SUPPLEMENTARY INFORMATION:

Previously, several preliminary risk assessments were conducted by EPA concerning the WTI incinerator. To prepare for a final, detailed risk assessment the EPA decided, in July 1993, that the Agency would arrange independent scientific peer reviews of both the project plan and the draft risk assessment. The first peer review was held in December, 1993 (17 November, 1993 Federal Register, pp. 60628-60629) and concerned the draft project plan for the risk assessment. For this first workshop, EPA convened a peer review panel of 13 independent scientists from the fields of toxicology, environmental fate and transport, combustion engineering, atmospheric modeling, and exposure assessment. The comments and recommendations provided during this workshop are published in "Reports on the Technical Workshop on WTI

Incinerator Risk Issues" (EPA/630/R–94/001). This document is available from the Center for Environmental Research Information (Phone: 513–569–7562). Major recommendations from this workshop included: (1) using additional incinerator performance test data; (2) refining computer models used to simulate airborne dispersions; (3) conducting a screening level ecological risk assessments; and (4) performing an evaluation of accident scenarios.

For the current review, EPA is convening the same panel, enhanced with eight additional experts in the area of ecological risk assessments and accident analysis. These scientists will focus on the scientific data, methods, and analyses, along with the assumptions and uncertainties that are associated with the risk estimates at the site. Following the workshop, EPA will consider the workshop recommendations in completing the risk assessment. Policy and permitting issues will not be discussed at the current workshop.
