REG. U.S. PAT. OFF.

BUILT THIS CABIN FOR \$300"— *Page 89*

WHO EVER HEARD OF DRIVING  
50 MILES FOR A DIME?

TED DID, POP,  
ON A WHIZZER

AT THAT RATE IT COSTS  
ONLY \$10 A YEAR TO RUN

YEP, THAT WHIZZER  
ON TED'S BIKE GETS  
125 MILES ON A GALLON

YOU KNOW, DAD, A WHIZZER  
WOULD BE FUN FOR SCHOOL  
AND ERRANDS

SAY, POP, JUST WHO'S GOING TO GET  
THIS WHIZZER?

FOR THAT MATTER, I SHOULD USE  
A WHIZZER MYSELF, FOR WORK

WELL, I GUESS YOU ARE...  
BUT I'M BORROWING IT  
NOW AND THEN

FOR FUN, FOR THRIFT,  
FOR WORK, IT'S WISE  
TO GO **WHIZZER!**

COMPLETE WITH ALL  
NECESSARY ATTACHMENTS

*Rugged 2½ h.p. 4-cycle engine*

*Speeds up to 35 M.P.H.*

*Over 4000 Whizzer Dealers  
coast to coast*

For nearest Whizzer Dealer, call Western Union, ask for Operator 25. For catalogue,  
write WHIZZER MOTOR COMPANY, Pontiac, Michigan.

# Why a Valve in the Head Is Worth Two In the Block

VALVE-IN-BLOCK

DUAL-VALVE

VALVE-IN-HEAD

Dual-valve engines, complicated and costly, develop more power than do single-valve engines of equal bore and stroke—because the greater area of *two* inlet and *two* exhaust valves per cylinder facilitates the flow of fuel mixture and exhaust gases . . . Chevrolet's valve-in-head design gains the same effect, simply and economically, with only *one* inlet and *one* exhaust valve per cylinder—because they open directly into the combustion chamber. That's why it can be said, "*A valve in the head is worth two in the block.*"

Among the most important automotive developments in years are advanced engines that are smaller in displacement yet develop more power than the engines they supplant. Significantly, their manufacturers changed *from* valve-in-block to valve-in-head design as one sure way of achieving increased efficiency—to give

*you more miles per gallon of gasoline.*

Today, six makes of cars have valve-in-head engines, as against four in 1947 and three in 1941 . . . Today, clearly, the trend is to valve-in-head design . . . and today, Chevrolet alone, among cars in its price range, offers motorists the proved economy and efficiency of the valve-in-head engine.

# U.S. ARMY

Part of the Team for Security

Here come the career men and women who make our country strong. They are the regular soldiers of our peacetime Army, marching this Army Day as part of our great security team.

Their lives are productive and richly rewarding. They receive education and training in hundreds of skilled, technical specialties. Financially and job-wise, they have a real future—security as solid as the great Nation they serve.

These are the men and women who protect the peace!

## this month's cover

NEAT AND TRIM as a clipper-ship's deck is the "Eastward Ho"—the seaside cabin shown on this month's cover. We couldn't believe it had been built for only \$300 until Norman E. Chaplin showed us the figures. He fashioned his cottage from stray materials that everyone else deemed useless, and offers the result as Exhibit A in his personal drive for homes for vets. He contends that any young man can build a year 'round home for a few hundred dollars if he has the grit to stay with the job. Apparently, it's not necessarily a youngster's project, as Chaplin is getting along towards 60. Mrs. Chaplin wields a deft trowel in laying up a neat brick wall. Daughter Rosemary dreamed up the cabin's name, which seems to fit the whaling-ship lore of the area. Turn to page 89 to read Chaplin's own story on how he cut a hundred corners to build his amazingly low-cost cabin on a Massachusetts shore.

# Choose Your "22" From This Great Line-up

## FIRST IN THE FIELD

Lightning fast, lightweight automatics... accurate, well balanced repeaters (both clip and tubular magazine models)... sturdy, dependable "single shots". Take your pick and *pick a Savage or Stevens* "22" rifle for highest quality — greatest value. See these models at your dealer's — write for free catalog.

**SAVAGE ARMS CORPORATION**  
Firearms Division      Chicopee Falls, Mass.

### STEVENS .22 Rifles — First in value

**Model 86** — .22 cal. Bolt Action Tubular Magazine Repeating Rifle. Magazine holds fifteen .22 long rifle; seventeen .22 long or twenty-one .22 short cartridges. Military style stock with pistol grip.

**Model 84** — .22 cal. Bolt Action, Clip Magazine Repeating Rifle. Detachable clip holds five .22 long rifle; .22 long or .22 short cartridges. Self-cocking, bolt action. Independent safety.

**Model 15** — .22 cal. Bolt Action, Single Shot Rifle. Chambered for .22 long rifle; .22 long or .22 short cartridges. The lowest priced lightweight "22" in the field.

**Model 87** — Semi-Automatic .22 cal. Rifle. Shoots 15 shots as fast as trigger can be pulled. Also, instantly adjustable as single shot or bolt action repeater, shooting .22 long rifle; .22 long or .22 short cartridges.

Stevens Models 86S - 84S - 87S; same as above with No. 150 Micro Peep Sight with Hooded Front Sight illustrated above.

### SAVAGE .22 Rifles — First in quality

**Model 6** — .22 cal. Auto-Loading Rifle — shoots fifteen long rifle cartridges as fast as you can pull the trigger. Also, instantly adjustable as bolt action repeater; shooting .22 long rifle; .22 long or .22 short cartridges.

**Model 5** — .22 cal. Bolt Action Tubular Magazine Repeating Rifle. Magazine capacity — fifteen .22 long rifle; seventeen .22 long or twenty-one .22 short cartridges.

**Model 4** — .22 cal. Bolt Action 5-shot Clip Magazine Rifle. Chambered for .22 long rifle; .22 long or .22 short cartridges. Stock and forestock of walnut.

**Model 3** — .22 cal. Single Shot Bolt Action Rifle. Shoots .22 long rifle; .22 long or .22 short cartridges, regular or high speed. Positive safety. Walnut stock and forestock.

Savage Models 6S - 5S - 4S - 3S; same with No. 150 Micro Peep Sight with Hooded Front Sight illustrated and described above.

**MAN-SIZED STOCKS**  
Stocks and forestocks of Savage and Stevens "22" rifles are full size, attractively finished, and properly proportioned for steady holding.

**No. 150 MICRO PEEP SIGHT with HOODED FRONT SIGHT**  
Micrometer elevation and windage adjustment. Precision built. Helps build top marksmanship.

**TENITE**  
The beautiful, durable, service-proven gunstock material — permits custom stock features and appearance on guns priced with the lowest. Now available on the Stevens model 87 (illus. at left) as well as other Stevens rifles and shotguns.

# 48%

## **GREATER STARTING POWER**

**Exide-Hycap Batteries** average nearly one and a half times the starting-power standards set by the Society of Automotive Engineers. Why all that extra power? And what does it mean to you? It means surer starts, faster starts, and enough reserve power for all the other storage battery needs of your car.

More than that, Exide-Hycap Batteries average 81% longer life than S.A.E.

requirements. And battery life is one of the measuring rods that determine battery cost... proving that an Exide-Hycap is a profitable and economical battery investment.

When you buy a battery, buy starting assurance. *Remember*, a single starting failure can be far more costly than the little extra you pay for a trustworthy Exide-Hycap Battery.

**1888... DEPENDABLE BATTERIES FOR 61 YEARS... 1949**

*"Exide" and "Hycap" Reg. Trade-marks U.S. Pat. Off.*

**THE ELECTRIC STORAGE BATTERY COMPANY, Philadelphia 32**

*Exide Batteries of Canada, Limited, Toronto*

# Hooray! 2-SPEED BIKING IS BACK!

This unit  
does the trick

Now, without buying a new brake, you can give your present bike 2-speed operation. With a flick of your finger lever, you can slip from low to high—**LOW GEAR** for quicker getaway and easier pedaling on hills, **HIGH GEAR** for swift sailing on the level stretches.

Ask your bicycle dealer about installing the New Departure 2-Speed conversion unit. Learn how simple it is to have the slickest bike in town!

## THE EDITORS

**T**HIS PICTURE means Stop! Look and Listen! to every reader. Not merely because it brings the exciting news that next month we present a new *Popular Mechanics* Build-It-Yourself House—but because there is nothing in the world that interests a reader more than his home.

Away back in 1933 we published plans for a \$700 home with four rooms and a lot of charm. Nobody knows how many thousands of these homes have been built by our readers, but today letters still come pretty regularly asking for the blueprints. We read with a nostalgic sigh the opening of that story in 1933: "Present low prices of materials make it possible for you to build this warm, livable four-room house for 700 dollars."

After the war we came to the aid of distressed home-hunters again, designing the now famous *Popular Mechanics* Build-It-Yourself House which a young veteran, under our guidance, built for himself. After this house appeared in April 1947, we followed with blueprints and a richly illustrated how-to-build-it book that has been read by over 50,000 home-hungry persons.

In this issue, the opening article shows a summer home built by a New Englander for \$300; it is full of money-saving ideas.

But look at what's coming! The new house which will make its debut in the May issue may well be the most sensational of our growing family of houses. The materials for this five-room home, complete with built-in kitchen cabinets, laundry and heating plant, cost less than \$3650! The exterior is of concrete blocks, stuccoed; the floor is concrete, with a vapor seal and insulation. Step-by-step drawings and photographs show its construction from vacant lot to lived-in home. It's attractive outside, spacious and homey within. Don't miss the new PM Build-It-Yourself Concrete-Block House in May.

# Become an EXPERT ACCOUNTANT

## through LASALLE'S PROBLEM METHOD

WHAT is the LaSalle Problem Method of acquiring Higher Accountancy Training?

Certainly not the dull routine associated with ordinary study—not "book-learning" in the theoretical sense.

Under the Problem Method each week you are given an important accounting principle—then shown how the principle is applied. You are given a problem and its solution. After you fully understand the principle and its application, you are then given a problem which you work out for yourself and send in to LaSalle. Your solution is returned to you with comments. If it has not been properly solved you are shown your error and the correct method.

The entire procedure is practically first-hand personal experience gained by you direct from capable accountancy instructors. These men take an interest in you, check your individual needs and work with you step by step as you progress.

You study and learn under a tested, proven plan built around the Problem Method. You continuously learn by actually handling important accountancy problems, analyzing, working them out and thinking out your own decisions.

Thus you are coached in the practical solving of the very problems you face in a higher accountancy position. Step by step you work mat-

### More Money—A Better Position

ters out for yourself. At the end of your training, you have real ability and practical experience—the kind which fits you for positions that business is glad to reward with real money.

Don't confuse Accountancy with bookkeeping. The Accountant is the executive, the man who makes the big money—the bookkeeper does only the detail routine jobs at low pay.

You can become an expert accountant through the LaSalle Problem Method without any preliminary knowledge of bookkeeping. You will be given what-

ever review you need. Mail the coupon now for full information.

#### FREE ACCOUNTING BOOKLET

Send me, without obligation, your 48-page booklet "Accountancy, the Profession that Pays"—plus "Ten Years' Promotion in One" a book which has helped many men.

# ADD PYROIL TO YOUR MOTOR DIET...

Your car will feel better, act better, run better, and live longer on a Pyroil diet, because Pyroil improves lubrication by coating vital engine parts with a constant, clinging film of oil. This film is your protection against metal-to-metal wear, battery drain and corrosion. Next time you stop for gas or oil, treat your car to Pyroil—and treat yourself to added miles of driving enjoyment.

## Pyroil for Aircraft Engines

Use Aircraft Pyroil B for lubricating oil, Aircraft Pyroil A for gasoline.

### GIVEN!

An attractive Pyroil metal savings bank—takes coins up to 50c pieces—is yours for the asking—sent postage paid.

Manufactured and Guaranteed by Pyroil Company, 90 Pyroil Bldg., La Crosse, Wisconsin.

Canadian Distributors: Central Purchasing Agencies, Ltd. Toronto, Ontario

**PYROIL COMPANY**  
90 Pyroil Bldg., La Crosse, Wisconsin

I want my car to last and run properly. Please tell me more about Pyroil and how it can accomplish this for me.

**are you  
SUFFERING  
from  
HIDDEN  
TALENTS?**

Do other people's successes make you feel unimportant? It may be that you've never given yourself a chance. Almost everyone has hidden talents which, when fully developed, open up new and challenging opportunities.

Helping men and women bring out the best that's in them has been the job of I.C.S. for more than 57 years. In every field of industry, you'll find leaders whose skills were developed through study with I.C.S.

They are the ones who sensed a latent ability within themselves—and who proceeded to do something about it. While others (equally gifted, perhaps) plodded along in routine jobs, they mastered I.C.S. courses . . . qualified themselves for rich rewards.

You can develop your hidden talents the same way they did. Start today and be ready for tomorrow's opportunities. Here's the coupon to mail:

**INTERNATIONAL CORRESPONDENCE SCHOOLS**

Special tuition rates to members of the Armed Forces. Enrollment under G.I. Bill and P.L. 16 approved for World War II Veterans. Canadian residents send coupon to International Correspondence Schools Canadian, Ltd., Montreal, Canada.

OFFICE

Infrared rays erase recording disks (The Sound Scriber Corp., New Haven 4, Conn.).....113  
 Disk holds 30 minutes of dictation (Thomas A. Edison, Inc., West Orange, N. J.).....117  
 Electric stapling machine (National Business Systems, Inc., 8 South St., Baltimore 2, Md.).....135

OUTDOOR RECREATION

Sport caps with pockets (Westbrook Hats, Inc., 721-23 Broadway, New York City 3).....113  
 Reel indicates water depth (The Depthometer Co., Box 1466, South Bend, Ind.).....117  
 Nontwist reversing lure (Grayle Specialties, 5457 N. Paulina, Chicago 40).....141  
 Waxing iron for skis (Mission Metalcrafters, Inc., Box 658, Santa Barbara, Calif.).....149  
 Lunch box serves as table (Abercrombie & Fitch Co., 19 East 45th St., New York City).....167  
 Feeder tees golf balls (Fonkin Mfg. Co., 435 W. Palmer Ave., Glendale, Calif.).....171

PHOTOGRAPHY

Two-minute camera (P D Q Camera Co., 1161 N. Cleveland Ave., Chicago 10).....124  
 Shoulder holder steadies camera (Mr. Lyman B. Burnam, RFD 1, Box 110, Clarkston, Wash.).....140  
 Twin-light floodlight unit (James H. Smith & Sons Corp., Griffith, Ind.).....176

TOOLS

High-speed saw blade (U. S. Steel Corp. Subsidiaries, 429 Fourth Ave., Pittsburgh 19, Pa.).....94  
 Gun saw cuts rubber or steel (Transa, Inc., Gateway Bldg., Minneapolis 1, Minn.).....124  
 High-speed wood bit (Rex Laboratories, 1717 Gent Ave., Indianapolis 2, Ind.).....140  
 Dispenser for dry-wall sealing tape (Superior Drywall Applicator, 107 North Hydraulic, Wichita 7, Kans.).....141  
 Internal pipe wrench (Roddick Tool Company, Costa Mesa, Calif.).....150  
 Machine shop unfolds from truck (Couse Manufacturing, Inc., 300 Passaic St., Newark 4, N. J.).....161  
 Portable saw cuts tile (Anaheim Machine Works, 125 S. Clementine St., Anaheim, Calif.).....167  
 Spring winder (Crown Manufacturing Co., 1025 North Sixth St., St. Louis 1, Mo.).....170  
 Table saw converted into horizontal drill.....184

TOYS AND NOVELTIES

Kite-string "carrier" frees planes at 3000 feet (World Sales, Inc., 3220 W. Broad St., Columbus 4, Ohio).....116  
 Embossing plastic (Miracle Adhesives Corp., 214 East 53rd St., New York City 22).....150  
 Monkeys carved from peach stones.....176

MISCELLANEOUS

Ultrasonic therapy.....94  
 "Shrinking" truck dumps load (R. G. LeTourneau, Inc., Peoria, Ill.).....99  
 Cranes lift house and carry it away.....103  
 Street planer (Spears-Wells Machinery Co., 1832 West Ninth St., Oakland 7, Calif.).....103  
 Valve meters air into water tank (Shasta Pump Co., Oakland 3, Calif.).....117  
 Ruler fits notebook rings (Plastilite Products Company, Pawtucket, R. I.).....141  
 Rolling luggage (Carson Pirie Scott & Co., State & Madison Sts., Chicago).....144  
 Group microscope has 10 eyepieces (Scopicon, 215 E. 149th St., New York City 51).....144  
 Electronic "eye" for street lights.....149  
 Blanket of foam saves truck.....155  
 "Odorproof" cage tests sense of smell.....161  
 Taking down the screens above dam in Germany.....166  
 Hen tracks on sound tracks.....168  
 Self-righting life jacket.....170  
 Deposit box has combination lock (Johnson Manufacturing Co., 1338 W. Garvey Ave., Monterey Park, Calif.).....176

Craftsman and Shop Notes Index

AUTOMOTIVE

Checking cylinder wear.....224  
 Homemade car-parts washer agitated by compressed air.....236  
 Antifreeze drained without loss.....236

FARM

Cloth cover protects seedlings.....192  
 Concrete cover for shallow well cuts cost by saving tile.....196  
 Combination dibble and marker spaces plants uniformly.....203  
 Name plate on rural mailbox lettered with thumbtacks.....214  
 Sickle sections mounted on hoe adapt it for rocky soil.....224  
 Tether attached to long pole does not wrap around post.....224  
 Roosting on fountain discouraged by suspended barrel hoop.....228  
 Combination sweeper-sifter for poultry yards.....229  
 Concrete feed troughs made by molding in earth forms.....229  
 Grain sacks stenciled easily.....236  
 Sunken nail keg holds pail to feed young calf.....236  
 Half gate in farm fence ideal for occasional use.....236

# HERE IS YOUR JOB in AVIATION

We have hundreds of urgent requests for Embry-Riddle ground and flight graduates -- many times the graduates we had available could have been placed in the last 3 months. Never has there been such opportunity for you in aviation. Begin your career now. A few short months at Embry-Riddle and you're ready for a good job with best pay.

EMBRY-RIDDLE OFFERS

Complete training in minimum time for A&E Mechanics and all fundamental flight, specialist and technical positions • Modern airline-size hangars, classrooms, shops and airplanes • Experience gained over a quarter-century of aviation training • Living facilities on the airport.

INDUSTRY NEEDS

Mechanics, technicians, specialists, engineers, pilots -- many, many more men than all aviation schools together can supply. The shortage of trained personnel is becoming more acute. Get in on the ground floor... Embry-Riddle students are spoken for well ahead of graduation. Don't delay. Write for proof of job opportunities TODAY. Begin your aviation career at Embry-Riddle NOW.

**TRAIN IN MIAMI -- AIR CAPITAL OF THE WORLD**

**AUDELS CARPENTERS & BUILDERS GUIDES—(4 Book Set).....\$6**

A practical illustrated trade assistant on modern construction for carpenters, joiners, builders, mechanics and all woodworkers. 4 vols., 1600 pages, 3700 illustrations. Fully indexed, flexible covers. Each volume sold separately \$1.50 a vol.

**AUDELS PLUMBERS & STEAMFITTERS GUIDES—(4 Book Set).....\$6**

A Practical Trade Assistant & Ready Reference. Explains in plain language & by clear illustrations, diagrams, charts, graphs, pictures principles of modern plumbing practice including Marine Pipe Fitting and Air Conditioning. 4 Vols.—1670 Pages—3642 Diagrams & Illustrations. Each Vol. Sold Separately \$1.50 a Vol.

**AUDELS OIL BURNER GUIDE.....\$1**

384 Pages Covering Installation, Servicing & Repairs All Types Domestic & Industrial Burners. Illustrated. Highly Endorsed.

**AUDELS HOUSE HEATING GUIDE.....\$4**

1000 Pages Covering Working Principles, Installation, Service of All Modern House Heating, Ventilating & Air Conditioning Systems. Explains New Radiant Heating. Fully Illustrated & Indexed.

**AUDELS REFRIGERATION & AIR CONDITIONING GUIDE.....\$4**

New from Cover to Cover—1280 Pages, Fully Illus. Covering basic principles, servicing, operation & repair of household, commercial & industrial refrigeration & air conditioning. A gold mine of essential important facts for engineers, servicemen, users.

**AUDELS SHEETMETAL WORKERS HANDY BOOK.....\$1**

Practical inside information. Fundamentals of Sheet Metal Work. 388 pages. Illustrated. 11 sections. Clearly written. Essential & important facts, figures, pointers in everyday language. Ref. Index.

**AUDELS SHEETMETAL PATTERN LAYOUTS.....\$4**

Developed by Experts for Sheet Metal Workers, Layout Men & Mechanics. A Practical Encyclopedia in 10 Sections, size 7 x 10 x 2—1125 Pages—350 Layouts—1600 Illustrations. 1001 Key Facts. Fully indexed for ready reference in answering your layout problems. Covers all phases of sheet metal work including Pattern Cutting, Pattern Development & Shop Procedure.

**AUDELS BLUE PRINT READING.....\$2**

For Mechanics & Builders. Covers all types of blue print reading including ship & airplane. 416 pages, fully illustrated.

**AUDELS MATHEMATICS & CALCULATIONS FOR MECHANICS \$2**

Mathematics for home study or reference. 700 pages, 550 illus. Practical mathematics from beginning. How to figure correctly. Easy, correct methods covering complete review. Illus. & Indexed.

**AUDELS AUTOMOBILE GUIDE.....\$4**

A practical quick ready reference book for auto mechanics, service men, operators & owners. Explains theory, construction & servicing of modern motor cars, trucks, buses & auto type Diesel engines. 1700 pages, fully illustrated. 55 chapters. Indexed. A standard book for mechanics. New Hydraulic drive covered.

**AUDELS DIESEL ENGINE MANUAL.....\$2**

A practical, concise treatise with questions and answers on the theory, operation and maintenance of modern diesel engines. Over 400 pages, fully illus. All details plainly brought out, this book is of extreme value to engineers, operators & students.

**AUDELS WELDERS GUIDE.....\$1**

A concise, practical text on operation & maintenance of all welding machines for all mechanics. Over 400 pages, illustrated. Covers all methods of electric and acetylene welding including airplane work.

**AUDELS MACHINIST & TOOLMAKERS HANDY BOOK.....\$4**

Covers modern machine shop practice in all its branches. Tells how to set up & operate lathes, screw and milling machines, shapers, drill presses & all other machine & hand tools. 1600 pages, fully illustrated. Indexed. 5 sections. 1—Modern Machine Shop Practice. 2—Blue Print Reading & How to Draw. 3—Calculations & Mathematics for Machinists. 4—Shop Physics. 5—How to Use the Slide Rule. 60 chapters. Easy to read and understand. A shop companion that answers your questions.

**AUDELS ELECTRIC MOTOR GUIDE \$4**

Practical Information Covering Construction, Control, Maintenance & Wiring Hookups of All Types Electric Motors also Armature Winding. 1000 Pages Fully Illustrated & Indexed.

**AUDELS ELEC. WIRING DIAGRAMS \$1**

210 Pages. Illustrated. Gives practical facts on wiring of electrical apparatus. It shows clearly how to wire apparatus for practically all fields of electricity. Each diagram is complete & self-explanatory. Highly Endorsed Pocket Companion.

**AUDELS PRACTICAL ELECTRICITY \$4**

A key to a practical understanding of Electricity. For maintenance engineers, electricians & all electrical workers. 1440 Pages, 2600 Illus. Covers important electrical information in handy form—including wiring for Light & Power. Indexed.

**AUDELS RADIOMANS GUIDE.....\$4**

A key to the practical understanding of radio including Frequency Modulation, Television, etc., Aircraft & Marine Radio. For radio engineers, servicemen, amateurs, 914 Pages, 633 Illustrations & Diagrams. Photos. Review Questions & Answers. Reference Index.

**AN AUDEL GUIDE IS A GOOD FRIEND!**

Step Up Your Own Skill with the Practical Facts and Figures of Your Trade. Save time and money with right methods, short cuts, labor saving ideas. CHECK NOW! You can look over any Audel Guide in your home. Start the Easy Payments if satisfied.

**CUT HERE MAIL ORDER**

AUDEL, Publishers, 49 W. 23 St., New York 10, N. Y.

Please mail me for 7 days' free examination the books marked (X) below. I agree to mail \$1 in 7 days on each book or set ordered, and to further mail \$1 a month on each book or set ordered until I have paid the purchase price. If I am not satisfied with Guides I will return them.

# ME—in a Rut? —COULD BE!

YES—you may be in a rut—just getting by—and not fully realizing it.

Every day you stay in that rut you "dig deeper"—make it harder and harder to get out.

So today while you think of it, take stock of yourself—are you getting ahead as fast as you should—are you satisfied to go along in a small job at small pay the rest of your life?

Hundreds of thousands of our students have won promotion and more money—and the prestige and happiness that success brings—perhaps we can help you.

Better investigate—the coupon below is for your convenience. Just check the field of your choice and we'll send you without obligation full information on that field—the requirements and opportunities—plus "Ten Years' Promotion in One"—a book which has helped many men.

Take the first step to get out of that rut—make more money—get a better job.

(Continued from page 10)

## HOUSE AND HOME

Solving home problems.....	190
Folding towel rack for kitchen or bathroom.....	193
Combination drier and utility shelf installed in waste corner space.....	193
Burned-out fluorescent tubes form novel porch trellis.....	196
Improvised pendant switch.....	201
Controlling flush-tank ball valve.....	203
Weatherproofing summer cottages.....	204
Ornamenting driveway gateposts.....	204
Flower trellis from porch gate is set up in a jiffy.....	212
Dog tethered to swivel post.....	212

## JIGS, MACHINES AND TOOLS

Plywood backing aids cutting plastic with magnetic scrollsaw.....	189
Easily made calculating scale speeds figuring dimensions.....	192
Plastic insert for jigsaw table.....	192
Home-workshop arbor press utilizes bottle capper.....	204
Record album holds saw blades for convenient storage.....	212
Rubber tubing on tip of file provides finger grip.....	212
Pulley cuts glazing putty.....	214
Tap serves as center punch.....	214
Accuracy of carpenter's level easily checked on any flat surface.....	223
Eraser starts nut in recess.....	228
Levels attached to yardstick aid sign painter.....	228
Graduated jig permits quick setup to bandsaw circles of various sizes.....	229
Trammels made from drill rod also used as beam compass.....	235
Increasing range of lathe milling attachment.....	235

## OUTDOOR RECREATION

Air-rifle target held on tree with auto-tire section.....	192
Trolling with outboard motor.....	196
Coffee can serves as camp stove.....	201
Car-top ski rack.....	202
Convenient car-top carrier for long fish pole clamps to drip molding.....	209
Torch for lighting campfires contained in lipstick holder.....	214

## PHOTOGRAPHY

Plywood case protects wide-angle lens from dust and damage.....	219
Condition of flash bulb checked with neon test light.....	220
Opening developer containers.....	220
Reminder for darkroom clock.....	220
Glass rod is substitute funnel.....	220
Alcohol dries sponges quickly.....	220
Tips of tripod legs painted white to minimize accidents.....	220

## SHOP

Scribing parallel lines on cylinder.....	196
Thin-wall tubing sawed quickly.....	201
Tools held on stepladder top by length of wire solder.....	201
Lacquer protects drawings.....	204
Staples hold sign cloth taut and are easy to remove.....	204
Metal "bridge" locks file drawer in large drafting table.....	224
Sash balance weights sheet metal when soldering seam.....	224
Oiling ball-valve fittings.....	224
Tire section provides tag rack.....	228
Modeling clay cleans pencil.....	228

## TOYS AND NOVELTIES

Lamps fantastic.....	197
Running water piped up tree trunk supplies hanging bird-bath and feeder.....	209
This toy "steam shovel" really digs.....	210

## WOODWORKING

Appropriate book ends for the home workshop.....	189
Round-cornered wooden boxes.....	212
Alsatian chairs.....	213

## MISCELLANEOUS

Rubber bands of different sizes cut from inner tube.....	192
Blotter removes decals.....	196
Paint can from cream carton.....	196
Lacing tip for leather thong fashioned from tin can.....	204
Ignition contacts on model airplane provided by dress snaps.....	209
Nonsplash water test tank checks outboard motors.....	214
Watertight expansion joint.....	228

## Radio-Television, Electronics

Portable civilian transceiver (Citizen's Radio Corp., Cleveland, Ohio).....	237
Low-cost 2-tube progressive beginner's set—unit No. 2.....	238
Sight and sound today ("Tele-Zoom" TV picture enlarger, Garod Radio Corp., 70 Washington St., Brooklyn 1, N. Y.; portable TV receiver, Motorola Inc., 4545 Augusta Blvd., Chicago 51; new RCA record player and records, RCA Victor Division, Camden, N. J.).....	240

**IMPORTANT NOTICE**—It is the intention of this magazine to provide its readers with information regarding the latest developments in the mechanical arts. **YOU PRACTICE** Radio Soldering with Soldering Equipment and Radio Parts I send you. Get practical experience mounting and connecting parts.

**YOU BUILD** this Tester with parts N. R. I. sends early in the course. Soon helps you fix neighbors' Radios and **EARN EXTRA MONEY** in spare time.

**YOU TEST** Radio circuits like this built with parts I send. Build special circuits; learn how to locate and repair circuit defects.

**YOU BUILD** Vacuum Tube Power Pack; make changes which give you experience with packs of many kinds. Learn how to correct Power Pack troubles.

**YOU BUILD** this A. M. Signal Generator for more valuable experience. It provides amplitude-modulated signals for many tests and experiments.

**YOU PRACTICE FM** (Frequency Modulation) experiments, get more experience with this Superheterodyne Receiver Circuit you build with parts I send.

**I SEND MANY KITS to Give You Valuable PRACTICAL EXPERIENCE**

**YOU BUILD THIS** complete, powerful Radio Receiver that brings in local and distant stations. N. R. I. gives you ALL the Radio parts . . . speaker, tubes, chassis, transformer, sockets, loop antenna, etc.

# LEARN RADIO-TELEVISION

**AT HOME IN SPARE TIME**

Want a good-pay job in the fast-growing RADIO-TELEVISION Industry? Want a money-making Radio-Television shop of your own? I've trained hundreds of men to be Radio Technicians. My tested train-at-home method makes learning easy. Learn Radio-Television principles from illustrated lessons. Get practical experience with **MANY KITS OF PARTS** I send. All equipment yours to keep.

**Make EXTRA MONEY In Spare Time**

The day you enroll I start sending **SPECIAL BOOKLETS** that show you how to make \$5, \$10 and more a week **EXTRA MONEY** fixing neighbors' Radios in spare time. From here it's a short step to your own shop or a good-pay Radio-Television servicing job. Or get into Police, Aviation, Marine Radio, Broadcasting, etc. Think of opportunities in the booming Television Industry.

**See What N. R. I. Can Do For You**

Mail coupon for **FREE** lesson and 64-page book, "HOW TO BE A SUCCESS IN RADIO AND TELEVISION-ELECTRONICS." Tells how quickly, easily you can get started. Send coupon in envelope or paste on penny postal. J. E. SMITH, President, Dept. 9DP, National Radio Institute, Pioneer Home Study Radio School, Washington 9, D. C.

**I TRAINED THESE MEN AT HOME**

**Has His Own Radio Business**

"Now servicing about 200 sets a month. Have largest service establishment in S. E. Missouri." — **ARLEY STUYVIN**, DeSoto, Missouri.

**\$15 A Week In Spare Time**

"For the past five years I have averaged \$15 and up a week in my spare time." — **STANLEY GENTON**, Cincinnati, Ohio.

**GET THIS TRAINING WITHOUT COST UNDER G. I. BILL**

**APPROVED FOR TRAINING UNDER GI BILL**

**KNOWLEDGE  
THAT HAS  
ENDURED WITH THE  
PYRAMIDS**

## **A SECRET METHOD FOR THE MASTERY OF LIFE**

**W**HENCE came the knowledge that built the Pyramids and the mighty Temples of the Pharaohs? Civilization began in the Nile Valley centuries ago. Where did its first builders acquire their astounding wisdom that started man on his upward climb? Beginning with naught they overcame nature's forces and gave the world its first sciences and arts. Did their knowledge come from a race now submerged beneath the sea, or were they touched with Infinite inspiration? From what concealed source came the wisdom that produced such characters as Amenhotep IV, Leonardo da Vinci, Isaac Newton, and a host of others? Today it is known that they discovered and learned to interpret certain *Secret Methods* for the development of their inner power of mind. They learned to command the inner forces within their own beings, and to master life. This secret art of living has been preserved and handed down throughout the ages. Today it is extended to those who dare to use its profound principles to meet and solve the problems of life in these complex times.

### **This Sealed Book—FREE**

Has life brought you that personal satisfaction, the sense of achievement and happiness that you desire? If not, it is your duty to yourself to learn about this rational method of applying natural laws for the mastery of life. To the thoughtful person it is obvious that everyone cannot be entrusted with an intimate knowledge of the mysteries of life, for everyone is not capable of properly using it. But if you are one of those possessed of a true desire to forge ahead and wish to make use of the subtle influences of life, the Rosicrucians (not a religious organization) will send you *A Sealed Book* of explanation without obligation. This *Sealed Book* tells how you, in the privacy of your own home, without interference with your personal affairs or manner of living, may receive these secret teachings. Not weird or strange practices, but a rational application of the basic laws of life. Use the coupon, and obtain your complimentary copy.

# INVENTORS

Learn how to protect your invention. The U. S. Patent Laws provide that any new and useful art, machine, article of manufacture, or composition of matter, or any new and useful improvement thereof, may be patented if the act of invention is involved. Therefore, every inventor with a valuable invention should take advantage of the Patent Laws and proceed for patent protection in order to safeguard his rights.

A patent gives the inventor the exclusive right to prevent others from making, using, or selling the invention claimed in the patent for a period of seventeen years.

The Patent Laws were enacted for the benefit of the inventor to give him protection for the features of his invention which are patentable. These features must be properly and concisely set forth and claimed in a formal application for patent, in order to comply with the requirements of the Patent Laws. For that reason, unless the inventor is familiar with patent matters, he should engage a competent registered patent attorney or agent to represent him. We are registered to practice before the U. S. Patent Office and are prepared to serve you in the handling of your patent matters.

A specially prepared booklet entitled "Patent Guide for the Inventor", containing detailed information with respect to patent protection and procedure, together with a "Record of Invention" form will be promptly forwarded to you without obligation upon request.

## Prepare Now For a Career in Refrigeration, Heating, Air Conditioning

In 6 months to 2 years you can train for a substantial career in industry, or a business of your own. Under the unique concentric curriculum at the Milwaukee School of Engineering each course unit is complete in itself and prepares you for specific occupational objectives. The length of training you receive varies with the goal you wish to reach. Over 1500 students from 48 states and 18 foreign countries are now enrolled. Faculty of 85 specialists. 35,000 former students in industry all over the world.

**Choose the Course That Interests You Most YOU CAN BECOME A—**

- Refrigeration Serviceman in 6 months
- Refrigeration and Heating Serviceman in 12 months
- Refrigeration, Heating and Air Conditioning Technician in 2 years

Terms Start April, July, September

# INVENTORS

Patent laws encourage the development of inventions.

We recommend that an inventor employ a registered Patent Attorney or agent, if the inventor is not familiar with patent matters. This is because the value of a patent depends largely upon the skillful preparation of the specification and claims in the patent application.

The firm of McMorrow, Berman and Davidson is registered to practice before the United States Patent Office. Additionally it engages patent attorneys able to readily understand inventors' disclosures, to advise concerning patentability, and to prepare appropriate specifications and claims.

If an inventor believes he has an invention, a search of the most pertinent prior U. S. patents should be made and a report obtained relative to its patentability. Where such report indicates that the invention appears patentable, in order to secure protection, diligence should be exercised in making application for a patent.

Send for a copy of Patent Booklet entitled "How To Protect Your Invention." This booklet contains information on patent protection and procedure. You will also receive an "Invention Record" blank. This will be promptly forwarded to you upon request—no obligation.

## McMORROW, BERMAN & DAVIDSON

# Will You Let Me PROVE I Can Make YOU a New Man?

LET ME START SHOWING RESULTS FOR YOU

"Have put 3 1/2 in. on chest." — F. S., New York.

"Recommend you for quick results!" — W. G., N. J.

"Did weigh 141. Now 170." — T. K., N. Y.

I COULD fill this whole magazine with enthusiastic reports from OTHERS. But what you want to know is— "What can Atlas do for ME?"

## 15 MINUTES A DAY

Just give me 15 minutes of your spare time daily. That's all I ask. And even in that short time I'll start giving RESULTS. And it will be the kind of RESULTS that you (and anyone else) can SEE, FEEL, MEASURE with a tape.

## FREE BOOK

I myself was once a 97-pound weakling—sickly, half-alive. Then I discovered "Dynamic Tension." And I won the title, "The World's Most Perfectly Developed Man!"

"Dynamic Tension" has done so much for other fellows that I simply ask you to let me prove that it can make a New Man of YOU—that it can start new inches of power pushing out your chest—build up your shoulders to champion huskiness—put new, hard, firm muscles on your biceps—make those stomach muscles of yours hard ridges!

Why not risk a postage stamp? Send coupon for my 48-page illustrated FREE BOOK AT ONCE! Address me personally: Charles Atlas, Dept. 8R, 115 East 23rd Street, New York 10, N. Y.

CHARLES ATLAS, Dept. 8R,  
115 East 23rd Street, New York 10, N. Y.

I want the proof that your system of "Dynamic Tension" will help make a New Man of me—give me a healthy, husky body and big muscle development. Send me your free book, "Everlasting Health and Strength."

# PATENT PROTECTION FOR INVENTORS

A patent is a valuable right. On the basis of a constitutional provision Congress has established a system under which inventors may secure the exclusive right to prevent the unauthorized use, manufacture and sale of their inventions for periods of seventeen years. The inventor secures this protection by obtaining a patent.

Unless an inventor is thoroughly familiar with such matters, he is advised to employ a competent registered patent attorney, as the value of patents depends largely upon the skillful preparation of the specification and claims.

We recommend that you authorize us to conduct a search through the United States patents pertinent to your invention and to submit a report setting forth our opinion with respect to its patentability.

This firm is registered to practice before the U. S. Patent Office and is available to assist inventors in the preparation and prosecution of their cases. Detailed information and the preliminary steps to take to obtain patent protection will be furnished upon request. *Form below for mailing convenience.*

## LAW NIGHTS AT HOME! L. B. DEGREE

LaSalle's famous Law Library—used as reference in many Law libraries and Law offices—has enabled thousands to master Law surprisingly fast, in spare hours at home, for business and professional advancement.

These 14 remarkable volumes, compiled by leading professors and lawyers, cover the whole basic field of Law in condensed, orderly, simplified manner.

You advance rapidly with this great library, plus special lectures furnished. We guide you step-by-step with personalized Problem Method of instruction . . . you learn by doing—handling legal problems—not by memorizing rules.

Send for two FREE 48-page booklets, "Law Training for Leadership," and "Evidence," answering questions about Law and its value to you, and telling how LaSalle Law graduates are winning rapid advancement in business and public life. Mail coupon below. No obligation.

### LA SALLE EXTENSION UNIVERSITY

A Correspondence Institution

417 S. Dearborn St. Dept. 464-L Chicago 5, ILL.

# They Never Knew It Was SO EASY To Play

**Thousands Now Play Popular Songs  
Who Didn't Know a Note of Music Before**

**You, too, can learn your favorite  
instrument at home, without  
a teacher, this quick,  
easy, money-saving way**

**T**HINK of the fun YOU are missing! The popularity, friendship, good times! Why? Because you think it's *hard* to learn music. You have an idea that it's a slow, tedious task, with lots of boring drills and exercises.

That's not the twentieth-century way! Surely you've heard the news! How people all over the world have learned to play by a method so simple a child can understand it—so fascinating that it's like playing a game. Imagine! You learn without a teacher—in your spare time at home—at a cost of only a few cents a day! You learn by the famous print-and-picture method—every position, every move before your eyes in big, clear illustrations. You **CAN'T** go wrong! And best of all, you start playing real tunes almost at once, from the very first lesson.

No needless, old-fashioned "scales" and exercises. No confused, perplexing study. You learn to play by playing. It's thrilling, exciting, inspiring! No wonder hundreds of thousands of people have taken up music this easy way. No wonder enthusiastic letters like those reproduced here pour in from all over the world.

Sound interesting? Well, just name the instrument you'd like to play and we'll prove you **CAN!** (Instruments supplied when needed. Cash or Credit.) Mail the coupon or write. Do it now! 51st year.

**U. S. SCHOOL OF MUSIC  
74 Brunswick Bldg.  
New York 10, N. Y.**

**Learned Quickly at Home.** "I didn't dream I could actually learn to play without a teacher. Now when I play for people they hardly believe that I learned to play so well in so short a time." \*H. C. S., Calif.

Music is the magic key to friendship, fun, romance. The person who can play a musical instrument is always sure of a welcome. Why not let music open up a new world for you. Thousands have discovered unexpected pleasure and profit in music, thanks to the unique method that makes it amazingly easy to learn.

**Send for FREE Booklet and  
Print and Picture Sample**

See for yourself how this wonderful self-instruction method works. Sit down, in the privacy of your own home, with the interesting illustrated booklet, "How to Learn Music at Home." No salesman will call—decide for yourself whether you want to play this easy way.

**Invited to Parties.** "Before I took your course I didn't know one note of music. Then three months later I started to play for dances. I've been invited to many parties. The course is easy and interesting." \*R. M., Vancouver, B. C.

**Well Worth Money.** "The course is fully self explanatory. When one is finished with it there is little one need learn. It is well worth the money and I fully believe you have the finest course on the market today." \*R. E. G., Clarksburg, W. Va.

**Surprised Friends.** "People who hear me play don't understand how I do it. They ask if I haven't had lessons from a teacher. To their surprise they find I haven't. I'm glad to be a student of your School." \*M. H., Athol, Kans.

**U. S. SCHOOL OF MUSIC

Please attach letter stating age, occupation, employer's name and address and name and address of at least one business man as reference. Men in service, also please give home address.

You receive all parts, including tubes, for building this fine, modern Superheterodyne Receiver. This and other valuable standard equipment becomes your property.

# Learn RADIO

## TELEVISION, ELECTRONICS

by  
**SHOP METHOD HOME TRAINING**

Let **NATIONAL SCHOOLS**, of Los Angeles, a practical Technical Resident Trade School for almost 50 years, train you for today's unlimited opportunities in Radio

these two **FREE** books will tell you how

### Good Jobs Await the Trained Radio Technician

You are needed in the great, modern Radio, Television and Electronics industry! Trained Radio technicians are in constant and growing demand at excellent pay—in Broadcasting, Communications, Television, Radar, Research Laboratories, Home Radio Service, etc. National Schools Master Shop Method Home Study Course, with newly added lessons and equipment, can train you in your spare time, *right in your own home*, for these exciting opportunities. Our method has been proved by the remarkable success of National Schools-trained men all over the world.

### You Learn by Building Equipment with Standard Radio Parts We Send You

Your National Schools Course includes not only basic theory, but practical training as well — *you learn by doing*. We send you complete standard equipment of professional quality for building various experimental and test units. You advance step by step until you are able to build the modern superheterodyne receiver shown above, which is yours to keep and enjoy. You perform more than 100 experiments—build many types of circuits, signal generator, low power radio transmitter, audio oscillator, and other units. The Free Books shown above tell you more about it—send for them today!

### **NOW!** NEW PROFESSIONAL MULTITESTER INCLUDED

This versatile testing instrument is portable and complete with test leads. Simple to operate, accurate and dependable. You will be able to quickly locate trouble and adjust the most delicate circuits. You can use the Multitester at home or on service calls. It is designed to measure AC and DC volts, current, resistance and decibels. You will be proud to own and use this valuable professional instrument.

**GET THE DETAILS—SEND THE COUPON** ▶

### LESSONS AND INSTRUCTION MATERIAL ARE UP-TO-DATE, PRACTICAL, INTERESTING

National Schools Master Shop Method Home Training gives you basic and advanced instruction in all phases of Radio, Television and Electronics. Each lesson is made easy to understand by numerous illustrations and diagrams. All instruction material has been developed and tested in our own shops and laboratories, under the supervision of our own engineers and instructors. A free sample lesson is yours upon request — use the coupon below.

#### You Get This and Other Valuable Information in the Free Sample Lesson:

1. Basic Receiver Circuits and How They are Used.
2. Construction of the Antenna Circuit.
3. How Energy is Picked Up by the Aerial.
4. How Signal Currents are Converted into Sound.
5. How the Tuning Condenser Operates.
6. How the R-F Transformer Handles the signal, and other data, with diagrams and illustrations.

Both Resident and Home Study Courses Offered

# GET INTO DRAFTING

The Draftsman Plays a most Important Part in INDUSTRY

## DRAWING OUTFIT INCLUDED with Drafting courses

All the tools you need including folding drawing table. With them you can put your ideas on paper quickly and with accuracy. With training you are all set to master Drafting in months, — not years — at home.

### Learn in Spare Time—At Home!

(or at the College in Chicago)

A few hours of pleasant home study every week — that's all. With Chicago Tech's help, you train yourself step by step. This tested method — developed over 44 years of C.T.C. progress — prepares men for good positions in industry.

Practically everything that's built or manufactured these days is constructed from blue print drawings prepared by the draftsman. He is the KEY man in industry. No new machines can be built, no bridges erected, no buildings constructed until the draftsman has completed his work.

Drafting is clean, interesting, professional-type work. The draftsman is paid well to start. And he has real opportunities for advancement to high-pay jobs in Engineering. The tremendous production programs ahead in industry will require more draftsmen than ever before.

Send today for free information. See what this training has done for others, what it can do for you. Simply MAIL COUPON TODAY in an envelope or use a penny postcard.

# Now YOU Can Lick Any AUTO REPAIR JOB!

IN LESS TIME—WITH LESS WORK

**FREE  
7-DAY OFFER**

**MoToR's New Auto REPAIR MANUAL** shows you how to service and repair ANY part of ANY car!

No auto repair job is too tough when you've got MoToR's AUTO REPAIR MANUAL! YOU can repair anything from carburetor to rear end—quickly, easily, right! Just look up make, model, and the job in the quick index—and go to it! Clear, illustrated instructions lead you step by step.

To make such an amazing book possible, the engineer-editors of MoToR Magazine collected and "broke down" over 150 official factory shop manuals for you, spotted all the vital repair information you need, dove-tailed it all together into ONE handy, easy-to-understand book.

### No Other Manual Like It!

This BIG book—764 pages, 8½x11 inches, bound in sturdy fabric—brings you nearly 200,000 service, repair, adjustment, replacement, tune-up facts on every car built from 1935 to 1948! More than 1700 cut-away photos, diagrams,

drawings show you exactly WHAT to do and HOW to do it! Used by the U. S. Army, trade and technical schools everywhere, thousands of auto servicemen.

Now YOU—without cost—can see for yourself what a wonderbook MoToR's Auto Repair Manual really is. TRY it—FREE for 7 days! Learn first-hand how it can pay for itself the first few times you use it.

## SEND NO MONEY 7-Day Free Examination

Just mail coupon below—without money! When the postman brings your book, pay him nothing. First make it show you what it's got! Unless you agree this is the greatest time-saver and work-saver you've ever seen—return book in 7 days and pay nothing. Mail coupon today! Address: MoToR Book Department, Desk 14, 250 West 55 Street, New York 19, N. Y.

USED BY  
U.S.  
ARMY

# Don't Envy The PLUMBER-Be One

## Make \$15 to \$50 a Day

Every skilled workman will tell you Plumbers have the best of it. WINTER and SUMMER the Plumber is busy at top wages. No skilled Plumber is ever out of a job. Compare his opportunities with any trade. To the man with know how, Plumbing means profit. Investigate Universal Plumbing School. Not a "war born school," but a plumbing school developed and operated by plumbers since 1923.

