Dan Glickman,

Secretary of Agriculture.

FR Doc. 95-30674 Filed 12-21-95; 8:45 am]

BILLING CODE 3410-01-M

Food Safety and Inspection Service

9 CFR Part 310

[Docket No. 95-048DF]

RIN 0583-AC03

Use of the Fast Antimicrobial Screen Test for Bob Veal Calves

AGENCY: Food Safety and Inspection Service, USDA.

ACTION: Direct final rule.

SUMMARY: The Food Safety and Inspection Service (FSIS) is amending the Federal meat inspection regulations to permit the use of the Fast Antimicrobial Screen Test (FAST) in its bob veal calf residue testing program. Under FSIS' residue testing program, carcasses of bob veal calves are subject to specific regulatory requirements for residue testing by FSIS inspectors to assure that adulterated meat does not enter human food channels. Until recently, the Calf Antibiotic and Sulfonamide Test (CAST) was the only official test authorized for use in the bob veal calf residue testing program. FSIS has now developed FAST, which is an enhanced and equally effective version of CAST that provides results after 6 hours of incubation, compared to 18-24 hours of incubation for CAST. This action will permit the use of FAST in lieu of CAST under FSIS' bob veal calf residue testing program.

DATES: This rule will be effective on February 20, 1996, unless we receive written adverse comments or written notice of intent to submit adverse comments on or before January 22, 1996. If FSIS receives adverse comments or notice of intent to submit adverse comments, FSIS will withdraw this rule and publish a proposed rule for public comment.

ADDRESSES: Send an original and two copies of written comments to: FSIS Docket Clerk, Docket #95-048DF, Room 4352, South Agriculture Building, Food Safety and Inspection Service, U.S. Department of Agriculture, Washington, DC 20250.

SUPPLEMENTARY INFORMATION:

Background

In June 1984, as a result of findings of increased levels of sulfonamide and antibiotic residues in young calves, FSIS promulgated an interim rule (49 FR 23602; affirmed 50 FR 32162) that amended the Federal meat inspection regulations (9 CFR parts 309, 310 and 318) by establishing an intensified residue testing program for bob veal calves (calves up to 3 weeks in age or 150 pounds in weight). FSIS was concerned with findings of increased levels of sulfonamide and antibiotic residues in young calves, and undertook an emergency rulemaking to decrease the likelihood that adulterated meat would enter into human food channels. FSIS determined that carcasses and parts thereof from bob veal calves are adulterated under the Federal Meat Inspection Act if they bear or contain sulfonamide or antibiotic residues other than in accordance with tolerances established by the Food and Drug Administration.

In the interim rule, FSIS stated that CAST, a swab bioassay test, would be the official test used to screen carcasses of bob veal calves. In trial testing, FSIS had found CAST to be extremely reliable in detecting violative levels of antibiotics and sulfonamides in animal tissues.

FSIS has recently developed a new test that, like CAST, is designed to detect the presence of sulfonamide and antibiotic residues in animal tissues. FAST is similar to and is performed in a similar manner to CAST. The major advantage of FAST is that test results can be obtained in 6 hours, instead of the 18-24 hour period required for CAST. FSIS' in-plant trial testing of FAST has shown that FAST is equivalent to CAST in detecting sulfonamide and antibiotic residues in animal tissues.¹

Therefore, FSIS is amending § 310.21 to add FAST as an alternative to CAST for use by inspectors in testing carcasses and parts of bob veal calves for sulfonamide and antibiotic residues.

¹ Results of the in-plant trial for FAST are available for review in the Office of the FSIS Docket Clerk, Room 4352, South Agriculture Building, Food Safety and Inspection Service, U.S. Department of Agriculture, Washington, DC 20250.

Effective Date

This rule is being published without a prior proposal because this action is viewed as noncontroversial, and FSIS does not anticipate any adverse public comments will be received. This rule will be effective 60 days after the date of publication in the Federal Register unless FSIS receives written adverse comments or written notice of intent to submit adverse comments within 30 days of the date of publication of this rule in the Federal Register.

If FSIS receives adverse comments or notice of intent to submit adverse comments, FSIS will withdraw this rule and publish a proposed rule for public comment.

If no adverse comments are received, FSIS will publish a notice in the Federal Register confirming that the rule is effective on the date indicated.

Executive Order 12866

This rule is considered not significant and therefore has not been reviewed by the Office of Management and Budget.

Effect on Small Entities

The Administrator, FSIS, has determined that this rule will not have a significant impact on a substantial number of small entities. The rule permits the use of an alternate test, which can provide results in less than half the time than the original test. Carcasses that test negative could be released on the day of slaughter, which will modestly benefit the meat industry.

Executive Order 12778

This rule has been reviewed under Executive Order 12778, Civil Justice Reform. This rule (1) preempts all State and local laws and regulations that are inconsistent with this rule; (2) has no retroactive effect; and (3) does not require administrative proceedings before parties may file suit in court challenging this rule.

List of Subjects in 9 CFR part 310

Meat inspection, Residue testing.

For the reasons discussed in the preamble, FSIS is amending part 310 of the Federal meat inspection regulations (9 CFR Part 310) as follows:

PART 310—[AMENDED]

1. The authority citation for part 310 continues to read as follows:

Authority: 21 U.S.C. 601-695; 7 CFR 2.17, 2.55.

2. The introductory text and footnote to paragraph (c) of § 310.21 are revised to read as follows:
