. That's why they can't be beat.

Read WHAT the BIG Auto Manufacturers Say About the M. S. A. S. These letters from factory executives speak for themselves. They prove that M. S. A. S. Training is the recognized standard—the only FACTORY ENDORSED SCHOOL in the world!

PACKARD—"Do not believe you would make any mistake in attending this school if you wish to become thoroughly experienced in the Automobile business. Have no hesitation in recommending it in every particular."

Learn in The Heart of the

MAXWELL—"We heartily recommend the Michigan State Automobile School."

Detroit, the Auto Center, is the logical place to learn the Automobile Business. When anyone thinks of automobiles, they think of Detroit, and when you think of learning the Automobile Business, it is only natural to think of the M. S. A. S. located right here in the very Heart of the Auto Industry. 79% of the Automobiles are made in the Detroit district. This fact is a big advantage to M. S. A. S. students. They visit the big factories and get the benefit of close contact and co-operation of factory executives.

BUICK—"We believe the Michigan State Automobile School located at Detroit would best meet your requirements as its courses in technical training are most thorough and complete in every detail."

HUDSON—"The Michigan State Auto School is the finest institution of its kind in the country. In fact we endorse its method of instruction because it ranks highest in the standard of schools. Its equipment and personnel is second to none. This school is thought very highly of by the automobile men of Detroit. You will make no mistake by entering for a course."

STUDEBAKER—"The Michigan State Automobile School at Detroit conducts a very good school, in fact we do not know of a better automobile school than the Michigan State."

THE AUTOMOBILE JOURNAL—"The Michigan State Automobile School today is conceded by those who know, to be the greatest institution of its kind in America. It is endorsed by the leading men in the industry. A first-class automobile mechanic is in demand today and can always earn a salary consistent with his knowledge and ability. We do not hesitate to recommend the M. S. A. S."

Have a Business OF YOUR OWN

Hundreds of M. S. A. S. graduates are in business for themselves all over the world. You can have a shop of your own too. With 12 million cars to repair there are wonderful opportunities for garages, tire repair shops, battery repair shops, electrical service stations and welding shops. And it means success to train in Detroit the Automobile Center at the M. S. A. S. Read what our graduates say, below.

What Our Graduates Say

Our files are full of letters from men who have finished our Courses and who are now in the automobile business for themselves making big money. Read these—they are typical of the thousands of letters we get:

"I have been in business now for myself about three years; we sure have a good business. There are several garages here in a little city of about 2,500 and we get all we can do all the time. We also employ two men, besides overtime, so you see, we are getting our share."—W. F. Dehnert, Neillsville, Wisc.

"An very busy these days—lots of repair work. Have five men working for me. I am just past twenty-one and I was seventeen when I took the automobile course at your school."—J. H. Nelson, Worcester, N. Y.

"I am now foreman of the shop where I work, and am making good with a Capital G. I have doubled my salary and am also turning out far better work than I did before taking your course."—Mervin S. Gill, Kimberly, Idaho.

"Have been in the garage here for two years and my wages have increased three hundred per cent."—Robert L. Beck, Picture Rocks, Pa.

"Since going to your school, I am making three or four times the money I was before going there, and I feel greatly obligated to you and the faculty. I have a good job with the Tanswell Motor Co., Tanswell, Va., and am making good."—J. O. Orger.

"I have been running a garage since Feb. 1920, and am doing fine. We have the sub-agency for the Ford car and Ford's tractor and thodge. Exclusive agency for the Buffalo tractor and truck and have been doing fine with all."—H. J. Nachtrieb, Peabrocks, N. Y.

"I have in charge for the Government and State of N. C. 400 trucks and 200 tractors. I am making \$250 a month and all of my expenses."—W. L. Herrelson, Beardsville, N. C.

You Can Be As Successful As These Fellows

"Before taking your course was working in silk mills at \$18.00 per week. Am now making \$100.00 a week. Cleaned up \$2,500.00 in six months repairing cars, selling accessories, etc. Five had money spent at M. S. A. S. was best investment I ever made."—J. S. Stetzel, Pa.

"It is four years last month since I finished the two courses at your school. Have not had a single job I could not master. Have saved \$100 every month since I got home. I give M. S. A. S. credit for my success."—J. I. Mayas, Kansas.

"Have been rushed since leaving the M. S. A. S. last November. Can surely give the M. S. A. S. credit for raising my pay from a pencil pointer at \$12.50 a week to \$42.00 which I am now getting."—F. W. Johnson, Ohio.

"Since I left your school have found it takes M. S. A. S. training to get ahead in the world. Have worked with men who had fifteen years experience, but my M. S. A. S. training put me up with them, and sometimes ahead of them. If I had it to do over again would be to M. S. A. S. two years earlier."—J. B. Navarre, West Va.

"Before entering your school was earning \$12.00 per week. I knew absolutely nothing about automobiles—didn't know the difference between carburetor and wheel base. Since I left your school have worked up through several positions, in 1 year paying \$100 per month. Then decided to go into the business myself. Present earnings are \$100 per month."—H. S. Bradley, Ohio.

Our Money-Back Guarantee

We guarantee that a graduate of our Automobile and Tractor Course will be qualified to fill a position as assembler, demonstrator, tester, repair man, auto electrician, chauffeur, tractor operator or farm lighting expert, or we will refund his tuition fee.

Train for Success—Let Us Help You—Start Now!

The letters above prove all we have said about the opportunities in the Automobile Business. It's up to YOU! If you want to get ahead, all you need do is GET BUSY! Our training will positively help you. One of the great advantages in coming to the M. S. A. S. is that you get a long thorough course, learning everything in detail. Men are beginning to realize they cannot learn the Automobile Business in six or eight weeks while studying three or four other trades at the same time. Each one must be given enough time to learn it properly. That's why QUALITY TRAINING is the ideal at the M. S. A. S.

Show Your Grit—Grab This Opportunity

Don't say you never had a chance. A Big One faces you right now! Get Busy! Don't wait for some one to push you along. Send for our free illustrated catalog! You see what other fellows have done—then show the world what you can do.

Put Your Name On this Pay-Roll

Men like you are wanted for big-pay positions in the fascinating field of automobile engineering. We have made it easy for you to fit yourself for one of these positions. You don't have to go to school. You don't have to serve an apprenticeship. Fifteen automobile engineers and specialists have compiled a spare time reading course that will equip you to be an automobile expert without taking any time from your present work.

AUTO BOOKS 6 Volumes Shipped FREE

Now ready for you—at a big reduction in price—an up-to-the-minute six-volume library on Automobile Engineering, covering construction, care and repair of pleasure cars, motor trucks, tractors and motorcycles. Brimming over with advanced information on Lighting Systems, Garage Design and Equipment, Welding and other repair methods. Contains everything that a mechanic or an engineer or a motorcyclist or the owner or prospective owner of a motor car ought to know. Written in simple language that anybody can understand. Tastefully bound in flexible covers and gold stamped. 2700 pages and 2400 illustrations, tables and wiring diagrams. A library that cost thousands of dollars to compile but that comes to you free for 7 days' examination.

Only 10 Cents a Day

Not a cent to pay in advance. First you see the books in your own home or shop. Just mail coupon and pay express charges when books arrive. You can read them and study them for seven whole days before you decide whether you want to keep them or not. If you like the books send \$2.80 in seven days and \$3.00 a month until the special price of \$21.80 has been paid. (Regular price \$45.00.)

Send No Money Now

Don't take our word for it. See the books without cost. There is so much profit in this offer for you, that we urge you not to waste a moment in sending for the books. Put the coupon in the mails today. SEND NO MONEY—only the coupon.

Your Success Is Certain In the Big-Pay Field of Today—ELECTRICITY

So rapid and tremendous has been the growth of the Electrical Industry that today this great field is badly in need of men—even the so-called Electricians, the "screw-driver" kind, are making big money, and are never out of work. But it's the trained man—"Electrical Expert"—who is cashing the big-pay check and bossing the big jobs. There's a place waiting for you in this big-pay field. You too can qualify in a few months as an "Electrical Expert."

"Electrical Experts" Earn \$12 to \$30 a Day

Be a Big-Pay Man

The "short-cut" to "Big-Pay" is training. The big field of today for the trained man is Electricity. Trained "Electrical Experts" can earn \$12.00 to \$30.00 a day.

Why Work for Less?

Why work for \$25.00 or \$30.00 or \$40 a week? With a few months training under me, through my easily-learned, quickly-grasped, right-up-to-the-minute, spare-time, Home-Study Course in Practical Electricity you can fit yourself for one of these bigger jobs—one of these jobs that pay \$12.00 to \$30.00 a day.

I Train You at Home

As Chief Engineer of the Chicago Engineering Works, I know just the kind of training you need to succeed as an "Electrical Expert." My course in Electricity is so simple, thorough and up-to-date that you can easily understand and apply every line of it—no big words, no useless theory, no higher mathematics—just plain, every-day, straight-from-the-shoulder, man-to-man English—the kind you and I use every day.

Satisfaction Guaranteed

My course is backed by an iron-clad guarantee that insures your success and satisfaction. I positively will refund every cent paid me in tuition if you are not fully satisfied. No other school will do this for you. Back of me in my guarantee stands the Chicago Engineering Works, a Million Dollar Institution.

Ten Things I Guarantee to Do for You

Positive Money Back Guarantee Bond

Personal Attention and Instruction

Handsome Diploma Upon Graduation

Thorough and Complete Course of Training

Early Special Instruction in Practical Money-Making Work

\$4,500 PROFIT A MONTH

YE GODS! SOME SUMMER SELLER
Have more than kept up my quota. \$4,500 gross profits per month. Gave up a \$10,000 job to take up the Oliver. Some Summer Sellers. A. R. Slade, N. J.

\$215 in One Day
"I made \$215 today!"
W. F. Bentley, Pa.

Beats Bentley
"I've smashed Bentley's record. Made \$279.65 profit from 1 day's sales. Oliver sells itself. I take the money."
John A. Ames, New York.

Earns \$3,900 in 6 Months
"I have averaged \$660 profit a month for the last six months."
A. M. Russell, Conn.

Big Spare Time Money
"I made \$45 last night."
N. B. Chelen.—Wash.

NO longer will housewives be chained to a dirty, mussy, coal or wood fire, all Summer long in a sweltering kitchen. 150,000 women have already equipped their ranges with this amazing new invention—the **Oliver Oil-Gas Burner**—that turns off and on with a valve, just like city gas. No more hot kitchens all day long just to cook a few meals. No more ashes, dirt, soot, smoke—no more undependable oil stoves. No wonder our representatives are cleaning up fortunes.

Every Woman Wants One

No work at all to sell this amazing invention. One minute to connect and light it and the sale is made. Every woman wants this wonderful work-saver that does away forever with carrying dirty coal and wood and is cheaper—because it burns 95% air, only 5% coal oil.

Right in her own range oven, the housewife can bake better and quicker than ever before. She can regulate her oven for any temperature—for quick baking or slow baking. Then, a little turn of the valve, the heat is off and the kitchen is cool and clean the rest of the day. Preserving and canning are done with one-sixth the work of the old way. No dirty coal, wood, ashes—no wicks, no soot, no odor, no grimy hands.

The Secret of Quick, Big Profits

You can see why this timely invention means big money during the Sum-

mer months. Here is an opportunity of a lifetime. A. R. Slade actually made \$13,500 in three months. Many make \$100 to \$200 a week just in spare time. You, too, can clean up big profits—you don't need to be a high-powered salesman or even a clever talker. The Oliver sells itself.

Free Sample Case Offer
Oliver Gives Fords Away.

During the last two months we paid over \$138,647 to our representatives. Write at once and we will give you full facts of how you, too, can make this Summer's work yield you a fortune. If you will write now you will be entitled to our special Free Sample case and Exclusive Territory offer. We are giving Fords away to producers—no contests.

The coupon brings full details—don't delay—every day means money lost. Act now.

Ticket to Chicago

(The Electrical Center of the World)

FREE

WE pay your railroad fare to Chicago—the Electrical Center of the World—from any place in the United States. Grasp this opportunity to see the country at our expense. Don't stick in one spot—travel—get experience. Come to Coyne—learn electricity in 3 months. Fit yourself for a big paying job. The largest electrical school in the country specializing in electrical instruction only.

Learn Electricity in 3 Months

Get a complete training so you can make big money as Power Plant Operator, Superintendent, Telephone man, Construction worker, auto, truck or tractor electrician, battery man, radio expert, or you can go into business for yourself as electrical contractor, dealer, auto ignition or battery expert and make from \$3,000 to \$20,000 a year. Hundreds of our graduates today are making big money and you can do the same if you grasp this opportunity—act now.

Great Shops of Coyne

No books or useless theory. You are trained on \$100,000 worth of electrical equipment. Everything from door bells to power plants. You work on motors, generators, house-wiring, autos, batteries, radio, switch-boards, power plants—everything to make you an expert ready to step right into a position paying from \$45 to \$100 a week.

RADIO COURSE FREE. We include the following free with the regular course:

- [1] A complete course in auto, truck and tractor electricity and storage batteries. Greatest outlay of auto, electrical and battery equipment in the country.
- [2] Course in Radio—the marvel of the age. Constructing, installing and operating. You can build your own wireless telephone set.
- [3] A life scholarship in the Coyne school. You can stay as long as you wish and return for further training at any time in the future.

Earn While You Learn! We help students to secure jobs to earn a good part of their expenses while studying.

Send Coupon

Don't delay a minute—send that coupon right now for our big free catalog and full particulars of Free Railroad Fare offer. Remember this special offer is limited so act now!

Mechanical Engineering

Learn at Home!

EMLOYERS everywhere are looking for men with mechanical ability. Splendid salaries and rapid advancement are offered those with special training.

There is an easy, delightful way in which you can learn right at home in spare time. For 31 years the International Correspondence Schools have been giving men and women just the training they need for success in mechanical engineering and more than 300 other subjects. Hundreds of thousands have stepped into good positions through I. C. S. help, but never were opportunities so great as now.

Let the I. C. S. help you. Choose the work you like best in the coupon below, then mark and mail it today. This doesn't obligate you in the least and it will bring you information that will start you on a successful career. This is your chance. Don't let it slip by. The most important thing you have to do is to mark and mail this coupon now.

Stop Wondering How I Teach Piano; I'll Show You, FREE

YEAR after year you've seen my advertisement in all the leading publications, offering to teach you piano in *quarter* the usual time. Year after year my school has grown and grown until now I have far more students than were ever before taught by one man. In 1922 over a thousand students *graduated* from my Piano or Organ course and received their diplomas.

Yet when I first started giving piano and organ lessons by mail in 1891 my method was laughed at. Could my conservatory have grown as it has, obtained students in every state of the Union and in fact practically every civilized country of the world unless it produced very unusual and satisfying RESULTS for its students? See for yourself what it is that has brought my method so rapidly to the front. Write for free booklet and sample lessons.

Now, for the first time, you can obtain sample lessons without charge. In the past I have always been opposed to sending out free lessons, even to persons who were seriously interested in my course. But my friends have insisted that I give everybody a chance to see for themselves just how simple, interesting and DIFFERENT my lessons are and I have consented to try the experiment *for a short time*. Simply mail the coupon below or write a postcard, and the 64-page booklet and sample lessons will go to you at once absolutely free and without obligation.

Within four lessons you will play an interesting piece on the piano or organ, not only in the original key, but in all other keys as well. Most students practice months before they acquire this ability. It is made possible by my patented invention the Colorotone. Another invention obtainable only from me is my hand-operated moving picture device, Quinn-dex. By means of Quinn-dex you actually see my fingers in motion on the piano, and can learn just how to train your own fingers.

When I say that I can teach you piano in *quarter* the usual time, do not think that this is too good to be true. Modern inventions and improved methods have accomplished just as great wonders in other branches of education. You at least owe it to yourself to *investigate*. Send coupon or postcard at once, before the offer of free sample lessons is withdrawn.

Quinn
Conservatory,
Studio PM 65,
598 Columbia Road,
Boston 25, Mass.

Please send me, without cost or obligation your free booklet, "How to Learn Piano or Organ," free sample lessons, and full particulars of your method.

LEARN TO DRAW AND MAKE MONEY

Study in the **SCHOOL** that has the **LONG ESTABLISHED REPUTATION**

Here is a **SIMPLE WAY** **TRY IT**
To Draw a Comic Face

Take your pencil and draw lightly a square (any size). Then add to it with pencil as shown in the small squares above. Erase all pencil guide lines after the drawing is completed. You can draw any kind of comic face by simply changing the shape of the nose, forehead, chin, etc.

Send in your drawing and let us see what you can do. You may have more natural ability than you think. Some of the **cleverest cartoonists** are former students. They had **no experience** before enrolling, but worked at the lessons **during their spare time**, and found Cartoonist **EVANS' METHOD "easy to learn"** and are now **making good money**. It is not hard to learn to draw **originals** when you are shown in a **practical way**. The method above is only one of many **simple methods** explained in the course.

We don't offer any "grand prizes," or "free materials" to encourage enrollments. The school is endorsed by well known cartoonists because they know the students are handled **right**.

Write today for **Portfolio of EVANS Cartoons** and **full information** about the school, and learn how to draw pictures which you can sell. The Course Is Not Expensive.

Only 8 weeks to get a big job in auto & tractor business

Louis Beimer at 24 was made foreman over men many years older. That's not luck—it's Rahe training.

Emanuel Rushfeldt, Alberta, says: "Earning \$10 a day and only 20 years old."

Big Firms Need Trained Men

The Auto and Tractor Business is on the boom. Thousands of trained men will be needed during the next few months. I get calls every day from Garages, Battery Stations, Auto Repair, Welding Shops and other successful concerns for Rahe men. When the big fellows need high grade men they know where to come for them. They want Rahe trained men who know the work from A to Z.

My Training Unusual

Scientific tool training—that's the secret. You do things here according to the latest engineering standards. Thousands of dollars have been spent in modern tools and equipment. That's why my men are at home in the biggest shops in the country. If you want to succeed the way Beimer and Rushfeldt and the rest have—qualify by the same method.

I'll Pay Your Railroad Fare and Board You

In order to fill the openings that now exist, I am making an offer no one has ever made before—Free railroad fare, Free board. But even that is not all. I'll tell you about the rest in my letter. Write me at once.

Rahe AUTO & TRACTOR Schools

CINCINNATI Dept. 903 **CHICAGO**
Ninth and Walnut 4445 Grand Blvd.

My big illustrated training book tells how others are succeeding. It tells many things you ought to know about Autos and Tractors. Write for it and my short time offer NOW. It soon expires.

ACT NOW

Without any obligation, send me your big free book, "The Evolution of Transportation." Also information regarding special temporary offer.

STUART'S ADHESIVE
PLAPAO-PAD

PAT'D APRIL 6 1909

Inner surface is made adhesive to secure the PLAPAO-PAD firmly to the body, keeping the PLAPAO-PAD continually applied and the pad from slipping. No straps, buckles or springs attached. Soft as velvet—easy to apply.

It's the Non-Slipping, yet Non-Rigid Pad and What is Within It That Counts

FREE to 5,000 Truss Sufferers

To the extent of 5,000 sufferers who may apply I will send, ABSOLUTELY FREE, a sufficient quantity of the Plapao to positively convince them that this is the only logical, commonsense way of treating ruptures. Plapao is a highly astringent medication placed within the Plapao-Pad and being absorbed through the skin, creates a wonderful feeling of relief and at the same time tends to strengthen the weakened muscles and thus permanently close the rupture opening. The process of recovery is natural, so you'll have no use for a truss—you can throw it away forever! Old and young have testified under oath that the Plapao-Pads cured their ruptures—many of them long-standing, aggravated cases—without delay from work. Patent allowed in U. S. and foreign countries. Awarded Gold Medal at Home and Grand Prix at Paris.

Send No Money—for a sufficient quantity of the Plapao is sent without charge to enable you to give it a thorough test; you pay nothing for this trial now or ever. Write for it and full information today. Address: Plapao Laboratories, Block 1427 St. Louis, Mo.

Play "JAZZ" on the Saxophone

Become a musician so quickly as to astound everyone. Learn by playing real music—instead of tiresome "exercises." You'll soon become the most popular person in your "set."

NEW EASY METHOD

is a revelation. Nothing else like it for thoroughness and rapidity. So simple that young and old find it easy to play with amazing skill. No "trick music"—but actual notes, learned quickly right in your own home.

Free Book offers this wonderful musical opportunity. Send for it today before copies are exhausted. You'll be astounded, thrilled, fascinated, at this easy, rapid way to become a veritable master of your favorite instrument. Name below the instrument you are particularly interested in.

More Money For You in RADIO

The amazing expansion of Radio has opened up thousands of wonderful new positions on land and sea. Big salaries, fascinating, easy work, short hours, and a wonderful future are offered to ambitious men who get into Radio now.

Take advantage of these wonderful opportunities to step into a big paying position in this great new field. Radio offers you an opportunity to travel and see the world, with all expenses paid, and a fine salary besides. Or you can stay at home and work up to a position paying up to \$10,000 a year. One of our recent graduates secured a position one week after graduating, paying a salary of \$300 per month.

Easy to Learn Radio at Home

Hundreds of men are already earning handsome incomes in this wonder science. If you want to get into a profession where opportunities are unlimited make Radio your career—become a Certified Radio-trician.

Thousands of Certified Radio-tricians are wanted to design Radio sets; to make new Radio improvements; to manufacture Radio equipment and to install it; to maintain and operate great Broadcasting stations and home Radio sets; to repair and sell Radio apparatus; to go into business for themselves; to operate aboard ship and at land stations.

You can easily and quickly qualify in your spare time at home through the help of the National Radio Institute. Prominent Radio experts will help you. Four wonderful instruments are furnished free, making the work thoroughly practical. The same plan that has already helped hundreds of our graduates to real success and real money in Radio is open to you.

Special Opportunity Now Open

The urgent need for radio experts and the calls which come to us for our students prompt us to make a special offer open to new students for a limited time. Through this special offer your enrollment will be accepted at a special rate, and you will receive, without extra cost, our new course in Wireless Telephony.

BIG BOOK FREE

No other field today offers such great opportunities as Radio. Take your choice of the many wonderful openings everywhere. Prepare now to step into the most interesting and best paid profession today. Read about the opportunities open now—the different kinds of work—the salaries paid. Write today for the free 44-page book that tells how America's first and biggest Radio school can make you a Certified Radio-trician in your spare time. Mail the coupon or write a letter NOW. NATIONAL RADIO INSTITUTE, 1345 Pennsylvania Ave., N. W., Dept. 15-E, WASHINGTON, D. C. Men, boys 16 or over should mail coupon immediately

New Profession Attracts Many

Public Welfare Service Proves Popular Field

At last this country seems to be waking up to one of its gravest dangers and most serious losses. A nation-wide movement is now under way to supplement the work of conservation, sanitation and extermination started by the Departments of Agriculture and Forestry a few years ago.

The movement is under the direction of the Exterminating Engineers of America. This organization has recently made remarkable discoveries in this field, and now, in order to meet the tremendous demand for its successful, scientific methods, it is selecting a limited number of men from every section of the country, training them by mail in its newly discovered methods, and starting them in business for themselves as local representatives of the Exterminating Engineers of America.

Men from every walk in life are being attracted to this dignified, patriotic profession. A new untouched field, it offers an ambitious man a most unusual opportunity. In a few weeks, without capital or previous experience, working through the Exterminating Engineers of America, he can become established in a thriving, professional business of his own—a business where there are big rewards and no competition. Representatives of this organization, established in this profession, are earning from \$60 to over \$300 a week.

Recent government reports show a two billion dollar property and crop loss last year from damage done by insects and pests of all descriptions. Investigations indicate that practically every office, hotel, warehouse, ship, farm and private dwelling suffers seriously from some species of pest or vermin. Thousands of specialists are needed to handle this public welfare service. Local representatives are wanted in this vicinity. Full information about the Society's work, the opportunities this new field offers, and how men are quickly qualified to enter it, is given in an interesting booklet which will be mailed free to anyone who will write for it.

Address THE EXTERMINATING ENGINEERS OF AMERICA, Dept. 15, 43 W. 16th St., New York City

California's Auto School

Wants 250 Men to Train for Auto Jobs Now Open

Only men who have the keenest desire to get into big-pay auto jobs are urged to answer this advertisement.

Now, auto opportunities are greatest in California. A million autos in the State—garages needed, repair shops needed, hundreds of auto jobs open.

This opportunity for only 250 mechanically inclined men. National Automotive is a quality school—our practical system of individual and specialized instruction makes it impossible to take thousands of students as some schools do. For this reason National Automotive is known as "Training Headquarters for Auto Experts." Since 1905 National Automotive has trained men to become auto experts. Now a new and greater National Automotive building and thousands of dollars worth of new and special equipment are ready for you. Also wonderful recreation advantages—ball grounds, gymnasium, world's largest stadium, amusements, etc., across the street in 130-acre Exposition Park, all free to you.

FREE Illustrated Auto Book

Sent only to men who are ready to come to Los Angeles to take this splendid course. A book of auto facts and information about National Automotive—tells why National training is more thorough and practical; how we make you a big-pay expert in a short time; how you can earn your room and board while learning. How National free employment service finds your job for you. Write today for this big free book.

National Automotive School

Dept. 25, 4006 S. Figueroa St.

Los Angeles, California

New and finer National Automotive Bldg., located across the street from 130-acre Exposition Park, Los Angeles, Cal.

The many unusual advantages offered by National Automotive training, together with the wonders of a trip to California, will more than repay your railroad fare.

World's Largest Stadium, Exposition Park, Los Angeles

National Automotive

THE SECRET OF DRAWING

WE'LL tell you the secret of drawing, right here! It is *learning of correct principles, observation, practice, and perseverance.*

No marvelous "secret" of drawing exists that will make you a success overnight. In any line of endeavor where the *hand and the eye must be skilled*, practice is essential. But there is a vast difference between *haphazard "practice"* and the scientific practice given by the Federal Course, that develops your talent on a sure foundation by the *quickest possible method*, and makes the work truly a pleasure. Learn at home in spare time. No previous training or experience needed. The Federal Course clearly explains each step, and gives you *individual personal criticisms* on all lessons.

Get This Free Book

"YOUR FUTURE"

Send for this book to-day if you are 16 years old or more and in earnest about your future. It is beautifully illustrated, tells every detail you need to know about the Federal Course, and shows work of Federal students. Fill out and mail the coupon NOW, kindly stating your age.

High School Course in Two Years!

Lack of High School Training has kept thousands of men and women from attaining business and social position. Without this training you are absolutely barred from a successful business career, from leading professions, from well-paid civil service jobs, from teaching and college entrance. In fact, all preferred positions are closed to you without this vital training. You can't stand this heavy handicap nor do you have to. The American School can give you the valuable training you missed.

Put Your Idle Hours to Work You can complete our simplified High School Course within two years by spare-time study. Then you will be mentally equipped to handle a worthwhile position. This course, prepared by some of America's leading professors, will broaden your mind, give you a wider outlook and make you keen, alert and capable.

Remove Your Handicap

Whether you need High School Training or specialized instruction in your chosen line—NOW is the time to remove your handicap. You must know the short cuts and efficiency methods. You must know the HOW and WHY. Over 50,000 students owe their success to training received from the practical, money-making Courses in the coupon below. Let us tell you about this training—about the Course you are interested in. Check and mail the coupon.

"A Dollar A Minute"

"That's what I figure my spare-time study with the I. C. S. was worth to me. It was the best investment I ever made. I'm now making \$160 a week—or almost twice as much in an hour as I used to make in a whole day!"

EVERY mail brings letters from some of the two million students of the International Correspondence Schools telling of promotions or increases in salary as the rewards of spare-time study.

What are you doing with the hours after supper? Can you afford to let them slip by unimproved when you can easily make them mean so much? One hour a day spent with the I. C. S. will prepare you for the position you want in the work you like best. Yes, it will! Put it up to us to prove it. Mark and mail this coupon now!

LEARN CARTOONING the Right Way

Have your ability trained by the school that has developed many famous cartoonists.

If you like to draw—if you find pleasure in picking up a pencil and paper and trying to make sketches or cartoons, don't regard it merely as a hobby. Have your ability developed and earn a good income as a cartoonist.

Hundreds of nationally known cartoonists, such as Branner of the Chicago Tribune; Blosser, who draws "Freckles and His Friends"; Gene Byrnes, creator of "Reg'lar Fellers"; Thiele of the Sioux City Tribune; Fung, of the Seattle Times and others equally well known, took the Landon Course at home, in their spare time, and fitted themselves for their present positions at salaries ranging from \$50 to \$200 and more per week.

Have YOUR talent developed by the same method

What the above mentioned boys did you can do, with the same training. The Landon method of teaching makes cartooning easy to learn. By means of an extensive series of Big picture charts all the necessary details of ORIGINAL drawing are explained step by step, in a clear and simple manner.

FACTS that determine the superiority of the Landon School:

1. Landon School Students are securing the best cartooning positions which open up everywhere.
2. The picture chart method of instruction was originated and is used exclusively by the Landon School.
3. From the very beginning, the Landon Course teaches ORIGINAL drawing. No copy work.
4. Individual attention and criticism of student's work. Personal coaching whenever necessary.
5. Specialized instruction on how to originate cartoon ideas. This is an exclusive feature of the Landon Course.
6. Practical assistance in securing positions for students and help in marketing their work.
7. The price is within reach of everyone who is ambitious to succeed. Easy payments can be arranged.

Write today for full information about the Landon Course, and sample chart by means of which you can test your own ability. Find out what the possibilities are for YOU in this interesting profession. Please state your age.

DEAFNESS IS MISERY

I know because I was Deaf and had **Head Noises** for over 30 years. My invisible Antiseptic Ear Drums restored my hearing and stopped Head Noises, and will do it for you. They are Tiny Megaphones. Cannot be seen when worn. Effective when Deafness is caused by Catarrh or by Perforated, Partially or Wholly Destroyed Natural Drums. Easy to put in, easy to take out. Are "Unseen comforts." Inexpensive. Write for Booklet and my sworn statement of how I recovered my hearing.

A. O. LEONARD, Suite 226, 70 5th Avenue, New York City

STOP TOBACCO

If you cannot stop it, do you know why? Do you know its effect on efficiency? This subject discussed in common-sense manner in booklet written by one who conducted anti-cigarette clinic for L. A. Police Dept. for over a year. Treated thousands—all forms. Booklet free as long as they last. Write Dr. T. H. Trinwith, Black Bldg., Los Angeles, Calif.

Useless as a Rabbit's Tail

The best thing a rabbit can do with his tail is to sit on it. And that's about as much use as some men make of their bodies. There are so many flat-chested, weak-kneed specimens walking the streets these days that a real live man is a curiosity. The average man of to-day has about as much ambition for exercise as a jelly-fish. If he runs 50 yards, he puffs like a steam engine, sits down and feels as though he were ready to die. And, take it from me, he isn't far from it.

Cut it out fellows. Don't be a cake-eater. If you ever knew the joys of a real healthy body, you would start this minute to get one. And that is just what you are going to do. The undertaker has his eye on you, but give him the laugh and say: "Not yet, old boy."

The Gateway to Health

It is open to you. Come on in and get busy. Yes, it means work, but Oh boy! what it brings to you. In just 30 days I am going to put one full inch on your biceps; yes, and two inches on your chest. But that is only the start. Now comes the real works.

I am going to broaden your shoulders, fill out your chest and give you a pair of arms that carry a wallop. Meanwhile I work on your inner muscles surrounding your vital organs. Every breath you take brings a deep inhale of oxygen into your lungs, purifying your blood, so that your whole body will fairly tingle with new life. You will feel real pep in your old backbone. This is no idle talk. My treatment has stood the test of years and is now endorsed by experts as absolutely the shortest and only sure route to Health and Strength. I don't promise results—I guarantee them. Come on now and make me prove it.

EARLE E. LIEDERMAN as he is to-day

Send for My New 64-Page Book, "MUSCULAR DEVELOPMENT"

It contains forty-three full-page photographs of myself and some of the many prize-winning pupils I have trained. Some of these came to me as pitiful weaklings, imploring me to help them. Look them over now and you will marvel at their present physiques. This book will prove an impetus and a real inspiration to you. It will thrill you through and through. All I ask is 10 cents to cover the cost of wrapping and mailing and it is yours to keep. This will not obligate you at all, but for the sake of your future health and happiness, do not put it off. Send today—right now, before you turn this page.

EARLE E. LIEDERMAN
Dept. 2005
309 Broadway NEW YORK CITY

Get the Training that Doubles Incomes!

Rex Cary had a job with a contractor but wasn't satisfied. He saw that big pay went to experts and enrolled for a home study course with Chicago "Tech". He soon became a Chief Draftsman and his salary was doubled, then doubled again and he hasn't reached the limit yet. J. D. Woodside was a carpenter at \$6 a day. He took the Chicago "Tech" Builder's Course, and was made Foreman at \$8 a day—then Superintendent. Now has paying contracting business of his own. These men are cashing in on the spare time they used to get specialized knowledge, and you can do the same.

Chicago "Tech" Experts Will Train You by Mail

Big jobs are waiting for skilled Draftsmen, for Building Experts who can read plans, estimate costs and direct work and for men with other technical knowledge. Don't let your chance get by. Get the training that brings quick advancement and more money.

Now!

Put X in coupon to show which subject interests you and we will send valuable information. If inquiry is on **Drafting**, you also get a **Free Trial Lesson**. If on **Building**, 2 books and **Blue Print Plans**. Mail the coupon today.

Chicago Technical College, 530 Chicago Tech. Bldg. Chicago, Illinois

Without cost or obligation on me, please send instructive matter about opportunities in line I have marked with "X".

"We pay him \$100 a week"

AND he's worth every cent of it. Came here several years ago asking for a job. He got just that—a small job at a small salary.

"Then I forgot about him—hardly knew he was on the payroll until one day I got a letter from the International Correspondence Schools telling me that he had enrolled for a course of home study. It was remarkable the way he went ahead.

"We pay him \$100 a week now and he's going to be earning even a larger salary some day. I wish we had more men like him."

HOW do you stand when your employer checks up his men for promotion? Does he think of you? Is there really any reason why you should be selected? Ask yourself these questions fairly. You must face them if you expect advancement and more money.

One hour after supper each night spent with the I. C. S. in your own home will prepare you for the position you want in the work you like best.

Yes, it will! Put it up to us to prove it. Without cost or obligation, just mark and mail this coupon.

TEAR OUT HERE

INTERNATIONAL CORRESPONDENCE SCHOOLS Box 5522-D, Scranton, Penna.

Without cost or obligation, please tell me how I can qualify for the position or in the subject before which I have marked an X:

**MEN!
YOU CAN
NOW**

STUDY AUTOS AT HOME

**Just What You
Have Been Waiting For
A Real Home Study Course
From a Reliable Institution**

You can now be a student of the Michigan State Automobile School without leaving your home. You can get the advantage of training approved by the auto industry, from the *only school that can give it to you*, even though you can't make a trip here. The twelve years of experience of this great school is now open to you without leaving your job, and with no extra expense.

Thousands of men all over the country have wanted to come to Detroit to learn the Auto Business at the "Old Reliable" M. S. A. S. Many have been unable to get the necessary money together to do so. We have had insistent and continued requests for some way to learn at home, by a good course from a reliable institution of high standing. In response to this demand the Michigan State Automobile School (the factory endorsed school) has prepared a complete Home Study Course in Automobile Mechanics and Auto Electricity. We have been nearly two years preparing this course. It is most complete—thorough in every detail, we have put all of our twelve years of training experience into it. You can now learn by the famous M. S. A. S. factory endorsed methods at home!

Study at Home, or in Detroit—(or Both)

The M. S. A. S. Home Study Course is written so you can learn the business entirely at home. But it includes the privilege of coming to Detroit to take our practical course also, with actual experience in our laboratories and shops. You can start at home and continue your training here later if you wish to. If you plan to come to Detroit later but can't come now, start now at home and have that much advantage. That will save part of room and board expense when you do come. It's a wonderful opportunity for you to make your start now toward success. Remember that this is the only Home Study Course put out by a factory endorsed school. It is also the only Home Study Course giving you the privilege of continuation in a real practical school.

Earn \$125 to \$500 Per Month

The *Automobile Business* is THE Business to get into. Over 12 million cars to overhaul and repair. Millions of batteries, electrical systems, and tires to repair and replace. Thousands of good garages are needed. Can you think of a better business for a man to get into? You can get started now—at home. You don't need to wait until you've saved up enough to come to Detroit for three months. Start now, study at home and come to Detroit later if you want to.

Very Easy Terms—Nothing to Wait for Now

No matter what your situation is you can take this course, on the astonishingly easy payment plan. You pay as you go and you take no chance. We give you a signed absolute guarantee to give your money back if you are not satisfied with the Course. You are to be the sole judge of whether you are satisfied or not.

OUR GUARANTEE

All of our time and effort for the past twelve years has been centered on just one thing—training men for the automobile business. We know exactly what training is required by the man who earns the big salary or succeeds in a shop of his own. We can't afford to put out a Home Study Course that isn't absolutely right, you can depend on that. But to make you doubly safe we will guarantee (in writing) to refund every penny of your tuition fee if on completing our course, you are not entirely satisfied with it.

GET STARTED NOW

Now—when you are working—is the time to prepare and train yourself for times when you may be out of a job. Have a good trade that you can work at anywhere any time. That's the automobile business. With 12 million cars to keep running a trained man can always get a good job or open a shop of his own.

Don't say you never had an opportunity. Here's a golden one placed right before you, and everything made easy for you to take it. Write for full particulars today. The coupon is the first step on your road to success. Mail it to us now.

You can earn MORE MONEY

in the Automobile Business

Learn in the pioneer auto school—twenty years of success back of it—and a reputation for successful graduates. The demand for trained men exceeds the supply. Opportunities exist everywhere.

You learn by actual practice in our \$75,000 shops and use tools and machinery under instructors carefully chosen for their ability to teach. You learn the complete electrical and mechanical details of both gasoline and steam cars. Special

training on electrical systems. Final training in our Commercial Repair Department working on actual jobs. Our instructors show you how and check and inspect each step of the work.

GET TRAINED NOW FOR SUCCESS

The Cleveland Auto School is conducted by expert automobile engineers. Over 7,000 graduates have made good. Our graduates not only get good jobs, but are able to make good in them because

they KNOW. Our classes permit PERSONAL work under close supervision. You have every opportunity for DOING. It isn't all "listen and watch."

OUR STUDENTS MAKE MORE MONEY

We make no promises—no free offers—no baits or allurements other than the fact that we teach you thoroughly. You get the mastery of motor car, truck and tractor construction and mechanism that will place you squarely on your feet in competi-

tion with men of much longer experience. We send out only trained graduates, who make big money. Our record speaks for itself. Our fees are reasonable. Write today for catalog and full information, or come direct to the School and enroll.

MEN-I Will Make You AUTOMOTIVE ELECTRICIANS

"I Teach You a New Easy Way

No longer is it necessary for you to spend years studying electricity—or to be a college graduate to get a big pay job. I have discovered and perfected an amazingly easy way by which any one can become an Automotive Electrician in a few weeks. Ambu graduates are holding down the best jobs in the country—stepping right out of the school into \$75 a week jobs. Yet I guarantee to teach you in 8 short weeks here in Chicago—or right in your own home in spare time. This is no idle talk. I can prove every word I say. I will give you the name and address of my graduates—they will tell you what they are making. And you don't have to worry about getting a job. My employment department will give you Free Service. Write me at once, or mail the coupon. You might as well have one of these jobs and be an Automotive Electrical Expert and get the big pay that is waiting for you."

—C. J. BUCKWALTER,
President

Wonderful New Field Pays \$75 to \$100 a Week After Few Weeks Training

If you want big money, here's your chance. Don't study for months and months learning some business that may not pay you as much as you want to earn. Here is a wonderful new field—Automotive Electricity—the highest paying branch of both the Electrical Field and the Automotive Industry, and there are not enough men by half to fill the thousands of jobs that are waiting—jobs that pay \$75 to \$150 a week. Just think of it! 78% of all automobile repairs are electrical. Yet, not one out of 50 garage men know enough about electricity to cash in on this field. No matter what you now know about automobiles, this is your big chance. For, by an amazingly new, easy method which I have discovered I will make you an automotive electrician in a few weeks of interesting study and equip you to take any of these big pay jobs you want.

Thousands of Men Wanted

Other branches of electricity are crowded. Men are out of work. Ordinary automobile mechanics cannot find jobs. But the demand for men who know Automotive Electricity is so tremendous that the men I train are snapped up the minute they finish my new, easy method of learning.

NO EXPERIENCE NEEDED

You don't have to be experienced. You don't have to know a thing about automobiles or electricity. You don't even have to have a high school education. No matter what you are doing now, no matter what your age, education or occupation, I will fit you in a few weeks to instantly locate any electrical trouble on any make or model of car and have your repairs made while the average man is fiddling around looking for the trouble.

BIG FREE BOOK

This big Free book about Automotive Electricity has started hundreds of men on the road to success and big pay in this amazing new field. Bletcher of Chicago earns \$100 a week. William Bass, of Louisiana, doubled his salary in two weeks. Ellerd makes \$1000 clear profit every month. Ludlow increased his income four times. Every one of these men started out by sending for this book. This is your opportunity. Send for this big book immediately. Don't delay your success a minute.

Jobs Waiting—Hurry

Learn at once all about this amazing new, easy way of becoming an Automotive Electrician. See for yourself what a tremendous future is ahead of you. See what my other graduates are doing. See how you can quickly get one of these big pay jobs with a real man's salary. A special limited time offer is now being made—so mail the coupon at once for the Free book and full details.

Will Your Picture Appear Here Next Year?

If Electricity Interests You Read This Story of Success

W. A. Granville, Power House Foreman of the great Roosevelt Dam in Arizona, is one of the many successful graduates of the American School's Course in Electricity. Read what he, himself, has to say about the work.

Dear Mr. Dunlap:

Your course is thorough and complete, understandable and easy to grasp. The interest you take in your students makes it more like a real study system. The price is reasonable and the terms will suit anyone.

I am Power House Foreman at Roosevelt Dam and you may refer to me at any time as I can speak only favorably of the School in every respect.

W. A. Granville,
% Lakeside Club,
Roosevelt, Arizona.

Mr. Granville is one of the far-sighted men who saw the big future in the electrical field. He chose the simplest, quickest and most economical means to equip himself for one of the many prosperous openings.

By studying evenings, while he worked for his livelihood in the daytime, he was able to prepare himself and when opportunity knocked it found him ready to step into a position of importance and real pay.

He Started Where You Are

If you want to get into this big profitable electrical field—want the kind of job that will satisfy—want the money that goes with a real job; **You Can Do What Granville Did.**

He knew big jobs require special preparation, knew the American School offered the best training in his line. He took that training and got the job he wanted.

What You Can Do in a Year

You can get into the kind of job you have hoped for—can complete the American School course in one year without giving up your present job. Hundreds of our students have done so. You can earn money on the side while you are learning. Let us show you how you can get practical training, with the useless, tiring matter

© A. S. 1923

eliminated—knowledge that you can immediately use, that will enable you to take a big job and handle it thoroughly from the start. Every student receives absolutely free a real Electrical Outfit containing a high-grade motor, Wheatstone bridge, electrical magnet, etc. It is not a plaything but a practical experimental outfit, that would cost you \$30.00 retail. The special instruction papers for this course were prepared by 20 big electrical experts.

We have prepared an interesting booklet—"Your Future in Electricity" which will give you valuable information about this Course, who the instructors are, what it costs and how it has helped others. Just cut off the coupon below, fill in your address and mail it today.

AMERICAN SCHOOL

58th St., Chicago

American School

The American School is not a money-making corporation, but like resident schools and colleges, is chartered strictly as an "Educational Institution, not for profit."

More than 200 famous engineers and educators prepared the special instruction papers for our students.

For over a quarter a century, Big Engineers, Educators and Business Men have recommended the American School. They know that our long experience as an educational institution guarantees better training at less cost than can be given by any school conducted for profit.

AMERICAN SCHOOL

YOU CAN NOW LEARN HOW TO INVENT!

- How to develop your imagination
- How to develop your ideas
- How to get the facts you need for inventions
- How to keep legal records of ideas
- How to use scientific principles of mechanics
- How to avoid wasting time on impractical inventions
- How to apply for a patent
- How to organize a company
- How to protect your rights
- How to market a patent

and hundreds of other vitally important facts which EVERY successful inventor knows and uses. A remarkable new, and much needed course which can be studied in spare time, at home.

Make Your Ideas Pay You a Fortune

You can now learn how to train your mind along scientific inventive lines. No longer need you let your mind wander in unprofitable fields. You can learn how to think of worth-while ideas and make your ideas pay you money. The trouble with most people is that they do not know what to do with their ideas. Millions of dollars go to waste because of these undeveloped ideas. Now for the first time you can learn to harness your thoughts and make them work for you! One little invention, properly developed, may make you independent for life!

You Are Born an Inventor Develop your ability

Raymond F. Yates

Every man, woman, and child is born with creative imagination. Some develop this faculty to a greater degree than others, and those who develop it to the greatest extent are successful inventors. Invention is an orderly process of the mind, which combines two or more known facts to produce a new fact. Anyone who develops the right mental process can become an inventor. Every successful inventor has this type of mind, developed by constant experience over a period of perhaps many years. Heretofore those who succeeded in the field of invention had to discover all the principles themselves. But, now, just as any student of medicine, law, or engineering can take full advantage of all the recorded experience in those fields of study, so can YOU take the same kind of short-cut to the habits of thought, and the methods of work required of successful inventors.

"Invention Is a Science and Should Be Taught as a Profession,"

Says Edison!

Every inventor realizes the hopelessness of groping in the dark for the habits of thought and methods of work required for successful invention. Trying to

invent without knowing the fundamental requirements of invention is like trying to build a bridge without knowing engineering.

This is the first course in practical invention that has ever been devised. Now you can take Edison's advice and actually learn HOW TO INVENT—how to make invention a profession! In simple, easy-to-understand language, you are told how successful inventors work; you learn how to use the secrets of invention that convert a simple little idea into money.

Amazing Book On Inventive Science Free

Fortunes have been made by men who have thought of a "little" idea in a flash—the bottle top, the crimped hairpin, the thin lead automatic pencil, the snap fastener—earned fortunes, yet there are as many fortunes lost by inventors who did not know just what to do about their ideas.

U.S. PATENTS

SEND FOR THIS FORM

DON'T LOSE YOUR RIGHTS TO PATENT PROTECTION

Before disclosing your invention to anyone send for blank form "EVIDENCE OF CONCEPTION" to be signed and witnessed. A sample form together with printed instructions will show you just how to work up your evidence and establish the same before filing application for patent. As registered patent attorneys we represent hundreds of inventors all over the United States and Canada in the advancement of inventions. Our schedule of fees will be found reasonable. The form "Evidence of Conception," sample, instructions relating to obtaining of patents and schedule of fees sent upon request. Ask for them—a post card will do.

480 Ouray Bldg. Washington, D. C.
Originators of forms "Evidence of Conception."

PATENTS and TRADEMARKS

We offer a strictly professional service to inventors and manufacturers in the protection of their patent and trademark rights. Validity and infringement investigations conducted. Correspondence solicited. Moderate fees. Preliminary advice without charge. No literature.

WANTED IDEAS

Inquiries from Manufacturers and Others Who Are
Looking for Good Ideas

PROTECTED BY PATENTS

are constantly being received. Manufacturers are always interested in any new device for which there is a market, which fills a long felt need, which makes production possible at a lower cost, or which will do the work BETTER. There is undoubtedly a great demand today for really worth while inventions.

Your First Step

If you have an idea, send immediately for my blank form "TO RECORD YOUR INVENTION." You should serve your own best interests by filling out and signing this form before you disclose your invention TO ANY ONE. This document will help you determine and establish evidence of invention before filing an application in the U. S. Patent Office. A copy, with full instructions, will be gladly sent free on request.

NEW BOOK "SUCCESSFUL PATENTS" SENT FREE

Every man who has an invention, or ever hopes to have one, should send for a copy of my book "SUCCESSFUL PATENTS." It tells what everyone should know about patents, trademarks, copyrights, etc. It describes my methods, fees and terms, gives information relative to assignment or sale of rights, and instructions in detail. Mail coupon today for a free copy of this book or a post card request will do.

To the Man with an Idea

I offer a comprehensive, experienced, efficient service for his prompt, legal protection, and will endeavor to aid him in the commercial development of his proposition—my service is distinguished by over 12 years' successful practice, and by thousands of satisfied clients and by reasonable fees.

Send sketch, or model, and description, for advice as to cost, opinion as to its patentable nature, etc. Preliminary advice gladly furnished without charge.

Before disclosing an invention, the inventor should write for our blank form "Record of Invention." This should be signed and witnessed and if returned to us together with model or sketch and description of the invention, we will give our opinion as to its patentable nature.

Our Three Books Mailed FREE to Inventors

OUR ILLUSTRATED GUIDE BOOK

HOW TO OBTAIN A PATENT

Contains full instructions regarding Patents, Trade-Marks, Foreign Patents, Our Methods, Terms, and 100 Mechanical Movements illustrated and described; Articles on Patent Practice and Procedure, and Law Points for Inventors.

OUR TRADE-MARK BOOK

Shows the value and necessity of trade-mark protection and gives information regarding Trade-Marks and unfair competition in trade.

OUR FOREIGN PATENT BOOK

We have direct agencies in all foreign countries and secure foreign patents in the shortest possible time and at the lowest cost.

LIST OF PATENT BUYERS SENT FREE

IDEAS WANTED: Send for LIST OF PATENT BUYERS containing unsolicited letters from Manufacturers and others WISHING TO BUY meritorious patents. There is a great demand for NEEDED INVENTIONS. We endeavor to assist OUR clients in the commercial development of their inventions.

SPECIALIZATION—OUR STAFF

The field of invention is so vast that it is impossible for any one man to become an expert in all classes of invention. For this reason we employ a number of patent lawyers and mechanical experts selected for their special knowledge and ability in certain lines of invention.

THE VALUE OF YOUR PATENT

depends on the skill and care with which your case is prepared and prosecuted in the United States Patent office. That every case receives our best efforts, and that our work is done skillfully and thoroughly, is evidenced by the many unsolicited letters of commendation that we receive constantly from our clients. We will furnish upon request lists of clients from any state in the Union for whom we have secured patents.

Our New York, Philadelphia, Pittsburgh, Chicago and San Francisco Offices

We have established for the benefit of our clients Branch Offices in New York City, Philadelphia, Pa., Pittsburgh, Pa., Chicago, Ill., and San Francisco, Cal. These branch offices located in these large commercial cities together with our Main Office located near the U. S. Patent Office, in Washington, enable us to more promptly handle the business of our clients, particularly as the branch offices are in constant touch with the Main Office.

