Section D—Conductor Assembly Units

A conductor assembly unit consists of 1,000 feet of conductor or cable for primaries, secondaries or services, and includes tie wires, sleeves for splicing, connectors, and armor rods with clips or armor wire where necessary. Tree trimming necessary for installing services and secondaries on poles not carrying primary line is included with the conductor assembly unit and shall be performed in accordance with the directions of the Engineer. The service shall be connected to the secondary or transformer and 2 feet of conductor or cable shall be left for connecting to the consumer's service entrance. In computing the compensation to the Bidder for conductor assembly units only the horizontal distance between conductor supports or pole stakes shall be used. The conductor or cable sizes and types listed are the manufacturer's designation.
