BIOGRAPHIES OF THE EARLY DISCOVERERS.

BY JEREMY BELKNAP, D. D.

INTRODUCTION.

THE editor of this work believes that a people who have patronised those publications which treat of other countries, would readily encourage one that was altogether devoted to our own country. We have general and particular histories, many of them abounding in excellent matter; but as yet we have no book of reference on subjects relating entirely to America. Almon published in England during the revolutionary war his "REMEMBRANCE," a collection of facts in regard to that conflict, remarkable for candor and correctness; but this is out of print. The next book of reference is NILES' REGISTER: the public are much indebted to this indefatigable and able editor for his historical treasures, which are truly great; but his periodical, on account of the expense, cannot circulate so generally as to diffuse the intelligence that it contains among all classes; and he has not, from the pressure of passing events, gone much into our early annals. The intention of the editor of this work is plainly this—to search, with competent assistance, the records of the discovery and settlement of this country, and to give in a cheap but handsome form the rich materials that are to be found scattered throughout the United States. He will commence his labors with the lives of the early adventurers who explored unknown countries, and particularly this.—There is a direct connexion between them, if some only prepared the way for others. We therefore shall present the whole chain of events which have operated in any way to our existence and welfare as a people. Chronology has been called the eye of history, and we shall be careful to give correct dates for all the incidents we enumerate. Going back to the fountains of our history, we shall follow the streams to the present time, in order that our readers may have a panoramic view, as it were, of all that regards our origin, progress, and present situation. Our distinguished minds in every age of our history shall not be forgotten, and, when practicable, some of their mental efforts shall be furnished the reader. The reader need not fear that the subject will be soon exhausted; for Time, who destroys all things else, makes new matter for the historian, not only in the birth of events, but in opening the long hidden mines of knowledge. The writer from whose works these biographies were taken, deserves the title of the *father of American history*. He was a man of genius, a scholar of extensive erudition, a divine of a holy life, and a lover of his country. He established a historical society, and produced several historical works. He wrote with a more polished pen than his cotemporaries, and showed them the worth of historical knowledge, and at the same time gave them an example of the manner in which history should be written. The name of Jeremy Belknap, D. D., is sponsor for all that has been said, and more. This great historian did not live to fill up his outline, which embraced "adventurers, statesmen, philosophers, divines, warriors, authors, and other remarkable characters, comprehending a recital of the events connected with their lives and actions;" what has been done, is well done—and we shall supply a portion of the deficiency from other sources. In fine, we shall use every exertion to make the work, if encouragement is given to the undertaking, a valuable collection of American history, biography, eloquence, polite literature, science, and statistics—interspersed with anecdotes of olden time, and of revolutionary days, to amuse as well as to instruct the reader. In our history we shall come down to the present time without a particle of party spirit, and strive to give a true record of events as they have or may occur. There is an advantage in many respects in this method of presenting history and polite literature to the public, as we have an opportunity of being optimists, and selecting that which will make the strongest impression on the mind of the reader. There are epochs in our history which have not often been distinctly marked by writers. We shall endeavor to point them out. There is a philosophy of history which should be studied while we are endeavoring to fix the facts in our memory. Cause and effect have the same connexion in the growth of a nation as in that of a blade of grass, and are much more clearly open to our investigation.

EDITOR.

BIRON.

BIRON, a native of Norway—His discovery of Iceland and Greenland—An account of his voyage—Character and appearance of the natives.

THE ancient inhabitants of Norway and Denmark, collectively taken, were distinguished by the name of *Normans*. Their situation near the coast of the sea, and the advantages which that element presented to them

beyond all which they could expect, from a rough soil, in a cold climate, led them at an early period to the science and practice of navigation. They built their vessels with the best of oak, and constructed them in such a manner as to encounter the storms and billows of the northern ocean. They covered them with decks and furnished them with high forecastles and sterns. They made use of sails as well as oars, and had learn-

ed to trim their sails to the wind, in almost any direction. In these arts, of building ships and of navigation, they were superior to the people bordering on the Mediterranean sea, who depended chiefly on their oars, and used sails only with a fair wind.

About the end of the eighth and beginning of the ninth century, the Normans made themselves famous by their predatory excursions. England, Scotland, Ire-

Isld, the Orkney and Shetland islands, were objects of their depredations; and in one of their piratical expeditions, A. D. 861, they discovered an island, which from its lofty mountains, covered with ice and snow, obtained the name of *Iceland*. In a few years after they planted a colony there; which was continually augmented by migrations from the neighboring countries. Within the space of thirty years 889, a new country situate to the west, was discovered, and from its verdure during the summer months, received the name of *Greenland*. This was deemed so important an acquisition, that, under the conduct of ERIC RAUDE or RED HEAD, a Danish chief, it was soon peopled.

The emigrants to these new regions were still inflamed with the passion for adventure and discovery. An Icelfander of the name HERIOEF and his son BIRON* made a voyage every year to different countries for the sake of traffic. About the beginning of the 11th century 1001, their ships were separated by a storm. When Biron arrived in Norway, he heard that his father was gone to Greenland, and he resolved to follow him; but another storm drove him to the southwest, where he discovered a flat country, free from rocks, but covered with thick woods, and an island near the coast.

He made no longer stay at either of these places than till the storm abated; when by a northeast course he hasted to Greenland. The discovery was no sooner known there, than LEIF the son of ERIC, who, like his father, had a strong desire to acquire glory by adventures, equipped a vessel, carrying twenty-five men; and taking Biron for his pilot, sailed in 1002, in search of the new country.

His course was southwest. On the first land which he saw, he found nothing but flat rocks and ice, without any verdure. He therefore gave it the name of *Helleland*, which signifies rocky. Afterwards he came to a level shore, without any rocks, but overgrown with woods, and the sand was remarkably white. This he named *Markland* or woody. Two days after, he saw land again, and an island lying before the northern coast of it. Here he first landed: and thence sailing westward, round a point of land, found a creek or river into which the ship entered.

On the banks of this river, were bushes bearing sweet berries; the air was mild, the soil fertile, and the river well stored with fish among which were very fine salmon. At the head of this river was a lake, on the shore of which they resolved to pass the winter, and erected huts for their accommodation. One of their company, a German named Tyker having straggled into the woods, found grapes; from which he told them, that in his country, they made wine. From this circumstance, Leif the commander of the party, called the place *Winland dat Gode*, the Good Wine Country.

An intercourse being thus opened between Greenland and Winland, several voyages were made, and the new country was further explored. Many islands were found near the coast, but not a human creature was seen till the third summer, 1004, when three boats constructed with ribs of bone, fastened with thongs or twigs and covered with skins, each boat containing three men, made their appearance. From the diminutive size of these people, the Normans denominated them *Scrallings*,* and inhumanly killed them all but one; who escaped and collected a large number of his countrymen, to make an attack on their invaders. The Normans defended their ships with so much spirit that the assailants were obliged to retire.

After this, a colony of Normans went and settled at Winland, carrying on a barter trade with the *Scrallings* for furs; but a controversy arose in the colony, which induced some to return to Greenland. The others dispersed and mixed among the *Scrallings*.

In the next century, 1121, Eric, bishop of Greenland, went to Winland, with a benevolent design to recover and convert his countrymen who had degenerated into savages. This prelate never returned to Greenland; nor was any thing more heard of Winland, for several centuries.

This account of the discovery of Winland is taken from Pontoppidan's History of Norway, Crantz's History of Greenland, and a late History of Northern Voyages, by Dr. John Reinhold Forster. The facts are said to have been collected from a "great number of Icelandic Manuscripts by Thormond Thorfeus, Adam von Bremen, Arngrim Jonas and many

other writers, so that it is hardly possible to entertain the least doubt concerning the authenticity of the relation.

Pontoppidan says "that they could see the sun full six hours in the shortest day; but Crantz tells us that "the sun rose on the shortest day at eight of the clock," and Forster that "the sun was eight hours above the horizon," from which he concludes that Winland must be found in the 49th degree of northern latitude; and from its being in a southwesterly direction from Greenland, he supposes that it is either a part of Newfoundland or some place on the northern coast of the gulf of St. Lawrence; but whether grapes are found in either of those countries he cannot say. However, he seems so fully persuaded of the facts, that he gives it as his opinion, that the Normans were, strictly speaking, the first discoverers of America, nearly five centuries before Columbus.

From a careful perusal of the first accounts of Newfoundland, preserved by those painful collectors Hakluyt and Purchas, and of other memoirs respecting that island and the coast of Labrador; and from inspecting the most approved maps of those regions, particularly one in the American Atlas, delineated agreeably to the actual surveys of the late celebrated navigator, Capt. James Cook, the following observations occur.

On the N. E. part of Newfoundland, which is most directly accessible from Greenland, there is a long range of coast, in which are two bays, the one called Gander Bay, and the other the Bay of Exploits. Before the mouth of the former, among many smaller, there lies one large island, called Fogo; and before the mouth of the latter, another called the New World. Either of these will sufficiently answer to the situation described in the account of Biron's second voyage. Into each of these bays, runs a river, which has its head in a lake, and both these lakes lie in the 49th degree of north latitude.

The earliest accounts of Newfoundland after its discovery and the establishment of a fishery on its coast, have respect chiefly to the lands about Trinity and Conception Bays, between the parallels of 48 and 49°. These lands are represented as producing strawberries, whortleberries, raspberries, pears, wild cherries, and hazel nuts, in very great plenty. The rivers are said to have been well stored with salmon and trout. The natives, who inhabited a bay lying to the northward of Trinity, and came occasionally thither in their canoes, are described as broad breasted and upright, with black eyes, and without beards: the hair on their heads was of different colours; some had black, some brown, and others yellow. In this variety they differed from the other savages of North America, who have uniformly black hair, unless it be grown gray with age.

The climate is represented as more mild in the winter than that of England; but much colder in the spring, by reason of the vast islands of ice, which are driven into the bays or grounded on the banks.

On the northeastern coast of Labrador, between the latitudes of 53 and 56°, are many excellent harbors and islands. The seas are full of cod, the rivers abound with salmon; and the climate is said to be more mild than in the gulf of St. Lawrence.

Nothing is said in any of these accounts of vines or grapes, excepting that some which were brought from England had thriven well. If any evidence can be drawn from the comparison between the countries of Newfoundland and New-England it may be observed that all the above mentioned fruits and berries are found in the northern and eastern parts of New-England as far as Nova Scotia, in the latitudes of 44 and 45°; and that grapes (*vitis vulpina*, *vitis vulpusca*.) are known to grow wherever these fruits are found.

De Monts in his voyage to Acadia, in 1608, speaks of grapes in several places; and they were in such plenty on the isle of Orleans in lat. 47° that it was first called the island of Bacchus.* Though there is no direct and positive testimony of grapes in the island of Newfoundland, it is by no means to be concluded that there were none. Nor is it improbable that grapes, though once found there, might have been so scarce, as not to merit notice, in such general descriptions, as were given by the first English adventurers.

The distance between Greenland and Newfoundland is not greater than between Iceland and Norway; and there could be no more difficulty in navigating the west-

ern than the eastern parts of the northern ocean, with such vessels as were then in use, and by such seamen as the Normans are said to have been; though they knew nothing of the magnetic needle.

Upon the whole, though we can come to no positive conclusion in a question of such remote antiquity; yet there are many circumstances to confirm, and none to disprove the relation given of the voyages of Biron. But if it be allowed that he is entitled to the honour of having discovered America before Columbus, yet this discovery cannot in the least detract from the merit of that celebrated navigator. For there is no reason to suppose that Columbus had any knowledge of the Norman discoveries; which long before his time were forgotten, and would perhaps never have been recollected if he had not by the astonishing exertions of his genius and his persevering industry, effected a discovery of this continent, in a climate more friendly to the views of commercial adventurers.

Even Greenland itself, in the fifteenth century, was known to the Danes and Normans only by the name of *lost Greenland*; and they did not recover their knowledge of it, till after the English had ascertained its existence by their voyages to discover a northwest passage to the Pacific Ocean, and the Dutch had coasted it in pursuing of whales.

MADOC.

MADOC, Prince of Wales.—His supposed discovery of America.—An account of his voyage examined.—The improbability of his supposed discovery shown.

This person is supposed to have discovered America, and brought a colony of his countrymen thither, before the discovery made by Columbus. The story of his emigration from Wales is thus related by Hakluyt, whose book was first published in 1589, and a second edition of it in 1600.

"The voyage of Madoc, the son of Owen Gwynneth, prince of North Wales, to the West Indies in the year 1170, taken out of the History of Wales, lately published by M. David Powel, Doctor of Divinity."

"After the death of Owen Gwynneth, his sons fell at debate who should inherit after him. For the eldest son born in matrimony, Edward or Iorwerth Drywion, was counted unfit to govern, because of the maim upon his face; and Howell, that took upon him all the rule, was a base son begotten of an Irish woman. Therefore, David gathered all the power he could and came against Howell, and fighting with him, slew him; and afterward enjoyed quietly the whole land of North Wales, until his brother Iorwerth's son came to age.

"Madoc, another of Owen Gwynneth his sons lent the land in contention between his brethren, and prepared certain ships with men and munition, and sought adventures by sea, sailing west, and leaving the coast of Ireland so far north that he came to a land unknown, where he saw many strange things.

"This land must needs be some part of that country of which the Spaniards affirm themselves to be the first finders since Hanno's time. [For by reason and order of cosmographie, this land to the which Madoc came, must needs be some part of Nova Hispania or Florida.] Whereupon it is manifest that that country was long [before] by Britains discovered, afore [either] Columbus [or Americus Vesputius] led any Spaniards thither.

"Of the voyage and return of that Madoc there be many fables feigned, as the common people do use, in distance of place and length of time, rather to augment than diminish, but sure it is that there he was. And after he had returned home and declared the pleasant and fruitful countries that he had seen without inhabitants; and upon the contrary part, for what wild and barren ground his brethren and nephews did murder one another, he prepared a number of ships and got with him such men and women as were desirous to live in quietness; and taking leave of his friends, took his journey thitherwards again.

"Therefore it is to be presupposed, that he and his people inhabited part of those countries; for it appeareth, by Francis Lopez de Gomara, that in Acuzamil, and other places, the people honored the cross. Whereby it may be gathered, that Christians had been there before the coming of the Spaniards. But because this people were not many, they followed the manners of the land they came to, and used the language they found there.

* His name is spelled by different authors *Biron*, *Biorn*, *Biorn*, and *Biarn*.

† Cut awks, chips—dwarfs

* It is also said that Mr. Ellis met with the vine about the English settlements at Hudson's Bay, and compares the fruit of it to the currants of the levant. Morse's Un. Geo. vol. i. p. 64.

* The words included in chrotchets [] are omitted in the second edition of Hakluyt's voyages.

"This Madoc arriving in that western country unto the which he came in the year 1170, left most of his people there, and returning back for more of his own nation, acquaintance and friends, to inhabit that fair and large country, went thither again, with ten sails, as I find noted by Gutyn Owen. I am of opinion that the land whereto he came, was some part of Mexico;* the causes which make me think so be these.

1. "The common report of the inhabitants of that country, which affirm that their rulers descended from a strange nation, that came thither from a far country; which thing is confessed by Mutezuma, King of that country, in an oration made for quieting of his people at his submission to the King of Castile; Hernando Cortez being then present, which is laid down in the Spanish chronicles of the conquest of the West Indies.

2. "The British words and names of places used in that country even to this day do argue the same; as when they talk together, they use the word *Guan-do*, which is hearken, or listen. Also they have a certain bird with a white head, which they call *penguin*, that is white head. But the island of *Corrooso*, the river of *Gugndor*, and the white rock of *Penynyn*, which be all British or Welch words, do manifestly show that it was that country, which Madoc and his people inhabited."

"Carmina Meredith filii Rhesi mentionem facientia de Madoco filio Oweni Gwynnedd et de sua navigatione in terras incognitas. Vixit hic Meredith circiter annum Domini, 1477.

Madoc wyl, mwyedie wedd
Iawn genau, Owen Gwynnedd,
Ni fynwn dir, fy enaid oedd,
Na da mawr, ond y moroedd.

These verses I received of my learned friend, M. William Camden.

THE SAME IN ENGLISH.

"Madoc I am the son of Owen Gwynnedd,
With stature large and comely grace adorned.
No lands at home, nor store of wealth me please,
My mind was whole to search the Ocean seas.

In this extract from Hakluyt is contained all the original information which I have been able to find respecting the supposed discovery of America by the Welch. The account itself is confused and contradictory. The country discovered by Madoc is said to be "without inhabitants: and yet the people whom he carried thither" followed the manners of the land, and used the language they found there." Though the Welch emigrants lost their language, yet the author attempts to prove the truth of his story by the preservation of several Welch words in the American tongues. Among these he is unfortunate in the choice of "penguin a bird with a white head;" all birds of that name on the American shores having black or dark brown heads, and the name *penguin* is said to have been originally *pindeguine*, from their excessive fatness.

Among the proofs which some late writers have adduced in support of the discovery of America by Madoc is this, that a language resembling the Welch was spoken by a tribe of Indians in North Carolina, and that it is still used by a nation situate on some of the western waters of the Mississippi. If that part of the account preserved by Hakluyt be true, that the language was lost, it is in vain to offer an argument of this kind in support of the truth of the story; but a question may here arise, How could any report of the loss of their language have been transmitted to Europe at so early a period?

An attempt has lately been made to ascertain the truth of this piece of history by Dr. John Williams, I have not seen the book itself, but if the critical reviewers may be credited, no new facts have been adduced. It is remarked by them, that "if Madoc once reached America, it is difficult to explain how he could return home, and it would be more improbable that he should arrive in America a second time; of which there is not the slightest evidence." They also observe, that "if Madoc sailed westward from Wales, the currents would rather have carried him to Nova Scotia than to the southward."

The mentioning of Nova Scotia reminds me of some words in the native language of that country which begin with two syllables resembling the name of Madoc. A sachem of the Penobscot tribe who lived in

* In the second edition, the word 'Mexico' is changed for 'the West Indies;' and the two following paragraphs are omitted

the end of the last and in the beginning of the present century bore the name of *Madokawando*. A village on Penobscot river was *Madawankce*. One branch of the river St. John, which runs into the bay of Funda is *Medoctack*, and another is *Medocscenecas*. The advocates of this opinion may avail themselves as far as they can of this coincidence, but in my apprehension it is too precarious to be the basis of any just conclusion.

After all that has been, or can be said on the subject, we must observe with the critical reviewers, that if "Madoc left Wales and discovered any other country it must always remain uncertain where that country is." Dr. Robertson thinks, if he made any discovery at all it might be Madeira, or one of the Azores.

The book of Hakluyt, in which the original story is preserved, was written in the reign of Queen Elizabeth, and in the time of her controversy with Spain. The design of his bringing forward the voyage of Madoc appears, from what he says of Columbus, to have been, the asserting of a discovery prior to his, and consequently the right of the Crown of England to the sovereignty of America; a point at that time warmly contested between the two nations. The remarks which the same author makes on several other voyages, evidently tend to the establishment of that claim. But if the story of Biron be true, which (though Hakluyt has said nothing of it) is better authenticated than this of Madoc, the right of the Crown of Denmark, is on the principle of prior discovery, superior to either of them.

Perhaps the whole mystery may be unveiled, if we advert to this one circumstance, the time when Hakluyt's book was first published, national prejudice might prevail even with so honest a writer, to convert a Welch fable into a political argument, to support, against a powerful rival, the claim of his sovereign to the dominion of this continent.

ZENO.

ZENO—His rank and birth—He sails on a voyage of discovery—Is overtaken by a tempest—Arrives at Frisland—Difficulties with the natives—Death of Nicolo Zeno—His brother Antonio takes the command.

It is well known that the Venetians were reckoned among the most expert and adventurous of the maritime nations. In that republic the family of Zeno or Zenti is not only very ancient, and of high rank, but celebrated for illustrious achievements. Nicolo Zeno having exhibited great valor in a war with the Genoese, conceived an ardent desire, agreeably to the genius of his nation, to travel; that he might, by his acquaintance with foreign nations and languages, render himself more illustrious and useful. With this view he equipped a vessel at his own expense, and sailed through the straits of Gibraltar to the northward, A. D 1380, with an intention to visit Britain and Flanders; but by a storm which lasted many days, he was cast away on the coast of Frisland.

The prince of the country, Zichmni (or as Purchas spells it, Zichmni), finding Zeno an expert seaman, gave him the command of his fleet, consisting of thirteen vessels, of which two only were rowed with oars: one was a ship, and the rest were small barks. With this fleet he made conquest and depredations in Ledovo and Ileso, and other small islands; several barks laden with fish being a part of his capture.

Nicolo wrote to his brother Antonio Zeno at Venice, inviting him to Frisland, whither he went; and being taken into the service of Zichmni, continued with him fourteen years. The fleet sailed on an expedition to Estland, where they committed great ravages; but hearing that the King of Norway was coming against them with a superior fleet, they departed, and were driven by a storm on shoals, where part of the fleet was wrecked, and the rest were saved on Grisland, "a great island, but not inhabited."

Zichmni then determined to attack Iceland, which belonged to the King of Norway; but finding it well fortified and defended, and his fleet being diminished, he retired and built a fort in Bress, one of seven small islands, where he left Nicolo and returned to Frisland.

In the next spring Zeno, with three small barks, sailed to the northward on discovery, and arrived at Engroenland,—where he found a monastery of Friars, and a church dedicated to St. Thomas, situate near a volcano, and heated by warm springs flowing from the mountain.

After the death of Nicolo, which happened in about four years, Antonio succeeded him in the com-

mand of the fleet; and the prince Zichmni, aiming at the sovereignty of the sea, undertook an expedition westward, because that some fishermen had discovered rich and populous islands in that quarter.

The report of the fishermen was, that above a thousand miles westward from Frisland, to which distance they had been driven by a tempest, there was an island called Estotland, which they had discovered twenty-six years before; that six men in one boat were driven upon the island, and being taken by the inhabitants were brought into a fair and populous city; that the king of that place sent for many interpreters, but none was found who could understand the language of the fishermen, except one who could speak Latin, and he had formerly been cast ashore on the island; that on his reporting their case to the king, he detained them five years, in which time they learned the language; that one of them visited divers parts of the island, and reported that it was a very rich country, abounding with all the commodities of the world; that it was less than Iceland, but far more fruitful, having in the middle a very high mountain, from which originated four rivers.

The inhabitants were described as very ingenious, having all mechanic arts. They had a peculiar kind of language and letters; and in the king's library were preserved Latin books, which they did not understand. They had all kinds of metals (but especially gold, with which they mightily abounded.) They held traffic with the people of Engroenland, from whence they brought furs, pitch, and brimstone. They had many great forests, which supplied them with timber for the building of ships, houses, and fortifications. The use of the loadstone was not known, but these fishermen, having the mariners' compass, were held in so high estimation, that the king sent them with twelve barks to a country at the southward called Drogio, where the most of them were killed and devoured by cannibals; but one of them saved himself by showing the savages a way of taking fish by nets, in much greater plenty than by any other mode before known among them. This fisherman was in so great demand with the princes of the country, that they frequently made war on each other for the sake of gaining him. In this manner he passed from one to another, till in the space of thirteen years he had lived with twenty-five different princes, to whom he communicated his "miraculous" art of fishing with nets.

He thus became acquainted with every part of the country, which he described to be so extensive as to merit the name of a *new world*. The people were rude and ignorant of the use of clothing, though their climate was cold, and afforded beasts for the chase. In their hunting and wars they used the bow and the lance; but they knew not the use of metal.

Farther to the southwest the air was said to be more temperate and the people more civil. They dwelt in cities, built temples, and worshipped idols, to whom they offered human victims; and they had plenty of gold and silver.

The fisherman having become fully acquainted with the country, meditated a return. Having fled through the woods to Drogio, after three years some boats arrived from Estotland, in one of which he embarked for that country; and having acquired considerable property, he fitted out a bark of his own and returned to Frisland.

Such was the report of the fisherman; upon hearing of which Zichmni resolved to equip his fleet and go in search of the new country; Antonio Zeno being the second in command. But "the preparation for the voyage to Estotland was begun in an evil hour; the fisherman, who was to have been the pilot, died three days before their departure."

However, taking certain mariners who had sailed with the fisherman, Zichmni, began the intended voyage. When he had sailed a small distance to the westward, he was overtaken by a storm which lasted eight days, at the end of which they discovered land, which the natives called Icaria. They were numerous and formidable and would not permit him to come on shore. From this place they sailed six days to the westward with a fair wind; but a heavy gale from the southward drove them four days before it, when they discovered land, in which was a volcano. The air was mild and temperate, it being the height of summer. They took a great quantity of fish, of sea fowl and their eggs. A part who penetrated the country as far as the foot of the volcano, found a spring from which issued "a certain water, like pitch, which ran into the sea." They discovered some of the inhabitants, who were of small stature and wild;

and who, at the approach of the strangers, hid themselves in their caves. Having found a good harbour, Zichmni intended to make a settlement; but his people opposing it, he dismissed part of the fleet under Zeno, who returned to Frisland.

The particulars of this narrative were first written by Antonio Zeno in his letters to his brother Carlo, at Venice; from some fragments of which a compilation was made by Francesco Marcolini, and preserved by Ramusio. It was translated by Richard Hakluyt, and printed in the third volume of the second edition of his collection, page 121, &c. From it Ortelius has made an extract in his *Theatrum Orbis*.

Dr. Forster has taken much pains to examine the whole account, both geographically and historically. The result of his inquiry is, that Frisland is one of the Orkneys; that Portland is the cluster of islands called Faro, and that Estland is Shetland.

At first, indeed, he was of opinion that "the countries, described by the Zenos actually existed at that time, but had since been swallowed up by the sea in a great earthquake." This opinion he founded on the probability that all the high islands in the middle of the sea are of volcanic origin; as is evident with respect to Iceland and the Faro islands in the North Sea; the Azores, Teneriffe, Madeira, the Cape de Verdes, St. Helena and Ascension in the Atlantic; the Society Islands, Otaheite, Easter, the Marquesas and other islands in the Pacific. This opinion he was induced to relinquish, partly because "so great a revolution must have left behind it some historical vestiges or traditions;" but principally because his knowledge of the Runic language suggested to him a resemblance between the names mentioned by Zeno and those which are given to some of the islands of Orkney, Shetland and the Hebrides.

However presumptuous it may appear to call in question the opinion of so learned and diligent an inquirer, on a subject which his philological and geographical knowledge must enable him to examine with the greatest precision; yet from the search which I have had opportunity to make, it appears probable to me that his first opinion was right, as far as it respects Frisland, and perhaps Portland. My reasons are these:

1. Dr. Forster says that Frisland was much larger than Iceland; and Hakluyt in his account of Zeno's voyage, speaks of it as "bigger than Ireland." Neither of these accounts can agree with the supposition of its being one of the Orkneys; for Iceland is 346 miles long, and 200 wide. Ireland is 310 in length, and 184 in breadth; But Pomona, the mainland of the Orkneys, is but 22 miles long, and 20 wide.

2. Frisland was seen by Martin Frobisher in each of his three voyages to and from Greenland in the years 1576, 1577 and 1578. In his first voyage he took his departure from Foulca, the westernmost of the Shetland Islands, in latitude $60^{\circ} 30'$, and after sailing W. by N. fourteen days, he made the land of Frisland, "bearing W. N. W. distance 16 leagues, in latitude 61° ." In his second voyage he sailed from the Orkneys W. N. W. twenty-six days, before he came "within making of Frisland;" which he thus describes:—

"July 4th. We made land perfect, and knew it to be Frisland. Found ourselves in lat. 60 and a half deg. and were fallen in with the southernmost part of this land. It is thought to be in bigness *not inferior to England*; and is called of some authors West Frisland. I think it lieth more west than any part of Europe. It extendeth to the north very far, as seemed to us, and appeareth by a description set out by two brethren, Nicolo and Antonio Zeni; who being driven out from Ireland about 200 years since, were ship-wrecked there. They have in their sea charts described every part; and for so much of the land as we have sailed along, comparing their charts with the coast, we find it very agreeable. All along this coast the ice lieth as a continual bulwark, and so defendeth the country that those who would land there incur great danger." In his third voyage he found means to land on the island. The inhabitants fled and hid themselves. Their tents were made of skins, and their boats were like those of Greenland. From these well authenticated accounts of Frisland, and its situation so far westward of the Orkneys and Shetland, it seems impossible that Dr. Forster's second opinion can be right.

3. One of the reasons which led the doctor to give up his first opinion, that these lands once existed, but had disappeared, was, that so great a revolution must have left some vestige behind. If no person escaped to tell the news, what better vestige can there be,

than the existence of shoals or rocks in the places where these islands once were known to be? In a map prefixed to Crantz's history of Greenland, there is marked a very extensive shoal between the latitudes of 59° and 60° , called "The sunken land of Buss." Its longitude is between Iceland and Greenland, and the author speaks of it in these words:—"Some are of opinion that Frisland was sunk by an earthquake, and that it was situate in those parts where the sunken land of Buss is marked in the maps; which the seamen cautiously avoid, because of the shallow ground and turbulent waves."

Respecting Buss Island, I have met with no other account than that which is preserved by Purchas in his abridgment of the journal of James Hall's voyages from Denmark to Greenland. In his first voyage, A. D. 1605, he remarks thus: "Being in the latitude of 59 and a half degrees, we looked to have seen Buss Island; but I do verily suppose the same to be placed in a wrong latitude in the marine charts." In his second voyage (1606) he saw land, which he "supposed to be Buss Island, lying more to the westward than it is placed in the marine charts;" and the next day, viz. July 2d, he writes, "We were in a great current setting S. S. W., which I suppose to set between Buss Island and Frisland over toward America."

In a fourth voyage, made in 1612, by the same James Hall, from England, for the discovery of a north-west passage, of which there is a journal written by John Gatanbe, and preserved in Churchill's Collections, they kept a good look out, both in going and returning, for the island of Frisland, but could not see it. In a map prefixed to this voyage, Frisland is laid down between the latitude of 61° and 62° , and Buss in the latitude of 57° . In Gratonbe's journal the distance between Shetland and Frisland is computed to be 260 leagues; the southernmost part of Frisland and the northernmost part of Shetland are said to be in the same latitude. There is also a particular map of Frisland preserved by Purchas, in which are delineated several towns and cities; the two islands of Flosa and Ledova are laid down to the westward of it, and another called Stromio to the eastward.

In a map of the North Seas, prefixed to an anonymous account of Greenland, in Churchill's Collections, we find Frisland laid down in the latitude 62° between Iceland and Greenland.

We have, then, no reason to doubt the existence of these islands as late as the beginning of the last century. At what time they disappeared is uncertain; but that their place has since been occupied by a shoal, we have also credible testimony.

The appearance and disappearance of islands in the Northern Sea is no uncommon thing. Besides former events of this kind, there is one very recent. In the year 1783, by means of a volcanic eruption, two islands were produced in the sea near the S. E. coast of Iceland. One was supposed to be so permanent that the king of Denmark sent and took formal possession of it as part of his dominions; but the ocean, paying no regard to the territorial claim of a mortal sovereign, has since reabsorbed it in his watery bosom.

These reasons incline me to believe that Dr. Forster's first opinion was well founded, as far as it respects Frisland.

He supposes Portland to be the cluster of islands called Faro. But Portland is said to lie south of Frisland; whereas the Faro Islands lie northwest of Orkney, which he supposes to be Frisland. The learned doctor, who is generally very accurate, was not aware of this inconsistency.

In the account which Hakluyt has given of Martin Frobisher's third voyage, we find that one of his ships, the Buss of Bridgewater, in her return fell in with land fifty leagues S. E. of Frisland, "which (it is said) was never found before,"—the southernmost part of which lay in lat. 57 and a half deg. Along the coast of this island, which they judged to extend twenty-five leagues, they sailed for three days. The existence of this land Dr. Forster seems to doubt; but yet allows that "if it was then really discovered it must have sunk afterwards into the sea, as it has never been seen again; or else these navigators must have been mistaken in their reckoning."

If such an island or cluster of islands did not exist in the situation described by Frobisher, it might be the Portland of Zeno; for the southernmost part of Frisland lay in the latitude of 60 and a half deg.; the southernmost part of this land in 57 and a half deg. in a direction S. E. from it. It was probably called Buss by the English, from the name of Frobisher's vessel which discovered it.

The only proof which can now be produced of this fact must be the actual existence of rocks and shoals in or near the same place. Of this, it is happily in my power to produce the evidence of two experienced shipmasters, of incontestible veracity, now living. The first is Isaac Smith of Malden near Boston, from whose log-book I have made the following extract:—"In a voyage from Petersburg to Boston, in the ship Thomas and Sarah, belonging to Thomas Russell, Esq. of Boston, merchant, Thursday, August 11, 1785, course W. N. W.—wind W. S. W. At 4 A. M. discovered a large rock ahead, which for some time we took to be a ship under close-reefed topsail. At 7, being within two miles, saw breakers under our lee, on which account wore ship. There are breakers in two places, bearing S. E.; one a mile, the other two miles from the rock. It lies in lat. $57^{\circ} 38'$, longitude West from London $13^{\circ} 36'$, and may be discovered five leagues off. We sounded and had fifty-six fathom. The rock appears to be about one hundred yards in circumference, and fifty feet above water. It makes like a hay-stack black below and white on the top." The other is Nathaniel Goodwin of Boston, who, in his homeward passage from Amsterdam, on the 15th of August, 1793, saw the same rock. According to his observation (which however on that day was a little dubious) it lies in lat. $57^{\circ} 48'$, and lon. $13^{\circ} 46'$. He passed within two miles of it to the southward, and saw breakers to the northward of it. Its appearance he describes in the same manner with Smith.

From these authorities I am strongly inclined to believe that the shoal denominated "the sunken land of Buss," is either a part of the ancient Frisland or of some island in its neighborhood; and that the rock and ledges seen by Smith and Goodwin belonged to the cluster once called Portland. If these conclusions be admitted, there can be no suspicion of fiction in the story of Zeno, as far as it respects Prince Zichmni and his expeditions. Shetland may then well agree with Estland, which is described by Hakluyt as lying "between Frisland and Norway."

The only place which in Zeno's relation is called by the same name, by which it is now known, is Iceland; though there can be no doubt that Engroeland, or Engroveland is the same with Greenland; where, according to Crantz, there was once a church dedicated to St. Thomas, and situate near a volcano and a hot spring.

But the question is, where shall we find Estotiland? Dr. Forster is positive that "it cannot be any other country than Winland (discovered in 1001), where the Normans made a settlement. The Latin books seen there by the fisherman, he supposes to have been the library of Eric, Bishop of Greenland, who went thither in the twelfth century to convert his countrymen. He is also of opinion that this fisherman had the use of the magnetic needle, which began to be known in Europe about the year 1302 before the time of the Zenos. He also thinks that the country called Drogio is the same with Florida."

In some of the old maps, particularly in Sanson's French Atlas, the name Estotiland is marked on the country of Labrador; but the pompous description of it by the fisherman, whether it be Labrador or Newfoundland, exceeds all the bounds of credibility, and abuses even the license of a traveller. The utmost extent of Zichmni's expedition, in consequence of the fisherman's report, could not be any further westward than Greenland, to which his description well agrees. The original inhabitants were short of stature, half wild, and lived in caverns; and between the years 1380 and 1384 they had extirpated the Normans and the monks of St. Thomas.

The discovery of Estotiland must therefore rest on the report of the fisherman; but the description of it, of Drogio, and the country southwest of Drogio must be ranked in the fabulous history of America, and would probably have been long since forgotten if Christopher Columbus had not made his grand discovery; from the merit of which, his rivals and the enemies of the Spanish nation have uniformly endeavoured to detract.

CHRISTOPHER COLUMBUS

CHRISTOPHER COLUMBUS—His reasons for seeking India in the west—His first voyage—His second voyage—His third voyage—His fourth voyage—Difficulties, privations, and the hardships he underwent—He is wrecked on Jamaica—His death and character.

THE adventures, which have already been spoken of, were more the result of accident than design; we are now entering on one founded in science and con-

ducted by judgment; an adventure which, whether we regard its conception, its execution, or its consequences, will always reflect the highest honour on him who projected it.

About the middle of the fifteenth century, when the Portuguese under the conduct of Prince Henry, and afterward of King John II., were pursuing their discoveries along the western shore of Africa, to find a passage by the south to India,—a genius arose, whose memory has been preserved with veneration in the pages of history, as the instrument of enlarging the regions of science and commerce beyond any of his predecessors. CHRISTOPHER COLUMBUS, a native of the republic of Genoa, was born in the year 1447, and at the age of fourteen entered on a seafaring life, as the proper sphere in which his vigorous mind was destined to perform exploits which should astonish mankind. He was educated in the sciences of geometry and astronomy, which form the basis of navigation; and he was well versed in cosmography, history and philosophy. His active and enterprising genius, though it enabled him to comprehend the old systems, yet would not suffer him to rest in their decisions, however sanctified by time or by venerable names; but determined to examine them by actual experiment, he first visited the seas within the polar circle, and afterwards those parts of Africa which the Portuguese had discovered, as far as the coast of Guinea; and by the time he had attained the age of thirty-seven, he had from his own experience received the fullest conviction that the opinion of the ancients respecting the torrid and frigid zones was void of any just foundation.

When an old system is found erroneous in one point, it is natural to suspect it of farther imperfections; and when one difficulty is overcome, others appear less formidable. Such was the case with Columbus; and his views were accelerated by an incident which threatened to put an end to his life. During one of his voyages, the ship in which he sailed took fire, in an engagement with a Venetian galley, and the crew were obliged to leap into the sea to avoid perishing in the flames. In this extremity Columbus, by the help of a floating oar, swam upwards of two leagues to the coast of Portugal near Lisbon, and met with a welcome reception from many of his countrymen who were settled there.

At Lisbon he married the daughter of Perestrelo, an old seaman, who had been concerned in the discovery of Porto Santo and Madeira; from whose journals and charts he received the highest entertainment. Pursuing his inquiries in geography, and observing what slow progress the Portuguese made in their attempts to find a way round Africa to India, "he began to reflect that as the Portuguese travelled so far southward, it were no less proper to sail westward," and that it was reasonable to expect to find the desired land in that direction.

It must here be remembered that India was in part known to the ancients, and that its rich and useful productions had for many centuries been conveyed into Europe, either by caravans through the deserts of Syria and Arabia, or by the way of the Red Sea, through Egypt into the Mediterranean. This lucrative commerce had been successively engrossed by the Phenicians, the Hebrews, the Egyptians, the Assyrians, the Palmyrenes, the Arabians, the Genoese, and the Venetians. The Portuguese were then seeking it by attempting the circumnavigation of Africa; and their expectation of finding it in that direction was grounded on ancient historical traditions that a voyage had been formerly made by the orders of Necho King of Egypt, from the Red Sea, round the southern part of Africa, to the straits of Hercules; and that the same route had been traversed by Hanno the Carthaginian, by Eudoxus the Egyptian, and others. The Portuguese had consumed about half a century in making various attempts, and had advanced no farther on the western coast of Africa, than just to cross the equator, when Columbus conceived his great design of finding India in the west.

The causes which led him to entertain this idea are distinguished by his son, the writer of his life, into these three; "natural reason, the authority of writers, and the testimony of sailors."

By the help of "reason," he argued in this manner: That the earth and sea composed one globe or sphere. This was known by observing the shadow of the earth in lunar eclipses. Hence he concluded that it might be travelled over from east to west, or from west to east. It had been explored to the east by some European travellers as far as Cipango, or Jap-

an; and as far westward as the Azores or Western Islands. The remaining space, though now known to be more than half, he supposed to be but one third part of the circumference of the globe. If this space were an open sea, he imagined it might be easily sailed over; and if there were any land extending eastward beyond the known limits of Asia, he supposed that it must be nearer to Spain by the west, than by the east. For, it was then a received opinion that the continent and islands of India extended over one third part of the circumference of the globe; that another third part was comprehended between India and the western shore of Spain; therefore it was concluded, that the eastern part of India must be as near to Spain as the western part. This opinion though now known to be erroneous, yet being then admitted as true, made it appear to Columbus very easy and practicable to discover India in the west. He hoped also that between Spain and India, in that direction, there might be found some islands; by the help of which, as resting places in his voyage, he might the better pursue his main design. The probability of the existence of land in that Ocean, he argued, partly from the opinion of philosophers, that there was more land than sea on the surface of the globe; and partly from the necessity of a counterpoise in the west, for the immense quantity of land which was known to be in the east.

Another source, from which he drew his conclusion, was, "the authority of learned men," who had affirmed the possibility of sailing from the western coast of Spain, to the eastern bounds of India. Some of the ancient Geographers had admitted this for truth, and one of them, Pliny, had affirmed that forty days were sufficient to perform this navigation. These authorities fell in with the theory which Columbus had formed; and having, as early as 1474, communicated his ideas in writing to Paul, a learned physician of Florence, he received from him letters of that date, confirming his opinion and encouraging his design; accompanied with a chart, in which Paul had laid down the city of Quisay (supposed to be the capital of China) but little more than two thousand leagues westward from Lisbon, which in fact is but half the distance. Thus, by arguing from true principles, and by indulging conjectures partly well founded and partly erroneous, Columbus was led to the execution of a plan, bold in its conception, and, to his view, easily practicable; for great minds overlook intermediate obstacles, which men of smaller views magnify into insuperable difficulties.

The third ground on which he formed his ideas was "the testimony of mariners;" a class of men who at that time, and in that imperfect state of science, were too prone to mix fable with fact; and were often misled by appearances, which they could not solve. In the sea, between Madeira and the Western Islands, pieces of carved wood and large joints of cane had been discovered, which were supposed to be brought by westerly winds. Branches of pine trees, a covered canoe, and two human bodies of a complexion different from the Europeans and Africans had been found on the shores of these islands. Some navigators had affirmed, that they had seen islands not more than a hundred leagues westward from the Azores. There was a tradition, that when Spain was conquered by the Moors in the eighth century, seven Bishops, who were exiled from their country, had built seven cities and churches, on an island called Antilla; which was supposed to be not more than two hundred leagues west of the Canaries; and it was said that a Portuguese ship had once discovered this island, but could never find it again. These stories, partly true and partly fabulous, had their effect on the mind of Columbus. He believed that islands were to be found, westward of the Azores and Canaries; though according to his theory, they were at a greater distance than any of his contemporaries had imagined. His candor led him to adopt an opinion from Pliny respecting floating islands, by the help of which he accounted for the appearances related to him, by his marine brethren. It is not improbable that the large islands of floating ice, driven from the Polar Seas to the southward; or the Fog Banks, which form many singular appearances resembling land and trees, might have been the true foundation of this opinion and of these reports.*

It is not pretended that Columbus was the only person of his age who had acquired these ideas of the form, dimensions and balancing of the globe; but he was one of the few who had begun to think for them-

selves, and he had a genius of that kind, which makes use of speculation and reasoning only as excitements to action. He was not a closet projector, but an enterprising adventurer; and having established his theory on principles, he was determined to exert himself to the utmost to demonstrate its truth by experiment. But deeming the enterprise too great to be undertaken by any but a sovereign state, he first applied (as it is said) to the Republic of Genoa, by whom his project was treated as visionary.* He then proposed his plan to John II. King of Portugal, who, though a Prince of good understanding and of an enterprising disposition, yet was so deeply engaged in prosecuting discoveries on the African coast, with a view to find a way to India round that continent; and had been at so vast an expense without any considerable success, that he had no inclination to accept the terms which Columbus proposed. Influenced however by the advice of Calzadilla, a favourite courtier, he privately gave orders to a ship, bound to the islands of Cape de Verd, to attempt a discovery in the west; but through ignorance and want of enterprise, the navigators, after wandering for some time in the ocean and making no discovery, reached their destined port and turned the project of Columbus into ridicule.

Disgusted with this base artifice, he quitted Portugal, and went to Ferdinand, King of Spain, having previously sent his brother to England to solicit the patronage of Henry VII. But being taken by pirates, and detained several years in captivity, Bartholomew had it not in his power to reveal his project to Henry, till Christopher Columbus had succeeded in Spain. Before this could be accomplished, he had various obstacles to surmount; and it was not till after seven years of painful solicitation that he obtained his request.

The objections made to the proposal of Columbus, by the most learned men in Spain, to whom the consideration of it was referred, will give us some idea of the state of geographical science at that time. One objection was, How should he know more than all the wise and skilful sailors who had existed since the creation? Another was the authority of Seneca, who had doubted whether it were possible to navigate the ocean at any great distance from the shore; but admitting that it were navigable, they imagined, that three years would be required to perform the voyage, which Columbus proposed. A third was, that if a ship should sail westward on a round globe, she would necessarily go down, on the opposite side, and then it would be impossible to return, because it would be like climbing up a hill, which no ship could do with the strongest wind. A fourth objection was grounded on a book of St. Augustine, in which he had expressed his doubt of the existence of antipodes and the possibility of going from one

"March 4, 1748—9, at two in the afternoon, made land, which bore N. E. seven leagues distance by estimation: at five tacked, being about three leagues from said island, wind E. S. E. lat. by observation 49 deg. 40 min.; lon. 24 deg. 30 min., from the Lizard. This island stretches N. W. and S. E. about 5 leagues long, and 9 miles wide. On the south side fine valleys and a great number of birds.

March 5, said island bore N. three leagues, N. W. a reef of rocks three miles. This day a ship's mast came along side. On the south point of said island is a small marshy island."

"A copy of my journal on board the snow St. Paul, of London, bound from South Carolina to London."

WILLIAM OTTON, Commander."

P. S. Captain Otton thought he saw a trait on the island, and would have gone ashore, but had unfortunately stove his boat some time before."

"Commodore Rodney is commissioned to go in quest of an island, which, according to the report of a master of a ship, and some others, on examination before the lords of the Admiralty, lies about 50° N. and about 300 leagues west of England. Capt. Murdock Mackenzie, an excellent mathematician, and author of the sea charts of the Orkney and Lewis islands, attends him in the Collodon alop, to bring back an account of what discoveries he may make. As this island lies out of the track of the trade to America, it is supposed to have been missed by navigators to our colonies, though marked in some Dutch maps. If the Commodore discovers it, he is to take possession of it by the name of Rodney's island."

"Friday, April 10, 1752, Commodore Rodney arrived at Woolwich: he had been cruising ten days in quest of an island, and the men at the top mast-head were more than once deceived with what the sailors call fog-banks. About the 6th or 7th day the crew observed branches of trees with their leaves on, and flights of gulls, and pieces of shipwreck, which are generally regarded as certain signs of an adjacent shore, but could not discover any." *Gent. Mag.* for 1751, p. 235; for 1752, p. 83, 189.

N. B. The island, marked in the Dutch maps, could not have been mistaken for this imaginary island, being but a single rock. It is the same that is described in the life of Zeno. Page 82.

* This is said on the authority of Herrera, the royal Spanish historian, Ferdinand Columbus, in the life of his father, says nothing of it; but represents his application to the king of Portugal as the first, and gives this reason for it, "because he lived under him."

* The following account of a curious deception, extracted from the Gentleman's Magazine, may elucidate the above observations:—

hemisphere to the other. As the writing of this Holy Father was received the sanction of the church to contradict him was deemed heresy.

For such reasons, and by such reasoners, the proposal of Columbus was at first rejected; but by the influence of John Perez, a Spanish priest, and Lewia Santangel, an officer of the King's household, Queen Isabella was persuaded to listen to his solicitation, and after he had been twice repulsed, to recall him to Court; when she offered to pawn her jewels to defray the expense of the equipment, amounting to no more than 2500 crowns; which sum was advanced by Santangel, and the Queen's jewelry was saved. Thus, to the generous decision of a female mind, we owe the discovery of America.

The condition stipulated between Ferdinand and Isabella on the one part, and Columbus on the other part, were these: "That he, his heirs and successors, should hold the office of Admiral in all those *islands and continents* which he should discover; that he should be Viceroy and Governor of the same, with power of nominating three associates, of whom their majesties should appoint one. That he should have one tenth part of the nett proceeds of all the gold and silver, precious stones, spice and other merchandize which should be found; that he, or a deputy of his own appointing, should decide all controversies respecting the trade; that he should be at one eighth part of the expense of equipping the first fleet, and should receive one eighth part of the profits."

The necessary preparations being made, and a year's provision laid in, on the 3d of August, 1492, Columbus sailed from Palos, a port of Spain, on the Mediterranean, with three vessels, one of which was called a carrack, and the other two caravels,* having on board the whole, ninety men. Having passed through the straits of Gibraltar, he arrived at the Canaries, on the 12th of the same month, where he was detained in refitting one of the caravels, and taking in wood and water, till the 6th of September, when he sailed westward on his voyage of discovery.

This voyage, which is now considered as an easy and pleasant run, between the latitudes of 20 and 30 degrees, with a trade wind, was then the boldest attempt which had ever been made, and filled the minds of the best seamen with apprehension. They were going directly from home, and from all hope of relief, if any accident should befall them. No friendly port nor human being was known to be in that direction. Every bird which flew in the air, every fish which appeared in the sea, and every weed which floated on its surface, was regarded with the most minute attention, as if the fate of the voyage depended on it. A phenomenon which had never before been observed struck them with terror. The magnetic needle appeared to vary from the pole. They began to apprehend that their compass would prove an unfaithful guide; and the trade wind which wafted them along with its friendly wings, they feared would obstruct their return.

To be twenty days at sea, without sight of land, was what the boldest mariner had never before attempted. At the expiration of that time, the impatient sailors began to talk of throwing their commander into the ocean, and returning home. Their murmurs reached his ears; but his active mind was never at a loss for expedients, even in the greatest extremity. By soothing, flattery, and artifice, by inventing reasons for every uncommon appearance, by promising reward to the obedient, and a gratuity to him who should first discover land, in addition to what the king had ordered; and by deceiving them in the ship's reckoning, he kept them on their course for sixteen days longer. In the night of the 11th of October, he himself saw a light, which seemed to be on shore, and on the morning of the 12th, they had the joyful sight of land, which proved to be the island of Guacahana, one of the cluster called Bahamas, in the 25th degree of north latitude.

Thus in the space of thirty-six days, and in the 45th year of his age, Columbus completed a voyage which he had spent twenty years in projecting and executing; a voyage which opened to the Europeans a new world; which gave a new turn to their thoughts, to their spirit of enterprise and of commerce; which enlarged the empire of Spain, and stamped with immortality the name of Columbus.

After spending several months in sailing from one island to another in that vast archipelago, which, from the mistakes of the age received the name of the West Indies. Columbus returned to Spain with the two smaller vessels (the larger having been wreck on the island of

Hispaniola, leaving behind him a colony of thirty-nine men, furnished with a year's provision, and lodged in a fort which have been built of the timber saved from the wreck. During his passage, he met with a violent tempest which threatened him with destruction. In this extremity he gave an admirable proof of his calmness and foresight. He wrote on parchment an account of his discoveries, wrapt it in a piece of oil cloth, and inclosed it in a cake of wax, which he put into a tight cask and threw into the sea. Another parchment, secured in the same manner, he placed on the stern, that if the ship should sink, the cask might float, and possibly one or the other might be driven on shore, or taken up at sea by some future navigator. But this precaution proved fruitless. He arrived safe in Spain, in March, 1493, and was received with the honors due to his merit.

The account which Columbus gave of his new discoveries, the specimens of gold and other valuable productions, and the sight of the natives which he carried from the West Indies to Spain, were so pleasing that the court determined on another expedition. But first it was necessary to obtain the sanction of the Pope, who readily granted it; and by an imaginary line, drawn from pole to pole, at the distance of one hundred leagues westward of the Azores, he divided between the crowns of Spain and Portugal, all the new countries already discovered or to be discovered; giving the western part to the former, and the eastern to the latter. No provision however was made, in case that they should meet, and their claims should interfere on the opposite side of the globe. The bull containing this famous but imperfect line of demarkation, was signed by Alexander VI. on the second day of May, 1493; and on the 28th of the same month, the King and Queen of Spain, by a written instrument, explained and confirmed the privileges and powers which they had before granted to Columbus, making the office of Viceroy and Governor of the Indies hereditary in his family. On the 25th September following he sailed from Cadiz, with a fleet of seventeen ships, great and small, well furnished with all necessaries for the voyage; and having on board 1500 people, with horses, cattle, and implements to establish plantations.

On Sunday, the third of November, he discovered an island, to which in honor of the day, he gave the name of Dominica. Afterward he discovered in succession other islands, which he called Marigalante, Guadaloupe, Montserrat, Redonda, Antigua, St. Martin's St. Ursula, and St. John. On the 12th of November he came to Navidad, on the north side of Hispaniola, where he had built his fort, and left his colony; but he had the mortification to find that the people were all dead, and that the fort had been destroyed.

The account given by the natives of the loss of the colony, was, that they fell into discord among themselves, on the usual subjects of controversy, women and gold; that having provoked a chief, whose name was Canaubo, he came against them with a superior force, and destroyed them; that some of the natives, in attempting to defend them, had been killed, and others were then ill of their wounds; which, on inspection, appeared to have been made with Indian weapons.

Columbus prudently forbore to make any critical inquiry into the matter; but hastened to establish another colony in a more eligible situation, to the eastward; which he called Isabella, after his royal patroness. He had many difficulties to contend with, besides those which unavoidably attend undertakings of such novelty and magnitude. Nature indeed was bountiful; the soil and climate produced vegetation with a rapidity to which the Spaniards had not been accustomed. From wheat sown at the end of January, full ears were gathered at the end of March. The stones of fruit, the slips of vines, and the joints of sugar cane sprouted in seven days, and many other seeds in half the time. This was an encouraging prospect; but the slow operations of agriculture did not meet the views of sanguine adventurers. The numerous followers of Columbus, some of whom were of the best families in Spain, had conceived hopes of suddenly enriching themselves, by the precious metals of those new regions; and were not disposed to listen to his recommendations of patience and industry in cultivating the earth. The natives were displeased with the licentiousness of their new neighbours; who endeavored to keep them in awe by a display of force. The explosion of fire arms, and the sight of men mounted on horses, were at first objects of terror; but use had rendered them less formidable. Columbus, overburdened with care and fatigue, fell sick, and at his recovery, found a

mutiny among his men; which by a due mixture of resolution and lenity, he had the address to quell. He then endeavored to establish discipline among his own people, and to employ the natives in cutting roads through the woods. Whilst he was present, and able to attend to business, things went on so prosperously that he thought he might safely proceed on his discoveries.

In his former voyage he had visited Cuba; but was uncertain whether it were an island or a part of some continent. He therefore passed over to its eastern extremity; and coasted its southward side, till he found himself entangled among a vast number of small islands, which for their beauty and fertility he called the Garden of the Queen; but the dangerous rocks and shoals which surrounded them, obliged him to stretch farther to the southward; by which means he discovered the island of Jamaica, where he found water and other refreshments for his men, who were almost dead with famine. The hazards, fatigue, and distress of this voyage, threw him into a lethargic disorder, from which he had just recovered, when he returned to his colony and found it all in confusion, from the same causes which had proved destructive to the first.

In his absence, the licentiousness of the Spaniards had provoked several of the chiefs: four of whom had united to destroy them, and had actually commenced hostilities, in which twenty Spaniards were killed. Columbus collected his people, put them into the best order, and by a judicious combination of force and stratagem gained a decisive victory, to which the horses and dogs did not a little contribute.

At his return to Hispaniola, he had the pleasure of meeting his brother Bartholomew, whom he had not seen for several years, and whom he supposed to have been dead. Bartholomew was a man of equal knowledge, experience, bravery and prudence with himself. His patience had endured a severe trial in their long separation. He had many obstacles to surmount before he could get to England and obtain access to the king. He was at Paris when he heard of the success of his brother's first enterprise; who had gone on the second before Bartholomew could get to Spain. On his arrival there, and being introduced to the court, he was appointed to the command of three ships, which were destined to convey supplies to the colony; and he arrived whilst Christopher was absent on his voyage to Cuba and Jamaica. Columbus appointed his brother to command at Isabella, whilst he went into the interior part of the island to perfect his conquest, and reduce the natives to subjection and tribute.

The Indians were so unused to collect gold dust in such quantities as their conquerors demanded it, that they offered to plant the immense plains of Hispaniola, and pay an equivalent in corn. Columbus was struck with the magnanimity of the proposal; and in consequence moderated the tribute. This did not satisfy the avarice of his fellow adventurers, who found means to complain of him to the king's ministers, for his negligence in acquiring the only commodity, which they thought deserved the name of riches. The Indians then desisted from planting their usual quantity of corn, and attempted to subsist chiefly on animal food. This experiment proved injurious to themselves as well as their conquerors; and it was computed, that within four years, from the discovery of the island, one third part of its inhabitants perished.

The complaint against Columbus so wrought on the jealous mind of King Ferdinand, that John Aguado, who was sent in 1495, with supplies to the colony, had orders to act as a spy on his conduct. This man behaved with so little discretion, as to seek matter of accusation, and give out threats against the Admiral. At the same time, the ships which he commanded being destroyed by a hurricane, he had no means left to return; till Columbus, knowing that he had enemies at home and nothing to support himself but his own merit, resolved to go to Spain with two caravels, himself in one and Aguado in the other. Having appointed proper persons to command the several forts; his brother Bartholomew to superintend the whole, and his brother James to be next in authority; he set sail on the tenth of March, 1496, and after a perilous and tedious voyage in the tropical latitudes, arrived at Cadiz on the 11th of June.

His presence at Court, with the gold and other valuable articles which he carried home, removed, in some measure, the prejudices which had been excited against him. But his enemies, though silent, were not idle; and in a court where phlegm and languor proved a clog to the spirit of enterprise, they found it

* A carrack was a vessel with a deck, a caravel had none

not difficult to obstruct his views; which notwithstanding all discouragements, were still pointed to the discovery of a way to India by the west.

He now demanded eight ships, to carry supplies to his colony, and six to go on discovery. These demands were complied with, and he began his third voyage on the thirtieth of May, 1498. He kept a course so far to the southward, that not only his men, but his provisions and water suffered greatly from excessive heat. The first land he made after leaving the Isles of Cape de Verd, was a large island which he named Trinidad, from its appearance in the form of three mountains. He then passed through a narrow strait and whirlpool into the gulf of Paria; where observing the tide to be rapid, and the water brackish, he conjectured that the land on the western and southern sides of the gulf was part of a continent; and that the fresh water proceeded from some great rivers.

The people on the coast of Paria were whiter than those of the island S. They had about their necks plates of gold and strings of pearl; which they readily exchanged for pieces of tin and brass, and little bells; and when they were questioned whence they obtained the gold and pearls, they pointed to the west.

The Admiral's provision not allowing him to stay long in this place; he passed again through that dangerous strait, to which he gave the name of the Dragon's Mouth; and having satisfied himself, that the land on his left was a continent, he steered to the N. W.; discovering Margarita and several other islands in his course; and on the thirtieth of August arrived at the harbour of St. Domingo, in Hispaniola; to which place his brother had removed the colony in his absence, in consequence of a plan preconcerted between them.

Wearied with incessant care and watching, in this dangerous voyage, he hoped now to enjoy repose; instead of which he found his colony much reduced by deaths; many of the survivors sick, with a disease, the peculiar consequence of their debauchery; and a large number of them in actual rebellion. They had formed themselves into a body; they had gained over many of the Indians, under pretence of protecting them; and they had retired to a distant part of the island, which proved a resort for the seditious and discontented. Their commander was Francis Roldan, who had been Chief Justice of the colony; and their number was so considerable, that Columbus could not command a force sufficient to subdue them. He therefore entered into a negotiation, by offering a pardon to those who would submit, and liberty of returning to Spain to those who desired it. These offers, however impolitic, proved successful. Roldan himself accepted them, and persuaded others to do the same; then, being restored to his office, he tried and condemned the refractory, some of whom were put to death.

An account of this mutiny was sent home to Spain by Columbus and another by Roldan. Each had their advocates at court, and the cause was heard by the king and queen. Roldan and his men were accused of adultery, perjury, robbery, murder, and disturbing the peace of the whole island; whilst Columbus was charged with cruelty to individuals, aiming at independence, and engrossing the tribute. It was insinuated, that not being a native of Spain, he had no proper respect for the noble families, who had become adventurers; and that the debts due to them could not be recovered. It was suggested, that if some remedy were not speedily applied, there was danger that he would revolt, and join with some other prince; and that to compass this design, he had concealed the real wealth of the colony, and prevented the conversion of the Indians to the Catholic faith.

These insinuations prevailed on the jealousy of Ferdinand, and even staggered the constancy of Isabella. They resolved to appoint a judge, who should examine facts on the spot: and if he should find the Admiral guilty, to supersede him. For this purpose they sent Francis Boradilla, a man of noble rank, but whose poverty alone recommended him to the office. Furnished with these powers, he arrived at St. Domingo, when Columbus was absent; took lodgings in his house; invited accusers to appear against him; seized on his effects, and finally sent him and both his brothers to Spain in three different ships, but all loaded with iron.

The master of the ship in which the Admiral sailed had so much respect for him, that, when he had got to sea, he offered to take off his fetters; but Columbus nobly declined, that he would permit that honor to be done to him, by none but his sovereign. In this hu-

milating confinement, he was delivered to Fonseca, Bishop of Badajoz, who had been the chief instigator of all these rigorous proceedings, and to whom had been committed the affairs of the Indies.

Not content with robbing Columbus of his liberty, this prejudiced ecclesiastic would have deprived him of his well earned reputation of having first discovered the new continent. With the accusations which Columbus had sent home against Roldan, he had transmitted an account of the discovery of the coast of Paria, which he justly supposed to be part of a continent. Ojeda, an active officer, who had sailed with Columbus in his second voyage, was at Court when these dispatches arrived, and saw the draught of the discovery, with the specimens of gold and pearls, which the Admiral had sent home. Being a favorite of Fonseca, he easily obtained leave to pursue the discovery. Some merchants of Seville were prevailed upon to equip four ships; with which, in 1499, Ojeda followed the track of Columbus, and made land on the coast of Paria. Amerigo Vespucci, a Florentine merchant, well skilled in geography and navigation, accompanied Ojeda in this voyage; and by publishing the first book and chart, describing the new world obtained the honor of having it called AMERICA. This however did not happen till after the death of Columbus. Several other adventurers followed the same track, and all supposed that the continent which they had seen, was part of India.

As soon as it was known, that Columbus was arrived at Cadiz, Nov. 5, 1500, in the disgraceful situation above mentioned, the king and queen, ashamed of the orders which they had given, commanded him to be released, and invited him to court, where they apologized for the misbehaviour of their new Governor, and not only promised to recall him, but to restore to the Admiral all his effects. Columbus could not forget the ignominy. He preserved the fetters, hung them up in his apartment, and ordered them to be buried in his grave.

Instead of reinstating him in his government according to the original contract, the king and queen sent Ovando, to Hispaniola, to supersede Bovadilla; and only indulged Columbus in pursuing his darling project, the discovery of India by the west, which he still hoped to accomplish. He sailed again from Cadiz, on the fourth of May, 1502; with four vessels, carrying one hundred and forty men and boys; of which number were his brother Bartholomew and his son Ferdinand, the writer of his life.

In his passage to the Caribbee islands, he found his largest vessel, of seventy tons, unfit for service; and therefore went to St. Domingo, in hope of exchanging it for a better; and to seek shelter from a storm which he saw approaching. To his infinite surprise and mortification, Ovando would not admit him into the port. A fleet of thirty ships was then ready to sail for Spain, on board of which Roldan and Bovadilla were prisoners. Columbus informed Ovando of the prognostics which he had observed, which Ovando disregarded, and the fleet sailed. Columbus then laid three of his vessels under the lee of the shore, and, with great difficulty, rode out the tempest. His brother put to sea; and by his great naval skill saved the ship in which he sailed. Of the fleet bound to Spain, eighteen ships were lost, and in them perished Roldan and Bovadilla.

The enemies of Columbus gave out that he had raised the storm by the art of magic; and such was the ignorance of the age, that the story was believed. What contributed the more to its credit, was, that one of the worst ships of the fleet, on board of which were all the effects which had been saved from the ruined fortune of Columbus, was the first which arrived in Spain. The amount of these effects was "four thousand pesos of gold, each of the value of eight shillings." The remark which Ferdinand Columbus makes on this event, so destructive to the accusers of his father is, "I am satisfied, it was the hand of God, who was pleased to infatuate them; that they might not hearken to good advice; for had they arrived in Spain, they had never been punished as their crimes deserved, but rather favored and preferred as being the Bishop's friends."

After this storm, and another which followed it, Columbus having collected his little squadron, sailed on discovery toward the continent; and, steering to the southwest, came to an island called Guanania, twelve leagues from the coast of Honduras, where he met with a large covered canoe, having on board several pieces of cotton cloth of divers colors, which

the people said they had brought from the westward. The men were armed with swords of wood, in which sharp flints were strongly fixed. Their provision was maize and roots, and they used the berries of cocoa as money. When the Admiral inquired for gold, they pointed to the west, and when he asked for a strait by which he might pass through the land, they pointed to the east. From the specimens of colored cloth, he imagined, that they had come from India; and he hoped to pass thither, by the strait which they described. Pursuing his course to the east and south, he was led to the gulf of Darien; and visited several harbors, among which was one which he called Porto Bello; but he found no passage extending through the land. He then returned to the westward, and landed on the coast of Veragua; where the beauty and fertility of the country invited him to begin a plantation, which he called Belem; but the natives, a fierce and formidable race, deprived him of the honor of first establishing a colony on the continent, by killing some of his people and obliging him to retire with the others.

At sea, he met with tempestuous weather of long continuance, in which his ships were so shattered, that with the utmost difficulty he kept them above water, till he ran them ashore on the island of Jamaica. By his extraordinary address, he procured from the natives two of their largest canoes; in which two of his most faithful friends, Mendez and Fiesco, accompanied by some of his sailors and a few Indians embarked for Hispaniola. After encountering the greatest difficulties in their passage, they carried tidings of his misfortune to Ovando, and solicited his aid. The merciless wretch detained them eight months without any answer, during which time, Columbus suffered the severest hardships from the discontent of his company, and a want of provisions. By the hospitality of the natives, he at first received such supplies, as they were able to spare; but the long continuance of these guests had diminished their store, and the insolence of the mutineers gave a check to their friendship. In this extremity, the fertile invention of Columbus suggested an expedient which proved successful. He knew that a total eclipse of the moon was at hand, which would be visible in the evening. On the preceding day, he sent for the principal Indians, to speak with them, on a matter of the utmost importance. Being assembled, he directed his interpreter to tell them, that the God of heaven, whom he worshipped, was angry with them for withholding provisions from him, and would punish them with famine and pestilence; as a token of which, the moon would in the evening, appear of an angry and bloody color. Some of them received his speech with terror, and others with indifference; but when the moon rose, and the eclipse increased as she advanced from the horizon, they came in crowds, loaded with provisions, and begged the Admiral to intercede with God, for the removal of his anger. Columbus retired to his cabin; and when the eclipse began to go off, he came out and told them, that he had prayed to his God, and had received this answer; that if they would be good for the future, and bring him provision as he should want, God would forgive them; and as a token of it, the moon would put on her usual brightness. They gave him thanks, and promised compliance; and whilst he remained on the island there was no more want of provision.

At the end of eight months, Ovando sent a small vessel to Jamaica, with a cask of wine, two fitches of bacon, and a letter of compliment and excuse, which the officer delivered; and without waiting for an answer, weighed his anchor the same evening and sailed back to Hispaniola. The men who adhered to Columbus and were with him on board the wrecks, wondered at the sudden departure of the vessel, by which they expected deliverance. Columbus, never at a loss for an evasion, told them that the caravel was too small to take the whole company, and he would not go without them. This fiction had the desired effect; those who adhered to him resumed their patience; but the mutineers became so insolent that it was necessary to subdue them by force. In the contest ten of them were killed. Porras, their leader, was made prisoner and the others escaped. Bartholomew Columbus and two others of the Admiral's party were wounded, of whom one died.

The fugitives, having lost their leader, thought it best to submit; and on the next day sent a petition to the Admiral, confessing their fault, and promising fidelity. This promise they confirmed by an oath, of which the imprecation was singular; "they renounced,

in case of failure, any absolution from Priest, Bishop, or Pope, at the time of their death; and all benefit from the sacraments of the church; consenting to be buried like heathens and infidels in the open field." The Admiral received their submission, provided that Porras should continue prisoner, and they would accept a commander of his appointment, as long as they should remain on the island.

At length a vessel, which Mendez had been permitted to buy, with the Admiral's money, at Hispaniola, came to Jamaica, and took them off. On their arrival at St. Domingo, August 13, 1504, Ovando affected great joy, and treated the Admiral with a show of respect; but he liberated Porras, and threatened with punishment the faithful adherents of Columbus. As soon as the vessel was refitted, the Admiral took leave of his treacherous host, and, with his brother, son, and servants embarked for Spain. After a long and distressing voyage, in which the ship lost her masts, he arrived at St. Luca, in May, 1505.

His patroness Isabella had been dead about a year; and with her had expired all the favor which he ever enjoyed in the Court of Ferdinand. Worn out with sickness and fatigue, disgusted with the insincerity of his sovereign, and the haughtiness of his courtiers, Columbus lingered out a year in fruitless solicitation for his violated rights; till death relieved him from all his vexations. He died at Valladolid, on the twentieth of May, 1506, in the 59th year of his age; and was buried in the cathedral of Seville, with this inscription on his tomb.

*A Castilla ya Leon,
Nuevo Mundo dio Colon.*

Translated thus;

To Castile and Leon,
Columbus gave a New World.

In the life of this remarkable man there is no deficiency of any quality which can constitute a truly great character.* His genius was penetrating, and his judgment solid. He had acquired as much knowledge of the sciences as could be obtained at that day; and he corrected what he had learned, by his own observations. His constancy and patience were equal to the most hazardous undertakings. His fortitude surmounted many difficulties; and his invention extricated him out of many perplexities. His prudence enabled him to conceal or obdure his own infirmities; whilst he took advantage of the passions of others, adjusting his behaviour to his circumstances; temporizing, or acting with vigour, as the occasion required.

His fidelity to the ungrateful Prince, whom he served, and whose dominions he enlarged, must render him forever conspicuous as an example of justice; and his attachment to the Queen, by whose influence he was raised and supported, will always be a monument of his gratitude.

To his other excellent qualities may be added his piety. He always entertained, and on proper occasions expressed, a reverence for the Deity, and a firm confidence in his care and protection. In his declining days, the consolations of religion were his chief support; and his last words were, "Into thy hands, O Lord, I commend my spirit."

The persecution and injustice which he suffered, may be traced up to the contract, which he insisted on, before he engaged in the plan of discovery. That a foreigner should attain so high a rank as to be Viceroy for life, and that the honor of an Admiral should be hereditary in his family, to the exclusion of all nobles of Spain, was more than their pride and jealousy could endure; and they constantly endeavoured to depreciate his merit; the only foundation on which his honors were erected.

There is a story recorded by Peter Martyr, a contemporary historian, which exemplifies their malice, and his ingenuity in rising superior to it. After the death of the Queen, the nobility affected to insinuate, that his discoveries were more the result of accident and good fortune, than of any well concerted measures. One day at a public dinner, Columbus having borne much insulting railery on that head, at length called for an egg, and asked whether any of them could set it upright on its little end. They all confessed it to be impossible. Columbus striking it gently, flatted the shell till it stood upright on the table. The company, with a disdainful sneer, cried out, "Any body might have done it."—"Yes," (said Columbus) but none of you thought of it; so I discovered the Indies, and now

every pilot can steer the same course. Many things appear easy when once performed, though before, they were thought impossible. Remember the scoffs that were thrown at me, before I put my design in execution. Then it was a dream, a chimery delusion; now, is what any body might have done as well as I." When this story was told to Ferdinand, he could not but admire the grandeur of that spirit, which at the same time he was endeavoring to depress.

Writers of different countries have treated the character of Columbus according to their prejudices, either national or personal. It is surprising to observe, how these prejudices have descended; and that even at the distance of three centuries, there are some, who affect to deny him the virtues for which he was conspicuous, and the merit of originating a discovery, which is an honor to human reason. His humanity has been called in question, because he carried dogs to the West Indies, and employed them in extirpating the natives. The truth is, that in his second expedition he was accompanied by a number of gentlemen of the best families in Spain; and many more would have gone if it had been possible to accommodate them. These gentlemen carried with them "horses, asses and other beasts which were of a great use in a new plantation." The conflict which Columbus had with the natives was in consequence of the disorderly conduct of these Spaniards; who, in his absence, had taken their goods, abused their women, and committed other outrages, which the Indians could not endure, and therefore made war upon them. In this war he found his colony engaged when he returned from his voyage to Cuba; and there was no way to end it, but by pursuing it with vigour. With two hundred Spaniards, of whom twenty were mounted on "horses followed by as many dogs," he encountered a numerous body of Indians, estimated at one hundred thousand, on a large plain. He divided his men into two parties, and attacked them on two sides; the noise of the fire arms, soon dispersed them, and the horses and dogs prevented them from rallying; and thus a complete victory was obtained. In this instance alone, were the dogs used against the natives. They naturally followed their masters into the field, and the horses to which they were accustomed; but to suppose that Columbus transported them to the West Indies, with a view to destroy the Indians, appears altogether idle, when it is considered that the number is reckoned only at twenty. Excepting in this instance, where he was driven by necessity, there is no evidence, that he made war on the natives of the West Indies; on the contrary, he endeavoured as far as possible to treat them with justice and gentleness. The same cannot be said of those who succeeded him.

Attempts have also been made to detract from his merit as an original discoverer of the New World. The most successful candidate, who has been set up as a rival to him, is MARTIN BEHAIM of Nuremberg, in Germany. His claim to a prior discovery has been so well contested, and the vanity of it so fully exposed by the late Dr. Robertson, that I should not have thought of adding any thing to what he has written, had not a memoir appeared in the second volume of Transactions of the American Philosophical Society at Philadelphia, in which the pretensions of Behaim are revived by M. OTTO; who has produced some authorities which he had obtained from Nuremberg, an imperial city of Germany, and which appear to him, "to establish in the clearest manner a discovery of America anterior to that of Columbus.

It is conceded that Behaim was a man of learning and enterprise; that he was contemporary with Columbus, and was his friend; that he pursued the same studies and drew the same conclusions; that he was employed by King John II. in making discoveries; and, that he met with a deserved honor for the important services which he rendered to the crown of Portugal. But there are such difficulties attending the story of his discovering America, as appear to me insuperable. These I shall state; together with some remarks on the authorities produced by M. Otto.

The first of his authorities contains several assertions which are contradicted by other histories; (1.) That Isabella, daughter of John, King of Portugal, reigned after the death of Philip, Duke of Burgundy, surnamed the Good. (2.) That this lady, when regent of the Duchy of Burgundy, and Flanders, Behaim paid a visit in 1459. And (3.) That having informed her of his designs, he procured a vessel in which he made the discovery of the island of Fayal, in 1460.

It is true that Philip, Duke of Burgundy and Flanders, surnamed the Good, married Isabella the daughter

of King John I. of Portugal; but Philip did not die till 1467, and was immediately succeeded by his son Charles, surnamed the Bold, then thirty-four years of age. There could therefore have been no interregnum, nor female regent, after the death of Philip; and if there had been, the time of Behaim's visit will not correspond with it; that being placed in 1459, eight years before the death of Philip. Such a mistake in point of fact, and of chronology, is sufficient to induce a suspicion that the "archives of Nuremberg" are too deficient in accuracy to be depended on as authorities.

With respect to the discovery of Fayal, in 1460, M. Otto acknowledges that it is "contrary to the received opinion;" and well he might; for the first of the Azores, St. Maria, was discovered in 1431; the second, St. Michael, in 1444; the third, Terceira, in 1445; and before 1449, the islands, St. George, Graciosa, Fayal and Pico, were known to the Portuguese. However, true it may be that Behaim settled in the island of Fayal and lived there twenty years; yet his claim to the discovery of it must have a better foundation than the "archives of Nuremberg," before it can be admitted.

The genuine account of the settlement of Fayal, and the interest which Behaim had in it, is thus related by Dr. Forster, a German author, of much learning and good credit.

"After the death of the infant Don Henry, which happened in 1466, the island of Fayal was made a present by his sister, Isabella, Duchess of Burgundy, to Jobst von Hurter, a native of Nuremberg. Hurter went in 1466, with a colony of more than 2000 Flemings of both sexes, to his property, the isle of Fayal. The Duchess had provided the Flemish emigrants with all necessaries for two years, and the colony soon increased. About the year 1486, Martin Behaim married a daughter of the Chevalier Jobst von Hurter, and had a son by her named Martin.—Jobst von Hurter, and Martin Behaim, both natives of Nuremberg, were lords of Fayal and Pico."

The date of the supposed discovery of America, by Behaim, is placed by M. Otto, in 1484, eight years before the celebrated voyage of Columbus. In the same year we are told that Alonzo Sanchez de Huelva was driven by a storm to the westward for twenty-nine days; and saw an island of which at his return he gave an information to Columbus. From both these supposed discoveries this conclusion is drawn. "That Columbus would never have thought of this expedition to America, had not Behaim gone there before him." Whether it be supposed that Behaim and Sanchez sailed in the same ship, or that they made a discovery of two different parts of America, in the same year, is not easy to understand from the authorities produced; but what destroys the credibility of this plausible tale, is, that Columbus had formed his theory, and projected his voyage, at least ten years before; as appears by his correspondence with Paul, a learned physician of Florence, which bears date in 1474. It is uncertain at what time Columbus first made his application to the King of Portugal, to fit him out for a western voyage; but it is certain that after a negotiation with him on the subject, and after he had found out the secret and unsuccessful attempt, which had been made to anticipate a discovery; he quitted that kingdom in disgust, and went into Spain, in the latter end of the year 1484. The authority of these facts is unquestioned; and from them it fully appears, that a prior discovery of America, by Behaim or Sanchez, made in 1484, could not have been the foundation of the enterprise of Columbus.

M. Otto speaks of letters written by Behaim in 1486, in the German language, and preserved in the "archives of Nuremberg," which support his claim to a prior discovery. As these letters are not produced, no certain opinion can be formed concerning them; but from the date of the letters, and from the letters, and from the voyages which Behaim actually performed in the two preceding years, we may with great probability suppose that they related to the discovery of Congo, in Africa; to which Behaim has an uncontroverted claim.

I will now state the facts relative to this event partly from the authorities cited by M. Otto; and partly from others.

Dr. Robertson places the discovery of Congo and Benin in 1483, and with him Dr. Forster agrees. The authors of the Modern Universal History speak of two voyages to that coast; the first in 1484, the second in 1485; both of which were made by Diego Cam, who is said to have been one of the most expert sailors and of an enterprising genius. From the

* Some of these observations are taken from Dr. Campbell's account of European settlement in America. Vol. I. ch. viii.

LANDING OF COLUMBUS, October 12, 1492.

chronicle of Hartman Schedl, as quoted by M. Otto, we are informed, that Behaim sailed from Cam, in these voyages, which are described in the following terms. "These two, by the bounty of heaven, coasting along the southern ocean, and having crossed the equator, got into the other hemisphere; where, facing to the eastward, their shadows projected towards the south, and right hand." No words could be more completely descriptive of a voyage from Portugal to Congo, as any person may be satisfied by inspecting a map of Africa; but how could M. Otto imagine that the discovery of America was accomplished in such a voyage as this? "Having finished their cruise (continues Schedl) in the space of 26 months, they returned to Portugal, with the loss of many of their seamen, by the violence of the climate." This latter circumstance also agrees very well with the climate of the African coast;* but Schedl says not a word of the discovery of America.

M. Otto goes on to tell us "that the most positive proof of the great services rendered to the crown of Portugal by Behaim, is the recompense bestowed on him by King John II.; who, in the most solemn manner, knighted him in the presence of all his court." Then follows a particular detail of the ceremony of installation, as performed on the 18th of February, 1485, and M. Otto fairly owns that this was "a reward for the discovery of Congo." Now let us bring the detached parts of the story together.

Behaim was knighted on the 18th of February, 1485, for the discovery of Congo, in which he had been employed 26 months preceding; having within that time made two voyages thither, in company with Diego Cam.† It will follow then that the whole of the preceding years, 1484 and 1483, were taken up in these two voyages. This agrees very well with the accounts of the discovery of Congo, in Robertson and Forster, and does not disagree with the modern universal history, as far as the year 1484 is concerned; which unfortunately is the year assigned for Behaim's discovery of "that part of America called Brazil, and his sailing even to the straits of Magellan."

The only thing to Mr. Otto's memoir which bears any resemblance to a solution of this difficulty is this, "We may suppose that Behaim, engaged in an expedition to Congo, was driven by the winds to Fernambouc, and from thence by the currents toward the coast of Guiana." But supposition without proof will avail little; and supposition against proof will avail nothing. The two voyages to Congo are admitted. The course is described; the time is determined; and both of these are directly opposed to the supposition of his being driven by winds and currents to America. For if he had been driven out of his course and had spent "several years in examining the American islands, and discovering the strait which bears the name of Magellan;" and if one of those years was the year 1484, then he could not have spent 26 months preceding February 1485, in the discovery of Congo; but of this we have full and satisfactory evidence; the discovery of America therefore must be given up.

There is one thing further in this memoir which deserves a particular remark, and that is the reason assigned by M. Otto, for which the King of Portugal declined the proposal of Columbus to sail to India by the west. "The refusal of John II. is a proof of the knowledge which that politic and wise prince had already procured of the existence of a new continent, which offered him only barren lands, inhabited by unconquerable savages." This knowledge is supposed to have been derived from the discoveries made by Behaim. But, not to urge again the chronological difficulty with which this conjecture is embarrassed, I will take notice of two circumstances, in the life of Columbus, which militate with this idea. The first is, that when Columbus had proposed a western voyage to King John and he declined it, "the king, by the advice of one Dr. Calzadilla, resolved to send a caravel privately, to attempt that which Columbus had proposed to him; because in case those countries were so discovered, he thought himself not obliged to bestow any great reward. Having speedily equipped a caravel, which was to carry supplies to the islands of Cabo Verde, he sent it that way which the Admiral proposed to go. But those whom he sent wanted the knowledge, constancy and spirit of the Admiral. After wandering many days upon the sea, they turned back to the islands of Cabo Verde, laughing at the

undertaking; and saying it was impossible there should be any land in those seas."

Afterward, "the king being sensible how faulty they were whom he had sent with the caravel, had a mind to restore the Admiral to his favor, and desired that he should renew the discourse of his enterprise; but not being so diligent to put this in execution, as the Admiral was in getting away, he lost that good opportunity; the Admiral, about the end of the year 1484, stole away privately out of Portugal for fear of being stopped by the king." This account does not agree with the supposition of a prior discovery.

The other circumstance is an interview which Columbus had with the people of Lisbon, and the King of Portugal, on his return from his first voyage. For it so happened that Columbus on his return was by stress of weather obliged to take shelter in the port of Lisbon; and as soon as it was known that he had come from the Indies, "the people thronged to see the natives whom he had brought, and hear the news; so that the caravel would not contain them. Some of them praising God for so great a happiness; others storming that they had lost the discovery through their king's incredulity."

When the king sent for Columbus, "he was doubtful what to do; but to take off all suspicion that he came from his conquests, he consented." At the interview, "the king offered him all that he required for the service of their Catholic Majesties, though he thought, that forasmuch as he had been a captain in Portugal, that conquest belonged to him. To which the Admiral answered, that he knew of no such agreement, and that he had strictly observed his orders, which were not to go to the mines of Portugal, [the gold coast] nor to Guinea." Had John II. heard of Behaim's voyage to a western continent, would he not have claimed it by priority of discovery, rather than by the commission which Columbus had formerly borne in his service? Had such a prior discovery been made, could it have been concealed from the people of Lisbon? And would they have been angry that the king had lost it by his incredulity? These circumstances appear to me to carry sufficient evidence, that no discovery of America prior to that of Columbus had come to the knowledge of the King of Portugal.

In answer to the question, "Why are we searching the archives of an imperial city for the causes of an event, which took place in the western extremity of Europe?" M. Otto gives us to understand, that "from the fourteenth to the sixteenth centuries, the Germans were the best geographers, the best historians, and most enlightened politicians." Not to detract from the merit of the German literati of those ages, I think we may give equal credit to a learned German author of the present age, Dr. John Reinhold Forster; who appears to have a thorough understanding of the claims not only of his own countrymen, but of others. In his indefatigable researches into the discoveries which have been made by all nations, though he has given due credit to the adventures of Behaim in Congo and Fayal, yet he has not said one word of his visiting America; which he certainly would have done, if in his opinion there had been any foundation for it.

Letters from Paul, a Physician of Florence, to Christopher Columbus, concerning the discovery of the Indies.

LETTER I.

To Christopher Columbus, Paul the Physician wisheth health.

I PERCEIVE your noble and earnest desire to sail to those parts where the spice is produced; and therefore in answer to a letter of yours, I send you another letter, which some days since I wrote to a friend of mine, and servant to the King of Portugal, before the wars of Castile, in answer to another he wrote to me by his highness's order, upon this same account; and I send you another sea chart like that I sent him, which will satisfy your demands. The copy of the letter is this.

To Ferdinand Martinez, canon of Lisbon, Paul the Physician wisheth health.

I AM very glad to hear of the familiarity you have with your most serene and magnificent king; and though I have very often discoursed concerning the short way there is from hence to the Indies, where the spice is produced, by sea, which I look upon to be shorter than that you take by the coast of Guinea; yet you now tell me that his highness would have me make out and demonstrate it, so as it may be understood and put in practice. Therefore, though I could better show it him with a globe in my hand, and make him

sensible of the figure of the world; yet I have resolved to render it more easy and intelligible, to show this way upon a chart, such as are used in navigation; and therefore I send one to his majesty, made and drawn with my own hand; wherein is set down the utmost bounds of the west, from Ireland in the north, to the farthest part of Guinea, with all the islands that lie in the way. Opposite to which western coast is described the beginning of the Indies, with the islands and places whither you may go, and how far you may bend from the north pole toward the equinoctial, and for how long a time; that is, how many leagues you may sail before you come to those places most fruitful in all sorts of spice, jewels, and precious stones. Do not wonder if I term that country where the spice grows west, that product being generally ascribed to the east; because those who shall sail westward will always find those places in the west; and they that travel by land eastward will ever find those places in the east. The strait lines that lie lengthways in the chart, show the distance there is from west to east; the others cross them, show the distance from north to south. I have also marked down in the said chart, several places in India, where ships might put in upon any storm, or contrary winds, or any other accident unforeseen.

Moreover to give you full information of all those places which you are very desirous to know; you must understand, that none but traders live or reside in all those islands, and that there is as great number of ships and seafaring people with merchandise, as in any other part of the world; particularly in a most noble port called *Zacton*, where there are every year a hundred large ships of pepper loaded and unloaded, besides many other ships that take in other spice.

This country is mighty populous, and there are many provinces and kingdoms, and innumerable cities under the dominion of a prince called the Kham, which name signifies, King of Kings; who for the most part resides in the province of Cathay. His predecessors were very desirous to have commerce and be in amity with Christians; and 200 years since, sent ambassadors to the Pope; desiring him to send them many learned men and doctors to teach them our faith; but by reason of some obstacles the ambassadors met with, they returned back, without coming to Rome.

Besides, there came an ambassador to Pope Eugenius IV. who told him the great friendship there was between those princes, their people and the Christians. I discoursed with him a long while upon the several matters of the grandeur of the royal structures, and of the greatness, length and breadth of their rivers. He told me many wonderful things of the multitude of towns and cities founded along the banks of the rivers; and that there were 200 cities upon one river only, with marble bridges over it, of a great length and breadth, and adorned with abundance of pillars. This country deserves as well as any other to be discovered; and there may not only be great profit made there, and many things of value found, but also gold, silver, all sorts of precious stones, and spices in abundance, which are not brought into our parts. And it is certain, that many wise men, philosophers, astrologers, and other persons skilled in all arts, and very ingenious, govern that mighty province, and command their armies.

From Lisbon directly westward, there are in the chart 26 spaces, each of which contains 250 miles, to the most noble and vast city of Quisay, which is 100 miles in compass, that is 35 leagues; in it there are ten marble bridges. The name signifies a heavenly city; of which wonderful things are reported, as to the ingenuity of the people, the buildings and the revenues. This space above mentioned is almost the third part of the globe. This city is in the province of Mango, bordering on that of Cathay, where the king for the most part resides.

From the island Antilla, which you call the seven cities, and of which you have some knowledge, to the most noble island of Cipango are ten spaces, which make 2500 miles, or 225 leagues; which island abounds in gold, pearls and precious stones; and you must understand, they cover their temples and palaces with plates of pure gold. So that for want of knowing the way, all these things are hidden and concealed, and yet may be gone to with safety.

Much more might be said, but having told you what is most material, and you being wise and judicious, I am satisfied there is nothing of it but what you understand, and therefore I will not be more prolix. Thus much may serve to satisfy your curiosity, it being as much as the shortness of time and my bu-

† Diego is the Spanish name of James, in Latin Jacobus, and in Portuguese, Jago. Cam is in Latin, Camus or Carus, and in Spanish, Cano; these different names are found in different authors.

business would permit me to say. So I remain most ready to satisfy and serve his highness to the utmost in all the commands he shall lay upon me.

FLORENCE, June 25, 1474.

LETTER II.

To Christopher Columbus, *Paul the Physician wisheth health.*

I RECEIVED your letters with the things you sent me, which I shall take as a great favor, and commend your noble and ardent desire of sailing from east to west, as it is marked out in the chart I sent you, which would demonstrate itself better in the form of a globe.

I am glad it is well understood, and that the voyage laid down is not only possible but true, certain, honorable, very advantageous, and most glorious among all Christians. You cannot be perfect in the knowledge of it, but by experience and practice, as I have had in great measure, and by the solid and true information of worthy and wise men, who have come from those parts to this court of Rome; and from merchants who have traded long in those parts and are persons of good reputation. So that when the said voyage is performed, it will be to powerful kingdoms, and to the most noble cities and provinces; rich and abounding in all things we stand in need of, particularly in all sorts of spice in great quantities, and store of jewels.

This will moreover be grateful to those kings and princes, who are very desirous to converse and trade with Christians of these our countries, whether it be for some of them to become Christians, or else to have communication with the wise and ingenious men of these parts, as well in point of religion, as in all sciences, because of the extraordinary account they have of the kingdoms and government of these parts.

For which reasons, and many more that might be alleged, I do not at all admire, that you who have a great heart, and all the Portuguese nation, which has ever had notable men in all undertakings, be eagerly bent upon performing this voyage.

AMERICUS VESPUTIUS.

AMERICUS VESPUTIUS.—His birth and education.—His scientific researches.—His account of his voyage to America.—The first account of America published by him.—The reason of this Continent being named America.—He has no claim to the discovery.

AMERICUS VESPUTIUS, or more properly Amerigo Vesputi, a Florentine gentleman, from whom America derives its name, was born March 9, 1451, of an ancient family. His father, who was an Italian merchant, brought him up in this business, and his profession led him to visit Spain and other countries. Being eminently skilful in all the sciences subservient to navigation, and possessing an enterprising spirit, he became desirous of seeing the new world, which Columbus had discovered in 1492. He accordingly entered as a merchant on board the small fleet of four ships, equipped by the merchants of Seville and sent out under the command of Ojeda. The enterprise was sanctioned by a royal license.

According to Amerigo's own account he sailed from Cadiz, May, 20, 1497, and returned to the same port October 15, 1498, having discovered the coast of Paria and passed as far as the gulf of Mexico. If this statement is correct, he saw the continent before Columbus; but its correctness has been disproved, and the voyage of Ojeda was not made until 1499, which Amerigo calls his second voyage, falsely representing that he himself had the command of six vessels. He sailed May 20, 1499, under the command of Ojeda, and proceeded to the Antilla islands, and thence to the coast of Guiana and Venezuela, and returned to Cadiz in Nov. 1500. After his return, Emanuel, king of Portugal, who was jealous of the success and glory of Spain, invited him to his kingdom, and gave him the command of three ships to make a third voyage of discovery. He sailed from Lisbon May 10, 1501, and ran down the coasts of Africa as far as Sierra Leone and the Coast of Angola, and then passed over to Brazil in South America, and continued his discoveries to the south as far as Patagonia. He then returned to Sierra Leone and the coast of Guinea, and entered again the port of Lisbon, September 7, 1502.

King Emanuel, highly gratified by his success, equipped for him six ships, with which he sailed on his fourth and last voyage, May 10, 1503. It was his object to discover a western passage to the Molucca islands. He passed the coasts of Africa, and entered the bay of All Saints in Brazil. Having provision for only 20 months, and being detained on the coast of Brazil by bad weather and contrary winds five months, he

formed the resolution of returning to Portugal, where he arrived June 14, 1504. As he carried home with him considerable quantities of the Brazil wood, and other articles of value, he was received with joy. It was soon after this period, that he wrote an account of his four voyages. The work was dedicated Rene II. Duke of Lorraine, who took the title of the king of Sicily, and who died Dec. 10, 1508. It was probably published about the year 1507, for in that year he went from Lisbon to Seville, and King Ferdinand appointed him to draw sea charts with the title of chief pilot. He died at the Island of Tercera in 1514, aged about 63 years, or agreeably to another account, at Seville, in 1512.

As he published the first book and chart, describing the new world, and as he claimed the honor of first discovering the continent, the new world has received from him the name of America. His pretensions however to this first discovery do not seem to be well supported against the claims of Columbus, to whom the honor is uniformly ascribed by the Spanish historians, and who first saw the continent in 1498. Herrera, who compiled his general history of America from the most authentic records, says, that Amerigo never made but two voyages, and those were with Ojeda in 1499 and 1501, and that his relation of his other voyages was proved to be a mere imposition. This charge needs to be confirmed by strong proof, for Amerigo's book was published within ten years of the period assigned for his first voyage, when the facts must have been fresh in the memories of thousands. Besides the improbability of his being guilty of falsifying dates, as he was accused, which arises from this circumstance, it is very possible, that the Spanish writers might have felt a national resentment against him for having deserted the service of Spain. But the evidence against the honesty of Amerigo is very convincing. Neither Martyr nor Benzoni, who were Italians, natives of the same country, and the former of whom was a contemporary, attribute to him the first discovery of the continent. Martyr published the first general history of the new world, and his epistles contain an account of all the remarkable events of his time. All the Spanish historians are against Amerigo. Herrera brings against him the testimony of Ojeda as given in a judicial inquiry. Fonseca, who gave Ojeda the license for his voyage, was not reinstated in the direction of Indian affairs until after the time, which Amerigo assigns for the commencement of his first voyage. Other circumstances might be mentioned; and the whole mass of evidence it is difficult to resist. The book of Amerigo was probably published about a year after the death of Columbus, when his pretensions could be advanced without the fear of refutation from that illustrious navigator. But however this controversy may be decided, it is well known, that the honor of first discovering the continent belongs neither to Columbus nor to Vesputi, even admitting the relation of the latter; but to the Cabots, who sailed from England. A life of Vesputi was published at Florence by Bandini, 1745, in which an attempt is made to support his pretensions.

The relation of his four voyages, which was first published about the year 1507, was republished in the *Novus Orbis*, fol. 1555. His letters were published after his death at Florence.

JOHN CABOT AND SEBASTIAN CABOT.

JOHN CABOT and his son Sebastian.—King Henry VII. grants John Cabot a commission.—He sails with his son on a voyage of discovery.—Appearance of land.—Description of it.—They return to England.—Sebastian sails on a voyage of discovery.

THE economical disposition of Henry VII. King of England, induced him to preserve tranquillity in his dominions, which greatly contributed to the increase of commerce and manufactures; and to bring thither merchants from all parts of Europe. The Lombards and the Venetians were remarkably numerous: the former of whom had a street in London appropriated to them and called by their name.

Among the Venetians resident there at that time was John Cabot, a man perfectly skilled in all the sciences requisite to form an accomplished mariner.—He had three sons, Lewis, Sebastian, and Sanctius, all of whom he educated in the same manner. Lewis and Sanctius became eminent men, and settled, the one at Genoa, the other at Venice. Of Sebastian a further account will be given.

The famous discovery made by Columbus caused great admiration and much discourse in the court of Henry, among the merchants of England. To find a way to India by the west, had long been a problem

with men of science as well as a desideratum in the mercantile interest. The way was then supposed to be opened; and the specimens of gold which Columbus had brought home, excited the warmest desire of pursuing that discovery.

Cabot, by his knowledge of the globe, supposed that a shorter way might be found from England to India, by the northwest. Having communicated his project to the king, it was favorably received; and on the fifth of March 1496, a commission was granted to "John Cabot, and his three sons, their heirs and deputies, giving them liberty to sail to all ports of east, west, and north, under the royal banners, and ensigns; to discover countries of the heathen unknown to Christians; to set up the king's banners there; to occupy and possess as his subjects, such places as they could subdue; giving them the rule and jurisdiction of the same, to be holden on condition of paying to the king, as often as they should arrive at Bristol (at which place only they were permitted to arrive,) in wares and merchandise, one fifth part of all their gains: with exemption from all customs and duties on such merchandise as should be brought from their discoveries."

After the granting of this commission, the king gave orders for fitting out two caravels for the purpose of the discovery. These were victualled at the public expense; and freighted by the merchants of London and Bristol, with coarse cloths and other articles of traffic. The whole company consisted of three hundred men.

With this equipment, in the beginning of May, 1497,* John Cabot and his son Sebastian sailed from Bristol towards the northwest, till they reached the latitude of 58°; where meeting with floating ice, and the weather being severely cold, they altered their course to the southwest; not expecting to find any land, till they should arrive at Cathay, the northern part of China, from whence they intended to pass southward to India.

On the 24th of June, very early in the morning, they were surprised with the sight of land; which, being the first that they had seen, they called *Prima Vista*. The description of it is given in these words. "The island which lieth out before the land, he called St. John, because it was discovered on the day of St. John, the Baptist. The inhabitants of this island wear beasts' skins. In their wars they use bows, arrows, pikes, darts, wooden cloths, and slings. The soil is barren in some places and yieldeth little fruit; but is full of white bears and stags, far greater than ours. It yieldeth plenty of fish, and those very great, as seals and salmon. There are soles above a yard in length; but especially there is great abundance of that kind of fish which the savages call *Bacalao*.—(Cod.) In the same island are hawks and eagles, as black as ravens; also partridges. The inhabitants had plenty of copper."

This land is generally supposed to be some part of the island of Newfoundland; and Dr. Foster thinks that the name, *Prima Vista*, was afterwards changed to *Bona Vista*, now the northern cape Trinity Bay, in latitude 48° 50'. Peter Martyr's account is, that Cabot called the land, *Bacalao*; and there is a small island off the south cape of Trinity Bay, which bears that name: Mr. Price, in his chronology (King Galvanus for an authority,) says, that the land discovered by Cabot was in latitude 45°. If this were true, the first discovery was made on the peninsula of Nova Scotia; and as they coasted the land northward, they must have gone into the gulf St. Lawrence, in pursuit of their northwest passage.

The best accounts of the voyage preserved by Hakluyt and Purchas, say nothing of the latitude of *Prima Vista*; but speak of their sailing northward after they had made the land, as far as 67°. Stowe, in his chronicle, says it was on the "north side of Terra de Labrador." This course must have carried them far up the strait which separates Greenland from the continent of America.

Finding the land still stretching to the northward, and the weather very cold in the month of July; the men became uneasy, and the commanders found it necessary to return to *Bacalao*. Having here refreshed themselves, they coasted the land southward till they came into the same latitude with the

* There is no good account of this voyage written by any contemporary author. It is therefore collected from several who have set down facts without much order or precision. To reconcile their contradictions, and deduce conclusions from what they have related, requires much trouble, and leaves an uncertainty with respect to particular circumstances, though the principal facts are well ascertained.

straits of Gibraltar 36°, according to some no farther than 38°; when their provisions falling short, they returned to England; bringing three of the savages as a present to the king. "They were clothed with the skins of beasts, and lived on raw flesh; but after two years, were seen in the king's court clothed like Englishmen, and could not be discerned from Englishmen."

Nothing more is said of John Cabot, the father; and some historians ascribe the whole of this discovery to Sebastian only; but at the time of this voyage he could not have been more than twenty years old, when though he might accompany his father, yet he was too young to undertake such an expedition himself. The voyage having produced no specimens of gold, and the king being engaged in a controversy with Scotland, no farther encouragement was given to the spirit of discovery.

After the king's death, Sebastian Cabot was invited to Spain, and was received in a respectful manner by King Ferdinand and Queen Isabella. In their service he sailed on a voyage of discovery to the southern parts of the New Continent; and having visited the coast of Brazil, entered a great river to which he gave the name of Rio de la Plata. He sailed up this river one hundred and twenty leagues; and found it divided into many branches; the shores of which were inhabited by numerous people.

After this he made other voyages, of which no particular memorials remain. He was honored by Ferdinand with a commission of Grand Pilot; and was one of the council of the Indies. His residence was in the city of Seville. His character was gentle, friendly and social. His employment was the drawing of charts; on which he delineated all the new discoveries made by himself and others. Peter Martyr speaks of him as a friend with whom he loved familiarly to converse.

In his advanced age, he returned to England, and resided at Bristol. By the favor of the Duke of Somerset, he was introduced to King Edward VI. who took great delight in his conversation, and settled on him a pension of 166*l.* 13*s.* 4*d.* per annum for life. He was appointed governor of a company of merchants, associated for the purpose of making discoveries of unknown countries. This is a proof of the great esteem in which he was held as a man of knowledge and experienced in his profession. He had a strong persuasion that a passage might be found to China by the northeast, and warmly patronized the attempt made by Sir Hugh Willoughby in 1553 to explore the northern seas for that purpose. There is still extant a complete set of instructions drawn and subscribed by Cabot, for the direction of the voyage to Cathay, which affords the clearest proof of his sagacity and penetration. But though this, as well as all other attempts of the kind, proved ineffectual to the principal end in view, yet it was the means of opening a trade with Russia, which proved very beneficial to the company.

The last account which we have with Sebastian is, that in 1556, when a company were sending out a vessel called the *Search* thrift, under the command of Stephen Burrough, for discovery; the Governor made a visit on board; which is thus related in the journal of the voyage as preserved by Hakluyt.

"The 27th of April, being Monday, the Right Worshipful Sebastian Cabot came aboard our pinnace, at Gravesend; accompanied with divers gentlemen and gentlewomen; who, after they had viewed our pinnace, and tasted of such cheer as we could make them, went ashore, giving to our mariners right liberal rewards. The good old gentleman Master Cabot gave to the poor most liberal alms, wishing them to pray for the good fortune and prosperous success of the *Search* thrift, our pinnace. And then at the sign of St. Christopher, he and his friends banqueted; and made me and them that were in the company great cheer; and for very joy that he had to see the towardness of our intended discovery, he entered into the dance himself, among the rest of the young and lusty company; which being ended he and his friends departed, most gently commending us to the governance of Almighty God."

According to the calculation of his age by Dr Campbell, he must at that time have been about eighty years old.

He was one of the most extraordinary men of the age in which he lived. By his ingenuity and industry, he enlarged the bounds of science and promoted the interest of the English nation. Dr. Campbell supposes it was he who first took notice of the variation of the magnetic needle. It had been observed in the

first voyage of Columbus to the West Indies; though probably Cabot might not have known it, till after he had made the same discovery.

JAMES CARTIER.

JAMES CARTIER.—He sails on a voyage of discovery.—Comes in sight of land.—Account of his voyage.—Chaleur Bay discovered.—His interview with the natives.—Donacona.—The Indian Chief.—His stratagem.—Reception of Cartier and his company by the Indians.—Character, habits, and customs of the Indians.—Cartier makes further discoveries.—Raging of the scurvy in his company.—Cartier takes possession of the country.—He returns to France with two of the natives.—Cartier again sails.—The natives inquire after their brethren.—Kindness of the Indians.

Though the English did not prosecute the discovery made by the Cabots, nor avail themselves of the only advantages which it could have afforded them; yet their neighbours of Brittany, Normandy and Biscay wisely pursued the track of those adventurers and took vast quantities of cod on the banks of Newfoundland.

In 1521, John Verazzani, a Florentine, in the service of France, ranged the coast of the new continent from Florida to Newfoundland, and gave it the name of *New France*. In a subsequent voyage he was cut to pieces and devoured by the savages.

It is remarkable that the three great European kingdoms, Spain, England and France, made use of three Italians to conduct their discoveries; Columbus a Genoese; Cabot, a Venetian; and Verazzani, a Florentine. This is a proof that among the Italians, there were at that time persons superior in maritime knowledge to the other nations of Europe; though the penurious spirit of those republics, their mutual jealousy and petty wars, made them overlook the benefits resulting from extensive enterprises, and leave the vast regions of the new world to be occupied by others.

The voyages of Verazzani having produced no addition to the revenue of France, all further attempts to perfect his discoveries were laid aside; but the fishery being found conducive to the commercial interest, it was at length conceived; that a plantation in the neighborhood of the banks might be advantageous. This being represented to King Francis I. by Chabot the Admiral, JAMES CARTIER † of St. Malo, was commissioned to explore the country, with a view to find a place for a colony.

On the 20th of April 1534, he sailed from St. Malo with two ships of sixty tons, and 122 men; and on the tenth of May came in sight of Bonavista, on the island of Newfoundland. But the ice which lay along the shore obliged him to go southward; and he entered a harbor to which he gave the name of St. Catharine; where he waited for fair weather, and fitted his boats.

As soon as the season would permit he sailed northward, and examined several harbors and islands, on the coast of Newfoundland; in one of which he found such a quantity of birds, that in half an hour, two boats were loaded with them; and after they had eaten as many as they could, five or six barrels full were salted for each ship. This place was called Bird Island.

Having passed Cape de Grat, the northern extremity of the land; he entered the straits of Bellisle and visited several harbors on the opposite coast of Labrador, one of which he called Cartier's Sound. The harbor is described as one of the best in the world; but the land is stigmatized as the place to which Cain was banished; no vegetation being produced among the rocks, but thorns and moss. Yet, bad as it was, there were inhabitants in it, who lived by catching seals, and seemed to be a wandering tribe.

In circumnavigating the great island of Newfoundland, they found the weather in general cold; but when they had crossed the gulf in a southwesterly direction to the continent, they came into a deep bay, where the climate was so warm, that they named it Baye de Chaleur, or the Bay of Heat. Here were several kinds of wild berries, roses and meadows of grass. In the fresh waters they caught salmon in great plenty.

Having searched in vain for a passage through the bay, they quitted it, and sailed along the coast eastward, till they came to the smaller bay of Gaspe; where they sought shelter from a tempest, and were detained twelve days in the month of July. In this place Cartier performed the ceremony of taking possession for the King of France. A cross of thirty feet high was erected on a point of land. On this cross was suspended a shield, with the arms of France and

* It is supposed that the island of Cape Breton took its name from the Bretons, the fishermen of Brittany.

† His name is sometimes written Quartier.

the words *Vive le Roy de France*. Before it, the people knelt, uncovered; with their hands extended, and their eyes lifted toward heaven. The natives, who were present, beheld the ceremony at first with silent admiration; but after a while, an old man, clad in a bear's skin, made signs to them that the land was his, and that they should not have it, without his leave. They then informed him by signs, that the cross was intended only as a mark of direction, by which they might again find the port; and they promised to return the next year, and to bring iron and other commodities.

They thought it proper however to conciliate the old man's good will, by entertaining him on board the ship and making him several presents; by which means, they so prevailed on him, that he permitted Cartier to carry two of his sons, young men, to France on the security of a promise that he would bring them back, at his return the next spring.

From Gaspe, he sailed so far into the Great River afterward called St. Lawrence, as to discover land on the opposite side; but the weather being boisterous, and the current setting against him, he thought it best to return to Newfoundland, and then to France; where he arrived safe in the harbor of St. Malo, on the fifth of September.

The discoveries made in this voyage excited farther curiosity; and the vice Admiral Melleray represented Cartier's merits to the King, so favourably as to procure for him a more ample equipment. Three ships, one of 120, one of 60 and one of 40 tons, were destined to perform another voyage, in the ensuing spring; and several young men of distinction entered as volunteers, to seek adventures in the new world. When they were ready to sail, the whole company, after the example of Columbus, went in procession to church, on Whitsunday, where the Bishop of St. Malo pronounced his blessing on them. They sailed on the 19th of May 1535. Meeting with tempestuous weather, the ships were separated; and did not join again, till Cartier in the largest ship arrived at Bird Island; where he again filled his boats with fowls, and on the 26th of July was joined by the other vessels.

From Bird Island they pursued the same course as in the preceding summer; and having come into the gulf on the western side of Newfoundland, gave it the name of St. Lawrence. Here they saw abundance of whales. Passing between the island of Assumption (since called Anticosti) and the northern shore, they sailed up the great river, till they came to a branch on the northern side, which the young natives who were on board called Saguenay; the main river they told him would carry him to Hochelega, the capital of the whole country.

After spending sometime in exploring the northern coast, to find an opening to the northward; in the beginning of September, he sailed up the river, and discovered several islands; one of which, from the multitude of filberts, he called Coudres; and another, from the vast quantity of grapes, he named Bacchus, (now Orleans.) This island was full of inhabitants who subsisted by fishing.

When the ships had come to anchor between the N. W. side of the island and the main, Cartier went on shore with his two young Savages. The people of the country were at first afraid of them; but hearing the youths speak to them in their own language, they became sociable, and brought eels and other fish, with a quantity of Indian corn in ears, for the refreshment of their new guests; in return for which, they were presented with such European baubles as were pleasing to them.

The next day, Donacona, the prince of the place, came to visit them, attended by twelve boats; but keeping ten of them at a distance, he approached with two only, containing sixteen men. In the true spirit of hospitality, he made a speech, accompanied with significant gestures, welcoming the French to his country and offering his service to them. The young savages, Tinguagni and Domagnia answered him, reporting all which they had seen in France, at which he appeared to be pleased. Then approaching the Captain, who held out his hand, he kissed it, and laid it round his own neck, in token of friendship. Cartier, on his part, entertained Donacona with bread and wine, and they parted mutually pleased.

The next day Cartier went up in his boat to find a harbor for his ships; the season being so far advanced that it became necessary to secure them. At the west end of the isle of Bacchus, he found "a goodly and pleasant sound, where is a little river

and haven; about three fathoms deep at high water." To this he gave the name of St. Croix, and determined there to lay up his ships.

Near this place was a village called Stadacona, of which Donacona was the lord. It was environed with forest trees, some of which bore fruit; and under the trees, was a growth of wild hemp. As Cartier was returning to his ships, he had another specimen of the hospitable manners of the natives. A company of people, of both sexes, met him on the shore of the little river, singing and dancing up to their knees in water. In return for their courtesy, he gave them knives and beads; and they continued their music till he was beyond hearing it.

When Cartier had brought his ships to the harbor and secured them, he intimated his intention to pass in his boats up the river to Hochelaga. Donacona was loth to part with him; and invented several artifices to prevent his going thither. Among others, he contrived to dress three of his men in black and white skins, with horns on their heads, and their faces besmeared with coal, to make them resemble infernal spirits. They were put into a canoe and passed to the ships; brandishing their horns and making an unintelligible harrangue. Donacona, with his people, pursued and took them, on which they fell down as if dead. They were carried ashore into the woods, and all the savages followed them. A long discourse ensued, and the conclusion of the farce was, that these demons had brought news from the god of Hochelaga, that his country was so full of snow and ice, that whoever should adventure thither would perish with the cold. The artifice afforded diversion to the French, but was too thin to deceive them. Cartier determined to proceed; and on the nineteenth of September, with his pinnace and two boats, began his voyage up the river to Hochelaga.

Among the woods on the margin of the river were many vines loaded with white grapes, than which nothing could be a more welcome sight to Frenchmen, though the fruit was not so delicious as they had been used to taste in their own country. Along the banks were many huts of the natives; who made signs of joy as they passed; presented them with fish; piloted them through narrow channels; carried them ashore on their backs, and helped them to get off their boats when aground. Some presented their children to them, and such as were of proper age were accepted.

The water at that time of the year being low, their passage was rendered difficult; but by the friendly assistance of the natives they surmounted the obstructions. On the 25th of September they passed the rapids between the islands in the upper part of the lake Angouleme, (now called St. Peter's) and on the second of October they arrived at the island of Hochelaga; where they had been expected, and preparations were made to give them a welcome reception. About a thousand persons came to meet them, singing and dancing, the men on one side, the women on the other, and the children in a distinct body. Presents of fish and other victuals were brought, and in return were given knives, beads and other trinkets. The Frenchmen lodged the first night in their boats, and the natives watched on the shore, dancing round their fires during the whole night.

The next morning Cartier, with twenty-five of his company, went to visit the town, and were met on the way by a person of distinction, who bade them welcome. To him they gave two hatchets and two knives, and hung over his neck a cross which they taught him to kiss. As they proceeded, they passed through groves of oak, from which acorns were fallen and lay thick on the ground. After this they came to fields of ripe corn, some of which was gathered. In the midst of these fields was situate the town of Hochelaga.

It was of a round form, encompassed with three lines of palisades, through which was one entrance, well secured with stakes and bars. On the inside was a rampart of timber, to which were ascents by ladders, and heaps of stones were laid in proper places for defence. In the town were about fifty long huts built with stakes and covered with bark. In the middle of each hut was a fire, round which were lodging places, floored with bark and covered with skins. In the upper part was a scaffold on which they dried and preserved their corn. To prepare it for eating, they pounded it in wooden mortars, and having mixed it with water, baked it on hot stones. Besides corn they had beans, squashes and pumpkins. They dried their fish and preserved them in troughs. These people lived chiefly

by tillage and fishing, and seldom went far from home. Those on the lower parts of the river were more given to hunting, and considered the Lord of Hochelaga as their sovereign, to whom they paid tribute.

When the new guests were conducted to an open square in the centre of the town; the females came to them, rubbing their hands and faces, weeping with joy at their arrival, and bringing their children to be touched by the strangers. They spread mats for them on the ground, whilst the men seated themselves in a large circle on the outside. The king was then brought into a litter on the shoulders of ten men, and placed on a mat next to the French Captain. He was about fifty years old, and had no mark of distinction but a coronet made of porcupine's quills dyed red; which he took off and gave to the Captain, requesting him to rub his arms and legs which were trembling with the palsy. Several persons, blind, lame and withered with age, were also brought to be touched; as if they supposed that their new guests were messengers from heaven invested with a power of healing diseases. Cartier gratified them as well as he could, by laying his hands on them and repeating some devotional passages from a service book, which he had in his pocket; accompanying his ejaculations with significant gestures, and lifting up his eyes to heaven. The natives attentively observed and imitated all his motions.

Having performed this ceremony, he desired the men, women and children to arrange themselves in separate bodies. To the men he gave hatchets, to the women beads, and to the children rings. He then ordered his drums and trumpets to sound, which highly pleased the company and set them to dancing.

Being desirous of ascending the hill, under which the town was built, the natives conducted them to the summit; where they were entertained with a most extensive and beautiful prospect of mountains, woods, islands and waters. They observed the course of the river above, and some falls of water in it; and the natives informed them that they might sail on it for three months; that it ran through two or three great lakes, beyond which was a sea of fresh water, to which they knew of no bounds; and that on the other side of the mountains there was another river which ran in a contrary direction to the southwest, through a country full of delicious fruits, and free from snow and ice; that there was found such metal as the Captain's silver whistle and the haft of the dagger belonging to one of the company which was gilt with gold. Being shown some copper, they pointed to the northward, and said it came from Saguenay. To this hill Cartier gave the name of *Montreal*, which it has ever since retained.

The visit being finished, the natives accompanied the French to their boats, carrying such as were weary on their shoulders. They were loth to part with their guests, and followed them along the shore of the river to a considerable distance.

On the 4th of October, Cartier and his company departed from Hochelaga. In passing down the river, they erected a cross on the point of an island, which, with three others, lay in the mouth of a shallow river, on the north side, called Pouetz. On the eleventh they arrived at the Port de St. Croix, and found that their companions had enclosed the ships with a palisade and rampart, on which they had mounted cannon.

The next day Donacona invited them to his residence, where they were entertained with the usual festivity and made the customary presents. They observed that these people used the leaves of an herb (tobacco) which they preserved in pouches made of skins and smoked in stone pipes. It was very offensive to the French; but the natives valued it as contributing much to the preservation of their health. Their houses appeared to be well supplied with provisions. Among other things which were new to the French, they observed the scalps of five men, spread and dried like parchment. These were taken from their enemies the Toudamani, who came from the south, and were continually at war with them.

Being determined to spend the winter among those friendly people, they traded with them for the provisions which they could spare, and the river supplied them with fish till it was hard frozen.

In December the scurvy began to make its appearance among the natives, and Cartier prohibited all intercourse with them; but it was not long before his own men were taken with it. It raged with uncontrolled violence for above two months, and by the middle of February, out of one hundred and ten persons, fifty were sick at once, and eight or ten had died.

In this extremity Cartier appointed a day of solemn

humiliation and prayer. A crucifix was placed on a tree, and as many as were able to walk, went in procession, through the ice and snow, singing the seven penitential psalms and performing other devotional exercises. At the close of the solemnity Cartier made a vow, that "if it would please God to permit him to return to France, he would go in pilgrimage to our Lady of Roquemadon." But it was necessary to watch as well as pray. To prevent the natives from knowing their weak and defenceless state, he obliged all who were able, to make as much noise as possible with axes and hammers; and told the natives that his men were all busily employed, and that he would not suffer any of them to go from the ships till their work was done. The ships were fast frozen up from the middle of November to the middle of March: the snow was four feet deep, and higher than the sides of the ships above the ice. The severity of the winter exceeded all which they had ever experienced; the scurvy still raged; twenty-five men had fallen victims to it, and the others were so weak and low in spirits, that they despaired of ever seeing their native country.

In the depth of this distress and despondency, Cartier, who had escaped the disease, in walking one day on the ice, met some of the natives, among whom was Domagaia, one of the young men who had been with him to France and who then resided with his countrymen at Stadacona. He had been sick with the scurvy, his sinews had been shrunk and his knees swollen, his teeth loose, and his gums rotten; but he was then recovered, and told Cartier of a certain tree; the leaves and bark of which he had used as a remedy. Cartier expressed his wish to see the tree; telling him that one of his people had been affected with the same disorder. Two women were immediately dispatched, who brought ten or twelve branches, and showed him how to prepare the decoction; which was thus, "to boil the bark and the leaves; to drink of the liquor every other day; and to put the dregs on the legs of the sick."

This remedy presently came into use, on board the ships; and its good effects were so surprising, that within one week they were completely healed of the scurvy; and some who had venereal complaints of long standing were also cured by the same means.

The severity of the winter having continued four months without intermission, at the return of the sun the season became milder, and in April the ice began to break up. On the third of May, Cartier took possession of the country by erecting a cross, thirty-five feet high, on which was hung a shield, bearing the arms of France, with this inscription: FRANCISCUS PRIMUS, DEI GRATIA, FRANCORUM REX, REGNAT.

The same day being a day of festivity, the two young savages, Taignoagni and Donagaia, with Donacona the chief of the place, came on board the ships, and were partly prevailed on and partly constrained to accompany Cartier to France. A handsome present was made to the family of Donacona, but it was with great reluctance that his friends parted with him; though Cartier promised to bring him again at the end of twelve months. On the sixth of May they sailed from the Port of St. Croix; and having touched at St. Peter's in Newfoundland, they arrived at St. Malo in France the sixth of July, 1536.

Whether Cartier performed his vow to God, the history does not tell us; certain it is, however, that he did not perform his promise to his passengers. The zeal for adventures of this kind began to abate. Neither gold nor silver were carried home. The advantages of the fur trade were not fully understood; and the prospect of benefit from cultivation in the short summer of that cold climate, was greatly overbalanced, by the length and severity of a Canadian winter. The natives had been so often told of the necessity of baptism in order to salvation, that on their arrival in France, they were at their own request baptised; but neither of them lived to see their native land again.

The report which Cartier brought home, of the fine country beyond the Lakes, had however made such an impression on the minds of some, that, at the end of four years, another expedition was projected. Francis de la Roche, Lord of Roberval, was commissioned by the King as his Lieutenant,

* This tree was called by the natives, *Ameda* or *Hameda*.—Mr. Hakluyt supposes it to have been the *Sassafras*; but as the leaves were used with the bark, in the winter, it must have been an evergreen. The dregs of the bark were also applied to the sore legs of the patients. From these circumstances I am inclined to think that it was the *prunus* (pinus canadensis) which is used in the same manner by the Indians, and such as have learned of them. Spruce beer is well known to be a powerful anti-scurbutic; and the bark of this and of the white pine serves as a cataplasm for wounds and sores.

Governor in Canada and Hockelaga; and Cartier was appointed his pilot, with the command of five ships. When they were ready to sail, Roberval had not finished his preparations, and was therefore detained. The King's orders to Cartier being positive, he sailed from St. Malo on the 23d of May 1540.

The winds were adverse and the voyage tedious. The ships were scattered, and did not arrive at the place of their destination till the 23d of August; when they came to the port of St. Croix in the river of Canada.

The first inquiry made by the natives was for their countrymen who had been carried away. The answer was, that Donacona was dead, and that the others had become great Lords, were married in France, and refused to return. Neither sorrow nor resentment were shown on this occasion; but a secret jealousy, which had been long working, received strength, from an answer so liable to suspicion.

The history of this voyage being imperfect, it is not possible to say, in what particular manner this jealousy operated. Cartier made another excursion, up the river; and pitched on a place about four leagues above St. Croix to lay up three of his vessels for the winter. The other two he sent back to France, to inform the King of what they had done; and that Roberval had not arrived.

At the new harbour, which he had chosen for his ships, was a small river, running in a serpentine course to the south. On the eastern side of its entrance was a high and steep cliff; on the top of which, they built a fort and called it Charlebourg. Below, the ships were drawn up and fortified, as they had been in the former winter which he spent here. Not far from the fort were some rocks containing chrystals; which they denominated diamonds; and on the shore were picked up certain specks of a yellow substance, which their imaginations refined into gold. Iron ore was found in abundance; and a kind of black slate, with veins of an apparent metallic substance.

In what manner they passed the winter, the defective accounts which we have do not inform us. In the spring of the following year, Cartier and his company having heard nothing of Roberval; and concluding that they were abandoned by their friends and exposed to perish in a climate the most severe, and among people whose conduct toward them was totally changed, determined to return to France. Accordingly having set sail, at the breaking up of the ice, they arrived in the harbor of St. John's in Newfoundland, sometime in June; where they met Roberval, who, with three ships and two hundred persons, male and female, had sailed from Rochelle in April; and were on their way to establish a colony in Canada. Cartier went on board Roberval's ship, and showed him the diamonds and gold which he had found; but told him that the hostile disposition of the natives had obliged him to quit the country; which however he represented to him as capable of profitable cultivation. Roberval ordered him to return to Canada; but Cartier privately sailed out of the harbor in the night, and pursued his voyage to France.

Mortified and disappointed, Roberval continued some time longer at St. John's before he proceeded, and about the end of July arrived at the place which Cartier had quitted. There he erected a fort on a commanding eminence, and another at its foot; in which were deposited all the provision, ammunition, artillery, implements of husbandry, and other materials for the intended colony.

In September, two vessels were sent back to France, to carry specimens of chrystal, and fetch provisions for the next year; the stores which they had brought being much reduced. By the help of the fish which they took in the river, and the game which they procured from the savages; and by well husbanding their provisions, they lingered out a tedious winter, having suffered much from the scurvy, of which about fifty of them died. In addition to this distress, Roberval exercised such severity in his government, that one man was hanged, several were laid in irons, and some of both sexes underwent the discipline of the whip.

In April the ice began to break up; and on the fifth of June he proceeded up the river; leaving De Royez, his Lieutenant, to command in his absence, with orders to embark for France, if he should not return by the middle of July.

As the account of the expedition ends here, we can only remark that the colony was broken up; and no farther attempt was made by the French to establish themselves in Canada, till after the expiration of half

a century. The last account of Roberval is that, in 1519, he sailed with his brother on some voyage of discovery, and never returned.

In this first visit, which the natives of Canada received from the Europeans, we have a striking instance of their primitive manners. Suspecting no danger, and influenced by no fear, they embraced the stranger with unaffected joy. Their huts were open to receive him, their fires and furs to give warmth and rest to his weary limbs; their food was shared with him or given in exchange for his trifles; they were ready with their simple medicines to heal his diseases and his wounds; they would wade through rivers and climb rocks and mountains to guide him in his way, and they would remember and requite his kindness more than it deserved.

Unhappily for them they set too high a value on their new guest. Imagining him to be of a heavenly origin, they were extravagant and ungarded in their first attachment, and from some specimens of his superiority, obvious to their senses, they expected more than ought ever to be expected from beings of the same species. But when the mistake was discovered, and the stranger whom they adored proved to be no more than human, having the same inferior desires and passions with themselves; especially when they found their confidence misplaced and their generous friendship ill requited; then the rage of jealousy extinguished the virtue of benevolence; and they struggled to rid themselves of him, as an enemy, whom they had received into their bosom as a friend.

On the other hand, it was too common for the European adventurer to regard the man of nature as an inferior being; and whilst he availed himself of his strength and experience, to abuse his confidence, and repay his kindness with insult and injury; to stigmatize him as a heathen and a savage, and to bestow on him the epithets of deceitful, treacherous, and cruel; though he himself had first set the example of these detestable vices.

FERDINANDO DE SOTO.

FERDINANDO DE SOTO—His expedition—His adventures—He penetrates into the interior of the country—His difficulty with the Indians—Encounter with the Indians in which many are killed—His death.

The travels and transactions of this adventurer are of so little importance in the history of America, that I should not have thought them worthy of notice; had it not been, that some gentlemen of ingenuity and learning have had recourse to the expedition of this Spaniard as a means of solving the question respecting the mounds and fortifications, of a regular construction, which within a few years past have been discovered in the thickest shades of the American forest.* Though the opinion seems to have been candidly given up by one of the writers who attempted to defend it; yet as what was published on the subject may have impressed some persons with an idea that these works were of European fabric, I shall briefly relate the history of Soto's march; and the difficulties which attend the supposition that he was the builder of any of these fortifications.

After the conquest of Mexico and Peru, in the beginning of the sixteenth century, the inextinguishable thirst for gold, which had seized the Spanish adventurers, prompted them to search for that bewitching metal wherever there could be any prospect of finding it. Three unsuccessful attempts had been made in Florida, by Ponce, Gomez, and Narvaez; but because these adventurers did not penetrate the interior parts of the continent, FERDINANDO DE SOTO, Governor of Cuba, who had been a companion of the Pizarros in their Peruvian expedition, and had there amassed much wealth, projected a march into Florida, of which country he had the title of Adelantado, or President. He sailed from the port of Havannah, May 18, 1539, with nine vessels, six hundred men,† two hundred and thirteen horses, and a herd of swine, and arrived on the 30th of the same month in the bay of Espiritu Santo, on the western coast of the peninsula of Florida.

Being a soldier of fortune and determined on conquest, he immediately pitched his camp and secured it. A foraging party met with a few Indians who resisted

them; two were killed, the others escaped, and reported to their countrymen that the warriors of fire had invaded their territories; upon which the smaller towns were deserted and the natives hid in the woods.

Having met with a Spaniard of the party of Narvaez, who had been wrecked on the coast, and had been twelve years a captive with the Indians, Soto made use of him as a messenger to them to inquire for gold and silver; and wherever he could receive any information, respecting these precious metals, thither he directed his march.

His manner of marching was this; The horsemen carried bags of corn and other provisions; the footmen marched by the side of the horses, and the swine were driven before them. When they first landed they had thirteen female swine, which in two years increased to several hundreds; the warmth of the climate being favorable to their propagation, and, the forests yielding them a plenty of food.

The first summer and winter were spent in the peninsula of Florida, not far from the bay of Apalache; and in the beginning of the following spring, having sent back his vessels to Cuba for supplies, and left a part of his men at the port, where he expected the ships to return, he marched towards the north and east, in search of a place called Yupaba, where he had been informed there was gold.

In this march he crossed the river Altamaha, and probably the Ogechee, and came, as he was informed, within two days' journey of the bay of St. Helena, where the Spaniards had been several years before. In all this march he staid not more than a week in any one place.

He then set his face northward, and having passed a hilly country, came to a district called Chalaque, which is supposed to be the country now called Cherokee, on the upper branches of the river Savannah. Thence he turned westward, in search of a place called Chiaha, and in this route he crossed the Allegany ridge, and came to Chiaha, where his horses and men being excessively fatigued, he rested thirty days. The horses fed in a meadow, and the people lay under the trees, the weather being very hot, and the natives in peace. This was in the months of May and June. During their abode there they heard of a country called Chisca, where was copper and another metal of the same color. This country lay northward, and a party was sent with Indian guides to view it. Their report was, that the mountains were impassable, and Soto did not attempt to proceed any farther in that direction.

From a careful inspection of the maps in the American Atlas, I am inclined to think that the place where Soto crossed the mountains was within the thirty-fifth degree of latitude. In Delisle's map, a village called Canasaga is laid down on the N. W. side of the Allegany, or (as it is sometimes called) the Appalachian ridge of mountains, in that latitude; and Chiaha is said in Soto's journal to be five days westward from Canasaga.

To ascertain the situation of Chiaha, we must observe that it is said to be subject to the Lord of Cosa, which is situate on an eastern branch of the Mobile; and Soto's sick men came down the river from Chiaha in boats. This river could be none but a branch of the Mobile; and his course was then turned toward the south. In this march he passed through Alabama, Tallase, Tascalusa, names which are still known and marked on the maps, till he came to the town of Mavilla, which the French pronounce Mouville and Mabilie. It was then a walled town, but the walls were of wood. The inhabitants had conceived a disgust to the Spaniards, which was augmented by an outrage committed on one of their chiefs, and finally broke out in a severe conflict, in which two thousand of the innocent natives were slain, and many of the Spaniards killed and wounded, and the town was burnt. This was in the latter end of October.

It is probable that Soto intended to pass the winter in the neighborhood of that village, if he could have kept on friendly terms with the Indians; for there he could have had a communication with Cuba. There he heard that the vessels which he had sent to Cuba for supplies were arrived at Ochus (Pensacola,) where he agreed to meet them; but he kept this information secret, because he had not yet made any discoveries which his Spanish friends would think worthy of regard. The country about him was populous and hostile, and, being void of gold or silver, was not an object for him to possess at the risk of losing his army, of which above an hundred had already perished. He therefore, after staying twenty-eight days for the recovery of his wounded, determined on a retreat.

* If the reader wishes to see a particular investigation of this hypothesis, he may consult the American Magazine, printed at New-York, for December 1787, January and February 1788, and some subsequent numbers; compared with the Columbian Magazine, printed at Philadelphia, for September and November 1788.

† In Prince's Chronology it is said that Soto had 900 men, but he quotes Purchas for his authority, in whose book the number is "six hundred."

In this retreat it has been supposed that he penetrated northward, beyond the Ohio. The truth is, that he began his march from Mavilla, a village near the mouth of the Mobile, on the 18th of November, and on the 17th of December arrived at Chicaca, an Indian village of twenty houses, where they remained till the next April.

The distance, the time, the nature of the country, the course and manner of the march, and the name of the village, all concur to determine this winter station of Soto to be a village of the *Chickasaw* Indians, situate on the upper part of the Yasou, a branch of the Mississippi, about eighty leagues northwestward from Mobile, and not less than one hundred and forty leagues southwestward from the Muskogum, where the great fortifications, which gave rise to this inquiry are found. From *Chicaca*, in the spring, he went westward, and crossed a river within the thirty-fourth degree of latitude, which he called Rio Grande, and which is now known to be the Mississippi.

On the western side of the Mississippi, after rambling all summer, he spent the next winter, at a place called Autiamque, where he enclosed his camp with a wall of timber, the work of three days only. Within this enclosure he lodged safely during three months; and in the succeeding spring, the extreme fatigue and anxiety which he had suffered, threw him into a fever, of which he died, May 21, 1542, at Guacoya. To prevent his death from being known to the Indians, his body was sunk in the middle of a river.

His Lieutenant, Louis de Moscoso, continued to ramble on the western side of the Mississippi, till the next summer; when worn with fatigue, disappointment, and loss of men, he built seven boats, called brigantines, on the Mississippi, in which, the shattered remnants, consisting of three hundred and eleven, returned to Cuba, in September, 1543.

The place where Soto died is said to have been on the bank of the Red river, a western branch of the Mississippi, in lat. 31°. The place where the remnant of his army built their vessels and embarked for Cuba, is called in the journal *Minoya*. They were seventeen days in sailing down the river, and they computed the distance to be two hundred and fifty leagues.*

From this account, faithfully abridged from Purchas and compared with the best maps, I am fully persuaded that the whole country through which Soto travelled on the eastern side of the Mississippi is comprehended within Florida, Georgia and South Carolina; and that he never went farther northward than the 35th degree of latitude, which is distant two degrees southward from any part of the Ohio. The conclusion then is, that he could not have been the builder of those fortifications still remaining in that part of the continent which lies N. W. of the Ohio. Nor indeed can any works which he erected for the security of his camp be subsisting at this time; for the best of them were made of wood, and were intended to cover his men and protect his horses and swine only during one winter.

The works which have so much excited curiosity and conjecture, are far more numerous, extensive and durable. They are found in various and distant places, in the interior part of the continent, on both sides of the Mississippi; on the Ohio and its branches; on James and Potomack rivers in Virginia; in the country of the Six Nations, and on the shores of Lake Erie; where they are exceedingly numerous.

The most obvious mode of solving the question respecting them, is by inquiry of the present natives.—But the structures are too ancient for their tradition; the oldest and wisest men know nothing of their original. The form and materials of these works, indicate the existence of a race of men superior to the present race, in improvement, in design, and in that patience which must have accompanied the labor of erecting them.

Trees which have been found growing on them have been cut down, and from indubitable marks, are known to have been upwards of three hundred years old; nor were these the first growth upon them.

The mounds and ramparts are constructed of earth, and have acquired a firmness and solidity, which render it probable that they are the work of some remote age and some other people, who had different ideas of convenience and were better acquainted with the arts of defence; and in fact were much more numerous than the ancestry of those natives, of whom we or our fathers have had any knowledge. It is to be

* Mr. Prince, in his chronology, says 400, in figures; but Purchas, from whom he quotes, says "two hundred and fifty."

hoped that the persons who now occupy and are cultivating the lands where these singular buildings are found, will preserve, as far as they are able, some at least of these monuments of unknown ages; that as they have long resisted the ravages of time, and may possibly baffle the researches of the present generation, they may subsist unimpaired as subjects of speculation to our posterity.

HUMPHREY GILBERT.

Master Hore sails on a voyage of discovery—They get reduced—They devour one another—Sizore of a French vessel with provision by the English—HUMPHREY GILBERT—He obtains a commission from Queen Elizabeth—He sails and is overtaken by a storm—Is obliged to put back—His difficulties—He again sails with five ships and arrives in America—His reception—He takes possession in the name of the Queen—He establishes laws—He sails on his return—Loss of the *Delight*—Loss of the vessel with Gilbert on board.

AFTER the discovery of Newfoundland by the Cabots, the passion for adventure, among the English, met with many severe checks. But whilst one adventurer after another was returning home from an unsuccessful voyage, intended to penetrate unknown seas to China; foreigners were reaping the benefit of their partial discoveries.

Within the first forty years we have no account of any attempt made by the English to prosecute the discovery of the new continent, except that in 1536, two vessels containing one hundred and twenty persons, of whom thirty were gentlemen of education and character, under the conduct of "Master Hore of London" made a voyage to Newfoundland; but they were so ill provided, and knew so little of the nature of the country, that they suffered the extremity of famine. For, notwithstanding the immense quantities of fish and fowl to be found on those coasts; they were reduced so low as to watch the nests of birds of prey and rob them of the fish which they brought to feed their young. To collect this scanty supply, with a mixture of roots and herbs, the men dispersed themselves in the woods, until several of them were missing. It was at first thought they were devoured by wild beasts; but it was found that they met with a more tragical fate; the stronger having killed the weaker and feasted on their flesh. In the midst of this distress, a French ship arriving with a supply of provisions, they took her by force, and returned to England; leaving to the Frenchmen their own smaller vessels, and dividing the provision between them. Complaint of this act of piracy was made to King Henry VIII; who knowing the miseries of the unfortunate crew, instead of punishing them, paid the damage out of his own coffers.

Within the succeeding forty years, the English had begun to make some advantage by the fishery; and in 1578, the state of it is thus described. "There are about one hundred sail of Spaniards who come to take cod; who make it all wet, and dry it when they come home; besides twenty or thirty more, who come from Biscay to kill whales for train. Those be better appointed for shipping and furniture of munition than any other nation save the English; who commonly are lords of the harbors. As touching their tonnage, I think it may be near five or six thousand. Of Portugals, there are not above fifty sail, whose tonnage may amount to three thousand, and they make all wet. Of the French nation are about one hundred and fifty sail; the most of their shipping is very small, not past forty tons; among which some are great and reasonably well appointed; better than the Portugals, and not so well as the Spaniards; the burden of them may be about seven thousand. The English vessels have increased in four years from thirty to fifty sail. The trade which our nation hath to Iceland, maketh, that the English are not there in such numbers as other nations."

The next year (1579) Queen Elizabeth granted to Sir Humphrey Gilbert, a patent for the discovering, occupying and peopling of "such remote, heathen and barbarous countries as were not actually possessed by any Christian people." In consequence of this grant many of his friends joined him, and preparations were made for an expedition, which promised to be highly advantageous. But before the fleet was ready, some declined and retracted their engagements. Gilbert with a few companions, sailed; but a violent storm, in which one of the ships foundered, caused them to return. This misfortune involved him in debt; and he had no way to satisfy the demands of his creditors, but by grants of land in America. By such means the country was not likely to be peopled, nor the conditions of his patent fulfilled. He was obliged therefore to sell his estate before he could make another attempt;

and after long solicitation, being assisted by some friends, he set sail from Plymouth with five ships, carrying two hundred and sixty men, on the eleventh of June 1583; and on the eleventh of July arrived off the bay of St. John, on the eastern coast of Newfoundland.

Thirty-six fishing vessels were then in the harbor, who refused him admittance. He prepared to enter by force of arms; but previously sent in his boat with his commission from Queen Elizabeth; on sight of which they submitted, and he sailed into the port.

The intention of this voyage was to take formal possession of the island, and of the fishery on its banks, for the crown of England. This was done in the following manner:

On Monday the fifth of August, Admiral Gilbert had his tent pitched on shore, in sight of all the shipping; and being attended by his own people, summoned the merchants and masters of vessels, both Englishmen and others to be present at the ceremony. When they were all assembled, his commission was read, and interpreted to the foreigners. Then a turf and a twig were delivered to him, which he received with a hazy wand. Immediately, proclamation was made, that by virtue of his commission from the Queen, he took possession for the crown of England, of the harbor of St. John, and two hundred leagues every way round it.

He then published three laws, for the government of the territory. By the first, public worship was established according to the mode of the church of England. By the second, the attempting of any thing prejudicial to her Majesty's title was declared treason according to the laws of England. By the third, the uttering of words to the dishonor of her Majesty was to be punished with the loss of ears and the confiscation of property.

The proclamation being finished, assent and obedience were signified by loud acclamations. A pillar was erected, bearing a plate of lead, on which the Queen's arms were engraven; and several of the merchants took grants of land, in sea farm; on which they might cure their fish, as they had done before.

A tax of provision, by her Majesty's authority, was levied on all the ships. This tax was readily paid; besides which, the Admiral received presents of wine, fruit, and other refreshments, chiefly from the Portuguese.

This formal possession, taken by Sir Humphrey Gilbert, in consequence of the discovery by the Cabots, is the foundation of the right and title of the crown of England to the territory of Newfoundland and to the fishery on its banks.

As far as the time would permit, a survey was made of the country; one principal object of which was the discovery of mines and minerals. The mineralogist was a Saxon, who is characterized as "honest and religious." This man brought to the Admiral first a specimen of iron, then a kind of ore, which, on the peril of his life, he protested to be silver. The Admiral enjoined secrecy, and sent it on board; intending to have it assayed, when they should get to sea.

The company being dispersed abroad, some were taken sick and died; some hid themselves in the woods, with an intention to go home, by the first opportunity; and others cut one of the vessels out of the harbor and carried her off.

On the 20th of August, the Admiral, having collected as many of his men as could be found, and ordered one of his vessels to stay and take off the sick; set sail with three ships; the *Delight*, the *Hind* and the *Squirrel*. He coasted along the southern part of the island, with a view to make Cape Breton and the Isle of Sable; on which last, he had heard that cattle and swine had been landed by the Portuguese, thirty years before.

Being entangled among shoals and involved in fogs, the *Delight* struck on a sand bank and was lost. Fourteen men only saved themselves in a boat; the loss of the Saxon miner was particularly noted, and nothing farther was heard of the silver ore. This misfortune determined the Admiral to return to England, without attempting to make any farther discoveries, or to take possession of any other part of America. On his passage, he met with bad weather. The *Squirrel* frigate in which Sir Humphrey sailed, was overloaded on her deck; but he persisted in taking his passage in her, notwithstanding the remonstrances of his friends, in the *Hind*, who would have persuaded him to sail with them. From the circumstance of his returning from his first voyage without accomplishing its object, it had been reported that he was afraid of the sea; had he yielded to the

solicitation of his friends, the stigma might have been indelible.

When the wind abated, and the vessels were near enough, the Admiral was seen constantly sitting in the stern with a book in his hand. On the 9th of September, he was seen for the last time; and was heard by the people in the *Hind* to say, "We are as near heaven by sea as by land." In the following night, the lights of his ship suddenly disappeared.—The people in the other vessel kept a good look out for him, during the remainder of the voyage. On the twenty-second of September, they arrived, through much tempest and peril, at Falmouth. But nothing more was seen or heard of the Admiral.

Whilst his zeal for the interest of the Crown, and the settlements of its American dominions, has been largely commended; he has been blamed for his temerity in lavishing his own and other men's fortunes in the prosecution of his designs. This is not the only instance of a waste of property in consequence of sanguine expectations; which, though ruinous to the first adventurers, has produced solid advantages to their successors.

Dr. Forster has a remark on one of the incidents of this voyage which is worthy of repetition and remembrance. "It is very clear (says he) in the instance of the Portuguese having stocked the Isle of Sable with domestic animals, that the discoverers of the new world were men of humanity; desirous of providing for such unfortunate people as might happen to be cast away on those coasts. The false policy of modern times is callous and tyrannical, exporting dogs to devour them. Are these the happy consequences of the so much boasted enlightened state of the present age, and refinement of manners, peculiar to our times? Father of mercies, when will philanthropy again take up her abode in the breasts of men, of Christians, and the rulers of this earth!"

WALTER RALEIGH, AND RICHARD GRENVILLE.

WALTER RALEIGH—Relative of Gilbert—Obtains a commission from Queen Elizabeth—He sails for America—Their arrival—Granganimeo, the Indian chief—Description of an Indian village—Hospitality and kindness of the natives—Return of Raleigh and his party to England with two natives—Virginia, so named by Elizabeth—Another expedition under the command of Sir Richard Grenville—Their arrival in America—Rashness of Grenville—His return—Death of Granganimeo—Wingina determines on a revenge—He is ensnared by the English and killed—Departure of the English—Another expedition—Their arrival—A dispute in the company—Governor of Virginia returns to England to solicit supplies—His ill-success—Disappointments and losses of Raleigh—Departure of the Governor for Virginia—His arrival—Finds the colony deserted and in ruins—He returns to England—Introduction of Tobacco in Europe—Anecdote of Sir Walter Raleigh.

THE distinguished figure, which the life of Sir Walter Raleigh makes in the history of England renders unnecessary any other account of him here, than what respects his adventures in America; and particularly in Virginia; of which colony he is acknowledged to have been the unfortunate founder.

He was half brother, by the mother's side, to Sir Humphrey Gilbert, and was at the expense of fitting out one of the ships of his squadron. Notwithstanding the unhappy fate of his brother, he persisted in his design of making a settlement in America. Being a favorite in the court of Queen Elizabeth, he obtained a patent, bearing date the 25th of March, 1584, for the discovering and planting of any lands and countries which were not possessed by any Christian prince or nation.

About the same time the Queen granted him another patent to license the vending of wine, throughout the kingdom; that by the profits thence arising he might be able to bear the expense of his intended plan of colonization. Further to strengthen his interest, he engaged the assistance of two wealthy kinsmen, Sir Richard Grenville and William Sanderson. They provided two barks, and having well furnished them with men and provisions, put them under the command of Philip Amadas and Arthur Barlow, who sailed from the west of England, April 27, 1584.

They took the usual route by the way of the Canaries and the West Indies; the reason of which is thus expressed in the account of this voyage written by Barlow, "because we doubted that the current of the bay of Mexico between the cape of Florida and Havana had been of greater force than we afterwards found it to be."

Taking advantage of the Gulf Stream, they approached the coast of Florida; and on the second of

July came into shoal waters; where the odoriferous smell of flowers indicated the land to be near, though not within sight. On the fourth they saw land; along which they sailed forty leagues before they found an entrance. At the first opening, they cast anchor, (July 13,) and having devoutly given thanks to God, for their safe arrival on the coast, they went ashore in their boats, and took possession in the name of Queen Elizabeth.

The place where they landed was a sandy island, called Woccon,* about sixteen miles in length and six in breadth, full of cedars, pines, cypress, sassafras, and other trees; among which were many vines loaded with grapes. In the woods they found deer and hares; and in the waters and marshes various kinds of fowl; but no human creature was seen till the third day; when a canoe, with three men, came along by the shore. One of them landed; and, without any fear or precaution, met the Europeans and addressed them in a friendly manner, in his own language. They carried him on board one of their vessels; gave him a shirt and some other trifles, and regaled him with meat and wine. He then returned to his canoe; and with his companions went a fishing. When the canoe was filled, they brought the fish on shore and divided them into two heaps; making signs, that each of the vessels should take one.

The next day, several canoes came; in which were forty or fifty people, and among them was Granganimeo, brother of Wingina King of the country; who was confined at home by the wounds, which he had received in battle, with a neighbouring Prince. The manner of his approach was fearless and respectful. He left his boats at a distance; and came along the shore, accompanied by all his people, till he was abreast of the ships. Then advancing with four men only, who spread a mat on the ground, he sat down on one end; and the four men on the other. When the English went on shore, armed, he beckoned to them to come and sit by him; which they did, and he made signs of joy and friendship, striking with his hand on his head and breast, and then on theirs, to show that they were all one. None of his people spoke a word; and when the English offered them presents, he took them all into his own possession; making signs that they were his servants and that all which they had, belonged to him.

After this interview, the natives came in great numbers and brought skins, coral, and materials for dyes; but when Granganimeo was present, none were permitted to trade, but himself and those who had a piece of copper on their heads. Nothing pleased him so much as a tin plate, in which he made a hole and hung it over his breast, as a piece of defensive armour. He supplied them every day with venison, fish, and fruits, and invited them to visit him at his village, on the north end of an island called Roanoke.

This village consisted of nine houses, built of cedar, and fortified with sharp palisades. When the English arrived there in their boat, Granganimeo was absent; but his wife entertained them with the kindest hospitality, washed their feet and their clothes, ordered their boat to be drawn ashore and their oars to be secured; and then seated them with venison, fish, fruits, and homony†. Whilst they were at supper, some of her men came in from hunting, with their bows and arrows in their hands; on which her guests began to mistrust danger; but she ordered their bows to be taken from them, and their arrows to be broken; and then turned them out at the gate. The English however thought it most prudent to pass the night in their boat, which they launched and laid at anchor. At this she was much grieved; but finding all her solicitations ineffectual, she ordered the victuals in the pots to be put on board, with mats to cover the people from the rain; and appointed several persons of both sexes to keep guard on the beach during the whole night.—

* This island is generally supposed to be one of those which lie in the mouth of Albemarle sound, on the coast of North Carolina. Barlow, in his letter to Sir W. Raleigh, preserved by Hakluyt, says, that he, with seven others, went in about "twenty miles into the river Ocean, and, the evening following, came to an island called Roanoke, distant from the harbor by which he entered, seven leagues; at the north end thereof was a village." Mr. Stith, who wrote the history of Virginia, and who acknowledges that he had not seen this letter in English but in a Latin translation, supposes that the island Woccon must lie between cape Hatteras and Cape Fear, and that the distance might be 30 leagues. But it appears from Barlow's letter that the boat went in one day and came in the evening to the north end of Roanoke; the distance is twice mentioned, once in miles and once in leagues. I see no reason therefore, to admit Stith's conjecture in opposition to Barlow. Stith however appears to have been a very close and accurate inquirer, as far as his materials and opportunity permitted.

† Homony is made of Indian corn beaten in a mortar and separated from the bran; then boiled either by itself or in the broth of meat.

Could there be a more engaging specimen of generous hospitality?

These people were characterised as "gentle, loving and faithful; void of guile and treachery; living after the manner of the golden age; caring only to feed themselves, with such food as the soil affordeth, and to defend themselves from the cold, in their short winter."

No farther discovery was made of the country by these adventurers. From the natives they obtained some uncertain account of its geography, and of a ship which had been wrecked on the coast between twenty and thirty years before. They carried away two of the natives, Wanchese and Manteo; and arrived in the west of England about the middle of September.

The account of this discovery was so welcome to Queen Elizabeth, that she named the country *Virginia*; either in memory of her own virginity, or because it retained its virgin purity, and the people their primitive simplicity.

About this time Raleigh was elected knight of the shire, for his native county of Devon; and in the Parliament which was held in the succeeding winter, he caused a bill to be brought into the House of Commons to confirm his patent for the discovery of foreign countries. After much debate, the bill was carried through both houses, and received the royal assent.—In addition to which, the Queen conferred on him the order of Knighthood.

A second expedition being resolved on, Sir Richard Grenville himself took the command, and with seven vessels, large and small, sailed from Plymouth, on the ninth of April, 1585. They went in the usual course by the Canaries and the West Indies; where they took two Spanish prizes; and, after narrowly escaping shipwreck on Cape Fear, arrived at Woccon the 26th of June.*

The natives came, as before, to bid them welcome and to trade with them. Manteo, whom they had brought back proved a faithful guide, and piloted them about from place to place. In an excursion of eight days, with their boats, they visited several Indian villages, on the islands and on the main, adjoining to Albemarle Sound. At one place, called Aquascogok, an Indian stole from them a silver cup. Inquiry being made, the offender was detected and promised to restore it; but the promise being not speedily performed, a hasty and severe revenge was taken, by the orders of Grenville; the town was burnt and the corn destroyed in the fields, (July 16) whilst the affrighted people fled to the woods for safety. From this ill judged act of violence, may be dated the misfortunes and failure of this colony.

Leaving one hundred and eight persons to attempt a settlement, Grenville proceeded with his fleet to the island of Hatteras; where he received a visit from Granganimeo, and then sailed for England. On the 13th of September he arrived at Plymouth; with a rich Spanish prize which he had taken on the passage.

Of the colony left in Virginia, Ralph Lane was appointed Governor. He was a military man, of considerable reputation in the service. Philip Amadas, who had commanded in the first voyage, was Admiral. They chose the island of Roanoke in the mouth of Albemarle Sound, as the place of their residence; and their chief employment was to explore and survey the country, and describe the persons and manners of its inhabitants. For these purposes, Sir Walter Raleigh had sent John Withe, an ingenious painter; and Thomas Hariot, a skilful mathematician, and a man of curious observation: both of whom performed their parts with fidelity and success.†

The farthest discovery which they made to the southward of Roanoke was Secotan, an Indian town between the rivers of Pamptico and Neus, distant eighty leagues. To the northward they went about forty leagues, to a nation called Chespeangs, on a small river now called Elisabeth, which falls into

* Mr. Stith mistakes in saying May 26, and Sir William Keith, who copies for him, adopts the same mistake.

† The drawings which Mr. Withe made were engraven and printed at Frankfurt (1590) by Theodore de Bry. They represented the persons and habits of the natives, their employments, diversions, and superstitions. From these, the prints in Beverly's history of Virginia are copied.

Mr. Hariot wrote a topographical description of the country and its natural history, which is preserved in Hakluyt's collection vol. iii. 225. It was translated into Latin, and published by De Bry in his collection of voyages. It has been supposed that Raleigh himself came to Virginia with this colony. This is a mistake, grounded on a mistranslation of a passage in Hariot's narrative. It is thus expressed in English: "The actions of those who have been by Sir Walter Raleigh therein employed."—which is thus rendered in the Latin translation, "qui eorum sum b. Walterum Raleigh, in eam regionem comitatus sunt. Stith, p. 2.

Chesapeake bay, below Norfolk. To the westward they went up Albemarle Sound and Chowan river, about forty leagues, to a nation called Chowanogs; whose king, Menatonona, amused them with a story of a copper mine and a pearl fishery; in search of which they spent so much time and so exhausted their provisions, that they were glad to eat their dogs before they returned to Roanoke.

During this excursion, their friend Granganimeo died; and his brother Wingina discovered his hostile disposition toward the colony. The return of Mr. Lane and his party, from their excursion, gave a check to his malice for a while; but he secretly laid a plot for their destruction; which being betrayed by the English, they seized all the boats on the island. This brought on a skirmish, in which five or six Indians were killed, and the rest fled to the woods. After much jealousy and dissimulation on both sides, Wingina was drawn into a snare; and with eight of his men, fell a sacrifice to the resentment of the English.

In a few days after Wingina's death, Sir Frances Drake, who had been cruising against the Spaniards in the West Indies, and had received orders from the Queen to visit this colony, arrived with his fleet on the coast; and by the unanimous desire of the people, took them all off and carried them to England, where they arrived in July 1586.

Within a fortnight after the departure of this unfortunate colony, Sir Richard Grenville arrived with three ships for their relief. Finding their habitation abandoned, and being unable to gain any intelligence of them, he landed fifty men on the island of Roanoke, plentifully supplied with provisions for two years, and then returned to England.

The next year (1587) three ships were sent, under the command of John White, who was appointed Governor of the colony, with twelve Counsellors. To them Raleigh gave a charter of incorporation for the city of Raleigh, which he ordered them to build on the river Chesapeake, the northern extent of the discovery. After narrowly escaping shipwreck on Cape Fear they arrived at Hatteras, on the 22d of July, and sent a party to Roanoke to look for the second colony of fifty men. They found no person living, and the bones of but one dead. The huts were standing, but were overgrown with bushes and weeds. In conversing with some of the natives, they were informed, that the colony had been destroyed by Wingina's people, in revenge of his death.

Mr. White endeavored to renew a friendly intercourse with those natives; but their jealousy rendered them implacable. He therefore went across the water to the main with a party of twenty-five men, and came suddenly on a company of friendly Indians, who were seated round a fire, one of whom they killed before they discovered the mistake.

Two remarkable events are mentioned as happening at this time; one was the baptism of Manteo, the faithful Indian guide; the other was the birth of a female child, daughter of Ananias Dare, one of the council; which, being the first child born in the colony, was named Virginia.

By this time (August 21) the ships had unloaded their stores and were preparing to return to England. It was evident that a further supply was necessary, and that some person must go home to solicit it. A dispute arose in the Council on this point, and after much altercation, it was determined, that the Governor was the most proper person to be sent on this errand. The whole colony joined in requesting him to proceed, promising to take care of his interest in his absence. With much reluctance he consented, on their subscribing a testimonial of his unwillingness to quit the plantation. He accordingly sailed on the 27th of August, and arrived in England the following November. The nation was in a state of alarm and apprehension on account of the war with Spain, and of the invincible armada, which had threatened it with an invasion. Sir Walter Raleigh was one of the Queen's Council of war, as were also Sir Richard Grenville and Mr. Lane. Their time was wholly taken up with public consultations, and Governor White was obliged to wait, till the plan of operations against the enemy could be adjusted and carried into execution.

The next spring, Raleigh and Grenville, who had the command of the militia in Cornwall, and were training them for the defence of the kingdom, being strongly solicited by White, provided two small barks, which sailed from Bideford on the 22d of April 1588.—These vessels had commissions as ships of war, and being more intent on gain to themselves, than relief to the colony, went in chase of prizes, and were both

driven back by ships of superior force, to the great mortification of their patron, and the ruin of his colony.

These disappointments were a source of vexation to Raleigh. He had expended forty thousand pounds, of his own and other men's money, in pursuit of his favorite object, and his gains were yet to come. He therefore made an assignment of his patent (March 7, 1589) to Thomas Smith, and other merchants and adventurers, among whom was Governor White, with a donation of one hundred pounds for the propagation of the Christian religion in Virginia. Being thus disengaged from the business of colonization; he had full scope for his martial genius in the war with Spain.

His assignees were not so zealous in the prosecution of their business. It was not till the spring of 1590, that Governor White could return to his colony. Then, with three ships, he sailed from Plymouth, and passing through the West Indies in quest of Spanish prizes, he arrived at Hatteras on the 15th of August. From this place they observed a smoke arising on the island of Roanoke, which gave them some hope that the colony was there subsisting; on their coming to the place, they found old trees and grass burning, but no human being. On a post of one of the houses they saw the word *Croatan*, which gave them some hope, that at the island of that name they should find their friends. They sailed for that island: which lay southward of Hatteras; but a violent storm arising, in which they lost their anchors, they were obliged to quit the inhospitable coast and return home; nor was any thing afterward heard of the unfortunate colony.

The next year (1591) Sir Richard Grenville was mortally wounded in an engagement with a Spanish fleet; and died on board the Admiral's ship, where he was a prisoner.

Raleigh, though disengaged from the business of colonizing Virginia, sent five times at his own expense to seek for and relieve his friends; but the persons whom he employed, having more profitable business in the West Indies, either went not to the place, or were forced from it by stress of weather, it being a tempestuous region, and without any safe harbor. The last attempt which he made, was in 1602; the year before his imprisonment; an event which gratified the malice of his enemies, and prepared the way for his death; which was much less ignominious to him than to his sovereign, King James I, the British Solomon; successor to Elizabeth, the British Deborah.*

This unfortunate attempt to settle a colony in Virginia, was productive of one thing which will always render it memorable, the introduction of tobacco into England. Cartier, in his visit to Canada fifty years before, had observed that the natives used this weed fumigation, but it was an object of disgust to Frenchmen. Ralph Lane, at his return in 1586, brought it first into Europe; and Raleigh, who was a man of gaiety and fashion, not only learned the use of it himself, but introduced it into the polite circles; and even the Queen herself gave encouragement to it. Some humorous stories respecting it are still remembered. Raleigh laid a wager with the Queen, that he would determine exactly, the weight of smoke which issued from his pipe. This he did by first weighing the tobacco and then the ashes. When the Queen paid the wager, she pleasantly observed, that many laborers had turned their gold into smoke, but that he was the first who had converted smoke into gold.

It is also related that a servant of Sir Walter, bringing a tankard of ale into his study as he was smoking his pipe, and reading, was so much alarmed at the appearance of smoke, issuing out of his mouth, that he threw the ale into his face, and ran down to alarm the family, crying out that his master was on fire.

King James had so refined a taste, that he not only held this Indian weed in great abhorrence himself, but endeavored, by proclamations and otherwise, to prevent the use of it among his subjects. But all his zeal and authority could not suppress it. Since his time it has become an important article of commerce, by which individuals in Europe and America, as well as colonies and nations, have risen to great opulence.

JOHN DE FUCA.

JOHN DE FUCA.—A native of Greece.—An account of his adventures and discoveries given by himself—Locke endeavors to procure De Fuca a commission.—Remarks.

WHEN the existence of a western continent was known to the maritime nations of Europe, one great

*As a specimen of the language of that time, let the reader take the following extract from Purchas.

"He [i. e. King James] is beyond comparison a mere transcendent, beyond all his predecessors, princes of this realm; beyond the neighboring princes of his own time; beyond the

object of their inquiry was, to find, through some openings which appeared in it, a passage to India and China. For this purpose several expensive and unsuccessful voyages were made; and every hint which could throw any light on the subject was eagerly sought and attended to by those who considered its importance.

JOHN DE FUCA was a Greek, born in the island of Cephalonia, in the Adriatic gulf. He had been employed in the service of Spain, in the West Indies, as a mariner and pilot, above forty years. Having lost his fortune, amounting (as he said) to sixty thousand ducats, when the Acapulco ship was taken, by Capt. Cavendish, an Englishman; and being disappointed of the recompense which he had expected from the court of Spain; he returned in disgust to his native country, by the way of Italy; that he might spend the evening of his life, in peace and poverty, among his friends.

At Florence he met with John Douglas, an Englishman, and went with him to Venice. There, Douglas introduced him to Michael Lock, who had been Consul of the Turkey company at Aleppo, and was then occasionally resident in Venice. (A. D. 1596.)

In conversation with Mr. Lock, De Fuca gave him the following account of his adventures.

"That he had been sent by the Viceroy of Mexico, as pilot of three small vessels, to discover the straits of Anian, on the western coast of America; through which, it was conjectured that a passage might be found, into some of the deep bays on the eastern side of the continent. This voyage was frustrated, by the misconduct of the commander, and the mutiny of the seamen.

"In 1592 the Viceroy sent him again, with the command of a caravel and a pinnace, on the same enterprise. Between the latitudes of 47° and 48° N. he discovered an inlet, into which he entered and sailed more than twenty days. At the entrance was a great headland, with an exceeding high pinnacle or spired rock, like a pillar. Within the strait, the land stretched N. W. and N. E. and also E. and S. E. It was much wider within, than at the entrance, and contained many islands. The inhabitants were clad in the skins of beasts. The land appeared to be fertile like that of New Spain, and was rich in gold and silver.

"Supposing that he had accomplished the intention of the voyage and penetrated into the North Sea; but not being strong enough to resist the force of the numerous savages, who appeared on the shores; he returned to Acapulco, before the expiration of the year."

Such was the account given by De Fuca; and Mr. Lock was so impressed with the sincerity of the relation and the advantages which his countrymen might derive from a knowledge of this strait, that he earnestly urged him to enter into the service of Queen Elizabeth, and perfect the discovery. He succeeded so far, as to obtain a promise from the Greek, though sixty years old, that if the Queen would furnish him with one ship, of forty tons, and a pinnace, he would undertake the voyage. He was the more easily persuaded to this, by a hope that the Queen would make him some recompense for the loss of his fortune by Capt. Cavendish.

Mr. Lock wrote to the Lord Treasurer Cecil, Sir Walter Raleigh and Mr. Hakluyt, requesting that they would forward the scheme, and that one hundred pounds might be advanced to bring De Fuca to England. The scheme was approved, but the money was not advanced. Lock was so much engaged in it, that he would have sent him to England at his own expense, but he was then endeavoring to recover at law, his demands from the Turkey company, and could not disburse the money. The pilot therefore returned to Cephalonia; and Lock kept up a correspondence with him, till 1602, when he heard of his death.

Though this account, preserved by Purchas, bears sufficient marks of authenticity; yet it has been rejected as fabulous for nearly two centuries; and is treated so even by the very candid Dr. Foster. Late voyages however, have established the existence of the strait; and De Fuca is no longer to be considered as an impostor; though the gold and silver in his account were but conjectural.

The strait which now bears his name is formed by land, which is supposed to be the continent of America on one side; and by a very extensive cluster of Islands on the other. Its southern entrance

concent of subjects dazzled with so much brightness; beyond our victorious Deborah, not in sex alone, but as peace is more excellent than war, and Solomon than David; in this also that he is, and we enjoy his present sunshine."

lies in lat. $48^{\circ} 20'$ N. long. 124° W. from Greenwich, and is about seven leagues wide. On the larboard side, which is composed of islands, the land is very mountainous; rising abruptly in high and sharp peaks. On the starboard side, is a point of land terminating in a remarkably tall rock, called the pillar. Within the entrance, the passage grows wider, extending to the S. E., N. and N. W. and is full of islands. On the E. and N. E. at a great distance are seen the tops of mountains, supposed to be on the continent; but the ships trading for furs have not penetrated far to the eastward; the sea otters being their principal object, and the land furs of small consideration. For this reason the eastern boundary of the inland sea is not yet fully explored. The strait turns to the N. and N. W. enclosing a large cluster of islands, among which is situate Nootka Sound, and comes into the Pacific ocean again in latitude $51^{\circ} 15'$, long. $128^{\circ} 40'$. This extremity of the strait is called its northern entrance, and is wider than the southern.

Another strait has been lately seen which is supposed to be that of De Fonte, a Spanish admiral, discovered in 1640; the existence of which has also been treated as fabulous. The cluster of islands, called by the British seamen, Queen Charlotte's, and by the Americans, Washington's Islands, are in the very spot where De Fonte placed the Archipelago of St. Lazarus. The entrance of this strait has been visited by the fur ships. It lies in lat. $54^{\circ} 35'$ and long 131° W.

These recent and well established facts may induce us to treat the relations of foreign voyages with decent respect. The circumnavigation of Africa by the ancient Phenicians, was for several ages deemed fabulous by the learned Greeks and Romans. But its credibility was fully established by the Portuguese discoveries in the fifteenth century. In like manner the discoveries of De Fuca and De Fonte, which have long been stigmatized by geographers as *pretended*, and marked in their maps as *imaginary*, are now known to have been founded in truth, though from the imperfection of instruments or the inaccuracy of historians, the degrees and minutes of latitude and longitude were not precisely marked, and though some circumstances in their accounts are but conjectural. Farther discoveries may throw new light on the subject, and though, perhaps, a N. W. passage by sea from the Atlantic into the Pacific may not exist; yet bays, rivers and lakes are so frequent in those northern regions of our continent, that an inland navigation may be practicable.

It has been suggested that the company of English merchants who enjoy an exclusive trade to Hudson's Bay have, from interested motives, concealed their knowledge of its western extremities. Whether there be any just foundation for this censure, I do not pretend to determine; but a survey is now said to be making, from which it is hoped, that this long contested question of a N. W. passage will receive a full solution.

BARTHOLOMEW GOSNOLD.

BARTHOLOMEW GOSNOLD—His Voyage to America—His arrival in Virginia—Description of the Sea-coast—Visit of the Indians—Abandonment of the Colony by the English.

THE unfortunate issue of Raleigh's attempt to make a settlement in America, together with the war with Spain, which continued for several years, gave a check to the spirit of colonizing. In the beginning of the seventeenth century it was revived by BARTHOLOMEW GOSNOLD, an intrepid mariner in the west of England. At whose expense he undertook his voyage to the northern part of Virginia does not appear; but on the 26th of March 1602, he sailed from Falmouth in Cornwall, in a small bark with thirty-two men. Instead of going by the way of the Canaries and the West Indies, he kept as far north as the winds would permit, and was the first Englishman who came in a direct course to this part of America.

On the 14th of May they made the land, and met with a shoal of European fabric, in which were eight savages, one of whom was dressed in European clothes, from which they concluded that some unfortunate fishermen of Biscay or Brittany had been wrecked on the coast.

The next day they had again sight of land, which appeared like an island, by reason of a large sound which lay between it and the main. This sound they called Shole Hope. Near this cape they took a great number of cod, from which circumstance they named the land *Cape Cod*. It is described as a low sandy shore, in the lat. 42° . The captain went on shore and found the sand very deep. A young Indian, with plates of copper hanging to his ears, and a bow and arrows in

his hand, came to him, and in a friendly manner offered his service.

On the 16th they coasted the land southerly, and at the end of twelve leagues discovered a point with breakers at a distance; and in attempting to double it, came suddenly into shoal water. To this point of land they gave the name of Point Care; it is now called Sandy Point, and forms the south-eastern extremity of the county of Barnstable, in Massachusetts.

Finding themselves surrounded by shoals and breakers, they lay at anchor till they had examined the coast and soundings in their boat; during which time some of the natives made them a visit. One of them had a plate of copper over his breast, a foot in length and half a foot in breadth; the others had pendants of the same metal at their ears; they all had pipes of tobacco, of which they were very fond.

In surveying the coast they discovered breakers lying off a point of land, which they denominated Gilbert's Point; it is now called Point Gammon, and forms the eastern side of the harbor of Hyennes.

On the 19th they passed the breach of Gilbert's Point, in four and five fathoms of water, and anchored a league or more to the westward of it. Several hummocks and hills appeared, which at first were taken to be islands; these were the high lands of Barnstable and Yarmouth.

To the westward of Gilbert's Point appeared an opening, which Gosnold imagined to have a communication with the supposed sound which he had seen westward of Cape Cod; he therefore gave it the same name, Shole Hope; but finding the water to be no more than three fathoms deep, at the distance of a league, he did not attempt to enter it. From this opening the land tended to the south-west; and in coasting it, they came to an island, to which they gave the name of *Martha's Vineyard*. This island is described as "distant eight leagues from Shole Hope, five miles in circuit, and uninhabited; full of wood, vines, and berries; here they saw deer and took abundance of cod."

From their station off this island, where they rode in eight fathoms, they sailed on the 24th, and doubled the cape of another island, next to it which they called Dover Cliff. This course brought them into a sound, where they anchored for the night, and the next morning sent their boat to examine another cape which lay between them and the main, from which projected a ledge of rocks a mile into the sea, but all above water, and not dangerous. Having passed round them, they came to anchor again in one of the finest sounds they had ever seen; and to which they gave the name of Gosnold's Hope. On the northern side of it was the main; and on the southern, parallel to it, at the distance of four leagues, was a large island, which they called Elizabeth, in honor of their queen. On this island they determined to take up their abode, and pitched upon a small woody islet in the middle of a fresh pond, as a safe place to build their fort. A little to the northward of this large island lay a small one, half a mile in compass, and full of cedars. This they called Hill's Hap. On the opposite shore appeared another similar elevation to which they gave the name of Hap's Hill.

By this description of the coast, it is evident that the sound into which Gosnold entered was Buzzard's Bay. The island which he called Martha's Vineyard, was not that which now goes by that name, but a small island, the easternmost of those which are known by the name of Elizabeth's Islands. It is called by the Indians *Nemimisset*; its present circumference is about four miles, but it has doubtless been diminished since Gosnold's time, by the force of the tides which set into and out of the bay with great rapidity. Its natural productions and pleasant situation answer well to his description; and deer are frequently seen and hunted upon it; but none were ever known to have been on the great island, now called Martha's Vineyard, which is above twenty miles in length, and was always full of inhabitants. For what reason and at what time the name was transferred from the one to the other, I have not yet learned.

The cliff named Dover is supposed to be the eastern head of a small island which was called by the natives *Onky Tonky*, and is now corrupted into *Uncle Timmy*. The rocky ledge is called *Rattlesnake Neck*. Hill's Hap consists now of two very small islands, called *Wickpecke's*. There is every appearance that these were formerly united, and there are now a few cedars on them. Hap's Hill, on the opposite part of the main, is a small elevated island, of an oval form, near the mouth of a river which passes through the towns of Wareham and Rochester. It is a conspicuous object to navigators.

The island on which Gosnold and his company took up their abode, is now called by its Indian name *Nausshaun*, and is the property of the Honorable JAMES BOWDOIN, of Boston, to whom I am indebted for these remarks on Gosnold's journal, which is extant at large in Purchas's collections.

Near the southwest end of Nausshaun is a large fresh pond; such an one as answers Gosnold's description, excepting that there is no islet in the middle of it. The shore is sandy; but what revolution may have taken place within the space of almost two centuries past, we cannot say.

Whilst some of Gosnold's men labored in building a fort and storehouse on the small island in the pond, and a flat boat to go to it, he crossed the bay in his vessel and discovered the mouths of two rivers; one was that near which lay Hap's Hill, and the other, that on the shore of which the town of New Bedford is now built.

After five days absence, Gosnold returned to the island and was received by his people with great ceremony, on account of an Indian chief and fifty of his men who were there on a visit. To this chief they presented a straw hat and two knives; the hat he little regarded, but the knives were highly valued. They feasted these savages with fish and mustard, and diverted themselves with the effect of the mustard on their noses. One of them stole a target but it was restored. They did not appear to be inhabitants, but occasional visitants at the island, for the sake of gathering shell fish. Four of them remained after the others were gone, and helped the English to dig the roots of sassafras, with which, as well as the furs which they bought of the Indians, the vessel was loaded.

After spending three weeks in preparing a storehouse, when they came to divide their provision, there was not enough to victual the ship, and to subsist the planters till the ship's return. Some jealousy also arose about the intentions of those who were going back; and after five day's consultation they determined to give up their design of planting and return to England. On the eighteenth of June they sailed out of the bay through the same passage by which they had entered it; and on the twenty-third of July they arrived at Exmouth, in the west of England.

Gosnold's intention was to have remained with a part of his men, and to have sent Gilbert, the second in command, to England, for farther supplies; but half of so small a company would not have been a sufficient number to resist the savages, had they been disposed to attack them.

After his return to England he was indefatigable in his endeavors to forward the settling of a colony in America, and was one of those who embarked in the next expedition to Virginia, where he had the rank of a counsellor, and where he died in the year 1607.

JOHN SMITH.

JOHN SMITH—His travels and adventures on the Continent—He joins the Austrian army—His Encounter with the Turks—Smith is made Prisoner—He is sold as a slave—His escape and return to England—He meets Gosnold—They sail to Virginia—Difficulties in the company—Smith is taken prisoner by the Indians—He is condemned to death—He is saved by Pocahontas, daughter of the Indian Chief—His release—His Discoveries—Smith is made President of Virginia—His Fame among the Indians—His singular Discipline—His Return to England—His Voyage to North Virginia—His Writings—His Death.

THOUGH the early part of the life of this extraordinary man was spent in foreign travels and adventures which have no reference to America, yet the incidents of that period so strongly mark his character, and give such a tincture to his subsequent actions, and are withal so singular in themselves, that no reader (it is presumed) will censure the introduction of them here as impertinent.

He was born at Willoughby, in Lincolnshire, in the year 1579.* From the first dawn of reason, he discovered a roving and romantic genius, and delighted in extravagant and daring actions among his schoolfellows. When about thirteen years of age, he sold his books and satchel, and his puerile trinkets, to raise money, with a view to convey himself privately to sea; but the death of his father put a stop for the present to this attempt, and threw him into the hands of guardians,

* This is determined by an inscription annexed to his portrait on his map of New England—"Ætat 37. Anno 1616."

This portrait represents him clad in armour, and under it are these verses:

"Such are the lines that show thy face; but those
That show thy grace and glory brighter be;
Thy fair discoveries and fowle overthrowes
Of salvages much civilized by thee,
Best show thy spirit, and to it glory win,
So thou art brass without, but golde within."

who endeavored to check the ardor of his genius by confining him to a counting house. Being put apprentice to a merchant at Lynn, at the age of fifteen, he at first conceived hopes that his master would send him to sea in his service, but this hope failing, he quitted his master, and with only ten shillings in his pocket, entered into the train of a young nobleman who was travelling to France. At Orleans he was discharged from his attendance on Lord Bertie, and had money given him to return to England. With this money he visited Paris, and proceeded to the Low Countries, where he enlisted as a soldier, and learned the rudiments of war, a science peculiarly agreeable to his ardent and active genius. Meeting with a Scots gentleman abroad, he was persuaded to pass into Scotland, with the promise of being strongly recommended to King James; but being baffled in this expectation, he returned to his native town, and finding no company there which suited his taste, he built a booth in a wood, and betook himself to the study of military history and tactics, diverting himself at intervals with his horse and lance; in which exercise he at length found a companion, an Italian gentleman, rider to the Earl of Lincoln, who drew him from his sylvan retirement to Tattersal.

Having recovered a part of the estate which his father had left him, he put himself into a better condition than before, and set off again on his travels, in the winter of the year 1596, being then only seventeen years of age. His first stage was Flanders, where meeting with a Frenchman who pretended to be heir to a noble family, he, with his three attendants, prevailed upon Smith to go with them to France. In a dark night they arrived at St. Valery in Picardy, and, by the connivance of the ship master, the Frenchmen were carried ashore with the trunks of our young traveller, whilst he was left on board till the return of the boat. In the mean time they had conveyed the baggage out of his reach, and were not to be found. A sailor on board, who knew the villains, generously undertook to conduct him to Mortaine where they lived, and supplied his wants till their arrival at the place. Here he found their friends, from whom he could gain no recompense; but the report of his sufferings induced several persons of distinction to invite him to their houses.

Eager to pursue his travels, and not caring to receive favors which he was unable to requite, he left his new friends, and went from port to port in search of a ship of war. In one of these rambles, near Dinan, it was his chance to meet one of the villains who had robbed him. Without speaking a word, they both drew; and Smith having wounded and disarmed his antagonist, obliged him to confess his guilt before a number of persons who had assembled on the occasion.

Satisfied with his victory, he retired to the seat of an acquaintance, the Earl of Plover, who had been brought up in England, and having received supplies from him, he travelled along the French coast to Bayonne, and from thence crossed over to Marseilles; visiting and observing every thing in his way which had any reference to naval or military architecture.

At Marseilles he embarked for Italy, in company with a rabble of pilgrims. The ship was forced by a tempest into the harbor of Toulon, and afterwards was obliged by a contrary wind to anchor under the little island of St. Mary, off Nice, in Savoy. The bigotry of the pilgrims made them ascribe their ill fortune to the presence of a heretic on board. They devoutly cursed Smith, and his Queen Elizabeth, and in a fit of pious rage threw him into the sea. He swam to the island, and the next day was taken on board a ship of St. Malo which had also put in there for shelter. The master of the ship, who was well known to his noble friend, the Earl of Plover, entertained him kindly, and carried him to Alexandria in Egypt; from thence he coasted the Levant; and on his return had the high satisfaction of a naval engagement with a Venetian ship, which they took and rifled of her rich cargo. Smith was set on shore at Antibes, with a box of a thousand chequins (about two thousand dollars), by the help of which, he made the tour of Italy, crossed the Adriatic and travelled into Stiria, to the seat of Ferdinand, Archduke of Austria. Here he met with an English and an Irish Jesuit who introduced him to Lord Eberspaught, Baron Kizel, and other officers of distinction, and here he found full scope for his genius; for the Emperor being then at war with the Turks, he entered into his army as a volunteer.

He had communicated to Eberspaught a method of conversing at a distance by signals made with torches, which being alternately shown and hidden a certain number of times, designated every letter of the alpha-

bet. He had soon an opportunity of making the experiment. Eberspaught being besieged by the Turks in the strong town of Olmpach, was cut off from all intelligence and hope of succour from his friends. Smith proposed his method of communication to Baron Kizel, who approved it, and allowed him to put it in practice.* He was conveyed by a guard to a hill within view of the town, and sufficiently remote from the Turkish camp. At the display of the signal, Eberspaught knew and answered it, and Smith conveyed to him this intelligence, "Thursday night, I will charge on the East; at the alarm rally thou." The answer was, "I will." Just before the attack, by Smith's advice, a great number of false fires were made on another quarter, which divided the attention of the enemy and gave advantage to the assailants; who, being assisted by a sally from the town, killed many of the Turks, drove others into the river, and threw succours into the place, which obliged the enemy the next day to raise the siege. This well conducted exploit, produced to our young adventurer, the command of a company, consisting of two hundred and fifty horsemen in the regiment of Count Meldrick, a nobleman of Transylvania.

The regiment in which he served being engaged in several hazardous enterprises, Smith was foremost in all dangers and distinguished himself both by his ingenuity and by his valor; and when Meldrick left the Imperial army, and passed into the service of his native prince, Smith followed him.

At the siege of Regal, the Ottomans derided the slow approaches of the Transylvanian army, and sent a challenge, purporting that the Lord Turbisha, to divert the ladies, would fight any single captain of the Christian troops. The honor of accepting this challenge being determined by lot, fell on Captain Smith; who, meeting his antagonist on horseback, within view of the ladies on the battlements, at the sound of music began the encounter, and in a short time killed him, and bore away his head in triumph to his general the Lord Moyzes.

The death of the chief so irritated his friend Gualgo, that he sent a particular challenge to the conqueror, who, meeting him with the same ceremonies, after a smart combat took off his head also. Smith then in his turn sent a message into the town, informing the ladies, that if they wished for more diversion, they should be welcome to his head, in case their third champion could take it. This challenge was accepted by Bonamolgo, who unhorsed Smith and was near gaining the victory. But remounting in a critical moment, he gave the Turk a stroke with his faulchion which brought him to the ground, and his head was added to the number. For these singular exploits he was honored with a military procession, consisting of six thousand men, three led horses, and the Turks' heads on the points of three lances. With this ceremony Smith was conducted to the pavilion of his general, who, after embracing him, presented him with a horse richly furnished, a scymitar and belt worth three hundred ducats, and a commission to be major in his regiment. The prince of Transylvania, after the capture of the place, made him a present of his picture set in gold, and a pension of three hundred ducats per annum, and moreover granted him a coat of arms bearing three Turks' heads in a shield. The patent was admitted and recorded in the college of Heralds in England, by Sir Henry Segar, garter-king-at-arms. Smith was always proud of this distinguishing honor, and these arms are accordingly blazoned in the frontispiece to his history, with this motto,

"Vincere est vivere."

After this, the Transylvanian army was defeated by a body of Turks and Tartars near Rotenton, and many brave men were slain, among whom were nine English and Scotch officers, who, after the fashion of that day, had entered into this service from a religious zeal to drive the Turks out of Christendom. Smith was wounded in this battle and lay among the dead. His habit discovered him to the victors as a person of consequence: they used him well till his wounds were healed, and then sold him to the Basha Bogal, who sent him as a present to his mistress Fragabizanda at Constantinople, accompanied with a message, as full

* The method is this: First, three torches are shown in a line equidistant from each other, which are answered by three others in the same manner: then the message being written as briefly as possible, and the alphabet divided into two parts, the letters from A to L are signified by showing and hiding one light, as often as there are letters from A to that letter which you mean. The letters from M to Z by two lights in the same manner. The end of a word is signified by showing three lights. At every letter, the light stands till the other party may write it down and answer by his signal, which is one light.

of vanity as void of truth, that he had conquered in battle a Bohemian nobleman, and presented him to her as a slave.

The present proved more acceptable to the lady than her lord intended. She could speak Italian; and Smith, in that language, not only informed her of his country and quality, but conversed with her in so pleasing a manner as to gain her affections. The connexion proved so tender, that to secure him for herself and to prevent his being ill used or sold again, she sent him to her brother, the Basha of Nalbrantz, in the country of the Cambrian Tartars, on the borders of the sea of Asoph. Her pretence was, that he should there learn the manners and language as well as religion of the Tartars. By the terms in which she wrote to her brother, he suspected her design, and resolved to disappoint her. Within an hour after Smith's arrival he was stripped; his head and beard were shaven, an iron collar was put about his neck; he was clothed with a coat of hair cloth, and driven to labor among other Christian slaves. He had now no hope of redemption, but from the love of his mistress, who was at a great distance, and not likely to be informed of his misfortune; the hopeless condition of his fellow-slaves could not alleviate his despondency.

In the depth of his distress, an opportunity presented for an escape, which to a person of a less courageous and adventurous spirit would have proved an aggravation of misery. He was employed in threshing at a grange, in a large field about a league from the house of his tyrant, who in his daily visits treated him with abusive language, accompanied with blows and kicks. This was more than Smith could bear, wherefore watching an opportunity when no other person was present, he levelled a stroke at him with his threshing instrument, which despatched him. Then hiding his body in the straw and shutting the doors, he filled a bag with grain, mounted the Basha's horse, and betaking himself to the desert, wandered for two or three days, ignorant of the way, and so fortunate as not to meet with a single person who might give information of his flight. At length he came to a post erected in a cross road, by the marks on which he found his way to Muscovy, and in sixteen days arrived at Exapolis on the river Don, where was a Russian garrison, the commander of which understanding he was a Christian, received him courteously; took off his iron collar, and gave him letters to the other governors in that region. Thus he travelled through part of Russia and Poland, till he got back to his friends in Transylvania; receiving presents in his way from many persons of distinction, among whom he particularly mentions a charitable lady, Calnata, being always proud of his connexion with that sex, and fond of acknowledging their favors. At Leipsic he met with his colonel, Count Meldrick, and Sigismund, prince of Transylvania, who gave him 1500 ducats to repair his losses. With this money he was enabled to travel through Germany, France, and Spain, and having visited the kingdoms of Morocco, he returned by sea to England; having in his passage enjoyed the pleasure of another naval engagement. At his arrival in his native country he had a thousand ducats in his purse, which, with the interest he had remaining in England, he devoted to seek adventures and make discoveries in North America.

Bartholomew Gosnold, having conceived a favorable idea of America, had made it his business on his return to England, to solicit assistance in prosecuting discoveries. Meeting with Captain Smith, he readily entered into his views, the employment being exactly suited to his enterprising genius. Having engaged Edward Maria Wingfield, a merchant, Robert Hunt, a clergyman, and several others, they prevailed upon a number of noblemen, gentlemen, and merchants, to solicit a patent from the crown, by which the adventurers to Virginia became subject to legal direction, and had the support and encouragement of a wealthy and respectable corporation; which was usually styled the South Virginia Company, or the London Company, in distinction from the Plymouth Company, who superintended the affairs of North Virginia. The date of their patent was April 10, 1606, and on the 19th of the following December, three ships, one of one hundred tons, another of forty, and one of twenty, fell down the river Thames for Virginia. The commander was Christopher Newport, an experienced mariner. They had on board the necessary persons and provisions for a colony; and their orders for government were sealed in a box, which was not to be opened till they should arrive in Virginia.