The Plumber Protects The Health of the Nation

### Own Your Own BUSINESS

Have your own business and big profits with little other than training and a kit of tools.

### JOURNEYMAN Gets Good Salary

Master Plumbers own their own shop. A Journeyman works for a Master. With this training journey-men can depend on high wages.

G. I. Approved. Established 1923

### UNIVERSAL PLUMBING SCHOOL

877 Holmes Street

Kansas City, Mo.

### BE A PLUMBER IN JUST 32 WEEKS

#### Learn With Tools—Not Books

No need ever serve an apprenticeship. Don't envy the plumbers big profits—enjoy them. Learn every trick of the trade—Leadwork—Blueprint for plan reading, etc. under Licensed Master Plumbers.

#### Over 7,000 Successful Plumbers Recommend This School

This system has made more than 7,000 plumbers. Investigate our past performance. If you like to work with tools this is your opportunity. Become a Plumber in America's largest and only school devoted exclusively to plumbing. Write today for FREE information.

# INVENTORS

When you are satisfied that you have invented a matter of value—write me, without obligation, for full information as to what steps you should take to secure a Patent.

The usual first step is to have a search of the prior U. S. Patents conducted, so that I can report to you on the question of Patentability.

# DO YOU WAKE UP STIFF?

When muscles are stiff and sore from unusual exercise or strain, use HEET®, the liniment that's strong yet does not burn the skin. Wonderful relief from muscular soreness comes as comforting HEET quickly starts to penetrate. Just brush it on with the applicator. HEET starts at once to ease muscular pain and keeps on working for hours. Ask your druggist for HEET liniment.

# Amazing NEW TOY GUN

## COMPLETELY SAFE

Here is the gun that will thrill every boy. When you pull the trigger, it cracks out like a real gun and smoke puffs out of the muzzle. The American Rangers Automatic is a quick acting, repeating pistol that never misses. It shoots 60 to 75 shots without re-loading. Looks like a real gun. Absolutely SAFE. Contains no explosives. Each gun comes boxed with 10,000 shots of smoke powder or enough ammunition to last a full year. This smoke powder is harmless. Will not hurt the eyes and may even be eaten. Only \$1.00 each or 3 guns for \$2.00. Only limited quantity available. Write for yours NOW.

### SEND NO MONEY

#### Try 10 Days - At Our Risk

Just send name and address. On arrival deposit only \$1.00 plus C.O.D. postage for one gun or \$2.00 plus C.O.D. postage for three guns. If not completely satisfied return and your money refunded. Save money. If you send cash with order, we pay postage. Write TODAY. No foreign orders accepted.

SAY YOU SAW IT IN POPULAR MECHANICS

# KNOW ELECTRICITY AS THE EXPERTS KNOW IT... and get an expert's pay

EVERYWHERE the Croft Library is acknowledged as the standard—the leader—the last word in practical electrical education. It is more than a set of books. It is a complete Home-Study Course, capable of equipping any ambitious man for success in the electrical field. Thousands have used the Croft books to step up to better positions. The books are capable of solving easily and quickly problems which rise up to puzzle you in the day's work. They are accurate—thorough—fascinating—practical.

## The Croft Library of Practical Electricity

The Croft Library is a complete electrical educator. It is founded on practice—on 20 years of shirt-sleeve experience—on work as it is actually done. It is jammed from cover to cover with the kind of hard-headed facts you want. Written so that the beginner can easily understand it, yet so sound, so thorough, that it is the daily guide of 50,000 highly paid electrical workers and engineers. Croft tells you the things you need to know about motors, generators, armatures, commutators, transformers, circuits, switchboards, distribution systems—electrical machinery of every type—wiring for light and power—wiring of finished buildings—underwriters and municipal requirements—illumination in its every phase—the most improved methods of lighting lamps—and lamp effects, etc.—how to do a complete job, from planning it, to completion.

### No money down — easy payments

Fill in and mail the coupon attached and we will send you the entire set of seven volumes for ten days' examination on approval. We take all the risk—you assume no obligation. If you decide to keep the books, send \$3.50 in ten days and the balance at the rate of \$4.00 a month. Send the coupon NOW and see the books for yourself.

McGraw-Hill Book Co., 330 W. 42nd St., New York 18, N. Y.  
Send me for ten days' examination on approval the Croft Library of Practical Electricity, 7 vols. If satisfactory I will send you \$3.50 in 10 days and \$4.00 monthly until the price of \$19.50 is paid. If not wanted, I will return the books postpaid.

# AT LAST... AN AMAZING NEW Underground Sprinkler System EVERY HOME-OWNER CAN AFFORD!

**1000 SQUARE FEET**  
Thoroughly Watered  
by 6 "Pop-Up" Heads

**ONLY \$49.50**  
**COMPLETE**  
NO EXTRAS TO BUY!

## INSTALL IT *Yourself* in One Evening WITHOUT DAMAGE TO LAWN OR GARDEN

Now... your lawn or garden can be sprinkled like a million dollar estate. Even the man whose "fingers are all thumbs" can install EVERSPRAY in a few hours. No special tools needed. No pipe to buy. No pipe fitting to cause trouble. No plumbers to pay. No complicated blueprints or instruction sheets to befuddle you. Simple, A.B.C. diagram makes everything easy with just a small monkey wrench.

**A Life-Time Installation**  
Once your EVERSPRAY is in place, it's there forever. No upkeep. No repairs. No draining. No inspection. It's in for keeps—always ready to give you trouble-free service year after year after year. Yet a home "renter" can take it up—and with him, when

### BE A USER-AGENT GET YOURS FREE!

The very moment your EVERSPRAY is sprinkling, friends & neighbors will want to know where they can get one too! Just send us their orders on our User-Agent Plan and quickly get back in profits three to four times the cost of your own Everspray. Check coupon if you're interested in our Plan.

he moves. No wonder owners by the thousands are rushing to install EVERSPRAY. It means *no more* wet clothes or muddy feet, *no more* hours wasted in sprinkling—*no more* neglected, burned out grass for want of time—*no more* wet puddles or dry spots once this amazing EVERSPRAY is installed.

**All Solid Brass and Copper**  
*Nothing to Rust, Rot, or to Wear Out*  
Every inch of the tubing that goes into an EVERSPRAY Underground Sprinkler System is made of *solid copper!* Every single fitting and connection is made of *solid brass!* The fittings are *machined* to assure perfect fit and prevent leakage. No part can rust! There are no rubber gaskets to rot or disintegrate.

Only EVERSPRAY gives you all of these exclusive features

### QUICK! EASY!

After you install your new EVERSPRAY, fold down the sod that was folded back, and the keenest eye can't see where you made the narrow, shallow trench that holds your "million-dollar estate" Sprinkler System.

### AMAZING "POP-UP" HEAD

Nothing else like it. Out of sight at sod level when not in use. Run lawn mower or roller right over them. Rake can't break or damage them. Children can not temper with recessed spray heads. Feet can't trip over them. Yet they pop up above grass level when water is turned on—and drop back when water pressure stops.

**From Mist to Rain**  
Patents applied for. Instant fingertip adjustment on EACH head gives any spray from fine mist to heavy rain.

### Automatic Drain Valve

Positively "freeze-proof". Entire system drains automatically **AFTER EVERY USE!** Nothing to worry about when zero weather comes. Nothing to get out of order or cause trouble. No blowing or draining... No repair or maintenance expense.

### SALESMEN WANTED

Salesmen, Distributors and Crew Managers wanted to call on home owners, hardware stores, department stores, and other retail outlets. Biggest summer seller ever invented. Make tremendous profits between now and July. Rush name air mail or telegraph for complete facts, discounts, commissions, demonstrator offer, and details of spectacular, sure-fire "JACK POT" Pyramid selling plan.

### MONEY-BACK GUARANTEE

We unconditionally guarantee the Everspray Underground Sprinkler System. This guarantee is made by one of the largest fabricators of copper and brass products in the world. If Everspray is not exactly as described in this advertisement or in our printed literature, the Entire System may be returned to us within 10 days after purchase and the purchase price will be refunded promptly and in full. You may buy direct from this advertisement with perfect confidence. ● If you don't order now, at least get all the facts. Send name on coupon for a beautiful folder containing pictures and descriptions of Everspray. It is FREE—no charge at any time. Send name today and be first in the neighborhood to enjoy Everspray.

# NOW EASY TO START A Big Business ON A SMALL INVESTMENT

## WARNER SUCCESS PLAN Gives exact instructions showing you

- How to start in spare time
- How to use home as headquarters
- How to bring in the business
- How to do real METALIZING in genuine GOLD, SILVER, or BRONZE, by the easy Warner Method
- How to start without risking your job
- How to pyramid your profits
- How to be sure of steady, big income.

Don't turn this page until you've given serious thought to your future. In the uncertain years ahead, the men who own their businesses are the ones who will be happiest. A small start now easily can lead you to complete independence, freedom from time clocks, freedom from fear of lay-offs, freedom from the limits of a pay check.

Now, while you can do it without risk—now is the time to investigate the exceptional opportunity offered you by the Warner Success Plan. Looking into the market, checking up on the possibilities for big sales and big profits will not cost you anything. Isn't this the time to lay the foundation for a future of complete independence—a life of happiness—a steady, dependable income?

### METALIZING BABY SHOES AND OTHER KEEPSAKES

offers an exciting new opportunity to men or couples who want personal independence

If you'd like the feeling of being boss instead of being bossed—the Baby Shoe business is made to order for you. Just think of the appeal. A mother's love for her child—her desire to preserve forever the tiny shoes in which her baby took its first toddling steps. No wonder orders come easy and fast. No wonder profits are big. Then think of the future. Fifteen Million babies in the last five years—three million last year—millions more next year. As long as babies are born, this business will prosper—in good times or bad. Think of the fun. Every job is different, interesting. And when you deliver a job and collect the money, you get a tremendous glow of satisfaction out of the mother's happy exclamations over your work. There's not another business I know of that offers you such big rewards in cash, in security, in a future, in independence that can be started on such a shoestring. You'll be glad you saw this ad—IF YOU SEND THE FREE COUPON.

## READ THE ENTIRE PLAN

### 7 DAYS AT MY RISK

#### DON'T SEND A PENNY . . . Just Send Your Name

This is one of the most fascinating businesses you can imagine. There are 15 MILLION pair of baby shoes waiting right now to be METALIZED. The opportunities are unlimited. The future is very big. And it's a business in which the whole family can have fun helping. A perfect business for man and wife to start—or for two partners. And I want you to read the whole Plan at my risk. Don't spend a cent unless you go ahead.

I want every serious minded man to let me show what I've done in our own shops here in Chicago—reveal the exact facts about the profits to be made and the way to make them. I don't want you to spend a cent for supplies until you've studied the facts, talked them over with the family, and satisfied yourself that this is the ONE BIG OPPORTUNITY FOR YOU. That's why I allow you to read all trade secrets contained in the Warner Success Plan at My Risk. If you don't go ahead, you don't pay a cent.

## You Have Nothing to Lose

### ALL FACTS FREE! MAIL!

Raymond E. Brandell, Mgr., Warner Electric Co.,  
1512 Jarvis Ave., Dept. 34, Chicago 26, Ill.

As long as it doesn't cost me a cent, I'm willing to read the facts, investigate, and then give you my decision. Send the facts by next mail. No cost to me now or at any other time.

### \$5.00 AN HOUR

Yes, it's possible for one man to turn out enough work to make \$5.00 an hour for his time. Think of how that pyramids when a partner or the whole family works.

#### Old Established Firm Backs You Up

The Warner Electric Company just celebrated its 26th year of success. You get a Real Start when you "join up with Warner"—you get real Guidance to Success.

Warner Electric Co., Dept. 34  
1512 Jarvis Ave., CHICAGO 26, ILL.

### WE SUPPLY EVERYTHING

You don't have to go "hunting" when Warner is behind you. We supply all materials, all mounts, chemicals, and metals. And you get the low prices made possible by our big quantity purchases and our own manufacture. You send for just what you need—and never have any big investment tied up in stock.

### PATENT ATTORNEYS

**INVENTORS—Patent laws** encourage the development of inventions. The Rules of Practice of the U. S. Patent Office advises—unless an inventor is familiar with such matters—that he employ a competent registered attorney or registered agent, as the value of patents depends largely upon the skillful preparation of the specifications and claims. Write for further particulars as to patent protection and procedure and "Invention Record" form at once. No obligation. McMorror, Berman & Davidson, Registered Patent Attorneys, 1345 Victor Building, Washington 1, D. C.

**INVENTORS—Learn how** to protect your invention. Unless the inventor is familiar with patent matters, he should engage a competent registered attorney or agent to represent him. We are registered to practise before the U. S. Patent Office and prepared to serve you in handling your patent matters. "Patent Guide for the Inventor" containing detailed information concerning patent protection and procedure with "Record of Invention" form will be forwarded to you upon request—without obligation. Clarence A. O'Brien & Harvey Jacobson, Registered Patent Attorneys, 91B-D District National Building, Washington, D. C.

**INVENTORS—If you consider** your invention to be something of importance, you may take steps to protect it with a U. S. patent which gives you the right to exclude others from making, using and selling your invention as claimed. "Patent Protection for Inventors" booklet outlining steps to take to secure patent protection will be mailed promptly without obligation. Victor J. Evans & Co., Merlin M. Evans, Registered Patent Attorney, 431-D Merlin Building, Washington 6, D. C.

## I'll Give You Bulldog Courage in 48 Hours

Are you timid? Bashful? Self-conscious? Are you afraid of people? —afraid of superiors? Give me 48 hours and I'll give you BULLDOG COURAGE, I'll make you bristle with fighting Determination, or refund your money.

Thousands of men and women are being held back—made miserable—made unhappy. Why? Simply because of bashfulness—self-consciousness—fear of criticism—business worries—and dozens of other fears.

Yet fear is ABSOLUTELY UNNECESSARY. An amazing method has been discovered which banishes fear. No trouble! No inconvenience. No long waiting for results. This method is perfectly simple—perfectly natural—perfectly logical. It works almost instantly. Try it. You will be astonished! In just a few hours you may find yourself brimming over with splendid new courage—new daring—new self-confidence.

DAVID V. BUSH

**Only \$1**

David V. Bush gives you his secrets of real he-man courage in his famous book called "Spunk." It is one of the most startling books ever written. You can't read it without a quickening of your pulse—without a surge of red-blooded courage.

This book is declared to be the masterpiece of David V. Bush who has astounded throngs in America's greatest cities and shown thousands the way to health, prosperity and self-confidence. Write for this amazing book today. Send only \$1 in full payment. If you are not delighted, if your fears are not gone by the time you read this book, return the book within 5 days and your money will be instantly refunded.

# LINGUAPHONE

is your *Passport*  
to the World

In your own home, alone or in a group, you can now learn to speak

**SPANISH • PORTUGUESE  
FRENCH • RUSSIAN  
ITALIAN • GERMAN**

or any of 23 other languages by the world-famous

## LINGUAPHONE Conversational METHOD

You learn the new language by listening to voices of native teachers. It is amazingly simple; thousands have succeeded. Educators hail Linguaphone as a notable advance in simplifying the mastery of languages. That is why so many Linguaphone Sets are used in schools, colleges, universities, as an aid to fluent speaking.

### Fun and Profit

Taking up a language by Linguaphone is actually a pleasure and entertainment. Every difficulty has been foreseen and removed. You begin to speak the new language so quickly that you not only amaze your friends but derive personal pleasure from your new accomplishment. Tens of thousands have proved this for themselves.

Available to Veterans under

# BUILD THIS HOUSE Yourself

## The Famous Popular Mechanics House

The picture below is from an actual photograph of the Build-It-Yourself House with breezeway and garage, as built by Jack Brownson, 23-year-old veteran, in Aurora, Illinois.

Designed by Popular Mechanics and Famous Architects. Every Detail Simplified and Explained. No Previous Experience Needed!

Can you use everyday tools as well as the average Popular Mechanics reader? Then you, too, can easily build this modern house in any of its five designs, doing every part of the job yourself. The new Popular Mechanics Book, "Your Home—How to Build It Yourself" will show you how.

### Space for Living and Family Growth

This beautiful, modern house is 1½ stories, with basement, living room, kitchen, dining nook, two bedrooms, bath, plenty of closets and space for two additional bedrooms on second floor. The house itself is 35' 9"x28' 11"; breezeway 20' 10"x8'; garage 20' 10"x12'.

### The House That Has Everything

Designed for easy construction and the most living space for the least cost, the Build-It-Yourself House is also most attractive and suitable for any community and most income groups. The basic plan is adaptable to four other exterior designs.

### Get Book and Plans Now—Build When You Can

You may never have thought about actually building a house yourself, but now that building restrictions have been lifted, it is easier than you think. So order book and plans today. Even if you engage a contractor to build for you, you will need the plans. And you certainly will want the book which can easily save you hundreds of dollars, whether you build this or any other house.

## Mail Coupon for New Book and Plans!

Build It Yourself or Have It Built — Save Hundreds of Dollars!

### PLANS YOU CAN READ AND FOLLOW

Plans consist of ten working-size blueprints — floor plans, elevations, construction notes, framing, joints, lumber and mill list, specifications, plumbing and wiring diagrams. Every measurement is marked — every detail made clear as ABC. Book has 100 pages — three-fifths are photographs and drawings. Some sections in colors, showing just how your house will look when finished.

## Now you can coat anything with LIQUID STAINLESS STEEL

IN SPARKLING, IRIDESCENT COLORS. APPLIED LIKE PAINT  
• CHEMICAL-PROOF, WATERPROOF, PERMANENT

By a new process, pure Stainless Steel has been incorporated with a new, tough, waterproof and chemicalproof plastic so that it can actually be applied like paint to practically any surface—quick-drying, beautiful and as near to a permanent protective coating as modern science can give you!

### PURE STAINLESS STEEL — APPLIED WITH A BRUSH

- "LIQUID STAINLESS STEEL" can be brushed or sprayed on wood, metal, plaster, brick, concrete or composition. "Metalize" ANYTHING with a paint-brush—painted or unpainted furniture, novelties, metal or wood cabinets, sinks, bathrooms, floors, surfaces exposed to salt or fresh water, interior or exterior—you can build of ANY material and give it a STEEL surface with "LIQUID STAINLESS STEEL"—the most durable and beautiful of all metals. Available in either the Natural color of Stainless Steel, or beautiful, sparkling iridescent metallic colors: Burgundy, Gold, Jade or Blue.
- PRICES: Quart \$3.95, Natural, \$4.30 for colors; Gallon, \$12.00 in Natural, \$12.95 for colors, all postpaid anywhere in U. S.

At dealers, or order direct (Dealers', Jobbers' inquiries invited).

## we built a cabin for \$300

Photos by John Hobbs

"It gave me real pleasure to straddle a hefty log and square it into a corner post with a sharp adz"

**By Norman E. Chaplin**

**T**HE CABIN cost us less than \$300. Double that amount and convert it into a year-'round cottage. When we started to build there were innumerable obstacles to overcome, but having considerably more courage and energy than money, we got what we wanted and boast of our success.

The main obstacle was the lack of material and our lack of a GI priority. At the present time, the obstacle would be the high cost. Both problems may be solved

similarly, depending upon the intensity of the urge that drives one into action. If you are not afraid of hard work, if you can hit a nail on the head, keep to a straight line with a saw, and know how to use a square and level, and if you have the will to keep on the job until it is completed, such a house is yours.

There are several points I wish to stress. The first is a never-say-die attitude.

Second, the cottage, though small and

"We painted our cabin white. Seven storm windows in our living room give us a view that can't be beat"

"We first built up the kitchen-dinette, bedroom and garage. A garage was a necessity, for we needed storage room for boats and tools. Later we added the living room and washroom. Below, when the cabin was almost finished I nailed up another new summer home, this one for our friends, the birds!"

built by amateurs at a minimum cost, need not be cheap or shacklike in appearance. Our \$300 cabin does not suffer in comparison with the \$7000 house next door, because we planned to make every feature the best possible before we dug the first hole. And this without an architect. Decide what you want in your house and then study magazine and newspaper plans. They may show pretentious or humble homes. Good ideas are everywhere.

We thought first of building a four-room cottage until we learned of the scarcity of building materials. The only builder considering the job gave us a figure of \$4000 for a summer cabin. This estimate, so far beyond what we had anticipated, tended to crystallize our independence. From then on we were concerned with the problems of a builder as well as an owner.

The plans were cut to three rooms and bath. A garage was included, for we needed a place for boats, tools, wood and the odds and ends that accumulate around a cabin. Planning means more than arranging floor space. The land, the morning sun, the sunsets, the summer breezes, the winter storms,

**"For trim I used pine slabs costing a dollar a trailer load, cutting and planing them into lumber myself"**

trees already available for landscaping, the best view of the ocean—these points and more were discussed and decisions made. The cabin, in spite of its simplicity, must be original in design, attractive and quaint. This is an important resolve. Do not build a "haphazard" cottage. The thoughtful touches that change a shack into a charming cottage cost little money. The effort and time spent on such touches produce results that are incalculable.

The cottage was placed close to the ground, closed in underneath with field stones laid in cement, which made a tight and attractive "cellar" wall. The stones were available without cost—found in the gutters of our newly laid streets and in stone walls placed at our disposal by interested friends. The cost of the cement was insignificant. The cottage itself is low-studded and rambling. The street wall is almost 50 percent garage door. When painting this, we experimented in order to unify the house and garage. We painted stripes of yellow and white on the doors, the rest of the building white: Over the doors hangs a birdhouse occupied each

spring by a family of wrens. Yellow shutters decorated with hand-painted ducks and held back with black S-hinges, and yellow flower boxes frame the 6 and 12-light windows. There are trellises on each side of the garage doors for honeysuckle and clematis.

The upper two panels of the kitchen door have the appearance of bull's-eye glass (done with paints), another touch of the unusual. At the same door a trellis, covered with morning-glories, hides the water pipes and drain.

When we were ready to build, no new lumber could be found. Secondhand lumber, high-priced and poor in quality, was ruled out. We searched for a building, which we ourselves might raze, and found a surprisingly large assortment—ex-service stations, roadside stands and old farm sheds. Many were low in price provided we did the moving. We finally purchased a collapsed summer cabin made of siding. For \$50 we acquired the cabin and such standing timber as we might need to replace sills and plate.

We sawed the walls of the cabin into

"Our cabin will never be finished, it seems. Now, I'm dummies up a glassed-in cupola that will give us a towering view of the sea"

4-by-8-foot sections—the largest size that would fit on our homemade trailer—and carted them to our own land, a beautiful spot overlooking the ocean near Plymouth, Mass. It was hard work and occupied all our spare time that first fall. Our determination never faltered, although we were sorely tried at times. There was an evening drive, after an all-day struggle with wrecking bars, saws and hammers, when the smell of burning rubber warned me of trouble. A few minutes later a trailer tire blew out. In order to mend the tube and shoe, every stick of lumber on the trailer had to be removed, piled at the side of the road and later repacked, this

time so none of the timbers could rub against the revolving wheel and thus burn another hole in the tire.

Pulling up floor boards with a nail remover to preserve as far as possible the utility of all lumber was slow work, but satisfactory. My wife removed the nails which my tool had lifted from the framing, and later she marked the sections to facilitate the reassembling on the homesite. Our floor plan had to be adapted to the lumber available without sacrificing "class and distinction." At long last we dumped our heterogeneous assortment of materials on the chosen land.

When we finally took stock we realized that there was not enough good material to establish the old cabin on the new site because of rot and wreckage. So we obtained more lumber, not from lumberyards, but from the woods where hurricane logs were still available.

This meant carting them on our trailer to a mill and having them cut into one-inch boards and some two-by-fours. Then we cut oak logs for sills and corner posts, and some cedar for posts. At last we were ready to start building.

Cedar posts, free for the chopping and lasting a lifetime, became our foundation. Challenged now by the builder's estimate, we determined to go ahead on the principle that no money would be spent unless absolutely necessary. We intended to prove that determination could overcome all difficulties, even financial ones.

To save a tree and still keep within the building restrictions, we had some difficulty in placing the cottage just where we

wanted it. But at last the first holes were dug and the posts for kitchen and bedroom were embedded in concrete. Several months later, when we were ready to add on the garage, we had to kindle bonfires to thaw out the frozen ground. The sills came next. Although several sizable timbers had been salvaged from the old cabin, we

"Our total wiring costs were \$18, including an old ship's lantern I electrified and hung outside on a cedar post"

"One end of our living room is completely enclosed with glass. We poured a smooth concrete floor and marked it off like a compass card. At the opposite end is our sure-drawing fireplace with back and arch made of brick. We laid up a facing with field stones"

decided that green oak would make a more lasting framework. We used six eight-inch logs, squared into shape with an adz. I had always wanted to try my hand with an adz, and the money spent on this good tool was never regretted. There is no greater satisfaction than to straddle a hefty log and with judicious strokes, square the timber. Seasoned oak is granitelike in hardness, but the green oak was fashioned into sills and girders without too great effort.

Because of the windy location, I took the precaution of boring the sills and fastening them to the corner posts with lag screws and bolts. No hurricane would lift my cabin from its foundation! The erection of the wall sections came next. We used four-by-fours for corner posts. Maneuvering to maintain the original contour, I patched and rebuilt the framing, making doubly sure of the strength of every timber and joist. The day we raised our first corner post and fitted to it, at right angles, two wall sections of the kitchen, the rain came down in torrents. We had both looked forward to this

(Continued to page 258)

### High-Speed Saw Blade Melts Steel As It Cuts

Heavy sections of structural steel are cut at a rate of 13 feet a minute by a 60-inch saw blade that literally melts away the steel. When the blade, the teeth of which travel faster than 320 miles an hour, makes contact with the tough steel, friction generates heat more rapidly than the material can absorb it. This intense heat melts the surface and the saw teeth carry it away. The operator controls the saw remotely from behind a transparent plastic shield.

### Ultrasonic Therapy

Sounds 20 times higher than the top frequency that humans can hear are being tested in therapy treatments for several physical ailments. The sounds are in the ultrasonic region, 143 times higher than the top note of a piano. Dr. G. J. Thiessen of the National Research Council, Ottawa, Can., has developed a therapy instrument that pipes the sounds through a flexible cable and applies them to the affected body area. An electronic generator produces a 600,000-cycle note which is carried to a ground-quartz crystal. It is the crystal which vibrates and is applied to the patient. Although the tests have been inconclusive as yet, ultrasonic therapy shows promise of effectively treating several ailments including asthma, sinus, neuralgia, sciatica, lumbago and sprains.

### Lifter Handles Truck Tires

One man can easily lift a heavy truck tire and roll it into position with the aid of a lever tool equipped with casters. The tool has two arms with a wheel on each arm. Parallel with the arms are two rollers mounted on swivel brackets. The lifter is shoved under the tire and the handle elevated. The brackets swing so that the lift is always straight up and there is no tendency for the tire to slip off. After the wheel has been rolled into position it is rotated until it is aligned with the wheel studs. The lifter handles any tire from 6.00-16 to 11.00-22 with a maximum lifting effort of only 25 pounds.

### Homemade Automobile Has Engine in Middle

Built by a South Carolina mechanic in his spare time, an unusual looking automobile has its engine in the middle. He originally intended to make the car a rear-engine model, but was unable to get the proper parts and had to place the engine just ahead of the rear axle. Because of the central location of the engine, which is connected to the differential by a 17-inch drive shaft, there is no room for a rear seat. A large luggage area is provided behind the engine compartment. The car goes from 20 to 24 miles on a gallon and cruises at 55 miles an hour.

### Back-Seat Clothes Rack for Car Doesn't Obstruct Driver's Vision

Without obstructing the driver's view to the rear, a clamp-on clothes rack for automobiles holds six or more suits. No screws are used to install the rack. It clamps to the window frames on each side of the rear seat. A turnbuckle in the center of the rack adjusts it to the proper width. The rod can also be used to suspend a baby basket or hammock. To remove the rack, you merely loosen the turnbuckle.

### Jeep Becomes Streamlined Sedan

Push-button doors and windows are featured on a completely streamlined jeep made by an Army officer on duty in Japan. Using the jeep chassis, Major Donald C. Surles of Cisco, Tex., built himself the ultramodern vehicle at a cost of \$2000. The original power plant is used. The doors slide upward into the roof when a button is pushed.

### Sugar-Beet Harvester

Up to six tons of sugar beets an hour are harvested by a tractor-drawn machine that does everything from topping and cleaning the beets to loading them in a truck. After being cleaned, the topped beets are carried up an elevator and dropped on a sorting belt. Two men, standing on the machine, sort the beets from clods and trash, dropping them into a trailer cart that has its own elevating chain for unloading the crop into a truck. Once removed from the soil, the beets never touch the ground.

# Rolling Out Man-Made Lumber

COMPRESSED sawdust board is being made by a British firm in continuous lengths and at one third the usual cost of manufacturing artificial lumber. The experimental English plant will be replaced this fall by a full-size one turning out board approximately four feet wide and  $\frac{1}{8}$  to  $\frac{3}{4}$  inch thick. Sawdust and resin are fed into a hopper, mixed and heated by high-frequency radio waves. It is then bonded by a pressure of 250 pounds to the square inch, at a temperature kept at 175 degrees Centigrade by infrared heat. Corrugated metal grooves the board to permit the escape of air bubbles when a final outer layer of paper or veneer is applied.

Artificially made lumber rolls out on the metal cutting table at speed of 8 to 10 feet per minute

Radio waves generated by apparatus in foreground heat sawdust-and-resin mixture prior to the bonding  
British Information Service photo

After landing on a nearby lake, fire fighters hike overland with their equipment to scene of the fire

Forest fire rolls through timber near Lady Evelyn, Ont. Plane bearing the firemen wings in for a landing

## ***Flying Fire Fighters***

↑ Fire pump is set up to carry water from the nearest stream. Seaplanes carry all the equipment as well as the fire fighters. Below, portable equipment is loaded aboard one of the planes for quick trip above forest

The whine of a plane engine has replaced the sound of a fire siren in northern Ontario. Fire fighters wing their way above the tall forests in seaplanes, land on one of the countless lakes or rivers that dot the province and hike the short distance to the fire scene. Time is vital in fighting forest fires—if a fire gets out of control it may rage across hundreds of miles of fine timber. Thirty pilots and 25 air engineers operate the 30 planes of the fire-fighting service, taking off from 23 bases strategically located across northern Ontario. The service patrols more than 360,000 square miles of terrain. The planes also are used for detection of fires as a supplement to observers in lookout towers. The Ontario service is one of the largest aerial fire-fighting services in the world and is credited with saving thousands of acres of forest each year by fast transportation of men and equipment to the scene of a fire.

## Precision-Casting Process Based on Wartime Technique

Using a technique developed in wartime when airplane supercharger buckets were precision-cast, Allis-Chalmers is now eliminating many machining operations by casting small, but intricate, parts for its products. These parts are cast so precisely that, although they were formerly machined, no machining is necessary. The process is based on the "lost wax" technique. Wax patterns are produced by injecting melted wax into metal dies. The wax pattern is removed and a refractory material poured around it and allowed to harden. Then the wax is melted and drained from the mold. Molten metal is poured into the cavity from which the wax was removed. After cooling for about five hours, the castings are knocked loose by an air hammer.

Top, left, injection molding of wax patterns. Dies are clamped in press and wax pumped in through flexible hose. Right, the molten metal is poured into molds. Above, final inspection of the castings. Parts on table are some produced by new process

## "Shrinking" Truck Dumps Load

Loads are carried down between the wheels in a rear-dump wagon called the Tournarocker. Though only 6½ feet high, it has a capacity of 16½ yards or 16 tons. Dumping is done by locking brakes on the rear wheels at the edge of the dump and raising the bowl by an electric motor and cable attached to the rear end of the bowl. This pulls the prime mover back towards the rear wheels, tips the bowl and dumps the load. It has an over-all length of about 26 feet and a 90-degree turning radius.

**B**ACK IN 1849 a lot of people acted in peculiar ways all on account of gold. They sold their homes and made for the prairies, the desert and the high mountains. It was California or bust. Some of them found gold. Others found nothing but black sand in their gold pans. But they kept coming, kept digging, kept chasing the golden rainbow.

A hundred years later, Lloyd D. Sweet of Watsonville, Calif., is hunting for gold, too. But it's an easy-going job to him. Gold is his hobby. If he garners any of the yellow stuff from his mine, he's happy about it. If he doesn't, he isn't bothered much. The reason is that his gold mine is near his summer home and his favorite recreation area. It is about halfway between the historic old mining towns of Downieville and Sierra City.

To reach Sweet's mine, you cross the North Yuga River on a "Flying Dutchman." That's a little wooden seat strung by a pulley on a cable. You pull yourself across stream with a rope. Nearby, among a formation of boulder deposits is the mine. There's a slit dug out of the rocks and built up with smaller stones. The sluice box is set in there. It's a wooden flume with burlap and cleats fastened along the bottom to catch gold washed down from his placer diggings.

# Hobby: Mining Gold

**Story and Photos by  
Harry De Lasaux**

Sweet's cabin is out of sight from the river level, a few hundred feet uphill. In order to build the cabin, Sweet—and Mrs. Sweet—had to clear brush and make a trail. The trail followed an old mining ditch used in the Gold Rush. It led from a nearby creek, a roaring little stream full of deep pools and brilliant falls. Sweet was asked how he secured the land.

"It's government land," he explained. "The country in the national forest areas is available for leasing provided you establish a mining claim. My first discovery of gold here netted me \$15 worth. I mined one nugget shaped like a thumb that was worth \$5. My claim includes the creek, so I'm always sure of plenty of water."

As the project developed, Sweet's talent as a mining engineer unfolded, too. He dug a ditch a quarter of a mile long upstream, dropping it down

To hurry gold production, Lloyd Sweet uses a fire hose on his water system to wash down the higher gravel banks

POPULAR MECHANICS

Top, sketch shows over-all plan of Sweet's homemade gold mine. Above, winch-and-gear system was built around old Chevrolet transmission. Below, water wheel is turned by gravity-flow stream piped from creek

Jib crane operated by water-power system can lift a ton of boulders out of the diggings. Below, sluice box, lined on bottom with burlap and cleats, catches the gold as rushing waters wash the metal into it

gradually to the river to secure a good gravity flow. This ditch supplied water to wash down the gold-bearing earth and gravels through the sluice box.

Next, he had to have some sort of device to lift out the boulders so he could free the earth and gravel. The Sweets laid a quarter of a mile of three-inch iron pipe along the line of the ditch. This was to supply the water power for his proposed water wheel.

First, he built a Pelton water wheel. It was simply an iron plate, circular in shape, to which were bolted metal cups. He balanced not only the water wheel, but all fast-turning parts. Next, he set the water wheel in a heavy box frame to catch the water flowing from the three-inch pipe. For his cable drum and gear-reduction system, he went to the junk yard and bought an old Chevrolet transmission, from which he took the gearshift and gearbox. He then attached the winch to the power system, rigged up a jib crane and he was ready to move boulders out of the diggings.

When the ditch from up above is wide open, a flood of water rushes down over his diggings and washes sand and gravel through the sluice box. Occasionally, he stops it long enough to get down in the pit and clean out the boulders.

Just to hurry up the gold-washing process, he also has rigged up a fire hose, and in spare moments he washes down the higher areas of the gravel bank with it.

When visitors ask if he really gets any gold, he produces a piepan with gold concentrates in it. Swirling water around and around in the piepan, he gives it a quick flip like the sourdough miners used to. Instantly, through the layer of black sand in the bottom, there appear several good-sized nuggets.

Sweet also has built a home power plant. A three-inch pipe supplies water power for a second water wheel connected to a generator from an old locomotive. With a hiss and a roar the thing starts up, and in a few seconds the lights go on, the radio works and Mrs. Sweet can start ironing clothes with an electric iron.

Mr. Sweet is in business at Watsonville, a thriving farming town along the California coast a few hours' drive below San Francisco. He's in a position to make frequent trips throughout the year to the Sweet diggings along Sierra County's North Yuba River. It's the land of the '49ers, and the history of the country he enjoys is rich with Gold Rush excitement and drama. Also, the people of that mountain region are friendly and helpful. One old prospector taught him several profitable tricks of gold mining—even showed him how to retort his gold from the quicksilver by using a large raw potato!

## Street Planer

Rough asphalt streets are planed smooth by a long vehicle that softens the surface with heat. Fuel-oil burners throw intense heat on the asphalt and, as the machine moves forward, the planing blade scrapes off the high spots, leaving the surface free of corrugations. The rear wheels are within the blade width, riding on planed surface. Under good conditions the planer can smooth 30,000 square yards of pavement per day.

## Cranes Lift House And Carry It Away

When W. L. Lipscomb of Victoria, Tex., wanted to remove the second floor of a building and convert it into a separate cottage, he decided the easiest way would be to pick it up and carry it to the new location. He did just that with the aid of two mobile cranes. Not a piece of furniture was disturbed or a single dish broken as the two cranes, working as a team, lifted the upper floor off the building and carried it safely to its new foundation.

# How to Tempt a Fish

## PART I

## FLY CASTING

**T**HIS IS A STORY of just average fishermen who, because of their choice of proper flies and fly-rod equipment, their knowledge of where to go and what times of day and evening to fish, must hide behind trees when tying flies to their leaders.

Because catching trout, bass, pike, pan fish, walleyes, salmon, landlocked salmon, bonefish, snook, tarpon, jack crevalle and sea trout with fly-fishing gear is so much fun and fly casting is so easy to learn, this sport is gaining tremendously in popularity throughout the sports world.

With about half an hour of coaching, you can learn enough about fly casting to catch numerous species of fresh and salt-water game fish, but it will take many years of conversing with the expert anglers before you will be able to talk like they do. It takes years of rubbing elbows with them at their clubs and in their streams to understand their "fly talk" — but you don't need this until later in life when sittin' beats wadin'.

What counts most is

that electric thrill that goes up the rod, through the palm of your hand, up your arm and into your heart when a fish is on your fly. And another important factor is that friendly feeling you build up inside for those with whom you fish.

There are millions of fishermen who prefer catching fish with a fly rod because it's the sporty way. The purist casts nothing but a dry fly that floats on the surface of the water. Next comes the angler who first tries it dry, then wet to get the big ones that are deeper during the middle of the day, and then dry again for the evening fishing. Third in line is the guy who mostly has in mind that he does not want to visit the commercial fish market on his way home. He goes to the stream, lake or bay fully equipped with dry and wet flies, streamers, nymphs, cork-bodied bugs, spinners, midget spoons, tiny plugs and worms.

In public life he is the same fellow who wears both belt and suspenders, but he usually comes home with fish

By Joe Godfrey, Jr.

International authority on fishing, founder and Executive Secretary of The Sportsman's Club of America, founder of The Fishing Hall of Fame and author of several well-known books on fishing

Thread that glistens in ultraviolet light now is used to tie flies that glow even on the cloudiest of days

for the table while some of the others can only say, "The big one got away."

There are many ways of catching fish such as guddling, chumming, soaking and trolley fishing, but here is a list of the highest-approved methods: 1—Dry-fly fishing. 2—Wet-fly fishing. 3—Spinner fishing. 4—Spinning. 5—Bait casting. 6—Trolling with artificials. 7—Trolling with bait. 8—Bobber fishing with bait. 9—Set-line fishing. 10—Net fishing.

You may catch more fish if you reverse

**FLIES FOR RAINBOW TROUT:** 1—Hair Professor. 2—Lachmann's Refracto Giant May Fly. 3—Edson Light Tiger. 4—Stroud's Silversides. 5—Ambrose Special. 6—Michigan Night Caddis. 7—Black Ghost Streamer. 8—Cains River Scotch Lassie.

the above list, but it won't be as much fun. The sport of fly fishing has in its fold at least two kinds of persons: The serious-minded angler who insists that he did not "catch" an Atlantic salmon, but rather he "killed" it, and he will further tell you why he used a No. 1 Jock Scott fly and on what the salmon were "feeding"; and the average or absent-minded fisherman who "caught" a salmon on something he thinks was a Dusty Miller fly, but he doesn't remember why he selected it or what size it was, and he doesn't care much what the fish were "eating" at the time. He does remember having a heap of fun taking this fish.

If in your travels you hear anglers telling of their catches (pardon the word "catch" instead of "kill," but these fish were thrown back) and if some of the stories sound exaggerated, go along with these fishermen as though you believed their yarns—provided you reserve your stories for last.

Truth is something more or less unknown in fishing circles because who wants to listen to a little-fish story?

But what part of this fishing business is truthful and where do we draw the line? Well, here it is, and you can count on this information just as you can be sure that fresh-caught walleye is good eating.

It is true that fish grow a lot faster after they are taken from the water. It is not true that fishing is a delusion entirely surrounded by liars in old clothes. It is true

that fishing is a disease for which there is no cure. It is true that opening day is the time when an avalanche of anglers crowds our streams in search of a few scared trout.

It is true that a creel is a wicker basket in which the fly angler carries a fly book, lunch, raincoat, solunar tables, fishing calendar, fish finder, can of worms and one small trout. It is true that a guide is a conservationist in disguise. It is not true that he takes you where they were biting good "last week," that he encourages you to return "next week" when the water will be "lower," "higher," "clearer," "muddier."

It is not true that boots are what you wear to carry large quantities of water and are guaranteed to keep your feet warmer in summer and colder in winter. It is not true that flies are feather or bucktail imitations of nothing ever seen before. It is true that they are the favorite food of moths and are tied especially for decorating fishermen's hats. It is true that plugs are imitations of bees, beetles, birds, bananas, cigars and hula dancers. It is true that "rod" is the name for a fishing pole costing over five dollars. It is said, too, that fly rods are sold by weight—the lighter the rod, the heavier the price. It is true that the worm is greatly scorned in fishing circles but is secretly used by most trout fishermen.

Sir Izaak Walton is the patron saint of the angler. His great contribution to angling

Old-time angler will swear his luck is best when he wears his battered fishing hat. Favorite flies are hooked in the crown, ready for use on the big ones

**FLIES FOR ATLANTIC SALMON:** 9—Jock Scott. 10—Green Highlander. 11—Pink Lady. 12—Cinnamon Sedge. 13—Brass Hat. 14—Thunder and Lightning. 15—Cahill. 16—Silver Doctor.

# Smallmouth Bass

← **FLIES FOR SMALLMOUTH BASS:** 17—Red Hopper. 18—Bumble Minnow Gray Yellow. 19—Weber's Whiskerbug. 20—Black and White Bass Houn. 21—Kade's Red and Yellow Ozark. 22—Weber's HOB Streamer. 23—Bill Blade's Streamer. 24—Green Cork Popping Bug. 25—Red Optic Fly. 26—Blade's Hair Hopper. 27—Red and Black Wing Spinner. 28—Parmachene Belle Prescott Spinner. 29—Red and Yellow Mystery Bug.

was his famous book, "The Compleat Angler," first published in 1653. Since that date there have been published some 300 different editions of this work.

In his time there were some good fly casters and excellent fly fishing in England, but since then angling methods both abroad and here have improved so tremendously that today we are faced with the problem of supplying enough fish. There are better-designed fly rods to go with the improved techniques for dry-fly fishing, wet-fly fishing, bass-bug casting and salt-water fly casting. Let's compare. Sir Izaak Walton was content to fish in the streams of the British Isles. Lee Wulff fishes for Atlantic salmon in the waters of Newfoundland, New Brunswick and Nova Scotia, then goes in for giant-tuna fishing in Nova Scotia, then flies his Cub plane to fish for bonefish on the flats of the Florida Keys. He uses the same fly-rod equipment for bonefish that he does for Atlantic salmon, except in the North he uses his own flies called White Wulff and Gray Wulff, but in Florida he uses a fly that looks like a shrimp, tied by Homer Rhode, famous bonefish guide in Miami. Wulff compares the two as follows: "My reactions were geared to the fight of an Atlantic salmon, generally considered top

fish in fresh waters. While I could let a salmon take line out between my fingers without having the braided nylon burn me, the speed of the bonefish was much greater. After burning my fingers on that first bonefish run, I let the click act as a brake and watched my fly line melt off the reel arbor. I'm not going to give up Atlantic salmon fishing, but every winter or spring from now on I'll spend some time in the warm salt shallows after bonefish with my fly-casting outfit."

The type of outfit you select for fly fishing is entirely dependent upon the kind of fishing you plan to do. Salmon outfits are bigger, can be used for bonefishing and are good even in the taking of tarpon and sailfish if you are careful. The rod for dry-fly and wet-fly fishing for trout and bass should be 8 or 8½ feet long, with enough stiffness in the body of the rod to give sufficient striking power, but the action of the rod should permit a delicate presentation of the fly.

The fly reel may be simple, single action with a permanent click, with weight enough to balance the rod properly and capacity enough to hold the fly line. The average rule is: The weight of the reel, line and filler and the fly should be about 1½ times the weight of the rod. Automatic reels have become popular because with this reel, slack line, stripped off by hand, can be quickly spooled back on the reel by

pressing the lever with the little finger. When a fish strikes, you can quickly retrieve your loose line and concentrate on playing the fish. There are several semi-automatics that give you finger-tip control.

The fly line is important in casting. In bait casting you depend upon the weight of the lure to get distance, but in fly casting the weight of the line takes out the fly. Here again we have it all over Sir Izaak Walton because we have learned a lot about line finishes, line materials and line tapers. It is possible for the beginner today to step up and cast a fly that goes out like a bullet. Level lines (diameter is uniform throughout its length) are for fly fishing with spinners and live bait. Tapered lines are for longer casts.

Regarding line sizes, just remember that size C line measures .050 inch—subtract or add .005 for each size smaller or larger.

Although there are dozens of good torpedo lines, Marvin Hedge, famous distance caster, developed a seven-taper line that he can throw, without a rod, farther than most anglers can cast a line with the aid of their own fly rods.

When going fly fishing we are often asked three questions: 1—When is the best time to go fly fishing? 2—When should you cast upstream or down? 3—What flies should we select?

Conditions such as muddy waters from heavy rains, falling barometer, moon in the

wrong phase, water temperature too warm are exceptions, but generally speaking the best time to go fishing is whenever you can get away when the season is open, when there is a run on or when the stream is having a hatch of insects. The best hour for brook-trout fishing is in the evening, also for about three hours after sunrise. For rainbows, the evening again and all through the day is generally good. Brown trout bite best at night and are good feeders in early evening. Cutthroats and Dolly Vardens, it seems, are always hungry.

In casting, try to drop your fly in the placid waters of pools or overhanging embankments near swift-running water. Often you can get a strike in quiet waters when the fish won't bite in rapids.

Generally, the quiet waters require you to fish upstream and fast waters make it necessary to fish downstream, but there is more to it, of course. In the East, where streams are more heavily fished, you will find anglers fishing upstream; the same is true in Wisconsin or wherever the fish are shy. In the Western streams, there are more fish and you can fish up or down, depending upon the speed of the current. Edward R. Hewitt, the old master and inventor of the spider fly, finds a real slick piece of water before he tosses his famous spider—upstream. If there is a trout nearby, there is an explosion and the trout is hooked.

In our country, the best way to find out

These five "clock" sketches show how to cast with a fly rod. Above, at beginning of cast, lift the rod slightly to 10 o'clock to gain tension for pickup

During the pickup, snap the rod tip sharply upward from 10 to 1 o'clock, using a brisk upswing of the forearm without moving the upper arm or shoulder

After this back cast, pause for a moment while line continues to move and whips out behind you. This will clear the line and prepare it for forward cast

To cast the line forward again, drive the rod tip forward but not downward, stopping at 9:30 o'clock. Apply power to your cast between 1 and 11 o'clock

In laying the fly, aim three feet above the water target. As the line is about to reach the limit of the cast, raise rod tip slightly so fly hits water first

Most anglers try to appear nonchalant after landing a fighting game fish, but the thrill grows along with the fish as the story is told during winter evenings

the best flies is to ask an angler who has previously fished the waters. Every angler has a pet list of his own. Our most popular fly patterns today are: Royal Coachman, Ginger Quill, Brown Hackle, Parmachene Belle, McGinty, Queen of the Waters, Black Gnat, Gray Hackle, Coachman, Professor.