Draftsman's Pocket Rule Free— To Everyone Sending Sketch

To every person of 16 years or older sending a sketch I am going to mail free and prepaid the Draftsman's Ivorine Pocket Rule shown here. This will come entirely with my compliments. With it I will send a 6x9 book on "Successful Draftsmanship". If you are interested in becoming a draftsman, if you think you have or may attain drafting ability, sit down and copy this drawing, mailing it to me today, writing your name, and your address and your age plainly on the sheet of paper containing the drawing. There are no conditions requiring you to buy anything. You are under no obligations in sending in your sketch. What I want to know is how much you are interested in drawing and your sketch will tell me that.

Positions Paying Up to \$250 and \$300 per Month

I am Chief Draftsman of the Engineers' Equipment Co. and I know that there are thousands of ambitious men who would like to better themselves, make more money and secure faster advancement. Positions paying up to \$250 and \$300 per month, which ought to be filled by skilled draftsmen, are vacant. I want to find the men who with practical training and personal assistance will be qualified to fill these positions. No man can hope to share in the great coming prosperity in manufacturing

FREE this \$25 Draftsman's Working Outfit

These are regular working instruments—the kind I use myself. I give them free to you if you enroll at once. Don't delay. Send for full information today.

Chief Draftsman, Engineers' Equipment Co., 1951 Lawrence Av. Div. 93-55, Chicago

FREE

\$80 Drafting Course

There is such an urgent demand for practical, trained Draftsman that I am making this special offer in order to enable deserving, ambitious and bright men to get into this line of work. I will teach you to become a Draftsman and Designer, until you are drawing a salary up to \$250.00 a month. You need not pay me for my personal instruction or for the complete set of instruments.

Send above Sketch and Get This

Ivorine Pocket Rule FREE

and building unless he is properly trained and is able to do first class practical work.

I know that this is the time to get ready. That is why I am making the above offer. I can now take and train a limited number of students personally and I will give to those students a guarantee to give them by mail practical drawing room training until they are placed in a permanent position with a salary up to \$250 and \$300 per month. You should act promptly on this offer because it is my belief that even though you start now the great boom will be well on by the time you are ready to accept a position as a skilled draftsman. So write to me at once. Enclose sketch or not, as you choose, but find out about the opportunities ahead of you. Let me send you the book "Successful Draftsmanship" telling how you may take advantage of these opportunities by learning drafting at home.

Mail Your Drawing at Once

— and Get an Ivorine Pocket Rule Absolutely **Free!**

Ambitious men interested in drafting hurry! Don't wait! This is your opportunity to get into this great profession. Accept the offer which I am making now. Send in your sketch or request for free book and free Ivorine Pocket Rule.

THOROPHONE

TRADE MARK REG. U.S. PAT. OFFICE

For Tone ~ Volume ~ Appearance
High Power Model

The
Worlds
Greatest
Loud-
Speaker

THE air is full of the most wonderful music—great artists, huge orchestras, ensembles, famous bands. Are you receiving this marvelous entertainment with all the original beautiful shadings and with great or low volume to suit the occasion? The Thorophone with a good receiving set will do this for you.

The Thorophone combines perfect tone quality with great sensitiveness and powerful amplifying strength. Far distant stations—even foreign countries—have been brought in

loud and clear over a Thorophone. Its super-sensitiveness enables you to bring in stations you never heard before and to realize the full value of your receiving set.

It is manufactured and guaranteed by America's oldest manufacturer of loud-speaking telephones.

The WINKLER-REICHMANN CO., Chicago

Type - S-5
\$45.00

S-6 consists of the Thorophone "S" type unit mounted on its side in a low, flat, beautifully finished wooden container.

It is arranged to lay on a phonograph and to connect to the phonograph horn. It has a universal adapter, fitting all makes of phonographs.

The loud speaker is the same as in the S-5. This in combination with a good phonograph horn makes a most satisfactory outfit.

S-6
\$35.00

- A. Heavy spun 16 ga. aluminum bell, dull back enamel finish, will not chip. Low permeability. Non-vibrating.
- B. Solid cast iron throat, correct acoustically; dull black enamel finish.
- C. Powerful Viola-like, WOODEN tone arm. Amplifier, retracts, purifies the tone. Dark walnut grain, hand-rubbed finish.
- D. Wood cabinet, dark walnut, piano finish.
- E. Vibrating solenoid coil.
- F. Sound Box Reproducer with controlled mica diaphragm. Much of the exquisite tone quality of the Thorophone is in this construction, which represents the highest development of the sound-reproducing art.
- G. & H. Terminals for A Battery and input with new low safety feature.
- I. Switch controlling A Battery for electric magnet, making it unnecessary to disconnect wires to A Battery.
- J. Powerful thermal electro magnet, the "piano solenoid" of the Thorophone.
- K. Rubber feet protect furniture upon which base may be set.
- L. Induction coil permitting a thousand volts of B Battery. You cannot injure the Thorophone by over-voltage.

† The height is 28 inches

The mechanism of the Thorophone consists of a powerful electro-magnetic solenoid excited from your A battery. This solenoid operates a controlled mica diaphragm, thus combining great amplifying power and sensitiveness with perfect tone quality. The solenoid is built big and strong and requires no adjustment. The Thorophone is designed with a large factor of safety to withstand unusually strong radio currents.

The great amplifying power of the Thorophone has been proven over and over again on comparative tests. Tone reigns supreme in music. The Thorophone's rendition is perfect—the pure, clear tones grip you. You feel the living presence of the artist. The Thorophone is a great musical instrument, built for lovers of fine music.

Vol. 39

MAY, 1923

No. 5

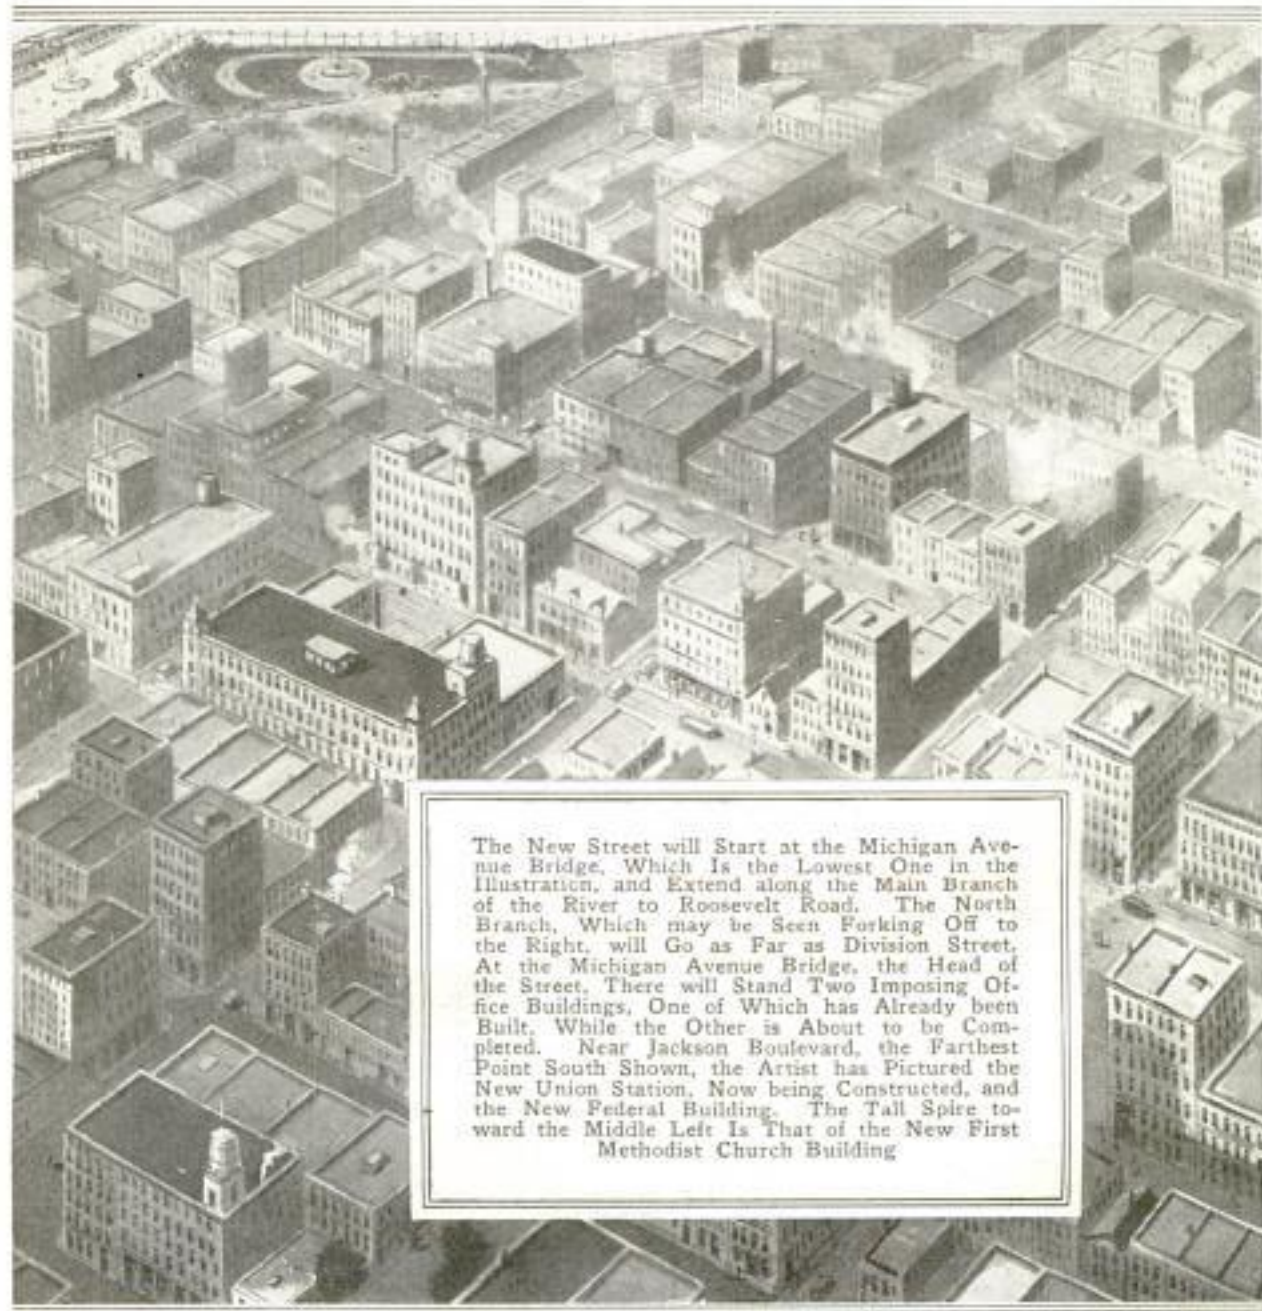

1836 Great Street may Cap Chicago River

BY ARTHUR ARROW, JR.

THE Chicago River, little used by boats, but because of its bridges at vital points a serious hindrance to traffic in that city, may soon be closed to navigation and its area utilized by build-

ing over it a great street, available for motor vehicles of all kinds.

The proposed plan, now in the hands of the Chicago Plan Commission and the Board of Local Improvements, calls for

The New Street will Start at the Michigan Avenue Bridge, Which Is the Lowest One in the Illustration, and Extend along the Main Branch of the River to Roosevelt Road. The North Branch, Which may be Seen Forking Off to the Right, will Go as Far as Division Street. At the Michigan Avenue Bridge, the Head of the Street. There will Stand Two Imposing Office Buildings, One of Which has Already been Built, While the Other is About to be Completed. Near Jackson Boulevard, the Farthest Point South Shown, the Artist has Pictured the New Union Station, Now being Constructed, and the New Federal Building. The Tall Spire toward the Middle Left Is That of the New First Methodist Church Building

Architects, Holabird & Roche⁵⁷
Chicago

1836

a street 200 feet wide, built of concrete slabs on concrete piling about 4 feet above the water level, and extending from the Michigan Avenue bridge along the main river to Roosevelt Road, and up the north branch of the river to Division Street.

According to the plan, it is to pass under existing bridges, as well as any new ones to be constructed, all of which will have headroom sufficient for all vehicles. Sidewalks, 15 feet in width, will run the entire length of the new street, and there will be two driveways, 51 feet wide, each providing for traffic in one direction.

In the middle space, 68 feet wide, there is to be a municipal garage, extending from bridge to bridge, relieving the loop streets and alleys from such parking, and bringing to the city, by means of reasonable charges, a large revenue. Upon the roofs of the garages, it is proposed to have public parks, with gardens, benches, and fountains, thus beautifying the thoroughfare and affording an attractive breathing space for public use. The driveway itself will have no grade crossings, nor will pedestrians need to cross the street. All vehicles will turn into it or out of it with right-hand turns, joining the stream of traffic in the direction in which it is going.

With the bridges fixed as permanent extensions of the streets they are connecting, it will be possible to erect on their sides attractive shops, such as may be found in Florence, Brussels, and other European cities.

Along the east and west sections of the river, the 200-foot stretch will not occupy the entire area, but space ranging from 50 to 90 feet will be added to the present dock line, and filled in for building purposes. Arcade streets, in the middle of all the blocks, leading to thor-

needed for lighterage and boat service, Angus Hibbard, of Chicago, the originator of the plan, states that experience has shown the coming of the automobile to have made lighterage uneconomical. In ordinary cases, he says, freight must first be unloaded from a car to a truck, then hauled to a river dock and transferred to a lighter. The lighter must then proceed to another dock, the load removed to another truck, and hauled to its destination. It is more economical to load such freight from car to truck and proceed directly to the destination, and this is the general practice. Even in cases where the destination points are immediately on the river bank, the lighter is not generally used as a means of conveyance. No one has gone into the lighterage business.

Among the many minor points involved, it may be mentioned that motor trucks loading with freight at near-by railway sidings, or warehouses, will be able to reach the new street at the nearest entrance, take their way along it, and then enter the loop at the point nearest their destination. A great part of the motor trucking would thus be taken out of loop streets which must now be used. Or again, the space now used for railway tracks, and for loading and unloading cars, might be disposed of at considerable profit. The cap will not in any way interfere with the utility of the proposed canal to the Mississippi River, as, by means of the Sag branch of the canal, boats would go directly to South Chicago harbor, where almost unlimited dockage is available.

All in all, the plan, claims Mr. Hibbard, will open up traffic lanes of great advantage to the city, will make the down-town district a more beautiful place to work in, and, incidentally will, in a direct way, help pay for itself.

Cross Section at One of the Bridges: The Distance from the Water Level to the Street will Be 4 Feet, and from the Street to the Roof of the Bridge About 14 Feet. The Sidewalks will Be 15 Feet Wide, the Driveways 51 Feet, and the Garage Space between Them, 68 Feet. Each Section will Be Large Enough to Accommodate 250 Cars

oughfares paralleling the driveway, will be another interesting feature.

Answering objections that the river is

Meanwhile the river will flow on, carrying away the city sewage, at present its most useful function. This waste mat-

Vista of the Proposed Park and Driveway: On the Roof of the Municipal Garage There will Be Gardens, Fountains, and Benches, While Built about the Bridges will Be Stores and Shops

ter is carried to a drainage canal southwest of the loop, which in turn empties into the Illinois River.

It is estimated that the improvement, if adopted, will cost approximately \$2,500,000 per mile.

1815

LICENSE PLATES REQUIRED FOR DENVER CYCLISTS

Since the passage of an ordinance by the Denver city council requiring all bicycles to carry license plates, the police department has been busy attaching plates to the bicycles of owners who are eager to take advantage of this protection against thieving. The license costs but \$1 a year. All police officers are instructed to look out for bicycles without plates, and secondhand dealers must report the license numbers of wheels for sale.

Cyclists of Denver, Gathered at Police Station, to have License Tags Affixed to Their Wheels. The Measure was Ordered for Protection against Theft

Cmt. Jos. H. Langer, of The Post, Denver, Colo.

1916

The Model Gives an Excellent Idea of How the New Cook County Zoo will Look When Completed. In the Building to the Left There will Be Refreshment Counters, and in the Court, Tables from Which the Visitors will Have an Unobstructed View of the Numerous Animal "Cages"

CAGING ANIMALS IN MODERN ZOOS

BY HJALMER LINDQUIST, *713 Sunset Blvd, Los Angeles, Calif.*

HOWEVER well satisfied captive wild animals may be in a zoölogical cage, there are always sentimental persons who find cause to pity the beasts and censure those public officials they think responsible for this seemingly cruel confinement. The provocation for such criticism can be traced in most instances to the cage. The zoo cage is exhibited more than the animals in it. There is too much evidence of the prison, and not enough of the frolicsomeness of the animals.

The solution of the problem has been found in not only making the home of the animals more agreeable, but also in having the cage in appearance proclaim this quality to everyone who sees it. Thus, in the latest practice, all bars are done away with, and the animals are placed in a habitat such as they might well choose for themselves. Then pity for the beasts vanishes and real enjoyment is found in observing them.

Perhaps the latest, and certainly one of the finest examples of a barless "cage," is now being completed at St. Louis, Mo. Though not radically different from similar cages in Denver and in some foreign cities, it has incorporated in it many little refinements that place it in a class by it-

self. The barless cage, as is quite generally known, consists of a three-sided arrangement of rock with a wide moat in front. The sides, of course, are so built that it is impossible for the animal to climb over or jump from them, while the moat is equally impassable.

In making the rock background for the St. Louis cage, which, by the way, was made to exhibit bears, the forms were first copied in glue molds from natural limestone ledge rock along the Mississippi River. These were then made into plaster molds, fitted together, and supported to form the wall design facing the interior of the dens. Finally plain and colored mortar was sprayed upon the forms, and the surface brushed over with muriatic acid.

Behind the back wall of the den is a feeding room extending the full width. It is entered by the bears through openings left in the back wall, the keepers using a special passageway also built in concrete. If desired, the animals may be separated in this room by a series of gates which are ordinarily left open. Underneath are mating rooms, and rooms for the mother bear to rear her young.

One of the most ambitious undertak-

1916

A Side View of the Barless "Cage" Recently Completed at St. Louis, Missouri, Showing the Moat, the Width of Which is Slightly beyond the Length It is Possible for a Bear to Jump: The Water, Contrary to Usual Belief, is Not Intended as a Safeguard for the Visitors but Rather as a Means of Recreation for the Bears. The Barrier, of Course, would Be Equally Effective without Any Water. Below is a General View of the Den, Showing How the Scene Appears to the Spectators. Openings in the Rock, Which may be Observed at the Right, Lead to Feeding Chambers, and Other Special Quarters for the Animals.

ings of this kind—a zoölogical park in which not only the bear den but all the other animal quarters, with few exceptions, are to be of the barless type—is being planned for Cook County, Illinois. The county owns a tract of forest land a short distance from Chicago, and it is there that the new zoo is to be built. If present plans are adopted, and it seems that this is likely, the county will have a zoölogical park distinctly different from any other in America.

From the entrance the visitor will see stretched before him a natural panorama of hill, rock, stream, and forest—all inhabited by wild beasts, and seemingly unconfined. Off toward his left will be zebra, and ostrich, and polar bear. Then

as he turns, he will see the lions, bears, tigers, antelope, monkeys, and other animals. Perched on a rocky mound, some 200 feet above the level of the surrounding land, and about in the center of the park (which will be about a mile long, and a half mile wide), will be the mountain goats. How utterly unlike anything America has today!

Not even the spectators will be seen, for while walks are to be arranged so that visitors may come within close distance of the animals, they will not be visible from the main entrance. It seems that a new era is about to be ushered in, in zoölogical work, and that America, not always among the first in this field, is now to take its place as the leader.

**HANGING DUSTER CLEANS
AUTO TOP IN GARAGE**

Hanging from the ceiling of the home garage, a new duster automatically cleans

Auto-Top Duster, Hanging from Ceiling of Garage, Automatically Cleans Top of the Car as It Enters and Leaves

off the top of the car every time it enters or is driven out. It is made of a soft woolly material, and hangs at such a distance from the ceiling that it brushes the top as the car passes under it. Proper attention to the top of an automobile is often neglected because, without a special device such as this, it is difficult to get at it.

**GOVERNMENT PLANES TO AID
RED-CROSS RELIEF**

Air craft of the army and navy and the Post Office Department will cooperate in the future with the American Red Cross to the extent of being available for the speedy transportation of disaster-relief personnel. Although completion of the

arrangements for this purpose have only recently been announced, the War Department has already notified the Red Cross officials that airplanes would be placed at their disposal to carry such aid to the scene of any disaster, upon telegraphic request from a duly authorized Red Cross agent.

**TRAP DRUMMER'S CASE HAS
SPACE FOR ACCESSORIES**

A newly designed musical-instrument case is made for the use of a trap drummer and contains space for his drum and its accessories, as well as for sheet music and a uniform. Made of a chemically treated fabric, it is said to be strong and durable. Fiber disks fit over the cymbals to hold them in place, and a tray holds the uniform. The cases are made in sizes for drums from 13 to 15 inches in diameter.

Front Elevation and Entrance to the Nonsectarian Church Which will Soon be Opened at Wellesley Hills, Massachusetts, as the Gift of a Local Resident: On the Church Platform will Be a Radiophone Receiving Set, and Distributed about the Auditorium will Be 100 Earphones

NEW CHURCH TO RECEIVE SERVICES VIA RADIO

BY F. N. HOLLINGSWORTH,

168 Marlborough St., Boston, Mass.
213 Trinity Bldg.

THE first wireless nonsectarian church in the country will soon be opened at Wellesley Hills, Mass., the gift of Roger W. Babson, a well-known statistician. In this church the usual radio Sunday services will be reversed. That is, instead of the service being broadcast from it, as in the case of St. Paul's Cathedral and other churches near Boston, services will be broadcast to it, either from other churches or by special arrangement.

On the church platform will be a

Plan of the Main Auditorium and Stage of the New Radio Church, to be Finished in June: The Seating Capacity will Be 980. There will Be No Pulpit

radiophone receiving set, and out of its loud speaker will come the prayer, music, sermon, and other transmissible features of the regular church service. As it is planned to conduct services for several different denominations, this will, of course, necessitate a workable schedule. For example, at 8:30 a. m. there may be a sermon for Catholics, sent very likely from Schenectady or New York; at 9:30 there will be a service for Baptists broadcast from President Harding's church

Side Elevation of the Church: On Sundays, Services via Radio will be Held First for Catholics, Then for Baptists, Congregationalists, and Christian Scientists, in the Order Named

at Washington; at 11:30 a service for Congregationalists; and at 12:30 a service for Christian Scientists. It is thought that this arrangement will help solve the difficulties of the rural church, and that it will be a new power for good.

Collections taken up at the several denominational gatherings will go to the denomination holding that service.

☛ A proclamation by the president has established the Pueblo ruin, near Aztec, N. M., presented to the government by the American Museum of Natural History, as a national monument.

1822 ARKANSAS RIVER BRIDGE TO BE WAR MEMORIAL

The completion of a five-span concrete-arch bridge over the Arkansas River at Little Rock, marks all but the final step which the Bear State is taking to honor the memory of its sons who fell during the war. Final tribute will be paid shortly, when the splendid structure, almost 3,000 feet long, will be dedicated as a war memorial, with fitting ceremony. The bridge will serve as one of the most modern traffic spans in the country,

and will carry a 60-foot roadway across the river between Little Rock and North Little Rock. In addition to vehicular traffic, provision is made for two lines of street-car tracks, and pedestrians will be amply accommodated with two 10-foot walks, one on each side. Long land approaches on each bank form part of the bridge proper, the river crossing being made by arches only, each having a span of $202\frac{3}{4}$ feet.

A Bird's-Eye View of the New Concrete-Arch Bridge Thrown across the Arkansas River at Little Rock: This Structure was Built to Commemorate the Soldiers, Sailors, and Marines Who Died during the War. Five Arches Span the River, with Long Approaches on Each Bank

his start from Wainwright to the nearest radio station, some 400 miles away. From the radio station the word will be sent to the scout planes at Spitzbergen, which are to be on the lookout to render any possible assistance on his arrival. It is expected that the bonfire signals arranged will convey the news in a few hours. Even if the weather or other agencies interfere with some of the signals, it is believed that the Eskimos in charge will be able to make connections by runners, and that thus the message will be completed on schedule without difficulty.

crew, will soon make his farewell bow to the public. This new car, which is about 400 pounds lighter than other American racers, has a piston displacement of only 122 cubic inches, is 4 inches shorter, and 4 inches narrower than usual. A polished steel mirror will give the driver a view of things at the side and in the rear. The body is constructed along airplane lines, and, although no attempt was made to force it, the car made 110 miles an hour in a recent trial. This is only another step in the tendency of recent years, to develop high-speed cars of low weight with small motors.

Lumbermen's Association, Henry Alder

WOOD-WASTE BRIQUETTES AS GOOD AS ANTHRACITE

616 Seattle
Wash.

BY LAWRENCE WM. PEDROSE, 1453 W
54th St., Seattle, Wash

CARBONIZATION and briquetting of sawdust and other waste wood material from lumber mills and wood-working plants is an important new industry developed in the Pacific Northwest through experiments financed by leading lumber manufacturers of the district. The product is a fuel high in fixed carbon, low in volatile constituents and ash, and equal to Pennsylvania anthracite, making it ideal for domestic, industrial, and metallurgical purposes.

How profitably to utilize wood waste has long been a problem confronting lumber manufacturers. From data gathered from Pacific-coast mills, it has been ascertained that a mill cutting 200,000 board feet of lumber daily has 200 cords of waste after its own fuel requirements have been taken care of. In the larger cities and industrial districts part of this waste is utilized as hogged (chip) fuel or as firewood, but the cost of distribution is so great that the average mill operator cannot afford to engage in the fuel business, and usually sells the waste to fuel dealers at a very low price to get it out of the way.

The lumber mills of the states of Washington and Oregon alone cut approximately 9,000,000,000 board feet of lumber annually, which means approximately 9,000,000 cords of wood waste, based upon a conservative estimate of one cord of wood waste to every thousand board feet of lumber. Hence it will be seen that utilization, in a practical way, of this waste is of great economic importance.

Experiments in the carbonization and briquetting of wood waste were made recently at Centralia, Wash. It was found that carbon briquettes could be successfully produced from waste wood at a cost of \$8 a ton, constituting a fuel equal to the best anthracite coal in every way. The process of manufacture is not intricate, and the plant is self-contained in that the material used for binder is obtained from the waste wood itself.

Hogged wood is run through a rotary drier, where a part of the moisture is removed, and conveyed to retorts. In the retorts the material is carbonized; it is then ground through a cage grinder, con-

ditioned by a formula on which patents are pending, put through a secondary grinding process, passed into a mixer and combined with the binder, again conditioned, and then pressed into briquettes ready for the secondary retort. In the secondary retort the lighter oils of the binder are recovered, leaving the active elements with a physical structure sufficient to withstand any condition that might arise while the briquettes are being consumed, and forming a sootless, smokeless fuel.

Investigation by a competent staff of engineers has shown that a 60-ton per day plant of finished briquettes, which would require approximately 150 cords of wood waste per day, can be operated profitably by a mill cutting 200,000 board feet of lumber a day and would absorb the surplus waste after the mill's own fuel requirements were taken care of. The cost of such a plant at the present time is about \$150,000. This plant will produce 20,000 tons of briquettes annually at a cost of \$8 a ton. It has also been found that from each

Fuel Briquettes. Like This, Made from Wood Waste, are Said to Equal Anthracite

ton of briquettes there can be obtained 15 gallons of tar oil, valued at \$3; 30,000 cubic feet of gas, valued at \$6, and seven gallons of acetone alcohol, valued at \$5.25, or a total valuation of \$14.25.

Because of their structural strength and the absence of any injurious impurities, the carbon briquettes are declared ideal for the smelting of ores. During the experiments, special tests were made to demonstrate these qualities. At an additional cost of 25 cents per ton, briquettes were produced having a compression strength of 650 pounds per square inch. Since a strength of 300 pounds per square inch is ample to resist the load in a 90-foot blast furnace, the importance of the new briquettes as a metallurgical fuel is readily seen.

Street cars equipped with roller bearings are soon to appear in St. Paul and Minneapolis, and it is expected this departure will make the operation of the cars almost as noiseless as eight-cylinder automobiles. In addition it is believed 12 to 15 per cent on power will be saved and service speeded up.

DUGONG FISHING IN AUSTRALIA

The Australian land fauna is noted for its many exclusive specimens, but even the surrounding sea offers some queer animals unknown in most other waters. Of these, the dugong, also known as the sea cow, but not to be confused with the animal of northern latitudes also so designated, is one. While it is found elsewhere around the Indian Ocean, it is caught mainly in the waters of Northern Australia, and the fishing, though done on a small scale only and by hired native fishermen, gives good returns to the few Australians who have taken up the industry. The dugong is a warm-blooded mammal, and its flesh is much appreciated for its fine flavor, in which there is no suspicion of fishiness. Salted and smoked, the meat serves as an equally palatable

bacon, and the "blubber" gives an excellent oil or lard with all the virtues of cod-

MICHIGAN NOW HAS ITS OWN 731 REINDEER HERD

Will reindeer thrive in Michigan?

State game officials are making a very practical test in order that they may answer this question to their complete

Close-Up of a Specimen of Norway Reindeer, Imported from That Country by the State of Michigan: Both Male and Female Reindeer Have Antlers of Great Spread

satisfaction. On an immense tract of cut-over land, near the city of Grayling, in Roscommon County, is a herd of reindeer imported several months ago direct from Norway, as recorded at the time in this magazine. Extreme care was taken in shipping the animals. Each had a crate to itself, and as a result not a

single one of the entire shipment was lost in transit. What is more, the original herd of 60 has made a remarkable increase, and, at present, counts 81 head.

Upper Michigan has tens of thousands of acres of cut-over land that is lying practically idle. Many settlers have attempted to raise sheep here or tried to farm the land, but have failed. Stockmen have had to face the fact that, for several months, the ground is covered with snow. Their winter feed bills have been so high that scarcely any profit could be realized.

Then the State Board of Conservation came along and said, "Surely there must be some way to make these lands profitable throughout the whole year. There seems to be no good reason why the grasses and wild forage crops of our northern peninsula would not raise to healthy maturity any game animal."

It was this belief that led the state to buy the herd of 60 reindeer, 10 male and 50 female, from Norway, at a price of \$125 each. The reindeer have an average weight of about 250 pounds, which means about 180 pounds when the animal is dressed.

The herd is to be placed on a 62,000-acre tract of cut-over land bordering the south shore of Lake Superior.

A Herd of Reindeer, Recently Imported, Making Themselves at Home on a 62,000-Acre Tract in Northern Michigan: They Are under State Control, and the Experiment is being Watched with Interest on Account of the Solution It Affords in Putting to Use the Great Waste Lands of the Upper Peninsula

ELECTRIC MUMMIFICATION

BY R. C. FOLGER

THE long-sought art of preserving the human form after death in nearly lifelike aspect, has apparently been achieved in a scientific method developed by an expert embalmer who, as a pioneer in this field, has devoted years of thought and patient investigation to the work. The method not only promises to afford a means of perpetuating the illustrious dead more successfully than the Egyptian mummies, but offers possibilities for the disposition of the dead in sanitary ways that introduce none of the objections of ordinary burial methods nor of cremation. As in many other modern inventions, electricity plays the leading part in the apparatus wherein the body is sterilized and dehydrated beyond the point where the organisms that cause decomposition can exist. The method also offers an opportunity to test for suspended animation by the application of electricity under proper control and of reviving apparently dead persons under the stimulating action of the electric current.

The apparatus which has been assembled at small cost by the inventor himself, has the outward appearance of a sarcophagus and consists of a chamber which receives a rolling copper table upon which the body is placed. This table forms one terminal for the contact with the body and the other terminal consists of a number of contacts made on the upper surface of the body. When the circuit is closed an electric current passes through the body at many different points, setting up sterilizing action due to the heat produced by the resistance offered by the body, and an electrolytic action that reduces the moisture. It is possible that the sterilization is assisted by the breaking up of saline solutions into chlorine and caustic soda, both active sterilization agents. Electric-resistance units placed below the table in the chamber supply additional heat, and an exhaust fan changes the atmosphere in the chamber at regular intervals. The electrical-control devices provide for regulation of the temperature and current by means of red signal lights and an alarm bell as well as recording instruments. The success of the method is attested by experiments performed upon dogs and cats, and by a test upon the body of a man who was the victim of a bullet. The test upon the man's body was witnessed by persons of authority, and they were surprised to note the absence of any discoloration due to the method, and that the form showed so little apparent shrinkage, although there was a loss in weight of about one-fifth.

This View Shows the Steamship "Leviathan" at the Dock at Newport News, Where It has been Undergoing a Reconditioning That will Cost \$10,000,000. It was Predicted by Foreign Experts That the Big Ship, Which Had Innumerable Patterns and Materials Peculiar to German Industry and Workmanship, could Not be Reconditioned in the United States. It is Now Pointed Out That This Work is Not Only Nearly Completed, but That the United States Shipping Board will Deliver a Far Better Product than First Slipped from the German Ways. To Reproduce the Ship Today would Cost About \$30,000,000

PHOTO COPYRIGHT, UNDERWOOD & UNDERWOOD

**"LEVIATHAN" RECONDITIONED
AS MOST PALATIAL LINER**

THE steamship "Leviathan," second largest ship afloat, which during the war carried 250,000 doughboys to France—on one trip 15,000 were transported—is soon to reappear as a passenger liner that is expected to be a sensation for speed and luxury. No pains have been spared by the United States Shipping Board to make the reconditioned ship safer, faster, more convenient, more economical to operate, and even more sumptuously appointed than the original German masterpiece. The boat has been converted into an oil burner with a tankage capacity of 10,000 tons, which is enough to operate the 46 boilers for about 10 days. The engines develop 70,000 horsepower. In addition to social rooms, the ballroom, dining rooms, smoking rooms, and tearooms, which will compare with the best on land, there will be a well-equipped gymnasium, swimming pool, special health baths, a small hot-house, and accommodations for dogs.

FLOATING LAND FOR HOME SITES IN HOLLAND

A View Just beyond the Limits of the Village of Giethoorn, in Holland, Where Sections of Water-Logged Land are Cut Away and Floated to Town: A Long Narrow Piece is being Guided along the Canal, and is Seen Just Arriving at the Village. Great Maneuvering Skill Is Necessary for This Work

OF all the countries of Europe, Holland affords, perhaps, the best example of how the topography of a country affects the habits of its people, and influences their lives. A considerable portion of the Low Country lies below the level of the sea, and it was to resist

its cruel invasions that the gigantic levees, or dikes, were built. Nevertheless, some of the flooded regions, periodically inundated by the sea, have been water-logged for centuries, and one of these is the province of Overijssel. Way up in northern Holland it lies, skirted by the

Four of the Professional Land Cutters Slicing Off a Section of Ground Preparatory to Floating It to Town: It is Then Carefully Guided through the Canals and Brought to Rest Wherever the Prospective Home Builder Desires to Build His House

A View of "Main Street" in the Floating Village of Giethoorn, in the Province of Overijssel, Holland: The Skillful Dutchmen have Towed and Pushed Their Floating Strip of Land Right into Town, and Are About to Guide It under the Bridge. One of Them is Giving It a Shove to Clear It from the Bank and Start It under the Bridge

mighty Zuider Zee, and perhaps its quaintest spot is the floating village of Giethoorn. Taking advantage of the condition of the soil, these hardy Dutchmen have learned how to cut away sections of turf, and then float them to the spot where they are wanted. Considerable skill, of course, is necessary to escape a ducking, because the footing is uncertain and slippery, and the marshland deceptive and treacherous. Poles, about

12 feet in length, are employed to shove off the floating home sites, which are cut away beyond the village limits and then guided to town. Some 8 or 10 men follow this work exclusively, and, naturally, are very adept in the handling of their poles and the "islands" in their charge. All of Giethoorn has been built up in this manner, until now it boasts a population upward of 2,000, living on the fertile strips which bank its canals.

This Sled, Built with Cylindrical Runners, That will Hold Luggage, Glides over Ice, Snow, or Water

SLED CAN BE RUN OVER ICE, SNOW, OR WATER

1763

A horse-drawn sled which glides equally well over ice or loose snow, and which, because of its pontoonlike runners, can also cross shallow streams or other bodies of water, has been made by a Canadian. The runners, the only unusual feature of the sled, are air-tight metal cylinders, having along their underside a converging projection which enables the sled to glide over ice. The peculiar build of the cylinders makes it also possible for them to be effective in soft snow or water. There are doors in the cylinders, so that the interior can be used for carrying luggage if so desired.

1665 PORTABLE SAND HEATER FOR PAVEMENT REPAIRS

The difficulty of making a suitable sand and asphalt mix under heavy-traffic conditions has prompted a southern street-car company to devise a portable sand-heating unit, along the same lines as the asphalt units which have long proved effective. A motor-driven drum, taking power from the overhead trolley wire, is charged with sand, then revolved slowly over a furnace contained in the unit. A temperature of 400° F. is attained, which has the effect of driving off the moisture and thereby facilitating a mix with the previously heated asphalt. The materials are used in equal parts, and the mix is poured between the

granite blocks alongside the street-car tracks. When carefully prepared, as in this case, the mixture forms an excellent filler and binder for this purpose.

A Portable Repair Outfit for Pavement between, and Abutting, the Street-Car Tracks: The Sand and Asphalt are Heated to 400 and 370° Respectively before Mixing, the Higher Temperature of the Sand Keeping the Mix Sufficiently Hot to Flow Readily

THE AMERICAN DOG DERBY

BY O. J. GRIMES

1037 Third Ave Salt Lake City Utah

SO long have we associated dog teams and sledges with Alaska and the Hudson's Bay country that we have come to believe that this mode of travel is peculiar to the regions of the Far North. But it isn't. In that section, west of Yellowstone Park and between the Union Pacific winter railhead at Ashton, Ida., and the Great Northern, trappers, woodsmen, and ranchmen travel by dog sledge through the long winter and frequently haul burdens of a thousand pounds or more.

In celebration of the snowfall, so necessary to crops of farm and range in the region, and to afford winter recreation, the community of Ashton decided to make use of the unusual feature of the dog sledge. It organized the American Dog Derby Association, and at mid-winter of each year invites anyone with a dog team to participate in the American dog derby, a test of speed, gameness, and clever driving, rather than of endurance. It is a 25-mile course, which is sufficiently grueling when covered in less than 2 hours 10 minutes, as it was this year.

The huskies of the North are not looked upon with favor in this country

because the distances are not so great as in Alaska and greater speed is desired. Bird dogs, crossbred with German and Belgian police and even Russian wolf and staghounds, are most favored, although this year some shepherds also were given a trial. But the bird dogs were the winners. Of ten teams starting, five made the 25-mile journey almost in a bunch, less than 18 minutes separating the first and the fifth, and the two lead teams crossed the tape just 14 seconds apart.

Aside from forming the feature of a winter carnival that is attracting international interest, the dog derby is stimulating an unparalleled interest in dog breeding. The intelligence of the bird dog, as well as its gameness, is being crossed with the strength of the police dog, and the results being obtained are something watched closely by dog fanciers throughout the country.

Drivers of this country admit that huskies are better for the distances of the Far North, but insist the dogs they are breeding can run rings around huskies on a 25-mile course and are issuing challenges to their brethren of the North to come down next winter for a test.

PHOTOGRAPHS WIRELESSED BY RADIO

The Photograph of President Harding Wirelessly from Washington to Philadelphia

Another Good Example of Wireless Photography in Profile

A Picture Sent Full Face: The Blemishes are Attributed to Static Interference

The first photographs ever transmitted by radio in the United States were made recently by the United States Naval Radio Station at Washington, and wirelessly to Philadelphia. The apparatus by which these pictures were sent is the invention of C. Francis Jenkins, who is also the inventor of the first motion-picture machine, and a description of it appeared in the December, 1922, issue of Popular Mechanics. Its salient feature is a prismatic

annular rim which is rotated at high speed, transferring light impulses into electrical impulses and then into radio impulses. An 1,150-meter wave length was used in the sending of these photographs. Although the transmitted pictures are not perfect, they are easily recognizable, and experts state that the faults are remediable and will be eliminated with improvements in radio reception. The sending was done from ordinary photos.

Dragline Excavator Operating a Pile Driver during Construction of a Dam across the Miami River at Hamilton, Ohio: In the Background Appears the Gravel Plant That was Built to Handle Gravel Accumulating in the Artificial Settling Basin Created by the Dam

COÖPERATION WITH RIVER AVERTS FLOODS

BY IVAN E. HOUK, *City Engineer of Dayton, Ohio.*

EVERYONE who has walked along our river channels knows that during flood periods the water moves the gravel along the bottom, depositing it in some places and scouring it out in others, often filling in sewer outlets, choking navigable waterways, and interfering with various commercial activities.

Inasmuch as this habit seems uncontrollable, except by the construction of large and expensive works, the Miami Valley flood-control authorities decided to keep the improved channel at Hamilton, Ohio, clean by coöperating with the river rather than by attempting to curb its natural tendencies. Consequently they built a concrete dam across the channel at the upper edge of the city, just high enough to form a pool and cause the gravel to settle; and then ar-

anged with a local gravel company to build a plant at this location and to take its supply from this artificial settling basin.

Both dam and gravel plant are now completed and operating as planned. If at some time in the future the floods should deposit gravel faster than the market demands, the excess can be excavated and stored along the bank. If, on the other hand, the floods do not bring the gravel fast enough, the bed of the river can be excavated below its natural level.

In constructing the dam, a dragline machine was used in excavating for the foundations, in driving piles, and in building cofferdams around the different sections of the dam. Five gaps, 24 feet long, were left in the first section, to

First Section of the Hamilton, Ohio, Dam during Construction: Note the Gaps Left in This Section to Carry the Flow of the River While the Remaining Portion was being Built; Also the Flexible Concrete Apron along the Downstream Apron

carry the river flow while the remaining portion was being built. These were filled in one by one. The dam is protected from undermining by steel sheet piling along the upstream apron, and by timber piling and a flexible concrete-block mattress along the downstream apron, the flexible mat being 40 feet wide.

CONCRETE ROAD FORM HAS

1864 NEW FEATURES

Several interesting changes are apparent in a new type of concrete road form which has recently appeared on the market.

The new form is of steel, $\frac{3}{16}$ inch thick, and comes in 12-foot sections instead of the usual 10-foot lengths,

thereby reducing the number of joints necessary to be installed. The top edge of the form has been made rounded, making it impossible for small stones or concrete to lodge there and cause the finishing machine to ride high. Flat steel stakes, of 18-inch penetration, pin the form to the subgrade.

NEW TREATMENT IMPROVES QUALITIES OF SILK

Stronger and more elastic silk is obtained by a special treatment recently developed in France. After weighting, the silk is treated with tin phospho-silicates and organic compounds in a suitable solvent at temperatures up to the boiling point. Preference is given to compounds that are soluble in water, or evaporate at ordinary temperature, or do not give colored reactions, which include compounds containing nitrogen and sulphur. Useful organic compounds mentioned are chlorine, betaine, alkaloids, and others more easily reduced than fibroin.

SAND SPRINKLER MAKES ICY SIDEWALKS SAFE

1799

When the sidewalks in Milwaukee are slippery with ice, a sand-sprinkling machine is used to make them safe for

owned by City of Milwaukee

Machine Used to Sprinkle Sand on Icy Streets: A Chain Running on Sprocket Wheels Works an Agitator That Scatters the Sand from the Box

pedestrians. Mounted on two wheels is a triangular box filled with sand and with an opening at the apex of the triangle. A chain runs around a sprocket on the inside of one wheel and around a smaller sprocket just below the outlet. As the chain moves it engages a third sprocket which operates an agitator in the outlet and sprinkles the sand upon the ground.

EGG-GRADING SCALE TELLS WEIGHT PER DOZEN

To make the grading of eggs by weight more convenient, there has been invented an improved egg-grading scale, which gives the weight per dozen of any-size

With This Grading Scale, the Lowest Number Visible on the Blades to the Left Indicates the Weight per Dozen of Any Egg Which is Placed in the Cup

egg. One side of the beam consists of several blades of uniform weight, marked to indicate the weight of a dozen eggs of the size of an egg placed in the pan at the opposite end of the beam. When there is no egg in the pan, the scale is in balance, but when an egg is placed in it, that side of the beam goes down, and the opposite side rises. As it does so, it picks up one blade after another until balance is again restored. The lowest visible number then indicates the weight of a dozen eggs of the size in the pan.

STEPPED CLAW HAMMER MAKES 1827 NAIL PULLING EASY

An ordinary carpenter's hammer has been modified in such a way as to dispose of the usual difficulty of having a nail stick when it is partially pulled out. This hammer has a series of three sets of claws, instead of the single set usually found. The claws are staggered in steps, thus making it possible to use whichever set of claws will give the best leverage on a particular nail.

FURRING CLIP FOR WIRE MESH 1648 HELPS PLASTERING

A new type of furring clip, made of galvanized plate, has been placed on the market, which is intended to be looped

The New Furring Clip Showing, from Left to Right, How It is Applied to the Wire Mesh and Nailed to the Wall

over the mesh with which it is used, and then be secured to the sheathing of the building. The clip has four leaves, each being so punched that the nail passes through all the four holes.

**UNIVERSITY OF WISCONSIN
BUYS SPEEDY LIFEBOAT**

The "Isabell," the new lifeboat recently purchased by the University of Wisconsin for over \$4,000, is said to be one of the fastest and finest boats used for this kind of work. In its trial run on Lake Mendota, it attained a speed of 28 miles an hour, and it is claimed that it is capable of doing even better. The craft is 30 feet long, with a 6.6-foot beam, and replaces launches which have hitherto served the double purpose of life-saving boats and coaching launches. Sixty-eight persons were rescued during the past year with one of the boats which the "Isabell" is replacing.

**SPANISH HELICOPTER
RISES 81 FEET**

A helicopter built by a Spanish engineer successfully rose to a height of 81 feet and maneuvered in the vicinity of the aerodrome, according to recent reports from Madrid. The machine, which is powered with an 80-horsepower engine, is designed very much along the lines of the ordinary airplane except for the smaller wings which are replaced by a large four-bladed propeller mounted on a vertical shaft. In addition to this performance, the present unofficial world's records for free helicopters stand as follows: duration of 2 minutes 37 seconds, and distance of 250 feet, both made in France.

The "Isabell," Purchased by the University of Wisconsin, to be Used as a Lifeboat on Lake Mendota: The Craft Is 30 Feet Long, Has a Beam of 6.6 Feet, and Is Capable of Doing 28 Miles an Hour or More. Its Steering Wheel and Other Controls Resemble Those of an Automobile

AUTO ENGINE HEATS QUICKLY WITH NEW DEVICE

The problem of heating an automobile engine to the proper operating tempera-

ture in cold weather has been greatly simplified by a device that is inserted in the water-circulation system, between the cylinder head and the radiator. It consists of a valve that automatically prevents water from going to the radiator, until it has reached a predetermined temperature. A seepage of one-tenth prevents the radiator from freezing.

REMODEL RAILWAY STATION AT OSAKA, JAPAN

Remodeling of the Osaka railway station, which is to be begun in the latter part of 1923 and completed in 1931, embraces plans for large passenger stations separate from each other. In order to provide space for the new terminals, some additional land, including the present

sites of several schools, has been acquired. The freight yards and station will be the largest and most up-to-date in Japan. A canal leading to the freight yard will be constructed for the purpose of transferring cargoes quickly to boats. The cost is estimated at \$15,000,000.

SKATING ON LINCOLN MEMORIAL REFLECTING POOL

Washington ice skaters enjoyed a treat in February when the water in the new reflecting pool in front of the Lincoln Memorial froze to a sufficient thickness to permit skating. Opportunities to skate in Washington are quite rare, and when they do occur all classes take to the ice.

In May the memorial, built of Colorado marble at a cost of \$2,939,729, was dedicated with elaborate ceremonies. In December, with less elaborate ceremonies, the water was turned into the reflecting pool. These ceremonies had kept up the interest in the memorial and the pool. From the day it was announced that a pool would be constructed, however, the lovers of skating had been anxious to learn whether they would be allowed to use it for this sport.

Finally it was announced that skating there would be permitted.

An interesting detail in connection with the construction of the pool, is the fact that it was found necessary to waterproof the bottom thoroughly. This was done by digging the basin, which is 2,000 feet long and 160 feet wide, sloping to a depth of 3½ feet in the center. The bottom was then covered with cinders, followed by alternate layers of asphalt and tar paper. Upon this substantial base was laid the final layer of slate.

Outdoor Enthusiasts of Washington, District of Columbia, Enjoying the Privilege of Skating on the Reflecting Pool of the Lincoln Memorial: After Waiting Most of the Winter, They were Rewarded When a Cold Snap in February Froze the Surface of the Pool to a Safe Thickness.

An Exterior View, Showing the Application of the Steel Fabric to Both Exterior and Interior Walls, as Well as to Porch Floors

**NEW STEEL FABRIC SIMPLIFIES
 1733 STUCCO WORK**

Of interest to architects and home builders is the recent development of a galvanized-steel mesh fabric which serves as a base for stucco or plaster work. The fabric is backed with a saturated rope-fiber waterproofing material, which, being porous, exerts a capillary attraction on the plastic material and thereby tends to hold it in place. The fabric itself functions primarily as a reinforcement to the applied stucco or plaster, and by eliminating keys, has an equal reinforcing value in all directions. Another advantage is that no furring strips are required, the fabric being crimped at uni-

Above: Applied as Stucco Reinforcing on a Frame House. Below: Showing How the Steel Fabric is Used on Walls and Ceilings of a New House

form intervals and in reality "self-furring." These features insure an exceedingly workmanlike job, without seams or lines of weakness in any direction.

Left: A Close-Up of the Ball, and Above, One of the Simple, Though at Times Strenuous, Games Which may be Played with It

**1792
 MANY-CORNERED RUBBER BALL
 GIVES GREATER EXERCISE**

A solid rubber ball with 10 corners and 12 faces has been made to furnish additional excitement to games usually played with a round ball. Under the same conditions, an ordinary ball will always act in one certain way. The new ball is anything but dependable; no matter how carefully the players may endeavor to duplicate a special rebound, the likelihood is that every time it hits the floor, it bounces off in a slightly different direction. This, of course, makes the playing more interesting—and more exciting.

MAMMOTH PENSTOCK EASILY ACCOMMODATES WORLD'S LARGEST LOCOMOTIVE

THIS giant penstock, or tube, 21 feet in diameter and 600 feet long, is one of a series of three constructed for the Niagara Falls 200,000-horsepower hydroelectric development. They will be drilled through solid rock, and are designed to pass a flow of 2,800 cubic feet of water per second to three turbines, each rated at 70,000 horsepower, located in the power house below them. Some conception of their capacity may be gained from the fact that nearly 3,000,000,000 tons of water will rush through these penstocks in a single year. The above view shows how "The Virginian," which is one of the world's largest and most powerful locomotives, could easily be run through one of the penstocks. On the right is a view of a 500,000-pound "needle valve," which will be used to control the flow in each of the three penstocks. So ingeniously is this enormous valve constructed, that only five seconds are necessary to completely shut off the huge flow. The design of the valve is such that it utilizes instead of opposes, the enormous pressure of the rushing water, when it is necessary to check the flow. This is accomplished by admitting water to the inner side of the valve, so that its force will be balanced on both sides of the valve gate.

