NUCLEAR REGULATORY COMMISSION

[Docket No. 50-289]

GPU Nuclear Corporation; Three Mile Island Nuclear Station, Unit 1 Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an exemption from the provisions of 10 CFR 50.44, 10 CFR 50.46, and appendix K to 10 CFR part 50 to GPU Nuclear Corporation (GPUN, the licensee) for Three Mile Island Nuclear Station, Unit 1 (TMI-1), located in Dauphin County, Pennsylvania.

Environmental Assessment

Identification of Proposed Action

The proposed action would enable the licensee to use demonstration fuel assemblies that contain some fuel rods whose zirconium-based cladding composition is somewhat different from the zirconium based compound named zircaloy. These demonstration assemblies would be loaded into TMI-1 during the upcoming September 1995 refueling outage and irradiated through fuel Cycles 11, 12, and 13.

The proposed action is in accordance with the licensee's application for exemption of June 1, 1995.

The Need for the Proposed Action

The proposed exemption to 10 CFR 50.44, 10 CFR 50.46, and appendix K to 10 CFR part 50 is needed because these regulations specifically refer to light-water reactors containing fuel consisting of uranium oxide pellets enclosed in zircaloy tubes. Zircaloy is a zirconium-based alloy currently in use as cladding for fuel pellets. A new zirconium-based cladding has been developed which is not the same chemical composition as