The ships were kept in the Downs by bad weather six weeks, and afterwards had a tempestuous voyage. They took the old route by the Canary and Caribbee

Islands, and did not make the entrance of Chesapeake Bay till the 26th of April, 1607. From the beginning of their embarkation there was a jealousy and dissonance among the company. Smith and Hunt were friends, and both were envied and suspected by the others. Hunt was judicious and patient; his office secured him from insult. Smith was ardent and industrious, courteous in his deportment, but liberal in his language. On some suggestions that he intended to usurp the government, and that his confederates were dispersed among the companies of each ship, he was made a prisoner from the time of their leaving the Canaries, and was under confinement when they arrived in the Chesapeake. When the box was opened, it was found that Bartholomew Gosnold, John Smith, Edward M. Wingfield, Christopher Newport, John Ratcliffe, John Martin, and George Kendal were named to be of the council; who were to choose a president from among themselves for one year and the government was vested in them. Matters of moment were to be "examined by a jury, but determined by the major part of the council, in which the president had two voices." When the council was sworn, Wingfield was chosen president, and a declaration was made of the reasons for which Smith was not admitted and sworn among the others.

Seventeen days from their arrival were spent in seeking a proper place for their first plantation. The southern point of the bay was named Cape Henry, and the northern Cape Charles, in honor of the two sons of King James. To the first great river which they discovered they gave the name of their sovereign; and the northern point of its entrance was called Point Comfort, on account of the good channel and anchorage which they found there. On the flats they took plenty of oysters, in some of which were pearls; and on the plain they found large and ripe strawberries, which afforded them a delicious repast.

Having met with five of the natives, they invited them to their town, Kecoughtan, where Hampton is now built. Here they were feasted with cakes made of Indian corn, and regaled with tobacco and a dance. In return they presented the natives beads and other trinkets. Proceeding up the river, another company of Indians appeared in arms. Their chief, Apamatic, holding in one hand his bow and arrow, and in the other a pipe of tobacco, demanded the cause of their coming; they made signs of peace, and were hospitably received. On the 13th of May they pitched upon a peninsula, where the ships could lie in six fathom water, moored to the trees, as the place of their intended settlement. Here they were visited by Paspaha, another Indian chief, who being made acquainted with their design, offered them as much land as they wanted, and afterwards sent them a deer for their entertainment. On this spot they pitched their tents, and gave it the name of Jamestown.

Every man was now employed either in digging and planting gardens, or making nets, or in cutting and riving timber to reload the ships. The president at first would admit of no martial exercise, nor allow any fortifications to be made, excepting the boughs of trees thrown together in the form of a half moon. Captain Newport took Smith and twenty more with him to discover the head of James river. In six days they arrived at the falls, and erecting a cross, as they had at Cape Henry, took possession of the country in the name of King James. In this route they visited Powhatan, the principal Indian chief, or emperor. His town consisted of twelve houses, pleasantly situated on a hill, before which were three islands, a little below the spot where Richmond is now built. Captain Newport presented a hatchet to this prince, which he gratefully received; and when some of his Indians murmured at the coming of the English among them, he silenced them by saying, "why should we be offended? they hurt us not, nor take any thing by force; they want only a little ground, which we can easily spare." This appearance of friendship was not much relied on, when, at their return to Jamestown, they found that the company had been surprised at their work by a party of Indians, who had killed one and wounded seventeen others. A double-headed shot from one of the ships had cut off a bough of a tree, which falling among the Indians, terrified and dispersed them. This incident obliged the President to alter the plan of the fort, which was now a triangular palisade with a lunette at each angle, and five pieces of artillery were mounted on the works, which were completed by the 15th of June. It was also found necessary to exercise the men at arms, to mount guard and be vigilant; for the Indians would surprise and molest stragglers, whilst by their superior agility they would escape unhurt.

The ships being almost ready to return, it was thought proper that some decision should be had respecting the allegations against Smith. His accusers affected commiseration, and pretended to refer him to the censure of the company in England, rather than to expose him to legal prosecution which might injure his reputation or touch his life. Smith, who knew both their malice and their impotence, openly scorned their pretended pity and defied their resentment. He had conducted himself so unexceptionably in every employment which had been allotted to him, that he had rendered himself very popular; and his accusers had by a different conduct lost the affections and confidence of the people. Those who had been suborned to accuse him acknowledged their fault, and discovered the secrets which had been practised against him. He demanded a trial, and the issue was, that the president was adjudged to pay him two hundred pounds; but when his property was seized in part of this satisfaction, Smith generously turned it into the common store for the benefit of the colony. Such an action could not but increase his popularity. Many other difficulties had arisen among them, which, by the influence of Smith and the exhortation of Hunt, their chaplain, were brought to a seemingly amicable conclusion. Smith was admitted to his seat in the council, and on the next Sunday they celebrated the communion. At the same time the Indians came in, and voluntarily desired peace. With the good report of these transactions Newport sailed for England, on the 23d of June, promising to return in twenty weeks with fresh supplies.

The colony thus left in Virginia consisted of one hundred and four persons, in very miserable circumstances, especially on account of provisions, to which calamity their long voyage did not a little contribute, both as it consumed their stock, and deprived them of the opportunity of towing seasonably in the spring. Whilst the ships remained, they could barter with the sailors for bread; but after their departure, each man's allowance was half a pint of damaged wheat and as much barley per day. The river, which at the flood was salt, and at the ebb was muddy, afforded them their only drink; it also supplied them with sturgeon and shell-fish. This kind of food, with their continual labor in the heat of summer, and their frequent watchings by night in all weathers, having only the bare ground to lie on, with but slight covering, produced diseases among them, which, by the month of September, carried off fifty persons, among whom was Captain Gosnold. Those who remained were divided into three watches, of whom, not more than five in each were capable of duty at once. All this time the president, Wingfield, who had the key of the stores, monopolized the few refreshments which remained, and was meditating to desert the plantation privately in the pinnace, and remove to the west Indies. These things rendered him so hateful to the rest, that they deposed him, and elected Ratcliffe in his room: they also removed Kendal from his place in the council; so that by the middle of September, three members only were left.

Ratcliffe, being a man of no resolution nor activity, committed the management of affairs abroad to Smith, in whom his confidence was not misplaced. At the same time the Indians in their neighborhood brought in a plentiful supply of such provisions as they had, which revived their drooping spirits; and Smith seeing the necessity of exertion to secure themselves and provide for the approaching winter, partly by his animating speeches, but more by his example, set them to work in moving and binding thatch, and in building and covering houses. In these exercises he bore a large share, and in a short time got a sufficiency of houses to make comfortable lodgings for all the people excepting himself. This being done, and the provisions which the natives had brought in being expended, he picked a number of the best hands and embarked in a shallop, which they had brought from England, to search the country for another supply.

The party which accompanied Smith in this excursion consisted of six men, well armed, but ill provided with clothing and other necessities. What was wanting in equipment was to be supplied by resolution and address; and Smith's genius was equal to the attempt. They proceeded down the river to Kecoughtan, [Hampton] where the natives, knowing the needy state of the colony, treated them with contempt, offering an ear of corn in exchange for a musket or a sword, and in like proportion for their scant and tattered garments. Finding that courtesy and gentle treatment would not prevail, and that nothing was to be expected in the way of barter, and moreover provoked by their contempt, Smith ordered his boat to be

drawn on shore and his men to fire at them. The affrighted natives fled to the woods, whilst the party searched their houses, in which they found plenty of corn; but Smith did not permit his men to touch it, expecting that the Indians would return and attack them. They soon appeared, to the number of sixty or seventy, formed into a square, carrying their idol *okee*, composed of skins, stuffed with moss, and adorned with chains of copper. They were armed with clubs and targets, bows and arrows, and advanced singing to the charge. The party received them with a volley of shot, which brought several of them to the ground, and their idol among them; the rest fled again to the woods, from whence they sent a deputation to offer peace and redeem their god. Smith, having in his hands so valuable a pledge, was able to bring them to his own terms; he stipulated that six of them should come unarmed, and load his boat with corn, and on this condition he would be their friend and give them hatchets, beads and copper. These stipulations were faithfully performed on both sides; and the Indians, in addition, presented them with venison, turkeys and other birds, and continued singing and dancing till their departure.

The success of this attempt encouraged him to repeat his excursions by land and water; in the course of which he discovered several branches of James river, and particularly the Chickahamony, from whose fertile banks he hoped to supply the colony with provision. But industry abroad will not make a flourishing plantation without economy at home. What he had taken pains and risked his life to provide, was carelessly and wantonly expended; the traffic with the natives being under no regulation, each person made his own bargain, and by outbidding each other, they taught the Indians to set a higher value on their commodities, and to think themselves cheated when they did not all get the same prices. This bred a jealousy and sowed the seeds of a quarrel with them, which the colony were in a poor condition to maintain, being at variance among themselves.

The shallop being again fitted for a trading voyage, whilst Smith was abroad on one of his usual rambles, and the people being discontented with the indolence of Ratcliffe, their President, and the long sickness of Martin, Wingfield and Kendal, who had been displaced, took advantage of Smith's absence, and conspired with some malecontents to run away with the vessel and go to England. Smith returned unexpectedly, and the plot was discovered. To prevent its execution, recourse was had to arms, and Kendal was killed. Another attempt of the same kind was made by Ratcliffe himself, assisted by Archer; but Smith found means to defeat this also. He determined to keep possession of the country, the value of which was daily rising in his estimation; not only as a source of wealth to individuals, but as a grand national object; and he knew that great undertakings could not be accomplished without labor and perseverance.

As the autumn advanced, the waters were covered with innumerable wild-fowl, which, with the addition of corn, beans and pumpkins, procured from the Indians, changed hunger into luxury, and abated the rage for abandoning the country. Smith had been once up the river Chickahamony, but because he had not penetrated to its source, exceptions were taken to his conduct as too dilatory. This imputation he determined to remove. In his next voyage he went so high that he was obliged to cut the trees which had fallen into the river, to make his way through as far as his boat could swim. He then left her in a safe place, ordering his men not to quit her until his return; then taking two of them, and two Indians for guides, he proceeded in one of their canoes to the meadows at the river's head; and leaving his two men with the canoe, he went with his Indian guides across the meadows. A party of 300 Indians below, had watched the motions of the boat. They first surprised the straggling crew, and made one of them prisoner, from whom they learned that Smith was above. They next found the two men whom he had left with the canoe asleep by a fire, and killed them; then having discovered Smith, they wounded him in the thigh with an arrow. Finding himself thus assaulted and wounded, he bound one of his Indian guides with his garters to his left arm, and made use of him as a shield, whilst he despatched three of his enemies and wounded some others. He was retreating to his canoe, when, regarding his enemies more than his footsteps, he suddenly plunged with his guide into an oozy creek, and stuck fast in the mud. The Indians, astonished at his bravery, did not approach him till, almost dead with cold, he threw away his arms, and begged them to draw

him out, which they did and led him to the fire, where his slain companions were lying. This sight admonished him what he was to expect. Being revived by their chafing his benumbed limbs, he called for the chief, Opeckanough, king of Pamaunkee, to whom he presented his ivory compass and dial. The vibrations of the needle, and the fly under the glass, which they could see but not touch, afforded them much amusement; and Smith, having learned some of their language, partly by means of that, and partly by signs entertained them with a description of the nature and uses of the instrument; and gave them such a lecture on the motions of the heavens and earth as amazed them, and suspended for a time the execution of their purpose. At length, curiosity being satiated, they fastened him to a tree, and prepared to despatch him with their arrows. At this instant, the chief holding up the compass, which he esteemed as a divinity, they laid aside their arms, and forming a military procession, led him in triumph to their village Orapaxe. The order of their march was thus: they ranged themselves in a single file, the king in the midst, before him were borne the arms taken from Smith, and his companions; next after the king came the prisoner, held by three stout savages, and on each side a file of six. When they arrived at the village, the old men, women and children came out to receive them; after some manoeuvres, which had the appearance of regularity, they formed themselves round the king and his prisoner into a circle, dancing and singing, adorned with paint, furs and feathers, brandishing their rattles, which were made of the tales of rattlesnakes. After three dances, they dispersed, and Smith was conducted to a long hut, guarded by forty men. There he was so plentifully feasted with bread and venison, that he suspected their intention was to fatten and eat him. One of the Indians, to whom Smith had formerly given beads, brought him a garment of furs to defend him from the cold. Another, whose son was then sick and dying, attempted to kill him, but was prevented by the guard. Smith being conducted to the dying youth, told them that he had a medicine at Jamestown which would cure him, if they would let him fetch it; but they had another design, which was to surprise the place, and to make use of him as a guide. To induce him to perform this service, they promised him his liberty, with as much land and as many women as would content him. Smith magnified the difficulty and danger of their attempt, from the ordnance, mines and other defences of the place, which exceedingly terrified them; and to convince them of the truth of what he told them, he wrote on a leaf of his pocket-book an inventory of what he wanted, with some directions to the people at the fort, how to affright the messengers who went to deliver the letter. They returned in three days, reporting the terror into which they had been thrown; and when they produced the things for which he had written, the whole company were astonished at the power of his divination by the *speaking leaf*.

After this they carried him through several nations, inhabiting the banks of the Potomack and Rapahanock, and at length brought him to Pamaunkee, where they performed a strange ceremony, by which they intended to divine, whether his intentions towards them were friendly or hostile. The manner of it was this: early in the morning a great fire was made in a long house, and a mat spread on each side, on one of which he was placed, and the guard retired. Presently, an Indian priest, hideously painted, and dressed in furs and snake skins, came skipping in, and after a variety of uncouth noises and gestures, drew a circle with meal round the fire: then came in three more in the same frightful dress, and after they had performed their dance, three others. They all sat opposite to him in a line, the chief priest in the midst. After singing a song, accompanied with the music of their rattles, the chief priest laid down five grains of corn, and after a short speech, three more; this was repeated till the fire was encircled. Then continuing the incantation, he laid sticks between the divisions of the corn. The whole day was spent in these ceremonies, with fasting, and at night a feast was prepared of the best meats which they had. The same tricks were repeated the two following days. They told him that the circle of meal represented their country, the circle of corn the sea shore, and the sticks his country; they did not acquaint him, or he has not acquainted us, with the result of the operation, but he observed that the gunpowder which they had taken from him, was laid up among their corn, to be planted the next spring.

After these ceremonies, they brought him to the emperor Powhatan, who received him in royal state, clothed in a robe of racoon skins, seated on a kind of throne,

elevated above the floor of a large hut, in the midst of which was a fire; at each hand of the prince sat two beautiful girls, his daughters, and along each side of the house, a row of his counsellors, painted and adorned with feathers and shells. At Smith's entrance a great shout was made. The queen of Apamatox brought him water to wash his hands, and another served him with a bunch of feathers instead of a towel. Having feasted him after their manner, a long consultation was held, which being ended, two large stones were brought in on one of which his head was laid, and clubs were lifted up to beat on his brains. At this critical moment Pocahontas, the king's favorite daughter, flew to him, took his head in her arms, and laid her own upon it. Her tender entreaties prevailed. The king consented that Smith should live, to make hatchets for him, and ornaments for her.

Two days, after, Powhatan caused him to be brought to a distant house; where, after another threatening, he confirmed his promise, and told him he should return to the fort, and send him two pieces of cannon, and a grindstone; for which he would give him the country of Capahousick, and for ever esteem him as his son. Twelve guides accompanied him, and he arrived at Jamestown the next day. According to the stipulation, two guns and a large grindstone were offered them; but having in vain tried to lift them, they were content to let them remain in their place. Smith, however, had the guns loaded, and discharged a volley of stones at a tree covered with icicles. The report and effect confounded them; but being pacified with a few toys, they returned, carrying presents to Powhatan and his daughter of such things as gave them entire satisfaction. After this adventure, the young princess, Pocahontas, frequently visited the plantation with her attendants; and the refreshments which she brought from time to time proved the means of saving many lives, which otherwise would have been lost.

Smith's return happened at another critical juncture. The colony was divided into parties, and the malecontents were again preparing to quit the country. His presence a third time, defeated the project; in revenge for which they meditated to put him to death, under pretence that he had been the means of murdering the two men who went with him in the canoe; but by a proper application of valor and strength, he put his accusers under confinement, till an opportunity presented for sending them as prisoners to England.

The misfortunes and mismanagements of this Virginian colony during the period here related, seem to have originated partly in the tempers and qualifications of the men who were appointed to command, and partly in the nature and circumstances of the adventure. There could be no choice of men for the service but among those who offered themselves; and those were previously strangers to each other, as well as different in their education, qualities and habits. Some of them had been used to the command of ships, and partook of the roughness of the element on which they were bred. It is, perhaps, no great compliment to Smith, to say that he was the best qualified of them for command; since the event proved that none of them who survived the first sickness, had the confidence of the people in any degree. It is certain that his resolution prevented the abandonment of the place the first year; his enterprising spirit led to an exploration of the country, and acquainted them with its many advantages; his captivity produced an intercourse with the savages; and the supplies gained from them, chiefly by means of his address, kept the people alive till the second arrival of the ships from England. The Virginians, therefore, justly regard him, if not as the father, yet as the saviour of that infant plantation.

In the winter of 1607, Capt. Newport arrived from England in Virginia. The other ship, commanded by Capt. Nelson, which sailed at the same time, was distressed on the American coast, and blown off to the West Indies. The supplies sent by the company were received in Virginia with the most cordial avidity; but the general license given to the sailors, to trade with the savages, proved detrimental to the planters, as it raised the prices of their commodities so high, that a pound of copper would not purchase, what before could be bought for an ounce. Newport himself was not free from this spirit of profusion, so common to seafaring men, which he manifested by sending presents of various kinds to Powhatan, intending thereby to give him an idea of the grandeur of the English nation. In a visit which he made to this prince, under the conduct of Smith, he was received and entertained with an equal show of magnificence; but in trading with the savage chief, he found himself outwitted. Powhatan,

in a lofty strain, spoke to him thus: "It is not agreeable to the greatness of such men as we are, to trade like common people for trifles: lay down therefore at once, all your goods, and I will give you the full value for them." Smith perceived the snare, and warned Newport of it; but he, thinking to outbrave the savage prince, displayed the whole of his store. Powhatan then set such a price on his corn, that not more than four bushels could be procured; and the necessary supplies could not have been had, if Smith's genius, ever ready at invention, had not hit on an artifice which proved successful. He had secreted some trifles, and among them a parcel of *blue beads*, which, seemingly in a careless way, he glanced in the eyes of Powhatan. The bait caught him; and he earnestly desired to purchase them. Smith, in his turn, raised the value of them, extolling them as the most precious jewels, resembling the color of the sky, and proper only for the noblest sovereigns in the universe. Powhatan's imagination was all on fire; he made large offers. Smith insisted on more, and at length suffered himself to be persuaded to take between two and three hundred bushels of corn for about two pounds of blue beads, and they parted in very good humour, each one being very much pleased with his bargain. In a subsequent visit to Opeckanough, King of Pamaunkee, the company were entertained with the same kind of splendor and a similar bargain closed the festivity; by which means, the blue beads grew into such estimation, that none but the princes and their families were able to wear them.

Loaded with this acquisition, they returned to Jamestown; where an unhappy fire had consumed several of their houses, with much of their provisions and furniture. Mr. Hunt, the chaplain, lost his apparel and library in this conflagration, and escaped from it with only the clothes on his back. This misfortune was severely felt; the ship staying in port fourteen weeks, and reserving enough for the voyage home, so contracted their stock of provisions, that before the winter was gone, they were reduced to great extremity, and many of them died. The cause of the ship's detention for so long a time was this: In searching for fresh water in the neighborhood of Jamestown, they had discovered in a rivulet some particles of a yellowish isinglass, which their sanguine imaginations had refined into gold dust. The zeal for this precious matter was so strong, that in digging, washing and packing it to complete the lading of the ship, all other cares were absorbed. This was a tedious interval to Capt. Smith; his judgment condemned their folly, his patience was exhausted, and his passion irritated, and the only recompense which he had for this long vexation, was the pleasure of sending home Wingfield and Archer, when the ship departed.

The other ship arrived in the spring, and notwithstanding a long and unavoidable detention in the West Indies, brought them a comfortable supply of provisions. They took advantage of the opening season, to rebuild their houses and chapel, repair the palisades, and plant corn for the ensuing summer, in all which works the example and authority of Smith, were of eminent service. Every man of activity was fond of him, and those of a contrary disposition were afraid of him. It was proposed that he should go into the country of the Monacans, beyond the falls of James river, that they might have some news of the interior parts to send home to the company; but a fray with the Indians detained him at Jamestown, till the ship sailed for England, laden chiefly with cedar, but not without another specimen of the yellow dust, of which Martin was so fond, that he took charge of the packages himself and returned to England. An accession of above one hundred men, among whom were several goldsmiths and refiners, had been made to the colony by the two last ships, and a new member, Matthew Scrivener, was added to the council.

Having finished the necessary business of the season, and despatched the ship, another voyage of discovery was undertaken by Captain Smith and fourteen others. They went down the river in an open barge, June 10, 1608, in company with the ship, and having parted with her at Cape Henry, they crossed the mouth of the bay, and fell in with a cluster of islands without Cape Charles, to which they gave the name of Smith's Isles, which they still bear. Then re-entering the bay they landed on the eastern neck, and were kindly received by Accomack, the prince of that peninsula, a part of which still bears his name. From thence they coasted the eastern shore of the bay, and landed sometimes on the main, and at other times on the low islands, of which they found many, but none fit for habitation. They proceeded

up the bay to the northward and crossed over to the western shore, down which they coasted to the southward, and in this route discovered the mouths of the great rivers, which fall into the bay on that side. One in particular attracted much of their attention, because of a reddish earth which they found there, and from its resemblance to bole-armoniack, they gave it the name of Bolus river, and it is so named in all the early maps of the country; but in the latter, it bears the Indian name Patapsco; on the north side of which is now the flourishing town of *Baltimore*. They sailed thirty miles up the Potowmack, without seeing any inhabitants; but on entering a creek found themselves surrounded by Indians who threatened them. Smith prepared for an encounter; but on firing a few guns, the Indians, terrified at the noise, made signs of peace, and exchanged hostages. One of the company was by this means carried to the habitation of their prince, and the whole were kindly used. They learned that it was by direction of Powhatan that the Indians were in arms, and had attempted to surprise them; from this circumstance they were led to suspect that Powhatan had been informed of this expedition, by the discontented part of the colony whom Smith had obliged to stay in the country when they would have deserted it.

It was Smith's invariable custom, when he met with the Indians, to put on a bold face, as if they appeared desirous of peace to demand their arms, and some of their children as pledges of their sincerity; if they complied, he considered them as friends; if not, as enemies. In the course of this voyage, he collected some furs, and discovered some colored earths, which the savages used as paints, but found nothing of the mineral kind. At the mouth of the Rappahanock, the boat grounded, and whilst they were waiting for the tide, they employed themselves in sticking with their swords the fishes which were left on the flats. Smith having struck his sword into a stingray, the fish raised its tail, and with its sharp indented thorn, wounded him in the arm. This wound was extremely painful, and he presently swelled to that degree, that they expected him to die, and he himself gave them orders to bury him on a neighboring island. But the surgeon, Dr. Russel, having probed the wound, by the help of a certain oil, so allayed the anguish and swelling, that Smith was able to eat part of the fish for his supper. From this occurrence, the place was distinguished by the name of Stingray Point, which it still bears.

On the 21st of July, they returned to Jamestown. Having, with the colored earths which they had found, disguised their boat and streamers, their old companions were alarmed at their approach, with the apprehension of an attack from the Spaniards; this was a trick of Smith's to frighten the old president, who had noted on the public stores, and was building a house in the woods, that he might seclude himself from the sickly, discontented, quarrelsome company. On Smith's arrival, they signified their desire of investing him with the government. Ratcliffe being deposed, it fell to him of course; and having recommended Scrivener to preside in his absence, he entered on another voyage of discovery, being determined to spare no pains for a full exploration of the country.

From the 24th of July to the 7th of September, with twelve men in an open barge, he ranged the bay of Chesapeake, as far northward as the falls of Susquehanna, entering all the rivers that flow into the bay, and examining their shores. In some places the natives were friendly, and in others jealous. Their idea of the strange visitors, was, that they had come "from under the world to take their world from them." Smith's constant endeavor was to preserve peace with them; but when he could not obtain corn in the way of traffic, he never scrupled to use threats, and in some cases violence, and by one or the other method he prevailed so as to bring home a load of provisions for his discontented companions, who without his efforts would not have been able to live. Sickness and death were very frequent, and the latest comers were most affected by the disorders of the climate.

Smith was now established in the presidency, by the election of the council and the request of the company; but the commission gave to a majority of the council the whole power. Newport, at his third arrival, brought over two new members, and Ratcliffe having still a seat, though deposed from the presidency, Smith was obliged in some cases to comply with their opinions, contrary to his own judgment, an instance of which will now be exhibited.

The Virginia Company in London, deceived by false reports, and misled by their own sanguine imaginations, had conceived an expectation not only of finding

precious metals in the country, but of discovering the South Sea, from the mountains at the head of James river; and it was thought, that the journey thither, might be performed in eight or ten days. For the purpose of making this capital discovery, they put on board Newport's ship, a barge capable of being taken to pieces, and put together again at pleasure. This barge was to make a voyage to the head of the river, then to be carried in pieces across the mountains, and to descend the rivers which were supposed to run westward to the South Sea. To facilitate this plan, it was necessary to gain the favor of Powhatan, through whose country the passage must be made; and as means of winning him, a royal present was brought over, consisting of a basin and ewer, a bed and furniture, a chair of state, a suit of scarlet clothes, with a cloak and a crown, all which were to be presented to him in due form; and the crown placed on his head, with as much solemnity as possible. To a person who knew the country and its inhabitants so well as Smith, this project appeared chimerical, and the means whereby it was to be carried on, dangerous. With a small quantity of copper and a few beads, he could have kept Powhatan in good humor, and made an advantage of it for the colony, whereas a profusion of presents he knew would but increase his pride and insolence. The project of travelling over unknown mountains with men already weakened by sickness, and worn out with fatigue, in a hot climate, and in the midst of enemies, who might easily cut off their retreat, was too romantic even for his sanguine and adventurous spirit. His opinion upon the matter cannot be expressed in more pointed language, than he used in a letter to the company. "If the quartered boat was burned to ashes, one might carry her in a bag, but as she is, five hundred cannot, to a navigable place above the falls." His dissent however was ineffectual, and when he found that the voice of the council was for executing it, he lent his assistance to effect as much of it as was practicable.

Previously to their setting out, he undertook, with four men only, to carry notice to Powhatan of the intended present, and invite him to come to Jamestown, that he might receive it there. Having travelled by land twelve miles to Werocomoco, on Pamunky (York) river, where he expected to meet Powhatan, and not finding him there, whilst a messenger was despatched thirty miles for him; his daughter Pocahontas, entertained Smith and his company with a dance, which for its singularity, merits a particular description.

In an open plain, a fire being made, the gentlemen were seated by it. Suddenly a noise was heard in the adjacent wood, which made them fly to their arms, and seize on two or three old men, as hostages for their own security, imagining that they were betrayed. Upon this the young princess came running to Smith, and passionately embracing him, offered herself to be killed, if any harm should happen to him or his company. Her assurances, seconded by all the Indians present, removed their fears. The noise which had alarmed them was made by thirty girls, who were preparing for the intended ceremony. Immediately they made their appearance, with no other covering than a girdle of green leaves and their skins painted, each one of a different color. Their leader had a pair of buck's horns on her head, an otter's skin as her girdle, and another on one arm; a bow and arrow in the other hand, and a quiver at her back. The rest of them had horns on their heads, and a wooden sword or staff in their hands. With shouting and singing they formed a ring round the fire, and performed a circular dance for about an hour, after which they retired in the same order as they had advanced. The dance was followed by a feast, at which the savage nymphs were as eager with their carresses as with their attendance; and this being ended, they conducted the gentlemen to their lodging by the light of fire-brands.

The next day Powhatan arrived, and Smith delivered the message from his father, Newport, (as he always called him) to this effect: "That he had brought him from the King of England, a royal present, and wished to see him at Jamestown, that he might deliver it to him; promising to assist him in prosecuting his revenge against the Monacans, whose country they would penetrate even to the sea beyond the mountains." To which the savage prince with equal subtlety and haughtiness, answered, "If your king has sent me a present, I also am a king, and am on my own land. I will stay here eight days. Your father must come to me; I will not go to him, nor to your fort. As for the Monacans, I am able to revenge myself. If you have heard of salt water beyond the mountains,

from any of my people, they have deceived you." Then with a stick he drew a plan of that region on the ground; and after many compliments the conference ended.

The present being put on board the boats, was carried down James river and up the Pamaunkee, whilst Newport, with fifty men, went across by land and met the boats, in which he passed the river, and held the proposed interview. All things being prepared for the ceremony of coronation, the present was brought from the boats; the basin and ewer were deposited, the bed and chair were set up, the scarlet suit and cloak were put on, though not till Namontac (an Indian youth whom Newport had carried to England and brought back again), had assured him that these habiliments would do him no harm; but they had great difficulty in persuading him to receive the crown, nor would he bend his knee, or incline his head in the least degree. After many attempts, and with actual pressing on his shoulders, they at last made him atoop a little and put it on. Instantly, a signal being given, the men in the boats fired a volley, at which the monarch started with horror, imagining that a design was forming to destroy him in the summit of his glory; but being assured that it was meant as a compliment, his fears subsided, and in return for the baubles of royalty received from King James, he desired Newport to present him his old fur mantle and deer-skin shoes, which, in his estimation, were doubtless a full equivalent; since all this finery could not prevail on the wary chief to allow them guides for the discovery of the inland country, or to approve their design of visiting it. Thus disappointed, they returned to Jamestown, determined to proceed without his assistance.

Smith, who had no mind to go on such a fruitless errand, tarried at the fort with eighty invalids to reload the ship, whilst Newport with all the council, and one hundred and twenty of the healthiest men, began their transmontane tour of discovery. They proceeded in their boats to the falls at the head of the river; from thence they travelled up the country two days and a half, and discovered two towns of the Monacans, the inhabitants of which seemed very indifferent towards them, and used them neither well nor ill. They took one of their petty princes and led him bound to guide them. Having performed this march, they grew wearied and returned, taking with them in their way back certain portions of earth, in which their refiner pretended that he had seen signs of silver. This was all the success of their expedition; for the savages had concealed their corn, and they could neither persuade them to sell it, nor find it to take it by force. Thus they returned to Jamestown, tired, disappointed, hungry and sick, and had the additional mortification of being laughed at by Smith for their vain attempt.

The Virginia Company had not only a view to the discovery of the South Sea, but also to establish manufactures in their colony; and for this purpose had sent over a number of workmen from Poland and Germany, who were skilled in the making pot-ashes and glass, as well as pitch and tar. Had the country been full of people, well cultivated and provided with all the necessities for carrying on these works, there might have been some prospect of advantage; but in a new region, the principal objects are subsistence and defence; these will necessarily occupy the first adventurers to the exclusion of all others. However, Smith was of a generous a disposition, and so indefatigable in doing what he apprehended to be his duty, and in gratifying his employers, that as soon as Newport returned from his fruitless attempt to find the South Sea, he set all who were able to work, that he might, if possible, answer the expectation of the company. Those who were skilled in the manufactures, he left under the care of the council, to carry on their works; whilst he took thirty of the most active with him, about five miles down the river, to cut timber, and make clapboards: this being, as he well knew, an employment the most certain of success. Among these were several young gentlemen, whose hands not having been used to labor, were blighted by the axes, and this occasioned frequent expressions of impatience and profaneness. To punish them, Smith caused the number of every man's oaths to be taken down daily, and at night, as many cans of water to be poured inside his sleeve. This discipline was no less singular than effectual; it so lessened the number of oaths, that scarcely one was heard in a week, and withal it made them perfectly good humored, and reconciled them to their labor. At his return to the fort, he found, not only that business had been neglected, but much provision consumed, and that it was necessary for him to undertake another expedition for corn. He,

therefore, went up the Chickahamony with two boats and eighteen men, and finding the Indians not in a humor for trading, but rather scornful and insolent, he told them that he had come not so much for corn, as to revenge his imprisonment, and the murder of his two men, some time before. Putting his crew in a posture of attack, the Indians fled, and presently sent messengers to treat of peace; for the obtaining which, he made them give him an hundred bushels of corn, with a quantity of fish and fowls; and with this supply he kept the colony from starving, and preserved the ship's provisions for her voyage to England. At her departure, she carried such specimens as could be had of tar, pitch, turpentine, soap-ashes, clapboards, and wainscot; and at Point Comfort met with Scrivener, who had been up the Pamunkey for corn, and had got a quantity of *pocones*, a red root, used in dyeing; these being taken on board, Captain Newport returned to England the third time, leaving about two hundred persons in Virginia.

The harvest of 1608 had fallen short both among the new planters and the natives; and the colony was indebted to the inventive genius and indefatigable perseverance of Smith for their subsistence during the succeeding winter. As long as the rivers were open, he kept the boats continually going among the natives for such supplies as could be obtained; and he never would return empty, if any thing were to be had by any means in his power. Whilst abroad in these excursions, he and his men were obliged frequently to lodge in the woods, when the ground was hard frozen and covered with snow; and their mode of accommodating themselves was, first to dig away the snow and make a fire; when the ground was dried and warmed, they removed the fire to one side, and spread their mats over the warm spot for their bed, using another mat as a screen from the wind; when the ground cooled, they shifted the fire again; by thus continually changing their position, they kept themselves tolerably warm through many cold nights; and it was observed, that those who went on this service and submitted to these hardships, were robust and healthy, whilst those who stayed at home were always weak and sickly.

The supplies procured by trading being insufficient, and hunger very pressing, Smith ventured on the dangerous project of surprising Powhatan, and carrying off his whole stock of provisions. This Indian prince had formed a similar design respecting Smith; and for the purpose of betraying him, had invited him to his seat, promising, that if he would send men to build him a house after the English mode, and give him some guns and swords, copper and beads, he would load his boat with corn. Smith sent him three Dutch carpenters, who treacherously revealed to him the design which Smith had formed. On his arrival with forty-six men, he found the prince so much on his guard, that it was impossible to execute his design. Having spent the day in conversation, (in the course of which Powhatan had in vain endeavored to persuade Smith to lay aside his arms, as being there in perfect security,) he retired in the evening, and formed a design to surprise Smith and his people at their supper; and had it not been for the affectionate friendship of Pocahontas, it would probably have been effected. This amiable girl, at the risk of her life, stole from the side of her father, and passing in the dark through the woods, told Smith with tears in her eyes of the plot, and then as privately returned. When the Indians brought in the supper Smith obliged them to taste of every dish; his arms were in readiness, and his men vigilant; and though there came divers sets of messengers, one after another during the night, under pretence of friendly inquiries, they found them so well prepared, that nothing was attempted, and the party returned in safety.

In a subsequent visit to Opecananough, by whom he formerly was taken prisoner, this prince put on the semblance of friendship, whilst his men lay in ambush with bows and arrows. The trick being discovered by one of Smith's party, and communicated to him, he resolutely seized the king by his hair, and holding a pistol to his breast, led him trembling to the ambush, and there, with a torrent of reproachful and menacing words, obliged him to order those very people, not only to lay down their arms, but to load him with provisions. After this, they made an attempt to murder him in his sleep, and to poison him, but both failed of success. The chief of Paspiha meeting him alone in the woods, armed only with a sword, attempted to shoot him, but he closed with the savage, and in the struggle both fell into the river; where, after having narrowly escaped drowning, Smith at last prevailed to gripe him by the throat, and would have cut off his head, but the entre-

ties of the poor victim prevailed on his humanity, he led him prisoner to Jamestown.

This intrepid behavior struck a dread into the savages, and they began to believe what he had often told them, that "his God would protect him against all their power, whilst he kept his promise; which was to preserve peace with them as long as they should refrain from hostilities, and continue to supply him with corn." An incident which occurred about the same time, confirmed their veneration for him. An Indian having stolen a pistol from Jamestown, two brothers, who were known to be his companions, were seized, and one was held as hostage for the other, who was to return in twelve hours with the pistol, or the prisoner was to be hanged. The weather being cold, a charcoal fire was kindled in the dungeon, which was very close, and the vapor had so suffocated the prisoner, that on the return of his brother at the appointed time with the pistol, he was taken out as dead. The faithful savage lamented his fate in the most distressing agony. Smith, to console him, promised, if they would steal no more, that he should be recovered. On the application of spirits and vinegar, he showed signs of life, but appeared delirious; this grieved the brother as much as his death. Smith undertook to cure him of this also, on the repetition of the promise to steal no more. The delirium being only the effect of the spirits which he had swallowed, was remedied by a few hours sleep; and being dismissed, with a present of copper, they went away, believing and reporting that Smith was able to bring the dead to life. The effect was, that not only many stolen things were recovered, and the thieves punished, but that peace and friendly intercourse were preserved, and corn brought in as long as they had any, whilst Smith remained in Virginia.

He was equally severe and resolute with his own men, and finding many of them inclining to be idle, and this idleness in a great measure the cause of their frequent sickness and death, he made an order, "that he who would not work should not eat, unless he were disabled by sickness; and that every one who did not gather as much food in a day as he did himself, should be banished." A recent attempt having been made to run away with the boats, he ordered, that the next person who should repeat this offence, should be hanged. By firmness in the execution of these laws, and by the concurrent force of his own example, in laboring continually, and distributing his whole share of European provisions and refreshments to the sick, he kept the colony in such order, that, though many of them murmured at his severity, they all became very industrious; and withal so healthy, that of two hundred persons, there died that winter and the next spring no more than seven. In the space of three months, they had made a quantity of tar, pitch, and pot-ashes; had produced a sample of glass; dug a well in the fort; built twenty new houses; provided nets and wiers for fishing; erected a block-house on the isthmus of Jamestown; another on Hog Island; and had begun a fortress on a commanding eminence. As the spring came on, they paid such attention to husbandry, as to have thirty or forty acres cleared and fit for planting; and a detachment had been sent to the southward, to look for the long lost colony of Sir Walter Raleigh, but without success.

Such was the state of the Virginia colony when Captain Samuel Argal arrived on a trading voyage, and brought letters from the company in England, complaining of their disappointment, and blaming Smith as the cause of it. They had conceived an ill opinion of him from the persons whom he had sent home, who represented him as arbitrary and violent towards the colonists, cruel to the savages, and disposed to traverse the views of the adventurers, who expected to grow rich very suddenly.

There was this disadvantage attending the business of colonization in North America at that day, that the only precedents which could be had were those of the Spaniards who had treated the natives with extreme cruelty, and amassed vast sums of gold and silver. Whilst the English adventurers detested the means by which the Spaniards had acquired their riches, they still expected that the same kind of riches might be acquired by other means; it was, therefore, thought politic to be gentle in demeanor and lavish of presents towards the natives, as an inducement to them to discover the riches of their country. On these principles, the orders of the Virginia Company to their servants were framed. But experience had taught Smith, the most discerning and faithful of all whom they had employed, that the country of Virginia would not enrich the adventurers in the time and manner which they expected; yet he was

far from abandoning it as worthless; his aim was thoroughly to explore it; and by exploring, he had discovered what advantages might be derived from it; to produce which, time, patience, expense, and labor, were absolutely necessary. He had fairly represented these ideas to his employers; he had spent three years in their service, and from his own observations had drawn and sent them a map of the country; and he had conducted their affairs as well as the nature of circumstances would permit. He had had a disorderly, factious, discontented, disappointed, set of men to control, by the help of a few adherents; in the face of the native lords of the soil, formidable in their numbers and knowledge of the country, versed in stratagem, tenacious of resentment, and jealous of strangers. To court them by presents, was to acknowledge their superiority, and inflate their pride and insolence. Though savages, they were men and not children. Though destitute of science, they were possessed of reason, and a sufficient degree of art. To know how to manage them, it was necessary to be personally acquainted with them; and it must be obvious, that a person who had resided several years among them, and had been a prisoner with them, was a much better judge of the proper methods of treating them, than a company of gentlemen at several thousand miles distance, and who could know them only by report. Smith had certainly the interest of the plantation at heart, and by toilsome experience, had just learned to conduct it, when he found himself so obnoxious to his employers, that a plan was concerted to supersede him, and reinstate, with a share of authority, those whom he had dismissed from the service.

The Virginia Company had applied to the king to recall their patent and grant another; in virtue of which, they appointed Thomas Lord de la Warre, general, Sir Thomas Gates, lieutenant-general; Sir George Somers, admiral; Sir Thomas Dale, marshal; Sir Ferdinando Wainman, general of horse; and Captain Newport, (the only one of them who had seen the country) vice-admiral. The adventurers having, by the alteration of their patent, acquired a reinforcement both of dignity and property, equipped nine ships; in which were embarked five hundred persons, men, women, and children. Gates, Somers, and Newport, had each a commission, investing either of them who might first arrive, with power to call in the old, and set up the new, commission. The fleet sailed from England in May, 1609, and by some strange policy, the three commanders were embarked in one ship. This ship being separated from the others in a storm, was wrecked on the island of Bermuda; another foundered at sea; and when the remaining seven arrived in Virginia, two of which were commanded by Ratcliffe and Archer, they found themselves destitute of authority; though some of them were full enough of prejudice against Smith, who was then in command. The ships had been greatly shattered in their passage, much of their provision was spoiled, many of their people were sick; and the season in which they arrived was not the most favorable to their recovery. A mutinous spirit soon broke out, and a scene of confusion ensued; the new comers would not obey Smith, because they supposed his commission to be superseded; the new commission was not arrived, and it was uncertain whether the ship which carried it would ever be seen or heard of. Smith would gladly have withdrawn and gone back to England, but his honor was concerned in maintaining his authority till he should be regularly superseded, and his spirit would not suffer him to be trampled on by those whom he despised. Upon due consideration, he determined to maintain his authority as far as he was able; waiting some proper opportunity to retire. Some of the most insolent of the new comers "he laid by the heels." With the more moderate he consulted what was best to be done; and, as a separation seemed to be the best remedy, and it had been in contemplation to extend the settlements, some were induced to go up to the Falls, others to Nansemond, and others to Point Comfort. Smith's year being almost expired, he offered to resign to Martin, who had been one of the old council, but Martin would not accept the command; he, therefore, kept up the form, and as much as he could of the power of government, till an accident, which had nearly proved fatal to his life, obliged him to return to England.

On his return from the new plantation at the Falls, sleeping by night in his boat, a bag of gunpowder took fire, and burnt him in a most terrible manner. Awakening in surprise, and finding himself wrapped in flames, he leaped into the water, and was almost drowned, before his companions could recover him. At his return

to Jamestown, in this distressed condition, Ratcliffe and Archer conspired to murder him in his bed; but the assassin whom they employed, had not courage to fire a pistol. Smith's old soldiers would have taken off their heads; but he thought it prudent to pass by the offence, and take this opportunity, as there was no surgeon in the country, of returning to England. As soon as his intention was known, the council appointed Mr. Percie to preside in his room, and detained the ship three weeks, till they could write letters, and frame complaints against him. He at length sailed for England, about the latter end of September, 1600; much regretted by his few friends, one of whom has left this character of him. "In all his proceedings he made justice his first guide, and experience his second; hating baseness, sloth, pride, and indignity, more than any dangers. He never would allow more for himself than for his soldiers; and upon no danger would send them where he would not lead them himself. He would never see us want what he had, or could by any means get for us. He would rather want than borrow; or starve, than not pay. He loved action more than words; and hated covetousness and falsehood worse than death. His adventures were our lives; and his loss our deaths."

There needs no better testimony to the truth of this character, than what is related of the miserable colony after he had quitted it. Without government, without prudence, careless, indolent and factious, they became a prey to the insolence of the natives, to the diseases of the climate and to famine. Within six months, their number was reduced from five hundred to sixty; and when the three commanders, who had been wrecked on Bermuda, arrived, 1610, with one hundred and fifty men in two small vessels, which they had built out of the ruins of their ship, and the cedars which grew on the island; they found the remnant of the colony in such a forlorn condition, that without hesitation, they determined to abandon the country, and were sailing down the river, when they met a boat from the Lord de la Warre, who had come with a fleet to their relief. By his persuasion they resumed the plantation, and to this fortunate incident may be ascribed the full establishment of the colony of Virginia.

Such a genius as Smith's could not remain idle. He was well known in England, and the report of his valor and his spirit of adventure, pointed him out to a number of merchants, who were engaged in the American fishery, as a proper person to make discoveries on the coast of North Virginia. In April, 1614, he sailed from London with two ships, and arrived at the island of Monahigon in latitude 43 1-2°, as it was then computed, where he built seven boats. The design of the voyage was to take whales, to examine a mine of gold, and another of copper, which were said to be there; and if either, or both of these should fail, to make up the cargo with fish and furs. The mines proved a fiction, and by long chasing the whales to no purpose, they lost the best season for fishing; but whilst the seamen were engaged in these services, Smith, in one of his boats, with eight men, ranged the coast, east and west, from Penobscot to Cape Cod; bartering with the natives for beaver and other furs, and making observations on the shores, islands, harbors and head lands; which, at his return to England, he wrought into a map, and presenting it to prince Charles, afterwards the royal martyr, with a request that he would give the country a name, it was for the first time called *New England*. The prince also made several alterations in the names which Smith had given to particular places. For instance, he had called the name of that promontory, which forms the eastern entrance of Massachusetts bay, *Tragabigzanda*; after the name of the Turkish lady to whom he had been formerly a slave at Constantinople; and the three islands which lie off the Cape, the *Turks Head*, in memory of his victory over the three Turkish champions, in his Transylvanian adventures. The former, Charles, in filial respect to his mother, called *Cape Anne*, which name it has ever since retained; the name of the islands has long since been lost; and another cluster to which he gave his own name, *Smith's Isles*, and which name the prince did not alter, are now, and have for more than a century been called the *Isles of Shoals*; so that the most pointed marks of his discoveries on the coast of New England, have, either by his own complaisance to the son of his sovereign, or by force of time and accidents become obsolete. When he sailed for England in one of the ships, he left the other behind to complete her lading, with orders to sell the fish in Spain. The master, Thomas Hunt, decoyed twenty-four of the natives on board, and sold them in Spain for slaves. The

memory of this base transaction was long preserved among the Americans, and succeeding adventurers suffered on account of it.

At Smith's return to England he put in at Plymouth, where, relating his adventures, and communicating his sentiments to Sir Ferdinando Gorges, he was introduced to the Plymouth Company of adventurers to North Virginia, and engaged in their service. At London he was invited by the South Virginia Company to return to their service; but made use of his engagement with the Plymouth adventurers as an excuse for declining their invitation. From this circumstance it seems, that they had been convinced of his former fidelity, notwithstanding the letters and reports which they had formerly received to his disadvantage.

During his stay in London, he had the very singular pleasure of seeing his friend Pocahontas, the daughter of Powhatan. Having been made a prisoner in Virginia, she was there married to Mr. John Rolfe, and by him was brought to England. She was then about twenty-two years of age; her person was graceful and her deportment gentle and pleasing. She had been taught the English language and the Christian religion, and baptized by the name of Rebecca. She had heard that Smith was dead, and knew nothing to the contrary, till she arrived in England.

The fame of an Indian princess excited great curiosity in London; and Smith had the address to write a handsome letter to the queen, setting forth the merits of his friend, and the eminent services she had done to him and the colony of Virginia. She was introduced by the Lady de la Warre; the queen and royal family received her with much complacency, and she proved herself worthy of their notice and respect. At her first interview with Smith she called him father; and because he did not immediately return the salutation and call her child she was so overcome with grief, that she hid her face and would not speak for some time. She was ignorant of the ridiculous affectation which reigned in the court of James; which forbade Smith assuming the title of father, to the daughter of a king; and when informed of it she despised it; passionately declaring, that she loved him as a father, and had treated him as such in her own country, and would be his child wherever she went. The same pedantic affectation caused her husband to be looked upon as an offender, for having, though a subject, invaded the mysterious rights of royalty in marrying above his rank. This marriage, however, proved beneficial to the colony, as her father had thereby become a friend to them, and when she came to England, he sent with her Uttamacoemac, one of his trusty counsellors; whom he enjoined to inquire for Smith, and tell him whether he was alive. Another order which he gave him was, to bring him the number of people in England; accordingly, on his landing at Plymouth, the obedient savage began his account by cutting a notch on a long stick for every person whom he saw; but soon grew tired of his employment, and at his return told Powhatan that they exceeded the number of leaves on the trees. A third command from his prince was, to see the God of England, and the king, queen, and princes, of whom Smith had told him so much; and when he met with Smith, he desired to be introduced to those personages. He had before this seen the king, but would not believe it; because the person whom they pointed out to him had not given him any thing. "You gave Powhatan," said he to Smith, "a white dog, but your king has given me nothing." Mr. Rolfe was preparing to return with his wife to Virginia, when she was taken ill and died at Gravesend; leaving an infant son, Thomas Rolfe, from whom are descended several families of note in Virginia, who hold their lands by inheritance from her.

Smith had conceived such an idea of the value and importance of the American continent, that he was fully bent on the business of plantation, rather than fishing and trading for furs. In this he agreed with his friend Sir Ferdinando Gorges, and the few other active members of the council of Plymouth, but it had become an unpopular theme. One colony had been driven home from Sagadahock by the severity of the season and the deaths of their leaders. Men who were fit for the business were not easily to be obtained, those who had formerly been engaged were discouraged, and it required great strength of mind as well as liberality of purse, to set on foot another experiment. After much trouble in endeavoring to unite persons of opposite interests, and stimulate those who had sustained former losses to new attempts, he obtained one ship of two hundred tons, and another of fifty, with

which he sailed in 1615. Having proceeded about one hundred and twenty leagues, they were separated in a storm; the smaller one commanded by Capt. Thomas Dermer pursued her voyage; but Smith having lost his masts was obliged to put back under a jury-mast to Plymouth. There he put his stores on board a small bark of sixty tons, and thirty men, of whom sixteen were to assist him in beginning a new colony.

Meeting with an English pirate, his men would have had him surrender; but though he had only four guns, and the pirate thirty-six, he disdained to yield. On speaking with her, he found the commander and some of the crew to be his old shipmates, who had run away with the ship from Tunis, and were in distress for provisions; they offered to put themselves under his command, but he rejected the proposal and went on his voyage. Near the Western Islands he fell in with two French pirates; his men were again thrown into a panic, and would have struck, but he threatened to blow up the ship, if they would not fight; and by firing a few running shot, he escaped them also. After this he was met by four French-men-of-war, who had orders from their sovereign to seize pirates. He showed them his commission under the great seal; but they perfidiously detained him whilst they suffered his ship to escape in the night, and return to Plymouth. They knew his enterprising spirit, and were afraid of his making a settlement in New England, so near to their colony of *Acadia*; and they suspected, or at least pretended to suspect, that he was the person who had broken up their fishery at Port Royal (which was really done by Captain Argal) the year before.

When their cruise was finished, they carried him to Rochelle; and notwithstanding their promises to allow him a share of the prizes which they had taken whilst he was with them, they kept him as a prisoner on board a ship at anchor. But a storm arising, which drove all the people below, he took the boat, with an half pike for an oar, thinking to make his escape in the night. The current was so strong that he drifted to sea, and was near perishing. By the turn of the tide he got ashore, on a marshy island, where some fowls found him in the morning almost dead with cold and hunger. He gave them his boat to carry him to Rochelle, where he learned that the ship which had taken him, with one of her prizes, which was very rich, had been driven on shore in that storm, and lost, with her captain and one half of the men.

Here he made his complaint to the judge of the Admiralty, and produced such evidence in support of his allegations, that he was treated with fair words; but it does not appear that he got any recompense. He met here and at Bourdeaux with many friends, both French and English, and at his return to England, published in a small quarto, an account of his two last voyages, with the depositions of the men who were in the ship when he was taken by the French. To this book he prefixed his map of New England; and in it gave a description of the country, with its many advantages, and the proper methods of rendering it a valuable acquisition to the English dominions. When it was printed, he went all over the west of England, giving copies of it to all persons of note; and endeavoring to excite the nobility, gentry, and merchants, to engage with earnestness in the business of colonizing America. He obtained from many of them fair promises, and was complimented by the Plymouth Company with the title of Admiral of New England. But the former ill success of some too sanguine adventurers, had made a deep impression, and a variety of cross incidents, baffled all his attempts.

However, his experience and advice were of eminent service to others. The open frankness and generosity of his mind led him to give all the encouragement which he could to the business of fishing and planting in New England, for which purpose, in 1622, he published a book, entitled, "*New England's Tryals*," some extracts from which are preserved by Purchas. No man rejoiced more than myself in the establishment of the colonies of Plymouth and Massachusetts.

When the news of the massacre of the Virginian planters by the Indians, 1622, arrived in England, Smith was all on fire to go over to revenge the insult. He made an offer to the company that if they would allow him one hundred soldiers and thirty sailors, with the necessary provisions and equipments, he would range the country, keep the natives in awe, protect the planters, and make discoveries, of the hitherto unknown parts of America; and for his own risk and pains would desire nothing but what he would "produce from the proper labor of the savages." On this

proposal the company was divided, but the pusillanimous and avaricious party prevailed; and gave him this answer, "that the charges would be too great; that their stock was reduced; that the planters ought to defend themselves; but, that if he would go at his own expense, they would give him *leave*, provided he would give them one-half of the *pillage*." Such an answer could be received only with contempt.

When the king in 1624, instituted a commission for the reformation of Virginia, Smith, by desire of the commissioners, gave in a relation of his former proceedings in the colony, and his opinion and advice respecting the proper methods of remedying the defects in government, and carrying on the plantation with a prospect of success.* These with many other papers he collected and published in 1627, in a thin folio, under the title of "The General History of Virginia, New England, and the Somer Isles." The narrative part is made up of journals and letters of those who were concerned with him in the plantation, intermixed with his own observations. His intimate friend, Mr. Purchas, had published most of them two years before in his "Pilgrims."

In 1629, at the request of Sir Robert Cotton, he published a history of the early part of his life, entitled, "The true Travels, Adventures and Observations of Captain John Smith." This work is preserved entire in the second volume of Churchill's Collections, and from it the former part of this account is compiled. In the conclusion he made some addition to the history of Virginia, Bermuda, New England, and the West Indies, respecting things which had come to his knowledge after the publication of his general history. He stated the inhabitants of Virginia in 1628 at five thousand, and their cattle about the same number. Their produce was chiefly tobacco; but those few who attended to their gardens had all sorts of fruit and vegetables in great abundance and perfection. From New England they received salted fish; but of fresh fish their own rivers produced enough, besides an infinite quantity of fowl; as their woods did of deer and other game. They had two brew houses; but they cultivated the Indian corn in preference to the European grain. Their plantations were scattered; some of their houses were palisaded; but they had no fortifications nor ordnance mounted.

His account of New England is, that the country had been represented by adventurers from the West of England, as rocky, barren, and desolate: but that since his account of it had been published, the credit of it was so raised, that forty or fifty sail went thither annually on fishing and trading voyages. That nothing had been done to any purpose in establishing a plantation, till "about an hundred Brownists went to New Plymouth; whose humorous ignorance caused them to endure a wonderful deal of misery with infinite patience."

He then recapitulates the history of his American adventures in the following terms. "Now to conclude the travels and adventures of Captain Smith: how first he planted Virginia, and was set ashore with a hundred men in the wild woods; how he was taken prisoner by the savages, and by the King of Pamaunkey, tied to a tree to be shot to death; led up and down the country to be shown for a wonder; fattened as he thought for a sacrifice to their idol, before whom they conjured three days, with strango dances and invocations; then brought before their Emperor Powhatan, who commanded him to be slain; how his daughter Pocahontas saved his life, returned him to Jamestown, relieved him and his famished company, which was but eight and thirty, to possess those large dominions; how he discovered all the several nations on the rivers falling into the Bay of Chesapeake; how he was stung almost to death by the poisonous tail of a fish called a stingray; how he was blown up with gunpowder and returned to England to be cured.

"Also how he brought New England to the subjection of the kingdom of Great Britain; his fights with the pirates, left alone among French men-of-war, and his ship ran from him; his sea-fights for the French against the Spaniards; their bad usage of him; how in France, in a little boat, he escaped them; was adrift all such a stormy night at sea by himself, when thirteen French ships were split or driven on shore by the isle Rhee, the general and most of his men drowned; when God, to whom be all honor and praise, brought him safe on shore to the admiration of all who escaped;

you may read at large in his general history of Virginia, the Somer islands, and New England."

This was probably his last publication, for he lived but two years after. By a note in Jusselyn's voyage, it appears that he died in 1631, at London, in the fifty-second year of his age.

It would have given singular pleasure to the compiler of these memoirs, if he could have learned from any credible testimony that Smith ever received any recompense for his numerous services and sufferings. The sense which he had of this matter, in 1627, shall be given in his own words. "I have spent five years, and more than five hundred pounds, in the service of Virginia and New England, and in neither of them have I one foot of land, nor the very house I built, nor the ground I digged with my own hands; but I see those countries shared before me by those who know them only by my descriptions."

DE MONTS, POUTRINCOURT, AND CHAMPLAIN.

DE MONTS.—His Patent for Acadia.—His Fort at St. Croix.—He quits Acadia.—POUTRINCOURT.—SAMUEL CHAMPLAIN.—He sails up the St. Lawrence.—Builds a Fort at Quebec.—Discovers the Lake.—Surrenders Quebec to the English.—His Death and Character.

AFTER the discovery of Canada by Cartier, the French continued trading to that country for furs, and fishing on the banks of Newfoundland, Cape Breton, and Acadia, where they found many excellent and convenient harbors, among which Canseau was early distinguished as a place extremely suitable for the fishery. One Savalet, an old mariner, who frequented that port, had before 1609 made no less than forty-two voyages to those parts.

Henry IV. King of France, perceived the advantages which might arise to his kingdom from a farther exploration of the northern parts of America; and therefore gave encouragement to those who were desirous of making adventures. In 1598, the Marquis de la Roche obtained a commission of Lord-lieutenant, and undertook a voyage with a view to establish a colony, consisting of convicts taken out of the prisons. Happening in the course of his voyage to fall in with the isle of Sable, a low, sandy island, lying about twenty-five leagues southward of Canseau, he there landed forty of his miserable crew, to subsist on the cattle and swine with which the place had been stocked by the Portuguese, for the relief of shipwrecked seamen. The reason given for choosing this forlorn place for the disembarkation of his colony, was, that they would be out of all danger from the savages, till he should find a better situation for them on the continent, when he promised to return and take them off. Whether he ever reached the continent is uncertain, but he never again saw the isle of Sable. Returning to France he engaged in the wars, was made a prisoner by the Duke of Mercœur, and soon after died. The wretched exiles subsisted on such things as the place afforded, and clothed themselves with the skins of seals. At the end of seven years, King Henry, in compassion, sent a fisherman to bring them home. Twelve only were then alive. The fisherman, concealing from them the generous intention of their sovereign, took all the skins which they had collected as a recompense for his services, some of which being black foxes were of great value. The king had them brought before him in their seal skin habits and long beards. He pardoned their former crimes, and made each of them a present of fifty crowns. When they discovered the fraud of the fisherman, they instituted a process against him at law, and recovered large damages: by means of which they acquired so much property as to enter into the same kind of traffic.

The king also granted to Pontgrave de Chauvin, an exclusive privilege of trading at Tadousac, the mouth of the river Saguenay; to which place he made two voyages, and was preparing for a third when he was prevented by death.

The next voyager of any note was SAMUEL CHAMPLAIN, of Brœlage; a man of a noble family: who, in 1603, sailed up the river of Canada, as far as Cartier had gone in 1535. He made many inquiries of the natives concerning their country, its rivers, falls, lakes, mountains and *mines*. The result of his inquiry was, that a communication was formed by means of two lakes, with the country of the Iroquois towards the south; that towards the west there were more and greater lakes of fresh water, to one of which they knew no limits; and that to the northward there was an inland sea of salt water. In the course of this voyage,

Champlain anchored at a place called Quebec, which in the language of the country signified a strait; and this was thought to be a proper situation for a fort and settlement. He heard of no mines but one of copper, far to the northward. With this information he returned to France, in the month of September.

On the eighth of November in the same year, King Henry granted to the Sieur De Monts, a gentleman of his bed-chamber, a patent, constituting him lieutenant-general of all the territory of *L'Acadia*, from the fortieth to the forty-sixth degree of north latitude, with power to subdue the inhabitants and convert them to the Christian faith. This patent was published in all the maritime towns of France; and De Monts having equipped two vessels, sailed for his new government on the 7th of March, 1604, taking with him the aforesaid Samuel Champlain for a pilot, Monsieur De Poutincourt, who had been for a long time desirous to visit America.

On the 6th of May, they arrived at a harbor on the southeast side of the peninsula of Acadia, where they found one of their countrymen, Rossignol, trading with the Indians without license. They seized his ship and cargo; leaving him only the poor consolation of giving his name to the harbor where he was taken. The provisions found in his ship were a seasonable supply, and without them the enterprise must have been abandoned. This place is now called Liverpool.

From Port Rossignol they coasted the peninsula to the southwest, and having doubled Cape Sable, came to anchor in the bay of St. Mary, where Aubry, a priest, going ashore, was lost in the woods, and a Protestant was charged with having murdered him, because they had sometimes had warm disputation on religious subjects. They waited for him several days, firing guns and sounding trumpets, but in vain; the noise of the sea was so great, that no other sound could be heard. Concluding that he was dead, they quitted the place after sixteen days, intending to examine that extensive bay on the west of their peninsula, to which they gave the name of La Baye Françoise; but which is now called the Bay of Fundy. The priest was afterwards found alive but almost starved to death.

On the eastern side of this bay they discovered a narrow strait, into which they entered, and soon found themselves in a spacious bason, environed with hills, from which descended streams of fresh water; and between the hills ran a fine navigable river, which they called L'Equille. It was bordered with fertile meadows, and full of delicate fish. Poutincourt, charmed with the beauty of the place, determined here to make his residence, and having received a grant of it from De Monts, gave it the name of Port Royal [Annapolis].

From Port Royal, De Monts sailed farther into the great bay, to visit a copper mine. It was a high rock, on a promontory, between two bays. [Menis.] The copper, though mixed with stone, was very pure, resembling that called Rozette copper. Among these stones they found chrystals, and a certain shining stone of a blue color. Specimens of these stones were sent to the king.

In farther examining the bay they came to a great river, which they called St. John's, full of islands, and swarming with fish. Up this river they sailed fifty leagues, and were extremely delighted with the vast quantity of grapes which grew on its banks. By this river they imagined that a shorter communication might be had with the Baye de Chaleur and the port of Tadousac, than by the sea.

From the river St. John they coasted the bay south-westerly, till they came to an island in the middle of a river which Champlain had previously explored. Finding its situation safe and convenient, De Monts resolved there to build a fort and pass the winter. To this island he gave the name of St. Croix;* because that

* This is a station of much importance. It has given rise to a controversy between the United States and the British government, which is not yet terminated. I shall therefore give a description of this island and its surrounding waters, from a translation of Mark Lescarbot's history of the voyages of De Monts, in which he himself was engaged, and therefore had seen the place which he describes. This translation is to be found at large in Churchill's Collections, vol. viii. 736, and an abridgement of it in Purchas's Pilgrims, vol. v. 1619.

"Leaving St. John's river, they came, following the coast twenty leagues from that place, to a great river, which is properly sea, [i.e. salt water] where they fortified themselves in a little island seated in the midst of this river, which the said Champlain had been to discover and view. And, seeing it strong by nature, and of easy defence and keeping; besides that the season began to shile away, and therefore it was be-hoveful to provide of lodging, without running any farther, they resolved to make their abode there.

"Before we speak of the ship's return to France, it is meet

* Agreeably to Smith's advice to these commissioners, King Charles I. at his accession dissolved the company, in 1626, and reduced the colony under the immediate direction of the crown, appointing the governor and council, and ordering all patents and processes to issue in his own name.

two leagues higher there were brooks which "came cross-wise to fall within this large branch of the sea."

The winter proved severe, and the people suffered so much by the scurvy, that thirty-six of them died; the remaining forty, who were all sick, lingered till the spring, (1605,) when they recovered by means of the fresh vegetation. The remedy which Cartier had found in Canada was here unknown.

As soon as his men were recovered, De Monts resolved to seek a comfortable station in a warmer climate. Having victualled and armed his pinnace, he sailed along the coast to Norombago, a name which had been given by some European adventurers to the Bay of Penobscot; from thence he sailed to Kennebec, Casco, Saco, and finally came to Malebarre, as Cape Cod was then called by the French. In some of the places which he had passed, the land was inviting, and particular notice was taken of the grapes; but the savages appeared numerous, unfriendly and thievish. De Monts' company being small, he preferred safety to pleasure, and returned first to St. Croix, and then to Port Royal; where he found Dupont, in a ship from France, with fresh supplies, and a reinforcement of forty men. The stores which had been deposited at St. Croix were removed across the bay, but the buildings were left standing. New houses were erected at the mouth of the river which runs into the basin of Port Royal: there the stores and people were lodged; and De Monts having put his affairs in as good order as possible, in the month of September embarked for France, leaving Dupont as his lieutenant, with Champlain and Champdore to perfect the settlement, and explore the country.

During the next winter they were plentifully supplied by the savages with venison, and a great trade was carried on for furs. Nothing is said of the scurvy; but they had short allowance of bread; not by reason of any scarcity of corn, but because they had no other

to tell you, how hard the isle of St. Croix is to be found out, to them that were never there. For there are so many isles and great bays to go by (from St. John's) before one be at it, that I wonder how one might ever pierce so far as to find it. There are three or four mountains, eminent above the others, on the sides; but on the north side, from whence the river runneth down, there is but a sharp pointed one, about two leagues distant. The woods of the mainland are fair and admirable high, and well grown, as in like manner is the grass. There is right over against the island fresh water brooks, very pleasant and agreeable; where divers of Mons. De Monts men did their business, and builded there certain cabins. As for the nature of the ground, it is most excellent, and most abundantly fruitful. For the said Mons. De Monts having caused there some piece of ground to be tilled, and the same sowed with rye; he was not able to tarry for the maturity thereof to reap it; and notwithstanding the grain fallen hath grown and increased so wonderfully, that two years after, we reaped and did gather of it as fair, big, and weighty as in France, which the soil has brought forth without any tillage; and yet at this present (1609) it doth continue still to multiply every year.

"The said island containeth some half a league in circuit, and at the end of it, on the sea side, there is a mount, or small hill, which is, as it were, a little isle, severed from the other, where Mons. De Monts his cannon were placed. There is also a little chapel, built after the savage fashion. At the foot of which chapel there is such store of muscels as is wonderful, which may be gathered at low water, but they are small."

"Now let us prepare and hoist up sails. Mons. de Poutincourt made the voyage into these parts, with some men of good sort, not to winter there; but as it were to seek out his seat, and find out a land that might like him. Which he having done, had no need to sojourn there any longer. So then, the ships being ready for the return, he shipped himself, and those of his company in one of them."

"During the foresaid navigation, Mons. de Monts his people, did work about the fort; which he seated at the end of the island, opposite to the place where he had lodged his cannon. Which was wisely considered, to the end to command the river up and down. But there was an inconvenience; the said fort did lie toward the north, and without any shelter, but of the trees that were on the isle shore, which all about he commanded to be kept and not cut down."

"The most urgent things being done, and hoary snowy father being come, that is to say winter, then they were forced to keep within doors, and to live every one at his home. During which time, our men had three special commodities in this island, want of wood (for that which was in the said isle was spent in buildings), lack of fresh water, and the continual watch made by night, fearing some surprise from the savages that had lodged themselves at the foot of said island, or some other enemy. For the malediction and rage of many Christians is such, that one must take heed of them much more than of infidels. When they had need of water or wood, they were constrained to cross over the river, which is thence as broad of every side as the river of Seine."

By a gentleman who resided several years in those parts, I have been informed, that an island which answers to the description lies in the eastern part of the Bay of Passamaquoddy; and there the river St. Croix was supposed to be by the commissioners who negotiated the peace in 1763, who had Mitchell's map before them; but in a map of the coast of New England and Nova Scotia, published in London, 1767, by Robert Sayer, and said to be drawn by Captain Holland, the river St. Croix is laid down at the western part of the bay; the breadth of which is about six or seven leagues.

mill to grind it than the hand-mill, which required hard and continual labor. The savages were so averse to this exercise, that they preferred hunger to the task of grinding corn, though they were offered half of it in payment. Six men only died in the course of this winter.

In the spring of 1606, Dupont attempted to find what De Monts had missed in the preceding year, a more southerly settlement. His bark was twice forced back with adverse winds; and the third time was driven on rocks and bilged at the mouth of the port. The men and stores were saved; but the vessel was lost. These fruitless attempts proved very discouraging; but Dupont employed his people in building a bark and shallop, that they might employ themselves in visiting the ports, whither their countrymen resort to dry their fish, till new supplies should arrive.

De Monts and Poutincourt were at that time in France, preparing, amidst every discouragement, for another voyage. On the thirteenth of May, they sailed from Rochelle, in a ship of one hundred and fifty tons; and on the 27th of July arrived at Port Royal, in the absence of Dupont, who had left two men only to guard the fort. In a few days he arrived, having met with one of their boats which they had left at Canseau, and great was the joy on both sides at their meeting.

Poutincourt now began his plantation; and having cleared a spot of ground, within fifteen days he sowed European corn and several sorts of garden vegetables. But notwithstanding the beauty and fertility of Port Royal, De Monts had still a desire to find a better place to the southward. He therefore prevailed on Poutincourt to make another voyage to Cape Malebarre; and so earnest was he to have this matter accomplished, that he would not wait till the next spring, but prepared a bark to go to the southward as soon as the ship was ready to sail.

On the 28th of August, the ship and the bark both sailed from Port Royal. In the ship, De Monts and Dupont returned to France; whilst Poutincourt, Champlain, Champdore and others crossed the bay to St. Croix, and thence sailed along the coast, touching at many harbors in their way till they arrived in sight of the Cape, the object of their voyage. Being entangled among the shoals, their rudder was broken and they were obliged to come to anchor, at the distance of three leagues from the land. The boat was then sent ashore to find a harbor of fresh water; which by the information of one of the natives was accomplished. Fifteen days were spent in this place; during which time a cross was erected, and possession taken for the King of France; as De Monts had done two years before at Kennebec. When the bark was repaired and ready to sail, Poutincourt took a walk into the country, whilst his people were baking bread. In his absence some of the natives visited his people and stole a hatchet. Two guns were fired at them and they fled. In his return he saw several parties of the savages, male and female, carrying away their children and their corn, and hiding themselves as he and his company passed. He was alarmed at this strange appearance; but much more so, when early the next morning a shower of arrows came flying among his people, two of whom were killed and several others wounded. The savages having taken their revenge, fled; and it was in vain to pursue them. The dead were buried at the foot of the cross; and whilst the funeral service was performing, the savages were dancing and yelling in mock concert at a convenient distance, but within hearing. When the French retired on board their bark, the savages took down the cross, dug up the bodies and stripped them of their grave clothes, which they carried off in triumph.

This unhappy quarrel gave Poutincourt a bad idea of the natives. He attempted to pass farther round the cape, but was prevented by contrary winds, and forced back to the same harbor, where the savages offering to trade, six or seven of them were seized and put to death.

The next day another attempt was made to sail farther; but the wind came against them. At the distance of six or seven leagues they discovered an island; but the wind would not permit them to approach it; they therefore gave it the name of Douteuse, or Doubtful. This was probably either Nanucket or Capawick, now called Martha's Vineyard; and if so, the contest with the Indians was on the south shore of Cape Cod, where are several harbors and streams of fresh water. To the harbor where he lay, he gave the name of Port Fortune.

It was now late in the season and no prospect appeared of obtaining any better place for a settlement; besides, he had two wounded men whose lives were in

danger. He therefore determined to return, which he did by the shortest and most direct course; and after a perilous voyage, in which the rudder was again broken, and the bark narrowly escaped shipwreck, he arrived at Port Royal on the 14th of November.

The manner in which they spent the third winter was social and festive. At the principal table, to which fifteen persons belonged, an order was established, by the name of L'ordre de bon temps. Every one took his turn to be caterer and steward, for one day, during which he wore the collar of the order and a napkin, and carried a staff. After supper he resigned his accoutrements, with the ceremony of drinking a cup of wine, to the next in succession. The advantage of this institution was, that each one was emulous to be prepared for his day, by previously hunting or fishing, or purchasing fish and game of the natives, who constantly resided among them, and were extremely pleased with their manners.

Four only died in this winter; and it is remarked that these were "sluggish and fretful." The winter was mild and fair. On a Sunday in the middle of January, after divine service, they "sport and had music on the river;" and the same month they went two leagues, to see their corn-field, and dined cheerfully in the sun shine.

At the first opening of the spring (1607) they began to prepare gardens; the produce of which was extremely grateful; as were also the numberless fish which came into the river. They also erected a water-mill, which not only saved them much hard labor at the hand-mill, but gave them more time for fishing. The fish which they took were called herrings and pilchards; of which they pickled several hogsheads to be sent home to France.

In April they began to build two barks, in which they might visit the ports frequented by the fishermen, and learn some news from their mother country, as well as get supplies for their subsistence. Having no pitch to pay the seams, they were obliged to cut pine trees and burn them in kilns, by which means they obtained a sufficiency.

On Ascension day a vessel arrived from France, destined to bring supplies; a large share of which, the crew had ungenerously consumed during their voyage. The letters brought by this vessel informed them that the company of merchants, associated with De Monts, was discouraged; and that their ship was to be employed in the fishery at Canseau. The reason of this proceeding was, that contrary to the king's edict, the Hollanders had intruded themselves into their fur trade in the river of Canada, having been conducted by a treacherous Frenchman; in consequence of which the king had revoked the exclusive privilege which he had given to De Monts for ten years. The avarice of these Hollanders was so great, that they had opened the graves of the dead, and taken the beaver skins in which the corpses had been buried. This outrage was so highly resented by the savages at Canseau, that they killed the person who had shown the places where the dead were laid. This news was extremely unwelcome, as it portended the destruction of the colony.

Poutincourt however was so well pleased with his situation, that he determined to return to it, though none but his own family should accompany him. He was very desirous to see the issue of his attempt at agriculture, and therefore detained the vessel as long as he could, and employed his bark in small voyages about the bay, to trade for furs and gather specimens of iron and copper to be transported to France. When they were all ready to sail, he tarried eleven days longer than the others, that he might carry home the first fruits of his harvest. Leaving the buildings and part of the provision with the standing corn, as a present to the friendly natives, he finally sailed from Port Royal, on the 11th of August, and joined the other vessels at Canseau; from which place he proceeded to France, where they arrived in the latter end of September.

Specimens of the wheat, rye barley, and oats were shown the king; which, with other productions of the country, animal and mineral, were so highly acceptable, that he renewed and confirmed to De Monts the privilege of trading for beavers, that he might have it in his power to establish a colony. In consequence of which the next spring several families were sent to renew the plantation, who found that the savages had gathered several barrels of the corn which had been left standing; and had reserved one for their friends whom they expected to return.

The revocation of the exclusive patent given to De Monts, was founded on complaints made by the masters of fishing vessels, that the branch of commerce in

which they were engaged would be ruined. When this patent was restored, it was limited to one year; and on this condition, that he should make an establishment in the river St. Lawrence. De Monts therefore quitted his connexion with Acadia, and the company of merchants, with whom he had been connected, fitted out two ships for the port of Tadousac, in 1603. The fur trade was of very considerable value, and the company made great profits; but De Monts finding their interests hurt by his connexion with them, withdrew from the association.

Poutrincourt resolving to prosecute his plantation at Port Royal, the grant of which had been confirmed to him by the king, sent Biencourt, his son, to France, (1608) for a supply of men and provisions. One condition of the grant was, that attempts should be made to convert the natives to the Catholic faith, it was therefore necessary to engage the assistance of some ecclesiastics. The first who embraced the proposal were the Jesuits, by whose zealous exertions a contribution was soon made for the purpose; and two of their order, Biard and Masse, embarked for the new plantation. It was not long before a controversy arose between them and the proprietor, who said "it was his part to rule them on earth, and theirs only to guide him to heaven." After his departure for France, his son Biencourt, disdaining to be controlled by those whom he had invited to reside with him, threatened them with corporeal punishment, in return for their spiritual anathemas. It became necessary then that they should separate. The Jesuits removed to Mount Desert, where they planted gardens and entered on the business of their mission, which they continued till 1613 or 1614; when Sir Samuel Argal from Virginia broke up the French settlements in Acadia. In the encounter one of these Jesuits was killed and the other was made prisoner. Of the other Frenchmen, some dispersed themselves in the woods and mixed with the savages; some went to the river St. Lawrence and strengthened the settlement which Champlain had made there; and others returned to France.

Two advantages were expected to result from establishing a colony in the river St. Lawrence; one was an extension of the fur trade, and another was the hope of penetrating westward, through the lakes, to the Pacific ocean, and finding a nearer communication with China. One of the vessels sent by the company of merchants, in 1608, to that river was commanded by Champlain. In his former voyage he had marked the strait above the Isle of Orleans, as a proper situation for a fort; because the river was there contracted in its breadth, and the northern shore was high and commanding. He arrived there in the beginning of July, and immediately began to clear the woods, to build houses, and prepare fields and gardens. Here he spent the winter, and his company suffered much by the scurvy. The remedy which Cartier had used, was not to be found, or the savages knew nothing of it. It is supposed that the former inhabitants had been extirpated, and a new people held possession.

In the spring of 1609, Champlain, with two other Frenchmen and a party of the natives, went up the river, now called Sorel, and entered the lakes, which lie toward the south, and communicate with the country of the Iroquois. To the largest of these lakes Champlain gave his own name, which it has ever since retained. On the shore of another which he called Lake Sacrament, now Lake George, they were discovered by a company of the Iroquois, with whom they had a skirmish. Champlain killed two of them with his musket. The scalps of fifty were taken and brought to Quebec in triumph.

In the autumn, Champlain went to France, leaving Capt. Pierre to command; and in 1610 he returned to Quebec, to perfect the colony, of which he may be considered as the founder.

After the death of Henry IV, he obtained of the Queen Regent, a commission as lieutenant of New France, with very extensive powers. This commission was confirmed by Lewis XIII; and Champlain was continued in the government of Canada.

The religious controversies, which prevailed in France, augmented the number of colonists. A settlement was made at Trois Rivières, and a brisk trade was carried on at Tadousac. In 1626, Quebec began to assume the face of a city, and the fortress was rebuilt with stone; but the people were divided in their religious principles, and the Hugonot party prevailed.

In this divided state, (1629) the colony was attacked by an armament from England under the conduct of Sir David Kirk. He sailed up the river St. Lawrence, and appeared before Quebec, which was then so miserably

supplied, that they had but seven ounces of bread to a man for a day. A squadron from France, with provision for their relief, entered the river; but, after some resistance, was taken by the English. This disappointment increased the distress of the colony and obliged Champlain to capitulate. He was carried to France in an English ship; and there found the minds of the people divided, with regard to Canada; some thinking it not worth regaining, as it had cost the government vast sums, without bringing any return; others deeming the fishery and fur trade to be great national objects, especially as they proved to be a nursery for seamen. These sentiments, supported by the solicitation of Champlain, prevailed; and by the treaty of St. Germain's, in 1632, Canada, Acadia and Cape Breton were restored to France.

The next year Champlain resumed his government, and the company of New France were restored to their former rights and privileges. A large recruit of inhabitants, with a competent supply of Jesuits, arrived from France; and with some difficulty a mission was established among the Hurons; and a seminary of the order was begun at Quebec. In the midst of this prosperity Champlain died, in the month of December, 1635; and was succeeded the next year by De Montmagny.

Champlain is characterized as a man of good sense, strong penetration and upright views; volatile, active, enterprising, firm and valiant. He aided the Hurons in their wars with the Iroquois, and personally engaged in their battles; in one of which he was wounded. His zeal for the propagation of the Catholic religion was so great that it was a common saying with him, that "the salvation of one soul was of more value than the conquest of an empire."

FERDINANDO GORGES,

AND

JOHN MASON.

FERDINANDO GORGES—His perseverance—His defence before the Commons—His complaint against the Dutch—His expense and loss—His misfortunes and death—JOHN MASON—His connection with Gorges—His plantation at Piscataqua—His great expense and loss—Massachusetts Colony established—Independence of the Colony suspected—Province of Maine—Its plan of government—Protected by Massachusetts—Purchased by Massachusetts.

We know nothing concerning Gorges in the early part of his life. The first account we have of him, is the discovery which he made of a plot which the Earl of Essex had laid to overthrow the government of Queen Elizabeth, the tragical issue of which is too well known to be here repeated. Gorges, who had been privy to the conspiracy at first, communicated his knowledge of it to Sir Walter Raleigh, his intimate friend, but the enemy and rival of Essex.

There was not only an intimacy between Raleigh and Gorges, but a similarity in their genius and employment; both were formed for intrigue and adventure; both were indefatigable in the prosecution of their sanguine projects; and both were naval commanders.

During the war with Spain, which occupied the last years of Queen Elizabeth, Gorges, with other adventurous spirits, found full employment in the navy of their mistress. When the peace, which her successor, James I. made in 1604, put an end to their hopes of honor and fortune by military enterprises, Sir Ferdinando was appointed Governor of Plymouth, in Devonshire. This circumstance, by which the spirit of adventure might seem to have been repressed, proved the occasion of its breaking out with fresh ardor, though in a pacific and mercantile form, connected with the rage for foreign discoveries, which after some interruption, had again seized the English nation.

Lord Arundel, of Wardeur, had employed a Captain Weymouth in search of a northwest passage to India. This navigator having mistaken his course, fell in with a river on the coast of America, which, by his description, must have been either Kennebec, or Penobscot. From thence he brought to England, five of the natives, and arrived in the month of July, 1605, in the harbor of Plymouth, where Gorges commanded, who immediately took three of them into his family. Their names were Manida, Sketwarroes and Tasquantum; they were all of one language, though not of the same tribe. This accident proved the occasion, under God's providence, of preparing the way for a more perfect discovery than had yet been made of this part of North America.

Having gained the affections of these savages by kind treatment, he found them very docile and intelligent; and from them he learned by inquiry, many particulars concerning their country, its rivers, harbors, islands, fish and other animals; the numbers, dispo-

sition, manners and customs of the natives; their government, alliances, enemies, force and methods of war. The result of these inquiries served to feed a sanguine hope of indulging his genius and advancing his fortune by a more thorough discovery of the country.

His chief associate in this plan of discovery, was Sir John Popham, Lord Chief Justice of the King's Bench, who, by his acquaintance with divers noblemen, and by their interest at court, obtained from King James a patent for making settlements in America, which was now divided into two districts, and called North and South Virginia. The latter of these districts was put under the care of certain noblemen, knights, and gentlemen who were styled the London Company; the former under the direction of others in Bristol, Exeter and Plymouth, who were called the Plymouth Company, because their meetings were usually held there.

By the joint efforts of this company, of which Popham and Gorges were two of the most enterprising members, a ship, commanded by Henry Chalong, was fitted out, and sailed in August, 1606, for the discovery of the country from which the savages had been brought, and two of them were put on board. The orders given to the master were to keep in as high a latitude as Cape Breton till he should discover the main land, and then to range the coast southward till he should find the place from which the natives had been taken. Instead of observing these orders, the captain falling sick on the passage, made a southern course, and first arrived at the island of Porto Rico, where he tarried some time for the recovery of his health; from thence, coming northwardly, he fell in with a Spanish fleet from the Havannah, by whom the ship was seized and carried to Spain.

Captain Prynne, in another ship which sailed from Bristol, with orders to find Chalong, and join with him in a survey of the coast, had better success; for though he failed of meeting his consort, yet he carried home a particular account of the coasts, rivers, and harbors, with other information relative to the country, which made so deep an impression on the minds of the company, as to strengthen their resolution of prosecuting their enterprise.

It was determined to send over a large number of people sufficient to begin a colony. For this purpose George Popham was appointed president; Raleigh Gilbert, admiral; Edward Harlow, master of ordnance; Robert Davis, serjeant-major; Ellis Best, marshal; Mr. Seamen, secretary; James Davies, commander of the fort; Gome Carew, searcher. All these were to be of the council; and besides these, the colony consisted of one hundred men, who were styled planters. They sailed from Plymouth in two ships, May 31, 1607, and having fallen in with the island of Monahigon, August 11, landed at the mouth of Sagadahock, or Kennebec river, on a peninsula, where they erected a storehouse, and having fortified it as well as their circumstances would admit, gave it the name of Fort St. George.

By means of two natives whom they brought with them to England, viz. Sketwarroes, sent by Gorges, and Dehamida, by Popham, they found a cordial welcome among the Indians, their sachems offering to conduct and introduce them to the Bashaba, or great chief, whose residence was at Penobscot, and to whom, it was expected, that all strangers should make their address.*

The president, having received several invitations, was preparing to comply with their request, and had advanced some leagues on his way, but contrary winds and bad weather obliged him to return, to the great grief of the sachems, who were to have attended him. The Bashaba hearing of their disappointment, sent his son to visit the president, and settle a trade for furs.

The ships departed for England in December, leaving behind them only 45 persons of the new colony. The season was too far advanced before their arrival to begin planting for that year, if there had been ground prepared for tillage. They had to subsist on the provisions which they had brought from England, and the fish and game which the country afforded. The severity of an American winter was new to them; and

* The Bashaba of Penobscot was a prince superior in rank to the sachems of the several tribes. All the sachems westward as far as Naumkeag (Salem), acknowledged subjection to him. He is frequently mentioned in the accounts of the first voyages to New England; but was killed by the Tarratones in 1613, before any effectual settlement was made in the country. We have no account of any other Indian chief in these northern parts of America, whose authority was so extensive.

though it was observed that the same winter was uncommonly severe in England, yet that circumstance being unknown could not alleviate their distress. By some accident their storehouse took fire, and was consumed with the greater part of their provisions, in the middle of the winter; and in the spring of 1688, they had the additional misfortune to lose their president, Captain Popham, by death. The ship which their friends in England by their united exertions sent over with supplies, arrived a few days after with the melancholy news of the death of Sir John Popham, which happened while she lay waiting for a wind at Plymouth. The command of the colony now devolved on Gilbert, but the next ship brought an account of the death of his brother, Sir John Gilbert, which obliged him to return to England, to take care of the estate to which he succeeded. These repeated misfortunes and disappointments, operating with the disgust which the new colonists had taken to the climate and soil, determined them to quit the place. Accordingly, having embarked with their president, they returned to England, carrying with them, as the fruit of their labor, a small vessel, which they had built during their residence here, and thus the first colony which was attempted in New England, began and ended in one year.

The country was now branded as intolerably cold, and the body of the adventurers relinquished the design. Sir Francis Popham, indeed, employed a ship for some succeeding years in the fishing and fur trade; but he, at length became content with his losses, and none of this company but Sir Ferdinando Gorges, had the resolution to surmount all discouragements. Though he sincerely lamented the loss of his worthy friend, the Chief Justice, who had zealously joined him in these hitherto fruitless, but expensive, labors; yet, "as to the coldness of the climate (he says,) he had too much experience in the world to be frightened with such a blast, as knowing many great kingdoms and large territories more northerly seated, and by many degrees colder, were plentifully inhabited, and divers of them stored with no better commodities than these parts afford, if like industry, art and labor be used."

Such persevering ardor in the face of so many discouragements, must be allowed to discover a mind formed for enterprise, and fully persuaded of the practicability of the undertaking.

When he found that he could not be seconded in his attempts for a thorough discovery of the country by others, he determined to carry it on by himself; and for this purpose he purchased a ship, and engaged with a master and crew to go to the coast of New England for the purpose of fishing and traffic, the only inducement which seafaring people could have to undertake such a voyage. On board this ship he put RICHARD VINES, and several others of his own servants, in whom he placed the fullest confidence, and whom he hired at a great expence to stay in the country over the winter, and pursue the discovery of it. These persons having left the ship's company to follow their usual occupation on the coast, travelled into the land, and meeting with the savages who had before returned to America, by their assistance became acquainted with such particulars as Gorges wished to know.

Mr. Vines and his companions were received by the Indians with great hospitality, though their residence among them was rendered hazardous, both by a war which raged among them, and by a pestilence which accompanied or succeeded it.

This war and pestilence are frequently spoken of by the historians of New England as remarkable events in the course of Providence, which prepared the way for the establishment of an European colony. Concerning the war, we know nothing more than this, that it was begun by the Tarratones, a nation who resided eastward of Penobscot. These formidable people surprised the Bashaba, or chief sachem, at his head quarters, and destroyed him with all his family; upon which all the other sachems who were subordinate to him, quarrelled among themselves for the sovereignty; and in these dissensions many of them as well as of their unhappy people perished. Of what particular kind the pestilence was, we have no certain information; but it seems to have been a disorder peculiar to the Indians, for Mr. Vines and his companions, who were intimately conversant with them, and frequently lodged in their wigwams, were not in the least degree affected by it, though it swept off the Indians at such a prodigious rate, that the living were not able to bury the dead.

* Mr. Gookin says, that "he had discoursed with some old Indians who were then youths, who told him, that the bodies of the sick were all over exceeding yellow, (which they described by pointing to a yellow garment,) both before they died and afterwards."

and their bones were found several years after lying about the villages where they had resided. The extent of this pestilence was between Penobscot in the east, and Narraganset in the west. These two tribes escaped, while the intermediate people were wasted and destroyed.

The information which Vines obtained for Sir Ferdinando, though satisfactory in one view, produced no real advantage proportionate to the expence. Whilst he was deliberating by what means he should farther prosecute his plan of colonization, Captain Henry Harley, who had been one of the unfortunate adventurers to Sagadahock, came to him, bringing a native of the Island Capawock, now called Martha's Vineyard, who had been treacherously taken from his own country by one of the fishing ships and shown in London as a sight. Gorges received this savage, whose name was Epenow, with great pleasure; and about the same time recovered Assacumet, one of those who had been sent in the unfortunate voyage of Captain Chalong. These two Indians at first scarcely understood each other; but when they had grown better acquainted, Assacumet informed his old master of what he had learned from Epenow concerning his country. This artful fellow had invented a story of a mine of gold in his native island, which he supposed would induce some adventurer to employ him as a pilot, by which means he hoped to get home, and he was not disappointed in his expectation.

Gorges had engaged the Earl of Southampton, then commander of the Isle of Wight, to advance one hundred pounds, and Captain Hobson another hundred, and also to go on the discovery. With this assistance, Harley sailed in June, 1614, carrying with him several land soldiers and the two before mentioned Indians, with a third named Wanape, who had been sent to Gorges from the Isle of Wight. On the arrival of the ship, she was soon piloted to the island of Capawock, and to the harbor where Epenow was to perform his promise. The principal inhabitants of the place, with some of his own kinsmen, came on board, with whom he held a conference, and contrived his escape. They departed, promising to return the next day with furs for traffic. Epenow had pretended that if it were known that he had discovered the secrets of his country, his life would be in danger; but the company were careful to watch him; and to prevent his escape, had dressed him in long clothes, which could easily be laid hold of, if there should be occasion. His friends appeared the next morning in twenty canoes, and lying at a distance, the captain called them to come on board, which they declining, Epenow was ordered to renew the invitation. He, mounting the fore-castle, hailed them as he was directed, and at the same instant, though one held him by the coat, yet being strong and heavy, he jumped into the water. His countrymen then advanced to receive him, and sent a shower of arrows into the ship, which so disconcerted the crew, that the prisoner completely effected his escape. Thus the golden dream vanished, and the ship returned without having performed any services adequate to the expence of her equipment.

The Plymouth Company were much discouraged by the ill success of this adventure; but the spirit of emulation between them and the London Company proved very serviceable to the cause in which they were jointly engaged. For these having sent out four ships under the command of Michael Cooper, to South Virginia, January, 1615, and Captain John Smith, who had been employed by that company, having returned to England, and engaged with the company at Plymouth, their hopes revived. Sir Ferdinando Gorges, in concert with Dr. Suttleff, Dean of Exeter, and several others, equipped two vessels, one of two hundred, the other of fifty tons, on board of which (besides the complement of seamen) were sixteen men who were destined to begin a colony in New England. March, 1615, when they had sailed one hundred and twenty leagues, the large ship had lost her masts, and sprung a leak; which obliged them to put back under jury masts to Plymouth. From thence Smith sailed again, (June 24) in a bark of sixty tons, carrying the same sixteen men; but on this second voyage, was taken by four French men-of-war, and carried to France. The vessel of fifty tons, which had been separated from him pursued her voyage, and returned in safety; but the main design of the voyage, which was to effect a settlement was frustrated.

The same year (October) Sir Richard Hawkins, by authority of the Plymouth Company, of which he was president for that year, visited the coast of New England, to try what services he could do them in searching the country, and its commodities; but on his arrival,

finding the natives engaged in war, he passed along the coast to Virginia, and from thence returned to England, by the way of Spain, where he disposed of the fish, which he had taken in the voyage.

After this, ships were sent every season by the London and Plymouth Companies on voyages of profit; their fish and furs came to a good market in Europe, but all the attempts which were made to colonize North Virginia, by some unforeseen accidents failed of success. Gorges, however, had his mind still invariably bent on his original plan, and every incident which seemed to favor his views, was eagerly improved for that purpose. Being possessed of the journals and letters of the several voyagers, and of all the information which could be had, and being always at hand to attend the meetings of the company, he contrived to keep alive their hopes, and was the prime mover in all their transactions.

About this time, Captain Thomas Dermer, who had been employed in the American fishery, and had entered fully into the same views, offered his services to assist in prosecuting the discovery of the country. He was at Newfoundland, and Gorges prevailed on the company to send Captain Edward Rocaft, in a ship, to New England, with orders to wait there till he should be joined by Dermer. Rocaft, on his arrival, met with a French interloper, which he seized, and then sailed with his prize to South Virginia. In the mean time Dermer went to England, and having conferred with Gorges and the company on the intended discovery, went out in a ship which Gorges himself owned, hoping to meet with Rocaft, but was much perplexed at not finding him.

Having ranged and examined every part of the coast, and made many useful observations, which he transmitted to Gorges, he shaped his course for Virginia,* where Rocaft had been killed in a quarrel, and his bark sunk. Dermer being thus disappointed of his consort, and of his expected supplies, returned to the northward. At the island of Capawock, he met with Epenow, who knowing him to be employed by Gorges, and suspecting that his errand was to bring him back to England, conspired with his countrymen, to seize him and his companions, several of whom were killed in the fray, Dermer defended himself with his sword, and escaped, though not without fourteen wounds, which obliged him to go again to Virginia where he died. The loss of this worthy man was the most discouraging circumstance which Gorges had met with, as he himself expresses it, "made him almost resolve never to intermeddle again in any of these courses." But he had in fact so deeply engaged in them, and had so many persons engaged with him, that he could not retreat with honor, whilst any hope of success remained. Soon after this, a prospect began to open from a quarter where it was least expected.

The patent of 1607, which divided Virginia into two colonies, expressly provided that neither company should begin any plantation within one hundred miles of the other. By this interdiction the middle region of North America was neglected, and a bait was laid to attract the attention of foreigners.

The adventurers to South Virginia had prohibited all who were not free of their company from planting or trading within their limits; the northern company had made no such regulations; by this means it happened that the South Virginians could fish on the northern coast, whilst the other company were excluded from all the privileges in the southern parts. The South Virginians had also made other regulations in the management of their business, which the northern company were desirous to imitate. They thought the most effectual way to do this, was to procure an exclusive patent. With this view, Gorges, ever active to promote the interest which he had espoused, solicited of the crown a new charter, which, by the interest of his friends in court, was after some delay obtained. By this instrument, forty noblemen, knights and gentlemen, were incorporated by the style of "the council established at Plymouth, in the county of Devon, for the planting, ruling and governing of New England in America." The date of the charter was November 3, 1620. The territory subject to their jurisdiction was from the 40th to the 48th degree of north latitude, and from sea to sea. This charter is the foundation of all the grants which were made of the country of New England.

Before this division was made, a number of families, who were styled *Partians*, on account of their seeking

* It is said that he was the first who passed the whole extent of Long Island Sound, and discovered that it was not connected with the continent. This was in 1619.

a farther reformation of the Church of England, which they could not obtain, and who had retired into Holland to avoid the severity of the penal laws against dissenters, meditated a removal to America. The Dutch were fond of retaining them as their subjects, and made them large offers, if they would settle in some of their transmarine territories; but they chose rather to reside in the dominions of their native prince, if they could have liberty of conscience. They had, by their agents negotiated with the South Virginia Company, and obtained a permission to transport themselves to America, within their limits; but as to liberty of conscience, though they could obtain no indulgence from the crown under hand and seal, yet it was declared, that "the king would connive at them, provided they behaved peaceably." As this was all the favor which the spirit of the time would allow, they determined to cast themselves on the care of Divine Providence, and venture to America. After several disasters, they arrived at Cape Cod in the 42d degree of north latitude, a place remote from the object of their intention, which was Hudson's river. The Dutch had their eye on that place, and bribed their pilot not to carry them thither. It was late in the season when they arrived; their permission from the Virginia Company was of no use here; and having neither authority nor form of government, they were obliged for the sake of order, before they disembarked, to form themselves into a body politic, by a written instrument. This was the beginning of the colony of New Plymouth; and this event happened (Nov. 11 1620) a few days after King James had signed the patent for incorporating the council. These circumstances served the interest of both, though then wholly unknown to each other. The council, being informed of the establishment of a colony within their limits, were fond of taking them into their protection, and the colony were equally desirous of receiving that protection as far as to obtain a grant of territory. An agent being despatched by the colony to England, Sir F. Gorges interested himself in the affair, and a grant was accordingly made (1623) to John Pierce, in trust for the colony. This was their first patent; they afterwards (1629) had another made to William Bradford and his associates.

One end which the council had in view, was, to prevent the access of unauthorised adventurers to the coast of New England. The crews of their ships, in their intercourse with the natives, being far from any established government, were guilty of great licentiousness. Besides drunkenness and debauchery, some flagrant enormities had been committed, which not only injured the reputation of Europeans, but encouraged natives to acts of hostility. To remedy these evils the council thought proper to appoint an officer to exercise government on the coast. The first person who was sent in this character, was Captain Francis West, who finding the fishermen too licentious and robust to be controlled by him, soon gave up this ineffectual command. They next appointed Captain Robert Gorges, a son of Sir Ferdinando. He was like his father, of an active and enterprising genius, and had newly returned from the Venetian war. He obtained of the council a patent for a tract of land on the northeastern side of Massachusetts Bay, containing thirty miles in length and ten in breadth, and by the influence of his father, and of his kinsman Lord Edward Gorges, he was despatched with a commission to be "Lieutenant-general and Governor of New England." They appointed for his council the aforesaid West, with Christopher Levett, and the Governor of New Plymouth for the time being. Gorges came to Plymouth in 1623, published his commission, and made some efforts to execute it. He brought over with him as a chaplain William Morrell, an Episcopal clergyman. This was the first essay for the establishment of a general government in New England, and Morrell was to have superintendence in ecclesiastical, as Gorges had in civil affairs; but he made no use of his commission at Plymouth; and only mentioned it in his conversation about the time of his departure.* This general government was a darling object with the Council of Plymouth, but was much dreaded by the planters of New England; however all the attempts which were made to carry it into execution failed of success. Gorges, after about a year's residence in the country, and holding one court at Plymouth, upon a Mr. Weston who had begun a plantation at Wessagusset, (Weymouth) where Gorges himself intended a settlement, was re-

called to England, the supplies which he expected to have received having failed. This failure was owing to one of those cross accidents which continually befell the Council of Plymouth. Though the erection of this board was really beneficial to the nation, and gave a proper direction to the spirit of colonizing, yet they had to struggle with the opposing interests of various sorts of persons.

The Company of South Virginia, and indeed the mercantile interest in general, finding themselves excluded from the privilege of fishing and traffic, complained of this institution as a monopoly. The commons of England were growing jealous of the royal prerogative; and wishing to restrain it; the granting charters of incorporation with exclusive advantages of commerce was deemed a usurpation on the rights of the people. Complaints were first made to the king in council; but no disposition appeared there to countenance them. It happened however, that a parliament was called for some other purposes (February 1624) in which Sir Edward Cook was chosen speaker of the Commons. He was well known as an advocate for the liberties of the people, and an enemy to projectors. The king was at first in a good humor with his parliament, and advantage was taken of a demand for subsidies to bring in a bill against monopolies.

The House being resolved into a committee, Sir Ferdinando Gorges was called to the bar, where the speaker informed him, that the patent granted to the Council of Plymouth was complained of as a grievance; that under color of planting a colony, they were pursuing private gains; that though they respected him as a person of worth and honor, yet the public interest was to be regarded before all personal considerations; and therefore they required that the patent be delivered to the House. Gorges answered, that he was but one of the company, inferior in rank and abilities to many others; that he had no power to deliver it, without their consent, neither in fact, was it in his custody. Being asked where it was, he said, it was for aught he knew, still remaining in the crown-office, where it had been left for the amendment of some errors. As to the general charge he answered; that he knew not how it could be a public grievance; since it had been undertaken for the advancement of religion, the enlargement of the bounds of the nation, the increase of trade, and the employment of many thousands of people; that it could not be a monopoly; for though a few only were interested in the business, it was because many could not be induced to adventure where their losses at first were sure, and their gains uncertain; and, indeed, so much loss had been sustained, that most of the adventurers themselves were weary; that as to the profit arising from the fishery it was never intended to be converted to private use, as might appear by the offers which they had made to all the maritime cities in the West of England; that the grant of exclusive privileges made by the crown, was intended to regulate and settle plantations, by the profits arising from the trade, and was in effect no more than many gentlemen and lords of manors in England enjoyed without offence. He added, that he was glad of an opportunity for such a parliamentary inquiry, and if they would take upon themselves the business of colonization, he and his associates would be their humble servants as far as lay in their power, without any retrospect to the vast expense which they had already incurred in discovering and taking possession of the country, and bringing matters to their then present situation. He also desired, that if any thing further was to be inquired into, it might be given him in detail with liberty of answering by his counsel.

A committee was appointed to examine the patent and make objections; which were delivered to Gorges; accompanied with a declaration from the speaker that he ought to look upon this as a favor. Gorges having acknowledged the favor, employed counsel to draw up answers to the objections. His counsel were Mr. (afterwards Lord) Finch, and Mr. Caltrup, afterwards attorney-general to the court of Wards. Though in causes where the crown and parliament are concerned as parties, counsel are often afraid of wading deeper than they can safely return; yet Gorges was satisfied with the conduct of his counsel, who fully answered the objections, both in point of law and justice; these answers being read, the House asked what further he had to say, upon which he added some observations in point of policy to the following effect:

That the adventurers had been at great cost and pains to enlarge the king's dominions; to employ many seamen, handicraftsmen, and laborers; to settle a flourishing plantation, and advance religion in these savage

countries; matters of the highest consequence to the nation, and far exceeding all the advantage which could be expected from a simple course of fishing, which must soon have been given over, for that so valuable a country could not long remain unpossessed either by the French, Spaniards, or Dutch; so that if the plantations were to be given up, the fishery must inevitably be lost, and the honor, as well as interest of the nation, greatly suffer; that the mischief already done by the persons who were foremost in their complaints was intolerable; for in their disorderly intercourse with the savages, they had been guilty of the greatest excesses of debauchery and knavery, and in addition to all these immoralities, they had furnished them with arms and ammunition; by which they were enabled to destroy the peaceable fishermen, and had become formidable enemies to the planters.

He further added, that he had, in zeal for the interest of his country, deeply engaged his own estate, and sent one of his sons to the American coast, besides encouraging many of his friends to go thither; thus he hoped would be an apology for his earnestness in this plea, as if he had shown less warmth, it might have been construed into negligence and ingratitude.

These pleas however earnest and rational, were to no purpose. The Parliament presented to the king the grievances of the nation, and the patent for New England was the first on the list. Gorges, however, had taken care that the king should be previously acquainted with the objections and answers; and James was so jealous of the prerogative, that though he gave his assent to a declaratory act against monopolies in general, yet he would not recall the patent. However, in deference to the voice of the nation, the council thought fit to suspend their operations. This proved for a while, discouraging to the spirit of adventure, and occasioned the recalling Robert Gorges from his government.

But the Parliament having proceeded with more freedom and boldness in their complaints than suited the feelings of James, he dissolved them in haste, before they could proceed to measures for remedying the disorders in church and state, which had been the subject of complaint; and some of the more liberal speakers were committed to prison. This served to damp the spirit of reformation, and prepared the way for another colony of emigrants to New England.

About the same time, the French ambassador put in a claim in behalf of his court to these territories, to which Gorges was summoned to answer before the king and council, which he did in so ample and convincing a manner, that the claim was for that time silenced. Gorges then, in the name of the Council of Plymouth, complained of the Dutch, as intruders on the English possessions in America, by making a settlement on Hudson's river. To this the States made answer, that if any such things had been done it was without their order, as they had only erected a company for the West-Indies. This answer made the council resolve to prosecute their business and remove their intruders.

Hitherto Gorges appears in the light of a zealous, indefatigable and unsuccessful adventurer; but neither his labors, expense, nor ill success were yet come to a conclusion.

To entertain a just view of Sir Ferdinando Gorges, we must consider him both as a member of the Council of Plymouth, pursuing the general interest of American plantations; and at the same time as an adventurer undertaking a settlement of his own in a particular part of the territory which was subject to the jurisdiction of the council. Having formed an intimacy with Captain John Mason, governor of Portsmouth, in the county of Hants, who was also a member of the council; and having (1622) jointly with him procured from the council a grant of a large extent of country, which they called Laconia, extending from the river Merrimack to Sagadahock, and from the ocean to the lakes and river of Canada, they indulged sanguine expectations of success. From the accounts given of the country by some romantic travellers, they had conceived an idea of it as a kind of terrestrial paradise, not only capable of producing all the necessaries and conveniences of life but as already richly furnished by the bountiful hand of nature. The air was said to be pure and salubrious; the country pleasant and delightful, full of goodly forests, fair valleys, and fertile plains; abounding in vines, chestnuts, walnuts, and many other sorts of fruit; the rivers stored with fish and environed with goodly meadows full of timber trees. In the great lake (Lake Champlain) it was said were four islands, full of pleasant woods and meadows, having great store of stags, fallow deer, elks, roebucks, beavers and other game; and these islands were supposed to be commodiously

* This Morrell appears to have been a diligent inquirer into the state and circumstances of the country, its natural productions and advantages, the manners, customs, and government of the natives: the result of his observations he wrought into a poem, which he printed both in Latin and English.

situated for habitation and traffic, in the midst of a fine lake, abounding with the most delicate fish. This lake was thought to be less than 100 miles distant from the sea coast; and there was some secret expectation that mines and precious stones would be the reward of their patient and diligent attention to the business of discovery. Such were the charms of Laconia!

It has been before observed that Gorges had sent over Richard Vines, with some others, on a discovery, to prepare the way for a colony. The place which Vines pitched upon was at the mouth of the river Saco. Some years after, another settlement was made on the river of Agamenticus by Francis Norton, whom Gorges sent over with a number of other people, having procured for them a patent of 12,000 acres on the east side of the river, and 12,000 more on the west side; his son, Ferdinando Gorges being named as one of the grantees; this was the beginning of the town of York. Norton was a lieutenant-colonel, and had raised himself to that rank from a common soldier by his own merit. In this company were several artificers, who were employed in building saw-mills, and they were supplied with cattle and other necessities for the business of getting lumber.

About the same time (viz. 1623) a settlement was begun at the river Piscataqua by Captain Mason and several other merchants, among whom Gorges had a share. The principal design of these settlements was to establish a permanent fishery, to make salt, to trade with the natives, and to prepare lumber for exportation. Agriculture was but a secondary object, though in itself the true source of all opulence and all subsistence.

These attempts proved very expensive and yielded no adequate returns. The associates were discouraged, and dropped off one after another, till none but Gorges and Mason remained. Much patience was necessary, but in this case it could be grounded only on enthusiasm. It was not possible in the nature of things that their interest should be advanced by the manner in which they conducted their business. Their colonists came over either as tenants or as hired servants. The produce of the plantation could not pay their wages, and they soon became their own masters. The charge of making a settlement in such a wilderness was more than the value of the lands when the improvements were made: overseers were appointed, but they could not hold the tenants under command, nor prevent their changing places on every discontent. The proprietors themselves never came in person to superintend their interests, and no regular government was established to punish offenders or preserve order. For these reasons, though Gorges and Mason expended from first to last more than twenty thousand pounds each, yet they only opened the way for others to follow, and the money was lost to them and their posterity.

Whilst their private interest was thus sinking in America, the reputation of the council of which they were members lay under such disadvantage in England as tended to endanger their political existence. As they had been incorporated for the purpose not merely of granting lands, but of making actual plantations in America, they were fond of encouraging all attempts from whatever quarter, which might realize their views and expectations.

The ecclesiastical government at this time allowed no liberty to scrupulous consciences; for which reason, many who had hitherto been peaceable members of the national church, and wished to continue such, finding that no indulgence could be granted, turned their thoughts towards America, where some of their brethren had already made a settlement. They first purchased of the Council of Plymouth a large territory, and afterward obtained of the crown a charter, by which they were constituted a body politic within the realm. In June, 1630, they brought their charter to America, and began the colony of *Massachusetts*. This proved an effectual settlement, and the reasons which rendered it so were the zeal and ardor which animated their exertions; the wealth which they possessed, and which they converted into materials for a new plantation; but principally the *presence* of the adventurers themselves on the spot, where their fortunes were to be expended and their zeal exerted. The difference between a man's doing business by himself and by his substitutes, was never more fairly exemplified than in the conduct of the Massachusetts planters, compared with that of Sir Ferdinando Gorges: what the one had been laboring for above twenty years without any success, was realized by the others in two or three years; in five, they were so far advanced as to be able to send out a colony from themselves to begin another at Connecticut; and in less than ten, they founded an uni-

versity which has ever since produced an uninterrupted accession of serviceable men in church and state.

The great number of people who flocked to this new plantation, raised an alarm in England. As they had manifested their discontent with the ecclesiastical government, it was suspected that they aimed at *independence*, and would throw off their allegiance to the crown. This jealousy was so strong, that a royal order was made to restrain any from coming hither who should not first take the oath of allegiance and supremacy, and obtain a license for their removal.

To refute this jealous cavil against the planters of New England, we need only to observe, that at the time when they began their settlement, and for many years after, the lands which they occupied were objects of envy both to the Dutch and French. The Dutch claimed from Hudson, as far as Connecticut river, where they had erected a trading house. The French claimed all the lands of New England; and the governor of Port Royal, when he wrote to Governor Winthrop, directed his letters to him as *governor of the English at Boston in Acadia*. Had the New England planters thrown off their subjection to the crown of England they must have become a prey to one or the other of these rival powers. Of this they were well aware, and if they had entertained any idea of independence, which they certainly did not (*nor did their successors till driven to it by Britain herself*) it would have been the most impolitic thing in the world to have avowed it, in the presence of neighbors with whom they did not wish to be connected.

This jealousy, however groundless, had an influence on the public councils of the nation, as well as on the sentiments of individuals, and contributed to increase the prejudice which had been formed against all who were concerned in the colonization of New England. The merchants still considered the Council of Plymouth, as monopolizing a lucrative branch of trade. The South Virginia Company disrelished their exclusive charter, and spared no pains to get it revoked. The popular party in the Commons regarded them as supporters of the prerogative, and under the royal influence. The high church party were incensed against them as enemies of prelacy, because they had favored the settlement of the Puritans within their territory; and the king himself suspected that the colonies in New England had too much liberty to consist with his notions of government. Gorges was looked upon as the author of all the mischief; and being publicly called upon, declared, "that though he had earnestly sought the interest of the plantations, yet he could not answer for the evils which had happened by them." It was extremely mortifying to him to find that after all his exertions and expenses in the service of the nation, he had become a very unpopular character, and had enemies on all sides.

To remedy these difficulties, he projected the reannation of the charter to the crown; and the division of the territory into twelve lordships, to be united under one general governor. As the charter of Massachusetts stood in the way of this project, he, in conjunction with Mason, petitioned the crown for a revocation of it. This brought on him the ill will of those colonists also, who from that time regarded him and Mason as their enemies. Before the council surrendered their charter, they made grants to some of their own members, of twelve districts, from Maryland to St. Croix, among which the district from Piscataqua to Sagadahock, extending one hundred and twenty miles northward into the country, was assigned to Gorges. In June, 1635, the council resigned their charter, and petitioned the king and the lords of the privy council for a confirmation of the several proprietary grants, and the establishment of a general government. Sir Ferdinando Gorges, then three score years of age, was the person nominated to be the general governor. About this time, Mason, one of the principal actors in this affair, was removed by death; and a ship, which was intended for the service of the new government, fell and broke in launching. A *quo warranto* was issued against the Massachusetts charter, but the proceedings upon it were delayed, and never completed. An order of the king in council, was also issued in 1637, for the establishment of the general government, and Gorges was therein appointed governor; but the troubles in Scotland and England, at this time grew very serious and put a check to the business. Soon after, Archbishop Laud and some other lords of council, who were zealous in the affair, lost their authority, and the whole project came to nothing.

Gorges, however, obtained of the crown in 1639, a confirmation of his own grant, which was styled the

Province of Maine, and of which he was made Lord Palatine with the same powers and privileges as the Bishop of Durham in the County Palatine of Durham. In virtue of these powers, he constituted a government within his said province, and incorporated the plantation at Agamenticus into a city, by the name of *Gorgeana*, of which his cousin, Thomas Gorges, was mayor, who resided there about two years, and then returned to England. The council for the administration of government were Sir Thomas Josselyn, Knight, Richard Vines, (Steward,) Francis Champemoun (a nephew to Gorges,) Henry Josselyn, Richard Boniton, William Hooke, and Edward Godfrey.

The plan which he formed for the government of his province was this: It was to be divided into eight counties, and these into sixteen hundreds, the hundreds were to be subdivided into parishes and tythings, as the people should increase. In the absence of the proprietor a lieutenant was to preside. A chancellor was constituted for the decision of civil causes; a treasurer to receive the revenue, a marshal for managing the militia, and a marshal's court, for criminal matters; an admiral, and admiral's court, for maritime causes; a master of ordnance and a secretary. These officers were to be a standing council. Eight deputies were to be elected, one from each county, by the inhabitants, to sit in the same council; and all matters of moment were to be determined by the lieutenant with advice of the majority. This council were to appoint justices, to give licenses for the sale of lands subject to a rent of four pence or sixpence per acre. When any law was to be enacted or repealed, or public money to be raised, they were to call on the counties to elect each two deputies, "to join with the council in the performance of the service;" but nothing is said of their voting as a separate house. One lieutenant and eight justices were allowed to each county; two head constables to every hundred; one constable and four tythingmen to every parish; and in conformity to the institutions of King Alfred, each tythingman was to give an account of the demeanor of the families within his tything to the constable of the parish, who was to render the same to the head constables of the hundred, and they to the lieutenant and justices of the county; who were to take cognizance of all misdemeanors; and from them an appeal might be made to the proprietor's lieutenant and council.

Forms of government, and plans of settlement, are much more easily drawn on paper, than carried into execution. Few people could be induced to become tenants in the neighborhood of such a colony as Massachusetts, where all were freeholders. No provision was made for public institutions; schools were unknown, and they had no ministers, till in pity to their deplorable state, two went thither from Boston on a voluntary mission, and were well received by them. The city of Gorgeana, though a lofty name, was in fact but an inconsiderable village; and there were only a few houses in some of the best places for navigation. The people were without order and morals, and it was said of some of them, that "they had as many shares in a *veeman*, as they had in a fishing boat." Gorges himself complained of the prodigality of his servants, and had very little confidence in his own sons, for whose aggrandizement he had been laboring to establish a foundation. He had indeed erected saw-mills and corn-mills, and had received some acknowledgment in the way of rents, but lamented, that he had not reaped the "happy success of those who are their own stewards, and the disposers of their own affairs."

How long Gorges continued in his office as Governor of Plymouth, does not appear from any materials within my reach. In 1625, he commanded a ship of war in a squadron under the Duke of Buckingham, which was sent to the assistance of France, under pretence of being employed against the Geneese. But a suspicion having arisen that they were destined to assist Louis against his Protestant subjects at Rochelle, as soon as they were arrived at Dieppe, and found that they had been deceived, Gorges was the first to break his orders and return with his ship to England. The others followed his example, and their zeal for the Protestant religion was much applauded.

When the civil dissensions in England broke out into a war, Gorges took the royal side; and though then far advanced in years, engaged personally in the service of the crown. He was in Prince Rupert's army at the siege of Bristol, in 1643; and when that city was retaken in 1645 by the Parliament's forces, he was plundered and imprisoned. His political principles rendered him obnoxious to the ruling powers, and when it was necessary for him to appear before the commis-

ationers for foreign plantations, he was severely frowned upon and consequently discouraged.

The time of his death is uncertain; he is spoken of in the records of the province of Maine as dead in June, 1647. Upon his decease, his estate fell to his eldest son, John Gorges, who, whether discouraged by his father's ill success, or incapacitated by the severity of the times, took no care of the province, nor do we find any thing memorable concerning him. Most of the commissioners who had been appointed to govern the province deserted it; and the remaining inhabitants, in 1649, were obliged to combine for their own security. In 1651 they petitioned the Council of State, that they might be considered as part of the Commonwealth of England. The next year, upon the request of a great part of the inhabitants, the colony of Massachusetts, took them under their protection, being supposed to be within the limits of their charter; some opposition was made to this step, but the majority submitted or acquiesced; and considering the difficulties of the times, and the unsettled state of affairs in England, this was the best expedient for their security.

On the death of John Gorges, the propriety descended to his son, Ferdinando Gorges, of Westminster, who seems to have been a man of information and activity. He printed a description of New England in 1658, to which he annexed a narrative written by his grandfather; from which this account is chiefly compiled; but another piece which in some editions is tacked to these, entitled, "Wonder working Providences," was unfairly ascribed to Sir Ferdinando Gorges, though written by a Mr. Johnson, of Woburn, in New England.

On the restoration of King Charles II. Gorges petitioned the crown, complaining of the Massachusetts colony for usurping the government of Maine, and extending the boundary lines. In 1664 commissioners were sent to America, who finding the people in the province of Maine divided in their opinions with respect to matters of government, appointed justices in the king's name to govern them; and about the same time the proprietor nominated thirteen commissioners, and prepared a set of instructions, which were entered on the records of the province. But upon the departure of the royal commissioners, the colony resumed its jurisdiction over them. These two sources of government kept alive two parties, each of whom were always ready to complain of the other and justify themselves.

An inquiry into the conduct of Massachusetts had been instituted in England, and the colony was ordered to send over agents to answer the complaints of Gorges, and Mason, the proprietor of New Hampshire, who had jointly proposed to sell their property to the crown, to make a government for the Duke of Monmouth. This proposal not being accepted, the colony themselves took the hint, and thought the most effectual way of silencing the complaint would be to make a purchase. The circumstances of the province of Maine were such as to favor their view. The Indians had invaded it; most of the settlements were destroyed or deserted, and the whole country was in trouble; the colony had afforded them all the assistance which was in their power, and they had no help from any other quarter. In the height of this calamity, John Usher, Esq., was employed to negotiate with Mr. Gorges for the purchase of the whole territory, which was effected in the year 1677. The sum of twelve hundred and fifty pounds sterling was paid for it, and it has ever since been a part of Massachusetts. It is now formed into two counties, York and Cumberland; but the District of Maine, as established by the laws of the United States, comprehends also the counties of Lincoln, Washington, and Hancock; extending from Piscataqua to St. Croix; a territory large enough when fully peopled, to be formed into a distinct State.*

HENRY HUDSON.

HENRY HUDSON—He sails on a voyage of discovery—arrives at Sandy Hook—The first attempt to sail up the river made by him—Hostility of the natives—He returns to England—He again sails—Mutiny—Hudson's misfortunes.

NOTWITHSTANDING the fruitless attempts which had been made to find a passage to India by the north, the idea was not given up; but it was supposed, that under the direction of some prudent, resolute and experienced commander, the object might yet be attained. A society of wealthy and sanguine adventurers in England, believed the practicability of the passage; and with a resolution and liberality almost unexampled, raised the money to carry on this expensive undertak-

ing. They gave the command of the expedition to HENRY HUDSON, a seaman of enlarged views and long experience; in whose knowledge and intrepidity they could safely confide; and whose enterprising spirit was exceeded by none, and equalled by few of his contemporaries.

When the ship which they had destined for the voyage was ready, Hudson with his crew, according to the custom of seamen in that day, went to church, in April 19, 1607, and there partook of the Lord's Supper. On the 1st of May he sailed from Gravesend; and on the 21st of June discovered land, in lat. 73°, on the eastern coast of Greenland, which he called *Hold with Hope*.

His design was to explore the whole coast of Greenland, which he supposed to be an island, and, if possible, to pass round it, or else directly under the pole. But having sailed as far as the lat. of 82°, he found the sea obstructed by impenetrable ice, and was obliged to return to England, where he arrived on the 15th of September.

By this voyage more of the eastern coast of Greenland was explored than had ever before been known; and the island, afterward called Spitzbergen, was first discovered. It also opened the way to the English, and after them to the Dutch, to prosecute the whale fishery in those northern seas.

The next year the same company of adventurers resolved to make another attempt, and sent Hudson again to find a passage to the northeast. He sailed on the 22d of August, 1608. The highest latitude to which he advanced in this voyage, was 75° 30'. After having made several attempts to pass between Spitzbergen and Nova Zembla, which he found impracticable, the season was so far spent, and the winds so contrary, that he had not time to try the strait of Waygats, nor Lumley's Inlet; and therefore thought it his "duty to save victual, wages, and tackle, by a speedy return." He arrived at Gravesend on the 20th of August.*

After his return from his second voyage he went over to Holland, and entered into the service of the Dutch. Their East India Company fitted out a ship for discovery, and put him into the command.† He sailed from Amsterdam on the 25th of March, 1609.‡

The highest latitude which he made in this voyage was 61° 46'; where he found the sea in the neighborhood of Nova Zembla so filled with ice, and covered with fogs, that it was impossible to pass the strait of Waygats to the eastward. He therefore tacked and steered westerly, toward Greenland; intending to fall in with Buss Island, which had been seen by one of Frobisher's ships in 1578; but when he came into the latitude where it was laid down, he could not find it.

He then steered south-westerly; passed the banks of Newfoundland among the French ships which were fishing, without speaking with any of them; and sailed along the coast of America. In this route he discovered Cape Cod and landed there; then pursued his course to the south and west; making remarks on the soundings and currents, till he came to the entrance of Chesapeake Bay. Here he plied off and on for several days, and then turned again to the northward.

In his return along the coast, on the 28th of August, he discovered the great bay, now called Delaware, in the latitude of 39° 5'. In this bay he examined the soundings and currents, and the appearance of the land; but did not go on shore.

From this bay, passing along a low marshy coast skirted with broken islands, on the 2d September he saw high hills to the northward; which I suppose were the Neversinks in New Jersey.

On the 4th of September, he came to an anchor in "a very good harbor" in the latitude 40° 30', which is the bay within Sandy Hook. On the 6th, the boat was sent to survey what appeared to be the mouth of a river, distant four leagues. This was the strait called the Narrows, between Long Island and Staten Island; here was a good depth of water; and within was a

* In the journal of this voyage, written by Hudson himself, is the following remark: "June 15, lat. 75° 7'. This morning one of our company looking overboard saw a mermaid, and calling up some of the company to see her, one more came up, and by that time she was close to the ship's side, looking earnestly on the men. A little after a sea came and overturned her. From the naval upward her back and breasts were like a woman, (as they say that saw her,) her body as big as one of us; her skin very white, and long hair hanging down behind, of color black. In her going down they saw her tail, which was like the tail of a porpoise, and speckled like a mackerel. Their names that saw her were Thomas Hilles, and Robert Raynor.—Purchas, iv. 575.

† This is said on the authority of Dr. Foster. The journal says nothing of it. It was written by Robert Inet his mate.

‡ Smith in his history of New York, following Oldmixon and other second hand authorities, places this voyage in 1608. But as the journals of Hudson's four voyages are extant in Purchas, I take all dates from them.

large opening, and a narrow river, to the west; the channel between Bergen Neck and Staten Island. As the boat was returning, it was attacked by some of the natives, in two canoes. One man, John Colman, was killed; he was buried on a point of land, which, from that circumstance, was called Colman's point. It is probably Sandy Hook, within which the ship lay.

On the 11th, they sailed through the Narrows, and found a "good harbor secure from all winds." The next day, they turned against a N. W. wind, into the mouth of the river, which bears Hudson's name; and came to anchor two leagues within it. On these two days, they were visited by the natives, who brought corn, beans, oysters and tobacco. They had pipes of copper, in which they smoked; and earthen pots, in which they dressed their meat. Hudson would not suffer them to stay on board by night.

From the 12th to the 19th September, he sailed up the river; which he found about a mile wide and of a good depth, abounding with fish, among which were "great store of salmon." As he advanced, the land on both sides was high, till it came very mountainous. This "high land had many points, the channel was narrow, and there were many eddy winds."

From a careful enumeration of the computed distances, in each day's run, as set down in the journal, it appears that Hudson sailed fifty three leagues. To this distance, the river was navigable for the ship; the boat went up eight or ten leagues farther; but found the bottom irregular, and the depth not more than seven feet. It is evident therefore that he penetrated this river, as far as where the city of Albany now stands.

The farther he went up the river, the more friendly and hospitable the natives appeared. They gave him skins in exchange for knives and other trifles. But as he came down, below the mountains, the savages were thievish and troublesome, which occasioned frequent quarrels, in which eight or nine of them were killed. The land on the eastern side of the river near its mouth, was called *Manahata*.

On the 4th of October he came out of the river; and without anchoring in the bay, stood out to sea; and steering directly for Europe, on the 7th November arrived "in the range of Dartmouth in Devonshire." Here the journal ends.

The discoveries made by Hudson in this remarkable voyage, were of great mercantile consequence to his employers. It has been said, that he "sold the country, or rather his right to it, to the Dutch." This however is questionable. The sovereigns of England and France laid equal claim to the country, and it is a matter which requires some discussion, whether the Hollanders were, at that time, so far admitted into the community of nations, as to derive rights which would be acknowledged by the other European powers. However, whilst they were struggling for existence among the nations, they were growing rich by their mercantile adventures; and this capital discovery, made at their expense, was a source of no small advantage to them. They had, for some time before, cast an eye on the fur trade; and had even bribed some Frenchmen to admit them into the traffic at Acadia and St. Lawrence. The discovery of Hudson's river gave them, at once, an entrance of above fifty leagues into the heart of the American continent; in a situation where the best furs could be procured without any interruption from either the French or the English. The place indeed lay within the claim of both these nations; Acadia extended from the latitude of 40° to 48°; and Virginia from 34° to 45°; but the French had made several fruitless attempts to pass southward of Cape Cod; and had but just begun their plantations at Acadia and St. Lawrence. The English had made some efforts to establish colonies in Virginia, one of which was struggling for existence, and others had failed, both in the southern and northern division. Besides, King James, by a stroke of policy peculiar to himself, in dividing Virginia between the North and South Companies, had interlocked each patent with the other; and at the same time interdicted the patentees from planting within one hundred miles of each other. This uncertainty, concurring with other causes, kept the adventurers at such a distance, that the intermediate country, by far the most valuable, lay exposed to the intrusion of foreigners; none of whom knew better than the Dutch, how to avail themselves of the ignorance or inattention of their neighbors in pursuit of gain.

But whether it can at this time be determined or not by what means the Hollanders acquired a title to the country; certain it is, that they understood and pursued the advantage which this discovery opened to them. Within four years, a fort and trading-house

* Now State of Maine.

were erected on the spot where Albany is now built; and another fort on the S. W. point of the island, where the city of New York now stands, by a company of merchants who had procured from the States-general a patent for an exclusive trade to Hudson's river.

The transactions between Hudson and his Dutch employers are not stated in the accounts of his voyages. Dr. Foster says that he offered to undertake another voyage in their service, but that they declined it, upon which he returned to England; and again entered into the service of the company, who had before employed him.

The former attempts for a northern passage having been made in very high latitudes, it was now determined, to seek for one, by passing to the westward of Greenland, and examining the inlets of the American continent. For this purpose a ship was fitted out, and the command was given to Hudson; but unhappily, the company insisted that he should take with him as an assistant, one Colburne, a very able and experienced seaman. Their great confidence in Colburne's skill excited Hudson's envy; and after the ship had fallen down the river, he put him on board a pinnace, bound up to London, with a letter to the owners, containing the reasons of his conduct; and then proceeded on his voyage. [April 22, 1610.] This rash step gave the crew an example of disobedience, which was so severely retaliated on himself, as to prove the cause of his ruin.

He went round the north of Scotland, through the Orkney and Faro islands, and on the 11th of May made the eastern part of Iceland. Sailing along its southern shore, in sight of the volcanic mountain Hecla, he put into a harbor in the western part of the island; where he met with a friendly reception from the inhabitants; but found great dissensions among his crew, which he could not appease without much difficulty.

Having doubled the southern promontory of Greenland, he steered N. W. for the American continent. In this passage he was so entangled with floating ice, that he almost despaired of getting clear. But at length with much labor and peril, he forced his way through the strait and into the bay which bears his name. The farther he advanced, the greater were the murmurings among his men. He removed his mate and boatswain and put others in their places. This discipline not only rendered him more unpopular, but inflamed the displaced officers with bitter resentment against him.

The whole summer having been spent in examining the eastern and southern extremities of the deep and extensive bay which he had discovered; in October it was too late to return; the discovery was yet incomplete, and he was loth to leave it. He had taken but half a year's provision from England. It was therefore necessary to husband what was left, and procure more by hunting; which was done in great plenty, by reason of the numerous flights of fowl which succeeded each other through the winter.

In November the ship was frozen up. Soon after the gunner died, and a controversy took place about dividing his clothes. Hudson was partial to Henry Green, a young man of a debauched character, whom he had taken on board; and whose name was not on the ship's books. This young man ungenerously took part with the discontented, and lost Hudson's favor.

They had to struggle with a severe winter, and bad accommodations, which produced scorbutic and rheumatic complaints. These were relieved by a decoction of the buds of a tree filled with a balsamic juice; the liquor was drank, and the buds applied to the swelled joints. This is supposed to have been the *Populus Balsamifera*.

When the spring came on, the birds disappeared, and their provisions fell short. To still the clamor among the discontented, Hudson injudiciously divided the remaining stores, into equal shares, and gave each man his portion; which some devoured at once and others preserved.

The ship being afloat, he began to sail toward the N. W. to pursue the object of his voyage; when, (June 21, 1611) a conspiracy which had been some time in fermentation, broke out into open mutiny. The displaced mate and boatswain, accompanied by the infamous Green and others rose and took command of the ship. They put Hudson, his son, the carpenter, the mathematician, and five others, most of whom were sick and lame, into the shallop; with a small quantity of meal, one gun and ammunition, two or three spears and an iron pot; and then with the

most savage inhumanity turned them adrift. This is the last account of Hudson. Whether he, with his unhappy companions, perished by the sea, by famine, or by the savages, is unknown.

The conspirators put the ship about to the eastward and hasted to get out of the bay. Near Cape Digges, they met with seven canoes of the savages, by whom they were attacked. The perfidious Green was killed, and three others wounded, of whom two died in a few days. The miserable remnant pursued their course homeward, and suffered much by famine; but at length arrived in Ireland, and from thence got to England.

This account of the unfortunate end of Hudson and the return of the ship, is taken from a narrative written by Abacue Pricket, whom the mutineers preserved, in hope that by his connexion with Sir Dudley Digges, one of the owners, they should obtain their pardon.

The most astonishing circumstance in this horrid act of cruelty, is the oath by which the conspirators bound themselves to execute their plot; the form of it is preserved by Pricket, and is in these words.

"You shall swear truth, to God, your prince and country; you shall do nothing but to the glory of God; and the good of the action in hand, and harm to no man." It is to be hoped, that the absurdity, hypocrisy, and blasphemy of this transaction will ever be unparalleled in the history of human depravity!

END OF VOL. I.

INTRODUCTION.

THE beginning of the colony of Virginia has been related in the life of Captain John Smith; to whose ingenuity, prudence, patience, activity, industry and resolution, its subsistence during the first three years is principally to be ascribed. It would have been either deserted by the people, or destroyed by the natives, had he not encouraged the former by his unremitting exertions, and struck an awe into the latter by his military address and intrepidity.

The views of the adventurers in England were intent on present gain; and their strict orders were to preserve peace with the natives. Neither of these could be realized. Cultivation is the first object in all new plantations; this requires time and industry; and till the wants of the people could be supplied by their own labor, it was necessary to have some dependence on the natives for such provisions as they could spare from their own consumption: and when the supply could not be obtained by fair bargain, it was thought necessary to use stratagem or force. Those who were on the spot were the best judges of the time and occasion of using those means; but they were not permitted to judge for themselves. The company of adventurers undertook to prescribe rules, to insist on a rigorous execution of them, and to form various projects which could never be carried into effect. In short, they expected more from their colony than it was possible for it to produce in so short a time, with such people as they sent to reside there, and in the face of so many dangers and difficulties, which were continually presented to them.

After the arrival of Captain Newport in England from his third voyage, the Company of South Virginia, disappointed and vexed at the small returns which the ships brought home, determined on a change of system, they solicited and obtained of the crown a new charter (May 23, 1609), and took into the company a much greater number of adventurers than before. Not less than six hundred and fifty-seven names of persons are inserted in the charter, many of whom were noblemen, and gentlemen of fortune, and merchants; besides fifty-six incorporated companies of mechanics in the city of London; and room was left for the admission of more. The government at home was vested in a council of fifty-two persons, named in the charter; at the head of which was Sir Thomas Smith, the former treasurer; and all vacancies which might happen in the council, were to be filled by the vote of a majority of the company legally assembled. This council in England had the power of appointing governors and other officers to reside in Virginia, and of making laws and giving instructions for the government of the colony. In consequence of this power, the treasurer and council constituted the following officers:

Sir Thomas West, Lord Delaware, Captain-general; Sir Thomas Gates, Lieutenant-general; Sir George Somers, Admiral; Captain Christopher Newport, Vice-Admiral; Sir Thomas Dale, High Marshall; and Sir Ferdinando Wainman, General of Horse.

Several other gentlemen, whose names are not mentioned, were appointed to other offices, all of which

were to be holden *during life*. This may seem a strange way of appointing officers in a new colony, especially when the charter gave the council power to revoke and discharge them. But it is probable that these gentlemen had friends in the company who were persons of wealth and influence, and who thought the offices not worthy of their acceptance, unless they could hold them long enough to make their fortunes. The example of Columbus might have served as a precedent, who had the office of admiral of the West Indies, not only for life, but as an inheritance to his posterity.

SIR THOMAS SMITH.

SIR THOMAS SMITH—He is calumniated—Decree of Chancery in his favor—He resigns his office of Treasurer of the Virginia Company—Two thousand acres of Land granted to him in Virginia—Sir Edwin Sandys, Treasurer of the Virginia Company—Lotteries—Supplies obtained by them for Virginia—Tenaciousness of King James.

ALL which is known with certainty of this gentleman is, that he was a London merchant, of great wealth and influence, Governor of the East India and Muscovy Companies, and of the company associated for the discovery of a northwest passage; that he had been sent (1604) ambassador from King James to the Emperor of Russia; that he was one of the assignees of Sir Walter Raleigh's patent, and thus became interested in the colony of Virginia. He had been treasurer of the company under their first charter, and presided in all the meetings of the council and of the company in England; but he never came to America.

It is unfortunate for the memory of Sir Thomas Smith, that both the company and colony of South Virginia were distracted by a malevolent party spirit; and that he was equally an object of reproach on the one hand and of panegyric on the other. To decide on the merit or demerit of his character, at this distance of time, would perhaps require more evidence than can be produced; but candor is due to the dead as well as to the living.

He was a warm friend of Captain John Smith, who, in his account of Virginia, speaks of him with respect, as a diligent and careful overseer, especially in sending supplies to the colony during his residence there; and after his return to England, he depended on Sir Thomas and the council for those accounts of the colony which he has inserted in his history, subsequent to that period.

In a dedication prefixed to a narrative of the shipwreck of Sir George Somers on the Island of Bermuda, Sir Thomas is complimented in the following manner: "Worthy air, if other men were like you, if all as able as you are were as willing, we should see a flourishing Christian church and commonwealth in Virginia. But let this be your consolation, there is one that is more able and willing than you, even the God of heaven and earth. And know further, for your comfort, that though the burden lie on you and a few more, yet are there many honorable and worthy men of all sorts who will never shrink from you. Go on, therefore, with courage and constancy; and be assured, that though by your honorable embassages and employments, and by your charitable and virtuous courses you have gained a worthy reputation in this world, yet nothing that you ever did or suffered, more honors you in the eyes of all that are godly-wise, than your faithful and unwearied prosecution, your continual and comfortable assistance of those foreign plantations."

But though flattered and complimented by his admirers, yet he had enemies both among the company in England and the colonists in Virginia. By some of his associates he was accused of favoring the growth of tobacco in the colony, to the neglect of other staple commodities which the country was equally capable of producing. It was also alleged, that instead of a body of laws agreeable to the English constitution, a book had been printed and dedicated to him, and sent to Virginia by his own authority, and without the order or consent of the company, containing "laws written in blood;" which, though they might serve for a time of war, being mostly translated from the martial law of the United Netherlands, yet were destructive of the liberties of English subjects, and contrary to the express letter of the royal charter. For this reason many people in England were deterred from emigrating to Virginia, and many persons in the colony were unjustly put to death.

In the colony, the clamor against him was still louder. It was there said, that he had been most scandalously negligent, if not corrupt, in the matter of supplies; that in a certain period called the "starving time," the allowance for a man was only eight ounces

of meal and a half pint of pease per day, and that neither of them were fit to be eaten; that famine obliged many of the people to fly to the savages for relief, who being retaken were put to death for desertion; that others were reduced to the necessity of stealing, which by his sanguinary laws was punished with extreme rigor; that the sick and infirm, who were unable to work, were denied the allowance, and famished for want; that some in these extremities dug holes in the earth, and hid themselves till they perished; that the scarcity was "so lamentable," that they were constrained to eat dogs, cats, snakes, and even human corpses; that one man killed his wife, and put her flesh in pickle, for which he was burnt to death. These calamities were by the colonists so strongly and pointedly laid to the charge of the treasurer, that when they had found a mare which had been killed by the Indians, and were boiling her flesh for food, they wished Sir Thomas was in the same kettle. A list of these grievances was presented to King James; and in the conclusion of the petition, they begged his majesty, that "rather than be reduced to live under the like government again, he would send over commissioners to hang them."

In answer to these accusations, it was said, that the original ground of all these calamities was the unfortunate shipwreck of a vessel loaded with supplies, on the Island of Bermuda. This happened at a time when Captain John Smith was disabled and obliged to quit the colony, which had been supported in a great measure by his exertions. Another source of the mischief was the indolence of the colonists themselves; who regarded only the present moment, and took no care for the future. This indolence was so great, that they would eat their fish raw rather than go to a small distance from the water for wood to dress it. When there was a plenty of sturgeon in the river, they would not take any more than to serve their present necessity, though they knew the season was approaching when these fish return to the sea; nor did they take care to preserve their nets, but suffered them to perish for want of drying and mending. Another cause was the dishonesty of those who were employed in procuring corn from the natives; for having accomplished their object, they went to sea, and turned pirates; some of them united with other pirates, and those who got home to England, protested that they were obliged to quit Virginia for fear of starving. Besides, it was said that when ships arrived with provision, it was embezzled by the mariners, and the articles intended for traffic with the Indians, were privately given away or sold for a trifle; and some of the people venturing too far into their villages were surprised and killed.

The story of the man eating his dead wife was propagated in England by some of the deserters; but when it was examined afterwards by Sir Thomas Gates, it proved to be no more than this. One of the colonists who hated his wife, secretly killed her; then, to conceal the murder cut her body in pieces, and hid them in different parts of the house. When the woman was missed, the man was suspected; his house was searched, and the pieces were found. To excuse his guilt, he pleaded that his wife died of hunger, and that he daily fed on her remains. His house was again searched, and other food was found; on which he was arraigned, confessed the murder, and was put to death; being burned, according to law.

Though calumniated both in England and America, Sir Thomas Smith did not want advocates; and his character for integrity was so well established in England, that when some of the company who had refused to advance their quotas, pleaded his negligence and avarice in their excuse, the Court of Chancery, before whom the affair was carried, gave a decree against them, and they were compelled to pay the sums which they had subscribed.

The charges against him were equally levelled against the council and company; and by their order a declaration was published, in which the misfortunes of the colony are thus summarily represented. "Cast up the reckoning together, want of government, store of idleness, their expectations frustrated by the traitors, their market spoiled by the mariners, their nets broken, the deer chased, their boats lost, their hogs killed, their trade with the Indians forbidden, some of their men fled, some murdered, and most by drinking the brackish water of James Fort, weakened and endangered; famine and sickness by all these means increased. Here at home the monies came in so slowly, that the Lord Delaware could not be despatched till the colony was worn and spent with difficulties. Above all, having neither ruler nor preacher, they feared neither God nor

man which provoked the Lord, and pulled down his judgments upon them."

Sir Thomas Smith continued in his office of treasurer till 1619; when the prejudice against him became so strong, that by the interest of the Earl of Warwick, who hated him, his removal was in contemplation. At the same time, Sir Thomas, being advanced in years and infirmities, having grown rich, and having a sufficiency of business as governor of the East India Company, thought it prudent to retire from an office of so great a responsibility, attended with so much trouble and so little advantage; and accordingly sent in his resignation to the Council of Virginia. His friends would have dissuaded him from this measure; but he was inflexible. Sir Edwin Sandys was elected his successor; a gentleman of good understanding, and great application to business. At his motion, a gratuity of 2,000 acres of land in Virginia was granted to Sir Thomas. He had been in office upwards of twelve years, in which time the expenses of the plantation had amounted to 80,000*l.*; and though he had declared that he left 4,000*l.* for his successor to begin with, yet it was found on examination, that the company was in debt to a greater amount than that sum.

Several ways were used for the raising of supplies to carry on the colonization of Virginia. One was by the subscriptions of the members of the company; another was by the voluntary donations of other people; and a third was by lotteries. Subscriptions, if not voluntarily paid were recoverable by law; but this method was tedious and expensive. Donations were precarious, and though liberal and well intended, yet they sometimes consisted only of books and furniture for churches and colleges, and appropriations for the education of Indian children. Lotteries were before this time unknown in England; but so great was the rage for this mode of raising money, that within the space of six years the sum of 29,000*l.* was brought into the treasury. This was "the real and substantial food with which Virginia was nourished." The authority on which the lotteries were grounded was the charter of King James (1609), and so tenacious was this monarch of his prerogative, that in a subsequent proclamation he vainly interdicted the "*speaking* against the Virginian Lottery." Yet when the House of Commons (1621) began to call in question some of the supposed rights of royalty, these lotteries and the proclamation which enforced them were complained of and presented among the grievances of the nation. On that occasion an apology was made by the king's friends, "that he never liked the lotteries, but gave way to them, because he was told that Virginia, could not subsist without them;" and when the Commons insisted on their complaint, the monarch revoked the license by an order of council; in consequence of which the treasury of the company was almost without resources.

THOMAS LORD DELAWARE, SIR THOMAS GATES, SIR GEORGE SOMERS, CAPTAIN CHRISTOPHER NEWPORT, SIR THOMAS DALE, SIR FERDINANDO WAINMAN.

LORD DELAWARE—arrives in Virginia—He builds two forts on James river—He leaves Virginia—arrives at the Western Islands—Daniel Gookin settles in Virginia—He removes to New England—SIR THOMAS DALE, Governor of Virginia—His energetic proceedings—His character as Governor—SIR THOMAS GATES—His arrival in Virginia as Governor—His return to England—SIR GEORGE SOMERS, Admiral of Virginia—Dispute with Gates about rank—He is wrecked on Bermuda Island—He arrives in Virginia—His death, burial, and monument—CHRISTOPHER NEWPORT, commander in the Navy of Queen Elizabeth—New York first settled—SIR FERDINANDO WAINMAN—His arrival in Virginia—His death—Death of Lord Delaware.

THE history of these persons is so blended, that a separate account of each cannot be written from any materials in my possession. Their characters, however, may be distinguished in a few words, before I proceed to the history of their united transactions in the employment of the company and colony of Virginia.

LORD DELAWARE is said to have been a worthy peer of an ancient family; a man of fine parts and of a generous disposition; who took much pains, and was at a great expense to establish the colony, in the service of which he suffered much in his health, and finally died at sea (1618,) in his second voyage to America, in or near the mouth of the bay which bears his name.

SIR THOMAS GATES was probably a land officer, between him and Sir George Somers, there was not that cordial harmony which is always desirable between men who are engaged in the same business. Excepting this, nothing is said to his disadvantage.

SIR GEORGE SOMERS was a gentleman of rank and

fortune, of approved fidelity and indefatigable industry; an excellent sea commander, having been employed in the navy of Queen Elizabeth, and having distinguished himself in several actions against the Spaniards in the West Indies. At the time of his appointment to be Admiral of Virginia, he was above sixty years of age. His seat in Parliament was vacated by his acceptance of a colonial commission. He died in the service of the colony (1610) at Bermuda, highly esteemed and greatly regretted.

CHRISTOPHER NEWPORT was a mariner of ability and experience in the American seas. He had been a commander in the navy of Elizabeth, and, in 1595, had conducted an expedition against the Spaniards in the West Indies, where, with three or four ships, he plundered and burned some towns, and took several prizes, with a considerable booty. He was a vain, empty, conceited man, and very fond of parade. By the advantage of going to and fro, he gained the confidence of the council and company in England; and whatever he proposed was adopted by them. Some traits of his character have been given in the life of Captain John Smith. In 1651 he imported fifty men, and seated them on a plantation, which he called Newport's News. Daniel Gookin came with a cargo of cattle from Ireland, and settled first on this plantation. He afterwards removed to New England.

SIR THOMAS DALE is said to have been a gentleman of much honor, wisdom and experience. To him was entrusted the execution of the laws sent over by Sir Thomas Smith; which, though perhaps necessary at that time, (1611) when so many turbulent and refractory persons were to be governed, yet were subversive of that freedom which Englishmen claimed as their birthright, and gave too much power into the hands of a governor. Though his administration was marked with rigor and severity, yet he did much towards advancing the settlements. On a high neck of land in James river, named Varina, he built a town which he called Henrico, in honor of Prince Henry, the remains of which were visible when Mr. Stith wrote his history (1746.) On the opposite side of the river he made a plantation on lands, from which he expelled the Indians, and called it New Bermuda. He staid in Virginia about five years, and returned to England (1616) after which there is no farther account of him.

OF SIR FERDINANDO WAINMAN, nothing is said but that he died soon after his arrival in Virginia with Lord Delaware, in the summer of 1610.

When the new charter of Virginia was obtained, the council and company immediately equipped a fleet, to carry supplies of men and women, with provisions and other necessaries to the colony. The fleet consisted of seven ships, in each of which, beside the captain, went one or more of the counsellors or other officers of the colony; and though there was a dispute about rank between two officers, Somers and Gates, they were placed in one ship with Newport, the third in command. The Governor-general, Lord Delaware, did not sail with this fleet; but waited till the next year, to go with a further supply. The names of the ships and their commanders were as follows:

The Sea-Adventure, Admiral Sir George Somers, with Sir Thomas Gates, and Captain Christopher Newport; the Falcon, Captain Radcliffe and Captain King; the Diamond, Captain Martin and Master Nelson; the Blessing, Gabriel Archer and Captain Adams; the Unity, Captain Wood and Master Pett; the Lion, Captain Webb; the Swallow, Captain Moore and Master Somers.

The fleet was attended by two smaller vessels, one of which was a ketch, commanded by Matthew Fitch, the other a pinnace, in which went Captain Davies and Master Davies.

This fleet sailed from Plymouth on the second day of June, 1609. Though their orders were not to go by the old route of the Canaries, and the West Indies, but to steer directly for Virginia, yet they went as far southward as the twenty-sixth degree of latitude; where the heat was so excessive, that many of the people were taken with calentures. In two ships, thirty-two persons died; others suffered severely, and one vessel only was free from sickness.

The whole fleet kept company till the twenty-fourth of July, when they supposed themselves to be within eight days sail of Virginia, stretching to the northwest, and crossing the Gulf Stream. On that day, began a violent tempest from the northeast, accompanied with a horrid darkness, which continued forty-four hours. In this gale the fleet was scattered. The Admiral's ship, on board of which was the commission for the new government, with the three principal officers, was

wrecked on the island of Bermuda. The ketch foundered at sea. The remainder, much damaged and distressed, arrived one after another in James river, about the middle of August.

The provisions brought by these ships were insufficient for the colony and the passengers. This deficiency proved very detrimental, and occasioned the miseries and reproaches which have been already mentioned. The space of ten months from August, 1609, to the arrival of Lord Delaware, in June, 1610, was known in Virginia for many years after, by the name of "the starving time." But the want of provision was not the only deficiency; there was a total want of principle and of order.

Of the company who arrived at this time, the following description is given by a native Virginian. "A great part of them consisted of unruly sparks, packed off, by their friends, to escape a worse destiny at home. The rest were chiefly made up of poor gentlemen, broken tradesmen, rakes and libertines, footmen, and such others as were much fitter to ruin a commonwealth than to help to raise or maintain one. This lewd company were led by their seditious captains into many mischiefs and extravagancies. They assumed the power of disposing of the government; and conferred it sometimes on one and sometimes on another. To-day the old commission must rule, to-morrow the new, and the next day neither. All was anarchy and distraction."

Such being the character of the people, there could not have been any great hope of success, if the whole fleet had arrived in safety.

The admiral's ship had on board a great quantity of provision. She was separated from the fleet in the storm, and sprang a leak at sea, so that with constant pumping and bailing, they could scarcely keep her above water for three days and four nights; during which time Sir George Somers did not once leave the quarter-deck. The crew, worn out with fatigue and despairing of life, broached the strong liquors, and took leave of each other with an inebriating draught, till many of them fell asleep. In this dreadful extremity, Sir George discovered land; the news of which awoke and revived them, and every man exerted himself to do his duty. At length the ship struck ground in such a position between two rocks, at the distance of half a mile from the shore, that the people and a great part of the cargo were safely landed.

The Bermuda Islands were uninhabited, and had the reputation of being enchanted.* But when the people were on shore they found the air pure and salubrious, and fruits of various kinds growing in luxuriant plenty and perfection. The shore was covered with tortoises, the sea abounded with fish, and in the woods they found wild hogs, which it is supposed had escaped from some vessel wrecked on the island.

Here they remained nine months. The two senior officers lived apart, and each, with the assistance of the men, built a vessel of the cedars which grew on the island, and the iron and cordage saved from the wreck. Sir George Somers labored with his own hands every day till his vessel was completed. One of these vessels was called the *Patience*, the other the *Deliverance*.

It is remarked, that during their abode on this island, they had morning and evening prayers daily; divine service was performed and two sermons were preached every Lord's day, by their chaplain, Mr. Bucke. One marriage was celebrated, and two children were born and baptized. Five of the company died, one of whom was murdered. The murderer was put under confinement, but escaped, and hid himself among the woods and rocks, with another offender, till the departure of the company, when they were left behind. Many of the people were so well pleased with the place, that they were with difficulty prevailed on to quit these pleasant islands.

The lower seams of the vessel were calked with the remains of the useless cables, and a small quantity of tar saved from the wreck. The upper seams were secured with lime made of calcined stones and shells, slaked with fresh water and softened with the oil of tortoises. This cement soon became dry and firm. The wild hogs served for sea-stores, being preserved with salt, crystallized on the rocks.

On the tenth of May, 1610, the company, consisting of one hundred and twenty persons, embarked, and

after encountering some difficulty among the rocks, the next day got clear of the land, and shaped their course for Virginia; where they arrived on the twenty-first, at Point Comfort, and two days after at Jamestown. The colony, reduced to sixty persons, in a sickly, mutinous and starving condition, gave them a mournful welcome. The new governor, Sir Thomas Gates, caused the bell to be rung, and summoned the whole company to the church; where, after an affectionate prayer by Mr. Bucke, the new commission was read and the former president, Mr. Percy, then scarcely able to stand, delivered up the old patent, with his commission.

On a strict examination, it was found that the provisions brought by the two pinnaces, would serve the people not more than sixteen days, and that what they had in the town would be spent in ten. It being seed time, the Indians had no corn to spare, and they were so hostile that no treaty could be holden with them. The sturgeon had not yet come into the river, and many of the nets were useless. No hope remained of preserving the colony; and after mature deliberation, it was determined to abandon the country. The nearest place where any relief could be obtained was Newfoundland; thither they proposed to sail, and there they expected to meet the fishing vessels from England, on board of which the people might be distributed and get passages home, when the season of fishing should be completed.

Having taken this resolution, and buried their ordinance at the gate of the fort, on the seventh of June, at beat of drum, the whole company embarked in four pinnaces. It was with difficulty that some of the people were restrained from setting fire to the town; but the governor, with a select company, remained on shore till the others had embarked, and he was the last that stepped into the boat. About noon they came to sail, and fell down with the ebb, that evening, to Hog Island. The next morning's tide brought them to Mulberry Island Point; where, lying at anchor, they discovered a boat coming up the river with the flood. In an hour's time the boat came along side the governor's pinnace, and proved to be an express from the Lord Delaware, who had arrived, with three ships and a supply of provision, two days before, at Point Comfort; where the captain of the fort had informed him of the intended evacuation; and his lordship immediately despatched his skiff with letters by Captain Edward Brewster, to prevent their departure. On receiving these letters, the governor ordered the anchors to be weighed, and the wind, being easterly, brought them back in the night, to their old quarters at Jamestown.

On the Lord's day, June 10, the ships came to anchor before the town. As soon as Lord Delaware came on shore, he fell down on his knees, and continued some time in silent devotion. He then went to church, and after service, his commission was read, which constituted him "governor and captain-general during his life, of the colony and plantation of Virginia." Sir Thomas Gates delivered up his commission and the colony seal. On this occasion, Lord Delaware made a public address to the people, blaming them for their former idleness and misconduct, and exhorting them to a contrary behavior, lest he should be obliged to draw the sword of justice against delinquents, and cut them off; adding, that he had rather spill his own blood to protect them from injuries.

Having displaced such men as had abused their power, and appointed proper persons to office, he assigned to every man his portion of labor, according to his capacity; among which the culture of vines was not forgotten; some Frenchmen having been imported for the purpose. There had been no division of the lands, but all was common property; and the colony was considered as one great family, fed daily out of the public store. Their employments were under the direction of the government, and the produce of their labors was brought into the common stock. The Indians were so troublesome, that it would not have been prudent for the people to disperse, till they should be better able to defend themselves, or till the savages should be more friendly. They were therefore lodged within the fortifications of Jamestown; their working and fishing parties, when abroad, were well armed or guarded; their situation was hazardous; and the prospect of improvement, considering the character of the majority, was not very flattering. "The most honest and industrious would scarcely take so much pains in a week, as they would have done for themselves in a day; presuming that however the harvest prospered, the general store must maintain them; by which means

they reaped not so much corn from the labors of thirty men, as three men could have produced, on their own lands."

No dependence could be placed on any supply of provisions from this mode of exertion. The stores brought over in the fleet might have kept them alive, with prudent management, for the greater part of a year; but within that time it would be necessary to provide more. The Bermuda Islands were full of hogs, and Sir George Somers offered to go thither with a party to kill and salt them. This offer was readily accepted, and he embarked in his own cedar vessel of thirty tons, accompanied by Captain Samuel Argal, in another.

They sailed together, till by contrary winds they were driven among the shoals of Nantucket and Cape Cod; whence Argal found his way back to Virginia, and was despatched to the Potomack for corn. There he found Henry Spelman, an English youth, who had been preserved from the fury of Powhatan, by his daughter Pocahontas. By his assistance Argal procured a supply of corn, which he carried to Jamestown.

Sir George Somers, after long struggling with contrary winds, was driven to the northeastern shore of America; where he refreshed his men, then pursued the main object of his voyage, and arrived safely at Bermuda. There he began to collect the swine, and prepare their flesh for food; but the fatigues to which he had been exposed by sea and land, proved too severe for his advanced age, and he sunk under the burden. Finding his time short, he made a proper disposition of his estate, and charged his nephew, Matthew Somers, who commanded under him, to return with the provision to Virginia. But the love of his native country prevailed. Having buried the entrails at Bermuda, he carried the corpse of his uncle to England, and deposited it at Whitchurch in Dorsetshire. A monument was afterwards erected at Bermuda to the memory of this excellent man.* The town of St. George was named for him, and the islands were called Somers Islands. The return of this vessel gave the first account in England of the discovery of those islands.

Virginia, thus left destitute of so able and virtuous a friend, was soon after deprived of the presence of its Governor, Lord Delaware. Having built two forts at the mouth of James river, and another at the falls; and having rendered his government respectable in the view both of the English and Indians, he found his health so much impaired, that he was obliged in nine months to quit the country, intending to go to Nevis for the benefit of the warm baths. By contrary winds he was forced to the Western Islands, where he obtained great relief from the fresh fruits of the country; but he was advised not to hazard himself again in Virginia; till his health should be more perfectly restored, by a voyage to England. Sir Thomas Dale and Sir Thomas Gates having previously gone at different times to England, the government was again left in the hands of Mr. Percy; a gentleman of a noble family and a good heart, but of very moderate abilities.

At the time of Lord Delaware's departure (March 28, 1611) the colony consisted of above two hundred people, most of whom were in good health and well provided; but when Sir Thomas Dale arrived, in less than two months, (May 10,) with three ships, bringing an addition of three hundred people, he found the old colonists again relapsing into the former state of indolence and penury. Depending on the public store, they had neglected planting, and were amusing themselves with bowling and other diversions in the streets of Jamestown. Nothing but the presence of a spirited governor, and a severe execution of his orders, could induce these people to labor. The severities exercised upon them were such as could not be warranted by the laws of England. The consequences were dis-

* This monument was erected about ten years after his death by Nathaniel Butler, then governor of Bermuda, of which the following account is given by Captain Smith, in his history of Virginia and the Somers Islands, p. 193.

"Finding accidentally a little cross erected in a bye place among many bushes, and understanding that there was buried the heart and entrails of Sir George Somers, he resolved to have a better memory to so worthy a soldier. So finding a great marble stone, brought out of England, he caused it by masons to be wrought handsomely and laid over the place, which he environed with a square wall of hewn stone, tomb-like; whereon he caused to be engraved this epitaph he had composed.

"In the year sixteen hundred and eleven,
Noble Sir George Somers went hence to heaven;
Whose well tried worth that held him still employ'd,
Gave him the knowledge of the world so wide.
Hence 'twas by Heaven's decree, that to this place,
He brought new guests and name, to mutual grace;
At last his soul and body being to part,
He here bequeathed his entrails and his heart."

* "Whereas it is reported that this land of Bermudas, with the islands about it, are enchanted and kept by evil and wicked spirits; it is a most idle and false report. God grant that we have brought no wicked spirits with us, or that there come none after us; for we found nothing there so ill as ourselves." *Jordan's News from Bermuda, 1613.*

content and insurrection in some, and servile acquiescence in others. Sir Thomas Dale was esteemed as a man who might safely be entrusted with power; but the laws by which he governed, and his rigorous administration of them, were the subject of bitter remembrance and complaint.

The adventurers in England were still in a state of disappointment; and when Sir Thomas Gates arrived without bringing any returns adequate to their expectations, the council entered into a serious deliberation whether to proceed in their adventure or abandon the enterprise. Lord Delaware's arrival in England cast a deeper gloom on the melancholy prospect. But the representations of these gentlemen, delivered in council and confirmed by oath, served to keep up their spirits, and induce them still to renew their exertions.

The substance of these representations was, that the country was rich in itself, but that time and industry were necessary to make its wealth profitable to the adventurers; that it yielded abundance of valuable woods, as oak, walnut, ash, sassafras, mulberry trees for silk worms, live oak, cedar and fir for shipping, and that on the banks of the Potowmack there were trees large enough for masts; that it produced a species of wild hemp for cordage, pines which yielded tar, and a vast quantity of iron ore; besides lead, antimony, and other minerals, and several kinds of colored earths; that in the woods were found various balsams and other medicinal drugs, with an immense quantity of myrtle-berries for wax; that the forests and rivers harbored beavers, otters, foxes and deer, whose skins were valuable articles of commerce; that sturgeon might be taken in the greatest plenty in five noble rivers; and that without the bay, to the northward, was an excellent fishing bank for cod of the best quality; that the soil was favorable to the cultivation of vines, sugar-canes, oranges, lemons, almonds and rice; that the winters were so mild that cattle could get their food abroad, and that swine could be fatted on wild fruits; that the Indian corn yielded a most luxuriant harvest; and in a word, that it was "one of the goodliest countries (says Purchas), promising as rich entrails as any kingdom of the earth, to which the sun is no nearer a neighbor."

Lord Delaware further assured them, that notwithstanding the ill state of his health, he was so far from shrinking or giving over the enterprise, that he was willing to lay all he was worth on its success, and to return to Virginia with all convenient expedition.

Sir Thomas Gates was again sent out with six ships, three hundred men, one hundred cattle, two hundred swine, and large supplies of every kind. He arrived in the beginning of August, 1611, and received the command from Sir Thomas Dale, who retired to Varina and employed himself in erecting a town, Henrico, and improving his plantation at New Bermuda.

In the beginning of the next year (1612), Captain Argal, who had carried home Lord Delaware, came again to Virginia with two ships, and was again sent to the Potowmack for corn; of which he procured fourteen hundred bushels. There he entered into an acquaintance with Japazaws, the sachem, an old friend of Captain Smith, and of all the English who had come to America. In his territory Pocahontas, the daughter of Powhatan, was concealed. The reason of her quitting the dominion of her father is unknown. Certain it is, that he had been in a state of hostility with the colony ever since the departure of Smith; and that the frequent depredations and murders committed by the Indians on the English, were in the highest degree painful to this tender-hearted princess. Argal contrived a plan to get her into his possession. He bargained with Japazaws to bring her on board the ship under pretence of a visit in company with his own wife; then dismissing the sachem and his wife with the promised reward, he carried Pocahontas to Jamestown, where she had not been since Captain Smith had left the colony.

A message was sent to Powhatan to inform him that his daughter was in their hands, and that she might be restored to him, on condition that he would deliver up all the English whom he held as captives, with all the arms, tools, and utensils which the Indians had stolen, and furnish the colony with a large quantity of corn. This proposal threw him into much perplexity; for though he loved his daughter, he was loth to give so much for her redemption. After three months he sent back seven of the captives, with three unserviceable muskets, an axe, a saw, and one canoe, loaded with corn. He also sent word, that when they should deliver his daughter, he would send them five hundred bushels of corn, and make full satisfaction for all past

injuries. No reliance could be placed on such a promise. The negotiation was broken, and the king was offended. The next spring (1613) another attempt was made, accompanied with threatening on the part of the English; and stratagem on the part of the Indians. This proved equally ineffectual. At length it was announced to Powhatan, that John Rolfe, an English gentleman, was in love with Pocahontas, and had obtained her consent, and the license of the governor to marry her. The prince was softened by this intelligence, and sent one of his chiefs to attend the nuptial solemnity. After this event Powhatan was friendly to the colony as long as he lived; and a free trade was carried on between them and his people.

The visit which this lady made to England with her husband, and her death, which happened there in the autumn of her youth, have been related in the life of Captain Smith. It is there observed, that "several families of note in Virginia are descended from her." The descent is thus traced by Mr. Stith: her son, Thomas Rolfe, was educated in England, and came over to Virginia, where he became a man of fortune and distinction, and inherited a large tract of land which had been the property of his grandfather, Powhatan. He left an only daughter, who was married to Colonel Robert Bolling. His son, Major John Bolling, was father to Colonel John Bolling, whose five daughters were married to Colonel Richard Randolph, Colonel John Fleming, Dr. William Gay, Mr. Thomas Eldridge, and Mr. James Murray. Such was the state of the family in 1747.

The reconciliation between Powhatan and the English awakened the fears of the Indians of Chickahomony, a formidable and free people. They were governed by an assembly of their elders, or wise men, who also bore the character of priests. They hated Powhatan as a tyrant, and were always jealous of his design to subject them. They had taken advantage of the dissension between him and the English to assert their liberty; but on the reconciliation, they apprehended that he might make use of the friendship of the colony to reduce them under his yoke. To prevent this, they sent a deputation to Sir Thomas Dale, to excuse their former ill-conduct, and submit themselves to the English government. Sir Thomas was pleased with the offer, and on a day appointed went with Captain Argal and fifty men to their village, where a peace was concluded on the following conditions.

1. That they should forever be called [Tossentessas] New Englishmen, and be true subjects of King James and his deputies.

2. That they should neither kill nor destroy any of the English nor their stray cattle, but bring them home.

3. That they should always be ready to furnish the English with three hundred men against the Spaniards or any other enemy.

4. That they should not enter any of the English settlements without previously sending in word that they were New Englishmen.

5. That every bow-man at harvest should bring into the store two measures [two one-half bushels] of corn, as a tribute, for which he should receive a hatchet.

6. That eight elders or chiefs should see all this performed, or receive punishment themselves; and that for their fidelity, each one should receive a red coat, a copper chain, and a picture of King James, and should be accounted his nobleman.

Though this transaction passed whilst Sir Thomas Gates was at the head of the government, and residing within the colony, yet nothing is said of his assenting to it, or giving any orders about it. Dale appears to have been the most active and enterprising man; and on Gates's return to England in the spring of 1614, the chief command devolved on him.

The experience of five years had now convinced all thinking men among the English, that the colony would never thrive whilst their lands were held in common, and the people were maintained out of the public stores. In such a case there is no spur to exertion; the industrious person and the drone fare alike, and the former has no inducement to work for the latter. The time prescribed in the king's instructions for their trading in a common stock, and bringing all the fruits of their labor into a common store, was expired. An alteration was then contemplated, but the first measure adopted did not much mend the matter. Three acres only were allotted to each man, as a farm, on which he was to work eleven months for the store, and one month for himself; and to receive his proportion out of the common stock. Those who were employed on Sir Thomas Dale's plantation had better terms. One month's labor only was required, and they were ex-

empted from all further service; and for this exemption, they paid a yearly tribute of three barrels and a half of corn to the public store. These farms were not held by a tenure of common socage, which carries with it freedom and property; but merely by tenancy at will, which produces dependence. It is, however, observed, that this small encouragement gave some present content, and the fear of coming to want gradually disappeared.

About two years after (1616), a method of granting lands in freeholds, and in lots of fifty acres, was introduced into Virginia. This quantity was allowed to each person who came to reside, or brought others to reside there. The design of it was to encourage emigration. Besides this, there were two other methods of granting lands. One was a grant of merit. When any person had conferred a benefit, or done a service to the colony, it was required by a grant of land which could not exceed two thousand acres. The other was called the adventure of the purse. Every person who paid twelve guineas into the company's treasury was entitled to one hundred acres.

After some time, this liberty of taking grants was abused; partly by the ignorance and knavery of surveyors, who often gave draughts of land without ever actually surveying them, but describing them by natural boundaries, and allowing large measure; and partly by the indulgence of courts, in a lavish admittance of claims. When a master of a ship came into court, and made oath that he had imported himself with so many seamen and passengers, an order was issued granting him as many rights of fifty acres; and the clerk had a fee for each right. The seamen at another court would make oath, that they had adventured themselves so many times into the country, and would obtain an order for as many rights, *toties quoties*. The planter who brought the imported servants would do the same, and procure an order for as many times fifty acres. These grants, after being described by the surveyors in the above vague and careless manner, were sold at a small price; and whoever was able to purchase any considerable number of them, became entitled to a vast quantity of land. By such means the original intention of allotting a small freehold to each emigrant was frustrated; and the settlement of the country in convenient districts was precluded. Land speculators became possessed of immense tracts, too large for cultivation; and the inhabitants were scattered over a great extent of territory in remote and hazardous situations. The ill effects of this dispersion were, insecurity from the savages; a habit of indolence; an imperfect mode of cultivation; the introduction of convicts from England, and of slaves from Africa.

The same year (1616), Sir Thomas Dale returned to England, carrying with him Pocahontas, the wife of Mr. Rolfe, and several other Indians. The motive of his return was to visit his family and settle his private affairs, after having spent five or six years in the service of the colony. He is characterized as an active, faithful governor, very careful to provide supplies of corn, rather by planting than by purchase. So much had these supplies increased under his direction, that the colony was able to lend to the Indian princes several hundred bushels of corn, and take mortgages of their land in payment. He would allow no tobacco to be planted till a sufficiency of seed-corn was in the ground. He was also very assiduous in ranging and exploring the country, and became extremely delighted with its pleasant and fertile appearance. He had so high an opinion of it, that he declared it equal to the best parts of Europe, if it were cultivated and inhabited by an industrious people.*

SIR SAMUEL ARGAL,

AND

SIR GEORGE YEARDLEY.

We have no account of Captain ARGAL before the year 1609, when he came to Virginia to fish for stur-

* Since the foregoing sheets were printed, I have found the following brief account of Sir George Somers, in Fuller's Worthies of England, p. 282.

"George Somers, Knight, was born in or near Lyme, in

geon and trade with the colony. This trade was then prohibited but being a kinsman of Sir Thomas Smith, his voyage was connived at, and the provisions and wine which he brought were a welcome relief to the colony. He was there when the shattered fleet, escaped from the tempest, arrived without their commanders; and he continued to make voyages in the service of the colony, and for his own advantage, till he was made deputy-governor, under Lord Delaware.

The principal exploit in which he was engaged, was an expedition to the northern part of Virginia.* Sir Thomas Dale, having received some information of the intrusion of the French and Dutch within the chartered limits of Virginia, sent Argal, ostensibly on a trading and fishing voyage to the northward; but with orders to seek for, and dispossess intruders. No account of this force is mentioned by any writer. Having visited several parts of the coast of North Virginia, and obtained the best information in his power, he arrived at the island now called Mount Desert, in the District of Maine; where two Jesuits, who had been expelled from Port Royal, by the governor, Biencourt, for their insolence, had made a plantation, and built a fort. A French ship and bark were then lying in the harbor. Most of the people were dispersed, at their various employments, and were unprepared to receive an enemy. Argal at once attacked the vessels with musquetry, and made an easy conquest of them. One of the Jesuits was killed in attempting to level one of the ship's guns against the assailants. Argal then landed, and summoned the fort. The commander requested time for consultation, but it was denied; on which the garrison abandoned the fort, and, by a private passage, escaped to the woods. Argal took possession in the name of the crown of England, and the next day the people came in, and surrendered themselves, and their commission, or patent. He treated them with politeness, giving them leave to go either to France, in the fishing vessels, which resorted to the coast, or with him to Virginia.

The other Jesuit, Father Biard, glad of an opportunity to be revenged on Biencourt, gave information of his settlement at Port Royal, and offered to pilot the vessel thither. Argal sailed across the Bay of Fundy, and, entering the harbor, landed forty men. A gun was fired from the fort, as a signal to the people aboard; but Argal advanced with such rapidity, that he found the fort abandoned, and took possession. He then sailed up the river with his boats; where he viewed their fields, their barns and mill; these he spared; but at his return he destroyed the fort, and defaced the arms of the King of France.

Biencourt was at this time surveying the country at a distance; but was called home suddenly, and requested a conference with the English commander. They met in a meadow, with a few of their followers. After an ineffectual assertion of rights, equally claimed by both, Biencourt proposed, if he could obtain a protection from the Crown of England, and get the obnoxious Jesuit into his possession, to divide the fur trade, and disclose the mines of the country; but Argal refused to make any treaty, alleging that his orders were only to dispossess him; and threatening, if he should find him there again, to use him as an enemy. Whilst they were in conference, one of the natives came up to them, and in broken French, with suitable gestures, endeavored to mediate a peace; wondering that persons, who seemed to him, to be of one nation, should make war on each other. This affecting incident served to put them both into good humor.

As it was a time of peace between the two crowns, the only pretext for this expedition, was the intrusion of the French into limits claimed by the English, in virtue of prior discovery. This mode of dispossessing them has been censured, as "contrary to the Law of Nations, because inconsistent with their peace." It was, however, agreeable to the powers granted in the charter of 1609; and even the seizure of the French vessels, on board of which was a large quantity of provision, clothing, furniture, and trading goods, was also warranted by the same charter. There is no evidence that this transaction was either approved by the Court of England, or resented by the Crown of France; cer-

tain it is, however, that it made way for a patent, which King James gave to Sir William Alexander, in 1621, by which he granted him the whole territory of Acadia, by the name of Nova Scotia; and yet the French continued their occupancy.

On his return towards Virginia, with his prizes, Argal visited the settlement which the Dutch had made at Hudson's river, near the spot where Albany is now built, and demanded possession; alleging that Hudson being an English subject, though in the service of Holland, could not alienate the lands which he had discovered; which were claimed by the crown of England, and granted by charter to the company of Virginia. The Dutch governor, Hendrick, Christians, being unable to make any resistance, quietly submitted himself and his colony to the Crown of England, and was permitted to remain there. But on the arrival of a reinforcement the next year, they built another fort, on the south end of the island Manhattan, where the city of New York now stands, and held the country for many years, under a grant from the States-general, by the name of New Netherlands.

The next spring (1614) Argal went to England, and two years after, Sir Thomas Dale followed him, leaving George Yeardley to govern the colony in his absence. It had been a grand object with Dale to discourage the planting of tobacco; but his successor, in compliance with the humor of the people, indulged them in cultivating it, in preference to corn. When the colony was in want of bread, Yeardley sent to the Indians of Chickahomony for their tribute, as promised by the treaty made with Dale. They answered, that they had paid his master; but that they had no orders, nor any inclination to obey him. Yeardley drew out one hundred of his best men, and went against them. They received him in a warlike posture; and after much threatening on both sides, Yeardley ordered his men to fire. Twelve of the natives were killed, and as many were made prisoners, of whom two were Elders of Senators. For their ransom, one hundred bushels of corn were paid, in addition to the tribute. Three boats were loaded for Jamestown, one of which was overset in the passage, and eleven men, with her whole cargo, were lost. The natives were so awed by this chastisement, that they supplied the colony with such provisions as they could spare from their own stock, or procure by hunting; and being thus supplied, the colonists gave themselves chiefly to the planting of tobacco.

In 1617, Captain Argal was appointed deputy-governor of the colony under Lord Delaware, and admiral of the adjacent seas. When he arrived, in May, he found the palisades broken, the church fallen down, and the well of fresh water spoiled; but the market-square and the streets of Jamestown were planted with tobacco, and the people were dispersed, wherever they could find room to cultivate that precious weed; the value of which was supposed to be much augmented by a new mode of cure, drying it on lines, rather than fermenting it in heaps. The author of this discovery was a Mr. Lambert; and the effect of it was a great demand from England for lines, which afterwards became a capital article of traffic.

To counteract the ill effects of Yeardley's indulgence, Argal revived the severe discipline which was grounded on the martial laws, framed by his patron, Sir Thomas Smith; a specimen of which may be seen in the following edicts. He fixed the advance on goods imported from England, at twenty-five per cent, and the price of tobacco at three shillings per pound; the penalty for transgressing this regulation was three years' slavery. No person was allowed to fire a gun, except in his own defence, against an enemy, till a new supply of ammunition should arrive; on penalty of one year's slavery. Absence from church on Sundays and holidays, was punished by laying the offender neck and heels, for one whole night, or by one week's slavery; the second offence, by one month's; and the third by one year's slavery. Private trade with the savages, or teaching them to use the arms, was punishable by death.

These and similar laws were executed with such rigor, as to render the deputy-governor odious to the colony. They had entertained a hope of deliverance, by the expected arrival of Lord Delaware, who sailed from England for Virginia (April, 1618) in a large ship, containing two hundred people. After touching at the Western Islands, a succession of contrary winds, and bad weather protracted the voyage for sixteen weeks, during which time, many of the people fell sick, and about thirty died, among whom was Lord Delaware. This fatal news was known first in Virginia; but the report of Argal's injurious conduct had gone to Eng-

land, and made a deep impression to his disadvantage, on the minds of his best friends. Besides a great number of wrongs to particular persons, he was charged with converting to his own use, what remained of the public stores; with depredation and waste of the revenues of the company; and with many offences in matters of state and government. At first the company were so alarmed, as to think of an application to the crown for redress; but on further consideration, they wrote a letter of reprehension to him, and another of complaint to Lord Delaware, whom they supposed to be at the head of the colony, requesting that Argal might be sent to England, to answer the charges laid against him.

Both these letters fell into Argal's hands. Convinced that his time was short, he determined to make the most of it for his own interest.* Having assumed the care of his lordship's estate in Virginia, he converted the labor of the tenants, and the produce of the land to his own use. But Edward Brewster, who had been appointed overseer of the plantation, by his lordship's orders before his death, endeavored to withdraw them from Argal's service, and employ them for the benefit of the estate. When he threatened one who refused to obey him, the fellow made his complaint to the governor; Brewster was arrested, tried by a court-martial, and sentenced to death, in consequence of the aforesaid law of Sir Thomas Smith. Sensible of the extreme severity of these laws, the court which had passed the sentence, accompanied by the clergy, went in a body to the governor, to intercede for Brewster's life, which, with much difficulty they obtained, on this condition, that he should quit Virginia, never more to return; and should give his oath, that he would, neither in England, nor elsewhere, say or do any thing to the dishonor of the governor. On his going to England, he was advised to appeal to the company; and the prosecution of this appeal, added to the odium which Argal had incurred, determined them to send over a new governor, to examine the complaints and accusations on the spot.

The person chosen to execute this commission, was Yeardley, his rival, who, on this occasion, was knighted, and appointed governor-general of the colony, where he arrived in the spring of 1619.

The Earl of Warwick, who was Argal's friend and partner in trade, had taken care to give him information of what was doing, and to despatch a small vessel, which arrived before the new governor, and carried off Argal with all his effects. By this manœuvre, and by virtue of his partnership with the earl, he not only escaped the intended examination in Virginia, but secured the greater part of his property, and defrauded the company of that restitution which they had a right to expect.

The character of Captain Argal, like that of most who were concerned in the colonization and government of Virginia, is differently drawn. On the one hand, he is spoken of as a good mariner, a civil gentleman, a man of public spirit, active, industrious, and careful to provide for the people, and keep them constantly employed. On the other hand, he is described as negligent of the public business, seeking only his own interest, rapacious, passionate, arbitrary, and cruel; pushing his unrighteous gains by all means of extortion and oppression. Mr. Stith, who, from the best information which he could obtain, at the distance of more than a century, by searching the public records of the colony, and the journals of the company, pronounces him "a man of good sense, of great industry and resolution," and says, that "when the company warned him peremptorily, to exhibit his accounts, and make answer to such things as they had charged against him, he so foiled and perplexed all their proceedings, and gave them so much trouble and annoyance, that they were never able to bring him to any account or punishment."

Nothing more is known of him, but that after quitting Virginia, he was employed in 1620, to command a ship of war, in an expedition against the Algerines; and that in 1623, he was knighted by King James.

About the same time that Lord Delaware died at sea, the great Indian prince Powhatan, died at his seat in Virginia. (April, 1618)* He was a person of excellent natural talents, penetrating and crafty, and a complete master of all the arts of savage policy; but totally void of truth, justice, and magnanimity. He was succeeded by his second brother Opitchapan; who, being demented and inactive, was soon obscured by the same

Dorsetshire. He was a lamb upon land, and a lion at sea. So patient on shore, that few could anger him; and on entering a ship as if he had assumed a new nature, so passionate that few could please him. Whitechurch, where his corpse was deposited, is distant three miles from Lyne.

* The time of this voyage is not accurately mentioned; but from comparing several dates and transactions, I think (with Mr. Prince) that it must have been in the summer of 1613. Certainly it was before Argal was made deputy-governor, in 1617 though some writers have placed it after that period.

* The same year is also memorable for the death of Sir Walter Raleigh, who may be considered as the founder of the colony in Virginia.

rior abilities and ambition of his younger brother Opechancanough. Both of them renewed and confirmed the peace which Powhatan had made with the colony; Opechancanough finally engrossed the whole power of government; for the Indians do not so much regard the order of succession, as brilliancy of talents, and intrepidity of mind in their chiefs.

To ingratiate themselves with the prince and attach him more closely to their interest, the colony built a house for him, after the English mode. With this, he was so much pleased, that he kept the keys continually in his hands, opening and shutting the doors many times in a day and showing the machinery of the locks, to his own people and strangers. In return for this favor, he gave liberty to the English to seat themselves at any place on the shores of the rivers, where the natives had no villages, and entered into a further treaty with them for the discovery of mines and for mutual friendship and defence. This treaty was at the request of Opechancanough engraven on a brass plate, and fastened to one of the largest oaks, that it might be always in view, and held in perpetual remembrance.

Yeorldley, being rid of the trouble of calling Argal to account, applied himself to the business of his government. The first thing he did was to add six new members to the council, Francis West, Nathaniel Powel, John Pory, John Ralfe, William Wickham, and Samuel Maycock. The next was to publish his intention to call a General Assembly, the privileges and powers of which were defined in his commission. He also granted to the oldest planters a discharge from all service to the colony, but such as was voluntary, or obligatory by the laws and customs of nations; with a confirmation of all their estates, real and personal, to be holden in the same manner as by English subjects. Finding a great scarcity of corn, he made some amends for his former error by promoting the cultivation of it. The first year of his administration (1619) was remarkable for very great crops of wheat and Indian corn, and for a great mortality of the people; not less than 300 of whom died.

In the month of July of this year, the first General Assembly of the colony of Virginia met at Jamestown.* The deputies were chosen by the townships or boroughs, no counties being at that time formed. From this circumstance the lower House of Assembly was always afterwards called the House of Burgess, till the revolution in 1776. In this assembly, the governor, council and burgesses sat in one house, and jointly "debated all matters, thought expedient for the good of the colony." The laws then enacted were of the nature of local regulations, and were transmitted to England for the approbation of the treasurer and company. It is said that they were judiciously drawn up; but no vestige of them now remains.

Thus, at the expiration of twelve years from their settlement, the Virginians first enjoyed the privilege of a colonial legislature, in which they were represented by persons of their own election. They received as a favor, what they might have claimed as a right; and with minds depressed by the arbitrary system under which they had been held, thanked the company for this favor, and begged them to reduce a compendium, with his majesty's approbation, the laws of England suitable for Virginia; giving this as a reason, that it was not fit for subjects to be governed by any laws, but those which received an authority from their sovereign.

It seems to have been a general sentiment among these colonists, not to make Virginia the place of their permanent residence, but after having acquired a fortune by planting and trade, to return to England. For this reason, most of them were destitute of families, and had no natural attachment to the country. To remedy this material defect, Sir Edwin Sandys the new treasurer, proposed to the company to send over a freight of young women, to make wives for the planters. This proposal with several others made by that eminent statesman, was received with universal applause; and the success answered their expectations. Ninety girls, "young and uncorrupt," were sent over at one time (1620); and sixty more, "handsome and well recommended" at another (1621.) These were soon blessed with the object of their wishes. The price of a wife, at first, was one hundred and twenty pounds of tobacco, but as the number became scarce, the price was increased to one hundred and fifty pounds, the value of which in money was three shillings per pound. By a subsequent act of assembly, it was ordained, that "the

price of a wife should have the precedence of all other debts of recovery and payment, because, of all kinds of merchandise, this was the most desirable."

To this salutary project of the company, King James was pleased to add another, which he signified to the treasurer by a letter, *commanding* them to send to Virginia one hundred dissolute persons, convicted of crimes, who should be delivered to them by the knight-marshal. The season of the year (November) was unfavorable for transportation; but so peremptory was the king's command, and so submissive the temper of the company, that they became bound for the subsistence of these wretches till they could sail, which was not till February. The expense of this equipment was 4000*l*.

On this transaction, Mr. Stith, who takes every opportunity to expose the weak and arbitrary government of King James, makes the following remarks. "Those who know with how high a hand this king carried it even with his parliaments, will not be surprised to find him thus unmercifully insult a private company, and load them against all law, with the maintenance and extraordinary expense of transporting such persons as he thought proper to banish. And I cannot but remark, how early that custom arose of transporting loose and dissolute persons to Virginia, as a place of punishment and disgrace; which though originally designed for the advancement and increase of the colony, yet has certainly proved a great hindrance to its growth. For it hath laid one of the finest countries in America under the unjust scandal of being another Siberia, fit only for the reception of malefactors, and the vilest of the people. So that few have been induced willingly to transport themselves to such a place; and our younger sisters, the northern colonies, have accordingly profited thereby. For this is one cause that they have outstripped us so much in the number of their inhabitants, and in the goodness and frequency of their towns and cities."

