A few months after his elevation to the office of governor, Moreton assembled a parliament, which established a great variety of regulations, for the remedy of those little inconveniences that are incidental to the infancy of all colonial settlements. A law that was now enacted for raising the value of foreign coins gave rise to the currency of Carolina, which, in after times, incurred an extreme depreciation. In imitation of the early policy of the settlement of Albemarle, all prosecutions for foreign debts were suspended. But the proprietaries, now regarding with displeasure what they had formerly confirmed without animadversion, interposed to negative this enactment, declaring that it was contrary to the king's honor, since it obstructed the course of justice, and that the colonial parliament had no power to frame a law so inconsistent with the jurisprudence of England; and the more sensibly to manifest their displeasure, they issued orders that all officers who had promoted this enactment should be displaced. Another cause of dispute between the proprietaries and the province, arose from the manner in which this parliament had been constituted. The province at this time was divided into the three counties of Berkeley, Craven (including the district formerly called Charendon), and Colleton. The proprietaries had desired, that of the twenty members of whom the lower house of parliament was composed, ten should be elected by each of the counties of Berkeley and Colleton; the third being reckoned as yet too inconsiderable to merit a share of parliamentary representation. Berkeley, which contained the metropolis, was the only one of the counties which as yet possessed a county court; and the provincial government having appointed the election to be held at Charlestown, the inhabitants of Berkeley had combined to prevent the people of Colleton from voting at all, and had themselves returned the whole twenty members. They maintained that this

advantage was due to their own superiority in number of people; a circumstance which at least enabled them to realize the pretension it suggested. The proprietaries, however, were highly displeased with this contempt of their instructions, which they were no sooner informed of, than they gave orders that the parliament should be dissolved, and none other assembled in so irregular a manner. But their commands were unavailing; and this signal injustice, after maintaining its ground for some time, obtained the countenance and assent of the proprietaries themselves, and continued to subsist, till, at a later period, its abettors were compelled to yield to the indignant and unanimous voice of the people whom they had disfranchised. The proprietaries, meanwhile, were exceedingly displeased with the reiterated disobedience of their deputies, and, in a remonstrance which they addressed to the governor and council, they reminded them, in language which at least expresses good intentions, "that the power of magistracy is put into your hands for the good of the people, who ought not to be turned into prey, as we doubt hath been too much practised." It was remarked, that the greatest dealers in Indian slaves were the keenest opponents of the claim of Colleton county to share in the exercise of the elective franchise; exemplifying how the indulgence of selfishness and oppression in any one relation tends entirely to pervert or extinguish in men's minds the sense of what is due to the rights of others. The proprietaries, though at times they expressed themselves, as on this last occasion, with vigor and wisdom, seem to have been quite incapacitated, by ignorance or irresolution, from pursuing or enforcing a consistent course of policy. It was found that some of the councillors, and even the commissioners that had been appointed to watch over the interests of the Indians, encouraged the traffic in Indian slaves; and though Moreton was able to remove these delinquents from office, they succeeded in rendering his own situation so disagreeable to him, that he was constrained to resign his authority, which was immediately conferred on West, who suffered the people to continue the practice of inveigling and kidnapping the Indians without restraint. The proprietaries then intrusted the government to Sir Richard Kyrle, an Irishman, who died soon after his arrival in the province. [1684.] West, thereupon, was again chosen interim governor by the council, whose appointment, on this occasion, the proprietaries thought proper to confirm. He was, however, shortly after superseded by Colonel Quarry, who retained the office only till the following year, [1685.] when, in consequence of the countenance he was found to have given to piracy, he, in his turn, was dismissed, and Joseph Moreton re-instituted in the government.*

The American seas had long been infested by a race of daring adventurers, privateers in time of war, pirates in time of peace, whose martial exploits, and successful depredations on the rich colonies and commerce of Spain, enabled them to conciliate the regard or purchase the connivance of many of the inhabitants of the British settlements, and even of the authorities supreme as well as subordinate, of the British empire. The king himself, for several years after his restoration, had extended to them his patronage, and even granted the honor of knighthood to one of their number, Henry Morgan, a Welshman, who had plundered Portobello and Panama, and acquired a vast booty by his achievements. Thus recommended by the king to the favorable regards of his subjects, these freebooters found it no less easy than advantageous to cultivate a friendly connexion with the people of Carolina, who willingly opened their ports, and furnished supplies of provisions to guests who lavishly spent their golden spoils in the colony. The treaty of 1687, together with the increasingly lawless character of the adventurers, had withdrawn the king's protection from them; but they continued, nevertheless, to maintain, and even extend, their intercourse with the planters and authorities of Carolina. The governor, the proprietary deputies, and the principal inhabitants, degraded themselves to a level with the vilest of mankind, by abetting the crimes of pirates, and becoming receivers of their nefarious acquisitions. The proprietaries strongly remonstrated against practices that degraded the character of the province, and dispraved the manners of all who participated

in them; and their orders, backed by a proclamation from the king, prevailed so far as to restrain the colonists from indulging an inclination which they had begun to demonstrate of sharing in the enterprises as well as the gains of their piratical associates. But they obstinately continued to retain their connection with these adventurers, which, diffusing among them the infectious desire of sudden wealth and the spirit of dissipation, contributed to the formation of habits pernicious to every community, but more particularly injurious to the prosperity of an infant settlement. Traces of these habits have continued long to be discernible in the character and manners of the inhabitants of Carolina. The king at length aroused by the complaints of his allies, and sensible how much the trade of his own subjects had been injured by these lawless proceedings, transmitted to the colony in April, 1684, "a law against pirates," which the proprietaries required their parliament to enact, and their executive officers rigorously to enforce. The first part of this requisition was readily complied with; but the evil had become so inveterate, that the law, instead of being carried into effect, was openly violated even by those by whom it had been enacted. It was not till three years after this period, that the evil received an effectual check, from an expedition which James the Second despatched under Sir Robert Holmes, for the suppression of piracy in the West Indies. Of this expedition the proprietaries sent intimation to the governor and council of Charlestown, and recommended to them a prompt submission to the authority, and co-operation in the designs and proceedings of Holmes; and their mandates being now supported by a force sufficient to overawe all opposition, these disgraceful proceedings sustained a complete, though unfortunately only a temporary interruption.

Meanwhile the obloquy and dispute which the province of South Carolina thus deservedly incurred, was not the only inconvenience that resulted from its connexion with the pirates. The Spaniards at St. Augustine had always regarded the southern settlements of the English with jealousy and dislike; they respected, and not without reason, that the Scotch planters at Port Royal inflamed the Indians against them; and they beheld with indignation the plunderers of their commerce openly encouraged at Charlestown. [1686.] After threatening to avenge themselves by hostilities, they at length invaded the southern frontiers of the province, and laid waste the settlements of Port Royal. The Carolinians finding themselves unable to defend a wide extended boundary, resolved to carry their arms into the heart of their enemy's territory; and accounting themselves authorised by the terms of the provincial charter to levy war on their neighbours, they made preparations for an expedition against St. Augustine. The proprietaries, informed of this project, hastened to withstand it by their remonstrance and prohibition. Every rational being, they declared, must have foreseen that the Spaniards, provoked by such injuries as the colonists had wantonly inflicted on them, would assuredly retaliate. The clause of the charter which was relied on by the colonists to justify their projected invasion meant no more (they maintained) than a pursuit in the heat of victory, and never could authorise a deliberate prosecution of war against the king of Spain's subjects within his own territories. "We ourselves," they protested, "claim no such power: nor can any man believe that the dependencies of England can have liberty to make war upon the king's allies, without his knowledge or consent." They intimated, at the same time, their dissent from a law which had been passed for raising men and money for the projected expedition against the Spaniards; and the inhabitants, either convinced by their reasonings, or disabled from raising the necessary supplies, abandoned the enterprise. On learning this result, the proprietaries congratulated the governor and council on their timely retraction of a measure which, had it been carried into effect, the promoters of it, they declared, might have answered with their lives. They instructed them to address a civil letter to the governor of St. Augustine,

* There can be little doubt, I apprehend, that if the proprietaries had transferred their own residence to the colonies, or had been able to realize the magnificent scheme contained in their fundamental constitutions, they would have put a much freer interpretation on the belligerent privilege conferred by the charter, and would have made war as largely and independently as the English East India Company have ever done. The accomplishment of their original views would have effected all the mischief that in a later age was justly or erroneously anticipated from the India bill of Mr. Fox; and disturbed the balance of the English constitution by the vast endowment of power and influence which it would have bestowed on a junta of the Aristocracy.

* Oldmixon, i. 331, 310. Hewitt, i. 91, 93. Chalmers, 545, 547. From Oldmixon's Lists, it appears that Colonel Quarry held official situations under the crown in several of the provinces at the same time. On his return to England in the year 1703, he presented to the lords of trade a memorial on the state of the American colonies, which is preserved among the Harleian Collection in the British Museum. Some notice of it occurs in Oldmixon's account of Virginia.

to inquire by what authority he had acted; and, in the mean time, to put the province in the best position of defence. From this period, mutual dread and animosity rarely ceased to prevail between the Spanish and English colonists in Florida and Carolina.

When the governor and council received intelligence of the death of Charles the Second, they proclaimed his successor with expressions of loyalty and joy, apparently the effusions of mere levity and love of change, but which gave so much satisfaction to James, that he conveyed to them, in return, the assurance of his favor and protection. His sincerity herein was on a par with their own; for he already meditated the revocation of the colonial charter, and the annihilation of all their privileges. He was prevented, however, from completing this intention, and his reign was productive of events that proved highly advantageous to the colony. Many of his English subjects, apprehending, from his arbitrary principles and his bigotry to the church of Rome, the subversion of their religion and liberties, fled beyond the Atlantic, from the approaching rigors of persecution: being determined rather to endure the severest hardships abroad, than to witness the establishment of popery and tyranny in England. The population of America, recruited by these emigrations, derived even a larger acquisition from the persecution of the protestants in France, that followed the revocation, in 1685, of the edict of Nantz. Above half a million of her most useful and industrious subjects, expelled from France, carried with them into England, Holland, and other European states, the arts and manufactures which had chiefly tended to enrich their native country. James, affecting to participate the indignation that was expressed by his own subjects at the persecution exercised by the French monarch, hastened to tender the most friendly assistance to the distressed Hugonots, who sought shelter in his dominions; and besides those who established themselves in England, considerable numbers were enabled to transport themselves to the British settlements in America. Many, also, who needed not his assistance, and who dreaded his designs, purchased colonial property with their own money, and retreated to the same distant region. Among the other colonies which thus reaped advantage from the oppressions exercised in France, and the apprehensions entertained in England, Carolina derived a considerable acquisition of people. Many of the protestant refugees, in particular, having purchased lands from the proprietaries, who were ever on the watch to encourage emigration to their territories, embarked with their families for this colony, and made a valuable addition to its industry, prosperity, and population.

Although the colonists had as yet made but small progress in cultivating their territory, and still found their efforts impeded, and their numbers abridged, by the obstructions of the forest and the ravages of disease, they were obviously beginning to surmount the first difficulties and disadvantages of their situation. Their cattle, requiring neither edifices nor attendance, found sufficient shelter, and ample nourishment, in the woods, and increased in an amazing degree. They traded to the West Indies for rum and sugar, in return for their lumber and provisions; and England supplied them with clothes, arms, ammunition, and utensils for building and cultivation, in exchange for their deer-skins, furs, and naval stores. This commerce, inconsiderable as it was, having begun to attract attention, a collector of the customs was established at Charlestown, soon after the accession of James to the throne. The proprietaries, on this occasion, transmitted their orders to the governor and council, to show a becoming forwardness in assisting the collection of the duty on tobacco transported to other colonies, and in seizing ships that presumed to trade contrary to the acts of navigation. But, although the proprietaries enjoyed in theory the most absolute authority within the province, and seemed, indeed, to have engrossed the whole powers of government, they had long been sensible of the practical inefficiency of every one of their mandates that was opposed to the opinions or favorite practices of the people. This last injunction was not only disobeyed but openly and argumentatively disputed by the colonists and the colonial judges and magistrates, who insisted that they were exempted from the operation of the navigation acts by the terms of the provincial charter, against which, they plainly informed the collector, that "they held an act of parliament to be of no force whatever." As the charter was posterior in date to the navigation act, this was in effect to contend for the dispensing power of the crown; and to maintain against the king himself, the very doctrine which he forfeited his throne by attempting to realize. Illegal and un-

generous, as a plea involving such doctrines may at first sight appear it will be found, in proportion as we examine it, that it is very far from being destitute of support, either from natural reason or legal principle. It was the charter alone that had added the colonial territory to the British empire; and it was to the execution and existence of that charter alone, that Great Britain could refer for legal evidence of the connexion between herself and the colonial people. The planters, possessing the power of transferring their labors to any region where they might please to settle, and the benefit of their allegiance to any sovereign whose stipulations in their favor might appear satisfactory to them, had, on the faith of this charter, and of its due observance in all points, formed and reared, at great expense, their present colonial settlement; and in all the courts of Great Britain the charter was undoubtedly held a valid paction in so far as it imposed obligations on the colonists. There appears, then, to have been no want of justice or equity in the claim of the planters, that a charter which had formed their original paction and bond of union with the mother country, on the faith of which their subjection had been yielded and their settlement created, and which was, on all hands, acknowledged to be strictly valid in so far as it imposed obligations upon them, should be held no less sacred in respect of the privileges which it conceded to them. While it was allowed to remain unannulled, it seemed to be entitled to entire and equal operation: and if it were to be set aside, the grantees should have been left at liberty to attach themselves to some other dominion, if they could not arrange with Britain new terms of a prorogated connexion with her. It must be acknowledged, however, that the legal force, if not the natural equity of this plea, is considerably abated by the consideration, that it was disclaimed by the proprietaries, and preferred exclusively by the resident colonial population. The proprietaries vainly disputed the reasonableness of the colonial plea, and as vainly prohibited the continuance of the relative practices. Neither awed by their authority, nor convinced by their reasonings, nor yet deterred by the frequent seizures of their own vessels and merchandize, the colonists continued to defend the legality and persist in the practice of trading wheresoever and in whatsoever commodities they pleased. While the proprietaries were laboring to prevail in this disagreeable controversy, they received a new and more painful addition to their embarrassments, from the alarming intelligence, that the king, having adopted the resolution of annihilating all proprietary governments, had directed a writ of *quo rear-rato* to be issued against the patent of Carolina. Thus, neither their submission to every royal mandate, nor their readiness to aid, with their feeble power, in the collection of the royal revenue, and the execution of the acts of navigation, could protect the chartered rights of the proprietaries from the enmity and injustice of the king. Yet prudently bending under the violence which they were unable to resist, they eluded the force of an attack which proved fatal to the charter of Massachusetts; and by proposing a treaty for surrender of their patent, they gained such delay as left them in possession of it, at the period of the British Revolution.

Governor Moreton, after his second appointment to the presidency of the colony, was allowed to retain it little more than a year. Though endowed with a considerable share of wisdom and ability, and connected with several respectable families in the colony, so inconsistent were his instructions from England with the prevailing views and interests of the people, that he found it difficult to execute the duties of his office at all, and impossible to discharge them satisfactorily. He had been described as a man of sober and religious temper; and having married the sister of Blake, it was hoped by the friends of piety and good morals, that the hands of government would be strengthened by this alliance, and an effectual check imposed on the more licentious and irregular party of the people. But the majority of his council entertained opinions very different from his, with respect to the conduct of the provincial administration, and claimed greater indulgences for the people than he had authority to grant. Hence there arose in the colony two political parties; the one attached to the prerogative and authority of the proprietaries, the other devoted to the liberties of the people. By the one it was contended that the laws and regulations transmitted from England, should be strictly and implicitly obeyed: by the other, more exclusive regard was had to the local circumstances of the colony; and it was maintained that the freemen were obliged to observe the injunctions of the proprietaries, only in so far as they were consistent with the interest of the resi-

dent population, and the prosperity of the settlement. In this situation of affairs, no governor could long maintain his authority among a number of bold and restless adventurers, averse to all restraint, and active in improving every opportunity to advance their own interest; for whenever he attempted to control any of their designs, by the exercise of his authority, they insulted his person, and complained of his administration, till they prevailed in having him removed from his office. The proprietaries finding that Moreton had become obnoxious to a considerable party among the people, now resolved with their usual feeble policy to sacrifice him to the enmity which his integrity had provoked; and having accordingly dispatched him, they appointed as his successor, James Colleton, a brother of one of their own number, and on whose attachment to the proprietary interest they thought themselves entitled to rely. His fortune and connections, it was hoped, would add influence to his office; and to lend him the greater weight as he was created a landgrave of the colony, with the appropriate endowment of forty-eight thousand acres of land. A high opinion had been entertained by his constituents of his good sense and ability; but either it was very ill-founded, or he was deprived of discretion and self-possession by the confusions and cabals in which he found himself involved. To his great mortification, he was quickly made sensible that the proprietary government had acquired very little stability, and was continually declining in the respect of its subjects. His own imprudence contributed materially to increase the weakness and discredit into which it had fallen.

The commencement of Colleton's administration gave universal satisfaction. But his instructions requiring him to attempt what his authority was unable to effect, the punishment of almost all the other colonial officers for various instances of disobedience to the proprietaries, and to execute with vigor the law against pirates, very soon embroiled him with a great body of the inhabitants. The form of the constitution, composed of a variety of jurisdictions, and investing the parliament with the choice of members for the grand council, gave rise to perpetual intrigue; and a diversity of factions sprung up, "as rampant," says Oldmixon, "as if the people had been made wanton by many ages of prosperity." A parliament having been summoned by Colleton, the majority of the members openly expressed their disapprobation of the fundamental constitutions; and having appointed a committee to revise and amend them, this body proceeded without delay to frame a new and very different scheme of government, which they distinguished by the name of the *standing laws of Carolina*, and transmitted to England for the approbation of the proprietaries. The reception of such a communication might have been easily foreseen. The proprietaries hesitated not a moment to reject these standing laws, and to issue the most positive orders for the due observance of the fundamental constitutions which had been so irreverently handled. But men who had deliberately undertaken so bold a measure, were not to be deterred from the prosecution of it by a consequence so obvious as the displeasure of the proprietaries; and a majority of the assembly still obstinately refused to acknowledge the authority of the fundamental constitutions. They were thereupon expelled from the house by the governor: and protesting against the validity of any laws that might be enacted by a minority of the commons, they retired into the country, and eagerly endeavored to instil their own principles and discontents into the minds of the people. So successful were their exertions for this purpose, that when a new parliament was convoked, [1687,] the undisputed and unanimous purpose of the members was to thwart and contradict the governor in whatsoever proceedings he might embrace, recommend, or be supposed to approve. So pertinaciously did they adhere to this line of policy, as to refuse to settle a militia act, though the safety of the province, endangered by the Spaniards and their Indian allies, seemed urgently to demand such a measure: and, in fine, to make sure of giving sanction to nothing that could be agreeable to the Governor, they flatly declined to pass any laws at all. A dispute in which they engaged with him about the payment of quit rents, afforded them an additional opportunity of indulging their spleen, and increasing their popularity. Colleton had attempted to enforce payment of the arrears of the

* Their protest, which is preserved in the archives of the Plantation Office, at London, is subscribed by one of the protestors with his mark, in respect of his inability to write. Chalmers, p. 566—a significant indication, it must be confessed, of the extent of his political knowledge and legislative qualifications.

quit rents due by the people, which though inconsiderable in amount, were reckoned extremely burdensome, as not one acre among a thousand for which quit rents were demanded yielded as yet any profit to the holders. Finding it impossible to accomplish a measure so unpopular, while he was destitute of support from the other provincial officers, he wrote to the proprietaries, requesting them to appoint as deputies, certain persons, whom he knew to be favourably disposed towards their government, and from whom he might expect assistance in the execution of his office. Apprised of this measure, the adverse party scrupled no violence or injustice to defeat or counteract it. Letters from England, containing deputations to persons obnoxious to the people, they seized and suppressed; and themselves appointed other men better affected to the popular cause. Advancing in this course of resolute usurpation, the leaders of the popular party proceeded to issue writs in their own name, [1683] and held assemblies in opposition to the governor, and in utter disregard of the authority of the proprietaries. Having imprisoned the secretary of the province, they took forcible possession of the public records; and without appearing to have any fixed or definite object in view, they effected a complete subversion of legitimate authority. Only a determined and active usurper was wanting to possess himself of the power which they seemed to be more eager to suspend or overthrow, than permanently to appropriate; and a personage altogether fitted to take advantage of the opportunity did not fail shortly after to present himself. During this scene of confusion, the tidings of the birth of a Prince of Wales were received in the colony, and celebrated by all parties with appearances of cordial sympathy and congratulation; and yet so unmeaning were these expressions, or so absorbed were the colonists with their own internal cabals, and so regardless of all changes beyond their own immediate sphere, that the intelligence of the revolution in England, though following the other event so closely, excited no emotion whatever. [1689,] and William and Mary were proclaimed with the most mechanical regularity and indifference.

Colleton mortified by the insignificance to which he was reduced, and alarmed by the bold and seditious spirit of the people, vainly perplexed himself with a variety of ineffectual schemes for recalling them to the recognition of legal authority. His conduct had been far from blameless, and had even attracted censure from the quarter whence he principally relied for countenance and protection. Among other irregularities into which he had been betrayed, he had imposed an arbitrary fine of one hundred pounds on the minister, for preaching what he accounted a seditious sermon; and the proprietaries had remitted the fine, not on account of the illegality of its infliction, but of the extravagance of its amount. It was at length suggested to him, whether by imprudent partisans or insidious counsellors, that to proclaim martial law was the only means that remained of inducing the people to return to his government, and yield obedience to the person, who under such a state of things would alone have the power to punish mutiny and sedition. Actuated no doubt by this purpose, though professing to apprehend an invasion of the Spaniards and Indians, he published an ordinance declaratory of martial law, and requiring every one to appear in arms for the defence of the province. However constitutional, however consistent with the provisions of the charter, this measure was imprudent in the extreme because the colonists, thus summoned to arms, were far more inclined to turn their weapons against their ruler than against the public enemy. The designs of the governor were easily seen through, and not less easily defeated. The assembly having convoked themselves, and taken this measure into their consideration, resolved at once that it was a daring encroachment on their liberties, and an unwarrantable exertion of power at a time when the colony was in no danger from without. Colleton, however, driven to the extremity of his resources, persisted in his proclamation of martial law, and vainly attempted to enforce the articles of war. But he was very soon taught to feel that the disaffection was too general to admit of such a remedy, and that all his efforts served but to unite the body of the people more firmly in opposition to his government. It was given out by some of his opponents, that the sole object of his present proceedings was to acquire to himself the monopoly of the Indian trade; and this surmise, with every other imputation, however groundless or inconsistent, was readily credited by a people to whom for years he had been an object of suspicion and dislike.

During the ferment that ensued upon these proceed-

ings [1690,] Seth Sothel, whom we have seen banished from Albemarle, and recalled by the proprietaries to justify his conduct, suddenly presented himself at Charlestown, and in the double capacity of a proprietary of the province, and a champion of popular rights against proprietary pretensions, laid claim to the possession of supreme authority. Hailed at once with the acclamation of a numerous faction, he succeeded without difficulty in prevailing over the opposition of the governor and the more respectable inhabitants, and in possessing himself of the reins of government, which had long awaited and invited the grasp of some vigorous hand. With a gracious semblance of respect to petitions which had been suggested by himself, he consented to convene a parliament; and during the distractions of the times, it was easy to procure the return of members who were ready to sanction, by their votes, whatever measures he might dictate to them. Colleton was, by this assembly, impeached of high crimes and misdemeanors, and not only disabled from holding any office in the government, but banished from the province. Others who were accused of having abetted his misgovernment, were subjected to fine, imprisonment, and exile. Having now obtained possession of the supreme authority, and under pretence of gratifying the resentments of the people, enriched himself by forfeitures, and disencumbered himself of rival candidates for office, Sothel proceeded to exercise his power with a tyranny that effectually rebuked and punished the folly of those who had permitted him to obtain it, and soon united the southern colony against him in the same unanimous hatred which he had excited among their brethren in North Carolina. He is said to have trampled under foot every restraint of justice and equity, and ruled the colonists with a rod of iron. The replenishment of his coffers was the sole object of his government, and his financial operations were varied only by varieties of rapine. The fair traders from Barbadoes and Bermuda were seized by his orders, under the pretended charge of piracy, and compelled to purchase their ransom from imprisonment by enormous fines; bribes were accepted from real felons to favor their escape from justice; and the property of individuals was seized and confiscated on the most unjust and frivolous pretences. The proprietaries hearing with astonishment of these outrageous proceedings, [1691,] transmitted letters of recall to Sothel, and threatened, in case of his disobedience, to procure a mandamus from the king to compel his appearance in England; and their orders being now seconded by the hearty concurrence of the people, the usurper was constrained to vacate his functions, and abandon the province. [1692,] He retired, however, no further than to North Carolina, where he died in the year 1694.*

The revolution of the British government had excited very little attention in either of the colonies of Carolina, which were too remotely connected with the higher institutions of the empire, to be sensibly affected by the changes they had undergone. It was from the proprietaries alone that they could expect the interposition of a superior power to arrest or repair the misrule, oppression and calamity, that had so long composed the chief part of the history, both of the northern and the southern settlements. In the hope of accomplishing this desirable object, the proprietaries, on the deposition of Sothel, intrusted the government of the whole of their settlements to Colonel Philip Ludwell, a person totally unconnected with the province, and with any of the parties it contained, and who had been sent by his countrymen in Virginia to England, to present the complaints of this province against Lord Edlingham. The proprietaries directed their new governor to publish to the inhabitants a general pardon for all crimes that had been formerly committed; to inquire into the grievances they might complain of; and to report to themselves the measures he should judge best calculated to preserve order and restore happiness. He was accompanied by Sir Nathaniel Johnson, who had been general of the Leeward Islands in the preceding reign, and who, having now adopted the resolution of retiring to Carolina, was appointed a cazique of the province, and a member of council. Ludwell, who was a man of sense and humanity, and possessed considerable expe-

rience of colonial affairs, commenced his administration in a manner that gave general satisfaction, and seemed to have completely allayed the prevailing ferments of the people. But this tranquility was of short duration; the minds of men had been too long and too violently agitated to relapse at once into a settled composure; and a circumstance that at first promised to produce the happiest effects on the prosperity of the province, proved the immediate occasion of the revival of public discontent. In the year 1690, a great body of French protestant exiles had taken refuge in England, whence a considerable number of them had been conveyed, at the expense of the British government, to the colony of Virginia. Others, who were less indigent, purchased lands in South Carolina, and having transported themselves and their families to this province, brought a valuable accession to the numerical strength, as well as to the industry and morality of its people. They had taken the oath of allegiance to the king, and promised fidelity to the proprietaries; and were disposed to regard the colonists whom they had joined in the friendly light of brethren and fellow-citizens. But, unhappily, these older colonists were very far from regarding their new associates with corresponding good-will. The numbers of the strangers, and the wealth by which some of them were distinguished, excited their suspicion and national antipathy; and when Ludwell, in compliance with the instructions of the proprietaries, prepared to admit the refugees to a participation in all the franchises and immunities of the other planters, the English and native inhabitants refused to acquiesce in this measure, and resolutely opposed its execution. They insisted that it was contrary to the laws of England, and therefore beyond the power of the proprietaries, who were subject to these laws; and that no power but that of the British parliament could dispense with the legal inability of aliens to purchase lands within the empire, or incorporate them into the British community, and make them partakers of the rights and privileges of natural-born Englishmen. They even maintained, that the marriages of the refugees, performed by the clergymen who had accompanied them, were unlawful, as being celebrated by men who had not obtained episcopal ordination; and, for themselves, they declared that they could not brook the thoughts of sitting in the same assembly with the rivals of the English nation, or of receiving laws from Frenchmen, the pupils of a system of slavery and arbitrary government. The unfortunate refugees, alarmed by these menacing resolutions, implored the protection of the proprietaries; and Ludwell found it necessary to suspend the measure he had begun, and to apply to the same quarter for further directions. The proprietaries returned a friendly but indecisive answer to the application of the refugees, who continued in a state of the most disagreeable solicitude, and entire privation of civil rights, for several years after; when at length their humane and patient demeanor prevailed over the antipathy of their former adversaries who then became the advocates of the pretensions they had so vehemently opposed, and passed a law of naturalization in favor of the aliens, without being disturbed by any scruples about invading the functions of the British parliament. In the meanwhile, the dispute that had arisen on this subject was productive of a great deal of irritation in the province, which was increased by the arrival of a crew of pirates, whom Ludwell caused to be apprehended and brought to trial for their crimes. The people exclaimed against the severity of this proceeding, and interested themselves so effectually in behalf of the pirates, who, previous to their apprehension, had spent a great deal of money very freely in the province, that on their trials they were all acquitted,* and the government was even compelled to grant them an indemnity. It was not till more than twenty years after this period, that Carolina was delivered from the resort of pirates, and not till after a series of bloody executions, at the last of which no fewer than forty of these naval robbers were put to death at once. Further disputes now arose between the government and the inhabitants about the arrears of the quit rents that were due to the proprietaries, who at length becoming impatient of this untoward issue of Ludwell's administration, and suspecting him of bending too readily to the popular will, deprived him of office, and conferred it, together with the dignity of landgrave, upon Thomas Smith, a

* Hewitt, t. 103. Chalmers, 551, 552. Williamson, i. 142, 143. Sothel left an ample estate, which, however, sustained no small diminution after his death from numerous decrees in favor of parties whom he had pillaged or defrauded. But the other proprietaries, in suing for a large amount of rents which he had recovered and embezzled, were prosecuted on the absurd existing maxim of the English law, that tenants in common could not bring actions of account against each other. It was not till the reign of Queen Anne that this iniquitous regulation was repealed.

* A few years after this period, some of the citizens of London appeared to have been infected with a similar favor for pirates. In the year 1696, several of those freebooters were acquitted at the Old Bailey, by a verdict which Chief Justice Holt declared was "a dishonor to the justice of the nation." State Trials, xiii. 460.

wealthy planter, and a prudent, upright, and popular man."

[1693.] It was in the midst of these disputes, and with the hope of appeasing them, that the proprietaries at length determined to surrender to the general dislike of the people, the fundamental constitutions which had been originally declared sacred and unalterable, but which an experience of twenty-three years had proved to be utterly worthless and impracticable. Apprised of the incurable aversion with which this instrument was now regarded by all classes of the colonists, and despairing of ever establishing a stable or acceptable government among them without making some considerable sacrifice to their inclinations, they accordingly enacted the following resolution: "That, as the people have declared they would rather be governed by the powers granted by the charter, without regard to the fundamental constitutions, it will be for their quiet, and the protection of the well-disposed, to grant their request." Thus perished the legislative labors of John Locke. Their abolition was unregretted by any party; for they had neither insured obedience to the government, nor afforded happiness to the people. What is still more singular, they seem to have perished unheeded; their abolition exciting no sensation whatever, and not being even noticed in any public act or order within the province. The convocations that were formerly termed parliaments, were now called assemblies; and this was all the visible change that took place. So perfectly impracticable had the great body of these celebrated constitutions been found. All that remained of them was the titles of nobility, which continued to drag on a sickly existence for a few years longer.

This important measure, which had been deferred till the constitutions which it repealed had been practically abrogated by their own inefficacy, and sunk into utter contempt, failed to produce any sensible effect in tranquillizing or conciliating the inhabitants of Carolina. Governor Smith, though he exerted himself with a zeal and prudence that have not been impeached by any party, to promote the peace and prosperity of the settlements intrusted to his care, found his endeavors so unsuccessful, and his situation so irksome, that he was constrained to solicit his dismissal from the proprietaries. [1694] whom he strongly urged, as the only means of restoring order and tranquility, to send over as governor one of their own body, invested with full power to hear and finally determine on the spot the complaints and contentions by which the province was distracted. The short administration of Smith was signalized by an occurrence that produced lasting and extensive effects on the prosperity of Carolina. A vessel from Madagascar, on her homeward voyage to Britain, happening to touch at Charlestown, the captain, in acknowledgment of the civilities of Smith, presented him with a bag of seed rice, which he said he had seen growing in eastern countries, where it was deemed excellent

Archdale, 11. Oldmixon, i. 342. Chalmers, 552. Hewit, i. 108—118, 139, 140. Williamson, i. 150, 1. In the account of the succession of governors, the annals of this period are involved in mutual, frequently in self-contradiction, and confusion. Williamson says that Ludwell retained the government for four years; but this is impossible; as Archdale, the successor of Smith, was appointed in 1694. Oldmixon renders confusion more confounded by his attempt to reconcile contradictory accounts, and to explain satisfactorily the sequence of governors. The historian of the British dominions in North America delivers his account of the matter in the following terms: "Thomas Smith, Esq. succeeded Mr. Colleton properly as governor, although Colonel Quarry, Mr. Southwell, and Colonel Ludwell, were intermediate for a short time."

† The repeal of the fundamental constitutions is noticed in a very slight and ambiguous manner by Hewit (i. 102); it is not noticed at all either by Wynne or by the historian of the British Dominions in North America; and Oldmixon, who wrote in 1698, says "The fundamental constitutions keep their ground to this day." i. 342. Yet Oldmixon's work, as it is the earliest, is also, next to the Political Annals of Chalmers, the most elaborate, as well as ingenious and interesting, of the general histories of the North American Settlements. A remarkable instance of the ignorance that prevails respecting Locke's connexion with America occurs in the work of a traveller who visited the United States in 1734, and who asserts (on the authority of the American General Gates), that Locke was the legislator of Connecticut. Wansley's Journal, p. 55.

‡ The operation and fate of Locke's system strikingly exemplify the observation of an eminent American statesman, that "A man may defend the principles of liberty, and the rights of mankind, with great abilities and success, and yet after all, when called upon to produce a plan of legislation, he may astonish the world with a signal absurdity." Adam's Delivance of the American Constitutions, p. 363. Yet some writers (and among others the author of a valuable little biographical work lately published at Edinburgh) have not scrupled to pronounce the constitutions of Carolina a model of legislative wisdom. So dangerous is it to judge works without reading them, and to assume their merit from the general character of their authors.

food and yielded a prodigious increase. The governor divided it between several of his friends, who agreed to make the experiment; and planting their parcels in different soils, found the result to exceed their most sanguine expectations. From this inconsiderable beginning, Carolina dates the rise of her staple commodity, the chief support of her people, and the main source of her opulence.

The proprietaries, disappointed in so many attempts to establish a satisfactory administration in the province, determined the more readily to adopt the suggestion of Smith. Their first choice for this purpose fell upon Lord Ashley, the grandson of the notorious Shaftesbury, and afterwards the author of *The Characteristics*. It was supposed that his shining talents, agreeable manners, and elevated rank, would powerfully conduce to the pacification of the colony. Happily, however, for all parties, his lordship, either having little inclination for the voyage, or being detained, as he alleged, by the state of his private affairs in England, declined the appointment, which was then conferred on a far more estimable person, John Archdale, another of the proprietaries, a quaker, and a man of great prudence and sagacity, and endowed with admirable patience and command of temper. Accepting the office, he was vested with authority so absolute and extensive, that the proprietaries thought fit to have it recorded in his commission, that such powers were not to be claimed in virtue of this precedent by future governors. Archdale proved himself worthy of the distinguished trust that had been reposed in him. He arrived first in South Carolina, [August, 1695,] where he formed a new council of moderate men; and in a short time, by remitting some arrears of rent, and by other conciliatory measures, aided by a firmness and mild composure that was neither to be disturbed nor overcome, he prevailed so far in quieting the public discontents, that he ventured to call a meeting of the general assembly. An address of grateful thanks voted by this body to the proprietaries (the first expression of such sentiments that had ever been uttered in Carolina) attests the wisdom of Archdale's administration, and justifies the opinion that notwithstanding the inflammable materials of which the colonial society was composed, only a good domestic government had been hitherto wanting to render the colony flourishing and happy. Moreton, Ludwell, and Smith, were, doubtless, meritorious governors; but they had been denied the power that was requisite to give efficacy to their wisdom, and could never grant the slightest indulgence to the people without assuming the dangerous liberty of violating their commission, or abiding the tedious intervention of a correspondence with England. Though Archdale was a quaker, and therefore opposed to military operations and the shedding of blood, yet he adapted his regulations to the sentiments of the people whose affairs he had undertaken to administer; and considering that a small colony surrounded by savage enemies, and exposed to the attacks of the Spaniards, should hold itself in a state of constant defence, he promoted a militia law, which, however, exempted all persons restrained by religious principles from bearing arms.* He was, at the same time, more desirous of preserving peace than of ensuring victory; and for this purpose exerted himself so successfully, by the exercise of courtesy and liberality, to cultivate the good will both of the civilized and savage neighbors of the province, that the Spaniards at St. Augustine expressed a cordial desire to maintain a good correspondence with the English; and various tribes of Indians embraced their friendship, and placed themselves under the protection of the government of Carolina. The Indians around Cape Fear in particular, who had long pursued the practice of plundering shipwrecked vessels,† and murdering their

* The following clause, by which this exemption was expressed, strongly attests the confidence that Archdale enjoyed, with the colonists. "And whereas there be several inhabitants called quakers, who, upon a conscientious principle of religion cannot bear arms, and because in all other civil matters they have been persons obedient to government, and ever ready to discharge their monies in other necessary and public duties; Be it therefore enacted, that all such whom the present governor John Archdale, Esq. shall judge that they refuse to bear arms on a conscientious principle of religion only, shall, by a certificate from him, be excused." Archdale's Preface, p. 3. Williamson, i. Append. 272.

† It is remarked by a statistical writer (Warden ii. 373.), that notwithstanding the temptations presented by the frequency of shipwreck on the coast of Carolina, no instance has ever occurred of the plunder of a wreck by the colonists. In this respect they have been distinguished, not indeed from the people of the other provinces, but from the inhabitants of the parent state, in which this inhumanity obtained so long and unapproved a prevalence, that in the middle of the eighteenth century, Pope represents the late enrichment "of a citizen of a poor fame" as originating in two rich shipwrecks on his lands in Cornwall.

crews, renounced, this inhumanity, and evinced the favorable change of their disposition by mitigating with friendly assistance, the numerous disasters by which the navigation of that coast was then unhappily signalized.

In North Carolina, the administration of Archdale was attended with equal success, and conducted with greater facility by the concurrence of a number of quakers who inhabited the northern province, and with whom he enjoyed a large share of personal influence. The esteem in which he was held by all ranks of men may be inferred from the elation with which the historian of North Carolina has recorded, as a circumstance redounding to the honour of this province, that Archdale purchased an estate at Albemarle, and gave one of his daughters in marriage to a planter at Pasquotank. But it was not his intention to remain longer in Carolina than was necessary for the adjustment of the existing controversies; and having effected this object in a degree that had surpassed the expectations of all parties, he returned to England in the close of the year 1696, loaded with the grateful benedictions of a people to whose peace and prosperity he had been so highly instrumental. The only portion of the inhabitants to whom he had been unable to give complete satisfaction, where the French refugees, against whom the jealous antipathy of the English settlers had not yet subsided. But while he soothed the public jealousy by withholding civil rights from the refugees, he awakened public generosity by an impressive recommendation of these unfortunate strangers to the hospitality and compassion of his countrymen; and to the refugees themselves, he recommended a patient perseverance in those virtues that tend to disarm human enmity, and by the exercise of which they were enabled shortly after to overcome the aversion, and even to conciliate the hearty friendship of their fellow colonists.*

It was in this year that a regular administration of the ordinances of religion was first introduced into Carolina by the friendly aid of the colonists of New England. Intelligence of the destitute state of the province, in this respect, seconded by the earnest applications of some of the more religious planters, had induced the New Englanders, in the preceding year, to form an association at Dorchester in Massachusetts, which was designed to be removed to Carolina, "to encourage the settlement of churches and the promotion of religion in the southern plantations." The persons thus associated, having placed at their head a distinguished minister of the New England churches, arrived in the beginning of this year in Carolina, which now for the first time beheld the celebration of the rite of the Lord's supper. Proceeding to a spot on the north-east bank of Ashley river, about eighteen miles from Charlestown, the pious emigrants founded there a settlement, to which in commemoration of the place they had left, they gave the name of Dorchester.

Among other extraordinary privileges, there had been granted to Archdale the power of nominating his successor; and in the exercise of this power he propagated the benefit of his own administration, by conferring the office of governor on Joseph Blake (nephew of the English admiral, a man of virtue, prudence, and moderation, acceptable to the people, and a proprietary of the province. Blake governed the colony wisely and happily for a period of four years. Shortly after his elevation to office, there was sent out to Carolina a new code of fundamental constitutions, subscribed by the Earl of Bath, who was then palatine, and the other proprietaries in England; but it was never recognised or confirmed by the provincial assembly. Blake appears to have exerted the most laudable endeavors to promote the religious instruction of the people, and to facilitate the exercise of worship to all denominations of christian professors. In the year 1698, he had the satisfaction to see John Cotton, a son of the celebrated minister of Boston, remove from Plymouth, in New England, to Charlestown, in South Carolina, where he gathered a church, and enjoyed a short, but happy and successful ministry. Though Blake was himself a dissenter, yet from regard to the spiritual interests of the episcopalian portion of the inhabitants of Charlestown, he caused a bill to be introduced into the assembly for

‡ Archdale, 17. 21, 22. Oldmixon, i. 342—345. Hewit, i. 120—137. Williamson, i. 152—158, and Append. 270. Some years after his return to England, Archdale published his Statistical and Historical Description of Carolina, a work replete with so much good sense, benevolence, and piety, that it is surprising it should never have been reprinted. One or two very interesting volumes might be composed by republication of Joselyn's and Dunton's Travels in New England, Archdale's Carolina, Dunton's New York, part of Smith's Virginia, Aslop's Maryland, Wesley's Journal in Georgia, and other tracts relative to the early history of America.

settling a perpetual provision of 150*l.* a year, with a house and other advantages, on the episcopal minister of that city. Marshall, the person who then occupied this ministerial situation, had gained universal regard by his piety and prudence; and the dissenters in the house acquiescing in the measure, from regard to this individual, the bill was passed into a law. Those who think that the dissenters acted amiss, and stretched their liberality beyond the proper confines of this virtue, in thus promoting the national establishment of a church from which they dissented, will regard the persecution they soon after sustained from the episcopal party as a merited retribution for their practical negation of dissenting principles. Those who judge more leniently, an error (if it be such) which there is little reason to suppose will ever be frequent in the world, will regret and condemn the ungrateful return which the dissenters experienced from a party for whose advantage they had incurred so great a sacrifice.

[1700.] With the administration of Blake; who died in the year 1700, ended the short interval of tranquility which had originated with the government of Archdale. Under the rule of his immediate successors, James Moore and Sir Nathaniel Johnson, the colony was harassed with Indian wars, involved in a heavy debt by an ill conducted and fruitless expedition against the Spaniards at Augustine, and agitated by religious disputes originating in a series of persecuting laws against the dissenters. Henceforward the proprietary government continued (with the exception of one returning gleam of success and popularity which it derived from the administration of Charles Craven in 1712) to afflict the province with every variety of misrule, and to fluctuate between the aversion and contempt of its subjects, till they were relieved by its dissolution in the year 1729, when the chief part of the chartered interest was sold to the crown.

The first Indian war by which this period was signalized, broke out in the year [1703.] and was occasioned by the influence of the Spaniards over the tribes that inhabited the region of Apalachia. Exasperated by the insults and injuries which these savages were instigated by the Spaniards to commit, Governor Moore determined by one vigorous effort to break their power, and by a sanguinary example to impress on all the Indian tribes the terror of the English name. At the head of a strong detachment of the colonial militia, reinforced by a body of Indian allies, he marched into the hostile settlements; defeated the enemy with the loss of eight hundred men, who were either killed or taken prisoners; laid waste all the Indian towns between the rivers Altamaha and Savannah; and compelled the whole district of Apalachia to submit to the English government. To effectuate his conquest, he transported fourteen hundred of the Apalachian Indians to the territory which is now denominated Georgia, where they were compelled to dwell in a state of dependence on his government—a measure which appears to have paved the way to the settlement of the English colony which arose about thirty years after in that region.

When the proprietaries of Carolina first undertook their colonial project, they solemnly declared, and caused it to be recorded in their charters, that they were moved to embrace this great design by zeal for the christian faith, and especially for its propagation among the Indian tribes of America. Yet a general provision in favor of toleration, which they permitted Locke to insert as an article of the fundamental constitutions, and which they took care to nullify by another article adjoined to that instrument by themselves, constituted the whole amount of their ecclesiastical operation during the first forty years of the proprietary government. They never at any time made the slightest attempt to fulfil their pledge of communicating instruction to the Indians; and this important field of christian labor was completely unoccupied till the beginning of the eighteenth century, when a few missionaries were sent to Carolina by the society incorporated in England for the propagation of the gospel in foreign countries. No visible fruits of the labors of those missionaries have ever been mentioned. Prior to this, the only European instructions that the Indians received under the auspices of the proprietary government, were communicated by a French dancing master, who settled in Craven county, and acquired a large estate by teaching the savages to dance and play on the flute.*

At the close of the seventeenth century, there were

only three edifices for divine worship erected within the southern province; containing respectively an episcopal, a presbyterian, and a quaker congregation; and all of them situated in the town of Charlestown. Throughout all the rest of the province, there were neither institutions of public worship nor schools for education. The first attempts that were made to supply these defects proceeded not from the proprietaries, but from Tennison, Archbishop of Canterbury, Compton, Bishop of London, and the society for the propagation of the gospel; but as in most of these attempts the paramount object was plainly to multiply adherents to the institutions of the church of England, they were the less successful among a people of whom many had personally experienced the persecution of this church, and more entertained a hereditary dislike to it. In the year 1707, the society for propagation of the gospel maintained six episcopal ministers in Carolina, and had sent two thousand volumes of books to be distributed gratuitously among the people. In the northern province, which was thinly peopled by colonists professing a great diversity of religious opinions, there was as yet no church at all. An act was passed by its assembly in the year 1702, imposing an assessment of 30*l.* per annum on every precinct, for the maintenance of a minister; and in 1705 and 1706 the first two religious edifices of North Carolina were erected. This northern province had for many years received from the proprietaries the appellation of the *county of Albemarle in Carolina*, and was sometimes, but not always, included in the commission of the governor of the southern settlement. It now came to be termed the colony of North Carolina; and at the dissolution of the proprietary government, was made a separate province with a distinct jurisdiction.

At length, after having so long disregarded the ecclesiastical concerns of the colony, the proprietaries in the beginning of the eighteenth century, turned their attention to this object with a spirit that caused the cessation of their prior indifference to be deeply regretted; and they made their first and last effort to signalize their boasted zeal for christianity, by the demonstration of a temper and the adoption of measures in the highest degree unchristian and tyrannical. The office of palatine was now in the hands of Lord Granville, who entertained the utmost aversion and contempt for dissenters of all descriptions, and had already signalized his bigotry to the church of England, by the zealous and vehement support he had given in parliament to the bill against occasional conformity.* His acquisition of the office of palatine presented him with an opportunity of indulging his favorite sentiments in the regulation of the ecclesiastical polity of Carolina. Contemning the remonstrances, and overruling the opposition of Archdale, he eagerly laid hold of so fair an occasion to exercise his bigotry; and in Moore and Johnson, on whom he successively bestowed the government of the province, he found able and willing instruments for the execution of his arbitrary purpose. These men, notwithstanding the great numerical superiority of the dissenters, by a series of illegal and violent proceedings acquired for themselves and a party of the episcopalian persuasion, a complete ascendancy over the provincial assemblies, which they exercised in the enactment of laws for the advancement of the church of England, and the oppression of every other christian association. After various preparatory measures, which under the impudent pretence of promoting the glory of God, had the effect of banishing every vestige of peace and goodwill from a numerous community of his rational creatures, the episcopal faction at length, in the year 1704, enacted two laws, by one of which the dissenters were deprived of every civil right, and by the other an arbitrary court of high commission (a name of evil import to Englishmen) was erected for the trial of ecclesiastical matters and the preservation of religious uniformity in Carolina. The society for propagation of the gospel, on receiving intelligence of the latter of these enactments, declared their resolution to send no more missionaries to Carolina till it should be repealed. Both the acts, however, having been ratified by the proprietaries, and the complaints of the dissenters treated with derision, these oppressed and insulted men were advised by the merchants of London who traded to the province, to seek redress of their grievances from the supreme power of the state. A petition for this purpose was accordingly presented to the House of Lords, who were struck with surprise and indigna-

tion at the tyrannical insolence of these despotic proprietaries and their provincial officers; and forthwith presented an address to Queen Anne, praying her royal repeal of the obnoxious laws, and recommending that the authors of them should be brought to condign punishment. The lords commissioners of trade, to whom the matter was referred by the queen, reported to her majesty, "that the making such laws was an abuse of the power granted by the charter, and inferred a forfeiture of the same;" adding their humble advice that judicial steps should be adopted for having the forfeiture legally declared, and the government resumed by the crown.* The queen, thereupon, issued an order, declaring the laws that had been complained of null and void, and promised to institute a *quo warranto* against the charter; but this promise was never fulfilled.† It was alleged that the forfeiture of the charter was obstructed by legal difficulties arising from the minority of some of the proprietaries, who could not be made responsible for the acts of the rest; as if the inability of these hereditary rulers of mankind to afford protection to their subjects, had not been the strongest reason why they should be deprived of the power of exacting obedience from them. While incessant attempts were made by the British government to deprive the New England states of the charters by which popular rights were preserved, this fair and legitimate occasion was neglected, of emancipating the people of Carolina from a patent which had confessedly been made subservient to the most odious oppression and intolerance; and even after the proprietaries had publicly declared (as they were soon after constrained to do) that it was not in their power to defend the province against the Indians by whose attacks it was menaced, the proprietary government was suffered to subsist, perhaps with the view of bringing colonial charters into discredit, until it sunk under the weight of its own weakness and incapacity. It was in the year 1706, that the intolerable policy of Lord Granville received this signal check: and from this period, the dissenters were permitted to enjoy, not indeed the equality, which they had originally been encouraged to expect, but a simple toleration. In the following year, an act of assembly was passed in South Carolina for the establishment of religious worship according to the forms of the church of England; by this act the province was divided into ten parishes, and provision made for building a church in each parish, and for the endowment of its minister. The churches were soon after built, and supplied with ministers by the English Society for the propagation of the gospel.

The progress of population is, if not the most certain, one of the most interesting tests of the prosperity of a state; but it is a test not easily applicable to communities subject, like all the American colonies, to a continual but irregular influx and efflux of people. The population of North Carolina appears to have sustained a severe check from the troubles and confusions that attended Culpepper's insurrection and Sethel's tyranny; inasmuch that, in the year 1691, the list of taxable inhabitants was found to contain only seven hundred and eighty seven names, about half the number that had been in the colony at the commencement of Miller's administration. Frequent emigrations were made from the northern to the southern province; and we must conclude that the diminution of inhabitants ascertained in 1694 had been effected in this manner: since prior to the year 1708, only two persons (a Turk for murder, and an old woman for witchcraft) had been executed in North Carolina—a fact which, considering the violent convulsions that the province had undergone, appears highly creditable to the humanity of the people. In the beginning of the eighteenth century, North Carolina received an accession to its inhabitants, first from a body of French refugees, who removed to it from Virginia, and afterwards from a colony of Germans, who, many years before, had been expelled from their homes by the desolation of the palatinate, and since experienced a great variety of wretchedness and exile. In the year 1710, its whole population amounted to 6000 persons, but of these not 2000 were taxables. There was no court-house in North Carolina before the year 1722; the assemblies and general courts till then being convened in private houses. Printing was unknown in either of the provinces, and the laws were

* This report, among other signatures has that of Prior the poet who was one of the commissioners of trade at the time.

† Oldmixon, i. 347—364. Hewitt, i. 163—177. Preparatory to their address to the queen, the House of Lords passed a resolution containing these remarkable expressions, that the law for enforcing conformity to the church of England in the colony "is an encouragement to atheism and irreligion, destructive to trade, and tends to ruin and depopulation of the province."

* Hewitt, i. 227. Oldmixon, i. 379. Oldmixon was struck with the singularity of French dancing masters and musicians being admitted, caressed, and enriched at the same time by the nobility and gentry of London and the savage aborigines of America.

* This was a bill imposing severe penalties on any person, who having conformed so far to the church of England as to enable him to hold a civil office, should ever after attend a dissenting place of worship. It did not pass into a law.

published by oral proclamation. Debts and rents were generally made payable in hides, tallow, furs, or other productions of the country. In the year 1705, it was enacted by law that marriages should be celebrated by the ministers of religion; but magistrates were permitted to perform this office in parishes unprovided with ministers. The executive power within the province was feeble and inefficient; partly in consequence of the state of dispersion and the lazy plenty in which the bulk of the inhabitants lived, and partly from the worthless or insignificant characters of many of the executive officers.* In the year 1709, Cary, the collector of the proprietary quit-rents, resolving to appropriate the amount of his collections, found it easy, with the aid of a few idle and dissolute partisans, to maintain himself in a state of opposition to the proprietary government, and suspend the operations of justice. The people, though they neither approved nor abetted his lawless proceeding, offered no resistance to it; and the governor, unable to reduce him to obedience, made application for assistance from Virginia, where some regular troops were quartered at the time. On the approach of a small party of these forces, Cary fled the colony, and his partisans dispersed. In the year 1712, this province sustained a severe and dangerous blow from a conspiracy of the Coree and Tuscorora tribes of Indians, who, resenting a real or supposed encroachment on their hunting lands, formed an alliance and project, with amazing secrecy and guile, for the total destruction of the European settlement. A general attack, in which a hundred and thirty-seven of the colonists were massacred in one night,† gave the first intelligence of their hostility. Happily, the alarm was given before the work of destruction had proceeded farther; and, after an obstinate resistance, the colonists were able to keep the enemy in check till a powerful force was despatched to their assistance by the governor and assembly of the southern province. An expedition was then undertaken by the combined forces of the two provinces against the hostile Indians, who were defeated with great slaughter, and compelled to abandon the country. The assembly of South Carolina voted 4000*l.* for the service of this war; and, during the continuance of it, the assembly of the northern province was compelled to issue 8000*l.* in bills of credit. A few months after its termination, North Carolina showed her willingness to repay the seasonable aid she had derived from the sister province, and despatched a body of troops to her assistance against a hostile movement of the Indians in that quarter. During the war in North Carolina, the people fled from the province in such numbers, that to prevent its total desertion, a law was passed, prohibiting any one from quitting its territory without a passport from the governor. In confirmation of this edict, the governor of Virginia issued a proclamation, commanding that all fugitives from Carolina without a passport should be apprehended and compelled to return.

The population of South Carolina, in the year 1700, is said to have amounted to no more than 5500 persons, a computation probably short of the truth. In the year 1723, it amounted to 32000, including 18000 slaves. For several years after the colonization of the territory, there were very few negro slaves in Carolina; but the demand for them was increased by the increasing cultivation of rice, which was thought too unhealthy and laborious for European constitutions; and the slave ships of Great Britain, encouraged the demand by the readiness with which they supplied it. At the close of the seventeenth century, Charlestown was already a flourishing town, containing several handsome edifices, a public library, and a population of 3000 souls—more than half of the total population of

* In 1701, Porter indicted a man for calling him "a cheating rogue." The defendant justified the words, and, proving that they were properly applied, was acquitted, and allowed his costs from the prosecutor. Yet, a few years after, Porter was appointed a proprietary deputy and member of council. Williamson, i. 203, 210. In 1726, Burrington, who had previously held the office of governor, and afterwards held it again, was indicted for defamation, in saying of the existing governor, Sir Richard Everard, that "he was no more fit for a governor than Sancho Panza," and for riotously threatening to scalp "his d—d thick skull." *Ib.* ii. 219. Two years after, the grand jury present Sir Richard the governor for having with his cane twice or thrice struck George Allen." *Ib.* 241.

† The Indians took a number of prisoners on this occasion, among whom were John Lawson, author of a descriptive account, which has been improperly termed a History of Carolina, and who had been appointed surveyor-general of the province, and Baron Graffenried, the leader of the palatine emigrants. Lawson was murdered at leisure by the savages; but Graffenried extirpated himself from the same fate, for which he had been designed, by declaring that he was the king of a distinct tribe, lately arrived in the province, and totally unconnected with the English.

the province. No printing press was established in Carolina till thirty years after.

When the difficulties attending the establishment of the first settlers in Carolina had been in some degree overcome, the fertility of the soil, the cheapness of provisions, and the agreeableness and general salubrity of the climate, afforded the highest encouragement to national increase. Families of ten and twelve children were frequently seen in the houses of the colonists at the close of the seventeenth century; and though some parts of both the provinces were for a time infected with severe epidemical diseases, and others still continue to be unfavorable to health at particular seasons, yet the statistical accounts and the registers of mortality amply demonstrate that the climate of the whole region is in the main highly conducive to the preservation, as well as the production of life. The salubrity of these, as well as of the other colonial settlements, has been greatly promoted by the progress of industry, in opening the woods, draining the marshes, and confining the streams within a certain channel. Yet the influence of cultivation has been by no means uniformly favorable to health in the Carolinas; and much of the disease with which they are afflicted at certain seasons is ascribed to the periodical inundations which the culture of the rice lands requires.*

During the infant state of the colony, the proprietaries sold the land at twenty shillings for every hundred acres, and sixpence of quit rent. They raised the price in the year 1604 to thirty shillings; and in 1711, to forty shillings for every hundred acres, and one shilling of quit rent. Lawson, who travelled through Carolina in the year 1700, celebrates the courtesy and hospitality of the planters; but represents an aversion to labor, and a negligent contentment with present advantages, as qualities very prevalent among them. Fruit, he says, was so plentiful that the hogs were fed with peaches.† The Carolinians have always been characterised by a taste for idleness, and a strong predilection for the sports of the field. The disposition that was evinced at a very early period of the history of these provinces, to treat insolvent debtors with extreme indulgence, has continued ever since to be a feature in their legislation, and has been thought to encourage a loose and improvident aptitude to contract debts. The most serious evils with which the two provinces have been afflicted have arisen from the abuse of spirituous liquors, the neglect of education, and the existence of negro slavery. It was long before institutions for the education of youth were generally established in Carolina; the benefits of knowledge were confined entirely to the sons of wealthy planters, who were sent to the colleges of Europe, or to the seminaries in the more northern states; and the consequent ignorance of the great bulk of the people, together with the influence of a warm climate, and the prevalent aversion to industry (increased by the pride which the possession of slaves inspires, and the discredit which slavery brings on labor), promoted an intemperate use of ardent spirits, which contributed additionally to deprave their sentiments, habits, and manners. It was in North Carolina that all the evils which I have enumerated (except those arising from negro slavery, and which are more deplorable perhaps than all the rest) prevailed longest and most extensively.‡ The improvement that after times have witnessed in all these respects, has been considerable in both the provinces; and the inhabitants of South Carolina, in particular, have long been distinguished for the cultivation of literature, the elegance of their manner, and their polite hospitality.

In every community where slavery exists, the treatment which the slaves experience will be regulated in no small degree by the proportion which they bear to the numbers of the free, and the apprehensions which they may consequently be capable of inspiring. No passion has a more dreadful or insatiable appetite, or prompts to more unrelenting cruelty, than fear; and no

* Warden, ii. 374. 415. Dr. Williamson (vol. ii. cap. 13) has clearly proved that the immediate effects of the extirpation of wood in Carolina have always been unfriendly to health, from the exposure to the sun of a surface of fresh land covered with vegetable produce in a state of decay.

† Lawson, p. 63. 83. 184. Archibald (p. 7.) speaks in nearly the same terms of the fertility of Carolina. Bloomer (p. 133) states, that the province, in 1695, contained many wealthy persons, who had retired to it in a state of great indigence.

‡ In March, 1720, the grand jury of Albemarle presented thirty-six persons, viz. seven for drunkenness, eight for profane swearing, seven for breaking the sabbath, four for adultery, five for stealing or misprisking hogs, three for breaking the peace, and two for selling liquor without license." Williamson, i. 211. It was an unfortunate supposition (whether well or ill founded) that was at one time entertained, that the water of Carolina possessed deleterious qualities which an infusion of rum was necessary to counteract.

apprehension can be more selfish or more provocative of inhumanity, than that which is inspired in men's bosoms by the danger of retaliation for the injustice which they are continuing to inflict. In South Carolina, for a very considerable period, the number of the slaves bore a greater proportion to that of the whole population than in any other of the North American colonies. From the year 1720 till the year 1765, the slaves in this state continued greatly and increasingly to outnumber the white inhabitants.* The consequence of this state of things was, that the slaves of the South Carolina planters were treated with extreme severity; and, in the year 1739, they formed a conspiracy for a general massacre of their masters, and proceeded to carry their design into effect by a dangerous insurrection, which was suppressed with the utmost difficulty, and punished by an exacerbation of the cruelty that had provoked it. The discontents of the slaves in this state proved a formidable auxiliary to the hostile designs of the neighbouring Spaniards, who were not wanting in endeavors to turn it to their advantage. After the American revolution the further importation of slaves into South Carolina was forbidden by law;† and the proportion between the freemen and the slaves underwent a change highly promotive of the security and humanity of the one, and of the comfort and consideration enjoyed by the other.‡ Neither here nor in any other country with whose history I am acquainted, have the protestant episcopal clergy ever distinguished themselves by exertions to mitigate the evils of slavery. Wherever a protestant episcopal church has been established by law, the only ministers of the gospel who have shown themselves the friends of the outcasts of the human race, have been methodists, Moravians, or dissenters of some other denomination. It has not been so in countries where the catholic church has prevailed. The priests of this persuasion have always constituted themselves the defenders and patrons of Indians and negro slaves. Perhaps this has arisen in part from the peculiarities of sentiment and habit by which the catholic priests are separated from the rest of mankind, and which may lessen in their estimation the differences of temporal condition by which the laity are distinguished.

It does not appear from the earlier annals of Carolina in what manner the provincial assemblies were constituted, or to what amount of property political franchises were attached. All the executive officers were nominated by the proprietaries, who specified the amount of the salaries in the warrants of appointment. Such was the difficulty of collecting money or produce, especially in the northern colony, that the proprietaries were frequently obliged to grant assignments of lands or quit rents to their officers in order to secure the performance of their duties. Sir Nathaniel Johnson, who was appointed governor of Carolina in the year 1702, received a warrant for a salary of 200*l.* a year. The other cotemporary officers had salaries of which the highest was 60*l.*, and the lowest 40*l.* a year. The governor's salary was doubled in the year 1717.

Carolina, by its amazing fertility in animal and vegetable produce, was enabled, from an early period, to carry on a considerable trade with Jamaica, Barbadoes, and the leeward islands, which, at the close of the seventeenth century, are said to have depended in a great measure on this colony for their means of sub-

* From Warden's population tables, it appears that, in the year 1734, they outnumbered the freemen in the proportion of 4 to 1; a relative proportion never at any other time known in an American province, though far short of what prevails in many of the British West India settlements.

† Indeed, a law to the same effect had been enacted by the assembly of South Carolina several years before the revolution; but it was disallowed by the royal governor as contrary to the policy, and injurious to the trade of Great Britain.

‡ Wynne, ii. 541.—543. Hewitt, ii. 14. 72.—74. 93.—97. Warden, ii. 413. 436. Traces of the cruelty with which slaves were anciently treated in South Carolina have lingered, it must be confessed, till a very late period, both in the laws of this province and the manners of its inhabitants. Slaves are, or till very lately were, burned alive for murder, burglary, or fire raising. In the year 1809, two negroes were actually burned alive over a slow fire in the market place in Charlestown. Bristed's "America and her Resources," p. 155. "The grand jury of Charlestown, for the term of January, 1816, reported, as a most serious evil, that instances of negro homicide were common within the city for many years; the parties exercising unlimited control as masters and mistresses indulging their cruel passions in the barbarous treatment of slaves, &c. &c." and thereby bringing on the community, the state, and the city the contumely and reproach of the civilized world." Warden, ii. 437. They who entertain such a sense of the evil, will, it may be hoped, in time find a cure for it.

What strange inconsistencies may coexist with even the worst evils of slavery, is strikingly evinced in the life of that distinguished Roman who united all the abstractions and refinements of Pichagorean philosophy with the most odious inhumanity to his slaves. Plutarch's Life of Marcus Cato.

sistance. Its staple commodities were rice, tar, and, afterwards, indigo. Oldmixon, whose history was published in the year 1708, observes, that the trade of the colony with England had of late obtained a great increase; "for notwithstanding all the discouragements the people lie under," he adds, "seventeen ships came last year laden from Carolina with rice, skins, pitch, and tar, in the Virginia fleet, besides straggling ships."

By an act that was passed in the year 1715, every planter of Carolina was ordered to purchase and enclose a burial ground for all persons dying on his estate; and, before interment of any corpse, to call in at least three or four of his neighbours to view it, for the purpose of further enquiry in case of any suspicious appearance. It has been noted, from an early period, as a peculiarity in the manners of many of the American provinces, that funerals are conducted with a degree of pomp and expense unknown to the usages of Europe. In some of the states, laws were enacted from time to time to restrain this vain and ill-timed prodigality. In none of them has it been carried to a greater extreme than in South Carolina, where the interment of the dead has been generally combined with a luxurious entertainment and a profusion of good cheer to the living.*

BOOK V. NEW YORK. CHAPTER I.

Hudson's Voyage of Discovery—First Settlement of the Dutch at Albany—The Province granted by the States-General to the West India Company of Holland—The Dutch Colonists extend their Settlements into Connecticut—Disputes with the New England Colonies—De'aware first colonized by the Swedes—War between the Dutch and Indians—Further disputes with New England—Designs of Charles the Second—Alarm and Efforts of the Dutch Governor—The Province granted by Charter to the Duke of York—Invaded by an English Fleet—Surrenders—Wise Government of Colonel Nichols—Holland cedes New York to England—recaptures it—finally cedes it again—New Charter granted to the Duke of York—Arbitrary Government of Andros—Discontent of the Colonists—The Duke consents to give New York a Free Constitution.

NEW YORK is distinguished from the other colonial settlements whose history we have already considered, both by the race of its first European settlers, and the mode of its annexation to the dominion of Britain. In all the other provinces, the first colonists were Englishmen, and the several occupations of American territory and corresponding extensions of the British empire, were the enterprises of English subjects, impelled by the spirit of commercial adventure, inflamed with religious zeal, or allured by ambitious expectation. The people of England had derived, in all these instances, an increase of their commercial resources, and the crown an enlargement of its dominion, from the acts of private individuals, sanctioned no doubt by the appropriation of public authority, but wholly unaided by the funds or forces of the community. But the territory of New York was originally colonized, not from England, but from Holland; and the incorporation of it with the rest of the British dominions was effected, not by settlement, but by conquest; not by the enterprise of individuals, but by the forces of the state. It is a singularity still more worthy of remark, and illustrative of the slender influence of human views and purposes in the pre-adjustment and connection of events, that this military conquest proved the means of establishing a colony of quakers in America; and the sword of Charles the Second, in conquering an appanage for his bigot brother, prepared a tranquil establishment in New Jersey and Pennsylvania, for the votaries of peace, toleration, and philanthropy.

The pretensions of the Dutch to this territory were certainly, from the first, more consistent with natural justice than with the law of nations, and the privilege which it attaches to priority of discovery. For if, on the one hand, the voyage of Cabot, and his general and indefinite visitation of the North American continent, preceded by more than a century the occurrence from which the Dutch occupation originated, there seems, on the other hand, a monstrous disregard of the rights of human nature, in maintaining that a claim, so precariously constituted, could subsist so long unexercised, and that a navigator, by casually approaching North America, in a vain and erroneous search of a passage to the Indies, should acquire, for his countrymen, a right to prevent the whole continent from being inhabited for more than an hundred years.

The prior right of England (yet unrecognized by the rest of the world) had produced no other permanent occupation than a feeble settlement on the distant territory of James River in Virginia; which had now subsisted for two years, when Henry Hudson, an Englishman, employed by the East India Company of Holland, set sail [1609] from the Texel for the discovery of a north-west passage to India. Having attempted in vain to accomplish the object of his voyage, he steered for Cape Cod, and entered the bay of Chesapeake, where he remarked the infant settlement of the English. He afterwards anchored his vessel off the Delaware, and proceeding thence to Long Island, sailed up the river Manhattan, on whose banks the chief fruit of his enterprise were destined to grow. Some authors have asserted that he sold his right to this territory to the Dutch: but the assertion is equally unproved and improbable; as he could convey to them no right which the voyage did not vest by a much better title in themselves. Several voyages were afterwards made from Holland to the river Manhattan, which, at first, was called the North River, but, in process of time, received the name of the able and enterprising navigator, by whom, if not originally discovered, it had been introduced for the first time to the acquaintance of the Dutch. This people now conceived that they had acquired a sufficient title to the adjacent territory, which they distinguished by the name of Nova Belgia, or New Netherlands.* The depending or recent conflicts of rival provinces, and even rival nations, lent at one time to all the circumstances attending the first occupation of this territory, an interest which they have long ceased to possess, except in the estimation of antiquarians.

The favorable report that Hudson had given of the country having been confirmed by subsequent voyages, a body of Dutch merchants embraced the resolution of establishing a trading settlement within its confines; [1614,] and the States General promoted the enterprise by granting them a patent for the exclusive trade of Hudson's river. Encouraged by this act of favor they proceeded, in the course of the same year, to appropriate a small portion of ground on the western bank of the river near Albany, where they erected a fort, and intrusted the government of the place to one Henry Christiaens. This feeble settlement had scarcely been established, when it was invaded by a Virginian squadron, commanded by Captain Argal, and returning from the conquest of the French possessions in the bay of Fundy. Argal claimed the territory occupied by the Dutch, as appertaining of right to the British dominion in America; and the governor was compelled to obey a summons of surrender, and to stipulate allegiance to England, and tribute and subordination to the government of Virginia. The states of Holland had too recently established an independence promoted by the aid, and recognised by the mediation of Great Britain, to make this outrage the cause of quarrel with a powerful ally, whose assistance they could not yet deem themselves strong enough to dispense with. They forbore, therefore, to take any notice of Argal's hostile proceedings: and it is even asserted by some

* Purchas, iii. 551, &c. Charlevoix, Hist. of New France, i. 221. Oldmixon, i. 117. Smith's Virginia, 75. Douglass's Summary, i. 231. Smith's History of New York, p. 2, 3. All these writers, except the first two, represent Hudson's Voyage as having been performed in 1609, and under the authority of a British commission. But they are all mistaken. They seem not to have been aware of the existence of any other authority, for the account which I have preferred, but that of Charlevoix; and Smith's opinion is obviously not a little influenced by the circumstance of Charlevoix being a French Jesuit, while Smith, who contradicts him, was an English, or at least a Virginian protestant minister. But the journals of all the voyages of Hudson are preserved in Purchas's collection; and they confirm Charlevoix, and contain the account I have adopted. From these journals also we may discover the cause of the error committed originally by Oldmixon, and from him transmitted to Smith and the others. Hudson's second Voyage, in which he visited Nova Zembla, was made from London in 1608, and with an English commission. This has evidently been confounded with his third voyage in 1609 from the Texel. The employment of Hudson, and the date of his voyage, are correctly represented in a new work, of which the first part has been very recently published.—The History of New York, by John Yates and Joseph Moulton, vol. i. part i. 202, 209.

This point has been the more eagerly contested, that some timid or servile civilians have doubted, if Holland, whose independence was not acknowledged by Spain till the beginning of 1603, could be regarded as previously admitted into the community of sovereign states, and capable of deriving rights from the laws of nations. Smaller jurists, and more manly thinkers, have adjudged, indeed, that this privilege accrues to a people from the time when they publicly assert a claim to independence, which, though partially denied for a while, they finally succeed in causing to be generally recognized. But this doctrine is not necessary to the support of the interest of the Dutch in Hudson's discovery, which was some months posterior to the treaty with Spain.

writers, that, in answer to a complaint by the British courts, of their intrusion into America, they denied that the settlement had been established by their authority, and represented it as the private act of a company of merchants. The same writers have alleged, that the Dutch, at the same time, besought the king to permit a few trading houses to be erected within his territories on Hudson's river, and that a permission to this extent was actually obtained. Whatever truth or falsehood there may be in these statements, it is certain that, in the year following [1615] Argal's invasion, a new governor, Jacob Elkin, having arrived at the fort with an additional complement of settlers, the claim of the English to the stipulated dependence was forthwith defied, and the payment of tribute successfully resisted. For the better protection of their independence, the colonists now erected another fort on the south-west point of Long Island: and two others were afterwards built at Good Hope, on Connecticut river, and at Nassau, on the east side of Delaware Bay. They continued for a series of years, in unmolested tranquility, to mature their settlement, enlarge their numbers, and, by the exercise of their national virtues of patience and industry, to subdue the first difficulties and hardships of an infant colony.*

The states of Holland finding their commerce enlarge with the continuance of freedom and the enjoyment of peace, and observing that their subjects had succeeded in preserving the footing they had gained on Hudson's river, began to form the project of improving this settlement, and rendering it the basis of more general and extended colonization in America. With this purpose was combined the scheme of their celebrated West India Company, which was established in the year 1620, and to which, in pursuance to their invariable policy, of colonizing by the agency of exclusive companies, it was determined to commit the administration of New Netherlands. They seemed to have watched, with an attentive eye, the proceedings of the English puritan exiles at Leyden, and viewed with alarm their projected migration to the banks of Hudson's river. [16] Unable or unwilling to obstruct the design by an opposition which would have involved an immediate collision with the pretensions of Britain, they defeated it by bribing the Dutch captain, with whom the emigrants sailed, to convey them so far to the northward, that their plantation was finally formed in the territory of Massachusetts. This fraudulent proceeding, though it prevented a rival settlement from being established on Hudson's river discredited their own title to this territory, and proportionably enforced the title of Great Britain, which, in the same year, was again distinctly asserted and exercised by the grant of king James's patent to the grand council of Plymouth. The Plymouth patent, however, which was declared void in the following year by the English House of Commons, and surrendered a few years after by the patentees, seemed as little entitled to respect abroad as to favor at home; for, even if its disregard of the Dutch occupation should not be supposed to infringe the law of nations, it unquestionably merited this reproach by appropriating territories where the French, in virtue of previous charters from their sovereign, had already established the settlements of Acadia and Canada. The nullity of the Plymouth patent, in this last particular, was tacitly acknowledged by Charles the First, in 1630, when, at the treaty of St. Germain, he restored the French provinces which his arms had conquered in the preceding year. Whether the States of Holland considered the patent equally unavailing against their rights or not, they appear to have made a grant of the country which was now called New Netherlands to their West India Company, in the following year, [1621]—the very year in which the English House of Commons protested against a similar patent of the same territory by their own monarch, as inconsistent with the general rights of their countrymen, and the true interests of trade. If the States General, or the colonists of Hudson's river, were acquainted with this parliamentary proceeding, they made more account of the benefit that might accrue from it to their territorial claim, than of the rebuke it might be thought to convey to their commercial policy. Under the management of the West India Company, the settlement was soon both consolidated and extended. The city of New Amsterdam, afterwards called New York, was built on York Island,

* Winterbottom, iii. 255. "In short, the scripture observation, it is better to go to the house of mourning than to the house of feasting, is unadvisable, and wholly inapplicable here, as it is difficult to distinguish the one from the other."

* Oldmixon, i. 118. Stah, 133. Wynne, i. 170. Smith, 2, 3. See Note 16, at the end of the volume. In the year 1634, the exports from New Netherlands were "four thousand beavers and seven hundred otters estimated at 27,150 guilders." Hazard, i. 397.

then known by the name of Manhattan; and at the distance of a hundred and fifty miles higher up the Hudson, was laid the foundation of the city of Albany.*

What was the precise extent of territory claimed by the Dutch, as comprehended within their colony of New Netherlands, has been differently represented even by their own writers, some of whom have not scrupled to maintain that it embraced the whole country from Virginia to Canada. Whatever was its titular extent, which was probably unknown to the colonists themselves, they proceeded to enlarge their occupation far beyond their immediate use, and, by their intrusion into the Connecticut and Delaware territories, laid the foundation of their future disputes with the colonies of New England. While these powerful neighbours as yet possessed no other establishment but the small settlement of Plymouth, to which the artifice of the Dutch had consigned the English emigrants from Leyden, the local authorities of New Amsterdam attempted to cultivate a friendly, or at least a commercial correspondence with the English colony; and for this purpose despatched their secretary Rosier with a congratulatory communication to the governor of Plymouth. [1627.] The English, from whose memory the fraud that had deprived them of a settlement at Hudson's river had not banished the recollection of Dutch hospitality at Leyden, received with much courtesy the felicitations of their successful rivals on the courageous struggle they had maintained with the difficulties of their situation; and as some years had yet to relapse before Massachusetts became populous, and before the English establishments in Connecticut were begun, the Dutch colonists were enabled to flatter themselves that their stratagem would not be resented, nor their settlements disturbed. They seem to have been aware of the reluctance of their government to exhibit publicly a title derogatory to the pretensions of Britain, and to have endeavoured to counteract the restraint which this policy might impose on their future acquisitions by the energy of their immediate occupation. Their first settlement was effected, apparently, without any equitable remuneration to the Indian proprietors of the land; and hence perhaps arose those dissensions with the Indians which afterwards produced a great deal of bloodshed. But when they extended their appropriations to Connecticut and Delaware, they were careful to facilitate their admission by purchasing the territory from its savage owners.† If their policy really was (as we may reasonably suppose, though we cannot positively assert), to supply a defective, or at least non-apparent title, by extent and priority of occupation, it was completely disappointed by the event; and when New England and Maryland began to be filled with inhabitants, the Dutch at length discovered that the early and immediate extent of their occupation only served to bring their rights the sooner into collision with the pretensions of neighbours more powerful than themselves; and to direct a severer scrutiny into a title which they were unable to produce, which their detected stratagem had contributed to discredit, and which the length of their possession was yet unable to supply. These disagreeable results were not experienced till after the lapse of several years of uninterrupted peace; and during the administration of Wouter Van Twiller, [1629] who arrived at Fort Amsterdam as the first governor appointed by the West India Company,‡ the Dutch colonists appear to have enjoyed a state of calm and mono-

tonous ease. This state afforded no materials for history, and served but indifferently to prepare them for their impending contentions with men whose frames and spirits had undergone the discipline of those severe trials that befel the first settlers in New England.*

[1633] It was near the close of Van Twiller's administration, that the English colonists extended their settlements beyond the boundaries of Massachusetts into the territory of Connecticut; an intrusion which the Dutch governor resented no farther than by causing his commissary, Van Culet, to intimate a harmless protest against it. He was succeeded in the following year [1637] by William Kieft, a man of enterprise and ability, but choleric and imperious in temper, unfortunate in conduct, and more fitted to encounter with spirit than to stem with prudence the sea of troubles that now began on all sides to invade the possessions of the Dutch. These colonists now experienced a total change in the complexion of their fortune; and their history for many subsequent years is little else than a chronicle of their struggles and contentions with the English, the Swedes, and the Indians. [1638] Kieft's administration commenced, as his predecessor's had concluded, with a protest against the advancing settlements of Connecticut and New Haven, accompanied by a prohibition of the trade which the English were carrying on in the neighbourhood of the fort of Good Hope. His reputation for ability, and the vigor of his remonstrance, excited at first some alarm in the English inhabitants of Connecticut, who had originally made their advances into this territory in equal ignorance of the proximity and the pretensions of the Dutch; but, quickly convinced that their imperious rival had no title to the country from which he pretended to exclude them, and encouraged by promises of assistance from the other New England colonies, they disregarded his remonstrance, and not only retained their settlements, but two years after [1640] compelled the Dutch garrison to evacuate the fort of Good Hope, and appropriated this plantation to themselves. This aggression, though passively endured, was loudly lamented by the Dutch, who, notwithstanding the increase of their numbers, and the spirit of their governor, displayed a helplessness in their contentions with the English, which if partly occasioned by the enervating influence of a long period of tranquility, seems also to have been promoted by secret distrust of the validity of their claim to the territories they had most recently occupied. It is certain, at least, that the Dutch were not always so forbearing; and an encroachment which their title enabled them more conscientiously to resist, was soon after repelled by Kieft, with a vigor and success which he was not often enabled to display. Lord Stirling, who had obtained a grant of Long Island from the Plymouth Company, transferred a considerable portion of it to certain of the inhabitants of New England, who had removed to their new acquisition in the year 1639, and, unmolested by the Dutch, whose settlements were confined to the opposite quarter, they had peaceably inhabited the eastern part of the island. Having received a considerable accession to their numbers, they at length proceeded to take possession of the western quarter; but from this station they were promptly dislodged by Kieft, who drove them back to the other end of the island, where they built the town of Southampton, [1642] and subsisted as a dependency of Connecticut,

till they were united to the state of New York on the fall of the Dutch dominion in North America.*

Kieft, in the same year, equipped two sloops, which he despatched on an expedition against a body of English who had penetrated from the settlements in Maryland into a district within the Delaware territory, the whole of which was claimed by the Dutch, but had been included in the charter obtained by Lord Baltimore from Charles the First. As the number of these emigrants from Maryland was inconsiderable, and they were totally unprepared to defend their possession against this unexpected attack, they were easily dislodged by the forces of Kieft. But there still remained in another quarter of Delaware a different race of settlers who, without any legal claim whatever to the territory they occupied, possessed a strength that proved of more avail to them than the formal title of the English. This was a colony of Swedes, of whose settlements in this corner of North America very few particulars have been transmitted by history. Their enterprise appears to have originated in the year 1626, when Gustavus Adolphus, king of Sweden, having received a magnificent account of the country adjacent to the Dutch settlement of New Netherlands, issued a proclamation exhorting his subjects to associate for the establishment of a colony in that region. Considerable sums are said to have been raised accordingly by contribution: and a number of Swedes and Fins emigrated in the year 1627 to America. They first landed at Cape Henlopen, at the entrance of Delaware Bay, and were so much charmed with its aspect that they gave it the name of Paradise Point. Some time after, they purchased from the natives all the land between that cape and the falls of Delaware; and maintaining little connexion with their parent state, but addicting themselves exclusively to agricultural occupations, they had possessed their new settlement without challenge or interruption, till Kieft assumed the government of New Netherlands.† Several of the Swedish colonists were scalped and killed, and in some instances, their children were stolen from them by the Indians. Yet, in general the two races lived on friendly terms together, and no war seems ever to have arisen between them. The Indians sometimes attended the religious assemblies of the Swedes; but with so little edification, that they expressed their amazement that one man should detain his tribe with such lengthened harangues without offering to entertain them with brandy. One of the earliest of Kieft's proceedings had been to protest against the intrusion of the Swedes, and vainly to urge their departure from a territory which he assured them his countrymen had purchased with their blood. But as the Dutch discovered no inclination to purchase it over again at the same expense, the Swedes, unavowed by this governor's power, paid no regard whatever to his remonstrances. A war, as it has been called, subsisted between the two communities for several years; but though attended with a plentiful reciprocation of rancor, it was unproductive of bloodshed. At the treaty of Stockholm, in 1650, Sweden and Holland forbore to make any allusion to colonial disputes or American territory;‡ and the two colonies being left to adjust their pretensions between themselves,§ their animosities

* Oldmixon, i. 118. Smith, 3. Chalmers, 569, 570. Chalmers questions the existence of the grant to the Dutch West India Company altogether. Though frequently referred to by Dutch writers, and by the governors of New Netherlands, it has never been published; and it was not until eight years after, that the West India Company sent out Van Twiller to assume the government in their behalf. But the authorities cited by Smith (p. 11), together with various circumstances in the subsequent history, seem to me to render Chalmers' doubts unreasonable. That the principal deed of grant was not at first transmitted to America, is no more than from its nature we should be led to expect. Its proper depository was in the archives of the Company in Holland. That an authenticated copy was sent, seems to have proceeded from the timorous and temporizing policy of the States-General.

† Smith, p. 3. This is the assertion of the Dutch writers; and though Kieft, the governor of New Netherlands in 1638, declared in his remonstrance against the Swedish occupants of Delaware, that the possessions claimed by the Dutch there "had been sealed by their blood," (Smith, p. 4.) the two statements may be perfectly consistent with each other.

‡ Wynne (vol. i. p. 173) ascribes the appointment of Elkyn, the predecessor of Van Twiller, to the West India Company. Oldmixon supposes Christians also to have been appointed by this corporation, which did not exist until several years after the appointment of them both. This may be easily explained by supposing, that it was the same merchants originally associated as patentees of the trade of Hudson's river, who were afterwards incorporated as the members of the West India Company.

* The only fact that has been recorded, as illustrative of Van Twiller's administration, is the style of government evinced in his patents of land, which commenced after this manner: "We, directors and council, residing in New Netherlands, on the Island of Manhattan, (York Island), under the government of their High Mightinesses, the Lords States General of the United Netherlands, and the privileged West India Company." Smith, p. 3.

† The Dutch preserved, for a series of years, a very minute and formal record of the grievances which they laid to the charge of the English Colonists. The insignificance of many of these complaints, and the homeliness of the subject-matter of others, contrast somewhat ludicrously with the pompousness of the titles and the bitter gravity of the style. The following are some extracts from this singular chronicle:—"23th April, 1640. Those of Hartford have not only usurped and taken in the lands of Connecticut, &c. but have also beaten the servants of the High and Mighty and Honored Company with sticks and plough-staves in hostile manner laming them: and, among the rest, struck Ever Duckings a hole in his head with a stick so that the blood ran very strongly down his body." "24th June, 1641. Some of Hartford have taken a hog out of the common, and shut it up out of mere hate or other prejudice, causing it to starve for hunger in the sty." "23th May, 1642. The English of Hartford have violently cut loose a horse of the Honored Company that stood bound upon the common." "23. The said English did again drive the Company's hogs from the common into the village, and pounded them." "16th September, 1642. Again they sold a young pig, which had pastured on the Company's land." Hazard, vol. ii. p. 234, 265, 255.

* Oldmixon, vol. i. p. 121. Smith, p. 3-5. Chalmers, p. 570, 571. Trumbull's Connecticut, vol. i. p. 113, 114, 148. The histories of these events, by Oldmixon, Smith, and Chalmers, are exceedingly confused, and in some points erroneous. Their chronology, in particular, is remarkably careless. Trumbull is always distinguished by the accuracy of his statements, but not less distinguished by his partiality. Here, in particular, he relates with great fidelity all the offences of the Dutch, but passes over in total silence every charge of this people against the English.

† The Swedish government appears to have made some attempt to obtain a recognition of its right to the territory. An application to this effect was made by Oxenstiern, the Swedish ambassador to the court of England: but though the Swedes alleged that the application was successful, and the validity of their occupation admitted, no proof of this averment was ever produced. Not less improbable was a pretence they seemed to have urged, of having purchased the claim of the Dutch. Samuel Smith's History of New Jersey, p. 23. This is a work of extreme rarity, and has been confounded by some writers with Smith's History of New York. The copy of which I have been enabled to peruse is in the library of George Dillwyn, Esq. It contains much curious matter, but is written in a very confused, tiresome manner.

‡ Smith, 5. Hulme's American Annals, i. 199. Professor Kalm's travels in North America, v. 2, p. 113, 118. Douglass, ii. 221. Chalmers, 572, 631, 632. Chalmers unfortunately seems to relax his usual accuracy when he considers his topics insignificant; and from this defect, as well as the peculiarities of his style, it is sometimes difficult to discover his meaning, or reconcile his inconsistency in different passages. Douglass's "Summary," which is replete with prejudice and partiality when it treats of New England states, is very frequently inaccurate when it travels beyond them.

§ Trumbull represents the Dutch and Swedish governors in 1642, as "making in a crafty design" to exclude an inhabitant of New Haven from trading at Delaware.

subsidied into an unfriendly peace. Even this degree of good neighborhood did not subsist for many years.

Meanwhile, numberless causes of dispute were continually occurring between New Netherlands and the colonies of Connecticut and New Haven; and the English, who had formerly been the parties complained of, now became the complainers. They charged the Dutch with disturbing, kidnapping, and plundering their traders; with enticing servants to rob and desert from their masters; and with selling arms and ammunition to the natives. The unfriendly relations that subsisted between the Dutch themselves and the Indians, would render this last charge against them extremely improbable, if it were not known that their countrymen in Europe have, on various occasions, manufactured and sold to their enemies the cannon balls which they knew were to be fired back into their own towns. To all these complaints, the English could obtain no other answer from Kieft but haughty reproaches and angry recriminations; and it was partly from suspicion of his designs, and for the purpose of defending themselves against them, though chiefly, no doubt, for their own security against Indian hostility, that the New England colonies were induced to form the scheme of the federal union, which they carried into effect in the year 1643. That the complaints of the English against Kieft were by no means unfounded, may be strongly inferred from the fact, that the succeeding governor of New Netherlands, though warmly attached to the cause of his countrymen, declined to make any answer to these charges, and desired that he might not be held responsible for them. And yet notwithstanding their mutual disagreements, the Dutch and English colonists never suffered themselves to forget entirely either the forms of courtesy, or the more substantial rights of humanity. Kieft, perhaps with more politeness than sincerity, congratulated the united colonies on the league they had formed; and when, in the course of the same year he applied to New Haven for assistance against the Indians, with whom he was engaged in a bloody and dangerous war, the government of this colony, though precluded by the federal union as well as by doubts of the justice of the Dutch cause, from embarking separately in hostilities, tendered the amplest contribution they could afford of provisions for men and cattle, to supply the scarcity that might have arisen from the Indian devastations. So unwarlike were the Dutch colonists in general, that they found it necessary to hire the services of Captain Underhill, who had been banished from Boston as one of the associates of Mrs. Hutchinson, and who at the head of a mixed troop of English and Dutch whom he commanded opposed the Indians with a skill and bravery that proved fatal to great numbers of them both in Long Island and on the main land, and was thought to have saved the colony of New Netherlands from utter destruction. Notwithstanding the need he had thus experienced of English assistance, and the benefit he had derived from it, Kieft continued, during the following years, to exchange with the colonies of Connecticut and New Haven, not only the most vehement remonstrances and vituperations, but menaces of hostility, which happily for himself, he was no less unable than they were unwilling to carry into effect. He continued all this time to be involved in hostilities with the Indians, between whom and the Dutch there was fought, towards the conclusion of the administration, [1646,] a great and general battle on Strickland's Plain, where, after an obstinate conflict and great slaughter on both sides, the Dutch with much difficulty kept the field, and the Indians withdrew unpursued.*

Kieft was succeeded, in the following year, [1647] by the last of the governors of New Netherlands. This was Peter Stuyvesant, a brave old officer, and one of those magnanimous spirits of which the republican service of Holland was in the age unusually productive. By his justice, prudence, and vigor, he appears to have succeeded in restoring peace with the Indians, and preserving it uninterrupted during the whole of his administration. His arrival was honored by an address of congratulation from the commissioners of the united colonies of New England, accompanied with an earnest entreaty for redress of the grievances they had endured

from his predecessor. One of the most serious of these grievances had latterly been the frequent seizures and confiscation of the English trading vessels, on the pretence of infractions of the custom-house regulations of New Netherlands, which the Dutch, with insolent injustice, refused to explain, and yet proceeded to enforce. Stuyvesant, though he declined to justify some of the acts of his predecessor, returned, as might have been expected, a counter claim of redress for the wrongs of New Netherlands, and in particular demanded a restoration of the territories of Connecticut and New Haven this was a hopeless demand; and Stuyvesant soon perceiving that the state of his title and of his force would barely suffice to prevent further invasion of the Dutch pretensions, was too prudent to persist in it. After various negotiations, [1650,] a treaty was at length concluded between the commissioners of the United English Colonies and the governor of New Netherlands, by which the settlements of the respective nations on Long Island were mutually secured to them, and a boundary ascertained between the Dutch settlement and the Connecticut and Newhaven occupations on the main land. [1651] This treaty was not productive of the good consequences that were expected from it. The English had passed a law prohibiting the Dutch from trading within their territories: a restriction that was highly resented by the Dutch; and the disputes that arose concerning the observance of this law, together with the competition of the two nations, to engross the profits of Indian trade, engendered a degree of mutual jealousy and ill humor that caused them to regard each other's proceeding and policy through a very unfavorable medium. The treaty seems not to have embraced any arrangement with regard to the Delaware territory, and Stuyvesant was determined to preserve entire all that yet remained uninvaded of the Dutch pretensions in this quarter. In support of these pretensions he was soon constrained to make such efforts to resist a trading settlement which the colony of New Haven attempted to establish on the borders of Delaware, as completely effaced every appearance of good understanding between the Dutch and the English provincial governments. The breach between them was widened by a panic excited in the English settlements of Connecticut and New Haven, where a number of Indians volunteered a confession of a projected massacre of the English, to which they declared that they had been instigated by the governor of New Netherlands, [1652.] The only confirmation of their story that they could produce, was the ammunition which the Dutch had been always in the practice of selling to them, and which the English now believed the more readily to have been supplied for their destruction, as the Indians had frequently employed it for this purpose. Notwithstanding the confident assertions of a respectable historian of Connecticut, this confession appears to me to have derived the credit it received chiefly from the fears and prepossessions of the English, who suffered themselves to be made the dupes of perfidious savages, whose enmity would have been gratified by the destruction of either of the races of their powerful neighbors. What may be thought, indeed, to place this beyond a doubt is, that no future confirmation of the charge was ever obtained, even after the fall of the Dutch dominion had placed every facility for the procurement of evidence in the hands of the English. The governments of Connecticut, New Haven, and Plymouth, however, blinded by apprehension and resentment, gave implicit faith to a statement discredited no less by the habitual fraud and treachery of the Indians, than by the manly and honorable character of Stuyvesant. To his indignant denial of the charge they answered by reminding him of the massacre of their countrymen by the Dutch in Amboyna, about thirty years before; and to his just exceptions to the value of the Indian testimony, they replied that the Dutch governor of Amboyna had sought a pretext for his cruelty in the charges against the English which he extorted by torture from the Japanese. The absurdity of this reasoning forcibly demonstrates the intensity of passion by which they were transported; and the repeated introduction of the topic of Amboyna shows as clearly the strong, but unconscious, dominion of national resentment and antipathy on their minds. [1653] In Massachusetts, the evidence of the conspiracy was not considered satisfactory; nor could all the instances of their confederates prevail with this state to join with them in a war against the Dutch. Judging their own forces along inadequate to such an enterprise, the other colonies applied for assistance to Oliver Cromwell, who was then engaged in the two years' war with Holland, which the long parliament had begun, [1654.] and who promptly acceded

to their request by despatching a squadron to undertake, in concurrence with the colonial troops an invasion of New Netherlands. The design was, however, arrested by intelligence of the peace that had been concluded between the protector and the States-general, and his squadron having fortified the spirits of the English colonists by demonstrating to themselves and their adversaries the vigor with which a powerful government would resent their wrongs, proceeded still further to augment their security, by effecting the conquest of the French province of Acadia.* It is remarkable, that the treaty of peace that was executed at this time between England and Holland contained no express allusion to the claims or possessions of either in North America; but as it was stipulated that war should cease, and peace and friendship prevail between all the dominions and possessions of the two countries in all parts of the world, and as the English expedition against New Netherlands was thereupon countermanded, the validity of the Dutch claim to this territory seems to have been manifestly implied, and practically acknowledged.

It was in the Delaware territory that Stuyvesant most resolutely and successfully defended the claims of his countrymen against the invasions of the New England colonists and the Swedes. As the war between the Dutch and the Swedes during Kieft's administration had in some respects resembled a peace, so the peace that ensued bore no little resemblance to a war. To check the encroachments which these settlers were continually attempting, Stuyvesant had erected a fort a place then called New Amstel, and afterwards New-castle. This proceeding gave umbrage to the Swedes, who expressed their displeasure in a protest, which, with the usual fate of such documents, was totally disregarded. About a year afterwards, Risingh, the Swedish governor, proceeded with an armed vessel against the Dutch fort, and obtaining admission into it by a stratagem somewhat discreditable to his own honesty, as well as to the vigilance of its defenders, he easily overpowered the garrison, and expelled them with violence, but without cruelty, not only from their strong hold, but from the confines of Delaware. During the short time that the fortress remained in his possession, it received the name of Christina, in compliment to the Queen of Sweden. Stuyvesant was not of a disposition to submit tamely to such an outrage, or to content himself with a simple reoccupation of the fort. He determined to invade and subdue the whole Swedish settlement; but destitute of a force sufficient for this enterprise, and fully occupied at the time, with a controversy more dangerous to his government as well as more interesting to his honor, he was constrained to apply for reinforcement to the West India company. This corporation, however, was then laboring under such embarrassments, that it was only by a friendly contribution of the city of Amsterdam, that its administrators were at length able to supply Stuyvesant with a small body of troops. Thus reinforced, he marched into Delaware, [1655,] where the Swedes had employed their leisure in erecting another fort, as if they had intended to defend their pretensions to the last extremity. But no sooner did they find themselves about to be attacked in earnest by a warrior, whose hostilities were not confined to stratagems and protests, and perceived that their forts failed to answer their true object of intimidating the enemy from approaching, than they peaceably surrendered them, together with the whole of their settlements, to the forces of Stuyvesant. This conquest of Delaware was effected without bloodshed; a circumstance the more extraordinary, as it certainly did not arise from absence of the passions from which this fatal extremity might be expected to ensue; for many of the Swedes detested the Dutch so cordially, that they chose to return to Europe and to abandon a country they had called a paradise, rather than submit to a union with the colony of New Netherlands. To this extremity, however, the rest were reduced, and the settlement for some years continued to be ruled in peace by a lieutenant-governor appointed by Stuyve-

* Oldmixon, i. 119. Chalmers, 571. Trumbull, i. 168, 174, 180, 191-3, 197, 202, 204, 212, 219, 220, 267. Smith, 6. The whole voluminous correspondence that took place, both on this occasion and afterwards, between the governors of the Dutch and English colonies, is preserved in Hazard's Collection, vol. ii.

† Risingh, under the disguise of friendship, came before, the works, fired two salutes, and landed thirty men, who were entertained by the commandant as friends; but he had no sooner discovered the weakness of the garrison than he made himself master of it, seizing also upon all the ammunition houses, and other effects of the West India company, and compelling several of the people to swear allegiance to Christina, Queen of Sweden.* Smith.

* Trumbull, i. 114, 121-123, 129, 138-140, 155, 157, 161. Belknap, i. 50. Yet the greater number of the writers of American history (copying each others' statements without examination) have asserted that the Dutch were never once involved in a quarrel with the Indians. One old writer, indeed, whose work is very scarce, has stated that the Dutch were continually harassed and endangered by the Indians. Brief Description of New York, formerly called New Netherlands, by Daniel Denton, p. 15. In Samuel Smith's History of New Jersey, (p. 64.) reference is made to some bloody contests between the Dutch and Indians.

sant. Thus unassisted by the parent state, fell the only colony that Sweden ever has possessed. The historian would have little pretension to piety or virtue who would deride a bloodless adjustment of national disputes. But in timorous hostilities, a new feature of opprobrium is added to the moral aspect of war. When we recollect that these Swedes were either the subjects of Gustavus Adolphus, or the immediate descendants of his subjects, and when we see them provoke a war by fraud and outrage, and then decline it by tamely submitting to the object of their insult and hatred, it must be acknowledged that they have enlarged the catalogue of those nations whose spirit has degenerated in their colonial settlements. The Dutch have been generally obnoxious to this remark; and their conduct in New Netherlands will never be cited as an exception to its application. All their colonies have been the offspring of motives no higher than the thirst of commercial gain; and the same sentiments which engaged them to extend their dominions, have gradually obliterated the energy that was requisite to their defence and preservation. The valor of Stuyvesant* rather reproached than animated the sluggish spirit of his fellow-colonists, whom his example could never teach either to repel injustice with spirit, or to bear it with dignity. Yet Holland was now in the meridian of her fame; and this was the age of Tromp and De Ruyter.

The attention which had been awakened in the mother country to the state of the colony of New Netherlands, was maintained by the prosperous result of her recent interposition, and further evinced itself in the following year [1656] by a constitution which was enacted by the West India company and the burgo-masters of Amsterdam, and approved by the States-general. This instrument provided that the colonists of New Netherlands were to be ruled in future by a governor nominated by the deputies of Amsterdam; and by burgo-masters and a town council elected by the people themselves; the council thereafter enjoying the power of filling up all vacancies in its own body. Some such constitution as this, appears to have been already established in New Netherlands; and the attention of the mother country beginning soon to relax, with the decline of the colony's prosperity, no further attempt seems to have been made to introduce the projected alteration. The West India company, however, transmitted about this time to Stuyvesant, a ratification they had procured from the States-general of his treaty in 1650 with the commissioners of the united English colonies. The Dutch governor gave notice of this circumstance to the commissioners, in a letter replete with christian benevolence and piety; and proposed to them that a friendly league and sincere good-will might thenceforward unite the colonies of England and Holland. But the English were averse to believe the sincerity of a man whom they had recently accused of plotting their destruction with the Indians; and, beginning to regard the Dutch occupation as altogether lawless and intrusive, they were determined not to sanction it by any new recognition. The commissioners answered the governor's communication with austere civility; recommending the continuance of peace, but declining either to ratify the former treaty or to execute a new one. They had begun to entertain strong hopes that the English government would unite with them in regarding the Dutch settlers in America, as mere intruders who could derive no claim of forbearance from the peace with Holland, and whom it would be no less just than expedient to expel or subdue. Their friends in England succeeded in impressing these views upon Richard Cromwell; [1659.] and during his short enjoyment of the protectorate, he addressed instructions to his commanders for an invasion of New Netherlands, and wrote letters to the English colonial governments, desiring the concurrence of their forces in the enterprise. But his speedy deposition spared him the actual guilt of attacking an unoffending people, whom his father had plainly considered as comprehended in his pacification with Holland.

Meanwhile, Stuyvesant had made attempts to improve his conquest of the Swedes by extending the Dutch settlements in Delaware; and equitable as well

as brave; he caused the territory which he occupied to be fairly purchased from the Indians. But his success in this quarter was now drawing to a close. Fendal the governor of Maryland, claimed the territory occupied by the Dutch and Swedes, as included within Lord Baltimore's grant; and finding that Stuyvesant was determined to retain the possession and defend the supposed title of his country, he procured a remonstrance to be transmitted in the name of Lord Baltimore to the States General and the West India Company, who, with an inversion of their usual policy, publicly denied the pretensions of the English, but at the same time transmitted private orders to Stuyvesant to avoid hostilities, if they should seem likely to ensue, by retiring beyond Lord Baltimore's alleged boundary. This injunction was complied with, though not to the extent of an entire evacuation of Delaware, when Charles Calvert a few years after assumed the government of Maryland.* Stuyvesant deeply deplored the feeble policy of those whose mandates he felt it his duty to obey; and sensible of the total discredit in which the Dutch title would be involved by thus practically avowing that its maintenance depended on the forbearance of the English, he earnestly solicited that a formal copy of the grant by the States General to the West India Company might be transmitted to New Netherlands, to enable him to assert, with proper form and dignity, the interest he was intrusted to defend. But his applications proved ineffectual. The States General were now more anxious than ever to avoid a rupture with England; and the West India Company, either concurring with their policy, or controlled by their orders, refused to exhibit a title [1660] of which they feared that Stuyvesant would make such an use as would infallibly provoke that extremity. Perhaps they thought that his prudence would be enforced by the consciousness of a defective title; and such was at least the effect that their policy actually produced. Stuyvesant, willing by any honorable means to propitiate the English, and hoping to obtain a recognition of the title which he was unable to produce, sent an embassy to Sir William Berkeley, the governor of Virginia, to propose a treaty of mutual trade between this colony and New Netherlands, and an alliance against the Indian enemies of both. Berkeley received the ambassadors with much courtesy, and despatched Sir Henry Moody to New Netherlands, with the terms of a commercial treaty; but he took care to decline every expression that might seem either to acknowledge, or even apply, assent to the territorial pretensions of the Dutch.

The authorities whose dominion in England was terminated by the Restoration, had been regarded with continual uneasiness and apprehension by the colonists of New Netherlands. The long parliament had attacked their countrymen in Europe; Cromwell had once been on the point of subduing the colony; and only the deposition of his successor had again snatched them from a repetition of the same danger. Of the government of Charles the Second they were disposed to entertain more favorable hopes, which might, perhaps, derive some confirmation from the well-known fact, that their rivals, the New English colonists, were as much disliked by the king as they had been favorably regarded by the protector. Accordingly, when the pursuers of Goffe and Whalley, baffled in their attempts to recover the retreat of these fugitive regicides in New England, besought Stuyvesant to deny them his protection in New Netherlands, [1661] he readily seized the opportunity of ingratiating his colony with the English court, by undertaking to give instant notice of the arrival of any of the regicides within his jurisdiction, and to prohibit all vessels from transporting them beyond the reach of their pursuers.† But this policy, which, it must be confessed, is not the most honorable trait of his administration, proved utterly unavailing; and every hope that the Dutch might have entertained, of an amelioration of their prospects, was

speedily dissipated by the intelligence of designs entertained by the king of England. Charles, though he had received, during the exile, more friendship and civility from the Dutch than from any other foreign power, even regarded this people with enmity and aversion; and he was the more disposed, at present, to embrace any measure that might humble the ruling party in Holland, by the interest he felt in a weaker faction, at the head of which was his nephew, the young Prince of Orange, whom he desired to see reinstated in the office of Stadtholder, which his ancestors had possessed—an office which the ruling party had pledged themselves to Cromwell never again to bestow on the Orange family. [1663.] These sentiments were enforced by the interest and urgency of the Duke of York, who had placed himself at the head of a New African company,* and found its commerce impeded by the more successful traffic of the Dutch. In imitation of the other courtiers, the Duke had also cast his eyes on the American territory, which his brother was now distributing with so liberal a hand; and, accordingly, in addition to the other reasons which he employed to promote a rupture with the Dutch, he solicited a grant of their North American plantations, on the prevailing plea that they had been originally usurped from the territory properly belonging to Britain. The influence of these motives on the mind of the king was doubtless aided by the desire to strike a blow that would enforce the arbitrary commission he was preparing to send to New England, and teach the puritan colonists there that it was in the power of their prince to subdue his enemies in America.

The rumor of the king's intentions appears to have reached America before it was generally prevalent in Europe; owing to the vigilance and activity of the numerous friends of the English colonists, who watched and apprised them of the designs of the court. When the association of the royal commission, with the expedition against New Netherlands, was known to the inhabitants of New England, the first piece of intelligence appeared to them much more unwelcome than the other was satisfactory. In Massachusetts, particularly, the proceedings of the general court seemed to indicate a strong apprehension that the military, no less than the civil department of the expedition, was intended to be employed against the liberties of the English colonists. Stuyvesant, whose anxious eye explored the darkening horizon of his country's fortune, discerned these symptoms of dissatisfaction in the New England settlements, and conceived from them the bold project of obtaining the alliance, or at least securing the neutrality, of his ancient enemies. With this view (apparently,) he undertook, first, a voyage to Massachusetts, where he was entertained by the governor and magistrates with much state and solemnity. Former rivalry was forgotten in the season of common danger, or remembered only to enhance the respect with which Endicot and Stuyvesant recognised, each in the other, an aged, brave, and virtuous champion of his country's cause. Perhaps some traces of the effect of this conference may be discerned in the slowness with which Massachusetts obeyed the requisition of the royal commanders to raise a body of men in aid of the invasion of New Netherlands. But it was impossible that Stuyvesant's negotiation could succeed, or his proposals, even to the extent of neutrality, be accepted. Notwithstanding this disappointment, however, he proceeded afterwards to Connecticut, where he was engaged in vainly attempting to bring a similar negotiation to a more successful issue, when the intelligence of the approach of the British fleet recalled him to the immediate defence of his province.

The king, who was totally unable to assign a just reason for going to war with Holland, after trying in vain to provoke the resentment of the States General by the most insulting memorials, and the most groundless complaints, determined, at length, to embrace the suggestion of his right to the province of New Netherlands; expecting, with good reason, that, from the assertion of this pretended right, the cause of quarrel which he was industriously seeking would infallibly arise. In pursuance of this purpose, a royal charter was executed in favor of the Duke of York, containing a grant of the whole region extending from the western banks of Connecticut to the eastern shore of the Delaware, [1664.] together with the adjacency of Long

* This gallant veteran did not fail to attract a portion of that idle rumor and absurd exaggeration to which solitary superiority is exposed. To the English he was a subject of continual marvel and apprehension. He had lost a leg in fighting for the independence of Holland; and the English believed that his artificial limb was made of silver (Josselyn, 153); and with still greater credulity, that he restrained the Dutch colonists from immediate hostilities with them, that he might destroy them more cruelly by the hands of the Indians (Trumbull, 202); so well did he cover the deficiency of his countrymen's military ardor. The tale of the silver leg is also related by Blome, 202.

* See ante, B. iii. One cause of the neglect which New Netherlands experienced from the Dutch West India Company, seems to have been that the attention and resources of the Company were absorbed by the efforts they made to maintain the rich settlement they had wrested from the Portuguese in South America. See Southey's History of Brazil, Part I.

† Trumbull, i. 245. It was notorious, at the time, that Goffe and Whalley were sheltered within the territory of New Haven, where the local authorities and the inhabitants, so far from assisting, had, with very little disguise, obstructed and defeated the attempts to apprehend them. This conduct of a people who had peculiarly distinguished themselves by enmity to the Dutch, had probably some weight in inducing Stuyvesant to pledge himself to a proceeding which, he seems not to have been aware, would have compromised the honor and independence of his country.

* This company was formed with the view of extending and appropriating the slave trade. Under the patronage of the Duke of York, it treated every commercial rival with a violence and injustice worthy of the purpose of its institution. In return for the protection of the English government, it lent its aid to harass the colonies by promoting a rigid enforcement of the acts of navigation. See Oldmixon, Vol. II. cap. i.

Island; and conferring upon his royal highness all the powers of governing, civil and military, within these ample boundaries. This grant took no more notice of the existing possession of the Dutch, than it showed respect to the recent charter of Connecticut, which, whether from ignorance, or from carelessness in the definition of the boundaries, it tacitly but entirely superseded. No sooner did the Duke of York obtain this grant, than, without waiting to take possession of his investiture, he proceeded to exercise his proprietary powers in their fullest extent, by conveying to Lord Berkeley and Sir George Carteret all that portion of the territory that forms the province of New Jersey. But, as it was manifest that this title of the duke himself, no less than of his assignees, would require to be effaced by a military force, an armament had been prepared for this purpose, with some attention to secrecy; a precaution which, if it proved ineffectual, was no less unnecessary; as the states of Holland reckoned it impossible that the king would attack their possessions, without the formality of a previous declaration, and were averse to provoke his injustice by seeming to expect it. So little, indeed, was the hostile enterprise against New Netherlands credited in Europe, that, but a few months before it sailed, a vessel arrived at the colony from Holland, bringing a further supply of planters, and of implements of husbandry. Stuyvesant earnestly pressed upon the West India Company the alarming intelligence which he had received; but the only defensive step to which they were moved by his urgency was, to send him now, when it was too late, the original grant from the States General, which, at the period when it might have availed him, he had solicited in vain.

The command of the English troops that embarked for this expedition, and the government of the province against which it was directed, were intrusted to Colonel Nichols, who had studied the art of war under Marshal Turenne, and who, with Car, Cartwright, and Maverick, also held a commission to visit the colonies of New England, and investigate and determine, according to their discretion, all disputes and controversies within the various colonial jurisdictions. After touching at Boston, where an armed force was ordered to be raised and sent to join the expedition, the fleet proceeded to Hudson's river, and took its station before the capital of New Netherlands. The requisition of a subsidiary force from Boston was so tardily obeyed, that the enterprise was over before the Massachusetts troops were ready to march: but, on the transmission of a similar requisition to Connecticut, Governor Winthrop, with several of the principal inhabitants of the province, immediately repaired to the English armament, and joined the standard of their king.

The veteran governor of New Netherlands, and the pupil of Turenne, were, according to military ideas, enemies worthy of each other; though doubtless it is a manifest profanation of language to assert the worthiness of two brave and honest men to shed each others' blood, or to represent Nichols as worthily employed in executing the lawless rage and rapacity of a tyrant upon an inoffensive people. But the two commanders were very unequally supported. Stuyvesant had vigorously exerted himself to put the city and fort in the best attitude of defence: but he found it totally impossible to man the hearts of its defenders. It must indeed be confessed in favor of these unfortunate Dutchmen, that the superior artillery and disciplined forces of the enemy rendered successful resistance utterly hopeless. Their residence in the country had been too short to connect them with it by patriotic ties; and their unwarlike habits rendered them utterly unsusceptible of impressions which their governor derived from the prospect of a contest, where the harvest of glory was proportioned to the hopelessness of victory. They felt themselves unjustly attacked; and their resentment of this injury was so strong, that many of them were determined not to remain the subjects of a tyrannical usurper; but it was not strong enough to overcome the rational conviction, that safety and independence were the only worthy objects of battle, and that where independence could not be gained by fighting, safety should not be risked by it. To add unnecessary combat to unavoidable defeat, appeared to them a driftless and fool-hardy waste of life; and if they must surrender the image they had built of their native Holland in the wilderness, they would rather surrender it entire to the pollution of hostile occupation, than defaced by the cannon of the enemy. They were willing to become exiles with their wives and children, or laborers for them; to encounter, in short, every evil that hope could alleviate or virtue subdue. But to expose their

kindred, their city, and themselves, to the certainty of capture by storm, and the extremity of military violence, seemed to them an inversion of all the dictates of wisdom, happiness and virtue.

Widely different were the sentiments, the views, and even the determinations of Stuyvesant; and for several days his undaunted spirit upheld the honor and prolonged the dominion of his country, in despite both of the desertion of her unwelcome children, and the impending violence of a stronger foe. On the arrival of the English armament, he sent a deputation to its commander, consisting of one of the ministers of New Amsterdam, one of the city councillors, and two other inhabitants, with a courteous letter desiring to know the reason and purpose of this hostile approach. Nichols answered, with equal politeness,* that he was commanded by his royal master to take possession of the British territory which had been usurped by the Dutch, whom, though nearly allied to him, the king could not, consistently with his honor, allow to invade and occupy the dominions of his crown: that he must therefore now demand the instant surrender of the place; that the king being tender of the effusion of Christian blood, had authorized him to offer security of life, liberty, and estate, to all who would readily submit to this requisition; but that such as should oppose his majesty's gracious intentions must prepare themselves for the worst miseries of war. Governor Winthrop, who was connected by acquaintance and mutual esteem with Stuyvesant and the principal Dutch citizens, enforced this summons by a letter, in which he strongly pressed the prudence of doing soon what must unavoidably be done at last. Stuyvesant, on receiving the summons of the English commander, was sensible of no other consideration than of the insolence and injustice with which his country was treated; and still earnestly hoping that her honor would be preserved unblemished, even though her dominions should be overthrown, he invited the burgomasters and council to attend him, and vainly labored to impart a portion of his feelings to this municipal body. They coolly desired to see the letters he had received; but as he judged with good reason that the easy terms of surrender that were proffered would not contribute to animate their ardor or further his own martial designs, he declined to gratify them in this particular; and simply assured them that the English had declared their purpose of depriving Holland of its sovereignty, and themselves of their independence. Suspecting the truth, they became more importunate in their first request; whereupon the governor, in a transport of indignation, tore the letters in pieces, and scattered them on the ground; while the burghers, in amazement and dismay, protested against his conduct, and all the consequences that might attend it. But Stuyvesant's courage needed not the aid of sympathetic bravery to sustain it: and more incensed to see his country's honor deserted than appalled to find himself its only defender, he determined to try the effect of an appeal to the justice and generosity of a gallant enemy; and to express in his reply to the summons of the English commander, not what he painfully saw, but what he magnanimously wished, to be the sentiments of his fellow-citizens. He exhibited to a deputation sent to him by Nichols, the original grant of the States General, and his own commission from the West India Company; and in a long and manly letter, maintained that a province thus formally incorporated with the Dutch dominion could not lawfully be attacked while peace subsisted between England and the republic. He represented the long possession of the territory which his countrymen had enjoyed, and the ratification which the English colonial governments had given to the Dutch claim, by the treaty they concluded with him in the year 1650; and he protested that it was impossible that the English monarch could have despatched this hostile armament, in the knowledge of these facts, or would hesitate to countermand it if they were submitted to his consideration. To spare the effusion of blood, he offered a treaty for a provisional arrangement, suspended on the issue of a reference to the two parent states; and he concluded with this calm and undaunted reply to the threat of

military execution in the event of a refusal to surrender. "As touching the threats in your conclusion, we have nothing to answer, only that we fear nothing, but what God (who is as just as merciful) shall lay upon us; all things being in his gracious disposal; and we may as well be preserved by him with small forces as by a great army; which makes us to wish you all happiness and prosperity, and recommend you to his protection." But Stuyvesant found it more easy to refute the pretensions than to resist the force of his opponent. Even after the English had begun to invest the place, and had occupied posts, from which attack seemed immediate and capture inevitable, he still clung to the hope that his fellow-citizens would not surrender the rights of their country till they had defended them with their lives, and shed the blood of the invaders. But Nichols who had learned how little the great body of the Dutch partook the martial ardor of their governor, caused a proclamation,† reiterating his original offers, to be circulated through the country and introduced into the town; a measure which so completely disarmed the spirit of the besieged, and extinguished the authority of Stuyvesant, that this stubborn veteran, after one more fruitless attempt to effect a provisional treaty, was at length obliged to capitulate for surrender, in order to prevent the people from giving up the place without the formality of capitulation. By the treaty which ensued it was provided that the Dutch garrison should march out with all the honors of war, and that the States General and West India Company should preserve their ammunition and public stores, and be allowed within six months to transport them to Holland: that the inhabitants should be free to sell their estates, and return to Holland, or retain them and reside in the settlement; that all who chose to remain should enjoy their ancient customs with respect to inheritance of property, liberty of conscience in divine worship and church order, and perpetual exemption from military service. All Dutchmen, either continuing in the province, or afterwards resorting to it, were to be allowed a free trade with Holland; a privilege which, as it was totally repugnant to the navigation act, neither Nichols nor even the king could confer, and which accordingly was withdrawn from them very soon after. As a concession to the inflexible obstinacy of the old governor, it was very superfluously provided, that if at any time thereafter the king of England and the States General should concur in desiring the province to be re-delivered to its former owners,† their desire should be promptly complied with. These, and various other articles, of additional advantage to the Dutch, forming perhaps the most favorable terms that a capitulating city ever obtained, were satisfactory to every one except the individual to whose solitary valor they were in some degree a tribute: and it was not till two days after they had been signed by the commissioners on both sides, that he could be persuaded to ratify them. Yet the Dutch West India Company, whose blunders and imbecility had promoted the fall of a dominion which they were unworthy to administer, had the mean ingratitude to express dissatisfaction with the conduct of this magnanimous man. The fall of the capital, which now received the name of New York, (a name also extended to the whole provincial territory,) was followed by the surrender of Albany, and the general subjection of the province with its subordinate settlement of Dutch and Swedes in Delaware. The government of Britain was acknowledged over the whole in the beginning of October, 1654.

Thus by an act of the most flagrant injustice and tyrannical usurpation, was overthrown the Dutch dominion in North America, after it had subsisted for more than half a century, and absorbed the feeble settlements of Sweden. It is impossible for a moment to suppose that the king was prompted to undertake this enterprise by an honest conviction of his right to the province; and that he was actuated by no concern for the interest of his other colonies was proved (if

* Chalmers betrays his usual partiality in describing this intercourse. While he derides the affected civility of Stuyvesant, he commends in Nichols the politeness that softens the rigors of war. Once for all I must remark on this writer, that the composition of his work had one great point in view—the apology of the kings and government of England in all their American transactions. He steadily pursues this object; and though too honorable wilfully to misrepresent facts, he is often too prejudiced to appreciate them fairly. Yet his Annals are a valuable source of information to those who carefully consult them; comparing one portion with another, and the whole with collateral authorities.

* It declared that all who would "submit to this his majesty's government, as his good subjects, shall be protected in his majesty's laws and justice, and peaceably enjoy whatsoever God's blessing and their own honest industry have furnished them with." Smith, p. 25. To the Swedish settlers in Delaware, it was specially represented, that it would be an honorable change for them to return from a republican to a monarchical government. S. Smith's New Jersey, p. 18.

† According to Hume, it would appear that this improbable condition did actually occur; for he states that on the complaint of Holland, the king disavowed the expedition, and imprisoned the admiral. Hist. of England, vol. vii. p. 399, 400. But he has confounded the invasion of New York with the expedition against Goree, which took place two years before, and which Charles after despatching, affected to disavow.

Old English - Windmill

such proof were wanting) by his subsequent conduct with regard to Acadia. This territory, to which the English had as fair a claim as to New York,* had been conquered from its French occupiers by the manly hostilities of Cromwell; and yet the earnest entreaties of the New England colonies could not prevent the king from restoring it to France, though a neighbor much more dangerous than Holland to his subjects. But Acadia was not, like New Netherlands, a settlement of protestant republicans, but of the subjects of a brother despot to whom Charles became a pensioner, and to whom he scrupled not to sell as much of the honor of England as was capable of being conveyed by his hands. His object, in so far as it embraced the English colonies, was rather to intimidate them, than to promote their advantage. Yet eventually it was they who derived the chief advantage from the acquisition of New York; and this, as well as every other conquest of American territory achieved by Great Britain, only tended to undo the bands by which she retained her colonies in a state of dependence. As they ceased to receive molestation or alarm from the neighborhood of rival settlements, their strength and their jealousy converged against the power and pretensions of the mother country.

Colonel Nichols, who had been appointed the first British governor of New York, probably with the humane view of persuading his master to refrain from burdening or irritating the people by fiscal impositions, seems to have depreciated, somewhat unjustly, the actual condition of the settlement, in his letters to the Duke of York. But all the early writers and travellers unite in describing the Dutch colonial metropolis as a handsome well built town; and Josselyn declares that the meanest house in it was worth 100*l*. Indeed, the various provisions that were introduced into the articles of surrender, to guard the comforts of the inhabitants from invasion, attest the orderly and plentiful estate which these colonists had attained, as well as explain the causes of their unwarlike spirit. If the manners of the Dutch colonists corresponded with those of their countrymen in the parent state, they were probably superior in elegance to the manners which the English colonists could derive from similar imitation. Sir William Temple was surprised to find in Holland that he was expected not to spit upon the floors of gentlemen's houses. [17] Of the colonists who had latterly resorted to the province, some were persons who had enjoyed considerable affluence and respectability in Holland, and who imported with them, and displayed in their houses, costly services of family plate, and well selected productions of the Dutch school of painting. No account has been preserved of the total population of the province and its dependencies; but the metropolis, at this time, seems to have contained about 3,000 persons.† More than half of this number chose to continue in the place after its annexation to the British empire: the rest abandoned a settlement which was no longer to retain its Dutch aspect or name; and their habitations were soon occupied by a supply of emigrants, partly from Britain, but chiefly from New England. The Duke of York, to allure the New England planters to settle in his province, published what he termed *conditions for plantations*, by which (among other provisions) it was declared that the inhabitants of every township should elect their own minister, and arrange his emoluments by private agreement between themselves and him. Among the Dutch who remained at New York, was the venerable Stuyvesant, who still adhered to the wreck of the institutions and community over which he had presided, and to the scenes that reminded him of the exploits of his old age. Here, for a few years more, he prolonged the empire of Dutch manners and the respect of the Dutch name, till full of days and honor, he breathed his last amidst the tears of his countrymen. His descendants inherited his worth and popularity, and, in the following century, were frequently elected into the magistracy of New York.

One of the first proceedings in which Nichols was employed, was in determining with the other commissioners the boundaries of New York and Connecticut.

The claims of the latter of these provinces in Long Island were disallowed, and the whole of that insular region annexed to the new British jurisdiction: but in the arrangement of the boundaries on the main land, so little disposition was entertained to take advantage of the erroneous appropriation in the Duke of York's grant, so ignorant also of the localities of the country were the commissioners, and so much inclined, at the same time, to gratify the people of Connecticut, in order to detach them from the interest of Massachusetts, that they undoubtedly received an allotment of territory far more liberal than equitable. A more correct adjustment of limits was found necessary at a subsequent period, and was not effected without creating the most vehement disputes between the two colonial governments.

1665.] Leaving the other commissioners to proceed to the execution of their functions in New England, Nichols betook himself to the discharge of his own peculiar duty in the province, which he had been deputed to govern. The Duke of York, who considered himself invested by his patent with regal authority, had made an ample delegation of his powers to his deputy; and the prudence and humanity of Nichols rendered his administration creditable to the proprietary and acceptable to the people. To confirm the acquisition that his arms had gained, and to assimilate, as far as possible, the different races of inhabitants, he judged it expedient to introduce among them all, an uniform frame of civil policy; and with a prudent conformity to the institutions that had already been established by the Dutch, he erected a court of assizes, composed of the governor, the council and the justices of the peace; which was invested with every power in the colony, legislative, executive, and judicial. The only liberal institution that he was allowed to introduce was trial by jury; and to this admirable check on judicial iniquity, all causes and controversies were subjected. He encouraged the colonists to make purchases of land from the natives; and these purchases he made the foundation of grants from himself, in which he reserved a quit rent of a penny an acre. A dispute which occurred among the inhabitants of Long Island suggested to him a salutary regulation which continued long to obtain in the province. The controversy had arisen out of some conflicting Indian deeds; and to prevent a recurrence of it as well as of the more fatal dissensions which were apt to arise from these transactions with the natives, it was ordained that henceforward no purchase from the Indians should be valid, unless the vendition were authorised by the license from the governor, and executed in his presence. The strength and numbers of the natives rendered it necessary to treat them with unimpeachable justice: and to prevent their frequent sales of the same land to different persons (a practice in which they had been encouraged by the conflicting pretensions and occupations of the Dutch, Swedes, and English), it was expedient that the bargains should be signalized by some memorable solemnity. The friendly relations that were now established between the European colonists of this province, and the powerful Indian tribes known by the title of the Five Nations, and which will afterwards demand a considerable share of our attention, were greatly promoted by the harmony which had subsisted between the Dutch and Indians during the government of Stuyvesant, whose prudence thus bequeathed a wise lesson and a valuable opportunity to the administration of his successor.

The court of assizes applied itself, without delay, to collect into one code the ancient customs of the province, with such additional improvements as the change of empire seemed to render necessary, and as served to introduce the supremacy that was ascribed to the jurisprudence of England. In this code, which was afterwards ratified by the Duke of York, there occur some laws that seem to denote the influence which the New England settlers in Long Island* no doubt exercised in its composition. Any child above sixteen years of age, striking his father or mother (except in defence of his own life), "at the complaint of the said father and mother, and not otherwise, they being sufficient witnesses thereof," was adjudged to suffer death. Travelling on Sunday was forbidden; and fornication was punished by marriage, fine, or corporal punishment, according to the discretion of the court. The barbarous state of medical science and practice was indicated by an ordinance, strictly prohibiting all surgeons, phy-

sicians, and midwives, from "presuming to exercise or put forth any act contrary to the known approved rules of art;" and the unsubdued state of nature appears from the proposition of rewards for the destruction of wolves in Long Island. The city of New York which had enjoyed extensive privileges under the old government, was now incorporated and placed under the administration of a mayor, aldermen, and sheriff; the English official nomenclature serving additionally to link the provincial institutions with English jurisprudence. One of the highest acts of power that was reserved to the court of assizes was the imposition of taxes; and this it soon had occasion to exercise in order to meet the exigencies of the war which Charles the Second had at length succeeded in provoking with Holland. But even the most ungracious acts of Nichols were disarmed of their offence by the conciliating demeanor that caused the Dutch to forget he had been their conqueror, and by the moderation and integrity which he uniformly evinced, and the personal sacrifices that he readily incurred for the public advantage. An assembly of deputies from the Dutch and English plantations in Long Island, which he summoned to adjust the boundaries of their respective settlements, took the opportunity of their congregation to transmit an address to the Duke of York, acknowledging their dependence on his sovereignty according to his patent; engaging to defend his rights, and to submit cheerfully to whatever laws might be enacted by virtue of his authority; and requesting that their declaration might be accepted as a memorial against them and their heirs, if they should ever be found to fail in the performance of their duty. Yet one portion of these people had but recently submitted to Nichols as the conquering leader of the troops of a foreign usurper; and the others had as recently been united to the liberal institutions of New England. So strongly does the universal story of mankind confirm the truth of Sully's observation, that where the people are not deceived by factious leaders, even arbitrary power is seldom resisted when it is humanely employed; and that popular discontent evinces much less frequently a promptitude to assert just rights, than impatience of accumulated sufferings.

1666.] The intelligence of the declaration of war with Holland, which was communicated by the Lord Chancellor (Clarendon) to Colonel Nichols, was accompanied with the assurance that the Dutch were preparing an expedition for the recovery of their American settlement, and that De Ruyter had received orders to sail immediately for New York.† Nichols exerted himself, with his usual energy, to resist the hostility of so formidable a foe; and though it appeared eventually, that either the chancellor's information had been erroneous, or that the expedition was suspended by De Ruyter's more important employments in Europe, the expense that attended the preparations for his reception, and the other consequences of the war, reduced the province to a state of considerable distress. As the people were destitute of shipping, their trade, which had been carried on by Dutch vessels, was totally lost; no supplies were sent from England to alleviate this calamity; and, in addition to other concomitant burdens of war, a general rate was imposed on the estates of the inhabitants by the court of assizes. Still there was every reason to apprehend that the supply that was raised would be insufficient, and the preparations consequently inadequate to repel the expected invasion. In this extremity, the governor, without, pressing the people for further contributions to defeat an enterprise which many of them must have contemplated with secret satisfaction, wisely and liberally advanced his own money and interposed his credit to supply the public exigencies. Happily for the prosperity of the settlement, which Nichols, with the aid of the other English colonies, would have defended to the last ex-

* Both medicine and surgery were then in a very rude state in England, where the efficacy of royal touch for the king's evil was still believed and tried, and Sydenham's career had but recently begun. Notwithstanding a legal determination pronounced in England, two centuries before this, that "a chirurgeon may cut off one member to save the rest" (State Trials, iii. 927), it was in France alone that a manufacture of surgical instruments existed till the end of the seventeenth century. Chelselden told Voltaire that he first introduced this manufacture into England in 1715. Age of Louis the Fourteenth, cap. 30. In Spain, as late as the year 1786, the treatment of fever was regulated by law. Townsend's Travels, iii. 140-142, &c.

