

referral for treatment. A diagnosis prepared for the purpose of treatment or referral for treatment but which is not so used is covered by §§ 1.460 through 1.499 of this part. These regulations do not apply to a diagnosis of drug overdose or alcohol intoxication which clearly shows that the individual involved is not an alcohol or drug abuser (e.g., involuntary ingestion of alcohol or drugs or reaction to a prescribed dosage of one or more drugs).

Disclose or disclosure. The term "disclose" or "disclosure" means a communication of patient identifying information, the affirmative verification of another person's communication of patient identifying information, or the communication of any information from the record of a patient who has been identified.

Drug abuse. The term "drug abuse" means the use of a psychoactive substance for other than medicinal purposes which impairs the physical, mental, emotional, or social well-being of the user.

Infection with the human immunodeficiency virus (HIV). The term "infection with the human immunodeficiency virus (HIV)" means the presence of laboratory evidence for human immunodeficiency virus infection. For the purposes of §§ 1.460 through 1.499 of this part, the term includes the testing of an individual for the presence of the virus or antibodies to the virus and information related to such testing (including tests with negative results).

Informant. The term "informant" means an individual who is a patient or employee or who becomes a patient or employee at the request of a law enforcement agency or official and who at the request of a law enforcement agency or official observes one or more patients or employees for the purpose of reporting the information obtained to the law enforcement agency or official.

Patient. The term "patient" means any individual or subject who has applied for or been given a diagnosis or treatment for drug abuse, alcoholism or alcohol abuse, infection with the human immunodeficiency virus, or sickle cell anemia and includes any individual who, after arrest on a criminal charge, is interviewed and/or tested in connection with drug abuse, alcoholism or alcohol abuse, infection with the human immunodeficiency virus, or sickle cell anemia in order to determine that individual's eligibility to participate in a treatment or rehabilitation program. The term patient includes an individual who has been diagnosed or treated for alcoholism, drug abuse, HIV infection, or sickle cell

anemia for purposes of participation in a VA program or activity relating to those four conditions, including a program or activity consisting of treatment, rehabilitation, education, training, evaluation, or research. The term "patient" for the purpose of infection with the human immunodeficiency virus or sickle cell anemia, includes one tested for the disease.

Patient identifying information. The term "patient identifying information" means the name, address, social security number, fingerprints, photograph, or similar information by which the identity of a patient can be determined with reasonable accuracy and speed either directly or by reference to other publicly available information. The term does not include a number assigned to a patient by a treatment program, if that number does not consist of, or contain numbers (such as social security, or driver's license number) which could be used to identify a patient with reasonable accuracy and speed from sources external to the treatment program.

Person. The term "person" means an individual, partnership, corporation, Federal, State or local government agency, or any other legal entity.

Records. The term "records" means any information received, obtained or maintained, whether recorded or not, by an employee or contractor of VA, for the purpose of seeking or performing VA program or activity functions relating to drug abuse, alcoholism, tests for or infection with the human immunodeficiency virus, or sickle cell anemia regarding an identifiable patient. A program or activity function relating to drug abuse, alcoholism, infection with the human immunodeficiency virus, or sickle cell anemia includes evaluation, treatment, education, training, rehabilitation, research, or referral for one of these conditions. Sections 1.460 through 1.499 of this part apply to a primary or other diagnosis, or other information which identifies, or could reasonably be expected to identify, a patient as having a drug or alcohol abuse condition, infection with the human immunodeficiency virus, or sickle cell anemia (e.g., alcoholic psychosis, drug dependence), but only if such diagnosis or information is received, obtained or maintained for the purpose of seeking or performing one of the above program or activity functions. Sections 1.460 through 1.499 of this part do not apply if such diagnosis or other information is not received, obtained or maintained for the purpose of seeking or performing a function or activity relating to drug abuse, alcoholism,

infection with the human immunodeficiency virus, or sickle cell anemia for the patient in question. Whenever such diagnosis or other information, not originally received or obtained for the purpose of obtaining or providing one of the above program or activity functions, is subsequently used in connection with such program or activity functions, those original entries become a "record" and §§ 1.460 through 1.499 of this part thereafter apply to those entries. Segregability: these regulations do not apply to records or information contained therein, the disclosure of which (the circumstances surrounding the disclosure having been considered) could not reasonably be expected to disclose the fact that a patient has been connected with a VA program or activity function relating to drug abuse, alcoholism, infection with the human immunodeficiency virus, or sickle cell anemia.

(1) The following are examples of instances whereby records or information related to alcoholism or drug abuse are covered by the provisions of §§ 1.460 through 1.499 of this part:

(i) A patient with alcoholic delirium tremens is admitted for detoxification. The patient is offered treatment in a VA alcohol rehabilitation program which he declines.

(ii) A patient who is diagnosed as a drug abuser applies for and is provided VA drug rehabilitation treatment.

(iii) While undergoing treatment for an unrelated medical condition, a patient discusses with the physician his use and abuse of alcohol. The physician offers VA alcohol rehabilitation treatment which is declined by the patient.

(2) The following are examples of instances whereby records or information related to alcoholism or drug abuse are not covered by the provisions of §§ 1.460 through 1.499 of this part:

(i) A patient with alcoholic delirium tremens is admitted for detoxification, treated and released with no counseling or treatment for the underlying condition of alcoholism.

(ii) While undergoing treatment for an unrelated medical condition, a patient informs the physician of a history of drug abuse fifteen years earlier with no ingestion of drugs since. The history and diagnosis of drug abuse is documented in the hospital summary and no treatment is sought by the patient or offered or provided by VA during the current period of treatment.

(iii) While undergoing treatment for injuries sustained in an accident, a patient's medical record is documented
