subsequently determined to be invalid. Banks may rely on this Commentary, which is issued as an official Board interpretation, as well as on the regulation itself.

F. 229.21(f) Exclusions

1. This provision clarifies that liability under this section does not apply to violations of the requirements of Subpart C of this regulation, or to actions for wrongful dishonor of a check by a paying bank's customer.

G. 229.21(g) Record Retention

1. Banks must keep records to show compliance with the requirements of this subpart for at least two years. This record retention period is extended in the case of civil actions and enforcement proceedings. Generally, a bank is not required to retain records showing that it actually has given disclosures or notices required by this subpart to each customer, but it must retain evidence demonstrating that its procedures reasonably ensure the customers' receipt of the required disclosures and notices. A bank must, however, retain a copy of each notice provided pursuant to its use of the reasonable cause exception under § 229.13(g) as well as a brief description of the facts giving rise to the availability of that exception.

XVI. Section 229.30 Paying Bank's Responsibility for Return of Checks A. 229.30(a) Return of Checks

1. This section requires a paying bank (which, for purposes of Subpart C, may include a payable-through and payable-at bank; see § 229.2(z)) that determines not to pay a check to return the check expeditiously. Generally, a check is returned expeditiously if the return process is as fast as the forward collection process. This paragraph provides two standards for expeditious return, the "two-day/four-day" test, and the "forward collection" test.

- 2. Under the "two-day/four-day" test, if a check is returned such that it would normally be received by the depositary bank two business days after presentment where both the paying and depositary banks are located in the same check processing region or four business days after presentment where the paying and depositary banks are not located in the same check processing region, the check is considered returned expeditiously. In certain limited cases, however, these times are shorter than the time it would normally take a forward collection check deposited in the paying bank and payable by the depositary bank to be collected. Therefore, the Board has included a "forward collection" test, whereby a check is nonetheless considered to be returned expeditiously if the paying bank uses transportation methods and banks for return comparable to those used for forward collection checks, even if the check is not received by the depositary banks within the two-day or four-day period.
 - 3. Two-day/four-day test.
- a. Under the first test, a paying bank must return the check so that the check would normally be received by the depositary bank within specified times, depending on whether or not the paying and depositary

banks are located in the same check processing region.

- b. Where both banks are located in the same check processing region, a check is returned expeditiously if it is returned to the depositary bank by 4:00 p.m. (local time of the depositary bank) of the second business day after the banking day on which the check was presented to the paying bank. For example, a check presented on Monday to a paying bank must be returned to a depositary bank located in the same check processing region by 4 p.m. on Wednesday. For a paying bank that is located in a different check processing region than the depositary bank, the deadline to complete return is 4 p.m. (local time of the depositary bank) of the fourth business day after the banking day on which the check was presented to the paying bank. For example, a check presented to such a paying bank on Monday must be returned to the depositary bank by 4:00 p.m. on Friday
- c. This two-day/four-day test does not necessarily require actual receipt of the check by the depositary bank within these times. Rather, the paying bank must send the check so that the check would normally be received by the depositary bank within the specified time. Thus, the paying bank is not responsible for unforeseeable delays in the return of the check, such as transportation delays.
- d. Often, returned checks will be delivered to the depositary bank together with forward collection checks. Where the last day on which a check could be delivered to a depositary bank under this two-day/four-day test is not a banking day for the depositary bank, a returning bank might not schedule delivery of forward collection checks to the depositary bank on that day. Further, the depositary bank may not process checks on that day. Consequently, if the last day of the time limit is not a banking day for the depositary bank, the check may be delivered to the depositary bank before the close of the depositary bank's next banking day and the return will still be considered expeditious. Ordinarily, this extension of time will allow the returned checks to be delivered with the next shipment of forward collection checks destined for the depositary bank.
- e. The times specified in this two-day/four-day test are based on estimated forward collection times, but take into account the particular difficulties that may be encountered in handling returned checks. It is anticipated that the normal process for forward collection of a check coupled with these return requirements will frequently result in the return of checks before the proceeds of nonlocal checks, other than those covered by § 229.10(c), must be made available for withdrawal.
- f. Under this two-day/four-day test, no particular means of returning checks is required, thus providing flexibility to paying banks in selecting means of return. The Board anticipates that paying banks will often use returning banks (see § 229.31) as their agents to return checks to depositary banks. A paying bank may rely on the availability schedule of the returning bank it uses in determining whether the returned check would "normally" be returned within

the required time under this two-day/fourday test, unless the paying bank has reason to believe that these schedules do not reflect the actual time for return of a check.

- 4. Forward collection test.
- a. Under the second, "forward collection," test, a paying bank returns a check expeditiously if it returns a check by means as swift as the means similarly situated banks would use for the forward collection of a check drawn on the depositary bank.
- b. Generally, the paying bank would satisfy the "forward collection" test if it uses a transportation method and collection path for return comparable to that used for forward collection, provided that the returning bank selected to process the return agrees to handle the returned check under the standards for expeditious return for returning banks under § 229.31(a). This test allows many paying banks a simple means of expeditious return of checks and takes into account the longer time for return that will be required by banks that do not have ready access to direct courier transportation.
- c. The paying bank's normal method of sending a check for forward collection would not be expeditious, however, if it is materially slower than that of other banks of similar size and with similar check handling activity in its community.
- d. Under the "forward collection" test, a paying bank must handle, route, and transport a returned check in a manner designed to be at least as fast as a similarly situated bank would collect a forward collection check (1) of similar amount, (2) drawn on the depositary bank, and (3) received for deposit by a branch of the paying bank or a similarly situated bank by noon on the banking day following the banking day of presentment of the returned check.
- e. This test refers to similarly situated banks to indicate a general community standard. In the case of a paying bank (other than a Federal Reserve Bank), a similarly situated bank is a bank of similar asset size, in the same community, and with similar check handling activity as the paying bank. (See § 229.2(ee).) A paying bank has similar check handling activity to other banks that handle similar volumes of checks for collection.
- f. Under the forward collection test, banks that use means of handling returned checks that are less efficient than the means used by similarly situated banks must improve their procedures. On the other hand, a bank with highly efficient means of collecting checks drawn on a particular bank, such as a direct presentment of checks to a bank in a remote community, is not required to use that means for returned checks, i.e. direct return, if similarly situated banks do not present checks directly to that depositary bank.
 - 5. Examples
- a. If a check is presented to a paying bank on Monday and the depositary bank and the paying bank are participants in the same clearinghouse, the paying bank should arrange to have the returned check received by the depositary bank by Wednesday. This would be the same day the paying bank would deliver a forward collection check to the depositary bank if the paying bank received the deposit by noon on Tuesday.