**FORESTATION TO HELP CITY
REDUCE INDEBTEDNESS**

1907

The town of Ilion, N. Y., hopes, by a community practice of reforestation, both to benefit its people in an immaterial way and to derive a substantial profit from it, and is already well along toward the realization of its aims. In 1910 the unproductive land that skirted its reservoir streams was planted with 5,000 pine-tree seedlings and about 3,000 spruce. In 1911, some 12,500 more were planted; in 1912, 5,000 spruce were purchased and set out, and in the following years 25,000 additional trees were planted, making a total of 50,500 trees. Some 90 per cent of these trees now live, a majority having attained a height of 14 feet, adding great beauty to a hitherto unsightly region. Within 30 or 35 years these trees will have reached commercial size, and as they are cut down, younger growths will take their place. In this manner considerable sums will be realized from the sale of the timber, and it is planned to apply these funds toward liquidating whatever municipal bonds may be outstanding at that time.

1938 — *Aeromarine*
**PLAN FAST AIRSHIP SERVICE
NEW YORK TO CHICAGO**

An overnight airship service is now being planned between New York and Chicago, as the beginning of a line of dirigibles that will operate on a scale heretofore not attempted even by Germany with the Zeppelins and Shütte-Lanz airships. After a survey of the past performances of air craft of this type, the advocates of the idea appear to be convinced that with the use of helium gas and with other protective measures, safe travel can be assured, and that it will be commercially possible to maintain service with a fleet of rigid dirigibles similar to the Shütte-Lanz type. Air terminals at which the liners would be moored to great masts and with provisions for heavier-than-air machines, would receive passengers from the smaller craft for transfer to the through-route airships. Accommodations for about 50 passengers would be provided and would include staterooms approximating, in size and appointments, those of a Pullman car; a dining room, an observation lounge, and a promenade deck, as well as quarters for the crew. The motors would be entirely removed from the passenger compartments so as to insure quietness and minimize vibration.

N.Y. Times 3/4/24

The DeHaviland Airplane Which Lieutenant Nowland Piloted in Making an Aerial Survey of the Salt Creek-Tea Pot Dome Oil Fields near Casper, Wyoming: A Film-Type Camera was Suspended Vertically in the Rear Cockpit of the Machine

THE LOG OF AN AERIAL SURVEY

BY BOB E. NOWLAND,

Lieutenant, Army Air Service

Fort Riley, Kans.

THE following account of a map-making flight was written for Popular Mechanics Magazine, at the instance of the Chief of Air Service of the War Department, by the pilot in charge of the expedition, and the illustrations are reproduced from official photographs by courtesy of that department. We are requested to mention, in this connection, that the Army Air Service is operating a school of aerial photography at Rantoul, and that full particulars may be obtained by writing the Commanding Officer, Photographic School Department, Chanute Field, Rantoul, Ill.—Editor.

AT seven o'clock on the morning of Aug. 7, 1922, the writer, as pilot, together with Master Sergeant Fred Carducci, photographer, left Fort Riley, Kansas, by airplane, for Casper, Wyo., some 600 miles away, to map, by order of the Army Air Service, the Salt Creek-Tea Pot Dome oil fields.

Our plane, an army DeHaviland with a 400-horsepower Liberty motor, was heavily loaded with camera, films, and miscellaneous equipment, but when once in the air, handled as easily as a training ship.

The flight to North Platte, Neb., our first stop, was made in 3 hours 25 minutes. With new

supplies, we were in the air again in 20 minutes, bound without further stop for Casper, 310 miles away. As the country in western Nebraska was quite

rough and unsettled, it seemed a good plan to keep in sight of the North Platte River, so that, in case of trouble, a landing could be made near civilization.

The motor was working perfectly and we seemed to be traveling with a favorable wind, as our speed over the ground figured out close to 120 miles per hour.

Just after crossing the Nebraska

line into Wyoming we passed over some very bad country, but the motor was run-

A Section of the Territory Mapped by Aerial Photography: A Close Inspection of the Picture will Disclose the Presence of 14 Oil-Drilling Rigs with Derricks

ning "sweetly," and in 3 hours 15 minutes we were over Casper. After circling the town several times, a landing was made at the local aviation company's field east

to be photographed. These maps gave very little information, as no contour or topographical maps of this country have been made. The area to be photographed was 35 miles north of Casper, and contained about 300 square miles of fairly rough country. The elevation above sea level at this point is approximately 5,000 feet, and as we planned on flying at 10,000 feet above the ground, to get pictures of a scale of 1:10,000, it will be seen that we were in for quite a bit of high-altitude work. Our camera was of the film type, taking a picture 7 inches wide by 9 inches long, and with 100 exposures to each film. This camera was suspended vertically in the rear cockpit of the airplane, in a mounting that allows it to be kept absolutely vertical at all times. To make an exposure, the photographer has only to press a trigger;

The Dark Patch Is the Shadow of a Cloud. To Avoid This Effect, the Mapping was Done before 10:00 o'Clock in the Morning

of town. The representative of the Bureau of Mines met us at the field, so we loaded all our equipment into his machine and drove to town. We spent the balance of the day in getting acquainted and in studying the existing maps of the area

ger; then, by turning a small handle about three revolutions, the film is wound into position, and the shutter cocked, for the next exposure. Exposures taken at 10,000 feet above the ground cover an area of $1\frac{1}{2}$ square miles to each picture.

This Is a Reproduction from a Poor Print of the Finished Aerial Map Which was Completed in Four Months After the Project was Begun. Under the Old Method of Land Surveying, It would have Taken Much Longer and Cost More to Cover the Same Area

Above: Aerial Photograph of an Oil Field near Casper, Wyoming. The Arrows Point to Wells That Were Gushers, and It can be Noted from the Dark Spots Where the Oil has Flowed over the Ground. Below: Aerial View of Casper, Showing the North Platte River, the Railroad Tracks, and the Oil-Storage Tanks and Refineries

In This Aerial Photograph, 1 Indicates a Portion of the Road between Casper and the Oil Fields; 2 Points to Motor Trucks Loaded with Freight, and 3 Denotes Pipe Lines Carrying Oil from the Wells to Casper, the Nearest Railroad Point

It was decided, after an inspection of the maps of the area to be photographed, that some method of marking the boundaries of the area would be necessary, to prevent useless waste of time, film, and gasoline, so a trip to the oil fields was made by automobile, and markers were laid down at known positions around the area. These markers were made of cheesecloth, staked securely to the ground. They were in the form of a letter "L," the arms of the letter being 50 feet long and 6 feet wide. An entire day was taken up with this work, as some little difficulty was experienced in finding the corner locations.

A dark room was fitted up in a local blueprint establishment, and our tank-developing apparatus moved in. That afternoon we made a flight of $1\frac{1}{2}$ hours over the area to note the position of prominent landmarks, and to see how well our cheesecloth markers showed up from the air.

As everything was in readiness, the following morning we started mapping the area. The temperature on the ground was up around 90° , but by the time we had reached our altitude, which took an hour, it had dropped to below freezing. We sat there for 2 hours 20 minutes, our

teeth chattering, getting a picture every 25 seconds, as we rode up and down the 25-mile strips, until our film gave out. That afternoon and evening we developed and printed our film, and the next day laid down the prints on large pieces of beaverboard, to see how much of the area we had covered. We were trying to snap a picture often enough to get a 50-per-cent overlap, and found when the prints were down, one over the next, that we had succeeded pretty well.

The next day's flying went much as the first, only we profited by the chilly ride of the first day, and wore our heavy leather flying clothes, and were much more comfortable. It was found that, due to the white billowy clouds that formed over the area each day, our photographic efforts had to be over by 10:00 o'clock each morning, otherwise our pictures would be spoiled by the black shadows that these clouds cast on the ground.

The rest of the flying went much as the first two flights had gone: an hour to climb up, a couple of hours up and down the area, and the long glide of 40 miles back to our field. The old Liberty motor worked perfectly for the $16\frac{1}{2}$ hours spent over the area, and slowly,

1679

day by day, the prints began to cover up the spots of the area unphotographed, until, on August 23, the job was completed—a total of five flights with over 600 exposures taken.

We packed and shipped our developing apparatus, and got away for home at 7:30 the morning of the 24th. This time we decided to go back by Cheyenne and Denver, so headed out over the mountains to the southeast. Cheyenne rolled by beneath us in 1 hour 20 minutes, and at 10:10 we were on the ground in Denver, taking on gasoline and oil, having covered 240 miles. At 11:00 o'clock we got under way from Denver, and at 3:00 o'clock that afternoon put our wheels down on the airdrome at Fort Riley, Kan., having covered the last 440 miles in just 4 hours.

Now came the slow and painstaking part of aerial mosaic-map making—the laboratory and assembling work. Four

**NEW RADIO DETECTOR HAS
1807 IMPROVED QUALITIES**

One of the most important recent developments in radio is the so-called non-interfering detector, which is said to give greater signal strength than the ordinary single-tube regenerative set. Essentially it is a vacuum tube, containing a filament, with an anode of sodium on its outer wall and with a U-shaped collector placed above the filament and facing the anode. A short length of resistance wire, in series with the filament, is cemented to the outside of the glass directly underneath the anode, and serves to maintain the anode at the proper operating temperature. It combines, in a sense, the features of a detector and an amplifier, and requires only a six-volt battery.

**153 STREET "LOCOMOTIVE" HELPS
ADVERTISE CAR COMPANY**

A gasoline tractor, fitted up to resemble a locomotive, and used to pull a truck upon which is mounted an automobile made by the same company, is at

Hellman Motor Co.
Long Island City, N.Y.

prints were made of each of the 600 views. These were looked over, and those of a certain uniform shade were selected. These prints were glued down to a heavy cardboard mounting, each overlapping the next until the job was completed. This map, when finished, was 13 feet long by 7 feet high, and is now in the office of the petroleum division of the Department of Interior in Washington.

From the beginning of this project until the finished article was delivered, about four months elapsed, and an area was covered which, with the old method of ground surveying, would have taken a crew of men several years to accomplish, and at many times the cost of an aerial map. The camera gives all the small detail.

This is one of the many peace-time uses of the aerial photographic section of the Army Air Service.

tracting attention in and about New York City. The tractor is a standard model, equipped with rubber-tired wheels, a cab and engine hood, and with headlights for night operation. As warning

Advertising Tractor Equipped to Resemble a Locomotive, and Used to Pull a Truck upon Which is Mounted an Auto Made by the Same Company

signals, there are both a bell and a horn. The crank, in front, is covered by a cow-catcher, hinged so that it can be raised.

Extensive anti-aircraft maneuvers, in which numerous kites and balloons will be shot at from Fort Totten, will be held this summer to determine the requirements for adequate air protection of New York City.

This Engine Is One of Ten, Said to Be the Largest and Most Powerful Passenger Locomotives in the World. It Weighs with Tender 328 Tons

WORLD'S LARGEST PASSENGER LOCOMOTIVES

The 10 largest passenger locomotives ever constructed, both in weight and tractive power, for use on mountain or plain for any railroad in the world, have been placed in operation on the mountain divisions of the Denver and Rio Grande Western Railroad.

The monster engines are 95 feet in length, 11 feet 2½ inches wide, 16 feet high, and weigh 644,600 pounds, with loaded tender. The wheelbase, including the tender, is 82 feet 2¾ inches, the drive-wheels are 63 inches in diameter, and the cylinders have a diameter of 26 inches and a 30-inch stroke. The weight on the drivers, of which there are eight pairs, is 257,500 pounds. The tender has a capacity of 14,000 gallons of water and 22 tons of coal. When the locomotive is working to maximum capacity, 8,000 gallons of water are evaporated each hour and 5½ tons of coal are burned. When first put into service, the latter part of 1922, the locomotives were used in freight service until broken in. They now haul 16-coach trains over the continental divide, running from Pueblo and Denver, Colo., to points in Utah. They each replace two of the former largest mountain-type engines used in the Rocky Mountains. A speed of 60 miles an hour can be developed with a train of 16 steel coaches, which aggregate 2,000,000 pounds in weight, so that the whole train weighs 2,644,600 pounds. The total length of such a train is 1,200 feet, or nearly a quarter of a mile.

ELECTRIC BABY PROVES

1850 ATTRACTIVE SIGN

At Piccadilly Circus, London, there has long been a free entertainment at night, and the pavement on the opposite side to the Monico is filled, two deep, with people gazing at the electric signs which proclaim glitteringly the excellency of something or other. But to the number has just been added the cleverest electric sign ever seen. It is a performing baby. There never was such a baby. At first it is glum and bad-tempered. Electric tears pour down its cheeks, electric furrows appear on its brow, its electric mouth opens. It is obviously yelling with rage. Then a bottle of somebody's milk appears, and the baby's face is wreathed in electric smiles, it winks an electric eye, and its one lock of electric hair stands on end with joy. It is drawing all London.

AMERICAN SEEKS TO LOCATE POCAHONTAS' GRAVE

Although it is generally known that Pocahontas, the Indian princess whose memory is linked with that of Capt. John Smith in the school histories, married an Englishman and died in England in 1617 as she was about to return to America, not much is known regarding her last resting place. According to old records, she was buried under the old church in Gravesend, which burned in 1727. Now an effort will be made by Edward Page Gaston, an American, to find her grave. He has permission from Canon Gedge, of St. George's church, to dig on the site of the old church, but before he can go on with the work he must have a permit from the British government. The new Gravesend church contains memorials to Pocahontas in the form of a pulpit made from Virginia wood and given in 1904 by the state of Indiana, a stained-glass window given by women of Virginia, and a tablet, reading in part, "Gentle and humane, she was the friend of the earliest struggling English colonists."

CONCRETE REINFORCING BARS INDICATE OWN SIZE

Deformed reinforcing bars for concrete work with the deformations indicating the size of the bars, in eighths of an inch, have been found of benefit in saving labor, and in insuring accuracy in sorting, storing, and placing. The figures used are symbolic, 3 denoting 3/8 inch, 5 standing for 5/8 inch, and so on.

CONTINUOUS AUTOMATIC ARC FEED FOR MOVIE PROJECTOR

¹⁷²² A motor attachment for use with any motion-picture projecting machine has been placed on the market which is designed to provide automatically a continuous carbon feed to the arc. The entire unit can be clamped to the projector, and, through reduction gears to the carbon feed, operates the latter at a ratio of 204,800 to 1. Power is furnished by a small 115-volt motor, whose speed is governed by a resistance coil

A Continuous Arc-Feed Attachment for Projecting Machines Which Relieves the Operator Entirely of Hand Feeding

mounted directly beneath it. With this arrangement, it is possible to speed up or slow down the motor as the space between the carbons demands.

 MACHINE CENTERS AND DRILLS
 AUTOMATICALLY

985

Designed for use in quantity production, an automatic centering machine has two heads which center work at both ends in one operation, accurately.

This Machine, Designed for Production Shops, Automatically Centers and Drills Work That is Taken to Other Machines for Various Finishing Operations

rately and rapidly. The machine has also an automatic drill-feed mechanism operated in conjunction with a magazine. Clamping of the work is done mechanically, so that after it is set up, it is only necessary to replenish the magazine, and take away the finished parts. The work is removed from the magazine by transfer slides, is placed in the vise, clamped, centered, and then released into the work box, without any attention from the operator. The feed to the drills is automatic, by means of the same cam that operates the transfer slides. This cam is driven by a small motor, and a set of change gears adjusts the drilling time.

UNUSUAL RUBBER PRODUCT FILLED WITH GAS

A new form of rubber impregnated with nitrogen gas, possesses such unusual properties that it promises to become an important product of the rubber industry. It is so buoyant as to support five times its weight in water, and a specimen, left for five months in sea water, indicated no increase in weight.

Christian Dulce Moulton
 3/14/23

MECHANICS

Owing to the presence of the multitude of nitrogen-filled cells, its resiliency is far greater than that of solid rubber. In evidence of this, a ball subjected to a pressure of 32,000 pounds, sufficiently reasserted itself in 24 hours, to hit the ceiling when bounced from the floor. It is either hard like brick or soft and resilient, depending upon the processing it receives.

AIRPLANE SPEED AND HEIGHT RECORDS MADE IN FRANCE

1878

Flying over a four-kilometer course at an average speed of 234 2/3 miles an hour, Sadi Lecoq, on February 15, near Marseilles, broke the standing record of 224 1/2 miles an hour made by General Mitchell of the U. S. Air Service on Oct. 18, 1922. Lecoq was flying a Nieuport - Delage "Sesquiplan," fitted with a 320-horsepower Hispano-Suiza engine. On February 11, Casale, flying a Spad-Herbemont biplane, motored with a radial air-cooled engine, reached a height of over 23,600 feet with a useful load of 550 pounds.

THE WELLAND CANAL

By George F. Paul, 900
Ellsworth Bldg,
Chicago

A View during Construction of Lock Number Six of the New Welland Ship Canal, as Seen from the Upper West Entrance Wall: Each of the Locks, of Which There Are Seven, Has a Usable Length of 800 Feet, a Usable Width of 80 Feet, and a Depth of 25 Feet

THE government of Canada is actively pushing the work on the new Welland Ship Canal, which is declared to be the largest earth-moving project now under way in the world. Centuries ago, Nature hewed the mighty Niagara gorge to join Lake Erie with the lowlands to the north. Today steam shovels are eating their way through this same ledge to link the two lakes and provide a series of safe steps by which loaded ships may quickly descend or climb back up.

The new Welland Canal may rightly be said to rival the Panama Canal. American builders overcame a difference of 85 feet between the levels of Gatun Lake and the ocean by building three locks at each end. The Welland Canal is only half as long as the Panama Canal, but—what is of more importance—Lake Erie is not a mere 85 feet higher than Lake Ontario, but 326½ feet higher. In other words, the builders of the Welland Canal have had to provide for a vertical lift nearly four times as great as the engineers of the Panama Canal.

This is the fourth canal project undertaken by the Canadians to span the Niagara peninsula. This canal cuts through

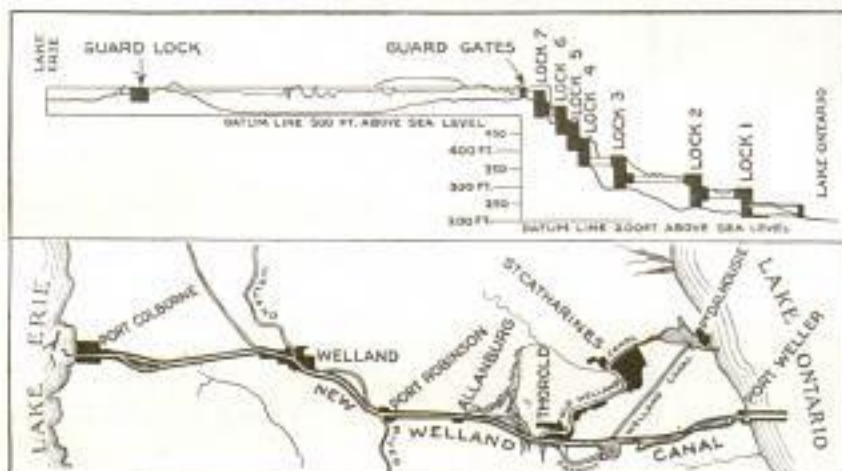

the valley of Ten Mile Creek, 10 miles west from Niagara River. It will have a total length of 25 miles, and will follow a practically straight line. It rises from Port Weller, on the Ontario side, to Thorold, where it crosses the present canal; here the level of both will be at an elevation of 382 feet above sea level. From there on to Allanburg, the new canal will straighten the present unsatisfactory alignment, crossing the old canal near the latter place, where both canals will be at an elevation of 568 feet, or the extreme low-water level of Lake Erie. The course of the present canal will then be followed to Port Colborne, the southern terminus on Lake Erie.

The big locks, of which there are seven, are all located within a few miles of Lake Ontario. Each lock provides a lift of 46½ feet, or nearly twice the lift of the Panama Canal locks. The builders are going down to bedrock for these locks, and are constructing them of concrete throughout. The canal will be excavated so as to have a bottom width of 200 feet with two-to-one slopes. For the present the excavation work will go

1694

Above: A View during Construction of One of the Locks of the New Welland Ship Canal That the Canadian Government is Building between Lake Ontario and Lake Erie. The Foundations are Carried Down to Bedrock and the Present Excavation Provides for Boats of a Draft of 25 Feet, Which will Later be Deepened to 30 Feet. Below: One of the Large Steel Forms Used in Building the Concrete Work for the Locks

down to a depth of only 25 feet. However, the intention is to make enlargements at some future time, and therefore all the structures are to be built for a 30-foot depth.

The project was started before the World War. At that time, the estimated cost was placed at \$50,000,000. Now it is believed that the total cost will run close to the \$100,000,000 mark, but the Canadians are determined to go on with the work and push it through to successful and early completion.

When this new canal is in working shape, lake boats of a maximum draft of 25 feet can pass safely to Lake Ontario and proceed to Prescott, there to unload for reshipment in 14-foot draft vessels to Montreal. This new arrangement will give the grain producers of the Northwest direct transportation by water for a total distance of 2,339 miles to the Straits of Belle Isle. There is but little doubt that within a few years Canada and the United States will reach a joint agreement for the improvement of the St. Lawrence River, so that the Welland Canal will be the great connecting link between the Great Lakes ports and the seaports of the whole world. There is great optimism in Canada over this outlook, some of its leading engineers firmly believing that within five years work will be started on the St. Lawrence waterway.

One unusual feature should be noted in commenting on this canal, and that is that in the first sections the material ex-

cavated is like plastic clay. It stretches much like rubber, and can even be worked up into the form of rope. This peculiar consistency makes it difficult to handle it in bulk. The steam shovels load on the dump cars great balls of this material about 6 feet in diameter. At first the contractors used straw to keep the clay from sticking to the bottom of the cars. Then they hit upon a better plan—they turned the hose on the sides and bottom of the cars before loading, and also turned the hose on the slopes where the cars were being dumped. When the embankments were thus drenched they became slippery skids, down which the sticky balls of clay took a rapid slide.

Another noteworthy feature of the new canal is the guard lock to be installed at Humberstone, about three miles from Port Colborne. The water level of Lake Erie varies from 568 feet to 579 $\frac{3}{4}$ feet. In order to care for these variations, which are due largely to high winds and storms, the guard lock is to be provided.

The construction figures for this canal run up into the millions. For instance, 6,740,000 cubic yards of rock excavation will be needed, about one-half of which has been completed, and there are 40,200,000 cubic yards of earth excavation, according to careful calculations. The structures call for the placing of 2,850,000 cubic yards of concrete, and nearly 20,000,000 pounds of steel will be required for reinforcement.

BOLL WEEVILS DESTROYED BY VACUUM MACHINE

The Machine Which Uses the Vacuum Principle for Sucking Boll Weevils and Their Eggs from Cotton Plants: It Is Adjustable for Height, to Facilitate Operations on Rolling Ground

An interesting application of the vacuum-cleaner principle has been made by an Iowa manufacturer in a machine for destroying the boll weevil on cotton plants. It may be used also in killing potato bugs and other pests. The machine straddles the row, and the huge rotary fan in a circular housing sucks the insects into a canvas bag from the plants, which are brought into the suction area by sidewalls extending close to the ground. The machine may be raised and lowered for plants of different sizes.

PORTABLE INSULATION TESTER IS VERY LIGHT

A small, light insulation tester has been developed recently whose portability affords a wide range of application in the industrial field and inspection service. The instrument consists of a direct-reading ohmmeter and a hand-driven direct-current generator, substantially mounted together in a cast-aluminum casing. The ohmmeter scale reads from 0 to 100 megohms, and is viewed through a protected glass window in the top of the case. "Line" and "earth" terminals

are provided which are protected from external injury by their convenient location below the ohmmeter housing. These are also provided with a "guard" circuit, so that errors due to surface leakage are

Left: The Tester with Handles Up, Ready to be Carried About. Right: Ready for a Test, the Hinged Door being Raised for Taking Readings

eliminated. The voltage rating of the instrument is 500, and its dimensions, with handles down, are only 5½ by 7¾ by 6¼ inches.

PORTABLE ELECTRIC HOIST HAS MANY USES

1717

A portable, self-contained electric hoist has just appeared which is intended for

Above, Phantom View of the Portable Hoisting Unit, Shown Complete Below: Both Driving Gears and Pinions are Machine-Cut from Electric Steel

use on construction jobs or in industrial plants. It is also adapted for skidding crates and general warehouse handling, and even for shifting freight cars on sidings. A steel casing completely envelops and protects the hoist mechanism and motor, which has a rating of 5 horsepower at 1,200 revolutions. The lifting capacity of the unit is 1,500 pounds at a hoisting speed of 100 feet per minute, and its over-all dimensions are only 2 by 2 by 4½ feet.

RESERVE ALASKAN OIL FIELD FOR NAVY'S FUEL

1737

More than 35,000 square miles in the northwest of Alaska have been set aside as an oil reserve to insure fuel for the

Map Showing Location and Relative Size of the 20-Million-Acre Tract Set Aside in Alaska as an Oil Reserve for the Navy

navy, by a recent order of President Harding. The petroleum possibilities of the reservation, which is mostly flat, grassy tundra, devoid of other vegetation, are practically unknown, but they are sufficient to attract some 50 private interests to whom allotments, totaling about 125,000 acres, have been granted for development. For years seepages of oil along the seacoast have indicated the existence there of large oil fields.

SPECIAL ELECTRIC HEATER FOR TICKET BOOTHS

1740

A convenient type of electric heater has been placed on the market recently for use in ticket booths. It is 20 inches long, and can easily be attached to the sides of the booth with screws. Resistance units are mounted inside, and the proper amount of heat is insured by a three-heat snap switch. The heater is of all-steel fireproof construction, and may

In This New Type of Electric Heater, Which can be Used as a Footrest, Danger to Footwear is Eliminated by an Air Space That Protects the Resistance Units

also be used as a footrest with perfect safety. Current may be tapped from any 110 or 220-volt circuit.

FAMOUS BELLS OF NOTRE DAME TO BE ELECTRIC-TOLLED

176

The successors of Quasimodo, Victor Hugo's fictitious bellringer of Notre Dame, will give way soon to the inroads of 20th-century mechanical efficiency. An electric motor is to be installed for tolling the first bell, which will be in the nature of a try-out before the other bells are similarly equipped. The introduction of modern appliances in the ancient cathedral is the result of the high post-war wages demanded by the ringers. The position as head ringer, of which there are several, has, at least in one case, been held by successive generations of the same family.

AIRPLANE-HEIGHT INDICATOR FOR NIGHT FLYING

Night-flying problems are now engaging the attention of aeronautical men. To be successful, flying by night must be made as safe as flying by day, otherwise the gain in speed over other methods of transportation would be of no benefit.

One of the unsolved problems of night flying has been the determination of the plane's height above the ground, especially when landing. An answer to this problem has been worked out in an altitude indicator recently tested by the Bureau of Standards.

This indicator consists of three tubes, each with an incandescent lamp at one end. Two of the tubes are parallel and stationary, while the third can be moved within a prescribed angle. This tube is equipped with a scale of numerals which are projected on the ground or water, just as a picture is projected on the screen. One of the sta-

ber between the brackets. This number will be his altitude.

The device indicates any height between 50 and 500 feet. If the plane is over 500 feet above ground, a cross appears between the bracket-shaped figures,

Apparatus for Night Indication of Airplane's Flying Height: Each of the Three Tubes Has a Small Incandescent Lamp at the Upper End, Which Throws an Illuminated Image upon the Ground. B and C Are Stationary, While A Is Movable and Projects a Number from the Scale Directly above It

and when it is less than 50 feet high, the number 50 moves toward the bar of light. The latter is simply a guide for determining the height when the machine is nearing the ground.

tionary tubes projects two figures in the shape of rectangular brackets, and the other a straight bar of light.

To determine his height, the pilot turns the movable tube until it projects a num-

MOTORCYCLE IS "MADE UP" TO PHOTOGRAPH WELL

A motorcycle with an extraordinary color design, an entire lack of nickel-plated parts, no reflecting surfaces, and miscellaneous trimmings of weird colors, has recently attracted attention on the streets of Los Angeles. The explanation of the odd design is simply that a motorcycle manufacturer is following a practice old in the motion-picture industry in having produced for advertising purposes a machine having a color scheme that will photograph as its stock models appear to the human eye. In motion-picture work, a white tablecloth, for example, makes a glaring white when projected on the screen. A light-yellow tablecloth, however, gives a natural white. So, wishing to have a machine that would photograph naturally without retouching, this and other color variations were taken into consideration, and the peculiar motorcycle mentioned was developed.

Geysers at the Base of Mount Lassen, California, Which are to be Tamed and Trained to Furnish Steam for Engines; Other Geysers at the Foot of Mount Helena will be Similarly Exploited

GEYSERS HARNESSSED TO FURNISH POWER

BY H. H. DUNN,

*27 22, Prince St.
Berkeley Calif*

THE largest group of geysers in California, in Sonoma County, is being harnessed to the steam engine to provide power. At the middle of February, one geyser had been tapped and connected with a steam engine, where it yielded 150 horsepower, which was put to work immediately drilling the "well" with which another geyser is to be tapped, and likewise connected with another engine. The ultimate object of the project is to provide steam enough from the whole group of geysers to drive turbines in a power house, thereby supplying electric current, at a cost price below even that at which hydroelectric power can be produced, to a dozen large towns and cities in the northern and central parts of the state.

Only about one-half of the steam available from the first geyser has been taken, owing to errors in drilling the first well and to lack of experience in keeping the steam confined and hot between the geyser and the engine. Plans under which the work is now being done provide for the taking of approximately 90 per cent of the steam from each geyser tapped in the future. Esti-

mates based on the production of the first geyser are that approximately 1,500,000 horsepower can be obtained from this group.

Though volcanic heat has been harnessed in Italy, this is the first time that power has been taken from the subterranean fires of the New World, and the only question which arises is as to the period of time over which these geysers will continue to furnish steam at pressure and heat sufficient for the operation of engines or turbines. The geysers at this point have been pouring forth their torrents of superheated steam and boiling water for some 200 years, since white men first knew of them, and have been increasing, rather than diminishing, in volume. The same statement is true of other geysers at the foot of Mt. Helena, near Calistoga, and at the base of Mt. Lassen, the recently active volcanic cone, farther north, where other interests are preparing to put the steam to work.

The method of taking the steam from the geysers is comparatively simple. A well is driven at an angle, from a point some hundred or more feet from the mouth of the geyser, to strike the throat

The First Engine to be Operated by Steam Direct from a Geyser in the United States: It is Installed at The Geysers, Sonoma County, California, and Takes Steam from One Geyser There, Developing 150 Horsepower

of the geyser at a depth of 200 to 400 feet, this depth depending on the solidity of the earth and rock formation surrounding the geyser.

Closely following the drill goes the 2-inch pipe, and when this tube breaks through the side of the throat of the geyser, the steam, under considerable pressure, follows it as an outlet, rather than the rougher and usually twisted natural vent. The upper end of the 2-inch pipe is then capped, an exhaust and a safety valve put on, and the steam conveyed in a smaller pipe to the engine. Greater power can be obtained, if necessary, by laying the pipe in a large tube, through which is allowed to flow the abundant hot water from the geyser, while still greater pressure can be maintained by superheating the steam at the engine. These things, however, have not been done, since the steam derived from the first geyser has been of sufficient pressure and hot enough to more than supply all power necessary for drilling operations on several other adjacent geysers.

At first it was thought that all the geysers were connected, that all were vents from the same subterranean lake of boiling water, and that by finding the proper location, and tapping this source of supply, the steam could be collected in one pipe and thus only one well would have

to be drilled. Experiments showed, however, that if all the geysers came from the same source, that source must be at such great depth that it could not be reached with any ordinary drill. It was then decided to take the steam from each geyser, allowing it to rise in its own vent to a point within 200 to 400 feet of the surface, as mentioned above, and there remove it. This has proved successful.

GIANT BLIMP NOW BUILDING 1804 TO CIRCLE WORLD

The large dirigible airship "ZR-1," now under construction for the U. S. Navy, will be sent on a trip around the world when completed next summer, and may later go to the north and south poles, according to plans recently announced. This ship, and the "ZR-3" that is being built in Germany for the navy, the first rigid dirigibles for this country, represent the most improved features in airship design, and it is expected they will be the forerunners of a large fleet of dirigibles. They will be filled with helium, the noninflammable gas that is available in large quantities only in the United States. For long-distance sustained flights and for carrying heavy loads, the rigid dirigible is regarded by many as the logical type of craft.

TESTING APPARATUS TO IMPROVE CARBURETORS

BY J. C. ALLEN, 229 *Howler Ave*
West Lafayette, Ind

IN an effort to increase the mileage obtained by automobiles on a gallon of gasoline, extensive experiments are being conducted at Purdue University, and the indications are that proper carburization will make an improvement of about 25 per cent. The apparatus is built with the idea of establishing the best methods of fuel preparation and of obtaining information concerning fuel-air ratios for efficient engine performance. Primarily, the test plant consists of an air chamber, an electrically driven vacuum blower, an air heater with motor-driven blower, a fuel-flow meter, a fuel-weighing apparatus, a manometer

board, and an air-flow control. The air chamber is designed to withstand high vacuums for altitude work and vaporization research, and provides mounting for side or top-outlet carburetors, connections for manometers, air inlet, and an inspection door. A gas heater is arranged for heating the air, before it enters the chamber, to temperatures as high as 500° F. The fuel is measured by a

Close-Up of Carburetor-Testing Apparatus Which has been Worked Out to Give Results Quickly and under Conditions Actually Existing on an Engine

flow meter, or by direct weighing for more accurate results. Everything is arranged so that a complete test of the carburetor can be made quickly and under conditions existing on an engine driving an automobile.

NIAGARA FALLS NEW PARK TO BENEFIT RESIDENTS

1875 The city of Niagara Falls, for many years one of the world's most famous tourist cities, is now to possess a 300-acre recreation park for the enjoyment of its own residents. Permission to expend the needed money has already been granted, and the probability is that the preliminary work will soon be under way. It is planned to have the park on the east side of the city, extending from the north boundary 2 1/2 miles to the Niagara River at the south. Playgrounds, picnic groves, a permanent band stand, an outdoor stage, a wading beach for children, a swimming pool, a lake, and boating lagoons, are among the details which will be incorporated.

1811 DESK CLOCK SOUNDS ALARM TO JOG OWNER'S MEMORY

For the busy man to whom time is valuable and keeping engagements promptly is important, a memory-jogging clock has been devised to set on his desk. Opposite the quarter hours on the dial, small cards are inserted in slots just outside the dial, and when the cards are in the slot, the clock's alarm rings at the quarter hour. Memoranda of the dates to be kept may be written on the cards. The clock is finished to be an ornament to the desk.

CA refuge is now being planned, on the Island of Andros, in the Bahama group, to save from extinction the last of the flame-colored flamingoes, which once were so numerous in Florida and the Bahamas. Only 1,000 or so remain where 20 years ago more than 12,000 are known to have flourished.

FLOATING CAISSON SERVES AS FIRE STOP

B. Morton & Sons,
 78 Quay St., Manchester, Eng.

BY R. FRANKLIN MUNDORFF, 1108 Askew Ave
 Kansas City, Mo

LARGE quantities of petroleum and oil have been imported into England via the Manchester Ship Canal during past years. Hitherto, however, the canal company has not permitted the importation of oil having a flash point below 73° F., owing to the want of a safe place to moor the vessels while discharging their cargoes. This difficulty has been overcome by the provision of a separate dock and discharging equipment in an isolated location, in which the vessels can be shut off from the canal by means of a floating reinforced-concrete caisson—a precautionary measure in case of fire and escape of the fluid.

The dock, which is 600 feet long and 100 feet wide, admits vessels of 30-foot draft, and the entrance is 80 feet wide. It is placed at a convenient angle to the canal to give easy access to the ships. In each of the entrance piers is provided a vertical U-groove, into which two projections at either end of the caisson fit. Thus an oil fire—if one should break out—could not spread by water beyond the limits of the dock itself.

The caisson, it may be explained, is a bargelike vessel, with its semicircular ends terminating in the substantial stem

Head-On View of the Concrete Floating Caisson Which, When Swung into Place at the Entrance to the Dock, will Serve to Stop the Spread by Water of an Oil Fire

and stern posts mentioned. Its length over all is slightly more than 82 feet, and the beam 12 feet, while the depth from

In This View, Note the Projection at the Stem. This, and a Similar One at the Stern, Fit into Two Vertical U-Grooves in the Entrance Piers. The Over-All Length of the Vessel Is Slightly More than 82 Feet, the Beam 12 Feet, and the Depth from Deck to Keel About 10 Feet

the crown of the deck to the keel is about 10 feet. A fore-and-aft central wall, together with six transverse bulkheads, divide the boat into 14 water-tight compartments. All these sections are provided with manholes with air-tight covers, a scuttle plug, and a sounding pipe.

For adjusting the water ballast, and for pumping out the ballast chambers, each compartment has a sluice valve con-

nected to a hand pump on deck. If desired, the sections may be dealt with singly or any number at a time. Two winches and four mooring bits complete the deck equipment.

Timber fenders bolted to a reinforced-concrete counter, carried by wings springing out from the upper parts of the sides, at the water level, form another interesting detail. The total weight of the vessel without ballast is 125 tons.

ROADSTER HAS GOLF LOCKER AND OTHER FEATURES

A small compartment, or buffet, for liquid refreshments, a locker for golf equipment, an ice chest, and a lunch kit are found in a newly designed sporting roadster. The buffet is within the right door, the golf locker runs crosswise behind the seat and has a door opening on the right side, and both ice chest and lunch kit are arranged in the end of the rear deck. There is also an emergency rear seat for two.

This New Roadster Has a Lunch Kit and an Ice Chest, an Emergency Rear Seat for Two, a Locker for Golf Equipment, and a Disappearing Compartment for Liquid Refreshments

WATCHDOG "TRAVELS BEAT" IN AERIAL-CABLE CAGE

Similarly to the way in which packages are carried in stores in traveling overhead baskets, a dog makes the circuit of his master's grounds in London at regular intervals in a traveling elevated cage. The dog appears to understand the responsibility of his place and is keenly on the lookout. From his position he becomes aware of an intruder's presence and speedily gives the alarm.

Two rhinoceroses, believed to be the only mated pair in captivity, have been presented for a new Chicago zoo.

**NEW GLIDING RECORD MADE
 BY FRENCH PILOT**

With a sustained flight of 8 hours 40 minutes, Warrant Officer Descamps, of the French army, established a new endurance record for motorless planes. The flight took place at the French glider camp near Biskra, Algeria, over rolling desert sands. In another recent flight there, Descamps covered a distance of over three miles measured in a straight line. Now that the motorless plane has demonstrated its ability to stay in the air, attention is turning toward developing the distance-flying feature.

Ordinary house closets are being lined with cedar by a southern concern. This comparatively new arrangement is much more convenient than the usual cedar chest, and is equally effective as a moth deterrent.

1872
**NEW ELECTRODE ALLOY CUTS
 COPPER-REFINING COST**

The introduction of a new alloy for making one of the electrodes used in the electrolytic refining of copper, resulted in such savings that a South American copper company reduced the cost of production in 1922 to two-thirds the cost for 1921, and to nearly one-third the 1915 figure. The anode is made from the new alloy, which consists essentially of copper and silicon. The savings result from a reduction in the losses of electric current and those due to contamination of the product from the ferrosilicon and lead electrodes previously used.

The Light between the Glasses of These Goggles is Arranged to Focus in the Direction of Vision. At the Right is Illustrated One of the Uses for Which the Lamp is Particularly Adapted

focuses in the direction of vision, has been made to aid motorists and others, who occasionally need a light that will permit the free use of both hands. The current is supplied by a small battery carried in the vest pocket, or in some other convenient way. The outfit may also be useful to linemen, gas inspectors, and firemen.

SKIERS TOWED BEHIND PLANE AT 60 MILES AN HOUR

Traveling over the snow on skis behind an airplane is the latest in outdoor sports, to which some Long Island boys were treated the other day at a demonstration of a small airplane. In the open field, the pilot was able to keep his plane as close as 5 feet above the ground, and at times towed the skiers along at a speed of 60 miles an hour. To further demonstrate the unusual qualities of the craft, it was piloted almost vertically down the side of a 40-foot embankment, without turning over. The machine, as used during this demonstration, was equipped with skids for landing gear.

ALL-YEAR WILD-FLOWER SUPPLY IN "ROCK GARDEN"

IN order to supply students of botany with wild flowers for study, Harvard College has built a "rock garden" under glass where flowers are grown, so that they may be available at any time of the year, instead of in spring and summer only. As nearly as possible, the flowers are grown under natural conditions, and many foreign species are also raised here. With the present garden as successful as it has proved itself, another and a larger rock garden is under construction to meet growing demands, which will provide for thousands of additional plants.

DRILL DIAMONDS AND DIAMOND DRILLING

BY CHARLES NICHOLLS WEBB, *Box 452,*

Virginia, Minn.

THE log of the prospector never fails to reward the seeker for romance. Even that of the present-day iron-ore explorer whose equipment is elaborate, and who resembles not in the least the pack-carrying pioneer, furnishes a thrill occasionally without the slightest intention.

For example, take this entry in the log of a Mesaba drill contractor:

"September 7—9. Advanced 33 feet and then lost another bit in the hole."

A brief matter-of-fact statement, meaning little to the average reader—not much more significant than "Encountered bad weather," in the seaman's chronicle—is it not? Yet, a loss no greater, under different conditions, would be recorded in glaring headlines, with much desirable publicity for a musical-comedy queen.

To the man making the entry it means that some \$4,000 worth of diamonds lie at the bottom of a hole, 2 inches in diameter and possibly 1,000 feet deep. It means that days, probably weeks, may be spent in fishing for that handful of precious Brazilian carbons. That is one phase of diamond-drill exploration on the Mesaba and Vermilion ranges of northern Minnesota.

tion of the deposit underfoot. Some day, a cutting edge will be found which can be substituted for diamonds, and the state of Bahia, Brazil, will then lose its most important industry. From all reports, Bahia needs the diamond industry to insure its future prosperity.

Black diamonds are sometimes harder than the brilliant or crystallized diamond. Technicians explain the difference in the varieties by saying that the Brazilian stone is "opaque and amorphous." Natives of the La Chapada and Lavras districts in Brazil mine the stones from alluvial deposits in much the same manner as gold is mined in the placer fields of California. They sell their finds to the agents of exporting firms in Bahia, who send them to the London, Paris, and New York markets. The stones are found in sizes ranging from small fragments up to 100 to 500 carats. One stone, found in 1895, weighed 3,078 carats, and was broken into pieces suitable for diamond-drill work by the purchaser, who paid \$32,000 for it. At the present time, it would be worth nearly \$400,000. Black diamonds are seldom black. They range in color from black to gray, the prevailing tone being a dark brown.

Rows of Cores Which have been Drilled with Diamond Bits: The Cores Vary in Length but Are All About $\frac{1}{2}$ Inch in Diameter

This Is a View of a Diamond-Drilling Outfit, with Its Supporting Derrick, Taken in the Lake Superior Iron Region of Minnesota

Showing the Successive Stages in Preparing a Bit for Setting with Diamonds, Beginning at the Upper Left of This View with a Blank Bit

There are other methods of testing and proving the extent of ore bodies. There are other methods of drilling besides the one necessitating the use of diamonds, but there is no other way of drilling through hard ore and rock and securing a core which shows, layer upon layer, the forma-

huts and do their mining with the most antiquated tools imaginable.

A short-handled hoe to stir the dia-

Sullivan Machinery Co., 122 S Michigan Ave. Class 2-1

mond-bearing gravel, a crowbar to pry up stones or break down banks, an iron hook on a pole to remove material from under stones or from otherwise inaccessible cracks, wooden basins of different sizes for final washing and concentrating the gravel, a sieve of some kind for sorting, a hammer and drill for the work of blasting—these include nearly every essential of a diamond miner's equipment. From this land of the crudest mining methods and through the hands of brokers and various agents, the diamonds travel to fields where different metals are mined by the most modern and scientific processes.

When the stones are purchased, they are split and usually cubical in shape, with sharp-pointed corners, and it is necessary to place them in the hands of an expert diamond setter who can mount them in a blank bit without breaking them, and who can so set them that the sharp edges will wear off evenly and so that the strain on all of the stones in the bit is uniform. The stones are set—sometimes in copper packing—in the cutting edge of the bit, which is a small cylindrical arrangement that removes a core of approximately $\frac{15}{16}$ inch in diameter from the ore or rock through which it bores.

Where one drill is on the job, the setter is usually the foreman. In any event, the foreman is responsible for the diamonds. In the morning, when work is begun, he turns over a bit already set, to the drill runner. The runner can tell from the character of the rock and the manner of the cutting, how long a bit should be run. In some formations, it can be used only through 6 inches or 1 foot, and, in

others, as much as 20 feet before it is necessary to pull it up and exchange it for another bit. When it is finally turned back to the foreman or setter, the stones are cut out and weighed in a delicate

balance to determine the loss for that run. Then they are reset to be used again. Wear of \$2 and \$3 a foot is reported sometimes.

Stones are often used until they are reduced to $\frac{1}{8}$ carat and even less.

Used stones are considered of more value than new ones, for the rough corners have been worn off and the hardness and the texture have been definitely proved, whereas new stones, despite the closest scrutiny and tests,

often go to pieces quickly. The trials and vicissitudes of diamond drilling are many. Sometimes a drill rod parts. This means a fishing job with special tools.

Diamonds very seldom fall out of their settings if reasonable care is used. If they should happen to break loose, a wax-filled impression cup will serve to recover them.

Oftener a bit will drop into the hole and the time required to fish it out may be a few hours or it may be several weeks or even months. It is all a part of the day's work to the diamond-drill prospector. He expects to lose diamonds and he loses them in plenty. He drills patiently for weeks at a time for their recovery and piles up costs in four figures for his company. And at the end of that time, he closes his logbook with the following entry, just as laconic but

no less significant than the one quoted before:

"December 24. Broke pinion tooth and delivered hole to company to finish, the lost bit having been recovered."

CIRCUS-LIGHTING PLANT HAS LARGE CAPACITY

An electric-lighting plant, similar to those used by the army and navy for emergency light and power during the late war, has been adapted for circuses, and is mounted on an ordinary horse-drawn circus wagon. The outfit consists of an automobile-type gasoline engine which drives a generator. A switch-board for controlling the lights is also erected on the wagon. Heavy cables lead from the switch-board to batteries of floodlights at the top of the "big tent" and side-shows, the generator having a capacity of approximately 1,000 medium-sized floodlights.

HOT-ROLLED GEARS PRODUCED BY NEW PROCESS

1716

The production of accurately formed gears has long been a difficult manufac-

and grinding machines. A new method has now been devised for shaping accurate tooth profiles, in which a hot plastic blank is rolled in forced contact with a forming master gear. Power is transmitted through two other gears, in order that the shaping gear may not transmit any driving power to the plastic blank and thereby cause tooth distortion. To build up the structure and profile absolutely symmetrically on both sides of the teeth, the master gear is oscillated by repeated reversals of the direction of rotation. This is accomplished automatically by electric-control apparatus connected to the motor. The effect of these reversals, while the blank is plastic, is to work and knead the metal into proper form and to give a polish to the tooth surface, practically forging the teeth. The spindle shaft is adjustable lengthwise, to accommodate different thicknesses of blanks.

uses a simple and quick method of locating open or grounded wires, which is equally effective for both surface and underground wiring. Two iron walking sticks are used, each connected by wire to a headpiece telephone receiver mounted over the man's cap. Thus equipped, he goes searching for trouble, walking astraddle the signal conduits, and prodding his sticks frequently into the ground, listening intently. When the defective spot is reached, naturally the grounded wire makes the sticks "talk," thereby revealing the fault.

**FIND BEETLE CENTURIES OLD
SAME AS MODERN SPECIES**

187

Examining a 1,700-year-old tree from the giant forest of Tulare County, California, a scientist has found that two wood-boring beetles, sealed in a hole in the tree over a thousand years, are not appreciably different from beetles of the same species now infesting the forest. It is judged the tree was struck by lightning when about 421 years old, and that it was at that time the tree became infested. Later, the indications are, the

Science 3/2/23

tree healed the wound, thus completely sealing in the beetles. Though it is considered remarkable that there has been so little change in so variable a species, one must also recognize, says the scientist making the discovery, that the insect in question pertains to an archaic type, and that undoubtedly the characteristics of the species had been well fixed before the Christian era.

**ALL-ALUMINUM CYCLE ENGINE
LIGHT AND POWERFUL**

1743

The demand of motorcycle fans for a powerful yet lightweight motor has resulted in the development of a four-cylinder aluminum engine. Special attention has been paid to accurate balance, in order to produce ease of steering and more perfect control at high speeds or on bad roads. A three-speed transmission is housed in the rear portion of the motor base, power being transmitted through a large multiple-disk clutch built into the flywheel. The pistons are also made of aluminum and have a bore of 2 3/4 inches by 3 1/4-inch stroke. This machine is said to have unusually secure and comfortable riding qualities, owing to

more power than given

This Four-Cylinder Aluminum Motorcycle Engine Was One of the Chief Attractions at a Recent New York Exhibit Because of Its Light Weight

the use of a bucket-type seat and to handlebars of new design.

There are now 148 national forests, embracing 181,799 acres, according to the Department of the Interior.

Bird's-Eye View of the World's Largest Single-Deck Grandstand, Now Nearing Completion at the Chicago National League Ball Park; The New Stands Have a Seating Capacity of 30,000, Which Is Comparable to That of the Largest Two and Three-Deck Stands, and Possess the Advantage of Giving to Each Spectator an Unobstructed View of the Field and an Opportunity to Watch the Play from a Very Favorable Angle. Part of the Added Box Seats can be Seen at the Left, Bordering on the Playing Field. At the Right and Back, on Either Side of the Scoreboard, Are the New Bleachers, Which Are of Steel Construction

View from the Southwest Side of the Chicago National League Ball Park, Showing the Old Stands after being Moved to Their New Position: The Gap between the Stands at the Left has Since been Filled In with New Stands

WORLD'S LARGEST SINGLE-DECK GRANDSTAND

BY HENRY S. WHITE

AN altogether unprecedented engineering enterprise, that will involve an outlay of \$450,000, is now nearing completion at the Chicago National League Ball Park. The old grandstand, with a seating capacity of 15,000, is being transformed into a new stand with a seating capacity of 30,000. Moreover, the playing field has been considerably increased in area, so that one of the foul lines, which was formerly 50 feet short of the regulation, is now moved back the proper distance.