† Hume (vii. 400) says that De Ruyter actually committed hostilities on Long Island before the declaration of war, in revenge for the capture of New York: but De Ruyter was not accustomed so imperfectly to avenge the wrongs of his country; and Hume has been misled by an erroneous account, or inaccurate recollection, of a more serious and successful attack on New York by the Dutch about seven years after this period, and in the course of a subsequent war.

* It was included in the claim derived from Cabot's voyage, and had been made the subject of various grants by James the First and Charles the First, to the Plymouth council in the first instance, and afterwards to Lord Stirling. This nobleman was the king's secretary of state in Scotland; and seeing the English courtiers obtaining grants of American territory, he applied for a share; and Acadia, under the name of Nova Scotia, was granted to him (most irregularly), by a patent under the great seal of Scotland.

† I found this calculation on a Report to the Board of Trade a few years after, published by Chalmers, p. 598, together with a consideration of the intervening events.

tremity, neither the States-general, nor the Dutch West India Company, made any attempt to repossess themselves of New York during this war; and at the peace of Breda it was ceded to England, in exchange for her colony of Surinam, which had been conquered by the Dutch. [1667.] This exchange was no otherwise expressed, than by a general stipulation in the treaty that each of the two nations should retain what its arms had acquired since hostilities began. The Dutch had no reason to regret the exchange; for it was impossible that they could long have preserved New York against the increasing strength and rivalry of the inhabitants of New England, Maryland, and Virginia. It was by this treaty that Acadia was ceded to France, which had acted as the ally of Holland during the war, and was the only party that reaped advantage from it. England saw her character dishonored by the injustice of the war: the glory of her arms tarnished by the disgrace at Chatham; the conquest achieved for her by Cromwell surrendered; and every one of the purposes for which the contest had been provoked, rendered utterly abortive.*

The security which the British dominion in New York derived from the treaty of Breda, occurred very seasonably to supply the useful services of Colonel Nichols, who, finding the pecuniary burdens of the war pressing too heavily on himself, was forced, in the beginning of this year, to resign an appointment which, at one time, seems to have rendered him as elate and happy as it had enabled him to make himself useful and beloved. The king, as a testimony of the approbation to which his eminent services were entitled, sent him a present of *two hundred pounds*; and this brave and modest loyalist was more gratified with the expression of royal favor than disappointed with the meanness and inadequacy of the remuneration. He was long remembered with respect and kindness by a people whom he had found hostile and divided; and whom, notwithstanding that he had been constrained to deprive them of liberty and independence, he left friendly, united, and contented.† The benefit of his successful exertions, together with the signal advantage of peace, and of the recognition by Holland of the British dominion, devolved on his successor, Colonel Lovelace, a man of quiet temper and moderate disposition, which in tranquil times so well supplied the absence of vigor and capacity, that the colony, during the greater part of six years that he presided over it, enjoyed a noiseless tenor of content and prosperity; and the most memorable occurrence that signalled his administration, was the unfortunate event that brought it to a close.

[1672.] The second war with Holland, which the king undertook in subservience to the ambition of Louis XIV., was calculated no less to injure the trade of New York, than to disturb the harmony of its mixed inhabitants, and alienate the regards of the original colonists. The false and frivolous reasons that were assigned by the English court for this profligate war, rendered it more offensive to every Dutchman by adding insult to injury; and the gallant achievements of De Ruyter, that extorted the admiration and applause even of his enemies, must have awakened in the most languid bosoms of the Dutch colonists some sympathy with the glory and danger of their country, and a reluctance to the destiny that had associated them with her enemies. The intelligence of the Duke of York's recent profession of the catholic faith contributed to increase their discontent, which at length prevailed so far with a considerable body of them, that they determined to abandon New York, and either return to Holland, or seek out another settlement in the new world. Happily for English America, they were retained within her territory by the address of the proprietaries of Carolina, who prevailed with them to direct their footsteps towards this province, [1673,] where, remote from foreign war, and surmounting hardships by patient industry, they formed a settlement that recompensed them for the habitations they had for-

saken. If more of their countrymen projected a similar migration, their purpose was suspended by an event which occurred the same year, and invited them to embrace a more gratifying deliverance from the irksomeness of their situation. A small squadron had been despatched from Holland, under the command of Binkes and Evertzen, to destroy the commerce of the English colonies; and having performed this service with great effect on the Virginian coast, they were induced to attempt a more important enterprise, by intelligence of the negligent security of the governor of New York. Repairing with secrecy and expedition to this ancient possession of their country, they had the good fortune to arrive at the metropolis while Lovelace was at a distance, and the command was exercised by Colonel Manning, whose own subsequent avowal, added to the more credible testimony of his conduct, has recorded his character as a traitor and poltroon. Now was reversed the scene that took place when New York was invaded by Nichols. The English inhabitants prepared to defend themselves, and offered their assistance to Manning; but he obstructed their preparations, rejected their aid, and, on the first intelligence of the enemy's approach, struck his flag, before their vessels were even in sight. As the Dutch fleet advanced, his garrison could not forbear to demonstrate their readiness to fight; but, in a transport of fear, he forbade a gun to be fired, under pain of death; and surrendered the place unconditionally to the invaders.* The moderation of the conquerors, however, showed them worthy of their success; and, hastening to assure all the citizens of the security of their rights and possessions, they inspired the Dutch colonists with triumph, and left the English no cause of resentment but against their pusillanimous commander. The same moderation being tendered to the other districts of the province, on condition of their sending deputies to swear allegiance to the States General, the inclinations of one party, and the fears of the other, induced the whole to submit; the Dutch dominion was restored, still more suddenly than it had been overthrown; and the name of New Netherlands once more revived. But neither the triumph of the one party, nor the mortification of the other, was destined to have a long endurance.

Great was the consternation that these events excited in the adjoining colonies of the English. The government of Connecticut, with astonishing absurdity, sent a deputation to the Dutch admirals, to remonstrate against their usurpation of dominion over the territory of England, and the property of her subjects; to desire them to explain the meaning of their conduct, and their further intentions; and to warn them, that the united colonies of New England were intrusted with the defence of their sovereign's dominions in America, and would be faithful to their trust. To this ridiculous application, the Dutch commanders returned a soldierlike answer, expressing their surprise at the terms of it, but declaring that they were commissioned by their country to do all the damage in their power to her enemies by sea and land; and that, while they applauded the fidelity of the English colonies to their sovereign, they would imitate so good an example, and endeavor to approve themselves not less zealous and faithful in the service of the States General. The most active preparations for war were forthwith made in Connecticut and the other confederated colonies: but as each party stood on the defensive, awaiting the invasion of the other, only a few insignificant skirmishes had taken place, when the arrival of winter suspended military operations. Early in the following spring, [1674] the controversy was terminated without further bloodshed, by the intelligence of the treaty of peace concluded at London, and of the restoration of New York to the English, by virtue of a general stipulation, that whatsoever countries might have been taken during the

war, should be restored to the power that had possessed them at its commencement.

The events of this war, both in Europe and America, were attended with important consequences to that portion of the North American population that derived its origin from Holland. The elevation to the dignity of Stadtholder, which the Prince of Orange had now derived from the fear and danger of his countrymen, and from their desire to propitiate the king of England, paved the way to his advancement to the English throne, and consequently to a reign under which the Dutch colonists, though disunited from Holland, ceased to regard the British sovereignty as a foreign domination. The effectual re-conquest of the province by the Dutch arms, and the final cession of it to England, by a pacific and conventional arrangement, cured the wound that had been inflicted by the injustice of England's original acquisition. Many of the Dutch colonists, besides, apprehensive of molestation, or, at least, despairing of favor from a government whose suspension had excited their undisguised triumph, were the more readily induced to follow their former companions, who had emigrated to Carolina; and this dispersion of the Dutch tended at once to promote their friendly association with the English, and to divest New York of a distinctive character which might have obstructed the harmony between her and the other provinces, with which she was now to be forever united.

The Duke of York, understanding that some doubts had been suggested of the validity of his original grant, which had been executed while the Dutch government was in peaceable possession of the country, and which, even though originally valid, seemed to have been vacated by the intervening conquest, thought it prudent to remedy this defect, and signalise the resumption of his proprietary functions by obtaining a new patent. This deed, which was readily granted to his solicitation, recited and confirmed the former grant of the province. It empowered him to govern the inhabitants "by such ordinances as he or his assigns should establish; and to administer justice according to the laws of England, with the admission of an appeal to the king in council. It prohibited all persons from trading thither without his permission; and, though it allowed the colonists to import merchandises, it subjected them to payment of customs, according to the laws of the realm. Under the authority of this charter, the duke continued to rule the province (diminished however by the New Jersey territory which he had previously assigned to others) till his proprietary right was merged in his regal title. It seems at first sight not a little surprising, that neither in this nor in the former charter of the territory, did the brother of the king obtain a grant of the same extraordinary powers and privileges that had been previously conferred on the proprietaries of Maryland and Carolina. But relying on the greatness of his connexion and his prospects, the duke was probably very little solicitous to share the dignities and immunities which these other proprietaries had procured for themselves; and, while as counsellor he exercised every act of government in their own names, he contented himself with ruling his territory in the name of the king. The misfortunes and evident incapacity of Lovelace precluded his reappointment to the office of governor, which was conferred on Edmund Andros, a man who disgraced superior talents by the unprincipled zeal and activity with which he rendered them subservient to the arbitrary designs of a tyrant. [18] This officer, whose subsequent proceedings in New England have already introduced him to our acquaintance, now commenced that career in America which has gained him so conspicuous a place in the annals of almost every one of her states for twenty years after this period. He was ordered to disturb no man's estate while he received possession of the province from the Dutch, and to distribute justice in the king's name according to the forms that had been observed by his predecessors. But in order to raise a revenue and defray the expenses of government, a great variety of rates were at the same time imposed by the sole authority of the duke; and one Dyer was appointed the collector of these odious and unconstitutional impositions.

The duke, in his instructions to Andros, had recommended to him the exercise of gentleness and humanity; but his selection of him to administer the more arbitrary policy which he now began to pursue towards the colonists, gave more reason to suppose that the admonition was necessary than that it would prove effectual: and accordingly the new governor had not been long in the province, when, besides embroiling

* The elevation that had been projected for the Prince of Orange, in particular, was defeated;—the states engaging to bestow a considerable appointment upon him when he should attain the age of twenty-two, but declaring their determination not to make him stadholder. Sir William Temple's Works (folio), vol. i. p. 74.

† From his monument in Amptill church, Bedfordshire, it appears that Nichols was killed on board the Duke of York's ship in a sea-fight with the Dutch in 1672. Within the pediment is fixed the cannon-ball that killed him, surmounted by this inscription: *Instrumentum mortis et immortalitatis.*

‡ A feeble attempt was made, indeed, in the year 1669, by one Coningsmark, a Swede, to excite an insurrection of his countrymen in the Delaware territory against the English. The attempt was defeated without bloodshed, and Coningsmark was condemned to be sold as a slave in Barbadoes. Samuel Smith's Hist. of New Jersey, p. 53, 54.

* Manning, after all this extraordinary and unaccountable conduct, had the impudence to repair to England; whence he returned, or was sent back, when the province was again given up by the Dutch in the following year. He was then tried by court martial on a charge of treachery and cowardice, expressed in the strongest and most revolting terms. Confessing this charge to be true, he received a sentence almost as extraordinary as his conduct: "that though he deserved death, yet because he had since the surrender been in England, and seen the king and the duke, it was adjudged that his sword should be broke over his head in public, before the city hall, and himself rendered incapable of wearing a sword, and of serving his majesty for the future in any public trust." Smith, p. 42, 43. The old maxim that was respected on this occasion, that grace is dispensed by the mere look of a king, was denied a few years after to the unfortunate Duke of Monmouth.

himself with the neighboring government of Connecticut, he excited the murmurs and remonstrances of the magistrates, the clergy, and the whole body of the people. The pressure of the arbitrary rates, suggesting especially to the settlers in Long Island the benefit of a representative assembly, they began at length to broach this proposition as a matter of constitutional right; but these first emotions of liberty were checked by Andros, with a vigor and decision for which he received the thanks of his master. A Dutch clergyman, named Renslaer, who had been recommended by the duke to the patronage of Andros, proved unacceptable to the people, and was punished by the magistrates of Albany for some language that was deemed improper. The governor interfered with his usual energy in the dispute, and having first loaded with insult a popular clergyman, whom Renslaer considered his rival, proceeded to adjudge all the magistrates to find bail to answer Renslaer's complaints, to the extent of 5,000*l.* each, and threw Leisler, one of their number, into prison for refusing to comply. But finding that he had, on this occasion, stretched his authority farther than he could support it, he was compelled to recede barely in time to prevent a tumult that might have dissolved the government. Apparently somewhat daunted with this defeat, he conducted himself with greater regard to prudence, and was able for a while to lead a quiet administration; but the seeds of popular discontent had been sown, and a strong desire for more liberal institutions took silent but vigorous root in the colony. This disposition, which the contagious vicinity of liberty in New England doubtless tended to keep alive, was fomented by a measure to which the governor resorted, to supply the inadequate returns from the colonial rates; [1676] the practice of soliciting pecuniary *benevolences* from the various communities and townships within his jurisdiction. This *badge of bad times*, as a colonial historian has termed it, is sometimes the promoter of those rights which it attacks indirectly and yet strongly suggests. In the close of the following year [1677] Andros was compelled to pay a visit to England, in order to obtain farther instructions adapted to the new scene that was about to open.

The revenue which the Duke of York had imposed on the province, had been limited to the duration of three years; and as this period was on the point of expiring, the interest both of the government and the people was fixed on the issue to which this emergency would lead. The people anxiously hoped that the very inadequacy of the present system of finance would induce their proprietary to consent to the desires they had expressed, and to seek the improvement of his revenue from the establishment of a representative assembly. But the duke was obstinately determined against this measure; and thought that he made a sufficient sacrifice to the advantage of the colonists, by simply enacting that the former rates should continue for three years longer. [1678] When Andros returned to his government with this unwelcome edict, the province was pervaded by universal discontent; and when a new edict, in the following year, [1679] announced an increase of the tax on the importation of liquors, the public indignation was expressed so vehemently, and so many complaints were transmitted to England, that the duke, in much surprise, recalled his governor to give an account of an administration that plainly appeared to be universally odious. [1680] This prince was determined that his subjects should be enslaved, and at the same time very willing that they should be happy; * and seeing no incompatibility between these circumstances, he supposed the more readily that Andros might have committed some enormities unconnected with his official functions, and called him home to ascertain if he had really so discredited legitimate tyranny. The inquiry, as might be expected, terminated in the honorable acquittal of the governor, who proved that he had committed no breach of trust; that he had merely evinced a temper suitable to his arbitrary functions, and enforced his master's

orders with the rigor that was necessary to carry such obnoxious measures into execution. But circumstances which occurred in the colony, during the absence of Andros, determined the duke to forbear for the present to re-employ so unpopular an officer, or to risk his own authority in a farther contest with the desires of the people, till his hand should be strengthened by the grasp of a sceptre.

Dyer, the collector of the revenue, had continued ever since his appointment to perform his functions with great odium, but little opposition. Latterly, however, the people had begun to question the lawfulness no less than the liberality of a system of taxation originating with the duke alone; and when they learned that their doubts were sanctioned by the opinions of the most eminent lawyers in England, their indignation broke forth with a violence that had nearly transported them to the commission of injustice still more outrageous than the wrongs they complained of. They accused Dyer of high treason, for having collected taxes without the authority of law; and the local magistrates seconding the popular rage, appointed a special court to try him on this absurd and unwarrantable charge. It was pretended that although he had not committed any one of the offences specified in the statute of treasons, yet it was lawful to subject him to the penalties of this statute, for the ancient and exploded crime of *encroaching power*;—one of those vague and unintelligible charges, which it had been the very purpose of the statute to abolish. But reason and humanity returned in the short interval between the impeachment and the trial; and when the prisoner demanded to know how his judges came to be invested with their functions, and if they did not act under an authority derived from the same prince, whose commission he himself enjoyed, the court interposed to suspend farther proceedings in the colony, and ordered him to be sent with an accuser to England. [1681] He was of course discharged immediately after his arrival; and no accuser thought proper to appear against him. But if this prosecution was any thing more than a bold undesigning expression of popular displeasure and impatience, it completely effected the farthest purposes of its promoters; and to their spirited though irregular measures, New York was indebted for the overthrow of an odious despotism, and her first experience of systematic liberty. While the duke regarded with astonishment the violent proceeding by which his collector had nearly perished as a traitor, and had been banished from the colony without a voice being raised in his favor, he was assailed with expressions of the same sentiments that had produced this violence, in a more constitutional, and therefore, perhaps, more disagreeable shape. The governor's council, the court of assizes, and the corporation of the city of New York, concurred with the whole body of the inhabitants in alighting the duke to permit the people to participate in the legislative power; and while their conduct enabled him to interpret these addresses into a formal declaration that they would no longer continue to pay taxes without possessing an assembly, he was given to understand, by his confidential advisers, that the laws of England would support them in this pretension. Overcome by the united force of all these circumstances, and not yet advanced to the height whence he was afterwards enabled to regard the suggestion of legal obstructions with a smile,* the duke first paused in his arbitrary career, and then gave a reluctant and ungracious assent to the demands of the colonists. Directions were sent to the deputy-governor on whom the administration had devolved in the absence of Andros, "to keep things quiet at New York in the mean time;" and shortly after, [1682] it was intimated to him that the duke could condescend to grant the desires of the people on condition of their raising money sufficient for the support of government, and of the principal inhabitants consenting to grant a written engagement that this should be done. At length, after wavering a little longer between fear and aversion, the duke gave notice of his final determination to establish in New York the same frame of government that the other colonies enjoyed, and particularly a representative assembly. The governor whom he nominated to conduct the new administration was Colonel Dongan, afterwards Earl of Limerick,

* Such were also the sentiments of Charles the Second. Sir William Temple, who conversed intimately with him, says that he wished that every body should be easy, "and would have been glad to see the least of his subjects pleased." Works, vol. i. p. 449. Yet when Temple and others entreated him to alleviate the misery of the Scotch, by restraining the bloody hands of the duke of Lauderdale, they found it utterly impossible to prevail. Ib. 336. Lauderdale's conduct, indeed, at one time underwent a similar scrutiny to that which we have seen Andros abide. The result was nearly the same: the king (say's Bishop Burnet) declaring, after a full inquiry, "I perceive that Lauderdale is being guilty of many bad things against the people of Scotland; but I cannot find that he has acted any thing contrary to my interest."

* See ante, B. II. cap. 5. One might almost be tempted to suspect Chalmers of an intention to satirize the duke by extravagance of unmerited praise, when he suggests as the reason for his acquiescence on this occasion, that "the continued adversity which had so long embittered his life, induced him regard the rights and feel for the sufferings of others."

a man of integrity, moderation, and agreeable manners, and, though a professed papist, which perhaps was his chief passport to the duke's favor, yet in the main acceptable, and justly so, to a people who regarded poverty with suspicion and dislike. The instructions that were communicated to Dongan, required him to convoke an assembly, which was to consist of a council of ten, and a house of representatives, not exceeding eighteen, to be elected by the freeholders. Like the other provincial legislatures, this body was empowered to make laws for the people, under the requisition of conformity to the general jurisprudence of the empire, and of subjection to the assent or dissent of the proprietary. Thus the inhabitants of New York, after being treated as a conquered people for nearly twenty years, and governed by the arbitrary will of the Duke of York and his deputies, were promoted by their own spirit and vigor to a participation in legislative rights; and by a singular coincidence obtained a free constitution at the very time when their old rivals, the colonists of New England, were deprived of it. Nothing could be more acceptable to them than this interesting change; and the ardent gratitude of their acknowledgments expressed much more justly their sense of the benefit, than the merit of their nominal benefactor.

The most interesting monument of the tyrannical administration which was thus suspended, is a report prepared by Andros, in reply to certain inquiries of the English committee of colonies in the year 1678; from which, and from a similar communication by the municipality of New York to the board of trade a few years after, some insight may be obtained into the condition of the province about this period. The city of New York, in 1678, appears to have contained 3,430 inhabitants, and to have owned no larger navy than three ships, eight sloops, and seven boats. No account appears to have been collected of the population of the whole province, which contained twenty-four towns, villages, or parishes. About fifteen vessels, on an average, traded yearly to the port of New York, importing English manufactures to the value of 50,000*l.* and exporting the productions of the colony, which consisted of land produce of all sorts, among which are particularised beef, pease, lumber, tobacco,* peltry procured from the Indians, and 60,000 bushels of wheat. Of servants the number was small, and they were much wanted. Some unfrequent and inconsiderable importations of slaves were made from Barbadoes: and there were yet but very few of these unfortunate beings in the colony. Agriculture was more generally followed than trade. A trader worth 1,000*l.*, or even 500*l.*, was considered a substantial merchant; and a planter worth half that sum in moveables was accounted rich. All the estates in the province were valued at 150,000*l.* "Ministers," says Andros, "are scarce, and religions many." The duke maintained a chaplain at New York; which was the only certain endowment of the church of England. There were about twenty churches or meeting places, of which half were vacant. All districts were liable by law to the obligation of building churches and providing for ministers, whose emoluments varied from 40*l.* to 70*l.* a year, with the addition of a house and garden. But the presbyterians and independents, who formed the most numerous and substantial portion of the inhabitants, were the only classes who showed much willingness to procure and support their ministers. Marriages were allowed to be solemnized either by ministers or by justices of the peace. There were no beggars in the province; and the poor, who were few, were well taken care of. The number of the militia amounted to 2,000; comprehending 140 horsemen; and a standing company of soldiers was maintained, with gunners and other officers for the forts of Albany and New York. Such was the condition of the province about four years preceding the period at which we have now arrived. Four years after (in 1686,) it was found to have improved so rapidly, that the shipping of New York amounted to ten three masted vessels, twenty sloops, and a few ketches of intermediate bulk. The militia had also increased to 4,000 foot, 300 horse, and a company of dragoons. The augmentation of inhabitants, indicated by this increase of military force, appears the more considerable, when we keep in view, that some time prior to this last mentioned period, the Delaware territory had been partly surrendered to Lord Baltimore, and partly assigned to William Penn.

* Denton states that the New York tobacco was considered equal in quality to the finest produce of Maryland, p. 3.

CHAPTER II.

Colonel Dongan's Administration—Account of the Five Indian Nations of Canada—Their Hostility to the French—Missionary Labors of the French Jesuits—James the Second abolishes the Liberties of New York—commands Dongan to abandon the Five Nations to the French—Andros again appointed Governor—War between the French and the Five Nations—Discontents at New York—Leisler declares for King William, and assumes the Government—The French attack the Province, and burn Schenectady—Arrival of Governor Sloughter—Perplexity of Leisler—his Trial—and Execution—Wars and mutual Cruelties of the French and Indians—Governor Fletcher's Administration—Peace of Ryswick—Piracy at New York—Captain Kidd—Factions occasioned by the Fate of Leisler—Trial of Bayard—Corrupt and oppressive Administration of Lord Cornbury—State of the Colony at the Close of the Seventeenth Century.

COLONEL Dongan did not arrive at the seat of his government till a year after the date of his appointment; [1683.] a delay which appears to have created some uneasiness, and was probably beneficial to the people, in affording time for the first ardor of an ill-mented loyalty to cool, and suggesting the precautions for preserving liberty that should signalise the first opportunity of exercising it. To relieve the public apprehensions, the governor proceeded at once to issue writs to the sheriffs, to convene the freeholders, for the purpose of electing their representatives in the assembly; and this legislative body soon afterwards held its first meeting at New York, to the great satisfaction of the whole province. One of the first ordinances which it framed naturally arose from the mixture of nations of which the population was composed, and was an act of general naturalization, securing and extending equal privileges to all. From this period the Dutch and English at New York were firmly compacted into one national body. They saw the daughter of their common proprietary married to the Stadtholder of Holland, and willingly cemented their own union by frequent intermarriage and the ties of consanguinity. There was passed, at the same time, an act declaring the liberties of the people, and one for defraying the requisite charges of government for a limited time. These, with a few other laws regulating the internal economy of the province, and, in particular, enacting its division into counties, were transmitted to the Duke of York, and received his confirmation, as proprietary, in the following year. [1684.] An amicable treaty, which the governor effected, about the same time, with the provincial authorities of Connecticut, terminated, at length the long-subsisting dispute with regard to the boundaries of Connecticut and New York.

But the administration of Colonel Dongan was chiefly distinguished by the attention which he bestowed upon Indian affairs, and by the increasing influence which now began to be exerted on the fortunes of the province by the state of its relations with the tribes composing the celebrated confederacy of The Five Nations of Canada. This federal association is said to have derived its origin from the most remote antiquity; and, as the name imports, it comprehended five Indian nations, of which the Mohawks have obtained the most lasting name, and which were united on terms of the strictest equality, in a perpetual alliance, for united conquest and mutual defence. The members of this united body reckoned themselves superior to all the rest of mankind, and the distinctive appellation which they adopted* was expressive of this opinion. But the principles of their confederacy display far more policy and refinement than we might expect from the arrogance of their barbarous name. They had embraced the Roman maxim, of increasing their strength by incorporating the people of other nations with themselves. After every conquest of an enemy, when they had indulged their revenge by some cruel executions, they exercised their usual policy in the adoption of the remaining captives; and frequently with so much advantage, that some of their most distinguished sachems and captains were derived from defeated and adopted foes. Each nation had its own separate republican constitution, in which rank and office were claimed only by age, procured only by merit, and enjoyed by the tenure of public esteem; and each was divided into three tribes, bearing respectively for their ensigns, and distinguished by the names of, the Tortoise, the Bear, and the Wolf. In no community was age graced with more respect, or youth endowed with greater beauty. Such was the efficacy of their mode of life in developing the fine proportions of which the human frame is susceptible, that, when the statue of the Apollo Belvidere was beheld, for the first time, by the American Apelles, Benjamin West, he started at the unexpected recognition, and exclaimed, "How like it is to a young

Mohawk warrior." The people of the several nations, and especially the Mohawks, were distinguished by the usual Indian qualities of attachment to liberty, fortitude in the endurance of pain, and preference of craft and stratagem to undisguised operation in war,* and by a more than usual degree of perseverance, resolution and active intrepidity. Almost all the tribes around this people, and even many at a great distance, who were not included in their confederacy, acknowledged a subjection to it, paid a tribute, which two aged sachems were annually deputed to collect,† and were restrained from making war or peace without the consent of the Five Nations. It was the policy of all the chiefs to affect superior poverty, and to distribute among the people the whole of their own share of tribute and plunder. All matters of common concernment were transacted in general meetings of the sachems of each nation: and the influence of time, aided by a long course of judicious policy and victorious enterprise, had completely succeeded in causing the federal character and sentiments to prevail over the peculiarities of their subordinate national associations. In the year 1677, the confederacy possessed 2150 fighting men. When the Tuscorora tribe was vanquished, as we have seen, at a subsequent period, and expelled from its territory by the colonists of Carolina, the fugitives proposed, and were permitted, to revive their broken estate by engraving it on this powerful confederacy; and as (in consequence of a supposition derived from similarity of language, of their original derivation from the same stock to which they now returned), they were associated as a new member of the general union, instead of being intermingled with any particular portion of it, the confederacy soon after obtained the name of the Six Nations. Both the French and the English writers, who have treated of the character or affairs of this people, have concurred in describing them as at once the most judicious and politic of the native powers, and the most fierce and formidable of the native inhabitants of America. There was only wanting to their fame, that literary celebration which they obtained too soon from the neighborhood of a race of civilized men, who were destined to eclipse, and finally extinguish, their greatness; and particularly from the pen of a highly-accomplished writer, Cadwalader Colden, one of the governors of New York, they have received the same historic service which his own barbarian ancestors derived from the writings of Cæsar and Tacitus.

When the French settled in Canada, in the beginning of this century, they found the Five Nations engaged in a bloody war with the powerful tribe of *Adirondacks*; in which, after having been themselves so severely pressed, that they were driven from their possessions round Montreal, and forced to seek an asylum on the south-east coast of Lake Ontario, the Five Nations had latterly succeeded in gaining a decided advantage, and had in turn constrained their enemies to abandon their lands situated above the *Three Rivers*, and fly for safety behind the strait where Quebec was built. The tide of success, however, was suddenly turned by the arrival of Champlain, who conducted the French colony, and who naturally joined the Adirondacks, because he had settled on their lands. The conduct, the bravery, and especially the fire-arms, of these new allies of the enemy, proved an overmatch for the skill and intrepidity of the Five Nations, who were defeated in several battles, and reduced to the greatest distress. It was at this critical juncture that the first Dutch ship arrived in Hudson's river, with the colonists who established themselves at Albany. The Five Nations, easily procuring from these neighbors a supply of that species of arms to which alone their enemies had been indebted for their superiority, revived the war with such impetuosity and success, that the nation of the Adirondacks was completely annihilated; and the French too late discovered, that they had espoused the fortunes of the weaker people.‡ Hence

* In this peculiarity most of the Indian tribes resembled the ancient Spartans; as they did also in the diligence with which they cultivated consciousness of speech.

† I have often had opportunity to observe what anxiety the poor Indians were under, while those two old men remained in that part of the country where I was. An old Mohawk sachem, in a poor blanket, and dirty shirt, may be seen issuing his orders with as arbitrary an authority as a Roman dictator. Colden, l. 4.

‡ To amuse the French, the Five Nations, at one time, sent them a proposal of peace, to which the French readily inclining, requested them to receive a deputation of Jesuits, whose exertions, they expected, would sincerely conciliate their friendship. The Five Nations willingly agreed, and desired to see the priests immediately; but the instant they got hold of them, they marched to attack the Indian allies of the French, and taking the priests with them as hostages, to enforce the neutrality of their countrymen, gave the Adirondacks a signal defeat. Colden, l. 23.

originated the mutual dread and enmity that so long subsisted between the French and the confederated Indians, and entailed so many calamities upon both. The French, less accustomed to the climate, and less acquainted with the country, than their savage enemies, attempted vainly to imitate their rapid and secret expeditions. A party despatched in the winter of 1665, by Courcelles, the governor of Canada, to attack the Five Nations, lost their way among wastes of snow, and after enduring the greatest misery, arrived, without knowing where they were, at the village of Schenectady, near Albany, which a Dutchman of consideration, named Corlear,* had recently founded. The French, exhausted and stupefied with cold and hunger, resembled rather an army of beggars than of hostile invaders, and would have fallen an easy prey to a body of Indians who were in the village, if Corlear, touched with compassion at their miserable appearance, had not employed both influence and artifice with the Indians, to persuade them to spare their unfortunate enemies, and depart to defend their own people against a more formidable attack in a different quarter, which he led them to expect. When the Indians were gone, Corlear and his townsmen brought refreshments to the famishing Frenchmen, and supplied them with provisions and other necessities to carry them home: having taught them by a sensible lesson, that it is the mutual duty of men to mitigate by kindness and charity, instead of aggravating by ambition and ferocity, the ills that arise from the rigors of nature, and the frailty of humanity. The French governor expressed much gratitude for Corlear's kindness, and the Indians never resented his benevolent stratagem: but their mutual warfare continued unabated. At length, after a long period of severe but indecisive hostilities, both parties, wearied of war, but not exhausted of animosity, agreed to a general peace, which was concluded in the year 1667, and had subsisted ever since without any considerable interruption, at the period when Colonel Dongan was made governor of New York.

Of the relation that subsisted between the Dutch and the Five Nations, only confused and uncertain accounts have been preserved. The writers who have asserted that the Dutch were continually in close alliance and friendship with the Indians, seem to have derived their statements entirely from their own ideas of what was probable, and to have mistaken for an expression of particular friendship, the indiscriminate readiness of the Dutch to traffic with friend or foe. It is certain that at one time they were engaged in a bloody war with the Indians; though with what particular tribes, there are no means of ascertaining; and that during Stuyvesant's administration they enjoyed a peace with them, of which the benefit was transmitted to the English. When Colonel Nichols assumed the government of New York, he entered into a friendly treaty with the Five Nations; which, however, till the arrival of Dongan, seems to have been productive of no farther connexion than an extensive commercial intercourse, in which the Indians supplied the English with peltry in return for arms and ammunition, of the use of which, as long as they were not employed against themselves, the vendors were entirely, and, as it proved, unfortunately, regardless. The Indians adhered to the treaty with strict fidelity; but always showed a scrupulous niceness in exacting the demonstrations of respect due to an independent people; and in particular when any of their forces had occasion to pass near the English forts, they expected to be saluted with military honors. In the mean time the French Canadians were not remiss in availing themselves of their deliverance from the hostilities of these formidable Indians. They advanced their settlements along the river St. Lawrence, and in the year 1672 built Fort Frontignac on its north-west bank, where it rushes from the vast parent waters of Ontario. With a policy proportioned to the vigor of their advances, they filled the Indian settlements with their missionaries, who laboring with great activity and success, multiplied converts to their doctrines, and allies to their countrymen. The praying Indians, as the French termed their converts, were either neutral, or, more frequently, their auxiliaries in war. The Jesuits preached not to their Indian auditors the doctrines that most deeply wound the pride of human nature, nor a lofty morality which the conduct of the bulk of its nominal professors practically denies and disgraces. They required of their converts but a superficial change; an embracement of one superstition in place of ano-

* This man enjoyed great influence with the Indians, who, after his death, always addressed the governors of New York with the title of Corlear, as the name most expressive of respect that they could employ. Colden, l. 32.

* "Ongue-honwe"—that is, "Men surpassing all others."

ther; and they entertained their senses, and impressed their imaginations, by a ceremonial at once picturesque and mysterious. Yet as, from the weakness of man, an admixture of error is inseparable from the best system of doctrine, so, from the goodness of God, a ray of truth is found to pervade even the worst. The instructions of the Jesuits, from which the lineaments of christianity were not wholly obliterated, may have contributed, in some instances, to form the divine image in the minds of the Indians; and the good seed, unchoked by the tares, may, in some places, have sprung up to everlasting life. The moral and domestic precepts contained in the Scriptures were communicated, in some instances, with a happy effect: and various congregations of Indian converts were persuaded by the Jesuits to build villages in Canada in the same style as the French colonists, to adopt European husbandry, and to renounce spirituous liquors. The visible separation of the catholic priests from the family of mankind, by a superstitious renunciation of conjugal and parental ties, gave no small sacredness to their character, and a strong prevailing power to their addresses. In the discharge of what they conceived their duty, their courage and perseverance were equalled only by their address and activity. They had already compassed sea and land to make proselytes, and the threats of death and torture could not deter them from executing their commission. Many of them, though commanded to depart, continued to remain among tribes that were at war with their countrymen; and some of them, on the principle of becoming all things to all men, embraced Indian habits of living. One of these last, established himself so firmly in the affections of one of the tribes of the Five Nations, that although they continued faithful to the national enmity against the French, they adopted him as a brother, and elected him a sachem. With such industry, resolution, and insinuation, did the French Jesuits exert themselves to recommend their faith and their country to the affections of the Indians. The French laity, too, and especially their civil and military officers and soldiery, succeeded better than the generality of the English, in recommending themselves to the good graces of the savages. French vanity was productive of more politeness and accommodation* than English pride; and even the displeasure that the French sometimes excited by the commission of injuries, was less intolerable than the provocation that the English too frequently inspired by a display of insolence. The stubborn disposition of the English was best fitted to contend with the obtrusions of nature; the pliancy and vivacity of the French, to prevail over the jealousy of the natives. There were as yet no protestant missions in this quarter of America, which, in the following century, some New England clergymen, aided by a religious society in Scotland, were destined to illustrate by noble and successful exertions of missionary labor.

Colonel Dongan, who was not, like his predecessors, enumbered with a monopoly of all the functions of government, nor absorbed in struggles with popular discontent, had leisure for a wider survey of the state of his countrymen's relations with the Indians, and very soon discovered that the peace which was so advantageous to the French Canadian colonists, by enabling them to extend their fortifications and their commerce over a vast extent of country, was productive of severe inconvenience to some of the colonies of Britain, and threatened serious danger to them all. The Five Nations, inflamed by their passion for war, and finding a pretext for its gratification in the recollection of numerous insults that had been offered to them in the season of their adversity, had turned their arms southward, and conquered the country from the Mississippi to the borders of Carolina; exterminating numerous tribes and nations in their destructive progress. Many of the Indian allies of Virginia and Maryland sustained their attacks; and these colonies themselves were frequently involved in hostilities both in defence of their allies, and in defence of themselves against allies incensed by discovering that their invaders derived their means of annoying them from the English at New York. But this year, Colonel Dongan, in conjunction with Lord Effingham, the governor of Virginia, concluded with the Five Nations a defini-

tive treaty of peace, embracing all the English settlements, and all tribes in alliance with them. Hatchets, proportioned to the numbers of the English colonists, were solemnly buried in the ground; and the arms of the Duke of York, as the acknowledged supreme head of the English and Indian confederacy, were suspended along the frontiers of the territories of the Five Nations.† This treaty was long inviolably adhered to; and the fidelity of its observance was powerfully aided by a renewal of hostilities between the Five Nations and their ancient enemies the French. It was at this time that the merchants of New York first adventured on the great lakes to the westward, hoping to participate in the trade which the French were carrying on with much profit in that quarter, and which they endeavored to guard from invasion by prejudicing the Indians against the English, and by every art that seemed likely to obstruct the advances of their rivals. Dongan perceiving the disadvantages to which his countrymen were exposed, solicited the English ministry to take measures for preventing the French from navigating the lakes which belonged to the Five Nations, and, consequently, as he apprehended, to England. But he was informed that it was preposterous to ask, or expect, that France would command her subjects to desist from an advantageous commerce for the benefit of their rivals; and he was directed rather by acts of kindness and courtesy to encourage the Indians to retain their adherence to England, and to make it the interest of all the tribes to trade with the English in preference to the French; observing withal such prudence as might prevent offence to European neighbors. So far were these views from being realised, that from this time there commenced a series of disputes between the two nations, which for the greater part of a century engaged them in continual wars and hostile intrigues that threatened the destruction of their colonial settlements, cost the lives of many of the European colonists, and wasted the blood, and prolonged the barbarism, of those unfortunate Indians who were involved in the vortex of their hostility.

1685.] On the death of Charles the Second, the Duke of York ascended his brother's throne, and the province of which he had been proprietary devolved, with all its dependencies, on the crown. The people of New York received, with improvident exultation, the accounts of their proprietary's advancement to royalty, and proclaimed him as their sovereign with the liveliest demonstrations of attachment and respect. They had been for some time past soliciting with much eagerness a formal grant of the constitution that was now established among them; and the duke had not only promised to gratify them in this particular, but had actually proceeded so far as to sign a patent in conformity with their wishes, which, at his accession to the throne, required only some trivial solemnity to render it complete and irrevocable. But James, though he could not pretend to forget, was not ashamed to violate, as King of England, the promise which he had made when Duke of York; and a calm and unblushing refusal was now returned to the renewed solicitations of all the incorporated bodies, and the great bulk of the inhabitants of the province. Determined to establish the same arbitrary system in New York which he designed for New England, so far from conferring new immunities, he withdrew what had been formerly conceded. [1686.] In the second year of his reign he invested Dongan with a new commission, empowering him, with consent of a council, to enact the laws, and impose the taxes; and commanding him to suffer no printing press to exist. Though he now sent Andros to New England, he paused a while before he ventured to restore the authority of that obnoxious governor in New York. But the people beheld in his appointment to govern the colonies in their neighborhood, an additional indication of their princes character and their own danger, and with impatient discontent† endured a yoke which they were unable to break, and which they

were prevented from exhibiting to public odium, and English sympathy, through the medium of the press.

Dongan, having been a soldier all his life, seems to have been fitted rather by habit to regard with indifference, than by disposition to enforce with rigor, a system of arbitrary power; and, accordingly, the remainder of his administration, though less favorable to his popularity, was not discreditable to his character, which continued to evince the same moderation, and the same regard to the public weal, as before. Though a Roman catholic, he had beheld with alarm, and resisted with energy, the intrusion of the French priests into the settlements of the Five Nations; and even when his bigoted master was persuaded by the court of France to command him to desist from thus obstructing the progress of popish conversion, he continued nevertheless to warn his Indian allies, that the admission of the Jesuits among them would prove fatal to their own interests, and to their friendship with the English. He still insisted that the French should not treat with the Indians in alliance with his colony, without his privity and intervention: but the French court again employed their interest with his master; and he accordingly received orders to depart from this pretension. The Five Nations, however, seemed more likely to need the assistance of his forces than the suggestions of his policy. Their untutored sagacity had long perceived what the ministers of the court of England were not skilful enough to discern, that the extensive projects of France both threatened themselves with subjugation, and involved, to the manifold disadvantage of the English colonies, a diminution of their trade, and a removal of the powerful barrier that still separated them from the rival settlement of Canada. The treaty that excluded the Five Nations from hostile expeditions against the more distant tribes allied to the other English colonies, gave them leisure to attend with less distraction to their nearer interests; and finding themselves inconvenienced by the supplies which their numerous enemies derived from the French, they had of late chosen to consider this as a hostile act which they were entitled to chastise and obstruct, and had constantly attacked the Canadian traders who carried military stores to any tribe with whom they were at war. The French, under the conduct of two successive governors, De la Barre and Nouville, had vainly endeavored, partly by treaty and partly by force, to repress proceedings so injurious to their commerce, their reputation, and their political views; when Dongan perceiving that a war would probably ensue between the rivals and the allies of his countrymen, prevailed, by the most urgent entreaties, on the English court to invest him with authority to assist the Five Nations in the contest that menaced them. But the French ministers gaining information of these instructions, hastened to counteract them by a repetition of artifices which again proved successful. They had already more than once, by their hypocrisy and cunning, succeeded in outwitting the sincere bigotry of the English king; and they had now the address to conclude with him a *treaty of neutrality for America*, by which it was stipulated that neither party should give assistance to Indian tribes in their wars with the other. Armed with so many advantages, the French authorities in Canada resumed, with increased vigor, their endeavors to chastise by force, or debauch by intrigue, the Indian tribes who had preferred the English alliance to theirs; while Dongan was compelled to sacrifice the honor of his country to the mistaken politics of his master, and to abandon her allies to the hostility, and her barrier to the violation, of an insidious and enterprising rival. He could not, however, divest himself of the interest he felt in the fortunes of the Five Nations, and seized every opportunity of imparting to them advice no less prudent than humane, for the conduct of their enterprises, and the treatment of their prisoners. But his inability to fulfil former engagements, and afford them farther aid, greatly weakened the efficacy of his councils. Though the remonstrances of Dongan enabled the ministers of James to discover, in the following year, [1687] that the treaty of neutrality for America was prejudicial to the interests of England, it was impossible to prevent the king from renewing, in the close of the same year, this impolitic arrangement with France.

But the king had no intention of relinquishing his empire in America; and his mind, though strongly tainted with bigotry, was not unsusceptible of politic views; though he seems rarely to have mingled these considerations together. As his bigotry had prompted him to give up the Indians to the French, his policy

* A curious instance of the complaisance of this people is related by Oldmixon (ii. 229), in his account of a tribe of savages who were greatly charmed with the good breeding of the French, in always appearing stark naked at their mutual conferences. Charlevoix boasts, that the French are the only European people who have ever succeeded in rendering themselves agreeable to the Indians. Whatever reason he may have had for this boast, he had no reason to glory in the means by which they courted popularity.

† When this treaty was renewed some years after, the sachem who acted as orator for the Indians thus addressed the colonial envoys. "We make fast the roots of the tree of peace and tranquillity, which is planted in this place. Its roots extend as far as the utmost of your colonies: if the French should come to shake this tree, we would feel it by the motion of its roots, which extend into our country." Colden, i. 109.

† So great was the change produced in the sentiments of the colonists by this change of treatment, that we find Dongan writing this year to the English ministry, "I wish for more fortifications, as the people every day grow more numerous, and are of a turbulent disposition." State Papers, apud Chalmers, 601. This censure seems to be as unjust as the retort which his own character experienced at the Revolution, when a body of the inhabitants denounced him as "a wicked popish governor."

now suggested the measure of uniting all his northern colonies in one government for their more effectual defence. It must be confessed, indeed, that he seems to have been at least as strongly prompted to this design by the desire of facilitating his own arbitrary government in the colonies, as by concern for their safety, or for the integrity of his dominions.* As his scheme included New York, and as he thought the people of this province now sufficiently prepared to abide the extremity of his will, he indulged the more readily the displeasure that Dongan had given him by obstructing the French Jesuits, which had been a subject of continual complaint from the court of France. The commission of this meritorious officer was accordingly superseded by a royal command to deliver up his charge to Sir Edmund Andros; and New York not only reverted to the dominion of its ancient tyrant, but beheld its existence as a separate province completely merged in its annexation to the government of New England. Andros remained at Boston as the metropolis of his jurisdiction; committing the administration of New York to Nicholson, his lieutenant-governor; [1688.] and though by the vigor of his remonstrances, and his reputation for ability, he compelled the French to suspend some encroachments which they were making or threatening to make on the English territories, he could lend no assistance to the Five Nations in the hostilities that were now carried on between them and the French with a mutual fury and ferocity that seemed totally to obliterate the distinction between civilized and savage men. The people of New York, deprived of their liberties, and mortified by their annexation to New England, felt themselves additionally ill used by the policy which compelled them to stand aloof and behold the fate of the allies to whom they had promised protection, together with their own most important interests suspended on the issue of a contest in which they were not suffered to take a share; while all the while their countrymen in the eastern part of New England were harassed by a dangerous Indian war which was believed on strong reasons to have been excited by the intrigues of the French. But though deserted by the English, the Five Nations maintained the struggle with an energy that promised the preservation of their independence, and finally with a success that excited hopes even of the subjugation of their civilized adversaries. Undertaking an expedition with twelve hundred of their warriors against Montreal, they conducted their march with such rapidity and secrecy as to surprise the French in almost unguarded security. The suddenness and fury of their attack proved irresistible. They burned the town, sacked the plantations, put a thousand of the French to the sword, and carried away a number of prisoners whom they burned alive; returning to their friends with the loss of only three of their own number. It was now that the disadvantage arising from the neutrality of the English was most sensibly felt, both in the cruelties with which the Indians stained the triumphs they obtained, and which the influence of a humane ally might have contributed to moderate,† and also in the inability of the savages to improve their victories into lasting conquest. They strained every nerve indeed to follow up their advantage, and shortly after the attack on Montreal possessed themselves of the fort at Lake Ontario which the garrison in a panic abandoned to them; and being now reinforced by the desertion of numerous Indian allies of the French, they reduced every station that this people possessed in Canada to a state of the utmost terror and distress. Nothing could have saved the French from utter destruction but the ignorance which disabled the Indians from attacking fortified places; and it was evident to all that a single

* Chalmers's account of this project of the king and of the measures which it produced (wherever the subject engages his attention, but especially in cap. 16) is strangely erroneous. He quotes, as words used by the king in explanation of his views (p. 425), expressions employed by a different person, and not ascribed at all to the king (Hutchinson, i. 371). He asserts also that Andros made an advantageous peace for the Five Nations with the French. Here indeed he is so far supported by an author to whom incorrectness is very unusual, and who says merely that "the Mohawks made peace with the French under the influence of Sir Edmund" (Hutchinson, i. 370). But the fact is, that the Five Nations were at war with the French during the whole of Andros's administration; and so totally unconnected was he with their affairs, that neither Smith nor Colden was aware of his having ever been a second time governor of New York.

† The conduct which we have already witnessed in some of the Indian allies of the New England states, in their joint wars, may seem to render this a vain speculation. But the Five Nations were a far more reasonable and intelligent race of beings than the Pequots and Narragansets. Colonel Dongan, whom they greatly loved and respected (Colden, i. 59), might have mollified their hostilities by his example, as he frequently and not altogether ineffectually attempted to do by his counsels.

vigorous act of interposition by the English colonists would have sufficed to terminate for ever the rivalry of France and England in this quarter of the world.

1689.] While this war between the French and the Indians was prolonged by indecisive hostilities, a scene of the utmost importance was preparing to open at New York. A deep and general disaffection to the government prevailed there among all ranks of men; and as the public discontents had been for some time plainly gathering to a head, some violent convulsion was fearfully anticipated; and perhaps was suspended by divisions in sentiment arising from the different aspects in which the state of the times presented itself to different minds. To the wealthy and the discerning, the privation of liberty and the degradation of the province, appeared with justice the only public disadvantages which they had occasion to deplore, or were interested to remove. But a dread of popery had seized the minds of many of the poorer inhabitants, and not only diminished real and substantial evils in their esteem, but gone far to extinguish common sense in their understandings and common justice in their sentiments. The king's well known bigotry, his attempts to introduce popery in England, and his tyrannical suppression of liberty among themselves, inculcated this additional apprehension on their irritated minds; and the servile apostasy of some of the officers of government at New York, who endeavored to court royal favor by professing to adopt the king's religion, appeared strongly to confirm it. Some angry feelings that had been excited in the commencement of Colonel Dongan's administration were now seen to revive and at once augment and diversify the prevailing ferments. At that period, notwithstanding the exertions of a former governor to adjust the boundaries of property in Long Island, a great many disputes on this subject prevailed in the same quarter between different individuals and different townships; and on Dongan had devolved the thankless office of adjusting these controversies by judgments which could hardly fail to engender a great deal of enmity against him. In such cases it too commonly happens that the arbitrator by seeking to gratify both parties, disappoints them both, and is taxed on all sides with partiality; or that studying only to enforce strict justice, he excites extreme discontent in those whom his award both deprives of the property they had hoped to keep or gain, and stigmatizes as unjust and unreasonable men. Most men possess sufficient ingenuity to supply them with plausible reasons for imputing the disappointment of their expectations to the dishonesty of those who obstruct or withhold them; and disappointed litigants have in all ages been notorious for the vehemence and acrimony of their spleen.* A great many persons who accounted themselves wronged by Dongan's adjudications, had made no scruple to impute their disappointments to the darkness and obliquity of his popish understanding. They conceived a violent jealousy of popish designs, which the recollection of their wrongs preserved unimpaired by the lapse of time and the character of Dongan's administration. These feelings were revived and inflamed by recent events and appearances; the apostasy of some of the public officers confirmed the apprehensions of popery; and the painful stroke inflicted by the establishment of civil tyranny was chiefly felt as aggravating the smart of a former and totally different injury. This class of persons esteemed popery the most terrible feature in the aspect of the times, and themselves as eminent victims of popish persecution; and considered these as by far the fittest considerations to unite the general resentment, and justify its vindictive reaction.

While the minds of men were thus agitated by common resentment, but restrained from cordial union by difference of opinion and variety of apprehension, the public expectation was awakened and elevated by intelligence from Europe of the designs of the Prince of Orange. Yet no commotion had ensued, when the important tidings arrived of the accession of William and Mary to the throne of England, and of the successful insurrection at Boston which had terminated the government of Andros. Even the contagious ferment excited by this last intelligence might have subsided without producing an explosion of popular violence, if the conduct of the local authorities of New York had not indicated an intention to resist, or at least a hesita-

* "May they be perpetually defeated in judicial controversies," was thought by the Greeks a curse worthy of being inserted in the denunciation they published against such as should violate the Amphictyonic engagement. It is an observation of Thucydides that men are much more exasperated by a supposed injustice of which the benefit accrues to their equals, than by the most violent usurpation committed by their superiors.

tion to concur with, the general revolution of the empire. Nicholson, the lieutenant-governor, and his council, not only refrained from proclaiming William and Mary, but despatched a letter to governor Bradstreet, at Boston, commanding with haughty menace, the immediate release of Andros, and the suppression of the insurrectionary rabble* who had presumed to put him in confinement. Notwithstanding this demonstration of opposition to the revolution, the more reflecting part of the inhabitants clearly perceived that their local government must follow the fate of the rest of the empire, and were disposed calmly to wait for the spontaneous submission of Nicholson and his council to William and Mary, or the arrival of orders or help from Britain to reduce them. But the impatience of a considerable body of the people, and especially of those who were panic struck with the terrors of popery, could not abide this tedious issue, and was inflamed with the apprehension of some notable piece of craft from Nicholson and his associates in office.†

This party found a chief in Jacob Leisler, a man of eager headlong temper and narrow capacity, and whose zeal against popery and former ill treatment by Andros, seemed to designate him the proper leader of the opposition to the political and religious enemies of the province. He had already committed the first act of resistance, by refusing to pay customs on some goods he had imported, alleging that the collector was a papist, and that there was no legitimate government in the colony. Nicholson having begun to make preparations for defending the city against a foreign invasion, and summoned the trained bands to garrison the fort, a report was circulated that the papists were preparing to massacre the protestants; and Leisler, who commanded a company of the trained bands, instantly marched at the head of a detachment of this body, and making his way into the fort, assumed the command of it in defence of the protestant cause, and in attendance on the orders of the king and queen of England. The precautions of the late king had deprived the people and their leaders of the power of diffusing their sentiments by the agency of the press; but a written declaration was subscribed by Leisler and his followers, importing that, although they had suffered many grievances from "a wicked popish governor, Dongan," they would have patiently awaited redress from England, if the violence and oppression of Nicholson and the schemes of the papists had not forced them to take arms and secure the fort, which they were ready to deliver up to such protestant officer as the king and queen might send to receive it. Leisler, finding that at first he was not joined by any persons of consideration in the province, despatched a messenger to King William, and by negotiations with Massachusetts and Connecticut, succeeded in interesting the governments of these colonies on his side. But a report arising that an English fleet was approaching to assist the insurgents, they were instantly joined by all classes of people in New York; and Nicholson, afraid of sharing the fate of Andros, fled to England. Unfortunately for Leisler, the command which priority of resistance and the favor of the lower orders enabled him, his natural temper equally prompted him to retain, though surrounded by men who dreaded his violence and reluctantly submitted to his elevation. These new adherents had influence enough to cause a second proclamation to be issued, in which the unworthy censure on Dongan was omitted, and no stipulation whatever inserted as to the religion of the royal officer to whom the fort would be surrendered. It had been happy for all parties if the jealousy of Leisler's rivals had been satisfied with this wise and moderate control over his measures. But Courtlandt, the mayor of the city, Colonel Bayard, Major Shuyler, and a number of other gentlemen, unable to brook the superiority of a man whose rank and talents were inferior to their own, retired to Albany, and, seizing the fort there, declared that they held it for King William, and would maintain no connexion with Leisler. Each

* Chalmers, in strains of equal arrogance, imputes the subsequent proceedings at New York to the rabble of this place. But a country where beggary and dependence are unknown, produces no class to which such an epithet can justly belong. The whole account he has given of the proceedings at this period is defaced by the grossest partiality.

† Thucydides thus characterizes the proceedings of the populace in one of the revolutions of Corcyra:—"Such as had the least wit had the best success; for both their own defect and the subtlety of their adversaries putting them into a great fear to be overcome in words, or at least in premeditation by their enemy's great craft, they therefore went roundly to work with them with deeds."—E. H. Hobbes Translation. "Hobbes's own summary of this passage and the context is, "In seditions and confusion, they that distrust their wits suddenly use their hands, and defeat the stratagems of the more subtle sort."

party now professed adherence to the same sovereign, and denounced the other as rebels to his authority. Leisler, though intrusted by the militia with the sole command, judged it prudent to associate some respectable citizens along with him in a station that was likely to prove so dangerous. Having fortified his own power by the appointment of a committee of safety at New York, he despatched his son-in-law, Milbourn, against the adverse faction at Albany. Courtlandt and his associates, burning with resentment, but averse to shed blood in such a quarrel, were relieved from their perplexity by a hostile irruption of French and Indians, [1690] which, by the desolation it inflicted on the surrounding country, either rendered their post untenable, or induced them to sacrifice their pretensions, for the purpose of enabling their countrymen to unite all the force of the province against the common enemy. Abandoning the fort to their rival, they took refuge in the neighboring colonies; and Leisler, with vindictive rashness, proceeded to confiscate their estates. To add strength and reputation to his party, a convention was summoned by Leisler of deputies from all the towns and districts to which his influence extended; and this assembly, in which two deputies from Connecticut were admitted to assist with their advice, enacted various regulations for the temporary government of the province. But the acts of this body, and especially its financial impositions, were disputed by a powerful party among the colonists, whose indignation against Leisler was confined with difficulty to insults and menaces; and many of the English inhabitants of Long Island, while they expressed a reluctant submission to this chief, privately applied to Connecticut, and solicited this state to annex their insular settlements to its jurisdiction.

In this unhappy state of animosity and contention the colonists of New York continued altogether nearly two years, notwithstanding a revolution which, by elevating the stadtholder of Holland to the English throne, had promised to unite them together more firmly than ever. Happily, the quarrel exhibited no symptoms of national antipathy between the Dutch and English, who without discrimination of races, embraced respectively the party to which their political sentiments attached them; and though much evil passion and malignity were engendered between the two factions, no blood was shed by either while their commotions lasted. But, unfortunately, the miseries of foreign war and hostile invasion were soon added to the calamity of internal discord. The condition of the French in Canada had been suddenly raised from the brink of ruin by the arrival of a strong reinforcement from the parent state, under the command of a skillful and enterprising officer, the old Count de Frontignac, who now assumed the government of the French settlements, and quickly gave a different complexion to the affairs of his countrymen. He set on foot a treaty with the Five Nations, and succeeded, meanwhile, in obtaining a suspension of their hostilities. War had already been declared between France and England; and the dissensions among the inhabitants of New York seeming to invite an attack upon this province, he determined to revive the drooping spirits of his people by availing himself of this tempting opportunity of success. A considerable body of French and Indians was accordingly collected, and despatched in the depth of winter against New York. By a strange coincidence, which seemed to have been decreed for the purpose of staining the French name in America with the blackest ingratitude and dishonor, this party, like their predecessors in 1665, after wandering for twenty-two days through deserts rendered trackless by snow, approached the village of Schenectady in so exhausted a condition that they had determined to surrender themselves to the inhabitants as prisoners of war. But, arriving at a late hour on an inclement night, and learning from the messengers they had sent forward that the inhabitants were all in bed, without even the precaution of a public watch, they exchanged their intention of imploring mercy to themselves for a plan of nocturnal attack and massacre of the defenceless people, to whose charity their own countrymen had once been so highly indebted. This detestable requital of good with evil was executed with a barbarity which of itself must be acknowledged to form one of the most revolting and terrific pictures that have ever been exhibited of human cruelty and ferocity. Dividing themselves into a number of parties, they set fire to the village in various places, and attacked the inhabitants with fatal advantage when, alarmed by the conflagration, they endeavored to escape from their burning houses. The exhausted strength of the Frenchmen appeared to revive with the work of destruction, and to gather energy

from the animated horror of the scene. Not only were all the male inhabitants they could reach put to death, but pregnant women were ripped up, and their infants dashed on the walls of the houses. But either the delay occasioned by this elaborate cruelty, or the more merciful haste of the flames to announce the calamity to those who might still fly from the assassins, enabled many of the inhabitants to escape. The efforts of the assailants were also somewhat impeded by a sagacious discrimination which they thought it expedient to exercise. Though unmindful of benefits, they were not regardless of policy, and of a number of Mohawk Indians who were in the village not one sustained an injury. Sixty persons perished in the massacre, and twenty-seven were taken prisoners. Of the fugitives who escaped half naked, and made their way through a storm of snow to Albany, twenty-five lost their limbs from the intensity of the frost. The French having totally destroyed Schenectady, retired loaded with plunder from a place where I think it must be acknowledged that even the atrocities of their countrymen in the Palatinate had been outdone.

The intelligence of this event excited the utmost consternation in the province of New York. Forces were quickly raised to repel or retort the hostility of the French; and, on the application of Leisler, the colony of Connecticut sent a body of auxiliaries to his aid. It was found difficult to excite the Five Nations to join actively with allies who had once deserted them; but they declared that no arts of the French should ever prevail with them to take the part of an ancient enemy against an ancient friend. As the province of Massachusetts was severely harassed at the same time by Indian hostilities instigated and aided by Count Frontignac, a scheme was projected between the New England states and New York for a general invasion of Canada. An expedition, commanded by Sir William Phipps, sailed from Boston against Quebec; and the united forces of Connecticut and New York, under the command of General Winthrop, were to march against Montreal. But Leisler's son-in-law, Milbourn, who acted as commissary-general, had made such imperfect provision for the expedition, that, partly from this defect, and partly from the inability of the Indians to supply as many canoes for crossing the rivers and lakes as it had been hoped they would furnish, the general was obliged to call a council of war, and, by their unanimous opinion, to order a retreat. The expedition against Quebec was equally unsuccessful. Leisler, transported with rage when he was informed of the retreat, caused Winthrop to be arrested, but was instantly compelled by universal indignation to release him. Infatuated by his dangerous elevation, this man began to display the spirit that goes before a fall. The government of Connecticut, incensed at the affront by which he had revenged the result of his own incapacity on the best officer and most respected inhabitant of their province, signified in very sharp terms their astonishment and displeasure at his presumption, and warned him, with prophetic wisdom, that his state needed rare prudence, and that he had urgent occasion for friends.

King William had received Leisler's messenger with the most flattering encouragement, and admitted him to the honor of kissing his hand, as a testimony of his satisfaction with the proceedings at New York. But Nicholson, on his arrival in England, found means to make his party good with the king, and instil into his mind a prejudice, of which royalty rendered it very susceptible, against the insurgents both at Boston and New York. He returned thanks, indeed, to the people of New York, by Leisler's messenger, for their fidelity; but in none of his communications with either Boston or New York did he recognise the governors whom the people had appointed; and he demonstrated to the inhabitants of both these places how very lightly he respected their complaints against Andros and Nicholson, by subsequently promoting these men to the government of others of the American provinces. He would, doubtless, have continued to unite New York and Massachusetts in the same government; but plainly foreseeing that he must inevitably grant a charter to Boston, and that he might hope to evade a similar concession to New York, which had never yet possessed this advantage, he consented to the separation which both desired, and in August, 1689, committed the separate government of this province to Colonel Sloughter. In consequence, however, of the embarrassed situation of his master's affairs in England, this officer did not arrive at New York till the second year [1691] after his appointment, and till Leisler had possessed power so long that he was extremely unwilling, and exercised it

with so much envy that he was exceedingly afraid, to surrender it. This ill-fated adventurer seems to have hoped to the last that the king would either continue him in his office or expressly sanction and reward his services; and when he found himself no otherwise noticed than by a summons from Colonel Sloughter to deliver up the fort, he answered in the language of folly and despair, that he would not give it up but to an order under the king's own hand. Such a resolution it was unfortunately possible to utter, though quite impracticable to maintain; and he only sealed his fate by this last frantic effort to evade it, and furnished his enemies with a legal pretext to destroy him, which otherwise they would have found it no easy matter to adduce. The new governor's ears were now readily opened to all the charges that Leisler's enemies hastened to prefer against him; and though he quickly abandoned the desperate purpose of defending the fort, he was denounced as a rebel, and committed to prison with his kinsman and Milbourn various others of his adherents on a charge of high treason.

Colonel Sloughter having thus established his authority in the province, proceeded to convoke an assembly which voted addresses in reprobation of Leisler's rebellious conduct, in holding out the fort against the governor. A general act of annulment was passed, not only against all the regulations that had been established by former royal governors and their counsels, but even against the laws that had been enacted by the popular assembly in 1683, on the strange and unintelligible pretext, that having never been observed by the late king, they had ceased to be binding on the people. As some doubt had arisen, whether, in the absence of a charter, the assembling of a representative body was an inherent right of the people, or a mere grace from the king, this assembly passed a remarkable law, declaring that this and all the other liberties of Englishmen belonged of right to the colonists; but this act was afterwards annulled by King William. Leisler and Milbourn were now brought to trial, and, vainly pleading their meritorious services in originating the revolution of the province, were convicted, and received sentence of death. The governor still hesitated to destroy the two persons, who, of all the inhabitants, had first declared themselves in favor of his sovereign; and, shortly after the trial, wrote to the English ministers to direct him in what manner the convicts should be disposed of: but he had hardly taken this step, when the renewed instances of their enemies induced him to alter his purpose, and issue the warrant of death, which was instantly carried into execution.* The adherents of Leisler and Milbourn, who had been much enraged at the sentence, were filled with terror and astonishment when they saw it carried into effect, and began to fly in such numbers from the province, that it was found necessary to pass in haste a general act of indemnity. Leisler's son complained to the king of the execution of his father, and the confiscation of his property; and the privy council reporting that, although the trial and execution were legal, it was advisable, under all the circumstances of the case, to restore the forfeited estate, this was all the grace that could for some time be obtained. But a compensation more honorable and satisfactory was awarded to them soon after; and, under the reign of the same king, the English parliament enacted a reversal of the colonial attainder. The passions which Leisler's administration had excited in one party, and which his execution had communicated to the other, continued long to distract the public councils, and embitter the private intercourse, of the inhabitants of New York.

The most respectable act of Sloughter's short administration was a conference which he held with the chiefs of the Five Nations, who admitted that they had so far relaxed their hostile purposes against the French, as to entertain propositions for a lasting peace with them; but now willingly consented to *brighten*, as they termed it, *their ancient belt of friendship*, and to renew a league, offensive and defensive, with the English. "We remember," they declared, "the deceit and treachery of the French; the belt they have sent us is poison; we spew it out of our mouths; and are resolved to make war with them as long as we live." On his return from this conference, a sudden death put a period to Sloughter's administration.

To animate the Indians in the purposes they had

* When no other measures could prevail with the governor, tradition informs us that a sumptuous feast was prepared, to which Colonel Sloughter was invited. When his excellency's reason was drowned in his cups, the entreaties of the company prevailed with him to sign the death-warrant, and before he recovered his senses the prisoners were executed." Smith, 104.

now professed, and to sharpen by exercise their hostility against the French, Major Schnyler, who had acquired extraordinary influence with the Five Nations by his courage, good sense, and friendly attention to their interests, undertook, in the close of this year, an expedition against Montreal at the head of a considerable body of colonial and Indian forces. Though the invaders were finally compelled to retreat, the French sustained great loss in several encounters, and the spirit and animosity of the Five Nations were whetted to such a pitch, that even when their allies retired, they continued during the winter to wage incessant and harassing hostilities with the French. Count Frontignac, whose sprightly manners and energetic character supported the spirits of his countrymen amidst every reverse, [1692] was at length so provoked with what he deemed the ingratitude of the Five Nations for his kindness to them at Schenectady, that, besides encouraging his own Indian allies to burn their prisoners alive, he at length condemned to a death still more dreadful two Mohawk warriors who had fallen into his hands. In vain the French priests remonstrated against this sentence, and urged him not to bring so foul a stain on the christian name; the count declared that every consideration must yield to the safety and defence of his people, and that the Indians must not be encouraged to believe that they might practise the extreme of cruelty on the French without the hazard of having it retorted on themselves. If he had been merely actuated by politic considerations, without being stimulated by revenge, he might have plainly perceived, from the conduct of all the Indian tribes in their wars with each other, that the fear of retort had no efficacy whatever to restrain them from their barbarous practices, which he now undertook to sanction as far as his example was capable of doing. The priests, finding that their humane intercession was ineffectual, repaired to the prisoners, and labored to persuade them to embrace the christian name, as a preparation for the dreadful fate which they were about to receive from christian hands; but their instructions were rejected with scorn and derision, and they found the prisoners determined to dignify, by Indian sentiments and demeanor, the Indian death which they had been condemned to undergo. Shortly before the execution, some Frenchman, less inhuman than his governor, threw a knife into the prison, and one of the Mohawks immediately despatched himself with it; the other, expressing contempt at his companion's mean evasion from glory, walked to the stake, singing, in his death-chant, that he was a Mohawk warrior, that all the power of man could not extort an indecent expression of suffering from his lips, and that it was ample consolation to him to reflect that he had made many Frenchmen suffer the same pangs that he must now himself undergo. When attached to the stake, he looked round on his executioners, their instruments of torture, and the assembled multitude of spectators, with all the complacency of heroic fortitude; and, after enduring for some hours, with composed mien and triumphant language, a series of barbarities too atrocious and disgusting to be recited, his sufferings were terminated by the interposition of a French lady, who prevailed with the governor to order that mortal blow, to which human cruelty has given the name of *coup de grace*, or stroke of favor.*

It was with great reluctance that King William had surrendered to the American colonies any of the acquisitions which regal authority had derived from the tyrannical usurpations of his predecessors; and his reign was signalled by various attempts to invade the privileges which at first he had been compelled to respect or to restore. He was informed by the English lawyers that he could not refuse to recognise the charter of Connecticut with all its ample privileges, and he was baffled in his attempt to procure an act of parliament to annul it. But as New York, never having had a charter, was judged to be not legally entitled to demand one, he determined not only to deprive it of this advantage, but, through the medium of its undefined consti-

tution, and the utter absence of restriction on the powers with which he might invest its governor, to attempt an encroachment on the envied privileges of Connecticut. Colonel Fletcher, a man of sordid disposition, violent temper, and shallow capacity, yet endowed with a considerable share of activity, was the governor who next arrived to represent the king at New York, and to him was intrusted the execution of the design that William had conceived against the neighboring colony. For this purpose he had been invested with plenary powers of commanding, not merely the militia of New York,* but all his majesty's militia in the colonies of that quarter of America. His first step towards effectuating this encroachment was to send a commission to governor Trent, who already commanded the militia of Connecticut according to the institutions of the provincial charter; and the reception of this, even in the light of a mere superogatory confirmation, it was probably hoped would pave the way to a more thorough establishment of the king's pretensions. But Connecticut had then, both in the offices of her government and the ranks of her people, abundance of men, who, thoroughly appreciating the privileges they enjoyed, had sense to see, and spirit to resist, every attempt to violate them; and the tender of Fletcher's commission was not only flatly refused but made the subject of a vigorous remonstrance. Incensed at such contumacy, as he was pleased to regard it, Fletcher proceeded with his usual impetuosity to Hartford, [1693.] and commanded the assembly of the state, who were sitting, to place their militia under his orders, as they would answer it to the king. He even proceeded to such a length as to threaten to issue a proclamation calling on all who were for the king to join him, and denouncing all others as guilty of disloyalty and sedition. Finding his menacing injunctions received with a calm but firm refusal, he presented himself with one of his council, Colonel Bayard, to the militia, at their parade, and expecting that a royal warrant would find greater favor with the men than it had done with the civil rulers, he commanded Bayard to read his commission aloud, as an act of declaratory possession of the authority to which he pretended. But Captain Wadsworth, who was always present when the liberties of his country were in danger, and who had once before saved the charter of Connecticut from invasion, now stepped forward to prevent the privileges it conveyed from being abridged or insulted, and commanding the drums to beat, completely drowned the obnoxious accents. When Fletcher attempted to interpose, Wadsworth supported his orders with such an energy of determination, that the meaner genius of his antagonist was completely rebuked; and seeing the countenances of all around kindling into sympathy with their patriot's fervor, he judged it best to consult his safety by a hasty departure to New York, where his spleen, at least, could not be obstructed by any exceptions to his commission. The king, with the view of covering his defeat, or of trying whether legal chicane could repair it, ordered this matter to be submitted to the opinion of the attorney and solicitor general of England; and on their reporting without hesitation in favor of the plea of Connecticut, an order of council was passed in conformity with their report; as if the matter at issue had involved a mere local dispute between two provincial jurisdictions, in which the king was to exercise the dignified functions of supreme and impartial arbitrator.†

It was fortunate for New York that the incapacity of her governor was prevented from being so detrimental as it might otherwise have proved to her Indian interests, by the confidence he reposed in Major Schnyler, whose weighty influence was employed to preserve the affections and sustain the spirit of the Five Nations. Yet so imperfectly were they assisted by the colony, that Frontignac, even while occupied with other hostilities in New England, was able by his vigor and activity to give them a severe defeat. Roused by this intelligence, Fletcher assembled the militia of New York, and abruptly demanding who was willing to march to the aid of their allies against the French, the men threw up their hats in the air and answered unanimously "One and all." The march was effected with a rapidity that highly gratified the Indians; and though it produced no substantial advantage to them, it was so favorably regarded as a demonstration of promptitude

to aid them, that they were prevented from embracing Frontignac's offers of peace. They could not help observing however that it was too frequent with the English to defer their succors till they had become unavailing; and that while the whole of the power of France in America was concentrated in simultaneous efforts to maintain the French dominion, the English colonies acted with partial and divided operation, and Maryland and Delaware in particular (though the quarrel was said to be a national one) took no share in the hostilities at all.

But the vigor of Governor Fletcher was more frequently and strenuously exerted in contentions with the house of assembly, than in aiding the Indians; though it was to his services in this last department that he owed what little popularity he enjoyed in the province. A bigot himself to the church of England, he labored incessantly to introduce a model of her establishment in New York, and naturally encountered much resistance to this project from the opposite predilections of the Dutch and other presbyterian inhabitants. At length his efforts succeeded in procuring a bill to be carried through the lower house, or assembly of representatives, for settling ministers in the several parishes: but when the council adjected to the clause which gave the people the privilege of electing their own ministers, a proviso that the governor should exercise the episcopal power of approving and collating the incumbents, this amendment was directly negatived by the assembly. The governor, exasperated at their obstinacy, called the house before him, and protracted their sitting with a passionate harangue. "You take upon you," said he, "as if you were dictators. I sent down to you an amendment of but three or four words in that bill, which though very immaterial, yet was positively denied. I must tell you, it seems very unmannerly. It is the sign of a stubborn, ill temper. You ought to consider that you have but a third share in the legislative power of the government; and ought not to take all upon you, nor be so peremptory. You ought to let the council have a share. They are in the nature of the House of Lords or upper House; but you seem to take the whole power in your hands, and set up for every thing. You have sat a long time to little purpose, and have been a great charge to the country. Ten shillings a day is a large allowance, and you punctually exact it. You have been always forward enough to pull down the fees of other ministers in the government. Why did not you think it expedient to correct your own to a more moderate allowance?" The members of assembly endured his roteness with invincible patience; but they also obstructed his pretensions with immovable resolution. In the following year, [1694] their disputes were so frequent that all business was interrupted; and the governor seemed to have embraced the determination of convoking the assembly no more. But though his own emoluments were secured by an act that had established the public revenue for several years yet to come, the necessity of raising further supplies to make presents to the Indians, and the arrival of a body of troops from Britain, obliged him to alter his determination. He had been required also by the king to lay before the assembly an assignment which his majesty had framed of the quotas to be respectively contributed by the colonies for the maintenance of an united force against the French.‡ [1695.] The assembly could not be prevailed with to pay the slightest attention to this royal assignment. But they made a liberal grant of money for the support of the troops that had arrived, and added a present to the governor; who now perceiving that the people of New York were totally unmanageable by insolence and passion, but might be made subservient to his advance, ceased to harass himself and them by farther pressing obnoxious schemes, and maintained a good correspondence with the assembly during the remainder of his administration. In this respect he was more successful than some of the future governors of the province, whose remarkable unpopularity during many years of honest and praiseworthy exertion has excited some surprise in those who have not examined with sufficient

* Colden, i. 135, 6. 139—145. Smith, 107, 8. Such fortitude was no unusual display in an American savage; and the subsequent execution of Damien at Paris renders the act of Frontignac at least no solitary instance in the history of civilised France. The execution of the English regicides in 1660, and of the Scottish rebels in 1745, exhibited scenes little less disgraceful to humanity. Probably, in all such cases of the addition of torture to death, cruelty completely overreaches itself, and diverting the mind of the sufferer from the one last enemy whose attack he cannot repel, relieves it by involving him in the animation of a contest where victory is in his own power. The more simple the mortal act is made, and the more melancholy respect that is shown to life even in taking it away, the more impressive and formidable an execution appears.

* He was appointed also Governor of Pennsylvania by the king who had deprived William Penn of his proprietary functions.

† Smith, 110. Trumbull, i. 390—395, and Appendix, 541—545. In the commission from George the Second to Sir Danvers Osborn (recited at length by Smith, p. 321, &c.) the right of commanding the Connecticut militia was again conferred on the governor of New York.

* It is surprising that he was not sensible of the inappropriateness of this observation, which had it been true, would have rendered his own passion exceedingly ridiculous. But the governor was at all times an indifferent reasoner; and anger, with which he was very subject to be overtaken, has always been more promotive of rhetoric than of logic.

† The list of the respective quotas was as follows:—

Pennsylvania	800.	Rhode Island and Providence	490.
Massachusetts	350.	Connecticut	120.
Maryland	160.	New York	200.
Virginia	240.		

This assignment seems nowhere to have received much attention or any respect.

minuteness the whole of their official career. Like Fletcher, these officers conceiving themselves vested with regal power uncircumscribed by chartered rights, looked on the provincial inhabitants as an inferior people, and began their administration with insolent demeanor and arbitrary pretensions: like him they learned wisdom from experience; but their wisdom came a day too late; the people had ceased to be as pliable as in former times; and the spirit of liberty, thoroughly exercised, had become prompt to repel as well as firm in resisting injustice. Their government was impeded by the total want of a public confidence, which having once deservedly forfeited, they found that even a complete change of measures was insufficient to regain. From ignorance or disregard of such considerations as these (which a very attentive perusal of colonial controversy has impressed upon me,) it has often been thought that the government of this province was embarrassed by the factious obstinacy of a perverse and unreasonable people, when in truth the governors were out reaping what themselves had sown, and struggling with the just suspicions that their original misconduct had created. In the unchartered province of Virginia, as well as in New York, such also were, not unfrequently, the proceedings of the British governors, and the complexion of their administrations: and Britain, it must be confessed, by employing such functionaries and promoting such policy, took infinite pains to educate the principles of liberty in those of her colonial dependencies, where they seemed least likely to attain a flourishing growth.

1695.] The remainder of Fletcher's administration was not distinguished by any occurrence that deserves to be particularly commemorated. The war between the French and the Five Nations sometimes languished by the address of Frontignac's negotiations, and was oftener kindled into additional rage and destruction by his enterprise and activity. Neither age nor decrepitude could chill the ardor of this man's spirit, nor impair the resources of his capacity. On the threshold of his own fate,* and supported in a litter, he flew to every point of attack or defence, to animate the havoc of war, and contemplate the execution of his plans. His own bodily situation had as little effect in mitigating his rigor, as in diminishing his activity; and as their hostilities were prolonged, the French and the Indians seemed to be inspired with a mutual emulation of cruelty† in victory, no less than of prowess in battle. The prisoners on both sides were made to expire in tortures; and the French, less prepared by education and physical habits for such extremities of suffering, endured a great deal more evil than they were able to inflict. [1696.] On one occasion, when Frontignac succeeded in capturing a Mohawk fort, it was found deserted of all its inhabitants except a sachem in extreme old age, who sat with the composure of an ancient Roman in his capital, and saluted his civilised compeer in age and infirmity, with dignified courtesy and venerable address. Every hand was instantly raised to wound and deface his time-stricken frame; and while French and Indian knives were plunged into his body, he recommended to his Indian enemies rather to burn him with fire, than he might teach their French allies how to suffer like men. "Never, perhaps," says Charlevoix, "was a man treated with more cruelty; nor ever did any endure it with superior magnanimity and resolution."‡ The governor of New York, mean-

while, encouraged the Five Nations, from time to time, to persevere in the contest, by endeavoring to negotiate alliances between them and other tribes, and by sending them valuable presents of ammunition and of the European commodities which they principally esteemed; and their intercourse with him fluctuated between grateful acknowledgments of these occasional supplies, and angry complaints that he fought all his battles by the instrumentality of the Indians. Indeed, except repelling some insignificant attacks of the French on the frontiers of the province, the English governor took no actual share in the war, and left the most important interests of his countrymen to be upheld against the efforts of a skilful and inveterate foe, by the unaided valor of their Indian allies. [1697.] The peace of Ryswick, which interrupted the hostilities of the French and English, threatened at first to be attended with fatal consequences to the allies, to whose exertions the English had been so highly indebted; and if Fletcher had been permitted to continue longer in the government of New York, this result, no less dangerous than dishonorable to his countrymen, would most probably have ensued. A considerable part of the forces of Count Frontignac had been employed hitherto in warlike operations against Massachusetts and New Hampshire, in conjunction with the numerous Indian allies whom he possessed in that quarter. [1698.] But the peace of Ryswick, of which he now received intelligence, enabled him to concentrate his whole disposable force against the only foe that remained to him; and refusing to consider the Five Nations as identified with the English, he prepared to invade them with such an army as they never before had to cope with, and overwhelm them with a vengeance which they seemed incapable of resisting. But Fletcher had now been very seasonably succeeded by the Earl of Bellamont, who was appointed governor both of New York and Massachusetts; and this nobleman being endowed with a considerable share both of resolution and capacity, clearly perceived the danger and injustice of suffering the French project to be carried into effect, and promptly interposed to counteract it. He not only furnished the Five Nations with an ample supply of ammunition and military stores, but notified to Count Frontignac, that if the French should presume to attack them, he would march with the whole forces of his province to their aid. The count thereupon abandoned his enterprise, and complained to his sovereign (Louis the Fourteenth) of the interruption it had received; while Lord Bellamont, in like manner, apprised King William of the step he had taken. The two kings commanded their respective governors to lend assistance to each other, and evince a spirit of accommodation in making the peace effectual to both nations, and to leave all disputes concerning the dependency of the Indian tribes to the determination of the commissioners who were to be named in pursuance of the treaty of Ryswick. Shortly after the reception of these mandates, a peace was concluded between the French and the Five Nations; but not till English insolence and French cunning had nearly detached these tribes entirely from the alliance they had so steadily maintained, by leading them to believe that the English interposed in their concerns for no other reason than that they accounted them their slaves. The French endeavored to take advantage of their ill humor by prevailing with them to receive an establishment of Jesuits into their settlements. But although the Indians at first entertained the offer, and listened with their usual gravity and politeness to the artful harangue of a Jesuit who had been sent to enforce it, [19] their habitual sentiments soon prevailed over a transient discontent, and they declared their determination to adhere to the English, and to receive, instead of the French priests, a ministry of protestant pastors which Lord Bellamont had proposed to establish among them.*

liberty, and live in greater plenty, than the common inhabitants of New York do." Colden, i. 212.

So many English prisoners have remained and married in the Indian settlements (says Professor Kalm), and so many French traders have spontaneously united themselves to the Indians, that "the Indian blood in Canada is very much mixed with European blood, and a great part of the Indians now living (1749) owe their origin to Europe." Travels, iii. 153. 276.

* Smith, 114—125. Colden, i. 159—210. The fulfilment of the promise of sending protestant pastors to the Five Nations seems to have been deferred till the year 1712, when one Andrews was sent among them by the English Society for propagating the Gospel. The Indians at first received him with joy, but peremptorily refused to suffer him to teach the English language to their children. After preaching and teaching among them, in the Indian tongue, for several years, he was universally forsaken by his auditors and scholars, and closed a fruitless mission in 1718. Humphrey's Hist. Acc. of the Society for propagating the Gospel, 295—310.

Some abuses that prevailed, and some disorders that were likely to arise at New York, had induced King William to bestow the government of the province on Lord Bellamont, who, it was hoped, would be easily able, by the influence of his elevated rank, added to the resolution and integrity of his character, to redress the one and compose the other. Fletcher, his predecessor, had proved a very unfaithful steward of the public revenue, and had gratified his avarice and his partialities by unjust and exorbitant appropriations and grants of land. Lord Bellamont, on investigating the particulars of Fletcher's administration, openly denounced him as a corrupt and profligate magistrate; and not only caused judicial proceedings to be instituted against him and the favorites whom he had enriched with a share of the public spoil, but at one time proposed to send him as a criminal, to undergo a public trial in England. The expense and difficulty of procuring what the law would deem requisite evidence, together with other obstructions which always oppose themselves to every scheme for effecting the exposure or compelling the restitution, of official plunder, prevented any of these proceedings from attaining a satisfactory issue.

An attempt that was made to correct another abuse proved at first eminently unfortunate, and was attended with very singular circumstances in its progress, and very remarkable consequences in England. The late war had given rise to a great deal of privateering, which in many instances had degenerated into piracy; and the evil was greatly increased by the readiness with which James the Second, in his exile, granted commissions for privateering to adventurers adhering, or professing adherence, to his cause, and who expected that these commissions would entitle their robberies to be regarded as acts of legitimate warfare.* From New York, in particular, many English piratical cruisers were known to have sailed; and, indeed, there was strong reason to suspect that Fletcher's hunger for gold had been too voracious to scruple the receiving of it from the hands of these robbers as the price of his connivance at their depredations. The suppression of this nuisance had been strongly recommended by the king to Lord Bellamont, who, casting about in his mind, and consulting his friends in what manner this design would be most efficaciously conducted, was advised to take the assistance of one Kidd, who was represented to him as a man of honor and intrepidity, and well acquainted with the persons and the haunts of the pirates. Kidd, who was in England at the time, was introduced to Lord Bellamont by the person who had so characterised him, and readily offered to undertake the suppression and apprehension of the pirates, if the king would grant him a commission for the purpose, and place at his disposal a good sailing frigate of thirty guns. The earl laid the proposal before the king, who was strongly disposed to embrace any feasible plan for extirpating piracy; but some difficulties having been started by the admiralty, the scheme was dropped, and, unfortunately for the character of all parties, a private adventure, to be conducted by Kidd against the pirates, was suggested in its stead, and finally embraced. The king himself was concerned in the enterprise, and had a tenth share reserved to him; and the Lord Chancellor (Somers,) the Duke of Shrewsbury, the Earls of Romney and Oxford, Sir Edmund Harrison, and various other persons of distinction, were associated in the adventure as partners with their sovereign. Kidd received an ordinary commission from the crown as a privateer, with special directions from the royal and noble owners of his vessel, to proceed against the pirates, and to hold himself particularly responsible to Lord Bellamont. Embarking on this important enterprise, with so much illustrious character intrusted to his keeping, Kidd arrived at New York long before Lord Bellamont, whose assumption of his government did not take place till more than two years after his appointment. When his lordship subsequently reached New York, he learned, to his no small confusion and resentment, that by his patronage of Kidd he had been accessory to an enormous aggravation of

* Unreasonable as we may think the expectation of these pirates, that the English, who denied James' regal right to govern them, should recognise the same right to the more formidable extent of making war on them, this plea was actually maintained by certain of King William's crown lawyers. Some pirates commissioned by James having been apprehended in 1693, Dr. Oldish, the king's advocate, refused to prosecute them, and along with Sir Thomas Pinfold, Tindall, and other lawyers, supported this refusal by a learned argument before the privy council. Tindall's Essay on the Law of Nations, p. 25—30. But other lawyers were found willing to prosecute the prisoners, who were convicted and executed. Howell, xii. No. 373.

* He died very soon after the restoration of peace by the treaty of Ryswick. Smith, 133.

† In truth, this emulation was more than a mere semblance. On one occasion a deliberate competition was made between the French and a tribe in alliance with them, to ascertain which people could insist the most ingenious cruelty on a Mohawk prisoner. Of the horrid tragedy that ensued, I shall give no further account than that the Indians greatly excelled their competitors, and threw the French into transports of laughter by the fantastic variety of the tortures they inflicted. The French soldiers appear to have been prompted to this brutality by mere revenge and ferocity. Their commander's object on this occasion was to create irreconcilable enmity between a tribe newly allied to him and the Five Nations. Colden, i. 194, 5. It may surprise a philosopher to consider, that these Frenchmen were the countrymen and contemporaries of Pascal, Fenelon, and Arnauld. It will edify a Christian to remember, that these eminent saints were beings of the same nature with the civilized and the savage perpetrators of such atrocities in Canada.

‡ Neither the French nor the Indians, however, slew all their prisoners. A great many remained to be exchanged at the end of the war; and on this occasion it was remarked, that all the Indians returned with great alacrity to their friends, but that in many cases it proved very difficult, and in some utterly impossible, to induce Frenchmen, who had lived a few years with the Indians and embraced their habits, to return to civilized life. The English found it no less difficult to prevail with their friends who had been taken prisoners by the French Indians, and lived for any considerable time with them, to return to New York; "though no people enjoy more

the evil he had hoped to extirpate, and to the dishonor of his king and of all the distinguished persons who had been associated in the privateering adventure; and that Kidd had already rendered himself more infamous and formidable than any other pirate that infested the seas, by the extent of his naval robberies and his numberless murders. Lord Bellamont vigorously exerted himself to repair, by better agency, the consequences of this unhappy error; and having fortunately succeeded in apprehending Kidd, [1699] who had repaired on a trafficking speculation to Boston, where he hoped not to be recognised, he wrote to the secretary of state, desiring that a warrant might be sent for transmitting this daring offender to England, where already considerable interest had been excited in the public mind by the tidings of the freebooter's desperate enterprises, and vague rumors of the share which the first personages in the state had taken in supplying him with the means of performing them. A ship of war was sent out to bring home the prisoner, and repel any attempt that might be made for his rescue; but, unfortunately, the vessel was disabled on her passage, and obliged to return to port. A strong suspicion now arose of collusion between Kidd and the ministry, who it was thought were determined not to have him brought home at all, lest in his own defence he should discover their infamous confederacy. This suspicion was inflamed by the artifices of the tory party, who were opposed to King William's government, and who vehemently pressed a motion in the House of Commons, that all persons who had been concerned in Kidd's adventure might be dismissed from their employments. Though this motion was rejected, they prevailed with the House to have Kidd examined at the bar, when the exertions of the ministers and Lord Bellamont to vindicate their characters had at length succeeded in bringing him to England; and though disappointed at first in their hope of obtaining any valuable disclosures from him, yet either honestly suspecting what they professed to believe, or trusting that he would be induced to become a useful instrument of their purposes (which he discovered more inclination than ability to do), they endeavored to have his trial deferred, and prevailed with the house to call him again to the bar, even after an address had been voted to the crown recommending that he should be speedily remitted to an English jury. Kidd was brought to trial at the Old Bailey in the year 1701, and being totally unable either to criminate the ministers or to defend himself, was convicted, with several of his accomplices, of piracy and murder, and soon after underwent the just punishment of his crimes. The violence of the tory faction in England prevented this matter from proving as injurious as, more moderately handled, it would, and perhaps ought to have been to Lord Bellamont and the Whig ministers of the king. Kidd's conduct previous to his employment as a privateer had in reality been such that a proper investigation of it would have subjected him to punishment, instead of recommending him to an important trust. A charge derived from this gross and culpable neglect, and directed against all who had been concerned in procuring Kidd's commission, was introduced into the articles of impeachment preferred soon after by the commons against Lord Somers. The name and character of the Earl of Bellamont, in particular, were expressly involved in this charge, though his recent death at New York prevented him from being included in the impeachment. But the managers of the impeachment associating this charge with other weightier imputations which they were unable to prove, and involving themselves (purposely, perhaps) in a dispute with the House of Lords, the impeachment ended in an acquittal, without producing a trial.

But the most afflicting disorders that threatened to assail the government and community of New York, were portended by the increasing animosity of two numerous factions, consisting of the friends and the enemies of the unfortunate Leisler. The son of this man, incapable of forgetting or forgiving the tragical fate of his father, had labored incessantly for the re-establishment of his character and the retribution of his wrongs; and having obtained, by the assistance of the province of Massachusetts, an act of parliament to reverse his father's attainder, and now proceeding, with every likelihood of success, to urge a claim for indemnification on account of his family's sufferings and losses, the spirits of his partizans in New York were powerfully excited by the hope of a triumph so humiliating to their adversaries. The mutual animosity of the two factions was roused and whetted to such a degree by the occurrence and the prospect of fresh opportunities to indulge

it, that the public business of the province was seriously impeded; and in the very first assembly that Lord Bellamont convoked at New York, except an unanimous address of thanks to himself for his speech on the state of the province, there was scarcely a single measure proposed, about which the members of assembly found it possible to agree. The character and manners of Lord Bellamont were happily adopted to compose these dissensions; a task which perhaps, if he had longer enjoyed the government, he would have wisely attempted and successfully effected; but unfortunately the circumstances in which he found himself placed on his first arrival at New York, and the sentiments which he was thence led to entertain, tended rather to inflame than to mitigate the evil. His just displeasure against Fletcher, animated by the discovery of that profligate governor's encouragement of the pirates, at first extended itself to every person who had held office along with him, or been distinguished by any appearance of his regard; and as in this class were comprehended the principal adversaries of Leisler, the spirits of this party were additionally revived, and their numbers augmented by the near prospect of supremacy and triumph. Young Leisler's solicitations in England at length so far prevailed, that a letter was addressed by the Secretary of State to Lord Bellamont, [1700] declaring that his majesty, from "a gracious sense of the father's services and sufferings," desired that the son's claims of indemnification might be entertained by the general assembly of New York. No sooner was the royal letter laid before the assembly, of which a great majority now consisted of the friends of young Leisler, than a vote was passed, appointing the sum of 1000*l.* to be levied immediately on the province for his advantage.

Lord Bellamont had now succeeded in acquainting himself with the state of the province: and the resentment and disturbance he had suffered from the piratical transactions in which his own and his sovereign's honor had been so deeply involved, seemed to have had time to subside. But the influence which his good sense and moderation were confidently expected to produce in tranquillizing the angry factions over which he presided, was intercepted by his unexpected death in the beginning of the year 1701. This event was attended with the most unfortunate consequences. The faction that had appeared likely to be totally defeated, received intelligence that Lord Cornbury, who was expected soon to arrive as the successor of Bellamont, was prepossessed in their favor, because they were accounted the partizans of the church of England, and began already to anticipate a favorable change in their relations with the adverse party; while this party, at the head of which was Nanfan, the lieutenant-governor, made haste to use their power with an energy enforced by the probable shortness of its duration. The most strenuous exertions were made by both, to increase their strength in the assembly; and the most furious animosities were created by the theoretical respect which both professed for the same fundamental principles; by the practical respect which each, accordingly, required for these principles from their adversaries; and by the practical disregard of them into which both were hurried by the violence of their passions. The faction opposed to Leisler's friends, being generally defeated in these contests, vented their indignation, and exercised the only policy that seemed to remain to them, in vehement complaints of their adversaries to the king, the parliament, and, above all, to Lord Cornbury, on whose favor their hopes of victory and vengeance now exclusively depended. Colonel Bayard, in particular, having promoted some of these addresses, in which the most scandalous charges of bribery, public plunder, and oppression, were preferred against the lieutenant-governor, the chief-justice, and the assembly, [1702] was committed to prison as a traitor, by Nanfan, under a law which Bayard and his friends had caused to be enacted in 1691, to curb their own adversaries, and which subjected to the pains of treason every person endeavoring, by force of arms, or otherwise, to disturb the peace, good, and quiet of the king's government. Though the attorney-general of New York gave a written opinion, that the addresses contained nothing criminal or illegal, Nanfan, finding the solicitor-general differently minded, urged on the charge; and, after a trial more fair, perhaps, than in such a state of public feeling could have been reasonably expected, Bayard was dragged to the brink of the pit which he himself had dug, by a verdict of guilty, and sentence of death.* Alderman Hutchins

was immediately after tried, and convicted on a similar charge. But here the adversaries of the prisoners thought proper to pause. Though the law on which the convictions had been founded was an arbitrary one, it had been enacted by the prisoners themselves and their party, and never yet repealed; and though the convictions proceeded on a somewhat strained construction of it, there had been no signal or undoubted departure from the ordinary principles of criminal justice. The prosecutors, therefore, had not incurred such guilt as to confound altogether their sense and humanity, or imperiously to urge them to complete what they had begun, and destroy their victims while they were yet in their power. Happily for themselves, and for the province, they consented to relieve the prisoners till the king's pleasure should be known. But long before the application on which the fatal issue was thus suspended could be made, Lord Cornbury arrived at New York; and not only caused the attainders of Bayard and Hutchins to be reversed, but placing himself at the head of their party, conducted his administration with such violence and partiality, that the late chief justice, and several other considerable persons of the opposite faction, thought it prudent to depart from the province.

Lord Cornbury, the grandson of Lord Chancellor Clarendon, possessed not one of the qualities for which his distinguished ancestor had been celebrated, except an exaggeration of his bigotry to the church of England, and his intolerance of all other religious communions. The rest of his character would have disgraced more estimable qualities; and seems to have formed a composition no less odious than despicable, of rapacity and prodigality, voluptuousness and cruelty, the loftiest arrogance, and the meanest chicanery. Whether from real difference in sentiment, or from a policy which in these days was not uncommon, while his father had adhered to the cause of James the Second, the son declared himself, at a very early period, for King William, and was one of the first officers who deserted with his troop to him; and having now dissipated his substance in riot and debauchery, and being obliged to fly from his creditors in England, it had been one of the last acts of his royal patron's administration, to reward his services with the government of New York. This appointment was confirmed by his kinswoman Queen Anne, who added to it the government of New Jersey, which had been recently surrendered by the proprietaries to the crown. The public events that belong to the period of Lord Cornbury's administration* do not fall within the compass of the present work; and I allude to its general complexion, for the purpose of explaining how the factions which we have seen carried to such a height in New York came to be, if not entirely suppressed, yet greatly mitigated and reduced. This desirable end, which was more obstructed than advanced by the only respectable governor that had been sent to New York since the revolution, was now signally promoted by the administration of a successor, who robbed even Andros of his evil eminence, and rendered himself more universally detested than any officer to whom the government of this province was ever intrusted. For a while the majority of the assembly, composed by his influence of the faction which had but recently smarted under the power of a triumphant rival, adhered with unscrupulous loyalty to him as its leader and protector; and even after the intolerance he began to exert against the presbyterians, and every other religious sect, except the protestant episcopalians, had alienated many of his first political adherents, he found their loss nearly compensated by the increased regards of those who now boasted him their ecclesiastical ally. Though the great body of the inhabitants, including the most ancient families in the province, were presbyterians, he refused to permit the ministers of this persuasion to preach without a license from himself, which implied that they officiated, not of right, but by indulgence. On one occasion, finding that in a township in Long Island there were a few episcopalians intermixed with the

one of the latter, maintained a plea, which was not heard of till a much later period in England; but illustrated it by an observation which we should not expect to hear in the courts of justice of a state where slavery was admitted. "The jury," he said, "are judges both of law and fact, as the case is now circumstanced; and if they will enslave themselves and their posterity, and debar themselves of all access to their prince, they will be worse than negroes." Even under the liberal jurisprudence of Oliver Cromwell, it was declared from the bench (on the first trial of *Albany*), that it was "a damnable doctrine" to hold that the jury were judges of law as well as fact. Howell, vol. iv. p. 1254, note.

* One of the first and the most respectable act of his administration was a renewal of the league with the Indian allies of New York, in a numerous convention of the tribes, which was held at Albany in 1702. OGDONSON, vol. i. p. 130.

* The proceedings on this trial, which are reported at some length in Howell's Collection, are creditable to the legal knowledge, ability, and spirit of the lawyers employed to conduct them, and especially of the counsel for the prisoner Emot,

presbyterians who formed the great majority of the inhabitants and had built a parsonage for their minister, he fraudulently contrived to get possession of the house, and then delivered it up to the episcopal party. Hearing some time after, that two presbyterian ministers from Virginia had preached to a congregation in New York without his license, he threw them both into prison; and afterwards brought them to trial for a misdemeanor: but although the judge advised the jury to return a special verdict, that the law on this subject might be finally ascertained, the jury were too prudent to put the liberties of their country so far out of their own keeping, and without hesitation acquitted the prisoners. In every quarter of the province his lordship offered his assistance to the episcopalians, to put them in possession of the churches that other sects had built; and to the disgrace of some of the zealots for episcopacy, this offer was in several instances accepted, and produced a wide scene of riot, injustice, and confusion. But happily for the unfortunate people who were exposed to the mischief of his administration, his conduct in other departments of government soon weakened his influence with all parties, and gradually deprived him of the power of instigating any portion of the society to harass or oppress the rest. It was discovered, that not content with the liberal grants of money which the assembly had made to him for his private use, he had embezzled large sums appropriated to the erection of public works, and the defence of the province; [1702—1709] and that unable to subsist on his lawful emoluments, even with the addition of enormous pillage, he had contracted debts to every tradesman who would trust him, and employed the powers of his office to set his creditors at defiance. Even after this discovery was made, he contrived to have some of the public money intrusted to his hands, by alarming the assembly with pretended intelligence of an approaching invasion; and this farther trust was executed with as little fidelity as the preceding ones. In vain the assembly proposed to establish a body of functionaries to control the public expenditure, and account for it to themselves; and with as little success did they transmit a remonstrance to the queen. Their application to her majesty met with no other attention than some private instructions, which were said to have been sent to the governor; their proposition to control the public disbursements was disallowed; and when they insisted on a scrutiny of his accounts, he warned them in an angry speech, not to provoke him to exert "certain powers" which the queen had committed to him, and advised them to let him hear less about the rights of the house, as the house had no rights but what the grace and good pleasure of her majesty permitted it to enjoy. By such declarations, and a line of policy pursued in strict conformity with them, he succeeded in alienating all his adherents, and finally in uniting all classes of the people in one common interest of opposition to himself. When he dissolved an assembly for its attention to the public interests, he found his influence no longer able to affect the composition of the assembly which he called to succeed it. It was fortunate for the people that they were compelled to endure this state of things for several years, and till the lessons which it was well calculated to teach them were deeply impressed on their minds. The governor had leisure to repeat the expedient of dissolving intractable assemblies, and the mortification of finding every succeeding one more stubborn than its predecessor; till he at length convoked assemblies which absolutely refused to vote the smallest supply for the public service, till he should account for all his past receipts and applications of money, and perform the impossible condition of refunding all the sums he had embezzled—preferring even an extremity so inconvenient to themselves, to the continuance of so corrupt and profligate an administration. The dissolute habits, and ignoble tastes and manners of the man, completed and embittered the disgust with which he was now universally regarded; and when he was seen rambling abroad in the dress of a woman, the people beheld with indignation and shame the representative of their sovereign, and the ruler of their country.

The inhabitants of New York had now ample leisure, and strong inducements to reflect, with little satisfaction, on the folly and mischief of those divisions that had once enabled such a man to enjoy influence among them, and successfully to incite them to harass and maltreat each other, that he might the more securely pillage and insult them all. His administration forcibly taught them the important lesson that divisions among themselves were profitable only to the party who ought to be the object of their constitutional jealousy, the

royal governor; and that union among themselves, founded on a sense of common interest, and maintained by the exercise of mutual forbearance and charity, was essential alike to their tranquillity and independence. The lesson was not lost upon them; and though former animosities were not entirely extinguished for many years, they never again reached the height which they had attained at the commencement of Lord Cornbury's administration. This worthless personage continued for a considerable period to remind the people by his presence of the salutary lessons they had derived from his administration, even after they had obtained a deliverance from its burden. In the year 1709, Queen Anne was at length compelled by the reiterated and unanimous complaints of New York and New Jersey (where he was equally odious), to supersede his commission, and appoint Lord Lovelace to succeed him; and no sooner was he deprived of his office, than his creditors threw him into the same prison, where he had unjustly confined many worthier men. Thus degraded from office by his public crimes, and deprived of liberty by his private vice and dishonesty, this kinsman of his queen remained a prisoner for debt in the province he had governed, till the death of his father, by elevating him to the peerage, entitled him to his liberation.* He then returned to Europe, and died in the year 1723.

Both before and after the British Revolution, the province of New York had received large additions to the number of its inhabitants from all the various sources of emigration which European hardships and regal misgovernment contributed so copiously to supply. The poor found here a country where their services were highly valued, and their rights enjoyed peculiar consideration; where, instead of being compelled to vie with each other for the boon of ill-rewarded labor, [20] their industry was eagerly courted by the rich, and conducted them with certainty to ease and independence. Among the later accessions of people, were a number of protestant refugees from France, and of presbyterians from Ireland.† The metropolis of the province, which, in the year 1678, contained about three thousand four hundred inhabitants, was found to contain nearly double that number in 1696; and the port which, at the former period, owned no more than three ships and eight sloops, possessed, in the last mentioned year, forty ships, sixty-two sloops, and the same number of boats. The shipping of New York, was promoted, not merely by the growth of its proper population, but by the advantages of its situation, which enabled it to command nearly the whole trade of Connecticut and New Jersey. The total population of the province amounted, in 1701, to about thirty thousand persons.‡ Many of the first English colonists who repaired to this province, after the conquest of it from the Dutch, are said to have remained but a short time in it, and to have sought a refuge in New Jersey from the hostilities of the French and their Indian allies. At the end of the seventeenth century the people consisted of various races, English, Scotch, Irish, French, and chiefly Dutch; the great majority being presbyterians and independents. The Dutch congregations continued at this time, and for long after, to acknowledge subjection to the ecclesiastical authorities of Holland; and from them, their ministers, in general, derived their ordination to sacred functions. The Scotch presbyterians, after repeatedly soliciting a charter incorporating their congregation, and being continually disappointed by the interest and opposition of the episcopal party, in the beginning of the eighteenth century, made a grant of their church, and the ground attached to it, to the general assembly of the church of Scotland. The episcopalians, though the least numerous class, enjoyed a charter of incorporation from the assembly; and the minister of their church in New York had a salary of 100*l.* a year levied by a tax on all the inhabitants of the city. For this privilege they were indebted to the exertions of Governor Fletcher; and they were elated by it to such a degree of presumption, as to maintain that the ecclesiastical establishment of the church of England extended to this province, and that theirs was the religion of the state; a pretension that excited much jealousy among all the dissenters, and

was peremptorily disputed by them. When the episcopal clergy became more numerous, they accounted themselves subject immediately to the bishop of London, who maintained a commissary at New York. They made an attempt at an after period to engross the privilege of solemnizing all marriages in the province, but found themselves unable to carry this pretension into effect. Though all law proceedings were conducted in English, and an English free school was established in 1702, the Dutch language continued long to prevail among a considerable portion of the people. For many years public worship was celebrated in Dutch in some of the churches; and in several counties the sheriffs often found it difficult to collect as many persons acquainted with English as were necessary to compose the juries in the courts of law. The English that was generally spoken was much corrupted by intermixture of the two languages.*

The subsistence of the Dutch language was less advantageous to the province than the permanence of Dutch manners, which continued long to be visible in the sobriety of deportment, and the peculiar attention to domestic cleanliness, order, and economy, by which the descendants of the original colonists of New York were eminently distinguished, and which their example succeeded in communicating, in no small degree, to the other races of European settlers with whom they were latterly associated. It was remarked, several years after this period, that the style of living was less gay and expensive, and that there was less inequality of fortune at New York than at Boston. A printing press was established at New York in the year 1693, by a printer flying from the very unwelcome occurrence of quaker persecution in Pennsylvania; and a library was founded under the government of Lord Bellamont in the year 1700. But the schools in this province were inconsiderable; and although the wealthier families obtained valuable instructors for their children among the numerous protestant refugees from France, even the first elements of knowledge were very generally neglected by the bulk of the people till the era of the American Revolution.†

If Britain had pursued a wiser policy towards this and her other American provinces, she might have obtained from their resources a very great, if not a total, deliverance from the burdens of her poor laws. But various circumstances contributed to screen or diminish the attractions which the colonial territories were calculated to present to the resort of the industrious poor. The practice of transporting felons to America brought this country into disrepute with many whose information was not sufficiently extensive to acquaint them with the real amount of the evil, and the great preponderance of the advantages by which it was counterbalanced. The historian of New York has ascribed to this cause the dearth of labor, and the increased importation of slaves which began to take place about this period. Another obstruction to the colonization of this province by the free poor arose from the practices of many of the governors, who, to promote the royal interest in the assembly, were permitted to make large grants of land to their partisans and dependants, by whom it was again farmed out at exorbitant rates to the cultivators, or retained in a vacant and unproductive state in the hope of a future rise in its value from the general progress of population.‡

* Smith, 150, 156, 263, 264, 265, 267, 294, 296, 304, 308, 307, 319. The English, French, and Irish colonists seem to have acquired pretty early an uniform character. The stronger nationality and more rigid manners of the Scotch, aided by frequent accessions from Scotland, preserved their national peculiarities longer unimpaired. "They preserve unaltered," says Dwight, "the character which they brought with them. They are industrious, frugal, orderly, patient of hardship, persevering, attached to government, reverential to religion, generally moral, and often pious. At the same time they are frequently unwarrantably self complacent, rigid in their dispositions, unbending in their opinions, sequestered, avaricious, ready to unchurch those who differ from them, and to say, doubtless we are the people." President Dwight's Travels, iii. 513.

Even when intermarriages and the common influence of free institutions and national associations shall have produced uniformity of character among all the races of American colonists, the national pedigrees of many particular districts will be preserved by their names. In one of the county of New York, almost every place bears the name of an Irish saint, city, county, or mountain. A neighboring district, originally planted by New Englanders, is all mapped out under the names of Unanimity, Frugality, Sobriety, Enterprise, and the like (Dwight, iv. 27.) It may be hoped that the recollection of such names as these last will impress a corresponding bias on the sentiments and character of the inhabitants of the region.

* Smith, 141, 145, 146—164. History of the British Dominions in America, B. III. cap. 1. This work, which I have frequently referred to, is an anonymous publication in quarto. It contains more ample and precise information than the composition of Wynne, and, like it, brings down the history and state of the colonies to the middle of the eighteenth century. It is more of a statistical than a historical work.

† Smith, 156. In 1710, three thousand palatine, flying from persecution in Germany, settled in New York. Ib. 174.

‡ Holmes, ii. 246. In 1731 it amounted to more than sixty thousand persons, of whom seven thousand were slaves. Ibid. ii. 114. Warden, i. 499.

The local government of the province was vested in the governor, the council, and the assembly. The governor, appointed by the king, was commander-in-chief by sea and land, and received from the provincial revenue a salary of about 1,500*l.* together with perquisites amounting to as much more. The councillors were appointed by the crown, but might be suspended by the governor. They enjoyed no salaries, and acted as a privy council to the governor, besides performing the legislative and judicial functions belonging to the English House of Lords. The members of assembly (elected by freeholders possessing lands or tenements improved to the value of forty pounds) had a daily allowance for their attendance; and to them, in concurrence with the council and the governor, was committed the privilege of enacting the provincial laws, which were required to be analogous to the jurisprudence of England. The laws were transmitted to England within three months after their enactment, and might, at any time after, be annulled by the king. The governor was empowered to prorogue or dissolve assemblies at his pleasure; to appoint the judges; to collate to all vacant benefices; and, with the advice of the council, to make grants of land, to be held of the crown by socage tenure. Besides subordinate courts of law, there was a supreme court at New York, of which the chief justice had a salary of 300*l.* a year. From its judgments an appeal might be made, in causes involving more than 100*l.* to the governor and council, and in causes above 300*l.* to the king and the privy council of England. Much uncertainty prevailed in the administration of civil justice from ignorance and difference of opinion as to the extent in which English statutes and decisions were to be admitted to operate as rules or precedents.

By a law passed in 1700 for the purpose of checking the missions of the Jesuits among the Indians, it was enacted, that every Jesuit or other popish priest, coming voluntarily into the province, should be subjected to perpetual imprisonment, and in case of escape and recapture, to the punishment of death. Slaves (by a law passed in 1702), except when assembled for labor, were forbidden to meet together in greater number than three; a regulation which proved insufficient to prevent a formidable insurrection of these unfortunate beings in the year 1712. Masters were enjoined by law to baptize their slaves, and encouraged to do so by a provision that their baptism should not entitle them to freedom. Indeed, manumission of slaves was discouraged by a heavy fine. Slaves were disqualified from bearing evidence against any body but slaves; and no negro, Indian, or mulatto, even though free, could hold or possess lands, tenements, or hereditaments. Any negro or Indian conspiring the death of a white man was capitally punished. Even though baptized, slaves were not considered to be properly comprehended in the denomination of Christians; for by an act passed in 1702, and confirmed in 1708, there was offered a reward of twenty shillings to every Christian, and half that sum to every Indian or slave, killing a wolf in the provincial territory.* Various laws were passed from time to time against selling ardent spirits to the Indians. The extortions of usurers were repressed by an act passed in 1717, restricting lawful interest to six per cent. This was repealed in the following year, when eight per cent. was allowed to be taken.

BOOK VI.

NEW JERSEY.

Of all the national communities in which mankind have ever been united, there is none (except the fallen

vested with power to do this, they either engrossed for themselves, or patented away to their particular favorites, a very great proportion of the whole province." Winterbotham, *f.* 337.

* In some of the colonial settlements of the Dutch (parti-

cularly at the Cape of Good Hope), the treatment of their slaves is said to have been distinguished by the most barbarous cruelty. It seems to have been very far otherwise in the province of New York. A pleasing picture of the mild patriarchal manners by which the harsh features of this institution were softened among the Dutch settlers at Albany, is delineated by Mrs. Grant in her "Memoirs of an American Lady," &c. vol. i. Letter VII. Extreme severity was inflicted only at second hand, by selling unruly and troublesome negroes to the planters of Jamaica.

From the Travels of that accurate observer and inquirer, Professor Kalm, it appears that Mrs. Grant has given a just picture of the treatment of the slaves; but that her description of the manners of the people of Albany in other respects is entirely fanciful and erroneous. Vol. ii. p. 260—266.

* It is remarkable that among those of the colonists of North America who were most eager to trace a resemblance between their own situation and that of the Jewish emigrants from Egypt, the opinion should have first sprung up that the savage Indians were the offspring of one of the tribes of Israel. This opinion (which is supported by very strong probabilities) was not without its use, if it tended to abate that spiritual pride sometimes unhappily engendered by a belief of the possession of an especial degree of divine favor. It was early adopted by the New England divines, and was maintained, with much learning and ability, in a treatise by one Thorwood, published at London in 1650, and entitled "Jewes in America." It was afterwards embraced by William Penn the quaker, and supported by him, and by many other distinguished writers.

commonwealth of Israel*) which can boast of an origin as illustrious as that which belongs to the provinces of North America. Almost all these provincial settlements have been founded by men whose prevailing motives were, zeal for the advancement of religious truth, for the security of political freedom, or for the enlargement of the resources and renown of their country; and all have been indebted for a very considerable share of their early population to the shelter which they afforded from civil or ecclesiastical tyranny. The successful establishment of every one of them is a noble monument of human energy and fortitude; for it was not accomplished without an arduous conflict with the most powerful habits of human nature, and the most formidable obstructions of difficulty, danger and distress. The colonists of New Jersey, indeed, from their proximity and friendly relation to older colonial settlements, and from other advantageous peculiarities in their situation, were exempted from many of the hardships which elsewhere attended, in so many instances, the foundation of society in North America. But the motives which conducted a great proportion of them to this territory were such as must be held to reflect the highest honor on their enterprise, and to ennoble the origin of New Jersey.

The territory to which this appellation belongs was first appropriated by the Dutch, of whose settlements I have given an account in the history of New York. It was included in the province to which this people gave the name of New Netherlands, and had received a few Dutch and Swedish settlers at the period of the conquest of the Dutch colony by the English. Preparatory to this enterprise, as we have already seen, Charles the Second granted a charter of American territory, including the whole of the Dutch occupation to his brother James, Duke of York; [1664] and, as the king, in conformity with his pretension to an antecedent right, which the intrusion of the Dutch could neither extinguish nor suspend, had thought himself entitled to bestow this grant before the territory was actually reduced to his dominion, the duke, in like manner, seems to have regarded his investiture as completed by the charter, and proceeded to exercise the powers it conferred on him, without waiting till he had attained actual possession of the province. His charter, though much less ample in its endowments than the charters which had been previously granted to the proprietaries of Maryland and Carolina, resembled these others in conferring the province, and the powers of government, on the proprietary and "his assigns." Various instances, both in the history of the Carolinas and of New Jersey, sufficiently demonstrate that, in conformity with this expression, the proprietaries regarded their functions less as a trust than as an absolute property, subject to every act of ownership, and in particular to mortgage and alienation; and, accordingly, the government of large provinces of the British empire was repeatedly assigned by proprietaries to their creditors, or sold to the highest bidder. It was not till after the British revolution, that the legality of these transactions was disputed; but although the ministers of William the Third maintained that they were totally repugnant to the law of England, which recognised a hereditary but not a commercial transmission of office and power, the point was never determined by any formal adjudication. The evil, in process of time, produced its own remedy. The succession and multiplication of proprietaries occasioned so much inconve-

nience to themselves, that sooner or later they were glad to bargain with the crown for a surrender of their functions; and both in Carolina and in New Jersey, the exercise of the right of assignation materially contributed to abridge the duration of the proprietary government.

The first example of a sale of proprietary rights and functions was afforded by the Duke of York, in his conveyance to Lord Berkeley and Sir George Carteret, of a portion of the territory comprehended in the royal charter which he had recently procured for himself. If he had deferred the exercise of his ownership till he had attained possession of the country, and procured a report of its condition from Colonel Nichols, whom he had nominated the governor of it, this partition would probably not have taken place. But, before he was yet in possession of any part of it, or had obtained the information requisite to enable him to conclude such a transaction with advantage either to himself or the country, he consented to sell one of the finest districts which it embraced, to two persons who appear to have been much better acquainted with it. Berkeley and Carteret were already proprietaries of Carolina; and not contented with this ample investiture, nor yet certified by experience of the tardy returns from colonial possessions, they had been induced, by the representations of a projector acquainted with the domain assigned to the Duke of York, to believe that a particular portion of this domain would form a valuable acquisition to themselves. How far the disjunction of this portion was likely to affect the interest and value of the remainder, was a point, which, for the honor of the purchasers, we must suppose them to have overlooked as completely as it was misunderstood by the seller. But, at a subsequent period, Colonel Nichols did not scruple to assert that the person* by whose advice Berkeley and Carteret were induced to make the purchase had himself been an unsuccessful candidate for the patent which the Duke of York had obtained, and that he had revenged his disappointment by instigating these courtiers to an acquisition which he was aware would greatly depreciate the remainder of the duke's investiture. Be this as it may, the transaction that ensued, as it was very little creditable to either of the parties who engaged in it, proved in the sequel disadvantageous to them both.

It was only three months after the date of his own charter, that the Duke of York, by deeds of lease and release, in consideration of "a competent sum of money," conveyed to Lord Berkeley and Sir George Carteret, and their heirs and assigns, that tract of land adjacent to New England, lying westward of Long Island, and bounded on the east, south, and west, by the river Hudson, the sea, and the Delaware; on the north by the forty-first degree and fortieth minute of latitude. In compliment to Carteret, who had defended the island of Jersey against the Long Parliament in the civil war, he bestowed on this region the name of Nova-Cesaria, or New Jersey; and he transferred to the grantees every right and royalty, and all the powers of government, which he himself possessed in virtue of his charter from the crown.

Having obtained, in this manner, the sovereignty of New Jersey, the first care of the proprietaries was to invite the resort of inhabitants to the province, and their exertions for this purpose, though pursued with more eagerness than perseverance, evinced no inconsiderable share of political sagacity. In those colonial territories which are destitute of the means of attracting adventurers by the prospect of speedy enrichment, and which must owe their cultivation to the steady enterprise and industry of permanent settlers, the most powerful attractions are supplied by liberal provisions for the security of the civil and religious rights of mankind. The recent history of New England had plainly demonstrated, that those attractions, of all others, address themselves most prevalently to that description of human character which is best fitted to contend with the difficulties of colonization, and that their operation is so forcible as to overpower the temptations even of very superior climate and soil. That the useful lesson thus afforded to the founders of colonies was not disregarded by the courtiers of Charles the Second, has already appeared from some parts of the history of Carolina, and is still more strongly mani-

* The name of this individual was Scot. Whether it was the same person, or another with the same name, who afterwards published an account of East New Jersey, I am unable to ascertain. Colonel Nichols gratuitously acquits Berkeley and Carteret of any accession to the design of defrauding the duke. But Carteret did not always enjoy an unsputed reputation. In 1669, he was expelled the House of Commons for confused accounts as chamberlain.

tested by the first measures that were pursued by the proprietaries of New Jersey. They hastened to concert and make public a body of institutions for the government of the province; and, as their object was to exhibit a political fabric that should appear desirable and advantageous to mankind, they succeeded in producing a project which obtained a very favorable reception, and would have better deserved it, if the proprietaries had been legislating for an existing population. It was indeed a singular competition which these proprietary governments produced, in which sovereigns and legislators found it their interest to vie with each other in the production of models of liberty, and in tendering to the acceptance of their subjects the most effectual securities against arbitrary government. Whatever doubts may be entertained of the dignity of their motives, or the sincerity of their professions, the measures which the various proprietaries adopted in pursuance of this policy proved highly beneficial to the provinces of North America, and cherished in the minds of their inhabitants an attachment to liberty, and a conviction of their right to it.

The instrument* which was now published by Berkeley and Cartaret gave assurance to all persons who should settle in New Jersey, that the province should be ruled only by laws enacted by an assembly in which the people were represented, and to which the power of making peace or war, and many other important privileges, were confided. In particular, it was stipulated by the proprietaries, "for the better security of the inhabitants in the said province, that they are not to impose, nor suffer to be imposed, any tax, custom, subsidy, tallage, assessment, or any other duty whatsoever, upon any color or pretence, upon the said province, and inhabitants thereof, other than what shall be imposed by the authority and consent of the general assembly." By another clause, of no less importance, it was provided, that "no person, at any time, shall be anyways molested, punished, disquieted, or called into question, for any difference in opinion or practice in matters of religious concernment, who does not actually disturb the civil peace of the province; but all and every such person and persons may, from time to time, and at all times, freely and fully, have and enjoy his and their judgments and consciences in matters of religion, they behaving themselves peaceably and quietly, and not using this liberty to licentiousness, nor to the civil injury, or outward disturbance of others; any law, statute, or clause, contained, or to be contained, usage or custom, of the realm of England, to the contrary thereof in any wise notwithstanding." The import of these expressions could not be misunderstood; and as they were publicly promulgated, without censure or disallowance from any quarter, it must be admitted, that the colonization of this province was undertaken on an assurance, which the settlers were very well entitled to credit, of their being completely exempted from the jurisdiction of the English parliament, both in the imposition of taxes and the regulation of ecclesiastical affairs. The administration of the executive power, together with the right of a negative on the enactments of the provincial assembly, were reserved to the proprietaries. To all persons resorting to New Jersey with the intention of settling in it, there were offered allotments of land, proportioned to the earliness of their arrival in the province, and to the numbers of their indentured servants and slaves; and for this they were required to pay a quit rent of an half-penny per acre after the year 1670, and to maintain one able male servant for every hundred acres in their possession. As the quit rents were deemed the private estate of the proprietaries, it was declared that all public expenses should be defrayed by general contribution. Such was the first constitution of New Jersey. New provisions were added to it from time to time, by subsequent proclamations, and the whole code was denominated by the people the *Laws of the Concessions*.

* Writers are not agreed upon the date of this instrument. The copies printed by Scot and Smith bear the date of February, 1664; which is manifestly erroneous, except on the very improbable supposition, that the document was framed by Berkeley and Cartaret, not only before they had obtained their own grant from the Duke of York, but before the duke himself had obtained his charter from the king. Chalmers supposes the date to have been February, 1665; but this is inconsistent with the clause which tenders certain advantages to settlers "who shall transport themselves before the 1st of January, 1665." Chalmers was prevented from observing this inconsistency by mistaking this last mentioned date for 1655.

† The assembly was empowered, not merely to levy forces and declare war as they should see cause, but "to pursue an enemy as well by sea as by land (if need be), out of the limits and jurisdictions of the said province, with the particular consent of the governor, and under his conduct, or of our commander-in-chief."

and regarded by them as their great charter, and as possessing a higher authority than even the acts of assembly, from not being subject to alteration or repeal. An important addition was suggested by the prudence and equity of Philip Carteret, who was the first governor appointed by the proprietaries, and who, without any directions from his constituents to respect the rights of the aboriginal inhabitants of the province, judged it proper to obtain their consent to the settlement, by purchasing their titles to the several districts which were occupied. The proprietaries had the wisdom to approve this proceeding, and some years after established the rule, that all lands should be purchased from the Indians by the governor and council, who were to be reimbursed by the settlers, in proportion to their respective possessions.

The conquest of New Netherlands had now been achieved by Colonel Nichols, who assumed the administration of the whole territory as governor for the Duke of York. While yet unacquainted with the grant to Berkeley and Carteret, he formed the design of colonizing the district which they had acquired, and for this purpose granted licenses to various persons to make purchases of lands from the aboriginal inhabitants of New Jersey. Three small townships were speedily formed in the eastern part of the territory, by emigrants chiefly from Long Island, who laid the foundation of Elizabeth Town, Woodbridge, and Piscataway: and Nichols, who entertained a very favorable opinion of this region, bestowed on it the name of Albania, in commemoration of one of the titles enjoyed by his master. But the hopes which he had conceived of rendering the district a valuable appendage of the duke's possessions, were soon interrupted by intelligence of the title of its new proprietaries; and the measures he had already taken gave rise to disputes respecting the property of the soil between the settlers, whose establishment he had promoted, and the proprietaries who now claimed their allegiance, which disturbed the repose of the province for more than half a century. He transmitted an earnest remonstrance to the Duke of York, on the impolicy of thus multiplying statistical divisions, and of disjoining from his own province a portion distinguished above all the rest by the fertility of its soil, the commodiousness of its rivers, and the richness of its minerals; and while he urged the duke to revoke a grant so prejudicial to his own interest, he predicted, what really happened, that the undertaking of Berkeley and Carteret, to colonize a vacant territory, would disappoint their expectations of profit, and involve them in expenses, of which only their remote posterity could hope to gather the fruits. This remonstrance appears to have produced some impression on the mind of the duke: but either it failed to suggest to him a sufficient inducement to revoke the grant he had executed, or he judged such revocation beyond his power; and Nichols was reluctantly compelled to surrender the government of New Jersey to Philip Carteret, who arrived with a company of thirty settlers from England, and established himself at Elizabeth Town, which was regarded as the capital of the infant province. Here for some years he ruled in peace over a desert which was gradually replenished with people from the provinces of New York and New England, attracted by the qualities of the country and the repute of the liberal institutions which its inhabitants were to enjoy. It was a happy peculiarity of the lot of those colonists that, establishing themselves in the vicinity of countries already cultivated, they escaped the disasters and privations which had afflicted so severely the first inhabitants of most of the other provinces. Their neighborhood to the commerce of New York, in particular, was considered a circumstance of no small advantage during the infancy of their settlement; though, in process of time, it was less favorably regarded, as having contributed to prevent the rise of a domestic mart, which would have afforded still more effectual encouragement to their trade. Like the other colonists of North America, they enjoyed the advantage of transporting the arts and habits of industry from an old country, where they had been carried to a high state of perfection, into a new land which afforded them more liberal encouragement and more unrestricted scope. Their exertions for the raising of cattle and grain were speedily and amply rewarded by a grateful soil; and their relations with the Indians enabled them to prosecute their labors in undisturbed tranquillity, and to add to them a beneficial traffic in peltry with the roving tribes by whom the neighboring forests were inhabited. Their connexion with the sister colony of New York communicated to them the benefit of the alliance which subsisted between this colony and

the powerful confederacy of the Five Nations; and, as the influence of this confederacy extended to all the tribes in the vicinity of the new settlement, its inhabitants enjoyed the felicity of an entire exemption from Indian war. Recommended by the salubrity of its climate, in addition to so many other advantages, it will not appear surprising that New Jersey was soon considered a very desirable residence, and that its attractions were celebrated by early writers with higher commendation than any of the other settlements obtained. The proprietaries, still buoyed up with the hope of a gainful revenue from their province, were not wanting in exertions to circulate the intelligence of its advantages both in Europe and America, and from time to time despatched from England vessels freighted with settlers and stores to reinforce the numbers and supply the wants of their people. But the period to which they had looked for the fulfilment of their hopes, was fated to demonstrate their fallacy; and the scene of felicity which the province had hitherto presented was disagreeably overcast by the arrival of the day when the payment of quit rents had been appointed to commence. [1666—1670.] The first demand of this tribute excited general disgust among the colonists, who seem to have expressed more unwillingness than inability to comply with it. A party among them, including the eldest settlers, who had occupied their lands under the authority of Colonel Nichols, refused to acknowledge the title of the proprietaries, and, in opposition to it, set up titles which they had obtained for themselves from the Indians. It was easier for the governor to demonstrate the illegality of these pretensions, than to prevail with the people to abandon them. For two years he maintained an ineffectual struggle to enforce the claims of the proprietaries, till at length the popular discontent broke forth in an insurrection [1672] which he found it impossible to withstand. He was compelled to return to England, stript of his functions, which the colonists forthwith conferred on a natural son of Sir George Carteret, by whom their pretensions had been abetted. Disappointing as this result must have been to the proprietaries, it was impossible for them to impute the blame of it to their governor, or to hesitate to replace him in the station from which he had been expelled. This measure, however, was retarded by the unexpected events of the following year, [1673,] when New York again reverting to the dominion of Holland, New Jersey was once more reunited to the province of New Netherlands.

[1674.] The Dutch, as we have already seen, did not long retain their acquisition, which was restored to Great Britain by the treaty of London. But the re-establishment of the proprietary governments into which the territory had been previously divided, was thought to require some additional formality, and was not effected without a renovation of the titles by which these jurisdictions had been originally created. Some doubts had already been suggested of the validity of the royal charter, which had been granted to the Duke of York at a time when the Dutch Government was in quiet possession of the country; and, however, unwilling to acknowledge the force of this objection, and recede from a pretension that had been deliberately embraced by his brother and himself, the duke was prompted by his own interest to remove from men's minds a doubt so likely to obstruct the resort of settlers to this province. Another cause seems also to have contributed to turn his thoughts to the procurement of a new investiture. The remonstrances of Colonel Nichols had led him to regard the grant he had made of New Jersey to Berkeley and Carteret with feelings of dissatisfaction, which were not diminished by the liberal institutions which these proprietaries had conferred on their province, and the number of inhabitants who had been attracted to it from his own dominions. Whatever were the motives that withstood the gratification of his wishes, whether he scrupled to commit the injustice and incur the dishonor of robbing two of the firmest adherents of his family, or doubted the support of the law or the king in such a transaction, it is manifest from his conduct that he entertained a desire to repossess himself of the New Jersey territory, without making any compensation to the parties who had acquired it. The Dutch conquest seemed to furnish him with an opportunity of removing the objections to which his own title was subject, without seeming to confess its original defectiveness; and to afford him, at the same time, a decent pretext for divesting Berkeley and Carteret of their property, without disowning the grant by which he had bestowed it upon them, or incurring any obligation to indemnify them for its loss. It was pretended that the Dutch conquest had extinguished the proprietary

rights, and that the country, unencumbered by them, had now reverted to the crown. In conformity with this view, the duke applied for a new investiture, and found no difficulty in obtaining from the king a second charter, which recited the former grant, and confirmed to him the whole of the territory which that grant had embraced. He now appointed Andros his lieutenant over the whole reunited province; and, investing all the functions of legislative and executive power in the governor and council, established the same arbitrary government in New Jersey that he had all along maintained in New York. But, although he could thus mediate the meanness of despoiling his friends of a property which he had sold to them, he wanted either resolution or authority to effectuate his iniquitous pretensions; and, on the application of Sir George Carteret, accipit to promise a renewal of the grant of New Jersey. Yet, though ashamed to acknowledge his intentions, he was unwilling to abandon them; and while the execution of the grant was delayed, he transmitted orders to Andros to maintain his prerogative over the whole territory. [1675] Even when he finally consented to restore New Jersey, he endeavored to evade the complete performance of his engagement, and pretended to have reserved certain rights of sovereignty over it, which Andros seized every opportunity of asserting.