Most fly fishermen on dark days select darker-colored flies because really all the fish sees is the silhouette, and the surface of the water takes on a silvery color, thus bright flies will not be seen as well. Black Grats, Black Hackle and Black Prince are popular. Bright flies on bright days are always good for rainbows. When going for steelheads, select flies that sink swiftly, preferably flies that have lead or copper-wrapped bodies because these fish are usually well beneath the surface. Spinners are often used, but these drag along the bottom and you are easily hung on a rock, whereas a weighted fly bumps along more on the bottom.

Hook sizes that get the most fish are 10 to 16, but when fishing in streams above 5000 feet you must use smaller flies, usually from 14 to 20 because the natural hatches above this sea-level measurement—drakes and stone flies—are tiny. In the streams of California, Montana, Wyoming and Idaho the anglers prefer sizes 16 or 18. Anglers who want bigger trout often use size 10 flies.

Early season anglers are the ones who must be most particular that their dry fly imitates the natural insect. The hatches

(Continued to page 246)

### Bermuda Grass Roots Planter

Bermuda grass roots are planted three times faster than usual by a device that plows, plants and covers in a single operation. It was adapted from a disk plow by Curtis Floyd, agricultural agent of Coal County, Okla. The roots are dropped through a pipe in moist soil behind the lead disk and immediately covered by the second and third disks. It puts roots three or four inches deep to insure better growth.

### Sports Caps With Pockets

Sports caps are now double-purpose—they not only keep the sun off your head and shade your eyes, but they also serve as convenient pockets for small items that are a nuisance when you're not wearing a coat. One model has a plastic visor with loops for golf tees or fishing flies. A zipper pocket on the front of the crown is a handy place to carry tickets or locker keys when on the beach or golf course.

### Infrared Rays Erase Disks For Reuse on Recorder

Sound grooves on plastic dictating disks are erased by heat and infrared rays in a machine about the size of a portable radio. Formerly the disks, made of Vinylite, could be used only once. The machine makes it possible to use the disks at least 25 times. The operator places the recorded disk on a spindle in the machine, presses a button and the recording spins inside a bath of heat and infrared rays. Centrifugal force on the heated plastic erases both sides of the disk simultaneously. The plastic by nature tends to return to its original molded form upon the application of heat. In less than a minute the lid opens automatically and the disk is ready for reuse. The erasing machines are leased to users of large quanti-

ties of disks on a 15 and 30-day basis; others can accumulate disks and have them erased at service centers.

Above, one of five control towers. Below, cutaway of the tube shows how materials are transferred from one belt to the next

Below, elevated on steel supports, the two-way conveyor will not interfere with highway traffic. The twin belts, enclosed in a metal tube, will have a capacity of 52 million tons yearly

# 130-Mile Belt to Carry Coal and Ore

Snaking through rolling Ohio, twin "rivers" of rubber, flowing in two directions, may be a preview of future railroads

**T**WIN "RIVERS" that flow uphill and down may be the railroad of tomorrow, if plans for an endless-belt conveyor between Lake Erie and the Ohio River live up to expectations.

The main line of the system, designed to haul millions of tons of coal and ore annually, will be a two-way belt extending 103 miles from Lorain on Lake Erie to the Ohio River near East Liverpool. Spur lines to Youngstown and Cleveland will bring the total up to 130 miles. To move its capacity of 52 million tons a year, the belts will roll 20 hours a day and 300 days a year, saving an estimated 20 to 45 million dollars annually in railroad freight charges.

Mounted on steel supports, the two-way belts will travel in a giant metal tube, flattened on top

Above, conveyor tube has a catwalk for maintenance men. Below, the belt system will run between Lake Erie and the Ohio River

and bottom. To cover the 103 miles from river to lake, 172 belts will be used. Some belts will be over a mile long. A "switchback" pulley system enables the belts to carry loads in either direction.

Coal will move northward in a continuous stream at about 6.8 miles an hour, arriving at the lake at a rate of 3400 tons an hour. The southbound ore belt will, of course, move at the same speed, but, because ore is heavier than coal, its delivery rate will be 5400 tons an hour.

Belt widths vary, with 72 inches on the south end of the main line, 60 inches farther north and 42 inches on the spurs. The electrically operated belts will be push-button controlled with electric-eye "watchmen" to stop the entire system if trouble develops.

Drawing illustrates the ingenious pulley system by which the conveyor belts are made to reverse themselves so that they will carry material either way

## Kite-String "Carrier" Frees Planes at 3000 Feet

Model planes, small parachutes and other lightweight objects descend from as high as 3000 feet after release from a toy carrier that rides up an ordinary kite string. Wind blowing against a cone at the rear pushes the device up the string. Objects hitched

to a spring wire at the front are released when it hits a bumper cone tied below the kite. The carrier returns down the string by its own weight. It takes about four minutes to go up 1500 feet and a minute to slide back.

## Mobile Betatron

Capable of being aimed in any direction, a 10-million-volt X-ray generator is powerful enough to send its rays through 16 inches of steel. The powerful generator, said to be the world's first mobile betatron, is installed at the Naval Ordnance Laboratory, White Oak, Md., and will be used to study the complex internal assemblies of mines, torpedoes and other Naval ordnance. Compactly housed in a steel casing, the betatron weighs about 5500 pounds and can be moved around with a crane. It is housed in a special building surrounded by concrete walls three feet thick to protect personnel.

Ⓛ Glass insulators on telegraph poles are being replaced by an unbreakable rubber type that is much smaller and weighs about one tenth as much.

### Valve Meters Air Into Water Tank

Air is injected into the pressure tank of a water system by a metering valve to keep the system from being "waterlogged." Each time the pump starts, the valve injects air into the tank, maintaining an air cushion above the water. The automatic valve is installed between the pump and tank. When the pump starts, the pressure, acting on a diaphragm, moves a plunger out of a cylinder, sucking in air. When pumping stops, the piston is driven back by a spring, forcing the air into the valve from which it enters the tank when pumping is resumed.

### Disk Holds 30 Minutes of Dictation

Seven-inch disks, recorded on a new dictation machine, are so light they can be mailed for three cents, yet hold 30 minutes of dictation. The seven-inch Vinylite records are slipped into the machine from the side and are positioned automatically. To prevent "dry runs," a warning light blinks if no disk is in the recorder or if the cover is not down. A locating pointer enables the operator to find his place quickly on the record, should he remove it before the full time is used. A companion machine for the secretary plays the recording.

### Reel Indicates Water Depth

Fishermen can tell the exact depth of the water with a pocket reel that measures up to 100 feet. To check the lake bottom, the angler releases a brake screw on the reel which allows a weighted line to drop through the water. When the weight hits the bottom, he reads the depth in coded markings on the water-resistant line. He then reels in the line and resets the brake screw. The reel permits the angler to chart his favorite fishing spot so it can be located at any time. The line is coded at one-foot intervals for easy reading.

# Chrysler Family Debut

The new Plymouth is wider on the inside and narrower over-all—leaving room to spare getting into garage

**By Wayne Whittaker**

**WHEN THE TOP BRASS** of the Chrysler Corporation planned its strategy for 1949, they made a 90-million-dollar bet.

They wagered that handsome outlay for retooling on their belief that the American motorist is tired of having his hat knocked off every time he gets in or out of a car; that he would welcome a car with detachable fenders in preference to a fancy repair bill every time a panel-side automobile comes limping home with a bashed fender; that he'd like easy access to the wheels instead of having to unbutton skirts of metal to get at a flat tire.

So they embodied those features in the whole Chrysler family—Chrysler, DeSoto, Dodge and Plymouth—as they planned the

cars that would celebrate the silver anniversary this year of the first Chrysler automobile.

The stylists were sure that the public is more concerned with headroom than with a low, super-swanky silhouette parked at the curb; that people like larger doors which open all the way and stay open for easy entrance and exit, and a reduced over-all exterior width. Despite the fact that every car in the line has wider seats than ever, the outside widths have been reduced from  $1\frac{3}{4}$  to  $3\frac{3}{4}$  inches. The height of all new models has been lowered by  $1\frac{5}{8}$  to  $2\frac{1}{4}$  inches.

One question is always asked about every new car on automobile row. Does it look like the other postwar cars? The an-

Top, 1949 Plymouth four-door sedan shows conservative styling. Below it is the Chrysler Windsor four-door

swer, as a glance at these pages will show, is: No, they look like conservative Chrysler-line cars rather than copies of their competitors. Perhaps there's a slight hint of Studebaker in the shape of top and rear deck, but the over-all design is distinctively Chrysler's own.

When K. T. Keller, president of Chrysler Corporation, was asked what he considered to be the outstanding feature of the new line, he said:

"We had to make up our minds what course to take in developing these new cars. It wasn't so much that we wanted everything on them to be new—although there are many improvements. The engines, for example, all have higher compression ratios. As far as design goes we wanted to build an outstanding car, a car that is easy to get into and get out of, that is easy to

garage, to handle in traffic or when parking. The outsides of our new cars are actually sculptured around conditions prescribed for the inside."

Despite the detachable fenders, exposed wheels and generous headroom, the '49 Chrysler line follows the straight-line styling trend and increased visibility introduced after the war. The corporation engineers and styling experts, of course, have had the advantage of studying the acceptance of many postwar innovations pioneered by others. At one time the embryo '49 Chrysler line was fenderless but this was changed after a careful sampling of public opinion.

Among the big news items in the Chrysler family debut are Plymouths and Dodges with reduced wheelbase in addition to the regular lines. The small Plymouth has a

The Dodge Coronet four-door shows postwar styling but—look at those detachable fenders, front and rear

111-inch wheelbase compared with 118½ inches on the regular model; the small Dodge has a wheelbase of only 115 inches, compared with the regular's 123½ inches. The small Plymouths include a car new to the line—the Suburban, an all-steel station wagon which will be priced below the regular station wagon.

The small Dodge line will be known as the Wayfarer. It includes a real sensation and innovation which already has the brass hats of the motor industry shaking their heads. This is a "stripped" convertible or three-passenger one-seat roadster, a sleek automobile which probably will create a furor among the youth of the nation. It has no side windows like ordinary convertibles, but uses plastic side curtains (Paging Grandpa!) which are stored in a compartment back of the seat. The car has no horn or backup light, no clock, no interior frills of any kind. The canvas top is manually operated. The rear luggage compartment appears large enough to hold two or three trunks. The industry is not so much concerned about the smart appearance of the car as it is about rumors concerning the low price for which the roadster will sell. The car will be unveiled officially sometime next month.

The new Plymouth (bread-and-butter car of the Chrysler family which sold at the rate of 375,373 cars last year compared with 232,863 for Dodge, 118,951 for Chrysler and 90,223 for DeSoto) has been completely redesigned and streamlined. You have to look closely to make sure that those fenders really are detachable.

The Plymouth engine has been boosted in horsepower from 95 to 97. Performance

Airplane-type rear shock absorbers are mounted on all Chrysler line '49 cars in diagonal fashion to help eliminate sidesway. They are shown here on the Dodge. Below, no fender panels cover rear wheels

The 1949 DeSoto Custom four-door is much roomier inside, yet its over-all length, width and height are reduced

has been improved with a new cylinder head which increases compression ratio from 6.6 to 1 to 7 to 1. A new chrome-plated compression piston ring reduces cylinder wear and provides greater protection during the breaking-in period. Quicker warm-up and faster throttle response are two of the advantages of a new intake manifold.

When you step into the '49 Plymouth you are first impressed with the amount of head and leg room, both back and front seats, and the excellent visibility. The windshield

is 37 percent bigger than in previous models and the rear window is 35.4 percent larger. The seats are much wider—an increase to 56 inches in the front and to 57 inches in the rear. This is something of a design feat when you consider that the over-all width of the cars has been decreased by more than an inch.

The regular Plymouth line has a 118-inch wheelbase (an increase of one inch over the '48) with six models: a club coupe and a four-door sedan in the Deluxe series and

This picture proves that Plymouth fenders, like the other cars of the Chrysler line, are really detachable

A rack and spring hold the bumper jack in place beside the spare tire and prevent it from rattling

a Special Deluxe club coupe, four-door sedan, convertible coupe and station wagon. The three models with the new 111-inch wheelbase are the two-door sedan, a three-passenger coupe and the Suburban.

The Plymouths have "smooth riding" diagonally mounted shock absorbers which allow greater road clearance and reduce sidesway. A new automatic electric choke, of the same type used on other Chrysler-line cars, has been added. Among the innovations of primary interest to the driver is the combination ignition and starter switch which eliminates the starter button. The car starts by turning the ignition key slightly beyond the "ignition on" position. When released, the key automatically returns to "ignition on." Aside from the convenience to the driver, this starter makes it impossible for children to move a car which has been left in gear by pushing the starter button.

Other new items include a vent-window lock designed to reduce theft of articles from parked cars, a heavily armored ignition cable to reduce theft, bull's-eye lens in the center of the sealed-beam headlights to increase light output, hard-to-break plastic lenses in the stop, tail and parking lights, an enclosed circuit breaker which eliminates the need for replacing lighting-system fuses, and a rattleproof rack for the bumper jack.

The corporation's No. 2 seller, the Dodge, is being built in three lines of passenger cars with 11 body styles, two wheelbases and an improved 7-to-1 compression engine. The new cars are shorter in over-all length, narrower in exterior width and lower in height. However, the Coronet and

Meadowbrook models (regular line) have a wheelbase of 123½ inches, an increase of four inches. This increase results in better cradling of the passengers between the axles and a smoother ride. All of the cars have much less overhang in both front and rear which makes parking easier and provides better road clearance on driveways with steep grades. Over-all length of the regular line is 203⅝ inches.

The higher compression Dodge engine has a new cylinder head. Other engineering advances include improved carburetor, intake manifold, camshaft and fuel pump. The intake manifold gives a better distribution of the fuel-air mixture to the cylinders and its shorter riser produces more rapid response to acceleration. The new camshaft with quick-lift, short-duration valve timing affords improved performance through a large part of the speed range. Filter, gasket and sediment bowl have been eliminated on the fuel pump and an air dome provided on the suction side. Another engine improvement is a protective coating on cylinder walls which prevents scuffing or scoring during the break-in period.

A new Gyro-Matic transmission, available as extra equipment on the Coronet, frees the driver from shifting gears. The driver starts the car with the gearshift in "high" position and presses down on the accelerator. When sufficient forward speed is attained, the accelerator is released and the Gyro-Matic shifts automatically into "high." For extra power in passing, the accelerator is pushed to the floor to shift automatically into a lower gear.

The Dodge interiors are comfortable and quietly luxurious. The front seats are six

**The roomy 1949 Plymouth station wagon has varnished wood trim and it can carry nine passengers with ease**

inches wider and the rear seats nearly eight inches wider than the '48s. The instrument panel has been moved four inches forward to increase interior length for more leg room; headroom has been increased to 37 inches for both front and back seats. The Dodge "knee level" seats have a height of  $15\frac{1}{8}$  inches in front and  $15\frac{1}{2}$  inches for the rear seat. The windshield area has been increased 24 percent and the larger rear window minimizes any blind spots. The doors open almost all the way and stay open when you are getting in or out.

The instrument panels have been completely restyled with the gauges centered in front of the driver and recessed to avoid confusing light reflections. Rotary switches replace the push-pull type formerly used. Many of the innovations already mentioned on the Plymouth, such as the new ignition switch, tamperproof vent-window lock, bull's-eye lens in the headlights and plastic lenses in the tail and stop lights, are to be found on the Dodge.

The Coronet and Meadowbrook lines include three four-door sedan models, a club coupe, convertible, eight-passenger sedan and a station wagon. The small-wheelbase Wayfarer line will include a two-door sedan and a three-passenger coupe in addition to the roadster.

The six 1949 Chrysler lines, to be known as Silver Anniversary models, are the six-cylinder Royal and Windsor series with

**Plymouth Special Deluxe club coupe shows shortening of over-all length by less overhang in front and rear**

**Headroom in the new Plymouth back seat? Plenty of it for a lady with a tall hat, and room to spare**

## Two-Minute Camera

Photographs taken with a direct-positive camera are processed right on the spot, in bright sunlight or shade, and completed within two minutes after the exposure. The camera, designed for sidewalk photographers and others who want prints to be ready almost immediately, is loaded with a magazine containing enough paper-film to make 50 exposures at a cost of less than two cents each. After the exposure is made, the photographer turns a crank, moving the paper down into a lightproof box fastened to the underside of the camera. A built-in knife cuts the photo from the roll. The box, with the paper-film inside, is removed from the camera and dipped in a developer. Baffles in the bottom of the box allow the solution to enter, but prevent entry of light. The print is then removed from the box and rinsed, bleached and redeveloped in daylight. The photos are permanent and dry in a few seconds.

Right, box of paper-film is loaded in camera. Left, after exposure, photo drops into this lightproof box which is removed for developing, below. Processing solutions enter box through baffle system in bottom

## "Gun" Saw Cuts Rubber or Steel

Anything from rubber to stainless steel can be cut through by a new electric gun-type saw. Its blade speed is variable and stroke length adjustable up to two inches, depending on material being cut and its thickness. A supporting handle that swivels 360 degrees and locks in any position eases arm fatigue. Guides for blade widths from a half inch to one inch also serve as gun sights in following a line. The saw can be driven by an electric drill, an air drill or a flexible shaft.

## "Bed" for Pilot Lessens Fatigue

Flying fatigue and the threat of "blackout" are reduced to new lows by a prone-position pilot bed being tested at the U. S. Air Force Aeromedical Laboratory. Basically a nylon netting supported over curved sides to make it fit body contours, the bed has enabled pilots to withstand up to 12 Gs (force of gravitational pull). Seated conventionally, a pilot can tolerate only about five Gs. Experimenters have used the pilot bed for eight hours continuously without experiencing discomfort. The prone position also requires less space for the cockpit and permits development of planes with slimmer silhouettes. Supports for the abdomen and head are adjustable. The arms rest in movable pans padded with foam rubber as the pilot operates special handgrip controls. A leg board gives each limb its own support, preventing pressure on the inside of the knees. The test bed is in the nose of a B-17 and another is to be put in the forward part of an F-80 jet plane. Both aircraft permit conventionally seated pilots to take over controls in emergencies.

## Twin-Torpedo Racer

Capable of speeds well over 100 miles an hour, an Italian racing car looks more like a pair of wheeled torpedoes than a motor vehicle. The driver sits in one torpedo while the power plant, a 500-cubic-centimeter motorcycle engine, is in the other. The car covered one mile at an average of 79.9 miles an hour from a standstill; 126.4 miles an hour with a flying start.

# HARBOR SWEEP.....

**E**ARLY this year a strange vessel with twin hulls began house-cleaning operations in New York harbor. Her job is to collect and remove driftwood and floating debris which would soon stop traffic if not cleared away.

The new Driftmaster, 100 feet long and 36 feet wide and powered by two diesel engines, is the first vessel ever built specifically for this purpose. She was designed by U. S. Army Engineers, who have the job of keeping waterways clear for commerce.

Spaced 20 feet apart, each of the pontoonlike hulls is but eight feet wide, allowing water to flow freely in a channel through the center of the vessel. Engine room, crew quarters and control bridge are mounted on a superstructure joining

the hulls some feet above the water line.

Two nets of steel chain links hang in the well between the hulls. They are dipped alternately into the water flowing between the hulls to scoop up drift when the vessel is under way. Each net is 20 feet square.

When floating debris is sighted, the front edge of one of the nets is lowered about three feet below the surface of the water. A steel bar at the front edge of the net travels in tracks along the sides of the wells. The vessel drives forward and drift flows between the hulls and into the net.

The back end of the net is kept about six feet above the water. To prevent log jams, crew members armed with long pikes work from small steel bridges or walkways joining the hulls. By pushing timbers into parallel piles as they float to rest against the back of the net, about five cords of wood can be picked up in each net.

When one net is full, it is hauled up clear of the water to keep from being a drag and slowing the boat down, and the second net is lowered into working position.

When both nets are full, the Driftmaster, running at about eight miles an hour, carries her load to two incinerator barges anchored in the Upper Bay near Robbins Reef. Using the boom located about midships, the nets are picked up one at a time and the contents dumped on the barges. One of the barges is concrete, the other steel.

Although all of this drift material is pretty thoroughly waterlogged, much of it is also coated with oil, and in time it all burns up.

Drift starts accumulating up around the Great Lakes and Lake Champlain, and in all the little streams which flow into the Hudson. It consists of rotting piers, doors, ladders, packing cases, wire-rope reels, chicken coops, pieces of pianos, fences,

From control bridge straddling twin hulls of U. S. Army's Driftmaster, Capt. William P. Hocking operates levers that raise and lower drift nets

Reporters on trial run watch crewmen, upper left, guiding driftwood between hulls. Right, front view of vessel

railroad ties, telegraph poles—the list could go on forever.

Drift shifts from one side of the harbor to the other in a few hours, depending on the tides and the weather. Small launches scout out large patches and report their location by radiophone to the Driftmaster. After coming all the way down the Hudson, drift eventually meets the Atlantic Ocean, at which point it often forms into a long line, or streak, a mile or more in length.

In the course of a year, some 3000 cords of driftwood are picked up in New York harbor.

Steel-chain drift nets, right, seen looking forward from the bridge. Below, boom raises and positions nets singly, dumping them on an incinerator barge

## Mauler Flies Record Weight

Grossing over 25,000 pounds, a Martin Mauler dive-torpedo bomber became the heaviest single-engine plane ever flown. Both its gross weight and 9000-pound pay-

load were much greater than that of a 21-passenger airliner. The record flight was made with complete armament—12 five-inch rockets, three 2200-pound torpedoes and four 20-mm. cannon. A one-man plane, it is being used experimentally on carriers.

Left, bolts and spacers in place ready for extra wheel. Right, maximum traction is provided with duals on all wheels and tires at low pressure

## Jeep Adaptor Kit Adds Extra Wheels

Front and rear wheels of a jeep can be made dual for added traction with an adaptor kit consisting of extension bolts and spacers. It takes only a few minutes to mount the extra wheel. You replace the wheel nuts with extension bolts, insert spacers between bolts and slide the extra wheel in place. Chains can be used on one or both wheels.

## Auto-Dashboard Fence Holds Cigarettes Upright

Held in place by two rubber suction cups, a metal fence keeps your pipe, cigarettes and other small items on top of the dashboard where you can easily reach them. A holder inside the fence is shaped to hold a package of cigarettes in an upright position. The fence is made of highly polished chrome steel.

☐ White portland cement concrete floors are used in aircraft plants to reflect light on the under parts of equipment on which mechanics are working.

## Perch on Auto Door Keeps Pet Off Laps

Dogs have a car seat all their own in a pet perch designed to keep Rover off the passengers' laps. The seat, made of pressed wood, is a semicircle 20 inches in diameter. It has a protective railing for the pet and is padded along one side to protect the car's finish. The perch hooks into the window slot, giving the pet a commanding view of the scenery and plenty of fresh air to prevent him from becoming car sick.

## Remote Control for Tractor

Operating a pull-type, 16-foot hillside combine is normally a two-man job, one man to run the combine and the other to drive the tractor. Richard Johnson of Condon, Ore., does both jobs with the aid of a remote-control apparatus that enables him to drive the tractor right from the combine platform. Compressed air from a small compressor driven by the fan belt does the physical work of shifting and steering as electric air valves are opened and closed by switches on the combine control panel. An electric cord connects the control panel with the tractor. The labor-saving remote-control system has been used for drilling, weeding, spring tothing and road grading as well as combining.

Right, Johnson shifts and steers his tractor right from the combine platform with the switches on the control panel. Below, there's no driver sitting on the seat of this tractor as it pulls the combine. Below, right, close-up of the remote-control system

# moving day for the PARABEAVERS

By Thomas E. Stimson, Jr.

**T**HIS BEAVER is a smart one," John Ryneanson decided. "I'll tear down part of his dam and put the trap near the break. That way, he'll get caught when he swims over to repair the damage."

John was inspecting a new beaver pond on a small mountain stream near the old ghost town of Idaho City, 40 miles from Boise. The pond was beginning to flood a dirt road alongside the watercourse. At this location the beaver was a nuisance and had to be removed.

Ryneanson kicked a hole through the top of the dam with his boot and water began pouring through the break. Into the pool behind the dam he lowered a live trap, a wire-mesh contrivance that opens out flat. When tripped, it springs together like a suitcase, imprisoning the animal inside.

The trapper placed a couple of branches on each side of the trap to form barricades. These would force the beaver to detour across the top of the trap when he came over to repair the leak.

Here's the distinguished fellow who builds dams and fur coats. Note the handlike forefeet, the webbed hind feet and the two long teeth that can fell a tree

Popped into this crate, the beaver will be released by parachute. Rubber strips automatically open box

Rynearson would visit the trap again at dawn and, if he found the beaver inside, he would carry it by truck to an airstrip down near Boise where a plane would be waiting for a load of animal passengers. Before lunch time the beaver would have an airplane ride. He'd be tossed out of the plane by parachute, would walk away from the self-opening container when the parachute touched ground and would be making himself at home on a stream several hundred miles away from where he had been caught, in an area where he couldn't cause trouble.

Meanwhile Rynearson investigated another complaint. A farmer in the lowlands reported that the animals were continually damming his main

**Right, crated animals drift down toward an unpopulated stream. Below, that black spot on the parachute is the beaver, already bound for the nearest water hole**

Aboard a transport plane goes a crated beaver for a trip to the mountains. This one will be hauled a few miles by truck after the airplane ride

irrigation ditch and cutting off his water. The farmer would tear down the dam in the morning and the beavers would build it up again overnight. The beavers and the farmer had been battling for a week.

Beavers can be great nuisances when they settle in an agricultural area. Part of a caretaker-trapper's job in Idaho is to remove them from locations in which they are doing damage. Rynearson is a pro-

essional trapper and also is one of the men designated as caretakers of the state's beaver population. Once there were almost 60 million beavers in the country; then they were trapped almost to extinction. They have brown glossy fur and are one of the most valuable of fur-bearing animals. It was the quest for beaver that first led explorers into many parts of the West, and some of the big fortunes of the times were founded on the beaver fur trade.

Forty or fifty years ago no more than a few thousand of the animals remained, tucked away in scattered mountain retreats. Stringent laws were passed to protect them and gradually the beaver population has been built up. Today, they are flourishing all the way from Maine to Washington and down through the Rockies, other large mountain ranges and along numerous river systems. The recent history of the beaver is an outstanding example of how conservation can be made to work.

Beavers are actually rodents, the largest of the several hundred rodents of North

America. They average 25 to 30 pounds and large specimens may weigh as much as 50 or 60 pounds. They are amphibious and will die if kept away from the water. The animals have forefeet that resemble tiny hands and hind feet that are webbed. Their broad flat tails are used as props when sitting up, as rudders when swimming and for slapping the surface of the water to produce a danger signal. Their principal food is the bark of willow, aspen and similar trees. The animals cut wood with two long teeth that are constantly growing.

The first thing beavers do when they migrate to a new location or are planted on a stream is to build a dam. They want a personal pool of quiet water in which they can play and on which they can build a house that will protect them from predators and from winter's cold. In the muddy bottom of the pool they anchor hundreds of fresh branches as a food supply for winter. After they eat the bark they will use the sticks to build up or repair their dam.

The dam itself is a well-engineered and solidly built barrier that withstands winter ice and spring freshets. Often it contains a big tree that the animals fell in place, or it may include several logs they cut to size and float or push to the location. Twigs, sticks, branches and even stones are

**In taking a beaver census a trapper jumps up and down on a large house. The animals are frightened out and the trapper counts them as they swim away**

**Food sticks from which the bark has been eaten indicate that beavers are living along this stream**

Caretaker-trapper estimates the size of new beaver on a mountain stream by measuring the size of the chips the animal cuts from a tree. Below, girl stretches skins on metal hoops. Traders prefer round-shaped pelts

packed into the interstices. Sometimes mud is carried up from the bottom to help fill the cracks. On a large stream a family of beavers has been known to build a dam that is a quarter of a mile long and up to four or five feet in height.

Their house is attached to the dam or a bank or sometimes is built as an island, composed of twigs, stones and mud. The foundation is built up to water level so that the animals have a dry floor under a domed roof. A large interior may measure 10 feet across. Usually, there are two underwater entrances. Their house makes a permanent abode for generations and is repaired every fall with more sticks and mud to insulate it against the weather.

Beaver dams are natural conservation devices. The dams hold back water and silt, stabilize stream flow and stimulate the growth of trees and bushes. Generally speaking, all kinds of wildlife

(Continued to page 266)

## Scooter-Car Seats Two

Fuel bills are low in a midget car which travels 60 to 75 miles on a gallon of gas and uses only a couple of ounces of oil a week. The open-air car has a five-horsepower motor that is started with a rope. Seating two, it scoots along at 40 miles an hour. Two other models will be available soon. One will have an enclosed body, battery, generator and starter and will be powered by a 7½-horsepower motor. The other will have a half body from the driver's seat forward.

## Electric Stapling Machine Fastens 30 Sheets a Stroke

Operating without levers, an electric stapling machine fastens up to 30 sheets when paper or other material touches its concealed control. Each stapling stroke is automatically adjusted to the thickness of the insert. It can also be used for saddle-stitching small booklets. To keep track of production and to warn an operator when to reload, a counter registers the number of staples used up to 999.

## Terraced Garden Grows Strawberries

You'll make economical use of your garden area with a pyramid bed especially designed for growing strawberries, but also suitable for flower gardens. The bed consists of five aluminum bands, each five inches wide but of varying lengths. These bands hold the soil mixture and permit the planting of 75 strawberry plants in a six-foot circle. A core of sharp sand in the center carries water down to all sections.

## Molding Protects Car Finish

Car-window molding, usually painted in an ornate wood-grain design, is protected from scratches by lengths of plastic that fit snugly over the sills. The plastic is held in place by wire spring clips. The molding completely covers the inner section of the window sill.

☞ Providing greater safety through increased visibility, the 1949 cars have 30 percent more glass area than prewar models.

## Swing Like A Gate

With "gate" swing, curved line shows where club head rides along briefly behind ball on straight line of flight path, adding extra yards to drive

A GOOD GOLF SWING is an extremely simple mechanical action like the opening and closing of a garden gate.

A gate is built to swing back to its original position after being swung open and that's what you are trying to do when you swing a golf club.

Some players don't seem to understand that. They try to adapt golf to their own muscular habits instead of training their muscles to conform to a mechanical swing.

An easy way to learn the swing that I teach in individual lessons and in class instruction is to divide it into four parts or numbers. Each part is simple to learn and when performed correctly you are bound to get a good clean hit.

Part one is to hold the club in the left hand and take your position preliminary to swinging at the ball. With palm outstretched, curve the fingers of your left hand around the shaft and then lay your palm across the top of the shaft so that your thumb lies flat against it, just to the right of its center line. This may feel like an awkward grip until you become used to it, but there's an advantage in holding the club this way; it helps force your left arm into an extended position.

Holding the club, extend your left arm so that the club head is just behind the ball. Stand with your feet as far apart as the width of your shoulders, with the ball in line with your left heel. Your

After ball is hit, professional Chet Beer continues his swing until both hands are again shoulder high. Both wrists are relaxed at the completion of the stroke

knees are bent slightly to eliminate tension and your body is inclined forward slightly from the hips. The club and your left arm form a straight line.

Part two of this lesson is to reach down with your right hand and place it on the shaft just forward of your left hand, palm down, with the right little finger overlapping the left forefinger and with the right thumb lying along the shaft just to the left of the shaft's center line.

Reaching out to grip a club in this way forces your right shoulder down and causes you to flex your right knee a bit more. Your left shoulder is high and your left side is extended, as they should be all through the swing.

You are now in the basic position, ready to swing in imitation of the garden gate. Your head and your left foot are to serve as the hinges, and your extended left arm and the club are to act as the gate itself.

The third step is to turn your right hip away from the ball, allowing your left heel to rise, and thus rotating your body to the right on its own axis. Raise your arms to the right at the same time, shoulder high, and then allow the left wrist to "break" or cock so that the club continues swinging until it is pointed toward your objective.

Your position at the top of the backswing is this: Your head has moved as little as possible and your eyes are still fixed on the ball. Your shoulders have turned so that they face away from the line of flight. Your left arm, still extended, is holding the club horizontally and parallel with the line of flight, behind your head.

Try this demonstration: Addressing the ball just as if you planned to swing and hit it, raise your arms

At crest of backswing, left wrist "breaks" and club head points in direction player is aiming the shot. Below, Beer assumes grip for gate swing

At start of swing, left, club is straight extension of left arm. As the club is brought back, center, golfer turns right hip away and lifts left heel. At backswing's highest point, right, club shaft is parallel with line of flight

straight out in front of you and cock both wrists so that the club head swings back over your head. Then rotate your body to the right, coming up on your left toe. Try your usual backswing and then this demonstration exercise a few times alternately, trying to achieve the demonstration position in your swing.

Step four is to swing down at the ball, hit it, and follow through. This whole forward swing must be done in a precise way. First, straighten your left wrist so that the club is swung up from its horizontal position behind your head and once more becomes an extension of your left arm.

With your body still in its turned position, sweep your arms down at the ball. Swing your arms down, not out. You must deliberately refrain from rotating your

body back to its original position during the downswing. Your arms automatically take care of that action.

During the downswing, your right elbow comes in against your body, forcing your body to the left in a lateral movement. This in turn pushes your left heel down to the ground again. Thus, at the moment of impact you are in the same position from which you started your backswing. Left arm, club and club head are all lined up with the ball. The lateral movement of your body now permits the club head to "ride" the ball for a short distance, tremendously increasing its flight.

Your swing doesn't end when the ball is hit. Continue to swing, with the club extended, until your hands are shoulder high once more. Then, let your wrists relax so

Before putting, golfer studies curved path the ball must follow toward cup to counteract slight dip in green

**Downswing, left, is made with arms alone. Center, the swing slows down after—not before—ball is struck**

**When follow-through is completed, the player's position is reverse of that at top of backswing**

that the club head swings over your shoulder, horizontal and parallel once more with the line of flight. This follow-through allows you to hit the ball when the club head is traveling its fastest and gives your arms space in which to slow down.

The swing I've described produces a hard-hit ball that has a long flight. The ball starts out low and climbs away from you in a straight, flat trajectory. It has considerable roll after landing.

This full swing should be used for all tee shots and for all long fairway shots. Short iron shots to the green are played with the same stroke, except that your body need not be turned as much away from the ball, and the backswing and follow-through are shortened.

If you have a chance to watch professionals in a championship match, you may think at first that each one has a style of swinging that is all his own, unlike most of his competitors. But on analyzing their swings you will realize that each is using the basic swing that I've described, modified some by his own characteristics.

Practice will develop this swing until it becomes natural to you, and a public driving range is a good place for practice. On the driving range, too, you can overcome any faults that you may have.

But don't try to figure out what you did wrong if you fail to hit the ball cleanly. Simply go back over the four parts of the swing I've described, perform each part as it has been told here, and try again.

**Playing medium irons calls for less extreme body turning and arm raising than in hitting woods for distance**

### Shoulder Holder Steadies Camera

Camera movement during exposures is cut to a minimum by a shoulder support that adjusts to hold the camera at either waist or eye level. The shelf on which the camera is mounted folds back into the frame for compact storage. Two shoulder clips fit over the shoulders, leaving the photographer's hands free and yet holding the camera securely.

These are sugar-beet seeds. At right, their natural size; at left, the same seeds after being pelleted

### Seed Pellets Eliminate Thinning

Seed pellets make life easier for the home gardener by virtually eliminating the backbreaking chores of thinning and transplanting fragile seedlings. When coated to form pellets of pea size, such tiny seeds as carrots can be planted one at a time, properly spaced for sturdy plants. Used commercially for several years, the seed pellets are now available for home gardens. Seeds are coated with a mixture of soluble materials containing fungicides, insecticides, fertilizer and hormones, plus inert ingredients to add bulk. The coating also protects the seed, making it possible to plant in the open two or three weeks earlier than usual.

### High-Speed Wood Bit

High-speed boring in either soft or hard wood is done with a flat bit that bores in any direction, regardless of grain or knots. Designed for use with power drills, the bit has a long pilot that will start holes at angles as small as 45 degrees. Chips unload

continuously without clogging the bit, which operates best at speeds of 750 to 3500 revolutions per minute. The bit can be sharpened quickly with a regular flat file and drills through Masonite, Bakelite and Lucite without chipping. A standard set contains six bits from  $\frac{3}{8}$  to 1 inch and one countersink, all having  $\frac{1}{4}$ -inch shanks.

ROLL OF SPOON

REVERSE ROLL

### Nontwist Reversing Lure

Twisted fishline is avoided with a spoon lure which reverses itself as it travels through the water with a flash-roll action. After five to seven rolls, pressure on the curved tail causes the lure to reverse its direction of roll. Various retrieving speeds may be used without loss of action. The lure is available in three sizes and several different color schemes.

### Valve Cap Has Built-In Tire Gauge

Checking tire pressures takes only a few seconds when your tires are equipped with individual pressure gauges that take the place of the regular valve caps. You simply press down a plunger on the gauge and, if your tire pressure is all right, a red bubble appears in a plastic window. If no bubble appears, your tire needs more air. The gauges are available for all standard tire pressures used on cars, tractors, motorcycles, trucks and aircraft.

### Dispenser Applies Cement To Dry-Wall Sealing Tape

Tape for sealing the joints in dry walls goes on up to five times faster when the workman uses a tape and cement dispenser. The new machine, weighing only eight pounds when fully loaded, applies cement to the tape as it is fed from the applicator. The amount of cement used can be controlled. A built-in device cuts the tape at the desired length.

### Ruler Fits Notebook Rings

Designed for carrying in ring-binder notebooks, a transparent ruler, made of Vinylite plastic, is easily removed or inserted without opening the rings. The ring slots are punched to fit either two or three-ring notebooks. The ruler is suitable for both pencil and ink ruling on either flat or curved surfaces.

# PAINT-BOMBING

**T**O THE PILOT of a low-flying airplane, one tree in a forest looks pretty much like another. Normally, this isn't much cause for concern, but when the pilot is flying a DDT-spraying mission over thousands of acres of trees he wants to know when to start and when to stop.

By paint-bombing treetops, workers in the U. S. Bureau of Entomology provide pilots with easy-to-see markers on each corner of the tract to be sprayed. This technique, worked out by Walter J. Buckhorn of the Portland, Ore., branch of the bureau, brings the maritime line-throwing gun into landlubber service. It involves shooting a line over the treetop, hoisting a paint bomb to the top and exploding it, showering the upper crown with brilliant paint visible to the airman for miles.

When Buckhorn was given the job of marking 12 test plots of 360 acres each in an Oregon forest, he thought there must be some quick way to outline the infested areas for the pilots. He decided upon the line-throwing gun used by Coastguardsmen. The gun he uses is an 1873 model Army Springfield, .45-.70-caliber, with about half the barrel sawed off. Instead of a bullet, the charge fires a six-ounce brass projectile that is about a foot long. Loaded through the muzzle, the projectile has an eye in one end to which is tied the end of a roll of twine. When the projectile is fired, it yanks a "tail" of twine out of a canister clamped to the muzzle.

By trial and error, Buckhorn perfected the paint bomb he needed. He took an ice-cream container of waxed paper and filled it with paint. In the paint he placed a quarter of a stick of dynamite, capped and wired. The detonation wires come out through a hole in the lid.

With this equipment, painting the treetop is simple. Buckhorn, standing about 150 feet from the tree, fires the

projectile over the treetop. On the opposite side of the tree, an assistant picks up the end of the line and pulls the paint bomb, which Buckhorn has tied to his end of the twine, up to the top of the tree. By manipulating the detonation wires as the bomb is hauled upward, Buckhorn keeps it from tangling in the limbs.

Once the bomb is at the top, he touches off the explosive with a battery. The explosion sprays paint around in a thick cloud, coating the foliage.

The DDT spray over the 12 test plots was so successful in insect control that plans are being made for spraying 1¼ million acres of forest lands.

Buckhorn's paint-bombing technique is expected to be a big help in other work as well. Already, plans are being made to use it to guide pilots who make aerial surveys and photographic maps of forest lands.

Buckhorn aims his line-throwing rifle. Canister contains a roll of twine. Insert shows a paint bomb with its explosive

# TREETOPS

Left, after the line is fired over the treetop, the paint bomb is tied to one end and hoisted to peak of tree as shown here. Detonation wires run from bomb to ground. Above, paint bomb is exploded in crown of tall Ponderosa pine. Note the paint cloud around treetop. Below, guided by painted treetops, helicopter sprays forest

U. S. Bureau of Entomology photo

## Group Microscope Has 10 Eyepieces

As many as 10 doctors and technicians can study a slide simultaneously under a multiviewer microscope that projects the image on individual viewing screens. The 10 eyepieces are arranged in a circle around the machine. The doctors can call attention to any portion of the slide by means of convenient control handles that move a small pointer across the screens. The instrument can also be used to project the slide on a wall screen. Used for group instruction in the study of tumor tissues, the instrument costs \$2500.

## Rolling Luggage

Luggage equipped with a "retractable landing gear" can be rolled instead of carried. Two miniature wheels pivot out of one end of the wardrobe case, and a handle can be pulled from the opposite end. The suitcase then can be wheeled around like a pushcart. If the traveler has more luggage to manage, he can pull two extension arms out of the bottom of the case and pile the extra pieces on top of the rolling wardrobe unit.

## Tiny Lens in Door "Inspects" Visitors

Through a wide-angle lens installed in a peep hole in the door, homeowners can see visitors from head to toe before the door is opened. The lens, only a fraction of an inch in diameter, is secured by a brass, chrome or bronze plate.

☐ The manufacture of portland cement involves such diverse equipment as a 600-ton kiln and a balance sensitive enough to weigh the dust from a butterfly wing.

# Iron Strike in Labrador

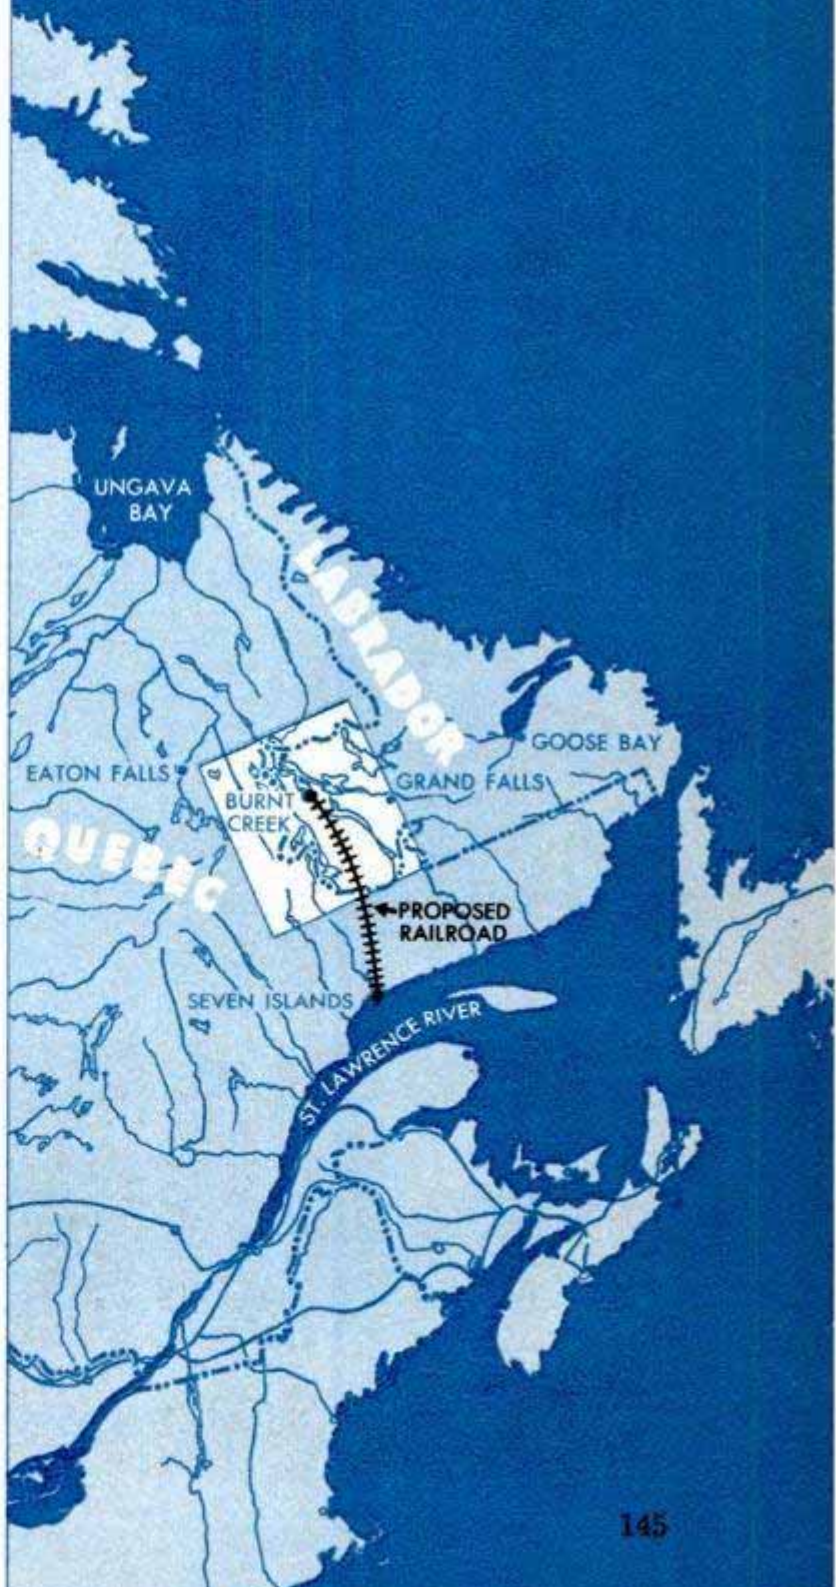

Deep in the northland, along the Labrador-Quebec border, lies one of this continent's richest iron-ore deposits. Map, below, shows the location. Left, modern prospectors use pneumatic drills in search for valuable ore

By James Montagnes

**T**WELVE years ago, Mathiau Andre, an Indian trapper, strolled into Seven Islands, Que., carrying some "pretty rocks" he had found while setting a trap line near the Quebec-Labrador border. His pretty rocks turned out to be extremely high-grade iron ore. Taken back into the unexplored wilderness by airplane, he pointed out that spot where he had picked up the rocks. Subsequent drilling has shown that he discovered what may be the biggest iron strike of the century.

Today, the area from the St. Lawrence River north to Ungava Bay seems destined to be the Mesabi of tomorrow. Prospectors, geologists, financiers and laborers are becoming acquainted with this desolate part of Canada, which a few years ago was unexplored wilderness.

Planes fly into the area from Seven Islands every day and plans are being made to construct a railroad into the iron-ore country. The center of activity is Burnt Creek, a

small mining community of 215 population. This primitive settlement, reminiscent of the gold-rush days, is sitting on one of the richest deposits of iron ore ever discovered. A test drilling located ore only two feet below the surface and was still bringing up good ore when drilling was stopped at 367 feet!

Distance was the main factor in starting a mining development in the Labrador area—distance from the nearest center of civilization, from transportation and sources of power to operate the mining equipment. By air it is close to 400 miles northeast of Quebec City to Seven Islands, a small settlement and fur post on the St. Lawrence River. There is no railway; you go by air or boat to get to Seven Islands. From a base there, air services have been flying in men and supplies to the new iron-ore fields 317 miles farther north.

This iron find in northern Quebec and Labrador is important to the North American economy. It means an ample supply of rich ore for the steel mills of the Great Lakes region and possibly new steel mills on the Atlantic seaboard and throughout eastern Canada. This is important in view of the signs of depletion of the best ore areas in the Minnesota iron ranges. Ore will be shipped from the Labrador area by train to Seven Islands and from there will go by steamer either to Great Lakes or

Diamond-drill crew in northern Canada hauls a core sample of iron ore out of the ground. Below, only 70 miles from the Quebec-Labrador deposits, Eaton Falls is expected to be used to produce electricity

Copyright Photographic Survey Co. Ltd.