The original stand was entirely of structural steel. It was 120 feet wide and about 765 feet long, with a single sloping deck, and the usual kind of steel-trussed roof. In plan it was composed of a central curved section with a straight section at each end, tangent to the curve. In undertaking the enlargement, the rivets in all the splices of the steel structure along each of the two radial lines where the straight sections joined the curved one, were burned out, thus disjuncting the stand into three sections. The section at the east end of the stand was left in place, the curved one was moved back about 100 feet, and

the other straight section, at the north end, was moved back until it was in position to increase the length of the grandstand to nearly 1,000 feet. This left two gaps between the sections in their new positions, one about 115 feet long, and the other about 150 feet. These two gaps were built in with steel roof trusses and new seating decks to line up with the deck in the old sections.

Before this was done, the ground level of the playing field was lowered about 7 feet, allowing for the erection of new box seats that extend around the whole inside line of the new stand, making its total width 167 feet, nearly 50 feet more than the old stand. This will make it the largest single-deck stand in the world. There are a few two and three-deckers with a greater seating capacity, but they have disadvantages

not possessed by the single-decker, where there are no obstructions whatever, so that spectators in all parts of the stand with equal facility can see balls in the air, and watch the players in the field. There are also no stairs necessary. Instead there is a ramp, or walk, slightly inclined and easily accessible.

Diagram Showing the Relative Size, Shape, and Location of the Old and New Stands at the Chicago National League Ball Park

One of the most interesting features about this undertaking was the manner

Close-Up of the Northwest Section of Stands after Moving, but before the New Box Seats were Added: Back of the Stand, at the Right, a Part of a Ramp Appears

of moving the two sections of the old stand to their new locations as parts of the new stand. Naturally the more difficult section to move was the curved one. It had 144 columns for which concrete foundation piers had to be prepared in the new location before the moving. In each of these piers were either two or four vertical anchor bolts—altogether about 450—that had to be set so accurately that every one of them would exactly match up with the holes in the 144 column base plates.

To accomplish this, the section, before being moved, was jacked up and placed with the column bases upon very rigid

timber horizontal framing, which was so constructed that continuous cap timbers lined up with nine narrow-gauge railroad tracks previously laid from the old to the new location, where each track straddled each line of foundation piers in such a manner that each column came to rest exactly over its individual pier. Between the bottom of the cap timbers and across each of the rail tracks, were steel rollers to facilitate the moving of the whole structure.

The moving was done by means of two horse-driven capstans, one opposite each end of the structure, with a long continuous steel cable between them, which, in connection with a series of pulleys and blocks—a set for each rail track—hailed the curved section of the old stand back 91 feet in two hours. At each column were an average of about six jacks, making a total of 840. These were operated by 80 men directed by whistle signals from the superintendent. At its new location everything had been done with such remarkable precision that when the structure was slowly lowered, by simultaneously and equally turning all the jacks, the 450 holes in the column bases slid over their respective anchor bolts without a single exception—certainly a remarkable example of perfect accuracy.

The Canvas Above Has behind It a Magnetized Framework, So That the Models, Also Painted, may be Attached on Their Appropriate Places, by Fastening a Tin Strip to Their Backs with Adhesive Tape. To the Left are Shown a Salesman's Traveling Case, Two of the Canvases, and Some of the Models

1612
**DISPLAY REMOVABLE OBJECTS
 ON PAINTED BACKGROUND**

Models of monuments and other objects are often displayed without the proper settings. To show reproductions of this kind to better advantage, there has been invented a system in which a natural setting for the article is painted upon a canvas, backed by a framework that is magnetized in certain appropriate places. The models are also paintings and may be attached at the magnetized areas of the background by fastening a tin strip to their backs with adhesive tape. There are no projections or defacing objects to mar the background. While this innovation may be of benefit in stores or other permanent quarters, it is thought it will be of even greater advantage to the traveling salesman who may carry with him one of the backgrounds and various styles of the articles he sells.

**OCEAN SHIP HAS CIRCULATING
 LIBRARY AND BOOKSHOP**

Space for a combined circulating library and bookshop has been arranged on the new steamship "Tuscania," which plies across the Atlantic. The library, said to be the only one of its kind, has a large collection of books and has

proved popular among the passengers. The bookshop run in connection with the library, carries a representative number of the latest works, and has also met with success.

Passenger Taking Out Book from the Circulating Library of the High-Seas Bookshop on the "Tuscania," a New Atlantic Liner

NEW FORM OF VIOLONCELLO HAS FIVE STRINGS

1628

A new form of the cello, having five strings instead of the usual four, has been developed.

The additional one is an E-string, made of No. 7 piano wire, which is kept under a tension of 60 pounds by a small worm gear, and extends the tone range of the instrument considerably. The cello has a leather strap attached to it, which

passes around the body of the player, while his left foot rests on a small stool with a toe strap.

ing on a single rail. Upon this frame a dumping body is mounted, and a long rod is attached to the frame for pushing the car along. This rod gives the operator sufficient leverage to control the car with ease. The body is easily tipped by tilting it on its frame when it is necessary to discharge a load.

LOCOMOTIVE FLAG HOLDERS ARE ALSO CONTAINERS

1574

A new holder for the signal flags carried by locomotives has been designed

to serve also as a container, to prevent unnecessary soiling or misplacing of the flags. The device resembles a double-barreled auto-tire pump, with an extension at the base which fits into the present flag socket on the locomotive. The flags, green

and white, are drawn from a slot made along the entire length of each cylinder, while springs inside prevent them from dropping out. After use, the flags are rolled back by turning the knob at the upper end of each flag-staff.

1617

HAND-OPERATED MONORAIL CAR EXCELS WHEELBARROW

To reduce the amount of energy required to push or haul a wheelbarrow or small-wheeled truck, a German engineer has designed a monorail hand car, which, he claims, lessens this energy by three-fourths. The new car consists of a frame in which two flanged wheels are mounted, one behind the other, for rid-

ELECTRIC BOILER CAR HEATS SWISS RAILWAY COACHES

A railway car carrying an electrically heated boiler for generating steam to heat passenger coaches, was recently put in service on the Swiss federal railways. This unusual equipment was introduced because, on through trains, there are a certain number of coaches from foreign lines arranged for steam heat, although, as on most electric lines, the Swiss coaches are provided with resistance heaters. The boiler, which is rated at about 1,000 horsepower and intended for about 120 pounds' steam pressure, is supplied with 15,000-volt alternating current, which passes from the overhead line through the trolley, and through choke coils and special switches, to two electrodes inside the boiler. A built-in pump circulates water against the electrodes.

wire cable and a small automobile. On the farther side of the creek, one end of a 238-foot cable was attached to a tree, 100 feet above the creek, while the other end of the cable terminated at a shanty in the melon field. Then great

The Car That Pulled the Melons over the Creek with a Long Rope, and Booth on a Public Road Where They were Delivered and Sold

boxes of melons were hung to a pulley running on the cable. A rope running through another pulley lashed to the tree had one end fastened to the box of melons and the other tied to a small roadster car on the far bank of the creek. It was an easy matter for the car to pull the box of melons, as it swung 100 feet above the stream, to an unloading platform at the foot of the tree. Much time was saved in a busy season by the simple plan of the cable and the car and the use of a little ingenuity.

AERIAL CABLE CARRIES MELONS OVER CREEK

INDIAN-RICE HARVESTING NEW INDUSTRY

BY LAWRENCE WM. PEDROSE

1953 10.54 th 2
Seattle, Wash

AN industry of growing importance to the Northwest, in that it garners a food resource heretofore used only in a desultory manner, is the harvesting of Indian, or Canada, rice, a wild grain which grows in great abundance in the lake region of northern Minnesota and sister states, and in the northwest territories of Canada.

Wild rice has both food and medicinal value, possessing high caloric content and being easily digested. It is often

the rice shoots commence to grow from the lake bottom, and by the beginning of summer appear above the surface of the water. In August, the stems head out and quickly ripen, dropping the grain, which sinks into the muck of the lake bottom, protected from the cold of winter. Soon after the ripening period, the rice grass disintegrates and also sinks to the bottom to rot and form new soil for the growth of the next crop.

PHOTOS COPYRIGHT BY ABRAHAM CURTIS FOR THE NORTHERN PACIFIC RY.

Harvesting Indian Rice Is Something Machinery cannot Do. Left: Using, Alternately, the Right Hand and Left, the Harvester Bends the Rice Stems over the Boat's Gunwale and Knocks Off the Heads with a Sharp Blow of the Stick. Right: A Typical Chippewa Squaw with Her Basket of Grain

prescribed by physicians for dyspepsia and other intestinal disorders. Because of its delicate flavor, it is also prized as a companion dish for game, and is in demand for this purpose both in this country and abroad.

As far back as history records, wild rice was harvested by the Indians and the grain used for gruel. It is a product of lakes and swamps in the prairie regions and not adapted to any form of cultivation, but in the Northwest tens of thousands of acres of wild rice are to be found, and these constitute the principal feeding and breeding grounds of ducks, geese, and other migratory waterfowl during their summer stay in the North.

The largest wild-rice fields are found around the edges of prairie lakes in water 2 to 4 feet deep. In the spring

The delicate nature of wild rice has made it difficult to improve the Indian method of harvesting. The grain falls from the ripening heads before it becomes dry, otherwise it would float upon the water, and thus harvesting is a task requiring skill. The best method has been found to be the use of a canoe, or other light boat of shallow draft. The boat is poled through the rice patch. A squaw sits in the stern with a round stick, 1 inch in diameter and about 2 feet long, in either hand. With her right hand she sweeps a quantity of grass in over the gunwale of the boat and knocks off the heads of grain with a sharp blow from the stick in her left hand. Then with the left hand she sweeps in a quantity of grass, from the other side of the canoe, and knocks off the headed grain with her right hand.

This View Shows How the Indians Thresh the Grain by Prodding It with Clubs Which Bruise the Husks and Thereby Release the Grain from the Chaff. It is Claimed This Is the Only Task Which could be Improved by Mechanical Means

From 10 to 15 bushels of headed grain can be gathered in a day by each boat. The heads are heavy, weighing about 40 pounds to the bushel, and the gathered

product runs about 80 per cent grain and 20 per cent stems and chaff. The grain is about as thick as a knitting needle and varies from $\frac{1}{2}$ inch to $1\frac{1}{4}$

PHOTOS COPYRIGHT BY ASAHEL CURTIS FOR THE NORTHERN PACIFIC RY.

A Rice-Harvesting Camp of the Chippewa Indians: This Is a "One-Squaw" Tepee Made of Birch Bark, and Is Portable, as It can be Quickly Rolled Up and Easily Carried About by One Person. In the Background Are a Few Chippewas, Pioneer Experts in the Harvesting of the Wild Grain

inches in length. The heads are placed in a hand mill for separating the grain from the chaff, the Indians using small cone-shaped "mortars" of wood, into which the heads are dumped and pounded with large pestles. In a receptacle holding a bushel of grain, five or six persons usually operate the threshing clubs.

Lately, the harvesting of wild rice has been undertaken in a commercial way, and machinery is being developed to replace the crude Indian method of threshing, but no successful mechanical device has been found for harvesting the headed grain. In northern Minnesota several large wild-rice plantations have been leased and are being developed. The possibilities of the industry may be seen

from the fact that, at present, the retail price of wild rice averages about \$1 a pound, with the demand far exceeding the supply. A large part of this demand is from sportsmen's associations and owners of wild-waterfowl preserves, who sow the rice for game food.

Recent improvements in handling and shipping wild rice have increased its scope for propagation purposes. Formerly the only known method of keeping the grain fertile was by submerging it in cold water. Now a container has come into use which provides an insulation of damp moss that keeps the grain in excellent condition, and the product is shipped successfully in 1, 5, and 10-pound packages.

NEW TYPE OF SAFETY SIGNAL FOR RAILROAD CROSSINGS

A new type of railroad signal has been installed, and is now under test, at a level crossing on a street in Chicago, Ill. On an iron post, bearing the word "Railroad" very conspicuously, that display the 10-inch bright-red train is approach

under a sign "Railroad" are four lights which display the word "Stop" in letters when a train is approach

signal appears only at the approach of a train.

NEW METHOD EASILY CORRECTS ELECTROTYPE PLATES

Corrections and alterations on electrotype plates have always been tedious tasks because of their permanence, which from other considerations is a virtue. A new method devised by the Bureau of Standards makes this comparatively easy and rapid. An electrode inserted in the nozzle of a hose, through which a solution of copper sulphate is forced against the area on the plate where the correction is to be made, forms the negative terminal of an electric circuit of which the plate is the positive electrode. This rapidly removes the copper to the desired depth. The remainder of the plate is kept from being affected by a coating of ink or other nonconducting material. Current at 12 to 15 volts has been found most satisfactory. The depression, which is as deep as the engraved lines, is leveled from the other side with a hammer and anvil, and, after polishing, is ready for the new work.

CA "steam screen" declared to be the newest effect in motion photography is seen in a late production. The scene is a stage setting. The curtains are drawn apart, showing a wall of steam coming from the floor back of the footlights and cutting off the view of the stage. Slowly the screen of steam is dissipated, revealing the dancers behind.

NEW APPARATUS DETERMINES SIZES OF CEMENT PARTICLES

Nearly every large industry now has its research laboratory. As most people know, Portland cement has to undergo many exacting tests in order to prove beyond a doubt that the product conforms to the quality requirements of standard specifications.

Blowing cement up a short brass stack to measure the size of almost infinitesimal particles is one of these tests. Standard Portland cement must be so uniform that 78 per cent will pass a sieve with 40,000 openings to the square inch. But the industry wanted to know just how fine that 78 per cent was. To the average person the task of measuring so nearly impalpable dust particles would seem impossible. An apparatus known as the air analyzer, used at the Structural Materials Research Laboratory, Lewis Institute, Chicago, separates and gives accurate average measurements for particles of cement so fine that it would take 80,000,000 of them, placed in closely fitted rows, to cover a glass plate 1 inch square. In other words, if it were possible to weave a sieve with 9,000 wires each way in a square inch, some cement would pass through.

The air analyzer consists of four brass stacks, each 61 inches high, equipped with a small bowl that fits tightly at the bottom. An air inlet enters the stack a few inches above the bowl, and at the top of each stack a cloth dust collector is attached.

The measuring and separation are done by placing a sample of cement in the bowl and letting air through the inlet nozzle at a specific pressure for a given time. The separation size, which is the measuring unit, depends upon the velocity of the air through the stack. This in turn depends on the size of the air nozzle and the diameter of the stack up which it is blown. In each of the four units the stacks are of different diameters, and the openings in the inlet nozzles are of different sizes. These are so arranged as to give air velocities which separate particles ranging from .00181 inch for the swiftest air flow in the smallest stack, to .00035 inch for the lowest velocity in the largest stack.

Many days were spent in establishing these separation sizes by means of microscopic measurements when the laboratory staff first completed the analyzer. With it, they have proved beyond all doubt that the manufacture of cement requires finer

grinding than any other industrial process used on such a large scale. Fine

With This Apparatus for Analyzing the Fineness to Which Cement is Ground, Particles as Small as .00035 of an Inch can be Separated

grinding requires power, which accounts for much of the expense involved in the manufacture of Portland cement.

RADIATOR FUNNEL REQUIRES NO HOLDING

Automobile owners will greet with satisfaction the appearance of a new type of radiator funnel, which, after insertion in the inlet cap, will stand erect without holding. In this position it is sufficiently rigid to permit a pail of water to be rested on its edge, thus not only leaving both the filler's hands free to empty the pail, but also relieving him of most of the weight of the pail. The funnel also contains a brass strainer.

A New Funnel for Automobile Radiators: After Insertion, the Funnel Stands without Holding, and the Radiator may be Quickly and Easily Filled

MECHANICAL DEVICE AIDS TOUCH TYPEWRITING

1568

A recently invented attachment for typewriter keyboards, is for the assistance

The Keyboard of This Typewriter is Fitted with an Attachment to Assist the Beginner in Learning the Touch System

of the beginner at touch typewriting. It consists of a frame with inclined bars, extending from the top to the lowest bank of keys, between the rows. The bars project a slight distance above the keys, thus serving as a guide to keep the fingers in the right positions.

COLLAPSIBLE ORCHARD LADDER MAKES FRUIT PICKING EASY

A collapsible orchard ladder, made in two sections, has been placed on the market recently, which greatly facilitates fruit-picking operations and the work of tree pruners. The upper section of the two-part ladder is disposed at an obtuse angle to the lower one, and terminates in a single rail. As this rail is sheathed,

The New Orchard Ladder is Easily Carried, and Fruit Picking over a Wide Range is Possible without Frequent Descents to Shift It to a New Position

no damage to the bark is possible when it is adjusted between the limbs of a fruit tree, and the fruit picker can pick over a considerable range without having to descend and shift the ladder to a new position. This improved ladder can also be quickly adjusted for use as an ordinary ladder, if desired.

BELLS CAST FROM STEEL INSTEAD OF BRONZE

1703

Bells cast from steel are being made to replace those that were melted in Germany during the war, in order to obtain the copper, tin, zinc, and other metals which they contained. Open-hearth steel is specially treated to produce bells that closely resemble in tone and resonance those made of bell-metal alloy. The manufacture requires care in molding, the metal being poured into a mold set with the mouth of the bell uppermost. The casting is cooled slowly, accurately tuned, and given a rust-proof coating.

UNIVERSAL JOINT ELIMINATES PINS AND SCREWS

1502

A ball-bearing universal joint of extremely simple construction has been placed on the market recently, which dispenses with small pins as working connections. Each of the two working shafts of the joint has two forked projections at the contact end, which fit into, and are contained by, a two-part spherical housing which is recessed to receive these projecting lugs. The contact faces of the housing also serve as bearing surfaces for each shaft, receiving the thrust and thereby reducing the wear.

Experiments made with different types of miners' lamps show that the amount of coal miners are able to move is much greater with a better light. With lamps giving six times the usual illumination, the amount of coal taken out was increased 14 per cent with 21 per cent less dirt, although the improved lamps weigh five times as much as the ordinary type.

Woodney B. C. Canada

Smeecher Products Co
Trenton, Mo.

Some interesting departures from the usual construction of engineers' levels have been embodied in a new instrument which has just appeared on the English market. Of special interest is the fact that the telescope is not rigidly mounted to the vertical center of the instrument, as is common practice, but is free to revolve a half-turn within the two collars in which it is mounted. This feature

A New Surveyor's Level of Simplified Construction: Instead of Centering between Hair Lines on the Level Tube, One End of the Bubble is Brought Up to a Pointed Indicator. The Bubble is Visible from the Eyepiece

provides an instant means of checking the line of collimation, or the true axis of the telescope, without the more laborious method necessary with the rigid type. Equally advantageous is the placing of the spirit tube to one side of the telescope, instead of under it, and the use of a reflecting prism to facilitate reading the level. The surveyor is thus able to observe the bubble from the eyepiece.

OWNER MAKES NOVEL FIRE TEST FOR NEW HOUSE

When an eastern architect received a commission recently to prepare plans for a new residence, he had no inkling that the owner would subject the building material used to the extraordinarily severe tests described below. The wall material selected — cinder-concrete blocks—was to be coated with stucco, and was expected to be fully fire-resistant. Accordingly, the owner proceeded to build a small test-house with blocks of this material, which he weighted down with 11 tons of pig

Test Block House, Loaded with 11 Tons of Pig Iron, in Which the Fire Raged for an Hour: The Blocks Withstood This as Well as More Severe Compression Tests Later

of any object he has made, the wax may be melted and made into some other article. The process offers possibilities for developing artistic talent and an eye for color.

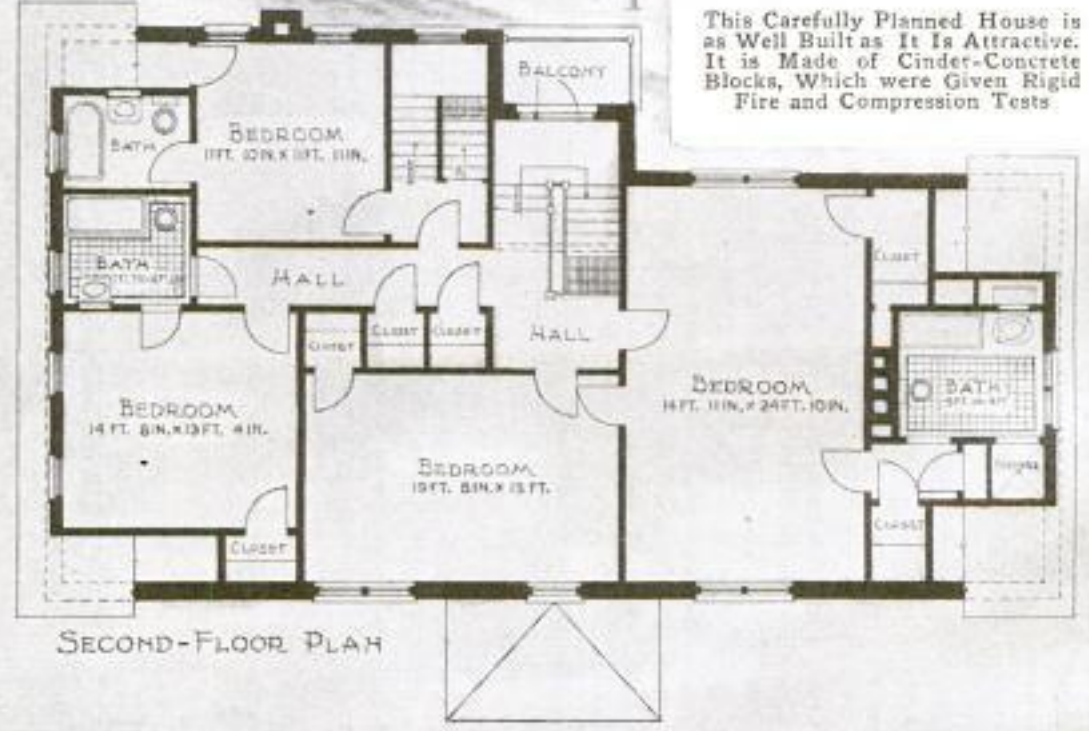

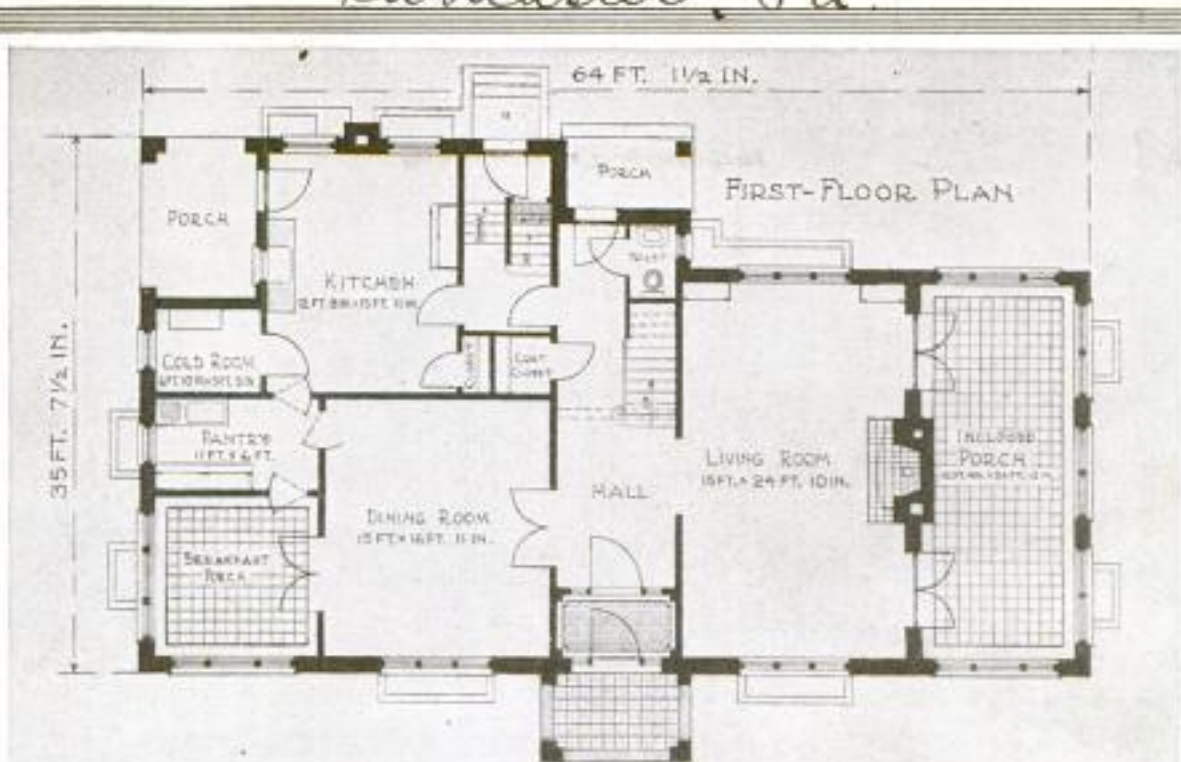

CAR FERRY DRIVES BLINDLY BEFORE GALE INTO PORT

1798 By a wild freak of chance, when Ann Arbor car ferry "No. 4" was battling an 80-mile hurricane on Lake Michigan with the mercury near 20° below zero, the storm drove it through the narrow space between the breakwaters and into Little Betsey Bay at Frankfort, Mich., its home port. With 19 loaded cars loose on the lower deck and battering the sides, Captain Fredericksen had lost his bearings at night. His wireless operator sent out the "S. O. S." call, and near morning the reply came that the ferry must be close to shore. Half an hour later the crew felt a crash. They rushed on deck. "No. 4" was safe at home. In the blinding snow, by some miracle, it had driven through the 260-foot channel into Little Betsey Bay, and it lay to with ice 30 feet high round its masts. The Ann Arbor Railroad car ferries carry loaded freight cars winter and summer between Frankfort, Escanaba, Menominee, and Manistique, Mich.

Chicago Tribune 2/25/23

iron. This done, he had the house filled with cord wood, poured some kerosene on it, and then applied a match. The fire raged for a whole hour, the maximum temperature reached being 2,200° F., but the blocks remained undamaged. Not yet content, the owner then took one of the blocks down to the plant of which he is superintendent, and had it subjected to a pressure of 1,200 pounds to the square inch in a large hydraulic press.

 blocks Lancaster, Pa.

ELECTRIC SWITCH REGULATES TEMPERATURE

1669

A new type of automatic relay switch has been placed on the market which is

A Heat-Governed Electric Switch: A Is the Main-Line Switch to Apparatus to be Controlled; B Is the Selector Switch, and C Controls the Two Contactors on Either Side of the Containing Cylinder

designed to provide convenient means for temperature control on automatic oil burners, electric refrigerating apparatus, electric heating units, or similar equipment where it is necessary to operate a switch in accordance with temperature changes. The unit is in reality a double-control switch of low voltage, power for which is provided from a transformer built into the relay. The control for temperature changes selectively energizes two low-voltage magnets, which in turn energize 110-volt solenoids, closing or opening the main-line circuit to the motor or other apparatus to be controlled.

1757

PYTHONS IN DALLAS ZOO TO HAVE PADDED CAGES

Hereafter pythons kept in the zoological gardens at Dallas, Tex., will be quartered in padded cages. The death of two mammoth pythons, each over 22 feet long, was due, according to their keepers, to cankerous sores on their mouths and tongues, caused by striking the sides of the cages when devouring their food. They will be mounted and preserved in the Texas Museum of Natural History.

FIRM GIVES KITCHEN LABELS FOR USE ON EMPTY CANS

1797

In order that the consumers of its product may use emptied cans more conveniently as containers for beans, starch, corks, twine, and other kitchen miscellanea, a San Francisco coffee firm is distributing booklets containing 24 gummed labels which may be used to index the cans for the pantry shelves. The labels are red with white lettering, and are 2 1/4 by 3 3/8 inches in dimensions. This affords a neat and convenient way of keeping various kitchen commodities.

PARALYZED MAN IN WHEELED CHAIR TILLS GARDEN

1699

With his combined wheel chair and cultivator and his half-acre garden, William Hartig, of Excelsior, Minn., gives a demonstration of what can be done in overcoming physical handicaps. Hartig has had three strokes of paralysis, has lost the use of his left side, has the use of only two fingers and one thumb, and is unable to stand or walk. Yet, with a chair mounted on a pair of old buggy wheels, he works his garden. Pushing backward with his right foot in his wheeled chair, he cultivates with hoe and rake as far as he can reach, then pushes farther backward for a new start.

STEEL SKELETON OF CHURCH IS UNUSUAL SIGHT

With its steel skeleton towering skyward and its walls hardly half finished, a church under construction in San Francisco stands as an evidence of a new idea in church architecture. Even to the finials on the steeple tops, the steel structure is complete. Contrasted with the usual method of building a church stone by stone from the foundation up, the skeleton of steel with its interlocking beams and columns and its slowly rising walls is sufficient to attract attention.

Frame of Church in Construction, Showing Steel Skeleton Far in Advance of Concrete Walls: The Beauty of the Completed Structure is Suggested Even in This Unfinished State

NEW FLUX PERMITS ZINC WELDING

A flux has recently been developed in Germany, that is said to enable the successful welding of zinc. The oxide that forms on the surface of molten zinc is dissolved by an alkaline flux which liberates hydrogen. Not only is continuous welding of zinc possible, but other metals, such as copper and brass, can be joined to zinc with the aid of this flux, which can be applied like solder or made into a solution to form a bath.

TEN-TON JACK HAS PUSH-AND-PULL FEATURES

An interesting push-and-pull jack has been developed recently, which is intended primarily for straightening center

sills on the draft-gear end of railroad cars—the sides of steel gondola cars frequently becoming distorted with heavy

usage—either by pushing apart or pulling them together where bent. The design of the new jack is extremely simple, consisting of a steel screw, ratchet with pawl, and two cast-steel nuts. The latter are provided with flat projections on one side for pushing, and hooks on the opposite side for pulling. Chains and additional hooks may also be attached for pulling in the sides of freight cars which have been bent outward. The jack is made in various capacities up to 10 tons.

A 10-Ton-Capacity Push-and-Pull Jack, Combining Ruggedness and Simplicity of Construction, for Straightening Center Sills on the Draft-Gear End of Railroad Cars: Flat Lugs are Provided for Pushing, Hooks for Pulling, and Extra Hooks on the Sides for Pulling with Chains

FIVE MILES OF GRANITE IS
BACK WALL OF HOUSE

CONCRETE PIPE CAST BY NEW
CENTRIFUGAL PROCESS

1502

With the back wall of his house composed of five miles of granite and the

Concrete pipe, centrifugally cast, is now being made at several places in the

Built against the Side of a Mountain, This House in the Blue Ridge Range of North Carolina Has Five Miles of Granite for One of Its Walls

United States, according to a system which has some original features as compared with the methods developed in Germany and later used in modified form in other countries. The first step in the process is building up a wire cage, to the ends of which are tied the metal end joints of the pipe. This is placed in a horizontal cylindrical form which is then partly filled with concrete mortar. The form is revolved rapidly on its horizontal axis, which action throws the concrete against the inside of the form, making what is the wall of the pipe when the concrete sets. The finished units are said to present a smooth uniform surface, and when placed end to end are remarkably true to line and circumference. By means of a special joint the pipe can be made tight for comparatively high pressure, a 20-inch pipe line being in service under a pressure of 50 pounds to the square inch. This pipe has walls 2½ inches thick.

other three of substantial masonry, the owner of a certain home in the Blue Ridge Mountains of western North Carolina is comfortably free from worries about the stability of his dwelling. It is known popularly as "the house with a wall five miles thick." Its occupants call themselves the "cliff dwellers."

☞ Rabbits breed so fast in the Hawaiian island of Laysan and destroy the vegetation to such an extent that the government will exterminate them in order to protect the birds.

1527

ICE SKATING IS FEATURED IN WARM WEATHER

Outdoor ice skating was the novel attraction at a pageant held in Forest Park, St. Louis. In spite of the maximum St. Louis temperature, ice was produced artificially and a surface maintained that permitted skating. The skating rink was 26 by 48 feet in size. First, a foundation consisting of a false floor was built, on which cork board was laid to prevent

heat leakage. Over this came a sheet of waterproof canvas, and on the canvas were supports for the refrigerating coils. Frozen sand made a base for the water which was sprayed upon it, and frozen in 10 hours by the direct-expansion system. So successfully did the freezing process operate, that the skaters commented on the perfect surface of the ice.

In Bright Sunshine and a Setting of Green, Skaters in Sport Costumes Formed an Interesting Feature of a St. Louis Pageant. Note the Contrast between the Skaters' Outdoor Costumes and the Court Dresses of the Other Performers. Refrigerating Machinery was Concealed in the Oval Platform, under the Ice.

DEVICE CONVERTS HAMMER INTO PIPE WRENCH

1296

A new and interesting device is a simple attachment that in a few seconds

makes a pipe wrench out of an ordinary claw hammer. It consists of two hardened steel jaws that swing on a ring which slips over the claw of the hammer. The action is such that the harder the pull on the hammer handle, the tighter the

jaws grip the pipe. It is an inexpensive and convenient device for home use.

1627 HEADLIGHT DIMMER OPERATED BY PUSH BUTTON

An automobile headlight-dimming device, recently placed on the market, is in the form of a push-button control fastened to the footboard of the car. Two wires connect to the headlight circuit and a slight pressure of the foot sends the

current through the self-contained resistance in the device, instantly dimming the lights. The lights become bright when the foot pressure is removed.

1636 SELF-LOCKING MANHOLE COVER PREVENTS COMMON ACCIDENT

The frequent accidents caused by the tilting of manhole covers in streets are

Manhole Cover Which Locks Automatically: At Right is One of the Keys Required to Unlock It

not likely to occur when a new automatic locking device is used. The cover locks automatically when placed in the frame. To unlock it, two keys are inserted through slots in the cover and given a quarter turn, when levers are engaged which release the latches. The mechanism will not unlock without the keys.

1610 SIMPLE BENDER FORMS IRON INTO MANY SHAPES

A handy device for bending bar iron in various sizes of rounds, flats, and squares, has recently been put on the market for the benefit of blacksmiths, repairmen, and farmers. It consists of two forked pieces of steel, each having a number of different-sized holes, hinged together. One end can be fastened to a post or bench, or held in a vise.

1613 POCKET-SIZE TYPEWRITER IS SMALLEST IN THE WORLD

The making of miniature models of comparatively large mechanical appliances seems to have a peculiar attraction for inventors, who often display considerable ingenuity in giving free rein to their hobby. An interesting example of this kind is the recent construction of a miniature typewriter, pocket-size, and claimed to be the smallest of its kind in the world. The machine takes a full-sized letterhead sheet, yet is so small that it can easily be held in the palm of one hand while typing with the other.

WESTERN UNIVERSITY BUILDS NEW RACING SHELLS

Above: One of the New Racing Shells of the University of Washington in the Course of Construction. The Framing is Made of Spruce and the Planking of Port Orford Cedar. In Order to Meet the Requirements of the Western Oarsmen, the Shell is Designed with a Decided Bow Lift. Left: Close-Up, Showing the Joining of the Keel and Ribs

Determined to achieve superiority in shell racing, the state University of Washington has recently conducted experiments in the design and construction of shells which are said to be revolutionary.

Until new designs were introduced by Washington last year, there had been very little changes in the construction of racing shells since the first craft with a sliding seat was developed. English shells are constructed of sycamore, brought from France, and pine from Norway, and are planked with Spanish cedar, whereas Americans have substituted ash for sycamore in the ribbing. However, the conventional English design, with low forward deck, has been copied both in this country and abroad for several decades.

The new Washington shells are constructed of spruce and Port Orford cedar, materials also adopted for Yale's shells this year. The peculiar stroke of western oarsmen has influenced the de-

sign, and the Washington shells are being constructed with a pronounced bow lift. Western oarsmen are trained to check their shoulder swing and take the weight out of the bow of the shell the instant the stroke is finished. This tends to eliminate the plunging of the forward deck under the water—"sousing." In contrast, the English style is a longer, heavier stroke which gives a full body swing and carries the entire weight of the crew forward in the boat. The new Washington shells are designed to be sensitive to the quick check of the oarsmen's stroke.

On the new shells no bolts are used, braces being fastened to the frame with screws and rivets. The planking, which is only $\frac{5}{16}$ inch thick, is fastened with copper rivets. Use of spruce also is an improvement over Norway pine in that it has a finer grain, is tougher, and is obtainable in greater lengths. The keels on the new shells are $\frac{5}{8}$ inch thick, in 40-foot and 21-foot sections. The completed shells will weigh about 250 pounds.

1621 ICE-SCORING MACHINE SAVES WASTE AND TIME

A Block of Ice Immediately after Leaving the Scoring Machine: This One is Subdivided into 16 Portions, but can be Divided into Any Other Number of Parts of Equal Size and Weight

An ice-scoring machine to facilitate the delivery of accurate weights of ice to consumers is now being placed on the market, and is said to be gaining considerable favor among ice cutters. The new machine is entirely automatic in operation, receiving the standard 300-pound cake of ice at one end and turning it out promptly at the other end, scored or divided into any desired number of pieces. It is then easy to disengage one of the smaller portions from the block without waste, and it is also obvious that the machine will save considerable time for the deliveryman.

1489 NEW FACTORY BUILDINGS FORM UPWARD STEPS

With only one direction to extend its buildings and that direction upward, a German watch factory is literally growing uphill step by step. The factory is at Schramberg, in the Black Forest. As the growth of the business required additions to the building, they have been constructed one by one, each a little higher up the steep hill, till the roof line takes on the form of a flight of steps.

1715 WAR-TIME "BULGES" NOW STABILIZE PEACE SHIPS

"Bulges" like those fitted to battleships during the war for protection against mines and torpedoes, are now being added to passenger liners by German ship-builders to give greater stability by balancing the superstructure. The first large vessel to be built on this plan is the "Albert Ballin," a 620-foot passenger and cargo ship launched recently at Hamburg.

Although More Like a Tropical Trading Station or Encampment, This Sunny and Pleasant-Looking Place Is Really a Jail. It is Situated at Broome, on the Northwest Coast of Western Australia, and Serves to Confine Offenders of the Aboriginal Population, or So-Called "Blackfellows"

AUSTRALIAN JAIL FOR "WILDMEN"

THE aborigines—native "blackfellows"—of Australia are born with a natural instinct to kill, and are consequently a great trouble to cattle breeders in isolated parts of north-western Australia. They spear cattle for no apparent reason whatever, except to gratify their lust for killing. Occasionally, when the station owners endeavor to punish them, a white man is killed, and immediately a hue and cry is raised for the murderers. It usually takes months for the mounted-police trooper, who is responsible for law and order over a stretch of country many hundreds of square miles in area, to track down the black-fellow and bring him to justice. Such murders, fortunately, are few. However, the jail is usually full of offenders who are serving terms for spearing cattle, and various minor infractions of the law. The town of Broome, where the jail is located, is the terminus of an important highway and is situated on Roebuck Bay in the northwestern part of Western Australia, not far from the Kimberley gold field. This is the first paying gold field found in that province, and was reported by government geologists in 1882. Then started the gold rush to this part of the continent, which soon led to rich discoveries in other districts.

The Blackfellows Lined Up for Inspection in the Prison Yard: The Principal Crime of These "Wildmen" Is Cattle Killing. They Are Very Bloodthirsty and Spear the Cattle of the Ranchmen Apparently for No Reason Whatever, but Criminals of Minor Degrees are Also Kept Here

The Massive Stone Wall and Parapet of the Old Round Tower at Fort Snelling, Minnesota. Indicate Its Original Purpose of Indian Defense

OLD STONE STRONGHOLD MADE INTO A HOUSE

With its massive stone walls and parapet built for defense against the Indians, the Round Tower at Fort Snelling, Minn., on the Mississippi River, has stood for a hundred years in a perfect state of preservation. Now it has been remodeled into a home with modern conveniences for the post electrician of the fort and his family. It stands a few hundred feet from the river.

☛ The depth of natural-gas wells varies greatly, from less than 1,000 feet to over 6,000 feet, the deepest well now producing reaching 6,822 feet.

167 PORTABLE OIL ENGINE RUNS PUMP OR BUCKSAW

An unusually compact and well-planned oil-engine unit, of English make, which is specially suited for farm needs or construction work, has been placed on the market recently. The engine is designed to run a bucksaw, with which it is conveniently mounted on either a fixed frame or a portable truck. A feature is a locking attachment, consisting of a chain and self-holding lever, for gripping a log or any unevenly shaped timber without slippage. The saw re-

quires practically no attention from the operator, as an automatic cut-off comes into play as soon as the piece of wood is severed. The unit, being entirely self-contained, can also be mounted for use as a portable pump, and when so used has a claimed output of 1,000 gallons of

water per hour against a 100-foot head. The engine is of 3 brake horsepower, and must be started with gasoline. The less volatile fuel is, of course, turned on when the cylinder is warmed up.

Above: The Bucksaw and Engine at Work Sawing a Log. Both Mounted on a Truck. Left: Engine Alone Dismounted. Right: Saw and Buck for Holding Timbers. Note the Locking Chain and Lever at the Right-Hand End.

NEW YORK DRYDOCK TO EQUAL SIZE OF ONE AT BOSTON

A drydock large enough to accommodate the largest vessels afloat will soon be built at New York. Plans calling for a dock of this description were recently approved by the directors of a well-known shipyard corporation. While the exact figures have not been given out, it is intimated that the drydock will be equal to, if not larger than, the navy dock near Boston, which is 1,200 feet long, 149 feet wide, and 45 feet deep.

ALASKAN RAILROADERS MUST BATTLE BIG DRIFTS

Railroading in Alaska in the winter season always proves to be a battle royal against the snow. The snow drifts badly in the cuts, then packs hard and freezes into walls that put up a strong and determined resistance before they are battered down by the snowplows. The White Pass and Yukon route is one of the lines that is hit the hardest by blizzards. It climbs a heavy grade, starting from sea level at Skagway and extending as far as White Horse, a distance of 110 miles.

In the dead of winter, operations are

sometimes brought to a standstill because of the heavy fall of snow. The snow of itself would not be so bad if it were not for the sudden drops in temperature fol-

Tunneling in the Snow to Dig Out a Buried Locomotive on the White Pass and Yukon Route: Note How Firm and Hard the Frozen Side Walls Look

lowing the snowfalls. It often happens that the mercury will register 15 to 25° below zero at Skagway, and up at White Horse it falls as low as 60° below. This means that when a train crew starts out on a run, the members never know when they will get back to the starting point. Railroading in this far-northern region calls for foresight and first-class snow-fighting equipment.

TANK SHIPS USING THE CANAL ARE ONE-EIGHTH OF TRAFFIC

Tank ships using the Panama Canal represented 12 per cent of the entire commercial traffic during 1922. These vessels carried about 1,500,000 long tons of cargo, or 10.4 per cent of all the cargo passing through the canal. The United States led in the number of ships and had 56.3 per cent of the total tonnage; Great Britain was second with 36.6 per cent, and Norway third with 4.3 per cent. However, only 55 per cent of the tonnage of tankers consisted of loaded ships, the remainder being ballasted.

**GALE LAYS BARE MUD ISLANDS
 IN BALTIMORE HARBOR**

Land unseen for a generation or more was exposed to view in the vicinity of historic Fort McHenry, Baltimore harbor, during a heavy storm last February. Under the influence of a two-day northwest gale, reaching a velocity of 42 miles an hour, a quantity of water, estimated by harbor engineers at several million gallons, was blown from the harbor toward the Chesapeake Bay with the result that the water level at the city pier was lowered by 4 feet 4 inches, by actual measurement. The bar at Fort McHenry, normally submerged, was uncovered to the extent of more than an acre, and Mud Islands, ordinarily under water,

showed above the surface along a frontage of nearly 2,000 feet. Vessels were unable to dock at the Clinton Street ferry because of the low water. Members of the harbor board, in boarding the official tug "Baltimore," found it impossible to step from pier to tug, as usual, and a ladder had to be used. Harbor work which is being done at the piers of the Pennsylvania Railroad, was visible for inspection, although the construction is considerably below the normal water level.

**CUPOLA TAPPER AND STOPPER
 SIMPLE AND SAFE**

In order to do away with the old hand method of tapping and stopping the flow of molten metal from cupolas, which requires experience and skill and is subject to accidents, a mechanical device has been developed. It consists of a piston-operated rod, with a cup at the end, into which is placed a composition ball that fits against the breast of the cupola when the flow is stopped. The piston movement is controlled by an arrangement of levers and rods that may be extended to some convenient point in the foundry. With this device, the flow can be easily gauged and effectively stopped. A counterweighted lever holds the ball in the desired position, and the whole device can be swung to one side for lining the spout or building up the breast.

FLEXIBILITY OF CAR'S DRIVE SHOWN BY DEMONSTRATION

To show the flexibility of the drive of a new light motor car, a novel demonstration was made recently at Seattle, Wash. An ordinary hunting-case watch with the lid open was placed on the brick pavement of a level street and the motor car slowly driven forward. Barely moving, the car crept forward until the left front tire touched the lid of the watch. Then, even more slowly, the car advanced until the lid was forced down and snapped shut. Upon backing away from the timepiece, the driver picked it up and offered it for examination, and it proved to be undamaged.

During the demonstration the driver was aided with hand signals from a man crouching beside the watch. Five, four, three, two, and one-inch distances were signaled by the watcher with the fingers of his hand. When the tire had reached the timepiece, the signal was a shake of the hand. The driver

then lined up with his eye a rivet on the running board with the edge of a brick in the pavement, and by thus sighting was able to gauge the movement forward of the car. An interested group of spec-

tators witnessed this test, which reflected much credit on the driver's skill.

EUROPEAN COOKING DEVICE DOES DOUBLE DUTY

With the object of saving every penny's worth of gas, a European invention

European Gas Saver Cooks with Double Boiler at Left, While Food is Cooking over the Burner

makes a gas burner do double duty. A coil over the burner heats and circulates water through a double boiler beside the gas plate, and while the food in its upper part is cooking, another dish of food may be cooking over the burner.

CLAIM HONEY IS EXCELLENT AS ANTIFREEZE REMEDY

Farmers of northeastern Wisconsin claim to have discovered that honey in the radiators of their automobiles is an excellent antifreezing agent. While certain chemists point out that the substance would gum and stick if the motor became overheated, the farmers in question seem to be well satisfied. It is said that 10 pounds of honey with an equal quantity of water will last through the winter, and that the solution is effective even at as low a temperature as 20° below zero.

UNIQUE PAGEANT IS STAGED BY SPORTSMEN

Seattle Wash.

FOR the purpose of calling attention to the hunting and fishing resources of the state of Washington, as well as for obtaining publicity for a membership drive, the men's Association of Seattle held what is believed to be the first pageant of ever offered. It consisted of a parade, nearly a mile long, of floats depicting various phases of hunting, fishing, and camp life, and in conjunction, a large outdoor life was held at a downtown auditorium. In the parade were men, of various ages from 3 to 70 years, and such novelties as a fish hold a ton of fish, a landing net that would hold a small whale, and an expert fly casters who cast numerous objects into the crowd. Above is shown one of the sets within the auditorium men, while below are two original the parade, an "honest-to-equally genuine trapper."

TO PROMOTE FISHING AND HUNTING INTERESTS

WOODEN CASE DISPLAYS SEED PACKETS ATTRACTIVELY

A new wooden case for displaying seed packets has one side for displaying vege-

Front of Self-Selling Seed Case: At Left, Shelf for Cash Register; Bottom, Compartments for Grass Seed, Corn, Beans, and the Like

table seeds, while the other holds flower seeds. Three 34-quart bins, pivoting outwardly at either side of the base, a projecting bracket, for supporting a cash register and with compartments for holding bags, at one end of the case, and three carton shelves at the opposite end, are other new features. The case stands about 6 feet high, and is 5 feet in length. There are eight rows of compartments on each side, their size increasing from the top to the bottom row. In all, they contain about 8,000 packets.

"SANDERS" ONCE USED FOR BLOTTING INK

Before the invention of blotting paper, writers with a pen were accustomed to the use of sand to dry the ink on a sheet

Forms of "Sanders" to Contain Dry Sand for Blotting Ink: Left, Wooden Sander, 125 Years Old; Right, Sheet-Iron Sander

of parchment or paper, and some receptacle for fine, dry sand was always found on the writing table. In the picture, two of these "sanders" are shown. The one on the left is of wood, over 125 years old. The other is of sheet iron and of unknown age. Sanders and quill pens were used in the same period.

FOUR-WHEELED ROLLER SKATES HAVE RUBBER TIRES

Standard-size roller skates with rubber tires, recently invented, are said to permit a greater freedom in fancy skating, and at the same time do away with all noise. The tires are of solid rubber, and secured by a flange so that they cannot work off. As with other types, the length of the skate can be adjusted to the size of the foot.

ELECTRIC RIVET HAMMER WORKS WITHOUT SHOCK

Wear and tear on vibratory equipment, such as rivet hammers, is always very severe, due to the shock which is trans-

Sectional View of Riveting Hammer and Concrete Drill, Showing Interiors of Motor and Driving Mechanism, and Ball-Bearing Journals

mitted thousands of times a day as the hammer blow is struck. In a new portable rivet hammer and concrete drill now being marketed, the effects of these hammer blows have been eliminated by automatically disconnecting the hammering member from the drive mechanism at the moment the blow is struck. At that instant the hammer rebounds from the blow, affording it a slight longitudinal movement which frees it from the drive, and therefore does not communicate shock to it.

**NEWLY ARRIVED CANARIES
MUST PASS INSPECTION**

All shipments of birds or other animals into the United States must pass the inspection of experts to prevent the importation of diseased or harmful specimens, and it is a rule which is carefully observed. This is specially true of canaries, which are inspected one by one. They come in large packages, each containing 21 rows of cages with one bird in each cage. Immediately on their arrival the cages are placed in the sunlight and the birds examined one by one. The cages of birds passed are marked with chalk to show that they are approved for sale.

Inspector Examining Foreign-Bred Canaries to Prevent Bringing In Diseased Birds

1559 **USE LARGE CONCRETE PIPE FOR CITY SEWERS**

Transporting a Section of Concrete Sewer Pipe, 108 Inches in Diameter: One of These Pieces of Pipe Weighs About Six Tons

Concrete pipe for sewer construction has in recent months been used in large sizes by several middle-western cities. At one place over 1,000 feet of pipe, 96 inches in diameter, has been used, and at another, considerable pipe, 108 inches in diameter, has been laid. The 108-inch pipe weighs 3,250 pounds per foot of length, and the 96-inch pipe over 2,700 pounds. Considerable skill, of course, is required in the handling and laying of these heavy pieces.

NEW EXPLOSIVE MADE FROM SAWDUST

1615

A new explosive compound in which ordinary sawdust replaces the nitroglycerin used in most high explosives,

has recently been announced by the chemistry department of the University of Washington. The discovery consists in the proper cooking of a mixture of sawdust and ammonium nitrate, which have long been known to form an explosive.

It is estimated that the explosive can be made to sell at about one-third the cost of commercial dynamite, as neither the ammonium nitrate, which forms 80 per cent of the mixture, nor the sawdust making up the balance, is an expensive material. The new explosive apparently has the strength and qualities desired in a high explosive. It is claimed to be practically smokeless and that the fumes from it do not cause headache or other physical inconvenience to the user; that it can only be exploded by detonation, that it does not require thawing, and does not burn readily. An effort is being made to make a state industry of the manufacture of the new explosive, which would be distributed at cost for the benefit of farmers and others who use explosives extensively for clearing land and increasing the productivity of the soil. It has been recently demonstrated in public.