In the beginning of the year 1675, Philip Carteret returned to New Jersey, and resumed the government of the settlements which had been formed in the eastern part of the province, and from which he had been expelled about two years before. The inhabitants, who had experienced the rigors of conquest and the arbitrary rule of Andros, now received their old governor very willingly; and, as he postponed the payment of their quit rents to a future day, and published a new set of concessions by Sir George Carteret that confirmed all their privileges, a peaceable and contented subordination was once more re-established in the colony. The only subject of disquiet that occurred for several years, arose from the arbitrary proceedings by which Andros from time to time enforced the unjust pretensions of the Duke of York. Governor Carteret, in the hope of procuring to his people a share of the advantages which the neighboring colony derived from her commerce, attempted to establish a direct trade between England and New Jersey. But Andros warmly opposed this proceeding, as an injury to the commerce and the customs of New York; [1676] and by confiscating the vessels that traded in opposition to his mandates, put an end to the New Jersey commerce in its infancy. In addition to this outrage, he endeavored by various exactions to render the colonists tributary to his government; and even proceeded to such extremity of insolence as to arrest Governor Carteret and convey him prisoner to New York. When complaints of these proceedings of his deputy were carried to the duke, he evinced the same indecision and duplicity that had characterized all his recent demeanor. He could not consent, he said, to depart from a prerogative which had always belonged to him; yet he directed that the exercise of it should be relaxed, as a matter of favor to his friend Sir George Carteret. But the province had now been divided into two proprietary jurisdictions; and it was in the western part of it, in which Carteret had ceased to have any interest, that the duke attempted to appropriate the largest share of his pretended prerogative. The circumstances that attended this partition of the territory, compose the most interesting portion of the early history of New Jersey.

Among the various sectaries who had reason to complain of the ecclesiastical policy pursued by the ministers of Charles the Second, the quakers incurred an ample share of persecution. During the last years of the protectorate of Cromwell, a number of quakers, charged with offending against public order and decency, had been committed to prison in various parts of England: and because the protector refused or delayed to pass an order for their release, one of the leaders of the sect rebuked him publicly in an angry harangue, which he concluded by tearing his own cap in two, and prophesying that the government would be rent from Cromwell and his family.* The accomplishment of this prediction

however, was the only gratification that the quakers were permitted to derive from the abolition of the protectoral government. In the interval between that event and the restoration, they experienced such additional severity as again elicited from one of their number the prophecy of another political revolution. These severities, partly occasioned by the aversion which the presbyterian ministers and magistrates entertained for the doctrines of the quakers, were also in part provoked by the frenzy and indecency with which many of the professors of these doctrines thought proper to signalise their contempt for the worship of their adversaries. [21] To the committee of safety, in whose hands the supreme power was lodged, the quakers were rendered additionally obnoxious by the progress which their tenets had made among the veteran soldiers of the commonwealth, and the success with which George Fox interposed to prevent a body of these converts from joining the parliamentary forces who were marching to suppress the insurrection of the royalists in Cheshire. They refused to interpose for the liberation of those quakers who had been imprisoned by the magistrates as vagabonds and disturbers of the peace or even to restrain the outrages of the populace, who in many places began to insult and disturb the quaker assemblies. The advancement of General Monk to the supreme direction of affairs, not only gratified these sectaries with the accomplishment of another prediction, but encouraged them to expect a favorable change in their own situation. Monk issued an order that no further disturbance should be given to the peaceable meetings of the quakers, and he listened to their complaints with a respect and attention which they had not been able to procure from his predecessors in authority. The hopes which this altered treatment gave rise to, were realised at the restoration. To the favorable regards of the king, the quakers were recommended by the complaints they preferred against every description of authority that had subsisted in England during the suspension of monarchy, and by the peculiar enmity they expressed against those who were also, in an eminent degree, the objects of his own dislike. Their accusations of the government of New England, in particular, met with a gracious acceptance, and produced an order for the suspension of all further severities against them in that quarter. Upwards of seven hundred quakers were released from various prisons in England, and an assurance was given that a complete toleration of quaker worship would be established by law. The fulfilment of this assurance, however, was obstructed by certain of the king's ministers, who, though willing by delusive pretences to tranquillise all the dissenters till the newly-restored monarchy might appear to be firmly established, were secretly determined to enforce a strict uniformity of religious worship in England; and, before many months of the new reign had elapsed, their purpose was effectually promoted by a circumstance which suddenly and completely extinguished whatever of count favor the quakers had really or seemingly enjoyed. Meanwhile, the sect, like all others, was indulged with an actual toleration, which was diligently improved by its founder and his wiser associates in multiplying their converts, and introducing into their society a system of order and discipline that tended to curb the wild spirit which had transported so many votaries of quakerism beyond the bounds of decency and sobriety, and exposed their profession, in so many places, to reproach and persecution. But this state of unmolested tranquillity, together with the hope of seeing it perpetuated by law, were quickly destroyed by a violent explosion of fury and fanaticism from a different body of sectarians. In some points, both of doctrine and practice, the "Fifth Monarchy men," or "Millenarians," bore a strong resemblance to the quakers; a temporal hierarchy, in particular, was equally odious to both, and both rejected, on all occasions, the ceremonial of an oath. The millenarians, however, went a step further than the quakers, and held themselves entitled to employ force for the overthrow of every temporal supremacy that usurped the place, and obstructed the advent, of that spiritual dominion which they eagerly expected to behold. George Fox, on the contrary, had taught, from the beginning of his ministry, that it was absolutely unlawful to employ any other than spiritual weapons for the promotion of spiritual ends, or, indeed, of any ends whatever. But he was well aware that he had collected around him many of the wildest and most

combustible spirits in the kingdom; and the exaggeration of his own principles, which he beheld in the demeanor of many of his own followers, together with numberless examples among the other sects and factions of which the times were so prolific, had forcibly taught him by what insensible gradations the minds of men, when thoroughly heated by religious or political zeal, are carried from the disapprobation of hostile institutions into the conviction of an especial call, or of a clear moral duty, to attempt their subversion. It was therefore with no small alarm that Fox had heard of the projects that the millenarians entertained some time prior to the restoration, of effecting by force of arms the establishment, or at least the recognition, of the Messiah's personal reign upon earth; and he had published, at the time, an earnest remonstrance to all his followers on the unlawfulness of designs, which, however remote from their distinctive principles, would prove, he feared, but too congenial to the spirit with which, in many instances, these principles were associated. But his endeavors, whatever effect they may have produced on his own followers, failed to convince the public that there was any radical or solid distinction between the quakers and the millenarians; and what probably contributed to sharpen his own apprehensions, as well as to increase the public prepossession, was, that the quakers were encumbered with a number of partial and temporary adherents, the limits of whose faith they were unable to ascertain by reference to a creed, and who, flitting from sect to sect, according to the ebbs and flows of their own humor and caprice, remained only long enough with any one to infect it with their own levity, and dishonor it with a share of their own reputation. The insurrection that broke forth among the millenarians, in the first year of the restored monarchy, proved highly prejudicial to the interests of the quakers, not only from the common opinion that the principles of the two sects were substantially the same, but from the plausible grounds that were afforded to the adversaries of toleration; and the pledges which the government, no less alarmed than provoked, determined to exact from every description of its subjects. The quakers now became the objects of peculiar jealousy, from their refusal to give assurance of fidelity to the king by taking the oath of allegiance, and were assailed with a rigor and reality of persecution which as yet they had never experienced in England. They were at first included along with the millenarians in a royal proclamation which forbade either of these classes of sectaries from assembling under pretence of worship elsewhere than in parochial churches, but were soon after distinguished by the provisions of an act of parliament that applied exclusively to themselves. By this statute it was enacted, that all quakers refusing to take the oath of allegiance, and assembling to the number of five persons above sixteen years of age for the purpose of divine worship, should, for the first and second offences, incur the penalty of fine and imprisonment, and, for the third, should either abjure the realm or be transported beyond it. Nay, so cordial was the dislike now entertained by the court against the quakers, that, instead of employing the complaints of this sect as the handle for a quarrel with the obnoxious province of Massachusetts, it was determined to stir up the enmity that had been expressed in this province against the quakers, and to invite the provincial government to a repetition of the severities that had been so recently prohibited. For this purpose, it was signified to the governor and assembly of Massachusetts, by a letter under the hand of the king, that his majesty, though desirous that liberty of conscience should be granted to all other religious professors in the province, would be glad to hear that a severe law were passed against the quakers, whose principles he reckoned incompatible with the existence of government. These unfavorable sentiments were very shortly after exchanged by the king for a juster estimate of quaker principles. In a conference which he granted to some of the leading members of the sect, he received assurances which satisfied him not only that this people had been unjustly confounded with the millenarians, but that their principles with respect to government, including an absolute renunciation of the right of resistance, were such as he had reason to wish more generally diffused through his dominions. But this alteration in his sentiments produced no relaxation of the legal severities to which the quakers were subjected, and was attended with no other consequence than a familiar and apparently confidential intercourse between him and some of their more eminent leaders, together with many expressions of regard and good will on his part which he was unwilling or unable to substantiate. In the

* Cromwell, though in general he treated the quakers with lenity (of which the impunity of this prophet may be adduced as an instance), could not entirely subdue his jealousy of a sect in which some of his own most determined adversaries had enrolled themselves. That restless agitator, John Lilburn, in the midst of his opposition to Cromwell, made a profession of quakerism, and yet not only continued to write against the protector's government, but long refused to promise that he would not employ his sword in aid of his pen. Gough and Sewell, i. 70. Cromwell had personally witnessed a great deal of quaker extravagance. He was interrupted

persecution that was now commenced against all classes of dissenters, the quakers were exposed to a more than equal share of severity from the unbending zeal with which they refused to conform even in appearance to any one of the obnoxious requisitions of the law, and the eagerness with which they seized every opportunity of making manifest their forbidden practices, and signaling their peculiar gifts of patient suffering and unconquerable perseverance. In every part of England the quakers were harassed with fines and imprisonments, and great numbers were transported to Barbadoes and to the American settlements,* where they formed a valuable addition to the English population, and quickly found that their persecutors in expelling them from their native land, had unconsciously contributed to the melioration of their lot. Instead of the wild enthusiasts who had formerly rushed with headlong zeal to New England in quest of persecution, there was now introduced into America a numerous body of wiser and milder professors of quakerism, whose views were confined to the enjoyment of that liberty of worship, for the sake of which they had been driven into exile. In several of the American provinces, as well as in the island of Barbadoes, they experienced an ample toleration and a friendly reception from the governments and the inhabitants; and, even in those provinces where they were still the objects of suspicion and severity, they contributed to render their principles less unpopular, by demonstrating with what useful industry and peaceful virtue the profession of them might be combined. Contented with the toleration of their worship, and diligently improving the advantages of their new lot, many of their exiles attained, in a few years, to a plentiful and prosperous estate; and so far did they carry their willingness to reconcile their own tenets with the existing institutions and practices of the countries in which they found themselves established, that in many instances they united a profession of quakerism with the purchase and employment of negro slaves. Perhaps the deceptfulness of the human heart was never more strikingly exhibited than in this monstrous association of the characters of exiles for conscience sake and the principles of universal peace and philanthropy, with the condition of slave owners and the exercise of arbitrary power. Yet, in process of time, much good was educed from this evil; and the inconsistency of one generation of quakers enabled their successors to exhibit to the world a memorable example of disinterested regard for the rights of human nature, and a magnanimous sacrifice to the requirements of piety and justice.

The principles of the sect continued meanwhile to propagate themselves in Britain, to an extent that more than supplied the losses occasioned by the banishment of so many of their professors. Almost all the other sects had suffered an abatement of piety and reputation from the furious disputes and vindictive struggles that attended the civil wars; and while the quakers were distinguished by exemption from this reproach, they were no less advantageously distinguished by a severity of persecution which enabled them to display in an eminent degree the primitive graces of christian character. It was now that their cause was espoused and their doctrines defended by writers who yielded to none of their contemporaries in learning, eloquence, or ingenuity, and who have never been equalled, or even approached, by any succeeding authors in the ranks of the quakers. The doctrines that had floated loosely through the quaker body were now collected and reduced to an orderly system; the discipline necessary to preserve from anarchy, and restrain the fantastic sallies which the genuine principle of quakerism is peculiarly apt to beget,† was explained and enforced; and, in the midst of a persecution which drove many of the presbyterians of Scotland to despair and rebellion, the quakers began to add to their zeal and resolution that mildness of address and tranquil propriety of thought and conduct by which they are now universally

characterized. Yet, it was long before the wild and enthusiastic spirit which had distinguished the rise of the society was banished entirely from its bosom: and while it continued to exert its influence, a considerable diversity of sentiment and language prevailed among the quakers. [22] This diversity, in particular, was manifest in the sentiments that were entertained with regard to the duty of confronting persecution. While all considered it unlawful to forsake their ordinances on account of the prohibition of their oppressors, there were many who esteemed it no less a dereliction of duty to abandon their country for the sake of a peaceful enjoyment of their ordinances in another land. Considering quakerism as a revival of primitive christianity, and themselves as fated to repeat the fortunes of the first Christians, and to gain the victory over the world by evincing the fortitude of martyrs, they had associated the success of their cause with the infliction and endurance of persecution, and deemed the retreating from a country where this evil impended over them, to one where they might be exempted from it, equivalent to the desertion of the contest in which the prevalence of truth or of error was to be decided. The toleration of their principles seemed to be less the object of their desire than the victorious spread of them; and the success of quakerism in England appeared to be incomplete without the downfall of the established hierarchy.* But there were others of more moderate temper, who, though willing to sustain the character of the primitive Christians deemed this character no way inconsistent with the exercise of that liberty which was expressly conceded to the objects of their imitation in the apostolic direction that when persecuted in one city they should flee to another. Disturbed in their religious assemblies, harassed and impoverished by fines and imprisonments, and withal continually exposed to a violent removal from their native land, as the consequence of a line of conduct which they held it their duty to pursue, they were led to meditate the advantage of a voluntary expatriation with their families and their substance, and naturally cast their eyes on that country which, notwithstanding the severities once inflicted on their brethren in some of its provinces, had always presented an asylum to the victims of persecution. Their regards were farther directed to this quarter by the number of their fellow sectaries who were now established in several of the North American states, and the freedom, comfort, and tranquillity which they were there enabled to enjoy.

Such was the situation of the quakers at the time when Lord Berkeley, alarmed by the insubordination of the planters of New Jersey, and dissatisfied with an acquisition which seemed likely to realize the predictions of Colonel Nichols, offered his share of the province for sale. He soon received the proposal of a price that was satisfactory from two English quakers named Fenwick and Byllinge, and in the year 1674, in conformity with their desire, conveyed the subject of the purchase to the first of these persons in trust for the other. Fenwick appears to have been unworthy of the confidence implied in this arrangement. A dispute soon arose between Byllinge and him with regard to their respective proportions of interest in the territory; and, to avoid the scandal of a law-suit, the two parties agreed to submit their pretensions to the judgment of the celebrated William Penn, who now began to occupy a conspicuous place among the leaders and champions of the quaker cause. Penn found it easier to appreciate the merits of the case than to terminate the controversy: and, after, he had pronounced an award in favor of Byllinge, it required the utmost exertions of his address and authority to prevail upon Fenwick to recognise it. Yielding at length to the solemn and earnest remonstrances of Penn, Fenwick forbore to press his unjust demand any farther; and, in the year 1675, with his wife and family, and a small troop of quaker associates, he set sail from England, and established himself in the western part of New Jersey. But Byllinge was now no longer in a condition to profit by the adjustment of the dispute. He had sustained such losses in trade that it became necessary for him to divest himself of the whole of his remaining property for the indemnification of his creditors; and as the most valuable part of this property consisted of his New Jersey purchase, he

was the more naturally led to desire that its administration should be confided to the same eminent person whose good offices had so recently contributed to ascertain and preserve it. William Penn, after some consideration, agreed to undertake this duty, and, in conjunction with Gawen Laurie and Nicholas Lucas, two of the creditors of Byllinge, assumed the direction of their constituents' share of the New Jersey territory.

The first care of Penn and his associates was to effect a partition of the province between themselves and Sir George Carteret; and as all parties were sensible of the disadvantage of a joint property, the division was accomplished without difficulty. The eastern part of the province was assigned to Carteret, under the name of East New Jersey; the western, to Byllinge's assignees, who named their moiety West New Jersey. The administrators of this latter territory then proceeded to divide it into a hundred lots, or properties; ten of which they assigned to Fenwick, and the remaining ninety they reserved for sale for the benefit of the creditors of Byllinge. Their next and most important proceeding was to frame a political constitution for the purchasers and future inhabitants of the land, which was promulgated under the title of "concessions," or terms of grant and agreement, to be mutually signed by the vendors and purchasers of the territory. This instrument adopted the provisions that had been previously enacted by Berkeley and Carteret for the exemption of the provincials from all taxes but such as their own native assemblies should impose on them, and for the security of religious freedom; the clause by which this latter provision was introduced being prefaced by a general declaration, "that no men, nor number of men, upon earth have power to rule over men's consciences in religious matters." It was appointed that the people should meet annually to choose one honest man for each propriety to sit in the provincial assembly; that "these elections be not determined by the common and confused way of cries and voices, but by putting balls into balloting boxes to be provided for that purpose, for the prevention of all partiality, and whereby every man may freely choose according to his own judgment and honest intention;" and that every member of assembly should be allowed a shilling a day during the session, "that thereby he may be known to be the servant of the people." Every man was to be capable of choosing and being chosen to sit in these assemblies, which were vested with the power to make, alter, and repeal laws, and to elect, from time to time a committee of assistants to carry the laws into execution. Without the verdict of a jury, no man could be arrested, confined, or deprived of life, liberty, or estate. Imprisonment for debt was disallowed: and a bankrupt, after surrendering his estate to his creditors, was set at liberty to work again for himself and his family. Such is an outline of the composition that forms the first essay of quaker legislation, and entitles its authors to no mean share in the honor of planting religious and political liberty in America. "There," said Penn and his colleagues, in allusion to this fruit of their labors, "we lay a foundation for after ages to understand their liberty as men and christians, that they may not be brought in bondage but by their own consent; 'for we put the power in the people.'"

The publication of this instrument, which its authors accompanied with a special recommendation of the province to the members of their own religious fraternity, produced an immediate display of that diversity of sentiment which had begun to prevail among the society of quakers. Many prepared with alacrity to embrace the proposals of the trustees, and expressed the most exaggerated expectations of the liberty, prosperity, and repose that awaited them in the new settlement; while others regarded with jealousy, and even vehemently opposed a secession which they considered pusillanimous and discreditable. To moderate the expectations of the one, and to appease the jealousy of the other of these parties, William Penn and his colleagues addressed a circular letter to the members of their sect, in which they solemnly cautioned them against leaving their country from a timid reluctance to bear testimony to their principles, from an impatient unsettled temper, or from any motive inferior to a deliberate conviction that the God of all the earth opened their way to New Jersey, and sanctioned their removal thither. They were admonished to remember that, although quaker principles were established in the province, only quaker safeguards could be interposed or relied on for their preservation; and, in particular, that the religious toleration which was to be established must depend for its continuance on the aid of that Being with whose will they believed it to concur, and could never be defended

* In one vessel alone, which was despatched from England in March 1684, sixty quaker convicts were shipped for America. Williamson's North Carolina, i. 82.

† Robert Barclay, the author of the "Apology for the Quakers," and of a treatise on "the Anarchy of the Ranters," has perhaps done more than any other writer of his persuasion to render quakerism a methodical and rational system. Yet this eminent person, though remarkably distinguished for the strength and soundness of his understanding and the sedateness of his temper, soon after his conversion to quakerism, betrayed in his conduct a strong taint of enthusiastic extravagance. He himself mentions, that on one occasion, having experienced a very vivid impression of the duty of walking through the streets of Aberdeen in sackcloth and ashes, he could not be easy till he had obeyed the divine call, as he conceived it to have been. Aikin's General Biography, vol. ii.

* In Neal's History of the Puritans (vol. iv.) there is preserved an account of a debate which took place in one of the churches of London between an English bishop and a party of these wilder professors of quakerism, who willingly accepted the bishop's rash challenge to a public disputation. The debate was short, and soon degenerated into a reciprocation of abuse, in which the bishop, finding himself by no means a match for his opponents, took to flight, and was pursued to his house by a mob of quakers, vociferating at his heels, "The hilding dieth, the hilding dieth."

by force or violence against the arm of an oppressor. To this admonitory letter there was annexed "A Description of West New Jersey," for the better information of intending colonists, in which some trivial exaggerations that had gone abroad respecting the excellence of the soil and climate were corrected, but in the main, a most inviting representation of the settlement was conveyed. This publication was certainly not intended to repress the ardor of quaker emigration; neither had it any such effect. Numerous purchases of colonial land were made by quakers in various parts of England; and, in the course of the year 1677, upwards of four hundred persons of this persuasion transported themselves to West New Jersey. Many of these were persons of considerable substance and respectability, who carried with them their children and servants; and along with them were sent a board of commissioners appointed by Penn and his colleagues to make partition of the lands, and purchase the acquiescence and friendship of the Indians. While the ship that carried out the first detachment of these emigrants was lying in the Tisames, and preparing to sail, it happened that Charles the Second was passing by in his pleasure barge. Observing a number of quakers on board, the king came alongside the vessel, and inquired whither they were bound. Informed of their purpose, he asked if they were all quakers, and, being answered in the affirmative, he gave them his blessing and departed.*

On their arrival in America, the quakers very soon discovered that the danger of a lawless encroachment on their privileges had not been suggested to them in vain. Andros summoned them to acknowledge the sovereignty of his master, the Duke of York; affirming that his own life would be endangered if he should venture to recognize their independence without an express order from the duke. When they remonstrated against this usurpation, Andros cut short the controversy by pointing to his sword; and as this was an argument which the quakers were precluded from retorting, they submitted for the present to his violence, and acknowledged themselves and their territory subject to the Duke of York, till the issue of an application for redress, which they transmitted to England. They were compelled for some time to endure the hardships inseparable from the occupation of a desert land. But these hardships were surmounted by industry and patience; and their first settlement, to which they gave the name of Burlington, quickly exhibited a thriving appearance, and was replenished with inhabitants by successive arrivals of additional quaker emigrants from the parent state. [1678] It was observed in this, as in most of the other infant settlements in America, that the success of individual colonists was in general proportioned to the original humility of their condition, and the degree of reliance which they placed on the resource of their own unassisted industry. Many who emigrated as servants were more prosperous than others who imported a considerable substance along with them. Inured to industry, they derived from it a return so ample, as soon enabled them to rise above a state of servitude, and cultivate land on their own account; while the others, subsisting too long on their imported stock, and relying too far upon the hired labor of the poor, were not unfrequently reduced to indigence. The first exertions of the colonists to procure themselves a livelihood had been facilitated by the friendly assistance of the Indians; but a hostile attack was soon threatened by these savages, who, on finding that a dangerous epidemic had broke out among them, accused their neighbors of having treacherously sold them the small-pox. The danger, however, was averted, by the influence of an Indian chief, who assured his countrymen that similar diseases had afflicted their forefathers, while as yet they had no intercourse with strangers, and that such calamities were not of earthly origin, but came down from heaven.

[1679] Sir George Carteret, the proprietary of East Jersey, died in 1679; having derived so little benefit from his American territory, that he found it necessary to bequeath it by his will to trustees, who were intrusted to dispose of it for the advantage of his creditors. The exemption which this district had been permitted to enjoy from the jurisdiction of the Duke of York, had not contributed to moderate the discontent with which the inhabitants of West Jersey submitted to an authority from which their right to be exempted

was equally clear. They had never ceased to importune the duke for a redress of this grievance; and were at length provoked to additional vehemence of complaint and urgency of solicitation, by a tax which Andros, in the exercise of his master's pretended sovereignty, imposed on the importation of European merchandise into West Jersey. Wearied at length with the continual importunity of these suitors, rather than moved with a sense of honor or equity, this unjust prince consented to refer the matter of their complaint to certain commissioners, by whom it was finally remitted [1680] to the legal opinion of Sir William Jones. The argument employed in behalf of the colonists of West Jersey on this occasion, was prepared by William Penn, George Hutchinson, and several other coadjutors, chiefly of the quaker persuasion, and breathes a firm undaunted spirit of liberty, worthy of the founders of a North American commonwealth. "Thus then," they insisted, after a narrative of the tides by which the territory had been transmitted to them, "we come to buy that moiety which belonged to Lord Berkeley, for a valuable consideration: and in the conveyance he made us, powers of government are expressly granted; for that only could have induced us to buy it; and the reason is plain, because to all prudent men the government of any place is more inviting than the soil. For what is good land without good laws? the better the worse. And if we could not assure people of an easy, and free, and safe government, both with respect to their spiritual and worldly property,—that is an uninterrupted liberty of conscience, and an inviolable possession of their civil rights and freedoms, by a just and wise government,—a mere wilderness would be no encouragement: for it were a madness to leave a free, good, and improved country, to plant in a wilderness, and there adventure many thousands of pounds to give an absolute title to another person to tax us at will and pleasure." Having adverted to the argument in support of the duke's usurped authority, they continued—"Natural right and human prudence oppose such doctrine all the world over: for what is it but to say, that people free by law under their prince at home, are at his mercy in the plantations abroad. And why? because he is a conqueror there; but still at the hazard of the lives of his own people, and at the cost and charge of the public. We could say more, but choose to let it drop. But our case is better yet; for the king's grant to the Duke of York is plainly restrictive to the laws and government of England. Now the constitution and government of England, as we humbly conceive, are so far from countenancing any such authority, that it is made a fundamental in our constitution, that the king of England cannot justly take his subjects' goods without their consent. This needs no more to be proved than a principle; it is an home-born right, declared to be law by divers statutes." "To give up this," they added, "the power of making laws, is to change the government, to sell, or rather resign ourselves to the will of another; and that for nothing; For, under favor, we buy nothing of the duke, if not the right of an undisturbed colonizing, and that as Englishmen with no diminution, but rather expectation of some increase of those freedoms and privileges enjoyed in our own country: for the soil is none of his; 'tis the natives', by the *jus gentium*, the law of nations; and it would be an ill argument to convert them to Christianity, to expel instead of purchasing them out of those countries. If then the country be theirs, it is not the duke's: he cannot sell it; then what have we bought?" "To conclude this point, we humbly say that we have not lost any part of our liberty by leaving our country; for we leave not our king, nor our government, by quitting our soil; but we transplant to a place given by the same king, with express limitation to erect no polity contrary to the same established government, but as near as may be to it; and this variation is allowed but for the sake of emergencies; and that latitude bounded by these words, *for the good of the adventurer and planter*." In a subsequent part of their pleading,* they remark, that "there is no end of this power; for since we are by this precedent assessed without any

* This curious document, which (like most quaker productions) is somewhat tedious, and enriched with some display of legal knowledge, is printed at full length in S. Smith's History. It is remarkable that Chalmers has taken no notice of it. Winterbotham (vol. ii. p. 287.) has given an abridged and very inadequate version of it. That Penn concurred in the presentation of this pleading, is undeniable; and hence it may be fairly presumed, that he assisted in its composition. But that he was the sole author of it, as some of his modern biographers have insinuated, is strongly refuted by its style, in which not the slightest resemblance is discoverable to any of his acknowledged productions.

law, and thereby excluded our English right of common assent to taxes, what security have we of any thing we possess? We can call nothing our own, but are tenants at will, not only for the soil, but for all our personal estates. This is to transplant, not from good to better, but from good to bad. This sort of conduct has destroyed government, but never raised one to any true greatness." "Lastly, the duke's circumstances, and the people's jealousies considered, we humbly submit it, if there can be in their opinion, a greater evidence of a design to introduce an unlimited government, than both to exact an untermittent tax from English planters, and to continue it after so many repeated complaints; and on the contrary, if there can be any thing so happy to the duke's present affairs, as the opportunity he hath to free that country with his own hand, and to make us all owners of our liberty to his favor and justice. So will Englishmen here know what to hope for, by the justice and kindness he shows to Englishmen there; and all men see the just model of his government in New York to be the scheme and draught in little of his administration in Old England at large, if the crown should ever devolve upon his head." Unpalatable as this argument must doubtless have been to the British court, and the counsellors of the Duke of York at this period, it was attended with the most triumphant success. The commissioners to whom the case had been referred were constrained to pronounce their judgment in conformity with the opinion of Jones, "that as the grant to Berkeley and Carteret had reserved no profit or jurisdiction, the legality of the taxes could not be defended." In compliance with this adjudication, the duke without farther scruple resigned all his claims on West Jersey, and confirmed the province itself in the amplest terms to its new proprietaries. And as the same procedure was evidently due to East Jersey, he granted soon after a similar release in favor of the representatives of his friend Sir George Carteret. Thus the whole of New Jersey was promoted at once from the condition of a conquered country to the rank of a free and independent province; and made the adjunct, instead of the dependency, of the British empire. The powerful and spirited pleading, by which this benefit was gained, derives additional interest from the recollection of the conflict that was then carrying on in England between the advocates of liberty and the abettors of arbitrary power. I question if it be possible to point out, in any of the writings or harangues of which that period was so abundantly prolific, a more impressive or magnanimous effort for the preservation of liberty, than is evinced in this first successful vindication of the rights of New Jersey. One of the most remarkable features of the plea which the provincials had maintained, was the strong and deliberate assertion that no tax could be justly imposed on them, without their own consent and the authority of their own general assembly. The report of the commissioners in their favor, and the relief that followed, were virtual concessions in favor of this principle, which in an after age was destined to obtain a more signal triumph in the independence of North America.

West Jersey now filled apace with inhabitants, by the accession of numerous settlers, of which the greater proportion still continued to be quakers. Byllinge, who was appointed the first governor by the other proprietaries, not finding it convenient to leave England, granted a deputation of his functions to Samuel Jennings, by whom the first representative assembly of West Jersey was convoked. [1681] In this assembly, there was enacted a body of Fundamental Constitutions, and a number of laws for the protection of property and the punishment of crimes. By the Fundamental Constitutions, the assembly was empowered to appoint and displace all persons holding offices of trust in the province; and the governor was precluded from making war, or doing any act that should be obligatory on the state, without the assembly's concurrence, and from withholding his assent to any of its enactments. Assemblies were to be annually convoked; and no assembly was to have power to impose a tax which should endure longer than a year. In the laws that were passed on this occasion, the most remarkable feature is a provision, that in all criminal cases, except treason, murder, and theft, the person aggrieved should have power to pardon the offender, whether before or after condemnation—a provision of very questionable expediency, but probably intended to prevent the christian duty of forgiveness from being evacuated, as in most countries is practically done, by the supposed municipal duty which engages a man to avenge as a citizen the wrong which as a christian he is pledged to forgive. The landed property of every inhabitant was made liable for his

* S. Smith, 68—93. Proud's History of Pennsylvania, i. 133—144. This is a very scarce work. I am indebted to the kindness of Dr. Sims, of Cavendish Square, London, for a perusal of one of the very few copies of it that are to be found in Europe. It is a work of great research, and abounding with valuable matter; but one of the most confused and tedious compositions that ever tormented human patience.

debat; marriages were appointed to be solemnized by justices of the peace; for the prevention of disputes with the Indians, the sale of spirituous liquors to them was strictly prohibited; and for the encouragement of poor but industrious laborers, who obtained the means of emigrating from Europe by indenting themselves as servants to more wealthy settlers, every servant was entitled to claim from his master, at the expiry of his indenture, a set of implements of husbandry, certain articles of apparel, and ten bushels of corn. To prevent the resort of worthless and depraved men to the province, a law was soon after passed, requiring every new settler, under pain of a pecuniary fine, to give satisfactory evidence to a justice of the peace, that his change of residence was not the effect of crime, nor an act of fraud, but that he was reputed a person of blameless character and sober life. From this period till the dissolution of the proprietary government, the provincial assembly continued to be annually convoked. It did not always confine itself to the exercise of the ample powers with which it was constitutionally endowed. For when Byllinge soon after proposed to deprive Jennings, the deputy-governor, of his office, the assembly interposed to prevent this proceeding; declaring that Jennings gave satisfaction to the people, and desiring him to retain his situation. The rule and ordinary practice of the constitution, however, was that the council of assistants to the governor were nominated by the assembly; while the proprietaries appointed the governor; and he, with the consent of the proprietaries, named his own deputy.

The success of their experiment in West Jersey encouraged the quakers of Great Britain to avail themselves of the opportunity that was now afforded of enlarging the sphere of their enterprise by the acquisition of the eastern half of the territory. The close of Philip Carteret's administration of East Jersey was embittered by a revival of the disputes that had once rendered him a fugitive from his government. Even the concession that had been recently obtained from the Duke of York served but to afford additional materials of discord between the proprietary government and the people; and instead of mutually enjoying the important benefit which it conferred, the two parties set themselves to debate with the utmost vehemence and pertinacity, whether this instrument or the proprietary concessions in 1664 should be regarded as the foundations of their government. Disgusted with these disputes, and perceiving that they were not likely to derive either emolument or satisfaction from a prolonged administration of the proprietary government, the trustees and executors of Sir George Carteret offered the province for sale to the highest bidder; and closing with the proposals of William Penn,* conveyed their rights over East Jersey to him, [1682] and to eleven other persons of the quaker persuasion. The territory comprehended in this conveyance contained already a variety of settlements, inhabited by seven hundred families, or about three thousand five hundred persons, exclusive of the inhabitants of certain remote and scattered plantations, who were computed to amount to at least half as many more. The great majority of the settlers were not quakers; and whether with the view of allaying the jealousy with which these persons might have regarded a government wholly composed of men whose principles differed so widely from their own, or for the purpose of fortifying their own interest at the British court, by the association of persons of influence in their undertaking, the twelve purchasers made haste to assume twelve other partners in their proprietary rights, and among others the Earl of Perth, Chancellor of Scotland, and Lord Drummond of Gilston, the Secretary of State for that kingdom.† In favor of these twenty-four proprietaries, the Duke of York executed his third and last grant of East Jersey; on receiving which, they proceeded to appoint a council or committee of their own number, to whom all the functions of the proprietary government were intrusted. To facilitate the exercise of their do-

minion, they obtained from Charles the Second a royal letter, addressed to the governor, council and inhabitants of the province, stating the title of the proprietaries to the soil and jurisdiction, and requiring all to yield obedience to their government and the laws.

At the time when East Jersey thus became subject to quaker administration (for the quakers still formed a great majority of the proprietary body) the inhabitants, by a diligent improvement of their advantages, had attained a flourishing and prosperous estate. The greater number of them had emigrated from New England, or were the descendants of New Englandmen; and their laws and manners in some particulars bore the traces of this origin. The punishment of death was denounced by law against children striking or cursing their parents. Adulterers were liable to flogging or banishment. Fornication was punished, at the discretion of the magistrate, by marriage, fine, or flogging. Nightwalking, or revelling abroad, after the hour of nine, subjected the offenders to a discretionary punishment. A thief, for the first offence, was to make threefold restitution; in case of frequent repetition, he might be capitally punished, or reduced to slavery. There was no law for the public support of religion; but every township maintained a church and minister. "The people," said the first deputy who came among them from their quaker sovereigns, "are generally a sober, professing people, wise in their generation, courteous in their behavior, and respectful to us in office." So happily exempt were they from the most ordinary and forcible temptation to violence and dishonesty, that according to the same testimony there was not an industrious man among them whose own hands could not procure him a state of honest competence, and even of ease and plenty.* If we might rely implicitly on the opinion of this observer, we should impute the dissensions that had lately prevailed in the province to the folly and mismanagement of Carteret and his associates in the government. But there is reason to believe that the blame of these dissensions was more equally divided between the people and their rulers. A headstrong and turbulent disposition appears to have prevailed among some classes at least of the inhabitants; various riots and disturbances broke forth even under the new government; and the utmost exertions of quaker prudence and patience were required to compose them. A law which was passed about four years after this period reprobates the frequent occurrence of quarrels and challenges, and interdicts the inhabitants from wearing swords, pistols, or daggers.

Among the new proprietaries of East Jersey was the celebrated Robert Barclay of Urie, a Scottish gentleman, who had been converted to quakerism, and in defence of his adopted principles had published a series of works that elevated his name and his cause in the esteem of all Europe. Admired by scholars and philosophers for the stretch of his learning and the strength and subtlety of his understanding, he was endeared to the members of his religious fraternity by the liveliness of his zeal, the excellence of his character, and the services which his pen had rendered to their cause. These services consisted rather of the literary celebrity which he had given to the quaker doctrine, than of any wider diffusion of their influence among mankind. For his writings in general are much more calculated to dazzle and confound the understanding, than to produce conviction or sink into the heart. To the King and the Duke of York, he was recommended not less by his distinguished fame, and his happy genius and address, than by the principles of passive obedience professed by that set of which he was considered a leader; and with both the royal brothers as well as with several of the most distinguished of their Scottish favorites and ministers, he maintained the most friendly and confidential intercourse. Inexplicable, as to many such a coalition of uncongenial characters may appear, it seems at least as strange a moral phenomenon to behold Barclay and Penn, the votaries of universal toleration and philanthropy, voluntarily associating in their labors for the education and happiness of an infant community, such instruments as Lord Perth and other abettors of royal tyranny and ecclesiastical persecution in Scotland. [23]

§ 1683] By the unanimous choice of his colleagues

* This testimony is confirmed by Gawen Lanrie, who was the second deputy-governor under the quaker administration. "There is not," he says, "in all the province a poor body, or that wants." "The servants work not so much by a third as they do in England, and I think feed much better; for they have beef, pork, bacon, pudding, milk, butter, and good beer and cider to drink. When they are out of their time, they have land for themselves, and generally turn farmers for themselves. Servants' wages are not under two shillings a day, besides victuals." S. Smith, p. 177. 181.

Robert Barclay was appointed the first governor of East Jersey, under the new proprietary administration. So highly was he esteemed by his colleagues, and such advantage was anticipated from his superintendence of the colony, that his commission bestowed the office on him for life, and while it dispensed with his personal residence,* authorised him to nominate his own deputy. But the expectations which produced or attended his elevation, were disappointed by the result; his government (like that of Sir Henry Vane in Massachusetts) was brief and ill fated, and calculated rather to lower than to advance his illustrious reputation. The most signal and beneficial event of his presidency, was the emigration of a considerable number of his own countrymen the Scotch to East Jersey; a measure which, however congenial it may appear to the situation of that oppressed and persecuted people, was not recommended to their adoption but by dint of a good deal of importunity and persuasion. For although the great bulk of the people of Scotland were dissatisfied with the episcopal establishment which their kings had forced upon them, and vast multitudes were enduring the utmost rigors of tyranny for their resistance to it, it was found no easy matter to persuade them to seek a relief from their sufferings, in a distant and perpetual exile from their native land. In addition to the motives to emigration which the severities exercised by Lord Perth and the other royal ministers contributed to supply, the influence of Barclay and other Scottish quakers was more successfully employed in prevailing with their countrymen to seek an asylum in East Jersey; and thither accordingly a body of emigrants, chiefly from Barclay's native county of Aberdeen, soon after resorted. [1684] For the purpose of rendering the Scotch more generally acquainted with the state of the colonial territory and the nature of its institutions, and of inciting them to remove thither, it was determined by the proprietaries to publish a historical and statistical account of it, with a preliminary treatise in which the prevailing objections to emigration should be combated, and this resource presented in a more desirable view than that in which the Scotch were generally disposed to regard it. From undertaking the authorship of this performance, Barclay was probably deterred by knowing that, as a quaker, his estimate of the popular objections, some of which were founded on religious considerations, would find little favor with the bulk of his countrymen; as well as by unwillingness to entangle himself with allusions to the existing persecution, which he could hardly have characterised in a manner satisfactory at once to his own conscience and to Lord Perth and others of his proprietary associates. To the work which was now composed and published, in furtherance of his and his colleagues' design, it is probable that he contributed some assistance; and indeed the inequality of the performance strongly attests that it was not wholly the composition of a single author. It was published as the production of a Scotch gentleman, George Scot of Pitlochrie, and bore the title of "The Model of the Government of the Province of East New Jersey in America." From various passages in this work, it would appear that many of the Scotch were prepossessed with the notion, that to emigrate from their native land without some extraordinary sanction from the Divine will, was an impious dereliction of the lot which the Almighty had assigned to them. In opposition to this view a large and ingenious commentary was made on the Divine command to replenish and subdue the earth; and it was argued that as this was an eternal law, the duty to fulfil it was of continual obligation, and required no extraordinary manifestation from Heaven. Among other incitements to emigration, it is remarked that "We see by nature trees flourish fair, prosper well and wax fruitful in a large orchard, which would otherwise decay if they were straitened in a little nursery. Do we not see it thus fall out in our civil state, where a few men flourish best, furnished with abilities or best fitted with opportunities, and the rest wax weak and languish, as wanting room and means to nourish them? Now, that the spirits and hearts of men are kept in better temper by spreading wide, will be evident to any man who considers that the husbanding of unmanured ground and shifting into empty lands, enforceth men to frugality and quickeneth invention; and the settling of new estates requirith justice and affection to the common good; and the taking in of large countries presents a natural remedy against covetousness, fraud, and vio-

* Oldmixon is mistaken in asserting that Barclay himself repaired, and carried his family with him to the province Barclay never was in New Jersey. Soon after his appointment, he sent thither his brother David, some of whose letters from the province are printed in S. Smith's History.

* Though Penn thus became a proprietary of East Jersey, his connexion both with its concerns, and with those of West Jersey, was henceforward almost merely nominal. He had now acquired for himself the province of Pennsylvania, which occupied all his interest, and diverted his attention from New Jersey.

† From the dedication of Scot's Model, &c. of East Jersey, it appears that Viscount Tarbet and Lord M'Leod, two other powerful Scotch nobles, became very shortly after proprietaries of this province. In one of Oldmixon's lists of the proprietaries (vol. 1. p. 143), we find the name of Sir George Mackenzie, the Lord Advocate of Scotland, whom his contemporaries justly denominated the bloody Mackenzie; and in one of his subsequent lists we find the names of Archdale the quaker proprietary of Carolina, and of West the lawyer, who obtained so much infamous distinction as a witness for the crown on the trial of Lord Russell. 2d Edit. vol. 1. p. 291.

lence, when every man may enjoy enough without wrong or injury to his neighbor." The heads of ancient families were particularly exhorted to embrace this opportunity of cheaply endowing their younger sons with a more liberal provision in America than the laws and usages of Scotland enabled them to bestow at home. In reply to an objection that had been urged that a province governed by quakers would be left unprotected of the means of military defence, it was stated that several of the proprietaries and many of the inhabitants did not belong to the quaker persuasion, and that East Jersey already numbered six hundred armed men. The argument derived from the severities inflicted by government on the presbyterians, is handled in a very courteous style. "You see it is now judged the interest of the government altogether to suppress the presbyterian principles; and that in order thereto, the whole force and bensil of the law of this kingdom are levelled at the effectual bearing them down; that the rigorous putting these laws in execution hath in a great part ruined many of these, who notwithstanding thereof find themselves in conscience obliged to retain these principles; while, on the other hand, episcopacy is by the same laws supported and protected. I would gladly know what other rational medium can be proposed in these circumstances, than either to comply with the government, by going what length is required by law, in conforming; or to retreat, where by law a toleration is by his majesty allowed. Such a retreat doth at present offer itself in America, and is nowhere else to be found in his majesty's dominions." What an encomium on America, at the expense of every other portion of the British empire! The work contains a minute account of the climate, soil, institutions and existing settlements of the province, and an elaborate panegyric on its advantages in all these particulars. As a farther recommendation of the province to the favor of the Scotch, Barclay, displacing a deputy whom he had appointed, of his own religious persuasion, conferred this office on Lord Neil Campbell, uncle of the Marquis of Argyll, who repaired to East Jersey, and remained there for some time as its lieutenant-governor.*

1685] The efforts of Barclay and his colleagues were crowned with success. A great many inhabitants of Scotland emigrated to East Jersey, and enriched American society with a valuable accession of virtue that had been refined by adversity, and piety that was invigorated by persecution. The more wealthy of the Scotch emigrants were noted for bringing with them a great number of servants, and in some instances for transporting whole families of poor laborers whom they established on their lands for a term of years, and endowed with a competent stock; receiving in return one half of the agricultural produce.†

But James the Second had now ascended the British throne: and practically inverting the magnanimous sentiment that has been ascribed to a French monarch, he deemed it unnecessary for a King of England to respect the engagements of the Duke of York; nor could all his seeming friendship for Barclay, together with all the influence of Lord Perth and the other courtier proprietaries, deter him from involving New Jersey in the design he had formed of annulling all the charters and constitutions of the American colonies. [1686] A real or pretended complaint was preferred to the English court against the inhabitants of the Jerseys for evasion of custom-house duties; and the ministers of James eagerly seizing this handle, without farther ceremony caused writs of quo warranto to be issued both against East and West New Jersey, and directed the attorney-general to prosecute them with the utmost stretch of legal expostion; assigning as the reason for this proceeding, the necessity of checking the pretended abuses "in a country which ought to be more dependent on his majesty." Alarmed at this blow, the proprietaries of East Jersey presented a remonstrance to the king, in which they reminded him that they had not received

this province as a benevolence, but had purchased it at the price of many thousand pounds, and had been encouraged to do so by the assurances of protection which they had received from himself; that they had already sent thither several hundreds of people from Scotland; and that, if it would be satisfactory to his majesty, they would immediately propose to the New Jersey assembly to impose the same taxes there that were paid by the people of New York. They entreated that if any change should be made in the condition of their province, it might be confined to an union of East and West Jersey in one jurisdiction, to be ruled by a governor whom the king might select from the body of proprietaries. [1687.*] But James was inexorable, and to their remonstrance gave no other answer than that he had determined to unite the Jerseys with New York and the New England states in one general government dependent on the crown and to be administered by Andros. Finding it impossible to divert him from his arbitrary purpose, the proprietaries of East Jersey were so far deserted of spirit and dignity, as not only to abandon a hopeless contest for the privileges of their people, but even to facilitate the execution of the king's designs against them, as the price of his consenting to respect their own private property in the colonial soil. They made a formal surrender of their patent on this condition; and as James agreed to accept it, the proceedings in the quo warranto process were no longer needed for East Jersey, and were even suspended with regard to the western territory. Seeing no resistance opposed to his will, the king was the less intent on consummating his acquisition; and while the grant of the soil to the proprietaries, which was necessary for this purpose, still remained unexecuted, the completion of the design was abruptly intercepted by the British revolution.

Although the proprietary governments in New Jersey were preserved for a time from dissolution by this event, they never afterwards attained a state of vigor or efficiency. Robert Barclay, who seems never to have been divested of the government of East Jersey, died in 1690; but no traces of his administration are to be found after the year 1688; and from thence till 1692, it is asserted by Chalmers that no government at all existed in New Jersey. The peace of the country was preserved, and the prosperity of its inhabitants promoted by their own honesty, sobriety, and industry. Almost all the original proprietaries of both provinces had in the mean time disposed of their interests to recent purchasers; and the proprietary associations had become so numerous and so fluctuating, that their proceedings were deprived of proper concert and steadiness, and their authority possessed neither the respect nor the affection of the people. The appointment of new proprietary governors in 1692, was the commencement of a series of disputes, intrigues, and vicissitudes of office, which in a society more numerous or less virtuous would probably have been attended with civil war and bloodshed. The government of New York, which from its dependence on the crown, was encouraged by King William to arrogate a pre-eminence over the neighboring chartered colonies, seemed to have thought this a favorable opportunity of reviving, and even extending, its ancient pretensions in New Jersey, whose inhabitants learned with equal surprise and indignation that the assembly of New York had included them in a taxation which it imposed on its own constituents. This attempt, however, was not more successful than the other instances in which New York made similar efforts to usurp an undue authority. A complaint to the English government on this subject was referred to the crown lawyers, who delivered an opinion that produced an abandonment of the pretensions of New York.† [1697] At length the disagreements between the various proprietaries and their respective adherents attained such a height, and were productive of so much schism and confusion, that it was sometimes difficult, if not impossible, for the people to tell in which of two or more rival pretenders to authority the legal administration was truly invested.‡ Numerous complaints of the inconve-

nience occasioned by this state of matters, were addressed by the inhabitants of the Jerseys to the British court; and the proprietaries themselves, finding that their seigniorial functions tended only to disturb the peace of their territories, and to obstruct their own emoluments as owners of the soil, hearkened willingly to an overture from the English ministers for a surrender of their powers of government to the crown. This surrender was finally arranged and effected in the commencement of the reign of Queen Anne, who proceeded forthwith to reunite East and West Jersey into one province, and to commit the government of it, as well as of New York, to her kinsman, Edward Hyde, Lord Cornbury.* [1702]

The commission and instructions which this nobleman received on his departure from England, present an abstract of the constitution and civil state of New Jersey from the resumption of its charter till the period when it ceased to be a British province. The local government was appointed to consist of a governor and twelve councillors nominated by the crown, and of a house of assembly, consisting of twenty-four members, to be elected by the people. The sessions of this assembly were to be held alternately in East and West Jersey. None were capable of voting for representatives in the assembly but persons possessing an hundred acres of land, or personal property to the value of fifty pounds; and none were eligible but persons possessing a thousand acres of land, or personal property worth five hundred pounds. The laws enacted by the council and assembly were subject to the negative of the governor; but if passed by him, they were to be immediately transmitted to England, where they were to be finally affirmed or disavowed by the crown. The governor was empowered to suspend any of the members of council from their functions, and to fill up vacancies occurring among them by death; and, with consent of this body, to constitute courts of law, to appoint all civil and military officers, and to employ the forces of the province in hostilities against public enemies. To the assembly there was to be communicated the royal desire, that it should impose sufficient taxes to afford a competent salary to the governor, to defray the salaries of its own members and of the members of council, and to support all the other provincial establishments and expenditure; the prescribed style of all money bills being, that the sums contained in them were granted to the crown, with the humble desire of the assembly, that they might be applied for the benefit of the province; and all monies so raised were to be paid into the hands of the receiver of the province till the royal pleasure should be signified with regard to their distribution. The former proprietaries of the province were confirmed in their rights to the estates and quit rents which they had formerly enjoyed; and none but they and their agents and surveyors were to be suffered to purchase land from the Indians. Liberty of conscience was assured to all men, except papists. Quakers were declared to be eligible to every office, and their affirmation accepted in lieu of the customary oaths. The governor was invested with the presentation to all ecclesiastical benefices. He was required to give particular encouragement to all ministers of religion in connexion with the church of England, and to "take especial care that God Almighty be devoutly and duly served." It is deserving of regret rather than of surprise, to find combined with, and almost in immediate sequence to this display of royal zeal for the interests of religion and the honor of God, a requisition to the governor, that, in encouraging trade, he should give especial countenance to the Royal African Company of England—a company that had been instituted for the piratical purpose of kidnapping or buying negroes in Africa, and selling them as slaves in the American and West Indian plantations. It was declared to be the intention of her majesty "to recommend unto the said company, that the said province may have a constant and sufficient supply of merchantable negroes at moderate rates;" and the governor was required to

king; to a third (notwithstanding the precedent of Lord Neil Campbell's appointment) because, being a Scotchman, it was questioned if he were legally capable of holding office in an English colony.

* Oldmixon, i. 147. S. Smith, 207—220, and Appendix. 558—573. Chalmers, 622. State Papers, apud eund. 626. Although the proprietaries persisted in terming this surrender a voluntary act, and asserting their right to have retained the government if they had pleased so to do, they appear to have been swayed in some measure by the threat of an expensive suit with the crown, which had determined to bring the validity of their pretensions to trial. In the instrument of surrender, the queen, while she declares her gracious acceptance of the powers resigned to her by the proprietaries, expressly refuses to acknowledge that these powers ever legally belonged to them.

* Oldmixon and S. Smith concur in relating that Lord Neil Campbell succeeded Barclay as governor. But this seems to have been a blunder of Oldmixon, which Smith has incautiously copied. Barclay, as we have seen, was appointed governor for life in 1683; he did not die till 1690: and from a document preserved by Smith himself (p. 196) it appears that Barclay in 1688, as governor of East Jersey, subscribed an agreement of partition between it and West Jersey.

† Scot, 24. 27. 35. 38. 45. 49. 101. 217. Oldmixon, i. 145. S. Smith, 106, 107, 181, 2. The convulsions that preceded the assassination of De Witt and the triumph of the Prince of Orange in Holland, drove many respectable Dutch families from their native land. Most of these exiles retired to North America. Sonmans, a member of the States General, had proceeded to England with this view, when he was overtaken by the sanguinary fury of the Orange faction, and murdered by their emissaries as he was riding with Robert Barclay, the quaker, in the neighborhood of London. His family, however, finally reached New Jersey. S. Smith, 425.

* This year the assembly of East Jersey, convened at Perth Amboy, granted a tax of a penny in the pound on estates to enable the governor of New York to repel a threatened invasion, "because the king had instructed him to call on other provinces for aid in case he was invaded." State Papers apud Chalmers, 629.

† Sir John Hawles and Sir Crosswell Levinz were the lawyers consulted on this occasion. The opinion they delivered was "that no customs could be imposed on the people of the Jerseys, otherwise than by act of parliament or their own assemblies."

‡ Obedience was refused by a considerable party to one governor, because it was doubted if a majority of the proprietaries had concurred in his nomination; to another, because it was denied that his appointment had been ratified by the

compel the planters duly to fulfil whatever engagements they might make with the company. He was further instructed to cause a law to be passed for restraining inhuman severity to slaves, and attaching a capital punishment to the wilful murder of them; and to take every means in his power to promote the conversion of these unhappy persons to the christian faith. All printing was prohibited in the province without a license from the governor. In all law-suits where the sum in dependence exceeded an hundred pounds, an appeal was admitted from the provincial courts to the governor and council: and when the sum exceeded two hundred pounds, a further appeal was competent to the privy council of England.

The instructions to Lord Cornbury contain reiterated intimations of the queen's sincere desire to promote peace, tranquillity and contentment, among her American subjects; but this desire accorded as ill with the disposition and qualifications of the individual to whom she remitted its accomplishment, as her anxiety to mitigate the evils of slavery will be thought to do with her earnest endeavor to diffuse this mischievous institution more widely in her dominions. Of the character and conduct of Lord Cornbury we have already seen a specimen in the history of New York. If the people of New Jersey had less reason to complain of him, it was only because his avocations at New York compelled him generally to delegate his functions in the other province to a deputy; and because the votaries of his favorite institution, the church of England, were too few in New Jersey, and perhaps too honest and unambitious, to afford him the materials of a faction whose instrumentality he might employ in oppressing and plundering the rest of the community. His distinguished name and rank, his near relationship to the queen, and the advantage he derived from appearing as the substitute of a government which had become universally unpopular, gave him at first an influence with the people of New Jersey, which a man of greater virtue might have rendered highly conducive to their felicity, and a man of greater ability might have improved to the subjugation of their spirit, and the diminution of their liberty. But all the illusions that attended his outset among them were speedily dispelled by acquaintance with his character, and experience of his administration. From the period of his appointment till his deprivation of office, the history of New Jersey consists of little else than a detail of the miserable squabbles in which he involved himself with the colonial assemblies; and a picture of the spirit and resolution with which they resisted his arbitrary violence, condemned his partial distribution of justice, and exposed his fraudulent misapplication of the public money. After repeated complaints, the queen was compelled to sacrifice him to the universal indignation which he had provoked; but not till he had very effectually, though most unintentionally, contributed, by a wholesome discipline, to awaken and fortify a vigorous and vigilant spirit of liberty, in two of the colonies which were most immediately subjected to the influence of the crown. He was superseded, in 1709, by Lord Lovelace, who was at the same time appointed his successor in the government of New York.*

The attractions which the neighboring province of Pennsylvania presented to the English quakers, and the cessation which the British revolution produced of the severities that had driven so many protestant dissenters from both England and Scotland, undoubtedly prevented the population of New Jersey from advancing with the rapidity which its increase at one period seemed to betoken. Yet, at the close of the seventeenth century, the province is said to have contained twenty thousand inhabitants, of whom twelve thousand belonged to East, and eight thousand to West Jersey.† It is more probable that the total population amounted to about fifteen thousand persons. The great bulk of them were quakers, presbyterians, and anabaptists. The militia of East Jersey amounted, at this period, to 1,400 men. There were two church of England ministers in the province; but their followers were not sufficiently numerous and wealthy to provide them with churches. New Jersey is said to have witnessed an unusually long subsistence of varieties of national

character among its inhabitants. Patriotic attachment and mutual convenience had generally induced the emigrants from different countries to settle in distinct bodies; a circumstance which strongly promoted among them the preservation of their peculiar national manners and customs. Kahn, the traveller, has preserved a very agreeable picture of the manners and habits of his countrymen, the early Swedish colonists of New Jersey and Delaware. They seem to have been less tenacious of their national peculiarities than the Dutch, and to have copied very early the manners of the English. Notwithstanding some symptoms of a turbulent and refractory disposition which were evinced by a portion of the East Jersey population during the subsistence of the proprietary government, a much more reasonable and moderate temper seems to have generally characterised the people of both parts of the united province; whereof a strong testimony is afforded in the harmony that attended their union by the act of the crown in 1702, and which even the policy of such a promoter of discord as Lord Cornbury was unable to disturb. Though separated from each other by differences of religious denomination, the inhabitants of the eastern and western territories were strongly assimilated by the habits of industry and frugality peculiar to the national character of the Scotch, and the sectarian discipline of the quakers; and the prevalence of these habits, doubtless, contributed to maintain tranquillity and harmony among the several races of people. Yet they were always distinguished by the atadiness and ardor of their attachment to liberty, and a promptitude to assert those generous principles which had been incorporated with the first foundation of political society in New Jersey. It is disagreeable to remember, that this manly appreciation of their own rights was not always accompanied with a proportionate consideration of the rights of others. Negro slavery was established in New Jersey; though at what precise period, or by what class of the planters, it was first introduced, I have not been able to ascertain. In spite of the royal patronage which we have beheld this baneful system receive, it never attained more than a very insignificant extent of prevalence throughout the territory. Even the quakers in this province, as well as in Pennsylvania, became proprietors of slaves; but their treatment of them was always distinguished by a humanity that rendered slavery little else than a name; and so early as the year 1696, the quakers of New Jersey united with their brethren in Pennsylvania in recommending to the members of their own sect to desist from the employment, or at least from the farther importation, of slaves. This interesting subject will demand more particular consideration in the history of Pennsylvania.

New Jersey had been for some time in possession of an increasing trade; but of its extent at this period no accurate estimate can be formed. Its exports consisted of agricultural produce (including rice), with which it supplied the West India islands; furs, skins, and a little tobacco for the English market; and oil, fish, and other provisions, which were sent to Spain, Portugal, and the Canary Isles. Blome, whose account of the American provinces was published in 1686, says, that the town of Burlington even then gave promise of becoming a place of considerable trade. The stateliness of the public edifices, and the comfort and elegance of the private dwellings that composed this town, are highly commended by a writer whose account of the province was published about ten years later than the work of Blome. It possessed already a thriving manufactory of linen and woollen cloth. [24] This manufacture, which was also introduced into Pennsylvania by some of the earliest colonists of this province, began so soon to excite the jealousy of the parent state, that in the year 1699 an act of parliament was passed prohibiting the exportation of wool and woollen manufactures from the American colonies, under a penalty of five hundred pounds for each offence, in addition to the forfeiture of the ship and cargo.

It is alleged by some writers, that, till a very late period, the inhabitants of New Jersey evinced a general neglect of education, and indifference to all improvement in the arts of life, and particularly in their system of agricultural labor. This reproach is said to have been more especially merited by the descendants of the Dutch settlers. Yet the college of Princeton was founded so early as the year 1738; the people have always enjoyed a high reputation for piety, industry, economy, and good morals; and no community, even in North America, has witnessed a wider diffusion, among all classes of its inhabitants, of the comforts and conveniences of life. It has been noted as a singular peculiarity in their manners, that women in this state

have always engrossed a considerable share in the practice of the medical art, and, except in cases of great difficulty and importance, have been the only physicians whom the inhabitants have had recourse to.*

It was a fortunate circumstance for the inhabitants of this province, that the Indian tribes in their neighborhood were far from numerous, and were almost always willing to cultivate a friendly relation with the Europeans. The gravity, simplicity, and courtesy of quaker manners, seem to have been particularly acceptable to these savages. An historian of New Jersey has preserved an account of a visit paid by an old Indian king to the inhabitants of Burlington, in the year 1692. Being attacked with a mortal disorder, the old man sent for the heir of his authority, and delivered to him a charge replete with prudent and reasonable maxims. Thomas Budd, a quaker, and one of the proprietaries of the province, being present on this solemn occasion, "took the opportunity to remark, that there was a great God who created all things; that he gave man an understanding of what was good and bad; and after this life rewarded the good with blessings, and the bad according to their doings. The king answered, It is very true, it is so; there are two ways, a broad and a strait way; there are two paths, a broad and a strait path; the worst and the greatest number go in the broad, the best and fewest in the strait path." This king dying soon afterwards, was attended to his grave, in the quakers' burial-place in Burlington, with solemnity, by the Indians in their manner, and with great respect by many of the English settlers.

In the year 1695, the governor's salary in East Jersey was 150*l*.; in West Jersey 200*l*. In 1704, when these two provinces had been united into one state, a bill was passed for raising by tax 2000*l*. per annum for the support of government: but it does not appear what proportion of this sum was allotted to the governor.

BOOK VII. PENNSYLVANIA AND DELAWARE. CHAPTER I.

Birth and Character of William Penn—He solicits a Grant of American Territory from Charles the Second—Charter of Pennsylvania—Object and Meaning of the Clauses peculiar to this Charter—English and American Opinions thereon—Penn's Efforts to people his Territories—Emigration of Quakers to the Province—Letter from Penn to the Indians—Penn's first Frame of Government for the Province—Grant of Delaware by the Duke of York to Penn—who sails for America—his joyful reception there—Numerous Emigrations to the Province—First Legislative Assembly—Pennsylvania and Delaware united—Controversy with Lord Baltimore—Treaty with the Indians—Second Assembly—new Frame of Government adopted—Philadelphia founded—Penn's Return to England—and Farewell to his People.

WILLIAM PENN, so renowned as a patriarch and champion of the quakers, and a founder of civilized society in North America, was the son of that naval commander who, under the protectorate of Cromwell, enlarged the British dominions by the conquest of Jamaica. This was the first colony which had been acquired by the English arms. New York was the next: for Acadia, though conquered in the interim by Cromwell's forces, did not then become an English settlement, and was surrendered by Charles the Second, soon after his restoration. It is another example of the strange concatenation of human affairs, that the second instance of the acquisition of a colony by the British arms, should have been the means of introducing the son of the first conqueror, as a quaker colonist and a preacher of peace, in America.

His father, who afterwards attained the dignity of knighthood, and the station of an admiral, was the descendant of a respectable English family. Devoting himself to the naval service of his country in the commencement of the civil wars, he embraced the cause of the parliament, and subsequently adhered to the fortunes of Cromwell. From an inferior rank in the service of these authorities, he was promoted to a dignified and important command, and enjoyed a considerable degree of favor with the Protector till the failure of the expedition which he conducted against St. Domingo. It is asserted very decidedly by some historians, and especially by all the quaker writers, that this disaster was occasioned by the fault of Venables, who

* S. Smith, 275. 352. "I confess," says Oldmixon in the 2d edition of his work, "it gives me a great deal of pain in writing this history, to see what sort of governors I meet with in the plantations."

† Warden's estimate of the population is much lower. He says (il. 42), that until the peace of Utrecht in 1713, the province never possessed more than 16,000 inhabitants. But his account of this province evinces great negligence and inaccuracy. Holmes (il. 45) reports the population to have amounted to 15,000 in 1701.

* Warden, il. 50. Whether this usage was the effect or the cause of the remarkable healthiness of the people of New Jersey, will admit of a doubt. But it may be regarded as the symptom of a remarkable degree of respect for the female sex. Of this sentiment another very singular testimony was afforded even so late as the commencement of the nineteenth century, by a law which extended the elective franchise in New Jersey to women. The New Jersey women, however, showed themselves worthy of the respect of their countrymen, by generally declining to avail themselves of this preposterous proof of it.

commanded the land forces, and could not fairly be attributed to Admiral Penn: but Cromwell, who understood military affairs better than those writers can be supposed to have done, was so far from acquitting the admiral of blame, that he imprisoned him in the Tower, and never afterwards intrusted him with any public employ. This circumstance, perhaps, contributed to the favor which he enjoyed at court after the Restoration; when he scrupled not to accept honor and employment from a government that stigmatized the service in which he had been previously engaged, by the insults it heaped on the memory of Blake.* It is alleged by Bishop Burnet, that he obtained the friendship of the Duke of York, with whom he commanded at sea in the Dutch war of 1665, by enabling him to avoid a renewed action with the enemy's fleet, without having seemed to decline it. Other writers, and especially those who have embraced the tenets, or felt themselves interested in the fame of his son, have asserted that the admiral owed his favor with the king and the duke to no other recommendations than those of his eminent valor and abilities. He was impeached, in 1668, by the House of Commons, for embezzling prize money; but, from some unexplained circumstance, the impeachment was permitted to drop.

Whatever was the cause of the court favor which he enjoyed, it was so considerable as to authorize the most ambitious hopes of the advancement of his son, and proportionally to embitter his disappointment at beholding that son embrace a profession of faith which subjected him not only to official disability, but to the severity of penal law, the derision of courtiers, and the displeasure of the great. Young Penn's predilection for the quakers, first excited by the discourses of one of their itinerant preachers, was manifested so early, and with so much warmth, as to occasion his expulsion from the university of Oxford at the age of sixteen. His father endeavored to prevail with him to abandon principles and manners so ill calculated to promote his worldly grandeur; and, finding his arguments ineffectual, resorted to blows, and even banished him from his home, with no better effect. Along with the peculiarities of quakerism, the young convert had received the first profound impression he had ever experienced of the truth and importance of Christianity; and both were for ever inseparably blended together in his mind. The treatment he received from his father, tended to fortify his conviction that quakerism was a revival of that pure and primitive Christianity which was fated to occasion the division of households, and the dissolution of the strongest ties of natural affection. The admiral, at length, devised a method of sapping the principles which he could not overthrow; and, for this purpose, sent his son to travel, with some young men of quality, in France, then the gayest and most licentious country of Europe. This device, which reflects little credit on the purity of that natural affection by which it was suggested, was attended with apparent success. Quakerism and Christianity were checked alike, for a time, in the mind of Penn, who returned to his gratified father with the manners of an elegant gentleman, and the sentiments of a man of pleasure.† But, having repaired, in the year 1666, to Ireland, to inspect an estate that belonged to his father in this country, it was here again his fate to meet with the same itinerant preacher who had impressed his mind so powerfully ten years before, at Oxford. His former sentiments were now revived, with deeper conviction and increased zeal and energy; and quickly produced a public, solemn,

and resolute expression of his adherence to the tenets and usages of the quakers. In vain were his father's instances once more repeated, and the temporal dignities which seemed only to wait his acceptance pressed with fond and pathetic earnestness on his regard. It was even in vain that the admiral, in despair, restricted his solicitation to such a slender compliance with the usages of the world, as that his son should uncover his head in the presence of the King, the Duke of York, and his parents. Penn's eye was now elevated to the contemplation of objects so glorious, that the lustre of earthly dignities grew dim before them; and his resolution (fortified by an early experience of imprisonment, and other legal austerities) was wound up to such a pitch of firmness and intensity, that he refused to lay even a single grain of incense on what he deemed an unhallowed altar of human arrogance and vanity. He now devoted all the large resources of his capacity to the defence and propagation of the quaker tenets, and sacrificed his temporal ease and enjoyment to the illustration of the quaker virtues,—with a success that has gained for him a renown more illustrious and imperishable than the ambition of his father ever ventured to hope, or the utmost favor of his sovereign could have been able to confer. It would not be easy to figure a more interesting career than is exhibited in the greater portion of his subsequent life. He travelled over many parts of Europe, and even extended his personal labors to America: and every where, from the courts of German princes to the encampments of Indian savages, we find him overcoming evil by good, and disarming the wrath of man by gentleness, patience, and faith. In his exterior appearance and address, there were combined, in an unusual degree, a venerable dignity and gravity of aspect, with a frank cheerful simplicity of manner, and a style of expression fraught with plainness, vigor, and good humor. His face was a very uncommon one, and its lineaments, though by no means fine, were far from unpleasing, and derived from their peculiarity something impressive and memorable. With the general comeliness which his frame attained as he advanced in years, his countenance expanded to a considerable dimension; and while his eye expressed considerate thought, and strength of understanding, the amplitude and regularity of the rest of his features seemed to indicate a habitual tranquillity of spirit. A mind so contemplative, and a life so active; such a mixture of mildness and resolution; of patience and energy; of industry and genius; of lofty piety and profound sagacity, have rarely been exemplified in the records of human character. The most pious and the most voluminous, he was also, next to Robert Barclay, the most learned and ingenious writer in defence of quakerism; and, at the same time, next to George Fox, the most indefatigable minister that the quakers have ever possessed. He contrived to exhibit at once the active and passive virtues suitable to a champion and a confessor of quakerism; and the same prisons that were the scene of his patient suffering for the rights of his brethren, were also the scene of his most elaborate literary efforts for their instruction. Among other quaker peculiarities, his writings are distinguished by a tedious prolixity; yet not much more so than the productions of the most celebrated cotemporary authors. They abound with numerous passages replete alike with the finest eloquence and the most forcible reasoning, engaging benevolence, and fervent piety. He was deeply infected with the doctrinal errors of the quakers; yet more deeply imbued with the spirit of the truth than many who profess to hold it devoid of such appendages; and, notwithstanding the tendency of these doctrinal errors to lead those who have thoroughly embraced them into frantic and indecent excesses, there were none of the quaker leaders who contributed more signally than Penn to the establishment of a system of orderly discipline throughout the society. This was a work of such difficulty, and so repugnant to the sentiments of many who regarded discipline as an attempt to control the sovereignty, and obstruct the freedom of spiritual communication, that all the influence of Penn's character and address, and all the weight he derived from his labors and sufferings, were requisite to its success, and barely sufficed to effect it. Except George Fox, no other individual has ever enjoyed so much authority in this society, or realized so completely the character of a patriarch of the quakers. Though his principles excluded him from the official dignities which his father had coveted for him, they did not prevent him from attaining a remarkable degree of favor and consideration, both with Charles the Second and his successor; which he improved, to the utmost of his power, for the relief of the suffering members of the

quaker society. Whatever were the services of the admiral, the claim which they were thought to infer was extended to his son; nor was its efficacy impaired by his visible influence over a numerous body of men, whose absolute renunciation of the rights of resistance and self-defence could not fail to interest the regards of arbitrary princes.

There exists, in all mankind, a propensity to unbounded admiration, arising from an indistinct glimpse and faint remaining trace of that image of infinite majesty and purity with which their existence connects them, and to which their nature once enjoyed a more ample conformity than it has been able to retain. We may consider either as the expression of this sentiment, or the apology for indulging it, that anxiety to claim the praise of faultless perfection for the objects of our esteem, which may truly be thought to indicate a secret consciousness that it is only to excellence above the reach of humanity that our admiration can ever be justly due. This error has never been evinced in a more signal degree than by the biographers of Penn, and the historians of his labors and institutions in America. The unmixd and unmerited encomium which his character and labors have received, originated, no doubt, with the writers of his own religious persuasion; but, so far from being confined to them, it has been even exaggerated by writers of a totally different class, and whose seeming impartiality has contributed, in a remarkable degree, to fortify and propagate the illusion. The quakers have always enjoyed, with some infidel philosophers, a reputation which no other professors of Christianity have been permitted to share; partly because they were accounted the friends of unlimited toleration, and partly from an erroneous idea that their christian name was but a thin mystical covering which veiled the pure and simple light of reason and philosophy from eyes yet too gross to receive it. Refusing to define their doctrinal tenets by a creed, and having already evacuated, by allegorical interpretation, some of their plainest precepts of the gospel, the quakers were expected, by their philosophical panegyrists, to pave the way for a total dissolution of Christianity, by gradually allegorizing the whole of the Scriptures. By the united efforts of these several tributaries to his fame, William Penn has been presented to the eyes of mankind as a character nearly, if not entirely, faultless; as the author of institutions not less admirable for their wisdom than their originality, and not less amply than instantaneously productive of the gratitude and happiness of mankind. [25] How exaggerated is this picture of the merit and the effects of his institutions, will appear but too clearly from the following pages. That the dazzling light with which his character has been invested, was sullied with the specks of mortal imperfection is also a truth which it is more easy than agreeable to demonstrate. But excellence, the more credibly it is represented, is the more effectually recommended to human imitation: and those who may be conscious of such infirmities as William Penn evinced, receive an important lesson when they are taught that these imperfections neither inevitably obstruct, nor satisfactorily apologise for, deficiency of even the most exemplary virtue.

In the commencement of his career, Penn evinced, towards his opponents, an arrogance of disdain, and a coarseness of vituperation, very little consistent with the mildness of quaker manners, or even with common decency and propriety.* It redounds to his credit that he corrected this fault, and graced his wisdom by an address replete with courtesy and kindness. But another change which his disposition appears also to have undergone, presents him in an aspect which it is less agreeable to contemplate. Recommended to Charles the Second and his successor, by a hereditary claim of regard, by the principles of passive obedience, which, as a quaker, he professed, and as a writer he contributed widely to disseminate, and by the willingness with which he and his fellow sectaries alone, of all the British protestants, recognized the royal prerogative of suspending laws, he was admitted to a degree of favor and intimacy with these perfidious and tyrannical princes, which laid a dangerous snare for the integrity

* In alluding to the history and character of his father, William Penn seems to have felt at once a natural sympathy with his republican honors, and an unwillingness to have him considered an associate of republicans, and antagonist of royalty. "From a lieutenant," says his son, "he passed through all the eminent offices of sea employment, and arrived to that of general about the thirtieth year of his age; in a time full of the biggest sea actions that any history mentions; and when neither bribes nor alliance, favor nor affection, but ability only could promote." He adds, however,—"He was engaged both under the parliament and king; but not as an actor in the domestic troubles; his compass always steering him to eye a national concern, and not intestine wars. His service, therefore, being wholly foreign, he may be truly said to serve his country, rather than either of these interests, so far as they were distinct from each other." Proud's Hist. of Pennsylvania, i. 21, 22. Oldmixon thus characterizes the admiral—"He was a strong Independent, and so continued till the Restoration; when finding religion and liberty at the mercy of their enemies, he very quickly made his peace with King Charles and the Duke of York." Second edition, i. 296.

† To reconcile this well-authenticated conduct of the admiral with the interest which quaker writers have evinced in defence of his reputation, it is necessary to remember, that he is said to have died a convert to quaker principles; and to have prophesied to his son that these principles, calmly and patiently supported, would finally triumph over all opposition. Proud. Clarkson.

* In the prefatory address which he prefixed to his account of his celebrated trial at the Old Bailey, for preaching at a conventicle, he makes use of this very unquaker expression, "Magna Charta is magna — with the recorder of London." Those who are unable to conjecture the ribaldry which I forbear to transcribe, may consult the preface itself, which is reprinted in Howell's State Trials, vol. vi. p. 953. Penn had no objection to a little pleasantry. An adversary of the quakers having published an attack on them, entitled "The Quaker's last Shift found out," Penn answered it by a work bearing the ludicrous title of "Naked Truth needs no Shift," Clarkson's Life of Penn, i. 155.

of his character and the rectitude of his conduct. It was natural that he and his friends, oppressed by the parliamentary enactments, should regard with more favor the arbitrary power which was frequently interposed for their relief, than the constitutional authority which was directed to their molestation. But none of the other protestant dissenters beheld otherwise than with disgust, the boon of a temporary mitigation of legal rigor, which implied a power in the crown subversive of every bulwark of British liberty. As the political agent of his society, cultivating the friendship of a tyrant, and seeking a shelter under his power from the laws, Penn occupied a situation regulated by no ordinary duties or ascertained principles;* and becoming gradually familiarized with arbitrary power, he scrupled not to beseech its interposition in the behalf of his own private concerns, and to employ, for the enlargement of his American territory, at the expense of the prior right of Lord Baltimore, the same authority which he had accustomed himself to respect as an engine of public good, and religious toleration. Dazzled, rather than corrupted, by royal favor and confidence, he beheld nothing in the character of the princes that reproved his friendship with them, or prevented it from becoming even more intimate and confidential, when their tyrannical designs were already fully developed, their characters unmasked to every other eye, and the hands from which he solicited favors were embued with the blood of men whom he had loved as friends, and revered as the most illustrious characters in England. While as yet the struggle between the popular leaders and the abettors of arbitrary power had not terminated in favor of the crown, Penn appeared to participate in the sentiments that were cherished by the friends of liberty. He addressed his applications for repeal of the penal laws against dissenters to the House of Commons; he attached himself to Algernon Sidney, and endeavored to promote his election in a contest with a court candidate for the borough of Guildford; and we have seen how he concurred in the magnanimous vindication of the rights of West Jersey against the encroachments of the Duke of York. Yet when the cause of liberty seemed for ever to have sunk beneath the ascendancy of royal prerogative, he applied to the crown for the relief which he had already practically recognized as the province of the parliament; he beheld his friend Sidney butchered on the scaffold without any interruption of cordiality between himself and the court; and when James the Second committed a far greater outrage on the rights of Magdalen college of Oxford than the encroachment he had attempted on the liberties of New Jersey, Penn's advice to the fellows of the college was to appease the king by concessions for their past conduct, which, at the same time, he acknowledged to have been honorable and praiseworthy. Nay, as if to render the change of his disposition still more eminently conspicuous, he concurred with the other proprietaries of East Jersey in tamely surrendering the liberties of this province to the same prince, against whom, when supported by the spirit of better times, he had so strenuously defended the liberties of its sister colony. Penn was present at the execution of Mrs. Gaunt, an aged lady, renowned for her piety and charity, who was burnt alive for having given shelter to a person in distress, whom she knew not at the time to have been a fugitive from the rebel army of the Duke of Monmouth; and at the execution of Alderman Cornish, who was hanged before the door of his own house, for a pretended treason, of which nobody believed him to be guilty. The only sentiment that he is reported to have expressed, on this occasion, was that "the king was greatly to be pitied for the evil counsels that hurried him into so much effusion of blood." When it is considered that, after all this, Penn's eyes were not opened† to the real character of James, and, on the contrary, his friendship with the barbarous tyrant continued to subsist, and even to increase, till the very last; it seems by no means surprising that his conten-

* That Penn did not acknowledge the same duties, as a political character, which he prescribed to himself as a quaker, appears from his withdrawing from a state warrant that was issued for his imprisonment on a political charge by King William (Proud, i. 348-350.)—an evasion which he never stooped to, when he was persecuted for his religious practices.

† He published a book in favor of the king's attempts to establish toleration, even after James had so far disclosed his real views as to have thrust papists into the government of the university of Oxford. He had recently before undertaken a secret embassy from the king to the Prince of Orange, in the hope of prevailing with the prince to give his sanction to the measures in behalf of toleration. Clarkson, i. 474, 509; ff. 5. Though unable to discern the designs of the king, he had not always been equally insensible to the dangers of popery; and in the days of his patriotic fervour, had written a pamphlet to animate the national rage against the pretended papish plot. Ibid. i. 216.

poraries should have generally regarded him as a secret abettor of all the monarch's designs for the establishment of popery and the destruction of liberty. It was perhaps fortunate for his fame that the public displeasure vented itself in this injustice; [26] the detection of which has contributed to shelter him even from the milder but more merited censure of an infatuated credulity, fortified by the vanity of supposing that he would ultimately render the royal authority entirely subversive to the accomplishment of his own religious and philanthropic views.

The character of William Penn has not escaped the charge of ambition*—a charge which admits of such variety of signification, that perhaps no human being was ever absolutely exempt from it. Assuredly, he was neither conscious nor susceptible of that vile and vulgar ambition that courts a personal distinction and elevation derived from the depression and impoverishment of mankind. Of the desire to derive a reflected lustre from the happiness and improvement which others might owe to him, it is neither so easy nor so desirable to absolve him. Nor, perhaps, was he wholly exempt from the influence of a temptation which this refined ambition is very apt to beget—the desire of magnifying and extending the power by which such benefits might continue to be conferred by himself and his posterity. William Penn, among the quakers, and that no less estimable man, John Wesley, among the methodists, have not been the only benefactors of the human race, who, confident of their good intentions, and habituated to power, have seemed to covet it somewhat too eagerly as a peculiarly efficient instrument of human welfare. But it is time to proceed from these prefatory observations on the character of this illustrious man, to a consideration of that portion of his life, which is identified with the rise of Pennsylvania and the history of Delaware.

The circumstances that first attracted the attention of Penn to the colonization of North America, have already been unfolded in the history of New Jersey. While he was engaged with his quaker associates in administering the government of that territory, he received such information of the fertility and resources of the country situated to the westward of the Delaware, as inspired him with the desire of acquiring a separate estate in this quarter. For this purpose he presented a petition to Charles the Second, [1689] stating his relationship to the deceased admiral, and his claim for a debt incurred by the crown to his father, when Shaftesbury's memorable device was adopted, of shutting the exchequer; soliciting, on these accounts, a grant of land to the northward of Maryland, and westward of the Delaware; and adding, that by his interest with the quakers, he should be able to colonize a province, which might, in time, not only extinguish his claims, but enlarge the British empire, augment its trade, and promote the glory of God by the civilization and conversion of the Indian tribes† This petition was referred to the Duke of York and Lord Baltimore, that they might report how far its object was compatible with their prior investitures. Both signified their acquiescence in Penn's demand, provided his patent should be so worded as to preclude any encroachment on their territories; and the Duke of York added his recommendation of the petition to the favor of the crown. Successful thus far, Penn transcribed from the charter of Maryland, the sketch of a patent in his own favor; but the attorney-general, Jones, to whose opinion it was remitted, declared, that certain of the clauses were "not agreeable to the laws here, though they are in Lord Baltimore's patent," and, in particular, pronounced that the exemption from British taxation, which Penn had proposed to confer on his colony, was utterly illegal. Compton, Bishop of London, at the same time, understanding that Penn, in soliciting his patent, had described himself as the head of the quakers, interposed in the proceedings, for the protection of the interests of the church of England. After some discussion of the points that had thus arisen, the committee of plantations requested chief-justice North, [1681] a personage of considerable eminence, both as

* An acute, but very partial writer, has characterised him as "a man of great depth of understanding, attended by equal dissimulation; of extreme interestedness, accompanied with insatiable ambition; and of an address in proportion to all these." Chalmers, 635. Jedaiah Morse, the American geographer, has expressed an opinion equally unfavorable of the character of Penn.

† In a letter to a friend, about the same time, he declares his purpose in the acquisition of American territory to have been "so to serve the truth and people of the Lord, that an example may be set to the nations;" adding, "there may be room there, though not here, for such an holy experiment." Proud, i. 169.

a statesman and a lawyer, to undertake the revision of the patent, and to provide, by fit clauses, for the reservation of the king's sovereignty, and the observance of acts of parliament. With his assistance, there was prepared an instrument which received the royal confirmation, and afterwards acquired so much celebrity as the charter of Pennsylvania.*

By this charter, which professed to be granted in consideration of "the merits of the father, and the good purposes of the son," there was conferred on William Penn, and his heirs and assigns, that vast region bounded on the east by the river Delaware; extending westward five degrees of longitude; stretching to the north from twelve miles northward of Newcastle, (in the Delaware territory) to the forty-third degree of latitude; limited on the south by a circle of twelve miles drawn round Newcastle to the beginning of the fortieth degree of latitude. Penn was constituted the absolute proprietary of the whole of this territory, which was erected into a province by the name of Pennsylvania,† and was to be held in free and common socage by fealty only, paying two bear skins annually, and one-fifth of all the gold and silver that might be discovered to the king. He was empowered to make laws, with the advice and assent of the freemen of the territory assembled, for the imposition of taxes and other public uses, but always in conformity to the jurisprudence of England; to appoint judges and other officers; and to pardon and relieve, except in the cases of wilful murder and high treason. In these cases, reprieve might be granted only till the signification of the pleasure of the king, to whom there was also reserved the privilege of receiving appeals. The distribution of property, and the punishment of felonies, were to be regulated by the laws of England, until different ordinances should be enacted by the proprietary and freemen. Duplicates of all the provincial laws were to be transmitted to the privy council, within five years after they were passed; and if not declared void by the council within six months after transmission, they were to be considered as having been approved of, and to become valid ordinances. That the colony might increase by resort of people, liberty was given to English subjects (those only excepted who should be specially forbidden) to remove to and settle in Pennsylvania; and thence to import the productions of the province into England, "but into no other country whatsoever," and to re-export them, within one year, paying the same duties as other subjects, and observing the acts of navigation. The proprietary was empowered to divide the province into towns, hundreds, and counties; to erect and incorporate towns into boroughs, and boroughs into cities; and to constitute ports for the convenience of commerce, to which the officers of the customs were to have free admission. The freemen in assembly were empowered to assess reasonable duties on the commodities loaded or unloaded in the harbors of the colony; and these duties were granted to Penn, with a reservation, however, to the crown of such customs as then were, or in future might be, imposed by act of parliament. He was to appoint, from time to time, an agent to reside in or near London, to answer for any misdemeanor he might commit against the laws of trade and navigation; and, in case of such misdemeanor, he was to make satisfaction within a year; in the default of which the king was to seize the government of the province, and retain it till due satisfaction were made. He was not to maintain correspondence with any king or power at war, nor to make war against any king or power in amity, with England. In case of incursion by neighboring barbarians, or by pirates or robbers, he had power to levy, muster, and train to arms all the inhabitants of the province, and to act as their captain-general, and to make war on and pursue the invaders. He was enabled to alienate the soil to the colonists, who might hold their lands under

* Oldmixon, i. 149, 159. Proud, i. 169—171. Chalmers, 635, 636. Dillwyn (see note 12.) apud Winterbotham, ii. 299. Both Oldmixon (who was a personal friend of Penn) and Mr. Clarkson have asserted that Penn's efforts to obtain his charter were greatly obstructed by his profession of quakerism. Of this I can find no evidence at all. Penn himself, writing to the lords of trade in 1683, says, "I return my most humble thanks for your former favors in the passing of my patent, and pray God reward you." Chalmers, 666.

† Penn's account of this denomination is creditable to his modesty. Finding that the king proposed that the name of Penn should form a part of the appellation of the province, he requested leave to decline an honor that might be imputed to his own vanity, and proposed the name of New Wales, which was opposed by the under secretary of state, who was a Welshman. Penn then suggested Sylvania, on account of its woody surface; but the king declared that the nomination belonged to him, and that in honor of Admiral Penn, the last suggested name should be enlarged into Pennsylvania. Clarkson, i. 279.

his grants, notwithstanding the English statute prohibiting such subinfeudations. It was stipulated by the king for himself and his successors, "that no custom or other contribution shall be levied on the inhabitants or their estates, unless by the consent of the proprietary, or governor and assembly, or by act of parliament in England." It was provided (in compliance with the desire of Bishop Compton) that if any of the inhabitants, to the number of twenty, should signify their desire to the Bishop of London to have a preacher sent to them, the preacher so appointed by that dignitary should be allowed to reside and perform his functions without denial or molestation. If any doubt should arise with regard to the true construction of the charter, it was commanded that an interpretation favorable to the proprietary should always be made; with the exclusion, however, of any thing that might derogate from the allegiance due to the crown.*

Such is the substance of a grant on which was established the fabric of the Pennsylvanian government and laws, so renowned for their wisdom, their moderation, and the excellence of their provisions in favor of liberty. The cautious stipulations for guarding and ascertaining the British ascendancy, by which this charter was distinguished from all preceding patents, were manifestly the offspring of the disputes in which the court had been for some time engaged with the colony of Massachusetts. There, the provincial government had deemed the acts of navigation inoperative within its jurisdiction, till they were legalized by its own ordinance. But the immediate and uninterrupted observance of them in Pennsylvania, was enforced by the stipulated penalty of a forfeiture of the charter. Laws had been passed in Massachusetts for the coining of money and other purposes, which were deemed inconsistent with the prerogative of the sovereign state. For the prevention of similar abuse, or, at least, the correction of it, before inveterate prevalence could have time to beget habits of independence, it was required that all the laws of the new province should be regularly transmitted to England for the royal approbation or dissent. The inefficacy of this requisition was very soon made apparent. To obviate the difficulty that had been experienced by the English government in conducting its disputes with the people of Massachusetts, who could never be prevailed with to accredit an agent at the court, without the utmost reluctance and delay, it was now required that a standing agent should be appointed to reside in London, and be responsible for the proceedings of his colonial constituents. But the most remarkable provision, by which this charter was distinguished from all the other American patents, was that which expressly reserved a power of taxation to the British parliament. Of the import of this much agitated clause, very different opinions were entertained from the first, by the lawyers and statesmen of England, and the colonists of Pennsylvania. In England, while it was denied that the novel introduction of such a clause into the charter of this province afforded to any of the other colonies an argument against parliamentary taxation, it was with more appearance of reason maintained that its actual insertion in this charter precluded even the possibility of an honest pretension to such immunity on the part of the Pennsylvanians. Of the very opposite ideas, however, that were entertained on this subject by the colonists, an account was rendered about a century afterwards by Dr. Franklin in his celebrated examination, as the representative of America, at the bar of the British House of Commons. Being asked, how the Pennsylvanians could reconcile a pretence to be exempted from taxation, with the express words of a clause, reserving to parliament the privilege of imposing this burden upon them; he answered, "They understand it thus:—By the same charter and otherwise, they are entitled to all the privileges and liberties of Englishmen. They find in the great charters, and in the petition and declaration of rights, that one of the privileges of English subjects is, that they are not

taxed but by their common consent; they have, therefore, relied upon it from the first settlement of the province, that the parliament never would nor could, by color of that clause in the charter, tax them till it had qualified itself to exercise such right, by admitting representatives from the people to be taxed." That this reasoning was not (as some have suggested) the mere production of Franklin's own ingenuity, nor even the immediate growth of the era of American independence; but that it expressed the opinion of the earliest race of the Pennsylvanian settlers, is a point susceptible of the clearest demonstration. From the official correspondence between the royal functionaries in America and the court of London, it appears that before the Pennsylvanians had existed as a people for seventeen years, the English ministry were apprised of the general prevalence of these sentiments among them; and in the work of a contemporary historian of this province, who derived his ideas with regard to it from the communication of Penn himself, the right of the colonists to elect representatives to the British parliament is distinctly asserted [27] It was only in the year preceding the date of the Pennsylvanian charter, that Penn, in reclaiming for the colonists of New Jersey the exclusive right of imposing taxes on themselves, had protested that no reasonable men would emigrate from England to a country where this right was not to be enjoyed; and, as the argument which he maintained on that occasion, was founded entirely on general principles, and what he regarded as the constitutional rights inseparable from the character of English subjects, without reference to any peculiarities in the charter of New Jersey, it seems highly improbable that he believed the clauses peculiar to his own charter to admit of an interpretation that would have placed his favorite province beyond the pale of the English constitution, and deterred reasonable men from resorting to it. We must either believe him to have entertained the same opinion on this point, that appears to have been prevalent among the colonists of his territory, or adopt the illiberal supposition of an historian,* who charges him with making concessions, in theory, which he never intended to substantiate in practice.

Having obtained this charter, to which the king gave additional authority, by a royal letter, commanding all intending planters in the new province to render due obedience to the proprietary, the next care of Penn was to attract a population to his vacant territory. To this end, he published an account of the soil and resources of the province, together with advices to those who were inclined to become adventurers, and a sketch of the conditions on which he was willing to deal with them. The advices are almost precisely the same with those which he had previously addressed to the intending emigrants to West Jersey; and enjoin all persons, who were deliberating, to have an eye, above all things, to the providence of God; to balance present inconvenience with future ease and plenty; and to obtain the consent of their near relations, that natural affections might be preserved, and a friendly and profitable correspondence between the two countries maintained. It was intimated to all, who were disposed to become planters, that land would be sold at the price of forty shillings, for a hundred acres, together with a perpetual quit-rent of a shilling. It was required that, in disencumbering the ground of wood, care should be taken to leave one acre of trees for every five acres cleared, and especially to preserve oaks and mulberries, for the construction of ships and the manufacture of silk. It was declared, that no planter would be permitted to overreach or otherwise injure the Indians, or even to avenge, at his own hands, any wrong he might receive from them; but that, in case of disputes between the two races, the adjustment of them should, in every instance, be referred to twelve arbitrators, selected equally from the Europeans and the Indians. The reservation of quit-rents, in addition to the payment of a price, which proved ultimately so fertile a source of discord between the proprietary family and the colonists, was the only feature in this scheme that appeared objectionable to the religious fraternity, of which Penn was a member;† but his influence among them was so

great, and his description of the province so inviting, as more than to outweigh this disagreeable and unexpected requisition. Numerous applications for land were speedily made by persons, chiefly of the quaker persuasion, in London, Liverpool, and especially in Bristol, where one trading association alone became the purchasers of twenty thousand acres of the territory, and prepared for embarking in various branches of commerce related to their acquisition. The prospect thus afforded of an early replenishment of his province, enforced the immediate attention of Penn to the form and fabric of its political constitution; in the composition of which, there could be room for little other labor than the exercise of a judicious selection from the admirable theoretical models, which had employed the pens, and exhausted the invention, of contemporary writers, and the excellent institutions, by which the several proprietaries of American provinces had vied with each other for the approbation of mankind, and the attraction of inhabitants to their vacant territories. In undertaking an employment so congenial to his disposition, as the work of legislation, Penn appears to have been impressed with equal confidence in the resources of his capacity and the rectitude of his intentions, and touched at the same time with a generous sense of the value of those interests that were involved in his labors, and the expanse of liberty and happiness that might result from them. "As my understanding and inclinations," he declared, "have been much directed to observe and reprove mischiefs in government, so it is now put into my power to settle one. For the matters of liberty and privilege, I purpose that which is extraordinary, and leave myself and successors no power of doing mischief, that the will of one man may not hinder the good of a whole country." The liberal institutions that arose shortly after in Pennsylvania, and the happiness of which they were so abundantly productive, attested the sincerity and rewarded the virtue of this magnanimous design; while the partial disappointment which it sustained, and particularly the mischief and dissension that arose from the power that was actually reserved to the proprietary and his successors, forcibly exemplified the infirmity of human purpose, and the fallacy incident to all human expectations.

As several of the purchasers of land, in their eagerness to commence the new settlement, were prepared to embark before Penn had yet completed his legislative composition, it was necessary that they should be previously acquainted with the purport of a work of so much concern to their interests. A rough sketch of its principal features was accordingly prepared and mutually signed by the proprietary and these adventurers, who being now assured of unlimited toleration,* and satisfied with the structure of the political constitutions, no longer hesitated to bid adieu to a scene of tyranny, contention, and persecution, and set sail in quest of freedom and repose for Pennsylvania. Three vessels from London and Bristol carried out these first Pennsylvanian settlers, and along with them, Colonel William Markham, the kinsman and secretary of Penn, who had also appointed him deputy-governor; and certain commissioners who were appointed to confer with the Indians respecting the purchase of their lands, and to endeavor to form with them a league of perpetual peace. These commissioners were solemnly enjoined to treat the Indians with all possible candor, justice, and humanity, and were made the bearers of a letter from Penn to them, accompanied by suitable presents. The Indians were given to understand by the letter of Penn, that the great God and Power who had created all men and commanded them to love and do good to one another, had been pleased to make a connexion between Penn and America; that the king of England had bestowed on him a province there, but that he desired to enjoy it with the goodwill and consent of the Indians; that many evil disposed Europeans, he was aware, had used the Indians very ill, but that he was a person of different disposition, and bore great love and regard to them; that the people he now sent among them were similarly disposed, and wished to live with them as neighbors and friends.

avoided to mingle the acquisition of a private estate with the purpose of making a holy experiment, and setting an example to the nations.

* It detracts not from the wisdom of Penn, but merely from the accuracy of those writers who have deemed originality indispensably requisite to the praise of virtue, that this equitable principle of toleration had been already resorted to in America by Lord Baltimore and the catholics of Maryland, and employed as a politic device by Lord Clarendon and his associates in Carolina, and by Lord Barkley and Sir George Carteret in New Jersey. Mr. Clarkson is the only historian of Penn who has conceded to Lord Baltimore the honor of originating toleration in America.

* Proud, i. 171. 187. Chalmers, 638, 657. "It is remarkable," says Dr. Franklin, in his Historical Review of the Constitution of Pennsylvania, "that such an instrument, penned with all the appearance of candor and simplicity imaginable, and equally agreeable to law and reason, to the claims of the crown and the rights of the subject, should be the growth of an arbitrary court. Perhaps it is no less singular, that the national rights, the authority of the laws, and of the supreme legislature, should have been so carefully attended to and preserved."

† This is a mistake. The Pennsylvanian charter differs from all the others in not communicating an express assurance to the colonists of the rights and character of Englishmen. The reason for this omission is said by Chalmers (p. 639) to have been, that the eminent lawyers, who prepared the charter, considered such declarations as superfluous, and their import sufficiently inferred by law.

* Chalmers,—who, in corroboration of his opinion, remarks that not one of the laws and constitutions, enacted by Penn, or under his auspices, was ever submitted, according to the terms of the charter, to the English court.

† The apology suggested by Mr. Clarkson for this imposition, that "Whereas William Penn held of the king, by a small annual rent, others were obliged to hold of him in the same manner," (Life of Penn, i. 292.) is quite unsatisfactory. It was merely an alms-dutty to the crown, to which Penn was subjected, for the whole province. He would have gained both in character and happiness, if he could have

Markham, at the head of one of these detachments of adventurers, proceeded, on his arrival in America, to take possession of an extensive forest, situated twelve miles northward of Newcastle on the western side of the Delaware, whose waters contributed with other streams of lesser note to the salubrity of the air and the fertility of the soil. As this situation enjoyed the advantages of a settled neighborhood on the south and east, the colonists were not embarrassed with the difficulties which depressed so many of their predecessors in similar pursuits; and, animated with hope and a spirit of steady activity, they set themselves diligently to prepare for the reception of the numerous emigrants who were expected to join them in the following year. Greater hardships were endured by another detachment of the first adventurers, who, arriving later in the season, went on shore at the place where Chester now stands: and the river having suddenly frozen before they could resume their voyage, were constrained to pass the remainder of the winter there. A discovery was now made by Colonel Markham which had a material influence on the future proceedings of Penn, who had hitherto supposed that the whole of the Delaware territory except the settlement of Newcastle and its appendages (occupied by the Duke of York as a dependency of his own province of New York), was really included in the Pennsylvania charter—a supposition which he seems to have entertained with a great deal of satisfaction. For he was aware that this territory already contained a number of Swedish and English settlers; and though doubtless he proposed to people his domain chiefly with quakers, it was far from undesirable to obtain for himself an immediate accession of tributaries, and for his people a social connexion with a race of hardy settlers already inured to colonial life and habits. He knew that Lord Baltimore claimed the allegiance of a number of those settlers whose plantations he supposed to be included within the domain of Pennsylvania, and had instructed Markham to demand from that nobleman a relinquishment of his pretensions. Markham accordingly applied to the proprietary of Maryland, and eagerly accepted his proposal to compare the titles of the two provinces and adjust their boundaries; but discovering very speedily that Penn had in reality no other claim than what might be derived from the confused designation which his charter had given to the limits of his province, and that a literal construction of Lord Baltimore's prior charter, where the limits were indicated with great precision, would evacuate at once the pretensions both of Penn and the Duke of York, he declined all further conference, and acquainted Penn with a discovery that threatened so much obstruction to his views.

In the spring of the following year, [1682] Penn completed and delivered to the world a composition of much thought and labor, entitled "The Frame of the Government of the Province of Pennsylvania." It was introduced by a noble preface containing his own thoughts on the origin, nature, and objects of government; wherein he deduces from various texts of Scripture the derivation of all power from God, the utter unlawfulness of resisting constituted authority, and, in short, "the divine right of government, and that for two ends: first, to terrify evil doers, secondly, to cherish those that do well; which," he continues, "gives government a life beyond corruption, and makes it as durable in the world as good men shall be, so that government seems to me a part of religion itself, a thing sacred in its institution and end." "They weakly err," he afterwards observes, "who think there is no other use of government than correction, which is the coarser part of it." Declining to pronounce any opinion on the comparative merit of the various political models which had been adopted by states or suggested by theorists, and remarking that not one of these had ever been realised without incurring some alteration from the lapse of time or the emergency of circumstances, he advances this position, that "any government is free to the people under it, whatever be the frame, where the laws rule and the people are a party to these laws; and more than this is tyranny, oligarchy, or confusion." "Governments," he insists, "rather depend upon men, than men upon governments. Let men be good and the government cannot be bad. If it be ill, they will cure it. But if men be bad, let the government be never so good, they will endeavor to warp and spoil it to their turn. I know some say, 'Let us have good laws, and no matter for the men that execute them.' But let them consider that though good laws do well, good men do better; for good laws may want good men, and be invaded or abolished by ill men; but good men will

never want good laws nor suffer ill ones.* That, therefore, which makes a good constitution, must keep it; namely, men of wisdom and virtue; qualities that because they descend not with worldly inheritances, must be carefully propagated by a virtuous education of youth." In conclusion he declares that, "We have, with reverence to God and good conscience to men, to the best of our skill contrived and composed the frame of this government to the great end of all government, to support power in reverence with the people, and to secure the people from the abuse of power, that they may be free by their just obedience, and the magistrates honorable for their just administration; for liberty without obedience is confusion, and obedience without liberty is slavery." This production, which will always command respect for its intrinsic merits, excited the greater interest at the time from its being regarded as the political manifesto of the party that had now become the most numerous and powerful among the quakers, and whose ascendancy continued gradually to increase till at length the whole society, by dint of conversion or expulsion, was moulded to a conformity with its opinions. Another party still existed, but was daily diminishing, which regarded with equal aversion the establishment of sectarian discipline, and the recognition of municipal government as a legitimate ordinance. The adherents of this party were willing to forbear from all forcible resistance to human violence; but were no less resolutely bent against any voluntary co-operation with human authority; and reproached the rest of their brethren with degenerating from original quaker principles, and substituting a servile obedience to the dead law without, in place of a holy conformity to the living law within.

By the frame which followed this preface, it was declared that the government of the province should be administered by the proprietary or his deputy as governor, and by the freemen formed into two separate bodies of a provincial council and a general assembly. The council was to be elected by the freemen, and to consist of seventy-two members, of whom twenty-four were annually to retire, and be replaced by the same number of new ones. Here the governor was to preside, invested with no other control than a treble vote. Thus composed, the council was to exercise not only the whole executive power, but the peculiar privilege which had been annexed to the functions of the same state organ in the Carolinian constitutions,† of preparing all the bills that were to be presented to the assembly. Not less than two-thirds of the members of council were necessary to make a quorum; and the consent of two-thirds of such quorum was indispensable in all matters of moment. The general assembly was to consist, the first year, of all the freemen; the next, of two hundred elected by the rest; and afterwards to be augmented in proportion to the increase of population. This body was not permitted to originate laws, but was restricted to a simple assent or negation in passing or rejecting the bills that might be sent to them by the governor and council. They were to present sheriffs and justices of the peace to the governor; naming double the requisite number of persons, for his choice of half. They were to be elected annually; and all elections, whether for the council or the assembly, were to be conducted by ballot. Such was the substance of the charter or frame of government, which was further declared to be incapable of alteration, change, or diminution in any part or clause, without the consent of the proprietary or his heirs, and six parts in seven of the freemen both in the provincial council and general assembly.

The mode of election by ballot, which has since become so general in North America, was first introduced

* How they could refuse to suffer bad laws, under a frame of government that excluded them from a share in legislation, is a difficulty which he has not undertaken to solve, and which, indeed, his general anathema against all resistance to constituted authority renders perfectly insoluble. It is true that he reproaches a government so framed with the character of tyranny; but this reproach merely gives additional sanction to discontent, without giving any to resistance. In order to harmonise his religious with his political creed, we must regard the forms which he deprecates, as essential to the efficacy of the virtues which he exalts with exclusive praise.

† Some of the planters had cooperated with Penn in the composition of the frame.

¶ Penn boasted that his legislative production excelled the performance of Locke: yet here he seems to have copied from it a very illiberal feature; doubtless with some improvement, inasmuch as the Carolinian council, which exercised this restriction of the topics to be discussed by the general assembly, was far less liberally constituted than the council of Pennsylvania. Penn had more occasion to boast the superior excellence than the better fate of these constitutions, which enjoyed even a shorter duration than the project of Locke.

there by the puritans, and subsequently adopted by quaker legislation—by which we have seen it established in New Jersey, and now transferred to Pennsylvania. This latter repetition of the experiment proved very unsatisfactory. The planters soon declared that they felt it repugnant to the spirit of Englishmen, to go muzzled to elections; that they scorned to give their opinions in the dark; that they would do nothing which they durst not own; and that they wished the mode of election to be so constituted as to show that their forebears and their voices agreed together. In consequence of these objections, Penn, perceiving (says Oldmixon) that the perfection of his institutions was not in accordance with the imperfect nature of human beings, consented to assimilate the Pennsylvania to the English mode of election.

To the frame, there was appended a code of forty conditional laws which were said to have been concerted between the proprietary and divers of the planters before their departure from England,* and were to be submitted for confirmation or modification to the first provincial assembly. This code is a production very superior to the constitutional frame, and highly creditable to the sense, the spirit, and the benevolence of its authors. Among other regulations propounded in it, it was declared that the character of freemen of the province should belong to all purchasers or renters of a hundred acres of land; to all servants or bondsmen who at the expiring of their engagements should cultivate the quota of land (fifty acres) allotted to them by law, and to all artificers and other inhabitants or residents who should pay scot and lot to the government; that no public tax should be levied from the people "but by a law for that purpose made," and that whoever should collect or pay taxes not so sanctioned, should be held a public enemy of the province and a betrayer of its liberties: "that all prisoners shall be workhouses;" that a thief should restore twice the value of his theft, and in default of other means adequate to such restitution, should work as a bondsman in prison for the benefit of the party injured; that the lands as well as the personal property of a debtor should be responsible for his obligations, except in the case of his having lawful children, for whose use two-thirds of the landed estate were appointed to be reserved; that all factors and correspondents in the province wronging their employers, should, in addition to complete restitution, pay a surplus amounting to a third of the sum they had unjustly detained; that all dramatic entertainments, games of hazard, sports of cruelty, and whatever else might contribute to promote ferocity of temper or habits of dissipation and irreligion, should be discouraged and punished; and "that all children within this province of the age of twelve years shall be taught some useful trade or skill, to the end none may be idle, but the poor may work to live, and the rich, if they become poor, may not want." This regulation, so congenial to primitive quaker sentiment and to republican spirit and simplicity, was admirably calculated not less to promote fellow-feeling than to secure independence. It contributed to preserve a sense of the natural equality of mankind, by recalling to every man's remembrance his original destination to labor: and while it tended thus to abate the pride and insolence of wealth, it operated no less beneficially to remedy the decay of fortune peculiarly incident to wealthy settlers in a country where the dearness of all kinds of labor rendered idleness a much more expensive condition than in Europe. It was further declared, that no persons should be permitted to hold any office, or to exercise the functions of freemen, but "such as profess faith in Jesus Christ, and are not convicted of ill fame, or unsober and dishonest conversation;" and that all persons acknowledging the one almighty and eternal God to be the creator, upholder, and ruler of the world, and professing to be conscientiously engaged to live peaceably and justly in society, should be wholly exempted from molestation for their more particular opinions and practices, and should never at any time be compelled to frequent or maintain any religious place, ministry, or worship whatever.

* Markham, the kinsman and secretary of Penn, and afterwards governor of the province, has ascribed the greater part of the constitution to the frame itself to the suggestions and importunity of these persons, in opposition to the original intentions of Penn. In a letter to Fletcher, the governor of New York (in May, 1696), Markham says, "I very well know that it [the frame of government] was forced from him by friends, when unless pleased and granted whatever they demanded, they would not have settled his country." State Papers, and Chalmers, 690. It is plain from the preface, that Penn considered a future alteration of the constitutions as far from unlikely.

This composition having been published, the next care of Penn, enforced by his experience of the Duke of York's proceedings in New Jersey, was to obtain, from this prince, an express release of every claim or pretence of jurisdiction over Pennsylvania; nor did the Duke refuse a concession so manifestly just to the son of a man for whose memory he professed the highest regard. It was stronger proof of this regard, and the fruit of much more importunate solicitation, that Penn obtained at the same time, in a grant of the Delaware territory,* whose thriving plantations he had anxiously desired to annex to his immense but uncultivated domains of Pennsylvania. Yielding to the urgency of Penn, and probably swayed in some degree, both by sentiments of friendship, and by indifference about a territory which he held by a defective and uncertain title, and had never been able to render productive of a revenue—the Duke now conveyed to him, by two separate deeds of gift, the town of Newcastle, with a territory of twelve miles around it, together with the tract of land extending southward from it upon the river Delaware to Cape Henlopen. This conveyance included not only the settlements originally formed by the Swedes and afterwards conquered by the Dutch, of which the early history is blended with the annals of New York, and to which Lord Baltimore possessed a claim which he had never been able to render effectual, but a large district which this nobleman's title equally embraced, and his activity and remonstrance had actually reclaimed from Dutch and Swedish occupation. Without adopting the harsh censure of a writer who maintains that this transaction reflected dishonor both on the Duke of York and William Penn, we can hardly fail to regard it as a faulty and ambiguous proceeding, or to regret the proportions in which its attendant blame must be divided between a prince distinguished even among the Stuarts for perfidy and injustice, and a patriarch renowned even among the quakers for humanity and benevolence. The Duke's patents assuredly did not include within his boundaries what he now pretended to convey; and it was only to a part of it that he could transfer even the dubious title arising from occupancy, in opposition to the legal claim of Lord Baltimore†

All things having been now prepared for his own personal presence in America, Penn himself set sail from England to visit his transatlantic territory, in company with a hundred English quakers, who had determined to unite themselves to their friends already removed to that quarter of the world. Arriving on the banks of the Delaware, he beheld with great satisfaction the thriving settlements comprehended in his late acquisition, and the hardy, sober, and laborious race of men by whom they were inhabited. The population of that part of the Delaware territory which he ultimately succeeded in retaining against Lord Baltimore, amounted already to three thousand persons, chiefly Swedes and Dutch;‡ and by them, as well as by the English settlers who were intermixed with them, and by the quakers whom Markham had carried out in the preceding year, the proprietary was received on his arrival with a satisfaction equal to his own, and greeted with the most cordial expressions of respect and good

* Only a month before this favor was granted, Sir John Warden, the Duke's secretary, assigned to Penn a repetition of former refusals of it, and at the same time wrote to Dongan, the governor of New York, cautioning him to beware of the encroachments of Penn, whom he describes as "very intent on his own interest in these parts, as you observe." State Papers, *spud* Chalmers, 660. The effect of the scenes of intrigue and altercation, which his views on the Delaware territory had produced, and seemed likely still further to prolong, is sufficiently visible on the mind of Penn. One of his letters to a friend, at this period, expresses an evident abatement of the fervor of his first impressions of the degree in which his colonial designs might be rendered conducive to spiritual ends. "Surely," he says, "God will come in for a share in this planting work, and that heaven shall leave the lump in time. I do not believe the Lord's providence had run this way towards me, but that he has a heavenly aid and service in it." Clarkson, i. 829.

† Oldmixon, i. 165. 175. Froud, i. 200—2. Chalmers, 643. Once for all, I would observe that, in the course of this history, I have frequently illustrated particular portions of my narrative by citation of various authorities, not one of which accords entirely either with the views of the others or with my own. To explain, in every such instance, how I have been led, from comparison of the whole, to the view that I have adopted, would encumber every chapter of my work with a long series of subsidiary disquisitions. Much of the labor of an honest historian can never be known to his readers.

‡ In one of Penn's letters, the Dutch and Swedish inhabitants of Delaware are thus described:—"They are a plain, strong, industrious people; who have made no great progress in culture; desiring rather to have enough, than plenty or traffic. As they are people proper and strong of body, so they have fine children, and almost every house full." Froud, i. 260, i. The Dutch had one, and the Swedes three meeting-houses for divine worship in the Delaware territory.—ibid.

will. The English rejoiced in their deliverance from the sway of the Duke of York; and the Dutch and Swedes were glad to renounce a connexion that had originated in the conquest first of the one and afterwards of both their races. It was flattering to their importance to be united to a state that seemed then much less likely to overshadow them by superior greatness, than either New York or Maryland: and whatever they might think of the justice of Lord Baltimore's pretensions, or the equity of his administration, it was manifest that his power was unequal to wrest from the Duke of York what had now been granted to the solicitations of William Penn. Proceeding to Newcastle, where the Dutch had a court-house, the proprietary convoked here a meeting of his new subjects; and, after the formalities requisite to ascertain his legal possession of the country, he explained to them the objects of his coming among them, exhorted them to live in sobriety and mutual amity, and renewed the commissions of the existing magistrates. The number of his colonists meanwhile was fast increasing around him. In the course of this year, no fewer than two thousand persons, chiefly quakers, arrived from England on the banks of the Delaware. Many of them were persons of rank and substance, and all were men of some education and great respectability, and with whom devotion to religious liberty had been the principal inducement to forsake their native land. They needed all the influence of this noble principle, to animate them to a brave endurance of the hardships they were compelled to undergo during the rigorous winter that followed their arrival. Their sufferings were mitigated as far as possible by the hospitality of the Swedes; but many of them were compelled to pass the winter in temporary huts or sheds, and the greater number had no better lodging than caves, which they dug for themselves on the banks of the river. Those hardships neither abated their zeal, nor were represented by them in such a formidable light as to repress the ardor of their friends in Europe, who, in the course of the following year, continued, by successive arrivals, to enlarge the population of Delaware and Pennsylvania. A valuable addition, in particular, was derived soon after from a numerous emigration of German quakers, who had been converted to this faith by the preaching of Penn and his associates, and whose well-timed removal from their native land happily enabled them to escape from the desolation of the Palatinate. The eminent piety and virtue by which these German colonists were distinguished in America, formed an agreeable sequel to the happy intervention of Providence by which they were snatched from the desolating rage of a tyrant, and the impending ruin of their country. There arrived also about this time, or shortly after, a number of emigrants from Holland; a country in which Penn had already preached and propagated his doctrines.*

Seeing his people thus gathering in augmenting numbers around him, Penn hastened to bind them together by some common act of social arrangement. Having distributed his territory into six counties, he summoned, at Chester,† the first general assembly, consisting of seventy-two delegates. Here, according to the frame that had been concerted in England, the freemen might have attended in their own persons. But both the sheriffs in their returns, and the inhabitants in petitions which they presented to the proprietary, declared that the fewness of the people, their inexperience in legislation, and the pressing nature of their domestic wants, rendered it inexpedient for them to exercise their privileges; and expressed their desire that the deputies they had chosen might serve both for the provincial council and the general assembly, in the proportions of three out of every county for the former, and nine for the latter of those bodies. In the circumstances of the province, the session of this first assembly was necessarily short; but it was distinguished by proceedings of considerable moment. The proprietary having expressed his approval of the representations that had been conveyed to him, an act of settlement was passed, introducing a corresponding and permanent change into the provincial constitution. With this and a few other

* In this [1682] and the two next succeeding years, arrived ships with passengers or settlers, from London, Bristol, Ireland, Wales, Cheshire, Lancashire, Holland, Germany, &c. to the number of about fifty sail.—Froud, i. 219.

† Penn, resolving to distinguish by a new name the place at which he called his first assembly, said to Thomas Pearson, a quaker, who had accompanied him from England, "Thou hast been the companion of my perils; what wilt thou that I should call this place?" Pearson suggested the name of his own native city of Chester. This friend of Penn was the maternal grandfather of Benjamin West. *West's Life of West*, Part I. p. 2.

modifications, the frame of government that had previously been made public was solemnly recognized and accepted. An act of union was passed, annexing the Delaware territory to the province of Pennsylvania; and the rank of naturalized British subjects was conferred on the Dutch, the Swedes, and all other foreigners within the boundaries of the province and territory. This arrangement, which, at the time, was both the effect and the cause of mutual harmony, unfortunately contained within itself the seeds of future discussion and discontent; for Penn held the Delaware territory, not by a grant from the crown, but by an assignment from the Duke of York; and when the efficacy of such a title, to convey the rights of government, came to be questioned, the people reprobated with resentful blame the wanton rashness, as they deemed it, of building their constitutional rights and privileges on a foundation so precarious. All the laws that had been concerted in England, together with nineteen others, were proposed and enacted by the assembly, which, in three days, closed a session no less remarkable for the importance of its labors, than for the candor and harmony that prevailed among men so diversified by variety of race, habit, and religious opinion. All concurred in expressing gratitude and attachment to the proprietary; the Swedes, in particular, deputed one of their number to assure him, "that they would love, serve, and obey him with all they had, and that this was the best day they had ever seen."

Among the many praiseworthy features of the code of laws that was thus enacted for Pennsylvania and Delaware, we have already remarked the particular wisdom of the provision for educating every native-born colonist to some useful trade or employment. But the points on which this code most justly claims the praise of original excellence and enlightened humanity, are its provisions for the administration of penal law. Nor was there any point on which its regulations have been more efficacious, or more productive of lasting and extensive benefit to mankind. It was reserved for quaker wisdom to discover, and for quaker patience and benevolence to prove, that, in the treatment of criminals, justice and mercy were not inconsistent virtues, nor policy and humanity incompatible objects of pursuit. Only two capital crimes, treason and murder, were recognised by this code; and, in all other cases, the reformation of the offender was esteemed a duty not less imperative than the punishment of the offence. To this end it was enacted, that all prisons should be work-houses, where offenders might be reclaimed, by discipline and instruction, to habits of industry and morality, and political benefit deduced from the performance of christian duty. The institutions that resulted from this benevolent enterprise in legislation, have reflected honor on Pennsylvania, and diffused their advantages extensively in America and Europe. Notwithstanding the strict injunctions in the royal charter, neither the code of laws which was now enacted, nor the alteration and enlargement which it subsequently underwent, was ever submitted to the royal revision.

No sooner was the assembly adjourned, than Penn hastened to Maryland to vindicate that part of its proceedings which was necessarily offensive to Lord Baltimore, and, if possible, effect with this nobleman an amicable adjustment of their respective boundaries. But he seems, from the beginning, to have been aware that such a termination of the dispute was not to be expected; and, notwithstanding all the respect he must have felt for Lord Baltimore's tolerant policy, and the protection which the quakers had experienced from it in Maryland, he plainly regarded him with a suspicion and aptitude to surmise wrong and anticipate resistance, not very creditable to his own candour and moderation; finding matter of evil import even in the demonstrations of honor and respect which he received from his brother proprietary.* Lord Baltimore, relied on the priority and distinctness of his own title; while Penn defended a later and more indistinct grant, on a plea that had been furnished to him by the Committee of Plantations in England—that it had never been intended to confer on Lord Baltimore any other territory but such as was inhabited by savages only, at the date of his charter; and that the language of his charter was therefore inconsistent with its intent, in so far as it seemed to authorise his claim to any part of the ter-

* In an account of their conference, which Penn transmitted to England, he says, "I met the proprietary of Maryland, attended suitably to his character, who took the occasion, by his civilities, to show me the greatness of his power." Froud, i. 1568.

ritory previously colonized by the Swedes or the Dutch. Each of them tenaciously adhered to what, with more or less reason, he considered his own; and neither could suggest any mode of adjustment save a total relinquishment of the other's pretensions. To avoid the necessity of recurring again to this disagreeable controversy, I shall here overlook intervening events to relate, that it was protracted for some years without the slightest approach to mutual accommodation; that King Charles, to whom both parties had complained, vainly endeavored to prevail with the one or the other to yield; and that James the II., soon after his accession to the throne, caused an act of council to be issued for terminating the dispute by dividing the subject matter of it equally between them. By this arrangement, which had more of equitable show than of strict justice, Penn obtained the whole of the Swedish and Dutch settlements, and, in effect, preserved all that he or the Duke of York had ever been in possession of. These districts, annexed, as we have seen, to his original acquisition, received the name of the *Three Lower Counties*, or the *Territories*, in contradistinction to the remainder of the union, which was termed the *Three Upper Counties* or *Province of Pennsylvania*.*

This busy year was not yet to close without an important and memorable scene, in which the character of Penn has shone forth in a very different light from that which his controversy with Lord Baltimore reflects on it. The commissioners who had accompanied the first detachment of emigrants, had, in compliance with their instructions, negotiated a treaty with the neighboring Indian tribes, for the purchase of the lands which the colonists were to occupy, and for the preservation of perpetual friendship and peace. The time appointed for the ratification of this treaty was now arrived; and, at a spot which is now the site of Kensington, one of the suburbs of Philadelphia, the Indian sachems, at the head of their assembled warriors, awaited in arms the approach of a quaker deputation. To this scene William Penn repaired, at the head of an unarmed train of his religious associates, carrying various articles of merchandise, which, on their approach to the sachems, were spread on the ground. Distinguished from his followers by no other external appendage than a sash of blue silk, and holding in his hand a roll of parchment that contained the confirmation of the treaty, Penn exchanged salutations with the Indians, and taking his station under an elm tree,† addressed them through the intervention of an interpreter. He assured them that the Great Spirit who created all men, and beheld the thoughts of every heart, knew with what sincerity he and his people desired to live in friendship and a perpetual commerce of good offices with the Indians. It was not the custom of his friends, he said, to use hostile weapons against their fellow creatures, and for this reason they came to meet the Indians unarmed. Their object was not to do injury, and thus provoke the Great Spirit, but to do good; and in this and every transaction, to consider the advantage of both peoples inseparable, and to proceed with all openness, brotherhood, and love. Having read from the parchment record the conditions of the purchase, and the articles of compact, by which it was agreed that all disputes between the colonists and the Indians should be adjusted by arbitrators mutually chosen, he delivered to the sachems the stipulated price,‡ and farther desired their acceptance, as a friendly gift, of the additional articles of merchandise that were spread before them. He then invited them to consider the land which he had purchased, as common to the two races, and freely to use its resources whenever they might have occasion for them.¶ He added, "that he would not do as the Marylanders did, that is, call

them children or brothers only; for often parents were apt to whip their children too severely, and brothers sometimes would differ: neither would he compare the friendship between him and them to a chain, for the rain might sometimes rust it, or a tree might fall and break it; but he should consider them as the same flesh and blood with the christians, and the same as if one man's body were to be divided into two parts." He concluded by presenting the parchment to the sachems, and requesting, that, for the information of their posterity, they would carefully preserve it for three generations. The Indians cordially acceded to these propositions, and solemnly pledged themselves to live in love with William Penn and his children as long as the sun and moon should endure.

Thus ended a treaty which Voltaire has remarked, with sarcastic exultation, that it was the only one between the christians and the Indians that was not ratified by an oath, and that never was broken. In one respect, indeed, the forbearance of Penn on this occasion to introduce christianity in any other way than as a name, into his harsgue, may have contributed to the cordiality with which his propositions were received. He sedulously forbore every allusion to distinctive peculiarities or offensive truths: and in addressing men whom he considered as benighted heathens,* he descended to adopt their religious nomenclature, and more than insinuated, that the Great Spirit of the Indians, and the True God of the christians, were not different, but the same. But a much more respectable peculiarity of quakerism than abstinence from oaths, formed the most remarkable feature in this treaty with the Indians, and mainly contributed to ensure its durability. Nothing could be more magnanimous than the explicit declaration of a race of civilised men, surrounded by a nation of warlike barbarians, that they renounced all the advantage of superior military skill, and even disclaimed the employment of every weapon of violence for the defence of their lives, or the vindication of their wrongs: trusting the protection of their persons and possessions against human ferocity and cupidity, to the dominion of God over the hearts of his rational creatures, and his willingness to signalize this dominion in behalf of all such as would exclusively rely on it. The singular exemplification of christian character in this respect, which the Pennsylvanian quakers continued uniformly to exhibit, was attended with an exemption no less singular, from those contentions and calamities which Indian neighborhood entailed on every other description of European colonists. The intentional injury of a quaker by an Indian is an event unknown in Pennsylvania, and very rare in American history. The probity of dealing, and courtesy of demeanor, by which the quakers endeavored to maintain this good understanding, were powerfully aided by the distinctions of dress and manners by which they were visibly disconnected with other men, and thus exempted, as a peculiar or separate tribe, from responsibility for the actions, or concern in the quarrels of their countrymen. The inhabitants of many of the other colonies were no less distinguished than the quakers for the justice and good faith that characterised their transactions with the Indians; and the catholic inhabitants of Maryland are said, in addition, to have graced these estimable qualities with the most conciliating demeanor. Yet none were able wholly to exempt themselves from Indian attack, or to refrain from retaliatory hostility. The people of Maryland were sometimes involved in the indiscriminate rage with which certain of the Indian tribes pursued the hostilities they had commenced against the coloists of Virginia. But whatever animosity the Indians might conceive against the European neighbors of the Pennsylvanians, or even against Pennsylvanian colonists who did not belong to the quaker society, they never failed to discriminate the followers of Penn, or children of Onas,* (which was

were always considered as having a right to dwell and to hunt within the lands which they had sold." *Travels in New England*, &c. i. 312.

* In one of his letters to his friends in England, he says of the Indians: "These poor people are under a dark night in things relating to religion." Proud, i. 256. The following adventure was communicated by Penn himself to Oldmixon. He was visiting an Indian sachem, and had retired for the night, when a young woman, the sachem's daughter, approaching his bed lay down beside him. Penn was much shocked; but, unwilling to offend by rejecting an intended compliment, he lay still without taking any notice of her, till she thought proper to return to her own couch. Vol. i. p. 308, 2d edition. A New England patriarch in such circumstances, would probably have excited the enmity of the whole Indian tribe by his expressions of disgust and reprobation.

† Onas, in the Indian tongue, signifies a pea. It came to be the Indian appellation of the governors of Pennsylvania, as corlear was of the governors of New York. Proud, i. 214. John Wesley, in the close of his life, was forcibly impressed

the denomination they gave to the quakers), as persons whom it was impossible for them to include within the pale of legitimate hostility. The friendship that was created by Penn's treaty between the province and the Indians, refreshed by successive acts of courtesy and humanity, endured for more than seventy years, and was never interrupted while the quakers retained the command of the government of Pennsylvania. Undoubtedly, the feature of quaker manners which proved most efficient in guarding them against Indian ferocity, was their rigid abstinence not only from the use, but even from the possession, of offensive weapons, arising from their conviction of the sufficiency of divine aid, and their respect to the scriptural threat, that all who take the sword shall perish by it. It was a totally different feature of christian character that was exhibited by the puritan colonists of New England in their intercourse with the Indians. They felt less indulgence for the frailty of the savages than concern for their spiritual blindness, and abhorrence of their idolatrous superstition: they displayed less meekness of wisdom than the quakers, but more of active zeal and missionary ardor. The puritans were most concerned to promote the religious interests of the Indians; the quakers to gain their good will. The puritans converted a number of their heathen neighbors; the quakers conciliated them all. It was unfortunate for the colonists of New England, that, asserting the lawfulness of defensive war, they were surrounded by numerous bold and warlike tribes, stimulated to acts of aggression, at first by their own ferocity and jealousy, and latterly by the intrigues of the French. It was a happy contingency for the planters of Pennsylvania, that the Indian tribes around them were inconsiderable in number, and either belonged to the confederacy or were subjected to the influence of the *Five Nations*, who were themselves in alliance with the sister colony of New York.

Nothing can be more exaggerated or inapplicable than the encomiums which numerous writers have bestowed on this celebrated transaction between Penn and the Indians. They have, with unhappy partiality, selected as the chief, and frequently the sole object of commendation, the supposed originality of the design of buying the lands from the savages, instead of appropriating them by fraud or force,—which last they represent as the only method of acquisition that had been employed by the predecessors of Penn in the colonization of North America.* This is at once to reproach every one of the other christian founders of North American society with injustice and usurpation; to compliment the Indians with the gratuitous supposition that only bare justice on the part of the colonists was requisite to the preservation of peace between the two races; and to ascribe to Penn a merit which assuredly did not belong to him, and which he himself has expressly disclaimed. The example of that equitable consideration of the rights of the native owners of the soil, which has been supposed to have originated with him, was first exhibited by the planters of New England, whose deeds of conveyance from the Indians were earlier by half a century than his; and was successively repeated by the planters of Maryland, Carolina, New York, and New Jersey, before the province of Pennsylvania had a name. Penn was introduced to an acquaintance with American colonization, by succeeding to the management of New Jersey, in which Berkeley and Carteret had already established this equitable practice; and his own conformity to it in Pennsylvania had been expressly recommended by Bishop Compton (whose interference in the composition of the charter we have already witnessed) and was publicly ascribed by himself to the counsels of that prelate.†

with the influence of the peculiar dress of the quakers, as at once a segregating principle, and a bond of sectarian union; and regretted that he had not prescribed a distinctive apparel to the methodists. Wesley's Journal.

* The Abbe Raynal declares, that Penn, in purchasing a conveyance from the Indians, in addition to his charter from the king of England, "is entitled to the glory of having given an example of moderation and justice in America, never so much as thought of before by the Europeans." Nubia, in his Continuation of Granger, says, "He occupied his domains by actual bargain and sale with the Indians. This fact does him infinite honor. Penn has thus taught us to respect the lives and properties of the most unenlightened nations." It would be easy to multiply similar quotations. Even Mr. Clarkson, who acknowledges that Lord Baltimore at least preceded Penn in this act of justice, cannot refrain from complimenting Penn in this act of justice, in this instance, "above the prejudices and customs of his time." The most modest and moderate account of Penn's treaty which I have seen, is that which claims Mr. Dillwyn (See note 25 for its author).

