and on which the petitioner intends to rely in proving the contention at the hearing. The petitioner must also provide reference to those specific sources and documents of which the petitioner is aware and on which the petitioner intends to rely to establish those facts or expert opinion. Petitioner must provide sufficient information to show that a genuine dispute exists with the applicant on a material issue of law or fact. Contentions shall be limited to matters within the scope of the amendment under consideration. The contention must be one which, if proven, would entitle the petitioner to relief. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceedings, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

If a hearing is requested, the Commission will make a final determination on the issue of no significant hazards consideration. The final determination will serve to decide when the hearing is held.

If the final determination is that the amendment request involves no significant hazards consideration, the Commission may issue the amendment and make it immediately effective, notwithstanding the request for a hearing. Any hearing held would take place after issuance of the amendment.

If the final determination is that the amendment request involves a significant hazards consideration, any hearing held would take place before the issuance of any amendment.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Services Branch, or may be delivered to the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, by the above date. Where petitions are filed during the last 10 days of the notice period, it is requested that the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at 1-(800) 248-5100 (in Missouri 1-(800) 342-6700). The Western Union operator should be given Datagram Identification Number N1023 and the following message addressed to William H. Bateman: petitioner's name and telephone number, date petition was

mailed, plant name, and publication date and page number of this **Federal Register** notice. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to M. Stanford Blanton, Esq., Balch and Bingham, Post Office Box 306, 1710 Sixth Avenue North, Birmingham, Alabama 35201, attorney for the license.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the presiding Atomic Safety and Licensing Board that the petition and/or request should be granted based upon a balancing of the factors specified in 10 CFR 2.714(a)(1) (i)–(v) and 2.714(d).

For further details with respect to this action, see the application for amendment dated June 10, 1994, which is available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, and at the local public document room located at the Houston-Love Memorial Library, 212 W. Burdeshaw Street, Post Office Box 1369, Dothan, Alabama 36302.

Dated at Rockville, Maryland, this 28th day of February 1995.

For the Nuclear Regulatory Commission. **Byron L. Siegel**,

Project Manager, Project Directorate II-1, Division of Reactor Projects—I/II, Office of Nuclear Reactor Regulation.

## [Docket Nos. 50-445 and 50-446]

Texas Utilities Electric Co.; Notice of Consideration of Issuance of Amendment to Facility Operating License, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License Nos. NPF– 87 and NPF–89 issued to Texas Utilities Electric Company (TU Electric, the licensee) for operation of the Comanche Peak Steam Electric Station, Units 1 and 2 located in Somervell County, Texas.

The proposed amendment would modify the Comanche Peak Steam Electric Station (CPSES) Technical Specification (TS) 3/4.6.2, "Depressurization and Cooling Systems—Containment Spray System" Surveillance Requirement (SR) 4.6.2.1b,

is replaced with NUREG-1431 SR 3.6.6A.4. This change replaces the specific pump flow and head values now contained in the SR with the general requirement that the pump develop the required head at the flow test point. Also Bases 3/4.6.2.1 "Containment Spray System" will be revised to expand the detail consistent with the NUREG-1431 Bases SR 3.6.6A.4. The Bases from NUREG-1431 has minor modifications to reflect (1) that the CPSES containment spray pumps are tested via a special test line which allows testing at flows higher than that allowed by the miniflow recirculation line; (2) the "pump design curve" is termed the "analytical pump curve"; and (3) the reference to the technical requirements manual where the pump head requirements are defined is provided for the user's information.

Before issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

The Commission has made a proposed determination that the amendment request involves no significant hazards consideration. Under the Commission's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety. As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

1. Do the proposed changes involve a significant increase in the probability or consequences of an accident previously evaluated?

The relocation of the specific values for flow and developed head at the flow test point to the Technical Requirements Manual (TRM) is essentially an administrative change. The change does not change the plant hardware or operating procedures. As such, the change has no impact on the probability of an accident.

The consequences of an accident previously evaluated, as it relates to the performance characteristics of the containment spray pumps, depends on the pumps meeting the performance characteristics in the analytical pump curve used by the containment analyses. Since the limitations established in the TRM will continue to ensure that this analytical pump curve is met, there is no impact on the