Above: Fir Stump, 14 Feet in Circumference, Used in Demonstrating the Effectiveness of the New Explosive Compound. Below: Result of the Explosion of 25 Pounds of the New Compound under the Stump

NEW MONKEY WRENCH WORKS FROM HANDLE

1658

Several interesting improvements have been incorporated in a new type of monkey wrench recently developed and placed on the market. The usual nut for adjusting the jaws has been eliminated, being supplanted by a ratchet which is easily operated from the handle. A trigger at the back of the tool provides quick release of the jaws by disengaging the ratchet. The face of the upper jaw is curved and corrugated, so that the tool can also be used as a pipe wrench when necessary.

Above: The Lower Jaw of This Wrench has been Removed and Set Up on Its Face, for Use as a Jack. Below: The Assembled Wrench, Showing the Trigger Release and the Ratchet Handle

Self-Propelled Railway Car, Which Runs on Gas Generated from the Unburned Carbon in the Ashes Dumped from the Ordinary Type of Locomotive: It Carries Its Own Gas Producer, Internal-Combustion Engines, and Electric Generators That Supply Current for the Motors

SELF-PROPELLED RAILWAY CAR RUNS ON WASTE FUEL

An electric-motor-driven railway car that generates its own electricity has been satisfactorily operated by a South African railroad. The unburned carbon in the ashes dumped from the grates of the regular locomotives, is used as fuel in a producer which generates gas for internal-combustion engines. The engines are connected to electric generators which furnish current to run the two 35-horsepower motors. The control is about the same as in the ordinary street car, and one man can operate the car. The first car weighed about 30 tons, and as it was of an experimental nature, was constructed of such standard equipment as was easily obtainable. Because of the relative scarcity of fuel, the car was developed to meet the need of an economical unit for operation on branch lines.

AUSTRALIAN RABBIT FENCE COVERED BY SAND

Just as snowdrifts cover fences in northern latitudes, the shifting sands in Australia cover the fences erected by the government to keep out the hordes of rabbits which devour the crops. To such an extent does this condition prevail that the fence of wire netting between Queensland and New South Wales has been wholly covered and the drifts of

sand have crept part way up a second fence built on top of the first. Now it is proposed that the Australian Common-

Original Boundary Fence in Australia Covered by Sand Drift, Which is Creeping Up on the Second Fence

wealth float a loan of \$15,000,000 to build more rabbit fences.

Estimates of the available amount of coal in the world will need revision, according to reports from the Belgian Congo, where two coal deposits estimated at over one billion tons are reported to have been discovered. One is 16 feet thick.

Two Horses Running Neck and Neck at the Finish of a Close Race: Without the Use of the Quintuple Camera, It Is Often a Matter of Compromise among the Judges in Declaring the Winner in a Finish Like This One

ADJUDGING HORSE RACES BY PHOTOGRAPHY

WHEN a group of race horses cross the finish line nose to nose it is difficult to determine the actual winner.

Judges Stand with Two of the Special Cameras Mounted One above the Other

To obviate this difficulty and to eliminate all disputes, a well-known German camera maker has developed a special camera for taking pictures of the finish of a horse race. A moving picture is not wholly satisfactory because it is not fast enough. Experience shows that it is desirable to take a series of five pictures while the horses are moving two yards,

and when it is remembered that horses can do nearly 20 yards a second, it means that these five pictures must be snapped in a tenth of a second. To attain this result, five objectives are arranged one above the other and are provided with very fine, large lenses, and extremely fast shutters, capable of a speed of $\frac{1}{12,000}$ second on a sunshiny day. The cameras are adapted to taking snapshots even when it is dusk. Special arrangements have been made so that a finished picture can be delivered 7 or 8 minutes after the race is finished. The camera is operated electrically, and the intention is to snap the camera so that the middle of the series of five pictures will show the horses crossing the finish line. Two cameras are used, so that if anything happens to one set of pictures, the other set is available.

Five-Story Camera, Designed to Take Five Pictures in Rapid Succession, So as to Record Accurately the Winner of a Horse Race

From the Top Down, These Pictures, Which were All Snapped within an Interval of One-Tenth of a Second by the Electrically Operated Quintuple Camera, Show Progressively a Number of Closely Bunched Horses as They Approach and Cross the Finish Line

**WATER BARRELS OF CONCRETE
ADOPTED BY RAILROADS**

1589

Through the western timberlands, over precipitous mountains, and across arid country, railroads have found some difficulty in maintaining their water barrels,

very bothersome, while up in the mountains the storms are severe, and at times the wooden barrels are destroyed or blown away.

An interesting type of concrete water barrel has been introduced lately on several of these railroads. The barrels are

cast in concrete in much the same manner as a concrete irrigation pipe, reinforced with a heavy basket of galvanized-metal fabric in the center of all the walls. Those in use on the Union Pacific system, and on the San Diego and Arizona branch of the Southern Pacific, have a diameter of 24 inches and a depth of 30 inches. The walls are 2½ inches thick, and the weight is 796 pounds. Each barrel holds 60 gallons. While this type is expected to be especially useful because it will decrease evaporation, it is

Concrete Water Barrels Which are being Introduced on the Union Pacific System, and on the San Diego and Arizona Branch of the Southern Pacific: Less Evaporation Is One of the Benefits Expected

a necessary means of protecting isolated bridges and bridge decking, as well as other structures, against fire. In hot climates the evaporation of the water is

also thought by some that the weight will be an advantage in that it will be too heavy for marauders along the right of way to carry off.

**AUTOMATIC SERVING
MACHINE SAVES TIME
AND LABOR**

A clever device, called a serving machine, has been patented for winding twine and other material on marline-wound cables. Actuated by a ¼-horsepower motor, this little machine can be started at the end of a long cable and will automatically travel to the other end, winding the protecting material on the cable as it goes. It is said to do the work faster and better than six expert riggers could, and as the first cost and maintenance are low, it is thought that it will increase the use of marline-wound cable. The machine was developed by a former navy-yard rigger.

Main Entrance of Los Angeles Stadium, Which, It is Said, will Be the World's Largest Amphitheater: In the Foreground Appears the Excavation for the Bowl, and on the Right Forms for Concrete Construction. The Illustration Gives a Good Idea of the Size

GREAT LOS ANGELES STADIUM TO SEAT 75,000

By FRANK B. HOWE

*412 Masonry
House Los Angeles, Calif.*

FACED with the problem of erecting the largest colosseum in the world—a stadium of the bowl type—at Los Angeles on a plot of land absolutely flat and without any of the natural advantages which often help stadium builders, the contractors devised an efficient working plan.

A huge derrick, nearly 150 feet in height, featured the first stage of the work. It was mounted on rollers on a track encircling the site of the stadium. From the operating engine at the bottom of the derrick a cable was run to the top and thence out to the middle of the

Towering Derrick Used to Operate Bucket for Excavating, and Endless Cable on Which the Bucket Moves

Base of the Derrick, and Roller Track on Which It Traveled in Excavating and Filling for the Bowl of the Stadium: As the Middle was Excavated and the Sides Filled, the Derrick was Moved

stadium. A scraper bucket of extra size was hung on this cable. Starting with the derrick and bucket, the earth was gradually worked from the middle to the outer edge of the arena, lowering the middle and raising the sides. On being placed in position, the scraper digs itself in as it is filled with earth, and when full, the cable drags it to the place where it is to be dumped. Then by reversing the cable, the bucket is returned. As the stadium site is lowered in the middle and raised on the sides, the derrick is moved along on the track and the same op-

eration repeated. When the hollowing-out process is finished, the interior of the bowl is smoothed.

and complete what is said to be the largest amphitheater ever erected.

The middle was excavated to a depth of 32 feet, and the sides rise to a height of 79 feet. The length of the stadium is 1,080 feet and its width 644 feet. It will seat 75,000 spectators who come into it through 103 entrances to fill the 65 rows of seats while they watch the players in the athletic field, 344 by 688 feet in size. Concrete to the amount of 27,000 cubic yards will be used in the construction of the stadium, and its cost, it is estimated, will be about 800,000 dollars.

The stadium will have its first use in the try-out games for the Pacific section in 1924 for the Olympic games in France the same year. And since the stadium

Bowl of Stadium during Construction: Note Rim, 79 Feet High, in Background, Compared with Derrick behind It; Also Forms for Concrete Construction in Left Foreground

With the bowl of earth replacing the level ground, it is a simple operation to line it with concrete, build in seats and a stage, provide the minor requirements,

is built, the people of Los Angeles hope to secure the international Olympic games of 1928 as an event worthy of the new arena.

1560 MACHINE DRILLS HOLES AND INSERTS PINS

What is known as a gudgeon-drilling and inserting machine has been developed for automatically doing work that

ordinarily requires a number of hand operations. The new machine is used principally in the manufacture of wooden rollers. In the middle of the machine is a revolving carrier into which the operator puts the blank pieces of wood. At each end of the machine is a drill spindle carrying a long drill, which makes a hole in each end of the blank piece. The carrier then makes a part revolution, and two other spindles with pusher rods force the pins, or gudgeons, into the holes. The machine is operated by means of cams, and all the operator has to do is to put in blank pieces and remove the finished ones.

Above: Gudgeon-Drilling and Inserting Machine Which Is Automatic Except for the Placing and Removal of Pieces on the Carrier. Below: Wooden Roller with Holes Drilled and One Gudgeon Inserted

ENGINEERS CHANGE COURSE OF RIVER IN INDIANA

One of the "Retards" Used to Change the Course of the White River in Indiana: Note How the Brush is Held in Place by the Cables Leading to Submerged Piles. The Railroad Bridge can be Seen in the Background

An interesting method of making a river behave itself is being used in straightening a bend in the west fork of the White River at the Baltimore and Ohio Railroad bridge, some 12 or 15 miles east of Vincennes, Ind. Some years previously, the river at this

point had changed its channel, so that it no longer flowed toward the bridge but threatened to eat its way into the railroad grade, a short distance beyond. Carload after carload of rock had been dumped into the river at the point menaced, but with every high water the rock was swept

Map Showing the Change That was Made in the Course of the River: The Broken Lines Indicate the New Channel, and the Arrows the Direction of Flow

away, leaving the spot again unprotected.

To solve the problem, the engineers engaged cut scores of small trees, and, by means of a cable and hoisting machinery, lowered the trees into the river at the bend. These, fastened together by

wire, were made to form two "retards," or brush dams, anchored about 300 yards apart, and extending about two-thirds across the river. As a result of this work, the river current has taken such a course that the new channel is expected to run straight to the railroad bridge.

HYDROELECTRIC POWER PLANT NORTH OF ARCTIC CIRCLE

The hydroelectric power plant maintained by the Norwegian government at Glomfjord has a peculiar interest on account of its location 30 miles north of the arctic circle, as well as for its features of construction. Several large lakes into which glaciers discharge, serve as a natural reservoir from which water

is carried in a tunnel, 9,050 feet long, with a cross section of 192 square feet. Two penstocks of welded steel lead to the power house on the coast, giving a head of 1,542 feet. Two turbines have a rated horsepower of 25,000 each, and the third 27,500 horsepower. Current is carried three miles to the point of consumption on two three-phase lines. The cost of the installation was \$5,600,000. The plant has a watershed of 96 square miles.

LIQUID OR POWDERED POISON
872 SPRAYED ON COTTON

Poison, in either liquid or powdered form, may be efficiently sprayed on cotton plants by the use of a recently introduced machine. The outfit.

Machine for Spraying Cotton Plants with Poison, Which may Be in Either Liquid or Powder Form: The Liquid is Forced by Compressed Air through Nozzles, and the Powder Blown onto the Damp Plants

consisting of an air pump, blower, spraying nozzles, liquid and powdered-poison receptacles, water tank, and apparatus for directing the sprays, is mounted on two high metal wheels and may be drawn by either horses or a tractor. The usual procedure is to treat the cotton early in the morning while the dew is yet upon the plants, spraying powdered poison upon them. When the sun has dried the dew from the plants, they are moistened with a water spray so that the powder will adhere, or liquid poison is sprayed directly from the nozzles. The appliance may be used also for any other plants that are cultivated in rows and are not of too great height.

X-RAY MOVIES ATTAIN HIGHER PERFECTION

According to competent medical authority, new developments in X-ray movies have been achieved by the use of a new method of sensitizing the photographic plate so as to record new wave lengths never before photographed. Fine details in bone structure have been revealed by the new method, and it is hoped that injuries and pathologic changes, to which the ordinary X-ray plate is blind, will be recorded after further experimentation.

Dr. C. Schneider, Berlin, Germany.

WEIGHTS THAT GROW PUZZLE
BUREAU OF STANDARDS

A curious case of weights that have been increasing in weight has been the subject of investigation at the Bureau of Standards for some time. The three weights were part of a set obtained with a balance at the Seattle, Wash., assay office of the Treasury Department, and their increase in weight was found to account for discrepancies in values given by the balances after being in use a short time. The fact that the other weights of the set showed no such variation, and that the rate of increase was not uniform, complicates the problem. In the first year there was a total gain of about 5 grains for the three weights, and about 7 grains in the next seven months. The next two months produced an increase of approximately 1 grain. No satisfactory solution has as yet been found.

HEDGE TRIMMED TO FORM HOUSE OWNER'S NAME

Allowing the hedge about his house to grow to a suitable height in several places, a resident of Shiloh, N. J., clipped the excess growth to form the letters of his name. While not detracting from

A Resident of Shiloh, New Jersey, Cut the Upper Part of the Hedge at the Front of His Home into Letters Forming His Name

the appearance of the surroundings, this has lent a touch of individuality and distinctiveness to the house.

A Group of Argentinians with Baskets Which They Used to Transport Sand and Gravel to a Pit Where Concrete was Mixed for the Construction of a Packing Plant

BUILDING A PACKING PLANT BY HAND

BY D. C. RETSLOFF

ARGENTINA, the second largest country in South America, takes precedence over all other South American countries in cattle and sheep raising and in the production of beef, mutton, and wool, and has one of the largest meat-packing and cold-storage plants on the continent.

La Plata, a city of 110,000, situated at the mouth of the river Plata, is the home of this plant which was built in an extraordinary way. During the recent war, the Argentinians did not favor the idea of foreign capital bringing industries into their country. Local laborers would not work with Americans, neither would they countenance

Argentinian Workmen Carrying Concrete in Buckets up a Ladder, and Pouring the Concrete into Forms

130 W. W. ^{Dean} ~~Dean~~ St. Louis, Mo
The use of labor-saving devices or machinery. The only way the packing company could erect its plant was by agreeing to employ an entire crew of resident laborers and to allow the work to be done in the old-fashioned manner.

The population of La Plata is almost entirely Italian, French, and Spanish. American foremen found this class of labor slow and stubborn. There were as many different "work spots" as there were materials. For instance, the rock and sand were unloaded at the dock as far apart as possible; the cement was piled at another point; large rocks were carried in a sort of litter to a

Two Workmen with a Litter Used in Carrying Rocks for the Building of the Hand-Constructed Packing Plant at the City of La Plata in Argentina

place where they were broken into bits; sand and small rocks were transported in baskets on the heads of workmen, to a pit where they were mixed with the cement. Then the concrete was carried in small buckets up ladders, where it was poured into the forms.

The cost of erecting this three-story plant was close to \$250,000. Among the 200 men employed in its construction, there were no Americans except the contractors and the skilled machinists. This work offers an interesting contrast to the modern methods used on a construction job in the United States.

996 PHOTOGRAPHER RISKS HEARING TO SNAP LARGE GAS WELL

The workmen who finally succeeded in "shutting in," at Byron, Wyo., what is

photographer recently took a chance at a close-up, he was warned to take not only this precaution but also to fill the outer ear passages with grease, and to bandage them. This to prevent the vibration from breaking his eardrums.

11780 CORNELL FINDS IT DIFFICULT TO REPLACE BROKEN OARS

An oar famine faces Cornell University, and Coach John Hoyle has not yet found a supply of spruce sufficiently good to stand the strain to which racing oars are put. These oars are made of white spruce, and the blocks from which they are manufactured must be at least 18 feet 6 inches long, 6 inches wide, and 3 inches thick. As, in addition, the grain must be perfectly straight, and the growth rings small and regular, it has proved difficult to find wood able to meet these requirements. The oars are finished at the university boathouse.

A Bird's-Eye View of the Mammoth 20-Acre Oil-Storage Tank under Construction, Which will Hold 1,750,000 Barrels of Oil When Completed: Its Roof will be Supported by Wooden Poles Set in Concrete Blocks in the Tank's Bottom. The Three Circular Tanks in the Background Are of 500,000-Barrel Capacity

1666
GIANT CONCRETE OIL TANK HAS VERY THIN WALLS

A huge reinforced-concrete oil-storage tank, nearly 20 acres in extent, is rapidly nearing completion in California, and will have a capacity—claimed to be the largest in the world—of 1,750,000 barrels of oil. The depth of the tank will be 16 feet, of which half will be below the ground. A remarkable feature of the construction is that the sides and bottom of the tank will be only 4 inches thick. This was made possible by the extremely careful and ingenious method of preparing and compacting the ground under and around the tank site. Special-treaded tractors were used to repack the soil left at the bottom, which resulted in greatly increasing its density. In this way the concrete in contact with the ground serves mainly to retain the stored oil, transmitting most of the pressure to the previously compacted soil.

1775
NEW RUST-PROOFING PROCESS FOR IRON AND STEEL

A new rust-proofing process for iron and steel consists in electroplating the articles with a coating of metallic cadmium, varying in thickness from .0001 to .001 inch. After plating, which takes about 10 minutes, the article is baked for two or three hours at a temperature of

300 to 400° Fahrenheit. This causes the cadmium to form an alloy with the iron or steel surface, which is highly resistant to atmospheric corrosion.

1681
POLICE "DEAD LINE" BARS SHOPLIFTERS

Shoplifters in New York City have become so numerous and expert in plying their trade as to compel the police department to establish a "dead line" around the shopping centers. Persons with known criminal records found within these areas are arrested on sight. One of the methods employed by the expert shoplifter

is to use an artificial hand as a decoy to distract the attention of the salesperson, while the concealed real hand stealthily tucks away whatever it can reach.

WINGLESS AIRPLANE TAXI MAKES TRIPS OVER SNOW

An airplane fuselage, mounted on skids, was in use last winter as a taxi at Truckee, Calif. It operated on short pleasure trips in the vicinity, and also ran, over snow, to Lake Tahoe, a resort some 14 miles away. The machine, which carried four persons including the driver, sometimes made 120 miles an hour on straight-aways, but, of course, had to slow down to about 85 miles on roads in order to negotiate the turns. Steering was by the usual aerial rudder, while a drag arrangement served as a brake. So successful has the builder and operator been that he plans to place four such machines in commission next season.

DAMAGE TO BRIDGE CAUSES SACRIFICE OF TREE

The associations clinging to a tree which had provided shade and a resting place for many years were not sufficient to save it when the tree's roots damaged the abutment of a bridge on a state highway crossed by hundreds of automobiles daily. The force of its growing roots spread the rock and filling of the bridge abutment, so that when high water came, part of the abutment was carried away. Thousands of spectators watched the felling of the tree. The bridge was moved downstream on rollers, and is in use while a new one is under construction. Then the old bridge will be dismantled.

CAn immense airship hangar recently completed at Scott Field, Ill., for the U. S. Army, is 810 feet long and 206 feet wide, with a clear height of 150 feet at the center. All-steel construction, motor-operated doors, and towing trolleys are features.

CONVENTION TO BE HELD
1546 IN DEEP SALT MINE

SKIING TAUGHT IN INDOOR
1255 SCHOOLS IN NORWAY

The state convention of the Kansas Knights of Pythias, which will be held next fall at Lyons, can claim two distinctions: It will be the largest lodge meeting ever held in a deep mine and also the only one ever held in a rock-salt mine.

"Ski-running," says a famous British figure skater, "is not for the timid, but it

The vast gallery cut in solid rock salt, in which the air is perfectly pure and there is no moisture, will be turned into a veritable palace of the Arabian nights. The walls of glittering salt will reflect the brilliancy of hundreds of electric lights. The roof is upheld by huge crystalline pillars. The floor of pure salt is polished until it is as smooth as a lake of ice. Music will be furnished for dancing merry-makers after they have disposed of the affairs of business.

This mine goes over 1,000 feet straight down into a vein of rock salt 400 feet thick. It is reached by two elevators controlled by an engine housed in a building above the ground.

The meeting is scheduled for Oct. 16-17, 1923, and probably 2,000 delegates from all parts of the state will be entertained in this unusual setting, as the novelty of the affair is expected to bring out a large number of interested participants.

FOULING OF SHIPS' BOTTOMS
INFLUENCED BY COLOR

The color of paint on a ship's bottom is an important factor in the amount of fouling that occurs, according to a series of experiments recently completed. The results showed the fouling to be greater on a dark surface than on a light one, the difference between white and black painted surfaces being particularly marked. Barnacles especially seemed averse to light color.

**CHAIN AVERTS EXPLOSIONS
 IN DRY-CLEANING PLANTS**

Fires caused by benzine explosions occur more or less frequently in dry-clean-

An Effective Device for Preventing Explosions in Dry-Cleaning Plants: The Chain Which the Workman is Holding Serves to Ground Static Charges of Electricity

ing establishments, but none has happened in an eastern plant since the adoption of a simple device for grounding static electricity when a workman is reaching into a washing machine. When doing this, the workman merely holds a chain which is connected to a water pipe, thereby grounding himself and conveying the static electricity to the ground. It is well known that substances like cotton, linen, silk, and especially unwashed or undyed wool or textiles, become more or less electrified when rubbed. When this is done in a bath of benzine, the latter also becomes electrified, but with an opposite charge, and a spark may form at any time, exploding the fumes from the very volatile and inflammable fluid. This condition is the most frequent cause of explosions and fires in dry-cleaning works.

Building an Ice House around a Stack, 31 Feet High, with 10 Feet More to Go: A Prolonged Cold Spell Necessitated Storing This 3,000-Ton Pile Out in the Open, and the House was Subsequently Built over and around It

USUAL ICE-STORAGE PRACTICE IS REVERSED

A prolonged period of sub-zero weather found one eastern ice company so swamped with the large harvest as to necessitate unusual means of storing the unexpected excess. Its storehouses being already filled, the company stacked more than 3,000 tons of ice out in the open, in a space immediately adjoining one of its storage houses, and then proceeded to build a shelter about the huge ice pile. The ice was stacked in 12-inch layers, and was piled up to a total height of 41 feet before being roofed. This reversal of usual storage methods was also accompanied by a considerable saving in loading cost, due to the plentiful light and also to the freedom of movement possible when working in the open.

BAR HOLDING MAGAZINE FILES FITS ON NARROW LEDGE

To save space in libraries, in the office, or in the home, an inventor has designed a rack for holding newspapers or magazines which can be put in place on the

Wooden Bar with Slanting Holders for Magazines: It can be Placed on a Window Sill or Any Other Suitable Ledge

window sill, or any other narrow ledge having a vertical background. The device consists of a wooden bar, provided with slanting holders of the ordinary type to receive the ends of the files.

SPEEDOMETER SIGNAL FLASHES DANGER LIGHT

An important automobile accessory for use with any motor car is designed to reduce the hazards of speeding by flash-

The Signal-Flashing Speed Recorder: Speed Limits may be Quickly Set with a Turn of a Key, Which is Also Used to Lock the Ignition

ing a signal light on the dial board as soon as the car exceeds any predetermined speed limit. The instrument may also be adjusted to flash at a speed slightly under the desired limit, and then to cut out the ignition automatically when the limit is reached. In addition it has the usual dials for recording speed, trip mileage, and total mileage, and an indicator which records the degree of inclination when the car runs up or down a grade.

TEST ACTION OF SALT WATER ON CONCRETE PIERS

It is well known that sea water has a deteriorating effect on concrete masonry

Left: Concrete Piles of a Rich and Lean Mix after Four Years in Sea Water. Right: Same Two Piles after 12 Years' Immersion

and for some time there has been a question as to whether or not the action of salt water could be resisted by properly proportioned concrete, which up to the present has been largely of the mixes prescribed for land structures. Tests covering a period of 11 years now render available data as to the mixes best suited

Above: Magnified Surface of Dense-Concrete Pile after Immersion in Sea Water. Below: Comparative View of Pile Made from Lean Concrete

for concrete work that will be subject to the action of sea water.

Twenty-four specimens of different mixes were made up at the navy yard at Charlestown, Mass., and suspended from a cap log of a wharf. The length of the test piles was 16 feet, which was sufficient to keep the bottom always immersed while the top was always above the water level. The specimens were permitted to remain in the water for over four years, when they were all taken out for inspection, at which time all were photographed and indications of deterioration recorded. After a seven-year period, the piles were again lifted. At this inspection it was found that the heavy growth of barnacles which had accumulated on the piles at the first inspection, had been destroyed by crude oil floating on the water. Four piles made of a dense mixture, comparatively high in cement, showed little effect of the nearly 12 years' immersion. The effect was increasingly marked on more porous piles, and on those made from mixtures in which the amount of cement used was relatively small.

1671
NEW STORAGE BATTERY FOR RADIO TUBES

A new storage battery, now on the market, has been designed with a view to the requirements of radio tubes that have been using dry cells. It is an 11-plate battery constructed from standard battery parts and has an 80 - ampere-hour rating at 2 volts. When used in connection with radio tubes drawing $\frac{1}{4}$ ampere, the battery will give approximately 320 hours' service.

About 149 pounds of meat per capita were consumed in the United States during 1922, announces the Department of Agriculture. Pork and beef ranked highest in the kind of meat purchased. The total consumption was about 16,000,000,000 pounds, a new record for this country.

TANDEM AUTO CHASSIS USED FOR RAILWAY COACHES

One of the most interesting adaptations of the gasoline automobile to rail service, is a tandem arrangement of two automobile chassis that recently appeared in Europe. The autos are fitted with passenger bodies, the usual steering gear dismantled, and flanged wheels fitted to a solid axle. The cars are coupled and run back to back, for which purpose a center buffer and draw pin are provided, and a sliding door at the rear of each body permits ready access from one to the other. They maintain a good average speed, the gears of the rear car being in neutral, and are said to run 15 miles to the gallon of gasoline with the vehicles fully loaded.

1605
PLAN OCEAN TRAFFIC LANES FOR PACIFIC SHIPS

Transpacific shipping has increased to such an extent that, in the interests of safety, the establishment of definite routes for the masters of vessels to follow, is being considered. To meet this condition the Hydrographic Office of the U. S. Navy, after careful study, recommends lanes for eastbound and westbound ships to take throughout the year. In contrast to this, ships sailing the Atlantic, where similar practice has been followed for years, must shift to a more southerly course during the iceberg season.

CANDY, NUTS, OR SIRUP MAY GO WITH ICE-CREAM CONE

The addition of a flavored sirup, of fruit, of nut meats, or of candy to an ice-cream cone, will be possible with a new invention. After the cone and its ball of ice cream have been prepared, a little container of pastry or confectionery may be pressed into the ice cream to hold the

sirup or other delicacy. A small conical projection on the container will hold it in place, and the container and its contents may be eaten with the ice cream and the cone.

TURNING AND GRINDING ARBOR FITS ALL PISTONS

A turning and grinding arbor that fits all the pistons in a line of various lengths and diameters, is now on the market. It maintains the same center distances in the lathe or grinder, and enables the operator to finish the different-sized pistons without changing the set-up. It consists of a steel arbor with notched holes along one side that receive the end of the set-screws of the different adapters which grip the open end of the pistons. The piston is slotted to receive the retaining finger driver on the adapter.

Arbor That Permits Pistons of Various Lengths and Diameters to be Finished without Changing the Set-Up: It Is the Notches along One Side That Makes This Possible

AUTOMATIC DEVICE REGISTERS AUTOS VISITING PARK

A new device which automatically registers the automobiles that visit the Cascade National Forests, has been installed on the entrance road. It consists of a number of steel springs placed in a wooden culvert over which the autos have to pass. Each time an automobile goes over the culvert, the springs undergo a slight depression which operates the recorder.

OILCAN HAS LARGE STRAINER AND CONTROL VALVE

A liquid measure, for the use of motor-car owners and garage men, has a horizontal strainer fixed at the middle. In addition it is equipped with a valve at the bottom, controlling the flow of oil, which is manipulated by a thumb lever at the top of the can. The spout is flexible so that the can actually serves as a funnel.

STANDARD BLOCKS SIMPLIFY SILO CONSTRUCTION

An unusual type of concrete silo has been erected in Germany, in which blocks of the same shape and size have been used throughout to form the cell walls. The cells of the silo are square, each having three bays to the side, and the unit of construction consists of two arched pieces which flank each other to form one bay in the wall. Concrete is poured between the adjacent ends of the arched bays, forming heavy piers which run down to the foundation floor and support the structure. The arched blocks are also provided with air holes, permitting circulation between the hollow shells that form the wall. The new silo is of 2,000 tons' capacity, and because of its unusual design was built at a great saving both in cost and in time.

TIRE SLICER FITS WORN TIRES FOR REUSE

A new use has been found for tire casings which have become worn or injured in travel, whereby they add greatly to the toughness and strength of other tires, and incidentally afford better protection to the inner tubes. A tire skiver, or slicer, is the means employed for cutting the beads from the old casing, leaving a feather-edge which facilitates its insertion into another casing of the same size. The advantage of this double lining to the inner tube is reflected in the superior tire economy which results.

¶The ever-increasing number of Chicago's broadcasting stations has compelled the designation of a "silent night" for the benefit of amateurs. At seven o'clock every Monday night these stations of the city will close, and for five hours the fans will have an opportunity to "fish" for distant stations without fear of local interruption.

A Tire Skiver, or Slicer, Set Up for Operation: The Machine can be Adjusted to Skive All Sizes and Styles of Tires, Leaving a Feather-Edge Which Facilitates Insertion into Another Tire of the Same Diameter

1548 WINDOW AWNINGS ADJUSTED FROM INSIDE OF HOUSE

To avoid the trouble of leaning out of a window to raise or lower an awning, a simple device is now available by

Device for Raising and Lowering Window Awnings from Inside in Place: The Inset Shows the Construction of the Device in Detail

which the awning may be adjusted from the inside. The awning is hung and roped as for hand operation. The shaft of the device passes through the window frame, terminating outside with a pulley which winds up or unwinds the rope to raise or lower the awning. Inside of the window the shaft end is held in place by a plate attached to the frame, and carries a socket into which a crank fits.

1531 RIVET AND BOLT EXTRACTOR EXERTS HEAVY PRESSURE

The removal of rusty nails, pins, or rivets from machinery is greatly simplified by the aid of a small tool which operates on the jack principle. A threaded bolt forms the jacking member of this device, and its end is brought up snug against the piece to be extracted. Twin levers, linked to a threaded nut on the central bolt, grip the

extracted. Twin levers, linked to a threaded nut on the central bolt, grip the

piece when the nut is turned, the resulting leverage causing a combined gripping and pulling effect on the imbedded piece, loosening it in proportion to the amount turned.

1275 PILOT LIGHTS AID CONTROL OF ELECTRIC FURNACE

A simple method employed to improve the regulation of electrodes in an arc furnace of the Heroult type, is by means of pilot-light control. In the case of a single-phase furnace, two 40-watt tungsten-filament lamps, which will glow at 15 volts and stand surges of 125 volts, can be used, while three lamps will serve for three-phase. The lamps are connected in series across the bus bars and provided with a common connection to the bath, a connection to the hearth usually being sufficient for the latter. When no arc is established, both lights will glow with equal brilliancy. With current flowing through the furnace, the lights will be equally bright if the arcs are the same, but the slightest change in the length or resistance of one arc will be indicated by its lamp. If one electrode should touch the bath, its lamp would instantly cease glowing.

When no arc is established, both lights will glow with equal brilliancy. A Homemade Electric Light for the Farmyard

By J. R. KOONTZ

FARM-LIGHTING plants are now universally used in the country, and, in many communities, the city lines are extended to serve the farmers for miles throughout the surrounding territory. In addition to the lights in the house and outbuildings, many farmers would like to install a few yard lights, were it not for the expense involved.

This was the case on our farm, until we determined to make the lights ourselves; one of the resulting lights is shown in the accompanying photograph, and, as each one costs only about \$1.30 for material, we made three or four, where we would have been obliged to use only one, had it been purchased.

A 4-ft. piece of $\frac{1}{2}$ by $1\frac{1}{2}$ -in. iron is bent at right angles, as shown in detail drawing, one end being 20 in. long, the other 28 in. Drill two holes in the 20-in. leg, to fit the $\frac{3}{8}$ -in. bolts used to fasten the bracket to the post. Two similar holes are also drilled in the other leg, one 2 in. from the end, for the bolt that holds the reflector, the other 18 in. from the end, for the braces.

A galvanized-iron sheet, 18 in. square, is cut in the form of a circle, and a V-

shaped cut made in it, as shown, the cut being 6 in. wide at the edge, and carried to the center. The disk is then bent or rolled to a conical shape, and the edges, which should overlap about 1 in., riveted and soldered. A $\frac{3}{8}$ -in. hole is punched in the center. A block of cypress, or other wood that will not rot when exposed to weather, is shaped, as shown, to fit the reflector, and drilled for a $\frac{3}{8}$ -in.

bolt, the head of which should be sunk into the wood: a nut locks the block in place, a leather washer being used between nut and reflector, to prevent water from soaking into it. The reflector is then bolted to the bracket with a nut and washer.

A 4-ft. length of $\frac{1}{4}$ -in. round iron is cut in two, and two braces, with an eye formed on each end, made as indicated. These are bolted loosely to the bracket, as shown in the assembled

view, and the places where the outer eyes rest on the reflector are marked. Holes to fit stove bolts are punched at the marked spots, and the porcelain knobs assembled, passing the stove bolts through the knobs, reflector, and braces, and using a leather washer between each knob and the reflector, and metal washers

Yard Lights are Easily Made in Any Farm Workshop, and will Add Much to the Comfort and Convenience of Work around the Yard at Night

The Photos Show All the Material Necessary to Construct the Yard Light, Together with a Completed Fixture. The Drawings Show Details of the Various Parts Used, and the Method of Assembling Them. The Cost of the Purchased Material for the Fixture Shown Was Only \$1.30

under the nuts. Do not draw the nuts tight until the wires are in place.

The lamp receptacle is now screwed in the center of the wooden block, the wires attached to it, and led through the slots in the knobs, and the knobs and braces are drawn up tight. A coat of good paint or enamel completes the job, except for bolting the bracket to the post, and leading the wiring, through knobs screwed to the post, to the switch-board.

The necessary materials for each light, with the prices paid for them, are:

4 ft. of $\frac{1}{2}$ by $1\frac{1}{2}$ -in. flat iron.....	\$.40
1 piece of 18 by 18-in. galvanized-iron sheet35
4 $\frac{3}{8}$ -in. bolts10
4 ft. of $\frac{1}{4}$ -in. round iron.....	.10
1 porcelain receptacle15
4 split-knob insulators10
2 stove bolts and 2 wood screws.....	.10
Total.....	\$1.30

These prices will vary a little in different localities, but not much. They do not, of course, include the pole, but this may usually be picked up around the farm, or the lights may be bolted to the buildings, if found more convenient, and the poles thus eliminated.

Cleaning Greasy Clutches

One of our heavy derricks, which was of the cone-clutch type, with wooden friction blocks, caused considerable trouble by the friction blocks not taking hold when the levers were operated, due to oil that had saturated the surface of the blocks. This trouble made frequent renewals of the blocks necessary.

It happened, one day, that a lighted match was carelessly thrown into the machine, with the result that the oil quickly ignited. To extinguish the flame, the

operator used the fire extinguisher, which was filled with a solution of carbon tetrachloride. In doing this, the solution was also squirted over the friction blocks. When the machine was again used, the friction blocks took hold as if new, the solution having dissolved the oil on their faces. A large can of the solution was then obtained, and used to clean the friction blocks whenever necessary.

The solution has also given good results in cleaning greasy automobile clutches and oily brake bands. It is much better than gasoline or kerosene, and is,

of course, safer than these, because it is not inflammable. It will not injure wood, leather, or fabric. Although the cost of carbon tetrachloride is greater than that of gasoline and kerosene, its superior cleansing qualities make up for this difference. It evaporates rapidly, and therefore should be kept in a closed can.

Care should be taken not to get the solution on the skin, as it is very irritating, nor in the eyes, which it will cause to smart.—A. S. Jamieson, Springfield, Massachusetts.

Fixture for Relining Brake Bands

The fixture illustrated has been found to facilitate greatly the relining of brake bands.

It consists of a steel riveting block to which a lever bracket is screwed or welded, as shown. In this bracket, the lever, the construction of which is clearly shown, pivots. A

strong coil spring, held in place by two studs, presses the forked end of the lever tightly on the face of the riveting block, so that when the brake band is inserted between the two, it is held securely. The rivet is pushed through the hole in the band, which is then placed between the riveting block and lever, the rivet being under the opening in the jaw. The pressure of the lever forces the rivet through the lining; the ends can be bent over in the usual way by means of the ball end of a light hammer.

Finger Protector for Files

When squaring holes and slots with a square file, the fingers are likely to be pinched between the file and the work, on the backward stroke. This particular cause of minor shop injuries can easily be eliminated by using a finger protector on the file. Some use a piece of leather for this purpose, but this is not satisfactory on a lengthy job, as it soon works loose, and, if pushed on tightly, cannot be removed as quickly as it might be. The spring-steel clip shown has two holes in line, one fitting the file neatly and the

other a little larger. On the same side as the larger hole, the spring is doubled over, and the end ground concave, so as to bear on the file corners. This concave end

Above: Details of Spring Clip That Prevents the Workman's Fingers from being Pinched between Work and File. Below: Clip in Place on File

holds the clip in place on the file. To put on or remove it, the ends of the clip are squeezed together slightly so that the concave end clears the file corners and allows the clip to slide easily.

Holder for Reference Drawings

A draftsman can keep his reference drawing before him and work with ease if he uses the wire holders shown in the illustration,

instead of keeping the reference drawing on his board, where it is in the way. The holders are made of No. 4 galvanized-iron wire, bent to the shape indicated, so that they will clamp over the edge of the drawing board.

They can be set in various positions to suit any size of drawing. The edges of the drawing or print are folded around the holders and attached to them by means of spring paper clips, four usually being required.

Wire-Cutting Fixture

In a machine shop where a certain job called for the production of a great number of pins of various sizes, ranging from $\frac{1}{4}$ in. to 3 in. in length, and from $\frac{1}{16}$ in.

An Easily Made Wire-Cutting Fixture Arranged on a Lathe: It will Cut Various Sizes of Pins Accurately to Any Length

to $\frac{3}{16}$ in. in thickness, an adjustable wire-cutting fixture was arranged on the lathe as indicated. With this fixture it was found possible to cut the pins accurately to any desired length, and at a rate of approximately 100 to 150 per minute.

The body or post of the fixture consists of a hardened and ground 7-in. length of 1-in. square steel, fastened to the lathe bed. Three holes are drilled through the post, as shown; the upper one, which supports the arbor, is reamed to a running fit; the tapered hole below it is for the insertion of the wire, and the lowest hole for holding the gauge. A setscrew is provided to hold the gauge tightly in any position. The arbor is made of mild steel, $\frac{3}{4}$ in. in diameter and 8 in. long, turned down near one end to $\frac{1}{16}$ in. in diameter, wide enough for the cutter; then turned to a $\frac{1}{2}$ -in. diameter for a distance equal to the thickness of the fixture body and the width of two lock nuts. The $\frac{1}{16}$ -in. portion, and the outer end of the $\frac{1}{2}$ -in. part, are threaded. The cutter is a hardened-steel disk, shaped as shown, with a $\frac{1}{16}$ -in. tapped hole in the center. The arbor is held in the lathe chuck, and the fixture assembled as shown. The lathe is run as fast as the wire can be fed by hand, between each "stroke" of the cutter.—H. Mayer, London, Eng.

☞ For all diameters the transverse pressure on a boiler is double the longitudinal pressure.

A Novel Valve-Grinding Tool

When grinding the valves of an automobile engine, the heads are given a partial revolution in their seats, grinding both valve and seat at the same operation, the usual means of imparting this motion being a screwdriver or a suitable bit held in a brace.

The drawing shows a tool that can be quite easily made, with which the valves may be ground rapidly by a continuous turning motion in one direction only, the tool itself reversing the motion. The frame is made of flat bar steel, with suitable brackets for supporting the vertical spindle and wooden disk, as illustrated. Two cork pulleys are attached to the spindle, and these bear against cork pads attached to the wooden disk. The length of the center bracket should be such that the cork pulleys and pads are compressed slightly when coming into contact with each other.

It will be seen that the number of cork pads on the handwheel is uneven, with no two of them directly opposite each other, and it is by this means that the spindle is

A Valve-Grinding Tool for Internal-Combustion Engines That Imparts the Proper Back-and-Forth Rotation to the Valves While Turning the Handwheel in But One Direction

rotated back and forth while turning the handle in but one direction. The number of pads is immaterial; they may be 3, 5, 7, or more, according to the distance it is desired to rotate the valves, and, of course, the larger and fewer the pads the greater the amount of rotation. Consequently, having an odd number of pads, and no two directly opposite, but one pad can come into contact with any one of the

pulleys at a time, and as these contacts alternate between the upper and lower pulleys, the direction of rotation of the spindle is correspondingly reversed.—R. H. Kasper, Philadelphia, Pa.

Simple Attachment for Testing Cylinders

In a shop where large numbers of oxygen cylinders, and similar pressure vessels, were tested daily, a hydraulic test pump was used to pump up the 5,000-lb. pressure required in each cylinder. Due to leakage at the valves and connections, it was found difficult, when the pressure in a cylinder began to drop, to determine whether the cylinder was defective, or the valves and fittings leaking.

After considerable experimenting, the simple method of testing illustrated in the drawing was adopted. A special cylinder cap, made of solid steel, was fitted with an accurately fitting screw, and a pressure gauge. A stuffing box and gland packed the screw, and a packing ring closed the joint between cap and cylinder.

The cylinder is filled with water, and the cap screwed on, the water that occupied the neck filling the hole in the cap. The screw is then screwed down until the required pressure shows on the gauge, and the cylinder allowed to remain under

A Simple and Effective Method of Testing Pressure Vessels: Any Leakage That Takes Place While Testing can be Detected Immediately and Stopped

this pressure for five minutes. If no drop in pressure takes place in this time, the cylinder passes inspection. Any slight leakage that may take place through the stuffing box is noticeable at once, and is stopped by screwing down the gland.

Handy Glaziers' Pliers

Glaziers, and other workers in glass, will find the tool illustrated of great assistance in making clean cuts; it is par-

Attachment Welded to Pliers Enables Glazier to Break Off Narrow Strips of Glass with Little Danger of Leaving Rough Edges

ticularly useful when a narrow strip of glass is to be broken from a sheet.

The tool consists of a pair of pliers, to the jaws of which strips of flat iron, about 3 in. long, are welded or brazed. These strips must, of course, seat on each other accurately, so that when applied to the glass an even pressure is brought to bear at all points. The increased area covered by the strips eliminates the usual "nicking" of the narrow strip in small pieces, which leaves the work very ragged.

Testing Hair Springs for Magnetism

A very delicate tester for magnetized hair springs, where even the smallest compass at hand is not deflected, is made by pulling a single fiber out of a silk thread, fastening one end to a short piece of soft-iron binding wire, and the other end to the cork of a small vial or bottle, so that, when the cork is in place on the bottle, the wire will be suspended horizontally near its bottom. The thread may be fastened to the cork and wire by means of a drop of shellac. A very slight magnetic influence will be sufficient to influence the light piece of iron wire, whereas it might have absolutely no visible effect on a small compass needle.—Andrew C. Cole, Chicago, Ill.

Making a Four-Inch Bench Slotter

By J. V. ROMIG

THE bench slotter described in this article will prove a useful addition to the equipment of the small workshop or mechanical laboratory. It is designed to be made with as little labor and expense as possible, so as to bring it within the reach of those who possess only a lathe and the usual hand tools, and who do not wish to have much of the work, if any, done outside their own shop.

The two straight movements of the slotter table, together with the circular one, permit the production of shapes that cannot easily be machined on the shaper or planer, as, for example, circular arcs and parts, in combination with straight portions. Narrow grooves and keyseats in wheels and levers are also easily cut, with the work lying on the table, while, on the shaper or planer, work of this character would require angle brackets and projecting tools. In addition to these advantages, the layout lines on the work are always in plain view, and working closely to them is rendered much easier than on planer or shaper. The only castings necessary are the bed, frame, table, and cone pulley; the rocker arm, link, and connecting rod may also be made in cast iron, if desired, or built up from cold-rolled steel, or forged.

The pattern making involved is simple, and should present no difficulties to those accustomed to the use of woodworking tools. Care should be taken to allow enough stock for shrinkage and machining, and to provide plenty of draft and good fillets in all corners. If in doubt

how the pattern should be made, consult the foundry where the pieces are to be cast; many valuable hints can be picked up there, and the advice given may make a big difference in the cost of the parts.

The bed is made of box section, and is shaped or planed true and smooth on its upper face; a rough cut should be taken over the bottom flange also, so that the machine will bed firmly and truly on the top of the bench.

The frame casting, a perspective view of which is shown in Fig. 6, is planed or shaped true on the bottom, and the ram slots shaped out close to size and square with the bed, on all surfaces. The frame is fastened to the bed with $\frac{3}{8}$ -in. cap-screws.

The ram is made from a $4\frac{1}{2}$ -in. length of $1\frac{1}{4}$ -in. cold-rolled steel, carefully straightened and squared, and trued to a surface plate or good straightedge, by scraping. The ram slots are scraped to a good sliding fit on the ram, and the $\frac{3}{8}$ by $2\frac{1}{2}$ -in. cold-rolled steel plates,

that hold the ram in place, fitted and scraped also. The ram is drilled from one end with a $\frac{5}{8}$ -in. drill to a depth of $1\frac{3}{8}$ in., and a $\frac{15}{32}$ -in. hole is drilled to meet this hole from the other end. From the end of the latter hole, a $\frac{3}{4}$ -in. slot, 2 in. long, is cut through the ram, and the clamp pin, made as shown in the detail in Fig. 4, fitted in place. The slot in the pin is made $\frac{5}{8}$ in. long by $\frac{9}{16}$ in. wide, so as to allow plenty of clearance for the tool-clamp rod.

This rod is turned down from a 15-in.

Perspective View of the Finished Slotter: This will Prove a Valuable Machine in the Small Shop, and One Well Worth the Time Spent in Its Construction

Figure 1, Front Elevation of Completed Machine; Figure 2, Side Elevation; Figure 3, Sectional View, Showing Details of Driving Mechanism; Figure 4, Section of Ram, Detail of Clamp Pin and Tool Head; Figure 5, Plan and Part Section of the Table and Dimensions of Slot; and Figure 6, Perspective View of Frame Casting

length of $\frac{7}{8}$ -in. cold-rolled steel, or may be built up by threading a $\frac{1}{2}$ -in. rod into a short length of $\frac{7}{8}$ -in. stock. One end is turned down to $\frac{3}{16}$ in., and slotted for

screws. A slot is cut into the disk, from the edge, past the center, for the $\frac{1}{2}$ -in. crankpin. The crankpin can be moved to any position in the slot, to adjust the

Figure 7, Shear, Which is Fastened to Bed; Figure 8, How Slide is Attached to Shear; Figure 9, Cross-Slide Fastenings; and Figure 10, Complete Slide Assembly

the $\frac{1}{4}$ -in. tool bits used; a short length is turned down to an easy fit in the $\frac{5}{8}$ -in. hole in the ram, and the remainder is $\frac{1}{2}$ in. in diameter, threaded at the upper end for the tool-clamp handle, which can usually be picked up at a junk store, or made from cold-rolled stock. A $\frac{1}{8}$ -in. collar, serrated on its lower face, and hardened, is used on the tool head between tool and ram.

The driving mechanism is quite simple to construct, and consists of a pair of gears, about 1-to- $3\frac{1}{4}$ ratio, a three-step cone pulley, connecting rod, rocker arm, and link. The cast-iron cone pulley, after being turned to size, is bored to a driving fit on a bronze bushing, which also carries the $1\frac{1}{16}$ -in. pitch diameter driving pinion. The whole assembly runs on a $\frac{3}{4}$ -in. shaft, $8\frac{1}{2}$ in. long, fastened in a boss on the frame by two $\frac{3}{8}$ -in. setscrews. A pinned collar holds the assembly on the shaft. The bushing is counterbored to act as an oil reservoir, and an oil hole should be drilled in it, tapped, and fitted with a screw, to permit easy lubrication.

The large gear, which is $6\frac{3}{8}$ in. in pitch diameter, is keyed to a $\frac{7}{8}$ -in. shaft, 4 in. long, which runs in a bronze bushing pressed into the boss in the frame, a pinned collar being used on the other end of the shaft. A 5-in. disk, made of $\frac{1}{4}$ -in. plate, is fastened to the gear by flat-head screws, the disk being held out from the gear by four sleeves, fitting over the

stroke of the ram, and clamped by tightening the steel bushing on which the connecting rod runs. A careful study of Fig. 3 will make all these details clear.

The connecting rod, as explained before, may be a casting, forging, or built up from cold-rolled steel, as may also the link and rocker arm; all should be fitted with bronze bushings, and provision made for oiling. The pins, including the crankpin, should be made of hardened tool steel, and are $\frac{1}{2}$ in. in diameter.

Plenty of clearance, to allow the rocker arm to swing, should be allowed in the yoke of the link.

The method of building up the table slides is very clearly shown in Figs. 7 to 10. The shear, shown in Fig. 7, is a piece of $\frac{1}{2}$ by 6-in. cold-rolled steel, fastened to the bed by $\frac{1}{4}$ -in. flat-head screws, spaced about $\frac{1}{2}$ in. apart. The shear must be scraped flat and true, and fitted with a flat steel bracket for the feed screw.

The slide is fastened to the shear, as shown in Fig. 8, by means of angles made of $\frac{3}{8}$ -in. thick sections of angle iron, carefully machined and screwed to the slide. The cross slide is fitted in a similar manner, as in Fig. 9, and is bored out in the center to fit the lower boss of the table, and drilled and tapped for four $\frac{1}{4}$ -in. headless locking screws, as shown in Fig. 5. All plates are $\frac{1}{2}$ in. thick, and the slide is fitted with two bronze nuts, to fit the $\frac{3}{8}$ -in. feed screws, as shown in the various drawings. The screws may be fitted with built-up handles, as shown on the cross-feed screw, or with handwheels made from old valve wheels.

The table slots should be cored in the casting, to the dimensions shown, to avoid a subsequent milling operation, and the table machined as indicated in Fig. 5. The four screws that engage its tapered lower face exert a downward pressure, holding the table firmly.