In the same year (1620) the merchandise of human flesh, was further augmented, by the introduction of negroes from Africa. A Dutch ship brought twenty of them for sale; and the Virginians, who had but just emerged from a state of vassalage themselves, began to be the owners and masters of slaves.

The principal commodity produced in Virginia besides corn, was tobacco; an article of luxury much in demand in the north of Europe. Great had been the difficulties attending this trade, partly from the jealousy of the Spaniards, who cultivated it in their American colonies; partly from the obsequiousness of James to that nation; and partly from his own squeamish aversion to tobacco, against the use of which, in his princely wisdom, he had written a book.*

The Virginia Company themselves were opposed to its cultivation, and readily admitted various projects for encouraging other productions, of more immediate use and benefit to mankind. As the country naturally yielded mulberry trees and vines, it was thought that silk and wine might be manufactured to advantage. To facilitate these projects, eggs of the silk-worm were procured from the southern countries of Europe; books on the subject were translated from foreign languages; persons skilled in the management of silk-worms and the cultivation of vines were engaged; and to crown all, a royal order from King James, enclosed in a letter from the treasurer and council, was sent over to Virginia, with high expectations of success. But no exertions nor authority could prevail, to make the cultivation of tobacco yield to that of silk and wine; and after the trade of the colony was laid open and the Dutch had free access to their ports, the growth of tobacco received such encouragement, as to become the grand staple of the colony.

At this time, the company in England was divided into two parties; the Earl of Warwick was at the head of one, and the Earl of Southampton of the other. The former was the least in number, but had the ear and support of the king; and their virulence was directed against Yeardley, who had intercepted a packet from his own secretary, Pory, containing the proofs of Argal's misconduct, which had been prepared to be used against him at his trial; but which the secretary had been bribed to convey to his close friend the Earl of Warwick. The governor, being a man of a mild and gentle temper, was so overcome with the opposition and menaces of the faction, which were publicly known in the colony, that his authority was

weakened, his spirits dejected, and his health impaired to that degree that he became unfit for business, and requested a dismission from the cares of government. His commission expired in November, 1621, but he continued in the colony, was a member of the council, and enjoyed the respect and esteem of the people.

During this short administration, many new settlements were made on James and York rivers, and the planters being supplied with wives and servants, began to think themselves at home, and to take pleasure in cultivating their lands; but they neglected to provide for their defence, placing too great confidence in the continuance of that tranquillity which they had long enjoyed by their treaty with the Indians.

SIR FRANCIS WYAT.

SIR FRANCIS WYAT—Succeeds Yeardley in the government of Virginia—Deceived by the Indian chiefs—Massacre of the colonists—He opposes the change of government attempted by the Crown—He returns to Ireland.

WHEN Sir George Yeardley requested a dismission from the burden of government, the Earl of Southampton recommended to the company Sir Francis Wyatt, as his successor. He was a young gentleman of a good family, in Ireland, who, on account of his education, fortune and integrity, was every way equal to the place, and was accordingly chosen.

He received from the company a set of instructions, which were intended to be a permanent directory for the governor and council of the colony. In these it was recommended to them, to provide for the service of God, according to the form and discipline of the Church of England; to administer justice according to the laws of England; to protect the natives, and cultivate peace with them; to educate their children; and to endeavor their civilization and conversion; to encourage industry; to suppress gaming, intemperance, and excess in apparel; to give no offence to any other prince, state, or people; to harbor no pirates; to build fortifications; to cultivate corn, wine, and silk; to search for minerals, dyes, gums, medical drugs; and to "draw off the people from the excessive planting of tobacco."

Immediately on Wyatt's arrival, (October, 1621) he sent a special message to Opechapan and Opechancanough, by Mr. George Thorpe, a gentleman of note in the colony, and a great friend to the Indians, to confirm the former treaties of peace and friendship. They both expressed great satisfaction at the arrival of the new governor; and Mr. Thorpe imagined that he could perceive an uncommon degree of religious sensibility in Opechancanough. That artful chief so far imposed on the credulity of this good gentleman, as to persuade him that he acknowledged his own religion to be wrong; that he desired to be instructed in the Christian doctrine, and that he wished for a more friendly and familiar intercourse with the English. He also confirmed a former promise of sending a guide to show them some mines above the falls. But all these pretences served only to conceal a design which he had long meditated, to destroy the whole English colony.

The peace which had subsisted since the marriage of Pocahontas had lulled the English into security, and disposed them to extend their plantations along the banks of the rivers, as far as the Potowmack, in situations too remote from each other. Their houses were open and free to the natives, who became acquainted with their manner of living, their hours of eating, of labor and repose, the use of their arms and tools, and frequently borrowed their boats, for the convenience of fishing and fowling, and to pass the rivers. This familiarity was pleasing to the English, as it indicated a spirit of moderation, which had been always recommended by the company in England to the planters; and, as it afforded a favorable symptom of the civilization and conversion of the natives; but, by them, or their leaders, it was designed to conceal the most sanguinary intentions.

In the spring of the next year, (1622) an opportunity offered to throw off the mask of friendship, and kindle their secret enmity into a blaze. Among the natives who frequently visited the English, was a tall, handsome, young chief, renowned for courage and success in war, and excessively fond of finery in dress. His Indian name was Nematanow; but by the English he was called Jack of the Feather. Coming to the store of one Morgan, he there viewed several toys and ornaments, which were very agreeable to the Indian taste, and persuaded Morgan to carry them to Pamunkey, where he assured him of an advantageous traffic. Morgan consented to go with him; but was murdered by the way.

* Beverley (p. 35) says that the first Assembly was called in 1620. But Stith, who had more accurately searched the records, says that the first was in 1619, and the second in 1620.

* This book is entitled "A Counterblast to Tobacco," and is printed in a folio volume of the works of King James. In this curious work, he compares the smoke of tobacco to the smoke of the bottomless pit; and says it is only proper to regale the devil after dinner.

In a few days, Nematanow came again to the store, with Morgan's cap on his head; and being interrogated by two stout lads, who attended there, what was become of their master, he answered that he was dead. The boys seized him, and endeavored to carry him before a magistrate; but his violent resistance, and the insolence of his language, so provoked them, that they shot him. The wound proved mortal; and when dying, he earnestly requested of the boys, that the manner of his death might be concealed from his countrymen, and that he might be privately buried among the English.

As soon as this transaction was known, Opechancanough demanded satisfaction; but being answered that the retaliation was just, he formed a plan for a general massacre of the English, and appointed Friday, the twenty-second day of March, for its execution; but he dissembled his resentment to the last moment. Parties of Indians were distributed through the colony, to attack every plantation, at the same hour of the day, when the men should be abroad and at work. On the evening before, and on the morning of that fatal day, the Indians came as usual to the houses of the English, bringing game and fish to sell, and sat down with them to breakfast. So general was the combination, and so deep the plot, that about one hour before noon, they fell on the people in the fields and houses; and, with their own tools and weapons, killed indiscriminately, persons of all ages, sexes and characters; inhumanly mangle their dead bodies, and triumphing over them, with all the expressions of frantic joy.

Where any resistance was made it was generally successful. Several houses were defended, and some few of the assailants slain. One of Captain Smith's old soldiers, Nathaniel Cassie, though wounded, split the skull of an Indian, and put his whole party to flight. Several other parties were dispersed by the firing of a single gun, or by the presenting of a gun, even in the hand of a woman.

Jamestown was preserved by the fidelity of Chanco, a young Indian covert, who lived with Richard Pace, and was treated by him as a son. The brother of this Indian came to lie with him, the night before the massacre, and revealed to him the plot, urging him to kill his master, as he intended to do by his own. As soon as he was gone in the morning, Chanco gave notice of what was intended, to his master; who, having secured his own house, gave the alarm to his neighbors, and sent an express to Jamestown.

Three hundred and forty-nine people* fell at this general massacre; of which number, six were members of the council. None of these were more lamented than Mr. George Thorpe. This gentleman was one of the best friends of the Indians, and had been earnestly concerned in the business of instructing and evangelizing them. He had left a handsome estate, and an honorable employment in England, and was appointed chief manager of a plantation and a seminary, designed for the maintenance and education of young Indians, in Virginia. He had been remarkably kind and generous to them; and it was by his exertion, that the house was built, in which Opechancanough took so much pleasure. Just before his death, he was warned of his danger, by one of his servants, who immediately made his escape; but Mr. Thorpe would not believe that they intended him any harm, and thus fell a victim to their fury. His

corpse was mangled and abused, in a manner too shocking to be related.

One effect of this massacre was the ruin of the iron-works, at Falling Creek, where the destruction was so complete, that, of twenty-four people, only a boy and girl escaped by hiding themselves. The superintendent of this work had discovered a vein of lead ore, which he kept to himself; but made use of it, to supply himself and his friends with shot. The knowledge of this was lost by his death for many years. It was again found by Colonel Byrd, and again lost. The place was a third time found by John Chiswell; and the mine is now, or has been lately, wrought to advantage.

Another consequence of this fatal event, was an order of the government, to draw together the remnant of the people into a narrow compass. Of eighty plantations, all were abandoned but six, which lay contiguous, at the lower part of James river.* The owners or overseers of three or four others refused to obey the order, and entrenched themselves, mounting cannon for their defence.†

The next effect was a ferocious war. The Indians were hunted like beasts of prey, and as many as could be found were destroyed. But as they were very expert in hiding themselves and escaping the pursuit, the English resolved to dissemble with them in their own way. To this they were further impelled by the fear of famine. As seed-time came on, both sides thought it necessary to relax their hostile operations and attend to the business of planting. Peace was then offered by the English, and accepted by the Indians; but when the corn began to grow, the English suddenly attacked the Indians in their fields, killed many of them, and destroyed their corn. The summer was such a scene of confusion that a sufficiency of food could not be obtained, and the people were reduced to great straits.

The unrelenting severity with which this war was prosecuted by the Virginians against the Indians, transmitted mutual abhorrence to the posterity of both; and procured to the former the name of "the long knife," by which they are still distinguished in the hieroglyphic language of the natives.

Though a general permission of residence had been given by Powhatan, and his successors, to the colonists; yet they rather affected to consider the country as acquired by discovery or conquest; and both these ideas were much favored by the English court.† The civilization of the natives was a very desirable object; but those who knew them best, thought that they could not be civilized till they were first subdued; or till their priests were destroyed.

It is certain that many pious and charitable persons in England were very warmly interested in their conversion. Money and books, church plate and other furniture were liberally contributed. A college was in a fair way of being founded; to the support of which lands were appropriated and brought into a state of cultivation. Some few instances of the influence of gospel principles on the savage mind, particularly Pocahontas and Chanco, gave sanguine hope of success; and even the massacre did not abate the ardor of that hope, in the minds of those who had indulged it. The experience of almost two centuries has not extinguished it; and, however discouraging the prospect, it is best for the cause of virtue that it never should be abandoned. There may be some fruit, which though not splendid nor extensive, yet may correspond with the genius of a religion, which is compared by its author, to "leaven hid in the meal." The power of evangelical truth on the human mind, must not be considered as void of reality, because not exposed to public observation.

When the news of the massacre was carried to England, the governor and colony were considered as subjects of blame, by those very persons who had always enjoined them to treat the Indians with mildness.

* The six plantations to which the government ordered the people to retire, were, Shirley Hundred, Flowerda Hundred, Jamestown, Passipha, Kiquotan, Southampton.

† Those persons who refused to obey the order, were Mr. Edward Hill, at Elizabeth city; Mr. Samuel Jordan, at Jordan's Point; Mr. Daniel Gookin, at Newport News; Mrs. Proctor, a gentlewoman of an heroic spirit, defended her plantation a month, till the officers of the colony obliged her to abandon it.

‡ Mr. Jefferson in his Notes on Virginia, (p. 153) observes, "That the lands of this country were taken from them by conquest is not so general a truth as is supposed. I find in our historians and records, repeated proofs of purchases, which cover a considerable part of the lower country; and many more would doubtless be found on further search. The upper country, we know has been acquired altogether by purchases made in the most unexceptionable form." A more particular account of the earliest purchases is desirable, specifying the date, the extent and the compensation.

However, ships were despatched with a supply of provisions, to which the corporation of London as well as several persons of fortune largely contributed. The king lent them twenty barrels of powder, and a quantity of unserviceable arms from the tower, and promised to levy four hundred soldiers, in the several counties of England, for their protection; but though frequently solicited by the company in England, and the colony in Virginia, he never could be induced to fulfil this promise.

The calamities which had befallen the colony, and the dissections which had agitated the company, became such topics of complaint, and were so represented to the king and his privy council, that a commission was issued, under the great seal, to Sir William Jones, Sir Nicholas Fortescue, Sir Francis Goston, Sir Richard Sutton, Sir William Pitt, Sir Henry Boochier, and Sir Henry Spilman, or any four of them, to inquire into all matters respecting Virginia, from the beginning of its settlement.

To enable them to carry on this inquiry, all the books and papers of the company were ordered into the custody of the commissioners; their deputy-treasurer was arrested and confined; and all letters which should arrive from the colony, were, by the king's command, to be intercepted. This was a very discouraging introduction to the business, and plainly showed not only the arbitrary disposition of the king; but the turn which would be given to the inquiry. On the arrival of a ship from Virginia, her packets were seized, and laid before the privy council.

The transactions of these commissioners were always kept concealed; but the result of them was made known by an order of Council, (October, 1623) which set forth, "That his majesty having taken into his princely consideration the distressed state of Virginia, occasioned by the ill government of the company, had resolved by a new charter, to appoint a governor and twelve assistants to reside in England; and a governor with twelve assistants to reside in Virginia; the former to be nominated by his majesty in council; the latter to be nominated by the governor and assistants in England, and to be approved by the king in council; and that all proceedings should be subject to the royal direction." The company was ordered to assemble and resolve whether they would submit, and resign their charter; and in default of such submission, the king signified his determination to proceed for recalling their charter, in such manner as to him should seem meet.

This arbitrary mandate so astonished the company, that when they met, it was read over three times, as if they had distrusted their own ears. Then a long silence ensued; and when the question was called for, twenty-six only voted for a surrender, and one hundred and twelve declared against it.

These proceedings gave such an alarm to all who were concerned in the plantation or trade of the colony, that some ships which were preparing to sail were stopped; but the king ordered them to proceed; declaring that the change of government would injure no man's property. At the same time he thought it proper to appoint commissioners to go to Virginia, and inquire into the state of the colony. These were Sir John Harvey, afterwards governor, John Pory, who had been secretary, Abraham Percy, Samuel Matthews, and John Jefferson. The subjects of their inquiry were "How many plantations there be; which of them be public and which private; what people, men, women and children, there be in each plantation; what fortifications, or what place is best to be fortified; what houses and how many; what cattle, arms, ammunition and ordnance; what boats and barges; what bridges and public works; how the colony standeth in respect of the savages; what hopes may be truly conceived of the plantation and the means to attain these hopes." The governor and council of Virginia were ordered to afford their best assistance to the commissioners; but no copy of their instructions was delivered to them.

After the departure of the commissioners, a writ of Quo Warranto was issued by the court of King's Bench against the company (November 10, 1623) and upon the representation of the attorney-general that no defence could be made by the company without their books and their deputy treasurer, the latter was liberated and the former were restored. The re-delivery of them to the privy council was protracted, till the clerks of the company had taken copies of them.*

* These copies were deposited in the hands of the Earl of Southampton, and after his death, which happened in 1624, descended to his son. After his death in 1667, they were purchased of his executors for sixty guineas, by Col. Byrd, of Virginia, then in England. From these copies, and from the records of the colony, Mr. Stith compiled the History of Virginia, which extends no farther than the year 1624.

* The number slain at the several plantations; from Captain Smith's history, p. 149.

At Captain John Berkeley's plantation, seated at the Falling Creek, sixty-six miles from James city, himself and twenty-one others; at Master Thomas Sheffield's plantation, three miles from the Falling Creek, himself and twelve others; at Henrico Islands, two miles from Sheffield's plantation, six; slain of the college people, twenty miles from Henrico, seventeen; at Charles city, and of Captain Smith's men, five; at the next adjoining plantation, eight; at William Farrar's house, ten; at Brickley Hundred, fifty miles from Charles city, Master George Thorpe and ten more; at Westover, a mile from Brickley, two; at Master John West's plantation, two; at Captain Nathaniel West's plantation, two; at Richard Owen's house, himself and six more; at Lieutenant Gibb's plantation, twelve; at Master Owen Macar's house, himself and three more; at Martin's Hundred, seven miles from James city, seventy-three; at another place, seven; at Edward Bout's plantation, fifty; at Master Water's house, himself and four more; at Apamattuck's river, at Master Pers's plantation, five miles from the College, four; at Master Maycock's dividend, Captain Samuel Maycock and four more; at Flowerda Hundred, Sir George Yeardley's plantation, six; on the side opposite to it, seven; at Master Swinlow's house, himself and seven more; at Master William Beckar's house, himself and four more; at Weanock, of Sir George Yeardley's people, twenty-one; at Povel Brooke, Captain Nathaniel Povel and twelve more; at Southampton Hundred, five, six; at Martin's Brandon Hundred, seven; at Captain Henry Spilman's house, two; at Ensign Speece's house, five; at Master Thomas Pers's house, by Mulberry island, himself and four more. The whole number, three hundred and forty-nine.

In the beginning of 1624 the commissioners arrived in Virginia, and a General Assembly was called, not at their request; for they kept all their designs as secret as possible. But notwithstanding all the precautions which had been taken, to prevent the colony from getting any knowledge of the proceedings in England, they were by this time, well informed of the whole, and had copies of several papers which had been exhibited against them.

The Assembly, which met on the 14th of February, drew up answers to what had been alleged, in a spirited and masterly style; and appointed John Porentis, one of the council, to go to England as their agent, to solicit the cause of the colony. This gentleman unhappily died on his passage; but their petition to the king and their address to the privy council were delivered, in which they requested that in case of a change of the government they might not again fall into the power of Sir Thomas Smith, or his confidants; that the governors sent over to them might not have absolute authority, but be restrained to act by advice of council; and above all, that they might "have the liberty of General Assemblies, than which nothing could more conduce to the public satisfaction and utility." They complained that the short continuance of their governors had been very disadvantageous. "The first year they were raw and inexperienced, and generally in ill health, through a change of climate. The second, they began to understand something of the affairs of the colony; and the third, they were preparing to return."

To the honor of Governor Wyat, it is observed, that he was very active, and joined most cordially in preparing these petitions; and was very far from desiring absolute and inordinate power, either in himself or in future governors.

The Assembly was very unanimous in their proceedings, and intended, like the commissions, to keep them secret. But Pory, who had long been versed in the arts of corruption, found means to obtain copies of all their acts. Edward Sharple, clerk of the council, was afterwards convicted of bribery and breach of trust, for which he was sentenced to the pillory, and lost one of his ears.

The commissioners, finding that things were going in the Assembly contrary to their wishes, resolved to open some of their powers with a view to intimidate them; and then endeavored to draw them into an explicit submission to the revocation of their charter. But the Assembly had the wisdom and firmness to evade the proposal, by requesting to see the whole extent of their commission. This being denied, they answered, that when the surrender of their charter should be demanded by authority, it would be time enough to make a reply.

The laws enacted by this Assembly are the oldest which are to be found in the records of the colony. They contain many wise and good provisions. One of them is equivalent to a *Bill of Rights*, defining the powers of the Governor, Council, and Assembly; and the privileges of the people, with regard to taxes, burdens and personal services.* The twenty-second of March, the day of the massacre, was ordered to be solemnized as a day of devotion.

Whilst these things were doing in the colony, its enemies in England were endeavoring, by means of some persons who had returned from Virginia, to injure the character of the governor; but he was sufficiently vindicated, by the testimony of other persons, who asserted, on their own knowledge, the uprightness of his proceedings, and declared upon their honor and conscience, that they esteemed him just and sincere, free from all corruption and private views. As he had requested leave to quit the government at the expiration of his commission, the company took up the matter; and when Sir Samuel Argal was nominated as a candidate in competition with him, there appeared but eight votes in his favor, and sixty-nine for the continuance of Wyat.

The Parliament assembled in February, 1624, and the company finding themselves too weak to resist the encroachments of a prince, who had engrossed almost the whole power of the State, applied to the House of Commons for protection. The king was highly offended at this attempt, and sent a prohibitory letter to the

speaker, which was no sooner read, than the company's petition was ordered to be withdrawn.

However singular this interference on the one hand, and compliance on the other may now appear, it was usual at that time for the king to impose his mandates, and for the Commons, who knew not the extent of their own rights, to obey; though not without the animadversions of the most intelligent and zealous members. The royal prerogative was held inviolably sacred, till the indiscretions of a subsequent reign reduced it to an object of contempt. In this instance, the Commons, however passive in their submission to the crown, yet showed their regard to the interest of the complainants as well as of the nation, by petitioning the king that no tobacco should be imported, but of the growth of the colonies. To this James consented, and a proclamation was issued accordingly.

The commissioners, on their return from Virginia, reported to the king, "that the people sent to inhabit there were most of them, by sickness, famine and massacre of the savages, dead; that those who were living were in necessity and want, and in continual danger from the savages; but that the country itself appeared to be fruitful, and to those who had resided there some time, healthy; that if industry were used, it would produce divers staple commodities, though for sixteen years past, it had yielded few or none; that this neglect must fall on the governors and company, who had power to direct the plantations; that the said plantations were of great importance, and would remain a lasting monument to posterity of his majesty's most gracious and happy government, if the same were prosecuted to those ends for which they were first undertaken; that if the provisions and instructions of the first charter (1606) had been pursued, much better effect had been produced than by the alteration thereof into so popular a course, and among so many hands as it then was, which caused much confusion and contention."

On this report, the king, by a proclamation, (July 15) suppressed the meetings of the company; and, till a more perfect settlement could be made, ordered a privy council to sit every Thursday, at the house of Sir Thomas Smith for conducting the affairs of the colony. Soon after, viz. in Trinity term, the *Quo Warranto* was brought to trial, in the court of king's bench; judgment was brought against the company, and the charter was vacated.

This was the end of the Virginia Company, one of the most public spirited societies which had ever been engaged in such an undertaking. Mr. Stith, who had searched all their records and papers, concludes his history by observing that they were "gentlemen of very noble, clear, and disinterested views, willing to spend much of their time and money, and did actually expend more than 100,000*l.* of their own fortunes, without any prospect of present gain or retribution, in advancing an enterprise which they conceived to be of very great consequence to their country."

No sooner was the company dissolved, than James issued a new commission (August 25) for the government of the colony. In it, the history of the plantation was briefly recited. Sir Francis Wyat was continued governor, with eleven assistants or counselors, Francis West, Sir George Yeardley, George Sandys, Roger Smith, Ralph Hamor, who had been of the former council, with the addition of John Martin, John Harvey, Samuel Matthews, Abraham Percy, Isaac Madsen, and William Clayborne. The governor and council were appointed during the king's pleasure, with authority to rule the colony, and punish offenders, as fully as any governor and council might have done. No assembly was mentioned or allowed, because the king supposed, agreeable to the report of the commissioners, that "so popular a course" was one cause of the late calamities; and he hated the existence of such a body within any part of his dominions, especially when they were disposed to inquire into their own rights, and redress the grievances of the people.

After the death of James, which happened on the 27th of March, 1625, his son and successor, Charles, issued a proclamation, expressing his resolution, that the colony and government of Virginia should depend immediately on himself, without the intervention of any commercial company. He also followed the example of his father, in making no mention of a representative assembly, in any of his subsequent commissions.

Governor Wyat, on the death of his father, Sir George Wyat, having returned to Ireland, the government of Virginia fell again into the hands of Sir George Yeardley. But, his death happening within the year 1626, he was succeeded by Sir John Harvey;

BARTHOLOMEW GOSNOLD* MARTIN PRING, BARTHOLOMEW GILBERT, GEORGE WEYMOUTH.

BARTHOLOMEW GOSNOLD—His voyage to Virginia—Discovers Cape Cod—His interview and traffic with the natives—Sails for England—Accompanies John Smith to Virginia—His death—MARTIN PRING—Sails for North Virginia—Discovers Fox Islands—Enters Massachusetts bay—Interview with the natives—Returns to England—His second Voyage—BARTHOLOMEW GILBERT—His voyage to Virginia—He is killed by the natives—GEORGE WEYMOUTH—Sails for America—Discovers George's Islands and Peitocost Harbor—Kidnaps some of the natives.

THE voyages made to America, by these navigators, in the beginning of the seventeenth century, may be considered as the leading steps to the colonization of New England. Excepting the fishery at Newfoundland, the Europeans were at that time in actual possession of no part of North America; though the English claimed a right to the whole, by virtue of prior discovery. The attempts which Raleigh had made, to colonize the southern part of the territory, called Virginia, had failed; but he and his associates enjoyed an exclusive patent from the Crown of England, for the whole coast; and these adventurers obtained a license, under this authority, to make their voyages and settlements.

BARTHOLOMEW GOSNOLD was an active, intrepid, and experienced mariner, in the west of England. He had sailed in one of the ships employed by Raleigh, to Virginia; and was convinced that there must be a shorter and safer way, across the Atlantic, than the usual route, by the Canaries and the West India Islands. At whose expense he undertook his voyage to the northern part of Virginia, does not appear; but that it was with the approbation of Sir Walter Raleigh and his associates, is evident from an account of the voyage which was presented to him.

On the 26th of March, 1602, Gosnold sailed from Falmouth, in a small bark, the tonnage of which is not mentioned, carrying thirty-two persons, of whom eight were mariners.† The design of the voyage was to find a direct and short course to Virginia; and, upon the discovery of a proper seat for a plantation, twelve of the company were to return to England, and twenty to remain in America; till further assistance and supplies could be sent to them.

The former part of this design was accomplished, as far as the winds and other circumstances would permit. They went no farther southward, than the 37th degree of latitude, within sight of St. Mary, one of the Western Islands. In the 43d degree they approached the continent of America, which they first discovered on the 14th of May, after a passage of seven weeks. The weakness of their bark, and their ignorance of the route, made them carry but little sail; or they might have arrived some days sooner. They judged that they had shortened the distance 500 leagues.

It is not easy to determine, from the journal, what part of the coast they first saw. Oldmixon says it was the north side of Massachusetts Bay. The description in the journal does, in some respects, agree with the coast, extending from Cape Ann to Marblehead, or to the rocky point of Nahant.

From a rock, which they called *Savage Rock*, a shallop of European fabric came off to them; in which were eight savages; two or three of whom were dressed in European habits. From these circumstances, they concluded that some fishing vessel of Biscay had been there, and that the crew were destroyed by the natives. These people, by signs, invited them to stay, but "the harbor being naught, and doubting the weather," they did not think proper to accept the invitation.

In the night they stood to the southward, and the next morning, found themselves "embayed with a mighty headland," which at first appeared "like an island, by reason of a large sound, which lay between it and the main." Within a league of this land, they came to anchor in fifteen fathoms, and took a very

* The account of Gosnold's voyage and discovery, in the first volume of this work, is so erroneous, from the misinformation which I had received, that I thought it best to write the whole of it anew. The former mistakes are here corrected, partly from the best information which I could obtain, after the most assiduous inquiry; but principally from my own observations on the spot; compared with the journal of the voyage, more critically examined than before.

† The names of the persons who went in this voyage, as far as I can collect them, are as follows: Bartholomew Gosnold, commander; Bartholomew Gilbert, second officer; John Angel; Robert Salterne—he went again the next year with Pring—he was afterwards a clergyman; William Streeter; Gabriel Archer, gentleman and journeyman—he afterwards went to Virginia—Archer's Hope, near Williamsburg, is named from him; James Rosier—he wrote an account of the voyage and presented it to Sir Walter Raleigh; John Borton, or the boat; — Tucker, from whom the shoal called Tucker's Trench is named.

* At this time women were scarce and much in request, and it was common for a woman to connect herself with more than one man at a time; by which means great uneasiness arose between private persons, and much trouble to the government. It was therefore ordered, "That every minister should give notice in his church, that what man or woman soever should use any word or speech, tending to a contract of marriage to two several persons at one time, although not precise and legal, should either undergo corporal punishment, or pay a fine, according to the quality of the offender."—(Stith, 222)

great quantity of cod. From this circumstance, the land was named *Cape Cod*. It is described as a low sandy shore, but without danger, and lying in the latitude of 42°. Capt. Gosnold with Mr. Brierton and three men, went to it and found the shore bold and the sand very deep. A young Indian, with copper pendants in his ears, a bow in his hand, and arrows at his back, came to them, and in a friendly manner offered his service; but, as they were in haste to return to the ship, they had little conference with him.

On the 16th, they sailed by the shore southerly; and, at the end of twelve leagues, saw a point of land, with breakers at a distance. In attempting to double this point, they came suddenly into shoal water; from which they extricated themselves by standing off to sea. This point they named *Point Care*, and the breakers, *Tucker's Terror*, from the person who first discovered the danger. In the night they bore up towards the land, and came to anchor in eight fathoms. The next day, (17th) seeing many breakers about them, and the weather being foul, they lay at anchor.

On the 18th, the weather being clear, they sent their boat to sound a beach, which lay off another point, to which they gave the name of *Gilbert's Point*. The ship remained at anchor the whole of this day; and some of the natives came from the shore in their canoes to visit them. These people were dressed in skins, and furnished with pipes and tobacco; one of them had a breast-plate of copper. They appeared more timorous than those of *Savage Rock*, but were very thievish.

When the people in the boat returned from sounding, they reported a depth of water from four to seven fathoms, over the breach; which the ship passed the next day, (19th) and came to anchor again above a league beyond it. Here they remained two days surrounded by schools of fish and flocks of aquatic birds. To the northward of west, they saw several hummocks, which they imagined were distinct islands; but when they sailed towards them, (on the 21st) they found them to be small hills within the land. They discovered also an opening, into which they endeavored to enter, supposing it to be the southern extremity of the sound between *Cape Cod* and the main land. But on examination the water proving very shoal, they called it *Shoal Hope*, and proceeded to the westward. The coast was full of people, who ran along the shore, accompanying the ship as she sailed; and many smokes appeared within the land.

In coasting along to the westward, they discovered an island, on which the next day (22) they landed. The description of it in the journal is this: "A disinhabited island; from *Shoal Hope* it is eight leagues; in circuit it is five miles, and hath forty-one degrees and one quarter of latitude. The place most pleasant; for we found it full of wood, vines, gooseberry bushes, huckleberries, raspberries, eglantine [sweet-briar,] &c. Here we had cranes, herons, shoulers, geese, and divers other birds; which there, at that time, upon the cliffs, being sandy with some rocky stones, did breed and had young. In this place we saw deer. Here we rode in eight fathoms, near the shore; where we took great store of cod, as before at *Cape Cod*, but much better. This island is sound, and hath no danger about it." They gave it the name of *Martha's Vineyard*, from the great number of vines which they found on it.

From this island, they passed (on the 24th) round a very high and distinguished promontory; to which they gave the name of *Dover Cliff*; and came to anchor "in a fair sound, where they rode all night."

Between them and the main, which was then in sight, lay a "ledge of rocks, extending a mile into the sea but all above water, and without danger." They went round the western extremity of this ledge, and came to in eight fathoms of water, a quarter of a mile from the shore, in one of the stateliest sounds that ever they had seen." This they called *Gosnold's Hope*. The north side of it was the main land stretching east and west, distant four leagues from the island, where they came to anchor, to which they gave the name of *Elizabeth*, in honor of their queen.

On the 29th of May, they held a council, respecting the place of their abode, which they determined to be "in the west part of *Elizabeth Island*, the north-east part running out of their ken." The island is thus described. "In the western side, it admitteth some creeks or sandy coves, so girded, as the water in some places meeteth; to which the Indians from the main, do often resort for fishing crabs. There is eight fathom very near the shore, and the latitude is 41° 10'. The breadth of the island from sound to sound, in the western part, is not passing a mile, at most; altogether unpeopled and disinhabited.

"It is overgrown with wood and rubbish. The woods are oak, ash, beech, walnut, witch-hazel, sassafrage and cedars, with divers others of unknown names. The rubbish is wild-peas, young sassafrage, cherry trees, vines, eglantine (or sweet-briar), gooseberry bushes, hawthorn, honeysuckles, with others of the like quality. The herbs and roots are strawberries, raspas, ground nuts, alexander, surrin, tansy, &c. without count. Touching the fertility of the soil, by our own experience, we found it to be excellent; for, sowing some English pulse, it sprouted out in one fortnight almost half a foot.

"In this island is a pond of fresh water, in circuit two miles; on one side not distant from the sea thirty yards. In the centre of it is a rocky islet, containing near an acre of ground, full of wood and rubbish, on which we began our fort and place of abode, and made a punt or flat-bottomed boat to pass to and fro over the fresh water.

"On the north side, near adjoining to *Elizabeth*, is an islet, in compass half a mile, full of cedars, by me called *Hill's Hap*; to the northward of which, in the middle of an opening on the main, appeared another like it, which I called *Hap's Hill*." When Captain Gosnold with divers of the company "went in the shallow towards *Hill's Hap*, to view it and the sandy cove, they found a bark canoe, which the Indians had quitted for fear of them. This they took and brought to England. It is not said that they made any acknowledgment or recompense for it.

Before I proceed in the account of Gosnold's transactions, it is necessary to make some remarks on the preceding detail, which is either abridged or extracted from the journal written by Gabriel Archer. This journal contains some inaccuracies, which may be corrected by carefully comparing its several parts, and by actual observations of the places described. I have taken much pains to obtain information, by consulting the best maps, and conversing or corresponding with pilots and other persons. But for my greater satisfaction, I have visited the island on which Gosnold built his house and fort, the ruins of which are still visible, though at the distance of nearly two centuries.

That Gosnold's *Cape Cod* is the promontory which now bears that name, is evident from his description. The point which he denominated *Care*, at the distance of twelve leagues southward of *Cape Cod*, agrees very well with *Malebarre*, or *Sandy Point*, the south-eastern extremity of the county of *Barnstable*. The shoal water and breach, which he called *Tucker's Terror*, correspond with the shoal and breakers commonly called the *Pollock Rip*, which extends to the south-east of this remarkable point.

To avoid this danger, it being late in the day, he stood so far out to sea, as to overshoot the eastern entrance of what is now called the *Vineyard sound*. The land which he made in the night was a white cliff on the eastern coast of *Nantucket*, now called *Sankoty Head*. The breach which lay off *Gilbert's Point*, I take to be at the *Bass Rip* and the *Pollock Rip*, with the cross riplings which extend from the south-east extremity of that island. Over these riplings there is a depth of water, from four to seven fathoms, according to a late map of *Nantucket*, published by *Peleg Coffin*, Esq., and others. That Gosnold did not enter the *Vineyard Sound*, but overshoot it in the night, is demonstrated by comparing his journal with that of *Martin Pring*, the next year; a passage from which shall be cited in its proper place.

The large opening which he saw, but did not enter, and to which he gave the name of *Shoal Hope*, agrees very well with the open shore, to the westward of the little island of *Muskeget*.

The island which he called *Martha's Vineyard*, now bears the name of *No-Man's Land*. This is clear from his account of its size, five miles in circuit; its distance from *Shoal Hope*, eight leagues, and from *Elizabeth Island*, five leagues; the safety of approaching it on all sides; and the small, but excellent cod, which are always taken near it in the spring months. The only material objection is, that he found deer upon the island; but this is removed by comparing his account with the journal of *Martin Pring*, who the next year, found deer in abundance on the large island, now called the *Vineyard*. I have had credible testimony, that deer have been seen swimming across the *Vineyard Sound*, when pursued by hunters. This island was a sequestered spot, where those deer who took refuge upon it, would probably remain undisturbed and multiply.*

* The following information was given to me by Benjamin Bassett, Esq. of *Chilmark*.

"About the year 1720, the last deer was seen on the

The lofty promontory to which he gave the name of *Dover Cliff*, is *Gay Head*; an object too singular and entertaining to pass unobserved, and far superior in magnitude to any other cliff on any of these islands. The "fair sound" into which he entered after doubling this cliff, is the western extremity of the *Vineyard Sound*; and his anchoring place was probably in or near *Menasha Bay*.

For what reason, and at what time, the name of *Martha's Vineyard* was transferred from the small island so called by Gosnold, to the large island which now bears it, are questions which remain in obscurity. That Gosnold at first took the southern side of this large island to be the main, is evident. When he doubled the cliff at its western end, he knew it to be an island; but gave no name to any part of it, except the *Cliff*.*

"The ledge of rocks extending a mile into the sea," between his anchoring ground and the main, is that remarkable ledge, distinguished by the name of the *Sow* and *Pigs*. The "stately sound" which he entered, after passing round these rocks, is the mouth of *Buzzard's Bay*; and the island *Elizabeth*, is the westernmost of the islands which now go by the name of *Elizabeth's Islands*. Its Indian name is *Cuttyhunk*, a contraction of *Poo-cut-oh-hunk-un-noh*, which signifies a thing that lies out of the water. The names of the others are *Nashawena*, *Pasque*, *Nauson*, *Nenimisset*, and *Peniquese*, besides some of less note.

In this island, at the west end, on the north side, is a pond of fresh water, three quarters of a mile in length, and of unequal breadth; but if measured in all its sinuosities, would amount to two miles in circuit. In the middle of its breadth, near the west end, is a "rocky islet, containing near an acre of ground."

To this spot I went, on the 20th day of June, 1797, in company with several gentlemen, whose curiosity and obliging kindness induced them to accompany me. The protecting hand of Nature has reserved this favorite spot to herself. Its fertility and its productions are exactly the same as in Gosnold's time, excepting the wood, of which there is none. Every species of what he calls "rubbish," with strawberries, peas, tansy, and other fruits and herbs, appear in rich abundance, unmolested by any animal but aquatic birds. We had the supreme satisfaction to find the cellar of Gosnold's storehouse; the stones of which were evidently taken from the neighboring beach; the rocks of the islet being less moveable, and lying in ledges.

The whole island of *Cuttyhunk* has been for many years stripped of its wood; but I was informed by Mr. Greenill, an old resident farmer, that the trees which formerly grew on it, were such as are described in Gosnold's Journal. The soil is a very fine garden mould, from the bottom of the vallies to the top of the hills, and affords rich pasture.

The length of the island is rather more than two miles, and its breadth about one mile. The beach between the pond and the sea is twenty-seven yards wide. It is so high and firm a barrier, that the sea never flows into the pond, but when agitated by a violent gale from the north-west. The pond is deep in the middle. It has no visible outlet. Its fish are perch, eels and turtles; and it is frequented by aquatic birds, both wild and domestic.

On the north side of the island, connected with it by a beach, is an elevation, the Indian name of which is *Copicut*. Either this hill, or the little island of *Peniquese*, which lies a mile to the northward, is the place which Gosnold called *Hill's Hap*. Between *Copicut* and *Cuttyhunk* is a circular sandy cove, with a narrow entrance. *Hap's Hill*, on the opposite shore of the

Vineyard and shot at. The horns of these animals have been ploughed up several times on the west end of the island. If one deer could swim across *Vineyard Sound*, why not more? *No-Man's Land* is four miles from the *Vineyard*, and if the deer could cross the Sound 7 miles, why not from the *Vineyard* to *No-Man's Land*?

* The reader will give the following conjecture as much weight as it deserves:

The large island is frequently called *Martin's Vineyard*, especially by the old writers. This is commonly supposed to be a mistake. But why? Captain *Pring's* Christian name was *Martin*, and this island has as good a right to the appellation of *Vineyard* as the other, being equally productive of vines. The names *Martha* and *Martin* are easily confounded, and as one island only was supposed to be designated by the *Vineyard*, it was natural to give it to the greater. The lesser became disregarded, and not being inhabited or claimed by any, it was supposed to belong to *NO-MAN*, and was called *No-Man's Land*. In an old Dutch map, extant, in *Orbigny's* history of America, p. 168, the name of *Martha's Vineyard* is given to a small island lying southward of *Elizabeth*; and the name of *Texel* is given to the large island, which is now called *the Vineyard*. The situation of the small island agrees with that of *No-Man's Land*.

† *Noah Webster*, Esq. of *New York*; *Captain Tallman*, Mr. *John Spooner*, Mr. *Allen*, a pilot, of *New Bedford*.

main, distant four leagues, is a round elevation, on a point of land, near the Dimplin Rocks, between the rivers of Aponeganset and Pascamanset, in the township of Dartmouth.

From the south side of Cuttyhunk, the promontory of Gay head, which Gosnold called Dover Cliff, and the island which he named Martha's Vineyard, lie in full view, and appear to great advantage. No other objects, in that region, bear any resemblance to them, or to the description given of them: nor is there a ledge of rocks projecting from any other island a mile into the sea.

Whilst Gabriel Archer, and a party, generally consisting of ten, labored in clearing the "rocky islet" of wood, and building a store-house and fort, Captain Gosnold and the rest of the company were employed either in making discoveries, or fishing, or collecting sassafras. On the 31st of May, he went to the main land, on the shore of which he was met by a company of the natives, "men, women, and children, who, with all courteous kindness, entertained him, giving him skins of wild beasts, tobacco, turtles, hemp, artificial strings, colored, [wampum,] and such like things as they had about them." The stately groves, flowery meadows, and running brooks, afforded delightful entertainment to the adventurers. The principal discovery which they made, was of two good harbors; one of which I take to be Aponeganset, and the other Pascamanset, between which lies the round hill, which they called *Hap's Hill*. They observed the coast to extend five leagues further to the south-west, as it does, to Seconnet Point. As they spent but one day in this excursion, they did not fully explore the main, though from what they observed, the land being broken, and the shore rocky, they were convinced of the existence of other harbors on that coast.

On the 5th of June, an Indian chief and fifty men, armed with bows and arrows, landed on the island. Archer and his men left their work, and met them on the beach. After mutual salutations, they sat down, and began a traffic, exchanging such things as they had, to mutual satisfaction. The ship then lay at anchor, a league off. Gosnold seeing the Indians approach the island, came on shore with twelve men, and was received by Archer's party, with military ceremony, as their commander. The captain gave the chief a straw hat and two knives. The former he little regarded; the latter he received with great admiration.

In a subsequent visit, they became better acquainted, and had a larger trade for furs. At dinner, they entertained the savages with fish and mustard, and gave them beer to drink. The effect of the mustard on the noses of the Indians afforded them much diversion. One of them stole a target, and conveyed it on board his canoe; when it was demanded of the chief, it was immediately restored. No demand was made of the birch canoe, which Gosnold had a few days before taken from the Indians. When the chief and his retinue took their leave, four or five of the Indians staid and helped the adventurers to dig the roots of sassafras, with which, as well as furs and other productions of the country, the ship was loaded for her homeward voyage. Having performed this service, the Indians were invited on board the ship, but they declined the invitation, and returned to the main. This island had no fixed inhabitants; the natives of the opposite shore frequently visited it, for the purpose of gathering shell-fish, with which its creeks and coves abounded.

All these Indians had ornaments of copper. When the adventurers asked them, by signs, whence they obtained this metal, one of them made answer, by digging a hole in the ground, and pointing to the main; from which circumstance it was understood that the adjacent country contained mines of copper. In the course of almost two centuries, no copper has been there discovered; though iron, a much more useful metal, wholly unknown to the natives, is found in great plenty. The question, whence did they obtain copper? is yet without an answer.

Three weeks were spent in clearing the islet, digging and stoning a cellar, building a house, fortifying it with palisades, and covering it with sedge, which then grew in great plenty on the sides of the pond. During this time, a survey was made of their provisions. After reserving enough to victual twelve men, who were to go home in the bark, no more could be left with the remaining twenty than would suffice them for six weeks; and the ship could not return till the end of the next autumn. This was a very discouraging circumstance.

A jealousy also arose respecting the profits of the ships' lading; those who staid behind claiming a share,

as well as those who should return to England. Whilst these subjects were in debate, a single Indian came on board, from whose apparently grave and sober deportment they suspected him to have been sent as a spy. In a few days after the ship went to Hill's Hap, out of sight of the fort, to take in a load of cedar, and was there detained so much longer than they expected, that the party at the fort had expended their provision. Four of them went in search of shell-fish, and divided themselves, two and two, going different ways. One of these small parties was suddenly attacked by four Indians in a canoe, who wounded one of them in the arm with an arrow. His companion seized the canoe, and cut their bow-strings on which they fled. It being late in the day, and the weather stormy, this couple were obliged to pass the night in the woods, and did not reach the fort till the next day. The whole party subsisted on shell-fish, ground nuts, and herbs, till the ship came and took them on board. A new consultation was then holden. Those who had been most resolute to remain, were discouraged; and the unanimous voice was in favor of returning to England.

On the 17th of June, they doubled the rocky ledge of Elizabeth, passed by Dover Cliff, sailed to the island which they had called Martha's Vineyard, and employed themselves in taking young geese, cranes, and herons. The next day they set sail for England; and, after a pleasant passage of five weeks, arrived at Exmouth, in Devonshire.

Thus failed the first attempt to plant a colony in North Virginia; the causes of which are obvious. The loss of Sir Walter Raleigh's Company, in South Virginia, was then recent in memory, and the same causes might have operated here to produce the same effect. Twenty men, situated on an island, surrounded by other islands and the main, and furnished with six weeks provisions only, could not maintain possession of a territory to which they had no right against the force of its native proprietors. They might easily have been cut off, when seeking food abroad, or their fort might have been invested, and they must have surrendered at discretion, or have been starved to death, had no direct assault been made upon them. The prudence of their retreat is unquestionable to any person who considers their hazardous situation.

During this voyage, and especially whilst on shore, the whole company enjoyed remarkably good health. They were highly pleased with the salubrity, fertility, and apparent advantages of the country. Gosnold was so enthusiastic an admirer of it, that he was indefatigable in his endeavors to forward the settlement of a colony in conjunction with Captain John Smith. With him, in 1607, he embarked in the expedition to South Virginia, where he had the rank of a counsellor. Soon after his arrival, by excessive fatigue in the extremity of the summer heat, he fell a sacrifice, with fifty others to the insalubrity of that climate, and the scanty measure and bad quality of the provisions with which that unfortunate colony was furnished.

The discovery made by Gosnold, and especially the shortness of the time in which his voyage was performed, induced Richard Hakluyt, then Prebendary of St. Augustine's Church in Bristol, to use his influence with the major, aldermen, and merchants of that opulent, mercantile city, to prosecute the discovery of the northern parts of Virginia. The first step was to obtain permission of Raleigh and his associates. This was undertaken and accomplished by Hakluyt, in conjunction of John Angel and Robert Salterne, both of whom had been with Gosnold to America. The next was to equip two vessels; one a ship of fifty tons, called the *Speedwell*, carrying thirty men; the other a bark of twenty-six tons, called the *Discoverer*, carrying thirteen men. The commander of the ship was Martin Pring, and his mate, Edmund Jones. The bark was commanded by William Browne, whose mate was Samuel Kirkland. Salterne was the principal agent, or supercargo; and was furnished with various kinds of clothing, hardware, and trinkets, to trade with the natives. The vessels were victualled for eight months, and sailed on the 10th of April, 1603, a few days after the death of Queen Elizabeth.

They went so far to the southward, as to be within sight of the Azores; and in the beginning of June, fell in with the American coast, between the 43d and 44th degrees of latitude, among those numerous islands which cover the district of Maine. One of these they named Fox Island, from some of that species of animal which they saw upon it. Among these islands, in the mouth of Penobscot Bay, they found good anchorage and fishing. The land being rocky, they judged it proper for the drying of cod, which they took in great

plenty, and esteemed better than those usually taken at Newfoundland.

Having passed all the islands, they ranged the coast to the south-west, and entered four inlets, which are thus described: "The most easterly was barred at the mouth; but having passed over the bar, we ran up it for five miles, and for a certain space found very good depth. Coming out again, as we sailed south-west, we lighted on two other inlets, which we found to pierce not far into the land. The fourth and most westerly was the best, which we rowed up ten or twelve miles. In all these places we found no people, but signs of fires, where they had been. Howbeit, we beheld very goodly groves and woods, and sundry sorts of beasts. But meeting with no sassafras, we left these places, with all the aforesaid islands, shaping our course for *Savage Rock*, discovered the year before by Captain Gosnold."

From this description, I conclude, that after they had passed the islands as far westward as Casco Bay, the easternmost of the four inlets which they entered was the mouth of the river Saco. The two next were Kennebunk and York rivers; the westernmost, and the best, was the river Piscataqua. The reason of their finding no people, was that the natives were at that season (June) fishing at the falls of the rivers; and the vestiges of fires marked the places at or near the mouths of the rivers, where they had resided and taken fish in the earlier months of the spring. In steering for *Savage Rock*, they must have doubled Cape Ann, which brought them into the bay of Massachusetts, on the northern shore of which, I suppose *Savage Rock* to be situated.

It seems that one principal object of their voyage was to collect sassafras, which was esteemed a highly medicinal vegetable. In several parts of these journals, and in other books of the same date, it is celebrated as a sovereign remedy for the plague, the venereal disease, the stone, strangury and other maladies. One of Gosnold's men had been cured by it, in twelve hours of a surfeit, occasioned by eating greedily of the bellies of dog-fish, which is called a "delicious meat."

The journal then proceeds: "Going on the main at *Savage Rock*, we found people, with whom he had no long conversation, because here also we could find no sassafras. Departing hence, we bare into that great gulf which *Capt. Gosnold* overshot the year before; coasting and finding people on the north side thereof. Not yet satisfied in our expectation, we left them and sailed over, and came to anchor on the south side, in the latitude of forty one degree and odd minutes; where we went on land, in a certain bay, which was called *Whitson Bay*, by the name of the worshipful master, John Whitson, then mayor of the city of Bristol, and one of the chief adventurers. Finding a pleasant bill adjoining, we called it *Mount Aldworth*, for master Robert Aldworth's sake, a chief furtherer of the voyage, as well with his purse as with his travel. Here we had sufficient quantity of sassafras."

In another part of this journal, *Whitson Bay* is thus described: "At the entrance of this excellent haven, we found twenty fathoms of water, and rode at our ease in seven fathoms, being land-locked; the haven winding in compass like the shell of a snail; and it is in latitude of forty-one degrees and twenty minutes. We also observed that we could find no sassafras but in sandy ground."

Though this company had no design to make a settlement in America, yet considering that the place where they found it convenient to reside, was full of inhabitants, they built a temporary hut, and enclosed it with a barricade, in which they kept constant guard by day and night, whilst others were employed in collect-

* The following note is from Peleg Coffin, Esq. "The haven here described must have been that of Edgartown. No other could with propriety be represented as winding or land-locked, as is truly the harbor of Edgartown, generally called Oldtown."

To this I subjoin an extract of a letter from the Rev Joseph Thaxter, minister of Edgartown, dated Nov. 15, 1797. "It is evident to me, and others better acquainted than I am, with whom I have consulted, that Pring, as soon as he passed the sandy point of Monunov (Malebar), bore to the westward, and came through what is called Butler's Hole; that he kept the North channel, till he got as far as Fal mouth, and that he then crossed over into Oldtown harbor, which corresponds in every respect to his description, except in the depth of water at the entrance of the harbor, there are now but fourteen fathoms; in the harbor there are seven and a half. I would suggest an idea, whether there is now the same depth of water at the entrance as in 1603? It is certain that the shoals shift, and that Cape Poge, within the memory of man, has been washed into the sea thirty or forty rods. From this circumstance, the difference in the depth of water may be easily accounted for. "There are several pleasant hills adjoining to the harbor, and to this day plenty of sassafras."

ing sassafras in the woods. The Indians frequently visited them in parties, of various numbers, from ten to a hundred. They were used kindly, had trinkets presented to them, and were fed with English pulse, their own food being chiefly fish. They were adorned with plates of copper; their bows, arrows and quivers were very neatly made; and their birchen canoes were considered as great curiosities, one of which, of seventeen feet in length and four in breadth, was carried home to Bristol, as a specimen of their ingenuity. Whether it was bought or stolen from them is uncertain.

The natives were excessively fond of music, and would dance in a ring round an English youth, who played on an instrument called a gitterne. But they were greatly terrified at the parking of two English mastiffs, which always kept them at a distance, when the people were tired of their company.

The growth of the place consisted of sassafras, *vincs*, cedar, oak, ash, beech, birch, cherry, hazel, walnut, maple, holly and wild plum. The land animals were stags and fallow deer in abundance, bears, wolves, foxes, lusernes,* porcupines, and dogs with short noses.† The waters and shores abounded with fish and shell-fish of various kinds, and aquatic birds in great plenty.

By the end of July they had loaded their bark with sassafras, and sent her to England. After which they made as much despatch as possible in lading their ship, the departure of which was accelerated by the following incident.

The Indians had hitherto been on friendly terms with the adventurers; but seeing their number lessened and one of their vessels gone, and those who remained dispersed at their several employments, they came one day, about noon, to the number of one hundred and forty, armed with bows and arrows, to the barricado, where four men were on guard with their muskets. The Indians called to them to come out, which they refused, and stood on their defence. Captain Pring, with two men only were on board the ship; as soon as he perceived the danger, he secured the ship as well as he could, and fired one of his great guns, as a signal to the laborers in the woods, who were reposeing after their fatigue, depending on the mastiffs for protection. The dogs hearing the gun, awoke their masters, who, then bearing a second gun, took to their arms, and came to the relief of the guard. At the sight of the men and dogs, the Indians desisted from their purpose, and affecting to turn the whole into a jest, went off laughing without any damage on either side.

In a few days after, they set fire to the woods where the sassafras grew, to the extent of a mile. These alarming circumstances determined Pring to retire. After the people had embarked, and were weighing the anchors, a larger number than ever they had seen, about two hundred, came down to the shore, and some in their canoes came off to the ship, apparently to invite the adventurers to a longer continuance. It was not easy to believe the invitation friendly, nor prudent to accept it. They therefore came to sail, it being the 9th of August. After a passage of five weeks, by the route of the Azores, they came into soundings; and on the 2d of October arrived at King Road, below Bristol, where the bark had arrived about a fortnight before them. This whole voyage was completed in six months. Its objects were to make discoveries, and to collect furs and sassafras. No instance of aggression on the part of the adventurers is mentioned, nor on the part of the natives, till after the sailing of the bark.

At the same time that Martin Pring was employed in his voyage, BARTHOLOMEW GILBERT went on a farther discovery to the southern part of Virginia, having it also in view to look for the lost colony of Sir Walter Raleigh. He sailed from Plymouth, May 10, 1603, in the bark Elizabeth, of fifty tons, and went by the way of Madeira to the West Indies, where he touched at

several of the islands, taking in ligum-vitæ, tortoises, and tobacco.

On the 6th of July he quitted the islands, and steered for Virginia. In four days he got into the Gulf Stream, and was becalmed five days. After which the wind sprang up, and on the 20th he saw land in the 40th degree of latitude. His object was to fetch the mouth of Chesapeake Bay; but the wind being adverse, after beating against it for several days, the necessity of wood and water obliged them to come to anchor about a mile from the shore, where there was an appearance of the entrance of a river.

On Friday, the 29th of July, Captain Gilbert accompanied by Thomas Canner, a gentleman of Bernard's Inn, Richard Harrison, mate, Henry Kenton, surgeon, and Derrick, a Dutchman, went on shore, leaving two boys to keep the boat. Immediately after they had entered the wood, the savages attacked, pursued and killed every one of them; two of them fell in sight of the boys, who had much difficulty to prevent the Indians from hauling the boat on shore.

With heavy hearts they got back to the ship; whose crew, reduced to eleven, including the boys, durst not make any further attempt; but steered for the Western Islands; after passing them, they arrived in the river Thames, about the end of September, when the city of London was "most grievously infected with the Plague."

After the peace which King James made with Spain in 1604, when the passion for the discovery of a north-west passage was in full vigor, a ship was sent from England by the Earl of Southampton and Lord Arundel of Wardor, with a view to this object. The commander of the ship was George Weymouth. He sailed from the Downs on the last day of March, 1605, and came in sight of the American coast on the 13th of May, in the latitude of 41 degrees 30 minutes.

Being there entangled among shoals and breakers, he quitted this land, and at the distance of fifty leagues, discovered several islands, to one of which he gave the name of *St. George*. Within three leagues of this island he came into a harbor, which he called *Pentecost* harbor; and sailed up a noble river, to which it does not appear that he gave any name, nor does he mention any name by which it was called by the natives.

The conjectures of historians respecting this river have been various. Oldmixon supposes it to have been James river in Virginia, whilst Beverly, who aims to correct him, affirms it to have been Hudson's river in New York. Neither of them could have made these mistakes, if they had read the original account in Purchas with any attention. In Smith's history of Virginia an abridgment of the voyage is given, but in so slight and indefinite a manner as to afford no satisfaction respecting the situation of the river, whether it were northward or southward from the land first discovered.

To ascertain this matter I have carefully examined Weymouth's journal and compared it with the best maps; but for more perfect satisfaction, I gave an abstract of the voyage with a number of queries to Capt. John Foster Williams, an experienced mariner and commander of the Revenue Cutter, belonging to this port; who has very obligingly communicated to me his observations made in a late cruise. Both of these papers are here subjoined.

"Abstract of the Voyage of Captain George Weymouth to the Coast of America, from the printed Journal, extant in Purchas's Pilgrims, part iv. page 1659.

A. D. 1605, March 31.—"Captain George Weymouth sailed from England in the Archangel, for the northern part of Virginia, as the whole coast of North America was then called.

May 13.—Arrived in soundings—160 fathoms.

14.—In five or six leagues distance shoaled the water from one hundred to five fathoms, saw from the mast-head a *whitish sandy cliff*, N. N. W. 6 leagues: many breaches nearer the land; the ground foul, and depth varying from six to fifteen fathoms. Parted from the land. Latitude 41 degrees 30 minutes.

15.—Wind between W. S. W. and S. S. W. In want of wood and water. Land much desired, and therefore sought for it *where the wind would best suffer us*.

QUERY 1.—As the wind then blew, must not the course be to the north and east!

16.—In almost fifty leagues run, found no land; the charts being erroneous.

17.—Saw land which bore N. N. E. a great gale of

wind and the sea high. Stood off till two in the morning; then stood in again. At eight, A. M. saw land again bearing N. E. It appeared a mean high land, being as we afterwards found it an *island* of no great compass. About noon came to anchor on the north side in forty fathoms, about a league from shore. Named the island *St. George*.

QUERY 2.—Could this island be *Seguin* or *Monhegan*? or if neither, what island was it!

Whilst we were on shore on the island our men on board caught thirty large cod and haddock. From hence we discerned many islands, and the main land extending from W. S. W. to E. N. E. A great way up into the main, as it then seemed, we discerned *very high mountains*; though the main seemed but low land. The mountains bore N. N. E. from us.

QUERY 3.—What mountains were these?

19.—Being *Whitsunday*, weighed anchor at twelve o'clock, and came along to the other islands more adjoining to the main, and in the road directly to the mountains, about three leagues from the first island found a safe harbor, defended from all winds, in an excellent depth of water for ships of any burthen in six, seven, eight, nine, ten fathoms, upon a clay ooze, very tough, where is good mooring even on the rocks, by the cliff side. Named it *Pentecost* harbor.

QUERY 4.—Do these marks agree with Sagadahock or Mosquetto harbor or St. George's Island; or if not with what harbor do they agree!

20.—Went ashore, found water issuing from springs down the rocky cliffs, and dug pits to receive it. Found, at no great depth, clay, blue, red and white. Good lobsters, rock-fish, plaice, and lumps. With two or three hooks caught cod and haddock enough for the ship's company three days.

24.—The captain, with 14 men armed, marched through two of the islands, one of which we guessed to be four or five miles in compass, and one broad. Abundance of great muscles, some of which contained pearls. One had 14 pearls in it.

30.—The captain with 13 men departed in the shallop, leaving the ship in harbor.

31.—The shallop returned, having discovered a *great river* trending far up into the main.

QUERY 5.—What river was this!

June 1.—Indians came and traded with us. Pointing to one part of the main, eastward, they signified to us that the *Bashabe*, their king, had plenty of furs, and much tobacco.

N. B.—Here Weymouth kidnapped five of the natives.

11.—Passed up into the river with our ship about 26 miles.

Observations by the Author of the Voyage, James Rosier.

"The first and chief thing required for a plantation is a bold coast, and a fair land to fall in with. The next is a safe harbor for ships to ride in.

"The first is a special attribute of this shore, being free from sands or dangerous rocks, in a continual good depth, with a most excellent land-fall as can be desired, which is the first island, named *St. George*.

"For the second, here are more good harbors for ships of all burthens than all England can afford. The river, as it runneth up into the main very high forty miles, towards the *Great Mountains*, beareth in breadth a mile, sometimes three-fourths, and a half a mile is the narrowest, where you shall never have less than four or five fathoms, hard by the shore; but six, seven, eight, nine, ten at low water. On both sides, every half mile, very gallant coves, some able to contain almost one hundred sail of ships; the ground is an excellent soft ooze, with tough clay for anchor hold; and ships may lie without anchor, only moored to the shore with a hawser.

"It floweth fifteen or eighteen feet at high water.

"Here are made by nature, most excellent places, as docks to grave and careen ships of all burthens, secure from all winds.

"The river yieldeth plenty of salmon, and other fishes of great bigness.

"The bordering land is most rich, trending all along on both sides, in an equal plain, neither mountainous nor rocky, but verged with a green border of grass; which may be made good feeding ground, being plentiful like the outward islands, with fresh water, which streameth down in many places.

"As we passed with a gentle wind, in our ship, up this river, any man may conceive with what admiration we all consented in joy; many who had been travellers in sundry countries, and in the most famous ri-

* Luserne, Lucern, a beast near the bigness of a wolf of color between red and brown, something mayled like a cat, and mingled with black spots; bred in Muscovy, and is a rich fur.—[Vide Minshieu in verbum Furre.

Could this animal be the racoon? Josselyn gives the name of luserne to the wild cat.

† As the existence of this species of animal has been doubted, I must remark, that it is several times mentioned by the earliest adventurers, and twice in Pring's Journal. Josselyn, who was a naturalist, and resided several years in the eastern parts of New England, gives this account of it: "I know of but one kind of beast in New England produced by equivocal generation, and that is the Indian dog, begotten between a wolf and a fox, or between a fox and a wolf; which they made use of, taming them and bringing them up to hunt with; but since the English came among them, they have gotten store of our dogs, which they bring up and keep in as much subjection as they do their wives."—[Josselyn's voyages to the N. E. p. 94.

vers. affirmed them not comparable to this. I will not prefer it before our river of Thames, because it is England's richest treasure; but we did all wish those excellent harbors, good depths, continual convenient breadth, and small-tide-gates, to be as well therein, for our country's good, as we found them here: then I would holdly affirm it to be the most rich, beautiful, large, secure harboring river that the world affordeth."

12.—"Our captain manned his *shallop* with seventeen men, and ran up to the *codde* of the river, where we landed, leaving six to keep the *shallop*. Ten of us, with our shot, and some armed, with a boy to carry powder and match, marched up the country, towards the mountains, which we described at our first falling in with the land, and were continually in our view. To some of them the river brought us so near, as we judged ourselves, when we landed, to be within a league of them; but we found them not, having marched well nigh four miles, and passed three great hills. Wherefore, because the weather was hot, and our men in their armor, not able to travel far and return to our binnacle at night, we resolved not to travel further.

"We no sooner came a board our pinnace, returning down towards our ship, but we espied a canoe coming from the farther part of the *codde* of the river, eastward. In it were three Indians, one of whom we had before seen, and his coming was very earnestly to importune us to let one of our men go with them to the *Bashabe*, and then the next morning he would come to our ship with furs and tobacco."

N. B.—They did not accept the invitation, because they suspected danger from the savages, having detained five of their people on board to be carried to England.

13.—"By two o'clock in the morning, taking advantage of the tide, we went in our pinnace up to that part of the river which trendeth west into the main, and we carried a cross to erect at that point, (a thing never omitted by any Christian travellers.) Into that river, we rowed by estimation, twenty miles.

"What profit or pleasure is described in the former part of the river, is wholly doubled in this; for the breadth and depth is such, that a ship, drawing seventeen or eighteen feet of water, might have passed as far as we went with our *shallop*, and much farther, because we left it in so good depth. From the place of our ship's riding in the harbor, at the entrance into the Sound, to the farthest point we were in this river, by our estimation, was not much less than *threescore* miles. [That is, as I understand it, from Pentecost harbor they went in the ship forty miles, to the *codde* of the river; and thence in the *shallop*, or pinnace, twenty miles up the west branch.]

QUEARY 6.—What is meant by *codde*? It appears to be an old word.

"We were so pleased with this river, and so loth to forsake it, that we would have continued there willingly for two days, having only bread and cheese to eat. But the tide not suffering it, we came down with the ebb. We conceived that the river ran very far into the land, for we passed six or seven miles altogether *fresh water*, (whereof we all drank) forced up by the flowing of the salt water.

14.—We warped our ship down to the river's mouth, and there came to anchor.

15.—Weighed anchor, and with a breeze from the land, came to our watering place, in Pentecost harbor, and filled our cask.

"Our captain upon a rock in the midst of this harbor, made his observation by the sun, of the height, latitude, and variation, exactly, upon all his instruments, viz. astrolabe, semisphere, ring, and cross-staff, and an excellent variation compass. The latitude he found 43 degrees 20 minutes, north; the variation, 11 degrees 15 minutes, west."

N. B.—In this latitude no part of the American coast lies, except Cape Porpoise, where is only a boat harbor. The rivers nearest to it are on the south, Kennebunk, a tide river of no great extent, terminating in a brook; and on the north, Saco, the navigation of which is obstructed by a bar at its mouth, and by a fall at the distance of six or seven miles from the sea. Neither of these could be the river described in Weymouth's Journal. His observation of the latitude, or the printed account of it, must have been erroneous.

IF—"Captain Williams will be so obliging as to put down his remarks on the above abstract in writing, for the use of his humble servant,

Boston, Aug. 4, 1797. JEREMY BELKNAP."

Captain William's Answer.

"The first land Captain Weymouth saw, a whitish sandy cliff, W. N. W. six leagues, must have been

Sankoty Head [Nantucket.] With the wind at W. S. W. and S. S. W. he could have fetched into this bay, [Boston] and must have seen Cape Cod, had the weather been clear. But,

The land he saw on the 17th, I think must be the island Monhegan, as no other island answers the description. In my last cruise to the eastward, I sounded, and had thirty fathoms, about one league to the northward of the island. The many islands he saw, and the main land, extending from W. S. W. to E. N. E. agree with that shore; the mountains he saw bearing N. N. E. were Penobscot Hills or Mountains; for from the place where I suppose the ship lay at anchor, the above mountains bear N. N. E.

The harbor where he lay with his ship, and named Pentecost harbor, is, I suppose, what is now called George's Island Harbor, which bears north from Monhegan, about two leagues; which harbor and islands agree with his descriptions, I think, tolerable well, and the name, George's Islands, serves to confirm it.

When the captain went in his boat and discovered a great river trending far up into the main, I suppose he went as far as Two Bush Island, about three or four leagues from the ship, from thence he could discover Penobscot bay.

Distance from the ship to Two Bush Island is about ten miles; from Two Bush Island to Owl's Head, nine miles; from Owl's Head to the north end of Long Island, twenty-seven miles; from the north end of Long Island to Old Fort Powal, six miles; and from the Old Fort to the head of the tide, or falls, in Penobscot river, thirty miles; whole number, eighty-two miles.

I suppose he went with his ship, round Two Bush Island, and then sailed up to the westward of Long Island, supposing himself to be then in the river; the mountains on the main to the westward extending near as high up as Belfast bay. I think it probable that he anchored with his ship off the point which is now called the Old Fort Point.

The *codde* of the river, where he went with his *shallop*, and marched up in the country, toward the mountains, I think must be Belfast bay.

The canoe that came from the farther part of the *codde* of the river, eastward, with Indians, I think it probable, came from Bagaduce.

The word *codde* is not common; but I have often heard it: as, "up in the *codde* of the bay," meaning the bottom of the bay. I suppose what he calls "the *codde* of the river," is a bay in the river.

The latitude of St. George's Island harbor, according to Holland's map, is forty-three degrees forty-eight minutes, which is nine leagues more north than the observation made by Captain Weymouth.

Boston, October 1, 1797.

SIR,—I made the foregoing remarks, while on my last cruise to the eastward. If any farther information is necessary, that is in my power to give, you may command me.

I am, with respect, Sir, your obedient humble servant,

JOHN FOSTER WILLIAMS.

REV. DR. BELKNAP.

Weymouth's voyage is memorable, only for the discovery of Penobscot river, and for the decoying of five of the natives on board his ship, whom he carried to England. Three of them were taken into the family of Sir Ferdinando Gorges, then governor of Plymouth, in Devonshire. The information which he gained from them, corroborated by Martin Pring, of Bristol, who made a second voyage in 1606, (and prosecuted the discovery of the rivers in the District of Maine) prepared the way for the attempt of Sir John Popham and others to establish a colony at Sagadahock, in 1607; an account of which attempt, and its failure, is already given in the life of Sir Ferdinando Gorges.

In the early accounts of this country we find the names of *Mavoshen* and *Norumbega*. *Mavoshen* was a name for the whole District of Maine, containing nine or ten rivers; the westernmost of which was Shawakotock, (written by the French Chouakot and by the English, Saco.) The easternmost was Quibegousson, which I take to be eastward of Penobscot, but cannot say by what name it is now called. *Norumbega* was a part of the same district, comprehending Penobscot bay and river; but its eastern and western limits are not described.

It is also to be noted that the river Penobscot was sometimes called *Pemaquid*, though this latter name is now restricted to a point or neck of land which lies about six leagues to the westward. Penobscot is called by the French, *Pentagoet*.

This confusion of names occasions no small perplexity to inquirers into the geography and early history of this country.

JOHN ROBINSON.

JOHN ROBINSON—His Birth and Education—Minister of a Congregation of Dissenters—His Congregation persecuted—Removes with his Church to Amsterdam—His disputation with Episcopians—His Church contemplates a Removal—Apply to the Virginia Company—Preaches to them previous to Removal—His affectionate leave of those who embarked for America—His Death, Character, and Posterity

THE first effectual settlements of the English in New England were made by those, who, after the reformation, dissented from the establishment of the Episcopal Church, who suffered on account of their dissent, and sought an asylum from their sufferings. Uniformity was insisted on with such rigor, as disgusted many conscientious ministers and people of the Church of England, and caused that separation which has ever since subsisted. Those who could not conform to the establishment, but wished for a more complete reformation, were at first distinguished by the name of *Puritans*; and among these the most rigid were the *Brownists*, so called from Robert Brown, "a fiery young clergyman," who, in 1580, headed a zealous party, and was vehement for a total separation. But his zeal, however violent, was void of consistency; for, in his advanced years, he conformed to the church; whilst others, who more deliberately withdrew, retained their separation, though they became more candid and moderate in their principles. Of these people a congregation was formed, about the year 1602, near the confines of the counties of York, Nottingham, and Lincoln; who chose for their ministers, Richard Clifton and John Robinson.

Mr. Robinson was born in the year 1576, but the place of his birth is unknown. He was probably educated in the University of Cambridge; and he is said to have been "a man of a learned, polished, and modest spirit; pious and studious of the truth; largely accomplished with gifts and qualifications suitable to be a shepherd over this flock of Christ." Before his election to this office, he had a benefice, near Yarmouth, in Norfolk, where his friends were frequently molested by the bishop's officers, and some were almost ruined by prosecutions in the ecclesiastical courts.

The reigning prince, at that time, was James I. than whom, a more contemptible character never sat on the British throne. Educated in the principles of Presbyterism, in Scotland, he forgot them all on his advancement to the throne of the three kingdoms. Flattered by the bishops he gave all ecclesiastical power into their hands, and entrusted sycophants with the management of the State; whilst he indolently resigned himself to literary and sensual indulgencies; in the former of which he was a pedant in the latter an epicure. The prosecution of the Puritans was conducted with unrelenting severity in the former part of his reign, when Bancroft was Archbishop of Canterbury. Abbot, who succeeded him was favorable to them; but when Laud came into power, they were treated with every mark of insult and cruelty.

Robinson's congregation did not escape persecution by separating from the establishment and forming an independent church. Still exposed to the penalties of the ecclesiastical law, they were extremely harassed; some were thrown into prison, some were confined to their own houses; others were obliged to leave their farms and suspend their usual occupations. Such was their distress and perplexity, that an emigration to some foreign country seemed the only means of safety. Their first views were directed to Holland, where the spirit of commerce had dictated a free toleration of religious opinions; a blessing, which neither the wisdom of politicians, nor the charity of clergymen had admitted into any other of the European States. But the ports of their own country were shut against them. they could get away only by seeking concealment and giving extravagant rates for their passages and fees to the mariners.

In the autumn of 1606, a company of these dissenters, hired a ship at Boston in Lincolnshire to carry them to Holland. The master promised to be ready at a certain hour of the day, to take them on board, with their families and effects. They assembled at the place; but he disappointed them. Afterwards he came in the night; and when they were embarked, betrayed them into the hands of searchers, and other officers; who, having robbed them of money, books and other articles, and treated the women with indecency, carried them back into the town, and exposed them as a

laughing spectacle to the multitude. They were arraigned before the magistrates, who used them with civility; but could not release them, without an order of the king and council. Till this arrived, they suffered a month's imprisonment; seven were bound over to the assizes, and the others were released.

The next spring (1608) they made another attempt, and hired a Dutch vessel, then lying in the harbor, to take them on board. The place agreed on was an unfrequented common, between Hull and Grimsby, remote from any houses. The women and children, with the baggage were sent down the river in a small bark, and the men agreed to meet them by land; but they came to the place a day before the ship arrived. The water being rough, and the women sick, they prevailed on the pilot of the bark to put into a small creek, where they lay aground, when the Dutchman came and took one boat load of the men on board. Before he could send for the others, a company of armed men appeared on horseback; which so frightened him, that he weighed anchor, and, the wind being fair, put to sea. Some of the men who were left behind, made their escape; others, who went to the assistance of the women, were with them apprehended, and carried from one justice of the peace to another; but the justices, not knowing what to do with so many helpless and distressed persons, dismissed them. Having sold their houses, cattle and furniture, they had no homes to which they could retire, and were therefore cast on the charity of their friends. Those who were hurried to sea without their families, and destitute even of a change of clothes, endured a terrible storm, in which neither sun, moon, nor stars appeared for seven days. This storm drove them far to the northward, and they very narrowly escaped foundering. After fourteen days they arrived at Amsterdam, where the people were surprised at their deliverance; the tempest having been very severe, and much damage having been sustained, both at sea, and in the harbors of the continent.

This forlorn company of emigrants were soon after joined by their wives and families. The remainder of the church went over, in the following summer; Mr. Robinson, with a few others, remained to help the weakest, till they were all embarked.

At Amsterdam, they found a congregation of their countrymen, who had the same religious views, and had emigrated before them. Their minister was John Smith, a man of good abilities, and a popular preacher, but unsteady in his opinions.* These people fell into controversy, and were soon scattered. Fearing that the infection might spread, Robinson proposed to his church a further removal; to which, though much to their disadvantage, in a temporal view, they consented; and after one year spent at Amsterdam, they removed to Leyden, where they continued eleven years. During this time, their number so increased, by frequent emigrations from England, that they had in the church three hundred communicants.

At Leyden, they enjoyed much harmony among themselves,† and a friendly intercourse with the Dutch; who, observing their diligence and fidelity in their business, entertained so great a respect for them, that the magistrates of the city (1619), in the seat of justice, having occasion to censure some of the French Protestants, who had a church there, made this public declaration. "These English have lived among us ten years, and yet we never had any suit or accusation against any of them; but your quarrels are continual."

The year (1609) in which Mr. Robinson went to Leyden, was remarkable for the death of Jacobus Arminius, one of the Divinity Professors of the University of that city. Between his successor, Episcopius, and the other theological professor, Polyander, there was much opposition; the former teaching the doctrine of Arminius, and the other that of Calvin. The contro-

versy was so bitter, that the disciples of the one would scarcely hear the lectures of the other. Robinson, though he preached constantly three times in the week, and was much engaged in writing, attended the discourses of each; and became master of the arguments on both sides of the controverted questions. Being fully persuaded of the truth of the Calvinian system, and openly preaching it, his zeal and abilities rendered him formidable to the Arminians; which induced Episcopius to publish several theses, and engage to defend them against all opposers.

Men of equal abilities and learning, but of different sentiments, are not easily induced to submission; especially in a country where opinion is not fettered and restrained by the ruling power. Polyander, aided by the ministers of the city, requested Robinson to accept the challenge. Though his vanity was flattered by the request, yet being a stranger, he modestly declined the combat. But their pressing importunity prevailed over his reluctance; and judging it to be his duty, he, on a set day, held a public disputation with the Arminian professor, in presence of a very numerous assembly.

It is usual, on such occasions, for the partizans on both sides to claim the victory for their respective champions. Whether it were so, at this time, cannot be determined, as we have no account of the controversy from the Arminian party. Governor Bradford, who was a member of Robinson's church, and probably present at the disputation, gives this account of it: "He so defended the truth, and foiled the opposer, as to put him to an apparent nonplus in this great and public audience. The same he did a second and a third time, upon the like occasions; which, as it caused many to give praise to God, that the truth had so famous a victory, so it procured for Mr. Robinson much respect and honor from these learned men and others."

When Robinson first went to Holland, he was one of the most rigid separatists from the Church of England. He had written in defence of the separation, in answer to Dr. William Ames,* whose name, in the petulance of his wit, he had changed to *Amiss*. After his removal to Holland, he met with Dr. Ames and Mr. Robert Parker, an eminent divine of Wiltshire, who had been obliged to fly thither from the terrors of the High Commission Court, under the direction of Archbishop Bancroft. In a free conversation with these gentlemen, Robinson was convinced of his mistake, submitted to the reproof of Dr. Ames, and became, ever after, more moderate in his sentiments respecting separation. In a book which he published, (1610) he allowed and defended the lawfulness of communicating with the Church of England, "in the word and prayer, that is, in the extempore prayer, before the sermon, though not in the use of the liturgy, nor in the indiscriminate admission to the sacraments. Yet he would allow the pious members of the Church of England, and of all the Reformed churches to communicate with his church; declaring that he separated from no church; but from the corruptions of all churches. This book gained him the title of Semi-separatist, and was so offensive to the rigid Brownists of Amsterdam, that they would scarcely hold communion with the Church of Leyden. These were called Robinsonians and Independents; but the name by which they distinguished themselves, was, a Congregational Church.

Their grand principle was the same which was afterwards held and defended by Chillingworth and Hoadley, that the Scriptures, given by inspiration, contain the true religion; that every man has a right to judge for himself of their meaning; to try all doctrines by them, and to worship God according to the dictates of his own enlightened conscience. They admitted, for truth, the doctrinal articles of the Church of England, as well as of the Reformed churches in France, Geneva, Switzerland, and the United Provinces; allowing all their members free communion, and differing from them only in matters of an ecclesiastical nature. Respecting these, they held, (1.) That no church ought to con-

* Dr. Ames was educated at Cambridge, under the famous Perkins, and became Fellow of Christ's College. In 1600 he gave offence to the gentlemen of the University, by preaching against cards and dice; and to avoid prosecution for non-conformity, fled to Holland. He first settled at the Hague, whence he was invited by the States of Friesland to the chair of Theological Professor at Francker, which he filled with reputation for twelve years. He was an able controversial writer; his style was concise and his arguments acute. He wrote several treatises against the Arminians, besides his famous *Medulla Theologicæ*. He afterwards removed to Rotterdam; but the air of Holland not agreeing with his constitution, he determined to come to New England. This was prevented by his death, in 1633. His widow and family afterwards came over, and his posterity have been respectable ever since. His valuable library became the property of Harvard College, where it was consumed by fire in 1764.

sist of more members than can conveniently meet together for worship and discipline. (2.) That every church of Christ is to consist only of such as appear to believe in and obey him. (3.) That any competent number of such have a right, when conscience obliges them, to form themselves into a distinct church. (4.) That this incorporation is, by some contract or covenant, expressed or implied. (5.) That being thus incorporated, they have a right to choose their own officers. (6.) That these officers are *Pastors*, or teaching Elders, *Ruling Elders* and *Deacons*. (7.) That elders being chosen or ordained have no power to rule the church but by consent of the brethren. (8.) That all elders and all churches are equal in respect of powers and privileges. (9.) With respect to ordinances, they held that baptism is to be administered to visible believers and their infant children; but they admitted only the children of communicants to baptism. That the Lord's Supper is to be received sitting at the table; whilst they were in Holland, they received it every Lord's Day. That ecclesiastical censures were wholly spiritual, and not to be accompanied with temporal penalties. (10.) They admitted no holy days but the Christian Sabbath, though they had occasionally days of fasting and thanksgiving. And, finally, they renounced all right of human invention or imposition in religious matters.

Having enjoyed their liberty in Holland eight or nine years, in which time they had become acquainted with the country and the manners of its inhabitants, they began to think of another removal (1617). The reasons of which, were these. (1.) Most of them had been bred to the business of husbandry in England; but in Holland, they were obliged to learn mechanical trades, and use various methods for their subsistence, which were not so agreeable to them as cultivation. (2.) The language, manners and habits of the Dutch were not rendered pleasing by familiarity; and, in particular, the loose and careless manner in which the Sabbath was regarded in Holland, gave them great offence. (3.) The climate was unfavorable to their health; many of them were in the decline of life; their children, oppressed with labor and disease, became infirm, and the vigor of nature seemed to abate at an early age. (4.) The licentiousness in which youth was indulged, was a pernicious example to their children; some of whom became sailors, others soldiers, and many were dissolute in their morals; nor could their parents restrain them, without giving offence and incurring reproach. These considerations afforded them the melancholy prospect, that their posterity would, in time, become so mixed with the Dutch, as to lose their interest in the English nation, to which they had a natural and strong attachment. (5.) They observed, also, that many other English people, who had gone to Holland, suffered in their health and substance; and either returned home to bear the inconveniences from which they had fled, or were reduced to poverty abroad. For these reasons, they concluded that Holland was not a country in which they could hope for a permanent and agreeable residence.

The question then was, to what part of the world should they remove, where they might expect freedom from the burdens under which they had formerly groaned, and the blessings of civil and religious liberty, which they had lately enjoyed.

The Dutch merchants being apprised of their discontent, made them large offers, if they would go to some of their foreign plantations; but their attachment to the English nation and government was invincible. Sir Walter Raleigh had, about this time, raised the fame of Guiana, a rich and fertile country of America, between the tropics, blessed with a perpetual spring, and productive of every thing which could satisfy the wants of man, with little labor. To this country, the views of some of the most sanguine were directed; but considering that in such warm climates, diseases were generated, which often proved fatal to European constitutions, and that their nearest neighbors would be the Spaniards, who, though they had not actually occupied the country, yet claimed it as their own, and might easily dispossess them, as they had the French of Florida: the major part disapproved of this proposal.

They then turned their thoughts towards that part of America, comprehended under the general name of Virginia. There, if they should join the colony already established, they must submit to the government of the Church of England. If they should attempt a new plantation, the horrors of a wilderness, and the cruelties of its savage inhabitants were presented to their view. It was answered, that the Dutch had begun to plant within these limits, and were unmolested; that all

* Mr. Neal says, that he refined on the principles of the Brownists, and at last declared for the Baptists; that he left Amsterdam, and settled with a party at Leyden; where, being at a loss for a proper administrator of baptism, he first plunged himself, and then performed the ceremony on others; which gained him the name of *Se-baptist*. After this he embraced the principles of Arminius, and published a book, which Robinson answered in 1611; but Smith soon after died, and his congregation was dissolved.

† Governor Hutchinson (*I presume through inattention*) has misrepresented this matter, (vol. II. 431) by saying, "that in the twelve years of their residence in Holland, they had contention among themselves, divided, and became two churches." The two churches of Smith and Robinson subsisted distinctly and unconnectedly before they quitted England. It was to avoid contention that the latter removed from Amsterdam, where the former fell to pieces. Not the least evidence of contention, in the church of Leyden, appears in any of our first historians; but there is the fullest testimony of the contrary in all of them. No division took place, till the emigration of part of them to America, when the utmost harmony and love were manifested on the occasion.

great undertakings were attended with difficulties; but that the prospect of danger did not render the enterprise desperate; that, should they remain in Holland, they were not free from danger, as a truce between the United Provinces and Spain, which had subsisted 12 years, was nearly expired, and preparations were making to renew the war; that the Spaniards, if successful might prove as cruel as the savages; and that liberty, both civil and religious, was altogether precarious in Europe. These considerations determined their views towards the uninhabited part of North America, claimed by their native prince, as part of his dominions; and their hope was, that by emigrating hither, they might make way for the propagation of the Christian religion in a heathen land, though (to use their own phrase) "they should be but as stepping-stones to others," who might come after them.

These things were first debated in private, and afterwards proposed to the whole congregation, who, after mature deliberation, and a devout address to Heaven, determined to make application to the Virginia Company in London, and to inquire whether King James would grant them liberty of conscience in his American dominions. John Carver and Robert Cushman were appointed their agents on this occasion, and letters were written by Mr. Robinson, and Mr. Brewster, their ruling elder, in the name of the congregation, to Sir Edwin Sandys and Sir John Worstenholme, two principal members of the Virginia Company.

In those letters they recommended themselves as proper persons for emigration, because they were, "weaned from the delicate milk of their own country, and so mured to the difficulties of a strange land, that no small things would discourage them, or make them wish to return home; that they had acquired habits of frugality, industry, and self-denial; and were united in a solemn covenant, by which they were bound to seek the welfare of the whole company, and of every individual person." They also gave a succinct and candid account of their religious principles and practices, for the information of the king and his council.

The answer which they received was as favorable as they could expect. The Virginia Company promised them as ample privileges as were in their power to grant. It was thought prudent not to deliver their letter to the king and council; but application was made to Sir Robert Norton, Secretary of State, who employed his interest with Archbishop Abbot; and by means of his mediation, the king promised to connive at their religious practices; but he denied them toleration under the great seal. With an answer, and some private encouragement, the agents returned to Holland.

It was impossible for them to transport themselves to America without assistance from the merchant adventurers in England. Further agency and agreements were necessary. The dissensions of the Virginia Company were tedious and violent; and it was not till after two whole years, that all the necessary provisions and arrangements could be made for their voyage.

In the beginning of 1620, they kept a solemn day of prayer, when Mr. Robinson delivered a discourse from 1 Samuel, xxiii. 3, 4; in which he endeavored to remove their doubts, and confirm their resolutions. It had been previously determined, that a part of them should go to America, and prepare the way for the others; and that if the major part should consent to go, the pastor should go with them; otherwise he should remain in Holland. It was found on examination, that though a major part was willing to go, yet they could not all get ready in season; therefore, the greater number being obliged to stay, they required Mr. Robinson to stay with them. Mr. Brewster, the ruling elder, was appointed to go with the minority, who were "to be an absolute church of themselves, as well as those that should stay; with this proviso, that, as any should go over or return, they should be reputed as members, without farther dismission or testimonial. The others were to follow as soon as possible.

In July, they kept another day of prayer, when Mr. Robinson preached to them from Ezra viii. 21, and concluded his discourse with an exhortation, which breathes a noble spirit of Christian liberty, and gives a just idea of the sentiments of this excellent divine, whose charity was the more conspicuous, because of his former narrow principles, and the general bigotry of the Reformed ministers and churches of that day.

"Brethren, (said he,) we are now quickly to part from one another, and whether I may ever live to see your face on earth any more, the God of Heaven only knows; but whether the Lord hath appointed that or not, I charge you before God and his blessed angels,

that you follow me no farther than you have seen me follow the Lord Jesus Christ.

"If God reveal any thing to you by any other instrument of his, be as ready to receive it, as ever you were to receive any truth by my ministry; for I am verily persuaded—I am very confident, that the Lord has more truth yet to break forth out of his holy word. For my part, I cannot sufficiently bewail the condition of the Reformed churches, who are come to a period in religion, and will go, at present, no farther than the instruments of their reformation. The Lutherans cannot be drawn to go beyond what Luther said; whatever part of his will our good God has revealed unto Calvin, they will rather die than embrace it. And the Calvinists, you see, stick fast where they were left, by that great man of God, who yet saw not all things.

"This is a misery much to be lamented; for though they were burning and shining lights in their times, yet they penetrated not into the whole counsel of God; but were they now living, would be as willing to embrace farther light, as that which they first received. I beseech you, remember, it is an article of your church covenant, 'that you be ready to receive whatever truth shall be made known to you, from the written word of God.' Remember that, and every other article of your sacred covenant. But I must, herewithal, exhort you to take heed what you receive as truth. Examine it, consider it, and compare it with other scriptures of truth before you receive it; for it is not possible that the Christian world should come so lately out of such thick anti-Christian darkness, and that perfection of knowledge should break forth at once.

"I must also advise you to abandon, avoid, and shake off the name of *Brownists*. It is a mere nickname; and a brand for the making religion, and the professors of it, odious to the Christian world."

Having said this, with some other things relating to their private conduct, he devoutly committed them to the care and protection of Divine Providence.

On the 21st of July, the intended passengers quitted Leyden, to embark at Delfhaven, to which place they were accompanied by many of their brethren and friends, several of whom had come from Amsterdam to take their leave of them. The evening was spent, till very late, in friendly conversation; and the next morning, the wind being fair, they went on board; where Mr. Robinson, on his knees, in a most ardent and affectionate prayer, again committed them to their divine Protector, and with many tears they parted.

After their arrival in New England, he kept up a friendly correspondence with them; and when any of them went to Europe, they were received by him with the most cordial welcome. The difficulties which then attended a voyage across the Atlantic, the expense of an equipment for a new colony, and the hardships necessarily incident to a plantation in a distant wilderness, proved a burden almost too great for those who came over. They had a hard struggle to support themselves here, and pay the debts which they had contracted in England; whilst those who remained in Holland, were in general too poor to bear the expense of a removal to America, without the help of their brethren who had come before them. These things prevented Mr. Robinson from gratifying his earnest desire to visit his American brethren, and their equally ardent wish to see him, till he was removed by death to a better country.*

He continued with his church at Leyden, in good health, and with a fair prospect of living to a more advanced age, till Saturday, the 22d of February, 1625, when he was seized with an inward ague; which, however distressing, did not prevent his preaching twice on the next day. Through the following week his disorder increased in malignity, and on Saturday, March 1, put an end to his valuable life; in the fiftieth year of his age, and in the height of his reputation and usefulness.

Mr. Robinson was a man of a good genius, quick penetration, ready wit, great modesty, integrity and candor. His classic literature and acuteness in disputation were acknowledged by his adversaries. His manners were easy, courteous and obliging. His preaching was instructive and affecting. Though in his younger years he was rigid in his separation from

the Episcopal Church, by whose governors he and his friends were treated with unrelenting severity, yet when convinced of his error, he openly acknowledged it, and by experience and conversation with good men, he became moderate and charitable, without abating his zeal for strict and real religion. It is always a sign of a good heart, when a man becomes mild and candid as he grows in years. This was eminently true of Mr. Robinson. He learned to esteem all good men of every religious persuasion, and charged his flock to maintain the like candid and benevolent conduct. His sentiments respecting the Reformers as expressed in his valedictory discourse, will entail immortal honor to his memory; evidencing his accurate discernment, his inflexible honesty, and his fervent zeal for truth and a good conscience. He was also possessed in an eminent degree of the talent of peace-making, and was happy in composing differences among neighbors and in families; so that peace and unity were preserved in his congregation. It is said that "such was the reciprocal love and respect between him and his flock, that it might be said of them as it was said of the Emperor Marcus Aurelius and the people of Rome, that it was hard to judge, whether he delighted more in having such a people, or they in having such a pastor." Besides his singular abilities in moral and theological matters, he was very discerning and prudent in civil affairs, and able to give them good advice in regard to their secular and political conduct. He was highly esteemed, not only by his own flock, but by the magistracy and clergy of Leyden, who gave him the use of one of their churches, in the chance of which he was buried. Mr. Prince, who visited that city in 1714, says that the most ancient people then living told him from their parents, that the whole city and university regarded him as a great and good man, whose death they sincerely lamented; and that they honored his funeral with their presence.

This event proved the dissolution of the church over which he had presided at Leyden. Some of them removed to Amsterdam, some to other parts of the Netherlands, and others came to New England, among whom were his widow and children. His son Isaac lived to the age of ninety, and left male posterity in the county of Barnstable.

JOHN CARVER.

JOHN CARVER—Appointed agent by the English settlers at Leyden—Superintends the equipments for emigration—Chosen Governor of the Company—Makes an excursion from Cape Cod to look for a harbor—Skirmish with the natives—Lands on Clark's Island—Makes a settlement at Plymouth—His sickness and recovery—His interview with Massachusetts—His death, character, and posterity—His sword in the cabinet of the Historical Society.

We have no particulars of the life of Mr. Carver, previous to his appointment as one of the agents of the English Congregational Church in Leyden. At that time he was in high esteem, as a grave, pious, prudent, judicious man, and sustained the office of a deacon. In the letters written by Sir Edwin Sandys, of the Virginia Company, to Mr. Robinson, the agents are said to have "carried themselves with good discretion."

The business of the agency was long delayed by the discontents and factions in the company of Virginia, by the removal of their former treasurer, Sir Thomas Smith, and the enmity between him and Sir Edwin Sandys, his successor. At length, a patent was obtained, under the company's seal; but by the advice of some friends, it was taken in the name of John Winthrop, a religious gentleman, belonging to the family of the Countess of Lincoln, who intended to accompany the adventurers to America. This patent and the proposals of Thomas Weston of London, merchant, and other persons, who appeared friendly to the design, were carried to Leyden, in the autumn of 1619, for the consideration of the people. At the same time there was a plan forming for a new council in the west of England, to superintend the plantation and fishery of North Virginia, the name of which was changed to New England. To this expected establishment, Weston, and the other merchants began to incline, chiefly from the hope of present gain by the fishery. This caused some embarrassment, and a variety of opinions; but considering that the council for New England was not yet incorporated, and that if they should wait for that event, they might be detained another year, before which time the war between the Dutch and the Spaniards might be renewed, the majority concluded to take the patent which had been obtained from the Company of South Virginia, and emigrate to some place near Hudson's river which was within their territory

* Merton, in his Memorial (p. 86) says, that "his and their adversaries had long been plotting how they might hinder his coming to New England." Hutchinson (vol. II. p. 454) says, "he was prevented by disappointments from these in England, who undertook to provide for the passage of him and his Congregation." Whether these disappointments were designed or unavoidable, cannot now be determined. Candor would lead us to suppose the latter. But the former supposition is within the limits of credibility.

The next spring, (1620) Weston himself went over to Leyden, where the people entered into articles of agreement with him, both for shipping and money, to assist in their transportation. Carver and Cushman were again sent to London, to receive the money and provide for the voyage. When they came there, they found the other merchants so very penurious and severe, that they were obliged to consent to some alteration in the articles; which though not relished by their constituents, yet were so strongly insisted on, that without them, the whole adventure must have been frustrated.

The articles, with their amendments, were these. "(1.) The adventurers and planters do agree, that every person that goeth, being sixteen year old and upward, be rated at ten pounds; and that ten pounds be accounted a single share. (2.) That he that goeth in person, and furnisheth himself out with ten pounds, either in money or other provisions, be accounted as having twenty pounds in stock, and in the division shall receive a double share. (3.) The persons transported and the adventurers shall continue their joint stock and partnership, the space of seven years, except some unexpected impediments do cause the whole company to agree otherwise; during which time all profits and benefits that are gotten by trade, traffic, trucking, working, fishing, or any other means, of any other person or persons, shall remain still in the common stock, until the division. (4.) That at their coming there, they shall choose out such a number of persons, as may furnish their ships and boats, for fishing upon the sea; employing the rest, in their several faculties, upon the land; as building houses, tilling and planting the ground, and making such commodities as shall be most useful for the colony. (5.) That at the end of the seven years, the capital and profits, viz. the houses, lands, goods and chattels be equally divided among the adventurers; if any debt or detriment concerning this adventure*----- (6.) Whosoever cometh to the colony hereafter, or putteth any thing into the stock, shall, at the end of the seven years be allowed proportionally to the time of his so doing. (7.) He that shall carry his wife, or children, or servants, shall be allowed for every person, now aged sixteen years, and upwards a single share in the division; or if he provide them necessaries, a double share, or if they be between ten years old and sixteen, then two of them to be reckoned for a person, both in transportation and division. (8.) That such children as now go, and are under ten years of age, have no other share in the division, than fifty acres of unmanured land. (9.) That such persons as die before the seven years be expired, their executors to have their parts or shares, at the division; proportionally to the time of their life in the colony. (10.) That all such persons as are of the colony, are to have meat, drink and apparel out of the common stock and goods of the said colony."

The difference between the articles as first agreed on, and as finally concluded, lay in these two points (1) In the former, it was provided that "the houses and lands improved, especially gardens and home-fields, should remain undivided, wholly to the planters at the end of the seven years;" but, in the latter, the houses and lands were to be equally divided. (2.) In the former, the planters were "allowed two days in the week, for their own private employment, for the comfort of themselves and families, especially such as had them to take care for." In the latter, this article was wholly omitted.

On these hard conditions, and with this small encouragement, the pilgrims of Leyden, supported by a pious confidence in the Supreme Disposer of all things, and animated by a fortitude, resulting from the steady principles of the religion which they professed, determined to cast themselves on the care of Divine Providence, and embark for America.

With the proceeds of their own estates, put into a common stock, and the assistance of the merchants, to whom they had mortgaged their labor and trade for seven years, two vessels were provided. One in Holland, of sixty tons, called the *Speedwell*, commanded by a Captain Reynolds, which was intended to transport some of them to America, and there to remain in their service, one year, for fishing and other uses. Another of one hundred and eighty tons, called the *May-flower*, was chartered by Mr. Cushman in London, and sent round to Southampton in Hampshire, whither Mr. Carver went to superintend her equipment. This vessel was commanded by a Captain Jones, and after discharging her passengers in America, was to return to England. Seven hundred pounds sterling were ex-

pended in provisions and stores, and other necessary preparations; and the value of the trading venture which they carried was seventeen hundred pounds Mr. Weston came from London to Southampton, to see them despatched. The *Speedwell*, with the passengers having arrived there from Leyden, and the necessary officers being chosen to govern the people and take care of the provisions and stores on the voyage; both ships, carrying one hundred and twenty passengers, sailed from Southampton on the fifth day of August, 1620.

They had not sailed many leagues, down the channel, before Reynolds, master of the *Speedwell*, complained that his vessel was too leaky to proceed. Both ships then put in at Dartmouth, where the *Speedwell* was scarped and repaired; and the workmen judged her sufficient for the voyage. On the twenty-first of August, they put to sea again; and, having sailed in company about one hundred leagues, Reynolds renewed his complaints against his ship; declaring, that by constant pumping he could scarcely keep her above water; on which, both ships again put back to Plymouth. Another search was made, and no defect appearing, the leaky condition of the ship was judged to be owing to her general weakness, and she was pronounced unfit for the voyage. About twenty of the passengers went on shore. The others, with their provisions, were received on board the *May-flower*; and, on the sixth of September, the company, consisting of one hundred and one passengers, (besides the ship's officers and crew) took their last leave of England, having consumed a whole month in these vexatious and expensive delays.

The true causes of these misadventures did not then appear. One was, that the *Speedwell* was overmasted; which error being remedied, the vessel afterwards made several safe and profitable voyages. But the principal cause was the deceit of the master and crew; who having engaged to remain a whole year in the service of the colony, and apprehending hard fare in that employment, were glad of such an excuse to rid themselves of the bargain.

The *May-flower*, Jones, proceeded with fair winds in the former part of her voyage; and then met with bad weather and contrary winds, so that for several days no sail could be carried. The ship labored so much in the sea, that one of the main beams sprung, which renewed the fears and distress of the passengers. They had then made about one-half of their voyage, and the chief of the company began a consultation with the commander of the ship, whether it were better to proceed or to return. But one of the passengers having on board a large iron screw, it was applied to the beam, and forced it into its place. This successful effort determined them to proceed.

No other particulars of this long and tedious voyage are preserved; but that the ship being leaky, and the people close stowed, were continually wet; that one young man, a servant of Samuel Fuller, died at sea; and that one child was born, and called *Oceanus*; he was son of Stephen Hopkins.

On the ninth of November, at break of day, they made land, which proved to be the white sandy cliffs of Cape Cod. This landfall being further northward than they intended, they immediately put about the ship to the southward; and, before noon, found themselves among shoals and breakers.* Had they pursued their southern course, as the weather was fine, they might, in a few hours more, have found an opening, and passed safely to the westward, agreeably to their original design, which was to go to Hudson's river. But having been so long at sea, the sight of any land was welcome to women and children; the new danger was formidable; and the eagerness of the passengers to be set on shore was irresistible. These circumstances, coinciding with the secret views of the master, who had been promised a reward by some agents of the Dutch West India Company, if he would not carry them to Hudson's river, induced him to put about to the northward. Before night, the ship was clear of the danger. The next day they doubled the northern extremity of the Cape, (Race-Point) and, a storm coming on, the ship was brought to anchor in Cape Cod harbor, where she lay perfectly secure from winds and shoals.

This harbor, being in the forty-second degree of north latitude, was without the territory of the South Virginia Company. The charter which these emigrants had received from them, of course became useless. Some symptoms of faction, at the same time, appearing

* These shoals lie off the south-east extremity of the cape, which was called by Gosnold, Point Care, by the Dutch and French, Malebarre, and is now known by the name of Sandy Point.

among the servants, who had been received on board in England, purporting that when on shore they should be under no government, and that one man would be as good as another, it was thought proper, by the most judicious persons, to have recourse to natural law; and that, before disembarkation, they should enter into an association, and combine themselves in a political body, to be governed by the majority. To this they consented; and, after solemn prayer and thanksgiving, a written instrument being drawn, they subscribed it with their own hands, and, by a unanimous vote, chose John Carver their governor for one year.

The instrument was conceived in these terms. "In the name of God, amen. We whose names are under-written, the loyal subjects of our dread sovereign Lord, King James, by the grace of God, of Great Britain, France and Ireland, King, Defender of the Faith, &c. having undertaken for the glory of God, and the advancement of the Christian faith, and honor of our King and country, a voyage to plant the first colony in the northern parts of Virginia, do, by these presents, solemnly and mutually, in the presence of GOD and of one another, covenant and combine ourselves together into a civil body politic, for our better ordering and preservation, and furtherance of the ends aforesaid; and, by virtue hereof, to enact, constitute and frame such just and equal laws and ordinances, acts, constitutions and offices, from time to time, as shall be thought most meet and convenient for the general good of the colony, unto which we promise all due subjection and obedience. In witness whereof, we have hereunto subscribed our names, at Cape Cod, the eleventh day of November, in the year of the reign of our sovereign Lord, King James of England, France and Ireland, the eighteenth, and of Scotland the fifty-fourth. Anno domini 1620."*

Government being thus regularly established on a truly republican principle, sixteen armed men were sent on shore, as soon as the weather would permit, to fetch wood and make discoveries. They returned at night with a boat load of juniper wood; and made report, "that they found the land to be a narrow neck; having the harbor on the one side, and the ocean on the other; that the ground consisted of sand-hills, like the Downs in Holland; that in some places the soil was black earth, "a spit's depth;" that the trees were oak, pine, sassafras, juniper, birch, holly, ash, and walnut; that the forest was open and without underwood; that no inhabitants, houses, nor fresh water were to be seen." This account was as much as could be collected in one Saturday's afternoon. The next day they rested.

Whilst they lay in this harbor, which was the space of five weeks, they saw great flocks of sea-fowl and whales, every day playing about them. The master and mate, who had been acquainted with the fishery, in the northern seas of Europe, supposed that they might, in that time, have made oil, to the value of three or four thousand pounds. It was too late in the season for cod, and, indeed, they caught none but small fish, near the shore, and shell-fish. The margin of the sea was so shallow, that they were obliged to wade ashore; and, the weather being severe, many of them took colds and coughs, which, in the course of the winter, proved mortal.

* The names of the subscribers are placed in the following order by Secretary Morton; but Mr. Prince, with his usual accuracy, has compared the list with Governor Bradford's MS History, and added their titles, and the number of each one's family which came over at this time; observing that some left the whole, and others part of their families, either in England or Holland, who came over afterwards. He has also been so curious as to note those who brought their wives, marked with a (†), and these who died before the end of next March, distinguished by an asterisk (*).

* Here something seems to be wanting which cannot now be supplied.

On Monday, the thirteenth of November, the women went ashore, under a guard, to wash their clothes; and the men were impatient for a further discovery. The shallop, which had been cut down and stowed between decks, needed repairing, in which seventeen days were employed. Whilst this was doing, they proposed that excursions might be made on foot. Much caution was necessary in an enterprise of this kind, in a new and savage country. After consultation and preparation, sixteen men were equipped with musket and ammunition, sword and corslet, under the command of Captain Miles Standish, who had William Bradford, Stephen Hopkins and Edward Tilly for his Council of War. After many instructions given, they were rather permitted than ordered to go, and the time of their absence was limited to two days.

When they had travelled one mile by the shore, they saw five or six of the natives, who, on sight of them, fled. They attempted to pursue; and, lighting on their track, followed them till night; but the thickets through which they had to pass, the weight of their armor, and their debility, after a long voyage, made them an unequal match, in point of travelling, to these nimble sons of nature. They rested, at length, by a spring, which afforded them the first refreshing draught of American water.

The discoveries made in this march were few, but novel and amusing. In one place they found a deer-trap, made by the bending of a young tree to the earth, with a noose under ground, covered with acorns. Mr. Bradford's foot was caught in the trap, from which his companions disengaged him, and they were all entertained with the ingenuity of the device. In another place they came to an Indian burying-ground; and, in one of the graves, they found a mortar, an earthen pot, a bow and arrows, and other implements, all which they very carefully replaced; because they would not be guilty of violating the repositories of the dead. But when they found a cellar, carefully lined with bark and covered with a heap of sand, in which about four bushels of seed-corn in ears were well secured, after reasoning on the morality of the action, they took as much of the corn as they could carry, intending, when they should find the owners, to pay them to their satisfaction. On the third day they arrived, weary and welcome, where the ship lay, and delivered their corn into the common store. The company resolved to keep it for seed, and to pay the natives the full value, when they should have opportunity.

When the shallop was repaired and rigged, twenty-four of the company ventured on a second excursion to the same place, to make a further discovery; having Captain Jones for their commander, with ten of his seamen and the ship's long-boat. The wind being high, and the sea rough, the shallop came to anchor under the land, whilst part of the company waded on shore from the long-boat, and travelled, as they supposed, six or seven miles, having directed the shallop to follow them the next morning. The weather was very cold, with snow, and the people, having no shelter, took such colds as afterwards proved fatal to many.

Before noon the next day the shallop took them on board, and sailed to the place which they denominated *Cold Harbor*.* Finding it not navigable for ships, and consequently not proper for their residence, after shooting some geese and ducks, which they devoured with "soldier's stomachs," they went in search of seed-corn. The ground was frozen and covered with snow; but the cellars were known by heaps of sand; and the frozen earth was penetrated with their swords, till they gathered corn to the amount of ten bushels. This fortunate supply, with a quantity of beans preserved in the same manner, they took on the same condition as before; and, it is remarked by Governor Bradford, that in six months after, they paid the owners to their entire satisfaction. The acquisition of this corn, they always regarded as a particular favor of Divine Providence, without which the colony could not have subsisted.

Captain Jones in the shallop went back to the ship with the corn and fifteen of the weakest of the people; intending to send mattocks and spades the next day.

* Mr. Price conjectures this place to have been Barnstable harbor, (p. 74). But neither the time nor distance can agree with this conjecture. Barnstable is more than fifty miles from Cape Cod harbor by land; a distance which they could not have travelled and back again in three short days of November. I rather think, after inquiry of a gentleman well acquainted with Cape Cod, that Cold Harbor is the mouth of Paomet Creek, between Yrurro and Wellfleet; and the description given in Mont's Relation corresponds with this idea. Paomet is a tide harbor for boats, distant between three and four leagues from the harbor of Cape Cod.—See Collections of Historical Society for 1794. Vol. III. p. 195

The eighteen who remained, marched, as they supposed, five or six miles into the woods, and returning another way, discovered a mound of earth, in which they hoped to find more corn. On opening it, nothing appeared but the skull of a man, preserved in red earth, the skeleton of an infant, and such arms, utensils and ornaments, as are usually deposited in Indian graves. Not far distant were two deserted wigwags, with their furniture and some venison, so ill preserved that even soldier's stomachs could not relish it. On the arrival of the shallop, they returned to the ship, the first of December. During their absence, the wife of William White had been delivered of a son, who, from the circumstances of his birth, was named Peregrine.*

At this time they held a consultation respecting their future settlement. Some thought that Cold Harbor might be a proper place, because, though not deep enough for ships, it might be convenient for boats, and because a valuable fishery for whales and cod might be carried on there. The land was partly cleared of wood and good for corn, as appeared from the seed. It was also likely to be healthful and defensible. But the principal reasons were, that the winter was so far advanced as to prevent coasting and discovery, without danger of losing men and boats; that the winds were variable, and the storms sudden and violent; that by cold and wet lodgings the people were much affected with coughs, which, if they should not soon obtain shelter would prove mortal; that provisions were daily consuming and the ship must reserve sufficient for her homeward voyage, whatever became of the colony.

Others thought it best to go to a place called Agawam, twenty leagues northward, where they had heard of an excellent harbor, good fishing, and a better soil for planting. To this it was answered, that there might possibly be as good a place, nearer to them. Robert Coppin, their pilot, who had been here before, assured them, that he knew of a good harbor and a navigable river, not more than eight leagues across the bay to the westward. Upon the whole, they resolved to send the shallop round the shore of the bay on discovery, but not beyond the harbor of which Coppin had informed them.

On Wednesday, the sixth of December, Governor Carver, with nine of the principal men, well armed, and the same number of seamen, of which Coppin was one, went out in the shallop. The weather was so cold, that the spray of the sea froze on their coats, till they were cased with ice, "like coats of iron." They sailed by the eastern shore of the bay, as they judged, six or seven leagues, without finding any river or creek. At length they saw "a tongue of land,† being flat off from the shore, with a sandy point; they bore up to gain the point, and found there a fair income, or road of a bay, being a league over at the narrowest, and two or three in length; but they made right over to the land before them." As they came near the shore, they saw ten or twelve Indians cutting up a grampus, who, in sight of them, ran away, carrying pieces of the fish which they had cut. They landed at a distance of a league or more from the grampus, with great difficulty, on account of the flat sands. Here they built a barricade, and placing sentinels, lay down to rest.

The next morning, Thursday, December 7th, they divided themselves into two parties; eight in the shallop, and the rest on shore, to make further discovery of this place, which they found to be "a bay without either river or creek coming into it." They gave it the name of *Grampus Bay*, because they saw many fish of that species. They tracked the Indians on the sand, and found a path into the woods, which they followed a great way, till they came to old corn fields and a spacious burying-ground, inclosed with pales. They ranged the wood till the close of the day, and then came down to the shore to meet the shallop which they had not seen since the morning. At high water she put into a creek; and, six men being left on board, two came on shore and lodged with their companions, under cover of a barricade and a guard.

On Friday, December 8th, they rose at five in the

* The following account of him is extracted from the Boston Newsletter of July 31, 1704, being the fifteenth number of the first newspaper printed in New England.—"Marshfield, July 22: Captain Peregrine White, of this town, aged eighty-three years and eight months, died here the 20th instant. He was vigorous and of a comely aspect, to the last; was the son of William White, and Susanna his wife, born on board the May-flower, Captain Jones, commander, in Cape Cod harbor, November, 1620, the first Englishman born in New England. Although he was in the former part of his life extravagant, yet he was much reformed in his last years, and died hopefully."

† This "tongue of land" is Billingsgate Point, the western shore of Wellfleet harbor.

morning, to be ready to go on board at high water. At the dawn of day they were surprised with the war-cry of the natives, and a flight of arrows. They immediately seized their arms, and on the first discharge of musketry all the Indians fled, but one stout man, who stood three shots behind a tree, and then retired, as they supposed wounded. They took up eighteen arrows, headed either with brass, deers' horns, or birds' claws, which they sent as a present to their friends in England. This unwelcome reception, and the shoal water of the place,* determined them to seek further. They sailed along the shore as near as the extensive shoals would permit, but saw no harbor. The weather began to look threatening, and Coppin assured them that they might reach the harbor, of which he had some knowledge, before night. The wind being south-easterly they put themselves before it.† After some hours it began to rain; the storm increasing, their rudder broke, their mast sprung, and their sails fell overboard. In this piteous plight, steering with two oars, the wind and the flood tide carried them into a cove full of breakers, and it being dark they were in danger of being driven on shore. The pilot confessed that he knew not the place; but a stout seaman, who was steering, called to the rowers to put about and row hard. This effort happily brought them out of the cove, into a fair sound, and under a point of land, where they came safely to anchor. They were divided in their opinions about going on shore; but about midnight, the wind shifting to the north-west; the severity of the cold made a fire necessary. They therefore got on shore, and with some difficulty kindled a fire, and rested in safety.

In the morning they found themselves on a small uninhabited island, within the entrance of a spacious bay.‡ Here they staid all the next day (Saturday) drying their clothes, cleaning their arms, and repairing, as well as they could, their shallop. The following day, being the Christian Sabbath, they rested.

On Monday, December 11th, they surveyed and sounded the bay, which is described to be "in the shape of a fish hook; a good harbor for shipping, larger than that of Cape Cod; containing two small islands without inhabitants; innumerable store of fowls, different sorts of fish, besides shell-fish in abundance. As they marched into the land,§ they found corn fields and brooks, and a very good situation for building." With this joyful news they returned to the company; and on the 16th of December the ship came to anchor in the harbor, with all the passengers, except four, who died at Cape Cod.

Having surveyed the land, as well as the season would permit in three days; they pitched upon a high ground on the southwest side of the bay, which was cleared of wood, and had formerly been planted. Under the south side of it, was "a very sweet brook in the entrance of which the shallop and boats could be secured, and many delicate springs of as good water as could be drank." On the opposite side of the brook was a cleared field, and beyond it a commanding eminence, on which they intended to lay a platform, and mount their cannon.

They went immediately to work, laying out house-lots, and a street; felling, sawing, riving and carrying timber; and before the end of December, though much interrupted by stormy weather, by the death of two, and the sickness of many of their number, they had erected a storehouse, with a thatched roof, in which their goods were deposited under a guard. Two rows of houses were begun, and as fast as they could be covered, the people, who were classed into nineteen families, came ashore, and lodged in them. On Lord's day, the 31st of December, they attended divine service, for the first time on shore, and named the place *PLYMOUTH*; partly because this harbor was so called in Captain Smith's map, published three or four years before, and partly in remembrance of the very kind and

* Morton says, "This is thought to be a place called Nauskeket." A creek which now bears the name of Sakait, lies between Eastham and Harwich; distant about three or four miles westward from Nauset; the seat of a tribe of Indians, who (as they afterwards learned) made this attack.

† The distance directly across the bay from Sakait is about twelve leagues; in Prince's Annals it is said they sailed fifteen leagues.

‡ This island has ever since borne the name of Clark's Island, from the mate of the ship, the first man who stepped on shore. The cove where they were in danger, lies between the Gunnet Head, and Saguish Point, at the entrance of Plymouth Bay.

§ The rock on which they first stepped ashore, at high water is now enclosed with a wharf. The upper part of it has been separated from the lower part, and drawn into the public square of the town of Plymouth, where it is distinguished by the name of The Forefather's Rock. The 22d of December (Georgian style) is regarded by the people of Plymouth as a festival.

friendly treatment which they had received from the inhabitants of Plymouth, the last part of their native country from which they sailed.

At this time some of the people lodged on shore, and others on board the ship, which lay at the distance of a mile and a half from the town; and when the tide was out, there could be no communication between them. On the 14th of January, very early in the morning, as Governor Carver and Mr. Bradford lay sick in bed at the storehouse, the thatched roof, by means of a spark, caught on fire, and was soon consumed; but by the timely assistance of the people on shore, the lower part of the building was preserved. Here were deposited their whole stock of ammunition, and several loaded guns; but happily the fire did not reach them. The fire was seen by the people on board the ship, who could not come on shore till an hour afterwards. They were greatly alarmed at the appearance, because two men, who had strolled into the woods, were missing, and they were apprehensive that the Indians had made an attack on the place. In the evening the strollers found their way home, almost dead with hunger, fatigue and cold.

The bad weather and severe hardships to which this company were exposed, in a climate much more rigorous than any to which they had ever been accustomed, with the scorbutic habits contracted in their voyage, and by living so long on shipboard, caused a great mortality among them in the winter. Before the month of April, nearly one half* of them died. At some times, the number of the sick was so great, that not more than six or seven were fit for duty, and these were almost wholly employed in attending the sick. The ship's company was in the same situation; and Captain Jones, though earnestly desirous to get away, was obliged to stay till April, having lost one half of his men.

By the beginning of March, the governor was so far recovered of his first illness, that he was able to walk three miles, to visit a large pond which Francis Billington had discovered from the top of a tree on a hill. At first it was supposed to be part of the ocean; but it proved to be the head water of the brook which runs by the town. It has ever since borne the name of the first discoverer, which would otherwise have been forgotten.

Hitherto they had not seen any of the natives at this place. The mortal pestilence which raged through the country, four years before, had almost depopulated it. One remarkable circumstance attending this pestilence was not known till after this settlement was made. A French ship had been wrecked on Cape Cod. The men were saved, and the provisions and goods. The natives kept their eye on them till they found an opportunity to kill all but three or four, and divide their goods. The captives were sent from one tribe to another, as slaves. One of them learned so much of their language, as to tell them that "God was angry with them for their cruelty, and would destroy them, and give their country to another people." They answered that "they were too many for God to kill." He replied, that "if they were ever so many, God had many ways to kill them of which they were then ignorant." When the pestilence came among them, (a new disease, probably the yellow fever,) they remembered the Frenchman's words; and when the Plymouth settlers arrived at Cap Cod, the few survivors imagined that the other part of his prediction would soon be accomplished. Soon after their arrival, the Indian priests or powows convened, and performed their incantations in a dark swamp three days successively, with a view to curse and destroy the new comers. Had they known the mortality which raged among them, they would doubtless have rejoiced in the success of their endeavors, and might very easily have taken advantage of their weakness to exterminate them. But none of them were seen till after the sickness had abated; though some tools, which had been left in the woods, were missing, which they had stolen in the night.

On the sixteenth of March, when the spring was so far advanced as to invite them to make their gardens, a savage came boldly into the place alone, walked through the street to the rendezvous or storehouse, and pronounced the words *Welcome Englishmen!* his name was Samoset; he belonged to a place distant five days

journey to the eastward, and had learned of the fishermen to speak broken English.

He was received with kindness and hospitality, and he informed them, "that by the late pestilence, and a ferocious war, the number of his countrymen had been so diminished, that not more than one in twenty remained; that the spot where they were now seated was called Patukset, and though formerly populous, yet every human being in it had died of the pestilence." This account was confirmed by the extent of the fields, the number of graves, and the remnants of skeletons lying on the ground.

The account which he gave of himself, was, "that he had been absent from home eight moons, part of the time among the Nausets, their nearest neighbors at the southeast, who were about one hundred strong, and more lately among the Wompaneags at the westward, who were about sixty; that he had heard of the attack made on them by the Nausets at Namsket; that these people were full of resentment against the Europeans, on account of the perfidy of Hunt, master of an English vessel, who had some years before the pestilence decoyed some of the natives, (twenty from Patukset and seven from Nauset) on board his ship, and sold them abroad as slaves; that they had killed three English fishermen, besides the Frenchmen aforementioned in revenge for this affront. He also gave information of the lost tools, and promised to see them restored; and that he would bring the natives to trade with them."

Samoset being dismissed with a present, returned the next day with five more of the natives, bringing the stolen tools, and a few skins for trade. They were dismissed with a request to bring more, which they promised in a few days. Samoset feigned himself sick, and remained; but as his companions did not return at the time, he was sent to inquire the reason.

On the 22nd he returned, in company with Squanto or Squantum, a native of Patukset, and the only one then living. He was one of the twenty whom Hunt had carried away; he had been sold in Spain, had lived in London with John Slany Merchant, Treasurer of the Newfoundland Company; had learned the English language, and came back to his native country with the fishermen. These two persons were deputed by the sachem of the Wompaneags, *Ma-sass-o-i*,* whose residence was at Sowams or Pokanoket, on the Narraganset Bay, to announce his coming, and bring some skins as a present. In about an hour, the sachem, with his brother *Qua-de-qui-nah*, and his whole force, of sixty men, appeared on the hill over against them. Squantum was sent to know his pleasure, and returned with the sachem's request, that one of the company should come to him. Edward Winslow immediately went alone, carrying a present in his hand, with the governor's compliments, desiring to see the sachem, and enter on a friendly treaty. Masassoit left Winslow in the custody of his brother, to whom another present was made, and taking twenty of his men, unarmed, descended the hill towards the brook, over which lay a log bridge. Captain Miles Standish, at the head of six men, met him at the brook, and escorted him and his train to one of the best houses, where three or four cushions were placed on a green rug, spread over the floor. The governor came in, preceded by a drum and trumpet, the sound of which greatly delighted the Indians. After mutual salutations, he entered into conversation with the sachem, which issued in a treaty. The articles were, "(1.) That neither he nor his should injure any of our's. (2.) That if they did, he should send the offender, that we might punish him. (3.) That if our tools were taken away, he should restore them. (4.) That if any unjustly warred against him, we would aid him; and if any warred against us, he should aid us. (5.) That he should certify his neighbor confederates of this, that they might not wrong us, but be comprised in the conditions of peace. (6.) That when their men came to us, they should leave their bows and arrows behind them; as we should leave our pieces when we came to them. (7.) That in doing thus, King James would esteem him as his friend and ally."

The conference being ended, and the company having been entertained with such refreshments as the place afforded, the sachem returned to his camp. This treaty, the work of one day, being honestly intended on both sides, was kept with fidelity as long as Masassoit lived, but was afterward broken by Philip, his successor.

The next day Masassoit sent for some of the English to visit him. Captain Standish and Isaac Allerton

* Mr. Prince says that *Ma-sass-o-i* is a word of four syllables, and was so pronounced by the ancient people of Plymouth. This remark is confirmed by the manner in which it is spelled in some parts of Mr. Winslow's Narrative, *Ma-sas-o-wal*.

went, were kindly received, and treated with ground-nuts and tobacco.

The sachem then returned to his head-quarters, distant about forty miles; but Squantum and Samoset remained at Plymouth, and instructed the people how to plant their corn, and dress it with herrings, of which an immense quantity came into the brooks. The ground which they planted with corn was twenty acres. They sowed six acres with barley and peas; the former yielded an indifferent crop; but the latter were parched with the heat, and came to nothing.

Whilst they were engaged in this labor, in which all were alike employed, on the 5th of April, (the day on which the ship sailed for England) Governor Carver came out of the field, at noon, complaining of a pain in his head, caused by the heat of the sun. It soon deprived him of his senses, and in a few days put an end to his life, to the great grief of this infant plantation. He was buried with all the honors which could be shown to the memory of a good man by a grateful people. The men were under arms, and fired several volleys over his grave. His affectionate wife, overcome with her loss, survived him but six weeks.

Mr. Carver is represented as a man of great prudence, integrity, and firmness of mind. He had a good estate in England, which he spent in the emigration to Holland and America. He was one of the foremost in action, and bore a large share of sufferings in the service of the colony, who confided in him as their friend and father. Piety, humility, and benevolence, were eminent traits in his character; and it is particularly remarked, that in the time of general sickness, which befel the colony, and with which he was affected, after he had himself recovered, he was assiduous in attending the sick, and performing the most humiliating services for them, without any distinction of persons or characters.

One of his grandsons lived to the age of one hundred and two years; and about the middle of the present century (1755) he, his son, grandson, and great grandson, were all, at the same time, at work in the same field, whilst an infant of the fifth generation was within the house, at Marshfield.

The memory of Governor Carver is still held in esteem; a ship belonging to Plymouth now bears his name; and his broadsword is deposited, as a curiosity, in the cabinet of the Historical Society, at Boston.

WILLIAM BRADFORD.

WILLIAM BRADFORD—His Birth and Education—Removes to Amsterdam—Accompanies the Adventurers to New England—His Wife Drowned—Chosen Governor of New Plymouth—Conspiracy of the Indians—He adopts Measures of Defence—Surrenders the Patent to the Colony—His Death and Character—His Descendants.

WILLIAM BRADFORD was born in 1588, at Ansterfield, an obscure village in the North of England. His parents dying when he was young, he was educated, first by his grand-parents, and afterwards by his uncles, in the practice of agriculture. His paternal inheritance was considerable; but he had no other learning but such as generally falls to the share of the children of husbandmen.

At twelve years of age, his mind became seriously impressed by divine truth, in reading the Scriptures; and as he increased in years, a native firmness enabled him to vindicate his opinions against opposition. Being stigmatized as a Separatist, he was obliged to bear the frowns of his relatives, and the scoff of his neighbors; but nothing could divert or intimidate him from attending on the ministry of Mr. Richard Clifton, and connecting himself with the church over which he and Mr. Robinson presided.

When he was eighteen years old, he joined in their attempt to go over to Holland, and was one of the seven who were imprisoned at Boston, in Lincolnshire, as is already related in the life of Robinson; but he was soon liberated on account of his youth. He was also one of those who, the next year, fled from Grimsby Common, when part of the company went to sea, and part were taken by the pursuivants.

After some time, he went over to Zealand, through various difficulties; and was no sooner set on shore, than a malicious passenger in the same vessel, accused him before the Dutch magistrates, as a fugitive from England. But when they understood the cause of his emigration, they gave him protection, and permission to join his brethren at Amsterdam.

It being impossible for him to prosecute agriculture in Holland, he was obliged to betake himself to some other business; and being then under age, he put himself as an apprentice to a French Protestant, who

* The exact bill of mortality as collected by Mr. Prince, is as follows:

In December, 6	Of these, 21 were subscribers to the civil compact.
In January, 8	
In February, 17	and 23 were women, children and servants.
In March, 13	
Total, 44	44

taught him the art of silk-dying. As soon as he attained the years of manhood, he sold his paternal estate in England, and entered on a commercial life, in which he was not very successful.

When the Church of Leyden contemplated a removal to America, Bradford zealously engaged in the undertaking, and came with the first company, in 1620, to Cape Cod. Whilst the ship lay in that harbor, he was one of the foremost in the several hazardous attempts to find a proper place for the seat of the colony in one of which, he, with others of the principal persons, narrowly escaped the destruction which threatened their shallop. On his return from this excursion to the ship with the joyful news of having found an harbor, and a place for settlement, he had the mortification to hear that, during his absence, his wife had accidentally fallen into the sea, and was drowned.

After the sudden death of Governor Carver, the infant colony cast their eyes on Bradford to succeed him; but being at that time so very ill, that his life was despaired of, they waited for his recovery, and then invested him with the command. He was in the thirty-third year of his age; his wisdom, piety, fortitude, and goodness of heart, were so conspicuous as to merit the sincere esteem of the people. Carver had been alone in command. They confided in his prudence, that he would not adventure on any matter of moment without the consent of the people, or the advice of the wisest. To Bradford they appointed an assistant, Isaac Allerton, not because they had not the same confidence in him, but partly for the sake of regularity, and partly on account of his precarious health. They appointed but one, because they were so reduced in number, that to have made a greater disproportion between rulers and people would have been absurd; and they knew that it would always be in their power to increase the number at their pleasure. Their voluntary combination was designed only as a temporary expedient, till they should obtain a charter under the authority of their sovereign.

One of the first acts of Bradford's administration, was, by the advice of the company, to send Edward Winslow and Stephen Hopkins to Masasoit, with Squanto for their guide. The design of this embassy was to explore the country, to confirm the league, to learn the situation and strength of their new friend, to carry some presents, to apologize for some misbehavior, to regulate the intercourse between them and the Indians, and to procure seed-corn for the next planting season.

These gentlemen found the sachem at Pokanoket,* about forty miles from Plymouth. They delivered the presents, renewed the friendship, and satisfied themselves respecting the strength of the natives, which did not appear formidable, nor was the entertainment which they received either liberal or splendid. The marks of desolation and death, by reason of the pestilence, were very conspicuous, in all the country through which they passed; but they were informed that the Narragansets, who resided on the western shore of the bay of that name, were very numerous, and that the pestilence had not reached them.

After the return of this embassy, another was sent to Nauset, to recover a boy who had straggled from Plymouth, and had been taken up by some of the Indians of that place. They were so fortunate as to recover the boy, and to make peace with Aspinet the sachem, when they paid for the seed-corn which they had taken out of the ground at Paomet, in the preceding autumn. During this expedition an old woman, who had never before seen any white people, burst into tears of grief and rage at the sight of them. She had lost three sons by the perfidy of Thomas Hunt, who decoyed them, with others, on board his ship, and sold them for slaves. Squanto, who was present, told her that he had been carried away at the same time; that Hunt was a bad man; that his countrymen disapproved his conduct, and that the English at Plymouth would not offer them any injury. This declaration, accompanied by a small present, appeased her anger, though it was impossible to remove the cause of her grief.

It was fortunate for the colony that they had secured the friendship of Masasoit; for his influence was found to be very extensive. He was regarded and revered by all the natives, from the bay of Narraganset

to that of Massachusetts. Though some of the petty sachems were disposed to be jealous of the new colony, and to disturb its peace, yet their mutual connection with Masasoit proved the means of its preservation; as a proof of which, nine of the sachems voluntarily came to Plymouth, and subscribed an instrument of submission in the following terms, viz.

"September 13, Anno Domini 1621. Know all men by these presents, that we, whose names are underwritten, do acknowledge ourselves to be the loyal subjects of King James, king of Great-Britain France, and Ireland, Defender of the Faith, &c. In witness whereof, and as a testimonial of the same, we have subscribed our names, or marks, as followeth:

Ohquamehud, Nattawahunt, Quadequina,
Cawnacome, Caumbatant, Huttamoiden,
Obbatinua, Chikatabak, Apannow."

Hobamak, another of these subordinate chiefs, came and took up his residence at Plymouth, where he continued as a faithful guide and interpreter as long as he lived. The Indians of the island of Capawock, which had now obtained the name of Martha's or Martin's Vineyard, also sent messengers of peace.

Having heard much of the Bay of Massachusetts, both from the Indians and the English fishermen, Governor Bradford appointed ten men, with Squanto, and two other Indians, to visit the place, and trade with the natives. On the 18th of September, they sailed in a shallop, and the next day got to the bottom of the bay, where they landed upon a cliff,* and were kindly received by Obbatinewa, the sachem who had subscribed the submission at Plymouth a few days before. He renewed his submission, and received a promise of assistance and defence against the Squaw Sachem of Massachusetts, and other enemies.

The appearance of this bay was pleasing. They saw the mouths of two rivers which emptied into it. The islands were cleared of wood, and had been planted; but most of the people who had inhabited them either were dead, or had removed. Those who remained were continually in fear of the Tarratenes, who frequently came from the eastward in a hostile manner, and robbed them of their corn. In one of these predatory invasions, Nanepashamet, a sachem, had been slain; his body lay buried under a frame, surrounded by an intrenchment and palisade. A monument on the top of a hill designated the place where he was killed.

Having explored the bay, and collected some beaver, the shallop returned to Plymouth, and brought so good a report of the place, that the people wished they had been seated there. But having planted corn and built huts at Plymouth, and being there in security from the natives, they judged the motives for continuance to be stronger than for removal. Many of their posterity having judged otherwise.

In November, a ship arrived from England, with thirty-five passengers, to augment the colony. Unhappily they were so short of provision, that the people of Plymouth were obliged to victual the ship home, and then put themselves and the new comers to half allowance. Before the next spring, (1622) the colony began to feel the rigor of famine. In the height of this distress, the governor received from Canonius, Sachem of Narraganset, a threatening message, in the emblematic style of the ancient Scythians; a bundle of arrows, bound with the skin of a serpent. The governor sent an answer in the same style, the skin of the serpent filled with powder and ball. The Narragansets, afraid of its contents, sent it back unopened; and here the correspondence ended.

It was now judged proper to fortify the town. Accordingly it was surrounded with a stockade and four flankarts; a guard was kept by day and night, the company being divided into four squadrons. A select number were appointed, in case of accidental fire, to mount guard with their backs to the fire, to prevent a surprise from the Indians. Within the stockade was enclosed the top of the hill, under which the town was built, and a sufficiency of land for a garden to each family. The works were begun in February and finished in March.

At this time the famine was very severe. Fish and spring waters were the only provision on which the people subsisted. The want of bread reduced their flesh; yet, they had so much health and spirit, that, on hearing of the massacre in Virginia, they erected an additional fort on the top of the hill, with a flat roof, on which the guns were mounted; the lower story served them for a place of worship. Sixty acres of ground were planted with corn; and their gardens were sown

with the seeds of other esculent vegetables, in great plenty.

The arrival of two ships with a new colony, sent out by Thomas Weston, but without provisions, was an additional misfortune. Some of these people being sick, were lodged in the hospital at Plymouth till they were so far recovered as to join their companions, who seated themselves at Wessagusset, since called Weymouth.

The first supply of provisions was obtained from the fishing vessels; of which thirty-five came this spring, from England to the coast. In August, two ships arrived with trading goods; which the planters bought at a great disadvantage, giving beaver in exchange. The summer being dry, and the harvest short, it became necessary to make excursions among the natives, to procure corn and beans, with the goods purchased from the ships. Governor Bradford undertook this service, having Squanto for his guide and interpreter; who was taken ill on the passage, and died at Manomok. Before his death, he requested the governor to pray for him, "that he might go to the Englishman's God."

In these excursions, Mr. Bradford was treated by the natives with great respect; and the trade was conducted, on both parts, with justice and confidence. At Nauset, the shallop being stranded, it was necessary to put the corn, which had been purchased, in stack and leave it covered with mats and sedge, in the care of the Indians, whilst the governor and his party came home, fifty miles on foot. It remained there from November to January; and when another shallop was sent, it was found in perfect safety, and the stranded shallop was covered.

At Namasket, [Middleborough] an inland place, he bought another quantity, which was brought home, partly by the people of the colony, and partly by the Indian women; their men disdaining to bear burdens.

At Manomet, [Sandwich] he bargained for more, which he was obliged to leave till March, when Captain Standish went and fetched it home, the Indian women bringing it down to the shallop. The whole quantity thus purchased, amounted to twenty-eight hogsheds of corn and beans; of which Weston's people had a share, as they had joined in the purchase.

In the spring [1623] the governor received a message from Masasoit that he was sick; on which occasion it is usual for all the friends of the Indians to visit them, or send them presents. Mr. Winslow again went to visit the sachem, accompanied by Mr. John Hamden,* and they had Hobamak for their guide and interpreter. The visit was very consolatory to their sick friend, and the more so, as Winslow carried him some cordials, and made him broth after the English mode, which contributed to his recovery. In return for this friendly attention, Masasoit communicated to Hobamak intelligence of a dangerous conspiracy then in agitation among the Indians which he had been solicited to join. Its object was nothing less than the total extirpation of the English, and it was occasioned by the imprudent conduct of Weston's people in the Bay of Massachusetts. The Indians had it in contemplation to make them the first victims, and then to fall on the people of Plymouth. Masasoit's advice was that the English should seize and put to death the chief conspirators, whom he named; and said that this would prevent the execution of the plot. Hobamak communicated this secret to Winslow as they were returning; and it was reported to the governor.

On this alarming occasion the whole company were assembled in court, and the news was imparted to them. Such was their confidence in the governor, that they unanimously requested him, with Allerton, his assistant, to concert the best measures for their safety. The result was to strengthen the fortifications, to be vigilant at home, and to send such a force to the Bay of Massachusetts, under Captain Standish, as he should judge sufficient to crush the conspiracy. An Indian who had come into the town was suspected as a spy, and confined in irons. Standish with eight chosen men, and the faithful Hobamak, went in the shallop to Weston's plantation, having goods as usual to trade with the Indians. Here he met the persons who had been named as conspirators, who personally insulted

* This was a general name for the northern shore of the Narraganset Bay, between Providence and Taunton rivers, and comprehending the present townships of Bristol, Warren, and Barrington, in the State of Rhode Island, and Swansey in Massachusetts. Its northern extent is unknown. The principal seats of the sachem were at Sowams and Kikemut. The former is a neck of land formed by the confluence of Barrington and Palmer's rivers; the latter is Mount Hope.

* Supposed to be Copp's Hill in the town of Boston.

* In Winslow's Journal, Mr. Hamden is said to be "a gentleman of London, who then wintered with us, and desired much to see the country." I suppose this to be the same person who distinguished himself by his opposition to the illegal and arbitrary demands of King Charles I. He had previously (1617) embarked for New England with Oliver Cromwell, Sir Arthur Hasleig and others; but they were prevented from coming by the king's "proclamation against disorderly transporting his majesty's subjects to the plantations in America." Hamden was born in 1594, and was twenty years old at the time of his being at Plymouth, in 1623.

and threatened him. A quarrel ensued, in which seven of the Indians were killed. The others were so struck with terror, that they forsook their houses and retreated to the swamps, where many of them died with cold and hunger; the survivors would have sued for peace, but were afraid to go to Plymouth. Weston's people were so apprehensive of the consequences of this affair, that they quitted the plantation; and the people of Plymouth, who offered them protection, which they would not accept, were glad to be rid of such troublesome neighbors.

Thus, by the spirited conduct of a handful of brave men, in conformity to the advice of the friendly sachem, the whole conspiracy was annihilated. But when the report of this transaction was carried to their brethren in Holland, Mr. Robinson, in his next letter to the governor, lamented with great concern and tenderness, "O that you had converted some, before you had killed any!"

The scarcity which they had hitherto experienced was partly owing to the increase of their numbers, and the scantiness of their supplies from Europe; but principally to their mode of laboring in common; and putting the fruit of their labor into the public store; an error, which had the same effect here, as in Virginia. To remedy this evil, as far as was consistent with their engagements, it was agreed in the spring of 1623 that every family should plant for themselves, on such ground as should be assigned to them by lot, without any division for inheritance; and that in the time of harvest a competent portion should be brought into the common store, for the maintenance of the public officers, fishermen and such other persons as could not be employed in agriculture. This regulation gave a spring to industry; the women and children cheerfully went to work with the men in the fields, and much more corn was planted than ever before. Having but one boat, the men were divided into parties of six or seven, who took their turns to catch fish; the shore afforded them shell fish, and ground nuts served them for bread. When any deer was killed the flesh was divided among the whole colony. Water fowl came in plenty at the proper season, but the want of boats prevented them from being taken in great numbers. Thus they subsisted, through the third summer, in the latter end of which two vessels arrived with sixty passengers. The harvest was plentiful; and after this time they had no general want of food, because they had learned to depend on their own exertions, rather than on foreign supplies.

The combination which they made, before their landing at Cape Cod, was the first foundation of their government; but, as they were driven to this expedient by necessity, it was intended to subsist no longer than till they could obtain legal authority from their sovereign. As soon as they knew of the establishment of the Council of New England, they applied for a patent; which was taken in the name of John Peirce, in trust for the colony. When he saw that they were well seated, and that there was a prospect of success to their undertaking, he went, without their knowledge, but in their name, and solicited the council for another patent, of greater extent; intending to keep it to himself, and allow them no more than he pleased, holding them as his tenants, to sue and be sued at his courts. In pursuance of this design, having obtained the patent, he bought a ship, which he named the *Paragon*; loaded her with goods, took on board upwards of sixty passengers, and sailed from London, for the colony of New Plymouth. In the Downs, he was overtaken by a tempest, which so damaged the ship, that he was obliged to put her into dock; where she lay seven weeks, and her repairs cost him one hundred pounds. In December, 1622, he sailed a second time, having on board one hundred and nine persons; but a series of tempestuous weather which continued fourteen days, disabled his ship, and forced him back to Portsmouth. These repeated disappointments proved so discouraging to him, that he was easily prevailed upon by the Company of Adventurers, to assign his patent to them for five hundred pounds. The passengers came over in other ships.

In 1629, another patent of larger extent was solicited by Isaac Allerton, and taken out in the name of "William Bradford, his heirs, associates, and assigns." This patent confirmed their title (as far as the Crown of England could confirm it) to a tract of land bounded on the east and south by the Atlantic Ocean, and by lines drawn west from the rivulet of Conohasset, and north from the river of Narraganset, which lines meet in a point, comprehending all the country called Pokanoket. To this tract they supposed they had a prior title from the depopulation of a great part of it by a

No. 4.

pestilence, from the gift of Masasoit, his voluntary subjection to the Crown of England, and his having taken protection of them. In a declaration published by them in 1636, they asserted their "lawful right in respect of vacancy, donation, and purchase of the natives," which, together with their patent from the crown, through the Council of New England "formed the warrantable ground and foundation of their government, of making laws and disposing of lands."*

In the same patent was granted a large tract bordering on the river Kennebeck, where they had carried on a traffic with the natives for furs, as they did also at Connecticut river, which was not equally beneficial, because there they had the Dutch for rivals. The fur trade was found to be much more advantageous than the fishery. Sometimes they exchanged corn of their own growth, for furs; but European coarse cloths, hardware, and ornaments, were good articles of trade when they could command them.

The Company in England, with which they were connected, did not supply them in plenty. Losses were sustained by sea; the returns were not adequate to their expectations; they became discouraged; threw many reflections on the planters, and finally refused them any farther supplies; but still demanded the debt due from them, and would not permit them to connect themselves in trade with any other persons. The planters complained to the Council of New England, but obtained no redress. After the expiration of the seven years (1628) for which the contract was made, eight of the principal persons in the colony, with four of their friends in London, became bound for the balance; and from that time took the whole trade into their own hands. These were obliged to take up money at an exorbitant interest, and to go deeply into trade at Kennebeck, Penobscot, and Connecticut; by which means, and their own great industry and economy, they were enabled to discharge the debt, and pay for the transportation of thirty five families of their friends from Leyden, who arrived in 1629.

The patent had been taken in the name of Mr. Bradford, in trust for the colony; and the event proved that their confidence was not misplaced. When the number of people was increased, and new townships were erected, the General Court, in 1640, requested that he would surrender the patent into their hands. To this he readily consented; and by a written instrument, under his hand and seal, surrendered it to them; reserving for himself no more than his proportion, by previous agreement. This was done in open court, and the patent was immediately re-delivered into his custody.

Whilst they were few in number, the whole body of associates or freemen assembled for legislative, executive and judicial business. In 1634, the governor and assistants were constituted a Judicial Court, and afterward, the Supreme Judiciary. Petty offences, and actions of debt, trespass and damage, not exceeding forty shillings, were tried by the selectmen of each town, with liberty of appeal to the next Court of Assistants. The first Assembly of Representatives was held in 1639, when two deputies were sent from each town, and four from Plymouth. In 1649 Plymouth was restricted to the same number with the other towns. These deputies were chosen by the freemen; and none were admitted to the privilege of freemen, but such as were twenty-one years of age, of sober and peaceable conversation, orthodox in the fundamentals of religion, and possessed of twenty pounds rateable estate.

By the former patent, the Colony of Plymouth was empowered to "enact such laws as should most best a state in its nonage, not rejecting, or omitting to observe such of the laws of their native country, as would conduce to their good." In the second patent, the power of government was granted to William Bradford and his associates, in the following terms. "To

frame and make orders, ordinances and constitutions, as well for the better government of their affairs here, (in England) and the receiving or admitting any to his or their society; as also for the better government of his or their people, at sea, in going thither, or returning from thence; and the same to be put in execution, by such officers and ministers as he or they shall authorize and depute; provided, that the said laws be not repugnant to the laws of England, or the frame of government by the said president and council hereafter to be established."

At that time, a general government over the whole territory of New England, was a favorite object with the council, which granted these patents; but after several attempts, it finally miscarried, to the no small joy of the planters, who were then at liberty to govern themselves.

In the formation of the laws of New Plymouth, regard was had, "primarily and principally, to the ancient platform of God's law." For, though some parts of that system were peculiar to the circumstances of the son's of Jacob, yet "the whole being grounded on the principles of moral equity," it was the opinion of our first planters, not at Plymouth only, but in Massachusetts, New Haven, and Connecticut, that "all men, especially Christians, ought to have an eye to it, in the framing of their political constitutions." A secondary regard was had to the liberties granted to them by their sovereign, and the laws of England, which they supposed "any impartial person might discern, in the perusal of the book of the laws of the colony."

At first they had some doubt concerning their right of punishing capital crimes. A murder which happened in 1630, made it necessary to decide this question. It was decided by the divine law against shedding human blood, which was deemed indispensable. In 1636, their code of laws was revised, and capital crimes were enumerated and defined. In 1671, it was again revised, and the next year printed, with this title, "The Book of the General laws of the Inhabitants of the jurisdiction of New Plymouth;"* a title very similar to the codes of Massachusetts and Connecticut, which were printed at the same time by Samuel Green, at Cambridge.

The piety, wisdom, and integrity of Mr. Bradford, were such prominent features in his character, that he was annually chosen governor as long as he lived, excepting three years, when Mr. Winslow, and two, when Mr. Prince, were chosen; and even then, Mr. Bradford was the first in the list of assistants, which gave him the rank of deputy-governor. In 1624, they chose five assistants, and in 1633, seven; the governor having a double vote. These augmentations were made at the earnest request of Mr. Bradford, who strongly recommended a rotation in the election of a governor; but could not obtain it for more than five years in thirty-five; and never for more than two years in succession. His argument was, "that if it were an honor or benefit, others beside himself should partake of it; if it were a burthen, others beside himself should help to bear it." Notwithstanding the reasonableness and equity of his plea, the people had a strong attachment to him, and confidence in him, that they could not be persuaded to leave him out of the government.

For the last twelve years of his life, he was annually chosen without interruption, and served in the office of governor. His health continued good till the autumn of 1656, when it began to decline; and as the next spring advanced, he became weaker, but felt not any acute illness till the beginning of May.

After a distressing day, his mind was, in the following night, so elevated with the idea of futurity, that he said to his friends in the morning, "God has given me a pledge of my happiness in another world, and the first fruits of eternal glory." The next day, being the 9th of May, 1657, he was removed from this world by death, in the sixty-ninth year of his age, to the im-

* In 1639, after the termination of the Pequot war, Masasoit, who had then changed his name to Wosamequeen, brought his son, Moaniam, to Plymouth, and desired that the league which he had formerly made, might be renewed and inviolable. The sachem and his son voluntarily promised, "for themselves and their successors, that they would not needlessly nor unjustly raise any quarrels or do any wrong to other natives to provoke them to war against the colony; and that they would not give, sell or convey any of their land, territory or possessions whatever, to any person or persons whomsoever, without the privity or consent of the government of Plymouth, other than to such as the said government should send or appoint. The whole count did them ratify and confirm the aforesaid league, and promise to the said Wosamequeen, his son and successors, that they would defend them against all such as should unjustly rise up against them, to wrong or oppose them."—(Morton's Memorial.

* Governor Hutchinson, with unaccountable carelessness, has asserted, (Vol. II. 463) that they never established any distinct code or body of laws; grounding his assertion on a passage in Hubbard's MS history, which implies no such thing. The quotation, imperfectly given by Hutchinson, is correctly as follows, (p. 50)

"The laws they intended to be governed by were the laws of England; to which they were willing to be subject to, though in a foreign land; and have since that time, continued in that mind for the general, adding only some particular municipal laws of their own, in such cases where the common laws and statutes of England could not well reach, or afford them help in emergent difficulties of the place; possibly on the same ground that Pacavius sometimes advised his neighbors of Capua not to cashier their old magistrates, till they could agree on better to place in their room. So did these choose to abide by the laws of England, till they could be provided of better."

mense loss and grief of the people, not only in Plymouth, but the neighboring colonies; four* of which he lived to see established, beside that of which he was one of the principal founders.

In addition to what has been said of Mr. Bradford's character, it may be observed, that he was a sensible man, of a strong mind, a sound judgment, and a good memory. Though not favored with a learned education, he was much inclined to study and writing. The French and Dutch languages were familiar to him, and he attained a considerable knowledge of the Latin and Greek; but he more assiduously studied the Hebrew, because he said, that "he would see with his own eyes the ancient oracles of God, in their native beauty."

He had read much of history and philosophy, but theology was his favorite study. He was able to manage the polemic part of it with much dexterity; and was particularly vigilant against the sectaries which infested the colonies; though by no means severe or intolerant, as long as they continued peaceable; wishing rather to foil them by argument, and guard the people against receiving their tenets, than to suppress them by violence, or cut them off by the sword of magistracy. Mr. Hubbard's character of him is, that he was a "person of great gravity and prudence, of sober principles, and for one of that persuasion, (Brownists,) very pliable, gentle, and condescending."

He wrote a history of Plymouth people and colony, beginning with the first formation of the church, in 1602, and ending in 1646. It was contained in a folio volume of 270 pages. Morton's Memorial is an abridgment of it. Prince and Hutchinson had the use of it, and the manuscript was carefully deposited with Mr. Prince's valuable collection of papers, in the library of the Old South church in Boston, which fell a sacrifice to the unprincipled fury of the British army, in the year 1775, since which time it has not been seen. He also had a large book of copies of letters relative to the affairs of the colony, a fragment of which was, a few years ago, recovered by accident,† and published by the Historical Society. To the fragment is subjoined another, being a "descriptive and historical account of New-England," in verse; which if it be not graced with the charms of poetry, yet is a just and affecting narrative, intermixed with pious and useful reflections. Besides these, he wrote, as Dr. Mather says, "some significant things, for the confutation of the errors of the times; by which it appears, that he was a person of a good temper, and free from that rigid spirit of separation, which broke the Separatists to pieces."

In his office of chief magistrate, he was prudent, temperate and firm. He would suffer no person to trample on the laws, or disturb the peace of the colony. During his administration there were frequent accessions of new inhabitants; some of whom were at first refractory; but his wisdom and fortitude obliged them to pay a decent respect to the laws and customs of the country. One particular instance is preserved. A company of young men, newly arrived, were very unwilling to comply with the governor's order for working on the public account. On a Christmas day, they excused themselves, under pretence that it was against their conscience to work. The governor gave them no other answer than, that he would let them alone, till they should be better informed. In the course of the day, he found them at play in the streets, and commanding the instruments of their game to be taken from them, he told them, that it was against his conscience to suffer them to play, whilst others were at work; and that if they had any religious regard to the day, they should show it, in the exercise of devotion at home. This gentle reproof had the desired effect, and prevented a repetition of such disorders.

His conduct toward intruders and false friends was equally moderate, but firm and decisive. John Lyford had imposed himself upon the colony as a minister, being recommended by some of the adventurers. At first his behavior was plausible, and he was treated with respect; but it was not long, before he began, in concert with John Oldham, to excite a faction. The governor watched them; and when a ship was about sailing for England, it was observed that Lyford was very busy in writing letters, of which he put a great number on board. The governor in a boat followed the ship to sea, and by favor of the master, who was a friend to the colony, examined the letters, some of which he intercepted, and concealed. Lyford and Oldham were

at first under much apprehension, but as nothing transpired, they concluded that the governor had only gone on board to carry his own letters; and felt themselves secure.

In one of the intercepted letters, Lyford had written to his friends, the discontented part of the adventurers, that he and Oldham intended a reformation in Church and State. Accordingly they began to institute a separate church; and when Oldham was summoned to take his turn at a military watch, he not only refused compliance, but abused Captain Standish, and drew his knife upon him. For this he was imprisoned; and both he and Lyford were brought to trial, before the whole company. Their behavior was insolent and obstinate. The governor took pains to convince them of their folly, but in vain. The letters were then produced; their adherents were confounded; and the evidence of their factious and disorderly conduct being satisfactory, they were condemned, and ordered to be banished from the plantation. Lyford was allowed six months for probation; but his pretences proved hypocritical, and he was obliged to depart. After several removals he died in Virginia. Oldham having returned after banishment, his second expulsion was conducted in this singular manner. "A guard of musketeers was appointed, through which he was obliged to pass; every one was ordered to give him a blow on the hinder parts with the butt end of his musket; then he was conveyed to the water side, where a boat was ready to carry him away, with this farewell, *go and mend your manners.*" This discipline had a good effect on him; he made his submission, and was allowed to come and go on trading voyages. In one of these, he was killed by the Pequod Indians, which proved the occasion of a war with that nation.

Mr. Bradford had one son by his first wife; and by his second, Alice Southworth, whom he married in 1623, he had two sons and a daughter. His son William, born in 1624, was deputy governor of the colony after his father's death, and lived to the age of 80; as appears by his grave-stone in Plymouth church-yard. One of his grandsons, and two of his great grandsons were counsellors of Massachusetts. Several other of his descendants have borne respectable characters, and have been placed in stations of honor and usefulness. One of them, William Bradford, has been deputy governor of the State of Rhode Island, and a Senator in the Congress of the United States. Two others, Alden Bradford, and Gamaliel Bradford are members of the Historical Society.

WILLIAM BREWSTER.

WILLIAM BREWSTER.—His Education—Enters the service of Davison—Honored by the States of Holland—Removes to Holland—Sets up a Printing Office—Removes to America—Officiates as a Preacher—His death and character.

THE place of this gentleman's birth is unknown. The time of it was A.D. 1560. He received his education at the University of Cambridge, where he became seriously impressed with the truth of religion, which had its genuine influence on his character, through his whole life.

After leaving the University, he entered into the service of William Davison, a courtier of Queen Elizabeth, and her ambassador in Scotland and in Holland; who found him so capable and faithful, that he reposed the utmost confidence in him. He esteemed him as a son, and conversed with him in private, both on religious and political subjects, with the greatest familiarity; and when anything occurred which required secrecy, Brewster was his confidential friend.

When the Queen entered into a league with the United Provinces, (1584) and received possession of several towns and forts, as security for her expenses in defending their liberties; Davison, who negotiated the matter, entrusted Brewster with the keys of Flushing, one of those cautionary towns; and the States of Holland were so sensible of his merit, as to present him with the ornament of a golden chain.

He returned as ambassador to England, and continued in his service, till Davison, having incurred the hypocritical displeasure of his arbitrary mistress, was imprisoned, fined, and ruined. Davison is said to have been a man of abilities and integrity, but easy to be imposed upon, and for that very reason was made Secretary of State. When Mary, the unfortunate Queen of Scotland, had been tried and condemned, and the parliament of England had petitioned their sovereign for her execution, Elizabeth privately ordered Davison to draw a death-warrant, which she signed, and sent him with it to the chancellor to have the great seal annexed. Having performed this duty, she pre-

tended to blame him for his precipitancy. Davison acquainted the council with the whole transaction; they knew the queen's real sentiments, and persuaded him to send the warrant to the Earls of Kent and Shrewsbury, promising to justify his conduct, and take the blame on themselves. These earls attended the execution of Mary; but, when Elizabeth heard of it, she affected surprise and indignation; threw all the blame on the innocent secretary, and committed him to the tower; where he became the subject of raillery from those very counsellors who had promised to countenance and protect him. He was tried in the star chamber, and fined ten thousand pound, which being rigorously levied upon him, reduced him to poverty.*

During these misfortunes, Brewster faithfully adhered to him, and gave him all the assistance of which he was capable. When he could no longer serve him, he retired into the north of England, among his old friends, and was very highly esteemed by those who were most exemplary for religion. Being possessed of a handsome property, and having some influence, he made use of both in promoting the cause of religion, and procuring persons of good character, to serve in the office of ministers to the parishes in his neighborhood.

By degrees he became disgusted with the impositions of the prelatical party, and their severity toward men of a moderate and peaceable disposition. This led him to inquire critically into the nature of ecclesiastical authority; and having discovered much corruption in the constitution, forms, ceremonies, and discipline of the Established Church, he thought it his duty to withdraw from its communion, and join with others of the same sentiments in the institution of a separate church; of which the aged Mr. Clifton and the younger Mr. Robinson were appointed pastors. The newly formed society met, on the Lord's days, at Mr. Brewster's house; where they were entertained at his expense, with much affection and respect, as long as they could assemble without opposition from their adversaries.

But when the resentment of their hierarchy, heightened by the countenance and authority of James, the successor of Elizabeth, obliged him to seek refuge in a foreign country; Brewster was the most forward to assist them in their removal. He was one of those who went on board of a vessel, in the night at Boston in Lincolnshire, (as already related in the life of Robinson;) and being apprehended by the magistrates, he was the greatest sufferer, because he had the most property. When liberated from confinement, he first assisted the weak and poor of the society in their embarkation, and then followed them to Holland.

His family was large, and his dependents numerous; his education and mode of living were not suited to a mechanical or mercantile life, and he could not practice agriculture in a commercial city. The hardships which he suffered in consequence of this removal were grievous and depressing; but when his finances were exhausted, he had a resource in his learning and abilities. In Leyden he found employment as a tutor; the youth of the city and university came to him for instruction in the English tongue; and by means of the Latin, which was common to both, and a grammar of his own construction, they soon acquired a knowledge of the English language. By the help of some friends, he also set up a printing office, and was instrumental in publishing several books against the hierarchy, which could not obtain a license in England.

His reputation was so high in the church of which he was a member, that they chose him a ruling elder, and confided in his wisdom, experience and integrity, to assist in conducting their temporal as well as ecclesiastical concerns, particularly their removal to America. With the minority of the church he came over, and suffered all the hardships attending their settlement in this wilderness. He partook with them of labor, hunger and watching; his bible and his arms were equally familiar to him; and he was always ready for any duty or suffering to which he was called.

For some time after their arrival, they were destitute of a teaching elder; expecting and hoping that Mr. Robinson, with the remainder of the church, would follow them to America. Brewster frequently officiated as a preacher, but he never could be persuaded to administer the sacraments, or take on him the pastoral office; though it had been stipulated before his departure from Holland, that "those who first went should

* These four colonies were Massachusetts, Connecticut, New-Haven, and Rhode Island.

† It was accidentally seen in a grocer's shop at Halifax, Nova Scotia, by James Clarke, Esq. a corresponding member of the Historical Society, and by him transmitted to Boston.

* For a particular account of Davison, and a full vindication of his conduct, the reader is referred to the fifth volume of Biographia Britannica, published by the late learned and candid Dr. Kippis; where the character of Elizabeth is drawn in proper colors, p. 4—13.

be an absolute church of themselves, as well as those who stand ;" and it was one of their principles, that the brethren who elected, had the power of ordaining to office.

The reason of his refusal was his extreme diffidence ; being unwilling to assume any other office in the church than that with which he had been invested by the whole body. This plea might have some force during Robinson's life, by whose advice he had been prevailed upon to accept the office of ruling elder ; but after his death there was less reason for it, and his declining to officiate was really productive of very disagreeable effects.

A spirit of faction and division was excited in the church, partly by persons of different sentiments and characters, who came over from England, and partly by uneasy and assuming brethren among themselves. Such was the notoriety and melancholy appearance of these divisions, that their friends in England seriously admonished them, and recommended to them "to let their practice in the church be complete and full ; to permit all who feared God, to join themselves to them without delay ; and to let all divine ordinances be used completely in the church, without longer waiting upon uncertainties, or keeping a gap open for opposites."

With this salutary advice they did not comply ; and one great obstacle to their compliance was the liberty of " prophesying," which was allowed not only to the elders, but to such private members as were " gifted." In Robinson's apology,* this principle is explained in a very cautious manner : the exercise of the gift was subject to the judgment of the minister ; and whilst they were under his superintendence, their prophesies were conducted with tolerable regularity ; but when they came to practice on this principle where they had not that advantage, the consequence was prejudicial to the establishment of any regular ministry among them. "The preachments of the gifted brethren produced those discouragements, to the ministers, that almost all left the colony, apprehending themselves driven away by the neglect and contempt, with which the people on this occasion treated them." This practice was not allowed in any other church in New England, except that of Plymouth.

Beside the liberty of prophesying, and public conference, there were several other peculiarities in their practice, which they learned from the Brownists, and in which they differed from many of the Reformed churches. They admitted none to their communion without either a written or oral declaration of their faith and religious experiences, delivered before the whole church, with liberty for every one to ask questions till they were satisfied. They practised ordination by the hands of the brethren. They disused the Lord's prayer and the public reading of the Scriptures. They did not allow the reading of the psalm before singing, till, in compassion to a brother who could not read, they permitted one of the elders or deacons to read it line by line, after it had been previously expounded by the minister. They admitted no children to baptism, unless one, at least of the parents, were in full communion with the church ; and they accounted all baptized children proper subjects of ecclesiastical discipline. Whilst in Holland, they had the Lord's Supper every Sabbath ; but when they came to America, they omitted it till they could obtain a minister, and then had it monthly. Most of these practices were continued for many years, and some are yet adhered to, though others have been gradually laid aside.

* "We learn from the Apostle Paul, (1 Cor. xiv. 3) that he who prophesieth, speaketh to men edification, and exhortation, and comfort ; which to perform conveniently, comes within the compass of but a few of the multitude, haply two or three in each of our churches. Touching prophecy, then, we think the same that the Synod of Enbden (1571) hath decreed in these words : ' Let the order of prophecy be observed according to Paul's institution. Into the fellowship of this work, are to be admitted, not only the ministers, but the teachers, elders, and deacons, yea, even of the multitude, who are willing to confer their gift, received of God, to the common utility of the church ; but as they first be allowed, by the judgment of the ministers and others.'—[Robinson's Apology, chap. viii.]

Governor Winthrop, and Mr. Wilson, minister of Boston, made a visit to Plymouth, in October, 1602, and kept Sabbath there. The following account of the afternoon exercise is preserved in Winthrop's Journal, p. 44.

"In the afternoon, Mr. Roger Williams, according to their custom, propounded a question, to which the pastor, Mr. Smith, spoke briefly ; then Mr. Williams prophesied ; and after him the elder [Brewster] then two or three more of the congregation. Then the elder desired the governor of Massachusetts and Mr. Wilson to speak to it, which they did. When this was ended, the deacon, Mr. Foller, put the congregation in mind of their duty of contribution : upon which the governor and all the rest went down to the deacon's seat, and put into the bag, and then returned."

The Church of Plymouth had no regular minister till four years after the death of Mr. Robinson, and nine years after their coming to America. In 1620, they settled Ralph Smith, who continued with them about five years, and then resigned. He is said to have been a man of "low gifts," and was assisted three years by Roger Williams, of "bright accomplishments, but of offensive errors." In 1635, they had John Reyner, "an able and godly man, of a meek and humble spirit, sound in the truth, and unreprieveable in his life and conversation." He continued with them till 1651, when he removed to Dover, in New Hampshire, where he spent the remainder of his life.

During his ministry at Plymouth, elder Brewster, having enjoyed a healthy old age, died on the sixteenth of April, 1644, being then in the eighty-fourth year of his age. He was able to continue his ecclesiastical functions, and his field labor, till within a few days of his death, and was confined to his bed but one day.

He had been remarkably temperate, through his whole life, having drank no liquor but water, till within the last five or six years. For many months together he had, through necessity, lived without bread ; having nothing but fish for his sustenance, and sometimes was destitute of that. Yet, being of a pliant and cheerful temper, he easily accommodated himself to his circumstances. When nothing but oysters or clams were set on his table, he would give thanks, with his family, that they could "suck of the abundance of the seas, and of the treasures hid in the sand."

He was a man of eminent piety and devotion ; not prolix, but full and comprehensive in his public prayers ; esteeming it his duty, to strengthen and encourage the devotion of others, rather than to weary them with long performances. On days of fasting and humiliation, he was more copious, but equally fervent. As an instance of this, it is observed, that in 1623, a drought of six weeks having succeeded the planting season, in July a day was set apart for fasting and prayer. The morning was clear and hot, as usual, but after eight hours employed in religious exercises, the weather changed, and before the next morning, a gentle rain came on, which continued, with intermissions of fair and warm weather, fourteen days, by which the languishing corn revived. The neighboring Indians observed the change, and said that "the Englishman's God was a good God."

In his public discourses, Mr. Brewster was very clear and distinguishing, as well as pathetic ; addressing himself first to the understanding, and then to the affections of his audience : convincing and persuading them of the superior excellency of true religion. Such a kind of teaching, was well adapted, and in many instances effectual, to the real instruction and benefit of his hearers. What a pity that such a man could not have been persuaded to take on him the pastoral office !

In his private conversation, he was social, pleasant, and inoffensive ; yet when occasion required, he exercised that fortitude which true virtue inspires, but mixed with such tenderness, that his reproofs gave no offence.

His compassion towards the distressed was an eminent trait in his character ; and if they were suffering for conscience sake, he judged them, of all others, most deserving of pity and relief. Nothing was more disgusting to him than vanity and hypocrisy.

In the government of the church, he was careful to preserve order and purity, and to suppress contention. Had his diffidence permitted him to exercise the pastoral office, he would have had more influence, and kept intruders at a proper distance.

He was owner of a very considerable library, part of which was lost, when the vessel in which he embarked was plundered at Boston in Lincolnshire. After his death, his remaining books were valued at forty-three pounds, in silver, as appears by the colony records, where a catalogue of them is preserved.

ROBERT CUSHMAN.

ROBERT CUSHMAN—Embarks for America—Returns to England—Arrives at Plymouth—Delivers a Discourse on Self Love—Sails for England—Taken by the French—his Death and character.

ROBERT CUSHMAN was a distinguished character among that collection of worthies who quitted England on account of their religious difficulties, and settled with Mr. John Robinson, their pastor, in the city of Leyden. Proposing afterwards a removal to America, in the year 1617, Mr. Cushman, and Mr. John Carver,

* This account of Mr. Cushman was published in 1785, at Plymouth, as an Appendix to the third edition of his Discourse on Self Love. It was written by John Davis, Esq.

(afterward the first governor of New Plymouth) were sent over to England, as their agents, to agree with the Virginia Company for a settlement, and to obtain, if possible, a grant of liberty of conscience in their intended plantation, from King James.

From this negotiation, though conducted on their part with great discretion and ability, they returned unsuccessful to Leyden, in May, 1618. They met with no difficulty indeed from the Virginia Company, who were willing to grant them sufficient territory, with as ample privileges as they could bestow : but the pragmatical James, the pretended vicegerent of the Deity, refused to grant them that liberty in religious matters, which was their principal object. This persevering people determined to transport themselves to this country, relying upon James' promise that he would connive it, though not expressly tolerate them ; and Mr. Cushman was again despatched to England in February, 1619, with Mr. William Bradford, to agree with the Virginia Company on the terms of their removal and settlement.

After much difficulty and delay, they obtained a patent in the September following ; upon which, part of the church at Leyden, with their elder, Mr. Brewster, determined to transport themselves as soon as possible. Mr. Cushman was one of the agents in England to procure money, shipping and other necessities for the voyage, and embarked with them at Southampton, August 5th, 1620. But the ship, in which he sailed, proving leaky, and after twice potting into port to repair, being condemned as unfit to perform the voyage, Mr. Cushman with his family, and a number of others, were obliged, though reluctantly, to relinquish the voyage for that time, and return to London. Those in the other ship proceeded and made their settlement at Plymouth in December, 1620, where Mr. Cushman also arrived in the ship Fortune from London on the 10th of November, 1621, but took passage in the same ship back again, pursuant to the directions of the merchant adventurers in London, (who fitted out the ship, and by whose assistance the first settlers were transported) to give them an account of the plantation. He sailed from Plymouth December 13th, 1621 ; and arriving on the coast of England, the ship, with a cargo valued at £500 sterling, was taken by the French. Mr. Cushman, with the crew, was carried into France ; but arrived in London in the February following. During his short residence at Plymouth, though a mere lay character, he delivered a discourse on the sin and danger of self-love, which was printed in London (1622) and afterward, re-printed in Boston, (1724) and again at Plymouth, (1785.) And though his name is not prefixed to either of the two former editions, yet unquestionable tradition renders it certain that he was the author, and even transmits to us a knowledge of the spot where it was delivered. Mr. Cushman, though he constantly corresponded with his friends here, and was very serviceable to their interest in London, never returned to the country again ; but, whilst preparing for it, was removed to a better, in the year 1626. The news of his death, and Mr. Robinson's, arrived at the same time, at Plymouth, by Captain Standish, and seems to have been equally lamented by their bereaved and suffering friends there. He was zealously engaged in the prosperity of the plantation, a man of activity and enterprise, well versed in business, respectable in point of intellectual abilities, well accomplished in scriptural knowledge, an unaffected professor, and a steady sincere practiser of religion. The design of the above mentioned discourse was to keep up that flow of public spirit, which, perhaps, began then to abate, but which was thought necessary for their preservation and security. The policy of that entire community of interests which our fathers established, and which this sermon was designed to preserve, is, nevertheless, justly questionable. The love of separate property, for good and wise purposes, is strongly implanted in the heart of man. So far from being unfavorable to a reasonable generosity and public spirit, it better enables us to display them, and is not less consistent with the precepts of Scripture, rightly understood, than with the dictates of reason. This is evidenced by the subsequent conduct of this very people. In the year 1623, departing a little from their first system, they agreed that every family should plant for themselves ; bringing in a competent portion at harvest, for the maintenance of public officers, fishermen, &c. and in all other things to go on in the general way, (as they term it) as before ; for this purpose they assigned to every family a parcel of land, for a year only, in proportion to their number. Even this temporary division, as Governor Bradford, in his manu-

script history, observes, "has a very good effect; makes all industrious; gives content; even the women and children now go into the field to work, and much more corn is planted than ever." In the spring of the year 1624, the people being still uneasy, one acre of land was given to each, in fee-simple; no more to be given, till the expiration of the seven years. In the year 1627, when they purchased the interest of the adventurers in England, in the plantation, there was a division and allotment of almost all their property, real and personal; twenty acres of tillage land to each, besides what they held before; the meadows and the trade only, remaining in common.

Thus it is observable, how men, in spite of their principles, are naturally led into that mode of conduct, which truth and utility, ever coincident, point out. Our fathers deserve the highest commendation for prosecuting, at the hazard of life and fortune, that reformation in religion, which the Church of England left imperfect: taking for this purpose, the Sacred Scriptures, as their only guide, they travelled in the path of truth, and appealed to a most noble and unerring standard; but when from their reverence to this divine authority, in matters of religion, they were inclined to esteem it the only guide, in all the affairs of life, and attempted to regulate their civil polity upon church ideas, they erred, and involved themselves in innumerable difficulties.

The end of civil society is the security of the temporal liberty and prosperity of man, not all the happiness and perfection which he is capable of attaining, for which other means are appointed. Had not our fathers placed themselves upon such a footing, with respect to property, as was repugnant to the nature of man, and not warranted by the true end of civil society, there would probably have been no just ground of complaint of a want of real and reasonable public spirit; and the necessity of the exhortation and reproof, contained in Mr. Cushman's discourse, would have been superseded. Their zeal, their enterprise, and their uncommon sufferings in the prosecution of their arduous undertaking, render it morally certain, that they would have ever cheerfully performed their duty in this respect. Their contemporaries might censure them for what they *did not*, but their posterity must ever admire and revere them for what they *did* exhibit.

After the death of Mr. Cushman, his family came over to New England. His son, Thomas Cushman, succeeded Mr. Brewster, as ruling elder of the Church of Plymouth, being ordained to that office in 1649. He was a man of good gifts, and frequently assisted in carrying on the public worship, preaching and catechizing. For it was one of the professed principles of that church, in its first formation, "to choose none for governing elders, but such as were able to teach." He continued in this office till he died, in 1691, in the eighty-fourth year of his age.

The above mentioned discourse of Mr. Robert Cushman, in 1621, may be considered as a specimen of the "prophesyings" of the brethren. The occasion was singular; the exhortations and reproofs are not less so; but were adapted to the then state of society. Some specimens may not be disagreeable, and are therefore here inserted.

"Now, brethren, I pray you remember yourselves, and know that you are not in a retired monastical course, but have given your names and promises one to another, and covenanted here to cleave together in the service of God and the king. What then must you do? May you live as retired hermits, and look after nobody? Nay, you must seek still the wealth of one another; and inquire, as David, how liveth such a man? how is he clad? how is he fed? He is my brother, and my associate; we ventured our lives together here, and had a hard brunt of it; and we are in league together. Is his labor harder than mine? surely I will ease him. Hath he no bed to lie on? I have two; I'll lend him one. Hath he no apparel? I have two suits, I'll give him one of them. Eats he coarse fare, bread and water? and have I better? surely we will part stakes. He is as good a man as I, and we are bound each to other; so that his wants must be my wants, his sorrows my sorrows, his sickness my sickness, and his welfare my welfare; for I am as he is. Such a sweet sympathy were excellent, comfortable, yea, heavenly, and is the only maker and conservator of churches and commonwealths.

"It wonderfully encourageth men in their duties, when they see the burthen equally borne; but when some withdraw themselves, and retire to their own particular ease, pleasure or profit, what heart can men have to go on in their business? When men are come

together to lift some weighty piece of timber, or vessel, if one stand still and do not lift, shall not the rest be weakened and disheartened? Will not a few idle drones spoil the whole stock of laborious bees? So one idle belly, one murmurer, one complainer, one self-lover, will weaken and dishearten a whole colony. Great matters have been brought to pass, where men have cheerfully, as with one heart, hand and shoulder, gone about it, both in wars, buildings and plantations; but where every man seeks himself, all cometh to nothing.

"The country is yet raw, the land untilld; the cities not builded; the cattle not settled. We are compassed about with a helpless and idle people, the natives of the country, which cannot, in any comely or comfortable manner, help themselves; much less us. We also have been very chargeable to many of our loving friends which helped us hither, and now again supplied us. So that before we think of gathering riches, we must even in conscience think of requiting their charge, love, and labor; and curses be on that profit and gain which aimeth not at this. Besides, how many of our dear friends did here die at our first entrance! many of them, no doubt, for want of good lodging, shelter, and comfortable things; and many more may go after them quickly, if care be not taken. Is this then, a time for men to begin to seek themselves? Paul saith, that men in the last days shall be lovers of themselves (2 Tim. iii. 2.); but it is here yet but the first days, and, as it were, the dawning of this new world. It is now therefore no time for men to look to get riches, brave clothes, dainty fare; but to look to present necessities. It is now no time to pamper the flesh, live at ease, snatch, catch, scrape, and hoard up; but rather to open the doors, the chests, and vessels, and say, brother, neighbor, friend, what want ye? any thing that I have? make bold with it; it is yours to command, to do you good, to comfort and cherish you; and glad I am that I have it for you.

"Let there be no prodigal son to come forth and say, give me the portion of lands and goods that appertaineth to me, and let me shift for myself. It is yet too soon to put men to their shifts; *Israel* was seven years in Canaan, before the land was divided unto tribes, much longer before it was divided unto families; and why wouldest thou have thy particular portion, but because thou thinkest to live better than thy neighbor, and scornest to live so meanly as he? but who, I pray thee, brought this particularizing first into the world? Did not Satan who was not content to keep that equal state with his fellows, but would set his throne above the stars? Did not he also entice man to despise his general felicity and happiness, and go try particular knowledge of good and evil? Nothing in this world doth more resemble heavenly happiness, than for men to live as one, being of one heart, and one soul; neither any thing more resembles hellish horror, than for every man to shift for himself, for if it be a good mind and practice, thus to affect particulars, *mine and thine*, then it should be best also for God to provide one heaven for thee, and another for thy neighbor.

"*Objection.* But some will say, If all men will do their endeavors, as I do, I could be content with this generality; but many are idle and slothful, and eat up other's labors, and therefore it is best to part, and then every man may do his pleasure.

"If others be idle and thou diligent, thy fellowship, provocation, and example, may well help to cure that malady in them, being together; but being asunder, shall they not be more idle, and shall not gentry and beggary be quickly the glorious ensigns of your commonwealth?

"Be not too hasty to say men are idle and slothful. All men have not strength, skill, faculty, spirit, and courage to work alike. It is thy glory and credit, that thou canst do so well, and his shame and reproach, that he can do no better; and are not these sufficient rewards to you both?

"If any be idle apparently, you have a law and governors to execute the same, and to follow that rule of the apostle, to keep back their bread, and let them not eat; go not therefore whispering, to charge men with idleness; but go to the governor and prove them idle and thou shalt see them have their deserts.

"There is no grief so tedious as a churlish companion. Bear ye one another's burdens, and be not a burden one to another. Avoid all factions, frowardness, singularity, and withdrawals, and cleave fast to the Lord, and one to another, continually; so shall you be a notable precedent to these poor heathens, whose eyes are upon you, and who very brutishly and cruelly do

daily eat and consume one another, through their emulations, ways and contentions; be you, therefore ashamed of it, and win them to peace, both with yourselves, and with one another, by your peaceable examples, which will preach louder to them, than if you could cry in their barbarous language; so also shall you be an encouragement to many of your Christian friends, in your native country, to come to you, when they hear of your peace, love and kindness. But, above all, it shall go well with your souls, when that God of peace and unity shall come to visit you with death, as he hath done many of your associates, you being found of him, not in murmurings, discontent, and jars, but in brotherly love, and peace, may be translated from this wandering wilderness, unto that joyful and heavenly Canaan." Amen.

EDWARD WINSLOW.

EDWARD WINSLOW—His Birth and Education—Travels on the Continent—Removes to America—His visit to Massachusetts—Returns to England—Sails again for Plymouth—Sent as Agent to England—Committed to the Fleet Prison—Released—Returns to New England and chosen Governor—Chosen Commissioner of the United Colonies—Sent by Cromwell against the Spaniards—Dies on the passage to Jamaica—Account of his Descendants.

THIS eminently useful person was the eldest son of a gentleman of the same name, of Droitwich, in Worcestershire, where he was born in 1594. Of his education and first appearance in life we have no knowledge. In the course of his travels on the continent of Europe, he became acquainted with Mr. Robinson and the church under his pastoral care at Leyden, where he settled and married. To this church he joined himself, and with them he continued till their removal to America. He came hither with the first company, and his name is the third in the list of those who subscribed the covenant of incorporation, before their disembarkation at Cape Cod. His family then consisted of his wife and three other persons. He was one of the company who coasted the bay of Cape Cod, and discovered the harbor of Plymouth; and when the Sachem Masasoit came to visit the strangers, he offered himself as a hostage, whilst a conference was held and a treaty was made with the savage prince.

His wife died soon after his arrival; and in the following spring, he married Susanna, the widow of William White, and mother of Peregrine, the first English child born in New England. This was the first marriage solemnized in the colony; (May 12, 1621.)

In June, he went in company with Stephen Hopkins to visit Sachem Masasoit at Pokanoket. The design of this visit is related in Bradford's life. The particular circumstances of it may properly be detailed here, in the very words of Winslow's original narrative.

"We set forward, the 10th of June, about nine in the morning; our guide [Tisquantum] resolving that night to rest at Namasket, a town under Masasoit, and conceived by us to be very near, because the inhabitants flocked so thick, on every slight occasion among us; but we found it to be fifteen English miles. On the way, we found ten or twelve men, women and children, which had pestered us till we were weary of them; perceiving that (as the manner of them all is) where victuals is easiest to be got, there they live, especially in the summer; by reason whereof, our bay affording many lobsters, they resort every spring tide thither, and now returned with us to Namasket. Thither we came about three in the afternoon; the inhabitants entertaining us, with joy, in the best manner they could, giving us a kind of bread, called by them Mazium, and the spawn of shad, which then they got in abundance; inasmuch as they gave us spoons to eat them; with these they boiled musty acorns, but of the shad we ate heartily. They desired one of our men to shoot at a crow, complaining what damage they sustained in their corn by them; who shooting and killing, they much admired it, as other shots on other occasions.

"After this Tisquantum told us, we should hardly in one day reach Pokanokick, moving us to go eight miles farther, where we should find more store and better victuals. Being willing to hasten our journey, we went, and came thither at setting-sun; where we found many of the men of Namasket fishing at a ware which they had made on a river, which belonged to them, where they caught abundance of bass. These welcomed us also, gave us of their fish, and we them of our victuals, not doubting but we should have enough wherever we came. There we lodged in the open fields; for houses they had none, though they spent the most of the summer there. The head of this river is reported to be not far from the place of our abode;

upon it are and have been many towns, it being a good length. The ground is very good on both sides, it being for the most part cleared. Thousands of men have lived there, which died in a great plague, not long since; and pity it was and is to see so many goodly fields and so well seated, without men to dress the same.

"The next morning we brake our fast, and took our leave and departed; being then accompanied with six savages. Having gone about six miles by the river's side, at a known shoal place, it being low water, they spake to us to put off our breeches, for we must wade through. Here let me not forget the valor and courage of some of the savages, on the opposite side of the river; for there were remaining alive only two men, both aged. These two, spying a company of men entering the river, ran very swiftly, and low in the grass, to meet us at the bank; where, with shrill voices, and great courage, standing, charged upon us with their bows, they demanded what we were, supposing us to be enemies, and thinking to take advantage of us in the water: but seeing we were friends, they welcomed us with such food as they had; and we bestowed a small bracelet of beads on them. Thus far, we are sure, the tide ebbs and flows.

"Having here again refreshed ourselves, we proceeded on our journey, the weather being very hot; yet the country so well watered, that a man could scarce be dry, but he should have a spring at hand to cool his thirst, beside small rivers in abundance. The savages will not willingly drink but at a spring-head. When we came to any small brook, where no bridge was, two of them desired to carry us through of their own accord; also fearing we were or would be weary, they offered to carry our pieces, [guns;] also, if we would lay off any of our clothes, we should have them carried; and as the one of them had found more special kindness from one of the messengers, and the other savage from the other, so they showed their thankfulness accordingly in affording us all help and furtherance in the journey.

"As we passed along, we observed that there were few places by the river, but had been inhabited; by reason whereof, much ground was clear save of weeds which grew higher than our heads. There is much good timber, oak, walnut, fir, beech, and exceeding great chesnut trees.

"Afterward we came to a town of Masassoits', where we eat oysters, and other fish. From thence we went to Pokanokick, but Masasoit was not at home. There we staid, he being sent for. When news was brought of his coming, our guide, Tisquantum, requested that at our meeting, we would discharge our pieces. One of us going to charge his piece, the women and children, through fear ran away and could not be pacified till he laid it down again; who afterward were better informed by our interpreter.

"Masasoit being come, we discharged our pieces and saluted him, who, after their manner, kindly welcomed us, and took us into his house, and set us down by him, where, having delivered our message and presents, and having put the coat on his back, and the chain about his neck, he was not a little proud to behold himself, and his men also to see their king so bravely attired.

"For answer to our message, he told us we were welcome; and he would gladly continue that peace and friendship which was between him and us; and for his men, they should no more pester us, as they had done; also that he would send to Paomet, and help us to seed-corn, according to our request.

"This being done, his men gathered near to him, to whom he turned himself and made a great speech; the meaning whereof (as far as we could learn) was, that he was commander of the country, and that the people should bring their skins to us. He named at least thirty places; and their answer was confirming and applauding what he said.

"He then lighted tobacco for us, and fell to discoursing of England and of the king, marvelling that he could live without a wife. Also he talked of the Frenchmen; bidding us not to suffer them to come to Narrowsiganset; for it was King James's country, and he was King James's man. It grew late, but he offered us no victuals; for indeed he had not any, being so newly come home. So we desired to go to rest. He laid us on the bed with himself and his wife; they at the one end, and we at the other; it being only planks, laid a foot from the ground, and a thin mat upon them. Two more of his chief men, for want of room, pressed by and upon us; so that we were worse wearied of our lodging, than of our journey.

"The next day being Thursday, many of their sachems or petty governors came to see us, and many of their men also. They went to their manner of games for skins and knives. We challenged them to shoot for skins, but they durst not; only they desired to see one of us shoot at a mark; who shooting with hail-shot, they wondered to see the mark so full of holes.

"About one o'clock, Masasoit brought two fishes that he had shot; they were like bream, but three times so big, and better meat. [Probably the fish called Taug.] These being boiled, there were at least forty, that looked for a share in them; the most eat of them. This meal only, we had in two nights and a day; and had not one of us brought a partridge, we had taken our journey fasting. Very importunate he was with us to stay with him longer; but we desired to keep the sabbath at home and feared we should be light-headed for want of sleep; for what with bad lodging, barbarous singing, (for they use to sing themselves to sleep) lice and fleas within doors, and musketoes without, we could hardly sleep, all the time of our being there; and we much feared that if we should stay any longer, we should not be able to recover home for want of strength.

"On Friday morning, before sun-rising, we took our leave and departed. Masasoit being both grieved and ashamed, that he could not better entertain us. Retaining Tisquantum to send from place to place, to procure truck for us, he appointed another [guide] Tokamaham in his place, whom we found faithful before and after upon all occasions."

This narrative gives us a just idea of the hospitality and poverty of the Indians. They gladly entertain strangers with the best they can afford; but it is familiar to them to endure long abstinence. Those who visit them must be content to fare as they do, or carry their own provisions and share it with them.