Atlantic seaboard steel mills. It is expected that there will be sufficient iron ore in the Labrador region to stimulate completion of the St. Lawrence Seaway, to make for more economical shipment of iron ore by the largest lake freighters direct from Seven Islands to the steel mills of the Great Lakes.

The iron-ore development in this new frontier region is not a pipe dream, for the companies exploring and planning development there have already spent millions on exploration and plan to spend many more. They include some of the biggest mining interests in the United States and Canada, in many cases Canadian gold-mining interests working closely with iron interests from the United States. Long-term exploration concessions have been granted some of the firms by the governments of Quebec and Newfoundland, the latter having jurisdiction over Labrador.

In the major iron-ore development, a large Canadian gold-mining company and a major United States steel company have joined forces to map out 300 million tons of iron ore, enough to keep mining going for at least 30 years. They have been drilling and working in that area since the end of the war. Their search has succeeded to the point where they are now seeing their

minimum ore fields prospected. The railroad they plan to build will run from Seven Islands, on the St. Lawrence River, north into the development. A charter for the railway has been obtained and it is to be started by 1950. The development covers a concession of almost 24,000 square miles, most of it in Labrador.

So far, all transportation into the iron-ore site has been by air. By river, with many portages, it would take too long. By air, the trip can be made in less than two hours. Everything has been flown in, from men to bulldozers to make rough roads in the rocky country. All food comes in by air. Diamond drills, materials for houses, materials to set up chemical-analysis laboratories, ore dump carts and trucks, machinery of all kinds have all been flown in by contract air-freight service and by a subsidiary air-transport company of the mining interests. Even the airports and landing strips had to be built for summer operations after the first supply planes came in during the winter to land on the snow of northern lakes.

When the mining operations actually start, electric power will be developed for the mines from the numerous fast-flowing rivers of the hilly area. The main iron-ore "find" to date is not too far from Grand

**Burnt Creek camp is the center of the exploration activities in the Quebec-Labrador iron-ore development**

Copyright Photographic Survey Co. Ltd.

All supplies are flown into the Burnt Creek camp. This Burnelli transport is being loaded at Seven Islands

Falls on the Hamilton River. A series of falls on the river drops it 800 feet in a short distance, biggest drop being 302 feet. This is considerably more than the drop of Niagara Falls. Another important source of power will be at Eaton Falls, about 70 miles northwest of the site.

As in other parts of northern Canada, electric power will be generated in the northland of Quebec and Labrador long before there are any towns or cities in that area. The power will be used by the mines and as the mines grow, the towns and cities will come to the frontier.

As an example of what this new iron-ore development means to northern Canada, it is but necessary to look at similar devel-

opments in other parts of the northland. In northern Manitoba, for instance, a copper mine in the bush, 400 miles north of Winnipeg, has become a thriving town of over 5000 people in a matter of two decades. The town has all the modern conveniences of any other town its size, only there are no roads out of the town for a drive; the roads lead only into the bush. Much farther north, gold finds on Great Slave Lake have brought into being the town of Yellowknife, largest community in Canada's vast Northwest Territories. Similarly, mining operations in Labrador will see new towns spring up in what is today only wilderness, largely unexplored, and inhabited only by a few Indian trappers and Eskimos.

In the barren surroundings of desolate northern Canada, drillers hunt for the red metal

### Waxing Iron for Skis

Skis can be waxed without thawing them when a small self-heating iron is used. The iron holds a supply of heating disks. When the skis are to be waxed, one of the disks is placed in an opening in the iron and ignited with a match. In about two minutes the aluminum iron is hot and wax is held against it until melted wax runs down a groove and onto the ski. The skier then moves the iron over the ski to spread the wax. A curved edge of the iron rubs wax into the ski groove.

### Electric-Eye Street Lights Turn Themselves On and Off

When it gets dark enough to make vision hazy, individual street lights can now turn themselves on with an electronic eye that "sees" dusk and dawn approaching. The electronic control, small enough to be mounted in the top of each lamp housing, has a peephole through which the outside light is measured by a phototube. As light intensity in the immediate area drops low enough to make artificial lighting desirable, the light goes on. When dawn brightens the area, it goes off. Most control units used today turn entire circuits of lights on or off at a predetermined time regardless of light conditions.

### Crank-Up Garden Umbrella

Opening a new garden umbrella and tilting it into the sun is as easy as turning two cranks. The cranks are located on the support pole just above table-top level. One of them tilts the umbrella and the other raises or lowers it. A transparent waterproof covering protects the umbrella during rainy weather. The umbrellas are available in seven and eight-foot sizes in a large selection of colors and in solid or striped patterns.

☐ In soil-conservation projects, the Department of Agriculture has planted 33,650 miles of field windbreaks in the West.

### Embossing Plastic

If you're artistically inclined, you'll enjoy working with a plastic that is squeezed from a tube to emboss everything from gift packages to drinking glasses. The plastic comes in several colors and adheres to cloth and leather as well as to smoother surfaces. When applied to any hard surface, such as glass or china, it can be removed easily if desired.

### Internal Pipe Wrench

Fittings that break off inside pipes are easily removed with an internal pipe wrench that is turned with a monkey wrench. The tool has only one moving part, a knurled cam that slips into gripping position inside the pipe. It is available in four standard pipe sizes.

### Lacquer-Deposit Calculator

Lacquer deposits on engine pistons are measured quickly with a high-voltage instrument. One terminal is attached to the piston and the other to the deposit. The instrument then measures the amount of voltage required to burn through the lacquer. Since it takes a known amount of voltage to penetrate a given lacquer deposit, the thickness of the deposit can be calculated. The instrument eliminates the former technique of removing the deposits by hand and then weighing them.

### Magnet Holds Soap High and Dry

Suspended by a magnetic holder, a bar of soap remains dry and handy for instant use. A magnet, mounted in a wall bracket, attracts a steel ball that is attached to the soap by a notched stem. When the soap has to be replaced, you remove the steel ball and insert it in a new bar.

Refrigerator inspector peers through a quartz-glass viewer to check the metal hood that will encase the mechanism. Casing is filled with hydrogen. Bubbles will appear if there are leaks. The quartz viewer cuts murkiness of the water, making it possible to see the smallest bubbles

## getting the cold facts

Before a refrigerator reaches a corner of the kitchen it passes through a series of exacting tests to check its efficiency. It must pass leak and noise tests, temperature tests and durability checks under the critical eyes of men and instruments. Inspectors also learn much from refrigerating units that have been in operation for years. At right are shown two such units, one operating constantly for 25 years, the other 28 years. Note the frost that has built up around the freezing compartments. As individual parts break down, they are replaced during "off" cycle of the mechanism. Below, black-light beam is thrown on a compressor to spot possible oil leaks. Oil appears as white spot under the rays

↓ Crystal microphone is held against the mechanism to determine the amount of noise the unit produces  
Frigidaire photos

**COOLING UNIT** will make your bedroom or trailer comfortable during the hot nights this summer. It mounts outside the window and disperses 800 cubic feet of filtered, washed and cooled air per minute

**TAPER LIGHTER**, below right, is a long mechanical match with which you can light gas heaters and burners easily. The striking unit slides up the tube to ignite the wick. It uses cigarette-lighter fluid

**BATHTUB HEADREST** makes reading or just plain relaxing in the tub a comfortable pastime. Suction cup holds it firmly against the sloping end of the tub. The headrest is cushioned with sponge rubber

**ICE BALLS** instead of cubes are the newest idea for cooling drinks. They're frozen in rubber trays that release one at a time when pressed on the back

## WHAT'S NEW *For Your Home*

**BOTTLE RESEALER** locks in the carbonation of soft drinks. A safety valve releases any pressure above 45 pounds to prevent explosion if heated or shaken

**CHILD EATS** eagerly when he "shares" his food with plastic puppy that sits beside bowl, top right. But food falls back into bowl so child gets all of it

**FLOWER PLANTER**, right, has an attractive loop fence around the leakproof container. You hang the planter on wall by placing loops over nails or hooks

**PUSH-BUTTON COOKING** is here with an electric range, lower right, controlled by buttons that glow with colors which show the heat intensity being used

**NEEDLE THREADER** and knife are both part of a handy thimble. Thumb pressure slides the knife out for cutting. Wire loop pulls thread through the eye

## Ambulance With Wings

Standing by on airfields throughout Saskatchewan, Can., are plane ambulances, ready to fly anywhere on the prairies to pick up medical patients who must be rushed to a hospital. The ambulance service is operated by the government and may be called into action by any doctor or responsible citizen. The plane closest to the patient then is dispatched and makes a landing on any reasonably level field in the vicinity. A nurse accompanies each air ambulance. The patient is carried on a stretcher which is loaded through a wide cargo door and secured to the cabin floor. The interior also has three seats for the nurse and relatives of the patient. If

Top, left, local doctor and farmer wave flying ambulance in for landing. Top, patient on stretcher is hoisted through wide door. Above, winged ambulances always stand ready for emergencies

required, a second stretcher can be substituted for two of the seats and a third patient can be carried on a mattress on the floor. Skis are used instead of wheels on the landing gear throughout the winter.

## Auto Tray

Eating in an automobile is a pleasure instead of a juggling act with an aluminum tray that attaches to front or rear-seat backs. A simple ratchet setting adjusts for either seat and rubber-sleeved arms protect the seat covering and hold the tray firmly. The tray was designed chiefly for drive-in eating places, but it can be used on outings and for travelers who like to eat in their cars.

☞ Tides flowing over the earth produce a friction which is slowing its rotation at a rate that will make the day a second longer in 100,000 years.

Ring of flame leaps up around the veteran oil truck. Crewmen of the new airport crash truck, upper right, watch fire spread

## BLANKET OF FOAM SAVES TRUCK

For five years fire engineers have been trying to burn up an old oil truck, but each year a blanket of foam foils the flames. Recently, during the demonstration of a new 12-ton airport crash truck, the oil truck and the surrounding area were doused with 200 gallons of high-octane gas and fuel oil. When the fuel was ignited, fire and smoke obscured the truck. Then fire-protection engineers smothered the flames with a blanket of carbon-dioxide gas and foam. Multijet nozzles deliver the gas at a rate of 800 pounds a minute and the foam at 2400 gallons a minute. Within 45 seconds, the fire was out and the truck was intact without even a flat tire.

With black smoke swirling around truck, crew unrolls equipment. Below, left, after 30 seconds of action, a fire-smothering fog hides truck. Below, fire out, the truck is plastered with foam

Roberts rigs model sailing boats which will appear full size on world's screens through Hollywood magic

## Hollywood Boatman

By Andrew Hamilton

**W**HO IN ALL Hollywood knows more about boats, rigging and equipment than any other one man?

You'll be wrong if you name Charles Laughton because he played Captain Bligh in "Mutiny on the Bounty." You'll score a clean miss if you pick John Ford, Victor Fleming or Tay Garnett, all of whom have directed many sea pictures.

The man you should choose is Benton Roberts, a 46-year-old industrial engineer, musician and graduate of Penn State. He has supplied boats and nautical equipment for more than 1800 Hollywood epics since 1931—approximately 100 pictures a year. What started as a sideline, today provides Roberts with a profitable livelihood for himself and a crew of three to nine men.

"People find it hard to believe that approximately 100 motion pictures containing boat scenes are made each year," Roberts says. "But it's true. Of course, some have boat scenes that are short and unimportant, but others like 'Captains Courageous,' 'Mrs. Miniver' or 'Mr. Peabody and the Mermaid' require weeks of shooting."

If the script calls for a Venetian gondola, Roberts has one that he can truck over to

the studio right away. If a director needs a couple of English longboats, he yells to an assistant who telephones Roberts. If it's a West Indies houseboat that's required—complete with pigs inside and chickens hanging from wire baskets over the gunwales—Roberts can supply it.

Over the past 18 years he has built up a fleet of more than 60 boats of all kinds, shapes and vintages. These range from a sleek, \$20,000 Chris-Craft (which has appeared in more than 50 films) to a crude South American mahogany dugout. In between are dories, dinghies, African war canoes, cabin cruisers, Eskimo kayaks, sampans, English punts, American racing shells, yachts and French longboats. Roberts calls them "character boats." The term is used in the same way that a certain type of actor is called a "character actor."

During World War II the Office of Strategic Services thought so highly of Roberts' collection they bought four of his Philippine-type native canoes. The OSS didn't say what would be done with them. Roberts didn't ask. But a \$600 check was promptly signed and the OSS whisked the canoes away. More than three years later they

were returned. Roberts has reason to believe that they were placed aboard U. S. submarines, taken into the Philippines and used for supersecret intelligence work.

As an engineering student at Penn State, Roberts had no intention whatever of winding up in the boat-brokerage business. But after graduation he came to California and took a job in the engineering department at Hal Roach studios. For several years he was a technician for "Our Gang" comedies. He built such trick props as an automobile that looked like a submarine and an old jalopy that fell apart like the one-hoss shay.

Then came sound motion pictures and the depression. Roberts took a job as pro-

prietor of the West Basin Yacht anchorage in the Los Angeles harbor.

One day M-G-M telephoned and said they needed a couple of yachts for a picture they were making — "Fast Life," starring William Haines. It was easy for Roberts to arrange a deal with the depression-hit yacht owners whose boats were tied up in his anchorage. M-G-M paid them a rental fee; they turned it over to Roberts.

"That was the start of it all," he says. "I worked several pictures for M-G-M. They recommended me to other studios. I've been busy ever since."

As additional orders came in Roberts began to purchase more boats and equipment. He plowed the profits right back into the

Much of Roberts' know-how went into building of the brig, *Pilgrim*, for the movie "Two Years Before the Mast"

Paramount Pictures photo

Assistant works on Roberts' 1918 Liberty engine, used when the movie script calls for shot of prohibition-days rum-runner engine.  
 ↓ Director of a motion picture may need an armada of small boats, so Roberts keeps several outboard motors on hand at all times

Roberts furnished sloop for movie "Lydia." Water in immediate background is real, breakwater is artificial

business. By 1943 he had collected so much stuff that he had to move from the West Basin in the Los Angeles harbor to Lake Machado, a small, marshy lake about half a mile inland.

There he built a combination warehouse, boathouse, repair shop and dock in which to keep his boats and equipment. On the ground floor he stores his most valuable boats. The loft is chock-full of rigging, sail and hardware. On the basement level, which opens toward the lake, is the outboard-motor shop.

His headquarters is practically a nautical museum. All three floors of the 40 by 100-foot building are overflowing with equipment of many types: lanterns, anchors, oarlocks, oars, boarding ladders, rope fenders, fishing gear, cargo nets, gaffs, binnacles, cork floats, dip nets, fishing jackets, boots, cargo lights, wheels, and capstans — almost anything imaginable that could be connected with boats or the sea.

How much is all this worth?

Roberts takes a long look around: "I dunno. Maybe \$100,000—maybe more."

Not long ago the director of the Harvard Museum was in

southern California. He heard through a friend that Roberts had "quite a collection of boats." He was interested because the Harvard Museum also collects boats of historical interest. But when he saw Roberts' extensive array, he shook his head enviously. "Harvard doesn't have anything like this."

Roberts works on a businesslike basis when he is dealing with Hollywood studios. He never sells, always rents. His terms are 10 percent of the value the first week, 5 percent per week thereafter. Charges range from \$45 a day for a speedboat to 25 cents a week for a life preserver.

"Actually, I try to save the studios money," Roberts says. "I know it is easy to cut budgets on an expensive picture by red-penciling the boat sequences. If I can show a director how to save money shooting a scene, he'll want to work with me next time."

Roberts' boats are used both inside the Hollywood studios

About \$100,000 worth of boats, engines, rigging and other nautical equipment is stored in Roberts' three-story boathouse. Below, war-heads for native canoes are spruced up with a new coat of paint

Paramount Pictures photo

For the picture "Saigon" Roberts furnished small native canoes, lanterns, life preservers and coiled rope

and on outdoor locations. Where only a close-up of the actors or the boats is required, shots are taken in studio "tanks" (small, artificial ponds) or "process shots" (against a screen that depicts an open sea, a roaring river or a South Sea dock). But where more of the background is required, Roberts' boats may be trucked to an appropriate outdoor setting. His craft have been shipped as far away as Maine, Canada, Louisiana and Mexico.

Roberts' biggest picture was "Captains Courageous," but his toughest was "Mrs. Miniver."

When the Grand Banks scene in "Captains Courageous," starring Spencer Tracy, was shot off Huntington Beach in southern California, it was a three-week job. Roberts rounded up 100 dories and 14 yachts, repainted or covered the superstructures with black paper so they would resemble fishing schooners.

"Much of that picture was shot on location," he says. "The expense of the rented yachts was terrific. We began shooting early in the morning and continued until late at night. Early one morning a blow came up and all 100 dories broke loose and were scattered along the southern California coast. That's one reason boat scenes are expensive!"

Here's what made "Mrs. Miniver" the toughest picture: M-G-M telephoned one afternoon at 4:00 p.m. and requested Roberts to have 50 boats at the Culver City studio by 6:00 a.m. the next morning. This was during the war, when transportation and gasoline were severely rationed.

Bets were wagered at the studios that

"this was one job Roberts couldn't pull off." But he is a resourceful individual with many friends. The boats were on the set at the appointed time and the shooting went off on schedule. In the script it was only a four-line scene, but it's the one that most people remember from that picture—the evacuation of Dunkirk. Roberts staged it for \$56 under his \$13,000 budget.

A good measure of Roberts' success is due to the fact that he can convert his 60 boats into several thousand different types by altering the sails, changing types of

(Continued to page 254)

Roberts, leaning over the bow, helps M-G-M camera-man rig camera for a low-angle shot just above water

## Machine Shop Unfolds From Truck

Equipped with all major machine and welding tools, a shop mounted on a truck body can cover on-the-job repairs over a large territory. Sides and catwalks fold out from the welded steel body to give protection to the crew in any kind of weather. A drill press, vise and electric grinder are located at the rear. Welding equipment, a lathe, an arbor-press frame and a 50-ton hydraulic jack are built into the truck. Above the shop is a swinging crane with a one-ton hoist. Optional equipment includes a carpenter's kit, blacksmith tools with a forge and anvil, and general shop tools. City electric lines can supply the power or it can be obtained from the truck engine through a power take-off. The engine also provides d.c. for welding.

Top, left, swinging crane with a one-ton hoist can be raised above the mobile shop to handle heavy equipment. Top, workman can stand on catwalk, protected from sun and rain by raised sides. Above, shop folds into a fast-moving truck between jobs

## "Odorproof" Glass Cage Tests Sense of Smell

Smells are studied scientifically in a "smellproof" glass cage at Cornell University. The cage is used in research aimed at uncovering the mysteries of the human olfactory system. The subject must bathe in a detergent, deodorize his nose and throat passages and put on an impervious, Fiberglas suit before being tested. He breathes isolated odors from a glass vial and exhales through a glass tube which pipes his breath into testing instruments. The research is expected to have immediate practical application in the air-conditioning field.

☐ American fur trappers and fur farmers produce about 30 million pelts a year, of which about 5 million are obtained from animals raised in captivity.

WHEN HIS SHIRTS wear out, Harrison Elliott doesn't discard them—to him they have a worthwhile future as raw material for his handmade paper. The New York hobbyist has a papermaking workshop in his home where he produces a variety of beautiful paper that is prized by collectors. Although he prefers to use new cotton and linen fabrics, Elliott has produced excel-

lent paper of unusual textures and colors from his castoff shirts and other garments. Since he is connected with the paper business professionally, his hobby is a sort of postman's holiday to him. However, as shown on the following pages, Elliott likes nothing better than to spend an evening in his home workshop producing fine papers of his own design and manufacture.

Elliott starts the process of converting a castoff shirt into fine paper by cutting the garment into many small pieces. The sharp blade of this cutter speeds the task. The buttons were removed earlier

Rags are placed in this tub where the motor-driven beater converts them into a fibrous mass. It takes several hours to complete the process. Elliott is examining the pulp which is still in threaded state

Beater roll with cover removed to show stainless-steel blades, which revolve against the corrugated bedplate, pounding the pieces of cloth into a pulp

Thoroughly beaten, the pulp is placed in a vat and stirred. Then this mold is lowered into the mixture and lifted out, covered with a thick sheet of pulp

Elliott inspects the watermark design on the screen of a hand mold. The design is formed with fine wire

When pulp is removed from mold it looks like this. Design of the watermark shows up clearly in photo

This step, known as couching, consists of tipping the mold upside down, depositing the pulp on felt

Elliott produces many unusual papers. To make this sheet, he embedded leaves in the pulp during molding

After pulp sheets have been couched, they are placed under a hand press to remove moisture. Press is also used when the paper sheets, after sizing and drying, are squeezed between metal to produce smooth finish

**TAKING DOWN THE SCREENS** is a risky operation when there are 250 tons of them suspended high above a roaring river. But to a former German parachutist who has the job, it is just a way to earn a living. The heavy screen, consisting of large steel rings linked together, was stretched along the top of a big dam in Westphalia, Germany, to protect the hydroelectric installation from destruction by Allied bombs. When bombs fell into the screen, they would explode before striking the retaining wall. Because of the steel shortage in Germany, the 250 tons of screen had to be dismantled. The former soldier doesn't seem to mind his unenviable task of scaling the nets and attaching draglines with which the screens are pulled down

## Picnic Lunch Box Serves as a Table

Picnickers can carry their own table with them in the form of a handsome carrying case that opens to form a sturdy table on which to serve the lunch. Packed for travel, the case holds two large vacuum bottles, eight plastic cups and two metal sandwich boxes. Four hinged legs for supporting the table fold inside the case, which is covered with a durable canvas duck.

## River "Paddle Boat"

Paddling 45 miles a day along the river is not hard work for John Stemle of Jasper, Ind. He does it frequently in a single-seated paddle boat he built for less than \$60. The paddle wheels, each two feet in diameter, are made of welding rods and fitted with small blades. Fenders keep the water from splashing into the canvas-covered craft. He cranks the paddle wheels by hand with an old bicycle frame mounted upside down in the cockpit.

## Portable Saw Cuts Tile

All types of ceramic tile may be cut on the job with a portable tile-cutting machine that employs a high-speed diamond-faced saw with a peripheral speed of 7000 feet per minute. The motor and saw are on an overhead swing-type mount that facilitates control. All moving parts are above the work and chips and dust are washed away by the stream of water that serves as coolant for the saw blade. Jigs for holding various odd shapes of tile are provided and the machine may be adjusted for any desired cutting angle. The tile cutter weighs 80 pounds and may be used for cutting cemented pieces, optical glass and similar refractories.

¶ Instruments capable of measuring deflections as small as 1/1,000,000 inch are used by engineers in testing concrete pavements.

# Hen Tracks on Sound

Artist in sound uses only brush, pen and ink, spacing the dabs and marks by a guide chart under the film

He converts music into photographic terms. The white lines fanned out on black cards make a musical scale

WITH ONLY a strip of celluloid and a brush, Norman McLaren can create jazz music, the sound of a galloping horse, a burp or any other strange noise. McLaren is the one-man producer of the National Film Board at Ottawa, Canada's capital.

As McLaren puts it, he "makes hen tracks on sound tracks" or draws his sounds directly on movie film. The usual procedure in making a sound track is to pick up the sound through a microphone, then convert it into light and dark areas along the edge of the film. When run through a projector, this optical track is reconverted into sound through an amplifying system.

McLaren's method short circuits all these stages. All he does is make little black dabs with a pen or brush on the film. But they aren't just random dabs of ink—they must follow a special pattern and fit into a space less than  $\frac{1}{4}$  inch wide. If the sounds are to be loud he draws them with heavy strokes; if he wants them softer he reduces their size. All the dabs and wiggles must follow a mathematically precise pattern. To produce middle C, for example, he must make about 11 dabs for each picture along the film.

He also is experimenting with sound drawn on cardboard and later photo-

graphed on the edge of the film. In this method, the wave forms can be drawn as large as desired and reduced to the proper width when photographed. This makes it possible to build up complex sound patterns, thereby giving greater flexibility to hand-drawn sounds.

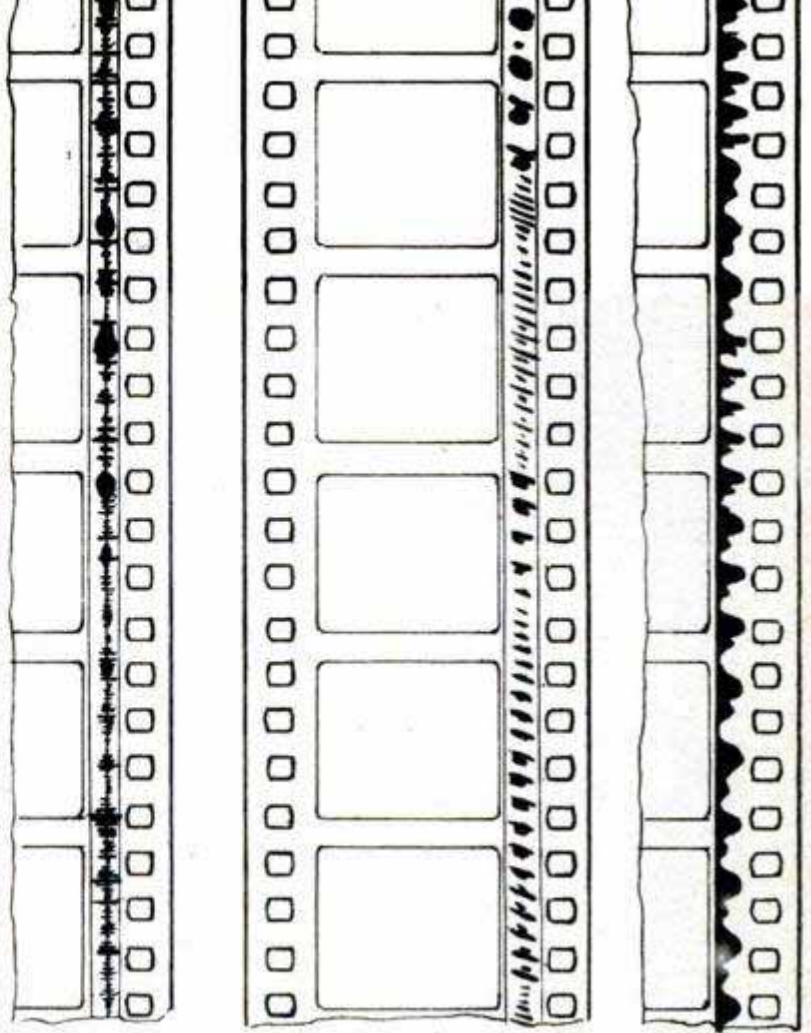

When he is making a musical track, he translates each musical note into photographic jargon on what he calls a "dope-sheet." The pitch, value, time and strength of the notes are converted into a table of technical terms.

McLaren's sound tracks are used with movie cartoons and other short subjects with such good results that the sound often steals attention from the picture itself. One film is a Baron Munchausen fantasy which depicts an upside-down world with upside-down sound. The hand-drawn sound is crammed on the film with fantastic results. Among his other numbers are a Bach rendition that sounds as if it were played on a buzz saw and "Pop Goes the Weasel" on an electric organ.

The artist's idea is not to copy existing sounds but to make new sounds which can't be obtained in any other way. Most of his sound tracks are, as he puts it, "a symphony of burps and rude noises" which produce hilarious results.

# Tracks

McLaren paints a scale on card. Each wavy strip is a different note but has the same tonal quality

↑ Left strip is conventional track, other two are hand-drawn. Below, animation camera shoots sound on a card

### Self-Righting Life Jacket

Unconscious victims of sea disasters can't float face down in the water when they wear a self-righting life jacket developed in England. A gas cylinder inflates

the jacket and the air pocket supports the wearer face up on the surface. The jacket can be slipped on and inflated in less than 10 seconds. A canvas handle on top of the jacket permits rescuers to lift an unconscious survivor from the water.

### Spring Winder

Springs of any size up to one inch can be turned out with a winder that is held in a vise. The winder, which can be operated by an inexperienced worker, uses wire up to  $\frac{1}{8}$  inch in diameter, and winds springs to any length and pitch. Turning a crank winds the spring to the desired size. The winder is part of a kit which also includes five mandrels and six coils of spring wire in various diameters.

### Air Vent for Hot-Water Heating

Venting air from hot-water heating systems is completely automatic with a new valve that requires none of the preliminary soaking needed with previous types. It can be used on both forced-circulation and gravity-circulation systems, either new or existing. A selector screw, easily adjusted, provides an automatic air eliminator, manual shutoff or manual venting.

### Radio on Farm Tractor Is Shockproof

Farmers can now hear their favorite news broadcasts, weather reports and other radio programs as they operate their tractors in the field. Designed especially for mounting on farm tractors, the new radio is waterproof and shockproof. It has six tubes and a telescoping antenna.

### Garage Lift-Post Jack Rolls to Job

Two small wheels on the base permit a new lift-post jack to be wheeled to the proper position. Designed for garages, the jack has a short handle so that it can be used in confined places. It lifts at the bumper or bumper bracket and can be manipulated from a standing position. When a car has been lifted, the complete wheel is exposed to permit quick changing of tires, inspecting brakes or packing wheel bearings.

### Feeder Tees Balls For Golf Practice

Golf balls are automatically teed up for practice shots by a machine installed on practice driving ranges. The golfer deposits his bucket of balls in a cylindrical container. Each time he presses a lever with his golf club, a ball rolls down a wire track and comes to rest on a rubber tee. When the lever is released, the track springs up, away from the ball.

Arm swings upright when ball rests atop tee. Inset shows how ball rolls down track to the tee

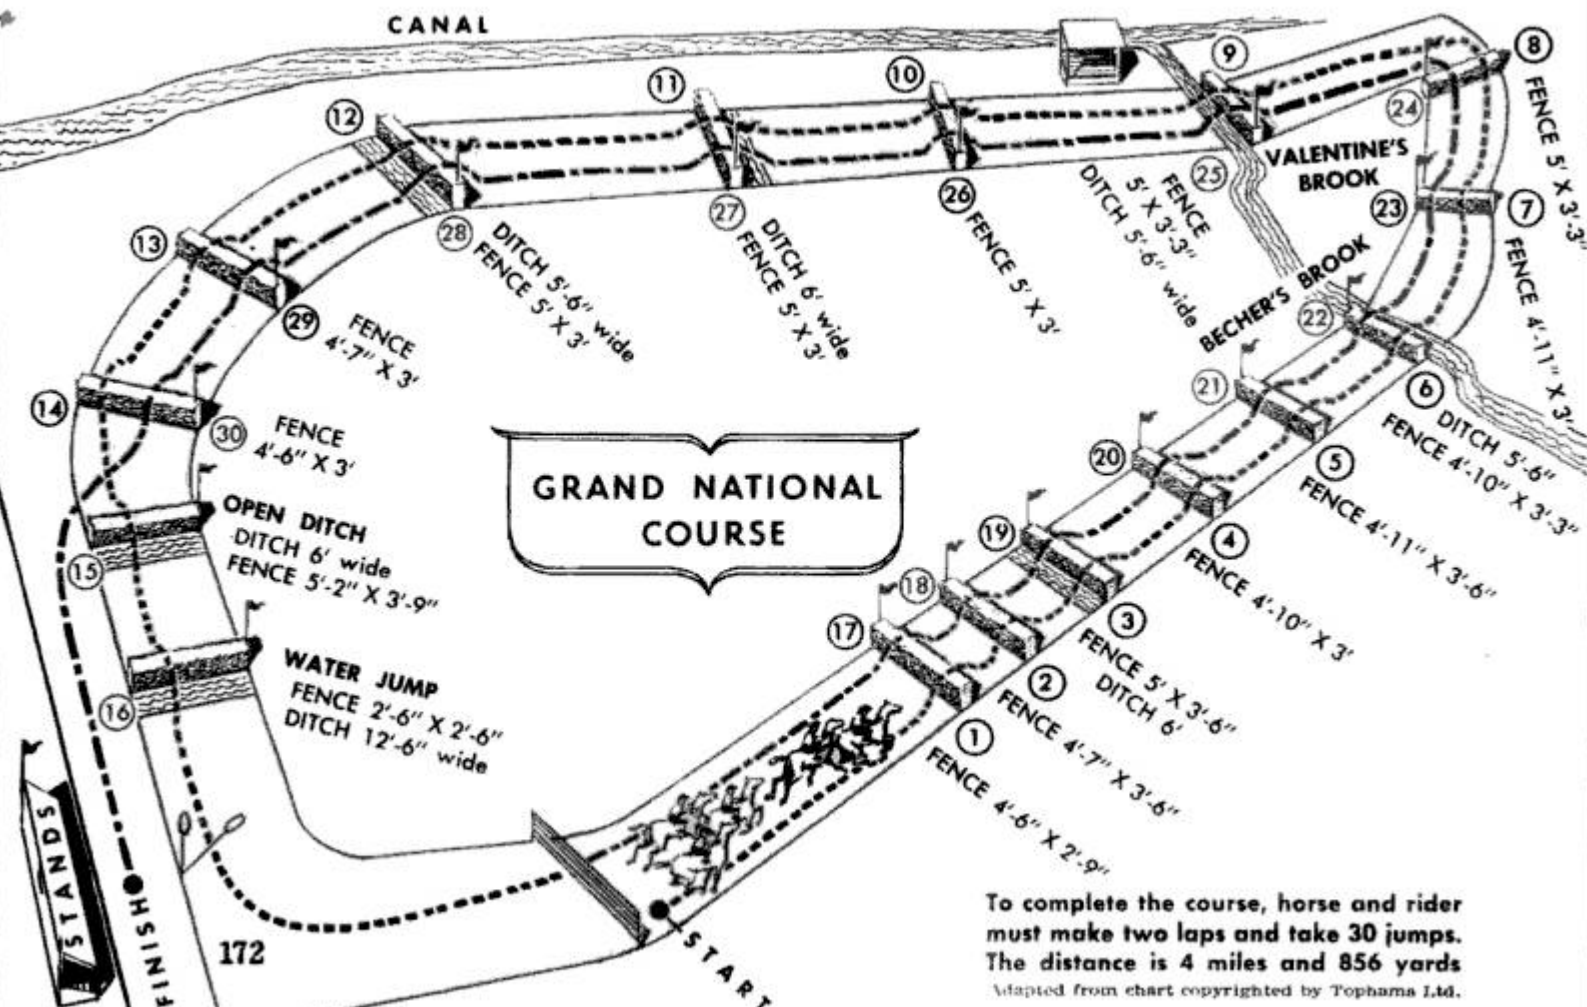

For information concerning sources of supply for commercial products described in this issue, turn to the WHERE-TO-BUY-IT INDEX (page 8), listing manufacturers' names and addresses

Slow horses have won at Aintree, but none without greatness of heart and endurance can meet the challenge of the fences and brooks that have tested the Grand National winners since 1837

A field of jumpers clears Becher's Brook which has taken a heavy toll of Aintree aspirants in the Grand National Steeplechase race

## Steeplechase Supreme

To complete the course, horse and rider must make two laps and take 30 jumps. The distance is 4 miles and 856 yards. Adapted from chart copyrighted by Tophams Ltd.

Crowd gathers along rail at deadly Becher's Brook. Horses must clear brook 5½ feet wide beneath fence

**S**PILLS AND THRILLS by the thousand have lured steeplechase fans from all over the world to the Grand National Steeplechase Course at Aintree, England. Owners of stout-hearted jumpers have traveled halfway around the globe with their entries in the slim hope they had a winner. One New Zealand horse, Moifaa, actually swam part way to England to enter and win the race. The ship on which Moifaa was being transported was wrecked off the coast and he swam ashore. That was back in 1904.

Moifaa was said to be one of the ugliest and ungainliest of horses ever to win the race. Beauty doesn't count at Aintree when the chips are down and the fences and water jumps on the second lap seem to get taller and wider. That is when horse and rider, plagued by fatigue and riderless mounts, must call upon hidden sources of endurance and courage. Some Aintree winners like Golden Miller have been real beauties and models of grace as they took the

jumps, but many have been plodders. What every Grand National winner has had to have is the heart of a champion.

Twice around this gruelling course equals 4 miles and 856 yards. There are 16 jumps on the triangular course and all except two are taken twice. The most famous of the jumps—which trainers and owners of steeplechase entries mention only in whispers—are Becher's Brook, Valentine's Brook and Canal Turn (No. 8 on the map on the opposite page).

Another thrilling moment at Becher's Brook as a favorite takes the jump

There are plenty of spills and broken bones at Aintree. On second lap, riderless horses add to the hazards

Aintree, a suburb of Liverpool Port in Lancashire, has seen this race run every year since 1839 except for three years in World War I and five years in World War II. The Grand National really started in 1837 over a course at Maghull but it was not until 1843 that the race was handicapped. From four starters in the first race — an all-time low — to a record of 57 in 1947, the Grand National has shown a preponderance of British winners. However, Battleship, an American horse and the son of Man o' War, won in 1938 in 9 minutes 29 $\frac{1}{2}$  seconds. That was within the six fastest times ever recorded for the course. Golden Miller made the fastest time in 1934, finishing in 9 minutes 20 $\frac{1}{2}$  seconds, carrying a rider who weighed 170 pounds.

The race is run in March each year, getting off amid great excitement to a straight 471 yards to the first fence. This is made of

close-packed gorse to a height of 4 feet 6 inches and is 2 feet 9 inches thick. A second similar fence an inch higher and 9 inches thicker follows. Then comes a fence of spruce 5 feet high and 3 feet 6 inches wide with a 6-foot ditch on the take-off side 2 feet 6 inches deep with a guard rail 1 foot 6 inches high in front of the ditch.

These jumps and the three succeeding are on the long straight course to Becher's Brook. Here many a man has seen his chance of winning vanish with his stake money. Becher's is made of fir to a height of 4 feet 10 inches and is 3 feet 3 inches wide. It looks innocent enough until half-way over. Then the jockey sees a ribbon of water on the far side stretching 5 feet 6 inches farther on. This is a natural brook running into a nearby canal.

There are more legends centered around Becher's Brook than any other part of

The Water Jump is 15 feet over-all. Among these entries finishing first lap are two horses without riders

An American entry (with 100-to-1 odds) clears Aintree hurdle

the course. Steeplechase followers like to tell about the great horse, Sprig, who cleared not only the fence and brook but also two fallen horses. This carried Sprig to victory and racing immortality in 1927. Sprig had competed twice before in the race as is often the case with winners.

Once over Becher's, the course bears left over another fir fence to Canal Turn at which a spruce fence 5 feet by 3 feet 3 inches leads immediately to another acute turn to the left. This brings the field to Valentine's Brook, actually a second crossing of Becher's near its junction with the canal. Although it is two inches higher than Becher's, it cannot claim as many victims.

It was at Valentine's Brook that fiery Easter Hero, known as "the greatest horse that never won the Grand National," met his doom. The cheers of the crowd followed this magnificent horse as he led from the very start of the race in 1929. But after he cleared Valentine's it was apparent that something had gone wrong. Later, in the paddock, after Gregalach had won, it was discovered that Easter Hero had spread one of his light racing shoes and could hardly walk. This horse was owned by an American, Jock Whitney.

After Valentine's comes a succession of easier jumps until the rider comes to Open Ditch. This has a fence of spruce prefaced by a 6-foot ditch that is banked by an 18-inch guard rail. The next one, Water Jump, which is 15 feet wide over-all with a thorn fence of spruce, ends the first lap. The second lap omits Open Ditch and Water Jump. Dodging around Open Ditch, the final stretch of 494 yards leads past the grandstand and tests the tired horses to find a winner.

During the 112-year history of the Grand National only 11 mares have been winners and only two four-year-olds. The three leaders are usually in the seven-year-old class. Since 1900 some 30 of the winners have been bred in Ireland, which leads envious trainers to remark that these horses have "the luck of the Irish" with them. This was true in 1928 when Tipperary Tim, who wasn't considered to be in the running, splashed through mud and rain to win. Only one other horse, Billy Barton, finished that day.

The key to success at Aintree seems to be good muscles, a fighting heart and a bit of Irish luck.

Tired horses on second lap are shown taking Becher's Brook. Sometimes only a few horses finish the race

### Hobbyist Carves Monkeys From Peach Stones

Using only a pocketknife for a tool, Captain Adrien Joly of a police and fire station in St. Jerome, Que., Can., carves monkeys from peach stones. The figures follow outline of the stones and show the monkey curled up, complete with eyes, ears, hands, feet and ribs. Each figure requires about 36 hours to carve. The craftsman then fashions them into necklaces.

### Plane Pitches First Ball

Japanese high-school baseball teams started play in a tournament at Osaka with a ball dropped to the pitcher's mound from an American reconnaissance plane. It was then thrown by an American officer to a schoolboy catcher to formally open the competition. Donated by the American League of Professional Baseball Clubs, the ball had streamers attached for the drop.

### Deposit Box Has Combination Lock

Complete privacy for your important papers is assured when you place them in an all-metal box that opens only when its five rotary locks are turned to the proper combination. Each of the locks is controlled by a plastic dial mounted along the front edge of the fire-resistant box. Small enough to be packed in your suitcase, the box keeps confidential papers and other valuables secure while you are traveling.

### Twin-Light Floodlight Unit

Using two photoflood lamps in a pair of 11-inch reflectors mounted on the ends of a bracket, a lighting unit for either movie or still cameras assures adequate illumination on moving subjects. As the photographer follows the subject with the camera, the lights do likewise. Light in weight, the unit has a convenient on-off switch just below the camera. It can be used with or without a tripod and it folds compactly for packing in a small carrying case.

## Variable-Pitch Prop Backs Up Boat

With a variable-pitch propeller for outboard motors the boatman can maneuver his craft in reverse, idle the motor in neutral or go forward at three different speeds. The propeller unit can be installed with a wrench and screwdriver. The controls are fastened directly under the gas tank.

All external parts of the propeller are made of aluminum alloy, with the bushings and drive shaft of stainless steel. If

the control lever or rod is damaged accidentally, the propeller automatically moves into a forward driving position.

Official U. S. Navy photos

## Mesh-Wire "Cocoon" Shields Radar

Fine mesh wire covers the entire inside of the Navy's \$2,000,000 test hangar nearing completion at Patuxent River, Md. The fine wire screens out all electronic disturbances. The hangar will house the equipment for tests on radar and other electronic devices in aircraft. One of the largest shielded buildings ever constructed, it is 300 feet wide, 178 feet long and more than 67 feet high. A bay, 79 feet long and 35 feet high, will accommodate the nose of larger-type planes. Two layers of wire mesh have been laid in the concrete floor and bronze spring contacts join the shield at the door openings. Four miles of soldering were required

Fine mesh wire completely lining the interior will shield experiments within the Navy Air Test Center hangar from all electronic disturbances

to bond all the joints in the covering. Mesh was used because it is cheaper and permits ventilation and light.

# SMOG SLEUTHS

Above, attendant inspects box which generates test vapors that are blown into the smog chamber, below

EVERY DAY millions of tons of potentially deadly contaminants are poured into the air above our big cities and industrial areas. These lethal fumes are ordinarily carried off by the wind and harmlessly dissipated, but sometimes certain weather conditions combine to prevent their escape. The fumes may then descend in a poisonous cloud, causing acute discomfort and, in extreme cases, death. This is what happened at Donora, Pa., in October 1948, when a choking smog filled the narrow valley where the town is located, bringing death to 19 persons.

Smog has been hanging over industrial cities for years, but still nobody can say exactly what it is. Its name is a combination of the words "smoke" and "fog," but it is not that simple. There are as many theories about smog and what causes it as there are people studying the problem, but everyone agrees that something must be done about it, and soon.

Scientists of the Stanford Research Institute at Palo Alto, Calif., are trying to solve the mysteries of the smog which plagues Los Angeles, causing eye and throat irritation and reducing visibility.

Even though smog is visible, compounds which cause eye-smarting may be invisible and the amount of contaminating material

Fairchild Aerial Survey photo

**Air view of Los Angeles shows smog layer. Warm air mass above smog prevents it from rising and dispersing**

may be less than ten parts in a billion parts of air.

To bring smog into the laboratory where they could try out the suspected irritants on human "guinea pigs" under controlled conditions, the research-institute scientists developed the smog chamber.

It is a galvanized sheet-metal cubicle, big enough to walk around in, mounted on a movable platform so that it can be taken wherever the scientists want to make tests. One wall has an observation window and in the rear wall there is a small vaporization compartment where the smog is created. A blower sends it into the chamber where the subject records his reactions.

Technicians control the flow of smog through the chamber with dampers in the ducts leading into the chamber. Vapors in the chamber are picked up by an exhaust flue in the ceiling and either discharged or recirculated through a return duct.

Counting the blinks the eyes make when exposed to smog is a good way to measure the amount of eye irritation caused by smog. To measure blink rates, the scientists use goggles fitted with photoelectric cells. Smog vapors are fed into the air space between the goggles and the subject's eyes.

The photoelectric cells pick up the light reflected from the whites of the eyeballs and record each time this light is interrupted by a blink. By comparing the person's normal blink rate with his blink rate when the smog is irritating his eyes, researchers measure the effects of various irritants.

Chemical compounds such as sulphur dioxide, sulphur trioxide, formaldehyde, acrolein, oxides of nitrogen, hydrogen per-sulphide and elemental sulphur, which can cause eye and nose irritation, are being tested one at a time and in combination in the smog chamber.

Some of these chemicals already have bad reputations. In 1930, in the Meuse River Valley in Belgium, 68 persons were killed by a smog of industrial fumes which filled the valley. The victims died as a result of inhaling the deadly chemicals borne on minute fog droplets.

Dr. L. Dautrebande, Belgian scientist and authority on smog who did a great deal of research on the Meuse Valley disaster, is coming to the Stanford Research Institute to explore the possibility that the irritants in the Los Angeles smog are being carried by these minute liquid droplets.

Spotting the irritants in the atmosphere calls for special instruments.

"If you squeeze all contaminating gases and moisture out of 200,000 cubic feet of Los Angeles air," explained one of the scientists, "you will have about one third of a barrel of water. In this quantity of water there will be dissolved perhaps twenty drops of contaminants, of which only a very small part may be the irritating or haze-producing materials we are looking for. The actual amount of contaminating material in 200,000 cubic feet of air may be so little that no method now exists to analyze it chemically. New methods must be invented."

An instrument to measure sulphur dioxide in the air looks like a Rube Goldberg invention with its maze of tubes, wires and tanks. It takes samples of the outside air and passes them through a tank

Above, complex apparatus measures tiny amounts of sulphur dioxide in the air. Below, transmissometer in box sends a beam of light into the large smog-filled pipe and measures the visibility loss caused by the vapor

containing a solution of hydrogen peroxide.

If there is any sulphur dioxide in the sample, it is oxidized by the hydrogen peroxide to form sulphuric acid. Electrodes in the tank instantly record any change in the conductivity of the solution caused by the formation of sulphuric acid.

Another ingenious device for studying smog, the Venturi scrubber, uses a vacuum cleaner as its suction pump. Impurities in the air are literally scrubbed out as the outside atmosphere is sucked at a speed of over 200 miles per hour through the narrow neck of a Venturi tube. The high speed of the air as it rushes through the narrow opening of the tube causes it to mix violently with droplets of water being sprayed through the tube. Dust and other particles which are washed out are later removed from the water and tested to determine their nature.

Thousands of dollars are lost every year by airlines

(Continued to page 252)

Above, photoelectric cells measure the blink rate of the eyes as smog is forced inside goggles. Light, reflected by the whites of the eyes, actuates cells. Below, Venturi scrubber washes impurities from the air

Portable test equipment is used to measure the amount of eye irritants in the air

# Mechanical Miners

Right, the 26-ton Colmol breaks up the coal with 10 rotating cutters. Below, demonstration of machine shows how coal is conveyed to rear

**M**ACHINES that dig coal faster than trucks can haul it away may soon be helping fill your coalbin. These mechanical miners are expected to make national coal production soar. Our best mines are now producing approximately 15 tons per man per day and our national average is 5 tons per man day.

