(extrusion) area, which exceeded current DOE guidelines for residual contamination on structural surfaces. As a result of these surveys, the site was designated for remediation under FUSRAP in December 1985.

ORNL conducted more extensive characterization surveys in May and June 1992 to more precisely define the locations and delineate the boundaries of the radioactive contamination identified during the initial designation surveys. The characterization surveys confirmed that the primary contaminants in the areas of the Rufert Building used to perform AEC work were uranium-238 and its decay products. The contamination extended throughout a much greater portion of the first floor of the building than originally thought. In addition, nearsurface walkover gamma radiation surveys were conducted on exterior areas. Two small isolated areas were contaminated with radioactive material.

Based on data collected and evaluated during the characterization activities, an expedited removal action was conducted at the Seymour site in 1992 and 1993. Post-remedial action surveys have demonstrated that the site now meets applicable requirements for use without radiological restrictions. DOE has certified that any residual contamination which remains on site falls within guidelines for use without radiological restrictions and that reasonably foreseeable future use of the property will result in no radiological exposure above these radiological guidelines established to protect members of the general public as well as site occupants. These findings are supported by the DOE Certification Docket for the Remedial Action Performed at the Seymour Site in Seymour, Connecticut, 1992–1993. Accordingly, this property is released from FUSRAP.

The certification docket will be available for review between 9:00 a.m. and 4:00 p.m., Monday through Friday (except Federal holidays) in the U.S. Department of Energy Public Reading Room located in Room 1E-190 of the Forrestal Building, 1000 Independence Avenue S.W., Washington, D.C. Copies of the certification docket will also be available in the DOE Public Document Room, U.S. Department of Energy, Oak Ridge Operations Office, Oak Ridge, Tennessee. DOE, through the Oak Ridge Operations Office, Former Sites Restoration Division, has issued the following statement:

Statement of Certification: Seymour Specialty Wire Site, Former AEC Operations

DOE, Oak Ridge Operations Office, Former Sites Restoration Division, has reviewed and analyzed the radiological data obtained following remedial action at the Seymour Specialty Wire site (Town of Seymour, Volume 135, pages 430-437). Post-remedial action radiological surveys show that the site now meets current guidelines for use without radiological restrictions. Based on analysis of all data collected, DOE certifies that any residual contamination which remains on site falls within current guidelines for use without radiological restrictions. This certification of compliance also provides assurance that reasonably foreseeable future use of the property will result in no radiological exposure above current radiological guidelines established to protect members of the general public as well as occupants of the site.

Property owned by Seymour Specialty Wire Company: 15 Franklin Street, Seymour, Connecticut 06482.

Issued in Washington, D.C., on January 19, 1995.

#### John E. Baublitz,

Acting Deputy Assistant Secretary for Environmental Restoration.

### **Energy Information Administration**

# Forms EIA-871A-F, "1995 Commercial Buildings Energy Consumption Survey"

AGENCY: Energy Information Administration, Department of Energy. ACTION: Notice of Proposed Revision of Forms EIA–871A-F, "1995 Commercial Buildings Energy Consumption Survey (CBECS)," and Solicitation of Comments.

**SUMMARY:** The Energy Information Administration (EIA), as part of its continuing effort to reduce paperwork and respondent burden (required by the Paperwork Reduction Act of 1980), conducts a presurvey consultation program to provide the general public and other Federal agencies with an opportunity to comment on proposed and/or continuing reporting forms. This program helps to ensure that requested data can be provided in the desired format, reporting burden is minimized, reporting forms are clearly understood, and the impact of collection requirements on respondents can be properly assessed. Currently, EIA is

soliciting comments concerning the proposed revision to the Forms EIA– 871A–F, "1995 Commercial Buildings Energy Consumption Survey."

DATES: Written comments must be submitted within 30 days of the publication of this notice. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below of your intention to do so as soon as possible.

ADDRESSES: Send comments to Martha Johnson, Project Manager, EI–631, Forrestal Building, U.S. Department of Energy, Washington, D.C. 20585, (202) 586–1135, Facsimile (202) 586–0018. Internet: mjohnsoneia.doe.gov.

**FOR FURTHER INFORMATION:** Requests for additional information or copies of the forms and instructions should be directed to Martha Johnson at the address listed above.

### SUPPLEMENTARY INFORMATION:

I. Background II. Current Actions III. Request for Comments

## I. Background

In order to fulfill its responsibilities under the Federal Energy Administration Act of 1974 (Pub. L. 93-275) and the Department of Energy Organization Act (Pub. L. 95-91), the **Energy Information Administration is** obliged to carry out a central, comprehensive, and unified energy data and information program. As part of this program, EIA collects, evaluates, assembles, analyzes, and disseminates data and information related to energy resource reserves, production, demand, and technology, and related economic and statistical information relevant to the adequacy of energy resources to meet demands in the near and longer term future for the Nation's economic and social needs.

The CBECS is a triennial survey that provides basic statistical information on consumption of and expenditures for energy in commercial buildings, and on the energy-related characteristics of these buildings. (Previous surveys were conducted in 1979, 1983, and 1986 under the name of the Nonresidential Buildings Energy Consumption Survey. The 1989 and 1992 surveys were collected using the new title, CBECS. To obtain this information, personal interviews are conducted for a sample of commercial buildings in the 50 states and the District of Columbia. For buildings in the survey, data are collected on structural characteristics, activities conducted inside the buildings, building ownership and