Mr. Winslow's next excursion was by sea to Monahigon, an island near the mouth of Penobscot Bay, to procure a supply of bread from the fishing vessels, who resorted to the eastern coast in the spring of 1622. This supply, though not large, was freely given to the suffering colony; and being prudently managed in the distribution, amounted to one quarter of a pound for each person, till the next harvest. By means of this excursion, the people of Plymouth became acquainted with the eastern coast; of which knowledge they afterwards availed themselves, for a beneficial traffic with the natives.

In the spring of the year 1623, Mr. Winslow made a second visit to the sachem, on account of his sickness; the particular circumstances of which are thus given in his own words.

"News came to Plymouth that Massassowat* was like to die, and that at the same time there was a Dutch ship driven so high on the shore, before his dwelling, by stress of weather, that till the tides increased, she could not be got off. Now it being a commendable manner of the Indians, when any, especially of note, are dangerously sick, for all that profess friendship to them to visit them in their extremity; therefore it was thought meet, that as we had ever professed friendship, so we should now maintain the same, by observing this their laudable custom; and the rather, because we desired to have some conference with the Dutch, not knowing when we should have so fit an opportunity.

"To that end, myself having formerly been there, and understanding in some measure the Dutch tongue, the governor [Bradford] again laid this service on myself, and fitted me with some cordials to administer to him; having one Mr. John Hamden, a gentleman of London, who then wintered with us, and desired much to see the country, for my comfort, and Hobamock for our guide. So we set forward, and lodged the first night at Namaskat, where we had friendly entertainment.

"The next day, about one o'clock, we came to a ferry in Conbatant's country, where, upon discharge of my piece, divers Indians came to us, from a house not far off. They told us that Massassowat was dead, and that day buried; and that the Dutch would be gone before we could get thither, having hove off their ship already. This news struck us blank; but especially Hobamock, who desired me to return with all speed. I told him I would first think of it, considering now, that he being dead, Conbatant, or Corbitant, was the most likely to succeed him, and that we were not

* Thus it is spelt in Winslow's narrative.

† His name is spelt Corbitant, Conbatant, and Conbutant. This ferry is probably the same which is now called Slade's Ferry, in Swanzev.

above three miles from Mattapoyst, his dwelling place. Although he were but a hollow hearted friend to us, I thought no time so fit as this to enter into more friendly terms with him, and the rest of the sachems thereabouts; hoping, through the blessing of God, it would be a means in that unsettled state, to settle their affections towards us; and though it were somewhat dangerous, in respect of our personal safety, yet esteeming it the best means, leaving the event to God in his mercy, I resolved to put it in practice, if Mr. Hamden and Hobamock durst attempt it with me, whom I found willing. So we went toward Mattapoyst.

"In the way, Hobamock manifesting a troubled spirit, brake forth into these speeches. *Neen womasn Sagamus, &c.* "My loving Sachem! many have I known but never any like thee!" Then turning to me, he said, whilst I lived, I should never see his like among the Indians. He was no liar, he was not bloody and cruel like other Indians; in anger and passion he was soon reclaimed; easy to be reconciled toward such as had offended him; ruled by reason, in such measure as he would not scorn the advice of mean men; and that he governed his men better with few strokes than others did with many; truly loving where he loved; yea, he feared we had not a faithful friend left among the Indians, showing how often he restrained their malice. He continued a long speech, with such signs of lamentation and unfeigned sorrow, as would have made the hardest heart relent.

"At length we came to Mattapoyst, and went to the sachem's place; Conbatant was not at home, but at Pokanokick, five or six miles off. The squaw sachem gave us friendly entertainment. Here we inquired again concerning Massassowat; they thought him dead; but knew no certainty. Whereupon I hired one to go with all exhibition to Pokanokick, that we might know the certainty thereof, and whilst to acquaint Conbatant with our being there. About half an hour before sun-setting the messenger returned, and told us that he was not yet dead, though there was no hope that we should find him living. Upon this, we were much revived, and set forward with all speed, though it was late within night when we got thither. About two o'clock, that afternoon, the Dutchman had departed, so that, in that respect, our journey was frustrate.

"When we came thither, we found the house so full of men, as we could scarce get in, though they used their best diligence to make way for us. They were in the midst of their charms for him, making such a hellish noise, as distempored us that were well, and therefore unlike to ease him that was sick. About him were six or eight women, who clafed his arms and legs to keep heat in him. When they had made an end of their charming, one told him that his friends the English were come to see him. Having his understanding left, though his sight wholly gone, he asked who was come! they told him *Winsnowe*; for they cannot pronounce the letter L, but ordinarily N in place of it;) he desired to speak with me. When I came to him and they told him of it, he put forth his hand to me, which I took; then he said twice, though very inwardly, '*keen, Winsnowe*?' art thou Winslow? I answered '*ahhe*,' that is, 'yes.' Then he doubted these words, '*Matta neen wonckunet namon Winsnowe*?' that is to say, 'O Winslow, I shall never see thee again!' Then I called Hobamock, and desired him to tell Masasoit, that the governor hearing of his sickness, was sorry for the same; and though, by reason of many businesses, he could not himself come, yet he had sent me, with such things for him as he thought most likely to do him good in this extremity; and whereof if he pleased to take, I would presently give him; which he desired; and, having a confection of many comfortable conserves, on the point of my knife, I gave him some, which I could scarce get through his teeth; when it was dissolved in his mouth, he swallowed the juice of it, whereat those that were about him were much rejoiced, saying he had not swallowed any thing in two days before. Then I desired to see his mouth, which was exceedingly furred, and his tongue swelled in such a manner, that it was not possible for him to eat such meat as they had. Then I washed his mouth, and scraped his tongue; after which I gave him more of the confection, which he swallowed with more readiness. Then he desired to drink; I dissolved some of it in water, and gave him thereof; and within half an hour, this wrought a great alteration in him, and presently after his sight began to come to him. Then I gave him more, and told him of a mis-

* A neck of land in the township of Swanzev, commonly pronounced Mattapoiset.

nap we had by the way, in breaking a bottle of drink, which the governor also sent him, saying, if he would send any of his men to Plymouth, I would send for more of the same; also for chickens, to make him broth, and for other things which I knew were good for him, and would stay the return of the messenger. This he took marvellous kindly, and appointed some who were ready to go by two o'clock in the morning, against which time I made ready a letter, declaring our good success, and desiring such things as were proper. He requested me that I would the next day take my piece, and kill him some fowl, and make him such potage as he had eaten at Plymouth, which I promised; but his stomach coming to him, I must needs make him some without fowl, before I went abroad. I caused a woman to bruise some corn and take the flour from it, and set the broken corn in a pipkin, (for they have earthen pots of all sizes.) When the day broke, we went out to seek herbs, (it being the middle of March) but could not find any but strawberry leaves, of which I gathered a handful and put into the same, and because I had nothing to relish it, I went forth again and pulled up a sassafras root, and sliced a piece and boiled it, till it had a good relish. Of this broth I gave him a pint, which he drank and liked it well; after this his sight mended, and he took some rest. That morning he caused me to spend in going among the sick in the town, requesting me to wash their mouths, and give them some of the same I gave him. This pains I took willingly, though it were much offensive to me.

"When the messengers were returned, finding his stomach come to him, he would not have the chickens killed, but kept them for breed. Neither durst we give him any physic, because he was so much altered, not doubting of his recovery if he were careful. Upon his recovery he brake forth into these speeches: 'Now I see the English are my friends, and love me; whilst I live, I will never forget this kindness they have showed me.' At our coming away, he called Hobamock to him, and privately told him of a plot of the Massachusetts against Weston's colony, and so against us. But he would neither join therein, nor give way to any of his. With this he charged him to acquaint me, by the way, that I might inform the governor. Being fitted for our return, we took leave of him, who returned many thanks to our governor, and also to ourselves, for our labor and love; the like did all that were about him. So we departed."

In the autumn of the same year, Mr. Winslow went to England as agent to the colony, to give an account of their proceedings to the adventurers, and procure such things as were necessary. Whilst he was in England, he published a narrative of the settlement and transactions of the colony at Plymouth, under this title, "Good news from New England, or a relation of things remarkable in that plantation, by E. Winslow."

This narrative is abridged in Purchas's Pilgrims, and has been of great service to all succeeding historians. To it, he subjoined an account of the manners and customs, the religious opinions and ceremonies of the Indian natives; which, being an original work and now rarely to be found, is inserted in the Appendix.

In the following spring (March 1624) Mr. Winslow returned from England, having been absent no longer than six months; bringing a good supply of clothing and other necessities, and, what was of more value than any other supply, *three heifers and one bull*; the first neat cattle brought into New-England.

The same year, he went again to England, where he had an opportunity of correcting a mistake which had been made in his former voyage. The adventurers, had then, in the same ship with the cattle, sent over John Lyford, as a minister; who was soon suspected of being a person unfit for that office. When Mr. Winslow went again to England, he imparted this suspicion; and at a meeting of the adventurers, it appeared on examination that Lyford had been a minister in Ireland; where his conduct had been so bad as to oblige him to quit that kingdom; and that the adventurers had been imposed upon, by false testimony concerning him. With this discovery, Mr. Winslow came back to Plymouth in 1625, and found the court sitting, on the affair of Oldham, who had returned, after banishment. The true characters of these impostors being thus discovered, they were both expelled from the plantation.

About the same time, Governor Bradford having prevailed on the people of Plymouth to choose five assistants, instead of one, Mr. Winslow was first elected to this office; in which he was continued till 1633,

when by the same influence, he was chosen governor,* for one year.

Mr. Winslow was a man of great activity and resolution, and therefore well qualified to conduct enterprises for the benefit of the colony. He frequently went to Penobscot, Kennebeck, and Connecticut rivers, on trading voyages, and rendered himself useful and agreeable to the people.

In 1635, he undertook another agency in England for the colonies of Plymouth and Massachusetts; partly on occasion of the intrusions which were made on the territory of New England, by the French on the east, and by the Dutch on the west: and partly to answer complaints, which had been made to the government against the Massachusetts Colony, by Thomas Morton, who had been twice expelled for his misbehavior.

At that time, the care of the colonies was committed to a number of bishops, lords, and gentlemen, of whom Archbishop Laud was at the head. It was also in contemplation to establish a general government in America, which would have superseded the charters of the colonies.

Winslow's situation at that time, was critical, and his treatment was severe. In his petition to the commissioners, he set forth the encroachments of the French and Dutch, and prayed for "a special warrant to the English Colonies to defend themselves against all foreign enemies." Governor Winthrop censured this petition, as "ill advised; because such precedents might endanger their liberties; that they should do nothing, but by commission out of England."

The petition, however, was favorably received by some of the Board. Winslow was heard several times in support of it, and pointed out a way in which the object might have been attained without any charge to the Crown, by furnishing some of the chief men of the colonies with authority, which they would exercise at their own expense, and without any public national disturbance. This proposal crossed the design of George and Mason, whose aim was to establish a general government; and the archbishop who was engaged in their interest, put a check to Winslow's proposal, by questioning him on Morton's accusation, for his own personal conduct in America. The offences alleged against him were, that he, not being in holy orders, but a mere layman, had taught publicly in the church, and had officiated in the celebration of marriages. To the former, Winslow answered, "that sometimes, when the church was destitute of a minister, he had exercised his gift for the edification of his brethren." To the latter, "that though he had officiated as a magistrate in the solemnizing of marriage, yet he regarded it only as a civil contract; that the people of Plymouth had for a long time been destitute of a minister, and were compelled by necessity to have recourse to the magistrate in that solemnity; that this was not to them a novelty, having been accustomed to it in Holland where he himself had been married by a Dutch magistrate, in the state house." On this honest confession, the archbishop pronounced him guilty of the crime of separation from the national church, and prevailed on the Board to consent to his imprisonment. He was therefore committed to the Fleet prison, where he lay confined seventeen weeks. But after that time, on petitioning the Board, he obtained release.

At his return to New England, the colony showed him the highest degree of respect, by choosing him their governor for the succeeding year (1636.) In this office he conducted himself greatly to their satisfaction. In 1644 he was again honored with the same appointment, and in the intermediate years, was the first on the list of magistrates.

When the colonies of New England entered into a confederation for their mutual defence, in 1643, Mr. Winslow was chosen one of the commissioners on behalf of Plymouth, and was continued in that office till 1646, when he was solicited by the Colony of Massachusetts, to go again to England to answer to the complaints of Samuel Gorton and others, who had charged them with religious intolerance and persecution. The times being changed, and the Puritans being in power,

* The following note from Governor Winthrop's Journal is worthy of observation. "Mr. Edward Winslow was chosen governor of Plymouth. Mr. Bradford having been governor about ten [twelve years,] and now by importunity got off."

This singular trait in Bradford's character, of which there is the faintest evidence, sufficiently invalidates an insinuation of Hutchinson, that Winslow's "employment abroad prevented a competition between Bradford and him for the governor's place."

Hutchinson was a governor of a different character. † Winslow's Journal, 47. ‡ Hutch. Hist. II. 457.

Mr. Winslow had great advantage in this business, from the credit and esteem which he enjoyed with that party. We have no account of the particulars of this agency, but only in general, that "by his prudent management, he prevented any damage, and cleared the colony from any blame or dishonor."

One design of the confederation of the colonies, was to promote the civilization of the Indians, and their conversion to the Christian religion. In this great and good work, Mr. Winslow was from principle, very zealously engaged. In England, he employed his interest and friendship with members of the Parliament, and other gentlemen of quality and fortune to erect a corporation there for the prosecution of the design. For this purpose, an act of Parliament was passed (1649) incorporating a society in England "for propagating the Gospel in New England." The commissioners of the United Colonies were constituted a Board of Correspondents, and distributors of the money, which was supplied in England by charitable donations from all the cities, towns, and parishes in the kingdom. By the influence and exertions of both these respectable bodies, ministers were supported among the Indians of New England: the Bible and other books of piety were translated into the Indian tongue, and printed for their use; and much pains were taken by several worthy ministers, and other gentlemen to instruct the Indians, and reduce them to a civilized life. This society is still in existence, and, till the revolution in America, they kept up a Board of Correspondents at Boston, but since that period it has been discontinued. Of this corporation, at its first establishment, Mr. Winslow was a very active and faithful member in England; where his reputation was great, and his abilities highly valued by the prevailing party, who found him so much employment there, and elsewhere, that he never returned to New England.

When Oliver Cromwell (1655) planned an expedition against the Spaniards in the West Indies, and sent Admiral Penn and General Venables to execute it, he appointed three commissioners to superintend and direct their operations: of which number Winslow was the chief; the other two were Richard Holdrip, and Edward Blagge. Their object was to attack St. Domingo, the only place of strength which the Spaniards had in Hispaniola.

The commanders disagreed in their tempers and views, and the control of the commissioners was of no avail. The troops, ill appointed and badly provided, were landed at too great a distance from the city, and lost their way in the woods. Worn with hunger and thirst, heat and fatigue, they were routed by an inconsiderable number of Spaniards; six hundred were killed, and the remnant took refuge on board their vessels.

To compensate as far as possible for this unfortunate event, the fleet sailed for Jamaica, which surrendered without any resistance. But Mr. Winslow, who partook of the chagrin of the defeat, did not enjoy the pleasure of the victory. In the passage between Hispaniola and Jamaica, the heat of the climate threw him into a fever; which, operating with the dejection of his mind, put an end to his life on the 8th of May, 1655, in the sixty-first year of his age. His body was committed to the deep, with the honors of war, forty-two guns being fired by the fleet on that occasion.

The following well-meant but inelegant verses were written by one of the passengers on board the same ship in which he died.

"The eighth of May, west from Spaniola shore,
God took from us our grand commissioner,
Winslow by name; a man in chiefest trust;
Whose life was sweet and conversation just;
Whose parts and wisdom most men did excel;
An honor to his place, as all can tell."

Before his departure from New-England, Mr. Winslow had made a settlement on a valuable tract of land in Marshfield, to which he gave the name of Carswell, probably from a castle and seat of that name in Staffordshire. His son, Josiah Winslow, was a magistrate and governor of the colony, and general of the New-England forces, in the war with the Indians, called Philip's war. He died in 1630. Isaac, the son of Josiah Winslow, sustained the chief civil and military offices in the county of Plymouth, after its incorporation with Massachusetts; and was President of the Provincial Council. He died in 1738. John Winslow, the son of Isaac, was a captain in the unfortunate expedition to Cuba in 1740, and afterward an officer in the British service, and major-general in several expeditions to Kennebeck, Nova Scotia, and Crown Point. He died in 1774, aged 71. His son, Dr. Isaac Winslow, is now in possession of the family estate at Marshfield. By

the favor of this gentleman, the letter books and journals of his late father, Major general Winslow, with many ancient family papers, containing a fund of genuine information, are deposited in the library of the Historical Society. There are several other reputable branches of this family in New England and Nova Scotia.

MILES STANDISH.

MILES STANDISH—A Soldier in the Netherlands—Embarks for America—Compels Corbitant to submit—His resolute conduct with the Indians—His Expedition to Wessagusset and Cape Ann—Mr. Hubbard's Observations relating to him—Mr. Robinson's Letter—Standish returns to Plymouth—Expedition against Morton—His settlement at Danbury—His Death and Descendants—Still's Remarks on sending Convicts to Virginia.

This intrepid soldier, the hero of New England, as John Smith was of Virginia, was a native of Lancashire, in the north of England; but the date of his birth is not preserved. Descended from the younger branch of a family of distinction,* he was "his apparent to a great estate of lands and livings, surreptitiously detained from him," which compelled him to seek subsistence for himself. Though small in stature, he had an active genius, a sanguine temper, and a strong constitution. These qualities led him to the profession of arms; and the Netherlands being, in his youth, a theatre of war, he entered into the service of Queen Elizabeth, in aid of the Dutch; and after the truce, settled with the English refugees at Leyden.

When they meditated a removal to America, Standish, though not a member of their church, was thought a proper person to accompany them. Whether he joined them at their request or his own motion, does not appear; but he engaged with zeal and resolution in their enterprise, and embarked with the first company in 1620.

On their arrival at Cape Cod, he was appointed commander of the first party of sixteen men, who went ashore on discovery; and when they began their settlement at Plymouth, he was unanimously chosen captain, or chief military commander. In several interviews with the natives he was the first to meet them, and was generally accompanied with a very small number of men, selected by himself.

After the league was made with Masassoit, one of his petty sachems, Corbitant, became discontented, and was meditating to join with the Narragansets against the English. Standish, with fourteen men and a guide, went to Corbitant's place, (Swanzy) and surrounded his house; but not finding him at home, they informed his people of their intention of destroying him, if he should persist in his rebellion. Corbitant, hearing of his danger, made an acknowledgment to Masassoit, and entreated his mediation with the English for peace. He was soon after [Sept. 13, 1621] admitted with eight other chiefs, to subscribe an instrument of submission to the English government.

In every hazardous enterprise, Capt. Standish was ready to put himself foremost, whether the objects were discovery, traffic, or war; and the people, animated by his example, and confiding in his bravery and fidelity, thought themselves safe under his command.

When the town of Plymouth [1622] was enclosed and fortified, the defence of it was committed to the captain, who made the most judicious disposition of their force. He divided them into four squadrons, appointing those whom he thought most fit, to command; and ordered every man, on any alarm, to repair to his respective station, and put himself under his proper officer. A select company was appointed, in case of accidental fire, to mount guard, with their backs to the fire, that they might prevent the approach of an enemy during the conflagration.

* All which I have been able to collect relative to the family of Standish, is as follows:

Henry Standish, a Franciscan, D. D. of Cambridge, Bishop of St. Asaph, before the Reformation, was a bigot to Popery. Falling down on his knees, before King Henry VIII. he petitioned him to continue the religious establishment of his ancestors. This prelate died, A. D. 1535, at a very advanced age.

John Standish, nephew to Henry, wrote a book against the translation of the bible into the English Language; and presented it to the Parliament. He died in 1556, in the reign of Queen Mary.

Sir Richard Standish, of Whittle, near Charley. In his grounds a lead mine was discovered, not long before 1695, and wrought with good success. Near the same place is a quarry of Mill-stones.

The village of Standish, and a seat called Standish-Hall, are situate near the river Douglas, in Lancashire, between the towns of Charley and Wigan, which are about 6 miles distant. Wigan is 9 miles north of Warrington, on the southern side of the county. See Camden's Map of Lancashire.

Being sent on a trading voyage to Matachiest, [between Barnstable and Yarmouth, Feb. 1623] a severe storm came on, during the first night, by which the harbor was filled with ice and Captain Standish with his party was obliged to lodge in one of the huts of the savages. They came together in a considerable number, and under the mask of friendship, promised to supply him with corn. Standish suspecting, by their number, that their intention was hostile, would not permit his men to lie down all at once, but ordered them to sleep and watch by turns. In the morning, a discovery was made that some things had been stolen from his shallop. The captain immediately went with his whole force, consisting of six men, surrounded the house of the sachem Ianough, and obliged him to find the thief and restore the stolen things. This resolute behavior struck them with awe; the trade went on peaceably, and when the harbor was cleared the shallop came off with a load of corn, and arrived safely at Plymouth.

This was the first suspicion of a conspiracy, which had for some time been forming among the Indians, to destroy the English. In the following month [March] he had another specimen of their insolence at Manomet,* whether he went to fetch home the corn which Governor Bradford had bought in the preceding autumn. The captain was not received with that welcome which the governor had experienced. Two Indians from Massachusetts were there, one of whom had an iron dagger, which he had gotten from some of Weston's people at Wessagusset, [Weymouth] and which he gave to Canacum, the Sachem of Manomet, in the view of Standish. The present was accompanied with a speech, which the captain did not then perfectly understand, but the purport of it was, "That the English were too strong for the Massachusetts Indians to attack without help from the others; because if they should cut off the people in their bay, yet they feared that those of Plymouth would revenge their death. He therefore invited the sachem to join with them, and destroy both colonies. He magnified his own strength and courage, and derided the Europeans, because he had seen them die, crying and making sour faces, like children." An Indian of Panmet was present, who had formerly been friendly, and now professed the same kindness, offering his personal service to get the corn on board the shallop, though he had never done such work before; and inviting the captain to lodge in his hut, as the weather was cold. Standish passed the night by his fire, but though earnestly pressed to take his rest, kept himself continually in motion, and the next day, by the help of the squaws, got his corn on board, and returned to Plymouth. It was afterward discovered that this Indian intended to kill him, if he had fallen asleep.

About the same time, happened Mr. Winslow's visit to Masassoit in his sickness, and a full discovery of the plot, which the Indians at Massachusetts had contrived to destroy the English. The people whom Weston had sent to plant a colony at Wessagusset, were so disorderly and imprudent, that the Indians were not only disgusted with them, but despised them. These were destined to be the first victims. Their overseer, John Sanders, was gone to Monhegan, to meet the fishermen, at their coming to the coast, and get some provisions. During his absence, the Indians had grown more insolent than before; and it was necessary that some force should be sent thither, as well to protect the colony as to crush the conspiracy. Standish was the commander of the party; and as this was his capital exploit, it may be most satisfactory and entertaining to give the account of it, as related by Mr Winslow in his narrative.

"The 23d of March [1623] being a yearly Court day, we came to this conclusion; that Captain Standish should take as many men as he thought sufficient to make his party good, against all the Indians in Massachusetts Bay; and because it is impossible to deal with them in open defiance, but to take them in such traps as they lay for others; therefore that he should pretend trade as at other times; but first to go to the English, and acquaint them with the plot and the end of his own coming, that by comparing it with their carriage towards them, he might better judge of the certainty of it, and more fitly take opportunity to revenge the same; but should forbear, if it were possible, till such time as he could make sure of Wittuwamat, a bloody and bold villain, whose head he had orders to bring with him.

* Manomet is the name of a creek or river which runs through the town of Sandwich, into the upper part of Buzzard's Bay, formerly called Manomet Bay. Between this and Sunset Creek, (into which Standish went and received his corn) is the place, which for more than a century, has been thought of, as proper to be cut through, to form a communication by a navigable canal, from Barnstable Bay to Buzzard's Bay.

Upon this, Captain Standish made choice of eight men, and would not take more, because he would prevent jealousy. On the next day, before he could go, came one* of Weston's company to us with a pack on his back, who made a pitiful narration of their lamentable and weak estate, and of the Indians' carriage; whose boldness increased abundantly, inasmuch as they would take their victuals out of their pots, and eat before their faces; yea, if in any thing they grieved them, they were ready to hold a knife at their breasts. He said that, to give them content, they had hanged one of the company, who had stolen their corn, and yet they regarded it not; that another of them had turned savage; that their people had mostly forsaken the town, and made their rendezvous where they got their victuals, because they would not take pains to bring it home; that they had sold their clothes for corn, and were ready to perish with hunger and cold, and that they were dispersed into three companies, having scarcely any powder and shot. As this relation was grievous to us, so it gave us good encouragement to proceed; and the wind coming fair the next day, March 25, Captain Standish being now fitted, set forth for Massachusetts.

"The captain being come to Massachusetts, went first to the ship, but found neither man nor dog therein. On the discharge of a musket, the master and some others showed themselves, who were on shore gathering ground-nuts and other food. After salutation, Captain Standish asked them how they durst so leave the ship, and live in such security? They answered, like men senseless of their own misery, that they feared not the Indians, but lived and suffered them to lodge with them, not having a sword nor a gun, or needing the same. To which the captain replied, that if there were no cause, he was glad. But upon further inquiry, understanding that those in whom John Sanders had reposed most confidence were at the plantation, thither he went and made known the Indians' purpose, and the end of his own coming; and told them that if they durst not stay there, it was the intention of the governor and people of Plymouth, to receive them

* His name was Phinehas Pratt: an Indian followed him to kill him, but by missing his way, he escaped and got into Plymouth. This man was living in 1677, when Mr. Hubbard wrote his history. The Indian who followed him went to Manomet, and on his return, visited Plymouth, where he was put in irons.

† Mr. Hubbard's account of this matter, is as follows. "The company, as some report, pretended, in way of satisfaction, to punish him that did the theft; but in his stead, hanged a poor decrepit old man, that was unserviceable to the company, and burdensome to keep alive: This was the ground of the story, with which the merry gentleman that wrote the poem called Hudibras, did in his poetical fancy, make so much sport. The inhabitants of Plymouth tell the story much otherwise, as if the persons hanged, was really guilty of stealing, as were many of the rest. Yet, it is possible, that justice might be executed, not on him that most deserved it, but on him that could best be spared, or who was not likely to live long, if he had been let alone."

The passage of Hudibras above referred to, is in Part, 2 canto 2, line 403, &c.

"Tho' nice and dark the point appear,
Quoth Ralph, it may hold up and clear;
That sinners may supply the place
Of suffering saints, is a plain case.
Justice gives sentence many times,
On one man for another's crimes.
Our brethren of New England use,
Choice malefactors to excuse,
And hang the guiltless in their stead,
Of whom the churches have less need;
As lately happened. In a town,
There liv'd a Cobler, and but one,
Who out of doctrine, could cut use,
And mend men's lives as well as shoes.
This precious brother, having slain
In time of peace, an Indian,
Not out of malice, but mere zeal
Because he was an Infidel,
The mighty Tottipotimoy
Sent to our elders an envoy,
Complaining sorely of the breach
Of league, held forth by brother Patch,
Against the articles in force
Between both churches, his and ours;
For which he crav'd the saints to render
Into his hands, or hang th' offender.
But they, maturely having weighed,
They had no more but him of the trade;
A man that serv'd them, in a double
Capacity, to teach and cobbler,
Resolv'd to spare him, yet to do
The Indian Hogan Mogan, to
Impartial justice, in his stead did
Hang an old Weaver, that was bed-ridden,
Then, wherefore may not you be skipp'd,
And in your room another whipp'd!"

The story is here most ridiculously caricatured as a slur upon the churches of New England. I do not find that the people of Weston's plantation had any church at all; they were a set of needy adventurers, intent only on gaining a subsistence. Mr. Neal says, that "he obtained a patent under pretence of propagating the discipline of the Church of England in America.

till they could be better provided for. These men answered that they could expect no better, and it was of God's mercy that they were not killed before his coming, desiring that he would neglect no opportunity to proceed; hereupon he advised them to secrecy and to order one third of their company that were farthest off to come home, and on pain of death to keep there, himself allowing them a pint of Indian corn, to a man, for a day, though that was spared out of our seed.—The weather proving very wet and stormy, it was the longer before he could do any thing.

"In the meantime an Indian came to him and brought some furs, but rather to get what he could from the captain than to trade; and though the captain carried things as smoothly as he could, yet at his return, the Indian reported that he saw by his eyes that he was angry in his heart, and therefore began to suspect themselves discovered. This caused one Pecksout, who was a Pinese [chief] being a man of a notable spirit, to come to Hobamock, [Standish's Indian guide and interpreter] and tell him that he understood the captain was come to kill himself and the rest of the savages there; 'Tell him, said he, we know it, but fear him not, neither will we shun him; but let him begin when he dare, he shall not take us at unawares.' Many times after, divers of them, severally or a few together, came to the plantation, where they would whet and sharpen the points of their knives before his face, and use many other insulting gestures and speeches. Among the rest, Wittuwamat bragged of the excellency of his knife, on the handle of which was pictured a woman's face. 'But, said he, I have another at home, wherewith I have killed both French and English, and that hath a man's face on it, and by and by, these two must be married.' Further he said of that knife which he there had, *Hinnain namen, hinnain michen, malla cuts*, that is to say, *by and by it should see, by and by it should eat, but not speak*. Also Pecksout being a man of greater stature than the captain, told him, 'though you are a great captain, yet you are but a little man; though I be no sachem, yet I am a man of great strength and courage.' These things the captain observed, but for the present, bore them with patience.

"On the next day, seeing he could not get many of them together at once, but Pecksout and Wittuwamat being together, with another man, and the brother of Wittuwamat, a youth of eighteen, putting many tricks on the weaker sort of men, and having about as many of his own men in the sameroom, the captain gave the word to his men; and the door being fast shut, he began himself with Pecksout, and snatching the knife from his neck, after much struggling killed him therewith; the rest killed Wittuwamat and the other man; the youth they took and hanged. It is incredible how many wounds these men received, before they died, not making any fearful noise, but catching at their weapons, and striving to the last. Hobamock stood by as a spectator, observing how our men demeaned themselves in the action; which being ended, he, smiling, brake forth and said, 'Yesterday Pecksout bragged of his own strength and stature, and told you that though you were a great captain, yet you were but a little man; but, to-day, I see you are big enough to lay him on the ground.'

"There being some women at the same time there, Captain Standish left them in the custody of Weston's people, at the town; and sent word to another company to kill those Indian men that were among them. These killed two more; himself with some of his own men, went to another place and killed another; but through the negligence of one man, an Indian escaped, who discovered and crossed their proceedings.

"Captain Standish took one half of his men with one or two of Weston's and Hobamock, still seeking them. At length they espied a file of Indians, making toward them; and there being a small advantage in the ground by reason of a hill, both companies strove for it. Captain Standish got it, whereupon the Indians retreated, and took each man his tree, letting fly their arrows amain, especially at himself and Hobamock. Whereupon Hobamock cast off his coat, and chased them so fast, that our people were not able to hold way with him. They could have but one certain mark, the arm and half the face of a notable villain as he drew [his bow] at Captain Standish, who with another, both discharged at him and brake his arm. Whereupon they fled into a swamp; when they were in the thicket, they parlied but got nothing but foul language. So our captain dared the sachem to come out and fight like a man, showing how base and woman like he was, in tonguing it as he did; but he refused and fled. So

the captain returned to the plantation; where he released the women and took not their beaver coats from them, nor suffered the least discourtesy to be offered them.

"Now were Weston's people resolved to leave the plantation, and go to Monhegan, hoping to get passage and return [to England] with the fishing ships. The captain told them, that for his own part, he durst live there with fewer men than they were; yet since they were otherwise minded, according to his orders from the governor and people of Plymouth, he would help them with corn, which he did, scarce leaving himself more than brought them home. Some of them disliked to go to Monhegan; and desiring to go with him to Plymouth, he took them into the shallop; and seeing the others set sail, and clear of Massachusetts Bay, he took leave and returned to Plymouth, bringing the head of Wittuwamat, which was set up on the fort.*

"This sudden and unexpected execution, had so terrified and amazed the other people who intended to join with the Massachusetts against us, that they forsook their houses, running to and fro like men distracted; living in swamps, and other desert places, and so brought disease upon themselves, whereof many are dead; as Canacum, Sachem of Manomet; Aspinet, of Nauset; and Ianough, of Mantachiest. This sachem, [Ianough] in the midst of these distractions, said, 'the God of the English was offended with them, and would destroy them in his anger.' From one of these places, a boat was sent with presents to the governor, hoping thereby to work their peace; but the boat was lost, and three of the people drowned; only one escaped, who returned; so that none of them durst come among us."

The Indian who had been confined at Plymouth, on his examination, confessed the plot; in which five persons were principally concerned, of whom two were killed. He protested his own innocence, and his life was spared on condition that he would carry a message to his sachem, Obtakiest, demanding three of Weston's men, whom he held in custody. A woman returned with his answer, that the men were killed before the message arrived, for which he was very sorry.

Thus ended Weston's plantation, within one year after it began. He had been one of the adventurers to Plymouth, but quitted them, and took a separate patent; and his plantation was intended to rival that of Plymouth. He did not come in person to America, till after the dispersion of his people, some of whom he found among the eastern fishermen, and from them he first heard of the ruin of his enterprise. In a storm, he was cast away between the rivers of Pascataqua and Merrimack, and was robbed by the natives of all which he had saved from the wreck. Having borrowed a suit of clothes from some of the people at Pascataqua, he came to Plymouth; where, in consideration of his necessity, the government lent him two hundred weight of beaver, with which he sailed to the eastward, with such of his own people as were disposed to accompany him. It is observed that he never repaid the debt but with enmity and reproach.

The next adventure in which we find Captain Standish engaged, was at Cape Ann, where the fishermen of Plymouth had in 1624 erected a stage, and a company from the west of England in the following year had taken possession of it. Standish was ordered from Plymouth with a party to retake it; but met a refusal. The controversy grew warm, and high words passed on both sides. But the prudence of Roger Conant, agent for the west countrymen, and of Mr. Pierce, master of their ship, prevented matters from coming to extremity. The ship's crew lent their assistance in building another stage, which the Plymouth fishermen accepted in lieu of the former, and thus peace and harmony were restored. Mr. Hubbard, who has preserved the memory of this affair, reflects on Captain Standish in the following manner: 'He had been bred a soldier in the low countries, and never entered into the school of Christ, or of John the Baptist; or if ever he was there, he had forgot his first lessons, to offer violence to no man, and to part with the cloak, rather than needlessly contend for the coat, though taken away without order. A little chimney is soon fired; so was the Plymouth captain, a man of very small stature, yet of a very hot and angry temper. The fire of his passion, soon kindled,

and blown up into a flame by hot words, might easily have consumed all, had it not been seasonably quenched."

When the news of the transactions at Wessagusset where Standish had killed the Indians, was carried to Europe, Mr. Robinson from Leyden wrote to the Church of Plymouth, "to consider the disposition of their captain, who was of a warm temper. He hoped the Lord had sent him among them for good, if they used him right; but he doubted whether there was not wanting that tenderness of the life of man, made after God's image, which was meet; and he thought it would have been happy if they had converted some, before they had killed any."

The best apology for Captain Standish is, that as a soldier he had been accustomed to discipline and obedience; that he considered himself as the military servant of the colony, and received his orders from the governor and people. Seditary persons are not always the best judges of a soldier's merit or feelings.—Men of his own profession will admire the courage of Standish, his promptitude and decision in the execution of his orders. No one has charged him either with failure in point of obedience or of wantonly exceeding the limits of his commission. If the arm of flesh were necessary to establish the rights and defend the lives and property of colonists in a new country, surrounded with enemies and false friends, certainly such a man as Standish, with all his imperfections, will hold a high rank among the worthies of New-England. Mr. Prince does not scruple to reckon him among those heroes of antiquity, "who chose to suffer affliction with the people of God; who through faith subdued kingdoms, wrought righteousness, obtained promises, stopped the mouths of lions, waxed valiant in fight, and turned to flight the armies of the aliens;" and even Mr. Hubbard, in another part of his history, says that Captain Standish "was a gentleman very expert in military service; by whom the people were all willing to be ordered in those concerns. He was likewise improved [employed] to good acceptance and success in affairs of the greatest moment in that colony, to whose interest he continued firm and steadfast to the last, and always managed his trust with great integrity and faithfulness."

Two ships which had come with supplies to the colony the same year (1625) returned in the autumn with cargoes of fish and furs. In one of these Standish embarked as agent for the colony, and arrived safely in England; the other was captured by a Turkish ship of war, and the loss of her valuable cargo was a severe blow to the colony. He arrived in a very unfortunate time: the plague raging in London, carried off more than forty thousand people in the space of one year. Commerce was stagnated, the merchants and members of the council of New-England were dispersed and no meeting could be held. All which Captain Standish could do, was, by private conference, to prepare the way for a composition with the company of adventurers, and by the help of a few friends, with great trouble and danger, to procure a small quantity of goods for the colony, amounting to 150*l.* which he took up at the exorbitant interest of 50 per cent. With this insufficient but welcome supply, he returned to Plymouth, in the spring of 1626; bringing the sorrowful news of the death of Mr. Robinson and Mr. Cushman.

Several attempts were, about this time, made to form plantations, within the Bay of Massachusetts, at Cape Ann and Pascataqua. Among these adventurers was one Captain Wollaston, "a man of considerable parts, and with him three or four more of some eminence, who brought over many servants and much provisions." He pitched on the southern side of the bay, at the head of the creek, and called an adjoining hill Mount Wollaston, [Quincy.] One of his company was Thomas Morton, "a pettifogger of Fumival's Inn," who had some property of his own, or of other men committed to him. After a short trial, Wollaston, not finding his expectations realized, went to Virginia, with a great part of the servants; and being better pleased with that country, sent for the rest to come to him. Morton thought this a proper opportunity to make himself head of the company; and, in a drunken frolic, persuaded them to depose Filcher, the lieutenant, and set up for liberty and equality.

Under this influence they soon became licentious and debauched. They sold their goods to the natives for furs, taught them the use of arms, and employed them in hunting. They invited and received fugitives from all the neighboring settlements; and thus endangered their safety, and obliged them to unite their strength in opposition to them. Captain Endicott, from Naumkeag,

* This may excite in some minds an objection to the humanity of our forefathers. The reason assigned for it was, that it might prove a terror to others. In matters of war and public justice, they observed the customs and laws of the English nation. As late as the year 1747, the heads of the lords, who were concerned in the Scots rebellion, were set up over Temple-Bar, the most frequented passage between London and Westminster.

made them a visit, and gave them a small check, by cutting down a May-pole, which they had erected as a central point of dissipation and extravagance; but it was reserved for Captain Standish to break up their infamous combination. After repeated friendly admonitions, which were disregarded, at the request and joint expense* of the scattered planters, and by order of the Government of Plymouth, he went to Mount Wollaston, and summoned Morton to surrender. Morton prepared for his defence, armed his adherents, heated them with liquor, and answered Standish with abusive language. But, when he stepped out of his door, to take aim at his antagonist, the captain seized his musket with one hand and his collar with the other, and made him prisoner. The others quietly submitted. No blood was shed nor a gun fired. They were all conducted to Plymouth, and then sent to England; where Morton was treated with less severity than he deserved, and was permitted to return and disturb the settlements, till the establishment of the Massachusetts colony, when he retired to Piscataqua, and there ended his days.

After this encounter, which happened in 1628, we have no particular account of Captain Standish. He is not mentioned in the account of the Pequot war, in 1637. He was chosen one of the magistrates or assistants of Plymouth Colony as long as he lived. As he advanced in years, he was much afflicted with the stone and the stranguary; he died in 1656, being then very old, at Duxbury, near Plymouth; where he had a tract of land, which to this day is known by the name of Captain's Hill.

He had one son, Alexander, who died in Duxbury. The late Dr. Wheelock, founder of Dartmouth College, and Mr. Kirkland, Missionary to the Indians, were descended from him. One of his grandsons was in possession of his coat of mail, which is now supposed to be lost; but his sword is preserved in the Cabinet of the Historical Society, of which one of his descendants, John Thornton Kirkland, is a member. His name is still venerated, and the merchants of Plymouth and Boston have named their ships after him. His posterity chiefly reside in several towns of the county of Plymouth.

JOHN WINTHROP,

FIRST GOVERNOR OF MASSACHUSETTS.

JOHN WINTHROP—His birth and ancestry—First Governor of the Colonies—His Character—Examination of his accounts and honorable result—His humility, firmness, and decision—His difficulties with Mrs. Hutchinson and her followers—His firm and correct conduct with the Church at Boston—His opinions of Democracy, Magistracy and Liberty—His pecuniary embarrassments and afflictions—His death—Preservation of his picture in the Senate Chamber of Massachusetts—His posterity.

This worthy gentleman was descended from a family remarkable for its attachment to the reformed religion, from the earliest period of the Reformation. His grandfather, Adam Winthrop, was an eminent lawyer and lover of the Gospel, in the reign of Henry VIII. and brother to a memorable friend of the Reformation, in the reign of Mary I. in whose hands the Martyr Philpot left his paper, which make a considerable part of the History of the Martyrs. His father, Adam Winthrop, was a gentleman of the same profession and character. Governor Winthrop was born at the family seat at Groton, in Suffolk, June 12, 1587, and was bred to the law, though he had a strong inclination to theological studies. At the age of eighteen he was made a justice of the peace, and his virtues became conspicuous. He was exemplary in his profession as an upright and impartial magistrate, and in his private character as a christian. He had wisdom to discern, and fortitude to do right in the execution of his office; and as a gentleman, was remarkable for liberality and hospitality. These qualities rendered him dear to men of sobriety and religion, and fitted him to engage in the great and difficult work of founding a colony.

When the design of settling a colony in New England was by some eminent persons undertaken, this gentleman was, by the consent of all, chosen for their leader. Having converted a fine estate of six or seven hundred

pounds sterling per annum into money, he embarked for New England, in the forty-third year of his age and arrived at Salem with the Massachusetts charter, June 12, 1630. Within five days, he, with some of the principal persons of the colony travelled through the woods twenty miles, to look out a convenient situation for a town, in some part of the Bay of Massachusetts. Some of them built their huts on the north side of Charles' river, [Charlestown] but the governor, and most of the assistants pitched upon the peninsula of *Shawmut* and lived there the first winter, intending in the spring to build a fortified town, but undetermined as to its situation. On the sixth of December, they resolved to fortify the isthmus of that peninsula; but changing their minds before the month expired, they agreed upon a place about three miles above Charlestown, which they called first Newtown, and afterwards Cambridge, where they engaged to build houses the ensuing spring. The rest of the winter they suffered much by the severity of the season, and were obliged to live upon acorns, ground-nuts, and shell fish. One of the poorer sort coming to the governor to complain, was told that the last batch was in the oven, but of this he had his share. They had appointed the 23d of February for a fast, but before it came, a ship arrived with provisions, and they turned it into a day of thanksgiving.

In the spring of 1631, in pursuance of the intended plan, the governor set up the frame of an house at Newtown; the deputy governor also built one, and removed his family. About this time Chickatawb, the chief of the Indians in that neighbourhood, made a visit to the governor, with high professions of friendship. The apprehension of danger from the Indians abated, and the scheme of a fortified town was gradually laid aside; though if it had been retained, the peninsula would have been a situation far preferable to Newtown. The governor took down his frame and removed it to Shawmut, which was finally determined upon for the metropolis, and named Boston.

The three following years he was continued, by annual election, at the head of the government, for which office he was eminently qualified, and in which he shone with a lustre, which would have done him honor in a larger sphere and a more elevated situation. He was the father, as well as the governor, of an infant plantation. His time, his study, his exertions, his influence and his interest were all employed in the public service. His wisdom, patience and magnanimity were conspicuous in the most severe trials, and his exemplary behaviour as a christian added a splendor to all his rare qualifications. He maintained the dignity of a governor with the obliging condescension of a gentleman, and was so deservedly respected and beloved, that when Archbishop Laud, hearkening to some calumnies raised against the country on account of their Puritan principles, summoned one Mr. Cleaves before King Charles I. in hopes of getting some accusation against the governor, he gave such an account of his laudable deportment in his station, and withal of the devotion with which prayers were made, both in private and public, for the king, that Charles expressed his concern, that so worthy a person as Mr. Winthrop should be no better accommodated than in an American wilderness.

He was an example to the people of that frugality, decency and temperance which were necessary in their circumstances, and even denied himself many of the elegancies and superfluities of life, which his rank, and fortune gave him a just title to enjoy, both that he might set them a proper example, and be the better enabled to exercise that liberality in which he delighted, even, in the end, to the actual impoverishment of himself and his family. He would often send his servants on some errand, at meal times, to the houses of his neighbors, to see how they were provided with food; and if there was a deficiency, would supply them from his own table. The following singular instance of his charity, mixed with humor, will give us an idea of the man. In a very severe winter, when wood began to be scarce in Boston, he received private information, that a neighbor was wont to help himself from the pile at his door. "Does he," said the governor, "call him to me, and I will take a course with him that shall cure him of stealing." The man appeared, and the governor addressed him thus. "Friend it is a cold winter, and I hear you are meanly provided with wood, you are welcome to help yourself at my pile till the winter is over." And then merrily asked his friend whether he had not put a stop to the man's stealing!

In the administration of justice, he was for tempering the severity of law with the exercise of mercy. He judged that in the infancy of a plantation, justice should be administered with more lenity than in a set-

tled state. But when other gentlemen of learning and influence had taken offence at his lenity, and adopted an opinion that a stricter discipline was necessary, he submitted to their judgment, and strictly adhered to the proposals which were made to support the dignity of government, by an appearance of union and firmness, and a concealment of differences and dissensions among the public officers.

His delicacy was so great, that, though he could not without incivility decline accepting gratuities from divers towns, as well as particular persons, for his public services, yet he took occasion in a public speech, at his third election to declare, that "he received them with a trembling hand in regard of God's word, and his own infirmity," and desired them, that for the future they would not be offended, if he should wholly refuse such presents.

In the year 1634, and the two years following, he was left out of the magistracy. Though his conduct, from his first engaging in the service of the colony, had been irreproachable, yet the envy of some, raised a suspicion of his fidelity, and gave him a small taste of what, in other popular governments, their greatest benefactors have had a large share of. An inquiry having been made of his receipts and disbursements of the public moneys, during his past administration, though it was conducted in a manner too harsh for his delicate sensibility, yet he patiently submitted to the examination of his accounts, which ended to his honor. Upon which occasion he made a declaration which he concluded in these words:—"In the things which I offer, I refer myself to the wisdom and justice of the Court, with this protestation, that it repenteth me not of my cost and labor bestowed in the service of this Commonwealth; but I do heartily bless the Lord our God, that he has been pleased to honor me so far as to call for any thing he hath bestowed upon me, for the service of his church and people here; the prosperity whereof, and his gracious acceptance, shall be an abundant recompense to me."

The same rare humility and steady equality of mind, were conspicuous in his behavior, when a pretence was raised to get him left out of the government, lest by the too frequent choice of one man, the office should cease to be elective, and seem to be his by prescription. This pretence was advanced even in the election sermons; and when he was in fact reduced to a lower station in the government, he endeavoured to serve the people as faithfully as in the highest, nor would he suffer any notice to be taken of some undue methods, which were used to have him left out of the choice. An instance of this rare temper, and the happy fruit of it, deserves remembrance. There was a time when he received a very angry letter from a member of the Court, which having read, he delivered back to the messenger with this answer "I am not willing to keep by me such a matter of provocation." Shortly after, the writer of this letter was compelled by the scarcity of provision, to send to buy one of the governor's cattle: he begged him to accept it as a gift, in token of his good will. On which the gentleman came to him with this acknowledgment "Sir, your overcoming yourself, hath overcome me."

But though condescending and gentle on every occasion of personal ill-treatment, yet where the honor of government or religion, and the interest of the people were concerned, he was equally firm and intrepid, standing foremost in opposition to those whom he judged to be really public enemies, though in the disguise of warm and zealous friends. Of this number was the famous ANNA HUTCHINSON, a woman of a masculine understanding and consummate art, who held private lectures to the women at her house, in which she advanced these doctrines, viz. "That the Holy Ghost dwells personally in a justified person, and that sanctification does not evidence justification." Those who held with her were said to be "under a covenant of grace," and those who opposed her "under a covenant of works." Into those two denominations the whole colony began to be divided. Her adherents prevailed in 1636, to choose for governor, HENRY VANE,* a young gentleman of an apparently grave and serious deportment, who had just arrived from England, and who paid great attention to this woman, and seemed zealously attached to her dis-

* From the bill of expense, sent to the Council of New England, may be seen the number and ability of the plantations in 1628.

* This person, so well known afterwards in England, is thus characterized by Lord Clarendon:

"A man of great natural parts and of very profound dissimulation, of a quick conception and ready, sharp and weighty expression. He had an unusual aspect, a vultum clausum, that though no man could make a guess of what he intended, yet made men think there was something in him extraordinary, and his whole life made good that imagination. There need no more be said of his ability, than that he was

tinguishing tenets. Winthrop, then deputy governor, not only differed in sentiment, but saw the pernicious influence of this controversy with regret, and feared, that if it were suffered to prevail, it would endanger the existence of the colony. In the heat of the controversy, Wheelwright, a zealous sectarian, preached a sermon, which not only carried these points to their utmost length, but contained some expressions which the Court laid hold of as tending to sedition, for which he was examined; but a more full inquiry was deferred for that time. Some warm brethren of Boston petitioned the Court in Wheelwright's favor, reflecting on their proceedings, which raised such a resentment in the Court against the town that a motion was made for the next election to be made at Cambridge. Vane, the governor, having no negative voice, could only show his dislike by refusing to put the question. Winthrop, the deputy governor, declined it, as being an inhabitant of Boston; the question was then put by Endicot of Salem, and carried for the removal.

At the opening of the election, (May 17, 1637) a petition was again presented by many inhabitants of Boston, which Vane would have read previous to the choice. Winthrop, who clearly saw that this was a contrivance to throw all into confusion, and spend the day in debate, that the election might be prevented for that time, opposed the reading of the petition until the election should be over. Vane and his party were strenuous, but Winthrop called to the people to divide, and the majority appeared for the election. Vane still refused, till Winthrop said he would proceed without him, which obliged him to submit. The election was carried in favor of Winthrop and his friends. The sergeants who had waited on Vane to the place of election, threw down their halberds, and refused to attend the newly elected governor; he took no other notice of the affront, than to order his own servants to bear them before him, and when the people expressed their resentment, he begged them to overlook the matter.

The town of Boston being generally in favor of the new opinions, the governor grew unpopular there, and a law which was passed this year of his restoration to office, increased their dislike. Many persons who were supposed to favor those opinions, were expected from England, to prevent whose settlement in the country, the Court laid a penalty on all who should entertain any strangers, or allow them the use of any house, or lot, above three weeks, without liberty first granted. This severe order was so ill received in Boston, that on the governor's return from the Court of Cambridge, they all refused to go out to meet him, or to show him any token of respect. The other towns on this occasion increased their respect towards him, and the same summer, in a journey to Ipswich, he was guarded from town to town with more ceremony than he desired.

The same year a synod was called to determine on the controverted points, in which assembly Winthrop, though he did not preside, yet as the head of the civil magistracy, was obliged often to interpose his authority, which he did with wisdom and gravity, silencing passionate and impertinent speakers, desiring that the divine oracles might be allowed to express their own meaning, and be appealed to for the decision of the controversy; and when he saw heat and passion prevail in the assembly, he would adjourn it, that time might be allowed for cool consideration, by which prudent management, the synod came to an amicable agreement in condemning the errors of the day. But the work was not wholly done, until the erroneous persons were banished the colony. This act of severity the Court thought necessary for the peace of the Commonwealth. Toleration had not then been introduced into any of the Protestant countries, and even the wisest and best men were afraid of it as the parent of all error and mischief.

Some of the zealous opinionists in the church of Boston, would have had the elders proceed against the governor in the way of ecclesiastical discipline, for his activity in procuring the sentence of banishment on their brethren. Upon this occasion in a well judged speech to the congregation, he told them that "though in his private capacity, it was his duty to submit to the censure of his brethren, yet he was not amenable to them for his conduct as a magistrate, even though it were unjust. That in the present case, he had acted according to his conscience and his oath, and by the advice of the elders of the church, and was fully satisfied that it would not have been consistent with the public peace to have done otherwise." These reasons satisfied the

uneasy brethren, and his general condescending and obliging deportment, so restored him to their affections, that he was held in greater esteem than before; as a proof of this, upon occasion of a loss which he had sustained in his temporal estate, they made him a present, amounting to several hundred pounds.

A warm dispute having arisen in the General Court, concerning the negative voice of the Upper House, the governor published his sentiments in writing, some passages of which giving great offence, he took occasion at the next meeting of the Court in a public speech to tell them "that as to the matter of his writing, it was according to his judgment, which was not at his own disposal, and that having examined it by the rules of reason, religion, and custom, he saw no cause to retract it; but as for the manner, which was wholly his own, he was ready to acknowledge whatever was blameable. He said, that what he wrote was on great provocation, and to vindicate himself and others from unjust aspersions, yet he ought not to have allowed a distemper of spirit, nor to have been so free with the reputation of his brethren; that he might have maintained his cause without casting any reflection on them, and that he perceived an unbecoming pride and arrogance in some of his expressions, for which he desired forgiveness of God and man!" By this condescending spirit, he greatly endeared himself to his friends, and his enemies were ashamed of their opposition.

He had not so high an opinion of a democratical government as some other gentlemen of equal wisdom and goodness; but plainly perceived a danger in referring matters of counsel and judicature to the body of the people; and when those who had removed to Connecticut, were about forming their government, he warned them of this danger in a friendly and faithful letter, wherein are these remarkable words: "The best part of a community is always the least and of that best part the wiser is still less; wherefore the old canon was, choose ye out judges, and thou shalt bring the matter before the judge."

In 1645, when he was deputy governor, a great disturbance was raised by some petitioners from Hingham, who complained that the fundamental laws of England were not owned in the colony as the basis of government; that civil privileges were denied to men, merely for not being members of the churches; and they could not enjoy divine ordinances because they belonged to the Church of England. With these complaints, they petitioned for liberty of conscience; or, if that could not be granted, for freedom from taxes and military services; the petition concluded with a menace, that in case of a refusal, complaint would be had to the Parliament of England. This petition gave much offence, and the petitioners were cited to Court, and fined as "movers to sedition." Winthrop was active in their prosecution; but a party in the House of Deputies was so strong in their favor as to carry a vote, requiring him to answer for his conduct in public; the result of which was, that he was honorably acquitted. Then resuming his seat, he took that opportunity publicly to declare his sentiments on the questions concerning the authority of the magistracy, and the liberty of the people. "You have called us," said he, to office, but being called, we have our authority from God, it is the ordinance of God, and hath the image of God stamped on it; and the contempt of it hath been vindicated by God with terrible examples of his vengeance. When you choose magistrates, you take them from among yourselves, men subject to the like passions with yourselves. If you see our infirmities, reflect on your own, and you will not be so severe on ours. The covenant between us and you is, that we shall govern you and judge your causes according to the laws of God and our best skill. As for our skill, you must run the hazard of it; and if there be an error, not in the will, but the skill, it becomes you to bear it. Nor would I have you mistake in the point of your liberty. There is a liberty of corrupt nature, which is inconsistent with authority, impatient of restraint, the grand enemy of truth and peace, and all the ordinances of God are bent against it. But there is a civil, moral, federal liberty, which is the proper end and object of authority, a liberty for that only which is just and good. For this liberty you are to stand with your lives; and whatever crosses it, is not authority, but a distemper thereof. This liberty is maintained in a way of subjection to authority, and the authority set over you will in all administrations for your good, be quietly submitted to by all but such as have a disposition to shake

off the yoke, and lose their liberty by murmuring at the honor and power of authority."

This kind of argument was frequently urged by the fathers of New England in justification of their severity toward those who dissented from them. They maintained that all men had liberty to do right, but no liberty to do wrong. However true this principle may be in point of morality, yet in matters of opinion, in modes of faith, worship, and ecclesiastical order, the question is, who shall be the judge of right and wrong? and it is too evident from their conduct, that they supposed the power of judging to be in those who were vested with authority; a principle destructive of liberty of conscience, and the right of private judgment, and big with all the horrors of persecution. The exercise of such authority they condemned in the high church party, who had oppressed them in England; and yet, such is the frailty of human nature, they held the same principles, and practised the same oppressions on those who dissented from them. Winthrop, before he left England, was of more Catholic spirit than some of his brethren; after he had come to America, he fell in with the reigning principle of intolerance, which almost all the Reformers unhappily retained as a relic of the persecuting church, from which they had separated; but as he advanced in life, he resumed his former moderation; and in the time of his last sickness, when Dudley, the deputy-governor pressed him to sign an order for the banishment of a person who was deemed heterodox, he refused, saying, that "he had done too much of that work already."

Having devoted the greatest part of his interest to the service of the public, and suffering many losses by accidents, and by leaving the management of his private affairs to unfaithful servants, whilst his whole time and attention were employed in the public business, his fortune was so much impaired, that some years before his death, he was obliged to sell the most of his estate for the payment of an accumulated debt. He also met with much affliction in his family, having buried three wives and six children. These troubles, joined to the opposition and ill treatment which he frequently met with from some of the people, so preyed upon his nature, already much worn by the toils and hardships of planting a colony in a wilderness, that he perceived a decay of his faculties seven years before he reached his grand climatic and often spoke of his approaching dissolution, with a calm resignation to the will of Heaven. At length, when he had entered the sixty-third year of his age, a fever occasioned by a cold, after one month's confinement, put an end to his life on the 26th of March, 1649.

The island called Governor's Island, in the harbor of Boston, was granted to him, and still remains in the possession of his descendants. His picture is preserved in the senate-chamber, with those of other ancient governors. The house in which he lived, remained till 1775, when, with many other old wooden buildings, it was pulled down by the British troops for fuel. He kept an exact journal of the occurrences and transactions in the colony during his residence in it. This journal was of great service to several historians, particularly Hubbard, Mather, and Prince. It is still in possession of the Connecticut branch of his family, and was published at Hartford in 1790. It affords a more exact and circumstantial detail of events within that period, than any compilation which has been or can be made from it; the principles and conduct of this truly great and good man, therein appear in the light which he himself viewed them; while his abilities for the arduous station which he held, the difficulties which he had to encounter, and his fidelity in business, are displayed with that truth and justice in which they ought to appear.

He had five sons living at his decease, all of whom, notwithstanding the reduction of his fortune, acquired and possessed large property, and were persons of eminence. Many of his posterity have borne respectable characters, and filled some of the principal places of trust and usefulness.

JOHN WINTHROP, F. R. S.

GOVERNOR OF CONNECTICUT.

JOHN WINTHROP, Governor of Connecticut—His birth and education—His removal to New England—Obtains a Charter Incorporating Connecticut and New Haven—Governor of the colony of Connecticut—Elected Fellow of the Royal Society—His death.

JOHN WINTHROP, eldest son of Governor Winthrop, by his first wife, was born at Groton, in Suffolk, Feb. 12, 1605. His fine genius was much improved by a

chosen to cozen and deceive a whole nation [the Scots] which was thought to excel in craft and cunning which he did with a notable pregnancy and dexterity."

* It must be observed, that the Mosaic law was at that time considered as the general standard, and most of the laws of the country were founded on it.

liberal education, in the universities of Cambridge, and Dublin, and by travelling through most of the European kingdoms, as far as Turkey. He came to New England with his father's family, Nov. 4, 1631; and though not above twenty-six years of age, was by the unanimous choice of the freemen, appointed a magistrate of the colony, of which his father was governor. He rendered many services to the country, both at home and abroad, particularly in the year 1634, when returning to England, he was by the stress of weather, forced into Ireland; where meeting with many influential persons at the house of Sir John Clossworthy, he had an opportunity to promote the interest of the colony, by their means.

The next year he came back to New England, with powers from the Lords Say and Brooke, to settle a plantation on Connecticut river. But finding that some worthy persons from Massachusetts had already removed, and others were about removing to make a settlement on that river at Hartford and Wethersfield, he gave them no disturbance; but having made an amicable agreement with them, built a fort at the mouth of the river, and furnished it with artillery and stores which had been sent over, and began a town there, which, from the two Lords who had a principal share in the undertaking, was called Saybrook. This fort kept the Indians in awe and proved a security to the planters on the river.

When they had formed themselves into a body politic they honoured him with an election to the magistracy, and afterward chose him governor of the colony. At the restoration of King Charles II. he undertook a voyage to England, on the behalf of the people both of Connecticut and New Haven; and, by his prudent address, obtained from the king a charter, incorporating both colonies into one, with a grant of privileges, and powers of government, superior to any plantation which had been settled in America. During this negotiation, at a private conference with the king, he presented his majesty with a ring, which King Charles I. had given to his grandfather. This present rendered him very acceptable to the king, and greatly facilitated the business. The people, at his return, expressed their gratitude to him by electing him to the office of governor, for fourteen years together, till his death.

Mr. Winthrop's genius led him to philosophical inquiries, and his opportunities for conversing with learned men abroad, furnished him with a rich variety of knowledge, particularly of the mineral kingdom; and there are some valuable communications of his in the philosophical transactions, which procured him the honor of being elected a Fellow of the Royal Society. He had also much skill in the art of physic; and generously distributed many valuable medicines among the people, who constantly applied to him whenever they had need, and were treated with a kindness that did honor to their benefactor.

His many valuable qualities as a gentleman, a christian, a philosopher, and a public ruler, procured him the universal respect of the people under his government; and his unwearied attention to the public business, and great understanding in the art of government, was of unspeakable advantage to them. Being one of the commissioners of the United Colonies of New England, in the year 1676, in the height of the first general Indian war, as he was attending the service at Boston, he fell sick of a fever, and died on the 5th of April, in the seventy-first year of his age, and was honorably buried in the same tomb with his excellent father.

GEORGE CALVERT, CECILIUS CALVERT,— (LORDS BALTIMORE.) LEONARD CALVERT.

GEORGE CALVERT—His birth and education—In the service of Sir Robert Cecil—He is made Secretary of State—He receives a pension from King James—Becomes a Catholic—Created Baron of Baltimore—He attempts a settlement at Newfoundland—Visits Virginia—Receives a grant of the territory north of the Potomack—His Death—His Character—CECIL CALVERT—He receives a Patent of Maryland—Settles the Colony—Appoints his brother, Leonard, Governor—LEONARD CALVERT—Conducts settlers to the Colony

GEORGE CALVERT was descended from a noble family of Flanders, and born at Kipling in Yorkshire, (1582.) He received his education at Trinity College, in Oxford, and after taking his Bachelor's degree, (1597) travelled over the continent of Europe. At his return to England, in the beginning of the reign of James I. he was taken into the office of Sir Robert Cecil, Secretary of State; and when Sir Robert was advanced to the Lord High Treasurer, he retained Cal-

vert in his service, and employed him in several weighty matters of state.

By the interest of Sir Robert, then Earl of Salisbury, he was appointed one of the clerks of the council, and received the honor of knighthood (1617); and in the following year was made Secretary of State, in the room of Sir Thomas Lake. Conceiving the Duke of Buckingham to have been instrumental in his preferment, he presented him with a jewel of great value; but the duke returned it, with a message that he owed his advancement to his own merit and the good pleasure of his sovereign, who was fully sensible of it. His great knowledge of public business, and his diligence and fidelity in conducting it, had rendered him very acceptable to the king, who granted him a pension of 1,000*l.* out of the customs.

In 1624, he conscientiously became a Roman Catholic, and having freely owned his principles to the king, resigned his office. This ingenuous confession so affected the mind of James, that he not only continued him on the list of Privy Counsellors, but created him Baron of Baltimore, in the county of Longford, in Ireland.

Whilst he was Secretary of State and one of the committee of trade and plantations, he obtained from the king, a patent for the south-eastern peninsula of Newfoundland, which he named the Province of Avalon; from Avalonius, a monk, who was supposed to have converted the British King Lucius, and all his court to Christianity; in remembrance of which event, the Abbey of Glastonbury was founded at Avalon, in Somersetshire. Sir George gave his province this name, imagining it would be the first place in North America where the Gospel would be preached.

At Ferryland, in his Province of Avalon, he built a fine house, and spent 25,000*l.* in advancing his plantation, which he visited twice in person. But it was so annoyed by the French, that though he once repulsed and pursued their ships, and took sixty prisoners; yet, he found his province so much exposed to their insults, and the trouble and expense of defending it so very great, that he was obliged to abandon it, and be content with the loss of what he had laid out, in the improvement of a territory, the soil and climate of which were considered as unfavorable to his views.

Being still inclined to form a settlement in America, whither he might retire with his family and friends, of the same religious principles, he made a visit to Virginia, the fertility and advantages of which had been highly celebrated; and in which he had been interested, as one of the adventurers. But the people there, being Protestants of the Church of England, regarded him with a jealous eye, on account of his religion; and by their unwelcome reception of him, he was discouraged from settling within their jurisdiction.

In visiting the Bay of Chesapeake, he observed that the Virginians had established trading houses on some of the islands; but that they had not extended their plantations to the northward of the river Potomack; although the country there was equally valuable with that which they had planted.

When he returned to England, he applied to King Charles I. for the grant of a territory northward of the Potomack; and the king, who had as great an affection for him as had his father James, readily complied with his request. But owing to the tedious forms of public business, before a patent could be completed and pass the seals, Lord Baltimore died at London on the 15th of April, 1632, in the 51st year of his age.

The character of this nobleman is thus drawn. Though he was a Roman Catholic, he kept himself disengaged from all interests, behaving with such moderation and propriety, that all parties were pleased with him, and none complained of him. He was a man of great good sense, not obstinate in his opinions, taking as much pleasure in hearing the sentiments of others as in delivering his own. Whilst he was Secretary of State, he examined all letters, and carried to the king every night an exact and well digested account of affairs. He agreed with Sir John Popham in the design of foreign plantations; but differed in the manner of executing it. Popham was for extirpating the original inhabitants, Calvert was for civilizing and converting them. The former was for present profit; the latter for reasonable expectation, and for employing governors who were not interested merchants, but unconcerned gentlemen; he was for granting liberties with caution, leaving every one to provide for himself by his own industry, and not to depend on a common interest. He left something respecting America in

writing, but it does not appear that it was ever printed.

After the death of Sir George, the patent was again drawn in the name of his eldest son, Cecil, Lord Baltimore, and passed the seals on the 28th of June, 1632. The original draught being in Latin, the patentee is called *Cecilius* and the country "*Terra Maria*, alias Maryland," in honor of Henrietta Maria, the Queen consort of Charles I.*

From the great precision of this charter the powers which it gives to the proprietor, and the privileges and exemptions which it grants to the people, it is evident that Sir George himself was the chief penman of it. One omission was soon discovered; no provision was made, that the laws should be transmitted to the sovereign for his approbation or disallowance. The commissioners of trade and plantations made a representation of this defect to the House of Commons, in 1633, and an act of Parliament was proposed as the only remedy.

The province of Maryland is thus described. All that part of a peninsula in America, lying between the ocean on the east, and the Bay of Chesapeake on the west, and divided from the other part, by a right line drawn from Watkin's Point, in the aforesaid bay, on the west, to the main ocean on the east. Thence to that part of Delaware Bay on the north, which lieth under the fortieth degree of north latitude from the equinoctial, where New England ends. Thence in a right line, by the degree aforesaid, to the true meridian of the first fountains of the river Potomack. Thence following the course of said river to its mouth, where it falls into the Bay of Chesapeake. Thence on a right line, across the bay to Watkin's Point; with all the islands and islets within these limits.

This region was erected into a province; and the proprietor was invested with palatine honors. In conjunction with the freemen or their delegates he had legislative, and, in person, or by officers of his own appointment, he had executive powers. He had also the advowson of churches, the erection of manors, boroughs, cities, and ports; saving the liberty of fishing and drying fish which was declared common to all the king's subjects. The charter provided, that if any doubts should arise concerning the sense of it, such an interpretation should be given as would be most favorable to the interest of the proprietor.

The territory is said to be "in the parts of America not yet cultivated, though inhabited by a barbarous people," and it is provided, that the province "should not be holden or reputed as part of Virginia, or of any other colony, but immediately dependant on the Crown of England." These clauses, together with the construction put on the fortieth degree of latitude, proved the ground of long and bitter controversies, one of which was not closed till after the lapse of a century.

Twelve years before the date of the charter, (1620,) John Porey, sometime secretary of Virginia, who had sailed into the northern part of the Bay of Chesapeake, reported that he found near one hundred English people very happily settled there, and engaged in a fur trade with the natives. In the year before the date of the charter, (1631,) King Charles had granted a license under the privy seal of Scotland, to Sir William Alexander, proprietor of Nova Scotia, and to William Cleyborne, counsellor and secretary of Virginia, to trade in those parts of America, for which there had not been a patent granted to others; and sent an order to the governor of Virginia to permit them freely to trade there. In consequence of which, Sir John Harvey and his council, in the same year, had granted to the said Cleyborne, a permission to sail and traffic to the "adjoining plantations of the Dutch, or to any English plantation on the territory of America." As nothing is said in these instruments of the Swedes, who first planted the shores of the Bay of Delaware, it has been inferred by the advocates of Baltimore, that they had not settled there previous to the charter of Maryland; though the family of Penn insisted on it as a fact, that the occupancy of the Swedes was prior to that period. In consequence of the license given to Cleyborne, he and his associates had made a settlement

* Ogilby says that a blank was left for the name of the territory, which Lord Baltimore intended to have filled with *Crescentia*. But when the king asked him for a name, he complaisantly referred it to his Majesty's pleasure, who proposed the name of the queen, to which his lordship could not but consent.

He also says, that the second Lord Baltimore was christened Cecil, in honor of his father's patron; but was confirmed by the name of *Cecilius*.

on the Isle of Kent, far within the limits of Maryland; and claimed a monopoly of the trade of the Chesapeake. These people, it is said, sent Burgesses to the Legislature of Virginia, and were considered as subject to its jurisdiction, before the establishment of Maryland.

After receiving the charter, Lord Baltimore began to prepare for the collecting and transporting a colony to America. At first, he intended to go in person; but afterward changed his mind, and appointed his brother Leonard Calvert, governor, with two assistants, Jeremy Hawly and Thomas Cornwallis. These, with about two hundred persons,* of good families and of the Roman Catholic persuasion, embarked at Cowes at the Isle of Wight, and on the twenty-second of November, 1633, and after a circuitous voyage through the West India islands, touching first at Barbadoes and then at St. Christopher's they came to anchor before Point Comfort in Virginia, on the twenty-fourth of February, 1634; and, on going up to Jamestown, delivered to Governor Harvey, the letters which the king had written in their favor. The governor and his council received them with that civility which was due to the command of their sovereign; but they resolved "to maintain the rights of the prior settlement." They afforded to the new colony supplies of provision for domestic use, but considered them as intruders on their territory, and as obstructing that traffic, from which they had derived and expected to derive much advantage.

On the 3d of March, Calvert with his colony proceeded in the Bay of Chesapeake, to the northward, and entered the Potomack, up which he sailed twelve leagues, and came to anchor under an island, which he named *St. Clement*. Here he fired his canon, erected a cross, and took possession, "in the name of the Saviour of the world and the King of England." Thence he went with his pinnaces fifteen leagues higher to the Indian town of Potomack, on the Virginia side of the river, now called New Marlborough; where he was received in a friendly manner by the guardian regent, the prince of the country being a minor. Thence he sailed twelve leagues farther, to the town of Piscataway, on the Maryland side; where he found *Henry Fleet*, an Englishman, who had resided several years among the natives, and was held by them in great esteem. He procured an interview between Calvert and the Werowance or lord of the place, and officiated as their interpreter. Calvert, determining to pursue a course of conduct founded on pacific and honorable intentions, asked the Werowance, whether he was willing that he and his people should settle in his country. His answer was short and prudent; "I will not bid you to go, nor to stay; but you may use your own discretion." This interview was held on board the governor's pinnace; the natives on shore crowded to the water's edge, to look after their sovereign, and were not satisfied of his safety, till he stood up and showed himself to them.

Having made this discovery of the river, and convinced the natives that his designs were amicable, the governor not thinking it advisable to make his first settlement so high up the river, sailed down to the ships, taking Fleet with him for a guide. The natives, who, when they first saw the ships, and heard the guns, had fled from St. Clement's island and its neighborhood, returned to their habitations, and seemed to repose confidence in their new friends; but this was not deemed a proper station. Under the conduct of Fleet, the governor visited a creek on the northern side of the Potomack, about four leagues from its mouth, where was an Indian village, surrounded by corn-fields, and called *Yocomoco*. Calvert went on shore, and acquainted the prince of the place with his intention; who was rather reserved in his answer, but entertained him in a friendly manner, and gave him a lodging in his own bed.

On the next day, he showed Calvert the country; which pleased him so well, that he determined there to fix his abode; and treated with the prince about purchasing the place. Calvert presented him and his principal men with English cloth, axes, hoes and knives; and they consented that their new friends should reside in one part of their town, and themselves in the

other part, till the next harvest; when they promised to quit the place, and resign it wholly to them. Both parties entered into a contract to live together in a friendly manner; or, if any injury should be done, on either side, the offending party should make satisfaction. Calvert having given them what he deemed a valuable consideration, with which they appeared to be content, they readily quitted a number of their houses and retired to the others; and, it being the reason for planting, both parties went to work. Thus on the 27th of March, 1634, the English colony took peaceable possession of the country of Maryland; and gave to the town the name of St. Mary, and to the creek on which it was situate, the name of St. George.

The desire of quieting the natives, by giving them a reasonable and satisfactory compensation for their lands is a trait in the character of the first planters, which will always do honor to their memory.

It was a fortunate circumstance for these adventurers, that, previous to their arrival, the Indians of *Yocomoco*, had resolved to quit their country, and retire to the westward, that they might be free from the incursions of the *Susquehannocks*, a powerful and warlike nation, residing between the Bays of Chesapeake and Delaware, who frequently invaded them, and carried off their provisions and women. Some had actually removed, and others were preparing to follow, but were encouraged to remain another season, by the presence of the English. They lived on friendly terms with the colony; the men assisted them in hunting and fishing; the women taught them to manage the planting and culture of corn, and making it into bread; and they were compensated for their labor and kindness in such tools and trinkets as were pleasing to them. According to their promise, they quitted the place wholly, in the following year, and the colony had full and quiet possession.

At his first settlement in this place, Calvert erected a house, and mounted a guard for the security of his people and stores. He was, soon after, visited by Sir John Harvey and by several of the Indian princes. At an entertainment on board one of the ships, the Werowance of Patuxent was seated between the Governor of Virginia and the governor of Maryland. One of his own subjects coming on board and seeing his sovereign in that situation, started with surprise, thinking him a prisoner, as he had been once before, to the Virginians. The prince rose from the table and satisfied the Indian that he was safe, which prevented his affectionate subject from leaping into the water, as he had attempted. This Werowance was so much pleased with the conduct of Calvert and his people, that after many other compliments he said to them, at parting, "I love the English so well, that if I knew they would kill me, I would command my people not to revenge my death; because I am sure they would not kill me, but through my own fault."

The colony had brought with them English meal; but they found Indian corn in great plenty, both at Barbadoes and Virginia; and by the next spring, they were able to export one thousand bushels to New England and Newfoundland; for which they received dried fish and other provisions in return. They procured cattle, swine and poultry from Virginia. They were very industrious in building houses and making gardens; in which they sowed the seeds of European esculent vegetables; and had the pleasure of seeing them come to high perfection. They suffered much in their health by the fever and ague, and many of them died; but when the survivors were seasoned to the climate, and had learned the use of indigenous medicinal remedies, they enjoyed their health much better. The country had so many natural advantages, that it soon became populous. Many Roman Catholic families from England resorted thither, and the proprietor with a degree of wisdom and generosity, then unparalleled but in Holland, after having established the Christian religion upon the footing of common law, granted liberty of conscience and equal privileges to Christians of every denomination. With this essential benefit, was connected security of property; lands were given in lots of fifty acres, to every emigrant, in absolute fee simple. Under such advantages the people thought themselves so happy, that in an early period of their colonial existence, they in return granted to the proprietor a subsidy of fifteen pounds of tobacco, on every poll, "as a testimony of their gratitude for his great charge and solicitude, in maintaining the government, in protecting the inhabitants in their rights, and for reimbursing his vast expense," which during the two first years exceeded forty thousand pounds sterling.

WILLIAM PENN.

WILLIAM PENN.—His Birth and Education.—He travels to France.—Goes to Ireland.—Attaches himself to the Quakers.—His arrest and discharge.—Discarded by his father.—Becomes an itinerant preacher.—Imprisoned in the tower.—His second journey to Ireland.—His father reconciled to him.—His imprisonment in Newgate.—He pleads for the Quakers before Parliament.—Receives a Charter of Pennsylvania.—His terms of settlement.—Sends a letter to the Indians.—Embarks with a number of Quakers for America.—Arrives at Newcastle.—Goes to Chester.—Names his settlement Philadelphia.—Specimen of his style of preaching.—His departure for England.—He publishes a book on the liberty of conscience.—Suspected of being an enemy to King William.—He is involved in debt.—His prudent measures.—Signs a new charter.—Returns to England.—His embarrassments.—His death.

THE FOUNDER of Pennsylvania was the grandson of Captain Giles Penn, an English Consul in the Mediterranean, and the son of Sir William Penn, an Admiral of the English navy, in the protectorate of Cromwell, and in the reign of Charles II. in which office he rendered very important services to the nation, particularly by the conquest of Jamaica from the Spaniards, and in a naval victory over the Dutch. William was born October 14, 1644, in the parish of St. Catharine, near the tower of London, educated at Chigwell, in Essex, and at a private school in London; and in the fifteenth year of his age entered as a student and gentleman commoner of Christ Church in Oxford.

His genius was bright, his disposition sober and studious, and being possessed of a lively imagination and a warm heart, the first turn of his mind towards religious subjects, was attended with circumstances bordering on enthusiasm. Having received his first impressions from the preaching of Thomas Loe, an itinerant Quaker, he conceived a favorable opinion of the flights and refinements of that rising sect, which led him, while, at the university, in conjunction with some other students, to withdraw from the established worship, and hold a private meeting, where they preached and prayed their own way. The discipline of the university being very strict in such matters, he was fined for the *sin* of nonconformity; this served to fix him more firmly in his principles and habits, and exposed his singularity more openly to the world. His conduct being then deemed obstinate, he was, in the sixteenth year of his age, expelled as an incorrigible offender against the laws of uniformity.

On his return home, he found his father highly incensed against him. As neither remonstrances, nor threatenings, nor *blows* could divest him of his religious attachments, he was, for a while turned out of the house; but by the influence of his mother he was so far restored to favor as to be sent to France, in company with some persons of quality, with a view to unbend his mind, and refine his manners. Here he learnt the language of the country, and acquired such a polite and courtly behaviour, that his father, after two years absence, received him with joy, hoping that the object of his wishes was attained. He was then admitted into Lincoln's Inn, where he studied law till the plague broke out in 1665, when he returned to his father's house.

About this time (1666) the king's coffers being low, and claims for unrewarded services being importunate, grants were frequently made of lands in Ireland; and the merits of Sir William Penn being not the least conspicuous, he received a valuable estate in the county of Cork, and committed the management of it to his son, then in the twenty-second year of his age. Here he met with his old friend Loe, and immediately attached himself to the society of Quakers, though at that time they were subject to severe persecution. This might have operated as a discouragement to a young gentleman of such quality and expectations, especially as he exposed himself thereby to the renewed displeasure of a parent who loved him, had not the integrity and fervor of his mind induced him to sacrifice all worldly considerations to the dictates of his conscience.

It was not long before he was apprehended at a religious "conventicle," and with eighteen others, committed to prison by the mayor of Cork; but upon his writing a handsome address to the Earl of Orrery, Lord President of Munster, in which he very sensibly pleaded for liberty of conscience, and professed his desire of a peaceable, and his abhorrence of a tumultuous and disrespectful separation from the established worship, he was discharged. This second stroke of persecution engaged him more closely to the Quakers. He associated openly with them, and bore, with calmness and patience, the cruel abuse which was liberally bestowed on that singular party.

His father being informed of his conduct, remanded

him home; and though now William's age forbade his trying the force of that species of discipline, to which as a naval commander, he had been accustomed, yet he piled him with those arguments, which it was natural for a man of the world to use, and which, to such an one, would have been prevailing. The principal one was a threatening to disinherit him, and to this he humbly submitted, though he could by no means be persuaded to take of his hat in presence of the king, the Duke of York, or his father. For this inflexibility he was again turned out of doors; upon which he commenced an itinerant preacher, and had much success in making proselytes. In these excursions, the opposition which he met with from the clergy and the magistracy frequently brought him into difficulties, and sometimes to imprisonment. But his integrity was so manifest, and his patience so invincible, that his father, at length, became softened toward him, and not only exerted his interest to release him from confinement, but winked at his return to the family whenever it suited his convenience. His mother was always his friend, and often supplied his necessities without the knowledge of the father.

In the year 1668, he commenced author, and having written a book, entitled "The Sandy Foundation Shaken," which gave great offence to the spiritual lords, he was imprisoned in the tower, and the visits of his friends were forbidden. But his adversaries found him proof against all their efforts to subdue him; for a message being brought to him by the Bishop of London, that he must either publicly recant, or lie a prisoner, his answer was, "My prison shall be my grave. I owe my conscience to no man. They are mistaken in me. I shake not their threats. They shall know that I can overcome their malice, and baffle all their designs by the spirit of patience." During this confinement he wrote his famous book, "No Cross, no Crown," and another, "Innocency with her open face," in which he explained and vindicated the principles which he had advanced in the book for which he was imprisoned. This, with a letter which he wrote to Lord Arlington, secretary of State, aided by the interest which his father had at court, procured his release, after seven months' confinement.

Soon after this, he made another visit to Ireland to settle his father's concerns, in which he exerted himself with great industry and success. Here he constantly appeared at the meetings of the Quakers, and at once officiated as a preacher, but used his interest with the court and nobility, and others of his nobility, to procure indulgence for them, and get some of them released from their imprisonment.

In 1670, an act of Parliament was made, which prohibited the meetings of dissenters, under severe penalties. The Quakers being forcibly debarr'd entering their meeting-house in Grace Church street, London, assembled before it in the street, where Penn preached to a numerous concourse, and being apprehended on the spot, by a warrant from the lord mayor, was committed to Newgate, and at the next session, took his trial at the Old Bailey, where he pleaded his own cause with the freedom of an Englishman and the magnanimity of a hero. The jury at first brought in their verdict, "guilty of speaking in Grace Church street," but this being unsatisfactory to the court, they were obtained all night, and the next day returned their verdict, "not guilty." The court were highly incensed against them, fined them forty marks each, and imprisoned them along with Penn, till their fines and fees were paid. An unlucky expression which dropped from the recorder on this trial, rendered the cause of the Quakers popular, and their persecutors odious. "It will never be well with us," said the malicious Sir John Hawley, "till something like the Spanish Inquisition be established in England." The triumph of Penn was complete; being acquitted by his peers, he was released from prison, on the payment of his fees, and returned to the zealous exercise of his ministry.

His conduct under this prosecution did him great honor. His father became perfectly reconciled to him, and soon after died, leaving his parental blessing and a plentiful estate. This accession of fortune made no alteration in his manners or habits; he continued to preach, to write, and to travel as before, and, within

a few months afterwards, was taken up again for preaching in the street, and carried to the tower; from whence, after a long examination, he was sent to Newgate, and being discharged without any trial, at the end of nine months, he went over to Holland and Germany, where he continued travelling and preaching, till the king published his declaration of indulgence to tender consciences, upon which he returned to England married a daughter of Sir William Springet, and settled at Rickmansworth, in Hertfordshire, where he pursued his studies, and multiplied his controversial writings for about five years.

In 1677, he "had a drawing" to renew his travels in Holland and Germany, in company with Fox, Barclay, Keith, and several others of his brethren. The inducement to this journey was the candid reception which had been given by divines, and other learned men in Germany, to the sentiments of every well meaning preacher who dissented from the Church of Rome. In the course of these travels they settled the order of church government, discipline, correspondence and carriage among their friends in Holland, dispersed their books among all sorts of people who were inclined to receive them; visited many persons of distinction, and wrote letters to others, particularly to the King of Poland and the Elector Palatine. They were received very courteously by the Princess Elizabeth, grand daughter of King James I. then resident at Herwerden, who, though not perfectly initiated into the mystery of "the holy silence," yet had been brought to a "waiting frame," and admitted them to several private meetings and conferences in her apartments, in company with the Countess of Hornes, and other ladies, her attendants, and afterwards kept up a correspondence with Mr. Penn till her death.

On his return to England, he found his friends suffering by the operation of a law made against Papists, the edge of which was unjustly turned against them. The law required a certain oath to be tendered to those who were suspected of popery; and because the Quakers denied the lawfulness of oaths in any case whatever, they were obliged to bear the penalty annexed to the refusal of this oath, which was no less than a fine of twenty pounds per month, or two thirds of their estate. By Penn's advice they petitioned the Parliament for redress of this grievance, and after explaining the reason of their declining the oath, offered to give their word to the same purpose, and to submit to the penalty, "if they should be found faulty." Penn had a hearing before a committee of Parliament, when he pleaded the cause of his friends and of himself, in a sensible, decent, convincing manner; and what he said had so much weight, that the committee agreed to insert in a bill, then pending, a proviso for their relief. The bill passed the Commons, but before it could be got through the House of Lords, it was lost by a sudden prorogation of Parliament.

We have hitherto viewed Mr. Penn as a Christian and a preacher; and he appears to have been honest, zealous, patient and industrious in the concerns of religion. His abilities and his literary acquirements were eminently serviceable to the fraternity with which he was connected; and it was owing to his exertions, in conjunction with Barclay and Keith, that they were formed into order, and that a regular correspondence and discipline were established among the several societies of them dispersed in Europe and America. His writings served to give the world a more just and favorable idea of their principles, than could be had from the harangues of illiterate preachers, or the chapeauds of enthusiastic writers; while his family and fortune procured for them a degree of respectability at home and abroad. His controversial writings are modest, candid and persuasive. His book, entitled "The Christian Quaker," is a sensible vindication of the doctrine of Universal Saving Light. His style is clear and perspicuous; and though he does not affect so much scholastic subtilty in his argumentation as his friend Bar-

clay, yet he is by no means inferior to him in solidity of reasoning. His character is thus drawn by the editor of his works: "Our worthy friend, William Penn, was known to be a man of great abilities; of an excellent sweetness of disposition; of quick thought and ready utterance; full of love, without dissimulation; as extensive in charity as comprehensive in knowledge; so ready to forgive enemies, that the ungrateful were not excepted. He was learned without vanity; apt without forwardness; facetious in conversation, yet weighty and serious; of an extraordinary greatness of mind, yet void of the stain of ambition."

We shall now view him in the character of a legislator, in which respect his learning, his sufferings, his acquaintance with mankind, and his genuine liberality, were of great use to him. Among his various studies, he had not omitted to acquaint himself with the principles of law and government; and he had more especial inducements to this, from the persecutions and arrests which he frequently suffered, into the legality of which it was natural for him to inquire. He had observed in his travels abroad, as well as in his acquaintance at home, the workings of arbitrary power, and the mediocrity of usurpation; and he had studied the whole controversy between regal and popular claims: the result of which was, that government must be founded in justice, and exercised with moderation. One of his maxims was, that "the people being the wife-police of the prince, is better managed by wisdom than ruled by force." His own feelings, as well as reflections, led him to adopt the most liberal idea of toleration. Freedom of profession and inquiry, and a total abhorrence of persecution for conscientious sake, were his darling principles; and it is a singular circumstance in the history of mankind, that Divine Providence should give to such a man as William Penn an opportunity to make a fair and consistent experiment of these excellent maxims, by establishing a colony in America, on the most liberal principles of toleration, at a time, when the policy of the oldest nations in Europe were ineffectually employed in endeavouring to reduce the active minds of men to a most absurd uniformity in articles of faith and modes of worship.

It has been observed that his father, Sir William Penn had inherited much by his services in the English navy. There were also certain debts due to him from the crown, at the time of his death, which the royal treasures were poorly able to discharge. His son, after much solicitation, found no prospect of getting his due, in the common mode of payment, and therefore turned his thoughts toward obtaining a grant of land in America, on which he might make the experiment of settling a colony, and establishing a government suited to his own principles and views.

Mr. Penn had been concerned with several other Quakers in purchasing of Lord Berkeley, his patent of West Jersey, to make a settlement for their persecuted brethren in England, many of whom transported themselves thither, in hope of an exemption from the troubles which they had endured, from the execution of the penal laws against dissenters. But they found themselves subject to the arbitrary impositions of Sir Edmund Andros, who governed the Duke of York's territory, and exercised the jurisdiction over all the settlements on both sides the Delaware. Penn and his associates remonstrated against his conduct, but their efforts proved ineffectual. However, the concern which Penn had in this purchase gave him not only a taste for speculating in landed interest, but a knowledge of the middle region of the American coasts, and being desirous of acquiring a separate estate, where he might realize his sanguine wishes, he had great advantage in making inquiry and determining on a place.

Having examined all the former grants to the companies of Virginia and New England, the Lord Baltimore and the Duke of York, he fixed upon a territory bounded on the east by the bay and river of Delaware, extending southward to Lord Baltimore's province of Maryland, westward as far as the western extent of Maryland, and northward "as far as plantable." For this he petitioned the king, and being examined before the Privy Council, on the 14th of June, concerning those words of his petition "as far as plantable," he declared, "that he should be satisfied with the extent of three degrees of latitude; and that in lieu of such a grant, he was willing to count his debt from the crown, or some part of it, and to stay for the remainder, till his Majesty should be in a better condition to satisfy it."

Notice of this application was given to the agents of the Duke of York and Lord Baltimore, and inquiry was made, how far the pretensions of Penn might consist

* The young son of his father to him deserv'd to be recommended. "These things I commend to you. I let nothing tempt you to wrong your consciences; if you keep peace at home, it will be a rest to you in a day of trouble. 2. Whichever you seem to be, say it justly, and time it seasonably; for that gives against and suspect. 3. Be not grieved at disappointments: if they can be recovered, as I do not trouble you. These things will serve you with diligence and content through this uncertain world."

"It may not be amiss here to introduce an extract from Mr. Penn's Journal containing the sentiments of the Quakers concerning marriage. "Amsterdam the 30 of the 6th month, 1677. A dispute concerning the law of the magistrate about marriage being proposed and discussed of in the town of God, among Friends, at a select meeting it was the universal and unanimous sense of Friends, that coming in marriage is the work of the Lord only, and not of priest or magistrate. It is God's ordinance and not man's. It was God's work before the fall, and it is God's work in the restoration. We acknowledge it to be the Lord's work, and we are not witnesses. But if a Friend have a desire that the magistrate should know it before the marriage be concluded, he may publish the same after the same hath been Friends were found clear after the marriage is performed in a public meeting of Friends and others, and carry a copy of the certificate to the magistrate, that, if they desire, they may register it."

with the grants already made to them. The peninsula between the bays of Chesapeake and Delaware had been planted by detached companies of Swedes, Finlanders, Dutch, and English. It was first by force, and afterwards by treaty, brought under the dominion of the Crown of England. That part of it which bordered on the Delaware was within the Duke of York's patent, while that which joined on the Chesapeake was within the grant to Lord Baltimore.

The Duke's agent consented that Penn should have the land west of Delaware and north of Newcastle, "in consideration of the reason he had to expect favor from his majesty." Lord Baltimore's agent petitioned that Penn's grant might be expressed to lie north of Susquehanna fort, and of a line drawn east and west from it, and that he might not be allowed to sell arms and ammunition to the Indians. To these restrictions Penn had no objection.

The draught of a charter being prepared, it was submitted to lord chief justice North, who was ordered to provide by fit clauses for the interest of the king and the encouragement of the planters. While it was under consideration, the Bishop of London petitioned that Penn might be obliged by his patent to admit a chaplain of his lordship's appointment, at the request of any number of the planters. The giving a name to the province was left to the king.

The charter, consisting of twenty-three sections, "penned with all the appearance of candor and simplicity," was signed and sealed by King Charles II., on the 4th of March, 1681. It constitutes William Penn, and his heirs, true and absolute proprietaries of the province of Pennsylvania, saving to the crown their allegiance and the sovereignty. It gives him, his heirs and their deputies, power to make laws "for the good and happy government of the country," by advice of the freemen, and to erect courts of justice for the execution of those laws, provided they be not repugnant to the laws of England. For the encouragement of planters, they were to enjoy the privileges of English subjects, paying the same duties in trade; and no taxes were to be levied on them, but by their own Assemblies or by acts of Parliament. With respect to religion, no more is said than what the Bishop of London had suggested, that if twenty inhabitants should desire a preacher of his lordship's approbation, he should be allowed to reside in the province. This was perfectly agreeable to Mr. Penn's professed principles of liberty of conscience; but it may seem rather extraordinary that this distinguished leader of a sect, who so pointedly denied the lawfulness of war, should accept the powers given him in the sixteenth article of the charter, "to levy, muster, and train all sorts of men; to pursue and vanquish enemies; to take and put them to death by the laws of war; and to do every thing which belonged to the office of captain-general in an army." Mr. Penn, for reasons of state, might find it convenient that he and his heirs should be thus invested with the power of the sword, though it was impossible for him or them to exercise it, without first apostatizing from their religious profession.

The charter being thus obtained, he found himself authorized to agree with such persons as were disposed to be adventurers to his new province. By a public advertisement, he invited purchasers, and described the country with a display of the advantages which might be expected from a settlement in it. This induced many single persons, and some families, chiefly of the denomination of Quakers, to think of a removal. A number of merchants and others formed themselves into a company, for the sake of encouraging the settlement and trade of the country, and purchased twenty thousand acres of his land. They had a president, treasurer, secretary, and a committee of twelve, who resided in England and transacted their common business. Their objects were to encourage the manufacturers of leather and glass, the cutting and sawing of timber, and the whale-fishery.

The land was sold at the rate of twenty pounds for every thousand acres. They who rented lands were to pay one penny yearly per acre. Servants, when their terms were expired, were entitled to fifty acres, subject to two shillings per annum; and their masters were allowed fifty acres for each servant so liberated, but subject to four shillings per annum; or if the master should give the servant fifty acres out of his own division, he might receive from the proprietor one hundred acres, subject to six shillings per annum. In every hundred thousand acres, the proprietor reserved ten for himself.

The quit rents were not agreed to without difficulty. The purchasers remonstrated against them as a burden,

unprecedented in any other American colony. But Penn distinguished between the character of proprietor and governor, urging the necessity of supporting government with dignity, and that by complying with this expedient, they would be freed from other taxes. Such distinctions are very convenient to a politician, and by this insinuation the point was carried: upon which it was remarked, (perhaps too severely,) that less of the man of God now appeared, and more of the man of the world."

According to the powers given by the charter, "for regulating and governing property within the province," he entered into certain articles with the purchasers and adventurers (July 11, 1681) which were entitled "Conditions and Concessions." These related to the laying out roads, city and country lots; the privilege of water courses; the property of mines and minerals; the reservation of timber and mulberry-trees; the terms of improvement and cultivation; the traffic with the Indians, and the means of preserving peace with them; of preventing debtors, and other defaulters from making their escape; and of preserving the morals of the planters, by the execution of the penal laws of England, till an Assembly should meet.

These preliminaries being adjusted, the first colony under his authority, came over to America, and began their settlement above the confluence of the Schuylkill with the Delaware. By them the proprietor sent a letter to the Indians, informing them that "the GREAT God had been pleased to make him concerned in their part of the world; and that the king of the country where he lived had given him a great province therein; but that he did not desire to enjoy it without their consent; that he was a man of peace, and that the people whom he sent were of the same disposition; but if any difference should happen between them, it might be adjusted by an equal number of men chosen on both sides." With this letter, he appointed commissioners to treat with the Indians, about purchasing land, and promised them that he would shortly come and converse with them in person.

About this time (Nov. 1681) he was elected a Fellow of the Royal Society.

The next spring he completed a frame of government (April 25, 1682) with the express design "to support power in reverence with the people, and to secure the people from the abuse of power." It is prefaced with a long discourse on the nature, origin, use and abuse of government; which shows that he had not only well studied the subject, but that he was fond of displaying his knowledge.

By this frame of government, there was to be a Provincial Council, consisting of seventy-two persons, answering to the number of elders in the Jewish sanhedrim, who were to be divided into three classes: twenty-four to serve for three years, twenty-four for two years, and twenty-four for one year; the vacancies thus made to be supplied by new elections; and after seven years, every one of those who went off yearly, were to be incapable of re-election for one year following. This rotation was intended "that all might be fitted for government, and have experience of the care and burden of it." Of this council two-thirds were to be a quorum, and the consent of two-thirds of this quorum was to be had in all matters of moment; but in matters of lesser moment one-third might be a quorum, the majority of whom might determine. The distinction between matters of moment and of lesser moment was not defined; nor was it declared who was to be judge of the distinction. The governor was not to have a negative but a treble voice. The council were to prepare and propose bills to the General Assembly, which were to be published thirty days before its meeting. When met, the Assembly might deliberate eight days, but on the ninth were to give their assent or dissent to the proposed bills; two-thirds of them to be a quorum. With respect to the number of the Assembly, it was provided, that the first year all the freemen in person might compose it; afterward a delegation of two hundred, which might be increased to five hundred." The governor, with the council to be the supreme executive, with a parental and prudential authority, and to be divided into four departments of eighteen each; one of which was called a committee of plantations, another of justice and safety, another of trade and revenue, and another of manners, education and arts.

To this frame of government was subjoined a body of fundamental laws, agreed upon by Penn and the adventurers in London, which respected moral, political, and economical matters; which were not to be altered but by the consent of the governor, or his heirs, and six

parts in the seven of the freemen, met in Provincial Council and Assembly. In this code we find that celebrated declaration which has contributed more than any thing else to the prosperity of Pennsylvania, viz. "That all persons living in the province, who confess and acknowledge the one almighty and eternal God to be the creator, upholder, and ruler of the world; and hold themselves obliged in conscience to live peaceably and justly in civil society, shall in no ways be molested for their religious persuasion or practice in matters of faith and worship; nor shall they be compelled at any time to frequent or maintain any religious worship, place or ministry whatever." To which was added another equally conducive to the welfare of society. "That according to the good example of the primitive Christians, and the case of the creation, every first day of the week, called the Lord's Day, people shall abstain from their common daily labor, that they may the better dispose themselves to worship God, according to their understandings."

These laws were an original compact between the governor and the freemen of the colony. They appear to be founded in wisdom and equity, and some of them have been copied into the declarations of rights prefixed to several of the present republican constitutions in America. The system of government which Penn produced has been regarded as an Utopian project; but though in some parts visionary and impracticable, yet it was liberal and popular, calculated to gain adventurers with a prospect of republican advantages. Some of its provisions, particularly the rotation of the council, have been adopted by a very enlightened body of American legislators, after the expiration of a century. The experiment is now in operation, and without experiment nothing can be fairly decided in the political, any more than in the physical world.

Having by the help of Sir William Jones, and other gentlemen of the long robe constructed a plan of government for his colony, Mr. Penn prepared to make the voyage to America, that he might attempt the execution of it.

A part of the lands comprehended within his grant had been subject to the government, which was exercised by the deputy of the Duke of York. To prevent any difficulty, he thought it convenient to obtain from the Duke a deed of sale of the Province of Pennsylvania, which he did on the 21st of August, 1682; and by two subsequent deeds, in the same month, the Duke conveyed to him the town of Newcastle, situate on the western side of the Delaware with a circle of 12 miles radius from the centre of the town, and from thence extending southerly to the Hoar Kills, at Cape Henlopen, the western point of the entrance of Delaware Bay; which tract contained the settlements made by the Dutch, Swedes, and Finns. This was called the territory, in distinction from the province of Pennsylvania, and was divided into three counties, Newcastle, Kent and Sussex.

At this time the penal laws against dissenters were executed with rigor in England, which made many of the Quakers desirous of accompanying or following Penn into America, where they had a prospect of the most extensive liberty of conscience. Having chosen some for his particular companions, he embarked with them in August 1682, and from the Downs, where the ship lay waiting for a wind, he wrote an affectionate letter to his friends, which he called "a farewell to England." After a pleasant passage of six weeks, they came within sight of the American coast, and were refreshed by the land breezes, at the distance of twelve leagues. As the ship sailed up the Delaware, the inhabitants came on board, and saluted the new governor with an air of joy and satisfaction. He landed at Newcastle, and summoned the people to meet him, when possession of the soil was given him in the legal form of that day; and he entertained them with a speech, explaining the purpose of his coming, and the views of his government: assuring them of his intention to preserve civil and religious liberty, and exhorting them to peace and sobriety. Having renewed the commissions of their former magistrates, he went to Chester, where he repeated the same things, and received their congratulations. The Swedes appointed a delegate to compliment him on his arrival, and to assure him of their affection and fidelity.

At this time the number of inhabitants was about three thousand. The first planters were the Dutch, and after them the Swedes and Finns. There had been formerly disputes among them, but for above twenty years they had been in a state of peace. The Dutch were settled on the bay, and applied themselves chiefly to trade; at Newcastle they had a court-house

and a place of worship. The Swedes and Finns lived higher up the river, and followed husbandry. Their settlements were Christina, Tenecum, and Wicoco; at each of which they had a church. They were a plain, robust, sober and industrious people, and most of them had large families. The colony which Penn had sent the year before, began their settlement above Wicoco, and it was by special direction of the proprietor, called PHILADELPHIA. The province was divided into three counties, Chester, Buckingham, and Philadelphia.

Three principal objects engaged the attention of Mr. Penn; one was to unite the territory with the province; another was to enter into a treaty with the Indians; and the third was to lay out a capital city.

The first was entered upon immediately. Within a month after his arrival, he called a General Assembly at Chester, when the constitution, which had been formed in England, was to undergo an experiment.

The freemen both of the province and territory were summoned to compose this Assembly in person. Instead of which, they elected twelve members in each county, amounting in all to seventy-two, the precise number, which by the frame of government was to compose one house only. The elections were accompanied by petitions to the governor, importing that the fewness of the people, their inability in estate, and unskillfulness in government, would not permit them to serve in so large a council and assembly, and therefore it was their desire that the twelve now returned from each county, might serve both for Provincial Council and General Assembly, with the same powers and privileges which by the charter were granted to the whole."

The members were accordingly distributed into two houses; three out of each county made a council, consisting of eighteen, and the remaining part formed an assembly of fifty-four. In this assembly was passed "the act of settlement," in which the frame of government made in England, being styled a *probationary act*, was so far changed, as that three persons of each county might compose the council, and *fix* the assembly. After several other "variations, explanations and additions, requested by the Assembly, and yielded to by the governor, the aforesaid charter, and frame of government was "recognised and accepted, as if with these alterations it was supposed to be complete." The Assembly is styled "the General Assembly of the province of Pennsylvania and the territories thereunto belonging."

Thus the lower counties, at this time, manifested their willingness to be united with the province of Pennsylvania; but the proprietor had not received from the crown, any right of jurisdiction over that territory, though the Duke had sold him the right of soil; and it was not in the power of the people, as subjects of the King of England, to put themselves under any form of government, without the royal authority. The want of this, with the operation of other causes, produced difficulties, which afterward rendered this union void; and the three lower counties had a separate Assembly, though under the same governor.

Mr. Penn's next object was to treat with the natives. The benevolence of his disposition led him to exercise great tenderness toward them, which was much increased by an opinion which he had formed, and which he openly avowed, that they were descendants of the ten dispersed tribes of Israel. He travelled into the country, visited them in their cabins, was present at their feasts, conversed with them in a free and familiar manner, and gained their affection by his obliging carriage, and his frequent acts of generosity. But on public occasions, he received them with ceremony, and transacted business with solemnity and order.

In one of his excursions in the winter, he found a chief warrior sick, and his wife preparing to sweat him, in the usual manner, by pouring water on a heap of hot stones, in a closely covered hut, and then plunging him into the river, through a hole cut in the ice. To divert himself during the sweating operation, the chief sang the achievements of his ancestors. Then his own, and concluded his song with this reflection: "Why are we sick, and these strangers well? It seems as if they were sent to inherit the land in our stead! Ah! it is because they love the *Great Spirit*, and we do not!" The sentiment was rational, and such as often occurred to the sagacious among the natives; We cannot suppose it was disagreeable to Mr. Penn, whose view was to impress them with an idea of his honest and pacific intentions, and to make a fair bargain with them.

Some of their Chiefs made him a voluntary present of the land which they claimed; others sold it at a stipulated price. The form of one of these treaties is thus described, in a letter which he wrote to his friends in England. "The king sat in the middle of a half moon, and had his council, old and wise, on each hand. Behind, at a little distance, sat the young ones, in the same figure. Having consulted and resolved the business, the king ordered one of them to speak to me. He stood up, came to me, took me by the hand, saluted me in the name of the king, told me he was ordered by the king to speak to me, and that now it was not he that spoke but the king, because what he should say was the king's mind. [Having made an apology for their delay,] he fell to the bounds of the land they had to dispose of, and the price, which is now dear, that which would once have bought twenty miles, not now buying two. During the time this person was speaking, not a man of them was observed to whisper or smile. When the purchase was agreed, great promises passed between us of kindness and good neighborhood, and that the English and Indians must live in love, as long as the sun gave light. Which done, another made speech to the Indians in the name of all the sachems, first to tell them what was done, next to charge them to love the christians, to live in peace with me and my people, and that they should never do me or my people any wrong. At every sentence of which they shouted, and said Amen, in their way. The pay or presents I made them, were not hoarded by the particular owners, but the neighboring kings and clans being present when the goods were brought out, the parties chiefly concerned consulted what and to whom they should give them. To every king, then, by the hands of a person, for that work appointed, was a proportion sent, sorted and folded, with that gravity which is admirable. Then that king subdivided it in like manner among his dependants, they hardly leaving themselves an equal share with one of their subjects."

Mr. Penn was so happy as to succeed in his endeavors to gain the good will of the Indians. They have frequently, in subsequent treaties many years after, expressed great veneration for his memory; and to perpetuate it, they have given to the successive governors of Pennsylvania the name of *Onas*, which signifies a *Pen*. By this name they are commonly known and addressed in the speeches made by the Six Nations in all their treaties.

One part of his agreement with the Indians was, that they should sell no lands to any person but to himself or his agents; another was, that his agents should not occupy nor grant any lands, but those which were fairly purchased of the Indians. These stipulations were confirmed by subsequent acts of Assembly; and every bargain made between private persons and the Indians without leave of the proprietor, was declared void. The charter which Mr. Penn had obtained of the crown, comprehended a far greater extent of territory, than it was proper for him at first to purchase of the natives.

He did not think it for his interest to take any more at once than he had a prospect of granting away to settlers. But his colony increased beyond his expectation, and when new tracts were wanted, the Indians rose in their demands. His first purchases were made at his own expense; and the goods delivered on these occasions, went by the name of presents. In a course of time when a treaty and a purchase went on together, the governor and his successors made the speeches, and the Assembly were at the expense of the presents. When one paid the cost, and the other enjoyed the profit, a subject of altercation arose between the proprietary and the popular interests, which other causes contributed to increase and inflame.

The purchases which Mr. Penn made of the Indians were undoubtedly fair and honest; and he is entitled to praise for his wise and peaceable conduct toward them. But there is such a thing as over-rating true merit. He has been celebrated by a late author, as baving in these purchases "set an example of moderation and justice in America, which was never thought of before by the Europeans." It had been a common thing in New-England, for fifty years before his time, to make fair and regular purchases of land from the Indians; and many of their deeds are preserved in the public records. As early as 1633, a law was enacted in the colony of Massachusetts, that "no person shall put any of the Indians from their planting grounds, or fishing places; and that upon complaint and proof thereof, they shall have relief in any of the courts of justice, as the English have." To prevent frauds in private bargains, it was ordered by the same act, that

"no person shall buy land of any Indian, without license first had and obtained of the General Court."—Other regulations respecting traffic with them were made at the same time, which bear the appearance, not only of justice and moderation, but of a parental regard to their interest and property.

Nor is it to be supposed that other Europeans neglected their duty in these respects. Several purchases were made before Penn's time in New-Jersey. Mr. Penn himself, in one of his letters, speaking of the quarrels between the Dutch and the Swedes, who had occupied the lands on the Delaware before him, says, "the Dutch, who were the first planters, looked on them [the Swedes] as intruders on their purchase and possession." Of whom could the Dutch have purchased those lands, but of the natives? They could not have occupied them without the consent of the Indians, who were very numerous, and could easily have extirpated them, or prevented their settlement. It is probable that this Dutch purchase is referred to in that part of Penn's letter before quoted, where he speaks of the land at that time, (1683) as *dearer* than formerly, for how could this have been ascertained but by comparing his with former purchases?

It may then be proper to consider Mr. Penn as having followed the "examples of justice and moderation," which had been set by former Europeans; in their conduct toward the natives of America; and as having united his example with theirs, for the imitation of succeeding adventurers. This will give us the true idea of his merit, without detracting from the respect due to those who preceded him in the arduous work of colonizing America.

Mr. Penn easily foresaw that the situation of his province, and the liberal encouragement which he had given to settlers, would draw people of all denominations thither, and render it a place of commerce; he therefore determined to lay the plan of a capital city, which in conformity to his catholic and pacific ideas, he called *Philadelphia*. The site of it was a neck of land between the river Delaware on the east and the Schuylkill, *Hiding Creek*, a branch on the west; and he designed that the city should extend from one to the other, the distance being two miles. This spot was chosen on account of the firm soil, the gentle rising from each river towards the midst, the numerous springs, the convenience of coves capable of being used as docks, the depth of water for ships of burthen, and the good anchorage. The ground was surveyed, and a plan of the intended city was drawn by Thomas Holme, surveyor-general. Ten streets, of two miles in length, were laid out from river to river, and twenty streets of one mile in length, crossing them at right angles. Four squares were reserved for common purposes, one in each quarter of the city, and in the centre, on the most elevated spot, was a larger square of ten acres, in which were to be built a state-house, a market-house, a school-house and a place of worship. On the side of each river it was intended to build wharves and ware-houses, and from each front street nearest to the rivers, an open space was to be left, in the descent to the shores, which would have added much to the beauty of the city. All owners of one thousand acres were entitled to a city lot, in the front streets, or in the central high street, and before each house was to be an open court, planted with rows of trees. Smaller purchasers were to be accommodated in the other streets; and care was taken in all, that no building should encroach on the street lines. This last regulation has been always attended to, though in some other respects the plan has been either disregarded or not completed.

The city was begun in 1682, and within less than a year, "eighty houses and cottages were built, wherein merchants and mechanics exercised their respective occupations;" and they soon found the country around them so well cultivated by the planters, as to afford them bread and vegetables, while the venison, fowl and fish, made an agreeable variety with the salted provisions which they imported. Penn himself writes, with an air of cheerfulness, that he was well contented with the country, and the entertainment which he found in it. This letter is among his printed works, and in the same collection we find an affectionate address to the people of Pennsylvania; in it he appears to have a tender concern for their moral and religious improvement, and warns them against the temptations to which they were exposed. Their circumstances were indeed peculiar; they had suffered contempt and persecution in England, and were now at rest; in the enjoyment of liberty, under a popular form of government; the eyes of the world were upon them; their former enemies were watching their conduct, and would have

been glad of an opportunity to reproach them; it was therefore his desire that they should be moderate in prosperity, as they had been patient in adversity. The concluding words of this address may give us a specimen of his style and manner of preaching. "My friends, remember that the Lord hath brought you upon the stage; he hath now tried you with liberty, yea, and with power; he hath put precious opportunities into your hands: have a care of a perverse spirit, and do not provoke the Lord by doing those things by which the inhabitants of the land that were before you, grieved his spirit;* but sanctify God, the living God in your hearts, that his blessing may fall and rest as the dew of Heaven on you and your offspring. Then shall it be seen to the nations, that there is no enchantment against Jacob, nor divination against Israel; but your tents shall be goodly and your dwellings glorious."

In the spring of 1683, a second Assembly was held in the new city of Philadelphia, and a great number of laws were passed. Among other good regulations, it was enacted, that to prevent lawsuits, three arbitrators, called peace-makers, should be chosen by every county court, to hear and determine small differences between man and man. This Assembly granted to the governor an impost on certain goods exported and imported, which he, after acknowledging their goodness, was pleased for the encouragement of the traders, "freely to remit." But the most distinguished act of this Assembly, was their acceptance of another frame of government which the proprietor had devised, which was "in part conformed to the first, in part modified according to the act of settlement, and in part essentially different from both." The most material alterations were the reducing the number of the Assembly from seventy-two to fifty-four, and the giving the governor a negative in lieu of a treble voice in acts of legislation. Their "thankful" acceptance of this second charter, was a proof of his great ascendancy over them, and the confidence which they placed in him; but these changes were regarded by some as a departure from the principles on which the original compact was grounded.

The state of the province at this time has been compared to that of "a father and his family, the latter united by interest and affection; the former revered for the wisdom of his institutions and the indulgent use of his authority. Those who were ambitious of repose, found it in Pennsylvania; and as none returned with an evil report of the land, numbers followed. All partook of the heaven which they found: the community wore the same equal face: no one aspired, no one was oppressed: industry was sure of profit, knowledge of esteem, and virtue of veneration." When we contemplate this agreeable picture, we cannot but lament that Mr. Penn should ever have quitted his province; but after residing in it about two years, he found himself urged by motives of interest as well as philanthropy, to return to England. At his departure in the summer of 1684, his capital city, then only of two years standing, contained nearly three hundred houses, and two thousand inhabitants; besides which there were twenty other settlements begun, including those of the Dutch and Swedes. He left the administration of government in the hands of the Council and Assembly, having appointed five commissioners to preside in his place.

The motives of his return to England were two. A controversy with Lord Baltimore, the proprietor of Maryland, concerning the limits of their respective patents, and, a concern for his brethren, who were suffering by the operation of the penal laws against dissenters from the Established Church.

The controversy with Lord Baltimore originated in this manner. Before Penn came to America, he had written to James Frisby and others, at their plantations on Delaware Bay, then reputed a part of Maryland, advising them, that as he was confident they were within his limits, they should yield an obedience to the laws of Maryland. This warning served as a pretext to some of the inhabitants of Cecil and Baltimore counties, who were impatient of control, to withhold the payment of their rents and taxes. Lord Baltimore and his council ordered the military officers to assist the sheriffs in the execution of their duty which was accomplished, though with great difficulty. After this, Markham, Penn's agent, had a meeting with Lord Baltimore at the village of Upland, which is now called Chester, where a discovery was made by a quadrant, that the place was twelve miles south of the 40th degree of latitude, a circumstance before unknown

to both parties. Baltimore, therefore, concluded to derive an advantage from precision, whilst Penn wished to avail himself of uncertainty. After Penn's arrival in America, he visited Lord Baltimore, and had a conference with him on the subject. An account of this conference taken in short hand by a person present, with a statement of the matter in debate, were sent by Lord Baltimore to England, and laid before the Lords of Trade and plantations in April, 1683. Upon which letters were written to both, advising them to come to an amicable agreement. This could not be done; and therefore, they both went to England, and laid their respective complaints before the Board of Trade. Baltimore alleged that the tract in question, was within the limits of his charter, and had always been so understood, and his claim allowed until disturbed by Penn. The words of his charter were, "to that part of Delaware bay on the north, which lies under the 40th degree of northerly latitude from the equinoctial." Penn, on the other hand, affirmed that Lord Baltimore's grant was of "lands not inhabited by the subjects of any Christian prince;" that the land in question was possessed by the Dutch and Swedes prior to the date of the charter of Maryland; that a surrender having been made by the Dutch of this territory to King Charles, in 1664, the country had ever since been in possession of the Duke of York. The Lords at several meetings, having examined the evidences on both sides, were of opinion that the lands bordering on the Delaware did not belong to Lord Baltimore, but to the king. They then proceeded to settle the boundary, and on the 7th of November, 1685, it was determined, that "for avoiding further differences, the tract of land lying between the river and bay of Delaware, and the eastern sea, on the one side, and Chesapeake bay on the other side, be divided into two equal parts by a line from the latitude from Cape Henlopen, to the 40th degree of northern latitude, and that one half thereof lying towards the Bay of Delaware and the eastern sea, be adjudged to belong to his majesty, and that the other half remain to the Lord Baltimore, as comprised within his charter." To this decision Lord Baltimore submitted, happy that he had lost no more, since a quo warranta had been issued against his charter. But the decision, like many others, left room for a farther controversy, which was carried on by their respective successors for above half a century. The question was concerning the construction of "the 40th degree of latitude," which Penn's heirs contended was the beginning, and Baltimore's the completion of the 40th degree, the difference being sixty-nine miles and a half.

The other cause of Mr. Penn's departure for England proved a source of much greater vexation, and involved consequences injurious to his reputation and interest. His concern for his suffering brethren induced him to use the interest which he had at court for their relief. He arrived in the month of August, and the death of Charles, which happened the next February, brought to the throne James II. under whom, when Lord-high-admiral, Penn's father had commanded, and who had always maintained a steady friendship with the son. This succession rather increased than diminished his attachment to the court; but as James openly professed himself a Papist, and the prejudices of a great part of the nation against him were very high, it was impossible for his intimate friends to escape the imputation of being popishly affected. Penn had before been suspected to be a Jesuit, and what now contributed to fix the stigma upon him was, his writing a book on liberty of conscience, a darling principle at court, and vindicating the Duke of Buckingham, who had written on the same subject. Another circumstance which strengthened the suspicion was, his taking lodgings at Kensington, in the neighborhood of the court, and his frequent attendance there, to solicit the liberation of his brethren who now filled the prisons of the kingdom.

He endeavored to allay these suspicions by publishing an address to his brethren, in which he refers to their knowledge of his character, principles and writings, for eighteen years past, and expresses his love of moderation, and his wish that the nation might not become "barbarous for Christianity, nor abuse one another for God's sake." But what gave him the greatest pain was, that his worthy friend Doctor Tillotson had entertained the same suspicion, and expressed it in his conversation. To him he wrote an expostulatory letter, and the Doctor frankly owned to him the ground of his apprehension, which Penn so fully removed, that Doctor Tillotson candidly acknowledged his mistake, and made it his business on all occasions to vindicate

Penn's character. This ingenuous acknowledgment, from a gentleman of so much information, and so determined an enemy to Popery, is one of the best evidences which can be had, of Mr. Penn's integrity in this respect; but the current of popular prejudice was at that time so strong, that it was not in the power of so great and good a man as Doctor Tillotson to turn it.

Had Mr. Penn fallen in with the discontented part of the nation, and encouraged the emigration of those who dreaded the consequences of King James' open profession of Popery, he might have made large additions to the numbers of his colonists, and greatly increased his fortune; but he had received such assurances from the king, of his intention to introduce universal toleration, that he thought it his duty to wait for the enlargement which his brethren must experience from the expected event. His book on liberty of conscience, addressed to the king and council, had not been published many days, before the king issued a general pardon, and instructed the Judges of Assize on their respective circuits to extend the benefit of it to the Quakers in particular. In consequence of this, about thirteen hundred of them, who had been confined in the prisons, were set at liberty. This was followed by a declaration for liberty of conscience, and for suspending the execution of the penal laws against dissenters, which was an occasion of great joy to all denominations of them. The Quakers, at their next general meeting, drew up an address of thanks to the king, which was presented by Mr. Penn.

The declaration of indulgence, being a specimen of that dispensing power, which the house of Stuart were fond of assuming, and being evidently intended to favor the free exercise of the Popish religion, gave an alarm to the nation, and caused very severe censures on those who, having felt the benefit of it, had expressed their gratitude in terms of affection and respect. The Quakers in particular became very obnoxious, and the prejudice against Penn as an abettor of the arbitrary maxims of the court, was increased; though on a candid view of the matter, there is no evidence that he sought any thing more than an impartial and universal liberty of conscience.*

It is much to be regretted, that he had not taken this critical opportunity to return to Pennsylvania. His controversy with Lord Baltimore had been decided by the council, and his pacific principles ought to have led him to acquiesce in their determination, as did his antagonist. He had accomplished his purpose with regard to his brethren, the Quakers, who, being delivered from their difficulties, were at liberty either to remain in the kingdom, or follow him to America. The state of the province was such as to require his presence, and he might at this time have resumed his office, and carried on his business in Pennsylvania, with the greatest probability of spending the remainder of his days there in usefulness and peace.

The revolution which soon followed, placed him in a very disagreeable situation. Having been a friend to James, he was supposed to be an enemy to William. As he was walking one day in Whitehall, he was arrested and examined by the lords in council, before whom he solemnly declared, "that he loved his country and the Protestant religion above his life, and that he had never acted against either; but that King James had been his friend, and his father's friend, and that he thought himself bound in justice and gratitude to be a friend to him." The jealous policy of that day had no ear for sentiments of the heart. He was obliged to find securities for his appearance at the next term, and thence to the succeeding term, in the last day of which, nothing having been specially laid to his charge, he was acquitted.

The next year (1690) he was taken up again on suspicion of holding correspondence with the exiled king. The lords requiring security for his appearance, he appealed to King William in person, who was inclined to acquit him, but to please some of the council, he was for awhile held to bail and then acquitted.

Soon after this, his name was inserted in a proclamation, wherein eighteen lords and others were charged with adhering to the enemies of the kingdom; but no evidence appearing against him, he was a third time acquitted by the Court of King's Bench.

* "If an universal charity, if the asserting an impartial liberty of conscience, if doing to others as one would be done by, and an open avowing and steady practising of these things, in all times, and to all parties, will justly lay a man under the reflection of being a Jesuit or Papist, I must not only submit to the character, but embrace it; and I can bear it with more pleasure than it is possible for them with any justice to give it to me."—(Penn's Let to Sec. Popple, Oct 24, 1688.

* Probably alluding to the ten tribes of Israel, from whom he supposes the Indians to be descended.

Being now at liberty, he meditated a return to Pennsylvania, and published proposals for another emigration of settlers. He had proceeded so far as to obtain from the Secretary of State an order for a convey; but his voyage was prevented by a fourth accusation, on the oath of a person whom the Parliament afterward declared a cheat and impostor; a warrant was issued for apprehending him, and he narrowly escaped an arrest, at his return from the funeral of his friend, George Fox, on the 16th of January, 1691. He then thought it prudent to retire, and accordingly kept himself concealed for two or three years, during which time he employed himself in writing several pieces, one of which entitled "Maxims and Reflections relating to the conduct of human life," being the result of much observation and experience, has been much celebrated, and has passed through several editions. In 1693, by the mediation of several persons of rank, he was admitted to appear before the king in council, where he so maintained his innocence of what had been alleged against him, that he was a fourth time honorably acquitted.

The true cause of these frequent suspicions was the conduct of his wife, who being passionately attached to the queen, consort of James, made a practise to visit her at St. Germain's every year, and to carry to her such presents as she could collect from the friends of the unhappy royal family. Though there was no political connexion or correspondence between Penn's family and the king's, yet this circumstance gave color to the jealousy which had been conceived; but the death of his wife which happened in February, 1691, put an end to all these suspicions. He married a second wife in 1696, a daughter of Thomas Callowhill, of Bristol, by whom he had four sons and one daughter.

By his continual expenses, and by the peculiar difficulties to which he had been exposed, he had run himself deeply into debt. He had lost £7000 before the revolution, and £4000 since; besides his paternal estate in Ireland, valued at £450 per annum. To repair his fortune, he requested his friends in Pennsylvania, that one hundred of them would lend him £100 each, for some years, on landed security. This, he said, would enable him to return to America, and bring a large number of inhabitants with him. What answer was given to this request, does not appear, but from his remaining in England six or seven years after, it may be concluded that he received no encouragement of this kind from them. The low circumstances of the first settlers, must have rendered it impossible to comply with such a request.

Pennsylvania had experienced many inconveniences from his absence. The Provincial Council having no steady hand to hold the balance, had fallen into a controversy respecting their several powers and privileges, and Moore, one of the proprietary officers, had been impeached of high misdemeanors. Disgusted with their disputes, and dissatisfied with the constitution which he had framed and altered, Penn wrote to his commissioners (1685) to require its dissolution; but the Assembly, perceiving the loss of their privileges, and of the rights of the people to be involved in frequent innovations, opposed the surrender. The commissioners themselves were soon after removed by the proprietor, who appointed for his deputy John Blackwell, an officer trained under Cromwell, and completely versed in the arts of intrigue. He began his administration in December, 1688, by a display of the power of the proprietor, and by endeavoring to sow discord among the freemen. Unawed by his insolence, they were firm in defence of their privileges, whilst at the same time they made a profession of peace and obedience. He imprisoned the Speaker of the Assembly which had impeached Moore, and by a variety of artifices evaded the granting an Habeas Corpus. He delayed as long as possible the meeting of a new Assembly; and when they entered on the subject of grievances, he prevailed on some of the members to withdraw from their seats, that there might not be a quorum. The remainder voted that his conduct was treacherous, and a strong prejudice was conceived not only against the deputy, but the proprietor who had appointed him. The province also fell under the royal displeasure. Their laws had not been presented for approbation, and the new king and queen were not proclaimed in Pennsylvania for a long time after their accession; but the administration of government was continued in the name of the exiled monarch. At what time the alteration was made, we cannot be certain; but in the year 1692, the king and queen took the government of the colony into their own hands, and appointed Colonel Fletcher, governor of New York and Pennsylvania, with equal powers and prerogatives

in both, without any reference to the charter of Pennsylvania.

It being a time of war between England and France, and the province of New York being much exposed to the incursions of the Indians in the French interest, the principal object which Fletcher had in view, was to procure supplies for the defence of the country, and the support of those Indians who were in alliance with the English. The assembly insisted on a confirmation of their laws, as a condition of their granting a supply, to which he consented, during the king's pleasure. They would have gone farther, and demanded a redress of grievances; but Fletcher having intimated to them that the king might probably annex them to New York, and they knowing themselves unable to maintain a controversy with the crown, submitted for the present to hold their liberties by courtesy, and voted a supply. On another application of the same kind, they nominated collectors in their bill, which he deemed inconsistent with his prerogative, and after some altercation dissolved them.

In 1696, William Markham, deputy-governor under Fletcher, made a similar proposal, but could obtain no supply, till an expedient was contrived to save their privileges. A temporary act of settlement was passed, subject to the confirmation of the proprietor, and then a grant was made of three hundred pounds; but as they had been represented by some at New York, as having acted inconsistently with their principles in granting money to maintain a war, they appropriated the grant to "the relief of those friendly Indians who had suffered by the war." The request was repeated every year, as long as the war continued; but the infancy, poverty, and embarrassments of the province were alledged for non-compliance. The peace of Ryswick in 1698, put an end to these requisitions.

Thus the province of Pennsylvania, as well as its proprietor, experienced many inconveniences during their long separation of fifteen years; and it is somewhat singular to remark, that whilst they were employed in an intellectual struggle with the royal governor and his deputy; he, whom Montesquieu styles the American Lycurgus, was engaged in his darling work of religious controversy and of itinerant preaching through England, Wales, and Ireland.

In August, 1699, he embarked with his family, and after a tedious passage of three months, arrived in Pennsylvania. By reason of this long voyage, they escaped a pestilential distemper, which during that time raged in the colony.

He did not find the people so tractable as before. Their minds were soured by his long absence, by the conduct of his deputies and the royal governors; their system of laws was incomplete, and their title to their lands insecure. After much time spent in trying their tempers and penetrating their views, he found it most advisable to listen to their remonstrances. Five sessions of assembly were held during his second residence with them; his expressions in his public speeches were soothing and captivating, and he promised to do every thing in his power to render them happy. They requested of him that in case of his future absence, he would appoint for his deputies men of integrity and property, who should be invested with full powers to grant and confirm lands, and instructed to give true measure; and that he would execute such an instrument as would secure their privileges and possessions. To these requests he seemed to consent, and with the most flattering complaisance desired them to name a person for his substitute, which they with equal politeness declined.

In May, 1700, the charter was surrendered by six parts in seven of the assembly, under a solemn promise of restitution with such alterations and amendments as should be found necessary. When a new charter was in debate, the representatives of the lower counties wanted to obtain some privileges peculiar to themselves, which the others were not willing to allow. The members from the territory therefore refused to join, and thus a separation was made of the Province of Pennsylvania from the three lower counties.

In this new charter, the people had no voice in the election of counsellors; whoever afterwards served in this capacity were appointed by the proprietor, but they had no power of legislation. The executive was vested solely in him, and he had a negative on all their laws. On the other hand the assembly had the right of originating laws, which before had been prepared for their deliberation. The number of members was four from each county, and more if the governor and Assembly should agree. They were invested with all the powers of a legislative body, according to the rights

of English subjects and the practice of other American colonies. The privileges before granted were confirmed, and some of their most salutary laws were included in the body of the charter; all which were declared irrevocable, except by consent of six-sevenths of the assembly with the governor; but the clause respecting liberty of conscience was declared absolutely irrevocable. A provisional article was added, that if in three years, the representatives of the province and territories should not join in legislation, each county of the province might choose eight persons, and the city of Philadelphia two, to represent them in one Assembly, and each county of the territory the same number to constitute another Assembly. On the 28th of October, 1701, this charter was accepted by the representatives of the province: previous to which (viz. on the 25th) the city of Philadelphia was incorporated by another charter, and the government of it committed to a Mayor and Recorder, eight Aldermen and twelve Common Councilmen. The persons in each of these offices were appointed by name in the charter, who were empowered to choose successors to themselves annually, and to add to the number of Aldermen and Common Councilmen so many of the freemen as the whole court should think proper.

These two charters were the last public acts of Mr. Penn's personal administration in Pennsylvania. They were done in haste, and while he was preparing to re-embark for England, which he did immediately on signing them. The cause of his sudden departure was an account which he had received, that a bill was about to be brought into Parliament, for reducing the proprietary and chartered governments to an immediate dependence on the crown. In his speech to the Assembly, he intimated his intention to return and settle among them with his family; but this proved to be his last visit to America. He sailed from Philadelphia in the end of October, and arrived in England about the middle of December, 1701. The bill in Parliament, which had so greatly alarmed him, was by the solicitation of the friends of the colonies postponed and finally lost. In about two months, King William died, and Queen Anne came to the throne, which brought Penn again into favor at court, and in the name of the society, of which he was at the head, he presented to her an address of congratulation.

He then resumed his favorite employment of writing, preaching, and visiting the societies of Friends in England, till the year 1707, when he found himself involved in a suit at law with the executors of a person who had formerly been his steward. The cause was attended with such circumstances, that though many thought him ill used, the Court of Chancery did not give him relief; which obliged him to live within the rules of the fleet prison for about a year till the matter was accommodated. After this he made another circuitous journey among his friends, and in the year 1710 took a handsome seat at Rushcombe in Buckinghamshire, where he resided during the remainder of his life.

At his departure from Philadelphia, he left for his deputy, Andrew Hamilton, whose principal business was to endeavor a re-union of the province and territory, which being ineffectual, the province claimed the privilege of a distinct Assembly.

On Mr. Hamilton's death John Evans was appointed in 1704 to succeed him. His administration was one unvaried scene of controversy and uneasiness. The territory would have received the charter, and the governor warmly recommended an union, but the province would not hearken to the measure. They drew up a statement of their grievances, and transmitted to the proprietor a long and bitter remonstrance, in which they charge him with not performing his promises, but by deep laid artifices evading them; and with neglecting to get their laws confirmed, though he had received great sums of money to negotiate the business. They took a retrospective view of his whole conduct, and particularly blamed his long absence from 1684 to 1699, during which the interest of the province was sinking, which might have been much advanced, if he had come over according to his repeated promises. They complained that he had not affixed his seal to the last charter; that he had ordered his deputy to call assemblies by his writs, and to prorogue and dissolve them at his pleasure; that he had reserved to himself though in England, an assent to bills passed by his deputy, by which means three negatives were put on their acts, one by the deputy governor, another by the proprietor, and a third by the crown. They also added to their list of grievances, the abuses and extortions of the secretary, surveyor, and other officers, which might

have been prevented if he had passed a bill proposed by the Assembly, in 1701, for regulating fees; the want of an established judicature between him and the people, for the judges being appointed by him, could not in that case be considered as independent and unbiassed; the imposition of quit rents on the city lots, and leaving the ground on which the city was built, encumbered with the claim of its first possessors the Swedes.

The language of this remonstrance was plain and unreserved; but the mode of their conducting it, was attended with a degree of prudence and delicacy which is not commonly observed by public bodies of men in such circumstances. They sent it to him privately by a confidential person, and refused to give any copy of it though strongly urged. They were willing to reclaim the proprietor to a due sense of his obligations, but were equally unwilling to expose him. They had also some concern for themselves; for if it had been publicly known that they had such objections to his conduct, the breach might have been so widened as to dissolve the relation between them; in which case certain inconveniences might have arisen respecting oaths and militia laws, which would not have been pleasing to an Assembly consisting chiefly of Quakers.

Three years after, (viz. in 1707) they sent him another remonstrance, in which they complained that the grievance before mentioned was not redressed; and they added to the catalogue articles of impeachment against Logan the secretary, and Evans the deputy governor. The latter was removed from his office, and was succeeded by Gookin in 1709, and he by Sir William Keith in 1717; but Logan held his place of secretary, and was in fact the prime minister and mover in behalf of the proprietor, though extremely obnoxious to the people.

These deputy governors were dependent on the proprietor for their appointment, and on the people for their support; if they displeased the former, they were recalled, if the latter, their allowance was withheld; and it was next to impossible to keep on good terms with both. Such an appointment could be accepted by none but indigent persons, and could be relished by none but those who were fond of perpetual controversy.

To return to the proprietor. His infirmities and misfortunes increased with his age, and unfitted him for the exercise of his beloved work. In 1711, he dedicated a preface to the journal of his old friend John Banks, which was his last printed work. The next year he was seized with a paralytic disorder, which impaired his memory. For three succeeding years he continued in a state of great debility, but attended the meeting of Friends at Reading, as long as he was able to ride in his chariot, and sometimes spoke short and weighty sentences, being incapable of pronouncing a long discourse. Approaching by gradual decay to the close of life, he died on the 30th of July, 1718, in the 74th year of his age, and was buried in his family tomb at Jordon's in Buckinghamshire.

Notwithstanding his large paternal inheritance, and the great opportunities which he enjoyed of accumulating property by his connexion with America, his latter days were passed in a state far from affluent. He was continually subject to the importunity of his creditors, and obliged to mortgage his estate. He was on the point of surrendering his province to the crown for a valuable consideration, to extricate himself from debt. The instrument was preparing for his signature, but his death, which happened rather unexpectedly, prevented the execution of it; and thus his province in America descended to his posterity, who held it till the revolution.

APPENDIX.

Mr. WINSLOW's account of the natives of New England, annexed to his Narrative of the Plantations, A. D. 1624.—[Purchas IV. 1667.

A few things I thought meet to add hereto, which I have observed amongst the Indians; both touching their religion and sundry other customs amongst them. And first, whereas myself and others, in former letters, (which came to the press against my will and knowledge) wrote that the Indians about us are a people without any religion, or knowledge of any God; therein I erred, though we could then gather no better; for as they conceive of many divine powers, so of one, whom they call *Kiehtan*, to be the principal maker of all the rest; and to be made by none. He, they say, created the heavens, earth, sea, and all creatures contained therein. Also that he made one man and one woman, of whom they, and we, and all mankind came; but how they became so far dispersed, that they know not. At

first, they say, that there was no sachem or king, but *Kiehtan*, who dwelleth above the heavens, whither all good men go when they die, to see their friends and have their fill of all things. This his habitation lieth westward in the heavens, they say; thither the bad men go also, and knock at his door, but he bids them *quachet*, that is to say, walk abroad for there is no place for such; so that they wander in restless want and penury. Never man saw this *Kiehtan*, only old men tell them of him, and bid them tell their children, yea charge them to teach their posterities the same, and lay the like charge upon them. This power they acknowledge to be good; and when they would obtain any great matter, meet together and cry unto him; and so likewise for plenty, victory, &c. sing, dance, feast, give thanks, and hang up garlands and other things in memory of the same.

Another power they worship, whom they call *Hobba-mock*, and to the northward of us, *Hobba-mogun*; this, as far as we can conceive is the devil. Him they call upon to cure their wounds and diseases. When they are curable, he persuades them he sends the same, for some conceived anger against them; but upon their calling upon him, can and doth help them; but when they are mortal and not curable in nature, then he persuades them *Kiehtan* is angry, and sends them, whom none can cure; inasmuch as in that respect only they somewhat doubt whether he be simply good, and therefore in sickness never call upon him. This *Hobba-mock* appears in sundry forms unto them, as in the shape of a man, a deer, a fawn, an eagle, &c. but most ordinarily a snake. He appears not to all, but the chiefest and most judicious among them; though all of them strive to attain to that hellish height of honor. He appears most ordinary, and is most conversant with three sorts of people; one, I confess, I neither know by name or office directly; of these they have few, but esteem highly of them, and think no weapon can kill them; another they call by the name of *Powah*, and the third *Paniese*.

The office and duty of the *Powah* is to be exercised principally in calling upon the devil, and curing diseases of the sick or wounded. The common people join with them in the exercise of invocation, but do but only assent, or as we term it, say Amen to that he saith; yet sometimes break out into a short musical note with him. The *Powah* is eager and free in speech; fierce in countenance, and joineeth many antic and laborious gestures with the same, over the party diseased. If the party be wounded, he will also seem to suck the wound; but if they be curable, (as they say) he toucheth it not; but a shooke, that is the snake, or *Wobsacnek*, that is the eagle, sitteth on the shoulder, and licks the same. This none see but the *Powah*, who tells them he doth it himself. If the party be otherwise diseased, it is accounted sufficient if in any shape he but come into the house, taking it for an undoubted sign of recovery.

And as in former ages Apollo had his temple at Delphos, and Diana at Ephesus, so have I heard them call upon some as if they had their residence in some certain places, or because they appeared in those forms in the same. In the *Powah*'s speech he promiseth to sacrifice many skins of beasts, kettles, hatchets, beads, knives, and other the best things they have to the fiend, if he will come to help the party diseased; but whether they perform it I know not. The other practices I have seen, being necessarily called sometimes to be with their sick, and have used the best arguments I could to make them understand against the same. They have told me I should see the devil at those times come to the party; but I assured myself and them of the contrary, which so proved; yea, themselves have confessed they never saw him when any of us were present. In desperate and extraordinary hard travail in child birth, when the party cannot be delivered by the ordinary means, they send for this *Powah*; though ordinarily their travail is not so extreme as in other parts of the world, they being of a more hardy nature; for on the third day after child birth, I have seen the mother with the infant, upon a small occasion, in cold weather, in a boat upon the sea.

Many sacrifices the Indians use, and in some cases they kill children. It seemeth they are various in their religious worship in a little distance, and grow more and more cold in their worship to *Kiehtan*; saying, in their memory he was much more called upon. The *Narohiggansets* exceed in their blind devotion, and have a great spacious house, wherein only some few (that are, as we may term them, priests) come; thither, at certain known times, resort all their people, and offer almost all the riches they have to their gods, as kettles,

skins, hatchets, beads, knives, &c. all which are cast by the priests into a great fire that they make in the midst of the house, and there consumed to ashes. To this offering every man bringeth freely; and the more he is known to bring hath the better esteem of all men. This, the other Indians about us approve of as good, and wish their sachems would appoint the like; and because the plague has not reigned at *Narohigganset* as at other places about them, they attributed to this custom there used.

The *Panieses* are men of great courage and wisdom, and to these also the devil appeareth more familiarly than to others, and as we conceive, maketh covenant with them to preserve them from death, by wounds with arrows, knives, hatchets, &c. or at least both themselves and especially the people think themselves to be freed from the same. And though against their battles all of them by painting, disfigure themselves, yet they are known by their courage and boldness, by reason whereof one of them will chase almost an hundred men; for they account it death for whomsoever stand in their way. These are highly esteemed of all sorts of people, and are of the sachem's counsel, without whom they will not war, or undertake any weighty business. In war their sachems, for their more safety, go in the midst of them. They are commonly men of great stature and strength, and such as will endure most hardness, and yet are more discreet, courteous and humane in their carriages than any amongst them, scorn- ing theft, lying, and the like base dealings, and stand as much upon their reputation as any men. And to the end they may have store of these, they train up the most forward and likeliest boys from their childhood, in great hardness, and make them abstain from dainty meat, observing divers orders prescribed, to the end that when they are of age, the devil may appear to them, causing to drink the juice of sentry and other bitter herbs, till they cast, which they must disgorge into the platter, and drink again and again, till at length through extraordinary pressing of nature it will seem to be all blood; and this the boys will do with eagerness at the first, and so continue till by reason of faintness, they can scarce stand on their legs, and then must go forth into the cold; also they beat their shins with sticks, and cause them to run through bushes and stumps and brambles, to make them hardy and acceptable to the devil, that in time he may appear unto them.

Their sachems cannot be all called kings, but only some few of them, to whom the rest resort for protection and pay homage unto them; neither may they war without their knowledge and approbation; yet to be commanded by the greater, as occasion seemeth. Of this sort is *Massasowat* our friend, and *Conanacus* of *Narohigganset* our supposed enemy. Every sachem taketh care of the widow and fatherless, also for such as are aged and any way maimed, if their friends be dead, or not able to provide for them. A sachem will not take any to wife but such an one as is equal to him in birth; otherwise, they say their seed would become ignoble; and though they have many other wives, yet are they no other than concubines or servants, and yield a kind of obedience to the principal, who ordereth the family and them in it. The like their men observe also, and will adhere to the first during their lives; but put away the other at their pleasure. This government is successive and not by choice; if the father die before the son or daughter be of age, then the child is committed to the protection and tuition of some one amongst them, who ruleth in his stead till he be of age, but when that is, I know not.

Every sachem knoweth how far the bounds and limits of his own country extendeth; and that is his own proper inheritance; out of that, if any of his men desire land to set their corn, he giveth them as much as they can use, and sets them in their bounds. In this circuit, whoever hunteth, if any kill venison, they bring him his fee; which is four parts of the same, if it be killed on land, but if in the water, then the skin thereof. The great sachems or kings know not their own bounds or limits of land, as well as the rest. All travellers or strangers for the most part lodge at the sachem's. When they come, they tell them how long they will stay and to what place they go; during which time they receive entertainment, according to their persons, but want not. Once a year the *Panieses* use to provoke the people to bestow much corn on the sachem. To that end they appoint a certain time and place, near the sachem's dwelling, where the people bring many baskets of corn and make a great stack thereof. There the *Panieses* stand ready to give thanks to the people on the sachem's behalf; and after acquainting the sachem therewith, who fetches the same

and is no less thankful, bestowing many gifts on them. When any are visited with sickness, their friends resort unto them for their comfort, and continue with them oftentimes till their death or recovery. If they die, they stay a certain time to mourn for them. Night and morning they perform this duty, many days after the burial, in a most doleful manner, inasmuch as though it be ordinary and the note musical which they take from one another and altogether; yet it will draw tears from their eyes and almost from ours also. But if they recover, then because their sickness was chargeable, they send corn and other gifts unto them, at a certain appointed time, whereat they feast and dance, which they call *commoro*. When they bury the dead, they sow up the corpse in a mat, and so put it in the earth; if the party be a sachem, they cover him with many curious mats, and bury all his riches with him, and enclose the grave with a pale. If it be a child, the father will also put his own most special jewels and ornaments in the earth with it; also he will cut his hair, and disfigure himself very much in token of sorrow. If it be the man or woman of the house; they will pull down the mats, and leave the frame standing, and bury them in or near the same, and either remove their dwelling or give over house-keeping.

The men employ themselves wholly in hunting, and other exercises of the bow, except at some times they take some pains in fishing. The women live a most slavish life; they carry all their burdens; set and dress their corn, gather it in, and seek out for much of their food; beat and make ready the corn to eat, and have all household care lying upon them.

The younger sort reverence the elder, and do all mean offices, whilst they are together, although they be strangers. Boys and girls may not wear their hair like men and women, but are distinguished thereby.

A man is not accounted a man till he do some notable act, or show forth such courage and resolution as becometh his place. The men take much tobacco, but for boys so to do, they account it odious.

All their names are significant and variable; for when they come to the state of men and women, they alter them according to their deeds or dispositions.

When a maid is taken in marriage, she first cutteth her hair, and after weareth a covering on her head, till her hair be grown out. Their women are diversely disposed, some as modest as they will scarce talk one with another in the company of men; being very chaste also; yet other some are light, lascivious and wanton. If a woman have a bad husband, or cannot affect him, and there be war or opposition between that and any other people, she will run away from him to the contrary party, and there live, where they never come unwelcome; for where are most women there is greatest plenty.

When a woman hath her monthly terms, she separateth herself from all other company, and liveth certain days in a house alone; after which, she washeth herself, and all that she hath touched or used, and is again received to her husband's bed or family. For adultery, the husband will beat his wife and put her away, if he please. Some common strumpets there are, as well as in other places; but they are such as either never married, or widows, or put away for adultery; for no man will keep such a one to wife.

In matters of unjust and dishonest dealing, the sachem examineth and punisheth the same. In case of theft, for the first offence, he is disgracefully rebuked; for the second, beaten by the sachem, with a cudgel on the naked back; for the third, he is beaten with many strokes, and hath his nose slit upwards, that thereby all men may know and shun him. If any man kill another he must likewise die for the same. The sachem not only passeth sentence upon malefactors, but executeth the same with his own hands, if the party be then present; if not, sendeth his own knife in case of death, in the hands of others to perform the same. But if the offender be to receive other punishment, he will not receive the same but from the sachem himself, before whom, being naked, he kneeleth, and will not offer to run away, though he beat him never so much, it being a greater disparagement for a man to cry during the

time of his correction, than in his offence and punishment.

As for their apparel, they wear breeches and stockings in one, like some Irish, which is made of deer-skins, and have shoes of the same leather. They wear also a deer's-skin loose about them like a cloak, which they will turn to the weather side. In this habit they travel; but when they are at home, or come to their journey's end, they presently pull off their breeches, stockings and shoes, wring out the water, if they be wet, and dry them, and rub or chafe the same. Though these be off, yet have they another small garment which covereth their secrets. The men wear also, when they go abroad in cold weather, an otter, or fox-skin on their right arm; but only their brazer on the left. Women, and all of that sex, wear strings about their legs, which men never do.

The people are very ingenious and observative; they keep account of time, by the moon, and winters or summers; they know divers of the stars by name; in particular they know the North Star, and call it *Maske*, which is to say *the Bear*; also they have many names for the winds. They will guess very well at the wind and weather beforehand, by observations in the heavens. They report also, that some of them can cause the wind to blow in what part they list—can raise storms and tempests, which they usually do, when they intend the death or destruction of other people, that by reason of the unseasonable weather, they may take advantage of their enemies in their houses. At such times they perform their greatest exploits, and at such seasons, when they are at enmity with any, they keep more careful watch than at other times.

As for their language, it is very copious, large, and difficult, as yet we cannot attain to any great measure thereof; but can understand them, and explain ourselves to their understanding by the help of those that daily converse with us.

And though there be difference in an hundred miles distance of place, both in language and manners, yet not so much but that they very well understand each other. And thus much of their lives and manners.

Instead of records and chronicles they take this course: where any remarkable act is done, in memory of it, either in the place, or by some pathway near adjoining, they make a round hole in the ground about a foot deep, and as much over, which when others passing by behold, they inquire the cause and occasion of the same, which being once known, they are careful to acquaint all men, as occasion serveth therewith; and lest such holes should be filled or grown up by any accident, as men pass by, they will oft renew the same: by which means many things of great antiquity are fresh in memory. So that as a man travelleth, if he can understand his guide, his journey will be less tedious, by reason of many historical discourses which will be related to him.

For that continent on which we are, called New England, although it hath ever been conceived by the English to be a part of the main land adjoining to Virginia, yet by relation of the Indians it should appear to be otherwise; for they affirm confidently that it is an island, and that either the Dutch or French pass through from sea to sea between us, and Virginia, and drive a great trade in the same. The name of that inlet of the sea they call *Mohegan*, which I take to be the same which we call Hudson's river, up which Master Hudson went many leagues, and for want of means (as I hear) left it undiscovered. For confirmation of this their opinion thus is much; though Virginia be not above an hundred leagues from us, yet they never heard of *Pocahatan*, or knew that any English were planted in his country, save only by us and *Tisquantum*, who went thither in an English ship; and therefore it is more probable, because the water is not passable for them who are very adventurous in their boats.

Then for the temperature of the air, in almost three years experience I can scarce distinguish New England, from Old England, in respect of heat and cold, frost, snow, rain, wind, &c. Some object because our plantation lieth in the latitude of two and forty, it must needs be much hotter. I confess I cannot give the

reason of the contrary; only experience teaches us, that if it do exceed England, it is so little as must require better judgments to discern it. And for the winter, I rather think (if there be difference) it is both sharper and longer in New-England than Old; and yet the want of those comforts in the one, which I have enjoyed in the other, may deceive my judgment also. But in my best observation, comparing our own conditions with the relations of other parts of America, I cannot conceive of any to agree better with the constitutions of the English, not being oppressed with the extremity of heat, nor nipped by biting cold, by which means, blessed be God, we enjoy our health, notwithstanding these difficulties we have undergone, in such a measure as would have been admired had we lived in England with the like means. The day is two hours longer than here when at the shortest, and as much shorter when at the longest.

The soil is variable, in some places mould, in some clay, and others a mixed sand, &c. The chiefest grain is the Indian maize, or Guinea wheat; the seed time beginneth in the middle of April, and continueth good till the midst of May. Our harvest beginneth with September. This corn increaseth in great measure, but is inferior in quality to the same in Virginia, the reason I conceive is because Virginia is far hotter than it is with us, it requiring great heat to ripen. But whereas it is objected against New-England, that corn will not grow there except the ground be manured with fish: I answer, that where men set with fish (as with us) it is more easy so to do than to clear ground, and set without some five or six years, and so begin anew, as in Virginia and elsewhere. Not but that in some places, where they cannot be taken with ease in such abundance, the Indians set four years together without them, and have as good corn or better than we have, that set with them; though indeed I think if we had cattle to till the ground, it would be more profitable and better agreeable to the soil to sow wheat, rye, barley, peas and oats, than to set maize, which our Indians call *Ewachim*; for we have had experience that they like and thrive well; and the other will not be procured without good labor and diligence, especially at seed time, when it must also be watched by night, to keep the wolves from the fish, till it be rotten, which will be in fourteen days, yet men agreeing together, and taking their turns, it is not much.

Much might be spoken of the benefit that may come to such as shall plant here, by trading with the Indians for furs, if men take a right course for obtaining the same; for I dare presume upon that small experience I have had to affirm, that the English, Dutch and French return yearly many thousand pounds profit by trade only, from that island on which we are seated.

Tobacco may be there planted, but not with that profit as in some other places, neither were it profitable there to follow it, though the increase were equal, because fish is a better and richer commodity, and more necessary, which may be, and there are had in as great abundance as in any other part of the world; witness the west country merchants of England, which return incredible gains yearly from thence. And if they can so do, which here buy their salt at a great charge, and transport more company to make their voyage than will sail their ships, what may the planters expect when once they are seated, and make the most of their salt there, and employ themselves at least eight months in fishing, whereas the other fish but four, and have their ship lie dead in the harbor all the time, whereas such shipping as belong to plantations may take freight of passengers or cattle thither, and have their lading provided against they come! I confess we have come so far short of the means, to raise such returns, as with great difficulty we have preserved our lives; inasmuch as when I look back upon our condition, and weak means to preserve the same, I rather admire at God's mercies and providence in our preservation, than that no greater things have been effected by us. But though our beginning have been thus raw, small and difficult, as thou hast seen, yet the same God that hath hitherto led us through the former I hope will raise means to accomplish the latter.

THE
HISTORY OF SOUTH AMERICA.

BY WILLIAM ROBERTSON, D. D.

EDITOR'S PREFACE.

I HAD intended after the publication of the "BIOGRAPHIES OF THE EARLY DISCOVERERS," from the pen of that elegant scholar, Dr. Belknap, to have commenced directly on the history of North America, but from a consultation with several profound historians friendly to this work, I have been induced to change my mind, and to publish previously the History of South America, by Dr. Robertson. This admirable work has been popular in both hemispheres. He was a writer "who ornamented every thing he touched." He was indefatigable in his researches, and brought to his work a high sense of truth and fairness. He was honest, eloquent, and philosophical. He filled a large space in the literary world, and time has not diminished a particle of his fame. His work has passed the ordeal of criticism, and is now a text book in our schools, and probably will long remain so.

When the publishers have got out this work from the pen of Dr. Robertson, I shall begin the general history of the United States, going back to the origin of all the colonies and trace their eventful course to Union and Independence, and then come down to a late period in our military and civil affairs, I shall, after this is accomplished, turn to our historical miscellanies, in which our libraries are opulent, and select for the reader such works as may throw light on particular passages of American history. No other than standard works will be given as text, and the editor will hold himself responsible for the matter contained in his own notes; this, when we come to our Revolutionary History will be copious.

PREFACE.

In fulfilling the engagement which I had come under to the Public, with respect to the History of America, it was my intention not to have published any part of the work until the whole was completed. The present state of the British colonies has induced me to alter that resolution. While they are engaged in civil war with Great Britain, inquiries and speculations concerning their ancient forms of policy and laws, which exist no longer, cannot be interesting. The attention and expectation of mankind are now turned towards their future condition. In whatever manner this unhappy contest may terminate, a new order of things must arise in North America, and its affairs will assume another aspect. I wait with the solicitude of a good citizen, until the ferment subside, and regular government be re-established, and then I shall return to this part of my work, in which I had made some progress. That, together with the history of Portuguese America, and of the settlements made by the several nations of Europe in the West India Islands, will complete my plan.

The three volumes which I now publish contain an account of the discovery of the New World, and of the progress of the Spanish arms and colonies there. This is not only the most splendid portion of the American story, but so much detached as by itself to form a perfect whole, remarkable for the unity of the subject. As the principles and maxims of the Spaniards in planting colonies, which have been adopted in some measure by every nation, are unfolded in this part of my work; it will serve as a proper introduction to the history of all the European establishments in America, and convey such information concerning this important article of policy, as may be deemed no less interesting than curious.

In describing the achievements and institutions of the Spaniards in the New World, I have departed in many instances, from the accounts of preceding historians, and have often related facts which seem to have been unknown to them. It is a duty I owe the Public to mention the sources from which I have derived such intelligence which justifies me either in placing transactions in a new light, or in forming any new opinion with respect to their causes and effects. This duty I perform with greater satisfaction, as it will afford an opportunity of expressing my gratitude to those benefactors who have honored me with their countenance and aid in my researches.

As it was from Spain that I had to expect the most important information, with regard to this part of my

work, I considered it as a very fortunate circumstance for me when Lord Grantham, to whom I had the honor of being personally known, and with whose liberality of sentiment, and disposition to oblige, I was well acquainted, was appointed ambassador to the court of Madrid. Upon applying to him, I met with such a reception as satisfied me that his endeavors would be employed in the most proper manner, in order to obtain the gratification of my wishes; and I am perfectly sensible, that what progress I have made in my inquiries among the Spaniards, ought to be ascribed chiefly to their knowing how much his lordship interested himself in my success.

But did I owe nothing more to Lord Grantham than the advantage which I have derived from his attention in engaging Mr. Waddilove, the chaplain of his embassy, to take the conduct of my literary inquiries in Spain, the obligations I lie under to him would be very great. During five years that gentleman has carried on researches for my behoof, with such activity, perseverance and knowledge of the subject, to which his attention was turned, as have filled me with no less astonishment than satisfaction. He procured for me the greater part of the Spanish books, which I have consulted; and as many of them were printed early in the sixteenth century, and are become extremely rare, the collecting of these was such an occupation as alone required much time and assiduity. To his friendly attention I am indebted for copies of several valuable manuscripts, containing facts and details which I might have searched for in vain in works that have been made public. Encouraged by the inviting good will with which Mr. Waddilove conferred his favors, I transmitted to him a set of queries, with respect both to the customs and policy of the native Americans, and the nature of several institutions in the Spanish settlements, framed in such a manner that a Spaniard might answer them without disclosing any thing that was improper to be communicated to a foreigner. He translated these into Spanish, and obtained from various persons who had resided in most of the Spanish colonies, such replies as have afforded me much instruction.

Notwithstanding those peculiar advantages with which my inquiries were carried on in Spain, it is with regret I am obliged to add, that their success must be ascribed to the beneficence of individuals, not to any communication by public authority. By a singular arrangement of Philip II. the records of the Spanish monarchy are deposited in the *Archivo de Simancas*, near Valladolid, at the distance of a hundred and twenty miles from the seat of government and the supreme courts of justice. The papers relative to America, and chiefly

to that early period of its history towards which my attention was directed, are so numerous, that they alone according to one account, fill the largest apartment in the *Archivo*; and, according to another, they compose eight hundred and seventy three large bundles. Conscious of possessing, in some degree, the industry which belongs to an historian, the prospect of such a treasure excited my most ardent curiosity. But the prospect of it is all that I have enjoyed. Spain, with an excess of caution, has uniformly thrown a veil over her transactions in America. From strangers they are concealed with peculiar solicitude. Even to her own subjects the *Archivo de Simancas* is not opened without a particular order from the crown; and, after obtaining that, papers cannot be copied without paying fees of office so exorbitant that the expense exceeds what it would be proper to bestow, when the gratification of literary curiosity is the only object. It is to be hoped, that the Spaniards will at last discover this system of concealment to be no less impolitic than illiberal. From what I have experienced in the course of my inquiries, I am satisfied, that upon a more minute scrutiny into their early operations in the New World, however reprehensible the actions of individuals may appear, the conduct of the nation will be placed in a more favorable light.

In other parts of Europe very different sentiments prevail. Having searched, without success in Spain, for a letter of Cortes to Charles V., written soon after he landed in the Mexican Empire, which has not hitherto been published; it occurred to me, that as the Emperor was setting out for Germany at the time when the messengers from Cortes arrived in Europe, the letter with which they were intrusted might possibly be preserved in the Imperial library at Vienna. I communicated this idea to Sir Robert Murray Keith, with whom I have long had the honor to live in friendship, and I had soon the pleasure to learn, that upon his application her Imperial Majesty had been graciously pleased to issue an order, that not only a copy of that letter (if it were found), but of any other papers in the library which could throw light upon the History of America, should be transmitted to me. The letter from Cortes is not in the Imperial library; but an authentic copy, attested by a notary, of the letter written by the magistrates of the colony planted by him at Vera Cruz, which I have mentioned, p. 210, having been found, it was transcribed, and sent to me. As this letter is no less curious, and as little known as that which was the object of my inquiries, I have given some account, in its proper place, of what is most worthy of notice in it. Together with it, I received a copy

of a letter from Cortes, containing a long account of his expedition to Honduras, with respect to which I did not think it necessary to enter into any particular detail; and likewise those curious Mexican paintings, which I have described.

My inquiries at St. Petersburg were carried on with equal facility and success. In examining into the nearest communication between our continent and that of America, it became of consequence to obtain authentic information concerning the discoveries of the Russians in their navigation from Kamschatka towards the coast of America. Accurate relations of their first voyage, in 1741, have been published by Muller and Gmelin. Several foreign authors have entertained an opinion that the court of Russia studiously conceals the progress which has been made by more recent navigators, and suffers the public to be amused with false accounts of their route. Such conduct appeared to me unsuitable to those liberal sentiments, and that patronage of science, for which the present sovereign of Russia is eminent; nor could I discern any political reason, that might render it improper to apply for information concerning the late attempts of the Russians to open a communication between Asia and America. My ingenious countryman, Dr. Rogerson, first physician to the Empress, presented my request to Her Imperial Majesty, who not only disclaimed any idea of concealment, but instantly ordered the journal of Captain Krenitzin, who conducted the only voyage of discovery made by public authority since the year 1741, to be translated, and his original chart to be copied for my use. By consulting them, I have been enabled to give a more accurate view of the progress and extent of the Russian Discoveries than has hitherto been communicated to the public.

From other quarters I have received information of great utility and importance. M. le Chevalier de Pinto, the minister from Portugal to the court of Great Britain, who commanded for several years at Matagrosso, a settlement of the Portuguese in the interior part of Brazil, where the Indians are numerous, and their original manners little altered by intercourse with Europeans, was pleased to send me very full answers to some queries concerning the character and institutions of the natives of America, which his polite reception of an application made to him in my name encouraged me to propose. These satisfied me, that he had contemplated with a discerning attention the curious objects which his situation presented to his view, and I have often followed him as one of my best instructed guides.

M. Suard, to whose elegant translation of the History of the Reign of Charles V. I owe the favorable reception of that work on the continent, procured me answers to the same queries from M. de Bougainville, who had opportunities of observing the Indians both of North and South America, and from M. Goulin le Jeune, who resided fifteen years among Indians in Quito, and twenty years in Cayenne. The latter are more valuable from having been examined by M. de la Coudanville, who a few weeks before his death, made some short additions to them, which may be considered as the last effort of that attention to science which occupied a long life.

My inquiries were not confined to one region in America. Governor Hutchinson took the trouble of recommending the consideration of my queries to Mr. Hawley and Mr. Brainard, two protestant missionaries employed among the Indians of the Five Nations, who favored me with answers which discover a considerable knowledge of the people whose customs they describe. From William Smith, Esq. the ingenious historian of New York, I received some useful information. When I enter upon the History of our Colonies in North America, I shall have occasion to acknowledge how much I have been indebted to many other gentlemen of that country.

From the valuable collection of Voyages made by Alexander Dalrymple, Esq. with whose attention to the History of Navigation and Discovery the Public is well acquainted, I have received some very rare books, particularly two large volumes of Memorials, partly manuscript and partly in print, which were presented to the court of Spain during the reigns of Philip III. and Philip IV. From these I have learned many curious particulars with respect to the interior state of the Spanish colonies, and the various schemes formed for their improvement. As this collection of Memorials formerly belonged to the Colbert Library, I have quoted them by that title.

All those books and manuscripts I have consulted with that attention which the respect due from an Author to the Public required; and by minute references

to them, I have endeavored to authenticate whatever I relate. The longer I reflect on the nature of historical composition, the more I am convinced that this scrupulous accuracy is necessary. The historian who records the events of his own time is credited in proportion to the opinion which the Public entertains with respect to his means of information and his veracity. He who delineates the transactions of a remote period, has no title to claim assent, unless he produces evidence in proof of his assertions. Without this he may write an amusing tale, but cannot be said to have composed an authentic history. In those sentiments I have been confirmed by the opinion of an Author, whom his industry, erudition, and discernment, have deservedly placed in a high rank among the most eminent historians of the age. Imboldened by a hint from him, I have published a catalogue of the Spanish books which I have consulted. This practice was frequent in the last century, and was considered as an evidence of laudable industry in an author; in the present, it may, perhaps, be deemed the effect of ostentation; but, as many of those books are unknown in Great Britain, I could not otherwise have referred to them as authorities, without encumbering the page with an insertion of their full titles. To any person who may choose to follow me in this path of inquiry, the catalogue must be very useful.

My readers will observe, that in mentioning sums of money, I have uniformly followed the Spanish method of computing by *pesos*. In America, the *peso fuerte*, or *duro* is the only one known; and that is always meant when any sum imported from America is mentioned. The *peso fuerte*, as well as other coins, has varied in its numerary value; but I have been advised, without attending to such minute variations, to consider it as equal to four shillings and sixpence of our money. It is to be remembered, however, that in the sixteenth century, the effective value of a *peso*, i. e. the quantity of labor which it represented, or of goods which it would purchase, was five or six times as much as at present.

N. B. Since this edition was put into the press, a History of Mexico, in two volumes in quarto, translated from the Italian of the Abbe de Francesco Saverio Clavigero, has been published. From a person who is a native of New Spain, who has resided forty years in that country, and who is acquainted with the Mexican language, it was natural to expect much new information. Upon perusing his work, however, I find that it contains hardly any addition to the ancient History of the Mexican empire, as related by Acosta and Herrera, but what is derived from the improbable narratives and fanciful conjectures of Torquemada and Boturini. Having copied their splendid descriptions of the high state of civilization in the Mexican empire, M. Clavigero, in the abundance of his zeal for the honor of his native country, charges me with having mistaken some points, and with having misrepresented others in the history of it. When an author is conscious of having exerted industry in research, and impartiality in decision, he may, without presumption, claim what praise is due to these qualities, and he cannot be insensible to any accusation that tends to weaken the force of his claim. A feeling of this kind has induced me to examine such strictures of M. Clavigero on my history of America, as merited any attention, especially as these are made by one who seemed to possess the means of obtaining accurate information; and to show that the greater part of them is destitute of any just foundation. This I have done in notes upon the passages in my History which gave rise to his criticisms.

College of Edinburgh, March 1, 1788.

BOOK I.

Progress of Navigation among the ancients—View of their discoveries as preparatory to those of the moderns—Improvements of ancient navigation and geography—Doctrine of the zones—Further discoveries checked by the irruption of barbarous nations—Geographical knowledge still preserved in the East, and among the Arabians—Revival of commerce and navigation in Europe—Favored by the Crusades—extended by travellers into the East—promoted by the invention of the mariner's compass—First regular plan of discovery formed by Portugal—State of that kingdom—Schemes of Prince Henry—Early attempts feeble—Progress along the Western coast of Africa—Hints of discovering a new route to the East Indies—Attempts to accomplish this—Prospects of Success.

The progress of men, in discovering and peopling the various parts of the earth, has been extremely slow. Several ages elapsed before they removed far from those mild and fertile regions in which they were originally placed by their Creator. The occasion of their first general dispersion is known; but we are unacquainted with the course of their migrations, or the time when they took possession of the different coun-

tries which they now inhabit. Neither history nor tradition furnishes such information concerning these remote events, as enables us to trace with any certainty, the operations of the human race in the infancy of society.

We may conclude, however, that all the early migrations of mankind were made by land. The ocean which surrounds the habitable earth, as well as the various arms of the sea which separate one region from another though destined to facilitate the communication between distant countries, seem, at first view, to be formed to check the progress of man, and to mark the bounds of that portion of the globe to which nature had confined him. It was long, we may believe, before men attempted to pass these formidable barriers, and became so skilful and adventurous as to commit themselves to the mercy of the winds and waves, or to quit their native shores in quest of remote and unknown regions.

Navigation and ship-building are arts so nice and complicated, that they require the ingenuity, as well as experience, of many successive ages to bring them to any degree of perfection. From the raft or canoe, which first served to carry a savage over the river that obstructed him in the chase, to the construction of a vessel capable of conveying a numerous crew with safety to a distant coast, the progress in improvement is immense. Many efforts would be made, many experiments would be tried, and much labor as well as invention would be employed, before men could accomplish this arduous and important undertaking. The rude and imperfect state in which navigation is still found among all nations which are not considerably civilized, corresponds with this account of its progress, and demonstrates that in early times the art was not so far improved as to enable men to undertake distant voyages, or to attempt remote discoveries.

As soon, however, as the art of navigation became known, a new species of correspondence among men took place. It is from this era that we must date the commencement of such an intercourse between nations as deserves the appellation of commerce. Men are, indeed, far advanced in improvement before commerce becomes an object of great importance to them. They must even have made some considerable progress towards civilization, before they acquired the idea of property, and ascertain it so perfectly as to be acquainted with the most simple of all contracts, that of exchanging by barter one rude commodity for another. But as soon as this important right is established, and every individual feels that he has an exclusive title to possess or to alienate whatever he has acquired by his own labor and dexterity, the wants and ingenuity of his nature suggest to him a new method of increasing his acquisitions and enjoyments, by disposing of what is superfluous in his own stores, in order to procure what is necessary or desirable in those of other men. Thus a commercial intercourse begins, and is carried on among the members of the same community. By degrees, they discover that neighboring tribes possess what they themselves want, and enjoy comforts of which they wish to partake. In the same mode, and upon the same principles, that domestic traffic is carried on within the society, an external commerce is established with other tribes or nations. Their mutual interest and mutual wants render this intercourse desirable, and imperceptibly introduce the maxims and laws which facilitate its progress and render it secure. But no very extensive commerce can take place between contiguous provinces, whose soil and climate being nearly the same yield similar productions. Remote countries cannot convey their commodities by land, to those places where, on account of their rarity, they are desired, and become valuable. It is to navigation that men are indebted for the power of transporting the superfluous stock of one part of the earth to supply the wants of another. The luxuries and blessings of a particular climate are no longer confined to itself alone, but the enjoyment of them is communicated to the most distant regions.

In proportion as the knowledge of the advantages derived from navigation and commerce continued to spread the intercourse among nations extended. The ambition of conquest, or the necessity of procuring new settlements, were no longer the sole motives of visiting distant lands. The desire of gain became a new incentive to activity, roused adventurers, and sent them forth upon long voyages, in search of countries whose products or wants might increase that circulation which nourishes and gives vigor to commerce. Trade proved a great source of discovery; it opened unknown seas, it penetrated into new regions, and contributed more than any other cause to bring men acquainted with the

situation, the nature and commodities of the different parts of the globe. But even after a regular commerce was established in the world, after nations were considerably civilized, and the sciences and arts were cultivated with ardor and success, navigation continued to be so imperfect, that it can hardly be said to have advanced beyond the infancy of its improvement in the ancient world.

Among all the nations of antiquity, the structure of their vessels was extremely rude, and their method of working them very defective. They were unacquainted with several principles and operations in navigation, which are now considered as the first elements on which that science is founded. Though that property of the magnet by which it attracts iron was well known to the ancients, its more important and amazing virtue of pointing to the poles had entirely escaped their observation. Destitute of this faithful guide, which now conducts the pilot with so much certainty in the unbounded ocean during the darkness of night, or when the heavens are covered with clouds, the ancients had no other method of regulating their course than by observing the sun and stars. Their navigation was of consequence uncertain and timid. They durst seldom quit sight of land, but crept along the coast, exposed to all the dangers, and retarded by all the obstructions, unavoidable in holding such an awkward course. An incredible length of time was requisite for performing voyages which are now finished in a short space. Even in the mildest climates, and in seas the least tempestuous, it was only during the summer months that the ancients ventured out of their harbors. The remainder of the year was lost in inactivity. It would have been deemed most inconsiderate rashness to have braved the fury of the winds and waves during winter.

While both the science and practice of navigation continued to be so defective, it was an undertaking of no small difficulty and danger to visit any remote region of the earth. Under every disadvantage, however, the active spirit of commerce exerted itself. The Egyptians, soon after the establishment of their monarchy, are said to have opened a trade between the Arabian Gulf, or Red Sea, and the western coast of the great Indian continent. The commodities which they imported from the East, were carried by land from the Arabian Gulf to the banks of the Nile, and conveyed down that river to the Mediterranean. But if the Egyptians in early times applied themselves to commerce, their attention to it was of short duration. The fertile soil and mild climate of Egypt produced the necessaries and comforts of life with such profusion, as rendered its inhabitants so independent of other countries, that it became an established maxim among that people, whose ideas and institutions differed in almost every point from those of other nations, to renounce all intercourse with foreigners. In consequence of this, they never went out of their own country; they held all seafaring persons in detestation, as impious and profane; and fortifying their own harbors, they denied strangers admittance into them. It was in the decline of their power, and when their veneration for ancient maxims had greatly abated, that they again opened their ports, and resumed any communication with foreigners.

The character and situation of the Phenicians were as favorable to the spirit of commerce and discovery as those of the Egyptians were adverse to it. They had no distinguishing peculiarity in their manners and institutions; they were not addicted to any singular and unsocial form of superstition; they could mingle with other nations without scruple or reluctance. The territory which they possessed was neither large nor fertile. Commerce was the only source from which they could derive opulence or power. Accordingly, the trade carried on by the Phenicians of Sidon and Tyre, was more extensive and enterprising than that of any state in the ancient world. The genius of the Phenicians, as well as the object of their policy and the spirit of their laws, were entirely commercial. They were a people of merchants, who aimed at the empire of the sea, and actually possessed it. Their ships not only frequented all the ports in the Mediterranean, but they were the first who ventured beyond the ancient boundaries of navigation, and, passing the Straits of Gades, visited the western coasts of Spain and Africa. In many of the places to which they resorted, they planted colonies, and communicated to the rude inhabitants some knowledge of their arts and improvements. While they extended their discoveries towards the north and the west, they did not neglect to penetrate into the more opulent and fertile regions of the south and east. Having rendered themselves masters of

several commodious harbors towards the bottom of the Arabian Gulf, they, after the example of the Egyptians, established a regular intercourse with Arabia and the continent of India on the one hand, and with the eastern coast of Africa on the other. From these countries they imported many valuable commodities unknown to the rest of the world, and during a long period engrossed that lucrative branch of commerce without a rival. [8]

The vast wealth which the Phenicians acquired by monopolizing the trade carried on in the Red Sea, incited their neighbors the Jews, under the prosperous reigns of David and Solomon, to aim at being admitted to some share of it. This they obtained, partly by their conquest of Humea, which stretches along the Red Sea, and partly by their alliance with Hiram, king of Tyre. Solomon fitted out fleets, which, under the direction of Phenician pilots, sailed from the Red Sea to Tarshish and Ophir. These, it is probable, were ports in India and Africa, which their conductors were accustomed to frequent and from them the Jewish ships returned with such valuable cargoes as suddenly diffused wealth and splendor through the kingdom of Israel. But the singular institutions of the Jews, the observance of which was enjoined by their divine Legislator, with an intention of preserving them a separate people, uninfected by idolatry, formed a national character, incapable of that open and liberal intercourse with strangers which commerce requires. Accordingly, this unsocial genius of the people, together with the disasters which befell the kingdom of Israel, prevented the commercial spirit which their monarchs labored to introduce and to cherish, from spreading among them. The Jews cannot be numbered among the nations which contributed to improve navigation, or to extend discovery.

But though the instructions and example of the Phenicians were unable to mould the manners and temper of the Jews, in opposition to the tendency of their laws, they transmitted the commercial spirit with facility, and in full vigor, to their own descendants the Carthaginians. The commonwealth of Carthage applied to trade and naval affairs, with no less ardor, ingenuity, and success, than its parent state. Carthage early rivalled and soon surpassed Tyre in opulence and power, but seems not to have aimed at obtaining any share in the commerce with India. The Phenicians had engrossed this, and had such a command of the Red Sea as secured to them the exclusive possession of that lucrative branch of trade. The commercial activity of the Carthaginians was exerted in another direction. Without contending for the trade of the East with their mother country, they extended their navigation chiefly towards the west and north. Following the course which the Phenicians had opened, they passed the Straits of Gades, and pushing their discoveries far beyond those of the parent state, visited not only all the coasts of Spain, but those of Gaul, and penetrated at last into Britain. At the same time that they acquired knowledge of new countries in this part of the globe, they gradually carried their researches towards the south. They made considerable progress by land into the interior provinces of Africa, traded with some of them, and subjected others to their empire. They sailed along the western coast of that great continent almost to the tropic of Cancer, and planted several colonies, in order to civilize the natives and accustom them to commerce. They discovered the Fortunate Islands, now known by the name of the Canaries, the utmost boundary of ancient navigation in the western ocean.

Nor was the progress of the Phenicians and Carthaginians in their knowledge of the globe, owing entirely to the desire of extending their trade from one country to another. Commerce was followed by its usual effects among both these people. It awakened curiosity, enlarged the ideas and desires of men, and incited them to bold enterprises. Voyages were undertaken, the sole object of which was to discover new countries, and to explore unknown seas. Such, during the prosperous age of the Carthaginian republic, were the famous navigations of Hanno and Himilco. Both their fleets were equipped by authority of the senate, and at public expense. Hanno was directed to steer towards the south, along the coast of Africa, and he seems to have advanced much nearer the equinoctial line than any former navigator. Himilco had it in charge to proceed toward the north, and to examine the western coasts of the European continent. Of the same nature was the extraordinary navigation of the Phenicians round Africa. A Phenician fleet, we are told, fitted out by Necho king of Egypt, took its de-

parture about six hundred and four years before the Christian era, from a port in the Red Sea, doubled the southern promontory of Africa, and after a voyage of three years returned by the Straits of Gades to the mouth of the Nile. Eudoxus of Cyzicus is said to have held the same course, and to have accomplished the same arduous undertaking.

These voyages, if performed in the manner which I have related, may justly be reckoned the greatest effort of navigation in the ancient world; and if we attend to the imperfect state of the art at that time, it is difficult to determine whether we should most admire the courage and sagacity with which the design was formed, or the conduct and good fortune with which it was executed. But unfortunately all the original and authentic accounts of the Phenician and Carthaginian voyages, whether undertaken by public authority or in prosecution of their private trade, have perished. The information which we receive concerning them from the Greek and Roman authors is not only obscure and inaccurate, but if we except a short narrative of Hanno's expedition, is of suspicious authority. Whatever acquaintance with the remote regions of the earth the Phenicians or Carthaginians may have acquired, was concealed from the rest of mankind with a mercantile jealousy. Every thing relative to the course of their navigation was not only a mystery of trade, but a secret of state. Extraordinary facts are related concerning their solicitude to prevent other nations from penetrating into what they wished should remain undivulged. Many of their discoveries seem, accordingly, to have been scarcely known beyond the precincts of their own states. The navigation round Africa, in particular, is recorded by the Greek and Roman writers rather as a strange amusing tale, which they did not comprehend or did not believe, than as a real transaction which enlarged their knowledge and influenced their opinions. [9] As neither the progress of the Phenician or Carthaginian discoveries, nor the extent of their navigation, were communicated to the rest of mankind, all memorials of their extraordinary skill in naval affairs seem in a great measure to have perished, when the maritime power of the former was annihilated by Alexander's conquest of Tyre, and the empire of the latter was overturned by the Roman arms.

Leaving, then, the obscure and pompous accounts of the Phenician and Carthaginian voyages to the curiosity and conjectures of antiquaries, history must rest satisfied with relating the progress of navigation and discovery among the Greeks and Romans, which, though less splendid, is better ascertained. It is evident that the Phenicians, who instructed the Greeks in many other useful sciences and arts, did not communicate to them that extensive knowledge of navigation which they themselves possessed; nor did the Romans imbibed that commercial spirit and ardor for discovery which distinguished their rivals the Carthaginians. Though Greece be almost encompassed by the sea, which formed many spacious bays and commodious harbors; though it be surrounded by a great number of fertile islands, yet, notwithstanding such a favorable situation which seemed to invite that ingenious people to apply themselves to navigation, it was long before this art attained any degree of perfection among them. Their early voyages, the object of which was piracy rather than commerce, were so inconsiderable that the expedition of the Argonauts from the coast of Thessaly to the Euxine Sea, appeared such an amazing effort of skill and courage, as entitled the conductors of it to be ranked among the demigods, and exalted the vessel in which they sailed to a place among the heavenly constellations. Even at a later period, when the Greeks engaged in the famous enterprise against Troy, their knowledge in naval affairs seems not to have been much improved. According to the account of Homer, the only poet to whom history ventures to appeal, and who by his scrupulous accuracy in describing the manners and arts of early ages, merits this distinction, the science of navigation at that time, had hardly advanced beyond its rudest state. The Greeks in the heroic age seem to have been unacquainted with the use of iron, the most serviceable of all the metals, without which no considerable progress was ever made in the mechanical arts. Their vessels were of inconsiderable burden, and mostly without decks. They had only one mast, which was erected or taken down at pleasure. They were strangers to the use of anchors. All their operations in sailing were clumsy and unskilful. They turned their observations towards stars, which were improper for regulating their course, and their mode of observing them was inaccurate and fallacious. When they had finished a voyage they drew their paltry barks ashore,

as savages do their canoes, and these remained on dry land until the season of returning to sea approached. It is not then in the early heroic ages of Greece that we can expect to observe the science of navigation, and the spirit of discovery, making any considerable progress. During that period of disorder and ignorance, a thousand causes concurred in restraining curiosity and enterprise within very narrow bounds.

But the Greeks advanced with rapidity to a state of greater civilization and refinement. Government, in its most liberal and perfect form, began to be established in their different communities; equal laws and regular police were gradually introduced; the sciences and arts which are useful or ornamental in life were carried to a high pitch of improvement; and several of the Grecian commonwealths applied to commerce with such ardor and success, that they were considered, in the ancient world, as maritime powers of the first rank. Even then, however, the naval victories of the Greeks must be ascribed rather to the native spirit of the people, and to that courage which the enjoyment of liberty inspires, than to any extraordinary progress in the science of navigation. In the Persian war, those exploits, which the genius of the Greek historians has rendered so famous, were performed by fleets composed chiefly of small vessels without decks; the crews of which rushed forward with impetuous valor, but little art, to board those of the enemy. In the war of Peloponnesus, their ships seem still to have been of inconsiderable burden and force. The extent of their trade, how highly soever it may have been estimated in ancient times, was in proportion to this low condition of their marine. The maritime states of Greece hardly carried on any commerce beyond the limits of the Mediterranean sea. Their chief intercourse was with the colonies of their countrymen planted in the Lesser Asia, in Italy, and Sicily. They sometimes visited the ports of Egypt, of the southern provinces of Gaul, and of Thrace; or, passing through the Hellespont, they traded with the countries situated around the Euxine sea. Amazing instances occur of their ignorance, even of those countries which lay within the narrow precincts to which their navigation was confined. When the Greeks had assembled their combined fleet against Xerxes at Egina they thought it inadvisable to sail to Samos, because they believed the distance between that island and Egina to be as great as the distance between Egina and the Pillars of Hercules. They were either utterly unacquainted with all the parts of the globe beyond the Mediterranean sea, or what knowledge they had of them was founded on conjecture, or derived from the information of a few persons whose curiosity and the love of science had prompted to travel by land into the Upper Asia, or by sea into Egypt, the ancient seats of wisdom and arts. After all that the Greeks learned from them, they appear to have been ignorant of the most important facts on which an accurate and scientific knowledge of the globe is founded.

The expedition of Alexander the Great into the East considerably enlarged the sphere of navigation and of geographical knowledge among the Greeks. That extraordinary man, notwithstanding the violent passions which incited him at some times to the wildest actions and the most extravagant enterprises, possessed talents which fitted him, not only to conquer, but to govern the world. He was capable of framing those bold and original schemes of policy, which gave a new form to human affairs. The revolution in commerce, brought about by the force of his genius, is hardly inferior to that revolution in empire occasioned by the success of his arms. It is probable that the opposition and efforts of the republic of Tyre, which checked him so long in the career of his victories, gave Alexander an opportunity of observing the vast resources of a maritime power, and conveyed to him some idea of the immense wealth which the Tyrians derived from their commerce especially that with the East Indies. As soon as he had accomplished the destruction of Tyre, and reduced Egypt to subjection, he formed the plan of rendering the empire which he proposed to establish, the centre of commerce as well as the seat of dominion. With this view he founded a great city, which he honored with his own name, near one of the mouths of the river Nile, that by the Mediterranean sea, and the neighborhood of the Arabian Gulf, it might command the trade both of the East and West. This situation was chosen with such discernment, that Alexandria soon became the chief commercial city in the world. Not only during the subsistence of the Grecian empire in Egypt and in the East, but amidst all the successive revolutions in those countries from the time of the Ptolemies to the discovery of the navigation by the Cape of Good

Hope, commerce, particularly that of the East Indies, continued to flow in the channel which the sagacity and foresight of Alexander had marked out for it.

His ambition was not satisfied with having opened to the Greeks a communication with India by sea; he aspired to the sovereignty of those regions which furnished the rest of mankind with so many precious commodities, and conducted his army thither by land. Entertaining, however, as he was, he may be said rather to have viewed than to have conquered that country. He did not, in his progress towards the East, advance beyond the banks of the rivers that fall into the Indus, which is now the western boundary of the vast continent of India. Amidst the wild exploits which distinguish this part of his history, he pursued measures that mark the superiority of his genius as well as the extent of his views. He had penetrated as far into India as to confirm his opinion of its commercial importance, and to perceive that immense wealth might be derived from intercourse with a country where the arts of elegance, having been more early cultivated, were arrived at greater perfection than in any other part of the earth. Full of this idea, he resolved to examine the course of navigation from the mouth of the Indus to the bottom of the Persian Gulf; and, if it should be found practicable, to establish a regular communication between them. In order to affect this, he proposed to remove the cataracts, with which the jealousy of the Persians, and their aversion to correspondence with foreigners, had obstructed the entrance into the Euphrates; to carry the commodities of the East up that river, and the Tigris, which unites with it, into the interior parts of his Asiatic dominions; while, by the way of the Arabian Gulf and the river Nile, they might be conveyed to Alexandria, and distributed to the rest of the world. Nearchus, an officer of eminent abilities, was intrusted with the command of the fleet fitted out for this expedition. He performed this voyage, which was deemed an enterprise so arduous and important, that Alexander reckoned it one of the most extraordinary events which distinguished his reign. Inconsiderable as it may now appear, it was at that time an undertaking of no little merit and difficulty. In the prosecution of it, striking instances occur of the small progress which the Greeks had made in naval knowledge. [4] Having never sailed beyond the bounds of the Mediterranean, where the ebb and flow of the sea are hardly perceptible, when they first observed this phenomenon at the mouth of the Indus, it appeared to them a prodigy, by which the gods testified the displeasure of heaven against their enterprise. [5] During their whole course, they seem never to have lost sight of land, but followed the bearings of the coast so servilely, that they could not avail themselves of those periodical winds which facilitate navigation in the Indian ocean. Accordingly they spent no less than ten months in performing this voyage, which, from the mouth of the Indus to that of the Persian Gulf, does not exceed twenty degrees. It is probable that amidst the convulsions and frequent revolutions in the East, occasioned by the contests among the successors of Alexander, the navigation to India by the course which Nearchus had opened was discontinued. The Indian trade carried on at Alexandria, not only subsisted, but was so much extended, under the Grecian monarchs of Egypt, that it proved a great source of the wealth which distinguished their kingdom.