With the new mining machines even the 15-ton rate will look skimpy. Eliminating the usual step-by-step mining sequence of cutting, drilling, blasting and loading, the new machines, in one continuous operation, roll up to the coal face, rip the coal from

Below, the Joy Continuous Miner has its control panel about 14 feet behind the nose. Left, the Joy machine in operation underground. Notice its low profile

the seam and convey it into trucks at rates up to 100 tons per man day! Blasting and time-consuming drilling are eliminated.

Electrically driven, the machines move under their own power and resemble giant alligators as they "squirm" around obstacles and under low roofs.

The Colmol (pronounced "coal mole") has a rectangular cutting head that burrows into the seam with two rows of five rotating cutters. Teeth on the cutters rip the coal free from a face 9½ feet wide and 4 feet high, advancing 3 feet a minute under good conditions. Rotation of the cutters sweeps the coal onto a conveyor which carries it to the rear where it spills into trucks at a rate of three tons per minute. It takes only one man to run the powerful machine.

The second machine, the Joy Continuous Miner, has a capacity of two tons a minute. Its "snout" is a menacing looking affair with jagged teeth that scrape the coal loose and carry it back to a conveyor. Six rows of carbide mining bits, mounted on an endless-chain arrangement, move continuously around the snout, knocking the coal free. As the coal is ripped away, the operator raises the cutter head to cover the height of the seam. An intermediate conveyor moves the coal from the ripper snout to a rear conveyor that transports it to the trucks. Controls are located 14 feet behind the nose.

By eliminating all blasting, both machines increase safety and reduce the timbering required to support the roof. Water sprays wet the coal during cutting operations to reduce dust to a minimum, thus improving working conditions.

Both companies are cautious about claims for their new machines, but mine operators who will use them say that their new problem will be to keep the machines from burying themselves in the coal they have mined. They work so rapidly that it will take a conveyor-belt system to keep the coal moving to the surface.

## Cattle Feed From Cordwood

By Patrick G. Kellogg

PART OF THE nourishment in a beefsteak or glass of milk soon may come from a pile of sawdust.

Chemists at the U. S. Forest Products Laboratory, Madison, Wis., have perfected a process for converting wood waste into a molasses that can be used as cattle feed. In tests, beef cattle have fattened as fast with the molasses supplement as with corn, and dairy cows produced just as much milk.

The chemists extract blackstrap molasses from sawdust and other waste by cooking the waste with dilute sulphuric acid under pressure to produce sugar. Then they reduce the sugar to molasses by evaporation and distillation. The process yields 150 to 160 gallons of molasses for each ton of the wood waste.

Molasses can be extracted from almost any type of wood, although the yield depends upon the amount of cellulose available. Various forms of wood from sawdust to cordwood chunks have been used with almost equal success. Waste from turpentine-extraction plants produces almost as much molasses as other types.

Germany produced alcohol by a similar process during the war. Wood alcohol was essential to Germany's wartime industries and was used extensively as a fuel to power the V-2 jets.

The molasses-makers run cordwood chunks through a "hog" which chews them into slivers or chips. The splinters are blown into a storage bin until they are needed, then poured into a tall tank in batches of 300 to 400 pounds each. In the "digester" tank, the wood is cooked under high-pressure steam with sulphuric acid and water. The acid breaks down the large carbohydrate molecules into small sugar molecules. The solution then is neutralized with lime and filtered.

War-surplus distillation units at the laboratory condense the material, which is further thickened in a vacuum still. Even more purification produces a syrup or sugar that is fit for human consumption.

The process may be a tremendous help in reducing the critical food shortages in the world. Dr. Elwin E. Harris, specialist in charge of the experiments, estimates that wood wasted in finishing the floor of a small home could produce three tons of molasses.

Timberland owners are especially interested in the new process. Even the slashings and trimmings from a farmer's wood lot could be used as a source of molasses. Industrial glucose, now produced by the breakdown or hydrolysis of starch, also can be obtained by using the process.

## World's Largest Testing Machine Has 5,000,000-Pound Capacity

Load capacities up to 5,000,000 pounds make a new testing machine at the Philadelphia Navy Yard the world's largest. Paradoxically, it will test the lightest aluminum and magnesium structures aeronautical engineers can design. Forty-seven feet high, the new machine handles specimens up to 30 feet high and 50 feet long in the 10 feet between its columns, and subjects them to high stresses in tension, compression and bending. A crosshead at the

top and a bed at the base remain stationary, either tension or compression coming from downward movement of a 136,000-pound steel "sensitive" crosshead. Pacing disks provide constant rates of increasing load or strain. Loads are measured by the Emery cell, a shallow cylinder containing a loose-fitting piston and a metal diaphragm, so arranged that load on the specimen causes pressure change on a thin film of liquid trapped between the piston (and diaphragm) and the cylinder bottom. The ponderous machine registers load variations of as little as five pounds.

## Adapter Converts Table Saw Into Horizontal Drill

Almost any table saw can be converted into a horizontal drill by an adapter that is installed in a few minutes. The saw blade and the dust-chute cover are removed and the conversion unit mounted in place with the two screws that normally hold the cover. A V-belt driven by a pulley on the saw arbor supplies the power to the drill.

☛ On U. S. farms today there are 1,880,000 trucks and 4,860,000 pleasure cars.

# the craftsman section

**CONCRETE STEPS** add much to a new home and help to modernize the appearance of an old one. See how you can build them yourself on page 205

**FINISHING FURNITURE** is an important step for the home craftsman. A story on page 198 gives the correct methods

**PORTABLE SAW TABLES** are handy in the crowded home shop or on the farm. An article on page 221 shows an unusual saw table of this type

**CAMERA REPAIRS** made periodically will assure your equipment being ready for that all-important picture. Refer to story on page 215

**By John B. Campbell**

**R**EMINISCENT of early counter scales, this smart-looking ivy balance in gleaming brass provides a distinctive and unusual table ornament. It's a lathe-and-drill-press project and especially aimed at the metalworker who takes pride in turning out an excellent piece of craftsmanship. With the exception of the steel knife edge and the ivory dial, all of the parts are made of brass, although the base and column can be of wood such as walnut, mahogany or ebony, varnished and hand rubbed.

Though the original was designed actually to serve as a balance, provision is made whereby the beam can be locked in a horizontal position to "balance" potted ivy. Details of the three parts comprising the base are shown in Fig. 2. These are drilled and tapped for bolting together with flat-headed machine screws, and the top piece of the stack is counterbored. Next, a flared member is turned which also is counterbored to fit over the shouldered projection of the piece beneath it. The upper end of the turning is turned down to fit inside a tubular post which is tapered from its full diameter at the bottom to  $\frac{7}{8}$  in. at the top. After this, a  $\frac{1}{64}$ -in. hole, counterbored for a 4-40 fillister-head ma-

chine screw, is drilled transversely through the post  $\frac{7}{8}$  in. up from the bottom.

Next, make the knife edge of stainless steel. This is sawed from  $\frac{1}{2}$ -in.-dia. stock and filed smooth to the dimensions given in Fig. 3. Both the locking pin and its ornamental knob, used to lock the crossbeam in a fixed position, are turned from brass. The clevis head and its component parts are detailed individually in the pull-apart view in Fig. 3, and shown assembled in the sectional view, Fig. 2. The two clevis members are fastened to the upper and lower rectangular plates with 4-40 flat-headed machine screws. The plates are first turned to a circular shape and then turned with a boss which is drilled and tapped. The upper plate is tapped to receive the threaded stud of the top ornament, while the lower plate is tapped to take the upper end of the threaded stud which ties the clevis, base and post assembly together. The stud consists of two lengths of rod threaded and soldered into a block as in Fig. 2.

A thin piece of ivory-colored plastic is used for the dial, Fig. 6. This is attached to the post by means of a brass support piece and a diamond-headed machine screw and nut, both being detailed in Fig. 6. The

threaded portion of the screw should be long enough to enter the nut only halfway, the balance of the threads in the nut being taken up by a fillister-head screw from the back. The crossbeam is filed to the shape shown in Fig. 1 and then drilled and tapped, at the point indicated, for a 6-32 setscrew. Care should be taken to make the beam symmetrical and balance it accurately. To balance it, file out the triangular hole and clamp the knife edge in place. Then test the balance occasionally as filing of the beam progresses. Note that a hole made with a No. 55 drill is located at the apex of the triangular hole. This assures a firm grip on the flat surfaces of the knife edge when the setscrew is tightened. The triangular hole must be filed with care to

make sure that the knife edge, when clamped in place, assumes a true right angle with respect to the flat surface of the crossbeam. A  $\frac{3}{32}$ -in.-dia. pin having rounded and polished ends and of a length slightly less than the width of the space existing between the sides of the clevis, Fig. 1, is driven through a hole drilled in the crossbeam close to the apex of the triangular hole. This pin prevents the surfaces of the crossbeam from rubbing against the inside surfaces of the clevis. The crossbeam is positioned within the clevis and fastened to the knife edge by a setscrew from the top. Access to the setscrew is provided by the hole for the top ornament. Finally, the pointer, cut and filed according to Fig. 1, is attached to the projecting end of the knife edge with a setscrew. The two eyes from which the pans are suspended are filed from  $\frac{1}{8}$ -in.-thick brass to the dimensions in Fig. 3. Note that the inside top edge is filed to a blunt knife edge to engage the notches in the crossbeam. Three holes for attaching the chains supporting the pans are drilled in the lower edge of each eye.

Spinning may be employed in dishing the pans, or the dishing can be done in a press like the one detailed in Fig. 5. Two wooden blocks, one being turned concave, Fig. 4, and the other convex, serve as dies between which brass disks are placed and clamped to dish them. Finishing consists of buffing each part individually and then coating it with clear lacquer to prevent tarnishing. If desired, an attractive "graining" can be applied to the clevis parts before they are lacquered. This is done by rubbing them back and forth on a sheet of fine emery cloth placed on a flat surface. The parts are held against a guide strip while rubbing so that the graining will be parallel with the edges of the parts.

# Appropriate Book Ends for the Home Workshop

What could be more appropriate to hold your craft books in the workshop than these novel book ends? Although appearing to be piercing the books, the handsaw actually is in two parts and, to further typify a workshop hobby, the bases of the book ends are made to represent carpenter's squares. If an old handsaw is not available, make the saw blade from sheet metal and the handle from hardwood which matches the veneer on the bases. Note that tabs on the ends of the blade sections are glued in slots cut in the base uprights. A better bond is had if the gluing surface of the blade is roughened before the glue is applied. The base of each book end consists of two pine blocks covered with a dark veneer, preferably walnut or mahogany. Glue and nail the blocks together and apply the veneer over the entire surface except the bottom, which is covered with felt. Reproduce graduations on the edges of the bases by inlaying them with strips of light-colored wood.

Axel E. Ogren, Chicago.

## Plywood Backing Aids Cutting Plastic With Magnetic Scrollsaw

To simplify cutting sheet plastic with a magnetic scrollsaw, one craftsman adds rigidity to the sheet by clamping it to a plywood backing. This reduces vibration of the plastic, makes the work easier, and lessens the possibility of breaking the sheet.

If the protective paper has been removed from the plastic, the pattern can be drawn directly on the backing. Small pieces of plastic can be similarly jigsawed by securing them temporarily to the backing with mucilage or water-soluble glue.

## *It's Coming Next Month-*

### POPULAR MECHANICS MASONRY HOME

#### *Our Answer to Your Housing Problem*

● The less expensive sequel to our *Build-It-Yourself Frame House*, it is a cozy home of five large rooms—living room, two bedrooms, bathroom, cabinet kitchen and utility room—approximately 674 square feet of comfortable living space. And it is all yours, complete with laundry and heating plant, for less than \$3650 if you build it yourself. Anyone who can mix mortar and cement can build the house. Carpentry consists mainly of putting on a simple hip roof. Insulated floors are poured concrete, exterior walls are concrete blocks stuccoed outside, and partition walls are tile. Walls in all rooms are furred out and plastered. In the descriptive story next month, see how easily anyone can build this beautiful, lasting home.

# Solving

Placing a wadded napkin in a Thermos-bottle cover keeps the cork from working loose. When the cover is tightened, pressure of the napkin holds the cork securely in place

Made of aluminum tubing, this piecrust vent produces a crust unmarred, except for a hole in the center. Half of the tubing is cut in four parts bent outward

Plastic shower-curtain hooks provide attractive hangers for pot holders. The rustproof hooks come in bright colors and allow the pot holders to be hung easily from either a screw hook or a nail

To keep a needle threader handy, store it in a holder made by attaching an adhesive bandage to the sewing machine. Slip threader under gauze portion of bandage

Lubricating zippers that have a tendency to stick is done simply by rubbing the teeth with wax. Occasionally lubricated in this way, the zippers will function smoothly

# Home Problems

If you do not have a glass funnel when pouring corrosive liquids into a small-necked bottle, the rubber cap from an extension-cord plug provides a good substitute in a pinch

The glass shades of hurricane lamps will stay clean and retain their sparkle longer if they are wiped with alcohol. Wash the shades as usual and wipe with an alcohol-moistened cloth

In many cases, applying vinegar to the joint of a broken chair rung or slat will loosen the glue sufficiently to permit easy removal of the part. Apply the vinegar with a small oilcan and allow to stand for a few hours. Repeat application if necessary

When power fails, an emergency lamp can be improvised by floating a thin piece of cork, which holds a string wick, in a glass filled with salad oil

A wire coat hanger forms a neat trellis for a potted vine. The hanger is bent into a figure eight and the hook is straightened and inserted in the dirt

## Air-Rifle Target Held on Tree With Auto-Tire Section

Fastening a section of old auto tire to the back of an air-rifle target permits clamping it to a slender tree or fence post. The tire section should be attached with screws and washers so it will not pull loose from the target when the latter is taken down.

## Easily Made Calculating Scale Speeds Figuring Dimensions

To save time when working with fractional dimensions, I made this handy calculator which is ideal for simple multiplication and division. The upper half of the calculator is 12 in. long and marked off in  $\frac{1}{16}$ -in. divisions. The lower half, also 12 in. long, is marked directly under the upper half but into 24 major divisions. Each major division has eight minor divisions located to coincide with those on the upper scale. In this way, any reading on the lower scale

is exactly double the opposite figure on the upper scale. To multiply a dimension by two locate the dimension on the upper scale and read the answer directly below it on the lower scale. An example is given in the drawing. Any figure from zero to six can be multiplied by four by doubling it, as above, locating this result on the upper scale and then reading the final answer directly below it. The reverse procedure, of

course, is used for division, the original figure being located on the lower scale, and the answer read on the upper scale.

Harry M. Suttle, Sacramento, Calif.

## Plastic Insert for Jigsaw Table

If the metal insert in a jigsaw table is replaced with one of clear plastic, the lower chuck can be seen easily, permitting quick changing of the saw blades.

## Rubber Bands of Different Sizes Cut From Inner Tube

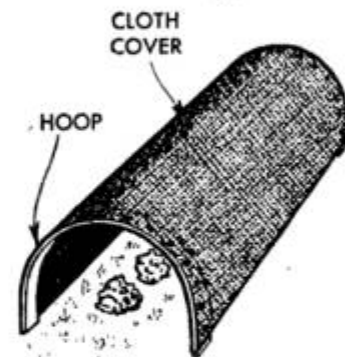

Rubber bands of varying sizes can be cut from sheet rubber or an inner tube by using this novel method. First cut a section from the inner tube and then split it along the seam. Now fold the piece double and cut slits in the crease, their location being determined by the size and thickness of the rubber bands required. Using the slits for a guide, cut out the rubber bands as shown in the drawing. Tinner's snips are excellent for cutting the inner tube, although a pair of inexpensive shears will do the job satisfactorily.

H. I. Hawxhurst, Sierra Madre, Calif.

## Cloth Cover Protects Seedlings

Sturdy covers to protect tender plants from the direct rays of the sun can be made by tacking strips of cotton cloth to wooden hoops. If the ends of the hoops are pressed well into the ground, there is little danger of the covers being blown away. Any number of strips can be sewed together to make the cover as long as desired, and extra hoops should be used at intervals to reinforce the covers along their length. If preferred, metal hoops can be used and the cloth sewed to them.

# Folding Towel Rack for Kitchen or Bathroom

If you want something different in a towel rack, here's an exceptionally neat one that retracts against the wall. Lengths of birch dowel form the arms and balls turned from walnut are glued over the ends. Holes in the wall bracket must be counterbored carefully, as the counterbores serve as stops for the ball ends of the arms. To fold the rack, simply lift each arm and release it. The arm then falls to the vertical position as in the photo. Reverse the movement to bring the arms to the horizontal, or open, position

## 100 W.P. Combination Drier and Utility Shelf Installed in Waste Corner Space

Damp dishcloths and towels or an occasional piece of clothing can be dried out of sight, and the kitchen kept neat as a pin, if this combination drying rack and utility shelf is installed in space that otherwise would be wasted. Although the original unit was made to fit between a kitchen range and an adjacent wall, a similar rack can be fitted between cabinets or in any unoccupied corner. The drying rack consists of two plywood panels separated by lengths of dowel and bottom braces. Note that a window-shade spring is fastened to the back of the rack and the front panel covering the framework. This causes the rack, which is held closed with a cabinet-door catch, to spring open as soon as the catch is released. For smooth operation, the

rack rides on dowel rollers. These revolve on pins made by driving nails into the ends of the dowels and filing off the heads. The plywood utility shelf can be covered with linoleum or hardboard. However, if you wish to set hot pots and pans on the shelf, cover it with sheet aluminum. If the installation is made next to an uninsulated range, be sure to mount a piece of asbestos between the drier and the range.

# ATTRACTIVE ENTRANCE

Flanking shutters with deep louvers lend the only modern touch to this fine doorway of colonial styling. A simple arched pediment and paneled wings recess the six-paneled door back from the wall line. Hand-wrought hardware completes the period detail.

Definitely modern in design, this door is especially suited to the low-line architecture of small homes. Curved strips of polished chrome break the flat plane of the flush door in its recessed frame. A wide, curved lockplate adds a modern ornamentation.

An ornate post-supported canopy shelters this glass-paneled doorway which is installed on the wall line. A wide transom is designed to balance height and width nicely. Shelves behind the glass panels provide space for a display of ceramics or potted plants.

Modified modern design is suited to large homes or small ones of either new or old architectural lines. This doorway is readily worked into modernizing and remodeling plans. The plain recess is flanked with coved stonework and curves smoothly into wall line.

# DOORS

By Bob Hurst

**S**TYLED to the architecture of the home, front doorways are the final finishing detail. In selecting the type of door, whether it be for new construction or for use in remodeling an older home, careful consideration should be given to exposure, distance between windows on the same wall, size of windows and the height of the doorsill above grade. Recessing the door into the wall, as in several of the designs shown, helps to protect it from weathering. Where the door is framed on the wall line, a canopy gives the same protection and generally adds an attractive detail as well. Recessed doorways of colonial design are best suited to large homes of traditional architecture. New homes with low roof lines call for doorways of modified modern design and construction.

Guarded by heavy ornamental-iron grille and framed by colored glazed tiles set in the masonry wall, this deeply recessed doorway is easily adapted to the modernized types of Spanish architecture. It appears at its best when installed at grade level

Plain straight lines of massive woodwork, flared side panels and an ornamental-iron pediment rail characterize this doorway. Note the similarity between it and a later type shown in photo at upper right. Both are suited to large two-story homes

## Concrete Cover for Shallow Well Cuts Cost by Saving Tile

W. T. M. Concrete

When digging a shallow well, you can save the cost of several tiles by installing a concrete cover just over the water level and running a length of 4½-in. pipe up to the pump. You probably can obtain a length of used pipe at a junk yard. Build a platform of planks over the rim of the last tile required, leaving an opening in its center for the pipe. Fasten a flange over the opening in the platform and, after threading the lower end of the pipe, turn the pipe into the flange. Then, temporarily supporting the top of the pipe with 2 x 4s, pour an 8-in. layer of concrete over the platform. After the concrete hardens, fill the rest of the wellhole with earth and complete installation of the pump.

Alex Owen, Schenectady, N. Y.

## Paint Can From Cream Carton

If you are unable to find a can for a small amount of paint, a cream carton will serve the purpose. Just enlarge the pouring spout in the top and wash and dry the inside of the carton.

## Trolling With Outboard Motor

To troll at very low speeds with an outboard motorboat, use a motor with full reverse and operate the boat stern-first.

The drag of the transom will maintain as low a speed as you wish. Be sure to stay away from shoal water, as the motor cannot be tilted in this reversed position.

## Scribing Parallel Lines on Cylinder

Sometimes, when working with wood or metal, it is necessary to scribe a line on a cylinder parallel with its axis. This can be done easily by using a length of angle iron as a straightedge. The angle iron naturally assumes a position parallel with the axis and is not likely to slip.

John M. Avery, Delhi, N. Y.

## Blotter Removes Decals

A wet blotter placed over a decal on a painted surface will loosen it sufficiently to permit removal with a dull knife without marring the finish. The blotter should remain over the decal for a couple of hours.

A. E. Fenn, Chicago.

## Burned-Out Fluorescent Tubes Form Novel Porch Trellis

Instead of discarding burned-out fluorescent tubes, you can use them to make an attractive trellis for the porch or terrace. A window box serves as a base, and a vertical member at each end of the box supports the tubes as shown in the detail.

H. T. Gunderman, New York City.

DO NOT USE

# LAMPS FANTASTIC

By Norbert Engels

IT IS FANTASTIC to think that lamps like these bring fancy prices in expensive shops, but even more so when you realize that they are made from old pewter jugs and pitchers, ornamental tobacco cans and painted glassware which, in many cases, are simply tossed out. There's practically no limit to what can be used for the lamp bases. It's a case of giving your imagination free rein. Combined with standard fittings or ones salvaged from old lamps, the parts required cost practically nothing. The examples given here show what can be done. The smart copper lamp shown below at the left was made from a 1-gal. oil measure, polished and lacquered and wired for a socket. The base for the nautical lamp shown below at the right is made from a decorative tobacco can and odd parts of several old lamps.

Above, left, a decorative candy can used for the base of this lamp is fitted with a socket fixture taken from an old lamp. The end of the fixture is attached to a wood block fastened to the bottom of the can. Above, right, shows an old-fashioned oil lamp that has been converted to an electric one by replacing the wick unit with a standard socket assembly

*Furniture you can Build p 150*

When building new furniture or restoring old pieces, each step of the finishing process, from bleaching and filling to varnishing or lacquering, is of the utmost importance. Perfection, of course, comes only with practice, but the following information will get you off to a good start

### Part III

**A**FTER COMPLETING the bedroom furniture described in the previous two issues, it's time for the all-important job of finishing it, because right here you can either flatter or ruin the appearance of the furniture.

No doubt, you have built the furniture of a wood suitable to take the particular finish desired, whether it be harvest wheat or heather mahogany, ambered walnut or limed oak. Naturally, the kind of wood used is a determining factor as, for instance, one cannot expect to obtain a limed-oak finish on birch. The finishing schedules presented below give a condensed procedure to follow in producing

## *Furniture for Filling, Staining*

a number of the popular, modern finishes, but, if the final results are to compare with finishes seen on store furniture, the finishing operation demands the same careful attention that you put into the cabinet work. Brushes and materials, as well as the room where the work is done, must be clean. Finishing should not be attempted in a cold room and the materials should not be cold. These precautions are important.

**Sanding:** Perhaps the most important

### FINISHING SCHEDULES

FINISH	APPLICATION
Ambered walnut	Bleach. Stain with amber stain. Apply sealer coat of thin lacquer. Fill with natural filler. Finish with clear lacquer.
Old-World walnut	Bleach. Seal. Fill with natural filler lightly tinted with burnt umber. Seal. Shade with brown wiping stain. Finish with clear lacquer.
Honeytone maple or birch	Tone with blond toner, using 1 part white lacquer to 4 parts clear, flat lacquer. Finish with water-white lacquer.
Pickled pine	Bleach. Stain with gray stain for pine. Finish with water-white lacquer or clear varnish.
Limed oak	Bleach. Seal. Fill pores with white paste wood filler. Finish with water-white lacquer.
Harvest-wheat mahogany	Bleaching will give required wheat color. Fill with natural filler lightly tinted with raw-sienna color in oil. Finish with lacquer.
Tweed mahogany	Bleach. Seal. Fill pores with red paste wood filler. Finish with water-white lacquer or clear varnish.
Heather mahogany	Bleach. Seal. Fill pores with white paste wood filler. Finish with water-white lacquer or clear varnish.

step in producing a beautiful, flawless finish is the sanding of the wood. Application of any number of finishing coats will not compensate for a careless job of sanding, but only tends to emphasize defects. Power sanders of the oscillating or belt types take the work out of sanding; however, if these are not available, you can do a satisfactory job of sanding by hand, wrapping the paper around a flat, felt-covered block and working with progressively finer grades of garnet paper from medium down to 5-0 grade.

**Bleaching:** Practically all of the

## *Your Bedroom and Varnishing*

so-called blond finishes are produced by first bleaching the wood to remove its natural color. This is done to obtain such popular mahogany finishes as harvest wheat, heather and tweed, and limed oak, and ambered walnut. Mahogany, when bleached and filled with white filler, is known as heather mahogany. When filled with red filler (natural filler with red oil

Above, a piano or draftsman's stool provides an excellent turntable when spraying lacquer on the smaller units. Below, a power sander makes play of sanding the broad, flat surfaces, but care must be used to avoid cutting through the top veneer

ing, so that they will sink into the pores. The filler is applied liberally in the direction of the grain, preferably with a short-bristled brush. Do not cover more than 6 or 8 sq. ft. of surface at one time or you will get ahead of the wiping and cleaning-up operations that follow. As soon as the filler flattens, it is wiped off. This is done by wiping across the grain with a coarse cloth such as burlap, or excelsior, using a circular motion. This is followed by cross-wiping with a fine material called tow, commonly used for upholstering purposes. This second wiping cuts the surplus filler flush with the surface of the wood. A third cross-wiping with a soft cloth wrapped around a felt block is excellent practice. A second application of filler, somewhat thinner than the first, is sometimes required when filling mahogany or other wood having a very open grain. This is determined by noting whether the pores are completely filled. Finally, the work is wiped lightly with the grain, using a soft cloth. This serves to remove any traces of filler missed in the towing-off operation. The filler should be allowed to dry 24 to 48 hrs. and then sanded very lightly with 5-0 wet-or-dry garnet paper.

M. T. CAMPBELL CO.  
703 E. 19TH ST.  
KANSAS CITY, MO.

In bleaching the wood to produce any of the popular blond finishes, the chemical solution is swabbed on the work with a rubber sponge. As the bleach is corrosive, wear rubber gloves

color added), it is called tweed, because of its pleasing pink tone. Bleached and filled with natural filler, it's called harvest-wheat mahogany. After bleaching, almost any color desired can be had by giving the wood a coat of diluted stain.

Bleaching is done with a commercial chemical solution consisting of two separate solutions which are mixed together and used immediately. As all bleaching solutions are highly corrosive, they should be handled carefully and applied with rubber gloves. Use a sponge to swab the solution on the wood and see that you wet the entire surface evenly. One application of bleach is usually sufficient although, in any case, it is good practice to make a test on a wood sample. Let the bleach stand and dry for 48 hrs.

**Filling:** Open-grained woods, such as oak, walnut, mahogany, etc., must be filled, that is, the pores of the surface and end grain must be packed level with a prepared paste filler. Fillers are available for either lacquer or varnish finishes and require cutting with benzine or turpentine to the consistency of thick cream before apply-

**Toning:** Toning is not successful on dark wood such as walnut, but very much so on naturally light-colored woods such as birch and maple. Toning, to some extent, takes the place of the bleaching process and is accomplished by spraying the bare wood with a semitransparent undercoat to lighten the wood. Toning is recommended for all extremely light finishes, as it does not obscure the grain, being almost as clear as water. Toner is made by adding white lacquer, 1 part, to clear flat lacquer, 4 or 5 parts. In the case of oak and mahogany, the toner should be made with tan-colored lacquer instead of white.

**Sealing:** Whether or not the bleached wood has been toned or stained, the surface must be sealed with a wash coat of shellac or lacquer before the work is filled. The wash sealer is made by cutting 1 part of clear shellac or lacquer with 6 parts of thinner. This coat is sanded lightly when dry, and then, after the grain is filled, a second sealer coat is applied. This is likewise sanded when dry, and followed with a coat of varnish or lacquer sealer. The latter coat, which fills any tiny open pores remaining, also is sanded. From here on, varnish or lacquer coats are applied, using a rubbed-effect or full-gloss type.

### Improved Pendant Switch

If the pendant switch on your kitchen or bathroom ceiling light breaks, here is a substitute that will serve the purpose until a new pendant switch is obtainable. Remove the broken switch and wire a push-button lamp socket in its place. Then,

turn a 15-amp. fuse into the socket to complete the circuit, and the socket will operate in the same way as a switch.

### Tools Held on Stepladder Top By Length of Wire Solder

Especially handy when making overhead electrical repairs, a length of wire solder, doubled and crimped as shown, will prevent small tools from rolling off a stepladder.

### Coffee Can Serves as Camp Stove

For camping, picnics or long motor trips, an old coffee can provides a cookstove that heats for almost half an hour without refueling. Fill the can two thirds full of sand and punch ventholes around its side just above the level of the sand. Then pour about two thirds cup of gasoline or fuel oil over the sand. *Caution:* Do not pour gasoline or oil over hot sand. Allow the sand to cool for at least five minutes before refueling the stove.

Arthur F. McConnell, Kansas City, Mo.

### Thin-Wall Tubing Sawed Quickly

To saw thin-wall tubing quickly and easily, fit two blades into the hacksaw, staggering the teeth. The latter is done by elongating one hole in each blade with a rattail file, the elongated holes being made at opposite ends of the blades. The staggering prevents the teeth

from hooking on the edge of the thin metal and permits the blades to cut like a file. In addition, if one of the blades is reversed, the saw will cut on both strokes, speeding the job considerably.

☐ A heavy steel spring used directly above a small boat anchor will act as a shock absorber during rough weather and thus help prevent the anchor from dragging.

# CAR-TOP

By Thomas E. Riley

**T**HIS DUAL-PURPOSE ski rack not only solves the transport problem for skiers, it serves equally well as a car-top canoe rack during the summer sport season. No extra parts are necessary to adapt it to either use. It consists of two laminated wooden frames resting on padded brackets, the frames being attached to the car top with spring-tensioned hooks shaped like gutters, the frames

# SKI RACK

Fig. 1. Each wooden frame is assembled from six pieces of choice straight-grained spruce or birch, cut to the shape and general dimensions given in the details in Fig. 2. The outer members of each frame are reinforced with sheet-metal plates screwed to the inner face. After the plates are fastened in place, two pairs of holes are drilled through each plate and the wood to which it is joined. The location of these holes is shown in the upper right-hand detail in Fig. 2. Spaced as indicated, they provide dual settings for the clamping-bar hinge pins. Use waterproof glue when assembling the frames. Hard maple is the best wood for the clamping bars. Special hinges for the bars are made by reshaping two pairs of 6-in. strap hinges. These are bent to an L-shape as detailed in Fig. 2. Outer ends of the clamping bars are fitted with slotted metal tie-downs through which the free ends of the binding straps are passed. The tie-downs are bent to a 60-deg. angle and the ends of the clamping bars are sawed to the same angle to provide additional support. Bend the mounting brackets to the approximate shape shown in the lower right-hand detail, Fig. 2, and fit them with rubber suction cups or rubber pads. To use the rack as a canoe rack, withdraw the clamping-bar hinge pins, lower the clamping bars into the grooves in the tops of the frames and insert the hinge pins in the lower holes in the reinforcing plates.

## Combination Dibble and Marker Spaces Plants Uniformly

From an old shovel handle and a couple of wooden strips you can make an adjustable dibble that will enable you to space seedlings uniformly when transplanting them. Just point the lower end of the handle and insert it through a hole drilled near one end of a wooden block of the desired length. Brace the outer end of the block and drive a screw into the edge of the block to engage the handle. A short dowel serves as a marker and three or four holes in the block permit the marker to be adjusted for spacing the plants.

Marion L. Rhodes, Knightstown, Ind.

## Controlling Flush-Tank Ball Valve

If the lift wires of the ball valve in a flush tank are wired together, overflowing of a toilet bowl is stopped by a quick twist of the flushing handle. In addition to permitting emergency seating of the valve without raising the tank cover, this positive control allows the bowl to be completely filled without overflowing. In many cases, filling the bowl will permit freeing a clogged drain by water pressure alone.

Roy G. Loughary, Portland, Ore.

## Staples Hold Sign Cloth Taut And Are Easy to Remove

When lettering large cloth signs, one artist found that office staples were better than thumbtacks to hold the cloth stretched tautly. To remove the staples rapidly, a length of stout fishline is placed under them as they are driven. A quick jerk on the line will then pull out the staples.

G. E. Hendrickson, Argyle, Wis.

## Weatherproofing Summer Cottages

Loose-fitting window frames and cracks in the siding and floors of summer cottages can be made windproof and weatherproof by using boat-calking compound to seal the openings. The compound can be applied with a calking gun, a knife, or, in an emergency, with a thin, flat stick that is somewhat pliable.

## Lacing Tip for Leather Thong Fashioned From Tin Can

Using a piece of metal cut from a tin can, this leather-lacing needle is made in a jiffy and costs absolutely nothing. After cutting a piece  $1\frac{1}{2}$  in. square from the side of a tin can, bend the metal

double and flatten the bend with a hammer. Then trim the edges of the metal to shape with tinner's snips. Finally, file the edges smooth and round the tip. To attach the needle to the end of the lace, pry the metal edges apart with a knife, insert the lace and squeeze the needle together with a pair of

pliers. If necessary, tap lightly with a hammer to tighten the grip and use a razor blade to trim excess lacing from the edges of the needle.—Gerald W. Hall, Mentor-on-the-Lake, Ohio.

## Lacquer Protects Drawings

To keep plans and working drawings from tearing easily, one craftsman glues them to pieces of cheesecloth and coats them with clear shellac or lacquer.

Neal Houlahen, Glenshaw, Pa.

## Ornamenting Driveway Gateposts

Discarded lamp housings from older types of cars make novel ornaments for the tops of driveway gateposts. Each housing is painted as desired and its rim embedded in a coating of mortar on top of the post. — Willard Midby, Billings, Mont.

## Home-Workshop Arbor Press Utilizes Bottle Capper

By fitting a bottle capper with an adjustable table, one home craftsman made a handy arbor press for light work. He used a piece of 3-in. angle iron for the table, drilling and tapping it for two bolts. Then, he drilled a series of corresponding holes along the front of the T-shaped upright of the bottle capper to permit fastening the table at several different heights.

# STEPS IN CONCRETE

Photos courtesy Portland Cement Association

By Thomas Trail

**C**AST-CONCRETE steps add measurable values to any home, and welcome savings in first cost can be had by doing the whole job yourself, from setting the wooden forms to mixing and pouring the concrete. Only the simplest hand tools, such as a hammer, saw, and a good level, are needed for building the necessary forms, and the lumber and materials are available from any building-materials dealer.

The first step in setting the forms is preparing the ground over which the steps are to be cast. If the soil is well-drained and contains gravel and sand in relatively small amounts, about all that is necessary is to level and tamp the area thoroughly to compact the soil. On the other hand, if the soil is a heavy, tight clay through which drainage of surface water is slow in wet seasons, it will be necessary to excavate to a depth of 6 to 8 in. below grade and put in a tamped-gravel fill. Thorough tamping of the fill is of the first importance. Make a tamper by cutting an 18-in. length from a 6 x 8-in. timber and nail a 36-in. strip to each side to provide handles. Go over the whole area of the gravel fill with the tamper several times in order to compact the fill uniformly. Cinders should never be used as a fill under a heavy concrete casting as they disintegrate in time.

Fig. 1 pictures the form required to produce the type of terrace steps shown

In this form, the riser boards are inclined at an angle of 5 deg. The purpose of this is to add to tread width without increasing the over-all dimensions

Braces, or stiffeners, usually are required to prevent springing of the riser boards under pressure of freshly poured concrete. Tie strips hold sides

in Fig. 2. Fig. 3 shows the method of laying out and cutting the form sideboards. Compare this with the simpler forms detailed in Figs. 4, 5 and 6. The form detailed in Fig. 6 gives the type of steps pictured in Fig. 8. To cover a given ground area, both types of forms require about the same amount of material per single step but the construction differs in some details. Note in Fig. 4 that the riser boards are inclined at an angle of about 5 deg. The purpose of this is to add to the actual tread width without increasing the over-all dimensions of the form. The inclination of the risers gives more toe room. In making this type of form, the risers should never be inclined more than 5 deg. The form in Fig. 4 is constructed for casting the steps, or stoop, considerably wider than the entrance doorframe. The smaller form in Fig. 5 has been made the width of the doorframe. In some types of stoops, this width may be necessary or desirable, but the general practice is to set the form to give a width that will extend from 6 to 18 in. on each side of the doorframe. This width allows plenty of room for installing an ornamental iron railing.

Lumber used for the forms should be smooth on one side and free from knot-holes. In addition to adequate staking, the boards should be well supported with braces and stiffeners to prevent bending under pressure when the concrete is poured. This is especially important where the width of the steps makes it necessary to use long riser boards. Braces, or stiffeners, of 2 x 4-in. stock should be nailed across the outer faces of all 3/4-in. riser boards more than 30 in. long and also across the face of 2-in. riser boards more

than 60 in. long. These braces or stiffeners, are shown in place in Figs. 5 and 6. When staking the first, or lower step form, use at least two stakes, Fig. 5, against the first riser board if it is 30 in. or less in length. If more, use three or four stakes. Tack the stakes to the board from the outside by driving the nails only part way in. The sideboards of forms like those in Figs. 5 and 6 are held together by means of cleats, at least two being required on each side, in addition to two or more stakes driven into the ground.

In Fig. 4, a somewhat different method of cleating and staking the sides of the form is shown. Here, the three sideboards are nailed to two 2 x 4-in. stakes previously located and driven at each side of the form. After plumbing the assembled sideboards, tie strips are nailed to the projecting ends of the stakes to keep the form from spreading under pressure of the freshly poured concrete. Then a narrow board is tacked to the stakes at each side of the form and additional short stakes are driven outside this board as shown. In this way, the end members of a wide form cannot shift during the pouring. The 2 x 4-in. braces, Fig. 5, have been omitted from the form in Fig. 4 to show better the angle of the riser boards.

When concrete side walls are cast integrally with the steps, Figs. 1 and 2, each step is reinforced with a 1/2-in. steel reinforcing bar which is placed in the step as the concrete is poured. The bar should be cut to such length that it extends beyond the ends of the step a distance equal to about half the thickness of the side walls. These bars prevent the side walls from cracking away from the steps.

Figs. 7 and 9 detail methods of setting forms for basement stairs. Where the stair well is already formed with concrete walls, the stair forms are simply riser boards spaced, plumbed and wedged between the walls. The earth fill is tamped to a uniform slope. When the steps are wider than normal, it is necessary to fit side planks and vertical cleats so that the riser boards may be supported by horizontal braces which are wedged against the side planks, as in Fig. 9. Be careful in laying out and setting forms for basement stairs to keep the tread-to-riser proportions within the accepted comfort range, as in the right-hand details of Fig. 9. These dimensions

Clean, sharp sand of the quality used for concrete work should have fine, medium and large particles mixed in about equal proportions for the best results

The largest pebbles of the gravel should not exceed 1½ in. in size. Concrete mix should contain very nearly equal quantities of large, medium and fine pebbles

**13 HOW TO FIGURE CUBIC VOLUME OF STEPS**

Example: Six steps 36 in. wide, 7-in. riser and 10-in. tread, with 8-in. side walls.

7 X 10 = 70 sq. in.  
70 X 36 = 2520 cu. in.  
2520 X 6 = 15,120 cu. in.

7 X 10 = 70 sq. in.  
70 ÷ 2 = 35 sq. in.  
35 X 36 = 1260 cu. in.  
1260 X 6 = 7560 cu. in.

4 X 7 = 28 sq. in.  
28 X 36 = 1008 cu. in.

10 X 12 = 120 sq. in.  
120 ÷ 2 = 60 sq. in.  
60 X 8 = 480 cu. in.

1½ X 15 = 22½ sq. in.  
22½ ÷ 2 = 11¼ sq. in.  
11¼ X 8 = 90 cu. in.

66 X 15 = 990 sq. in.  
990 X 8 = 7920 cu. in.

4 X 16 = 64 sq. in.  
64 ÷ 2 = 32 sq. in.  
32 X 8 = 256 cu. in.

5 X 15 = 75 sq. in.  
75 ÷ 2 = 37½ sq. in.  
37½ X 8 = 300 cu. in.

15,120 cu. in.  
7,560 cu. in.  
1,008 cu. in.

23,688 cu. in. Steps  
18,092 cu. in. (9046 X 2)

41,780 cu. in. Volume

480 cu. in.  
90 cu. in.  
7920 cu. in.  
256 cu. in.  
300 cu. in.

9046 cu. in. One side wall

Total volume in cu. ins. 41,780 ÷ 1728 (cubic ins. per one cu. ft.) = 24 cu. ft., approx.

also apply when building forms for other types of steps.

On small jobs, concrete may be mixed by hand methods but, where several yards are required for a single pouring, it is better to rent a mixer or purchase concrete ready-mixed to specifications. In hand-mixing, make a bottomless box, Fig. 10, for measuring the amounts of gravel, sand and cement. The box holds 1 cu. ft. of dry material if made according to the dimensions. One good way of mixing is to shovel the measured materials into a wheelbarrow. Mix the dry materials as in steps A and B, Fig. 10. Add the proper amount of clean water, step C, and mix thoroughly, step D. Once the pouring is begun, continue until the job is finished. As soon as pouring is finished, level the concrete flush with the top of the forms with a wooden float, Fig. 10. Wait until the concrete stiffens slightly before troweling. Edges of the treads and other parts of the concrete work are rounded by running an edging tool along the top edges of the forms. Cover the concrete with wet sacks or straw and keep the covering damp for several days after pouring to aid in proper curing.

The largest size of gravel used in the concrete mix for pouring the average entrance steps should not exceed 2 in. in diameter, Fig. 11. Smaller average sizes are better. The average proportions of the sand and gravel sizes are shown in Fig. 12. The table, Fig. 13, shows how to estimate in detail the amount of concrete required for steps and side walls. If the aggregate (sand and gravel) is only slightly damp, use 5½ gal. of water per sack of cement when mixing. If the aggregate is quite wet, use only 4 to 4½ gal. of water per sack. Use of the correct amount of water is important.

Attractive in its simplicity, this combination birdbath and feeder will be a great favorite with your feathered friends. The unit is suspended from a tree limb with wire or chain and the bath features running water which drips from an overhead outlet. Water is piped to the bath by means of a length of copper tubing stapled to the tree trunk and along the underside of the limb. The lower end of the tubing is connected to the water line as shown, the valve being adjusted for a steady drip. A metal pan for the bath and two cups, one for feed and the other for suet, are set in a circular plywood platform. A hole for an overflow is drilled through the side of the pan just under the platform, and the suet cup is fitted with a skewer to hold the suet cake in place. Another novel feature of this unit is an offset perch made from two pieces of stiff wire and a length of dowel. This is soldered to the end of the copper tubing to permit the birds to catch the water as it drips from the outlet. The copper tubing is painted to match the bark of the tree, and

## Running Water Piped Up Tree Trunk Supplies Hanging Birdbath and Feeder

the undersides of the platform, pan and cups are painted the same shade except in a mottled effect to blend with the tree foliage.—Hi Sibley, Nuevo, Calif.

## Convenient Car-Top Carrier for Long Fish Pole Clamps to Drip Molding

As my favorite fish pole is too long to be carried inside my car, I made this handy car-top carrier for the pole. It consists of two flat-iron holders, tightened with wing nuts, which clamp to the drip molding of the car. Pieces of rubber tubing pressed over the ends of the holders protect the car finish from being marred by the metal.

Claude W. Clifford, Portland, Ore.

## Ignition Contacts on Model Airplane Provided by Dress Snaps

Ignition systems of gas-model airplanes are not likely to fail because of broken contacts if ordinary dress snaps are soldered to the terminals and to the ends of the leads. In addition, use of the snaps permits the wiring to be disconnected quickly for replacing the various parts.

Fred M. Bowles, Annapolis, Md.

# THIS TOY "STEAM SHOVEL"

YOUNG engineers will have hours of fun with this sturdy model of a full-size steam shovel. It is realistic in design and principle of operation, and the cab and crane mounted on a truck chassis have a swivel base which permits swinging in a complete circle. Two hand cranks, one on each side of the cab, operate the shovel. The bottom of the shovel is hinged, and the load is dumped by pulling a trip cord extending back to the cab. Sand or loose soil is easily scooped from one spot and dumped in another or into a toy truck. Size of excavation is limited only by the swing of the crane and travel of the shovel beam.

