NUCLEAR REGULATORY COMMISSION

[Docket No. 50–219]

GPU Nuclear Corporation; Oyster Creek Nuclear Generating Station Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. DPR–16, issued to GPU Nuclear Corporation, (the licensee), for operation of the Oyster Creek Nuclear Generating Station, located in Ocean County, New Jersey.

Environmental Assessment

Identification of the Proposed Action

The proposed action would change the setpoints of Technical Specification 2.3.D, "Reactor High Pressure, Relief Valve Initiation" by increasing the setpoint value by 15 psig for each of the Electromagnetic Relief Valve (EMRVs) in the Automatic Depressurization System.

The proposed action is in accordance with the licensee's application for amendment dated June 15, 1994, as supplemented by letter dated September 23, 1994, and November 3, 1994.

The Need for the Proposed Action

The proposed action is needed because the "Bourden tube" type pressure switches currently in use at Oyster Creek experience drift, which results in exceeding the existing "as found" setpoint. Increasing the specified setpoints by 15 psig will provide for expanding the "as found" tolerance bands. Increasing these tolerance bands serves to ensure that the setpoints will remain within the Technical Specification requirements