The progress which the Romans made in navigation and discovery, was still more inconsiderable than that of the Greeks. The genius of the Roman people, their military education, and the spirit of their laws, concurred in estranging them from commerce and naval affairs. It was the necessity of opposing a formidable rival, not the desire of extending trade, which first prompted them to aim at maritime power. Though they soon perceived, that in order to acquire the universal dominion after which they aspired, it was necessary to render themselves masters of the sea, they still considered the naval service as a subordinate station, and reserved for it such citizens as were not of a rank to be admitted into the legions. In the history of the Roman Republic, hardly one event occurs that marks attention to navigation any further than it was instrumental towards conquest. When the Roman valor and discipline had subdued all the maritime states known in the ancient world; when Carthage, Greece, and Egypt had submitted to their power, the Romans did not imbibed the commercial spirit of the conquered nations. Among that people of soldiers, to have applied to trade would have been deemed a degradation to a Roman citizen. They abandoned the mechanical arts, commerce, and navigation, to slaves, to freedmen,

to provincials, and to citizens of the lowest class. Even after the subversion of liberty, when the severity and haughtiness of ancient manners began to abate, commerce did not rise into high estimation among the Romans. The trade of Greece, Egypt, and the other conquered countries, continued to be carried on in its usual channels, after they were reduced into the form of Roman provinces. As Rome was the capital of the world, and the seat of government, all the wealth and valuable productions of the provinces flowed naturally thither. The Romans, satisfied with this, seem to have suffered commerce to remain almost entirely in the hands of the natives of the respective countries. The extent, however, of the Roman power, which reached over the greatest part of the known world, the vigilant inspection of the Roman magistrates, and the spirit of the Roman government, no less intelligent than active, gave such additional security to commerce as animated it with new vigor. The union among nations was never so entire, nor the intercourse so perfect, as within the bounds of this vast empire. Commerce, under the Roman dominion, was not obstructed by the jealousy of rival states, interrupted by frequent hostilities, or limited by partial restrictions. One superintending power moved and regulated the industry of mankind, and enjoyed the fruits of their joint efforts.

Navigation felt its influence, and improved under it. As soon as the Romans acquired a taste for the luxuries of the East, the trade with India through Egypt was pushed with new vigor, and carried on to greater extent. By frequenting the Indian continent, navigators became acquainted with the periodical course of the winds, which, in the ocean that separates Africa from India, blow with little variation during one half of the year from the east, and during the other half blow with equal steadiness from the west. Encouraged by observing this, the pilots who sailed from Egypt to India abandoned their ancient slow and dangerous course along the coast, and, as soon as the western monsoon set in, took their departure from Ocelis, at the mouth of the Arabian Gulf, and stretched boldly across the ocean. The uniform direction of the wind, supplying the place of the compass, and rendering the guidance of the stars less necessary, conducted them to the port of Musiris, on the western shore of the Indian continent. There they took on board their cargo, and, returning with the eastern monsoon, finished their voyage to the Arabian Gulf within the year. This part of India, now known by the name of the Malabar coast, seems to have been the utmost limit of ancient navigation in that quarter of the globe. What imperfect knowledge the ancients had of the immense countries which stretch beyond this towards the East, they received from a few adventurers who had visited them by land. Such excursions were neither frequent nor extensive, and it is probable that, while the Roman intercourse with India subsisted, no traveller ever penetrated further than to the banks of the Ganges [6]. The fleets from Egypt which traded at Musiris, were loaded it is true, with the spices and other rich commodities of the continent and islands of the further India; but these were brought to that port, which became the staple of the commerce between the east and west, by the Indians themselves in canoes hollowed out of one tree. The Egyptian and Roman merchants, satisfied with acquiring these commodities in this manner, did not think it necessary to explore unknown seas, and venture upon a dangerous navigation, in quest of the countries which produced them. But though the discoveries of the Romans in India were so limited, their commerce there was such as will appear considerable, even to the present age, in which the Indian trade has been extended far beyond the practice or conception of any preceding period. We are informed by one author of credit, that the commerce with India drained the Roman empire every year of more than four hundred thousand pounds; and by another, that one hundred and twenty ships sailed annually from the Arabian Gulf to that country.

The discovery of this new method of sailing to India, is the most considerable improvement in navigation made during the continuance of the Roman power. But in ancient times, the knowledge of remote countries was acquired more frequently by land than by sea: [7] and the Romans, from their peculiar disinclination to naval affairs, may be said to have neglected totally the latter, though a more easy and expeditious method of discovery. The progress, however, of their victorious armies through a considerable portion of Europe, Asia, and Africa, contributed greatly to extend discovery by land, and gradually opened the navigation of new and unknown seas. Previous to the Roman conquests, the civilized nations of antiquity had little com-

munication with those countries in Europe which now form its most opulent and powerful kingdoms. The interior parts of Spain and Gaul were imperfectly known. Britain, separated from the rest of the world, had never been visited, except by its neighbors the Gauls, and by a few Carthaginian merchants. The name of Germany had scarcely been heard of. Into all these countries the arms of the Romans penetrated. They entirely subdued Spain and Gaul; they conquered the greatest and most fertile parts of Britain; they advanced into Germany, as far as the banks of the river Elbe. In Africa, they acquired a considerable knowledge of the provinces, which stretched along the Mediterranean Sea, from Egypt westward to the Straits of Gades. In Asia, they not only subjected to their power most of the provinces which composed the Persian and the Macedonian empires, but after their victories over Mithridates and Tigranes, they seem to have made a more accurate survey of the countries contiguous to the Euxine and Caspian seas, and to have carried on a more extensive trade than that of the Greeks with the opulent and commercial nations then seated round the Euxine sea.

From this succinct survey of discovery and navigation, which I have traced from the earliest dawn of historical knowledge, to the full establishment of the Roman dominion, the progress of both appears to have been wonderfully slow. It seems neither adequate to what we might have expected from the activity and enterprise of the human mind, nor to what might have been performed by the power of the great empires which successively governed the world. If we reject accounts that are fabulous and obscure; if we adhere steadily to the light and information of authentic history, without substituting in its place the conjectures of fancy or the dreams of etymologists, we must conclude, that the knowledge which the ancients had acquired of the habitable globe was extremely confined. In Europe, the extensive provinces in the eastern part of Germany were little known to them. They were almost totally unacquainted with the vast countries which are now subject to the kings of Denmark, Sweden, Prussia, Poland, and the Russian empire. The more barren regions that stretch within the arctic circle, were quite unexplored. In Africa, their researches did not extend far beyond the provinces which border on the Mediterranean, and those situated on the western shore of the Arabian Gulf. In Asia, they were unacquainted, as I formerly observed, with all the fertile and opulent countries beyond the Ganges, which furnish the most valuable commodities that in modern times have been the great object of the European commerce with India; nor do they seem to have ever penetrated into those immense regions occupied by the wandering tribes, which they called by the general name of Sarmatians or Scythians, and which are now possessed by Tartars of various denominations, and by the Asiatic subjects of Russia.

But there is one opinion that universally prevailed among the ancients, which conveys a more striking idea of the small progress they had made in the knowledge of the habitable globe than can be derived from any detail of their discoveries. They supposed the earth to be divided into five regions, which they distinguished by the name of Zones. Two of these, which were nearest the poles, they termed frigid zones, and believed the extreme cold which reigned perpetually there rendered them uninhabitable. Another, seated under the line, and extending on either side towards the tropics, they called the Torrid zone, and imagined it to be so burned up with unremitting heat, as to be equally destitute of inhabitants. On the two other zones, which occupied the remainder of the earth, they bestowed the appellation of Temperate, and taught that these being the only regions in which life could subsist, were allotted to man for his habitation. This wild opinion was not a conceit of the uninformed vulgar, or a fanciful fiction of the poets, but a system adopted by the most enlightened philosophers, the most accurate historians and geographers in Greece and Rome. According to this theory, a vast portion of the habitable earth was pronounced to be unfit for sustaining the human species. Those fertile and populous regions within the torrid zone, which are now known not only to yield their own inhabitants the necessities and comforts of life with most luxuriant profusion, but to communicate their superfluous stores to the rest of the world, were supposed to be the mansion of perpetual sterility and desolation. As all the parts of the globe with which the ancients were acquainted lay within the northern temperate zone, their opinion that the other temperate zone was filled with inhabitants, was founded

on reasoning and conjecture, not on discovery. They even believed that, by the intolerable heat of the torrid zone, such an insuperable barrier was placed between the two temperate regions of the earth as would prevent forever any intercourse between their respective inhabitants. Thus, this extravagant theory not only proves that the ancients were unacquainted with the true state of the globe, but it tended to render their ignorance perpetual, by representing all attempts towards opening a communication with the remote regions of the earth, as utterly impracticable. [8.]

But, however imperfect or inaccurate the geographical knowledge which the Greeks and Romans had acquired may appear, in respect of the present improved state of that science, their progress in discovery will seem considerable, and the extent to which they carried navigation and commerce must be reckoned great, when compared with the ignorance of early times. As long as the Roman Empire retained such vigor as to preserve its authority over the conquered nations, and to keep them united, it was an object of public policy, as well as of private curiosity, to examine and describe the countries which composed this great body. Even when the other sciences began to decline, geography, enriched with new observations, and receiving some accession from the experience of every age, and the reports of every traveller, continued to improve. It attained to the highest point of perfection and accuracy to which it ever arrived in the ancient world, by the industry and genius of Ptolemy the Philosopher. He flourished in the second century of the Christian era, and published a description of the terrestrial globe, more ample and exact than that of any of his predecessors.

But, soon after, violent convulsions began to shake the Roman state; the fatal ambition or caprice of Constantine, by changing the seat of government, divided and weakened its force; the barbarous nations, which Providence prepared as instruments to overturn the mighty fabric of the Roman power, began to assemble and to muster their armies on its frontier; the empire tottered to its fall. During this decline and old age of the Roman state, it was impossible that the sciences should go on improving. The efforts of genius were, at that period, as languid and feeble as those of government. From the time of Ptolemy, no inconsiderable addition seems to have been made to a geographical knowledge; nor did any important revolution happen in trade, excepting that Constantinople, by its advantageous situation, and the encouragement of the eastern emperors, became a commercial city of the first note.

At length, the clouds which had been so long gathering round the Roman empire burst into a storm. Barbarous nations rushed in from several quarters with irresistible impetuosity, and in the general wreck, occasioned by the inundation which overwhelmed Europe, the arts, sciences, inventions, and discoveries of the Romans perished in a great measure, and disappeared. All the various tribes which settled in the different provinces of the Roman empire were uncivilized, strangers to letters, destitute of arts, unacquainted with regular government, subordination or laws. The manners and institutions of some of them were so rude as to be hardly compatible with a state of social union. Europe, when occupied by such inhabitants, may be said to have returned to a second infancy, and had to begin anew its career in improvement, science, and civility. The first effect of the settlement of those barbarous invaders was to dissolve the union by which the Roman power had cemented mankind together. They parcelled out Europe into many small and independent states, differing from each other in language and customs. No intercourse subsisted between the members of those divided and hostile communities. Accustomed to a simple mode of life, and averse to industry, they had few wants to supply, and few superfluities to dispose of. The names of *stranger* and *enemy* became once more words of the same import. Customs every where prevailed and even laws were established, which rendered it disagreeable and dangerous to visit any foreign country. Cities, in which alone an extensive commerce can be carried on, were few, inconsiderable, and destitute of those immunities which produce security or excite enterprise. The sciences, on which geography and navigation are founded, were little cultivated. The accounts of ancient improvements and discoveries, contained in the Greek and Roman authors, were neglected or misunderstood. The knowledge of remote regions was lost, their situation, their commodities, and almost their names were unknown.

One circumstance prevented commercial intercourse

with distant nations from ceasing altogether. Constantinople, though often threatened by the fierce invaders who spread desolation over the rest of Europe, was so fortunate as to escape their destructive rage. In that city the knowledge of ancient arts and discoveries was preserved; a taste for elegance and splendor subsisted; the productions and luxuries of foreign countries were in request; and commerce continued to flourish there when it was almost extinct in every other part of Europe. The citizens of Constantinople did not confine their trade to the Islands of the Archipelago, or to the adjacent coasts of Asia; they took a wider range, and, following the course which the ancients had marked out, imported the commodities of the East Indies from Alexandria. When Egypt was torn from the Roman empire, by the Arabians, the industry of the Greeks discovered a new channel by which the productions of India might be conveyed to Constantinople. They were carried up the Indus as far as that great river is navigable; thence they were transported by land to the banks of the river Oxus, and proceeded down its stream to the Caspian sea. There they entered the Volga, and, sailing up it, were carried by land to the Tanae, which conducted them into the Euxine sea, where vessels from Constantinople waited their arrival. This extraordinary and tedious mode of conveyance merits attention, not only as a proof of the violent passion which the inhabitants of Constantinople had conceived for the luxuries of the East, and as a specimen of the ardor and ingenuity with which they carried on commerce; but because it demonstrates that, during the ignorance which reigned in the rest of Europe, an extensive knowledge of remote countries was still preserved in the capital of the Greek empire.

At the same time a gleam of light and knowledge broke in upon the East. The Arabians, having contracted some relish for the sciences of the people whose empire they had contributed to overturn, translated the books of several of the Greek philosophers into their own language. One of the first was that valuable work of Ptolemy which I have already mentioned. The study of geography became, of consequence, an early object of attention to the Arabians. But that acute and ingenious people cultivated chiefly the speculative and scientific parts of geography. In order to ascertain the figure and dimensions of the terrestrial globe, they applied the principles of geometry, they had recourse to astronomical observations, they employed experiments and operations, which Europe in more enlightened times has been proud to adopt and to imitate. At that period, however, the fame of the improvements made by the Arabians did not reach Europe. The knowledge of their discoveries was reserved for ages capable of comprehending and of perfecting them.

By degrees the calamities and desolation brought upon the western provinces of the Roman empire by its barbarous conquerors were forgotten, and in some measure repaired. The rude tribes which settled there acquiring insensibly some idea of regular government, and some relish for the functions and comforts of civil life, Europe began to awake from its torpid and inactive state. The first symptoms of revival were discerned in Italy. The northern tribes which took possession of this country, made progress in improvement with greater rapidity than the people settled in other parts of Europe. Various causes, which it is not the object of this work to enumerate or explain, concurred in restoring liberty and independence to the cities of Italy. The acquisition of these roused industry, and gave motion and vigor to all the active powers of the human mind. Foreign commerce revived, navigation was attended to and improved. Constantinople became the chief mart to which the Italians resorted. They met not only met with a favorable reception, but obtained such mercantile privileges as enabled them to carry on trade with great advantage. They were supplied both with the precious commodities of the east, and with many curious manufactures, the product of ancient arts and ingenuity which still subsisted among the Greeks. As the labor and expense of conveying the productions of India to Constantinople by that long and indirect course which I have described, rendered them extremely rare, and of an exorbitant price, the industry of the Italians discovered other methods of procuring them in greater abundance and at an easier rate. They sometimes purchased them in Aleppo, Tripoli, and other parts on the coast of Syria, to which they were brought by a route not unknown to the ancients. They were conveyed from India by sea up the Persian Gulf, and ascending the Euphrates and Tigris as far as Bagdad, were carried by land across the desert of Palmyra, and from thence to the towns on the Mediterranean. But

from the length of the journey, and the dangers to which the caravans were exposed, this proved always a tedious and often a precarious mode of conveyance. At length the Soldans of Egypt, having revived the commerce with India in its ancient channel, by the Arabian Gulf, the Italian merchants, notwithstanding the violent antipathy to each other with which Christians and the followers of Mahomet were then possessed, repaired to Alexandria, and enduring, from the love of gain, the insolence and exactions of the Mahometans, established a lucrative trade in that port. From that period the commercial spirit of Italy became active and enterprising. Venice, Genoa, Pisa, rose from inconceivable towns to be populous and wealthy cities. Their naval power increased; their vessels frequented not only all the ports in the Mediterranean, but venturing sometimes beyond the straits, visited the maritime towns of Spain, France, the Low Countries, and England; and, by distributing their commodities over Europe, began to communicate to its various nations some taste for the valuable productions of the East, as well as some ideas of manufactures and arts, which were then unknown beyond the precincts of Italy.

While the cities of Italy were thus advancing in their career of improvement, an event happened, the most extraordinary, perhaps, in the history of mankind, which, instead of retarding the commercial progress of the Italians rendered it more rapid. The martial spirit of the Europeans, heightened and inflamed by religious zeal, prompted them to attempt the deliverance of the Holy Land from the dominion of Infidels. Vast armies composed of all the nations in Europe, marched towards Asia upon this wild enterprise. The Genoese, the Pisans, and Venetians, furnished the transports which carried them thither. They supplied them with provisions and military stores. Besides the immense sums which they received on this account, they obtained commercial privileges and establishments of great consequence in the settlements which the Crusaders made in Palestine, and in other provinces of Asia. From those sources, prodigious wealth flowed into the cities which I have mentioned. This was accompanied with a proportional increase of power: and, by the end of the Holy War, Venice in particular became a great maritime state, possessing an extensive commerce and ample territories. Italy was not the only country in which the crusades contributed to revive and diffuse such a spirit as prepared Europe for future discoveries. By their expeditions into Asia, the other European nations became well acquainted with remote regions, which formerly they knew only by name, or by the reports of ignorant and credulous pilgrims. They had an opportunity of observing the manners, the arts, and the accommodations of people more polished than themselves. This intercourse between the East and West subsisted almost two centuries. The adventurers who returned from Asia, communicated to their countrymen the ideas which they had acquired, and the habits of life they had contracted by visiting more refined nations. The Europeans began to be sensible of wants with which they were formerly unacquainted; new desires were excited; and such a taste for the commodities and arts of other countries gradually spread among them, that they not only encouraged the resort of foreigners to their harbors, but began to perceive the advantages and necessity of applying to commerce themselves.

This communication, which was opened between Europe and the western provinces of Asia, encouraged several persons to advance far beyond the countries in which the Crusaders carried on their operations, and to travel by land into the more remote and opulent regions of the East. The wild fanaticism, which seems at that period to have mingled in all the schemes of individuals, no less than in all the counsel of nations, first incited men to enter upon those long and dangerous peregrinations. They were afterwards undertaken from prospects of commercial advantage, or from motives of mere curiosity. Benjamin, a Jew of Tudela, in the kingdom of Navarre, possessed with a superstitious veneration for the law of Moses, and solicitous to visit his countrymen in the East, whom he hoped to find in such a state of power and opulence as might redound to the honor of his sect, set out from Spain, in the year 1160, and travelling by land to Constantinople, proceeded through the countries to the north of the Euxine and Caspian Seas, as far as Chinese Tartary. From thence he took his route towards the south, and after traversing various provinces of the further India, he embarked on the Indian Ocean, visited several of its islands, and returned at the end of thirteen years, by the way of Egypt, to Europe, with much

information concerning a large district of the globe altogether unknown at that time to the western world. The zeal of the head of the Christian Church co-operated with the superstition of Benjamin the Jew in discovering the interior and remote provinces of Asia. All Christendom having been alarmed with the accounts of the rapid progress of the Tartar arms under Zengis Khan [1216.] Innocent IV., who entertained most exalted ideas concerning the plenitude of his own power, and the submission due to his injunctions, sent Father John de Plano Carpini, at the head of a mission of Franciscan monks, and Father Ascolino, at the head of Dominicans, to enjoin Kayuk Kahn, the grandson of Zengis, who was then at the head of the Tartar empire, to embrace the Christian faith, and to desist from desolating the earth by his arms. The haughty descendant of the greatest conqueror Asia had ever beheld, astonished at this strange mandate from an Italian priest, whose name and jurisdiction were alike unknown to him, received it with the contempt which it merited, though he dismissed the mendicants who delivered it with impunity. But as they had penetrated into the country by different routes, and followed for some time the Tartar camps, which were always in motion, they had an opportunity of visiting a great part of Asia. Carpini, who proceeded by the way of Poland and Russia, travelled through its northern provinces as far as the extremities of Thibet. Ascolino, who seems to have landed some where in Syria, advanced through its southern provinces into the interior parts of Persia.

Not long after, [1253] St. Louis of France contributed further towards extending the knowledge which the Europeans had begun to acquire of those distant regions. Some designing impostor, who took advantage of the slender acquaintance of Christendom with the state and character of the Asiatic nations, having informed him that a powerful Khan of the Tartars had embraced the Christian faith, the monarch listened to the tale with pious credulity, and instantly resolved to send ambassadors to this illustrious convert, with a view of enticing him to attack their common enemy the Saracens in one quarter, while he fell upon them in another. As monks were the only persons in that age who possessed such a degree of knowledge as qualified them for a service of this kind he employed in it Father Andrew, a Jacobine, who was followed by Father William de Rubruquis, a Franciscan. With respect to the progress of the former, there is no memorial extant. The journal of the latter has been published. He was admitted into the presence of Mangu, the third Khan in succession from Zengis, and made a circuit through the interior parts of Asia, more extensive than that of any European who had hitherto explored them.

To those travellers whom religious zeal sent forth to visit Asia, succeeded others who ventured into remote countries from the prospect of commercial advantage, or from motives of mere curiosity. The first and most eminent of these was Marco Polo, a Venetian of a noble family. Having engaged early in trade [1265.] according to the custom of his country, his aspiring mind wished for a sphere of activity more extensive than was afforded to it by the established traffic carried on in those parts of Europe and Asia which the Venetians frequented. This prompted him to travel into unknown countries, in expectation of opening a commercial intercourse with them more suited to the sanguine ideas and hopes of a young adventurer.

As his father had already carried some European commodities to the court of the great Khan of the Tartars, and had disposed of them to advantage, he resorted thither. Under the protection of Kublay Khan, the most powerful of all the successors of Zengis, he continued his mercantile peregrinations in Asia upwards of twenty-six years; and during that time advanced towards the east, far beyond the utmost boundaries to which any European traveller had ever proceeded. Instead of following the course of Carpini and Rubruquis, along the vast unpeopled plains of Tartary, he passed through the chief trading cities in the more cultivated parts of Asia, and penetrated to Cambalu, or Peking; the capital of the great kingdom of Cathay, or China, subject at that time to the successors of Zengis. He made more than one voyage on the Indian ocean; he traded in many of the islands from which Europe had long received spices and other commodities which it held in high estimation, though unacquainted with the particular countries to which it was indebted for those precious productions; and he obtained information concerning several countries which he did not visit in person, particularly the island Zipangri, probably the same now known by the

name of Japan. On his return, he astonished his contemporaries with his descriptions of vast regions whose names had never been heard of in Europe, and with such pompous accounts of their fertility, their populousness, their opulence, the variety of their manufactures, and the extent of their trade, as rose far above the conception of an uninformed age.

About half a century after Marco Polo [1322.] Sir John Mandeville, an Englishman, encouraged by his example, visited most of the countries in the East which he had described, and, like him, published an account of them. The narrations of these early travellers abound with many wild incoherent tales, concerning giants, enchanters, and monsters. But they were not from that circumstance less acceptable to an ignorant age, which delighted in what was marvellous. The wonders which they told, mostly on hearsay, filled the multitude with admiration. The facts which they related from their own observation attracted the attention of the more discerning. The former, which may be considered as the popular traditions and fables of the countries through which they had passed, were gradually disregarded as Europe advanced in knowledge. The latter, however incredible some of them may have appeared in their own time, have been confirmed by the observations of modern travellers. By means of both, however, the curiosity of mankind was excited with respect to the remote parts of the earth; their ideas were enlarged; and they were not only insensibly disposed to attempt new discoveries, but received such information as directed to that particular course in which these were afterwards carried on.

While this spirit was gradually forming in Europe, a fortunate discovery was made, which contributed more than all the efforts and ingenuity of the preceding ages to improve and to extend navigation. That wonderful property of the magnet, by which it communicates such virtue to a needle or slender rod of iron as to point towards the poles of the earth, was observed. The use which might be made of this in directing navigation was immediately perceived. That valuable, but now familiar instrument, the mariner's compass was constructed. When by means of it navigators found that, at all seasons and in every place, they could discover the north and south with so much ease and accuracy, it became no longer necessary to depend merely on the light of the stars and the observation of the sea coast. They gradually abandoned their ancient timid and lingering course along the shore, ventured boldly into the ocean, and relying on this new guide, could steer in the darkest night, and under the most cloudy sky, with a security and precision hitherto unknown. The compass may be said to have opened to man the dominion of the sea, and to have put him in full possession of the earth, by enabling him to visit every part of it. Flavio Gioia, a citizen of Almasi, a town of considerable trade in the kingdom of Naples, was the author of this great discovery, about the year one thousand three hundred and two. It hath been often the fate of those illustrious benefactors of mankind who have enriched science and improved the arts by their inventions, to derive more reputation than benefit from the happy efforts of their genius. But the lot of Gioia has been still more cruel; through the inattention or ignorance of contemporary historians, he has been defrauded even of the fame to which he had such a just title. We receive from them no information with respect to his profession, his character, the precise time when he made this important discovery, or the accidents and inquiries which led to it. The knowledge of this event, though productive of greater effects than any recorded in the annals of the human race, is transmitted to us without any of those circumstances which can gratify the curiosity that it naturally awakens. But though the use of the compass might enable the Italians to perform the short voyages to which they were accustomed with greater security and expedition, its influence was not so sudden or extensive as immediately to render navigation adventurous, and to excite a spirit of discovery. Many causes combined in preventing this beneficial invention from producing its full effect instantaneously. Men relinquish ancient habits slowly and with reluctance. They are averse to new experiments, and venture upon them with timidity. The commercial jealousy of the Italians, it is probable labored to conceal the happy discovery of their countrymen from other nations. The art of steering by the compass with such skill and accuracy as to inspire a full confidence in its direction, was acquired gradually. Sailors unaccustomed to quit the sight of land, durst not launch out at once and commit themselves to unknown seas. Accordingly, near half a century elapsed

from the time of Gioia's discovery, before navigators ventured into any seas which they had not been accustomed to frequent.

The first appearance of a holder spirit may be dated from the voyages of the Spaniards to the Canary or Fortunate Islands. By what accident they were led to the discovery of those small isles, which lie near five hundred miles from the Spanish coast, and above a hundred and fifty miles from the coast of Africa, contemporary writers have not explained. But, about the middle of the fourteenth century, the people of all the different kingdoms into which Spain was then divided, were accustomed to make piratical excursions thither; in order to plunder the inhabitants, or to carry them off as slaves. Clement VI., in virtue of the right claimed by the Holy See to dispose of all countries possessed by Infidels, erected those isles into a kingdom in the year one thousand three hundred and forty four, and conferred it on Lewis de la Cerda, descended from the royal family of Castile. But that unfortunate prince, destitute of power to assert his nominal title, having never visited the Canaries, John de Bethencourt, a Norman baron, obtained a grant of them from Henry III. of Castile. Bethencourt, with the valour and good fortune which distinguished the adventurers of his country, attempted and effected the conquest; and the possession of the Canaries remained for some time in his family, as a fief held of the crown of Castile. Previous to this expedition of Bethencourt, his countrymen settled in Normandy are said to have visited the coast of Africa, and to have proceeded far to the south of the Canary Islands [1365]. But their voyages thither seem not to have been undertaken in consequence of any public or regular plan for extending navigation and attempting new discoveries. They were either excursions suggested by that roving piratical spirit which descended to the Normans from their ancestors, or the commercial enterprises of private merchants, which attracted so little notice that hardly any memorial of them is to be found in contemporary authors.—In a general survey of the progress of discovery, it is sufficient to have mentioned this event; and leaving it among those of dubious existence, or of small importance, we may conclude, that though much additional information concerning the remote regions of the East had been received by travellers who visited them by land, navigation at the beginning of the fifteenth century had not advanced beyond the state to which it had attained before the downfall of the Roman empire.

At length the period arrived, when Providence decreed that men were to pass the limits within which they had been so long confined, and open to themselves a more ample field wherein to display their talents, their enterprise, and courage. The first considerable efforts towards this were not made by any of the more powerful states of Europe, or by those who had applied to navigation with the greatest assiduity and success. The glory of leading the way in this new career was reserved for Portugal, one of the smallest and least powerful of the European kingdoms. As the attempts of the Portuguese to acquire the knowledge of those parts of the globe with which mankind were then unacquainted, not only improved and extended the art of navigation, but roused such a spirit of curiosity and enterprise as led to the discovery of the New World, of which I propose to write the history, it is necessary to take a full view of the rise, the progress, and success of their various naval operations. It was in this school that the discoverer of America was trained; and unless we trace the steps by which his instructors and guides advanced, it will be impossible to comprehend the circumstances which suggested the idea, or facilitated the execution, of his great design.

Various circumstances prompted the Portuguese to exert their activity in this new direction, and enabled them to accomplish undertakings apparently superior to the natural force of their monarchy. The kings of Portugal, having driven the Moors out of their dominions, had acquired power as well as glory, by the success of their arms, against the Infidels. By their victories over them, they had extended the royal authority beyond the narrow limits within which it was originally circumscribed in Portugal, as well as in other feudal kingdoms. They had the command of the national force, could rouse it to act with united vigour, and, after the expulsion of the Moors, could employ it without dread of interruption from any domestic enemy. By the perpetual hostilities carried on for several centuries against the Mahometans, the martial and adventurous spirit which distinguished all the European nations during the middle ages, was improved and

heightened among the Portuguese. A fierce civil war towards the close of the fourteenth century, occasioned by a disputed succession, augmented the military ardor of the nation, and formed or called forth men of such active and daring genius as are fit for bold undertakings. The situation of the kingdom, bounded on every side by the dominions of a more powerful neighbour, did not afford free scope to the activity of the Portuguese by land, as the strength of their monarchy was no match for that of Castile. But Portugal was a maritime state, in which there were many commodious harbors; the people had begun to make some progress in the knowledge and practice of navigation, and the sea was open to them, presenting the only field for enterprise in which they could distinguish themselves.

Such was the state of Portugal, and such the disposition of the people when John I., surnamed the Bastard, obtained secure possession of the crown by the peace concluded with Castile, in the year one thousand four hundred and eleven. He was a prince of great merit, who, by superior courage and abilities, had opened his way to a throne which of right did not belong to him. He instantly perceived that it would be impossible to preserve public order, or domestic tranquility, without finding some employment for the restless spirit of his subjects. With this view he assembled a numerous fleet at Lisbon, composed of all the ships which he could fit out in his own kingdom, and of many hired from foreigners. This great armament was destined to attack the Moors settled on the coast of Barbary [1412]. While it was equipping, a few vessels were appointed to sail along the western shore of Africa, bounded by the Atlantic ocean, and to discover the unknown countries situated there. From this inconsiderable attempt, we may date the commencement of that spirit of discovery which opened the barriers which had so long shut out mankind from the knowledge of one half of the terrestrial globe.

At the time when John sent forth these ships on this new voyage, the art of navigation was still very imperfect. Though Africa lay so near to Portugal, and the fertility of the countries already known on that continent invited men to explore it more fully, the Portuguese had never ventured to sail beyond Cape Non. That promontory, as its name imports, was hitherto considered as a boundary which could not be passed. But the nations of Europe had now acquired as much knowledge as emboldened them to disregard the prejudices and to correct the errors of their ancestors.

The long reign of ignorance, the constant enemy of every curious inquiry and of every new undertaking, was approaching to its period. The light of science began to dawn. The works of the ancient Greeks and Romans began to be read with admiration and profit. The sciences cultivated by the Arabians were introduced into Europe by the Moors settled in Spain and Portugal, and by the Jews, who were very numerous in both these kingdoms. Geometry, astronomy, and geography, the sciences on which the art of navigation is founded, became objects of studious attention. The memory of discoveries made by the ancients, was revived, and the progress of their navigation and commerce began to be traced. Some of the causes which have obstructed the cultivation of science in Portugal, during this century and the last did not exist, or did not operate in the same manner, in the fifteenth century; [9] and the Portuguese at that period seem to have kept pace with other nations on this side of the Alps in literary pursuits.

As the genius of the age favored the execution of that new undertaking, to which the peculiar state of the country invited the Portuguese; it proved successful. The vessels sent on the discovery doubled that formidable Cape, which had terminated the progress of former navigators, and proceeded a hundred and sixty miles beyond it, to Cape Bojador. As its rocky cliffs, which stretched a considerable way into the Atlantic, appeared more dreadful than the promontory which they had passed, the Portuguese commanders durst not attempt to sail round it, but returned to Lisbon, more satisfied with having advanced so far, than ashamed of having ventured no further.

Inconsiderable as this voyage was, it increased the passion for discovery which began to arise in Portugal. The fortunate issue of the king's expedition against the Moors of Barbary added strength to that spirit in the nation, and pushed it on to new undertakings. In order to render these successful, it was necessary that they should be conducted by a person who possessed abilities capable of discerning what was attainable, who enjoyed leisure to form a regular system for prosecu-

ting discovery, and who was animated with ardor that would persevere in spite of obstacles and repulses. Happily for Portugal, she found all those qualities in Henry Duke of Viesco, the fourth son of King John, by Philippa of Lancaster, sister of Henry IV king of England. That prince, in his early youth, having accompanied his father in his expedition to Barbary, distinguished himself by many deeds of valor. To the martial spirit, which was the characteristic of every man of noble birth at that time, he added all the accomplishments of a more enlightened and polished age. He cultivated the arts and sciences, which were then unknown and despised by persons of his rank. He applied with peculiar fondness to the study of geography; and by the instruction of able masters, as well as by the accounts of travellers, he early acquired such knowledge of the habitable globe, as discovered the great possibility of finding new and opulent countries, by sailing along the coast of Africa. Such an object was formed to awaken the enthusiasm and ardor of a youthful mind, and he espoused with the utmost zeal the patronage of a design which might prove as beneficial as it appeared to be splendid and honorable. In order that he might pursue this great scheme without interruption, he retired from court immediately after his return from Africa, and fixed his residence at Sagres, near Cape St. Vincent, where the prospect of the Atlantic ocean invited his thoughts continually towards his favorite project, and encouraged him to execute it. In this retreat he was attended by some of the most learned men in his country, who aided him in his researches. He applied for information to the Moors of Barbary, who were accustomed to travel by land into the interior provinces of Africa in quest of ivory, gold dust, and other rich commodities. He consulted the Jews settled in Portugal. By promises, rewards and marks of respect, he allured into his service several persons, foreigners as well as Portuguese, who were eminent for their skill in navigation. In taking those preparatory steps, the great abilities of the prince were seconded by his private virtues. His integrity, his affability, his respect for religion, his zeal for the honor of his country, engaged persons of all ranks to applaud his design, and to favor the execution of it. His schemes were allowed, by the greater part of his countrymen, to proceed neither from ambition nor the desire of wealth, but to flow from the warm benevolence of a heart eager to promote the happiness of mankind, and which justly entitle him to assume a motto for his device, that described the quality by which he wished to be distinguished, *the talent of doing good*.

His first effort, as is usual at the commencement of any new undertaking, was extremely inconsiderable. He fitted out a single ship [1418.] and giving the command of it to John Gonzales Zarco and Tristan Vaz, two gentlemen of his household, who voluntarily offered to conduct the enterprise, he instructed them to use their utmost efforts to double Cape Bojador, and thence to steer towards the south. They, according to the mode of navigation which still prevailed, held their course along the shore; and by following that direction, they must have encountered almost insuperable difficulties in attempting to pass Cape Bojador. But fortune came in aid to their want of skill, and prevented the voyage from being altogether fruitless. A sudden squall of wind arose, drove them out to sea, and when they expected every moment to perish, landed them on an unknown island, which from their happy escape they named *Porto Santo*. In the infancy of navigation, the discovery of this small island appeared a matter of such moment, that they instantly returned to Portugal with the good tidings, and were received by Henry with the applause and honor due to fortunate adventurers. This faint dawn of success filled a mind ardent in the pursuit of a favorite object, with such sanguine hopes as were sufficient incitements to proceed. Next year [1419] Henry sent out three ships under the same commanders, to whom he joined Bartholomew Perestrello, in order to take possession of the island which they had discovered. When they began to settle in Porto Santo, they observed towards the south a fixed spot in the horizon like a small black cloud. By degrees, they were led to conjecture that it might be land; and steering towards it, they arrived at a considerable island, uninhabited and covered with wood, which on that account they called *Madeira*. As it was Henry's chief object to render his discoveries useful to his country, he immediately equipped a fleet to carry a colony of Portuguese to these islands [1420.] By his provident care, they were furnished not only with the seeds, plants and domestic animals common in Europe; but, as he foresaw that the warmth of the climate

mate and fertility of the soil would prove favorable to the rearing of other productions, he procured slips of the vine from the island of Cyprus, the rich wines of which were then in great request, and plants of the sugar-cane from Sicily, into which it had been lately introduced. These thrived so prosperously in this new country, that the benefit of cultivating them was immediately perceived, and the sugar and wine of Madeira quickly became articles of some consequence in the commerce of Portugal.

As soon as the advantages derived from this first settlement to the west of the European continent began to be felt, the spirit of discovery appeared less chimerical, and became more adventurous. By their voyages to Madeira, the Portuguese were gradually accustomed to a bolder navigation, and, instead of creeping servilely along the coast, ventured into the open sea. In consequence of taking this course, Gilianez, who commanded one of prince Henry's ships, doubled Cape Bojador [1433.] the boundary of the Portuguese navigation upwards of twenty years, and which had hitherto been deemed unpassable. This successful voyage, which the ignorance of the age placed on a level with the most famous exploits recorded in history, opened a new sphere to navigation, as it discovered the vast continent of Africa, still washed by the Atlantic ocean, and stretching towards the south. Part of this was soon explored; the Portuguese advanced within the tropics, and in the space of a few years discovered the river Senegal, and all the coast extending from Cape Blanco to Cape de Verd.

Hitherto the Portuguese had been guided in their discoveries, or encouraged to attempt them, by the light and information which they received from the works of the ancient mathematicians and geographers. But when they began to enter the torrid zone, the notion which prevailed among the ancients, that the heat which reigned perpetually there was so excessive as to render it uninhabitable, deterred them, for some time, from proceeding. Their own observations, when they first ventured into this unknown and formidable region, tended to confirm the opinion of antiquity concerning the violent operation of the direct rays of the sun. As far as the river Senegal, the Portuguese had found the coast of Africa inhabited by people nearly resembling the Moors of Barbary. When they advanced to the south of that river, the human form seemed to put on a new appearance. They beheld men with skins black as ebony, with short curled hair, flat noses, thick lips, and all the peculiar features which are now known to distinguish the race of negroes. This surprising alteration they naturally attributed to the influence of heat, and if they should advance nearer to the line, they began to dread that its effects would be still more violent. Those dangers were exaggerated; and many other objections against attempting further discoveries were proposed by some of the grandees, who, from ignorance, from envy, or from that cold timed prudence which rejects whatever has the air of novelty or enterprise, had hitherto condemned all prince Henry's schemes. They represented, that it was altogether chimerical to expect any advantage from countries situated in that region which the wisdom and experience of antiquity had pronounced to be unfit for the habitation of men; that their forefathers, satisfied with cultivating the territory which Providence had allotted them, did not waste the strength of the kingdom by fruitless projects in quest of new settlements; that Portugal was already exhausted by the expense of attempts to discover lands which either did not exist, or which nature destined to remain unknown; and was drained of men, who might have been employed in undertakings attended with more certain success, and productive of greater benefit. But neither their appeal to the authority of the ancients, nor their reasonings concerning the interests of Portugal, made any impression upon the determined philosophic mind of prince Henry. The discoveries which he had already made, convinced him that the ancients had little more than a conjectural knowledge of the torrid zone. He was no less satisfied that the political arguments of his opponents, with respect to the interest of Portugal, were malevolent and ill founded. In those sentiments he was strenuously supported by his brother Pedro, who governed the kingdom as guardian of their nephew Alphonso V., who had succeeded to the throne during his minority [1438]; and, instead of slackening his efforts, Henry continued to pursue his discoveries with fresh ardor.

But in order to silence all the murmurs of opposition, he endeavored to obtain the sanction of the highest authority in favor of his operations. With this view

he applied to the Pope, and represented, in pompous terms, the pious and unwearied zeal with which he had exerted himself during twenty years, in discovering unknown countries, the wretched inhabitants of which were utter strangers to true religion, wandering in heathen darkness, or led astray by the delusions of Mahomet. He besought the holy father, to whom, as the vicar of Christ, all the kingdoms of the earth were subject, to confer on the crown of Portugal a right to all the countries possessed by infidels, which should be discovered by the industry of its subjects, and subdued by the force of its arms. He entreated him to enjoin all Christian powers, under the highest penalties, not to molest Portugal while engaged in this laudable enterprise, and to prohibit them from settling in any of the countries which the Portuguese should discover. He promised that in all their expeditions, it should be the chief object of his countrymen to spread the knowledge of the Christian religion, to establish the authority of the Holy See, and to increase the flock of the universal pastor. As it was by improving with dexterity every favorable conjuncture for acquiring new powers, that the court of Rome had gradually extended its usurpations, Eugene IV., the Pontiff to whom this application was made, eagerly seized the opportunity which now presented itself. He instantly perceived that, by complying with Prince Henry's request, he might exercise a prerogative no less flattering in its own nature than likely to prove beneficial in its consequences. A bull was accordingly issued, in which, after applauding in the strongest terms the past efforts of the Portuguese, and exhorting them to proceed in that laudable career on which they had entered, he granted them an exclusive right to all the countries which they should discover, from Cape Non to the continent of India.

Extravagant as this donation, comprehending such a large portion of the habitable globe, would now appear, even in Catholic countries, no person in the fifteenth century doubted that the Pope in the plenitude of his apostolic power, had a right to confer it. Prince Henry was soon sensible of the advantages which he derived from this transaction. His schemes were authorized and sanctified by the bull approving of them. The spirit of discovery was connected with zeal for religion, which in that age was a principle of such activity and vigor as to influence the conduct of nations. All Christian princes were deterred from intruding into those countries which the Portuguese had discovered, or from interrupting the progress of their navigation and conquests. [10]

The fame of the Portuguese voyages soon spread over Europe. Men long accustomed to circumscribe the activity and knowledge of the human mind within the limits to which they had been hitherto confined, were astonished to behold the sphere of navigation so suddenly enlarged, and a prospect opened of visiting regions of the globe the existence of which was unknown in former times. The learned and speculative reasoned and formed theories concerning those unexpected discoveries. The vulgar inquired and wondered; while enterprising adventurers crowded from every part of Europe, soliciting prince Henry to employ them in this honorable service. Many Venetians and Genoese, in particular, who were at that time superior to all other nations in the science of naval affairs, entered aboard the Portuguese ships, and acquired a more perfect and extensive knowledge of their profession in that new school of navigation. In emulation of these foreigners, the Portuguese exerted their own talents. The nation seconded the designs of the prince. Private merchants formed companies [1446.] with a view to search for unknown countries. The Cape de Verde Islands, which lie off the promontory of that name, were discovered [1449.] and soon after the isles called Azores. As the former of these are above three hundred miles from the African coast, and the latter nine hundred miles from any continent, it is evident by their venturing so boldly into the open seas, that the Portuguese had by this time improved greatly in the art of navigation.

While the passion for engaging in new undertakings was thus warm and active, it received an unfortunate check by the death of prince Henry [1463.] whose superior knowledge had hitherto directed all the operations of the discoverers, and whose patronage had encouraged and protected them. But notwithstanding all the advantages which they derived from these, the Portuguese during his life did not advance in their utmost progress towards the south, within five degrees of the equinoctial line; and after their continued exertions for half a century, [from 1412 to 1463.] hardly

fifteen hundred miles of the coast of Africa were discovered. To an age acquainted with the efforts of navigation in its state of maturity and improvement, these essays of its early years must necessarily appear feeble and unskilful. But inconsiderable as they may be deemed, they were sufficient to turn the curiosity of the European nations into a new channel, to excite an enterprising spirit, and to point the way to future discoveries.

Alphonso, who possessed the throne of Portugal at the time of prince Henry's death, was so much engaged in supporting his own pretensions to the crown of Castile, or in carrying on his expeditions against the Moors of Barbary, that, the force of his kingdom being exerted in other operations, he could not prosecute the discoveries in Africa with ardor. He committed the conduct of them to Fernando Gomez, a merchant in Lisbon, to whom he granted an exclusive right of commerce with all the countries of which prince Henry had taken possession. Under the restraint and oppression of a monopoly, the spirit of discovery languished. It ceased to be a national object, and became the concern of a private man more attentive to his own gain than to the glory of his country. Some progress, however, was made. The Portuguese ventured at length [1471.] to cross the line, and, to their astonishment, found that region of the torrid zone, which was supposed to be scorched with intolerable heat, to be not only habitable, but populous and fertile.

John II., who succeeded his father Alphonso [1481.] possessed talents capable both of forming and executing great designs. As part of his revenues, while prince, had arisen from duties on the trade with the newly discovered countries, this naturally turned his attention towards them, and satisfied him with respect to their utility and importance. In proportion as his knowledge of these countries extended, the possession of them appeared to be of greater consequence. While the Portuguese proceeded along the coast of Africa, from Cape Non to the river of Senegal, they found all that extensive tract to be sandy, barren and thinly inhabited by a wretched people professing the Mahometan religion, and subject to the vast empire of Morocco. But to the south of that river, the power and religion of the Mahometans were unknown. The country was divided into small independent principalities, the population was considerable, the soil fertile, and the Portuguese soon discovered that it produced ivory, rich gums, gold, and other valuable commodities. By the acquisition of these, commerce was enlarged, and became more adventurous. Men, animated and rendered active by the certain prospect of gain, pursued discovery with greater eagerness than when they were excited only by curiosity and hope.

This spirit derived no small reinforcement of vigor from the countenance of such a monarch as John. Declaring himself the patron of every attempt towards discovery, he promoted it with all the ardor of his grand uncle, prince Henry, and with superior power. The effects of this were immediately felt. A powerful fleet was fitted out [1484.] which after discovering the kingdoms of Benin and Congo, advanced above fifteen hundred miles beyond the line, and the Portuguese, for the first time, beheld a new heaven, and observed the stars of another hemisphere. John was not only solicitous to discover, but attentive to secure the possession of those countries. He built forts on the coast of Guinea; he sent out colonies to settle there; he established a commercial intercourse with the more powerful kingdoms; he endeavored to render such as were feeble or divided tributary to the crown of Portugal. Some of the petty princes voluntarily acknowledged themselves his vassals. Others were compelled to do so by force of arms. A regular and well digested system was formed with respect to this new object of policy, and by firmly adhering to it the Portuguese power and commerce in Africa were established upon a solid foundation.

By their constant intercourse with the people of Africa, the Portuguese gradually acquired some knowledge of those parts of that country which they had not visited. The information which they received from the natives, added to what they had observed in their own voyages, began to open prospects more extensive, and to suggest the idea of schemes more important than those which had hitherto allured and occupied them. They had detected the error of the ancients concerning the nature of the torrid zone. They found as they proceeded southwards, that the continent of Africa, instead of extending in breadth, according to the doctrine of Ptolemy, at that time the oracle and guide of the learned in the science of geography, appeared sensibly to con-

tract itself, and to bend towards the east. This induced them to give credit to the accounts of the ancient Phœnician voyages round Africa, which had long been deemed fabulous, and led them to conceive hopes, that by following the same route, they might arrive at the East Indies, and engross that commerce which has been the source of wealth and power to every nation possessed of it. The comprehensive genius of prince Henry, as we may conjecture from the words of the Pope's bull, had early formed some idea of this navigation. But though his countrymen, at that period, were incapable of conceiving the extent of his views and schemes, all the Portuguese mathematicians and pilots now concurred in representing them as well founded and practicable. The king entered with warmth into their sentiments, and began to concert measures for this arduous and important voyage.

Before his preparations for this expedition were finished, accounts were transmitted from Africa, that various nations along the coast had mentioned a mighty kingdom situated on their continent, at a great distance towards the east, the king of which, according to their description, professed the Christian religion. The Portuguese monarch immediately concluded, that this must be the emperor of Abyssinia, to whom the Europeans, seduced by a mistake of Rubruquis, Marco Polo, and other travellers to the East, absurdly gave the name of Prester, or Presbyter John; and as he hoped to receive information and assistance from a Christian prince, in prosecuting a scheme that tended to propagate their common faith, he resolved to open, if possible, some intercourse with his court. With this view, he made choice of Pedro de Covillam, and Alphonso de Payva, who were perfect masters of the Arabic language, and sent them to the East to search for the residence of this unknown potentate, and to make him proffers of friendship. They had in charge likewise to procure whatever intelligence the nations which they visited could supply, with respect to the trade of India, and the course of navigation to that continent.

While John made this new attempt by land, to obtain some knowledge of the country which he wished so ardently to discover, he did not neglect the prosecution of this great design by sea. The conduct of a voyage for this purpose, the most arduous and important which the Portuguese had ever projected, was committed to Bartholomew Diaz [1486] an officer whose sagacity, experience, and fortitude, rendered him equal to the undertaking. He stretched boldly towards the south, and proceeding beyond the utmost limits to which his countrymen had hitherto advanced discovered near a thousand miles of new country. Neither the danger to which he was exposed, by a succession of violent tempests in unknown seas, and by the frequent mutinies of his crew, nor the calamities of a famine which he suffered from losing his storeship, could deter him from prosecuting his enterprise. In recompense of his labors and perseverance, he at last deserved that lofty promontory which bounds Africa to the south. But to desert it was all that he had in his power to accomplish. The violence of the winds, the shattered condition of his ships, and the turbulent spirit of the sailors, compelled him to return after a voyage of sixteen months, in which he discovered a far greater extent of country than any former navigator. Diaz had called the promontory which terminated his voyage *Cape Tormentoso*, or the stormy Cape; but the king, his master, as he now entertained no doubt of having found the long desired route to India, gave it a name more inviting, and of a better omen, *The Cape of Good Hope*.

Those sanguine expectations of success were confirmed by the intelligence which John received over land, in consequence of his embassy to Abyssinia. Covillam and Payva, in obedience to their master's instructions, had repaired to Grand Cairo. From that city they travelled along with a caravan of Egyptian merchants, and embarking on the Red Sea, arrived at Aden, in Arabia. There they separated; Payva sailed directly towards Abyssinia; Covillam embarked for the East Indies, and having visited Calcut, Goa, and other cities on the Malabar coast, returned to Sofala, on the east side of Africa, and thence to Grand Cairo, which Payva and he had fixed upon as their place of rendezvous. Unfortunately the former was cruelly murdered in Abyssinia; but Covillam found at Cairo two Portuguese Jews, whom John, whose provident sagacity attended to every circumstance that could facilitate the execution of his schemes, had despatched after them, in order to receive a detail of their proceedings, and to communicate to them new instructions. By one of these Jews, Covillam transmitted to Portugal a journal of his travels by sea and land, his remarks

upon the trade of India, together with exact maps of the coasts on which he had touched; and from what he himself had observed, as well as from the information of skilful seamen, in different countries, he concluded, that, by sailing round Africa, a passage might be found to the East Indies.

The happy coincidence of Covillam's opinion and report, with the discoveries which Diaz had lately made, left hardly any shadow of doubt with respect to the possibility of sailing from Europe to India. But the vast length of the voyage, and the furious storms which Diaz had encountered near the Cape of Good Hope, alarmed and intimidated the Portuguese to such a degree, although by long experience they were now become adventurous and skilful mariners, that some time was requisite to prepare their minds for this dangerous and extraordinary voyage. The courage, however, and authority of the monarch gradually dispelled the vain fears of his subjects, or made it necessary to conceal them. As John thought himself now upon the eve of accomplishing that great design which had been the principal object of his reign, his earnestness in prosecuting it became so vehement, that it occupied his thoughts by day and bereaved him of sleep through the night. While he was taking every precaution that his wisdom and experience could suggest, in order to ensure the success of the expedition, which was to decide concerning the fate of his favorite project, the fame of the vast discoveries which the Portuguese had already made, the reports concerning the extraordinary intelligence which they had received from the East, and the prospect of the voyage which they now meditated, drew the attention of all the European nations, and held them in suspense and expectation. By some, the maritime skill and navigation of the Portuguese were compared with those of the Phœnicians and Carthaginians, and exalted above them. Others formed conjectures concerning the revolutions which the success of the Portuguese schemes might occasion in the course of trade, and the political state of Europe. The Venetians began to be disquieted with the apprehension of losing their Indian commerce, the monopoly of which was the chief source of their power as well as opulence, and the Portuguese already enjoyed in fancy the wealth of the East. But during this interval, which gave such scope to the various workings of curiosity, of hope, and of fear, an account was brought to Europe of an event no less extraordinary than unexpected, the discovery of a New World situated on the West; and the eyes and admiration of mankind turned immediately towards that great object.

BOOK II.

Birth and education of Columbus—acquires naval skill in the service of Portugal—conceives hopes of reaching the East Indies by holding a westerly course—his system founded on the ideas of the ancients, and knowledge of their navigation—and on the discoveries of the Portuguese—his negotiations with different courts—obstacles which he had to surmount in Spain—Voyage of discovery—difficulties—success—return to Spain—Astonishment of mankind on this discovery of a new world—Papal grant of it—Second voyage—Colony settled—Further discoveries—War with the Indians—First tax imposed on them—Third voyage—He discovers the Continent—State of the Spanish colony—Errors in the first system of colonizing—Voyage of the Portuguese to the East Indies by the Cape of Good Hope—Effects of this—discoveries made by private adventurers in the New World—Name of America given to it—Machinations against Columbus—disgraced and sent in chains to Europe—Fourth voyage of Columbus—His discoveries—disasters—death.

AMONG the foreigners whom the fame of the discoveries made by the Portuguese had allured into their service, was Christopher Colon, or Columbus, a subject of the Republic of Genoa. Neither the time nor place of his birth is known with certainty [11]; but he was descended of an honorable family, though reduced to indigence by various misfortunes. His ancestors having betaken themselves for subsistence to a seafaring life, Columbus discovered in his early youth the peculiar character and talents which mark out a man for that profession. His parents, instead of thwarting this original propensity of his mind, seem to have encouraged and confirmed it by the education which they gave him. After acquiring some knowledge of the Latin tongue, the only language in which science was taught at that time, he was instructed in geometry, cosmography, astronomy, and the art of drawing. To these he applied with such arder and predilection, on account of their connexion with navigation, his favorite object, that he advanced with rapid proficiency in the study of them. Thus qualified, he went to sea at the age of fourteen [1461], and began

his career on that element which conducted him to so much glory. His early voyages were to those ports in the Mediterranean which his countrymen the Genoese, frequented. This being a sphere too narrow for his active mind, he made an excursion to the northern seas [1467,] and visited the coast of Iceland, to which the English and other nations had begun to resort on account of its fishery. As navigation, in every direction, was now become enterprising, he proceeded beyond that island, the Thule of the ancients, and advanced several degrees within the polar circle. Having satisfied his curiosity, by a voyage which tended more to enlarge his knowledge of naval affairs than to improve his fortune, he entered into the service of a famous sea-captain of his own name and family. This man commanded a small squadron fitted out at his own expense, and by cruising sometimes against the Mahometans, sometimes against the Venetians, the rivals of his country in trade, had acquired both wealth and reputation. With him Columbus continued for several years, no less distinguished for his courage than for his experience as a sailor. At length, in an obstinate engagement off the coast of Portugal, with some Venetian caravels returning richly laden from the Low Countries, the vessel on board which he served took fire, together with one of the enemy's ships to which it was fast grappled. In this dreadful extremity his intrepidity and presence of mind did not forsake him. He threw himself into the sea, laid hold of a floating oar, and by the support of it, and his dexterity in swimming, he reached the shore, though above two leagues distant, and saved a life reserved for great undertakings.

As soon as he recovered strength for the journey, he repaired to Lisbon, where many of his countrymen were settled. They soon conceived such a favorable opinion of his merit, as well as talents, that they warmly solicited him to remain in that kingdom, where his naval skill and experience could not fail of rendering him conspicuous. To every adventurer animated either with curiosity to visit new countries, or with ambition to distinguish himself, the Portuguese service was at that time extremely inviting. Columbus listened with a favorable ear to the advice of his friends, and having gained the esteem of a Portuguese lady, whom he married fixed his residence in Lisbon. This alliance, instead of detaching him from a seafaring life, contributed to enlarge the sphere of his naval knowledge, and to excite a desire of extending it still further. His wife was a daughter of Bartholomew Perestrello, one of the captains employed by prince Henry in his early navigations, and who, under his protection, had discovered and planted the islands of Porto Santo and Madeira. Columbus got possession of the journals and charts of this experienced navigator; and from them he learned the course which the Portuguese had held in making their discoveries, as well as the various circumstances which guided or encouraged them in their attempts. The study of these soothed and inflamed his favorite passion; and while he contemplated the maps, and read the descriptions of the new countries which Perestrello had seen, his impatience to visit them became irresistible. In order to indulge it, he made a voyage to Madeira, and continued during several years to trade with that island, with the Canaries, the Azores, the settlements in Guinea, and all the other places which the Portuguese had discovered on the continent of Africa.

By the experience which Columbus acquired, during such a variety of voyages to almost every part of the globe with which at that time any intercourse was carried on by sea, he was now become one of the most skilful navigators in Europe. But, not satisfied with that praise, his ambition aimed at something more. The successful progress of the Portuguese navigators had awakened a spirit of curiosity and emulation, which set every man of science upon examining all the circumstances that led to the discoveries which they had made, or that afforded a prospect of succeeding in any new and bolder undertaking. The mind of Columbus, naturally inquisitive, capable of deep reflection, and turned to speculations of this kind, was so often employed in revolving the principles upon which the Portuguese had founded their schemes of discovery, and the mode on which they had carried them on, that he gradually began to form an idea of improving upon their plan, and of accomplishing discoveries which hitherto they had attempted in vain.

To find out a passage by sea to the East Indies, was the important object in view at that period. From the time that the Portuguese doubled Cape de Verd, this was the point at which they aimed in all their navigations, and in comparison with all their discoveries in Africa appeared inconsiderable. The fertility and

riches of India had been known for many ages; its spices and other valuable commodities were in high request throughout Europe, and the vast wealth of the Venitians, arising from their having engrossed this trade, had raised the envy of all nations. But how intent soever the Portuguese were upon discovering a new route to those desirable regions, they searched for it only by steering towards the south, in hopes of arriving at India by turning to the east after they had sailed round the further extremity of Africa. This course was still unknown, and even if discovered, was of such immense length, that a voyage from Europe to India must have appeared at that period an undertaking extremely arduous, and of very uncertain issue. More than half a century had been employed in advancing from Cape Non to the equator; a much longer space of time might elapse before the more extensive navigation from that to India could be accomplished. These reflections upon the uncertainty, the danger, and tediousness of the course which the Portuguese were pursuing, naturally led Columbus to consider whether a shorter and more direct passage to the East Indies might not be found out. After revolving long and seriously every circumstance suggested by his superior knowledge in the theory as well as the practice of navigation; after comparing attentively the observations of modern pilots with the hints and conjectures of ancient authors, he at last concluded, that by sailing directly towards the west, across the Atlantic ocean, new countries, which probably formed a part of the great continent of India, must infallibly be discovered.

Principles and arguments of various kinds, and derived from different sources, induced him to adopt this opinion, seemingly as chimerical as it was new and extraordinary. The spherical figure of the earth was known, and its magnitude ascertained with some degree of accuracy. From this it was evident, that the continents of Europe, Asia, and Africa, as far as they were known at that time, formed but a small portion of the terraqueous globe. It was suitable to our ideas concerning the wisdom and beneficence of the Author of Nature, to believe that the vast space still unexplored was not covered entirely by a waste unprofitable ocean, but occupied by countries fit for the habitation of man. It appeared likewise extremely probable that the continent on this side of the globe was balanced by a proportional quantity of land in the other hemisphere. These conclusions concerning the existence of another continent, drawn from the figure and structure of the globe, were confirmed by the observations and conjectures of modern navigators. A Portuguese pilot, having stretched further to the west than was usual at that time, took up a piece of timber artificially carved floating upon the sea; and as it was driven towards him by a westerly wind, he concluded that it came from some unknown land situated in that quarter. Columbus's brother-in-law had found to the west of the Madeira isles, a piece of timber fashioned in the same manner, and brought by the same wind; and had seen likewise canes of an enormous size floating upon the waves, which resembled those described by Ptolemy as productions peculiar to the East Indies. After a course of westerly winds, trees torn up by the roots were often driven upon the coast of the Azores; and at one time, the dead bodies of two men, with singular features, resembling neither the inhabitants of Europe nor of Africa, were cast ashore there.

As the force of this united evidence, arising from theoretical principles and practical observations, led Columbus to expect the discovery of new countries in the western ocean, other reasons induced him to believe that these must be connected with the continent of India. Though the ancients had hardly ever penetrated into India further than the banks of the Ganges, yet some Greek authors had ventured to describe the provinces beyond that river. As men are prone, and at liberty, to magnify what is remote or unknown, they represented them as regions of an immense extent. Ctesias affirmed that India was as large as all the rest of Asia. Onesicritus, whom Pliny the naturalist follows, contended that it was equal to a third part of the habitable earth. Nearchus asserted, that it would take four months to march in a straight line from one extremity of India to the other. The journal of Marco Polo, who had proceeded towards the East far beyond the limits to which any European had ever advanced, seemed to confirm these exaggerated accounts of the ancients. By his magnificent descriptions of the kingdoms of *Cathay* and *Cipango*, and of many other countries the names of which were unknown in Europe, India appeared to be a region of vast extent. From these accounts, which, however defective, were the

most accurate that the people of Europe had received at that period with respect to the remote parts of the East, Columbus drew a just conclusion. He contended that, in proportion as the continent of India stretched out towards the East, it must, in consequence of the spherical figure of the earth, approach near to the islands which had lately been discovered to the west of Africa; that the distance from the one to the other was probably not very considerable; and that the most direct as well as shortest course to the remote regions of the East was to be found by sailing due west. [12] This notion concerning the vicinity of India to the western parts of our continent, was countenanced by some eminent writers among the ancients, the sanction of whose authority was necessary, in that age, to procure a favorable reception to any tenet. Aristotle thought it probable that the Columns of Hercules, or Straits of Gibraltar, were not far removed from the East Indies, and that there might be a communication by sea between them. Seneca, in terms still more explicit, affirms, that with a fair wind one might sail from Spain to India in a few days. The famous Atlantic islands described by Plato, and supposed by many to be a real country, beyond which an unknown continent was situated, is represented by him as lying at no great distance from Spain. After weighing all these particulars, Columbus, in whose character the modesty and diffidence of true genius were united with the ardent enthusiasm of a projector, did not rest with such absolute assurance, either upon his own arguments, or upon the authority of the ancients, as not to consult such of his contemporaries as were capable of comprehending the nature of the evidence which he produced in support of his opinion. As early as the year one thousand four hundred and seventy four, he communicated his ideas concerning the probability of discovering new countries, by sailing westward, to Paul, a physician of Florence, eminent for his knowledge of cosmography, and who, from the learning as well as candor which he discovers in his reply, appears to have been well entitled to the confidence which Columbus placed in him. He warmly approved of the plan, suggested several facts in confirmation of it, and encouraged Columbus to persevere in an undertaking so laudable, and which must rebound so much to the honor of his country and the benefit of Europe.

To a mind less capable of forming and of executing great designs than that of Columbus, all those reasonings and observations and authorities would have served only as the foundation of some plausible and fruitless theory, which might have furnished matter for ingenious discourse or fanciful conjecture. But with his sanguine and enterprising temper speculation led directly to action. Fully satisfied himself with respect to the truth of his system, he was impatient to bring it to the test of experiment, and to set out upon a voyage of discovery. The first step towards this was to secure the patronage of some of the considerable powers in Europe capable of undertaking such an enterprise. As long absence had not extinguished the affection which he bore to his native country, he wished that it should reap the fruits of his labors and invention. With this view, he laid his scheme before the senate of Genoa, and, making his country the first tender of his service, offered to sail under the banners of the republic in quest of the new regions which he expected to discover. But Columbus had resided for so many years in foreign parts, that his countrymen were unacquainted with his abilities and character; and, though a maritime people, were so little accustomed to distant voyages, that they could form no just idea of the principles on which he founded his hopes of success. They inconsiderately rejected his proposal, as the dream of a chimerical projector, and lost forever the opportunity of restoring their commonwealth to its ancient splendour.

Having performed what was due to his country, Columbus was so little discouraged by the repulse which he had received, that instead of relinquishing his undertaking he pursued it with fresh ardor. He made his next overture to John II. king of Portugal, in whose dominions he had been long established, and whom he considered on that account, as having the second claim to his service. Here every circumstance seemed to promise him a more favorable reception: he applied to a monarch of an enterprising genius, no incompetent judge in naval affairs, and proud of patronising every attempt to discover new countries. His subjects were the most experienced navigators in Europe, and the least apt to be intimidated either by the novelty and boldness of any maritime expedition. In Portugal, the professional skill of Columbus, as

well as his personal good qualities, were thoroughly known, and as the former rendered it probable that his scheme was not altogether visionary, the latter exempted him from the suspicion of any sinister intention in proposing it. Accordingly, the king listened to him in the most gracious manner, and referred the consideration of his plan to Diego Ortiz, Bishop of Ceuta, and two Jewish Physicians, eminent cosmographers, whom he was accustomed to consult in matters of this kind. As in Genoa, ignorance had opposed and disappointed Columbus; in Lisbon, he had to combat with prejudice, an enemy no less formidable. The persons according to whose decision his scheme was to be adopted, or rejected, had been the chief directors of the Portuguese navigations, and had advised to search for a passage to India, by steering a course directly opposite to that which Columbus recommended as shorter and more certain. They could not, therefore, approve of his proposal without submitting to the double mortification of condemning their own theory, and acknowledging his superior sagacity. After teasing him with captious questions, and starting innumerable objections, with a view of betraying him into such a particular explanation of his system as might draw from him a full discovery of its nature, they deferred passing a final judgment with respect to it. In the mean time they conspired to rob him of the honor and advantages which he expected from the success of his scheme, advising the king to despatch a vessel secretly, in order to attempt the proposed discovery, by following exactly the course which Columbus seemed to point out. John, forgetting on this occasion the sentiments becoming a monarch, meanly adopted this perfidious counsel. But the pilot chosen to execute Columbus's plan had neither the genius nor the fortitude of its author. Contrary winds arose, no sight of approaching land appeared, his courage failed, and he returned to Lisbon, execrating the project as equally extravagant and dangerous.

Upon discovering this dishonorable transaction, Columbus felt the indignation natural to an ingenious mind, and in the warmth of his resentment determined to break off all intercourse with a nation capable of such flagrant treachery. He instantly quitted the kingdom, and landed in Spain towards the close of the year one thousand four hundred and eighty-four. As he was now at liberty to court the protection of any patron whom he could engage to approve of his plan, and to carry it into execution, he resolved to propose it in person to Ferdinand and Isabella, who at that time governed the united kingdoms of Castile and Aragon. But as he had already experienced the uncertain issue of application to kings and ministers, he took the precaution of sending into England his brother Bartholomew, to whom he had fully communicated his ideas, in order that he might negotiate at the same time with Henry VII. who was reputed one in the most sagacious as well as opulent princes in Europe.

It was not without reason that Columbus entertained doubts and fears with respect to the reception of his proposals in the Spanish court. Spain was at that juncture engaged in a dangerous war with Granada, the last of the Moorish kingdoms in that country. The wary and suspicious temper of Ferdinand was not formed to relish bold or uncommon designs. Isabella, though more generous and enterprising, was under the influence of her husband in all her actions. The Spaniards had hitherto made no efforts to extend navigation beyond its ancient limits, and had beheld the amazing progress of discovery among their neighbors the Portuguese without one attempt to imitate or to rival them. The war with the infidels afforded an ample field to the national activity and love of glory. Under circumstances so unfavorable, it was impossible for Columbus to make rapid progress with a nation naturally slow and dilatory in forming all its resolutions. His character, however, was admirably adapted to that of the people whose confidence and protection he solicited. He was grave, though courteous in his deportment; circumspect in his words and actions, irreproachable in his morals, and exemplary in his attention to all the duties and functions of religion. By qualities so respectable, he not only gained many private friends, but acquired such general esteem, that, notwithstanding the plainness of his appearance, suitable to the mediocrity of his fortune, he was not considered as a mere adventurer, to whom indigence had suggested a visionary project, but was received as a person to whose propositions serious attention was due.

Ferdinand and Isabella, though fully occupied by their operations against the Moors, paid so much regard to Columbus, as to remit the consideration of his plan

to the queen's confessor, Ferdinand de Talavera. He consulted such of his countrymen as were supposed best qualified to decide with respect to a subject of this kind. But true science had hitherto made so little progress in Spain, that the pretended philosophers, selected to judge in a matter of such moment, did not comprehend the first principles upon which Columbus founded his conjectures and hopes. Some of them from mistaken notions concerning the dimensions of the globe, contended that a voyage to those remote parts of the east which Columbus expected to discover, could not be performed in less than three years. Others concluded, that either he would find the ocean to be of infinite extent, according to the opinion of some ancient philosophers; or, if he should persist in steering towards the west beyond a certain point, that the convex figure of the globe would prevent his return, and that he must inevitably perish in the vain attempt to open a communication between the two opposite hemispheres which nature had forever disjoined. Even without deigning to enter into any particular discussion, many rejected the scheme in general, upon the credit of a maxim, under which the ignorant and unenterprising shelter themselves in every age. "That it is presumptuous in any person, to suppose that he alone possesses knowledge superior to all the rest of mankind united." They maintained, that if there were really any such countries as Columbus pretended, they could not have remained so long concealed, nor would the wisdom and sagacity of former ages have left the glory of this invention to an obscure Genoese pilot.

It required all Columbus's patience and address to negotiate with men capable of advancing such strange propositions. He had to contend not only with the obstinacy of ignorance, but with what is still more intractable, the pride of false knowledge. After innumerable conferences, and wasting five years in fruitless endeavors to inform and to satisfy judges so little capable of deciding with propriety, Talavera at last made such an unfavorable report to Ferdinand and Isabella, as induced them to acquaint Columbus, that until the war with the Moors should be brought to a period, it would be imprudent to engage in any new and extensive enterprise.

Whatever care was taken to soften the harshness of this declaration, Columbus considered it as a final rejection of his proposals. But, happily for mankind, that superiority of genius, which is capable of forming great and uncommon designs, is usually accompanied with an ardent enthusiasm, which can neither be cooled by delays nor damped by disappointment. Columbus was of this sanguine temper. Though he felt deeply the cruel blow given to his hopes, and retired immediately from a court where he had been amused so long with vain expectations, his confidence in the justness of his own system did not diminish, and his impatience to demonstrate the truth of it by an actual experiment became greater than ever. Having courted the protection of sovereign states without success, he applied next to persons of inferior rank, and addressed successively the Dukes of Medina Sidonia and Medina Celi, who, though subjects, were possessed of power and opulence more than equal to the enterprise which he projected. His negotiations with them proved as fruitless as those in which he had been hitherto engaged; for these noblemen were either as little convinced by Columbus's arguments as their superiors, or they were afraid of alarming the jealousy and offending the pride of Ferdinand, by countenancing a scheme which he had rejected.

Amid the painful sensations occasioned by such a succession of disappointments, Columbus had to sustain the additional distress of having received no accounts of his brother whom he had sent to the court of England. In his voyage to that country, Bartholomew had been so unfortunate as to fall into the hands of pirates, who having stripped him of every thing detained him a prisoner for several years. At length he made his escape, and arrived in London, but in such extreme indigence, that he was obliged to employ himself, during a considerable time in drawing and selling maps, in order to pick up as much money as would purchase a decent dress in which he might venture to appear at court. He then laid before the king the proposals with which he had been intrusted by his brother; and notwithstanding Henry's excessive caution and parsimony, which rendered him averse to new or extensive undertakings, he received Columbus's overtures with more approbation than any monarch to whom they had hitherto been presented.

Meanwhile, Columbus being unacquainted with his brother's fate, and having now no prospect of encour-

agement in Spain, resolved to visit the court of England in person, in hopes of meeting with a more favorable reception there. He had already made preparations for this purpose, and taken measures for the disposal of his children during his absence, when Juan Perez, the guardian of the monastery of Rabida, near Palos, in which they had been educated, earnestly solicited him to defer his journey for a short time. Perez was a man of considerable learning, and of some credit with queen Isabella, to whom he was known personally. He was warmly attached to Columbus, with whose ability as well as integrity he had many opportunities of being acquainted. Prompted by curiosity or by friendship, he entered upon an accurate examination of his system, in conjunction with a physician settled in the neighborhood, who was a considerable proficient in mathematical knowledge. This investigation satisfied them so thoroughly, with respect to the solidity of the principles on which Columbus founded his opinion, and the probability of success in executing the plan which he proposed, that Perez, in order to prevent his country from being deprived of the glory and benefit which must accrue to the patrons of such a grand enterprise, ventured to write to Isabella, conjuring her to consider the matter anew with the attention which it merited.

Moved by the representations of a person whom she respected, Isabella desired Perez to repair immediately to the village of Santa Fe, in which, on account of the siege of Granada, the court resided at that time, that she might confer with him on this important subject. The first effect of their interview was a gracious invitation of Columbus back to court, accompanied with the present of a small sum to equip him for the journey. As there was now a certain prospect that the war with the Moors would speedily be brought to a happy issue by the reduction of Granada, which would leave the nation at liberty to engage in new undertakings; this, as well as the mark of royal favor, with which Columbus had been lately honored, encouraged his friends to appear with greater confidence than formerly in support of his scheme. The chief of these, Alonza de Quintanilla, comptroller of the finances in Castile, and Luis de Santangel, receiver of the ecclesiastical revenues in Aragon, whose meritorious zeal in promoting this great design entitles their names to an honorable place in history, introduced Columbus to many persons of high rank, and interested them warmly in his behalf.

But it was not an easy matter to inspire Ferdinand with favorable sentiments. He still regarded Columbus's project as extravagant and chimerical; and in order to render the efforts of his partisans ineffectual he had the address to employ, in this new negotiation with him, some of the persons who had formerly pronounced his scheme to be impracticable. To their astonishment, Columbus appeared before them with the same confident hopes of success as formerly, and insisted upon the same high recompense. He proposed that a small fleet should be fitted out, under his command, to attempt the discovery, and demanded to be appointed hereditary admiral and viceroy of all the seas and lands which he should discover, and to have the tenths of the profits arising from them, settled irrevocably upon himself and his descendants. At the same time, he offered to advance the eighth part of the sum necessary for accomplishing his design, on condition that he should be entitled to a proportional share of benefit from the adventure. If the enterprise should totally miscarry, he made no stipulation for any reward or emolument whatever. Instead of viewing this conduct as the clearest evidence of his full persuasion with respect to the truth of his own system, or being struck with that magnanimity which, after so many delays and repulses, would stoop to nothing inferior to its original claims, the persons with whom Columbus treated began meanly to calculate the expense of the expedition, and the value of the reward which he demanded. The expense, moderate as it was, they represented to be too great for Spain in the present exhausted state of its finances. They contended that the honors and emoluments claimed by Columbus were exorbitant, even if he should perform the utmost of what he had promised; and if all his sanguine hopes would prove illusive, such vast concessions to an adventurer would be deemed not only inconsiderate, but ridiculous. In this imposing garb of caution and prudence, their opinion appeared so plausible, and was so warmly supported by Ferdinand, that Isabella declined giving any countenance to Columbus, and abruptly broke off the negotiation with him which she had begun.

This was more mortifying to Columbus than all the disappointments which he had hitherto met with. The

invitation to court from Isabella, like an unexpected ray of light, had opened such prospects of success as encouraged him to hope that his labors were at an end; but now darkness and uncertainty returned, and his mind firm as it was, could hardly support the shock of such an unforeseen reverse. He withdrew in deep anguish from court, with an intention of prosecuting his voyage to England as his last resource.

About that time Granada surrendered, and Ferdinand and Isabella, in triumphal pomp, took possession of a city [Jan. 2, 1499.] the reduction of which extirpated a foreign power from the heart of their dominions, and rendered them master of all the provinces extending from the bottom of the Pyrenees to the frontiers of Portugal. As the flow of spirits which accompanies success elevates the mind, and renders it enterprising, Quintanilla and Santangel, the vigilant and discerning patrons of Columbus, took advantage of this favorable situation, in order to make one effort more in behalf of their friend. They addressed themselves to Isabella; and after expressing some surprise, that she, who had always been the munificent patroness of generous undertakings, should hesitate so long to countenance the most splendid scheme that had ever been proposed to any monarch; they represented to her, that Columbus was a man of a sound understanding and virtuous character, well qualified, by his experience in navigation, as well as his knowledge of geometry, to form just ideas with respect to the structure of the globe and the situation of its various regions; that, by offering to risk his own life and fortune in the execution of his scheme, he gave the most satisfying evidence both of his integrity and hope of success; that the sum requisite for equipping such an armament as he demanded was inconsiderable, and the advantages which might accrue from his undertaking were immense; that he demanded no recompense for his invention and labor, but what was to arise from the countries which he should discover; that, as it was worthy of her magnanimity to make this noble attempt to extend the sphere of human knowledge, and to open an intercourse with regions hitherto unknown, so it would afford the highest satisfaction to her piety and zeal, after re-establishing the Christian faith in those provinces of Spain from which it had been long banished, to discover a new world, to which she might communicate the light and blessings of divine truth; that if now she did not decide instantly, the opportunity would be irretrievably lost; that Columbus was on his way to foreign countries, where some prince more fortunate or adventurous, would close with his proposals and Spain would for ever bewail that fatal timidity which had excluded her from the glory and advantages that she had once in her power to have enjoyed.

These forcible arguments, urged by persons of such authority, and at a juncture so well chosen, produced the desired effect. They dispelled all Isabella's doubts and fears; she ordered Columbus to be instantly recalled, declared her resolution of employing him on his own terms, and regretting the low estate of her finances, generously offered to pledge her own jewels in order to raise as much money as might be needed in making preparations for the voyage. Santangel, in a transport of gratitude, kissed the queen's hand, and, in order to save her from having recourse to such a mortifying expedient for procuring money, engaged to advance immediately the sum that was requisite.

Columbus had proceeded some leagues on his journey, when the messenger from Isabella overtook him. Upon receiving an account of the unexpected resolution in his favor, he returned directly to Santa Fe, though some remainder of diffidence still mingled itself with his joy. But the cordial reception which he met with from Isabella, together with the near prospect of setting out upon that voyage which had so long been the object of his thoughts and wishes, soon effaced the remembrance of all that he had suffered in Spain during eight tedious years of solicitation and suspense. The negotiation now went forward with facility and despatch, and a treaty of capitulation with Columbus was signed on the 17th of April, one thousand four hundred and ninety-two. The chief articles of it were:—1. Ferdinand and Isabella, as sovereigns of the ocean, constituted Columbus their high admiral in all the seas, islands, and continents, which should be discovered by his industry; and stipulated that he and his heirs for ever should enjoy this office, with the same powers and prerogatives which belonged to the high admiral of Castile within the limits of his jurisdiction. 2. They appointed Columbus their viceroy in all the islands and continents which he should discover; but if, for the better administration of affairs, it would hereafter be

necessary to establish a separate governor in any of those countries; they authorized Columbus to name three persons of whom they would choose one for that office; and the dignity of viceroy with all its immunities, was likewise to be hereditary in the family of Columbus. 3. They granted to Columbus and his heirs for ever the tenth of the free profits accruing from the productions and commerce of the countries which he should discover. 4. They declared, that if any controversy or lawsuit should arise with respect to any mercantile transaction in the countries which should be discovered, it should be determined by the sole authority of Columbus, or of judges to be appointed by him. 5. They permitted Columbus to advance one-eighth part of what should be expended in preparing for the expedition, and in carrying on commerce with the countries which he should discover, and entitled him, in return to one eighth part of the profit.

Though the name of Ferdinand appears enjoined with that of Isabella in this transaction, his distrust of Columbus was still so violent that he refused to take any part in the enterprise as king of Aragon. As the whole expense of the expedition was to be defrayed by the crown of Castile, Isabella reserved for her subjects of that kingdom an exclusive right to all the benefits which might redound from its success.

As soon as the treaty was signed, Isabella, by her attention and activity in forwarding the preparations for the voyage, endeavored to make some reparation to Columbus for the time which he had lost in fruitless solicitation. By the twelfth of May, all that depended upon her was adjusted; and Columbus waited on the king and queen in order to receive their final instructions. Every thing respecting the destination and conduct of the voyage they committed implicitly to the disposal of his prudence. But that they might avoid giving any just cause of offence to the king of Portugal, they strictly enjoined him not to approach near to the Portuguese settlements on the coast of Guinea, or in any of the other countries to which the Portuguese claimed right as discoverers. Isabella had ordered the ships of which Columbus was to take the command to be fitted out in the port of Palos a small maritime town in the province of Andalusia. As the guardian Juan Perez, to whom Columbus had already been so much indebted, resided in the neighborhood of this place, he, by the influence of that good ecclesiastic, as well as by his own connection with the inhabitants, not only raised among them what he wanted of the sum that he was bound by treaty to advance, but engaged several of them to accompany him in the voyage. The chief of these associates were three brothers of the name of Pinzon, of considerable wealth, and of great experience in naval affairs, who were willing to hazard their lives and fortunes in the expedition.

But after all the efforts of Isabella and Columbus, the armament was not suitable either to the dignity of the nation by which it was equipped, or to the importance of the service for which it was destined. It consisted of three vessels. The largest, a ship of no considerable burden, was commanded by Columbus, as admiral, who gave it the name of *Santa Maria*, out of respect for the Blessed Virgin, whom he honored with singular devotion. Of the second, called the *Pinta*, Marton Pinzon was captain, and his brother Francis pilot. The third, named the *Nigna*, was under the command of Vincent Yanez Pinzon. These two were light vessels hardly superior in burden or force to large boats. The squadron, if it merits that name, was victualled for twelve months, and had on board ninety men, mostly sailors, together with a few adventurers who followed the fortune of Columbus, and some gentlemen of Isabella's court, whom she appointed to accompany him. Though the expense of the undertaking was one of the circumstances which chiefly alarmed the court of Spain and retarded so long the negotiation with Columbus, the sum employed in fitting out this squadron did not exceed four thousand pounds.

As the art of ship-building in the fifteenth century was extremely rude, and the bulk of vessels was accommodated to the short and easy voyages along the coast which they were accustomed to perform, it is a proof of the courage, as well as enterprising genius of Columbus, that he ventured, with a fleet so unfit for a distant navigation, to explore unknown seas, where he had no chart to guide him, no knowledge of the tides and currents, and no experience of the dangers to which he might be exposed. His eagerness to accomplish the great design which had so long engrossed his thoughts, made him overlook or disregard every circumstance that would have intimidated a mind less adventurous. He pushed forward the preparations with

such ardor, and was seconded so effectually by the persons to whom Isabella committed the superintendence of this business, that every thing was soon in readiness for the voyage. But as Columbus was deeply impressed with sentiments of religion, he would not set out upon an expedition so arduous, and of which one great object was to extend the knowledge of the Christian faith, without imploring publicly the guidance and protection of Heaven. With this view, he, together with all the persons under his command, marched in solemn procession to the monastery of Rabida. After confessing their sins, and obtaining absolution, they received the holy sacrament from the hands of the guardian, who joined his prayers to theirs for the success of an enterprise which he had so zealously patronized.

Next morning, being Friday the third day of August, in the year one thousand four hundred and ninety-two, Columbus set sail, a little before sunrise, in presence of a vast crowd of spectators, who sent up their supplications to Heaven for the prosperous issue of the voyage, which they wished rather than expected. Columbus steered directly for the Canary Islands, and arrived there [Aug. 13] without any occurrence that would have deserved notice on any other occasion. But, in a voyage of such expectation and importance, every circumstance was the object of attention. The rudder of the *Pinta* broke loose the day after she left the harbor; and that accident alarmed the crew, no less superstitious than unskilful, as a certain omen of the unfortunate destiny of the expedition. Even in the short run to the Canaries, the ships were found to be so crazy and ill appointed, as to be very improper for a navigation which was expected to be both long and dangerous. Columbus refitted them, however, to the best of his power; and having supplied himself with fresh provisions, he took his departure from Gomera, one of the most westerly of the Canary Islands, on the sixth day of September.

Here the voyage of discovery may properly be said to begin; for Columbus, holding his course due west, left immediately the usual tract of navigation, and stretched into unfrequented and unknown seas. The first day, as it was very calm, he made but little way; but on the second he lost sight of the Canaries; and many of the sailors, dejected already, and dismayed, when they contemplated the boldness of the undertaking, began to beat their breasts, and to shed tears, as if they were never more to behold land. Columbus comforted them with assurances of success, and the prospect of vast wealth in those opulent regions whither he was conducting them. This early discovery of the spirit of his followers taught Columbus that he must prepare to struggle not only with the unavoidable difficulties which might be expected from the nature of his undertaking, but with such as were likely to arise from the ignorance and timidity of the people under his command; and he perceived that the art of governing the minds of men would be no less requisite for accomplishing the discoveries which he had in view, than naval skill and undaunted courage. Happily for himself, and for the country by which he was employed, he joined to the ardent temper and inventive genius of a projector, virtues of another species which are rarely united with them. He possessed a thorough knowledge of mankind, an insinuating address, a patient perseverance in executing any plan, the perfect government of his own passions, and the talent of acquiring an ascendancy over those of other men. All these qualities, which formed him to command, were accompanied with that superior knowledge of his profession, which begets confidence in times of difficulty and danger. To unskilful Spanish sailors, accustomed only to coasting voyages in the Mediterranean, the maritime science of Columbus, the fruit of thirty years' experience, improved by an acquaintance with all the inventions of the Portuguese, appeared immense. As soon as they put to sea, he regulated every thing by his sole authority; he superintended the execution of every order; and allowing himself only a few hours for sleep, he was at all other times upon deck. As his course lay through seas, which had not formerly been visited, the sounding line, or instruments for observation, were continually in his hands. After the example of the Portuguese discoverers, he attended to the motion of tides and currents, watched the flight of birds, the appearance of fishes, seaweeds, and of every thing that floated on the waves, and entered every occurrence, with a minute exactness, in the journal which he kept. As the length of the voyage could not fail of alarming sailors, habituated only to short excursions, Columbus endeavored to conceal from them the real pro-

gress which they made. With this view, though they run eighteen leagues on the second day after they left Gomera, he gave out that they had advanced only fifteen, and he uniformly employed the same artifice of reckoning short during the whole voyage. By the fourteenth of September the fleet was above two hundred leagues to the west of the Canary Isles, at a greater distance from land than any Spaniard had been before that time. There they were struck with an appearance no less astonishing than new. They observed that the magnetic needle, in their compasses, did not point exactly to the polar star, but varied towards the west; and as they proceeded, this variation increased. This appearance, which is now familiar, though it still remains one of the mysteries of nature, into the cause of which the sagacity of man has not been able to penetrate, filled the companions of Columbus with terror. They were now in a boundless and unknown ocean, far from the usual course of navigation; nature itself seemed to be altered, and the only guide which they had left was about to fail them. Columbus, with no less quickness than ingenuity, invented a reason for this appearance, which, though it did not satisfy himself, seemed so plausible to them, that it dispelled their fears or silenced their murmurs.

He still continued to steer due west, nearly in the same latitude with the Canary Islands. In this course he came within the sphere of the trade wind which blows invariably from east to west, between the tropics and a few degrees beyond them. He advanced before this steady gale with such uniform rapidity that it was seldom necessary to shift a sail. When about four hundred leagues to the west of the Canaries, he found the sea so covered with weeds, that it resembled a meadow of vast extent, and in some places they were so thick as to retard the motion of the vessels. This strange appearance occasioned new alarm and disquiet. The sailors imagined that they were now arrived at the utmost boundary of the navigable ocean; that these floating weeds would obstruct their further progress, and concealed dangerous rocks, or some large track of land, which had sunk, they knew not how, in that place. Columbus endeavored to persuade them that what had alarmed ought rather to have encouraged them, and was to be considered as a sign of approaching land. At the same time, a brisk gale arose, and carried them forward. Several birds were seen hovering about the ship [13.] and directing their flights towards the west. The desponding crew resumed some degree of spirit, and began to entertain fresh hopes.

Upon the first of October they were, according to the admiral's reckoning, seven hundred and seventy leagues to the west of the Canaries; but lest his men should be intimidated by the prodigious length of the navigation, he gave out that they had proceeded only five hundred and eighty four leagues, and fortunately, for Columbus, neither his own pilot, nor those of the other ships, had skill sufficient to correct this error, and discover the deceit. They had now been above three weeks at sea; they had proceeded far beyond what former navigators had attempted or deemed possible; all their prognostics of discovery, drawn from the flight of birds and other circumstances, had proved fallacious; the appearances of land, with which their own credulity or the artifice of their commander had from time to time flattered and amused them, had been altogether illusive, and their prospect of success seemed now to be as distant as ever. These reflections occurred often to men who had no other object or occupation than to reason and discourse concerning the intention and circumstances of their expedition. They made impression at first upon the ignorant and timid, and extending by degrees to such as were better informed or more resolute, the contagion spread at length from ship to ship. From secret whispers or murmurings, they proceeded to open cabals and public complaints. They taxed their sovereign with inconsiderate credulity in paying such regard to the vain promises and rash conjectures of an indigent foreigner, as to hazard the lives of so many of her own subjects in prosecuting a chimerical scheme. They affirmed that they had fully performed their duty, by venturing so far in an unknown and hopeless course, and could incur no blame for refusing to follow any longer a desperate adventurer to certain destruction. They contended, that it was necessary to think of returning to Spain, while their crazy vessels were still in a condition to keep the sea, but expressed their fears that the attempt would prove vain, as the wind, which hitherto have been so favourable to their course, must render it impossible to sail in an opposite direction. All agreed that Columbus should be

compelled by force to adopt a measure on which their common safety depended. Some of the more audacious proposed, as the most expeditious and certain method of getting rid at once of his remonstrances, to throw him into the sea, being persuaded that, upon their return to Spain, the death of an unsuccessful projector, would excite little concern, and be inquired into with no curiosity.

Columbus was fully sensible of his perilous situation. He had observed, with great uneasiness, the fatal operation of ignorance and of fear in producing disaffection among his crew, and saw that it was now ready to burst out into open mutiny. He retained, however, perfect presence of mind. He affected to seem ignorant of their machinations. Notwithstanding the agitation and solicitude of his own mind, he appeared with a cheerful countenance, like a man satisfied with the progress he had made, and confident of success. Sometimes he employed all the arts of insinuation to soothe his men. Sometimes he endeavored to work upon their ambition or avarice, by magnificent descriptions of the fame and wealth which they were about to acquire. On other occasions he assumed a tone of authority, and threatened them with vengeance from their sovereign, if, by their dastardly behavior, they should defeat this noble effort to promote the glory of God, and to exalt the Spanish name above that of every other nation. Even with seditious sailors, the words of a man whom they had been accustomed to reverence, were weighty and persuasive, and not only restrained them from those violent excesses which they meditated, but prevailed with them to accompany their admiral for some time longer.

As they proceeded, the indications of approaching land seemed to be more certain, and excited hope in proportion. The birds began to appear in flocks, making towards the south-west. Columbus, in imitation of the Portuguese navigators, who had been guided, in several of their discoveries, by the motion of birds, altered his course from due west towards that quarter whither they pointed their flight. But, after holding on for several days in this new direction, without any better success than formerly, having seen no object, during thirty days, but the sea and the sky, the hopes of his companions subsided faster than they had risen; their fears revived with additional force; impatience, rage, and despair, appeared in every countenance. All sense of subordination was lost: the officers, who had hitherto concurred with Columbus in opinion, and supported his authority, now took part with the private men; they assembled tumultuously on the deck, expostulated with their commander, mingled threats with their expostulations, and required him instantly to tack about and to return to Europe. Columbus perceived that it would be of no avail to have recourse to any of his former arts, which, having been tried so often, had lost their effect; and that it was impossible to rekindle any zeal for the success of the expedition among men in whose breasts fear had extinguished every generous sentiment. He saw that it was no less vain to think of employing either gentle or severe measures to quell a mutiny so general and so violent. It was necessary, on all these accounts, to soothe the passions which he could no longer command, and to give way to a torrent too impetuous to be checked. He promised solemnly to his men that he would comply with their request, provided they would accompany him, and obey his command for three days longer, and, if during that time, land were not discovered, he would then abandon the enterprise, and direct his course towards Spain.

Enraged as the sailors were, and impatient to turn their faces again toward their native country, this proposition did not appear to them unreasonable. Nor did Columbus hazard much in confining himself to a term so short. The presages of discovering land were now so numerous and promising, that he deceived them infallibly. For some days the sounding line reached the bottom, and the soil which it brought up indicated land to be at no great distance. The flocks of birds increased, and were composed not only of sea-fowl, but of such land birds as could not be supposed to fly far from the shore. The crew of the *Pinta* observed a cane floating, which seemed to have been newly cut, and likewise a piece of timber artificially carved. The sailors aboard the *Niña* took up the branch of a tree with red berries, perfectly fresh. The clouds around the setting sun assumed a new appearance; the air was more mild and warm, and during the night the wind became unequal and variable. From all these symptoms, Columbus was so confident of being near land, that on the evening of the eleventh of October,

after public prayers for success, he ordered the sails to be furled, and the ships to lie to, keeping strict watch, lest they should be driven ashore in the night. During this interval of suspense and expectation, no man shut his eyes, all kept upon deck, gazing intently towards that quarter where they expected to discover the land, which had been so long the object of their wishes.

About two hours before midnight, Columbus, standing on the fore-castle, observed a light at a distance, and privately pointed it out to Pedro Gutierrez, a page of the Queen's wardrobe. Gutierrez perceived it, and calling to Salcedo, controller of the fleet, all three saw it in motion, as if it were carried from place to place. A little after midnight the joyful sound of *land! land!* was heard from the *Pinta*, which kept always ahead of the other ships. But, having been so often deceived by fallacious appearances, every man was now become slow of belief, and waited in all the anguish of uncertainty and impatience for the return of day. As soon as morning dawned [Oct. 12], all doubts and fears were dispelled. From every ship an island was seen about two leagues to the north, whose flat and verdant fields, well stored with wood, and watered with many rivulets, presented the aspect of a delightful country. The crew of the *Pinta* instantly began the *Te Deum*, as a hymn of thanksgiving to God, and were joined by those of the other ships, with tears of joy and transports of congratulation. This office of gratitude to Heaven, was followed by an act of justice to their commander. They threw themselves at the feet of Columbus, with feelings of self-condemnation mingled with reverence. They implored him to pardon their ignorance, incredulity, and insolence, which had created him so much unnecessary disquiet, and had so often obstructed the prosecution of his well-concerted plan; and passing, in the warmth of their admiration, from one extreme to another, they now pronounced the man, whom they had so lately reviled and threatened, to be a person inspired by Heaven with sagacity and fortitude more than human, in order to accomplish a design so far beyond the ideas and conception of all former ages.

As soon as the sun arose, all their boats were manned and armed. They rowed towards the island with their colors displayed, with warlike music, and other martial pomp. As they approached the coast, they saw it covered with a multitude of people, whom the novelty of the spectacle had drawn together, whose attitudes and gestures expressed wonder and astonishment at the strange objects which presented themselves to their view. Columbus was the first European who set foot in the New World which he had discovered. He landed in a rich dress, and with a naked sword in his hand. His men followed, and kneeling down, they all kissed the ground which they had so long desired to see. They next erected a crucifix, and prostrating themselves before it, returned thanks to God for conducting their voyage to such a happy issue. They then took solemn possession of the country, for the crown of Castile and Leon, with all the formalities which the Portuguese were accustomed to observe in acts of this kind, in their new discoveries.

The Spaniards, while thus employed, were surrounded by many of the natives, who gazed in silent admiration upon actions which they could not comprehend, and of which they did not foresee the consequences. The dress of the Spaniards, the whiteness of their skins, their beards, their arms, appeared strange and surprising. The vast machines in which they had traversed the ocean, that seemed to move upon the waters with wings, and uttered a dreadful sound resembling thunder, accompanied with lightning and smoke, struck them with such terror, that they began to respect their new guests as a superior order of beings, and concluded that they were children of the Sun, who had descended to visit the earth.

The Europeans were hardly less amazed at the scene now before them. Every herb, and shrub, and tree, was different from those which flourished in Europe. The soil seemed to be rich, but bore few marks of cultivation. The climate, even to the Spaniards, felt warm, though extremely delightful. The inhabitants appeared in the simple innocence of nature, entirely naked. Their black hair, long and uncurled, floated upon their shoulders, or was bound in tresses around their heads. They had no beards, and every part of their bodies was perfectly smooth. Their complexion was of a dusky copper color, their features singular, rather than disagreeable, their aspect gentle and timid. Though not tall, they were well shaped and active. Their faces, and several parts of their body, were fantastically painted with glaring colors. They were shy at first through fear, but soon became familiar with the

Spaniards, and with transports of joy received from them hawkbells, glass beads, or other baubles, in return for which they gave such provisions as they had, and some cotton yarn, the only commodity of value that they could produce. Towards evening, Columbus returned to his ship, accompanied by many of the islanders in their boats, which they called *canoes*, and though rudely formed out of the trunk of a single tree, they rowed them with surprising dexterity. Thus, in the first interview between the inhabitants of the old and new worlds, every thing was conducted amicably, and to their mutual satisfaction. The former, enlightened and ambitious, formed already vast ideas with respect to the advantages which they might derive from the regions that began to open to their view. The latter, simple and undiscerning, had no foresight of the calamities and desolation which were approaching their country.

Columbus, who now assumed the title and authority of admiral and viceroy, called the island which he had discovered *San Salvador*. It is better known by the name of *Guanahani*, which the natives gave to it, and is one of that large cluster of islands called the *Lucaya* or *Bahama* isles. It is situated above three thousand miles to the west of Gomera; from which the squadron took its departure, and only four degrees to the south of it; so little had Columbus deviated from the westerly course, which he had chosen as the most proper.

Columbus employed the next day in visiting the coasts of the island; and from the universal poverty of the inhabitants, he perceived that this was not the rich country for which he sought. But, conformably to his theory concerning the discovery of these regions of Asia which stretched towards the east, he concluded that *San Salvador* was one of the isles which geographers described as situated in the great ocean adjacent to India. Having observed that most of the people whom he had seen wore small plates of gold, by way of ornament, in their nostrils, he eagerly inquired where they got that precious metal. They pointed towards the south, and made him comprehend by signs, that gold abounded in countries situated in that quarter. Thither he immediately determined to direct his course, in full confidence of finding there these opulent regions which had been the object of his voyage, and would be a recompense for all his toils and dangers. He took along with him seven of the natives of *San Salvador*, that, by acquiring the Spanish language, they might serve as guides and interpreters; and those innocent people considered it as a mark of distinction when they were selected to accompany him.

He saw several islands, and touched at three of the largest, on which he bestowed the names of *St. Mary* of the *Conception*, *Fernandina*, and *Isabella*. But, as their soil, productions, and inhabitants nearly resembled those of *San Salvador*, he made no stay in any of them. He inquired every where for gold, and the signs that were uniformly made by way of answer, confirmed him in the opinion that it was brought from the south. He followed that course, and soon discovered a country which appeared very extensive, not perfectly level, like those which he had already visited, but so diversified with rising grounds, hills, rivers, woods, and plains, that he was uncertain whether it might prove an island, or part of the continent. The natives of *San Salvador*, whom he had on board, called it *Cuba*; Columbus gave it the name of *Juana*. He entered the mouth of a large river with his squadron, all the inhabitants fled to the mountains as he approached the shore. But as he resolved to careen the ships in that place, he sent some Spaniards, together with one of the people of *San Salvador*, to view the interior part of the country. They having advanced about sixty miles from the shore, reported, upon their return, that the soil was richer and more cultivated than any they had hitherto discovered; that, besides many scattered cottages, they had found one village, containing above a thousand inhabitants; that the people, though naked, seemed to be more intelligent than those of *San Salvador*, but had treated them with the same respectful attention, kissing their feet, and honoring them as sacred beings allied to heaven; that they had given them to eat a certain root, the taste of which resembled roasted chestnuts, and likewise a singular species of corn called *mazze*, which, either when roasted whole or ground into meal, was abundantly palatable; that there seemed to be no four-footed animals in the country, but a species of dog, which could not bark, and a creature resembling a rabbit, but of a much smaller size; that they had observed some ornaments of gold among the people, but of no great value.

These messengers had prevailed with some of the

natives to accompany them, who informed Columbus, that the gold of which they made their ornaments was found in *Cubanacan*. By this word they meant the middle or inland part of Cuba; but Columbus, being ignorant of their language, as well as unaccustomed to their pronunciation, and his thoughts running continually upon his own theory concerning the discovery of the East Indies, he was led, by the resemblance of sound, to suppose that they spoke of the great Khan, and imagined that the opulent kingdom of *Cathay*, described by Marco Polo, was not very remote. This induced him to employ some time in viewing the country. He visited almost every harbor, from Porto del Principe, on the north coast of Cuba, to the eastern extremity of the island: but, though delighted with the beauty of the scenes which every where presented themselves, and amazed at the luxuriant fertility of the soil, both which, from their novelty, made a more lively impression upon his imagination [14], he did not find gold in such quantity as was sufficient to satisfy either the avarice of his followers, or the expectations of the court to which he was to return. The people of the country, as much astonished at his eagerness in quest of gold as the Europeans were at their ignorance and simplicity, pointed towards the east, where an island which they called *Hayti* was situated, in which that metal was more abundant than among them. Columbus ordered his squadron to bend its course thither; but Marton Alonso Pinzon, impatient to be the first who should take possession of the treasures which this country was supposed to contain, quitted his companions, regardless of all the admiral's signals to slacken sail until they should come up with him.

Columbus, retarded by contrary winds, did not reach *Hayti* till the sixth of December. He called the port where he first touched St. Nicholas, and the island itself *Espagnola*, in honor of the kingdom by which he was employed; and it is the only country, of those he had yet discovered, which has retained the name that he gave it. As he could neither meet with the *Pinta*, nor have any intercourse with the inhabitants, who fled in great consternation towards the woods, he soon quitted St. Nicholas, and, sailing along the northern coast of the island, he entered another harbor, which he called *Concepcion*. Here he was more fortunate; his people overtook a woman who was flying from them, and after treating her with great gentleness, dismissed her with a present of such toys as they knew were most valued in those regions. The description which she gave to her countrymen of the humanity and wonderful qualities of the strangers; their admiration of the trinkets, which she showed with exultation; and their eagerness to participate of the same favors; removed all their fears, and induced many of them to repair to the harbor. The strange objects which they beheld, and the baubles which Columbus bestowed upon them, amply gratified their curiosity and their wishes. They nearly resembled the people of *Guacanahani* and *Cuba*. They were naked like them, ignorant and simple; and seemed to be equally unacquainted with all the arts which appear most necessary in polished societies; but they were gentle, credulous, and timid, to a degree which rendered it easy to acquire the ascendant over them, especially as their excessive admiration led them into the same error with the people of the other islands, in believing the Spaniards to be more than mortals, and descended immediately from heaven. They possessed gold in greater abundance than their neighbors, which they readily exchanged for bells, beads, or pins; and in this unequal traffic both parties were highly pleased, each considering themselves as gainers by the transaction. Here Columbus was visited by a prince or *cacique* of the country. He appeared with all the pomp known among a simple people, being carried in a sort of palanquin upon the shoulders of four men, and attended by many of his subjects, who served him with great respect. His deportment was grave and stately, very reserved towards his own people, but with Columbus and the Spaniards extremely courteous. He gave the admiral some thin plates of gold, and a girdle of curious workmanship, receiving in return presents of small value, but highly acceptable to him.

Columbus, still intent on discovering the mines which yielded gold, continued to interrogate all the natives with whom he had any intercourse, concerning their situation. They concurred in pointing out a mountainous country, which they called *Cibao*, at some distance from the sea, and further towards the east. Struck with this sound, which appeared to him the same with *Cipango*, the name by which Marco Polo, and other travellers to the east, distinguished the island of Japan, he no longer doubted with respect to

the vicinity of the countries which he had discovered to the remote parts of Asia; and in full expectation of reaching soon those regions which had been the object of his voyage, he directed his course towards the east. He put into a commodious harbor, which he called St. Thomas, and found that district to be under the government of a powerful *cacique*, named *Guacanahari*, who, as he afterwards learned, was one of the five sovereigns among whom the whole island was divided. He immediately sent messengers to Columbus, who in his name delivered to him the present of a mask curiously fashioned with the ears, nose and mouth of beaten gold, and invited him to the place of his residence, near the harbor now called Cape Francois some leagues towards the east. Columbus despatched some of his officers to visit this prince, who, as he behaved himself with greater dignity, seemed to claim more attention. They returned with such favorable accounts both of the country and of the people, as made Columbus impatient for that interview with *Guacanahari* to which he had been invited.

He sailed for this purpose from St. Thomas, on the twenty-fourth of December, with a fair wind, and the sea perfectly calm; and as, amidst the multiplicity of his occupations, he had not shut his eyes for two days, he retired at midnight in order to take some repose, having committed the helm to the pilot, with strict injunctions not to quit it for a moment. The pilot, dreading no danger, carelessly left the helm to an inexperienced cabin boy, and the ship, carried away by a current, was dashed against a rock. The violence of the shock awakened Columbus. He ran up to the deck. There all was confusion and despair. He alone retained presence of mind. He ordered some of the sailors to take a boat, and carry out an anchor astern; but instead of obeying, they made off towards the *Nigna*, which was about half a league distant. He then commanded the masts to be cut down, in order to lighten the ship; but all his endeavors were too late; the vessel opened near the keel, and filled so fast with water that its loss was inevitable. The smoothness of the sea, and the timely assistance of boats from the *Nigna*, enabled the crew to save their lives. As soon as the islanders heard of this disaster, they crowded to the shore, with their prince *Guacanahari* at their head. Instead of taking advantage of the distress in which they beheld the Spaniards, to attempt any thing to their detriment, they lamented their misfortune with tears of sincere condolence. Not satisfied with this unavailing expression of their sympathy, they put to sea a number of canoes, and under the direction of the Spaniards, assisted in saving whatever could be got out of the wreck; and by the united labor of so many hands, almost every thing of value was carried ashore. As fast as the goods were landed, *Guacanahari* in person took charge of them. By his orders they were all deposited in one place, and armed sentinels were posted, who kept the multitude at a distance, in order to prevent them not only from embezzling, but from inspecting too curiously what belonged to their guests. [15] Next morning this prince visited Columbus, who was now on board the *Nigna*, and endeavored to console him for his loss, by offering all that he possessed to repair it.

The condition of Columbus was such that he stood in need of consolation. He had hitherto procured no intelligence of the *Pinta*, and no longer doubted but that his treacherous associate had set sail for Europe, in order to have the merit of carrying the first tidings of the extraordinary discoveries which had been made, and to preoccupy so far the ear of their sovereign, as to rob him of the glory and reward to which he was so justly entitled. There remained but one vessel, and that the smallest and most crazy of the squadron, to traverse such a vast ocean, and carry so many men back to Europe. Each of those circumstances was alarming, and filled the mind of Columbus with the utmost solicitude. The desire of overtaking Pinzon, and of facing the unfavorable impressions which his misrepresentations might make in Spain, made it necessary to return thither without delay. The difficulty of taking such a number of persons on board the *Nigna* confirmed him in an opinion which the fertility of the country, and the gentle temper of the people, had already induced him to form. He resolved to leave a part of his crew in the island, that by residing there, they might learn the language of the natives, study their disposition, examine the nature of the country, search for mines, prepare for the commodious settlement of the colony which he purposed to return, and thus secure and facilitate the acquisition of those advantages which he expected from his discoveries. When he mentioned this to his

men, all approved of the design; and from impatience under the fatigue of a long voyage, from the levity natural to sailors, or from the hopes of amassing wealth in a country which afforded such promising specimens of its riches, many offered voluntarily to be among the number of those who should remain.

Nothing was now wanting towards the execution of this scheme, but to obtain the consent of *Guacanahari*; and his unassuming simplicity soon presented to the admiral a favorable opportunity of proposing it. Columbus having, in the best manner he could, by broken words and signs, expressed some curiosity to know the cause which had moved the islanders to fly with such precipitation upon the approach of his ships, the *cacique* informed him that the country was much infested by the incursions of certain people, whom he called *Carribeans*, who inhabited several islands to the south-east. These he described as a fierce and warlike race of men, who delighted in blood, and devoured the flesh of the prisoners who were so unhappy as to fall into their hands; and as the Spaniards at their first appearance were supposed to be *Carribeans*, whom the natives, however numerous, durst not face in battle, they had recourse to their usual method of securing their safety, by flying into the thickest and most impenetrable woods. *Guacanahari*, while speaking of those dreadful invaders, discovered such symptoms of terror, as well as such consciousness of the inability of his own people to resist them, as led Columbus to conclude that he would not be alarmed at the proposition of any scheme which afforded him the prospect of an additional security against their attacks. He instantly offered him the assistance of the Spaniards to repel his enemies: he engaged to take him and his people under the protection of the powerful monarch whom he served, and offered to leave in the island such a number of his men as should be sufficient, not only to defend the inhabitants from future incursions, but to avenge their past wrongs.

The credulous prince closed eagerly with the proposal, and thought himself already safe under the patronage of beings sprung from heaven, and superior in power to mortal men. The ground was marked out for a small fort, which Columbus called *Navidad*, because he had landed there on Christmas day. A deep ditch was drawn around it. The ramparts were fortified with palisades, and the great guns, saved out of the admiral's ship, were planted upon them. In ten days the work was finished; that simple race of men laboring with inconsiderate assiduity in erecting this first monument of their own servitude. During this time, Columbus, by his caresses and liberality, labored to increase the high opinion which the natives entertained of the Spaniards. But while he endeavored to inspire them with confidence in their disposition to do good, he wished likewise to give them some striking idea of their power to punish and destroy such as were the objects of their indignation. With this view, in presence of a vast assembly, he drew up his men in order of battle, and made an ostentatious but innocent display of the sharpness of the Spanish swords, of the force of their spears, and the operation of their cross-bows. These rude people, strangers to the use of iron, and unacquainted with any hostile weapons but arrows of reed pointed with the bones of fishes, wooden swords, and javelins hardened in the fire, wondered and trembled. Before this surprise or fear had time to abate, he ordered the great guns to be fired. The sudden explosion struck them with such terror that they fell flat to the ground, covering their faces with their hands; and when they beheld the astonishing effect of the bullets among the trees, towards which the cannon had been pointed, they concluded that it was impossible to resist men, who had the command of such destructive instruments, and who came armed with thunder and lightning against their enemies.

After giving such impressions both of the beneficence and power of the Spaniards, as might have rendered it easy to preserve an ascendant over the minds of the natives, Columbus appointed thirty-eight of his people to remain in the island. He intrusted the command of these to Diego de Arado, a gentleman of Cordova, investing him with the same powers which he himself had received from Ferdinand and Isabella; and furnished him with every thing requisite for the subsistence or defence of this infant colony. He strictly enjoined them to maintain concord among themselves, to yield an unreserved obedience to their commander, to avoid giving offence to the natives by any violence or exaction, to cultivate the friendship of *Guacanahari*, but not to put themselves in his power by dragging in small parties, or marching too far from the fort. He promised to visit them soon with such a reinforcement of strength

as might enable them to take full possession of the country, and to reap all the fruits of their discoveries. In the mean time he engaged to mention their names to the king and queen, and to place their merit and services in the most advantageous light.

Having thus taken every precaution for the security of the colony, he left Navidad on the fourth of January, one thousand four hundred and ninety-three, and steering towards the east, discovered and gave names to most of the harbors on the northern coast of the island. On the sixth he descried the Pinta, and soon came up with her, after a separation of more than six weeks. Pinzon endeavored to justify his conduct by pretending that he had been driven from his course by stress of weather, and prevented from returning by contrary winds. The admiral, though he still suspected his perfidious intentions, and knew well what he urged in his own defence to be frivolous as well as false, was so sensible that this was not a proper time for venturing upon any high strain of authority, and felt such satisfaction in this junction with his consort, which delivered him from many disquieting apprehensions, that, lame as Pinzon's apology was, he admitted of it without difficulty, and restored him to favor. During his absence from the admiral, Pinzon had visited several harbors in the island, had acquired some gold by trafficking with the natives, but had made no discovery of any importance.

From the condition of his ships, as well as the temper of his men, Columbus now found it necessary to hasten his return to Europe. The former having suffered much during a voyage of such an unusual length, were extremely leaky. The latter expressed the utmost impatience to revisit their native country, from which they had been so long absent, and where they had things so wonderful and unheard-of to relate. Accordingly, on the sixteenth of January, he directed his course towards the north-east, and soon lost sight of land. He had on board some of the natives, whom he had taken from the different islands which he discovered; and besides the gold, which was the chief object of research, he had collected specimens of all the productions which were likely to become subjects of commerce in the several countries, as well as many unknown birds, and other natural curiosities, which might attract the attention of the learned, or excite the wonder of the people. The voyage was prosperous to the fourteenth of February, and he had advanced near five hundred leagues across the Atlantic ocean, when the wind began to rise, and continued to blow with increasing rage, which terminated in a furious hurricane. Every thing that the naval skill and experience of Columbus could devise was employed in order to save the ships. But it was impossible to withstand the violence of the storm, and, as they were still far from any land, destruction seemed inevitable. The sailors had recourse to prayers to Almighty God, to the invocation of saints, to vows, and charms, to every thing that religion dictates, or superstition suggests to the afflicted mind of man. No prospect of deliverance appearing, they abandoned themselves to despair, and expected every moment to be swallowed up in the waves. Besides the passions which naturally agitate and alarm the human mind in such awful situations, when certain death, in one of his most terrible forms, is before it, Columbus had to endure feelings of distress peculiar to himself. He dreaded that all knowledge of the amazing discoveries which he had made was now to perish; mankind were to be deprived of every benefit that might have been derived from the happy success of his schemes, and his own name would descend to posterity as that of a rash deluded adventurer, instead of being transmitted with the honor due to the author and conductor of the most noble enterprise that had ever been undertaken. These reflections extinguished all sense of his own personal danger. Less affected with the loss of life than solicitous to preserve the memory of what he had attempted and achieved, he retired to his cabin and wrote upon a parchment a short account of the voyage which he had made, of the course which he had taken, of the situation and riches of the countries which he had discovered, and of the colony that he had left there. Having wrapped up this in an oiled cloth, which he enclosed in a cake of wax, he put it into a cask carefully stoppered up, and threw it into the sea, in hopes that some fortunate accident might preserve a deposit of so much importance to the world. [16]

At length Providence interposed to save a life reserved for other services. The wind abated, the sea became calm, and on the evening of the fifteenth, Columbus and his companions discovered land; and though uncertain what it was, they made towards it.

They soon knew it to be St. Mary, one of the Azores or western isles, subject to the crown of Portugal. There, after a violent contest with the governor, in which Columbus displayed no less spirit than prudence, he obtained a supply of fresh provisions, and whatever else he needed. One circumstance, however, greatly disquieted him. The Pinta, of which he had lost sight on the first day of the hurricane, did not appear; he dreaded for some time that she had foundered at sea, and that all her crew had perished; afterwards, his former suspicions recurred, and he became apprehensive that Pinzon had borne away for Spain, that he might reach it before him, and by giving the first account of his discoveries, might obtain some share of his fame.

In order to prevent this, he left the Azores as soon as the weather would permit [Feb. 24]. At no great distance from the coast of Spain, when near the end of his voyage, and seemingly beyond the reach of any disaster, another storm arose, little inferior to the former in violence; and after driving before it during two days and two nights, he was forced to take shelter in the river Tagus [March 4]. Upon application to the King of Portugal, he was allowed to come up to Lisbon; and, notwithstanding the envy which it was natural for the Portuguese to feel, when they beheld another nation entering upon that province of discovery which they had hitherto deemed peculiarly their own, and in its first essay not only rivaling but eclipsing their fame, Columbus was received with all the marks of distinction due to a man who had performed things so extraordinary and unexpected. The king admitted him into his presence, treated him with the highest respect, and listened to the account which he gave of his voyage with admiration mingled with regret. While Columbus, on his part, enjoyed the satisfaction of describing the importance of his discoveries, and of being now able to prove the solidity of his schemes to those very persons, who, with an ignorance disgraceful to themselves, and fatal to their country, had lately rejected them as the projects of a visionary or designing adventurer.

Columbus was so impatient to return to Spain, that he remained only five days in Lisbon. On the fifteenth of March he arrived in the port of Palos, seven months and eleven days from the time when he set out thence upon his voyage. As soon as the ship was discovered approaching the port, all the inhabitants of Palos ran eagerly to the shore, in order to welcome their relations and fellow-citizens, and to hear tidings of their voyage. When the prosperous issue of it was known, when they beheld the strange people, the unknown animals, and singular productions, brought from the countries which had been discovered, the effusion of joy was general and unbounded. The bells were rung, the cannon fired; Columbus was received at landing with royal honors, and all the people in solemn procession, accompanied him and his crew to the church, where they returned thanks to Heaven, which had so wonderfully conducted and crowned with success a voyage of greater length and of more importance than had been attempted in any former age. On the evening of the same day, he had the satisfaction of seeing the Pinta, which the violence of the tempest had driven far to the north, enter the harbor.

The first care of Columbus was to inform the king and queen, who were then at Barcelona, of his arrival and success. Ferdinand and Isabella, no less astonished than delighted with this unexpected event, desired Columbus, in terms the most respectful and flattering, to repair immediately to court, that from his own mouth they might receive a full detail of his extraordinary services and discoveries. During his journey to Barcelona, the people crowded from the adjacent country, following him every where with admiration and applause. His entrance into the city was conducted, by order of Ferdinand and Isabella, with pomp suitable to the great event, which added such distinguishing lustre to their reign. The people whom he brought along with him from the countries which he had discovered, marched first, and by their singular complexion, the wild peculiarity of their features, and uncouth finery, appeared like men of another species. Next to them were carried the ornaments of gold, fashioned by the rude art of the natives, the grains of gold found in the mountains, and dust of the same metal gathered in the rivers. After these appeared the various commodities of the new discovered countries, together with their curious productions. Columbus himself closed the procession, and attracted the eyes of all the spectators, who gazed with admiration on the extraordinary man, whose superior sagacity and

fortitude had conducted their countrymen, by a route concealed from past ages, to the knowledge of a new world. Ferdinand and Isabella received him clad in their royal robes, and seated upon a throne, under a magnificent canopy. When he approached, they stood up, and raising him as he kneeled to kiss their hands, commanded him to take his seat upon a chair prepared for him, and to give a circumstantial account of his voyage. He delivered it with a gravity and composure no less suitable to the disposition of the Spanish nation than to the dignity of the audience in which he spoke, and with that modest simplicity which characterizes men of superior minds, who, satisfied with having performed great actions, court not vain applause by an ostentatious display of their exploits. When he had finished his narration, the king and queen, kneeling down, offered up solemn thanks to Almighty God for the discovery of those new regions, from which they expected so many advantages to flow in upon the kingdoms subject to their government. [17] Every mark of honor that gratitude or admiration could suggest was conferred upon Columbus. Letters patent were issued, confirming to him and to his heirs all the privileges contained in the capitulation concluded at Santa Fe; his family was ennobled; the king and queen, and after their example the courtiers, treated him on every occasion with all the ceremonious respect paid to persons of the highest rank. But what pleased him most, as it gratified his active mind, bent continually upon great objects, was an order to equip, without delay, an armament of such force as might enable him not only to take possession of the countries which he had already discovered, but to go in search of those more opulent regions which he still confidently expected to find.

While preparations were making for this expedition, the fame of Columbus's successful voyage spread over Europe, and excited general attention. The multitude, struck with amazement when they heard that a new world had been found, could hardly believe an event so much above their conception. Men of science, capable of comprehending the nature, and of discerning the effects of this great discovery, received the account of it with admiration and joy. They spoke of his voyage with rapture, and congratulated one another upon their felicity in having lived in the period when, by this extraordinary event, the boundaries of human knowledge were so much extended, and such a new field of inquiry and observation opened, as would lead mankind to a perfect acquaintance with the structure and productions of the habitable globe. [18] Various opinions and conjectures were formed concerning the new found countries, and what division of the earth they belonged to. Columbus adhered tenaciously to his original opinion, that they should be reckoned a part of those vast regions in Asia, comprehended under the general name of India. This sentiment was confirmed by the observations which he made concerning the productions of the countries he had discovered. Gold was known to abound in India, and he had met with such promising samples of it in the islands which he visited, as led him to believe that rich mines of it might be found. Cotton, another production of the East Indies, was common there. The pimento of the islands he imagined to be a species of the East Indian pepper. He mistook a root, somewhat resembling rhubarb, for that valuable drug, which was then supposed to be a plant peculiar to the East Indies. The birds brought home by him were adorned with the same rich plumage which distinguishes those of India. The alligator of the one country appeared to be the same with the crocodile of the other. After weighing all these circumstances, not only the Spaniards, but the other nations of Europe, seem to have adopted the opinion of Columbus. The countries which he had discovered were considered as a part of India. In consequence of this notion, the name of Indies is given to them by Ferdinand and Isabella, in a ratification of their former agreement, which was granted to Columbus upon his return. Even after the error which gave rise to this opinion was detected, and the true position of the New World was ascertained, the name has remained, and the appellation of *West Indies* is given by all the people of Europe to the country, and that of *Indians* to its inhabitants.

The name by which Columbus distinguished the countries which he had discovered was so inviting, the specimens of their riches and fertility which he produced were so considerable, and the reports of his companions, delivered frequently with the exaggeration natural to travellers, so favorable, as to excite a wonderful spirit of enterprise among the Spaniards.

Though little accustomed to naval expeditions, they were impatient to set out upon their voyage. Volunteers of every rank solicited to be employed. Allured by the inviting prospects which opened to their ambition and avarice, neither the length nor danger of the navigation intimidated them. Cautious as Ferdinand was, and averse to every thing new or adventurous, he seems to have caught the same spirit with his subjects. Under its influence, preparations for a second expedition were carried on with rapidity unusual in Spain, and to an extent that would be deemed not inconsiderable in the present age. The fleet consisted of seventeen ships, some of which were of good burden. It had on board fifteen hundred persons, among whom were many of noble families, who had served in honorable stations. The greater part of these, being destined to remain in the country, were furnished with every thing requisite for conquest or settlement, with all kinds of European domestic animals, with such seeds and plants as were most likely to thrive in the climate of the West Indies with utensils and instruments of every sort, and with such artificers as might be most useful in an infant colony.

But, formidable and well provided as this fleet was, Ferdinand and Isabella did not rest their title to the possession of the newly discovered countries upon its operations alone. The example of the Portuguese, as well as the superstition of the age, made it necessary to obtain from the Roman pontiff a grant of those territories which they wished to occupy. The Pope, as the vicar and representative of Jesus Christ, was supposed to have a right of dominion over all the kingdoms of the earth. Alexander VI., a pontiff infamous for every crime which disgraces humanity, filled the Papal throne at that time. As he was born Ferdinand's subject, and very solicitous to secure the protection of Spain, in order to facilitate the execution of his ambitious schemes in favor of his own family, he was extremely willing to gratify the Spanish monarchs. By an act of liberality which cost him nothing, and that served to establish the jurisdictions and pretensions of the Papal See, he granted in full right to Ferdinand and Isabella all the countries inhabited by Infidels, which they had discovered, or should discover; and, in virtue of that power which he derived from Jesus Christ, he conferred on the crown of Castile vast regions, to the possession of which he himself was so far from having any title, that he was unacquainted with their situation, and ignorant even of their existence. As it was necessary to prevent this grant from interfering with that formerly made to the crown of Portugal, he appointed that a line, supposed to be drawn from pole to pole, a hundred leagues to the westward of the Azores, should serve as a limit between them; and, in the plenitude of his power, bestowed all to the east of this imaginary line upon the Portuguese, and all to the west of it upon the Spaniards. Zeal for propagating the Christian faith was the consideration employed by Ferdinand in soliciting this bull, and is mentioned by Alexander as his chief motive for issuing it. In order to manifest some concern for this laudable object, several friars, under the direction of Father Boyl, a Catalonian monk of great reputation, as apostolical vicar, were appointed to accompany Columbus, and to devote themselves to the instruction of the natives. The Indians whom Columbus had brought along with him, having received some tincture of Christian knowledge, were baptized with much solemnity, the king himself, the prince his son, and the chief persons of his court, standing as their godfathers. Those first fruits of the New World have not been followed by such an increase as pious men wished, and had reason to expect.

Ferdinand and Isabella having thus acquired a title, which was then deemed completely valid, to extend their discoveries and to establish their dominion over such a considerable portion of the globe, nothing now retarded the departure of the fleet. Columbus was extremely impatient to revisit the colony which he had left, and to pursue that career of glory upon which he had entered. He set sail from the bay of Cadiz on the twenty-fifth of September, and touching again at the island of Gomera, he steered further towards the south than in his former voyage. By holding this course, he enjoyed more steadily the benefit of the regular winds, which reign within the tropics, and was carried towards a large cluster of islands, situated considerably to the east of those which he had already discovered. On the twenty-sixth day after his departure from Gomera [Nov. 2], he made land. It was one of the Caribbee or Leeward Islands, to which he gave the name of Descada, on account of the impatience of his crew to discover some part of the New World. After this he

visited successively Dominica, Marigalante, Guadeloupe, Antigua, San Juan de Puerto Rico, and several other islands, scattered in his way as he advanced towards the north-west. All these he found to be inhabited by that fierce race of people whom Guacanahari had painted in such frightful colors. His descriptions appeared not to have been exaggerated. The Spaniards never attempted to land without meeting with such a reception as discovered the martial and daring spirit of the natives: and in their habitations were found relics of those horrid feasts which they had made upon the bodies of their enemies taken in war.

But as Columbus was eager to know the state of the colony which he had planted, and to supply it with the necessaries of which he supposed it to be in want, he made no stay in any of those islands, and proceeded directly to Hispaniola [Nov. 22]. When he arrived off Navidad, the station in which he had left the thirty-eight men under the command of Arada, he was astonished that none of them appeared, and expected every moment to see them running with transports of joy to welcome their countrymen. Full of solicitude about their safety, and foreboding in his mind what had befallen them, he rowed instantly to land. All the natives from whom he might have received information had fled. But the fort which he had built was entirely demolished, and the tattered garments, the broken arms and utensils scattered about it, left no room to doubt concerning the unhappy fate of the garrison. While the Spaniards were shedding tears over those sad memorials of their fellow-citizens, a brother of the cazique Guacanahari arrived. From him Columbus received a particular detail of what had happened after his departure from the island. The familiar intercourse of the Indians with the Spaniards tended gradually to diminish the superstitious veneration with which their first appearance had inspired that simple people. By their own insouciance and ill conduct, the Spaniards speedily effaced those favorable impressions, and soon convinced the natives, that they had all the wants, and weaknesses, and passions of men. As soon as the powerful restraint which the presence and authority of Columbus imposed was withdrawn, the garrison threw off all regard for the officer whom he had invested with command. Regardless of the prudent instructions which he had given them, every man became independent, and gratified his desires without control. The gold, the women, the provisions of the natives, were all the prey of those licentious oppressors. They roamed in small parties over the island, extending their rapacity and insolence to every corner of it. Gentle and timid as the people were, those unprovoked injuries at length exhausted their patience, and roused their courage. The cazique of Cibao, whose country the Spaniards chiefly infested on account of the gold which it contained, surprised and cut off several of them, while they straggled in as perfect security as if their conduct had been altogether inoffensive. He then assembled his subjects, and surrounding the fort, set it on fire. Some of the Spaniards were killed in defending it; the rest perished in attempting to make their escape by crossing an arm of the sea. Guacanahari, whom all their exactions had not alienated from the Spaniards, took arms in their behalf, and, in endeavoring to protect them, had received a wound, by which he was still confined.

Though this account was far from removing the suspicions which the Spaniards entertained with respect to the fidelity of Guacanahari, Columbus perceived so clearly that this was not a proper juncture for inquiring into his conduct with scrupulous accuracy, that he rejected the advice of several of his officers, who urged him to seize the person of that prince, and to revenge the death of their countrymen by attacking his subjects. He represented to them the necessity of securing the friendship of some potentate of the country, in order to facilitate the settlement which they intended, and the danger of driving the natives to unite in some desperate attempt against them, by such an ill-timed and unavailing exercise of rigor. Instead of wasting his time in punishing past wrongs, he took precautions for preventing any future injury. With this view, he made choice of a situation more healthy and commodious than that of Navidad. He traced out the plan of a town in a large plain near a spacious bay, and obliging every person to put his hand to a work on which their common safety depended, the houses and ramparts were soon so far advanced, by their united labor, as to afford them shelter and security. This rising city, the first that the Europeans founded in the New World, he named Isabella, in honor of his patroness the Queen of Castile.

In carrying on this necessary work, Columbus had not only to sustain all the hardships, and to encounter all the difficulties, to which infant colonies are exposed when they settle in an uncultivated country, but he had to contend with what was more insupportable, the laziness, the impatience, and mutinous disposition of his followers. By the enervating influence of a hot climate, the natural inactivity of the Spaniards seemed to increase. Many of them were gentlemen, unaccustomed to the fatigue of bodily labor, and all had engaged in the enterprise with the sanguine hopes excited by the splendid and exaggerated description of their countrymen who returned from the first voyage, or by the mistaken opinion of Columbus, that the country which he had discovered was either the Cipango of Marco Polo, or the Ophir, from which Solomon imported those precious commodities which suddenly diffused such extraordinary riches through his kingdom. But when, instead of that golden harvest which they had expected to reap without toil or pains, the Spaniards saw that their prospect of wealth was remote as well as uncertain, and that it could not be obtained but by the slow and persevering efforts of industry, the disappointment of those chimerical hopes occasioned such dejection of mind as bordered on despair, and led to general discontent. In vain did Columbus endeavor to revive their spirits by pointing out the fertility of the soil, and exhibiting the specimens of gold daily brought in from different parts of the island. They had not patience to wait for the gradual returns which the former might yield, and the latter they despised as scanty and inconsiderable. The spirit of disaffection spread, and a conspiracy was formed, which might have been fatal to Columbus and the colony. Happily he discovered it; and seizing the ringleaders, punished some of them, sent others prisoners into Spain, whither he despatched twelve of the ships which had served as transports, with an earnest request for a reinforcement of men and a large supply of provisions.

1494] Meanwhile, in order to banish that idleness which, by allowing his people leisure to brood over their disappointment, nourished the spirit of discontent, Columbus planned several expeditions into the interior part of the country. He sent a detachment, under the command of Alonso de Ojeda, a vigilant and enterprising officer, to visit the district of Cibao, which was said to yield the greatest quantity of gold, and followed him in person with the main body of his troops. In this expedition he displayed all the pomp of military magnificence that he could exhibit, in order to strike the imagination of the natives. He marched with colors flying, with martial music, and with a small body of cavalry that paraded sometimes in the front and sometimes in the rear. As those were the first horses which appeared in the New World, they were objects of terror no less than of admiration to the Indians, who, having no tame animals themselves, were unacquainted with that vast accession of power which man hath acquired by subjecting them to his dominion. They supposed them to be rational creatures. They imagined that the horse and the rider formed one animal, with whose speed they were astonished, and whose impetuosity and strength they considered as irresistible. But while Columbus endeavored to inspire the natives with a dread of his power, he did not neglect the arts of gaining their love and confidence. He adhered scrupulously to the principles of integrity and justice in all his transactions with them, and treated them, on every occasion, not only with humanity but with indulgence. The district of Cibao answered the description given of it by the natives. It was mountainous and uncultivated, but in every river and brook gold was gathered either in dust or in grains, some of which were of considerable size. The Indians had never opened any mines in search of gold. To penetrate into the bowels of the earth, and to refine the rude ore, were operations too complicated and laborious for their talents and industry, and they had no such high value for gold as to put their ingenuity and invention upon the stretch in order to obtain it. The small quantity of that precious metal which they possessed, was either picked up in the beds of the rivers, or washed from the mountains by the heavy rains that fall within the tropics. But from those indications, the Spaniards could no longer doubt that the country contained rich treasures in its bowels, of which they hoped soon to be masters. In order to secure the command of this valuable province, Columbus erected a small fort, to which he gave the name of St. Thomas, by way of ridicule upon some of his incredulous followers, who would not believe that the country produced gold, until they saw it with their own eyes, and touched it with their hands.

The account of those promising appearances of wealth in the country of Cibao came very seasonably to comfort the desponding colony, which was affected with distresses of various kinds. The stock of provisions which had been brought from Europe was mostly consumed; what remained was so much corrupted by the heat and moisture of the climate as to be almost unfit for use; the natives cultivated so small a portion of ground, and with so little skill, that it hardly yielded what was sufficient for their own subsistence; the Spaniards of Isabella had hitherto neither time nor leisure to clear the soil, so as to reap any considerable fruits of their own industry. On all these accounts, they became afraid of perishing with hunger, and were reduced already to a scanty allowance. At the same time, the diseases predominant in the torrid zone, and which rage chiefly in those uncultivated countries where the hand of industry had not opened the woods, drained the marshes, and confined the rivers within a certain channel, began to spread among them. Alarmed at the violence and unusual symptoms of those maladies, they exclaimed against Columbus and his companions in the former voyage, who, by their splendid but deceitful descriptions of Hispaniola, had allured them to quit Spain for a barbarous uncultivated land, where they must either be cut off by famine, or die of unknown distempers. Several of the officers and persons of note, instead of checking, joined in those seditious complaints. Father Boyl, the apostolical vicar, was one of the most turbulent and outrageous. It required all the authority and address of Columbus to re-establish subordination and tranquillity in the colony. Threats and promises were alternately employed for this purpose; but nothing contributed more to soothe the malecontents than the prospect of finding, in the mines of Cibao, such a rich store of treasure as would be a recompense for all their sufferings, and efface the memory of former disappointments.

When, by his unwearied endeavors, concord and order were so far restored that he could venture to leave the island, Columbus resolved to pursue his discoveries, that he might be able to ascertain whether those new countries with which he had opened a communication were connected with any region of the earth already known, or whether they were to be considered as a separate portion of the globe hitherto unvisited. He appointed his brother Don Diego, with the assistance of a council of officers, to govern the island in his absence; and gave the command of a body of soldiers to Don Pedro Margarita, with which he was to visit the different parts of the island, and endeavor to establish the authority of the Spaniards among the inhabitants. Having left them very particular instructions with respect to their conduct, he weighed anchor on the 24th of April, with one ship and two small barks under his command. During a tedious voyage of full five months, he had a trial of almost all the numerous hardships to which persons of his profession are exposed, without making any discovery of importance, except the island of Jamaica. As he ranged along the southern coast of Cuba, [19] he was entangled in a labyrinth formed by an incredible number of small islands, to which he gave the name of the Queen's Garden. In this unknown course, among rocks and shelves, he was retarded by contrary winds, assaulted with furious storms, and alarmed with the terrible thunder and lightning which is often almost incessant between the tropics. At length his provisions fell short; his crew, exhausted with fatigue as well as hunger, murmured and threatened, and were ready to proceed to the most desperate extremities against him. Beset with danger in such various forms, he was obliged to keep continual watch, to observe every occurrence with his own eyes, to issue every order, and to superintend the execution of it. On no occasion was the extent of his skill and experience as a navigator so much tried. To these the squadron owed its safety. But this unremitted fatigue of body, and intense application of mind, overpowering his constitution, though naturally vigorous and robust, brought on a feverish disorder, which terminated in a lethargy, that deprived him of sense and memory, and had almost proved fatal to his life.

But, on his return to Hispaniola [Sept. 27], the sudden emotion of joy which he felt upon meeting with his brother Bartholomew at Isabella, occasioned such a flow of spirits as contributed greatly to his recovery. It was now thirteen years since the two brothers, whose similarity of talents united in close friendship, had separated from each other, and during that long period there had been no intercourse between them. Bartholomew after finishing his negotiation in the court of England, had set out for Spain by the way of France.

At Paris he received an account of the extraordinary discoveries which his brother had made in his first voyage, and that he was then preparing to embark on a second expedition. Though this naturally induced him to pursue his journey with the utmost despatch, the admiral had sailed for Hispaniola before he reached Spain. Ferdinand and Isabella received him with the respect due to the nearest kinsman of a person whose merit and services rendered him so conspicuous; and as they knew what consolation his presence would afford to his brother, they persuaded him to take the command of three ships, which they had appointed to carry provisions to the colony at Isabella.

He could not have arrived at any juncture when Columbus stood more in need of a friend capable of assisting him with his counsels, or of dividing with him the cares and burdens of government. For although the provisions now brought from Europe afforded a temporary relief to the Spaniards from the calamities of famine, the supply was not in such quantity as to support them long, and the island did not hitherto yield what was sufficient for sustenance. They were threatened with another danger, still more formidable than the return of scarcity, and which demanded more immediate attention. No sooner did Columbus leave the island on his voyage of discovery, than the soldiers under Margarita, as if they had been set free from discipline and subordination, scorned all restraint. Instead of conforming to the prudent instructions of Columbus, they dispersed in straggling parties over the island, lived at discretion upon the natives, wasted their provisions, seized their women, and treated that inoffensive race with all the insolence of military oppression.

As long as the Indians had any prospect that their sufferings might come to a period by the voluntary departure of the invaders, they submitted in silence, and dissembled their sorrow; but they now perceived that the yoke would be as permanent as it was intolerable. The Spaniards had built a town, and surrounded it with ramparts. They had erected forts in different places. They had enclosed and sown several fields. It was apparent that they came not to visit the country, but to settle in it. Though the number of those strangers was inconsiderable, the state of cultivation among these rude people was so imperfect, and in such exact proportion to their own consumption, that it was with difficulty they could afford subsistence to their new guests. Their own mode of life was so indolent and inactive, the warmth of the climate so enervating, the constitution of their bodies naturally so feeble, and so unaccustomed to the laborious exertions of industry, that they were satisfied with a proportion of food amazingly small. A handful of maize, or a little of the insipid bread made of the cassadroot, was sufficient to support men whose strength and spirits were not exhausted by any vigorous efforts either of body or mind. The Spaniards, though the most abstemious of all the European nations, appeared to them excessively voracious. One Spaniard consumed as much as several Indians. This keenness of appetite surprised them so much, and seemed to be so insatiable, that they supposed the Spaniards had left their own country because it did not produce as much as was requisite to gratify their immoderate desire of food, and had come among them in quest of nourishment. Self-preservation prompted them to wish for the departure of guests who wasted so fast their slender stock of provisions. The injuries which they suffered added to their impatience for this event. They had long expected that the Spaniards would retire of their own accord. They now perceived that, in order to avert the destruction with which they were threatened, either by the slow consumption of famine, or by the violence of their oppressors, it was necessary to assume courage, to attack those formidable invaders with united force, and drive them from the settlements of which they had violently taken possession.

Such were the sentiments which universally prevailed among the Indians, when Columbus returned to Isabella. Inflamed, by the unprovoked outrages of the Spaniards, with a degree of rage of which their gentle natures, formed to suffer and submit, seemed hardly susceptible, they waited only for a signal from their leaders to fall upon the colony. Some of the caciques had already surprised and cut off several stragglers. The dread of this impending danger united the Spaniards, and re-established the authority of Columbus, as they saw no prospect of safety but in committing themselves to his prudent guidance. It was now necessary to have recourse to arms, the employing of which against the Indians Columbus had

hitherto avoided with the greatest solicitude. Unequal as the conflict may seem, between the naked inhabitants of the New World armed with clubs, sticks, hardened in the fire, wooden swords, and arrows pointed with bones or flints, and troops accustomed to the discipline, and provided with the instruments of destruction known in the European art of war, the situation of the Spaniards was far from being exempt from danger. The vast superiority of the natives in number compensated many defects. A handful of men was about to encounter a whole nation. One adverse event, or even any unforced delay in determining the fate of the war, might prove fatal to the Spaniards. Conscious that success depended on the vigor and rapidity of his operations, Columbus instantly assembled his forces. They were reduced to a very small number. Diseases, engendered by the warmth and humidity of the country, or occasioned by their own licentiousness, had raged among them with much violence; experience had not yet taught them the art either of curing these, or the precautions requisite for guarding against them; two-thirds of the original adventurers were dead, and many of those who survived were incapable of service. The body which took the field [March 24, 1495] consisted only of two hundred foot, twenty horse, and twenty large dogs; and how strange soever it may seem to mention the last as composing part of a military force, they were not perhaps the least formidable and destructive of the whole, when employed against naked and timid Indians. All the caciques on the island, Guacanahari excepted, who retained an inviolable attachment to the Spaniards, were in arms to oppose Columbus, with forces amounting, if we may believe the Spanish historians, to a hundred thousand men. Instead of attempting to draw the Spaniards into the fastnesses of the woods and mountains, they were so imprudent as to take their station in the Vega Real, the most open plain in the country. Columbus did not allow them time to perceive their error, or to alter their position. He attacked them during the night, when undisciplined troops are least capable of acting with union and concert, and obtained an easy and bloodless victory. The consternation with which the Indians were filled by the noise and havoc made by the firearms, by the impetuous force of the cavalry, and the fierce onset of the dogs was so great, that they threw down their weapons, and fled without attempting resistance. Many were slain; more were taken prisoners, and reduced to servitude; [20] and so thoroughly were the rest intimidated, that from that moment they abandoned themselves to despair, relinquishing all thoughts of contending with aggressors whom they deemed invincible.

Columbus employed several months in marching through the island, and in subjecting it to the Spanish government, without meeting with any opposition. He imposed a tribute upon all the inhabitants above the age of fourteen. Each person who lived in those districts where gold was found, was obliged to pay quarterly as much gold dust as filled a hawk's bell; from those in other parts of the country, twenty-five pounds of cotton were demanded. This was the first regular taxation of the Indians, and served as a precedent for exactions still more intolerable. Such an imposition was extremely contrary to those maxims which Columbus had hitherto inculcated with respect to the mode of treating them. But intrigues were carrying on in the court of Spain at this juncture, in order to undermine his power, and discredit his operations, which constrained him to depart from his own system of administration. Several unfavorable accounts of his conduct, as well as of the countries discovered by him, had been transmitted to Spain. Margarita and Father Boyl were now at court, and in order to justify their own conduct, or to gratify their resentment, watched with malevolent attention for every opportunity of spreading insinuations to his detriment. Many of the courtiers viewed his growing reputation and power with envious eyes. Fonseca, archdeacon of Seville, who was intrusted with the chief direction of Indian affairs, had conceived such an unfavorable opinion of Columbus, for some reason which the contemporary writers have not mentioned, that he listened with partiality to every invective against him. It was not easy for an unfriended stranger, unpractised in courtly arts, to counteract the machinations of so many enemies. Columbus saw that there was but one method of supporting his own credit, and of silencing all his adversaries. He must produce such a quantity of gold as would not only justify what he had reported with respect to the rich-

ness of the country, but encourage Ferdinand and Isabella to persevere in prosecuting his plans. The necessity of obtaining it forced him not only to impose this heavy tax upon the Indians, but to exact payment of it with extreme rigor; and may be pleaded in excuse for his deviating on this occasion from the mildness and humanity with which he uniformly treated that unhappy people.

The labor, attention, and foresight which the Indians were obliged to employ in procuring the tribute demanded of them, appeared the most intolerable of all evils, to men accustomed to pass their days in a careless improvident indolence. They were incapable of such a regular and persevering exertion of industry, and felt it such a grievous restraint upon their liberty, that they had recourse to an expedient for obtaining deliverance from this yoke, which demonstrates the excess of their impatience and despair. They formed a scheme of starving those oppressors whom they durst not attempt to expel; and from the opinion which they entertained with respect to the voracious appetite of the Spaniards, they concluded the execution of it to be very practicable. With this view they suspended all the operations of agriculture; they sowed no maize, they pulled up the roots of the manioc or cassava which were planted, and retiring to the most inaccessible parts of the mountains, left the uncultivated plains to their enemies. This desperate resolution produced in some degree the effects which they expected. The Spaniards were reduced to extreme want; but they received such seasonable supplies of provisions from Europe, and found so many resources in their own ingenuity and industry, that they suffered no great loss of men. The wretched Indians were the victims of their own ill-concerted policy. A great multitude of people, shut up in the mountainous or wooded part of the country, without any food but the spontaneous productions of the earth, soon felt the utmost distresses of famine. This brought on contagious diseases; and in the course of a few months more than a third part of the inhabitants of the island perished, after experiencing misery in all its various forms.

But while Columbus was establishing the foundations of the Spanish grandeur in the New World, his enemies labored with unwearied assiduity to deprive him of the glory and rewards which, by his services and sufferings, he was entitled to enjoy. The hardships unavoidable in a new settlement, the calamities occasioned by an unhealthy climate, the disasters attending a voyage in unknown seas, were all represented as the effects of his restless and inconsiderate ambition. His prudent attention to preserve discipline and subordination was denominated excess of rigor; the punishments which he inflicted upon the mutinous and disorderly were imputed to cruelty. These accusations gained such credit in a jealous court, that a commissioner was appointed to repair to Hispaniola, and to inspect into the conduct of Columbus. By the recommendation of his enemies, Aguado, a groom of the bedchamber, was the person to whom this important trust was committed. But in this choice they seem to have been more influenced by the obsequious attachment of the man to their interest, than by his capacity for the station. Puffed up with such sudden elevation, Aguado displayed, in the exercise of this office, all the frivolous self-importance, and acted with all the disgusting insolence which are natural to little minds, when raised to unexpected dignity, or employed in functions to which they are not equal. By listening with eagerness to every accusation against Columbus, and encouraging not only the malecontent Spaniards, but even the Indians, to produce their grievances, real or imaginary, he fomented the spirit of dissension in the island, without establishing any regulations of public utility, or that tended to redress the many wrongs, with the odium of which he wished to load the admiral's administration. As Columbus felt sensibly how humiliating his situation must be, if he should remain in the country while such a partial inspector observed his motions and controlled his jurisdiction, he took the resolution of returning to Spain, in order to lay a full account of all his transactions, particularly with respect to the points in dispute between him and his adversaries, before Ferdinand and Isabella, from whose justice and discernment he expected an equal and a favorable decision. [1496] He committed the administration of affairs, during his absence, to Don Bartholomew, his brother, with the title of Adelantado, or Lieutenant-Governor. By a choice less fortunate, and which proved the source of many calamities to the colony, he appointed Francis Roldan chief justice, with very extensive powers.

In returning to Europe, Columbus held a course different from that which he had taken in his former voyage. He steered almost due east from Hispaniola, in the parallel of twenty-two degrees of latitude; as experience had not yet discovered the more certain and expeditious method of stretching to the north, in order to fall in with the south-west winds. By this ill-advised choice, which, in the infancy of navigation between the New and Old World, can hardly be imputed to the admiral as a defect in naval skill, he was exposed to infinite fatigue and danger, in a perpetual struggle with the trade winds, which blow without variation from the east between the tropics. Notwithstanding the almost insuperable difficulties of such a navigation, he persisted in his course with his usual patience and firmness, but made so little way that he was three months without seeing land. At length his provisions began to fail, the crew was reduced to the scanty allowance of six ounces of bread a day for each person. The admiral fared no better than the meanest sailor. But, even in this extreme distress, he retained the humanity which distinguishes his character, and refused to comply with the earnest solicitations of his crew, some of whom proposed to feed upon the Indian prisoners whom they were carrying over, and others insisted to throw them overboard, in order to lessen the consumption of their small stock. He represented that they were human beings, reduced by a common calamity to the same condition with themselves, and entitled to share an equal fate. His authority and remonstrances dissipated those wild ideas suggested by despair. Nor had they time to recur; as he came soon within sight of the coast of Spain, when all their fears and sufferings ended.

Columbus appeared at court with the modest but determined confidence of a man conscious not only of integrity but of having performed great services. Ferdinand and Isabella, ashamed of their own facility in lending too favorable an ear to frivolous or unfounded accusations, received him with such distinguished marks of respect as covered his enemies with shame. The censures and calumnies were no more heard of at that juncture. The gold, the pearls, the cotton, and other commodities of value which Columbus produced, seemed fully to refute what the malecontents had propagated with respect to the poverty of the country. By reducing the Indians to obedience, and imposing a regular tax upon them, he had secured to Spain a large accession of new subjects, and the establishment of a revenue that promised to be considerable. By the mines which he had found out and examined, a source of wealth still more copious was opened. Great and unexpected as those advantages were, Columbus represented them only as preludes to future acquisitions, and as the earnest of more important discoveries, which he still meditated, and to which those he had already made would conduct him with ease and certainty.

The attentive consideration of all these circumstances made such an impression, not only upon Isabella, who flattered with the idea of being the patroness of all Columbus's enterprises, but even upon Ferdinand, who having originally expressed his disapprobation of his schemes, was still apt to doubt of their success, that they resolved to supply the colony of Hispaniola with every thing which could render it a permanent establishment, and to furnish Columbus with such a fleet, that he might proceed to search for those new countries of whose existence he seemed to be confident. The measures most proper for accomplishing both these designs were concerted with Columbus. Discovery had been the sole object of the first voyage to the New World; and though, in the second, settlement had been proposed, the precautions taken for that purpose had either been insufficient, or were rendered ineffectual by the mutinous spirit of the Spaniards, and the unforeseen calamities arising from various causes. Now a plan was to be formed of a regular colony, that might serve as a model in all future establishments. Every particular was considered with attention, and the whole arranged with a scrupulous accuracy. The precise number of adventurers, who should be permitted to embark was fixed. They were to be of different ranks and professions, and the proportion of each was established according to their usefulness and the wants of the colony. A suitable number of women were to be chosen to accompany these new settlers. As it was the first object to raise provisions in a country where scarcity of food had been the occasion of so much distress, a considerable body of husbandmen was to be carried over. As the Spaniards had then no con-

ception of deriving any benefit from those productions of the New World which have since yielded such large returns of wealth to Europe, but had formed magnificent ideas, and entertained sanguine hopes with respect to the riches contained in the mines which had been discovered, a band of workmen, skilled in the various arts employed in digging and refining the precious metals, was provided. All these emigrants were to receive pay and subsistence for some years, at the public expense.

Thus far the regulations were prudent, and well adapted to the end in view. But as it was foreseen that few would engage voluntarily to settle in a country whose noxious climate had been fatal to so many of their countrymen. Columbus proposed to transport to Hispaniola such malefactors as had been convicted of crimes which, though capital, were of a less atrocious nature; and that for the future a certain proportion of the offenders usually sent to the galleys, should be condemned to labor in the mines which were to be opened. This advice, given without due reflection, was as inconsiderately adopted. The prisons of Spain were drained, in order to collect members for the intended colony; and the judges empowered to try criminals were instructed to recruit it by their future sentences. It was not, however, with such materials that the foundations of a society, destined to be permanent, should be laid. Industry, sobriety, patience, and mutual confidence, are indispensably requisite in an infant settlement, where purity of morals must contribute more towards establishing order than the operation or authority of laws. But when such a mixture of what is corrupt is admitted into the original constitution of the political body, the vices of those unsound and incurable members will probably infect the whole, and must certainly be productive of violent and unhappy effects. This the Spaniards fatally experienced; and the other European nations having successively imitated the practice of Spain in this particular, pernicious consequences have followed in their settlement, which can be imputed to no other cause.

Though Columbus obtained, with great facility and despatch, the royal approbation of every measure and regulation that he proposed, his endeavors to carry them into execution were so long retarded, as must have tired out the patience of any man less accustomed to encounter and surmount difficulties. Those delays were occasioned partly by that tedious formality and spirit of procrastination, with which the Spaniards conduct business, and partly by the exhausted state of the treasury, which was drained by the expense of celebrating the marriage of Ferdinand and Isabella's only son with Margaret of Austria, and that of Joanna, their second daughter, with Philip Archduke of Austria; but must be chiefly imputed to the malicious arts of Columbus's enemies. Astonished at the reception which he met with upon his return, and overawed by his presence, they gave way, for some time, to a tide of favor too strong for them to oppose. Their enmity, however, was too inveterate to remain long inactive. They resumed their operations; and by the assistance of Fonseca, the minister for Indian affairs, who was now promoted to the Bishopric of Badajoz, they threw in so many obstacles to protract the preparations for Columbus's expedition, that a year elapsed before he could procure two ships to carry over a part of the supplies destined for the colony, and almost two years were spent before the small squadron was equipped, of which he himself was to take the command.

[1498.] This squadron consisted of six ships only, of no great burden, and but indifferently provided for a long or dangerous navigation. The voyage which he now meditated was in a course different from any he had undertaken. As he was fully persuaded that the fertile regions of India lay to the south-west of those countries which he had discovered, he proposed, as the most certain method of finding out these, to stand directly south from the Canary or Cape de Verd islands, until he came under the equinoctial line, and then to stretch to the west before the favorable wind for such a course, which blows invariably between the tropics. With this idea he set sail [May 30], and touched first at the Canary, and then at the Cape de Verd islands [July 4]. From the former he despatched three of his ships with a supply of provisions for the colony in Hispaniola; with the other three, he continued his voyage towards the south. No remarkable occurrence happened until they arrived within five degrees of the line [July 19]. There they were becalmed, and at the same time the heat became so excessive that many of their wine casks burst, the liquors in others soured,

and their provisions corrupted. The Spaniards, who had never ventured so far to the south, were afraid that the ships would take fire, and began to apprehend the reality of what the ancients had taught concerning the destructive qualities of that torrid region of the globe. They were relieved, in some measure, from their fears by a seasonable fall of rain. This, however, though so heavy and unintermitting that the men could hardly keep the deck, did not greatly mitigate the intenseness of the heat. The admiral, who with his usual vigilance had in person directed every operation from the beginning of the voyage, was so much exhausted by fatigue and want of sleep, that it brought on a violent fit of the gout, accompanied with a fever. All these circumstances constrained him to yield to the importunities of his crew, and to alter his course to the north-west, in order to reach some of the Caribbee islands, where he might refit, and be supplied with provisions.

On the first of August, the man stationed in the round top surprised them with the joyful cry of *Land!* They stood toward it, and discovered a considerable island, which the admiral called *Trinidad*, a name it still retains. It lies on the coast of Guiana, near the mouth of the Orinoco. This, though a river only of the third or fourth magnitude in the New World, far surpasses any of the streams in our hemisphere. It rolls towards the ocean such a vast body of water, and rushes into it with such impetuous force, that when it meets the tide, which on that coast rises to an uncommon height, their collision occasions a swell and agitation of the waves no less surprising than formidable. In this conflict, the irresistible torrent of the river so far prevails, that it freshens the ocean many leagues with its flood. Columbus, before he could conceive the danger, was entangled among these adverse currents and tempestuous waves, and it was with the utmost difficulty that he escaped through a narrow strait, which appeared so tremendous that he called it *La Boca del Drago*. As soon as the consternation which this occasioned permitted him to reflect upon the nature of an appearance so extraordinary, he discerned in it a source of comfort and hope. He justly concluded that such a vast body of water as this river contained, could not be supplied by any island, but must flow through a country of immense extent, and of consequence that he was now arrived at that continent which it had long been the object of his wishes to discover. Full of this idea, he stood to the west along the coast of those provinces which are now known by the names of *Para* and *Cumana*. He landed in several places, and had some intercourse with the people, who resembled those of *Hispaniola* in their appearance and manner of life. They wore, as ornaments, small plates of gold, and pearls of considerable value, which they willingly exchanged for European toys. They seemed to possess a better understanding and greater courage than the inhabitants of the islands. The country produced four-footed animals of several kinds, as well as a great variety of fowls and fruits. The admiral was so much delighted with its beauty and fertility, that, with the warm enthusiasm of a discoverer, he imagined it to be the *Paradise* described in Scripture, which the Almighty chose for the residence of man while he retained innocence that rendered him worthy of such a habitation. [21] Thus Columbus had the glory not only of discovering to mankind the existence of a new World, but made considerable progress towards a perfect knowledge of it; and was the first man who conducted the Spaniards to that vast continent which has been the chief seat of their empire, and the source of their treasures in this quarter of the globe. The shattered condition of his ships, scarcity of provisions, his own infirmities, together with the impatience of his crew, prevented him from pursuing his discoveries any further, and made it necessary to bear away for *Hispaniola*. In his way thither he discovered the islands of *Cubagua* and *Margarita*, which afterwards became remarkable for their pearl-fishery. When he arrived at *Hispaniola* [Aug. 30], he was wasted to an extreme degree, with fatigue and sickness; but found the affairs of the colony in such a situation as afforded him no prospect of enjoying that repose of which he stood so much in need.

Many revolutions had happened in that country during his absence. His brother, the adelantado, in consequence of an advice which the admiral gave before his departure, had removed the colony from *Isabella* to a more commodious station, on the opposite side of the island, and laid the foundation of *St. Domingo*, which was long the most considerable European town in the New World, and the seat of the supreme courts in the Spanish dominions there. As soon as the Spaniards were established in his new settlement, the adelantado,

that they might neither languish in inactivity, nor have leisure to form new cabals, marched into those parts of the island which his brother had not yet visited or reduced to obedience. As the people were unable to resist, they submitted every where to the tribute which he imposed. But they soon found the burden to be so intolerable that, everawed as they were by the superior power of their oppressors, they took arms against them. Those insurrections, however, were not formidable. A conflict with timid and naked Indians was neither dangerous nor of doubtful issue.

But while the adelantado was employed against them in the field, a mutiny of an aspect far more alarming broke out among the Spaniards. The ringleader of it was *Francis Roldan*, whom Columbus had placed in a station which required him to be the guardian of order and tranquility in the colony. A turbulent and inconsiderate ambition precipitated him into this desperate measure, so unbecoming his rank. The arguments which he employed to seduce his countrymen were frivolous and ill founded. He accused Columbus and his two brothers of arrogance and severity; he pretended that they aimed at establishing an independent dominion in the country; he taxed them with an intention of cutting off part of the Spaniards by hunger and fatigue, that they might more easily reduce the remainder to subjection; he represented it as unworthy of Castilians, to remain the tame and passive slaves of these Genoese adventurers. As men have always a propensity to impute the hardships of which they feel the pressure to the misconduct of their rulers; as every nation views with a jealous eye the power and exaltation of foreigners, Roldan's insinuations made a deep impression on his countrymen. His character and rank added weight to them. A considerable number of the Spaniards made choice of him as their leader; and, taking arms against the adelantado and his brother, seized the king's magazine of provisions, and endeavored to surprise the fort at *St. Domingo*. This was preserved by the vigilance and courage of *Don Diego Columbus*. The mutineers were obliged to retire to the province of *Xaragua*, where they continued not only to disclaim the adelantado's authority themselves, but excited the Indians to throw off the yoke.

Such was the distracted state of the colony when Columbus landed at *St. Domingo*. He was astonished to find that the three ships which he had despatched from the Canaries were not yet arrived. By the unskillfulness of the pilots, and the violence of currents, they had been carried a hundred and sixty miles to the west of *St. Domingo*, and forced to take shelter in a harbor of the province of *Xaragua*, where Roldan and his seditious followers were cantoned. Roldan carefully concealed from the commanders of the ships his insurrection against the adelantado, and, employing his utmost address to gain their confidence, persuaded them to set on shore a considerable part of the new settlers whom they brought over, that they might proceed by land to *St. Domingo*. It required but few arguments to prevail with those men to espouse his cause. They were the refuse of the jails of Spain, to whom idleness, licentiousness, and deeds of violence were familiar; and they returned eagerly to a course of life nearly resembling that to which they had been accustomed. The commanders of the ships perceiving, when it was too late, their imprudence in disembarking so many of their men, stood away for *St. Domingo*, and got safe into the port a few days after the admiral; but their stock of provisions was so wasted during a voyage of such long continuance that they brought little relief to the colony.

By this junction with a band of such bold and desperate associates, Roldan became extremely formidable, and no less extravagant in his demands. Columbus, though filled with resentment at his ingratitude, and highly exasperated by the insolence of his followers, made no haste to take the field. He trembled at the thoughts of kindling the flames of a civil war, in which, whatever party prevailed, the power and strength of both must be so much wasted as might encourage the common enemy to unite and complete their destruction. At the same time, he observed, that the prejudices and passions which incited the rebels to take arms, had so far infected those who still adhered to him, that many of them were adverse, and all cold to the service. From such sentiments, with respect to the public interest, as well as from this view of his own situation, he chose to negotiate rather than to fight. By a seasonable proclamation, offering free pardon to such as should merit it by returning to their duty, he made impression upon some of the malecontents. By

engaging to grant such as should desire it the liberty of returning to Spain, he allured all those unfortunate adventurers, who, from sickness and disappointment, were disgusted with the country. By promising to re-establish Roldan in his former office, he soothed his pride; and, by complying with most of his demands in behalf of his followers, he satisfied their avarice. Thus, gradually and without bloodshed, but after many tedious negotiations, he dissolved this dangerous combination, which threatened the colony with ruin; and restored the appearance of order, regular government and tranquility.

In consequence of this agreement with the mutineers, lands were allotted them in different parts of the island, and the Indians settled in each district were appointed to cultivate a certain portion of ground for the use of those new masters [1499]. The performance of this work was substituted in place of the tribute formerly imposed; and how necessary soever such a regulation might be in a sickly and feeble colony, it introduced among the Spaniards the *Repatriamientos*, or distributions of Indians established by them in all their settlements, which brought numberless calamities upon that unhappy people, and subjected them to the most grievous oppression. This was not the only bad effect of the insurrection in *Hispaniola*; it prevented Columbus from prosecuting his discoveries on the continent, as self preservation obliged him to keep near his person his brother the adelantado, and the sailors whom he intended to have employed in that service. As soon as his affairs would permit, he sent some of his ships to Spain with a journal of the voyage which he had made, a description of the new countries which he had discovered, a chart of the coast along which he had sailed, and specimens of the gold, the pearls, and other curious or valuable productions which he had acquired by trafficking with the natives. At the same time he transmitted an account of the insurrection in *Hispaniola*; he accused the mutineers not only of having thrown the colony into such violent convulsions as threatened its dissolution, but of having obstructed every attempt towards discovery and improvement, by their unprovoked rebellion against their superiors, and proposed several regulations for the better government of the island, as well as the extinction of that mutinous spirit, which, though suppressed at present, might soon burst out with additional rage. Roldan and his associates did not neglect to convey to Spain, by the same ships, an apology for their own conduct, together with their recriminations upon the admiral and his brothers. Unfortunately for the honor of Spain and the happiness of Columbus, the latter gained most credit in the court of Ferdinand and Isabella, and produced unexpected effects.

But, previous to the relating of these, it is proper to take a view of some events, which merit attention, both on account of their own importance, and their connection with the history of the New World. While Columbus was engaged in his successive voyages to the west, the spirit of discovery did not languish in Portugal, the kingdom where it first acquired vigor, and became enterprising. Self-condemnation and neglect were not the only sentiments to which the success of Columbus, and reflection upon their own imprudence in rejecting his proposals, gave rise among the Portuguese. They excited a general emulation to surpass his performances, and an ardent desire to make some reparation to their country for their own error. With this view, Emanuel, who inherited the enterprising genius of his predecessors, persisted in their grand scheme of opening a passage to the East Indies by the Cape of Good Hope, and soon after his accession to the throne equipped a squadron for that important voyage. He gave the command of it to *Vasco da Gama*, a man of noble birth, possessed of virtue, prudence, and courage, equal to the station. The squadron, like all those fitted out for discovery in the infancy of navigation, was extremely feeble, consisting only of three vessels, of neither burden nor force adequate to the service. As the Europeans were at that time little acquainted with the course of the trade-winds and periodical monsoons, which render navigation in the Atlantic ocean as well as in the sea that separates Africa from India, at some seasons easy, and at others not only dangerous but almost impracticable, the time chosen for Gama's departure was the most improper during the whole year. He set sail from Lisbon on the ninth of July, [1497], and standing towards the south, had to struggle for four months with contrary winds before he could reach the Cape of Good Hope. Here their violence began to abate [Nov. 20]; and during an interval of calm weather, Gama doubled that formidable

promontory, which had so long been the boundary of navigation, and directed his course towards the north-east, along the African coast. He touched at several ports; and after various adventures, which the Portuguese historians relate with high but just encomiums upon his conduct and intrepidity, he came to anchor before the city of Melinda. Throughout all the vast countries which extend along the coast of Africa, from the river Senegal to the confines of Zanguebar, the Portuguese had found a race of men rude and uncultivated, strangers to letters, to arts and commerce, and differing from the inhabitants of Europe no less in their features and complexion than in their manners and institutions. As they advanced from this, they observed, to their inexpressible joy, that the human form gradually altered and improved; the Asiatic features began to predominate, marks of civilization appeared, letters were known, the Mahometan religion was established, and a commerce far from being inconsiderable was carried on. At that time several vessels from India were in the port of Melinda. Gama now pursued his voyage with almost absolute certainty of success, and under the conduct of a Mahometan pilot, arrived at Calcut, upon the coast of Malabar, on the twenty-second of May, one thousand four hundred and ninety-eight. What he beheld of the wealth, the populousness, the cultivation, the industry, and arts of this highly civilized country, far surpassed any idea that he had formed, from the imperfect accounts which the Europeans had hitherto received of it. But as he possessed neither sufficient force to attempt a settlement, nor proper commodities with which he could carry on commerce of any consequence, he hastened back to Portugal, with an account of his success in performing a voyage, the longest, as well as most difficult, that had ever been made since the first invention of navigation. He landed at Lisbon on the fourteenth of September, one thousand four hundred and ninety-nine, two years two months and five days from the time he left that port.

Thus, during the course of the fifteenth century, mankind made greater progress in exploring the state of the habitable globe, than in all the ages which had elapsed previous to that period. The spirit of discovery, feeble at first and cautious, moved within a very narrow sphere, and made its efforts with hesitation and timidity. Encouraged by success, it became adventurous, and boldly extended its operations. In the course of its progression, it continued to acquire vigor, and advanced at length with a rapidity and force which burst through all the limit within which ignorance and fear had hitherto circumscribed the activity of the human race. Almost fifty years were employed by the Portuguese in creeping along the coast of Africa from Cape Non to Cape de Verd, the latter of which lies only twelve degrees to the south of the former. In less than thirty years they ventured beyond the equinoctial line into another hemisphere, and penetrated to the southern extremity of Africa, at the distance of forty-nine degrees from Cape de Verd. During the last seven years of the century, a New World was discovered in the west, not inferior in extent to all the parts of the earth with which mankind were at that time acquainted. In the East, unknown seas and countries were found out, and a communication, long desired, but hitherto concealed was opened between Europe and the opulent regions of India. In comparison with events so wonderful and unexpected, all that had hitherto been deemed great or splendid faded away and disappeared. Vast objects now presented themselves. The human mind, roused and interested by the prospect, engaged with ardor in pursuit of them, and exerted its active powers in a new direction.

This spirit of enterprise, though but newly awakened in Spain, began soon to operate extensively. All the attempts towards discovery made in that kingdom had hitherto been carried on by Columbus alone, and at the expense of the Sovereign. But now private adventurers, allured by the magnificent descriptions he gave of the regions which he had visited, as well as by the specimens of their wealth which he produced, offered to fit out squadrons at their own risk, and to go in quest of new countries. The Spanish court, whose scanty revenues were exhausted by the charge of its expeditions to the New World, which, though they opened alluring prospects of future benefit, yielded a very sparing return of present profit, was extremely willing to devolve the burden of discovery upon its subjects. It seized with joy an opportunity of rendering the avarice, the ingenuity, and efforts of projectors instrumental in promoting designs of certain advantage to the public, though of doubtful success with respect

to themselves. One of the first propositions of this kind was made by Alonzo de Ojeda, a gallant and active officer, who had accompanied Columbus in his second voyage. His rank and character procured him such credit with the merchants of Seville, that they undertook to equip four ships, provided he could obtain the royal license, authorising the voyage. The powerful patronage of the Bishop of Badajoz easily secured success in a suit so agreeable to the court. Without consulting Columbus or regarding the rights and jurisdiction which he had acquired by the capitulation in one thousand four hundred and ninety-two, Ojeda was permitted to set out for the New World. In order to direct his course, the bishop communicated to him the admiral's journal of his last voyage, and his charts of the countries which he had discovered. Ojeda struck out into no new path of navigation, but adhering servilely to the route which Columbus had taken, arrived on the coast of Paria [May]. He traded with the natives, and, standing to the west, proceeded as far as Cape de Vela, and ranged along a considerable extent of coast beyond that on which Columbus had touched. Having thus ascertained the opinion of Columbus, that this country was a part of the continent, Ojeda returned by way of Hispaniola to Spain [October], with some reputation as a discoverer, but with little benefit to those who had raised the funds for the expedition.

Amerigo Vespucci, a Florentine gentleman, accompanied Ojeda in this voyage. In what station he served is uncertain, but as he was an experienced sailor, and eminently skilled in all the sciences subservient to navigation, he seems to have acquired such authority among his companions, that they willingly allowed him to have a chief share in directing their operations during the voyage. Soon after his return, he transmitted an account of his adventures and discoveries to one of his countrymen; and laboring with the vanity of a traveller to magnify his own exploits, he had the address and confidence to frame his narrative so as to make it appear that he had the glory of having first discovered the continent in the New World. Amerigo's account was drawn up not only with art, but with some elegance. It contained an amusing history of his voyage, and judicious observations upon the natural productions, the inhabitants, and the customs of the countries which he had visited. As it was the first description of any part of the New World that was published, a performance so well calculated to gratify the passion of mankind for what is new and marvellous, circulated rapidly, and was read with admiration. The country of which Amerigo was supposed to be the discoverer, came gradually to be called by his name. The caprice of mankind, often as unaccountable as unjust, has perpetuated this error. By the universal consent of nations, America is the name bestowed on this new quarter of the globe. The bold pretensions of a fortunate impostor, have robbed the discoverer of the New World of a distinction which belonged to him. The name of Amerigo has supplanted that of Columbus; and mankind may regret an act of injustice, which, having received the sanction of time, it is now too late to redress. [22]

During the same year, another voyage of discovery was undertaken. Columbus not only introduced the spirit of naval enterprise into Spain, but all the first adventurers who distinguished themselves in this new career were formed by his instructions, and acquired in his voyages the skill and information which qualified them to imitate his example. Alonso Nigno, who had served under the admiral in his last expedition, fitted out a single ship, in conjunction with Christopher Guerra, a merchant of Seville, and sailed to the coast of Paria. This voyage seems to have been conducted with greater attention to private emolument than to any general or national object. Nigno and Guerra, made no discoveries of any importance; but they brought home such a return of gold and pearls as inflamed their countrymen with the desire of engaging in similar adventures.

Soon after [Jan. 13, 1500], Vincent Yanez Pinzon, one of the admiral's companions in his first voyage, sailed from Palos with four ships. He stood boldly towards the south, and was the first Spaniard who ventured across the equinoctial line; but he seems to have landed on no part of the coast beyond the mouth of the Maragnon, or river of the Amazons. All these navigators adopted the erroneous theory of Columbus, and believed that the countries which they had discovered were part of the vast continent of India.

During the last year of the fifteenth century, that fertile district of America, on the confines of which Pinzon had stopped short, was more fully discovered.

The successful voyage of Gama to the East Indies having encouraged the King of Portugal to fit out a fleet so powerful as not only to carry on trade but to attempt conquest, he gave the command of it to Pedro Alvarez Cabral. In order to avoid the coast of Africa, where he was certain of meeting with variable breezes or frequent calms, which might retard his voyage, Cabral stood out to sea, and kept so far to the west, that, to his surprise, he found himself upon the shore of an unknown country, in the tenth degree beyond the line. He imagined at first that it was some island in the Atlantic ocean, hitherto unobserved; but, proceeding along its coast for several days, he was led gradually to believe, that a country so extensive formed a part of some great continent. This latter opinion was well founded. The country with which he fell in belongs to that province in South America now known by the name of Brasil. He landed; and having formed a very high idea of the fertility of the soil, and agreeableness of the climate, he took possession of it for the crown of Portugal, and despatched a ship to Lisbon with an account of this event, which appeared to be no less important than it was unexpected. Columbus's discovery of the New World was the effort of an active genius enlightened by science, guided by experience, and acting upon a regular plan executed with no less courage than perseverance. But from this adventure of the Portuguese, it appears that chance might have accomplished that great design which it is now the pride of human reason to have formed and perfected. If the sagacity of Columbus had not conducted mankind to America, Cabral, by a fortunate accident, might have led them, a few years later, to the knowledge of that extensive continent.

While the Spaniards and Portuguese, by those successive voyages, were daily acquiring more enlarged ideas of the extent and opulence of that quarter of the globe which Columbus had made known to them, he himself, far from enjoying the tranquillity and honors with which his services should have been recompensed, was struggling with every distress in which the envy and malevolence of the people under his command, or the ingratitude of the court which he served, could involve him. Though the pacification with Roldan broke the union and weakened the force of the mutineers, it did not extirpate the seeds of discord out of the island. Several of the malecontents continued in arms, refusing to submit to the admiral. He and his brothers were obliged to take the field alternately, in order to check their incursions, or to punish their crimes. The perpetual occupation and disquiet which this created, prevented him from giving due attention to the dangerous machinations of his enemies in the court of Spain. A good number of such as were most dissatisfied with his administration had embraced the opportunity of returning to Europe with the ships which he despatched from St. Domingo. The final disappointment of all their hopes inflamed the rage of these unfortunate adventurers against Columbus to the utmost pitch. Their poverty and distress, by exciting compassion, rendered their accusations credible, and their complaints interesting. They teased Ferdinand and Isabella incessantly with memorials, containing the detail of their own grievances, and the articles of their charge against Columbus. Whenever either the king or queen appeared in public, they surrounded them in a tumultuary manner, insisting with importunate clamours for the payment of the arrears due to them, and demanding vengeance upon the author of their sufferings. They insulted the admiral's sons wherever they met them, reproaching them as the offspring of the projector, whose fatal curiosity had discovered those pernicious regions which drained Spain of its wealth, and would prove the grave of its people. These avowed endeavors of the malecontents from America to ruin Columbus, were seconded by the secret but more dangerous insinuations of that party among the courtiers, which had always thwarted his schemes, and envied his success and credit.

Ferdinand was disposed to listen, not only with a willing but with a partial ear, to these accusations. Notwithstanding the flattering accounts which Columbus had given of the riches of America, the remittances from it had hitherto been so scanty that they fell far short of defraying the expense of the armaments fitted out. The glory of the discovery, together with the prospect of remote commercial advantages, was all that Spain had yet received in return for the efforts which she had made. But time had already diminished the first sensations of joy which the discovery of a New World occasioned, and fame alone was not an object to satisfy the cold interested mind of Ferdinand. The

nature of commerce was then so little understood that, where immediate gain was not acquired, the hope of distant benefit, or of slow and moderate returns, was totally disregarded. Ferdinand considered Spain, on this account, as having lost by the enterprise of Columbus, and imputed it to his misconduct and incapacity for government, that a country abounding in gold had yielded nothing of value to its conquerors. Even Isabella, who from the favorable opinion which she entertained of Columbus had uniformly protected him, was shaken at length by the number and boldness of his accusers, and began to suspect that a disaffection so general must have been occasioned by real grievances which called for redress. The Bishop of Badajoz, with his usual animosity against Columbus, encouraged these suspicions, and confirmed them.

As soon as the queen began to give way to the torrent of calumny, a resolution fatal to Columbus was taken. Francis de Bovadilla, a knight of Calatrava, was appointed to repair to Hispaniola, with full powers to inquire into the conduct of Columbus, and if he should find the charge of maladministration proved, to supersede him, and assume the government of the island. It was impossible to escape condemnation, when this preposterous commission made it the interest of the judge to pronounce the person whom he was sent to try, guilty. Though Columbus had now composed all the dissensions in the island; though he had brought both Spaniards and Indians to submit peaceably to his government; though he had made such effectual provision for working the mines, and cultivating the country, as would have secured a considerable revenue to the king, as well as large profits to individuals; Bovadilla, without designing to attend to the nature or merit of those services, discovered from the moment that he landed in Hispaniola, a determined purpose of treating him as a criminal. He took possession of the admiral's house in St. Domingo, from which its master happened at that time to be absent, and seized his effects, as if his guilt had been already fully proved; he rendered himself master of the fort and of the King's stores by violence; he required all persons to acknowledge him as supreme governor; he set at liberty the prisoners confined by the admiral, and summoned him to appear before his tribunal, in order to answer for his conduct; transmitting to him, together with the summons, a copy of the royal mandate, by which Columbus was enjoined to yield implicit obedience to his commands.

Columbus, though deeply affected with the ingratitude and injustice of Ferdinand and Isabella, did not hesitate a moment about his own conduct. He submitted to the will of his sovereigns with a respectful silence, and repaired directly [October] to the court of that violent and partial judge whom they had authorized to try him. Bovadilla, without admitting him into his presence, ordered him instantly to be arrested, to be loaded with chains, and hurried on board a ship. Even under this humiliating reverse of fortune, the firmness of mind which distinguishes the character of Columbus did not forsake him. Conscious of his own integrity, and solacing himself with reflecting upon the great things which he had achieved, he endured this insult offered to his character, not only with composure but with dignity. Nor had he the consolation of sympathy to mitigate his sufferings. Bovadilla had already rendered himself so extremely popular, by granting various immunities to the colony, by liberal donations of Indians to all who applied for them, and by relaxing the reins of discipline and government, that the Spaniards, who were mostly adventurers, whom their indigence or crimes had compelled to abandon their native country, expressed the most indecent satisfaction with the disgrace and imprisonment of Columbus. They flattered themselves that now they should enjoy an uncontrolled liberty more suitable to their disposition and former habits of life. Among persons thus prepared to censure the proceedings, and to asperse the character of Columbus, Bovadilla collected materials for a charge against him. All accusations the most improbable as well as inconsistent, were received. No informer, however, infamous, was rejected. The result of this inquest, no less indecent than partial, he transmitted to Spain. At the same time he ordered Columbus, with his two brothers, to be carried thither in fetters; and, adding cruelty to insult, he confined them in different ships, and excluded them from the comfort of that friendly intercourse which might have soothed their common distress. But while the Spaniards in Hispaniola viewed the arbitrary and insolent proceedings of Bovadilla with a general approbation, which reflects dishonor upon their

name and country, one man still retained a proper sense of the great actions which Columbus had performed, and was touched with the sentiments of veneration and pity due to his rank, his age, and his merit. Alonzo de Valejo, the captain of the vessel on board which the admiral was confined, as soon as he was clear of the island, approached his prisoner with great respect, and offered to release him from the fetters with which he was unjustly loaded. "No," replied Columbus with a generous indignation, "I wear these irons in consequence of an order from my sovereigns. They shall find me as obedient to this as to their other injunctions. By their command I have been confined, and their command alone shall set me at liberty."

Nov. 23.] Fortunately the voyage to Spain was extremely short. As soon as Ferdinand and Isabella were informed that Columbus was brought home a prisoner and in chains, they perceived at once what universal astonishment this event must occasion, and what an impression to their disadvantage it must make. All Europe, they foresaw, would be filled with indignation at this ungenerous requital of a man who had performed actions worthy of the highest recompense, and would exclaim against the injustice of the nation, to which he had been such an eminent benefactor, as well as against the ingratitude of the princes whose reign he had rendered illustrious. Ashamed of their own conduct, and eager not only to make some reparation to this injury, but to efface the stain which it might fix upon their character, they instantly issued orders to set Columbus at liberty [Dec. 17.] invited him to court, and remitted money to enable him to appear there in a manner suitable to his rank. When he entered the royal presence, Columbus threw himself at the feet of his sovereigns. He remained for some time silent; the various passions which agitated his mind suppressing his power of utterance. At length he recovered himself, and vindicated his conduct in a long discourse, producing the most satisfying proofs of his own integrity as well as good intention, and evidence, no less clear, of the malevolence of his enemies, who, not satisfied with having ruined his fortune, labored to deprive him of what alone was now left, his honor and his fame. Ferdinand received him with decent civility, and Isabella with tenderness and respect. They both expressed their sorrow for what had happened, disavowed their knowledge of it, and joined in promising him protection and future favor. But though they instantly degraded Bovadilla, in order to remove from themselves any suspicion of having authorized his violent proceedings, they did not restore to Columbus his jurisdiction and privileges as viceroy of those countries which he had discovered. Though willing to appear the avengers of Columbus's wrongs, that illiberal jealousy which prompted them to invest Bovadilla with such authority, as put it in his power to treat the admiral with indignity, still subsisted. They were afraid to trust a man to whom they had been so highly indebted; and retaining him at court under various pretexts, they appointed Nicholas de Ovando, a knight of the military order of Alcantara, governor of Hispaniola.

Columbus was deeply affected with this new injury, which came from hands that seemed to be employed in making reparation for his past sufferings. The sensibility with which great minds feel every thing that implies any suspicion of their integrity, or that wears the aspect of an affront, is exquisite. Columbus had experienced both from the Spaniards, and their ungenerous conduct exasperated him to such a degree that he could no longer conceal the sentiments which it excited. Wherever he went he carried about with him, as a memorial of their ingratitude, those fetters with which he had been loaded. They were constantly hung up in his chamber, and he gave orders, that when he died they should be buried in his grave.

1501.] Meanwhile the spirit of discovery, notwithstanding the severe check which it had received by the ungenerous treatment of the man who first excited it in Spain, continued active and vigorous. [January] Rodrigo de Bastidas, a person of distinction, fitted out two ships in copartnership with John de la Cosa, who having served under the admiral in two of his voyages was deemed the most skilful pilot in Spain. They steered directly towards the continent, arrived on the coast of Paria, and, proceeding to the west, discovered all the coast of the province now known by the name of Tierra Firme, from Cape de Vela to the Gulf of Darien. Not long after Ojeda, with his former associate Amerigo Vespucci, set out upon a second voyage, and, being unacquainted with the destination of Bastidas, held the same course and touched at the same

places. The voyage of Bastidas was prosperous and lucrative, that of Ojeda unfortunate. But both tended to increase the ardor of discovery; for in proportion as the Spaniards acquired a more extensive knowledge of the American continent, their idea of its opulence and fertility increased.

Before these adventurers returned from their voyages, a fleet was equipped, at the public expense, for carrying over Ovando, the new governor, to Hispaniola. His presence there was extremely requisite, in order to stop the inconsiderate career of Bovadilla, whose imprudent administration threatened the settlement with ruin. Conscious of the violence and iniquity of his proceedings against Columbus, he continued to make it his sole object to gain the favor and support of his countrymen, by accommodating himself to their passions and prejudices. With this view, he established regulations in every point the reverse of those which Columbus deemed essential to the prosperity of the colony. Instead of the severe discipline necessary in order to habituate the dissolute and corrupted members of which the society was composed, to the restraints of law and subordination, he suffered them to enjoy such uncontrolled license as encouraged the wildest excesses. Instead of protecting the Indians, he gave a legal sanction to the oppression of that unhappy people. He took the exact number of such as survived their past calamities, divided them into distinct classes, distributed them in property among his adherents, and reduced all the people of the island to a state of complete servitude. As the avarice of the Spaniards was too rapacious and impatient to try any method of acquiring wealth but that of searching for gold, this servitude became as grievous as it was unjust. The Indians were driven in crowds to the mountains, and compelled to work in the mines, by masters who imposed their tasks without mercy or discretion. Labor so disproportioned to their strength and former habits of life, wasted that feeble race of men with such rapid consumption, as must have soon terminated in the utter extinction of the ancient inhabitants of the country.

The necessity of applying a speedy remedy to those disorders hastened Ovando's departure. He had the command of the most respectable armament hitherto fitted out for the New World. It consisted of thirty-two ships, on board of which two thousand five hundred persons embarked with an intention of settling in the country. [1502.] Upon the arrival of the new governor with this powerful reinforcement to the colony, Bovadilla resigned his charge, and was commanded to return instantly to Spain, in order to answer for his conduct. Roldan and the other ringleaders of the mutineers, who had been most active in opposing Columbus, were required to leave the island at the same time. A proclamation was issued, declaring the natives to be free subjects of Spain, of whom no service was to be expected contrary to their own inclination, and without paying them an adequate price for their labor. With respect to the Spaniards themselves, various regulations were made, tending to suppress the licentious spirit which had been so fatal to the colony, and to establish that reverence for law and order on which society is founded, and to which it is indebted for its increase and stability. In order to limit the exorbitant gain which private persons were supposed to make by working the mines, an ordinance was published, directing all the gold to be brought to a public smelting-house, and declaring one-half of it to be the property of the crown.