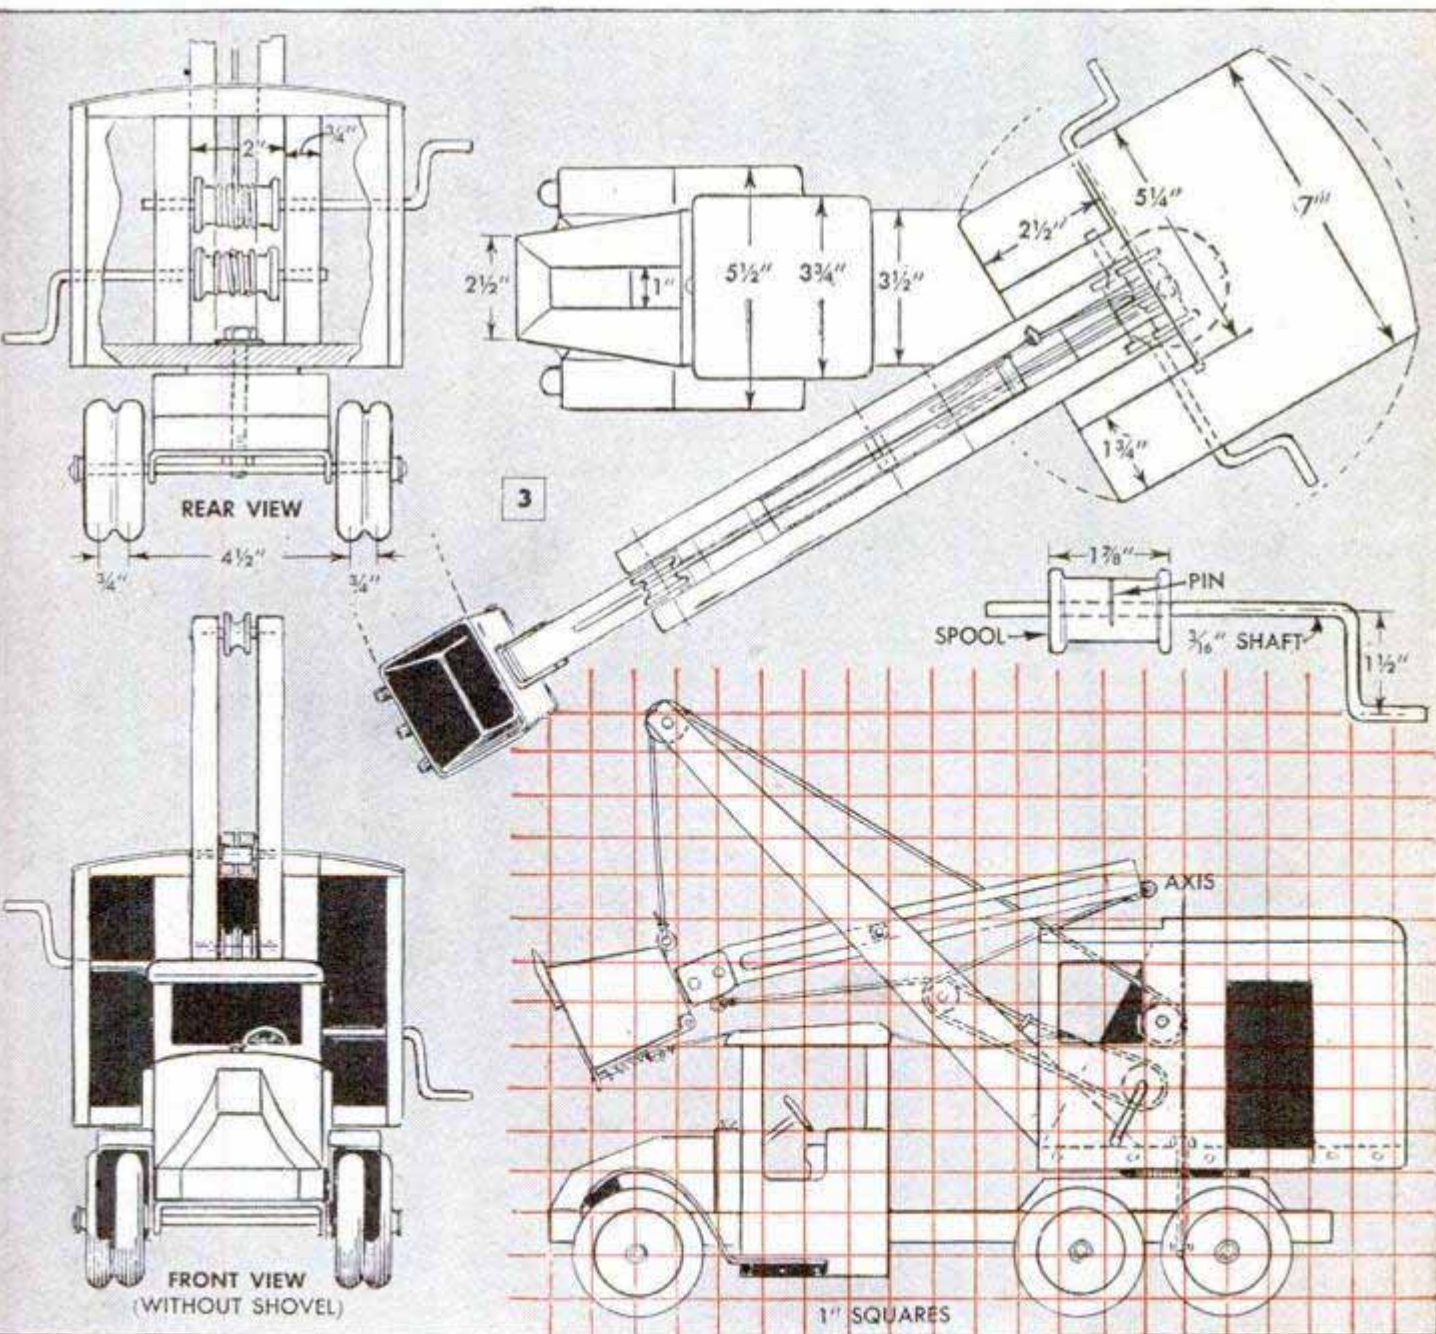

The crane, Fig. 1, consists of two parallel members with spacer blocks, sheaves, and a roller between them. Note that the lower sheave has a double groove, a screw eye guiding the cord in one of the grooves. The

shovel beam has two slots, one for the roller of the crane and the other for the lifting cord. For durability, the shovel is made of sheet metal. Three teeth ground to flat, sharp points are soldered to the cutting edge of the shovel as shown in Fig. 2. Details of the latch are given in the lower left-hand detail. The truck chassis and cab are made of wood to the dimensions indicated in the side, top, and end views of Fig. 3, and are assembled as in Fig. 2. The rear wall of the cab is made of 1-in. stock planed to a curve and the roof is sheet metal. Four dual wheels are used on the rear of the truck chassis and two single-tired wheels on the front. These are turned to the dimensions given in the sectional view, Fig. 2, and drilled for a tight fit on the  $\frac{3}{16}$ -in. axle. Use hardwood, such as maple, for both the front and rear wheels. The winches

# REALLY DIGS

are wooden spools pinned to  $\frac{3}{16}$ -in. shafts bent to form crank handles. The upper winch raises and lowers the shovel while the lower winch moves the shovel back and forth. Controlling cords are arranged as shown in Fig. 2. After assembling, sandpaper all wooden parts to get a smooth surface over which to apply paint. The shovel, tires, cab roof and front fenders are painted black and all other parts a bright red or yellow. Use a durable, outdoor enamel for the final coat as the finish will get hard usage.

## Flower Trellis From Porch Gate Is Set Up in a Jiffy

If you have an old porch gate, it will provide an attractive flower trellis that can be folded and stored during the winter. Just extend the gate to the desired height and attach it with screws to a post or the side of a building so it is easily removed. If set up against a building, use wooden spacers to hold it away from the siding.

Byron L. Troyer, La Fontaine, Ind.

## Record Album Holds Saw Blades For Convenient Storage

Circular-saw blades are stored conveniently and safely by inserting them in the envelopes of a phonograph-record album.

If each envelope is labeled according to the type of blade it contains, blade selection can be made quickly.

Benj. Nielsen, Aurora, Neb.

## Dog Tethered to Swivel Post

Ideal for tethering a dog in the back yard, this swivel post is easily moved and the swivel prevents the dog from wrapping the tether around the stake. The stake is merely a length of pipe or rod pointed at one end for driving into the ground. A piece of thin iron rod, bent to shape and welded to a short length of pipe, is placed over the stake to provide the swivel. A washer under the swivel keeps it from working into the ground, and the top of the stake is peened over to prevent the swivel from slipping off. The swivel pipe should be large enough to rotate freely on the stake.

100 W.P.

## Round-Cornered Wooden Boxes

When making wooden boxes, such as flower boxes, that must present a good appearance, use pieces of quarter round to provide neat-looking rounded corners. Try to use quarter round of the same thickness as the sides of the box and, if necessary, reinforce the inside of the corner with sheet metal.

Herbert E. Fey, New Braunfels, Tex.

## Rubber Tubing on Tip of File Provides Finger Grip

A small section of heavy rubber tubing or hose pressed over the tip of a file provides a comfortable finger grip. This is especially useful to protect the fingers when filing for a long period of time. Use hose or tubing of a size that fits tightly over the tip of the file.

Clifford T. Bower, Decatur, Pa.

# Alsatian Chairs

THESE continental chairs with their widely splayed legs and attractive, carved backs are worthy projects for the home craftsman and provide distinctive pieces for a hall or dining room. Although each chair back appears difficult to make, actually it is fairly simple because the design first is cut through by scrollsawing. Either of the back designs is cut from a single panel, and the scrolled section finished in low relief with a chisel, veining tool and sandpaper. The seat is mounted on two cleats bored approximately 15 deg. from the vertical for insertion of the legs. The top ends of the legs are saw-cut to receive a wedge driven at right angles to the grain of the cleat. The top edges of the seat are rounded and, by using material 1 5/8 in. thick, the seat can be hollowed to form a concave section for greater comfort. In assembling, the back is fastened to the cleats with angle brackets which are recessed flush. Either antique or natural finish, waxed and rubbed to a soft luster, is suitable for this type of chair.

Furniture you can Build p 120

### Nonsplash Water Test Tank Checks Outboard Motors

An empty 55-gal. oil drum provides an ideal tank for testing outboard motors in water and, if the top of the drum is cut out to form a flap, water will not splash out of the tank when the motor is operated at high speeds. When laying out the top of the drum for cutting, draw a straight line, 16 in. long, 10 in. in from the rim, centering it on the drum top. Then, at each end of this line draw a perpendicular line back to the rim. Using a cold chisel, cut out the top along the perpendiculars and along the rim. Then bend the resulting flap downward to form the opening.—Ed Packer, Chicago.

### Pulley Cuts Glazing Putty

Glazing a window is done more quickly by an amateur if a small V-pulley is used to cut the putty into strips of the proper shape. An ordinary clothes-line pulley is the right size for the job. The putty is spread on a board with a rolling pin to the required thickness and cut as needed. The strips fit almost perfectly, requiring only slight pressure with a putty knife to press them in place.—Jeff Sterns, New Bedford, Mass.

Prevent breaking the agate guides of a fishing rod by inserting small corks in them before putting the rod in its case.

### Tap Serves as Center Punch

Instead of discarding a worn or damaged tap, save it and use it as a center punch. As most small taps have a pointed tip, they can be used without grinding, but, if desired, an extra-sharp point can be ground on the end of the tap since the metal is extremely hard.

### Name Plate on Rural Mailbox Is Lettered With Thumbtacks

One farmer made a novel and easily read name plate for his mailbox by pressing thumbtacks into a piece of wood. After the wood is cut to shape and painted, the letters are roughly sketched on it. Then, the thumbtacks are pressed into the wood to form the letters. The wood, of course, should be painted dark to contrast with the heads of the tacks.

### Torch for Lighting Campfires Contained in Lipstick Holder

Just the thing for lighting campfires without wasting matches, this little torch contained in a lipstick holder is easily carried in a pocket. In addition, the cap of the holder keeps the wick dry even in the wettest weather. Either shape a candle to fit or wrap paper or tape around the holder to cover the slot and fill it with melted wax. Insert a wick in the wax before it has had time to harden.

Elmer A. Anderson, Prairie du Sac, Wis.

*Close-ups on*  
**CAMERA CARE**

By Richard W. Emery

EVERY photo fan dreams of that once-in-a-life-time shot. Getting it for the album calls for quick action and a camera and accessories in top-notch working condition. Some camera parts, such as the lens mechanism and the focal-plane shutter, are made with watchlike precision and their performance is affected by dust, dampness and extremes of heat and cold. Low temperatures tend to slow down the exposure speeds of between-the-lens shutters and also shutters of the curtain, or focal-plane, type. Fine dust works its way into the shutter mechanism in time and affects reliable operation. Dampness (condensation) has a slow, corrosive action on metal parts, especially near the seashore. However, good outdoor pictures are wherever you find them and frequently the exposure must be made in adverse weather conditions.

To protect the lens from damage during outdoor work under difficult conditions, keep it covered with a lens cap at all times when not in use. If the camera gets wet in a rainstorm, wipe all the parts as dry as possible and leave it open in a protected place until thoroughly dry. If you must leave the

To clean a camera, first loosen dust with a soft brush as above. Then blow off dust and lint with a syringe as shown below

**4** For cleaning interior surfaces of cameras, use lens-cleaning tissue dampened with carbon tetrachloride

camera in a car parked in the sun during a hot day, wrap the camera in a coat or blanket to protect it from the extreme heat. When outdoors, the photographer should acquire the habit of carrying the camera either by the handle or hand strap or in a carrying case, rather than carrying it loosely in the hand as it may be dropped and damaged. Small cameras of the candid type should always be carried in a heavy leather case provided with a neck strap. After purchasing a camera, carefully study the manufacturer's instructions for its care and use. Mechanical misuse should be avoided, especially when operating the newer types of shutters. As an example, never cock a Compur shutter when it is

**A light leak in the bellows can be temporarily repaired by covering the hole with black gummed tape**

**6**

**5** To locate a light leak, press a flashlight against inside corners of bellows and inspect outer surface

set for time or bulb exposure and avoid changing from a fast shutter setting to the time or bulb setting when the shutter is cocked. Cover the lens and release the shutter before changing the setting. Avoid touching the surface of the lens with your fingers, as this may leave a smudge or a fingerprint that will spoil a good picture.

Periodic cleaning and inspection assure reliable performance. A thorough dusting of all the parts is the first step. For dusting, use a soft camel's-hair brush especially made for the purpose, Fig. 2. With this brush, you can get into the difficult corners both inside and outside. After loosening the dust with the brush, blow it clear with a rubber syringe as in Fig. 3. Don't

**After pressing tape down smoothly around the hole, crease it to conform to accordion folds of bellows**

**7**

**8**  
Torn covering can be replaced with household cement. First coat both surfaces, then press them together

blow the dust away with the breath as this deposits moisture on the metal parts. The focusing racks and pinions on both folding cameras and view cameras should get special attention, as dust and abrasive grit tend to collect on these parts. The best cleaner is a small cloth swab dipped in carbon tetrachloride. Apply this liquid cleaner freely to flush away dirt and grit. In some cases, it will be necessary to dismantle parts of the camera in order to get at the racks. For drying and polishing interior metal surfaces, use a lens-cleaning tissue as in Fig. 4.

If the camera is of the extension-bellows type and has had considerable use, the bellows should be fully extended occasionally

Brushing the lens before polishing it will remove dust particles which may otherwise act as an abrasive

**10**

**9**  
Leather dressing will make a worn camera look new. Use cream type which contains preservative and dye

and closely examined for light leaks. Proceed as in Figs. 1 and 5. The room should be darkened so that tell-tale pinpoints of light will be revealed by a careful exploration with a small flashlight. Usually light leaks first show up in the accordion folds of the bellows. Small leaks can be repaired temporarily by covering with black masking tape as in Figs. 6 and 7. Place a finger inside the bellows and flatten the fold so that the tape will adhere over the whole area. Then crease the tape as in Fig. 7, so that it conforms to the fold of the bellows. A somewhat better repair can be made in most cases by applying the tape to the inside of the bellows fold, but this procedure takes much more time and care. Don't rely

After brushing, place a drop of lens-cleaning fluid on center of the lens. Then polish with lens tissue

**11**

**12** To polish the lens surface inside the camera, remove or open the camera back and compress the bellows

**13** For a smooth sliding action, rub paraffin on sliding surfaces of film holders, above, and tripod, below

**14**

**15**

**15** Reflectors can be kept clean and bright with carbon tetrachloride. Polish the surface with a soft cloth

on taping a bellows that is torn or badly worn. Get a new bellows.

In time, hard knocks and general outdoor wear cause scuffs and tears in the covering of the camera box, or case. The covering will probably be loosened at its edges. Coat the underside of the loosened edges with a quick-setting household cement as in Fig. 8. If the area to be re-cemented is fairly large, coat both surfaces with cement and then hold them tightly in contact for a few seconds. A good leather dressing, applied according to the manufacturer's directions, can make a weather-worn camera look like new. Use a dressing of the type containing both a preservative and dye. Apply with a soft cloth as in Fig. 9 and polish until dry.

Be especially careful when cleaning a lens to avoid scratching the soft glass. Brush away any fine dust particles with a soft camel's-hair brush as in Fig. 10, then polish with lens tissue dampened with a lens-cleaning fluid. Some photographers place a single drop of the special cleaning fluid in the center of the lens with a toothpick as in Fig. 11. Clean and polish both exposed surfaces of the lens, Fig. 12.

Camera accessories made of wood and having sliding surfaces such as those on the cut-film holder, Fig. 13, and the folding tripod, Fig. 14, will continue to work smoothly if the sliding surfaces are coated occasionally with paraffin. After coating these surfaces, brush away all the excess paraffin. If you have flash equipment, you'll get better pictures when the reflectors are kept bright and clean. Use silver polish on silver-plated reflectors. All others should be cleaned with carbon tetrachloride and polished with a soft cloth. If the cleaning fluid is kept in a bottle spray-

**Electric terminals of flash equipment should be kept clean by burnishing with emery cloth**

er, as in Fig. 15, the job is done quickly and easily. The electrical terminals of the flash system require periodic attention. Clean the corrosion off copper terminals with a fine polishing rouge or a fine emery cloth as in Fig. 16. Silver-plated terminals should be cleaned with a soft cloth dampened with carbon tetrachloride. When flash equipment is stored for any length of time, remove the batteries from their container and loop or coil the electrical cords so they do not become permanently kinked. The best protection for a camera in a sudden rainstorm is a waterproof bag of oiled silk or plastic, Fig. 17. For the greatest protec-

**A weatherproof bag tailored to fit the camera and flash gun will afford protection from dust and driving rain**

tion from dampness and dust, either when the camera is in storage or in intermittent use, the bag should be sewed with folded waterproof seams and provided with a handy drawstring which tightly closes the open end of the bag. Whether you buy or make a bag it should cover completely both camera and flash gun.

## **Plywood Case Protects Wide-Angle Lens From Dust and Damage**

Having added a wide-angle lens to my camera equipment, I was faced with the problem of protecting it from dust and damage while carrying it in my camera case. I solved the problem by making a separate case for it from  $\frac{1}{8}$ -in. plywood. The lens is held snugly by sliding the lens board in a groove in each side of the case. These grooves should be waxed so the lens board slides smoothly. Two thicknesses of plywood are used for each side of the case. The inner piece is of two parts which are glued to the outer piece to form the groove. The front of the case is fitted with a cover attached with small brass hinges and held in the closed position with a flat, brass S-hook and a brass screw eye. Although I finished the case by merely applying a couple of coats of wax to the wood, it can be stained and varnished or painted to match the camera case.

Walter Fischman, Philadelphia, Pa.

## Condition of Flash Bulb Checked With Neon Test Light

A small neon test light connected in series with a photoflash bulb will check the condition of the bulb without damaging it. When the tester circuit is plugged into the 110-volt line, the neon light will glow if the flash bulb is in good condition.

## Opening Developer Containers

Photographic chemicals packaged in containers fitted with metal covers are easier to open with a lift-type can opener than by cutting off the tops with a knife. The can opener does the job more quickly and is safer to use.

## Reminder for Darkroom Clock

When working with fine-grain developers which require comparatively long processing time, it is easy to forget the exact time the film should be removed from the solution unless an automatic timer is used. To eliminate guesswork when using a clock for timing, fasten a reminder hand to the face of the clock. It is simply a round cardboard backing to which a movable cardboard indicator is attached with a brass paper fastener. The backing is attached to the center of the clock-face with cellulose tape and the hand

is moved to the predetermined time. When the minute hand of the clock is directly under the indicator hand, it is time to remove the film. The reminder can be used similarly when fixing or washing.

## Glass Rod Is Substitute Funnel

If a plastic or glass funnel is not at hand for transferring photo solutions from one container to another, try using a glass stirring rod as shown. The liquid will follow the rod into the container. If a stirring rod is not available, a rod-type thermometer may be used. In addition to the convenience of using a glass rod when a clean funnel is not handy, the rod is much easier to wash thoroughly than a funnel, thus avoiding contamination.

## Alcohol Dries Sponges Quickly

In order to speed drying his sponges before packing them, one traveling photographer wrings out as much of the water as possible and then soaks the sponges in alcohol. Wrung out again, the sponges are soon dry enough to pack as the alcohol evaporates much more rapidly than water.

R. F. Donovan, Jersey City, N. J.

## Tips of Tripod Legs Painted White To Minimize Accidents

To help prevent accidental tripping over the legs of a tripod, apply a coat of white paint to the rubber tips so they can be easily seen. White tire paint will provide a long-lasting coating. — Kenneth Murray, Colon, Mich.

# Portable

## Bench-Saw Cabinet

BY ADDING portability to a motor-driven bench saw, this wheelbarrow-type cabinet greatly increases its usefulness, especially in small home workshops where floor space is limited, or on a farm where it is sometimes more convenient to take the saw to the work. When long boards are to be ripped or crosscut, for example, the saw is easily moved so that the work will clear obstacles. In addition, the cabinet permits the saw and a supply of hand tools to be transported conveniently in a light truck or trailer.

Fig. 1 gives the over-all dimensions and Fig. 2 shows how the cabinet is assembled. Side panels of  $\frac{1}{2}$ -in. plywood are screwed to the inside face of the 2 x 3-in. frames. Drawer runners

are fastened to the panels and then the two frames are joined by cross members, which are half-lapped and screwed to the corner posts. Note that the upper and lower horizontal members of the side frames extend at the top to serve as handles and at the bottom, in the opposite direction, to form the wheel fork. Next, drawer rails and guides are fitted and the three drawers are made, following the type of construction detailed in Fig. 2. Drawer bottoms can be of 1/4-in. plywood unless the bottom is to support a heavy weight. If this is the case, use 1/2-in. plywood. The bottoms fit in grooves cut in the drawer sides and fronts, and ends of the drawer backs fit in dados cut in the sides. The wheel fork is strengthened with flat-iron brackets attached with bolts and screws as in Fig. 2. The 8-in. wheels are mounted on a single shaft with a pipe spacer between them. Threaded ends of the shaft pass through holes drilled in the frame members which form the wheel fork, and nuts turned on the threaded axle ends hold it in place. The plywood back is attached to the corner posts with screws and the

plywood top is supported by cross members half-lapped into the horizontal members of the side frames. The recessed side panels provide space for storage of hand tools to meet ordinary needs.

If the bench saw is of the type in which the arbor raises and lowers, a hinged motor base, Fig. 1, is necessary to equalize belt tension. For saws with a fixed arbor and an elevating-type table, the motor may be located inside the cabinet on a fixed base as in Fig. 3. Where the motor is mounted in this way, the upper drawers are shortened to allow space for the motor and drive belt. If the base of the saw provides only for bottom discharge of the sawdust, the top drawer can be used as a receptacle. In this case, it may be necessary to provide a sheet-metal deflector at the back of the drawer compartment to prevent sawdust from dropping into the lower drawers.

When the saw must be used for ripping extra-long boards, an extension table, Fig. 4, comes in handy. This consists of two boards glued together or cleated edge-to-edge to attain the required width. The outer end of the extension table is supported on a sawhorse of the correct height to hold it level with the top of the saw

table. The opposite end of the extension is held flush with the edge of the saw table by two flat-iron bars recessed into the ends of the boards as in the detail, Fig. 4. The sectional size of the bars permits them to fit flush in the guide slots of the saw table. An alternate method of fitting the wheels is shown in Fig. 5. In this design, the wheels must be placed close to the balancing point.

## Accuracy of Carpenter's Level Easily Checked on Any Flat Surface

Because of the waste of time and money an inaccurate carpenter's level can cause, I always check the settings of a newly purchased level before using it on a job of any consequence. Naturally, the best way to do this is simply to lay the tool on a surface that is known to be level. However, the tool can be checked almost as easily on a surface that is not absolutely level. After selecting a flat, firm surface, I place the

tool on it and note exactly where the bubble settles in the level glass. Then, turning the tool end-for-end, I carefully take another reading. If the two readings are exactly the same, the tool is set accurately, but, if the readings vary, the level glass requires a corresponding adjustment. To check the setting of the plumb glass, I follow the same procedure, using a vertical surface.

Andrew Vena, Philadelphia, Pa.

## Metal "Bridge" Locks File Drawer In Large Drafting Table

As my drafting table is equipped with a lock on the right-hand drawer but none on the long file drawer, I made a sheet-metal bridge to hook over the two drawers. With the bridge in place, locking the right-hand drawer locks the file drawer also.

L. E. Reichenbaugh, Tulsa, Okla.

## Sash Balance Weights Sheet Metal When Soldering Seam

To facilitate holding two pieces of corrugated metal while soldering them together, lap the seam and weight it with a sash balance laid in the groove formed by the corrugations. Slide it along as work progresses.

## Checking Cylinder Wear

A piston ring and a feeler gauge are the only tools required to get a reasonably accurate check of cylinder wear on your car. As the ridge at the top of the cylinder does not wear, place the ring inside the cylinder at this point and measure the gap with the feeler gauge. Then move the ring

down about 2 in. and again measure the gap. One third of the difference between these two figures is the approximate amount of wear in thousandths of an inch. If you want to be extremely accu-

rate, divide by 3.1416. To check the wear in the lower part of the cylinder, repeat the procedure 2 in. up from the bottom. However, the wear at this point likely will be considerably less than the wear at the upper part of the cylinder.

## Sickle Sections Mounted on Hoe Adapt It for Rocky Soil

Unusually rocky soil is much easier to work if two sickle sections are riveted to the hoe. If equipment is available, welding the sections results in a more sturdy garden tool.

## Oiling Ball-Valve Fittings

When oiling ball-valve fittings, the ball has a tendency to restrict the flow of oil from the can spout. To avoid this, use a nail or a piece of stiff wire to depress the valve and apply the oil to the nail. It will run down the nail to the fitting. This method, of course, also can be used to oil other hard-to-reach places of a similar nature.

## Tether Attached to Long Pole Does Not Wrap Around Post

If an animal is tethered to a post for grazing, the tether can be kept from wrapping around the post by fastening it to a long pole as shown. The pole is pulled around the post by the animal and the full length of the tether is utilized.

# AUTO-BRAKE SERVICING

By Phil Ruskin

MODERN car-braking systems have been so simplified and standardized in construction that any car owner who likes to tinker can easily make ordinary repairs and adjustments himself. A simple adjustment of one or more of the four braking units, Fig. 1, renewal of shoes, adding fluid or bleeding air out of the system are usually all that is necessary. The most common symptoms of defects in the system are brakes that squeal on application, a "soft" pedal or a pedal that requires pumping in order to make a quick stop. Operation of the hydraulic service brake is quite simple and the parts are easily reached for servicing. When the brake pedal is depressed, a piston in the main, or master, cylinder, Fig. 7, exerts pressure on the fluid in the brake lines. This transfers an equalized pressure to pistons in each of the wheel cylinders, Figs. 3, 5 and 6. Each wheel cylinder contains two pistons, the purpose of the two being to distribute hydraulic pressure equally to the two brake shoes in each braking unit. As the pedal is released, the pressure is relieved and the brake-shoe retracting springs release the shoes from contact with the brake drums and, at the same time, force the pistons of the wheel cylinder inward. This movement forces fluid out of the cylinders and back into the brake lines.

Before servicing the brakes, check the

When new brake shoes are installed at the time of servicing, it's necessary to adjust anchor bolts. Although methods vary with different makes of brakes, the method shown above is typical of regular procedure

Sectional view, above, shows the hydraulic wheel cylinder and other parts of the brake unit. Below is a pull-apart view of the wheel cylinder, showing the various parts. Shown at the right is the master cylinder

pedal for free movement and toeboard clearance. There should be from  $\frac{1}{4}$  to  $\frac{1}{2}$  in. of free movement, A in Fig. 2. Full braking pressure should be available between the positions B and C. A soft, spongy pedal can mean that there is air or gas in the system or insufficient fluid. Check the fluid level in the master cylinder, add fluid if necessary and then, before bleeding the system, examine the lines carefully for leaks. In bleeding the system to remove air, it is a common rule that the longest pipe line should be bled first. Remove the bleeder valve screw, Figs. 8, 9 and 10. Then attach the bleeder drain, Fig. 8, being careful to keep the end of the bleeder drain hose below the level of fluid in the jar. Unscrew the bleeder valve one-half to three-quarters turn, depress the foot pedal by hand and then allow it to return slowly. Air in the system will show as bubbles on the surface of the fluid in the glass jar. Continue movement of the pedal until bubbles cease to appear. Then tighten the bleeder valve, remove the drain hose and replace and tighten the screw at the bleeder valve.

To adjust the brake shoes, jack up the car and block the axles so that the wheels can be turned freely. Disconnect emergency-brake pull rods and remove the adjusting-hole covers from the flange plates. On one common type of brake, these holes are located at the bottom of the flange plate as in Fig. 1. Insert a flat tool or a screwdriver in the hole. The end of the tool should engage the lugs on the adjusting cover or star wheel. Lift up on

the adjusting tool to turn the star wheel to the right. Continue the adjustment on both star wheels until the brake shoes drag slightly when the road wheel is turned. Then back off the star wheel the required number of notches to give the brakes the proper running clearance. The service manual gives the proper number of notches to back the adjusting mechanism to get the correct clearance. The emergency or parking brake should be adjusted each time the service brakes are adjusted and, on some cars, it is necessary to adjust the parking brake before backing off the star wheels in the rear brakes. When new brake shoes have been installed at the time of servicing the brakes, it will be necessary to adjust all anchor bolts, Figs. 4 and 10. Although the methods will vary with different cars and makes of brakes, Fig. 4 shows the typical procedure in making this adjustment. After servicing the brakes, be sure that there is sufficient brake fluid in the master cylinder. The recommendations generally specify that it should be nearly full. Use only the brake fluid specified by the manufacturer of the car. On some late-model postwar cars, the brakes are of the self-centering, self-adjusting type. Under normal wear, this brake will not require servicing until replacement of the brake shoes is necessary. The brake automatically adjusts itself to compensate for each .005 in. of wear on the linings, keeping the running clearance always approximately the same.

To check performance of the brakes under the average driving conditions, road-test the car after the servicing has been completed. On dry, smooth concrete, the brakes should stop the car easily within a distance of 30 ft. at a speed of 20 m.p.h., Fig. 11, assuming, of course, that the tires are in good condition and have sufficient tread to grip the surface of the road effectively. This is a fair measure of brake efficiency but it is well to remember that other mechanical defects will affect good braking. Incorrect wheel alignment and wheels out of balance, worn tires, underinflation or overinflation of the tires, and worn wheel bearings are defects to look for if carefully serviced brakes do not give good performance under test.

## Levels Attached to Yardstick Aid Sign Painter

Two level glasses mounted at the approximate center of a yardstick save considerable time when sign painting. The level for horizontal lines must, of course, be attached exactly parallel with the edge of the yardstick, while the level for vertical lines must be exactly 90 deg. to the edge.—Bryant H. Neill, Waco, Tex.

## Modeling Clay Cleans Pencil

A small wad of modeling clay kept at one corner of a drawing board provides a handy means of cleaning newly sharpened pencils and removing partially dried ink from pens. The clay will

last for some time, as the soiled portion can be worked into the wad. The clay, of course, will stay in place on the board.

## Watertight Expansion Joint

For long runs of pipe that are subjected to temperature extremes, this watertight joint allows for expansion and still with-

stands considerable pressure. Telescoping copper rings give lateral strength to the joint and a rubber ring makes it watertight. The latter should be replaced by a ring of synthetic material in cases where rubber is likely to deteriorate.

## Tire Section Provides Tag Rack

Use a section cut from the side of an old auto tire to clamp job tags to a convenient spot on the shop wall. The section should include the rim and a portion of the tread. If the rim part of the tire section is nailed or screwed tightly to the wall, there will be sufficient clamping action to hold either a few or a number of tags securely in place.

## Eraser Starts Nut in Recess

If a nut must be started on a bolt, the end of which is in a recess thus making it impossible to use the fingers, a pencil fitted with an eraser will do the trick. Just taper the eraser so its end will fit into the nut, twist the nut onto it, and start the nut on the bolt.

## Roosting on Fountain Discouraged By Suspended Barrel Hoop

Poultry are discouraged from roosting on the top of a drinking fountain if a barrel hoop is suspended directly over it. Three wires tied to the end of the main wire are used to keep the hoop horizontal and these are made as short as possible so the hoop will tip easily when a chicken attempts to roost on it. The hoop is centered and hung an inch or two above the fountain.

# Combination Sweeper-Sifter for Poultry Yards

Cleaning poultry yards is done in a jiffy with this combination sweeper and sifter. Pushed along to gather litter and droppings, the sweeper is shaken occasionally to sift the load of dirt and sand. Except for the wheels and hardware cloth, the sweeper can be made from scrap materials

## Concrete Feed Troughs Are Made Easily by Molding in Earth Forms

Needing several small feed troughs, I decided to cast them from concrete poured in forms dug in the ground, thus saving the expense of wooden forms. The form is dug as shown in the drawing, and the dirt is dampened and smoothed with a trowel. If the ground is dry, it must be thoroughly moistened before the concrete is poured to prevent the water in the concrete from being absorbed too rapidly. The trough is reinforced with chicken wire or iron rods, and wooden molds, which are placed on the bottom of the trough while the concrete is still wet, are used to cast the legs. After pouring is completed, the unit should be covered with damp straw and the concrete allowed to cure for several days.

Charles E. Mason, California, Mo.

W.T.M. Concrete

## Graduated Jig Permits Quick Setup to Bandsaw Circles of Various Sizes

A few minutes spent in making this graduated jig will save considerable time when setting up circle-cutting jobs on the bandsaw. The plywood base is drilled near one end for a dowel pivot and slotted, as shown, for several circle diameters. To use, just insert the saw blade in the proper slot and clamp the base to the table. — Graham Cheek, Asheboro, N. C.

# Tool up with a FLEXIBLE SHAFT

By Sam Brown

**A FLEXIBLE SHAFT** combines both the power and uses of many different tools in a handy portable unit. With it, you can carve, drill, sand, rout, buff, wire-brush, saw, polish and grind simply by using the necessary accessories on the projecting end of the shaft at the handpiece, Figs. 2 to 4 and 7 to 9 inclusive. Large flexible shafts are widely used in industry for such heavy operations as removing rust and scale, grinding welds, polishing large surfaces of metal and snagging castings.

Flexible shafts usually are rated large or small according to the size of the shaft, or core, as it is called. A large flexible shaft is one having a core  $\frac{5}{16}$  in. in diameter or larger, while a small shaft is one having a  $\frac{1}{8}$  to  $\frac{1}{4}$ -in. core. The large shafts will transmit power for the heaviest work that can be done with hand-held tools, and small shafts are especially suited to use with tiny rotary files, grinding wheels and polishers, which must be rotated at extremely high speeds. The small shafts are quite flexible and will operate efficiently when curved to a comparatively short radius.

2 SANDING

3 GRINDING

4 POLISHING

A flexible shaft consists of a stationary casing and a core, which rotates inside the casing. The core, in both the large and small sizes, is a precision-built unit consisting of layers of spring-steel piano wire wound to produce an alternating right and left-hand pitch, as in Fig. 6. The pitch of the outside layer determines the direction in which the shaft should be rotated. Most shafts are left pitch and should be operated in a clockwise direction, as this movement tends to tighten the outer winding of wire. Clockwise direction of rotation is common to lathes, drill presses and also to most types of motors. It is possible to reverse the direction of rotation of the shaft where the work load will at no time exceed half the power rating.

Although some casings consist only of a continuous spring-steel strip wound spirally with interlocking edges, most of the better-quality shafts are fitted with casings of braided wire and molded rubber or fabric coverings which give somewhat greater flexibility and ease of handling. Small shafts designed for high speeds often have a spiral inner liner which fits loosely over the core and has the effect

$\frac{1}{2}$ "	3/4	4,200 R.P.M.	10"	6" DIA.	11°	

① General average values — cores of the same dia. may vary in construction so that values given are only an all-around average.

② This column lists largest motor generally used. Safety factor is about 4. Motor power can be increased proportionately with increase in shaft speed. Example,  $\frac{1}{4}$ -in. core can handle 1/6 hp. at 1750 r.p.m., or 1/3 hp. at 3600 r.p.m.

③ Main consideration is the prevention of shaft overheating which occurs if shaft runs much over 500 surface feet per minute. Most shafts under  $\frac{1}{4}$ -in. dia. are powered with universal motors and will run much slower than "no load" speed of motor.

④ Values given are normal for good power transmission but shafts can be worked at sharper curves for occasional work.

⑤ These diameters are based on what the shaft will stand and also on how fast any grinding wheel can be operated with safety. Wire brushes, buffs and sanding disks can be larger.

⑥ This column shows deflection or "windup" of shaft under full load. A  $\frac{1}{8}$ -in. shaft, for example, will deflect 70 deg. per foot. If the shaft is 3 ft. long, total deflection will be 210 deg. or a little over  $\frac{1}{2}$  of a full turn.

of reducing friction. Connecting members of the shaft are press-fitted into the casing and are designed to permit coupling directly to the motor at one end and to the handpiece at the other. When the shaft is operated straight or nearly so, Fig. 12, the end of the core extends only slightly. Fig. 13 shows how the core extends when the shaft is flexed. One end of the core is fixed in the connector and the other end is splined or keyed to the connector to permit movement in and out when the shaft is operated on a comparatively short radius. On some shafts, this movement is taken up at the motor end, the handpiece end being fixed. Shafts of this type can be attached directly to a motor shaft, Fig. 1, or to a drill press, Fig. 18. When connected to the drill press, as in Fig. 18, it should be kept in mind that the torque of the drill-press spindle far exceeds the load limit of the shaft.

Simplified data on the common sizes of flexible shafts is given in the table, Fig. 10. The data given is not exact but is average for all shafts. If you want a shaft for light craftwork, such as modelmaking, the  $\frac{1}{8}$  to  $\frac{3}{16}$ -in. core size is a good selection. For heavy grinding, buffing, and wire-brushing, the  $\frac{3}{8}$ -in. core is sufficiently strong to take the torque of motors up to  $\frac{1}{2}$  hp. For the small shaft, the handiest length is 3 to 3 $\frac{1}{2}$  ft. and the large shaft should be 5 to 6 ft. long. Such shafts are available as motor-and-shaft units with variable speeds, and also for direct attachment to motors, or any spindle of proper size and speed.

The business end of the flexible shaft is the handpiece and, in the larger units, many different types of handpieces are

12

13

available. The straight, spindle-type handpiece, Fig. 11, usually is supplied with the large shaft. Flanges for this handpiece permit mounting accessories which have a center hole and can be held between the flanges. A hand-closing chuck having a threaded shank, which can be screwed onto the handpiece spindle, is useful for holding drills and any other tools having shanks of a diameter within the capacity of the chuck. Grinding wheels should not exceed the diameter given in the table, but such accessories as cloth buffs and sanding disks can exceed the grinding-wheel diameters by as much as 25 percent. A common handpiece supplied with the small shafts is either a collet chuck or a chuck tightened by means of a special key or spanner-type wrench, Fig. 11. These usually have a capacity of  $\frac{3}{32}$  or  $\frac{1}{8}$  in., adapters being available for holding the in-between sizes. Such chucks are ideally suited to driving mounted grinding wheels, wire brushes and small rotary files. The key-type chuck is available in either sleeve-bearing or ball-bearing construction, but collet chucks usually are supplied only with sleeve bearings. Right-angle handpieces are supplied for use with the heavy shafts. Figs. 2 and 4 show this type of handpiece in use.

14

## MOTOR MOUNTS

Motors for powering small flexible shafts should be supported with a swivel joint for ease in manipulation. Fig. 14 shows a motor hanging from a vertical arm which is held by a toolbox. For portability, the motor can be carried on a shoulder strap as in Fig. 15. Benchwork requires that motor be supported overhead. See Fig. 16

15

16

17

18

Power take-off for driving flexible shaft can be made from drill-press spindle, as above, or from lathe motor, as at the left

19

Core of shaft is cleaned and lubricated at regular intervals

Proper installation of the flexible-shaft unit is necessary if you are to get the most out of this versatile tool. One of the handiest arrangements for using a small shaft-and-motor unit is that in Fig. 5. On such units, the motor is provided with a bail or hook so it can be hung at some point above the work. In this case, a swinging arm mounted on the bench tool panel makes it possible to use the shaft unit at any point on the bench top. Other applications, using the same motor unit, are shown in Figs. 14, 15 and 16. Similar units are available with larger shafts and motors. The larger units also are supplied with a special floor stand as in Figs. 2 and 3. On these units, the motor base swivels, permitting the unit to follow the movements of the operator without undue flexing of the shaft. In small commercial shops and home workshops, the larger shafts can be set up as in Fig. 1, the motor being bolted to a wooden base.

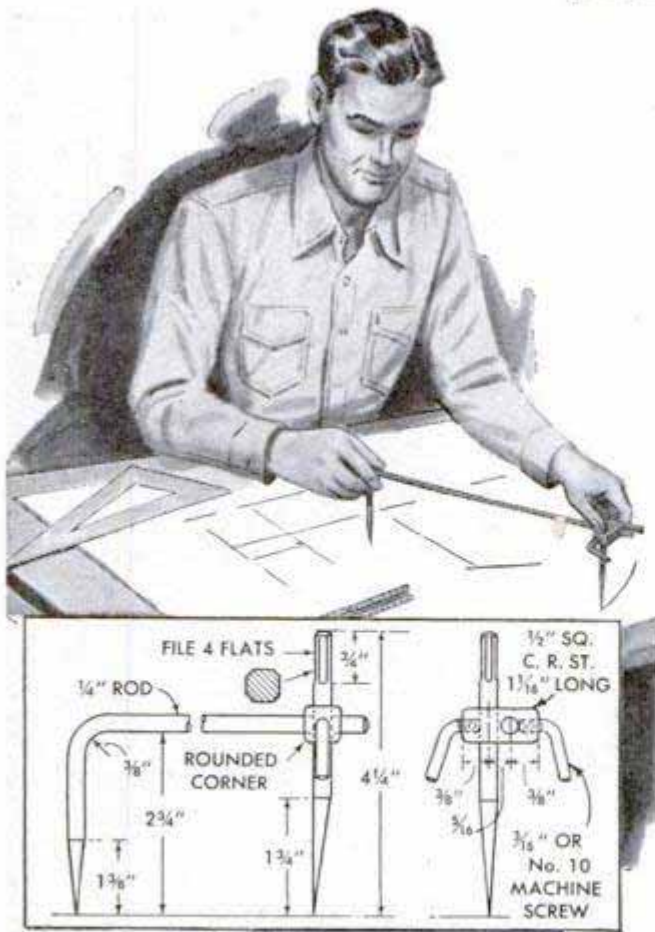

The same type of shaft as that in Fig. 1 is shown in a somewhat different adaptation in Fig. 17 where it is being driven by the lathe motor and is used to drill index holes in a wood turning. In the setup shown in Fig. 1, maximum freedom of movement is obtained with the end of the motor shaft toward the operator, a trick to remember when operating a flexible shaft with the motor mounted on a stationary base. Disk-sanding is done with a special flexible disk constructed as shown in the details in Fig. 1. The abrasive disk usually is not attached to the backing disk with adhesive but is held in place by a recessed flange. In operating a disk of this type on large flat surfaces, make a one-way stroke with the leading edge of the disk lifted slightly as shown. In this way, the trailing edge will not leave scratches on the work. A lamb's-wool bonnet for polishing can be fitted over this type of disk.

Flexible shafts used intermittently need little servicing, except that care should be taken to make sure that the shaft does not run without lubricant. Dismantle the shaft at regular intervals and clean all the parts with a solvent as in Fig. 19. When assembling after cleaning, renew the lubricant with the grade specified by the manufacturer. Ball-bearing handpieces usually are provided with separate oilholes having ball closures. These handpieces should be lubricated at regular intervals with a medium machine oil or any special lubricant specified by the manufacturer.

(Certain photos courtesy R. G. Haskins Co., Delta Mfg. Co., Freedom Electric Co., and The Dumore Co.)

# Increasing Range of Lathe Milling Attachment

Easy to make and simple to use, this handy adapter considerably increases the usefulness of a lathe milling attachment. The base of the adapter is clamped in the milling-attachment vise, and work that is irregularly shaped or too large for the vise is mounted on a faceplate screwed on the adapter stub. For milling round work, the faceplate is replaced with a four-jaw chuck. All parts of the adapter are made of cold-rolled steel. One half of the stub is threaded the same as the lathe spindle, and the unthreaded portion is a force fit in a slightly undersize hole drilled through the base. A registering hole is drilled through both stub and base for a  $\frac{3}{16}$ -in. steel pin which holds the stub in place. A piece of  $\frac{1}{2}$ -in. square stock, drilled and tapped for a setscrew, is mounted on the face of the block as shown in the detail. Note that the three holes drilled in this piece are counterbored for fillister-head screws. The setscrew, of course, is turned through the piece of square stock and against the hub of the chuck or faceplate to lock it on the stub.

## Trammels Made From Drill Rod Also Used as Beam Compass

Made primarily from drill rod, this set of trammels is inexpensive and, by replacing the adjustable scriber with a pencil, it doubles as a beam compass. The beam and pivot point are made in one piece, one end of the rod being bent 90 deg. and pointed as shown. The adjustable point, or scriber, fits in a sliding head made of  $\frac{1}{2}$ -in. bar stock. Flats are filed on four sides of the upper part of the adjustable point to aid in turning it for the proper setting, and the tip of the point is bent to align with one side. Note that the locking screws for the adjustable point and the sliding head are bent from machine screws. In use, the sliding head is locked at the approximate setting. Then, the eccentric point is turned to the exact setting and also locked in place. To make accurate settings easier when using the tool as a beam compass, the upper part of the pencil can be filed at an angle so that the point is eccentric.

Earl R. Goddard, Denver, Colo.

☞ Pour paraffin over unused paint remaining in a can and it will not harden.

## Homemade Car-Parts Washer Agitated by Compressed Air

One mechanic uses a homemade washer agitated with compressed air to wash car parts quickly and thoroughly. The washer consists of an old oil drum, a tight-fitting cover, an adjustable parts rack and a length of pipe inserted at the bottom of the drum for an air intake. A series of holes is drilled along the portion of the pipe inside the drum, and the outer end is fitted with an air-hose connection and a control valve. The parts rack is simply a metal frame covered with screen wire. Two pieces of rod are welded vertically to the frame, sleeves being slipped over the rod and tightened with setscrews to permit adjusting the rack for depth. Note that holes are drilled through the cover to allow the air to escape and that casters are welded to the bottom of the drum to make it portable. Be sure that the cover is tightly in place before turning on the air pressure full force.

Elmer Vandrey, Truman, Minn.

## U.I. '51 Grain Sacks Stenciled Easily

A hoop of stiff wire inserted in a grain sack will stretch the sack taut for easy stenciling. The hoop can be made from a wire clothes hanger.

## Antifreeze Drained Without Loss

Clamping a length of hose to the radiator drain cock permits draining antifreeze into a gallon jug or other container without losing a single drop. In addition, this pre-

vents splashing the underside of the car and the garage floor. Clamp the hose to the drain cock by twisting a piece of wire around it.—T. A. Thom, Knoxville, Iowa.

## Sunken Nail Keg Holds Pail To Feed Young Calf

Instead of taking time to hold the feed pail when feeding a young calf, one farmer sets the pail in an empty nail keg which is partially embedded in the ground. Earth is shoveled into the keg to help anchor it. Of course, it is necessary to embed the keg at such

a depth that the rim supports the pail at the proper height for feeding. Mounted in this way, it is difficult for the calf to overturn the pail and spill the feed.

## Half Gate in Farm Fence U.I. '51 Ideal for Occasional Use

When farm lots are fenced with boards, narrow swinging gates are a convenience in passing from one lot to another. If infrequent use does not warrant the time and expense of installing full-size gates, a half gate will be found handy. This is easy to make and costs practically nothing. Just install a couple of boards vertically in the fence and saw off the upper boards between them. Then make a half gate from these short pieces and hinge it to one of the uprights.

Marion L. Rhodes, Knightstown, Ind.

## Portable Civilian Transceiver

**R**ADIO TRANSCEIVERS for public use between homes, automobiles, offices, manufacturing plants, farms, and many other person-to-person radio-telephone applications are now claimed to be in pilot-plant production according to one manufacturer who has received F.C.C. approval. The portable battery-operated combination transmitter and receiver is to be used on the 465-mc. band allocated for civilian use, when licensing is authorized.

The compact unit is about one fourth the size of the famous wartime walkie-talkie and is the result of two years of research and engineering in which many new techniques, including the use of "printed" silver-on-ceramic circuits, and subminiature tubes played an important part. In order to qualify for the F.C.C. approval, experimental units have been given exhaustive field tests by the manufacturer. These tests have been made between auto and home, home and office, boats and shore, planes and ground, and from person-to-person on city streets. It is also claimed that they have been tested for practical push-button operation in the field between hunters, mountain climbers, farmhouse and field, and by surveyors. This pioneer manufacturer predicts that this type of personal two-way radio will become a standard means of eyewitness reporting of sports and news events to radio and television audiences and to newspapers.

Two transceivers of the type shown in photos A and B are required for person-to-person air contact. In actual operation, the unit is held in the position shown in photo A. It weighs only 11 ounces, including the small folding antenna, and it is housed in a tiny case measuring  $1\frac{1}{4} \times 2\frac{7}{8} \times 6$  in. This pocket-size radio station includes all necessary equipment except a tiny headphone and the necessary batteries, which are carried in a separate case about the size of a miniature camera. Photos B and C show the ultracompact construction made possible by the subminiature tubes and "printed" circuit. This model 100-B citizens' transceiver is for Class-B stations only, operating on 465 megacycles, tolerance 0.4; input of 3 watts; emission, A-3 with 30 percent maximum modulation. The transmitting section uses a Sylvania 6K4 subminiature oscillator, and the receiver is a super-regenerative type using three Sylvania 1V5 subminiature tubes. Two of these tiny tubes are shown mounted on one of the ceramic panels in photo C. The total weight of the station equipment, including batteries, is  $2\frac{1}{2}$  pounds. The practical range is about two miles, depending upon the terrain.