When it is desired to rotate the table for circular work, the clamp screws are loosened slightly, and the table turned by means of a bar inserted in one of the slots. By using a 12-in. bar, a very sensitive feed may be obtained. For taper cuts, the work is lined up with shims of the proper thickness.

Standard $\frac{1}{4}$ -in. tool-steel bits are used for most work; for small internal slotting, $\frac{1}{4}$ -in. tool steel, bent and forged to the proper shape, may be used.

A cone pulley, of the same size as that on the machine, is keyed on the counter-shaft, and a $\frac{3}{4}$ -in. belt used.

Engine Exhaust Heats Oil

To thin the oil in the cylinder oil cup of a gasoline engine during cold weather, arrange the exhaust pipe so that it directs the hot gas against the oil cup. This can be done by using a few elbows and some short lengths of pipe. The pipe used for this purpose must be of larger size than the regular exhaust pipe, in order to compensate for the increased back pressure that results from the use of the elbows.

Two Files Used for Gripping Tool

Two flat or half-round files and a short length of pipe will make an excellent substitute for pliers when these are not at hand or when they do not exactly answer the purpose. This gripping tool has been found very useful to remove dowel pins with protruding heads, when it is impossible to hammer them out, or difficult to pull them out with pliers; and also for removing the ends of bar stock that frequently stick in the collet of a screw machine or turret lathe.

The photograph shows how the tool is used. The ends of the files are stuck into

A Handy Gripping Tool, Improvised from Two Files and a Length of Pipe, Is an Excellent Substitute for a Pair of Pliers and in Some Cases Is More Suitable

the pipe and the pin is caught between them. By pressing the handles together, the files grip the work tightly. The cross-cut surface of the files prevents them from slipping, no matter how hard they are pulled or turned around. Considerable leverage can be obtained by using long files and a long pipe.

Lathe Improvised from Hand Grinder

I was confronted with the task of making a number of turned wooden handles at a time when I could not get to a

A Hastily Improvised Lathe That Accomplishes the Work of Turning Wood with Surprising Speed and Ease, Considering Its Crude Construction

lathe; the job, however, was satisfactorily accomplished on a lathe hastily improvised from a hand-power bench grinder. Two small holes were drilled to a depth of $\frac{1}{4}$ in. in the face of the nut holding the emery wheel on the shaft. The holes were $\frac{5}{16}$ in. in diameter, and spaced $1\frac{1}{2}$ in. apart, as shown in the detail. The grinder was clamped firmly to the left end of the bench, and served as the headstock of the lathe. The tailstock and center were made from a center punch and a simple wooden clamp, as shown. A $\frac{1}{2}$ -in. bolt was used to fasten the tailstock in place on the bench; this bolt passed through a hole in the bench and was provided with a wingnut to permit adjustment of the center. The work to be turned was prepared by centering at each end, and driving two pins, made from nails, into one end, so that they fitted into the holes drilled in the nut of the grinder. The work was placed in position with the pins seated in the holes, and was held securely by bringing the center into place and tightening the wingnut. A block of wood served as a rest.

The arrangement may be improved upon considerably by filing down the end of the grinder shaft to a 60° point, like a lathe center. If it is not desirable to have a hole drilled in the bench, the tailstock may be nailed to a strip of wood and the latter clamped to the table with small C-clamps.—D. H. Palmeter, Detroit, Mich.

Laying Out Square Corners

The farmer who builds his own out-buildings will appreciate the method of laying out square corners for foundation walls

shown in the illustrations. This method, while not new, is not nearly as well known as it should be, as

Laying Out Square Corners for Foundation Walls by Means of the 6, 8, and 10 Rule: This Is a Simple Method, and Quite Accurate

it is about the simplest method practicable with rough equipment.

Referring to the line drawing, a base line, of hard cord, marking the outer side of one wall, is stretched between two stakes, about 2 ft. above the ground. The other lines are squared from this one. As all the lines are squared in the same manner, the description of the squaring of the inner side of the adjacent wall, as shown, will suffice.

A stake, A, is driven into the ground outside the base line, and a line stretched, at approximately right angles to the base line, to another stake, B, lightly driven outside the outer-wall line on the opposite side. From the point where this line crosses the base line, a distance of 6 ft. is measured, and a mark made at this point on the line, by tying a small piece of colored twine on it. Then, from the same point, a distance of 8 ft. is measured along the base line, and a similar mark made. A light pole is cut exactly 10 ft. long, and a short stick nailed to it at one end, the stick being cut to such a length that, when the end is rested on the ground, the pole will be just at the height of the line. This end of the pole is then set exactly at the 8-ft. mark, the

stake B lifted by a helper, as shown in the photograph, and moved until the pole touches the 6-ft. mark while still touching the 8-ft. one. The stake is then driven in firmly, and the line is square with the base line.

The trench may be laid out on the ground by holding a plumb bob so that the bob line just touches the lines stretched between the stakes, and making a spade mark at the point where the plumb bob touches the earth, or by simply using a straightedge, set on the ground and held against the line.

Removing Chatter Marks in a Countersink

In spite of all care a countersink will sometimes chatter or tear, and this spoils the appearance of a job. To remove the chatter marks, place a small piece of emery cloth, with the abrasive side downward, over the hole, and bring the countersink down. In a few minutes, all the chatter marks will be polished off.

Handling Heavy Truck Wheels

When it is necessary to reline the brakes of a heavy truck, or to remove the wheels for any reason, considerable trouble is usually experienced in handling the latter because of their weight. This objection, however, can be easily overcome by jacking up the truck so that a strong plank, on two rollers, can be slipped under the wheel to be removed. The jack is then lowered until part of the weight of the wheel rests on the board. With one man at either side of the wheel, it is now an easy matter to pull off the wheel without lifting it. The wheel is

A Simple and Quick Method of Removing Heavy Truck Wheels: A Strong Board and Two Rollers Bear the Weight

replaced by reversing the procedure.—
Lowell R. Butcher, Des Moines, Ia.

Heater Used as Lamp

Needing some additional light in one corner of the office and not having any extra fixtures, I struck upon the idea of using the electric reflecting heater which was in the room. After removing the heating element from the socket and substituting a lamp for it, I found that the result was all that could be desired. The heater reflected the light just as well as it did the heat.—W. F. Schaphorst, Newark, N. J.

Testing Fuses with a Flashlight

Maintenance electricians and mechanics will find the simple scheme of using a flashlight to test fuses, a good one. A

small hole is punched or drilled through the metal lens case, so that the end of a length of stranded wire, such as lamp cord, can be pushed through. The end of the wire is bared, twisted around the screw shell

of the lamp, and soldered. The other end of the wire is soldered to a brass tip. When testing fuses, one end of the fuse is held in contact with the metal cap on the bottom of the flashlight, and the brass tip is touched to the other end. If the fuse is in good condition, the lamp will light. A small hard-rubber thimble, to fit over the tip, should be provided to keep the tip clean.

Backing Tool for Riveting

The tool shown in the drawing, while primarily designed for use in tightening loose rivets in automobile frames, will be found useful in any shop where heavy work must be riveted, as it enables one man to do the riveting without a helper.

A piece of heavy round steel is used for the rivet snap, or anvil, and it is turned and cupped on the end to fit the rivet head, in the same manner as any other snap. It is drilled, a little above its center, to fit a heavy bar handle, and a cotter-

pin hole is drilled at right angles to the handle hole. The handle is drilled, at

An Adjustable Backing Tool or Snap That Enables One Man to Do Heavy Riveting Single-Handed: It will Prove a Useful Tool in Any Shop

intervals of about 1 in., with a series of cotter-pin holes, and slotted at one end to fit the flat-steel hook shown, a hole for a heavy pin being drilled through the slot jaws. The hook is also drilled at 1-in. intervals to fit the cotter, and the tool is assembled as shown.

The manner of using the tool is obvious; the hook can be reversed when it cannot be caught on any portion of the work while in the position shown.

Dog for Adjusting Steel Cable

A steel cable is not considered so convenient as a chain for use as a towline, or for similar purposes, because its length cannot be adjusted so easily.

However, this objection may be overcome by attaching an easily made dog to one end of the cable. The dog is made of $\frac{3}{8}$ -in. flat steel, shaped as shown in the drawing. A cam, with a handle, is riveted loosely to the body, off center, so that when the cam is set in the position shown in the upper view, the cable is gripped tightly, and when turned as in the lower view, the cable is released. With this device, the cable can be adjusted to any length desired.—Geo. G. McVicker, North Bend, Neb.

Tool for Spreading and Extracting Cotter Pins

In garages, where it is necessary to extract and spread cotter pins frequently, the special tool for this purpose shown in the drawing will be found of considerable utility. An old pair of pliers is forged and filed to the shape shown in the illustration, then hardened and tempered.

A lip on one jaw opens the cotter pin and spreads it, while the notch in the other jaw prevents the head of the pin from slipping. The ends of the jaws are ground down to fit under the head of the cotter pin to extract it,

as shown in the lower drawing. The jaw ends should be rounded, to prevent cutting the pin.

Polisher for Tempering

It is desirable to have a steel surface polished brightly before the metal is tempered, in order that the worker may be able to watch the color while tempering. An excellent emery-cloth holder, that has a soft backing, so that the abrasive surface will touch all parts when used on slightly uneven surfaces, is illustrated.

The holder is made from a disk of $\frac{1}{16}$ -in. sheet metal, bent at right angles near the center, leaving about $\frac{3}{4}$ in. space between the two sides. A semicircular wooden block, $\frac{3}{4}$ in. thick and $\frac{1}{2}$ in. less in depth than the height of the sides of the holder, fits in this space. A notch is cut across the center of the block, as indicated by the dotted line in the drawing. A $\frac{1}{4}$ -in. hole is then drilled through the center of the sheet-metal sides, near the

bottom. A hole is drilled through the wooden block, at right angles to the notch, for an eyebolt, the eye of which fits over a pin driven through the holes in the sides. The ends of the pin are riveted. Sheets of emery cloth are then torn into $\frac{3}{4}$ -in. strips; about 12 of these are used, the ends being caught between block and holder, and clamped securely by tightening the eyebolt. By using about a dozen strips of emery cloth, it is possible to polish the surface much better than if only one strip were used.

bottom. A hole is drilled through the wooden block, at right angles to the notch, for an eyebolt, the eye of which fits over a pin driven through the holes in the sides. The ends of the pin are riveted. Sheets of emery cloth are then torn into $\frac{3}{4}$ -in. strips; about 12 of these are used, the ends being caught between block and holder, and clamped securely by tightening the eyebolt. By using about a dozen strips of emery cloth, it is possible to polish the surface much better than if only one strip were used.

Elongating Holes in Plates

The tool shown in the illustration was used in a boiler shop when it was necessary to cut some holes of an oval shape, making the length

$1\frac{1}{2}$ times the width. Several attempts were first made to do this by drilling, but the drill had a tendency to run into the hole already drilled. A special chisel, made as shown in the drawing, enabled the work

to be done quickly. Chisel steel, of the same diameter as the holes, was used, one end being ground down, as indicated, to form a cutting lip about $\frac{1}{8}$ in. deep. The chisel locates itself in the hole and cuts a good chip each time it is driven through.

Setting Contact Points on Automobiles

An automobile equipped with battery ignition must usually have the contact points adjusted, or at least checked up, once about every 2,000 miles; this is a rather difficult operation for the mechanic, unless the breaker box is unusually accessible, because it is hard to observe the cam while cranking by hand, and if the electric starter is used, it is hard to get the shaft to stop at just the right point. If the car is a light one, it can be put in high gear on a level road, and

can be pushed along until the points are separated the maximum distance, when the hand brake is set to hold the car while adjusting the points.

With a heavier car, one man can still do the work, if there is a grade near by so that gravity can be utilized to help move the car. A strong rope is attached to the rear axle and brought around a tree or strong post, the rope being doubled if the car is heavy or the grade steep. While the rope is held taut from a position near the breaker box, the brake is released and the car allowed to move down slowly, by paying out the rope, until the contact points are wide open. At this position the brake is applied to hold the car, while the adjustments are being made.

Simple Planing Stop and Vise

One of the most important tools for the woodworker is his vise. Sometimes a vise is not at hand, and the woodworker is at a loss how to support his work. The illustration shows a very

simple vise and planing stop that can be made at small expense; it will grip the work securely, and, if properly made, is practically unbreakable.

The vise consists of two curved pieces of hardwood, of a size suitable for the work for which it is to be used. A generally satisfactory thickness is about 1 inch. The pieces are pivoted at their central points on long screws that extend into the bench, or other support on which the vise is fastened. At one end each of the jaws is beveled so that a wedge can be driven between them to clamp the opposite ends on the work. To enable the wedge to be readily driven out again, a cleat is nailed on it, as shown. It is a good idea to connect the wedge to one of the jaws with a short length of chain and two screweyes, one driven into the cleat, the other into the jaw.—H. G. Schultz, Teaneck, N. J.

☛ For every 10° F. added to the temperature of feed water by exhaust steam, nearly one per cent of fuel is saved.

Brush Attachment for Drawing Borders

The brush attachment illustrated is used for drawing clean, straight borders

on showcards and similar work. The attachment can be made by anyone in a few moments with the help of a pair of pliers. A piece of soft-iron wire, about 8 in. long, is formed to the shape shown; two coils are made about 2 in. from one end by winding the wire around the

cap of a fountain pen, or other round article of about the same diameter. The other end of the wire is then bent up to form an oval loop, as shown, so that when the arrangement is slipped onto the brush, the coils and loop will grip the handle securely. The spacing of the border from the edge of the card can readily be varied by bending the end that is drawn along the edge of the T-square or triangle.—E. E. Knight, San Diego, Calif.

Gilding Small Articles

Small articles can be gilded in the following way: Dissolve, in 8 oz. distilled water, 1 oz. of cyanide of potassium (poison), and 32 gr. of chloride of gold, and shake well to insure thorough mixing. Cut a strip of sheet zinc, and bend it to form a hook to fit the article.

Put some of the solution in a glass or earthenware dish, then scour the article with baking soda and water to remove all dirt and grease, rinse it off, and suspend it by means of the zinc hook in the solution, until it appears very dark in color. It is then removed, and again scoured with brush and soda, which will bring out a beautiful gilded finish.

If a Roman finish is desired, the articles must be satin-finished with a wire brush before dipping, but if an English finish is desired, they are polished before dipping.

Emergency Climbing Irons

On a possum-hunting party in southern Maryland, the hunters were assem-

Climbing Irons Made of Four-Foot Lengths of $\frac{1}{4}$ -Inch Steel Rod, That will be Found Very Serviceable by Linemen

bled and everything in readiness, when it was discovered that climbing irons, which were very necessary items on this trip, had been forgotten. A trip back for these was out of the question, as the time involved would mean too long a delay. The hunters were decidedly at a loss, until some one suggested applying for help to a blacksmith who lived near by.

The ingenious blacksmith turned out several pairs of the irons shown in a short time; each one was made of a 4-ft. length of $\frac{1}{4}$ -in. steel rod, bent to the shape shown in the drawing. One end was sharpened to a point and tempered, while the other end was formed into a 4-in. stirrup and bent around the first to strengthen it. The climbers thus made served the purpose just as well as purchased ones, and were found heavy enough to stand hard usage. Leather straps from the tire holders on the automobiles were used to hold the climbers in place. Such climbing irons can be easily made in any blacksmith shop, and many uses can be found for them around industrial establishments, and by power, telephone, or telegraph linemen.

Ⓞ Do not heat the work above a bare red heat when casehardening for colors, using cyanide.

Measuring Disks in Micrometer

Some kinds of work are rather difficult to measure with a micrometer. Thin round pieces, for instance, may easily be measured incorrectly if care is not taken to see that the work is held in the center of the measuring faces, and at right angles to them. Recently, among a batch of $\frac{3}{4}$ by $\frac{1}{16}$ -in. disks, a number were found to exceed the tolerance allowed on the diameter, and it became necessary to measure the whole lot. The man to whom this inspection job was given made the simple attachment shown in the illustration, to save the time and trouble required in adjusting the pieces squarely between the micrometer anvil and spindle. The attachment is a short piece of cold-rolled steel the same diameter as the disks, drilled in the center a running fit for the micrometer spindle, and slotted with a saw a little wider than the thickness of the disks. With this little device, the job was done in a short time, as it was simply a matter of inserting the disks in the slot until the edges were flush with the attachment, when the measuring could proceed with safety, as the work was thus located square and central. After the disk was measured, the micrometer was tipped

Simple Attachment for Measuring Disks with a Micrometer Caliper That Insures Each Disk being Held Square and Central between Spindle and Anvil

over as the spindle was turned back, releasing the disk and allowing it to fall out into a box.

A Color Code for Fuses

In a large industrial building where renewable fuses of various capacities, but of the same cartridge size, are used, a color-code system to distinguish between the fuses has been found very useful.

The fuse cartridges are painted in different colors to indicate the capacities of the links contained in them. For instance, with the small cartridge fuse having a maximum rating of 30 amp., there are in use five kinds of links, of 5, 10, 15, 20, and 30-amp. capacity. For these links,

the colors white, green, blue, yellow, and red are used, respectively. For the next size of cartridge, having a maximum rating of 60 amp., a similar code is used.

With this system, the size of fuse necessary to make renewals can be determined at a glance, insuring proper renewals without the danger of under or overfusing.

Protecting Ladle When Melting Babbitt

When starting to melt a ladleful of babbitt, put some machine oil, or grease, or even some resin, in the bottom of the ladle. This will quickly melt and catch fire, and while burning out, will melt some of the babbitt, causing it to flow down into the bottom of the ladle. This thin layer of melted babbitt will quickly conduct away the intense heat of the fire to which the bottom is exposed, and prevent it from burning out. The oil or grease will not spoil the quality of the metal.—H. Bethuel Kingsley, Fort Miller, New York.

Simple Woodworker's Clamp

A piece of wood, cut out and fastened to the workbench with wire, as shown in the drawing, makes a very handy clamp

for holding several boards together at one end while working on them. This clamp is much more convenient for this purpose than an ordinary pair of wood clamps, and requires less time to adjust. It is preferable to make this clamp of hardwood. The slot, cut out near one end, as shown in the drawing, should have rounded corners and beveled edges to prevent marking the boards on which it is used. Two screweyes and a piece of heavy flexible wire are used to attach the clamp to the side of the workbench. The wire is brought around the ends of the boards, the clamp placed on them, and the boards then shoved against the wire; this pulls the upper end of the clamp down and squeezes the boards together.

Tool for Etching Steel

The etching tool shown in the photo can be made very cheaply, and forms a

A Useful Lettering Tool for Etching Steel: The Height of the Letters is Kept Uniform and the Lettering Thus Presents a Neat Appearance

very useful device for etching lettering on steel. Beeswax and acid are used in the ordinary way, the purpose of the tool being to keep the letters in a straight line and of the same height, thus giving the inscription a neat appearance, in keeping with well-finished work.

The tool consists of three parts: the lettering tool, a sliding distance piece, and a guide, made of flat plate, bent to the shape shown. The lettering tool has a slot cut in the center, and is also slotted in the center, for a small clamp screw. The sliding piece is a piece of stock of the same thickness as that used for the tool, doubled to fit over the latter, and drilled for the clamp screw. By moving this piece, the width of the slot can be varied to suit the size of the letters required.

The guide plate is clamped to the work as shown in the photo, and the tool is used with the edge of the guide in the slot. It may easily be seen that the height of the letters must be uniform, as the tool can only move a distance equal to the width of the slot, when making the vertical strokes of the letters.

Making Clean-Cut Metal Stencils

By JAMES TATE

STENCIL cutting, as usually undertaken by those not "in the know," consists in attempting to cut the thin sheet brass or zinc with a chisel, or similar tool. The results are invariably unsatisfactory, as the edges of the cuts are ragged, and, when filed smooth, the proportions of the letters are changed; a burr is also thrown up on the underside of very thin stock that no subsequent hammering or filing will remove.

A simple method, and one that pro-

duces excellent work, is to etch the designs with acid. Using this process, the metal is left perfectly flat on both sides, and the outlines of the characters are smooth and regular. The stencils, particularly if made of zinc, can be produced very quickly, no great skill is required, and there is no need of finishing after the etching has been completed.

into close contact, with a piece of hard felt or similar material. The lead foil can be obtained from any florist, or electrical-supply house, and is very cheap.

The foil is now given a light coat of beeswax, and this leaves the surface ready for the lettering to be drawn or traced upon it, with a pencil or stylus. When drawing in the lettering or design, provision must be made for the ties that hold the center portions of such letters as O, D, and C to the rest of the plate. The out-

lines of the lettering are then cut through with a fine, sharp-pointed knife—a photographer's etching knife makes a good tool for this—as shown in Fig. 2. The foil background is now stripped from the plate, leaving it as in Fig. 3, with only the foil lettering remaining on it. The next step is to paint the whole surface, including the foil letters, with asphaltum paint, or electrotypers' varnish; then the letters are stripped from the plate. This is best done with a needle or pin, stuck into a wooden handle, the point of the tool being inserted under an edge of each letter, the foil raised, and the letter stripped off. The foil will bring practically all the beeswax on the zinc with it, leaving a clean surface for the action of the acid, as in Fig. 5.

After the asphaltum has thoroughly dried, the plate is turned over and the back and edges coated with melted beeswax, using a brush, and taking care that every part of the surface is coated. The plate is now ready for etching.

The acid used is muriatic acid, and is poured into a shallow enameled tray. The plate is placed in the tray, face up, and the tray kept in motion until the acid has eaten through all the lettering. Care must be taken not to allow the acid to splash on the face or hands, or to inhale the fumes given off. When the etching is finished, the work is removed and washed in running water, when the asphaltum may be removed with gasoline, and the beeswax with hot water.

Figure 1, Applying the Lead Foil; Figure 2, Cutting In the Lettering; Figure 3, Plate Ready for Painting; Figure 4, Painting the Plate; Figure 5, Plate with Lettering Stripped; Figure 6, Preparing the Plate for Etching; and Figure 7, Etching the Work

To make a stencil in zinc, which is about the easiest metal to etch, cut the plate to size, lay it on a smooth, flat surface, and coat one side lightly with melted beeswax. The plate is then warmed slightly, to melt the wax again, and, while the latter is still soft, a sheet of lead foil, cut to the same size as the plate, is laid over it, as shown in Fig. 1, and rubbed

If asphaltum, or electrotypers' varnish, is not easily obtainable, melted beeswax can be applied to the face of the work instead, although it will make the work of removing the foil lettering a little more difficult.

Simple Chip Shield

The practice of turning brass, bronze, and similar metals at high cutting speeds often results in injuries to the operator's

eyes by flying chips. This is, in most cases, easily avoided by the use of a guard or shield, the use of which should be made compulsory. A very simple chip guard is that shown in the drawing; it consists of a leather disk, screwed to a steel collar, the latter being a loose fit over the toolpost. The leather itself should be a "wringing" fit on the toolpost, and the hole should be off center, so that the disk can be swung to one side or the other to suit the work, or when necessary to change tools.

Removing Stripped Wood Screws

It often happens that wood screws cannot be unscrewed, because there are no threads in the wood; they may have been stripped by giving the screw a few extra turns when driving it in, or the threads may have disappeared due to dry or wet rot.

To remove the screw without marring the surface of the wood, the method illustrated may be used. Drive a finishing nail into the wood, as indicated, so that its end will come in contact with the screw thread. The screw can then be removed easily. The small nail hole is easily puttied or otherwise filled, so as to be scarcely noticeable.—H. H. Siegele, Emporia, Kan.

Reaming Axle Bushings

When inserting new front-wheel spindle bushings, it is poor practice to drive out both old bushings, and press both of the new ones in place at once, then ream them from the outside of each bushing.

The result of this is that the reamer is often canted, and the hole reamed at a slight angle. To ream the holes correctly, one old bushing should be left in place to serve as a guide, as shown in the lower view. When the bushing has been reamed to size, the old one is pressed out, and the second bushing pressed in and reamed, using the first one as a guide. By employing this method the bearing of the spindle bolt can be made practically perfect.

Felt Pad for Wiping Solder

A handy tool for wiping the surplus solder, when tinning the ends of pipes, or similar work, can be made very easily from two pieces of hardwood, one — the holder proper — being left plain, the other shaped to fit the hand comfortably. This handle has a step cut out at one end, and is slotted, at the same end, as shown. A piece of thin felt is fastened to the holder by screws, brought around the end, and screwed to the handle while the latter is in the position shown in the upper view. In order to stretch the felt tightly, the handle is then pulled down in line with the holder and secured with a screw and nut. Thus the whole working surface of the pad is free from obstructions, nails, screws, etc., and the material cannot "bunch" or crumple up after a short time in use.

Auto Engine as Power Plant

There are many possibilities for farm use in a discarded automobile. One of the most practical is to remove and

overhaul the engine and adapt it for driving the machinery in the farm workshop. Such a power plant will give good service for several years. The illustrations show an engine taken from a light car and mounted on a wooden bedplate. The only change made in the arrangement of the parts was to mount the gas tank on a high wooden frame, and to extend the transmission shaft; this extension carried the driving pulley, and was journaled in pillow blocks, fitted on each side of the pulley.

A Discarded Automobile Engine. Used to Drive the Machinery in a Farm Workshop: It Has Proved Very Satisfactory

The engine is operated exactly as when in the auto, high, low, and reverse speeds being available. After the cylinders had been reground, and new rings fitted, and when the plant had been in operation for some time, a test was made to determine the power delivered at the pulley. This proved to exceed 12 brake horsepower.—Dale R. Van Horn, College View, Neb.

Extinguishing Burning Oils and Greases

An experiment recently made to ascertain the most efficient fire extinguisher for burning oils, fats, greases, and similar substances developed a number of interesting facts.

In the majority of liquid fire extinguishers, the active agent is carbon tetrachloride, which is a noninflammable liquid at ordinary temperatures, vaporizing rapidly at a comparatively low temperature. The vapor is also noninflammable, and is heavier than air. When carbon tetrachloride is thrown upon burning wood, paper, oily waste, and similar material, the vapor formed excludes the air and the fire is smothered. However, oils or oily substances are soluble, or partly so, in carbon tetrachloride, and should this liquid come into contact with oil which is later used in the manufacture of food products, it is probable that under certain conditions the odor of the chemical would be very easily noticed. Another drawback in using the majority of liquid fire extinguishers on burning oil is that it produces an effect very similar to that of throwing water in a tank of burning oil, increasing the fire hazard because of the danger of setting fire to the building.

Most dry extinguishers contain a considerable amount of ammonium carbonate. This substance, when thrown upon

burning grease, causes the latter to foam and swell, and if a kettle filled, or even partly filled, with oil or fat should take fire, and ammonium carbonate is thrown into it, causing it to foam, the vessel will in all probability overflow and in this way endanger the safety of the building.

Experiments made with flour indicated that good results would be obtained if the fire were quickly covered with a large quantity. Flour works very well with a small volume of oil, but the quantity required to put out a fire in a good-sized vessel would cause the oil to flow over the sides, and for this reason flour, unless very quickly and carefully applied, does not always give good results.

Dry sawdust takes fire readily, and unless a quantity sufficient to smother the fire is at once thrown upon the burning oil, the sawdust will feed the flames instead of quenching them. Wet sawdust thrown on burning oil produces an effect somewhat the same as water, so it is apparent that neither wet nor dry sawdust is good material to use in extinguishing a fire of this nature.

Of all the substances tested, baking soda proved to be the most efficient for putting out a fire in which fats, oils, or greases were involved. The baking soda should be dusted to a depth of about $\frac{1}{4}$ in. over one half the surface of the blazing oil. The gas formed by the decomposing

soda spreads over the uncovered portion of the blaze; this blanket of heavier-than-air gas prevents the oxygen of the air from coming into contact with the oil, and in this manner the fire is smothered.

It is essential that the baking soda be in the form of a very fine powder, for if it lumps or cakes, the lumps sink and gas is liberated below the surface of the oil; this causes the oil to foam and swell, and consequently there is danger of the oil overflowing the sides of the vessel. To prevent the baking soda from lumping in the container, mix it thoroughly with 30 per cent of very fine sand, and it will be found that the mixture is but little less effective than the pure soda.—E. O'Connor, Davenport, Ia.

Tool for Cutting Corrugated Roofing

Cutting corrugated roofing with a pair of ordinary tin snips is a tiresome job, and one that is usually rather rough on

the hands. The simple tool shown in the illustration, which is made from an old pitchfork and works somewhat like a can opener, will be found much easier on the hands. The tines of the fork are cut to a length of about 4 in., and bent until the points are about 2 in. apart. The

middle tine is then bent downward, as shown, and sharpened to form a cutting knife. When cutting, the outer tines will run in the corrugations on either side of the line of cut, keeping the cut straight.—H. J. Engel, New Braunfels, Tex.

Hanging a Double-Swing Door

The photograph shows a factory door that swings in either direction and closes itself through the action of a strong coil spring. It is not necessary for the workman to stop to open the door, but simply to push the truck against it. This door

is not of the common hinged type, but swings on two pivots located above and below the door, about 1 ft. from the side

Double-Swing Door in a Factory, Opened by Simply Pushing the Trucks against It: A Spring Attachment Makes It Self-Closing

jamb. The only equipment required to make it self-closing, is a heavy coil spring, a wall bracket from which to extend the spring, and two lengths of chain for attaching the spring to the door in the manner indicated. The spring is brought into tension when the door is opened in either direction, owing to the fact that one chain extends to each side of the pivot on which the door swings. The woodwork of the door is protected from damage by sheet metal, fastened on each side at the height of the truck bodies.—Orin Crooker, Wheaton, Ill.

Drilling Horizontal Holes Straight

Anyone who has ever used a brace and bit knows that in the drilling of horizontal holes there is a great tendency to raise or lower the brace a trifle while drilling, which, of course, results in the hole being drilled at an angle. To overcome this tendency, slip a large washer over the bit so that it rests on the smooth shank. As soon as the bit is held at an angle the washer will travel one way or the other, and the workman can correct the fault instantly. The washer should be free from burrs.

Filing Bearing-Cap Faces

When filing down the flat faces of caps of connecting rods, bearings, and steering-gear connections to compensate for wear, the caps cannot always be held in a vise conveniently, because of their

shape. An excellent method of holding them on the workbench is shown in the illustration.

Two holes are drilled in the workbench; these are spaced apart the same distance as the bolt holes in the cap. Bolts are

pushed through the holes from underneath, and nuts screwed on, to hold the bolts in place and to serve as seats for the caps. Although this method may not appear to provide a substantial support, it has been found that the cap can be filed down without any tendency to rock, providing the lowest part of the curved surface rests on the bench.

Recovering Pump Cylinder from Well

Workmen repairing a casing well had the misfortune to drop the pump cylinder to the bottom of the pipe, about 120 ft.

below the ground. To raise the casing was, of course, out of the question. The only method of recovering the cylinder was to use some device, which, when lowered from the top by a rope, would engage the cylinder and draw it up. The device used is shown in the illustration.

A piece of hardwood, 10 in. long, was rounded to form a tapering plug, the outside diameter of which just exceeded the inside diameter of the cyl-

inder. A hole was drilled through the plug lengthwise, and a trunk rope passed through it and tied. After the plug was lowered in the casing, and when it was felt that the small end had entered the cylinder, a length of 1-in. pipe was slipped over the rope and allowed to drop on the plug. The impact of the pipe drove the plug into the cylinder. It was then an easy matter to lift the cylinder to the surface.

A Tire-Setting Gauge

In the shrinking of steel tires on railroad-car wheels, the side of the flange must be kept parallel to the flange of the hub liner. Measuring with a small gauge or scale is by no means easy or comfortable, as it must be done while the tire is hot. A gauge that has been especially devised to overcome this objection, and that enables the worker to accomplish the work with speed and accuracy, is shown in the illustration.

The gauge has a cast-iron base, the underside of which has a V-notch milled in it to fit on the journal. A long steel rod is driven into a hole drilled in the base, and is fitted with two fingers. The

lower one is attached permanently to the rod, and, in use, is set against the liner. The upper finger is fitted in a sliding block. When the lower finger is set against the liner, the block is moved up until it is opposite the tire, then locked by a setscrew. The finger is then moved until it touches the tire and is locked, and the gauge is swung around the journal. It is thus an easy matter to set the tire perfectly parallel with the liner.—W. S. Pickerell, Spokane, Wash.

☛ An emergency valve-grinding tool can be made from a piece of broom handle, a thin piece of sheet metal, driven into the end, and two pins to hold the sheet metal in place. To operate the tool thus improvised, hold it between the palms and twirl around by moving the palms back and forth.

A Homemade Tea Wagon

By E. E. SCOTT

THE tea wagon is a true boon for the busy housewife, as it saves many of the innumerable steps between dining room and kitchen, necessary in carrying in meals, and removing dishes.

The material for all parts of the tea wagon shown, except the wide boards for the trays, is mahogany, obtained from the scrap pile of a chair shop, and costing only 50 cents. The trays are made of

Full Details and Dimensions of a Tea Wagon That can be Made Very Cheaply at Home: Most of the Parts can be Made of Scrap Stock, and the Construction is Simple. The Photograph Shows the Completed Wagon

$\frac{1}{2}$ -in. pine boards, doweled and glued together as shown in the detail.

The making of the wheels is the only operation that is at all difficult and demands explanation, but, with a little care in mitering the separate sections, the work is comparatively easy. The wheels should first be laid out, full size, on a sheet of cardboard, and one rim section cut out to the shape indicated by the dotted lines, to serve as a template. The stock should be marked by means of the template, but cut in a miter box set to a $22\frac{1}{2}^\circ$ angle. The ends of each section must then be carefully "sliced" with a keen plane, to make as perfect a fit as possible, then doweled and glued as shown, notches being cut in the corners, and the rough segments bound together with wire until dry. The octagonal hub and square spokes are then made and glued together, and the assembly, when dry, carefully centered within the rim. The spokes are marked, cut to the proper length, and nailed to the rim with 1-in. brads, one on each side of a spoke.

With one leg of a pair of compasses at the center of the hub, a $12\frac{1}{2}$ -in. circle is described on the rim, and it is trimmed

to shape with knife, file, and sandpaper. If desired, a groove can be cut in the rim and rubber tires fitted.

The remainder of the work is mainly a case of "cut and fit," all the details and parts being shown in the drawing. The axle brackets are fastened to the lower tray by three long screws, the wheels being attached to the brackets by square-head brass bolts, $2\frac{1}{2}$ in. long. A pair of ordinary casters are fitted to the rear legs. Screws are used to fasten the angle braces on the trays, and also for the handle brackets. The remaining parts are carefully mortised, glued, and nailed with small brads. Prepared liquid glue should not be used; use the hard, flaky patternmakers' glue obtainable at most hardware stores, and melt it in a regular gluepot.

The finish will, of course, depend upon the material used and the maker's taste, but the woodwork should be as finely finished as possible before any stain is applied, and, if the wood is open-grained, a good paste filler should be used after staining. Do not use a varnish stain, but obtain a good stain or wood dye, and follow the maker's directions closely.

Gate for Dog Built in Fence

It is generally desirable to give watch dogs free entry and exit to the house yard of a farm, especially at night, and for this reason one of the gates is usually left open; this, however, does not exclude poultry or cattle from the yard. This objection can be easily overcome by providing a self-closing gate that can be opened with little effort by the dog.

swings on a vertical rod that passes through screweyes driven into the frame, as indicated. It must be balanced as perfectly as possible so that the chains will

The gate can be built in any fence, can be made of any suitable size, and can be adjusted so that more or less effort is required to open it. It is held in a suspended position by two short chains as shown, and

close it again after it has been opened. The force required to open the gate depends on the distance that the chains are spaced from the hinge rod; the farther they are spaced from it, the more force is required, and vice versa.

The edges of both gate and opening are, of course, perfectly smooth, to eliminate possible danger of injury, and sufficient clearance must be left between the top and bottom of the gate to insure easy operation.

Hints for the Home Typist

To facilitate handling the paper and carbon sheets when making several copies on a typewriter, the following expedient has been found very helpful: Select a sheet of light but tough paper, the same width as the carbon sheets, but about $1\frac{1}{2}$ in. longer. Place the carbon sheets, face downward, on this paper and fold the projecting end over the top of them. Then sew the carbon sheets in this fold securely on a sewing machine, about $\frac{1}{2}$ in. from the fold, using a rather long stitch. In using this carbon arrangement, each sheet of paper is pushed up under the flap as far as it will go, and the platen release is used when inserting the sheets into the machine.

Replacing Gaskets

Shellac is very often used when putting in a new gasket. This is, however, bad practice, as a new gasket will compress enough to make a good joint, it being necessary only to rub a little grease on both sides, and the use of shellac means that the gasket will be torn when removed. When replacing an old hard gasket, shellac must be used, but it is better not to use old gaskets at all.

Track Aids in Pulling Buggy over Steps

A detachable track has been found to be a great aid in pushing a baby cab or invalid chair over a flight of steps. Two lengths of channel iron, wide enough to accommodate the tire of the vehicle between the

flanges, are used for the tracks. At one end, both flanges are trimmed off for about 2 in., and the web is bent down to form a hook. Light flat-iron brackets, bent U-shape, are screwed to the riser of the top step to accommodate the hooks, so that the web of the channel will come flush with the tread of the step. The tracks are spaced to suit the wheels of the cab or chair. When not in use the tracks can be laid aside. If the steps are of concrete, expansion bolts can be used to fasten the brackets, holes being first drilled in the step with a common star drill.

Replacing Fan Belts

Trouble is often experienced when replacing fan belts on small cars having a crank that is not detachable, because there is very often too little space between the crank and the lower fan pulley. This trouble can be eliminated by cutting off, with a hacksaw, part of the four teeth of the crank that engage with the pin on the end of the shaft. Of course, care must be taken not to cut off too much, or the crank will be ruined.

Drawers Made from Varnish Cans

Ordinary varnish cans of 1 or 1½-gal. size can be turned into very serviceable and durable drawers for holding small

Serviceable and Durable Drawers, Made from Varnish Cans, Provide Excellent Storage Space in Any Workshop. They may be Arranged under the Bench, or a Frame can be Built to Contain Them

tools, nails, screws, putty, and, if desired, liquids. One side of the can is cut away as indicated. The sharp edges remaining are bent or hammered down so that there will be no danger of cutting the hands. A number of slides on which the cans may run easily can be arranged underneath the workbench, as shown in the illustration, or if desired, a special frame can be built to contain them, making a neat storage cabinet.—Harry W. Poor, Boston, Mass.

Simple Tube Deflater

A device for deflating inner tubes is shown in the illustration. It can be constructed in a few minutes and is very useful in any garage, as it eliminates the necessity of removing the valve, or of searching for a piece of wire to push it down.

Two small holes are drilled in one end of a piece of wood in the manner shown. The hole in the side is large enough to allow a valve stem to be inserted, while the hole in the end permits the air from the tube to escape. A machine screw is driven into a smaller hole in line with the first hole, and extends about $\frac{3}{8}$ in. into it. The end of the screw fits inside of the valve stem, and holds the valve open.—J. J. Ginsberg, Brooklyn, N. Y.

Refrigerator for the Camp

An excellent refrigerator for the camp or summer cottage can readily be made by lining a wooden dry-goods box with

A Wooden Dry-Goods Box, Lined with Galvanized Iron and Divided into Several Compartments, Makes an Excellent Refrigerator for the Camp

galvanized iron, soldering all seams, so as to make it water-tight. This refrigerator also serves as a drinking tank.

The refrigerator has three compartments; the large one is used for the drinking water, the one at the left in the photograph for cream and milk bottles, and the smallest one for meats and vegetables. The two larger compartments are made by making a partition across the box, but the smaller one is simply a removable galvanized iron box. The compartments can be made any size.

Water from a spring is led into the box by means of a length of pipe, and flows from the main compartment into the smaller one through a hole drilled in the partition. A drain hole is drilled in the outer side of the second compartment so that the surplus water will flow out. This hole is drilled at about two-thirds the height of quart-size milk bottles. The hole in the partition may be higher than this, so that the level of the water in the largest compartment will reach nearly to the top of the small meat box.

It has been found that a refrigerator of this type, about 3 ft. by 18 in. by 12 in. in dimensions, will keep milk and cream sweet for three days during the hottest weather.—Harry F. Blanchard, South Glenn Falls, N. Y.

☛ Steam for small toys may be obtained by connecting a rubber tube to the valve of a steam radiator.

Winding Electrical Coils Tightly

Most experimenters, working with electrical coils, find great difficulty in winding the wire so tightly that the coil, when finished, will have the neat appearance of machine-wound coils. It is well known that copper possesses a high heat-expansion rate, and this fact can be applied in coil winding, to make a neat job. By placing the wire over the stove, or other source of heat, until it is thoroughly warmed, and keeping the temperature as high as possible during the winding operation, surprisingly good results will be obtained. In following this method care must be taken to see that the ends of the wire are securely fastened, to prevent them from loosening when the wire contracts upon cooling. When it is understood that 100 ft. of copper wire expands nearly $\frac{1}{2}$ in. when raised in temperature about 30° F., it is easily seen that, when the wire contracts upon cooling, it will produce a tightly wound coil.

Holding the Garage Door Open

Open garage doors are likely to be slammed shut by a slight breeze. This is very annoying, especially when one person, unaided, is attempting to drive into the garage. The simple stops shown in the drawing will prevent this occurrence. Each consists of a stout wooden prop, of 1 by 2-in. material, a leather strap, nailed to the door, and a cleat nailed below the strap. In use, the prop is set under the cleat so that pressure applied to the other side of the door cannot close it. When the doors are closed the ends of the props

Method of Keeping Garage Doors from Closing, Which Proves of Considerable Assistance When Driving into the Garage Unaided

are set behind brackets provided for this purpose; or simply rested on the frame.

Lubricating Windows

When windows fit tightly so that it is difficult to open and close them, the guide strips are usually planed down. This method of overcoming the difficulty is effective but has the disadvantage of allowing the window to rattle during windy weather, and is therefore not entirely satisfactory. A better method is to use a suitable lubricant on the guides. Not every kind of oil can be used for this purpose, however, as some kinds become thick and sticky, and this tends to increase the difficulty instead of lessening it. An excellent solution for the purpose is a mixture of paraffin and turpentine.

Dissolve as much paraffin in turpentine as possible, by shaving the paraffin and allowing the mixture to stand for a few days. Apply the solution liberally to the window guides with a brush, going over them two or three times. The turpentine will evaporate and leave a colorless film of paraffin on the guides. After this treatment the windows will slide freely, regardless of weather conditions.

For metal-frame windows in industrial and office buildings, the following method gives satisfaction: The paraffin is melted and powdered graphite is stirred into it while hot. Upon cooling, the mixture solidifies, and the cake thus formed is used to rub the guides.

Obtaining Clear Image in Finder

When exposures are made under the open sky, the finders on many cameras show not only the image of the object to be photographed, but also reflect a transparent image of the photographer's head and a section of the sky above, both of which disturb the sharp outlines of the image. Pulling down the hood of the finder low enough to cut out these reflections usually hides from view the top of the image.

A simple means of correcting this fault, and, at the same time, leaving the whole image visible, is to place a small paper cone over the finder; a piece of heavy paper rolled into conical shape, and pinned together, will serve excellently. A convenient size of cone is about 6 in. long, with the top opening $\frac{3}{4}$ in. in diameter, and the bottom opening just large enough to fit over the finder.

Garden Hedges from Sod

It usually takes considerable time and care to grow a neat-looking border hedge, and this deters many gardeners from

Left: A Garden Well Surrounded by a Hedge Made of Sod.
Right: A Bridge of Sod Built over a Miniature Lagoon

planting them. The gardeners of Exposition Park, Los Angeles, however, have found a quick method of making them, by using sod.

The illustrations show the pleasing effect of sod hedges surrounding a rustic well curb, and also forming a bridge over a miniature lagoon. Strips of sod are piled, one upon another, to the height and shape desired, and kept thoroughly soaked until a compact structure is formed. Sod with the grass side out is used on the edges, as well as in the top-most layer. In making structures like the bridge, it is, of course, necessary to provide reinforcement of some kind, usually heavy-wire mesh.—C. C. Wagner, Los Angeles, Calif.

Simple Blow-Out Shoe

A strip of canvas, properly applied, makes an ideal blow-out shoe that will add many miles of service to an old casing. The canvas strip must, of course, be wider than the length of the hole in the casing. The canvas is wrapped around the tube several times, so that it will fit exactly inside of the casing. A liberal application of soapstone will eliminate most of the danger of chafing. Care must be taken when replacing the tube to get it in the casing so that the bandage fits inside of the blow-out. It will be found that the casing will not bulge as with an ordinary blow-out shoe, and that the strip will last a long time.

MAKING ARTIFICIAL FLOWERS

By Bertha Graves Morey

Awarded First Prize—\$100—in Contest on Occupations for Shut-Ins

DECORATIVE artificial flowers are used for so many purposes, and in such vast quantities, that some understanding of their construction will prove very valuable to the shut-in; by applying the principles laid down and illustrated in this article, he can build up a steady and lucrative business, and one that is not affected, to any great extent, by the season, as are many other lines of home employment.

In designing or making flowers for the trade, the prevailing styles should be followed, as any undue originality may lead to poor sales. The styles for flowers used for millinery are usually limited as to size and to color. If large flowers are the fashion, the size is more important than the kind, and the flowers must always be of the fashionable color. The same applies to smaller flowers. These are usually used in wreaths and bunches, and sometimes for completely covering hat crowns. Whatever sizes the ruling fashion dictates, it is best to follow nature somewhat in the selection, and to make small flowers like some natural small flower.

The quality of the material of which the flowers are made should be in harmony with the thing they are to decorate. When used for the stage, they should be of fine color, of effective size, and of any kind of material that is inexpensive and will produce the desired result. Useful materials include colored linings, muslins, cotton flannels, and organdies. For pageantry and outdoor decorations, waterproof glue should be used, and these flowers, which are usually of greater size than for other purposes, should be made of sturdy materials, to withstand careless handling.

Those used for gowns and millinery are applied to new uses, and change in style each season. These flowers are made of an unlimited number of kinds of material, from the richest to the commonest. Cloth of gold and silver, velvets, ribbons, brocades, silks, satins, laces, nets, beads, feathers, and covered wires make up the richer flowers used in millinery.

Natural grasses, seeds, pods, husks, raf-

fia, reeds, paper, twine, leather, oilcloth, sheet rubber, tinted and painted with oil colors, yarns, chenille, and braids make up a not less interesting group of flowers for millinery, fancy dress, fancy work; decorations for cars, display windows, parades, and interior decoration for stores and homes. A touch of bright color is an acknowledged necessity, in attracting and pleasing the modern eye.

The materials needed for assembling the parts of the flowers are waterproof glue; coarse and fine wire; covered wire; cords; sealing waxes of all colors, for touches of color in the flower centers, and for sealing places hard to glue; mending tissue for covering stems and buds, and oil and water colors for details and accents.

The tools used are shears, wire cutters, sharp knives, brushes, an alcohol lamp for melting sealing wax, and an atomizer for blowing tints of color over the finished flower.

The decorative flower, to be effective, need not be a copy of nature. If a great number of flowers are to be made at one time, work can be saved by first preparing all the parts and then doing the assembling. It is sometimes best to have certain persons do the preparing, and others, possibly more fitted, the assembling. The plan of work should always be carefully laid out, and the parts put in trays or box lids.

Flowers of two or more shades or materials are more interesting and quite as easily made as those in one tone or material.

Each material has its limitations and possibilities. Woven materials, that fray easily, cannot be handled in the same manner as leather, paper, oilcloth, etc., that do not fray. Machine hemstitching offers the most professional finish for the edges of petals made from fraying materials. Pile materials, such as velvet and plush, lose much of their fraying qualities if painted over the back with a thin-glue size. This size should be thick enough to stay on the surface, and not soak through the pile. Several applications, each to be dried before the next is applied, will be necessary if the

Left: Flower with Pine-Cone Center, Pine-Needle Petals, and Wax-Tipped Pine-Needle Stamens. Center: Various Flowers, Using Ribbon-Loop and Cut-Out Petals, and Two with Painted Acorn Cups as Centers. Right: Bud, of Satin, Metal-Cloth, or Silk-Covered Satin, with Ribbon Calyx and Stem

material is to be quite stiff. Nets, mulls, and thin silks may be stiffened by dipping in a very thin size. To do this, the material is dipped, then dried in a small frame, made in the same manner as an ordinary curtain stretcher. Cotton materials may be starched to almost any degree of stiffness and either stretched, as mentioned above, or ironed. Stretching is by far the most successful way of drying, but is not always practicable, if small pieces or scraps of material are being used.

The parts of all flowers are about the same, and the different development of these parts will be better understood if natural flowers are taken apart and carefully studied. From this study many ideas for the shapes to use for petals and leaves will be discovered. A notebook of sketches of the parts of dissected flowers will prove an invaluable addition to the flower maker's equipment.

For the artificial-flower maker's purposes, the flower consists of three parts: the center, the petal or petals, and the calyx. The center is made up of stamens and pistils; the petals, known botanically as the corolla, may consist of one funnel-shaped unit, as in the petunia, or of many petals, as in a rose; the calyx, consisting of the sepals, is the cuplike formation that grows from the stem and surrounds the petals and center, all forming the flower.

Centers in decorative artificial flowers, as in nature, form a distinctive note that should be well developed with the proper color harmony in relation to the other parts. The centers for silk, feather, metal-cloth, and lace flowers should be of rich material, to harmonize with the material used in the petals.

To make the centers, buttons, covered with material embroidered with silk or metal threads, are used, or small skeins

Left: Flower with Velvet-Ribbon Calyx and Stem. Center: Center Made of Velvet and Gold-Net-Covered Button, and Shape of Artificial Leaves. Right: Method of Cutting Petal Material, After Hemstitching, to Avoid Waste

of thread, tied or wired, and clipped to form short, stubby, brushlike parts, which are touched with colored sealing wax, or oil paint, to make them bright. Buttons, covered with long-nap velvet, and then covered with silk or metal net, also make good centers, the pile of the velvet standing up through the meshes of the net. Beaded velvet centers may be used for silk flowers; feather centers for ribbon and silk flowers, or small clipped feather centers for flowers of soft feather petals. Twine, fiber, raffia, tight little rolls of paper, muslin and crash, and crochet wool, cotton, or linen yarn, are suitable materials for the centers of paper and oilcloth flowers.

The stamens, while frequently omitted from the artificial flower, are an attractive addition, and well worth the extra work. Short or long pieces of fairly stiff cords, raffia, threads, or grasses with ends knotted, beaded, dipped in sealing wax, or touched with oil paint, make suitable stamens. The color used on these should harmonize closely with the other parts of the flower, or contrast strongly, while preserving the color scheme. If small loops are used for stamens and large ones for petals, the stamens are made of material that will enable them to be distinguished easily from the petals. Loops of fine wire, strung with small beads, make sparkling stamens, appropriate for flowers used for millinery and dress decoration.

