licensee's application of February 14, 1995. The proposed action would exempt the licensee from the requirements of 10 CFR Part 50, Appendix J, Paragraph III.D.1.(a), to the extent that a one-time interval extension for the Type A test (containment integrated leak rate test) by approximately 15 months from the February 1995 refueling outage to the May 1996 refueling outage would be granted.

The Need for the Proposed Action

The proposed action is needed to permit the licensee to defer the Type A test from the February 1995 refueling outage to the May 1996 refueling outage, thereby saving the cost of performing the test and eliminating the test period from the critical path time of the outage.

Environmental Impacts of the Proposed Action

The Commission has completed its evaluation of the proposed action and concludes that the proposed one-time exemption would not increase the probability or consequences of accidents previously analyzed and the proposed one-time exemption would not affect facility radiation levels or facility radiological effluents. The licensee will continue to be required to conduct the Type B and C local leak rate tests which historically have been shown to be the principal means of detecting containment leakage paths with the Type A tests confirming the Type B and C test results. It is also noted that the licensee, as a condition of the proposed exemption, will perform the visual containment inspection although it is only required by Appendix J to be conducted in conjunction with Type A tests. The NRC staff considers that these inspections, though limited in scope, provide an important added level of confidence in the continued integrity of the containment boundary. The NRC staff also notes that the containment is maintained at a subatmospheric pressure which provides a means for continuously monitoring potential containment leakage paths during power operation. The change will not increase the probability or consequences of accidents, no changes are being made in the types of any effluents that may be released offsite, and there is no significant increase in the allowable individual or cumulative occupational radiation exposure. Accordingly, the Commission concludes that there are no significant radiological environmental impacts associated with the proposed action.

With regard to potential nonradiological impacts, the proposed

action does involve features located entirely within the restricted area as defined in 10 CFR Part 20. It does not affect nonradiological plant effluents and has no other environmental impact. Accordingly, the Commission concludes that there are no significant nonradiological environmental impacts associated with the proposed action.

Alternatives to the Proposed Action

Since the Commission has concluded there is no measurable environmental impact associated with the proposed action, any alternatives with equal or greater environmental impact need not be evaluated. As an alternative to the proposed action, the NRC staff considered denial of the proposed action. Denial of the application would result in no change in current environmental impacts.

Alternative Use of Resources

This action does not involve the use of any resources not previously considered in the Final Environmental Statement for the Surry Power Station, Unit No. 2.

Agencies and Persons Consulted

In accordance with its stated policy, the NRC staff consulted with the Virginia State official regarding the environmental impact of the proposed action. The State official had no comments.

Finding of No Significant Impact

Based upon the environmental assessment, the Commission concludes that the proposed action will not have a significant effect on the quality of the human environment. Accordingly, the Commission has determined not to prepare an environmental impact statement for the proposed action.

For further details with respect to the proposed action, see the licensee's letter dated February 14, 1995, which is available for public inspection at the Commission's Public Document Room, The Gelman Building, 2120 L Street, NW., Washington, DC, and at the local public document room located at the Swem Library, College of William and Mary, Williamsburg, Virginia 23185.

Dated at Rockville, Maryland, this 28th day of February 1995.

For the Nuclear Regulatory Commission. Richard P. Croteau.

Acting Director Project Directorate II-2, Division of Reactor Projects—I/II, Office of Nuclear Reactor Regulation.

Licensing Support System Advisory Review Panel

AGENCY: Nuclear Regulatory

Commission.

ACTION: Notice of public meeting.

SUMMARY: The Licensing Support System Advisory Review Panel (LSSARP) will hold its next meeting on March 22 and 23, 1995, at the Department of Energy's Yucca Mountain Site Characterization Project Office, room 450, Bank of America Building, 101 Convention Center Drive, Las Vegas, Nevada. The entire meeting will be open to the public pursuant to the Federal Advisory Committee Act (Pub. L. 94– 463, 86 Stat. 770–776).

AGENDA: The meeting will be held from 1:00 p.m. to 5:00 p.m. on Wednesday, March 22 and from 9:00 a.m. to 4:30 p.m. on Thursday, March 23, 1995. The agenda will consist of briefings and discussions on the following topics:

- 1. Header Working Group Update.
- 2. Technical Working Group Report on Review of LSS Requirements Document.
 - 3. Current LSS Activity at DOE.
- 4. Inclusion/Exclusion Criteria for DOE's Records Management System.
- 5. Location of the LSS Facility.
- 6. Topic Selection for Use of LSS on Pilot Project Basis.
- 7. Progress Toward Development of an NRC/DOE Memorandum of Agreement.
- 8. Comments Received on Draft Participant Compliance Document.
- Future Meeting Schedule. SUPPLEMENTARY INFORMATION: The Nuclear Regulatory Commission (NRC) established the LSSARP in 1989 to provide advice and recommendations to the NRC and to the Department of Energy (DOE) on topics, issues, and activities related to the design, development and operation of an electronic information management system known as the Licensing Support System (LSS). This system will contain information relevant to the Commission's future licensing proceeding for a geologic repository for the disposal of high-level radioactive waste. Membership on the Panel consists of representatives of the State of Nevada, Nye County, Nevada, a coalition of effected units of local Government in Nevada, the National