# LOW-COST 2-TUBE PROGRESSIVE

By S. A. Johnson

**T**HIS EXTREMELY SIMPLE and highly efficient two-tube receiver will be of interest not only to the builders of Unit No. 1, the one-tube set that appeared in the January issue, but also to anyone who wants an inexpensive, easy-to-build, broadcast-band receiver that will operate a loudspeaker to good room volume. Since this second model has a built-in power supply, it eliminates the 45-volt B-battery used in the previous set, and operates directly from your 110-volt a.c. supply line. It employs all of the same parts except the switch on volume control R5, which is changed to a single-pole, single-throw type. Therefore, the beginners who built Unit No. 1 can build this more powerful set with a minimum of expense and trouble, as only a few parts are added.

A type 6AK6 miniature power-pentode tube is now employed as a power amplifier for the output of the original 6J6 twin-triode tube; all of the excellent performance of the one-tube set is retained, with the added advantages of loudspeaker volume and all-electric operation. Both set No. 1 and set No. 2 are complete, individual units and need not be built progressively unless desired. Those who built the first set are advised to remove all wiring, except the tube-filament circuit, from the chassis base and completely rewire the circuit for this new 2-tube loudspeaker model.

A

B

# SIGHT AND SOUND TODAY

A—Either conventional rectangular TV pictures or circular enlargements from about the center of the regular picture are now available on the same viewing tube in this Garod television receiver. The inset photo shows the conventional picture, which the young lady can change at will by means of the push-button remote-control switch she holds in her hand. The switch is connected to a 15-ft. cord and provides close-ups of faces or specific events in the scenes. This Tele-Zoom feature is claimed not to distort the image. The operator can change back at will to the conventional-size picture whenever crowd action or an entire scene is preferable for viewing

B—Completely portable, this television receiver includes an adjustable portable-type antenna that straps inside the lid of the case when not in use. The set employs a 7-in. picture tube and can be used wherever alternating current and TV broadcasting are available. It is built on the same chassis as the table-model Motorola VT71 and features the same simplified controls. C—This shows the portable TV set ready for use with the adjustable antenna inserted in its socket. The antenna snaps into place and may be rotated for peak performance. With antenna, set weighs 33 pounds. Case cover is leatherette

D—New type of record and automatic record player recently introduced by RCA plays a single-size disk about 7 in. in diameter for all classifications of recorded music, popular, classical, folk and children's material. Operation at 45 r.p.m. provides up to 5 minutes and 15 seconds of playing time on each side or up to 42 minutes when eight records are stacked on the automatic record player. Record-changer mechanism is claimed to be unusually fast and to eliminate 75 percent of the problems encountered in the conventional changers. The outstanding feature is the large, 1½-in., plastic-capped center spindle which houses the noiseless trigger-fast drop mechanism

# See the image $2\frac{1}{2}$ times as Bright

BRIGHT TO THE EDGES

**SPARKLING BRIGHT** describes the image you see in the finder of the new Kodak Reflex II Camera. Sharper focusing, edge-to-edge composing are made possible with the new Kodak Ektalite Field Lens beneath the ground-glass screen (see diagram above). Microscopic lens grooves redirect stray light rays—give you an image  $2\frac{1}{2}$  times as bright overall, 10 times as bright at corners, as with the usual ground-glass finder.

And of course you get all these Kodak *plus features*—Lumenized twin lenses, four-element Kodak Anastar  $f/3.5$ 's . . . fast-action  $1/300$ -second flash shutter . . . new automatic film stop.

Seeing is believing—so inspect the new Kodak Reflex II Camera at your nearest dealer's. The camera with case, \$135 plus tax.

## The NEW Kodak Reflex II Camera

Flashholder, \$9.50 plus tax.  
New two-piece field case comes with camera.

"Kodak" is a trade-mark.

(Prices subject to change without notice)

## Beginner's Set—Unit No. 2

(Continued from page 239)

available from all parts houses for about \$1.00. The dimensions are, of course, the same as for the previous set. Those who wish to make their own base can omit the ends, turned-over edges, and tabs. The base may be made of .055-in.-thick aluminum or any suitable sheet metal that can be bent to shape between two blocks of wood clamped in a vise. Drill all holes indicated in Fig. 1; the holes for the miniature tube sockets are  $\frac{5}{8}$  in. in diameter. Small drill holes may be reamed out to this size with a tapered reamer, or a Greenlee chassis punch may be used.

Photos A, B, C, D and E show various views of the completed set; if you did not build Unit No. 1, you should study these photos carefully and note how the various

parts are mounted on the chassis base. The schematic circuit diagram appears in Fig. 2 and the pictorial wiring diagram is given in Fig. 3. Please note that this pictorial wiring diagram shows a bottom view of the chassis base. The miniature tube sockets should be mounted so that the blank terminal space is in the position shown. Use No. 20 insulated hookup wire for the circuit and make all soldered connections with rosin-core wire solder. The selenium rectifier is made self-supporting on the terminal strip by soldering its positive terminal directly to one of the insulated lugs on the terminal strip as shown in Fig. 3; it must clear the metal base. When wiring the circuit, check each lead carefully with both the pictorial and schematic wiring diagrams and mark out each lead on Fig. 3 with a colored pencil when it is completed. The use of tie-point strips having insulated terminal lugs simplifies circuit wiring. They enable the builder to use shorter

# New Eagle-Picher Decorator Paints simplify all home decorating!

**10 HARMONIZING COLORS!**

**HARMONIZE with each other!**

**BLEND with any color scheme!**

**SIMPLIFY color selection!**

**3 exactly matching finishes**

for walls, ceilings

for kitchens, bathrooms

for woodwork, cabinets

Eagle-Picher colors were selected by interior decorators because they harmonize completely with each other—blend perfectly with all colors in furniture, drapes, rugs—and are by far the most popular with discriminating homeowners.

With them you can work decorating miracles. You'll get professional effects, easily, because you're sure of a unified, harmonious color scheme, and you get exactly matching flat walls and glossy woodwork. They're easy to apply, too... cover almost any surface in one coat and may be washed because they're genuine oil paints.

Eagle-Picher paint for an average-sized room will cost you less than five dollars! Ask your dealer!

**PROVE IT YOURSELF!  
TRY YOUR  
FURNITURE COLORS

# WHEN IT'S A PLUMB YOU CAN BE SURE

It's As Perfect  
As A Tool Can Be

Your tasks will be easier, you'll do jobs better when you use a Plumb. Plumb Ball Pein Hammers, for example, are toughened to stand heavy work. The weight is centered behind the striking face to add force to the blow. Cone-shaped pein spreads rivets instead of mashing them. Tested hickory handles are shaped to lessen fatigue. Like all Plumb Tools they are balanced to make hard jobs easy —to do work faster.

Fayette R. Plumb, Inc., Phila. 37, Pa.

—exclusively Plumb*

# PLUMB

HAMMERS • HATCHETS • AXES • FILES

leads and to make a neater wiring job. The various fixed resistors and condensers are self-supporting by means of their "pig-tailed" wire connections. Use care in soldering leads to the terminals of the small tube sockets.

The 5-in. permanent-magnet (PM) speaker is mounted on a  $\frac{3}{16}$  x  $5\frac{1}{8}$  x  $5\frac{3}{4}$ -in. hard-pressed-wood baffle, which in turn is mounted on the chassis by means of two metal angle brackets. First of all, five  $\frac{3}{4}$ -in. holes are drilled in the baffle, as shown in photo A, to act as the speaker grille. These holes are then backed with a piece of grille cloth which is glued in position before the speaker is mounted.

When the set is completely wired and the tubes are inserted in their respective sockets, plug in the power cord and rotate the volume control so that the switch is in the "on" position. Thanks to the selenium rectifier, the set warms up very quickly. As soon as the brief warm up is completed, you should be able to hear some "whistles" as you rotate the tuning-dial knob. "Backing off" the volume control brings in clearly the station you want to hear and eliminates the whistle. There is a certain knack in tuning a set of this type but you can learn it in a very few minutes by experimenting. As in the case of the one-tube set, a short, indoor antenna will give the best selectivity, but a long, outdoor antenna will provide stronger signals. Use the antenna that gives best results in your location. Once you have tuned in a station that you can identify and for which you know the frequency, set the dial pointer to that frequency. Then adjust trimmer condenser C2 under the base with a small screwdriver so that the dial pointer will always indicate that station. Always be careful not to turn the dial pointer past the scale limits. You will find that the position of the power plug in the wall sockets has a noticeable effect on hum level. Try reversing the plug in the wall socket if hum seems excessive. No external ground is used with this receiver; the set receives the effect of a ground through its connection with the power line. The headphone jacks on the rear of the chassis are retained in this new set for those who want to listen to programs with headphones after others have gone to bed. Simply plug the headphone-cord tips into the jacks and remove the 6AK6 tube. Removing the tube silences the loudspeaker; the remaining 6J6 tube gives excellent headphone volume. Detailed student material list R-376 for this low-cost progressive set Unit No. 2 is available from Popular Mechanics Radio and Electronics department upon receipt of ordinary letter postage.

# More Facts about the NEW FORD "FEEL"

When you drive this great '49 Ford, you sense in an instant the new Ford "Feel"—a feeling of effortless control, relaxing comfort and reassuring security—a feeling of eager and flexible response.

And one of the big reasons back of this new Ford "Feel" is . . .

## "Equa-Poise"

**Power!**

Take your choice of either the new 100 h.p. V-8 or the 95 h.p. Six and get smooth,

brilliant performance. Both engines are "Equa-Poise" mounted. Both incorporate a number of advancements in basic design—both are truly *new*. New "Equa-Flo" Cooling System, "Deep-Breath" Manifolding, "Power-Dome" Combustion Chambers and improved lubrication all contribute to Ford's feeling of responsiveness.

Ford "Power-Dome" Combustion Chamber

Ford offers new economy, too; up to 10% savings in gas—up to 25% with Ford's smooth new automatic Overdrive, optional at extra cost.

And remember, only Ford in its field gives you this power choice of new V-8 or new Six!

There's a <sup>NEW</sup> Ford in your future

Drive a FORD and FEEL the difference!

## How to Tempt a Fish

(Continued from page 112)

are most numerous in May and June. Later in the year, when the fish are feeding on grasshoppers and other bugs, the trout are not so fussy about what they take.

A few years ago, John Alden Knight came forth with his much-respected theory that fish feed during certain periods. Charts in his book tell you when during the day you should fish. These time charts are called the Solunar Tables.

No one has yet developed a successful fish call like a duck call or a moose call, but Frank Steel now has an instrument called the "Fish Finder" that makes fishing sound easy. He is the present world-record holder for Chinook salmon, with an 83-pounder which he caught in 1910 in the Umpqua River. He is the former national fly-casting champion, so he backs up this new instrument with many years of experience in fishing.

He says, "You've got to find the fish before you can catch them, so I have developed a dependable way of locating bass, trout, walleyes, northern pike, muskies and pan fish. I found the favorite water temperatures of all the common freshwater game fish. All smallmouth bass like 67 degrees, and they like it the same across the continent. When the surface water is 60 degrees you will find the smallmouth bass 5 to 10 feet deep, so you must fish for them at that depth. The fish finder gives you a water thermometer and the necessary fish charts for each fish."

Now for another tip on what's really hot in fly fishing. A tough, waterproof thread has been developed that reacts under light in the ultraviolet spectrum. Bathing suits made of the material can be seen at a distance of two miles, and have made quite a hit with some of the more attractive mermaids. Now the material is being used to tie flies that may catch all the trout and bass that swim. At dawn or dusk, in smog or on the cloudiest days, the flies glow as if they're alive and are said to be four times as bright as conventional flies.

Elmer Maywald of Oak Park, Ill., an expert angler and conservation-minded sportsman, last year fished in some of the better streams of British Columbia, Washington, Oregon, Idaho, Montana and Wyoming with his latest fly creation made from the feathers of a horned owl. It took more trout than anything else in his fly box. His hope is that every fly tier will use horned-owl feathers because the more horned owls that are destroyed the better will be the quail and duck shooting. In tying this fly

### Refinishing Leather Upholstery

**Q**—I have a large leather-upholstered chair. The upholstery is rather worn at the corners of the cushion and on the tops of the armrests. There are a few small cracks at these points but they do not seem to go clear through the leather. Is there any way of refinishing leather upholstery to make it look like new?  
D.A.—Richmond, Va.

**A**—If you are sure that your chair is upholstered in genuine leather and not the so-called imitation leather or other types of leather substitute, then the question of whether or not it can be successfully refinished depends almost entirely on the extent and nature of the wear or other defects. Special enamels and dyes are available in a wide range of colors and are easy to apply by following the manufacturers' directions. The colored enamels are more or less opaque and are quite effective in hiding ordinary defects. The dyes color the material without entirely hiding the characteristic texture and graining of the leather. It is very important that all surfaces of the upholstery be thoroughly cleaned before either of these refinishing materials is applied.

### Fireplace Smokes

**Q**—Recently I moved into an old house having a large stone fireplace in the living room. This fireplace smokes badly when either wood or coal is burned. The flue seems to be clear of obstructions. Fireplace opening is about 36 in. high. What could be the cause of this trouble?  
B.G.—Portland, Me.

**A**—When you say the fireplace "smokes badly" we assume you mean that it smokes continuously and not just intermittently or when the fire is first lighted. Two quite common causes are suggested by your description. The first is that the flue is too small in sectional area. It should be not less than one tenth the area of the fireplace opening. A square flue generally seems to give better results than a rectangular one. The other possibility is that the wind shelf either is not properly located or constructed, or it is filled to the outside edge with an accumulation of fine ash, soot and very likely bits of mortar that have fallen from above. The purpose of the wind shelf, of course, is to prevent back draft. If it is covered with debris

Amazing new LUMITE screening

# STAINPROOF

*Because it's Rustproof!*

LONGER-  
LASTING

CAN'T  
STAIN YOUR  
HOUSE!

CAN'T  
RUST OR  
CORRODE

#### Facts for Architects and Builders:

**Effect of acids, alkalis and solvents**—Essentially none.

**Effect of age**—Independent scientific tests indicate that LUMITE is more durable than any other type of screen cloth under all climatic conditions that might normally be encountered.

**Non-inflammable**—Will not support flame . . . is self-extinguishing. Melting point, 340°F.

**Tensile strength**—Up to 40,000 lbs. per square inch.

**Impact strength**—Greater than conventional screening.

**Installation**—Cut with ordinary scissors. Fold cut edges under one-half inch. Tack or staple the screening smoothly and evenly every 1½". Because of inherent characteristics LUMITE will gradually draw itself into a snug, firm fit. For correct methods of machine framing, consult LUMITE engineers.

Imagine a screening that can be GUARANTEED never to rust, rot, corrode or stain your house—yet costs only 11½-12¢ per square foot. That's LUMITE!

Imagine a plastic so strong that it actually has greater impact strength than any other type of screening. That's LUMITE!

Imagine a screening that never needs painting to protect it from rust or corrosion. That's LUMITE!

Imagine a screening that is so easy to handle anyone can frame it—no special tools needed—will never sag or bulge when properly framed. That's LUMITE!

For your new home or to replace old screens, order LUMITE from your hardware, lumber or building supply dealer.

Write for information and free sample to Dept. PM-2, LUMITE DIVISION, Chicopee Manufacturing Corporation, 47 Worth Street, New York 13, N. Y.

or is too narrow, it could be the cause of an almost continuous back draft, forcing smoke and gases into the room. A thorough cleaning of the flue and wind shelf, and the installation of a damper, if there is none, might help to correct your trouble. However, if the flue is too small or the wind shelf too narrow, rebuilding is the only sure solution.

### Refinishing Ornamental Iron

Q—The ornamental-iron railing on my front stoop is rusty in spots and the paint is scaling off on the lower portions, exposing the metal to the weather. Can I refinish these railings myself in a dull black like the original finish? F.M.—Toronto, Ont., Can.

A—Yes, the actual refinishing is quite simple, the main problem being the thorough removal of the rust and scale. A stiff wire brush is quite effective for brushing off the rust and scale but you may have to use a coarse file to bare the metal on some parts of the railing. After a thorough wire-brushing, clean off all dust and loose material so that it will not be picked up by the brush and spread with the paint. As soon as the work has been cleaned, it should be immediately coated with a protective primer before the bare metal is exposed to moisture. Either a brushing red lead or tinner's red lead makes a good metal primer. Be sure to allow the primer plenty of time to dry thoroughly, and then apply a coat of flat-black paint. This dries without any sheen or gloss and makes a very attractive, durable finish.

### Cleaning Shellacked Floors

Q—My hardwood floors are shellacked and waxed. Now the finish has gotten grimy and dull. I have been told to use a dry-cleaning fluid to remove the old wax and grime, rather than a washing solution. Is this correct? R.M.—Kansas City, Mo.

A—Yes, insofar as the superiority of the cleaning fluid over washing-powder solution as a cleaner is concerned. However, we cannot recommend the use of cleaning fluid in any room in the house as the fire and health hazards are too great, even with all doors and windows open. Water in the washing solution may turn the shellac white on any areas where the wax film is worn off. With ordinary precautions, turpentine can be used safely to remove the old wax. Have the doors and windows open when applying the turpentine and for some hours after to allow the fumes to pass out. Embedded grime not removed along with the old wax can be removed with a household paint cleaner before refinishing the floor.

### Repairing Chairs That Squeak

Q—I have several older-type dining chairs with hardwood frames and backs. The joints of all the wooden parts are loose and squeak annoyingly when the chairs are in use. How can I tighten these loose joints—should I take each chair apart and reglue the joints, or is there a simpler method? Would I have to use clamps? R.R.—Denver, Colo.

A—The best method, of course, is to disassemble the chairs completely, clean all the old glue out of the joints and reglue, clamping the joints under pressure until the glue is dry. Use care when taking the chairs apart so as not to split the wood. Frequently, the parts of older chairs were joined with dowels and special care must be taken not to break these. To reassemble each chair as a unit, you will need at least four bar clamps. On some chairs, six bar clamps will be needed. Otherwise the chair must be joined in sections, allowing the glue to dry each time.

he uses the feathers off the shanks of the feet for the body, and the hackle comes from the face of the bird.

What looks most important to the fish is the fly. It takes a good fly, properly presented, to get the best out of fly fishing. Fly tying is not just a fad of fishermen; it's a hobby that has lured doctors, presidents, baseball players, lawyers and industrialists away from their work. Every American town in a trout-fishing area possesses a fly tier or two and the big cities are crowded with them. In fact, the bug that bites the fly tier produces a fever every bit as serious as the disease that strikes millions of fishermen as soon as the season opens.

(To be continued)

## Smog Sleuths

(Continued from page 181)

operating in Los Angeles because of canceled flights due to smogged-in airports. To find out what smog does to visibility, the technicians built a transmissometer.

Patterned after one developed by Dr. N. E. Bradbury of Stanford University, it consists of a photoelectric cell mounted in a box along with a light which sends out a beam that is reflected back with a mirror to strike the photocell. The photoelectric cell registers the amount of light cut off by foreign particles in the air and gives an exact measure of visibility.

A perforated disk whirling in front of the bulb in the transmissometer chops the light beam into 1050 flashes per second so that the photoelectric-cell amplifier, tuned to pick up only this frequency, does not register any other light.

When the transmissometer is used in the laboratory, the light beam is directed through a 40-foot tube containing test-smog vapors. By testing separately each element of the smog, the scientists can find out how much each contributes to reduced visibility.

"From what we have found out about smog so far, we know that the conditions which cause smog are the same almost everywhere it occurs," stated one of the scientists.

"First, there must be a heavily industrialized area to provide the necessary smoke and fumes. Then, a meteorological "roof" or inversion layer must be present to prevent the smoke and fumes from escaping, and the wind must be stagnant, or nearly so, to keep the air from circulating and blowing the smog away."

Los Angeles makes a good smog laboratory because it has a large industrial area

# Don't let a rusty radiator take you for a costly ride

*Clean out rust with*

## **DU PONT COOLING SYSTEM CLEANSER**

Get rid of winter's accumulation of rust, scale and scum . . . avoid damage caused by overheating. Just pour a can of DU PONT CLEANSER into your radiator, run the engine 30 minutes or more, and drain. It dissolves rust—cleans thoroughly—improves the engine performance. It's safe, sure and easy to use.

*Keep out rust with*

## **DU PONT ACID AND RUST INHIBITOR**

After cleaning out the radiator, you can keep it free from rust all season by pouring in a can of DU PONT ACID AND RUST INHIBITOR. It retards rust formation, and keeps out acid, too.

*Avoid radiator leaks with*

## **DU PONT COOLING SYSTEM SEALER**

You can stop leaks quickly and securely—and help to prevent radiator leaks in the future—by pouring in DU PONT COOLING SYSTEM SEALER. It will not clog the radiator or harm hose or metal parts.

**Rust-clogged  
radiators cause  
overheating,  
trouble and expense**

What a difference a  
real hand sander  
makes!

## The *NEW* SPEED-GRITS\* SANDER

A real professional-looking finish in a fraction of the required time by the old-fashioned wooden block. Fast on the flats and in the curves and corners too. That's the story of the new SPEED-GRITS Sander, the tool that handles like a plane.

It's light in weight but strongly built and it grips the sandpaper like a bulldog so it can't slip, loosen, snag or tear.

Best news of all is the low price. In two sizes—large size, with sanding area of 7" x 2", is priced at only \$1.25. Slightly smaller size costs \$1.00. Ask to see the handy SPEED-GRITS Sander at your local hardware store. You ought to have one in your shop.

\* Reg. Pending.

The SPEED-GRITS Sander loads like a camera—only faster and easier. You can unclamp it for loading and clamp it tight again in a jiffy.

The Mark of Quality in Abrasives

**BEHR-MANNING**  
NORTON abrasives TROY, N.Y.

and all the meteorological conditions necessary for smog formation. Los Angeles County is rimmed on three sides by high mountains and is located directly beneath the lower lip of a huge tilted saucer of air extending out over the Pacific Ocean to the Hawaiian Islands.

Whirling in a huge clockwise circle, this high-pressure system pours a cascade of warm air down on the California coast. Often 20 to 30 degrees warmer, the air forms a ceiling directly over the Los Angeles basin, floating above the cool air which fills the basin.

Contaminated air from the city below is unable to rise through this inversion layer which hovers between 1000 and 3000 feet above the ground. The natural haze of dust, salt particles and water droplets which collects at this layer is increased by man-made smoke and fumes, spreading a blanket of smog over the city. When the smog reaches ground level, eyes begin to smart and noses and throats burn.

The Stanford Research Institute scientists are working to perfect a smog-forecasting technique. With the help of a 36-foot chart on which they plotted two years of weather data from Los Angeles, they computed the Stanford Research Institute Smog Index. In its present state of development, the smog index helps meteorologists predict smog two days in advance with fair accuracy.

Forecasting smog is important because it will then be possible to limit the amount of smoke and fumes poured into the air when smog is expected. This knowledge may prevent a recurrence of the tragedies which struck the Meuse Valley and Donora.

## Hollywood Boatman

(Continued from page 160)

oarlocks, building a false cabin and adding figureheads.

He recalls one picture where a Hollywood flunky ordered a particular type of boat. Roberts knew it wasn't the right kind. He tried to say so, but the obnoxious underling insisted, "That's what the head man ordered and that's what he'll get."

Roberts shrugged his shoulders and delivered the boat. As soon as the director saw it he threw up his hands. "Utterly impossible!" he moaned. "It hides all the actors. We need a speed boat, not a cabin cruiser. How long will it take us to get a speed boat up here?"

"Give me a carpenter and I'll have one for you in about five minutes," Roberts said. He and the carpenter went to work, loosened a dozen screws and lifted the

cabin off. The result, an open-cockpit speedboat, which the director had wanted all the time.

With a little ingenuity, a boat used in one film can be remodeled to fit an entirely different type of picture. The French boats used in "Frenchman's Creek" became English longboats for "That Hamilton Woman." A sloop that appeared in "Lydia" can be changed into a day cruiser, a cabin cruiser, a yacht tender or a motor sailer.

Roberts keeps in touch with several salvage outfits on the West Coast. When they come across something of interest, they ring him on the telephone. He is a voluminous reader of magazines and books—always on the hunt for photos and descriptions of historical or foreign boats.

When he can't buy exactly what he wants, he builds it himself. His Venetian gondola, his English punts and several of his native war canoes are examples. He uses modern boatbuilding techniques and his products are always much stronger and more waterproof than the originals—at the same time duplicating in exact detail the lines and ornamentation.

A film company on location in Canada once took some scenes featuring an 18-foot sailboat. Back in Hollywood, it was decided that some additional close-ups had to be taken. It was cheaper to hire Roberts' skill than to transport the film company all the way back to Canada. Working from only a photograph, he constructed an exact duplicate of the sailboat.

On one of his salvaging expeditions Roberts acquired a model of the War of 1812 sailing ship, Peary. He had no particular use for it then, but put it away on the theory that it might come in handy some day. In the picture, "The Beginning or the End," he was called upon to furnish President Franklin D. Roosevelt's study. While doing research for this task, he ran across an item which said that F.D.R. had been given a model of the Peary in 1934. Roberts was delighted to use his own model in the motion-picture reproduction of the wartime President's desk.

Because his boats are bread and butter to him, and because he's often the only man on a set who knows how to handle them, Roberts holds a card in the Screen Actors' Guild and appears in many boat scenes. He's a stocky little guy with a dapper mustache and a twinkle in his eyes. He may be the skipper of a yacht, the driver of a speedboat or the boatswain of the admiral's gig.

Take a good look the next time you witness a sea picture at the movies. You may be able to pick out Benton Roberts, the Hollywood boatman.

## We Built a Cabin for \$300

(Continued from page 93)

adventure for so long, had done so many back-breaking jobs for just this moment, that we refused to be thwarted by the rain that lashed in from the ocean. As soon as the two sections were braced, I tossed a tarpaulin over the top. Then we sought partial protection from the storm, glorying that the roof of our cottage—in part—was over our heads at last.

The old window frames, minus glass and weak in structure, were taken home and glazed, reinforced, puttied and painted during the winter. The two doors, splintered and much the worse for wear, were rebuilt and made ready at home for re-hanging in the spring.

As with all the lumber we had salvaged, the floor and roof boards demanded careful sorting. Roof covering seemed a hopeless problem until I came across a builder who had an odd lot of asphalt shingles that he was willing to sell for a nominal amount. They covered one side of the roof. Over the garage, and later over the living room, we used a good grade of roofing paper that has withstood two winters.

Two layers of flooring were out of the question. Over the one floor we laid building paper and linoleum, which gives us a neat and tight floor. As soon as each wall was erected, my wife puttied and painted, filling cracks and holes. This "face lifting" has given the cabin an atmosphere of sanitation and beauty. Outside, the woodwork is white with yellow trim; inside, each room is finished in some pastel shade. The ceilings are white.

Critics might remark that I did not build the cabin according to conventional methods. Under the circumstances, the method I used—putting together the walls and then the roof—was most satisfactory. During the first winter, when we kept at the job every week end, we set up a wood stove in the kitchen with a stovepipe protruding through the window opening. It was crude, but we never suffered from the cold.

We were well satisfied with our first year's progress, for now we had a kitchen, bedroom and large garage. We started the second year with a summer of loafing, swimming, boating and fishing between bouts of work.

This year we confined our activities to the utilities—plumbing, heating and lighting. Our first move was for a better method of heating. A chimney and fireplace were in order. We also wanted a living room. And we built in a toilet, since town water now was available.

A PINT IN THE CRANKCASE  
A PINT THROUGH THE AIR INTAKE

Months before, we had laid the chimney foundation so that the back wall of the chimney would be a part of the garage rear wall. The wall was completed with odd pieces of siding and a small door as passageway from the garage through the living room (porch) to the beach path. Fortunately white brick, cement and flue lining were plentiful and inexpensive. Many of the stones in the foundation and face of the chimney and hearth came from the beach and highways. Total cost of chimney and fireplace, including damper, lead and hard brick, was not over \$35.

The fireplace was faced with field stones, some of them brought to us by an interested friend from his own stone wall. We enjoyed putting them in place a few at a time, building up the pillars and arch like a jigsaw puzzle. Every stone belonged somewhere. We played along until we found that place. How did I know about building chimneys and fireplaces? Years before, a mason built my first fireplace. It smoked like Vesuvius. So I made a point of learning from a more capable mason all the tricks of the trade. The first fireplace I built worked, and so have the several I've laid up since. Bricklaying is play. Even my wife took to this job and turned out excellent work. Because we once more were out of lumber, we decided to build the living room of bricks. My wife laid up most of the bricks that went into outer walls while I was framing the roof.

To return to the fireplace. Hard brick for back and arch; for the hearth, flat stones from the beach laid in a bed of mortar and pointed up with a straight mixture of cement to which yellow ochre for coloring had been added. Above the mantel, where the chimney bricks were exposed, a stronger mix of cement and sand was used. I fashioned the mortar with a trowel to resemble Spanish stucco. On the garage side, a rough mix of sand and cement was wiped over the bricks to seal every possible crevice and guard against fire.

For the mantelpiece I adzed a wide oak log and pinned it to some base pieces mortared into the fireplace, leaving the wooden knobs of the pins sticking up slightly, like old ship trunnions. The fireplace solved our heat problem. A hole was left on the garage side, into which we have inserted a pipe for the wood stove which we use when we need extra heat. Were we to use the cabin in extremely cold weather, we would set up a coal stove from which we would run pipes to the other rooms.

Plumbing problems could not be solved without the expenditure of real money, we

(Continued to page 262)

# WE MAKE \$1000 IN 30 DAYS

"WE HAVE a BELSAW we got in 1940. It has been a wonderful mill, and it has made us lots and lots of money. My son and I work this mill alone and we can, believe it or not, make \$1000 in 30 days and do it easy."

F. W. Siegenthaler, Clatskanie, Oregon

## BELSAW PUT ME IN BUSINESS

"I own this 200 acre farm which has about 3½ million feet of 2nd growth fir. My son owns the BELSAW mill. Never in my whole life was I ever so well satisfied, contented and happy as I am now with his BELSAW mill. It has made him lots of money. If the Lord is willing and with His protection I feel it will make him plenty more. We are alone and do not hire any outside help. My son is the foreman and I am the crew."

Give yourself this steady, year around income. You don't need a crew . . . a tractor or old engine furnishes power for your BELSAW. With its mechanical feed, a BELSAW is easy to operate . . . beginners get excellent results right away.

### READ HOW BELSAWYERS TURN TREES into BIG PROFITS

Mr. Siegenthaler's experience is only ONE of thousands of examples how BELSAWS build big-money businesses. For example, Mr. Robert Ashton, Eagle River, Wisconsin, bought his BELSAW two years ago and began manufacturing crates for Universal Gas Ranges and other industrial users. He reports his sales have totaled thousands of dollars, and expects to greatly increase his volume this year. Mr. Wolfgram, Wabeno, Wisconsin, also reports unusually big profits with his BELSAW, turning out 12,000 feet of box stock a day. He also makes 1,500 boats a year. "It's easy with a BELSAW," E. C. Eddy, Mio, Michigan, writes. "With Mrs. Eddy as sawyer, we turn out 3,500 feet of cabin siding a day. Last year we turned down \$150,000 worth of business."

Whether you make lumber for your own use, or for sale, BELSAW gives you both profits and savings! Operate in your spare time, or on a full time basis. Put a portable BELSAW to work for you in your "off" farming season. Start economically . . . grow fast. You can start with only \$62.50 down payment and turn out valuable lumber for your own use . . . supply local retail yards . . . produce every kind of building material . . . do "custom sawing" for your neighbors and others. There's never a slow season for profits, and you'll have plenty of customers waiting for BELSAW products. Find out about BELSAW Portable Sawmills TODAY.

thought, until we discovered that the plumbing-supply houses couldn't supply us because there was still no open market for the non-GI. Once more we were on the hunt, and found at low cost a hopper and box, old-fashioned but in good condition; we also found second-hand iron and brass piping, and at long last, the necessary fixtures to complete the installation, along with a secondhand bathroom sink. An iron kitchen sink, apparently useless with rust, was salvaged from the original cabin. This was scoured, given three coats of enamel and placed in a framework of shelves and cabinets. The shelves, covered with linoleum and edged with chromium, make a modern and sanitary ensemble. An old faucet, chromium-plated at a cost of 75 cents, completes the up-to-date kitchen.

Our only labor bill, paid to two chaps who dug the ditch for water pipes, the foundation for the porch and the cesspool, was \$25. The cesspool was built of white brick—an experiment on my part since cesspool bricks were too expensive and chipped stone not available. I left spaces between the bricks, shaping the walls inward to a three-foot opening with a cover of concrete, an iron ring in the center. On top, to camouflage the cesspool, stands a birdbath made of concrete.

Now for our living room (or glassed-in

porch). Very little of our lumber was left, nor could we buy any. After some maneuvering, we finally acquired what is the most attractive room in the cabin. A 12-by-14-foot foundation was dug, a one-foot concrete wall was poured along the outer sides, and then the area was filled with gravel and stone and covered with a three-inch concrete floor, marked off in the four compass directions. In the center is a three-foot circle on which we will paint a compass card. We used oak for plate and corner posts, which we covered with wire lath and stuccoed inside and out. Seven four-light storm windows were inserted through which we obtain a view of the ocean and islands second to none. The small wall space is brick, laid by my wife and painted cream inside, white outside.

The walls of the toilet are covered with Rocklath and washable paper. An outside faucet serves bathers and gardener.

Wiring the house was perhaps the quickest job. The electric company attended to all outside work except placing the outlet box in combination with the switch box and the rigid conduit outside. The meter box was furnished free. The task of running the three wires through the weather head into the conduit and to the switch box was simple. Checking the neutral service

# Snap-on's Famous Ferret Set

Rugged tools . . . twice as strong as you would expect such slim, streamlined handles and thin-walled sockets to be.

*"The Choice of Better Mechanics"*

## Present Owners: Supplement your basic set with these Special Ferret tools . . .

### CLUTCH-TYPE SCREW DRIVER

Handles clutch-type (figure 8) head screws. Built short for easy operation in close quarters.

### RATCHET ADAPTOR

Converts any combination of Ferret handle, extension and socket into a reverse action ratcheting tool.

### PLASTIC GRIP HANDLE

A shockproof, plastic handle, 5 1/8" long that is ideal for electric work. Makes your Ferret Set more useful.

### DOUBLE HEX FLEXOCKETS

Saves a lot of tough work fumbling for hard to get at studs and bolts. Eight sizes: 1/8" to 3/4".

**FERRET FLEXTENSION** — A flexible steel cable extension connects handle and socket to work around corners and over obstructions.

### EXTRA LONG FERRET SPEEDER

36 1/2" long, 27" shank. Radius of sweep is 3 1/4". "Palm-Grip" handle rotates to provide easy operation.

Mechanics like this set because it is way over par in performance . . . the tools are strong and easily adaptable to a variety of jobs.

They squeeze into tight places and get those hard-to-reach nuts and bolts that defy the ordinary type wrench. Recently designed by Snap-on engineers, they have the new features that make fast, easy work of the tough jobs.

**INCLUDED IN THE SET:** 1/4" and 5/16" single broached sockets; 11 double broached sockets from 3/8" to 7/8"; a speeder wrench, sliding tee, 8" reversible ratchet, nut spinner and universal joint, plus a 3", 6" and 12" extension. All complete in a metal box for only **\$27.65**

This glorified magnet is the stator from a Hoover Motor. It is electrically annealed after punching, then dipped in high-grade varnish and baked under infrared lamps on a continuous conveyor.

## WIRY

The good looks of the component parts of Hoover Motors show the fine workmanship built into them—precision-wound coils, miles of wire dedicated to smooth, cool, dependable performance in continuous operation. Made by the makers of the world-famous Hoover Cleaner. Order today from your nearest dealer for immediate delivery.

## HOOVER MOTORS

Made in capacities of  $\frac{1}{4}$  to  $1\frac{1}{2}$  H.P.  
The Hoover Company  
Electric Motor Division, North Canton, Ohio

wire and seeing that the entrance setup was well grounded were important jobs. B.X. was difficult to obtain, but I hunted until I found enough for my requirements. We installed outlets for refrigerator, stove, toaster, iron and various lamps. There are two outlets in the bedroom and several in the living room. The only fixed light is in the bathroom where we also have a plug for razor and heater. The garage has several wall plugs. At the end of the flagstone walk from porch door to path is an odd-shaped cedar post on which hangs an electrified ship's lantern. Total cost—\$18.

Another important suggestion is this—use pine slabs. One trailer load, costing one dollar, has been used for boarding-in eaves, for corner trim, casings around windows, trellises and moldings. Cut and planed with power tools, the wood finishes satisfactorily and is a tremendous saving over the cost of finished lumber bought from a dealer. Many of our finishing touches, such as the birdhouse, window boxes and trellises were made with wood that might have been used for firewood.

Soon we will install a cupola—a six-sided, glassed-in enclosure on the roof, from which we can scan the entire horizon. This latest venture illustrates why our method of building is so intriguing. There's always something more to plan and build.

It has taken us two years of week ends to complete the cabin as is. We now have forgotten the back-breaking jobs and are proud to share our beauty spot with our friends. Perhaps if we built now we would not be forced to tear down an old structure to obtain our lumber. It still would be a definite method of saving a great deal of money.

But this project has not saved us money alone. It has made possible a cabin which we could not have had otherwise. It has given health and strength to both of us. True, we were dead tired at the close of each working day, but when I look around at men of my age (soon leaving the fifties behind) and realize how "soft" many of them are, I am thankful that my impulse is to work.

There is, most of all, the joy of accomplishment, the pride in seeing a dream come true through one's own efforts. And the thrill of each accomplishment is repeated again and again, until the cottage becomes more precious to its owner than the castle of a king.

☐ Almost 24,000,000 tons of concrete—about the amount required for a four-lane highway connecting Chicago and Mexico City—were used in the construction of Grand Coulee Dam.

and to Restore

**CAR PERFORMANCE**

**OIL-CONTROL STARTS HERE**

**TO STOP OIL-PUMPING REPLACE WORN ENGINE CONNECTING ROD BEARINGS**

Don't let your blood pressure go up when car performance goes down. It's easy to correct the trouble where it starts! Engine connecting rod and crankshaft bearings control oil flow for correct engine lubrication. When worn they let excess oil reach combustion chambers. It burns to carbon on piston rings, pistons, spark plugs and valves, stealing power—and performance goes up in exhaust smoke. To put oil back to its job of lubrication and put new power, pep and economy in the engine, replace with Federal-Mogul Oil-Control Bearings. Ask your mechanic!

**FEDERAL-MOGUL SERVICE**

tend to increase along streams that contain beavers. Brooks that would dry up in the summer often flow all year around because of percolation from the dammed waters. Wells that go dry in the summer hold water all through the year when beavers are planted on adjacent streams.

The trouble is that a beaver sometimes selects a dam site that happens to be on a farmer's land and the farmer has decided for himself just where he wants the water level of his stream. He doesn't want a dam placed where its pool will flood his meadows or turn a dirt road into a morass. Nor does he care to have beavers whittle off all his fence posts close to the ground, as has happened. He doesn't want them prowling into his orchard to cut down valuable fruit trees which they seem to fancy.

A beaver-conservation program that pleases everyone is difficult to plan but after some trials and errors the Idaho State Fish and Game Commission has developed a program that works very well. Early in the century very few beavers were left in Idaho; now the state has a beaver population estimated at around 90,000.

The program is administered by John W. Smith, state fur supervisor, and consists of an allotment system by which a number of carefully selected trappers are allowed to take nominal numbers of skins every year in return for caring for the beavers in their districts. The purpose of the plan is to build up the population to its greatest practical size, estimated at 200,000, and at the same time to contribute fur to the market.

Most of the men chosen as beaver caretaker-trappers are professional trappers who are especially licensed by the state. Each is allotted a beaver district that consists of a natural watershed or a portion of one, amounting to several hundred or several thousand square miles. Part of the caretaker's duty is to live-trap beavers on the streams that have the greatest population and to transplant them on other streams in his area. Too, he takes care of all complaints by removing animals that are doing damage in rural sections. In return, he is allowed to trap for himself a number of beavers during the winter months when the fur is prime. The number runs from less than 100 to possibly more than 150 skins, depending on the local population and its rate of increase.

The skins are auctioned off by the state and the proceeds are divided 75 percent to the trapper and 25 percent to the state. Prices may average more than \$30 per skin

# BIG- CAPACITY TOOLS IN ONE

and a caretaker-trapper often receives several thousand dollars as his share.

Each trapper captures and turns over to the state a number of beavers amounting to 10 percent of the number he is permitted to trap for the market. These animals are then transplanted to unpopulated mountain streams in Idaho's primitive areas.

In past years the state commission used trucks and pack animals for transplanting the beavers but on long trips the animals often perished because they were kept away from water for too long. Now, a journey of any distance is performed by airplane. It's cheaper and more reliable.

Dropping the beavers by parachute is a new experiment and more than 35 of the animals have been dropped successfully to date. It's a tricky operation and it takes a skilled mountain pilot to pick out the stream that has been selected for the drop and to get down to within a couple hundred feet of the ground, the altitude at which the drops are made. The wind must be gauged just right so that the parachute and its burden won't drift into trees. Usually, the chute lands within a hundred feet or so of the stream. A male and female are planted close together on the same stream so that a new colony may be started.

The drop box is hinged at the bottom like a clamshell and is tied with a piece of

weak string. Two lengths of inner-tube rubber are stretched across the bottom and are secured to the sides, tending to make the box break its string and fly open. This can't happen as long as the parachute supports its weight but once the box touches the ground its sides open up and the beaver walks out, heading instinctively for the nearest water.

No one except caretaker-trappers may take beaver in Idaho. Other states have tried open seasons but usually trappers and hunters have depleted the population almost to zero in a single season. Stringent controls have had to be reapplied.

California has been trying a controlled open season in which trappers who have obtained permits are allowed to take pelts in special control areas that contain an oversupply of animals. Once California had so many beavers that fur brigades from the Hudson's Bay Company traveled south to capture them; now the state's population is not more than several thousand.

Each state is doing all that it can to restore the animals to numbers that will permit the taking of some fur and that at the same time will make beavers an important factor in erosion control. Once threatened with extinction, the valuable animals are regaining their original place in the wild-life population.

## "You're Sure to Have MORE FUN with a Coleman Along" — Says Andy Devine

"I like plenty of good food wherever I go, and I get it quick with my Coleman Folding Camp Stove without any waiting, fuss, muss or bother. I just set it up and start cooking, and in no time I have the kind of food that satisfies a big outdoor appetite."

Andy Devine can currently be seen in the Republic Picture, "The Last Bandit."

### **Coleman** Folding CAMP STOVE

Lights instantly. Cooks like a city gas range. Makes and burns its own gas from gasoline. Folds up, carries like a suitcase. Ask your dealer for a demonstration.

Prices as low as \$9.95 in U. S. A.

### **Coleman** Floodlight LANTERN

Adds more hours of fun to each day. Floodlights 100-ft. area. Storm-proof. Safe. Durable. Prices as low as \$9.95 in U. S. A. Ask your dealer for demonstration.

1868

## Chrysler Family Debut

(Continued from page 123)

five body types, the eight-cylinder Saratoga (two body types), New Yorker (four), Town and Country (two), and Crown Imperial (two). New to the line this year is a Royal station wagon which seats nine passengers and has removable intermediate and rear seats.

The wheelbase of the Royal and Windsor series has been increased four inches from 121½ inches to 125½ inches. At the same time the over-all length has been reduced from 208<sup>9</sup>/<sub>32</sub> inches to 203<sup>15</sup>/<sub>16</sub> inches. On the Saratoga and New Yorker models the wheelbase has been lengthened from 127½ inches to 131½ inches and the over-all length reduced from 214<sup>9</sup>/<sub>32</sub> to 210 inches. The Royal and Windsor models are 2<sup>3</sup>/<sub>32</sub> inches lower, standing at 65¾ inches, and the big eights stand 66 inches high, a reduction of about two inches.

In regard to over-all width, the Royals and Windsors are 4<sup>5</sup>/<sub>16</sub> inches narrower, being reduced from 77¾ inches to 73<sup>1</sup>/<sub>16</sub> inches. Despite this, as in the other cars of the company line, the interior is more spacious. On the four-door sedan, the front seat cushion is six inches wider, increasing from 52 to 58 inches, and the rear seat has been widened from 51 to 58 inches. The New Yorker and Saratoga models have been narrowed by 3<sup>1</sup>/<sub>16</sub> inches and at the same time the front seat is six inches wider and the rear seat seven inches wider.

Windshield area of the new Chryslers has been increased from 687 to 851½ square inches. The rear window also has been enlarged.

Compression ratio has been boosted on both the six and the eight-cylinder engines. On the sixes (Royal and Windsor) the ratio has been increased from 6.7 to 1 to 7 to 1, and on the eights from 6.7 to 1 to 7.25 to 1. Engineers report an accompanying increase in better performance and gasoline economy. The electrical and ignition system has been made more durable and weatherproof as a result of Chrysler's experience in building combat vehicles during the war. All models are equipped with weatherproof spark-plug covers. A new air cleaner and higher-capacity fuel pump are designed for improved engine performance.

The Chrysler instrument panel has been completely restyled and front-seat passengers have plenty of space between them and the right-hand side of the panel. The panel itself is narrower than in the past and concave in shape. Also, the heater installation is under the hood. All of the

(In Canada, Port Hope, Ont.)

**NICHOLSON**  
**FILES** FOR EVERY PURPOSE

instruments are grouped in a semicircular "safety eye" housing directly over the steering column and to the right a leather-covered safety cushion of sponge rubber extends to the door. This affords protection to front-seat passengers, particularly children, in case of a sudden stop.

The Chrysler's Prestomatic Fluid-Drive transmission has been simplified as to the hydraulic and electrical parts in an effort to minimize mechanical and control difficulties. New gearshift-control-lever lengths and more rigid connecting links make the shifting easier and quieter.

All the innovations of the Plymouth and Dodge cars, such as the new ignition switch, diagonally mounted shock absorbers and coated cylinder walls are found in the Chryslers. All Chryslers are now given an application of undercoating at the factory.

The 1949 DeSoto conforms with the other products of the company line in conservative beauty, excellent visibility, increased wheelbase (from 121½ to 125½ inches), reduced over-all length, much wider seats and slightly narrower exterior width, detachable fenders, wrap-around bumpers and lower silhouette. The engine has an increased compression ratio and slightly boosted horsepower.

The new DeSoto is a comfortable car with "chair high" seats to let the driver and passengers take advantage of the better visibility. The steering wheel has been placed so that shorter drivers may see over it easily and long-legged drivers will not bump their knees into it. Tip-Toe hydraulic shift and Fluid Drive are retained in the '49 DeSoto. All of the mechanical improvements on the other Chrysler Corporation cars, from new ignition system to nonsway shock absorbers, are incorporated in the new DeSoto.

The Custom line includes a four-door sedan, club coupe, convertible, Suburban and eight-passenger sedan. The Deluxe line has a four-door sedan, club coupe, station wagon and a Carry-All sedan. The latter has a rear seat that can be quickly folded flush with the floor to provide extra luggage space.

### Light "Watchman"

For persons who want their homes lighted evenings when they are out, there is a new miniature electronic control that switches lights on and off at preset times. It can be plugged into any electrical outlet. The device can also be used to control lighting in stores, dark hallways, garages and poultry sheds.

You get more capacity

Model 40A

with a  
**DELTA MILWAUKEE**

**Multiplex Radial-Arm Saw**

**Cuts time and costs for:**  
 • Contractors • Lumber Yards  
 • Cabinet Shops • Sash and Door Plants • Pattern Shops  
 • Shipping Departments • Farms • Schools • Maintenance Departments • Others

**The Old, Conventional Principle—** This shows how conventional radial-arm saws pivot from the column. They have practically no mitering capacity at 45°, not much usable capacity at 30°, and almost none beyond 45° on left-hand miters.