The petals permit the greatest variety of shape in designing decorative flowers. They are made in loops, fringes, or solid pieces, carefully yet seemingly carelessly shaped, of one or of many pieces. The one-piece petal such as would be used for the calla lily, the petunia, etc., is not very interesting in artificial flowers, and is more easily made of crêpe paper than of woven material. When made of woven material, it is necessary to use wooden or metal forms where the dampened material is pressed and stretched until dry. Any necessary seams or laps are glued with waterproof glue. The edges are trimmed when perfectly dry, and any tinting necessary is done with an air brush. While it is interesting to know something of how the one-piece petal is made, the result is not worth the extra equipment.

The many-piece corolla or petals are much more interesting, effective, and simpler to make. The shape and color may follow the natural flowers or the maker's own taste. Flower design, like all other designs, follows lines and ideas not always found in nature. However,

there is much to learn from nature, and artificial flowers made following nature's own design and color are always interesting.

For materials that ravel, machine hemstitching or picoting makes a substantial and interesting petal edge. The petals may be so designed as to make one line of hemstitching finish two sets of petals, leaves, or blades, as shown in one of the drawings. Coarse or fine buttonholing is also a useful petal edging.

The calyx is an excellent place to finish the flower. Broad strips of raffia, mending tissue, ribbon, strips of the same kind of material as that used for the petals, tape, or oilcloth are cut to shape at the ends, and wound over the base of the flower and down the stem. These strips, if of mending tissue, will stick from the warmth of the hand if held in place for a moment. If the covering is of any other material, glue or sewing, or both, must be used. Should the material stain with glue, fasten it in place with as few stitches as will do the work. Avoid overworking the parts of a flower, as this will make them clumsy and ugly.

The leaves may be seemingly real flat leaves, twists, spikes, or loops of suitable color to simulate the desired foliage. For flat leaves, imitating natural leaves, patterns are made, and the leaves cut from sized or starched material and glued to a thin-wire stem, which also forms the central vein of the leaf. When complete, if very glossy foliage is wanted, paint the leaves and stems with shellac, or dip them.

Buds are made of small balls or forms of cotton, covered with green, or a darker color than that used for the flower. The calyx and stem are finished in the same manner as the flower.

When assembling the parts, the center is first made by winding a skein on the winding card shown at the top of the large illustration. The ends of the skein are tied; it is then removed, doubled several times, and tied with several turns of No. 26 iron wire, and the ends clipped, so that the center assumes the shape shown at the upper right. The stamens are placed around the center and secured with fine wire also. The petals are next placed in position and wound as firmly as possible. If there are several rows of petals, use only one or two windings of the wire for the first rows and the heaviest winding for the last row. This stub is then wound with heavier wire, No. 22 for average work, and this wire extended down for the stem, although

Details of the Making of an Artificial Flower with Skein Center, Sealing-Wax-Tipped Stamens, Loop or Skein Petals, and Either Binder-Twine or Strip Calyx: The Winding Card Shown Is for the Purpose of Making Uniform Skeins for Centers or Petals. Several Types of Stamens are Also Shown. The Color Scheme Indicated is Suggested Only, and may be Modified to Suit

the stem may also be stuck inside the skein center; the method of making the stem will depend, to a large extent, upon the type of center used. Before covering the stem, any buds to be used must be added by twisting the bud stem with the flower stem. The calyx is then made and glued, or sewn, firmly in place, the stem wire covered, and the covering glued or sewn.

The foliage used with flowers should harmonize with the color of the flowers, as yellowish-green for yellow flowers; gray or purplish-green for red flowers, blue-green for blue flowers, and gray-green for pink and violet flowers.

Many natural grasses and seeds are used in millinery. If the natural color is not desired, aniline dyes, soluble in alcohol, are used to dye the grasses. Several dippings, drying between successive ones, will be needed for very dark colors. Water colors may be used, but the water sometimes softens the grass, causing it to lose its shape. Alcohol dries very quickly, and does not soften the stems or grass. When dyeing with either water or alcohol dyes, always dry by hanging up by the stems. If it is necessary to stiffen the plants, use alcohol that has absorbed as much white shellac as it will take, and then add the dye and dip until the proper shade is reached. The seeds may be dyed, shellacked, or painted with glossy or flat-color oil paints. Seeds may be

drilled and wired and used in the centers. Small husks and seed pods are used for decorative flowers, sometimes in the natural color, but most frequently dyed or painted, using the same methods as with the seeds. The stem parts of clove seeds make interesting centers for very small flowers. Palm-leaf fans, cut in crosswise strips and rolled in $\frac{3}{4}$ -in. rolls, make good centers for stiff flowers, such as zinnias.

The vogue for winter bouquets permits the use not only of natural flowers, but everlasting ones, such as straw flowers, bachelor's-buttons, lily pods, chinese-lantern pods, rose hips, pampas grass, and the countless reeds. Dry corn husks make very lovely delicate-colored petals, but are not durable and will not stand much shaking or handling.

To market the product, a line of a dozen or more samples should be made, and either sent or taken to the merchant, and orders solicited, the material to be delivered at a certain time. The price should bear some relation to flowers on the market of the same quality. The time spent cannot be calculated at the same rate for work done by an invalid as that of the work done by the able-bodied. The selling price should be $33\frac{1}{2}$ to 40 per cent below the merchant's selling price. Some workers mark their goods at the retail price, less either of the above-mentioned discounts.

Grading Lawn Frontage

It frequently happens that grades for public walks are established after houses have been built on the adjoining lots, and

as these grades are very often lower than the surface of the lots, it becomes necessary for the owners to slope the frontage, and make a neat bank. This is usually done by cutting the ridge down and re-seeding the

bare soil. During this process much trouble is experienced from rain, as it washes both seed and soil away. To pre-

vent this, a workman employed a practical method in making the bank, that left it very neat in form and grassed over in perfect condition.

The level of the walk was about 20 in. below the surface of the lawn and presented a very rough appearance, as shown in Fig. 1. The sod was loosened, cut into strips by means of a spade, rolled back, and the soil graded, as shown in Fig. 2. Before the sod strips were rolled back over the bare soil, as shown in Fig. 3, both sod and soil were thoroughly sprayed with water until saturated, which helped to keep the sod in place and prevented the grass from withering before the roots took hold. Subsequent watering, at intervals of 24 to 48 hours, for a few weeks, left the lawn frontage in as perfect condition as before the bank was formed.

Neighboring lots, where the slope was cut away in the usual manner by cutting and re-seeding, did not attain a presentable appearance for over a year, and some were badly damaged by rain.

Emergency Gaskets for Automobile

When it is necessary to use a gasket for an oil leak in the transmission cover, and a regular gasket is not at hand, a good one may be made from a piece of heavy wrapping paper. The sheet is laid over the cover and cut to fit by tapping around the edges with a hammer. The bolt holes are cut with the ball end of the hammer. The same kind of gasket will serve in many other places.

Keeping Floor Boards in Place

After a light car has been in use for some time, it frequently happens that the foot boards do not fit as snugly as at first,

and hence are apt to slip out of place. This might cause a serious mishap, if it should occur while driving, as the pedals would be locked. One way of eliminating this danger is to bolt two metal

strips to opposite sides of the middle floor board, as shown in the illustration. The ends are allowed to project $\frac{1}{4}$ or $\frac{1}{2}$ in. beyond the edge of the floor board. It has been found that the boards will never slip out of place with this arrangement, but can still be removed and replaced easily.—W. J. Fraser, Toronto, Canada.

Double Gate for Farmyard

A gate of double width is a special convenience in the farmyard to permit the easy passage of wide hayracks, loaders, harrows, and other large implements. Such a gate is shown in the illustration, and it has the additional advantage of being made without the usual center post, to which both parts of a double gate are latched, and which is objectionable because it partly defeats the purpose of such a gate.

The gate illustrated is strong and rigid. The fence on one side of it is provided with two posts upon which are mounted U-brackets made of flat iron or steel. These are in line with similar brackets on the gate, as shown, and together accommodate a 2 by 4-in. beam. A hole, drilled near the end of the beam, permits

the insertion of a peg or bolt to be used for a handle.

Generally, it is only necessary to open one section of the gate to provide sufficient space for the passage of an auto-

A Double Gate for the Farmyard, Constructed So as to Eliminate the Objectionable Center Post of the Usual Double Gates

mobile or carriage. The side of the gate shown at the right is opened by simply pushing the 2 by 4-in. beam back a few inches to clear the bracket. The beam remains in the four brackets of the other section and posts, and holds the rest of the gate rigidly in place. When necessary to open both sections, the right one is released first, and then the beam is pulled out of the two post brackets, which allows the left section to swing freely on its hinges.

A Neat and Simple Hedge

A very neat hedge can be made without the trouble and expense of setting out separate shrubs and then having to keep them trimmed. A frame of wire screen or netting is set up in the manner indicated by the drawing. Sod is placed inside the wires, with the grass side out, and the space between is filled with earth.

In a short while the grass will grow through the mesh of the screen and completely conceal it. The same idea can be followed out by planting some rapid-growing climbing vines over the netting.—Robt. Page Lincoln, Minneapolis, Minn.

A Homemade Vise

A homemade vise that can be clamped to any table or bench proves of considerable assistance where space does not per-

A Handy Vise That can be Attached to Any Table or Bench with Ordinary C-Clamps: It is Made of Hardwood and the Jaws are Protected with Angle Iron

mit the use of a stationary vise, or where a vise is used so seldom that it is hardly advisable to purchase one.

The base and jaws are made of hardwood, to the dimensions shown. A piece of 2-in. angle iron holds the stationary jaw to the base, and is attached to both with $\frac{1}{4}$ -in. bolts. To face the jaws, $\frac{1}{4}$ -in. angle iron is used. A hole is drilled through the center of both jaws for the $\frac{5}{8}$ -in. bolt, used as a screw, and a $\frac{5}{8}$ -in. nut is recessed into the back of the stationary jaw. If desired, small holes can be drilled through the head of the bolt to accommodate a "tommy," so that it will not be necessary to use a wrench for tightening or loosening the vise; or a permanent lever may be attached to the bolt head as in an ordinary vise. C-clamps are used to fasten the vise to the table or bench.

Disinfecting Cellars

It is very disagreeable to have the basement or cellar acquire a musty odor after being closed up all winter. To prevent this, clean the basement thoroughly, taking care that there is no decaying vegetable matter in it. Then sprinkle dry chloride of lime, pulverized copperas, or even common lime on the floor, and close the basement up. After a few days, open the windows until the smell of the lime disappears. If the musty smell still per-

sists, whitewash the walls and sprinkle powdered charcoal around freely.

It is a good plan to whitewash the cellar walls twice every year, in the spring and in the fall. This will not only improve the appearance but will also help to keep the air from becoming foul. As everyone does not know how to make a good whitewash that will not rub off on the clothes, the following recipes and information will be of value. Procure some hydrated lime, which can usually be purchased at a builder's-supply yard. Add enough of it to half a pailful of water until the mixture, which is, of course, stirred continuously, acquires a creamy consistency. Take $\frac{1}{4}$ lb. of flour and mix it in a separate dish, using enough water to barely wet it. Rub all lumps out with a tablespoon. Then pour boiling water on it to thicken it, and pour it into the whitewash, stirring well.

Another method of making a good whitewash consists in adding 2 lb. of salt to every 10 gal. of water, stirring well until the salt is dissolved; and then adding hydrated lime until the mixture has the consistency of paint.

Fasteners for Colonial-Window Shutters

The window shutters on present-day houses of the colonial type are fitted more for ornament than for use, and since they are not opened or closed, the type of fixture shown should be used for fastening the shutter to the side of the house.

This fixture has several advantages. It is nearly invisible, holds the shutter securely, and can be detached in a few moments, when it is necessary to clean or paint behind the shutter. A small U-shaped, galvanized-iron bracket is attached to the siding with wood screws, in line with the edge of the shutter. The latter is attached to the bracket by means of a machine bolt, as shown, and the head of the bolt is countersunk and covered with a wooden plug.—L. H. Georger, Buffalo, New York.

Removing and Replacing Valve Springs

Although the grinding of valves on automobile engines is a simple operation, according to most instruction books, the amateur mechanic faces several difficulties, especially in case of an L or a T-type of cylinder head. Very often the whole side of the cylinder block is inaccessible; the valve spring cannot be lifted without the aid of a compressing lever, and the pin under the spring is difficult to get at, and often falls down into the oil pan while one is attempting to get hold of it. The use of a few simple tools, however, makes the job comparatively easy.

A satisfactory compressing lever that can easily be made is shown in Figs. 1 and 2. The lifter consists of two short lengths of flat steel, connected with a short bolt so that the tool can be folded, to save space in the tool compartment. An iron or hardwood block is used as a fulcrum. By resting the fulcrum on the crankcase, near the row of valve tappets, and inserting the forked end of the lever under the valve spring, the latter can be pried up far enough to expose the pin.

After raising the valve spring, the pin must be removed. This is usually done by means of a pair of tapered-nose pliers, as shown in Fig. 4. However, an electromagnet, made as shown in Fig. 3, has been found to give great satisfaction. The core of this magnet, which is made of soft iron, extends $1\frac{1}{2}$ in. beyond the bobbin; it is bent and tapered at the end as shown. The bobbin is wound with several layers of No. 14 single cotton-covered magnet

wire. The ends of the coil are soldered to flexible cord that can be led to the terminals of a storage battery, or provided with a plug to fit into the dash lamp or other

Figure 1: Tool for Compressing Valve Springs. Figure 2: Method of Using. Figure 3: Homemade Electromagnet Used to Extract Pins. Figure 4: Tapered-Nose Pliers for Extracting Pins. Figure 5: Method of Holding Springs Compressed

socket. Such a magnet will remove and replace pins with very little danger of dropping them.

It is usually an easy matter to remove the valve springs, but very difficult to compress them and to put them into place again. A simple method is shown in Fig. 5. The spring is compressed in a vise, and some No. 20 wire tied around it, as indicated, to hold it together after the vise has been released. While held in this way, the spring is set in position around the valve stem, and the washer and the pin are replaced. The tie wires are then cut.—H. H. Parker, Oakland, Calif.

Film-Developing Rack

A convenient and inexpensive frame to facilitate the handling of film-pack films, while developing, is shown in the photo.

The frame is made of wooden strips, the length and width of which are determined by the size of the films and the number to be developed at the same time. The films are fastened to the sides of the frame with glass-headed push pins, as indicated, and the frame, with the films attached, is then immersed in the developer bath and fixing solution in turn. The use of such a frame permits each negative to be watched separately, and overexposed negatives can be removed before the

others. After the films have been thoroughly fixed and washed, the frame is placed in a suitable place to allow the

A Frame for Facilitating the Development of Film-Pack Films: The Negatives can be Watched Separately and Any One can be Removed before the Rest

films to dry, and thus the separate films need only be handled once or twice at any time.

Installing Radio Apparatus on the Farm

By E. R. HAAN

THE large number of stations now broadcasting weather and market reports make the installation of a radio-receiving instrument on the farm no longer a luxury, but a necessity.

The operation of a receiving set is very simple; no technical knowledge is neces-

the reception of the latter is made possible by using 21 turns of wire instead of the 16 indicated in the circuit diagram of the outer coil, making a total of 45 turns instead of 40. No. 28 single silk-covered wire should be used instead of the No. 26 double cotton-covered wire specified, to

The Single-Wire Aerial Is the Most Commonly Used, and has been Found to Be Universally Successful. Its Length Is from 100 to 150 Feet, and It is Suspended at a Height of 30 to 60 Feet above the Ground. The Illustration Shows All the Details of Installation and the Necessary Connections

sary, and any farmer may, in a very short time, become expert in "tuning in" the various stations within the range of his set.

A receiving set can be either built at home or purchased ready-made. There are today thousands of boys on the farm who have built and are building radio-receiving sets. For those who contemplate building their own sets, complete information on the construction of a successful receiving set that has a distance range of approximately 1,000 miles, and a wavelength range of 150 to 400 meters, is contained in the February and March, 1923, issues of this magazine. The February issue describes the construction of a detector unit with one stage of amplification; the March issue, the construction of two and three-step sets. With this set it is possible to receive the popular entertainments and lectures broadcast at wave-lengths up to 400 meters, but not the official weather forecasts, and crop-and-market reports that are broadcast at a 485-meter wave length. However,

enable the extra turns to be wound on the form. This is the only change necessary, and will readily be understood upon referring to the articles mentioned. The set can be used successfully to operate a regular loud-speaking horn or can be hooked up with a phonograph horn to amplify the sound. Under especially favorable atmospheric conditions the distance range is often much greater than 1,000 miles.

If a ready-made receiving set is to be purchased, a few considerations must be borne in mind: It is highly advisable for a farmer to have a two-stage set with which he can receive the 485-meter reports. Never purchase a set on the assumption, or on the verbal assurance that it is suitable for receiving market reports; insist that the dealer demonstrate this capacity of the set by actually "bringing in" these reports.

Anyone can install a receiving set. Procure a 100-ft. or 150-ft. length of No. 12 or 14 stranded copper wire, which is best for strength and conductivity. If this

cannot be obtained, any bare copper wire, No. 12 or 14, but not smaller, will do. Also procure two aerial insulators; some No. 14 insulated weatherproof wire for a "lead-in," the length of which depends on the height of the aerial; a lightning switch, for which a single-pole double-throw knife switch of 600-volt, 100-amp. capacity is suitable; a number of porcelain knobs, and two porcelain tubes. With this material proceed to erect the aerial, as shown in Fig. 1. In selecting a suitable place to suspend the aerial, the following precautions must be taken, the neglect of which will result in inefficiency of the set. Suspend the aerial 30 to 60 ft. above the ground, so that there will be a considerable space between it and any trees, structures, or outbuildings. In case electric-power, light, or telephone lines run near or through the farmyard, take care to suspend the aerial at right angles to and not parallel to these lines. If possible suspend the aerial from masts mounted on the house and barn or other building. The lead-in wire must always be fastened to the house end. Full details of the method of attaching the wire to the mast are shown in the illustration.

The lead-in wire is attached to one end of the aerial and is brought down to the lightning switch; it is either allowed to hang from the aerial to the switch as indicated, or if desired, may be attached to the side of the house at different points

with porcelain knobs. Care must be taken to solder all the connections, in order to make them mechanically and electrically secure. The insulation of the lead-in wire must be kept intact at all points to prevent any possible ground. The lightning switch is attached on the outside of the house near the window where the wire to the instrument is brought in; the latter is insulated by means of a porcelain tube where it passes through the window casing or frame. The lead-in wire from the aerial is soldered to the center terminal of the switch; the wire to the instrument to the upper-clip terminal, and the ground wire to the lower-clip terminal.

There are numerous other types of aerials that give good results. Frequently two or four-wire aerials are used. There are cage, umbrella, fan, and loop aerials, the latter for inside use. There are also several methods of connecting the lead-in to the aerial. But it is not the purpose of this article to give the construction of various types, their merits and demerits; the single-wire aerial described above has been found universally successful, and, being simple to make, is particularly recommended. However, if it is desired to have a two or four-wire aerial, the aerial wires and guy wires are attached to a wooden spreader, as shown in Fig. 8; the aerial wires are 100 ft. long, and are spaced 2 ft. apart.

Figure 1, Three Cells of a Farm-Lighting Outfit Used for A-Battery; Figure 2, Method of Grounding on Water Pipe; Figure 3, Grounding in a Well; Figures 4, 5, and 6, Other Methods of Grounding; Figure 7, a Four-Wire Aerial That is Used Quite Often. The Wires are Spaced About Two Feet Apart, on Wooden Spreaders, Which are Braced by Insulated Wires or Ropes

The ground connection must now be made. This is another important part of the installation. The object is to make a good connection between the ground terminal of the switch and the earth. Drive a long steel or iron rod into the ground, to a depth of about 5 or 6 ft., and solder the ground wire to it securely. Another excellent method of grounding is to solder the ground wire to a copper plate and to drop this plate into a well, as shown in Fig. 4. Other methods of grounding are shown in Figs. 5, 6, and 7. The ground wire need not be insulated, but it must be well separated from the lead-in wire so that there can be no possible connection between the two. The connection shown in Fig. 2 is quite suitable for the ground connection from the instrument—not the switch—and is simply made. Run a length of lamp cord, or similar heavy wire, to the nearest water pipe. Scrape the pipe bright and attach the bared end of the wire to it by means of a clamp, or by soldering directly to the pipe. Be sure to make a good connection between wire and pipe.

In maintaining the set, the following hints should be kept in mind: Never allow the storage battery to run low before it is recharged, as this lowers the efficiency of the set, and is bad for the storage battery itself; on a farm having an electric-lighting outfit, it is not at all necessary to have a separate storage battery for the radio set, because three cells of the lighting battery, connected as in Fig. 2, will do just as well. In fact, using three cells of the lighting battery is even better than having a separate A-battery, because the lighting battery is always kept charged, and hence does not involve so much trouble as a separate storage battery.

The B-battery should be tested occasionally for voltage. This can easily be done by means of an 18 to 24-volt automobile-headlight lamp; its two terminals

are touched, for a moment only, to the two leads connected to opposite poles of each 22-volt unit. If it burns very dimly, the battery is weak, and should be replaced with a new one. It usually takes quite a while before the B-battery is exhausted, and one is therefore apt to forget about it and wonder why the set does not work as well as it did at first.

There are several kinds of detector and amplifier tubes at various prices on the market. In selecting these, it is best to get a good tube manufactured by a reputable concern. However, the difference in the results obtained from two tubes having the same rating, and made by the same concern, is sometimes surprising. Before purchasing any tube one should always insist upon having it tested, as it frequently occurs that tubes do not work properly, due to causes and conditions in their manufacture beyond control.

By carefully following the method of installing the aerial and ground, and observing the suggestions for maintenance contained in this article, any farmer can successfully "listen in" to lectures and entertainments, to weather forecasts, and crop and market reports, that are broadcast daily from scores of stations all over the country.

In receiving market reports, it is, of course, necessary to note them down carefully so that the reports from various stations can be compared. It will be found that it is very convenient to have a blackboard mounted on the wall near the set, so that the items and figures can be jotted down as they are received. The board should be arranged so that the reports of several successive days can be noted, as this helps to show the trend of the market. No particular arrangement of this bulletin board is shown, as the subjects listed will depend upon the particular interest of the farmer, and will vary in nearly every case.

Irrigating the Garden

It is common during the summer dry spell to see amateur gardeners spending an hour every evening in sprinkling their gardens. While this undoubtedly refreshes the plants, it does not saturate the ground to a sufficient depth to benefit the plant roots.

A much better method, and one that does not require as much time and labor, is to remove the nozzle from the hose and allow the full stream to flow into the

garden. The stream should be directed into the rows by means of small ditches, in the same manner as irrigation is practiced in dry climates. By saturating the soil to a depth of 4 or 5 in., sufficient moisture is provided to last for several days or a week. The soil should, of course, be cultivated as usual.

One should never sprinkle a garden during the day when the sun is shining, as this practice is very injurious to the plants and flowers.—G. E. Hendrickson, Argyle, Wis.

A Fireproof Cement

An excellent fireproof cement for furnace and stove work can be made by mixing powdered fire clay with sodium silicate (water glass) to the consistency of a stiff dough. Powdered magnesia or asbestos can also be used instead of fire clay, but the latter is usually the easiest to obtain. A small quantity of asbestos fiber added to the mixture will serve, like hair in plaster, to hold the cement together.

The cement thus made is not expensive and will stand considerable heat. It is very useful for plugging up smoke-pipe openings and also for lining stoves.

A Birch-Bark Berrying Basket

A simple berrying basket can easily be improvised in the woods, when a regular basket or bag is not available.

Tear a strip of bark from a birch tree, and fold it over, as shown in the photo, folding in the edges at the side and bottom, and "sewing" them together with a slender flexible green twig. Attach another piece

of twig to the top of the basket, to serve as a handle. This basket is quite strong, considering its rough construction, and serves very well for the purpose of carrying berries, fruits, and nuts. It can, of course, be made any size desired.

Lawn Table and Parasol

The novelty of the lawn table shown in the photograph consists in the use of a three-branched tree crotch for the legs, and also in the attachment of a large parasol to the table. To one who is fond of reading or studying in the open, this shaded table is a great convenience.

When the branches of the crotch are sawed off evenly, they provide a strong and stable support. The bark can be left on or peeled as desired. A circular table top is preferable to any other shape, and it should be a little smaller in diameter

than the parasol used. The table top is mounted on a framework of 2 by 4-in. pieces, nailed to the crotch, and is preferably made of cypress, to withstand the

A Novel Lawn Table Equipped with a Large Parasol Is of Great Convenience for Those Fond of Reading or Studying Outdoors

effects of the weather. The parasol is one of extra-large size, such as used on delivery wagons, and the handle is set into a hole drilled in a wooden block screwed to the table.

Pumping Tires Quickly

The attachment shown in the drawing permits the use of two pumps to inflate an automobile tire, and is therefore quite a timesaving addition to the motorist's tool kit, especially when the car is equipped with fairly large tires.

The device is made from a short piece of $\frac{5}{8}$ -in. metal tubing, in the ends of which valve-stem tips, about $\frac{3}{4}$ in. long, are soldered. A hole is drilled in the center of the tube, another stem soldered in, and a length of pump hose clamped to it. A regular pump-hose stem, equipped with a screw-cap, is clamped in the other end of the rubber tube.—R. L. Friess, Bowling Green, Ohio.

Foiling Automobile Thieves

Automobile thieves usually do not care to spend much time in attempting to steal a light car: they take one that can be

Two Methods for Foiling Automobile Thieves: Figure 1, Wire That Lifts the Coils to Separate the Bottom Contacts; Figure 2, Sheet of Mica That Separates Back Contacts

started instantly, and let the others alone. For this reason, simple methods of preventing the engine from starting are often just as good as expensive locks.

Figure 1 shows a piece of pointed wire, about $\frac{1}{4}$ in. thick, pushed through a hole drilled in the side of the coil box, and under the coils, so that the lower contact on each box is raised and the circuit broken. It is, of course, advisable to drill the hole on the left side, so that the wire cannot be seen when the car is entered.

Another method of breaking the circuit is to cut a piece of mica, or any thin insulating material, to the shape shown in Fig. 2. When this is inserted behind the coils, with the end A down, the circuit is broken. With end B down, however, the circuit is complete, and the car can be started as usual, as the back terminals make contact through the cut-out portions of the mica sheet. The discovery of this device is also very improbable.

Cleaning Tarnished Silver

Tarnished silverware can be cleaned by dipping it in a solution of water, soda, and salt, contained in an aluminum pan. The pan must be clean and free from all grease, and filled with enough boiling water to cover the silverware. One tea-

spoonful of baking soda and another of table salt is added to each quart of water. The silverware is immersed until the tarnish has disappeared. The pieces are rinsed in clean warm water, and rubbed until dry with a soft cloth. If not tarnished very much, it is only necessary to dip the silverware in the solution, but it must come in contact with the aluminum. —Charles A. Smith, New Haven, Conn.

Easily Made "Vernier" Rheostat

A "vernier" rheostat, connected in series with the regular one, will be found of advantage when regulating the filament current in the radio detector. For receiving sets not equipped with a vernier rheostat, one can readily be improvised as illustrated. The rheostat consists of a short length of resistance wire, wound once around the circumference of a fiber spigot washer, about $\frac{5}{8}$ in. in diameter. Grooves are cut across the washer, as shown, so that one end of the resistance wire can be wound around the threaded spindle, and locked with a nut and washer; the other end is fastened by threading it through two $\frac{1}{32}$ -in. holes, drilled about $\frac{1}{8}$ in. apart. A spring-brass contact, bolted to the panel, bears on the wire when the assembly is

A Homemade "Vernier" Rheostat That can be Made by Any Amateur: Its Maximum Resistance Equals That of a Single Turn of Wire of the Regular Rheostat

mounted on the panel, and connection to the spindle is made by means of a spring-brass strip, also bolted to the panel as shown. A spring is used on the spindle, between this strip and the inner binding nut on the fiber washer. A knob and indicator are mounted on the front of the panel in the usual way. This rheostat provides a variable range of resistance, the maximum value of which is equal to that of a single turn of wire on the regular rheostat.—E. J. Bachman, Fullerton, Pa.

PRIZE OFFERS AND ANNOUNCEMENTS

1836 DEVICE FOR RECORDING SHAFT SIGNALS SOUGHT BY COMPANY IN TRANSVAAL

A practicable device for recording mine-shaft signals is sought by the Rand Mutual Assurance Company, which offers a prize not exceeding £250, or about \$1,100, for the best submitted. It is intimated that the company may also offer to buy or lease the winning device, though competitors will be under no obligation to enter into this phase of the question.

As it would be scarcely possible for American contestants to write and receive full details of the competition in time to submit their designs before the closing date, which is September 30, of this year, the full conditions governing the contest are given herewith. They are as follows:

1, the device must be capable of being installed in existing plants at a moderate cost; 2, it must be capable of being kept in efficient working condition without undue expense; 3, if the device has been in practical use, particulars must be supplied; 4, models, drawings, plans, photographs, or other descriptions of the device must be submitted, from which a full-size working appliance is capable of being constructed. These must be accompanied by an estimate giving the approximate cost of equipping a typical engine with the device, and the royalty (if any) payable for its use if the device is patented; 5, the full name and address of each competitor must be given; also a statement as to whether the device is patented or not, and when and where a model of the invention can be seen; and 6, the Prevention of Accidents Committee reserves to itself the right to reduce or withdraw the prize money if in its opinion none of the designs submitted is considered to be sufficiently worthy.

Address J. F. Bilbrough, Managing Secretary, Rand Mutual Assurance Co., Ltd., P. O. Box 413, Johannesburg, Transvaal, South Africa.

1835 NAME AND SLOGAN WANTED FOR HATS TO BE WORN BY MIDDLE-AGED WOMEN

A name and a slogan for a new line of hats about to be introduced are wanted by a millinery company of Chicago. Four prizes are to be given, the first \$400, and the others \$300, \$200, and \$100, respectively.

Describing the name sought, the company explains that the hats are to be sold to women of 30, 40, perhaps even 50 years, women prominent in social and business life; and that for several reasons it has been considered inadvisable to call the new line by any appellation that includes the word matron. The slogan must not exceed 14 words.

All submissions should be in the hands of the judges not later than June 1, this year, addressed Dept. 84, Gage Brothers & Co., 18 S. Michigan Ave., Chicago.

1797 INTERNATIONAL STAMP COLLECTORS PLAN LONDON EXHIBITION

Collections valued at thousands of dollars will be displayed at an international stamp exhibition in London during the month of May. Among the postage stamps which may be shown are some from a special issue recently brought out in Italy in conjunction with the tercentenary of the foundation of an institute of the Roman Catholic Church. These bear a picture of Christ in the midst of his disciples. It is believed that this is the only instance of philatelic representation of Jesus of Nazareth.

1834 YEARLY BONUS OF £50 IS ADDED TO RHODES SCHOLARSHIPS

A yearly bonus of £50 will be added, until further notice, to the normal £300 per annum given to students holding a Rhodes scholarship. These scholarships, as many know, are tenable only at Oxford University, where they may be held for three years, subject to the approval of the school authorities.

To each state of the union are assigned two scholarships, though the actual nomination must first be

made by the college or university of which the applicant is a member, and ratification is left to a committee of selection. The candidates must be male citizens of the United States, must be between 19 and 25 years, must be unmarried, and must have completed their sophomore year at some recognized institution. The Oxford University Press, American Branch, 35 West 32nd St., New York City, has on hand publications explaining the requirements in detail.

1832 UNRECOGNIZED MUSICAL GENIUS SOUGHT BY NEW YORK MUSIC LOVERS

Unrecognized composers, vocalists, and instrumentalists who feel that they have exceptional ability, will be given an opportunity to prove their merit by the promoters of the stadium concerts at the College of New York City. This organization is holding a contest in which all American composers, singers, and players of musical instruments so desiring may have their talent passed upon. The winning composers will have their scores played by the New York Philharmonic Orchestra during the regular concert season, while the winners in the other groups will be permitted to play with the orchestra.

Manuscripts must reach William Cowen, chairman of the score committee, Fisk Building, New York City, before May 1, this year. Other conditions of the contest may be learned by writing the same address.

805 CASH PRIZES IN RECRUITING CONTEST FOR NEW YORK NATIONAL GUARD

Many members of the New York National Guard will be discharged upon the completion of their enlistment terms in the near future, and the adjutant general is taking the occasion for the inauguration of an active recruiting campaign, which, it is hoped, will aid in keeping the guard at its full strength. To further the campaign, cash prizes totaling \$1,000 will be awarded to members throughout the state bringing in the greatest number of recruits, or securing the largest number of reenlistments. No distinction is to be made between the two classes of enrollment. Contestants, however, must themselves be members of the guard on or before March 31, this year, and must bring in their last candidate before June 15.

1803 THE ADJUTANT GENERAL CIVIL SERVICE COMMISSION ANNOUNCES MANY GOVERNMENT VACANCIES

Vacancies for a radio engineer, associate radio engineer, and an assistant radio engineer, are announced by the Civil Service Commission. There are also positions open for a junior engineer and deck officer, an engineer, a senior engineer, Grade B, an associate, assistant, and junior engineer, a senior architect, and a topographic draftsman.

The salaries to be paid, closing date for applications, and other information may be had by writing the Civil Service Commission, Washington, D. C., for form 1512. Mention in the letter which position you are interested in.

1633 STUDENTS OF MUNICIPAL GOVERNMENT INVITED TO SUBMIT ESSAYS

Postgraduate students who are enrolled, or who were enrolled last year, in any American college or university offering distinct postgraduate courses in municipal government, are invited by the National Municipal League to compete in an essay contest on the subject. The winning writer will receive \$250, and the second best, \$100. The same organization also announces a prize of \$100 for the best essay submitted by an undergraduate student on any one of several stipulated phases of municipal government. For additional information, and instructions, write the secretary of the league, 261 Broadway, New York City, stating which contest you are interested in.

**THOUSAND DOLLARS FOR WOMEN'S CLUB
RENDERING GREATEST SERVICE**

The women's club, affiliated with the General Federation of Women's Clubs, which in the 12 months ending Sept. 15, 1923, shall have rendered the service of greatest benefit to its community, will be given a prize of \$1,000 by the Pictorial Review. In extending an invitation to the various clubs to compete for the prize, the editors of the magazine suggest that each send a typewritten report, accompanied by photographs. These reports must be in the hands of the magazine on or before the above-mentioned date. Additional information will be supplied by the Club Editor, Pictorial Review, 222 West 39th St., New York City.

**PRIZE OF \$200 FOR HISTORICAL ESSAY
ON EASTERN HEMISPHERE**

A prize of \$200 for the best monograph or essay in 1923 based on original investigation in the history of the eastern hemisphere, is offered by the American Historical Association. The manuscript must be written by a resident of the western hemisphere, and must not exceed 100,000 words. July 1, 1923, is the closing date. Address the secretary of the association, 1140 Woodward Building, Washington, D. C., for further particulars.

**1632 BOYS AND GIRLS MAY WIN PRIZES
IN SHORT-STORY CONTEST**

Boys and girls, from 10 to 17 years of age, are asked to write stories for a joint prize contest to be held by The Haversack and The Torchbearer, 810 Broadway, Nashville, Tenn. Both in the boys' and in the girls' division of the contest, the stories must be between 2,500 and 3,000 words, and must be woven about a subject of general interest to either boys or girls. The winner in each group will receive \$160, while other awards will be made to those placed second and third.

*John Barton Payne,
Chairman: Conference
Submitters*

**NATIONAL CONFERENCE ON STATE PARKS
TO BE HELD FOR THIRD TIME**

A national conference to discuss the development of state parks will be held at the Turkey Run State Park, Indiana, on May 7, 8, and 9, this year. This conference will be the third of its kind which has been called.

**BOK PRIZE FOR COMMUNITY SERVICE
GIVEN DR. RUSSELL CONWELL**

Doctor Russell H. Conwell, journalist, pastor of the Baptist Temple, and head of the Temple University of Philadelphia, has been awarded the \$10,000 Edward W. Bok prize for the most conspicuous service rendered to the community during the preceding year. The presentation was made by Senator George Wharton Pepper of Pennsylvania. Temple University, founded by Doctor Conwell especially for self-supporting young men and women, has both day and evening classes, and offers courses from the kindergarten to the highest university subjects. In addition to a school of pharmacy, a medical school, a law school, a dental, and a theological school, it gives instruction in commercial pursuits, civil engineering, physical training, domestic science, pedagogy, and music.

*Christian Science Monitor
3/8/23*

**BOSTON TECHNICAL STUDENTS ASKED
TO SOLVE CITY PROBLEMS**

The city of Boston, through Mayor James M. Curley, is offering the students of the Massachusetts Institute of Technology, four prizes of \$500 each for the best reports and working plans solving certain municipal problems. These include street traffic, street cleaning, and the sanitary control of offensive industries. The competition closes May 1, this year.

**FOREST THEATER \$100 PRIZE
WON BY ILLINOIS WOMAN**

The \$100 prize offered by the Forest Theater of Carmel, Calif., for a play suitable for presentation on its outdoor stage, has been awarded to Helen Coale Crew (Mrs. Henry Crew), of Evanston, Ill., for a poetic drama of the 13th-century Italy, called "The Cradle." The story tells of Saint Francis and the children's crusade.

CONTESTS PREVIOUSLY ANNOUNCED

Medals, Diplomas, and Money Awards: Announced August issue, 1921; awards offered by the Franklin Institute. The Franklin medal is for workers in technology; the Elliott-Cresson is for original research work and invention; the Howard N. Potts is for important development of previous discoveries and inventions. Each award consists of a gold medal with a diploma. There are also a silver medal, and a Certificate of Merit awarded for meritorious discoveries, and cash premiums for certain work in optics.

One Million Francs for Best Motor: Announced January issue, 1922; closes June 1, 1923; address, Aero Club of France, Paris.

Best Treatise Regarding Immortality: Prize \$1,000; announced January issue, 1923; closes Dec. 1, 1923; address, Contest Editor, 2 West 47th Street, New York City.

Awards to Further Science of Electricity: Medals and prizes, amounting in all to about \$20,000; announced February issue, 1923. For particulars address General Electric Company, Schenectady, N. Y.

For Best Paper on Technical Phase of Aeronautics: Prize \$125; closes March 31 of each year; announced February issue, 1923; address, Royal Aeronautical Society of England, 7 Albemarle St., London, W. 1, England.

For Best Work by American Chemist: An annual award of \$25,000; announced February issue, 1923; address the Allied Chemical and Dye Corporation, New York City.

Articles on Chemistry: Prizes \$50 and \$25; announced January issue, 1923; closes May 1, 1923; address, Secretary, Canadian Institute of Chemistry, Toronto, Ont.

Names for Great Lakes Steamers: Two prizes of \$50 each; announced February issue, 1923; suggested names must reach the company before the opening of navigation season in 1924; address the Detroit and Cleveland Navigation Company, Detroit, Mich.

For Best Studies in the Economic Field: Four prizes from \$1,000 to \$200; announced March issue, 1923; closes June 1, 1923; address, Prof. J. Laughlin, University of Chicago.

Literary Contest by the New Pearson's Magazine: Nine prizes totaling \$1,500; announced March issue, 1923; closes May 1, 1923.

Motorboat Race, Miami Beach, Fla., to Havana, Cuba: Prizes \$10,000; announced March issue, 1923. Write Miami Chamber of Commerce.

Essay on Economic Subject: Prize \$1,500; announced March issue, 1923; address the Simonds Economic Prize Contest, 470 Main St., Fitchburg, Massachusetts.

Pulitzer Prizes, Columbia University: For best work in various literary and journalistic lines; announced April issue; nominations of candidates must be made before Feb. 1, 1924.

More Humane Slaughtering Devices: Two prizes, \$10,000 and \$5,000; announced April issue; closes April 30, this year; address, American Society for Prevention of Cruelty to Animals, 50 Madison Ave., New York City.

University Scholarship, Four-Year: For best high-school essay on "The Influence of Highway Transportation upon the Religious Life of My Community"; announced April issue; closes May 1, this year.

Scholarships for War Nurses and Ex-Service Men: Numerous scholarships provided at colleges and universities throughout the country under the will of the late La Verne Noyes; announced April issue; apply direct to colleges.

Safe Rudder Steering —and an Extra H. P.

SAFETY! Is anything of more importance in a boat motor? How do water accidents happen? Some one is standing, another steering, a violent change in direction and splash! No chance for dangerous pivot turning with the safe, rudder-steered ELTO! No shaky steering handle. Steer from any part of boat with tiller rope. Balance your boat properly. No attention to steering except at turns!

An Extra H. P.

The ELTO is full 3 H. P. not by loose claims, but by piston displacement. That is a full extra H. P. over other light weight motors—the indispensable extra H. P. to “buck” winds, currents, tides and sudden storms—to give speed to safe substantial boats. It makes the ELTO by far the fastest of outboard motors, as always demonstrated in official races.

“As Light As Right”

Trust Ole Evinrude, the pioneer designer of outboard motors, to build as “light as right” at no sacrifice of needed power or durability. The ELTO has more

than double the bearing area of other light weight motors and a full extra H. P. It is both the most powerful of light weight motors and the lightest of all motors per H. P.

The Only Instant Starting Motor

There can be no relief from hard stubborn starting without change of ignition. Ole Evinrude discarded old type ignition and added Atwater Kent Unisparker with Hot Shot Battery to his perfected motor, the ELTO, which makes it a quarter turn starter under all conditions. No ropes needed. No returning of parts to factory for remagnetizing. Every hardware store a service station.

Dealers and Demonstrating Agents—a profitable proposition if your territory is still open. *Write today.*

Not just a picture book but a detailed mechanical description of design and construction that shows how to judge motor values.

3 H.P. Fast Light Twin

“As light as right”

If the subscriber paid direct

Suppose that every Monday morning all the people who have a hand in furnishing your telephone service came to your door for your share of their pay. From the telephone company itself, would come operators, supervisors, chief operators, wire chiefs, linemen, repairmen, inspectors, installers, cable splicers, test-boardmen, draftsmen, engineers, scientists, executives, bookkeepers, commercial representatives, stenographers, clerks, conduit men and many others, who daily serve your telephone requirements, unseen by you.

There would be tax collectors to take your share of national, state and municipal taxes, amounting to over forty million dollars. There would be men and women coming for a fair return on their money invested in telephone stocks and bonds—money

which has made the service possible.

Then there are the people who produce the raw materials, the supplies and manufactured articles required for telephone service. They would include hundreds of thousands of workers in mines, smelters, steel mills, lumber camps, farms, wire mills, foundries, machine shops, rubber works, paint factories, cotton, silk and paper mills, rope works, glass works, tool works, and scores of other industries.

When you pay your telephone bill, the money is distributed by the company to the long line of people who have furnished something necessary for your service. The Bell System spares no effort to make your service the best and cheapest in the world, and every dollar it receives is utilized to that end.

One Policy, One System, Universal Service, and all directed toward Better Service

Ask Any Beauty

How she beautifies her teeth

If all women knew what millions know, they would all brush teeth in this new way.

Ask anyone with glistening teeth. You see them everywhere today. You will probably learn that the reason lies in this new-day method.

Then you can see the results on your own teeth if you make this delightful test.

Clouded by film

The natural tooth luster is clouded by film. At first the film is viscous. You can feel it now. It clings to teeth, gets between the teeth and stays.

Food stains, etc., discolor it. If not removed, it forms dingy coats. Tartar is based on film. And few things do more to mar beauty.

Film also holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay. Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea. Thus most tooth troubles are now traced to film.

Very few escaped

Tooth troubles were constantly increasing. Beautiful teeth were seen less often than now. So dental science saw the need for better cleansing methods. Research found two ways to fight film. One acts to curdle film, one to remove it, and without any harmful scouring.

Able authorities proved these methods effective. Then a new-type tooth paste was created, based on new discoveries. These two great film combatants were embodied in it.

The name of that tooth paste is Pepsodent.

Avoid Harmful Grit

Pepsodent curdles the film and removes it without harmful scouring. Its polishing agent is far softer than enamel. Never use a film combatant which contains harsh grit.

Careful people of some fifty nations now use it largely by dental advice.

Corrects mistakes

Pepsodent also corrects mistakes made in tooth pastes of the past. It multiplies the alkalinity of the saliva. That is there to neutralize mouth acids, the cause of tooth decay.

It multiplies the starch digestant in the saliva. That is there to digest starch deposits which may otherwise ferment and form acids.

Former tooth pastes brought just opposite effects. They depressed these natural tooth-protecting agents.

Your home needs

Everyone in your home should adopt this method. They will when they see the results.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

The results in one week will delight and convince you. Cut out the coupon now.

Pepsodent PAT. OFF.
REG. U.S.
The New-Day Dentifrice

A scientific film combatant, which whitens, cleans and protects the teeth without use of harmful grit. Now advised by leading dentists the world over.

HANES GUARANTEE

We guarantee Hanes Underwear absolutely — every thread, stitch and button. We guarantee to return your money or give you a new garment if any seam breaks.

\$100 A SUIT

5 Big HANES Features

- 1 Hanes large, roomy armholes**, taped instead of turned under. Can't curl or rip—but a friction-free surface that really wears.
- 2 Hanes webbing belt** guaranteed 2-thread elastic webbing instead of single thread, gives more elasticity and greater strength. Specially sewed to prevent tears and rips.
- 3 Hanes closed crotch** is cut and stitched in a special way that really keeps it closed. That means added hot-weather comfort.
- 4 Hanes crotch lap buttons** sewed on the seam. Won't come off. 4 thicknesses of material instead of customary 2. No patch used.
- 5 Hanes wide, full-length knees** cut so as to give greatest freedom without binding or creeping up the leg.

**You've got it all
in "HANES" at \$100**

“You can buy Topkis for only a dollar!”

“I DIDN'T pick Topkis by the label the first time. I chose it because it was the best-looking athletic underwear I saw in the shop.

“The salesman had to say ‘One Dollar’ a couple of times before I understood it was the regular price.

“You can bet I am careful to pick the Topkis label now!”

Topkis has better material than most higher priced athletic underwear. Best nainsook and other high-grade fabrics.

Really comfortable fit, too! Correctly

cut, man-size arm-holes; longer, wider legs; roomy chest and waist. Full size guaranteed. Pre-shrunk to stay true to size. Buttons sewed on to stay.

And wear—how it does wear!

That's what you get for One Dollar in the Topkis Men's Athletic Union Suit. No good dealer will ask more—but most will admit it's worth more.

Men's Shirts and Drawers, 75c a garment; Boys' Union Suits, Girls' Bloomer Union Suits, and Children's Waist Union Suits, 75c.

Ask for TOPKIS Underwear. Look for the Topkis label.

Write for new booklet, chock full of “inside stuff” on underwear. It's free.

Seven Tool Uses at the Price of a Single Tool

The Starrett Combination Square forms one of the most convenient and useful tools ever devised for machinists and mechanics.

Combining as it does the uses of a rule, square, miter, depth gage, height gage and level, it permits more rapid work on the part of the user and saves littering up the bench with a number of necessary but seldom used tools.

Not the least remarkable feature of this remarkable tool is the price—it's about what you'd pay for one of the seven tools it supplants. See this tool at any hardware store.

Fully described (with 2100 other fine precision tools) in the Starrett Catalog No. 22 AP free on request. Write also for the Supplement showing the latest Starrett Tools.

Are YOU Old at 40?

A very common cause of early old age is the disturbed condition of an important gland. Even big strong men are not exempt from this serious irregularity. Our plainly written, interesting educational

FREE BOOK—Why Many Men Are Old at Forty

may bring a priceless message to you. It tells of a simple sensible way by which thousands have relieved this prostate gland condition. It tells how sciatica, backache, pains in toes and heels, interrupted sleep, mental depression, frequent micturition, etc., are so often due to this gland. Sold for over five years upon a money-back-if-not-satisfied plan. Do not confuse it with massage, medication, violet rays, etc. No obligation. Physician's inquiries especially invited.

TOOLS YOU CAN RELY ON

You'll find that most mechanics use Brown & Sharpe Tools because they can rely on them. These tools have the accuracy and dependability built in them that gives you complete confidence that your work will be correct. The more good, accurate tools you have, the more good, accurate work you can produce.

You Can RELY on Brown & Sharpe Micrometers

The addition of a Brown & Sharpe Micrometer to your kit gives you a reliable tool for accurate measurements.

The care and skill used in making the screw, fitting the spindle and graduating the thimble and sleeve are features which

make every Brown & Sharpe Micrometer an accurate, dependable tool.

Micrometers of especial interest to the garage mechanic are the No. 55, which measures all pistons from 2" to 6" by thousandths of an inch, and the No. 270 Tubular Inside Micrometers for accurately gauging cylinder bores.

Are you acquainted with the No. 607 Micrometer Depth Gauge and other "New Tools by Brown & Sharpe," for every close limit job? Write today for Catalog No. 28.

BOYS!!

LEARN HOW TO PLAY ANY TUNE IN ONE AFTERNOON

FREE Complete instructions for making real music with a Hohner Harmonica (Mouth Organ) sent free to any American Boy.

First learn the scale—"do, re, mi, fa" etc. Then try "Home Sweet Home." Diagrams and full explanations show you how you can do this easily with a **HOHNER HARMONICA**

After you've done this you can play any tune you can whistle--with chords and full accompaniment. Harmonica is most popular music on the radio. Biggest hit of the year in New York Orchestras. Be the first boy in your neighborhood to play a harmonica well. Astonish your folks and friends. Be sure to ask at the music goods store, general store, stationery or drug store in your town for a Hohner Harmonica--big and up. Write us this minute and say "Send me Hohner Harmonica Instructions" and give your name and address. Write now, 601--

Kingery

Start A Profitable Business for Yourself

—and make **MONEY** right away

KINGERY POP CORN POPPERS AND PEANUT ROASTERS often prove a gold mine for the ambitious person. The investment is small—practically no attention is required to machine while in operation—little expense for stock or power—and profits are BIG: 3 3/4c on every 5c sale or 8 3/4c on every 10c purchase.

KINGERY MACHINES are complete in every way. They turn out the buttered popcorn and hot roasted peanuts with little effort on your part.

VERY LITTLE SPACE IS REQUIRED—for KINGERY POP CORN POPPERS AND PEANUT ROASTERS can fit in practically any space.

Everybody—young or old—rich or poor—every person is a possible customer.

James Kipwiss, P. O. Box 56, Waynesburg, Pa., writes: "Since I got your machine, in 15 days I have made \$227.55."

My Ideal Lawnmower Grinder

Earned \$1662¹⁹ in 1922

W. F. Kendt, of 1476 Main St., Buffalo, writes:

"I sharpened 994 lawnmowers on my Ideal Lawnmower Grinder during the grass season of 1922, and the receipts were \$1662.19, which is not bad for a side line."

E. W. McCormick, of Saginaw, Mich., writes:

"Five years ago I purchased from you an Ideal Lawnmower Grinder with which I ground over 5,000 mowers. If I could not buy another, I would not take \$1000 for it."
E. W. McCormick."

Put an Ideal Lawnmower Grinder in your shop. It sharpens a Lawnmower keen as a razor every 20 minutes without removing reel knives.

Mowers run easily—owners delighted—they tell others—you are in big demand. Costs but little and will prove the greatest money maker you ever installed.

Write today for booklet, "Let George Say It," and catalog. Buy early and start with the first grass clip.

ATKINS METAL CUTTING SAWS

Use
Atkins
"Non-Breakable"
Hack Saw
Blades

End Hack Saw Blade Breakage

WITH Atkins "Non-Breakable" Hack Saw Blades you can eliminate practically all losses due to blade breakage, and do metal cutting faster and easier.

Made of selected steel, these blades are hardened and tempered by an exclusive gas and oil process which makes the cutting edge extremely hard and the body of the blade unusually tough and flexible. That's why they out-cut and out-last other blades. Prove it for yourself. Send us ten cents and tell us what metal you cut and we'll send a sample blade. You'll say it's the best you ever used.

No matter what wood or metal-cutting you do, there are Atkins' saws to save you time, labor and money. Ask for our free booklets.

Get "Saws in the Shop"

Sent You FREE

A 32 page book that's full of practical suggestions on metal-cutting, and general shop information. Every man who buys or uses saws will find it helpful. Just write your name and address on the margin of this page and mail it to us.

Driver.

NEVER BEFORE A SCREW DRIVER LIKE THIS

Tip the handle and gravity produces the blade you want. A quarter turn of the knurled cap at the base of the blade locks the blade for use. When finished turn the same knurled cap and the blade springs back into the handle.

Three blades—for use anywhere you want a screw driver. The strongest tool of its size and kind. Order one today.

"Been on a
vacation
Bill?"

"No, Jim—I've stopped smoking. Gained six pounds in a week. You know how I used to smoke—a package of cigarettes and a cigar or two a day—it sure had some hold on me. But I'm cured—took a scientific home to-

bacco treatment—fixed me up in two weeks.

"Wasn't hard on me at all—noticed improvement the first day—I feel like a new man. It didn't interfere with my work—didn't leave any druggish after-effects—the money I saved in the last two weeks has paid for the treatment alone.

"Why don't you take it? It has cured men like you and me for over forty years—it is a doctor's individual prescription that sure fixes you up. Just send the coupon for full information NOW. No obligation. All correspondence is strictly confidential."

Glands Used to Restore Hair Growth

Science of Gland Therapy Relieves Baldness—New Treatment Restores Health and Growth

Baldness in both men and women is now generally ascribed by scientists to defective functioning of endocrine glands. Hair growth is dependent upon the secretions of these glands—these secretions making possible the assimilation of those elements in the blood which are vital to a luxurious growth of hair.

Now it is possible for any bald person to have a full, luxuriant growth of hair through the discovery of E. R. Alexander, nationally known scientist. Dr. Alexander, through the concentration of glands, can supply the deficiency of gland secretion and produce a full growth of hair.

This discovery may be easily used in the privacy of your own home. Within a few weeks you will notice new, vigorous hair beginning to come in and with this growth you can gradually restore your hair to its former bright, healthy color.

So confident is Dr. Alexander that you can be relieved of the embarrassment of baldness and regain the normal hair growth by this method that he offers to send a regular \$4.00 treatment for only \$2.00 to anyone who will write for it. Use it according to directions, and if at the end of a month you do not find your hair returning with all its former vigor, the treatment does not cost a cent.

SEND NO MONEY—just your name and address to Alexander Laboratories, 812 Gateway Station, Kansas City, Mo., or 812 Terminal, Toronto, Canada, and this treatment will be mailed at once in plain wrapper. Try it according to directions and if at the end of a month you are not more than satisfied with results, your money will be refunded at once. A big Kansas City bank guarantees that Dr. Alexander is reliable and holds \$1,000 cash as a guarantee to return your money if you wish.

Don't suffer the embarrassment of baldness—give the treatment a trial on this liberal offer.

Please Mention Popular Mechanics

Different from all others—the NEW BENJAMIN

AIR RIFLE

Made on a different principle from all other Air-Rifles. The Benjamin is really a strong air-pump used to compress the air in the air chamber to any degree of power desired. From one to six strokes of the pump give all the force necessary. Each additional stroke gives increased power. The Benjamin works on the same principle as all air-drills and air-hammers—with this difference: You control the shooting force as you desire. Lock at this block of hardwood. It shows how Benjamin power is regulated as you wish.

You can't have accidents with a Benjamin. It's safe, always, because you control the power. The Benjamin never loses shooting force, and has no springs to get out of order or shake your aim. Write us for an interesting folder about this wonderful air-gun.

If your dealer does not handle same, send direct to Isotoff—

Get This Wonderful Ring. If You Can Tell It From a Genuine Diamond Send It Back

These sparkling, beautiful CORODITE diamonds positively match genuine diamonds in every way—same blazing flash and dazzling play of living rainbow fire. They, alone, stand the diamond tests, including terrific acid test of direct comparison. Lifetime experts need all their experience to see any difference. Prove this yourself.

Wear a Corodite Diamond 7 DAYS FREE
Make that test. You risk nothing. Wear a genuine Corodite and a diamond side by side on the same finger for 7 days. If you or your friends can tell the difference, send it back; you won't be out a single penny. That's fair enough. If you keep the ring, price printed here is all you pay. No installments. Remember, Corodites alone have the same cutting as genuine stones.

No. 1—Ladies' Solitaire 14K Gold S. Ring . . . \$2.84
No. 4—Ladies' Hand-Carved Basket Setting, 14kt. Finish . . . \$3.96
No. 5—Ladies' Solitaire Bridal Blossom Engraved . . . \$3.54

FREE—A Vitalic Bike Cap to Boys who will write for it

Get Out
the Old Bike
—and Use It

Renew It With Vitalics

Many an old bike is lying around unused—waiting for a rider. Nine times out of ten a new pair of good tires is all that is necessary to put it in running order. Brush off the cobwebs and dust—equip that old bicycle with a pair of Vitalics.

Vitalics can be depended on. They have been the choice of boys and men for over ten years. For real endurance, freedom from punctures and real wearing qualities, there is nothing to equal Vitalics.

Big bicycle makers like Excelsior, Iver Johnson and others put nothing except Vitalic Tires on their finest wheels.

"Tougher than Elephant Hide" describes Vitalic qualities exactly. It is a slogan that thousands of boys have proven for themselves. Your bicycle dealer sells Vitalics. Insist on them when you equip the old bike or buy the new one.

Diamonds Here at 60% of Market Price

Never in three quarters of a century have we offered such amazing bargains. Hundred of money-saving opportunities in latest Diamond Bargain List, equalling those shown here.

Here's why we can offer such remarkable values: This 75 year old firm—rated at over \$1,000,000.00 capital—the largest and oldest diamond banking institution of its kind in the world has made loans on Diamonds, Watches, and other jewels in excess of \$25,000,000.00.

Why Pay Full Prices Costs Nothing to See

Thousands of unpaid loans. Must sell now. Diamonds, Jewels, Watches and other Gems of unusual qualities—at an entirely different price basis—viz: loan values not market values. At our risk we send you any bargain you wish for absolutely free examination. No red tape. No obligation. Don't buy unless satisfied you can not match the bargain at 60 per cent more. Diamonds of desirable quality at \$100 per carat. Yes, some even lower priced—also, finest gems obtainable at higher per carat—but proportionately low bargain prices. Our bargains have guaranteed loan values also, unlimited exchange privilege at full prices.

Latest List Diamond Loans

Send at once for latest list. Thousands of unpaid loans and other special advantage bargains described in full detail with exact weight, color, quality, etc. Get details of Free Examination offer. No obligation. List is free.

"Red Devil" Rapid Boring Auger Bits are 33 1/4% easier boring, have 10% greater clearance, and bore with or against the grain of any wood. Style 2400—10/16 in., shown above, 75c.

The "Red Devil" Wrench Set Fits Every Nut Right

A REALLY fine wrench set with which you can tackle the toughest jobs and save time.

"Red Devil" open-end "S" Wrenches are handier than a monkey wrench. They fit every bolt and nut right and hold fast. Openings will not spread. They are thin—just the tools you need for working in hard-to-get-at places. Forged from open hearth steel, heat-treated for strength.

Each set consists of five wrenches, with sizes of openings ranging from 7/16 to 1 inch. "Red Devil" Wrench Set No. 92, price 50c.

For those who prefer to work with a straight wrench, we have also this pattern in the above type of wrench. Five wrenches to a set. Style No. 91, 50c a set. At all hardware stores. If not in stock, send dealer's name and order direct.

Mechanic's tool booklet free.

ORDER TODAY FROM YOUR JOBBER, OR St. Paul Welding & Mfg. Co., 177 W. 3rd St., St. Paul, Minn.

Beat 'em all with Auto-Wheel

You can beat 'em all, race or no race, if you are "driving" an Auto-Wheel—the speediest boys' coaster. Winning is dead easy. Only another Auto-Wheel can give you any competition.

It's the self-contained, friction-reducing roller bearings which make an Auto-Wheel Coaster go so easily that it seems to be running itself. But roller bearings are only one of the many superior features in the Auto-Wheel Coaster.

Some of the other features are: rubber-tired disc wheels (3 largest models have over-size tires); steel-tired disc or wood spoke wheels if desired; all wheels interchangeable; hound brace; hand brake; special hub cap and locking pin; sides mortised as well as nailed. Every one is a reason why live boys prefer the

Rebuild Your Health

Current from your light socket transformed into the wonderful health-building Tonic Ray

Pleasant and Soothing - yet powerfully effective

You now can actually do wonders for yourself or for any ailing member of your family:—in fact you can do more today toward overcoming weakness and ill-health than the world's greatest physician could do for a king a few years ago. This is because science has so tamed and harnessed electrical energy that you can safely employ its life-laden forces to invigorate every organ and stimulate every bodily function to healthy activity.

Ra-Tone Violet Ray

(The Home Treatment for Health, Strength and Beauty)

By simply treating yourself at home you can relieve pains, aches, soreness, weakness, etc., and at the same time remove the cause. You can do it pleasantly and without shock. Stubborn cases readily yield. You can feel the pep and energy of health return while nervousness, weakness and any of a score of ailments leave you. Investigate and get the facts. We will prove that this can be done. Write for full particulars.

Thousands Benefited

The wonderful benefits of Ra-Tone treatment have been demonstrated in thousands of cases, many of which are not essentially different from yours. You can expect similar results. Write at once.

Get the Facts. Go carefully into the subject. Send for the latest and most complete book ever written on the subject. For a short time only it will be sent FREE. It is too costly for continued gratis distribution. Get yours NOW.

Stimulates circulation.
Purifies the blood.
Drives out aches and pains.
Strengthens weakened organs.
Increases vitality.
Restores to normal activity organs, nerves, blood and muscles.

That Feeling of Freedom

Astride an INDIAN Scout you quickly escape from city walls and get back to nature.

A wonderful feeling of new life and freedom comes to you; it's so *easy* to ride and handle.

It's different from the average motorcycle. Lower frame—you can put both feet flat on ground when sitting in saddle—100 pounds lighter, cheaper to buy and operate.

INDIAN Scout, responsive to your slightest touch, carries you safely along country roads, up mountain trails—anywhere.

The biggest motorcycle value ever offered. Only \$250.00, electrically equipped \$285.00. Easy payments. Costs less than carfare.

Ask your INDIAN dealer for free demonstration—no obligations.

Write us, Dept. 37, for nearest dealer's name and free illustrated booklet.

Protects Ford Wiring

A single "ground" may burn out your whole wiring system if it isn't protected—may even set fire to your car! Don't take chances! Install a "Union" Fuse Block—today. A "ground" will then only blow a fuse, which can be replaced for a few cents.

The "Union" Fuse Block also puts an end to flickering lights through loose connections, and to blown lamps caused by speeding motor. Permits use of standard single filament lamps for both *bright* and *dim* lights.

Easy to Install No extra wiring needed. Sent postpaid for \$1.50, if not at your dealer's. Money back if not satisfied. Write for Booklet.

Universal Automatic Spring Oiler

Discovered and Invented by Grus

Astounding and Unbelievable Results

Gives Permanent Relief from Spring Squeaks—Oiler Attached

The Perfect Leaf Spring Lubricating System

Retail Price **75c**
Regular Size EACH
Complete Set of Four for FORDS \$2.50 per set

Manufactured under Grus Trade Patents

Just think of it, no more broken springs; no more rusted springs; no more squeaky springs; no more inactive springs; no more wasted oil.

The Universal Automatic Spring Oilers make your car run smoothly, easily, quietly, comfortably, begin immediately to lay a thin film of oil between the spring leaves. Just slip the oilers over the spring directly back of the spring clip and they are there to stay—will outlast the car.

Sold at Accessory Stores, Garages, Department and Hardware Stores.

If your dealer does not handle them, order direct. It takes two oilers for each half spring—one for each quarter spring.

NEW Style Oliver

New 1923 Model
NOW Ready

On FREE TRIAL for
One Week—Read Below

The latest, newest and greatest of all Oliver Typewriters, the "Quiet Speedster," Model 11, is now READY. Send at once for complete details on this wonderful new 1923 machine and our money saving offer.

The NEW 1923 Oliver offers for the convenience of experienced typists, the standard three-bank keyboard. ANY operator, whether now using a 3 or 4-bank standard keyboard can operate the NEW Oliver immediately without practice, without loss of time, speed or output.

Here are the three salient NEW features of the 1923 Oliver:

- 1 Standard 3-Bank Keyboard.** Letters are arranged as on all other standard keyboards. Numerals are placed on top bank, eliminating superfluous fourth row. Any trained typist can operate instantly. No loss of speed or output. Beginners will find this the easiest and quickest keyboard to learn.
- 2 Extra Quiet Action.** The rattle and bang of old-fashioned typewriters banished. So quiet you hardly notice it.
- 3 Velvet-like Touch.** The slightest touch operates the keys. No heavy pounding. A pleasure to use it. Saves nerves and finger-tips.

Special Price Offer SAVE \$50

And the World's Best Typewriter
Shipped to You Direct

The NEW Oliver is the dream typewriter come true. An utterly durable typewriter, almost silent in action, at a wonderfully low price. A machine that defies the years, yet easy to operate; a typewriter of simplified mechanical structure, hence sturdiest. There are about 800 parts in the Oliver. Others have as high as 2,500 parts. Nothing flimsy to get out of order. Olivers often go ten to fifteen years without repairs. And this simple structure and efficient manufacturing enable us to sell you this super-standard typewriter—at a saving of \$50. Note these prices:

Oliver No. 9

With 1923 Model Standard Three-Bank Keyboard. Monthly payment plan, \$55. Cash.

\$49.50

Oliver No. 11

The NEWEST Oliver, with Standard Three-Bank Keyboard and many modern refinements. Monthly payment price, \$75. Cash,

Valve Grinder
No. 747
Price, \$5.00

Mr. Punch says:

"Believe me, that new valve grinder will make any automobile owner his own mechanic."

A new, easy-to-use Valve Grinder

SIMPLICITY of operation is the big feature. Each upward stroke and each downward stroke of the operating handle gives $1\frac{1}{2}$ complete revolutions of the spindle. This makes easy short, quick reciprocations, long reciprocations, or advancing reciprocations.

Furnished with an extension that gives 5 inches additional length when desired—thus making a total of $11\frac{1}{4}$ inches below the gear.

The leverage obtained through the long operating handle and transmitted through a ball bearing spindle makes grinding an easy job. Blade fits either slotted or spotted valves. Hard wood handles, mahogany finish.

Length over all without extension, $12\frac{1}{4}$ inches; length over all with extension, $17\frac{1}{4}$ inches; weight, $1\frac{3}{4}$ pounds.

A NEW RADIO ACHIEVEMENT

Since the beginning of general radio broadcasting, Air-Way engineers have unceasingly striven to simplify design, and to rectify operation, so that a receiving set could be made which the average man or woman could easily "tune in" with and get the most pleasing and uninterrupted results.

Out of this research, experiment and application to an ideal, the new Air-Way Radio Frequency Sets have come as an answer to the great and insistent public demand for genuine quality of radio reception.

Air-Way
TOLEDO

By genuine quality we mean good, full, natural tone, loud and distinct; with sharpness of tuning, which gives protection against interference from other stations, and allows you to hold and enjoy quietly the station you desire to hear; with ease of tuning, which makes the instrument practical and dependable in the home for all the family; and with long range, which multiplies the pleasures and opportunities of radio possession.

This Beautiful Four Tube Set Only \$50

This instrument is not only a remarkable value, but it is a new radio achievement, marking a distinct advance in the science of radio reception. In it the long sought success in the use of Radio Frequency Amplification has been accomplished.

And in this achievement Air-Way engineers have not only embodied skill and genius of design, but have given that care and precision to the manufacture of each and every part which is the only certain guarantee of true quality.

Air-Way Type F Receiving Set is a four-tube instrument. It has one step of Radio Frequency, Detector, and two steps of Audio Frequency amplification, compactly housed in a cabinet artistic in its simplicity of line and beauty of finish. This is a long-range receiving set that can be operated to its full capacity by the different members of the family. It thus meets every practical and pleasurable need for genuine quality of reception upon all the avenues of radio broadcasting.

Jobbers should address our Wholesale Dept.: The Zinke Company, 1323 S. Michigan Blvd., Chicago, Ill.

To Dealers: Although this new Type F Set was only announced in January, our big factories are already taxed to capacity by the spontaneous demand for this nominally priced genuine quality instrument. This set will give you unchallenged radio leadership. Wire your orders for delivery through your jobber.

In Toledo homes on this set broadcasting is reproduced from the distant stations of Denver, Los Angeles, Dallas, Minneapolis, Duluth, Newark, Atlanta and Havana. It is suitable either for head phones or loud speaking apparatus, and the volume and quality of tone is a genuine surprise to those accustomed to ordinary radio instruments.

To market this valuable instrument at the nominal price of only \$50 is a notable example of Air-Way policy to give to the public the advantages of scientific production economy in the Air-Way factories.

In price and merit this instrument is distinctly in a class by itself—clearly the outstanding value on the radio market.

Have your dealer get this fine instrument for you at once. Catalog, illustrating and describing Air-Way Receiving Sets together with all parts for those who build their own sets, will be mailed free, postpaid, upon request. Give name of your dealer and send for this catalog today.

An Amazingly Easy Way to Own a Radio Set

Good Radio sets are expensive—but here's the opportunity to buy the very best on such easy terms that you can afford to have the best.

The air is full of music—pick out the concert which pleases you—listen to a dozen concerts in one evening. Lectures by the most famous speakers—sermons by world-renowned preachers. Baseball scores, returns from the prize fights, news reports of the day sent out hourly by leading newspapers, bed time stories for the little tots. A blessing to the sick, invalids or shut-ins. Brings the world to your door. Far more entertaining than anything else you could buy.

So simple a child can operate—nothing to learn—turn a couple of dials and you have a concert—turn again and you have another. Nothing to buy—the "SENSITONE" comes complete, including "A" and "B" batteries, head phones, vacuum tube and complete aerial equipment.

SENSITONE

Regenerative Radio Receiving Set

Only \$15 Down—\$10 a Month

A Thoroughly Reliable Set, manufactured by the Klitsen Radio Mfg. Co., under the Armstrong License (U. S. Patent No. 1,113,149 and pending letter patent 807,388).

Shelbyville, Mo., hears concerts in Havana, Cuba. A user in Winnipeg, Can., listens to Los Angeles, Calif., while Stanton, N. D., hears Ft. Worth, Texas, and Schenectady, N. Y. A party in Denver, Colo., hears concerts from Havana, Cuba. Let us send you copies of hundreds of such letters. A payment of only \$15.00 cash and \$10.00 monthly brings the "SENSITONE" to you.

Sign the coupon today and your receiver will go forward at once.

HAROLD R. WAKEM & CO.

835 W. Washington Blvd. Chicago, Ill.

Please ship me one complete "Sensitone" Radio Receiving Set as described above, for which I agree to pay \$15.00 herewith and \$10.00 per month until the full purchase price of \$95.00 is paid. Set to remain the property of Harold R. Wakem & Company until fully paid for.

Wave Trap

TRADE MARK
PATENT APPLIED FOR

The Missing
Link
in RADIO

Stops Interference!

THE "WAVE TRAP" will eliminate interfering broadcasting stations and enable you to listen to your favorite station. It will work on any set, greatly increase its selectivity and clearness, and eliminate code and spark stations.

It is mounted on a Formica panel in a handsome mahogany finished cabinet 6 x 5 x 6. It is a high grade instrument throughout and a valuable addition to the operation and appearance of any set. It comes to you complete and there are no extras to buy. It is installed in a minute by changing only one outside connection.

Use the "WAVE TRAP" for real results.

Remit in any convenient form. Keep 10 days and see for yourself here is Saxophone music you simply must have! Money back if you wish to return it.

TYPEWRITER SENSATION!

Free Trial—Use as You Pay

After trial send us only \$4.00 a month until the low total price of \$48.80 is paid, and the machine is yours. This is absolutely the most generous typewriter offer we ever made. Do not rent a machine when you can pay \$4.00 a month and own one. Think of it—Buying a \$100.00 Machine for \$48.80. Cash price \$45.00, just a little less than half its original price.

REMINGTON MONARCH

Perfect machines. Correspondence size. Keyboard of Standard Universal arrangement, 42 Keys, writing 84 characters. The entire line of writing completely visible at all times, has the tabulator, the two color ribbon, with automatic reverse, the back spacer, variable spacer, self-starter, in fact, every late style feature and modern operating convenience. Comes to you with everything complete; tools, cover, operating book and instructions—nothing extra to buy. You cannot imagine the perfection of this beautiful reconstructed typewriter until you have seen it. We have sold thousands of these perfect late style machines at this bargain price and every one of these thousands of satisfied customers had this beautiful, strictly up-to-date machine on five days' free trial before deciding to buy it. We will send it to you F. O. B. Chicago for five days' free trial. It will sell itself, but if you are not satisfied that this is the greatest typewriter you ever saw, you can return it at our expense. You won't want to return it after you try it, for we are sure you cannot equal this wonderful value anywhere.

Send No Money! \$8.80 Put in Your Order Now

AFTER TRIAL

When the typewriter arrives deposit with the express agent \$8.80 and take the machine for five days' trial. If you are convinced that it is the best typewriter you ever saw keep it and send us \$4.00 a month until our bargain price of \$48.80 is paid. If you don't want it, return it to the express agent, receive your \$8.80 and return the machine. We will pay the return express charges. This bargain is guaranteed just as if you paid \$100.00 for it. It is standard. Over half a million people own and use these typewriters and think them the best ever manufactured. The supply at this price is limited, the price will probably be raised when next advertisement appears, so don't delay. Fill in the coupon today—the typewriter will be shipped promptly.

There is no red tape. We employ no solicitors—no collectors—no chattel mortgages. It is simply understood that we retain title to the machine until \$48.80 is paid. You cannot lose. You will perhaps never have a greater typewriter opportunity. Do not send us one cent. Get the coupon in the mails to day—sure.

Young Typewriter Co., Department 65, Chicago, 25 W. Lake St.

Young Typewriter Co., Department 145, Chicago, 25 W. Lake St.

Ship me the Remington Monarch Typewriter, F. O. B. Chicago as described in this advertisement. I will pay you \$4.00 monthly as rent until the \$40.00 balance of the SPECIAL \$48.80 sale price is paid. The title to remain in you until fully paid for. It is understood that I have five days in which to examine and try the typewriter. If I choose not to keep it I will carefully re-pack it and return it to the express agent. It is understood that you give the standard guarantee.

What About Radio in 1925?

Can You Keep Pace with Its Progress?

While RADIO is now a very big institution, it is true, nevertheless, that there will be many new developments, some new parts, and many new "hook-ups" before RADIO attains its final state of perfection. Can you keep track of all these changes—to-day, to-morrow, in 1924, and in 1925?

**LEFAX RADIO HANDBOOK
PERPETUALLY UP-TO-DATE!**

LEFAX RADIO HANDBOOK always keeps pace with new developments in Radio—the book is loose-leaf, and every month to every purchaser of the book is sent additional pages that keep the book up-to-date. No extra charge for this service for one year. Written by the two chiefs of the RADIO dept. U. S. Bureau of Standards. Fine imitation morocco leather cover.

Price \$3.50 postpaid, complete with year's service

PATENT PENDING
ONLY \$1.97
If You Send Quick!

Amazing new invention—the Compacto-Grill—toasts better and in half usual time; it toasts, fries and broils as well as larger stove. Makes rarebits, heats sauces at table. Nothing else like it. Worth three times the price.

Don't confuse the Compacto-Grill with ordinary toasters or grills. It is made on a new principle. Does work of electric or gas range, in small space, on table or server. New kind of coils give heat twice as intense as other grills. And silverish finished Asbestos plate below coils sends all heat UP. None wasted; none goes down to heat table; protecting pad unnecessary.

Make coffee, bouillon or rarebits, fry or broil at the table in a jiffy. Keep dishes piping hot at table. Make browner, more even, tastier toast. Warm baby's milk quickly; have hot water for sudden illness in half usual time. Hundreds of uses at table, in bedroom or sickroom.

Beautiful also. Black enameled base handsomely figured. Nickelled finished top. Positively strong and durable. Heats on any light current. Size 7 inches by 6 inches—6 foot cord and plug

included free. Special price is to introduce quickly for every home that sees one of these beautiful, compact, efficient, convenient Compacto-Grills wants one, and one customer brings many others.

Send no money. Just mail coupon. When postman brings Compacto-Grill pay him only \$1.97 (plus the few cents postage). Use it five days at breakfast, luncheon, dinner or midnight supper. Then if not thoroughly delighted, return it and \$1.97 will be refunded. You are the sole judge. But act at once. This wonderful stove does the work of a \$7.00 grill and present low introductory price cannot be maintained long.

Send No Money—Just This Coupon

ACORN BRASS MFG. CO., 3260 W. Lake St., Chicago, Ill.
 Without a penny in advance send me the amazing new invention, the Compacto-Grill. I will pay the postman only \$1.97 (plus few cents postage) on arrival. There will be no further charges at any time. But if for any reason I wish to return this grill, I may do so within 5 days and you agree to refund my \$1.97 instantly and without question. I am to be the sole judge.

Cut your Own Hair!

Free Trial Offer

You can cut your own hair just as easy as brushing your hair, with the Cowan HAIR CUTTER SAFETY RAZOR. Marvelous new invention does away with tiresome waits in the barber shop. Gives you a perfect hair cut right in your own home. Saves your time and patience, as well as the cost of hair cuts. We'll take all the risk. Our free trial offer will show you beyond the shadow of a doubt that you can cut your own hair as well as any barber can cut it. A finished hair cut just as you want it, in fifteen minutes. Any time, any place—it's always ready!

For MEN and WOMEN

Made so anyone can use it properly and get a good hair cut on the first trial. For trimming around ears, a simple adjustment gives the proper angle. Hair is evenly tapered. Will not shave nor split hairs. Each hair cut off squarely. Adjustable for use as a safety razor. Comes packed in an attractive and convenient leatherette-covered metal case. Blades of finest Swedish steel, especially tempered and ground. The Cowan Hair Cutter is made from the best of materials by high-class workmen. Will last a lifetime and will pay for itself many times over.

OVER FIFTY THOUSAND satisfied users. But the real proof for you is to get a Cowan and prove it to yourself.

WHY WAIT? You'll be cutting your hair in a year or two anyway—everybody will—it'll be the accepted thing. The Cowan is here to stay—get one and save money, time and patience.

SEND NO MONEY

Just send your name and address today for details of our Free Trial Offer. Send no money. Take no risk—assume no obligation. Prove the "Cowan" in your own home right now. A postcard will do.

Ford Owners! Free Trial of AUTOVAC

Amazing Discovery That Cuts Oil Bills 33 1/2% To 50%!

Your Ford will have a smoother running motor—and we guarantee you will reduce your oil consumption 33 1/2% to 50%—if you put AUTOVAC on the crank case of your car—removing the oil filter plug. AUTOVAC stops dust and grit from being drawn into the crank case. It enables you to feed your motor oil that is really CLEAN; eliminates the cause of misfiring; stops oil leakage; keeps your motor clean. Over 65,000 Ford owners are enthusiastic about what it accomplishes.

Free Trial For Ten Days—Send No Money

Put AUTOVAC on your Ford for 10 days at our expense! If it gives you a smoother running motor—if it cuts your oil bill 1-3 to 1-2—send me only \$3.50 in full payment at the end of 10 days. Otherwise return it—without obligation. You will be astonished at what AUTOVAC will accomplish. So write today. Simply say "Send me AUTOVAC. I will put it on my Ford for 10 days. If it does everything you say it will, I will send you \$3.50. Otherwise I will return it without obligation." Address

AUTOVAC COMPANY, 613 WALLACE BLDG., SALISBURY, N. C.

Swear Off Tobacco

Tobacco Habit Banished Let Us Help You

Quick Results

Trying to quit the tobacco habit unaided is often a losing fight against heavy odds, and may mean a serious shock to your nervous system. So don't try it! Make the tobacco habit quit you. It will quit you if you will just take **Tobacco Redeemer** according to directions.

It doesn't make a particle of difference whether you've been a user of tobacco for a single month or 50 years, or how much you use, or in what form you use it. Whether you smoke cigars, cigarettes, pipe, chew plug or fine cut or use snuff—**Tobacco Redeemer** will positively remove all craving for tobacco in any form in a few days. Your tobacco craving will usually begin to decrease after the very first dose—there's no long waiting for results.

Tobacco Redeemer contains no habit-forming drugs of any kind and is marvelously quick, scientific and thoroughly reliable.

Not a Substitute

Tobacco Redeemer is in no sense a substitute for tobacco, but is a radical, efficient treatment. After finishing the treatment you have absolutely no desire to use tobacco again or to continue the use of the remedy. It helps to quiet the nerves, and will make you feel better in every way. If you really want to quit the tobacco habit—get rid of it so completely that when you see others using it, it will not awaken the slightest desire in you—you should at once begin a course of **Tobacco Redeemer** treatment for the habit.

Results Absolutely Guaranteed

A single trial will convince the most skeptical. Our legal, binding, money-back guarantee goes with each full treatment. If **Tobacco Redeemer** fails to banish the tobacco habit when taken according to the plain and easy directions, your money will be cheerfully refunded upon demand.

Let Us Send You Convincing Proof

If you are a slave of the tobacco habit and want to find a sure, quick way of quitting "for keeps" you owe it to yourself and to your family to mail the coupon below or send your name and address on a postal and receive our free booklet on the deadly effect of tobacco on the human system, and positive proof that **Tobacco Redeemer** will quickly free you from the habit.

Pay Day!

Just Another Disappointment

It need not be—if you find the work for which you are best adapted. Advancement—making more money—and love for your work are bound to follow.

Our "Personal Analysis" charts you for the right business—places you exactly where you belong—points unerringly to the one position where your individual qualifications will bring the fullest reward.

To win the success you dream of—to make pay day a source of satisfaction instead of a disappointment, first find the work for which your capabilities fit you. If you're in the wrong job, the hardest effort and perseverance can't bring great achievement. Learn the facts. It is not too late. Happiness and prosperity are both at stake.

Many men past middle age, have turned failure into success by changing to the work for which they are fitted. Young men on the threshold of their careers are no longer choosing employment blindly. For the way to know has been provided.

Personal Analysis Solves the Problem

A new science, recognized by educators and big business men has been evolved—called by many, vocational guidance. We term it Personal Analysis, because a board of experts make a careful study of your qualifications, tell you what your abilities are, and what career promises you the quickest, surest success.

Many have profited by it already. Leading universities and men prominent in industry recommend it to any who wish to be certain what course to pursue.

A Trial Analysis—FREE

Fill out the coupon below and receive not only a free preliminary analysis but full particulars as well. You will then see for yourself, before investing a dollar, how practical and necessary our Personal Analysis is in your achievement of success. Use the convenient coupon NOW.

When you buy a rifle or a shotgun— you should be getting a lifelong friend

And you will if you choose a *Stevens*—that's certain. You'd be surprised at the large number of men today still using the same old *Stevens* rifle or shotgun they bought as boys.

For a *Stevens* is accurate—and it stays accurate—it's accuracy built-in to last.

When a *Stevens* barrel is bored or drilled, the final cutting removes less than one-half of a thousandth of an inch.

And the same painstaking care is given to every detail—to getting a handsome finish; to striking just the right balance.

Finally—the prices. Little short of amazing are the *Stevens* prices. Just glance at the price shown on the rifle pictured here. And the same low prices throughout the *Stevens* line.

Ask at your dealer's or write for the interesting catalog describing in detail the *Stevens* complete line of rifles and shotguns.

Make Your Bike a Motorcycle

The Famous SHAW 2½ H. P. MOTOR ATTACHMENT

Why envy the fellow who rides an expensive heavy weight motorcycle? For a fraction of his investment you can easily convert your bike into a sturdy, lightweight, dependable motorbicycle. With a 2½ horsepower Shaw Motor on your bike you can travel with any of them—up the steepest hills, over sandy or muddy roads, and on long tours. You can enjoy the great out of doors and get the most out of life at the least cost.

The powerful Shaw Motor gives a speed of 4 to 40 miles an hour. 90 to 125 miles on a gallon of gasoline and 1200 to 1800 miles on a gallon of oil. Cheaper than walking. Sportier than foot pedaling.

Attach in 30 Minutes—No Special Tools FITS ANY MAKE BICYCLE

An ordinary wrench or screw driver are all you need to attach the Shaw Motor to your bike. No filing, fitting or boring. No changing or making over. 30 minutes after receiving your Shaw you can fill up with gas and oil and begin the greatest sport you've ever had. Simple directions are furnished. The Shaw clamps on bike frame making for easy control, better balance and greater power.

The Shaw Motor Attachment fits any standard bicycle frame. It transforms your bike both in appearance and performance. The perfect balance of the engine avoids vibration so common in most motors. Simple, dependable and safe at all times. The price is so low that you will hardly miss the money. In fact you'll soon pay for it in carfare and time saved.

The Complete Shaw Motorbicycle

If you have no bike and desire a complete Shaw Motorbicycle here it is. A lightweight, powerful, motorbicycle, complete in every detail. All latest 1923 improvements. 2½ horse power motor of highest efficiency. Special New Low Prices Now. Use coupon.

Take Advantage of New Low Prices

The 1923 Shaw Motor is the best model we have ever built. And we have made tremendous price reductions. You can now own a Shaw Motor Attachment at less cost than ever before. You can join the other thousands of happy, enthusiastic Shaw users. Do it now.

LOWEST PRICES GUARANTEED TYPEWRITERS

Send us only \$5.00 a month until the low total price of \$66.20 is paid, and the machine is yours.

FREE TRIAL This is absolutely the most generous typewriter offer ever made. Do not rent a machine when you can pay \$5.00 a month and own one. Think of it—Buying a \$110.00 Machine for \$66.20. Cash price, \$61.70, just a little more than half its original price.

The Famous **L.C. Smith** Model No. 8

This is the famous L. C. Smith typewriter which has set the world's standard for quality and service for over twenty years. Perfect machines, Standard size. Keyboard of Standard Universal arrangement, 42 Keys, writing 84 characters—universally used in teaching the touch system. The entire line of writing completely visible at all times, has the declinal tabulator, the two color ribbon, with automatic reverse, the back spacer, ball bearing type bars, ball bearing carriage action, ball bearing shift action, in fact every late style feature and modern operating convenience. Comes to you with everything complete; tools, cover, operating book and instructions—nothing extra to buy. You cannot imagine the perfection of this beautiful rebuilt typewriter until you have seen it. We have sold thousands of these perfect late style machines at this bargain price and every one of these thousands of satisfied customers had this beautiful, strictly up-to-date machine on five days' free trial before deciding to buy it. We will send it to you F. O. B. Chicago for five days' free trial. It will sell itself, but if you are not satisfied that this is the greatest typewriter you ever saw, you can return it at our expense. You won't want to return it after you try it, for you cannot equal this wonderful value anywhere.

SEND NO MONEY Order Now—Before They're Gone

When the typewriter arrives deposit with the express agent \$6.20 and take the machine for five days' trial. If you are convinced that it is the best typewriter you ever saw keep it and send us \$5.00 a month until our bargain price of \$66.20 is paid. If you don't want it, return it to the express agent, receive your \$6.20 and return the machine. We will pay the return express charges. This machine is guaranteed just as if you paid \$110.00 for it. It is standard. Over half a million people own and use these typewriters and think them the best ever manufactured. The supply at this price is limited, the price will probably be raised when next advertisement appears, so don't delay. Fill in the coupon today—the typewriter will be shipped promptly. There is no red tape. We employ no collectors—no collectors—no chattel mortgage. It is simply understood that we retain title to the machine until full \$66.20 is paid. You cannot lose. It is the greatest typewriter opportunity you will ever have. Do not send us one cent. Get the coupon in the mails today—sure.

SMITH TYPEWRITER SALES CO., 300, 360 E. Grand Ave., Chicago, Ill.

SMITH TYPEWRITER SALES CO., 300, 360 E. Grand Ave., Chicago, Ill.

Ship me the L. C. Smith Model No. 8, F. O. B. Chicago, as described in this advertisement. I will pay you \$5.00 monthly as rent until the \$60.00 balance of the Special \$66.20 sale price is paid. The title to remain in you until fully paid for. It is understood that I have five days in which to examine and try the typewriter. If I choose not to keep it I will carefully repack it and return it to the express agent. It is understood that you give the standard guarantee.

COOK AND BAKE

With Amazing New Invention

No More Sweltering Kitchens in Summer—No More Fires to Build—No More Dirty Heavy Coal—No More Ashes in House—No More Scuttles to Empty—No More Smelly, Sooty Oil Stoves to Clutter Kitchen. No More Spoiled Roasts, Bread or Cake from Uncertain Oven.

Makes Your Range A REAL GAS STOVE

An amazing new invention has ended forever the days of woman's slavery to all kinds of household drudgery. The Oliver Oil-Gas Burner—makes any coal or wood range a real gas stove—on and off with a valve. Gives much or little heat—only when you want it—at a twist of your wrist.

Wonderful Baking Bake right in your good old oven—better and quicker than ever before. No need for keeping a hot fire going all day.

AGENTS

If you want to earn \$40 to \$50 a week spare time, \$250 a week full time or if you can swing a whole territory at \$5,000 to \$15,000 a year, write me quick for sales plan and Exclusive Territory Franchise.

Oliver Gives Fords Away

I give Fords to my producers. The big Summer Season is just starting. Write today. Address me personally, Mr. B. M. Oliver, President, at address shown on coupon.

You want a batch of bread or biscuits, a light fluffy cake or pies; or you wish to prepare a meal simply turn a valve and *light your fire*. In a jiffy the oven is at a fine even temperature—any degree you want. Put in your roast or baking—put on your stew of vegetables. Go away and forget them. Come back when they are done—turn the *fire out instantly*—and your kitchen is cool and clean.

Burns 95% Air, 5% Oil—Fits Any Stove

Mr. Oliver's wonderful invention is made in 16 models—fits any kind of cook stove or range without changes or drilling. Sets in firebox in one minute. Absolutely safe. Lasts a lifetime.

30 Days' Free Trial

You don't have to be satisfied with reading about the Oliver. You can test it for thirty days—use it in your own home—bake with it in your own oven—on Mr. Oliver's Free Trial Offer. If you mail the coupon at once you will be in time to receive Mr. Oliver's Special Low Introductory Price and 30 Day Free Trial Offer, together with his attractive free booklet, "New Kind of Heat." No obligation. But mail the coupon before you turn this page.

SURFIX

Chemically Processed LIQUID GLASS

Science has at last produced Surfex. A liquid glass treatment for the finish of automobiles and furniture. Every painted or varnished surface is porous and Surfex seals the pores.

MAKES THE ORIGINAL FINISH PERMANENT

It has taken over twenty years of research and development work to perfect Surfex, and, although only recently put on the market, Surfex has been adopted by leading automobile and furniture manufacturers. A Surfexed surface is smooth, dry, transparent. Will not peel or crack. Can be washed with water and never requires polish. It is easily applied. A \$1 bottle will more than Surfex a large car. If your dealer is not able to supply you yet, send..... for a 6 oz. bottle.

AGENTS WANTED

Self-Filling Fountain Pen

Writes same as expensive pens costing 10 times as much. Our men are making big money demonstrating and selling in store windows. Everyone is a prospect. It SELLS ON SIGHT.

WRITE FOR SAMPLE AND PARTICULARS 75 CENTS

Others are cleaning up. Why can't you? Carry 50 in your pocket. Sell anywhere and make yourself a nice wad of money on the side.

T. KOBAYASHI & CO., Dept. 35, 311 River St., Chicago, Ill.

Fountain Pen and Check Protector ALL IN ONE

⑤ This steel cutting wheel, concealed in cap, and fed with acid proof red ink, protects name, signature and amount of every check you write.

② An air cushion feed, controls ink flow. Ends for ever the curse of leaks and blots.

① Iridium tip, 14 karat gold pen, made by secret process, writes smoothly on any paper. Requires no breaking in.

③ A screw pressure filling mechanism which insures a large supply of ink. Fills and cleans with a turn of a button.

④ Exclusive patented clip. Spring goes entirely through cap. Strongest, most convenient clip in the world, and for good measure a rolled gold band which prevents cap from splitting or breaking.

Here is a REAL Fountain Pen. Not a cheap pen with a trick selling point, but the best pen our big factory can turn out, having these five points of superiority.

\$53,000,000

was lost last year, in raised checks, forgeries and alterations. 70 per cent of these were by removing payee's name and substituting the word Bearer, Cash, Currency, Pay-Roll, etc. You may be the next victim. Protect yourself now, with this wonderful invention that you can have with you all the time, wherever you go.

AGENTS HERE IS THE FASTEST SELLER EVER

No wonder, agents are literally cleaning up fortunes! No wonder we receive telegrams and letters asking for whole states as territories, and enclosing as high as \$1,000 for advance orders of pens. This wonderful new pen not only has this check protecting feature, but so many other unusual features that it is entirely out of the class of any other pen on the market.

We have openings for a few more good men—agents, district managers and State managers. If interested, send price indicated for sample pen and convince yourself of its merits and tremendous selling value. Cost of sample pen will be refunded with first order. Be sure to check space on coupon showing you want Agent's Proposition.

You can offer prospects, besides perfect protection of every check written, you have the highest grade, smoothest writing pen they ever saw. No wonder they want to buy right away. No wonder we receive letters every day from our agents, like those in the panel at the left.

If you want to get into a proposition that will pay you the biggest money of anything for your efforts, a sure fire seller, that is bringing in enormous profits for other salesmen, here is your opportunity. If you want one of these pens for personal use, simply check the one you want on the coupon and enclose money order or check, we will send you one with an absolute guarantee that it must please you, that it is the most satisfactory and best made pen you ever saw, or your money will be instantly refunded. Guaranteed for Five Years. Don't take any more chances with the checks you write. Send this coupon now, immediately. And check in the proper place, if you want us to send you

full details of our liberal offer to give you territory for this amazing new invention that sells like wild fire and brings you in big, easy profits.

Elyria, Ohio

The initials of a friend

You will find these letters on many tools by which electricity works. They are on great generators used by electric light and power companies; and on lamps that light millions of homes.

They are on big motors that pull railway trains; and on tiny motors that make hard housework easy.

By such tools electricity dispels the dark and lifts heavy burdens from human shoulders. Hence the letters G-E are more than a trademark. They are an emblem of service—the initials of a friend.

GENERAL ELECTRIC

50,000 People have bought this New fuel maker for Summer cooking and baking!

Goes in any Style of Stove

At last science has produced the one invention that women have been looking forward to for years! Think of cooking and baking in your own stove in the hot summer time without dragging in wood and coal and without sweating over the fire. Think of using a stove that can be turned off after the meal is cooked. Thousands of women everywhere are welcoming this new invention that enables you to make, right in your own cook stove, a perfectly safe and harmless vapor-gas that never escapes once the heat is turned off, and which makes a flame that gives many times the heat of coal and wood or even city gas. Think of a fuel that is cheaper than coal or wood, besides freeing you from countless labors and the monotony of building coal or wood fires. You can now have

INSTANT-GAS

right in your own stove or any old stove just from ordinary coal-oil. No need for special cutting or fitting into the stove. The Instant-Gas Perfect oil-burning device is made so that it fits the fire-box of any stove and can be put in by anybody in a few minutes. Instant-Gas does away with the back breaking bother of coal or wood and gives you at the touch of a match the most satisfactory heat ever invented for summer cooking and baking. It can be turned off immediately. Already thousands upon thousands of

these are being shipped to every nook and corner of the country and congratulatory letters are pouring from everywhere.

50,000 SOLD!

Orders for the INSTANT-GAS have already passed 50,000 and the sales are increasing daily.

Write us; and read some of these letters in our free descriptive literature. If you send the coupon at once we will gladly arrange to send you this wonderful new invention so you can try it for 30 days at our risk. In addition if you act at once you can take advantage of our special low price introductory offer to the first users in each community. Use the coupon below.

A New Book on Concrete For the Home, Farm and Factory

Describing 173 Ways of Using Concrete. Full directions for doing these things yourself with ordinary tools — 138 Illustrations.

Popular Mechanics' **CONCRETE** Handbook Number 1

Shows you how to make such things as

Concrete Fence Posts on the Farm
Cheap Concrete Mixer
Concrete Forge
Concrete Boat Landings and Docks
Garden Seats of Concrete
Molds for Making Concrete Blks.
Watering-Troughs in Concrete
Forms for Concrete Gate Posts
Rural Mail Box Post
Concrete Garden Furniture (5 articles)
Concrete Tile
Concrete Sidewalk Flagging
Horse Stalls of Concrete
Concrete Block Milk House
Sanitary Drinking Fountain of Concrete
Concrete Curbs and Gutters
Faultless Concrete Sidewalks

And practically any other requirement in concrete.

(THOROUGHLY INDEXED)

AT the very outset it should be understood that while this book contains much that is of interest to the professional concrete worker, the clear directions and great variety of work covered make it especially suited to the needs of the amateur.

The farmer who wishes to make and set some concrete fence posts or make a watering trough for his stock; the shop man who wants a concrete forge, or the home lover who wishes to make some practical or ornamental article of concrete, will find that this handbook tells him just how to proceed, so that he may have confidence as to the outcome of his work. No wading through a lot of technical terms in order to pick out the bit of information needed; just step-by-step instruction "written so you can understand it."

Price 50c POST-PAID. Send in your order at once and get ready to do that particular piece of work long deferred for want of the "know how."

How You Can Change Odd Pieces Into Masterpieces

ATTICS, store rooms and barns are full of old pieces of furniture—out of style, perhaps, but they can easily be made attractive and useful. Perhaps all they need is refinishing to conform with the present styles. This can easily be accomplished at practically no expense. All you need is a little time, a brush and

JOHNSON'S WOOD DYE

Johnson's Wood Dye is very easy to apply—it goes on easily and quickly, without a lap or a streak. It penetrates deeply, bringing out the beauty of the grain without raising it—dries in 4 hours and does not rub off or smudge.

Johnson's Wood Dye is made in fourteen beautiful shades, all of which may be easily lightened or darkened—full directions on every label.

Our FREE Book Tells YOU How

This book tells how to finish wood in artistic stained and enameled effects. Gives practical suggestions on making your home attractive, cheery and inviting. Tells just what materials to use and how to apply them.

Use Coupon Below.

This book is the work of experts—profusely illustrated—contains color charts—gives covering capacities, etc. We will gladly send it free and postpaid for the name of your dealer. Fill out and mail coupon at right.

FREE CORD TIRES

Get this Mellinger Agency
— Money Rolls in

Earn Big Money

without risking one cent. I will start you, as I have started so many others, in a business of your own. Begin all or part time. The Mellinger Plan is revolutionizing the tire business. A positive proven success. Different from anything you ever heard of. No previous experience needed. Tires shipped prepaid on approval. No risk. Save car owners money. Just what millions of tire buyers have been looking for. Piles up profits for Mellinger agents.

I Guarantee Your Profits

Let Me Prove That You Can Earn
From \$100.00 to \$400.00 a Month

I don't ask you to risk one cent. Make your car an asset, not an expense. I don't care what you have been doing or whether you live in the city or country. Storekeepers, garage men, clerks, farmers, young fellows discontented with mere jobs, all sorts of people got this Mellinger Plan and almost over night made a financial success that changed their whole lives.

ONE BILLION DOLLARS

will be spent for tires in the next few months. You can dip your hands into this golden flood and take out all the money you need. Whether you want CASH, CASH, CASH, or simply want guaranteed mileage tires for yourself at LOWER prices, write today. Get the facts. Buy at wholesale prices. Get the discounts. See how the MELLINGER PLAN saves car owners big money. My new low prices amaze everybody. Get my inside figures. Better tires for less money makes business just roll in for Mellinger Agents.

Guaranteed by Bond 12,000 Miles

Mellinger Hand-made, Oversize Cords are the finest, most serviceable made. Super-vitalized rubber makes riding easy. New bead construction. My exclusive tread, protected by U. S. Patent No. 68612, gives 10% greater wearing surface. I specifically guarantee by legal bond, Mellinger Cord Tires 12,000 miles. Most manufacturers do not guarantee mileage. The motorist uses their tires at his own risk.

Elbert Irwin, Indiana, sells 34 tires and 34 tubes amounting to more than \$600 cash in one month. He got a free set of tires and profits of \$210.00.

George Zecher of Illinois got a free set of tires and on his first month's sales orders netted a profit of approximately \$116.00.

Marshall Demoret, an Ohio agent, within six months after his appointment is ordering 34 tires at a time. On just one such order his profit at regular retail prices is over \$60.00.

Keighey, Idaho, sells \$900; Hirschelife, Pennsylvania, sells \$1500 the first month; Franklin, Pennsylvania, sells \$600 a month. Thousands of others cashing in.

Free MASTER SALESMAN.

This picture shows the I send this sample Kit absolutely Free. A substantially bound portfolio containing good size samples of fabric, cord, rubber, cross sections cut from tires and pure gum tubes. In 5 Minutes you can demonstrate tire secrets that the average dealer knows nothing about. This Kit was developed by a Mellinger Agent who sells over \$50,000 worth of tires annually. He says: "It's like taking a prospect thru the Factory. The Kit sells the prospect and I take the order." This Star Salesman's Kit is very expensive, but I will gladly send it to you Free if you are in dead earnest.

IF YOU OWN A CAR! WRITE ME QUICK

Don't buy anyone's tires until you see these amazing values—see these tires on your own car. THINK OF IT. Oversize Cord Tires for less than fabrics used to cost. If there is no authorized Mellinger Agent in your locality, I will want one owner to show and recommend Mellinger Tires. I will ship these magnificent Cord Tires prepaid. For a little of your time and enthusiasm, I will make you a surprising offer that will give you a set of tires FREE. Be the first from your locality to get my Confidential offer. Mail the coupon, today—right now; tear it off now. It's your big opportunity. Get this free book that has proven the golden key to thousands. DON'T MISS IT.