While these steps were taking for securing the tranquillity and welfare of the colony which Columbus had planted, he himself was engaged in the unpleasant employment of soliciting the favor of an ungrateful court, and notwithstanding all his merit and services, he solicited in vain. He demanded, in terms of the original capitulation in one thousand four hundred and ninety-two, to be reinstated in his office of viceroy over the countries which he had discovered. By a strange fatality, the circumstance which he urged in support of his claim, determined a jealous monarch to reject it. The greatness of his discoveries, and the prospect of their increasing value, made Ferdinand consider the concessions in the capitulation as extravagant and impolitic. He was afraid of intrusting a subject with the exercise of a jurisdiction that now appeared to be so extremely extensive, and might grow to be no less formidable. He inspired Isabella with the same suspicions; and under various pretexts, equally frivolous and unjust, they eluded all Columbus's requisitions to perform that which a solemn compact bound them to accomplish. After attending the court of Spain for

near two years, as an humble suitor, he found it impossible to remove Ferdinand's prejudices and apprehensions; and perceived at length that he labored in vain, when he urged a claim of justice or merit with an interested and unfeeling prince.

But even this ungenerous return did not discourage him from pursuing the great object which first called forth his inventive genius, and excited him to attempt discovery. To open a new passage to the East Indies was his original and favorite scheme. This still engrossed his thoughts; and either from his own observations in his voyage to Paria, or from some obscure hint of the natives, or from the accounts given by Bastidas and de la Cosa of their expedition, he conceived an opinion that beyond the continent of America there was a sea which extended to the East Indies, and hoped to find some strait or narrow neck of land, by which a communication might be opened with it and the part of the ocean already known. By a very fortunate conjecture, he supposed this strait or isthmus to be situated near the Gulf of Darien. Full of this idea, though he was now of an advanced age, worn out with fatigue, and broken with infirmities, he offered, with the alacrity of a youthful adventurer, to undertake a voyage which would ascertain this important point, and perfect the grand scheme which from the beginning he proposed to accomplish. Several circumstances concurred in disposing Ferdinand and Isabella to lend a favorable ear to this proposal. They were glad to have the pretext of any honorable employment for removing from court a man with whose demands they deemed it impolitic to comply, and whose services it was indecent to neglect. Though unwilling to reward Columbus, they were not insensible of his merit, and from their experience of his skill and conduct, had reason to give credit to his conjectures, and to confide in his success. To these considerations, a third must be added of still more powerful influence. About this time the Portuguese fleet, under Cabral, arrived from the Indies; and by the richness of its cargo, gave the people of Europe a more perfect idea than they had hitherto been able to form, of the opulence and fertility of the East. The Portuguese had been more fortunate in their discoveries than the Spaniards. They had opened a communication with countries where industry, arts, and elegance flourished; and where commerce had been longer established, and carried to greater extent than in any region of the earth. Their first voyages thither yielded immediate as well as vast returns of profit, in commodities extremely precious and in great request. Lisbon became immediately the seat of commerce and wealth; while Spain had only the expectation of remote benefit, and of future gain from the western world. Nothing, then, could be more acceptable to the Spaniards than Columbus's offer to conduct them to the East, by a route which he expected to be shorter, as well as less dangerous than that which the Portuguese had taken. Even Ferdinand was roused by such a prospect and warmly approved of the undertaking.

But interesting as the object of this voyage was to the nation, Columbus could procure only four small barks, the largest of which did not exceed seventy tons in burden, for performing it. Accustomed to brave danger, and to engage in arduous undertakings with inadequate force, he did not hesitate to accept the command of this pitiful squadron. His brother Bartholomew, and his second son Ferdinand, the historian of his actions, accompanied him. He sailed from Cadiz on the ninth of May, and touched, as usual, at the Canary islands; from thence he proposed to have stood directly for the continent; but his largest vessel was so clumsy and unfit for service, as constrained him to bear away for Hispaniola, in hopes of exchanging her for some ship of the fleet that had carried out Ovando. When he arrived at St. Domingo [June 29], he found eighteen of these ships ready loaded, and on the point of departing for Spain. Columbus immediately acquainted the governor with the destination of his voyage, and the accident which had obliged him to alter his route. He requested permission to enter the harbor, not only that he might negotiate the exchange of his ship, but that he might take shelter during a violent hurricane, of which he discerned the approach from various prognostics which his experience and sagacity had taught him to observe. On that account, he advised him likewise to put off for some days the departure of the fleet bound for Spain. But Ovando refused his request, and despised his counsel. Under circumstances in which humanity would have afforded refuge to a stranger, Columbus was denied admittance into a country of which he had discovered the existence and acquired the possession. His salary

warning, which merited the greatest attention, was regarded as the dream of a visionary prophet, who arrogantly pretended to predict an event beyond the reach of human foresight. The fleet set sail for Spain. Next night the hurricane came on with dreadful impetuosity. Columbus, aware of the danger, took precautions against it, and saved his little squadron. The fleet destined for Spain met with the fate which the rashness and obstinacy of its commanders deserved. Of eighteen ships two or three only escaped. In this general wreck perished Bovadilla, Roldan, and the greater part of those who had been the most active in persecuting Columbus, and oppressing the Indians. Together with themselves, all the wealth which they had acquired by their injustice and cruelty was swallowed up. It exceeded in value two hundred thousand pesos; an immense sum at that period, and sufficient not only to have screened them from any severe scrutiny into their conduct, but to have secured them a gracious reception in the Spanish court. Among the ships that escaped, one had on board all the effects of Columbus which had been recovered from the ruins of his fortune. Historians, struck with the exact discrimination of characters, as well as the just distribution of rewards and punishments, conspicuous in those events, universally attribute them to an immediate interposition of Divine Providence, in order to avenge the wrongs of an injured man, and to punish the oppressors of an innocent people. Upon the ignorant and superstitious race of men, who were witnesses of this occurrence, it made a different impression. From an opinion which vulgar admiration is apt to entertain with respect to persons who have distinguished themselves by their sagacity and inventions, they believed Columbus to be possessed of supernatural powers, and imagined that he had conjured up this dreadful storm by magical art and incantations in order to be avenged of his enemies.

Columbus soon left Hispaniola [July 14], where he met with such an inhospitable reception, and stood towards the continent. After a tedious and dangerous voyage, he discovered Guania, an island not far distant from the coast of Honduras. There he had an interview with some inhabitants of the continent, who arrived in a large canoe. They appeared to be a people more civilized, and who had made greater progress in the knowledge of useful arts than any whom he had hitherto discovered. In return to the inquiries which the Spaniards made, with their usual eagerness, concerning the places where the Indians got the gold which they wore by way of ornament, they directed them to countries situated to the west, in which gold was found in such profusion that it was applied to the most common uses. Instead of steering in quest of a country so inviting, which would have conducted him along the coast of Yucatan to the rich empire of Mexico, Columbus was so bent upon his favorite scheme of finding out the strait which he supposed to communicate with the Indian ocean, that he bore away to the east towards the gulf of Darien. In this navigation he discovered all the coast of the continent, from Cape Gracias a Dios to a harbor which, on account of its beauty and security, he called Porto Bello. He searched in vain for the imaginary strait, through which he expected to make his way into an unknown sea; and though he went on shore several times, and advanced into the country, he did not penetrate so far as to cross the narrow isthmus which separates the Gulf of Mexico from the great Southern ocean. He was so much delighted, however, with the fertility of the country, and conceived such an idea of its wealth from the specimens of gold produced by the natives, that he resolved to leave a small colony upon the river Belen, in the province of Veragua, under the command of his brother, and to return himself to Spain [1503], in order to procure what was requisite for rendering the establishment permanent. But the ungovernable spirit of the people under his command, deprived Columbus of the glory of planting the first colony on the continent of America. Their insolence and rapaciousness provoked the natives to take arms; and as these were a more hardy and warlike race of men than the inhabitants of the islands, they cut off part of the Spaniards, and obliged the rest to abandon a station which was found to be untenable.

This repulse, the first that the Spaniards met with from any of the American nations, was not the only misfortune that befell Columbus; it was followed by a succession of all the disasters to which navigation is exposed. Furious hurricanes with violent storms of thunder and lightning, threatened his leaky vessels with destruction; while his discontented crew, ex-

hausted with fatigue, and destitute of provisions, was unwilling or unable to execute his commands. One of his ships perished; he was obliged to abandon another, as unfit for service; and with the two which remained, he quitted that part of the continent, which, in his anguish, he named the Coast of Vexation, and bore away for Hispaniola. New distresses awaited him in his voyage. He was driven back by a violent tempest from the coast of Cuba, his ships fell foul of one another, and were so much shattered by the shock that with the utmost difficulty they reached Jamaica [June 24], where he was obliged to run them aground, to prevent them from sinking. The measure of his calamities seemed now to be full. He was cast ashore upon an island at a considerable distance from the only settlement of the Spaniards in America. His ships were ruined beyond the possibility of being repaired. To convey an account of his situation to Hispaniola appeared impracticable; and without this it was in vain to expect relief. His genius, fertile in resources, and most vigorous in those perilous extremities when feeble minds abandon themselves to despair, discovered the only expedient which afforded any prospect of deliverance. He had recourse to the hospitable kindness of the natives, who, considering the Spaniards as beings of a superior nature, were eager, on every occasion, to minister to their wants. From them he obtained two of their canoes, each formed out of the trunk of a single tree hollowed with fire, and so misshapen and awkward as hardly to merit the name of boats. In these, which were fit only for creeping along the coast, or crossing from one side of a bay to another, Mendez, a Spaniard, and Fieschi, a Genoese, two gentlemen particularly attached to Columbus, gallantly offered to set out for Hispaniola, upon a voyage of above thirty leagues. This they accomplished in ten days, after surmounting incredible dangers, and enduring such fatigues, that several of the Indians who accompanied them sunk under it, and died. The attention paid to them by the governor of Hispaniola was neither such as their courage merited, nor the distress of the persons from whom they came required. Ovando, from a mean jealousy of Columbus, was afraid of allowing him to set foot in the island under his government. This ungenerous passion hardened his heart against every tender sentiment which reflection upon the services and misfortunes of that great man, or compassion for his own fellow-citizens, involved in the same calamities, must have excited. Mendez and Fieschi spent eight months in soliciting relief for their commander and associates, without any prospect of obtaining it.

During this period, various passions agitated the mind of Columbus and his companions in adversity. At first, the expectation of speedy deliverance, from the success of Mendez and Fieschi's voyage, cheered the spirits of the most desponding. After some time the most timorous began to suspect that they had miscarried in their daring attempt [1504]. At length, even the most sanguine concluded that they had perished. The ray of hope which had broke in upon them, made their condition appear now more dismal. Despair, heightened by disappointment, settled in every breast. Their last resource had failed, and nothing remained but the prospect of ending their miserable days among naked savages, far from their country and their friends. The seamen, in a transport of rage, rose in open mutiny, threatened the life of Columbus, whom they reproached as the author of all their calamities, seized ten canoes, which they had purchased from the Indians, and, despising his remonstrances and entreaties, made off with them to a distant part of the island. At the same time the natives murmured at the long residence of the Spaniards in their country. As their industry was not greater than that of their neighbors in Hispaniola, like them they found the burden of supporting so many strangers to be altogether intolerable. They began to bring in provisions with reluctance, they furnished them with a sparing hand, and threatened to withdraw those supplies altogether. Such a resolution must have been quickly fatal to the Spaniards. Their safety depended upon the good will of the Indians; and unless they could revive the admiration and reverence with which that simple people had at first beheld them, destruction was unavoidable. Though the licentious proceedings of the mutineers had in a great measure effaced those impressions which had been so favorable to the Spaniards, the ingenuity of Columbus suggested a happy artifice, that not only restored but heightened the high opinion which the Indians had originally entertained of them. By his skill in astronomy, he knew that there was shortly to be a total eclipse of the moon. He assembled all the

principal persons of the district around him on the day before it happened, and, after reproaching them for their fickleness in withdrawing their affection and assistance from men whom they had lately revered, he told them, that the Spaniards were servants of the Great Spirit, who dwells in heaven, who made and governs the world; that he, offended at their refusal to support men who were the objects of his peculiar favor, was preparing to punish this crime with exemplary severity, and that very night the moon should withhold her light, and appear of a bloody hue, as a sign of the divine wrath and an emblem of the vengeance ready to fall upon them. To this marvellous prediction some of them listened with the careless indifference peculiar to the people of America; others, with the credulous astonishment natural to barbarians. But when the moon began gradually to be darkened, and at length appeared of a red color, all were struck with terror. They ran with consternation to their houses, and returning instantly to Columbus loaded with provisions, threw them at his feet, conjuring him to intercede with the Great Spirit to avert the destruction with which they were threatened. Columbus, seeming to be moved by their entreaties, promised to comply with their desire. The eclipse went off, the moon recovered its splendour, and from that day the Spaniards were not only furnished profusely with provisions, but the natives, with superstitious attention, avoided every thing that could give them offence.

During those transactions, the mutineers had made repeated attempts to pass over to Hispaniola in the canoes which they had seized. But, from their own misconduct or the violence of the winds and currents, their efforts were all unsuccessful. Enraged at this disappointment, they marched towards that part of the island where Columbus remained, threatening him with new insults and dangers. While they were advancing, an event happened, more cruel and afflicting than any calamity which he dreaded from them. The governor of Hispaniola, whose mind was still filled with some dark suspicions of Columbus, sent a small bark to Jamaica, not to deliver his distressed countrymen, but to spy out their condition. Lest the sympathy of those whom he employed should afford them relief, contrary to his intention, he gave the command of this vessel to Escobar, an inveterate enemy of Columbus, who, adhering to his instructions with malignant accuracy, cast anchor at some distance from the island, approached the shore in a small boat, observed the wretched plight of the Spaniards, delivered a letter of empty compliments to the admiral, received his answer, and departed. When the Spaniards first descried the vessel standing towards the island, every heart exulted, as if the long expected hour of their deliverance had at length arrived; but when it disappeared so suddenly, they sunk into the deepest dejection, and all their hopes died away. Columbus alone, though he felt most sensibly this wanton insult which Ovando added to his past neglect, retained such composure of mind as to be able to cheer his followers. He assured them that Mendez and Fieschi had reached Hispaniola in safety; that they would speedily procure ships to carry them off; but as Escobar's vessel could not take them all on board, that he had refused to go with her, because he was determined never to abandon the faithful companions of his distress. Soothed with the expectation of speedy deliverance, and delighted with his apparent generosity in attending more to their preservation than to his own safety, their spirits revived, and he regained their confidence.

Without this confidence he could not have resisted the mutineers, who were now at hand. All his endeavors to reclaim those desperate men had no effect but to increase their frenzy. Their demands became every day more extravagant, and their intentions more violent and bloody. The common safety rendered it necessary to oppose them with open force. Columbus, who had been long afflicted with the gout, could not take the field. His brother, the adelantado, marched against them [May 20]. They quickly met. The mutineers rejected with scorn terms of accommodation, which were once more offered them, and rushed on boldly to the attack. They fell not upon an enemy unprepared to receive them. In the first shock, several of their most daring leaders were slain. The adelantado, whose strength was equal to his courage, closed with their captain, wounded, disarmed, and took him prisoner. At sight of this, the rest fled with a dastardly fear suitable to their former insolence. Soon after, they submitted in a body to Columbus, and bound themselves by the most solemn oaths to obey all his commands. Hardly was tranquillity re-established

when the ships appeared, whose arrival Columbus had promised with great address, though he could foresee it with little certainty. With transports of joy the Spaniards quitted an island in which the unfeeling jealousy of Ovando had suffered them to languish above a year, exposed to misery in all its various forms.

When they arrived at St. Domingo [Aug. 13], the governor with the mean artifice of a vulgar mind, that labors to atone for insolence by servility, fawned on the man whom he envied, and had attempted to ruin. He received Columbus with the most studied respect, lodged him in his own house, and distinguished him with every mark of honor. But amidst these evaded demonstrations of regard, he could not conceal the hatred and malignity latent in his heart. He set at liberty the captain of the mutineers, whom Columbus had brought over in chains to be tried for his crimes; and threatened such as had adhered to the admiral with proceeding with a judicial inquiry into their conduct. Columbus submitted in silence to what he could not redress; but discovered an extreme impatience to quit a country which was under the jurisdiction of a man who had treated him, on every occasion, with inhumanity and injustice. His preparations were soon finished, and he set sail for Spain with two ships [Sept. 12]. Disasters similar to those which had accompanied him through life continued to pursue him to the end of his career. One of his vessels being disabled, was soon forced back to St. Domingo; the other, shattered by violent storms, sailed several hundred leagues with jury-masts, and reached with difficulty the port of St. Lucar [December].

There he received the account of an event the most fatal that could have befallen him, and which completed his misfortunes. This was the death of his patroness Queen Isabella [Nov. 9], in whose justice, humanity, and favor he confided as his last resource. None now remained to redress his wrongs, or to reward him for his services and sufferings, but Ferdinand, who had so long opposed and so often injured him. To solicit a prince thus prejudiced against him was an occupation no less irksome than hopeless. In this, however, was Columbus doomed to employ the close of his days. As soon as his health was in some degree re-established, he repaired to court; and though he was received there with civility barely decent, he plied Ferdinand with petition after petition, demanding the punishment of his oppressors, and the restitution of all the privileges bestowed upon him by the capitulation of one thousand four hundred and ninety-two. Ferdinand amused him with fair words and unmeaning promises. Instead of granting his claims, he proposed expedients in order to elude them, and spun out the affair with such apparent art, as plainly discovered his intention that it should never be terminated. The declining health of Columbus flattered Ferdinand with the hopes of being soon delivered from an importunate suitor, and encouraged him to persevere in this illiberal plan. Nor was he deceived in his expectations. Disgusted with ingratitude of a monarch whom he had served with such fidelity and success, exhausted with the fatigues and hardships which he had endured and broken with the infirmities which these had brought upon him, Columbus ended his life at Valladolid on the twentieth of May, one thousand five hundred and six, in the fifty-ninth year of his age. He died with a composure of mind suitable to the magnanimity which distinguished his character, and with sentiments of piety becoming that supreme respect for religion which he manifested in every occurrence of his life.

BOOK III.

State of the colony in Hispaniola—New war with the Indians—Cruelty of the Spaniards—Fatal regulations concerning the condition of the Indians—Diminution of that people—Discoveries and settlements—First colony planted on the Continent—Conquest of Cuba—Discovery of Florida—of the South Sea—Great expectations raised by this—Causes of disappointment with respect to these for some time—Controversy concerning the treatment of the Indians—Contrary decisions—Zeal of the ecclesiastics, particularly of Las Casas—Singular proceedings of Ximenes—Negroes imported into America—Las Casas' idea of a new colony—permitted to attempt it—unsuccessful—Discoveries towards the West—Yucatan—Campeachy—New Spain—preparations for invading it.

WHILE Columbus was employed in his last voyage, several events worthy of notice happened in Hispaniola. The colony there, the parent and nurse of all the subsequent establishments of Spain in the New World, gradually acquired the form of a regular and prosperous society. The humane solicitude of Isabella to protect the Indians from oppression, and particularly the proclamation by which the Spaniards were pro-

hibited to compel them to work, retarded, it is true for some time the progress of improvement. The natives, who considered exemption from toil as extreme felicity, scorned every allurements and reward by which they were invited to labor. The Spaniards had not a sufficient number of hands either to work the mines or to cultivate the soil. Several of the first colonists who had been accustomed to the service of the Indians, quitted the island, when deprived of these instruments, without which they knew not how to carry on any operation. Many of the new settlers who came over with Ovando, were seized with the distempers peculiar to the climate, and in a short space above a thousand of them died. At the same time, the exacting one-half of the product of the mines, as the royal share, was found to be a demand so exorbitant that no adventurers would engage to work them upon such terms. In order to save the colony from ruin, Ovando ventured to relax the rigor of the royal edicts [1505]. He made a new distribution of the Indians among the Spaniards, and compelled them to labor, for a stated time, in digging the mines, or in cultivating the ground; but in order to screen himself from the imputation of having subjected them again to servitude, he enjoined their masters to pay them a certain sum, as the price of their work. He reduced the royal share of the gold found in the mines from the half to the third part, and soon after lowered it to a fifth, at which it long remained. Notwithstanding Isabella's tender concern for the good treatment of the Indians, and Ferdinand's eagerness to improve the royal revenue, Ovando persuaded the court to approve of both these regulations.

But the Indians, after enjoying respite from oppression, though during a short interval, now felt the yoke of bondage to be so galling that they made several attempts to vindicate their own liberty. This the Spaniards considered as rebellion, and took arms in order to reduce them to subjection. When war is carried on between nations whose state of improvement is in any degree similar, the means of defence bear some proportion to those employed in the attack; and in this equal contest such efforts must be made, such talents are displayed, and such passions roused, as exhibit mankind to view in a situation no less striking than interesting. It is one of the noblest functions of history to observe and to delineate men at a juncture when their minds are most violently agitated, and all their powers and passions are called forth. Hence the operations of war, and the struggles between contending states, have been deemed by historians, ancient as well as modern, a capital and important article in the annals of human actions. But in a contest between naked savages, and one of the most warlike of the European nations, where science, courage, and discipline on one side, were opposed by ignorance, timidity, and disorder on the other, a particular detail of events would be as unpleasant as uninteresting. If the simplicity and innocence of the Indians had inspired the Spaniards with humanity, had softened the pride of superiority into compassion, and had induced them to improve the inhabitants of the New World, instead of oppressing them, some sudden acts of violence, like the too rigorous chastisements of impatient instructors, might have been related without horror. But, unfortunately, this consciousness of superiority operated in a different manner. The Spaniards were advanced so far beyond the natives of America in improvement of every kind, that they viewed them with contempt. They conceived the Americans to be animals of an inferior nature, who were not entitled to the rights and privileges of men. In peace they subjected them to servitude. In war they paid no regard to those laws which, by a tacit convention between contending nations, regulate hostility, and set some bounds to its rage. They considered them not as men fighting in defence of their liberty, but as slaves who had revolted against their masters. Their caziques, when taken, were condemned, like the leaders of banditti, to the most cruel and ignominious punishments; and all their subjects, without regarding the distinction of ranks established among them, were reduced to the same state of abject slavery. With such a spirit and sentiments were hostilities carried on against the cazique of Higüey, a province at the eastern extremity of the island. This was occasioned by the perfidy of the Spaniards, in violating a treaty which they had made with the natives, and it was terminated by hanging up the cazique, who defended his people with bravery so far superior to that of his countrymen, as entitled him to a better fate.

The conduct of Ovando, in another part of the island,

was still more treacherous and cruel. The province anciently named Xaragua, which extends from the fertile plain where Leogane is now situated to the western extremity of the island, was subject to a female cacique, named Anacoana, highly respected by the natives. She, from that partial fondness with which the women of America were attached to the Europeans (the cause of which shall be afterwards explained), had always courted the friendship of the Spaniards, and loaded them with benefits. But some of the adherents of Roldan having settled in her country, were so much exasperated at her endeavoring to restrain their excesses, that they accused her of having formed a plan to throw off the yoke, and to exterminate the Spaniards. Ovando, though he knew well what little credit was due to such profligate men, marched, without further inquiry, towards Xaragua, with three hundred foot and seventy horsemen. To prevent the Indians from taking alarm at this hostile appearance, he gave out that his sole intention was to visit Anacoana, to whom his countrymen had been so much indebted, in the most respectful manner, and to regulate with her the mode of levying the tribute payable to the king of Spain. Anacoana, in order to receive this illustrious guest, with due honor, assembled the principal men in her dominions, to the number of three hundred; and advancing at the head of these, accompanied by a great crowd of persons of inferior rank, she welcomed Ovando with songs and dances, according to the mode of the country, and conducted him to the place of her residence. There he was feasted for some days, with all the kindness of simple hospitality, and amused with the games and spectacles usual among the Americans upon occasions of mirth and festivity. But amidst the security which this inspired, Ovando was meditating the destruction of his unsuspecting entertainer and her subjects; and the mean perfidy with which he executed this scheme, equalled his barbarity in forming it. Under color of exhibiting to the Indians the parade of a European tournament, he advanced with his troops, in battle array, towards the house in which Anacoana and the chiefs who attended her were assembled. The infantry took possession of all the avenues which led to the village. The horsemen encompassed the house. These movements were the object of admiration, without any mixture of fear, until, upon a signal which had been concerted, the Spaniards suddenly drew their swords, and rushed upon the Indians, defenceless, and astonished at an act of treachery which exceeded the conception of undesigning men. In a moment Anacoana was secured. All her attendants were seized and bound. Fire was set to the house; and without examination or conviction, all these unhappy persons, the most illustrious in their own country, were consumed in the flames. Anacoana was reserved for a more ignominious fate. She was carried in chains to St. Domingo, and, after the formality of a trial before Spanish judges, she was condemned, upon the evidence of those very men who had betrayed her, to be publicly hanged.

Overawed and humbled by this atrocious treatment of their princes and nobles, who were objects of their highest reverence, the people in all the provinces of Hispaniola submitted, without further resistance to the Spanish yoke. Upon the death of Isabella all the regulations tending to mitigate the rigor of their servitude were forgotten. The small gratuity paid to them as the price of their labor was withdrawn, and at the same time the tasks imposed upon them were increased [1506]. Ovando, without any restraint, distributed Indians among his friends in the island. Ferdinand, to whom the queen had left by will one-half of the revenue arising from the settlements in the New World, conferred grants of a similar nature upon his courtiers, as the least expensive mode of rewarding their services. They farmed out the Indians, of whom they were rendered proprietors, to their countrymen settled in Hispaniola; and that wretched people, being compelled to labor in order to satisfy the rapacity of both, the exactions of their oppressors no longer knew any bounds. But, barbarous as their policy was, and fatal to the inhabitants of Hispaniola, it produced, for some time, very considerable effects. By calling forth the force of a whole nation, and exerting itself in one direction, the working of the mines was carried on with amazing rapidity and success. During several years the gold brought into the royal smelting-houses in Hispaniola amounted annually to four hundred and sixty thousand pesos, above a hundred thousand pounds sterling; which, if we attend to the great change in the value of money since the beginning of the sixteenth century to the present times, must appear a consider-

able sum. Vast fortunes were created, of a sudden, by some. Others dissipated, in ostentatious profusion, what they acquired with facility. Dazzled by both, new adventurers crowded to America, with the most eager impatience, to share in those treasures which had enriched their countrymen; and, notwithstanding the mortality occasioned by the unhealthiness of the climate, the colony continued to increase.

Ovando governed the Spaniards with wisdom and justice not inferior to the rigor with which he treated the Indians. He established equal laws; and, by executing them with impartiality, accustomed the people of the colony to reverence them. He founded several new towns in different parts of the island, and allured inhabitants to them by the concession of various immunities. He endeavored to turn the attention of the Spaniards to some branch of industry more useful than that of searching for gold in the mines. Some ships of the sugarcane having been brought from the Canary islands by way of experiment, they were found to thrive with such increase in the rich soil and warm climate to which they were transplanted, that the cultivation of them soon became an object of commerce. Extensive plantations were begun; sugarworks, which the Spaniards called *ingenios*, from the various machinery employed in them, were erected, and in a few years the manufacture of this commodity was the great occupation of the inhabitants of Hispaniola, and the most considerable source of their wealth.

The prudent endeavors of Ovando, to promote the welfare of the colony, were powerfully seconded by Ferdinand. The large remittances which he received from the New World opened his eyes, at length, with respect to the importance of these discoveries, which he had hitherto affected to undervalue. Fortune, and his own address, having now extricated him out of those difficulties in which he had been involved by the death of his queen [1507], and by his disputes with his son-in-law about the government of her dominions, he had full leisure to turn his attention to the affairs of America. To his provident sagacity Spain is indebted for many of those regulations which gradually formed that system of profound but jealous policy, by which she governs her dominions in the New World. He erected a court distinguished by the title of *Casa de Contratacion*, or Board of Trade, composed of persons eminent for rank and abilities, to whom he committed the administration of American affairs. This board assembled regularly in Seville, and was invested with a distinct and extensive jurisdiction. He gave a regular form to ecclesiastical government in America, by nominating archbishops, bishops, deans, together with clergymen of subordinate ranks, to take charge of the Spaniards established there, as well as of the natives who should embrace the Christian faith, but notwithstanding the obsequious devotion of the Spanish court to the papal see, such was Ferdinand's solicitude to prevent any foreign power from claiming jurisdiction, or acquiring influence, in his new dominions, that he reserved to the crown of Spain the sole right of patronage to the benefices in America, and stipulated that no papal bull or mandate should be promulgated there until it was previously examined and approved of by his council. With the same spirit of jealousy, he prohibited any goods to be exported to America, or any person to settle there without a special license from that council.

But, notwithstanding this attention to the police and welfare of the colony, a calamity impended which threatened its dissolution. The original inhabitants, on whose labor the Spaniards in Hispaniola depended for their prosperity, and even their existence, wasted so fast that the extinction of the whole race seemed to be inevitable. When Columbus discovered Hispaniola, the number of its inhabitants was computed to be at least a million. They were now reduced to sixty thousand in the space of fifteen years. This consumption of the human species, no less amazing than rapid, was the effect of several concurring causes. The natives of the American islands were of a more feeble constitution than the inhabitants of the other hemisphere. They could neither perform the same work nor endure the same fatigue with men whose organs were of a more vigorous conformation. The listless indolence in which they delighted to pass their days, as it was the effect of their debility, contributed likewise to increase it, and rendered them from habit, as well as constitution, incapable of hard labor. The food on which they subsisted afforded little nourishment, and they were accustomed to take it in small quantities, not sufficient to invigorate a languid frame, and render it equal to the efforts of active industry. The Spaniards, without attending to those peculiarities in the constitution of the Americans

imposed tasks upon them which, though not greater than Europeans might have performed with ease, were so disproportioned to their strength, that many sunk under the fatigue, and ended their wretched days. Others, prompted by impatience and despair, cut short their own lives with a violent hand. Famine, brought on by compelling such numbers to abandon the culture of their lands, in order to labor in the mines, proved fatal to many. Diseases of various kinds, some occasioned by the hardships to which they were exposed, and others by their intercourse with the Europeans, who communicated to them some of their peculiar maladies, completed the desolation of the island. The Spaniards, being thus deprived of the instruments which they were accustomed to employ, found it impossible to extend their improvements, or even to carry on the works which they had already begun [1508]. In order to provide an immediate remedy for an evil so alarming, Ovando proposed to transport the inhabitants of the Lucayo islands to Hispaniola, under pretence that they might be civilized with more facility, and instructed to greater advantage in the Christian religion, if they were united to the Spanish colony, and placed under the immediate inspection of the missionaries settled there. Ferdinand, deceived by this artifice, or willing to connive at an act of violence which policy represented as necessary, gave his assent to the proposal. Several vessels were fitted out for the Lucayos, the commanders of which informed the natives, with whose language they were now well acquainted, that they came from a delicious country, in which the departed ancestors of the Indians resided, by whom they were sent to invite their descendants to resort thither, to partake of the bliss enjoyed there by happy spirits. That simple people listened with wonder and credulity; and, fond of visiting their relations and friends in that happy region, followed the Spaniards with eagerness. By this artifice above forty thousand were decoyed into Hispaniola, to share in the sufferings which were the lot of the inhabitants of that island, and to mingle their groans and tears with those of that wretched race of men.

The Spaniards had, for some time, carried on their operations in the mines of Hispaniola with such ardor as well as success, that these seemed to have engrossed their whole attention. The spirit of discovery languished; and, since the last voyage of Columbus, no enterprise of any moment had been undertaken. But as the decrease of the Indians rendered it impossible to acquire wealth in that island with the same rapidity as formerly, this urged some of the more adventurous Spaniards to search for new countries, where their avarice might be gratified with more facility. Juan Ponce de Leon, who commanded under Ovando in the eastern district of Hispaniola, passed over to the island of St. Juan de Puerto Rico, which Columbus had discovered in his second voyage, and penetrated into the interior part of the country. As he found the soil to be fertile, and expected, from some symptoms, as well as from the information of the inhabitants, to discover mines of gold in the mountains, Ovando permitted him to attempt making a settlement in the island. This was easily effected by an officer eminent for conduct no less than for courage. In a few years Puerto Rico was subjected to the Spanish government, the natives were reduced to servitude; and being treated with the same inconsiderate rigor as their neighbors in Hispaniola, the race of original inhabitants, worn out with fatigue and sufferings, was soon exterminated.

About the same time Juan Diaz de Solis, in conjunction with Vincent Yanez Pinzon, one of Columbus's original companions, made a voyage to the continent. They held the same course which Columbus had taken as far as the island of Guanaos; but, standing from thence to the west, they discovered a new and extensive province, afterwards known by the name of Yucatan, and proceeded a considerable way along the coast of that country. Though nothing memorable occurred in this voyage, it deserves notice, because it led to discoveries of greater importance. For the same reason the voyage of Sebastian de Ocampo must be mentioned. By the command of Ovando he sailed round Cuba, and first discovered with certainty, that this country, which Columbus once supposed to be a part of the continent, was a large island.

This voyage round Cuba was one of the last occurrences under the administration of Ovando. Ever since the death of Columbus, his son, Don Diego, had been employed in soliciting Ferdinand to grant him the offices of viceroy and admiral in the New World, together with all the other immunities and profits which descended to him by inheritance, in consequence of the

original capitulation with his father. But if these dignities and revenues appeared so considerable to Ferdinand, that, at the expense of being deemed unjust as well as ungrateful, he had wrested them from Columbus, it was not surprising that he should be unwilling to confer them on his son. Accordingly Don Diego wasted two years in incessant but fruitless importunity. Wary of this, he endeavored at length to obtain by a legal sentence what he could not procure from the favor of an interested monarch. He commenced a suit against Ferdinand before the council which managed Indian affairs; and that court, with integrity which reflects honor upon its proceedings, decided against the king, and sustained Don Diego's claim of the vicereignty, together with all the other privileges stipulated in the capitulation. Even after this decree Ferdinand's repugnance to put a subject in possession of such extensive rights might have thrown in new obstacles, if Don Diego had not taken a step which interested very powerful persons in the success of his claims. The sentence of the council of the Indies gave him a title to a rank so elevated, and a fortune so opulent, that he found no difficulty in concluding a marriage with Donna Maria, daughter of Don Ferdinand de Toledo, great commander of Leon, and brother of the duke of Alva, a nobleman of the first rank, and nearly related to the king. The duke and his family espoused so warmly the cause of their new ally, that Ferdinand could not resist their solicitations [1509]. He recalled Ovando, and appointed Don Diego his successor, though even in conferring this favor he could not conceal his jealousy; for he allowed him to assume only the title of governor, not that of viceroy, which had been adjudged to belong to him.

Don Diego quickly repaired to Hispaniola, attended by his brother, his uncles, his wife, whom the courtesy of the Spaniards honored with the title of vice-queen, and a numerous retinue of persons of both sexes born of good families. He lived with a splendor and magnificence hitherto unknown in the New World; and the family of Columbus seemed now to enjoy the honors and rewards due to his inventive genius, of which he himself had been cruelly defrauded. The colony itself acquired new lustre by the accession of so many inhabitants, of a different rank and character from most of those who had hitherto migrated to America, and many of the most illustrious families in the Spanish settlements are descended from the persons who at that time accompanied Don Diego Columbus.

No benefits accrued to the unhappy natives from this change of governors. Don Diego was not only authorized by a royal edict to continue the *repartimientos*, or distribution of Indians, but the particular number which he might grant to every person, according to his rank in the colony, was specified. He availed himself of that permission; and soon after he landed at St. Domingo, he divided such Indians as were still unappropriated, among his relations and attendants.

The next care of the new governor was to comply with an instruction which he received from the king, about settling a colony in Cubagua, a small island which Columbus had discovered in his third voyage. Though this barren spot hardly yielded subsistence to its wretched inhabitants, such quantities of those oysters which produce pearls were found on its coast, that it did not long escape the inquisitive avarice of the Spaniards, and became a place of considerable resort. Large fortunes were acquired by the fishery of pearls, which was carried on with extraordinary ardor. The Indians, especially those from the Lucayo islands, were compelled to dive for them; and this dangerous and unhealthy employment was an additional calamity which contributed not a little to the extinction of that devoted race.

About this period, Juan Diaz de Solis and Pinzon set out, in conjunction, upon a second voyage. They stood directly south, towards the equinoctial line, which Pinzon had formerly crossed, and advanced as far as the fortieth degree of southern latitude. They were astonished to find that the continent of America stretched on their right hand through all this vast extent of ocean. They landed in different places, to take possession in name of their sovereign; but though the country appeared to be extremely fertile and inviting, their force was so small, having been fitted out rather for discovery than making settlements, that they left no colony behind them. Their voyage served, however, to give the Spaniards more exalted and adequate ideas with respect to the dimensions of this now quarter of the globe.

Though it was about ten years since Columbus had discovered the main land of America, the Spaniards had hitherto made no settlement in any part of it. What had been so long neglected was now seriously attempted, and with considerable vigor; though the plan for this purpose was neither formed by the crown, nor executed at the expense of the nation, but carried on by the enterprising spirit of private adventurers. The scheme took its rise from Alonso de Ojeda, who had already made two voyages as a discoverer, by which he acquired considerable reputation, but no wealth. But his character for intrepidity and conduct easily procured him associates, who advanced the money requisite to defray the charges of the expedition. About the same time, Diego de Nicuesa, who had acquired a large fortune in Hispaniola, formed a similar design. Ferdinand encouraged both; and though he refused to advance the smallest sum, he was extremely liberal of titles and patents. He erected two governments on the continent, one extending from Cape de Vela to the Gulf of Darien, and the other from that to Cape Gracias a Dios. The former was given to Ojeda, the latter to Nicuesa. Ojeda fitted out a ship and two brigantines, with three hundred men; Nicuesa six vessels with seven hundred and eighty men. They sailed about the same time from St. Domingo for their respective governments. In order to give their title to those countries some appearance of validity, several of the most eminent divines and lawyers in Spain were employed to prescribe the mode in which they should take possession of them. There is not in the history of mankind any thing more singular or extravagant than the form which they devised for this purpose. They instructed those invaders, as soon as they landed on the continent, to declare to the natives the principal articles of the Christian faith; to acquaint them in particular, with the supreme jurisdiction of the Pope over all the kingdoms of the earth; to inform them of the grant which this holy pontiff had made of their country to the king of Spain; to require them to embrace the doctrines of that religion which the Spaniards made known to them; and to submit to the sovereign whose authority they proclaimed. If the natives refused to comply with this requisition, the terms of which must have been utterly incomprehensible to uninstructed Indians, then Ojeda and Nicuesa were authorized to attack them with fire and sword; to reduce them, their wives and children, to a state of servitude; and to compel them by force to recognise the jurisdiction of the church, and the authority of the monarch, to which they would not voluntarily subject themselves. [23]

As the inhabitants of the country could not at once yield assent to doctrines too refined for their uncultivated understandings, and explained to them by interpreters imperfectly acquainted with their language; as they did not conceive how a foreign priest, of whom they had never heard, could have any right to dispose of their country, or how an unknown prince should claim jurisdiction over them as his subjects; they fiercely opposed the new invaders of their territories. Ojeda and Nicuesa endeavoured to effect by force what they could not accomplish by persuasion. The contemporary writers enter into a very minute detail in relating their transactions; but as they made no discovery of importance, nor established any permanent settlement, their adventures are not entitled to any considerable place in the general history of a period where romantic valor, struggling with incredible hardships, distinguishes every effort of the Spanish arms. They found the natives in those countries of which they went to assume the government, to be of a character very different from that of their countrymen in the islands. They were free and warlike. Their arrows were dipped in a poison so noxious, that every wound was followed with certain death. In one encounter they slew above seventy of Ojeda's followers, and the Spaniards, for the first time, were taught to dread the inhabitants of the New World. Nicuesa was opposed by people equally resolute in defence of their possessions. Nothing could soften their ferocity. Though the Spaniards employed every art to soothe them, and to gain their confidence, they refused to hold any intercourse, or to exchange any friendly office, with men whose residence among them they considered as fatal to their liberty and independence [1510]. This implacable enmity of the natives, though it rendered an attempt to establish a settlement in their country extremely difficult as well as dangerous, might have been surmounted at length by the perseverance of the Spaniards, by the superiority of their arms, and their skill in the art of war. But every disaster which can

be accumulated upon the unfortunate combined to complete their ruin. The loss of their ships by various accidents upon an unknown coast, the diseases peculiar to a climate the most noxious in all America, the want of provisions unavoidable in a country imperfectly cultivated, dissension among themselves, and the incessant hostilities of the natives, involved them in a succession of calamities, the bear recital of which strikes one with horror. Though they received two considerable reinforcements from Hispaniola, the greater part of those who had engaged in this unhappy expedition perished, in less than a year, in the most extreme misery. A few who survived settled as a feeble colony at Santa Maria el Antigua, on the Gulf of Darien, under the command of Vasco Nunez de Balboa, who, in the most desperate exigencies, displayed such courage and conduct as first gained the confidence of his countrymen, and marked him out as their leader in more splendid and successful undertakings. Nor was he the only adventurer in this expedition who will appear with lustre in more important scenes. Francisco Pizarro was one of Ojeda's companions, and in this school of adversity acquired or improved the talents which fitted him for the extraordinary actions which he afterwards performed. Hernan Cortes, whose name became still more famous, had likewise engaged early in this enterprise, which roused all the active youth of Hispaniola to arms; but the good fortune that accompanied him in his subsequent adventures interposed to save him from the disasters to which his companions were exposed. He was taken ill at St. Domingo before the departure of the fleet, and detained there by a tedious indisposition.

Notwithstanding the unfortunate issue of this expedition, the Spaniards were not deterred from engaging in new schemes of a similar nature. When wealth is acquired gradually by the persevering hand of industry, or accumulated by the slow operations of regular commerce, the means employed are so proportioned to the end attained, that there is nothing to strike the imagination, and little to urge on the active powers of the mind to uncommon efforts. But when large fortunes were created almost instantaneously; when gold and pearls were procured in exchange for baubles; when the countries which produced these rich commodities, defended only by naked savages, might be seized by the first bold invader; objects so singular and alluring roused a wonderful spirit of enterprise among the Spaniards, who rushed with ardor into this new path that was opened to wealth and distinction. While this spirit continued warm and vigorous, every attempt either towards discovery or conquest was applauded, and adventurers engaged in it with emulation. The passion for new undertakings, which characterizes the age of discovery in the latter part of the fifteenth and beginning of the sixteenth century, would alone have been sufficient to prevent the Spaniards from stopping short in their career. But circumstances peculiar to Hispaniola, at this juncture, concurred with it in extending their navigation and conquests. The rigorous treatment of the inhabitants of that island having almost extirpated the race, many of the Spanish planters, as I have already observed, finding it impossible to carry on their works with the same vigor and profit, were obliged to look out for settlements in some country where people were not yet wasted by oppression. Others, with the inconsiderate levity natural to men upon whom wealth pours in with a sudden flow, had squandered in thoughtless prodigality what they acquired with ease, and were driven by necessity to embark in the most desperate schemes, in order to retrieve their affairs. From all these causes, when Don Diego Columbus proposed [1511] to conquer the island of Cuba, and to establish a colony there, many persons of chief distinction in Hispaniola engaged with alacrity in the measure. He gave the command of the troops destined for that service to Diego Valasquez, one of his father's companions in his second voyage, and who, having been long settled in Hispaniola, had acquired an ample fortune, with such reputation for probity and prudence, that he seemed to be well qualified for conducting an expedition of importance. Three hundred men were deemed sufficient for the conquest of an island of above seven hundred miles in length, and filled with inhabitants. But they were of the same unwarlike character with the people of Hispaniola. They were not only intimidated by the appearance of their new enemies, but unprepared to resist them. For though, from the time that the Spaniards took possession of the adjacent island, there was reason to expect a descent on their territories, none of the small communities into which Cuba was di-

vided, had either made any provision for its own defence, or had formed any concert for their common safety. The only obstruction the Spaniards met with was from Hatuey, a cacique, who had fled from Hispaniola, and had taken possession of the eastern extremity of Cuba. He stood upon the defensive at their first landing, and endeavored to drive them back to their ships. His feeble troops, however, were soon broken and dispersed; and he himself being taken prisoner, Velasquez, according to the barbarous maxim of the Spaniards, considered him as a slave who had taken arms against his master, and condemned him to the flames. When Hatuey was fastened to the stake, a Franciscan friar, laboring to convert him, promised him immediate admittance into the joys of heaven, if he would embrace the Christian faith. "Are there any Spaniards," says he, after some pause, "in that region of bliss which you describe!—" Yes," replied the monk, "but only such as are worthy and good." "The best of them," returned the indignant cacique, "have neither worth nor goodness: I will not go to a place where I may meet with one of that accursed race." This dreadful example of vengeance struck the people of Cuba with such terror that they scarcely gave any opposition to the progress of their invaders; and Velasquez, without the loss of a man, annexed this extensive and fertile island to the Spanish monarchy.

The facility with which this important conquest was completed served as an incitement to other undertakings. Juan Ponce de Leon, having acquired both fame and wealth by the reduction of Puerto Rico, was impatient to engage in some new enterprise. He fitted out three ships at his own expense, for a voyage of discovery [1512], and his reputation soon drew together a respectable body of followers. He directed his course towards the Lucayo islands; and after touching at several of them, as well as of the Bahama isles, he stood to the south-west, and discovered a country hitherto unknown to the Spaniards, which he called Florida, either because he fell in with it on Palm Sunday, or on account of its gay and beautiful appearance. He attempted to land in different places, but met with such vigorous opposition from the natives, who were fierce and warlike, as convinced him that an increase of force was requisite to effect a settlement. Satisfied with having opened a communication with a new country, of whose value and importance he conceived very sanguine hopes, he returned to Puerto Rico through the channel now known by the name of the Gulf of Florida.

It was not merely the passion of searching for new countries that prompted Ponce de Leon to undertake this voyage; he was influenced by one of those visionary ideas, which at that time often mingled with the spirit of discovery, and rendered it more active. A tradition prevailed among the natives of Puerto Rico, that in the isle of Bimini, one of the Lucayos, there was a fountain of such wonderful virtue as to renew the youth and recall the vigor of every person who bathed in its salutary waters. In hopes of finding this grand restorative, Ponce de Leon and his followers ranged through the islands, searching with fruitless solicitude and labor for the fountain which was the chief object of their expedition. That a tale so fabulous should gain credit among simple and unenlightened Indians is not surprising. That it should make any impression upon an enlightened people appears in the present age altogether incredible. The fact, however, is certain; and the most authentic Spanish historians mention this extravagant sally of their credulous countrymen. The Spaniards at that period were engaged in a career of activity which gave a romantic turn to their imagination, and daily presented to them strange and marvellous objects. A New World was opened to their view. They visited islands and continents, of whose existence mankind in former ages had no conception. In those delightful countries nature seemed to assume another form: every tree and plant and animal was different from those of the ancient hemisphere. They seemed to be transported into enchanted ground; and after the wonders which they had seen, nothing, in the warmth and novelty of their admiration, appeared to them so extraordinary as to be beyond belief. If the rapid succession of new and striking scenes made such impression even upon the sound understanding of Columbus, that he boasted of having found the seat of Paradise, it will not appear strange that Ponce de Leon should dream of discovering the fountain of youth.

Soon after the expedition to Florida, a discovery of much greater importance was made in another part of America. Balboa having been raised to the government of the small colony at Santa Maria in Darien, by

the voluntary suffrage of his associates, was so extremely desirous to obtain from the crown a confirmation of their election, that he despatched one of his officers to Spain, in order to solicit a royal commission, which might invest him with a legal title to the supreme command. Conscious, however, that he could not expect success from the patronage of Ferdinand's ministers, with whom he was unconnected, or from negotiating in a court to the arts of which he was a stranger, he endeavored to merit the dignity to which he aspired, and aimed at performing some signal service that would secure him the preference to every competitor. Full of this idea, he made frequent inroads into the adjacent country, subdued several of the caciques, and collected a considerable quantity of gold, which abounded more in that part of the continent than in the islands. In one of those excursions, the Spaniards contended with such eagerness about the division of some gold, that they were at the point of proceeding to acts of violence against one another. A young cacique who was present, astonished at the high value which they set upon a thing of which he did not discern the use, tumbled the gold out of the balance with indignation; and turning to the Spaniards, "Why do you quarrel (says he) about such a trifle? If you are so passionately fond of gold, as to abandon your own country, and to disturb the tranquillity of distant nations for its sake, I will conduct you to a region where the metal which seems to be the chief object of your admiration and desire is so common that the meanest utensils are formed of it." Transported with what they heard, Balboa and his companions inquired eagerly where this happy country lay, and how they might arrive at it. He informed them that at the distance of six suns, that is, of six days' journey, towards the south, they should discover another ocean, near to which this wealthy kingdom was situated; but if they intended to attack that powerful state, they must assemble forces far superior in number and strength to those with which they now appeared.

This was the first information which the Spaniards received concerning the great southern ocean, or the opulent and extensive country known afterwards by the name of Peru. Balboa had now before him objects suited to his boundless ambition, and the enterprising ardor of his genius. He immediately concluded the ocean which the cacique mentioned, to be that for which Columbus had searched without success in this part of America, in hopes of opening a more direct communication with the East Indies; and he conjectured that the rich territory which had been described to him must be part of that vast and opulent region of the earth. Elated with the idea of performing what so great a man had attempted in vain, and eager to accomplish a discovery which he knew would be no less acceptable to the king than beneficial to his country, he was impatient until he could set out upon this enterprise, in comparison of which all his former exploits appeared inconsiderable. But previous arrangement and preparation were requisite to ensure success. He began with courting and securing the friendship of the neighboring caciques. He sent some of his officers to Hispaniola with a large quantity of gold, as a proof of his past success, and an earnest of his future hopes. By a proper distribution of this, they secured the favor of the governor, and allured volunteers into the service. A considerable reinforcement from that island joined him, and he thought himself in a condition to attempt the discovery.

The isthmus of Darien is not above sixty miles in breadth; but this neck of land which binds together the continents of North and South America, is strengthened by a chain of lofty mountains stretching through its whole extent, which render it a barrier of solidity sufficient to resist the impulse of two opposite oceans. The mountains are covered with forests almost inaccessible. The valleys in that moist climate where it rains during two-thirds of the year, are marshy, and so frequently overflowed that the inhabitants find it necessary, in many places, to build their houses upon trees, in order to be elevated at some distance from the damp soil, and the odious reptiles engendered in the putrid waters. Large rivers rush down with an impetuous current from the high grounds. In a region thinly inhabited by wandering savages, the hand of industry had done nothing to mitigate or correct those natural disadvantages. To march across this unexplored country with no other guides but Indians, whose fidelity could be little trusted, was, on all those accounts, the boldest enterprise on which the Spaniards had hitherto ventured in the New World. But the intrepidity of Balboa was such as distinguished him among his countrymen, at a period when every adventurer was conspi-

cuous for daring courage [1513]. Nor was bravery his only merit; he was prudent in conduct, generous, affable, and possessed of those popular talents which, in the most desperate undertakings, inspire confidence and secure attachment. Even after the junction of the volunteers from Hispaniola, he was able to muster only a hundred and ninety men for his expedition. But they were hardy veterans, inured to the climate of America, and ready to follow him through every danger. A thousand Indians attended them to carry their provisions; and, to complete their warlike array, they took with them several of those fierce dogs, which were no less formidable than destructive to their naked enemies.

Balboa set out upon this important expedition on the first of September, about the time that the periodical rains began to abate. He proceeded by sea, and without any difficulty, to the territories of a cacique whose friendship he had gained; but no sooner did he begin to advance into the interior part of the country, than he was retarded by every obstacle, which he had reason to apprehend, from the nature of the territory, or the disposition of its inhabitants. Some of the caciques, at his approach, fled to the mountains with all their people, and carried off or destroyed whatever could afford subsistence to his troops. Others collected their subjects, in order to oppose his progress; and he quickly perceived what an arduous undertaking it was to conduct such a body of men through hostile nations, across swamps, and rivers, and woods, which had never been passed but by straggling Indians. But by sharing in every hardship with the meanest soldier, by appearing the foremost to meet every danger, by promising confidently to his troops the enjoyment of honor and riches superior to what had been attained by the most successful of their countrymen, he inspired them with such enthusiastic resolution, that they followed him without murmuring. When they had penetrated a good way into the mountains, a powerful cacique appeared in a narrow pass, with a numerous body of his subjects, to obstruct their progress. But men who had surmounted so many obstacles, despised the opposition of such feeble enemies. They attacked them with impetuosity, and, having dispersed them with much ease and great slaughter, continued their march. Though their guides had represented the breadth of the isthmus to be only a journey of six days, they had already spent twenty-five in forcing their way through the woods and mountains. Many of them were ready to sink under such uninterrupted fatigue in that sultry climate, several were taken ill of the dysentery and other diseases frequent in that country, and all became impatient to reach the period of their labors and sufferings. At length the Indians assured them, that from the top of the next mountain they should discover the ocean which was the object of their wishes. When, with infinite toil, they had climbed up the greater part of that steep ascent, Balboa commanded his men to halt, and advanced alone to the summit, that he might be the first who should enjoy a spectacle which he had so long desired. As soon as he beheld the South Sea stretching in endless prospect below him, he fell on his knees, and, lifting up his hands to heaven, returned thanks to God, who had conducted him to a discovery so beneficial to his country, and so honorable to himself. His followers, observing his transports of joy, rushed forward to join in his wonder, exultation, and gratitude. They held on their course to the shore with great alacrity, when Balboa, advancing up to the middle in the waves with his buckler and sword, took possession of that ocean in the name of the king his master, and vowed to defend it with these arms, against all his enemies.

That part of the great Pacific or Southern ocean which Balboa first discovered, still retains the name of the Gulf of St. Michael, which he gave to it, and is situated to the east of Panama. From several of the petty princes, who governed in the districts adjacent to that gulf, he extorted provisions and gold by force of arms. Others sent them to him voluntarily. To these acceptable presents, some of the caciques added a considerable quantity of pearls; and he learned from them, with much satisfaction, that pearl oysters abounded in the sea which he had newly discovered.

Together with the acquisition of this wealth, which served to soothe and encourage his followers, he received accounts which confirmed his sanguine hopes of future and more extensive benefits from the expedition. All the people on the coast of the South Sea concurred in informing him that there was a mighty and opulent kingdom situated at a considerable distance towards the south-east, the inhabitants of which had tame animals to carry their burdens. In order to give the Sea-

niards an idea of these, they drew upon the sand the figure of the llamas or sheep, afterwards found in Peru, which the Peruvians had taught to perform such services as they described. As the llama in its form nearly resembles a camel, a beast of burden deemed peculiar to Asia, this circumstance in conjunction with the discovery of the pearls, another noted production of that country; tended to confirm the Spaniards in their mistaken theory with respect to the vicinity of the New World to the East Indies.

But though the information which Balboa received from the people on the coast, as well as his own conjectures and hopes, rendered him extremely impatient to visit this unknown country, his prudence restrained him from attempting to invade it with a handful of men exhausted by fatigue and weakened by diseases. [24] He determined to lead back his followers, at present, to their settlement of Santa Maria in Darien, and to return next season with a force more adequate to such an arduous enterprise. In order to acquire a more extensive knowledge of the isthmus, he marched back by a different route, which he found to be no less dangerous and difficult than that which he had formerly taken. But to men elated with success, and animated with hope, nothing is insurmountable. Balboa returned to Santa Maria [1514], from which he had been absent four months, with greater glory and more treasure than the Spaniards had acquired in any expedition in the New World. None of Balboa's officers distinguished themselves more in this service than Francisco Pizarro, or assisted with greater courage and ardor in opening a communication with those countries in which he was destined to act soon a more illustrious part.

Balboa's first care was to send information to Spain of the important discovery which he had made; and to demand a reinforcement of a thousand men, in order to attempt the conquest of that opulent country concerning which he had received such inviting intelligence. The first account of the discovery of the New World hardly occasioned greater joy than the unexpected tidings that a passage was at last found to the great southern ocean. The communication with the East Indies, by a course to the westward of the line of demarcation drawn by the Pope, seemed now to be certain. The vast wealth which flowed into Portugal, from its settlements and conquests in that country, excited the envy and called forth the emulation of other states. Ferdinand hoped now to come in for a share in this lucrative commerce, and, in his eagerness to obtain it, was willing to make an effort beyond what Balboa required. But even in this exertion, his jealous policy, as well as the fatal antipathy of Fonseca, now Bishop of Burgos, to every man of merit who distinguished himself in the New World, was conspicuous. Notwithstanding Balboa's recent services, which marked him out as the most proper person to finish that great undertaking which he had begun, Ferdinand was so ungenerous as to overlook these, and to appoint Pedrarias Davila governor of Darien. He gave him the command of fifteen stout vessels and twelve hundred soldiers. These were fitted out at the public expense, with a liberality which Ferdinand had never displayed in any former armament destined for the New World; and such was the ardor of the Spanish gentlemen to follow a leader who was about to conduct them to a country where, as fame reported, they had only to throw their nets into the sea and draw out gold, that fifteen hundred embarked on board the fleet, and, if they had not been restrained, a much greater number would have engaged in the service.

Pedrarias reached the Gulf of Darien without any remarkable accident, and immediately sent some of his principal officers ashore to inform Balboa of his arrival, with the king's commission to be governor of the colony. To their astonishment, they found Balboa, of whose great exploits they had heard so much, and of whose opulence they had formed such high ideas, clad in a canvass jacket, and wearing coarse hempen sandals used only by the meanest peasants, employed, together with some Indians, in thatching his own hut with reeds. Even in this simple garb, which corresponded so ill with the expectations and wishes of his new guests, Balboa received them with dignity. The fame of his discoveries had drawn so many adventurers from the islands, that he could now muster four hundred and fifty men. At the head of those daring veterans, he was more than a match for the forces which Pedrarias brought with him. But, though his troops murmured loudly at the injustice of the king in superseding their commander, and complained that strangers would now reap the fruits of their toil and success, Balboa submitted with implicit obedience to

the will of his sovereign, and received Pedrarias with all the deference due to his character.

Notwithstanding this moderation, to which Pedrarias owed the peaceable possession of his government, he appointed a judicial inquiry to be made into Balboa's conduct, while under the command of Nicuesa, and imposed a considerable fine upon him, on account of the irregularities of which he had then been guilty. Balboa felt sensibly the mortification of being subjected to trial and to punishment in a place where he had so lately occupied the first station. Pedrarias could not conceal his jealousy of his superior merit; so that the resentment of the one and the envy of the other gave rise to dissensions extremely detrimental to the colony. It was threatened with a calamity still more fatal. Pedrarias had landed in Darien at a most unlucky time of the year [July], about the middle of the rainy season, in that part of the torrid zone where the clouds pour down such torrents as are unknown in more temperate climates. The village of Santa Maria was seated in a rich plain, environed with marshes and woods. The constitution of Europeans was unable to withstand the pestilential influence of such a situation, in a climate naturally so noxious, and at a season so peculiarly unhealthy. A violent and destructive malady carried off many of the soldiers who accompanied Pedrarias. An extreme scarcity of provision augmented this distress, as it rendered it impossible to find proper refreshment for the sick, or the necessary sustenance for the healthy. In the space of a month, above six hundred persons perished in the utmost misery. Dejection and despair spread through the colony. Many principal persons solicited their dismissal, and were glad to relinquish all their hopes of wealth, in order to escape from that pernicious region. Pedrarias endeavored to divert those who remained from brooding over their misfortunes, by finding them employment. With this view, he sent several detachments into the interior parts of the country, to levy gold among the natives, and to search for the mines in which it was produced. Those rapacious adventurers, more attentive to present gain than to the means of facilitating their future progress, plundered without distinction wherever they marched. Regardless of the alliances which Balboa had made with several of the caziques, they stripped them of every thing valuable, and treated them, as well as their subjects, with the utmost insolence and cruelty. By their tyranny and exactions, which Pedrarias, either from want of authority or inclination, did not restrain, all the country from the Gulf of Darien to the lake of Nicaragua was desolated, and the Spaniards were inconsiderately deprived of the advantages which they might have derived from the friendship of the natives, in extending their conquests to the South Sea. Balboa, who saw with concern that such ill-judged proceedings retarded the execution of his favorite scheme, sent violent remonstrances to Spain against the imprudent government of Pedrarias, who had ruined a happy and flourishing colony. Pedrarias, on the other hand, accused him of having deceived the king, by magnifying his own exploits, as well as by a false representation of the opulence and value of the country.

Ferdinand became sensible at length of his imprudence in superseding the most active and experienced officer he had in the New World, and, by way of compensation to Balboa, appointed him *Adelantado*, or Lieutenant-Governor of the countries upon the South Sea, with very extensive privileges and authority. At the same time he enjoined Pedrarias to support Balboa in all his operations, and to consult with him concerning every measure which he himself pursued. [1515] But to effect such a sudden transition from inveterate enmity to perfect confidence, exceeded Ferdinand's power. Pedrarias continued to treat his rival with neglect; and Balboa's fortune being exhausted by the payment of his fine, and other exactions of Pedrarias, he could not make suitable preparations for taking possession of his new government. At length, by the interposition and exhortations of the Bishop of Darien, they were brought to a reconciliation; and, in order to cement this union more firmly, Pedrarias agreed to give his daughter in marriage to Balboa. [1516.] The first effect of their concord was, that Balboa was permitted to make several small incursions into the country. These he conducted with such prudence, as added to the reputation which he had already acquired. Many adventurers resorted to him, and, with the countenance and aid of Pedrarias, he began to prepare for his expedition to the South Sea. In order to accomplish this, it was necessary to build vessels capable of conveying his

troops to those provinces which he proposed to invade [1517.] After surmounting many obstacles, and enduring a variety of those hardships, which were the portion of the conquerors of America, he at length finished four small brigantines. In these, with three hundred chosen men, a force superior to that with which Pizarro afterwards undertook the same expedition, he was ready to sail towards Peru, when he received an unexpected message from Pedrarias. As his reconciliation with Balboa had never been cordial, the progress which his son-in-law was making revived his ancient enmity, and added to its rancour. He dreaded the prosperity and elevation of a man whom he had injured so deeply. He suspected that success would encourage him to aim at independence upon his jurisdiction; and so violently did the passions of hatred, fear, and jealousy operate upon his mind, that, in order to gratify his vengeance, he scrupled not to defeat an enterprise of the greatest moment to his country. Under pretexts which were false, but plausible, he desired Balboa to postpone his voyage for a short time, and to repair to Acla, in order that he might have an interview with him. Balboa, with the unsuspicious confidence of a man conscious of no crime, instantly obeyed the summons; but as soon as he entered the place, he was arrested by order of Pedrarias, whose impatience to satiate his revenge did not suffer him to languish long in confinement. Judges were immediately appointed to proceed to his trial. An accusation of disloyalty to the king, and of an intention to revolt against the governor was preferred against him. Sentence of death was pronounced; and though the judges who passed it, seconded by the whole colony, interceded warmly for his pardon, Pedrarias continued inexorable; and the Spaniards beheld, with astonishment and sorrow, the public execution of a man whom they universally deemed more capable than any one who had borne command in America, of forming and accomplishing great designs. Upon his death, the expedition which he had planned was relinquished. Pedrarias, notwithstanding the violence and injustice of his proceedings, was not only screened from punishment by the powerful patronage of the Bishop of Burgos and other courtiers, but continued in power. Soon after he obtained permission to remove the colony from its unwholesome station of Santa Maria to Panama, on the opposite side of the isthmus; and though it did not gain much in point of healthfulness by the change, the commodious situation of this new settlement contributed greatly to facilitate the subsequent conquests of the Spaniards in the extensive countries situated upon the Southern Ocean.

During these transactions in Darien [1515], the history of which it was proper to carry on in an uninterrupted tenor, several important events occurred with respect to the discovery, the conquest, and government of other provinces in the New World. Ferdinand was so intent upon opening a communication with the Molucca or Spice Islands by the west, that in the year one thousand five hundred and fifteen he fitted out two ships at his own expence, in order to attempt such a voyage, and gave the command of them to Juan Diaz de Solis, who was deemed one of the most skilful navigators in Spain. He stood along the coast of South America, and on the first of January, one thousand five hundred and sixteen, entered a river which he called Janeiro, where an extensive commerce is now carried on. From thence he proceeded to a spacious bay, which he supposed to be the entrance into a strait that communicated with the Indian Ocean; but, upon advancing further, he found it to be the mouth of Rio de la Plata, one of the vast rivers by which the southern continent of America is watered. In endeavoring to make a descent in this country, De Solis and several of his crew were slain by the natives, who, in sight of the ships, cut their bodies in pieces, roasted and devoured them. Discouraged with the loss of their commander, and terrified at this shocking spectacle, the surviving Spaniards set sail for Europe, without aiming at any further discovery. Though this attempt proved abortive, it was not without benefit. It turned the attention of ingenious men to this course of navigation, and prepared the way for a more fortunate voyage, by which, a few years posterior to this period, the great design that Ferdinand had in view was accomplished.

Though the Spaniards were thus actively employed in extending their discoveries and settlements in America, they still considered Hispaniola as their principal colony, and the seat of government. Don Diego Columbus wanted neither inclination nor abilities to have rendered the members of this colony, who were most immediately under his jurisdiction, prosperous and happy. But he was circumscribed in all his operations

by the auspicious policy of Ferdinand, who on every occasion, and under pretexts the most frivolous, retrenched his privileges, and encouraged the treasurer, the judges, and other subordinate officers to counteract his measures, and to dispute his authority. The most valuable prerogative which the governor possessed was that of distributing Indians among the Spaniards settled in the island. The rigorous servitude of those unhappy men having been but little mitigated by all the regulations in their favor, the power of parceling out such necessary instruments of labor at pleasure, secured to the governor great influence in the colony. In order to strip him of this, Ferdinand created a new office, with the power of distributing the Indians, and bestowed it upon Rodrigo Albuquerque, a relation of Zapata, his confidential minister. Mortified with the injustice as well as indignity of this invasion upon his rights, in a point so essential, Don Diego could no longer remain in a place where his power and consequence were almost annihilated. He repaired to Spain with the vain hopes of obtaining redress. Albuquerque entered upon his office with all the rapacity of an indigent adventurer impatient to amass wealth. He began with taking the exact number of Indians in the island, and found that from sixty thousand, who in the year one thousand five hundred and eight survived after all their sufferings, they were now reduced to fourteen thousand. These he threw into separate divisions or lots, and bestowed them upon such as were willing to purchase them at the highest price. By this arbitrary distribution several of the natives were removed from their original habitations, many were taken from their ancient masters, and all of them subjected to heavier burdens, and to more intolerable labor, in order to reimburse their new proprietors. Those additional calamities completed the misery, and hastened on the extinction of this wretched and innocent race of men.

The violence of these proceedings, together with the fatal consequences which attended them, not only excited complaints among such as thought themselves aggrieved, but touched the hearts of all who retained any sentiments of humanity. From the time that ecclesiastics were sent as instructors into America, they perceived that the rigor with which their countrymen treated the natives, rendered their ministry altogether fruitless. The missionaries, in conformity to the mild spirit of that religion which they were employed to publish, early remonstrated against the maxims of the planters with respect to the Americans, and condemned the *repartimientos*, or distributions, by which they were given up as slaves to their conquerors as no less contrary to natural justice and the precepts of Christianity than to sound policy. The Dominicans, to whom the instruction of the Americans was originally committed, were most vehement in testifying against the *repartimientos*. In the year one thousand five hundred and eleven, Montesino, one of their most eminent preachers, inveighed against this practice, in the great church of St. Domingo, with all the impetuosity of popular eloquence. Don Diego Columbus, the principal officer of the colony, and all the laymen who had been his hearers, complained of the monk to his superiors; but they, instead of condemning, applauded his doctrine as equally pious and seasonable. The Franciscans, influenced by the spirit of opposition and rivalry which subsists between the two orders, discovered some inclination to take part with the laity, and to espouse the defence of the *repartimientos*. But as they could not with decency give their avowed approbation to a system of oppression so repugnant to the spirit of religion, they endeavored to palliate what they could not justify, and alleged, in excuse for the conduct of their countrymen, that it was impossible to carry on any improvement in the colony, unless the Spaniards possessed such dominion over the natives that they could compel them to labor.

The Dominicans, regardless of such political and interested considerations, would not relax in any degree the rigor of their sentiments, and even refused to absolve, or admit to the sacrament, such of their countrymen as continued to hold the natives in servitude. Both parties applied to the king for his decision in a matter of such importance. Ferdinand empowered a committee of his privy council, assisted by some of the most eminent civilians and divines in Spain, to hear the deputies sent from Hispaniola in support of their respective opinions. After a long discussion, the speculative point in controversy was determined in favor of the Dominicans, the Indians were declared to be a free people entitled to all the natural rights of men; but notwithstanding this decision, the *repartimientos* were continued upon their ancient footing. As this deter-

mination admitted the principles upon which the Dominicans founded their opinion, they renewed their efforts to obtain relief for the Indians with additional boldness and zeal. At length, in order to quiet the colony, which was alarmed at their remonstrances and censures, Ferdinand issued a decree of his privy council [1513], declaring, that after mature consideration of the Apostolical Bull, and other titles by which the crown of Castile claimed a right to its possessions in the New World, the servitude of the Indians was warranted both by the laws of God and of man; that unless they were subjected to the dominion of the Spaniards, and compelled to reside under their inspection, it would be impossible to reclaim them from idolatry, or to instruct them in the principles of the Christian faith; that no farther scruple ought to be entertained concerning the lawfulness of the *repartimientos*, as the king and council were willing to take the charge of that upon their own consciences; and that therefore the Dominicans and monks of other religious orders should abstain for the future from those invectives which, from an excess of charitable but ill-informed zeal, they had uttered against that practice.

That his intention of adhering to this decree might be fully understood, Ferdinand conferred new grants of Indians upon several of his courtiers [25]. But, in order that he might not seem altogether inattentive to the rights of humanity, he published an edict, in which he endeavored to provide for the mild treatment of the Indians under the yoke to which he subjected them; he regulated the nature of the work which they should be required to perform; he prescribed the mode in which they should be clothed and fed, and gave directions with respect to their instructions in the principles of Christianity.

But the Dominicans, who from their experience of what was past judged concerning the future, soon perceived the inefficacy of those provisions, and foretold, that as long as it was the interest of individuals to treat the Indians with rigor, no public regulations could render their servitude mild or tolerable. They considered it as vain, to waste their own time and strength in attempting to communicate the sublime truths of religion to men whose spirits were broken and their faculties impaired by oppression. Some of them in despair, requested the permission of their superiors to remove to the continent, and to pursue the object of their mission among such of the natives as were not hitherto corrupted by the example of the Spaniards, or alienated by their cruelty from the Christian faith. Such as remained in Hispaniola continued to remonstrate, with decent firmness, against the servitude of the Indians.

The violent operations of Albuquerque, the new distributor of Indians, revived the zeal of the Dominicans against the *repartimientos*, and called forth an advocate for that oppressed people, who possessed all the courage, the talents, and activity requisite in supporting such a desperate cause. This was Bartholemew de las Casas, a native of Seville, and one of the clergymen sent out with Columbus in his second voyage to Hispaniola, in order to settle in that island. He early adopted the opinion prevalent among ecclesiastics, with respect to the unlawfulness of reducing the natives to servitude; and that he might demonstrate the sincerity of his conviction, he relinquished all the Indians who had fallen to his own share in the division of the inhabitants among their conquerors, declaring that he should ever bewail his own misfortune and guilt, in having exercised for a moment this impious dominion over his fellow-creatures. From that time he became the avowed patron of the Indians; and by his bold interpositions in their behalf, as well as by the respect due to his abilities and character, he had often the merit of setting some bounds to the excesses of his countrymen. He did not fail to remonstrate warmly against the proceedings of Albuquerque; and though he soon found that attention to his own interest rendered this rapacious officer deaf to admonition, he did not abandon the wretched people whose cause he had espoused. He instantly set out for Spain, with the most sanguine hopes of opening the eyes and softening the heart of Ferdinand, by that striking picture of the oppression of his new subjects which he would exhibit to his view.

He easily obtained admittance to the king, whom he found in a declining state of health. With much freedom, and no less eloquence, he represented to him, all the fatal effects of the *repartimientos* in the New World, boldly charging him with the guilt of having authorized this impious measure, which had brought misery and destruction upon a numerous and innocent race of men, whom Providence had placed under his

protection. Ferdinand, whose mind as well as body was much enfeebled by his distemper, was greatly alarmed at this charge of impiety, which at another juncture he would have despised. He listened with deep compunction to the discourses of Las Casas, and promised to take into serious consideration the means of redressing the evil of which he complained. But death prevented him from executing his resolution. Charles of Austria, to whom all his crowns devolved, resided at that time in his paternal dominions in the Low Countries. Las Casas, with his usual ardor, prepared immediately to set out for Flanders, in order to occupy the ear of the young monarch, when Cardinal Ximenes, who, as Regent, assumed the reins of government in Castile, commanded him to desist from the journey, and engaged to hear his complaints in person.

He accordingly weighed the matter with attention equal to its importance; and as his impetuous mind delighted in schemes bold and uncommon, he soon fixed upon a plan which astonished the ministers trained up under the formal and cautious administration of Ferdinand. Without regarding either the rights of Don Diego Columbus, or the regulations established by the late king, he resolved to send three persons to America as superintendents of all the colonies there, with authority, after examining all circumstances on the spot, to decide finally with respect to the point in question. It was a matter of deliberation and delicacy to choose men qualified for such an important station. As all the laymen settled in America, or who had been consulted in the administration of that department, had given their opinion that the Spaniards could not keep possession of their new settlements, unless they were allowed to retain their dominion over the Indians, he saw that he could not rely on their impartiality, and determined to commit the trust to ecclesiastics. As the Dominicans and Franciscans had already espoused opposite sides in the controversy, he, from the same principle of impartiality, excluded both these fraternities from the commission. He confined his choice to the monks of St. Jerome, a small but respectable order in Spain. With the assistance of their general, and in concert with Las Casas, he soon pitched upon three persons whom he deemed equal to the charge. To them he joined Zuazo, a private lawyer of distinguished probity, with unbounded power to regulate all judicial proceedings in the colonies. Las Casas was appointed to accompany them with the title of protector of the Indians.

To vest such extraordinary powers, as might at once overturn the system of government established in the New World, in four persons, who, from their humble condition in life, were little entitled to possess this high authority, appeared to Zapata, and other ministers of the late king, a measure so wild and dangerous, that they refused to issue the despatches necessary for carrying it into execution. But Ximenes was not of a temper patiently to brook opposition to any of his schemes. He sent for the refractory ministers, and addressed them in such a tone that in the utmost consternation they obeyed his orders. The superintendents, with their associates Zuazo and Las Casas, sailed for St. Domingo. Upon their arrival, the first act of their authority was to set at liberty all the Indians who had been granted to the Spanish courtiers, or to any person not residing in America. This, together with the information which had been received from Spain concerning the object of the commission, spread a general alarm. The colonists concluded that they were to be deprived at once of the hands with which they carried on their labor, and that, of consequence, ruin was unavoidable. But the fathers of St. Jerome proceeded with such caution and prudence as soon dissipated all their fears. They discovered, in every step of their conduct, a knowledge of the world, and of affairs, which is seldom acquired in a cloister; and displayed a moderation as well as gentleness still more rare among persons trained up in the solitude and austerity of a monastic life. Their ears were open to information from every quarter; they compared the different accounts which they received; and, after a mature consideration of the whole, they were fully satisfied that the state of the colony rendered it impossible to adopt the plan proposed by Las Casas, and recommended by the Cardinal. They plainly perceived that the Spaniards settled in America were so few in number, that they could neither work the mines which had been opened, nor cultivate the country; that they depended for effecting both upon the labor of the natives, and, if deprived of it, they must instantly relinquish their conquests, or give up all the advantages which

they derived from them; that no allurements was so powerful as to surmount the natural aversion of the Indians to any laborious effort, and that nothing but the authority of a master could compel them to work; and if they were not kept constantly under the eye and discipline of a superior, so great was their natural listlessness and indifference, that they would neither attend to religious instruction, nor observe those rites of Christianity which they had been already taught. Upon all those accounts, the superintendents found it necessary to tolerate the *repartimientos*, and to suffer the Indians to remain under subjection to their Spanish masters. They used their utmost endeavors, however, to prevent the fatal effects of this establishment, and to secure to the Indians the consolation of the best treatment compatible with a state of servitude. For this purpose, they revived former regulations, they prescribed new ones, they neglected no circumstance that tended to mitigate the rigor of the yoke; and by their authority, their example, and their exhortations, they labored to inspire their countrymen with sentiments of equity and gentleness towards the unhappy people upon whose industry they depended. Zuazo, in his department, seconded the endeavors of the superintendents. He reformed the courts of justice in such a manner as to render their decisions equitable as well as expeditious, and introduced various regulations which greatly improved the interior policy of the colony. The satisfaction which his conduct and that of the superintendents gave was now universal among the Spaniards settled in the New World; and all admired the boldness of Ximenes in having departed from the ordinary path of business in forming his plan, as well as his sagacity in pitching upon persons whose wisdom, moderation, and disinterestedness rendered them worthy of this high trust.

Las Casas alone was dissatisfied. The prudential consideration which influenced the superintendents made no impression upon him. He regarded their idea of accommodating their conduct to the state of the colony, as the maxim of an unhallored timid policy, which tolerated what was unjust because it was beneficial. He contended that the Indians were by nature free, and, as their protector, he required the superintendents not to bereave them of the common privilege of humanity. They received his most virulent remonstrances without emotion, but adhered firmly to their own system. The Spanish planters did not bear with him so patiently, and were ready to tear him in pieces for insisting in a requisition so odious to them. Las Casas, in order to screen himself from their rage, found it necessary to take shelter in a convent; and perceiving that all his efforts in America were fruitless, he soon set out for Europe, with a fixed resolution not to abandon the protection of a people whom he deemed to be cruelly oppressed.

Had Ximenes retained that vigor of mind with which he usually applied to business, Las Casas must have met with no very gracious reception upon his return to Spain. But he found the Cardinal languishing under a mortal distemper, and preparing to resign his authority to the young king, who was daily expected from the Low Countries. Charles arrived, took possession of the government, and, by the death of Ximenes, lost a minister whose abilities and integrity entitled him to direct his affairs. Many of the Flemish nobility had accompanied their sovereign to Spain. From that warm predilection to his countrymen, which was natural at his age, he consulted them with respect to all the transactions in his new kingdom; and they, with an indiscreet eagerness, intruded themselves into every business, and seized almost every department of administration. The direction of American affairs was an object too alluring to escape their attention. Las Casas observed their growing influence; and though projectors are usually too sanguine to conduct their schemes with much dexterity, he possessed a bustling, indefatigable activity, which sometimes accomplishes its purposes with greater success than the most exquisite discernment and address. He courted the Flemish ministers with assiduity. He represented to them the absurdity of all the maxims hitherto adopted with respect to the government of America, particularly during the administration of Ferdinand, and pointed out the defects of those arrangements which Ximenes had introduced. The memory of Ferdinand was odious to the Flemings. The superior virtues and abilities of Ximenes had long been the object of their envy. They fondly wished to have a plausible pretext for condemning the measures both of the monarch and of the minister, and of reflecting some discredit on their political wisdom. The friends of Don Diego Columbus,

as well as the Spanish courtiers who had been dissatisfied with the Cardinal's administration, joined Las Casas in censuring the scheme of sending superintendents to America. This union of so many interests and passions was irresistible; and in consequence of it the fathers of St. Jerome, together with their associate Zuazo, were recalled. Rodrigo de Figueroa, a lawyer of some eminence, was appointed chief judge of the island, and received instructions, in compliance with the request of Las Casas, to examine once more, with the utmost attention, the point in controversy between him and the people of the colony, with respect to the treatment of the natives: and in the mean time to do every thing in his power to alleviate their sufferings, and to prevent the extinction of the race.

This was all that the zeal of Las Casas could procure at that juncture in favor of the Indians. The impossibility of carrying on any improvements in America, unless the Spanish planters could command the labor of the natives, was an insuperable objection to his plan of treating them as free subjects. In order to provide some remedy for this, without which he found it was in vain to mention his scheme, Las Casas proposed to purchase a sufficient number of negroes from the Portuguese settlements on the coast of Africa, and to transport them to America, in order that they might be employed as slaves in working the mines and cultivating the ground. One of the first advantages which the Portuguese had derived from their discoveries in Africa arose from the trade in slaves. Various circumstances concurred in reviving this odious commerce, which had been long abolished in Europe, and which is no less repugnant to the feelings of humanity than to the principles of religion. As early as the year one thousand five hundred and three, a few negro slaves had been sent into the New World. In the year one thousand five hundred and eleven, Ferdinand permitted the importation of them in greater numbers. They were found to be a more robust and hardy race than the natives of America. They were more capable of enduring fatigue, more patient under servitude, and the labor of one negro was computed to be equal to that of four Indians. Cardinal Ximenes, however, when solicited to encourage this commerce, peremptorily rejected the proposition, because he perceived the iniquity of reducing one race of men to slavery, while he was consulting about the means of restoring liberty to another. But Las Casas, from the inconsistency natural to men who hurry with headlong impetuosity towards a favorite point, was incapable of making this distinction. While he contended earnestly for the liberty of the people born in one quarter of the globe, he labored to enslave the inhabitants of another region; and in the warmth of his zeal to save the Americans from the yoke, pronounced it to be lawful and expedient to impose one still heavier upon the Africans. Unfortunately for the latter, Las Casas's plan was adopted. Charles granted a patent to one of his Flemish favorites, containing an exclusive right of importing four thousand negroes into America. The favorite sold his patent to some Genoese merchants for twenty-five thousand ducats, and they were the first who brought into a regular form that commerce for slaves between Africa and America, which has since been carried on to such an amazing extent.

But the Genoese merchants [1518], conducting their operations, at first, with the rapacity of monopolists, demanded such a high price for negroes, that the number imported into Hispaniola made no great change upon the state of the colony. Las Casas, whose zeal was no less inventive than indefatigable, had recourse to another expedient for the relief of the Indians. He observed, that most of the persons who had settled hitherto in America, were sailors and soldiers employed in the discovery or conquest of the country; the younger sons of noble families, allured by the prospect of acquiring sudden wealth; or desperate adventurers, whom their indigence or crimes forced to abandon their native land. Instead of such men, who were dissolute, rapacious, and incapable of that sober persevering industry which is requisite in forming new colonies, he proposed to supply the settlements in Hispaniola and other parts of the New World with a sufficient number of laborers and husbandmen, who should be allured by suitable premiums to remove thither. These, as they were accustomed to fatigue, would be able to perform the work to which the Indians, from the feebleness of their constitution, were unequal, and might soon become useful and opulent citizens. But though Hispaniola stood much in need of a recruit of inhabitants, having been visited at this time with the small-pox, which swept off almost all the natives who had survived their

long continued oppression; and though Las Casas had the countenance of the Flemish ministers, this scheme was defeated by the bishop of Burgos, who thwarted all his projects.

Las Casas now despaired of procuring any relief for the Indians in those places where the Spaniards were already settled. The evil was become so inveterate there as not to admit of a cure. But such discoveries were daily making in the continent as gave a high idea both of its extent and populousness. In all those vast regions there was but one feeble colony planted; and except a small spot on the isthmus of Darien, the natives still occupied the whole country. This opened a new and more ample field for the humanity and zeal of Las Casas, who flattered himself that he might prevent a pernicious system from being introduced there, though he had failed of success in his attempts to overturn it where it was already established. Full of this idea, he applied for a grant of the unoccupied country stretching along the seacoast from the Gulf of Paria to the western frontier of that province now known by the name of Santa Martha. He proposed to settle there with a colony composed of husbandmen, laborers, and ecclesiastics. He engaged in the space of two years to civilize ten thousand of the natives, and to instruct them so thoroughly in the arts of social life, that from the fruits of their industry an annual revenue of fifteen thousand ducats should arise to the king. In ten years he expected that his improvements would be so far advanced as to yield annually sixty thousand ducats. He stipulated, that no soldier or sailor should ever be permitted to settle in this district; and that no Spaniard whatever should enter it without his permission. He even projected to clothe the people whom he took along with him in some distinguishing garb, which did not resemble the Spanish dress, that they might appear to the natives to be a different race of men from those who had brought so many calamities upon their country. From this scheme, of which I have traced only the great lines, it is manifest that Las Casas had formed ideas concerning the method of treating the Indians, similar to those by which the Jesuits afterwards carried on their great operations in another part of the same continent. He supposed that the Europeans, by availing themselves of that ascendancy which they possessed in consequence of their superior progress in science and improvement, might gradually form the minds of Americans to relish those comforts of which they were destitute, might train them to the arts of civil life, and render them capable of its functions.

But to the bishop of Burgos, and the council of the Indies, this project appeared not only chimerical, but dangerous in a high degree. They deemed the faculties of the Americans to be naturally so limited, and their indolence so excessive, that every attempt to instruct or to improve them would be fruitless. They contended, that it would be extremely imprudent to give the command of a country extending above a thousand miles along the coast to a fanciful presumptuous enthusiast, a stranger to the affairs of the world, and unacquainted with the arts of government. Las Casas, far from being discouraged with a repulse, which he had reason to expect, had recourse once more to the Flemish favorites, who zealously patronised his scheme merely because it had been rejected by the Spanish ministers. They prevailed with their master, who had lately been raised to the Imperial dignity, to refer the consideration of this measure to a select number of his privy counsellors; and Las Casas having excepted against the members of the council of the Indies, as partial and interested they were all excluded. The decision of men chosen by recommendation of the Flemings was perfectly conformable to their sentiments. They warmly approved of Las Casas's plan, and gave orders for carrying it into execution, but restricted the territory allotted him to three hundred miles along the coast of Cumana; allowing him, however, to extend it as far as he pleased towards the interior part of the country.

This determination did not pass uncensured. Almost every person who had been in the West Indies exclaimed against it, and supported their opinion so confidently, and with such plausible reasons, as made it advisable to pause and to review the subject more deliberately. Charles himself, though accustomed, at this early period of his life, to adopt the sentiments of his ministers with such submissive deference as did not promise that decisive vigor of mind which distinguished his riper years, could not help suspecting that the eagerness with which the Flemings took part in every affair flowed from some improper motive, and began to discover an inclination to examine in person into the state

of the question concerning the character of the Americans, and the proper manner of treating them. An opportunity of making this inquiry with great advantage soon occurred [June 20]. Quevedo, the bishop of Darien, who had accompanied Pedrarias to the continent in the year one thousand five hundred and thirteen, happened to land at Barcelona, where the court then resided. It was quickly known that his sentiments concerning the talents and disposition of the Indians differed from those of Las Casas: and Charles naturally concluded that by confronting two respectable persons who, during their residence in America, had full leisure to observe the manners of the people whom they pretended to describe, he might be able to discover which of them had formed his opinion with the greatest discernment and accuracy.

A day for this solemn audience was appointed. The emperor appeared with extraordinary pomp, and took his seat on a throne in the great hall of the palace. His principal courtiers attended. Don Diego Columbus, admiral of the Indies, was summoned to be present. The bishop of Darien was called upon first to deliver his opinion. He, in a short discourse, lamented the fatal desolation of America by the extinction of so many of its inhabitants; he acknowledged that this must be imputed, in some degree, to the extensive rigor and inconsiderate proceedings of the Spaniards; but declared that all the people of the New World whom he had seen either in the continent or in the islands, appeared to him to be a race of men marked out, by the inferiority of their talents, for servitude, and whom it would be impossible to instruct or improve, unless they were kept under the continual inspection of a master. Las Casas, at greater length and with more fervor, defended his own system. He rejected with indignation the idea that any race of men was born to servitude as irreligious and inhuman. He asserted that the faculties of the Americans were not naturally despicable, but unimproved; that they were capable of receiving instruction in the principles of religion, as well as of acquiring the industry and arts which would qualify them for the various offices of social life, that the mildness and timidity of their nature rendered them so submissive and docile, that they might be led and formed with a gentle hand. He professed that his intentions in proposing the scheme now under consideration were pure and disinterested; and though from the accomplishment of his designs inestimable benefits would result to the crown of Castile, he never had claimed, nor ever would receive, any recompense on that account.

Charles, after hearing both, and consulting with his ministers, did not think himself sufficiently informed to establish any general arrangement with respect to the state of the Indians; but as he had perfect confidence in the integrity of Las Casas, and as even the bishop of Darien admitted his scheme to be of such importance that a trial should be made of its effects, he issued a patent [1522], granting him the district of Cumana formerly mentioned, with full power to establish a colony there according to his own plan.

Las Casas pushed on the preparations for his voyage with his usual ardor. But, either from his own inexperience in the conduct of affairs, or from the secret opposition of the Spanish nobility, who universally dreaded the success of an institution that might rob them of the industrious and useful hands which cultivated their estates, his progress in engaging husbandmen and laborers was extremely slow, and he could not prevail on more than two hundred to accompany him to Cumana.

Nothing, however, could damp his zeal. With this slender train, hardly sufficient to take possession of such a large territory, and altogether unequal to any effectual attempt towards civilizing its inhabitants, he set sail. The first place at which he touched was the island of Puerto Rico. There he received an account of a new obstacle to the execution of his scheme, more insuperable than any he had hitherto encountered. When he left America, in the year one thousand five hundred and sixteen, the Spaniards had little intercourse with any part of the continent except the countries adjacent to the Gulf of Darien. But as every species of internal industry began to stagnate in Hispaniola, when, by the rapid decrease of the natives, the Spaniards were deprived of those hands with which they had hitherto carried on their operations, this prompted them to try various expedients for supplying that loss. Considerable numbers of negroes were imported; but, on account of their exorbitant price, many of the planters could not afford to purchase them. In order to procure slaves at an easier rate,

some of the Spaniards in Hispaniola fitted out vessels to cruise along the coast of the continent. In places where they found themselves inferior in strength, they traded with the natives, and gave European toys in exchange for the plates of gold worn by them as ornaments; but, whenever they could surprise or overpower the Indians, they carried them off by force, and sold them as slaves. In those predatory excursions such atrocious acts of violence and cruelty had been committed, that the Spanish name was held in detestation all over the continent. Whenever any ships appeared, the inhabitants either fled to the woods, or rushed down to the shore in arms to repel those hated disturbers of their tranquillity. They forced some parties of the Spaniards to retreat with precipitation; they cut off others; and in the violence of their resentment against the whole nation, they murdered two Dominican missionaries, whose zeal had prompted them to settle in the province of Cumana. This outrage against persons revered for their sanctity excited such indignation among the people of Hispaniola, who, notwithstanding all their licentious and cruel proceedings, were possessed with a wonderful zeal for religion, and a superstitious respect for its ministers, that they determined to inflict exemplary punishment, not only upon the perpetrators of that crime, but upon the whole race. With this view, they gave the command of five ships and three hundred men to Diego Ocampo, with orders to lay waste the country of Cumana with fire and sword, and to transport all the inhabitants as slaves to Hispaniola. This armament Las Casas found at Puerto Rico, on its way to the continent; and as Ocampo refused to defer his voyage, he immediately perceived that it would be impossible to attempt the execution of his pacific plan in a country destined to be the seat of war and desolation.

In order to provide against the effects of this unfortunate incident, he set sail directly for St. Domingo [April 11], leaving his followers cantoned out among the planters in Puerto Rico. From many concurring causes, the reception which Las Casas met with in Hispaniola was very unfavorable. In his negotiations for the relief of the Indians, he had censured the conduct of his countrymen, settled there with such honest severity as rendered him universally odious to them. They considered their own ruin as the inevitable consequence of his success. They were now elated with hope of receiving a large recruit of slaves from Cumana, which must be relinquished if Las Casas were assisted in settling his projected colony there. Figueroa, in consequence of the instructions which he had received in Spain, had made an experiment concerning the capacity of the Indians, that was represented as decisive against the system of Las Casas. He collected in Hispaniola a good number of the natives, and settled them in two villages, leaving them at perfect liberty, and with the uncontrolled direction of their own actions. But that people, accustomed to a mode of life extremely different from that which takes place wherever civilization has made any considerable progress, were incapable of assuming new habits at once. Dejected with their own misfortunes as well as those of their country they exerted so little industry in cultivating the ground, appeared so devoid of solicitude or foresight in providing for their own wants, and were such strangers to arrangement in conducting their affairs, that the Spaniards pronounced them incapable of being formed to live like men in social life, and considered them as children, who should be kept under the perpetual tutelage of persons superior to themselves in wisdom and sagacity.

Notwithstanding all those circumstances, which alienated the persons in Hispaniola to whom Las Casas applied from himself and from his measures, he, by his activity and perseverance, by some concessions and many threats, obtained at length a small body of troops to protect him and his colony at their first landing. But upon his return to Puerto Rico, he found that the diseases of the climate had been fatal to several of his people; and that others having got employment in that island, refused to follow him. With the handful that remained, he set sail and landed in Cumana. Ocampo had executed his commission in that province with such barbarous rage, having massacred many of the inhabitants, sent others in chains to Hispaniola, and forced the rest to fly for shelter to the woods, that the people of a small colony, which he had planted at a place which he named *Toledo*, were ready to perish for want in a desolated country. There, however, Las Casas was obliged to fix his residence, though deserted both by the troops appointed to protect him, and by those under the command of Ocampo, who foresaw and dreaded the calamities

ties to which he must be exposed in that wretched station. He made the best provision in his power for the safety and subsistence of his followers, but as his utmost efforts availed little towards securing either the one or the other, he returned to Hispaniola, in order to solicit more effectual aid for the preservation of men who, from confidence in him, had ventured into a post of so much danger. Soon after his departure, the natives, having discovered the feeble and defenceless state of the Spaniards, assembled secretly, attacked them with the fury natural to men exasperated by many injuries, cut off a good number, and compelled the rest to fly in the utmost consternation to the island of Cubagua. The small colony settled there on account of the pearl fishery, catching the panic with which their countrymen had been seized, abandoned the island, and not a Spaniard remained in any part of the continent, or adjacent islands, from the Gulf of Paria to the borders of Darien. Astonished at such a succession of disasters, Las Casas was ashamed to show his face after this fatal termination of all his splendid schemes. He shut himself up in the convent of the Dominicans at St. Domingo, and soon after assumed the habit of that order.

Though the expulsion of the colony from Cumana happened in the year one thousand five hundred and twenty-one, I have chosen to trace the progress of Las Casas's negotiations from their first rise to their final issue without interruption. His system was the object of long and attentive discussion; and though his efforts in behalf of the oppressed Americans, partly from his own rashness and imprudence, and partly from the malevolent opposition of his adversaries, were not attended with that success which he promised with too sanguine confidence, great praise is due to his humane activity, which gave rise to various regulations that were of some benefit to that unhappy people. I return now to the history of the Spanish discoveries as they occur in the order of time.

Diego Velasquez, who conquered Cuba in the year one thousand five hundred and eleven, still retained the government of that island, as the deputy of Don Diego Columbus, though he seldom acknowledged his superior, and aimed at rendering his own authority altogether independent. Under his prudent administration, Cuba became one of the most flourishing of the Spanish settlements. The fame of this allured thither many persons from the other colonies, in hopes of finding either some permanent establishment or some employment for their activity. As Cuba lay to the west of all the islands occupied by the Spaniards, and as the ocean which stretches beyond it towards that quarter had not hitherto been explored, these circumstances naturally invited the inhabitants to attempt new discoveries. An expedition for this purpose, in which activity and resolution might conduct to sudden wealth, was more suited to the genius of the age than the patient industry requisite in clearing ground and manufacturing sugar. Instigated by this spirit, several officers, who had served under Pedrarias in Darien, entered into an association to undertake a voyage of discovery. They persuaded Francisco Hernandez Cordova, an opulent planter in Cuba, and a man of distinguished courage, to join with them in the adventure, and chose him to be their commander. Velasquez not only approved of the design, but assisted in carrying it on. As the veterans from Darien were extremely indigent, he and Cordova advanced money for purchasing three small vessels, and furnished them with every thing requisite either for traffic or for war. A hundred and ten men embarked on board of them, and sailed from St. Jago de Cuba, on the eighth of February, one thousand five hundred and seventeen. By the advice of their chief pilot, Antonio Alaminos, who had served under the first admiral Columbus, they stood directly west, relying on the opinion of that great navigator, who uniformly maintained that a westerly course would lead to the most important discoveries.

On the twenty-first day after their departure from St. Jago, they saw land, which proved to be *Cape Catoche*, the eastern point of that large peninsula projecting from the continent of America, which still retains its original name of *Yucatan*. As they approached the shore, five canoes came off full of people decently clad in cotton garments; an astonishing spectacle to the Spaniards, who had found every other part of America possessed by naked savages. Cordova endeavored by small presents to gain the good will of these people. They, though amazed at the strange objects now presented for the first time to their view, invited the Spaniards to visit their habitations, with an appearance of cordiality. They landed accordingly, and as they advanced into the country, they observed with new won-

der some large houses built with stone. But they soon found that, if the people of Yucatan had made progress in improvement beyond their countrymen, they were likewise more artful and warlike. For though the cazique had received Cordova with many tokens of friendship, he had posted a considerable body of his subjects in ambush behind a thicket, who, upon a signal given by him, rushed out and attacked the Spaniards with great boldness, and some degree of martial order. At the first flight of their arrows, fifteen of the Spaniards were wounded; but the Indians were struck with such terror by the sudden explosion of the fire arms, and so surprised at the execution done by them, by the cross bows, and by the other weapons of their new enemies, that they fled precipitately. Cordova quitted a country where he had met with such a fierce reception, carrying off two prisoners, together with the ornaments of a small temple which he plundered in his retreat.

He continued his course towards the west, without losing sight of the coast, and on the sixteenth day arrived at Campeachy. There the natives received them more hospitably; but the Spaniards were much surprised, that on all the extensive coast along which they had sailed, and which they imagined to be a large island, they had not observed any river. [26.] As their water had begun to fail, they advanced, in hopes of finding a supply; and at length they discovered the mouth of a river at Potonchan, some leagues beyond Campeachy.

Cordova landed all his troops, in order to protect the sailors while employed in filling the casks; but notwithstanding this precaution, the natives rushed down upon them with such fury and in such numbers, that forty-seven of the Spaniards were killed upon the spot, and one man only of the whole body escaped unhurt. Their commander, though wounded in twelve different places, directed the retreat with presence of mind equal to the courage with which he had led them on in the engagement, and with much difficulty they regained their ships. After this fatal repulse, nothing remained but to hasten back to Cuba with their shattered forces. In their passage thither they suffered the most exquisite distress for want of water, that men, wounded and sickly, shut up in small vessels, and exposed to the heat of the torrid zone, can be supposed to endure. Some of them, sinking under these calamities, died by the way: Cordova, their commander, expired soon after they landed in Cuba.

Notwithstanding the disastrous conclusion of this expedition, it contributed rather to animate than to damp a spirit of enterprise among the Spaniards. They had discovered an extensive country, situated at no great distance from Cuba, fertile in appearance, and possessed by a people far superior in improvement to any hitherto known in America. Though they had carried on little commercial intercourse with the natives, they had brought off some ornaments of gold, not considerable in value, but of singular fabric. These circumstances, related with the exaggeration natural to men desirous of heightening the merit of their own exploits, were more than sufficient to excite romantic hopes and expectations. Great numbers offered to engage in a new expedition. Velasquez, solicitous to distinguish himself by some service so meritorious as might entitle him to claim the government of Cuba independent of the admiral, not only encouraged their ardor, but at his own expense fitted out four ships for the voyage. Two hundred and forty volunteers, among whom were several persons of rank and fortune, embarked in this enterprise. The command of it was given to Juan de Grijalva, a young man of known merit and courage, with instructions to observe attentively the nature of the countries which he should discover, to barter for gold, and, if circumstances were inviting, to settle a colony in some proper station. He sailed from St. Jago de Cuba on the eighth of April, one thousand five hundred and eighteen. The pilot, Alaminos, held the same course as in the former voyage: but the violence of the currents carrying the ships to the south, the first land which they made was the island of *Cozumel*, to the east of Yucatan. As all the inhabitants fled to the woods and mountains at the approach of the Spaniards, they made no long stay there, and without any remarkable occurrence they reached Potonchan on the opposite side of the peninsula. The desire of avenging their countrymen, who had been slain there, concurred with their ideas of good policy, in prompting them to land, that they might chastise the Indians of that district with such exemplary rigor as would strike terror into all the people round them. But though they disembarked all their troops, and carried ashore some field pieces, the Indians fought with such courage, that the Spaniards

gained the victory with difficulty, and were confined in their opinion that the inhabitants of this country would prove more formidable enemies than any they had met with in other parts of America. From Potonchan they continued their voyage towards the west, keeping as near as possible to the shore, and casting anchor every evening, from dread of the dangerous accidents to which they might be exposed in an unknown sea. During the day their eyes were turned continually towards land, with a mixture of surprise and wonder at the beauty of the country, as well as the novelty of the objects which they beheld. Many villages were scattered along the coast, in which they could distinguish houses of stone that appeared white and lofty at a distance. In the warmth of their admiration, they fancied these to be cities adorned with towers and pinnacles; and one of the soldiers happening to remark that this country resembled Spain in appearance, Grijalva, with universal applause, called it *New Spain*, the name which still distinguishes this extensive and opulent province of the Spanish empire in America [27.] They landed in a river which the natives called *Tabasco* [June 9]; and the fame of their victory at Potonchan having reached this place, the cazique not only received them amicably, but bestowed presents upon them of such value, as confirmed the high ideas which the Spaniards had formed with respect to the wealth and fertility of the country. These ideas were raised still higher by what occurred at the place where they next touched. This was considerably to the west of Tabasco, in the province since known by the name of Guaxaca. There they were received with the respect paid to superior beings. The people perfumed them, as they landed, with incense of gum copal, and presented to them as offerings the choicest delicacies of their country. They were extremely fond of trading with their new visitants, and in six days the Spaniards obtained ornaments of gold of curious workmanship, to the value of fifteen thousand pesos, in exchange for European toys of small price. The two prisoners whom Cordova had brought from Yucatan, had hitherto served as interpreters; but as they did not understand the language of this country, the Spaniards learned from the natives by signs, that they were subjects of a great monarch called Montezuma, whose dominions extended over that and many other provinces. Leaving this place, with which he had so much reason to be pleased, Grijalva continued his course towards the west. He landed on a small island [June 19], which he named the Isle of Sacrifices, because there the Spaniards beheld, for the first time, the horrid spectacle of human victims, which the barbarous superstition of the natives offered to their gods. He touched at another small island, which he called St. Juan de Ulua. From this place he despatched Pedro de Alvarado, one of his officers, to Velasquez, with a full account of the important discoveries which he had made, and with all the treasure that he acquired by trafficking with the natives. After the departure of Alvarado, he himself, with the remaining vessels, proceeded along the coast as far as the river Panuco, the country still appearing to be well peopled, fertile, and opulent.

Several of Grijalva's officers contended that it was not enough to have discovered those delightful regions, or to have performed, at their different landing-places, the empty ceremony of taking possession of them for the crown of Castile, and that their glory was incomplete, unless they planted a colony in some proper station, which might not only secure the Spanish nation a footing in the country, but with the reinforcements which they were certain of receiving, might gradually subject the whole to the dominion of their sovereign. But the squadron had now been above five months at sea; the greatest part of their provisions was exhausted, and what remained of their stores so much corrupted by the heat of the climate, as to be almost unfit for use; they had lost some men by death; others were sickly; the country was crowded with people who seemed to be intelligent as well as brave; and they were under the government of one powerful monarch, who could bring them to act against their invaders with united force. To plant a new colony under so many circumstances of disadvantage, appeared a scheme too perilous to be attempted. Grijalva, though possessed of ambition and courage, was destitute of the superior talents capable of forming or executing such a great plan. He judged it more prudent to return to Cuba, having fulfilled the purpose of his voyage, and accomplished all that the armament which he commanded enabled him to perform. He returned to St. Jago de Cuba, on the twenty-sixth of October, from which he had taken his departure about six months before.

This was the longest as well as the most successful voyage which the Spaniards had hitherto made in the New World. They had discovered that Yucatan was not an island as they had supposed, but part of the great continent of America. From Potonchan they had pursued their course for many hundred miles along a coast formerly unexplored, stretching first towards the west, and then turning to the north; all the country which they had discovered appeared to be no less valuable than extensive. As soon as Alvarado reached Cuba, Velasquez, transported with success so far beyond his most sanguine expectations, immediately despatched a person of confidence to carry this important intelligence to Spain, to exhibit the rich productions of the countries which had been discovered by his means, and to solicit such an increase of authority as might enable and encourage him to attempt the conquest of them. Without waiting for the return of his messenger, or for the arrival of Grijalva, of whom he was become so jealous or distrustful that he was resolved no longer to employ him, he began to prepare with such a powerful armament as might prove equal to an enterprise of so much danger and importance.

But as the expedition upon which Velasquez was now intent terminated in conquests of greater moment than what the Spaniards had hitherto achieved, and led them to the knowledge of a people, who, if compared with those tribes of America with whom they were hitherto acquainted, may be considered as highly civilized; it is proper to pause before we proceed to the history of events extremely different from those which we have already related, in order to take a view of the state of the New World when first discovered, and to contemplate the policy and manners of the rude uncultivated tribes that occupied all the parts of it with which the Spaniards were at this time acquainted.

BOOK IV.

View of America when first discovered, and of the manners and policy of its most uncivilized inhabitants.—Vast extent of America—grandeur of the objects it presents to view—its mountains—rivers—lakes—its form favorable to commerce—temperature—predominance of cold—causes of this—uncultivated—unwholesome—its animals—soil—Inquiry how America was peopled—various theories—what appears most probable—Condition and character of the Americans—All, the Mexicans and Peruvians excepted, in the state of savages—Inquiry confined to the uncivilized tribes—Difficulty of obtaining information—various causes of this—Method observed in the inquiry—I. The bodily constitution of the Americans considered—II. The qualities of their minds—III. Their domestic state—IV. Their political state and institutions—V. Their system of war and public security—VI. The arts with which they were acquainted—VII. Their religious ideas and institutions—VIII. Such singular and detached customs as are not reducible to any of the former heads—IX. General review and estimate of their virtues and defects.

TWENTY-SIX years had elapsed since Columbus had conducted the people of Europe to the New World. During that period the Spaniards had made great progress in exploring its various regions. They had visited all the islands scattered in different clusters through that part of the ocean which flows in between North and South America. They had sailed along the eastern coast of the continent from the river De la Plata to the bottom of the Mexican Gulf, and had found that it stretched without interruption through this vast portion of the globe. They had discovered the great Southern Ocean, which opened new prospects in that quarter. They had acquired some knowledge of the coast of Florida, which led them to observe the continent as it extended in an opposite direction; and though they pushed their discoveries no further towards the North, other nations had visited those parts which they neglected. The English in a voyage the motives and success of which shall be related in another part of this History, had sailed along the coast of America from Labrador to the confines of Florida; and the Portuguese, in quest of a shorter passage to the East Indies, had ventured into the northern seas, and viewed the same regions. Thus, at the period where I have chosen to take a view of the state of the New World, its extent was known almost from its northern extremity to thirty-five degrees south of the equator. The countries which stretch from thence to the southern boundary of America, the great empire of Peru, and the interior state of the extensive dominions subject to the sovereigns of Mexico, were still undiscovered.

When we contemplate the New World, the first circumstance that strikes us is its immense extent. It was not a small portion of the earth, so inconsiderable that it might have escaped the observation or research of former ages, which Columbus discovered. He made known a new hemisphere, larger than either Europe,

or Asia, or Africa, the three noted divisions of the ancient continent, and not much inferior in dimensions to a third part of the habitable globe.

America is remarkable, not only for its magnitude, but for its position. It stretches from the northern polar circle to a high southern latitude, above fifteen hundred miles beyond the furthest extremity of the old continent on that side of the line. A country of such extent passes through all the climates capable of becoming the habitation of man, and fit for yielding the various productions peculiar either to the temperate or to the torrid regions of the earth.

Next to the extent of the New World, the grandeur of the objects which it presents to view is most apt to strike the eye of an observer. Nature seems here to have carried on her operations upon a larger scale and with a bolder hand, and to have distinguished the features of this country by a peculiar magnificence. The mountains in America are much superior in height to those in the other divisions of the globe. Even the plain of Quito, which may be considered as the base of the Andes, is elevated further above the sea than the top of the Pyrenees. This stupendous ridge of the Andes, no less remarkable for extent than elevation, rises in different places more than one-third above the Peak of Teneriffe, the highest land in the ancient hemisphere. The Andes may literally be said to hide their heads in the clouds; the storms often roll, and the thunder bursts below their summits, which, though exposed to the rays of the sun in the centre of the torrid zone, are covered with everlasting snows. [28]

From these lofty mountains descend rivers, proportionably large, with which the streams in the ancient continent are not to be compared, either for length of course, or the vast body of water which they roll towards the ocean. The Maragnon, the Orinoco, the Plata in South America, the Mississippi and St. Lawrence in North America, flow in such spacious channels, that long before they feel the influence of the tide, they resemble arms of the sea rather than rivers of fresh water. [29]

The lakes of the New World are no less conspicuous for grandeur than its mountains and rivers. There is nothing in other parts of the globe which resembles the prodigious chain of lakes in North America. They may properly be termed inland seas of fresh water; and even those of the second or third class in magnitude are of larger circuit (the Caspian Sea excepted) than the greatest lake of the ancient continent.

The New World is of a form extremely favorable to commercial intercourse. When a continent is formed, like Africa, of one vast solid mass, unbroken by arms of the sea penetrating into its interior parts, with few large rivers, and those at a considerable distance from each other, the greater part of it seems destined to remain for ever uncivilized, and to be debarred from any active or enlarged communication with the rest of mankind. When, like Europe, a continent is opened by inlets of the ocean of great extent, such as the Mediterranean and Baltic; or when, like Asia, its coast is broken by deep bays advancing far into the country, such as the Black Sea, the Gulfs of Arabia, of Persia, of Bengal, of Siam, and of Leotang; when the surrounding seas are filled with large and fertile islands, and the continent itself watered with a variety of navigable rivers, those regions may be said to possess whatever can facilitate the progress of their inhabitants in commerce and improvement. In all these respects America may bear a comparison with the other quarters of the globe. The Gulf of Mexico, which flows in between North and South America, may be considered as a Mediterranean sea, which opens a maritime commerce with all the fertile countries by which it is encircled. The islands scattered in it are inferior only to those in the Indian Archipelago, in number, in magnitude, and in value. As we stretch along the northern division of the American hemisphere, the Bay of Chesapeake presents a spacious inlet, which conducts the navigator far into the interior parts of provinces no less fertile than extensive; and if ever the progress of culture and population shall mitigate the extreme rigor of the climate in the more northern districts of America, Hudson's Bay may become as subservient to commercial intercourse in that quarter of the globe, as the Baltic is in Europe. The other great portion of the New World is encompassed on every side by the sea, except one narrow neck which separates the Atlantic from the Pacific Ocean; and though it be not opened by spacious bays or arms of the sea, its interior parts are rendered accessible by a number of large rivers, fed by so many auxiliary streams, flowing in such various directions, that almost without any aid from the hand of industry

and art, an inland navigation may be carried on through all the provinces from the river De la Plata to the Gulf of Paria. Nor is this bounty of nature confined to the southern division of America; its northern continent abounds no less in rivers which are navigable almost to their sources, and by its immense chain of lakes provision is made for an inland communication, more extensive and commodious than in any quarter of the globe. The countries stretching from the Gulf of Darien on one side, to that of California on the other, which form the chain that binds the two parts of the American continent together, are not destitute of peculiar advantages. Their coast on one side is washed by the Atlantic Ocean, on the other by the Pacific. Some of their rivers flow into the former, some into the latter, and secure to them all the commercial benefits that may result from a communication with both.

But what most distinguishes America from other parts of the earth is the peculiar temperature of its climate, and the different laws to which it is subject with respect to the distribution of heat and cold. We cannot determine with precision the portion of heat felt in any part of the globe, merely by measuring its distance from the equator. The climate of a country is affected, in some degree, by its elevation above the sea, by the extent of continent, by the nature of the soil, the height of adjacent mountains, and many other circumstances. The influence of these, however, is from various causes less considerable in the greater part of the ancient continent; and from knowing the position of any country there, we can pronounce with greater certainty what will be the warmth of its climate, and the nature of its productions.

The maxims which are founded upon observation of our hemisphere will not apply to the other. In the New World, cold predominates. The rigor of the frigid zone extends over half of those regions which should be temperate by their position. Countries where the grape and the fig should ripen, are buried under snow one half of the year; and lands situated in the same parallel with the most fertile and best cultivated provinces in Europe, are chilled with perpetual frosts, which almost destroy the power of vegetation. [30] As we advance to those parts of America which lie in the same parallel with provinces of Asia and Africa, blessed with a uniform enjoyment of such genial warmth as is most friendly to life and vegetation, the dominion of cold continues to be felt, and winter reigns, though during a short period, with extreme severity. If we proceed along the American continent into the torrid zone, we shall find the cold prevalent in the New World extending itself also to this region of the globe, and mitigating the excess of its fervor. While the negro on the coast of Africa is scorched with unremitting heat, the inhabitant of Peru breathes an air equally mild and temperate, and is perpetually shaded under a canopy of gray clouds, which intercepts the fierce beams of the sun, without obstructing his friendly influence. Along the eastern coast of America, the climate, though more similar to that of the torrid zone in other parts of the earth, is nevertheless considerably milder than in those countries of Asia and Africa which lie in the same latitude. If from the southern tropic we continue our progress to the extremity of the American continent, we meet with frozen seas, and countries horrid, barren, and scarcely habitable for cold much sooner than in the north.

Various causes combine in rendering the climate of America so extremely different from that of the ancient continent. Though the utmost extent of America towards the north be not yet discovered, we know that it advances much nearer to the pole than either Europe or Asia. Both these have large seas to the north, which are open during part of the year; and even when covered with ice, the wind that blows over them is less intensely cold than that which blows over land in the same high latitudes. But in America the land stretches from the river St. Lawrence towards the pole, and spreads out immensely to the west. A chain of enormous mountains covered with snow and ice, runs through all this dreary region. The wind, in passing over such an extent of high and frozen land, becomes so impregnated with cold, that it acquires a piercing keenness, which it retains in its progress through warmer climates, and it is not entirely mitigated until it reach the Gulf of Mexico. Over all the continent of North America a north-westerly wind and excessive cold are synonymous terms. Even in the most sultry, the moment that the wind veers to that quarter, its penetrating influence is felt in a transition from heat to cold no less violent than sudden. To this powerful cause we may ascribe the extraordinary dominion of

cold, and its violent inroads into the southern provinces, in that part of the globe.

Other causes, no less remarkable, diminish the active power of heat in those parts of the American continent which lie between the tropics. In all that portion of the globe, the wind blows in an invariable direction from east to west. As this wind holds its course across the ancient continent, it arrives at the countries which stretch along the western shores of Africa, inflamed with all the fiery particles which it had collected from the sultry plains of Asia, and the burning sands in the African deserts. The coast of Africa is, accordingly the region of the earth which feels the most fervent heat, and is exposed to the unmitigated ardor of the torrid zone. But this same wind, which brings such an accession of warmth to the other countries lying between the river of Senegal and Cafraria, traverses the Atlantic Ocean before it reaches the American shore. It is cooled in its passage over this vast body of water, and is felt as a refreshing gale along the coast of Brazil, [31] and Guiana, rendering these countries, though among the warmest in America, temperate, when compared with those which lie opposite to them in Africa. [32] As this wind advances in its course across America, it meets with immense plains covered with impenetrable forests, or occupied by large rivers, marshes, and stagnating waters, where it can recover no considerable degree of heat. At length it arrives at the Andes, which run from north to south through the whole continent. In passing over their elevated and frozen summits, it is so thoroughly cooled, that the greater part of the countries beyond them hardly feel the ardor to which they seem exposed by their situation. In the other provinces of America, from *Tierre Ferme* westward to the Mexican empire, the heat of the climate is tempered, in some places, by the elevation of the land above the sea, in others, by their extraordinary humidity, and in all, by the enormous mountains scattered over this tract. The islands of America in the torrid zone are either small or mountainous, and are fanned alternately by refreshing sea and land breezes.

The causes of the extraordinary cold towards the southern limits of America, and in the seas beyond it, cannot be ascertained in a manner equally satisfying. It was long supposed that a vast continent, distinguished by the name of *Terra Australis Incognita*, lay between the southern extremity of America and the Antarctic pole. The same principles which account for the extraordinary degree of cold in the northern regions in America, were employed in order to explain that which is felt at Cape Horn and the adjacent countries. The immense extent of the southern continent, and the large rivers which it poured into the ocean, were mentioned and admitted by philosophers as causes sufficient to occasion the unusual sensation of cold, and the still more uncommon appearances of frozen seas in that region of the globe. But the imaginary continent to which such influence was ascribed, having been searched for in vain, and the space which it was supposed to occupy having been found to be an open sea, new conjectures must be formed with respect to the causes of a temperature of climate, so extremely different from that which we experience in countries removed at the same distance from the opposite pole. [33]

After contemplating those permanent and characteristic qualities of the American continent, which arise from the peculiarity of its situation, and the disposition of its parts, the next object that merits attention is its condition when first discovered, as far as that depended upon the industry and operations of man. The effects of human ingenuity and labor are more extensive and considerable than even our own vanity is apt at first to imagine. When we survey the face of the habitable globe, no small part of that fertility and beauty which we ascribe to the hand of nature, is the work of man. His efforts, when continued through a succession of ages, change the appearance and improve the qualities of the earth. As a great part of the ancient continent has long been occupied by nations far advanced in arts and industry, our eye is accustomed to view the earth in that form which it assumes when rendered fit to be the residence of a numerous race of men, and to supply them with nourishment.

But in the New World, the state of mankind was ruder, and the aspect of nature extremely different. Throughout all its vast regions, there were only two monarchies remarkable for extent of territory, or distinguished by any progress in improvement. The rest of this continent was possessed by small independent tribes,

destitute of arts and industry, and neither capable to correct the effects nor desirous to meliorate the condition of that part of the earth allotted to them for their habitation. Countries occupied by such people were almost in the same state as if they had been without inhabitants. Immense forests covered a great part of the uncultivated earth; and as the hand of industry had not taught the rivers to run in a proper channel, or drained off the stagnating water, many of the most fertile plains were overflowed with inundations, or converted into marshes. In the southern provinces, where the warmth of the sun, the moisture of the climate, and the fertility of the soil, combine in calling forth the most vigorous powers of vegetation, the woods are so choked with its rank luxuriance as to be almost impervious, and the surface of the ground is hid from the eye under a thick covering of shrubs and herbs and weeds. In this state of wild unassisted nature, a great part of the large provinces in South America, which extend from the bottom of the Andes to the sea, still remain. The European colonies have cleared and cultivated a few spots along the coast; but the original race of inhabitants, as rude and indolent as ever, have done nothing to open or improve a country possessing almost every advantage of situation and climate. As we advance towards the northern provinces of America, nature continues to wear the same uncultivated aspect, and, in proportion as the rigor of the climate increases, appears more desolate and horrid. There the forests, though not encumbered with the same exuberance of vegetation, are of immense extent; prodigious marshes overspread the plains, and few marks appear of human activity in any attempt to cultivate or embellish the earth. No wonder that the colonies sent from Europe were astonished at their first entrance into the New World. It appeared to them waste, solitary, and uninviting. When the English began to settle in America, they termed the countries of which they took possession, *The Wilderness*. Nothing but their eager expectation of finding mines of gold could have induced the Spaniards to penetrate through the woods and marshes of America, where at every step, they observed the extreme difference between the uncultivated face of nature, and that which it acquires under the forming hand of industry and art. [34]

The labor and operations of man not only improve and embellish the earth, but render it more wholesome and friendly to life. When any region lies neglected and destitute of cultivation, the air stagnates in the woods; putrid exhalations arise from the waters; the surface of the earth, loaded with rank vegetation, feels not the purifying influence of the sun or of the wind; the malignity of the distempers natural to the climate increases, and new maladies no less noxious are engendered. Accordingly, all the provinces of America, when first discovered, were found to be remarkably unhealthy. This the Spaniards experienced in every expedition into the New World, whether destined for conquest or settlement. Though by the natural constitution of their bodies, their habitual temperance, and the persevering vigor of their minds, they were as much formed as any people in Europe for active service in a sultry climate, they felt severely the fatal and pernicious qualities of those uncultivated regions through which they marched, or where they endeavored to plant colonies. Great numbers were cut off by the unknown and violent diseases with which they were infected. Such as survived the destructive rage of those maladies, were not exempted from the noxious influence of the climate. They returned to Europe, according to the description of the early Spanish historians, feeble, emaciated, with languid looks, and complexions of such a sickly yellow color as indicated the unwholesome temperature of the countries where they had resided.

The uncultivated state of the New World affected not only the temperature of the air, but the qualities of its productions. The principle of life seems to have been less active and vigorous there than in the ancient continent. Notwithstanding the vast extent of America, and the variety of its climates, the different species of animals peculiar to it are much fewer in proportion than those of the other hemisphere. In the islands there were only four kinds of quadrupeds known, the largest of which did not exceed the size of a rabbit. On the continent, the variety was greater; and though the individuals of each kind could not fail of multiplying exceedingly when almost unmolested by men, who were neither so numerous, nor so united in society, as to be formidable enemies to the animal creation, the number of distinct species must still be considered as extremely small. Of two hundred dif-

ferent kinds of animals spread over the face of the earth, only about one-third existed in America at the time of its discovery. Nature was not only less prolific in the New World, but she appears likewise to have been less vigorous in her productions. The animals originally belonging to this quarter of the globe appear to be of an inferior race, neither so robust nor so fierce as those of the other continent. America gives birth to no creature of such bulk as to be compared with the elephant or rhinoceros, or that equals the lion and tiger in strength and ferocity. [35] The *Tapyr* of Brazil, the largest quadruped of the ravenous tribe in the New World, is not larger than a calf of six months old. The *Puma* and *Jaguar*, its fiercest beasts of prey, which Europeans have inaccurately denominated lions and tigers, possess neither the undaunted courage of the former, nor the ravenous cruelty of the latter. They are inactive and timid, hardly formidable to man, and often turn their backs upon the least appearance of resistance. The same qualities in the climate of America which stunted the growth, and enfeebled the spirit, of its native animals, have proved pernicious to such as have migrated into it voluntarily from the other continent, or have been transported thither by the Europeans. The bears, the wolves, the deer of America, are not equal in size to those of the Old World. Most of the domestic animals, with which the Europeans have stored the provinces wherein they settled, have degenerated with respect either to bulk or quality, in a country whose temperature and soil seem to be less favorable to the strength and perfection of the animal creation. [36]

The same causes which checked the growth and the vigor of the more noble animals, were friendly to the propagation and increase of reptiles and insects. Though this is not peculiar to the New World, and those odious tribes, nourished by heat, moisture, and corruption, infest every part of the torrid zone; they multiply faster, perhaps, in America, and grow to a more monstrous bulk. As this country is on the whole less cultivated and less peopled than the other quarters of the earth, the active principle of life wastes its force in productions of this inferior form. The air is often darkened with clouds of insects, and the ground covered with shocking and noxious reptiles. The country around Porto Bello swarms with toads in such multitudes as hide the surface of the earth. At Guayaquil, snakes and vipers are hardly less numerous. Carthagea is infested with numerous flocks of bats, which annoy not only the cattle but the inhabitants. In the islands, legions of ants have at different times consumed every vegetable production, [37] and left the earth entirely bare as if it had been burned with fire. The damp forests and rank soil of the countries on the banks of the Orinoco and Maragony teem with almost every offensive and poisonous creature which the power of a sultry sun can quicken into life.

The birds of the New World are not distinguished by qualities so conspicuous and characteristic as those which we have observed in its quadrupeds. Birds are more independent of man, and less affected by the changes which his industry and labor make upon the state of the earth. They have a greater propensity to migrate from one country to another, and can gratify this instinct of their nature without difficulty or danger. Hence the number of birds common to both continents is much greater than that of quadrupeds; and even such as are peculiar to America nearly resemble those with which mankind were acquainted in similar regions of the ancient hemisphere. The American birds of the torrid zone, like those of the same climate in Asia and Africa, are decked in plumage which dazzles the eye with the beauty of its colors; but nature, satisfied with clothing them in this gay dress, has denied most of them that melody of sound and variety of notes which catch and delight the ear. The birds of the temperate climates there, in the same manner as in our continent, are less splendid in their appearance; but, in compensation for that defect, they have voices of greater compass, and more melodious. In some districts of America, the unwholesome temperature of the air seems to be unfavorable even to this part of the creation. The number of birds is less than in other countries, and the traveller is struck with the amazing solitude and silence of its forests. It is remarkable, however, that America, where the quadrupeds are so dwarfish and dastardly, should produce the *Condor* which is entitled to pre-eminence over all the flying tribe, in bulk, in strength, and in courage.

The soil in a continent so extensive as America, must, of course, be extremely various. In each of its

provinces we find some distinguishing peculiarities, the description of which belongs to those who write their particular history. In general we may observe, that the moisture and cold, which predominate so remarkably in all parts of America, must have great influence upon the nature of its soil; countries lying in the same parallel with those regions which never feel the extreme rigor of winter in the ancient continent, are frozen over in America during a great part of the year. Chilled by this intense cold, the ground never acquires warmth sufficient to ripen the fruits which are found in the corresponding parts of the other continent. If we wish to rear in America the productions which abound in any particular district of the ancient world, we must advance several degrees nearer to the line than in the other hemisphere, as it requires such an increase of heat to counterbalance the natural frigidity of the soil and climate. [38] At the Cape of Good Hope, several of the plants and fruits peculiar to the countries within the tropics are cultivated with success; whereas, at St. Augustine in Florida, and Charles Town in South Carolina, though considerably nearer the line, they cannot be brought to thrive with equal certainty. [39] But, if allowance be made for this diversity in the degree of heat, the soil of America is naturally as rich and fertile as in any part of the earth. As the country was thinly inhabited, and by a people of little industry, who had none of the domestic animals which civilized nations rear in such vast numbers, the earth was not exhausted by their consumption. The vegetable productions, to which the fertility of the soil gave birth, often remained untouched, and, being suffered to corrupt on its surface, returned with increase into its bosom. As trees and plants derive a great part of their nourishment from air and water; if they were not destroyed by man and other animals, they would render to the earth more, perhaps, than they take from it, and feed rather than impoverish it. Thus the uncultivated soil of America, may have gone on enriching for many ages. The vast number as well as enormous size of the trees in America, indicate the extraordinary vigor of the soil in its native state. When the Europeans first began to cultivate the New World, they were astonished at the luxuriant power of vegetation in its virgin mould; and in several places the ingenuity of the planter is still employed in diminishing and wasting its superfluous fertility, in order to bring it down to a state fit for profitable culture. [40]

Having thus surveyed the state of the New World at the time of its discovery, and considered the peculiar features and qualities which distinguish and characterize it, the next inquiry that merits attention is, How was America peopled? By what course did mankind migrate from the one continent to the other? And in what quarter is it most probable that a communication was opened between them?

We know with infallible certainty that all the human race spring from the same source, and that the descendants of one man, under the protection, as well as in obedience to the command of Heaven, multiplied and replenished the earth. But neither the annals nor the traditions of nations reach back to those remote ages, in which they took possession of the different countries where they are now settled. We cannot trace the branches of this first family, or point out with certainty the time and manner in which they divided and spread over the face of the globe. Even among the most enlightened people, the period of authentic history is extremely short; and every thing prior to that is fabulous or obscure. It is not surprising, then, that the unlettered inhabitants of America, who have no solicitude about futurity, and little curiosity concerning what is passed, should be altogether unacquainted with their own original. The people on the two opposite coasts of America, who occupy those countries in America which approach nearest to the ancient continent are so remarkably rude, that it is altogether vain to search among them for such information as might discover the place from whence they came, or the ancestors of whom they are descended. Whatever light has been thrown on this subject is derived not from the natives of America, but from the inquisitive genius of their conquerors.

When the people of Europe unexpectedly discovered a New World, removed at a vast distance from every part of the ancient continent which was then known, and filled with inhabitants whose appearance and manners differed remarkably from the rest of the human species, the question concerning their original became naturally an object of curiosity and attention. The theories and speculations of ingenious men with respect to this subject, would fill many volumes; but are often so wild and chimerical, that I should offer an insult to the

understanding of my readers, if I attempted either minutely to enumerate or to refute them. Some have presumptuously imagined, that the people of America were not the offspring of the same common parent with the rest of mankind, but that they formed a separate race of men, distinguishable by peculiar features in the constitution of their bodies, as well as in the characteristic qualities of their minds. Others contend, that they are descended from some remnant of the antediluvian inhabitants of the earth, who survived the deluge which swept away the greatest part of the human species in the days of Noah; and preposterously suppose rude, uncivilized tribes, scattered over an uncultivated continent, to be the most ancient race of people on the earth. There is hardly any nation from the north to the south pole, to which some antiquary, in the extravagance of conjecture, has not ascribed the honor of peopling America. The Jews, the Canaanites, the Phœnicians, the Carthaginians, the Greeks, the Scythians, in ancient times, are supposed to have settled in this western World. The Chinese, the Swedes, the Norwegians, the Welsh, the Spaniards, are said to have sent colonies thither in later ages, at different periods and on various occasions. Zealous advocates stand forth to support the respective claims of those people; and though they rest upon no better foundation than the casual resemblance of some customs, or the supposed affinity between a few words in their different languages, much erudition and more zeal have been employed, to little purpose, in defence of the opposite systems. Those regions of conjecture and controversy belong not to the historian. His is a more limited province, confined by what is established by certain or highly probable evidence. Beyond this I shall not venture, in offering a few observations which may contribute to throw some light upon this curious and much agitated question.

1. There are authors who have endeavored by mere conjecture to account for the peopling of America. Some have supposed that it was originally united to the ancient continent, and disjoined from it by the shock of an earthquake, or the irruption of a deluge. Others have imagined, that some vessel being forced from its course by the violence of a westerly wind, might be driven by accident towards the American coast, and have given a beginning to population in that desolate continent. But with respect to all those systems, it is in vain either to reason or inquire, because it is impossible to come to any decision. Such events as they suppose are barely possible, and may have happened. That they ever did happen, we have no evidence, either from the clear testimony of history, or from the obscure intimations of tradition.

2. Nothing can be more frivolous or uncertain than the attempts to discover the original of the Americans merely by tracing the resemblance between their manners and those of any particular people in the ancient continent. If we suppose two tribes, though placed in the most remote regions of the globe, to live in a climate nearly of the same temperature, to be in the same state of society, and to resemble each other in the degree of their improvement, they must feel the same wants, and exert the same endeavors to supply them. The same objects will allure, the same passions will animate them, and the same ideas and sentiments will arise in their minds. The character and occupations of the hunter in America must be little different from those of an Asiatic who depends for subsistence on the chase. A tribe of savages on the banks of the Danube must nearly resemble one upon the plains washed by the Mississippi. Instead then of presuming from this similarity, that there is any affinity between them, we should only conclude that the disposition and manners of men are formed by their situation, and arise from the state of society in which they live. The moment that begins to vary, the character of a people must change. In proportion as it advances in improvement, their manners refine, their powers and talents are called forth. In every part of the earth, the progress of man hath been nearly the same; and we can trace him in his career from the rude simplicity of savage life, until he attains the industry, the arts, and the elegance of polished society. There is nothing wonderful, then, in the similitude between the Americans and the barbarous nations of our continent. Had Laftau, Garcia, and many other authors attended to this, they would not have perplexed a subject, which they pretend to illustrate, by their fruitless endeavors to establish an affinity between various races of people, in the old and new continents, upon no other evidence than such a resemblance in their manners as necessarily arises from the similarity of their condition. There are, it is true,

among every people, some customs which, as they do not flow from any natural want or desire peculiar to their situation, may be denominated usages of arbitrary institution. If between two nations settled in remote parts of the earth, a perfect agreement with respect to any of these should be discovered, one might be led to suspect that they were connected by some affinity. If, for example, a nation were found in America that consecrated the seventh day to religious worship and rest, we might justly suppose that it had derived its knowledge of this usage, which is of arbitrary institution, from the Jews. But, if it were discovered that another nation celebrated the first appearance of every new moon with extraordinary demonstrations of joy, we should not be entitled to conclude that the observation of this monthly festival was borrowed from the Jews, but ought to consider it merely as the expression of that joy which is natural to man on the return of the planet which guides and cheers him in the night. The instances of customs, merely arbitrary, common to the inhabitants of both hemispheres, are, indeed, so few and so equivocal, that no theory concerning the population of the New World ought to be founded upon them.

3. The theories which have been formed with respect to the original of the Americans, from observation of their religious rites and practices, are no less fanciful and destitute of solid foundation. When the religious opinions of any people are neither the result of rational inquiry, nor derived from the instructions of revelation, they must needs be wild and extravagant. Barbarous nations are incapable of the former, and have not been blessed with the advantages arising from the latter. Still, however, the human mind, even where its operations appear most wild and capricious, holds a course so regular, that in every age and country the dominion of particular passions will be attended with similar effects. The savage of Europe or America, when filled with superstitious dread of invisible beings, or with inquisitive solicitude to penetrate into the events of futurity, trembles alike with fear, or glows with impatience. He has recourse to rites and practices of the same kind, in order to avert the vengeance which he supposes to be impending over him, or to divine the secret which is the object of his curiosity. Accordingly, the ritual of superstition in one continent seems, in many particulars, to be a transcript of that established in the other, and both authorize similar institutions, sometimes so frivolous as to excite pity, sometimes so bloody and barbarous as to create horror. But without supposing any consanguinity between such distant nations, or imagining that their religious ceremonies were conveyed by tradition from the one to the other, we may ascribe this uniformity, which in many instances seems very amazing, to the natural operation of superstition and enthusiasm upon the weakness of the human mind.

4. We may lay it down as a certain principle in this inquiry, that America was not peopled by any nation of the ancient continent which had made considerable progress in civilization. The inhabitants of the New World were in a state of society so extremely rude as to be unacquainted with those arts which are the first essays of human ingenuity in its advance towards improvement. Even the most cultivated nations of America were strangers to many of those simple inventions which were almost coeval with society in other parts of the world, and were known in the earliest periods of civil life with which we have any acquaintance. From this it is manifest, that the tribes which originally migrated to America, came off from nations which must have been no less barbarous than their posterity, at the time when they were first discovered by the Europeans. For, although the elegant or refined arts may decline or perish, amidst the violent shocks of those revolutions and disasters to which nations are exposed, the necessary arts of life, when once they have been introduced among any people, are never lost. None of the vicissitudes in human affairs affect these, and they continue to be practised as long as the race of men exists. If ever the use of iron had been known to the savages of America, or to their progenitors; if ever they had employed a plough, a loom, or a forge, the utility of these inventions would have preserved them, and it is impossible that they should have been abandoned or forgotten. We may conclude, then, that the Americans sprung from some people, who were themselves in such an early and unimproved stage of society, as to be unacquainted with all those necessary arts, which continued to be unknown among their posterity when first visited by the Spaniards.

5. It appears no less evident that America was not

peopled by any colony from the more southern nations of the ancient continent. None of the rude tribes settled in that part of our hemisphere can be supposed to have visited a country so remote. They possessed neither enterprise, nor ingenuity, nor power that could prompt them to undertake, or enable them to perform such a distant voyage. That the more civilized nations in Asia or Africa are not the progenitors of the Americans, is manifest not only from the observations which I have already made concerning their ignorance of the most simple and necessary arts, but from an additional circumstance. Whenever any people have experienced the advantages which men enjoy by their dominion over the inferior animals, they can neither subsist without the nourishment which these afford, nor carry on any considerable operation independent of their ministry and labor. Accordingly, the first care of the Spaniards, when they settled in America, was to stock it with all the domestic animals of Europe; and if, prior to them, the Tyrians, the Carthaginians, the Chinese, or any other polished people, had taken possession of that continent, we should have found there the animals peculiar to those regions of the globe where they were originally seated. In all America, however, there is not one animal, tame or wild, which properly belongs to the warm or even the more temperate countries of the ancient continent. The camel, the dromedary, the horse, the cow, were as much unknown in America as the elephant or the lion. From which it is obvious, that the people who first settled in the western world did not issue from the countries where those animals abounded, and where men, from having been long accustomed to their aid, would naturally consider it not only as beneficial, but as indispensably necessary to the improvement, and even the preservation of civil society.

6. From considering the animals with which America is stored, we may conclude that the nearest point of contact between the old and new continents is towards the northern extremity of both, and that there the communication was opened, and the intercourse carried on between them. All the extensive countries in America which lie within the tropics, or approach near to them, are filled with indigenous animals of various kinds, entirely different from those in the corresponding regions of the ancient continent. But the northern provinces of the New World abound with many of the wild animals which are common in such parts of our hemisphere as lie in a similar situation. The bear, the wolf, the fox, the hare, the deer, the roebuck, the elk, and several other species, frequent the forests of North America, no less than those in the north of Europe and Asia. It seems to be evident, then, that the two continents approach each other in this quarter, and are either united, or so nearly adjacent that these animals might pass from the one to the other.

7. The actual vicinity of the two continents is so clearly established by modern discoveries, that the chief difficulty with respect to the peopling of America is removed. While those immense regions which stretch eastward from the river Ob to the sea of Kamchatka were unknown or imperfectly explored, the north-east extremities of our hemisphere were supposed to be so far distant from any part of the New World, that it was not easy to conceive how any communication should have been carried on between them. But the Russians, having subjected the western part of Siberia to their empire, gradually extended their knowledge of that vast country, by advancing towards the east into unknown provinces. These were discovered by hunters in their excursions after game, or by soldiers employed in levying the taxes; and the court of Moscow estimated the importance of those countries, only by the small addition which they made to its revenue. At length Peter the Great ascended the Russian throne. His enlightened, comprehensive mind, intent upon every circumstance that could aggrandize his empire, or render his reign illustrious, discerned consequences of those discoveries which had escaped the observation of his ignorant predecessors. He perceived that in proportion as the regions of Asia extended towards the east, they must approach nearer to America; that the communication between the two continents, which had long been searched for in vain, would probably be found in this quarter; and that by opening it, some part of the wealth and commerce of the western world might be made to flow into his dominions by a new channel. Such an object suited a genius that delighted in grand schemes. Peter drew up instructions with his own hand for prosecuting this design, and gave orders for carrying it into execution.

His successors adopted his ideas and pursued his plan. The officers whom the Russian court employed in this service had to struggle with so many difficulties, that their progress was extremely slow. Encouraged by some faint traditions among the people of Siberia, concerning a successful voyage in the year one thousand six hundred and forty-eight, round the north-east promontory of Asia, they attempted to follow the same course. Vessels were fitted out, with this view, at different times, from the rivers Lena and Kolyma; but in a frozen ocean, which nature seems not to have destined for navigation, they were exposed to many disasters, without being able to accomplish their purpose. No vessel fitted out by the Russian court ever doubled this formidable Cape; [41] we are indebted for what is known of those extreme regions of Asia, to the discoveries made in excursions by land. In all those provinces an opinion prevails, that there are countries of great extent and fertility which lie at no considerable distance from their own coasts. These the Russians imagined to be part of America; and several circumstances concurred not only in confirming them in this belief, but in persuading them that some portion of that continent could not be very remote. Trees of various kinds unknown in those naked regions of Asia, are driven upon the coast by an easterly wind. By the same wind, floating ice is brought thither in a few days; flights of birds arrive annually from the same quarter; and a tradition obtains among the inhabitants, of an intercourse formerly carried on with some countries situated to the east.

After weighing all these particulars, and comparing the position of the countries in Asia which had been discovered, with such parts in the northwest of America as were already known, the Russian court formed a plan, which would have hardly occurred to a nation less accustomed to engage in arduous undertakings, and to contend with great difficulties. Orders were issued to build two vessels at the small village of Ochotz, situated on the sea of Kamchatka, to sail on a voyage of discovery. Though that dreary uncultivated region furnished nothing that could be of use in constructing them, but some larch trees: though not only the iron, the cordage, the sails, and all the numerous articles requisite for their equipment, but the provisions for victualling them were to be carried through the immense deserts of Siberia, down rivers of difficult navigation, and along roads almost impassible, the mandate of the sovereign, and the perseverance of the people, at last surmounted every obstacle. Two vessels were finished, and, under the command of the Captains Behring and Tschirikow, sailed from Kamchatka, in quest of the New World in a quarter where it had never been approached. They shaped their course towards the east; and though a storm soon separated the vessels, which never rejoined, and many disasters befell them, the expectations from the voyage were not altogether frustrated. Each of the commanders discovered land, which to them appeared to be part of the American continent; and, according to their observation, it seems to be situated within a few degrees of the north-west coast of California. Each set some of his people ashore: but in one place the inhabitants fled as the Russians approached; in another, they carried off those who landed, and destroyed their boats. The violence of the weather, and the distress of their crews, obliged both captains to quit this inhospitable coast. In their return they touched at several islands which stretched in a chain from east to west between the country which they had discovered and the coast of Asia. They had some intercourse with the natives, who seemed to them to resemble the North Americans. They presented to the Russians the *calumet*, or pipe of peace, which is a symbol of friendship universal among the people of North America, and a usage of arbitrary institution peculiar to them.

Though the islands of this New Archipelago have been frequented since that time by the Russian hunters, the court of St. Petersburg, during a period of more than forty years, seems to have relinquished every thought of prosecuting discoveries in that quarter. But in the year one thousand seven hundred and sixty-eight it was unexpectedly resumed. The sovereign who had been lately seated on the throne of Peter the Great, possessed the genius and talents of her illustrious predecessor. During the operations of the most arduous and extensive war in which the Russian empire was ever engaged, she formed schemes and executed undertakings, to which more limited abilities would have been incapable of attending but amidst the leisure of pacific times. A new voyage of discovery

from the eastern extremity of Asia was planned, and captain Krentzin and Lieutenant Levassheff were appointed to command the two vessels fitted out for that purpose. In their voyage onward they held nearly the same course with the former navigators, they touched at the same islands, observed their situation and productions more carefully, and discovered several new islands with which Behring and Tschirikow had not fallen in. Though they did not proceed so far to the east as to revisit the country which Behring and Tschirikow supposed to be part of the American continent, yet, by returning in a course considerably to the north of theirs, they corrected some capital mistakes into which their predecessors had fallen, and have contributed to facilitate the progress of future navigators in those seas. [42]

Thus the possibility of a communication between the continents in this quarter rests no longer upon mere conjecture, but is established by undoubted evidence. Some tribe, or some families of wandering Tartars, from the restless spirit peculiar to their race, might migrate to the nearest islands, and, rude as their knowledge of navigation was, might, by passing from one to the other, reach at length the coast of America, and give a beginning to population in that continent. The distance between the Marian or Ladrone islands and the nearest land in Asia, is greater than that between the part of America which the Russians discovered, and the coast of Kamchatka; and yet the inhabitants of those islands are manifestly of Asiatic extract. If, notwithstanding their remote situation, we admit that the Marian islands were peopled from our continent, distance alone is no reason why we should hesitate about admitting that the Americans may derive their original from the same source. It is probable that future navigators in those seas, by steering further to the north, may find that the continent of America approaches still nearer to Asia. According to the information of the barbarous people who inhabit the country about the north-east promontory of Asia, there lies, off the coast, a small island, to which they sail in less than a day. From that they can descry a large continent which, according to their description, is covered with forests, and possessed by people whose language they do not understand. By them they are supplied with the skins of martens, an animal unknown in the northern parts of Siberia, and which is never found but in countries abounding with trees. If we could rely on this account, we might conclude that the American continent is separated from ours only by a narrow strait, and all the difficulties with respect to the communication between them would vanish. What could be offered only as a conjecture, when this history was first published, is now known to be certain. The near approach of the two continents to each other, has been discovered, and traced in a voyage undertaken upon principles so pure and so liberal, and conducted with so much professional skill, as reflect lustre upon the reign of the sovereign by whom it was planned, and do honor to the officers intrusted with the execution of it. [43]

It is likewise evident from recent discoveries, that an intercourse between our continent and America might be carried on with no less facility, from the north-west extremities of Europe. As early as the ninth century, [A. D. 830,] the Norwegians discovered Greenland, and planted colonies there. The communication with that country after a long interruption was renewed in the last century. Some Lutheran and Moravian missionaries, prompted by zeal for propagating the Christian faith, have ventured to settle in this frozen and uncultivated region. To them we are indebted for much curious information with respect to its nature and inhabitants. We learn that the north-west coast of Greenland is separated from America by a very narrow strait; that, at the bottom of the bay, into which this strait conducts, it is highly probable that they are united; that the inhabitants of the two countries have some intercourse with one another; that the Esquimaux of America perfectly resemble the Greenlanders in their aspect, dress, and mode of living; that some sailors who had acquired the knowledge of a few words in the Greenlandish language, reported that these were understood by the Esquimaux; that, at length [A. D. 1764,] a Moravian missionary, well acquainted with the language of Greenland, having visited the country of the Esquimaux, found, to his astonishment, that they spoke the same language with the Greenlanders; that they were in every respect the same people, and he was accordingly received and entertained by them as a friend and a brother.

By these decisive facts, not only the consanguinity of the Esquimaux and Greenlanders is established, but

the possibility of peopling America from the north of Europe is demonstrated. If the Norwegians, in a barbarous age, when science had not begun to dawn in the north of Europe, possessed such naval skill as to open a communication with Greenland, their ancestors, as much addicted to roving by sea, as the Tartars are to wandering by land, might, at some more remote period, accomplish the same voyage, and settle a colony there, whose descendants might, in progress of time, migrate into America. But if, instead of venturing to sail directly from their own coast to Greenland, we suppose that the Norwegians held a more cautious course, and advanced from Shetland to the Feroe islands, and from them to Iceland, in all which they had planted colonies; their progress may have been so gradual, that this navigation cannot be considered as either longer or more hazardous than these voyages which that hardy and enterprising race of men is known to have performed in every age.

8. Though it be possible that America may have received its first inhabitants from our continent, either by the north-west of Europe, or the north-east of Asia, there seems to be good reason for supposing that the progenitors of all the American nations from Cape Horn to the southern confines of Labrador, migrated from the latter rather than the former. The Esquimaux are the only people in America, who in their aspect or character, bear any resemblance to the northern Europeans. They are manifestly a race of men distinct from all the nations of the American continent, in language, in disposition, and habits of life. Their original, then, may warrantably be traced up to that source which I have pointed out. But among all the other inhabitants of America, there is such a striking similitude in the form of their bodies and the qualities of their minds, that notwithstanding the diversities occasioned by the influences of climate, or unequal progress in improvement, we must pronounce them to be descended from one source. There may be a variety in the shades, but we can every where trace the same original colour. Each tribe has something peculiar which distinguishes it, but in all of them we discern certain features common to the whole race. It is remarkable, that in every peculiarity, whether in their persons or dispositions, which characterize the Americans, they have some resemblance to the rude tribes scattered over the north-east of Asia, but almost none to the nations settled in the northern extremities of Europe. We may, therefore, refer them to the former origin, and conclude that their Asiatic progenitors, having settled in those parts of America where the Russians have discovered the proximity of the two continents, spread gradually over its various regions. This account of the progress of population in America coincides with the traditions of the Mexicans concerning their own origin, which, imperfect as they are, were preserved with more accuracy, and merit greater credit, than those of any people in the New World. According to them, their ancestors came from a remote country situated to the north-west of Mexico. The Mexicans point out their various stations as they advanced from this into the interior provinces, and it is precisely the same route which they must have held if they had been emigrants from Asia. The Mexicans, in describing the appearance of their progenitors, their manners and habits of life at that period, exactly delineate those of the rude Tartars from whom I suppose them to have sprung.

Thus have I finished a Disquisition which has been deemed of so much importance that it would have been improper to omit it in writing the history of America. I have ventured to inquire, but without presuming to decide. Satisfied with offering conjectures, I pretend not to establish any system. When an investigation is, from its nature, so intricate and obscure, that it is impossible to arrive at conclusions which are certain, there may be some merit in pointing out such as are probable.

The condition and character of the American nations, at the time when they became known to the Europeans, deserve more attentive consideration than the inquiry concerning their original. The latter is merely an object of curiosity; the former is one of the most important as well as instructive researches which can occupy the philosopher or historian. In order to complete the history of the human mind, and attain to a perfect knowledge of its nature and operations, we must contemplate man in all those various situations wherein he has been placed. We must follow him in his progress through the different stages of society, as he gradually advances from the infant state of civil life towards its maturity and decline. We must observe at each period, how the faculties of his understanding unfold; we

must attend to the efforts of his active powers, watch the various movements of desire and affection, as they rise in his breast, and mark whether they tend, and with what ardor they are exerted. The philosophers and historians of ancient Greece and Rome, our guides in this as well as every other disquisition, had only a limited view of this subject, as they had hardly any opportunity of surveying man in his rudest and most early state. In all those regions of the earth with which they were well acquainted, civil society had made considerable advances, and nations had finished a good part of their career before they began to observe them. The Scythians and Germans, the rudest people of whom any ancient author has transmitted to us an authentic account, possessed flocks and herds, had acquired property of various kinds, and, when compared with mankind in their primitive state, may be reckoned to have attained to a great degree of civilization.

But the discovery of the New World enlarged the sphere of contemplation, and presented nations to our view, in stages of their progress much less advanced than those wherein they have been observed in our continent. In America, man appears under the rudest form in which we can conceive him to subsist. We behold communities just beginning to unite, and may examine the sentiments and actions of human beings in the infancy of social life, while they feel but imperfectly the force of its ties, and have scarcely relinquished their native liberty. That state of primeval simplicity, which was known in our continent only by the fanciful description of poets, really existed in the other. The greater part of its inhabitants were strangers to industry and labor, ignorant of arts, imperfectly acquainted with the nature of property, and enjoying almost without restriction or control the blessings which flowed spontaneously from the bounty of nature. There were only two nations in this vast continent which had emerged from this rude state, and had made any considerable progress in acquiring the ideas, and adopting the institutions, which belong to polished societies. Their government and manners will fall naturally under our review in relating the discovery and conquest of the Mexican and Peruvian empires; and we shall have there an opportunity of contemplating the Americans in the state of highest improvement to which they ever attained.

At present, our attention and researches shall be turned to the small independent tribes which occupied every other part of America. Among these, though with some diversity in their character, their manners, and institutions, the state of society was nearly similar, and so extremely rude, that the denomination of *savage* may be applied to them all. In a general history of America, it would be highly improper to describe the condition of each petty community, or to investigate every minute circumstance which contributes to form the character of its members. Such an inquiry would lead to details of immeasurable and tiresome extent. The qualities belonging to the people of all the different tribes have such a near resemblance, that they may be painted with the same features. Where any circumstances seem to constitute a diversity in their character and manners worthy of attention, it will be sufficient to point these out as they occur, and to inquire into the cause of such peculiarities.

It is extremely difficult to procure satisfying and authentic information concerning nations while they remain uncivilized. To discover their true character under this rude form, and to select the features by which they are distinguished, requires an observer possessed of no less impartiality than discernment. For, in every stage of society, the faculties, the sentiments, and desires of men are so accommodated to their own state, that they become standards of excellence to themselves, they affix the idea of perfection and happiness to those attainments which resemble their own, and, wherever the objects and enjoyments to which they have been accustomed are wanting, confidently pronounce a people to be barbarous and miserable. Hence the mutual contempt with which the members of communities, unequal in their degrees of improvement, regard each other. Polished nations, conscious of the advantages which they derive from their knowledge and arts, are apt to view rude nations with peculiar scorn, and, in the pride of superiority, will hardly allow either their occupations, their feelings, or their pleasures, to be worthy of men. It has seldom been the lot of communities, in their early and unpolished state, to fall under the observation of persons endowed with force of mind superior to vulgar prejudices, and capable of contemplating man, under whatever aspect he appears, with a candid and discerning eye.

The Spaniards, who first visited America, and who had opportunity of beholding its various tribes while entire and unsubdued, and before any change had been made in their ideas or manners by intercourse with a race of men much advanced beyond them in improvement, were far from possessing the qualities requisite for observing the striking spectacle presented to their view. Neither the age in which they lived, nor the nation to which they belonged, had made such progress in true science, as inspires enlarged and liberal sentiments. The conquerors of the New World were mostly illiterate adventurers, destitute of all the ideas which should have directed them in contemplating objects so extremely different from those with which they were acquainted. Surrounded continually with danger or struggling with hardships, they had little leisure, and less capacity, for any speculative inquiry. Eager to take possession of a country of such extent and opulence, and happy in finding it occupied by inhabitants so incapable to defend it, they hastily pronounced them to be a wretched order of men, formed merely for servitude; and were more employed in computing the profits of their labor, than in inquiring into the operations of their minds, or the reasons of their customs and institutions. The persons who penetrated at subsequent periods into the interior provinces, to which the knowledge and devastations of the first conquerors did not reach, were generally of a similar character; brave and enterprising in a high degree, but so uninformed as to be little qualified either for observing or describing what they beheld.

Not only the incapacity but the prejudices of the Spaniards rendered their accounts of the people of America extremely defective. Soon after they planted colonies in their new conquests, a difference in opinion arose with respect to the treatment of the natives. One party, solicitous to render their servitude perpetual, represented them as a brutish, obstinate race, incapable either of acquiring religious knowledge, or of being trained to the functions of social life. The other, full of pious concern for their conversion, contended that, though rude and ignorant, they were gentle, affectionate, docile, and by proper instructions and regulations might be formed gradually into good Christians and useful citizens. This controversy, as I have already related, was carried on with all the warmth which is natural, when attention to interest on the one hand, and religious zeal in the other, animate the disputants. Most of the laity espoused the former opinion; all the ecclesiastics were advocates for the latter; and we shall uniformly find that, accordingly as an author belonged to either of these parties, he is apt to magnify the virtues or aggravate the defects of the Americans far beyond truth. Those repugnant accounts increase the difficulty of attaining a perfect knowledge of their character, and render it necessary to peruse all the descriptions of them by Spanish writers with distrust, and to receive their information with some grains of allowance.

Almost two centuries elapsed after the discovery of America, before the manners of its inhabitants attracted, in any considerable degree, the attention of philosophers. At length they discovered that the contemplation of the condition and character of the Americans, in their original state, tended to complete our knowledge of the human species; might enable us to fill up a considerable chasm in the history of its progress; and lead to speculations no less curious than important. They entered upon this new field of study with great ardor; but, instead of throwing light upon the subject, they have contributed in some degree to involve it in additional obscurity. Too impatient to inquire, they hastened to decide; and began to erect systems, when they should have been searching for facts on which to establish their foundations. Struck with the appearance of degeneracy in the human species throughout the New World, and astonished at beholding a vast continent occupied by a naked, feeble, and ignorant race of men, some authors, of great name, have maintained that this part of the globe had but lately emerged from the sea, and become fit for the residence of man; that every thing in it bore marks of a recent original; and that its inhabitants, lately called into existence, and still at the beginning of their career, were unworthy to be compared with the people of a more ancient and improved continent. Others have imagined, that, under the influence of an unkindly climate, which checks and enervates the principle of life, man never attained in America the perfection which belongs to his nature, but remained an animal of an inferior order, defective in the vigor of his bodily frame, and destitute of sensibility, as well as of force, in the operations of his mind. In opposition to both these,

other philosophers have supposed that man arrives at his highest dignity and excellence long before he reaches a state of refinement; and, in the rude simplicity of savage life, displays an elevation of sentiment, an independence of mind, and a warmth of attachment, for which it is vain to search among the members of polished societies. They seem to consider that as the most perfect state of man which is the least civilized. They describe the manners of the rude Americans with such rapture, as if they proposed them for models to the rest of the species. These contradictory theories have been proposed with equal confidence, and uncommon powers of genius and eloquence have been exerted, in order to clothe them with an appearance of truth.

As all those circumstances concur in rendering an inquiry into the state of the rude nations in America intricate and obscure, it is necessary to carry it on with caution. When guided in our researches by the intelligent observations of the few philosophers who have visited this part of the globe, we may venture to decide. When obliged to have recourse to the superficial remarks of vulgar travellers, of sailors, traders, bucaniers, and missionaries, we must often pause, and comparing detached facts, endeavor to discover what they wanted sagacity to observe. Without indulging conjecture, or betraying a propensity to either system, we must study with equal care to avoid the extremes of extravagant admiration, or of supercilious contempt for those manners which we describe.

In order to conduct this inquiry with greater accuracy, it should be rendered as simple as possible. Man existed as an individual before he became the member of a community; and the qualities which belong to him under his former capacity should be known, before we proceed to examine those which arise from the latter relation. This is peculiarly necessary in investigating the manners of rude nations. Their political union is so incomplete, their civil institutions and regulations so few, so simple, and of such slender authority, that men in this state ought to be viewed rather as independent agents, than as members of a regular society. The character of a savage results almost entirely from his sentiments or feelings as an individual, and is but little influenced by his imperfect subjection to government and order. I shall conduct my researches concerning the manners of the Americans in this natural order, proceeding gradually from what is simple to what is more complicated.

I shall consider, I. The bodily constitution of the Americans in those regions now under review. II. The qualities of their minds, III. Their domestic state. IV. Their political state and institutions. V. Their system of war, and public security. VI. The arts with which they were acquainted. VII. Their religious ideas and institutions. VIII. Such singular detached customs as are not reducible to any of the former heads. IX. I shall conclude with a general review and estimate of their virtues and defects.

I. The bodily constitution of the Americans.—The human body is less affected by climate than that of any other animal. Some animals are confined to a particular region of the globe, and cannot exist beyond it: others, though they may be brought to bear the injuries of a climate foreign to them, cease to multiply when carried out of that district which nature destined to be their mansion. Even such as seem capable of being naturalized in various climates feel the effect of every remove from their proper station, and gradually dwindle and degenerate from the vigor and perfection peculiar to their species. Man is the only living creature whose frame is at once so hardy and so flexible, that he can spread over the whole earth, become the inhabitant of every region, and thrive and multiply under every climate. Subject, however, to the general law of Nature, the human body is not entirely exempt from the operation of climate; and when exposed to the extremes either of heat or cold, its size or vigor diminishes.

The first appearance of the inhabitants of the New World filled the discoverers with such astonishment that they were apt to imagine them a race of men different from those of the other hemisphere. Their complexion is of a reddish brown, nearly resembling the color of copper. The hair of their heads is always black, long, coarse, and uncurled. They have no beard, and every part of their body is perfectly smooth. Their persons are of a full size, extremely straight, and well proportioned. [44] Their features are regular, though often distorted by absurd endeavors to improve the beauty of their natural form, or to render their aspect more dreadful to their enemies. In the islands, where four-footed animals were both few and small, and the

earth yielded her productions almost spontaneously, the constitution of the natives, neither braced by the active exercises of the chase, nor invigorated by the labor of cultivation, was extremely feeble and languid. On the continent, where the forests abound with game of various kinds, and the chief occupation of many tribes was to pursue it, the human frame acquired greater firmness. Still, however, the Americans were more remarkable for agility than strength. They resembled beasts of prey, rather than animals formed for labor. [45] They were not only averse to toil, but incapable of it; and when roused by force from their native indolence, and compelled to work, they sunk under tasks which the people of the other continent would have performed with ease. This feebleness of constitution was universal among the inhabitants of those regions in America which we are surveying, and may be considered as characteristic of the species there.

The beardless countenance and smooth skin of the American seems to indicate a defect of vigor, occasioned by some vice in his frame. He is destitute of one sign of manhood and of strength. This peculiarity, by which the inhabitants of the New World are distinguished from the people of all other nations, cannot be attributed, as some travellers have supposed, to their mode of subsistence. For though the food of many Americans be extremely insipid, as they are altogether unacquainted with the use of salt, rude tribes in other parts of the earth have subsisted on aliments equally simple, without this mark of degradation, or any apparent symptom of a diminution in their vigor.

As the external forms of the Americans lead us to suspect that there is some natural debility in their frame, the smallness of their appetite for food has been mentioned by many authors as a confirmation of this suspicion. The quantity of food which men consume varies according to the temperature of the climate in which they live, the degree of activity which they exert, and the natural vigor of their constitutions. Under the enervating heat of the torrid zone, and when men pass their days in indolence and ease, they require less nourishment than the active inhabitants of temperate or cold countries. But neither the warmth of their climate, nor their extreme laziness, will account for the uncommon defect of appetite among the Americans. The Spaniards were astonished with observing this, not only in the islands, but in several parts of the continent. The constitutional temperance of the natives far exceeded, in their opinion, the abstinence of the most mortified hermits: while, on the other hand, the appetite of the Spaniards appeared to the Americans insatiably voracious; and they affirmed, that one Spaniard devoured more food in a day than was sufficient for ten Americans.

A proof of some feebleness in their frame, still more striking, is the insensibility of the Americans to the charms of beauty, and the power of love. That passion which was destined to perpetuate life, to be the bond of social union, and the source of tenderness and joy, is the most ardent in the human breast. Though the perils and hardships of the savage state, though excessive fatigue on some occasions, and the difficulty at all times of procuring subsistence, may seem to be adverse to this passion, and to have a tendency to abate its vigor, yet the rudest nations in every other part of the globe seem to feel its influence more powerfully than the inhabitants of the New World. The negro glows with all the warmth of desire natural to his climate; and the most uncultivated Asiatics discover that sensibility, which, from their situation on the globe, we should expect them to have felt. But the Americans are, in an amazing degree, strangers to the force of this first instinct of nature. In every part of the New World the natives treat their women with coldness and indifference. They are neither the objects of that tender attachment which takes place in civilized society, nor of that ardent desire conspicuous among rude nations. Even in climates where this passion usually acquires its greatest vigor, the savage of America views his female with disdain, as an animal of a less noble species. He is at no pains to win her favor by the assiduity of courtship, and still less solicitous to preserve it by indulgence and gentleness. Missionaries themselves, notwithstanding the austerity of monastic ideas, cannot refrain from expressing their astonishment at the dispassionate coldness of the American young men in their intercourse with the other sex. Nor is this reserve to be ascribed to any opinion which they entertain with respect to the merit of female chastity. That is an idea too refined for a savage, and sug-

gested by a delicacy of sentiment and affection to which he is a stranger.

But in inquiries concerning either the bodily or mental qualities of particular races of men, there is not a more common or more seducing error, than that of ascribing to a single cause, those characteristic peculiarities which are the effect of the combined operation of many causes. The climate and soil of America differ in so many respects from those of the other hemisphere, and this difference is so obvious and striking, that philosophers of great eminence have laid hold on this as sufficient to account for what is peculiar in the constitution of its inhabitants. They rest on physical causes alone, and consider the feeble frame and languid desire of the Americans, as consequences of the temperament of that portion of the globe which they occupy. But the influences of political and moral causes ought not to have been overlooked. These operate with no less effect than that on which many philosophers rest as a full explanation of the singular appearances which have been mentioned. Wherever the state of society is such as to create many wants and desires, which cannot be satisfied without regular exertions of industry, the body accustomed to labor becomes robust and patient of fatigue. In a more simple state, where the demands of men are so few and so moderate that they may be gratified, almost without any effort, by the spontaneous productions of nature, the powers of the body are not called forth, nor can they attain their proper strength. The natives of Chili and of North America, the two temperate regions in the New World, who live by hunting, may be deemed an active and vigorous race, when compared with the inhabitants of the isles, or of those parts of the continent where hardly any labor is requisite to procure subsistence. The exertions of a hunter are not, however, so regular, or so continued, as those of persons employed in the culture of the earth, or in the various arts of civilized life; and though his agility may be greater than theirs, his strength is on the whole inferior. If another direction were given to the active powers of man in the New World, and his force augmented by exercise, he might acquire a degree of vigor which he does not in his present state possess. The truth of this is confirmed by experience. Wherever the Americans have been gradually accustomed to hard labor, their constitutions become robust, and they have been found capable of performing such tasks, as seemed not only to exceed the powers of such a feeble frame as has been deemed peculiar to their country, but to equal any effort of the natives either of Africa or of Europe. [46]

The same reasoning will apply to what has been observed concerning their slender demand for food. As a proof that this should be ascribed as much to their extreme indolence, and often total want of occupation, as to any thing peculiar in the physical structure of their bodies, it has been observed, that in those districts where the people of America are obliged to exert any unusual effort of activity, in order to procure subsistence, or wherever they are employed in severe labor, their appetite is not inferior to that of other men, and in some places, it has struck observers as remarkably voracious.

The operation of political and moral causes is still more conspicuous in modifying the degree of attachment between the sexes. In a state of high civilization, this passion, inflamed by restraint, refined by delicacy, and cherished by fashion, occupies and engrosses the heart. It is no longer a simple instinct of nature; sentiment heightens the ardor of desire, and the most tender emotions of which our frame is susceptible soothe and agitate the soul. This description, however, applies only to those, who, by their situation, are exempted from the cares and labors of life. Among persons of inferior order, who are doomed by their condition to incessant toil, the dominion of this passion is less violent; their solicitude to procure subsistence, and to provide for the first demand of nature, leaves little leisure for attending to its second call. But if the nature of the intercourse between the sexes varies so much in persons of different rank in polished societies, the condition of man while he remains uncivilized must occasion a variation still more apparent. We may well suppose, that amidst the hardships, the dangers, and the simplicity of domestic life, where subsistence is always precarious and often scanty, where men are almost continually engaged in the pursuit of their enemies, or in guarding against their attacks, and where neither dress nor reserve are employed as arts of female allurements, that the attention of the Americans to their women would be extremely feeble, without imputing

this solely to any physical defect or degradation in their frame.

It is accordingly observed, that in those countries of America where, from the fertility of the soil, the mildness of the climate, or some further advances which the natives have made in improvement, the means of subsistence are more abundant, and the hardships of savage life are less severely felt, the animal passion of the sexes becomes more ardent. Striking examples of this occur among some tribes seated on the banks of great rivers well stored with food, among others who are masters of hunting grounds abounding so much with game, that they have a regular and plentiful supply of nourishment with little labor. The superior degree of security and affluence which these tribes enjoy is followed by their natural effects. The passions implanted in the human frame by the hand of nature acquire additional force; new tastes and desires are formed; the women, as they are more valued and admired, become more attentive to dress and ornament; the men beginning to feel how much of their own happiness depends upon them, no longer disdain the arts of winning their favor and affection. The intercourse of the sexes becomes very different from that which takes place among their ruder countrymen; and as hardly any restraint is imposed on the gratification of desire either by religion or laws or decency, the dissolution of their manners is excessive.

Notwithstanding the feeble make of the Americans, hardly any of them are deformed, or mutilated, or defective in any one of their senses. All travellers have been struck with this circumstance, and have celebrated the uniform symmetry and perfection of their external figure. Some authors search for the cause of this appearance in their physical condition. As the parents are not exhausted or over fatigued with hard labor, they suppose that their children are born vigorous and sound. They imagine that, in the liberty of savage life, the human body, naked and unconfined from its earliest age, preserves its natural form; and that all its limbs and members acquire a juster proportion than when fettered with artificial restraints, which stint its growth and distort its shape. Something, without doubt, may be ascribed to the operation of these causes; but the true reasons of this apparent advantage, which is common to all savage nations, lie deeper, and are closely interwoven with the nature and genius of that state. The infancy of man is so long and so helpless, that it is extremely difficult to rear children among rude nations. Their means of subsistence are not only scanty, but precarious. Such as live by hunting must range over extensive countries, and shift often from place to place. The care of children, as well as every other laborious task, is devolved upon the women. The distresses and hardships of the savage life, which are often such as can hardly be supported by persons in full vigor, must be fatal to those of more tender age. Afraid of undertaking a task so laborious, and of such long duration, as that of rearing their offspring, the women, in some parts of America, procure frequent abortions by the use of certain herbs, and extinguish the first sparks of that life which they are unable to cherish. Sensible that only stout and well formed children have force of constitution to struggle through such a hard infancy, other nations abandon and destroy such of their progeny as appear feeble or defective, as unworthy of attention. Even when they endeavor to rear all their children without distinction, so great a proportion of the whole number perishes under the rigorous treatment which must be their lot in the savage state, that few of those who labored under any original frailty attain the age of manhood. Thus in polished societies, where the means of subsistence are secured with certainty, and acquired with ease; where the talents of the mind are often of more importance than the powers of the body; children are preserved notwithstanding their defects or deformity, and grow up to be useful citizens. In rude nations, such persons are either cut off as soon as they are born, or, becoming a burden to themselves and to the community, cannot long protract their lives. But in those provinces of the New World, where, by the establishment of the Europeans, more regular provision has been made for the subsistence of its inhabitants, and they are restrained from laying violent hands on their children, the Americans are so far from being eminent for any superior perfection in their form, that one should rather suspect some peculiar imbecility in the race, from the extraordinary number of individuals who are deformed, dwarfish, mutilated, blind, or deaf.

How feeble soever the constitution of the Americans may be, it is remarkable that there is less variety in the human form throughout the New World than in the

ancient continent. When Columbus and the other discoverers first visited the different countries of America which lie within the torrid zone, they naturally expected to find people of the same complexion with those in the corresponding regions of the other hemisphere. To their amazement, however, they discovered that America contained no negroes; and the cause of this singular appearance became as much the object of curiosity as the fact itself was of wonder. In what part or membrane of the body that humor resides which tinges the complexion of the negro with a deep black, it is the business of anatomists to inquire and describe. The powerful operation of heat appears manifestly to be the cause which produces this striking variety in the human species. All Europe, a great part of Asia, and the temperate countries of Africa, are inhabited by men of a white complexion. All the torrid zone in Africa, some of the warmer regions adjacent to it, and several countries in Asia, are filled with people of a deep black color. If we survey the nations of our continent, making our progress from cold and temperate countries towards those parts which are exposed to the influence of vehement and unremitting heat, we shall find that the extreme whiteness of their skin soon begins to diminish; that its color deepens gradually as we advance; and, after passing through all the successive gradations of shade, terminates in a uniform unvarying black. But in America, where the agency of heat is checked and abated by various causes, which I have already explained, the climate seems to be destitute of that force which produces such wonderful effects on the human frame. The color of the natives of the torrid zone in America is hardly of a deeper hue than that of the people in the more temperate parts of their continent. Accurate observers, who had an opportunity of viewing the Americans in very different climates, and in provinces far removed from each other, have been struck with the amazing similarity of their figure and aspect. [47]

But though the hand of nature has deviated so little from one standard in fashioning the human form in America, the creation of fancy hath been various and extravagant. The same fables that were current in the ancient continent, have been revived with respect to the New World, and America too has been peopled with human beings of monstrous and fantastic appearance. The inhabitants of certain provinces were described to be pygmies of three feet high; those of others to be giants of an enormous size. Some travellers published accounts of people with only one eye; others pretended to have discovered men without heads, whose eyes and mouths were planted in their breasts. The variety of Nature in her productions is indeed so great, that it is presumptuous to set bounds to her fertility, and to reject indiscriminately every relation that does not perfectly accord with our own limited observation and experience. But the other extreme, of yielding a hasty assent on the slightest evidence to whatever has the appearance of being strange and marvellous, is still more unbecoming a philosophical inquirer; as, in every period, men are more apt to be betrayed into error by their weakness in believing too much, than by their arrogance in believing too little. In proportion as science extends, and nature is examined with a discerning eye, the wonders which amused ages of ignorance disappear. The tales of credulous travellers concerning America, are forgotten; the monsters which they describe have been searched for in vain; and those provinces where they pretend to have found inhabitants of singular forms are now known to be possessed by a people nowise different from the other Americans.

Though those relations may, without discussion, be rejected as fabulous, there are other accounts of varieties in the human species in some parts of the New World, which rest upon better evidence, and merit more attentive examination. This variety has been particularly observed in three different districts. The first of these is situated in the isthmus of Darien, near the centre of America. Lionel Wafer, a traveller possessed of more curiosity and intelligence than we should have expected to find in an associate of Buccaneers, discovered there a race of men few in number, but of a singular make. They are of low stature, according to his description, of a feeble frame, incapable of enduring fatigue. Their color is a dead milk white; not resembling that of fair people among the Europeans, but without any tincture of a blush or sanguine complexion. Their skin is covered with a fine hairy down of a chalky white; the hair of their heads, their eyebrows, and eye-lashes, are of the same hue. Their eyes are of a singular form, and so weak that

they can hardly bear the light of the sun; but they see clearly by moonlight, and are most active and gay in the night. No race similar to this has been discovered in any other part of America. Cortes, indeed, found some persons exactly resembling the white people of Darien among the rare and monstrous animals which Montezuma had collected. But as the power of the Mexican empire extended to the provinces bordering on the isthmus of Darien, they were probably brought thence. Singular as the appearance of those people may be, they cannot be considered as constituting a distinct species. Among the negroes of Africa, as well as the natives of the Indian islands, nature sometimes produces a small number of individuals, with all the characteristic features and qualities of the white people of Darien. The former are called *Albinos* by the Portuguese, the latter *Kackerlakes* by the Dutch. In Darien the parents of those *Whites* are of the same color with the other natives of the country and this observation applies equally to the anomalous progeny of the Negroes and Indians. The same mother who produces some children of a color that does not belong to the race, brings forth the rest with a complexion peculiar to her country. One conclusion may then be formed with respect to the people described by Wafer, the *Albinos* and the *Kackerlakes*; they are a degenerated breed, not a separate class of men; and from some disease or defect of their parents, the peculiar color and debility which mark their degradation are transmitted to them. As a decisive proof of this, it has been observed, that neither the white people of Darien, nor the *Albinos* of Africa, propagate their race; their children are of the color and temperament peculiar to the natives of their respective countries. [48]

The second district that is occupied by inhabitants differing in appearance from the other people of America, is situated in a high northern latitude, extending from the coast of Labrador towards the pole, as far as the country is habitable. The people scattered over those dreary regions are known to the Europeans by the name of *Esquimaux*. They themselves, with that idea of their own superiority, which consoles the rudest and most wretched nations, assume the name of *Keralit*, or *Men*. They are of a middle size, and robust, with heads of a disproportioned bulk, and feet as remarkably small. Their complexion though swarthy, by being continually exposed to the rigor of a cold climate, inclines to the European white, rather than to the copper color of America, and the men have beards which are sometimes bushy and long. From these marks of distinction, as well as from one still less equivocal, the affinity of their language to that of the Greenlanders, which I have already mentioned, we may conclude, with some degree of confidence, that the *Esquimaux* are a race different from the rest of the Americans.

We cannot decide with equal certainty concerning the inhabitants of the third district, situated at the southern extremity of America. These are the famous *Patagonians*, who during two centuries and a half, have afforded a subject of controversy to the learned, and an object of wonder to the vulgar. They are supposed to be one of the wandering tribes which occupy the vast but least known region of America, which extends from the river de la Plata to the Straits of Magellan. Their proper station is in that part of the interior country which lies on the banks of the river Negro; but in the hunting season, they often roam as far as the straits which separate Tierra del Fuego from the main land. The first accounts of this people were brought to Europe by the companions of Magellan, who described them as a gigantic race, above eight feet high, and of strength in proportion to their enormous size. Among several tribes of animals, a disparity in bulk as considerable may be observed. Some large breeds of horses and dogs exceed the more diminutive races in stature and strength, as far as the Patagonian is supposed to rise above the usual standard of the human body. But animals attain the highest perfection of their species only in mild climates, or where they find the most nutritive food in greatest abundance. It is not then in the uncultivated waste of the Magellanic regions, and among a tribe of improvident savages, that we should expect to find man possessing the highest honors of his race, and distinguished by a superiority of size and vigor, far beyond what he has reached in any other part of the earth. The most explicit and unexceptionable evidence is requisite, in order to establish a fact repugnant to those general principles and laws, which seem to affect the human frame in every other instance, and to decide with respect to its nature and qualities. Such evidence has not hitherto been produced. Though several persons, to whose testimony great respect is due,

have visited this part of America since the time of Magellan, and have had interviews with the natives; though some have affirmed, that such as they saw were of gigantic stature, and others have formed the same conclusion from measuring their footsteps, or from viewing the skeletons of their dead; yet their accounts vary from each other in so many essential points, and are mingled with so many circumstances manifestly false or fabulous, as detract much from their credit. On the other hand, some navigators, and those among the most eminent of their order for discernment and accuracy, have asserted that the natives of Patagonia, with whom they had intercourse, though stout and well made, are not of such extraordinary size as to be distinguished from the rest of the human species. [49] The existence of this gigantic race of men seems, then, to be one of those points in natural history, with respect to which a cautious inquirer will hesitate, and will choose to suspend his assent until more complete evidence shall decide whether he ought to admit a fact, seemingly inconsistent with what reason and experience have discovered concerning the structure and condition of man, in all the various situations in which he has been observed.

In order to form a complete idea with respect to the constitution of the inhabitants of this and the other hemisphere, we should attend not only to the make and vigor of their bodies, but consider what degree of health they enjoy, and to what period of longevity they usually arrive. In the simplicity of the savage state, when man is not oppressed with labor, or enervated by luxury, or disquieted with care, we are apt to imagine that this life will flow on almost untroubled by disease or suffering, until his days be terminated in extreme old age by the gradual decays of nature. We find, accordingly, among the Americans, as well as among other rude people, persons whose decrepid and shrivelled form seems to indicate an extraordinary length of life. But as most of them are unacquainted with the art of numbering, and all of them as forgetful of what is past, as they are improvident of what is to come, it is impossible to ascertain their age with any degree of precision. It is evident that the period of their longevity must vary considerably, according to the diversity of climates, and their different modes of subsistence. They seem, however, to be every where exempt from many of the distempers which afflict polished nations. None of the maladies, which are the immediate offspring of luxury, ever visited them; and they have no names in their languages by which to distinguish this numerous train of adventitious evils.

But whatever be the situation in which man is placed, he is born to suffer; and his diseases in the savage state, though fewer in number, are, like those of the animals whom he nearly resembles in his mode of life, more violent and more fatal. If luxury engenders and nourishes distempers of one species, the rigor and distresses of savage life bring on those of another. As men in this state are wonderfully improvident, and their means of subsistence precarious, they often pass from extreme want to exuberant plenty, according to the vicissitudes of fortune in the chase, or in consequence of the various degrees of abundance with which the earth affords to them its productions in different seasons. Their inconsiderate gluttony in the one situation, and their severe abstinence in the other, are equally pernicious. For though the human constitution may be accustomed by habit, like that of animals of prey, to tolerate long famine, and then to gorge voraciously, it is not a little affected by such sudden and violent transitions. The strength and vigor of savages are at some seasons impaired by what they suffer from a scarcity of food; at others they are afflicted with disorders arising from indigestion and a superfluity of gross aliment. These are so common, that they may be considered as the unavoidable consequence of their mode of subsisting, and cut off considerable numbers in the prime of life. They are likewise extremely subject to consumptions, to pleuritic, asthmatic, and paralytic disorders, brought on by the immoderate hardships and fatigue which they endure in hunting and in war; or owing to the inclemency of the seasons to which they are continually exposed. In the savage state, hardships and fatigue violently assault the constitution. In polished societies, intemperance undermines it. It is not easy to determine which of them operates with most fatal effect, or tends most to abridge human life. The influence of the former is certainly most extensive. The pernicious consequences of luxury reach only a few members in any community; the distresses of savage life are felt by all. As far as I can judge, after very minute inquiry, the general period of human life is

shorter among savages than in well regulated and industrious societies.

One dreadful malady, the severest scourge with which, in this life, offended Heaven chastens the indulgence of criminal desire, seems to have been peculiar to the Americans. By communicating it to their conquerors, they have not only amply avenged their own wrongs, but, by adding this calamity to those which formerly embittered human life, they have, perhaps, more than counterbalanced all the benefits which Europe has derived from the discovery of the New World. This distemper, from the country in which it first raged, or from the people by whom it was supposed to have been spread over Europe, has been sometimes called the Neapolitan, and sometimes the French disease. At its first appearance, the infection was so malignant, its symptoms so violent, its operation so rapid and fatal, as to battle all the efforts of medical skill. Astonishment and terror accompanied this unknown affliction in its progress, and men began to dread the extinction of the human race by such a cruel visitation. Experience, and the ingenuity of physicians, gradually discovered remedies of such virtue as to cure or to mitigate the evil. During the course of two centuries and a half, its virulence seems to have abated considerably. At length, in the same manner with the leprosy, which raged in Europe for some centuries, it may waste its force and disappear; and in some happier age, this western infection, like that from the east, may be known only by description. [50]

II. After considering what appears to be peculiar in the bodily constitution of the Americans, our attention is naturally turned towards the powers and qualities of their minds. As the individual advances from the ignorance and imbecility of the infant state to vigor and maturity of understanding, something similar to this may be observed in the progress of the species. With respect to it, too, there is a period of infancy, during which several powers of the mind are not unfolded, and all are feeble and defective in their operation. In the early ages of society, while the condition of man is simple and rude, his reason is but little exercised, and his desires move within a very narrow sphere. Hence arise two remarkable characteristics of the human mind in this state. Its intellectual powers are extremely limited; its emotions and efforts are few and languid. Both these distinctions are conspicuous among the rudest and most unimproved of the American tribes, and constitute a striking part of their description.

What, among polished nations, is called speculative reasoning or research, is altogether unknown in the rude state of society, and never becomes the occupation or amusement of the human faculties, until man be so far improved as to have secured, with certainty, the means of subsistence, as well as the possession of leisure and tranquillity. The thoughts and attention of a savage are confined within the small circle of objects immediately conducive to his preservation or enjoyment. Every thing beyond that escapes his observation, or is perfectly indifferent to him. Like a mere animal, what is before his eyes interests and affects him; what is out of sight, or at a distance, makes little impression. There are several people in America, whose limited understandings seem not to be capable of forming an arrangement for futurity; neither their solicitude nor their foresight extend so far. They follow blindly the impulse of the appetite which they feel, but are entirely regardless of distant consequences, and even of those removed in the least degree from immediate apprehension. While they highly prize such things as serve for present use, or minister to present enjoyment, they set no value upon those which are not the object of some immediate want. When, on the approach of the evening, a Caribbee feels himself disposed to go to rest, no consideration will tempt him to sell his hammock. But, in the morning when he is sallying out to the business or pastime of the day, he will part with it for the slightest toy that catches his fancy. At the close of winter, while the impression of what he has suffered from the rigor of the climate, is fresh in the mind of the North American, he sets himself with vigor to prepare materials for erecting a comfortable hut to protect him against the inclemency of the succeeding season; but, as soon as the weather becomes mild, he forgets what is past, abandons his work, and never thinks of it more until the return of cold compels him, when too late, to resume it.

If in concerns the most interesting, and seemingly the most simple, the reason of man while rude and destitute of culture, differs so little from the thoughtless levity of children, or the improvident instinct of animals,

its exertions in other directions cannot be very considerable. The objects towards which reason turns, and the disquisitions in which it engages, must depend upon the state in which man is placed, and are suggested by his necessities and desires. Disquisitions, which appear the most necessary and important to men in one state of society, never occur to those in another. Among civilized nations, arithmetic, or the art of numbering, is deemed an essential and elementary science; and in our continent, the invention and use of it reaches back to a period so remote as is beyond the knowledge of history. But among savages, who have no property to estimate, no hoarded treasures to count, no variety of objects or multiplicity of ideas to enumerate, arithmetic is a superfluous and useless art. Accordingly, among some tribes in America it seems to be quite unknown. There are many who cannot reckon further than three; and have no denomination to distinguish any number above it. Several can proceed as far as ten, others to twenty. When they would convey an idea of any number beyond these, they point to the hair of their head, intimating that it is equal to them, or with wonder declare it to be so great that it cannot be reckoned. Not only the Americans, but all nations while extremely rude, seem to be unacquainted with the art of computation. As soon, however, as they acquire such acquaintance or connexion with a variety of objects, that there is frequent occasion to combine or divide them, their knowledge of numbers increases, so that the state of this art among any people may be considered as one standard by which to estimate the degree of their improvement. The Iroquoise, in North America, as they are much more civilized than the rude inhabitants of Brazil, Paraguay, or Guiana, have likewise made greater advances in this respect; though even their arithmetic does not extend beyond a thousand, as in their petty transactions they have no occasion for any higher number. The Cherokee, a less considerable nation on the same continent, can reckon only as far as a hundred, and to that extent have names for the several numbers; the smaller tribes in their neighborhood can rise no higher than ten. [51]

In other respects, the exercise of the understanding among rude nations is still more limited. The first ideas of every human being must be such as he receives by the senses. But in the mind of man, while in the savage state, there seem to be hardly any ideas but what enter by this avenue. The objects around him are presented to his eye. Such as may be subservient to his use, or can gratify any of his appetites, attract his notice; he views the rest without curiosity or attention. Satisfied with considering them under that simple mode in which they appear to him, as separate and detached, he neither combines them so as to form general classes, nor contemplates their qualities apart from the subject in which they inhere, nor bestows a thought upon the operations of his own mind concerning them. Thus he is unacquainted with all the ideas which have been denominated *universal*, or *abstract*, or *of reflection*. The range of his understanding must, of course, be very confined, and his reasoning powers be employed merely on what is sensible. This is so remarkably the case with the ruder nations of America, that their language, (as we shall afterwards find) have not a word to express any thing but what is material or corporeal. *Time*, *space*, *substance*, and a thousand terms, of those present abstract and universal ideas, are altogether unknown to them. A naked savage, covering over the fire in his miserable cabin, or stretched under a few branches which afford him a temporary shelter, has as little inclination as capacity for useless speculation. His thoughts extend not beyond what relates to animal life; and when they are not directed towards some of its concerns, his mind is totally inactive. In situations where no extraordinary effort either of ingenuity or labor is requisite, in order to satisfy the simple demands of nature the powers of the mind are so seldom roused to any exertion, that the rational faculties continue almost dormant and unexercised. The numerous tribes scattered over the rich plains of South America, the inhabitants of some of the islands, and of several fertile regions on the continent, come under this description. Their vacant countenance, their staring unexpressive eye, their listless inattention, and total ignorance of subjects which seemed to be the first which should occupy the thoughts of rational beings, made such impression upon the Spaniards, when they first beheld those rude people, that they considered them as animals of an inferior order, and could not believe that they belonged to the human species. It required the authority of a papal bull to counteract this opinion, and to convince them that the Americans were

capable of the functions and entitled to the privileges of humanity. Since that time, persons more enlightened and impartial than the discoverers or conquerors of America, have had an opportunity of contemplating the most savage of its inhabitants, and they have been astonished and humbled with observing how nearly man in this condition approaches to the brute creation. But in severer climates, where subsistence cannot be procured with the same ease, where men must unite more closely, and act with greater concert, necessity calls forth their talents and sharpens their invention, so that the intellectual powers are more exercised and improved. The North American tribes, and the natives of Chili, who inhabit the temperate regions in the two great districts of America, are people of cultivated and enlarged understandings, when viewed in comparison with some of those seated in the islands, or on the banks of the Maragnon and Orinoco. Their occupations are more various, their system of policy, as well as of war, more complex, their arts more numerous. But even among them, the intellectual powers are extremely limited in their operations, and, unless when turned directly to those objects which interest a savage, are held in no estimation. Both the North Americans and Chileses, when not engaged in some of the functions belonging to a warrior or hunter, loiter away their time in thoughtless indolence, unacquainted with any other subject worthy of their attention, or capable of occupying their minds. If even among them reason is so much circumscribed in its exertions, and never arrives, in its highest attainments, at the knowledge of those general principles and maxims which serve as the foundation of science, we may conclude that the intellectual powers of man in the savage state are destitute of their proper object, and cannot acquire any considerable degree of vigor and enlargement.

From the same causes, the active efforts of the mind are few, and on most occasions languid. If we examine into the motives which rouse men to activity in civilized life, and prompt them to persevere in fatiguing exertions of their ingenuity or strength, we shall find that they arise chiefly from acquired wants and appetites. These are numerous and importunate; they keep the mind in perpetual agitation, and in order to gratify them, invention must be always on the stretch, and industry must be incessantly employed. But the desires of simple nature are few, and where a favorable climate yields almost spontaneously what suffices to gratify them they scarcely stir the soul, or excite any violent emotion. Hence the people of several tribes in America waste their life in a listless indolence. To be free from occupation, seems to be all the enjoyment towards which they aspire. They will continue whole days stretched out in their hammocks, or seated on the earth in perfect idleness, without changing their posture, or raising their eyes from the ground, or uttering a single word.

Such is their aversion to labor that neither the hope of future good, nor the apprehension of future evil can surmount it. They appear equally indifferent to both, discovering little solicitude, and taking no precautions to avoid the one or to secure the other. The cravings of hunger may rouse them; but as they devour, with little distinction, whatever will appease its instinctive demands, the exertions which these occasion are of short duration. Destitute of ardor, as well as variety of desire, they feel not the force of those powerful springs which give vigor to the movements of the mind, and urge the patient hand of industry to persevere in its efforts. Man, in some parts of America, appears in a form so rude that we can discover no effects of his activity, and the principle of understanding, which should direct it, seems hardly to be unfolded. Like the other animals he has no fixed residence; he has erected no habitation to shelter him from the inclemency of the weather; he has taken no measures for securing certain subsistence; he neither sows nor reaps; but roams about as led in search of the plants and fruits which the earth brings forth in succession; and in quest of the game which he kills in the forest, or of the fish which he catches in the rivers.

This description, however, applies only to some tribes. Man cannot continue long in this state of feeble and uninformed infancy. He was made for industry and action, and the powers of his nature, as well as the necessity of his condition, urge him to fulfil his destiny. Accordingly, among most of the American nations, especially those seated in rigorous climates, some efforts are employed, and some previous precautions are taken, for securing subsistence. The career of regular industry is begun and the laborious arm has made the first essays of its powers. Still, however,

the improvident and slothful genius of the savage state predominates. Even among those more improved tribes, labor is deemed ignominious and degrading. It is only to work of a certain kind that a man will deign to put his hand. The greater part is devolved entirely upon the women. One half of the community remains inactive, while the other is oppressed with the multitude and variety of its occupations. Thus their industry is partial, and the foresight which regulates it is no less limited. A remarkable instance of this occurs in the chief arrangement with respect to their manner of living. They depend for their subsistence, during one part of the year, on fishing; during another, on hunting; during a third, on the produce of their agriculture. Though experience has taught them to foresee the return of those various seasons, and to make some provision for the respective exigencies of each, they either want sagacity to proportion this provision to their consumption, or are so incapable of any command over their appetites, that, from their inconsiderate waste, they often feel the calamities of famine as severely as the rudest of the savage tribes. What they suffer one year does not augment their industry, or render them more provident to prevent similar distresses. This inconsiderate thoughtlessness about futurity, the effect of ignorance and the cause of sloth, accompanies and characterizes man in every stage of savage life; and, by a capricious singularity in his operations he is then least solicitous about supplying his wants, when the means of satisfying them are most precarious, and procured with the greatest difficulty. [52]

III. After viewing the bodily constitutions of the Americans, and contemplating the powers of their minds, we are led, in the natural order of inquiry, to consider them as united together in society. Hitherto our researches have been confined to the operations of understanding respecting themselves as individuals; now they will extend to the degree of their sensibility and affection towards their species.

The domestic state is the first and most simple form of human association. The union of the sexes among different animals is of longer or shorter duration in proportion to the ease or difficulty of rearing their offspring. Among those tribes where the season of infancy is short, and the young soon acquire vigor or agility, no permanent union is formed. Nature commits the care of training up the offspring to the mother alone, and her tenderness, without any other assistance, is equal to the task. But where the state of infancy is long and helpless, and the joint assiduity of both parents is requisite in tending their feeble progeny, there a more intimate connexion takes place, and continues until the purpose of nature be accomplished, and the new race grow up to full maturity. As the infancy of man is more feeble and helpless than that of any other animal, and he is dependent during a much longer period on the care and foresight of his parents, the union between husband and wife came early to be considered not only as a solemn but as a permanent contract. A general state of promiscuous intercourse between the sexes never existed but in the imagination of poets. In the infancy of society when men, destitute of arts and industry, lead a hard precarious life, the rearing of their progeny demands the attention and efforts of both parents; and if their union had not been formed and continued with this view, the race could not have been preserved. Accordingly in America, even among the rudest tribes, a regular union between husband and wife was universal, and the rights of marriage were understood and recognised. In those districts where subsistence was scanty, and the difficulty of maintaining a family was great, the man confined himself to one wife. In warmer and more fertile provinces, the facility of procuring food concurred with the influence of climate in inducing the inhabitants to increase the number of their wives. In some countries the marriage-union subsisted during life; in others, the impatience of the Americans under restraint of any species, together with their natural levity and caprice, prompted them to dissolve it on any slight pretences, and often without assigning any cause.

But in whatever light the Americans considered the obligation of this contract, either as perpetual or only as temporary; the condition of women was equally humiliating and miserable. Whether man has been improved by the progress of arts and civilization in society, is a question which, in the wantonness of disputation, has been agitated among philosophers. That women are indebted to the refinements of polished manners, for a happy change in their state, is a point which can

admit of no doubt. To despise and to degrade the female sex is a characteristic of the savage state in every part of the globe. Man proud of excelling in strength and in courage, the chief marks of pre-eminence among rude people, treats woman, as an inferior, with disdain. The Americans, perhaps from that coldness and insensibility which has been considered as peculiar to their constitution, add neglect and harshness to contempt. The most intelligent travellers have been struck with this inattention of the Americans to their women. It is not, as I have already observed, by a studied display of tenderness and attachment that the American attempts to gain the heart of the woman whom he wishes to marry. Marriage itself, instead of being a union of affection and interests between equals, becomes among them the unnatural conjunction of a master with his slave. It is the observation of an author whose opinions are deservedly of great weight, that wherever wives are purchased their condition is extremely depressed. They become the property and the slaves of those who buy them. In whatever part of the globe this custom prevails, the observation holds. In countries where refinement has made some progress, women when purchased are excluded from society, shut up in sequestered apartments, and kept under the vigilant guard of their masters. In ruder nations they are degraded to the meanest functions. Among many people of America the marriage contract is properly a purchase. The man buys his wife of her parents. Though unacquainted with the use of money, or with such commercial transactions as take place in more improved society, he knows how to give an equivalent for any object which he desires to possess. In some places, the suitor devotes his service for a certain time to the parents of the maid whom he courts; in others he hunts for them occasionally, or assists in cultivating their fields and forming their canoes; in others, he offers presents of such things as are deemed most valuable on account of their usefulness or rarity. In return for these he receives his wife; and this circumstance, added to the low estimation of women among savages, leads him to consider her as a female servant whom he has purchased, and whom he has a title to treat as an inferior. In all unpolished nations, it is true, the functions in domestic economy which fall naturally to the share of women are so many, that they are subjected to hard labor, and must bear more than their full portion of the common burden. But in America their condition is so peculiarly grievous, and their depression so complete, that servitude is a name too mild to describe their wretched state. A wife among most tribes is no better than a beast of burden, destined to every office of labor and fatigue. While the men loiter out the day in sloth, or spend it in amusement, the women are condemned to incessant toil. Tasks are imposed upon them without pity, and services are received without complacency or gratitude. Every circumstance reminds women of this mortifying inferiority. They must approach their lords with reverence; they must regard them as more exalted beings, and are not permitted to eat in their presence. There are districts in America where this dominion is so grievous, and so sensibly felt, that some women, in a wild emotion of maternal tenderness, have destroyed their female children in their infancy, in order to deliver them from that intolerable bondage to which they knew they were doomed. Thus the first institution of social life is perverted. That state of domestic union towards which nature leads the human species, in order to soften the heart to gentleness and humanity, is rendered so unequal as to establish a cruel distinction between the sexes, which forms the one to be harsh and unfeeling, and humbles the other to servility and subjection.

It is owing, perhaps, in some measure, to this state of depression, that women in rude nations are far from being prolific. The vigor of their constitution is exhausted by excessive fatigue, and the wants and distresses of savage life are so numerous as to force them to take various precautions in order to prevent too rapid an increase of their progeny. Among wandering tribes, or such as depend chiefly upon hunting for subsistence, the mother cannot attempt to rear a second child until the first has attained such a degree of vigor as to be in some measure independent of her care. From this motive it is the universal practice of the American women to suckle their children during several years; and, as they seldom marry early, the period of their fertility is over before they can finish the long but necessary attendance upon two or three children. Among some of the least polished tribes, whose industry and foresight do not extend so far as to make any regular

provision for their subsistence, it is a maxim not to burden themselves with rearing more than two children; and no such numerous families as are frequent in civilized societies are to be found among men in the savage state. When twins are born, one of them commonly is abandoned, because the mother is not equal to the task of rearing both. [53] When a mother dies while she is nursing a child, all hope of preserving its life fails, and it is buried together with her in the same grave. As the parents are frequently exposed to want by their own improvident indolence, the difficulty of sustaining their children becomes so great that it is not uncommon to abandon or destroy them. Thus their experience of the difficulty of training up an infant to maturity, amidst the hardships of savage life, often stifles the voice of nature among the Americans, and suppresses the strong emotions of parental tenderness.

But though necessity compels the inhabitants of America thus to set bounds to the increase of their families, they are not deficient in affection and attachment to their offspring. They feel the power of this instinct in its full force, and as long as their progeny continue feeble and helpless, no people exceed them in tenderness and care. But in rude nations the dependence of children upon their parents is of shorter continuance than in polished societies. When men must be trained to the various functions of civil life by previous discipline and education, when the knowledge of abstruse sciences must be taught, and dexterity in intricate arts must be acquired, before a young man is prepared to begin his career of action, the attentive feelings of a parent are not confined to the years of infancy, but extend to what is more remote, the establishment of his child in the world. Even then his solicitude does not terminate. His protection may still be requisite, and his wisdom and experience still prove useful guides. Thus a permanent connexion is formed; parental tenderness is exercised, and filial respect returned, throughout the whole course of life. But in the simplicity of the savage state the affection of parents, like the instinctive fondness of animals, ceases almost entirely as soon as their offspring attain maturity. Little instruction fits them for that mode of life to which they are destined. The parents, as if their duty were accomplished, when they have conducted their children through the helpless years of infancy, leave them afterwards at entire liberty. Even in their tender age, they seldom advise or admonish; they never chide or chastise them. They suffer them to be absolute masters of their own actions. In an American hut, a father, a mother, and their posterity, live together like persons assembled by accident, without seeming to feel the obligation of the duties mutually arising from this connection. As filial love is not cherished by the continuance of attention or good offices, the recollection of benefits received in early infancy is too faint to excite it. Conscious of their own liberty, and impatient of restraint, the youth of America are accustomed to act as if they were totally independent. Their parents are not objects of greater regard than other persons. They treat them always with neglect, and often with such harshness and insolence as to fill those who have been witnesses of their conduct with horror. Thus the ideas which seem to be natural to man in his savage state, as they result necessarily from his circumstances and condition in that period of his progress, affect the two capital relations in domestic life. They render the union between husband and wife unequal. They shorten the duration and weaken the force of the connection between parents and children.

IV. From the domestic state of the Americans, the transition to the consideration of their civil government and political institutions is natural. In every inquiry concerning the operations of men when united together in society, the first object of attention should be their mode of subsistence. Accordingly as that varies, their laws and policy must be different. The institution suited to the ideas and exigencies of tribes which subsist chiefly by fishing or hunting, and which have as yet acquired but an imperfect conception of any species of property, will be much more simple than those which must take place when the earth is cultivated with regular industry; and a right of property, not only in its productions, but in the soil itself, is completely ascertained.

All the people of America, now under review, belong to the former class. But though they may all be comprehended under the general denomination of savage, the advances which they had made in the art of procuring to themselves a certain and plentiful subsistence were very unequal. On the extensive plains of South America man appears in one of the rudest

states in which he has ever been observed, or perhaps can exist. Several tribes depend entirely upon the bounty of nature for subsistence. They discover no solicitude, they employ little foresight, they scarcely exert any industry to secure what is necessary for their support. The *Topayers*, of Brazil, the *Guaceros*, of Tierra Firme, the *Caiguas*, the *Mozos*, and several other people of Paraguay, are unacquainted with every species of cultivation. They neither sow nor plant. Even the culture of the manioc, of which cassada bread is made of is an art too intricate for their ingenuity, or too fatiguing to their indolence. The roots which the earth produces spontaneously; the fruits, the berries, and the seeds which they gather in the woods; together with lizards and other reptiles, which multiply amazingly with the heat of the climate in a fat soil, moistened by frequent rains, supply them with food during some part of the year. At other times they subsist by fishing; and nature seems to have indulged the laziness of the South American tribes by the liberality with which she ministers in this way to their wants. The vast rivers of that region in America abound with an infinite variety of the most delicate fish. The lakes and marshes formed by the annual overflowing of the waters are filled with all the different species, where they remain shut up, as in natural reservoirs, for the use of the inhabitants. They swarm in such shoals, that in some places they are caught without art or industry. [54] In others, the natives have discovered a method of infecting the water with the juice of certain plants, by which the fish are so intoxicated that they float on the surface, and are taken with the hand. [55] Some tribes have ingenuity enough to preserve them without salt, by drying or smoking them upon hurdles over a slow fire. The prolific quality of the rivers in South America, induces many of the natives to resort to their banks, and to depend almost entirely for nourishment on what their waters supply with such profusion. In this part of the globe hunting seems not to have been the first employment of men, or the first effort of their invention and labor to obtain food. They were fishers before they became hunters; and as the occupations of the former do not call for equal exertions of activity or talents with those of the latter, people in that state appear to possess neither the same degree of enterprise nor of ingenuity. The petty nations adjacent to the Maragnon and Orinoco are manifestly the most inactive and least intelligent of all the Americans.

None but tribes contiguous to great rivers can sustain themselves in this manner. The greater part of the American nations, dispersed over the forests with which their country is covered, do not procure subsistence with the same facility. For although these forests, especially in the southern continent of America, are stored plentifully with game, considerable efforts of activity and ingenuity are requisite in pursuit of it. Necessity incited the natives to the one, and taught them the other. Hunting became their principal occupation; and as it called forth strenuous exertions of courage, of force, and of invention, it was deemed no less honorable than necessary. This occupation was peculiar to the men. They were trained to it from their earliest youth. A bold and dexterous hunter ranked next in fame to the distinguished warrior, and an alliance with the former is often courted in preference to one with the latter. Hardly any device, which the ingenuity of man has discovered for ensuring or destroying wild animals, was unknown to the Americans. While engaged in this favorite exercise, they shake off the indolence peculiar to their nature, the latent powers and vigor of their minds are roused, and they become active, persevering, and indefatigable. Their sagacity in finding their prey and their address in killing it are equal. Their reason and their senses being constantly directed towards this one object, the former displays such fertility of invention and the latter acquire such a degree of acuteness as appear almost incredible. They discern the footsteps of a wild beast, which escape every other eye, and can follow them with certainty through the pathless forest. If they attack their game openly, their arrow seldom errs from the mark: if they endeavor to circumvent it by art, it is almost impossible to avoid their toils. Among several tribes, their young men were not permitted to marry until they had given such proofs of their skill in hunting as put it beyond doubt that they were capable of providing for a family. Their ingenuity, always on the stretch, and sharpened by emulation as well as necessity, has struck out many inventions which greatly facilitate success in the chase. The most singular of these is the discovery of a poison, in which they dip the arrows employed in hunting. The

slightest wound with those envenomed shafts is mortal. If they only pierce the skin, the blood fixes and congeals in a moment, and the strongest animal falls motionless to the ground. Nor does this poison, notwithstanding its violence and subtlety, infect the flesh of the animal which it kills. That may be eaten with perfect safety, and retain its native relish and qualities. All the nations situated upon the banks of the Maragnon and Orinoco are acquainted with this composition, the chief ingredient in which is the juice extracted from the root of the *curare*, a species of withe. In other parts of America they employ the juice of the *manchénille* for the same purpose, and it operates with no less fatal activity. To people possessed of those secrets the bow is a more destructive weapon than the musket, and, in their skilful hands, does great execution among the birds and beasts which abound in the forests of America.

But the life of a hunter gradually leads man to a state more advanced. The chase, even where prey is abundant, and the dexterity of the hunter much improved, affords but an uncertain maintenance, and at some seasons it must be suspended altogether. If a savage trusts to his bow alone for food, he and his family will be often reduced to extreme distress. [56] Hardly any region of the earth furnishes man spontaneously with what his wants require. In the mildest climates, and most fertile soils, his own industry and foresight must be exerted in some degree to secure a regular supply of food. Their experience of this surmounts the abhorrence of labor natural to savage nations, and compels them to have recourse to culture, as subsidiary to hunting. In particular situations, some small tribes may subsist by fishing, independent of any production of the earth raised by their own industry. But throughout all America, we scarcely meet with any nation of hunters which does not practise some species of cultivation.

The agriculture of the Americans, however, is neither extensive nor laborious. As game and fish are their principal food, all they aim at by cultivation is to supply any occasional defect of these. In the southern continent of America, the natives confined their industry to rearing a few plants, which, in a rich soil and warm climate, were easily trained to maturity. The chief of these is *maize*, well known in Europe by the name of Turkey or Indian wheat, a grain extremely prolific, of simple culture, agreeable to the taste, and affording a strong hearty nourishment. The second is the *manioc*, which grows to the size of a large shrub or small tree, and produces roots somewhat resembling parsnips. After carefully squeezing out the juice, these roots are grated down to a fine powder, and formed into thin cakes called *cassada* bread, which, though insipid to the taste, proves no contemptible food. As the juice of the manioc is a deadly poison, some authors have celebrated the ingenuity of the Americans in converting a noxious plant into wholesome nourishment. But it should rather be considered as one of the desperate expedients for procuring subsistence to which necessity reduces rude nations; or, perhaps, men were led to the use of it by a progress in which there is nothing marvellous. One species of manioc is altogether free of any poisonous quality, and may be eaten without any preparation but that of roasting it in the embers. This, it is probable, was first used by the Americans as food; and, necessity having gradually taught them the art of separating its pernicious juice from the other species, they have by experience found it to be more prolific as well as more nourishing. [57] The third is the *plantain*, which, though it rises to the height of a tree, is of such quick growth, that in less than a year it rewards the industry of the cultivator with its fruit. This, when roasted, supplies the place of bread, and is both palatable and nourishing. [58] The fourth is the *potatoe*, whose culture and qualities are too well known to need any description. The fifth is *pimento*, a small tree yielding a strong aromatic spice. The Americans, who, like other inhabitants of warm climates, delight in whatever is hot and of poignant flavor, deem this seasoning a necessary of life, and mingle it copiously with every kind of food they take.

Such are the various productions, which were the chief object of culture among the hunting tribes on the continent of America: and with a moderate exertion of active and provident industry these might have yielded a full supply to the wants of a numerous people. But men, accustomed to the free and vagrant life of hunters, are incapable of regular application to labor, and consider agriculture as a secondary and inferior occupation. Accordingly, the provision for sub-

sistence, arising from cultivation, was so limited and scanty among the Americans, that, upon any accidental failure of their usual success in hunting, they were often reduced to extreme distress.

In the islands, the mode of subsisting was considerably different. None of the large animals which abound on the continent were known there. Only four species of quadrupeds, besides a kind of small dumb dog existed in the islands, the biggest of which did not exceed the size of a rabbit. To hunt such a diminutive prey was an occupation which required no effort either of activity or courage. The chief employment of a hunter in the isles was to kill birds, which on the continent are deemed ignoble game, and left chiefly to the pursuit of boys. This want of animals, as well as their peculiar situation, led the islanders to depend principally upon fishing for their subsistence. Their rivers, and the sea with which they are surrounded, supplied them with this species of food. At some particular seasons, turtle, crabs, and other shellfish abounded in such numbers that the natives could support themselves with a facility in which their indolence delighted. At other times, they ate lizards and various reptiles of odious forms. To fishing the inhabitants of the islands added some degree of agriculture. Maize, [59] manioc, and other plants were cultivated in the same manner as on the continent. But all the fruits of their industry, together with what their soil and climate produced spontaneously, afforded them but a scanty maintenance. Though their demands for food were very sparing, they hardly raised what was sufficient for their own consumption. If a few Spaniards settled in any district, such a small addition of supernumerary mouths soon exhausted their scanty stores, and brought on a famine.

Two circumstances common to all the savage nations of America, concurred with those which I have already mentioned, not only in rendering their agriculture imperfect, but in circumscribing their power in all their operations. They had no tame animals; and they were unacquainted with the useful metals.

In other parts of the globe, man, in his rudest state, appears as lord of the creation, giving law to various tribes of animals, which he has tamed and reduced to subjection. The Tartar follows his prey on the horse which he has reared; or tends his numerous herds, which furnish him both with food and clothing: the Arab has rendered the camel docile, and avails himself of its persevering strength: the Laplander has formed the reindeer to be subservient to his will; and even the people of Kamchatka have trained their dogs to labor. This command over the inferior creatures is one of the noblest prerogatives of man, and among the greatest efforts of his wisdom and power. Without this his dominion is incomplete. He is a monarch who has no subjects, a master without servants, and must perform every operation by the strength of his own arm. Such was the condition of all the rude nations in America. Their reason was so little improved, or their union so incomplete, that they seem not to have been conscious of the superiority of their nature, and suffered all the animal creation to retain its liberty, without establishing their own authority over any one species. Most of the animals, indeed, which have been rendered domestic in our continent, do not exist in the New World; but those peculiar to it are neither so fierce nor so formidable as to have exempted them from servitude. There are some animals of the same species on both continents. But the reindeer, which has been tamed and broken to the yoke in the one hemisphere, runs wild in the other. The *bison* of America is manifestly of the same species with the horned cattle of the other hemisphere. The latter, even among the rudest nations in our continent, have been rendered domestic; and, in consequence of his dominion over them, man can accomplish works of labor with greater facility, and has made a great addition to his means of subsistence. The inhabitants of many regions of the New World, where the bison abounds, might have derived the same advantages from it. It is not of a nature so indolent, but that it might have been trained to be as subservient to man as our cattle. But a savage, in that uncultivated state wherein the Americans were discovered, is the enemy of the other animals, not their superior. He wastes and destroys, but knows not how to multiply or to govern them.

This, perhaps, is the most notable distinction between the inhabitants of the Ancient and New Worlds, and a high pre-eminence of civilized men above such as continue rude. The greatest operations of man in changing and improving the face of nature, as well as his most considerable efforts in cultivating the earth.

are accomplished by means of the aid which he receives from the animals that he has tamed, and employs in labor. It is by their strength that he subdues the stubborn soil, and converts the desert or marsh into a fruitful field. But man, in his civilized state, is so accustomed to the service of the domestic animals, that he seldom reflects upon the vast benefits which he derives from it. If we were to suppose him, even when most improved, to be deprived of their useful ministry, his empire over nature must in some measure cease, and he would remain a feeble animal, at a loss how to subsist, and incapable of attempting such arduous undertakings as their assistance enables him to execute with ease.

It is a doubtful point, whether the dominion of man over the animal creation, or his acquiring the useful metals, has contributed most to extend his power. The era of this important discovery is unknown, and in our hemisphere very remote. It is only by tradition, or by digging up some rude instruments of our forefathers, that we learn that mankind were originally unacquainted with the use of metals, and endeavored to supply the want of them by employing flints, shells, bones, and other hard substances, for the same purposes which metals serve among polished nations. Nature completes the formation of some metals. Gold, silver, and copper, are found in their perfect state in the clefts of rocks, in the sides of mountains, or the channels of rivers. These were accordingly the metals first known, and first applied to use. But iron, the most serviceable of all, and to which man is most indebted, is never discovered in its perfect form; its gross and stubborn ore must feel twice the force of fire, and go through two laborious processes, before it becomes fit for use. Man was long acquainted with the other metals before he acquired the art of fabricating iron, or attained such ingenuity as to perfect an invention, to which he is indebted for those instruments wherewith he subdues the earth, and commands all its inhabitants. But in this, as well as in many other respects, the inferiority of the Americans was conspicuous. All the savage tribes, scattered over the continent and islands, were totally unacquainted with the metals which their soil produces in great abundance, if we except some trifling quantity of gold, which they picked up in the torrents that descended from their mountains, and formed into ornaments. Their devices to supply this want of the serviceable metals were extremely rude and awkward. The most simple operation was to them an undertaking of immense difficulty and labor. To fell a tree with no other instruments than hatchets of stone, was employment for a month. To form a canoe into shape, and to hollow it, consumed years; and it frequently began to rot before they were able to finish it. Their operations in agriculture were equally slow and defective. In a country covered with woods of the hardest timber, the clearing of a small field destined for culture required the united efforts of a tribe, and was a work of much time and great toil. This was the business of the men, and their indolence was satisfied with performing it in a very slovenly manner. The labor of cultivation was left to the women, who, after digging, or rather stirring the field, with wooden mattocks, and stakes hardened in the fire, sowed or planted it; but they were more indebted for the increase to the fertility of the soil than to their own rude industry.

Agriculture, even when the strength of man is seconded by that of the animals which he has subjected to the yoke, and his power augmented by the use of the various instruments with which the discovery of metals has furnished him, is still a work of great labor; and it is with the sweat of his brow that he renders the earth fertile. It is not wonderful, then, that people destitute of both these advantages should have made so little progress in cultivation, that they must be considered as depending for subsistence on fishing and hunting, rather than on the fruits of their own labor.

From this description of the mode of subsisting among the rude American tribes, the form and genius of their political institutions may be deduced, and we are enabled to trace various circumstances of distinction between them and more civilized nations.

1. They were divided into small independent communities. While hunting is the chief source of subsistence, a vast extent of territory is requisite for supporting a small number of people. In proportion as men multiply and unite, the wild animals on which they depend for food diminish, or fly at a greater distance from the haunts of their enemy. The increase of a society in this state is limited by its own nature, and the members of it must either disperse, like the game which

they pursue, or fall upon some better method of procuring food than by hunting. Beasts of prey are by nature solitary and unsocial, they go not forth to the chase in herds, but delight in those recesses of the forest where they can roam and destroy undisturbed. A nation of hunters resembles them both in occupation and in genius. They cannot form into large communities, because it would be impossible to find subsistence; and they must drive to a distance every rival who may encroach on those domains, which they consider as their own. This was the state of all the American tribes; the numbers in each were inconsiderable, though scattered over countries of great extent; they were far removed from one another, and engaged in perpetual hostilities or rivalry. In America, the word *nation* is not of the same import as in other parts of the globe. It is applied to small societies, not exceeding, perhaps, two or three hundred persons, but occupying provinces, greater than some kingdoms in Europe. The country of Guiana, though of larger extent than the kingdom of France, and divided among a greater number of nations, did not contain above twenty-five thousand inhabitants. In the provinces which border on the Orinoco, one may travel several hundred miles in different directions, without finding a single hut, or observing the footsteps of a human creature. In North America, where the climate is more rigorous, and the soil less fertile, the desolation is still greater. There, journeys of some hundred leagues have been made through uninhabited plains and forests. [60] As long as hunting continues to be the chief employment of man, to which he trusts for subsistence, he can hardly be said to have occupied the earth. [61]

2. Nations which depend upon hunting are in a great measure strangers to the idea of property. As the animals on which the hunter feeds are not bred under his inspection, nor nourished by his care, he can claim no right to them while they run wild in the forest. Where game is so plentiful that it may be caught with little trouble, men never dream of appropriating what is of small value, or of easy acquisition. Where it is so rare, that the labor or danger of the chase requires the united efforts of a tribe, or village, what is killed is a common stock belonging equally to all, who, by their skill or their courage, have contributed to the success of the excursion. The forest or hunting-grounds are deemed the property of the tribe, from which it has a title to exclude every rival nation. But no individual arrogates a right to any district of these in preference to his fellow-citizens. They belong alike to all; and thither, as to a general and undivided store, all repair in quest of sustenance. The same principles by which they regulate their chief occupation extend to that which is subordinate. Even agriculture has not introduced among them a complete idea of property. As the men hunt, the women labor together, and after they have shared the toils of the seed time, they enjoy the harvest in common. Among some tribes, the increase of their cultivated lands is deposited in a public granary, and divided among them at stated times, according to their wants. [62] Among others, though they lay up separate stores, they do not acquire such an exclusive right of property, that they can enjoy superfluity while those around them suffer want. Thus the distinctions arising from the inequality of possessions are unknown. The terms rich or poor enter not into their language; and being strangers to property, they are unacquainted with what is the great object of laws and policy, as well as the chief motive which induced mankind to establish the various arrangements of regular government.

3. People in this state retain a high sense of equality and independence. Wherever the idea of property is not established, there can be no distinction among men but what arises from personal qualities. These can be conspicuous only on such occasions as call them forth into exertion. In times of danger, or in affairs of intricacy, the wisdom and experience of age are consulted, and prescribe the measures which ought to be pursued. When a tribe of savages takes the field against the enemies of their country, the warrior of most approved courage leads the youth to the combat. If they go forth in a body to the chase, the most expert and adventurous hunter is foremost, and directs their motions. But during seasons of tranquillity and inaction, when there is no occasion to display those talents, all pre-eminence ceases. Every circumstance indicates that all the members of the community are on a level. They are clothed in the same simple garb. They feed on the same plain fare. Their houses and furniture are exactly similar. No distinction can arise from the inequality of possessions. Whatever forms dependence on one part,

or constitutes superiority on the other, is unknown. All are freemen, all feel themselves to be such, and assert with firmness the rights which belong to that condition. This sentiment of independence is imprinted so deeply in their nature that no change of condition can eradicate it, and bend their minds to servitude. Accustomed to be absolute masters of their own conduct, they disdain to execute the orders of another; and having never known control they will not submit to correction. [63] Many of the Americans, when they found that they were treated as slaves by Spaniards, died of grief; many destroyed themselves in despair.

4. Among the people in this state, government can assume little authority, and the sense of civil subordination must remain very imperfect. While the idea of property is unknown, or incompletely conceived; while the spontaneous productions of the earth, as well as the fruits of industry, are considered as belonging to the public stock, there can hardly be any such subject of difference or discussion among the members of the same community, as will require the hand of authority to interpose in order to adjust it. Where the right of separate and exclusive possession is not introduced, the great object of law and jurisdiction does not exist. When the members of a tribe are called into the field, either to invade the territories of their enemies, or to repel their attacks; when they are engaged together in the toil and dangers of the chase, they then perceive that they are part of a political body. They are conscious of their own connexion with the companions in conjunction with whom they act; and they follow and reverence such as excel in conduct and valor. But during the intervals between such common efforts they seem scarcely to feel the ties of political union. [64] No visible form of government is established. The names of *magistrate* and *subject* are not in use. Every one seems to enjoy his natural independence almost entire. If a scheme of public utility be proposed, the members of the community are left at liberty to choose whether they will or will not assist in carrying it into execution. No statute imposes any service as a duty, no compulsory laws oblige them to perform it. All their resolutions are voluntary, and flow from the impulse of their own minds. The first step towards establishing a public jurisdiction has not been taken in those rude societies. The right of revenge is left in private hands. If violence is committed, or blood is shed, the community does not assume the power either of inflicting or of moderating the punishment. It belongs to the family and friends of the person injured or slain to avenge the wrong, or to accept of the reparation offered by the aggressor. If the elders interpose, it is to advise, not to decide, and it is seldom their counsels are listened to; for, as it is deemed pusillanimous to suffer an offender to escape with impunity, resentment is implacable and everlasting. The object of government among savages is rather foreign than domestic. They do not aim at maintaining interior order and police by public regulations, or the exertions of any permanent authority, but labor to preserve such union among the members of their tribe, that they may watch the motions of their enemies, and act against them with concert and vigor.

Such was the form of political order established among the greater part of the American nations. In this state were almost all the tribes spread over the provinces extending eastward of the Mississippi, from the mouth of the St. Lawrence to the confines of Florida. In a similar condition were the people of Brazil, the inhabitants of Chili, several tribes of Paragua and Guiana, and in the countries which stretch from the mouth of the Orinoco to the peninsula of Yucatan. Among such an infinite number of petty associations, there may be peculiarities which constitute a distinction, and mark the various degrees of their civilization and improvement. But an attempt to trace and enumerate these would be vain, as they have not been observed by persons capable of discerning the minute and delicate circumstances which serve to discriminate nations resembling one another in their general character and features. The description which I have given of the political institutions which took place among those rude tribes in America, concerning which we have received the most complete information, will apply, with little variation, to every people, both in its northern and southern division, who have advanced no further in civilization than to add some slender degree of agriculture to fishing and hunting.

Imperfect as those institutions may appear, several tribes were not so far advanced in their political progress. Among all those petty nations which trusted for subsistence entirely to fishing and hunting without any

species of cultivation, the union was so incomplete, and their sense of mutual dependence so feeble, that hardly any appearance of government or order can be discerned in their proceedings. Their wants are few, their objects of pursuit simple, they form into separate tribes, and act together, from instinct, habit, or convenience, rather than from any formal concert and association. To this class belong the Californians, several of the small nations in the extensive country of Paragua, some of the people on the banks of the Orinoco, and on the river St. Magdalene, in the new kingdom of Granada.

But though among these last mentioned tribes there was hardly any shadow of regular government, and even among those which I first described its authority is slender and confined within narrow bounds, there were, however, some places in America where government was carried far beyond the degree of perfection which seems natural to rude nations. In surveying the political operations of man, either in his savage or civilized state, we discover singular and eccentric institutions, which start as it were from their station, and fly off so wide, that we labor in vain to bring them within the general laws of any system, or to account for them by those principles which influence other communities in a similar situation. Some instances of this occur among those people of America whom I have included under the common denomination of savage. These are so curious and important that I shall describe them, and attempt to explain their origin.

In the New World, as well as in other parts of the globe, cold or temperate countries appear to be the favorite seat of freedom and independence. There the mind, like the body, is firm and vigorous. There men, conscious of their own dignity, and capable of the greatest efforts in asserting it, aspire to independence, and their stubborn spirits stoop with reluctance to the yoke of servitude. In warmer climates, by whose influence the whole frame is so much enervated that present pleasure is the supreme felicity, and mere repose is enjoyment, men acquiesce, almost without a struggle, in the dominion of a superior. Accordingly, if we proceed from north to south along the continent of America, we shall find the power of those vested with authority gradually increasing, and the spirit of the people becoming more tame and passive. In Florida, the authority of the sachems, caziques, or chiefs, was not only permanent, but hereditary. They were distinguished by peculiar ornaments, they enjoyed prerogatives of various kinds, and were treated by their subjects with that reverence which people accustomed to subjection, pay to a master.

Among the Natchez, a powerful tribe now extinct, formerly situated on the banks of the Mississippi, a difference of rank took place, with which the northern tribes were altogether unacquainted. Some families were reputed noble, and enjoyed hereditary dignity. The body of the people was considered as vile, and formed only for subjection. This distinction was marked by appellations which distinguished the high elevation of the one state, and the ignominious depression of the other. The former were called *Respectable*; the latter, the *Stinkards*. The great Chief, in whom the supreme authority was vested, is reputed to be a being of superior nature, the brother of the sun, the sole object of their worship. They approach this great Chief with religious veneration, and honor him as the representative of their deity. His will is a law, to which all submit with implicit obedience. The lives of his subjects are so absolutely at his disposal, that if any one has incurred his displeasure, the offender comes with profound humility and offers him his head. Nor does the dominion of the Chiefs end with their lives; their principal officers, their favorite wives, together with many domestics of inferior rank, are sacrificed at their tombs, that they may be attended in the next world by the same persons who served them in this; and such is the reverence in which they are held, that those victims welcome death with exultation, deeming it a recompense of their fidelity and a mark of distinction to be selected to accompany their deceased master. Thus a perfect despotism, with its full train of superstition, arrogance, and cruelty, is established among the Natchez, and, by a singular fatality, that people has tasted of the worst calamities incident to polished nations, though they themselves are not far advanced beyond the tribes around them in civility and improvement. In Hispaniola, Cuba, and the larger islands, their caziques or chiefs possessed extensive power. The dignity was transmitted by hereditary right from father to son. Its honors and prerogatives were considerable. Their subjects paid great respect to the caziques, and executed their orders without hesitation or reserve.

They were distinguished by peculiar ornaments, and in order to preserve or augment the veneration of the people, they had the address to call in the aid of superstition to uphold their authority. They delivered their mandates as the oracles of heaven, and pretended to possess the power of regulating the seasons, and of dispensing rain or sunshine according as their subjects stood in need of them.

In some parts of the southern continent, the power of the caziques seems to have been as extensive as in the isles. In Bogota, which is now a province of the new kingdom of Granada, there was settled a nation more considerable in number, and more improved in the various arts of life, than any in America, except the Mexican and Peruvians. The people of Bogota subsisted chiefly by agriculture. The idea of property was introduced among them, and its rights, secured by laws, handed down by tradition, and observed with great care. They lived in towns which may be termed large when compared with those in other parts of America. They were clothed in a decent manner, and their houses may be termed commodious when compared with those of the small tribes around them. The effect of this uncommon civilization was conspicuous. Government had assumed a regular form. A jurisdiction was established, which took cognizance of different crimes, and punished them with rigor. A distinction of ranks was known; their chief, to whom the Spaniards gave the title of monarch, and who merited that name on account of his splendour as well as power, reigned with absolute authority. He was attended by officers of various conditions; he never appeared in public without a numerous retinue; he was carried in a sort of palanquin with much pomp, and harbingers went before him to sweep the road and strew it with flowers. This uncommon pomp was supported by presents or taxes received from his subjects, to whom their prince was such an object of veneration that none of them presumed to look him directly in the face, or ever approached him but with an averted countenance. There were other tribes on the same continent, among which, though far less advanced than the people of Bogota in their progress towards refinement, the freedom and independence natural to man in his savage state was much abridged, and their caziques had assumed extensive authority.

It is not easy to point out the circumstances, or to discover the causes which contributed to introduce and establish among each of those people a form of government so different from that of the tribes around them, and so repugnant to the genius of rude nations. If the persons who had an opportunity of observing them in their original state had been more attentive and more discerning, we might have received information from their conquerors sufficient to guide us in this inquiry. If the transactions of people unacquainted with the use of letters were not involved in impenetrable obscurity, we might have derived some information from this domestic source. But as nothing satisfactory can be gathered either from the accounts of the Spaniards, or from their own traditions, we must have recourse to conjectures in order to explain the irregular appearances in the political state of the people whom I have mentioned. As all those tribes which had lost their native liberty and independence were seated in the torrid zone, or in countries approaching to it, the climate may be supposed to have had some influence in forming their minds to that servitude which seems to be the destiny of man in those regions of the globe. But though the influence of climate, more powerful than that of any other natural cause, is not to be overlooked, that alone cannot be admitted as a solution of the point in question. The operations of mind are so complex that we must not attribute the form which they assume to the force of a single principle or cause. Although despotism be confined in America to the torrid zone, and to the warm regions bordering upon it, I have already observed that these countries contain various tribes, some of which possess a high degree of freedom, and others are altogether unacquainted with the restraints of government. The indolence and timidity peculiar to the inhabitants of the islands, render them so incapable of the sentiments or efforts necessary for maintaining independence, that there is no occasion to search for any other cause of their tame submission to the will of a superior. The subjection of the Natchez, and of the people of Bogota, seems to have been the consequence of a difference in their state from that of the other Americans. They were settled nations, residing constantly in one place. Hunting was not the chief occupation of the former, and the latter seem hardly to have trusted to it for any part of their subsistence.

Both had made such progress in agriculture and arts that the idea of property was introduced in some degree in the one community, and fully established in the other. Among people in this state, avarice and ambition have acquired objects, and have begun to exert their power; views of interest allure the selfish; the desire of pre-eminence excites the enterprising; dominion is courted by both; and passions unknown to man in his savage state prompt the interested and ambitious to encroach on the rights of their fellow-citizens. Motives, with which rude nations are equally unacquainted, induce the people to submit tamely to the usurped authority of their superiors. But even among nations in this state, the spirit of subjects could not have been rendered so obsequious, or the power of rulers so unbounded, without the intervention of superstition. By its fatal influence the human mind, in every stage of its progress, is depressed, and its native vigor and independence subdued. Whoever can acquire the direction of this formidable engine, is secure of dominion over his species. Unfortunately for the people whose institutions are the subject of inquiry, this power was in the hands of their chiefs. The caziques of the isles could put what responses they pleased into the mouths of their *Cemis* or gods; and it was by their interposition, and in their name, that they imposed any tribute or burden on their people. The same power and prerogative was exercised by the great chief of the Natchez, as the principal minister as well as the representative of the Sun, their deity. The respect which the people of Bogota paid to their monarchs was likewise inspired by religion, and the heir apparent of the kingdom was educated in the innermost recess of their principal temple, under such austere discipline, and with such peculiar rites, as tended to fill his subjects with high sentiments concerning the sanctity of his character, and the dignity of his station. Thus superstition, which in the rudest period of society, is either altogether unknown, or wastes its force in childish unmeaning practices, had acquired such an ascendancy over those people of America, who had made some little progress towards refinement, that it became the chief instrument of bending their minds to an uterine servitude, and subjected them, in the beginning of their political career, to a despotism hardly less rigorous than that which awaits nations in the last stage of their corruption and decline.

V. After examining the political institutions of the rude nations in America, the next object of attention is their art of war, or their provision for public security and defence. The small tribes dispersed over America are not only independent and unconnected, but engaged in perpetual hostilities with one another. Though mostly strangers to the idea of separate property, vested in any individual, the rudest of the American nations are well acquainted with the rights of each community to its own domains. This right they hold to be perfect and exclusive, entitling the possessor to oppose the encroachment of neighboring tribes. As it is of the utmost consequence to prevent them from destroying or disturbing the game in their hunting grounds, they guard this national property with a jealous attention. But as their territories are extensive, and the boundaries of them not exactly ascertained, innumerable subjects of dispute arise, which seldom terminate without bloodshed. Even in this simple and primitive state of society, interest is a source of discord, and often prompts savage tribes to take arms in order to repel or punish such as encroach on the forests or plains to which they trust for subsistence.

But interest is not either the most frequent or the most powerful motive of the incessant hostilities among rude nations. These must be imputed to the passion of revenge, which rages with such violence in the breast of savages, that eagerness to gratify it may be considered as the distinguishing characteristic of men in their uncivilized state. Circumstances of powerful influence, both in the interior government of rude tribes, and in their external operations against foreign enemies, concur in cherishing and adding strength to a passion fatal to the general tranquillity. When the right of redressing his own wrongs is left in the hands of every individual, injuries are felt with exquisite sensibility, and vengeance exercised with unrelenting rancor. No time can obliterate the memory of an offence, and it is seldom that it can be expiated but by the blood of the offender. In carrying on their public wars, savage nations are influenced by the same ideas, and animated with the same spirit, as in prosecuting private vengeance. In small communities, every man is touched with the injury or affront offered to the body of which he is a member, as if it were a personal attack

upon his own honor or safety. The desire of revenge is communicated from breast to breast, and soon kindles into rage. As feeble societies can take the field only in small parties, each warrior is conscious of the importance of his own arm, and feels that to it is committed a considerable portion of the public vengeance. War, which between extensive kingdoms is carried on with little animosity, is prosecuted by small tribes with all the rancor of a private quarrel. The resentment of nations is as implacable as that of individuals. It may be dissimulated or suppressed, but is never extinguished; and often, when least expected or dreaded, it bursts out with redoubled fury. When polished nations have obtained the glory of victory, or have acquired an addition of territory, they may terminate a war with honor. But savages are not satisfied until they extirpate the community which is the object of their hatred. They fight, not to conquer, but to destroy. If they engage in hostilities, it is with a resolution never to see the face of the enemy in peace, but to prosecute the quarrel with immortal enmity. The desire of vengeance is the first and almost the only principle which a savage instills into the minds of his children. This grows up with him as he advances in life; and as his attention is directed to few objects, it acquires a degree of force unknown among men whose passions are dissipated and weakened by the variety of their occupations and pursuits. The desire of vengeance, which takes possession of the heart of savages, resembles the instinctive rage of an animal rather than the passion of a man. It turns, with undiscerning fury, even against inanimate objects. If hurt accidentally by a stone, they often seize it in a transport of anger, and endeavor to wreak their vengeance upon it. If struck with an arrow in a battle, they will tear it from the wound, break and bite it with their teeth, and dash it on the ground. With respect to their enemies their rage of vengeance knows no bounds. When under the dominion of this passion, man becomes the most cruel of all animals. He neither pities, nor forgives, nor spares.

The force of this passion is so well understood by the Americans themselves, that they always apply to it in order to excite their people to take arms. If the elders of any tribe attempt to rouse their youth from sloth, if a chief wishes to allure a band of warriors to follow him in invading an enemy's country, the most persuasive topics of their martial eloquence are drawn from revenge. "The bones of our countrymen," say they, "lie uncovered; their bloody bed has not been washed clean. Their spirits cry against us; they must be appeased. Let us go and devour the people by whom they were slain. Sit no longer inactive upon your mats; lift the hatchet, console the spirits of the dead, and tell them that they shall be avenged."

Animated with such exhortations, the youth snatch their arms in a transport of fury, raise the song of war, and burn with impatience to imbrue their hands in the blood of their enemies. Private chiefs often assemble small parties and invade a hostile tribe without consulting the rulers of the community. A single warrior, prompted by caprice or revenge, will take the field alone, and march several hundred miles to surprise and cut off a straggling enemy. [65] The exploits of a noted warrior, in such solitary excursions, often form the chief part in the history of an American campaign; [66] and their elders connive at such irregular sallies, as they tend to cherish a martial spirit, and accustom their people to enterprise and danger. But when a war is national, and undertaken by public authority, the deliberations are formal and slow. The elders assemble, they deliver their opinions in solemn speeches, they weigh with maturity the nature of the enterprise, and balance its beneficial or disadvantageous consequences with no inconsiderable portion of political discernment or sagacity. Their priests and soothsayers are consulted, and sometimes they ask the advice even of their women. If the determination be for war, they prepare for it with much ceremony. A leader offers to conduct the expedition, and is accepted. But no man is constrained to follow him; the resolution of the community to commence hostilities imposes no obligation upon any member to take part in the war. Each individual is still master of his own conduct, and his engagement in the service is perfectly voluntary.

The maxims by which they regulate their military operations, though extremely different from those which take place among more civilized and populous nations, are well suited to their own political state, and the nature of the country in which they act. They never take the field in numerous bodies, as it would require a greater effort of foresight and industry than is usual among savages, to provide for their subsistence during

a march of some hundred miles through dreary forests, or during a long voyage upon their lakes and rivers. Their armies are not encumbered with baggage or military stores. Each warrior, besides his arms, carries a mat and a small bag of pounded maize, and with these is completely equipped for any service. While at a distance from the enemy's frontier, they disperse through the woods, and support themselves with the game which they kill, or the fish which they catch. As they approach nearer to the territories of the nation which they intend to attack, they collect their troops, and advance with greater caution. Even in their hottest and most active wars they proceed wholly by stratagem and ambuscade. They place not their glory in attacking their enemies with open force. To surprise and destroy is the greatest merit of a commander, and the highest pride of his followers. War and hunting are their only occupations, and they conduct both with the same spirit and the same arts. They follow the track of their enemies through the forest. They endeavor to discover their haunts, they lurk in some thicket near to these, and, with the patience of a sportsman lying in wait for game, will continue in their station day after day until they can rush upon their prey when most secure, and least able to resist them. If they meet no straggling party of the enemy, they advance towards their villages, but with such solicitude to conceal their own approach, that they often creep on their hands and feet through the woods, and paint their skins of the same color with the withered leaves, in order to avoid detection. If so fortunate as to remain unobserved, they set on fire the enemies' huts in the dead of night, and massacre the inhabitants as they fly naked and defenceless from the flames. If they hope to effect a retreat without being pursued, they carry off some prisoners, whom they reserve for a more dreadful fate. But if, notwithstanding all their address and precautions, they find that their motions are discovered, that the enemy has taken the alarm, and is prepared to oppose them, they usually deem it most prudent to retire. They regard it as extreme folly to meet an enemy who is on his guard, upon equal terms, or to give battle in an open field. The most distinguished success is a disgrace to a leader if it has been purchased with any considerable loss of his followers, [67] and they never boast of a victory if stained with the blood of their own countrymen. To fall in battle, instead of being reckoned an honorable death, is a misfortune which subjects the memory of a warrior to the imputation of rashness or imprudence. [68]

This system of war was universal in America; and the small uncivilized tribes, dispersed through all its different regions and climates, display more craft than boldness in carrying on their hostilities. Struck with this conduct, so opposite to the ideas and maxims of Europeans, several authors contend that it flows from a feeble and dastardly spirit peculiar to the Americans, which is incapable of any generous or manly exertion. But when we reflect that many of these tribes, on occasions which call for extraordinary efforts, not only defend themselves with obstinate resolution, but attack their enemies with the most daring courage, and that they possess fortitude of mind superior to the sense of danger or the fear of death, we must ascribe their habitual caution to some other cause than constitutional timidity. The number of men in each tribe is so small, the difficulty of rearing new members amidst the hardships and dangers of savage life is so great, that the life of a citizen is extremely precious, and the preservation of it becomes a capital object in their policy. Had the point of honor been the same among the feeble American tribes as among the powerful nations of Europe, had they been taught to court fame or victory in contempt of danger and death, they must have been ruined by maxims so ill adapted to their condition. But wherever their communities are more populous, so that they can act with considerable force, and can sustain the loss of several of their members without being sensibly weakened, the military operations of the Americans more nearly resemble those of other nations. The Brazilians, as well as the tribes situated upon the banks of the river De la Plata, often take the field in numerous bodies as deserve the name of armies. They defy their enemies to the combat, engage in regular battles, and maintain the conflict with that desperate ferocity which is natural to men who, having no idea of war but that of exterminating their enemies, never give or take quarter. [69] In the powerful empires of Mexico and Peru, great armies were assembled, frequent battles were fought, and the theory as well as practice of war were different from

what took place in those petty societies which assume the name of nations.

But though vigilance and attention are the qualities chiefly requisite where the object of war is to deceive and to surprise; and though the Americans, when acting singly, display an amazing degree of address in concealing their own motions, and discovering those of an enemy, yet it is remarkable that, when they take the field in parties, they can seldom be brought to observe the precautions most essential to their own security. Such is the difficulty of accustoming savages to subordination, or to act in concert; such is their impatience under restraint, and such their caprice and presumption, that it is rarely they can be brought to conform themselves to the counsels and directions of their leaders. They never station sentinels around the place where they rest at night, and after marching some hundred miles to surprise an enemy, are often surprised themselves, and cut off, while sunk in as profound sleep as if they were not within reach of danger.

If, notwithstanding this negligence and security, which often frustrate their most artful schemes, they catch the enemy unprepared, they rush upon them with the utmost ferocity, and tearing off the scalps of all those who fall victims to their rage, [70] they carry home those strange trophies in triumph. These they preserve as monuments, not only of their own prowess, but of the vengeance which their arm has inflicted upon the people who were objects of public resentment. They are still more solicitous to seize prisoners. During their retreat, if they hope to effect it unmolested, the prisoners are commonly exempt from any insult, and treated with some degree of humanity, though guarded with the most strict attention.

But after this temporary suspension, the rage of the conquerors rekindles with new fury. As soon as they approach their own frontier, some of their number are despatched to inform their countrymen with respect to the success of the expedition. Then the prisoners begin to feel the wretchedness of their condition. The women of the village, together with the youth who have not attained to the age of bearing arms, assemble, and forming themselves into two lines, through which the prisoners must pass, beat and bruise them with sticks or stones in a cruel manner. After this first gratification of their rage against their enemies, follow lamentations for the loss of such of their own countrymen as have fallen in the service, accompanied with words and actions which seem to express the utmost anguish and grief. But in a moment, upon a signal given, their tears cease; they pass, with a sudden and unaccountable transition, from the depths of sorrow to the transports of joy; and begin to celebrate their victory with all the wild exultation of a barbarous triumph. The fate of the prisoners remains still undecided. The old men deliberate concerning it. Some are destined to be tortured to death, in order to satiate the revenge of the conquerors; some to replace the members which the community has lost in that or former wars. They who are reserved for this milder fate, are led to the huts of those whose friends have been killed. The women meet them at the door, and if they receive them, their sufferings are at an end. They are adopted into the family, and, according to their phrase, are seated upon the mat of the deceased. They assume his name, they hold the same rank, and are treated thenceforward with all the tenderness due to a father, a brother, a husband, or a friend. But, if either from caprice or an unrelenting desire of revenge, the women of any family refuse to accept of the prisoner who is offered to them, his doom is fixed. No power can then save him from torture and death.

While their lot is in suspense, the prisoners themselves appear altogether unconcerned about what may befall them. They talk, they eat, they sleep, as if they were perfectly at ease, and no danger impending. When the fatal sentence is intimated to them, they receive it with an unaltered countenance, raise their death song, and prepare to suffer like men. Their conquerors assemble as to a solemn festival, resolved to put the fortune of the captive to the utmost proof. A scene ensues, the bare description of which is enough to chill the heart with horror, wherever men have been accustomed, by milder institutions, to respect their species, and to melt into tenderness at the sight of human sufferings. The prisoners are tied naked to a stake, but so as to be at liberty to move round it. All who are present, men, women, and children, rush upon them like furies. Every species of torture is applied that the rancor of revenge can invent. Some burn their limbs with red hot irons, some mangle their bodies with knives, others tear their flesh from their bones,

pluck out their nails by the roots, and rend and twist their sinews. They vie with one another in refinements of torture. Nothing sets bounds to their rage but the dread of abridging the duration of their vengeance by hastening the death of the sufferers; and such is their cruel ingenuity in tormenting, that, by avoiding industriously to hurt any vital part, they often prolong this scene of anguish for several days. In spite of all that they suffer, the victims continue to chant their death song with a firm voice, they boast of their own exploits, they insult their tormentors for the want of skill in avenging their friends and relations, they warn them of the vengeance which awaits them on account of what they are now doing, and excite their ferocity by the most provoking reproaches and threats. To display undaunted fortitude, in such dreadful situations is the noblest triumph of a warrior. To avoid the trial by a voluntary death, or to shrink under it, is deemed infamous and cowardly. If any one betrays symptoms of timidity, his tormentors often despatch him at once with contempt, as unworthy of being treated like a man. Animated with those ideas, they endure without a groan what it seems almost impossible that human nature should sustain. They appear to be not only insensible to pain, but to court it. "Forbear," said an aged chief of the Iroquois, when his insults had provoked one of his tormentors to wound him with a knife, "forbear these stabs of your knife, and rather let me die by fire, than those dogs, your allies, from beyond the sea, may learn by my example to suffer like men." This magnanimity of which there are frequent instances among the American warriors, instead of exciting admiration, or calling forth sympathy, exasperates the fierce spirits of their torturers to fresh acts of cruelty. Weary, at length of contending with men whose constancy of mind they cannot vanquish, some chief, in a rage, puts a period to their sufferings, by despatching them with his dagger or club.

This barbarous scene is often succeeded by one no less shocking. As it is impossible to appease the fell spirit of revenge which rages in the heart of a savage, this frequently prompts the Americans to devour those unhappy persons who have been the victims of their cruelty. In the ancient world, tradition has preserved the memory of barbarous nations of cannibals, who fed on human flesh. But in every part of the New World there were people to whom this custom was familiar. It prevailed in the southern continent, in several of the islands, and in various districts of North America. Even in those parts where circumstances with which we are unacquainted had in a great measure abolished this practice, it seems formerly to have been so well known that it is incorporated into the idiom of their language. Among the Iroquois, the phrase by which they express their resolution of making war against an enemy is, "Let us go and eat that nation." If they solicit the aid of a neighboring tribe, they invite it "to eat broth made of the flesh of their enemies." [71] Nor was the practice peculiar to rude unpolished tribes; the principle from which they took rise is so deeply rooted in the minds of the Americans, that it subsisted in Mexico, one of the civilized empires in the New World, and relics of it may be discovered among the more mild inhabitants of Peru. It was not scarcity of food, as some authors imagine, and the importunate cravings of hunger, which forced the Americans to those horrid repasts on their fellow-creatures. Human flesh was never used as common food in any country, and the various relations concerning people who reckoned it among the stated means of subsistence, flow from the credulity and mistakes of travellers. The rancor of revenge first prompted men to this barbarous action. The fiercest tribes devoured none but prisoners taken in war, or such as they regarded as enemies. [72] Women and children who were not the objects of enmity, if not cut off in the fury of their first inroad into a hostile country, seldom suffered by the deliberate effects of their revenge.

The people of South America gratify their revenge in a manner somewhat different, but with no less unrelenting rancor. Their prisoners, after meeting at their first entrance with the same rough reception as among the North Americans, are not only exempt from injury, but treated with the greatest kindness. They are feasted and caressed, and some beautiful young women are appointed to attend and solace them. It is not easy to account for this part of their conduct, unless we impute it to a refinement in cruelty. For, while they seem studious to attach the captives to life, by supplying them with every enjoyment that can render it agreeable, their doom is irrevocably fixed. On a day appointed the victorious tribe assembles, the pri-

soner is brought forth with great solemnity, he views the preparations for the sacrifice with as much indifference as if he himself was not the victim, and meeting his fate with undaunted firmness, is despatched with a single blow. The moment he falls, the women seize the body and dress it for the feast. They besmear their children with the blood, in order to kindle in their bosoms a hatred of their enemies, which is never extinguished, and all join in feeding upon the flesh with amazing greediness and exultation. To devour the body of a slaughtered enemy they deem the most complete and exquisite gratification of revenge. Wherever this practice prevails, captives never escape death, but they are not tortured with the same cruelty as among tribes which are less accustomed to such horrid feasts. [73]

As the constancy of every American warrior may be put to such severe proof, the great object of military education and discipline in the New World is to form the mind to sustain it. When nations carry on war with open force, defy their enemies to the combat, and vanquish them by the superiority of their skill or courage, soldiers are trained to be active, vigorous, and enterprising. But in America, where the genius and maxims of war are extremely different, passive fortitude is the quality in highest estimation. Accordingly, it is early the study of the Americans to acquire sentiments and habits which will enable them to behave like men when their resolution shall be put to the proof. As the youth of other nations exercise themselves in feats of activity and force, those of America vie with one another in exhibitions of their patience under sufferings. They harden their nerves by those voluntary trials, and gradually accustom themselves to endure the sharpest pain without complaining. A boy and a girl will bind their naked arms together, and place a burning coal between them, in order to try who first discovers such impatience as to shake it off. All the trials customary in America, when a youth is admitted into the class of warriors, or when a warrior is promoted to the dignity of captain or chief, are accommodated to this idea of manliness. They are not displays of valor, but of patience; they are not exhibitions of their ability to offend, but of their capacity to suffer. Among the tribes on the banks of the Orinoco, if a warrior aspires to the rank of captain, his probation begins with a long fast, more rigid than any ever observed by the most abstemious hermit. At the close of this the chiefs assemble, each gives him three lashes with a large whip, applied so vigorously that his body is almost flayed, and if he betrays the least symptoms of impatience or even sensibility he is disgraced for ever, and rejected as unworthy of the honor to which he aspires. After some interval, the constancy of the candidate is proved by a more excruciating trial. He is laid in hammock with his hands bound fast, and innumerable multitude of venomous ants, whose bite occasions exquisite pain, and produces a violent inflammation, are thrown upon him. The judges of his merit stand around the hammock, and, while these cruel insects fasten upon the most sensible parts of his body, a sigh, a groan, an involuntary motion, expressive of what he suffers, would exclude him for ever from the rank of captain. Even after this evidence of his fortitude, it is not deemed to be completely ascertained, but must stand another test more dreadful than any he has hitherto undergone. He is again suspended in his hammock, and covered with leaves of the palmetto. A fire of stinking herbs is kindled underneath, so as he may feel its heat and be involved in its smoke. Though scorched and almost suffocated, he must continue to endure with the same patient insensibility. Many perish in this rude essay of their firmness and courage, but such as go through it with applause, receive the ensigns of their new dignity with much solemnity, and are ever after regarded as leaders of approved resolution, whose behavior in the most trying situations will do honor to their country. In North America the previous trial of a warrior is neither so formal nor so severe. Though even there, before a youth is permitted to bear arms, his patience and fortitude are proved by blows, by fire, and by insults more intolerable to a haughty spirit than both.

The amazing steadiness with which the Americans endure the most exquisite torments, has induced some authors to suppose that, from the peculiar feebleness of their frame, their sensibility is not so acute as that of other people; as women, and persons of a relaxed habit, are observed to be less affected with pain than robust men, whose nerves are more firmly braced. But the constitution of the Americans is not so different in its texture from that of the rest of the human species as to account for this diversity in their behavior. It

flows from a principle of honor, instilled early and cultivated with such care, as to inspire man in his rudest state with an heroic magnanimity, to which philosophy hath endeavored in vain to form him, when more highly improved and polished. This invincible constancy he has been taught to consider as the chief distinction of a man, and the highest attainment of a warrior. The ideas which influence his conduct, and the passions which take possession of his heart, are few. They operate of course with more decisive effect than when the mind is crowded with a multiplicity of objects, or distracted by the variety of its pursuits; and when every motive that acts with any force in forming the sentiments of a savage, prompts him to suffer with dignity, he will bear what might seem to be impossible for human patience to sustain. But wherever the fortitude of the Americans is not roused to exertion by their ideas of honor, their feelings of pain are the same with those of the rest of mankind. [74] Nor is that patience under sufferings for which the Americans have been so justly celebrated, a universal attainment. The constancy of many of the victims is overcome by the agonies of torture. Their weakness and lamentations complete the triumph of their enemies, and reflect disgrace upon their own country.

The perpetual hostilities carried on among the American tribes are productive of very fatal effects. Even in seasons of public tranquillity, their imperfect industry does not supply them with any superfluous store of provisions; but when the irruption of an enemy desolates their cultivated lands, or disturbs them in their hunting excursions, such a calamity reduces a community, naturally unprovided and destitute of resources, to extreme want. All the people of the district that is invaded are frequently forced to take refuge in woods and mountains, which can afford them little subsistence, and where many of them perish. Notwithstanding their excessive caution in conducting their military operations, and the solicitude of every leader to preserve the lives of his followers, as the rude tribes in America seldom enjoy any interval of peace, the loss of men among them is considerable in proportion to the degree of population. Thus famine and the sword combine in thinning their numbers. All their communities are feeble, and nothing now remains of several nations which were once considerable, but the name.

Sensible of this continual decay, there are tribes which endeavor to recruit their national force when exhausted, by adopting prisoners taken in war, and by this expedient prevent their total extinction. The practice, however, is not universally received. Resentment operates more powerfully among savages than considerations of policy. Far the greater part of their captives was anciently sacrificed to their vengeance, and it is only since their numbers began to decline fast, that they have generally adopted milder maxims. But such as they do naturalize renounce for ever their native tribe, and assume the manners as well as passions of the people by whom they are adopted so entirely, that they often join them in expeditions against their own countrymen. Such a sudden transition, and so repugnant to one of the most powerful instincts implanted by nature, would be deemed strange among many people; but among the members of small communities, where national enmity is violent and deep rooted, it has the appearance of being still more unaccountable. It seems, however, to result naturally from the principles upon which war is carried on in America. When nations aim at exterminating their enemies, no exchange of prisoners can ever take place. From the moment one is made a prisoner, his country and his friends consider him as dead. [75] He has incurred indelible disgrace by suffering himself to be surprised or to be taken by an enemy; and were he to return home, after such a stain upon his honor, his nearest relations would not receive or even acknowledge that they knew him. Some tribes were still more rigid, and if a prisoner returned, the infamy which he had brought on his country was expiated, by putting him instantly to death. As the unfortunate captive is thus an outcast from his own country, and the ties which bound him to it are irreparably broken, he feels less reluctance in forming a new connexion with people, who, as an evidence of their friendly sentiments, not only deliver him from a cruel death, but offer to admit him to all the rights of a fellow-citizen. The perfect similarity of manners among savage nations facilitates and completes the union, and induces a captive to transfer not only his allegiance, but his affection to the community into the bosom of which he is received.

But though war be the chief occupation of men in their rude state, and to excel in it their highest dis-

tion and pride, their inferiority is always manifest when they engage in competition with polished nations. Destitute of that foresight which discerns and provides for remote events, strangers to the union and mutual confidence requisite in forming any extensive plan of operations, and incapable of the subordination no less requisite in carrying such plans into execution, savage nations may astonish a disciplined enemy by their valor, but seldom prove formidable to him by their conduct; and whenever the contest is of long continuance, must yield to superior art [76]. The empires of Peru and Mexico, though their progress in civilization, when measured by the European or Asiatic standards, was inconsiderable, acquired such an ascendancy over the rude tribes around them, that they subjected most of them with great facility to their power. When the people of Europe overran the various provinces of America, this superiority was still more conspicuous. Neither the courage, nor number of the natives could repel a handful of invaders. The alienation and enmity, prevalent among barbarians, prevented them from uniting in any common scheme of defence, and while each tribe fought separately, all were subdued.

VI. The arts of rude nations unacquainted with the use of metals, hardly merit any attention on their own account, but are worthy of some notice, as far as they serve to display the genius and manners of man in this stage of his progress. The first distress a savage must feel, will arise from the manner in which his body is affected by the heat, or cold, or moisture of the climate under which he lives; and his first care will be to provide some covering for his own defence. In the warmer and more mild climates of America, none of the rude tribes were clothed. To most of them nature had not even suggested any idea of impropriety in being altogether uncovered. As under a mild climate there was little need of any defence from the injuries of the air, and their extreme indolence shunned every species of labor to which it was not urged by absolute necessity, all the inhabitants of the isles, and a considerable part of the people on the continent, remained in this state of naked simplicity. Others were satisfied with some slight covering, such as decency required. But though naked, they were not unadorned. They dressed their hair in many different forms. They fastened bits of gold, or shells, or shining stones, in their ears, their noses and cheeks. They stained their skins with a great variety of figures; and they spent much time, and submitted to great pain, in ornamenting their persons in this fantastic manner. Nature, however, which finds endless occupation for ingenuity and invention in nations where dress has become a complex and intricate art, is circumscribed within so narrow bounds, and confined to so few articles among naked savages, that they are not satisfied with those simple decorations, and have a wonderful propensity to alter the natural form of their bodies, in order to render it (as they imagine) more perfect and beautiful. This practice was universal among the rudest of the American tribes. Their operations for that purpose begin as soon as an infant is born. By compressing the bones of the skull, while still soft and flexible, some flatten the crown of their heads; some squeeze them into the shape of a cone; others mould them as much as possible into a square figure; and they often endanger the lives of their posterity by their violent and absurd efforts to derange the plan of nature, or to improve upon her designs. But in all their attempts either to adorn or to new model their persons, it seems to have been less the object of the Americans to please, or to appear beautiful, than to give an air of dignity and terror to their aspect. Their attention to dress had more reference to war than to gallantry. The difference in rank and estimation between the two sexes was so great, as seems to have distinguished, in some measure, their solicitude to appear mutually amiable. The man deemed it beneath him to adorn his person, for the sake of one on whom he was accustomed to look down as a slave. It was when the warrior had in view to enter the council of his nation, or to take the field against its enemies, that he assumed his choicest ornaments, and decked his person with the nicest care. The decorations of the women were few and simple; whatever was precious or splendid was reserved for the men. In several tribes the women were obliged to spend a considerable part of their time every day in adorning and painting their husbands, and could bestow little attention upon ornamenting themselves. Among a race of men so haughty as to despise, or so cold as to neglect them, the women naturally became careless and slovenly, and the love of finery and show, which had been deemed their favorite passion, was confined chiefly to the other sex. To deck his

person was the distinction of a warrior, as well as one of his most arduous occupations. [77]. In one part of their dress, which at first sight appears the most singular and capricious, the Americans have discovered considerable sagacity in providing against the chief inconveniences of their climate, which is often sultry and moist to excess. All the different tribes, which remain unclothed, are accustomed to anoint and rub their bodies with the grease of animals, with viscous gums, and with oils of different kinds. By this they check that profuse perspiration, which in the torrid zone wastes the vigor of the frame, and abridges the period of human life. By this, too, they provide a defence against the extreme moisture during the rainy season [78]. They likewise, at certain seasons, temper paint of different colors with those unctuous substances, and bedaub themselves plentifully with that composition. Sheathed with this impenetrable varnish, their skins are not only protected from the penetrating heat of the sun, but as all the innumerable tribes of insects have an antipathy to the smell or taste of that mixture, they are delivered from their teasing persecution, which amidst forests and marshes, especially in the warmer regions, would have been altogether intolerable in a state of perfect nakedness.

The next object to dress that will engage the attention of a savage, is to prepare some habitation which may afford him shelter by day, and a retreat at night. Whatever is connected with his ideas of personal dignity, whatever bears any reference to his military character, the savage warrior deems an object of importance. Whatever relates only to peaceable and inactive life, he views with indifference. Hence, though finally attentive to dress, he is little solicitous about the elegance or disposition of his habitation. Savage nations, far from that state of improvement, in which the mode of living is considered as a mark of distinction, and unacquainted with those wants, which require a variety of accommodation, regulate the construction of their houses according to their limited ideas of necessity. Some of the American tribes were so extremely rude, and had advanced so little beyond the primeval simplicity of nature, that they had no houses at all. During the day, they take shelter from the scorching rays of the sun under thick trees; at night they form a shed with their branches and leaves. [79]. In the rainy season they retire into caves, formed by the hand of Nature, or hollowed out by their own industry. Others, who have no fixed abode, and roam through the forest in quest of game, sojourn in temporary huts, which they erect with little labor, and abandon without any concern. The inhabitants of those vast plains, which are deluged by the overflowing of rivers during the heavy rains that fall periodically between the tropics, raise houses upon piles fastened in the ground, or place them among the boughs of trees, and are thus safe amidst that wide extended inundation which surrounds them. Such were the first essays of the rudest Americans towards providing themselves with habitations. But even among tribes which are more improved, and whose residence is become altogether fixed, the structure of their houses is extremely mean and simple. They are wretched huts, sometimes of an oblong and sometimes of a circular form, intended merely for shelter, with no view to elegance, and little attention to convenience. The doors are so low that it is necessary to bend or to creep on the hands and feet in order to enter them. They are without windows, and have a large hole in the middle of the roof, to convey out the smoke. To follow travellers in other minute circumstances of their descriptions, is not only beneath the dignity of history, but would be foreign to the object of my researches. One circumstance merits attention, as it is singular, and illustrates the character of the people. Some of their houses are so large as to contain accommodation for fourscore or a hundred persons. These are built for the reception of different families, which dwell together under the same roof, [80] and often around a common fire, without separate apartments, or any kind of screen or partition between the spaces which they respectively occupy. As soon as men have acquired distinct ideas of property; or when they are so much attached to their females, as to watch them with care and jealousy; families of course divide and settle in separate houses, where they can secure and guard whatever they wish to preserve. This singular mode of habitation among several people of America, may therefore be considered not only as the effect of their imperfect notions concerning property, but as a proof of inattention, and indifference towards their women. If they had not been accustomed to perfect equality, such

an arrangement could not have taken place. If their sensibility had been apt to have taken alarm, they would not have trusted the virtue of their women amidst the temptations and opportunities of such a promiscuous intercourse. At the same time, the perpetual concord, which reigns in habitations where so many families are crowded together, is surprising, and affords a striking evidence that they must be people of either a very gentle, or of a very phlegmatic temper, who in such a situation, are unacquainted with animosity, brawling, and discord.

After making some provision for his dress and habitation, a savage will perceive the necessity of preparing proper arms with which to assault or repel an enemy. This, accordingly, has early exercised the ingenuity and invention of all rude nations. The first offensive weapons were doubtless such as chance presented, and the first efforts of art to improve upon these, were extremely awkward and simple. Clubs made of some heavy wood, stakes hardened in the fire, lances whose heads were armed with flint or the bones of some animal, are weapons known to the rudest nations. All these, however, are of use only in close encounter. But men wished to annoy their enemies while at a distance, and the bow and arrow it the most early invention for this purpose. This weapon is in the hands of people whose advances in improvement are extremely inconsiderable, and is familiar to the inhabitants of every quarter of the globe. It is remarkable, however, that some tribes in America were so destitute of art and ingenuity, that they had not attained to the discovery of this simple invention, and seem to have been unacquainted with the use of any missile weapon. The sling, though in its construction not more complex than the bow, and among many nations of equal antiquity, was little known to the people of North America, or the islands, but appears to have been used by a few tribes in the southern continent. [81]. The people, in some provinces of Chili, and those of Patagonia, towards the southern extremity of America, use a weapon peculiar to themselves. They fasten stones, about the size of a fist, to each end of a leather thong of eight feet in length, and swing these round their heads, throw them with such dexterity, that they seldom miss the object at which they aim.

Among people who had hardly any occupation but war or hunting, the chief exertions of their invention, [82] as well as industry, were naturally directed towards these objects. With respect to every thing else, their wants and desires were so limited, that their invention was not upon the stretch. As their food and habitations are perfectly simple, their domestic utensils are few and rude. Some of the southern tribes had discovered the art of forming vessels of earthen ware, and baking them in the sun, so as they could endure the fire. In North America, they hollowed a piece of hard wood in the form of a kettle, and filling it with water, brought it to boil, by putting red-hot stones into it. [83]. These vessels they used in preparing part of their provisions; and this may be considered as a step towards refinement and luxury; for men in their rudest state were not acquainted with any method of dressing their victuals but by roasting them on the fire; and among several tribes in America, this is the only species of cookery yet known. But the masterpiece of art, among the savages of America, is the construction of the canoes. An Esquimaux, shut up in his boat of whalebone, covered with the skins of seals, can brave that stormy ocean on which the barrenness of his country compels him to depend for the chief part of his subsistence. The people of Canada venture upon their rivers and lakes in boats made of the bark of trees, and so light that two men can carry them, wherever shallows or cataracts obstruct the navigation. [84]. In these frail vessels they undertake and accomplish long voyages. The inhabitants of the isles and of the southern continent form their canoes by hollowing the trunk of a large tree, with infinite labor; and though in appearance they are extremely awkward and unwieldy, they paddle and steer them with such dexterity, that Europeans, well acquainted with all the improvements in the science of navigation, have been astonished at the rapidity of their motion, and the quickness of their evolutions. Their *progies*, or war boats, are so large as to carry forty or fifty men; their canoes, employed in fishing and in short voyages are less capacious. The form as well as materials of all these various kinds of vessels, is well adapted to the service for which they are destined; and the more minutely they are examined, the mechanism of their structure, as well as neatness of their fabric, will appear the more surprising.

But, in every attempt towards industry among the Americans, one striking quality in their character is conspicuous. They apply to work without ardor, carry it on with little activity, and, like children, are easily diverted from it. Even in operations which seem the most interesting, and where the most powerful motives urge them to vigorous exertions, they labor with a languid listlessness. Their work advances under their hand with such slowness, that an eye witness compares it to the imperceptible progress of vegetation. They will spend so many years in forming a canoe, that it often begins to rot with age before they finish it. They will suffer one part of a roof to decay and perish, before they complete the other. The slightest annual operation consumes an amazing length of time, and what in polished nations would hardly be an effort of industry, is among savages an arduous undertaking. This slowness of the Americans in executing works of every kind may be imputed to various causes. Among savages, who do not depend for subsistence upon the efforts of regular industry, time is of so little importance that they set no value upon it; and provided they can finish a design, they never regard how long they are employed about it. The tools which they employ are so awkward and defective that every work in which they engage must necessarily be tedious. The hand of the most industrious and skilful artist, were it furnished with no better instrument than a stone hatchet, a shell, or the bone of some animal, would find it difficult to perfect the most simple work. It is by length of labor that he must endeavor to supply his defect of power. But above all, the cold phlegmatic temper peculiar to the Americans, renders their operations languid. It is almost impossible to rouse them from that habitual indolence to which they are sunk; and unless when engaged in war or in hunting, they seem incapable of exerting any vigorous effort. Their ardor of application is not so great as to call forth that inventive spirit which suggests expedients for facilitating and abridging labor. They will return to a task day after day, but all their methods of executing it are tedious and operose. [85] Even since the Europeans have communicated to them the knowledge of their instruments, and taught them to imitate their arts, the peculiar genius of the Americans is conspicuous in every attempt they make. They may be patient and assiduous in labor, they can copy with a servile and minute accuracy, but discover little invention and no talents for despatch. In spite of instruction and example, the spirit of the race predominates; their motions are naturally tardy, and it is in vain to urge them to quicken their pace. Among the Spaniards in America, *the work of an Indian* is a phrase by which they describe any thing, in the execution of which an immense time has been employed and much labor wasted.

VII. No circumstance respecting rude nations has been the object of greater curiosity than their religious tenets and rites; and none, perhaps, has been so imperfectly understood, or represented with so little fidelity. Priests and missionaries are the persons who have had the best opportunities of carrying on this inquiry among the most uncivilized of the American tribes. Their minds, engrossed by the doctrines of their own religion, and habituated to its institutions, are apt to discover something which resembles those objects of their veneration, in the opinions and rites of every people. Whatever they contemplate they view through one medium, and draw and accommodate it to their own system. They study to reconcile the institutions which fall under their observation to their own creed, not to explain them according to the rude notions of the people themselves. They ascribe to them ideas which they are incapable of forming, and suppose them to be acquainted with principles and facts, which it is impossible that they should know. Hence, some missionaries have been induced to believe, that even among the most barbarous nations in America, they had discovered traces, no less distinct than amazing, of their acquaintance with the sublime mysteries and peculiar institutions of Christianity. From their own interpretation of certain expressions and ceremonies, they have concluded that these people had some knowledge of the doctrine of the Trinity, of the incarnation of the Son of God, of his expiatory sacrifice, of the virtue of the cross, and of the efficacy of the Sacraments. In such unintelligent and credulous guides we can place little confidence.

But even when we make our choice of conductors with the greatest care, we must not follow them with implicit faith. An inquiry into the religious notions of rude nations is involved in peculiar intricacies, and we must often pause in order to separate the facts which our informers relate from the reasonings with which

they are accompanied, or the theories which they build upon them. Several pious writers, more attentive to the importance of the subject than the condition of the people whose sentiments they were endeavoring to discover, have bestowed much unprofitable labor in researches of this nature. [86]

There are two fundamental doctrines, upon which the whole system of religion, as far as it can be discovered by the light of nature, is established. The one respects the being of a God, the other the immortality of the soul. To discover the ideas of the uncultivated nations under our review, with regard to those important points, it is not only an object of curiosity, but may afford instruction. To these two articles I shall confine my researches, leaving subordinate opinions, and the detail of local superstitions, to more minute inquirers. Whoever has had any opportunity of examining into the religious opinions of persons in the inferior ranks of life, even in the most enlightened and civilized nations, will find that their system of belief is derived from instruction, not discovered by inquiry. That numerous part of the human species, whose lot is labor, whose principal and almost sole occupation is to secure subsistence, views the arrangement and operations of nature with little reflection, and has neither leisure, nor capacity for entering into that path of refined and intricate speculation which conduces to the knowledge of the principles of natural religion. In the early and most rude periods of savage life, such disquisitions are altogether unknown. When the intellectual powers are just beginning to unfold, and their first feeble exertions are directed towards a few objects of primary necessity and use; when the faculties of the mind are so limited as not to have formed abstract or general ideas; when language is so barren as to be destitute of names to distinguish any thing that is not perceived by some of the senses; it is preposterous to expect that man should be capable of tracing with accuracy the relation between cause and effect; or to suppose that he should rise from the contemplation of the one to the knowledge of the other, and form just conceptions of a Deity, as the Creator and Governor of the universe. The idea of creation is so familiar, wherever the mind is enlarged by science and illuminated with revelation, that we seldom reflect how profound and abstruse this idea is, or consider what progress man must have made in observation and research, before he could arrive at any knowledge of this elementary principle in religion. Accordingly, several tribes have been discovered in America, which have no idea whatever of a Supreme Being, and no rites of religious worship. Inattentive to that magnificent spectacle of beauty and order presented to their view, unaccustomed to reflect either upon what they themselves are, or to inquire who is the author of their existence, men, in their savage state, pass their days like the animals around them, without knowledge or veneration of any superior power. Some rude tribes have not in their language any name for the Deity, nor have the most accurate observers been able to discover any practice or institution which seemed to imply that they recognised his authority, or were solicitous to obtain his favor. [87] It is however only among men in the most uncultivated state of nature, and while their intellectual faculties are so feeble and limited as hardly to elevate them above the irrational creation, that we discover this total insensibility to the impressions of any invisible power.

But the human mind, formed for religion, soon opens to the reception of ideas, which are destined, when corrected and refined, to be the great source of consolation amidst the calamities of life. Among some of the American tribes, still in the infancy of improvement, we discern apprehensions of some invisible and powerful beings. These apprehensions are originally indistinct and perplexed, and seem to be suggested rather by the dread of impending evils than to flow from gratitude for blessings received. While nature holds on her course with uniform and undisturbed regularity, men enjoy the benefits resulting from it, without inquiring concerning its cause. But every deviation from this regular course rouses and astonishes them. When they behold events to which they are not accustomed, they search for the reasons of them with eager curiosity. Their understanding is unable to penetrate into these; but imagination, a more forward and ardent faculty of the mind, decides without hesitation. It ascribes the extraordinary occurrences in nature to the influence of invisible beings, and supposes that the thunder, the hurricane, and the earthquake are effects of their interposition. Some such confused notion of spiritual or invisible power, superintending over those

natural calamities which frequently desolate the earth, and terrify its inhabitants, may be traced among many rude nations. [88] But besides this, the disasters and dangers of savage life are so many, and men often find themselves in situations so formidable, that the mind, sensible of its own weakness, has no resource but in the guidance and protection of wisdom and power superior to what is human. Dejected with calamities which oppress him, and exposed to dangers which he cannot repel, the savage no longer relies upon himself: he feels his own impotence, and sees no prospect of being extricated, but by the interposition of some unseen aid. Hence, in all unenlightened nations, the first rites or practices which bear any resemblance to acts of religion, have it for their object to avert evils which men suffer or dread. The *Manitous* or *Okkis* of the North Americans were amulets or charms, which they imagined to be of such virtue as to preserve the persons who reposed confidence in them from any disastrous event, or they were considered as tutelary spirits, whose aid they might implore in circumstances of distress. The *Cemis* of the islanders were reputed by them to be the authors of every calamity that afflicted the human race; they were represented under the most frightful forms, and religious homage was paid to them with no other view than to appease these furious deities. Even among those tribes whose religious system was more enlarged, and who had formed some conception of benevolent beings, which delighted in conferring benefits, as well as of malevolent powers prone to inflict evil; superstition still appears as the offspring of fear, and all its efforts were employed to avert calamities. They were persuaded that their good deities, prompted by the beneficence of their nature, would bestow every blessing in their power, without solicitation or acknowledgment; and their only anxiety was to soothe and deprecate the wrath of the powers whom they regarded as the enemies of mankind.

Such were the imperfect conceptions of the greater part of the Americans with respect to the interposition of invisible agents, and such, almost universally, was the mean and illiberal object of their superstitions. Were we to trace back the ideas of other nations to that rude state in which history first presents them to our view, we should discover a surprising resemblance in their tenets and practices; and should be convinced, that in similar circumstances, the faculties of the human mind hold nearly the same course in their progress, and arrive at almost the same conclusions. The impressions of fear are conspicuous in all the systems of superstition formed in this situation. The most exalted notions of men rise no higher than to a perplexed apprehension of certain beings, whose power, though supernatural, is limited as well as partial.

But, among other tribes, which have been longer united, or have made greater progress in improvement, we discern some feeble pointing towards more just and adequate conceptions of the power that presides in nature. They seem to perceive that there must be some universal cause to whom all things are indebted for their being. It we may judge by some of their expressions, they appear to acknowledge a divine power to be the maker of the world, and the disposer of all events. They denominate him the *Great Spirit*. But these ideas are faint and confused, and when they attempt to explain them, it is manifest that among them the word *spirit* has a meaning very different from that in which we employ it, and that they have no conception of any deity but what is corporeal. They believe their gods to be of the human form, though of a nature more excellent than man, and retail such wild incoherent fables concerning their functions and operations, as are altogether unworthy of a place in history. Even among these tribes, there is no established form of public worship; there are no temples erected in honor of their deities; and no ministers peculiarly consecrated to their service. They have the knowledge, however, of several superstitious ceremonies and practices handed down to them by tradition, and to these they have recourse with a childish credulity, when roused by any emergence from their usual insensibility, and excited to acknowledge the power, and to implore the protection of superior beings.

The tribe of the Natchez, and the people of Bogota, had advanced beyond the other uncultivated nations of America in their ideas of religion, as well as in their political institutions; and it is no less difficult to explain the cause of this distinction than of that which we have already considered. The Sun was the chief object of religious worship among the Natchez. In their temples, which were constructed with some magnificence, and decorated with various ornaments, ac-

cording to their mode of architecture, they preserved a perpetual fire, as the purest emblem of their divinity. Ministers were appointed to watch and feed this sacred flame. The first function of the great chief of the nation, every morning, was an act of obeisance to the Sun; and festivals returned at stated seasons, which were celebrated by the whole community with solemn but unbloody rites. This is the most refined species of superstition known in America, and perhaps one of the most natural as well as most seducing. The Sun is the apparent source of the joy, fertility, and life, diffused through nature; and while the human mind, in its earlier essays towards inquiry, contemplates and admires his universal and animating energy, its admiration is apt to stop short at what is visible, without reaching to the unseen cause; and pays that adoration to the most glorious and beneficial work of God, which is due only to him who formed it. As fire is the purest and most active of the elements, and in some of its qualities and effects resembles the Sun, it was, not improperly, chosen to be the emblem of his powerful operation. The ancient Persians, a people far superior in every respect, to that rude tribe whose rites I am describing, founded their religious system on similar principles, and established a form of public worship, less gross and exceptionable than that of any people destitute of guidance from revelation. This surprising coincidence in sentiment between two nations, in such different states of improvement, is one of the many singular and unaccountable circumstances which occur in the history of human affairs.

Among the people of Bogota, the Sun and Moon were, likewise, the chief objects of veneration. Their system of religion was more regular and complete, though less pure, than that of the Natchez. They had temples, altars, priests, sacrifices, and that long train of ceremonies, which superstition introduces, wherever she has fully established her dominion over the minds of men. But the rites of their worship are cruel and bloody. They offered human victims to their deities, and many of their practices nearly resembled the barbarous institutions of the Mexicans, the genius of which we shall have an opportunity of considering more attentively in its proper place.

With respect to the other great doctrine of religion, concerning the immortality of the soul, the sentiments of the Americans were more united: the human mind even when least improved and invigorated by culture, shrinks from the thought of annihilation, and looks forward with hope and expectation to a state of future existence. This sentiment, resulting from a secret consciousness of its own dignity, from an instinctive longing after immortality, is universal, and may be deemed natural. Upon this are founded the most exalted hopes of man in his highest state of improvement; nor has nature withheld from him this soothing consolation, in the most early and rude period of his progress. We can trace this opinion from one extremity of America to the other, in some regions more faint and obscure, in others more perfectly developed, but nowhere unknown. The most uncivilized of its savage tribes do not apprehend death as the extinction of being. All entertain hopes of a future and more happy state, where they shall be for ever exempt from the calamities which imbitter human life in its present condition. This future state they conceive to be a delightful country, blessed with perpetual spring, whose forests abound with game, whose rivers swarm with fish, where famine is never felt, and uninterrupted plenty shall be enjoyed without labor or toil. But as men, in forming their first imperfect ideas concerning the invisible world, suppose that there they shall continue to feel the same desires, and to be engaged in the same occupations, as in the present world; they naturally ascribe eminence and distinction, in that state to the same qualities and talents which are here the objects of their esteem. The Americans, accordingly allotted the highest place, in their country of spirits, to the skilful hunter, to the adventurous and successful warrior, and to such as had tortured the greatest number of captives, and devoured their flesh. These notions were so prevalent that they gave rise to a universal custom, which is at once the strongest evidence that the Americans believe in a future state, and the best illustration of what they expect there. As they imagine, that departed spirits begin their career anew in the world whither they are gone, that their friends may not enter upon it defenceless and unprovided, they bury together with the bodies of the dead, their bow, their arrows, and other weapons used in hunting or war; they deposit in their tombs the skins or stuffs of which they make garments, Indian corn, manioc, venison, domestic utensils, and whatever

is reckoned among the necessities in their simple mode of life. In some provinces, upon the decease of a cazique or chief, a certain number of his wives, of his favorites, and of his slaves, were put to death and interred together with him, that he might appear with the same dignity, in his future station, and waited upon by the same attendants. This persuasion is so deep rooted that many of the deceased person's retainers offer themselves as voluntary victims, and court the privilege of accompanying their departed master, as a high distinction. It has been found difficult, on some occasions, to set bounds to this enthusiasm of affectionate duty, and to reduce the train of a favorite leader to such a number as the tribe could afford to spare. [89]

Among the Americans, as well as other uncivilized nations, many of the rites and observances which bear some resemblance to acts of religion, have no connection with devotion, but proceed from a fond desire of prying into futurity. The human mind is most apt to feel and to discover this vain curiosity, when its own powers are most feeble and uninformed. Astonished with occurrences of which it is unable to comprehend the cause, it naturally fancies that there is something mysterious and wonderful in their origin. Alarmed at events of which it cannot discern the issue or the consequences, it has recourse to other means of discovering them than the exercise of its own sagacity. Wherever superstition is so established as to form a regular system, this desire of penetrating into the secrets of futurity is connected with it. Divination becomes a religious act. Priests, as the ministers of heaven, pretend to deliver its oracles to men. They are the only soothsayers, augurs, and magicians, who profess the sacred and important art of disclosing what is hidden from other eyes.

But, among rude nations, who pay no veneration to any superintending power, and who have no established rites or ministers of religion, their curiosity to discover what is future or unknown, is cherished by a different principle, and derives strength from another alliance. As the diseases of men in the savage state, are (as has been already observed) like those of the animal creation, few, but extremely violent, their impatience under what they suffer, and solicitude for the recovery of health, soon inspired them with extraordinary reverence for such as pretended to understand the nature of their maladies, and to be possessed of knowledge sufficient to prevent or deliver them from their sudden and fatal effects. These ignorant pretenders, however, were such utter strangers to the structure of the human frame, as to be equally unacquainted with the causes of its disorders, and the manner in which they will terminate. Superstition, mingled frequently with some portion of craft, supplied what they wanted in science. They imputed the origin of diseases to supernatural influence, and prescribed or performed a variety of mysterious rites, which they gave out to be of such efficacy as to remove the most dangerous and inveterate maladies. The credulity and love of the marvellous, natural to uninformed men, favored the deception, and prepared them to be the dupes of those impostors. Among savages, their first physicians are a kind of conjurers or wizards, who boast that they know what is past, and can foretell what is to come. Incantations, sorcery, and mummeries of diverse kinds, no less strange than frivolous, are the means which they employ to expel the imaginary causes of malignity; and relying upon the efficacy of these, they predict with confidence what will be the fate of their deluded patients. Thus superstition, in its earliest form, flowed from the solicitude of man to be delivered from present distress, not from his dread of evils awaiting him in a future life, and was originally ingrafted on medicine, not on religion. One of the first and most intelligent historians of America, was struck with this alliance between the art of divination and that of physic, among the people of Hispaniola. But this was not peculiar to them. The *Aleris*, the *Payas*, the *Autmoins*, or whatever was the distinguishing name of their diviners and charmers in other parts of America, were all the physicians of their respective tribes, in the same manner as the *Bubitos* of Hispaniola. As their function led them to apply to the human mind when enfeebled by sickness, and as they found it, in that season of dejection, prone to be alarmed with imaginary fears, or amused with vain hopes, they easily induced it to rely with implicit confidence on the virtue of their spells, and the certainty of their predictions.

Whenever men acknowledge the reality of supernatural power and discernment in one instance, they have a propensity to admit it in others. The Americans did not long suppose the efficacy of conjuration to be con-

fined to one object. They had recourse to it in every situation of danger or distress. When the events of war were peculiarly disastrous, when they met with unforeseen disappointment in hunting, when inundations or drought threatened their crops with destruction, they called upon their conjurers to begin their incantations, in order to discover the causes of those calamities, or to foretell what would be their issue. Their confidence in this delusive art gradually increased, and manifested itself in all the occurrences of life. When involved in any difficulty, or about to enter upon any transaction of moment, every individual regularly consulted the sorcerer, and depended upon his instructions to extricate him from the former, as well as to direct his conduct in the latter. Even among the rudest tribes in America, superstition appears in this form, and divination is an art in high esteem. Long before man had acquired such knowledge of a deity as inspires reverence, and leads to adoration, we observe him stretching out a presumptuous hand to draw aside that veil with which Providence kindly conceals its purposes from human knowledge; and we find him laboring with fruitless anxiety to penetrate into the mysteries of the divine administration. To discern and to worship a superintending power, is an evidence of the enlargement and maturity of the human understanding; a vain desire of prying into futurity is the error of its infancy, and a proof of its weakness.

From this weakness proceeded likewise the faith of the Americans in dreams, their observation of omens, their attention to the chirping of birds, and the cries of animals, all which they suppose to be indications of future events; and if any one of these prognostics is deemed unfavorable, they instantly abandon the pursuit of those measures on which they are most eagerly bent.

VIII. But if we would form a complete idea of the uncultivated nations of America, we must not pass unobserved some singular customs, which, though universal and characteristic, could not be reduced, with propriety, to any of the articles into which I have divided my inquiry concerning their manners.

Among savages, in every part of the globe, the love of dancing is a favorite passion. As, during a great part of their time, they languish in a state of inactivity and indolence, without any occupation to rouse or interest them, they delight universally in a pastime which calls forth the active powers of their nature into exercise. The Spaniards, when they first visited America, were astonished at the fondness of the natives for dancing, and beheld with wonder a people, cold and unanimated in most of their other pursuits, kindle into life, and exert themselves with ardor, as often as this favorite amusement recurred. Among them, indeed, dancing ought not to be denominated an amusement. It is a serious and important occupation which mingles in every occurrence of public or private life. If any intercourse be necessary between two American tribes, the ambassadors of the one approach in a solemn dance, and present the calumet or emblem of peace; the sachems of the other receive it with the same ceremony. If war is denounced against an enemy, it is by a dance expressive of the resentment which they feel, and of the vengeance which they meditate. If the wrath of their gods is to be appeased, or their beneficence to be celebrated; if they rejoice at the birth of a child, or mourn the death of a friend, they have dances appropriated to each of these situations, and suited to the different sentiments with which they are then animated. If a person is indisposed, a dance is prescribed as the most effectual means of restoring him to health; and if he himself cannot endure the fatigue of such an exercise, the physician or conjuror performs it in his name, as if the virtue of his activity could be transferred to his patient.

All their dances are imitations of some action; and though the music by which they are regulated is extremely simple, and tiresome to the ear by its dull monotony, some of their dances appear wonderfully expressive and animated. The war dance is, perhaps, the most striking. It is the representation of a complete American campaign. The departure of the warriors from their village, their march into the enemy's country, the caution with which they encamp, the address with which they station some of their party in ambush, the manner of surprising the enemy, the noise and ferocity of the combat, the scalping of those who are slain, the seizing of prisoners, the triumphant return of the conquerors, and the torture of the victims, are successively exhibited. The performers enter with such enthusiastic ardor into their several parts; their gestures, their countenance, their voice, are so wild and so well adapted to their various situations, that Euro-

peans can hardly believe it to be a mimic scene, or view it without emotions of fear and horror.

But however expressive some of the American dances may be, there is one circumstance in them remarkable, and connected with the character of the race. The songs, the dances, the amusements of other nations, expressive of the sentiments which animate their hearts, are often adapted to display or excite the sensibility which mutually attaches the sexes. Among some people, such is the ardor of this passion, that love is almost the sole object of festivity and joy; and as rude nations are strangers to delicacy, and unaccustomed to disguise any emotion of their minds, their dances are often extremely wanton and indecent. Such is the *Calenda*, of which the natives of Africa are so passionately fond; and such the feats of the dancing girls which the Asiatics contemplate with so much avidity of desire. But among the Americans, more cold and indifferent to their females, from causes which I have already explained, the passion of love mingles but little with their festivals and pastimes. Their songs and dances are mostly solemn and martial; they are connected with some of the serious and important affairs of life; and, having no relation to love or gallantry, are seldom common to the two sexes, but executed by the men and women apart. [90] If, on some occasions, the women are permitted to join in the festival, the character of the entertainment is still the same, and no movement or gesture is expressive of attachment, or encourages familiarity.

An immoderate love of play, especially at games of hazard, which seems to be natural to all people unaccustomed to the occupations of regular industry, is likewise universal among the Americans. The same causes, which so often prompt persons in civilized life, who are at their ease, to have recourse to this pastime, render it the delight of the savage. The former are independent of labor, the latter do not feel the necessity of it; and as both are unemployed, they run with transport to whatever is interesting enough to stir and to agitate their minds. Hence the Americans, who at other times are so indifferent, so phlegmatic, so silent, and animated with so few desires, as soon as they engage in play become rapacious, impatient, noisy, and almost frantic with eagerness. Their furs, their domestic utensils, their clothes, their arms, are staked at the gaming table, and when all is lost, high as their sense of independence is, in a wild emotion of despair or of hope, they will often risk their personal liberty upon a single cast. Among several tribes, such gaming parties frequently recur, and become their most acceptable entertainment at every great festival. Superstition, which is apt to take hold of those passions which are most vigorous, frequently lends its aid to confirm and strengthen this favorite inclination. Their conjurors are accustomed to prescribe a solemn match at play as one of the most efficacious methods of appeasing their gods, or of restoring the sick to health.

From causes similar to those which render them fond of play, the Americans are extremely addicted to drunkenness. It seems to have been one of the first exertions of human ingenuity to discover some composition of an intoxicating quality; and there is hardly any nation so rude, or so destitute of invention, as not to have succeeded in this fatal research. The most barbarous of the American tribes have been so unfortunate as to attain this art; and even those which are so deficient in knowledge, as to be unacquainted with the method of giving an inebriating strength to liquors by fermentation, can accomplish the same end by other means. The people of the islands of North America, and of California, used, for this purpose, the smoke of tobacco, drawn up with a certain instrument into the nostrils, the fumes of which ascending to the brain, they felt all the transports and phrensy of intoxication. [91] In almost every other part of the New World, the natives possessed the art of extracting an intoxicating liquor from maize or the manioc root, the same substances which they convert into bread. The operation by which they effect this nearly resembles the common one of brewing, but with this difference, that, in place of yeast, they use a nauseous infusion of a certain quantity of maize or manioc chewed by their women. The saliva excites a vigorous fermentation, and in a few days the liquor becomes fit for drinking. It is not disagreeable to the taste, and, when swallowed in large quantities, is of an intoxicating quality. This is the general beverage of the Americans, which they distinguish by various names, and for which they feel such a violent and insatiable desire as it is not easy either to conceive or describe. Among polished nations, where a succession of various functions and

amusements keeps the mind in continual occupation, the desire for strong drink is regulated in a great measure by the climate, and increases or diminishes according to the variations of its temperature. In warm regions, the delicate and sensible frame of the inhabitants does not require the stimulation of fermented liquors. In colder countries, the constitution of the natives, more robust and more sluggish, stands in need of generous liquors to quicken and animate it. But among savages, the desire of something that is of power to intoxicate is in every situation the same. All the people of America, if we except some small tribes near the Straits of Magellan, whether natives of the torrid zone, or inhabitants of its more temperate regions, or placed by a harder fate in the severe climate towards its northern or southern extremity, appear to be equally under the dominion of this appetite. Such a similarity of taste, among people in such different situations, must be ascribed to the influence of some moral cause, and cannot be considered as the effect of any physical or constitutional want. While engaged in war or in the chase, the savage is often in the most interesting situations, and all the powers of his nature are roused to the most vigorous exertions. But those animating scenes are succeeded by long intervals of repose, during which the warrior meets with nothing that he deems of sufficient dignity or importance to merit his attention. He languishes and mopes in this season of indolence. The posture of his body is an emblem of the state of his mind. In one climate, covering over the fire in his cabin; in another, stretched under the shade of some tree, he dozes away his time in sleep, or in an unthinking joyless inactivity not far removed from it. As strong liquors awake him from this torpid state, give a brisker motion to his spirits, and enliven him more thoroughly than either dancing or gaming, his love of them is excessive. A savage, when not engaged in action, is a pensive melancholy animal; but as soon as he tastes, or has a prospect of tasting, the intoxicating draught, he becomes gay and frolicsome. Whatever be the occasion or pretexes on which the Americans assemble, the meeting always terminates in a debauch. Many of their festivals have no other object, and they welcome the return of them with transports of joy. As they are not accustomed to restrain any appetite, they set no bounds to this. The riot often continues without intermission several days; and whatever may be the fatal effects of their excess, they never cease from drinking as long as one drop of liquor remains. The persons of greatest eminence, the most distinguished warriors, and the chiefs most renowned for their wisdom, have no greater command of themselves than the most obscure members of the community. Their eagerness for present enjoyment renders them blind to its fatal consequences; and those very men, who in other situations seem to possess a force of mind more than human, are in this instance inferior to children, in foresight as well as consideration, and mere slaves of brutal appetite. When their passions, naturally strong, are heightened and inflamed by drink, they are guilty of the most enormous outrages, and the festivity seldom concludes without deeds of violence or bloodshed.

But, amidst this wild debauch, there is one circumstance remarkable; the women, in most of the American tribes, are not permitted to partake of it. [92] Their province is to prepare the liquor, to serve it about to the guests, and to take care of their husbands and friends when their reason is overpowered. This exclusion of the women from an enjoyment so highly valued by savages, may be justly considered as a mark of their inferiority, and as an additional evidence of that contempt with which they were treated in the New World. The people of North America, when first discovered, were not acquainted with any intoxicating drink; but as the Europeans early found it their interest to supply them with spirituous liquors, drunkenness soon became as universal among them as among their countrymen to the south; and their women, having acquired this new taste, indulge it with as little decency and moderation as the men.

It were endless to enumerate all the detached customs which have excited the wonder of travellers in America; but I cannot omit one seemingly as singular as any that has been mentioned. When their parents and other relations become old, or labor under any distemper which their slender knowledge of the healing art cannot remove, the Americans cut short their days with a violent hand, in order to be relieved from the burden of supporting and tending them. This practice prevailed among the ruder tribes in every part of the continent, from Hudson's Bay to the river De la Plata;

and however shocking it may be to those sentiments of tenderness and attachment, which, in civilized life, we are apt to consider as congenial with our frame, the condition of man in the savage state leads and reconciles him to it. The same hardships and difficulty of procuring subsistence, which deter savages, in some cases, from rearing their children, prompt them to destroy the aged and infirm. The declining state of the one is as helpless as the infancy of the other. The former are no less unable than the latter to perform the functions that belong to a warrior or hunter, or to endure those various distresses in which savages are so often involved by their own want of foresight and industry. Their relations feel this; and, incapable of attending to the wants or weaknesses of others, their impatience under an additional burden prompts them to extinguish that life which they find it difficult to sustain. This is not regarded as a deed of cruelty, but as an act of mercy. An American, broken with years and infirmities, conscious that he can no longer depend on the aid of those around him, places himself contentedly in his grave; and it is by the hands of his children or nearest relations that the thong is pulled, or the blow inflicted, which releases him for ever from the sorrows of life.

IX. After contemplating the rude American tribes in such various lights; after taking a view of their customs and manners from so many different stations, nothing remains but to form a general estimate of their character compared with that of more polished nations. A human being, as he comes originally from the hand of nature, is every where the same. At his first appearance in the state of infancy, whether it be among the rudest savages or in the most civilized nation, we can discern no quality which marks any distinction or superiority. The capacity of improvement seems to be the same; and the talents he may afterwards acquire, as well as the virtues he may be rendered capable of exercising, depend, in a great measure, upon the state of society in which he is placed. To this state his mind naturally accommodates itself, and from it receives discipline and culture. In proportion to the wants which it accustoms a human being to feel, and the functions in which these engage him, his intellectual powers are called forth. According to the connexions which it establishes between him and the rest of his species, the affections of his heart are exerted. It is only by attending to this great principle that we can discover what is the character of man in every different period of his progress.

If we apply it to savage life, and measure the attainments of the human mind in that state by this standard, we shall find, according to an observation which I have already made, that the intellectual powers of man must be extremely limited in their operations. They are confined within the narrow sphere of what he deems necessary for supplying his own wants. Whatever has not some relation to these neither attracts his attention, nor is the object of his inquiries. But however narrow the bounds may be within which the knowledge of a savage is circumscribed, he possesses thoroughly that small portion which he has attained. It was not communicated to him by formal instruction; he does not attend to it as a matter of mere speculation and curiosity; it is the result of his own observation, the fruit of his own experience, and accommodated to his condition and exigencies. While employed in the active occupations of war or of hunting, he often finds himself in difficult and perilous situations, from which the efforts of his own sagacity must extricate him. He is frequently engaged in measures, where every step depends upon his own ability to decide, where he must rely solely upon his own penetration to discern the dangers to which he is exposed, and upon his own wisdom in providing against them. In consequence of this, he feels the knowledge which he possesses, and efforts which he makes, and either in deliberation or action rests on himself alone.

As the talents of individuals are exercised and improved by such exertions, much political wisdom is said to be displayed in conducting the affairs of their small communities. The council of old men in an American tribe, deliberating upon its interests, and determining with respect to peace or war, has been compared to the senate in more polished republics. The proceedings of the former, we are told, are often no less formal and sagacious than those of the latter. Great political wisdom is exhibited in pondering the various measures proposed, and in balancing their probable advantages against the evils of which they may be productive. Much address and eloquence are employed by the leaders, who aspire at acquiring such confidence with

their countrymen, as to have an ascendant in those assemblies. But, among savage tribes, the field for displaying political talents cannot be extensive. Where the idea of private property is incomplete, and no criminal jurisdiction is established, there is hardly any function of internal government to exercise. Where there is no commerce, and scarcely any intercourse among separate tribes; where enmity is implacable, and hostilities are carried on almost without intermission; there will be few points of public concern to adjust with their neighbors; and that department of their affairs which may be denominated foreign, cannot be so intricate as to require much refined policy in conducting it. Where individuals are so thoughtless and improvident as seldom to take effectual precautions for self-preservation, it is vain to expect that public measures and deliberations will be regulated by the contemplation of remote events. It is the genius of savages to act from the impulse of present passion. They have neither foresight, nor temper to form complicated arrangements with respect to their future conduct. The consultations of the Americans, indeed, are so frequent, and their negotiations are so many, [33] and so long protracted, as to give their proceedings an extraordinary aspect of wisdom. But this is not owing so much to the depth of their schemes, as to the coldness and phlegm of their temper, which render them slow in determining. If we except the celebrated league, that united the Five Nations in Canada, into a federal republic, which shall be considered in its proper place, we can discern few such traces of political wisdom, among the rude American tribes, as discover any great degree of foresight or extent of intellectual abilities. Even among them, we shall find public measures more frequently directed by the impetuous ferocity of their youth, than regulated by the experience and wisdom of their old men.

As the condition of man in the savage state is unfavorable to the progress of the understanding, it has a tendency likewise, in some respects, to check the exercise of affection, and to render the heart contracted. The strongest feeling in the mind of a savage is a sense of his own independence. He has sacrificed so small a portion of his natural liberty by becoming a member of society, that he remains, in a great degree, the sole master of his own actions. He often takes his resolutions alone, without consulting or feeling any connection with the persons around him. In many of his operations he stands as much detached from the rest of his species as if he had formed no union with them. Conscious how little he depends upon other men, he is apt to view them with a careless indifference. Even the force of his mind contributes to increase this unconcern; and as he looks not beyond himself in deliberating with respect to the part which he should act, his solicitude about the consequences of it seldom extends further. He pursues his own career, and indulges his own fancy, without inquiring or regarding whether what he does be agreeable or offensive to others, whether they may derive benefit or receive hurt from it. Hence the ungovernable caprice of savages, their impatience under any species of restraint, their inability to suppress or moderate any inclination, the scorn or neglect with which they receive advice, their high estimation of themselves, and their contempt of other men. Among them, the pride of independence produces almost the same effects with interestedness in a more advanced state of society: it refers every thing to a man himself, it leads him to be indifferent about the manner in which his actions may affect other men, and renders the gratification of his own wishes the measure and end of conduct.

To the same cause may be imputed the hardness of heart and insensibility remarkable in all savage nations. Their minds, roused only by strong emotions, are little susceptible of gentle, delicate, or tender affections. Their union is so incomplete that each individual acts as if he retained all his natural rights entire and undiminished. If a favor is conferred upon him, or any beneficial service is performed on his account, he receives it with much satisfaction, because it contributes to his enjoyment; but this sentiment extends not beyond himself, it excites no sense of obligation, he neither feels gratitude, nor thinks of making any return. [94] Even among persons the most closely connected, the exchange of those good offices which strengthen attachment, mollify the heart, and sweeten the intercourse of life, is not frequent. The high ideas of independence among the Americans render a sullen reserve, which keeps them at a distance from each other. The nearest relations are mutually afraid to make any demand, or to solicit any service, lest it should be considered by the

other as imposing a burden, or laying a restraint upon his will.

I have already remarked the influence of this hard unfeeling temper upon domestic life, with respect to the connection between husband and wife, as well as that between parents and children. Its effects are no less conspicuous, in the performance of those mutual offices of tenderness which the intimacies of our nature frequently exact. Among some tribes, when any of their number are seized with any violent disease, they are generally abandoned by all around them, who, careless of their recovery, fly in the utmost consternation from the supposed danger of infection. But even where they are not thus deserted, the cold indifference with which they are attended can afford them little consolation. No look of sympathy, no soothing expressions, no officious services, contribute to alleviate the distress of the sufferers, or to make them forget what they endure. Their nearest relations will often refuse to submit to the smallest inconvenience, or to part with the least trifle, however much it may tend to their accommodation or relief. So little is the breast of a savage susceptible of those sentiments which prompt men to that feeling attention which mitigates the calamities of human life, that, in some provinces of America, the Spaniards have found it necessary to enforce the common duties of humanity by positive laws, and to oblige husbands and wives, parents and children, under severe penalties, to take care of each other during their sickness. The same harshness of temper is still more conspicuous in their treatment of the animal creation. Prior to their intercourse with the people of Europe, the North Americans had some tame dogs, which accompanied them in their hunting excursions, and served them with all the ardor and fidelity peculiar to the species. But, instead of that fond attachment which the hunter naturally feels towards those useful companions of his toils, they requito their services with neglect, seldom feed, and never caress them. In other provinces the Americans have become acquainted with the domestic animals of Europe, and availed themselves of their service; but it is universally observed that they always treat them harshly, and never employ any method either for breaking or managing them, but force and cruelty. In every part of the deportment of man in his savage state, whether towards his equals of the human species, or towards the animals below him, we recognise the same character, and trace the operations of a mind intent on its own gratifications, and regulated by its own caprice, with little attention or sensibility to the sentiments and feelings of the beings around him.

After explaining how unfavorable the savage state is to the cultivation of the understanding, and to the improvement of the heart, I should not have thought it necessary to mention what may be deemed its lesser defects, if the character of nations, as well as of individuals, were not often more distinctly marked by circumstances apparently trivial than by those of greater moment. A savage frequently placed in situations of danger and distress, depending on himself alone, and wrapped up in his own thoughts and schemes, is a serious melancholy animal. His attention to others is small. The range of his own ideas is narrow. Hence that taciturnity which is so disgusting to men accustomed to the open intercourse of social conversation. When they are not engaged in action, the Americans often sit whole days in one posture, without opening their lips. When they go forth to war, or to the chase, they usually march in a line at some distance from one another, and without exchanging a word. The same profound silence is observed when they row together in a canoe. It is only when they are animated by intoxicating liquors, or roused by the jollity of the festival and dance, that they become gay and conversible.

To the same causes may be imputed the refined cunning with which they form and execute their schemes. Men who are not habituated to a liberal communication of their own sentiments and wishes, are apt to be so distrustful as to place little confidence in others, and to have recourse to an insidious craft in accomplishing their own purposes. In civilized life, those persons who by their situations have but a few objects of pursuit on which their minds incessantly dwell, are most remarkable for low artifice in carrying on their little projects. Among savages, whose views are equally confined, and their attention no less preserved to those circumstances must operate still more extensively, and gradually accustom them to a dissimulation and subtlety in all their transactions. The force of this is increased by habits which they acquire in carrying on the two most interesting operations wherein they

are engaged. With them war is a system of craft, in which they trust for success to stratagem more than to open force, and have their invention continually on the stretch to circumvent and surprise their enemies. As hunters, it is their constant object to ensnare in order that they may destroy. Accordingly, art and cunning have been universally observed as distinguishing characteristics of all savages. The people of the rude tribes of America are remarkable for their artifice and duplicity. Inquisitively secret in forming their measures, they pursue them with a patient undeviating attention, and there is no refinement of dissimulation which they cannot employ, in order to ensure success. The natives of Peru were engaged above thirty years in concerting the plan of that insurrection which took place under the vice-royalty of the Marquis de Villa Garcia; and though it was communicated to a great number of persons, in all different ranks, no indication of it ever transpired during that long period; no man betrayed his trust, or by an unguarded look, or rash word, gave rise to any suspicion of what was intended. The dissimulation and craft of individuals is no less remarkable than that of nations. When set upon deceiving, they wrap themselves up so artificially, that it is impossible to penetrate into their intentions, or to detect their designs.

But if there be defects or vices peculiar to the savage state, there are likewise virtues which it inspires, and good qualities, to the exercise of which it is friendly. The bonds of society sit so loose upon the members of the more rude American tribes, that they hardly feel any restraint. Hence the spirit of independence, which is the pride of a savage, and which he considers as the unalienable prerogative of man. Incapable of control, and disdaining to acknowledge any superior, his mind, though limited in its powers, and erring in many of its pursuits, acquires such elevation by the consciousness of its own freedom, that he acts on some occasions with astonishing force, and perseverance, and dignity.

As independence nourishes this high spirit among savages, the perpetual wars in which they are engaged call it forth into action. Such long intervals of tranquillity as are frequent in polished societies are unknown in the savage state. Their enmities, as I have observed, are implacable and immortal. The valor of the young men is never allowed to rust in inaction. The hatchet is always in the hand, either for attack or defence. Even in their hunting excursions, they must be on their guard against surprise from the hostile tribes by which they are surrounded. Accustomed to continual alarms, they grow familiar with danger; courage becomes an habitual virtue, resulting naturally from their situation, and strengthened by constant exertions. The mode of displaying fortitude may not be the same in small and rude communities, as in more powerful and civilized states. Their system of war, and standard of valor may be formed upon different principles; but in no situation does the human mind rise more superior to the sense of danger, or the dread of death, than in its most simple and uncultivated state.

Another virtue remarkable among savages, is attachment to the community of which they are members. From the nature of their political union, one might expect this tie to be extremely feeble. But there are circumstances which render the influence, even of their loose mode of association, very powerful. The American tribes are small; combined against their neighbors, in prosecution of ancient enmities, or in avenging recent injuries, their interests and operations are neither numerous nor complex. These are objects which the uncultivated understanding of a savage can comprehend. His heart is capable of forming connections which are so little diffused. He assents with warmth to public measures, dictated by passions similar to those which direct his own conduct. Hence the ardor with which individuals undertake the most perilous service, when the community deems it necessary. Hence their fierce and deep rooted antipathy to the public enemies. Hence their zeal for the honor of their tribe, and that love of their country, which prompts them to brave danger that it may triumph, and to endure the most exquisite torments, without a groan, that it may not be disgraced.

Thus, in every situation where a human being can be placed even in the most unfavorable, there are virtues which peculiarly belong to it; there are affections which it calls forth; there is a species of happiness which it yields. Nature, with the most beneficent intention, connotes and forms the mind to its condition; the ideas and wishes of man extend not beyond that state of society to which he is habituated. What

it presents as objects of contemplation or enjoyment, fills and satisfies his mind, and he can hardly conceive any other mode of life to be pleasant, or even tolerable. The Tartar, accustomed to roam over extensive plains, and to subsist on the product of his herds, imprecates upon his enemy, as the greatest of all curses, that he may be condemned to reside in one place, and to be nourished with the top of a weed. The rude Americans, fond of their own pursuits, and satisfied with their own lot, are equally unable to comprehend the intention or utility of the various accommodations, which, in more polished society are deemed essential to the comfort of life. Far from complaining of their own situation, or viewing that of men in a more improved state with admiration or envy, they regard themselves as the standard of excellence, as beings the best entitled, as well as the most perfectly qualified to enjoy real happiness. Unaccustomed to any restraint upon their will or their actions, they behold with amazement the inequality of rank, and the subordination which takes place in civilized life, and consider the voluntary submission of one man to another as a renunciation no less base than unaccountable, of the first distinction of humanity. Void of foresight as well as free from care themselves, and delighted with that state of indolent security, they wonder at the anxious precautions, the unceasing industry, and complicated arrangements of Europeans, in guarding against distant evils, or providing for future wants; and they often exclaim against their preposterous folly, in thus multiplying the troubles and increasing the labor of life. This preference of their own manners is conspicuous on every occasion. Even the names, by which the various nations wish to be distinguished, are assumed from this idea of their own pre-eminence. The appellation which the Iroquois give to themselves is the *chief of men*, *Carabe*, the original name of the fierce inhabitants of the Windward Islands, signifies the *warlike people*. The Cherokees, from an idea of their own superiority, call the Europeans *Nothings*, or the *accursed race*, and assume to themselves the name of the *beloved people*. The same principle regulated the notions of the other Americans concerning the Europeans; for although at first they were filled with astonishment at their arts, and with dread of their power, they soon came to abate their estimation of men whose maxims of life were so different from their own. Hence they called them the froth of the sea, men without father or mother. They supposed, that either they had no country of their own, and therefore invaded that which belonged to others; or that, being destitute of the necessities of life at home, they were obliged to roam over the ocean, in order to rob such as were more amply provided.

Men thus satisfied with their own condition are far from any inclination to relinquish their own habits, or to adopt those of civilized life. The transition is too violent to be suddenly made. Even where endeavors have been used to wean a savage from his own customs, and to render the accommodations of polished society familiar to him; even where he has been allowed to taste of those pleasures, and has been honored with those distinctions, which are the chief objects of our desire, he droops and languishes under the restraint of laws and forms, he seizes the first opportunity of breaking loose from them, and returns with transport to the forest or the wild, where he can enjoy a careless and uncontrolled freedom.

Thus I have finished a laborious delineation of the character and manners of the uncivilized tribes scattered over the vast continent of America. In this, I aspire not at rivaling the great masters who have painted and adorned savage life, either in boldness of design, or in the glow and beauty of their coloring. I am satisfied with the more humble merit of having persisted with patient industry, in viewing my subject in many various lights, and collecting from the most accurate observers such detached, and often minute features, as might enable me to exhibit a portrait that resembles the original.

Before I close this part of my work, one observation more is necessary, in order to justify the conclusions which I have formed, or to prevent the mistakes into which such as examine them may fall. In contemplating the inhabitants of a country so widely extended as America, great attention should be paid to the diversity of climates under which they are placed. The influence of this I have pointed out with respect to several important particulars which have been the object of research; but even where it has not been mentioned, it ought not to be overlooked. The provinces of America are of such different temperament, that this alone is sufficient to constitute a distinction between

their inhabitants. In every part of the earth where man exists, the power of climate operates, with decisive influence, upon his condition and character. In those countries which approach near to the extremes of heat or cold, this influence is so conspicuous as to strike every eye. Whether we consider man merely as an animal, or as being endowed with rational powers which fit him for activity and speculation, we shall find that he has uniformly attained the greatest perfection of which his nature is capable, in the temperate regions of the globe. There his constitution is most vigorous, his organs most acute, and his form most beautiful. There, too, he possesses a superior extent of capacity, greater fertility of imagination, more enterprising courage, and a sensibility of heart which gives birth to desires, not only ardent, but persevering. In this favorite situation he has displayed the utmost efforts of his genius, in literature, in policy, in commerce, in war, and in all the arts which improve or embellish life.

This powerful operation of climate is felt most sensibly by rude nations, and produces greater effects than in societies more improved. The talents of civilized men are continually exerted in rendering their own condition more comfortable; and by their ingenuity and inventions, they can in a great measure supply the defects, and guard against the inconveniences of any climate. But the improvident savage is affected by every circumstance peculiar to his situation. He takes no precaution either to mitigate or to improve it. Like a plant or an animal, he is formed by the climate under which he is placed, and feels the full force of its influence.

In surveying the rude nations of America, this natural distinction between the inhabitants of the temperate and torrid zones is very remarkable. They may, accordingly, be divided into two great classes. The one comprehends all the North Americans from the river St. Laurence to the Gulf of Mexico, together with the people of Chili, and a few small tribes towards the extremity of the southern continent. To the other belong all the inhabitants of the islands, and those settled in the various provinces which extend from the isthmus of Darien almost to the southern confines of Brasil, along the east side of the Andes. In the former, which comprehends all the regions of the temperate zone that in America are inhabited, the human species appears manifestly to be more perfect. The natives are more robust, more active, more intelligent, and more courageous. They possess, in the most eminent degree, that force of mind, and love of independence, which I have pointed out as the chief virtues of man in his savage state. They have defended their liberty with persevering fortitude against the Europeans, who subdued the other rude nations of America with the greatest ease. The natives of the temperate zone are the only people in the New World who are indebted for their freedom to their own valor. The North Americans, though long encompassed by three formidable European powers, still retain part of their original possessions, and continue to exist as independent nations. The people of Chili, though early invaded, still maintain a gallant contest with the Spaniards, and have set bounds to their encroachments; whereas, in the warmer regions, men are more feeble in their frame, less vigorous in the efforts of their minds, of a gentle but dastardly spirit, more enslaved by pleasure, and more sunk in indolence. Accordingly, it is in the torrid zone that the Europeans have most completely established their dominion over America; the most fertile and desirable provinces in it are subjected to their yoke; and if several tribes there still enjoy independence, it is either because they have never been attacked by an enemy already satiated with conquest, and possessed of larger territories than he was able to occupy, or because they have been saved from oppression by their remote and inaccessible situation.

Conspicuous as this distinction may appear between the inhabitants of those different regions, it is not, however, universal. Moral and political causes, as I have formerly observed, affect the disposition and character of individuals, as well as nations, still more powerfully than the influence of climate. There are, accordingly, some tribes, in various parts of the torrid zone, possessed of courage, high spirit, and the love of independence, in a degree hardly inferior to the natives of more temperate climates. We are too little acquainted with the history of these people, to be able to trace the several circumstances in their progress and condition, to which they are indebted for this remarkable pre-eminence. The fact, nevertheless, is certain. As early as the first voyage of Columbus, he received

information that several of the islands were inhabited by the *Carrabees*, a fierce race of men, nowise resembling their feeble and timid neighbors. In his second expedition to the New World, he found this information to be just, and was himself a witness of their intrepid valor. [95] The same character they have maintained invariably in all subsequent contests with the people of Europe; and even in our own times we have seen them make a gallant stand in defence of the last territory which the rapacity of the invaders had left in their possession. [96] Some nations in Brasil were no less eminent for vigor of mind and bravery in war. The people of the isthmus of Darien boldly met the Spaniards in the field, and frequently repelled those formidable invaders. Other instances might be produced. It is not by attending to any single cause or principle, how powerful and extensive soever its influence may appear, that we can explain the actions, or account for the character of men. Even the law of climate, more universal, perhaps, in its operation than any that affects the human species, cannot be applied, in judging of their conduct, without many exceptions.

BOOK V.

History of the conquest of New Spain by Cortes.

WHEN Grijalva [1518] returned to Cuba, he found the armament destined to attempt the conquest of that rich country which he had discovered almost complete. Not only ambition, but avarice, had urged Velasquez to hasten his preparations; and having such a prospect of gratifying both, he had advanced considerable sums out of his private fortune towards defraying the expenses of the expedition. At the same time, he exerted his influence as governor, in engaging the most distinguished persons in the colony to undertake the service. [97] At a time when the spirit of the Spanish nation was adventurous to excess, a number of soldiers, eager to embark in any daring enterprise, soon appeared. But it was not so easy to find a person qualified to take the command in an expedition of so much importance; and the character of Velasquez, who had the right of nomination, greatly increased the difficulty of the choice. Though of most aspiring ambition, and not destitute of talents for government, he possessed neither such courage, nor such vigor and activity of mind, as to undertake in person the conduct of the armament which he was preparing. In this embarrassing situation, he formed the chimerical scheme, not only of achieving great exploits by a deputy, but of securing to himself the glory of conquests which were to be made by another. In the execution of this plan, he fondly aimed at reconciling contradictions. He was solicitous to choose a commander of intrepid resolution, and of superior abilities, because he knew these to be requisite in order to ensure success; but, at the same time, from the jealousy natural to little minds, he wished this person to be of a spirit so tame and obsequious as to be entirely dependent on his will. But when he came to apply those ideas in forming an opinion concerning the several officers who occurred to his thoughts as worthy of being intrusted with the command, he soon perceived that it was impossible to find such incompatible qualities united in one character. Such as were distinguished for courage and talents were too high spirited to be passive instruments in his hands. Those who appeared more gentle and tractable were destitute of capacity, and unequal to the charge. This augmented his perplexity and his fears. He deliberated long and with much solicitude, and was still wavering in his choice when Amador de Laredo, the royal treasurer in Cuba, and Andres Duera, his own secretary, the two persons in whom he chiefly confided, were encouraged by this irresolution to propose a new candidate; and they supported their recommendation with such assiduity and address, that, no less fatally for Velasquez than happily for their country, it proved successful.

The man whom they pointed out to him was Fernando Cortes. He was born at Medellin, a small town in Estremadura, in the year one thousand four hundred and eighty-five, and descended from a family of noble blood, but of very moderate fortune. Being originally destined by his parents to the study of law, as the most likely method of bettering his condition, he was sent early to the university of Salamanca, where he imbibed some tincture of learning. But he was soon disgusted with an academic life, which did not suit his ardent and restless genius, and retired to Medellin, where he gave himself up entirely to active sports and martial exercises. At this period of life he was so impetuous, so overbearing, and so dissipated, that his father was glad

to comply with his inclination, and sent him abroad as an adventurer in arms. There were in that age two conspicuous theatres, on which such of the Spanish youth as courted military glory might display their valor; one in Italy, under the command of the Great Captain; the other in the New World. Cortes preferred the former, but was prevented by indisposition from embarking with a reinforcement of troops sent to Naples. Upon this disappointment he turned his views towards America, whither he was allured by the prospect of the advantages which he might derive from the patronage of Ovando, [98] the governor of Hispaniola, who was his kinsman. When he landed at St. Domingo, in one thousand five hundred and four, his reception was such as equalled his most sanguine hopes, and he was employed by the Governor in several honorable and lucrative stations. These, however, did not satisfy his ambition; and, in the year one thousand five hundred and eleven, he obtained permission to accompany Diego Velasquez in his expedition to Cuba. In this service he distinguished himself so much, that, notwithstanding some violent contests with Velasquez, occasioned by trivial events unworthy of remembrance, he was at length taken into favor, and received an ample concession of lands and of Indians, the recompense usually bestowed upon adventurers in the New World.

Though Cortes had not hitherto acted in high command, he had displayed such qualities in several scenes of difficulty and danger, as raised universal expectation, and turned the eyes of his countrymen towards him as one capable of performing great things. The turbulence of youth, as soon as he found objects and occupations suited to the ardor of his mind, gradually subsided and settled into a habit of regular indefatigable activity. The impetuosity of his temper, when he came to act with his equals, insensibly abated, by being kept under restraint, and melted into a cordial soldierly frankness. These qualities were accompanied with calm prudence in concerting his schemes, with persevering vigor in executing them, and with what is peculiar to superior genius, the art of gaining the confidence and governing the minds of men. To all which were added the inferior accomplishments that strike the vulgar, and command their respect; a graceful person, a winning aspect, extraordinary address in martial exercises, and a constitution of such vigor as to be capable of enduring any fatigue.

As soon as Cortes was mentioned to Velasquez by his two confidants, he flattered himself that he had at length found what he had hitherto sought in vain, a man with talents for command, but not an object for jealousy. Neither the rank nor the fortune of Cortes, as he imagined, was such that he could aspire at independence. He had reason to believe that by his own readiness to bury ancient animosities in oblivion, as well as his liberality in conferring several recent favors, he had already gained the good will of Cortes, and hoped, by this new and unexpected mark of confidence, that he might attach him for ever to his interest.

Cortes, receiving his commission [Oct. 23.] with the warmest expressions of respect and gratitude to the governor, immediately erected his standard before his own house, appeared in a military dress, and assumed all the ensigns of his new dignity. His utmost influence and activity were exerted in persuading many of his friends to engage in the service, and in urging forward the preparations for the voyage. All his own funds, together with what money he could raise by mortgaging his lands and Indians, were expended in purchasing military stores and provisions, or in supplying the wants of such of his officers as were unable to equip themselves in a manner suited to their rank. [99] Inoffensive and even laudable as this conduct was, his disappointed competitors were malicious enough to give it a turn to his disadvantage. They represented him as aiming already, with little disguise, at establishing an independent authority over his troops, and endeavoring to secure their respect or love by his ostentatious and interested liberality. They reminded Velasquez of his former dissensions with the man in whom he now reposed so much confidence, and foretold that Cortes would be more apt to avail himself of the power which the governor was inconsiderately putting in his hands, to avenge past injuries than to requite recent obligations. These insinuations made such impression upon the suspicious mind of Velasquez, that Cortes soon observed some symptoms of a growing alienation and distrust in his behavior, and was advised by Lucas and others to hasten his departure before these should become so confirmed as to break out with open violence. Fully sensible of this danger, he urged forward his preparations with such

rapidity that he set sail from St. Jago de Cuba on the eighteenth of November. Velasquez accompanying him to the shore, and taking leave of him with an appearance of perfect friendship and confidence, though he had secretly given it in charge to some of Cortes' officers, to keep a watchful eye upon every part of their commander's conduct.

Cortes proceeded to Trinidad, a small settlement on the same side of the island, where he was joined by several adventurers, and received a supply of provisions and military stores, of which his stock was still very incomplete. He had hardly left St. Jago, when the jealousy which had been working in the breast of Velasquez grew so violent that it was impossible to suppress it. The armament was no longer under his own eye and direction; and he felt that as his power over it ceased, that of Cortes would become more absolute. Imagination now aggravated every circumstance which had formerly excited suspicion: the rivals of Cortes industriously threw in reflections which increased his fear; and with no less art than malice they called superstition to their aid, employing the predictions of an astrologer in order to complete the alarm. All these, by their united operation, produced the desired effect. Velasquez repented bitterly of his own imprudence, in having committed a trust of so much importance to a person whose fidelity appeared so doubtful, and hastily despatched instructions to Trinidad, empowering Verdugo, the chief magistrate there, to deprive Cortes of his commission. But Cortes had already made such progress in gaining the esteem and confidence of his troops, that, finding officers as well as soldiers equally zealous to support his authority, he soothed or intimidated Verdugo, and was permitted to depart from Trinidad without molestation.

From Trinidad Cortes sailed for the Havana, in order to raise more soldiers, and to complete the outfitting of his fleet. There several persons of distinction entered into the service, and engaged to supply what provisions were still wanting; but as it was necessary to allow them some time for performing what they had promised, Velasquez, sensible that he ought no longer to rely on a man of whom he had so openly discovered his distrust, availed himself of the interval which this unavoidable delay afforded, in order to make one attempt more to wrest the command out of the hands of Cortes. He loudly complained of Verdugo's conduct, accusing him either of childish facility, or of manifest treachery, in suffering Cortes to escape from Trinidad. Anxious to guard against a second disappointment, he sent a person of confidence to the Havana, with peremptory injunctions to Pedro Barba, his lieutenant-governor in that colony, instantly to arrest Cortes, to send him prisoner to St. Jago under a strong guard, and to countermand the sailing of the armament until he should receive further orders. He wrote likewise to the principal officers, requiring them to assist Barba in executing what he had given him in charge. But before the arrival of this messenger, a Franciscan friar of St. Jago had secretly conveyed an account of this interesting transaction to Bartholomew de Olmedo, a monk of the same order, who acted as chaplain to the expedition. Cortes, forewarned of the danger, had time to take precautions for his own safety. His first step was to find some pretext for removing from the Havana Diego de Ordaz, an officer of great merit, but in whom, on account of his known attachment to Velasquez, he could not confide in this trying and delicate juncture. He gave him the command of a vessel destined to take on board some provisions in a small harbor beyond Cape Antonio, and thus made sure of his absence without seeming to suspect his fidelity. When he was gone, Cortes no longer concealed the intentions of Velasquez from his troops; and as officers and soldiers were equally impatient to set out on an expedition, in preparing for which most of them had expended all their fortunes, they expressed their astonishment and indignation at that illiberal jealousy to which the governor was about to sacrifice, not only the honor of their general, but all their sanguine hopes of glory and wealth. With one voice they entreated that he would not abandon the important station to which he had such a good title. They conjured him not to deprive them of a leader whom they followed with such well founded confidence, and offered to shed the last drop of their blood in maintaining his authority. Cortes was easily induced to comply with what he himself so ardently desired. He swore that he would never desert soldiers who had given him such a signal proof of their attachment, and promised instantly to conduct them to that rich country which had been so long the object of their thoughts and wishes. This declaration was received

with transports of military applause, accompanied with threats and imprecations against all who should presume to call in question the jurisdiction of their general, or to obstruct the execution of his designs.

Every thing was now ready for their departure; but though this expedition was fitted out by the united effort of the Spanish power in Cuba; though every settlement had contributed its quota of men and provisions; though the governor had laid out considerable sums, and each adventurer had exhausted his stock, or strained his credit, the poverty of the preparations was such as must astonish the present age, and bore, indeed, no resemblance to an armament destined for the conquest of a great empire. The fleet consisted of eleven vessels; the largest of a hundred tons, which was dignified by the name of Admiral; three of seventy or eighty tons, and the rest small open barks. On board of these were six hundred and seventeen men; of which five hundred and eight belonged to the land service, and a hundred and nine were seamen or artificers. The soldiers were divided into eleven companies, according to the number of the ships; to each of which Cortes appointed a captain, and committed to him the command of the vessel while at sea, and of the men when on shore. [100] As the use of fire arms among the nations of Europe was hitherto confined to a few battalions of regularly disciplined infantry, only thirteen soldiers were armed with muskets, thirty-two were cross-bow men, and the rest had swords and spears. Instead of the usual defensive armour, which must have been cumbersome in a hot climate, the soldiers wore jackets quilted with cotton, which experience had taught the Spaniards to be a sufficient protection against the weapons of the Americans. They had only sixteen horses, ten small field pieces, and four falconets.

With this slender and ill provided train did Cortes set sail [Feb. 10, 1519.] to make war upon a monarch whose dominions were more extensive than all the kingdoms subject to the Spanish crown. As religious enthusiasm always mingled with the spirit of adventure in the New World, and, by a combination still more strange, united with avarice, in prompting the Spaniards to all their enterprises, a large cross was displayed in their standards, with this inscription, *Let us follow the cross, for under this sign we shall conquer.*

So powerfully were Cortes and his followers animated with both these passions, that no less eager to plunder the opulent country whither they were bound, than zealous to propagate the Christian faith among its inhabitants, they set out, not with the solicitude natural to men going upon dangerous services, but with that confidence which arises from security of success, and certainty of the divine protection.

As Cortes had determined to touch at every place where Grijalva had visited, he steered directly towards the island of Cozumel; there he had the good fortune to redeem Jerome de Aguilar, a Spaniard, who had been eight years a prisoner among the Indians. This man was perfectly acquainted with a dialect of their language understood through a large extent of country, and possessing besides a considerable share of prudence and sagacity, proved extremely useful as an interpreter. From Cozumel, Cortes proceeded to the river of Tabasco [March 4.] in hopes of a reception as friendly as Grijalva had met with there, and of finding gold in the same abundance; but the disposition of the natives, from some unknown cause, was totally changed. After repeated endeavors to conciliate their good will, he was constrained to have recourse to violence. Though the forces of the enemy were numerous, and advanced with extraordinary courage, they were routed with great slaughter in several successive actions. The loss which they had sustained, and still more the astonishment and terror excited by the destructive effect of the fire arms, and the dreadful appearance of the horses, humbled their fierce spirits, and induced them to sue for peace. They acknowledged the King of Castile as their sovereign, and granted Cortes a supply of provisions with a present of cotton garments, some gold, and twenty female slaves. [101]

Cortes continued his course to the westward, keeping as near the shore as possible, in order to observe the country; but could discover no proper place for landing until he arrived at St. Juan de Ulua. As he entered this harbor, [April 2,] a large canoe full of people, among whom were two who seemed to be persons of distinction, approached his ship with signs of peace and amity. They came on board without fear or distrust, and addressed him in a most respectful manner, but in a language altogether unknown to Aguilar. Cortes was in the utmost perplexity and distress at the

event of which he instantly foresaw the consequences, and already felt the hesitation and uncertainty with which he should carry on the great schemes which he meditated, if, in his transactions with the natives, he must depend entirely upon such an imperfect, ambiguous, and conjectural mode of communication as the use of signs. But he did not remain long in his embarrassing situation; a fortunate accident extricated him when his own sagacity could have contributed little towards his relief. One of the female slaves, whom he had received from the *cazique* of Tabasco, happened to be present at the first interview between Cortes and his new guests. She perceived his distress, as well as the confusion of Aguilar; and, as she perfectly understood the Mexican language, she explained what they had said in the Yucatan tongue, with which Aguilar was acquainted. This woman, known afterwards by the name of Donna Marina, and who makes a conspicuous figure in the history of the New World, where great revolutions were brought about by small causes and inconsiderable instruments, was born in one of the provinces of the Mexican Empire. Having been sold as a slave in the early part of her life, after a variety of adventures she fell into the hands of the Tabascans, and had resided long enough among them to acquire their language without losing the use of her own. Though it was both tedious and troublesome to converse by the intervention of two different interpreters, Cortes was so highly pleased with having discovered this method of carrying on some intercourse with the people of a country into which he was determined to penetrate, that in the transports of his joy he considered it as a visible interposition of Providence in his favor.

He now learned that the two persons whom he had received on board of his ship were deputies from Teutillo and Pilpatoe, two officers intrusted with the government of that province by a great monarch whom they called Montezuma; and that they were sent to inquire what his intentions were in visiting their coast, and to offer him what assistance he might need, in order to continue his voyage. Cortes, struck with the appearance of those people, as well as the tenor of the message, assured them, in respectful terms, that he approached their country with most friendly sentiments, and came to propose matters of great importance to the welfare of their prince and his kingdom, which he would unfold more fully, in person, to the governor and the general. Next morning, without waiting for any answer, he landed his troops, his horses, and artillery; and, having chosen proper ground, began to erect bays for his men, and to fortify his camp. The natives, instead of opposing the entrance of those fatal guests into their country, assisted them in all their operations with an alacrity of which they had ere long good reason to repent.

Next day Teutillo and Pilpatoe entered the Spanish camp with a numerous retinue; and Cortes, considering them as the ministers of a great monarch entitled to a degree of attention very different from that which the Spaniards were accustomed to pay the petty *caziques* with whom they had intercourse in the isles, received them with much formal ceremony. He informed them, that he came as ambassador from Don Carlos, of Austria, King of Castile, the greatest monarch of the East, and was intrusted with propositions of such moment, that he could impart them to none but the Emperor Montezuma himself, and therefore required them to conduct him, without loss of time, into the presence of their master. The Mexican officers could not conceal their uneasiness at a request which they knew would be disagreeable, and which they foresaw might prove extremely embarrassing to their sovereign, whose mind had been filled with many disquieting apprehensions ever since the former appearance of the Spaniards on his coasts. But before they attempted to dissuade Cortes from insisting on his demand, they endeavored to conciliate his good will by entreating him to accept of certain presents, which, as humble slaves of Montezuma, they laid at his feet. They were introduced with great parade, and consisted of fine cotton cloth, of plumes of various colors, and of ornaments of gold and silver to a considerable value; the workmanship of which appeared to be as curious as the materials were rich. The display of these produced an effect very different from what the Mexicans intended. Instead of satisfying, it increased the avidity of the Spaniards, and rendered them so eager and impatient to become masters of a country which abounded with such precious productions, that Cortes could hardly listen with patience to the arguments which Pilpatoe and Teutillo employed to dissuade him from visiting

the capital, and in a haughty determined tone, he insisted on his demand of being admitted to a personal audience of their sovereign. During this interview, some painters, in the train of the Mexican chiefs, had been diligently employed in delineating, upon white cotton cloths, figures of the ships, the horses, the artillery, the soldiers, and whatever else attracted their eyes as singular. When Cortes observed this, and was informed that these pictures were to be sent to Montezuma, in order to convey to him a more lively idea of the strange and wonderful objects now presented to their view than any words could communicate, he resolved to render the representation still more animating and interesting, by exhibiting such a spectacle as might give both them and their monarch an awful impression of the extraordinary prowess of his followers, and the irresistible force of their arms. The trumpets, by his order, sounded an alarm; the troops, in a moment, formed in order of battle, the infantry performed such martial exercises as were best suited to display the effect of their different weapons; the horse, in various evolutions, gave a specimen of their agility and strength; the artillery, pointed towards the thick woods which surrounded the camp, were fired, and made dreadful havoc among the trees. The Mexicans looked on with that silent amazement which is natural when the mind is struck with objects which are both awful and above its comprehension. But, at the explosion of the cannon, many of them fled, some fell to the ground, and all were so much confounded at the sight of men whose power so nearly resembled that of the gods, that Cortes found it difficult to compose and reassure them. The painters had now many new objects on which to exercise their art, and they put their fancy on the stretch in order to invent figures and symbols to represent the extraordinary things which they had seen.

Messengers were immediately despatched to Montezuma with those pictures, and a full account of every thing that had passed since the arrival of the Spaniards, and by them Cortes sent a present of some European curiosities to Montezuma, which, though of no great value, he believed would be acceptable on account of their novelty. The Mexican monarchs, in order to obtain early information of every occurrence in all the corners of their extensive empire, had introduced a refinement in police unknown at that time in Europe. They had couriers posted at proper stations along the principal roads; and as these were trained to agility by a regular education, and relieved one another at moderate distances, they conveyed intelligence with surprising rapidity. Though the capital in which Montezuma resided was above a hundred and eighty miles from St. Juan de Ulua, Cortes's presents were carried thither, and an answer to his demands received in a few days. The same officers who had hitherto treated with the Spaniards were employed to deliver this answer; but as they knew how repugnant the determination of their master was to all the schemes and wishes of the Spanish commander, they would not venture to make it known until they had previously endeavored to soothe and mollify him. For this purpose they renewed their negotiation, by introducing a train of a hundred Indians loaded with presents sent to him by Montezuma. The magnificence of these was such as became a great monarch, and far exceeded any idea which the Spaniards had hitherto formed of his wealth. They were placed on mats spread on the ground in such order as showed them to the greatest advantage. Cortes and his officers viewed with admiration the various manufactures of the country; cotton stuffs so fine, and of such delicate texture as to resemble silk; pictures of animals, trees, and other natural objects, formed with feathers of different colors, disposed and mingled with such skill and elegance as to rival the works of the pencil in truth and beauty of imitation. But what chiefly attracted their eyes were two large plates of a circular form, one of massive gold representing the sun, the other of silver, an emblem of the moon. [192] These were accompanied with bracelets, collars, rings, and other trinkets of gold; and that nothing might be wanted which could give the Spaniards a complete idea of what the country afforded, with some boxes filled with pearls, precious stones, and grains of gold unwrought, as they had been found in the mines or rivers. Cortes received all these with an appearance of profound veneration for the monarch by whom they were bestowed. But when the Mexicans, presuming upon this, informed him that their master, though he had desired him to accept of what he had sent as a token of regard for that monarch whom Cortes represented, would not give his consent that foreign troops should approach nearer to his capital, or even allow them to continue longer in his dominions, the Spanish general

declared, in a manner more resolute and peremptory than formerly, that he must insist on his first demand, as he could not without dishonor, return to his own country, until he was admitted into the presence of the prince whom he was appointed to visit in the name of his sovereign. The Mexicans, astonished at seeing any man dare to oppose that will which they were accustomed to consider as supreme and irresistible, yet afraid of precipitating their country into an open rupture with such formidable enemies, prevailed with Cortes to promise that he would not remove from his present camp until the return of a messenger whom they sent to Montezuma for further instructions.

The firmness with which Cortes adhered to his original proposal should naturally have brought the negotiation between him and Montezuma to a speedy issue, as it seemed to leave the Mexican monarch no choice, but either to receive him with confidence as a friend, or to oppose him openly as an enemy. The latter was what might have been expected from a haughty prince in possession of extensive power. The Mexican empire at this period was at a pitch of grandeur to which no society ever attained in so short a period. Though it had subsisted, according to their own traditions, only a hundred and thirty years, its dominion extended from the North to the South Sea, over territories stretching, with some small interruption, above five hundred leagues from east to west, and more than two hundred from north to south, comprehending provinces not inferior in fertility, population and opulence, to any in the torrid zone. The people were warlike and enterprising; the authority of the monarch unbounded, and his revenues considerable. If, with the forces which might have been suddenly assembled in such an empire, Montezuma had fallen upon the Spaniards while encamped on a barren unhealthy coast, unsupported by any ally, without a place of retreat, and destitute of provisions, it seems to be impossible, even with all the advantages of their superior discipline and arms, that they could have stood the shock, and they must either have perished in such an unequal contest, or have abandoned the enterprise.

As the power of Montezuma enabled him to take this spirited part, his own dispositions were such as seemed naturally to prompt him to it. Of all the princes who had swayed the Mexican sceptre, he was the most haughty, the most violent, and the most impatient of control. His subjects looked up to him with awe, and his enemies with terror. The former he governed with unexampled rigor; but they were impressed with such an opinion of his capacity as commanded their respect; and, by many victories over the latter, he had spread far the dread of his arms, and had added several considerable provinces to his dominions. But though his talents might be suited to the transactions of a state so imperfectly polished as the Mexican empire, and sufficient to conduct them while in their accustomed course, they were altogether inadequate to a conjuncture so extraordinary, and did not qualify him either to judge with the discernment, or to act with the decision requisite in such trying emergence.

From the moment that the Spaniards appeared on his coast, he discovered symptoms of timidity and embarrassment. Instead of taking such resolutions as the consciousness of his own power, or the memory of his former exploits, might have inspired he deliberated with an anxiety and hesitation which did not escape the notice of his meanest courtiers. The perplexity and discomposure of Montezuma's mind upon this occasion, as well as the general dismay of his subjects, were not owing wholly to the impression which the Spaniards had made by the novelty of their appearance and the terror of their arms. Its origin may be traced up to a more remote source. There was an opinion, if we may believe the earliest and most authentic Spanish historians, almost universal among the Americans, that some dreadful calamity was impending over their heads, from a race of formidable invaders, who should come from regions towards the rising sun, to overrun and desolate their country. Whether this disquieting apprehension flowed from the memory of some natural calamity which had afflicted that part of the globe, and impressed the minds of the inhabitants with superstitious fears and forebodings, or whether it was an imagination accidentally suggested by the astonishment which the first sight of a new race of men occasioned, it is impossible to determine. But as the Mexicans were more prone to superstition than any people in the New World, they were more deeply affected by the appearance of the Spaniards, whom their credulity instantly represented as the instrument destined to bring about this fatal revolution which they dreaded. Under

those circumstances it ceases to be incredible that a handful of adventurers should alarm the monarch of a great empire, and all his subjects.

Notwithstanding the influence of this impression, when the messenger arrived from the Spanish camp with an account that the leader of the strangers, adhering to his original demand, refused to obey the order enjoining him to leave the country, Montezuma assumed some degree of resolution; and in a transport of rage natural to a fierce prince unaccustomed to meet with any opposition to his will, he threatened to sacrifice those presumptuous men to his gods. But his doubts and fears quickly returned; and instead of issuing orders to carry his threats into execution, he again called his ministers to confer and offer their advice. Feeble and temporising measures will always be the result when men assemble to deliberate in a situation where they ought to act. The Mexican counsellors took no effectual measure for expelling such troublesome intruders, and were satisfied with issuing a more positive injunction, requiring them to leave the country; but this they preposterously accompanied with a present of such value as proved a fresh inducement to remain there.

Meanwhile, the Spaniards were not without solicitude, or a variety of sentiments, in deliberating concerning their own future conduct. From what they had already seen, many of them formed such extravagant ideas concerning the opulence of the country, that despising danger or hardships when they had in view treasures which appeared to be inexhaustible, they were eager to attempt the conquest. Others, estimating the power of the Mexican empire by its wealth, and enumerating the various proofs which had occurred of its being under a well regulated administration, contended that it would be an act of the wildest frenzy to attack such a state with a small body of men, in want of provisions, unconnected with any ally, and already enfeebled by the diseases peculiar to the climate, and the loss of several of their number. Cortes secretly applauded the advocates for bold measures, and cherished their romantic hopes, as such ideas corresponded with his own, and favored the execution of the schemes which he had formed. From the time that the suspicions of Velasquez broke out with open violence in the attempts to deprive him of the command, Cortes saw the necessity of dissolving a connection which would obstruct and embarrass all his operations, and watched for a proper opportunity of coming to a final rupture with him. Having this in view, he had labored by every art to secure the esteem and affection of his soldiers. With his abilities for command, it was easy to gain their esteem; and his followers were quickly satisfied that they might rely, with perfect confidence, on the conduct and courage of their leader. Nor was it more difficult to acquire their affection. Among adventurers nearly of the same rank, and serving at their own expense, the dignity of command did not elevate a general above mingling with those who acted under him. Cortes availed himself of this freedom of intercourse to insinuate himself into their favor, and by his affable manners, by well timed acts of liberality to some, by inspiring all with vast hopes, and by allowing them to trade privately with the natives, [103] he attached the greater part of his soldiers so firmly to himself, that they almost forgot that the armament had been fitted out by the authority and at the expense of another.

During these intrigues, Teutile arrived with the present from Montezuma, and, together with it, delivered the ultimate order of that monarch to depart instantly out of his dominions; and when Cortes, instead of complying, renewed his request of an audience, the Mexican turned from him abruptly, and quitted the camp with looks and gestures which strongly expressed his surprise and resentment. Next morning, none of the natives, who used to frequent the camp in great numbers in order to barter with the soldiers, and to bring in provisions, appeared. All friendly correspondence seemed now to be at an end, and it was expected every moment that hostilities would commence. This, though an event that might have been foreseen, occasioned a sudden consternation among the Spaniards, which emboldened the adherents of Velasquez not only to murmur and cabal against their general, but to appoint one of their number to remonstrate openly against his imprudence in attempting the conquest of a mighty empire with such inadequate force, and to urge the necessity of returning to Cuba, in order to refit the fleet and augment the army. Diego de Ordaz, one of his principal officers, whom the malecontents charged with this commission, delivered it with a soldierly freedom and bluntness, assuring Cortes that he spoke the senti-

ments of the whole army. He listened to this remonstrance without any appearance of emotion, and as he well knew the temper and wishes of his soldiers, and foresaw how they would receive a proposition fatal at once to all the splendid hopes and schemes which they had been forming with such complacency, he carried his dissimulation so far as to seem to relinquish his own measures in compliance with the request of Ordaz, and issued orders that the army should be in readiness next day to re-embark for Cuba. As soon as this was known, the disappointed adventurers exclaimed and threatened; the emissaries of Cortes, mingling with them, inflamed their rage; the ferment became general; the whole camp was almost in open mutiny; all demanding with eagerness to see their commander. Cortes was not slow in appeasing; when, with one voice, officers and soldiers expressed their astonishment and indignation at the orders which they had received. It was unworthy, they cried, of the Castilian courage to be daunted at the first aspect of danger, and infamous to fly before any enemy appeared. For their parts, they were determined not to relinquish an enterprise that had hitherto been successful, and which tended so visibly to spread the knowledge of true religion, and to advance the glory and interest of their country. Happy under his command, they would follow him with alacrity through every danger in quest of those settlements and treasures which he had so long held out to their view; but if he chose rather to return to Cuba, and tamely give up all his hopes of distinction and opulence to an envious rival, they would instantly choose another general to conduct them in that path of glory which he had not spirit to enter.

Cortes, delighted with their ardor, took no offence at the boldness with which it was uttered. The sentiments were what he himself had inspired, and the warmth of expression satisfied him that his followers had imbibed them thoroughly. He affected, however, to be surprised at what he heard, declaring that his orders to prepare for embarking were issued from a persuasion that this was agreeable to his troops; that, from deference to what he had been informed was their inclination, he had sacrificed his own private opinion, which was firmly bent on establishing immediately a settlement on the sea coast, and then on endeavoring to penetrate into the interior part of the country; that now he was convinced of his error; and as he perceived that they were animated with the generous spirit which breathed in every true Spaniard, he would resume, with fresh ardor, his original plan of operation, and doubted not to conduct them, in the career of victory, to such independent fortunes as their valor merited. Upon this declaration, shouts of applause testified the excess of their joy. The measure seemed to be taken with unanimous consent; such as secretly condemned it being obliged to join in the acclamations, partly to conceal their disaffection from their general, and partly to avoid the imputation of cowardice from their fellow-soldiers.

Without allowing his men time to cool or to reflect, Cortes set about carrying his design into execution. In order to give a beginning to a colony, he assembled the principal persons in his army, and by their suffrage elected a council and magistrates, in whom the government was to be vested. As men naturally transplant the institutions and forms of the mother country into their new settlements, this was framed upon the model of a Spanish corporation. The magistrates were distinguished by the same names and ensigns of office, and were to exercise a similar jurisdiction. All the persons chosen were most firmly devoted to Cortes, and the instrument of their election was framed in the king's name, without any mention of their dependence on Velasquez. The two principles of avarice and enthusiasm, which prompted the Spaniards to all their enterprises in the New World, seem to have concurred in suggesting the name which Cortes bestowed on his infant settlement. He called it, *The Rich Town of the True Cross*.

The first meeting of the new council was distinguished by a transaction of great moment. As soon as it assembled, Cortes applied for leave to enter; and approaching with many marks of profound respect, which added dignity to the tribunal, and set an example of reverence for its authority, he began a long harangue, in which, with much art, and in terms extremely flattering to persons just entering upon their new function, he observed, that as the supreme jurisdiction over the colony which they had planted was now vested in this court, he considered them as clothed with the authority and representing the person of their sovereign; that accordingly he would communicate to them what

he deemed essential to the public safety, with the same dutiful fidelity as if he were addressing his royal master; that the security of a colony settled in a great empire, whose sovereign had already discovered his hostile intentions, depended upon arms, and the efficacy of these upon the subordination and discipline preserved among the troops; that his right to command was derived from a commission granted by the governor of Cuba; and as that had been long since revoked, the lawfulness of his jurisdiction might well be questioned; that he might be thought to act upon a defective or even a dubious title; nor could they trust an army which might dispute the powers of its general, at a juncture when it ought implicitly to obey his orders; that, moved by these considerations, he now resigned all his authority to them, that they, having both right to choose, and power to confer full jurisdiction, might appoint one in the king's name to command the army in its future operations; and as for his own part, such was his zeal for the service in which they were engaged, that he would most cheerfully take up a pike with the same hand that laid down the general's truncheon, and convince his fellow-soldiers, that though accustomed to command, he had not forgotten how to obey. Having finished his discourse, he laid the commission from Velasquez upon the table, and, after kissing his truncheon, delivered it to the chief magistrate, and withdrew.

The deliberations of the council were not long, as Cortes had concerted this important measure with his confidants, and had prepared the other members with great address for the part which he wished them to take. His resignation was accepted; and as the uninterrupted tenor of their prosperity under his conduct afforded the most satisfying evidence of his abilities for command, they, by their unanimous suffrage, elected him chief justice of the colony, and captain-general of its army, and appointed his commission to be made out in the king's name, with most ample powers, which were to continue in force until the royal pleasure should be further known. That this deed might not be deemed the machination of a junto, the council called together the troops, and acquainted them with what had been resolved. The soldiers, with eager applause, ratified the choice which the council had made; the air resounded with the name of Cortes, and all vowed to shed their blood in support of his authority.

Cortes, having now brought his intrigues to the desired issue, and shaken off his mortifying dependence on the governor of Cuba, accepted of the commission, which vested in him supreme jurisdiction, civil as well as military over the colony, with many professions of respect to the council and gratitude to the army. Together with this new command, he assumed greater dignity, and began to exercise more extensive powers. Formerly he had felt himself to be only the deputy of a subject; now he acted as the representative of his sovereign. The adherents of Velasquez, fully aware of what would be the effect of this change in the situation of Cortes, could no longer continue silent and passive spectators of his actions. They exclaimed openly against the proceedings of the council as illegal, and against those of the army as mutinous. Cortes, instantly perceiving the necessity of giving a timely check to such seditious discourse by some vigorous measure, arrested Ordaz, Escudero, and Velasquez de Leon, the ringleaders of this faction and sent them prisoners aboard the fleet, loaded with chains. Their dependants, astonished and overawed, remained quiet; and Cortes, more desirous to reclaim than to punish his prisoners, who were officers of great merit, courted their friendship with such assiduity and address, that the reconciliation was perfectly cordial; and on the most trying occasions, neither their connection with the governor of Cuba, nor the memory of the indignity with which they had been treated, tempted them to swerve from an inviolable attachment to his interest. In this, as well as his other negotiations at this critical juncture, which decided with respect to his future fame and fortune Cortes owed much of his success to the Mexican gold, which he distributed with a liberal hand both among his friends and his opponents.

Cortes, having thus rendered the union between himself and his army indissoluble, by engaging it to join him in disclaiming any dependence on the governor of Cuba, and in repeated acts of disobedience to his authority, thought he now might venture to quit the camp in which he had hitherto remained, and advance into the country. To this he was encouraged by an event no less fortunate than seasonable. Some Indians having approached his camp in a mysterious manner, were introduced into his presence. He found that

they were sent with a proffer of friendship from the cazique of Zempoalla, a considerable town at no great distance; and from their answers to a variety of questions which he put to them, according to his usual practice in every interview with the people of the country, he gathered, that their master, though subject to the Mexican empire, was impatient of the yoke, and filled with such dread and hatred of Montezuma, that nothing could be more acceptable to him than any prospect of deliverance from the oppression under which he groaned. On hearing this, a ray of light and hope broke in upon the mind of Cortes. He saw that the great empire which he intended to attack was neither perfectly united, nor its sovereign universally beloved. He concluded, that the causes of disaffection could not be confined to one province, but that in other corners there must be malecontents, so weary of subjection, or so desirous of change, as to be ready to follow the standard of any protector. Full of those ideas, on which he began to form a scheme that time and more perfect information concerning the state of the country enabled him to mature, he gave a most gracious reception to the Zempoallans, and promised soon to visit their cazique.

In order to perform this promise, it was not necessary to vary the route which he had already fixed for his march. Some officers, whom he had employed to survey the coast, having discovered a village named Quiabisan, about forty miles to the northward, which, both on account of the fertility of the soil and commodiousness of the harbor, seemed to be a more proper station for a settlement than that where he was encamped, Cortes determined to remove thither. Zempoalla lay in his way, where the cazique received him in the manner which he had reason to expect; with gifts and caresses, like a man solicitous to gain his good will; with respect approaching almost to adoration, like one who looked up to him as a deliverer. From him he learned many particulars with respect to the character of Montezuma, and the circumstances which rendered his dominion odious. He was a tyrant, as the cazique told him with tears, haughty, cruel, and suspicious; who treated his own subjects with arrogance, ruined the conquered provinces by excessive exactions, and often tore their sons and daughters from them by violence; the former to be offered as victims to his gods; the latter to be reserved as concubines for himself or favorites. Cortes, in reply to him artfully insinuated, that one great object of the Spaniards in visiting a country so remote from their own, was to redress grievances, and to relieve the oppressed; and having encouraged him to hope for this interposition in due time, he continued his march to Quiabisan.

The spot which his officers had recommended as a proper situation, appeared to him to be so well chosen, that he immediately marked out ground for a town. The houses to be erected were only huts; but these were to be surrounded with fortifications of sufficient strength to resist the assaults of an Indian army. As the finishing of those fortifications was essential to the existence of a colony, and of no less importance in prosecuting the designs which the leader and his followers meditated, both in order to secure a place of retreat, and to preserve their communication with the sea, every man in the army, officers as well as soldiers, put his hand to the work, Cortes himself setting them an example of activity and perseverance in labor. The Indians of Zempoalla and Quiabisan lent their aid; and this petty station, the parent of so many mighty settlements, was soon in a state of defence.

While engaged in this necessary work, Cortes had several interviews with the caziques of Zempoalla and Quiabisan; and availing himself of their wonder and astonishment at the new objects which they daily beheld, he gradually inspired them with such a high opinion of the Spaniards, as beings of a superior order, and irresistible in arms, that, relying on their protection, they ventured to insult the Mexican power, at the very name of which they were accustomed to tremble. Some of Montezuma's officers having appeared to levy the usual tribute, and to demand a certain number of human victims, as an expiation for their guilt in pre-empting to hold intercourse with those strangers whom the emperor had commanded to leave his dominions; instead of obeying the order, the caziques made them prisoners, treated them with great indignity, and as their superstition was no less barbarous than that of the Mexicans, they prepared to sacrifice them to their gods. From this last danger they were delivered by the interposition of Cortes, who manifested the utmost horror at the mention of such a deed. The two caziques having now been pushed to an act of such

open rebellion, as left them no hope of safety but in attaching themselves inviolably to the Spaniards, they soon completed their union with them, by formally acknowledging themselves to be vassals of the same monarch. Their example was followed by the Totoaquas, a fierce people who inhabited the mountainous part of the country. They willingly subjected themselves to the crown of Castile, and offered to accompany Cortes, with all their forces, in his march towards Mexico.

Cortes had now been above three months in New Spain; and though this period had not been distinguished by martial exploits, every moment had been employed in operations which, though less splendid, were more important. By his address in conducting his intrigues with his own army, as well as his sagacity in carrying on his negotiations with the natives, he had already laid the foundations of his future success. But whatever confidence he might place in the plan which he had formed, he could not but perceive, that as his title to command was derived from a doubtful authority, he held it by a precarious tenure. The injuries which Velasquez had received were such as would naturally prompt him to apply for redress to their common sovereign; and such a representation, he foresaw, might be given of his conduct that, he had reason to apprehend, not only that he might be degraded from his present rank, but subjected to punishment. Before he began his march, it was necessary to take the most effectual precautions against this impending danger. With this view he persuaded the magistrates of the colony at Vera Cruz to address a letter to the king, the chief object of which was to justify their own conduct in establishing a colony independent on the jurisdiction of Velasquez. In order to accomplish this, they endeavored to detract from his merit in fitting out the two former armaments under Cordova and Grijalva, affirming that these had been equipped by the adventurers who engaged in the expeditions, and not by the governor. They contended that the sole object of Velasquez was to trade or barter with the natives, not to attempt the conquest of New Spain, or to settle a colony there. They asserted that Cortes and the officers who served under him had defrayed the greater part of the expense of fitting out the armament. On this account, they humbly requested their sovereign to ratify what they had done in his name, and to confirm Cortes in the supreme command by his royal commission. That Charles might be induced to grant more readily what they demanded, they gave him a pompous description of the country which they had discovered; of its riches, the number of its inhabitants, their civilization and arts; they related the progress which they had already made in annexing some parts of the country situated on the sea coast to the crown of Castile; and mentioned the schemes which they had formed, as well as the hopes which they entertained, of reducing the whole to subjection.* Cortes himself wrote in a similar strain; and as he knew that the Spanish court, accustomed to the exaggerated representations of every new country by its discoverers, would give little credit to their splendid accounts of New Spain, if these were not accompanied with such a specimen of what it contained as would excite a high idea of its opulence, he solicited his soldiers to relinquish what they might claim as their part of the treasures which had hitherto been collected, in order that the whole might be sent to the king. Such was the ascendancy which he had acquired over their minds, and such their own romantic expectations of future wealth, that an army of indigent and rapacious adventurers was capable of this generous effort, and offered to their sovereign the richest present that had hitherto been transmitted from the New World. [104] Portocarrero and Montejó, the chief magistrates of the colony, were appointed to carry this present to Castile, with express orders not to touch at Cuba in their passage thither.

While a vessel was preparing for their departure an unexpected event occasioned a general alarm. Some soldiers and sailors, secretly attached to Velasquez, or

* In this letter it is asserted, that though a considerable number of Spaniards have been wounded in their various encounters with the people of Tabasco, not one of them died, and all had recovered in a very short time. This seems to confirm what I observe in p. 123, concerning the impotence of the offensive weapons used by the Americans. In this letter, the human sacrifices offered by the Mexicans to their deities are described minutely, and with great horror; some of the Spaniards, it is said, had been eye-witnesses of those barbarous rites. To the letter is subjoined a catalogue and description of the presents sent to the emperor. That published by Gemara, Cron. c. 29, seems to have been copied from it. Pet. Martyr describes many of the articles in his treatise, 'De Insulis nuper inventis,' p. 351, &c.

intimidated at the prospect of the dangers unavoidable in attempting to penetrate into the heart of a great empire with such unequal force, formed the design of seizing one of the brigantines, and making their escape to Cuba, in order to give the governor such intelligence as might enable him to intercept the ship which was to carry the treasure and despatches to Spain. This conspiracy, though formed by persons of low rank, was conducted with profound secrecy; but at the moment when every thing was ready for execution, they were betrayed by one of their associates.

Though the good fortune of Cortes interposed so seasonably on this occasion, the detection of this conspiracy filled his mind with most disquieting apprehensions, and prompted him to execute a scheme which he had long revolved. He perceived that the spirit of disaffection still lurked among his troops; that though hitherto checked by the uniform success of his schemes, or suppressed by the hand of authority various events might occur which would encourage and call it forth. He observed, that many of his men, weary of the fatigue of service, longed to revisit their settlements in Cuba; and that upon any appearance of extraordinary danger or any reverse of fortune, it would be impossible to restrain them from returning thither. He was sensible, that his forces, already too feeble, could bear no diminution, and that a very small defection of his followers would oblige him to abandon the enterprise. After ruminating often, and with much solicitude, upon those particulars, he saw no hope of success but in cutting off all possibility of retreat, and in reducing his men to the necessity of adopting the same resolution with which he himself was animated, either to conquer or to perish. With this view he determined to destroy his fleet; but as he durst not venture to execute such a bold resolution by his single authority, he labored to bring his soldiers to adopt his ideas with respect to the propriety of this measure. His address in accomplishing this was not inferior to the arduous occasion in which it was employed. He persuaded some that the ships had suffered so much by having been long at sea, as to be altogether unfit for service; to others he pointed out what a seasonable reinforcement of strength they would derive from the junction of a hundred men, now unprofitably employed as sailors; and to all he represented the necessity of fixing their eyes and wishes upon what was before them, without allowing the idea of a retreat once to enter their thoughts. With universal consent the ships were drawn ashore, and after stripping them of their sails, rigging, iron works, and whatever else might be of use, they were broke in pieces. Thus, from an effort of magnanimity, to which there is nothing parallel in history, five hundred men voluntarily consented to be shut up in a hostile country, filled with powerful and unknown nations; and, having precluded every means of escape, left themselves without any resource but their own valor and perseverance.

Nothing now retarded Cortes; the alacrity of his troops and the disposition of his allies were equally favorable. All the advantages, however, derived from the latter, though procured by much assiduity and address, were well nigh lost in a moment, by an indiscreet sally of religious zeal, which on many occasions precipitated Cortes into actions inconsistent with the prudence that distinguishes his character. Though hitherto he had neither time nor opportunity to explain to the natives the errors of their own superstition, or to instruct them in the principles of the Christian faith, he commanded his soldiers to overturn the altars and to destroy the idols in the chief temple of Zempoalla, and in their place to erect a crucifix and an image of the Virgin Mary. The people beheld this with astonishment and horror; the priests excited them to arms; but such was the authority of Cortes, and so great the ascendancy which the Spaniards had acquired, that the commotion was appeased without bloodshed, and concord perfectly re-established.

Cortes began his march from Zempoalla, on the sixteenth of August, with five hundred men, fifteen horse, and six field pieces. The rest of his troops, consisting chiefly of such as from age or infirmity were less fit for active service, he left as a garrison in Villa Rica, under the command of Escalante, an officer of merit, and warmly attached to his interest. The cazique of Zempoalla supplied him with provisions, and with two hundred of those Indians called *Tamemes*, whose office, in a country where tame animals were unknown, was to carry burdens, and to perform all servile labor. They were a great relief to the Spanish soldiers, who hitherto had been obliged not only to carry their own baggage, but to drag along the artillery by main force. He

offered likewise a considerable body of his troops, but Cortes was satisfied with four hundred; taking care, however, to choose persons of such note as might prove hostages for the fidelity of their master. Nothing memorable happened in his progress, until he arrived on the confines of Tlascalca. The inhabitants of that province, a warlike people, were implacable enemies of the Mexicans, and had been united in an ancient alliance with the caziques of Zempoalla. Though less civilized than the subjects of Montezuma, they were advanced in improvement far beyond the rude nations of America whose manners we have described. They had made considerable progress in agriculture; they dwelt in large towns; they were not strangers to some species of commerce; and in the imperfect accounts of their institutions and laws, transmitted to us by the early Spanish writers, we discern traces both of distributive justice and of criminal jurisdiction in their interior police. But still, as the degree of their civilization was incomplete, and as they depended for subsistence not on agriculture alone, but trusted for it in a great measure to hunting, they retained many of the qualities natural to men in this state. Like them they were fierce and revengeful; like them, too, they were high spirited and independent. In consequence of the former, they were involved in perpetual hostilities, and had but a slender and occasional intercourse with neighboring states. The latter inspired them with such detestation of servitude, that they not only refused to stoop to a foreign yoke, and maintain an obstinate and successful contest in defence of their liberty against the superior power of the Mexican empire, but they guarded with equal solicitude against domestic tyranny; and disdaining to acknowledge any master, they lived under the mild and limited jurisdiction of a council elected by their several tribes.

Cortes, though he had received information concerning the martial character of this people, flattered himself that his professions of delivering the oppressed from the tyranny of Montezuma, their inveterate enmity to the Mexicans, and the example of their ancient allies the Zempoallans, might induce the Tlascalans to grant him a friendly reception. In order to dispose them to this, four Zempoallans of great eminence were sent ambassadors, to request in his name, and in that of their cazique, that they would permit the Spaniards to pass through the territories of the republic in their way to Mexico. But instead of the favorable answer which was expected, the Tlascalans seized the ambassadors, and, without any regard to their public character, made preparations for sacrificing them to their gods. At the same time they assembled their troops, in order to oppose those unknown invaders if they should attempt to make their passage good by force of arms. Various motives concurred in precipitating the Tlascalans into this resolution. A fierce people, shut up within its own narrow precincts, and little accustomed to any intercourse with foreigners, is apt to consider every stranger as an enemy, and is easily excited to arms. They concluded, from Cortes's proposal of visiting Montezuma in his capital, that, notwithstanding all his professions, he courted the friendship of a monarch whom they both hated and feared. The imprudent zeal of Cortes in violating the temples in Zempoalla, filled the Tlascalans with horror; and as they were no less attached to their superstition than the other nations of New Spain, they were impatient to avenge their injured gods, and to acquire the merit of offering up to them as victims, those impious men who had dared to profane their altars; they contemned the small number of the Spaniards, as they had not yet measured their own strength with that of these new enemies, and had no idea of the superiority which they derived from their arms and discipline.

Cortes, after waiting some days in vain for the return of his ambassadors, advanced [Aug. 30.] into the Tlascalcan territories. As the resolutions of people who delight in war are executed with no less promptitude than they are formed, he found troops in the field ready to oppose him. They attacked him with great intrepidity, and in the first encounter, wounded some of the Spaniards, and killed two horses; a loss, in their situation, of great moment, because it was irreparable. From this specimen of their courage, Cortes saw the necessity of proceeding with caution. His army marched in close order; he chose the stations where he halted, with attention, and fortified every camp with extraordinary care. During fourteen days he was exposed to almost uninterrupted assaults, the Tlascalans advancing with numerous armies, and renewing the attack in various forms, with a degree of valor and perseverance to which the Spaniards had seen nothing paral-

led in the New World. The Spanish historians describe those successive battles with great pomp, and enter into a minute detail of particulars, mingling many exaggerated and incredible circumstances [105] with such as are real and marvellous. But no power of words can render the recital of a combat interesting, where there is no equality of danger; and when the narrative closes with an account of thousands slain on the one side, while not a single person falls on the other, the most labored descriptions of the previous disposition of the troops, or of the various vicissitudes in the engagement, command no attention.

There are some circumstances, however, in this war, which are memorable, and merit notice, as they throw light upon the character both of the people of New Spain, and of their conquerors. Though the Tlascalans brought into the field such numerous armies as appear sufficient to have overwhelmed the Spaniards, they were never able to make any impression upon their small battalion. Singular as this may seem, it is not inexplicable. The Tlascalans, though addicted to war, were like all unpolished nations, strangers to military order and discipline, and lost in a great measure the advantage which they might have derived from their numbers, and the impetuosity of their attack, by their constant solicitude to carry off the dead and wounded. This point of honor, founded on a sentiment of tenderness natural to the human mind, and strengthened by anxiety to preserve the bodies of their countrymen from being devoured by their enemies, was universal among the people of New Spain. Attention to this pious office occupied them even during the heat of combat, broke their union, and diminished the force of the impression which they might have made by a joint effort.

Not only was their superiority in number of little avail, but the imperfection of their military weapons rendered their valor in a great measure ineffectual. After three battles and many skirmishes and assaults, not one Spaniard was killed in the field. Arrows and spears, beaded with dint or the bones of fishes, stakes hardened in the fire, and wooden swords, though destructive weapons among naked Indians, were easily turned aside by the Spanish bucklers, and could hardly penetrate the *escapules*, or quilted jackets, which the soldiers wore. The Tlascalans advanced boldly to the charge, and often fought hand to hand. Many of the Spaniards were wounded though all slightly, which cannot be imputed to any want of courage or strength in their enemies, but to the defect of the arms with which they assailed them.

Notwithstanding the fury with which the Tlascalans attacked the Spaniards, they seemed to have conducted their hostilities with some degree of barbarous generosity. They gave the Spaniards warning of their hostile intentions; and as they knew that their invaders wanted provisions, and imagined perhaps, like the other Americans, that they had left their own country because it did not afford them subsistence, they sent to their camp a large supply of poultry and maize, desiring them to eat plentifully, because they scorned to attack an enemy enfeebled by hunger, and it would be an affront to their gods to offer them famished victims, as well as disagreeable to themselves to feed on such emaciated prey.

When they were taught by the first encounter with their new enemies, that it was not easy to execute this threat; when they perceived, in the subsequent engagements, that notwithstanding all the efforts of their own valor, of which they had a very high opinion, not one of the Spaniards was slain or taken, they began to conceive them to be a superior order of beings, against whom human power could not avail. In this extremity, they had recourse to their priests, requiring them to reveal the mysterious causes of such extraordinary events, and to declare what new means they should employ in order to repulse these formidable invaders. The priests, after many sacrifices and incantations, delivered this response: That these strangers were the offspring of the sun, procreated by his animating energy in the regions of the east; that, by day, while cherished with the influence of his parental beams, they were invincible; but by night, when his reviving heat was withdrawn, their vigor declined and faded like the herbs in the field, and they dwindled down into mortal men. Theories less plausible have gained credit with more enlightened nations, and have influenced their conduct. In consequence of this, the Tlascalans, with the implicit confidence of men who fancy themselves to be under the guidance of Heaven, acted in contradiction to one of their most established maxims in war, and ventured to attack the enemy, with a strong body, in the night time, in hopes of destroying them when enfeebled and

surprised. But Cortes had greater vigilance and discernment, than to be deceived by the rude stratagems of an Indian army. The sentinels at his outposts, observing some extraordinary movement among the Tlascalans, gave the alarm. In a moment the troops were under arms, and rallying out, dispersed the party with great slaughter, without allowing it to approach the camp. The Tlascalans convinced by sad experience that their priests had deluded them, and satisfied that they attempted in vain either to deceive or to vanquish their enemies, their fierceness abated, and they began to incline seriously to peace.

They were at a loss, however, in what manner to address the strangers, what idea to form of their character, and whether to consider them as beings of a gentle or of a malevolent nature. There were circumstances in their conduct which seemed to favor each opinion. On the one hand, as the Spaniards constantly dismissed the prisoners whom they took, not only without injury, but often with presents of European toys, and renewed their offers of peace after every victory; this lenity amazed people, who, according to the exterminating system of war known in America, were accustomed to sacrifice and devour without mercy all the captives taken in battle, and disposed them to entertain favorable sentiments of the humanity of their new enemies. But, on the other hand, as Cortes had seized fifty of their countrymen who brought provisions to his camp, and supposing them to be spies, had cut off their hands; this bloody spectacle, added to the terror occasioned by the fire-arms and horses, filled them with dreadful impressions of the ferocity of their invaders. [106] This uncertainty was apparent in the mode of addressing the Spaniards. "If," said they, "you are divinities of a cruel and savage nature, we present to you five slaves, that you may drink their blood and eat their flesh. If you are mild deities, accept an offering of incense and variegated plumes. If you are men, here is meat, and bread, and fruit to nourish you." The peace, which both parties now desired with equal ardor, was soon concluded. The Tlascalans yielded themselves as vassals to the crown of Castile, and engaged to assist Cortes in all his future operations. He took the republic under his protection, and promised to defend their persons and possessions from injury or violence.

This treaty was concluded at a seasonable juncture for the Spaniards. The fatigue of service among a small body of men, surrounded by such a multitude of enemies was incredible. Half the army was on duty every night, and even they whose turn it was to rest, slept always upon their arms, that they might be ready to run to their posts on a moment's warning. Many of them were wounded; a good number, and among these Cortes himself, labored under the distempers prevalent in hot climates, and several had died since they set out from Vera Cruz. Notwithstanding the supplies which they received from the Tlascalans, they were often in want of provisions, and so destitute of the necessities most requisite in dangerous service, that they had no salve to dress their wounds, but what was composed of the fat of the Indians whom they had slain. Worn out with such intolerable toil and hardships, many of the soldiers began to murmur, and when they reflected on the multitude and boldness of their enemies, more were ready to despair. It required the utmost exertion of Cortes's authority and address to check this spirit of despondency in its progress, and to reanimate his followers with their wonted sense of their own superiority over the enemies with whom they had to contend. The submission of the Tlascalans, and their own triumphant entry into the capital city, where they were received with the reverence paid to beings of a superior order, banished at once from the minds of the Spaniards all memory of past sufferings; dispelled every anxious thought with respect to their future operations, and fully satisfied them that there was not now any power in America able to withstand their arms.

Cortes remained twenty days in Tlascalca, in order to allow his troops a short interval of repose after such hard service. During that time he was employed in transactions and inquiries of great moment with respect to his future schemes. In his daily conferences with the Tlascalcan chiefs, he received information concerning every particular relative to the state of the Mexican empire, or to the qualities of its sovereign, which could be of use in regulating his conduct, whether he should be obliged to act as a friend or as an enemy. As he found that the antipathy of his new allies to the Mexican nation was no less implacable than had been represented, and perceived what benefit he might derive from the

aid of such powerful confederates, he employed all his powers of insinuation in order to gain their confidence. Nor was any extraordinary exertion of these necessary. The Tlascalans, with the levity of mind natural to unpolished men, were, of their own accord, disposed to run from the extreme of hatred to that of fondness. Every thing in the appearance and conduct of their guests was to them matter of wonder. [107] They gazed with admiration at whatever the Spaniards did, and, fancying them to be of heavenly origin, were eager not only to comply with their demands, but to anticipate their wishes. They offered, accordingly, to accompany Cortes in his march to Mexico, with all the forces of the republic, under the command of their most experienced captains.

But, after bestowing so much pains on cementing this union, all the beneficial fruits of it were on the point of being lost by a new effusion of that intemperate religious zeal with which Cortes was animated no less than the other adventurers of the age. They all considered themselves as instruments employed by Heaven to propagate the Christian faith, and the less they were qualified, either by their knowledge or morals, for such a function, they were more eager to discharge it. The profound veneration of the Tlascalans for the Spaniards having encouraged Cortes to explain to some of their chiefs the doctrines of the Christian religion, and to insist that they should abandon their own superstitions, and embrace the faith of their new friends, they, according to an idea universal among barbarous nations, readily acknowledged the truth and excellence of what he taught; but contended, that the *Teules* of Tlascala were divinities no less than the God in whom the Spaniards believed; and as that Being was entitled to the homage of Europeans, so they were bound to revere the same powers which their ancestors had worshipped. Cortes continued, nevertheless, to urge his demand in a tone of authority, mingling threats with his arguments, until the Tlascalans could bear it no longer, and conjured him never to mention this again, lest the gods should avenge on their heads the guilt of having listened to such a proposition. Cortes, astonished and enraged at their obstinacy, prepared to execute by force what he could not accomplish by persuasion, and was going to overturn their altars and cast down their idols with the same violent hand as at Zempoalla, if Father Bartholomew de Olmedo, chaplain to the expedition, had not checked his inconsiderate impetuosity. He represented the imprudence of such an attempt in a large city newly reconciled, and filled with people no less superstitious than warlike; he declared, that the proceeding at Zempoalla had always appeared to him precipitate and unjust; that religion was not to be propagated by the sword, or infidels to be converted by violence; that other weapons were to be employed in this ministry; patient instruction must enlighten the understanding, and pious example captivate the heart, before men could be induced to abandon error, and embrace the truth. Amidst scenes where a narrow minded bigotry appears in such close union with oppression and cruelty, sentiments so liberal and humane soothe the mind with unexpected pleasure; and at a time when the rights of conscience were little understood in the Christian world, and the idea of toleration unknown, one is astonished to find a Spanish monk of the sixteenth century among the first advocates against persecution, and in behalf of religious liberty. The remonstrances of an ecclesiastic, no less respectable for wisdom than virtue, had their proper weight with Cortes. He left the Tlascalans in the undisturbed exercise of their own rites, requiring only that they should desist from their horrid practice of offering human victims in sacrifice.

Cortes, as soon as his troops were fit for service, resolved to continue his march towards Mexico, notwithstanding the earnest dissuaves of the Tlascalans, who represented his destruction as unavoidable if he put himself in the power of a prince so faithless and cruel as Montezuma. As he was accompanied by six thousand Tlascalans, he had now the command of forces which resembled a regular army. They directed their course towards Cholula [Oct. 13]; Montezuma, who had at length consented to admit the Spaniards into his presence, having informed Cortes that he had given orders for his friendly reception there. Cholula was a considerable town, and though only five leagues distant from Tlascala, was formerly an independent state, but had been lately subjected to the Mexican empire. This was considered by all the people of New Spain as a holy place, the sanctuary and chief seat of their gods, to which pilgrims resorted from every province and a greater number of human victims were offered in its

principal temple than even in that of Mexico. Montezuma seems to have invited the Spaniards thither, either from some superstitious hope that the gods would not suffer this sacred mansion to be defiled, without pouring down their wrath upon those impious strangers, who ventured to insult their power in the place of its peculiar residence; or from a belief that he himself might there attempt to cut them off with more certain success, under the immediate protection of his divinities.

Cortes had been warned by the Tlascalans, before he set out on his march, to keep a watchful eye over the Cholulans. He himself, though received into the town with much seeming respect and cordiality, observed several circumstances in their conduct which excited suspicion. Two of the Tlascalans, who were encamped at some distance from the town, as the Cholulans refused to admit their ancient enemies within its precincts, having found means to enter in disguise, acquainted Cortes that they observed the women and children of the principal citizens retiring in great hurry every night; and that six children had been sacrificed in the chief temple, a rite which indicated the execution of some warlike enterprise to be approaching. At the same time, Marina the interpreter received information from an Indian woman of distinction, whose confidence she had gained, that the destruction of her friends was concerted; that a body of Mexican troops lay concealed near the town; that some of the streets were barricaded, and in others, pits or deep trenches were dug, and slightly covered over, as traps into which the horses might fall; that stones or missive weapons were collected on the tops of the temples, with which to overwhelm the infantry; that the fatal hour was now at hand, and their ruin unavoidable. Cortes, alarmed at this concurring evidence, secretly arrested three of the chief priests, and extorted from them a confession, that confirmed the intelligence which he had received. As not a moment was to be lost, he instantly resolved to prevent his enemies, and to inflict on them such dreadful vengeance as might strike Montezuma and his subjects with terror. For this purpose, the Spaniards and Zempoallans were drawn up in a large court, which had been allotted for their quarters near the centre of the town; the Tlascalans had orders to advance; the magistrates and several of the chief citizens were sent for, under various pretexts, and seized. On a signal given, the troops rushed out and fell upon the multitude, destitute of leaders, and so much astonished, that the weapons dropping from their hands, they stood motionless, and incapable of defence. While the Spaniards pressed them in front, the Tlascalans attacked them in the rear. The streets were filled with bloodshed and death. The temples, which afforded a retreat to the priests and some of the leading men, were set on fire, and they perished in the flames. This scene of horror continued two days; during which, the wretched inhabitants suffered all that the destructive rage of the Spaniards, or the implacable revenge of their Indian allies could inflict. At length the carnage ceased, after the slaughter of six thousand Cholulans, without the loss of a single Spaniard. Cortes then released the magistrates, and, reproaching them bitterly for their intended treachery, declared, that as justice was now appeased, he forgave the offence, but required them to recall the citizens who had fled, and re-establish order in the town. Such was the ascendancy which the Spaniards had acquired over this superstitious race of men, and so deeply were they impressed with an opinion of their superior discernment, as well as power, that, in obedience to this command, the city was in a few days filled again with people, who, amidst the ruins of their sacred buildings, yielded respectful service to men whose hands were stained with the blood of their relations and fellow-citizens. [108]

From Cholula, Cortes advanced directly towards Mexico [Oct. 29], which was only twenty leagues distant. In every place through which he passed, he was received as a person possessed of sufficient power to deliver the empire from the oppression under which it groaned; and the caziques or governors communicated to him all the grievances which they felt under the tyrannical government of Montezuma, with that unreserved confidence which men naturally repose in superior beings. When Cortes first observed the seeds of discontent in the remote provinces of the empire, hope dawned upon his mind; but when he now discovered such symptoms of alienation from their monarch near the seat of government, he concluded that the vital parts of the constitution were affected, and conceived the most sanguine expectations of overturning a state whose natural strength was thus divided and impaired. While those reflections encouraged the ge-

neral to persist in his arduous undertaking, the soldiers were no less animated by observations more obvious to their capacity. In descending from the mountains of Chalco, across which the road lay, the vast plain of Mexico opened gradually to their view. When they first beheld this prospect, one of the most striking and beautiful on the face of the earth; when they observed fertile and cultivated fields stretching further than the eye could reach; when they saw a lake resembling the sea in extent, encompassed with large towns, and discovered the capital city rising upon an island in the middle, adorned with its temples and turrets; the scene so far exceeded their imagination, that some believed the fanciful descriptions of romance were realized, and that its enchanted palaces and gilded domes were presented to their sight; others could hardly persuade themselves that this wonderful spectacle was any thing more than a dream. [109] As they advanced, their doubts were removed, but their amazement increased. They were now fully satisfied that the country was rich beyond any conception which they had formed of it, and flattered themselves that at length they should obtain an ample recompense for all their services and sufferings.

Hitherto they had met with no enemy to oppose their progress, though several circumstances occurred which led them to suspect that some design was formed to surprise and cut them off. Many messengers arrived successively from Montezuma, permitting them one day to advance, requiring them on the next to retire, as his hopes or fears alternately prevailed; and so wonderful was this infatuation, which seems to be unaccountable on any supposition but that of a superstitious dread of the Spaniards, as beings of a superior nature, that Cortes was almost at the gates of the capital, before the monarch had determined whether to receive him as a friend, or to oppose him as an enemy. But as no sign of open hostility appeared, the Spaniards, without regarding the fluctuations of Montezuma's sentiments, continued their march along the causeway which led to Mexico through the lake, with great circumspection and the strictest discipline, though without seeming to suspect the prince whom they were about to visit.

When they drew near the city, about a thousand persons, who appeared to be of distinction, came forth to meet them, adorned with plumes and clad in mantles of fine cotton. Each of these in his order passed by Cortes, and saluted him according to the mode deemed most respectful and submissive in their country. They announced the approach of Montezuma himself, and soon after his harbingers came in sight. There appeared first two hundred persons in a uniform dress, with large plumes of feathers, alike in fashion, marching two and two, in deep silence, barefooted, with their eyes fixed on the ground. These were followed by a company of higher rank, in their most showy apparel, in the midst of whom was Montezuma, in a chair or litter richly ornamented with gold, and feathers of various colors. Four of his principal favorites carried him on their shoulders, others supported a canopy of curious workmanship over his head. Before him marched three officers with rods of gold in their hands, which they lifted up on high at certain intervals, and at that signal all the people bowed their heads, and hid their faces, as unworthy to look on so great a monarch. When he drew near, Cortes dismounted, advancing towards him with officious haste, and in a respectful posture. At the same time Montezuma alighted from his chair, and, leaning on the arms of two of his near relations, approached with a slow and stately pace, his attendants covering the streets with cotton cloths, that he might not touch the ground. Cortes accosted him with profound reverence, after the European fashion. He returned the salutation, according to the mode of his country, by touching the earth with his hand, and then kissing it. This ceremony, the customary expression of veneration from inferiors towards those who were above them in rank, appeared such amazing condescension in a proud monarch, who scarcely deigned to consider the rest of mankind as of the same species with himself, that all his subjects firmly believed those persons, before whom he humbled himself in this manner, to be something more than human. Accordingly, as they marched through the crowd, the Spaniards frequently, and with much satisfaction, heard themselves denominated *Teules*, or divinities. Nothing material passed in this first interview. Montezuma conducted Cortes to the quarters which he had prepared for his reception, and immediately took leave of him, with a politeness not unworthy of a court more refined. "You are now," says he, "with your brothers in your own house; refresh yourselves after your fatigue, and be happy until I return." The place allot-

ted to the Spaniards for their lodging, was a house built by the father of Montezuma. It was surrounded by a stone wall, with towers at proper distances, which served for defence as well as for ornament, and its apartments and courts were so large as to accommodate both the Spaniards and their Indian allies. The first care of Cortes was to take precautions for his security, by planting the artillery so as to command the different avenues which led to it, by appointing a large division of his troops to be always on guard, and by posting sentinels at proper stations, with injunctions to observe the same vigilant discipline as if they were in sight of an enemy's camp.

In the evening, Montezuma returned to visit his guests with the same pomp as in their first interview, and brought presents of such value, not only to Cortes and to his officers, but even to the private men, as proved the liberality of the monarch to be suitable to the opulence of his kingdom. A long conference ensued, in which Cortes learned what was the opinion of Montezuma with respect to the Spaniards. It was an established tradition, he told him, among the Mexicans, that their ancestors came originally from a remote region, and conquered the provinces now subject to his dominion; that after they were settled there, the great captain who conducted this colony returned to his own country, promising that at some future period his descendants should visit them, assume the government, and reform their constitution and laws; that from what he had heard and seen of Cortes and his followers, he was convinced that they were the very persons whose appearance the Mexican traditions and prophecies taught them to expect; that accordingly he had received them not as strangers, but as relations of the same blood and parentage, and desired that they might consider themselves as masters in his dominions, for both himself and his subjects should be ready to comply with their will, and even to prevent their wishes. Cortes made a reply in his usual style, with respect to the dignity and power of his sovereign, and his intention of sending him into that country; artfully endeavoring so to frame his discourse, that it might coincide as much as possible with the idea which Montezuma had formed concerning the origin of the Spaniards. Next morning, Cortes and some of his principal attendants were admitted to a public audience of the emperor. The three subsequent days were employed in viewing the city; the appearance of which, so far superior in the order of its buildings and the number of its inhabitants, to any place the Spaniards had beheld in America, and yet so little resembling the structure of a European city, filled them with surprise and admiration.

Mexico, or *Tenuchtitlan*, as it was anciently called by the natives, is situated in a large plain, environed by mountains of such height that, though within the torrid zone, the temperature of its climate is mild and healthful. All the moisture which descends from the high grounds, is collected in several lakes, the two largest of which, of about ninety miles in circuit, communicate with each other. The waters of the one are fresh, those of the other brackish. On the banks of the latter, and on some small islands adjoining to them, the capital of Montezuma's empire was built. The access to the city was by artificial causeways or streets formed of stones and earth, about thirty feet in breadth. As the waters of the lake during the rainy season overflowed the flat country, these causeways were of considerable length. That of Tacuba, on the west, extended a mile and a half; that of Tepeaca, on the north-west, three miles; that of Cuoyacan, towards the south, six miles. On the east* there was no causeway, and the city could be approached only by canoes. In each of these causeways were openings at proper intervals, through which the waters flowed, and over these beams of timber were laid, which being covered with earth, the causeway or street had every where a uniform appearance. As the approaches to the city were singular, its construction was remarkable. Not only the temples of their gods, but the houses belonging to the monarch, and to persons of distinction, were of such dimensions, that, in comparison with any other buildings which hitherto had been discovered in America, they might be termed magnificent. The habitations of the common people were mean, resembling the huts of other Indians.

* I am indebted to M. Clavigero for correcting an error of importance in my description of Mexico. From the east, where Tezcuco was situated, there was no causeway, as I have observed, and yet by some invitation on my part, from that of the printer, in all the former editions, one of the causeways was said to lead to Tezcuco. M. Clavigero's measurement of the length of these causeways differs somewhat from that which I have adopted from F. Toribio. Clavig. ii. p. 72.

But they were all placed in a regular manner, on the banks of the canals which passed through the city, in some of its districts, or on the sides of the streets which intersected it in other quarters. In several places were large openings or squares, one of which, allotted for the great market, is said to have been so spacious, that forty or fifty thousand persons carried on traffic there. In this city, the pride of the New World, and the noblest monument of the industry and art of man, while unacquainted with the use of iron, and destitute of aid from any domestic animal, the Spaniards, who are most moderate in their computations, reckon that there were at least sixty thousand inhabitants.

But how much soever the novelty of those objects might amuse or astonish the Spaniards, they felt the utmost solicitude with respect to their own situation. From a concurrence of circumstances, no less unexpected than favorable to their progress, they had been allowed to penetrate into the heart of a powerful kingdom, and were now lodged in its capital without having once met with open opposition from its monarch. The Tlascalans, however, had earnestly dissuaded them from placing such confidence in Montezuma, as to enter a city of such peculiar situation as Mexico, where that prince would have them at mercy, shut up as it were in a snare, from which it was impossible to escape. They assured them that the Mexican priests had, in the name of the gods, counselled their sovereign, to admit the Spaniards into the capital, that he might cut them off there at one blow with perfect security. They now perceived too plainly, that the apprehensions of their allies were not destitute of foundation; that, by breaking the bridges placed at certain intervals on the causeways, or by destroying part of the causeways themselves, their retreat would be rendered impracticable, and they must remain cooped up in the centre of a hostile city, surrounded by multitudes sufficient to overwhelm them, and without a possibility of receiving aid from their allies. Montezuma had, indeed, received them with distinguished respect. But ought they to reckon upon this as real, or to consider it as feigned? Even if it were sincere, could they promise on its continuance? Their safety depended upon the will of a monarch in whose attachment they had no reason to confide; and an order flowing from his caprice, or a word uttered by him in passion, might decide irrevocably concerning their fate.

These reflections, so obvious as to occur to the meanest soldier, did not escape the vigilant sagacity of their general. Before he set out from Cholula, Cortes had received advice from Villa Rica, that Quallipocca, one of the Mexican generals on the frontiers, having assembled an army in order to attack some of the people whom the Spaniards had encouraged to throw off the Mexican yoke, Escalante had marched out with part of the garrison to support his allies; that an engagement had ensued, in which, though the Spaniards were victorious, Escalante with seven of his men, had been mortally wounded, his horse killed, and one Spaniard had been surrounded by the enemy and taken alive; that the head of this unfortunate captive, after being carried in triumph to different cities, in order to convince the people that their invaders were not immortal, had been sent to Mexico. Cortes, though alarmed with this intelligence, as an indication of Montezuma's hostile intentions, had continued his march. But as soon as he entered Mexico he became sensible, that, from an excess of confidence in the superior valor and discipline of his troops, as well as from the disadvantage of having nothing to guide him in an unknown country, but the defective intelligence which he had received from people with whom his mode of communication was very imperfect, he had pushed forward into a situation where it was difficult to continue, and from which it was dangerous to retire. Disgrace, and perhaps ruin, was the certain consequence of attempting the latter. The success of his enterprise depended upon supporting the high opinion which the people of New Spain had formed with respect to the irresistible power of his arms. Upon the first symptoms of timidity on his part, their veneration would cease, and Montezuma, whom fear alone restrained at present, would let loose upon him the whole force of his empire. At the same time, he knew that the countenance of his own sovereign was to be obtained only by a series of victories, and that nothing but the merit of extraordinary success could screen his conduct from the censure of irregularity. From all these considerations, it was necessary to maintain his station, and to extricate himself out of the difficulties in which one bold step had involved him, by venturing upon another still bolder. The situation was trying, but his mind was

equal to it; and after revolving the matter with deep attention, he fixed upon a plan no less extraordinary than daring. He determined to seize Montezuma in his palace, and to carry him as a prisoner to the Spanish quarters. From the superstitious veneration of the Mexicans for the person of their monarch, as well as their implicit submission to his will, he hoped, by having Montezuma in his power, to acquire the supreme direction of their affairs; or, at least, with such a sacred pledge in his hands, he made no doubt of being secure from any effort of their violence.

This he immediately proposed to his officers. The timid startled at a measure so audacious, and raised objections. The more intelligent and resolute, conscious that it was the only resource in which there appeared any prospect of safety, warmly approved of it, and brought over their companions so cordially to the same opinion, that it was agreed instantly to make the attempt. At his usual hour of visiting Montezuma, Cortes went to the palace, accompanied by Alvarado, Sandoval, Lugo, Velasquez de Leon, and Davila, five of his principal officers, and as many trusty soldiers. Thirty chosen men followed, not in regular order, but sauntering at some distance, as if they had no object but curiosity; small parties were posted at proper intervals, in all the streets leading from the Spanish quarters to the court; and the remainder of his troops, with the Tlascalan allies, were under arms ready to sally out on the first alarm. Cortes and his attendants were admitted without suspicion; the Mexicans retiring, as usual, out of respect. He addressed the monarch in a tone very different from that which he had employed in former conferences, reproaching him bitterly as the author of the violent assault made upon the Spaniards by one of his officers, and demanded public reparation for the loss which they had sustained by the death of some of their companions, as well as for the insult offered to the great prince whose servants they were. Montezuma, confounded at this unexpected accusation, and changing color, either from consciousness of guilt, or from feeling the indignity with which he was treated, asserted his own innocence with great earnestness, and, as a proof of it, gave orders instantly to bring Quallipocca and his accomplices prisoners to Mexico. Cortes replied with seeming complaisance, that a declaration so respectable left no doubt remaining in his own mind, but that something more was requisite to satisfy his followers, who would never be convinced that Montezuma did not harbor hostile intentions against them, unless as an evidence of his confidence and attachment, he removed from his own palace, and took up his residence in the Spanish quarters, where he should be served and honored as became a great monarch. The first mention of so strange a proposal bereaved Montezuma of speech, and almost of motion. At length indignation gave him utterance, and he haughtily answered, "That persons of his rank were not accustomed voluntarily to give up themselves as prisoners; and were he mean enough to do so, his subjects would not permit such an affront to be offered to their sovereign." Cortes, unwilling to employ force, endeavored alternately to soothe and to intimidate him. The altercation became warm; and having continued above three hours, Velasquez de Leon, an impetuous and gallant young man, exclaimed with impatience, "Why waste more time in vain! Let us either seize him instantly, or stab him to the heart." The threatening voice and fierce gestures with which these words were uttered, struck Montezuma. The Spaniards, he was sensible, had now proceeded so far, as left him no hope that they would recede. His own danger was imminent, the necessity unavoidable. He saw both, and abandoning himself to his fate, complied with their request.

His officers were called. He communicated to them his resolution. Though astonished and afflicted, they presumed not to question the will of their master, but carried him in silent pomp, all bathed in tears, to the Spanish quarters. When it was known that the strangers were conveying away the Emperor, the people broke out into the wildest transports of grief and rage, threatening the Spaniards with immediate destruction, as the punishment justly due to their impious audacity. But as soon as Montezuma appeared, with a seeming gayety of countenance, and waved his hand, the tumult was hushed; and upon his declaring it to be of his own choice that he went to reside for some time among his new friends, the multitude, taught to revere every intimation of their sovereign's pleasure, quietly dispersed.

Thus was a powerful prince seized by a few strangers in the midst of his capital, at noonday, and carried off

as a prisoner, without opposition or bloodshed. History contains nothing parallel to this event, either with respect to the temerity of the attempt, or the success of the execution; and were not all the circumstances of this extraordinary transaction authenticated by the most unquestionable evidence, they would appear so wild and extravagant as to go far beyond the bounds of that probability which must be preserved even in fictitious narrations.

Montezuma was received in the Spanish quarters with all the ceremonious respect which Cortes had promised. He was attended by his own domestics, and served with his usual state. His principal officers had free access to him, and he carried on every function of government as if he had been at perfect liberty. The Spaniards, however, watched him with the scrupulous vigilance which was natural in guarding such an important prize, [110] endeavoring at the same time to soothe and reconcile him to his situation by every external demonstration of regard and attachment. But from captive princes, the hour of humiliation and suffering is never far distant. Quallipoca, his son, and five of the principal officers who served under him, were brought prisoners to the capital [Dec. 4], in consequence of the orders which Montezuma had issued. The Emperor gave them up to Cortes, that he might inquire into the nature of their crime, and determine their punishment. They were formally tried by a Spanish court martial; and though they had acted no other part than what became loyal subjects and brave men, in obeying the orders of their lawful sovereign, and in opposing the invaders of their country, they were condemned to be burnt alive. The execution of such atrocious deeds is seldom long suspended. The unhappy victims were instantly led forth. The pile on which they were laid was composed of the weapons collected in the royal magazine for the public defence. An innumerable multitude of Mexicans beheld, in silent astonishment, the double insult offered to the majesty of their empire, an officer of distinction committed to the flames by the authority of strangers for having done what he owed in duty to his natural sovereign; and the arms provided by the foresight of their ancestors for avenging public wrongs, consumed before their eyes.

But these were not the most shocking indignities which the Mexicans had to bear. The Spaniards, convinced that Quallipoca would not have ventured to attack Escalante without orders from his master, were not satisfied with inflicting vengeance on the instrument employed in committing that crime while the author of it escaped with impunity. Just before Quallipoca was led out to suffer, Cortes entered the apartment of Montezuma, followed by some of his officers, and a soldier, carrying a pair of fetters; and approaching the monarch with a stern countenance told him, that as the persons who were now to undergo the punishment which they merited, had charged him as the cause of the outrage committed, it was necessary that he likewise should make atonement for that guilt; then turning away abruptly, without waiting for a reply, commanded the soldier to clasp the fetters on his legs. The orders were instantly executed. The disconsolate monarch, trained up with an idea that his person was sacred and inviolable, and considering this profanation of it as the prelude of immediate death, broke out into loud lamentations and complaints. His attendants, speechless with horror, fell at his feet, bathing them with their tears; and, bearing up the fetters in their hands, endeavored with officious tenderness to lighten their pressure. Nor did their grief and despondency abate, until Cortes returned from the execution, and with a cheerful countenance ordered the fetters to be taken off. As Montezuma's spirits had sunk with unmanly dejection, they now rose into indecent joy; and with an unbecoming transition, he passed at once from the anguish of despair to transports of gratitude and expressions of fondness towards his deliverer.

In those transactions, as represented by the Spanish historians, we search in vain for the qualities which distinguish other parts of Cortes's conduct. To usurp a jurisdiction which could not belong to a stranger, who assumed no higher character than that of an ambassador from a foreign prince, and, under color of it, to inflict a capital punishment on men whose conduct entitled them to esteem, appears an act of barbarous cruelty. To put the monarch of a great kingdom in irons, and, after such ignominious treatment, suddenly to release him, seems to be a display of power no less inconsiderate than wanton. According to the common relation, no account can be given either of the action or the other but that Cortes, intoxicated with

success, and presuming on the ascendant which he had acquired over the minds of the Mexicans, thought nothing too bold for him to undertake, or too dangerous to execute. But, in one view, these proceedings, however repugnant to justice and humanity, may have flowed from that artful policy which regulated every part of Cortes's behavior towards the Mexicans. They had conceived the Spaniards to be an order of beings superior to men. It was of the utmost consequence to cherish this illusion, and to keep up the veneration which it inspired. Cortes wished that shedding the blood of a Spaniard should be deemed the most heinous of all crimes; and nothing appeared better calculated to establish this opinion than to condemn the first Mexicans who had ventured to commit it to a cruel death, and to oblige their monarch himself to submit to a mortifying indignity as an expiation for being accessory to a deed so atrocious. [111]

[1520.] The rigor with which Cortes punished the unhappy persons who first presumed to lay violent hands upon his followers, seems accordingly to have made all the impression that he desired. The spirit of Montezuma was not only overawed but subdued. During six months that Cortes remained in Mexico, the monarch continued in the Spanish quarters with an appearance of as entire satisfaction and tranquility as if he had resided there not from constraint, but through choice. His ministers and officers attended him as usual. He took cognisance of all affairs; every order was issued in his name. The external aspect of government appearing the same, and all its ancient forms being scrupulously observed, the people were so little sensible of any change, that they obeyed the mandates of their monarch with the same submissive reverence as ever. Such was the dread which both Montezuma and his subjects had of the Spaniards, or such the veneration in which they held them, that no attempt was made to deliver their sovereign from confinement; and though Cortes, relying on this ascendant which he had acquired over their minds, permitted him not only to visit his temples, but to make hunting excursions beyond the lake, a guard of a few Spaniards carried with it such a terror as to intimidate the multitude, and secure the captive monarch.

Thus, by the fortunate temerity of Cortes in seizing Montezuma, the Spaniards secured at once to themselves more extensive authority in the Mexican Empire than it was possible to have acquired in a long course of time by open force; and they exercised more absolute sway in the name of another, than they could have done in their own. The arts of polished nations, in subjecting such as are less improved, have been nearly the same in every period. The system of screening a foreign usurpation, under the sanction of authority derived from the natural rulers of a country, the device of employing the magistrates and forms already established as instruments to introduce a new dominion, of which we are apt to boast as sublime refinements in policy peculiar to the present age, were inventions of a more early period, and had been tried with success in the West long before they were practised in the East.

Cortes availed himself to the utmost of the powers which he possessed by being able to act in the name of Montezuma. He sent some Spaniards, whom he judged best qualified for such commissions, into different parts of the empire, accompanied by persons of distinction, whom Montezuma appointed to attend them, both as guides and protectors. They visited most of the provinces, viewed their soil and productions, surveyed with particular care the districts which yielded gold or silver, pitched upon several places as proper stations for future colonies, and endeavored to prepare the minds of the people for submitting to the Spanish yoke. While they were thus employed, Cortes, in the name and by the authority of Montezuma, degraded some of the principal officers in the empire, whose abilities or independent spirit excited his jealousy, and substituted in their place persons less capable or more obsequious.

One thing still was wanting to complete his security. He wished to have such command of the lake as might ensure him a retreat if, either from levity or disgust, the Mexicans should take arms against him, and break down the bridges or causeways. This, too, his own address, and the facility of Montezuma, enabled him to accomplish. Having frequently entertained his prisoner with pompous accounts of the European marine, and art of navigation, he awakened his curiosity to see those moving palaces which made their way through the water, without oars. Under pretext of gratifying this desire, Cortes persuaded Montezuma to appoint some of his subjects to fetch part of the naval stores which the Spaniards had deposited at Vera Cruz to Mexico, and

to employ others in cutting down and preparing timber. With their assistance, the Spanish carpenters soon completed two brigantines, which afforded a frivolous amusement to the monarch, and were considered by Cortes as a certain resource if he should be obliged to retire.

Encouraged by so many instances of the monarch's tame submission to his will, Cortes ventured to put it to a proof still more trying. He urged Montezuma to acknowledge himself a vassal of the king of Castile, to hold his crown of him as superior, and to subject his dominions to the payment of an annual tribute. With this requisition, the last and most humbling that can be made to one possessed of sovereign authority, Montezuma was so obsequious as to comply. He called together the chief men of his empire, and in a solemn harangue, reminding them of the traditions and prophecies which led them to expect the arrival of a people sprung from the same stock with themselves, in order to take possession of the supreme power, he declared his belief that the Spaniards were this promised race; that therefore he recognised the right of their monarch to govern the Mexican empire; that he would lay his crown at his feet, and obey him as a tributary. While uttering these words, Montezuma discovered how deeply he was affected in making such a sacrifice. Tears and groans frequently interrupted his discourse. Overawed and broken as his spirit was, it still retained such a sense of dignity as to feel that pang which pierces the heart of princes when constrained to resign independent power. The first mention of such a resolution struck the assembly dumb with astonishment. This was followed by a sudden murmur of sorrow, mingled with indignation, which indicated some violent eruption of rage to be near at hand. This Cortes foresaw, and seasonably interposed to prevent it by declaring that his master had no intention to deprive Montezuma of the royal dignity, or to make any innovation upon the constitution and laws of the Mexican empire. This assurance, added to their dread of the Spanish power and to the authority of their monarch's example, extorted a reluctant consent from the assembly. [112] The act of submission and homage was executed with the formalities which the Spaniards were pleased to prescribe.

Montezuma, at the desire of Cortes, accompanied this profession of fealty and homage with a magnificent present to his new sovereign; and after his example his subjects brought in very liberal contributions. The Spaniards now collected all the treasures which had been either voluntarily bestowed upon them at different times by Montezuma, or had been extorted from his people under various pretexts; and having melted the gold and silver, the value of these, without including jewels and ornaments of various kinds, which were preserved on account of their curious workmanship, amounted to six hundred thousand pesos. The soldiers were impatient to have it divided, and Cortes complied with their desire. A fifth of the whole was first set apart as the tax due to the king. Another fifth was allotted to Cortes as commander in chief. The sums advanced by Velasquez, by Cortes, and by some of the officers, towards defraying the expense of fitting out the armament, were then deducted. The remainder was divided among the army, including the garrison at Vera Cruz, in proportion to their different ranks. After so many defalcations, the share of a private man did not exceed a hundred pesos. This sum fell so far below their sanguine expectations that some soldiers rejected it with scorn, and others murmured so loudly at this cruel disappointment of their hopes, that it required all the address of Cortes, and no small exertion of his liberality, to appease them. The complaints of the army were not altogether destitute of foundation. As the crown had contributed nothing towards the equipment or success of the armament, it was not without regret that the soldiers beheld it sweep away so great a proportion of the treasure purchased by their blood and toil. What fell to the share of the general appeared according to the ideas of wealth in the sixteenth century, an enormous sum. Some of Cortes's favorites had secretly appropriated to their own use several ornaments of gold, which neither paid the royal fifth, nor were brought into account as part of the common stock. It was, however, so manifestly the interest of Cortes at this period to make a large remittance to the king, that it is highly probable those concealments were not of great consequence.

The total sum amassed by the Spaniards bears no proportion to the ideas which might be formed, either by reflecting on the descriptions given by historians of the ancient splendor of Mexico, or by considering the

productions of its mines in modern times. But among the ancient Mexicans, gold and silver were not the standards by which the worth of other commodities was estimated; and destitute of the artificial value derived from this circumstance, were no further in request than as they furnished materials for ornaments and trinkets. These were either consecrated to the gods in their temples, or were worn as marks of distinction by their princes and some of their most eminent chiefs. As the consumption of the precious metals was inconsiderable, the demand for them was not such as to put either the ingenuity or industry of the Mexicans on the stretch in order to augment their store. They were altogether unacquainted with the art of working the rich mines with which their country abounded. What gold they had was gathered in the beds of the rivers, native, and ripened into a pure metallic state. The utmost effort of their labor in search of it was to wash the earth carried down by torrents from the mountains, and to pick out the grains of gold which subsided; and even this simple operation, according to the report of the persons whom Cortes appointed to survey the provinces where there was a prospect of finding mines, they performed very unskillfully. From all those causes, the whole mass of gold in possession of the Mexicans was not great. As silver is rarely found pure, and the Mexican art was too rude to conduct the process for refining it in a proper manner, the quantity of this metal was still less considerable. Thus, though the Spaniards had exerted all the power which they possessed in Mexico, and often with indecent rapacity, in order to gratify their predominant passion, and though Montezuma had fondly exhausted his treasures, in hopes of satiating their thirst for gold, the product of both, which probably included a great part of the bullion in the empire, did not rise in value above what has been mentioned. [113]

But however pliable Montezuma might be in other matters, with respect to one point he was inflexible. Though Cortes often urged him, with the importunate zeal of a missionary, to renounce his false gods, and to embrace the Christian faith, he always rejected the proposition with horror. Superstition, among the Mexicans, was joined into such a regular and complete system, that its institutions naturally took fast hold of the mind; and while the rude tribes in other parts of America were easily induced to relinquish a few notions and rites, so loose and arbitrary as hardly to merit the name of a public religion, the Mexicans adhered tenaciously to their mode of worship, which, however barbarous, was accompanied with such order and solemnity as to render it an object of the highest veneration. Cortes, finding all his attempts ineffectual to shake the constancy of Montezuma, was so much enraged at his obstinacy, that in a transport of zeal he led out his soldiers to throw down the idols in the grand temple by force. But the priests taking arms in defence of their altars, and the people crowding with great ardor to support them, Cortes's prudence overruled his zeal, and induced him to desist from his rash attempt, after dislodging the idols from one of the shrines, and placing in their stead an image of the Virgin Mary. [114]

From that moment the Mexicans, who had permitted the imprisonment of their sovereign, and suffered the exactions of strangers without a struggle began to meditate how they might expel or destroy the Spaniards, and thought themselves called upon to avenge their insulted deities. The priests and leading men held frequent consultations with Montezuma for this purpose. But as it might prove fatal to the captive monarch to attempt either the one or the other by violence, he was willing to try more gentle means. Having called Cortes into his presence, he observed, that now, as all the purposes of his embassy were fully accomplished, the gods had declared their will, and the people signified their desire, that he and his followers should instantly depart out of the empire. With this he required them to comply, or unavoidable destruction would fall suddenly on their heads. The tenor of this unexpected requisition, as well as the determined tone in which it was uttered, left Cortes no room to doubt, that it was the result of some deep scheme concerted between Montezuma and his subjects. He quickly perceived that he might derive more advantage from a seeming compliance with the monarch's inclinations, than from an ill-timed attempt to change or oppose it; and replied, with great composure, that he had already begun to prepare for returning to his own country; but as he had destroyed the vessels in which he arrived, some time was requisite for building other ships. This appeared reasonable. A number of Mexicans were sent to Vera Cruz to cut down timber, and some Spanish

carpenters were appointed to superintend the work. Cortes flattered himself that during this interval he might either find means to avert the threatened danger, or receive such reinforcements as would enable him to despise it.

Almost nine months were elapsed since Portocarrero and Montejo had sailed with his despatches to Spain; and he daily expected their return with a confirmation of his authority from the king. Without this, his condition was insecure and precarious; and after all the great things which he had done, it might be his doom to bear the name and suffer the punishment of a traitor. Rapid and extensive as his progress had been, he could not hope to complete the reduction of a great empire with so small a body of men, which by this time diseases of various kinds considerably thinned; nor could he apply for recruits to the Spanish settlements in the islands, until he received the royal approbation of his proceedings.

While he remained in this cruel situation, anxious about what was past, uncertain with respect to the future, and by the late declaration of Montezuma, oppressed with a new addition of cares, a Mexican courier arrived with an account of some ships having appeared on the coast. Cortes, with fond credulity, imagining that his messengers were returned from Spain, and that the completion of all his wishes and hopes was at hand, imparted the glad tidings to his companions, who received them with transports of mutual gratulation. Their joy was not of long continuance. A courier from Sandoval, whom Cortes had appointed to succeed Escalante in command of Vera Cruz, brought certain information that the armament was fitted out by Velasquez, governor of Cuba, and instead of bringing the aid which they expected, threatened them with immediate destruction.

The motives which prompted Velasquez to this violent measure are obvious. From the circumstances of Cortes's departure, it was impossible not to suspect his intention of throwing off all dependence upon him. His neglecting to transmit any account of his operations to Cuba, strengthened this suspicion, which was at last confirmed beyond doubt by the indiscretion of the officers whom Cortes sent to Spain. They, from some motive which is not clearly explained by the contemporary historians, touched at the island of Cuba, contrary to the peremptory orders of their general. By this means Velasquez not only learned that Cortes and his followers, after formally renouncing all connection with him, had established an independent colony in New Spain, and were soliciting the king to confirm their proceedings by his authority; but he obtained particular information concerning the opulence of the country, the valuable presents which Cortes had received, and the inviting prospects of success that opened to his view. Every passion which can agitate an ambitious mind; shame, at having been so grossly overreached; indignation, at being betrayed by the man whom he had selected as the object of his favor and confidence; grief, for having wasted his fortune to aggrandize an enemy; and despair of recovering so fair an opportunity of establishing his fame and extending his power, now raged in the bosom of Velasquez. All these, with united force, excited him to make an extraordinary effort in order to be avenged on the author of his wrongs, and to wrest from him his usurped authority and conquests. Nor did he want the appearance of a good title to justify such an attempt. The agent whom he sent to Spain with an account of Grijalva's voyage, had met with a most favorable reception; and from the specimens which he produced, such high expectations were formed concerning the opulence of New Spain, that Velasquez was authorized to prosecute the discovery of the country, and appointed governor of it during life, with more extensive power and privileges than had been granted to any adventurer from the time of Columbus. Elated by this distinguishing mark of favor, and warranted to consider Cortes not only as intruding upon his jurisdiction, but as disobedient to the royal mandate, he determined to vindicate his own rights, and the honor of his sovereign by force of arms. [115] His ardor in carrying on his preparations was such as might have been expected from the violence of the passions with which he was animated; and in a short time an armament was completed, consisting of eighteen ships which had on board fourscore horsemen, eight hundred foot soldiers, of which eighty were musketeers, and a hundred and twenty cross-bow men, together with a train of twelve pieces of cannon. As Velasquez's experience of the fatal consequence of committing to another what he ought to have executed himself, had not rendered him more enterprising, he vested the

command of this formidable body, which, in the infancy of the Spanish power in America, merits the appellation of an army, in Pamphilo de Narvaez, with instructions to seize Cortes and his principal officers, to send them prisoners to him, and then to complete the discovery and conquest of the country in his name.

After a prosperous voyage, Narvaez landed his men without opposition near St. Juan de Ulua [April]. Three soldiers, whom Cortes had sent to search for mines in that district, immediately joined him. By this accident he not only received information concerning the progress and situation of Cortes, but, as these soldiers had made some progress in the knowledge of the Mexican language, he acquired interpreters, by whose means he was enabled to hold some intercourse with the people of the country. But, according to the low cunning of deserters, they framed their intelligence with more attention to what they thought would be agreeable than to what they knew to be true; and represented the situation of Cortes to be so desperate, and the disaffection of his followers to be so general, as increased the natural confidence and presumption of Narvaez. His first operation, however, might have taught him not to rely on their partial accounts. Having sent to summon the governor of Vera Cruz to surrender, Guevara, a priest whom he employed in that service, made the requisition with such insolence, that Sandoval, an officer of high spirit, and zealously attached to Cortes, instead of complying with his demands, seized him and his attendants, and sent them in chains to Mexico.

Cortes received them not like enemies, but as friends, and, condemning the severity of Sandoval, set them immediately at liberty. By this well timed clemency, seconded by caresses and presents, he gained their confidence, and drew from them such particulars concerning the force and intentions of Narvaez, as gave him a view of the impending danger in its full extent. He had not to contend now with half naked Indians, no match for him in war, and still more inferior in the arts of policy, but to take the field against an army in courage and martial discipline equal to his own, in number far superior, acting under the sanction of royal authority, and commanded by an officer of known bravery. He was informed that Narvaez, more solicitous to gratify the resentment of Velasquez than attentive to the honor or interest of his country, had begun his intercourse with the natives, by representing him and his followers as fugitives and outlaws, guilty of rebellion against their own sovereign, and of injustice in invading the Mexican empire; and had declared that his chief object in visiting the country was to punish the Spaniards who had committed these crimes, and to rescue the Mexicans from oppression. He soon perceived that the same unfavorable representations of his character and actions had been conveyed to Montezuma, and that Narvaez had found means to assure him, that as the conduct of those who kept him under restraint was highly displeasing to the King his master, he had it in charge not only to rescue an injured monarch from confinement, but to reinstate him in the possession of his ancient power and independence. Animated with this prospect of being set free from subjection to strangers, the Mexicans in several provinces began openly to revolt from Cortes, and to regard Narvaez as a deliverer no less able than willing to save them. Montezuma himself kept up a secret intercourse with the new commander, and seemed to court him as a person superior in power and dignity to those Spaniards whom he had hitherto revered as the first of men. [116]

Such were the various aspects of danger and difficulty which presented themselves to the view of Cortes. No situation can be conceived more trying to the capacity and firmness of a general, or where the choice of the plan which ought to be adopted was more difficult. If he should wait the approach of Narvaez in Mexico, destruction seemed to be unavoidable; for, while the Spaniards pressed him from without, the inhabitants, whose turbulent spirit he could hardly restrain with all his authority and attention, would eagerly lay hold on such a favorable opportunity of avenging all their wrongs. If he should abandon the capital, set the captive monarch at liberty, and to march out to meet the enemy, he must at once forego the fruits of all his toils and victories, and relinquish advantages which could not be recovered without extraordinary efforts and infinite danger. If, instead of employing force, he should have recourse to conciliating measures, and attempt an accommodation with Narvaez; the natural haughtiness of that officer, augmented by consciousness of his present superiority, forbade him to cherish any sanguine hope of success. After revolving every

scheme with deep attention, Cortes fixed upon that which in execution was most hazardous, but, if successful, would prove most beneficial to himself and to his country; and with the decisive intrepidity suited to desperate situations, determined to make one bold effort for victory under every disadvantage, rather than sacrifice his own conquests and the Spanish interests in Mexico.

But though he foresaw that the contest must be terminated finally by arms, it would have been not only indecent but criminal to have marched against his countrymen, without attempting to adjust matters by an amicable negotiation. In this service he employed Olmedo, his chaplain, to whose character the function was well suited, and who possessed, besides, such prudence and address as qualified him to carry on the secret intrigues in which Cortes placed his chief confidence. Narvaez rejected with scorn every scheme of accommodation that Olmedo proposed, and was with difficulty restrained from laying violent hands on him and his attendants. He met, however, with a more favorable reception among the followers of Narvaez, to many of whom he delivered letters, either from Cortes or his officers, their ancient friends and companions. Cortes artfully accompanied these with presents of rings, chains of gold, and other trinkets of value, which inspired those needy adventurers with high ideas of the wealth that he had acquired, and with envy of their good fortune who were engaged in his service. Some, from hopes of becoming sharers in those rich spoils, declared for an immediate accommodation with Cortes. Others, from public spirit, labored to prevent a civil war, which, whatever party should prevail, must shake, and perhaps subvert the Spanish power in a country where it was so imperfectly established. Narvaez disregarded both, and by a public proclamation denounced Cortes and his adherents rebels and enemies to their country. Cortes, it is probable, was not much surprised at the untractable arrogance of Narvaez; and after having given such a proof of his own pacific disposition as might justify his recourse to other means, he determined to advance towards an enemy whom he had labored in vain to appease.

He left a hundred and fifty men in the capital, [May,] under the command of Pedro de Alvarado, an officer of distinguished courage, for whom the Mexicans had conceived a singular degree of respect. To the custody of this slender garrison he committed a great city, with all the wealth he had amassed, and what was of still greater importance, the person of the imprisoned monarch. His utmost art was employed in concealing from Montezuma the real cause of his march. He labored to persuade him, that the strangers who had lately arrived were his friends and fellow-subjects; and that, after a short interview with them, they would depart together, and return to their own country. The captive prince, unable to comprehend the designs of the Spaniard, or to reconcile what he now heard with the declarations of Narvaez, and afraid to discover any symptom of suspicion or distrust of Cortes, promised to remain quietly in the Spanish quarters, and to cultivate the same friendship with Alvarado which he had uniformly maintained with him. Cortes, with seeming confidence in this promise, but relying principally upon the injunctions which he had given Alvarado to guard his prisoner with the most scrupulous vigilance, set out from Mexico.

His strength, even after it was reinforced by the junction of Sandoval and the garrison of Vera Cruz, did not exceed two hundred and fifty men. As he hoped for success chiefly from the rapidity of his motions, his troops were not encumbered either with baggage or artillery. But as he dreaded extremely the impression which the enemy might make with their cavalry, he had provided against this danger with the foresight and sagacity which distinguish a great commander. Having observed that the Indians in the province of Chinantla used spears of extraordinary length and force, he armed his soldiers with these, and accustomed them to that deep and compact arrangement which the use of this formidable weapon, the best perhaps that was ever invented for defence, enabled them to assume.

With this small but firm battalion, Cortes advanced towards Zempoalla, of which Narvaez had taken possession. During his march, he made repeated attempts towards some accommodation with his opponent. But Narvaez requiring that Cortes and his followers should instantly recognise his title to be governor of New Spain, in virtue of the powers which he derived from Velasquez; and Cortes refusing to submit to any authority which was not founded on a commission from

the Emperor himself, under whose immediate protection he and his adherents had placed their infant colony; all these attempts proved fruitless. The intercourse, however, which this occasioned between the two parties, proved of no small advantage to Cortes, as it afforded him an opportunity of gaining some of Narvaez's officers by liberal presents, of softening others by a semblance of moderation, and of dazzling all by the appearance of wealth among his troops, most of his soldiers having converted their share of the Mexican gold into chains, bracelets, and other ornaments, which they displayed with military ostentation. Narvaez and a little party of his creatures excepted, all the army leaned towards an accommodation with their countrymen. This discovery of their inclination irritated his violent temper almost to madness. In a transport of rage, he set a price upon the head of Cortes, and of his principal officers; and having learned that he was now advanced within a league of Zempoalla with his small body of men, he considered this as an insult which merited immediate chastisement, and marched out with all his troops to offer him battle.

But Cortes was a leader of greater abilities and experience than, on equal ground, to fight an enemy so far superior in number, and so much better appointed. Having taken his station on the opposite bank of the river de Canoas, where he knew that he could not be attacked, he beheld the approach of the enemy without concern, and disregarded this vain bravado. It was then the beginning of the wet season, and the rain had poured down, during a great part of the day, with a violence peculiar to the torrid zone. The followers of Narvaez, unaccustomed to the hardships of military service, murmured so much at being thus fruitlessly exposed, that, from their unsoldierlike impatience, as well as his own contempt of his adversary, their general permitted them to retire to Zempoalla. The very circumstance which induced them to quit the field, encouraged Cortes to form a scheme by which he hoped at once to terminate the war. He observed that his hardy veterans, though standing under the torrents which continued to fall without a single tent or any shelter whatsoever to cover them, were so far from repining at hardships which were become familiar to them, that they were still fresh and alert for service. He foresaw that the enemy would naturally give themselves up to repose after their fatigue, and that, judging of the conduct of others by their own effeminacy, they would deem themselves perfectly secure at a season so unfit for action. He resolved, therefore, to fall upon them in the dead of night, when the surprise and terror of this unexpected attack might more than compensate the inferiority of his numbers. His soldiers, sensible that no resource remained but in some desperate effort of courage, approved of the measure with such warmth, that Cortes, in a military oration which he addressed to them before they began their march, was more solicitous to temper than to inflame their ardor. He divided them into three parties. At the head of the first he placed Sandoval; intrusting this gallant officer with the most dangerous and important service, that of seizing the enemy's artillery, which was planted before the principal tower of the temple where Narvaez had fixed his head-quarters. Christoval de Olid commanded the second, with orders to assault the tower, and lay hold on the general. Cortes himself conducted the third and smallest division, which was to act as a body of reserve, and to support the other two as there should be occasion. Having passed the river de Canoas, which was much swelled with the rains, not without difficulty, the water reaching almost to their elbows, they advanced in profound silence, without beat of drum, or sound of any warlike instrument; each man armed with his sword, his dagger, and his Chinantlan spear. Narvaez, remiss in proportion to his security, had posted only two sentinels to watch the motions of an enemy whom he had such good cause to dread. One of these was seized by the advanced guard of Cortes's troops; the other made his escape, and, hurrying to the town with all the precipitation of fear and zeal, gave such timely notice of the enemy's approach, that there was full leisure to have prepared for their reception. But, through the arrogance and infatuation of Narvaez, this important interval was lost. He imputed this alarm to the cowardice of the sentinel, and treated with derision the idea of being attacked by forces so unequal to his own. The shouts of Cortes's soldiers, rushing on to the assault, convinced him at last that the danger which he despised was real. The rapidity with which they advanced was such that only one cannon could be fired before Sandoval's party closed with the enemy, drove

them from their guns, and began to force their way up the steps of the tower. Narvaez, no less brave in action than presumptuous in conduct, armed himself in haste, and by his voice and example animated his men to the combat. Olid advanced to sustain his companions; and Cortes himself rushing to the front, conducted and added new vigor to the attack. The compact order in which this small body pressed on, and the impenetrable front which they presented with their long spears bore down all opposition before it. They had now reached the gate, and were struggling to burst it open, when a soldier having set fire to the reeds with which the tower was covered, compelled Narvaez to sally out. In the first encounter he was wounded in the eye with the spear, and, falling to the ground, was dragged down the steps, and in a moment clapped in fetters. The cry of victory resounded among the troops of Cortes. Those who had sallied out with their leader now maintained the conflict feebly, and began to surrender. Among the remainder of his soldiers, stationed in two smaller towers of the temple, terror and confusion prevailed. The darkness was so great, that they could not distinguish between their friends and foes. Their own artillery was pointed against them. Wherever they turned their eye, they beheld lights gleaming through the obscurity of the night, which, though proceeding only from a variety of shining insects that abound in moist and sultry climates, their affrighted imaginations represented as numerous bands of musketeers advancing with kindled matches to the attack. After a short resistance, the soldiers compelled their officers to capitulate, and before morning all laid down their arms, and submitted quietly to their conquerors.

This complete victory proved more acceptable, as it was gained almost without bloodshed, only two soldiers being killed on the side of Cortes, and two officers, with fifteen private men of the adverse faction. Cortes treated the vanquished not like enemies, but as countrymen and friends, and offered either to send them back directly to Cuba, or to take them into his service, as partners in his fortune, on equal terms with his own soldiers. This latter proposition, seconded by a seasonable distribution of some presents from Cortes, and liberal promises of more, opened prospects so agreeable to the romantic expectations which had invited them to engage in this service, that all, a few partisans of Narvaez excepted, closed with it, and vied with each other in professions of fidelity and attachment to a general, whose recent success had given them such a striking proof of his abilities for command. Thus, by a series of events no less fortunate than uncommon, Cortes not only escaped from perdition which seemed inevitable, but, when he had least reason to expect it, was placed at the head of a thousand Spaniards, ready to follow wherever he should lead them. Whoever reflects upon the facility with which this victory was obtained, or considers with what sudden and unanimous transition the followers of Narvaez ranged themselves under the standard of his rival, will be apt to ascribe both events as much to the intrigues as to the arms of Cortes, and cannot but suspect that the ruin of Narvaez was occasioned no less by the treachery of his own followers, than by the valor of the enemy.

But in one point the prudent conduct and good fortune of Cortes were equally conspicuous. If, by the rapidity of his operations after he began his march, he had not brought matters to such a speedy issue, even this decisive victory would have come too late to have saved his companions whom he left in Mexico. A few days after the discomfiture of Narvaez, a courier arrived with an account that the Mexicans had taken arms, and, having seized and destroyed the two brigantines which Cortes had built in order to secure the command of the lake, and attacked the Spaniards in their quarters, had killed several of them, and wounded more, had reduced to ashes their magazine of provisions, and carried on hostilities with such fury, that though Alvarado and his men defended themselves with undaunted resolution, they must either be soon cut off by famine, or sink under the multitude of their enemies. This revolt was excited by motives which rendered it still more alarming. On the departure of Cortes for Zempoalla, the Mexicans flattered themselves that the long-expected opportunity of restoring their sovereign to liberty, and of vindicating their country from the odious dominion of strangers, was at length arrived; that while the forces of their oppressors were divided, and the arms of one party turned against the other, they might triumph with greater facility over both. Consultations were held, and schemes formed with this intention. The Spaniards in Mexico, conscious of their

own feebleness, suspected and dreaded those machinations. Alvarado, though a gallant officer, possessed neither that extent of capacity nor dignity of manners, by which Cortes had acquired such an ascendancy over the minds of the Mexicans, as never allowed them to form a just estimate of his weakness or of their own strength. Alvarado knew no mode of supporting his authority but force. Instead of employing address to disconcert the plans or to soothe the spirits of the Mexicans, he waited the return of one of their solemn festivals. When the principal persons in the empire were dancing, according to custom, in the court of the great temple, he seized all the avenues which led to it; and allured partly by the rich ornaments which they wore in honor of their gods, and partly by the facility of cutting off at once the authors of that conspiracy which he dreaded, he fell upon them, unarmed and unsuspecting of any danger, and massacred a great number, none escaping but such as made their way over the battlements of the temple. An action so cruel and treacherous filled not only the city, but the whole empire with indignation and rage. All called aloud for vengeance; and regardless of the safety of their monarch, whose life was at the mercy of the Spaniards, or of their own danger in assaulting an enemy who had been so long the object of their terror, they committed all those acts of violence of which Cortes received an account.

To him the danger appeared so imminent as to admit neither of deliberation nor delay. He set out instantly with all his forces, and returned from Zempoalla with no less rapidity than he had advanced thither. At Tlascala he was joined by two thousand chosen warriors. On entering the Mexican territories, he found that disaffection to the Spaniards was not confined to the capital. The principal inhabitants had deserted the towns through which he passed; no person of note appearing to meet him with the usual respect; no provision was made for the subsistence of his troops; and though he was permitted to advance without opposition, the solitude and silence which reigned in every place, and the horror with which the people avoided all intercourse with him, discovered a deep rooted antipathy that excited the most just alarm. But implacable as the enmity of the Mexicans was, they were so unacquainted with the science of war, that they knew not how to take the proper measures either for their own safety or the destruction of the Spaniards. Uninstructed by their former error in admitting a formidable enemy into their capital, instead of breaking down the causeways and bridges, by which they might have enclosed Alvarado and his party, and have effectually stopped the career of Cortes, they again suffered him to march into the city [June 24] without molestation, and to take quiet possession of his ancient station.

The transports of joy with which Alvarado and his soldiers received their companions cannot be expressed. Both parties were so much elated, the one with their seasonable deliverance, and the other with the great exploits which they had achieved, that this intoxication of success seems to have reached Cortes himself; and he behaved on this occasion neither with his usual sagacity nor attention. He not only neglected to visit Montezuma, but embittered the insult by expressions full of contempt for that unfortunate prince and his people. The forces of which he had now the command appeared to him so irresistible that he might assume a higher tone, and lay aside the mask of moderation under which he had hitherto concealed his designs. Some Mexicans, who understood the Spanish language, heard the contemptuous words which Cortes uttered, and, reporting them to their countrymen, kindled their rage anew. They were now convinced that the intentions of the general were equally bloody with those of Alvarado, and that his original purpose in visiting their country had not been, as he pretended, to court the alliance of their sovereign, but to attempt the conquest of his dominions. They resumed their arms with the additional fury which this discovery inspired, attacked a considerable body of Spaniards who were marching towards the great square in which the public market was held, and compelled them to retire with some loss. Emboldened by this success, and delighted to find that their oppressors were not invincible, they advanced the next day with extraordinary martial pomp to assault the Spaniards in their quarters. Their number was formidable, and their undaunted courage still more so. Though the artillery pointed against their numerous battalions, crowded together in narrow streets, swept off multitudes at every discharge; though every blow of the Spanish weapons fell with mortal effect upon their naked bodies, the impetuosity of the assault did not abate. Fresh men rushed forward to occupy the

places of the slain, and, meeting with the same fate, were succeeded by others no less intrepid and eager for vengeance. The utmost efforts of Cortes abilities and experience, seconded by the disciplined valor of his troops, were hardly sufficient to defend the fortifications that surrounded the post where the Spaniards were stationed, into which the enemy were more than once on the point of forcing their way.

Cortes beheld with wonder the implacable ferocity of a people who seemed at first to submit tamely to the yoke, and had continued so long passive under it. The soldiers of Narvaez, who fondly imagined that they followed Cortes to share in the spoils of a conquered empire, were astonished to find that they were involved in a dangerous war with an enemy whose vigor was still unbroken, and loudly execrated their own weakness in giving such easy credit to the delusive promises of their new leader. But surprise and complaints were of no avail. Some immediate and extraordinary effort was necessary to extricate themselves out of their present situation. As soon as the approach of evening induced the Mexicans to retire in compliance with their national custom of ceasing from hostilities with the setting sun, Cortes began to prepare for a sally, next day, with such a considerable force as might either drive the enemy out of the city, or compel them to listen to terms of accommodation.

He conducted in person the troops destined for this important service. Every invention known in the European art of war, as well as every precaution suggested by his long acquaintance with the Indian mode of fighting were employed to ensure success. But he found an enemy prepared and determined to oppose him. The force of the Mexicans was greatly augmented by fresh troops, which poured in continually from the country, and their animosity was in no degree abated. They were led by their nobles, inflamed by the exhortations of their priests, and fought in defence of their temples and families, under the eye of their gods, and in presence of their wives and children. Notwithstanding their numbers, and enthusiastic contempt of danger and death, wherever the Spaniards could close with them, the superiority of their discipline and arms obliged the Mexicans to give way. But in narrow streets, and where many of the bridges of communication were broken down, the Spaniards could seldom come to a fair encounter with the enemy, and, as they advanced, were exposed to showers of arrows and stones from the tops of houses. After a day of incessant exertion, though vast numbers of the Mexicans fell, and part of the city was burnt, the Spaniards weary with the slaughter, and harassed by multitudes which successively relieved each other, were obliged at length to retire, with the mortification of having accomplished nothing so decisive as to compensate the unusual calamity of having twelve soldiers killed, and above sixty wounded. Another sally, made with greater force, was not more effectual, and in it the general himself was wounded in the hand.

Cortes now perceived, too late, the fatal error into which he had been betrayed by his own contempt of the Mexicans, and was satisfied that he could neither maintain his present station in the centre of a hostile city, nor retire from it without the most imminent danger. One resource still remained, to try what effect the interposition of Montezuma might have to soothe or overawe his subjects. When the Mexicans approached next morning to renew the assault, that unfortunate prince, at the mercy of the Spaniards, and reduced to the sad necessity of becoming the instrument of his own disgrace, and of the slavery of his people, [117] advanced to the battlements in his royal robes, and with all the pomp in which he used to appear on solemn occasions. At sight of their sovereign, whom they had long been accustomed to honor, and almost to revere as a god, the weapons dropped from their hands, every tongue was silent, all bowed their heads, and many prostrated themselves on the ground. Montezuma addressed them with every argument that could mitigate their rage, or persuade them to cease from hostilities. When he ended his discourse, a sullen murmur of disapprobation ran through the ranks; to this succeeded reproaches and threats; and the fury of the multitude rising in a moment above every restraint of decency or respect, flights of arrows and volleys of stones poured in so violently upon the ramparts, that before the Spanish soldiers, appointed to cover Montezuma with their bucklers, had time to lift them in his defence, two arrows wounded the unhappy monarch, and the blow of a stone on his temple struck him to the ground. On seeing him fall, the Mexicans were so much astonished, that with a transition not uncommon in popular tumults,

they passed in a moment from one extreme to the other, remorse succeeded to insult, and they fled with horror, as if the vengeance of heaven were pursuing the crime which they committed. The Spaniards without molestation carried Montezuma to his apartments, and Cortes hastened thither to console him under his misfortune. But the unhappy monarch now perceived how low he was sunk; and the haughty spirit which seemed to have been so long extinct, returning, he scorned to survive this last humiliation, and to protract an ignominious life, not only as the prisoner and tool of his enemies, but as the object of contempt or detestation among his subjects. In a transport of rage he tore the bandages from his wounds, and refused, with such obstinacy, to take any nourishment, that he soon ended his wretched days, rejecting with disdain all the solicitations of the Spaniards to embrace the Christian faith.

Upon the death of Montezuma, Cortes, having lost all hope of bringing the Mexicans to an accommodation, saw no prospect of safety but in attempting a retreat, and began to prepare for it. But a sudden motion of the Mexicans engaged him in new conflicts. They took possession of a high tower in the great temple which overlooked the Spanish quarters, and placing there a garrison of their principal warriors, not a Spaniard could stir without being exposed to their missile weapons. From this post it was necessary to dislodge them at any risk; and Juan de Escobar, with a numerous detachment of chosen soldiers, was ordered to make the attack. But Escobar, though a gallant officer, and at the head of troops accustomed to conquer, and who now fought under the eyes of their countrymen, was thrice repulsed. Cortes, sensible that not only the reputation but the safety of his army depended on the success of this assault, ordered a buckler to be tied to his arm, as he could not manage it with his wounded hand, and rushed with his drawn sword into the thickest of the combatants. Encouraged by the presence of their general, the Spaniards returned to the charge with such vigor, that they gradually forced their way up the steps, and drove the Mexicans to the platform at the top of the tower. There a dreadful carnage began; when two young Mexicans of high rank, observing Cortes as he animated his soldiers by his voice and example, resolved to sacrifice their own lives in order to cut off the author of all the calamities which desolated their country. They approached him in a suppliant posture, as if they had intended to lay down their arms, and seizing him in a moment, hurried him towards the battlements, over which they threw themselves headlong, in hopes of dragging him along to be dashed in pieces by the same fall. But Cortes, by his strength and agility, broke loose from their grasp, and the gallant youths perished in this generous though unsuccessful attempt to save their country.* As soon as the Spaniards became masters of the tower, they set fire to it, and, without farther molestation, continued the preparations for their retreat.

This became the more necessary, as the Mexicans were so much astonished at the last effort of the Spanish valor, that they began to change their whole system of hostility, and, instead of incessant attacks, endeavored, by barricading the streets and breaking down the causeways, to cut off the communication of the Spaniards with the continent, and thus to starve an enemy whom they could not subdue. The first point to be determined by Cortes and his followers, was, whether they should march out openly in the face of day, when they could discern every danger, and see how to regulate their own motions, as well as how to resist the assaults of the enemy; or, whether they should endeavor to retire secretly in the night? The latter was preferred, partly from hopes that their national superstition would restrain the Mexicans from venturing to attack them in the night, and partly from their own fond belief in the predictions of a private soldier, who having acquired universal credit by a smattering of learning, and his pretensions to astrology, boldly assured his countrymen of success, if they made their retreat in this manner. They began to move, towards midnight, in three divisions. Sandoval led the van; Pedro Alvarado and Velasquez de Leon had the conduct of the rear; and Cortes commanded in the centre, where he placed the prisoners, among whom were a son and two daughters of Montezuma, together with several Mexicans of distinction, the artillery, the baggage, and a portable bridge of timber in-

* M. Clavigero has censured me with asperity for relating this gallant action of the two Mexicans, and for supposing that there were battlements round the temple of Mexico. I related the attempt to destroy Cortes on the authority of Her. dec. 2. lib. x. c. 9. and of Torquemada lib. iv. c. 69. I followed them likewise in supposing the uppermost platform of the temple to be encompassed by a balustrade or rail.

tended to be laid over the breaches in the causeway. They marched in profound silence along the causeway which led to Tacuba, because it was shorter than any of the rest, and, lying most remote from the road towards Tlascala and the sea-coast, had been left more entire by the Mexicans. They reached the first breach in it without molestation, hoping that their retreat was undiscovered.

But the Mexicans, unperceived, had not only watched all their motions with attention, but had made proper dispositions for a most formidable attack. While the Spaniards were intent upon placing their bridge in the breach, and occupied in conducting their horses and artillery along it, they were suddenly alarmed with a tremendous sound of warlike instruments, and a general shout from an innumerable multitude of enemies; the lake was covered with canoes; flights of arrows and showers of stones poured in upon them from every quarter; the Mexicans rushing forward to the charge with fearless impetuosity, as if they hoped in that moment to be avenged for all their wrongs. Unfortunately the wooden bridge, by the weight of the artillery, was wedged so fast into the stones and mud, that it was impossible to remove it. Dismayed at this accident, the Spaniards advanced with precipitation towards the second breach. The Mexicans hemmed them in on every side; and though they defended themselves with their usual courage, yet crowded together as they were on a narrow causeway, their discipline and military skill were of little avail, nor did the obscurity of the night permit them to derive great advantage from their firearms, or the superiority of their other weapons. All Mexico was now in arms; and so eager were the people on the destruction of their oppressors, that they who were not near enough to annoy them in person, impatient of the delay, pressed forward with such ardor as drove on their countrymen in front with irresistible violence. Fresh warriors instantly filled the place of such as fell. The Spaniards, weary with slaughter, and unable to sustain the weight of the torrent that poured in upon them, began to give way. In a moment the confusion was universal: horse and foot, officers and soldiers, friends and enemies, were mingled together; and while all fought and many fell, they could hardly distinguish from what hand the blow came.

Cortes, with about a hundred foot soldiers and a few horse, forced his way over the two remaining breaches in the causeway, the bodies of the dead serving to fill up the chasms, and reached the main land. Having formed them as soon as they arrived, he returned with such as were yet capable of service to assist his friends in their retreat, and to encourage them, by his presence and example, to persevere in the efforts requisite to effect it. He met with part of his soldiers who had broke through the enemy, but found many more overwhelmed by the multitude of their aggressors, or perishing in the lake; and heard the piteous lamentations of others, whom the Mexicans, having taken alive, were carrying off in triumph to be sacrificed to the god of war. Before day, all who had escaped assembled at Tacuba. But when the morning dawned, and discovered to the view of Cortes his shattered battalion reduced to less than half its number, the survivors dejected, and most of them covered with wounds, the thoughts of what they had suffered, and the remembrance of so many faithful friends and gallant followers who had fallen in that night of sorrow,* pierced his soul with such anguish, that while he was forming their ranks, and issuing some necessary orders, his soldiers observed the tears trickling from his eyes, and remarked with much satisfaction, that while attentive to the duties of a general, he was not insensible to the feelings of a man.

In this fatal retreat many officers of distinction perished [118], and among these Velasquez de Leon, who having forsaken the party of his kinsman, the governor of Cuba, to follow the fortune of his companions, was, on that account, as well as for his superior merit, respected by them as the second person in the army. All the artillery, ammunition, and baggage, were lost; the greater part of the horses, and above two thousand Tlascalans, were killed, and only a very small portion of the treasure which they had amassed was saved. This, which had been always their chief object, proved a great cause of their calamity; for many of the soldiers having so overloaded themselves with bars of gold as rendered them unfit for action, and retarded their flight, fell ignominiously, the victims of their own inconsiderate avarice. Amidst so many disasters, it was some consolation to find that Aguilar and Marina,

whose function as interpreters was of such essential importance, had made their escape.

The first care of Cortes was to find some shelter for his wearied troops; for as the Mexicans infested them on every side, and the people of Tacuba began to take arms, he could not continue in his present station. He directed his march towards the rising ground, and having fortunately discovered a temple situated on an eminence, took possession of it. There he found not only the shelter for which he wished, but, what was no less wanted, some provisions to refresh his men; and though the enemy did not intermit their attacks throughout the day, they were with less difficulty prevented from making any impression. During this time Cortes was engaged in deep consultation with his officers, concerning the route which they ought to take in their retreat. They were now on the west side of the lake. Tlascala, the only place where they could hope for a friendly reception, lay about sixty-four miles to the east of Mexico; so that they were obliged to go round the north end of the lake before they could fall into the road which led thither. A Tlascalan soldier undertook to be their guide, and conducted them through a country in some places marshy, in others mountainous, in all ill cultivated and thinly peopled. They marched for six days with little respite, and under continual alarms, numerous bodies of the Mexicans hovering around them, sometimes harassing them at a distance with their missile weapons, and sometimes attacking them closely in front, in rear, in flank, with great boldness, as they now knew that they were not invincible. Nor were the fatigue and danger of those incessant conflicts the worst evils to which they were exposed. As the barren country through which they passed afforded hardly any provisions, they were reduced to feed on berries, roots, and the stalks of green maize; and at the very time that famine was depressing their spirits and wasting their strength, their situation required the most vigorous and unremitting exertions of courage and activity. Amidst those complicated distresses, one circumstance supported and animated the Spaniards. Their commander sustained this sad reverse of fortune with unshaken magnanimity. His presence of mind never forsook him; his sagacity foresaw every event, and his vigilance provided for it. He was foremost in every danger, and endured every hardship with cheerfulness. The difficulties with which he was surrounded seemed to call forth new talents; and his soldiers, though despairing themselves, continued to follow him with increasing confidence in his abilities.

On the sixth day they arrived near to Otumba, not far from the road between Mexico and Tlascala. Early next morning they began to advance towards it, flying parties of the enemy still hanging on their rear; and, amidst the insults with which they accompanied their hostilities, Marina remarked that they often exclaimed with exultation, "Go on, robbers; go to the place where you shall quickly meet with the vengeance due to your crimes." The meaning of this threat the Spaniards did not comprehend, until they reached the summit of an eminence before them. There a spacious valley opened to their view, covered with a vast army, extending as far as the eye could reach. The Mexicans, while with one body of their troops they harassed the Spaniards in their retreat, had assembled their principal force on the other side of the lake; and marching along the road which led directly to Tlascala, posted it in the plain of Otumba, through which they knew Cortes must pass. At the sight of this incredible multitude, which they could survey at once from the rising ground, the Spaniards were astonished, and even the boldest began to despair. But Cortes, without allowing leisure for their fears to acquire strength by reflection, after warning them briefly that no alternative now remained but to conquer or to die, led them instantly to the charge. The Mexicans waited their approach with unusual fortitude. Such however was the superiority of the Spanish discipline and arms, that the impression of this small body was irresistible; and whichever way its force was directed, it penetrated and dispersed their most numerous battalions. But while these gave way in one quarter, new combatants advanced from another, and the Spaniards, though successful in every attack, were ready to sink under those repeated efforts, without seeing any end of their toil, or any hope of victory. At that time Cortes observed the great standard of the empire, which was carried before the Mexican general, advancing; and fortunately recollecting to have heard, that on the fate of it depended the event of every battle, he assembled a few of his bravest officers, whose horses were still capable of service, and, placing himself at

their head, pushed forward towards the standard with an impetuosity which bore down every thing before it. A chosen body of nobles, who guarded the standard, made some resistance, but were soon broken. Cortes, with a stroke of his lance, wounded the Mexican general, and threw him on the ground. One of the Spanish officers, alighting, put an end to his life, and laid hold of the imperial standard. The moment that their leader fell, and the standard, towards which all directed their eyes, disappeared, a universal panic struck the Mexicans; and, as if the bond which held them together had been dissolved, every ensign was lowered, each soldier threw away his weapons, and all fled with precipitation to the mountains. The Spaniards unable to pursue them far, returned to collect the spoils of the field, which were so valuable as to be some compensation for the wealth which they had lost in Mexico; for in the enemy's army were most of their principal warriors dressed out in their richest ornaments as if they had been marching to assured victory. Next day [July 8], to their great joy, they entered the Tlascalan territories.

But amidst their satisfaction in having got beyond the precincts of a hostile country, they could not look forward without solicitude, as they were still uncertain what reception they might meet with from allies to whom they returned in a condition very different from that in which they had lately set out from their dominions. Happily for them, the enmity of the Tlascalans to the Mexican name was so inveterate, their desire to avenge the death of their countrymen so vehement, and the ascendancy which Cortes had acquired over the chiefs of the republic so complete, that, far from entertaining a thought of taking any advantage of the distressed situation in which they beheld the Spaniards, they received them with a tenderness and cordiality which quickly dissipated all their suspicions.

Some interval of tranquillity and indulgence was now absolutely necessary; not only that the Spaniards might give attention to the cure of their wounds, which had been too long neglected, but in order to recruit their strength, exhausted by such a long succession of fatigue and hardships. During this, Cortes learned that he and his companions were not the only Spaniards who had felt the effects of the Mexican enmity. A considerable detachment which was marching from Zempoalla towards the capital, had been cut off by the people of Tepaca. A smaller party, returning from Tlascala to Vera Cruz, with the share of the Mexican gold allotted to the garrison, had been surprised and destroyed in the mountains. At a juncture when the life of every Spaniard was of importance, such losses were deeply felt. The schemes which Cortes was meditating rendered them peculiarly afflictive to him. While his enemies, and even many of his own followers, considered the disasters which had befallen him as fatal to the progress of his arms, and imagined that nothing now remained but speedily to abandon a country which he had invaded with unequal force, his mind, as eminent for perseverance as for enterprise, was still bent on accomplishing his original purpose, of subjecting the Mexican empire to the crown of Castile. Severe and unexpected as the check was which he had received, it did not appear to him a sufficient reason for relinquishing the conquests which he had already made, or against resuming his operations with better hopes of success. The colony at Vera Cruz was not only safe, but had remained unmolested. The people of Zempoalla and the adjacent districts had discovered no symptoms of defection. The Tlascalans continued faithful to their alliance. On their martial spirit, easily roused to arms, and inflamed with implacable hatred of the Mexicans, Cortes depended for powerful aid. He had still the command of a body of Spaniards, equal in number to that with which he had opened his way into the centre of the empire, and had taken possession of the capital; so that with the benefit of greater experience, as well as more perfect knowledge of the country, he did not despair of quickly recovering all that he had been deprived of by untoward events.

Full of this idea, he courted the Tlascalan chiefs with such attention, and distributed among them so liberally the rich spoils of Otumba, that he was secure of obtaining whatever he should require of the republic. He drew a small supply of ammunition and two or three field-pieces from his stores at Vera Cruz. He despatched an officer of confidence with four ships of Narvaez's fleet to Hispaniola and Jamaica, to engage adventurers, and to purchase horses, gunpowder, and other military stores. As he knew that it would be vain to attempt the reduction of Mexico, unless he could secure the command of the lake, he gave orders

* Nochs triste is the name by which it is still distinguished in New Spain

to prepare in the mountains of Tlascal, materials for building twelve brigantines, so as they might be carried thither in pieces ready to be put together, and launched when he stood in need of their service.

But while, with provident attention, he was taking those necessary steps towards the execution of his measures, an obstacle arose in a quarter where it was least expected, but most formidable. The spirit of discontent and mutiny broke out in his own army. Many of Narvaez's followers were planters rather than soldiers; and had accompanied him to New Spain with sanguine hopes of obtaining settlements, but with little inclination to engage in the hardships and dangers of war. As the same motives had induced them to enter into their new engagements with Cortes, they no sooner became acquainted with the nature of the service, than they bitterly repented of their choice. Such of them as had the good fortune to survive the perilous adventures in which their own imprudence had involved them, happy in having made their escape, trembled at the thoughts of being exposed a second time to similar calamities. As soon as they discovered the intention of Cortes, they began secretly to murmur and cabal, and, waxing gradually more audacious, they, in a body offered a remonstrance to their general against the imprudence of attacking a powerful empire with his shattered forces, and formally required him to lead them back directly to Cuba. Though Cortes, long practised in the arts of command, employed arguments, entreaties, and presents to convince or to soothe them; though his own soldiers, animated with the spirit of their leader, warmly seconded his endeavors; he found their fears too violent and deep rooted to be removed, and the utmost he could effect was to prevail with them to defer their departure for some time, on a promise that he would, at a more proper juncture, dismiss such as should desire it.

That the malecontents might have no leisure to brood over the causes of their disaffection, he resolved instantly to call forth his troops into action. He proposed to chastise the people of Tepecaca for the outrage which they had committed; and as the detachment which they had cut off happened to be composed mostly of soldiers who had served under Narvaez, their companions, from the desire of vengeance, engaged the more willingly in this war. He took the command in person, [August] accompanied by a numerous body of Tlascalans, and in a space of a few weeks, after various encounters, with great slaughter of the Tepecacans, reduced that province to subjection. During several months, while he waited for the supplies of men and ammunition which he expected, and was carrying on his preparations for constructing the brigantines, he kept his troops constantly employed in various expeditions against the adjacent provinces, all of which were conducted with a uniform tenor of success. By these, his men became again accustomed to victory, and resumed their wonted sense of superiority; the Mexican power was weakened; the Tlascalan warriors acquired the habit of acting in conjunction with the Spaniards; and the chiefs of the republic delighted to see their country enriched with the spoils of all the people around them; and astonished every day with fresh discoveries of the irresistible prowess of their allies, they declined no effort requisite to support them.

All those preparatory arrangements, however, though the most prudent and efficacious which the situation of Cortes allowed him to make, would have been of little avail without a reinforcement of Spanish soldiers. Of this he was so deeply sensible, that it was the chief object of his thoughts and wishes; and yet his only prospect of obtaining it from the return of the officer whom he had sent to the isles to solicit aid, was both distant and uncertain. But what neither his own sagacity nor power could have procured, he owed to a series of fortunate and unforeseen incidents. The governor of Cuba, to whom the success of Narvaez appeared an event of infallible certainty, having sent two small ships after him with new instructions, and a supply of men and military stores, the officer whom Cortes had appointed to command on the coast, artfully decoyed them into the harbor of Vera Cruz, seized the vessels, and easily persuaded the soldiers to follow the standard of a more able leader than him whom they were destined to join. Soon after, three ships of more considerable force came into the harbor separately. These belonged to an armament fitted out by Francisco de Garay, governor of Jamaica, who, being possessed with the rage of discovery and conquest which animated every Spaniard settled in America, had long aimed at intruding into some district of New Spain, and dividing with Cortes the glory and gain of annexing that empire to

the crown of Castile. They unadvisedly made their attempt on the northern provinces, where the country was poor, and the people fierce and warlike; and after a cruel succession of disasters, famine compelled them to venture into Vera Cruz, and cast themselves upon the mercy of their countrymen [Oct. 28]. Their fidelity was not proof against the splendid hopes and promises which had seduced other adventurers; and, as if the spirit of revolt had been contagious in New Spain, they likewise abandoned the master whom they were bound to serve, and enlisted under Cortes. Nor was it America alone that furnished such unexpected aid; a ship arrived from Spain, freighted by some private merchants with military stores, in hopes of a profitable market in a country, the fame of whose opulence began to spread over Europe. Cortes eagerly purchased a cargo which to him was invaluable, and the crew, following the general example, joined him at Tlascal.

From those various quarters, the army of Cortes was augmented with a hundred and eighty men, and twenty horses, a reinforcement too inconsiderable to produce any consequence which would have entitled it to have been mentioned in the history of other parts of the globe. But in that of America, where great revolutions were brought about by causes which seemed to bear no proportion to their effects, such small events rise into importance, because they were sufficient to decide with respect to the fate of kingdoms. Nor is it the least remarkable instance of the singular felicity conspicuous in many passages of Cortes's story, that the two persons chiefly instrumental in furnishing him with those seasonable supplies, should be an avowed enemy who aimed at his destruction, and an envious rival who wished to supplant him.

The first effect of the junction with his new followers was to enable him to dismiss such of Narvaez's soldiers as remained with reluctance in his service. After their departure, he still mustered five hundred and fifty infantry, of which fourscore were armed with muskets or crossbows, forty horsemen, and a train of nine field-pieces. At the head of these, accompanied by ten thousand Tlascalans and other friendly Indians, Cortes began his march towards Mexico, on the twenty-eighth of December, six months after his disastrous retreat from that city.

Nor did he advance to attack an enemy unprepared to receive him. Upon the death of Montezuma, the Mexican chiefs, in whom the right of electing the emperor was vested, had instantly raised his brother Quetzlavaca to the throne. His avowed and inveterate enmity to the Spaniards would have been sufficient to gain their suffrages, although he had been less distinguished for courage and capacity. He had an immediate opportunity of showing that he was worthy of their choice, by conducting in person those fierce attacks which compelled the Spaniards to abandon his capital; and as soon as their retreat afforded him any respite from action, he took measures for preventing their return to Mexico, with prudence equal to the spirit which he had displayed in driving them out of it. As from the vicinity of Tlascal, he could not be unacquainted with the motions and intentions of Cortes, he observed the storm that was gathering, and began early to provide against it. He repaired what the Spaniards had ruined in the city, and strengthened it with such new fortifications as the skill of his subjects was capable of erecting. Besides filling his magazines with the usual weapons of war, he gave directions to make long spears headed with the swords and daggers taken from the Spaniards, in order to annoy the cavalry. He summoned the people in every province of the empire to take arms against their oppressors, and as an encouragement to exert themselves with vigor, he promised them exemption from all the taxes which his predecessors had imposed. But what he labored with the greatest earnestness was, to deprive the Spaniards of the advantages which they derived from the friendship of the Tlascalans, by endeavoring to persuade that people to renounce all connexion with men who were not only avowed enemies of the gods whom they worshipped, but who would not fail to subject them at last to the same yoke which they were now inconsiderately lending their aid to impose upon others. These representations, no less striking than well founded, were urged so forcibly by his ambassadors, that it required all the address of Cortes to prevent their making a dangerous impression.

But while Quetzlavaca was arranging his plan of defence, with a degree of foresight uncommon in an American, his days were cut short by the small-pox. This distemper, which raged at that time in New Spain

with fatal malignity, was unknown in that quarter of the globe until it was introduced by the Europeans, and may be reckoned among the greatest calamities brought upon them by their invaders. In his stead the Mexicans raised to the throne Guatimozin, nephew and son-in-law of Montezuma, a young man of such high reputation for abilities and valor, that in this dangerous crisis, his countrymen, with one voice, called him to the supreme command.

1521.] As soon as Cortes entered the enemy's territories, he discovered various preparations to obstruct his progress. But his troops forced their way with little difficulty, and took possession of Tezeuco, the second city of the empire, situated on the banks of the lake about twenty miles from Mexico. Here he determined to establish his head-quarters, as the most proper station for launching his brigantines, as well as for making his approaches to the capital. In order to render his residence there more secure, he deposed the cazique, or chief, who was at the head of that community, under pretext of some defect in his title, and substituted in his place a person whom a faction of the nobles pointed out as the right heir of that dignity. Attached to him by this benefit, the cazique and his adherents served the Spaniards with inviolable fidelity.

As the preparations for constructing the brigantines advanced slowly under the unskilful hands of soldiers and Indians, whom Cortes was obliged to employ in assisting three or four carpenters who happened fortunately to be in his service; and as he had not yet received the reinforcement which he expected from Hispaniola, he was not in a condition to turn his arms directly against the capital. To have attacked at this period, a city so populous, so well prepared for defence, and in a situation of such peculiar strength, must have exposed his troops to inevitable destruction. Three months elapsed before the materials for the brigantines were finished, and before he heard any thing with respect to the success of the officer whom he had sent to Hispaniola. This, however, was not a season of inaction to Cortes. He attacked successively several of the towns situated around the lake; and though all the Mexican power was exerted to obstruct his operations, he either compelled them to submit to the Spanish crown, or reduced them to ruins. The inhabitants of other towns he endeavored to conciliate by more gentle means; and though he could not hold any intercourse with them but by the intervention of interpreters, yet, under all the disadvantages of that tedious and imperfect mode of communication he had acquired such thorough knowledge of the state of the country, as well as of the dispositions of the people, that he conducted his negotiations and intrigues with astonishing dexterity and success. Most of the cities adjacent to Mexico were originally the capitals of small independent states; and some of them having been but lately annexed to the Mexican empire, still retained the remembrance of their ancient liberty, and bore with impatience the rigorous yoke of their new masters. Cortes, having early observed symptoms of their disaffection, availed himself of this knowledge to gain their confidence and friendship. By offering with confidence to deliver them from the odious dominion of the Mexicans, and by liberal promises of more indulgent treatment if they would unite with him against their oppressors, he prevailed on the people of several considerable districts, not only to acknowledge the King of Castile as their sovereign, but to supply the Spanish camp with provisions, and to strengthen his army with auxiliary troops. Guatimozin, on the first appearance of defection among his subjects, exerted himself with vigor to prevent or to punish their revolt; but, in spite of his efforts, the spirit continued to spread. The Spaniards gradually acquired new allies, and with deep concern he beheld Cortes arming against his empire those very hands which ought to have been active in its defence, and ready to advance against the capital at the head of a numerous body of his own subjects.

While, by those various methods, Cortes was gradually circumscribing the Mexican power in such a manner that his prospect of overturning it seemed neither to be uncertain nor remote, all his schemes were well nigh defeated by a conspiracy no less unexpected than dangerous. The soldiers of Narvaez had never united perfectly with the original companions of Cortes, nor did they enter into his measures with the same cordial zeal. Upon every occasion that required any extraordinary effort of courage or of patience, their spirits were apt to sink; and now, on a near view of what they had to encounter, in attempting to reduce a city so inaccessible as Mexico, and defended by a numerous

army, the resolution even of those among them who had adhered to Cortes when he was deserted by their associates, began to fail. Their fears led them to presumptuous and unsoldierlike discussions concerning the propriety of their general's measures, and the improbability of their success. From these they proceeded to censure and invectives, and at last began to deliberate how they might provide for their own safety, of which they deemed their commander to be totally negligent. Antonia Vilefagna, a private soldier, but bold, intriguing, and strongly attached to Velasquez, artfully fomented this growing spirit of disaffection. His quarters became the rendezvous of the malecontents, where, after many consultations, they could discover no method of checking Cortes in his career, but by assassinating him and his most considerable officers, and conferring the command upon some person who would relinquish his wild plans, and adopt measures more consistent with the general security. Despair inspired them with courage. The hour for perpetrating the crime, the persons whom they destined as victims, the officers to succeed them in command, were all named: and the conspirators signed an association, by which they bound themselves with most solemn oaths, to mutual fidelity. But on the evening before the appointed day, one of Cortes's ancient followers, who had been seduced into the conspiracy, touched with compunction at the imminent danger of a man whom he had long been accustomed to revere, or struck with horror at his own treachery, went privately to his general and revealed to him all that he knew. Cortes, though deeply alarmed, discerned at once what conduct was proper in a situation so critical. He repaired instantly to Vilefagna's quarters, accompanied by some of his most trusty officers. The astonishment and confusion of the man at this unexpected visit anticipated the confession of his guilt. Cortes, while his attendants seized the traitor, snatched from his bosom a paper, containing the association, signed by the conspirators. Impatient to know how far the infection extended, he retired to read it, and found there names which filled him with surprise and sorrow. But aware how dangerous a strict scrutiny might prove at such a juncture, he confined his judicial inquiries to Vilefagna alone. As the proofs of his guilt were manifest, he was condemned after a short trial, and next morning he was seen hanging before the door of the house in which he had lodged. Cortes called his troops together, and having explained to them the atrocious purpose of the conspirators, as well as the justice of the punishment inflicted on Vilefagna, he added, with an appearance of satisfaction, that he was entirely ignorant with respect to all the circumstances of this dark transaction, as the traitor, when arrested, had suddenly torn and swallowed a paper which probably contained an account of it, and under the severest tortures possessed such constancy as to conceal the names of his accomplices. This artful declaration restored tranquillity to many a breast that was throbbing, while he spoke, with consciousness of guilt and dread of detection; and by this prudent moderation, Cortes had the advantage of having discovered, and of being able to observe such of his followers as were disaffected; while they, flattering themselves that their past crime was unknown, endeavored to avert any suspicion of it by redoubling their activity and zeal in his service.

Cortes did not allow them leisure to ruminate on what had happened; and as the most effectual means of preventing the return of a mutinous spirit, he determined to call forth his troops immediately to action. Fortunately, a proper occasion for this occurred without his seeming to court it. He received intelligence that the materials for building the brigantines were at length completely finished, and waited only for a body of Spaniards to conduct them to Tezcuco. The command of this convoy, consisting of two hundred foot soldiers, fifteen horsemen, and two field-pieces, he gave to Sandoval, who, by the vigilance, activity, and courage which he manifested on every occasion, was growing daily in his confidence, and in the estimation of his fellow-soldiers. The service was no less singular than important; the beams, the planks, the masts, the cordage, the sails, the ironwork, and all the infinite variety of articles requisite for the construction of thirteen brigantines, were to be carried sixty miles over land, through a mountainous country, by people who were unacquainted with the ministry of domestic animals, or the aid of machines to facilitate any work of labor. The Tlascalans furnished eight thousand *Tamemes*, an inferior order of men destined for servile tasks, to carry the materials on their shoulders, and appointed fifteen thousand warriors to accompany and defend them.

Sandoval made the disposition for their progress with great propriety, placing the *Tamemes* in the centre, one body of warriors in the front, another in the rear, with considerable parties to cover the flanks. To each of these he joined some Spaniards, not only to assist them in danger, but to accustom them to regularity and subordination. A body so numerous, and so much encumbered, advanced leisurely but in excellent order; and in some places, where it was confined by the woods or mountains, the line of march extended above six miles. Parties of Mexicans frequently appeared hovering around them on the high grounds; but perceiving no prospect of success in attacking an enemy continually on his guard, and prepared to receive them, they did not venture to molest him; and Sandoval had the glory of conducting safely to Tezcuco, a convoy on which all the future operations of his countrymen depended.

This was followed by another event of no less moment. Four ships arrived at Vera Cruz from Hispaniola, with two hundred soldiers, eighty horses, two battering cannon, and a considerable supply of ammunition and arms. Elevated with observing that all his preparatory schemes, either for recruiting his own army, or impairing the force of the enemy, had now produced their full effect, Cortes impatient to begin the siege in form, hastened the launching of the brigantines. To facilitate this, he had employed a vast number of Indians for two months, in deepening the small rivulet which runs by Tezcuco into the lake, and in forming it into a canal near two miles in length; [119] and though the Mexicans, aware of his intentions, as well as of the danger which threatened them, endeavored frequently to interrupt the laborers, or to burn the brigantines, the work was at last completed. On the twenty-eighth of April, all the Spanish troops, together with the auxiliary Indians, were drawn up on the banks of the canal; and with extraordinary military pomp, rendered more solemn by the celebration of the most sacred rites of religion, the brigantines were launched. As they fell down the canal in order, Father Olmedo blessed them, and gave each its name. Every eye followed them with wonder and hope, until they entered the lake, when they hoisted their sails and bore away before the wind. A general shout of joy was raised; all admiring that bold inventive genius, which, by means so extraordinary that their success almost exceeded belief, had acquired command of a fleet, without the aid of which Mexico would have continued to set the Spanish power and arms at defiance.

Cortes determined to attack the city from three different quarters; from Tepeaca on the north side of the lake, from Tabuca on the west, and from Cuyocan towards the south. These towns were situated on the principal causeways which led to the capital, and intended for their defence. He appointed Sandoval to command in the first, Pedro de Alvarado in the second, and Christoval de Olid in the third; allotting to each a numerous body of Indian auxiliaries, together with an equal division of Spaniards, who, by the junction of the troops from Hispaniola, amounting now to eighty-six horsemen, and eight hundred and eighteen foot soldiers; of whom one hundred and eighteen were armed with muskets or cross-bows. The train of artillery consisted of three battering cannon, and fifteen field-pieces. He reserved for himself, as the station of greatest importance and danger, the conduct of the brigantines, each armed with one of his small cannon, and manned with twenty-five Spaniards.

As Alvarado and Olid proceeded towards the posts assigned them [May 10], they broke down the aqueducts which the ingenuity of the Mexicans had erected for conveying water into the capital, and, by the distress to which this reduced the inhabitants, gave a beginning to the calamities which they were destined to suffer. Alvarado and Olid found the towns of which they were ordered to take possession deserted by their inhabitants, who had fled for safety to the capital, where Guatimozin had collected the chief force of his empire, as there alone he could hope to make a successful stand against the formidable enemies who were approaching to assault him.

The first effort of the Mexicans was to destroy the fleet of brigantines, the fatal effects of whose operations they foresaw and dreaded. Though the brigantines, after all the labor and merit of Cortes in forming them, were of inconsiderable bulk, rudely constructed, and manned chiefly with landmen hardly possessed of skill enough to conduct them, they must have been objects of terror to a people unacquainted with any navigation but that of their lake, and possessed of no vessel larger than a canoe. Necessity, however, urged Guatimozin

to hazard the attack; and hoping to supply by numbers what he wanted in force, he assembled such a multitude of canoes as covered the face of the lake. They rowed on boldly to the charge, while the brigantines, retarded by a dead calm, could scarcely advance to meet them. But as the enemy drew near, a breeze suddenly sprang up; in a moment the sails were spread, the brigantines, with the utmost ease, broke through their feeble opponents, overset many canoes, and dissipated the whole armament with such slaughter, as convinced the Mexicans, that the progress of the Europeans in knowledge and arts rendered their superiority greater on this new element than they had hitherto found it by land.

From that time Cortes remained master of the lake, and the brigantines not only preserved a communication between the Spaniards in their different stations, though at considerable distance from each other, but were employed to cover the causeways on each side, and keep off the canoes when they attempted to annoy the troops as they advanced towards the city. Cortes formed the brigantines in three divisions, appointing one to cover each of the stations from which an attack was to be carried on against the city, with orders to second the operations of the officer who commanded there. From all the three stations he pushed on the attack against the city with equal vigor; but in a manner so very different from the conduct of sieges in regular war, that he himself seems afraid it would appear no less improper than singular to persons unacquainted with his situation. Each morning his troops assaulted the barricades which the enemy had erected on the causeways, forced their way over the trenches which they had dug, and through the canals where the bridges were broken down, and endeavored to penetrate into the heart of the city, in hopes of obtaining some decisive advantage which might force the enemy to surrender, and terminate the war at once; but when the obstinate valor of the Mexicans rendered the efforts of the day ineffectual, the Spaniards retired in the evening to their former quarters. Thus their toil and danger were in some measure continually renewed; the Mexicans repairing in the night what the Spaniards had destroyed through the day, and recovering the posts from which they had driven them. But necessity prescribed this slow and untoward mode of operation. The number of his troops were so small that Cortes durst not, with a handful of men, attempt to make a lodgment in a city where he might be surrounded and annoyed by such a multitude of enemies. The remembrance of what he had already suffered by the ill judged confidence with which he had ventured into such a dangerous situation, was still fresh in his mind. The Spaniards, exhausted with fatigue, were unable to guard the various posts which they daily gained; and though their camp was filled with Indian auxiliaries, they durst not devolve this charge upon them, because they were so little accustomed to discipline, that no confidence could be placed in their vigilance. Beside this, Cortes was extremely solicitous to preserve the city as much as possible from being destroyed, both because he destined it to be the capital of his conquests, and wished that it might remain as a monument of his glory. From all these considerations, he adhered obstinately, for a month after the siege was opened, to the system which he had adopted. The Mexicans, in their own defence, displayed valor which was hardly inferior to that with which the Spaniards attacked them. On land, on water, by night and by day, one furious conflict succeeded to another. Several Spaniards were killed, more wounded, and all were ready to sink under the toils of unintermitting service, which were rendered more intolerable by the injuries of the season, the periodical rains being now set in with their usual violence.

Astonished and disconcerted with the length and difficulties of the siege, Cortes determined to make one great effort to get possession of the city, before he relinquished the plan which he had hitherto followed, and had recourse to any other mode of attack. With this view he sent instructions to Alvarado and Sandoval to advance with their divisions to a general assault, and took the command in person [July 3] of that posted on the causeway of Cuyocan. Animated by his presence, and the expectation of some decisive event, the Spaniards pushed forward with irresistible impetuosity. They broke through one barricade after another, forced their way over the ditches and canals, and, having entered the city, gained ground incessantly in spite of the multitude and ferocity of their opponents. Cortes, though delighted with the rapidity of his progress, did not forget that he might still find it necessary to retreat; and, in order to secure it, appointed Julien de Alderete, a captain of chief note in the troops which

he had received from Hispaniola, to fill up the canals and gaps in the causeway as the main body advanced. That officer, deeming it inglorious to be thus employed, while his companions were in the heat of action and the career of victory, neglected the important charge committed to him, and hurried on, inconsiderately, to mingle with the combatants. The Mexicans, whose military attention and skill were daily improving, no sooner observed this than they carried an account of it to their monarch.

Guatimozin instantly discerned the consequence of the error which the Spaniards had committed, and, with admirable presence of mind, prepared to take advantage of it. He commanded the troops posted in the front to slacken their efforts, in order to allure the Spaniards to push forward, while he despatched a large body of chosen warriors through different streets, some by land, and others by water, towards the great breach in the causeway which had been left open. On a signal which he gave, the priests in the principal temples struck the great drums consecrated to the god of war. No sooner did the Mexicans hear its doleful solemn sound, calculated to inspire them with contempt of death, and enthusiastic ardor, than they rushed upon the enemy with frantic rage. The Spaniards, unable to resist men urged on no less by religious fury than hope of success, began to retire, at first leisurely, and with a good countenance; but as the enemy pressed on, and their own impatience to escape increased, the terror and confusion became so general, that when they arrived at the gap in the causeway, Spaniards and Tlascalans, horsemen and infantry, plunged in promiscuously, while the Mexicans rushed upon them fiercely from every side, their light canoes carrying them through shoals which the brigantines could not approach. In vain did Cortes attempt to stop and rally his flying troops; fear rendered them regardless of his entreaties or commands. Finding all his endeavors to renew the combat fruitless, his next care was to save some of those who had thrown themselves into the water; but while thus employed, with more attention to their situation than to his own, six Mexican captains suddenly laid hold of him, and were hurrying him off in triumph; and though two of his officers rescued him at the expense of their own lives, he received several dangerous wounds before he could break loose. Above sixty Spaniards perished in the rout; and what rendered the disaster more afflicting, forty of these fell alive into the hands of an enemy never known to show mercy to a captive.

The approach of night, though it delivered the defeated Spaniards from the attacks of the enemy, ushered in what was hardly less grievous, the noise of their barbarous triumph, and of the horrid festival with which they celebrated their victory. Every quarter of the city was illuminated; the great temple shone with such peculiar splendor, that the Spaniards could plainly see the people in motion, and the priests busy in hastening the preparations for the death of the prisoners. Through the gloom, they fancied that they discerned their companions by the whiteness of their skins, as they were stripped naked, and compelled to dance before the image of the god to whom they were to be offered. They heard the shrieks of those who were sacrificed, and thought that they could distinguish each unhappy victim by the well known sound of his voice. Imagination added to what they really saw or heard, and augmented its horror. The most unfeeling melted into tears of compassion, and the stoutest heart trembled at the dreadful spectacle which they beheld [120]

Cortes, who, besides all that he felt in common with his soldiers, was oppressed with the additional load of anxious reflections natural to a general on such an unexpected calamity, could not, like them, relieve his mind by giving vent to its anguish. He was obliged to assume an air of tranquillity, in order to revive the spirit and hopes of his followers. The juncture, indeed, required an extraordinary exertion of fortitude. The Mexicans, elated with their victory, sallied out next morning to attack him in his quarters. But they did not rely on the efforts of their own arms alone. They sent the heads of Spaniards whom they had sacrificed to the leading men in the adjacent provinces, and assured them that the god of war, appeased by the blood of their invaders, which had been shed so plentifully on his altars, had declared with an audible voice, that in eight days time those hated enemies should be finally destroyed, and peace and prosperity re-established in the empire.

A prediction uttered with such confidence, and in terms so void of ambiguity, gained universal credit among a people prone to superstition. The zeal of

the provinces, which had already declared against the Spaniards, augmented; and several which had hitherto remained inactive, took arms, with enthusiastic ardor, to execute the decree of the gods. The Indian auxiliaries who had joined Cortes, accustomed to venerate the same deities with the Mexicans, and to receive the responses of their priests with the same implicit faith, abandoned the Spaniards as a race of men devoted to certain destruction. Even the fidelity of the Tlascalans was shaken, and the Spanish troops were left almost alone in their stations. Cortes, finding that he attempted in vain to dispel the superstitious fears of his confederates by argument, took advantage, from the imprudence of those who had framed the prophecy in fixing its accomplishments so near at hand, to give a striking demonstration of its falsity. He suspended all military operations, during the period marked out by the oracle. Under cover of the brigantines, which kept the enemy at a distance, his troops lay in safety, and the fatal term expired without any disaster.

Many of his allies, ashamed of their own credulity, returned to their station. Other tribes, judging that the gods, who had now deceived the Mexicans, had decreed finally to withdraw their protection from them, joined his standard; and such was the levity of a simple people, moved by every slight impression, that in a short time after such a general defection of his confederates, Cortes saw himself, if we may believe his own account, at the head of a hundred and fifty thousand Indians. Even with such a numerous army, he found it necessary to adopt a new and more wary system of operation. Instead of renewing his attempts to become master of the city at once, by such bold but dangerous efforts of valor as he had already tried, he made his advances gradually, and with every possible precaution against exposing his men to any calamity similar to that which they still bewailed. As the Spaniards pushed forward, the Indians regularly repaired the causeways behind them. As soon as they got possession of any part of the town, the houses were instantly levelled with the ground. Day by day, the Mexicans, forced to retire as their enemies gained ground, were hemmed in within more narrow limits. Guatimozin, though unable to stop the career of the enemy, continued to defend his capital with obstinate resolution, and disputed every inch of ground. The Spaniards not only varied their mode of attack, but, by orders of Cortes, changed the weapons with which they fought. They were again armed with the long Chinantlan spears which they had employed with such success against Narvaez; and, by the firm array in which this enabled them to range themselves, they repelled, with little danger, the loose assault of the Mexicans: incredible numbers of them fell in the conflicts which they renewed every day. While war wasted without, famine began to consume them within the city. The Spanish brigantines having the entire command of the lake, rendered it almost impossible to convey to the besieged any supply of provisions by water. The immense number of his Indian auxiliaries enabled Cortes to shut up the avenues to the city by land. The stores which Guatimozin had laid up were exhausted by the multitudes which had crowded into the capital to defend their sovereign and the temples of their gods. Not only the people, but persons of the highest rank, felt the utmost distresses of famine. What they suffered brought on infectious and mortal distempers, the last calamity that visits besieged cities, and which filled up the measure of their woes.

But, under the pressure of so many and such various evils, the spirit of Guatimozin remained firm and unsubdued. He rejected with scorn every overture of peace from Cortes; and, disdaining the idea of submitting to the oppressors of his country, determined not to survive its ruin. The Spaniards continued their progress. At length all the three divisions penetrated into the great square in the centre of the city, and made a secure lodgment there [July 27.] Three-fourths of the city were now reduced and laid in ruins. The remaining quarter was so closely pressed, that it could not long withstand assailants, who attacked it from their new station with superior advantage, and more assured expectation of success. The Mexican nobles, solicitous to save the life of a monarch whom they revered, prevailed on Guatimozin to retire from a place where resistance was now vain, that he might rouse the more distant provinces of the empire to arms, and maintain there a more successful struggle with the public enemy. In order to facilitate the execution of this measure, they endeavored to amuse Cortes with overtures of submission, that, while his attention was employed in adjusting the articles of pacification, Gua-

timozin might escape unperceived. But they made this attempt upon a leader of greater sagacity and discernment than to be deceived by their arts. Cortes, suspecting their intention, and aware of what moment it was to defeat it, appointed Sandoval; the officer on whose vigilance he could most perfectly rely, to take the command of the brigantines, with strict injunctions to watch every motion of the enemy. Sandoval, attentive to the charge, observing some large canoes crowded with people rowing across the lake with extraordinary rapidity, instantly gave the signal to chase. Garcia Holguin, who commanded the swiftest sailing brigantine, soon overtook them, and was preparing to fire on the foremost canoe, which seemed to carry some person whom all the rest followed and obeyed. At once the rowers dropped their oars, and all on board, throwing down their arms, conjured him with cries and tears to forbear, as the emperor was there. Holguin eagerly seized his prize; and Guatimozin, with a dignified composure, gave himself up into his hands, requesting only that no insult might be offered to the empress or his children. When conducted to Cortes, he appeared neither with the sullen fierceness of a barbarian, nor with the dejection of a suppliant. "I have done," said he, addressing himself to the Spanish general, "what became a monarch. I have defended my people to the last extremity. Nothing now remains but to die. Take this dagger," laying his hand on one which Cortes wore, "plant it in my breast, and put an end to a life which can no longer be of use."

As soon as the fate of their sovereign was known, the resistance of the Mexicans ceased; and Cortes took possession of that small part of the capital which yet remained undestroyed [Aug. 13]. Thus terminated the siege of Mexico, the most memorable event in the conquest of America. It continued seventy-five days, hardly one of which passed without some extraordinary effort of one party in the attack, or of the other in the defence of a city, on the fate of which both knew that the fortune of the empire depended. As the struggle here was more obstinate, it was likewise more equal than any between the inhabitants of the Old and New Worlds. The great abilities of Guatimozin, the number of his troops, the peculiar situation of his capital, so far counterbalanced the superiority of the Spaniards in arms and discipline, that they must have relinquished the enterprise if they had trusted for success to themselves alone. But Mexico was overturned by the jealousy of neighbors who dreaded its power, and by the revolt of subjects impatient to shake off its yoke. By their effectual aid, Cortes was enabled to accomplish what, without such support, he would hardly have ventured to attempt. How much soever this account of the reduction of Mexico may detract, on the one hand, from the marvellous relations of some Spanish writers, by ascribing that to simple and obvious causes which they attribute to the romantic valor of their countrymen, it adds, on the other, to the merit and abilities of Cortes, who, under every disadvantage, acquired such an ascendancy over unknown nations, as to render them instruments towards carrying his schemes into execution. [121]

The exultation of the Spaniards, on accomplishing this arduous enterprise, was at first excessive. But this was quickly damped by the cruel disappointment of those sanguine hopes which had animated them amidst so many hardships and dangers. Instead of the inexhaustible wealth which they expected from becoming masters of Montezuma's treasures, and the ornaments of so many temples, their rapaciousness could only collect an inconsiderable booty amidst ruins and desolation. Guatimozin, aware of his impending fate, had ordered what remained of the riches amassed by his ancestors to be thrown into the lake. The Indian auxiliaries, while the Spaniards were engaged in conflict with the enemy, had carried off the most valuable part of the spoil. The sum to be divided among the conquerors was so small that many of them disdained to accept of the pittance which fell to their share, and all murmured and exclaimed; some against Cortes and his confidants, whom they suspected of having secretly appropriated to their own use a large portion of the riches which should have been brought into the common stock; others, against Guatimozin, whom they accused of obstinacy in refusing to discover the place where he had hidden his treasure.

Arguments, entreaties, and promises were employed in order to soothe them, but with so little effect, that Cortes, from solicitude to check this growing spirit of discontent, gave way to a deed which stains the glory of all his great actions. Without regarding the former dignity of Guatimozin, or feeling any reverence

for those virtues which he had displayed, he subjected the unhappy monarch, together with his chief favorite, to torture, in order to force from them a discovery of the royal treasure, which it was supposed they had concealed. Gustimozin bore whatever the refined cruelty of his tormentors could inflict, with the invincible fortitude of an American warrior. His fellow-sufferer, overcome by the violence of the anguish, turned a dejected eye towards his master, which seemed to implore his permission to reveal all that he knew. But the high spirited prince, darting on him a look of authority mingled with scorn, checked his weakness by asking, "Am I now reposing on a bed of flowers?" Overawed by the reproach, the favorite persevered in his dutiful silence and expired. Cortes, ashamed of a scene so horrid, rescued the royal victim from the hands of his torturers, and prolonged a life reserved for new indignities and sufferings.

The fate of the capital, as both parties had foreseen, decided that of the empire. The provinces submitted one after another to the conquerors. Small detachments of Spaniards marching through them without interruption, penetrated in different quarters to the great Southern Ocean, which, according to the ideas of Columbus, they imagined would open a short as well as easy passage to the East Indies, and secure to the crown of Castile all the envied wealth of those fertile regions; and the active mind of Cortes began already to form schemes for attempting this important discovery.

He did not know, that during the progress of his victorious arms in Mexico, the very scheme, of which he began to form some idea, had been undertaken and accomplished. As this is one of the most splendid events in the history of the Spanish discoveries, and has been productive of effects peculiarly interesting to those extensive provinces which Cortes had now subjected to the crown of Castile, the account of its rise and progress merits a particular detail.

Ferdinand Magalhaens, or Magellan, a Portuguese gentleman of honorable birth, having served several years in the East Indies, with distinguished valor, under the famous Albuquerque, demanded the recompense which he thought due to his services, with the boldness natural to a high spirited soldier. But as his general would not grant his suit, and he expected greater justice from his sovereign, whom he knew to be a good judge and a generous rewarder of merit, he quitted India abruptly, and returned to Lisbon. In order to induce Emanuel to listen more favorably to his claim, he not only stated his past services, but offered to add to them by conducting his countrymen to the Molucca or Spice Islands, by holding a westerly course; which he contended would be both shorter and less hazardous than that which the Portuguese now followed by the Cape of Good Hope, through the immense extent of the Eastern Ocean. This was the original and favorite project of Columbus, and Magellan founded his hopes of success on the ideas of that great navigator, confirmed by many observations, the result of his own naval experience, as well as that of his countrymen in their intercourse with the East. But though the Portuguese monarchs had the merit of having first awakened and encouraged the spirit of discovery in that age, it was their destiny, in the course of a few years, to reject two grand schemes for this purpose, the execution of which would have been attended with a great accession of glory to themselves, and of power to their kingdom. In consequence of some ill founded prejudice against Magellan, or of some dark intrigue which contemporary historians have not explained, Emanuel would neither bestow the recompense which he claimed, nor approve of the scheme which he proposed; and dismissed him with a disdainful coldness intolerable to a man conscious of what he deserved, and animated with the sanguine hopes of success peculiar to those who are capable of forming or of conducting new and great undertakings. In a transport of resentment, [1517] Magellan formally renounced his allegiance to an ungrateful master, and fled to the court of Castile, where he expected that his talents would be more justly estimated. He endeavored to recommend himself by offering to execute, under the patronage of Spain, that scheme which he had laid before the court of Portugal, the accomplishment of which, he knew, would wound the monarch against whom he was exasperated in the most tender part. In order to establish the justness of his theory, he produced the same arguments which he had employed at Lisbon; acknowledging, at the same time, that the undertaking was both arduous and expensive, as it could not be attempted but with a squadron of considerable force, and vic-

tuated for at least two years. Fortunately, he applied to a minister who was not apt to be deterred either by the boldness of a design, or the expense of carrying it into execution. Cardinal Ximenes, who at that time directed the affairs of Spain, discerning at once what an increase of wealth and glory would accrue to his country by the success of Magellan's proposal, listened to it with a most favorable ear. Charles V., on his arrival in his Spanish dominions, entered into the measure with no less ardor, and orders were issued for equipping a proper squadron at the public charge, of which the command was given to Magellan, whom the king honored with the habit of St. Jago and the title of Captain general.

On the tenth of August, one thousand five hundred and nineteen, Magellan sailed from Seville with five ships, which, according to the ideas of the age, were deemed to be of considerable force, though the burden of the largest did not exceed one hundred and twenty tons. The crews of the whole amounted to two hundred and thirty-four men, among whom were some of the most skilful pilots in Spain, and several Portuguese sailors, in whose experience, as more extensive, Magellan placed still greater confidence. After touching at the Canaries, he stood directly south towards the equinoctial line along the coast of America, but was so long retarded by tedious calms, and spent so much time in searching every bay and inlet for that communication with the Southern Ocean which he wished to discover, that he did not reach the river De la Plata till the twelfth of January, [1520.] That spacious opening through which its vast body of water pours into the Atlantic allured him to enter; but after sailing up it for some days, he concluded from the shallowness of the stream and the freshness of the water, that the wished-for strait was not situated there, and continued his course towards the south. On the thirty-first of March he arrived in the Port of St. Julian, about forty-eight degrees south of the line, where he resolved to winter. In this uncomfortable station he lost one of his squadron; and the Spaniards suffered so much from the excessive rigor of the climate, that the crews of three of his ships, headed by their officers, rose in open mutiny, and insisted on relinquishing the visionary project of a desperate adventurer, and returning directly to Spain. This dangerous insurrection Magellan suppressed, by an effort of courage no less prompt than intrepid, and inflicted exemplary punishment on the ringleaders. With the remainder of his followers, overawed but not reconciled to his scheme, he continued his voyage towards the south, and at length discovered, near the fifty-third degree of latitude, the mouth of a strait, into which he entered, notwithstanding the murmurs and remonstrances of the people under his command. After sailing twenty days in that winding dangerous channel, to which he gave his own name, and where one of his ships deserted him, the great Southern Ocean opened to his view, and with tears of joy he returned thanks to Heaven for having thus far crowned his endeavors with success.

But he was still at a greater distance than he imagined from the object of his wishes. He sailed during three months and twenty days in a uniform direction towards the north-west without discovering land. In this voyage, the longest that had ever been made in the unbounded ocean, he suffered incredible distress. His stock of provisions was almost exhausted, the water became putrid, the men were reduced to the shortest allowance with which it was possible to sustain life, and the scurvy, the most dreadful of all the maladies with which sea-faring people are afflicted, began to spread among the crew. One circumstance alone afforded them some consolation; they enjoyed an uninterrupted course of fair weather, with such favorable winds that Magellan bestowed on that ocean the name of *Pacific*, which it still retains. When reduced to such extremity that they must have sunk under their sufferings, they fell in with a cluster of small but fertile islands [March 6.] which afforded them refreshments in such abundance, that their health was soon re-established. From these isles, which he called *De los Ladrones*, he proceeded on his voyage, and soon made a more important discovery of the islands now known by the name of the *Philippines*. In one of these he got into an unfortunate quarrel with the natives, who attacked him with a numerous body of troops well armed; and while he fought at the head of his men with his usual valor, he fell [April 26] by the hands of those barbarians, together with several of his principal officers.

The expedition was prosecuted under other commanders. After visiting many of the smaller isles scattered in the eastern part of the Indian ocean, they

touched at the great Island of Borneo, [Nov. 8] and at length landed in Tidore, one of the Moluccas, to the astonishment of the Portuguese, who could not comprehend how the Spaniards, by holding a westerly course, had arrived at that sequestered seat of their most valuable commerce, which they themselves had discovered by sailing in an opposite direction. There, and in the adjacent isles, the Spaniards found a people acquainted with the benefits of extensive trade, and willing to open an intercourse with a new nation. They took in a cargo of the precious spices, which are the distinguished production of these islands; and with that, as well as with specimens of the rich commodities yielded by the other countries which they had visited, the *Victory*, which, of the two ships that remained of the squadron, was most fit for a long voyage, set sail for Europe, [Jan. 1522] under the command of Juan Sebastian del Cano. He followed the course of the Portuguese, by the Cape of Good Hope, and after disasters and sufferings he arrived at St. Lucar on the seventh of September, one thousand five hundred and seventy-two, having sailed round the globe in the space of three years and twenty-eight days.

Though an untimely fate deprived Magellan of the satisfaction of accomplishing this great undertaking, his contemporaries, just to his memory and talents, ascribed to him not only the honor of having formed the plan, but of having surmounted almost every obstacle, to the completion of it; and in the present age his name is still ranked among the highest in the roll of eminent and successful navigators. The naval glory of Spain now eclipsed that of every other nation; and by a singular felicity she had the merit, in the course of a few years, of discovering a new continent almost as large as that part of the earth which was formerly known, and of ascertaining by experience the form and extent of the whole of the terraqueous globe.

The Spaniards were not satisfied with the glory of having first encompassed the earth; they expected to derive great commercial advantages from this new and boldest effort of their maritime skill. The men of science among them contended, that the Spice Islands, and several of the richest countries in the East, were so situated as to belong of right to the crown of Castile, in consequence of the partitions made by Alexander VI. The merchants, without attending to this discussion, engaged eagerly in that lucrative and alluring commerce, which was now open to them. The Portuguese, alarmed at the intrusion of such formidable rivals, remonstrated and negotiated in Europe, while in Asia, they obstructed the trade of the Spaniards by force of arms. Charles V., not sufficiently instructed with respect to the importance of this valuable branch of commerce, or distracted by the multiplicity of his schemes and operations, did not afford his subjects proper protection. At last, the low state of his finances, exhausted by the efforts of his arms in every part of Europe, together with the dread of adding a new war with Portugal to those in which he was already engaged, induced him to make over his claim of the Moluccas to the Portuguese for three hundred and fifty thousand ducats. He reserved, however, to the crown of Castile the right of reviving its pretensions on repayment of that sum; but other objects engrossed his attention and that of his successors; and Spain was finally excluded from a branch of commerce in which it was engaging with sanguine expectations of profit.

Though the trade with the Moluccas was relinquished, the voyage of Magellan was followed by commercial effects of great moment to Spain. Philip II., in the year one thousand five hundred and sixty-four, reduced those islands which he discovered in the Eastern ocean to subjection, and established settlements there; between which and the kingdom of New Spain a regular intercourse, the nature of which shall be explained in its proper place, is still carried on. I return now to the transactions in New Spain.

At the time that Cortes was acquiring such extensive territories for his native country, and preparing the way for future conquests, it was his singular fate not only to be destitute of any commission or authority from the sovereign whom he was serving with such successful zeal, but to be regarded as an undutiful and seditious subject. By the influence of Fonseca, Bishop of Burgos, his conduct in assuming the government of New Spain was declared to be an irregular usurpation, in contempt of the royal authority; and Christoval de Tapia received a commission, empowering him to supersede Cortes, to seize his person, to confiscate his effects, to make a strict scrutiny into his proceedings, and to transmit the result of all the inquiries carried on in New Spain to the Council of the Indies, of which

the Bishop of Burgos was president. A few weeks after the reduction of Mexico, Tapia landed at Vera Cruz with the royal mandate to strip its conqueror of his power, and treat him as a criminal. But Fonseca had chosen a very improper instrument to wreak his vengeance on Cortes. Tapia had neither the reputation nor the talents that suited the high command to which he was appointed. Cortes, while he publicly expressed the most respectful veneration for the emperor's authority, secretly took measures to defeat the effect of his commission; and having involved Tapia and his followers in a multiplicity of negotiations and conferences, in which he sometimes had recourse to threats, but more frequently employed bribes and promises, he at length prevailed upon that weak man to abandon a province which he was unworthy of governing.

But notwithstanding the fortunate dexterity with which he had eluded this danger, Cortes was so sensible of the precarious tenure by which he held his power, that he despatched deputies to Spain [May 15.] with a pompous account of the success of his arms, with further specimens of the productions of the country, and with rich presents to the emperor, as the earnest of future contributions from his new conquests; requesting, in recompense for all his services, the approbation of his proceedings, and that he might be intrusted with the government of those dominions, which his conduct and the valor of his followers had added to the crown of Castile. The juncture in which his deputies reached the court was favorable. The internal commotions in Spain, which had disquieted the beginning of Charles's reign, were just appeased. The ministers had leisure to turn their attention towards foreign affairs. The account of Cortes's victories filled his countrymen with admiration. The extent and value of his conquests became the object of vast and interesting hopes. Whatever stain he might have contracted, by the irregularity of the steps which he took in order to attain power, was so fully effaced by the splendor and merit of the great actions which this had enabled him to perform, that every heart revolted at the thought of inflicting any censure on a man whose services entitled him to the highest marks of distinction. The public voice declared warmly in favor of his pretensions; and Charles, arriving in Spain about this time, adopted the sentiments of his subjects with a youthful ardor. Notwithstanding the claims of Velasquez, and the partial representations of the Bishop of Burgos, the emperor appointed Cortes captain general and governor of New Spain, judging that no person was so capable of maintaining the royal authority, or of establishing good order both among his Spanish and Indian subjects, as the victorious leader whom the former had long been accustomed to obey, and the latter had been taught to fear and to respect.

Even before his jurisdiction received this legal sanction, Cortes ventured to exercise all the powers of a governor, and, by various arrangements, endeavored to render his conquest a secure and beneficial acquisition to his country. He determined to establish the seat of government in its ancient station, and to raise Mexico again from its ruins; and having conceived high ideas concerning the future grandeur of the state of which he was laying the foundation, he began to rebuild its capital on a plan which bath gradually formed the most magnificent city in the New World. At the same time, he employed skilful persons to search for mines, in different parts of the country, and opened some which were found to be richer than any which the Spaniards had hitherto discovered in America. He detached his principal officers into the remote provinces, and encouraged them to settle there, not only by bestowing upon them large tracts of land, but by granting them the same dominion over the Indians, and the same right to their service, which the Spaniards had assumed in the islands.

It was not however, without difficulty that the Mexican empire could be entirely reduced into the form of a Spanish colony. Enraged and rendered desperate by oppression, the natives often forgot the superiority of their enemies, and ran to arms in defence of their liberties. In every contest, however, the European valor and discipline prevailed. But fatally for the honor of their country, the Spaniards sullied the glory redounding from these repeated victories by their mode of treating the vanquished people. After taking Guatimozin, and becoming masters of his capital, they supposed that the king of Castile entered on possession of all the rights of the captive monarch, and affected to consider every effort of the Mexicans to assert their own independence, as the rebellion of vassals against

their sovereign, or the mutiny of slaves against their master. Under the sanction of those ill founded maxims, they violated every right that should be held sacred between hostile nations. After each insurrection, they reduced the common people, in the provinces which they subdued, to the most humiliating of all conditions, that of personal servitude. Their chiefs, supposed to be more criminal, were punished with greater severity, and put to death in the most ignominious or the most excruciating mode that the insolence or the cruelty of their conquerors could devise. In almost every district of the Mexican empire, the progress of the Spanish arms is marked with blood, and with deeds so atrocious as disgrace the enterprising valor that conducted them to success. In the country of Panuco, sixty caziques or leaders, and four hundred nobles were burnt at one time. Nor was this shocking barbarity perpetrated in any sudden sally of rage, or by a commander of inferior note. It was the act of Sandoval, an officer whose name is entitled to the second rank in the annals of New Spain, and executed after a solemn consultation with Cortes; and to complete the horror of the scene, the children and relations of the wretched victims were assembled, and compelled to be spectators of their dying agonies. It seems hardly possible to exceed in horror this dreadful example of severity; but it was followed by another, which affected the Mexicans still more sensibly, as it gave them a most feeling proof of their own degradation, and of the small regard which their haughty masters retained for the ancient dignity and splendor of their state. On a slight suspicion, confirmed by very imperfect evidence, that Guatimozin had formed a scheme to shake off the yoke, and to excite his former subjects to take arms, Cortes, without the formality of a trial, ordered the unhappy monarch, together with the caziques of Tezeuco and Tacuba, the two persons of greatest eminence in the empire, to be hanged; and the Mexicans, with astonishment and horror, beheld this disgraceful punishment inflicted upon persons to whom they were accustomed to look up with reverence hardly inferior to that which they paid to the gods themselves. [122] The example of Cortes and his principal officers encouraged and justified persons of subordinate rank to venture upon committing greater excesses. Nuno de Guzman, in particular, stained an illustrious name by deeds of peculiar enormity and rigor, in various expeditions which he conducted.

One circumstance, however, saved the Mexicans from further consumption, perhaps from as complete as that which had depopulated the islands. The first conquerors did not attempt to search for the precious metals in the bowels of the earth. They were neither sufficiently wealthy to carry on the expensive works which are requisite for opening those deep recesses where nature has concealed the veins of gold and silver, nor sufficiently skilful to perform the ingenious operations by which those precious metals are separated from their respective ores. They were satisfied with the more simple method, practised by the Indians, of washing the earth carried down rivers and torrents from the mountains, and collecting the grains of native metal deposited there. The rich mines of New Spain, which have poured forth their treasures with such profusion on every quarter of the globe, were not discovered for several years after the conquest. By that time [1552], &c., a more orderly government and police were introduced into the colony; experience, derived from former errors, had suggested many useful and humane regulations for the protection and preservation of the Indians; and though it then became necessary to increase the number of those employed in the mines, and they were engaged in a species of labor more pernicious to the human constitution, they suffered less hardship or diminution than from the ill judged, but less extensive, schemes of the first conquerors.

While it was the lot of the Indians to suffer, their new masters seemed not to have derived any considerable wealth from their ill conducted researches. According to the usual fate of first settlers in new colonies, it was their lot to encounter danger and to struggle with difficulties; the fruits of their victories and toils were reserved for times of tranquillity, and reaped by successors of great industry, but of inferior merit. The early historians of America abound with accounts of the sufferings and of the poverty of its conquerors. In New Spain, their condition was rendered more grievous by a peculiar arrangement. When Charles V. advanced Cortes to the government of that country, he at the same time appointed certain commissioners to receive and administer the royal revenue there, with independent jurisdiction. These men, chosen from inferior

stations in various departments of public business at Madrid, were so much elevated with their promotion, that they thought they were called to act a part of the first consequence. But being accustomed to the minute formalities of office, and having contracted the narrow ideas suited to the sphere in which they had hitherto moved, they were astonished on arriving in Mexico [1524], at the high authority which Cortes exercised, and could not conceive that the mode of administration, in a country recently subdued and settled, must be different from what took place in one where tranquillity and regular government had been long established. In their letters, they represented Cortes as an ambitious tyrant, who, having usurped a jurisdiction superior to law, aspired at independence, and, by his exorbitant wealth and extensive influence, might accomplish those disloyal schemes which he apparently meditated. These insinuations made such deep impression upon the Spanish ministers most of whom had been formed to business under the jealous and rigid administration of Ferdinand, that unmindful of all Cortes's past services, and regardless of what he was then suffering in conducting that extraordinary expedition, in which he advanced from the lake of Mexico to the western extremities of Honduras, [123] they infused the same suspicions into the minds of their master, and prevailed on him to order a solemn inquest to be made into his conduct [1525], with powers to the licentiate Ponce de Leon, intrusted with that commission, to seize his person, if he should find that expedient, and send him prisoner to Spain.

The sudden death of Ponce de Leon, a few days after his arrival in New Spain, prevented the execution of this commission. But as the object of his appointment was known, the mind of Cortes was deeply wounded with this unexpected return for services which far exceeded whatever any subject of Spain had rendered to his sovereign. He endeavored, however, to maintain his station, and to recover the confidence of the court. But every person in office, who had arrived from Spain since the conquest, was a spy upon his conduct, and with malicious ingenuity gave an unfavorable representation of all his actions. The apprehensions of Charles and his ministers increased. A new commission of inquiry was issued [1528], with more extensive powers, and various precautions were taken in order to prevent or to punish him, if he should be so presumptuous as to attempt what was inconsistent with the fidelity of a subject. Cortes beheld the approaching crisis of his fortune with all the violent emotions natural to a haughty mind conscious of high desert, and receiving unworthy treatment. But though some of his desperate followers urged him to assert his own rights against his ungrateful country, and with a bold hand to seize that power which the courtiers meanly accused him of coveting, he retained such self-command, or was actuated with such sentiments of loyalty, as to reject their dangerous counsels, and to choose the only course in which he could secure his own dignity, without departing from his duty. He resolved not to expose himself to the ignominy of a trial in that country which had been the scene of his triumphs; but, without waiting for the arrival of his judges, to repair directly to Castile, and commit himself and his cause to the justice and generosity of his sovereign.

Cortes appeared in his native country with the splendor that suited the conqueror of a mighty kingdom. He brought with him a great part of his wealth, many jewels and ornaments of great value, several curious productions of the country, [124] and was attended by some Mexicans of the first rank, as well as by the most considerable of his own officers. His arrival in Spain removed at once every suspicion and fear that had been entertained with respect to his intentions. The emperor, having now nothing to apprehend from the designs of Cortes, received him like a person whom consciousness of his own innocence had brought into the presence of his master, and who was entitled, by the eminence of his services, to the highest marks of distinction and respect. The order of St. Jago, the title of Marquis del Valle de Guaxaca, the grant of an ample territory in New Spain, were successively bestowed upon him; and as his manners were correct and elegant, although he had passed the greater part of his life among rough adventurers, the emperor admitted him to the same familiar intercourse with himself, that was enjoyed by noblemen of the first rank.

But, amidst these external proofs of regard, symptoms of remaining distrust appeared. Though Cortes earnestly solicited to be reinstated in the government of New Spain, Charles, too sagacious to commit such an important charge to a man whom he had once sus-

pected, peremptorily refused to invest him again with powers which he might find it impossible to control. Cortes, though dignified with new titles, returned to Mexico [1530], with diminished authority. The military department, with powers to attempt new discoveries, was left in his hands; but the supreme direction of civil affairs was placed in a board called *The Audience of New Spain*. At a subsequent period, when, upon the increase of the colony, the exertion of authority more united and extensive became necessary, Antonio de Mendoza, a nobleman of high rank, was sent thither as *Viceroy*, to take the government into his hands.

This division of power in New Spain proved, as was unavoidable, the source of perpetual dissension, which embittered the life of Cortes, and thwarted all his schemes. As he had now no opportunity to display his active talents but in attempting new discoveries, he formed various schemes for that purpose, all of which bore impressions of a genius that delighted in what was bold and splendid. He early entertained an idea, that, either by steering through the Gulf of Florida along the east coast of North America, some strait would be found that communicated with the western ocean; or that, by examining the isthmus of Darien, some passage would be discovered between the North and South Seas. But having been disappointed in his expectations with respect to both, he now confined his views to such voyages of discovery as he could make from the ports of New Spain in the South Sea. There he fitted out successively several small squadrons, which either perished in the attempt, or returned without making any discovery of moment. Cortes, weary of intrusting the conduct of his operations to others, took the command of a new armament in person [1536]; and, after enduring incredible hardships, and encountering dangers of every species, he discovered the large peninsula of California, and surveyed the greater part of the gulf which separates it from New Spain. The discovery of a country of such extent would have reflected credit on a common adventurer; but it could add little new honor to the name of Cortes, and was far from satisfying the sanguine expectations which he had formed. Disgusted with ill success, to which he had not been accustomed, and weary of contesting with adversaries to whom he considered it as a disgrace to be opposed, he once more sought for redress in his native country [1540].

But his reception there was very different from that which gratitude, and even decency, ought to have secured for him. The merit of his ancient exploits was already, in a great measure, forgotten or eclipsed by the fame of recent and more valuable conquests in another quarter of America. No service of moment was now expected from a man of declining years, and who began to be unfortunate. The emperor behaved to him with cold civility; his ministers treated him sometimes with neglect, sometimes with insolence. His grievances received no redress; his claims were urged without effect; and after several years spent in fruitless application to ministers and judges, an occupation the most irksome and mortifying to a man of high spirit, who had moved in a sphere where he was more accustomed to command than to solicit, Cortes ended his days on the second of December, one thousand five hundred and forty-seven, in the sixty-second year of his age. His fate was the same with that of all the persons who distinguished themselves in the discovery or conquest of the New World. Envied by his contemporaries, and ill requited by the court which he served, he has been admired and celebrated by succeeding ages. Which has formed the most just estimate of his character, an impartial consideration of his actions must determine.

BOOK VI.

History of the conquest of Peru by Pizarro and of the dissensions and civil wars of the Spaniards in that country—Origin, progress, and effects of these.

1523.] From the time that Nugnez de Balboa discovered the great Southern Ocean, and received the first obscure hints concerning the opulent countries with which it might open a communication, the wishes and schemes of every enterprising person in the colonies of Darien and Panama were turned towards the wealth of those unknown regions. In an age when the spirit of adventure was so ardent and vigorous, that large fortunes were wasted, and the most alarming dangers braved, in pursuit of discoveries merely possible, the faintest ray of hope was followed with an eager expectation, and the slightest information was sufficient to inspire such perfect confidence as conducted men to the most arduous undertakings. [125]

Accordingly, several armaments were fitted out in order to explore and take possession of the countries to the east of Panama, but under the conduct of leaders whose talents and resources were unequal to the attempt. As the excursions of those adventurers did not extend beyond the limits of the province to which the Spaniards have given the name of *Tierra Firme*, a mountainous region covered with woods, thinly inhabited, and extremely unhealthy, they returned with dismal accounts concerning the distresses to which they had been exposed, and the unpromising aspect of the places which they had visited. Damped by these tidings, the rage for discovery in that direction abated; and it became the general opinion that Balboa had founded visionary hopes, on the tale of an ignorant Indian, ill understood, or calculated to deceive.

1524.] But there were three persons settled in Panama, on whom the circumstances which deterred others made so little impression, that, at the very moment when all considered Balboa's expectations of discovering a rich country, by steering towards the east, as chimerical, they resolved to attempt the execution of his scheme. The names of those extraordinary men were Francisco Pizarro, Diego de Almagro, and Hernando Luque. Pizarro was the natural son of a gentleman of an honorable family by a very low woman, and according to the cruel fate which often attends the offspring of unlawful love, had been so totally neglected in his youth by the author of his birth, that he seems to have destined him never to rise beyond the condition of his mother. In consequence of this ungenerous idea, he set him, when bordering on manhood, to keep hogs. But the aspiring mind of young Pizarro disdaining that ignoble occupation, he abruptly abandoned his charge, enlisted as a soldier, and after serving some years in Italy, embarked for America, which, by opening such a boundless range to active talents, allured every adventurer whose fortune was not equal to his ambitious thoughts. There Pizarro early distinguished himself. With a temper of mind no less daring than the constitution of his body was robust, he was foremost in every danger, patient under the greatest hardships, and unsubdued by any fatigue. Though so illiterate that he could not even read, he was soon considered as a man formed to command. Every operation committed to his conduct proved successful, as, by a happy but rare conjunction, he united perseverance with ardor, and was as cautious in executing as he was bold in forming his plans. By engaging early in active life, without any resource but his own talents and industry, and by depending on himself alone in his struggles to emerge from obscurity, he acquired such a thorough knowledge of affairs, and of men, that he was fitted to assume a superior part in conducting the former, and in governing the latter.

Almagro had as little to boast of his descent as Pizarro. The one was a bastard, the other a foundling. Bred, like his companion, in the camp, he yielded not to him in any of the soldierly qualities of intrepid valor, indefatigable activity, or insurmountable constancy in enduring the hardships inseparable from military service in the New World. But in Almagro these virtues were accompanied with the openness, generosity, and candor, natural to men whose profession is arms; in Pizarro, they were united with the address, the craft, and the dissimulation of a politician, with the art of concealing his own purposes, and with sagacity to penetrate into those of other men.

Hernando de Luque was an ecclesiastic, who acted both as priest and schoolmaster at Panama, and, by means which the contemporary writers have not described, had amassed riches that inspired him with thoughts of rising to greater eminence.

Such were the men destined to overturn one of the most extensive empires on the face of the earth. Their confederacy for this purpose was authorized by Pedrarias, the governor of Panama. Each engaged to employ his whole fortune in the adventure. Pizarro, the least wealthy of the three, as he could not throw so large a sum as his associates into the common stock, engaged to take the department of greatest fatigue and danger, and to command in person the armament which was to go first upon discovery. Almagro offered to conduct the supplies of provisions and reinforcements of troops, of which Pizarro might stand in need. Luque was to remain at Panama to negotiate with the governor, and superintend whatever was carrying on for the general interest. As the spirit of enthusiasm uniformly accompanied that of adventure in the New World, and by that strange union both acquired an increase of force, this confederacy, formed by ambition and avarice, was confirmed by the most solemn act of

religion. Luque celebrated mass, divided a consecrated host into three, and reserving one part to himself, gave the other two to his associates, of which they partook; and thus, in the name of the Prince of Peace, ratified a contract of which plunder and bloodshed were the objects.

The attempt was begun with a force more suited to the humble condition of the three associates than to the greatness of the enterprise in which they were engaged. Pizarro set sail from Panama [Nov. 14], with a single vessel of small burden and a hundred and twelve men. But in that age, so little were the Spanish acquainted with the peculiarities of the climate in America, that the time which Pizarro chose for his departure was the most improper in the whole year; the periodical winds, which were then set in, being directly adverse to the course which he proposed to steer. After beating about for seventy days, with much danger and incessant fatigue, Pizarro's progress towards the south-east was not greater than what a skilful navigator will now make in as many hours. He touched at several places on the coast of *Tierra Firme*, but found every where the same uninviting country which former adventurers had described; the low grounds converted into swamps by an overflowing of rivers; the higher, covered with impervious woods; few inhabitants, and those fierce and hostile. Famine, fatigue, frequent rencounters with the natives, and, above all, the distempers of a moist, sultry climate, combined in wasting his slender band of followers. [1525.] The undaunted resolution of their leader continued, however, for some time, to sustain their spirits, although no sign had yet appeared of discovering those golden regions to which he had promised to conduct them. At length he was obliged to abandon that inhospitable coast, and retire to Chuchama, opposite to the pearl islands, where he hoped to receive a supply of provisions and troops from Panama.

But Almagro, having sailed from that port with seventy men, stood directly towards that part of the continent where he hoped to meet with his associates. Not finding them there, he landed his soldiers, who, in searching for their companions, underwent the same distresses, and were exposed to the same dangers, which had driven them out of the country. Repulsed at length by the Indians in a sharp conflict, in which their leader lost one of his eyes by the wound of an arrow, they likewise were compelled to re-embark. Chance led them to the place of Pizarro's retreat, where they found some consolation in recounting to each other their adventures, and comparing their sufferings. As Almagro had advanced as far as the river St. Juan [June 24], in the province of Popayan, where both the country and inhabitants appeared with a more promising aspect, that dawn of better fortune was sufficient to determine such sanguine projectors not to abandon their scheme, notwithstanding all that they had suffered in prosecuting it. [126]

1526.] Almagro repaired to Panama in hopes of recruiting their shattered troops. But what he and Pizarro had suffered gave his countrymen such an unfavorable idea of the service, that it was with difficulty he could levy fourscore men. Feeble as this reinforcement was, Almagro took the command of it, and, having joined Pizarro, they did not hesitate about resuming their operations. After a long series of disasters and disappointments, not inferior to those which they had already experienced, part of the armament reached the Bay of St. Matthew, on the coast of Quito, and landing at Tacamez, to the south of the river of Emmeraulds, they beheld a country more champaign and fertile than any they had yet discovered in the Southern Ocean, the natives clad in garments of woollen or cotton stuff, and adorned with several trinkets of gold and silver.

But notwithstanding those favorable appearances, magnified beyond the truth, both by the vanity of the persons who brought the report from Tacamez, and by the fond imagination of those who listened to them, Pizarro and Almagro durst not venture to invade a country so populous with a handful of men enfeebled by fatigue and diseases. They retired to the small island of Gallo, where Pizarro remained with part of the troops, and his associates returned to Panama, in hopes of bringing such a reinforcement as might enable them to take possession of the opulent territories whose existence seemed to be no longer doubtful.

But some of the adventurers, less enterprising, or less hardy, than their leaders, having secretly conveyed lamentable accounts of their sufferings and losses to their friends at Panama, Almagro met with an unfavorable reception from Pedro de los Rios, who had succeeded Pedrarias in the government of that settlement.

After weighing the matter with that cold economical prudence which appears the first of all virtues to persons whose limited faculties are incapable of conceiving or executing great designs, he concluded an expedition, attended with such certain waste of men, to be so detrimental to an infant and feeble colony, that he not only prohibited the raising of new levies, but dispatched a vessel to bring home Pizarro and his companions from the island of Gallo. Almagro and Luque, though deeply affected with those measures, which they could not prevent, and durst not oppose, found means of communicating their sentiments privately to Pizarro, and exhorted him not to relinquish an enterprise that was the foundation of all their hopes, and the only means of re-establishing their reputation and fortune, which were both on the decline. Pizarro's mind, bent with inflexible obstinacy on all its purposes, needed no incentive to persist in the scheme. He peremptorily refused to obey the governor of Panama's orders, and employed all his address and eloquence in persuading his men not to abandon him. But the incredible calamities to which they had been exposed were still so recent in their memories, and the thoughts of revisiting their families and friends, after a long absence, rushed with such joy into their minds, that when Pizarro drew a line upon the sand with his sword, permitting such as wished to return home to pass over it, only thirteen of all the daring veterans in his service had resolution to remain with their commander.

This small but determined band, whose names the Spanish historians record with deserved praise, as the persons to whose persevering fortitude their country is indebted for the most valuable of all its American possessions, fixed their residence in the island of Gorgona. This, as it was further removed from the coast than Gallo, and uninhabited, they considered as a more secure retreat, where, unmolested, they might wait for supplies from Panama, which they trusted that the activity of their associates would be able to procure. Almagro and Luque were not inattentive or cold solicitors, and their incessant importunity was seconded by the general voice of the colony, which exclaimed loudly against the infamy of exposing brave men, engaged in the public service, and chargeable with no error but what flowed from an excess of zeal and courage, to perish like the most odious criminals in a desert island. Overcome by those entreaties and expostulations, the governor at last consented to send a small vessel to their relief. But that he might not seem to encourage Pizarro to any new enterprise, he would not permit one landman to embark on board of it.

By this time, Pizarro and his companions had remained five months in an island infamous for the most unhealthy climate in that region of America. [127] During all this period, their eyes were turned towards Panama, in hopes of succour from their countrymen; but worn out at length with fruitless expectations, and dispirited with suffering hardships of which they saw no end, they, in despair, came to a resolution of committing themselves to the ocean on a float, rather than continue in that detestable abode. But, on the arrival of the vessel from Panama, they were transported with such joy that all their sufferings were forgotten. Their hopes revived; and, with a rapid transition not unnatural among men accustomed by their mode of life to sudden vicissitudes of fortune, high confidence succeeded to extreme dejection, Pizarro easily induced not only his own followers, but the crew of the vessel from Panama, to resume his former scheme with fresh ardor. Instead of returning to Panama, they stood towards the south-east, and, more fortunate in this than in any of their past efforts, they, on the twentieth day after their departure from Gorgona, discovered the coast of Peru. After touching at several villages near the shore, which they found to be nowise inviting, they landed at Tumbez, a place of some note about three degrees south of the line, distinguished for its stately temple, and a palace of the *Incas* or sovereigns of the country. There the Spaniards feasted their eyes with the first view of the opulence and civilization of the Peruvian empire. They beheld a country fully peopled, and cultivated with an appearance of regular industry; the natives decently clothed, and possessed of ingenuity so far surpassing the other inhabitants of the New World as to have the use of tame domestic animals. But what chiefly attracted their notice was such a show of gold and silver, not only in the ornaments of their persons and temples, but in several vessels and utensils for common use, formed of those precious metals, as left no room to doubt that they abounded with profusion in the country. Pizarro and his

companions seemed now to have attained to the completion of their most sanguine hopes, and fancied that all their wishes and dreams of rich domains, and inexhaustible treasures, would soon be realized.

But with the slender force then under his command, Pizarro could only view the rich country of which he hoped hereafter to obtain possession. He ranged, however, for some time along the coast, maintaining every where a peaceable intercourse with the natives, no less astonished at their new visitants than the Spaniards were with the uniform appearance of opulence and cultivation which they beheld. [1527.] Having explored the country as far as requisite to ascertain the importance of the discovery, Pizarro procured from the inhabitants some of their *Llamas* or tame cattle, to which the Spaniards gave the name of sheep, some vessels of gold and silver, as well as some specimens of their other works of ingenuity, and two young men, whom he proposed to instruct in the Castilian language, that they might serve as interpreters in the expedition which he meditated. With these he arrived at Panama, towards the close of the third year from the time of his departure thence. No adventurer of the age suffered hardships or encountered dangers which equal those to which he was exposed during this long period. The patience with which he endured the one, and the fortitude with which he surmounted the other, exceed whatever is recorded in the history of the New World, where so many romantic displays of those virtues occur.

[1528.] Neither the splendid relation that Pizarro gave of the incredible opulence of the country which he had discovered, nor his bitter complaints on account of that unreasonable recall of his forces, which had put it out of his power to attempt making any settlement there, could move the governor of Panama to swerve from his former plan of conduct. He still contended, that the colony was not in a condition to invade such a mighty empire, and refused to authorize an expedition which he foresaw would be so alluring that it might ruin the province in which he presided, by an effort beyond its strength. His coldness, however, did not in any degree abate the ardor of the three associates; but they perceived that they could not carry their scheme into execution without the countenance of superior authority, and must solicit their sovereign to grant that permission which they could not extort from his delegate. With this view, after adjusting among themselves that Pizarro should claim the station of governor, Almagro that of lieutenant-governor, and Luque the dignity of bishop in the country which they proposed to conquer, they sent Pizarro as their agent to Spain, though their fortunes were now so much exhausted by the repeated efforts which they had made, that they found some difficulty in borrowing the small sum requisite towards equipping him for the voyage.

Pizarro lost no time in repairing to court; and new as the scene might be to him, he appeared before the emperor with the unembarrassed dignity of a man conscious of what his services merited; and he conducted his negotiation with an insinuating dexterity of address, which could not have been expected either from his education or former habits of life. His feeling description of his own sufferings, and his pompous account of the country which he had discovered, confirmed by the specimens of its productions which he exhibited, made such an impression both on Charles and his ministers, that they not only approved of the intended expedition, but seemed to be interested in the success of its leader. Presuming on these dispositions in his favor, Pizarro paid little attention to the interest of his associates. As the pretensions of Luque did not interfere with his own, he attained for him the ecclesiastical dignity to which he aspired. For Almagro he claimed only the command of the fortress which should be erected at Tumbez. To himself he secured whatever his boundless ambition could desire. He was appointed [July 26] governor, captain-general, and adelantado of all the country which he had discovered, and hoped to conquer, with supreme authority, civil as well as military; and with full right to all the privileges and emoluments usually granted to adventurers in the New World. His jurisdiction was declared to extend two hundred leagues along the coast to the south of the river St. Jago; to be independent of the governor of Panama; and he had power to nominate all the officers who were to serve under him. In return for those concessions, which cost the court of Spain nothing, as the enjoyment of them depended upon the success of Pizarro's own efforts, he engaged to raise two hundred and fifty men, and to provide the ships, arms, and warlike stores requisite towards subjecting to the crown of Castile the country of which the government was allotted him.

[1529.] Inconsiderable as the body of men was which Pizarro had undertaken to raise, his funds and credit were so low that he could hardly complete half the number; and after obtaining his patents from the crown, he was obliged to steal privately out of the port of Seville, in order to elude the scrutiny of the officers, who had it in charge to examine whether he had fulfilled the stipulations of his contract. Before his departure, however, he received some supply of money from Cortes, who having returned to Spain about this time, was willing to contribute his aid towards enabling an ancient companion, with whose talents and courage he was well acquainted, to begin a career of glory similar to that which he himself had finished.

He landed at Nombre de Dios, and marched across the isthmus to Panama, accompanied by his three brothers, Ferdinand, Juan, and Gonzalo, of whom the first was born in lawful wedlock, the two latter, like himself, were of illegitimate birth, and by Francisco de Alcantara, his mother's brother. They were all in the prime of life, and of such abilities and courage as fitted them to take a distinguished part in his subsequent transactions.

[1530.] On his arrival at Panama, Pizarro found Almagro so much exasperated at the manner in which he had conducted his negotiation, that he not only refused to act any longer in concert with a man by whose perfidy he had been excluded from the power and honors to which he had a just claim, but labored to form a new association, in order to thwart or to rival his former confederate in his discoveries. Pizarro, however, had more wisdom and address than to suffer a rupture so fatal to all his schemes, to become irreparable. By offering voluntarily to relinquish the office of adelantado, and promising to concur in soliciting that title, with an independent government for Almagro, he gradually mitigated the rage of an open-hearted soldier, which had been violent, but was not implacable. Luque, highly satisfied with having been successful in all his own pretensions, cordially seconded Pizarro's endeavors. A reconciliation was effected, and the confederacy renewed on its original terms, that the enterprise should be carried on at the common expense of the associates, and the profits accruing from it should be equally divided among them.

Even after their reunion, and the utmost efforts of their interest, three small vessels, with a hundred and eighty soldiers, thirty-six of whom were horsemen, composed the armament which they were able to fit out. But the astonishing progress of the Spaniards in America had inspired them with such ideas of their own superiority, that Pizarro did not hesitate to sail with this contemptible force, [Feb. 1531,] to invade a great empire, Almagro was left at Panama, as formerly, to follow him with what reinforcement of men he should be able to muster. As the season for embarking was properly chosen, and the course of navigation between Panama and Peru was now better known, Pizarro completed the voyage in thirteen days; though by the force of the winds and currents he was carried above a hundred leagues to the north of Tumbez, the place of his destination, and obliged to land his troops in the bay of St. Matthew. Without losing a moment, he began to advance towards the south, taking care, however, not to depart far from the sea shore, both that he might easily effect a junction with the supplies which he expected from Panama, and secure a retreat in case of any disaster, by keeping as near as possible to his ships. But as the country in several parts on the coast of Peru is barren, unhealthy, and thinly peopled; as the Spaniards had to pass all the rivers near their mouth, where the body of water is greatest; and as the imprudence of Pizarro, in attacking the natives when he should have studied to gain their confidence, had forced them to abandon their habitations; famine, fatigue, and diseases of various kinds brought upon him and his followers calamities hardly inferior to those which they had endured in their former expedition. What they now experienced corresponded so ill with the alluring description of the country given by Pizarro, that many began to reproach him, and every soldier must have become cold to the service, if even in this unfertile region of Peru, they had not met with some appearances of wealth, and cultivation, which seemed to justify the report of their leader. At length they reached the province of Coaque [April 14]; and having surprised the principal settlement of the natives, they seized their vessels and ornaments of gold and silver, to the amount of thirty thousand pesos, with other booty of such value as dispelled all their doubts, and inspired the most desponding with sanguine hopes. Pizarro himself was so much delighted with this rich

spoils, which he considered as the first fruits of a land abounding with treasure, that he instantly despatched one of his ships to Panama with a large remittance to Almagro; and another to Nicaragua with a considerable sum to several persons of influence in that province, in hopes of alluring adventurers by this early display of the wealth which he had acquired. Meanwhile, he continued his march along the coast, and disdaining to employ any means of reducing the natives but force, he attacked them with such violence in their scattered habitations, as compelled them either to retire into the interior country, or to submit to his yoke. This sudden appearance of invaders, whose aspect and manners were so strange, and whose power seemed to be so irresistible, made the same dreadful impression as in other parts of America. Pizarro hardly met with resistance until he attacked the island of Puna in the bay of Guayaquil. As that was better peopled than the country through which he had passed, and its inhabitants fiercer and less civilized than those of the continent, they defended themselves with such obstinate valor, that Pizarro spent six months in reducing them to subjection. From Puna he proceeded to Tumbez, where the distempers which raged among his men compelled him to remain for three months.

While he was thus employed, he began to reap advantage from his attention to spread the fame of his first success to Coaque. Two different detachments arrived from Nicaragua [1532], which, though neither exceeded thirty men, he considered as a reinforcement of great consequence to his feeble band, especially as the one was under the command of Sebastian Benaleazar, and the other of Hernando Soto, officers not inferior in merit and reputation to any who had served in America. From Tumbez he proceeded to the river Piura [May 16], and in an advantageous station near the mouth of it he established the first Spanish colony in Peru; to which he gave the name of St. Michael.

As Pizarro continued to advance towards the centre of the Peruvian empire, he gradually received more full information concerning its extent and policy, as well as the situation of its affairs at that juncture. Without some knowledge of these, he could not have conducted his operations with propriety; and without a suitable attention to them, it is impossible to account for the progress which the Spaniards had already made, or to unfold the causes of their subsequent success.

At the time when the Spaniards invaded Peru, the dominions of its sovereigns extended in length, from north to south, above fifteen hundred miles along the Pacific Ocean. Its breadth, from east to west, was much less considerable; being uniformly bounded by the vast ridge of the Andes, stretching from its one extremity to the other. Peru, like the rest of the New World, was originally possessed by small independent tribes, differing from each other in manners, and in their forms of rude policy. All, however, were so little civilized, that, if the traditions concerning their mode of life, preserved among their descendants, deserve credit, they must be classed among the most unimproved savages of America. Strangers to every species of cultivation or regular industry, without any fixed residence, and unacquainted with those sentiments and obligations which form the first bonds of social union, they are said to have roamed about naked in the forests, with which the country was then covered, more like wild beasts than like men. After they had struggled for several ages with the hardships and calamities which are inevitable in such a state, and when no circumstance seemed to indicate the approach of any uncommon effort towards improvement, we are told that there appeared, on the banks of the lake Titicaca, a man and woman of majestic form, clothed in decent garments. They declared themselves to be children of the Sun, sent by their beneficent parent, who beheld with pity the miseries of the human race, to instruct and to reclaim them. At their persuasion, enforced by reverence for the divinity in whose name they were supposed to speak, several of the dispersed savages united together, and, receiving their commands as heavenly injunctions, followed them to Cuzco, where they settled, and began to lay the foundations of a city.

Manco Capac and Mama Ocollo, for such were the names of those extraordinary personages, having thus collected some wandering tribes, formed that social union which, by multiplying the desires and uniting the efforts of the human species, excites industry and leads to improvement. Manco Capac instructed the men in agriculture, and other useful arts. Mama Ocollo taught the women to spin and to weave. By the labor of the one sex, subsistence became less precarious; by that of the other, life was rendered more comfortable. After

securing the objects of first necessity in an infant state, by providing food, raiment, and habitations for the rude people of whom he took charge, Manco Capac turned his attention towards introducing such laws and policy as might perpetuate their happiness. By his institutions, which shall be more particularly explained hereafter, the various relations in private life were established, and the duties resulting from them prescribed with such propriety, as gradually formed a barbarous people to decency of manners. In public administration, the functions of persons in authority were so precisely defined, and the subordination of those under their jurisdiction maintained with such a steady hand, that the society in which he presided soon assumed the aspect of a regular and well governed state.

Thus, according to the Indian tradition, was founded the empire of the Incas or Lords of Peru. At first its extent was small. The territory of Manco Capac did not reach above eight leagues from Cuzco. But within its narrow precincts he exercised absolute and uncontrolled authority. His successors, as their dominions extended, arrogated a similar jurisdiction over the new subjects which they acquired; the despotism of Asia was not more complete. The Incas were not only obeyed as monarchs, but revered as divinities. Their blood was held to be sacred, and, by prohibiting intermarriages with the people, was never contaminated by mixing with that of any other race. The family, thus separated from the rest of the nation, was distinguished by peculiarities in dress and ornaments, which it was unlawful for others to assume. The monarch himself appeared with ensigns of royalty reserved for him alone; and received from his subjects marks of obsequious homage and respect which approached almost to adoration.

But, among the Peruvians, this unbounded power of their monarch seems to have been uniformly accompanied with attention to the good of their subjects. It was not the rage of conquest, if we may believe the accounts of their countrymen, that prompted the Incas to extend their dominions, but the desire of diffusing the blessings of civilization, and the knowledge of the arts which they possessed, among the barbarous people whom they reduced. During a succession of twelve monarchs, it is said that not one deviated from this beneficent character.

When the Spaniards first visited the coast of Peru, in the year one thousand five hundred and twenty-six, Huana Capac, the twelfth monarch from the founder of the state, was seated on the throne. He is represented as a prince distinguished not only for the pacific virtues peculiar to the race, but eminent for his martial talents. By his victorious arms the kingdom of Quito was subjected, a conquest of such extent and importance as almost doubled the power of the Peruvian empire. He was fond of residing in the capital of that valuable province which he had added to his dominions; and notwithstanding the ancient and fundamental law of the monarchy against polluting the royal blood by any foreign alliance, he married the daughter of the vanquished monarch of Quito. She bore him a son named Atahualpa, whom, on his death at Quito, which seems to have happened about the year one thousand five hundred and twenty-nine, he appointed his successor in that kingdom, leaving the rest of his dominions to Huascar, his eldest son by another of the royal race. Greatly as the Peruvians revered the memory of a monarch who had reigned with greater reputation and splendor than any of his predecessors, the destination of Huana Capac concerning the succession appeared so repugnant to a maxim coeval with the empire, and founded on authority deemed sacred, that it was no sooner known at Cuzco than it excited general disgust. Encouraged by those sentiments of his subjects, Huascar required his brother to renounce the government of Quito, and to acknowledge him as his lawful superior. But it had been the first care of Atahualpa to gain a large body of troops which had accompanied his father to Quito. These were the flower of the Peruvian warriors, to whose valor Huana Capac had been indebted for all his victories. Relying on their support, Atahualpa first eluded his brother's demand, and then marched against him in hostile array.

Thus the ambition of two young men, the title of the one founded on ancient usage, and that of the other asserted by the veteran troops, involved Peru in a civil war, a calamity to which, under a succession of virtuous princes, it had hitherto been a stranger. In such a contest the issue was obvious. The force of arms triumphed over the authority of laws. Atahualpa remained victorious, and made a cruel use of his victory. Conscious of the defect in his own title to the crown,

he attempted to exterminate the royal race, by putting to death all the children of the Sun descended from Manco Capac, whom he could seize either by force or stratagem. From a political motive, the life of his unfortunate rival Huascar, who had been taken prisoner in a battle which decided the fate of the empire, was prolonged for some time, that by issuing orders in his name, the usurper might more easily establish his own authority.

When Pizarro landed in the bay of St. Matthew, this civil war raged between the two brothers in its greatest fury. Had he made any hostile attempt in his former visit to Peru, in the year one thousand five hundred and twenty-seven, he must then have encountered the force of a powerful state, united under a monarch possessed of capacity as well as courage, and unembarrassed with any care that could divert him from opposing his progress. But at this time, the two competitors, though they received early accounts of the arrival and violent proceedings of the Spaniards, were so intent upon the operations of a war which they deemed more interesting, that they paid no attention to the motions of an enemy, too inconsiderable in number to excite any great alarm, and to whom it would be easy, as they imagined, to give a check when more at leisure.

By this fortunate coincidence of events, whereof Pizarro could have no foresight, and of which, from his defective mode of intercourse with the people of the country, he remained long ignorant, he was permitted to carry on his operations unmolested, and advanced to the centre of a great empire before one effort of its power was exerted to stop his career. During their progress, the Spaniards had acquired some imperfect knowledge of this struggle between the two contending factions. The first complete information with respect to it they received from messengers whom Huascar sent to Pizarro in order to solicit his aid against Atahualpa, whom he represented as a rebel and a usurper. Pizarro perceived at once the importance of this intelligence, and foresaw so clearly all the advantages which might be derived from this divided state of the kingdom which he had invaded, that without waiting for the reinforcement which he expected from Panama, he determined to push forward, while intestine discord put it out of the power of the Peruvians to attack him with their whole force, and while, by taking part, as circumstances should incline him, with one of the competitors, he might be enabled with greater ease to crush both. Enterprising as the Spaniards of that age were in all their operations against Americans, and distinguished as Pizarro was among his countrymen for daring courage, we can hardly suppose that, after having proceeded hitherto slowly, and with much caution, he would have changed at once his system of operation, and have ventured upon a measure so hazardous, without some new motive or prospect to justify it.

As he was obliged to divide his troops, in order to leave a garrison in St. Michael, sufficient to defend a station of equal importance as a place of retreat in case of any disaster, and as a port for receiving any supplies which should come from Panama, he began his march with a very slender and ill-accounted train of followers. They consisted of sixty-two horsemen [128], and a hundred and two foot soldiers, of whom twenty were armed with cross bows, and three with muskets. He directed his course towards Caxamalca, a small town at the distance of twelve days' march from St. Michael, where Atahualpa was encamped with a considerable body of troops. Before he had proceeded far, an officer despatched by the Inca met him with a valuable present from that prince, accompanied with a proffer of his alliance, and assurance of a friendly reception at Caxamalca. Pizarro, according to the usual artifice of his countrymen in America, pretended to come as the ambassador of a very powerful monarch, and declaring that he was now advancing with an intention to offer Atahualpa his aid against those enemies who disputed his title to the throne.

As the object of the Spaniards in entering their country was altogether incomprehensible to the Peruvians, they had formed various conjectures concerning it without being able to decide whether they should consider their new guests as beings of a superior nature, who had visited them from some beneficent motive, or as formidable avengers of their crimes, and enemies to their repose and liberty. The continual professions of the Spaniards, that they came to enlighten them with the knowledge of truth, and lead them in the way of happiness, favored the former opinion; the outrages which they committed, their rapa-

erosness and cruelty, were awful confirmations of the latter. While in this state of uncertainty, Pizarro's declaration of his pacific intentions so far removed all the Inca's fears that he determined to give him a friendly reception. In consequence of this resolution, the Spaniards were allowed to march in tranquillity across the sandy desert between St. Michael and Motupe, where the most feeble effort of an enemy, added to the unavoidable distresses which they suffered in passing through that comfortless region, must have proved fatal to them. [129] From Motupe they advanced towards the mountains which encompassed the low country of Peru, and passed through a defile so narrow and inaccessible, that a few men might have defended it against a numerous army. But here likewise, from the same inconsiderate credulity of the Inca, the Spaniards met with no opposition, and took quiet possession of a fort erected for the security of that important station. As they now approached near to Caxamalca, Atahualpa renewed his professions of friendship; and, as an evidence of their sincerity, sent them presents of greater value than the former.

On entering Caxamalca, Pizarro took possession of a large court, on one side of which was a house which the Spanish historians call a palace of the Inca, and on the other a temple of the Sun, the whole surrounded with a strong rampart or wall of earth. When he had posted his troops in this advantageous station, he despatched his brother Ferdinand and Hernando Soto to the camp of Atahualpa, which was about a league distant from the town. He instructed them to confirm the declaration which he had formerly made of his pacific disposition, and to desire an interview with the Inca, that he might explain more fully the intention of the Spaniards in visiting his country. They were treated with all the respectful hospitality usual among the Peruvians in the reception of their most cordial friends, and Atahualpa promised to visit the Spanish commander next day in his quarters. The decent deportment of the Peruvian monarch, the order of his court, and the reverence with which his subjects approached his person and obeyed his commands, astonished those Spaniards who had never met in America with any thing more dignified than the petty cazique of a barbarous tribe. But their eyes were still powerfully attracted by the vast profusion of wealth which they observed in the Inca's camp. The rich ornaments worn by him and his attendants, the vessels of gold and silver in which the repast offered to them was served up, the multitude of utensils of every kind formed of those precious metals, opened prospects far exceeding any idea of opulence that a European of the sixteenth century could form.

On their return to Caxamalca, while their minds were yet warm with admiration and desire of the wealth which they had beheld, they gave such a description of it to their countrymen as confirmed Pizarro in a resolution which he had already taken. From his own observation of American manners during his long service in the New World, as well as from the advantages which Cortes had derived from seizing Montezuma, he knew of what consequence it was to have the Inca in his power. For this purpose, he formed a plan as daring as it was perfidious. Notwithstanding the character that he had assumed of an ambassador from a powerful monarch, who courted an alliance with the Inca, and in violation of the repeated offers which he had made to him of his own friendship and assistance, he determined to avail himself of the unsuspecting simplicity with which Atahualpa relied on his professions, and to seize the person of the Inca during the interview to which he had invited him. He prepared for the execution of his scheme with the same deliberate arrangement, and with as little compunction as if it had reflected no disgrace on himself or his country. He divided his cavalry into three small squadrons, under the command of his brother Ferdinand, Soto, and Benalazar; his infantry were formed in one body, except twenty of most tried courage, whom he kept near his own person to support him in the dangerous service, which he reserved for himself; the artillery, consisting of two field-pieces, and the cross bowmen, were placed opposite to the avenue by which Atahualpa was to approach. All were commanded to keep within the square, and not to move until the signal for action was given.

Early in the morning [Nov. 16], the Peruvian camp was all in motion. But as Atahualpa was solicitous to appear with the greatest splendor and magnificence in his first interview with the strangers, the preparations for this were so tedious that the day was far advanced before he began his march. Even then, lest the order of the procession should be deranged, he moved so

slowly, that the Spaniards became impatient, and apprehensive that some suspicion of their intention might be the cause of this delay. In order to remove this, Pizarro despatched one of his officers with fresh assurances of his friendly disposition. At length the Inca approached. First of all appeared four hundred men, in a uniform dress, as barbers to clear the way before him. He himself, sitting on a throne or couch adorned with plumes of various colors, and almost covered with plates of gold and silver enriched with precious stones, was carried on the shoulders of his principal attendants. Behind him came some chief officers of his court, carried in the same manner. Several bands of singers and dancers accompanied this cavalcade; and the whole plain was covered with troops, amounting to more than thirty thousand men.

As the Inca drew near the Spanish quarters, Father Vincent Valverde, chaplain to the expedition, advanced with a crucifix in one hand, and a breviary in the other, and in a long discourse explained to him the doctrine of the creation, the fall of Adam, the incarnation, the sufferings and resurrection of Jesus Christ, the appointment of St. Peter as God's vicergerent on earth, the transmission of his apostolic power by succession to the Popes, the donation made to the King of Castile by Pope Alexander of all the regions of the New World. In consequence of all this, he required Atahualpa to embrace the Christian faith, to acknowledge the supreme jurisdiction of the Pope, and to submit to the King of Castile as his lawful sovereign; promising, if he complied instantly with this requisition, that the Castilian monarch would protect his dominions, and permit him to continue in the exercise of his royal authority; but if he should impiously refuse to obey this summons, he denounced war against him in his master's name, and threatened him with the most dreadful effects of his vengeance.

This strange harangue, unfolding deep mysteries, and alluding to unknown facts, of which no power of eloquence could have conveyed at once a distinct idea to an American, was so lamely translated by an unskilful interpreter, little acquainted with the idiom of the Spanish tongue, and incapable of expressing himself with propriety in the language of the Inca, that its general tenor was altogether incomprehensible to Atahualpa. Some parts in it, of more obvious meaning, filled him with astonishment and indignation. His reply, however, was temperate. He began with observing, that he was lord of the dominions over which he reigned by hereditary succession; and added, that he could not conceive how a foreign priest should pretend to dispose of territories which did not belong to him; that if such a preposterous grant had been made, he, who was the rightful possessor, refused to confirm it; that he had no inclination to renounce the religious institutions established by his ancestors; nor would he forsake the service of the Sun, the immortal divinity whom he and his people revered, in order to worship the God of the Spaniards, who was subject to death; that with respect to other matters contained in his discourse, as he had never heard of them before, and did not now understand their meaning, he desired to know where the priest had learned things so extraordinary. "In this book," answered Valverde, reaching out to him his breviary. The Inca opened it eagerly, and, turning over the leaves, lifted it to his ear: "This," says he, "is silent; it tells me nothing;" and threw it with disdain to the ground. The enraged monk, running towards his countrymen, cried out, "To arms, Christians, to arms; the word of God is insulted; avenge this profanation on those impious dogs." [130]

Pizarro, who, during this long conference, had with difficulty restrained his soldiers, eager to seize the rich spoils of which they had now so near a view, immediately gave the signal of assault. At once the martial music struck up, the cannon and muskets began to fire, the horse sallied out fiercely to the charge, the infantry rushed on sword in hand. The Peruvians, astonished at the suddenness of an attack which they did not expect, and dismayed with the destructive effect of the fire-arms, and the irresistible impression of the cavalry, fled with universal consternation on every side, without attempting either to annoy the enemy, or to defend themselves. Pizarro, at the head of his chosen band, advanced directly towards the Inca; and though his nobles crowded around him with officious zeal, and fell in numbers at his feet, while they vied one with another in sacrificing their own lives, that they might cover the sacred person of their sovereign, the Spaniards soon penetrated to the royal seat; and Pizarro, seizing the Inca by the arm, dragged him to the ground, and carried him as a prisoner to his quarters. The fate

of the monarch increased the precipitate flight of his followers. The Spaniards pursued them towards every quarter, and with deliberate and unrelenting barbarity continued to slaughter wretched fugitives, who never once offered to resist. The carnage did not cease until the close of day. Above four thousand Peruvians were killed. Not a single Spaniard fell, nor was one wounded but Pizarro himself, whose hand was slightly hurt by one of his own soldiers, while struggling eagerly to lay hold on the Inca. [131]

The plunder of the field was rich beyond any idea which the Spaniards had yet formed concerning the wealth of Peru; and they were so transported with the value of the acquisition, as well as the greatness of their success, that they passed the night in the extravagant exultation natural to indigent adventurers on such an extraordinary change of fortune.

At first the captive monarch could hardly believe a calamity which he so little expected to be real. But he soon felt all the misery of his fate, and the dejection into which he sunk was in proportion to the height of grandeur from which he had fallen. Pizarro, afraid of losing all the advantages which he hoped to derive from the possession of such a prisoner, labored to console him with professions of kindness and respect, that corresponded ill with his actions. By residing among the Spaniards, the Inca quickly discovered their ruling passion, which indeed they were in nowise solicitous to conceal, and, by applying to that, made an attempt to recover his liberty. He offered as a ransom what astonished the Spaniards, even after all they now knew concerning the opulence of his kingdom. The apartment in which he was confined was twenty-two feet in length and sixteen in breadth; he undertook to fill it with vessels of gold as high as he could reach. Pizarro closed eagerly with this tempting proposal, and a line was drawn upon the walls of the chamber, to mark the stipulated height to which the treasure was to rise.

Atahualpa, transported with having obtained some prospect of liberty, took measures instantly for fulfilling his part of the agreement, by sending messengers to Cuzco, Quito, and other places, where gold had been amassed in largest quantities, either for adorning the temples of the gods, or the houses of the Inca, to bring what was necessary for completing his ransom directly to Caxamalca. Though Atahualpa was now in the custody of his enemies, yet so much were the Peruvians accustomed to respect every mandate issued by their sovereign, that his orders were executed with the greatest alacrity. Soothed with hopes of recovering his liberty by this means, the subjects of the Inca were afraid of endangering his life by forming any other scheme for his relief; and though the force of the empire was still entire, no preparations were made, and no army assembled to avenge their own wrongs or those of their monarch. The Spaniards remained in Caxamalca tranquil and unmolested. Small detachments of their number marched into remote provinces of the empire, and, instead of meeting with any opposition, were every where received with marks of the most submissive respect. [132]

Inconsiderable as those parties were, and desirous as Pizarro might be to obtain some knowledge of the interior state of the country, he could not have ventured upon any diminution of his main body, if he had not about this time [December,] received an account of Almagro's having landed at St. Michael with such a reinforcement as would almost double the number of his followers. The arrival of this long expected succour was not more agreeable to the Spaniards than alarming to the Inca. He saw the power of his enemies increase; and as he knew neither the source whence they derived their supplies, nor the means by which they were conveyed to Peru, he could not foresee to what a height the inundation that poured in upon his dominions might rise [1533]. While disquieted with such apprehensions, he learned that some Spaniards, in their way to Cuzco, had visited his brother Huascar in the place where he kept him confined, and that the captive prince had represented to them the justice of his own cause, and, as an inducement to espouse it, had promised them a quantity of treasure greatly beyond that which Atahualpa had engaged to pay for his ransom. If the Spaniards should listen to this proposal, Atahualpa perceived his own destruction to be inevitable; and suspecting that their insatiable thirst for gold would tempt them to lend a favorable ear to it, he determined to sacrifice his brother's life that he might save his own; and his orders for this purpose were executed, like all his other commands, with scrupulous punctuality.

Meanwhile, Indians daily arrived at Caxamalca from

different parts of the kingdom, loaded with treasure. A great part of the stipulated quantity was now amassed, and Atahualpa assured the Spaniards that the only thing which prevented the whole from being brought in, was the remoteness of the provinces where it was deposited. But such vast piles of gold presented continually to the view of needy soldiers, had so inflamed their avarice, that it was impossible any longer to restrain their impatience to obtain possession of this rich booty. Orders were given for melting down the whole, except some pieces of curious fabric reserved as a present for the emperor. After setting apart the fifth due to the crown, and a hundred thousand pesos as a donative to the soldiers which arrived with Almagro, there remained one million five hundred and twenty-eight thousand five hundred pesos to Pizarro and his followers. The festival of St. James [July 25], the patron saint of Spain, was the day chosen for the partition of this enormous sum, and the manner of conducting it strongly marks the strange alliance of fanaticism with avarice, which I have more than once had occasion to point out as a striking feature in the character of the conquerors of the New World. Though assembled to divide the spoils of an innocent people, procured by deceit, extortion, and cruelty, the transaction began with a solemn invocation of the name of God, as if they could have expected the guidance of heaven in distributing those wages of iniquity. In this division above eight thousand pesos, at that time not inferior in effective value to as many pounds sterling in the present century, fell to the share of each horseman, and half that sum to each foot soldier. Pizarro himself, and his officers, received dividends in proportion to the dignity of their rank.

There is no example in history of such a sudden acquisition of wealth by military service, nor was ever a sum so great divided among so small a number of soldiers. Many of them having received a recompense for their services far beyond their most sanguine hopes, were so impatient to retire from fatigue and danger, in order to spend the remainder of their days in their native country in ease and opulence, that they demanded their discharge with clamorous importunity. Pizarro, sensible that from such men he could expect neither enterprise in action nor fortitude in suffering, and persuaded that wherever they went the display of their riches would allure adventurers, less opulent but more hardy, to his standard, granted their suit without reluctance, and permitted above sixty of them to accompany his brother Ferdinand, whom he sent to Spain with an account of his success, and the present destined for the emperor.

The Spaniards having divided among them the treasure amassed for the Inca's ransom, he insisted with them to fulfil their promise of setting him at liberty. But nothing was further from Pizarro's thoughts. During his long service in the New World, he had imbibed those ideas and maxims of his fellow-soldiers, which led them to consider its inhabitants as an inferior race, neither worthy of the name, nor entitled to the rights of men. In his compact with Atahualpa, he had no other object than to amuse his captive with such a prospect of recovering his liberty, as might induce him to lend all the aid of his authority towards collecting the wealth of his kingdom. Having now accomplished this, he no longer regarded his plighted faith; and at the very time when the credulous prince hoped to be replaced on his throne, he had secretly resolved to bereave him of life. Many circumstances seem to have concurred in prompting him to this action, the most criminal and atrocious that stains the Spanish name, amidst all the deeds of violence committed in carrying on the conquests of the New World.

Though Pizarro had seized the Inca in imitation of Cortes's conduct towards the Mexican monarch, he did not possess talents for carrying on the same artful plan of policy. Destitute of the temper and address requisite for gaining the confidence of his prisoner, he never reaped all the advantages which might have been derived from being master of his person and authority. Atahualpa was, indeed, a prince of greater abilities and discernment than Montezuma, and seems to have penetrated more thoroughly into the character and intentions of the Spaniards. Mutual suspicion and distrust accordingly took place between them. The strict attention with which it was necessary to guard a captive of such importance, greatly increased the fatigue of military duty. The utility of keeping him appeared inconceivable; and Pizarro felt him as an encumbrance, from which he wished to be delivered.

Almagro and his followers had made a demand of an equal share in the Inca's ransom; and though

Pizarro had bestowed upon the private men the large gratuity which I have mentioned, and endeavored to soothe their leader by presents of great value, they still continued dissatisfied. They were apprehensive, that as long as Atahualpa remained a prisoner, Pizarro's soldiers would apply whatever treasure should be acquired, to make up what was wanting of the quantity stipulated for his ransom, and under that pretext exclude them from any part of it. They insisted eagerly on putting the Inca to death, that all the adventurers in Peru might thereafter be on an equal footing.

Pizarro himself began to be alarmed with accounts of forces assembling in the remote provinces of the empire, and suspected Atahualpa of having issued orders for that purpose. These fears and suspicions were artfully increased by Philipillo, one of the Indians, whom Pizarro had carried off from Tumbez in the year one thousand five hundred and twenty-seven, and whom he employed as an interpreter. The function which he performed admitting this man to familiar intercourse with the captive monarch, he presumed, notwithstanding the meanness of his birth, to raise his affections to a Coya, or descendant of the Sun, one of Atahualpa's wives; and seeing no prospect of gratifying that passion during the life of the monarch, he endeavored to fill the ears of the Spaniards with such accounts of the Inca's secret designs and preparations, as might awaken their jealousy, and excite them to cut him off.

While Almagro and his followers openly demanded the life of the Inca, and Philipillo labored to ruin him by private machinations, that unhappy prince inadvertently contributed to hasten his own fate. During his confinement he had attached himself with peculiar affection to Ferdinand Pizarro and Hernando Soto; who, as they were persons of birth and education superior to the rough adventurers with whom they served, were accustomed to behave with more decency and attention to the captive monarch. Soothed with this respect from persons of such high rank, he delighted in their society. But in the presence of the governor he was always uneasy and overawed. This dread soon came to be mingled with contempt. Among all the European arts, what he admired most was that of reading and writing; and he long deliberated with himself, whether he should regard it as a natural or acquired talent. In order to determine this, he desired one of the soldiers, who guarded him, to write the name of God on the nail of his thumb. This he showed successively to several Spaniards, asking its meaning; and to his amazement, they all, without hesitation, returned the same answer. At length Pizarro entered; and, on presenting it to him, he blushed, and with some confusion was obliged to acknowledge his ignorance. From that moment Atahualpa considered him as a mean person less instructed than his own soldiers; and he had not address enough to conceal the sentiments with which this discovery inspired him. To be the object of a barbarian's scorn, not only mortified the pride of Pizarro, but excited such resentment in his breast, as added force to all the other considerations which prompted him to put the Inca to death.

But in order to give some color of justice to this violent action, and that he himself might be exempted from standing singly responsible for the commission of it, Pizarro resolved to try the Inca with all the formalities observed in the criminal courts of Spain. Pizarro himself, and Almagro, with two assistants, were appointed judges, with full power to acquit or to condemn; an attorney-general was named to carry on the prosecution in the king's name; counsellors were chosen to assist the prisoner in his defence; and clerks were ordained to record the proceedings of court. Before this strange tribunal, a charge was exhibited still more amazing. It consisted of various articles; that Atahualpa, though a bastard, had dispossessed the rightful owner of the throne, and usurped the regal power; that he had put his brother and lawful sovereign to death; that he was an idolater, and had not only permitted but commanded the offering of human sacrifices; that he had a great number of concubines; that since his imprisonment he had wasted and embezzled the royal treasures, which now belonged of right to the conquerors; that he had incited his subjects to take arms against the Spaniards. On these heads of accusation, some of which are so ludicrous, others so absurd, that the effrontery of Pizarro, in making them the foundation of a serious procedure, is not less surprising than his injustice, did this strange court go on to try the sovereign of a great empire, over whom it had no jurisdiction. With respect to each of the articles,

witnesses were examined; but as they delivered their evidence in their native tongue, Philipillo had it in his power to give their words whatever turn best suited his malevolent intentions. To judges pre-determined in their opinion, this evidence appeared sufficient. They pronounced Atahualpa guilty, and condemned him to be burnt alive. Friar Valverde prostituted the authority of his sacred function to confirm this sentence, and by his signature warranted it to be just. Astonished at his fate Atahualpa endeavored to avert it by tears, by promises, and by entreaties that he might be sent to Spain, where a monarch would be the arbiter of his lot. But pity never touched the unfeeling heart of Pizarro. He ordered him to be led instantly to execution; and what added to the bitterness of his last moments, the same monk who had just ratified his doom, offered to console and attempted to convert him. The most powerful argument Valverde employed to prevail with him to embrace the Christian faith, was a promise of mitigation in his punishment. The dread of a cruel death extorted from the trembling victim a desire of receiving baptism. The ceremony was performed; and Atahualpa, instead of being burnt, was strangled at the stake.

Happily for the credit of the Spanish nation, even among the profligate adventurers which it sent forth to conquer and desolate the New World, there were persons who retained some tincture of the Castilian generosity and honor. Though, before the trial of Atahualpa, Ferdinand Pizarro had set out for Spain, and Soto was sent on a separate command at a distance from Caxamalea, this odious transaction was not carried on without censure and opposition. Several officers, and among those some of the greatest reputation and most respectable families in the service, not only remonstrated but protested against this measure of their general, as disgraceful to their country, as repugnant to every maxim of equity, as a violation of public faith, and a usurpation of jurisdiction over an independent monarch, to which they had no title. But their laudable endeavors were vain. Numbers, and the opinion of such as held every thing to be lawful which they deemed advantageous, prevailed. History, however, records even the unsuccessful exertions of virtue with applause; and the Spanish writers, in relating events where the valor of their nation is more conspicuous than its humanity, have not failed to preserve the names of those who made this laudable effort to save their country from the infamy of having perpetrated such a crime.

On the death of Atahualpa, Pizarro invested one of his sons with the ensigns of royalty, hoping that a young man without experience might prove a more passive instrument in his hands than an ambitious monarch, who had been accustomed to independent command. The people of Cuzco, and the adjacent country, acknowledged Manco Capac, a brother of Huascar, as Inca. But neither possessed the authority which belonged to a sovereign of Peru. The violent convulsions into which the empire had been thrown, first by the civil war between the two brothers, and then by the invasion of the Spaniards, had not only deranged the order of the Peruvian government, but almost dissolved its frame. When they beheld their monarch a captive in the power of strangers, and at last suffering an ignominious death, the people in several provinces, as if they had been set free from every restraint of law and decency, broke out into the most licentious excesses. So many descendants of the Sun, after being treated with the utmost indignity, had been cut off by Atahualpa, that not only their influence in the state diminished with their number, but the accustomed reverence for that sacred race sensibly decreased. In consequence of this state of things, ambitious men in different parts of the empire aspired to independent authority, and usurped jurisdiction to which they had no title. The general who commanded for Atahualpa in Quito, seized the brother and children of his master, put them to a cruel death, and, disclaiming any connection with either Inca, endeavored to establish a separate kingdom for himself.

The Spaniards with pleasure beheld the spirit of discord diffusing itself, and the vigor of government relaxing among the Peruvians. They considered those disorders as symptoms of a state hastening towards its dissolution. Pizarro no longer hesitated to advance towards Cuzco, and he had received such considerable reinforcements, that he could venture, with little danger, to penetrate so far into the interior part of the country. The account of the wealth acquired at Caxamalea operated as he had foreseen. No sooner did his brother Ferdinand, with the officers and soldiers to whom he had given their discharge after the partition

of the Inca's ransom, arrive at Panama, and display their riches in the view of their astonished countrymen, than fame spread the account with such exaggeration through all the Spanish settlements on the South Sea, that the governors of Guatimala, Panama, and Nicaragua, could hardly restrain the people under their jurisdiction, from abandoning their possessions, and crowding to that inexhaustible source of wealth which seemed to be opened in Peru. In spite of every check and regulation, such numbers resorted thither, that Pizarro began his march at the head of five hundred men, after leaving a considerable garrison in St Michael, under the command of Benalcazar. The Peruvians had assembled some large bodies of troops to oppose his progress. Several fierce encounters happened. But they terminated like all the actions in America; a few Spaniards were killed or wounded; the natives were put to flight with incredible slaughter. At length Pizarro forced his way to Cuzco, and took quiet possession of that capital. The riches found there, even after all that the natives had carried off and concealed, either from a superstitious veneration for the ornaments of their temples, or out of hatred to their rapacious conquerors, exceed in value what had been received as Atahualpa's ransom. But as the Spaniards were now accustomed to the wealth of the country, and it came to be parcelled out among a great number of adventurers, this dividend did not excite the same surprise, either from novelty, or the largeness of the sum that fell to the share of each individual. [133]

During the march to Cuzco, that son of Atahualpa whom Pizarro treated as Inca, died; and as the Spaniards substituted no person in his place, the title of Manco Capac seems to have been universally recognised.

While his fellow-soldiers were thus employed, Benalcazar, governor of St. Michael, an able and enterprising officer, was ashamed of remaining inactive, and impatient to have his name distinguished among the discoverers and conquerors of the New World. The seasonable arrival of a fresh body of recruits from Panama and Nicaragua put it in his power to gratify this passion. Leaving a sufficient force to protect the infant settlement intrusted to his care, he placed himself at the head of the rest, and set out to attempt the reduction of Quito, where, according to the report of the natives, Atahualpa had left the greatest part of his treasure. Notwithstanding the distance of that city from St. Michael, the difficulty of marching through a mountainous country covered with woods, and the frequent and fierce attacks of the best troops in Peru commanded by a skilful leader, the valor, good conduct, and perseverance of Benalcazar surmounted every obstacle, and he entered Quito with his victorious troops. But they met with a cruel mortification there. The natives now acquainted to their sorrow with the predominant passion of their invaders, and knowing how to disappoint it, had carried off all those treasures, the prospect of which had prompted them to undertake this arduous expedition, and had supported them under all the dangers and hardships wherewith they had to struggle in carrying it on.

Benalcazar was not the only Spanish leader who attacked the kingdom of Quito. The fame of its riches attracted a more powerful enemy. Pedro de Alvarado, who had distinguished himself so eminently in the conquest of Mexico, having obtained the government of Guatimala as a recompense for his valor, soon became disgusted with a life of uniform tranquillity, and longed to be again engaged in the bustle of military service. The glory and wealth acquired by the conquerors of Peru heightened this passion, and gave it a determined direction. Believing, or pretending to believe, that the kingdom of Quito did not lie within the limits of the province allotted to Pizarro, he resolved to invade it. The high reputation of the commander allured volunteers from every quarter. He embarked with five hundred men, of whom above two hundred were of such distinction as to serve on horseback. He landed at Puerto Viejo, and without sufficient knowledge of the country, or proper guides to conduct him, attempted to march directly to Quito, by following the course of the river Guayaquil, and crossing the ridge of the Andes towards its head. But in this route, one of the most impracticable in all America, his troops endured such fatigue in forcing their way through forests and marshes on the low grounds, and suffered so much from excessive cold when they began to ascend the mountains, that before they reached the plain of Quito, a fifth part of the men and half their horses died, and the rest were so much dispirited and worn out, as to be almost unfit for service. [134] There

they met with a body, not of Indians, but of Spaniards, drawn in hostile array against them. Pizarro having received an account of Alvarado's armament, had detached Almagro with some troops to oppose this formidable invader of his jurisdiction; and these were joined by Benalcazar and his victorious party. Alvarado, though surprised at the sight of enemies whom he did not expect, advanced boldly to the charge. But, by the interposition of some moderate men in each party, an amicable accommodation took place; and the fatal period when Spaniards suspended their conquests to imbue their hands in the blood of their countrymen, was postponed a few years. Alvarado engaged to return to his government, upon Almagro's paying him a hundred thousand pesos to defray the expense of his armament. Most of his followers remained in the country; and an expedition, which threatened Pizarro and his colony with ruin, contributed to augment its strength.