**The Modern Delta Multiplex principle —** This shows how center-pivoted saw arm permits Delta Multiplex to be set quickly to cut any miter — right- or left-hand — at full capacity up to 90°. The saw rotates through 360°. Permits unlimited number of saw positions, greater capacity and ease of operation.

**One Multiplex does all this — and more!**

- ✓ Cutting arm rotates 360° — you get an unlimited number of saw positions!
- ✓ You get 100% mitering capacity — you can cut full-length miters, both right-hand and left-hand — from 0° to 90°!

Your nearby Delta distributor has a complete line of Multiplex models with motors ranging from 1/2 H. P. to 10 H. P. and rip capacities from 2" to 6". Inspect them there. See for yourself the Delta Multiplex features that assure you of safety, speed, convenience, capacity, and economy. And ask about buying on easy credit terms. Look for the

name of your Delta distributor under "Tools" in the classified section of your telephone directory. *Send coupon for free bulletins!*

# New SpeedWay COMBO KIT

## \$29.50

at your local hardware  
and electric stores.

### Every home needs these basic tools!

Not only the home craftsman, model maker and mechanic, but everyone with a home, a car or a hobby needs a SpeedWay Combo Kit.

Here are the basic power tools needed wherever things are made, installed or repaired: No. 69 SpeedWay 1/4" Drill, with attachments for sanding and polishing

A No. 129 SpeedWay Hand Grinder, that takes all arbor-mounted grinding wheels, rotary files, cutters and brushes, and accessories as shown (left)

With this kit you can drill holes up to 1/4" diameter, can grind, cut and shape steel, brass, wood, plastics, bone, etc. Tedious jobs like sand-papering, polishing and filing, scraping off rust, etc., actually become fun.

Designed and built by SpeedWay—manufacturers of quality power tools for over 40 years. These are not toys but capable electric tools with lots of power and correct operating speeds.

Sold by all leading hardware, electric, tool and department stores. (Ask for a demonstration.)

Write for FREE descriptive circular and the name of your nearest dealer.

## Speedway Manufacturing Co.

1863 So. 52nd Avenue  
CICERO, ILLINOIS

Powerful 1/4" Capacity Electric Drill—drills holes in steel or wood. Quality drill bit included.

with adapter, rubber backer, and abrasive discs, it makes a portable power sander. (Adapter backer and 10 assorted abrasive discs included)

with the slip-on lamb's wool bonnet, it is a portable power-driven polisher or buffer.

Snapped in the chromium plated Speed Stand, it becomes a horizontal drill stand, bench sander or polishing head.

High-Speed Hand Grinder (20,000 R P M)—For all mounted cutting burrs (for cutting steel wood bone plastics), grinding stones, brushes and abrasive discs. Seven assorted accessories plus 1/8" and 3/32" collets included.

Instruction Manuals—easy-to-follow guides to year 'round fun and useful pleasure with your Combo-Kit.

Note: The tools in the Combo-Kit operate on either 110-120 V AC or DC current

**SpeedWay** "Blue Line Tools"

## Do an hour's painting in minutes!

**GIVES SMOOTH, PROFESSIONAL FINISH**

Once you paint the Speedy Sprayer way you'll never be happy wielding a brush! For Speedy Sprayer is designed to make painting actually *fun*. Merely pull the trigger—and your most troublesome paint jobs are done *in minutes* instead of hours! Inside and outside of your house, basement walls, furniture, screens, radiators, auto—they're all easy with Speedy Sprayers. Ask your hardware, paint, lumber or auto supply dealer. If he hasn't Speedy Sprayer, he can get it for you.

*Pays for itself on your first big job!*

### **SPEEDY SPRAYER 890**

Sturdy—dependable—portable! Delivers clean, oil-free air at 2 cu. ft. per min. at 30-40 lbs. pressure. Operated by any 1/4 h.p. motor. Never needs oiling. Outfit with gun, less motor. **\$29.95**

### **SPEEDY SPRAYER 444**

Double capacity. No job too big! Delivers 4 cu. feet of clean, oil-free air at 40 lbs. pressure. Operated by 1/2 h.p. motor or gas engine. Outfit with gun, less motor. **\$54.50**

Write for literature.

HULL MFG. CO., P. O. Box 246-D4, Warren, Ohio

## Do YOU make this mistake in PAINTING?

Failure to prepare the surface before repainting often results in an unsatisfactory job. Dirt, grease, and wax should be removed . . . Glossy varnish or enamel should be dulled, to prevent the new finish from "crawling" or pulling away.

**WIL-BOND**—an easy-to-use liquid—does a complete job of preparing any type of surface. Easily applied with a rag. Eliminates sanding . . . Eliminates messy washing down with soap and water. *Cleans, dulls, and bonds in one operation!* Sets up a slight "tack" which causes the new finish to spread easily, cover evenly, bond perfectly.

Write for leaflet on **WIL-BOND**. Sold by paint and hardware stores.

**WIL-BOND**

Wilson-Imperial Company, 119 Chestnut Street, Newark 5, N. J.

Witte  
Diselectric  
Model LDREA.  
7.5 KVA-AC.

Reliable power  
for a few cents  
an hour!  
**WITTE**  
DIESELECTRIC PLANTS

A Witte Diselectric Plant starts and operates on low cost fuel oil. It eliminates the risk and additional cost of gasoline, reducing fuel costs in some instances by as much as 50%. The Witte pre-combustion chamber assures full fuel combustion, giving maximum power from every dollar you spend for fuel.

The Witte Diselectric is famous for trouble-free performance under strenuous operating conditions. Sturdy Witte construction practically eliminates maintenance problems.

WHAT SIZE DO YOU NEED? Witte Diselectric Plants range from 3 to 10 KVA-AC; from 2.5 to 8 KW-DC. See your Witte dealer, or write for free illustrated literature.

**Protect Property...Loved Ones!**  
Automatic Fire Protection in Your Home  
with **RED COMET** Extinguishers

- INEXPENSIVE
- ALWAYS EFFECTIVE
- EASILY INSTALLED
- AUTOMATIC

Every home workshop contains fire hazards. Now you can provide 24-hour protection for your property and loved ones with famous Red Comet Automatic Fire Extinguishers on guard. This unique device functions automatically without human aid. When fire starts, Red Comets go into action instantly. A heat-sensitive thermostatic fuse releases a spray of powerful Red Comet fluid which forms a smothering blanket of fog and quickly snuffs out fire. Rigid factory tests assure positive operation. Manufactured since 1931. There are more than one million Red Comets in use in homes, factories and stores all over the world.

Don't gamble your life and property. Be protected with Red Comets.

Available in two sizes—Standard model protects up to 175 cubic feet; Senior size, up to 350 cubic feet. Standard model, as illustrated, priced at \$6.45.

Write for free literature or send check or money order to:

GOLD

New 1949 Model

Turn your Spare Time  
into **CASH**

with the **FOLEY  
LAWN MOWER  
SHARPENER**

Why don't you get into this steady repeat cash business? Start in spare time in garage or basement. The Foley sharpens all sizes and types of mowers in 15 or 20 minutes (with handles on). Prices run from \$1.50 to \$2.00 for hand mowers, and from \$5.00 to \$8.00 for power mowers. This is the way to make money!

The Foley Electrakeen System is the same as used by lawn mower factories—it sharpens all reel blades and cutter bar in ONE operation. It turns out perfect work that pleases your customers and brings them back. Every lawn mower needs sharpening at least once or twice a season. No experience needed with a Foley—and it puts a perfect cutting edge on any reel blade mower two to three times faster than any other method.

**SHARPENS  
1,000 MOWERS  
PER SEASON**

"I have sharpened over 10,000 mowers in my Foley Lawn Mower Sharpener in the last 10 years — only repairs needed were new belts." — Charles H. Smith, Calif.

**MADE \$582.00  
IN ONE MONTH**

"My lowest month sharpening lawn mowers was \$80.00 and highest \$582.00. Naturally my best months are in the Summer." — W. W. Loud, Okla.

**PAID ITS COST  
IN 30 DAYS**

"The Foley Lawn Mower Sharpener paid its cost the first 30 days after installing. It's O.K. in every way," says M. H. Engler, Mo.

**Low Prices, Less than \$50 Starts You**

Start your business on payment plan if you wish — less than \$50 will put a new 1949 model Foley Lawn Mower Sharpener in your hands ready to go. 99c out of each dollar you take in is profit. FREE PLAN shows how to start — mail coupon today!

## Duplex Handgrinder

**A versatile tool with plenty of power — to do your work faster and easier**

You can see by these pictures why home-workshop fans say, "The Dumore Duplex is the handgrinder to buy!" *It's a real tool* — rugged and powerful. And it's built to do everything from delicate carving in plastic and wood to tough clean-up jobs on hard weld-metal!

Just think of the advantages of these features:

1. A full 1/14 hp Dumore motor for no-stall power.
2. An extra-capacity chuck for 1/4", 1/8" and 3/32" tools.
3. Attachments that convert it instantly to Flexible Shaft Tool, Bench Grinder, Toolpost Grinder, Sander-Polisher.

It is almost impossible to list all of the hundreds of jobs you can do with this fine Dumore tool in any workshop. We hear of new ones every day from enthusiastic, satisfied users. And every job is done faster, easier, and *better* — thanks to the Duplex. Enjoy working with a tool that adds so much more fun to your hobby. Get a Duplex today.

Save **\$300.00** to **\$500.00**  
by building your own  
**arc welder**

HOBART D.C. welding generator in 150—200—300 ampere sizes.

Here's how you can do it with one of these HOBART units.

1. Select the generator best fitted for your work. 2. Decide between portable and stationary. 3. Connect your own gas engine or power source.

**Go after those BIG PAY jobs.** No need waiting to own a complete factory built outfit. Let HOBART help you get started now with profitable arc welding, by building your own.

**Start your own business** or use arc welding in your present work. It's easy. Connect a full capacity HOBART welding generator to electric motor or power shaft for shop work—or mount it on truck or trailer with gasoline engine for welding anywhere, independent of power lines.

**No limit to possibilities and uses** Do arc welding of highest quality on all kinds of work. Manufacturing, maintenance, repair. Generators with auxiliary power operate tools, appliances, lights and earn extra money for you.

**It will pay you to investigate** the complete line of A.C. and D.C. HOBART arc welders. Built for every need. Mail the coupon today for more information.

HOBART BROTHERS COMPANY

MATCHED PRECISION TOOLS FOR WOODWORKING AND METALWORKING

**DRILL** SOLID CONCRETE  
COMMON BRICK  
SANDSTONE, ETC.

**1 INCH  
IN 29 SECONDS with  
Hammerin' Hank**

The Sensational New Rotary-Impact Attachment that gives Hammer Action to an ordinary electric drill!

Slip "Hammerin' Hank" into the chuck — turn the switch — WHAM! WHAM! WHAM! — a hammer blow every time the bit turns a half revolution. No need anymore to pass up tough masonry jobs because you don't own a pneumatic! Fits all makes 3/8" or 1/2" chucks; takes 3/8" or 1/2" bits. Bites through super-fast, super-clean with as little as 10 lbs. thrust. A real triumph of invention — amazingly low priced!

**TESTED!**

Drilled an inch in concrete block in 29 seconds!  
Drilled 1000 holes without appreciable loss of speed or dulling of bit.  
Beat "standard" drills 4 to 1 in speed, 100 to 1 in efficiency!  
Actually lengthens bit life immeasurably.

If dealer can't supply, send \$9.95 direct for postpaid rush shipment. Satisfaction guaranteed.

# Time to "Spring-Clean" your Oil filter

**WINTER DRIVING GUMS UP YOUR ENGINE...** dangerously clogs up your oil filter.

**LOOK AT THAT MUCK...** an oil filter element loaded to capacity with sludge, grit.

**TO HELP AVOID COSTLY ENGINE REPAIRS...** install a clean, new "Purolator" Refill.

**TROUBLE-FREE MILES AHEAD...** "Purolator" traps all the abrasives, all the sludge.

Make the Spring changeover complete... new oil and a clean oil filter. Install a new Purolator Micronic Refill. Purolator, remember, is the filter that traps all the engine-wrecking sludge and abrasives.

Purolator Refills fit all oil filters. \$1.38 to \$2.50, depending on make of car; installed in a few minutes. If your car is not equipped with an oil filter, put in a Purolator. \$6.50 up, also depending on make of car.

**Purolator**  
**MICRONIC OIL FILTER**  
... the oil filter that traps all the abrasives, all the sludge.

## NEW Electric SANDER

Only  
**\$14.85**  
POSTPAID

### AMAZING Patented MOTO-SANDER AND POLISHER

Say "Good-bye" to Hand Sanding & Polishing! Let speedy "Moto-Sander" do the work while you just guide it. Ideal for light sanding jobs. Use Moto-Sander for finishing, refinishing, redecorating. Quickly and smoothly sands furniture, walls, woodwork, wall board, plaster joints; boats, workshop projects, etc. Straight-line action (non-rotary) will not burn or scratch surface. Use Moto-Sander also for fast, effortless polishing of furniture, refrigerator cabinets, automobiles, other waxed surfaces. There are dozens of time and money-saving uses in every shop and home for this inexpensive machine. Moto-Sander is the lightest, most practical electric sander on the market. Delivers 7,200 strokes a minute . . . works into those hard-to-get-at places . . . weighs only 2 1/2 lbs. Furnished complete with 6 sheets assorted grade Garnet Paper for sanding, plus felt pad and sheepskin for wax polishing. Operates on 110-120 V., 60 cycle A.C. Thousands of satisfied users.

EASY FOR AWKWARD PLACES

SANDS FLAT SURFACES EVENLY

GETS INTO TIGHT CORNERS

ROUNDS CORNERS LIKE MAGIC

### USE MOTO-SANDER AROUND THE HOUSE

- Sand Furniture and Bookcases
- Sand Stairways, Doors, Woodwork
- Sand Walls before painting
- Polish the Family Car
- Polish Pianos and Cedar Chests
- Polish Waxed Furniture

**MONEY-BACK GUARANTEE:** Buy Moto-Sander from your dealer. If he cannot supply you send only \$14.85 (check or money order) and we will ship postpaid; or, send only \$2 now, and pay postman balance plus postage upon delivery. Your MONEY-BACK if not delighted after 5 days' trial.

## New IMPROVED Electric MOTO-SAW

ONLY \$5.85  
(with 3 Saw Blades) Postpaid

**SAFE AS A HAND SAW  
JUST GUIDE IT!**

The versatile Moto-Saw is as safe as a hand saw. A touch of the trigger switch sets it going . . . releasing stops it instantly.

**SAWS TO CENTER OF 19" WIDTHS**  
No Limit to Length of Stock it Will Cut  
**THOUSANDS OF SATISFIED USERS**

### AVERAGE CUTTING SPEED ONE FOOT PER MINUTE

Moto-Saw works more like magic than any tool you ever saw! Takes no effort to run . . . no perceptible pressure to feed . . . only a trifle heavier than a hand scroll saw, and better balanced in your hand. Runs 7,200 strokes a minute . . . leaves no rough edges . . . easily cuts intricate scroll designs in medium hard wood up to 3/4" thick. Blade holder faces blade 4 ways . . . permits sawing sideways as well as forward and backward. Sturdily constructed . . . only two moving parts . . . never needs oiling . . . requires no bench room or floor space. Operated on alternating current. Thousands of satisfied users.

**MONEY-BACK GUARANTEE:** Buy Moto-Saw from your dealer. If he cannot supply you, send only \$5.85 for Moto-Saw and 3 blades, postpaid; or, send only \$1.00 now, and pay postman balance plus postage upon delivery. MONEY-BACK if not delighted after 5 days' trial.

# Power YOUR BOAT

## with an ATLAS "SKIPPER"

There is such a definite relationship between hull and horsepower and boat speed, that you ought to determine just what you want in an engine, before you get too far along with hull plans or construction. Here is a compact 55 H.P. heavy duty gasoline engine, made by one of America's foremost builders of Marine Diesel engines. With direct drive, it weighs under 500 pounds. Its heavy flywheel cushions power impulses and provides that smooth operation that delights every yachtsman. We make this one size and type only, because it is ideal for the requirements of so many sportsmen, fishermen, lake and river boatmen. For pleasure craft or small commercial vessels, investigate "The Skipper." Write for complete specifications and prices.

The "New Look" in Masonry is **STREAMLINED**

**\$336<sup>34</sup>**

\*National Average May vary according to locality

**Buys ALL the  
Dunstone for  
the "AMERICANA"**

The "Americana" is 37' x 24', with 936 square feet of area. Yet the average price of the Dunstone to build all-masonry cavity walls is only \$336.34. The same square-foot economy applies to any kind of building — residential, commercial or industrial — of any size or design — anywhere.

**Beauty • Long Life • Safety**

Dunstone has much more than price alone. It has the beauty of streamlined proportioning, and the eye-appeal of a wide color range. It has the endurance and weather-defying qualities of masonry at its best. And it stands for fire-proof, termite-proof construction.

**DUNSTONE** America's Finest Masonry

Dunstone is a super-brick—a full 16" long. Square and true in all dimensions. Reduces mortar joints. Has the symmetry demanded by modern styling. All these values for a lower-than lumber price!

Dunstone's low price is made possible by local manufacturing, using local labor and local materials, in a country-wide chain of local plants. Write for book "Tomorrow's Silhouettes" and name of plant nearest you.

**W. E. DUNN MFG. CO.**

610 W. 24th Street

Holland, Mich.

**You Can Be the Local  
Manufacturer**

The manufacture of Dunstone is an outstanding opportunity for men of vision and alertness looking for a local manufacturing business allied with the great building industry. We supply all plant equipment necessary. Provide you with complete manufacturing data. Back you with liberal sales and advertising assistance. Write for informative book "Blueprints for Profit."

## Semlers' ASSOCIATED SURPLUS CO.

10838 VENTURA BOULEVARD • NO. HOLLYWOOD, CALIF.

# Mow 'Em Down with PRONTO POWER LAWN MOWER

Give your lawn the new  
look with Pronto

After 4 years production a proven, well engineered, original, safe, lifetime, quick action, easy handling, economical, most simple and practical of all power lawn mowers.

Pronto first with quiet enclosed spiral gear 4 ball bearing drive. No troublesome belts, pulleys, chains, sprockets, friction wheels or inefficient cutter revolving at engine speed.

Four 10 inch ball bearing (sealed) rubber tired wheels.

Pronto design 20 inch blade whirling type with removable safety type manganese steel cutter tips (new set postpaid \$1.00).

Cutter arm readily adjustable any height from ground to suit operator, and will cut grass as close as any mower. Pronto cutter assembly has highest cutter torque for horse power of any mower known, and up to three times more cutting power at blade than other mowers.

Pronto base is cast of light strong Aircraft metal. Axles extend entirely through base for strength. Steel handles are adjustable for height and position.

Our long experience and know how in the whirling blade mower field qualifies us to offer the Pronto as a satisfactory mower, proved by hundreds of satisfied users for every type and condition of grass as well as weeds, long and short, light and heavy, also uneven, rough and terraced lawns. Cutter blade trims to within 1/2 inch of any desired object, therefore ideal for cutting around trees, shrubbery, walks, fences, etc.

Briggs and Stratton or Clinton 4 cycle gasoline Engines are used on the Pronto mower as both Engines are well known for their reliability and easy starting, as well as nation wide service facilities.

**COMPLETE MOWER \$89.50**

MOWER LESS ENGINE, OTHERWISE COMPLETE..... **\$54.50**

## GEAR DRIVE CUTTER ASSEMBLY

For those who desire to construct their own mower, or want a replacement cutter assembly, we furnish the complete gear driven cutter assembly as used on Pronto mowers, with flexible connection to Engine shaft, (give diameter of Engine shaft when ordering) and 20 inch blade with safety cutter tips complete as shown for..... **\$22.50**

All prices FOB factory, check or money order in full with order, no COD's, all orders filled in rotation as received by us. We have one price to all, and no dealers or agents.

## STOP SANDING BY HAND! use the new SAND-O-FLEX on curved and irregular surfaces

Use Sand-O-Flex on contoured and flat surfaces alike. This low-cost sander reaches into recesses, around intricate curves, and handles all those tedious finishing jobs that were formerly done only by hand. Fasten it to your motor shaft or any of your present stationary or portable power tools. The ideal sander for a hundred home uses. Finishes any material—woods, metals, compositions. Satin finishes stainless steel!

Sand-O-Flex consists of 6 abrasive strips backed by 6 separate brushes in a light-weight aluminum body. When rotated at usual motor speed the brushes "cushion" the abrasive cloth and mold it to the work shape. Abrasive unwinds as ends are worn. All parts are replaceable. Refill abrasive cartridges 3/4" wide, available in coarse, medium and fine for wood and metalworking. Fits 1/2" or 5/8" shafts. Adapters furnished on request.

Only \$4.98

## CROSLLEY Announces big NEW models!

They're here—five new Crosley style leaders! New Crosley Sedan Deluxe is bigger! It's the latest word in American design. New speed-line styling, rich interior, choice fabrics. Seats 4 with ample luggage room. Crosley—the world's biggest-selling Station Wagon—has larger, longer body lines. All steel. No increase in price. New Crosley Convertible gets admiring glances wherever it goes. And smart Crosley trucks save money by the mile.

That's not all. Today's Crosley engine gives you even more power, even better hill climbing—even greater economy—35 to 50 miles on a gallon of regular gasoline. Smart enough for small incomes, inexpensive enough for high income tax brackets! Crosley gives you more for your money. Prices range downward from the Station Wagon at only \$929 F.O.B., Marion, Indiana.

## Complete MODEL FLYING OUTFIT! only \$6.95

Here's your chance to buy, at a ridiculously low price, a complete model plane outfit. The plane is rugged (all metal), with wings, tail & fuselage finished and colored, ready to assemble with landing gear, wheels and everything you need to fly it!

HERE IS WHAT YOU GET:

Herkiser CO2 engine, ready-to-run • Prefabricated and colored plane, ready to assemble and fly • CO2 Capsule holder • CO2 Capsules for power • Correct propeller • Engine instructions • Landing gear flight log • Insignia • etc., etc.

Entire Outfit  
\$6.95

Fly the latest in model airplanes, powered by CO2 capsules—the same capsules that charge home soda bottles. No gasoline, oil or smelly exhaust fumes. There's nothing like the thrill of CO2 flying. You don't need such space for free-flights (100 ft. square on calm days).

Send remittance in full or send \$1.00. We will ship same day, balance C.O.D. Large illustrated 2-color Hobby Catalog only 10¢ Dept. BF-49

*Make \$20 to \$30 a Week*  
**EXTRA MONEY**

**MACHINE SAW FILING**  
**PAYS UP to \$2 or \$3 an HOUR**

With the high prices of food, clothing and everything else, just think what you could do with extra money every week! Turn your spare time into CASH—sharpening saws with a Foley Automatic Saw Filer pays up to \$2 or \$3 an hour. You will find you can make \$20 to \$30 a week in your spare time as a starter.

You can work in your basement or garage—no experience necessary. "The first saw I sharpened with my Foley Filer came out 100%"—writes Clarence E. Parsons. No canvassing—"I advertised in our local paper and got in 93 saws"—says M. L. Thompson. The Foley is the only machine with which you can file all hand saws, also band saws and cross-cut circular saws.

**SEND FOR FREE BOOK**  
**"INDEPENDENCE AFTER 40"!**

Shows how you can get business from home owners, farmers, carpenters, schools, factories, etc. With a small investment, no overhead, no stock of goods to carry, you can get right into a cash business—and possibly later on develop into a full-time repair shop. Send coupon today for Free Book.

"Each saw I filed got me six more and business has been picking up that way since a year ago. If it keeps up I will have to buy another Foley Saw Filer." — William C. Baldwin

"I have done 4 or 5 thousand saws in my spare time in the 4 1/2 years since I got the outfit, and they are all coming back."—Len Grego

"Have filed over 2200 saws in 18 months. One customer always brings another." — E. A. Fink

# ASSEMBLE YOUR OWN TRAILER

**CUB SPORTSTER**

**SAVE UP TO 50%**

Enjoy the luxury of owning one of these sturdy, streamlined trailers. Save up to half the normal cost by assembling it yourself. For practically material costs alone, you can buy the full-size CUB SPORTSTER or CUB SR. trailer in construction kit form.

In only a few hours, using a screwdriver, hammer and wrench, either trailer can be

easily assembled. Precision cut, factory-finished panels and sub-assemblies are guaranteed to fit.

Both trailers have sleeping room for two adults and two children, thus they can pay for themselves during one vacation. Many Cub trailer owners make extra money by renting their trailers for week-end and vacation trips!

The CUB SPORTSTER has a rugged all metal body and all steel frame that weighs only 450 lbs. It is 12' 7" long, 6' wide, 5' in height and it adds only 75 lbs. tongue weight to your car. The CUB SPORTSTER kit includes a galley, ice box, wheels, fenders and all parts except tires and tubes.

Only **279.50** plus F.O.B. Los Angeles tax

The CUB SENIOR can't be matched in either price or quality. A walk-in trailer, it has plenty of room for everything in pre-assembled cupboards, drawers and a spacious closet. Built-in dinette bed, sink, ice box and two fold-away tables give you all the comforts of home. The CUB SENIOR is 10' long (8' body length), 6' 4" wide and 6' 9" in height. It has an all steel frame and all parts are included except tires and tubes.

Only **395.00** plus F.O.B. Los Angeles tax

(C.O.D. shipment will be made on either trailer if at least \$50.00 deposit accompanies order.)

## FREE TRIAL 95¢ GOLF BALL

with factory-direct order! **6 for \$3.50** Postpaid

Here's why American's exclusive "Flywheel-Action" golf balls give you 14.9% more spin:

Other golf balls have weight concentrated near the liquid center.

American "Flywheel-Action" golf balls have weight distributed farther away from the liquid center. That's why you get longer flight, more "bite," and truer putting, with American "Flywheel-Action."

SEND COUPON TODAY!

Order 6 top quality, new, 95¢ "Flywheel-Action" High-Speed balls at 58<sup>1</sup>/<sub>2</sub>¢ each. We ship 7—your order of 6 plus free "Sampler." You get American's finest 95¢ Tournament balls at 50¢ each.

**OUR GUARANTEE:** Give your free Sampler "the works" in actual play. If you're not convinced it's the sweetest-playing golf ball you've ever used, regardless of price, return all 7 balls for full refund. American Golf Ball Mfg. Co., 8629 W. 3rd St., Los Angeles 36, Calif.

## Loose Bathroom Fixtures Just Need SMOOTH-ON

Hooks, cup holders, shelf brackets, towel racks, soap dishes and other fixtures stay in place when you use Smooth-On No. 1 Iron Cement. You apply it to screws or bolts and into the screw or bolt holes. The fixture stays tight, because Smooth-On expands a little as it sets. Get a 1/4-oz., 7-oz. or 1-lb. size of Smooth-On No. 1 and keep it handy, not only for tightening loose parts and fixtures, but to stop leaks and seal cracks. If your hardware store hasn't Smooth-On, write us.

# The LAWNHAVER

SELF-PROPELLED

MAKES MOWING AS EASY AS  
WALKING EMPTY-HANDED

3/4 HP—\$125  
1 1/2 HP—\$139.50

Yes, the 3rd wheel drive does away with all controls. Start the LAWN-SHAVER, cut your lawn—to stop or turn around lift 3rd wheel from ground by raising the handle with fingertip ease (its perfect balance makes this simple). Trims flush with obstacles, can be operated in spots where no other power mower can go. Vertical height adjustment 1/2" to 3 1/4". Chain driven wheel and reel. Heavy duty solid steel construction. 4 cycle gas engine.

# BETTER CONTROL<sup>SM</sup> of Growing Conditions

\*Available Plant Food • Soil Moisture • Soil Aeration  
• Insect and Pest Control • Soil Temperature

## With a SEAMAN ROTARY TILLER!

A SEAMAN ROTARY TILLER means better and lower cost seedbeds . . . better control over vital growing factors. Many Seaman users report increased crop yields (often 35% or more).

HERE IS WHAT HAPPENS: The power-driven Tiller tines break up clods and aerate the pulverized ground . . . which helps warm up the soil, hastening seed germination and promoting earlier maturity. Some users increase aeration by tilling with hood up, also helping to control weeds and insects.

The pulverizing action also creates more capillary paths for water to follow. You lose less water and nutrients through erosion, evaporation, and leaching.

Fertilizer is mixed throughout the topsoil depth for quicker and more effective decomposition.

Power take-off and motorized units (gas or diesel) . . . 3 to 7 ft. tillage widths. Write for Bulletin NST and see your Seaman dealer.

*A Thousand and One Ideas You Can Use on the Farm!*

**POPULAR MECHANICS FARM MANUAL**

Use it to Step up Farm Efficiency — Increase Production — Improve Farm Appearance — Save Time, Labor, Money!

**A Must for Every Farm Family! Saves Money for City Homeowners Too!**

Here is the experience of hundreds of successful farm operators brought together in one handy, easy-to-read, easy-to-use, working handbook by the editors of Popular Mechanics. It is brimful of short cuts, labor-saving ideas, ingenious apparatus and methods that will simplify the day's work and lighten some of the more tedious chores, make money and save money for you.

**HELPS IN THE FIELD — IN THE BARN — IN THE HOME**

Every department of the farm is covered in the Farm Manual. Every member of the family will find in it something that he or she can use to tremendous advantage in farm operation, maintenance and improvement, from the building and care of equipment to painting the farm home and fast freezing fruits and vegetables. It covers farm buildings, the farmhouse and other homes and is of interest equally to the woman looking for home improvement, beauty and convenience and the man striving for easier and more profitable operation.

**ORDER TODAY — FOR YOURSELF — FOR A GIFT**

Use the coupon below. Mail it today. Book will be sent at once, postpaid if you include payment with your order. If you don't think the Farm Manual is worth even more than you paid for it after five days' use, send it back by mail and your money will be refunded. This may be the best investment you ever made. Rush coupon today.

**284 FACT-PACKED PAGES**

**Hundreds of Illustrations**

Popular Mechanics Farm Manual is packed with practical ideas and usable information that can easily be worth hundreds of dollars to farm families and homeowners everywhere.

**Farm Machinery and Implements**  
How to make and get the most out of farm implements.

**Farm Workshop Equipment and Repairs**  
Ideas that can save hundreds of dollars.

**Poultry and Livestock**  
How to build equipment, gadgets, etc. Care of farm animals and poultry.

# A DOUBLE PAGE OF PALLEY VALUES!!!

IN MANY ITEMS WE HAVE THE WORLD'S LARGEST SUPPLY

**HERE THEY ARE! THOSE TERRIFIC MIX VALUES**

**GADGET MIX**  
Especially prepared for the HOBBYIST. Rivets, Spacers, Bolts, Screws, Nuts, Gears, etc. A gold mine. #106. **\$1.19**

**BEARING MIX**  
Needle, Ball & Roller Bearings in excellent assortment. Sizes from 1/8" to 1". One of our "BEST SELLERS". 15 BEARINGS. #170 for ONLY **\$2.95**

**HINGE MIX**  
12 pairs of strap and butt Hinges, Glass 1" x 1" to 1 1/2" x 4" in length to 8" strap. #170E. A \$3.00 Value FOR ONLY **\$1.09**

**ABRASIVE AND GRINDING WHEEL MIX**  
50 Pieces including honing stone, pencil rolls, wheels, abrasive sheets, etc. A really sharp value. #170AG. **99c**

**SPRING MIX**  
Torsion, Compression & Tension Springs, steel, brass. A treasure here for emergency. #205. 2 LBS. for ONLY **89c**

**COMBO-MIX**  
Comb. of all above, all in one pkg. Sent. At special introductory price. **\$5.79**

**FILE MIX**  
Ten Assorted Files of 6", 8", 10", 12". Includes 3 Vixens, ball rounds, bastards, mills, etc. in seconds and used but in good condition. 1 Vixen alone worth our price for the entire mix. **99c**

**LENS MIX**  
THE PHOTOGRAPHERS FRIEND  
10 pieces of precision finished lenses, and first surface mirrors, including the following:  
A 51 mm dia. double lens, A 85 mm dia. lens with speed fig. a complete set of 3 lenses, one double convex, two objective plano-convex, each having a 1 1/2" focal length, one 3 1/2" dia. plano-convex lens with a 3" focal length.  
Also 3 double sided first surface mirrors totaling 37 square inches, worth \$10.00.  
Make your own projector, portrait and enlarging lens magnifiers, photo spots, etc. You'll bring to your friends about this one for ONLY **\$5.49**

**PULLEY MIX**  
You'll want this one around. 10 micarta and metal pulleys ranging from 1" to 5" with ball and one piece bearings. These are aircraft pulleys, the best made with hundreds of uses. A WONDERFUL BUY @ **\$2.95**

**SWITCH MIX**  
New 12 assorted types of Aircraft Switches. Including double & single throws, double & single poles & multiples. Voltage ratings from 5 to 20 amps. 125 Volts A. C., 35 amps. 24 Volts D. C.  
1001 uses in Auto, Truck, Tractor, Jeep, Shop, Radio, etc. **\$2.95**

**REAMER MIX**  
168-reamer Assortment: Special Taper line finish Reamers - High Speed Steel. Slightly used but in excellent condition. Ten assorted sizes ranging from .186 x .165 and 244 x .215 to .425 x .385 and .432 x .403. One alone worth our selling price of ten. For set of ten Reamers **\$4.49**

**COUNTERSINK MIX**  
#168A - Countersink Assortment! Excellent condition - High Speed Steel. Assortment of ten 100" and 110" with pilot sizes ranging from 3/32" to 3/16". For Ten **\$2.69**

**DEAD LINE FLASH!** Just Purchased \$600,000 Inventory of New Cutting Tools. Taps, Drills, Milling Cutters, Metal Saws. TREMENDOUS SAVINGS! WRITE FOR LIST

**DOUBLE CASTER UNIT**  
2 Needle bearded 6" Casters joined as a unit on a 7 1/2" x 8" rubber protected steel face plate. The unit is 9" high and will completely swivel. Ball bearings in swivel entirely enclosed and protected. Bolts Furnished. If you have to move heavy machinery or rigs these are just the unit. At a Fraction of its cost. Unit **\$9.85**

**AIRCRAFT INSTRUMENT MIX - 12 different new or good used cond**

Fuel Air Ratio Right and Left Indicator Oil Pressure Gauge  
Air Speed Indicator Flap Position Indicator Liquidometer  
Manifold Press Indicator A-8 or A-9 Oxy. Reglats. Engine Gauge Unit (Fuel & Oil Pressure cyl. hd. temp.)  
Autumn Ind. & Transmitter Landing Instruction

These Instruments contain sensitive meter movements. Miniature gyros, jewels and ball bearings, gears, valves . . . a treasure trove of fine parts. **\$16.95**

APPROXIMATELY \$2000 GOVERNMENT COST FOR ONLY

**CHEMISTRY SET REEL COUNTER AND CONTROL BOX**

Made for Chemical Warfare Division for testing water, etc. Complete set with chemicals, test tubes, full instructions. Packed in attractive lucite box with covers and dividers. 15 Pieces. **\$1.39** Set

Counts 0 to 999, each drive advances figures one numeral. Manual single pole, double throw switch has neutral position and serves to reel forward and reverse, with red jewel instrument light to indicate winding operation. Reset dial to turn counter back to 0. Assembled in compact 2"x2 1/2"x5 1/2" box. **\$2.69** Each

**LOADING SWITCH MC 432** Containing many electronic parts including 5 position multiple switch, 4 micro adjustment rheostats, fixed resistors, etc. A profitable investment @ **69c** Old Reliable for the AAF.

**BOAT FENDER**  
21" long 5" dia. Protection against docks for small boats. \$6.50 Value. Only **\$1.95**

**EX-1 - HYDRAULIC MASTER & SLAVE UNIT**  
Extractor Controls. Eliminate complicated rod linkage for throttle control on boats, gasoline engines, etc. These two units connected with 1/4" tubing and filled with oil serves as a precision 1 - 1 ratio 90° throw control with a minimum of effort. Combination Master and Slave **\$15.95**

**AIR CO OXYGEN REGULATOR** Latest design, sturdy, lightweight - dual gauge regulator unit. Gauge range from 0-220 P. S. I. regulated pressure 0-3000 P. S. I. bottle pressure. Designed for safety factor of 2400 P. S. I. Fits all standard Oxygen high pressure bottles, used in welding, torch cutting, Oxygen breathing. Compare this value anywhere **\$12.50**

#155 VICTOR CUTTING TORCH Type #408SS. Used but in gd. cond. **\$15.75**

### WINCH HOISTS

Thousands of satisfied users. Hundreds have written, the most wonderful tool in the world.

### No. 100 WINCH HOIST

Cap. 2500 lbs. with 24:1 ratio controlled bronze worm gear. 1 1/2" alloyed steel cable with hook, two speed handle. Ideal for Garage, Trucking, Mach. Shops, Boat Bldrs., etc. A \$100 Value \$15.99

### OXFORD BR. & TOOL SCRAPERS

Complete set of 4 tools packed in Giltwood Wood Case.

1 ea. 8", 10", 12", 14" half round Scraper.  
1 - 6" Three square Scraper.  
1 - 12" Double end Scraper.  
Made of Finest Tool Steel, Forged, Tempered, and Hollow Ground. At the Unheard of Price for Entire Set of Only \$2.49

### PLASTIC PARALLEL STRAIGHT EDGE

with knobs and rubber pads for use alongside on each section. A must for inspectors, mechanics, draftsmen, and engineers... You've never seen 'em 'em. 97¢

### GAS ENGINES HERE'S A TERRIFIC VALUE PARADE IN CHEAP POWER.

#### 10 H. P. CONTINENTAL GAS ENGINE

4 cylinder, Magneto Spark, built in Gas Tank. Water Cooled with Radiator. Complete with Tachometer and mounted on heavy steel frame for portability. A very smooth running job. Used but in guaranteed condition. Above engine used to drive pump described and priced below \$175.00

### WATER PUMP WIP-1

100 Gallons per Minute. 75 ft. head pressure, with 2" standard pipe ports. \$159.00  
PUMP SOLD SEPARATELY OR PUMP AND GAS ENGINE SOLD TOGETHER AS ONE UNIT \$325.00

### Genuine Red Seal 4 Cycle Air Cooled L head 2 H.P. CONTINENTAL GAS ENGINE

standard equipment inc. Mesh type air cleaner, flywheel, magneto, boat type carburetor, blower housing, muffler, fuel tank, fuel filter with shut off valve, starter pulley, etc. The ideal power package for light tractors, lighting plants, compressors, boats, lawn mowers, etc. And cast your eyes at this price \$47.95

### New BRIGGS & STRATTON MODEL "A" GAS ENGINE

Rating 2.10 H.P. 4 cycle, single cylinder. Complete in original Factory Crates. A \$102 Value for Only \$64.95

### W-1B LARGE HEAVY STEEL FILTERING TANK

30" dia. x 4' high. Complete with 2 large line filters, line pressure. Gauges, 5-way diverter valve (washing, filtering, filtering to waste, shut, by pass). Chlorination control panel with gauges, pressure regulating valve and tanks. 2" standard pipe plumbing throughout. \$229.00

### Sperry Aircraft Directional GYRO COMPASS

Precision made for sensitive direction 360° swing calibrated in 1/10 degree (6 min) Luminous dial. Built in 3 volt instrument light and and bank indicator 4 1/2" cube metal box with 3" dia. face. Operates on Vacuum. Ideal for cars, light planes or boats. Can be used in autos and boats by attaching one tube to intake manifold. Complete with caging and reset knob. Re-insure. Good Condition ONLY \$4.49

### High Pressure Oxygen Bottle

New. Will hold up to 3,000 lbs. PSL with CO2 used as fire inflator or fire extinguisher, with oxygen for sick room or deep-water diving, etc. Completely equipped with brass valve, 3/8" hose. Dial gauge, & canvas bag. \$2.29

### NEW ADJUSTABLE TAP WRENCHES

Jaws are made of tool steel, hardened and tempered. Won't break or get out of line.

#7 THREADWELL Cap. 1/4" to 1 1/2" \$2.49  
#8 VERMONT Cap. 1/4" to 1 1/2" \$3.49  
#24 GREENFIELD Cap. 1 1/2" to 4" Length 72" \$6.49

### Selsyn Mr. Transformers

For Remote Control G. E. Model 21.1G. 1 57.5 volts. 400 cycle \$514  
Can be used on 110 volt. Pr. Cost \$60.00 - Our Price \$3.95

### MICARTA TUBE

Ideal for Insulating or Bushing Stock. 3/8" x 1/4" wall x 1' O. D. Original use was for trailing antenna - F 10. Use for tow rack, seawater displays, shifting spacers, bearings, etc. In original crates. 59¢ ea.

### S & K ROLL-A-WAY TOOL CARRIER

Not Tunny, but made of heavy gauge red crackle finish steel. 32"x27"x19". With 1 dividing drawer, 1 drawer with clamp-on rack for tools. Locks on upper drawer and pull out lid for locking lower chamber with drawer. Rubber Wheel Ball Bearing Swivel Castors with 2 Extra Portable Tool Trays. We have 80 of 'em now, but they won't last long at COMPLETE UNIT \$32.95

### AIR COMPRESSOR

Thousands now in use for spraying, inflating, tractors, trucks, garage, laboratory, air tools, industrial use, etc. Lightweight but powerful, can be run by 1/2 H. P. Motor or Gas Engine. Operates in either Direction or rotation. Gives approximately 2.27 CFM at 600 RPM, 6.54 CFM displacement at 1200 RPM. Has 2 inch bore, 1 1/2 inch stroke. Suggested pressure 75 P.S.I. Size 9" x 12" x 16 1/2". Weight approximately 23 pounds. AT THIS NEW LOW PRICE \$23.95  
Motors, Tanks, Fittings to Adapt this Unit also Avble.

### POWER UNIT

The Complete Model G&R 12-24, 100 Cooling of a Single Cylinder, Air Cooled, Four-Cycle, Briggs-Stratton Gasoline Engine, Type-Stroke Cylinder, Air Cooled, L-Head, Four-Cycle, 6 H. P. Bore 3", Stroke, 3 1/2". Governed for Speed Between 2500 - 3200 R. P. M.  
Directly Connected to a Direct Current Generator of 2000 Watts, Rating 26.5 Volts, 100 Amps, to form an Integrated Unit. Fuel Container 1 1/2 Gallons.  
The Engine and Generator are Mounted on Four Shock Absorbing Rubber Motor Mounts Attached to a Channel Iron Base. 4 Wheel for Mobility can be used as Lighting Plant or Power Supply. A TERRIFIC VALUE!  
THE BUY OF THE CENTURY... ONLY \$79.89

### Electronic Transmissn. Gear Train

GT-1 Containing approx. 50 Bronze Spur & Pinion Gears ranging from 3/8" to 4" dia., 5 sets of 7 cluster gears, 2 complete worm & worm gear drive sets, 40 N. D. ball bearings from 1/2" to 1 1/2" dia, watch springs, bushings, posts, face plates, housings, Micro Switches, 2 miniature, controlled clutches, etc. 19 lbs. of Pleasure and profit. \$8.49  
A Tremendous Gadget Misc. Only Gears in above train are all in multiple size and sequence with identical tooth ratio giving hundreds of ideal gear reduction combinations.

### NEW PRESSURE TANKS

Stainless Steel - Shatter Proof, Seamless, 10,000 available in 8 different sizes, 1001 uses.

12" x 24 inches - 2100 Cu. in. capacity \$4.75  
18" x 24 inches - 3600 Cu. in. capacity \$5.49  
24" x 24 inches - 5400 Cu. in. capacity \$6.95  
30" x 24 inches - 8100 Cu. in. capacity \$8.49

### GEAR BOXES

VTG-1-50", 1 1/2 to 1 bevel gear reduction, 1/2" dia. with lever control for engaging & disengaging positive clutch, dust proof housing, pre-lubricated bearings, size 7"x8". A lifetime value. \$3.95  
VTG-2-30" bevel gear reduction 18 to 1, 1 1/2" x 4 square. Final take-off 4 1/2" dia. 26 tooth, 3/4" diam. spur gear with lever control for engaging and disengaging positive clutch, dust proof housing, pre-lubricated bearings, size 12"x8". Only Both above gear boxes can be used with above Transmission. \$6.49

### FIRE EXTINGUISHER

Kiddle Lee Col Type, Built to Gov't spec, wirebound, shatterproof Heavy Case. Fully recharged, 3 1/2" lb. - 2 1/2" x 4" Trigger control with horn 4TB type. \$15 Value \$13.25  
#601A \$11.75

**DO DOZENS OF JOBS QUICKLY AND EASILY WITH JUST ONE TRACTOR!**

Shaw tractors are always ready to plow, cultivate, bulldoze, harrow, mow, haul, rake, seed, spray, disc, saw and do scores of other jobs on a minute's notice. A child can operate these amazing machines and the low-cost Jiffy Hitch attachments are quick and easy to change.

**IDEAL TRACTOR FOR GARDENS, SMALL FARMS**

If you're gardening, farming, maintaining a golf course, chick hatchery, orchard, estate, cabin camp, truck farm, park, etc., you need a Shaw Du-All or Peppy-Pal. You'll get more jobs done, at lower cost, in a fraction of the time. You'll get top-quality work out of these dependable, efficient Shaw tractors.

**SOON PAYS FOR ITSELF—CHEAP TO OPERATE**

The remarkably low initial cost of Shaw tractors and attachments plus the low operating costs (only a few cents an hour) makes Shaw the buy of the year. It will soon pay for itself in time and labor-saving plus helping make extra profits for the man who job-contracts or likes to earn spare-time money.

**ECONOMICAL TO BUY—TOP QUALITY MATERIALS**

From big heavy duty tires to the smallest engine pin you receive only first quality materials—carefully and sturdily constructed, thoroughly inspected and tested for longer service and low maintenance. Precision engineering and efficient power utilization assure top performance on the toughest job.

**FULL GUARANTEE—PROMPT SHIPMENT**

Every Shaw tractor carries a full year's guarantee against any defect in workmanship or material. Check the many features of Shaw tractors—many different models ranging from 1½ to 12½ horsepower, variable speeds, power turn, forward and reverse, Timken roller bearings, Ross steering device and scores of other important features. Mail the coupon below, select and order your Shaw tractor for early delivery.

# WILLIE MOSCONI

World's Pocket Billiard Champion, 1947 and 1948, holds pocket billiards high-run record of 309 balls in succession and match single game record of 127. Mosconi also rates as a 3-cushion expert.

# WILLIE HOPPE

A champion since '06, the veteran Willie Hoppe has held every title in carom billiards. After 44 years of competition, he's still world's 3-cushion champion.

WHEN THE "BOY WONDER" MEETS THE "OLD MASTER" OF THE CUE...IT'S

## CAMELS for MILDNESS!

MY BRAND, TOO,  
WILLIE HOPPE—THE  
30-DAY MILDNESS  
TEST WON ME  
OVER TO CAMELS  
FOR KEEPS!

30 DAYS?...I'VE  
SMOKED CAMELS  
FOR 20 YEARS. I  
KNOW THEY'RE MILD,  
AND CAMELS ALWAYS  
TASTE GREAT!

In a recent test  
of hundreds of people  
who smoked only  
Camels for 30 days,  
noted throat special-  
ists, making weekly ex-  
aminations, reported

**NOT ONE SINGLE  
CASE OF THROAT  
IRRITATION  
due to smoking  
CAMELS!**

● Millions of smokers have been enjoying Camel mildness for years, but if you haven't yet discovered the cool, cool mildness and rich, full flavor of Camel's choice tobaccos... make the Camel mildness test in your own "T-Zone" (T for Taste and T for Throat).

*Money-Back Guarantee!* Try Camels and test them as you smoke them. If, at any time, you are not convinced that Camels are the mildest cigarette you ever smoked, return the package with the unused Camels and we will refund its full purchase price, plus postage. (Signed) R. J. Reynolds Tobacco Company, Winston-Salem, North Carolina.
