number of shares is not affected by a cash distribution and, therefore, no order size adjustment is necessary.

Currently, under Section 46, a DNR instruction applies to both cash and stock distributions. For example, the price of an order marked DNR would not be adjusted under the current definition in Section 46 even in the event of a 2 for 1 or similar stock dividend. Such a dividend would halve the quotes for the security, but the order would remain at the original price, far out of line with the adjusted market for that security. Similarly, all orders marked DNI would not be subject to the current adjustment provisions of Section 46. While an order marked DNI would not be increased in size in the event of stock dividend, it also would not be reduced in price pursuant to the provisions of Section 46.

For customers who understand the operation of Section 46 to be the same as NYSE Rule 118, leaving the current definitions in place could result in unexpected executions of certain open orders. To address this concern, the NASD has proposed to amend the applicability of Section 46 to orders marked DNR and DNI. Pursuant to the amendment, the provisions of the rule will not apply to orders marked DNI where the distribution is payable in cash. nor to orders marked DNI where the distribution is payable in stock, provide, however, that the price of such DNI orders will be adjusted as required by the rule.

The Commission has determined to approve the NASD's proposal. The Commission finds that the rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to the NASD, including the requirements of Section 15A(b)(6) of the Act.⁸ Section 15A(b)(6) requires, in part, that the rules of a national securities association be designed to promote just and equitable principles of trade; to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. The proposed rule change acts to remedy an unintentional inconsistency between Section 46 and NYSE Rule 118. The rule change also protects against the unexpected and unintended execution of open orders.

It is therefore ordered, pursuant to Section 19(b)(2) of the Act, that the proposed rule change SR–NASD–94–71 be, and hereby is, approved. For the Commission, by the Division of Market Regulation, pursuant to delegated authority.⁹

Self-Regulatory Organizations; New York Stock Exchange, Inc.; Order Granting Approval to Proposed Rule Change Amending Specialist Combination Review Policy to Require Proponents of Certain Specialist Unit Combinations to Address Issues Related to the Capitalization, Risk Management, and Operational Efficiency of Large Sized Specialized Units

February 8, 1995.

I. Introduction

On December 9, 1994 the New York Stock Exchange, Inc. ("NYSE" or "Exchange") submitted to the Securities and Exchange Commission ("SEC" or "Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to adopt amendments to the NYSE's Specialist Combination Review Policy ("Policy"). Specifically, the proposal would require proponents of certain specialist unit combinations to address issues related to the capitalization, risk management, and operational efficiency of large sized specialist units.

The proposed rule change was published for comment in Securities Exchange Act Release No. 35171 (December 28, 1994), 60 FR 1818 (January 5, 1995). No comments were received on the proposal.

II. Background

The Exchange's Policy was first approved by the Commission on a sixmonth pilot basis in 1987.³ The Commission subsequently granted permanent approval following an interim extension.⁴

The Policy is a three-tier system of review, primarily conducted by the Quality of Markets Committee ("QOMC"), to review proposed

specialist combinations that raise concentration-related issues. The Policy calls for review of a potential combination where the combination will result in a specialist unit accounting for more than 5% of any one of four specified concentration measures: Allocation for all listed common stocks; allocation for the 250 most active listed common stocks; total share volume of stock trading on the Exchange; and total dollar value of stock trading on the Exchange. Once a review is triggered under the Policy, the primary factors taken into consideration by the QOMC depend upon whether the proposed combination warrants a Tier I review (exceeding a concentration measure by more than 5%), Tier II review (exceeding a concentration measure by more than 10%, up to and including 15%), or a Tier III review (exceeding a concentration measure by 15%). The level of the burden of proof placed upon the proposed combining units also may vary depending on the Tier of review.

III. Description

The proposal will add several requirements that address issues related to the capitalization, risk management, and operational efficiency of large-sized specialist units.⁵ The proposal requires proponents of a combination that would exceed 10% of a concentration measure to:

• Submit an acceptable risk management plan with respect to any line of business in which they engage;

• Submit an operational certification prepared by an independent, nationally recognized management consulting organization with respect to all aspects of the firm's management and operations;

• Agree to maintain a minimum of 1.5 times (2 times, in the case of a 15% combination) the total capital requirement specified in Rule 104.20 ⁶ with respect to the combined entity's stocks;

⁶Pursuant to NYSE Rule 104.20, a specialist unit at an active post is required to be able to assume a position of 150 trading units in each common Continued

⁴ See Securities Exchange Act Release Nos. 25481 (March 17, 1988), 53 FR 9554 (March 23, 1988) (interim extension); 34167 (June 6, 1994), 59 FR 30625 (June 14, 1994) (permanent approval).

⁵ Once the proponents agree that they will abide by the requirements listed below, the Exchange will verify the ability of the units to make such commitments by reviewing their individual capitalization information. If such a review shows that the units do not have the requisite capacity, then the combination will not be approved. Once the combination has been approved, the Exchange will monitor the combined unit to ensure that it continues to meet the additional requirements. In the event the combined unit fails to meet the additional requirements, the Exchange will address the issue as it would any other capital requirements violation. In such circumstances, the Exchange, through its Rule 476, has several courses of action available to it including stock reallocation.