† In a letter from Penn to the Lords of the Committee of Trade and Plantations in England (in 1683), he declares, that "I have followed the Bishop of London's counsel by buying and not taking away the natives' land." Proud, i. 274. This

* Proud, i. 208, 293, &c. Chalmers, 647, 8. 650, &c. The Duke of York, who supported Penn's pretensions, finding it impossible otherwise to prevail over the title of Lord Baltimore, solicited from the King a new charter of the Delaware territory to himself, in order to reconvey it with more effect to his friend; and this was on the point of being done, when the Duke's accession to the throne enabled him to gratify Penn by a proceeding no less arbitrary in its import, but more equitable in its appearance.

† This tree was long regarded with universal respect. During the war of independence, General Simcoe, who commanded a British force stationed at Kensington, when his soldiers were cutting down all the trees around them for firewood, placed a sentinel under this elm to guard it from injury—a singular tribute from a man who was engaged in violating the very principles of equity and peace of which the object of his consideration was respected as a memorial.

‡ What this price amounted to has nowhere been recorded. Penn, writing in the following year to some friends in England, represents it as dear; and adds, "He will deserve the name of wise that outwits them (the Indians) in any treaty about a thing they understand." Proud, i. 328.

§ The same liberality was shown by the colonists of New England, where, as we learn from Dr. Dwight, "the Indians

1683.] The continual arrival of vessels, transporting settlers to the colony from all parts of the British dominions, afforded ample occasion to Penn for the exercise of the agreeable labor of surveying his territories, and appropriating to the purchasers their respective allotments of land. One of these allotments, consisting of a thousand acres, was a gift from the proprietary to his friend George Fox, and formed the only estate which that venerable quaker patriarch was ever possessed of.* The greater number of the emigrants still continued to be quakers, with the addition of some other dissenters, withdrawing from the severities of persecution, and the contagion of European vices; and their behavior in the colony corresponding with the noble motives that had conducted them to it, [28] the domains of Penn exhibited a happy and animated scene of active industry, devotional exercise, and thankful enjoyment of civil and religious liberty. It appeared, however, that some worthless persons had already intruded themselves among the more respectable settlers; and three men, who were now brought to trial and convicted of coining adulterated money, gave occasion to the first practical display of the mildness of Pennsylvania justice.

Shortly before this judicial proceeding, the second session of the assembly of Pennsylvania and Delaware had been held. In this assembly, some new laws were passed, and certain singularities in legislation were attempted. It was proposed that all young men should be compelled by law to marry before a certain age; and that no inhabitant of the province should be permitted to have more than two suits of clothes, one for summer, and the other for winter; but these propositions were very properly rejected. More wisdom was displayed in an ordinance which abrogated the common law with regard to the descent of lands, and enacted, that, in the succession of children to a father dying intestate, the eldest son should have no farther preference than a double share. However consonant it might have been to feudal principles, to bestow the fief undiminished upon him who was first able to defend it, this policy was manifestly unsuitable to colonists who had a wilderness to cultivate, and were the more especially called to invigorate exertion by an extensive diffusion of interest and property in the soil. An impost upon goods imported and exported was voted to the proprietary,† who acknowledged the kindness of the assembly, but wisely and generously remitted the proposed burden on the province and the traders who resorted to it. But the most important business that was transacted in this session was an alteration in the constitution of the state, which, unquestionably, from whatever causes, underwent at first much greater and more frequent fluctuations than the history of any of the other colonial settlements evinces. William Penn having demanded of the members of council and assembly, "Whether they desired to preserve his first charter, or to obtain a new one?" they unanimously adopted the latter part of the alternative. With the assistance of a committee of these two bodies, a new frame or charter was accordingly prepared and executed by the proprietary. The chief purpose of this proceeding seems to have been to legalize (according to Penn's ideas) the alteration that had been effected by the "act of settlement" passed in the first session of the assembly. It was accordingly now provided, by a charter emanating from the proprietary, that the provincial council should consist of eighteen persons, three from each county, and the assembly of thirty-six; by whom, in conjunction with the governor, all laws were to be made, and public affairs transacted. But still no laws could be proposed in the assembly but such as had been prepared and pre-

letter is also printed by Chalmers, p. 661, &c. Mr. Clarkson refers to it as containing Penn's statement of his controversy with Lord Baltimore, but has not thought that the credit of Penn would be advanced by its publication. It consists chiefly of an elaborate attempt to vindicate his own pretensions to the Delaware territory, and to interest the lords of trade to support them against Lord Baltimore's claims. Hence, perhaps, the readiness he evinces to do honor to the Bishop of London.

* Fox disposed of this estate by his will. But however was in Pennsylvania.

† This seems to refute the allegation of Dr. Franklin, in his "Historical Review of the Constitution of Pennsylvania," that Penn prevailed with his first colonists to submit to his quit rents, by holding out the delusive hope, that they would supersede all public impositions for the support of government. Franklin having engaged on the side of the Pennsylvanian assembly in their disputes with the descendants of Penn, endeavored to increase the discredit of his adversaries by the harshest censure of their illustrious ancestor. Yet, that Franklin really esteemed Penn, is apparent from many passages in his writings; and that he even regarded him with no common admiration may be inferred from a curious letter of his (relative to a supposed portrait of Penn), preserved in Woodhouselee's Life of Lord Kalmia.

ented by the governor and council. The only alteration in the distribution of power that was effected by this new charter was, that the governor, with his treble vote, necessarily possessed more control in a council of eighteen, than by the original frame he could have enjoyed in a council of seventy-two members. The interests of freedom were, however, promoted by a grant, to all the inhabitants of the province, of unlimited liberty to hunt in uninclosed lands, and to fish in all waters, "that they may be accommodated with such food and sustenance as God in his providence hath freely afforded;" and aliens were encouraged by a provision, that, in case of their dying without having been previously naturalized, their lands should nevertheless descend to their heirs. This charter was thankfully accepted by the representatives of the people, who closed their second assembly with expressions of undiminished attachment to the proprietary.

This assembly had been held at the infant city of Philadelphia. Shortly after his arrival in the province, Penn had selected a commodious situation, between the rivers Schuylkill and Delaware, for the erection of the metropolis of Pennsylvania: and having regulated the model of the future city by a map,* he bestowed on it a name expressive of that brotherly love which he hoped would ever characterise its inhabitants. To many of the streets he gave names descriptive of the varieties of forest trees that had been cut down to make room for the structures of civilized life; and which still continue to commemorate the sylvan origin of the place. The progress of the buildings of Philadelphia was a favorite object of his care, and advanced with such rapidity, that, in less than a year from the time when it was begun, a hundred substantial houses overlooked the caves that had sheltered their owners but a few months before; and, in the course of the following year, [1684] the population of the city amounted to two thousand five hundred persons.

The remainder of the time occupied by the proprietary's first visit to his colony was spent in conducting his controversy with Lord Baltimore; in extending his treaties with the Indian tribes, to whom his presents from time to time amounted in value to several thousand pounds; in acting as a minister among the quaker colonists, and arranging the frame of their sectarian usages and discipline; and in impelling and directing the progress of his favorite city of Philadelphia. He saw his religious society and principles established in a land where they were likely to take a vigorous root, and expand with unbounded freedom; and institutions rising around him that promised to illustrate his name with a lasting and honorable renown. In fine, he beheld the people who acknowledged his supremacy happy and prosperous, and seemed himself to enjoy his transatlantic retirement †. The only sources of uneasiness that had yet arisen from his colonial labors, were, his dispute with Lord Baltimore, and the failure of all his efforts to guard the Indians from that destructive vice which the vicinity of Europeans has always contributed to diffuse among them. A law had been passed against supplying these savages with spirituous liquors; but the practice had been introduced by the colonists of Delaware, long before Penn's arrival, and his attempts to suppress it proved utterly ineffectual. The Europeans acknowledged the cruelty and injustice of this traffic, and the Indians confessed their experience of its baneful effects; but neither could be persuaded to refrain from it. It was attended with the additional evil of confirming the Indians in their roving habits of life; as the peltry they acquired in hunting was the only commodity they were able to exchange with the colonists for rum and brandy. The more valuable possessions and advantages by which the colonists were distinguished, were either lightly esteemed by the Indians, or reckoned unworthy of the laborious habits that were requisite to procure them. In answer to the advice of the Europeans, that they should betake themselves to a life of regular industry, one of the Indians begged to hear some satisfactory reason "why he should labor hard all his days to make his children idle all theirs."

* In the "Connection of the History of the Old and New Testament," by Dean Prideaux, there is a plan or model of the city of ancient Babylon. "Much according to this model," says the dean, "hath William Penn the quaker laid out the ground for his city of Philadelphia, in Pennsylvania; and were it all built according to that design, it would be the fairest and best city in all America, and not much behind any other in the whole world."

† In a letter to a friend in England, he says, "Oh how sweet is the quiet of these parts, free from the anxious and troublesome solicitations, hurries, and perplexities, of woeful Europe: and God will thin her; the day hastens upon her." Proud, i. 209.

In the midst of a scene of felicity as unmixed, perhaps, as any community of human beings has ever exhibited, Penn resolved upon returning to England, in order to enforce, by personal solicitation, the interest which he possessed at the English court, and which he was desirous to employ in aid of his controversy with Lord Baltimore, as well as for the relief of a number of his quaker brethren who were suffering in the parent state from an increased strictness in the execution of the penal laws against non-conformists.* In preparation for this measure, he entrusted the administration of his proprietary functions to the provincial council, of which he appointed Thomas Lloyd, a quaker, to be president, and his own kinsman, Markham, to be secretary; and committed the execution of the laws to Nicholas Moore and four other planters whom he constituted the provincial judges. On the eve of his departure, and having already embarked, he addressed, to Lloyd and others of his more intimate associates a valedictory letter, which he desired them to communicate to all his friends in Pennsylvania and Delaware. "Dear friends," he declared to them, "my love and my life is to you, and with you; and no water can quench it, nor distance wear it out, or bring it to an end. I have been with you, cared over you, and served you with unfeigned love; and you are beloved of me, and dear to me beyond utterance. I bless you in the name and power of the Lord; and may God bless you with his righteousness, peace, and plenty, all the land over. Oh that you would eye him in all, through all! and above all, the works of your hands." After admonishing these to whom he had committed the rule, to consider it as a sacred function and heavenly trust, he thus apostrophizes his favorite city: "And thou, Philadelphia, the virgin settlement of this province, named before thou wert born, what love, what care, what service, and what travail, has there been to bring thee forth, and preserve thee from such as would abuse and defile thee! Oh that thou mayest be kept from the evil that would overwhelm thee! that, faithful to the God of thy mercies in the life of righteousness, thou mayest be preserved to the end. My soul prays to God for thee, that thou mayest stand in the day of trial, that thy children may be blessed of the Lord, and thy people saved by his power. My love to thee has been great, and the remembrance of thee affects mine heart and mine eyes! The God of eternal strength keep and preserve thee to his glory and thy peace." "So, dear friends," he thus concludes, "my love again salutes you all, wishing that grace, mercy, and peace, with all temporal blessings, may abound richly among you:—So says, so prays, your friend and lover in the truth, William Penn."

At the period of the proprietary's departure from the province, Philadelphia already contained three hundred houses, and the population of Pennsylvania amounted altogether to six thousand souls. Of the increase which the inhabitants of the Delaware territory had undergone, no memorial has been preserved.

CHAPTER II.

BIOMING adieu to the peaceful scenes of Pennsylvanian life, Penn transferred his exertions to the very dissimilar theatre of the court of England. Here the interest which he possessed was soon increased to such

* The unfortunate consequences that attended Penn's withdrawal at this period from the quiet of America, to plunge again into the solicitations of woeful Europe, have rendered the cause of this step a subject of some importance. Ozmixon, who derived his information from Penn himself, says, that he was determined, much against his will, to return, by tidings of the persecution of the quakers and other dissenters in England; and that "He knew he had an interest in the court of England, and was willing to employ it for the safety, ease, and welfare of his friends," i. 171. But Proud, who is by far the best authority on points of early Pennsylvania history, declares that "the dispute between him and the Lord

a degree, by the advancement of his own patron and his father's friend, the Duke of York, to the throne, that, in the hope of employing it to his own advantage, and to the general promotion of religious liberty, he abandoned all thoughts of returning to America, and continued to reside in the neighborhood, and even to employ himself in the service, of the court, as long as James the Second was permitted to wear the crown:—a policy that, in the sequel, proved equally prejudicial to his reputation in England and his interests in America. The first fruit of his enhanced influence at court was the adjudication that terminated his controversy with Lord Baltimore, and secured to him the most valuable portion of the Delaware territory.* Fruits of a more liberal description were evinced in his successful efforts to procure a suspension of the legal severities to which the members of his own religious society were obnoxious, and for the discontinuance of which he had the satisfaction of presenting an address of thanks to the king from all the quakers in England.†

This year was signalized by an attempt, that originated with the annual meeting of the quaker society at Burlington, in New Jersey, to communicate the knowledge of christian truth to the Indians. These savages readily acceded to the conferences that were proposed to them, and listened with their usual gravity and decorum to the first body of missionaries who, in professing to obey the divine command to *teach and baptize* all nations, ever ventured to teach that baptism was not an ordinance of christian appointment. Of the particular communications between these quaker teachers and the Indians, no account has been preserved; but the result, as reported by a quaker historian, was, that the Indians in general acknowledged at the time that what they heard was very wise, weighty, and true, and never afterwards thought farther about it. The first successful attempts to evangelize the Indian inhabitants of New Jersey, Delaware, and Pennsylvania, were not made till towards the middle of the following century, when this work was undertaken by the celebrated David Brainerd, of New England, and by a body of Moravian brethren who had emigrated from Germany.

Meanwhile, the emigrations from England to Pennsylvania continued to proceed with undiminished vigor; the stimulus that had been previously afforded by the rigors of ecclesiastical law, being amply supplied by the dislike and suspicion with which the king's civil policy was regarded, by the accounts which had been circulated of the prosperity enjoyed by the colonists of this province, and by the general belief that Penn's interest with the king would protect its liberties from the general wreck in which his tyranny had involved the other colonial constitutions. In the course of this year, about a thousand emigrants appear to have resorted to Pennsylvania alone. But this increase in the population of his territories was now the only source of satisfaction that they were to afford to the proprietary, and the remainder of his connexion with them was overclouded by disappointment, and embittered by mutual dispute. It was but a few months after his departure from the province, that a spirit of discord began to manifest itself among the planters. Moore, the chief justice, and Robinson, the clerk of the provincial court, neither of whom belonged to the quaker persuasion, had rendered themselves disagreeable to the leading persons of this society in the colony. The first was impeached by the assembly of high crimes and misdemeanors, and for refusing to answer the charge was suspended from his functions by the council; while a very disproportionate censure was passed on the other, who, for what was deemed contemptuous behavior in

answering the questions of the assembly, was not only committed to custody, but voted "a public enemy to the province and territories." Of the charges against Moore not a trace has been preserved; but it is manifest that Penn considered them frivolous or unfounded. In vain he wrote to the authors of these proceedings,* entreating them to restrain their tempers, and forbear from the indulgence of animosities so discreditable to the colony; to value themselves a little less, and to honor other men a little more than they appeared to him to have done. The assembly answered by professions of the highest reverence for himself, accompanied by entreaties (unfortunately ineffectual) that he would return to live among his people; but declared withal that they thought fit "to humble that corrupt and aspiring minister of state, Nicholas Moore." The correspondence between the proprietary and this body, as well as the council, gradually assumed an increasingly disagreeable complexion. To other causes of displeasure, were added reports of the increased consumption of spirituous liquors among the colonists—the intemperance in this respect which they propagated among the Indians thus recoiling upon themselves; and complaints of various abuses and extortions committed by the officers whom he had entrusted to conduct the sales of his land. But nothing seems to have mortified him more sensibly than the difficulty he experienced in obtaining payment of his quit rents, and the universal reluctance that was shown to comply with, or even pay any attention to, his applications for remittances on that account. The people in general had rather submitted to than approved the imposition of quit rents; and, though prospering in their circumstances, and conscious of the expenses that the proprietary had incurred for their advantage, they were only now beginning to reap the first fruits of the far greater expenses incurred by themselves in purchasing their lands from him, and in transporting themselves and their families, servants, and substance to the province. Much labor and expense was yet wanting to render more than a small portion of their lands productive of advantage to them: and to be now called on to pay quit rents for the whole, and for this purpose to surrender the first earnings of their own hazard, hardship, and toil, to be expended by their proprietary in a distant country, was a proceeding very ill calculated to obtain their favorable regard, and which the very generosity of the proprietary, that rendered it the more unavoidable on his part, had by no means prepared them to expect. Penn had, doubtless, hoped that the council to whom he had delegated his proprietary functions, would have spared him the humiliating necessity of descending to a personal altercation with his people on this subject. But, so far were the council from demonstrating any such regard for his delicacy or his interest, that they would give him no assistance whatever in the prosecution of his unpopular demand, and even forbore to take any notice of the remonstrances which he addressed to them on the neglect of their duty. Astonished and indignant to find himself treated in a manner which he deemed so ungrateful and unjust, Penn felt himself constrained at length to reproach his people in a letter, [1686] which forms a melancholy contrast to the beautiful valediction with which he had taken his leave of them, scarcely two years before. He complained that the provincial council had neglected and slighted his communications; that the labor which he had religiously consecrated to his people's good was neither valued nor understood by them; and that their proceedings in other respects had been so unwarrantable as to have put it in his power more than once to annul the charter he had bestowed on them, if he had been disposed to take advantage of their misconduct. He declared that he was suffering much embarrassment by the failure of the remittances he had expected from America, and that this was one of the causes of his detention in England. His quit rents, he said, amounted then, at the very least, to five hundred pounds a year; but he could not obtain payment of a penny of this income. "God is my witness," says he, "I lie not. I am above six thousand pounds out of pocket more than ever I saw by the province; and you may throw in my pains, cares, and hazard of life, and leaving of my family and friends to serve them." According to this statement, it would appear that he had already sold a million acres of land in the province, and devoted twenty thousand pounds (the stipulated price corresponding to sales of that extent) to the public service, besides the additional expenditure which he mentions of six thousand pounds.

* "For the love of God, me, and the poor country," he says in one of these letters, "be not so governmentish, so noisy, and open in your dissatisfactions. Some folks love hunting in government itself." Proud, i. 227.

This remonstrance, which was more especially addressed to the provincial council, having proved as ineffectual as his preceding applications, Penn determined to withdraw from that body the management of his interests and the possession of the executive power, which he had committed to its keeping on his departure from the province. Expecting more activity from fewer, and more integrity from different hands, he resolved to confine the executive power to five persons, and, in order to mark his sense of the injurious treatment which he conceived had been inflicted on an able and honorable man, he hesitated not to appoint Nicholas Moore to be one of the persons by whom this important function was to be exercised. To Lloyd, the former president of the council, and three other quakers, in conjunction with Moore, he accordingly granted a warrant or deputation investing them with their office under the title of *commissioners of state*. He commanded them, at the very first assembly that should be holden after their instalment in office, to abrogate, in the proprietary's name, every act that had been passed in his absence. He charged them to be particularly careful to repress every tendency to disorder, dispute, or collision of powers between the several organs of government, and, for this purpose, to permit no perleying or open conference between the council and the assembly, but to confine the one to the exercise of its privilege of proposing laws, and the other to a simple expression of assent or dissent. He admonished them to act with vigor in suppressing vices without respect of persons or persuasions,—adding, "Let not foolish pity rob justice of its due, and the people of proper examples. I know what malice and prejudice say; but they move me not. I know how to allow for new colonies, though others do not." He advised them, before ever "letting their spirits into any affair," to lift up their thoughts to Him who is not far from every one of us, and to beseech from that only source of intelligence and virtue, the communication of a good understanding and a temperate spirit. He recommended to them a diligent attention to the proprietary's interest, and a watchful care to the preservation of their own dignity. "I beseech you," he said, "draw not several ways; have no cabals apart, nor reserves from one another; treat with a mutual simplicity, an entire confidence, in one another; and if at any time you mistake, or misapprehend, or dissent from one another, let not that appear to the people: show your virtues but conceal your infirmities; this will make you awful and reverent with the people." "Love, forgive, help, and serve one another," he continued; "and let the people learn by your example, as well as by your power, the happy life of concord."*

1687.] This appointment proved more conducive than might have been expected to the peace of the province, which appears for some time to have sustained no other interruption than what arose from the rumor of an Indian massacre. In the midst of the consternation which his report excited, Caleb Pusey, a quaker, volunteered to go to the spot where the Indians were said to have assembled in preparation for their bloody design, provided the council would appoint five other deputies to accompany him, and who would agree, like him, to present themselves unarmed to the Indians. On the arrival of this magnanimous deputation at the spot which had been indicated to them, they found only an Indian prince with a small retinue engaged in their usual occupations. The prince, on being apprised of the cause of their visit, informed the deputies that the Indians had indeed been disappointed to find that the price of a recent occupation of land had not yet been fully paid to them; but that, having perfect confidence in the integrity of the English, they were by no means impatient; he declared that the story of the projected massacre was a wicked fabrication, and that some Indian women who had contributed to give it currency deserved to be burned alive. One of the deputies having reminded the prince that the Indians and the English were the creatures of the same God, and equally the objects of his impartial love, which he showed by

* Proud, i. 295—300, 303—307. In a letter to these commissioners, some time after, he tells them, "They that live near to God, will live far from themselves; and, from the sense they have of his nearness and majesty, have a low opinion of themselves; and out of that low and humble frame of spirit it is that true charity grows. Oh that the people of my province felt this gracious quality abounding in them! My work would then be done, and their praise and my joy unspeakably abound. Wherefore, in the name and fear of God, let all old sores be forgotten as well as forgiven." Ibid. 333. This letter is dated from a mansion which politics and literature have since contributed to distinguish, Holland House, which Penn had made his residence on account of its vicinity to Kensington, where King James held his court

Baltimore before-mentioned was what mainly occasioned Penn's return to England,* i. 288. In a letter written shortly after his arrival in England, Penn says, that "He had seen the king and the Duke of York. They and their nobles had been very kind to him, and he hoped the Lord would make way for him in their hearts to serve his suffering people, as also his own interests as it related to his American concerns." Clarkson, i. 426.

* This adjudication was not so distinct as to prevent much subsequent dispute respecting the precise boundaries between Delaware and Maryland, which continued to distract the inhabitants on the borders of these provinces, till it was finally decided in 1750, by a decree pronounced in Chancery by Lord Hardwicke. Chalmers, 651. Vesey's Reports, i. 144.

Nothing was more common for a long time in the American provinces than disputes arising from uncertain boundaries. A dispute of this nature between the townships of Lyne and New Nondon, in New England, during the seventeenth century, was decided by a solemn pugilistic combat between four champions chosen by the inhabitants of the two places. Dwight's Travels, ii. 498.

† Proud, i. 290—294, 308—314. "The king has given us," said Penn in the speech with which he accompanied the presentation of the quaker address, "an illustrious example in his own person; for while he was a subject he gave Caesar his tribute, and now he is Caesar he gives God his due, namely, the sovereignty over consciences."

sending dew from heaven alike on their lands, and urged that the two races ought therefore to love one another, the prince replied, "What you have said is true; and as God has given you corn, I would advise you to get it in, for we intend you no harm." This amicable assurance, repeated by the deputies to their friends, delivered the province from an apprehension that had excited general dismay.

But Penn was far from deriving the satisfaction which he had expected from his commissioners of state; and his letters continued to repeat, though in a milder manner than before, his complaints of the detention of his quit rents, the neglect of his communications, and the disregard of his services. "I believe I may say," was his expression on one of these occasions, "I am one of the unhappiest proprietaries with one of the best people." From the numerous apologies contained in those letters for his continued residence in England, and his protestations that he found attendance at court as burdensome and disagreeable as a state of slavery in Turkey could be, it would seem that the people of Pennsylvania regarded his absence from them with much dissatisfaction. At length, Lloyd and some of the other quaker commissioners desiring that he would discharge them from their functions, it appeared to him that some farther change was necessary in the form of his provincial administration; and, having determined to commit his powers and his interests to the more active management of a single individual, who should be invested with the rank of deputy governor, he selected for this purpose Captain John Blackwell, one of Cromwell's officers, who had married the daughter of General Lambert, and was residing at this time in New England. The consequences of this appointment were, in truth, the reverse in all respects of those which had resulted from the preceding one; but, unfortunately, they were much more disagreeable and pernicious. Blackwell appears to have been very highly esteemed by Penn, and he probably exerted himself much more than his predecessors in the executive authority had done to vindicate the patrimonial interest of the proprietary; but he provoked the general indignation and disgust of the people by his arbitrary and illegal proceedings. "Rule the meek meekly," was the instruction of Penn to him; and those that will not be ruled, rule with authority." But meekness was no part of the disposition of Blackwell; and violence and intrigue were the chief engines of his policy.† He commenced his administration by endeavoring, not without effect, to sow discord among the freemen, and to overawe the timid by a display of power. But he had mistaken the real character of the people over whom he presided; and was taught, by the issue of an obstinate struggle, that the profession of quaker meekness and submission is not inconsistent with the exhibition of unhesitating firmness and determined resolution. Finding that White, the individual who had given most displeasure to Penn, by urging the impeachment of Moore, had been chosen a delegate to the assembly, he resolved to debar him from attendance there; and for this purpose caused him to be thrown into prison on the most frivolous pretences. A writ of *habeas corpus* was procured in behalf of White; but the execution of it was long impeded by the devices of Blackwell. Other practices, no less arbitrary and illegal, were employed by him for disabling men whom he disliked or suspected, from performing the duties of members of the provincial council. To give the assembly time to cool, after the commission of these outrages, he deferred the convocation of it as long as possible, and at length opened its session [1689] with a haughty and insolent harangue. His predecessors in authority had not considered it expedient to comply with the proprietary's desire of abrogating all the laws that had been made in his absence; but this measure was now announced by the deputy governor, with an insolence that would have discredited a more acceptable communication. The first proceeding of the assembly was a remonstrance against his arbitrary proceedings; and all that his utmost influence could effect on some of the members of this body, was to prevail with them to absent them-

selves from its sittings. This miserable manoeuvre had no other effect than to provoke the assembly to declare that the secession of these members was a treacherous desertion of the public service. They passed, at the same time, a series of resolutions, importing, "That the proprietary's absence, as it may be to his disappointment, so it was extremely to the peoples prejudice; that as to the project of abrogating all the laws, he had no right so to do, because every law was in force that had not been declared void by the king; that, even with the consent of the freemen, the proprietary could make no laws to bind the province, except in the way prescribed by the charter; and that as it was desirable, so it was also to be hoped, that no laws of any other make would be imposed upon the people." After a vain struggle with an opposition thus vigorously supported, Blackwell was compelled to abandon his office, and depart from the province, leaving the executive authority once more in the hands of the provincial council, of which the presidency was resumed by Thomas Lloyd.

The ferment which had been excited during Blackwell's administration, whatever evil influence it may have exercised on the tempers of some of the colonists, was not permitted to retard in the slightest degree the rapid pace with which the general prosperity was advancing. On the contrary, a more vigorous spring seemed to have been imparted to the industry and general progress and improvement of the community, as if the energy that was excited by the provocation given to the public spirit of the people, had diffused its influence through every occupation and department of life. It was in this year that the first institution for the education of youth was established in Pennsylvania. This was called "The Friends' Public School of Philadelphia;" at the head of which was placed George Keith, a celebrated quaker writer; and which was subsequently incorporated and enlarged by charters from the proprietary.

It had been happy for Penn, if he had sooner discovered how detrimental to all his interests this long absence from the colony, and residence at the English court, must inevitably prove. The revolution that had occurred in the close of the preceding year, had abruptly destroyed that precarious favor of a tyrant, for the sake of which he had risked his popularity in England and his influence in Pennsylvania, and which had infatuated his understanding to such a degree, that he even continued to correspond with the fugitive monarch after his expulsion from the throne. That he was engaged in any of the plots, that were carrying on at this period for the restoration of James, there is truly no reason to believe; but as he voluntarily lingered in England for some time after the revolution had been accomplished, and never transmitted any instruction for proclaiming William and Mary in Pennsylvania, it is not improbable that he looked with some expectation to the success of these attempts.* To return to America was soon after put out of his power, by the consequences of the general suspicion which his conduct had excited in England. He was compelled to give bail for his appearance before the privy council; [1690] and though he more than once succeeded in justifying himself from the charges adduced against him, yet, finding that farther accusations continued to be preferred, and that a warrant had at length been issued for committing him to prison, he thought proper to sequester himself from public view, and to live for some time in a state of concealment. His name was occasionally inserted in the proclamations for the apprehension of suspected persons, that were issued, from time to time by the English ministers; who were, however, too deeply engaged in more pressing and important affairs, to have leisure as yet to attend to the concerns of his Pennsylvanian sovereignty. During this retirement, his repose was invaded very disagreeably by tidings of factious disputes and dissensions among his people, and particularly by the rupture that took place between Pennsylvania and Delaware, and separated from each other two communities, for the conjunction of which he had labored with a zeal that outstripped his usual equity and moderation.

The increasing greatness of Pennsylvania had gradually excited the jealousy of the people of Delaware, who beheld with impatience their more ancient settlement dwindling into comparative insignificance, and verging into a mere fraction of a younger but more thriving community. The members deputed to the provincial council at Philadelphia from Delaware complained that they were deprived of a just share in the appointment of public officers, and at length endeavored by intrigue to counterbalance the preponderance of their associates. Privately assembling, without the usual formality of an official summons, in the council-room, they proceeded to exercise the executive functions vested in the whole body, and issued warrants for displacing a number of public officers, and appointing others to fill their places. This proceeding was almost instantly declared illegal and void by a council more regularly convoked; but the waters of strife had now been let out, and could no longer be stayed. Penn, alarmed at the account of these dissensions, endeavored to mediate between the parties, and desired them to make choice of any one of the three forms of executive administration which they had already respectively tried. He was willing, he said, to invest the executive power either in the council, or in five commissioners, or in a deputy governor; and their choice would be determined by the recollection of which of these they had found the most impartial in the distribution of public offices. [1691] The Pennsylvanians at once declared themselves in favor of a deputy governor, and, anticipating the proprietary's approbation of their wishes, desired Lloyd to perform the duties of this office. The Delaware counsellors, on the contrary, protested against this choice, and declared their own preference of a board of commissioners. They refused to submit to the government of Lloyd, and, withdrawing from the council, they returned to Delaware, where their countrymen were easily prevailed on to approve and support their secession. In vain Lloyd endeavored, by the most liberal and generous offers to the Delaware colonists, to prevail with them to submit to an administration which he had reluctantly assumed in obedience to the urgent and unanimous desire of the Pennsylvanians; they rejected all his offers; and, countenanced by Colonel Markham, the kinsman of the proprietary, declared that they were determined to have an executive government separate from that of Pennsylvania. Stung with vexation and disappointment at this result, Penn was at first inclined to impute the blame of it to Lloyd; but soon ascertaining how perfectly disinterested and well meaning the conduct of this worthy man had been, he transferred his censure to the Delaware counsellors, and bitterly reproached them with selfish ambition and ingratitude. Hoping, however, by gratifying them in their present desire, to prevent the rupture from extending any further, he granted separate commissions for the executive government of Pennsylvania and Delaware to Lloyd and Markham; the functions of the legislature still remaining united in a council and assembly common to the two settlements. By the friendly co-operation of Lloyd and Markham, this singular machinery of government was conducted with much greater harmony and success than the peculiarities of its structure, and the causes from which they had arisen, would have prepared us to expect.*

The following year [1692] was signalled in a manner still more discreditable to the province, and disagreeable to the proprietary, by a violent dissension among the quakers of Pennsylvania. This has been represented, by the party that proved weakest in the struggle, as a purely ecclesiastical quarrel, in which their adversaries, worsted in spiritual, had resorted to carnal weapons; and by the stronger, as a political effervescence which the power of the magistrate was rightfully employed to compose. The disturbance originated with George Keith, a man eminently distinguished by the vigor and subtlety of his apprehension, by an insatiable appetite for controversy, a copious eloquence, and a vehement temper. To his religious associates, the quakers, he was recommended by his numerous writings in defence of their tenets, and more particularly endeared as the champion of their quarrel with the churches, ministers and magis-

* "It is none of the endearingest considerations," he adds in the same letter, "that I have not had the present of a skin, or a pound of tobacco, since I came over." Froude, i. 334.

† Penn appears to have been deceived into this appointment by a repute of which Blackwell proved to have been totally undeserving. He apologized to the people of Pennsylvania for the unhappy consequences that resulted from it, by stating that he had acted for the best, and had not selected Blackwell till he had found it impossible to prevail with any quaker to accept the office of deputy governor; yet, he added withal, "I must say, I fear his peevishness to some friends (quakers) has not risen out of the dust without occasion." Froude, i. 340.

* In a letter, written by him to his friends in Pennsylvania in January, 1689, he says, "Great revolutions have been of late in this land of your nativity, and where they may period the Lord knows." He adds, that "to improve my interest with King James for tender consciences" had been the main cause of his detention so long in England. Froude, i. 341. From a letter of Leisler, who at this period acquired so much celebrity at New York (ante, B. v. cap. ii.), to Bishop Burnet, it appears that he considered Pennsylvania as one of the strongholds of the Jacobites in America, and that a considerable number of this party were then retiring from the other provinces to Pennsylvania and New Jersey. Chalmers, 697.

* Froude, i. 346-62. Clarkson, ii. 61. Penn seems to have expressed no disapprobation whatever of the conduct of Markham, of whom Froude indeed reports (i. 236) that "he had the proprietary's confidence and esteem till his death;" whence perhaps it may be inferred that the real purpose of Markham, in placing himself at the head of the factious counsellors of Delaware, was to retain over them an influence favorable to the authority of the proprietary.

trates of New England—a country which, by a numerous body of the quakers, was long regarded with a feeling to which it is difficult to give any other name than that of a vindictive dislike. [29] He had travelled in that country as a quaker preacher: and, adding the smart of personal controversy with the people to a resentment of the well-remembered wrongs which they had wreaked on his religious fraternity, he had accumulated against them a hoard of animosity, which all the prolixity of his publications seemed to be incapable of exhausting. With an animated vituperation, which was thought very savoury by the quakers as long as it was directed against their adversaries,* he had condemned the government of New England for the severities inflicted by it heretofore upon enthusiasts, with whose extravagance, as well as whose sufferings, it appeared that he himself was too much inclined to sympathise. Even those quakers, who were possessed of that moderate spirit which was gradually leavening the whole of their society, and was utterly opposed to the wild extravagance by which their brethren in New England had provoked their fate, were flattered by publications which artfully turned the shame of quakerism into its glory, and added the honors of martyrdom to the other evidences of their claim to a revival of primitive christianity. His eminent repute with his fellow sectaries had recommended him first to the appointment of surveyor-general of East Jersey, and more recently to the mastership of the quaker seminary of education established at Philadelphia. From real conviction, from an inveterate habit of controversy, or from ambitious desire to gain a still higher eminence among the quakers than he had already attained, he began at length to utter censures upon various particulars in the conduct and usage of his fellow sectaries in Pennsylvania. He complained that there was a great deal too much slackness in the system of quaker discipline, and that very loose and erroneous doctrine was taught by many of the quaker preachers. He insisted that, as the infliction and even the violent resistance of evil was inconsistent with Christian meekness and brotherly love, no quaker ought to be concerned in "the compelling part of government," and much less ought any such to retain negroes in a state of slavery.† His censures had in some respects a substantial reality, and in others at least a reasonable show, of just application, that rendered them only the more irritating to the minds of those whom he rebuked without being able to convince. Supported by a respectable company of adherents, and particularly in some of his views by the German emigrants, who from the first had protested against negro slavery as utterly inconsistent with quaker christianity, Keith appears to have encountered the opposition which his new doctrines received from the majority of the quakers, with as much vehemence as he had displayed in his previous contests with their common enemies. A regular trial of strength ensued between the two parties in the quaker society; and the adversaries of Keith, finding themselves supported by a majority, published a declaration or testimony of denial against him. In this curious production they expressed their deep regret of "the tedious exercise and vexatious perplexity" which their late friend, George Keith, had brought upon them. "With moaning," they declared, "and lamentation do we say,—How is this mighty man fallen!—How is his shield cast away!—How shall it be told in Gath!—Will not the daughters of the uncircumcised triumph?" They proceeded to accuse him of uttering against themselves "such unsavoury words and abusive language, as a person of common civility would loath;" and in particular with having assented them on various occasions, "and upon small provocations, if any, that they were fools, ignorant heathens, silly souls, rotten ranters, and Muggletonians,

* On a retrospect of his character, however, after they themselves had become his adversaries, the quakers discovered that, even before his schism with them, and even in his treatment of the people of New England, he had "bad too much life in argument," had "exhibited an unbecoming vanity on victory thereby obtained by him over his opponents," and altogether conducted himself "in a very extravagant manner." Proudt, i. 364.

† It is less remarkable that this latter feature of his doctrine should have been unnoticed by Proudt, than that it should have escaped the observation of Clarkson, who, in his life of Penn, speaks of Keith with unmixed contempt; and in his history of the Abolition of the Slave Trade refers to a period four years later, as the era of the first effort of the American quakers to mitigate the evil of negro slavery. Gabriel Thomas, a quaker, contemporary with Keith, the friend of Penn, and the earliest historian of Pennsylvania, expressly ascribes to Keith the particular doctrine to which I allude; and Dr. Franklin, in one of his letters, mentions that he had seen the protestation against negro slavery, that was issued at this period by Keith and his followers.

with other names of that infamous strain, thereby to our grief, foaming out his own shame." They accused him of asserting that quakerism was too often a cloak of heresy and hypocrisy: and that more diabolical doctrine passed current among the quakers than among any other description of Protestant professors. As the climax of his contumacy, they alleged, that when they had "tenderly dealt" with him for his abusive language and disorderly behavior, he had insultingly answered, "that he trampled their judgment under his feet as dirt;" and that he had since set up a separate meeting, whose proceedings had rendered the religious reputation of the bulk of the quakers "a scorn to the profane, and the song of the drunkard."

Keith who had by this time collected around him a numerous concourse of adherents, whom he styled "Christian quakers," while he bestowed on all the rest of the quaker community the opprobrious title of "apostates," did not fail to answer this declaration by an address which contained a defence of himself and his principles, and an illustration of the various acts of apostasy committed by his adversaries. This publication presented so ludicrous a contrast between the sectarian principles and the magisterial conduct of these persons, that it fairly transported them beyond the bounds of quaker patience, and convinced them that what had been hitherto regarded as a mere ecclesiastical dispute, ought now to be resented as a political quarrel. They declared, that though a tender meekness should undoubtedly characterize their notice of offences committed against them in their capacity of quakers, yet a magisterial sternness was no less incumbent upon them, in the visitation of offences that tended to "lessen the lawful authority of the magistracy in the view of the baser sort of the people." Keith, the author of the address, and Bradford, the printer of it, were both (after an examination which the other magistrates refused to share with their quaker brethren) committed to prison; Bradford's printing press was seized, and both Keith and he were denounced, by proclamation, as seditious persons, and enemies of the royal authority in Pennsylvania. Bradford, who relied on the protection of English constitutional law, compelled his prosecutors to bring him to trial for the offences they had laid to his charge; but though he was acquitted by the verdict of a jury, he had incurred such pecuniary loss, and found himself the object of so much active dislike, that he was compelled to remove his printing establishment from Pennsylvania. Keith was brought to trial shortly after, along with Francis Bodd, another quaker, for having, in a little work which was their joint production, falsely defamed a quaker magistrate, whom they had described as too high and imperious in worldly courts. They were found guilty, and sentenced to pay a fine of five pounds.† Retiring soon after to England, Keith published an account of the whole proceedings against him, in a pamphlet which he entitled "New England spirit of persecution transmitted to Pennsylvania, and the pretended quaker found persecuting the true quaker." So extensive was his influence, both in England and America, that for some time it was doubted whether he and his friends, or the party opposed to them, would succeed in eclipsing the others, and securing to themselves the exclusive possession of the quaker name. But the career of Keith, as a quaker, was suddenly abridged, and his influence in the society completely overthrown, by a consequence which it is probable that neither he nor his opponents anticipated from the commencement of their disputes. In the course of his labors in that wide field of controversy, which the attacks of his various adversaries in Pennsylvania and New England spread before him, Keith succeeded (to his own satisfaction at least) in refuting all the peculiar tenets, that had ever been common to himself and the quakers; and scorning to conceal the desertion of his original opinions, he hesitated

not to declare himself a convert from the quaker society, to the church of England. This secession was a death-blow to the influence of that party, which had hitherto espoused his sentiments; and which henceforward, either gradually coalescing with a more powerful majority, or peaceably submitting to a sentence of expulsion, contributed alike to the ascendancy of principles which originally it had hoped and intended to subvert. When Keith finally declared himself the antagonist of quakerism, he encountered the most active opposition from William Penn; but till then, the treatment which he had experienced in Pennsylvania, had been a source of the utmost regret and disapprobation to the proprietary.*

[1693.] The government that had been formed in England by the revolution, having now completed the arrangements that were necessary for its establishment and security at home, had leisure to extend its cares to the colonial communities at the extremity of the empire. In the histories of the other American settlements, we have seen instances of the esgerness which King William and his ministers evinced to appropriate to the crown the appointment of the provincial governors. The situation of the proprietary of Pennsylvania, together with various circumstances in the recent history of this province, presented a favorable opportunity of repeating the same policy, and, indeed, furnished a much more decent pretext for it than had been deemed sufficient to warrant an invasion of the rights of the proprietary of Maryland. Penn was generally suspected by the English people of adherence to the interests of his ancient patron James the Second; and in consequence of a charge of this nature (though supported only by falsehood and perjury†) he had absconded from judicial inquiry, and was living in concealment. In Pennsylvania the laws had been administered in the name of the banished king, long after the government of William and Mary had been recognised in the other colonies; and the dissensions which Keith's schism had excited were magnified into the appearance of disorders inconsistent with the honor of the British crown. Fortified with such pretexts for the royal interposition, King William issued a commission, depriving Penn of all authority in America, and investing the government of his territories in Colonel Fletcher, who had also been appointed the governor of New York. Penn, who regarded this proceeding as a tyrannical usurpation of his rights, adopted the strange defensive precaution of writing to Fletcher, beseeching him, on the score of private friendship, to refuse compliance with the king's commission; but an effort of this irregular description could not possibly avail him, and the government was quietly surrendered to Fletcher, who appointed, first Lloyd, and afterwards Markham, to act as his deputy. In the commission to Fletcher, no manner of regard had been expressed to the charter of Pennsylvania, and the main object of his policy was to obtain a recognition of the dependence of the province on the crown. This involved him in a series of disputes with the assembly, who passed an unanimous resolution, "that the laws of this province, which were in force and practice before the arrival of this present governor, are still in force;" but afterwards judged it expedient to acquiesce in the arrogation, that the liberty of conscience which they owed to the wisdom and virtue of William Penn and themselves, was bestowed on them by the grace and favor of the king. Farther than this, the governor found it impossible to bend them to his wishes. One object to which he strenuously labored to obtain their concurrence, [1694] was a general contribution in aid of the defence of the frontiers of New York against the arms of the French. Finding it necessary to reinforce, by argument, the authority of a royal letter which he produced for this purpose, he reminded them that the military operations carried on at this frontier contributed to the defence of the other colonies as well as New York, and that it was unjust to burden this province with the sole charge of proceedings which

* These very words, long before addressed by William Penn to an English magistrate, who was committing him to Newgate (Clarkson, i. 100) for refusing to take an oath, had been hitherto current and respected among the quakers, as importing no more than a magnanimous contempt, or decent disdain. However deficient in meekness and courtesy, they were certainly much less so than a great deal of the language that, about this period, was exchanged between many of the quaker writers and their adversaries. One Bugg, a quaker, having about this time deserted the society and quarrelled with his friends, maintained a literary warfare with them that tended much more to promote the mirth than the edification of mankind. I have seen an address to Bugg, from his ancient associates, in which they greeted him with numerous abusive allusions to the unsavouriness of his name.

† Penn, writing to a friend in America, declares that the report of this trial had excited much disgust in England, and induced many to exclaim against the fitness of quakers to administer municipal authority. Proudt, i. 376.

* G. Thomas' Hist. of Pennsylvania, 52, l. Proudt, i. 345. 361.—376. Clarkson's Hist. of the Abolition of the Slave Trade, i. 136. Thomas' Hist. of Printing in America, ii. 10. 24. Proudt's account of these proceedings bears evident marks of partiality. It is amusing to observe his grudge against Keith and Bradford for having dated a paper, which they published, from the prison to which they had been committed.

George Keith, after his embracement of the doctrines of the Church of England, was sent back again as a missionary to America, by the English Society for the Propagation of the Gospel; and in his labors to convert the Indians, is said to have been much more successful than any of the votaries of his former tenets. Oldmixon, i. 146.

† The author of the charge from which Penn withdrew himself, was the notorious Fuller, who was afterwards condemned to the pillory, for the detected falsehood of the charges which he had preferred against other distinguished persons.

were indispensable to the general safety. He was aware, he said, that the quaker principles which prevailed among them forbade not only the carrying of arms, but the levying of money even for the support of defensive war; but he hoped they would not refuse to feed the hungry and clothe the naked, which were certainly Christian virtues, and which the hunger and nakedness of the Indian allies of New York now presented them with a favorable opportunity of exercising. This ingenious casuistry, which the quakers might well have regarded rather as an affront to their understandings than a concession to their principles, proved on the present occasion, quite unavailing; to the no small displeasure of William Penn, who, on being reinstated in his government, reproached the assembly with their refusal to contribute towards the common defence, and desired that a sum of money for this purpose should forthwith be levied and remitted to New York.

In addition to the other disappointments and misfortunes that had recently befallen the proprietary of Pennsylvania, he had now to lament a sensible diminution of the esteem he had enjoyed with the members of his religious society in England. They reproached him with having meddled more with politics, and the concerns of the English government, than became a member of their Christian body; and would not admit the benevolent motives of his conduct, or the benefit which they themselves had personally reaped from it, as a sufficient apology for the scandal it had created, and the evil example it had afforded.* In the midst of so many adverse circumstances, involving the desertion of ancient friends, and the disappointment of almost every object of temporal satisfaction which he had proposed to himself, his retirement was penetrated by the grateful kindness of that illustrious man, whom once, in circumstances resembling his own present situation, he had endeavored to befriend. John Locke, who was now in the enjoyment of considerable favor at the English court, convinced of Penn's innocence, and mindful of the friendly intercession which Penn had made in his behalf with King James, when he was an exile in Holland, offered to employ his interest to procure him a pardon from King William. But the dignity of Penn's virtue was rather elevated than depressed by adversity; and emulating the magnanimity by which his own similar kindness had been formerly rejected by Locke, he declared, that, as he had done nothing unworthily, he would not consent to stain his reputation by accepting a pardon.† The retirement thus virtuously preserved, contributed no less to the refinement of his character than to the extension of his fame; and was signalled by the publication of a series of literary performances replete with learning, genius, and mild benevolence.

In a short time, the clouds that had gathered around his fortunes began to disperse; the quakers became completely reconciled, and as much attached as ever to him; and the good offices of Lord Somers, Locke, and other friends, concurring with the justice of his cause, and the detection of impostures committed by one of his accusers, succeeded in undeceiving the English court, and obviated every pretence for continuing to exclude him from the enjoyment of the privileges conferred on him by the charter of Pennsylvania. A royal warrant was accordingly issued for reinstating him in his proprietary functions; in the exercise of which he proceeded forthwith to invest his kinsman, Markham, with the office of deputy-governor, of his whole territories—thus again re-uniting the executive administration of Pennsylvania and Delaware.‡

* Lower, a quaker, the friend of Penn, and in good repute with the rest of the society, undertook to mediate a reconciliation between them, and for this purpose drew up the following apology, which was to be subscribed and distributed by Penn: "If any things, during these late revolutions, I have concerned myself, either by words or writings (in love, pity, or good-will to any in distress), farther than consisted with truth's honor or the church's peace, I am sorry for it; and the government having passed it by, I desire that it may be by you also." Clarkson, i. 98. Whether this apology was presented or not, is unknown: but a reconciliation took place shortly after between Penn and the quakers.

† This was not the only point of similarity in the histories of these distinguished persons. Both had been the dupes of very bad men (Shaftesbury and James the Second), and both suffered unjustly for their connexion with them. Both were expelled from the university of Oxford.

‡ Proud, i. 400—404. Clarkson, 277. 97. Mr. Clarkson's statements that this warrant was expressed in a manner particularly creditable to William Penn, is erroneous. The abstract he has given of its import is equally so, and shows him to have been misled by some defective copy of the instrument, which in reality commenced in this manner:—"Whereas upon information, that, by reason of great miscarriages in the government of our province of Pennsylvania, in America, and the absence of the proprietor, the same was fallen into disorder and confusion," &c. The reason assigned for restoring him is, that he "has given us good assurance that he will take care of the government of our said province and territories, and provide for the safety and security thereof."

Pennsylvania, meanwhile, continued to increase its population with such rapidity, that, about this period, [1695] the number of inhabitants (exclusive of negro slaves), was estimated at twenty thousand. A considerable change was observed soon after the English Revolution in the character of the emigrants, who, though generally respectable persons, yet showed very plainly, in many parts of their conduct, and especially in their reluctance to embrace the measures that were proposed for mitigating the evils of negro slavery, that views of temporal enrichment had much more powerfully influenced them in resorting to America than religious zeal. The formality of apparel and simplicity of manners peculiar to the constitutions of the quakers, served to purify their body by confining its attractions to sober-minded men; and enforced the example of industry; by increasing its efficacy in conducting to a plentiful estate. But the temporal advantages thus closely associated with quaker manners had latterly tended to produce a practical relaxation of the strictness and spirituality of quaker principles, and to adulterate the motives from which the profession of these principles was embraced. The attractions of Pennsylvania as a sanctuary of liberty of conscience had been comparatively diminished to the English dissenters by the Revolution; but its attractions, in other respects, continued unabated, and, by the widely-diffused influence and correspondence of Penn, were circulated through all parts of the British empire. Already many persons who in England had found it difficult to gain a livelihood, had in Pennsylvania amassed estates, to the value, some, of many thousands, more of many hundreds of pounds. The accounts that were published in England of the wages of labor in the province attracted thither a considerable number of persons in the humblest walks of life, who had the expenses of their transportation defrayed by the wealthier individuals, to whom for a series of years, they engaged themselves as servants. But the improvement in the condition of these people was so rapid, that a want of laborers, and the exorbitance of the wages that were necessary to retain free men in that condition, were continual subjects of complaint. These circumstances, concurring with the example of the neighboring colonies, had originally introduced, and now continued to prolong, the subsistence of negro slavery in the province; and this vile institution, by degrading servitude, and rendering it a condition still more undesirable to free men, promoted the causes from which itself had arisen. It required more virtue than even the quakers were yet capable of exerting to defend themselves from the contagion of this evil, and to induce them to divide the produce of their lands with their laborers, in such proportions as might have enabled them to employ only free labor in their cultivation.

During the interval that elapsed between the restoration of Penn to his proprietary authority, and his second visit to his people, [1696] some change was introduced into the form of the provincial constitution. Markham had repeatedly pressed the assembly to authorize the levy of a sum of money, to be remitted to the governor of New York, for the support of the war; or, as it was decently declared, for the relief of the poor Indians; and Penn, in his letters from England, had reinforced this application by declaring, that the preservation of the proprietary government would again be endangered by their refusal to comply with it. This appeared to the assembly a favorable opportunity of obtaining a change which they had long desired to effect, in the distribution of the legislative functions between themselves and the governor and council; and showing plainly that, without this equivalent, they were determined not to waive their scruples to a contribution for hostile purposes, they compelled Markham to consent to the passing of a new act of settlement, which formed the third frame or charter of the Pennsylvanian constitution. By this new compact, it was provided, that from each county there should be chosen only two persons to represent the people in council, and four as their representatives in assembly; the council being thus reduced in number from eighteen to twelve, and the assembly from thirty-six to twenty-four. It was farther stipulated, that the assembly should regulate its own adjournments, and should be no longer confined to a simple assent or negation to legislative propositions originating with the governor and council, but should share with them the privilege of preparing and proposing laws. On receiving this boon, the assembly passed an order for raising the sum of three hundred pounds, to be remitted to the governor of New York, for the relief of the distressed Indians on the frontiers of his province.* Governor Fletcher wrote

to Markham in the following year, [1697] declaring that the money had been faithfully applied to the feeding and clothing of the Indians, and desiring a fresh supply for the same benevolent purpose. The assembly, in reply to this proposition, desired that their thanks might be conveyed to Fletcher for "his regard and candor to them" in applying their former remittance to the use they had intended; adding, that although, for the present, they must decline to impose farther burdens on the province, they would always be ready to observe the king's farther commands, "according to their religious persuasions and abilities." Thus early did the quakers experience the difficulty of reconciling their religious principles with the administration of political power. It was but a few years after, when, in answer to a requisition from William Penn, in the king's name, for a sum expressly intended for the erection of forts and batteries at New York, the Pennsylvanian assembly assigned their poverty, and the partiality which imposed upon them so many exactions from which other and older colonies were exempted, as the only reasons for deferring to comply with the king's commands, "so far as their abilities and religious persuasions shall permit." This *salvo*, which was always inserted on such occasions, for the honor of quaker consistency, never prevented the quakers of Pennsylvania from contributing, as the subjects of a military government, their full contingent to the sinews of war. In voting grants of money which were expressly demanded, and which they well knew would be employed to impel the rage of war, and reward the ferocity of savages whom they had professed their anxious desire to convert and civilize, it was always attempted by the substitution of some other alleged purpose, to shift the sin from themselves to their military superiors, or at least to draw a decent veil over concessions which they could neither withhold nor avow.* This veil was not without its use, if it contributed to maintain among the Pennsylvanian quakers that respect for their pacific tenets which they displayed in the following century, when the English government, endeavoring to push them into a still more active and unequivocal co-operation with military measures, they sacrificed to their principles the possession of political power. To the real dereliction of these principles, however, which was suffered to gain admission among them under the cover of this veil, may perhaps, in part, be ascribed that schism which produced the sect or party of *Free Quakers*, who, during the war of independence, took arms against Great Britain, and have since continued to profess the lawfulness of defensive war.

1698—99.] The colony continued to glide on for some time in a course of tranquil prosperity, interrupted at length by an event which had been now too long deferred to be capable of producing the beneficial consequences which at one time were fondly expected to ensue from it—the return of the proprietary to his American dominions. On this second occasion, accompanied by his family, and professing his intention to spend the remainder of his life in Pennsylvania, his arrival was hailed with general, if not universal satisfaction,—of which the only visible abatement was created by the first visitation of that dreadful epidemic the yellow fever (since so fatally prevalent) at Philadelphia.† Some young men having ventured, in opposition to the commands of the magistrates, to salute the proprietary on his arrival with a discharge of artillery, performed this operation so awkwardly, as to occasion a severe injury to themselves; which the quakers seem to have regarded as a providential rebuke of a tribute so unsuitable to a member of their fraternity. The very first transactions that took place between Penn and his provincial assembly were but ill calculated

governor of Carolina, introduced into this province a law for the formation of a militia.

* Dr. Franklin mentions an instance some years after, of a requisition addressed to the assembly of Pennsylvania, of a grant of £2000 for the purchase of gunpowder; to which the assembly replied, that, consistently with quaker principles, they could not grant a farthing for such a purpose, but had voted £2000 for the purchase of grain. Various instances of accession to war, still more unambiguous, on the part of the American quakers, are related in Kalin's Travels in North America, vol. i.

† Thomas Story, an eminent preacher among the quakers, and afterwards recorder of Philadelphia, thus describes the impression produced by the prevalence of this epidemic:—"Great was the majesty and hand of the Lord; great was the fear that fell upon all flesh; I saw no lofty or airy countenance, nor heard any vain jesting to move men to laughter; nor extravagant leaping to excite above measure the lusts of the flesh; but every face gathered paleness, and many hearts were humbled, and countenances fallen and sunk, as such that wasted every moment to be summoned to the bar." Proud, vol. i. p. 422. How different this from Thucydides's description of the increased gaiety and profligacy produced by the plague at Athens.

* It was almost at the same time that Archdale, the quaker

ted to promote their mutual satisfaction. In the history of some of the other settlements (and particularly of Carolina and New York,) we have seen that the American seas were at this time infested by pirates, whose prodigal expenditure of money among their entertainers, and whose readiness to assist in evading the obnoxious acts of navigation, recommended them too successfully to the countenance of many of the North American colonists. Pennsylvania had not escaped this reproach, which Penn had communicated in letters to the assembly; by whom, while laws were readily enacted against the practices imputed to them, proclamations had at the same time been issued, declaring in the strongest terms that these imputations were unfounded. This disagreeable subject was resumed immediately after the arrival of Penn; and though the assembly still complained of the injustice of the reproach, it was found necessary to expel from it one of its members, the son-in-law of Colonel Markham, who was suspected of participating, or at least countenancing piracy. Still more productive of uneasiness were the applications which Penn was compelled by the British government to address to his assembly for levying money to be expended on military operations at New York; and which were answered only by complaints of the hardship of these exactions, and protestations of the inability of the province to comply with them. But the most signal and unhappy disagreement that occurred between Penn and the assembly, arose from the measures which he now suggested for improving the treatment of negro slaves, and correcting abuses that had occurred in the intercourse between the colonists and the Indians.

It was impossible that the evils of slavery, and the repugnance of such an inhuman institution to the duties of Christianity, which Baxter, Tryon, and other writers had already pressed upon the attention of the protestant inhabitants of Christendom, could escape the sense of those benevolent sectaries, who professed to exhibit a peculiar conformity to the mildest and most self-denying precepts of the gospel. When George Fox, the founder of this sect, paid a visit to Barbadoes in 1671, he found the quakers, as well as the other white inhabitants, in possession of slaves. "Respecting their negroes," he relates among his other admonitions to the quaker planters, "I desired them to endeavor to train them up in the fear of God, as well those that were bought with their money, as those that were born in their families. I desired also that they would cause their overseers to deal mildly and gently with their negroes, and not use cruelty towards them, as the manner of some hath been and is; and that after certain years of servitude, they should make them free.*" How conscientiously the quakers complied with this admonition is apparent, from a law passed by the legislature of Barbadoes five years after, commanding them to desist from giving instruction to negroes, and in particular from admitting them to their religious assemblages;† and how magnanimously they persisted to do their duty in the face of this unchristian command, may be inferred from an enactment of the same legislature in the following year, imposing a penalty on any shipmaster who should bring a quaker to the island. The prosecution of such measures, and the adoption of a similar policy in others of the West India plantations, succeeded in banishing from these settlements an example which might have been attended with the most beneficial consequences to the interests of the planters and the happiness of the negroes; and compelled many quaker planters to emigrate to America, where they brought with them their modified opinions on the subject of slavery. Many of them probably entertained the intention of an entire compliance with the admonition of Fox, by setting their negroes at liberty after certain years of servitude; but this purpose was easily overpowered by the sophistry and temptation of self-inter-

rest, the contagion of general example, and the influence of habit in blunting the feelings of humanity.

By his acquisition of the Delaware territory, it is probable that Penn, on coming to the possession of his American domains, found the system of negro slavery already established within them. During his first visit, it appears that a few negroes were imported into Pennsylvania, and were purchased by the quakers, as well as the other settlers. While the scarcity of laborers enforced the temptation to this practice, the kindness of quaker manners contributed to soften its evil and veil its iniquity; and it was not till the year 1688, that the repugnance of slavery itself, however disguised to the tenets of Christianity, was first suggested to the Pennsylvanians by the emigrants who had resorted to them from Germany. Whatever taint the practice of the quakers might have derived from human infirmity, they were still anxious as a body to maintain the theoretical purity of their principles; and accordingly, in compliance with the suggestion of the Germans, a resolution declaratory of this undeniable truth was passed in the same year, by the annual meeting of the quakers of Pennsylvania. The effect of this generous homage to religious truth and the rights of human nature, however, was not carried beyond a practical exemption of the slaves of the quakers, from evils not inevitably inherent in the system of bondage. George Keith, as we have seen, made an attempt, in 1692, to bring the practice of his fellow-sectaries into a closer accommodation to their theory. But his violence and irregularity were not calculated to recommend his dictates to general esteem; and the increasing number of the slaves, together with the diversities of character among the colonists (to which I have already adverted), rendered the emancipation of the negroes increasingly improbable. In the year 1696, the annual meeting of the Pennsylvanian quakers repeated their former declaration, adding to it an earnest admonition to the members of their society, to refrain from all farther importations of negro slaves; but no other immediate effect seems to have resulted from this measure, than an increased concern for the welfare of the negroes, who in some instances were admitted to attend divine worship in the same meeting-houses with their quaker masters.

On his second arrival in America, [1700] Penn seems very soon to have perceived, that from the variety of character among his colonists, and the inevitable tendency of absolute power to abuse, the negro slavery of Pennsylvania too much resembled, in some instances, the features of the same institution in other places. He was mortified with the discovery, at the same time, of numerous frauds and abuses that disgraced the character of the colonists in their traffic with the Indians. With the view of providing a remedy for both these evils, he presented to the assembly three bills which he had himself prepared; the first, for regulating the morals and marriages of the negroes; the second, for regulating the trials and punishments of the negroes; and the third, for preventing abuses and frauds upon the Indians. The assembly instantly negatived the first and last of these bills; acceding only to that which related to the trial and the punishment of their slaves. No account is transmitted of any discussion or debate on the bills which were rejected; and indeed it is probable that the assembly, in this instance, were glad to confine themselves to the ancient formula of simply approving or rejecting the bills presented to them. But it is said by one of the biographers of Penn, that the feelings of the proprietary received a convulsive shock on the occasion. He had indeed been unanimously supported by his council, which consisted entirely of quakers, in proposing the bills; but he had seen them decisively negatived by an assembly, of which a great majority consisted of persons of the same religious persuasion. Though disappointed of the more extensive influence, which as a political legislator he had hoped to exercise, he was yet able, in his ecclesiastical ministry among the quakers, to introduce into their discipline regulations and practices relative to the purposes of the rejected bills, the spirit of which, at least, was by the example of this powerful sect forcibly recommended to general imitation. Monthly meetings were enacted among the quakers, for the religious and moral education of their negro slaves; and regular conferences were arranged with the Indians, for communicating to them whatever instruction they could be prevailed on to accept. Penn finally obtained leave, or at least, took it upon himself to make a treaty with the Indians, by which they acknowledged themselves subjects of the British crown, and amenable to the provincial laws; and by which certain regulations were prescribed, for

preventing frauds upon them in their commercial dealings with the white population.

Thus was cherished in the quaker society a principle which about fifty years after obtained the signal triumph of procuring emancipation to all the negroes in America belonging to quakers; and thus, meanwhile, was cherished in the general body of the inhabitants of Pennsylvania a sense of what was due to the claims of human nature, which obtained for the slaves in this province a treatment far kinder and more equitable than they enjoyed in any other of the American states. Notwithstanding the encouragement afforded by the British government to the importation of negroes into all the American settlements, the slaves in Pennsylvania never formed more than a very insignificant fraction of the whole population of the province. Slavery subsisted longer in Delaware; and the slaves in this settlement, though not numerous, were rather more so than in the larger province of Pennsylvania.*

In addition to the other disagreeable impressions of which his second visit to America had been productive, William Penn had now the mortification of witnessing a revival of the jealousies between Delaware and Pennsylvania, and the inefficacy of all his efforts to promote a cordial union between the inhabitants of these countries. As a remedy for their mutual dissatisfaction, he had prepared a change in the frame of government; but the adjustment of this compact tended rather to inflame than allay the existing disputes. He endeavored to defer the extremity to which their disputes manifestly tended, by various acts of conciliation towards the weaker and more jealous party, and particularly by convoking at Newcastle, the metropolis of Delaware, another assembly, which was held in the close of this year. But although he succeeded after many efforts in obtaining from this assembly a subsidy for the support of his government, and made some progress in arranging with them the terms of a new charter or frame of government, the mutual jealousies between the two settlements were displayed with such unreserve, that in almost every topic of consideration, the Delaware representatives, to a man, voted exactly the reverse of whatever was proposed or approved by the Pennsylvanians. The subsidy amounted to 2000*l.* of which 1573*l.* was the proportion imposed upon Pennsylvania, and the remainder upon Delaware. It was unwise, perhaps, of Penn to invite his people to the acceptance of a new social compact, at a time when they were so much heated by mutual jealousy, and when the union between the two settlements was evidently so precarious. It afforded a pretext not long after for taxing him with converting the public distractions to his own advantage, and effectuating devices for the enlargement of his own power, while the minds of his people were too much occupied [1701] with their mutual dissensions to perceive the drift of his propositions.

But Penn had now determined again to leave America, and return to England; and while he naturally desired to have some frame of government finally established before his departure, his recent experience had doubtless impressed him with the conviction, that an extension of his own authority would render the constitution more subservient to the welfare of the people, and afford a freer scope to the promotion of views, and the exertion of influence, which must always be impartially directed to the general advantage.

In the last assembly, which he held before his departure, he had occasion to exert all his authority and address to prevent the representatives of Delaware and Pennsylvania from coming to an open rupture, and also to guard his own interests in the sale and lease of vacant lands, from an attempt of the assembly to exercise a

* Fox's Journal (3d edit.) 431. An earlier and more uncompromising resistance to slavery was made by some of the clergy of the church of Rome. At St. Luiz, in the year 1653, the celebrated Jesuit Vieira scribbled not from the pulpit to declare, to a congregation of slave owners, that no man could hold a negro in slavery, without devoting his own soul to eternal slavery in hell. Southey's History of Brazil. Part II. cap. 25. This discourse, which Mr. Southey has preserved at full length, is, perhaps, the most eloquent and powerful denunciation of the system of slavery that ever was uttered or written by priest or layman.

† Oldmixon, vol. ii. p. 38. The preamble of this law sets forth, that "Whereas many negroes have been suffered to remain at the meeting of quakers as hearers of their doctrine, and taught in their principles, whereby the safety of this island may be much hazarded," &c. We find the legislature of Barbadoes, an hundred and fifty years after, enacting similar laws against the methodist teachers and preachers, and declaring that their doctrines were fitted to turn the world upside down,

* Proud, vol. i. p. 423. 428—432. Clarkson's Abolition of the Slave Trade, vol. i. p. 136, 137. Ibid. Life of Penn, vol. ii. p. 218, 219, 225. Winterbottom, vol. ii. p. 417. Warden, vol. ii. p. 69, 125. In the course of his ministerial labors at this time, Penn visited his quaker brethren in Maryland, and appears to have been received in a friendly manner by his ancient adversary Lord Baltimore, who with his lady accompanied him to a quaker meeting. Penn regretted, for the sake of his noble companions, that the fervor of the meeting had subsided before their entrance; and lady Baltimore declared herself disappointed of the diversion she had expected. He had also various interviews with the Indians, who listened to him willingly as long as he confined himself to general allusions to religion. But when he desired on one occasion to direct their minds to the search of an internal manifestation of the Redeemer of the human race, his interpreter declared that there were no words in the Indian tongue that were capable of conveying such a notion.

To Penn, himself, the Indians very readily paid a degree of respect, which they refused to extend to his religious tenets. Many of them believed him a being of a higher order than the rest of mankind; "nor could they for a long time credit the news of his death, not believing him subject to the accidents of nature." Farmer's View of the Policy of Great Britain, &c. (A. D. 1764.) p. 60.

control over them. A great many laws were passed; of which the most remarkable were, for the establishment of a post-office, for the punishment of the vices of scolding and drunkenness; for restraining the practice of drinking healths, and for the destruction of wolves. But the most important proceeding on this occasion was the enactment of the new charter or frame of government, which Penn finally tendered to the assembly, and prevailed with six parts in seven of that body to accept, and even thankfully acknowledge. By this charter, it was provided (in conformity with the frame of 1696) that an assembly should be annually chosen by the freemen, to consist of four persons out of each county, or of a greater number, if the governor and assembly should so agree; that this assembly should choose its own officers, and be the sole judges of the qualifications and elections of the members; that it should prepare bills, impeach criminals, and redress grievances; and possess all the other powers and privileges of an assembly, according to the rights of the freemen subjects of England, and the customs observed in any of the king's plantations in America. The governor was empowered to summon, prorogue, and dissolve the assembly; to nominate his council; to discharge singly the whole executive functions of government, and to share the legislative, by affirming or rejecting the bills of the assembly.* It was declared that liberty of conscience should be inviolably preserved; that Christians of every denomination should be qualified to fill the offices of government; and that no act or ordinance should ever be made to alter or diminish the form or effect of this charter, without the consent of the governor for the time being, and six parts in seven of the assembly. But as it was now plainly foreseen that the representatives of the province, and those of the territories, would not long continue to unite in legislation, it was provided that they should be allowed to separate within three years from the date of the charter; and should enjoy the same privileges when separated as when connected. In the exercise of the new authority thus invested in himself, Penn proceeded to nominate a council of state, to consult with and assist the governor or his deputy, and to exercise his functions in case of his death or absence. The office of deputy-governor he bestowed on Colonel Andrew Hamilton, who had formerly been governor of New Jersey.

One of the last acts which he performed before his departure, the incorporation, by charter, of the city of Philadelphia, has been justly charged with great illiberality: though, according to the apology that has been suggested for it, the blame must be divided between himself and others. By this charter, he nominated the first mayor, recorder, aldermen, and common councilmen of the city; and among other privileges and franchises, empowered them to elect their successors in office, and even to increase their own number at pleasure. The city lands were granted to them, by the style of the mayor and commonalty of the city of Philadelphia; but the commonalty had no share in the government or estate of the city; the civic functionaries being self-elective, and not accountable to their fellow-citizens in any respect. It has been said that this municipal constitution, which was copied from the charter of the town of Bristol in England, was accorded by Penn to the desires of certain of his colonists who were natives of that place; and it is admitted that the functionaries whom he himself named, were men of integrity and abilities. But the possession of power, divested of control and responsibility, produced its usual effect on this corporate body; and the abuses engendered by its administration, were from a very early period a continual theme of discontent and complaint to the inhabitants of the city and the provincial assembly. Having finished these proceedings, and once more renewed a friendly league with the Indians, Penn communicated to his people an adieu, friendly and benevolent, but far less affectionate than his former valediction; and embarking with his family, returned to England.

The only reason that Penn assigned to his people for this second departure was the intelligence he had re-

ceived of a project of the English ministers to abolish all the proprietary jurisdictions in North America, and the necessity of his own appearance in England to oppose a proceeding so derogatory to his interest: but as he found on his arrival in this country, that the measure had been abandoned, and yet never again returned to America, it seems very unlikely that this was the sole or even the chief reason for his conduct. The disagreements that had taken place between himself and his colonists, had rendered their intercourse far less satisfactory than he could have desired, and induced him to supply the inadequacy of his own personal influence by a large addition to his political power; and from the numerous demands of the British government for contributions, in aid of military purposes, it was manifest that this power must be frequently exerted for the attainment of objects which, as a professor of quakerism, he could pursue with more decency and more vigor by the intervention of a deputy, than by his own personal agency. The disagreeable tidings that pursued him from America must have increased his aversion to return thither: and the favor he enjoyed with queen Anne on her accession, [1702] perhaps reawakened the views and hopes that had led him once before to prefer the courtly shades of Kensington, to the wild woods of Pennsylvania. His attendance at court, however, was soon interrupted by the perplexity and embarrassment of his private affairs (arising from the fraud of his steward), which compelled him to mortgage his American territory; and the same cause, concurring with increased dissensions between him and the colonists, induced him subsequently to bargain with the British government for a sale of his proprietary functions.* The completion of the bargain, however, was prevented by his death, which transmitted the proprietary government to his descendants, by whom it was enjoyed till the period of the American revolution.

Penn had scarcely quitted America when the disputes between the province and the territories broke forth with greater bitterness than ever. The Delaware representatives protested against the charter; and, refusing to sit in the same assembly with the Pennsylvanian representatives, chose a separate place of meeting for themselves in Philadelphia. After continuing for some time to indulge their jealous humor, and to enjoy whatever satisfaction they could find in separate legislation, [1703] they were persuaded by the successor of Hamilton, Governor Evans (who was much more agreeable to them than to the people of Pennsylvania,) to evince a more reasonable temper, and to propose a reunion with the Pennsylvanian assembly. But this body, provoked with the refractoriness which the Delaware representatives had already displayed, now refused to listen to their overtures of reconciliation. The breach thus became irreparable, and in the following year [1704] the separate legislature of Delaware was permanently established at Newcastle. In addition to the tidings of these prolonged disagreements and final rupture between the two settlements, Penn was harassed by complaints against the government of Evans, whose exertions to promote a militia, though they rendered him popular in Delaware, made him odious in Pennsylvania. Deriding the pacific acrophies of the quakers, [1706] Evans falsely proclaimed the approach of a hostile invasion, and invited all who were willing to join him to take arms against the enemy. A few individuals, and among these, four quakers, duped by this stratagem, flew to arms, and prepared to repel the threatened attack. But the chief effect of the proclamation was to cause many persons to bury their plate and money, and to fly from their homes; and the detection of the falsehood was followed by an impeachment of the governor, and of Logan the secretary of the province, who though innocent of accession to the fraud, made himself suspected, by endeavoring to palliate the guilt of it. Penn, however, supported these accused officers, and thereby increased the displeasure that was beginning to prevail in the province against himself. He was now very little disposed to look with favor on the proceedings of the inhabitants of Pennsylvania; who, no longer engrossed with their disputes with the people of Delaware, began to scan with very dissatisfied eyes the whole course of his proceedings with respect to themselves. The assembly of Pennsylvania not only assailed him with repeated demands, that the quit-rents, which he deemed his own private estate, should be appropriated to the support of the provincial government, but transmitted to him a remonstrance, entitled *Heads of Complaint*, in which they alleged that it was by his artifices that the several char-

ters granted at the first settling of the province had been defeated; that he had violated his original compact by the recent stretch of his authority so far beyond the limits within which he had engaged to confine it; and that he had received large sums of money during his last visit to the province, in return for benefits which he had promised to procure, but had never yet obtained for the people from the English government. They censured the original annexation of Delaware to Pennsylvania; reminding him that his title to the government of Delaware, not having been founded on a royal grant, was from the first very precarious; and lamenting with great grief that the privileges granted to the Pennsylvanians by his first charters, had been exposed to perish with the baseless fabric of the Delaware institutions with which he had associated them. Numerous extortions of his officers were at the same time complained of; and these were attributed to his refusal, in the year 1701, to affirm a bill that had been framed by the assembly for the regulation of official fees. Probably some of these complaints were founded in misapprehension, or suggested by factious malignity; and doubtless the discontent, which both on this and other occasions was expressed towards the proprietary, owed in some degree its origin to the peculiar relation which he held with the members of his own religious society in the province. They had always regarded the civil and political institutions of Pennsylvania as subordinate to the establishment and liberal encouragement of quakerism, and expected a degree of equality to result from the legislation of a quaker minister, which they would never have looked for from a law-giver of any other persuasion. His own assurances, at the beginning, that in acquiring the province, his main purpose was to serve the truth and people of God, (which they understood to signify quakerism and the quakers,) contributed to exaggerate their expectations in this respect.

Indignant at these charges against himself, and prejudiced by this feeling against the accusers of Evans, Penn continued to maintain this worthless individual in the office he had conferred on him, till his conduct had gone far to excite the people of Delaware to actual hostilities against their Pennsylvanian neighbors, in prosecution of an unjust demand for a toll on the navigation of the Delaware, which Evans had suggested to them. Receiving complaints of this, as well as of other instances of official malversation, on the part of his deputy-governor, and having ascertained, by a deliberate examination of them, that they were too well founded, Penn hesitated no longer to supersede Evans, and appointed in his place Charles Gookin, a gentleman of ancient Irish family, sometime retired from the army, in which he had served with repute; and who seemed qualified, by his age, experience, and the mildness of his manners, to give satisfaction to the people over whom he was sent to preside. Gookin carried out with him an affectionate letter from Penn to the assembly, in which their recent disagreements were passed over without any other notice than what may be inferred from a recommendation to his people as well as himself, of that humility with which men ought to remember their own imperfections, and that charity with which they ought to cover the infirmities of others. But the assembly were not so to be pacified. While they congratulated Gookin on his arrival, [1709] they revived in their address every topic of complaint that they had ever before preferred. Their ill-humor was augmented by the number of applications which Gookin was from time to time compelled to make, in the queen's name, for contributions in aid of the various military operations that related more immediately to the American colonies. To all these applications, the assembly invariably answered, that their religious principles would not suffer them to contribute to the support of war; but they voted the sums that were demanded as *present*s to the queen.

Finding his people not so easily intreated to conciliation as he had hoped, Penn, now in his sixty-sixth year,* for the last time addressed the assembly, in a letter replete with calm solemnity, and dignified concern. It was a mournful consideration to him, he said, that he was forced by the oppressions and disappointments which had fallen to his share in this life, to speak to the people of that province in a language he once hoped never to have occasion to employ. [1710] In a style of serious remonstrance he appealed to them, if, at the expense of his own fortune and personal care, he had not conducted them into a land where prosperity

* Mr. Clarkson has omitted to notice this important innovation, in his abstract of their charter. Dr. Franklin (in his *Historical Review*, &c.) comparing it with the corresponding innovation in favor of the assembly, admits, that, "upon the whole there was much more reason for acknowledgments than complaints."

† No mention is made of the royal approbation of this appointment, which is expressly referred to in the appointment of Evans, the successor of Hamilton. By an act of parliament, already noticed in the history of Maryland, it was requisite now that all the acting governors in the proprietary jurisdictions should be approved by the king.

* He demanded as the price of this surrender £20,000, but agreed to accept £12,000.

* Mr. Clarkson has miscalculated in supposing that Penn was in his seventieth year when he wrote this letter. Penn was born on the 14th October, 1644.

and liberty, far beyond the common lot of mankind, had been made their portion; and if this work of his hand, had yielded him aught else than the sorrow, disquiet and poverty, that now depressed his old age.* "I must desire you all," he proceeded, "in a serious and true weightiness of mind, to consider what you are, or have been doing; why matters must be carried on with these divisions and contentions; and what real causes have been given on my side for that opposition to me and my interest which I have met with, as if I were an enemy, and not a friend, after all I have done. I am sure I know not of any cause whatsoever. Were I sensible you really wanted any thing of me, in the relation between us, that would make you happier, I could readily grant it, if any reasonable man would say it were fit for you to demand." He entered into a long deduction of the various alterations that the constitution of the province had received, and endeavored to show that every one had arisen out of inconveniences of which all had been sensible at the time, and which all had willingly united in thus correcting. It was right, he contended, that the proprietary, who was personally responsible to the crown, for an administration conformable to the provincial charter, should be vested exclusively with the executive power. He could no longer, he said, impute the treatment he had met with, to mistakes in judgment,—seeing that he had such injuries to complain of as repeated attacks on his reputation; numerous indignities offered to him in papers sent over to England, by the hands of men who could not be expected to make the most discreet and charitable use of them; insinuations against his integrity; attempts upon his estate; and disfavor shown to individuals (particularly Logan, the secretary of the province) on account of their well known attachment to him. "I cannot but mourn," he added, "the unhappiness of my portion dealt to me from those, of whom I had reason to expect much better and different things; nor can I but lament the unhappiness that too many are bringing on themselves, who, instead of pursuing the amicable ways of peace, love, and unity, which I at first hoped to find in that retirement, are cherishing a spirit of contention and opposition, and, blind to their own interest, are oversetting that foundation on which your happiness might be built. Friends! the eyes of many are upon you: the people of many nations of Europe look on that country as a land of ease and quiet, wishing to themselves in vain the same blessings they conceive you may enjoy: but to see the use you make of them, is no less the cause of surprise." He concluded by declaring, that the opposition he had received from them, must at length force him to consider more closely his own private and declining circumstances in relation to the province. He was willing to continue his kindness to them, if they should think him deserving of reciprocal regard. If it should be otherwise deemed by a majority among them, let them say so at once; and he would know what he had to rely on. And yet he would hope that God might so direct them by the impartment of heavenly wisdom and holy fear, that "we may once more meet good friends, and live so to the end."

This letter is said to have produced a deep and powerful impression on the more considerate part of the assembly, who now began to feel for the father of his country, and regard with tenderness his venerable age; to remember his long labors, and to appreciate their own interest in his distinguished fame. These sentiments were rapidly propagated throughout the province; and their effect was apparent at the next annual election, when not one of the persons who had demonstrated enmity to Penn, and excited the rest of their countrymen to think unfavorably of him, was returned to the provincial assembly. But it is more than doubtful if this change of sentiment was ever known to its illustrious object, who was attacked shortly after by a succession of apoplectic fits, which suspending in a great degree the exercise of his memory and understanding, prevented him alike from completing an arrangement he had made with the crown for the sale of his proprietary rights, and from receiving the intelligence that would have induced him to consider such an arrangement unnecessary. [30.]

* Notwithstanding this desponding strain, it is manifest from Penn's competition with Locke for the praise of superior legislation (see a note to B. III. ante), that he was by no means insensible to the imperishable fame assured to him as the founder of Pennsylvania. The services of Penn were not only more liberally remunerated, but more gratefully remembered by his people, than were those of Lord Baltimore by the colonists of Maryland.

Little remains to be added to the view that has already been exhibited of the civil and political institutions of Pennsylvania and Delaware, at the close of the seventeenth century. Pennsylvania continued to retain the constitution enacted by Penn's last charter, in 1701, till the era of American independence; and Delaware continued to enjoy its own assembly, and to be subject to the executive administration of the governor of Pennsylvania till the year 1755, when it was formally erected into a separate state, and endowed with a separate government. No fixed salary seems to have been allotted to the governor of Pennsylvania; but sums of money were voted to him, from time to time, to defray the expenses of his government; and the amount of these was proportioned, in a great degree, to the favor he enjoyed with the representatives of the people. At the assembly which was held by Penn at Newcastle in the close of the year 1709, the remuneration allotted to the members consisted of six shillings a day for attendance, and three pence per mile for travelling charges. The speaker's daily allowance was ten shillings. The meeting of the assembly was indicated by the ringing of a bell; and any member entering half an hour after the appointed time, was fined tenpence. The humane code of criminal law, that was coeval with the first instance of Pennsylvania legislation, continued in force till the year 1705, when it was abolished by Queen Anne as too little consonant with the spirit of English jurisprudence. But it was soon after re-established by the same princess, on the intercession of William Penn.

Although quakerism continued long to be the most prevalent religious profession in Pennsylvania, yet from a very early period the province had been resorted to by sectaries of various other denominations, and a church had already been built in Philadelphia for the reception of a congregation of 700 persons attached to the tenets and discipline of the church of England. Some displeasure is said to have been evinced by the quakers at the first proposal of this episcopal party to erect an organ in their church. The episcopalians, and all the other sectaries unconnected with the quakers, made frequent propositions for the establishment of a militia; but the quakers steadily refused to sanction such a proceeding, by an act of the provincial government; though all who deemed the use of arms lawful, were permitted to train themselves, and to adopt every military precaution for their defence that should not be inconsistent with the peace of the province. Most of the offices of government were filled by quakers; and neither the duties of the bar, nor the functions of the bench, were deemed incompatible with their religious profession.† So early as the year 1686, a printing press was established at Philadelphia; and an almanac, for the following year, was printed at this press by Bradford.

When the Swedish colonists first occupied Delaware, they found the country infested with wolves, whose ferocity was soon after inflamed to an extraordinary pitch, by the mortality which the small-pox occasioned among the Indians, and the increased quantity of prey that they derived from the unburied corpses of the victims of this pestilence. Both in Pennsylvania and Delaware, bounties continued to be paid for the destruction of wolves so late as the middle of the eighteenth century.

The province and the territories, but especially the former, appear to have enjoyed very soon a thriving trade with England, with the southern colonies of America, and with the West India settlements. Their exports consisted of corn, beef, pork, fish, pipe staves; hides, tallow, and wool to the West India settlements; horses and other live cattle to the southern plantations; and peltry to England. Their direct trade with England was afterward increased by the cultivation of tobacco, which was begun under Blackwell's administration, and so rapidly extended, that in the beginning of the eighteenth century, fourteen ships sailed annually with that commodity from Pennsylvania. Their exports, however, were abridged in the year 1699, by an act of parliament (already noticed in the history of New Jersey) which prohibited the exportation of wool, whether raw or manufactured, from the American colonies. The province, at the same time, imported the produce of various English manufactures, to the value of about £18,000 a year, and yielded a revenue of £3,000 to the customs of the crown. The consumption of English

manufactures would probably have been larger, but that the German colonists had imported with them into Pennsylvania, the manufactures of paper, linen, and woollen cloth.

According to Oldmixon, whose history was published in 1708, the total number of inhabitants within the domains of William Penn then amounted to 35,000; a computation which the author himself terms a modest one, and which, as it includes Indians and negroes, is probably short of the truth. The town of Philadelphia, in 1696, contained two thousand houses, most of which are described as stately structures of brick; and Newcastle, the metropolis of Delaware, in the beginning of the eighteenth century, possessed 2500 inhabitants. For many years after its first occupation by the English, Pennsylvania continued to witness a rapid growth of its people, not only from a constant resort of emigrants, whom its attractions invited from all parts of Europe, but from a native increase more vigorous than any society since the infancy of the world, has ever exhibited. Gabriel Thomas, who published his account of this province in 1696, declares that barrenness among women was unknown in Pennsylvania, and their celibacy, after twenty years of age, not less so; adding, with quaker plainness, that it was impossible to meet a young married woman there who had not a child in her body or one in her arms. The children born in the province he describes as in general "better natured, milder, and more tender hearted than those born in England." The fertility of the soil, the general healthiness of the climate (notwithstanding the severe epidemics occasionally prevalent at Philadelphia), the liberal reward of labor, and the frugal, industrious, and regular habits diffused by the powerful example of the quakers, contributed to the promotion of this large increase, and rendered the people of Pennsylvania distinguished, even among the North American communities, as a moral and a happy race. The manners of a great proportion of the first race of quaker settlers, and of their immediate descendants, are said to have formed a pleasing exhibition of courteous benevolence, corresponding to the purpose with which their removal to America had been undertaken,—of facilitating the enjoyment of that affectionate intercourse which their tenets peculiarly enjoined. Some of the leading persons among the earliest quaker settlers were men who traced their lineage to the stock of the most ancient nobility of England, and in whom a sense of ancestral distinction was so tempered with the meekness of genuine quakerism, as to impart only a patriarchal dignity to their manners. Their hospitality, in particular, was conducted with a grace and simplicity entirely patriarchal.‡ The people of Delaware appear to have been, in general, a less refined and enterprising, but not a less virtuous race. Penn himself has celebrated the good morals and sobriety of deportment of the Swedish and Dutch agriculturists. The Swedish church at Wilmington is reputed one of the oldest churches in North America.

Among the first race of Pennsylvanian settlers were many persons whose attainments in science and literature would have done honor to the most enlightened communities. James Logan, a quaker, and secretary of the province, was the correspondent of the most learned men in Europe; and several of his works, written in the Latin tongue, (particularly a treatise on the generation of plants, and one on the properties of light,) were published with much applause at Leyden. He enriched Philadelphia with a valuable library; and, in his old age, executed an admirable translation of Cicero's treatise *De Senectute*, which was afterward printed with an encomiastic preface by Dr. Franklin. Thomas Makin, another quaker, and one of the earliest settlers in Pennsylvania, produced, in the beginning of the eighteenth century, a descriptive and historical account of the province, in a Latin poem, entitled, *Descriptio Pennsylvaniae*, exhibiting with great force of thought, and beauty of language, one of the most delightful pictures of national virtue and happiness, that ever was presented to the admiration of mankind.

† In the year 1729 alone the number of emigrants from various parts of Europe to Pennsylvania amounted to 6200. The greater part of these were Germans and Irish. Douglas's Summary.

‡ Warden, ii. 98. Galt's Life of West, Part I. p. 11-14 "In the houses of the principal families, the patricians of the country," says Mr. Galt, "unlimited hospitality formed a part of their regular economy. It was the custom among those who resided near the highways, after supper, and the last religious exercises of the evening, to make a large fire in the hall, and to set out a table with refreshments for such travellers as might have occasion to pass during the night; and when the families assembled in the morning, they seldom found that their tables had been unvisited."

† In the case of Kinsey, a quaker lawyer (afterward attorney-general, and finally chief-justice of Pennsylvania,) it was determined, after solemn debate, by the provincial government, that quaker lawyers should not be obliged to uncover their heads in addressing the judges. Proud, ii. 196, 197, 231.

APPENDIX.

State and Prospects of the North American Provinces at the Close of the Seventeenth Century—Sentiments and Opinions of the Colonists respecting the Sovereignty and the Policy of Great Britain, &c.

At the close of the seventeenth century, the British settlements in North America contained a population of more than three hundred thousand persons, distributed among the various colonial establishments, whose origin and early progress I have endeavored to illustrate.* The formation of these colonies is by far the most interesting event of that remarkable age.

"Speculative reasoners during that age," says a great historian, "raised many objections to the planting of those remote colonies, and foretold that, after draining their mother country of inhabitants, they would soon shake off her yoke, and erect an independent government in America; but time has shown that the views entertained by those who encouraged such undertakings, were more just and solid. A mild government, and great naval force, have preserved, and may still preserve, during some time, the dominion of England over her colonies. And such advantages have commerce and navigation reaped from these establishments, that more than a fourth of the English shipping is at present computed to be employed in carrying on the trade with the American settlements." The apprehensions of depopulation, alluded to by this author, are noticed at greater length in the prior work of Oldmixon, who asserts, that "on this argument are founded all the reasons to excuse the ill-usage the plantations have met with;" and after demonstrating the absurdity of such a notion, appeals to the large increase which the trade and the revenue of England had already derived from the colonies, as affording a juster and more powerful argument for repairing this ill-usage, and introducing more liberal provisions into the English commercial code.† The apprehensions of American independence were no less the object of ridicule to the best informed writers, in the beginning of that century which was destined to witness the American revolution. "It will be impossible," says Neal, "for New England to subsist of itself for some centuries of years; for, though they might maintain themselves against their neighbors on the continent, they must starve without a free trade with Europe, the manufactures of the country being very inconsiderable; so that if we could suppose them to rebel against England, they must throw themselves into the arms of some other potentate, who would protect them no longer than he could sell them with advantage." So slightly were the colonies connected with each other, and so much of mutual repugnance had been created by religious and political distinctions between them, that the probability of their uniting together for common defence against the parent state never occurred to this author. Nor will this be thought any great impeachment of his sagacity, when we consider that seventy years afterward, the prospect, which had then begun to dawn, of an effectual confederacy of these colonies against England, was declared by a philosophical historian to be perfectly delusive and chimerical.

If Hume had studied the history and condition of the colonies, or if Neal and Oldmixon had added to this acquirement the sagacity of Hume, it is probable that he would not have adduced the *mildness* of the English government as one of the causes that were likely to retard the independence of America, which he perceived must ere long ensue; and that they would have discerned, in the policy of the English government, an influence that powerfully tended to counteract the principles that separated the American communities from each other,

* From a comparison of the calculations of various writers, each of whom, almost invariably, contradicts all the others, and not unfrequently contradicts himself, I am inclined to think the following estimate of the population of the colonies at this period nearly, if not entirely correct. Virginia, 60,000; Massachusetts (to which Maine was then attached), between 70,000 and 80,000; Connecticut, 30,000; Rhode Island, 10,000; New Hampshire, 10,000; Maryland, 30,000; North and South Carolina, 10,000; New York, 30,000; New Jersey, 15,000; and Pennsylvania, 35,000. Even writers so accurate and sagacious as Dwight and Holmes have been led to underrate the early population of North America, by relying too far on the estimates which the local governments furnished to the British ministry for the ascertainment of the numbers of men whom they were to be required to supply for the purposes of naval and military expeditions.

† Oldmixon, *Introduc.* 19, &c. This author refers to a still earlier work in which the same topics had been enforced, entitled "*Groans of the Plantations*," by Judge Littleton, of Barbadoes. A still more distinguished writer on the same side of the question was Sir Dalby Thomas, an eminent merchant, who wrote an *Historical Account of the Rise and Growth of the West India Colonies*,

and to unite them by a strong sense of common interest and common injury in a confederacy fatal to the pretensions of the parent state. Every added year tended no less to weaken the divisive influence of the distinctions imported by the original colonists into their settlements, than to enhance the sense of a common interest, and to fortify the power by which that interest might be defended. The character of *generous undertakings*, which Hume very justly accords to these colonial establishments, expresses a praise which the English government had no pretensions to share with the private individuals by whom they were founded; ‡ and the mild policy, whether voluntary or not, which permitted the liberal institutions erected for themselves by these men to continue in existence, tended rather to abridge than to prolong the British dominion, by cherishing in the colonies a spirit and habit of liberty repugnant to the unjust and oppressive tenor of the English commercial restrictions.§ The colonial empire of Spain would not have boasted a longer duration than that of England if her settlements in South America had enjoyed as liberal constitutions as the North American colonies. "The policy of Europe," says a writer who perhaps equalled Hume in political sagacity, and certainly excelled him in acquaintance with colonial history, "has very little to boast of, either in the original establishment, or, so far as concerns their internal government, in the subsequent prosperity of the colonies of America." Folly and injustice, he pronounces, were the principles that presided over the formation of all the colonial establishments; avarice of gold impelling the adventurers to the southern, and tyranny and persecution promoting the emigrations to the northern parts of America. The governments of the several parent states, he observes, contributed little or nothing towards effectuating the establishments of their colonies, and yet invariably attempted to enrich their own exchequers, and secure to themselves a monopoly of the colonial commerce. [31.] by regulations injurious to the freedom and prosperity of the colonists—a procedure, in which the particular policy of England was only somewhat less illiberal and oppressive than that of the other European states. "In what way, therefore," he demands, "has the policy of Europe contributed either to the first establishment, or to the present grandeur of the colonies of America? In one way, and in one way only, it has contributed a great deal. *Magna mater virum!* It bred and formed the men who were capable of achieving such great actions, and of laying the foundations of so great an empire; and there is no other quarter of the world of which the policy is capable of forming, or has ever actually and in fact formed such men. The colonies owe to the policy of Europe the education and great views of their active and enterprising founders; and some of the greatest and most important of them, so far as concerns their internal government, owe to it scarce any thing else."

In the colonial establishments of the French, the Spaniards and the Portuguese, the royal government was stronger and more arbitrary, and subordination more strictly enforced, than in the parent states. Illiberal institutions, remote from the power and splendor of the thrones to which they were allied, required to be guarded with peculiar strictness from the intrusion of opinions and practices that savored of freedom. It was otherwise in the British colonies, where the grafts of constitutional liberty that had been transplanted from the parent state, expanded with a vigor proportioned to their distance from the rival shoots of royalty and aristocracy with which they were theoretically connected. Not only did these colonies enjoy domestic constitutions favorable to liberty, but there existed in the minds of the great bulk of the people, a democratic spirit and resolution that practically reduced the power of the pa-

‡ The colonization of Georgia which was not effected till 1732, was the only instance in which the English government contributed to the foundation of any of the North American states.

§ See an account of the commercial restrictions that were imposed prior to the English Revolution, and an examination of their policy, ante, B. I. cap. 3. To the restrictions there described, there was added, before the close of the seventeenth century, a prohibition (noticed in the histories of New Jersey and Pennsylvania) of the exportation of wool from the colonies.

I have some doubts of the accuracy of a statement (derived from Neal) in B. II. cap. v. ante. of the colonists having been at one time restrained from working mines of iron and copper. Till the year 1750, the export of American iron was restrained by heavy duties, Raynal, B. IV. cap. vii.; and even the manufacture appears to have been subject to some inconvenient regulations, Oldmixon, (2d Edit.) vol. i. p. 296. But even then, both iron and copper mines were worked in several of the states; and the success of these undertakings seems to have been chiefly obstructed by the dearthness of labor. Douglas, vol. ii. p. 109. Winterbotham, vol. ii. p. 368,

rent state even below the standard of its theory. Many causes seem to have contributed to the formation of this spirit, and to the production of sentiments and habits conducive to its efficacy. All the colonial charters were extorted, by interest or importunity, from princes noted for arbitrary designs or perfidious characters; and no sooner had these charters produced the effect of collecting numerous and thriving communities in America, than some of them were, and all of them would have been, annulled, if the dynasty of the Stuarts had been much farther prolonged. The designs of these princes were not entirely abandoned by their successors at the British Revolution. For many years after, the American colonists were roused to continual contests in defence of their charters, which the English court made successive attempts to qualify or annul. These defensive efforts, and the success with which they were generally crowned, tended powerfully to keep alive an active and vigilant spirit of liberty in America. The ecclesiastical constitutions and the religious sentiments that prevailed in the majority of the provinces, were no less favorable to the nurture of liberal and independent sentiments. In Virginia, Maryland, and South Carolina, alone of all the states:—in the first, from its earliest settlement, and in the two others by a most unjust usurpation; the church of England was possessed of a legal pre-eminence, and maintained at the expense, not only of its own adherents, but of all the other inhabitants, of whatever christian denomination.¶ In all the other states there existed, about the close of the seventeenth century, either an entire political equality of religious sects, or at least a very near approach to it; and in all these, not only were the inhabitants, by their general character of protestants, the votaries of a system founded on the rights of private judgment, but the majority of them belonging to that class which in England received the name of protestant dissenters, professed tenets which have been termed the *protestantism of the protestant faith*, and which peculiarly predisposed to a jealousy of civil liberty, and a promptitude to repel every arbitrary exertion of authority. Even the episcopal church where it existed, whether as the pre-eminent establishment, or as one among many co-equal associations, was stripped of its aristocratical appendages, and exhibited neither a titled hierarchy nor a gradation of ranks among the ministers of religion. In civil life, a similar equality of ranks universally prevailed. No attempt was ever made to plant the proud distinction of *nobility* in any of the provinces, except in Carolina, where the institution soon withered and died.¶ Unaccustomed to that distinction of ranks which the policy of Europe has established, the people were generally impressed with an opinion of the natural equality of all freemen; and even in those provinces where negro slavery had the greatest prevalence, the possession of this tyrannical privilege seems rather to have adulterated the spirit of freedom with a considerable tinge of arrogance, than to have contributed at all to mitigate or depress it. Except this inhuman institution, every circumstance in the domestic or relative condition of these provinces had a tendency to promote industry, good morals, and impressions of equality. The liberal reward of labor and the cheapness of land, placed the enjoyment of comfort, and the dignity of independence, within the reach of all; the luxuries and honors of England attracted the wealthy voluptuary and the votary of ambition to that more inviting sphere of enjoyment and intrigue; and the vast *wastes* or uncultivated districts attached to every province served as salutary outlets by which the population was drained of those restless disorderly adventurers who were averse to legal restraint and patient labor, and who, in the roving occupation of hunters and *backwoodsmen* (as they have been termed,) found a resource that diverted them from more lawless and dangerous pursuits, and even rendered them useful as a body of pioneers, who paved the way for an extension

¶ The most remarkable dispute that occurred during the eighteenth century between England and Virginia, prior to the Revolution, was occasioned by an attempt of the English government to support the episcopal clergy of the province in a pretension which was disagreeable to the bulk of the people. The English government interfered to prevent the operation of a law prejudicial to the emoluments of the clergy; but the provincial tribunals refused to pay any attention to its mandate.

¶ Yet the mysterious nonsense of free masonry seems to have been introduced pretty early, and has continued to maintain a footing among the Americans. This is perhaps the only instance of the successful importation into America of one of these institutions so frequent in European states, which have become absurd by surviving the manners and principles in which they originated, but which are consecrated by time and the passion that mankind have for connecting themselves with antiquity.

and multiplication of the colonial settlements. No trading corporations or monopolies restrained the freedom with which every man might employ his industry, capital, and skill; and no forest laws nor game laws confined the sports of the field to a privileged class of the community. No entails were admitted to give adventitious aid to natural inequalities, and perpetuate, in the hands of idleness and folly, the substance that had been amassed by industry and ability.* Happily for the stability of American freedom, it was impossible for the first generation of colonists to succeed in effectuating their settlements, and attaining a secure and prosperous establishment, without the exercise of virtues, and the formation of a character, that guaranteed the preservation of the blessings to which they had conducted. Even the calamities of French and Indian war with which some of the provinces long continued to be harassed, contributed to preserve a spirit and habits without which their people might have been unable in the eighteenth century to achieve their independence. If the latter settlements of New Jersey and Pennsylvania were exempted in some degree from the discipline of those hardships and difficulties with which the commencement of all the other settlements was attended, they were happily peopled, in a great degree, by a class of settlers whose habits and manners were peculiarly favorable to industry and good morals, and congenial to the spirit of republican constitutions. The quakers, indeed, have been much more successful in breathing American society with manners favorable to liberty, than with principles allied to their own political doctrines.

To England, the acquisition of these colonial settlements was highly advantageous. They enlarged her trade and revenues; they afford a vast field in which her needy and superfluous population might improve their condition and dissipate their discontent; and finally, they created for her a new nation of friends interested in her happiness and glory, and of customers, whose growing wants and wealth excited and rewarded the manufacturing industry of her people. All the nations of Europe derived advantage from the formation of these establishments, which disburdened their territories of great numbers of men, whom the pressure of poverty, aggravated by defective civil institutions, and an aversion to the systems of their national churches inflamed by ecclesiastical intolerance, must have rendered either martyrs or rebels in their native land. The emigration from the continent of Europe, and especially from Germany to America, during the greater part of the eighteenth century, was much more copious than the emigration from England. To the colonists, the subsistence of their peculiar connexion with England was likewise attended with some advantages. The acknowledged right and implied protection of England deterred all other European powers who were not at war with her from molesting them; while their chartered or traditional constitutions opposed (after the English Revolution) a barrier to gross and open encroachments of the parent state herself on colonial rights and liberties. As their own strength and resources increased, the benefit of English protection was proportionally diminished, while the inconvenience of her commercial restrictions, and of participation in her politics and wars, was more sensibly experienced.

A considerable variety and indistinctness of opinion prevailed both in England and America, respecting the precise import of the political relation subsisting between the two countries. It was at first the maxim of the English court, that the crown was the only member of the British constitution which possessed jurisdiction over the colonies.† All the charters were framed in conformity with this maxim, except the charter of Pennsylvania. The colonies were by no means uniform in the sentiments which they expressed on this subject. They complained very generally of an unjust usurpation of power over them by the British parliament, when the navigation laws were passed; and openly maintained on many occasions, that an act of the British parliament was not binding on America. Yet they scrupled not to complain of their grievances to the houses of parliament, and to invoke, from time to time, parliamentary

interposition in their behalf. The New England states alone seem to have perceived from the first the advantage they might one day derive from adhering to the maxim, that they were politically connected only with the king, and not at all with the parliament; and with singular prudence forbore to ask favors from a parliament by which they were regarded with especial favor, lest they should seem to sanction parliamentary interference with their concerns. When the parliament enjoyed but an occasional existence, and was frequently, indeed generally, opposed to the court, the English monarchs resolutely maintained their exclusive jurisdiction over the colonies. When the parliament acquired greater power and permanence it enforced, both on the court and the colonies, the acknowledgment of its supreme legislative jurisdiction. The colonies murmured against the trade laws: they often evaded them; and many persons still maintained that the parliament had no right to impose them. This opinion kept its ground, and would have been more generally and openly asserted, if the colonies had been able to enforce it, or had received encouragement from the crown. But the English ministers were now always (by a necessity of the constitution) in possession of a majority in parliament, and found it easier and safer to act on all occasions through the instrumentality of this organ, than through a prerogative employed on a number of distant provincial assemblies. The revolution of 1688 established firmly the supreme power of the parliament, and enforced the submission of America to its legislative control; and from this period, all the measures by which the British government proposed to affect the public interest of the colonists, were pursued through the medium of parliamentary enactments. No taxation of the colonies was *practically attempted* by the parliament, except what arose from the regulation of commerce; but a power was assumed to alter the American charters, or at least to modify the constitutions which these charters had created. There was one point, indeed, in which the relation of the colonies to the royal prerogative, seemed still to be acknowledged. It was not to the House of Lords, or to any of the ordinary tribunals of England, that appeals were carried from the judgments of American courts, but to the king in council; and it was the same organ that enjoyed the power of modifying and rescinding the provincial laws which were deemed repugnant to English jurisprudence.‡

Yielding not to conviction but to necessity, overawed by the strength of Britain, and encumbered by the dangerous vicinity of the French in Canada, the colonists submitted to the power of parliament, and rendered to it even that degree of voluntary acknowledgment which may be inferred from numerous petitions for the redress of grievances.¶ Yet the submission that was actually enforced, was yielded with manifest reluctance, and the pretensions by which that submission might in after times be extended, were regarded with the most jealous apprehension. So early as the year 1696, a pamphlet was published in England, recommending the imposition of a parliamentary tax on one of the colonies. This was immediately answered by two other publications, in which the power of taxing the colonies was utterly denied to a parliament in which they were not represented.||

There were various particulars in the supremacy that was exercised and the policy that was pursued by the parent state, that were offensive to the colonists, and regarded by them as humiliating badges of dependence. The appointment of certain of the provincial governors by the crown, not only created discontent in the provinces which beheld this privilege enjoyed by the inhabitants of the other states, but excited in these others

† Lord Mansfield repeatedly pronounced that it was within the competency of the English court of King's Bench to send a writ of habeas corpus into America; but he declared that this was a power which could rarely if ever be exercised with propriety. *Stokes on the Constitution of the British Colonies*, p. 5, 6.

¶ When they became more wealthy and powerful, and found that the parliament was about to usurp their domestic taxation, they refrained from sending petitions to it, and presented them only to the king—See Franklin's Works, iii. 336—and at length boldly revived the ancient maxim, "that the king, and not the king, lords, and commons collectively, is their sovereign; and that the king with their respective assemblies is their only legislator." *Ibid.* 381. Thus the Americans in contending for their independence, finally took their stand on a principle originally introduced by despotic princes, and intended to secure their subjection to arbitrary government and royal prerogative.

|| Gordon's Hist. of the United States, vol. i. Letter ii. "The pamphlets against taxation (said Lord Camden in his speech in the House of Lords, April, 1766) were much read, and no answer was given to them, no censure passed upon them; nor were men startled at the doctrine." *Ibid.*

a continual apprehension of being levelled in this respect with the condition of their neighbors. The manner in which this branch of the royal prerogative was too often exercised, tended to render it additionally disagreeable. It was the general practice of the English ministers to commit the royal governments to needy dependents, whose chief aim was to repair a shattered fortune and to recommend themselves to their patrons by a headlong zeal for the assertion of every real or pretended prerogative of the crown.¶ The transportation of English felons to America, was also a practice of the British government, which the lapse of time rendered increasingly offensive to the colonists. We have seen the assembly of Maryland, as early as the year 1676, endeavour to stem the torrent of vicious and profligate example which was thus directed by the parent state among the laboring classes of her colonial subjects. The assembly of Pennsylvania made an attempt to obstruct the importation of convicts into that state by imposing a duty of five pounds on every convict that should be imported. But it was not till a later period that the practice was generally objected to by the colonists. So pressing in most places was the demand for laborers, that their moral characters and the terms on which they were obtained, were considerations to which the planters had not leisure to attend. Nay, in some instances, felons were not the only involuntary emigrants from England whose labor they appropriated. It became at one time a common practice for captains of vessels to entice ignorant persons, by flattering promises of wealth and preferment, to accompany them to America, where they had no sooner arrived, than they were sold as bondsmen to defray the cost of their passage and entertainment. [32.] So early as the year 1686 an order of council** was issued for the prevention of this practice. In process of time all the local governments and all the respectable inhabitants of the provinces united in petitioning the English government to discontinue the practice of sending felons to America;†† but their complaints of this evil, as well as of the continued importation of additional negro slaves, experienced the most contemptuous disregard. One consequence that is said to have resulted from this arbitrary treatment, was the existence of very general ignorance or very illiberal prejudices, with regard to the condition of North America, in the minds of all classes of people in England. Though persons connected with the colonies, by commerce or otherwise, might entertain juster ideas of their condition, it is certain that till a very late period these territories were generally regarded in England as wild inhospitable deserts, infested by savages and beasts of prey, and cultivated only by criminals or by kidnapped negroes and Europeans. Though Bishop Berkeley had prophesied a destiny of unequalled splendor to this region, in his "Verses on the prospect of planting arts and literature in America," and though Thomson had celebrated the happiness of the colonies, and their subservience to the greatness of the British empire,‡‡ the encomiastic strains of these writers were more than counteracted by the sarcastic and opprobrious imputations which were sanctioned by others and more

¶ Sir William Keith's Hist. of Virginia, 184. Williamson's North Carolina, ii. 15. We have already seen abundant confirmation of the testimony of these writers in the histories of Virginia, New York, and New Jersey. See the observations on the general effect of the English Revolution on the American colonies, at the close of the history of Virginia, B. I. cap. 3, ante.

In some instances, the government was bestowed as a sinecure office on a courtier who resided in England, while his deputy (appointed also by the crown) performed the duty, and received a part of the salary. The Earl of Orkney, in particular, who was appointed governor of Virginia in 1704, held this appointment so long that he received 42,000*l.* of salary from a people who never once beheld him among them. *Oldmixon*, (2d Edit.) vol. i. p. 400. His place in the province, however, was very well supplied for nearly twenty years by a distinguished officer and man of science, Colonel Alexander Spotsiswoode, (of the Scotch family of that name,) to whom, among other benefits, the colonists were indebted for the expedition in 1714, by which a passage over the Apalachian mountains was first ascertained. *Ibid.* p. 401, 402. In honor of his services, one of the counties of Virginia is called Spotsylvania.

** This document is preserved in the British Museum. The system of inveigling and kidnapping was not confined to England. It was carried on to a great extent in Suabia and other German cantons by Dutch factors, whom Raynal asserts to have been hired by the British government. *British Settlements in America*, B. IV. cap. 9.

†† An American patriot humorously proposed that a reciprocal transportation of American felons to England should in equity be indulged to the colonists. *Franklin's Memoirs*.

‡‡ "Lo! swarming o'er the new-discovered world,
Gay colonies extend; the calm retreat
Of undeserved distress—

—Bound by social freedom, firm they rise;
Of Britain's empire the support and strength."
THOMSON.

* At a subsequent period, the system of entails became prevalent in Virginia. *Wirt's Life of Henry*, p. 33. It was productive of great dislike and jealousy between the aristocracy and the yeomanry of the province. *Ibid.* *passim*.

† A bill having been introduced into the House of Commons in the reign of James the First, for regulating the American fisheries, Sir George Calvert, the secretary of state, conveyed to the house the following intimation from the king; "America is not annexed to the realm, nor within the jurisdiction of parliament; you have, therefore, no right to interfere." *Colonial Tracts in Harvard Library*, apud Holmes, i. 195.

only passed their own lives in slothful indulgence, but retained the poor in factious idleness, by neglecting to provide them with safe and useful employment; and strongly urges the wealthy capitalists of England to provide for their own security, by facilitating every foreign vent to the energies of active and indigent men. He enlarges on the pleasures incident to a planter's life, and enforces his description by the testimony of his own experience. "I have not been so ill bred," he declares, "but I have tasted of plenty and pleasure, as well as want and misery. And lest any should think the toil might be insupportable, I assure myself there are who delight extremely in vain pleasure, that take much more pains in England to enjoy it, than I should do there to gain wealth sufficient; and yet I think they should not have half such sweet content." B. VI. To gentlemen he proposes, among other inducements, the pleasures of fishing, fowling, and hunting, to an unbounded extent; and to laborers, the blessings of a vacant soil, of unequalled cheapness and unsurpassed fertility. He promises no mines to tempt sordid avarice, nor conquests to allure profligate ambition; but the advantages of a temperate climate, and of a secure and exhaustless subsistence; the wealth that agriculture may extract from the land, and fisheries from the sea. "Therefore," he concludes, "honorable and worthy countrymen, let not the meanness of the word fish distaste you, for it will afford as good gold as the mines of Guiana or Potosi, with less hazard and charge, and more certainty and facility."

I have given but a very general outline of Smith's exposition of this subject. The details with which he has filled it up are highly interesting, and well deserving of perusal. I think there can be no doubt that he has treated the subject of colonization with more both of the skill of a politician and the profound sagacity of a philosopher, than Lord Bacon has shown in either or both of his productions, the "Essay on Plantations," and the "Considerations touching the Plantation in Ireland."

The name of Smith has not yet gathered all its fame. The lustre it once possessed is somewhat obscured by time, and by the circumstances that left America so long to depend on England for the sentiments and opinions that literature preserves or produces, and consequently led her to rate her eminent men rather by the importance of their achievements in the scale of British than of American history. But I think I can foresee its revival. It will grow with the growth of men and letters in America; and whole nations of its admirers have yet to be born. As the stream becomes more illustrious, the springs will become more interesting. Romulus, I doubt not, was an object of greater interest in the Augustan era than in the preceding ages of Rome. The age of Smith's fame has in like manner yet to come; an age when there will be inscribed by the Americans, on tablets more lasting than Carthaginian gold,

"Fortia facta patrum, series longissima rerum,
Per tot docta viros prima ab origine gentis;"

and he will then be thought as far to excel Romulus in true glory, as America has excelled, and is yet likely to excel old Rome in happiness and virtue.

He was born in the year 1579, and died on the 21st of June, 1631.

Nothing can be more erroneous or unjust than Winterbotham's Chronological Catalogue of the American States, in which Lord Delaware is recorded as the founder of Virginia. If this honor belong to any individual, it is to Captain Smith.

NOTE [3] p. 203.—The history of Lord Delaware's government, and the more recent example of the settlement formed by Lord Selkirk in Prince Edward's Island, demonstrate very strongly the beneficial influence, to which noblemen may render their rank subservient, in the promotion and support of such establishments. The mass of mankind bear very little resemblance to the original colonists of Massachusetts and Pennsylvania. They are utterly incapable of appreciating superior piety, and yield (especially in small bodies) a very reluctant deference to the pretensions of superior wisdom and ability. The claims of superior birth and hereditary elevation have the advantage of being more certain and manifest, more adapted to their habits, and less offensive to their self-complacency. Lord Bacon observes, that plantations are most frequent in the earlier stages of society; that is, in the period when superior birth, united (as it then commonly is) with a monopoly of the little knowledge

that exists, exercises the strongest influence on mankind. The colony conducted by Lord Selkirk to Prince Edward's Island consisted of Highlanders, a race of men peculiarly distinguished by, what Burke has termed, "the proud submission and generous loyalty to rank." When their countrymen in the Hebrides beheld Dr. Johnson, they made little account of the intellectual superiority which had gained him a sort of monarchical influence in England; but desiring to know what were his claims to respect, inquired of him if he could recount a long genealogy.

NOTE [4] p. 203.—The surprising errors that Robertson has committed in his account of Sir Thomas Dale's administration may well seem to detract, in no small degree, from the credit of history. He not only imputes to the Company the enactment and introduction of the arbitrary code transmitted by Sir Thomas Smith, but unfolds at length the (imaginary) reasons that prevailed with them to adopt a measure so harsh and sanguinary; though of this measure itself they are expressly acquitted by Stith, the only authority on the subject that exists, and the very authority to which Robertson himself refers. Among the other reasons which he assigns, is the advice of Lord Bacon, which he unhesitatingly charges this eminent person with having communicated, and the Company with having eagerly approved. In support of a charge so decided and so remarkable, he refers merely to a passage in Lord Bacon's *Essay on Plantations*. It would be well for the fame of Bacon if all the charges with which his character is loaded were supported by such evidence. For *supposing* (which is doubtful) that this essay was published before the collection of Sir Thomas Smith's system of martial law, and *supposing* it to have been read by the compiler of that system, it is surely more than doubtful if the passage alluded to would yet support Dr. Robertson's imputation. It merely recommends that a colonial government should "have commission to exercise martial laws, with some limitation;" a power inseparable from such, and indeed from every system of government. The twenty-fourth section of King James' second charter to the Company had already invested the colonial governors with "full power and authority to use and exercise martial law, in cases of mutiny or rebellion;" and the preceding section of the same charter authorizes them, "in case of necessity," to rule, correct, and punish, according to their own "good discretions." No blame can attach to the bare authorization of an extraordinary power, reserved in every society, for extraordinary occasions. What alone seems deserving of blame is Sir Thomas Smith's violent and illegal substitution of the most sanguinary code of martial law that was ever framed, in the room of the former constitution, and for the purposes of the ordinary administration of the colony; and Dr. Robertson's very hasty and unfounded imputation of this proceeding to the act of the Council and the advice of Lord Bacon. It had been well if the Council had paid more attention to the maxim of this great man, that "those who plant colonies must be endowed with great patience."

The inaccuracy and misrepresentation in which Dr. Robertson has indulged, in his history of South America, has been detected by Mr. Southey, and exposed in the *History of Brazil*, Part I. note 58.

NOTE [5] p. 224.—Chalmers and Robertson have imputed the slow increase of the colonists of New Plymouth to "the unsocial character of their religious confederacy." As the charge of entertaining antisocial principles was preferred against the first Christians by men who plumed themselves on exercising *hospitality to the gods of all nations*, it is necessary to ascertain the precise meaning of this imputation, if we would know whether it be praise or blame that it involves. Whether, in a truly blameworthy acceptance, the charge of unsocial principles most properly belongs to these people or to their adversaries, may be collected from the statements they have respectively made of the terms on which they were willing to hold a companionable intercourse with their fellow men. Mr. Winslow, who was for some time governor of New Plymouth, in his account of the colony declares that the faith of the people was in all respects the same with that of the reformed churches of Europe, from which they differed only in their opinion of church government, wherein they pursued a more thorough reformation. They disclaimed, however, any uncharitable separation from those with whom they differed on this point, and freely admitted the members of every

reformed church to communion with them. "We ever placed," he continues, "a large difference between those that grounded their practice on the word of God, though differing from us in the exposition and understanding of it, and those that hated such reformers and reformation, and went on in anti-christian opposition to it, and persecution of it. It is true we profess and desire to practise a separation from the world and the works of the world; and as the churches of Christ are all saints by calling, so we desire to see the grace of God shining forth (at least seemingly, leaving secret things to God) in all we admit into church fellowship with us, and to keep off such as openly wallow in the mire of their sins, that neither the holy things of God nor the communion of saints may be leavened or polluted thereby." He adds, that none of the new settlers who are admitted into the church of New Plymouth are encouraged, or even permitted, to insert in the declaration of their faith a renunciation of the Church of England or any other reformed establishment. (Mather. B. I. cap. iii.) It does not appear to me that these sentiments warrant the charge of unsocial principles in any sense which a Christian will feel himself at all concerned to disclaim. Whether the adversaries of these men were distinguished for principles more honorably social or more eminently charitable, may be gathered from a passage in Howel's *Familiar Letters*, where this defender of church and state thus expresses the sentiments of his party respecting religious differences between mankind. "I rather pity than hate Turk or infidel, for they are of the same metal and bear the same stamp as I do, though the inscriptions differ. If I hate any, it is those schismatics that puzzle the sweet peace of our church; so that I could be content to see an Anabaptist go to hell on a Brownist's back." (vol. i. let. 31.) The policy of the ecclesiastical administration of England gave a premium to the production of such sentiments. Howel's fervor for the church party did not survive the power of that party to reward him. After the fall of the English church and monarchy, he became the defender and penegyrist of the administration of Cromwell; though, like Walter and Dryden, he returned in the train of Fortune, when she returned to his original friends.

NOTE [6] p. 229.—The introduction of this feature into the portrait of Sir Henry Vane rests entirely on the authority of Burnet and Kennet, (followed by Hume,) who speak from hearsay. Ludlow, who knew Vane personally, bestows the highest praise on his imperturbable serenity and presence of mind; and, with the glowing sympathy of a kindred spirit, describes the resolute magnanimity with which at his trial he sealed his own fate by scorn to plead, like Lambert, for his life, and gallantly pleading for the dying liberties of his country. At his execution, when some of his friends expressed resentment of the injuries that were heaped upon him, "Alas!" said he, "what ado they keep to make a poor creature like his Saviour. I bless the Lord I am so far from being affrighted at death, that I find it rather shrink from me than I from it. Ten thousand deaths for me, before I will defile the chastity and purity of my conscience; nor would I for ten thousand worlds part with the peace and satisfaction I have now in my heart." Even Burnet admits that the resolution he summoned up at the last prompted him "to some very extraordinary acts, though they cannot be mentioned." Oldmixon, less scrupulous, has satisfied the curiosity that Burnet excited, by relating that "Lady Vane began her reckoning for her son, the Lord Barnard, from the night before Sir Henry lost his head on Tower Hill." Perhaps the deep piety and constant negation of all merit in himself, by which the heroism of Vane was softened and ennobled, may have suggested to minds unacquainted with these principles the imputation of constitutional timidity. At all events this cloud, whether truly belonging to his character, or raised by the envious breath of his detractors, has, from the admirable vigor of his mind and the unquestioned courage of his demeanor, served rather to embellish than to obscure the lustre of his fame.

NOTE [7] p. 236.—The accounts of the first conversations which the missionaries held with various bodies of these heathens, abound with curious questions and observations that proceeded from the Indians in relation to the tidings that were brought to their ears. One man asked, Whether Englishmen were ever so ignorant of Jesus Christ as the Indians? A second, Whether Jesus Christ could understand prayers in the Indian language? A third proposed this question,

How there could be an image of God, since it was forbidden in the second commandment! On another occasion, after Mr. Elliot had done speaking, an aged Indian started up, and with tears in his eyes asked, Whether it was not too late for such an old man as he, who was near death, to repent and seek after God? A second asked, How the English came to differ so much from the Indians in their knowledge of God and Jesus Christ, since they had all at first but one Father? A third desired to be informed, How it came to pass that sea water was salt, and river water fresh? Several inquired, How Judas could deserve blame for facilitating the end which it was the purpose of God to effect? One woman asked, Whether she was entitled to consider herself as having prayed, when she merely joined in her mind with her husband who prayed by her side? Another, If her husband's prayer signified any thing while he continued to beat his wife? Many of the converts continued to believe that the gods whom they had formerly served had in reality great power, but were spirits subordinate to the true and only God; and when threatened with witchcraft by the Powaws for their apostacy, they said, We do not deny your power, but we serve a greater God, who is so much above yours that he can defend us from them, and enable even us to tread upon them all. One sachem sent for an Indian convert, and desired to know how many gods the English had! When he heard they had but one, he replied scornfully, Is that all? I have thirty-seven! Do they suppose I would exchange so many for one!

NOTE [8] p. 239.—The character of George Fox is by no means generally understood in the present day. His writings are so voluminous, and there is such a mixture of good and evil in them, that every reader finds it easy to justify his preconceived opinion, and to fortify it by appropriate quotations. His works are read by few, and wholly read by still fewer. Many form their opinions of him from the passages which are cited from his writings by his adversaries: and of the quakers there are many who derive their opinions of him from the passages of a very different complexion which are cited in the works of the modern writers of their own sect. I shall here subjoin some extracts from his Journal, which will verify some of the remarks I have made in the text: premising this observation, that the book itself was first put into my hands by a zealous and intelligent quaker, for the purpose of proving that it contained no such passages as some of those which I am now to transcribe from it.

Fox relates, that in the year 1648 he found his nature so completely new-modelled, that "I knew nothing but pureness, innocence, and righteousness, being renewed up into the image of God by Christ Jesus; so that I was come up to the state of Adam, which he was in before he fell. The creation was opened to me; and it was showed me how all things had their names given them according to their nature and virtue. I was at a stand in my mind whether I should practice physic for the good of mankind, seeing the nature and virtues of the creatures were so opened to me by the Lord. But I was immediately taken up in spirit to see another or more steadfast state than Adam's in innocence, even into a state in Christ Jesus that should never fall. The Lord showed me that such as were faithful to him in the power and light of Christ should come up into that state in which Adam was before he fell; in which the admirable works of the creation and the virtues thereof may be known through the openings of that divine Word of wisdom and power by which they were made." In many of the disputes which he afterward held with ministers and doctors, he maintained that he was, and that every human being by cultivation of the spiritual principle within him might become like him, perfectly pure and free from all dregs of sin. He relates with complacency and approbation, that having one day addressed a congregation of people at Beverley in Yorkshire, the audience declared afterward that it was an angel or spirit that had suddenly appeared among them and spoken to them. He conceived himself warranted by his endowments to trample on all order and decency. One Sunday as he approached the town of Nottingham, he tells, "I espied the great steeple-house; and the Lord said unto me, thou must go cry against yonder great idol, and against the worshippers therein." He accordingly, entered the church, and hearing the minister announce the text, *We have also a more sure word of prophecy*, and tell the people that by this was meant the Scriptures, whereby they were to try all doctrines, religions, and

opinions, Fox adds, "I could not hold, but was made to cry out, 'Oh no; it is not the Scriptures; it is the Holy Spirit.'" On another occasion, having entered a church, and hearing the preacher read for his text, *Ho! every one that thirsteth, come ye to the waters, &c.*, Fox called out to him, "Come down, thou deceiver! dost thou bid people come freely and take of the water of life freely, and yet thou takest three hundred pounds a year of them for preaching the scriptures to them?" Approaching the town of Litchfield, he declares he found himself directed to cast off his shoes, and in that condition walked through the streets, exclaiming, "Wo to the bloody city of Litchfield!" which he accordingly did. These examples are selected almost at random from numberless instances of similar proceedings recorded in his voluminous journal. Yet he strongly condemns those whom he terms *ranters*, and relates in various places the attempts he had made to convince them of their delusion. Journal, 3d edit. 1765, pp. 16. 24. 27. 34. 49. 50. 51.

William Penn, in the beautiful Preface which he wrote for this Journal, informs us that these ranters were persons who "for want of staying their minds in an humble dependence upon him that opened their understandings to see great things in his law, ran out in their own imaginations, and mixing them with these divine openings, brought forth a monstrous birth, to the scandal of those that feared God." "Divers," he adds, "fell into gross and enormous practices, pretending in excuse thereof that they could without evil commit the same act which was sin in another to do." "I say," he continues, "this ensnared divers, and brought them to an utter and lamentable loss as to their eternal state; and they grew very troublesome to the better sort of people, and furnished the looser with an occasion to blaspheme." (Preface, p. 7.)

Fox himself relates some horrid immoralities of the ranters, and that he had found it necessary to publish addresses to give assurance to the people that these deluded persons were quakers only in name (Journal, p. 399.) He applies the epithet of ranters to many of those who called themselves quakers in America (143.) Some of Fox's chief associates and coadjutors appear to have become in the end ranters, or something worse. Of these was James Nayler, who was long the fellow-laborer and fellow-sufferer of Fox, and whom Fox still terms a quaker, at the same time when he was in prison for his horrible enormities. Fox alludes vaguely and sorrowfully to Nayler's errors and disobedience to himself. When he found that Nayler would not give heed to his rebukes, Fox told him that "the Lord moved me to slight him, and to set the power of God over him." He adds, that it soon after happened to Nayler that "his resisting the power of God in me, and the truth of God that was declared to him by me, became one of his greatest burdens." (Journal, p. 205.) Nayler had ridden naked into Bristol with a crew of insane followers making the most blasphemous proclamations before him, and had committed the most profligate immoralities. On his trial he produced a woman, one Dorcas Earberry, who deposed that she had been dead two days, and was recalled to life by Nayler.

It is impossible to discover what part of the extravagance of Nayler was condemned by Fox and the proper body of the quakers. We find Fox relating with great approbation many wild and absurd exhibitions by which quakers were moved, as they said, to show themselves as signs of the times. "Some," he says, "have been moved to go naked in the streets, and have declared amongst them that God would strip them of their hypocritical professions, and make them as bare and naked as they were. But instead of considering it, they have frequently whipped, or otherwise abused them." (Journal, p. 386.) Many such instances he relates in the Journal (p. 323, &c.) with cordial approbation of the conduct of the quakers, and the strongest reprobation of the persecutors who punished them for walking naked.

Fox taught that God did not create the devil, (Journal, p. 140.) Yet though the reasoning by which he defends this gross heresy would plainly seem to imply that the devil was a self-created being, there is another passage, (p. 345,) from which we may perhaps conclude that Fox's real opinion was that the devil was created by God a good spirit, but transformed himself by his own act into a wicked one. He sets down every misfortune that happened to any of his adversaries or persecutors as a judgment of Heaven upon them. He relates various cures of sick and wounded persons that ensued on his prayers, and on more ordinary means that he used for their relief. It is not easy to discover

if he himself regarded these as the exertions of miraculous power; but from many passages it is plain that they were, to his knowledge, so regarded by his followers; and the editor of his journal refers to them in the index under the head of "Miracles."

I think it not unreasonable to consider quakerism the growth of a protestant country, and quietism, which arose among catholics, as branches of a system essentially the same; and Madame Guyon and Molinos as the counterparts of Fox and Barclay. The moral resemblance is plainer than the historical connexion; but the propagation of sentiment and opinion may be powerfully effected when it is not visibly indicated. Quietism was first engendered in Spain, by a sect called the Illuminati or Alambrados, who sprung up about the year 1575. They rejected sacraments and other ordinances, and some of them became notorious for indecent and immoral extravagances. This sect was revived in France in the year 1634, but quickly disappeared under a hot persecution. It re-appeared again with a system of doctrine considerably purified, yet still inculcating the distinctive principle of exclusive teaching by an inward light and sensible direction, towards the close of the seventeenth century, both at Rome in the writings of Molinos, and in France under the auspices of Madame Guyon and Fenelon. Encyclopædia Britannica, vol. ix. p. 156, and xv. p. 766.

NOTE [9] p. 240.—Besse, in his voluminous "Collection of the Sufferings of the People called Quakers," relates that Lydia Wardell, of Newbury in New England, a convert to quakerism, at length found herself concerned to appear in a public assembly "in a very unusual manner, and such as was exceeding hard and self-denying to her natural disposition, she being a woman of exemplary modesty in all her behavior. The duty and concerns she lay under was that of going into their church at Newbury naked, as a token of that miserable condition which she esteemed them in." "But they, instead of religiously reflecting on their own condition, which she came in that manner to represent to them, fell into a rage and presently laid hands on her," &c. Vol. ii. p. 235. He also notices the case of Deborah Wilson, a young woman of very modest and retired life, and of a sober conversation, having passed naked through the streets as a sign against the cruelty and oppression of the rulers." 236.

George Bishop, another quaker writer, thus relates the case of Deborah Wilson. "She was a modest woman, of a retired life and sober conversation; and bearing a great burden for the hardness and cruelty of the people, she went through the town of Salem naked as a sign; which she having in part performed, was laid hold on, and bound over to appear at the next court of Salem, where the wicked rulers sentenced her to be whipt." New England judged, p. 388. The writings of Besse, Bishop, and some others, who were foolish enough to defend the extravagance that they had too much sense to commit, were the expiring sighs of quaker nonsense and frenzy. They are still mentioned with respect by some modern quakers, who praise instead of reading them; as the sincere but frantic zeal of Loyola and Xavier and still commended by their successors, who have inherited the name and the manners, without the spirit that distinguished the original Jesuits.

It had been well if the government of Massachusetts had inflicted punishment on the disgusting violations of decency avowed by these writers, without extending its severity to the bare profession of quakerism. This injustice was occasioned by the conviction that these outrages were the legitimate fruits of quaker principles; a conviction which, it appears the language even of those quakers who were themselves guiltless of such outrages, tended strongly to confirm. It is only such language on the part of the quakers that can acquit their adversaries of the inhuman absurdity that pervades the reasoning of persecutors, and holds men responsible for all the consequences that may be logically deduced from their principles, though rejected and denied by themselves. The sentiments of the people of New England are thus strongly expressed by Cotton Mather: "I appeal to all the reasonable part of mankind whether the infant colonies of New England had not cause to guard themselves against these dangerous villains. It was also thought that the very quakers themselves would say, that if they had got into a corner of the world, and with immense toil and charge made a wilderness habitable, on purpose there to be undisturbed in the exercises of their worship, they would never bear to have New Englanders come among them and

only passed their own lives in slothful indulgence, but retained the poor in factious idleness, by neglecting to provide them with safe and useful employment; and strongly urges the wealthy capitalists of England to provide for their own security, by facilitating every foreign vent to the energies of active and indigent men. He enlarges on the pleasures incident to a planter's life, and enforces his description by the testimony of his own experience. "I have not been so ill bred," he declares, "but I have tasted of plenty and pleasure, as well as want and misery. And lest any should think the toil might be insupportable, I assure myself there are who delight extremely in vain pleasure, that take much more pains in England to enjoy it, than I should do there to gain wealth sufficient; and yet I think they should not have half such sweet content." B. VI. To gentlemen he proposes, among other inducements, the pleasures of fishing, fowling, and hunting, to an unbounded extent; and to laborers, the blessings of a vacant soil, of unequalled cheapness and unsurpassed fertility. He promises no mines to tempt sordid avarice, nor conquests to allure profligate ambition; but the advantages of a temperate climate, and of a secure and exhaustless subsistence; the wealth that agriculture may extract from the land, and fisheries from the sea. "Therefore," he concludes, "honorable and worthy countrymen, let not the meanness of the word fish distaste you, for it will afford as good gold as the mines of Guiana or Potosi, with less hazard and charge, and more certainty and facility."

I have given but a very general outline of Smith's exposition of this subject. The details with which he has filled it up are highly interesting, and well deserving of perusal. I think there can be no doubt that he has treated the subject of colonization with more both of the skill of a politician and the profound sagacity of a philosopher, than Lord Bacon has shown in either or both of his productions, the "Essay on Plantations," and the "Considerations touching the Plantation in Ireland."

The name of Smith has not yet gathered all its fame. The lustre it once possessed is somewhat obscured by time, and by the circumstances that left America so long to depend on England for the sentiments and opinions that literature preserves or produces, and consequently led her to rate her eminent men rather by the importance of their achievements in the scale of British than of American history. But I think I can foresee its revival. It will grow with the growth of men and letters in America; and whole nations of its admirers have yet to be born. As the stream becomes more illustrious, the springs will become more interesting. Romulus, I doubt not, was an object of greater interest in the Augustan era than in the preceding ages of Rome. The age of Smith's fame has in like manner yet to come; an age when there will be inscribed by the Americans, on tablets more lasting than Carthaginian gold,

"Fortia facta patrum, series longissima rerum,
Per tot ducta viros prima ab origine gentis;"

and he will then be thought as far to excel Romulus in true glory, as America has excelled, and is yet likely to excel old Rome in happiness and virtue.

He was born in the year 1579, and died on the 21st of June, 1631.

Nothing can be more erroneous or unjust than Winterbotham's Chronological Catalogue of the American States, in which Lord Delaware is recorded as the founder of Virginia. If this honor belong to any individual, it is to Captain Smith.

NOTE [3] p. 203.—The history of Lord Delaware's government, and the more recent example of the settlement formed by Lord Selkirk in Prince Edward's Island, demonstrate very strongly the beneficial influence, to which noblemen may render their rank subservient, in the promotion and support of such establishments. The mass of mankind bear very little resemblance to the original colonists of Massachusetts and Pennsylvania. They are utterly incapable of appreciating superior piety, and yield (especially in small bodies) a very reluctant deference to the pretensions of superior wisdom and ability. The claims of superior birth and hereditary elevation have the advantage of being more certain and manifest, more adapted to their habits, and less offensive to their self-complacency. Lord Bacon observes, that plantations are most frequent in the earlier stages of society; that is, in the period when superior birth, united (as it then commonly is) with a monopoly of the little knowledge

that exists, exercises the strongest influence on mankind. The colony conducted by Lord Selkirk to Prince Edward's Island consisted of Highlanders, a race of men peculiarly distinguished by, what Burke has termed, "the proud submission and generous loyalty to rank." When their countrymen in the Hebrides beheld Dr. Johnson, they made little account of the intellectual superiority which had gained him a sort of monarchical influence in England; but desiring to know what were his claims to respect, inquired of him if he could recount a long genealogy.

NOTE [4] p. 203.—The surprising errors that Robertson has committed in his account of Sir Thomas Dale's administration may well seem to detract, in no small degree, from the credit of history. He not only imputes to the Company the enactment and introduction of the arbitrary code transmitted by Sir Thomas Smith, but unfolds at length the (imaginary) reasons that prevailed with them to adopt a measure so harsh and sanguinary; though of this measure itself they are expressly acquitted by Stith, the only authority on the subject that exists, and the very authority to which Robertson himself refers. Among the other reasons which he assigns, is the advice of Lord Bacon, which he unhesitatingly charges this eminent person with having communicated, and the Company with having eagerly approved. In support of a charge so decided and so remarkable, he refers merely to a passage in Lord Bacon's *Essay on Plantations*. It would be well for the fame of Bacon if all the charges with which his character is loaded were supported by such evidence. For supposing (which is doubtful) that this essay was published before the collection of Sir Thomas Smith's system of martial law, and supposing it to have been read by the compiler of that system, it is surely more than doubtful if the passage alluded to would yet support Dr. Robertson's imputation. It merely recommends that a colonial government should "have commission to exercise martial laws, with some limitation;" a power inseparable from such, and indeed from every system of government. The twenty-fourth section of King James' second charter to the Company had already invested the colonial governors with "full power and authority to use and exercise martial law, in cases of mutiny or rebellion;" and the preceding section of the same charter authorizes them, "in case of necessity," to rule, correct, and punish, according to their own "good discretions." No blame can attach to the bare authorization of an extraordinary power, reserved in every society, for extraordinary occasions. What alone seems deserving of blame is Sir Thomas Smith's violent and illegal substitution of the most sanguinary code of martial law that was ever framed, in the room of the former constitution, and for the purposes of the ordinary administration of the colony; and Dr. Robertson's very hasty and unfounded imputation of this proceeding to the act of the Council and the advice of Lord Bacon. It had been well if the Council had paid more attention to the maxim of this great man, that "those who plant colonies must be ended with great patience."

The inaccuracy and misrepresentation in which Dr. Robertson has indulged, in his history of South America, has been detected by Mr. Southey, and exposed in the History of Brazil, Part I. note 58.

NOTE [5] p. 224.—Chalmers and Robertson have imputed the slow increase of the colonists of New Plymouth to "the unsocial character of their religious confederacy." As the charge of entertaining anti-social principles was preferred against the first Christians by men who plumed themselves on exercising hospitality to the gods of all nations, it is necessary to ascertain the precise meaning of this imputation, if we would know whether it be praise or blame that it involves. Whether, in a truly blameworthy acceptance, the charge of unsocial principles most properly belongs to these people or to their adversaries, may be collected from the statements they have respectively made of the terms on which they were willing to hold a companionable intercourse with their fellow men. Mr. Winslow, who was for some time governor of New Plymouth, in his account of the colony declares that the faith of the people was in all respects the same with that of the reformed churches of Europe, from which they differed only in their opinion of church government, wherein they pursued a more thorough reformation. They disclaimed, however, any uncharitable separation from those with whom they differed on this point, and freely admitted the members of every

reformed church to communion with them. "We ever placed," he continues, "a large difference between those that grounded their practice on the word of God, though differing from us in the exposition and understanding of it, and those that hated such reformers and reformation, and went on in anti-christian opposition to it, and persecution of it. It is true we profess and desire to practise a separation from the world and the works of the world; and as the churches of Christ are all saints by calling, so we desire to see the grace of God shining forth (at least seemingly, leaving secret things to God) in all we admit into church fellowship with us, and to keep off such as openly wallow in the mire of their sins, that neither the holy things of God nor the communion of saints may be leavened or polluted thereby." He adds, that none of the new settlers who are admitted into the church of New Plymouth are encouraged, or even permitted, to insert in the declaration of their faith a renunciation of the Church of England or any other reformed establishment. (Mather, B. I. cap. iii.) It does not appear to me that these sentiments warrant the charge of unsocial principles in any sense which a Christian will feel himself at all concerned to disclaim. Whether the adversaries of these men were distinguished for principles more honorably social or more eminently charitable, may be gathered from a passage in Howel's Familiar Letters, where this defender of church and state thus expresses the sentiments of his party respecting religious differences between mankind. "I rather pity than hate Turk or infidel, for they are of the same metal and bear the same stamp as I do, though the inscriptions differ. If I hate any, it is those schismatics that puzzle the sweet peace of our church; so that I could be content to see an Anabaptist go to hell on a Brownist's back." (vol. i. let. 31.) The policy of the ecclesiastical administration of England gave a premium to the production of such sentiments. Howel's fervor for the church party did not survive the power of that party to reward him. After the fall of the English church and monarchy, he became the defender and panegyrist of the administration of Cromwell; though, like Waller and Dryden, he returned in the train of Fortune, when she returned to his original friends.

NOTE [6] p. 229.—The introduction of this feature into the portrait of Sir Henry Vane rests entirely on the authority of Burnet and Kennet, (followed by Hume,) who speak from hearsay. Ludlow, who knew Vane personally, bestows the highest praise on his imperturbable serenity and presence of mind; and, with the glowing sympathy of a kindred spirit, describes the resolute magnanimity with which at his trial he sealed his own fate by scornfully pleading, like Lambert, for his life, and gallantly pleading for the dying liberties of his country. At his execution, when some of his friends expressed resentment of the injuries that were heaped upon him, "Alas!" said he, "what ado they keep to make a poor creature like his Saviour. I bless the Lord I am so far from being affrighted at death, that I find it rather shrink from me than I from it. Ten thousand deaths for me, before I will defile the chastity and purity of my conscience; nor would I for ten thousand worlds part with the peace and satisfaction I have now in my heart." Even Burnet admits that the resolution he summoned up at the last prompted him "to some very extraordinary acts, though they cannot be mentioned." Oldmixon, less scrupulous, has satisfied the curiosity that Burnet excited, by relating that "Lady Vane began her reckoning for her son, the Lord Barnard, from the night before Sir Henry lost his head on Tower Hill." Perhaps the deep piety and constant negation of all merit in himself, by which the heroism of Vane was softened and ennobled, may have suggested to minds unacquainted with these principles the imputation of constitutional timidity. At all events this cloud, whether truly belonging to his character, or raised by the envious breath of his detractors, has, from the admirable vigor of his mind and the unquestioned courage of his demeanor, served rather to embellish than to obscure the lustre of his fame.

NOTE [7] p. 236.—The accounts of the first conversations which the missionaries held with various bodies of these heathens, abound with curious questions and observations that proceeded from the Indians in relation to the tidings that were brought to their ears. One man asked, Whether Englishmen were ever so ignorant of Jesus Christ as the Indians? A second, Whether Jesus Christ could understand prayers in the Indian language? A third proposed this question,

How there could be an image of God, since it was forbidden in the second commandment? On another occasion, after Mr. Elliot had done speaking, an aged Indian started up, and with tears in his eyes asked, Whether it was not too late for such an old man as he, who was near death, to repent and seek after God? A second asked, How the English came to differ so much from the Indians in their knowledge of God and Jesus Christ, since they had all at first but one Father? A third desired to be informed, How it came to pass that sea water was salt, and river water fresh? Several inquired, How Judas could deserve blame for facilitating the end which it was the purpose of God to effect? One woman asked, Whether she was entitled to consider herself as having prayed, when she merely joined in her mind with her husband who prayed by her side? Another, If her husband's prayer signified any thing while he continued to beat his wife? Many of the converts continued to believe that the gods whom they had formerly served had in reality great power, but were spirits subordinate to the true and only God; and when threatened with witchcraft by the Powaws for their apostasy, they said, We do not deny your power, but we serve a greater God, who is so much above yours that he can defend us from them, and enable even us to tread upon them all. One sachem sent for an Indian convert, and desired to know how many gods the English had? When he heard they had but one, he replied scornfully, Is that all? I have thirty-seven! Do they suppose I would exchange so many for one?

NOTE [8] p. 239.—The character of George Fox is by no means generally understood in the present day. His writings are so voluminous, and there is such a mixture of good and evil in them, that every reader finds it easy to justify his preconceived opinion, and to fortify it by appropriate quotations. His works are read by few, and wholly read by still fewer. Many form their opinions of him from the passages which are cited from his writings by his adversaries: and of the quakers there are many who derive their opinions of him from the passages of a very different complexion which are cited in the works of the modern writers of their own sect. I shall here subjoin some extracts from his Journal, which will verify some of the remarks I have made in the text: premising this observation, that the book itself was first put into my hands by a zealous and intelligent quaker, for the purpose of proving that it contained no such passages as some of those which I am now to transcribe from it.

Fox relates, that in the year 1643 he found his nature so completely new-modelled, that "I knew nothing but pureness, innocency, and righteousness, being renewed up into the image of God by Christ Jesus; so that I was come up to the state of Adam, which he was in before he fell. The creation was opened to me; and it was showed me how all things had their names given them according to their nature and virtue. I was at a stand in my mind whether I should practice physic for the good of mankind, seeing the nature and virtues of the creatures were so opened to me by the Lord. But I was immediately taken up in spirit to see another or more steadfast state than Adam's in innocency, even into a state in Christ Jesus that should never fall. The Lord showed me that such as were faithful to him in the power and light of Christ should come up into that state in which Adam was before he fell; in which the admirable works of the creation and the virtues thereof may be known through the openings of that divine Word of wisdom and power by which they were made." In many of the disputes which he afterward held with ministers and doctors, he maintained that he was, and that every human being by cultivation of the spiritual principle within him might become like him, perfectly pure and free from all dregs of sin. He relates with complacency and approbation, that having one day addressed a congregation of people at Beverley in Yorkshire, the audience declared afterward that it was an angel or spirit that had suddenly appeared among them and spoken to them. He conceived himself warranted by his endowments to trample on all order and decency. One Sunday as he approached the town of Nottingham, he tells, "I espied the great steeple-house; and the Lord said unto me, thou must go cry against yonder great idol, and against the worshippers therein." He accordingly, entered the church, and hearing the minister announce the text, *We have also a more sure word of prophecy*, and tell the people that by this was meant the Scriptures, whereby they were to try all doctrines, religions, and

opinions, Fox adds, "I could not hold, but was made to cry out, 'Oh no; it is not the Scriptures; it is the Holy Spirit.'" On another occasion, having entered a church, and hearing the preacher read for his text, *Ho! every one that thirsteth, come ye to the waters, &c.*, Fox called out to him, "Come down, thou deceiver! dost thou bid people come freely and take of the water of life freely, and yet thou takest three hundred pounds a year of them for preaching the scriptures to them?" Approaching the town of Litchfield, he declares he found himself directed to cast off his shoes, and in that condition walked through the streets, exclaiming, "Wo to the bloody city of Litchfield!" which he accordingly did. These examples are selected almost at random from numberless instances of similar proceedings recorded in his voluminous journal. Yet he strongly condemns those whom he terms *ranters*, and relates in various places the attempts he had made to convince them of their delusion. Journal, 3d edit. 1765, pp. 16. 24. 27. 34. 49. 50. 51.

William Penn, in the beautiful Preface which he wrote for this Journal, informs us that these ranters were persons who "for want of staying their minds in an humble dependence upon him that opened their understandings to see great things in his law, ran out in their own imaginations, and mixing them with these divine openings, brought forth a monstrous birth, to the scandal of those that feared God." "Divers," he adds, "fell into gross and enormous practices, pretending in excuse thereof that they could without evil commit the same act which was sin in another to do." "I say," he continues, "this ensnared divers, and brought them to an utter and lamentable loss as to their eternal state; and they grew very troublesome to the better sort of people, and furnished the looser with an occasion to blaspheme." (Preface, p. 7.)

Fox himself relates some horrid immoralities of the ranters, and that he had found it necessary to publish addresses to give assurance to the people that these deluded persons were quakers only in name (Journal, p. 399.) He applies the epithet of ranters to many of those who called themselves quakers in America (443.) Some of Fox's chief associates and coadjutors appear to have become in the end ranters, or something worse. Of these was James Nayler, who was long the fellow-laborer and fellow-sufferer of Fox, and whom Fox still terms a quaker, at the same time when he was in prison for his horrible enormities. Fox alludes vaguely and sorrowfully to Nayler's errors and disobedience to himself. When he found that Nayler would not give heed to his rebukes, Fox told him that "the Lord moved me to slight him, and to set the power of God over him." He adds, that it soon after happened to Nayler that "his resisting the power of God in me, and the truth of God that was declared to him by me, became one of his greatest burdens." (Journal, p. 205.) Nayler had ridden naked into Bristol with a crew of insane followers making the most blasphemous proclamations before him, and had committed the most profligate immoralities. On his trial he produced a woman, one Dorcas Earberry, who deposed that she had been dead two days, and was recalled to life by Nayler.

It is impossible to discover what part of the extravagance of Nayler was condemned by Fox and the proper body of the quakers. We find Fox relating with great approbation many wild and absurd exhibitions by which quakers were moved, as they said, to show themselves as signs of the times. "Some," he says, "have been moved to go naked in the streets, and have declared amongst them that God would strip them of their hypocritical professions, and make them as bare and naked as they were. But instead of considering it, they have frequently whipped, or otherwise abused them." (Journal, p. 386.) Many such instances he relates in the Journal (p. 323, &c.) with cordial approbation of the conduct of the quakers, and the strongest reprobation of the persecutors who punished them for walking naked.

Fox taught that God did not create the devil, (Journal, p. 140.) Yet though the reasoning by which he defends this gross heresy would plainly seem to imply that the devil was a self-created being, there is another passage, (p. 343,) from which we may perhaps conclude that Fox's real opinion was that the devil was created by God a good spirit, but transformed himself by his own act into a wicked one. He sets down every misfortune that happened to any of his adversaries or persecutors as a judgment of Heaven upon them. He relates various cures of sick and wounded persons that ensued on his prayers, and on more ordinary means that he used for their relief. It is not easy to discover

if he himself regarded these as the exertions of miraculous power; but from many passages it is plain that they were, to his knowledge, so regarded by his followers; and the editor of his journal refers to them in the index under the head of "Miracles."

I think it not unreasonable to consider quakerism the growth of a protestant country, and quietism, which arose among catholics, as branches of a system essentially the same; and Madame Guyon and Molinos as the counterparts of Fox and Barclay. The moral resemblance is plainer than the historical connexion; but the propagation of sentiment and opinion may be powerfully effected when it is not visibly indicated. Quietism was first engendered in Spain, by a sect called the Illuminati or Alambrados, who sprung up about the year 1575. They rejected sacraments and other ordinances, and some of them became notorious for indecent and immoral extravagances. This sect was revived in France in the year 1634, but quickly disappeared under a hot persecution. It re-appeared again with a system of doctrine considerably purified, yet still inculcating the distinctive principle of exclusive teaching by an inward light and sensible direction, towards the close of the seventeenth century, both at Rome in the writings of Molinos, and in France under the auspices of Madame Guyon and Fenelon. Encyclopædia Britannica, vol. ix. p. 156, and xv. p. 766.

NOTE [9] p. 240.—Besse, in his voluminous "Collection of the Sufferings of the People called Quakers," relates that Lydia Wardell, of Newbury in New England, a convert to quakerism, at length found herself concerned to appear in a public assembly "in a very unusual manner, and such as was exceeding hard and self-denying to her natural disposition, she being a woman of exemplary modesty in all her behavior. The duty and concerns she lay under was that of going into their church at Newbury naked, as a token of that miserable condition which she esteemed them in." "But they, instead of religiously reflecting on their own condition, which she came in that manner to represent to them, fell into a rage and presently laid hands on her," &c. Vol. ii. p. 235. He also notices the case of Deborah Wilson, a young woman of very modest and retired life, and of a sober conversation, having passed naked through the streets as a sign against the cruelty and oppression of the rulers." 236.

George Bishop, another quaker writer, thus relates the case of Deborah Wilson. "She was a modest woman, of a retired life and sober conversation; and bearing a great burden for the hardness and cruelty of the people, she went through the town of Salem naked as a sign; which she having in part performed, was laid hold on, and bound over to appear at the next court of Salem, where the wicked rulers sentenced her to be whipt." New England judged, p. 388. The writings of Besse, Bishop, and some others, who were foolish enough to defend the extravagance that they had too much sense to commit, were the expiring sighs of quaker nonsense and frenzy. They are still mentioned with respect by some modern quakers, who praise instead of reading them; as the sincere but frantic zeal of Loyola and Xavier and still commended by their sly successors, who have inherited the name and the manners, without the spirit that distinguished the original Jesuits.

It had been well if the government of Massachusetts had inflicted punishment on the disgusting violations of decency avowed by these writers, without extending its severity to the bare profession of quakerism. This injustice was occasioned by the conviction that these outrages were the legitimate fruits of quaker principles; a conviction which, it appears the language even of those quakers who were themselves guiltless of such outrages, tended strongly to confirm. It is only such language on the part of the quakers that can acquit their adversaries of the inhuman absurdity that pervades the reasoning of persecutors, and holds men responsible for all the consequences that may be logically deduced from their principles, though rejected and denied by themselves. The sentiments of the people of New England are thus strongly expressed by Cotton Mather: "I appeal to all the reasonable part of mankind whether the infant colonies of New England had not cause to guard themselves against these dangerous villains. It was also thought that the very quakers themselves would say, that if they had got into a corner of the world, and with immense toil and charge made a wilderness habitable, on purpose there to be undisturbed in the exercises of their worship, they would never bear to have New Englanders come among them and

interrupt their public worship, and endeavor to seduce their children from it; yea and repeat such endeavors after mild entreaties first, and then just banishments to oblige their departure." B. VII. cap. iv. Yet Mather deplores and condemns the extreme severities which were ultimately inflicted by his countrymen upon the quakers. It was one of the privileges of Israel that *the people shall dwell alone*; and the hope of enjoying a similar privilege was one of the motives that led the puritans to exchange the pleasures of their native land for the labors of desolate wilderness.

NOTE [10] p. 243.—Upon this occasion Cotton Mather observes—"Such has been the jealous disposition of our New Englanders about their dearly-bought privileges, and such also has been the various understanding of the people about the extent of those privileges, that of all the agents which they have sent over unto the court of England for now forty years together, I know not any one who did not at his return meet with some very forward entertainment among his countrymen: and there may be the Wisdom of the Holy and Righteous God, as well as the malice of the Evil One, acknowledged in the ordering of such temptations."

Mr. Norton, before his departure for England, expressed a strong apprehension that the affair he was required to engage in would issue disastrously to himself. Mather adds, "In the spring before his going for England he preached an excellent sermon unto the representatives of the whole colony assembled at the Court of Election, wherein I take particular notice of this passage—Moses was the meekest man on earth, yet it went ill with Moses, 'tis said, for their sakes. How long did Moses live at Meribah? Sure I am, it killed him in a short time; a man of as good a temper as could be expected from a mere man."

It might have been thought that Mr. Norton, whose death was thus in a manner the fruit of his exertions to extend religious liberty in the colony, would have escaped the reproach of persecution. But he had given great offence to some of the quakers, by writing and preaching against their tenets. And after his death, certain of that body published at London, *A representation to the King and Parliament*, wherein, pretending to report some *Remarkable judgments upon their Persecutors*, they inserted the following passage: "John Norton, chief priest in Boston, by the immediate power of the Lord, was smitten and as he was sinking down by the fireside, being under just judgment, he confessed the hand of the Lord was upon him, and so he died." Mather, B. III. cap. ii. sect. 21, 22, 23. The popish fables respecting the deaths of Luther, Calvin, Bucer, and Beza, are hardly more replete with folly, untruth, and presumption, than some of these quaker interpretations of providence. Their authors, like many other persons involved in religious contentions, or exposed to persecution for religion's sake, mistook an ardent zeal for God, for a complete subjection of mind to his will, and an entire identification of their views and purposes with his; practically regardless of their own remaining infirmity and corruption, and of that important truth, that while we continue in this veil of flesh we know only in part, and can see but through a glass darkly. Among other evil consequences, this error begets a contracted or perverted view of the administration of divine justice. It was when the royal psalmist, impatient of his own sufferings, and of the prosperity of oppressors, perplexed himself with endeavors to find within the compass of this life a visible display of the whole scene of divine justice, that he uttered the words of folly and ignorance, and offended against the generation of the children of God.

NOTE [11] p. 243.—Mr. Winthrop the younger was in the bloom of manhood, accomplished by learning and travel, and the heir of a large estate, when he readily joined with his father in promoting and accompanying an emigration to New England. Cotton Mather has preserved a letter written by Winthrop the elder to his son, while the one was governor of Massachusetts, and the other of Connecticut. I shall be excused for transcribing some part of an epistle so beautiful in itself, and so strikingly characteristic of the fathers of New England. "You are the chief of two families. I had by your mother three sons, and three daughters; and I had with her a large portion of outward estate. These now are all gone; mother gone; brethren and sisters gone; you only are left to see the vanity of these temporal things and learn wisdom thereby; which may be of more use to you, through the Lord's

blessing, than all that inheritance which might have befallen you: and for which this may stay and quiet your heart, that God is able to give you more than this; and that it being spent in the furtherance of his work, which has here prospered so well through his power hitherto, you and yours may certainly expect a liberal portion in the prosperity and blessing thereof hereafter; and the rather, because it was not forced from you by a father's power, but freely resigned by yourself, out of a loving and filial respect unto me, and your own readiness unto the work itself. From whence, as I do often take occasion to bless the Lord for you, so do I also commend you and yours to his fatherly blessing, for a plentiful reward to be rendered unto you. And doubt not my dear son, but let your faith be built upon his promise and faithfulness, that as he hath carried you hitherto through many perils, and provided liberally for you, so he will do for the time to come, and will never fail you nor forsake you. My son the Lord knows how dear thou art to me, and that my care has been more for thee than for myself. But I know thy prosperity depend not on my care, nor on thine own, but on the blessing of our heavenly Father: neither doth it on the things of this world, but on the light of God's countenance, through the merit and mediation of our Lord Jesus Christ. It is that only which can give us peace of conscience with contentation; which can as well make our lives happy and comfortable in a mean estate as in a great abundance. But if you weigh things aright, and sum up all the turnings of divine providence together, you shall find great advantage. The Lord hath brought us to a good land; a land where we enjoy outward peace and liberty, and above all, the blessing of the gospel, without the burthen of impositions in matters of religion. Many thousands there are who would give great estates to enjoy our condition. Labor, therefore, my good son, to increase our thankfulness to God for all his mercies to thee, especially for that he hath revealed his everlasting good will to thee in Jesus Christ, and joined thee to the visible body of his church, in the fellowship of his people, and hath saved thee in all thy travels abroad from being infected with the vices of these countries where thou hast been, (a mercy vouchsafed but unto few young gentlemen travellers.) Let Him have the honor of it who kept thee. He it was who gave thee favor in the eyes of all with whom thou hadst to do, both by sea and land; He it is who hath given thee a gift in understanding and art; and he it is who hath provided thee a blessing in marriage, a comfortable help and many sweet children. And therefore I would have you to love him again, and serve him, and trust him for the time to come."—Mather, B. II. cap. xi. sect. 9.

The wife of the writer of the foregoing letter, and the mother of the person to whom it was addressed, was a daughter of the celebrated Hugh Peters.—Savage's Notes to Winthrop's Hist. vol. i. p. 65.

Winthrop the elder not only performed actions worthy to be written, but produced writings worthy to be read. Yet his *Journal*, or *History* as it has been termed, in the late edition by Mr. Savage, is, I think, very inferior in spirit and interest to his letters. I hope that Mr. Savage has expressed rather his own editorial partiality than the prevalent taste of New England, in preferring this performance to the work of Cotton Mather. It would seem indeed that Winthrop's *Journal* has not derived much support from its own popularity, since "the liberal aid" of the legislature of Massachusetts is acknowledged to have been requisite to its publication.

I must regret that I had not an earlier opportunity of perusing the performance of Mr. Savage, to whose sagacity I owe the detection of an error into which I have been betrayed by the authorities on which I have hitherto relied. At present it is not in my power to correct it otherwise than by noticing (in conformity with Lt. Savage's note, vol. ii. p. 159), that although Sir John Harvey was displaced from the office of Governor of Virginia in 1639, Sir William Berkeley, whom I have supposed to have been his immediate successor was not appointed till 1641. The government in the interim was held by Sir Francis Wyatt.

NOTE [12] p. 247.—Among many interesting and romantic adventures and escapes related by Mather, Neal, Hutchinson, Dwight, and other New England writers, as having occurred during the continuance of Philip's war, there is one incident which excited much marvelling at the time, and has since derived an increase of interest from the explanation which it received after the death of the party principally concerned in it. In 1675 the town of Hadley was alarmed by the

sudden approach of a body of Indians in the time of public worship, and the people were thrown into a confusion that betokened an unresisted massacre. Suddenly a grave elderly person appeared in the midst of them. Whence he came or who he was, nobody could tell. In his mein and dress he differed from the rest of the people. He not only encouraged them to defend themselves, but putting himself at their head, he rallied, instructed, and led them on to encounter the enemy, who by this means were repulsed. As suddenly the deliverer of Hadley disappeared; and the people were left in a state of perplexity and amazement, and utterly unable to account for this singular phenomenon. After his death it was known to have been Goffe the regicide, who resided somewhere in the neighborhood, but in such deep sequestration that none but those who were intrusted with the secret were ever able to make the remotest approach to a discovery of his retreat. Whaley resided with him; and they had some years before been joined by another of the regicides, Colonel Dixwell. They frequently changed their place of abode, and gave the name of *Ebouzer* to every spot that afforded them shelter. They had many friends both in England and in the New England states, and with some they maintained a pretty close correspondence. They had constant and exact intelligence of every thing that passed in England, and were unwilling to give up all hopes of deliverance. Their greatest expectations were from the fulfilment of the prophecies of scripture, which they had intently studied. They had no doubt that the execution of the judges was *the slaying of the witnesses*; and were much disappointed when the year 1666 had passed without any remarkable event, but still flattered themselves with the hope that common chronology might be erroneous. The strict inquisition that was made for them by the royal commissioners and others, renders their concealment in a country so thinly peopled, and where every stranger was the object of immediate and curious notice, truly surprising. It appears that they were befriended and much esteemed for their piety by persons who regarded the great action in which they had participated with the strongest disapprobation. Hutchinson, 215—219.

It requires less sense and humanity than were common in New England to perceive that the capital trial of a king must ever be a mockery of justice, and practically refutes the plea of necessity that is sometimes made the apology for defect of justice. No man will accept a commission to sit as judge of his king without, previously determining for his own safety to convict him, and to guard the sentence from being infringed by pardon; and the authority that is powerful enough to bring the king to trial has nothing to apprehend from his hostility in exile. How different was the situation of Charles and his persecutors, from the relations which courts of justice commonly imply, was strongly expressed by Cook, the Solicitor for the People of England, who declared, that although in ordinary trials he had often trembled to think how much easier it would be to account to God for mercy and indulgence than for justice and rigor, yet now it was meat and drink to him to ask judgment against the king. Howell's State Trials, iv. 1045.

In such, as in all cases, to be brave and generous is the safest course. While the deposed king lives, the demerits that have procured his deposition attach to his cause; but when his blood is shed, his faults seem to be washed away, and the cause which he maintained, purified from much of his odium by compassion, is transmitted to his unoffending descendants.

NOTE [13] p. 255.—In every state of human society, and under every form of faith, the belief of witchcraft has prevailed. Heathens, who are represented in scripture as serving demons, have respected and sought to propitiate the powers of witchcraft. Christians, or persons professing the service of the true God, have condemned and punished the practice. It has prevailed from time immemorial in Africa, which is generally considered by the learned as its cradle. Bryan Edwards has given a curious account of the witchcraft or Obeah practices believed and cultivated among the negroes in the West Indies. He states that the term Obeah, Obiah, or Obia (for it is variously written), is the adjective, and Obe or *Obi* the noun substantive; and that by the terms Obia men, and Obia women, are meant those who practise *Obi* or witchcraft. History of the West Indies, vol. ii. p. 107.—Jacob Bryant, in his commentary on the word *Oph*, remarks that "a serpent in the Egyptian language was called *Ob* or

Aub; and that "*Obion* is still the Egyptian name for a serpent." "Moses," he continues, "in the name of God forbids the Israelites ever to inquire of the demon *Ob*, which is translated in our Bible, charmer or wizard, divinator or sorcerer." "The woman at Endor," he adds, "is called *Oub* or *Ob*, translated Pythonissa; and *Oubois* was the name of the basilisk or royal serpent, emblem of the sun, and an ancient oracular deity of Africa." Bryant's *Ancient Mythology*, vol. i. p. 48, 475 and 478.

NOTE [14] p. 267.—The following may serve as a specimen of these articles of grievance, and of the answers they received:—"IV. As no laws can be repealed but by the assembly, it desired to know if the proprietary intended to annul a clause in the act for bringing tobacco to towns?" *Answer*. "The proprietary does not intend to annul the clause mentioned without an act of repeal." "V. The attorney-general oppresses the people." *Answer*. "If such proceedings have been practised, the law is open against the offender, who is not countenanced by government." "VI. Certain persons, under a pretended authority from some militia officers, have pressed provisions in time of peace." *Answer*. "We know of no such offenders; but when informed of them we shall proceed against them according to law and matter of fact." "VII. The late adjournment of the provincial court to the last Tuesday in January is a time most inconvenient to the people." *Answer*. "At the request of the lower house, they will adjourn the provincial court by proclamation." Chalmers, 350, 381. Why Chalmers, who is generally displeased even with the more moderate assertors of American liberty, should term this "a spirited representation of grievances," (p. 372.) I am at a loss to discover. But perhaps no other writer has ever combined such elaborate research of facts with such temerity of opinion and such glaring inconsistency of sentiment, as the "*Political Annals*" of this writer display. The American provinces, though little indebted to his favorable opinion, owe the most important illustration of their history to his industrious researches. Some of the particulars of his own early history may perhaps account for the peculiarities of his American politics. A Scotsman by birth, he had emigrated to Maryland, and was settled at Baltimore as a lawyer, when the revolutionary contest, (in which he adhered to the royal cause,) blasted all his prospects, and compelled him to take refuge in England, where his unfortunate loyalty and distinguished attainments procured him an honorable appointment from the Board of Trade. The first (and only) volume of his *Annals* was composed while he hoped that the royal cause would yet prevail in America, and was intended to be the apology of his party. His labors were discontinued when the cause and party to which they were devoted had evidently perished. Though a strong vein of Toryism pervades all his pages, he is at times unable to restrain an expression of indignant contempt at particular instances of the conduct of the kings and ministers, whose general policy he labors to vindicate.

NOTE [15] p. 272.—That a gift will blind the discernment even of the wise, and pervert the words even of the just, is an assurance conveyed to us by unerring wisdom, and confirmed by examples among which even the name of Locke must be enrolled. If no gift could be more seducing than the deference and admiration with which Shaftesbury graced his other bounties to Locke, no blindness could well be greater than that which veiled the eyes, and perverted the sentiments of the philosopher with respect to the conduct and character of his patron. In his memoirs of this profligate politician, not less insidious in his friendships than furious in his enmities, and who alternately inflamed and betrayed every faction in the state,—he has honored him as a mirror of worth and patriotism; declaring that, in a mild yet resolute constancy, he was equalled by few and exceeded by none; and that while liberty endures, his fame will mock the efforts of envy and the operations of time. Locke, folio edit. III. 450, &c. While Locke reprobates the unprincipled ambition and inveterate falsehood, with which Monk endeavored to the last to obtain for himself the vacant dignity of Cromwell,—he is totally insensible to any other feature than the ability of the more successful manoeuvres by which Shaftesbury outwitted the less dexterous knave, and at length forced him to concur in the Restoration. Locke has vaunted the profound sagacity with which Shaftesbury could penetrate the character, and avail himself of the talents and disposition, of every

VOL. I.—21.

person he conversed with. For his own vindication, it is necessary to regard him in this performance as exemplifying the quality which he so highly commended. When occasion required it, Shaftesbury could assume, a virtue to which his talent lent such a degree of efficacy as commanded universal admiration. When he was appointed to preside in the Court of Chancery, he was unacquainted with law, and had grown grey in the practice of fraud and intrigue. Yet in the discharge of the functions of this office, he is acknowledged to have combined the genius of Bacon with the integrity of More; and the satisfaction that was derived from the legal soundness of his decrees, was surpassed only by the respect that was entertained for the lofty impartiality of his conduct.

Among other marks of confidence bestowed by Shaftesbury on Locke, he employed him to choose a wife for his son, whom he was anxious to marry early; as the feebleness of the young man's constitution gave him cause to apprehend the extinction of his family. Locke, undismayed by the nice and numerous requisites which Shaftesbury desired him to combine in the object of his choice, fulfilled this delicate office to his patron's satisfaction; and afterwards accepted the office of tutor to the eldest male offspring of the marriage. Life of Locke, prefixed to the folio edition of his Works. Like Philip of Macedon, Shaftesbury seems to have determined to extract as much advantage as possible to his posterity from the genius of the great philosopher who proved to be his contemporary. Neither the tutors, however, derived much credit from his tuition, or received much gratitude from his pupil. Alexander sneered at the sophisms of Aristotle, (Plutarch's Life of Alexander;) and the author of the "Characteristics," in his "Letters written by a Nobleman to a Young Man at the University," 1716, severely censured the writings of Locke, as giving countenance to infidelity.

Shaftesbury was able to infect Locke with all his own real or pretended suspicions of the catholics; and even when the philosopher could not refrain from censuring the severity and intolerance of the protestants, he expressed his regret that they should be found capable of "such popish practices." Not less unjust and absurd was Lord Russell's declaration, that massacring men in cool blood was so like a practice of the papists, that he could not but abhor it; and Sir Edward Coke's remark, that poisoning was a popish trick. When Locke undertook to legislate for Carolina, he produced ecclesiastical constitutions not more, and political regulations far less favorable to human liberty and happiness, than those which had been previously established by a catholic legislator in Maryland.

Mr. Fox is much puzzled to account for Locke's friendship with Shaftesbury, and has attempted it, I think, very unsuccessfully.

It is strange that we should be obliged to prefer the testimony of an unprincipled satirist to that of an upright philosopher. Yet Dryden's character of Achiropiel is undoubtedly the justest and most masterly representation of Shaftesbury that has ever been produced by friend or foe. So much more powerful is affection than enmity in deluding the fancy and seducing the understanding!

NOTE [16] p. 284.—Founders of ancient colonies have sometimes been deified by their successors. New York is perhaps the only commonwealth whose founders have been covered with ridicule from the same quarter. It is impossible to read the ingenious and diverting romance entitled Knickerbocker's History of New York, without wishing that the author had put either a little more or a little less truth in it, and that his talent for humor and sarcasm had found another subject than the dangers, hardships, and virtues, of the ancestors of his national family. It must be unfavorable to patriotism to connect historical recollections with ludicrous associations; but the genius of Mr. Irving has done this so effectually, that it is difficult to read the names of Wouter Van Twiller, of Corlear, and of Peter Stuyvesant, without a smile; or to see the free and happy colonists of New York enslaved by the forces of a despot, without a sense of ridicule that abates the resentment which injustice should excite, and the sympathy which is due to misfortune. Yet Stuyvesant was a gallant and generous man; and Corlear softened the miseries of war and mitigated the wrath of man by his benevolence. If this writer had confined his ridicule to the wars, or rather bloodless buffettings and squabbles of the Dutch and the Swedes, his readers would have derived more unimproved enjoy-

ment from his performance. Probably my discernment of the unsuitableness of Mr. Irving's mirth, is quickened by a sense of personal wrong; as I cannot help feeling that he has by anticipation ridiculed my topic and parodied my narrative. If Sanchio Panza had been a real governor, misrepresented by the wit of Cervantes, his future historian would have found it no easy matter to bespeak a grave attention to the annals of his administration.

NOTE [17] p. 289.—"Dining one day at Monsieur Hoeff's, and having a great cold, I observed, everytime I spit, a tight handsome wench, that stood in the room with a clean cloth in her hand, was presently down to wipe it up, and rub the board clean. Somebody at table speaking of my cold, I said the most trouble it gave me was to see the poor wench take so much pains about it. Monsieur Hoeff told me, 'twas well I escaped so; and that if his wife had been at home, tho' I were an ambassador, she would have turned me out of doors for fouling her house." Sir William Temple's Works, i. 472.

NOTE [18] p. 290.—The charitable attempt of Chalmers to vindicate the character of this man from the impeachment and abhorrence, not of one, but of every province over which he exercised the functions of government previous to the British Revolution, is totally unsuccessful. The main topic of apology is, that he merely executed the orders of his master, and sometimes ineffectually recommended more humane and liberal measures; an apology which might be, as in fact it was equally pleaded to justify the atrocities of Kirke and Jeffries in England, and of Graham of Claverhouse and Sir James Turner, in Scotland. It is an apology that may sometimes exempt from punishment, but can never redeem character, or avert reprobation. When Turner was taken prisoner by the persecuted Scottish peasantry in Dumfriesshire, they were proceeding to put him to death for his cruelty; but observing from the written instructions found on his person, that he had actually fallen short of the severity which he had been ordered to commit, these generous men arrested their uplifted hands, and dismissed him with impunity, but not without abhorrence. That Andros, from some of his private suggestions to the duke, seems at times to have been willing to alleviate the burdens of the people, only renders him the more culpable for so actively effectuating a contrary policy, the mischief and odium of which he plainly discerned. It might have been argued, with some appearance of probability, that the unanimous dislike he excited in New England inferred less of reproach to his personal character, than of the repugnance between the previous habits of the people and the structure of that arbitrary system which he was appointed to administer among them. But the detestation he excited in New York, where the people had been habituated to arbitrary government, admits not of this suggestion; which, even with regard to New England, we have already seen to be very slightly, if at all admissible. James the Second evinced a sagacity that approached to instinct, in the employment of fit instruments to execute injustice and cruelty; and his steady patronage of Andros, and constant preference of his to any other instrumentality, in the subjugation of colonial liberty, is the strongest certificate that could be given of the aptness of this officer's disposition for the employment for which he was selected. His friend and compeer Randolph boasted, that, in New England, Andros was as arbitrary as the Great Turk.

After the British Revolution, Andros is said to have conducted himself irreproachably as governor of Virginia. But William and Mary had not entrusted him with tyrannical power; and the Virginians would not have permitted him to exercise it. His appointment to this situation, however, was an insult to the American colonies, and a disgraceful proceeding of King William, who assuredly was not a friend to American liberty. Andros died at London in 1715, at a very advanced age.

NOTE [19] p. 297.—This jesuit accompanied the French commissioners who repaired to the head quarters of the Five Nations to treat for peace. When the commissioners approached the Indian station, they were met by a sachem who presented them with three separate gifts, strings of wampum; the first, to wipe away their tears for the French that had been slain; the second, to open their mouths, that they might speak freely; and the third, to clean the mat on which

they were to sit, while treating of peace, from the blood that had been spilt on both sides. The jesuit, who acted as the orator of the embassy, endeavored to pay court to the Indians by imitation of their style. "The war kettle," said he, "boiled so long, that it would have scalded all the Five Nations had it continued; but now it is upset, and turned upside-down, and a firm peace made." He recommended to them the preservation of amity with *Corlear*, the Indian name for the governor of New York; and having thus attempted to disarm their suspicions, uttered many injurious insinuations against this ally. "I offer myself to you," he continued, "to live with you at *Onondaga*, to instruct you in the christian religion, and to drive away all sickness, plagues, and the diseases of your country." Though this proposition, which the French were much bent on effectuating, was absolutely rejected, the peace brought them a deliverance from so much misery and fear, that, when a deputation of the sachems of the Five Nations arrived at Montreal to ratify the treaty, they were received with general acclamations of joy, and a salute from the artillery on the ramparts. The Indian allies of the French were highly offended with this demonstration of respect. "We perceive," they angrily observed, "that fear makes the French show more respect to their enemies, than love can make them do to their friends." Colden, i. 209—212.

NOTE [20] p. 299.—Denton, whose description of New York was published in 1702, gives a very agreeable picture of the state of the province and its inhabitants at this period:—"I must needs say, that if there be a terrestrial Canaan, 'tis surely here. The inhabitants are blessed with peace and plenty; blessed in their country, blessed in the fruit of their bodies, and the fruit of their grounds; blessed in their basket and in their store; in a word, blessed in whatsoever they take in hand, or go about; the earth yielding plentiful increase to their painful labor."—"Were it not to avoid prolixity, I could say a great deal more, and yet say too little, to show how free are these parts of the world from that pride and oppression, with their miserable effects, which many, nay almost all, parts of the world are troubled with. There, a wagon or cart gives as good content as a coach; and a piece of their home-made cloth better than the finest lawns or richest silks; and though their low-roofed houses may seem to shut their doors against pride and luxury, yet, how do they stand wide open to let charity in and out, either to assist each other or to relieve a stranger! and the distance of place from other nations doth secure them from the envious frowns of ill-affected neighbors, and the troubles which usually arise thence." Denton, 19, 20.

What a contrast there is between this happy picture and the state of European society about the same period, as depicted by De Foe in the most celebrated of his romances!—"I saw the world busy around me; one part laboring for bread, and the other squandering it in vile excesses or empty pleasures."—"The men of labor spent their strength in daily strugglings for bread to maintain the vital power they laboured with; so living in a daily circulation of sorrow; living but to work, and working but to live, as if daily bread were the only end of a wearisome life, and a wearisome life the only occasion of daily bread."

NOTE [21] p. 302.—From the writings of the modern historians and apologists of quakerism, we might be led to suppose that none of the quakers who were imprisoned by the magistrates of England at this period had been accused of aught else but the profession of their peculiar doctrinal tenets, or attendance at their peculiar places of worship. But very different accounts of the causes of their imprisonment have been transmitted by some of the sufferers themselves; and, from the tenor of these it is manifest that the only wrong they sustained from the magistrates was, that they were committed to prison, instead of being confined in lunatic hospitals. The most remarkable of these compositions is the Narrative of the Persecution of Solomon Eccles, in the year 1659, written by himself, and dated from Newgate, where he describes himself as "a prisoner for the testimony of the Lord." This man, who was a quaker, and a tailor in London, relates, that "It was clearly showed to me that I should go to the steeple-house in Aldermanbury the first day of the week then following, and take with me something to work, and do it in the pulpit at their singing time." So, after much musing, "I purposed to carry with me a pocket to sew." He repaired to Edmund Calamy's chapel, and watching his

opportunity, made his way into the pulpit. "I sat myself down upon the cushion, and my feet upon the seat where the priest, when he hath told out his lies, doth sit down, and, having my work ready, I pulled one or two stitches." When the people began to persecute him, i. e. to pull him down, he cared not if they had killed him, "for I was full of joy, and they were full of wrath and madness." He was carried before the mayor. "Then said he to me, 'Wherefore did you work there?' I said, 'In obedience to the Lord's commandment.' He said it was a false spirit; and said he, 'Where are your sureties?' I said, the Lord was my security." Accordingly, his persecution was consummated by a commitment to Newgate. "Now, let all sober people judge whether I did this thing out of envy against either priest or people. Yea, farther, I say, the Lord lay it not to their charge who have said that I did it in malice, devilishness, and envy," &c. &c. This singular narrative is republished in the State Trials, vol. vi. p. 998.

NOTE [22] p. 303.—Of this diversity the following instance may serve as a specimen. When the statute against the quakers began to be generally enforced, George Bishop, a man of some eminence among them, remonstrated against it in these terms: "To the king and both houses of parliament, *Thus saith the Lord*, Meddle not with my people because of their conscience to me, and banish them not out of the nation because of their conscience; for if you do I will send my plagues among you, and you shall know that I am the Lord. Written in obedience to the Lord, by his servant, G. Bishop." Gough and Sewell, i. 249. Very different was the remonstrance which William Penn addressed on the same subject to the king of Poland, in whose dominions a severe persecution was instituted against the quakers. "Give us poor christians," says he, "leave to expostulate with thee. Suppose we are tares, as the true wheat hath always been called, yet pluck us not up for Christ's sake, who saith, Let the tares and the wheat grow up until the harvest, that is, until the end of the world. Let God have his due as well as Caesar. The judgment of conscience belongeth unto him and mistakes about religion are known to him alone." Clarkson's life of Penn, i. 189.

NOTE [23] p. 305.—It is not difficult to understand how a friendly intercourse originated between the leading persons among the quakers and Charles the Second and his brother. The quakers desired to avail themselves of the authority of the king for the establishment of a general toleration, and their own especial defence against the enmity and dislike of their numerous adversaries. The king and his brother regarded with great benevolence the principles of non-resistance professed by these sectaries, and found in them the only class of protestants who could be rendered instrumental to their design of re-establishing popery by the preparatory measure of a general toleration. But how the friendly relation thus created between the royal brothers and such men as Penn and Barclay should have continued to subsist uninterrupted by all the tyranny and treachery which the reigns of these princes disclosed, is a difficulty which their contemporaries were unable to solve in any other manner than by considering the quakers as at bottom the votaries of popery and arbitrary power. The more modern and juster, as well as more charitable censure is, that they were the dupes of kingly courtesy, craft, and dissimulation. They endeavored to make an instrument of the king; while he permitted them to flatter themselves with this hope, that he might avail himself of their instrumentality for the accomplishment of his own designs.

Perhaps since the days when the prophets of Israel were divinely commissioned to rebuke their offending monarchs, no king was ever addressed in terms of more dignified admonition than Robert Barclay has employed in concluding the dedication of his famous *Apology for the Quakers* to Charles the Second. "There is no king in the world," he bids him remember, "who can so experimentally testify of God's providence and goodness; neither is there any who rules so many free people, so many true Christians; which thing renders thy government more honorable, and thyself more considerable, than the accession of many nations filled with slavish and superstitious souls. Thou hast tasted of prosperity and adversity; thou knowest what it is to be banished thy native country and to be overruled, as well as to rule and sit upon the throne; and being oppressed, thou hast reason to know how hateful the oppressor is both to God and man. If after all these

warnings and advertisements, thou dost not turn unto the Lord with all thy heart, but forget him who remembered thee in thy distress, and give thyself up to follow lust and vanity, surely great will be thy condemnation." Yet Charles gave himself up to lust and vanity, without apprehending or experiencing any diminution of the regards of his quaker friends; and the tyranny and oppression that stained the conduct of both Charles and James rendered them hateful to all men except the catholics and the quakers. The horrible cruelties inflicted by the orders, and in the presence of James himself on the Scottish covenanters must have been perfectly well known to Barclay. But perhaps his sympathy with the sufferers was abated by the lamentable intolerance which many of these unfortunate victims of bigotry themselves evinced. There were few of them who, even in the midst of their own afflictions, did not bequeath a dying testimony to their countrymen against the sin of tolerating the blasphemous heresy of the quakers. See *The Cloud of Witnesses*, Woodrow's History, and other works illustrative of that period.

Of the cajolery that was practised by King James upon the quakers, I think a remarkable instance is afforded, very unintentionally, by Mr. Clarkson in his *Memoirs of William Penn*, vol. ii. cap. 1. In the year 1688, Gilbert Latsey, an eminent quaker minister, having been presented by Penn to this prince, thanked him for his *Declaration of Indulgence* in favor of quakers and other dissenters, adding an expression of his hope, that, as the king had remembered the quakers in their distress, so God might remember him in his distress. Some time after when James, expelled from England, was endeavoring to make head against his adversaries in Ireland, he sent a message to Latsey, confessing that the revolution had approved him so far a prophet, inasmuch as the king had fallen into distress. But Latsey was not satisfied with this partial testimony, and reminded James, that as his life had been saved at the battle of the Boyne, the prophecy that had been addressed to him was entirely fulfilled.

NOTE [24] p. 307.—Gabriel Thomas, the author of this pleasing little work, which is dedicated to Sir John Moore and Sir Thomas Lane, aldermen of London, and at that time two of the principal proprietaries of West Jersey, was a quaker, and the friend of Penn to whom at the same time he dedicated a corresponding history of the province of Pennsylvania. His chief aim in writing he declares to have been to inform the labouring poor of Britain of the opportunity afforded to them by these colonial settlements, of exchanging a state of ill-rewarded toil, or of beggary and burdensome dependence, for a condition at once more useful, honorable, prosperous, and happy. "Now, reader," he thus concludes, "having no more to add of any moment or importance, I salute thee in Christ; and whether thou stayest in England, Scotland, Ireland, or Wales, or goest to Pennsylvania, West or East Jersey, I wish thee all health and happiness in this, and everlasting comfort, in God, in the world to come. Fare thee well!"

NOTE [25] p. 308.—The following instance of the sensitiveness of the quakers to the reputation of William Penn and his institutions, I believe has never before been published, and I think deserves to be made known. When Winterbotham undertook the compilation of his "Historical, Geographical, Commercial, and Philosophical View of the American United States," he was encouraged to pursue his labors by the assurance of numerous subscriptions, a great part of which were obtained from English quakers. The authorities which he consulted on the subject of Pennsylvania, gave him an insight into the lamentable dissensions that had occurred between the founder of this province and his quaker colonists, and induced him to form an opinion unfavorable to the equity of Penn, and to the moderation of both parties. The historical part of his account of this province was accordingly written in a strain calculated to convey this impression. Unfortunately for him this came to be known just when his work was ready for publication and delivery to the subscribers. The quakers instantly withdrew their subscriptions, a step that involved Winterbotham in the most serious embarrassment. Alarmed at this unexpected blow, the unfortunate author, then a prisoner in Newgate for seditious expressions of which he is now generally acknowledged to have been innocent, applied to the late William Dillwyn, of Walthamstow, and throwing himself on the humanity of that venerable

man, implored his powerful intercession with the members of his religious fraternity. By his advice, Winterbotham consented to cancel the objectionable portion of the work, and, in the place of it, there was substituted a composition on the same subject from the pen of Mr. Dillwyn. A few copies of the work in its original state having got into circulation, there was added to the preface in the remaining copies an apology for the error into which the author declared that he had been betrayed with regard to the character of Penn and his colonists. The Quakers, on being apprised of this, complied at once with the solicitation of their respected friend, and fulfilled their engagements with Winterbotham. This anecdote was related to me by Mr. Dillwyn himself. The contribution which this excellent person, celebrated in Clarkson's History of the Abolition of the Slave Trade, thus made to Winterbotham's work, is characterised by his usual mildness and indulgence. Without denying the existence of unhappy dissensions in Pennsylvania, he suggests reasons for supposing that they originated in mutual misapprehension, and were neither violent nor lasting. An apologetical vein pervades the whole composition, of which the only fault is, that, unlike the generality of Quaker productions, it is a great deal too short. Mr. Dillwyn was a native of New Jersey, and had devoted a great deal of attention to the history of America.

NOTE [26] p. 309.—Bishop Burnet relates that Penn, in alluding to the executions of Mrs. Gaunt and Alderman Cornish, at which he had attended as a spectator, said, that "the king was greatly to be pitied!" and endeavored to palliate his guilt, by ascribing his participation in these and other atrocities, to the influence that Jeffries had acquired over his mind. Unfortunately for the credit of this wretched apology, the king was not under the influence of Jeffries when he ordered and witnessed the infliction of torture on the covenanters in Scotland; and the disgrace into which Jeffries fell immediately before the Revolution, for refusing to gratify the king by professing popery, and pretending to keep a corner of his conscience sacred from the royal dominion, shows how voluntary and how limited the king's pretended subjection to him truly was. It is related in the diary of Henry Lord Clarendon, that Jeffries expressed his uneasiness to this nobleman at the king's impetuosity and want of moderation. When Jeffries was imprisoned in the Tower at the Revolution, he assured Tutchin, one of his victims, who came to visit and exult over him, that on returning from his bloody circuit in the west, he had been "snubbed at court for being too merciful." Kirke, in like manner, when reproached with his cruelties, declared, that they had greatly fallen short of the letter of his instructions.

For the credit of Penn's humanity, it may be proper to observe, that it was common, in that age, for persons of the highest respectability, and, among others, for noblemen and ladies of rank, in their coaches, to attend executions, especially of remarkable sufferers. See various passages in that learned and interesting work, Howell's State Trials.

NOTE [27.] p. 310.—Colonel Nicholson, an active agent of the crown, both before and after the English Revolution, who held office successively in many of the colonies, and was acquainted with the condition of them all, in a letter to the Board of Trade, in 1698, observes, that "A great many people of all the colonies, especially in those under proprietaries, think that no law of England ought to be binding on them, without their own consent; for they foolishly say, that they have no representatives sent from themselves to the parliament of England; and they look upon all laws made in England, that put any restraint upon them, to be great hardships." State Papers, *apud* Chalmers, 443.

In the introduction to the historical work of Oldmixon, who boasts of the assistance and information he received from William Penn, we find this remarkable passage:—"The Portuguese have so true a notion of the advantage of such colonies, that to encourage them, they admit the citizens of Goa to send deputies to sit in the assembly of the Cortes. And if it were asked, why our colonies have not their representatives, who could presently give a satisfactory answer?" Edit. 1708, p. 34.

An extension of the right of electing members of parliament, to a part of the realm which had not been previously represented there, occurred in the thirty-fifth year of the reign of Henry the Eighth. The inhabitants of the county Palatine and city of Chester complained, in a petition to the king, "that, for want of knights and burgesses in the court of parliament, they sustained

manifold damages, not only in their lands, goods, and bodies, but in the civil and politic governance and maintenance of the commonwealth of their said county; and that while they had been always bound by the acts and statutes of the said court of parliament, the same as other counties, cities, and boroughs, that had knights and burgesses in said court, they had often been touched and grieved with acts and statutes, made within the said court, as well derogatory unto the most ancient jurisdictions, liberties, and privileges of the said county Palatine, as prejudicial unto the commonwealth, quietness, and peace of his majesty's subjects." They proposed as a remedy, "that it would please his highness, that it be enacted, with the assent of the lords spiritual and temporal, and by the commons in parliament assembled, that, from the end of the session, the county Palatine shall have two knights for the said county; and likewise two citizens, to be burgesses for the city of Chester." The complaint was thought just and reasonable, and the petitioners were accordingly admitted to send representatives to parliament.

Various instances of similar proceedings occurred in the reigns of this monarch's successors—Edward the Sixth, Mary, and Elizabeth; the latter of whom created twenty-four new boroughs in England.

NOTE [28] p. 314.—In the year 1684, there was published, by one of these emigrants, "The Planter's Speech to his Neighbors and Countrymen of Pennsylvania;" a composition which reminds us of some of the productions of the early colonists of New England. "The motives of your retreating to these new habitations," says this writer, "I apprehend, measuring your sentiments by my own, to have been,—

"1st. The desire of a peaceable life, where we might worship God and obey his law, with freedom, according to the dictates of the divine principle, unincumbered with the mouldy errors occasioned by the fierce invasions of tradition, politic craft, and covetous or ambitious cruelty.

"2d. That we might here, as on a virgin Elysian shore, commence, or improve, such an innocent course of life, as might unload us of those outward cares, vexations, and turmoils, which before we were always subject unto from the hands of self-designing and unreasonable men.

"3d. That, as *Lot*, by flying to little *Zoar*, from the ungodly company of a more populous and magnificent dwelling, we might avoid being grieved with the sight of infectious, as well as odious, examples, of horrid swearings, cursings, drunkenness, gluttony, uncleanness, and all kinds of debauchery, continually committed with greediness; and also escape the judgments threatened to every land polluted with such abominations.

"4th. That as trees are transplanted from one soil to another, to render them more thriving and better bearers, so we here, in peace and secure retirement, under the bountiful protection of God, and in the lap of the least adulterated nature, might every one the better improve his talent, and bring forth more plenteous fruits to the glory of God, and public welfare of the whole creation.

"5th. And lastly, that in order hereunto, by our holy doctrine, and the *practical teachings* of our exemplary abstemious lives, transacted in all humility, sobriety, plainness, self-denial, virtue, and honesty, we might gain upon those thousands of poor dark souls scattered round about us, and commonly, in way of contempt and reproach, called *heathens*, and bring them not only to a state of civility, but real piety; which effected, would turn to a more satisfactory account than if, with the proud Spaniards, we had gained the mines of Potosi." "These thoughts, these designs, my friends, were those that brought you hither; and so far only as you pursue and accomplish them, you obtain the end of your journey." "Our business, therefore, here, in this new land, is not so much to build houses, and establish factories, and promote trade and manufactures, that may enrich ourselves, though all these things in their due place are not to be neglected, as to erect temples of holiness and righteousness, which God may delight in." Among other advices, which this writer proceeds to communicate, he recommends not only the refraining from all wanton waste of inferior animal life, but a total abstinence from animal food.—Proud, i. 226, &c.

NOTE [29] p. 317.—Of the long prevalence of this feeling among the Quakers, innumerable instances might be adduced. One of the most remarkable, is a transaction which occurred in England, in 1705, and

which reflects very little credit on the honesty of any of the persons who were implicated in it. At that time, Lord Cornbury, the royal governor of New York, in conjunction with the royal governor of Massachusetts, and various enemies of colonial liberty in England, were endeavoring to supply Queen Anne's ministers with some pretext for annulling the charter of Connecticut. To this end, they preferred against the government of this province a great variety of charges, some of which were so manifestly incapable of abiding parliamentary scrutiny, or judicial investigation, that they could not have been intended to serve any other purpose than that of discrediting the colonial government in the opinion of the English public, and abating the sympathy by which the colonists were aided in the defence of their liberties. Among other proceedings of this description, the enemies of the colony laid hold of one of the laws that had been passed by the Connecticut assembly, more than fifty years before, against the Quakers, at the time of the general persecution of these sectaries in New England; and which, as it had been enacted before the last Connecticut charter was granted, could never imply an abuse of the powers which this charter conferred. A complaint against this law was presented to the queen in council, describing it as an ordinance recently enacted, and beseeching her majesty's interposition to prevent the injustice which it threatened from being carried into effect. In vain the colonial agents endeavored to prevent the sanction of a royal order from being given to this charge by offering to prove, that the law had been enacted half a century before; that it had never been carried into effect even at that time, and was long since deemed obsolete, and that no suspicion could now have been reasonably entertained of an attempt to revive it, as there was not a single Quaker living in the colony. An order of council was issued, nevertheless, stating the complaint exactly in the terms in which it had been presented, and annulling the law as a recent enactment, and contrary to the colonial charter. To give greater efficacy to this proceeding, the Quakers of London, who had been instigated to support the complaint, and must, therefore, have known the explanation which it had received, presented a public address of thanks to the queen for her gracious interposition in behalf of their brethren in New England; taking especial care so to word their representation of what she had done, that the public should not be undeceived as to the date of the law that had been repealed. Nay, more than seventy years after, Robert Proud, a Quaker, and American historian, with astonishing ignorance, or shameful partiality, published a copy of the queen's order in council, and of the Quaker address, with the preliminary remark, that "About this time, (anno 1705,) the Quakers, in America, seem to have had reason to be alarmed by a singular act of Assembly, passed in the colony of Connecticut; the substance or purport of which appears by the order of Queen Anne in council, made upon that occasion." Proud, i. 465, 6. Trumbull's Connecticut, i. 420.

William Penn, probably, partook of the general prejudice entertained by his fellow sectaries against the people of New England; and it is certain that he carried on a friendly correspondence with Randolph, who had rendered himself so odious to that people, and done so much to destroy their liberties (*ante*, b. ii. cap. iv. and v.) But it is with sincere pleasure, I add, that he appears to have had no concern whatever with this proceeding of the London Quakers, in 1705. Indeed, it appears (from Clarkson's Life of him, vol. ii. cap. xvi.) that he was at this time involved in great perplexity by the embarrassed state of his circumstances, and compelled to reside within the rules of the Fleet prison. It is the more necessary to note this, as two years before he had carried up an address from the Quakers of England to Queen Anne, thanking her for her general declaration of indulgence to all dissenters.

No sectaries have ever evinced a stronger corporate spirit than the Quakers. None have shown a keener sense or more lasting resentment of injuries sustained by any member of their fraternity. It was the opinion of Turgot, says his biographer Condorcet, "that only good men were capable of sustaining indignation and displeasure." In truth, this is a frailty which many good men have too readily indulged. Deeming offences against themselves offences against goodness, and convinced of their own good intentions, they have forgotten to believe in their own imperfections, or to make allowance for the infirmities of others; and so have cherished passions and prejudices that obscured their moral discrimination, and, on some occasions, rendered their general honesty of little avail.

The quakers have always delighted to exaggerate the persecutions that they have encountered. An illustrious French traveller has been so far deceived by their vague declamations on this topic, as to assert that quakers were, at one time, *put to the torture* in New England.—*Rochebroucault's Travels*, i. 525.

NOTE [30] p. 321.—Of the condition in which Penn continued to linger for a number of years before his death, an interesting account is given by Thomas Story the quaker, (whose account of the yellow fever at Philadelphia in 1699 I have already noticed,) who, arriving from America in 1713, proceeded to pay a visit to all that remained of his venerable friend. "He was then," says Story, "under the lamentable effects of an apopleptic fit which he had had some time before; for his memory was almost quite lost, and the use of his understanding suspended, so that he was not so conversable as formerly, and yet as near the truth, in the love of it, as before; wherein appeared the great mercy and favour of God, who looks not as man looks. For though to some this accident might look like judgment, and no doubt his enemies so accounted it, yet it will bear quite another interpretation, if it be considered how little time of rest he ever had from the importunities of the affairs of others, to the great hurt of his own, and suspension of all his enjoyments, till this happened to him, by which he was rendered incapable of all business, and yet sensible of the enjoyment of truth as at any time in all his life. When I went to the house, I thought myself strong enough to see him in that condition; but when I entered the room, and perceived the great defect of his expressions from want of memory, it greatly bowed my spirit under a consideration of the uncertainty of all human qualifications, and what the finest of men are soon reduced to by a disorder of the organs of that body with which the soul is connected and acts during this present mode of being. When these are but a little obstructed in their various functions, a man of the clearest parts and finest expression becomes scarcely intelligible. Nevertheless, no insanity or lunacy at all appeared in his actions; and his mind was in an innocent state, as appeared by his very loving deportment to all that came near him. And that he had still a good sense of truth, is plain by some very clear sentences he spoke in the life and power of truth in an evening meeting we had together there, wherein we were greatly comforted; so that I was ready to think this was a sort of sequestration of him from all the concerns of his life, which so much oppressed him, not in judgment, but in mercy, that he might have rest, and not be oppressed thereby to the end."—*Clarkson*, ii. 335. Yet some writers have believed that, at this very time, Penn was engaged with the Jacobites in concerting plots in behalf of the Pretender. This allegation appeared the more plausible, as proceeding from

the State Papers (published by Macpherson) of Nairne, an under secretary at the Pretender's court; although the statements in these papers are founded entirely on the reports sent to France by two obscure Jacobite spies in England.

William Penn lingered in this condition till the 30th of July, 1718, when he closed his long and laborious life. This event, though long expected, was deeply bewailed in Pennsylvania; and the worth of Penn honorably commemorated by the tardy gratitude of his people.—*Proud*, ii. 105. 120. 122.

NOTE [31] p. 322.—"It is remarkable," says a distinguished modern statesman and philosopher, "how exactly the history of the Carthaginian monopoly resembles that of the European nations who have colonized America. At first, the distant settlement could admit of no immediate restraints, but demanded all the encouragement and protection of the parent state; and the gains of its commerce were neither sufficiently alluring to the Carthaginian merchant from their own magnitude, nor necessary to him from the difficulty of finding employment for his capital in other directions. At this period, the colony was left to itself, and was allowed to manage its own affairs in its own way, under the superintendence and care of Carthage, which protected it from foreign invasion, but neglected its commerce. In this favourable predicament, it soon grew into importance; some of the Carthaginian merchants most probably found their way thither, or promoted the colonial speculations by loans; at any rate, by furnishing a ready demand for the rude produce.

"In this stage of its progress, then, we find the colony trade left free; for the first of the two treaties, prohibiting all the Roman ships of war to approach within a certain distance of the coast, allows the trading vessels free access to all the harbors, both of the continent and the colonies. This intercourse is even encouraged with the port of Carthage, by a clause freeing the vessels entering, from almost all import duties. The treaty includes the Roman and Carthaginian allies; by which were probably meant their colonies, as well as the friendly powers; and the clause, which expressly includes the colony of Sicily, gives the Romans all the privileges in that island which the Carthaginians themselves enjoyed. At this period, it is probable that the commerce of Rome excited no jealousy, and the wealth of the colonies little avarice; although a dread of the military prowess of the former seems to have given rise to the negotiation.

"Some time afterwards another treaty, conceived in a different spirit, and formed exactly upon the principles of the mercantile system, was concluded between those celebrated rival powers. The restrictions upon the navigation of the Roman ships of war are here ex-

tended and enforced; the freedom of entry into the port of Carthage is continued, and into the ports of Sicily also, the Romans granting to the Carthaginians like privileges at Rome. But the Romans are debarred from plundering, trading, or settling (a singular conjunction) upon the coast of Africa Propria, which was peopled by Carthaginian colonies, and furnished large supplies of provisions and money to the city. The same restriction is extended to Sardinia; and trading vessels are only permitted to enter the harbour of that colony for the space of five days, to refit, if driven thither by stress of weather. A singular clause is inserted, to which close analogies may be traced in the modern questions of neutral rights and contraband of war;—if any Roman troops shall receive stores from a Carthaginian port, or a port in the provincial territories of the state, they are bound not to turn them against either the republic or her allies.

"The substance of this very singular document will suggest various reflections to my readers. I shall only observe, that we find in it the principles of the modern colonial system clearly unfolding themselves; and that we have every reason to regret the scantiness of our knowledge of the Carthaginian story, which, in so far as relates to the commerce of that people, breaks off here, and leaves us no trace of the farther restrictions most probably imposed by succeeding statesmen upon the growing trade of the colonies."—*Brougham's Inquiry into the Colonial Policy of the European Powers*.

NOTE [32] p. 323.—A good deal of irritation seems to have been excited in America, in the beginning of the eighteenth century, by some discussion that took place in parliament with regard to a project for the employment of felons in the royal dock-yards of England. A bill for this purpose was passed by the House of Commons, but rejected by the House of Lords as tending to discredit his Majesty's service in the dock-yards. This was commented on with just displeasure in an American periodical work, of which some passages have been preserved in *Smith's History of New York*. By making felony a passport to the advantages of an establishment in America, says this writer, the number of criminals is multiplied in England; and the misery of the industrious poor is aggravated by the discredit attached to the only certain means of improving their condition. "There are thousands of honest men," he continues, "labouring in Europe at fourpence a day, starving in spite of all their efforts, a dead weight to the respective parishes to which they belong; who, without any other qualifications than common sense, health, and strength, might accumulate estates among us, as many have done already. These, and not the felons, are the men that should be sent over for the better peopling the plantations."—268, 9.

THE HISTORY OF THE UNITED STATES.

HAVING closed the two volumes of Grahame's History of North America, which comes down only to 1688, we shall continue the chain of events from matter drawn from respectable sources, and such as are considered standard histories. The numbers for a single year will give the reader a larger amount of American history than has been written by any single author in this or in any other country.

CHAPTER I.

Disputes between New York and New Jersey—Overthrow of the Royal Government in New York—Settlement of Pennsylvania—New Charter for Massachusetts—Restoration of the Royal Government in New York—War with the French and Indians—Fort Mifflin built—Comparative Force of the Colonies in 1695—War with Canada—With the Spanish Colonies—Between Carolina and the Indians—Dissensions in New York—Boundary settled between Massachusetts and Connecticut—Yale College.

In 1674, William Penn obtained an assignment of Lord Berkeley's interest in the Jerseys; and in 1676 he released East Jersey to Carteret. About 1680, after settling a controversy with the Duke of York, he, with eleven others, obtained a transfer of Carteret's part; and immediately conveyed one half of their interest to the Earl of Perth and others. Continual efforts were made in the meantime for re-annexing the Jerseys to

New York. Carteret established a port of entry at Amboy. Andros seized and condemned the vessels which traded there. New York then claimed the right of taxing the Jerseys; but when her collector ventured to prosecute a vessel, judgment was almost invariably given against him. A *quo warranto* issued against East Jersey: the proprietors surrendered their patent, and it was not long after, that both Jerseys were annexed to New England.

A Mr. Dongan was the governor who succeeded Andros in 1683. The French had undertaken to exclude the people of New York from the fur trade in Canada; and as the Five Nations were then at war with the tribes of that country, Dongan sought revenge by obtaining permission to assist them. The permission was recalled in 1686, and under Andros, New York was shortly after annexed to New England. James II. had ordered the discontinuance of assemblies: the colonists were greatly

exasperated at the proceeding; and as soon as they heard of the revolution at Boston, they took possession of the fort in King William's name, and drove the lieutenant-governor out of the country. Captain Jacob Leisler, who was the leader of the insurrection, conducted afterwards with so little prudence or moderation, that the province was divided into two factions, and for a long time suffered much inconvenience from their mutual animosities.

In 1681 William Penn obtained a charter for the territory of Pennsylvania; in April, 1682, he formed a code of laws for his intended colony; in August he obtained from the Duke of York a grant of Newcastle, with the country southward to Cape Henlopen, and in October of the same year he landed on the banks of the Delaware with two thousand emigrants. Philadelphia was immediately founded, and within twelve months nearly one hundred houses demonstrated the

rapidity of its growth. The proprietor, though appointed "captain-general" of his territory, and invested with power to raise, equip, and lead his forces whenever it should be necessary, did not come to the country as a conqueror, and instead of exasperating the natives by forcing them to quit their lands, conciliated their good will by paying them a satisfactory equivalent. He experienced considerable difficulty, however, in settling a dispute with Lord Baltimore about the boundaries of his grant, and after some fruitless altercation the question was submitted to the committee of plantations, who decided that the peninsula formed by the bays of Chesapeake and Delaware should be equally divided between the two claimants by a meridional line, drawn from the fortieth degree of north latitude to Cape Henlopen. Penn's code of laws was founded on the enlightened principle, that "liberty, without obedience, is confusion; and obedience without liberty, is slavery;" but its complicated provisions were much better in theory than in practice, and after many unsuccessful attempts to make it fit the circumstances of the colony, it was finally abandoned for a more simple form of government. Pennsylvania was dilatory in acknowledging the Prince of Orange. The government was administered in the name of James for some time after his abdication; and when at last the proprietor was obliged to recognise William and Mary, he did not lack address to make satisfactory apologies for his delay.

Nor did Massachusetts derive so much benefit from the Revolution as she had at first anticipated. In June, 1680, the assembly met at Boston, and until orders were received from England the council were requested to administer the government according to the original charter. The king sent for Sir Edmond Andros, and the other prisoners: the general court deputed two assistants, Mr. Cooke and Mr. Oakes, to aid the other agents in procuring a confirmation of their beloved charter; but a new one was issued in 1691, and the colony found with no little dissatisfaction, that in future the king was to appoint their governor, deputy-governor, and secretary, and that the governor was to have the calling, adjournment, prorogation, and dissolution at the assembly, as well as the sole appointment of all military, and with the council, of all political officers. By another provision Plymouth and Nova Scotia were annexed to Massachusetts; while, contrary to the wishes of both parties, New Hampshire was left to a separate government. In May, 1692, Sir William Phipps, the first governor, arrived with the new charter, which after all was, in the following June, joyfully accepted by the general assembly.

New York was reduced to its former allegiance in March, 1691. The conduct and character of Leisler had determined some of the most respectable men in the colony to settle at Albany, where a convention of the people resolved to retain the fort and country for the king and queen. Leisler sent against it a small force, under his worthy lieutenant, one Jacob Melbourne, who, though on his first attack, he found the garrison impregnable to his sermons against James and popery, was enabled to subdue them on the second by the co-operation of the Indians. Their property was confiscated, and Leisler's authority re-established. But both himself and his authority were short-lived. He had the folly to resist the new governor, Colonel Henry Sloughter, who soon obtained possession of the fort, and ordered Leisler and Melbourne to be executed for high treason. Nor was it with internal enemies alone that New York had at this time to contend. In 1688 Louis XIV. despatched some ships of war, under one Caulmiere, in order to assist Count Frontignac, general of the land forces, in a project for the conquest of that province. Count Frontignac was indefatigable in his efforts to gain over the Five Nations, who had made two attacks upon Montreal, and murdered a great number of inhabitants. He held a great council with them at Onondaga, and as they seemed to be somewhat inclined to peace, he resolved to give their favourable disposition no time for change, and at the same time to inspire his own drooping countrymen, by finding them immediate employment against the English colonies. On the 19th of January a party of about two hundred French and some Calumuga Indians, set out in the deep snow for Schenectady: they arrived on the 6th of February, eleven o'clock at night, and the first intimation the inhabitants had of their design was conveyed in the noise of their own bursting doors. The village was burnt; sixty persons were butchered, twenty-seven suffered the worst fate of captivity, and the rest made their way naked through the snow to Albany. A party of young men and some Mohawk Indians set out from the latter place, pursued the enemy, and killed and

captured twenty-five. In the spring and summer of 1680, New Hampshire and Maine were subject to similar inroads. Massachusetts fitted out seven small vessels with about eight hundred men, who under Sir William Phipps had the poor revenge of taking Port Royal, and returned on the 30th of May, with hardly plunder enough to pay the expense of equipment. About the same time Count Frontignac made an attack upon Salmon Falls and Fort Casco, where he killed and captured about one hundred and eighty persons.

New York, Connecticut, and Massachusetts now resolved to join in a united attack upon the common enemy. The troops of the former set out by land for Montreal. Those of the latter, consisting of about two thousand, set sail from Nantucket on the 9th of August, in a fleet of forty vessels, some of which carried forty-four guns. The land forces did not receive the aid they expected from the Five Nations. Their provisions fell short, and they were obliged to return. The naval expedition did not reach Quebec till October; the energy of Sir William Phipps was by no means calculated to counterbalance the inclemency of the season, and after holding several councils of war, and parading about the place for two or three days, it was deemed most expedient to return, and the fleet arrived safely at Boston on the 13th of November. The colony being unable to pay off the troops, they threatened to mutiny, and as a last resource the general court issued bills of credit, and at the same time imposed a tax payable in those bills at five per cent. above par. The paper for a time was worth only fourteen shillings in the pound, but it rose above par when the tax was about to be collected.

The Indians now renewed their hostilities. Sir William Phipps went to England for aid, but returned without effecting his purpose. A fort was built at Pamaquid. Iberville and Villebone appeared before it with two ships of war, and some French and Indians; but to the no small dissatisfaction of the latter the lateness of the season and the want of a pilot, necessitated them to return. In the summer of 1693, king William at length despatched two thousand one hundred sailors and two thousand four hundred soldiers, for the reduction of Quebec, but they were first to capture Martinique; and before they reached Boston a contagious fever had carried off more than half of their numbers. The rest were incapable of service, and the expedition was abandoned. In 1696 the conquests which Massachusetts had made in the French territory refused their obedience. Pamaquid was taken by Iberville, and New Hampshire was obliged to secure herself from attack, by putting a body of five hundred men under the command of Colonel Church. But Iberville retired and though Church made in turn a successful inroad upon the French territory, nothing of consequence took place on either side. In the course of the same year a plan was matured at the court of Versailles for laying waste all the English possessions in America, and it is said that the plan would probably have succeeded, had not the forces appropriated for the purpose been employed in other service, till the season of operation was past.

The peace of Riswick put an end to hostilities between the French and English on both sides of the Atlantic. All the New England colonies had suffered severely from the Indians during the war. New York was protected by the Five Nations; and yet, so little did the English ministry know of the respective situations of the colonies, or so partial were they to that of the Duke of York, that they formed a design, in 1695, of uniting the forces of all the others for the defence of this. Massachusetts was to furnish three hundred and fifty men; Rhode Island, forty eight; Connecticut, one hundred and twenty; New York, two hundred; Pennsylvania, eighty; Maryland, one hundred and sixty; Virginia, two hundred and fifty; in all, eleven hundred and ninety-eight. But the plan was never carried into execution. Such of the colonies as were attacked themselves, could not spare troops to defend others; and those that were still at peace, could not tell how long they should be. As Virginia was peculiarly peaceful, she furnishes little matter for the pen of the historian. The college of William and Mary obtained a charter, in 1692; had a liberal endowment, soon after; and was established at Williamsburgh, in 1693. In 1698, the state-house at Jamestown was consumed by fire; and, in the following year, the seat of government was removed to Williamsburg.

By the treaty of Riswick, there was to be a reciprocal surrender of all conquests made during the war. But no specific arrangement was entered into, for ascertaining the respective boundaries of the English and

French possessions in America. The subject furnished ample room for controversy; and, when news was brought, that hostilities had been re-commenced in Europe, it found the colonies in a fit disposition to welcome the event. They mutually flew to arms; and, as New York had secured herself from danger, by assisting to conclude a treaty of neutrality, between the Five Nations and the Governor of Canada, New England was obliged to endure the whole brunt of the war. Propositions were, indeed made for a general neutrality; but Dudley, the governor of Massachusetts and New Hampshire, was in hopes of subduing Nova Scotia, and, perhaps, Canada; and, in the spring of 1707, he applied to Connecticut and Rhode Island to assist his own colonies in raising, for the purpose, a body of one thousand men. The former declined to contribute her quota: the troops were raised by the other three; and on the 13th of May, the expedition set sail from Nantasket in twenty-three transports, under the convoy of the Deptford man of war, and the Province galley. It arrived at Port Royal in a few days; but, as Colonel March, though a brave man, was unfit to head so difficult an enterprise, little was done beyond the burning of some houses, and the killing of a few cattle. The officers were jealous of each other: all were mistaken as to the state of the fort; and it was soon concluded to re-embark the troops. They were led back again by the viceregers of the governor; but after spending ten days in fruitless parade about the fort, they again re-embarked and came home.

The colonies were resolved not to give up the enterprise so. In the fall of 1708, Massachusetts plied the queen with an address; which, with the assistance of the colony's friends in England, at length obtained from the ministry a promise of five regiments of regular troops. These, with twelve hundred men raised in Massachusetts and Rhode Island, were to sail from Boston and proceed to Quebec; while a second division of fifteen hundred men, from the colonies south of Rhode Island, were to march against Montreal, by the route of Lake Champlain. Pennsylvania did not raise her quota of troops; and those furnished by the other colonies did not penetrate beyond Wood Creek. The Boston troops waited for the English army from the 20th of May to the 11th of October, 1709, when the news that it had been ordered to Portugal, obliged the provinces to abandon the undertaking. But their patience was not yet exhausted. Another application was made to the queen; and in July, 1710, Colonel Nicholson, who commanded the troops destined for Montreal, the year before, came over with five frigates and a bomb-ketch, for the purpose of attacking Port Royal. He was joined by three regiments of New England troops; sailed from Boston the 15th of September; and on the 24th was before Port Royal, which surrendered on the 5th of October; and being called *Annapolis*, in honour of the queen, was put under the government of Samuel Vech, a Nova Scotian trader. Nicholson returned to England; and pleading the success of his first expedition, obtained from the new ministry an army of seven regiments, who had grown veteran under the Duke of Marlborough. The colonies, too, made every exertion to bear the expenses and burthens of the expedition. Troops were soon raised; Massachusetts issued forty thousand pounds in bills of credit; provisions were impressed; and on the 30th of July, 1711, the whole armament left Boston harbour for Quebec. On the 23d of August the wreck of ten transports on Egg Island, in the St. Lawrence, determined the squadron to put about. A debate was held at Spanish River, in Cape Breton, upon the expediency of annoying the French at Placentia; but the whole expedition sailed for England, without annoying them there, or any where else. The frontiers of the colonies were again left exposed to depredation; nor was it till 1713, that the cession of Nova Scotia to England prevented the French from instigating the Indians to hostility.

While these things were taking place in the north, Carolina was alternately engaged in disputes with its proprietors, and in quarrels with its neighbours. A rumor of the war against France and Spain, in 1702, induced Governor Moore to anticipate the event, by proposing an immediate attack upon St. Augustine. In vain did the more temperate incur the epithet of traitor, by protesting against the measure. There were six thousand white inhabitants of the colony; two thousand pounds were voted to defray all expenses; and in September of the same year, Mr. Moore sailed, with a part of six hundred militia and six hundred Indians; while Colonel Daniel set out by land with the remainder. The Spaniards, apprised of the undertaking had stored the castle with four months provisions; and,

when their invaders arrived, they found it impossible to dislodge the garrison, without battering artillery. While Colonel Daniel was gone to Jamaica to procure it, the appearance of two small Spanish vessels at the mouth of the harbor so terrified the Governor, that he abandoned his own ships, and fled precipitantly to Carolina. Daniel escaped the enemy with great difficulty; and the only result of the enterprise was a debt of six thousand pounds; which the colony was obliged to discharge by bills of credit redeemable in three years, out of a duty on liquors, skins, and furs. But the ignominy of this expedition was shortly after wiped off, by a successful war against the Appalachian Indians; who, after witnessing the conflagration of all their towns between the Altamaha and the Savannah, were fain to solicit peace, and to acknowledge the British government. Peace with external enemies was soon followed by a revival of the old dispute with the proprietors. They added new fuel to the controversy, by attempting to establish the episcopal church; and the flame at length mounted so high, that, had not another foreign war withdrawn the attention of the colony, they must have shortly fallen under a writ of *quo warranto*.

Spain, through the Governor of Havana, despatched M. Le Febvre, captain of a French frigate, with four other armed vessels, and eight hundred men, to make a practical assertion of her right, by first discovery, to all North America. The News was no sooner brought to Charleston, than the appearance of the squadron was announced by signals from Sullivan's Fort. But the enemy consumed one day in sounding South Bar; and Sir Nathaniel Johnson, who had succeeded Mr. Moore, and who had well employed the military skill he acquired in Europe, in erecting works of defence about the harbor, made good use of the twenty-four hours, in calling out the militia, and procuring the aid of the Indians. The enemy landed three times; three times they were successfully repulsed; and they weighed anchor for Havana, under new impressions of the strength of Carolina. The invasion cost the colony about eight thousand pounds; no tax had ever yet been imposed on lands or persons; and a continuance of the duty on liquors, skins, and furs, was pledged to redeem an additional amount of bills of credit. Commodities immediately rose in price; and the paper currency soon fell thirty-three and a third per cent. below par.

In 1707, the death of the palatine, Lord Granville, a bigoted churchman, gave place to Lord Craven, a more liberal and tolerant member of the same sect. In 1712, the neighbouring Indians formed a secret plan for the extermination of the North Carolinians. They fell suddenly upon the inhabitants; and in the single settlement of Roanoke, one hundred and seventy-seven persons fell victims to their cruelty. Some fugitives carried the intelligence to Charleston. The assembly voted four thousand pounds to raise troops for their defence, and a Colonel Barnwell was soon detached, with six hundred militia, and about three hundred and sixty friendly Indians. In the first engagement, three hundred of the enemy fell, and one hundred were captured. The rest took shelter in a wooden breast-work at Tuscarora; but were so vigorously pressed, that they soon sued for peace; quitted the country; and joining with the Iroquois, formed what has since been called the Six, instead of the Five, nations. The addition made by this war to the debt of the colony, induced the assembly to institute a bank; and to issue notes for forty thousand pounds; which should be lent on interest, and made a legal tender. In the first year, the exchange rose to one hundred and eighty; in the second, to two hundred per cent. And what was an additional vexation to the colonists, Queen Anne made a desperate attempt to settle, by proclamation, the nominal value of their foreign coin.

About the year 1702, a contagious fever was brought from the West Indies, into several of the North American sea ports. It raged violently in New York, and was mortal in almost every instance. To increase the calamities of the colony, it was in the same year put under the government of the needy and profligate Lord Cornbury; who joined the Anti-Leislerian party, because it was the strongest; flattered the assembly in a set speech; got them to raise fifteen hundred pounds for erecting batteries at the Narrows; and appropriated the money to his own use. A quarrel ensued between himself and the Legislature. But he continued to charge enormous fees, and to demand and misapply money,—till in 1706, the united complaints of New York and Jersey induced the queen to recall him. One good consequence attended his administration. The assembly passed a resolution, "That the imposing and levy-

ing of any moneys upon her majesty's subjects of this colony, under any pretence or colour whatsoever, without their consent in general assembly, is a grievance, and a violation of the people's property." As early as 1692, it is worthy of observation that Massachusetts published a still stronger assertion of the same principle. "No aid, tax, tollage, assessment, custom, loan, benevolence, or imposition whatsoever," (says the act, and the words remind us of *Magna Charta*.) shall be laid, assessed, imposed, or levied on any of their majesty's subjects, or their estates, on any pretence whatsoever, but by the act and consent of the governor, council, and representatives of the people assembled in general court.

New York had entered with much zeal into the project of conquering Canada, which we have before mentioned as having failed for the want of the promised support from England. To defray the expenses of the army under Colonel Nicholson, New York voted twenty thousand pounds, in bills of credit: New Jersey added three thousand pounds; and Connecticut eight thousand more. After the enterprise had failed, Colonel Schnyler, a gentleman of great influence in New York, undertook a voyage to England at his own expense, in order to enlist the ministry once more in the cause. The presence of five Indian Sachems, who sailed with him, added considerably to the weight of his negotiation; and he has the merit of having been a chief promoter of the expedition, which was so successful against Port Royal in 1710. When Massachusetts undertook that, which terminated so differently, against Quebec, in 1712, New York issued ten thousand pounds in bills of credit, and incurred debts to still greater amount, in order to co-operate with Connecticut and New Jersey, in putting Mr. Nicholson at the head of four thousand men, for a corresponding attack upon Montreal. But some of the ships which had been sent to co-operate in the plan, were wrecked in the St. Lawrence; and the return of the fleet having left the French governor at liberty to direct his whole force against the army, Colonel Nicholson was apprehensive of discomfiture, and commenced a retreat.

Here concludes the history, down to this period, of every important event in the colonies, if we except the order of Queen Anne, issued in 1712, to discontinue the presents with which the inhabitants had been accustomed to conciliate their governors; and the adjustment of boundaries between Rhode Island and Connecticut, and between Connecticut and Massachusetts. The two latter agreed that the towns which they had respectively settled should still remain under their former jurisdiction; and that if either party should be found to have encroached on the territory of the other, the loss should be made good by an equal grant of lands in some other place. Massachusetts had to give Connecticut one hundred and seven thousand seven hundred and ninety-three acres; which were sold by the latter chiefly for the support of Yale College.

As early as 1655, New Haven made an appropriation of three hundred, and Milford of one hundred pounds for the support of a grammar school and college. The former, soon after, added a donation of lands; and in 1659, the legislature voted forty pounds annually, and one hundred pounds for the purchase of books. In 1660, a donation was received from Governor Hopkins. The general court agreed to establish both institutions at New Haven; and the project had just begun to show its fruits, when the troubles of the colony so impoverished their resources, that they could not pay for instructors. When the New England colonies formed the union in 1665, the grammar school was revived; and the funds, which had been raised for both institutions, being appropriated exclusively to this, it has been enabled to continue in existence to the present time.

In 1698, the clergy began again to talk upon the subject of a college; in the following year ten of their number were chosen to found, erect, and govern one; and in 1700 they met at Branford, each bringing three or four large books, and laying them upon the table, with, "I give these books for the founding of a college in this colony." As it was doubtful whether they could hold property, it was agreed to petition for a charter. To promote the design, Mr. Fitch, of Norwich, gave six hundred acres of land, and "all the glass and nails which should be necessary to build a college house and hall." The charter was granted in October, 1701; and on the 11th of November, the trustees held a meeting; chose a rector; passed some rules for the government of the institution, and concluded to fix it at Saybrook. The first commencement was held at that place on the 13th of September, 1702. The college was originally designed for the education of ministers:

the charter provided that the trustees should be none but clergymen; and of the forty-six graduates, between 1702 and 1713, thirty-four became ministers.

The growth of the school, though slow, at length rendered it inconvenient to accommodate all the students at Saybrook; and both they and their parents were dissatisfied to see a part transferred to Milford. The evil grew worse every day; and as the trustees did not seem inclined to apply the proper remedy, by removing the institution to a more adequate place, the several towns of the colony undertook to force the measure, by subscribing different sums for its establishment in different situations. Seven hundred pounds sterling were subscribed to fix it at New Haven; five hundred for its continuance at Saybrook; and less sums for its removal to other places. Still there was much difference of opinion among the trustees; nor was it till October, 1716, that they agreed to establish the college at New Haven. In 1714, Governor Yule had made it a present of forty volumes; and in 1716, he added three hundred more. Two years afterwards, he gave the trustees goods to the value of two hundred pounds sterling, prime cost; and a similar donation of one hundred pounds in 1721, induced them to call the institution after his name. In 1717, the number of students was thirty-one. A century after, it had increased nearly ten-fold.

CHAPTER II.

Paper Money in Massachusetts—Quarrel between the Governor and Representatives—Inroads of the Indians—Deputation to the French—Peace—Alterations in the Charter—Renewal of the Dispute between the Executive and Legislature—Mr. Burnet's Instructions for a Fixed Salary—Adjournment of the Court—Mr. Burnet's Death—Mr. Belcher renews the Discussion—Association for issuing more Bills of credit—Mr. Shute—Adjustment of the Dispute between New York and New Jersey concerning Boundaries—Controversy between New York and Canada—Prosperity of the Northern Colonies—The Parson's Cause in Virginia—Proceedings in Carolina—Settlement of Yamasee Territory—Paper Money—Disposition of the Proprietors—Disputes between the Governor and the Assembly—Dissolution of the Charter and Division of the Province—Settlement of Georgia—Mr. Oglethorpe—Quarrel with the Spaniards—Ineffectual Attack upon St. Augustine—Abortive attempt upon Georgia.

THE rise in exchange produced by imprudent issues of paper money in Massachusetts, was idly attributed to a decay in trade; and the colony was almost unanimously of opinion, that trade could only be revived, by an additional quantity of bank notes. A few saw the real evil, and were for calling in the bills, that were already abroad; but it was determined by the great majority, that either by a private, or a public bank, the province should be supplied with more money, or rather, with more paper. The general court at length resolved to place bills for fifty thousand pounds in the hands of trustees; who were to lend them at five per cent interest, with a stipulation, that one-fifth of the principal should be repaid annually. Still trade would not improve. Mr. Shute, who had just succeeded Mr. Dudley, attributed the fact to a scarcity of money; and recommended, that some effectual measures should be taken to make it more abundant. The specific was therefore doubled. But an additional emission of one hundred thousand pounds so greatly depreciated the value of the currency, that the general court were, at last enabled to see the true cause of the difficulty: and the governor, too, when his salary came to be voted in the depreciated money, according to its nominal amount, began to be somewhat sceptical of his policy.

This was the small beginning of a long and rancorous quarrel between the governor and the general court. In 1719, it was now 1720, the former had incurred the censure of the ministry, by assenting to a bill for the imposition of duties upon English tonnage, and upon English manufactures: when a similar bill was sent up, this year, it was negatived in the council: a warm altercation ensued; and it was not till the next session, that the act passed without the offensive clauses. In the same session, the governor claimed the right of negativing a choice, which the house had made, of a speaker; and, when they refused to recognize the claim, he dissolved the court, and issued new writs of election. Nearly the same persons were re-elected; and the only effect of the measure, was, to make them still less disposed to accommodate Mr. Shute. They opposed him in every thing, whether it was right or wrong, insignificant or important. They neglected to vote him his salary, as was usual, at the beginning of the session; and not only postponed the business till the day of adjournment, but reduced the amount from six to five hundred pounds. The depredations of some eastern Indians made it necessary to call the represent-

atives together again, before the stated time. They immediately passed an act, which amounted to a declaration of war; and, when the governor accused them of usurping his prerogative, they docked off another hundred pounds from his salary. He laid before them instructions from the crown, to give him a fixed and adequate sum; they "desired the court might rise;" and it rose accordingly.

The governor opened the next assembly with recommending many wise measures; which were totally neglected by the court; and little else, indeed, was done, during the session, but to continue the emission of bank bills, and to drive the gold and silver from the country, by ordering that it should be passed at a higher rate than that which had been established by an act of parliament. The next general court very early appointed a committee to vindicate their predecessors from the aspersions of the governor. The committee justified the house; and their report was ordered to be printed. The court postponed the vote for the governor's salary; he laid by their list of appointments; they deputed a committee to inquire into the matter; he told them, he should take his own time for it; the house resolved, to make no grants or allowances; the governor made an angry speech; and the court was dissolved. A new legislature soon manifested the same temper with the old. In spite of the governor's protest, that the charter had placed the militia solely at his own disposal, they proceeded to make regulations for carrying on the Indian war; leaving his excellency no other power, than that of approving the measures, which might be adopted by a committee of their appointment. He embarked suddenly for England; and the representatives and council, though generally opposed on all other questions, were united in resolving to send after him instructions to their agent, to take the best measures for defending the interests of the colony against his representations.

These internal dissensions gave the Indians a good opportunity to make their inroads upon the frontiers. They were set on by the French in Canada; particularly by one father Ralle, a Jesuit missionary. Some troops were sent to capture this holy personage; but he received the intelligence in time to escape; and the party could only get possession of his papers; among which were letters of authorization from M. Vaudreuil the governor of Canada. War was now formally declared against the Indians; and, as it was abundantly evident that they were instigated by the French, a deputation was sent to M. Vaudreuil, in 1726, in order to remonstrate against a conduct so incompatible with the peace, which then subsisted between France and England. He first disclaimed all interference; but, when his letters to Ralle were produced, he could deny it no longer. He assured the deputation, that he would thenceforth exert himself to effectuate a peace; and a peace was accordingly soon after concluded at Boston.

Parliament, in the mean time, was condemning, question after question, the whole proceedings of the general court in the case of Mr. Shute. It was thought expedient to issue a new charter for "explaining" the old one, in the two points, which respected the powers of choosing a speaker, and of adjourning the court. The last was entirely "explained" away from the house; and the former was so modified, as to leave the governor his negative. Rather than have the whole subject again brought before parliament, which was the penalty of refusal, the general court concluded it was most advisable to adopt both of these alterations. Its attention was next turned to the loud complaints about the decay of trade and the scarcity of money. A bill passed both houses for issuing more notes; and when it was negatived by the lieutenant-governor, they agreed to postpone the consideration of salaries. The lieutenant had said, that his instructions would not let him assent to such bills, except they were for the charges of government; a bill for issuing sixty thousand pounds was, therefore, headed, "An act for defraying the necessary charges of government;" and the influence of an uncertain salary necessitated his excellency to give his assent.

Mr. William Burnet, the new governor of Massachusetts and New Hampshire, had received express instructions from the king, to see that the general court settled upon him a fixed and certain salary. Soon after his arrival, the assembly voted seventeen hundred pounds for defraying the expenses of his voyage, and for supporting him in the discharge of his office. He said he could not assent to such a vote. They then voted, for the first purpose, three hundred pounds; which were accepted; and, for the last, fourteen hundred pounds; which were refused. The legislature assert-

ed, that it was their privilege, as Englishmen, to raise and apply their own money; and, when the governor answered, that he would never accept such a grant as had been made, the council were for establishing a fixed salary,—but the representatives requested, that the court might rise. Mr. Burnet would not grant the request. It was again made; and again refused. The house then sent up a long message; in which they detailed their reasons for refusing to establish a fixed salary; and once more reiterated their wishes, that they "might not be kept sitting there," to the manifest prejudice of their constituents. The governor answered them promptly enough; but not at all to their satisfaction; and, after resolving to adhere to their old method of appropriating moneys, they drew up a statement of the controversy, and transmitted it to the several towns. Many spirited messages were exchanged in quick succession between his excellency and the house. The latter again repeated a request, that the court might rise: he told them they could not expect to have their own wishes gratified, when they paid so little attention to those of his majesty; and the altercation was waxing so high, that the council thought it best to interfere,—and to propose that some certain sum should be fixed upon, as a salary for the governor. The representatives voted three thousand pounds in their own money,—equal to about one thousand pounds sterling; but as the act contained no provision for the continuance of the same sum, Mr. Burnet refused his assent; and, apprehending, that the house was somewhat influenced by the people of Boston, who had unanimously voted against a fixed salary, he adjourned the court to the town of Salem. At Salem it met, on the 30th of October, 1728. The battle of messages recommenced as briskly as ever. The representatives appointed agents to plead their cause in England; the council would not concur in the act, because they had not been consulted; and the project must have failed for want of money, had not the people of Boston subscribed for the necessary sums. The agents soon transmitted a report of the board of trade; in which the conduct of the house was entirely disapproved. They were told, also, that, unless they fixed a salary, the parliament would;—"It is better," they answered, "that the liberties of the people should be taken from them, than given up by themselves." Both parts of the administration went all this time without pay; for, as the representatives would vote no salaries, the governor would assent to no drafts upon the treasury. At length there was a recess between the 20th of December, 1728, and the 2d of April, 1729; when the court assembled at Salem; and, after several fruitless meetings, were adjourned to Cambridge. They met there, on the 21st of August; and, a few days after, Mr. Burnet died of a fever at Boston.

Mr. Belcher, his successor, came over, in the beginning of August, 1730, with a fresh packet of instructions, to insist upon a fixed salary. The king said it was the "last signification of the royal pleasure on this subject;" and he threatened to bring the whole history of the province before parliament, if it were not immediately complied with. The house voted one thousand pounds currency, to defray the charges of his excellency's voyage, and a sum equal to one thousand pounds sterling, to aid him in managing public affairs. The council added an amendment, to make the appropriation annual. The amendment was rejected. The council modified it, by confining the yearly allowance to the duration of Mr. Belcher's government. The representatives again refused their assent, and the resolution was dropped. The controversy continued for some time longer, but the governor was at length wearied out, and leave was in the end obtained of the king to let the legislature take its own way in the regulation of his salary.

The termination of this dispute was only the beginning of another. An unusual scarcity of money was complained of all over New England. The governor of Massachusetts and New Hampshire, had been instructed to suffer the emission of no more bills in those colonies. Connecticut was employed in agriculture, and did not stand in need of much money. But the commerce of Rhode Island demanded an abundant circulating medium, and one hundred thousand pounds in bills of credit were accordingly loaned to the inhabitants for twenty years. An association of merchants, in Boston, undertook to prevent the circulation of this money, by issuing, themselves, one hundred and ten thousand pounds of the same sort; but the bills of all the New England colonies soon became current; silver rose from nineteen to twenty-seven shillings the ounce, and the notes of the association entirely disappeared.

Another company of eight hundred persons set on foot a plan for issuing one hundred and fifty thousand pounds in bills of credit, which should be lent on good security, at three per cent. interest, the principal, as in all these schemes, being redeemable by annual instalments of a certain per cent. The authors of the project began in season to secure the good opinion of the next general court, and so successful were they in the business, that the house was found to be chiefly composed of subscribers, and was for a long time distinguished by the name of the *Land Bank House*. Small traders, and small traders only, would accept the company's notes; but it continued to issue them without end, and the governor was finally obliged to petition parliament for an act to suppress the institution. Mr. Shirley superseded Mr. Belcher in 1740, and one of the first bills passed under his administration, declared that all contracts should be considered as payable in silver, at six shillings and eight pence the ounce, or its equivalent in gold. Notes for so many ounces of silver were also issued, and made receivable in payment of debts, the debts being augmented as the notes should depreciate.

A long peace had enabled New York and New Jersey to adjust, in some measure, an unpleasant dispute about boundaries. It gave the former an opportunity, also, to take advantage of her geographical facilities for trading on the northern lakes, and in 1722, Mr. Burnet, the governor of that province and of New Jersey, greatly excited the jealousy of the French, by building a store-house at Oswego. M. Longueuil, the governor of Canada, retaliated by launching two vessels on Lake Ontario, and sending materials to erect a trading-house, and to repair the fort at Niagara. The Seneca Indians were greatly incensed at this measure, and Mr. Burnet remonstrated against it; but M. Longueuil proceeded to complete his fort, and the former could only get revenge by erecting, at his own expense, a like fort at Oswego. M. Beauharnois, the successor of M. Longueuil, sent the commander a written summons to evacuate it. The summons was disregarded. He warmly remonstrated against the proceeding to Mr. Burnet. Mr. Burnet as warmly remonstrated against the proceeding at Niagara, and here the dispute ended for the present. It was not long afterward, that the French acquired the control over Lake Champlain, by seizing and fortifying Crown Point.

During the regency of the Duke d'Orleans, in France, and the administration of Sir Robert Walpole, in England, all the colonies to Virginia, inclusive, had little to distract their attention from their own private affairs, and could scarcely help becoming prosperous. Land was cheap, and subsistence easily obtained. Marriages, of course, were early and frequent, and population soon began to extend itself over the vacant parts of the country. Such a process is attended with no eclat, and perhaps there is nothing to relieve the monotony of a long and felicitous period, in the internal economy of the colonies, if we except the dispute in Virginia respecting ecclesiastical salaries.

In 1696, when the price of tobacco was sixteen shillings and eightpence per hundred, an act of the assembly, which was re-enacted and assented to by the king, in 1718, conferred upon each parish minister an annual stipend of sixteen thousand pounds of tobacco. In 1755, the crop was scanty, and the legislature, by another act, which was to continue in force ten months, and not to wait for the royal assent, provided that those who owed debts, in tobacco, might either pay them in the specific article or in money, at the rate of sixteen shillings and eight pence per hundred. Though the price was then from fifty to sixty shillings, the measure created no disturbance, and three years afterward, when it was surmised that the crop would again be short, the same expedient was resorted to. But the ministers now began to see its operation, and one of them, in a pamphlet, entitled *The Treepenny Act*, convinced the legislature that he understood precisely how they were defrauding his order of its just dues. He was attacked by two Colonels, whom he answered with *The Colonels Dismounted*, and the war of pamphlets soon grew so hot, that the printers of Virginia were afraid to continue it.

The subject was next taken up by the king in council, who declared that the act of 1758 was a mere usurpation, and could have no force. Backed by such authority, the ministers brought the question before a county court, and, after a formal argument, it was decided in their favor. By the laxity of practice, the subject was permitted to be once more discussed, and when all supposed that the first judgment could never be shaken, the unexpected eloquence of Mr. Patrick

Henry is said to have changed the opinion of the court. The clergy took their revenge in an angry pamphlet; and here the controversy seems to have terminated.

Carolina, in the mean time, was rapidly undergoing a revolution of government. In 1715, the colony had incurred considerable expenses, in a war with about six thousand Yamasee, Creek, and Apalachian Indians, who were met at a place called the Salt-Catchers, by twelve hundred men, and so completely routed, that they were obliged to make a new settlement in Florida. The proprietors not only ordered the reduction of the paper money, which the assembly saw fit to issue, on account of this expedition, but when applied to for assistance by the agents of the colony, they declared their inability to protect it, unless his majesty would interpose. The assembly had also undertaken to make a barrier against the Indians, by offering the Yamasee territory to all persons who would come over and settle in it. Five hundred Irishmen accepted the offer, and had actually taken up the ground, when the proprietors ordered the law to be repealed, and the lands to be laid out in baronies for themselves. It had been the custom to elect all the representatives of the colony, in the single town of Charleston. The increase of population now rendered the practice extremely inconvenient; and the legislature had enacted, that for the future, each parish should assemble in its own church, and choose its own representatives. The proprietors ordered the act to be repealed; and Governor Johnson, son of the former governor of that name, had to use all his influence to keep the colonists from breaking into open rebellion, at this wanton and outrageous proceeding. But they were compelled to bear yet more insults. Some expeditions against a band of pirates, who had long infested the coast, necessitated the assembly, as they imagined, to issue another quantity of paper money; and the governor carried an additional bill for redeeming it in three years, by a tax upon land and negroes. But the tax was oppressive to the planters; and they had influence enough to obtain another act, for the emission of more bills. As soon as the proprietors heard of these transactions, they sent the governor instructions to approve of no legislative measures, until it had been laid before them. Another order soon after followed, to take off a duty which the colony had laid, of five per cent. on British manufactures; and as if these outrages were not sufficient, they deemed it meet to show another instance of their despotism, by giving an arrogant and abusive answer to a memorial, which the assembly had presented, against their right to revoke the laws of the province.

The rupture between Spain and Great Britain in 1719, afforded fresh opportunities for the prosecution of this dispute. The rumor of an expedition, fitting out at Havana, for the invasion of South Carolina, induced Governor Johnson to attempt the reparation of the forts in the harbor of Charleston, by the voluntary aid of the inhabitants. A subscription was set on foot; and he placed a liberal sum opposite to his own name. The assembly disapproved of the measure; or rather asserted that the receipts from the duties would render it unnecessary. The governor wanted to know if the duties had not been taken off? They told him they intended to pay no attention to the repeals, which they had been forced to make. A warm altercation followed; and though nothing decisive took place, the representatives seem to have formed a determination to rid themselves of the proprietary government. Private meetings were held, to concert measures of resistance. The militia unanimously subscribed an instrument of association; and the people engaged to stand by each other, in the assertion of their rights and privileges. At the first meeting of the new assembly, all former repeals were repealed: the proprietors were declared to have forfeited their rights of government; and the honorable Robert Johnson was desired to accept the office of governor in the name of the king. A message from himself and the council requested a conference with the house; they would receive no message "from the governor, in concert with the gentlemen he was pleased to call his council." He sent them an expostulatory speech; they would take notice of no "paper, sent by the governor in conjunction with the gentlemen" he called his council; and they informed him, in a second address, that they intended to cast off the proprietary government, and to obey him no longer, unless he would consent to exercise his office, as viceroy of the king. He proclaimed the dissolution of the assembly, and retired into the country. The proclamation was torn from the officer's hands; Colonel John Moore was elected chief magistrate; and the assembly agreed to inaugurate him, on the very day,

which Mr. Johnson had set apart for the review of the militia. He had the review postponed; but, when he came to Charleston, on the appointed day, he found the militia paraded in the public square, in order to celebrate the proclamation of Mr. Moore. All his efforts to stop the proceedings were ineffectual. The assembly proclaimed their own governor; chose their own council; and went deliberately about the transaction of public affairs. The province was on their side; and their power was soon after corroborated and fixed, by the vigorous preparations, which they made to repel a contemplated attack from Havana. Their agent in England obtained a decision in the council, that the proprietors had forfeited their charter; a *seire facias* issued against it: the proprietors surrendered their interests; and Mr. Francis Nicholson was soon after welcomed to the colony, as governor under the king. The security, which the province felt in the protection of the crown, was greatly increased by a treaty, which was soon after concluded with the Cherokee Indians. Security made the colonists industrious; and industry soon raised them sufficiently above their former circumstances, to arrest the depreciation of their paper currency; which had fallen about eighty-six per cent. below par. Increase of wealth made boundaries a matter of importance; and, in 1732, the province found it convenient to divide itself into North and South Carolina.

About the same time, the territory of Georgia was granted to twenty-one trustees, for the purpose of being parcelled out to such of the English poor as would consent to be carried over the Atlantic; and, early in 1733, Mr. James Oglethorpe, one of the trustees, arrived at Charleston with one hundred and sixty. He proceeded, soon afterwards, to the intended place of settlement: erected a small fort on the site of Savannah; and obtained a cession of lands from the Creek tribe of Indians. The first company was followed by several others;—but the progress of the colony was greatly obstructed, by an attempt to put it under a feudal system. The lands were to be held in tail-mat by the tenure of knight-service; and to revert to the trustees, either if the male issue should become extinct,—or if the grounds were not enclosed and cultivated within eighteen years. To complete the policy, the importation of rum and of negroes was prohibited; and all commerce with the Indians was restricted to those, who could obtain a license. The natural consequences soon followed. A great many of the settlers emigrated to Carolina; where they could hold lands in fee simple; could trade freely with the West Indies; and be permitted to employ negro slaves in the cultivation of their lands. Those who staid behind, were perpetually complaining of their fetters: and, though Mr. Oglethorpe erected a battery, to command the mouth of the Savannah, and built forts at Augusta and Frederica, the colony needed civil privileges more than military defences, and their general concerns were soon in a ruinous condition. Under a different system, Carolina was so prosperous as to double her exports in ten years; while it was with the greatest difficulty, that the inhabitants of Georgia obtained a scanty subsistence.

When England and Spain began to prepare for war, in 1737, a British regiment of six hundred men was sent into Carolina; and Mr. Oglethorpe was appointed major-general of that province and of Georgia. The Spaniards fortified East Florida; and made a vain attempt to gain over the Indians, who were in alliance with the English. They succeeded better with the slaves; of whom enough were seduced to form a distinct regiment by themselves. Nor did the evil stop here. A large number of negroes assembled at Stono; forced open a warehouse of arms and ammunition; murdered all the white men whom they met; and compelled the black, willing or unwilling, to come under their standard. But it was a brief triumph. After the first impulse of rage was exhausted, the insurgents halted in an open field; and began their usual pastime of dancing. There happened to be a religious meeting in the neighborhood; and the congregation, armed as usual set upon the thoughtless rabble; killed great numbers on the spot; and so frightened the rest, that they never afterwards dreamed of insurrection. There were now about forty thousand slaves in Carolina; and the occurrence just mentioned had the good effect of making the colonists keep vigilant watch over their conduct, during the approach of the war between England and Spain.

When it actually broke out, in 1739, Admiral Vernon was detached to the West Indies, and General Oglethorpe was ordered to annoy the Floridas. He immediately communicated his instructions to the as-

sembly of South Carolina; they voted one hundred and twenty thousand pounds for the service; a regiment of four hundred men was raised in Virginia and the Carolinas; a body of Indians enlisted; and Post-Captain Price promised his co-operation with four twenty-gun ships and two sloops of war. On the 9th of May, 1740, the general entered Florida, with four hundred men and a party of Indians from his own province. He was joined, at the mouth of St. John's River, by the Virginia and Carolina regiment, and a company of Highlanders; and was enabled, shortly after, to appear before St. Augustine, with about two thousand effective men. A reconnoitre of the place induced him to abandon his original design of taking it by storm. A regular investment was determined upon; and the troops were disposed in the most advantageous positions for beginning the approaches. The general himself undertook to bombard the town from the Island of Anastasia; but a few shots convinced him that a breach, at so great a distance, was impracticable. It was next resolved to attack the six half galleys then in the harbor, by one of the twenty-gun ships; but the bar was found to be so shallow that she could not get over it. In the mean time the Spaniards had received supplies and reinforcements: and a party of the besiegers was surprised and cut in pieces. Other misfortunes followed in quick succession. Captain Price withdrew his ships; the dispirited troops began to desert in large bodies; and General Oglethorpe was, at length, reluctantly compelled to abandon the enterprise. The colonies attributed the failure to the general; and the general laid it to the charge of the army. We think neither was to blame. The force was too small at the outset; and, before a part of it reached the place of rendezvous, the arrival of supplies had greatly and unexpectedly increased the strength of the enemy.

But, at any rate, the expenses entailed by the expedition, joined to the still greater calamity of seeing their capital reduced to ashes, determined the people of Carolina to raise no forces in future, except for their own defence; and, when an expedition of thirty ships and three thousand men sailed against Georgia, in 1742, they imagined it would not be for their own defence, to aid General Oglethorpe in preventing the enemy from getting possession of a province, which was so effectual a barrier to their own. About the end of June the enemy anchored off Simon's Bar; and General Oglethorpe found he had to oppose him with only seven hundred men,—consisting of the regiment he led against St. Augustine, and of a few Highlanders, rangers, and Indians. But the thickets and morasses of the country stood him in the place of many soldiers; and, retiring to Frederica, he resolved to act, as long as he could, upon the defensive. By an English prisoner, who had escaped from the Spaniards, he learned that the troops from Cuba, and those from St. Augustine, agreed so ill with each other, that they had taken up their encampments apart. One of these, the general thought he might venture to attack. He selected the flower of his little army; and, under the cover of the night, marched unobserved within two miles of the lines. The main body was halted; while he went forward, with a small party, to reconnoitre the encampment. He had, with great circumspection, approached very near it; when the whole enterprise was supposed to be defeated, by the treachery of a French soldier, who fired his musket, and ran over to the enemy. General Oglethorpe wrote a letter to the deserter; requesting him to tell the Spaniards how defenceless Frederica was; to urge an immediate attack; or, at any rate, to persuade them to remain at Simon's Fort three days longer; when his expected reinforcement of two thousand men and six ships of war would arrive. He particularly cautioned him against dropping even a hint about the contemplated attack of Admiral Vernon upon St. Augustine. A Spanish prisoner, who had been taken in a skirmish, was bribed to deliver the letter into the deserter's own hands; but he, of course, delivered it into the hands of General Don Antonio Di Radondo. The latter was, at first, not a little perplexed, whether to consider it as a mere stratagem, or as a real and serious letter of instruction; but the appearance of some ships, which had been despatched with supplies by the assembly of South Carolina, appeared to put the seriousness of the paper beyond all doubt. The panic-struck army set fire to the fort, and hurried on board of their vessels; and thus a circumstance, which, at first, seemed to threaten the certain conquest of the province, served, in the hands of a skillful commander, as perhaps the only means of its preservation.

CHAPTER III.

War between France and England and their Colonies—Preparation for an Attack upon Louisbourg—The Attack—Surrender—D'Anville's Expedition—Abortive Attempt upon Nova Scotia—Upon Crown Point—Peace—Paper Money in Massachusetts—Discovery of Louisiana and Foundation of New Orleans—Situation of the English and French Colonies—Origin of the Rupture between them—Colonel Washington's Embassy—Project of Union—Plan of the first campaign—Capture of Nova Scotia—General Braddock's Defeat—Expedition against Crown Point—That against Niagara—Second Campaign—Capture of Oswego—Third Campaign—Disputes between Lord Loudon and Massachusetts—Fourth Campaign—Second Capture of Louisbourg—Unsuccessful attack upon Ticonderoga—Capture of Fort Frontenac—Of Du Quesne—Fifth Campaign—Capture of Quebec—Death of Wolfe—Attempt to retake Quebec—Surrender of New France—General Peace.

WHILE France and England were engaged in actual war, under the pretence of supporting respectively the queen of Hungary and the elector of Bavaria, the colonies of the two nations preserved a sort of hostile peace; but as soon as the news reached Cape Breton, that the controversy had become open and avowed in Europe, Duvivier attacked and took the English fishing settlement at Canseau; and soon after made a similar, though unsuccessful, attempt, upon Annapolis. Governor Shirley immediately formed the design of taking Cape Breton. It was well situated for annoying the English Fisheries; and thirty millions of francs employed upon its fortifications, had made it the "Dunkirk of America." The governor requested the secrecy of the court, upon a project, which he was about to communicate. They readily promised it; and he surprised them with the proposal of sending four hundred men to take Louisbourg by storm. They condemned the undertaking as vastly too hazardous and expensive: but, unfortunately, or, perhaps, fortunately, one of the members happened to pray for blessings upon it, in the family devotions at his lodgings. The plan was soon known, all over Massachusetts; the people were generally in favour of it; and an influx of petitions, from every quarter induced the council to change their determination. They invited the co-operation of all the colonies as far as Pennsylvania; but none, except those of New England would furnish their quotas of troops. There was no military character of note in the country; and the command of the expedition was given to one Colonel Pepperel; who had little other qualification than that of being a rich merchant and a popular man. A general embargo was laid: more bills of credit were issued, notwithstanding the express prohibition of the crown "a variety of advice," (says Mr. Belknap,) was given from all quarters: "private property was impressed, and, by the 4th of April, 1745, three thousand two hundred and fifty troops from Massachusetts arrived safely at Canseau. The quota of three hundred and four, from New Hampshire, had landed four days before; that of five hundred and sixteen, from Connecticut, came in on the 25th of the same month; but the troops from Rhode Island did not arrive in time to be of any service to the expedition.

Governor Shirley had written to England for assistance, some time before the disclosure of his project to the general court; and a detachment from Admiral Warren's fleet in the West Indies, appeared off Canseau, the day before the arrival of the Massachusetts troops: the admiral himself soon followed, in the *Superb*, of sixty guns; and, every thing being now ready, the land forces embarked for Chapeaurouge; while the fleet, (in all, about one hundred sail,) manœuvred before Louisbourg. The landing was effected with little difficulty; and, in the course of the ensuing night, a party of four hundred men marched around to the northeast part of the harbour, and set fire to some warehouses of spirituous liquors and naval stores. The smoke was blown directly into the grand battery; and it did such signal execution, that, when thirteen of the party were returning, next day, they saw, with surprise and joy, that the flagstaff was bare, and the

chimnies without smoke. An Indian was hired, for a bottle of rum, to crawl in an embrasure, and open the gate; and, though a detachment of the enemy was then coming to retake the fort, the thirteen retained possession, till the arrival of a reinforcement from the main body.

Fourteen nights were the troops engaged in drawing the cannon over a morass to the place of encampment, a distance of about two miles; and, when the account of the expedition was sent to England, they were not a little indignant at seeing no mention of their having worked like oxen, with straps over their shoulders, and up to their knees in mud. As this expedition had been planned by a lawyer, and was to be executed by a merchant, at the head of husbandmen and mechanics, any thing like a regular siege was not to have been expected. The soldiers laughed at such words as *zig-zag*, and *epaulement*; and thought, the most eligible mode of approaching was that of a straight line. In execution of this new principle of tactics, 400 men assaulted the island battery; were repulsed; and many of them taken prisoners. They all concurred in representing the besiegers as much more numerous than they were; though all was frolic in the rear of the army, the front did, indeed, look formidable; and the impression made by these reports and appearances, together with the intelligence, which was conveyed into town, that the supply ship, the *Vigilant*, of sixty-four guns, had been taken, induced Duchambon, the governor, to tender a capitulation. This was the only advantage gained over France, during the whole war; and, when accounts of it reached England, the crown made baronets of Pepperel and Shirley, and the parliament readily undertook to defray the expenses.

France and England now mutually resolved to make a complete conquest of each other's possessions in America; and, in the spring of 1746, circular letters were sent to the English colonies as far as Virginia, to have in readiness as many troops as each might be able to spare. The plan of the campaign, was, to sail against Quebec, with some ships of war and the New England troops; while those of the other colonies should be collected at Albany, and march against Crown Point and Montreal. The ships of war made seven vain attempts to leave England, and the first part of the scheme was necessarily abandoned. The colonists were diverted from the last, by a threatened attack of the enemy upon Annapolis; and, before they could despatch troops for the protection of that place, New England, in particular, was greatly alarmed by the intelligence, that a formidable armament, under the Duke D'Anville, had arrived in Nova Scotia. Every effort was made to put the country in a state of defence. The militia were joined to the troops already raised; and, for six weeks, all stood in hourly expectation of an attack; when some English prisoners, who had been set at liberty, brought the welcome news, that the French soldiers were in too much distress themselves to think of distressing others. The armament originally consisted of about forty ships of war, and about fifty-six transports; carrying 3000 troops, and 40,000 muskets for the Canadians and Indians. Many ships were lost and wrecked on the voyage; and a sweeping mortality prevailed on board of those, which had reached the place of destination. To increase their calamities, they learned, by an intercepted letter from Governor Shirley to the commander at Louisbourg, that their own squadron would probably be followed by an English fleet. The admiral shortly died: the vice-admiral killed himself: and, when M. Le Jonquiere undertook to lead the fleet against Annapolis, a violent storm dispersed the ships; and those, that did not suffer wreck, returned singly to France.

Governor Shirley now resumed the project of dislodging the French and Indians from Nova Scotia. The troops of Rhode Island and New Hampshire were prevented from joining the expedition; and the enemy was not only more numerous than those of Massachusetts, but had the advantage of being provided with snow-shoes. The English

were beaten at Minas; and promised not to bear arms for one year, against the French in Nova Scotia. Governor Shirley next directed his attention to Crown Point. Massachusetts and New York engaged to furnish their quotas of troops: the winter was no obstacle to the governor's enthusiasm; and the enterprise was only prevented by the discreet resolution of Connecticut, to withhold her co-operation. The treaty of Aix-la-Chapelle was concluded in October, 1748; and New England deemed it but a poor return for the expenses which she had incurred, that an article of *status ante bellum* compelled her to relinquish Louisbourg. Massachusetts, in particular, had issued immense quantities of paper-money. Was there a call upon the treasury. Bills of credit must answer it. Was trade decaying? It could only be revived by bills of credit. Was there any disorder in the internal economy of the province? Bills of credit were the only remedy. And bills of credit were issued in such quantities, that they had sunk to *eleven for one*; when the arrival of the specie, which parliament had promised, was the means not only of staying the depreciation, but of destroying paper-money altogether. After some opposition, the general court passed an act for redeeming bills of credit, at their real value, or, in other words, for silver at fifty shillings the ounce. Not an evil, which had been predicted, was seen to attend the measure; and, on the contrary, it is said to have given commerce a very perceptible impulse for the better.

As the importance of America was daily increasing in the eyes of Europe, the question of boundaries between the colonies of different nations began to be discussed more frequently and in greater earnest. Spain had pretensions to the whole of Georgia; and England laid claim to a part of Florida. By the treaty of Utrecht, Nova Scotia, or Acadia, was, indeed, ceded to the English; but there was still room enough for controversy, in determining what were the boundaries of that country. The French asserted, that its eastern line was the Kennebec; the English made it embrace the whole territory south of the St. Lawrence; and the commissioners appointed by the two nations, under the treaty of Aix-la-Chapelle, were equally laborious and equally obstinate in maintaining their respective claims. Nor was this the only conflict. As if these two nations were fated to cross each other's path, in every thing, while the English colonies were advancing indefinitely from east to west, the French began to extend their own settlements transversely from north to south. In 1673, they explored the Mississippi as far as the 33d degree of north latitude; and some time afterwards, its mouth was discovered by one La Salle, a Norman, who subsequently obtained the patronage of the French court, in an attempt to make a settlement on its banks. He set sail with a few followers, in four small vessels; arrived 100 leagues west of the river; was soon assassinated by his own men; and they, in turn, were murdered, or dispersed, by the Spanish and Indians. Several other expeditions were undertaken, for the same purpose, but none were fortunate enough to land at the wished for place; and it was not till 1722, that a joint removal of these scattered settlements to New Orleans laid the foundation of a flourishing colony. The country was called Louisiana; and, as settlements now began to extend up the Mississippi, a plan was formed to unite them with Canada, by a concatenation of forts. England claimed the country to the South Sea: France was resolved to bound her by the Alleghany mountains; and, as usual, the controversy soon ended in a reciprocal determination of fighting it out.

There was a great disparity of numbers between the French and English colonies. Nova Scotia contained five thousand inhabitants; New Hampshire, thirty thousand; Massachusetts, two hundred and twenty thousand; Rhode Island, thirty-five thousand; Connecticut, one hundred thousand; New York, one hundred thousand; the Jerseys, sixty thousand; Pennsylvania, including Delaware, two hundred and fifty thousand; Maryland, eighty-five thousand; Virginia, eighty-five thousand; the

Carolinas, seventy-five thousand: Georgia, six thousand:—in all, one million fifty-one thousand. Canada contained but forty-five thousand: Louisiana, but seven thousand:—total, fifty-two thousand. To compensate in part for this numerical inferiority, the French had the advantage of being guided by one and the same hand; whereas the English were divided into separate clans, and unaccustomed to act in concert. All the Indians, except the Five Nations, were on the side of France; and, what was of still greater service to her cause, the governors of Canada had all been military men; had employed the inhabitants in erecting fortifications to command Lake Champlain, and the River St. Lawrence; and were now proceeding to complete the chain, by extending the links along the other western lakes, and down the Mississippi.

The circumstance, which served to open the quarrel, was the alleged intrusion of the *Ohio Company*; an association of influential men from England and Virginia, who had obtained a grant of 600,000 acres of land, in order to drive a fur trade with the Indians. The governor of Canada wrote to the governors of New York and Pennsylvania, that, unless these intruders were removed from the territory of his most Christian majesty, he should be under the necessity of seizing them. The threat was disregarded; and the traders were seized. A communication was immediately opened along French Creek and Alleghany River, between the Ohio and Fort Presqu'île; and troops stationed at convenient distances, were secured, by temporary works, against any attack of small arms. The Ohio company made loud complaints: Lieutenant-Governor Dinwiddie laid the subject before the assembly of Virginia; and despatched Major Washington, with a letter to the French commander; in which he was required to quit the dominions of his Britannic majesty. M. Legardeur de St. Pierre transmitted the letter to the governor of Canada; whose orders, he said, he should implicitly follow. Early in the spring of 1755, Major Washington, on the death of his colonel, took the command of a regiment, raised in Virginia, for the protection of the frontiers. He defeated a party of French and Indians, under Dijnoville; and was proceeding to occupy the post, at the fork of the Alleghany and Monongahela Rivers, when he was met, at the Little Meadows, by a superior force; and, after a gallant defence, was compelled to surrender. The French had already erected the strong fort of Du Quesne, on the ground of which he had intended to take possession.

The provincial governors received orders from the secretary of state, to repel force by force; and, if practicable, to form a *Union* among the several colonies. Delegates had already been appointed to meet at Albany, for the purpose of conferring with the Five Nations; and Governor Shirley recommended, that the subject of union should, also, be discussed at the convention. The commissioners from Massachusetts had ample powers to co-operate in the formation of a plan: those from Maryland were instructed to observe what others did; and those from New Hampshire, Rhode Island, Connecticut, Pennsylvania, and New York, had no instructions at all on the subject. As soon, however, as the friendship of the Indians was thought to be secured by a distribution of presents, the delegates appointed a committee, to devise some scheme for the proposed confederation; and the committee recommended the adoption of a government analogous to that of the individual colonies. There was to be a grand council, composed of deputies from the several provinces,—and a president-general, appointed by the crown, with the power of negating the acts of the council. The Connecticut delegates alone dissented from this plan; because, as they said, it put too much power into the hands of the crown. It was rejected in England for the very opposite reason; and, in lieu of it, the minister proposed, that the several governors, with one or two of their counsellors, should meet and adopt such measures as the common safety might demand. But this scheme was defeated by a provision, that they might draw upon the British

treasury for all necessary sums: which parliament would undertake to repay, by imposing a general tax upon the colonies. It was now resolved, therefore, to carry on the war with British troops; and leave the provincial legislatures to supply such reinforcements as each was willing or able to afford.

Early in 1755, General Braddock set sail from England, with a respectable body of troops; and about the same time, Admiral Boscawen was despatched to this country, in order to intercept a French armament, which was then fitting out for Canada. The provincial governors met General Braddock, in Virginia, on the 14th of April; and it was resolved to divide the campaign into three separate expeditions:—the first against Du Quesne, with the British, Virginia, and Maryland forces, under General Braddock;—the second against Fort Frontenac, with the Massachusetts regulars, under Governor Shirley;—the third against Crown Point, with New England and New-York troops, under General William Johnson, one of the New York council. Massachusetts, in the mean time, undertook, singly, to drive the French from Nova Scotia; and, on the 20th of May, three thousand troops were despatched for the purpose, under Lieutenant-Colonel Winslow. They arrived at Annapolis Royal, on the 28th; anchored, soon after, before Fort Lawrence, in Chenecto, with a fleet of forty sail: and, being joined by three hundred British troops, with some artillery, marched immediately against Beau Sejour. A block house, with a few cannon, and a breast-work, with a few troops behind it, opposed the passage of the Musquash; which, according to the French, was the western limit of Nova Scotia. The passage was forced, with the loss of one man; and entrenchments were immediately opened before Beau Sejour. The garrison surrendered on the fifth day: Fort Gaspereau soon followed the example; the appearance of three twenty-gun ships induced the enemy to set fire to his works at St. Johns; and thus, in the single month of June, with the loss of but three men, the English gained possession of Nova Scotia, according to their own definition of the term.

As soon as the convention of governors was dissolved, General Braddock proceeded to the post at Well's Creek, whence the army commenced its march about the middle of June. Their progress was very much retarded by the necessity of cutting a road; and, lest the enemy should have time to collect in great force, the general concluded to set forward with 1200 select men, while Colonel Dunbar should follow slowly in the rear, with the main body and the heavy baggage. Colonel Washington's regiment had been split into separate companies, and he had only joined the army as aid to the general. The roughness of the country prevented the advanced corps from reaching the Monongahela till the 8th of July. It was resolved to attack Du Quesne the very next day; and lieutenant-colonel Gage was sent in front with three hundred British regulars, while the general himself followed at some distance with the main body. He had been strongly cautioned by Colonel Washington to provide against an ambuscade, by sending forward some provincial companies to scour the woods; but he held the provincials and the enemy in equal contempt. The Monongahela was crossed the second time, about seven miles from Du Quesne; and the army was pressing forward in an open wood, through high and thick grass, when the front was suddenly thrown into disorder by a volley from small arms. The main body was formed three deep, and brought to its support: the commander-in-chief of the enemy fell; and a cessation of the fire led General Braddock to suppose that the assailants had fled; but he was soon attacked with redoubled fury. Concealed behind trees, logs, and rocks, the Indians poured upon the troops a deadly and incessant fire; officers and men fell thickly around, and the survivors knew not where to direct their aim to revenge their slaughtered comrades. The whole body was again thrown into confusion; but the general, obstinate and courageous, refused to retreat; and instead of withdraw-

ing them beyond the reach of the enemy's muskets, where their ranks might easily have been formed anew, undertook to rally them on the very ground of attack, and in the midst of a most incessant and deadly fire. He persisted in these efforts until three horses had been shot under him, and every one of his officers on horseback, except Colonel Washington, was either killed or wounded. The general at length fell, and the rout became universal.* The troops fled precipitately until they met the division under Dunbar, then forty miles in the rear. Sixty-four officers out of eighty-five, and about half of the privates were killed or wounded. General Braddock died in Dunbar's camp; and the whole army, which appears to have been panic struck, marched back to Philadelphia. The provincial troops, whom Braddock had so lightly esteemed, displayed during the battle the utmost calmness and courage. Though placed in the rear, they alone, led on by Washington, advanced against the Indians, and covered the retreat; and had they at first been permitted to engage the enemy in their own way, they would easily have defeated them.

The two northern expeditions, though not so disastrous, did not either of them succeed in attaining the object proposed. In that against Crown Point much delay was occasioned by the distracted councils of so many different governments; and it was not till the last of August, that General Johnson, with three thousand seven hundred men, arrived at the fort of lake George, on his way to Ticonderoga. Meanwhile the French squadron had eluded Admiral Boscawen; and, as soon as it arrived at Quebec, Baron Dieskau, the commander, resolved to march against Oswego, with his own twelve hundred regulars, and about six hundred Canadians and Indians. The news of General Johnson's movement determined Dieskau to change his plan, and to lead his forces directly against the American camp. General Johnson called for reinforcements: eight hundred troops, raised as a corps of reserve by Massachusetts, were immediately ordered to his assistance: and the same colony undertook to raise an additional number of two thousand men. Colonel Williams was sent forward with one thousand men to amuse and reconnoitre the enemy. He met them four miles from the camp, offered battle, and was defeated.† Another detachment shared the same fate; and the French were now within one hundred and fifty yards of the camp, when a halt for a short time enabled the Americans to recover their alarm, and to

* Braddock was mortally wounded, and taken on litters, at first, from the field, and then a litter was made for him, on which he was carried forty miles from the battle ground, where he expired on the evening of the fourth day after his defeat. Seven hundred of his men were killed, among whom were William Shirley, of the staff, and Colonel Sir Peter Halket. Among the wounded, were Robert Orme, Roger Morris, Sir John St. Clair, and several others of the staff, and Lieutenant-Colonels Button and Gage. Braddock was a brave and excellent officer. His mistake was in not studying the character of the enemy. Franklin advised him to proceed with the utmost caution; but the proud general thought the adviser was a much better philosopher than soldier.

† Hendrick, a Mohawk chief, was killed in this battle. He was the son of a Mohegan chief, by a Mohawk woman. He married into a Mohawk family, and became distinguished among the six nations. His fame extended to Massachusetts, for the commissioners, in 1754, consulted him on the great question of instructing certain youths of his nation. He was friendly to the English; and in this battle with Dieskau, he commanded three hundred Mohawks. He was grave and sententious in council, and brave in fight. Some of his aphorisms are as wise as those of Solon. When it was proposed to send a detachment to meet the enemy, and the number being mentioned, he replied: "If they are to fight, they are too few; if they are to be killed, they are too many." When it was proposed to send out the detachment in three parties, Hendrick took three sticks, and said, "Put them together, and you cannot break them; take them one by one, and you will break them easily." They followed the advice of the old warrior in this; and had they regarded the precautions he suggested, in scouring the field by a flank guard, Williams would not have fallen into the ambuscade. Hendrick is remembered among the friends of white men, who now and then have been found in the different ages of our history, among Indians.

DEFEAT OF GENERAL BRADDOCK, 1755

100

make good use of their artillery through the fallen trees, behind which they were posted. Dieskau advanced to the charge; but he was so firmly received, that the Indians and militia gave way and fled: he was obliged to order a retreat of the regulars; and, in the ardent pursuit which ensued, he was himself mortally wounded and made prisoner.* A scouting party had, in the mean time, taken the enemy's baggage; and when the retreating army came up, they attacked it so successfully from behind the trees, that the panic-struck soldiers dropped all their accoutrements, and fled in the utmost confusion for their posts on the lakes.† This victory revived the spirits of the colonists, depressed by the recent defeat of General Braddock, but the success was not improved in any proportion to their expectation. General Shirley, now the commander in chief, urged an attempt on Ticonderoga; but a council of war judging it unadvisable, Johnson employed the remainder of the campaign in fortifying his camp. On a meeting of Commissioners from Massachusetts and Connecticut, with the governor and council of New-York, in October, it was unanimously agreed, that the army under General Johnson should be discharged, excepting six hundred men, who should be engaged to garrison Fort Edward and Fort William Henry. The French still retained possession of Ticonderoga, and fortified it.

General Shirley,‡ who was to conduct the expedition against Niagara and Fort Frontenac, experienced such delays, that he did not reach Oswego until the 21st of August. On his arrival, he made all necessary preparations for the expedition to Niagara; but, through the desertion of batteauxmen, the scarcity of wagons on the Mohawk river, and the desertion of sledgemen at the great carrying place, the conveyance of provisions and stores

* John Harmand Dieskau, baron, was a lieutenant-general in the French army. In 1755, he left Montreal with twelve hundred regulars, and six hundred Canadians and Indians. General Johnson, with three thousand seven hundred men, arrived at the fort of Lake George, on his way to Ticonderoga. Baron Dieskau, hearing of this movement of General Johnson, instead of proceeding to Albany, as was his original intention, resolved to attack the American camp. A reinforcement of eight hundred troops was sent to General Johnson's assistance; and Colonel Williams, with one thousand men, was ordered to reconnoitre the enemy. He met the enemy but was defeated, and left among the slain. The loss of the French was also considerable; M. St. Pierre, commander of the Indians, was mortally wounded. On the same day, the 8th of September, Baron Dieskau appeared in view of General Johnson's army, which was encamped on the banks of Lake George, defended on each side by a woody swamp. The Americans having recovered from the alarm which their first disaster had thrown them into, and being stationed behind some fallen trees, their superior situation enabled them to make good use of their artillery. Dieskau, encouraged by his previous success, advanced boldly to the charge; but his Indians, more accustomed to the tomahawk and scalping knife, than to the roar of cannon, fled in dismay. His auxiliary troops being so dispersed, he was obliged to order a retreat of the regulars. In the pursuit which followed, he was himself wounded. A soldier, seeking for plunder, found Dieskau alone, deserted by his troops, leaning on the stump of a tree, unable to move from a wound in his leg. While he was searching for his watch, to deliver to him, the soldier supposing he was seeking for a pistol, poured a charge through his hips. He was conveyed to New York, where he was attended by Dr. Jones. He never entirely recovered from the wound, which gradually impaired his constitution, and he died in consequence of it, at Surere, in France, September 8th, 1767. He was unquestionably a general of military skill.

† General Phineas Lyman was second in command in this battle. He was a brave man, of far superior abilities to Johnson; and when the commander-in-chief was wounded, General Lyman took the command, and fought out the battle most gallantly. Lyman was a man of first rate talents and education, a lawyer, and a statesman. He sustained himself for five hours, on that day, and gave his orders like a veteran soldier; but Johnson never mentioned his name in his account of the battle, from a most despicable feeling of jealousy. Lyman continued for several campaigns to command the Connecticut troops, and won laurels in every situation. The close of his life was dark and sad; but his honour was never tarnished.

‡ Shirley was a good lawyer, and a brave officer. He was a man of literary taste and acquirements. He published a tragedy, and some other dramatic works.

was so much retarded, that nearly four weeks elapsed before he could commence any further operations; and from a continued succession of adverse circumstances, in a council of war called on the 26th of September, it was unanimously resolved to defer the expedition to the succeeding year; to leave Colonel Mercer at Oswego, with a garrison of seven hundred men, and to build two additional forts for the security of the place; while the general should return with the rest of the army to Albany. Thus ended the campaign of 1755: it opened with the brightest prospects; immense preparations had been made, yet not one of the objects of the three principal expeditions had been attained; and by this failure the whole frontier was exposed to the ravages of the Indians, which were accompanied by their usual acts of barbarity.

The colonies, however, far from being discouraged by the misfortunes of the last campaign, determined to renew and increase their exertions. General Shirley, to whom the superintendence of all the military operations had been confided, assembled a council of war at New-York to concert a plan for the ensuing year. The plan adopted by the council embraced expeditions against Du Quesne, Niagara, and Crown Point, and the despatching a body of troops by the way of the rivers Kennebeck and Chaudiere, to create alarm for the safety of Quebec. Major-General Winslow* was appointed to lead the expedition against Crown Point. He was a popular officer, and the colonists felt a deep interest in the expedition; but, for want of an established financial system, (their only taxes were upon lands and polls,) the requisite funds were raised with difficulty, and the recruiting service made very slow progress. Only seven thousand men assembled at the posts on Lake George. General Winslow declared, that, without more forces, he could not undertake the expedition; and it would probably have been abandoned, had he not been reinforced by the timely arrival of some British troops. They came over with General Abercrombie, who had superseded General Shirley, and who soon after gave place to the Earl of Loudon. These changes produced some unpleasant contests for priority of rank. General Winslow asserted frankly, that the provincials would never be commanded by British officers; and the Earl of Loudon seriously propounded the question, whether the colonial troops, with his majesty's arms in their hands, would refuse obedience to his majesty's commanders? He was answered in the affirmative; and when he understood that the New England troops in particular, had enlisted under the condition of being led by their own officers, he agreed to let those troops act separately.

While the English were adjusting these differences, and debating whether it would be expedient to attack Fort Niagara, or Fort Du Quesne, Montcalm, the successor of Dieskau, marched against Oswego with about five thousand French, Canadians, and Indians. His artillery played with such effect upon the fort, that it was soon declared untenable; and to avoid an assault, the garrison, who were sixteen hundred in number, and had stores for five months, surrendered themselves prisoners of war. The fort had been an object of considerable jealousy to the Five Nations; and Montcalm made a wise use of his conquest by demolishing it in their presence. The English and American army was now thrown upon the defensive. Instead of attacking Ticonderoga, General Winslow was ordered to fortify his own camp: Major-General Webb, with fourteen hundred regulars, took post near Wood Creek; and Sir William Johnson, with one thousand militia, was stationed at the German Flats. The colonists were now called upon for reinforcements; and, as parliament had distributed

* Winslow was a grandson of the second governor of Plymouth, of that name. He was engaged as a captain in the expedition to Cuba, in 1740; as a major-general in the expeditions to Kennebeck, Nova Scotia, and Crown Point, in the Spanish wars. The bold stand he took in favour of the militia at that time, has been quoted as a precedent since, and endeared his name to every lover of military honour.

among them one hundred and fifteen thousand pounds for the last year's expenses, they were enabled to answer the call with perhaps more promptitude than was anticipated. The recruits were on their way to the camp, when intelligence of the small-pox at Albany frightened them home again. The other provincials were equally alarmed; and all, except a New York regiment, were dismissed. Thus terminated the second campaign. The expedition up the Kennebeck had been abandoned; that against Niagara was not commenced; and not even a preparation had been made for that against Du Quesne.

At the commencement of the following year a council was held at Boston, composed of Lord Loudon, and the governors of the New England provinces and of Nova Scotia. At this council his lordship proposed that New England should raise four thousand men for the ensuing campaign; and that a proportionate number should be raised by New York and New Jersey. These requisitions were complied with; and in the spring his lordship found himself at the head of a very considerable army. Admiral Holbourn arriving in the beginning of July at Halifax with a powerful squadron, and a reinforcement of five thousand British troops, under George Viscount Howe, Lord Loudon sailed from New York with six thousand regulars, to join those troops at the place of their arrival. Instead of the complex operations undertaken in previous campaigns, his lordship limited his plan to a single object. Leaving the posts on the lakes strongly garrisoned, he resolved to direct his whole disposable force against Louisbourg; Halifax having been determined on as the place of rendezvous for the fleet and army destined for the expedition. Information was, however, soon received, that a French fleet had lately sailed from Brest; that Louisbourg was garrisoned by six thousand regulars, exclusive of provincials; and that it was also defended by seventeen line of battle ships, which were moored in the harbour. There being no hope of success against so formidable a force, the enterprise was deferred to the next year; the general and admiral on the last of August proceeded to New York; and the provincials were dismissed.

The Marquis de Montcalm, availing himself of the absence of the principal part of the British force, advanced with an army of nine thousand men, and laid siege to Fort William Henry. The garrison at this fort consisted of between two and three thousand regulars, and its fortifications were strong* and in very good order; and for the additional security of this important post, General Webb was stationed at Fort Edward with an army of four thousand men. The French commander, however, urged his approaches with such vigour, that within six days after the investment of the fort, Colonel Munro, the commandant, having in vain solicited succour from General Webb, found it necessary to surrender by capitulation. The garrison was to be allowed the honours of war, and to be protected against the Indians until within the reach of Fort Edward; but the next morning, a great number of Indians having been permitted to enter the lines, began to plunder; and meeting with no opposition, they fell upon the sick and wounded whom they immediately massacred. Their appetite for carnage being excited, the defenceless troops were attacked with fiend-like fury. Munro in vain implored Montcalm to provide the stipulated guard, and the massacre proceeded. All was turbulence and horror. On every side savages were butcher-

* This is a great mistake; the fort was built merely as a defence against Indians, and was entirely unfit for a siege, by a power who had the command of ordnance. The fort was not abandoned till the last shot they had was fired. The conduct of the brave and gallant Montcalm, is inexplicable. Could not such a general, with so many regular troops, have restrained the Indians? His reputation was without stain until that hour. Some of the disarmed and wretched troops were compelled to make resistance, and wrenched the arms from their assailants, and defended themselves with desperation. There are blood-stained pages in history we could wish were not there. This is one of them.

ing and scalping their wretched victims. Their hideous yells, the groans of the dying, and the frantic shrieks of others shrinking from the uplifted tomahawk, were heard by the French unmoved. The fury of the savages was permitted to rage without restraint until fifteen hundred were killed, or hurried captives into the wilderness. The day after this awful tragedy, Major Putnam was sent with his rangers to watch the motions of the enemy. When he came to the shore of the lake, their rear was hardly beyond the reach of musket shot. The prospect was horrible in the extreme; the fort demolished; the barracks and buildings yet burning; innumerable fragments of human carcases still broiled in the decaying fires; and dead bodies, mangled with tomahawks and scalping knives, in all the wantonness of Indian barbarity, were every where scattered around. Who can forbear exclaiming with the poet,

"Man is to man the surest, sorest ill!"

Thus ended the third campaign* in America; happily forming the last series of disasters resulting from folly and mismanagement, rather than from want of means and military strength. The successes of the French left the colonies in a gloomy state. By the acquisition of Fort William Henry, they had obtained full possession of the lakes Champlain and George; and by the destruction of Oswego, they had acquired the dominion of those other lakes which connect the St. Lawrence with the waters of Mississippi. The first afforded the easiest admission from the northern colonies into Canada, or from Canada into those colonies; the last united Canada to Louisiana. By the continued possession of Fort Du Quesne, they preserved their ascendancy over the Indians, and held undisturbed control of all the country west of the Alleghany mountains. The British nation was alarmed and indignant, and the king found it necessary to change his councils. At the head of a new ministry, he placed the celebrated William Pitt, afterwards Earl of Chatham, who was raised by his talents from the humble post of ensign in the guards to the control of the destinies of a mighty empire; under his administration public confidence revived, and the na-

tion seemed inspired with new life and vigour.† He was equally popular in both hemispheres; and so promptly did the governors of the northern colonies obey the requisitions of his circular letter of 1757, that by May, in the following year, Massachusetts, had seven thousand, Connecticut five thousand, and New Hampshire three thousand troops, prepared to take the field. The zeal of Massachusetts was particularly ardent. The people of Boston supported taxes which took away two thirds of the income on real estate; one half of the effective men in the province were on some sort of military duty; and the transports for carrying the troops to Halifax were ready to sail in fourteen days from the time of their engagement. The mother country was not less active. While her fleets blockaded or captured the French armaments, she despatched Admiral Boscawen to Halifax with

a formidable squadron of ships, and an army of twelve thousand men. Lord Loudoun was replaced by General Abercrombie, who, early in the spring of 1758, was ready to enter upon the campaign at the head of fifty thousand men, the most powerful army ever seen in America.

Three points of attack were marked out for this campaign; the first, Louisbourg; the second, Ticonderoga and Crown Point; and the third, Fort Du Quesne. On the first expedition Admiral Boscawen sailed from Halifax on the 25th of May, with a fleet of twenty ships of the line and eighteen frigates, and an army of fourteen thousand men, under the command of General Amherst, and arrived before Louisbourg on the 2d of June. The garrison of that place, commanded by the Chevalier de Drucourt, an officer of courage and experience, was composed of two thousand five hundred regulars, aided by six hundred militia. The harbour being secured by five ships of the line, one fifty gun ship, and five frigates, three of which were sunk across the mouth of the basin, it was found necessary to land at some distance from the town. This being effected, and the artillery and stores brought on shore, General Wolfe was detached with two thousand men to seize a post occupied by the enemy at the Lighthouse Point, from which the ships in the harbour, and the fortifications in the town, might be greatly annoyed. On the approach of that gallant officer, the post was abandoned by the enemy, and several strong batteries were erected there by their opponents. Approaches were also made on the opposite side of the town, and the siege was pressed with resolution and vigour, though with great caution. A very heavy cannonade being kept up against the town and the vessels in the harbour, a bomb was at length set on fire and blew up one of the largest ships, and the flames were communicated to two others, which shared the same fate. The English admiral now sent six hundred men in boats into the harbour, to make an attempt on two ships of the line which still remained in the basin; one of which, being aground, was destroyed, and the other was towed off in triumph. This gallant exploit, putting the English in complete possession of the harbour, and several breaches being made practicable in the works, the place was deemed no longer defensible, and the governor offered to capitulate. It was required that the garrison should surrender as prisoners of war. These humiliating terms, though at first rejected, were afterwards acceded to; and Louisbourg, with all its artillery, provisions, and military stores, as also Island Royal, St. John's, and their dependencies, were placed in the hands of the English, who, without farther difficulty, took possession of the island of Cape Breton. The conquerors found two hundred and twenty-one pieces of cannon, and eighteen mortars, with a very large quantity of stores and ammunition. The inhabitants of Cape Breton were sent to France in English ships; but the garrison, sea officers, sailors, and marines, amounting collectively to nearly six thousand men, were carried prisoners to England.

The armies destined to execute the plans against Ticonderoga and Fort Du Quesne were appointed to rendezvous respectively at Albany and Philadelphia. The first was commanded by General Abercrombie, and consisted of upwards of fifteen thousand men, attended by a formidable train of artillery. On the 5th of July, the general embarked his troops on Lake George, on board of one hundred and twenty-five whale boats, and nine hundred batteaux, and commenced operations against Ticonderoga. After debarkation at the landing place in a cove on the west side of the lake, the troops were formed into four columns, the British in the centre, and the provincials on the flanks. In this order they marched toward the advanced guard of the French, which, consisting of the battalion only, posted in a logged camp, destroyed what was in their power, and made a precipitate retreat. While Abercrombie was continuing his march in the woods towards Ticonderoga, the columns were thrown into confusion, and in some degree entangled with each other. At this juncture, Lord

† "William Pitt, Earl of Chatham, one of the most able and successful ministers that England ever possessed, was born November 15, 1708, and was the son of Robert Pitt, Esq. of Bocomock, in Cornwall. His education he received at Eton, and at Trinity College, Oxford. His entrance into public life was as a cornet of horse; and in 1735, through the influence of the Duchess Dowager of Marlborough, he was returned to parliament, as member for Old Sarum. He subsequently sat for Seaford, Aliborough, and Bath. As a senator, he soon rendered himself so obnoxious to Walpole, that the minister, with equal injustice and impolicy, deprived him of his commission. This unconstitutional act only enhanced his popularity, and sharpened his resentment. After having been ten years in opposition, he was, early in 1746, appointed joint vice-treasurer of Ireland; and, in the same year, treasurer and paymaster general of the army, and a privy counsellor. During his treasurership, he invariably refused to benefit by the large balances of money which necessarily remained in his hands. In 1755, he was dismissed; in 1756, he obtained a brief reinstatement in power, as secretary of state, and was again dismissed; but, in 1757, defeat and disgrace having fallen on the country, the unanimous voice of the people compelled the sovereign to place him at the head of the administration. Under his auspices, Britain was, during four years, triumphant in every quarter of the globe. Thwarted in his measures, after the accession of George III., he resigned, in October, 1761, an office which he could no longer hold with honour to himself, or advantage to the nation. A pension was granted to him, and his wife was created a baroness. On the downfall of the Rockingham administration, Pitt was appointed lord privy seal, and was raised to the peerage, with the title of Earl of Chatham. He acquired no glory as one of the new and ill-assorted ministry, and he withdrew from it in November, 1768. Though suffering severely from gout, he continued to speak in parliament upon all important questions. The American war, in particular, he opposed with all his wonted vigour and talent. On the 8th of April, 1773, while rising to speak in the house of lords, he fell into a convulsive fit, and he expired on the 11th of the following May. He was interred, and a monument raised to him, in Westminster Abbey, at the public expense; and a perpetual annuity of 4000*l.* was granted to his heirs. Some short poems, and a volume of letters to his nephew, have appeared in print. The character of Lord Chatham is thus ably summed by Grattan: 'There was in this man something that could create, subvert, or reform; an understanding, a spirit, and an eloquence, to summon mankind to society, or to break the bonds of slavery asunder, and to rule the wilderness of free minds with unbounded authority; something that could establish or overwhelm empire, and strike a blow in the world that should resound through the universe.'"

In America, his name was held in the highest estimation. Every patriot did him honour. Country signs bore his semblance, or something the people thought like his noble features. In the town of Dedham, in Massachusetts, Nathaniel Ames, the father of the great orator, Fisher Ames, a physician, philosopher, and mathematician, erected a granite column to his memory, and surmounted it by a bust of the great friend of liberty. It was thrown down by time, and suffered to lie in neglect for many years; but it has since been renovated, and stands now a monument to departed genius and patriotism. "His eloquence formed an era in our language;" and the fire he breathed into the soul of freedom, has not, and we trust never will, be extinguished. Genius, united to letters and patriotism, can never die. We forgive his last act; it was one of feeling and of national pride. Lord Chatham aided the projectors of canals with his whole soul, while politicians thought he had better have been doing almost any thing else; but his agency has been proved by the wonderful advantages which have resulted to the nation from canals. Grattan should have added, that he foresaw the resources of the nation, and commenced their development; if not so rhetorical, it would have been literally true; and even the beauty of prophecy is its fulfilment.

* While the army was in winter quarters, a circumstance occurred, which exhibits the watchful jealousy the colonists ever exercised over their liberties. "The general court had provided barracks on Castle Island, for a regiment of Highlanders, which had been expected at Boston. Some recruiting officers soon afterwards arrived at Nova Scotia; and, protesting that their regiments would never be filled up if the men must be lodged in these barracks, they required the justices of the peace to furnish quarters, according to the act of parliament. The justices denied that the act of parliament extended to this country. Lord Loudoun wrote the court a letter, and asserted roundly that it did; that, moreover, he had 'used gentleness and patience' long enough; and that unless the requisitions were complied with in forty-eight hours from the receipt of this letter, he should be 'under the necessity' of ordering 'into Boston the three battalions from New York, Long Island, and Connecticut; and if more were wanting, he had two in the Jerseys at hand, besides those in Pennsylvania.' The general court now passed an act very similar to that of parliament, on the subject of recruits; but it did not fully answer Lord Loudoun's expectations, nor did he fail to let them know it in a second epistle. The answer of the general court was merely a reiteration of what we have so often heard from the same body. They asserted their rights as Englishmen; said they had conformed to the act of parliament as nearly as the case would admit; and declared that it was their misfortune, if a strict adherence to their duty should give offence to Lord Loudoun. He, in turn, applauded the zeal of the province in the service of his majesty, affected to rely on its compliance with his wishes, and countermanded his orders for the march of the troops. The general court sent his excellency a conciliatory message, in which they asserted that they were entirely dependent on parliament; that its acts were the rule of all their judicial proceedings; that its authority had never been questioned; and that if they had not made this avowal 'in times past, it was because there had been no occasion for it.' Judge Marshall seems to think that this language was sincere, but Mr. Minot attributes it to the desire of the court to keep friends with parliament till they were reimbursed for the expenses which they had incurred during the war. The truth is probably between the two opinions."—Sandford's Hist. of the United States, p. 145, 146.

Howe, at the head of the right centre column, fell in with a part of the advanced guard of the enemy which had been lost in the wood in retreating from Lake George, and immediately attacked and dispersed it, killing a considerable number, and taking one hundred and forty-eight prisoners. This success was, however, dearly purchased, by the loss of the gallant nobleman who fell in leading the attack.* The English army, without farther opposition took possession of a post within two miles of Ticonderoga. Abercrombie, having learned from the prisoners the strength of the enemy at that fortress, and from an engineer the condition of their works, resolved on an immediate storm, and made instant disposition for an assault. The troops having received orders to march up briskly, rush upon the enemy's fire, and reserve their own till they had passed a breastwork, marched to the assault with great intrepidity. Unlooked for impediments, however, occurred. In front of the breastwork, to a considerable distance, trees had been felled with their branches outward, many of which were sharpened to a point, by means of which the assailants were not only retarded in their advance, but, becoming entangled among the boughs, were exposed to a very galling fire. Finding it impracticable to pass the breastwork, which was eight or nine feet high, and much stronger than had been represented, General Abercrombie, after a contest of near four hours, ordered a retreat, and the next day resumed his former camp on the south side of Lake George. In this brave but ill-judged assault nearly two thousand of the assailants were killed and wounded, while the loss of the enemy, who were covered during the whole action, was inconsiderable. General Abercrombie immediately re-crossed Lake George, and entirely abandoned the project of capturing Ticonderoga.†

The campaign was not destined, however, to close with such ill success. Colonel Bradstreet proposed an expedition against Frontenac; a fort which, by being placed on the north side of the St. Lawrence, just where it issues from Lake Ontario,

was the key to the communication between Canada and Louisiana. It served also to keep the Indians in subjection, and was the general repository of stores for the enemy's western and southern posts. Late in the evening of the 25th of August, Colonel Bradstreet landed within a mile of the place, with three thousand men, eight pieces of cannon, and three mortars. The French had not anticipated an attack at this point, and the garrison consisted of only one hundred and ten men, with a few Indian auxiliaries. It was impossible to hold out long. Colonel Bradstreet posted his mortars so near the fort, that every shell took effect; and the commander was very soon obliged to surrender at discretion. The booty consisted of sixty pieces of cannon, great numbers of small arms, provisions, military stores, goods to a large amount, and nine armed vessels of from eight to eighteen guns. Colonel Bradstreet destroyed the fort and vessels, re-crossed the Ontario, and returned to the army.

Had it not been for this fortunate enterprise, the unaccountable delay in preparing the expedition against Du Quesne would probably have left that fort a third time in possession of the enemy. It was not until June that the commander, General Forbes, set out from Philadelphia; it was September before Colonel Washington, with the Virginia regulars, was ordered to join the main body at Ray's Town; and owing to the difficulties of cutting a new road, it was as late as November when the army appeared before Du Quesne. The garrison, deserted by the Indians, and without adequate means of defence, had escaped down the Ohio the evening before the arrival of the British, who had only to take possession, therefore, in the king's name. The fort was supplied with a new garrison, and the name changed to Pittsburgh. The Indians, as usual, joined the strongest side. A peace was concluded with all the tribes between the Ohio and the lakes; and the frontier inhabitants of Pennsylvania, Maryland, and Virginia, were once more relieved from the terrors of fire and scalping knives.

The campaign of 1758 was highly honorable to the British arms, and the results of it very important. Of the three expeditions, two had completely succeeded, and the leader of the third had made an important conquest. To the commanding talents of Pitt, and the confidence which they inspired, this change of fortune must be chiefly attributed; and in no respect were these talents more strikingly displayed than in the choice of men to execute his plans. The advantages of this campaign had, however, been purchased by an expensive effort and corresponding exhaustion of provincial strength; and when a circular letter from Mr. Pitt to the several governors induced the colonies to resolve upon making the most vigorous preparations for the next, they soon discovered that their resources were by no means commensurate with their zeal.

Notwithstanding these difficulties, it was resolved to signalize the year 1759 by the complete conquest of Canada. The plan of the campaign was, that three powerful armies should enter the French possessions by three different routes, and attack all their strong-holds at nearly the same time. At the head of one division of the army, Brigadier-General Wolfe, a young officer who had signalized himself at the siege of Louisbourg, was to ascend the St. Lawrence and lay siege to Quebec, escorted by a strong fleet to co-operate with his troops. The central and main army, composed of British and provincials, was to be conducted against Ticonderoga and Crown Point by General Amherst, the new commander in chief, who, after making himself master of these places, was to proceed over Lake Champlain and by the way of the Richelieu River to the St. Lawrence, and descending that river, form a junction with General Wolfe before the walls of Quebec. The third army, to be composed principally of provincials, reinforced by a strong body of friendly Indians, was to be commanded by General Prideaux, who was to lead this division first against Niagara, and after the reduction of that place, to embark on Lake Ontario, and proceed down the St. Lawrence against Montreal. It has been observed by a recent author, "Had the elements been laid,

and the enemy spell-bound, the whole of this brilliant plan could not have helped succeeding." This sentence, however, betrays a very limited view of a plan that was well worthy of the mind of Pitt. In this arrangement immediate advantage was not sacrificed; while the more remote results exhibited a prospect highly calculated to excite the ambition of the leaders, and to arouse all the energies of the troops. It is in thus affording motives which tend to bring physical force into most effective and persevering action, that intellectual superiority becomes manifest, confounding the calculations of ordinary minds.

Early in the winter, General Amherst commenced preparations for his part of the enterprise; but it was not till the last of May that his troops were assembled at Albany; and it was as late as the 22d of July, when he appeared before Ticonderoga. As the naval superiority of Great Britain had prevented France from sending out reinforcements, none of the posts in this quarter were able to withstand so great a force as that of General Amherst. Ticonderoga was immediately abandoned; the example was followed at Crown Point; and the only way in which the enemy seemed to think of preserving their province was by retarding the English army with shows of resistance till the season of operation should be past, or, till by the gradual concentration of their forces, they should become numerous enough to make an effectual stand. From Crown Point they retreated to Ile-aux-Noix, where General Amherst understood there was a body of between three and four thousand men, and a fleet of several armed vessels. The English made great exertions to secure a naval superiority; and had it not been for a succession of adverse storms upon the lake, they would most probably have accomplished the original design of forming a junction at Quebec, instead of being obliged to go into winter quarters at Crown Point. In prosecution of the enterprise against Niagara, General Prideaux had embarked with an army on Lake Ontario; and on the 6th of July landed without opposition within about three miles from the fort, which he invested in form. While directing the operations of the siege, he was killed by the bursting of a cohorn, and the command devolved on Sir William Johnson. That General, prosecuting with judgment and vigour the plan of his predecessor, pushed the attack of Niagara with an intrepidity that soon brought the besiegers within a hundred yards of the covered way. Meanwhile, the French, alarmed at the danger of losing a post which was a key to their interior empire in America, had collected a large body of regular troops from the neighbouring garrisons of Detroit, Venango, and Presqu'Isle, with which, and a party of Indians, they resolved, if possible to raise the siege. Apprised of their intentions to hazard a battle, General Johnson ordered his light infantry, supported by some grenadiers and regular foot, to take post between the cataract of Niagara and the fortress; placed the auxiliary Indians on his flanks; and, together with this preparation for an engagement, took effectual measures for securing his lines, and bridling the garrison. About nine in the morning of the 24th of July, the enemy appeared, and the horrible sound of the war hoop from the hostile Indians, was the signal for battle. The French charged with great impetuosity, but were received with firmness; and in less than an hour were completely routed. This battle decided the fate of Niagara. Sir William Johnson the next morning opened negotiations with the French commandant; and in a few hours a capitulation was signed. The garrison, consisting of six hundred and seven men, were to march out with the honors of war, to be embarked on the lake, and carried to New-York; and the women and children were to be carried to Montreal. The reduction of Niagara effectually cut off the communication between Canada and Louisiana.

The expedition against the capital of Canada was the most daring and important. Strong by nature, and still stronger by art, Quebec had obtained the appellation of the Gibraltar of America; and every attempt against it had failed. It was now commanded by Montcalm, an officer of distinguished

* George Howe, lord-viscount, was commander of five thousand British troops in America, and was the most popular of all the leaders of the British Armies, in the conflicts with France. When Abercrombie made his attack on Ticonderoga, he led the van-guard, and fell at the first fire. He was admired by all the provincials. Old Stark, the hero of Bennington, who knew him well, feared that he should not have been a true whig in the revolution, if Lord Howe had been alive. His death was mourned as a public calamity, and the Americans seemed to lose their spirit in his fall. The good people of Massachusetts caught the infection of grief from the soldiers, and erected a monument, by permission for their admired General, in Westminster Abbey, at their own expense, of two hundred and fifty pounds sterling. It is still standing in Westminster Abbey.

† Major Rogers, with his rangers, was in this battle, and asked permission to scour the woods before the regular troops were led on; but this was not granted. Major Robert Rogers was a native of Londonderry, or Dumbarton, in the state of New Hampshire. He was early known as a brave soldier, and was authorized by the British Government to raise five companies of rangers, as they were called. They were kept on the frontiers for winter as well as summer service, to watch the hostile Indians, who often, in the most inclement season, made attacks on the defenceless inhabitants of the frontiers. This body of troops was taken from the boldest and hardiest of the yeomanry of the land. They were doubly armed, and carried with them snow-shoes and skates for service. They generally made their head-quarters at the southern extremity of Lake George. Their snow-shoes put them on a equality with their foes, and with their skates they had greatly the advantage of the Indians. Stark, Putnam, and several others, who were distinguished afterwards in the revolutionary war, were trained in this school. Some of the well authenticated exploits of this hardy band, seem like romance to us in the present day. All along the borders of Lake George, spots are shown where the rangers fought desperate battles, in the winter season, sometimes with more than twice their numbers. This corps fought from seventeen hundred and fifty-five to the fall of Quebec, in seventeen hundred and fifty-nine. They were put foremost in battle by Abercrombie and Amherst, and some of them were sent to assist Wolfe. Rogers states in his journal of these campaigns, that their packs were generally of twice the weight of those commonly carried by soldiers. Many of this band perished in their frontier campaigns. For some particulars in the life of this most singular man, see Allen's Biography.

reputation; and its capture must have appeared chimerical to any one but Pitt. He judged rightly, however, that the boldest and most dangerous enterprises are often the most successful, and especially when committed to ardent minds, glowing with enthusiasm, and emulous of glory. Such a mind he had discovered in General Wolfe, whose conduct at Louisbourg had attracted his attention. He appointed him to conduct the expedition, and gave him for assistants Brigadier Generals Moncton, Townshend, and Murray; all, like himself, young and ardent. Early in the season he sailed from Halifax with eight thousand troops, and near the last of June, landed the whole army on the island of Orleans, a few miles below Quebec. From this position he could take a near and distinct view of the obstacles to be overcome. These were so great, that even the bold and sanguine Wolfe perceived more to fear than to hope. In a letter to Mr. Pitt, written before commencing operations, he declared that he saw but little prospect of reducing the place.

Quebec stands on the north side of the St. Lawrence, and consists of an upper and lower town. The lower town lies between the river and a bold and lofty eminence, which runs parallel to it far to the westward. At the top of this eminence is a plain, on which the upper town is situated. Below, or east of the city, is the river St. Charles, whose channel is rough, and whose banks are steep and broken. At a short distance farther down is the Montmorency; and between these two rivers, and reaching from one to the other, was encamped the French army, strongly entrenched, and at least equal in number to that of the English. General Wolfe took possession of Point Levi, on the southern bank of the St. Lawrence, and there erected batteries against the town. The cannonade which was kept up, though it destroyed many houses, made but little impression on the works, which were too strong and too remote to be materially affected; their elevation, at the same time, placing them beyond the reach of the fleet. Convinced of the impossibility of reducing the place, unless he could erect batteries on the north side of the St. Lawrence, Wolfe soon decided on more daring measures. The northern shore of the St. Lawrence, to a considerable distance above Quebec is so bold and rocky as to render a landing in the face of an enemy impracticable. If an attempt were made below the town, the river Montmorency, passed, and the French driven from their entrenchments, the St. Charles would present a new, and perhaps an insuperable barrier. With every obstacle fully in view, Wolfe, heroically observing that "a victorious army finds no difficulties," resolved to pass the Montmorency and bring Montcalm to an engagement. In pursuance of this resolution, thirteen companies of English grenadiers, and part of the second battalion of royal Americans, were landed at the mouth of that river, while two divisions, under Generals Townshend and Murray, prepared to cross it higher up. Wolfe's plan was to attack first a redoubt, close to the water's edge, apparently beyond reach of the fire from the enemy's entrenchments, in the belief that the French, by attempting to support that fortification, would put it in his power to bring on a general engagement; or, if they should submit to the loss of the redoubt, that he could afterwards examine their situation with coolness, and advantageously regulate his future operations. On the approach of the British troops, the redoubt was evacuated, and the general, observing some confusion in the French camp, changed his original plan, and determined not to delay an attack. Orders were immediately despatched to the Generals Townshend and Murray to keep their divisions in readiness for fording the river; and the grenadiers and royal Americans were directed to form on the beach until they could be properly sustained. These troops, however, not waiting for support, rushed impetuously towards the enemy's entrenchments; but they were received with so strong and steady a fire from the French musketry, that they were instantly thrown into disorder, and obliged to seek shelter in the redoubt which the enemy had abandoned. Detained here awhile by a dreadful thunderstorm, they were still within reach of a severe

fire from the French; and many gallant officers, exposing their persons in attempting to form the troops, were killed, the whole loss amounting to nearly five hundred men. The plan of attack being effectually disconcerted, the English General gave orders for repassing the river, and returning to the island of Orleans.

Compelled to abandon the attack on that side, Wolfe deemed that advantage might result from attempting to destroy the French fleet, and by distracting the attention of Montcalm with continual descents upon the northern shore. General Murray, with twelve hundred men in transports, made two vigorous but abortive attempts to land; and though more successful in the third, he did nothing more than burn a magazine of warlike stores. The enemy's fleet was effectually secured against attacks, either by land or by water, and the commander in chief was again obliged to submit to the mortification of recalling his troops. At this juncture, intelligence arrived that Niagara was taken, that Ticonderoga and Crown Point had been abandoned, but that General Amherst, instead of pressing forward to their assistance, was preparing to attack the Ile-aux-Noix. While Wolfe rejoiced at the triumph of his brethren in arms, he could not avoid contrasting their success with his own disastrous efforts. His mind, alike lofty and susceptible, was deeply impressed by the disasters at Montmorency; and his extreme anxiety, preying upon his delicate frame, sensibly affected his health. He was observed frequently to sigh; and, as if life was only valuable while it added to his glory, he declared to his intimate friends, that he would not survive the disgrace which he imagined would attend the failure of his enterprise. Nothing, however, could shake the resolution of this valiant commander, or induce him to abandon the attempt. In a council of his principal officers, called on this critical occasion, it was resolved, that all the future operations should be above the town. The camp at the island of Orleans was accordingly abandoned; and the whole army having embarked on board the fleet, a part of it was landed at Point Levi, and a part higher up the river. Montcalm, apprehending from this movement that the invaders might make a distant descent, and come on the back of the city of Quebec, detached M. de Bougainville with fifteen hundred men, to watch their motions, and prevent their landing.

Baffled and harrassed in all his previous assaults, General Wolfe seems to have determined to finish the enterprise by a single bold and desperate effort. The admiral sailed several leagues up the river, making occasional demonstrations of a design to land troops; and, during the night, a strong detachment in flat-bottomed boats fell silently down with the stream, to a point about a mile above the city. The beach was shelving, the bank high and precipitous, and the only path by which it could be scaled, was now defended by a captain's guard and a battery of four guns. Colonel Howe, with the van, soon clambered up the rocks, drove away the guard, and seized upon the battery. The army landed about an hour before day, and by daybreak was marshalled on the heights of Abraham.

Montcalm could not at first believe the intelligence; but, as soon as he was assured of its truth, he made all prudent haste to decide a battle which it was no longer possible to avoid. Leaving his camp at Montmorency, he crossed the river St. Charles with the intention of attacking the English army. No sooner did Wolfe observe this movement, than he began to form his order of battle. His troops consisted of six battalions and the Louisbourg grenadiers. The right wing was commanded by General Moncton, and the left by General Murray. The right flank was covered, by the Louisbourg grenadiers, and the rear and left by Howe's light infantry. The form in which the French advanced indicating an intention to outflank the left of the English army, General Townshend was sent with the battalion of Amherst, and the two battalions of royal Americans, to that part of the line, and they were formed *en potence*, so as to present a double front to the enemy. The body of reserve consisted

of one regiment, drawn up in eight divisions, with large intervals. The dispositions made by the French General were not less masterly. The right and left wings were composed about equally of European and colonial troops. The centre consisted of a column, formed of two battalions of regulars. Fifteen hundred Indians and Canadians, excellent marksmen, advancing in front, screened by surrounding thickets began the battle. Their irregular fire proved fatal to many British officers, but it was soon silenced by the steady fire of the English. About nine in the morning the main body of the French advanced briskly to the charge, and the action soon became general. Montcalm having taken post on the left of the French army, and Wolfe on the right of the English, the two Generals met each other where the battle was most severe. The English troops reserved their fire until the French had advanced within forty yards of their line, and then, by a general discharge made terrible havoc among their ranks. The fire of the English was vigorously maintained, and the enemy every where yielded to it. General Wolfe, who, exposed in the front of his battalions, had been wounded in the wrist, betraying no symptom of pain, wrapped a handkerchief round his arm, and continued to encourage his men. Soon after, he received a shot in the groin; but, concealing the wound, he was pressing on at the head of his grenadiers with fixed bayonets, when a third ball pierced his breast.* The army, not disconcerted by his fall, continued the action under Moncton, on whom the command now devolved, but who, receiving a ball through his body, soon yielded the command to General Townshend. Montcalm, fighting in front of his battalions, received a mortal wound about the same time; and General Seneceberg, the second in command, also fell. The British Grenadiers, pressed on with their bayonets. General Murray, briskly advancing with the troops under his direction, broke the centre of the French army. The Highlanders, drawing their broadswords, completed the confusion of the enemy; and after having lost their first and second in command, the right and centre of the French were entirely driven from the field; and the left was following the example, when Bougainville appeared in the rear, with the fifteen hundred men who had been sent to oppose the landing of the English. Two battalions and two pieces of artillery were detached to meet him; but he retired, and the British troops were left the undisputed masters of the field. The loss of the French was much greater than that of the English. The corps of French regulars was almost entirely annihilated. The killed and wounded of the English army did not amount to six hundred men. Although Quebec was still strongly defended by its fortifications, and might possibly be relieved by Bougainville, or from Montreal, yet General Townshend had scarcely finished a road in the bank to get up his heavy artillery for a siege, when the inhabitants capitulated, on condition that during the war they might still enjoy their own civil

* On receiving his mortal wound, Wolfe was conveyed into the rear, where, careless about himself, he discovered, in the agonies of death, the most anxious solicitude concerning the fate of the day. From extreme faintness, he had reclined his head on the arm of an officer, but was soon aroused by the cry of "They fly, they fly!" "Who fly?" exclaimed the dying hero. "The French," answered his attendant. "Then," said he, "I die contented," and immediately expired. A death more full of military glory has seldom been recorded by the pen of the historian, or celebrated by the pencil of the painter. General Wolfe was only thirty-three years of age. He possessed those military talents, which, with the advantage of years and opportunity of action, "to moderate his ardour, expand his faculties, and give to his intuitive perception and scientific knowledge the correctness of judgment perfected by experience," would have "placed him on a level with the most celebrated generals of any age or nation."—Montcalm was every way worthy to be a competitor of Wolfe. He had the truest military genius of any officer whom the French had ever employed in America. After he had received his mortal wound, he was carried into the city; and when informed that it was mortal, his reply was, "I am glad of it." On being told that he could survive but a few hours, "So much the better," he replied, "I shall not then live to see the surrender of Quebec."

and religious rights. A garrison of five thousand men was left under General Murray, and the fleet sailed out of the St. Lawrence.

The fall of Quebec did not immediately produce the submission of Canada. The main body of the French army, which, after the battle on the plains of Abraham, retired to Montreal, and which still consisted of ten battalions of regulars, had been reinforced by six thousand Canadian militia, and a body of Indians. With these forces M. de Levi, who had succeeded the Marquis de Montcalm in the chief command, resolved to attempt the recovery of Quebec. He had hoped to carry the place by a coup de main during the winter; but, on reconnoitering, he found the outposts so well secured, and the governor so vigilant and active, that he postponed the enterprise until spring. In the month of April, when the upper part of the St. Lawrence was so open as to admit a transportation by water, his artillery, military stores, and heavy baggage, were embarked at Montreal, and fell down the river under convoy of six frigates; and M. de Levi, after a march of ten days, arrived with his army at Point au Tremble, within a few miles of Quebec. General Murray, to whom the care of maintaining the English conquest had been entrusted, had taken every precaution to preserve it; but his troops had suffered so much by the extreme cold of the winter, and by the want of vegetables and fresh provisions, that instead of five thousand, the original number of his garrison there were not at this time above three thousand men fit for service. With this small but valiant body he resolved to meet the enemy in the field; and on the 28th of April, marched out to the heights of Abraham, where, near Sillery, he attacked the French under M. de Levi, with great impetuosity. He was received with firmness; and after a fierce encounter, finding himself outflanked, and in danger of being surrounded by superior numbers, he called off his troops, and retired into the city. In this action the loss of the English was near a thousand men, and that of the French still greater. The French general lost no time in improving his victory. On the very evening of the battle he opened trenches before the town, but it was the 11th of May before he could mount his batteries, and bring his guns to bear on the fortifications. By that time General Murray, who had been indefatigable in his exertions, had completed some outworks, and planted so numerous an artillery on his ramparts, that his fire was very superior to that of the besiegers, and in a manner silenced their batteries. A British fleet most opportunely arriving a few days after, M. de Levi immediately raised the siege, and precipitately retired to Montreal. Here the Marquis de Vaudreuil, governor-general of Canada, had fixed his head quarters, and determined to make his last stand. For this purpose he called in all his detachments, and collected around him the whole force of the colony.

The English, on the other hand, were resolved upon the utter annihilation of the French power in Canada; and General Amherst prepared to overwhelm it, with an irresistible superiority of numbers. Almost on the same day, the armies from Quebec, from Lake Ontario, and from Lake Champlain, were concentrated before Montreal: a capitulation was immediately signed; Detroit, Michilimackinac, and indeed, all New France, surrendered to the English. The French troops were to be carried home; and the Canadians to retain their civil and religious privileges.

The history of modern Europe, with whose destiny that of the colonies was closely interwoven, may be designated as the annals of an interminable war. Her sovereigns, ever having the oily words of peace on their lips, have seldom had recourse to the olive branch but as the signal of a truce, the duration of which should be coeval with the reinvigoration of military strength. It was thus with France on the present occasion. Equally unsuccessful on both continents, and exhausted by her strenuous and continued efforts, she was at length induced to make overtures of peace; and every thing seemed to be in a fair train for adjustment, when the treaty was suddenly broken off by an attempt of the court of Ver-

sailles to mingle the politics of Spain and of Germany with the disputes between France and Great Britain. A secret family compact between the Bourbons to support each other through evil and good, in peace and in war, had rendered Spain desirous of war, and induced France once more to try her fortune. As the interests of the two nations were now identified, it only remained for England to make a formal declaration of hostility against Spain. The colonies of New England being chiefly interested in the reduction of the West India Islands, furnished a considerable body of troops to carry on the war. A large fleet was dispatched from England; the land forces amounted to sixteen thousand; and before the end of the second year, Great Britain had taken the important city of Havana, the key of the Mexican Gulf, together with the French provinces of Martinique, Grenada, St. Lucia, St. Vincent, and the Caribee Islands.

The progress of the British conquests, which threatened all the remaining colonial possessions of their opponents, was arrested by preliminary articles of peace, which, towards the close of 1762, were interchanged at Fontainebleau between the ministers of Great Britain, France, and Spain. On the 10th of February, in the following year, a definitive treaty of peace was signed at Paris, and soon after ratified.*

* "The acquisitions of Great Britain, both from France and Spain, on the continent of North America, established by this treaty, whether they be considered in relation to the political or commercial interests of the parent country, or in relation to the entire interests of the American colonies, merits particular attention. Every article, therefore, which has respect to America, is subjoined in the words of the treaty.

By the second article, France renounces and guarantees to Great Britain all Nova Scotia or Acadia, and likewise Canada, the Isle of Cape Breton, and all other Islands in the gulf and river of St. Lawrence.

By the third article, it is stipulated that the French shall have the liberty of fishing and drying on a part of the island of Newfoundland, as specified in the thirteenth article of the treaty of Utrecht; and the French may also fish in the gulf of St. Lawrence, so as they do not exercise the same but at the distance of three leagues from all the coasts belonging to Great Britain, as well those of the continent, as those of the islands in the said gulf. As to what relates to the fishery out of the said gulf, the French shall exercise the same, but at the distance of fifteen leagues from the coast of the Isle of Cape Breton.

By the fourth article, Great Britain cedes to France, to serve as a shelter for the French fishermen, the islands of St. Peter and Miquelon; and his most Christian Majesty absolutely engages not to fortify the said islands, nor to erect any other buildings thereon, but merely for the convenience of the fishery; and to keep only a guard of fifty men for the police.

By the sixth article it is stipulated, that the confines between the dominions of Great Britain and France, on the continent of North America, shall be irrevocably fixed, by a line drawn along the river Mississippi, from its source, as far as the river Ilerverle, and from thence by a line drawn along the middle of this river, and of the lakes Maurepas and Pontchartrain, to the sea; and to this purpose the most Christian King cedes in full right, and guarantees to his Britanic Majesty, the river and port of Mobile, and every thing that he possesses on the left side of the river Mississippi, except the town of New Orleans, and the island on which it is situated, which shall remain to France, provided that the navigation of the river shall be equally free to the subjects of Great Britain and France, in its whole breadth and length, from its source to the sea, and that part expressly which is between the said island of New Orleans and the right bank of that river, as well as the passage both in and out of its mouth; and the vessels belonging to the subjects of either nation shall not be stopped, visited, or subjected to the payment of any duty whatsoever. The stipulation in favour of the inhabitants of Canada, inserted in the second article, shall also take place with regard to the inhabitants of the countries ceded by this article; that is, that the French in Canada may freely profess the Roman Catholic religion, as far as the laws of Great Britain permit; that they may enjoy their civil rights, retire when they please, and may dispose of their estates to British subjects.

By the seventh article, it is stipulated that Britain shall restore to France the islands of Guadalupe, Marigaboute, Desirade, and Martinico, in the West Indies, and of Belleisle, on the coast of France, with their fortresses; provided that the term of eighteen months be granted to his Britanic Majesty's subjects settled there, and in other places hereby restored to France, to settle their estates, recover their debts, and to transport themselves and effects, without being restrained on account of their religion, or any pretence, except for debts, or criminal prosecutions.

By the eighth article, France cedes to Great Britain the islands of Grenada and the Grenadines, with the same stipulations in favor of the inhabitants as are inserted in

France ceded to Great Britain, all the conquests which the latter had made in North America; and it was stipulated between the two crowns, that the boundary line of their respective dominions in the new hemisphere should run along the middle of the Mississippi, from its source as far as the Ilerverle, and along the middle of that river, and of Lakes Maurepas and Pontchartrain.

Thus terminated a war, which originated in an attempt on the part of the French to surround the English colonists, and chain them to a narrow strip of country along the coast of the Atlantic; and ended with their giving up the whole of what was then their only valuable territory in North America. The immediate advantage the colonies derived from the successful issue of the contest was great and apparent. Although, for a short period after the conquest of Canada had been effected, they were subject to attacks from the Indian tribes attached to the French, and also from the Cherokees on their southwestern borders, they were soon enabled to visit their cruelties with severe retribution, and to procure a lasting repose, as the Indians had no forts to which to repair for protection or aid. But the indirect results, though almost unperceivable at first, were far more important, and prepared the way for those momentous efforts which issued in the loss to Great Britain of the fairest portion of her colonies, and the establishment of her vassal as a rival. The colonists became inured to the habits and hardships of a military life, and skilled in the arts of European warfare; while the desire of revenge for the loss of Canada, which France did not fail to harbour, was preparing for them a most efficient friend, and making way for the anomalous exhibition of a despotic sovereign, exerting all his power in the cause of liberty and independence.

CHAPTER IV.

History of the Colonies from the peace of Paris, 1763, to 1774.

Immediately after the peace of Paris, 1763, a new scene was opened. The national debt of Great Britain then amounted to one hundred and forty-

the second article for those of Canada; and the partition of the islands called neutral, is agreed and fixed, so that those of St. Vincent, Dominica, and Tobago, shall remain in full right to England, and that of St. Lucia shall be delivered to France in full right, the two crowns reciprocally guaranteeing to each other the partition so stipulated.

By the sixteenth article, it is stipulated, that his Britanic Majesty shall cause all the fortifications to be demolished, which his subjects shall have erected in the bay of Honduras and other places of the territory of Spain, in that part of the world. And his Catholic Majesty shall not, for the future, permit his Britanic Majesty, or their workmen, to be disturbed or molested under any pretence whatsoever, in their occupation of cutting, loading, and carrying away log-wood; and for this purpose they may build, without hindrance, and occupy, without interruption, the houses and magazines necessary for them, for their families, and for their effects; and his said Catholic Majesty assures to them, by this article, the entire enjoyment of what is above stipulated.

By the seventeenth article, his Catholic Majesty desists from all pretensions which he may have formed to the right of fishing about the island of Newfoundland.

By the eighteenth article, it is stipulated, that the king of Great Britain shall restore to Spain all that he has conquered in the Island of Cuba, with the fortress of Havana; and that fortress, as well as all the other fortresses of the said island, shall be restored in the same condition they were in when they were conquered by his Britanic Majesty's arms.

By the twentieth article, his Catholic Majesty cedes and guarantees, in full right, to his Britanic Majesty, Florida, with the Fort of St. Augustine, and the bay of Pensacola, as well as all that Spain possesses on the continent of North America, to the east, or to the southeast of the river Mississippi; and in general, every thing that depends on the said countries and lands, with the sovereignty, power, and possession, and all rights acquired by treaties, or otherwise, which the Catholic king and the crown of Spain have had till now over the said countries." Anderson, vol. iii. p. 339—433, where the preliminary articles of the treaty are inserted entire; and vol. iv. p. 1, 2, where the most material alterations or explanations of those articles, as settled by the definitive treaty, are inserted.—American Annals, vol. ii. p. 113—115.

eight millions, for which an interest of nearly five millions was annually paid. While the British minister was digesting plans, for diminishing this amazing load of debt, he conceived the idea of raising a substantial revenue in the British colonies, from taxes laid by the parliament of the parent state. On the one hand it was urged, that the late war originated on account of the colonies; and that it was reasonable, more especially as it had terminated in a manner so favourable to their interest, they should contribute to defraying the expenses it had occasioned. Thus far both parties were agreed: but Great Britain contended, that her parliament, as the supreme power, was constitutionally vested with an authority to lay them on every part of the empire. This doctrine, plausible in itself, and conformable to the letter of the British constitution, when the whole dominions were represented in one assembly, was reprobated in the colonies, as contrary to the spirit of the same government, when the empire became so far extended, as to have many distinct representative assemblies. The colonists believed, that the chief excellence of the British constitution consisted in the right of the subjects to grant, or withhold taxes; and in their having a share in enacting the laws, by which they were to be bound.

They conceived, that the superiority of the British constitution, to other forms of government, was, not that their supreme council was called parliament but that the people had a share in it, by appointing members, who constituted one of its constituent branches, and without whose concurrence, no law, binding on them, could be enacted. In the mother country, it was asserted to be essential to the unity of the empire, that the British parliament should have a right of taxation, over every part of the royal dominion. In the colonies, it was believed, that taxation and representation were inseparable; and that they could neither be free nor happy, if their property could be taken from them, without their consent. The common people in America reasoned on this subject, in a summary way: "I a British parliament," said they, "in which we are unrepresented, and over which we have no control, can take from us any part of our property, by direct taxation, they may take as much as they please; and we have no security for any thing that remains, but a forbearance on their part, less likely to be exercised in our favour, as they lighten themselves of the burdens of government, in the same proportion that they impose them on us." They well knew, that communities of mankind, as well as individuals, have a strong propensity to impose on others, when they can do it with impunity; and especially when there is a prospect, that the imposition will be attended with advantage to themselves. The Americans, from that jealousy of their liberties, which their local situation nurtured, and which they inherited from their forefathers, viewed the exclusive right of laying taxes on themselves, free from extraneous influence, in the same light, as the British parliament views its peculiar privilege of raising money, independent of the crown. The parent state appeared, to the colonists, to stand in the same relation to their local legislatures, as the monarch of Great Britain to the British Parliament. His prerogative is limited by that palladium of the people's liberty, the exclusive privilege of granting their own money. While this right rests in the hands of the people, their liberties are secured.

In the same manner reasoned the colonists: "In order to be styled freemen, our local assemblies, elected by ourselves, must enjoy the exclusive privilege of imposing taxes upon us." They contended, that men settled in foreign parts, to better their condition, not to submit their liberties; to continue the equals, not to become the slaves of their less adventurous fellow-citizens; and that, by the novel doctrine of parliamentary power, they were degraded from being the subjects of a king, to the low condition of being subjects of subjects. They argued, that it was essentially involved in the idea of property, that the possessor had such a right therein, that it was a contradiction to suppose any other

man, or body of men, possessed a right to take it from him, without his consent. Precedents in the history of England justified this mode of reasoning. The love of property strengthened it; and it had a peculiar force on the minds of colonists, three thousand miles removed from the seat of government, and growing up to maturity, in a New World, where, from the extent of country, and the state of society, even the necessary restraints of civil government were impatiently borne. On the other hand, the people of Great Britain revolted against the claims of the colonists. Educated in habits of submission to parliamentary taxation, they conceived it to be the height of contumacy, for the colonists to refuse obedience to the power, which they had been taught to revere. Not advertent to the common interest, which existed between the people of Great Britain and their representatives, they believed, that the said community of interests was wanting. The pride of an opulent, conquering nation, aided this mode of reasoning. "What!" said they, "shall we, who have so lately humbled France and Spain, be dictated to by our own colonists? Shall our subjects, educated by our care, and defended by our arms, presume to question the rights of parliament, to which we are obliged to submit?" Reflections of this kind, congenial to the natural vanity of the human heart, operated so extensively, that the people of Great Britain spoke of their colonies and of their colonists, as a kind of possession annexed to their persons. The love of power, and of property, on the one side of the Atlantic, were opposed by the same powerful passions on the other.

The disposition to tax the colonies was also strengthened, by exaggerated accounts of their wealth. It was said, "that the American planters lived in affluence, and with inconsiderable taxes; while the inhabitants of Great Britain were borne down, by such oppressive burdens, as to make a bare subsistence, a matter of extreme difficulty." The officers who had served in America, during the late war, contributed to this delusion. Their observations were founded on what they had seen in cities, and at a time, when large sums were spent by government, in support of fleets and armies, and when American commodities were in great demand. To treat with attention those who came to fight for them, and also to gratify their own pride, the colonists had made a parade of their riches, by frequently and sumptuously entertaining the gentlemen of the British army. These, judging from what they saw, without considering the general state of the country, concurred in representing the colonists as very able to contribute, largely, towards defraying the common expenses of the empire.

The charters, which were supposed to contain the principles on which the colonies were founded, became the subject of serious investigation on both sides. One clause was found to run through the whole of them, except that which had been granted to Mr. Penn. This was a declaration, "that the emigrants to America should enjoy the same privileges, as if they had remained, or had been born within the realm:" but such was the subtlety of disputants, that both parties construed this general principle so as to favour their respective opinions. The American patriots contended, that as English freeholders could not be taxed, but by representatives, in choosing whom they had a vote, neither could the colonists: but it was replied, that, if the colonists had remained in England, they must have been bound to pay the taxes imposed by parliament. It was therefore inferred, that, though taxed by that authority, they lost none of the rights of native Englishmen, residing at home. The partisans of the mother country could see nothing in charters, but security against taxes, by royal authority. The Americans, adhering to the spirit more than to the letter, viewed their characters as a shield against all taxes not imposed by representatives of their own choice. This construction they contended to be expressly recognised by the charter of Maryland. In that, king Charles bound both himself and his successors, not to assent to any bill subjecting the inhabitants to internal taxation, by external legislation.

The nature and extent of the connexion between Great Britain and America, was a great constitutional question, involving many interests and the general principles of civil liberty. To decide this recourse was, in vain, had to parchment authorities made at a distant time; when neither the grantor nor grantees, of American territory, had in contemplation any thing like the present state of the two countries.

Great and flourishing colonies, daily increasing in numbers, and already grown to the magnitude of a nation, planted at an immense distance, and governed by constitutions, resembling that of the country from which they sprung, were novelties in the history of the world. To combine colonies so circumstanced, in one uniform system of government with the parent state, required a great knowledge of mankind, and an extensive comprehension of things. It was an arduous business, far beyond the grasp of ordinary statesmen, whose minds were narrowed by the formalities of law, or the trammels of office. An original genius, unfettered with precedents, and exalted with just ideas of the rights of human nature, and the obligations of universal benevolence, might have struck out a middle line, which would have secured as much liberty to the colonies, and as great a degree of supremacy to the parent state, as their common good required; but the helm of Great Britain was not in such hands. The spirit of the British constitution, on the one hand, revolted at the idea, that the British parliament should exercise the same unlimited authority over the unrepresented colonies, which it exercised over the inhabitants of Great Britain. The colonists, on the other hand, did not claim a total exemption from its authority. They in general allowed the mother country a certain undefined prerogative over them, and acquiesced in the right of parliament, to make many acts, binding them in many subjects of internal policy, and regulating their trade. Where parliamentary supremacy ended, and at what point colonial independency began, was not ascertained. Happy, for the English empire, would it have been, had the question never been agitated; but much more so, had it been compromised by an amicable compact, without the horrors of a civil war.

The English colonies were originally established on the principles of a commercial monopoly. While England pursued trade, her commerce increased at least four-fold. The colonies took the manufactures of Great Britain, and paid for them with provisions, or raw materials. They united their arms in war, their commerce and their councils in peace, without nicely investigating the terms on which the connexion of the two countries depended.

A perfect calm in the political world is not long to be expected. The reciprocal happiness, both of Great Britain and of the colonies, was too great to be of long duration. The calamities of the war of 1755 had scarcely ended, when the germ of another war was planted, which soon grew up and produced deadly fruit.

At that time, sundry resolutions passed the British parliament, relative to the imposition of a stamp duty in America, which gave a general alarm. By them the right, the equity, the policy, and even the necessity of taxing the colonies, were formally avowed. These resolutions, being considered as the preface of a system of American revenue, were deemed an introduction to evils of much greater magnitude. They opened a prospect of oppression, boundless in extent, and endless in duration. They were nevertheless not immediately followed by any legislative act. Time, and an invitation, were given to the Americans, to suggest any other mode of taxation that might be equivalent in its produce to the stamp act; but they objected, not only to the mode, but the principle; and several of their assemblies, though in vain, petitioned against it. An American revenue was, in England, a very popular measure. The cry in favour of it was so strong, as to silence the voice of petitions to the contrary.—The equity of compelling the Americans to contribute to the common expenses of the empire, satisfied many who, without inquiring into the policy or

justice of taxing their unrepresented fellow subjects, readily assented to the measures adopted by the parliament for this purpose. The prospect of easing their own burdens, at the expense of the colonists, dazzled the eyes of gentlemen of landed interest, so as to keep out of their view the probable consequences of the innovation.

The omnipotence of parliament was so familiar a phrase, on both sides of the Atlantic, that few in America, and still fewer in Great Britain, were impressed, in the first instance, with any idea of the illegality of taxing the colonists.

Illumination on that subject was gradual. The resolutions in favor of an American stamp act, which passed in March, 1764, met with no opposition. In the course of the year which intervened between these resolutions, and the passing of a law grounded upon them, the subject was better understood, and constitutional objections against the measure, were urged by several, both in Great Britain and America. This astonished and chagrined the British ministry: but as the principle of taxing America had been, for some time, determined upon, they were unwilling to give it up. Impelled by partiality for a long cherished idea, Mr. Grenville, in March 1765, brought into the house of commons his long expected bill, for laying a stamp duty in America. By this, after passing through the usual forms, it was enacted, that the instruments of writing, in daily use among a commercial people, should be null and void, unless they were executed on stamped paper or parchment, charged with a duty imposed by the British parliament.

When the bill was brought in, Mr. Charles Townsend concluded a speech in its favour, with words to the following effect: "And now will these Americans, children planted by our care, nourished up by our indulgence, till they are grown to a degree of strength and opulence, and protected by our arms, will they grudge to contribute their mite to relieve us from the heavy weight of that burden which we lie under?" To which colonel Barre replied: "They planted by your care! No, your oppressions planted them in America. They fled from tyranny to a then uncultivated and inhospitable country, where they exposed themselves to almost all the hardships to which human nature is liable; and, among others, to the cruelty of a savage foe, the most subtle, and, I will take upon me to say, the most formidable of any people upon the face of God's earth! and yet, actuated by principles of true English liberty, they met all hardships with pleasure, compared with those they suffered in their own country, from the hand of those that should have been their friends. They nourished up by your indulgence! They grew by your neglect of them. As soon as you began to care about them, that care was exercised in sending persons to rule them, in one department and another, who were, perhaps, the deputies of deputies to some members in this house, sent to spy out their liberties, to misrepresent their actions, and to prey upon them: men, whose behaviour, on many occasions, has caused the blood of those sons of liberty to recoil within them: men promoted to the highest seats of justice—some who, to my knowledge, were glad, by going to a foreign country, to escape being brought to the bar of a court of justice in their own. They protected by your arms! They have nobly taken up arms in your defence, have exerted a valour amidst their constant and laborious industry, for the defence of a country whose frontier was drenched in blood, whilst its interior parts yielded all its little savings to your emolument. And, believe me, that same spirit of freedom, which actuated these people at first, will accompany them still: but prudence forbids me to explain myself farther. God knows, I do not, at this time, speak from any motives of party heat. I deliver the genuine sentiments of my heart. However superior to me, in general knowledge and experience, the respectable body of this house may be, yet I claim to know more of America than most of you; having seen and been conversant in that country. The people, I believe, are as truly loyal as any subjects the king has; but a people jealous of their liberties, and who will vindicate them,

if ever they should be violated: but the subject is too delicate. I will say no more."

During the debate on the bill, the supporters of it insisted much on the colonies being virtually represented in the same manner as Leeds, Halifax, and some other towns were. A recurrence to this plea was a virtual acknowledgement, that there ought not to be taxation without representation. It was replied, that the connexion between the electors and non-electors of parliament, in Great Britain, was so interwoven, from both being equally liable to pay the same common tax, as to give some security of property to the latter: but with respect to taxes laid by the British parliament, and paid by the Americans, the situation of the parties was reversed. Instead of both parties bearing a proportionable share of the same common burden, what was laid on the one, was exactly so much taken off from the other.

The bill met with no opposition in the house of lords; and, on the 22d of March, 1765, it received the royal assent. The night after it passed, Dr. Franklin wrote to Mr. Charles Thomson; "The sun of liberty is set; you must light up the candles of industry and economy." Mr. Thomson answered: "I was apprehensive, that other lights would be the consequence;" and he foretold the opposition which shortly took place. On its being suggested from authority, that the stamp officers would not be sent from Great Britain, but selected from among the Americans, the colony agents were desired to point out proper persons for that purpose. They generally nominated their friends, which affords a presumptive proof, that they supposed the act would have gone down. In this opinion, they were far from being singular. That the colonists would be, ultimately, obliged to submit to the stamp act, was at first commonly believed, both in England and America. The framers of it, in particular, flattered themselves, that the confusion, which would arise upon the disuse of writings, and the insecurity of property, which would result from using any other than that required by law, would compel the colonies, however reluctant, to use the stamped paper, and consequently to pay the taxes imposed thereon. They, therefore, boasted that it was a law, which would execute itself. By the term of the stamp act, it was not to take effect till the first day of November; a period of more than seven months after its passing. This gave the colonists an opportunity of leisurely canvassing the new subject, and examining fully on every side. In the first part of this interval, struck with astonishment, they lay in silent consternation, and could not determine what course to pursue. By degrees they recovered their recollection. Virginia led the way in opposition to the stamp act. Mr. Patrick Henry, on the 29th of May, 1765, brought into the house of burgesses of that colony, the following resolutions, which were substantially adopted.

"Resolved, that the first adventurers, settlers of this his majesty's colony and dominion of Virginia, brought with them, and transmitted to their posterity, and all other, his majesty's subjects, since inhabiting in this, his majesty's said colony, all the liberties, privileges, and immunities, that have at any time, been held, enjoyed, and possessed by the people of Great Britain.

"Resolved, that, by two royal charters, granted by king James the first, the colonists aforesaid are declared entitled to all liberties, privileges, and immunities of denizens, and natural subjects, to all intents and purposes, as if they had been abiding and born within the realm of England.

"Resolved, that his majesty's liege people, of this his ancient colony, have enjoyed the rights of being thus governed, by their own assembly, in the article of taxes, and internal police; and that the same have never been forfeited, or yielded up: but have been constantly recognised by the king and people of Britain.

"Resolved, therefore, that the general assembly of this colony, together with his majesty, or his substitutes, have in their representative capacity, the only exclusive right and power, to lay taxes and imposts, upon the inhabitants of this colony; and that

every attempt, to vest such power in any other person or persons, whatsoever, than the general assembly aforesaid, is illegal, unconstitutional, and unjust, and hath a manifest tendency to destroy British, as well as American liberty.

"Resolved, that his majesty's liege people, the inhabitants of this colony, are not bound to yield obedience to any law, or ordinance whatever, designed to impose any taxation whatever upon them, other than the laws or ordinances of the general assembly aforesaid.

"Resolved, that any person, who shall, by speaking or writing, assert or maintain, that any person, or persons, other than the general assembly of this colony, have any right or power, to impose, or lay any taxation on the people here, shall be deemed an enemy to this his majesty's colony."

Upon reading these resolutions, the boldness and novelty of them affected one of the members to such a degree, that he cried out, "treason! treason!" They were, nevertheless, well received by the people; and immediately forwarded to the other provinces. They circulated extensively, and gave a spring to the discontented. Till they appeared, most were of opinion, that the act would be quietly adopted. Murmurs, indeed, were common, but they seemed to be such, as would soon die away. The countenance of so respectable a colony, as Virginia, confirmed the wavering, and emboldened the timid. Opposition to the stamp act, from that period, assumed a bolder face. The fire of liberty blazed forth from the press. Some well-judged publications set the rights of the colonists, in a plain, but strong point of view. The tongues and the pens of the well-informed citizens laboured in kindling the latent sparks of patriotism. The flame spread from breast to breast, till the conflagration became general. In this business, New England had a principal share. The inhabitants of that part of America, in particular, considered their obligations to the mother country, for past favours, to be very inconsiderable. They were fully informed, that their forefathers were driven, by persecution to the woods of America, and had there, without any expense to the parent state, effected a settlement on bare creation. Their resentment, for the invasion of their accustomed right of taxation, was not so much mitigated, by the recollection of late favours, as it was heightened by the tradition of grievous sufferings, to which their ancestors, by the rulers of England, had been subjected.

The heavy burdens, which the operation of the stamp act would have imposed on the colonists, together with the precedent it would establish of future exactions, furnished the American patriots with arguments, calculated as well to move the passions, as to convince the judgments of their fellow colonists. In great warmth they exclaimed: "If the parliament have a right to levy the stamp duties, they may, by the same authority, lay on us imposts, excises, and other taxes, without end, till their rapacity is satisfied, or our abilities are exhausted. We cannot, at future elections, displace these men, who so lavishly grant away our property. Their seats and their power are independent of us, and it will rest with their generosity, where to stop, in transferring the expenses of government, from their own, to our shoulders."

It was fortunate for the liberties of America, that newspapers were the subject of a heavy stamp duty. Printers, when uninfluenced by government, have generally arranged themselves on the side of liberty, nor are they less remarkable for their attention to the profits of their profession. A stamp duty, which openly invaded the first, and threatened a diminution of the last, provoked their united zealous

* Patrick Henry, whose eloquence was of the same family with the poetry of Shakspeare, introduced these resolutions, with an animated speech, which is unfortunately lost, or, perhaps, was never written. Tradition informs us, that, while he was pouring out his whole soul, in the brilliant extemporaneous effusions of the most ardent patriotism, he broke off abruptly, or was silenced by a call to order, in the middle of a sentence, which began as follows, "Caesar had his Brutus: Charles his Oliver; and if king George go on as he has begun he will find"—

opposition. They daily presented to the public original dissertations, tending to prove, that, if the stamp act were suffered to operate, the liberties of Americans were at an end, and their property virtually transferred to their trans-Atlantic fellow subjects. The writers among the Americans, seriously alarmed for the fate of their country, came forward with essays, to prove, that, agreeably to the British constitution, taxation and representation were inseparable; that the only constitutional mode of raising money from the colonists, was by acts of their own legislatures; that the crown possessed no farther power, than that of requisition; and that the parliamentary right of taxation was confined to the mother country, where it originated from the natural right of man, to do what he pleased with his own, transferred by consent from the electors of Great Britain, to those whom they chose to represent them in parliament. They also insisted much on the misapplication of public money, by the British ministry. Great pains were taken to inform the colonists of the large sums annually bestowed on pensioned favourites, and for the various purposes of bribery. Their passions were inflamed by high coloured representations of the hardship of being obliged to pay the earnings of their industry into a British treasury, well known to be a fund for corruption.

The writers on the American side were opposed by arguments, drawn from the unity of the empire; the necessity of one supreme head; the unlimited power of parliament; and the great numbers in the mother country, who, though legally disqualified from voting at elections, were, nevertheless, bound to pay the taxes imposed by the representatives of the nation. To these objections it was replied, that the very idea of subordination of parts, excluded the notion of simple undivided unity; that, as England was the head, she could not be the head and the members too; that, in all extensive empires, where the dead uniformity of servitude did not prevent, the subordinate parts had many local privileges and immunities; that, between these privileges and the supreme common authority, the line was extremely nice; and that, nevertheless, the supremacy of the head had an ample field of exercise, without arrogating to itself the disposal of the property of the unrepresented subordinate parts. To the assertion, that the power of parliament was unlimited, the colonists replied, that before it could constitutionally exercise that power, it must be constitutionally formed; and that, therefore, it must at least, in one of its branches, be constituted by the people, over whom it exercised unlimited power; that, with respect to Great Britain, it was so constituted; and with respect to America, it was not. They therefore inferred, that its power ought not to be the same over both countries. They argued also, that the delegation of the people was the source of power, in regard to taxation; and, as that delegation was wanting in America, they concluded the right of parliament, to grant away their property, could not exist; and that the defective representation in Great Britain, should be urged as an argument for taxing the Americans, without any representation at all, proved the encroaching nature of power. Instead of convincing the colonists of the propriety of their submission, it demonstrated the wisdom of their resistance; for, said they, "one invasion of natural right is made the justification of another, much more injurious and oppressive."

The advocates for parliamentary taxation, laid great stress on the rights supposed to have accrued to Great Britain, on the score of her having reared up and protected the English settlements in America, at great expense. It was, on the other hand, contended by the colonists, that, in all the wars which were common to both countries, they had taken their full share; but in all their own dangers, in all the difficulties belonging separately to their situation, which did not immediately concern Great Britain, they were left to themselves, and had to struggle through a hard infancy; and in particular, to defend themselves, without any aid from the parent state, against the numerous savages in their vicinity; that, when France had made war upon them, it was not on their own account, but as appen-

dages to Great Britain; that, confining their trade for the exclusive benefit of the parent state, was an ample compensation for her protection, and a sufficient equivalent for their exemption from parliamentary taxation; and that the taxes imposed on the inhabitants of Great Britain were incorporated with their manufactures, and ultimately fell on the colonists, who were the consumers.

The advocates for the stamp act also contended, that, as the parliament was charged with the defence of the colonies, it ought to possess the means of defraying the expenses incurred thereby. The same argument had been used by king Charles the first, in support of ship-money; and it was now answered in the same manner as it was by the patriots of that day; "that the people, who were defended or protected, were the fittest to judge of and to provide the means of defraying the expenses incurred on that account." In the mean time, the minds of the Americans underwent a total transformation. Instead of their late peaceable and steady attachment to the British nation, they were daily advancing to the opposite extreme. The people, especially in the large cities, became riotous, insulted the persons, and destroyed the property of such as were known or supposed to be friendly to the stamp act. The mob were the visible agents in these disorderly proceedings; but they were encouraged by persons of rank and character.

As opportunities offered, the assemblies generally passed resolutions, asserting their exclusive right to lay taxes on their constituents. The people, in their town meetings, instructed their representatives to oppose the stamp act. For a specimen of the spirit and style of their instructions, see Appendix, No. 1.

The expediency of calling a continental congress, to be composed of deputies from each of the provinces, had early occurred to the people of Massachusetts. The assembly of that province passed a resolution in favour of that measure, and fixed on New York as the place, and the second Tuesday of October, 1765, as the time, for holding the same. They sent circular letters to the speakers of the several assemblies, requesting their concurrence. This first advance towards continental union, was seconded in South Carolina, before it had been agreed to by any colony to the southward of New England. The example of this province had a considerable influence in recommending the measure to others, divided in their opinions as to its propriety.

The assemblies of Virginia, North Carolina, and Georgia, were prevented, by their governors, from sending a deputation to this congress. Twenty-eight deputies from Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, and South Carolina, met at New York: and, after mature deliberation, agreed on a declaration of their rights, and on a statement of their grievances. They asserted, in strong terms, their exemption from all taxes not imposed by their own representatives. They also concurred in a petition to the king, a memorial to the house of lords, and a petition to the house of commons. The colonies prevented from sending their representatives to this congress, forwarded petitions similar to those adopted by the deputies who attended.

While a variety of legal and illegal methods were adopted, to oppose the stamp act, the first of November, on which it was to commence its operation, approached. At Boston, the day was ushered in by a funeral tolling of bells. Many shops and stores were shut. The effigies of the planners and friends of the stamp act, were carried about the streets in public derision, and then torn in pieces by the enraged populace. It was remarkable, that, though a large crowd was assembled, there was not the least violence or disorder.

At Portsmouth, in New Hampshire, the morning was ushered in with tolling all the bells in town. In the course of the day, notice was given to the friends of Liberty, to attend her funeral. A coffin, neatly ornamented, and inscribed with the word LIBERTY, in large letters, was carried to the grave. The funeral procession began from the

state-house, attended with two unbraced drums. While the inhabitants who followed the coffin were in motion, minute guns were fired, and continued till the coffin arrived at the place of interment. Then an oration, in favour of the deceased, was pronounced. It was scarcely ended, before the coffin was taken up; it having been perceived that some remains of life were left: on which the inscription was immediately altered to "Liberty revived." The bells immediately exchanged their melancholy for a more joyful sound; and satisfaction appeared in every countenance. The whole was conducted with decency, and without injury or insult to any man's person or property.

The general aversion to the stamp act was, by similar methods, in a variety of places, demonstrated. It is remarkable that the proceedings of the populace, on these occasions, were carried on with decorum and regularity. They were not ebullitions of a thoughtless mob; but, for the most part, planned by leading men, of character and influence, who were friends to peace and order. These, knowing well that the bulk of mankind are more led by their senses, than by their reason, conducted the public exhibitions on that principle, with a view of making the stamp act, and its friends, both ridiculous and odious.

Though the stamp act was to have operated from the 1st of November, yet legal proceedings, in the courts, were carried on as before. Vessels entered and departed without stamped papers. The printers boldly printed and circulated their newspapers, and found a sufficient number of readers: though they used common paper, in defiance of the acts of parliament. In most departments, by common consent, business was carried on, as though no stamp act had existed. This was accompanied by spirited resolutions to risk all consequences, rather than submit to use the paper required by law. While these matters were in agitation, the colonists entered into associations against importing British manufactures, till the stamp act should be repealed. In this manner, British liberty was made to operate against British tyranny. Agreeably to the free constitution of Great Britain, the subject was at liberty to buy, or not to buy, as he pleased. By suspending their future purchases on the repeal of the stamp act, the colonists made it the interest of merchants and manufacturers, to solicit for that repeal. They had usually taken so great a proportion of British manufactures, that the sudden stoppage of all their orders, amounting, annually, to two or three millions sterling, threw some thousands, in the mother country, out of employment, and induced them, from a regard to their own interest, to advocate the measures wished for by America. The petitions from the colonies were seconded by petitions from the merchants and manufacturers of Great Britain. What the former prayed for as a matter of right, and connected with their liberties, the latter also solicited from motives of immediate interest.

In order to remedy the deficiency of British goods, the colonists betook themselves to a variety of necessary domestic manufactures. In a little time, large quantities of common cloths were brought to market; and these, though dearer, and of a worse quality, were cheerfully preferred to similar articles, imported from Britain. That wool might not be wanting, they entered into resolutions to abstain from eating lambs. Foreign elegancies were laid aside. The women were as exemplary as the men, in various instances of self-denial. With great readiness they refused every article of decoration for their persons, and luxury for their tables. These restrictions, which the colonists had voluntarily imposed on themselves, were so well observed, that multitudes of artificers, in England, were reduced to great distress, and some of their most flourishing manufactories were, in a great measure, at a stand. An association was entered into, by many of the Sons of Liberty, the name given to those who were opposed to the stamp act, by which they agreed, "to march with the utmost expedition, at their own proper costs and expense, with their whole force, to the relief of those that should be in danger from the stamp act, or its promoters and abettors, or any

thing relative to it, on account of any thing that may have been done, in opposition to its obtaining." This was subscribed by so many, in New York and New England, that nothing but a repeal could have prevented the immediate commencement of a civil war.

From the decided opposition to the stamp act, which had been adopted by the colonies, it became necessary for Great Britain to enforce, or to repeal it. Both methods of proceeding had supporters. The opposers of a repeal urged arguments, drawn from the dignity of the nation, the danger of giving way to the clamours of the Americans, and the consequences of weakening parliamentary authority over the colonies. On the other hand, it was evident, from the determined opposition of the colonies, that it could not be enforced without a civil war, by which, in every event, the nation must be a loser. In the course of these discussions, Dr. Franklin was examined at the bar of the house of commons, and gave extensive information on the state of American affairs, and the impolicy of the stamp act, which contributed much to remove prejudices, and to produce a disposition that was friendly to a repeal.

Some speakers of great weight, in both houses of parliament, denied their right of taxing the colonies. The most distinguished supporters of this opinion were Lord Camden, in the house of peers, and Mr. Pitt, in the house of commons. The former, in strong language, said: "My position is this; I repeat it; I will maintain it to my last hour. Taxation and representation are inseparable. This position is founded on the laws of nature. It is more; it is itself an eternal law of nature. For whatever is a man's own is absolutely his own. No man has a right to take it from him, without his consent. Whoever attempts to do it, attempts an injury. Whoever does it, commits a robbery."

Mr. Pitt, with an original boldness of expression, justified the colonists, in opposing the stamp act. "You have no right," said he, "to tax America. I rejoice that America has resisted. Three millions of our fellow-subjects, so lost to every sense of virtue as tamely to give up their liberties, would be fit instruments to make slaves of the rest." He concluded with giving his advice, that the stamp act be repealed absolutely, totally, and immediately; that the reasons for the repeal be assigned: that it was founded on an erroneous principle. "At the same time," said he, "let the sovereign authority of this country over the colonies, be asserted in as strong terms as can be devised, and be made to extend to every point of legislation whatsoever, that we may bind their trade; confine their manufactures; and exercise every power, except that of taking their money out of their pockets without their consent."

The approbation of this illustrious statesman, whose distinguished abilities had raised Great Britain to the highest pitch of renown, inspired the Americans with additional confidence in the rectitude of their claims of exemption from parliamentary taxation; and emboldened them to farther opposition, when, at a future day, as shall be hereafter related, the project of an American revenue was resumed. After much debating, two protests in the house of Lords, and passing an act, "for securing the dependence of America on Great Britain," the repeal of the stamp act was carried, in March, 1766. This event gave great joy in London. Ships in the river Thames displayed their colours; and houses were illuminated, all over the city. It was no sooner known in America, than the colonists rescinded their resolutions, and recommended their mercantile intercourse with the mother country. They presented their homespun clothes to the poor; and imported more largely than ever. The churches resounded with thanksgivings; and their public and private rejoicings knew no bounds. By letters, addresses, and other means, almost all the colonies showed unequivocal marks of acknowledgment and gratitude. So sudden a calm, after so violent a storm, is without a parallel in history. By the judicious sacrifice of one law, the parliament of Great Britain procured an acquiescence in all that remained.

There were enlightened patriots, fully impressed

with an idea, that the immoderate joy of the colonists was disproportioned to the advantage they had gained.

The stamp act, though repealed, was not repealed on American principles. The preamble assigned as the reason thereof, "that the collecting the several duties and revenues, as by the said act was directed, would be attended with many inconveniences, and productive of consequences, dangerous to the commercial interests of these kingdoms." Though this reason was a good one in England, it was by no means satisfactory in America. At the same time that the stamp act was repealed, the absolute unlimited supremacy of parliament was, in words asserted. The opposers of the repeal contended for this as essential. The friends of that measure acquiesced in it, to strengthen their party, and make sure of their object. Many of both sides thought, that the dignity of Great Britain required something of the kind, to counterbalance the loss of authority, that might result from her yielding to the clamours of the colonists. The act for this purpose was called the declaratory act; and was, in principle, more hostile to American rights than the stamp act; for, it annulled those resolutions and acts of the provincial assemblies, in which they had asserted their right to exemption from all taxes not imposed by their own representatives; and also enacted, "that the parliament had, and of right ought to have, power to bind the colonies, in all cases whatsoever."

The majority of the Americans intoxicated with the advantage they had gained overlooked this statute, which, in one comprehensive sentence, not only deprived them of liberty and property, but of every right incident to humanity. They considered it as a salvo for the honour of parliament, in repealing an act, which had so lately received their sanction; and flattered themselves it would remain a dead letter; and that, although the right of taxation was in words retained, it would never be exercised. Unwilling to contend about paper claims of ideal supremacy, they returned to their habits of good humour with the parent state,

The repeal of the stamp act, in a relative connexion with all its circumstances and consequences, was the first direct step to American independence. The claims of the two countries were not only left undecided; but a foundation was laid for their extending, at a future period, to the impossibility of a compromise. Though, for the present, Great Britain receded from enforcing her claim of American revenue, a numerous party, adhering to that system, reserved themselves for more favourable circumstances to enforce it; and, at the same time, the colonists, more enlightened on the subject, and more fully convinced of the rectitude of their claims, were encouraged to oppose it, under whatsoever form it should appear, or under whatsoever disguise it should cover itself.

Elevated with the advantage they had gained, from that day forward, instead of feeling themselves dependent on Great Britain, they conceived that, in respect to commerce, she was dependent on them. It inspired them with such high ideas of the importance of their trade, that they considered the mother country to be brought under greater obligations to them, for purchasing her manufactures, than they were to her for protection and the administration of civil government. The freemen of British America, impressed with the exalting sentiments of patriotism and of liberty, conceived it to be within their power, by future combinations, at any time to convulse, if not to bankrupt the nation, from which they sprang.

Opinions of this kind were strengthened by their local situation, favouring ideas, as extensive as the unexplored continent of which they were inhabitants. While the pride of Britons revolted at the thought, of their colonies refusing subjection to that parliament, which they obeyed; the Americans, with equal haughtiness, exclaimed: "Shall the petty island of Great Britain, scarce a speck on the map of the world, control the free citizens of the great continent of America?"

These high-sounding pretensions would have

been harmless, or, at most, spent themselves in words, had not a ruinous policy, untaught by recent experience, called them into serious action. Though the stamp act was repealed, an American revenue was still a favourite object with many in Great Britain. The equity and the advantage of taxing the colonists, by parliamentary authority, were very apparent to their understandings: but the mode of effecting it, without hazarding the public tranquillity, was not so obvious.

Mr. Charles Townsend, afterwards chancellor of the exchequer, pawned his credit to accomplish what many so earnestly desired. He accordingly, in 1767, brought into parliament a bill, for granting duties in the British colonies on glass, paper, painters' colours, and tea, which was afterwards enacted into a law. If the small duties, imposed on these articles, had preceded the stamp act, they might have passed unobserved: but the late discussions, occasioned by that act, had produced among the colonists, not only an animated conviction of their exemption from parliamentary taxation, but a jealousy of the designs of Great Britain.

The sentiments of the Americans, on this subject, bore a great resemblance to those of their British countrymen, of the preceding century, in the case of ship-money. The amount of that tax was very moderate, little exceeding twenty thousand pounds. It was distributed upon the people with equality, and expended for the honour and advantage of the kingdom; yet all these circumstances could not reconcile the people of England to the imposition. It was entirely arbitrary. "By the same right," said they, "any other tax may be imposed." In like manner, the Americans considered these small duties, in the nature of an entering wedge, designed to make way for others, which would be greater and heavier. In a relative connexion with late acts of parliament, respecting domestic manufactures and foreign commerce, laws, for imposing taxes on British commodities exported to the colonies, formed a complete circle of oppression, from which there was no possibility of escaping.

The colonies had been, previously, restrained from manufacturing certain articles, for their own consumption. Other acts confined them to the exclusive use of British merchandise. The addition of duties put them wholly in the power and discretion of Great Britain. "We are not," said they, "permitted to import from any nation, other than our own parent state, and have been, in some cases, restrained by her from manufacturing for ourselves; and she claims a right to do so, in every instance, which is incompatible with her interest. To these restrictions we have hitherto submitted: but she now rises in her demands, and imposes duties on those commodities, the purchasing of which elsewhere, than at her market, her laws forbid, and the manufacturing of which for her own use, she may, any moment she pleases, restrain. If her right be valid, to lay a small tax, it is equally so to lay a large one; for, from the nature of the case, she must be guided exclusively by her own opinions of our ability, and of the propriety of the duties she may impose. Nothing is left for us to do, but to complain, and pay."

The colonists contended that there was no real difference, between the principle of these new duties and the stamp act. They were both designed to raise a revenue in America, and in the same manner. The payment of the duties, imposed by the stamp act, might have been eluded by the total disuse of stamped paper; and so might the payment of these duties, by the total disuse of those articles on which they were laid: but in neither case, without great difficulty. The colonists were, therefore, reduced to the hard alternative of being obliged, totally, to disuse articles of great utility in human life, or to pay a tax without their consent. The fire of opposition, which had been smothered by the repeal of the stamp act, burned afresh against the same principle of taxation, exhibited in its new form. Mr. Dickinson, of Pennsylvania, on this occasion, presented to the public a series of letters, signed "a Farmer," proving the extreme danger which threatened the liberties of America, from their acquies-

cence in a precedent, which might establish the claim of parliamentary taxation. They were written with great animation; and were read with uncommon avidity. Their reasoning was so convincing, that many of the candid and disinterested citizens of Great Britain acknowledged, that the American opposition to parliamentary taxation was justifiable. The enormous sums, which the stamp act would have collected, had thoroughly alarmed the colonists for their property.

It was now demonstrated by several writers, especially by the Pennsylvania Farmer, that a small tax, though more specious, was equally dangerous: as it established a precedent, which eventually annihilated American property. The declaratory act, which at first was the subject of but few comments, was now dilated upon, as a foundation for every species of oppression; and the small duties, lately imposed, were considered as the beginning of a train of much greater evils.

Had the colonists admitted the propriety of raising a parliamentary revenue among them, the erection of an American board of commissioners, for managing it, which was about this time instituted at Boston, would have been a convenience, rather than an injury; but united as they were in sentiments, of the contrariety of that measure to their natural and constitutional rights, they ill brooked the innovation. As it was coeval with the new duties, they considered it as a certain evidence, that the project of an extensive American revenue, notwithstanding the repeal of the stamp act, was still in contemplation. A dislike to British taxation naturally produced a dislike to a board, which was to be instrumental in that business; and occasioned many insults to its commissioners.

The revenue acts, of 1767, produced resolves, petitions, addresses, and remonstrances, similar to those, with which the colonists opposed the stamp act. It also gave rise to a second association, for suspending farther importations of British manufactures, till those offensive duties should be taken off. Uniformity, in these measures, was promoted by a circular letter from the assembly of Massachusetts, to the speakers of the other assemblies. This stated the petitions and representations, which they had forwarded against the late duties, and strongly pointed out the great difficulties, that must arise to themselves and their constituents, from the operation of acts of parliament, imposing duties on the unrepresented American colonies; and requesting a reciprocal free communication, on public affairs. Most of the provincial assemblies, as they had opportunities of deliberating on the subject, approved the proceedings of the Massachusetts assembly, and harmonised with them in the measures, which they had adopted. They stated their rights, in firm but decent language; and prayed for a repeal of the late acts, which they considered as infringements on their liberties.

It is not unreasonable to suppose, that the minister, who planned these duties, hoped, that they would be regarded as regulations of trade. He might also presume, that, as they amounted only to an inconsiderable sum, they would not give any alarm. The circular letter of the Massachusetts assembly, which laid the foundation for united petitions against them, gave therefore great offence. Lord Hillsborough, who had lately been appointed secretary of state, for the American department, wrote letters to the governors of the respective provinces, urging them to exert their influence, to prevent the assemblies from taking any notice of it; and he called on the Massachusetts assembly, to rescind their proceedings on that subject. This measure was both injudicious and irritating. To require a public body to rescind a resolution, for sending a letter, which was already sent, answered, and acted upon, was a bad specimen of the wisdom of the new minister. To call a vote, for sending a circular letter, to invite the assemblies of the neighbouring colonies to communicate together, in the pursuit of legal measures to obtain a redress of grievances, "a flagitious attempt to disturb the public peace," appeared to the colonists a very injudicious application of harsh epithets, to

their constitutional right of petitioning. To threaten a new house of assembly with dissolution, in case of their not agreeing to rescind an act of a former assembly, which was not executory, but executed, clashed no less with the dictates of common sense, than the constitutional rights of British colonists. The proposition for rescinding was negatived, by a majority of ninety-two to seventeen. The assembly was immediately dissolved, as had been threatened. This procedure of the new secretary was considered, by the colonists, as an attempt to suppress all communication of sentiments between them; and to prevent their united supplications from reaching the royal ear.

The bad humour, which, from successive irritation, already too much prevailed, was about this time wrought up to a high pitch of resentment and violence, on occasion of the seizure of Mr. Hancock's sloop *Liberty*, June 10th, 1768, for not having entered all the wines she had brought from Madeira. The popularity of her owner, the name of the sloop, and the general aversion to the board of commissioners, and parliamentary taxation, concurred to inflame the minds of the people. They used every means in their power to interrupt the officers, in the execution of their business; and numbers swore that they would be revenged. Mr. Harrison, the collector, Mr. Hallowell, the comptroller, and Mr. Irvine, the inspector of imports and exports, were so roughly handled, as to bring their lives into danger. The windows of some of their houses were broken; and the boat of the collector was dragged through the town, and burned on the common. Such was the temper and disposition of many of the inhabitants, that the commissioners of the customs thought proper to retire on board the *Romney* man of war; and afterwards to Castle William.

The commissioners, from the first moment of their institution, had been an eye-sore to the people of Boston. This, though partly owing to their active zeal in detecting smugglers, principally arose from the association which existed in the minds of the inhabitants, between that board and an American revenue. The declaratory act of 1766, the revenue act of 1767, together with the pomp and expense of this board, so disproportionate to the small income of the present duties, conspired to convince not only the few who were benefitted by smuggling, but the great body of enlightened freemen, that farther and greater impositions of parliamentary taxes were intended. In proportion as this opinion gained ground, the inhabitants became more disrespectful to the executive officers of the revenue, and more disposed, in the frenzy of patriotism, to commit outrages on their persons and property. The constant bickering that existed between them and the inhabitants, together with the steady opposition given by the latter to the discharge of the official duties of the former, induced the commissioners and friends of an American revenue, to solicit the protection of a regular force, to be stationed at Boston. In compliance with their wishes, his majesty ordered two regiments, and some armed vessels, to repair thither, for supporting and assisting the officers of the customs in the execution of their duty. This restrained the active exertion of that turbulent spirit which, since the passing of the late revenue laws, had revived; but it added to its pre-existing causes.

When it was reported in Boston, that one or more regiments were ordered there, a meeting of the inhabitants was called, and a committee appointed to request the governor to issue precepts for convening a general assembly. He replied, "that he could not comply with this request till he had received his majesty's commands for that purpose." This answer being reported, it was voted, that the select-men of Boston should write to the select-men of other towns, to propose, that a convention of deputies from each, be held, to meet at Faneuil Hall, in Boston.

Ninety-six towns, and eight districts, agreed to the proposal made by the inhabitants of Boston, and appointed deputies to attend a convention; but the town of Hatfield refused its concurrence. When the deputies met, they conducted with moderation;

disclaimed all legislative authority; advised the people to pay the greatest deference to government; and to wait patiently for a redress of their grievances, from his majesty's wisdom and moderation. Having stated to the world the causes of their meeting, and an account of their proceedings, they dissolved themselves, after a short session, and went home.

Within a day after the convention broke up, the expected regiments arrived, and were peaceably received. Hints had been thrown out by some, that they should not be permitted to come on shore. Preparations were made, by the captains of the men of war in the harbour, to fire on the town, in case opposition had been made to their landing; but the crisis for an appeal to arms was not yet arrived. It was hoped by some, that the folly and rage of the Bostonians would have led them to this rash measure, and thereby have afforded an opportunity for giving them some naval and military correction; but both prudence and policy induced them to adopt a more temperate line of conduct.

While the contention was kept alive, by the successive irritations, which have been mentioned there was, particularly in Massachusetts, a species of warfare carried on between the royal governors, and the provincial assemblies. Each watched the other with all the jealousy, which strong distrust could inspire. The latter regarded the former as instruments of power, wishing to pay their court to the mother country, by curbing the spirit of American freedom; and the former kept a strict eye on the latter, lest they might smooth the way to independence, at which they were charged with aiming. Lieutenant governor Hutchinson, of Massachusetts, virtually challenged the assembly to a dispute, on the ground of the controversy between the two countries. This was accepted by the latter; and the subject discussed with all the subtlety of argument which the ingenuity of either party could suggest.

The war of words was not confined to the colonies. While the American assemblies passed resolutions, asserting their exclusive right to tax their constituents, the parliament, by resolves, asserted their unlimited supremacy in and over the colonies. While the former, in their public acts, disclaimed all views of independence, they were successively represented in parliamentary resolves, royal speeches, and addresses from lords and commons, as being in a state of disobedience to law and government; as having proceeded to measures subversive of the constitution; and manifesting a disposition to throw off all subordination to Great Britain.

In February, 1769, both houses of parliament went one step beyond all that had preceded. They concurred in a joint address to his majesty, in which they expressed their satisfaction in the measures his majesty had pursued; gave the strongest assurances, that they would effectually support him in such farther measures, as might be found necessary, to maintain the civil magistrates in a due execution of the laws, in Massachusetts Bay; beseeched him, "to direct the governor to take the most effectual methods for procuring the fullest information, touching all treasons or misprisons of treason committed within the government, since the 30th day of December, 1767; and to transmit the same, together with the names of persons, who were most active in the commission of such offences, to one of the secretaries of state, in order that his majesty might issue a special commission for inquiring of, hearing, and determining, the said offences, within the realm of Great Britain, pursuant to the provision of the statute of the thirty-fifth of King Henry the eighth." The latter part of this address, which proposed the bringing of delinquents from Massachusetts, to be tried at a tribunal in America, underwent many severe animadversions.

It was asserted to be totally inconsistent with the spirit of the constitution: for, in England, a man, charged with a crime, had a right to be tried in the country in which his offence was supposed

to have been committed. "Justice is regularly and impartially administered in our courts," said the colonists; "and yet, by direction of parliament, offenders are to be taken by force, together with all such persons as may be pointed out as witnesses, and carried to England, there to be tried in a distant land, by a jury of strangers, and subject to all the disadvantages which result from want of friends, want of witnesses, and want of money."

The house of burgesses of Virginia met, soon after official accounts of the joint address of lords and commons, on this subject, reached America, and passed resolutions, asserting "their exclusive right to tax their constituents; their right to petition their sovereign for redress of grievances; the lawfulness of procuring the concurrence of the other colonies, in praying for the royal interposition, in favour of the violated rights of America; that all trials for treason, or for any crime whatsoever, committed in that colony, ought to be before his majesty's courts, within the said colony; and that the seizing any person, residing in the said colony, suspected of any crime whatsoever, committed therein, and sending such person to places beyond the sea to be tried, was highly derogatory to the right of British subjects." The next day, lord Botetourt, the governor of Virginia, sent for the house of burgesses, and addressed them as follows: "Mr. Speaker, and gentlemen of the house of burgesses, I have heard of your resolves, and augur ill of their effects. You have made it my duty to dissolve you; and you are dissolved accordingly."

The assembly of North Carolina adopted resolutions, similar to those of Virginia, for which Tryon, their governor, dissolved them. The members of the house of burgesses in Virginia, and of the assembly of North Carolina, after their dissolution, met as private gentlemen, chose their late speakers, moderators, and adopted resolutions against importing British goods. The non-importation agreement was, in this manner, forwarded by the very measures intended to curb the spirit of American freedom, from which it sprung.—Meetings of the associations were regularly held, in the various provinces. Committees were appointed to examine all vessels arriving from Britain. Censures were freely passed on such as refused to concur in these associations, and their names published in newspapers, as enemies to their country. The regular acts of the provincial assemblies were not so much respected and obeyed, as the decrees of these committees.

In Boston, lieutenant-governor Hutchinson endeavoured to promote a counter association; but without effect. The friends of importation objected, that, till parliament made provision for the punishment of the confederacies against importation, a counter association would answer no other purpose, than to expose the associators to popular rage.

The Bostonians, about this time, went one step farther. They re-shipped goods to Great Britain, instead of storing them as formerly. This was resolved upon, in a town meeting, on the information of an inhabitant, who communicated a letter he had lately received from a member of parliament, in which it was said, "that shipping back ten thousand pounds' worth of goods would do more, than storing a hundred thousand." This turned the scale, and procured a majority of votes for re-shipping. Not only in this, but in many other instances, the violence of the colonists were fostered by individuals in Great Britain. A number of these were in principle with the Americans, in denying the right of parliament, to tax them; but others were more influenced by a spirit of opposition to the ministerial majority, than by a regard to the constitutional liberties of either country.

The non-importation agreement had now lasted some time, and by degrees had become general. Several of the colonial assemblies had been dissolved, or prorogued, for asserting the rights of their constituents. The royal governors, and

other friends to an American revenue, were chastised. The colonists were irritated. Good men, both in England and America, deplored these untoward events, and beheld with concern an increasing ill humour between those, who were bound by interest and affection, to be friends to each other.

In consequence of the American non-importation agreement, founded in opposition to the duties of 1767, the manufacturers of Great Britain experienced a renewal of the distresses, which followed the adoption of similar resolutions, in the year 1765. The repeal of these duties was therefore solicited by the same influence, which had procured the repeal of the stamp act. The rulers of Great Britain acted without decision. Instead of persevering in their own system of coercion, or, indeed, in any one uniform system, they struck out a middle line, embarrassed with the consequences, both of severity and of lenity, and with, out the complete benefits of either. Soon after the spirited address to his majesty, last mentioned, had passed both houses of parliament, assurances were given for repealing all the duties, imposed in 1767, excepting that of three pence per pound on tea.

Anxious on the one hand to establish parliamentary supremacy, and on the other afraid to stem the torrent of opposition, they conceded enough to weaken the former, and yet not enough to satisfy the latter. Had Great Britain generously repealed the whole, and for ever relinquished all claim to the right or even the exercise of the right of taxation, the union of the two countries might have lasted for ages. Had she seriously determined to compel the submission of the colonies, nothing could have been more unfriendly to this design, than her repeated concessions to their reiterated associations. The declaratory act, and the reservation of the duty on tea, left the cause of contention between the two countries in full force: but the former was only a claim on paper, and the latter might be evaded, by refusing to purchase any tea, on which the parliamentary tax was imposed. The colonists, therefore, conceiving that their commerce might be renewed, without establishing any precedent, injurious to their liberties, relaxed in their associations, in every particular, except tea, and immediately recommenced the importation of all other articles of merchandise. A political calm once more took place. The parent state might now have closed the dispute for ever, and honourably receded, without a formal relinquishment of her claims. Neither the reservation of the duty on tea, by the British parliament, nor the exceptions made by the colonists, of importing no tea, on which a duty was imposed, would, if they had been left to their own operation, have disturbed the returning harmony of the two countries.—Without fresh irritation, their wounds might have healed, and not a scar been left behind.

Unfortunately for the friends of union, so paltry a sum as three pence per pound on so insignificant an article as tea, in consequence of a combination between the British ministry and East India company, revived the dispute to the rending of the empire.

These two abortive attempts, to raise a parliamentary revenue in America, caused a fermentation in the minds of the colonists, and gave birth to many inquiries respecting their natural rights. Reflections and reasonings on this subject produced a high sense of liberty, and a general conviction, that there could be no security for their property, if they were to be taxed at the discretion of a British parliament in which they were unrepresented, and over which they had no control. A determination not only to oppose this new claim of taxation, but to keep a strict watch, lest it might be established in some disguised form, took possession of their minds.

It commonly happens, in the discussion of doubtful claims between states, that the ground of the original dispute insensibly changes. When the mind is employed in investigating one subject,

others, associated with it, naturally present themselves. In the course of inquiries on the subject of parliamentary taxation, the restriction on the trade of the colonists, and the necessity that was imposed on them, to purchase British and other manufactures, loaded with their full proportion of all taxes, paid by those who made or sold them, became more generally known. While American writers were vindicating their country from the charge of contributing nothing to the common expenses of the empire, they were led to set off to their credit, the disadvantage of their being confined exclusively to purchase manufactures in Britain. They instituted calculations, by which they demonstrated, that the monopoly of their trade drew from them greater sums, for the support of government, than were usually paid by an equal number of their fellow-citizens of Great Britain; and that taxation, superadded to such a monopoly, would leave them in a state of perfect uncompensated slavery. The investigation of these subjects brought matters into view, which the friends of union ought to have kept out of sight. These circumstances, together with the extensive population of the eastern states, and their adventurous spirit of commerce, suggested to some bold spirits, that not only British taxation, but British navigation laws, were unfriendly to the interests of America. Speculations of this magnitude suited well with the extensive views of some capital merchants; but never would have roused the bulk of the people, had not new matter brought the dispute between the two countries to a point, in which every individual was interested.

On reviewing the conduct of the British ministry, respecting the colonies, much weakness, as well as folly, appears. For a succession of years, there was a steady pursuit of American revenue; but great inconsistency in the projects for obtaining it. In one moment, the parliament was for enforcing their laws; the next, for repealing them. Doing and undoing, menacing and submitting, straining and relaxing, followed each other, in alternate succession. The object of administration, though twice relinquished, as to any present efficacy, was invariably pursued; but without any unity of system.

On the 9th of May, 1769, the king, in his speech to parliament, highly applauded their hearty concurrence, in maintaining the execution of the laws, in every part of his dominions. Five days after this speech, lord Hillsborough, secretary of state for the colonies, wrote to lord Botetourt, governor of Virginia: "I can take upon me to assure you, notwithstanding informations to the contrary, from men, with fictitious and seditious views, that his majesty's present administration have at no time entertained a design to propose to parliament, to lay any farther taxes upon America, for the purpose of raising a revenue; and that it is, at present, their intention to propose, the next session of parliament, to take off the duties upon glass, paper, and colours, upon consideration of such duties having been laid contrary to the true principles of commerce." The governor was also informed, that "his majesty relied upon his prudence and fidelity, to make such an explanation of his majesty's measures, as would tend to remove prejudices, and to re-establish mutual confidence and affection, between the mother country and the colonies." In the exact spirit of his instructions, lord Botetourt addressed the Virginia assembly as follows: "It may possibly be objected, that, as his majesty's present administration are not immortal, their successors may be inclined to attempt to undo, what the present ministers shall have attempted to perform; and to that objection I can give but this answer: that it is my firm opinion, that the plan, I have stated to you, will certainly take place, and that it will never be departed from; and so determined am I for ever to abide by it, that I will be content to be declared infamous, if I do not to the last hour of my life, at all times, in all places, and upon all occasions, exert every power, with which I either am, or ever shall be, legally invested, in order to obtain

and maintain for the continent of America, that satisfaction, which I have been authorised to promise this day, by the confidential servants of our gracious sovereign, who, to my certain knowledge, rates his honour so high, that he would rather part with his crown, than preserve it by deceit."

These assurances were received with transports of joy, by the Virginians. They viewed them as pledging his majesty for security, that the late design for raising a revenue in America was abandoned, and never more to be resumed. The assembly of Virginia, in answer to lord Botetourt, expressed themselves thus: "We are sure our most gracious sovereign, under whatever changes may happen in his confidential servants, will remain immutable in the ways of truth and justice, and that he is incapable of deceiving his faithful subjects; and we esteem your lordship's information not only as warranted, but even sanctified by the royal word."

How far these solemn engagements with the Americans, were observed, subsequent events will demonstrate. In a perfect reliance on them, most of the colonies returned to their ancient habits of good humour, and flattered themselves that no future parliament would undertake to give or grant away their property.

From the royal and ministerial assurances given in favour of America, in the year 1769, and the subsequent repeal in 1770, of five-sixths of the duties which had been imposed in 1767; together with the consequent renewal of the mercantile intercourse between Great Britain and her colonies, many hoped, that the contention between the two countries was finally closed. In all the provinces, excepting Massachusetts, appearances seemed to favour that opinion. Many incidents operated there to the prejudice of that harmony, which had begun, elsewhere to return. Stationing a military force among them was a fruitful source of uneasiness. The royal army had been brought thither with the avowed design of enforcing submission to the mother country. Speeches from the throne, and addresses from both houses of parliament, had taught them to look upon the inhabitants as a factious, turbulent people, who aimed at throwing off all subordination to Great Britain. They, on the other hand were accustomed to look upon the soldiery as instruments of tyranny, sent on purpose to drag them out of their liberties.

Reciprocal insults soured the tempers, and mutual injuries embittered the passions of the opposite parties. Some fiery spirits, who thought it an indignity to have troops quartered among them, were constantly exciting the townspeople to quarrel with the soldiers.

On the second of March, 1770, a fray took place near Mr. Gray's ropewalk, between a private soldier of the twenty-ninth regiment, and an inhabitant. The former was supported by his comrades, the latter by the rope-makers, till several on both sides were involved in the consequences. On the 5th, a more dreadful scene was presented. The soldiers, when under arms, were pressed upon, insulted and pelted by a mob, armed with clubs, sticks, and snow-balls covering stones. They were also dared to fire. In this situation, one of the soldiers who had received a blow, in resentment fired at the supposed aggressor. This was followed by a single discharge from six others. Three of the inhabitants were killed, and five were dangerously wounded. The town was immediately in commotion. Such were the temper, force, and number of the inhabitants, that nothing but an engagement to remove the troops out of the town, together with the advice of moderate men, prevented the townspeople from falling on the soldiers. Preston, the captain who commanded, and the party, who fired on the inhabitants, were committed to jail, and afterwards tried. The captain and six of the men were acquitted. Two were brought in guilty of manslaughter. It appeared on the trial, that the soldiers were abused, insulted, threatened, and pelted, before they fired. It was also proved, that only seven guns were fired by the eight prisoners. These circumstances induced the jury to give a

favourable verdict. The result of the trial reflected great honour on John Adams and Josiah Quincy, the counsel for the prisoners; and, also, on the integrity of the jury, who ventured to give an upright verdict, in defiance of popular opinions.

The events of that tragical night sunk deep in the minds of the people, and were made subservient to important purposes. The anniversary of it was observed with great solemnity. Eloquent orators were successively employed, to deliver an annual oration, to preserve the remembrance of it fresh in their minds. On these occasions the blessings of liberty, the horrors of slavery, the dangers of a standing army, the rights of the colonies, and a variety of such topics, were presented to the public view, under their most pleasing and alarming forms. These annual orations administered fuel to the fire of liberty, and kept it burning with an incessant flame.

The obstacles to returning harmony, which have already been mentioned, were increased, by making the governor and judges, in Massachusetts, independent of the province. Formerly they had been paid by yearly grants from the assembly; but about this time provision was made for paying their salaries by the crown. This was resented as a dangerous innovation; as an infraction of their charter; and as destroying that balance of power, essential to free governments. That the crown should pay the salary of the chief justice, was represented by the assembly as a species of bribery, tending to bias his judicial determinations. They made it the foundation for impeaching Mr. Justice Oliver, before the governor; but he excepted to their proceedings as unconstitutional. The assembly, nevertheless, gained two points. They rendered the governor more odious to the inhabitants, and increased the public respect for themselves, as the counter part of the British house of commons, and as guardians of the rights of the people.

A personal animosity between governor Hutchinson and some distinguished patriots in Massachusetts, contributed to perpetuate a flame of discontent in that province, after it had elsewhere visibly abated. This was worked up, in the year 1773, to a high pitch, by a singular combination of circumstances. Some letters had been written, in the course of the dispute, by governor Hutchinson, lieutenant governor Oliver, and other royal servants in Boston, to persons in power in England, which contained a very unfavourable representation of the state of public affairs, and tended to show the necessity of coercive measures, and of changing the chartered system of government, to secure the obedience of the province. These letters fell into the hands of Dr. Franklin, agent of the province, who transmitted them to Boston. The indignation and animosity which were excited on the receipt of them, had no bounds. The house of assembly agreed on a petition and remonstrance to his majesty, in which they charged their governor, and lieutenant governor, with being betrayers of the people they governed, and of giving private, partial, and false information. They also declared them enemies to the colonies, and prayed for justice against them, and for their speedy removal from their places. These charges were carried through by a majority of eighty-two to twelve.

The petition and remonstrance being transmitted to England, their merits were discussed before his majesty's privy council. After a hearing before that board, in which Dr. Franklin represented the province of Massachusetts, the governor and lieutenant governor were acquitted. Mr. Wedderburne, who defended the accused royal servants, in the course of his pleadings, inveighed against Dr. Franklin, in the severest language, as the fomentor of the disputes between the two countries.* It was no protection to this venera-

* This charge is now known to be false. Dr. Franklin took every method in his power to prevent a rupture between Great Britain and America. His advice to his countrymen was, "to hear every thing for the present; as they were sure, in time, to outgrow all

ble sage, that, being the agent of Massachusetts, he conceived it his duty to inform his constituents of letters, written on public affairs, calculated to overturn their chartered constitution. The age, respectability, and high literary character of the subject of Mr. Wedderburne's philippic, turned the attention of the public to the transaction. The insult offered to one of the public agents, and especially to one who was both the pride and ornament of his native country, sunk deep in the minds of the Americans. That a faithful servant, whom they loved, should be insulted for discharging his official duty, rankled in their hearts. Dr. Franklin was immediately dismissed from the office of deputy postmaster general, which he held under the crown. It was not only by his transmission of these letters, that he had given offence to the British ministry, but by his popular writings in favour of America. Two of his pieces, in particular, had lately attracted a large share of public attention, and had an extensive influence on both sides of the Atlantic. The one purported to be an edict from the king of Prussia, for taxing the inhabitants of Great Britain, as descendants of emigrants from his dominions. The other was entitled, "Rules for reducing a great empire to a small one." In both of which he had exposed the claims of the mother country, and the proceedings of the British ministry, with the severity of poignant satire.

For ten years there had now been little intermission in the disputes between Great Britain and her colonies. Their respective claims had never been compromised on middle ground. The calm which followed the repeal of the stamp act, was in a few months disturbed by the revenue act of the year 1767. The tranquillity which followed the repeal of five-sixths of that act, in the year 1770, was nothing more than a truce. The reservation of the duty on tea, as an avowed evidence of the claims of Great Britain to tax her colonies, kept alive the jealousy of the colonists; while, at the same time, the stationing of an army in Massachusetts, the continuance of a board of commissioners in Boston, the constituting the governors and judges of that province independent of the people, were constant sources of irritation. The altercations which, at this period, were common between the royal governors and the provincial assemblies, together with numerous vindications of the claims of America, made the subject familiar to the colonists. The ground of the controversy was canvassed in every company. The more the Americans read, reasoned, and conversed on the subject, the more they were convinced of their right to the exclusive disposal of their property. This was followed by a determination to resist all encroachments on that palladium of liberty. They were as strongly convinced of their right, to refuse and resist parliamentary taxation, as the ruling powers of Great Britain of their right to demand and enforce their submission to it.

The claims of the two countries being thus irreconcilably opposed to each other, the partial calm, which followed the concession of parliament, in 1770, was liable to disturbance, from every incident. Under such circumstances, nothing less than the most guarded conduct, on both sides, could prevent a renewal of the controversy. Instead of following these prudential measures, which would have kept the ground of the dispute out of sight, an impolitic scheme was concerted, between the British ministry and the East India company, that placed the claims of Great Britain and her colonies in hostile array against each other.

In the year 1773, commenced a new era of the

their grievances; and as it could not be in the power of the mother country to oppress them long." With that command of countenance, which is peculiar to great minds, he bore Wedderburne's abuse without any visible emotion; but that he felt, and remembered it, is visible from the following circumstances. About five years afterwards, when, as minister plenipotentiary of the United States, he signed a treaty of alliance on their behalf, with the king of France, he intentionally wore the same coat he had on when he was insulted by Wedderburne. See Dr. Priestley's Life. Vol. II. page 464.

American controversy. To understand this in its origin, it is necessary to recur to the period, when the solitary duty on tea was exempted, from the partial repeal of the revenue act of 1767. When the duties which had been laid on glass, paper, and painters' colours, were taken off, a respectable minority in parliament contended, that the duty on tea should also be removed. To this it was replied; "that, as the Americans denied the legality of taxing them a total repeal would be a virtual acquiescence in their claims; and that, in order to preserve the rights of the mother country, it was necessary to retain the preamble, and at least one of the taxed articles." It was rejoined, that a partial repeal would be a source of endless discontent; and that the tax on it would not defray the expenses of collecting it. The motion in favour of a total repeal was rejected by a great majority. As the parliament thought fit to retain the tax on tea, for an evidence of their right of taxation, the Americans in like manner, to be consistent with themselves in denying that right, discontinued the importation of that commodity. While there was no attempt to introduce tea into the colonies, against this declared sense of the inhabitants, these opposing claims were in no danger of collision. In that case, the mother country might have solaced herself, with her ideal rights, and the colonies, with their favourite opinion of a total exemption from parliamentary taxes, without disturbing the public peace. This mode of compromising the dispute, which seemed at first designed as a salvo for the honour and consistency of both parties, was, by the interference of the East India company, in combination with the British ministry, completely overset.

The expected revenue from tea failed, in consequence of the American association to import none on which a duty was charged. This proceeded as much from the spirit of gain, as of patriotism. The merchants found means of supplying their countrymen with tea, smuggled from countries to which the power of Britain did not extend. They doubtless conceived themselves to be supporting the rights of their country, by refusing to purchase tea from Britain; but they also reflected, that if they could bring the same commodity to market free of duty, their profits would be proportionably greater.

The love of gain was not peculiar to the American merchants. From the diminished exportation to the colonies, the warehouses of the British East India company had in them seventeen millions of pounds of tea, for which a market could not be procured. The ministry and East India company, unwilling to lose, the one, the expected revenue from the sale of the tea in America, the other, the usual commercial profits, agreed on a measure by which they supposed both would be secured.

The East India company was, by law, authorized to export their tea free of duties, to all places whatsoever. By this regulation, tea, though loaded with an exceptionable duty, would come cheaper to the colonies, than before it had been made a source of revenue: for the duty taken off it, when exported from Great Britain, was greater than that to be paid on its importation into the colonies. Confident of success, in finding a market for their tea, thus reduced in its price, and also of collecting a duty on its importation and sale in the colonies, the East India company freighted several ships with teas, for the different colonies, and appointed agents for its disposal. This measure united several interests in opposition to its execution. The patriotism of the Americans was corroborated by several auxiliary aids, no ways connected with the cause of liberty.

The merchants in England were alarmed at the losses, that must accrue to themselves, from the exportations of the East India company, and from the sales going through the hands of consignees. Letters were written to colonial patriots, urging their opposition to the project.

The smugglers, who were both numerous and powerful, could not relish a scheme which, by underselling them, and taking a profitable branch of business out of their hands, threatened a diminution of their gains. The colonists were too sus-

picious of the designs of Great Britain to be imposed upon.

The cry of endangered liberty once more excited an alarm, from New Hampshire to Georgia. The first opposition to the execution of the scheme, adopted by the East India company, began with the American merchants. They saw a profitable branch of their trade likely to be lost, and the benefits of it to be transferred to the people in Great Britain. They felt for the wound, that would be inflicted on their country's claim of exemption from parliamentary taxation; but they felt, with equal sensibility, for the losses they would sustain, by the diversion of the streams of commerce, into unusual channels. Though the opposition originated in the selfishness of the merchants, it did not end there. The great body of the people, from principles of the purest patriotism, were brought over to second their wishes. They considered the whole scheme as calculated to seduce them into an acquiescence with the views of parliament, for raising an American revenue. Much pains were taken to enlighten the colonists on this subject, and to convince them of the imminent hazard to which their liberties were exposed.

The provincial patriots insisted largely on the persevering determination of the parent state, to establish her claim of taxation, by compelling the sale of tea in the colonies, against the solemn resolutions and declared sense of the inhabitants; and that, at a time, when the commercial intercourse of the two countries was renewed, and their ancient harmony fast returning. The proposed venders of the tea were represented as revenue officers, employed in the collection of an unconstitutional tax, imposed by Great Britain. The colonists contended, that, as the duty and the price of the commodity were inseparably blended, if the tea were sold, every purchaser would pay a tax imposed by the British parliament, as part of the purchase money. To obviate this evil, and to prevent the liberties of a great country from being sacrificed by inconsiderate purchasers, sundry town meetings were held in the capitals of the different provinces, and combinations were formed to obstruct the sales of the tea, sent by the East India company.

The resolutions adopted, by the inhabitants of Philadelphia, on the 18th of October, 1773, afford a good specimen of the whole. These were as follow:

"1. That the disposal of their own property is the inherent right of freemen; that there can be no property in that which another can, of right, take from us without our consent; that the claim of parliament to tax America, is, in other words, a claim of right to levy contributions on us at pleasure.

"2. That the duty, imposed by parliament upon tea landed in America, is a tax on the Americans, or levying contributions on them, without their consent.

"3. That the express purpose, for which the tax is levied on the Americans, namely, for the support of government, administration of justice, and defence of his majesty's dominions in America, has a direct tendency to render assemblies useless, and to introduce arbitrary government and slavery.

"4. That a virtuous and steady opposition, to this ministerial plan of governing America, is absolutely necessary to preserve even the shadow of liberty; and is a duty which every freeman in America owes to his country, to himself, and to his posterity.

"5. That the resolution, lately entered into by the East India company, to send out their tea to America, subject to the payment of duties on its being landed here, is an open attempt to enforce this ministerial plan, and a violent attack upon the liberties of America.

"6. That it is the duty of every American to oppose this attempt.

"7. That whoever shall, directly or indirectly, countenance this attempt, or, in any wise, aid or abet in unloading, receiving, or vending the tea sent, or to be sent out by the East India com-

pany, while it remains subject to the payment of a duty here, is an enemy to his country.

"8. That a committee be immediately chosen, to wait on those gentlemen, who, it is reported, are appointed by the East India company, to receive and sell said tea, and request them, from a regard to their own character, and the peace and good order of the city and province, immediately to resign their appointment."

As the time approached, when the arrival of the tea ships might be soon expected, such measures were adopted, as seemed most likely to prevent the landing of their cargoes. The tea consignees, appointed by the East India company, were, in several places, compelled to relinquish their appointments; and no others could be found, hardy enough, to act in their stead. The pilots, in the river Delaware, were warned not to conduct any of the tea ships into their harbour. In New York, popular vengeance was denounced against all who would contribute, in any measure, to forward the views of the East India company. The captains of the New York and Philadelphia ships, being apprized of the resolution of the people, and fearing the consequence of landing a commodity, charged with an odious duty, in violation of their declared public sentiments, concluded to return directly to Great Britain, without making any entry at the custom house.

It was otherwise in Massachusetts. The tea ships, designed for the supply of Boston, were consigned to the sons, cousins, and particular friends of governor Hutchinson. When they were called upon to resign, they answered "that it was out of their power." The collector refused to give a clearance, unless the vessels were discharged of dutiable articles. The governor refused to give a pass for the vessels, unless properly qualified for the custom house. The governor likewise, requested admiral Montague to guard the passages out of the harbour; and gave orders to suffer no vessels, coasters excepted, to pass the fortress from the town, without a pass signed by himself. From a combination of these circumstances, the return of the tea vessels, from Boston, was rendered impossible. The inhabitants, then, had no option, but to prevent the landing of the tea; to suffer it to be landed, and depend on the unanimity of the people not to purchase it; to destroy the tea; or to suffer a deep laid scheme against their sacred liberties to take effect. The first would have required incessant watching, by night, as well as by day, for a period of time, the duration of which no one could compute. The second would have been visionary to childishness, by suspending the liberties of a growing country, on the self-denial and discretion of every tea-drinker in the province. They viewed the tea as the vehicle of an unconstitutional tax, and as inseparably associated with it. To avoid the one, they resolved to destroy the other. About seventeen persons, dressed as Indians, repaired to the tea ships, broke open three hundred and forty-two chests of tea, and, without doing any other damage, discharged their contents into the water.

Thus, by the inflexibility of the governor, the issue of this business was different, at Boston, from what it was elsewhere. The whole cargoes of tea were returned from New York and Philadelphia. That which was sent to Charleston was landed and stored; but not offered for sale. Mr. Hutchinson had repeatedly urged government to be firm and persevering. He could not, therefore, consistent with his honour, depart from a line of conduct, he had so often and so strongly recommended to his superiors. He also believed, that the inhabitants would not dare to perfect their engagements; and flattered himself, that they would desist, when the critical moment arrived.

Admitting the rectitude of the American claims of exemption, from parliamentary taxation, the destruction of the tea, by the Bostonians, was warranted by the great law of self-preservation; for it was not possible for them, by any other means, to discharge the duty they owed to their country.

The event of this business was very different

from what had been expected in England. The colonists acted with so much union and system, that there was not a single chest, of any of the cargoes sent out by the East India company, sold for their benefit.

CHAPTER V.

Proceedings of the British Parliament, in consequence of the destruction of the tea, by the Bostonians. Boston port act, &c.

INTELLIGENCE of the events, which have been stated in the last chapter, was, on the 7th of March, 1774, communicated, in a message from the throne, to both houses of parliament. In this communication, the conduct of the colonists was represented, as not only obstructing the commerce of Great Britain, but as subversive of its constitution. The message was accompanied with a number of papers, containing copies and extracts of letters, from the several royal governors and others; from which it appeared, that the opposition to the sale of tea was not peculiar to Massachusetts; but common to all the colonies. These papers were accompanied with declarations, that nothing short of parliamentary influence could re-establish order, among the turbulent colonists; and that, therefore, decisive measures should be immediately adopted. If the right of levying taxes on the Americans were vested in the parent state, these inferences were well-founded; but if it were not, their conduct, in resisting an invasion of their rights, was justified, not only by many examples in the history of Britain, but by the spirit of the constitution of that country, which they were opposing.

By the destruction of the tea, the people of Boston had incurred the sanction of penal laws. Those in Great Britain, who wished for an opportunity to take vengeance on that town, commonly supposed by them to be the mother of sedition and rebellion, rejoiced, that her inhabitants had laid themselves open to castigation.

It was well known, that the throwing of the tea into the river did not originate with the persons, who were the immediate instruments of that act of violence; and that the whole had been concerted, at a public meeting, and was, in a qualified sense, the act of the town. The universal indignation, which was excited in Great Britain, against the people of Boston, pointed out to the ministry the suitability of the present moment for humbling them. Though the ostensible ground of complaint was nothing more than a trespass on private property, committed by private persons; yet it was well known to be a part of a long digested plan of resistance to parliamentary taxation. Every measure, that might be pursued on the occasion, seemed to be big with the fate of the empire. To proceed in the usual forms of law, appeared to the rulers, in Great Britain, to be a departure from their dignity. It was urged by the ministry, that parliament, and parliament only, was capable of re-establishing tranquility among these turbulent people, and of bringing order out of confusion. To stifle all opposition from the merchants, the public papers were filled with writings, which stated the impossibility of carrying on a future trade to America, if this flagrant outrage on commerce should go unpunished.

It was in vain urged, by the minority, that no good could arise from coercion, unless the minds of the Americans were made easy on the subject of taxation. Equally vain was a motion for a retrospect into the conduct of the ministry, which had provoked their resistance.

The parliament confined themselves solely to the late misbehaviour of the Americans, without any inquiry into its provoking causes.

The violence of the Bostonians, in destroying an article of commerce, was largely insisted upon, without any indulgence for the jealous spirit of liberty, in the descendants of Englishmen.—The connexion between the tea, and the uncon-

stitutional duty imposed thereon, was overlooked, and the public mind of Great Britain solely fixed on the obstruction given to commerce, by the turbulent colonists. The spirit raised against the Americans became as high, and as strong, as their most inveterate enemies desired. This was not confined to the common people; but took possession of legislators, whose unclouded minds ought to be exalted above the mists of prejudice or partiality. Such, when they consult on public affairs, should be free from the impulses of passion; for it rarely happens, that resolutions, adopted in anger, are founded in wisdom. The parliament of Great Britain, transported with indignation against the people of Boston, in a fit of rage resolved to take legislative vengeance on that devoted town.

Disregarding the forms of her own constitution, by which none are to be condemned unheard, or punished without a trial, a bill was finally passed, by which the port of Boston was virtually blocked up: for it was legally precluded from the privilege of landing and discharging, or of lading and shipping of goods, wares, and merchandise. The minister, who proposed this measure, stated, in support of it, that the opposition, to the authority of parliament, had always originated in that colony, and had always been instigated by the seditious proceedings of the town of Boston; that it was, therefore necessary to make an example of that town, which, by an unparalleled outrage, had violated the freedom of commerce; and that Great Britain would be wanting in the protection she owed to her peaceable subjects, if she did not punish such an insult, in an exemplary manner.—He, therefore, proposed, that the town of Boston should be obliged to pay for the tea, which had been destroyed. He was farther of opinion, that making a pecuniary satisfaction, for the injury committed, would not alone be sufficient; but that, in addition thereto, security must be given in future, that trade might be safely carried on; property protected; laws obeyed; and duties paid. He urged, therefore, that it would be proper to take away from Boston, the privileges of a port, until his majesty should be satisfied, in these particulars, and publicly declare in council, on a proper certificate of the good behaviour of the town, that he was so satisfied. Until this should happen, he proposed that the custom-house officers should be removed to Salem. The minister hoped, that this act would execute itself; or, at most, that a few frigates would secure its execution. He also hoped, that the prospect of advantage to the town of Salem, from its being made the seat of the custom-house, and from the occlusion of the port of Boston, would detach the inhabitants from the interest of the latter, and dispose them to support a measure, from which they had so much to expect. It was also presumed, that the other colonies would leave Boston to suffer the punishment due to her demerits. The abettors of parliamentary supremacy flattered themselves, that this decided conduct of Great Britain would, for ever extinguish all opposition of the refractory colonists to the claims of the mother country; and the apparent equity of obliging a delinquent town to make reparation, for an injury occasioned by the factious spirit of its inhabitants, silenced many of the friends of America. The consequences, resulting from this measure, were the reverse of what were wished by the first, and dreaded by the last.

By the operation of the Boston port act, the preceding situation of its inhabitants, and that of the East India company, was reversed. The former had more reason to complain of the disproportionate penalty, to which they were indiscriminately subjected, than the latter of that outrage on their property, for which punishment had been inflicted. Hitherto the East India company were the injured party; but, from the passing of this act, the balance of injury was on the opposite side. If wrongs received entitled the former to reparation, the latter had a much stronger title on the same ground. For the act of seventeen or eighteen individuals, as many thousands were involved in one general calamity.

Both parties viewed the case on a much larger scale than that of municipal law. The people of Boston alledged, in vindication of their conduct, that the tea was a weapon aimed at their liberties; and that the same principles of self-preservation, which justify the breaking of the assassin's sword, uplifted for destruction, equally authorized the destruction of that tea, which was the vehicle of an unconstitutional tax, subversive of their liberties. The parliament of Great Britain considered the act of the people of Boston, in destroying the tea, as an open defiance of that country. The demerit of the action, as an offence against property, was lost in the supposed superior demerit of treasonable intention, to emancipate themselves from a state of colonial dependence. The Americans conceived the case to be intimately connected with their liberties; the inhabitants of Great Britain, with their supremacy. The former considered it as a duty they owed their country, to make a common cause with the people of Boston; the latter thought themselves under equal obligations, to support the privileges of parliament.

On the third reading of the Boston port bill, a petition was presented by the lord mayor, in the name of several natives and inhabitants of North America, then residing in London. It was drawn with great force of language, and stated that, "the proceedings of parliament against Boston were repugnant to every principle of law and justice, and established a precedent, by which no man in America could enjoy a moment's security." The friends of parliamentary supremacy had long regretted the democratic constitutions of the provinces, as adverse to their schemes.—They saw, with concern, the steady opposition that was given to their measures, by the American legislatures. These constitutions were planned, when Great Britain neither feared nor cared for her colonies. Not suspecting that she was laying the foundation of future states, she granted charters that gave to the people so much of the powers of government, as enabled them to make, not only a formidable, but a regular, constitutional opposition to the country from which they sprung.

Long had her rulers wished for an opportunity to revoke these charters, and to new-model these governments.* The present moment seemed favourable to this design. The temper of the nation was high; and the resentment against the province of Massachusetts general and violent. The late outrages in Boston furnished a pretence for the attempt. An act of the British parliament speedily followed to the one for shutting up the port of Boston, entitled, An act for better regulating the government of Massachusetts. The object of this was to alter the charter of the province, in the following particulars.

The council, or second branch of the legislature, heretofore elected by the general court, was to be, from the first of August, 1774, appointed by the crown. The royal governor was also, by the same act, invested with the power of appointing and removing all judges of the interior courts of common pleas, commissioners of oyer and terminer, the attorney general, provost marshal, justices, sheriffs, &c. The town meetings, which were sanctioned by the charter, were, with a few exceptions, expressly forbidden to be held, with-

* The three last kings of the Stuart line laboured hard, to annihilate the charters of the English colonies in America; and nothing but the revolution of 1688, in England, prevented the accomplishment of their designs. The four first sub-revolutionary sovereigns of England discontinued the attempt; but it was revived, in the reign of the fifth. This abrogation of the charter of Massachusetts was the entering wedge, and, if successful, would doubtless have been followed, by a prostration of the charters of the other provinces, to make room for a more courtly system, less dependent on the people. The American revolution saved the colonies, in the last case, as the English revolution had in the first:—so necessary are occasional revolutions, to bring governments back to first principles, and to teach rulers, that the people are the fountain of all legitimate power, and their happiness the object of all its delegations.

out the leave of the governor or lieutenant governor in writing, expressing the special business of said meeting, first had and obtained; and with a farther restriction, that no matter should be treated of at those meetings, except the election of public officers, and the business expressed in the leave given by the governor or lieutenant governor. Jurymen, who had been before elected by the freeholders and inhabitants of the several towns, were to be, by this new act, all summoned and returned, by the sheriffs of the respective counties. The whole executive government was taken out of the hands of the people; and the nomination of all the important officers vested in the king or his governor.

This act excited a greater alarm than the port act. The one affected only the metropolis; the other the whole province. The one had the appearance of being merited; as it was well known, that an act of violence had been committed by its inhabitants, under the sanction of a town meeting; but the other had no stronger justifying reason than that the proposed alterations were, in the opinion of the parliament, absolutely necessary, in order to the preservation of the peace and good order of the said province. In support of this bill, the minister who brought it in, alleged, that an executive power was wanting in the country. The very people, said he, who commit the riots, are the posse comitatus, in which the force of the civil power consists. He farther urged the utility of making laws, the execution of which, under the present form of government in Massachusetts, might be so easily evaded; and therefore contended for a necessity to alter the whole frame of their constitution, as far as related to its executive and judicial powers. In opposition, it was urged, that the taking away the civil constitution of a whole people, secured by a solemn charter, upon general charges of delinquencies and defects, was a stretch of power of the most arbitrary and dangerous nature.

By the English constitution, charters were sacred, revocable only by a due course of law, and on a conviction of misconduct. They were solemn compacts between the prince and the people and without the constitutional power of either party. The abettors of the British schemes reasoned in a summary way. Said they, "the colonies, particularly Massachusetts, by their circular letters, associations, and town meetings, have for years past, thwarted all the measures of government, and are meditating independency. This turbulent spirit of theirs is fostered by their constitution which invests them with too much power, to be consistent with their state of subordination. Let us therefore lay the axe at the root: new model their charter; and lop off those privileges which they have abused."

When the human mind is agitated with passion, it rarely discerns its own interest, and but faintly foresees consequences. Had the parliament stopped short with the Boston port act, the motive to union and to make a common cause with that metropolis, would have been feeble, perhaps intellectual to have roused the other provinces; but the arbitrary mutilation of the important privileges contained in a solemn charter, without a trial, and without a hearing, by the will of parliament, convinced the most moderate, that the cause of Massachusetts was the cause of all the provinces.

It readily occurred to those who guided the helm of Great Britain, that riots would probably take place, in attempting the execution of the acts just mentioned. They also discerned, that such was the temper of the people, that trials for murders, committed in suppressing riots, if held in Massachusetts, would seldom terminate in favour of the parties, who were engaged on the side of government. To make their system complete, it was necessary to go one step farther, and to screen their active friends from the apprehended partiality of such trials. It was therefore provided by law, that if any person was indicted for murder, or for any capital offence, committed in aiding magistracy, that the government might send the person so indicted, to another colony, or to Great

Britain to be tried. This law was the subject of severe comments. It was considered as an act of indemnity to those, who should embroil their hands in the blood of their fellow-citizens. It was asked, how the relations of a murdered man could effectually prosecute, if they must go three thousand miles to attend that business. It was contended, that the act, by stopping the usual course of justice, would give rise to assassinations, and dark revenge among individuals; and encourage all kinds of lawless violence. The charge of partiality was retorted. For, said they, "if a party spirit, against the authority of Great Britain, would condemn an active officer, in Massachusetts, as a murderer, the same party spirit, for preserving the authority of Great Britain, would in that country, acquit a murderer as a spirited performer of his duty." The case of Captain Preston was also quoted, as a proof of the impartial administration of justice in Massachusetts.

The same natives of America, who had petitioned against the Boston port bill, presented a second one against these two bills. With uncommon energy of language, they pointed out many constitutional objections against them; and concluded with fervently beseeching, "that the parliament would not by passing them, reduce their countrymen to an abject state of misery and humiliation or drive them to the last resource of despair." The lords of the minority entered also a protest against the passing of each of these bills.

It was fortunate for the people of Boston, and those who wished to promote a combination of the colonies against Great Britain, that these three several laws passed nearly at the same time.—They were presented in quick succession, either in the form of bills, or of acts, to the consideration of the inflamed Americans, and produced effects on their minds, infinitely greater than could have been expected from either, especially from the Boston port act alone.

When the fire of indignation, excited by the first, was burning intelligence of these other acts, operated like fuel, and made it flame out with increasing vehemence. The three laws were considered as forming a complete system of tyranny, from the operation of which, there was no chance of making a peaceable escape.

"By the first," said they, "the property of unoffending thousands is arbitrarily taken away, for the act of a few individuals. By the second, our chartered liberties are annihilated: and by the third, our lives may be destroyed with impunity. Property, liberty, and life, are all sacrificed on the altar of ministerial vengeance." This mode of reasoning was not peculiar to Massachusetts.—These three acts of parliament, contrary to the expectation of those who planned them, became a cement of a firm union among the colonies, from New Hampshire to Georgia. They now openly said, "Our charters and other rights and immunities, must depend on the pleasure of parliament." They were sensible that they had all concurred, more or less, in the same line of opposition, which had provoked these severe statutes against Massachusetts; and they believed, that vengeance, though delayed, was not remitted: and that the only favour, the least culpable could expect, was to be the last that would be devoured. The friends of the colonies contended, that these laws were in direct contradiction to the letter and the spirit of the British constitution. Their opposers could support them on no stronger grounds than those of political necessity and expedience. They acknowledged them to be contrary to the established mode of proceeding; but defended them, as tending ultimately to preserve the constitution, from the meditated independency of the colonies.

Such was the temper of the people in England that the acts hitherto passed were popular. A general opinion had gone forth in the mother country, that the people of Massachusetts, by their violent opposition to government, had drawn on themselves merited correction.

The parliament did not stop here; but proceeded one step farther, which inflamed their enemies in

America, and lost them friends in Great Britain. The general clamour in the provinces was, that the proceedings in parliament was arbitrary and unconstitutional. Before they completed their memorable session, in the beginning of the year 1774, they passed an act rejecting the government of Quebec, which, in the opinion of their friends merited these appellations. By this act government of that province was made to extend southward to the Ohio, westward to the banks of the Mississippi, and northward to the boundary of the Hudson's Bay company. The principal object of the act was to form a legislative council, for all the affairs of the province, except taxation, which council should be appointed by the crown; the office to be held during pleasure; his majesty's Roman Catholic subjects to be entitled to a place therein; to establish the French laws, and a trial without jury, in civil cases; and the English laws, with a trial by jury, in criminal; and to secure, to the Roman Catholic clergy, except the regulars, the legal enjoyment of their estates, and their tithes, from all who were of their own religion. Not only the spirit, but the letter of this act were so contrary to the English constitution, that it diminished the popularity of the measures, which had been adopted against the Americans.

Among the more southern colonists, it was conceived, that its evident object was to make the inhabitants of Canada fit instruments, in the hands of power, to reduce them to a state of slavery.

They well remembered the embarrassments occasioned to them, in the late war between France and England, by the French inhabitants of Canada. They supposed, that the British administration, meant, at this time, to use these people in the same line of attack, for their subjugation. As Great Britain had new modelled the chartered government of Massachusetts, and claimed an authority to so do in every province, the colonists were apprehensive, that, in the plenitude of her power, she would impose on each of them, in their turn, a constitution, similar to the one projected for the province of Canada.

They foresaw, or thought they foresaw, the annihilation of their ancient assemblies, and their whole legislative business transferred to creatures of the crown. The legal parliamentary right to a maintenance, conferred on the clergy of the Roman Catholic religion, gave great offence to many in England; but the political consequences, expected to result from it, were most dreaded by the colonists.

They viewed the whole act as an evidence, that hostilities were intended against them, and as calculated to make Roman Catholics subservient to the purposes of military coercion.

The session of parliament, which passed these memorable acts, had stretched far into summer. As it drew near a close, the most sanguine expectations were indulged, that, from the resolution and great unanimity of parliament, on all American questions, the submission of the colonists would be immediate, and their future obedience and tranquility effectually secured. The triumphs, and congratulations, of the friends of the ministry were unusually great.

In passing the acts which have been just mentioned, dissentients in favour of America, were unusually few. The ministerial majority, believing that the refractory colonists depended chiefly on the countenance of their English abettors, were of opinion, that as soon as they received intelligence of the decrease of their friends, and of the decisive conduct of parliament, they would acquiesce in the will of Great Britain. The fame and grandeur of the nation were such, that it was never imagined, they would seriously dare to contend with so formidable a people. The late triumphs of Great Britain had made such an impression on her rulers, that they believed the Americans, on seeing the ancient spirit of the nation revive, would not risk a trial of prowess with those fleets and armies, which the combined forces of France and Spain were unable to resist. By an impious confidence in their superior strength, they precipitated the nation into rash measures, from the dire effects of which, the world may learn a useful lesson.

CHAPTER VI.

Proceedings of the colonies, in 1774, in consequence of the Boston port act.

THE winter which followed the destruction of the tea in Boston, was fraught with anxiety to those of the colonists, who were given to reflection. Many conjectures were formed about the line of conduct Great Britain would probably adopt for the support of her dignity. The fears of the most timid were more than realized, by the news of the Boston port bill. This arrived on the 10th of May, 1774; and its operation was to commence the 1st of the next month. Various town meetings were called, to deliberate on the state of public affairs. On the 13th of May, the town of Boston passed the following vote:

"That it is the opinion of this town, that, if the other colonies come to a joint resolution, to stop all importation from Great Britain and the West Indies, till the act, for blocking up this harbour, be repealed, the same will prove the salvation of North America, and her liberties. On the other hand, if they continue their exports and imports, there is high reason to fear that fraud, power, and the most odious oppression, will rise triumphant over justice, right, social happiness, and freedom. And, moreover, that this vote be transmitted by the moderator, to all our sister colonies, in the name and behalf of this town."

Copies of this vote were transmitted to each of the colonies. The opposition to Great Britain had hitherto called forth the pens of the ingenious, and, in some instances, imposed the self-denial of non-importation agreements: but the bulk of the people had little to do with the dispute. The spirited conduct of the people of Boston, in destroying the tea, and the alarming precedents set by Great Britain, in consequence thereof, brought subjects into discussion, with which every peasant and day labourer was concerned.

The patriots who had hitherto guided the helm, knew well, that, if the other colonies did not support the people of Boston, they must be crushed; and it was equally obvious, that in their coercion a precedent, injurious to liberty, would be established. It was therefore the interest of Boston to draw in the other colonies. It was also the interest of the patriots, in all the colonies, to bring over the mass of the people, to adopt such efficient measures as were likely to extricate the inhabitants of Boston from the unhappy situation in which they were involved. To effect these purposes, much prudence as well as patriotism was necessary. The other provinces were but remotely affected by the fate of Massachusetts. They had no particular cause, on their own account, to oppose the government of Great Britain. That a people so circumstanced, should take part with a distressed neighbour, at the risk of incurring the resentment of the mother country, did not accord with the selfish maxims by which states, as well as individuals, are usually governed. The ruled are, for the most part, prone to suffer as long as evils are tolerable: and, in general, they must feel before they are roused to contend with their oppressors: but the Americans acted on a contrary principle.

They commenced an opposition to Great Britain, and ultimately engaged in a defensive war, on speculation. They were not so much moved by oppression, actually felt, as by a conviction that a foundation was laid, and a precedent about to be established, for future oppressions. To convince the bulk of the people, that they had an interest in foregoing a present good, and submitting to a present evil, in order to obtain a future greater good, and to avoid a future greater evil, was the task assigned to the colonial patriots. It called for the exertion of their utmost abilities. They effected it in a great measure by means of the press. Pamphlets, essays, addresses, and newspaper dissertations, were daily presented to the public, proving that Massachusetts was suffering in the common cause; and that interest and policy required the united exertions of all the colonies, in support of

that much-injured province. It was inculcated on the people, that, if the ministerial schemes were suffered to take effect in Massachusetts, the other colonies must expect the loss of their charters, and that a new government would be imposed upon them, like that projected for Quebec. The king and parliament held no patronage in America sufficient to oppose this torrent. The few who ventured to write in their favour, found a difficulty in communicating their sentiments to the public. No pensions or preferments awaited their exertions. Neglect and contempt were their usual portion; but popularity, consequence, and fame, were the rewards of those who stepped forward in the cause of liberty. In order to interest the great body of the people, the few, who were at the helm, disclaimed any thing more decisive, than convening the inhabitants, and taking their sense on what was proper to be done. In the meantime, great pains were taken to prepare them for the adoption of vigorous measures.

The words whigs and tories, for want of better, were now introduced, as the distinguishing names of parties. By the former, were meant those who were for making a common cause with Boston, and supporting the colonies in their opposition to the claims of parliament. By the latter, those who were, at least, so far favourers of Great Britain, that they wished, either that no measures, or only palliative measures, should be adopted in opposition to her schemes.

These parties were so nearly balanced in New York, that nothing more was agreed to, at the first meeting of the inhabitants, than a recommendation to call a congress.

At Philadelphia, the patriots had a delicate part to act. The government of the colony being proprietary, a multitude of officers, connected with that interest, had much to fear from convulsions, and nothing to expect from a revolution. A still greater body of the people, called Quakers, denied the lawfulness of war; and therefore could not adopt such measures, for the support of Boston, as naturally tended to produce an event so adverse to their system of religion.

The citizens of Boston not only sent forward their public letter to the citizens of Philadelphia, but accompanied it with private communications, to individuals of known patriotism and influence, in which they stated the impossibility of their standing alone, against the torrent of ministerial vengeance, and the indispensable necessity, that the leading colony of Pennsylvania should afford them its support and countenance. The advocates in Philadelphia, for making a common cause with Boston, were fully sensible of the state of parties in Pennsylvania. They saw the dispute with Great Britain brought to a crisis, and a new scene opening, which required exertions different from any heretofore made. The success of these they well knew, depended on the wisdom, with which they were planned, and the union of the whole people, in carrying them into execution. They saw the propriety of proceeding with the greatest circumspection; and therefore resolved, at their first meeting, on nothing more than to call a general meeting of the inhabitants, on the next evening. At the second meeting, the patriots had so much moderation and policy, as to urge nothing decisive, contenting themselves with taking the sense of the inhabitants, simply on the propriety of sending an answer to the public letter from Boston. This was universally approved. The letter agreed upon was firm but temperate. They acknowledged the difficulty of offering advice on the present occasion; sympathized with the people of Boston in their distress; and observed that all lenient measures, for their relief, should be first tried. They said, that, if the making restitution for the tea destroyed, would put an end to the unhappy controversy, and leave the people of Boston upon their ancient footing of constitutional liberty, it could not admit of a doubt what part they should act; but that it was not the value of the tea; it was the indefeasible right of giving and granting their own money, which was the matter

in consideration; that it was the common cause of America; and, therefore, necessary, in their opinion, that a congress of deputies from the several colonies should be convened, to devise means for restoring harmony between Great Britain and the colonies, and preventing matters from coming to extremities. Till this could be brought about, they recommended firmness, prudence, and moderation to the immediate sufferers; assuring them, that the people of Pennsylvania would continue to evince a firm adherence to the cause of American liberty.

In order to awaken the attention of the people, a series of letters was published, well calculated to rouse them to a sense of their danger, and point out the fatal consequences of the late acts of parliament. Every newspaper teemed with dissertations in favour of liberty; and with debates of the members of parliament, especially with the speeches of the favourers of America, and the protests of the dissenting lords. The latter had a particular effect on the colonists, and were considered by them as proofs, that the late acts against Massachusetts were unconstitutional and arbitrary.

The minds of the people being thus prepared, the friends of liberty promoted a petition to the governor, for convening the assembly. They knew that this would not be granted, and that the refusal of it would smooth the way for calling the inhabitants together. The governor having refused to call the assembly, a general meeting of the inhabitants was requested. About eight thousand met, on the 18th of June, 1774 and adopted sundry spirited resolutions. In these they declared, that the Boston port act was unconstitutional; that it was expedient to convene a continental congress; to appoint a committee for the city and county of Philadelphia, to correspond with their sister colonies and the several counties of Pennsylvania; and to invest that committee with power to determine on the best mode for collecting the sense of the province, and appointing deputies to attend a general congress. Under the sanction of this last resolve, the committee appointed for that purpose, wrote a circular letter to all the counties of the province, requesting them to appoint deputies to a general meeting, proposed to be held on the 15th of July. Part of this letter was in the following words:

"We would not offer such an affront to the well-known public spirit of Pennsylvania, as to question your zeal on the present occasion. Our very existence in the rank of freemen, and the security of all that ought to be dear to us, evidently depends on our conducting this great cause to its proper issue, by firmness, wisdom, and magnanimity. It is with pleasure we assure you, that all the colonies, from South Carolina to New Hampshire, are animated with one spirit, in the common cause, and consider this as the proper crisis, for having our differences, with the mother country, brought to some certain issue, and our liberties fixed upon a permanent foundation. This desirable end can only be accomplished by a free communication of sentiments, and a sincere and fervent regard for the interests of our common country."

The several counties readily complied with the request of the inhabitants of Philadelphia, and appointed deputies; who met at the time appointed, and passed sundry resolves, in which they reprobated the late acts of parliament; expressed their sympathy with Boston, as suffering in the common cause; approved of holding a congress; and declared their willingness to make any sacrifices, that might be recommended by a congress, for securing their liberties.

Thus, without tumult, disorder, or divided councils, the whole province of Pennsylvania was, by prudent management and temperate proceedings, brought into the opposition, with its whole weight and influence. This is the more remarkable, as it is probable, that, if the sentiments of individuals had been separately taken, there would have been a majority against involving themselves in the consequences of taking part with the destroyers of the tea, at Boston.

While these proceedings were carrying on in Pennsylvania, three of the most distinguished patriots of Philadelphia, under colour of an excursion of pleasure, made a tour throughout the province, in order to discover the real sentiments of the common people. They were well apprized of the consequences of taking the lead in a dispute, which every day became more and more serious, unless they could depend on being supported by the yeomanry of the country. By freely associating and conversing with many of every class and denomination, they found them unanimous in the fundamental principle of the American controversy, "that the parliament of Great Britain had no right to tax them." From their general determination on this subject, a favourable prognostic was formed, of a successful opposition to the claims of Great Britain.

In Virginia, the house of burgesses, on the 26th of May, 1774, resolved, that the first of June, the day on which the operation of the Boston port bill was to commence, should be set apart by the members, as a day of fasting, humiliation and prayer; "devoutly to implore the divine interposition, for averting the heavy calamities which threatened destruction to their civil rights, and the evils of a civil war; and to give them one heart and one mind, to oppose, by all just and proper means, every injury to American rights." On the publication of this resolution, the royal governor, the earl of Dunmore dissolved them. The members, notwithstanding their dissolution, met in their private capacities, and signed an agreement, in which, among other things, they declared, "that an attack made on one of their sister colonies, to compel submission to arbitrary taxes, was an attack made on all British America, and threatened ruin to the rights of all, unless the united wisdom of the whole be applied."

In South Carolina the vote of the town of Boston, of the 13th of May, being presented to a number of the leading citizens of Charleston, it was unanimously agreed to call a meeting of the inhabitants.

That this might be as general as possible, letters were sent to every parish and district in the province, and the people were invited to attend, either personally, or by their representatives, at a general meeting of the inhabitants. A large number assembled, in which were some, from almost every part of the province. The proceedings of the parliament against the province of Massachusetts were distinctly related to this convention. Without one dissenting voice, they passed sundry resolutions, expressive of their rights and of their sympathy with the people of Boston. They also chose five delegates to represent them, in a continental congress, and invested them "with full powers, and authority, in behalf of them and their constituents, to concert, agree to, and effectually prosecute such legal measures as, in their opinion, and the opinion of the other members, would be most likely to obtain a redress of American grievances."

The events of this time may be transmitted to posterity; but the agitation of the public mind can never be fully comprehended, by those who were not witnesses of it.

In the counties and towns of the several provinces, as well as in the cities, the people assembled and passed resolutions, expressive of their rights, and of their detestation of the late acts of parliament. These had an instantaneous effect on the minds of thousands. Not only the young and impetuous, but the aged and temperate, joined in pronouncing them to be unconstitutional and oppressive. They viewed them as deadly weapons aimed at the vitals of that liberty, which they adored; and as rendering abortive the generous pains taken by their forefathers, to procure for them in a new world, the quiet enjoyment of their rights. They were the subjects of their meditation when alone, and of their conversation when in company.

Within little more than a month, after the news of the Boston port bill reached America, it was

communicated from state to state; and a flame kindled, in almost every breast, through the widely extended provinces.

In order to understand the mode by which this flame was spread; with such rapidity, over so great an extent of country, it is necessary to observe, that the several colonies were divided into counties, and these again sub-divided into districts, distinguished by the names of towns, townships, precincts, hundreds or parishes. In New England the sub-divisions, which are called towns, were, by law, bodies corporate; had their regular meetings; and might be occasionally convened by their proper officers. The advantages derived from these meetings, by uniting the whole body of the people, in the measures taken to oppose the stamp act, induced other provinces to follow the example. Accordingly, under the association which was formed to oppose the revenue act of 1767, committees were established, not only in the capitals of every province, but in most of the subordinate districts. Great Britain, without designing it, had, by her two preceding attempts at American revenue, taught her colonies, not only the advantages, but the means of union. The system of committees, which prevailed in 1765, and also in 1767, was revived in 1774. By them there was a quick transmission of intelligence, from the capital towns, through the subordinate districts, to the whole body of the people, and an union of counsels and measures was effected, among widely disseminated inhabitants.

It is perhaps impossible for human wisdom, to contrive any system more subservient to these purposes, than such a reciprocal exchange of intelligence, by committees. From the want of such a communication with each other, and consequently of union among themselves, many states have lost their liberties, and more have been unsuccessful in their attempts to regain them, after they were lost.

What the eloquence and talents of Demosthenes could not effect among the states of Greece, might have been effected by the simple device of committees of correspondence. The few have been enabled to keep the many in subjection, in every age from the want of union among the latter. Several of the provinces of Spain complained of oppression, under Charles the fifth, and in transports of rage took arms against him; but they never consulted or communicated with each other. They resisted separately, and were therefore separately subdued.

The colonists sympathizing with their distressed brethren in Massachusetts, felt themselves called upon, to do something for their relief; but to determine what was most proper, did not so obviously occur. It was a natural idea, that, for harmonising their measures, a congress of deputies from each province should be convened. This early occurred to all; and, being agreed to, was the means of producing union and concert among inhabitants, removed several hundred miles from each other. In times less animated, various questions about the place and legality of their meeting, and about the extent of their power, would have produced a great diversity of sentiments; but on this occasion, by the special agency of Providence, there was the same universal bent of inclination, in the great body of the people. A sense of common danger extinguished selfish passions. The public attention was fixed on the great cause of liberty. Local attachments and partialities were sacrificed on the altar of patriotism.

There were not wanting moderate men, who would have been willing to pay for the tea destroyed, if that would have put an end to the controversy; for, it was not for the value of the tea, nor of the tax, but the right of giving and granting their money, that the colonists contended. The act of parliament was so cautiously worded, as to prevent the opening of the port of Boston, even though the East India company had been reimbursed for all damages, "until it was made appear to his majesty in council, that peace and

obedience to the laws were so far restored, in the town of Boston, that the trade of Great Britain might be safely carried on there, and his majesty's customs duly collected." The latter part of this limitation, "the due collection of his majesty's customs," was understood to comprehend submission to the late revenue laws. It was therefore inferred, that payment for the tea destroyed, would produce no certain relief, unless they were willing to give operation to the law, for raising a revenue on future importations of that commodity, and also to acquiesce in the late mutilation of their charter. As it was deliberately resolved, never to submit to either, the most lukewarm of well-informed patriots, possessing the public confidence, neither advised nor wished for the adoption of that measure. A few in Boston, who were known to be in the royal interest, proposed a resolution for that purpose; but they met with no support. Of the many, who joined the British in the course of the war, there was scarcely an individual to be found in this early stage of the controversy, who advocated the right of parliamentary taxation. There were doubtless many timid persons, who fearing the power of Britain, would rather have submitted to her encroachments, than risked the vengeance of her arms; but such, for the most part, suppressed their sentiments. Zeal for liberty being immediately rewarded with applause, the patriots had every inducement to come forward, and avow their principles; but there was something so unpopular in appearing to be influenced by timidity, interest, or excessive caution, when essential interests were attacked, that such persons shunned public notice, and sought the shade of retirement.

In the three first months, which followed the shutting up of the port of Boston, the inhabitants of the colonies in hundreds of small circles, as well as in their provincial assemblies and congresses, expressed their abhorrence of the late proceedings of the British parliament against Massachusetts; their concurrence in the proposed measure of appointing deputies for a general congress; and their willingness to do and suffer whatever should be judged conducive to the establishment of their liberties.

A patriotic flame, created and diffused by sympathy, was communicated to so many breasts, and reflected from such a variety of objects, as to become too intense to be resisted.

While the combination of the other colonies, to support Boston, was gaining strength, new matter of dissension daily took place in Massachusetts. The resolution for shutting the port of Boston, was no sooner taken, than it was determined to order a military force to that town. General Gage, the commander in chief of the royal forces in North America was also sent thither, in the additional capacity of governor of Massachusetts. He arrived at Boston on the third day after the inhabitants received the first intelligence of the Boston port bill. Though the people were irritated by that measure, and though their republican jealousy was hurt by the combination of the civil and military character in one person, yet the general was received with all the honours which had been usually paid to his predecessors. Soon after his arrival, two regiments of foot, with a detachment of artillery, and some cannon were landed at Boston. These troops were by degrees reinforced, with others from Ireland, New York, Halifax and Quebec.

The governor announced that he had the king's particular command, for holding the general court at Salem, after the first of June. When that eventful day arrived, the act for shutting up the port of Boston commenced its operations. It was devoutly kept at Williamsburg, as a day of fasting and humiliation. In Philadelphia, it was solemnized with every manifestation of public calamity and grief. The inhabitants shut up their houses. After divine service, a stillness reigned over the city, which exhibited an appearance of the deepest distress.

In Boston, a new scene opened on the inhabi-

tants. Hitherto, that town had been the seat of commerce and of plenty. The immense business, transacted therein, afforded a comfortable subsistence to many thousands. The necessary, the useful, and even some of the elegant arts were cultivated among them. The citizens were polite and hospitable. In this happy state they were sentenced on the short notice of twenty-one days, to a total deprivation of all means of subsisting.—The blow reached every person. The rents of the landholders either ceased, or were greatly diminished. The immense property, in stores and wharves, was rendered comparatively useless.—Labourers, artificers, and others, employed in the numerous occupations created by an extensive trade, partook of the general calamity. They who depended on a regular income, flowing from previous acquisitions of property, as well as they, who, with the sweat of their brow, earned their daily subsistence, were equally deprived of the means of support; and the chief difference between them was, that the distresses of the former were rendered more intolerable, by the recollection of past enjoyments. All these inconveniences and hardships were borne with a passive, but inflexible fortitude. Their determination to persist in the same line of conduct, which had been the occasion of their suffering, was unabated.

The authors and advisers of the resolution, for destroying the tea, were in the town, and still retained their popularity and influence. The execrations of the inhabitants fell not on them, but on the British parliament. Their countrymen acquitted them of all selfish designs, and believed that in their opposition to the measures of Great Britain, they were actuated by an honest zeal for constitutional liberty. The sufferers, in Boston, had the consolation of sympathy from the other colonists. Contributions were raised, in all quarters, for their relief. Letters and addresses came to them from corporate bodies, town meetings, and provincial conventions, applauding their conduct, and exhorting them to perseverance.

The people of Marblehead, who, by their proximity, were likely to reap advantage from the distresses of Boston, generously offered the merchants thereof, the use of their harbour, wharves, ware-houses, and also their personal attendance on the lading or unlading of their goods, free of all expense.

The inhabitants of Salem, in an address to Governor Gage, concluded with these remarkable words: "By shutting up the port of Boston, some imagine that the course of trade might be turned hither, and to our benefit; but nature, in the formation of our harbour, forbids our becoming rivals in commerce, of that convenient mart; and, were it otherwise, we must be dead to every idea of justice, and lest to all the feelings of humanity, could we indulge one thought to seize on wealth, and raise our fortunes, on the ruins of our suffering neighbours."

The Massachusetts general court met at Salem, according to adjournment, on the 7th of June.—Several of the popular leaders took, in a private way, the sense of the members, on what was proper to be done. Finding they were able to carry such measures, as the public exigencies required, they prepared resolves, and moved for their adoption; but before they went on the latter business, their door was shut.

One member, nevertheless, contrived means of seceding information to Governor Gage of what was doing. His secretary was sent off, to dissolve the general court; but was refused admission. As he could obtain no entrance, he read the proclamation at the door, and immediately afterwards in council; and thus dissolved the general court. The house, while sitting with their doors shut, appointed five of the most respectable members as their committee, to meet committees from other provinces, that might be convened the 1st of September at Philadelphia; voted them seventy-five pounds sterling each; and recommended, to the several towns and districts, to raise the said sum by equitable proportions. By these

means, the designs of the governor were disappointed. His situation in every respect was truly disagreeable. It was his duty to forward the execution of laws, which were universally execrated. Zeal for his master's service prompted him to endeavour, that they should be carried into full effect; but his progress was retarded by obstacles from every quarter. He had to transact his official business with a people, who possessed a high sense of liberty, and were uncommonly ingenious in evading disagreeable acts of parliament. It was a part of his duty, to prevent the calling of the town meetings, after the 1st of August, 1774. These meetings were nevertheless held. On his proposing to exert authority, for the dispersion of the people, he was told by the selectmen, that they had not offended against the act of parliament; for that only prohibited the calling of town meetings; and no such call had been made: a former constitutional meeting, before the 1st of August, having only adjourned themselves from time to time. Other evasions, equally founded on the letter of even the late obnoxious laws, were practised.

As the summer advanced, the people of Massachusetts received stronger proofs of support, from the neighbouring provinces. They were, therefore encouraged to farther opposition. The inhabitants of the colonies, at this time, with regard to political opinions, might be divided into three classes. Of these, one was for rushing precipitately into extremities. They were for immediately stopping all trade, and could not even brook the delay of waiting, till the proposed continental congress should meet. Another party, equally respectable, both as to character, property, and patriotism, was more moderate; but not less firm. These were averse to the adoption of any violent resolutions, till all others were ineffectually tried. They wished that a clear statement of their rights, claims, and grievances, should precede every other measure. A third class disapproved of what was generally going on: a few from principle, and a persuasion that they ought to submit to the mother country; some from the love of ease; others from self-interest; but the bulk from fear of the mischievous consequences likely to follow. All these latter classes, for the most part, lay still, while the friends of liberty acted with spirit. If they, or any of them, ventured to oppose popular measures, they were not supported, and therefore declined farther efforts. The resentment of the people was so strong against them, that they sought for peace by remaining quiet. The same indecision, that made them willing to submit to Great Britain, made them apparently acquiesce in popular measures which they disapproved. The spirited part of the community, being on the side of liberty, the patriots had the appearance of unanimity; though many either kept at a distance from public meetings, or voted against their own opinion, to secure themselves from resentment, and promote their present ease and interest.

Under the influence of those who were for the immediate adoption of efficacious measures, an agreement, by the name of the solemn league and covenant, was adopted by numbers. The subscribers of this bound themselves, to suspend all commercial intercourse with Great Britain, until the late obnoxious laws were repealed, and the colony of Massachusetts restored to its chartered rights.

General Gage published a proclamation, in which he styled this solemn league and covenant, "an unlawful, hostile, and traitorous combination." And all magistrates were charged to apprehend, and secure for trial, such as should have any agency in publishing or subscribing the same, or any similar covenant. This proclamation had no other effect, than to exercise the pens of the lawyers, in showing that the association did not come within the description of legal treason; and that, therefore, the governor's proclamation was not warranted by the principles of the constitution.

The late law, for regulating the government of the province, arrived near the beginning of Au-

gust, and was accompanied by a list of thirty-six new counsellors, appointed by the crown, and in a mode variant from that prescribed by the charter. Several of these, in the first instance, declined an acceptance of the appointment. Those, who accepted it, were every where declared to be enemies to their country. The new judges were rendered incapable of proceeding in their official duty. Upon opening the courts, the juries refused to be sworn, or to act in any manner, either under them, or in conformity to the late regulations. In some places, the people assembled, and filled the court-houses, and avenues to them, in such a manner, that neither the judges, nor their officers, could obtain entrance: and, upon the sheriff's commanding them to make way to the court, they answered, "that they knew no court independent of the ancient laws of their country, and to none other would they submit."

In imitation of his royal master, Governor Gage issued a proclamation, "for the encouragement of piety and virtue, and for the prevention and punishing vice, profaneness, and immorality." In this proclamation, hypocrisy was inserted as one of the immoralities, against which the people were warned. This was considered by the inhabitants, who had often been ridiculed for their strict attention to the forms of religion, to be a studied insult, and as such was more resented than an actual injury.

The proceedings and apparent dispositions of the people together with the military preparations, which were daily made through the province, induced General Gage to fortify that neck of land, which joins Boston to the continent. He also seized upon the powder lodged in the arsenal at Charlestown.

This excited a most violent and universal ferment. Several thousand of the people assembled at Cambridge; and it was with difficulty, they were restrained from marching directly to Boston, to demand a delivery of the powder, with a resolution, in case of a refusal, to attack the troops.

The people, thus assembled, proceeded to Lieutenant Governor Oliver's house, and to the houses of several of the new counsellors, and obliged them to resign, and to declare, that they would no more act under the laws lately enacted. In the confusion of these transactions, a rumour went abroad, that the royal fleet and troops were firing upon the town of Boston. This was probably circulated by the popular leaders, on purpose to ascertain what aid they might expect from the country in case of extremities. The result exceeded their most sanguine expectations. In less than twenty-four hours there were upwards of thirty thousand men in arms marching towards the capital. Other risings of the people took place in different parts of the colony; and their violence was such, that in a short time the new counsellors, the commissioners of the customs, and all who had taken an active part in favour of Great Britain, were obliged to screen themselves in Boston. The new seat of government at Salem was abandoned; and all the officers connected with the revenue were obliged to consult their safety, by taking up their residence in a place, which an act of parliament had proscribed from all trade.

About this time delegates from every town and district, in the county of Suffolk, of which Boston is the county town, had a meeting; at which they prefaced a number of spirited resolutions, containing a detail of the particulars of their intended opposition to the late acts of parliament, with a general declaration, "that no obedience was due from the province to either, or any part of the said acts; but that they should be rejected as the attempts of a wicked administration to enslave America." The resolves of this meeting were sent on to Philadelphia, for the information and opinion of the congress, which as shall hereafter be related, had met there about this time.

The people of Massachusetts rightly judged, that from the decision of Congress on these resolutions, they would be enabled to determine what

support they might expect. Notwithstanding present appearances, they feared that the other colonies, which were no more than remotely concerned, would not hazard the consequence of making a common cause with them, should subsequent events make it necessary to repel force by force. The decision of Congress exceeded their expectations. They "most thoroughly approved the wisdom and fortitude, with which opposition to wicked ministerial measures had been hitherto conducted in Massachusetts; and recommended to them perseverance in the same firm and temperate conduct, as expressed in the resolutions of the delegates, from the county of Suffolk." By this approbation and advice, the people of Massachusetts were encouraged to resist, and the other colonies became bound to support them. The former more in need of a bridle than a spur, proceeded as they had begun; but with additional confidence.

Governor Gage had issued writs for holding a general assembly at Salem; but subsequent events, and the heat and violence which every where prevailed, made him think it expedient to counteract the writs by a proclamation for suspending the meeting of the members. The legality of a proclamation for that purpose was denied; and, in defiance thereof, ninety of the newly-elected members met, at the time and place appointed. They soon afterwards resolved themselves into a provincial congress, and adjourned to Concord, about twenty miles from Charlestown. On their meeting there they chose Mr. Hancock president, and proceeded to business. One of their first acts was to appoint a committee to wait on the governor, with a remonstrance, in which they apologized for their meeting, from the distressed state of the colony; complained of their grievances; and, after stating their apprehensions, from the hostile preparations on Boston neck, concluded with an earnest request, "that he would desist from the construction of the fortress, at the entrance into Boston, and restore that pass to its natural state."

The governor found some difficulty in giving them an answer, as they were not, in his opinion, a legal body; but the necessity of the times overruled his scruples. He replied, by expressing his indignation at the supposition, "that the lives, liberties, or property of any people, except enemies, could be in danger from English troops." He reminded them, that, while they complained of alterations, made to their charter, by acts of parliament, they were by their own acts subverting it altogether. He, therefore, warned them of the rocks they were upon, and to desist from such illegal and unconstitutional proceedings. The governor's admonitions were unavailing. The provincial congress appointed a committee, to draw up a plan, for the immediate defence of the province. It was resolved to enlist a number of the inhabitants, under the name of minute men, who were to be under obligations to turn out at a minute's warning. Jedediah Pribble, Artemas Ward, and Seth Pomeroy, were elected general officers to command these minute men and the militia, in case they should be called out to action. A committee of safety, and a committee of supplies were appointed. These consisted of different persons, and were intended for different purposes. The first were invested with an authority to assemble the militia, when they thought proper, and were to recommend to the committee of supplies the purchase of such articles as the public exigencies required. The last were limited to the small sum of 15,627*l.* 15*s.* sterling, which was all the money at first voted, to oppose the power and riches of Great Britain. Under this authority, and with these means, the committee of safety and of supplies acting in concert, laid in a quantity of stores, partly at Worcester, and partly at Concord. The same congress met again, and soon afterwards resolved, to get in readiness twelve thousand men, to act on any given emergency; and that a fourth part of the militia should be enlisted as minute men, and receive pay. John Thomas and William Heath were appointed general officers. They

also sent persons to New Hampshire, Rhode Island, and Connecticut, to inform them of the steps they had taken, and to request their co-operation in making up an army of twenty thousand men. Committees from these several colonies, met a committee from the provincial congress of Massachusetts, and settled their plans. The proper period for commencing opposition to General Gage's troops, was determined to be, whenever they marched out with their baggage, ammunition, and artillery. The aid of the clergy was called in upon this occasion; and a circular letter was addressed to each of the several ministers in the province, requesting their assistance, "in avoiding the dreadful slavery with which they were threatened."

As the winter approached, General Gage ordered barracks for his troops to be erected; but such was the superior influence of the popular leaders, that, on their recommendation, the workmen desisted from fulfilling the general's wishes, though the money for their labour would have been paid by the crown.

An application to New York was equally unsuccessful; and it was with difficulty that the troops could be furnished with winter lodgings. Similar obstructions were thrown in the way of getting winter covering for the soldiery. The merchants of New York, on being applied to, answered, "that they would never supply any article for the benefit of men who were sent as enemies to the country." The inhabitants of Massachusetts encouraged the desertion of the soldiers; and acted systematically in preventing their obtaining any other supplies but necessary provisions. The farmers were discouraged from selling them straw, timber, boards, and such like articles of convenience. Straw, when purchased for their service, was frequently burnt. Vessels, with bricks intended for their use, were sunk; carts with wood were overturned; and the king's property was daily destroyed.

A proclamation had been issued by the king, prohibiting the exportation of military stores from Britain, which reached America in the latter end of the year 1774. On receiving intelligence thereof, in Rhode Island, the people seized upon, and removed from the public battery, about forty pieces of cannon; and the assembly passed resolutions for obtaining arms and military stores by every means, and also for raising and arming the inhabitants. About this time, December 13th, a company of volunteers, headed by John Sullivan and John Langdon, beset his majesty's castle at Portsmouth. They stormed the fort, and secured and confined the garrison, till they broke open the powder house, and took the powder away. The powder being secured, the garrison was released from confinement.

Throughout this whole season, civil government, legislation, judicial proceedings, and commercial regulations were, in Massachusetts, to all appearance annihilated. The provincial congress exercised all the semblance of government which existed. From their coincidence with the prevailing disposition of the people, their resolutions had the weight and efficacy of the laws. Under the simple style of recommendation, they organized the militia, and made ordinances respecting public monies, and such farther regulations as were necessary for preserving order, and for defending themselves against the British troops.

In this crisis, it seemed to be the sense of the inhabitants of Massachusetts to wait events. They dreaded every evil that could flow from resistance, less than the operation of the late acts of parliament; but, at the same time, were averse to be the aggressors, in bringing on a civil war. They chose to submit to a suspension of regular government in preference to permitting the streams of justice to flow in the channel prescribed by the late acts of parliament, or to conducting them forcibly in the old one, sanctioned by their charter. From the extinction of the old, and the rejection of the new constitution, all regular government was, for several months, abolished. Some hundred thousands of people were in a state of nature,

without legislation, magistrates, or executive officers. There was, nevertheless, a surprising degree of order. Men of the purest morals were among the most active opposers of Great Britain. While municipal laws ceased to operate, the laws of reason, morality, and religion, bound the people to each other as a social band, and preserved as great a degree of decorum as had at any time prevailed. Even those who were opposed to the proceedings of the populace, when they were prudent and moderate, for the most part enjoyed safety, both at home and abroad.

Though there were no civil, there was an abundance of military officers. These were chosen by the people; but exercised more authority than any who had been honoured with commissions from the governor. The inhabitants in every place devoted themselves to arms. Handling the musket, and training, were the fashionable amusements of the men; while the women, by their presence, encouraged them to proceed. The sound of drums and fife were to be heard in all directions. The young and the old were fired with a martial spirit. On experiment, it was found, that to force on the inhabitants a form of government to which they were totally averse, was not within the fancied omnipotence of parliament.

During these transactions in Massachusetts, effectual measures had been taken, by the colonies, for convening a continental congress. Though there was no one entitled to lead in this business, yet, in consequence of the general impulse on the public mind, from a sense of common danger, not only the measure itself, but the time and place of meeting were, with surprising unanimity, agreed upon. The colonies, though formerly agitated with local prejudices, jealousies, and aversions, were led to assemble together in a general diet, and to feel their weight and importance in a common union. Within four months from the day, on which the first intelligence of the Boston port bill reached America, the deputies of eleven provinces had convened in Philadelphia; and in four days more, by the arrival of delegates from North Carolina, there was a complete representation of twelve colonies, containing three millions of people, disseminated over two hundred and sixty thousand square miles of territory. Some of the delegates were appointed by the constitutional assemblies. In other provinces where they were embarrassed by royal governors, the appointments were made in voluntary meetings of the people. Perhaps there never was a body of delegates, more faithful to the interests of their constituents, than the congress of 1774. The public voice, elevated none to a seat in that august assembly, but such as, in addition to considerable abilities, possessed that ascendancy over the minds of their fellow citizens, which can neither be acquired by birth, nor purchased by wealth. The instructions given to these deputies were various; but, in general, they contained strong professions of loyalty, and of constitutional dependence on the mother country.—The framers of them acknowledged the prerogative of the crown, and disclaimed every wish of separation from the parent state. On the other hand, they were firm in declaring, that they were entitled to all the rights of British born subjects, and that the late acts respecting Massachusetts were unconstitutional and oppressive.

They particularly stated their grievances, and for the most part concurred, in authorizing their deputies to concert and agree to such measures, in behalf of their constituents, as, in their joint opinion, would be most likely to obtain a redress of American grievances, ascertain American rights, on constitutional principles; and establish union and harmony between Great Britain and the colonies. Of the various instructions, on this occasion, those which were drawn up, by a convention of delegates, from every county in the province of Pennsylvania, and presented by them, in a body, to the constitutional assembly, were the most precise and determinate. By these it appears, that the Pennsylvanians were disposed to submit to the acts of navigation, as they then stood, and, also,

to settle a certain annual revenue on his majesty, his heirs, and successors, subject to the control of parliament; and to satisfy all damages, done to the East India company, provided their grievances were redressed, and an amicable compact was settled, which, by establishing American rights, in the manner of a new magna charta, would have precluded future disputes.

Of the whole number of deputies, which formed the continental congress, of 1774, one half were lawyers. Gentlemen of that profession had acquired the confidence of the inhabitants, by their exertions in the common cause. The previous measures, in the respective provinces, had been planned and carried into effect, more by lawyers than by any other order of men. Professionally taught the rights of the people, they were among the foremost, to desecry attacks made on their liberties. Bred in the habits of public speaking, they made a distinguished figure in the meetings of the people, and were particularly able to explain to them the tendency of the late acts of parliament.—Exerting their abilities and influence, in the cause of their country, they were rewarded with its confidence.

On the meeting of Congress, they chose Peyton Randolph their president, and Charles Thomson their secretary. They agreed, as one of the rules of their doing business, that no entry should be made on their journals of any propositions discussed before them, to which they did not finally assent.*

This august body, to which all the colonies looked up for wisdom and direction, had scarcely convened, when a dispute arose about the mode of conducting business, which alarmed the friends of union. It was contended by some, that the votes of the small provinces should not count as much as those of the larger ones. This was argued with some warmth; and invidious comparisons were made between the extensive dominion of Virginia, and the small colonies of Delaware and Rhode Island. The impossibility of fixing the comparative weight of each province, from the want of proper materials, induced Congress to resolve, that each should have one equal vote. The mode of conducting business being settled, two committees were appointed: one, to state the rights of the colonies; the several instances in which these rights had been violated; and the means most proper to be pursued for obtaining a restoration of them; the other, to examine and report the several statutes which affected the trade and manufactures of the colonies. The first committee were farther instructed, to confine themselves to the consideration of such rights, as had been infringed since the year 1763.

Congress, soon after their meeting, agreed upon a declaration of their rights, by which it was, among other things, declared, that the inhabitants of the English colonies, in North America, by the immutable laws of nature, the principles of the English constitution, and the several charters or

compacts, were entitled to life, liberty, and property; and that they had never ceded, to any sovereign power whatever, a right to dispose of either, without their consent. That their ancestors, who first settled the colonies, were entitled to all the rights, liberties, and immunities of free and natural-born subjects, within the realm of England, and by their migrating to America, they by no means forfeited, surrendered, or lost any of those rights; that the foundation of English liberty, and of all free government, was a right, in the people, to participate in their legislative council; and that as, the English colonists were not, and could not be properly represented in the British parliament, they were entitled to a free and exclusive power of legislation, in their several provincial legislatures, in all cases of taxation and internal polity, subject only to the negative of their sovereign. They then ran the line, between the supremacy of parliament, and the independency of the colonial legislatures, by provisos and restrictions, expressed in the following words: "But, from the necessity of the case, and a regard to the mutual interests of both countries, we cheerfully consent to the operation of such acts of the British parliament, as are, bona fide, restrained to the regulation of our external commerce, for the purpose of securing the commercial advantages of the whole empire to the mother country, excluding every idea of taxation, internal and external, for raising a revenue on the subjects in America without their consent."

This was the very hinge of the controversy.—The absolute, unlimited supremacy of the British parliament, both in legislation and taxation, was contended for on one side; while, on the other, no farther authority was conceded, than such a limited legislation, with regard to external commerce, as would combine the interests of the whole empire. In government, as well as in religion, there are mysteries, from the close investigation of which little advantage can be expected. From the unity of the empire, it was necessary that some acts should extend over the whole. From the local situation of the colonies, it was equally reasonable that their legislatures should, at least in some matters, be independent. Where the supremacy of the first ended, and the independency of the last began, was to the best informed a puzzling question. A different state of things would exist at this day, had the discussion of this doubtful point never been attempted.

Congress also resolved, that the colonists were entitled to the common law of England, and more especially to the privilege of being tried by their peers of the vicinage; that they were entitled to the benefit of such of the English statutes as existed at the time of their colonization, and which they had found to be applicable to their local circumstances, and also to the immunities and privileges, granted and confirmed to them by royal charters, or secured by provincial laws; that they had a right peaceably to assemble, consider of their grievances, and petition the king; that the keeping a standing army in the colonies, without the consent of the legislature of the colony where the army was kept, was against law; that it was indispensably necessary to good government, and rendered essential, by the English constitution, that the constituent branches of the legislature be independent of each other; and that, therefore, the exercise of legislative power, in several colonies, by a council, appointed during pleasure by the crown, was unconstitutional, dangerous, and destructive to the freedom of American legislation. All of these liberties Congress, in behalf of themselves and their constituents, claimed, demanded, and insisted upon, as their indubitable rights, which could not be legally taken from them, altered, or abridged, by any power whatever, without their consent.

Congress then resolved, that sundry acts which had been passed in the reign of George the Third, were infringements and violations of the rights of the colonists; and that the repeal of them was essentially necessary, in order to restore harmony between Great Britain and the colonies. The

acts complained of, were as follow: the several acts of 4 George III. ch. 15. and ch. 35—5 Geo. III. ch. 25—6 Geo. III. ch. 52—7 Geo. III. ch. 41. and ch. 46—8 Geo. III. ch. 22. which imposed duties for the purpose of raising a revenue in America, extended the power of the admiralty courts, beyond their ancient limits, deprived the American subjects of trial by jury, and authorized the judge's certificate to indemnify the prosecutor from damages, that he might, otherwise, be liable to; requiring oppressive security from a claimant of ships and goods seized, before he was allowed to defend his property.

Also, 12 Geo. III. ch. 24 entitled, "An act for the better securing his majesty's dock-yards, magazines, ships, ammunition, and stores," which declares a new offence in America, and deprives the American subjects of a constitutional trial by jury of the vicinage, by authorizing the trial of any person, charged with committing any offence, described in the said act, out of the realm, to be indicted and tried for the same, in any shire or county within the realm.

Also, the three acts passed in the last session of parliament, for stopping the port and blocking up the harbour of Boston; for altering the charter and government of Massachusetts Bay; and that which is entitled, "An act for the better administration of justice," &c.

Also, the act passed in the same session, for establishing the Roman Catholic religion, in the province of Quebec, abolishing the equitable system of English laws, and erecting a tyranny there, to the great danger, from so total a dissimilarity of religion, law, and government of the neighbouring British colonies, by the assistance of whose blood and treasure the said country had been conquered from France.

Also the act passed in the same session, for the better providing suitable quarters for officers and soldiers, in his majesty's service, in North America.

Also, that the keeping a standing army in several of these colonies, in time of peace, without the consent of the legislature of the colony, in which such army was kept, was against law.

Congress declared, that they could not submit to these grievous acts and measures. In hopes that their fellow-subjects in Great Britain would restore the colonies to that state, in which both countries found happiness and prosperity, they resolved, for the present, only to pursue the following peaceable measures:

1. To enter into a non-importation, non-consumption, and non-exportation agreement or association.

2. To prepare an address to the people of Great Britain, and a memorial to the inhabitants of British America.

3. To prepare a loyal address to his majesty.

By the association they bound themselves and their constituents, "from and after the 1st day of December next, not to import into British America, from Great Britain or Ireland, any goods, wares, or merchandise, whatsoever; not to purchase any slave, imported after the said 1st day of December; not to purchase or use any tea, imported on account of the East India company, or any on which a duty hath been or shall be paid; and, from and after the 1st day of the next ensuing March, neither to purchase or use any East India tea whatever; that they would not, after the 10th day of the next September if their grievances were not previously redressed, export any commodity whatsoever, to Great Britain, Ireland, or the West Indies, except rice to Europe; that the merchants should, as soon as possible, write to their correspondents in Great Britain and Ireland, not to ship any goods to them on any pretence whatever; that, if any merchant there should ship any goods for America, in order to contravene the non-importation agreement, they would not afterwards have any commercial connexion with such merchant; that such as were owners of vessels, should give positive orders to their captains and masters, not to receive, on board their vessels, any

* This rule was adopted from policy. The firmness of two or three of the delegates was doubted by some of their more determined associates. It was apprehended, that these would bring forward some temporising scheme of accommodation, in hopes that it would operate in their favour, in case the country was conquered. The majority thought it more equal, that, in every event, all should stand or fall together, without separate subterfuges. Joseph Galloway brought forward such a scheme, which was rejected, and, of course, not entered on the journals; but he obtained a certificate of his having done so. After he had joined the British, in the low ebb of American affairs, which took place early in December, 1776, he produced those documents, to prove, that he had always been a true and loyal subject. The outlines of Galloway's schemes were a neutral government, to be instituted in America, for regulating all the common concerns of the colonies, and to be administered by a president-general, of royal appointment, with executive powers, and a negative on all proposed acts of legislation; together with a council, to be appointed by the provincial assemblies. The legislative body to be incorporated with the British parliament, so far that the assent of both should be requisite to the validity of all general acts and statutes, which were intended to operate over both countries.

John Quincy Adams

goods prohibited by the said non-importation agreement; that they would use their endeavours to improve the breed of sheep, and increase their number to the greatest extent; that they would encourage frugality, economy and industry, and promote agriculture, arts and American manufactures; that they would discountenance and discourage every species of extravagance and dissipation; that, on the death of relations or friends, they would wear no other mourning than a small piece of black crape or ribbon; that such, as were vendors of goods, should not take any advantage of the scarcity, so as to raise their prices; that, if any person should import goods after the 1st day of December, and before the 1st day of February, then next ensuing, the same ought to be immediately re-shipped, or delivered up to a committee to be stored or sold; and that, in the last case, all the clear profits should be applied towards the relief of the inhabitants of Boston; that, if any goods should be imported after the 1st day of February, the next ensuing, they should be sent back without breaking any of the packages; that committees should be chosen in every county, city, and town, to observe the conduct of all persons touching the association, and to publish, in gazettes, the names of the violators of it, as foes to the rights of British America; that the committees of correspondence, in the respective colonies, frequently inspect the entries of their custom-houses, and inform each other, from time to time, of the true state thereof; that all American manufactures should be sold at reasonable prices, and no advantages to be taken of a future scarcity of goods; and lastly, that they would have no dealings or intercourse whatever, with any province or colony of North America, which should not accede to, or should violate the aforesaid associations."

These several resolutions they bound themselves and their constituents, by the sacred ties of virtue, honour, and love of their country, to observe till their grievances were redressed.

In their address to the people of Great Britain, they complimented them for having, at every hazard maintained their independence, and transmitted the rights of man, and the blessings of liberty to their posterity, and requested them not to be surprised, that they, who were descendants from the same common ancestors, should refuse to surrender their rights, liberties, and constitution. They proceeded to state their rights and their grievances, and to vindicate themselves from the charges of being seditious, impatient of government, and desirous of independency. They summed up their wishes in the following words: "Place us in the same situation in which we were, at the close of the last war, and our former harmony will be restored."

In the memorial of Congress to the inhabitants of the British colonies, they recapitulated the proceedings of Great Britain against them, since the year 1763, in order to impress them with a belief that a deliberate system was formed for abridging their liberties. They then proceeded to state the measures they had adopted, to counteract this system, and gave the reasons which induced them to adopt the same. They encouraged them to submit to the inconveniences of non-importation and non-exportation, by desiring them, "to weigh, in the opposite balance, the endless miseries, they and their descendants must endure, from an established arbitrary power."—They concluded with informing them, "that the schemes agitated against the colonies, had been so conducted as to render it prudent to extend their views to mournful events, and to be, in all respects, prepared for every contingency."

In the petition of Congress to the king, they begged leave to lay their grievances before the throne. After a particular enumeration of these, they observed, that they wholly arose from a destructive system of colony administration, adopted since the conclusion of the last war. They assured his majesty, that they had made such provision for defraying the charges of the admin-

istration of justice, and the support of civil government, as had been judged just and suitable to their respective circumstances; and that, for the defence, protection, and security of the colonies, their militia would be fully sufficient in time of peace; and, in case of war, they were ready and willing, when constitutionally required, to exert their most strenuous efforts in granting supplies, and raising forces. They said, "we ask but for peace, liberty and safety. We wish not a diminution of the prerogative; nor do we solicit the grant of any new right in our favour. Your royal authority over us, and our connexion with Great Britain, we shall always carefully and zealously endeavour to support and maintain." They then solicited for a redress of their grievances, which they had enumerated; and, appealing to that Being, who searches thoroughly the hearts of his creatures, they solemnly professed, "that their councils had been influenced by no other motives, than a dread of impending destruction." They concluded with imploring his majesty, "for the honour of Almighty God, for his own glory, for the interests of his family, and for the safety of his kingdom and dominions, that as the loving father of his whole people, connected by the same bonds of law, loyalty, faith, and blood, though dwelling in various countries, he would not suffer the transcendent relation, formed by these ties, to be further violated, by uncertain expectation of effects, that, if attained, never could compensate for the calamities, through which they must be gained."

The congress also addressed the French inhabitants of Canada; to whom they stated the right they had on becoming English subjects, to the benefits of the English constitution. They explained what these rights were; and pointed out the difference between the constitution imposed on them by act of parliament, and that to which, as British subjects, they were entitled. They introduced their countryman Montesquieu, as reproaching their parliamentary constitution, and exhorting them to join their fellow colonists, in support of their common rights. They earnestly invited them to join, with the other colonies, in one social compact, founded on the generous principles of equal liberty, and to this end recommended, that they would choose delegates to represent them in Congress.

All these addresses were written with uncommon ability. Coming from the heart, they were calculated to move it. Inspired by a love of liberty, and roused by a sense of common danger, the patriots of that day spoke, wrote and acted, with an animation unknown in times of public tranquillity: but it was not so much, on the probable effect of these addresses, that Congress founded their hopes of obtaining a redress of their grievances, as on the consequences which they expected from the operation of their non-importation, and non-exportation agreement. The success that had followed the adoption of measures, similar to the former, in two preceding instances, had encouraged the colonists to expect much from a repetition of it. They indulged in extravagant opinions of the importance of their trade to Great Britain. The measure of the non-exportation of their commodities was a new expedient; and, from that, even more was expected, than from the non-importation agreement. They supposed, that it would produce such extensive distress among the merchants and manufacturers of Great Britain, and, especially among the inhabitants of the British West India Islands, as would induce their general co-operation, in procuring a redress of American grievances. Events proved that young nations, like young people, are prone to overrate their own importance.

Congress having finished all this important business, in less than eight weeks, dissolved themselves, on the 26th of October, after giving their opinion, "that another congress should be held on the 10th of May, next ensuing, at Philadelphia, unless the redress of their grievances should be previously obtained," and recommending, "to all

the colonies to choose deputies as soon as possible, to be ready to attend at that time and place, should events make their meeting necessary."

On the publication of the proceedings of Congress, the people obtained that information which they desired. Zealous to do something for their country, they patiently waited for the decision of that body, to whose direction they had resigned themselves. Their determinations were no sooner known, than cheerfully obeyed. Though their power was only advisory, yet their recommendations were more generally and more effectually carried into execution, than the laws of the best regulated states. Every individual felt his liberties endangered, and was impressed with an idea, that his safety consisted in union. A common interest in warding off a common danger, proved a powerful incentive to the most implicit submission. Provincial congresses and subordinate committees were every where instituted. The resolutions of the continental congress were sanctioned with the universal approbation of these new representative bodies; and institutions were formed under their directions to carry them into effect.

The regular constitutional assemblies, also, gave their assent to the measures recommended. The assembly of New York was the only legislature, which withheld its approbation. Their metropolis had long been head quarters of the British army in the colonies; and many of their best families were connected with the people of influence in Great Britain. The unequal distribution of their land fostered an aristocratic spirit. From the operation of these and other causes, the party for royal government was both more numerous and respectable in New York, than in the other colonies.

The assembly of Pennsylvania, though composed of a majority of Quakers, or of those who were friendly to their interest, was the first legal body of representatives, that ratified unanimously, the acts of the general congress. They not only voted their approbation of what that body had done, but appointed members to represent them in the new congress, proposed to be held on the 10th day of May next ensuing; and took sundry steps to put the province in a posture of defence.

To relieve the distresses of the people of Boston, liberal collections were made, throughout the colonies, and forwarded for the supply of their immediate necessities. Domestic manufactures were encouraged, that the wants of the inhabitants, from the non-importation agreement, might be diminished; and the greatest zeal was discovered by a large majority of the people, to comply with the determination of these new made representative bodies. In this manner, while the forms of the old government subsisted, a new and independent authority was virtually established. It was so universally the sense of the people, that the public good required a compliance with the recommendations of Congress, that any man who discovered an anxiety about the continuance of trade and business, was considered as a selfish individual; preferring private interest to the good of his country. Under the influence of these principles, the intemperate zeal of the populace transported them, frequently, so far beyond the limits of moderation, as to apply singular punishments to particular persons, who contravened the general sense of the community.

One of these was forcibly subjecting the obnoxious persons to a stream of cold water, discharged on them from a spout of a pump. Another and more serious one was, after smearing their bodies with tar, to roll them in feathers, and expose them, thus covered with tar and feathers, to the ridicule of spectators. A more common mode was to treat them with contempt and scorn, arising in particular cases, to such a height, as to abstain from all social intercourse with them. Frequently their names were stuck up in public places, with the appellation of Tories, traitors, cowards, enemies to the country, &c.

The British ministry were not less disappointed than mortified, at this unexpected combination of

the colonies. They had flattered themselves with a belief, that the malcontents in Boston were a small party, headed by a few factious men, and that the majority of the inhabitants would arrange themselves on the side of government, as soon as they found Great Britain determined to support her authority; and, should even Massachusetts take part with its offending capital, they could not believe that the other colonies would make a common cause, in supporting so intemperate a colony: but should even that expectation fail, they conceived that their association must be founded on principles so adverse to the interests and feelings of individuals, that it could not be of long duration. They were encouraged in these ill-founded opinions, by the recollection, that the colonies were frequently quarrelling about boundaries, clashing in interests, differing in policy, manners, customs, forms of government, and religion, and under the influence of a variety of local prejudices, jealousies, and aversions. They also remembered the obstacles, which prevented the colonies from acting together, in the execution of schemes, planned for their own defence, in the late war against the French and Indians. The failure of the expected co-operation of the colonies, in one uniform system, at that time, was not only urged by the British ministry, as a reason for parliamentary control over the whole, but flattered them with a delusive hope, that they never could be brought to combine their counsels and their arms. Perhaps the colonists apprehended more danger from British encroachments, on their liberties, than from French encroachment, on Indian territories, in their neighbourhood: or more probably, the time to part being come, the Governor of the Universe, by a secret influence on their minds, disposed them to union. From whatever cause it proceeded, it is certain, that a disposition to do, to suffer, and to accommodate, spread from breast to breast, and from colony to colony, beyond the reach of human calculation. It seemed as though one mind inspired the whole. The merchants put far behind them the gains of trade, and cheerfully submitted to a total stoppage of business, in obedience to the recommendations of men, invested with no legislative powers. The cultivators of the soil, with great unanimity, assented to the determination, that the hard-earned produce of their farms should remain unshipped, although, in case of a free exportation, many would have been eager to have purchased it from them, at advanced prices. The sons and daughters of ease renounced imported conveniences: and voluntarily engaged to eat, drink, and wear, only such articles as their country afforded. These sacrifices were made, not from the pressure of present distress, but on the generous principle of sympathy with an invaded sister colony, and the prudent policy of guarding against a precedent which might, on a future day, operate against their liberties.

This season of universal distress exhibited a striking proof, how practicable it is for mankind to sacrifice ease, pleasure, and interest, when the mind is strongly excited by its passions. In the midst of their sufferings, cheerfulness appeared in the face of all the people. They counted every thing cheap in comparison with liberty, and readily gave up whatever tended to endanger it. A noble strain of generosity and mutual support was generally excited. A great and powerful diffusion of public spirit took place. The animation of the times raised the actors in these scenes above themselves, and excited them to deeds of self-denial, which the interested prudence of calmer seasons can scarcely credit.

CHAPTER VI.

Transactions in Great Britain in consequence of the proceedings of Congress, in 1774.

SOME time before the proceedings of Congress reached England, it was justly apprehended, that a non-importation agreement would be one of the

measures they would adopt. The ministry, apprehending that this event, by distressing the trading and manufacturing towns, might influence votes against the court, in the election of a new parliament, which was of course to come on in the succeeding year, suddenly dissolved the parliament, and immediately ordered a new one to be chosen. It was their design to have the whole business of elections over, before the inconveniences of a non-importation agreement could be felt. The nation was thus surprised into an election, without knowing that the late American acts had driven the colonies into a firm combination, to support, and make a common cause with, the people of Massachusetts. A new parliament was returned; which met in thirty-four days after the proceedings of Congress were first published in Philadelphia, and before they were known in Great Britain. This, for the most part, consisted, either of the former members, or of those who held similar sentiments.

On the 30th of November, the king, in his speech to his new parliament, informed them, "that a most daring spirit of resistance and disobedience to the laws, unhappily prevailed in the province of Massachusetts, and had broken forth in fresh violences of a very criminal nature; that these proceedings had been countenanced and encouraged in his other colonies; that unwarrantable attempts had been made to obstruct the commerce of his kingdom, by unlawful combinations; and that he had taken such measures, and given such orders, as he judged most proper and effectual, for carrying into execution the laws, which were passed in the last session of the late parliament, relative to the province of Massachusetts."

An address, proposed in the house of commons, in answer to this speech, produced a warm debate. The minister was reminded of the great effects, he had predicted from the late American acts: "They were to humble that whole continent, without farther trouble; and the punishment of Boston was to strike so universal a panic in all the colonies, that it would be totally abandoned, and, instead of obtaining relief, a dread of the same fate would awe the other provinces, to a most respectful submission." An address, re-echoing the royal speech was, nevertheless, carried by a great majority. A similar address was carried, after a spirited debate, in the upper house: but the lords Richmond, Portland, Rockingham, Stamford, Stanhope, Torrington, Ponsonby, Wycombe, and Camden entered a protest against it, which concluded with these remarkable words: "Whatever may be the mischievous designs, or the inconsiderate temerity which lead others to this desperate course, we wish to be known as persons, who have disapproved of measures so injurious in their past effects, and future tendency, and who are not in haste, without inquiry or information, to commit ourselves in declarations, which may precipitate our country into all the calamities of a civil war."

Soon after the meeting of the new parliament, the proceedings of the congress reached Great Britain. The first impression, made by them, was in favour of America. Administration seemed to be staggered; and their opposers triumphed, in the eventual truth of their prediction, that an universal confederacy, to resist great Britain, would be the consequence of the late American acts. The secretary of state, after a day's perusal, during which a council was held, said that the petition of Congress, to the king, was a decent and proper one. He also cheerfully undertook to present it; and afterwards reported, that his majesty was pleased very graciously to receive it; and to promise to lay it before his two houses of parliament. From these favourable circumstances, the sanguine friends of America concluded, that it was intended to make the petition a foundation of a change of measures; but these hopes were of short duration.

The partizans of administration placed so much confidence in the efficacy of the measures, they had lately taken, to bring the Americans to obe-

dience, that they regarded the boldest resolutions of Congress, as the idle clamours of an unruly multitude, which proper exertions on the part of Great Britain would speedily silence. So much had been asserted and contradicted by both parties, that the bulk of the people could form no certain opinion on the subject.

The parliament adjourned for the Christmas holidays, without coming to any decision on American affairs. As soon as they met, in January, 1775, a number of papers, containing information, were laid before them. These were mostly letters from governors, and other servants of his majesty, which detailed the opposition of the colonists, in language calculated to give a bad impression of their past conduct, and an alarming one of their future intentions.

It was a circumstance unfavourable to the lovers of peace, that the rulers of Great Britain received almost the whole of their American intelligence from those, who had an interest in deceiving them. Governors, judges, revenue officers, and other royal servants, being both appointed and paid by Great Britain, fancied that zeal, for the interest of that country, would be the most likely way to insure their farther promotion. They were therefore, in their official despatches to government, often tempted to abuse the colonists, with a view of magnifying their own watchfulness, and recommending themselves to Great Britain. The plain, simple language of truth was not acceptable to courtly ears. Ministers received and caressed those and those only, whose representations coincided with their own views and wishes. They, who contended that, by the spirit of the English constitution, British subjects, residing on one side of the Atlantic, were entitled to equal privileges, with those who resided on the other, were unnoticed; while the abettors of ministerial measures were heard with attention.

In this hour of national infatuation, lord Chatham, after a long retirement, resumed his seat in the house of lords, and exerted his univalued eloquence, in sundry attempts to dissuade his countrymen from attempting to subdue the Americans by force of arms. The native dignity of his superior genius and the recollection of his important services entitled him to distinguished notice. His language, voice, and gesture, were calculated to force conviction on his hearers. Though venerable for his age he spoke with the fire of youth. He introduced himself with some general observations on the importance of the American quarrel. He enlarged on the dangerous events that were coming on the nation, in consequence of the present dispute. He arraigned the conduct of ministers, with great severity; reprobated their whole system of American politics; and moved that an humble address be presented to his majesty, most humbly to advise and beseech him, to despatch orders to General Gage, to remove his majesty's forces from the town of Boston. His lordship supported this motion in a pathetic animated speech; but it was rejected by a great majority. From this and other circumstances, it soon became evident, that the Americans could expect no more favour from the new parliament, than they had experienced from the late one. A majority in both houses were against them, and resolved to compel them to obedience; but a respectable minority in their favour was strongly seconded by petitions, from the merchants and manufacturers, throughout the kingdom, and particularly from those of London and Bristol. As these were well apprised of the consequences, that must follow from the prosecution of coercive measures, and deeply interested in the event, they made uncommon exertions to prevent their adoption. They pointed out the various evils, that would result from them, and warned their countrymen of the danger to which their commercial interests were exposed.

When the petition from the merchants of London was read in the house of commons, it was moved to refer it to the committee appointed to take into consideration the American papers; but

it was moved by way of amendment, on the ministerial side, that it should be referred to a separate committee, to meet on the 27th, the day succeeding that appointed for the consideration of American papers. This, though a dishonourable evasion, was carried by a majority of more than two to one.

A similar fate attended the petitions from Bristol, Glasgow, Norwich, Liverpool, Manchester, Birmingham, Woolverhampton, Dudley, and some other places. These, on their being presented, were in like manner consigned to, what the opposition humourously termed the committee of oblivion.

About the same time, a petition was offered from Mr. Bolland, Dr. Franklin, and Mr. Lee, stating that they were authorized by Congress to present their petition to the king, which his majesty had referred to that house: that they were enabled to throw great light on the subject; and praying to be heard at the bar in support of the said petition. The friends of the ministry alleged, that as Congress was not a legal body, nothing could be received from them. It was in vain replied, that the congress, however illegal as to other purposes, was sufficiently legal for presenting a petition; that, as it was signed by the individual members of Congress, it might be received as a petition from individuals; that the signers were persons of great influence in America; and that it was the right of all subjects to have their petitions heard.

In the course of the debate on lord Chatham's motion, for addressing his majesty to withdraw his troops from Boston, it had been observed, by some lords in administration, that it was common and easy to censure their measures; but those who did so proposed nothing better. Lord Chatham answered, that he should not be one of those idle censurers; that he had thought long and closely upon the subject; and purposed soon to lay before their lordships the result of his meditations, in a plan for healing the differences between Great Britain and the colonies, and for restoring peace to the empire. When he had matured his plan, he introduced it into the house, in the form of a bill, for settling the troubles in America. In this he proposed, that the colonists should make a full acknowledgment of the supremacy of the legislature, and the superintending power of the British parliament. The bill did not absolutely decide on the right of taxation; but partly, as a matter of grace, and partly as a compromise, declared and enacted, "that no tax, or other charge, should be levied in America, except by common consent in their provincial assemblies." It asserted the right of the king, to send a legal army to any part of his dominions at all times; but declared, "that no military force could ever be lawfully employed, to violate or destroy the just rights of the people." It also legalized the holding a congress, in the ensuing May, for the double purpose, "of recognizing the supreme legislative authority, and superintending power of parliament over the colonies; and for making a free grant to the king, his heirs, and successors, of a certain and perpetual revenue subject to the disposition of parliament, and applicable to the alleviation of the national debt." On these conditions the bill proposed, "to restrain the powers of the admiralty courts to their ancient limits; and suspended, for a limited time, those acts which had been complained of by Congress." It proposed to place the judges, in America, on the same footing as to the holding of their salaries and offices, with those in England; and secured to the colonies all the privileges, franchises, and immunities, granted by their several charters and constitutions. His lordship introduced this plan with a speech, in which he explained, and supported every part of it. When he sat down, lord Dartmouth rose, and said "it contains matter of such magnitude as to require consideration: and therefore hoped, that the noble earl did not expect their lordships to decide upon it, by an immediate vote: but would be willing it should lie on the table for consideration." Lord Chatham answered, "that he ex-

pected no more;" but lord Sandwich rose, and, in a petulant speech, opposed its being received at all, and gave his opinion, "that it ought immediately to be rejected, with the contempt it deserved; that he could not believe it to be the production of any British peer; that it appeared to him rather the work of some American;" and, turning his face towards Dr. Franklin, who was leaning on the bar, said, "he fancied he had in his eye the person who drew it up; one of the bitterest and most mischievous enemies this country had ever known." This turned the eyes of many lords on the insulted American, who with that self-command, which is peculiar to great minds, kept his countenance unmoved. Several other lords of the administration gave their sentiments, also, for rejecting lord Chatham's conciliatory bill; urging that it not only gave a sanction to the traitorous proceedings of the congress already held, but legalized their future meeting. They enlarged on the rebellious temper, and hostile disposition of the Americans; and said, "that, though the duty on tea was the pretence, the restrictions on their commerce, and the hopes of throwing them off, were the real motives of their disobedience; and that to concede now, would be to give up the point for ever."

The dukes of Richmond and Manchester, lord Camden, lord Lyttleton, and others were for receiving lord Chatham's conciliatory bill; some from approbation of its principles; but others only from a regard to the character and dignity of the house.

Lord Dartmouth, who, from indecision, rarely had any will or judgment of his own, and who, with dispositions for the best measures, could be easily prevailed upon to join in support of the worst, finding the opposition from his coadjutors in administration unexpectedly strong, turned round, and gave his voice with them for immediately rejecting the plan. Lord Chatham, in reply to lord Sandwich, declared, "the bill proposed by him to be entirely his own; but he made no scruple to declare, that, if he were the first minister of the country, and had the care of settling this momentous business, he should not be ashamed of publicly calling to his assistance a person, so perfectly acquainted with the whole of the American affairs as the gentleman alluded to, and so injuriously reflected upon (Dr. Franklin:) one whom all Europe held in high estimation for his knowledge and wisdom, and ranked with the Boyles and Newtons, who was an honour not only to the English nation but to human nature."

The plan proposed by lord Chatham was rejected, by a majority of sixty-four to thirty-two; and without being admitted to lie on the table. That a bill on so important a subject, offered by one of the first men of the age, and who, as prime minister of the nation, had, but a few years before, taken up Great Britain, when in a low despondency, and conducted her to victory and glory, through a war with two of the most powerful kingdoms of Europe, should be rejected without any consideration, or even a second reading, was not only a breach of decency, but a departure from that propriety of conduct which should mark the proceedings of a branch of the national legislature. It could not but strike every thinking American, that such legislators, influenced by passion, prejudice, and party spirit, many of whom were totally ignorant of the subject, and who would not give themselves an opportunity, by a second reading, or farther consideration, to inform themselves better were very unfit to exercise unlimited supremacy over three millions of virtuous, sensible people, inhabiting the other side of the globe.

On the day after the rejection of lord Chatham's bill, a petition was presented to the house of commons, from the planters of the sugar colonies, residing in Great Britain, and the merchants of London, trading to the colonies. In this they stated that the British property in the West India islands amounted to upwards of thirty millions; that a farther property of many millions was employed in the commerce, created by the said islands; and

that the profits and produce of these immense capitals, which ultimately centered in Great Britain, would be deranged and endangered by the continuance of the American troubles. The petitioners were admitted to a hearing; when Mr. Glover, as their agent, ably demonstrated the folly and danger of persevering in the contest; but without any effect. The immediate coercion of the colonies was resolved upon: and the ministry would not suffer themselves to be diverted from its execution. They were confident of success, if they could once bring the controversy to the decision of arms. They expected more from conquest, than they could promise themselves by negotiation or compromise. The free constitutions of the colonies, and their rapid progress in population, were beheld with a jealous eye, as the natural means of independence. They conceived the most effectual method, of retaining them long, would be to reduce them soon. They hoped to be able to extinguish remonstrance and debate, by such a speedy and decisive conquest, as would give them an opportunity to new-model the colonial constitutions, on such principles as would prevent future altercations, on the subject of their chartered rights. Every representation, that tended to retard or obstruct the coercion of the colonies, was therefore considered as tending only to prolong the controversy. Confident of victory, and believing that nothing short of it would restore the peace of the empire, the ministry turned a deaf ear to all petitions and representations. They even presumed, that the petitioners, when they found Great Britain determined on war, would assist in carrying it on with vigour, in order to expedite the settlement of the dispute. They took it for granted, that when, the petitioning towns were convinced, that a renewal of the commercial intercourse, between the two countries, would be sooner obtained by going on, than turning back, the same interest, which led them at first to petition, would lead them afterwards to support coercive measures, as the most effectual and shortest way of securing commerce from all future interruptions.

The determination of ministers, to persevere, was also forwarded by hopes of the defection of New York from her sister colonies. They flattered themselves, that, when one link of the continental chain gave way it would be easy to make an impression on the disjointed extremities.

Every attempt to close the breach, which had been opened by the former parliament, having failed, and the ministry having made up their minds, on the mode of proceeding with the colonists, their proposed plan was briefly unfolded. This was to send a greater force to America, and to bring in a temporary act, to prohibit all the foreign trade of the New England colonies, till they should make proper submissions and acknowledgments. An address to his majesty was, at the same time, moved, "to beseech him to take the most effectual measures, to enforce due obedience to the laws and authority of the supreme legislature."

Truly critical was the moment to the union of the empire. A new parliament might, without the charge of inconsistency, have repealed acts, passed by a former one, which had been found inconvenient on experiment; but pride and passion, under the specious names of national dignity and zeal for the supremacy of parliament, induced the adoption of measures, for immediately compelling the submission of the colonies.

The repeal of a few acts of parliament would, at this time, have satisfied America. Though she had been extending her claims, yet she was still willing that Great Britain should monopolize her trade, and that the parliament should regulate it for the common benefit of the empire. Nor was she disposed to abridge his majesty of any of his usual prerogatives. This authority was sufficient for the mother country, to retain the colonists, in a profitable state of subordination, and yet not so much as to be inconsistent with their claims, or the security of their most important interests. Britain viewed the matter in a different light. To concede, at this time would be to acknowledge,

that the ministry had hitherto been in the wrong ; a concession rarely made by private persons, and more rarely by men in public stations. The leading members in parliament, not distinguishing the opposition of freemen to unconstitutional innovation, from the turbulence of licentious mobs breaking over the bounds of law and constitution, supposed that to redress grievances was to renounce sovereignty. This inference, in some degree, resulted from the broad basis, which they had assigned to the claims of the mother country. If, as was contended, on the part of Great Britain, they had a right to bind the colonies, in all cases whatsoever, and the power of parliament over them were absolute and unlimited, they were precluded from rescinding any act of theirs, however oppressive, when demanded as a matter of right. They were too highly impressed with ideas of their unlimited authority, to repeal any of their laws, on the principle, that they had not a constitutional power to enact them, and too unwise to adopt the same measure on the ground of political expediency. Unfortunately for both countries, two opinions were generally held, neither of which was, perhaps, true in its utmost extent, and one of which was most assuredly false. The ministry and parliament of England proceeded on the idea, that the claims of the colonists amounted to absolute independence, and that a fixed resolution to renounce the sovereignty of Great Britain was concealed under the specious pretext of a redress of grievances. The Americans, on the other hand, were equally confident, that the mother country not only harboured designs unfriendly to their interests, but seriously intended to introduce arbitrary government. Jealousies of each other were reciprocally indulged, to the destruction of all confidence, and to the final dismemberment of the empire.

In discussing the measures proposed by the minister, for the coercion of the colonies, the whole ground of the American controversy was traversed. The comparative merits of concession and coercion were placed in every point of view. Some of the minority, in both houses of parliament, pointed out the dangers that would attend a war with America; the likelihood of the interference of other powers; and the probability of losing, and the impossibility of gaining any thing more than was already possessed. On the other hand, the friends of the ministry asserted, that the Americans had been long aiming at independence; that they were magnifying pretended grievances, to cover a premeditated revolt; that it was the business and duty of Englishmen, at every hazard, to prevent its completion, and bring them back to a remembrance that their present greatness was owing to the mother country; and that even their existence had been purchased at an immense expense of British blood and treasure. They acknowledged the danger to be great; but said "it must be encountered; that every day's delay increased the evil; and that it would be base and cowardly to shift off, for the present, an unavoidable contest, which must fall with accumulated weight on the heads of their posterity." The danger of foreign interference was denied. It was contended, that an appearance of vigorous measures, with a farther reinforcement of troops at Boston, would be sufficient to quell the disturbances. It was also urged, that the friends of government were both strong and numerous, and only waited for proper support, and favourable circumstances, to declare themselves.

After long and warm debates, and one or two protests, the ministerial plans were carried by great majorities. In consequence thereof, on the 9th of February, 1775, a joint address, from both lords and commons was presented to his majesty, in which, "they returned thanks for the communication of the papers, relative to the state of the British colonies in America; gave it as their opinion that a rebellion actually existed in the province of Massachusetts; besought his majesty, that he would take the most effectual measures, to enforce due obedience to the laws and authority

of the supreme legislature; and begged, in the most solemn manner, to assure his majesty, that it was their fixed resolution, at the hazard of their lives and properties, to stand by his majesty against all rebellious attempts, in the maintenance of the just rights of his majesty, and of the two houses of parliament."

The lords, Richmond, Craven, Archer, Abergavenny, Roekingham, Wycombe, Courtenay, Torrington, Ponsonby, Cholmondeley, Abingdon, Rutland, Camden, Effingham, Stanhope, Scarborough, Fitzwilliam, and Tankerville, protested against this address, "as founded on no proper parliamentary information, being introduced by refusing to suffer the presentation of petitions against it; as following the rejection of every mode of conciliation; as holding out no substantial offer of redress of grievances; and as promising support to those ministers, who had inflamed America, and grossly misconducted the affairs of Great Britain."

By the address against which this protest was entered, the parliament of Great Britain passed the Rubicon. In former periods, it might be alleged, that the claims of the colonies were undefined, and that their unanimous resolution to defend them was unknown; but after a free representation from twelve provinces had stated their rights, and pledged themselves to each other to support them, and their determinations were known, a resolution that a rebellion actually existed, and that at the hazard of their lives and properties, they would stand by his majesty, against all rebellious attempts, was a virtual declaration of war. Both parties were now bound, in consequence of their own acts, to submit the controversy to a decision of arms. Issue was joined, by the approbation Congress had given to the Suffolk resolves, and by this subsequent joint address of both houses of parliament to his majesty. It is probable that neither party, in the beginning, intended to go thus far; but by the inscrutable operations of Providence, each was permitted to adopt such measures as not only rent the empire, but involved them both, with their own consent, in all the calamities of a long and bloody war. The answer from the throne, to the joint addresses of parliament, contained assurances of taking the most speedy and effectual measures, for enforcing due obedience to the laws, and authority of the supreme legislature. This answer was accompanied with a message to the commons, in which they were informed, that some augmentation to the forces by sea and land would be necessary. An augmentation of four thousand three hundred and eighty-three men to the land forces, and of two thousand seamen to be employed for the ensuing year, was accordingly asked for, and carried without difficulty. With the first, it was stated, that the force at Boston would be ten thousand men, a number supposed to be sufficient for enforcing the laws. Other schemes, in addition to a military force, were thought advisable for promoting the projected coercion of the colonies. With this view a punishment was proposed, so universal in its operation, that it was expected the inhabitants of the New England colonies, to obtain a riddance of its heavy pressure, would interest themselves in procuring a general submission to parliament. Lord North moved for leave to bring in a bill "to restrain the trade and commerce of the provinces of Massachusetts Bay and New Hampshire, the colonies of Connecticut, and Rhode Island and Providence Plantations in North America, to Great Britain, Ireland, and the British islands in the West Indies, and to prohibit such provinces and colonies from carrying on any fishery on the banks of Newfoundland, or other places therein to be mentioned, under certain conditions, and for a limited time." The motion for this bill was supported, by declaring, that, as the Americans had refused to trade with the mother country, they ought not to be permitted to trade with any other. It was known that the New England colonies carried on a circuitous trade and fishery, on the banks of Newfoundland to a great extent. To cut them off from this resource,

they were legislatively forbidden to fish, or to carry on foreign trade. It was presumed, that the wants of a large body of people, deprived of employment, would create a clamour in favour of reconciliation.

The British ministry expected to excite the same temper in the unemployed New England men, that Congress meant to raise by the non-importation agreement, among the British merchants and manufacturers. The motion for this bill, brought into view the whole of the American controversy. The opposers of it said, that its cruelty exceeded the examples of hostile rigour with avowed enemies; for that, in the most dangerous wars, the fishing craft was universally spared.—They desired the proposer of the bill to recollect, that he had often spoken of the multitude of friends he had in those provinces, and that now he confounded the innocent with the guilty; friends with enemies; and involved his own partisans in one common ruin with his opposers. They alleged farther, that the bill would operate against the people of Great Britain: as the people of New England were in debt to them, and had no other means of paying that debt, but through the fishery, and the circuitous trade depending on it. It was observed, that the fishermen, being cut off from employment, must turn soldiers: and that, therefore, while they were provoking the Americans to resistance, by one set of acts, they were furnishing them with the means of recruiting an army by another.

The favourers of the bill denied the charge of severity, alleging that the colonists could not complain of any distress the bill might bring on them, as they not only deserved it, but had set the example; and that they had entered into unlawful combinations to ruin the merchants and manufacturers of Great Britain. It was said, that, if any foreign power had offered a similar insult or injury, the whole nation would have demanded satisfaction. They contended that it was a bill of humanity and mercy: for, said they, the colonists have incurred all the penalties of rebellion, and are liable to the severest military execution. Instead of inflicting the extent of what they deserved, the bill only proposes to bring them to their senses, by restricting their trade. They urged farther, that the measure was necessary; for, said they, "the Americans have frequently imposed on us, by threatening to withdraw their trade, hoping through mercantile influence to bend the legislature to their demands; that this was the third time, they had thrown the commerce of Great Britain into a state of confusion; and that both colonies and commerce were better lost, than preserved on such terms." They added farther, that they must either relinquish their connexion with America, or fix it on such a basis, as would prevent a return of these evils. They admitted the bill to be coercive; but said, "that the coercion, which put the speediest end to the dispute, was eventually the most merciful."

In the progress of the bill, a petition from the merchants and traders of London, who were interested in the American commerce, was presented against it. They were heard by their agent, Mr. David Barclay; and a variety of witnesses were examined before the house. In the course of their evidence it appeared, that, in the year 1764, the four provinces of New England employed, in their several fisheries, no less than forty-five thousand eight hundred and eighty ton of shipping, and six thousand and two men; and that the produce of their fisheries that year, in foreign markets amounted to 322,220l. 16s. sterling. It also appeared, that the fisheries had very much increased since that time; that all the materials used in them, except salt, and the timber of which the vessels were built, were purchased from Great Britain; and that the net proceeds of the whole were remitted thither. All this information was disregarded. After much opposition in both houses, and a protest in the house of lords, the bill was, by a great majority, finally ratified. So intent were the ministry and parliament on the coer-

cion the colonists, that every other interest was sacrificed to its accomplishment. They conceived the question between the two countries to be, simply, whether they should abandon their claims, and at once give up all the advantages arising from sovereignty and commerce, or resort to violent measures for their security.

Since the year 1769, when a secretary of state, officially disclaimed all views of an American revenue, little mention had been made of that subject; but the decided majority, who voted with the ministry on this occasion, emboldened lord North once more to present it to the view of his countrymen. He, therefore, brought into parliament, a scheme, which had the double recommendation of holding forth the semblance of conciliation, and the prospect of an easement of British taxes, by a productive revenue from the colonies. This resolution passed on the 20th of February, and was as follows:

"Resolved, that, when the governor, council, and assembly, or general court, of any of his majesty's provinces or colonies in America, shall propose to make provision according to the condition, circumstances, and situation of such province or colony, for contributing their proportion for the common defence, such proportion to be raised under the authority of the general court or general assembly of such province or colony, and disposable by parliament; and shall engage to make provision, also, for the support of the civil government, and the administration of justice in such province or colony, it will be proper, if such proposal shall be approved by his majesty, and the two houses of parliament, and for so long as such provision shall be made accordingly, to forbear, in respect of such province or colony, to levy any duty, tax, or assessment, except only such duties as it may be expedient to continue to levy or to impose for the regulation of commerce; the net produce of the duties last mentioned, to be carried to the account of such province or colony respectively."

This was introduced by the minister, in a long speech, in which he asserted, that it would be an infallible touchstone to try the Americans. "If," said he, "their opposition be only founded on the principles which they pretend, they must agree with this proposition; but if they have designs in contemplation, different from those they avow, their refusal will convict them of duplicity." The opposition to the minister's motion originated among those who had supported him in previous questions. They objected to the proposal, that, in effect, it was an acknowledgment of something grievous in the idea of taxing America by parliament; and that it was, therefore, a departure from their own principles. They contended, that it was improper to make concessions to rebels, with arms in their hands; or to enter into any measures for a settlement with the Americans, in which they did not, as a preliminary, acknowledge the supremacy of parliament. The minister was likely to be deserted by some of his partizans, till others explained the consistency of the scheme with their former declarations. It was said, "what shall parliament lose by acceding to this resolution?—Not the right of taxing America: for this is most expressly reserved. Not the profitable exercise of this right; for it proposes to enforce the only essential part of taxation, by compelling the Americans to raise not only what they, but what we, think reasonable. We are not going to war for trifles, and a vain point of honour; but for substantial revenue." The minister farther declared, that he did not expect his proposition to be generally relished by the Americans. But, said he, if it do no good in the colonies, it will do good here. It will unite the people of England, by holding out to them a distinct object of revenue. He added farther, as it tends to unite England, it is likely to disunite America; for if only one province accept the offer, their confederacy, which only makes them formidable, will be broken.

The opposers of ministry attacked the proposition, with the combined force of wit and argument.

They animadverted on the inconsistency of holding forth the same resolution as a measure of concession, and as an assertion of authority. They remarked, that, hitherto, it had been constantly denied, that they had any contest about an American revenue; and that the whole had been a dispute about obedience to trade-laws, and the general legislative authority of parliament; but now ministers suddenly changed their language, and proposed to interest the nation, and console the manufacturers, and animate the soldiery, by persuading them, that it is not a contest for empty honour, but for the acquisition of a substantial revenue. It was said, that the Americans would be as effectually taxed, without their consent by being compelled to pay a gross sum, as by an aggregate of small duties to the same amount; and that this scheme of taxation exceeded, in oppression, any that the rapacity of mankind had hitherto devised. In other cases, a specific sum was demanded; and the people might reasonably presume that the remainder was their own: but here they were wholly in the dark, as to the extent of the demand.

This proposition, however, for conciliation, though disrelished by many of the friends of ministry, was carried, on a division of two hundred and seventy-four to eighty-eight. On its transmission to the colonies, it did not produce the effects of disunion expected from it. It was unanimously rejected.

Other plans for conciliation with the colonies, founded on principles very different from those which were the basis of lord North's conciliatory motion, were brought forward, in the house of commons; but without receiving its approbation. The most remarkable of these was proposed by Mr. Edmund Burke, in a speech, which, for strength of argument, extent of information, and sublimity of language, would bear a comparison with the most finished performance that ancient or modern times have produced. In his introduction to this admirable speech, he examined and explained the natural and accidental circumstances of the colonies, with respect to situation, resources, number, population, commerce, fisheries, and agriculture; and from these considerations showed their importance. He then inquired into their unconquerable spirit of freedom; which he traced to its original sources. From these circumstances, he inferred the line of policy which should be pursued with regard to America. He showed that all proper plans of government must be adapted to the feelings, established habits, and received opinions of the people. On these principles, Mr. Burke reprobated all plans of governing the colonies by force; and proposed, as the ground-work of his plan, that the colonists should be admitted to an interest in the constitution. He then went into an historical detail of the manner, in which the British privileges had been extended to Ireland, Wales, and the counties palatine of Chester and Durham; the state of confusion before that event; and the happy consequences which followed it.—He contended, that a communication, to the members, of an interest in the constitution, was the great ruling principle of British government. He, therefore, proposed to go back to the old policy for governing the colonies. He was for a parliamentary acknowledgment of the legal competency of the colonial assemblies, for the support of their government in peace, and for public aids in time of war. He maintained the futility of parliamentary taxation, as a method of supply. He stated, that much had been given in the old way of colonial grant; that, from the year 1748 to 1763, the journals of the house of commons repeatedly acknowledged, that the colonies not only gave, but gave to satiety; and that, from time to time, in which parliamentary imposition had superceded the free gifts of the provinces, there was much discontent, and little revenue. He, therefore, moved six resolutions, affirmatory of these facts; and grounded on them resolutions, for repealing the acts complained of by the Americans, trusting to the liberality of their future voluntary contribu-

tions. This plan of conciliation, which promised immediate peace to the whole empire, and a lasting obedience of the colonies, though recommended by the charms of the most persuasive eloquence, and supported by the most convincing arguments, was by a great majority rejected.

Mr. D. Hartley, not discouraged by the negative, which had been given to Mr. Burke's scheme, came forward with another for the same purpose. This proposed, that a letter of requisition should be sent to the colonies, by the secretary of state, on a motion from the house, for a contribution to the expenses of the whole empire. He meant to leave, to the provincial assemblies, the right to judge of the expedience, amount and application of the grant. In confidence that the colonies would give freely, when called on, in this constitutional way, he moved, to suspend the acts complained of by the Americans. This was also rejected.

Another plan was, digested in private, by Dr. Franklin, on the part of the Americans, and Dr. Fothergill and David Barclay, on behalf of the British ministry. There appeared a disposition to concede something considerable on both sides; but the whole came to nothing in consequence of an inflexible determination to refuse a repeal of the act of parliament for altering the chartered government of Massachusetts. Dr. Franklin agreed, that the tea destroyed should be paid for; the British ministers, that the Boston port act should be repealed; but the latter contended, "that the late Massachusetts acts, being real amendments of their constitution, must, for that reason, be continued, as well as to be a standing example of the power of parliament." On the other hand, it was declared by Dr. Franklin, "that, while the parliament claimed and exercised a power of internal legislation for the colonies, and of altering American constitutions at pleasure, there could be no agreement; as that would render the Americans unsafe in every privilege they enjoyed, and would leave them nothing in which they could be secure."

This obstinate adherence to support parliament, in a power of altering the laws and charters of the provinces, particularly to enforce their late laws for new-modelling the chartered constitution of Massachusetts, was the fatal rock, by dashing on which the empire broke in twain; for every other point, in dispute between the two countries, seemed in a fair way for an amicable compromise.

The fishery bill was speedily followed by another, for restraining the trade and commerce of the colonies and provinces of New Jersey, Pennsylvania, Maryland, Virginia, and South Carolina. The reasons assigned for this were the same with those offered for the other. These provinces had adopted the continental association. The British minister thought it proper, that, as they had voluntarily interdicted themselves from trade with Great Britain, Ireland and the West Indies, they should be restrained from it with all other parts of the world. He contended, that the inhabitants of the colonies might render this act a dead letter, by relinquishing their own resolutions, as then they would meet with no restraint in carrying on trade in its ancient legal channel. It is remarkable, that three of the associated colonies, viz. New York, Delaware, and North Carolina, were omitted in this restraining bill. Whatever might be the view of the British ministry for this discrimination, it was considered in the colonies as calculated to promote disunion among them. It is certain, that the colonists, exempted from its operation, might have reaped a golden harvest from the exemption in their favour, had they been disposed to avail themselves of it; but such was the temper of the times, that a renunciation of immediate advantage in favour of the public was fashionable. The selfish passions, which, in seasons of peace, are too often the cause of quarrels, were hushed by the pressure of common danger.

The exempted colonies spurned the proffered favour, and submitted to the restraints imposed on their less favoured neighbours, so as to be equal sharers of their fate. The indulgence granted to

New York, in being kept out of this restraining bill, was considered by some as a premium for her superior loyalty. Her assembly had refused to approve the proceedings of the congress, and had, in some other instances, discovered less warmth than the neighbouring legislatures. Much was expected from her moderation. At the very time the British parliament was framing the restraining acts just mentioned, the constitutional assembly of New York petitioned for a redress of their grievances. Great stress had been laid on the circumstance, that Congress was not a legal assembly; and the want of constitutional sanction had been assigned as a reason for the neglect, with which their petition had been treated. Much praise had been lavished on the colony of New York, for its moderation; and occasion had been taken, from their refusing to approve the proceedings of the congress, to represent the resolutions and claims of that body to be more the ebullitions of incendiaries, than the sober sentiments of the temperate citizens. It was both unexpected and confounding to those who supported these opinions, that the representation and remonstrance of the very loyal assembly of New York stated, "that an exemption from internal taxation, and the exclusive right of providing for their own civil government, and the administration of justice in the colony, were esteemed by them as their undoubted and unalienable rights."

A motion being made, in the house of commons, for bringing up this representation and remonstrance of the assembly of New York, it was amended, on the suggestion of lord North, by adding, "in which the assembly claim to themselves rights derogatory to, and inconsistent with, the legislative authority of parliament, as declared by the declaratory act." The question, so amended, being put, passed in the negative. The fate of this representation extinguished the hopes of those moderate persons, both in the parent state, and the colonies, who flattered themselves, that the disputes, subsisting between the two countries, might be accommodated by the mediation of the constitutional assemblies. Two conclusions were drawn from this transaction; both of which were unfriendly to a reconciliation. The decided language with which the loyal assembly of New York claimed exemption from parliamentary taxation, proved to the people of Great Britain, that the colonists, however they might differ in modes of opposition, or in degrees of warmth, were, nevertheless, united in that fundamental principle. The rejection of their representation proved, that nothing more was to be expected from proceeding in the constitutional channel of the legal assemblies, than from the new system of a continental congress. Solid revenue and unlimited supremacy were the objects of Great Britain; and exemption from parliamentary taxation, that of the most moderate of the colonies. So wide were the claims of the two countries from each other, that to reconcile them on any middle ground seemed to be impossible.

CHAPTER VIII.

Consequences in America, resulting from the preceding transactions of Parliament; and of the commencement of hostilities.

The year 1774 terminated with an expectation in America, that a few months would bring them a redress of their grievances. But the probability of that event daily diminished. The colonists had indulged themselves in an expectation that the people of Great Britain, from a consideration of the dangers and difficulties of a war with their colonies, would, in their elections, have preferred those who were friends to peace and reconciliation. But, when they were convinced of the fallacy of these hopes, they turned their attention to the means of self-defence. It had been the resolution of many, never to submit to the operation of the late acts of parliament. Their number daily increased; and in the same proportion that Great

Britain determined to enforce, did they determine to oppose. Intelligence of the rejection of lord Chatham's bill, of the address of both houses of parliament to the king on the 9th of February, and of the fishery bill, arrived among the colonists, about the same time, and diminished what remained of their first hopes of a speedy accommodation. The fishery bill excited a variety of emotions. The obvious tendency of it was to starve thousands. The severity of it did not strike an Englishman, for he viewed it as a merited correction for great provincial offences. But it appeared in the blackest colours to an American, who felt no consciousness of guilt, and who fancied that heaven approved his zeal in defence of liberty. It alienated the affections of the colonists, and produced in the breasts of thousands, a hatred of Great Britain.

The penal acts of parliament, in 1774, were all levelled against Massachusetts; but the fishery bill extended to New Hampshire, Connecticut, and Rhode Island. The reasons assigned for this by lord North were, that they had aided and abetted their offending neighbours, and were so near to them that the intentions of parliament would be frustrated, unless they were in like manner comprehended in the proposed restraints. The extension of this penal statute, to three additional provinces, operated powerfully in favour of union, and convinced the most moderate, of the increasing necessity for all the provinces to make a common cause in their opposition. Whatever might be the designs of parliament, their acts had a natural tendency to enlarge the demands of the Americans, and to cement their confederacy, by firm principles of union. At first they only claimed exemption from internal taxation; but by the combination of the East India company and the British ministry, an external tax was made to answer all the purposes of a direct internal tax. They, therefore, in consistence with their own principles, were constrained to deny the right of taxing in any form for a supply. Nothing could contribute more to make the colonists deny the parliamentary claim of internal legislation, than the manner in which it was exercised, in depriving them of their charters, and passing an act relative to trials, which promised indemnity to murderers. This convinced them that an opposition to so injurious a claim was essentially necessary to their security. But they still admitted the power of parliament to bind their trade. This was conceded by Congress only a few months before an act passed, that they should have no foreign trade, nor be allowed to fish on their own coasts. The British ministry, by their successive acts, impelled the colonists, to believe, that while the mother country retained any authority over them, that authority would, in some shape or other, be exerted so as to answer all the purposes of a power to tax. While Great Britain stretched that portion of controlling supremacy which the colonists were disposed to allow her to such an extent as covered oppression equally grievous with that which they would not allow, the way was fast opening for a total renunciation of her sovereignty. The coercive measures adopted by the parent state, produced a disposition in the colonies to extend their claims; and the extension of their claims produced an increasing disposition in Great Britain to coerce them still more. The jealousy of liberty on one side, and the desire of supremacy on the other, were reciprocally cause and effect; and urged both parties, the one to rise in their demands, and the other to enforce submission. In the contest between Great Britain and her colonies, there had been a fatal progression from small to greater grounds of dissension. The trifling tax of 3d. per pound on tea, roused the jealous inhabitants of Boston to throw 340 chests of it into the ocean. This provoked the British parliament to shut up their port, and to new-model their charter. Statutes so unconstitutional and alarming, excited a combination in twelve of the colonies, to stop all trade with Great Britain, Ireland, and the West Indies. Their combination gave birth to the restraining

acts of parliament, by which nine of the colonies were interdicted all other trade but that from which they had voluntarily excluded themselves; and four of these nine were further devoted to famine, by being forbidden to fish on their own coasts.—Each new resolution on the one side, and new act on the other, reciprocally gave birth to something from the opposing parties, that was more irritating or oppressive, than what had preceded.

The beginning of strife, between the parent state and her colonies, was like the letting out of waters. From inconsiderable causes love was changed into suspicion, which gradually ripened into ill-will, and soon ended in hostility. Prudence, policy, and reciprocal interest, urged the expediency of concession; but pride, false honour, and misconceived dignity, drew in an opposite direction. Undecided claims and doubtful rights, which, under the influence of wisdom and humility, might have been easily compromised, imperceptibly widened into an irreconcilable breach. Hatred at length took the place of kind affections, and the calamities of war were substituted, in lieu of the benefits of commerce.

From the year 1768, in which a military force had been stationed in Boston, there was a constant succession of insulting words, looks and gestures. The inhabitants were exasperated against the soldiers, and they against the inhabitants. The former looked on the latter as the instruments of tyranny, and the latter on the former as seditious rioters, or fraudulent smugglers. In this irritable state, every incident, however trifling, made a sensible impression. The citizens apprehended constant danger from an armed force, in whose power they were. The soldiers, on the other hand, considered themselves in the midst of enemies, and exposed to attacks from within and from without. In proportion as the breach between Great Britain and her colonies widened, the distrust and animosity between the people and the army increased. From the latter end of 1774, hostile appearances daily threatened that the flames of war would be kindled from the collision of such inflammable materials. Whatsoever was done by either party by way of precaution, for the purposes of self-defence, was construed by the other as preparatory to an intended attack. Each disclaimed all intentions of commencing hostilities, but reciprocally manifested suspicion of the other's sincerity. As far as was practicable without an open rupture, the plans of the one were respectively thwarted by the other. From every appearance it became daily more evident that arms must ultimately decide the contest. To suffer an army that was soon expected to be an enemy, quietly to fortify themselves, when the inhabitants were both able and willing to cut them off appeared to some warm spirits the height of folly. But the prudence and moderation of others, and especially the advice and recommendation of Congress, restrained their impetuosity. It was a fortunate circumstance for the colonies that the royal army was posted at New England. The people of that northern country have their passions more under the command of reason and interest, than those in the southern latitudes, where a warmer sun excites a greater degree of irascibility. One rash offensive action against the royal forces at this early period, though successful, might have done great mischief to the cause of America. It would have lost them European friends, and weakened the disposition of the other colonies to assist them. The patient and the politic New England men, fully sensible of their situation, submitted to many insults, and bridled their resentments. In civil wars or revolutions it is a matter of much consequence who strikes the first blow. The compassion of the world is in favour of the attacked, and the displeasure of good men on those who are the first to imbrue their hands in human blood. For the space of nine months after the arrival of General Gage, the behaviour of the people of Boston is particularly worthy of imitation, by those who wish to overturn established governments.—They conducted their opposition with exquisite

address. They avoided every kind of outrage and violence, preserved peace and good order among themselves, successfully engaged the other colonies to make a common cause with them, and counteracted General Gage so effectually as to prevent his doing any thing for his royal master, while by patience and moderation they screened themselves from censure. Though resolved to bear as long as prudence and policy dictated, they were all the time preparing for the last extremity. They were furnishing themselves with arms and ammunition, and training their militia.

Provisions were also collected and stored in different places, particularly at Concord, about twenty miles from Boston. General Gage, though zealous for his royal master's interest, discovered a prevailing desire of a peaceable accommodation. He wished to prevent hostilities by depriving the inhabitants of the means necessary for carrying them on. With this view he determined to destroy the stores which he knew were collected for the support of a provincial army. Wishing to accomplish this without bloodshed, he took every precaution to effect it by surprise, and without alarming the country. At eleven o'clock at night, April 18th, 1775, 800 grenadiers and light infantry, the flower of the royal army, embarked at the Common, landed at Phipps's farm, and marched for Concord, under the command of Lieutenant Colonel Smith. Neither the secrecy with which this expedition was planned, the privacy with which the troops marched out, nor an order that no one informed should leave Boston, were sufficient to prevent intelligence from being sent to the country militia, of what was going forward. About two in the morning 130 of the Lexington militia had assembled to oppose them, but intelligence respecting the regulars being uncertain, they were dismissed, with orders to appear again at beat of drum. They collected a second time, to the number of 70, between four and five o'clock in the morning, of the 19th, and the British regulars soon after made their appearance. Major Pitcairn, who led the advanced corps, rode up them and called out: "Disperse, you rebels; throw down your arms and disperse." They still continued in a body; on which he advanced nearer, discharged his pistol, and ordered his soldiers to fire. This was done with a hurra. A dispersion of the militia was the consequence; but the firing of the regulars was nevertheless continued. Individuals falling they were fired upon, though dispersing, returned the fire. Three or four of the militia were killed on the green. A few more were shot after they had begun to disperse. The royal detachment proceeded to Concord, and executed their commission. They disabled two 24 pounders, threw 500 lb of ball into wells, and staved about sixty barrels of flour. Mr. John Buttrick, of Concord, major of a minute regiment, not knowing what had passed at Lexington, ordered his men not to give the first fire, that they might not be the aggressors. Upon his approaching near the regulars, they fired, and killed Captain Isaac Davis, and one private of the provincial minute men. The fire was returned, and a skirmish ensued. Thinking their troops having done their business, began their retreat towards Boston. This was conducted with expedition, for the adjacent inhabitants had assembled in arms, and began to attack them in every direction. In their return to Lexington they were exceedingly annoyed, both by those who pressed on their rear, and others who pouring in from all sides, fired from behind stone walls and such like coverts, which supplied the place of lines and redoubts. At Lexington the regulars were joined by a detachment of 900 men, under Lord Percy, which had been sent out by General Gage to support Lieutenant Colonel Smith. This reinforcement having two pieces of cannon, awed the provincials, and kept them at a greater distance; but they continued a constant, though irregular and scattering fire, which did great execution. The close firing from behind the walls by good marksmen, put the regular troops into no small confusion: but they nevertheless kept up a brisk

retreating fire on the militia and minute men. A little after sunset the regulars reached Bunker's-hill, worn down with excessive fatigue, having marched that day between thirty and forty miles. On the next day they crossed the Charlestown ferry, and returned to Boston.

There never were more than 400 provincials engaged at one time, and often not so many. As some tired and gave out, others came up and took their places. There was scarcely any discipline observed among them. Officers and privates fired when they were ready, or saw a royal uniform, without waiting for the word of command. Their knowledge of the country enabled them to gain opportunities by crossing fields and fences, and to act as flanking parties against the king's troops, who kept to the main road.

The regulars had sixty-five killed, one hundred and eighty wounded, and twenty-eight made prisoners. Of the provincials fifty were killed, and thirty-eight wounded and missing.

As arms were to decide the controversy, it was fortunate for the Americans that the first blood was drawn in New England. The inhabitants of that country are so connected with each other by descent, manners, religion, politics, and a general equality, that the killing of a single individual interested the whole, and made them consider it as a common cause. The blood of those who were killed at Lexington and Concord proved the firm cement of an extensive union.

To prevent the people within Boston from co-operating with their countrymen without, in case of an assault, which was now daily expected, General Gage agreed with a committee of the town, that upon the inhabitants lodging their arms in Faneuil hall, or any other convenient place, under the care of the selectmen, all such inhabitants as were inclined, might depart from the town, with their families and effects. In five days after the ratification of this agreement, the inhabitants lodged 1778 muskets, 634 pistols, 273 bayonets and 38 blunderbusses. The agreement was well observed in the beginning; but after a short time obstructions were thrown in the way of its final completion, on the plea that persons who went from Boston to bring in the goods of those who chose to continue within the town, were not properly treated. Congress remonstrated on the infraction of the agreement, but without effect. The general on a farther consideration of these consequences of moving the whigs out of Boston, evaded it in a manner not consistent with good faith. He was in some measure compelled to adopt this dishonourable measure, from the clamour of the tories, who alleged that none but enemies to the British government were disposed to remove, and that when they were all safe with their families and effects the town would be set on fire. To prevent the provincials from obtaining supplies which they much wanted, a quibble was made on the meaning of the word *effects* which was construed by the general as not including merchandise. By this construction, unwarranted by every rule of genuine interpretation, many who quitted the town were deprived of their usual resources for support. Passports were not universally refused, but were given out very slowly; and the business was so conducted that families were divided; wives were separated from their husbands; children from their parents; and the aged and infirm from their relations and friends. The general discovered a disinclination to part with the women and children, thinking that, on their account, the provincials would be restrained from making an assault on the town. The selectmen gave repeated assurances that the inhabitants had delivered up their arms; but, as a cover for violating the agreement, General Gage issued a proclamation, in which he asserted that he had a full proof to the contrary. A few might have secreted some favourite arms; but nearly all the training arms were delivered up. On this flimsy pretence the general sacrificed his honour to policy and the clamours of the tories. Contrary to good faith, he detained many, though fairly entitled by agreement to go out: and when

he admitted the departure of others, he would not allow them to remove their families and effects.

The provincial congress of Massachusetts, which was in session at the time of the Lexington battle, despatched an account of it to Great Britain, accompanied with many depositions, to prove that the British troops were the aggressors. They also made an address to the inhabitants of Great Britain, in which, after complaining of their sufferings, they say: "These have not yet detached us from our royal sovereign. We profess to be his loyal and dutiful subjects, and though hardly dealt with, as we have been, are still ready with our lives and fortunes, to defend his person, crown and dignity. Nevertheless, to the persecution and tyranny of his evil ministry, we will not tamely submit. Appealing to heaven for the justice of our cause, we determine to die or be free." From the commencement of hostilities, the dispute between Great Britain and the colonies took a new direction.

Intelligence that the British troops had marched out of Boston into the country on some hostile purpose, being forwarded by expresses from one committee to another, great bodies of the militia, not only from Massachusetts, but the adjacent colonies, grasped their arms and marched to oppose them. The colonies were in such a state of irritability, that the least shock in any part was, by a powerful and sympathetic affection, instantaneously felt throughout the whole. The Americans who fell were revered by their countrymen, as martyrs who had died in the cause of liberty. Resentment against the British burned more strongly than ever. Martial rage took possession of the breasts of thousands. Combinations were formed, and associations subscribed, binding the inhabitants to one another by the sacred ties of honour, religion, and love of country, to do whatever their public bodies directed for the preservation of their liberties. Hitherto the Americans had no regular army. From principles of policy they cautiously avoided that measure, lest they might subject themselves to the charge of being aggressors. All their military regulations were carried on by their militia, and under the old established laws of the land. For the defence of the colonies, the inhabitants had been, from their early years, enrolled in companies, and taught the use of arms. The laws for this purpose had never been better observed than for some months previous to the Lexington battle. These military arrangements, which had been previously adopted for defending the colonies from hostile French and Indians, were on this occasion turned against the troops of the parent state. Forts, magazines, and arsenals, by the constitution of the country, were in the keeping of his majesty. Immediately after the Lexington battle, these were for the most part taken possession of throughout the colonies, by parties of the provincial militia. Ticonderoga, in which was a small royal garrison, was surprised and taken by adventurers from different states. Public money which had been collected in consequence of previous grants, was also seized for common services. Before the commencement of hostilities, these measures would have been condemned by the moderate even among the Americans; but that event justified a bolder line of opposition than had been adopted. Sundry citizens having been put to death by British troops, self preservation dictated measures which, if adopted under other circumstances, would have disunited the colonists. One of the most important of this kind was the raising an army. Men of warm tempers whose courage exceeded their prudence, had for months urged the necessity of raising troops; but they were restrained by the more moderate, who wished that the colonies might avoid extremities, or at least that they might not lead in bringing them on. The provincial congress of Massachusetts being in session at the time the battle of Lexington was fought, voted that "an army of 30,000 men be immediately raised; that 13,000 be of their own province; and that a letter and delegate be sent to the several colonies of New Hampshire, Connecticut and Rhode Island." In consequence of this vote, the

business of recruiting was begun : and in a short time a provisional army was paraded in the vicinity of Boston, which, though far below what had been voted by the provincial congress, was much superior in numbers to the royal army. The command of this force was given to General Ward.

Had the British troops confined themselves to Boston, as before the 18th of April, the assembling an American army, though only for the purpose of observation and defence, would have appeared in the nature of a challenge; and would have made many less willing to support the people of Massachusetts; but after the British had commenced hostilities, the same measure was adopted without subjecting the authors of it to censure, and without giving offence or hazarding the union. The Lexington battle not only furnished the Americans with a justifying apology for raising an army, but inspired them with ideas of their own prowess. Amidst the most animated declarations of sacrificing fortune, and risking life itself for the security of American rights, a secret sigh would frequently escape from the breasts of her most determined friends, for fear that they could not stand before the bravery and discipline of British troops. Hoary sages would shake their heads, and say; "Your cause is good, and I wish you success: but I fear that your undisciplined valour must be overcome, in the unequal contest. After a few thousands of you have fallen, the provinces must ultimately bow to that power which has so repeatedly humbled France and Spain." So confident were the British of their superiority in arms, that they seemed desirous that the contest might be brought to a military decision. Some of the distinguished speakers in parliament had publicly asserted that the natives of America had nothing of the soldier in them, and that they were in no respect qualified to face a British army. European philosophers had published theories, setting forth that not only vegetables and beasts, but that even men degenerated in the western hemisphere. Departing from the spirit of true philosophy, they overlooked the state of society in the new world, and charged a comparative inferiority, on every production that was American. The colonists themselves had imbibed opinions from their forefathers, that no people on earth were equal to those with whom they were about to contend. Impressed with high ideas of British superiority, and diffident of themselves, their best-informed citizens, though willing to run all risks, feared the consequence of an appeal to arms. The success that attended their first military enterprise, in some degree banished these suggestions. Perhaps in no subsequent battle did the Americans appear to greater advantage than in their first essay at Lexington. It is almost without parallel in military history, for the yeomanry of a country to come forward in a single disjointed manner, without order, and for the most part without officers, and by an irregular fire, to put to flight troops equal in discipline to any in the world. In opposition to the bold assertions of some, and the desponding fears of others, experience proved that Americans might effectually resist British troops. The diffident grew bold in their country's cause, and indulged in cheerful hopes that heaven would finally crown their labours with success.

Soon after the Lexington battle, and in consequence of that event, not only the arms, ammunition forts and fortifications in the colonies were secured for the use of the provincials: but regular forces were raised, and money struck for their support. These military arrangements were not confined to New England, but were general throughout the colonies. The determination of the king and parliament to enforce submission to their acts, and the news of the Lexington battle, came to the distant provinces nearly about the same time. It was supposed by many that the latter was in consequence of the former, and that General Gage had recent orders to proceed immediately to subdue the refractory colonies.

From a variety of circumstances the Americans had good reason to conclude that hostilities would

soon be carried on vigorously in Massachusetts, and also to apprehend that, sooner or later, each province would be the theatre of war. "The more speedily therefore," said they, "we are prepared for that event, the better chance we have for defending ourselves." Previous to this period, or rather to the 19th April, 1775, the dispute had been carried on by the pen, or at most by associations and legislative acts; but from this time forward it was conducted by the sword. The crisis was arrived when the colonies had no alternative, but either to submit to the mercy, or to resist the power of Great Britain. An unconquerable love of liberty could not brook the idea of submission; while reason, more temperate in her decisions, suggested to the people their insufficiency to make effectual opposition. They were fully apprized of the power of Britain; they knew that her fleets covered the ocean, and that her flag waved in triumph through the four quarters of the globe; but the animated language of the time was, "It is better to die freemen, than to live slaves." Though the justice of their cause and the inspiration of liberty gave, in the opinion of disinterested judges, a superiority to the writings of Americans, yet in the latter mode of conducting their opposition, the candid among themselves acknowledged an inferiority. Their form of government was deficient in that decision, despatch and coercion, which are necessary to military operations.

Europeans, from their being generally unacquainted with fire arms, are less easily taught the use of them than Americans, who are from their youth familiar with these instruments of war; yet on other accounts they are more susceptible of military habits. The proportion of necessitous men in the new world is small compared with that in the old.

To procure subsistence is a powerful motive with an European to enlist; and the prospect of losing it makes him afraid to neglect his duty; but these incitements to the punctual discharge of military services, are wanting in America. In old countries the distinction of ranks and the submission of inferiors to superiors, generally takes place; but in the new world, an extreme sense of liberty and equality indisposes to that implicit obedience which is the soul of an army. The same causes which nurtured a spirit of independence in the colonies were hostile to their military arrangements. It was not only from the different state of society in the two countries, but from a variety of local causes, that the Americans were not able to contend in arms, on equal terms, with their parent state. From the first settlement of the British colonies, agriculture and commerce, but especially the former, had been the favourite pursuits of their inhabitants. War was a business abhorrent from their usual habits of life. They had never engaged in it from their own motion, nor in any other mode than as appendages to British troops, and under British establishments. By these means the military spirit of the colonies had had no opportunity of expanding itself. At the commencement of hostilities, the British troops possessed a knowledge of the science and discipline of war, which could be acquired only by a long series of application, and substantial establishments. Their equipments, their artillery, and every other part of their apparatus for war approached perfection. To these important circumstances was added a high national spirit of pride, which had been greatly augmented by their successes in their last contest with France and Spain. On the other hand the Americans were undisciplined, without experienced officers, and without the shadow of military establishments. In the wars which had been previously carried on, in or near the colonies, the provincials had been, by their respective legislatures, frequently added to the British troops: but the pride of the latter would not consider the former, who were without uniformity of dress, or the pertness of military airs, to be their equals. The provincial troops were therefore for the most part, assigned to services which, though laborious, were not honourable.

The ignorance of British generals commanding in the woods of America, sometimes involved them in difficulties from which they had been more than once relieved by the superior local knowledge of the colonial troops. These services were soon forgotten: and the moment the troops who performed them could be spared they were disbanded. Such like obstacles had hitherto depressed military talents in America; but they were now overcome by the ardour of the people.

In the year 1775, a martial spirit pervaded all ranks of men in the colonies. They believed their liberties to be in danger, and were generally disposed to risk their lives for their establishment. Their ignorance of the military art, prevented their weighing the chances of war with that exactness of calculation, which, if indulged, might have damped their hopes. They conceived that there was little more to do than fight manfully for their country. They consoled themselves with the idea, that though their first attempt might be unsuccessful, their numbers would admit of a repetition of the experiment, till the invaders were finally exterminated. Not considering, that in modern wars the longest purse decides oftener than the longest sword, they feared not the wealth of Britain. They both expected and wished that the whole dispute would be speedily settled in a few decisive engagements. Elevated with the love of liberty, and buoyed above the fear of consequences, by an ardent military enthusiasm, unabated by calculations about the extent, duration, or probable issue of the war, the people of America seconded the voice of their rulers, in an appeal to heaven for the vindication of their rights. At the time the colonies adopted these spirited resolutions, they possessed not a single ship of war, nor so much as an armed vessel of any kind. It had often been suggested that their seaport towns lay at the mercy of the navy of Great Britain; this was both known and believed, but disregarded. The love of property was absorbed in the love of liberty. The animated votaries of the equal rights of human nature, consoled themselves with the idea that though their whole sea coast should be laid in ashes, they could retire to the western wilderness, and enjoy the luxury of being free; on this occasion it was observed in Congress, by Christopher Gadsden, one of the South Carolina delegates: "Our houses being constructed of brick, stone, and wood, though destroyed, may be rebuilt; but liberty once gone is lost for ever."

The sober discretion of the present age will more readily censure than admire, but can more easily admire than imitate the fervid zeal of the patriots of 1775 and 1776, who in idea sacrificed property in the cause of liberty, with the ease that they now sacrifice almost every other consideration for the acquisition of property.

The revenues of Britain were immense; and her people were habituated to the payment of large sums in every form which contributions to government have assumed. But the American colonies possessed neither money nor funds; nor were their people accustomed to taxes equal to the exigencies of war. The contest having begun about taxation, to have raised money by taxes for carrying it on, would have been impolitic. The temper of the times precluded the necessity of attempting the dangerous expedient; for such was the enthusiasm of the day, that the colonists gave up both their personal services and their property to the public, on the vague promises that they should at a future time be reimbursed. Without inquiring in the solidity of funds, or the precise period of payment, the resources of the country were demanded on general assurances, that all expenses of the war should ultimately be equalized. The parent state abounded with experienced statesmen and officers; but the dependent form of government exercised in the colonies, precluded their citizens from gaining that practical knowledge which is acquired from being at the head of public departments. There were very few in the colonies who understood the business of providing for an army, and still fewer who had experience

and knowledge to direct its operations. The disposition of the finances of the country, and the most effectual mode of drawing forth its resources, were subjects with which scarce any of the inhabitants were acquainted. Arms and ammunition were almost wholly deficient; and though the country abounded with the materials of which they are manufactured, yet there was neither time nor artists enough to supply an army with the means of defence. The country was destitute both of fortifications and engineers. Amidst so many discouragements, there were some flattering circumstances. The war could not be carried on by Great Britain, but at a great disadvantage, and at immense expense. It was easy for ministers, at St. James's, to plan campaigns: but hard was the fate of the officer, from whom the execution, of them, in the woods of America, was expected. The country was so extensive, and abounded so much with Jeffies, that, by evacuating and retreating, the Americans, though they could not conquer, yet might save themselves from being conquered. The authors of the acts of Parliament, for restraining the trade of the colonies, were most excellent recruiting officers for Congress. They imposed a necessity on thousands to become soldiers. All other business being suspended, the whole resources of the country were applied in supporting an army. Though the colonists were without discipline, they possessed native valour. Though they had neither gold nor silver, they possessed a mine, in the enthusiasm of their people. Paper, for upwards of two years, produced to them more solid advantages, than Spain derived from her superabounding precious metals. Though they had no ships to protect their trade or their towns, they had simplicity enough to live without the former, and enthusiasm enough to risk the latter; rather than submit to the power of Britain. They believed their cause to be just, and that heaven approved their exertions in defence of their rights. Zeal originating from such motives, supplied the place of discipline: and inspired a confidence and military ardour, which overleaped all difficulties.

Resistance being resolved upon by the Americans, the pulpit, the press, the bench and the bar, severally laboured to unite and encourage them. The clergy of New England were a numerous, learned and respectable body, who had a great ascendancy over the minds of their hearers.—They connected religion and patriotism; and in their sermons and prayers, represented the cause of America, as the cause of heaven. The synod of New York and Philadelphia also sent forth a pastoral letter, which was publicly read in their churches. This earnestly recommended such sentiments and conduct, as were suitable to their situation. Writers and printers followed in the rear of the preachers: and, next to them, had the greatest hand in animating their countrymen.—Gentlemen, of the bench and of the bar, denied the charge of rebellion, and justified the resistance of the colonists. A distinction founded on law, between the king and his ministry, was introduced. The former, it was contended, could do no wrong. The crime of treason was charged on the latter, for using the royal name, to varnish their own unconstitutional measures. The phrase of a ministerial war became common; and was used, as a medium for reconciling resistance with allegiance.

Coeval with the resolutions for organizing an army, was one appointing the 20th day of July, 1775, a day of public humiliation, fasting and prayer to Almighty God: "to bless their rightful sovereign king George; and to inspire him with wisdom to discern and pursue the true interest of his subjects; that the British nation might be influenced, to regard the things that belonged to her peace, before they were hid from her eyes; that the colonies might be ever under the care and protection of a kind providence, and be prospered in all their interests: that America might soon behold a gracious interposition of heaven, for the redress of her many grievances, the restoration of her invaded right, a reconciliation with the pa-

rent state, on terms constitutional and honourable to both."^{*} The forces which had been collected in Massachusetts, were stationed in convenient places, for guarding the country, from farther excursions of the regulars from Boston. Breast-works were also erected in different places, for the same purpose. While both parties were attempting to carry off stock from the several islands, with, which the bay of Boston is agreeably diversified, sundry skirmishes took place. These were of real service to the Americans. They habituated them to danger; and, perhaps, much of the courage of old soldiers, is derived from an experimental conviction, that the chance of escaping unhurt from engagements, is much greater than young recruits suppose.

About the latter end of May, a great part of the reinforcements ordered from Great Britain, arrived at Boston. Three British generals, Howe, Burgoyne and Clinton, whose behaviour in the preceding war had gained them great reputation, arrived about the same time. General Gage, thus reinforced, prepared for acting with more decision: but before he proceeded to extremities, he conceived it due to ancient forms, to issue a proclamation, holding forth to the inhabitants the alternative of peace or war. He therefore offered pardon, in the king's name, to all who should forthwith lay down their arms, and return to their respective occupations and peaceable duties: excepting only from the benefit of that pardon, "Samuel Adams, and John Hancock, whose offences were said to be of too flagitious a nature, to admit of any other consideration, than that of condign punishment." He also proclaimed, that not only the persons above-named and excepted, but also, all their adherents, associates, and correspondents, should be deemed guilty of treason and rebellion; and treated accordingly. By this proclamation, it was also declared, "that as the courts of judicature were shut, martial law should take place, till a due course of justice should be re-established." It was supposed that this proclamation was a prelude to hostilities; and preparations were accordingly made by the Americans. A considerable height, by the name of Bunker's hill, just at the entrance of the peninsula of Charlestown, was so situated as to make the possession of it a matter of great consequence, to either of the contending parties. Orders were therefore issued, by the provincial commanders, that a detachment of a thousand men should intrench upon this height. By some mistake, Breed's hill, high and large like the other, but situated nearer Boston, was marked out for the intrenchments, instead of Bunker's hill. The provincials proceeded to Breed's hill: and worked with so much diligence, that between midnight and the dawn of the morning, they had thrown up a small redoubt about eight rods square. They kept such a profound silence, that they were not heard by the British, on board their vessels, though very near. These having derived their first information of what was going on, from the sight of the works, nearly completed, began an incessant firing upon them. The provincials bore this with firmness; and, though they were only young soldiers, continued to labour till they had thrown up a small breast-work extending from the east side of the redoubt to the bottom of the hill. As this eminence overlooked Boston, General Gage thought it necessary to drive the provincials from it. About noon, there-

fore, he detached Major General Howe and Brigadier General Pigot, with the flower of his army, consisting of four battalions, ten companies of the grenadiers and ten of light infantry, with a proportion of field artillery, to effect this business. These troops landed at Moreton's point, and formed after landing; but remained in that position, till they were reinforced by a second detachment of light infantry and grenadier companies, a battalion of land forces, and a battalion of marines, making in the whole nearly 3000 men. While the troops, who first landed, were waiting for this reinforcement, the provincials for their farther security, pulled up some adjoining post and rail fences, and set them down in two parallel lines, at a small distance from each other; and filled the space between with hay, which, having been lately mowed, remained on the adjacent ground.

The king's troops formed in two lines, and advanced slowly, to give their artillery time to demolish the American works. While the British were advancing to the attack, they received orders to burn Charlestown. These were not given, because they were fired upon from the houses in that town, but from the military policy of depriving enemies of a cover in their approaches. In a short time, this ancient town, consisting of about 500 buildings, chiefly of wood, was in one great blaze. The lofty steeple of the meeting house formed a pyramid of fire above the rest, and struck the astonished eyes of numerous beholders, with a magnificent but awful spectacle. In Boston, the heights of every kind were covered with the citizens, and such of the king's troops, as were not on duty. The hills around the adjacent country, which afforded a safe and distinct view, were occupied by the inhabitants of the country.

Thousands, both within and without Boston, were anxious spectators of the bloody scene. The honour of British troops, beat high in the breasts of many: while others, with a keener sensibility, felt for the liberties of a great and growing country. The British moved on slowly; which gave the provincials a better opportunity for taking aim. The latter, in general reserved themselves, till their adversaries were within ten or twelve rods; but then began a furious discharge of small arms. The stream of the American fire was so incessant, and did so great execution, that the king's troops retreated in disorder and precipitation. Their officers rallied them, and pushed them forward with their swords; but they returned to the attack with great reluctance. The Americans again reserved their fire, till their adversaries were near; and then put them a second time to flight. General Howe and the officers redoubled their exertions, and were again successful; though the soldiers discovered a great aversion to going on. By this time the powder of the Americans began so far to fail, that they were not able to keep up the same brisk fire. The British then brought some cannon to bear, which raked the inside of the breast-works from end to end. The fire from the ships, batteries, and field artillery was redoubled; the soldiers in their rear were goaded on by their officers. The redoubt was attacked on three sides at once. Under these circumstances, a retreat from it was ordered: but the provincials delayed and made resistance with their discharged muskets, as if they had been clubs, so long, that the king's troops, who easily mounted the works, had half filled the redoubt, before it was given up to them.

While these operations were going on at the breast-work and redoubt, the British light infantry were attempting to force the left point of the former, that they might take the American line in flank. Though they exhibited the most undaunted courage, they met with an opposition which called for its greatest exertions. The provincials reserved their fire, till their adversaries were near; and then poured it upon the light infantry, with such an incessant stream, and in a direction so true, as mowed down their ranks. The engagement was kept up on both sides with great resolution. The persevering exertions of the king's

^{*} Since the fast of the Ninevites, recorded in sacred writ, perhaps there has not been one, which was more generally kept, with suitable dispositions, than that of July 20, 1775. It was no formal service. The whole body of the people felt the importance, the weight and the danger of the unequal contest, in which they were about to engage; that every thing dear to them was at stake; and that a divine blessing only could carry them through it successfully. This blessing they implored with their whole souls, poured forth in ardent supplications, issuing from hearts deeply penetrated with a sense of their unworthiness, their dependence and danger; and at the same time, impressed with an humble confidence, in the mercies and goodness of that Being, who had planted and preserved them hitherto, amid many dangers, in the wilderness of a new world.

troops could not compel the Americans to retreat, till they observed that their main body had left the hill. This, when begun, exposed them to new dangers; for, it could not be effected, but by marching over Charlestown neck; every part of which was raked by the shot of the Glasgow man of war, and of two floating batteries. The incessant fire kept up across this neck, prevented any considerable reinforcement from joining their countrymen who were engaged; but the few who fell on their retreat, over the same ground, proved that the apprehensions of those provincial officers, who declined passing over to succour their companions, were without any solid foundation.

The number of Americans engaged, amounted only to 1500. It was apprehended that the conquerors would push the advantage they had gained, and march immediately to American headquarters at Cambridge; but they advanced no farther than Bunker's hill. There they threw up works for their own security. The provincials did the same, on Prospect hill, in front of them. Both were guarding against an attack; and both were in a bad condition to receive one. The loss of the peninsula depressed the spirits of the Americans; and the great loss of men produced the same effect on the British. Their have been few battles in modern wars, in which, all circumstances considered, there was a greater destruction of men, than in this short engagement. The loss of the British, as acknowledged by General Gage, amounted to 1054. Nineteen commissioned officers were killed and 70 more were wounded. The battle of Quebec, in 1759, which gave Great Britain the province of Canada, was not so destructive to British officers, as this affair of a slight intrenchment, the work only of a few hours. That the officers suffered so much, must be imputed to their being aimed at. None of the provincials in this engagement were rifle men: but, they were all good marksmen. The whole of their previous military knowledge had been derived from hunting, and the ordinary amusements of sportsmen. The dexterity which, by long habit, they had acquired in hitting beast, birds, and marks, was fatally applied to the destruction of British officers. From their fall, much confusion was expected. They were therefore particularly singled out. Most of those, who were near the person of General Howe, were either killed or wounded: but the general, though he greatly exposed himself, was unhurt. The light infantry and grenadiers lost three-fourths of their men. Of one company, not more than five, and of another, not more than fourteen escaped. The unexpected resistance of the Americans was such, as wiped away the reproach of cowardice, which had been cast on them, by their enemies in Britain. The spirited conduct of the British officers, merited and obtained great applause: but, the provincials were justly entitled to a large portion of the fame, for having made the utmost exertions of their adversaries necessary, to dislodge them from lines, which were the work only of a single night.

The Americans lost five pieces of cannon. Their killed amounted to one hundred and thirty-nine; their wounded and missing to three hundred and fourteen. Thirty of the former fell into the hands of the conquerors. They particularly regretted the death of General Warren. To the purest patriotism and most undaunted bravery, he added the virtues of domestic life, the eloquence of an accomplished orator, and the wisdom of an able statesman. A regard to the liberty of his country only, induced him to oppose the measures of government. He aimed not at a separation from, but a coalition with the mother country. He took an active part in defence of his country; not that he might be applauded, and rewarded for a patriotic spirit; but, because he was, in the best sense of the word, a real patriot. Having no interested or personal views to answer, the friends of liberty confided in his integrity. The soundness of his judgment, and his abilities as a public speaker, enabled him to make a distinguished figure in public councils: but, his intrepidity and active zeal,

induced his countrymen to place him in the military line. Within four days after he was appointed a major general, he fell a noble sacrifice to a cause, which he had espoused from the purest principles. Like Hampden he lived, and like Hampden he died; universally beloved, and universally regretted. His many virtues were celebrated in an elegant eulogium, written by Dr. Rush, in language, equal to the illustrious subject.

The burning of Charlestown, though a place of great trade, did not discourage the provincials. It excited resentment and execration; but not any disposition to submit. Such was the high-toned state of the public mind, and so great the indifference of property, when put in competition with liberty, that military conflagrations, though they distressed and impoverished, had no tendency to subdue the colonists. They might answer in the old world: but were not calculated for the new, where the war was undertaken, not for a change of masters, but for securing essential rights. The action at Breed's-hill or Bunker's hill, as it has been commonly called, produced many and very important consequences. It taught the British so much respect for the Americans, intrenched behind works, that their subsequent operations were retarded with a caution, that wasted away a whole campaign, to very little purpose. It added to the confidence the Americans began to have in their own abilities; but inferences, very injurious to the future interests of America, were drawn from the good conduct of the new troops, on the memorable day. It inspired some of the leading members of Congress, with such high ideas of what might be done by militia, or men engaged for a short term of enlistment, that it was long before they assented to the establishment of a permanent army. Not distinguishing the continued exertions of an army, through a series of years, from the gallant efforts of the yeomanry of the country, led directly to action, they were slow in admitting the necessity of permanent troops. They conceived the country might be defended, by the occasional exertions of her sons, without the expense and danger of an army, engaged for the war. In the progress of hostilities, as will appear in the sequel, the militia lost much of their first ardour; while leading men in the councils of America, trusting to its continuance, neglected the proper time of recruiting, for a series of years. From the want of perseverance in the militia, and the want of a disciplined standing army, the cause for which arms were at first taken up, was more than once brought to the brink of destruction.

CHAPTER IX.

The second Congress meets; organizes a regular Continental Army: makes sundry public addresses: petitions the King, &c. Transactions in Massachusetts.

It has already been mentioned, that Congress, previous to its dissolution, on the 26th of October, 1774, recommended to the colonies, to choose members for another; to meet on the 10th of May, 1775; unless the redress of grievances was previously obtained. A circular letter had been addressed by lord Dartmouth, to the several colonial governors, requesting their interference, to prevent the meeting of this second congress; but ministerial requisitions had lost their influence. Delegates were elected, not only for the twelve colonies, that were before represented, but also for the parish of St. John's, in Georgia; and, in July following, for the whole province. The time of the meeting of this second congress, was fixed at so distant a day, that an opportunity might be afforded for obtaining information of the plans adopted by the British parliament in the winter of 1774, 1775. Had these been favourable, the delegates would either not have met, or dispersed after a short session: but as the resolution was then fixed, to compel the submission of the colonies, and hostilities had already commenced the meeting of

Congress, on the tenth of May, which was at first eventual, became fixed.

On their meeting, they chose Peyton Randolph, for their president, and Charles Thompson, for their secretary. On the next day Mr. Hancock laid before them a variety of depositions, proving, that the king's troops were the aggressors, in the late battle at Lexington, together with sundry papers relative to the great events, which had lately taken place in Massachusetts. Whereupon Congress resolved itself into a committee of the whole, to take into consideration the state of America. They proceeded in the same line of moderation and firmness, which marked the acts of their predecessors in the past year.

The city and county of New York, having applied to Congress, for advice how they should conduct themselves with regard to the troops they expected to land there: they were advised, "to act on the defensive, so long as might be consistent with their safety; to permit the troops to remain in the barracks, so long as they behaved peaceably: but not to suffer fortifications to be erected, or any steps to be taken for cutting off the communication between the town and country." Congress also resolved: "That exportation to all parts of British America, which had not adopted their association, should immediately cease;" and that, "no provision of any kind, or other necessities, be furnished to the British fisheries, on the American coasts;" and, "that no bill of exchange, draft, or order, of any officer in the British army or navy, their agents or contractors, be received or negotiated, or any money supplied them, by any person in America; that no provisions or necessities of any kind, be furnished or supplied, to or for the use of the British army or navy, in the colony of Massachusetts Bay; that no vessel employed in transporting British troops to America, or from one part of North America, to another, or warlike stores or provisions for said troops, be freighted or furnished with provisions or any necessities." These resolutions may be considered as the counterpart of the British acts for restraining the commerce, and prohibiting the fisheries of the colonies. They were calculated to bring distress on the British islands, in the West Indies; whose chief dependence for subsistence, was on the importation of provisions from the American continent. They also occasioned new difficulties in the support of the British army and fisheries. The colonists were so much indebted to Great Britain, that government bills for the most part found among them a ready market. A war in the colonies was therefore made subservient to commerce, by increasing the sources of resistance. This enabled the mother country, in a great degree, to supply her troops without shipping money out of the kingdom. From the operation of these resolutions, advantages of this nature were not only cut off, but the supply of the British army was rendered both precarious and expensive. In consequence of the interdiction of the American fisheries, great profits were expected, by British adventurers, in that line. Such frequently found it most convenient to obtain supplies in America, for carrying on their fisheries: but, as Great Britain had deprived the colonists of all benefits from that quarter, they now, in their turn, interdicted all supplies from being furnished to British fishermen. To obviate this unexpected embarrassment, several of the vessels employed in this business, were obliged to return home to bring out provisions, for their associates. These restrictive resolutions were not so much the effect of resentment, as of policy. The colonists conceived that by distressing the British commerce, they would increase the number of those who would interest themselves in their behalf.

The new congress had convened but a few days, when their venerable president, Peyton Randolph, was under the necessity of returning home. On his departure, John Hancock, who had lately been proscribed, by General Gage, was unanimously chosen his successor. The objects of deliberation, presented to this new congress, were, if pos-

sible, more important than those which, in the preceding year, had engaged the attention of their predecessors. The colonists had now experienced the inefficacy of those measures, from which relief had been formerly obtained. They found a new parliament disposed to run all risks in compelling their submission. They also understood, that administration was united against them, and its members firmly established in their places. Hostilities were commenced. Reinforcements had arrived; and more were daily expected. Added to this, they had information, that their adversaries had taken measures to secure the friendship and co-operation of the Indians and Canadians.

The coercion of the colonists being resolved upon, and their conquest supposed to be inevitable, the British ministry judged, that it would be for the interest of both countries, to proceed in that vigorous course, which promised the speediest attainment of their object. They hoped, by pressing the colonists on all quarters, to intimidate opposition, and ultimately to lessen the effusion of human blood.

In this awful crisis, Congress had only a choice of difficulties. The New England states had already organized an army, and blockaded General Gage. To desert them would have been contrary to plighted faith, and to sound policy: to support them, would make the war general, and involve all the provinces in one general promiscuous state of hostility. The resolution of the people in favour of the latter was fixed; and only wanted public sanction for its operation. Congress therefore resolved: "that for the express purpose of defending and securing the colonies and preserving them in safety, against all attempts to carry the late acts of parliament into execution by force of arms, they be immediately put in a state of defence: but, as they wished for a restoration of the harmony, formerly subsisting between the mother country and the colonies, to the promotion of this most desirable reconciliation, an humble and dutiful petition be presented to his majesty." To resist, and to petition, were coeval resolutions. As freemen, they could not tamely submit: but as loyal subjects, wishing for peace as far as was compatible with their rights, they once more in the character of petitioners, humbly stated their grievances, to the common father of the empire. To dissuade the Canadians from co-operating with the British, they again addressed them: representing the pernicious tendency of the Quebec act, and apologizing for their taking Ticonderoga and Crown Point, as measures which were dictated by the great law of self-preservation.

About the same time, Congress took measures for warding off the danger, that threatened their frontier inhabitants from the Indians. Commissioners to treat with them, were appointed: and a supply of goods for their use was ordered. A talk was also prepared by Congress, and transmitted to them, in which the controversy between Great Britain and her colonies was explained in a familiar Indian style. They were told, that they had no concern in the family quarrel; and were urged by the ties of ancient friendship, and a common birth place, to remain at home; keep their hatchet buried deep; and to join neither party.

The novel situation of Massachusetts, made it necessary for the ruling powers of that province, to ask the advice of Congress, on a very interesting subject: "the taking up and exercising the powers of civil government." For many months they had been kept together, in tolerable peace and order, by the force of ancient habits; under the simple style of recommendation and advice from popular bodies, invested with no legislative authority. But, as war now raged in their borders, and a numerous army was actually raised, some more efficient form of government became necessary. At this early day, it neither comported with the wishes, nor the designs of the colonists, to erect forms of government independent of Great Britain. Congress, therefore, recommended only such regulations, as were immedi-

ately necessary: and these were confined, as near as possible, to the spirit and substance of the charter; and were only to last, till a governor, of his majesty's appointment, would consent to govern the colony according to its charter.

On the same principles of necessity, another assumption of new powers became unavoidable. The great intercourse that daily took place throughout the colonies, pointed out the propriety of establishing a general post-office. This was accordingly done; and Dr. Franklin who, had by royal authority, been dismissed from a similar employment about three years before, was appointed by his country, the head of the new department.

While Congress was making arrangements for their proposed continental army, it was thought expedient, once more to address the inhabitants of Great Britain and to publish to the world a declaration setting forth their reasons for taking up arms: to address the speaker and gentlemen of the assembly of Jamaica, and the inhabitants of Ireland; and also to prefer a second humble petition to the king. In their address to the inhabitants of Great Britain, they again vindicated themselves, from the charge of aiming at independency; professed their willingness to submit to the several acts of trade and navigation, which were passed before the year 1763; recapitulated their reasons for rejecting lord North's conciliatory motion; stated the hardships they suffered, from the operations of the royal army in Boston; and insinuated the danger that the inhabitants of Britain would be in, of losing their freedom, in case their American brethren were subdued.

In their declaration, setting forth their causes and necessity of their taking up arms, they enumerated the injuries they had received, and the methods taken by the British ministry to compel their submission; and then said: "we are reduced to the alternative of choosing an unconditional submission to the tyranny of irritated ministers, or resistance by force. The latter is our choice. We have counted the cost of this contest, and find nothing so dreadful as voluntary slavery." They asserted "that foreign assistance was undoubtedly attainable." This was not founded on any private information, but was an opinion derived from their knowledge of the principles of policy, by which states usually regulate their conduct towards each other.

In their address to the speaker and gentlemen of the assembly of Jamaica, they dilated on the arbitrary systems of the British ministry; and informed them, that in order to obtain a redress of their grievances, they had appealed to the justice, humanity, and interest, of Great Britain. They stated, that to make their schemes of non-importation and non-exportation, produce the desired effects, they were obliged to extend them to the islands. "From that necessity, and from that alone, said they, our conduct has proceeded." They concluded with saying: "the peculiar situation of your island forbids your assistance; but we have your good wishes. From the good wishes of the friends of liberty and mankind, we shall always derive consolation."

In their address to the people of Ireland, they recapitulated their grievances; stated their humble petitions, and the neglect with which they had been treated. "In defence of our persons and properties under actual violations," said they, "we have taken up arms. When that violence shall be removed, and hostilities cease on the part of the aggressors, they shall cease on our part also."

These several addresses were executed in a masterly manner, and were well calculated to make friends to the colonies. But their petition to the king, which was drawn up at the same time, produced more solid advantages in favour of the American cause, than any other of their productions. This was in a great measure carried through Congress by Mr. Dickinson. Several members, judging from the violence with which parliament proceeded against the colonies, were of opinion, that farther petitions were nugatory:

but this, worthy citizen, a friend to both countries, and devoted to a reconciliation on constitutional principles, urged the expediency and policy of trying, once more, the effect of an humble, decent, and firm petition to the common head of the empire. The high opinion that was conceived of his patriotism and abilities, induced the members to assent to the measure, though they generally conceived it to be labour lost. The petition agreed upon, was the work of Mr. Dickinson's pen. In this among other things, it was stated: "That, notwithstanding their sufferings, they had retained too high a regard for the kingdom, from which they derived their origin, to request such a reconciliation, as might, in any manner, be inconsistent with her dignity and welfare. Attached to his majesty's person, family, and government, with all the devotion that principle and affection can inspire; connected with Great Britain by the strongest ties that can unite society; and deploring every event that tended, in any degree, to weaken them, they not only most fervently desired the former harmony, between her and the colonies, to be restored, but that a concord might be established between them, upon so firm a basis, as to perpetuate its blessings, uninterrupted by any future dissensions, to succeeding generations, in both countries. They, therefore, besought, that his majesty would be pleased to direct some mode, by which the united applications of his faithful colonists to the throne, in pursuance of their common councils, might be improved into a happy and permanent reconciliation." By this last clause, Congress meant, that the mother country should propose a plan for establishing by compact, something like Magna Charta, for the colonies. They did not aim at a total exemption from the control of parliament; nor were they unwilling to contribute in their own way, to the expenses of government: but they feared the horrors of war less than submission to unlimited parliamentary supremacy. They desired an amicable compact, in which doubtful, undefined points should be ascertained, so as to secure that proportion of authority and liberty, which would be for the general good of the whole empire. They fancied themselves in the condition of the barons at Runnymede; with this difference, that, in addition to opposing the king, they had also to oppose the parliament. This difference was more nominal than real; for, in the latter case, the king and parliament stood precisely in the same relation to the people of America, which subsisted in the former, between the king and people of England. In both, popular leaders were contending with the sovereign, for the privileges of subjects.

This well-meant petition was presented on September 1st, 1775, by Mr. Penn, and Mr. Lee; and, on the 4th, lord Dartmouth informed them, "that to it, no answer would be given." This slight contributed, not a little, to the union and perseverance of the colonists. When pressed by the calamities of war, a doubt would sometimes arise, in the minds of scrupulous persons, that they had been too hasty in their opposition to the protecting, parent state. To such, it was usual to present the second petition of Congress to the king: observing thereon, that all the blood, and all the guilt of the war, must be charged on British, and not the American counsels. Though the colonists were accused, in a speech from the throne, as meaning only "to amuse, by vague expressions of attachment to the parent state, and the strongest protestations of loyalty to their king, while they were preparing for a general revolt; and that their rebellious war was manifestly carried on, for the purpose of establishing an independent empire:" yet, at that time, and for months after a redress of grievances was their ultimate aim. Conscious of this intention, and assenting, in the sincerity of their souls, to the submissive language of their petition, they illy brooked the contempt, with which their joint supplication was treated; and still worse, that they should be charged from the throne, with studied duplicity.

Nothing contributes more to the success of

revolutions, than moderation. Intemperate zealots overshoot their object, and soon spend their force; while the calm and dispassionate persevere to the end. The bulk of the people, in civil commotions, are influenced to a choice of sides, by the general complexion of the measures adopted by the respective parties. When these appear to be dictated by justice and prudence, and to be uninfluenced by passion, ambition, or avarice, they are disposed to favour them. Such was the effect of this second petition, through a long and trying war, in which, men of serious reflection were often called upon to examine the rectitude of their conduct.

Though the refusal of an answer, to this renewed application of Congress to the king, was censured by numbers in Great Britain, as well as in the colonies; yet, the partizans of the ministry vanished the measure, as proper and expedient. They contended, that the petition, as it contained no offers of submission, was unavailing, as a ground work of negotiation. Nothing was farther from the thoughts of Congress, than such concessions as were expected in Great Britain. They conceived themselves more sinned against than sinning. They claimed a redress of grievances, as a matter of right: but were persuaded, that concessions, for this purpose, were acts of justice, and not of humiliation; and therefore, could not be disgraceful to those by whom they were made. To prevent future altercations, they wished for an amicable compact, to ascertain the extent of parliamentary supremacy. The mother country wished for absolute submission to her authority; the colonists, for a repeal of every act, that imposed taxes, or that interfered in their internal legislation. The ministry of England, being determined not to repeal these acts, and the congress equally determined not to submit to them; the claims of the two countries were so wide from each other as to afford no reasonable ground to expect a compromise. It was, therefore, concluded, that any notice taken of the petition would only afford an opportunity for the colonies to prepare themselves for the last extremity.

A military opposition to the armies of Great Britain, being resolved upon by the colonies, it became an object of consequence to fix on a proper person to conduct that opposition. Many of the colonists had titles of high rank in the militia, and several had seen something of real service, in the late war between France and England: but there was no individual of such superior military experience, as to entitle him to a decided pre-eminence; or even to qualify him, on that ground, to contend, on equal terms, with the British masters of the art of war. In elevating one man, by the free voice of an invaded country, to the command of thousands of his equal fellow citizens, no consideration was regarded but the interest of the community. To bind the uninhabited provinces more closely to the common cause, policy directed the views of Congress to the south.

Among the southern colonies, Virginia, for numbers, wealth, and influence, stood pre-eminent. To attach so respectable a colony to the aid of Massachusetts, by selecting from it a commander in chief, was not less warranted by the great military genius of one of its distinguished citizens, than dictated by sound policy. George Washington was, by an unanimous vote, appointed commander in chief of all the forces raised, or to be raised, for the defence of the colonies. It was a fortunate circumstance attending his election, that it was accompanied with no competition, and followed by no envy. That same general impulse on the public mind, which led the colonists to agree in many other particulars, pointed to him as the most proper person for presiding over the military arrangements of America. Not only Congress, but the inhabitants, in the east and the west, in the north and the south, as well before as at the time of embodying a continental army, were in a great degree unanimous in his favour.

General Washington was born on the 22d of February, 1732. His education favoured the production of a solid mind, and a vigorous body.

Mountain air, abundant exercise in the open country, the wholesome toils of the chase, and the delightful scenes of rural life, expanded his limbs to an unusual, graceful and well proportioned size. His youth was spent in the acquisition of useful knowledge, and in pursuits, tending to the improvement of his fortune, or the benefit of his country. Fitted more for active, than for speculative life, he devoted the greater portion of his time to the latter: but this was amply compensated by his being frequently in such situations, as called forth the powers of his mind, and strengthened them by repeated exercise. Early in life, in obedience to his country's call, he entered the military line, and began his career of fame, in opposing that power, in concert with whose troops, he acquired his last and most distinguished honours. He was aid-de-camp to General Braddock in 1755; when that unfortunate officer was killed. He was eminently serviceable in covering the retreat, and saving the remains of the routed army. For three years after the defeat of Braddock, George Washington was commander in chief of the forces of Virginia, against the incursions of the French and Indians, from the Ohio. He continued in service, till the reduction of Fort Duquesne, 1758, gave peace to the frontiers of his native colony, Virginia. Soon after that event, he retired to his estate, Mount Vernon, on the banks of the Potomac, and with great industry and success pursued the arts of peaceful life.

When the proceedings of the British parliament alarmed the colonists with apprehensions, that a blow was levelled at their liberties, he again came forward into public view, and was appointed a delegate to the congress, which met in September, 1774. Possessed of a large proportion of common sense and directed by a sound judgment, he was better fitted for the exalted station to which he was called, than many others, who, to a greater brilliancy of parts, frequently add the eccentricity of original genius. Engaged in the busy scenes of life, he knew human nature, and the most proper method of accomplishing proposed objects. His passions were subdued and kept in subjection to reason. His soul, superior to party spirit, to prejudice, and illiberal views, moved according to the impulses it received from an honest heart, a good understanding, common sense and a sound judgment. He was habituated to view things on every side to consider them in all relations, and to trace the possible and probable consequences of proposed measures. Much addicted to close thinking, his mind was constantly employed. By frequent exercise, his understanding and judgment expanded, so as to be able to discern truth, and to know what was proper to be done, in the most difficult conjectures.

Soon after General Washington was appointed commander in chief, four major generals, one adjutant general, with the rank of a brigadier, and eight brigadier generals, were appointed, in subordination to him; who were as follows:

Maj. Generals.	Brig. Generals.
1st, Artemas Ward.	1st, Seth Pomeroy.
2d, Charles Lee.	2d, Richard Montgomery.
3d, Philip Schuyler.	3d, David Wooster.
4th, Israel Putnam.	4th, William Heath.
	5th, Joseph Spencer.
Adjut. General,	6th, John Thomas.
Horatio Gates.	7th, John Sullivan.
	8th, Nath. Greene.

General Washington replied, to the president of Congress, announcing his appointment, in the following words:

Mr. President,

"Though I am truly sensible of the high honour done me, in this appointment, yet, I feel great distress from a consciousness, that my abilities and military experience may not be equal to the extensive and important trust. However as the congress desire it, I will enter upon the momentous duty, and exert every power I possess in their service, and for the support of the glorious cause. I beg they will accept my most cordial thanks, for this distinguished testimony of their approbation.

"But, lest some unlucky event should happen, unfavourable to my reputation, I beg it may be remembered by every gentleman in the room, that I this day declare, with the utmost sincerity, I do not think myself equal to the command I am honoured with.

"As to pay, sir, I beg leave to assure the congress, that as no pecuniary consideration could have tempted me to accept this arduous employment, at the expense of my domestic ease and happiness, I do not wish to make any profit from it. I will keep an exact account of my expenses. Those, I doubt not, they will discharge, and that is all I desire."

A special commission was drawn up, and presented to him, and at the same time, a unanimous resolution was adopted by Congress: "that they would maintain and assist him, and adhere to him, with their lives and fortunes, in the cause of American liberty." Instructions were also given him for his government, by which, after reciting various particulars, he was directed: "to destroy or make prisoners, of all persons who now are, or who hereafter shall appear in arms against the good people of the colonies." The whole was summed up in authorising him, "to order and dispose of the army under his command, as might be most advantageous for obtaining the end, for which it had been raised; making it his special care, in discharge of the great trust committed to him, that the liberties of America received no detriment." About the same time, twelve companies of riflemen were ordered to be raised in Pennsylvania, Maryland, and Virginia. The men, to the amount of 1430, were procured, and forwarded with great expedition. They had to march from 4 to 760 miles; and yet, the whole business was completed, and they joined the American army at Cambridge, in less than two months, from the day on which the first resolution for raising them was agreed to.

Coeval with the resolution for raising an army, was another for emitting a sum, not exceeding two million of dollars, in bills of credit, for the defence of America; and the colonies were pledged for their redemption. This sum was increased from time to time by farther emissions. The colonies, having neither money nor revenue at their command, were forced to adopt this expedient: the only one which was in their power for supporting an army. No one delegate opposed the measure. So great had been the credit of the former emissions of paper, in the greater part of the colonies, that every few at that time foresaw or apprehended the consequences of unfunded paper emissions: but had all the consequences which resulted from this measure, in the course of the war, been foreseen, it must, notwithstanding, have been adopted; for it was a less evil, than there should be a general wreck of property, than that the essential rights and liberties of a growing country should be lost. A happy ignorance of future events, combined with the ardour of the times, prevented many reflections on this subject, and gave credit and circulation to these bills of credit.

General Washington, soon after his appointment to the command of the American army, set out for the camp, at Cambridge. On his way thither, he was treated with the highest honours, in every place through which he passed. Large detachments of volunteers, composed of private gentlemen, turned out to escort him.

On his arrival at Cambridge, July 3d, 1775, he was received with the joyful acclamations of the American army. At the head of his troops, he published a declaration, previously drawn up by Congress, in the nature of a manifesto, setting forth the reasons for taking up arms. In this, after enumerating various grievances of the colonies, and vindicating them from a premeditated design, of establishing independent states, it was added: "In our own native land, in defence of the freedom which is our birthright, and which we ever enjoyed till the late violation of it; for the protection of our property, acquired solely by the industry of our forefathers, and ourselves, against violence actually offered, we have taken up arms; we shall

lay them down when hostilities shall cease on the part of the aggressors, and all danger of their being renewed, shall be removed, and not before."

When General Washington joined the American army, he found the British intrenched on Bunker's hill, having also three floating batteries in Mystic river, and a twenty gun ship below the ferry, between Boston and Charlestown. They had also a battery on Copse's hill, and were strongly fortified on the neck. The Americans were intrenched at Winter hill, Prospect hill, and Roxbury communicating with one another by small posts over a distance of ten miles. There were also parties stationed in several towns, along the sea coast. They had neither engineers to plan suitable works, nor sufficient tools for their erection.

In the American camp, was collected a large body of men: but without those conveniences, which ancient establishments have introduced for the comfort of regular armies. Instead of tents, sails, (now rendered useless by the obstructions of commerce,) were applied for their covering: hut, even of them, there was not a sufficiency. The American soldiers, having joined the camp, in all that variety of clothing, which they used in their daily labour, were without uniformity of dress. To abolish provincial distinctions, the hunting shirt was introduced. They were also without those heads of departments, in the line of commissaries, or quartermasters, which are necessary for the regular and economical supply of armies. Individuals, brought to camp their own provisions, on their own horses. In some parts committees of supplies, were appointed, who purchased necessities at public expense, sent them on to camp, and distributed them to such as were in want, without any regularity or system. The country afforded provisions; and nothing more was wanting, than proper systems for their collection, and distribution. Other articles, though equally necessary, were almost wholly deficient; and could not be procured, but with difficulty. On the 4th of August, the whole stock of powder in the American camp, and in the public magazines, of the four New England provinces, would make little more than nine rounds a man. The continental army remained in this destitute condition, for a fortnight or more. This was generally known among themselves, and was also communicated to the British, by a deserter: but they, suspecting a plot, would not believe it. A supply of a few tons was sent on to them from the committee of Elizabeth-town: but this was done privately, lest the adjacent inhabitants, who were equally destitute, should stop it for their own use. The public rulers in Massachusetts issued a recommendation to the inhabitants, not to fire a gun at beast, bird, or mark; in order that they might husband their little stock, for the more necessary purposes of shooting men. A supply of several thousand pounds weight of powder, was soon after obtained from Africa, in exchange for New England rum. This was managed with so much address, that every ounce for sale in the British Forts on the African coasts, was purchased up, and brought off for the use of the Americans.

Embarrassments, from various quarters, occurred in the formation of a continental army. The appointment of general officers, made by Congress, was not satisfactory. Enterprising leaders had come forward, with their followers, on the commencement of hostilities, without scrupulous attention to rank. When these were all blended together, it was impossible to assign to every officer the station which his services merited, or his vanity demanded. Materials for a good army were collected. The husbandmen who flew to arms, were active, zealous, and of unquestionable courage: but to introduce discipline and subordination, among freemen who were habituated to think for themselves, was an arduous labour.

The want of system and of union under proper heads, pervaded every department. From the circumstance, that the persons employed in providing necessities for the army were unconnected with each other, much waste and unnecessary

delays were occasioned. The troops of the different colonies came into service, under variant establishments. Some were enlisted with the express condition of choosing their officers. The rations furnished by the local legislatures, varied both as to quantity, quality, and price. To form one uniform mass of these discordant materials, and to subject the licentiousness of independent freemen to the control of military discipline, was a delicate and difficult business.

The continental army, put under the command of General Washington, amounted to 14,500 men. These had been so judiciously stationed around Boston as to confine the British to the town, and to exclude them from the forage and provisions, which the adjacent country and islands in Boston bay afforded. This force was thrown into three grand divisions. General Ward commanded the right wing, at Roxbury. General Lee, the left, at Prospect hill; and the centre was commanded by General Washington. In arraying the army, the military skill of Adjutant General Gates was of great service. Method and punctuality were introduced. The officers and privates were taught to know their respective places, and to have the mechanism and movements, as well as the name of an army.

When some effectual pains had been taken to discipline the army, it was found that the term, for which enlistments had taken place, was on the point of expiring. The troops from Connecticut and Rhode Island, were engaged only, till the 1st day of December, 1775; and no part of the army longer than the 1st day of January, 1776. Such mistaken apprehensions respecting the future conduct of Great Britain prevailed, that many thought the assumption of a determined spirit of resistance, would lead to a redress of all grievances.

The Massachusetts assembly and the continental congress, both resolved in November, to fit out armed vessels, to cruise on the American coast, for the purpose of intercepting warlike stores and supplies, designed for the use of the British army. The object was at first limited; but as the prospect of accommodation vanished, it was extended to all British property afloat, on the high seas. The Americans were diffident of their ability to do any thing on the water, in opposition to the greatest naval power in the world; but from a combination of circumstances, their first attempts were successful.

The Lee privateer, Captain Manly, took the brig Nancy, an ordnance ship, from Woolwich, containing a large brass mortar, several pieces of brass cannon, a large quantity of arms and ammunition; with all manner of tools, utensils, and machines, necessary for camps, and artillery. Had Congress sent an order for supplies, they could not have made out a list of articles, more suitable to their situation, than those, thus providentially thrown into their hands.

In about nine days after, three ships, with various stores, for the British army, and a brig from Antigua, with rum, were taken by Captain Manly. Before five days more had elapsed, several other store ships were captured. By these means, the distresses of the British troops, in Boston, were increased, and supplies, or the continental army, were procured. Naval captures, being unexpected, were matter of triumph to the Americans, and of surprise to the British. The latter scarcely believed, that the former would oppose them by land, with a regular army: but never suspected, that a people so unfurnished as they were, with many things necessary for arming vessels, would presume to attempt any thing on the seas. A spirit of enterprise, invigorated by patriotic zeal, prompted the hardy New-England-men to undertake the hazardous business; and their success encouraged them to proceed. Before the close of the year, Congress determined to build five vessels of 32 guns, five of 28, and three of 24. About this time, an event took place, which would have disposed a less determined people to desist from provoking the vengeance of the British navy. This was the burning of Falmouth, in the northern part

of Massachusetts. Captain Moet, in the *Canceaux*, of sixteen guns, on the 18th of October, 1775, destroyed 139 houses, and 278 stores, and other buildings in that town.*

This spread an alarm on the coast, but produced no disposition to submit. Many moved from the sea ports, with their families and effects; but no solicitations were preferred to obtain British protection.

In a few days after the burning of Falmouth, the old south meeting house, in Boston, was taken into possession by the British; and destined for a riding school, and the service of the light dragoons. These proceedings produced, in the minds of the colonists, a more determined spirit of resistance, and a more general aversion to Great Britain.

CHAPTER X.

Ticonderoga taken; Canada invaded, and evacuated.

It early occurred to many, that if the sword decided the controversy between Great Britain and her colonies, the possession of Ticonderoga would be essential to the security of the latter. Situated on a promontory, formed at the junction of the waters of Lake George and Lake Champlain; it is the key of all communication between New York and Canada. Messrs. Deane, Wooster, Parsons, Stephens and others, of Connecticut, planned a scheme to obtain possession of this valuable post. Having procured a loan of 1800 dollars of public money, and provided a sufficient quantity of powder and ball, they set off for Bennington, to obtain the co-operation of Colonel Allen, of that place. Two hundred and seventy men, mostly of that brave and hardy people, who are called green mountain boys, were speedily collected at Castleton; which was fixed on as the place of rendezvous. At this place, Colonel Arnold, who, though attended only with a servant, was prosecuting the same object, unexpectedly joined them. He had been early chosen captain of a volunteer company, by the inhabitants of New Haven, among whom he resided. As soon as he received news of the Lexington battle, he marched off with his company for the vicinity of Boston, and arrived there, though 150 miles distant, in a few days. Immediately after his arrival, he waited on the Massachusetts committee of safety, and informed them that that there were, at Ticonderoga, many pieces of cannon, and a great quantity of valuable stores; and that the fort was in a ruinous condition, and garrisoned only by about forty men. They appointed him a colonel, and commissioned

* Captain Moet had been frequently at Falmouth, and was there hospitably entertained. After hostilities had commenced, but before serious war was contemplated, he landed as formerly; but not as an enemy. Brigadier Thompson, under no orders of government, took him prisoner. The inhabitants interposed; and, from motives of justice and policy, urged and accomplished his unconditional discharge. The affront rankled in the heart of the captain. He soon after returned with a small naval force, and gave notice, that he was under orders to reduce the town to ashes, and that he should begin the business at sun rise, the next morning. No resistance was made. The inhabitants employed themselves, during the night, in removing their effects. The next morning, the town was in flames. Moet's armed naval force lay all day before it, and, without cessation, threw shells, carcasses, and hot shot into it till its destruction was completed. This being done, Captain Moet, with his fleet, drew off. Thus the pride of the province of Maine was laid desolate, in one day; and 139 families, who, 24 hours before, lived in ease and comfort, were reduced to want, and had no shelter from the autumnal storms, and approaching winter. Falmouth had formerly been twice sacked by Indians, and some of its inhabitants had been killed by them; but no act of theirs, was to be compared to this conflagration. The Indians scalped women and children to obtain a bounty. They robbed houses, for the sake of plunder; but Captain Moet, without the hope of gain, and without provocation, destroyed the subsistence and blasted the hopes of a whole community. A new town, like the phoenix, has arisen from the ashes of the old, and is now in flourishing circumstances. See Sullivan's History of the District of Maine, page 205, 203.

him to raise 400 men, and to take Ticonderoga. The leaders of the party, which had previously rendezvoused at Castleton, admitted Colonel Arnold to join them. It was agreed that Colonel Allen should be the commander in chief of the expedition, and that Colonel Arnold should be his assistant. They proceeded without delay, and arrived, in the night, at lake Champlain, opposite to Ticonderoga. Allen and Arnold crossed over with 83 men, and landed near the garrison. They contended who should go in first: but it was at last agreed, that they should both go in together. They advanced abreast, and entered the fort at the dawning of day. A sentry snapped his piece at one of them, and then retreated, through the covered way, to the parade. The Americans followed, and immediately drew up. The commander, surprised in his bed, was called upon to surrender the fort. He asked, by what authority? Colonel Allen replied: "I demand it in the name of the Great Jehovah, and of the continental congress."

No resistance was made; and the fort, with 100 pieces of cannon, other valuable stores, and 45 prisoners, fell into the hands of the Americans. The boats had been sent back, for the remainder of the men: but the business was done before they got over. Col. Seth Warner was sent off with a party to take possession of Crown-Point, where a sergeant and twelve men performed garrison duty. This was speedily effected.

The next object, calling for the attention of the Americans, was to obtain the command of lake Champlain: but, to accomplish this, it was necessary for them to get possession of a sloop of war, lying at St. John's, at the northern extremity of the lake. With the view of capturing this sloop, it was agreed to man and arm a schooner, lying at South Bay; that Arnold should command her, and that Allen should command some bateaux on the same expedition. A favourable wind carried the schooner ahead of the bateaux, and Colonel Arnold got immediate possession of the sloop by surprise. The wind again favouring him, he returned, with his prize, to Ticonderoga, and rejoined Colonel Allen. The latter soon went home; and the former, with a number of men, agreed to remain there in garrison. In this rapid manner, the possession of Ticonderoga, and the command of lake Champlain, was obtained, without any loss, by a few determined men. Intelligence of these events was in a few days, communicated to Congress, which met, for the first time, at ten o'clock of the same day, in the morning of which, Ticonderoga was taken. They rejoined in the spirit of enterprise, displayed by their countrymen: but feared the charge of being aggressors, or of doing any thing to widen the breach between Great Britain and the colonies; for an accommodation was, at that time, their unanimous wish. They therefore recommended to the committees of the cities and counties of New York and Albany, to cause the cannon and stores to be removed from Ticonderoga to the south end of lake George, and to take an exact inventory of them: "in order that they might be safely returned, when the restoration of the former harmony between Great Britain and the colonies, so ardently wished for by the latter, should render it prudent, and consistent with the overruling law of self-preservation."

Colonel Arnold having begun his military career with a series of successes, was urged by his native impetuosity to project more extensive operations. He, on the 13th of June, wrote a letter to Congress, strongly urging an expedition into Canada, and offering with 2000 men to reduce the whole province. In his ardent zeal to oppose Great Britain, he had advised the adoption of offensive war, even before Congress had organized an army, or appointed a single military officer. His importunity was at last successful, as shall hereafter be related: but not till two months had elapsed, subsequent to his first proposition of conducting an expedition against Canada. Such was the increasing fervour of the public mind in 1775, that what, in the early part of the year, was

deemed violent and dangerous, was in its progress pronounced both moderate and expedient.

Sir Guy Carleton, the king's governor in Canada no sooner heard that the Americans had surprised Ticonderoga, and Crown-Point, and obtained the command of lake Champlain, than he planned a scheme for their recovery. Having only a few regular troops under his command, he endeavoured to induce the Canadians and Indians, to co-operate with him; but they both declined. He established martial law, that he might compel the inhabitants to take arms. They declared themselves ready to defend the province: but refused to march out of it, or to commence hostilities on their neighbours. Colonel Johnson had, on the same occasion, repeated conferences with the Indians, and endeavoured to influence them to take up the hatchet; but they steadily refused. In order to gain their co-operation, he invited them to feast on a Bostonian, and to drink his blood. This, in the Indian style, meant no more than to partake of a roasted ox and a pipe of wine, at a public entertainment; which was given to induce their co-operation with the British troops. The colonial patriots affected to understand it in its literal sense. It furnished in their mode of explication, a convenient handle for operating on the passions of the people.

These exertions in Canada, which were principally made with a view to recover Ticonderoga, Crown-Point, and the command of lake Champlain, induced Congress to believe that a formidable invasion of their northwestern frontier was intended, from that quarter. The evident tendency of the Quebec act favoured this opinion. Believing it to be the fixed purpose of the British ministry, to attack the united colonies on that side, they conceived that they would be inexcusable if they neglected the proper means of warding off so terrible a blow. They were also sensible that the only practicable plan to effect this purpose, was to make a vigorous attack upon Canada, while it was unable to resist the unexpected impression. Their success at Ticonderoga and Crown-Point, had already paved the way for this bold enterprise, and had broken down the fences which guarded the entrance into that province. On the other hand, they were sensible that by taking this step, they changed at once the whole nature of the war. From defensive it became offensive; and subjected them to the imputation of being the aggressors.— They were well aware that several who had espoused their cause in Britain, would probably be offended at this measure; and charge them with heightening the mischiefs occasioned by the dispute. They knew that the principles of resistance, as far as they had hitherto acted upon them, were abetted by a considerable party in Great Britain: and that to forfeit their good opinion, might be of great disservice. Considerations of this kind made them weigh well the important step, before they ventured upon it. They, on the other hand, reflected that the eloquence of the minority in parliament, and the petitions and remonstrances of the merchants in Great Britain, had produced no solid advantages in their favour: and that they had no chance of relief, but from the smiles of heaven on their own endeavours. The danger was pressing. War was not only inevitable, but already begun. To wait till they were attacked by a formidable force at their backs, in the very instant when their utmost exertions would be requisite, perhaps insufficient, to protect their cities and sea coast, against an invasion from Britain, would be the summit of folly. The laws of war and of nations justified the forestalling of an enemy. The colonists maintained that to prevent known hostile intentions, was a matter of self-defence. They were also sensible they had already gone such lengths, as could only be vindicated by arms; and that, if a certain degree of success did not attend their resistance, they would be at the mercy of an irritated government, and their moderation in the single instance of Canada, would be an unavailing plea for indulgence. They were also encouraged to proceed, by certain information, that the French inha-

bitants of Canada, except the noblesse and the clergy, were as much discontented with their present system of government as the British settlers. It seemed therefore probable, that they would consider the provincials, rather as friends, than as enemies. The invasion of that province was therefore determined upon, if found practicable, and not disagreeable to the Canadians.

Congress had committed the management of their military arrangements, in this northern department, to Generals Schuyler and Montgomery. While the former remained at Albany, to attend an Indian treaty, the latter was sent forward to Ticonderoga, with a body of troops from New York and New England. About this time, General Schuyler addressed the inhabitants, informing them, "that the only views of Congress were to restore to them those rights, which every subject of the British Empire, of whatever religious sentiments he may be, is entitled to; and that, in the execution of these trusts, he had received the most positive orders to cherish every Canadian, and every friend to the cause of liberty, and sacredly to guard their property." The Americans, about 1000 in number, effected a landing at St. John's; which, being the first British post in Canada, lies only 115 miles to the northward of Ticonderoga. The British pickets were driven into the fort. The environs was then reconnoitred, and the fortifications were found to be much stronger than had been suspected. This induced the calling of a council of war, which recommended a retreat to Isle aux Noix, twelve miles south of St. John's, to throw a boom across the channel, and to erect works for its defence. Soon after this event, a bad state of health induced General Schuyler to retire to Ticonderoga; and the command devolved on General Montgomery.

This enterprising officer, in a few days, returned to the vicinity of St. John's, and opened a battery against it. Ammunition was so scarce, that the siege could not be carried on, with any prospect of speedy success. The general detached a small body of troops, to attempt the reduction of fort Chamblée, only six miles distant. Success attended this enterprise. By its surrender, six tons of gunpowder were obtained, which enabled the general to prosecute the siege of St. John's with vigour. The garrison, though straitened for provisions, persevered in defending themselves with unabating fortitude. While General Montgomery was prosecuting this siege, the governor of the province collected, at Montreal, about 800 men, chiefly militia and Indians. He endeavoured to cross the river St. Lawrence, with this force, and to land at Longueuil, intending to proceed thence to attack the besiegers: but Colonel Warner, with 300 green mountain boys, and a four pounder, prevented the execution of the design. The governor's party was suffered to come near the shore: but was then fired upon, with such effect as to make them retire, after sustaining great loss.

An account of this affair being communicated to the garrison in St. John's, Major Preston, the commanding officer, surrendered, on receiving honourable terms of capitulation. About 500 regulars and 100 Canadians became prisoners to the provincials. They also acquired 39 pieces of cannon, seven mortars, two howitzers, and about 800 stand of arms. Among the cannon were many brass field pieces; an article of which the Americans were nearly destitute.

While the siege of St. John's was pending, Colonel Allen, who was returning with about 86 men from a tour on which he had been sent by his general, was captured by the British near Montreal. Though he had surrendered in action, with arms in his hands, under a verbal capitulation that he should receive good treatment, he was loaded with irons, and in that condition sent to England.*

* Colonel Allen, after his exchange, published an interesting narrative of his captivity. The crime alleged against him was his taking Ticonderoga: and it was intended that he should be tried for this, as an act of rebellion. From his narrative, it appears that the irons placed on him were uncommonly heavy, and so fasten-

After the reduction of St. John's, General Montgomery proceeded towards Montreal. The few British forces there, unable to stand their ground, repaired for safety on board their shipping, in hopes of escaping down the river; but they were prevented. General Prescott, who was on board with several officers, and about 120 privates, having no chance of escape, submitted to be prisoners on terms of capitulation. Eleven sail of vessels, with all their contents, consisting of ammunition, provisions, and intrenching tools, became the property of the provincials. Governor Carleton was about this time conveyed in a boat with muffled paddles, by a secret way to the Three Rivers, and thence to Quebec in a few days.

When Montreal was evacuated by the troops, the inhabitants applied to General Montgomery for a capitulation. He informed them as they were defenceless, they could not expect such a concession: but, he engaged, upon his honour, to maintain the individuals and religious communities of the city, in the peaceable enjoyment of their property, and the free exercise of their religion. In all his transactions, he spoke, wrote, and acted with dignity and propriety; and treated the inhabitants with liberality and politeness.

Montreal which at this time surrendered to the provincials, carried on an extensive trade, and contained many of those articles, which from the operation of the resolutions of Congress, could not be imported into any of the united colonies. From these stores, the American soldiers, who had hitherto suffered from the want of suitable clothing, obtained a plentiful supply.

General Montgomery, after leaving some troops

ed, that he could not lie down otherwise than on his back. A chest was his seat by day and his bed by night. In letters to the British general Prescott, he urged his claim to better treatment, on the ground of his humanity and politeness to all the prisoners he had taken; but no answer ever came to his hands. After he had been sent in irons as a state prisoner to England, he was sent back as a prisoner of war to America. On his return, when the fleet, on board of which he was confined, rendezvoused at the Cove of Cork, he received from the kindness of the inhabitants of that city, a plentiful supply for all his wants; but their benevolence was intercepted by Captain Symonds, of the British navy, who swore that "the damned American rebels should not be so feasted by the damned rebels of Ireland." After much bad usage in a circuitous voyage he was landed at Halifax, sick with the scurvy, and there put in prison. Thence he was sent to New York, and for a few months was admitted to his parole; but in August, 1777, on pretence of breaking it, was confined in the provost jail. During his residence there, he was witness of the most horrid scenes of oppression and cruelty, to the American prisoners; and declares, that, from his own knowledge, he had no doubt, that upwards of 2000 of them perished with hunger, cold, and sickness, occasioned by the filth of the place in which they were confined, and the scanty unwholesome provisions, with which they were served. He further states, that till the defeat of the Hessians at Trenton, in December, 1776, the conquest of the country was considered as certain; that the forfeiture of estates, and the execution of the leaders of the rebellion, were spoken of, as events near at hand; and that the severe treatment of the prisoners was founded on the idea, that every thing short of immediate execution, was better than they as rebels, had a right to expect; that the most ungenerous and cruel methods, by starvation, and otherwise, were adopted to compel their enlistment into the British service; that many submitted to death, in preference to that mode of obtaining a release; that the halter and the gallows were, in the early periods of the war, often presented to his own view, as the consequence of his obstinacy and rebellion; but, afterwards, high command, and a large tract of the conquered country was offered him on condition he would join the British. To the last he replied: "that he viewed their offer, of conquered United States' land, to be similar to that which the devil offered to Jesus Christ; to give him all the kingdoms of the world, if he would fall down and worship him, when at the same time, the poor devil had not one foot of land upon earth." A review of this narrative naturally excites speculations on the numerous executions, and extensive confiscations which, probably, would have been the consequence of the failure of the revolution, and ought to excite gratitude in the breast of every American, that these ruinous measures were prevented, by the final success of their arms. Colonel Allen was confined in the provost jail, of New York, till May, 1778, when he was exchanged; and, to the great joy of his country restored to activity in its service.

in Montreal, and sending detachments into different parts of the province, advanced towards the capital. His little army arrived with expedition before Quebec. Success had hitherto crowned every attempt of General Montgomery; but his situation was nevertheless very embarrassing. Much to be pitied is the officer, who, having been bred to arms, in the strict discipline of regular armies, is afterwards called to command men, who carry with them the spirit of freedom into the field. The greater part of the Americans, officers, as well as soldiers, having never seen any service, were ignorant of their duty, and feebly impressed with the military ideas of union, subordination and discipline. The army was continental in name and pay; but in no other respect. Not only the troops of different colonies conceived themselves independent of each other; but, in some instances, the different regiments of the same colony were backward to submit to the orders of officers in a higher grade of another line. They were soon tired of a military life. Novelty and the first impulse of passion had led them to camp; but, the approaching cold season, together with the fatigues and dangers incident to war induced a general wish to relinquish the service. Though, by the terms of their enlistment, they were to be discharged in a few weeks, they could not brook an absence from their homes, for that short space of time. The ideas of liberty and independence, which roused the colonists to oppose the claims of Great Britain, operated against that implicit obedience, which is necessary to a well regulated army.

Even in European states, where long habits have established submission to superiors, as a primary duty of the common people, the difficulty of governing recruits, when first led to the field from the civil occupations, is great: to exercise discipline over freemen, accustomed to act only from the impulse of their own minds, required not only a knowledge of human nature, but an accommodating spirit, and a degree of patience, which are rarely found among officers of regular armies. The troops under the immediate command of General Montgomery, were, from their usual habits, averse to the ideas of subordination, and had suddenly passed from domestic ease, to the numberless wants and distresses, which are incident to marches through strange and desert countries. Every difficulty was increased by the short term, for which they were enlisted. To secure the affections of the Canadians, it was necessary for the American general to restrain the appetites, and control the licentiousness of his soldiery; while the appearance of military harshness was dangerous, lest their good will might be forfeited. In this choice of difficulties, the genius of Montgomery surmounted many obstacles. During his short, but glorious career, he conducted with so much prudence, as to make it doubtful, whether we ought to admire most, the goodness of the man, or the address of the general.

About the same time that Canada was invaded in the usual route from New York, a considerable detachment, from the American army at Cambridge, was conducted into that royal province, by a new and unexpected passage. Colonel Arnold, who successfully conducted this bold undertaking, thereby acquired the name of the American Hannibal. He was detached, with a thousand men, from Cambridge, to penetrate into Canada, by ascending the river Kennebeck, and descending by the Chaudiere, to the river St. Lawrence. Great were the difficulties these troops had to encounter, in marching by an unexplored route, three hundred miles, through an uninhabited country. In ascending the Kennebeck, they were constantly obliged to work upwards, against an impetuous current. They were often compelled, by cataracts or other impediments, to land, and to haul their batteaux up rapid streams, and over falls of rivers. Nor was their march by land more eligible, than this passage by water. They had deep swamps, thick woods, difficult mountains, and craggy precipices alternately to encounter. At some places, they

had to cut their way, for miles together, through forests so embarrassed, that their progress was only four or five miles a day. The constant fatigue caused many to fall sick. One third of the number which set out, was from want of necessities, obliged to return; the others proceeded with unabated fortitude and constancy. Provisions grew at length so scarce, that some of the men eat their dogs, cartouch boxes, breeches, and shoes. When they were an hundred miles from any habitation, or prospect of a supply, their whole store was divided, which yielded four pints of flour to each man. - After they had baked and eaten their last morsel, they had thirty miles to travel, before they could expect any farther supply. The men bore up under these complicated distresses, with the greatest fortitude.* They gloried in the hope of completing a march, which would rival the fame of similar expeditions undertaken by the heroes of antiquity. Having spent thirty-one days, in traversing a hideous wilderness, without ever seeing any thing human, they at length reached the inhabited parts of Canada. They were there well received, and supplied with every thing necessary for their comfort. The Canadians were struck with amazement, when they saw this armed force emerging from the wilderness. It had never entered their conceptions, that it was possible for human beings to traverse such immense wilds. The most pointed instructions had been given to this corps, to conciliate the affections of the Canadians. It was particularly enjoined upon them, if the son of lord Chatham, then an officer in one of the British regiments in that province, should fall into their hands, to treat him with all possible attention, in return for the great exertions of his father, in behalf of American liberty. A manifesto, subscribed by General Washington, which had been sent from Cambridge with this detachment was circulated among the inhabitants of Canada. In this, they were invited to arrange themselves under the standard of general liberty; and were informed that the American army was sent, not to plunder but to protect them.

While General Montgomery lay at Montreal, Colonel Arnold arrived at Point Levy, opposite to Quebec. Such was the consternation of the garrison and inhabitants, at his unexpected appearance, that had not the river intervened, an immediate attack, in the first surprise and confusion, might have been successful. The bold enterprise of one American army, marching through the wilderness, at a time when success was crowning every undertaking of another, invading in a different direction, struck terror into the breast of those Canadians, who were unfriendly to the designs of Congress. The embarrassments of the garrison were increased by the absence of Sir Guy Carleton. That gallant officer on hearing of Montgomery's invasion, prepared to oppose him in the extremes of the province. While he was collecting a force to attack invaders in one direction, a different corps, emerging out of the depths of an unexplored wilderness, suddenly appeared from another. In a few days Colonel Arnold crossed the river St. Lawrence; but his chance of succeeding by a coup de main, was in that short space greatly diminished. The critical moment was past. The panic occasioned by his first appearance had abated, and solid preparations for the defence of the town were adopted. The inhabitants, both English and Canadians, as soon as danger pressed, united for their common defence. Alarmed for their property, they were at their own request, embodied for its security. The sailors were taken from the shipping in the harbour, and put to the batteries on shore. As Colonel Arnold had no artillery, after parading some days on the heights near Quebec, he drew off his troops, intending nothing more until the arrival of Montgomery, than to cut off supplies from entering the garrison.

So favourable were the prospects of the united

* Aaron Burr, afterwards vice-president of the United States, was one of his party. He was then about twenty years old, and had broken off from his legal studies that he might serve on his expedition.

colonies at this period, that General Montgomery set on foot a regiment of Canadians, to be in the pay of Congress. James Livingston, a native of New York who had long resided in Canada, was appointed to the command thereof; and several recruits were engaged for the term of twelve months. The inhabitants, on both sides of the river St. Lawrence, were very friendly. Expresses in the employ of the Americans, went without molestation, backwards and forwards, between Montreal and Quebec. Many individuals performed signal services, in favour of the invading army. Among a considerable number, Mr. Price stands conspicuous, who advanced 5000*l* in specie, for their use.

Various causes had contributed to attach the inhabitants of Canada, especially those of the inferior classes to the interest of Congress, and to alienate their affections from the government of Great Britain. The contest was for liberty; and there is something in that sound captivating to the mind of man, in a state of original simplicity. It was for the colonies; and Canada was also a colony. The objects of the war were therefore supposed to be for their common advantage. The form of government, lately imposed on them by act of parliament, was far from being so free, as the constitutions of the other colonies, and was in many respects particularly oppressive. The common people had no representative share in enacting the laws, by which they were to be governed; and were subjected to the arbitrary will of persons, over whom they had no control. Distinctions so degrading were not unobserved by the native Canadians: but were more obvious to those who had known the privileges enjoyed in the neighbouring provinces. Several individuals, educated in New England and New York, with the high ideas of liberty, inspired by their free constitutions, had, in the interval between the peace of Paris, 1763, and the commencement of the American war, migrated into Canada. Such sensibly felt the difference between the governments they had left, and the arbitrary constitution imposed on them; and, both from principle and affection, earnestly persuaded the Canadians to make a common cause with the united colonies.

Though motives of this kind induced the peasantry of the country to espouse the interest of Congress, yet sundry individuals, and some whole orders of men, threw the weight of their influence into the opposite scale. The legal privileges which the Roman catholic clergy enjoyed, made them averse to a change, lest they should be endangered, by a more intimate connexion with their protestant neighbours. They used their supposed influence in the next world, as an engine to operate on the movements of the present. They refused absolution to such of their flocks as abetted the Americans. This interdiction of the joys of heaven, by those who were supposed to hold the keys of it, operated powerfully on the opinions and practices of the superstitious multitude. The seigneurs had immunities unknown in the other colonies. Such is the fondness for power in every human breast, that revolutions are rarely favoured by any order of men, who have reason to apprehend that their future situation, in case of a change, will be less pre-eminent than before.

The sagacious General Montgomery, no less a man of the world than an officer, discovered great address in accommodating himself to these clashing interests. Though he knew the part the popish clergy had acted, in opposition to him, yet he conducted towards them, as if totally ignorant of the matter; and treated them and their religion with great respect and attention. As far as he was authorised to promise, he engaged that their ecclesiastical property should be secured, and the free exercise of their religion continued. To all, he held forth the flattering idea of calling a convention of representatives, freely chosen, to institute, by its own will, such a form of government as they approved. While the great mind of this illustrious man, was meditating schemes of

liberty and happiness, a military force was collecting and training to oppose him, which in a short time put a period to his valuable life.

At the time the Americans were before Montreal, General Carleton, as has been related, escaped through their hands, and got safe to Quebec. His presence was itself a garrison. The confidence reposed in his talents inspired the men under his command, to make the most determined resistance. Soon after his arrival, he issued a proclamation, setting forth: "That all persons liable to do militia duty, and residing in Quebec, who refused to arm in conjunction with the royal army, should, in four days, quit Quebec, with their families, and withdraw from the limits of the district, by the first of December, on pain of being treated afterwards as spies or rebels." All who were unwilling to co-operate with the British army, being thus disposed of, the remaining inhabitants, though unused to arms, became, in a little time, so far acquainted with them, as to be very useful in defending the town. They supported fatigues, and submitted to command, with a patience and cheerfulness, that could not be exceeded by men familiarized to the hardships and subordination of a military life.

General Montgomery, having effected at Point aux Trembles a junction with Colonel Arnold, commenced the siege of Quebec. Upon his arrival before the town, he wrote a letter to the British governor, recommending an immediate surrender, to prevent the dreadful consequences of a storm. Though the flag which conveyed this letter was fired upon, and all communication refused, General Montgomery found other means to convey a letter of the same tenor into the garrison: but the firmness of the governor could not be moved, either by threats or dangers. The Americans soon after commenced a bombardment with five small mortars; but with very little effect. In a few days General Montgomery opened a six gun battery, at the distance of seven hundred yards from the walls; but his metal was too light to make any impression.

The news of General Montgomery's success in Canada had filled the colonies with expectations, that the conquest of Quebec would soon add fresh lustre to his already brilliant fame. He knew well the consequences of popular disappointment, and was of opinion that unless something decisive was immediately done, the benefit of his previous acquisitions would, in a great degree, be lost to the American cause. On both accounts, he was strongly impelled to make every exertion, for satisfying the expectations and promoting the interest of a people, who had honoured him with so great a share of their confidence. The government of Great Britain, in the extensive province of Canada, was at that time reduced to the single town of Quebec. The astonished world saw peaceable colonists, suddenly transformed into soldiers, and these marching through unexplored wildernesses, and extending themselves by conquests, in the first moment after they had assumed the profession of arms.

Towards the end of the year, the tide of fortune began to turn. Dissensions broke out between Colonel Arnold and some of his officers, threatening the annihilation of discipline. The continental currency had no circulation in Canada, and all the hard money furnished for the expedition was nearly expended. Difficulties of every kind were daily increasing. The extremities of fatigue were constantly to be encountered. The American general had not a sufficient number of men to make the proper reliefs, in the daily labours they underwent; and that inconsiderable number, worn down with toil, was constantly exposed to the severities of a Canada winter. The period for which a great part of his men had enlisted, being on the point of expiration, he apprehended that they who were entitled to it, would insist on their discharge. On the other hand, he saw no prospect of staggering the resolution of the garrison. They were well supplied with every thing necessary for their defence, and were daily acquiring

additional firmness. The extremity of winter was fast approaching.

From these combined circumstances, General Montgomery was impressed with a conviction, that the siege should either be raised, or brought to a summary termination. To storm the place, was the only feasible method of effecting the latter purpose. But this was an undertaking, in which success was but barely possible. Great minds are seldom exact calculators of danger. Nor do they minutely attend to the difficulties which obstruct the attainment of their objects. Fortune, in contempt of the pride of man, has ever had an influence in the success or failure of military enterprises. Some of the greatest achievements, of that kind, have owed their success to a noble contempt of common forms.

The upper part of Quebec was surrounded with very strong works, and the access from the lower town was excessively difficult, from its almost perpendicular steepness. General Montgomery, from a native intrepidity, and an ardent thirst for glory, overlooked all these dangers; and resolved at once, either to carry the place or perish in the attempt. Trusting much to his good fortune; confiding in the bravery of his troops, and their readiness to follow whithersoever he should lead: and depending somewhat on the extensiveness of the works, he determined to attempt the town by escalade.

The garrison of Quebec at this time consisted of about 1520 men, of which 800 were militia, and 450 were seamen belonging to the king's frigates, or merchant ships in the harbour. The rest were marines, regulars, or Colonel Maclean's new-raised emigrants. The American army consisted of about 800 men. Some had been left at Montreal, and near a third of Arnold's detachment, as has been related, had returned to Cambridge.

General Montgomery, having divided this little force into four detachments, ordered two feints to be made against the upper town; one by Colonel Livingston, at the head of the Canadians, against St. John's gate; and the other by Major Brown, against Cape Diamond; reserving to himself and Colonel Arnold the two principal attacks, against the lower town. At five o'clock in the morning, General Montgomery, advanced against the lower town. He passed the first barrier, and was just opening to attack the second, when he was killed, together with Captain John McPherson, Captain Cheesman, and some others. This so dispirited the men, that Colonel Campbell, on whom the command devolved, thought proper to draw them off. In the mean time Colonel Arnold, at the head of about 350 men, passed through St. Roques, and approached near a two gun battery, without being discovered. This he attacked, and, though it was well defended, carried it; but with considerable loss. In this attack, Colonel Arnold received a wound, which made it necessary to carry him off the field of battle. His party nevertheless continued the assault, and pushing on, made themselves masters of a second barrier. These brave men sustained the force of the whole garrison for three hours; but finding themselves hemmed in, and without hopes either of success, relief or retreat, they yielded to numbers, and the advantageous situation of their adversaries.

The loss of the Americans, in killed and wounded, was about 100, and 300 were taken prisoners. Among the slain were Captain Kendricks, Lieutenant Humphries, and Lieutenant Cooper. The behaviour of the provincial troops was such, as might have silenced those who had reproached them, for being deficient in courage. The most experienced veterans could not have exceeded the firmness they displayed in their last attack. The issue of this assault relieved the garrison of Quebec, from all apprehensions for its safety.

The provincials were so much weakened, as to be scarcely equal to their own defence. However Colonel Arnold had the boldness to encamp within three miles of the town, and had the address, even with his reduced numbers, to impede the conveyance of refreshments and provisions into the gar-

ison. His situation was extremely difficult. He was at an immense distance from those parts, whence effectual assistance could be expected. On his first entrance into the province, he had experienced much kind treatment from the inhabitants. The Canadians, besides being fickle in their resolutions are apt to be biased by success. Their disposition to aid the Americans, became daily more precarious. It was even difficult to keep the provincial troops from returning to their respective homes. Their sufferings were great. While their adversaries were comfortably housed in Quebec, they were exposed in the open air, to the extreme rigour of the season. The severity of a Canada winter was far beyond any thing with which they were acquainted. The snow lay about four feet deep on a level.

This deliverance of Quebec may be considered as a proof, how much may be done by one man, for the preservation of a country. It also proves, that soldiers may in a short time be formed out of the mass of citizens.

The conflict being over, the ill will which had subsisted, during the siege, between the royal and provincial troops, gave way to sentiments of humanity. The Americans, who surrendered, were treated with kindness. Ample provision was made for their wounded, and no unnecessary severity was shown to any. Few men have ever fallen in battle so much regretted by both sides as General Montgomery. His many amiable qualities had procured him an uncommon share of private affection, and his great abilities an equal proportion of public esteem. Being a sincere lover of liberty, he had engaged in the American cause from principle; and quitted the enjoyment of an easy fortune, and the highest domestic felicity, to take an active share in the fatigues and dangers of a war, instituted for the defence of the community, of which he was an adopted member. His well known character, was almost equally esteemed by the friends and foes of the side which he had espoused. In America, he was celebrated as a martyr to the liberties of mankind; in Great Britain, as a misguided good man, sacrificing to what he supposed to be the rights of his country. His name was mentioned in parliament with singular respect. Some of the most powerful speakers in that illustrious assembly, displayed their eloquence in sounding his praise, and lamenting his fate. Those in particular, who had been his fellow soldiers in the late war, expatiated on his many virtues. The minister himself acknowledged his worth, while he reprobated the cause for which he fell. He concluded an involuntary panegyric, by saying: "Curse on his virtues they have undone his country."

Though the invasion of Canada was finally unsuccessful, yet the advantages which the Americans gained in the months of September and October, gave fresh spirits to their army and people. The boldness of the enterprise might have taught Great Britain the folly of persisting in the design of subjugating America. But instead of preserving the union, and restoring the peace of the empire, by repealing a few of her laws, she, from mistaken dignity, resolved on a more vigorous prosecution of the war.

The tide of good fortune, which, in the autumn of 1775, flowed in upon General Montgomery, induced Congress to reinforce the army under his command. Chamblee, St. John's, and Montreal having surrendered, a fair prospect opened of expelling the British from Canada, and of annexing that province to the united colonies. While they were in imagination anticipating these events, the army in which they confided was defeated, and the general whom they so highly esteemed slain.

The intelligence transmitted from General Montgomery, previous to his assault on Quebec, encouraged Congress to resolve that nine battalions should be kept up and maintained in Canada. The repulse of their army, though discouraging, did not extinguish the ardour of the Americans. It was no sooner known at head quarters in Cambridge, than General Washington convened a coun-

cil of war, by which it was resolved: "That as no troops could be spared from Cambridge, the colonies of Massachusetts, Connecticut, and New Hampshire should be requested to raise three regiments, and forward them to Canada. Congress also resolved to forward the reinforcements previously voted, and to raise four battalions in New York, for the defence of that colony, and to garrison Crown Point, and the several posts to the southward of that fortress. That the army might be supplied with blankets for this winter expedition, a committee was appointed to procure from householders, such as could be spared from their families. To obtain a supply of hard money, for the use of the army in Canada, proper persons were employed to exchange paper money for specie. Such was the enthusiasm of the times, that many thousand Mexican dollars were frequently exchanged at par, by individuals, for the paper bills of Congress. It was also resolved, to raise a corps of artillery for this service, and to take into the pay of the colonies, one thousand Canadians, in addition to Colonel Livingston's regiment. Moses Hazen, a native of Massachusetts, who had resided many years in Canada, was appointed to the command of this new corps.

Congress addressed a letter to the Canadians, in which they observed: "Such is the lot of human nature, that the best causes are subject to vicissitudes: but generous souls, enlightened and warmed with the fire of liberty, become more resolute as difficulties increase." They stated to them, "that eight battalions were raising to proceed to their province, and, that if more force were necessary, it should be sent." They requested them to seize, with eagerness, the favourable opportunity then offered to co-operate in the present glorious enterprise; and advised them to establish associations in their different parishes; to elect deputies for forming a provincial assembly, and for representing them in Congress.

The cause of the Americans had received such powerful aid from many patriotic publications in their gazettes, and from the fervent exhortations of popular preachers, connecting the cause of liberty with the animating principles of religion, that it was determined to employ these two powerful instruments of revolutions, printing and preaching, to operate on the minds of the Canadian. A complete apparatus for printing, together with a printer and a clergyman, were therefore sent into Canada.

Congress also appointed Dr. Franklin, Mr. Chase, and Mr. Carrol, the two first of whom were members of their body, and the last a respectable gentleman of the Roman Catholic persuasion, to proceed to Canada with the view of gaining over the people of that colony to the cause of America; and authorized them to promise, on behalf of the united colonies, that Canada should be received into their association on equal terms; and also that the inhabitants thereof should enjoy the free exercise of their religion, and the peaceable possession of all their ecclesiastical property.

The desire of effecting something decisive in Canada, before the approaching spring would permit relief to ascend the river St. Lawrence, added to the enthusiasm of the day, encountered difficulties, which, in less animated times, would be reckoned insurmountable. Arthur St. Clair, who was appointed colonel of one of the Pennsylvania regiments, received his recruiting orders on the 10th of January; and, notwithstanding the shortness of the period, his regiment was not only raised, but six companies of it had, in this extremely cold season, completed their march from Pennsylvania to Canada, a distance of several hundred miles; and, on the eleventh of April following joined the American army before Quebec.

Though Congress and the states made great exertions to support the war in Canada, yet from the fall of Montgomery their interest in that colony daily declined. The reduction of Quebec was an object to which their resources were inadequate. Their unsuccessful assault on Quebec made an impression both on the Canadians and

Indians unfavourable to their views. A woman, infected with the small-pox, had either been sent out, or voluntarily came out of Quebec, and, by mixing with the American soldiers, propagated that scourge of the new world, to the great diminution of the effective force of their army. The soldiers inoculated themselves, though their officers issued positive orders to the contrary. By the first of May, so many new troops had arrived, that the American army, in name, amounted to 3000: but from the prevalence of the small-pox, there were only 900 fit for duty. The increasing number of invalids retarded military operations, while the opposite party was buoyed up, with the expectation that the advancing season would soon bring them relief. To these causes of the declining interest of Congress, it must be added that the affections of the Canadians were alienated. They had many, and well-founded complaints against the American soldiers. Unrestrained by the terror of the civil law, and refusing obedience to a military code, the hope of impunity, and the love of plunder led many of the invading army to practices not less disgraceful to themselves, than injurious to the cause in which they had taken arms. Not only the common soldiers, but the officers of the American army deviated in their intercourse with the Canadians, from the maxims of sound policy. Several of them, having been lately taken from obscure life, were giddy with their exaltation. Far from home, they were unawed by those checks, which commonly restrain the ferocity of man.

The reduction of Chamblee, St. John's, and Montreal, together with the exposed situation of Quebec, being known in England, measures were without delay adopted by the British ministry, to introduce into Canada, as soon as possible, a force sufficient for the double purpose of recovering what they had lost, and of prosecuting offensive operations from that quarter against the revolted colonies. The van of this force made good its passage, very early in May, through the ice, up the river St. Lawrence. The expectation of their coming had for some time damped the hopes of the besiegers, and had induced them to think of a retreat. The day before the first of the British reinforcements arrived, the measure was resolved upon by a council of war, and arrangements were made for carrying it into execution.

Governor Carleton was too great a proficient in the art of war, to delay seizing the advantages which the consternation of the besiegers, and the arrival of a reinforcement, afforded. A small detachment of soldiers and marines from the ships, which had just ascended the river St. Lawrence, being landed, and joined to the garrison in Quebec, he marched out at their head to attack the Americans. On his approach, he found every thing in confusion. The late besiegers, abandoning their artillery and military stores, had in great precipitation retreated. In this manner, at the expiration of five months, the mixed siege and blockade of Quebec was raised. The fortitude and perseverance of the garrison reflected honour on both officers and privates.

The reputation acquired by General Carleton in his military character, for bravery and judiciously defending the province committed to his care, was exceeded by the superior applause merited from his exercise of the virtues of humanity and generosity. Among the numerous sick in the American hospitals, several incapable of being moved were left behind. The victorious general proved himself worthy of success, by the treatment of these unfortunate men: he not only fed and clothed them, but permitted them when recovered to return home. Apprehending that fear might make some conceal themselves in the woods, rather than, by applying for relief, make themselves known he removed their doubts by a proclamation, in which he engaged: "that as soon as their health was restored, they should have free liberty of returning to their respective provinces." This humane line of conduct was more injurious to the

views of the leaders in the American councils, than the severity practised by other British commanders. The truly politic, as well as humane General Carleton dismissed these prisoners after liberally supplying their wants, with a recommendation, "to go home, mind their farms, and keep themselves and their neighbours from all participation in the unhappy war."

The small force which arrived at Quebec early in May, was followed by several British regiments, together with the Brunswick troops, in such a rapid succession, that in a few weeks the whole was estimated at 13,000 men.

The Americans retreated forty-five miles before they stopped. After a short halt, they proceeded to the Sorel, at which place, they threw up some slight works for their safety. They were there joined by some battalions coming to reinforce them. About this time General Thomas, the commander in chief in Canada, was seized with the small-pox, and died; having forbidden his men to inoculate, he conformed to his own rule, and refused to avail himself of that precaution. On his death, the command devolved at first on General Arnold, and afterwards on General Sullivan. It soon became evident, that the Americans must abandon the whole province of Canada.

From a desire to do something which might counterbalance, in the minds of the Canadians, the unfavourable impression which this farther retreat would communicate, General Thompson projected an attack upon the British post at the Three Rivers. This lies about half way between Quebec and Montreal, and is so called from the vicinity of one of the branches of a large river, whose waters are discharged through three mouths into the St. Lawrence.

A plan of operations was agreed upon, in which it was determined to make the attack, in four different places, at the same time; and very early in the morning, in the hope of surprising the enemy. Much resolution was discovered in its execution: but the concurrence of too many circumstances was necessary to ensure success. The expectation of simultaneous operations failed; the chance of a surprise was lost. The assailants were repulsed and driven some miles through a deep swamp. General Thomson and Colonel Irvine, with 200 men, were taken prisoners, and about 25 were killed. The loss of the British was considerable.

The British forces having arrived, and a considerable body of them having rendezvoused at the Three Rivers, a serious pursuit of the American army commenced. Had sir Guy Carleton taken no pains to cut off their retreat, and at once attacked their post, or rather their fortified camp at Sorel, it would probably have fallen into his hands: but either the bold, though unsuccessful attack at the Three Rivers had taught them to respect them, or he wished to reduce them without bloodshed. In the pursuit he made three divisions of his army, and arranged them so as to embrace the whole American encampment, and to command it in every part. The retreat was delayed so long that the Americans evacuated Sorel, only about two hours before one division of the British made its appearance.

While the Americans were retreating, they were daily assailed by the remonstrances of the inhabitants of Canada, who had either joined or befriended them. Great numbers of Canadians had taken a decided part in their favour, rendered them essential services, and thereby incurred the heavy penalties annexed to the crime of supporting rebellion. These, though Congress had assured them but a few months before, "that they would never abandon them to the fury of their common enemies," were, from the necessity of the case, left exposed to the resentment of their provincial rulers. Several of them, with tears in their eyes, expostulated with the retreating army, and, bewailing their hard fate, prayed for support. The only relief the Americans could offer, was an assurance of continued protection if they retreated with them; but this was a hard alternative, to men who had wives,

children and immovable effects. They generally concluded, that it was the least of two evils, to cast themselves on the mercy of that government, against which they had offended.

The distresses of the retreating army were great. The British were close on their rear, and threatening them with destruction. The unfurnished state of the colonies in point of ordnance, imposed a necessity of preserving their cannon. The men were obliged to drag their loaded batteaux up the rapids by mere strength, and when they were to the waist in water. The retreating army was also encumbered with great numbers labouring under the small pox, and other diseases. Two regiments, at one time, had not a single man in health. Another had only six, and a fourth only forty, and two more were in nearly the same condition.

To retreat in face of an enemy is at all times hazardous: but, on this occasion, it was attended with an unusual proportion of embarrassments.—General Sullivan, who conducted the retreat, nevertheless, acted with so much judgment and propriety, that the baggage and public stores were saved and the numerous sick brought off. The American army reached Crown Point on the first of July, and at that place made their first stand.

A short time before the Americans evacuated the province of Canada, General Arnold convened the merchants of Montreal, and proposed to them to furnish a quantity of specified articles for the use of the army in the service of Congress. While they were deliberating on the subject, he placed sentinels at their shop doors, and made such arrangements, that what was at first only a request, operated as a command. A great quantity of goods were taken on pretence that they were wanted for the use of the American army, but in their number were many articles only serviceable to women, and to persons in civil life. His nephew soon after opened a store in Albany, and publicly disposed of goods which had been procured at Montreal.

The possession of Canada so eminently favoured the plans of defence adopted by Congress, that the province was evacuated with great reluctance. The Americans were not only mortified at the disappointment of their favourite scheme, of annexing it as a fourteenth link in the chain of their confederacy: but apprehended the most serious consequences from the ascendancy of the British power in that quarter. Anxious to preserve a footing there, they had persevered for a long time, in stemming the tide of unfavourable events.

General Gates was appointed to command in Canada, June 17th, 1776: but on coming to the knowledge of the late events in that province, he concluded to stop short within the limits of New York. The scene was henceforth reversed. Instead of meditating the recommencement of offensive operations, that army, which had lately excited so much terror in Canada, was called upon to be prepared for repelling an invasion threatened from that province.

The attention of the Americans being exclusively fixed on plans of defence, their general officers, commanding in the northern department, were convened to deliberate on the place and means, most suitable for that purpose. To form a judgment on this subject, a recollection of the events of the late war, between France and England, was of advantage. The same ground was to be fought over, and the same posts to be again contended for. On the confines of lake George and lake Champlain, two inland seas, which stretch almost from the sources of Hudson's river to the St. Lawrence, are situated the famous posts of Ticonderoga and Crown Point. These are of primary necessity to any power which contends for the possession of the adjacent country; for they afford the most convenient stand either for its annoyance or defence. In the opinion of some American officers, Crown Point, to which the army on the evacuation of Canada had retreated, was the most proper place for erecting works of defence; but it was otherwise determined, by the

council convened on this occasion. It was also by their advice resolved to move lower down, and to make the principal work on the strong ground east of Ticonderoga, and especially by every means to endeavour to maintain a naval superiority on lake Champlain. In conformity to these resolutions, General Gates, with about 12,000 men, which collected in the course of the summer, was fixed in command at Ticonderoga, and a fleet was constructed at Skenesborough. This was carried on with so much rapidity, that in a short time there were afloat, in lake Champlain, one sloop, three schooners, and six gondolas, carrying in the whole 58 guns, 86 swivels, and 440 men. Six other vessels were also nearly ready for launching at the same time. The fleet was put under the command of Arnold, and he was instructed to proceed beyond Crown Point, down lake Champlain to the Split Rock: but most peremptorily restrained from advancing any farther; for security against an apprehended invasion was the ultimate end of the armament.

The expulsion of the American invaders from Canada, was only a part of the British designs in that quarter. They urged the pursuit no farther than St. John's: but indulged in a hope of being soon in a condition for passing the lakes, and penetrating through the country to Albany, so as to form a communication with New York. The objects they had in view were great, and the obstacles in the way of their accomplishment equally so. Before they could advance with any prospect of success, a fleet, superior to that of the Americans on the lakes, was to be constructed. The materials of some large vessels were, for this purpose, brought from England: but their transportation, and the labour necessary to put them together, required both time and patience. The spirit of the British commanders rose in proportion to the difficulties which were to be encountered. Nevertheless, it was late in the month of October, before their fleet was prepared to face the American naval force, on lake Champlain. The former consisted of the ship *Inflexible*, mounting 18 twelve pounders, which was so expeditiously constructed, that she sailed from St. John's 28 days after laying her keel; one schooner mounting 14, and another 12 six pounders; a flat bottomed radeau, carrying six 24 and six 12 pounders, besides howitzers, and a gondola with seven 9 pounders. There were also twenty smaller vessels, with brass field pieces, from 9 to 24 pounders, or with howitzers. Some long boats were furnished in the same manner. An equal number of large boats acted as tenders. Besides these vessels of war, there was a vast number destined for the transportation of the army, its stores, artillery, baggage and provisions. The whole was put under the command of Captain Pringle. The naval force of the Americans, from the deficiency of means, was far short of what was brought against them. Their principal armed vessel was a schooner, which mounted only 12 six and four pounders; and their whole fleet, in addition to this, consisted of only fifteen vessels of inferior force.

No one step could be taken towards accomplishing the designs of the British, on the northern frontiers of New York, till they had the command of lake Champlain. With this view, their fleet proceeded up the lake, and engaged the Americans. The wind was so unfavourable to the British, that their ship *Inflexible*, and some other vessels of force, could not be brought into action. This lessened the inequality between the contending fleets so much, that the principal damage sustained by the Americans, was the loss of a schooner and gondola. At the approach of night, the action was discontinued. The vanquished took the advantage which the darkness afforded, to make their escape. This was effected by General Arnold, with great judgment and ability. By the next morning, the whole fleet under his command was out of sight. The British pursued with all the sail they could crowd. The wind having become more favourable, they overtook the Americans, and brought them to action near Crown

Point. A smart engagement ensued, and was well supported on both sides, for about two hours. Some of the American vessels which were most ahead escaped to Ticonderoga. Two gallees and five gondolas remained and resisted an unequal force, with a spirit approaching to desperation. One of the gallees struck and was taken. General Arnold, though he knew that to escape was impossible, and to resist unavailing, yet, instead of surrendering, determined that his people should not become prisoners, nor his vessels a reinforcement to the British. The spirited resolution was executed with a judgment, equal to the boldness with which it had been adopted. He ran the Congress galley, on board which he was, together with the five gondolas, on shore, in such a position as enabled him to load his men and blow up the vessels. In the execution of this perilous enterprise, he paid a romantic attention to a point of honour. He did not quit his own galley till she was in flames, lest the British should board her and strike his flag. The result of this action, though unfavourable to the Americans, raised the reputation of General Arnold, higher than ever. In addition to the fame of a brave soldier, he acquired that of an able sea officer.

The American naval force being nearly destroyed, the British had undisputed possession of lake Champlain. On this event, a few continental troops which had been at Crown Point, retired to their main body at Ticonderoga. General Carleton took possession of the ground from which they had retreated, and was there soon joined by his army. He sent out several reconnoitering parties, and at one time pushed forward a strong detachment on both sides of the lake, which approached near to Ticonderoga. Some British vessels appeared at the same time within cannon shot of the American works at that place. It is probable he had it in contemplation, if circumstances favoured, to reduce the post: and that the apparent strength of the works restrained him from making the attempt, and induced his return to Canada.

Such was the termination of the northern campaign, in 1776. Though after the surrender of Montreal, evacuations, defeats and retreats had almost interruptedly been the lot of the Americans, yet, with respect to the great object of defence on the one side, and of conquest on the other, a whole campaign was gained to them and lost to their adversaries.

The British had cleared Canada of its invaders and destroyed the American fleet on the lakes; yet, from impediments thrown in their way, they failed in their ulterior designs. The delays, contrived by General Gates, retarded the British, for so great a part of the summer, that, by the time they had reached Ticonderoga, their retreat, on account of the approaching winter became immediately necessary. On the part of the Americans, some men and a few armed vessels were lost; but time was gained; their army saved: and the frontier of the adjacent states secured from a projected invasion. On the part of the British, the object of a campaign, in which 13,000 men were employed, and nearly a million of money expended was rendered in a great measure abortive.

CHAPTER XI.

Transactions in Virginia; the Carolinas; Georgia; the general state of public affairs, in the colonies in 1775. Transactions in Massachusetts; evacuation of Boston, 1776.

It has already been mentioned that the colonists, from the rising of Congress, in October, 1774, and particularly after the Lexington battle were attentive to the training of their militia, and making the necessary preparations for their defence.

The effects of their arrangement, for this purpose varied with circumstances.

Where there were no royal troops, and where

ordinary prudence was observed, the public peace was undisturbed. In other cases, the intemperate zeal of governors, and the imprudent warmth of the people, anticipated the calamities of war. Virginia, though there was not a single British soldier within its limit, was, by the indiscretion of its governor, lord Dunmore, involved for several months in difficulties, little short of those to which the inhabitants of Massachusetts were subjected. His lordship was very unfit to be at the helm, in this tempestuous season. His passions predominated over his understanding, and precipitated him into measures injurious both to the people whom he governed, and to the interest of his royal master. The Virginians, from the earliest stage of the controversy, had been in the foremost line of the opposition to the claims of Great Britain; but, at the same time, treated lord Dunmore with the attention that was due to his station. In common with the other provinces, they had taken effectual measures to prepare their militia, for the purposes of defence.

While they were pursuing this object, his lordship engaged a party, belonging to a royal vessel in James's river, to convey some public powder from a magazine in Williamsburgh, on board their ship. The value or quantity of the powder was inconceivable; but the circumstances attending its removal begat suspicions, that lord Dunmore meant to deprive the inhabitants of the means of defence. They were, therefore, alarmed, and assembled with arms to demand its restitution.

By the interposition of the mayor and corporation of Williamsburgh, extremities were prevented. Reports were soon afterwards spread, that a second attempt to rob the magazine was intended. The inhabitants again took arms and instituted nightly patrols, with a determined resolution to protect it. The governor was irritated at these commotions, and in the warmth of his temper, threatened to set up the royal standard, enfranchise the negroes, and arm them against their masters. This irritated, but did not intimidate. Several public meetings were held in the different counties, in all of which, the removal of the powder from the magazine, and the governor's threats, were entirely condemned. Some of the gentlemen of Hanover, and the neighbouring counties, assembled in arms, under the conduct of Mr. Patrick Henry, and marched towards Williamsburg, with an avowed design to obtain restitution of the powder, and to take measures for securing the public treasury. This ended in a negotiation, by which it was agreed, that payment for the powder, by the receiver general of the colony, should be accepted in lieu of restitution: and, that, upon the engagement of the inhabitants of Williamsburg to guard both the treasury and the magazine, the armed parties should return to their habitations.

The alarm of this affair induced lord Dunmore to send his lady and family on board the Fowey man of war, in James's river. About the same time, his lordship, with the assistance of a detachment of marines, fortified his palace, and surrounded it with artillery. He soon after issued a proclamation in which Mr. Henry and his associates were charged with rebellious practices; and the existing commotions were attributed to a desire in the people, of changing the established form of government. Several meetings were held in the neighbouring counties, in which, the conduct of Henry and his associates was applauded; and resolutions were adopted, that, at every risk, he and they should be indemnified. About this time, copies of some letters from governor Dunmore, to the minister of the American department, were made public. These, in the opinion of the Virginians, contained unfair and unjust representations of facts, and also of their temper and disposition. Many severe things were said on both sides, and fame, as usual magnified or misrepresented whatever was said or done. One distrust begat another. Every thing tended to produce a spirit of discontent, and the fever of the public mind daily increased.

In this state of disorder, the governor convened

the general assembly. The leading motive, for this unexpected measure, was to procure their approbation and acceptance of the terms of the conciliatory motion, agreed to in parliament, on the 20th of the preceding February. His lordship introduced this to their consideration, in a long and plausible speech. In a few days, they presented their address in answer; in which, among other grounds of rejection, they stated, that "the proposed plan only changed the form of oppression, without lessening its burden;" but, they referred the papers for a final determination, to Congress. For themselves they declared: "We have exhausted every mode of application, which our invention could suggest, as proper and promising. We have decently remonstrated with parliament; they have added new injuries to the old. We have wearied our king with supplication; he has not deigned to answer us. We have appealed to the native honour and justice of the British nation; their efforts in our favour have been hitherto ineffectual."

The assembly, among their first acts, appointed a committee to inquire into the causes of the late disturbances; and particularly to examine the state of the magazines they found most of the remaining powder buried; the muskets deprived of their locks; and spring guns planted in the magazine.

These discoveries irritated the people, and occasioned intemperate expressions of resentment. Lord Dunmore quitted the palace privately, and retired on board the Fowey man of war, which then lay near York Town. He left a message for the house of burgesses, acquainting them, "that he thought it prudent to retire to a place of safety, having reason to believe that he was in constant danger of falling a sacrifice to popular fury. He, nevertheless, hoped that they would proceed in the great business before them; and he engaged to render the communication between him and the house, as easy and as safe as possible. He assured them that he would attend, as heretofore, to the duties of his office; and that he was well disposed to restore that harmony which had been unhappily interrupted."

This message produced a joint address from the council and house of burgesses; in which, they represented his lordship's fears to be groundless, and declared their willingness to concur in any measure he would propose for the security of himself and family; and concluded, by entreating his return to the palace. Lord Dunmore, in reply, justified his apprehensions of danger, from the threats which had been repeatedly thrown out. He charged the house of burgesses with countenancing the violent proceedings of the people, and with a design to usurp the executive power, and subvert the constitution. This produced a reply fraught with recrimination and defensive arguments. Every incident afforded fresh room for altercation. There was a continued intercourse by addresses, messages, and answers, between the house of burgesses and the Fowey; but little of the public business was completed. His lordship was still acknowledged as the lawful governor of the province: but did not think proper to set his foot on shore, in the country over which his functions were to be exercised.

At length, when the necessary bills were ready for ratification, the council and burgesses jointly entreated the governor's presence, to give his assent to them and finish the session. After several messages and answers, lord Dunmore peremptorily refused to meet the assembly at the capitol, their usual place for deliberation: but said, he would be ready to receive them on the next Monday at his present residence on board the Fowey, for the purpose of giving his assent to such bills as he should approve of. Upon receiving this answer, the house of burgesses passed resolutions, in which they declared, that the message, requiring them to attend the governor on board of a ship of war, was a high breach of their rights and privileges; that they had reason to fear a dangerous attack was meditated against the colony; and it was, therefore, their opinion, that they should prepare for the pre-

servation of their rights and liberties. After strongly professing loyalty to the king, and amity to the mother country, they broke up their session.

The royal government in Virginia, from that day, July 10th, 1775, ceased. Soon afterwards, a convention of delegates was appointed to supply the place of the assembly. As these had unlimited confidence reposed in them, they became at once possessed of undefined discretionary powers, both legislative and executive. They exercised this authority, for the security of their constituents. They raised and embodied an armed force, and took measures for putting the colony in a state of defence. They published a justification of their conduct, and set forth the necessity of the measures they had adopted. They concluded with professions of loyalty, and declared, that though they were determined at every hazard to maintain their rights and privileges, it was also their fixed resolution to disband such forces as were raised for the defence of the colony, whenever their danger was removed.

The headstrong passions of lord Dunmore precipitated him into farther follies. With the aid of the loyalists, run away negroes, and some frigates that were on the station, he established a marine force. By degrees he equipped, and armed a number of vessels, of different kinds and sizes, in one of which he constantly resided, except when he went on shore, in a hostile manner. This force was calculated only for depredation, and never became equal to any essential service. Obnoxious persons were seized and taken on board. Negroes were carried off; plantations ravaged; and houses burnt. These proceedings occasioned the sending of some detachments, of the newly-raised provincial forces, to protect the coasts. This produced a predatory war, from which neither honour nor benefit could be acquired, and in which, every supply from the shore was purchased at the risk of blood. The forces under his lordship attempted to burn Hampton: but the crews of the royal vessels employed in that business, though they had begun to cannonade it, were so annoyed by riflemen from the shore, that they were obliged to quit their station. In a few days after this repulse, Nov. 7th, 1775, a proclamation was issued by the governor dated on board the ship *William*, off Norfolk, declaring that, as the civil law was at present insufficient to punish treason and traitors, martial law should take place, and be executed through the colony; and requiring all persons capable of bearing arms, to repair to his majesty's standard, or to be considered as traitors. He also declared all indentured servants, negroes and others, appertaining to rebels, who were able and willing to bear arms, and who joined his majesty's forces, to be free.

Among the circumstances which induced the rulers of Great Britain to count on an easy conquest of America, the great number of slaves had a considerable weight. On the sea coast of five of the most southern provinces the number of slaves exceeded that of freemen. It was supposed that the proffer of freedom would detach them from their masters' interest, and bind them by strong ties to support the royal standard. Perhaps, under favourable circumstances, these expectations would in some degree, have been realized; but lord Dunmore's indiscretion deprived his royal master of this resource. Six months had elapsed since his lordship first threatened its adoption. The negroes had in a great measure ceased to believe and the inhabitants to fear. It excited less surprise, and produced less effect, than if it had been more immediate and unexpected. The country was now in a tolerable state of defence, and the force for protecting the negroes, in case they had closed with his lordship's offer, was far short of what would have been necessary for their security.

The injury, done the royal cause by the bare proposal of the scheme, far outweighed any advantage that resulted from it. The colonists were struck with horror, and filled with detestation of a government, which was exercised in loosening the

bands of society, and destroying domestic security. The union and vigour, which were given to their opposition, was great, while the additional force, acquired by his lordship, was considerable. It nevertheless produced some effect in Norfolk and the adjoining country, where his lordship was joined by several hundreds, both whites and blacks. The governor, having once more got footing on the main, amused himself with hopes of acquiring the glory of reducing one part of the province by means of the other. The provincials had now an object, against which they might direct their arms. An expedition was therefore concerted against the force which had taken post at Norfolk.

To protect his adherents, lord Dunmore constructed a fort at the great bridge, on the Norfolk side and furnished it with artillery. The provincials also fortified themselves, near to the same place with a narrow causeway in their front. In this state, both parties continued quiet for some days. The royalists commenced an attack. Captain Fordyce, at the head of about 60 British grenadiers, passed the causeway, and boldly marched up to the provincial intrenchments with fixed bayonets. They were exposed, without cover, to the fire of the provincials in front, and enflayed by another part of their works. The brave captain and several of his men fell. The lieutenant, with others, was taken; and all who survived were wounded. The slaves in this engagement were more prejudicial to their British employers than to the provincials. Captain Fordyce was interred by the victors, with military honour. The English prisoners were treated with kindness; but the Americans, who had joined the king's standard, experienced the resentment of their countrymen.

The royal forces on the ensuing night, evacuated their post at the great bridge; lord Dunmore shortly afterwards abandoned Norfolk, and retired with his people on board his ships. Many of the tories, a name which was given to those who adhered to the royal interest, sought the same asylum, for themselves and moveable effects. The provincials took possession of Norfolk; and the fleet, with its new incumbrances, removed to a greater distance. The people on board, cut off from all peaceable intercourse with the shore, were distressed for provisions and necessities of every kind. This occasioned sundry unimportant contests, between the provincial forces and the armed ships and boats. At length on the arrival of the Liverpool man of war from England, a flag was sent on shore, to put the question, whether they would supply his majesty's ships with provisions?

An answer was returned in the negative. It was then determined to destroy the town. This was carried into effect; and Jan. 1, 1776, Norfolk was reduced to ashes. The whole loss was estimated at 300,000*l.* sterling. The provincials, to deprive the ships of every source of supply, destroyed the houses and plantations near the water, and obliged the people to move their cattle, provisions, and effects, further into the country.

Lord Dunmore, with his fleet, continued for several months on the coast and in the rivers of Virginia. His unhappy followers suffered a complication of distresses. The scarcity of water and provisions, the closeness and filth of the small vessels produced diseases which were fatal to many, especially to the negroes. Though his whole force was trifling when compared with the resources of Virginia; yet the want of suitable armed vessels made its expulsion impracticable. The experience of that day evinced the inadequacy of land forces, for the defence of a maritime country; and the extensive mischief which may be done, by even an inconsiderable marine, when unopposed in its own way. The want of a navy was both seen and felt. Some arrangements to procure one were therefore made. Either the expectation of an attack from this quarter, or the sufferings of the crews on board, induced his lordship, in the summer of 1776, to burn the least valuable of his vessels, and to send the remainder, amounting to 30 or 40 sail, to Florida, Bermuda,

and the West Indies. The hopes which lord Dunmore had entertained of subduing Virginia, by the co-operation of the negroes, terminated with this movement. The unhappy Africans, who had engaged in it, are said to have almost universally perished.

While these transactions were carrying on, another scheme, in which lord Dunmore was a party in like manner miscarried. It was in contemplation to raise a considerable force at the back of the colonies, particularly in Virginia, and the Carolinas. Connelly, a native of Pennsylvania, was the framer of the design. He had gained the approbation of lord Dunmore, and had been sent to him by General Gage at Boston, and from him he received a commission to act as colonel commandant. It was intended that the British garrisons at Detroit, and some other remote spots, with their artillery and ammunition, should be subservient to this design. Connelly also hoped for the aid of the Canadians and Indians. He was authorized to grant commissions, and to have the supreme direction of the new forces. As soon as they were in readiness he was to penetrate through Virginia, and to meet lord Dunmore near Alexandria, on the river Potomac. Connelly was taken up on suspicion, by one of the committees in Maryland, while on his way to the scene of action. The papers found in his possession betrayed the whole. Among these, were a general sketch of the plan, and a letter from lord Dunmore to one of the Indian chiefs. He was imprisoned, and the papers published. So many fortunate escapes induced a belief among serious Americans, that their cause was favoured by heaven. The various projects which were devised, and put in operation against them, pointed out the increasing necessity of union; while the havoc made on their coasts, the proffer of freedom to their slaves, and the encouragement proposed to Indians, for making war on their frontier inhabitants, quickened their resentment against Great Britain.

North Carolina was more fortunate than Virginia. The governors of both were perhaps equally zealous for the royal interest, and the people of both equally attached to the cause of America; but the former escaped with a smaller portion of public calamity. Several regulations were at this time adopted by most of the provinces. Councils of safety, committees, and conventions, were common substitutes for regular government. Similar plans for raising, arming and supporting troops, and for training the militia, were, from north to south, generally adopted. In like manner, royal governors, throughout the provinces, were exerting themselves in attaching the people to the schemes of Great Britain. Governor Martin, of North Carolina, was particularly zealous in his business. He fortified and armed his palace at Newbern, that it might answer the double purpose of a garrison and magazine. While he was thus employed, such commissions were excited among the people, that he thought it expedient to retire on board a sloop of war in Cape Fear river.—The people found powder and various military stores, which had been buried in his garden and yard.

Governor Martin, though he had abandoned his usual place of residence, continued his exertions for reducing North Carolina to obedience. He particularly addressed himself to the regulators and Highland emigrants. The former had acquired this name from attempting to regulate the administration of justice, in the remote settlements, in a summary manner, subversive of the public peace. They had suffered the consequences of opposing royal government, and, from obvious principles of human nature, were disposed to support the authority, whose power to punish they had recently experienced. The Highland emigrants had been only a short time in America, and were yet more under the influence of European ideas, than those which their new situation was calculated to inspire.

Governor Martin sent commissions among these people, for raising and commanding regiments;

and he granted one to Mr. M'Donald, to act as their general. He also sent them a proclamation commanding all persons, on their allegiance, to repair to the royal standard. This was erected by General M'Donald, about the middle of February. Upon the first intelligence of their assembling, Brigadier General Moore, with some provincial troops and militia, and some pieces of cannon, marched to oppose them. He took possession of Rock-fish bridge, and threw up some works. He had not been there many days, when M'Donald approached; and sent a letter to Moore, enclosing the governor's proclamation and advising him and his party to join the king's standard; and adding, that in case of a refusal, they must be treated as enemies. To this Moore replied, that he and his officers considered themselves as engaged in a cause, the most glorious and honourable in the world, the defence of mankind; and in his turn offered, that if M'Donald's party laid down their arms, they should be received as friends; but, otherwise they must expect consequences, similar to those which they threatened. Soon after this, General M'Donald, with his adherents, pushed on to join Governor Martin: but Colonels Lillington and Caswell, with about 1000 militia men, took possession of Moore's creek bridge, which lay in their way, and raised a small breast work to secure themselves.

On the next morning, the Highland emigrants attacked the militia posted at the bridge; but M'Cleod, the second in command, and some more of their officers being killed at the first onset, they fled with precipitation. General M'Donald was taken prisoner, and the whole of the party broken and dispersed. The overthrow produced consequences very injurious to the British interest. A royal fleet and army was expected on the coast. A junction formed between them and the Highland emigrants, in the interior country, might have made a sensible impression on the province. From an eagerness to do something, the insurgents prematurely took arms, and being crushed before the arrival of proper support, their spirits were so entirely broken, that no future effort could be expected from them.

While the war raged only in Massachusetts, each province conducted as if it expected to be the next attacked. Georgia, though a majority of its inhabitants were at first against the measures, yet, about the middle of this year, joined the other colonies. Having not concurred in the petitions from Congress to the king, they petitioned by themselves; and stated their rights and grievances, in firm and decided language. They also adopted the continental association, and sent on their deputies to Congress.

In South Carolina, there was an eagerness to be prepared for defence, which was not surpassed in any of the provinces. Regiments were raised; forts were built; the militia trained; and every necessary preparation made for that purpose. Lord William Campbell, the royal governor, endeavoured to form a party for the support of government, and was in some degree successful. Distrusting his personal safety on shore, about the middle of September, he took up his residence on board an armed vessel, then in the harbour.

The royal government still existed in name and form; but the real power, which the people obeyed, was exercised by a provincial congress, a council of safety, and subordinate committees. To conciliate the friendship of the Indians, the popular leaders sent a small supply of powder into their country. They who were opposed to Congress, embodied, and robbed the wagons which were employed in its transportation. To inflame the minds of their adherents, they propagated a report that the powder was intended to be given to the Indians, for the purpose of massacring the friends of royal government. The inhabitants took arms, some to support royal government, but more to support the American measures.

The royalists acted feebly, and were easily overpowered. They were disheartened by the

superior numbers that opposed them. They every where gave way, and were obliged either to fly or feign submission. Solicitations had been made about this time for royal forces to awe the southern provinces; but without effect, till the proper season was over. One scheme for this purpose was frustrated by a single device. Private intelligence had been received of an express being sent from sir James Wright, governor of Georgia, to General Gage. By him, the necessity of ordering a part of the royal army to the southward was fully stated. The express was waylaid, and compelled by two gentlemen to deliver his letters. One to General Gage was kept back, and another one forwarded in its room. The seal and hand-writing were so exactly imitated that the deception was not suspected. The forged letter was received and acted upon. It is stated the degree of peace and tranquility to be such as induced an opinion, that there was no necessity of sending royal troops to the southward.

While these states were thus left to themselves, they had time and opportunity to prepare for extremities; and, in the mean time, the friends of royal government were severally crushed. A series of disasters followed the royal cause in the year 1775. General Gage's army was cooped up in Boston, and rendered useless. In the southern states, where a small force would have made an impression, the royal governors were unsupported. Much was done to irritate the colonists, and to cement their union; but very little, either in the way of conquest and concession, to subdue their spirits or conciliate their affections.

In this year the people of America generally took the side of the colonies. Every art was made use of, by the popular leaders, to attach the inhabitants to their cause; nor were the votaries of the royal interest inactive: but little impression was made by the latter, except among the uninformed. The great mass of the wealth, learning, and influence, in all the southern colonies, and in most of the northern, was in favour of the American cause. Some aged persons were exceptions to the contrary. Attached to ancient habits, and enjoying the fruits of their industry, they were slow in approving new measures, subversive of the former, and endangering the latter. A few, who had basked in the sunshine of court favour, were restrained by honour, principle, and interest, from forsaking the fountain of their enjoyments. Some feared the power of Britain, and others doubted the perseverance of America; but a great majority resolved to hazard every thing, in preference to a tame submission. In the beginning of the year 1776, the colonists were farmers, merchants, and mechanics; but in its close, they had assumed the profession of soldiers. So sudden a transformation of so numerous, and so dispersed a people, is without a parallel.

This year was also remarkable for the general termination of royal government. This was effected without any violence to its executive officers. The new system was not so much forcibly imposed, or designedly adopted, as introduced through necessity, and the imperceptible agency of a common danger, operating uniformly on the mind of the public. The royal governors, for the most part voluntarily abdicated their governments, and retired on board ships of war. They assigned for reason that they apprehended personal danger; but this, in every instance, was unfounded. Perhaps, these representatives of royalty thought, that as they were constitutionally necessary to the administration of justice, the horrors of anarchy would deter the people from prosecuting their opposition. If they acted from this principle, they were mistaken. Their withdrawing from the exercise of their official duties both furnished an apology, and induced a necessity for organizing a system of government, independent of royal authority. By encouraging opposition to the popular measures, they involved their friends in distress. The unsuccessful insurrections, which they fomented, being improperly timed, and unsupported, were easily overthrown; and actually

strengthened the popular government, which they meant to destroy.

As the year 1775 drew near to a close, the friends of Congress were embarrassed with a new difficulty. The army was temporary, and only engaged to serve out the year. The object, for which they had taken up arms, was not obtained. Every reason, which had previously induced the provinces to embody a military force, still existed and with increasing weight. It was therefore resolved to form a new army. The same flattering hopes were indulged, that an army for the ensuing year would answer every purpose. A committee of Congress, consisting of Dr. Franklin, Mr. Lynch, and Mr. Harrison, repaired to head quarters at Cambridge; and there, in conjunction with General Washington, made arrangements for organizing an army for the year 1776. It was presumed that the spirit, which had hitherto operated on the yeomanry of the country, would induce most of the same individuals to engage for another twelvemonth; but, on experiment, it was found that much of their military ardour had already evaporated. The first impulse of passion, and the novelty of the scene, had brought many to the field, who had great objections against continuing in the military line.—They found, that to be soldiers, required sacrifices, of which, when they assumed that character, they had no idea. So unacquainted were the bulk of the people with the mode of carrying on modern war, that some of them flew to arms, with the delusive expectation of settling the whole dispute, by a few decisive and immediate engagements. Experience soon taught them, that to risk life in open fighting was but a part of a soldier's duty. Several of the inferior officers retired; the men frequently refused to enlist, unless they were allowed to choose their officers. Others would not engage unless they were indulged with furloughs. Fifty would apply together for leave of absence; indulgence threatened less ruinous consequences than a refusal would probably have produced. On the whole, enlistments went on slowly. Though the recruits for the new army had not arrived; yet, the Connecticut troops, whose time expired on the first of December could not be persuaded to continue in service. On their way home, several of them were stopped by the country people, and compelled to return. When every thing seemed to be exposed, by the departure of so great a part of the late army, the militia were called on for a temporary aid. A new difficulty obstructed, as well the recruiting of the army, as the coming in of the militia. Sundry persons, infected with the small-pox, were sent out of Boston and landed at Point Shirley. Such was the dread of that disease, that the British army scarcely excited equal terror. So many difficulties retarded the recruiting service, that on the last day of the year, 1775, the whole American army amounted to no more than 9650 men. Of the remarkable events, with which the subsequent important year was replete, it was not the least, that, within musket shot of twenty British regiments, one army was disbanded and another enlisted.

All this time the British troops at Boston were suffering the inconvenience of a blockade. From the 19th of April, they were cut off from those refreshments which their situation required. Their supplies from Britain did not reach the coast, for a long time after they were expected. Several were taken by the American cruisers, and others were lost at sea. This was in particular the fate of many of their coal ships. The want of fuel was particularly felt, in a climate where the winter is both severe and tedious. They relieved themselves, in part, from their sufferings on this account, by the timber of houses, which they pulled down and burnt. Vessels were despatched to the West Indies to procure provisions; but the islands were so straitened, that they could afford little assistance. Armed ships and transports were ordered to Georgia, with an intent to procure rice; but the people of that province, with the aid of a party from South Carolina, so effectually opposed them, that of eleven vessels, only two got off safe with

their cargoes. It was not till the stock of the garrison was nearly exhausted, that the transports from England entered the port of Boston, and relieved the distresses of the garrison.

While the troops within the lines were apprehensive of suffering from want of provisions, the troops without were equally uneasy for want of employment. Used to labour and motion on their farms, they could not brook the inactivity and confinement of a camp life. Fiery spirits declaimed in favour of an assault. They preferred a bold spirit of enterprise, to that passive fortitude, which bears up under present evils, while it waits for favourable junctures. To be in readiness for an attempt of this kind, a council of war recommended to call in 7280 militia men, from New Hampshire or Connecticut. This number, added to the regular army before Boston, would have made an operating force of about 17,000 men.

The provincials laboured under great inconveniences from the want of arms and ammunition.—Very early in the contest, the king of Great Britain, by proclamation, forbade the exportation of warlike stores to the colonies. Great exertions had been made to manufacture saltpetre and gunpowder: but the supply was slow and inadequate. A secret committee of Congress had been appointed, with ample power to lay in a stock of this necessary article. Some swift sailing vessels had been despatched to the coast of Africa, to purchase what could be procured in that distant region. A party from Charleston forcibly took about 17,000 lbs. of powder, from a vessel near the bar of St. Augustine. Some time after, Commodore Hopkins stripped Providence, one of the Bahama islands, of a quantity of artillery and stores; but the whole, procured from all these quarters, was far short of a sufficiency. In order to supply the new army before Boston, with the necessary means of defence, an application was made to Massachusetts for arms: but, on examination, it was found that their public stores afforded only 200. Orders were issued to purchase firelocks from private persons: but few had any to sell, and fewer would part with them. In the month of February, there were 2000 of the American infantry, who were destitute of arms. Powder was equally scarce, and yet daily applications were made for dividends of the small quantity which was on hand, for the defence of various parts threatened with invasion. The eastern colonies presented an unusual sight. A powerful enemy safely entrenched in their first city, while a fleet was ready to transport them to any part of the coast. A numerous body of husbandmen was resolutely bent on opposition; but without the necessary arms and ammunition for self-defence. The eyes of all were fixed on General Washington; and it was unreasonably expected, that he would, by a bold exertion, free the town of Boston from the British troops. The dangerous situation of public affairs led him to conceal the real scarcity of arms and ammunition; and, with that magnanimity which is characteristic of great minds, to suffer his character to be assailed, rather than vindicate himself, by exposing his many wants. There were not wanting persons, who, judging from the superior numbers of men in the American army, boldly asserted, that, if the commander in chief were not desirous of prolonging his importance at the head of an army, he might, by a vigorous exertion, gain possession of Boston. Such suggestions were reported and believed by several, while they were contradicted by the general, who chose to risk his fame, rather than expose his army and his country.

Agreeably to the request of the council of war, about 7000 of the militia had rendezvoused in February. General Washington stated to his officers, that the troops in camp, together with the reinforcements which had been called for, and were daily coming in, would amount nearly to 17,000 men: that he had not powder sufficient for a bombardment; and asked their advice, whether, as reinforcements might be daily expected to the enemy, it would not be prudent before that event took place, to make an assault

on the British lines. The proposition was negatived: but it was recommended to take possession of Dorchester heights. To conceal this design, and to divert the attention of the garrison, a bombardment of the town from other directions commenced, and was carried on for three days, with as much briskness as a deficient stock of powder would admit. In this first essay, three of the mortars were broken, either from a defect in their construction, or, more probably, from ignorance of the proper mode of using them.

The night of the 4th of March was fixed upon for taking possession of Dorchester heights. A covering party of about 800 men led the way. These were followed by the carts, with the intrenching tools, 1200 of a working party, commanded by General Thomas. In the rear, there were more than two hundred carts, loaded with fascines, and hay in bundles. While the cannon were playing in other parts, the greatest silence was kept by this working party. The active zeal of the industrious provincials completed lines of defence, by morning, which astonished the garrison. The difference between Dorchester heights on the evening of the 4th, and the morning of the 5th, seemed to realize the tales of romance. The admiral informed General Howe, that if the Americans kept possession of these heights, he would not be able to keep one of his majesty's ships in the harbour. It was therefore determined in a council of war, to attempt to dislodge them. An engagement was hourly expected. It was intended by General Washington, in that case, to force his way into Boston with 4000 men, who were to have embarked at the mouth of Cambridge river. The militia had come forward with great alertness each bringing three days' provision, in expectation of an immediate assault. The men were in high spirits, and impatiently waiting for the appeal.

They were reminded, that it was the 5th of March, and were called upon to avenge the death of their countrymen killed on that day. The many eminences in and near Boston, which overlooked the ground on which it was expected that the contending parties would engage, were crowded with numerous spectators; but General Howe did not intend to attack until the next day. In the night, a most violent storm, and, towards morning, a heavy flood of rain, came on. A carnage was thus providentially prevented, that would probably have equalled, if not exceeded, the fatal 17th of June at Bunker's Hill. In this situation, it was agreed by the British, in council of war, to evacuate the town as soon as possible.

In a few days after, a flag came out of Boston, with a paper signed by four selectmen, informing, "that they had applied to General Robertson, who, on an application to General Howe, was authorised to assure them, that he had no intention of burning the town, unless the troops under his command were molested, during their embarkation, or at their departure, by the armed force without." When this paper was presented to General Washington, he replied, "that as it was an unauthenticated paper, and without an address, and not obligatory on General Howe, he could take no notice of it;" but at the same time intimated his good wishes for the security of the town.

A proclamation was issued by General Howe, ordering all woollen and linen goods to be delivered to Crean Brush, Esq. Shops were opened and stripped of their goods. A licentious plundering took place. Much was carried off, and more was wantonly destroyed. These irregularities were forbidden in orders, and the guilty threatened with death; but, nevertheless, great mischief was committed.

The British, amounting to more than 7000 men evacuated Boston, March 17th, 1776; leaving their barracks standing; a number of pieces of cannon spiked; four large iron sea mortars; and stores to the value of 30,000*l*. They demolished the castle, and knocked off the trunions of the cannon. Various incidents caused a delay of nine days after the evacuation, before they left Nan-tasket road.

This embarkation was attended with many circumstances of distress and embarrassment. On the departure of the royal army from Boston, a great number of the inhabitants, attached to their sovereign, and afraid of public resentment, chose to abandon their country. From the great multitude about to depart, there was no possibility of procuring purchasers for their furniture; neither was there a sufficiency of vessels for its convenient transportation. Mutual jealousy subsisted between the army and navy: each charging the other as the cause of their common distress. The army was full of discontent. Reinforcements, though long promised, had not arrived. Both officers and soldiers, thought themselves neglected. Five months had elapsed since they had received any advice of their destination. Wants and inconveniences increased their ill humour. Their intended voyage to Halifax subjected them to great dangers. The coast at all times hazardous, was imminently so at that tempestuous equinoctial season. They had reason to fear, that they would be blown off to the West Indies, and without a sufficient stock of provisions. They were also going to a barren country. To add to their difficulties, this dangerous voyage, when completed, was directly so much out of their way. Their business lay to the southward; and they were going northward. Under all these difficulties, and with all these gloomy prospect, the fleet steered for Halifax. Contrary to appearances, the voyage thither was both short and prosperous. They remained there some time, waiting for reinforcements and instructions from England.

When the royal fleet and army departed from Boston, several ships were left behind, for the protection of vessels coming from England; but the American privateers were so alert, that they nevertheless made many prizes. Some of the vessels which they captured, were laden with arms and warlike stores. Some transports, with troops on board, were also taken. These had run into the harbour, not knowing that the place was evacuated. The boats employed in the embarkation of the British troops, had scarce completed their business, when General Washington, with his army, marched into Boston. He was received with marks of approbation more flattering than the pomps of a triumph. The inhabitants, released from the severities of a garrison life, and from the various indignities to which they were subjected, hailed him as their deliverer. The evacuation of Boston had been previously determined upon, by the British ministry, from principles of political expediency. Being resolved to carry on the war, for purposes affecting all the colonies, they conceived a central position to be preferable to Boston. Policy of this kind had induced the adoption of the measure; but the American works on Roxbury expedited its execution.

CHAPTER XII.

The Proceedings of Parliament, against the Colonies, 1775-6; Operations in South Carolina, New York, and New Jersey.

THE operations, carried on against the united colonies, in the year 1775, were adapted to cases of criminal combination, among subjects not in arms. The military arrangements for that year, were therefore made on the idea of a trifling addition to a peace establishment. It was either not known, that a majority of the Americans had determined to resist the power of Great Britain, rather than submit to the coercive laws, or it was not believed that they had spirit sufficient to act in conformity to that determination. The propensity in human nature, to believe that to be true, which is wished to be so, had deceived the royal servants in America, and the British ministry in England, so far as to induce their general belief, that a determined spirit on the part of government, and a few thousand troops to support that determination, would easily compose the troubles

in America. Their military operations, in the year 1775, were therefore calculated on the small scale of strengthening the civil power, and not on the large one of resisting an organized army. Though it had been declared by parliament in February, 1775, that a rebellion existed in Massachusetts, yet it was not believed that the colonists would dare to abet their opposition by an armed force.

The resistance made by the militia at Lexington, the consequent military arrangements adopted, first by Massachusetts, and afterwards by Congress, together with the defence of Bunker's hill, all conspired to prove that the Americans were far from being contemptible adversaries. The nation, finding itself, by a fatal progression of the unhappy dispute, involved in a civil war, was roused to recollection. Though several corporate bodies, and sundry distinguished individuals in Great Britain were opposed to coercive measures, yet there was a majority for proceeding. The pride of the nation was interested in humbling the colonists, who had dared to resist the power which had lately triumphed over the combined force of France and Spain. The prospect of freeing their own estates from a part of the heavy taxes charged thereon, induced numbers of the landed gentlemen in Great Britain to support the same measures. They conceived the coercion of the colonies to be the most direct mode of securing their contribution towards sinking the national debt. Influenced by these opinions, they not only justified the adoption of rigorous measures, but cheerfully consented to present additional taxes, with the same spirit which induces litigants in private life, to advance money for forwarding a lawsuit, from the termination of which great profits are expected.

Lord North, the prime minister of England, finding himself supported by so many powerful interests, was encouraged to proceed. He had already subdued a powerful party in the city of London, and triumphed over the East India company. The submission of the colonies was only wanting to complete the glory of his administration. Previous success emboldened him to attempt the arduous business. He flattered himself, that the accomplishment of it would not only restore peace to the empire, but give a brilliancy to his name, far exceeding that of any of his predecessors.

Such was the temper of a great part of the nation, and such the ambitious views of its prime minister; when the parliament was convened, on the 21st of October, 1775. In the speech from the throne, great complaints were made of the leaders in the colonies, who were said, by their misrepresentations, to have infused into the minds of the deluded multitude, opinions repugnant to their constitutional subordination; and afterwards to have proceeded to the commencement of hostilities, and the usurpation of the whole powers of government. His majesty also charged his subjects in America, with "meaning only to amuse, by vague expressions of attachment to the parent state, while they were preparing for a general revolt." And he farther asserted, "that the rebellious war now levied by them was become more general, and manifestly carried on for the purpose of establishing an independent empire; and that it had become the part of wisdom, and, in its effects, of clemency, to put a speedy end to these disorders, by the most decisive exertions."

Information was also given, that "the most friendly offers of foreign assistance had been received; and that his majesty's electoral troops were sent to the garrison of Gibraltar, and Port Mahon, in order that a large number of the established forces of the kingdom might be applied to the maintenance of its authority." The severity of these assertions was mitigated by the declaration, "that when the unhappy and deluded multitude, against whom this force should be directed, would become sensible of their error, his majesty would be ready to receive the misled with tenderness and mercy;" and "that to prevent inconveniences, he should give authority to certain persons on the spot, to grant general or particular pardons and indemnities to such as should be disposed to return

to their allegiance." The sentiments expressed in this speech, and the heavy charges therein laid against the colonists, were re-echoed in addresses to the king from both houses of parliament, but not without a spirited protest in the house of lords. In this, nineteen dissenting members asserted the American war to be "unjust and impolitic in its principles, and fatal in its consequences." They also declared, that they could not consent to an address, "which might deceive his majesty and the public into a belief of the confidence of their house in the present ministers, who had disgraced parliament; deceived the nation; lost the colonies; and involved them in a civil war against their clearest interests, and, upon the most unjustifiable grounds, wantonly spilling the blood of thousands of their fellow subjects."

The sanction of parliament being obtained for a vigorous prosecution of the American war, estimates for the public service were agreed to, on the idea of operating against the colonies, as an hostile armed foreign power. To this end, it was voted to employ 28,000 seamen, and 55,000 land forces; and authority was given to engage foreign mercenaries. No ministry had, in any preceding war, exerted themselves more to prosecute military operations against alien enemies, than the present, to make the ensuing campaign decisive of the dispute, between the mother country and the colonies. One legislative act was still wanting, to give full efficacy to the intended prosecution of hostilities. This was brought into parliament, in a bill interdicting all trade and intercourse with the thirteen united colonies, Nov. 20th, 1775. By it, all property of Americans, whether of ships or goods on the high seas, or in harbour, was declared "to be forfeited to the captors, being the officers and crews of his majesty's ships of war." It farther enacted, "that the masters, crews and other persons found on board captured American vessels, should be entered on board his majesty's vessels of war, and there considered to be in his majesty's service, to all intents and purposes, as if they had entered of their own accord." This bill also authorised the crown to appoint commissioners, who, over and above granting pardons to individuals, were empowered to "inquire into general and particular grievances, and to determine whether any colony, or part of a colony, had returned to that state of obedience, which might entitle it to be received within the king's peace and protection." In that case, upon a declaration from the commissioners, "the restrictions of the proposed law were to cease."

It was said in favour of this bill, "that as the Americans were already in a state of war, it became necessary that hostilities should be carried on against them, as was usual against alien enemies; that the more vigorously and extensively military operations were prosecuted, the sooner would peace and order be restored; that as the commissioners went out with the sword in one hand, and terms of conciliation in the other, it was in the power of the colonists to prevent the infliction of any real or apparent severities, in the proposed statute."

In opposition, it was said, "that treating the Americans as a foreign nation, was chalking out the way for their independence." One member observed, that as the indiscriminate rapine of property authorised by the bill, would oblige the colonists to coalesce as one man, its title ought to be: "A bill for carrying more effectually into execution the resolves of Congress." The clause, for vesting the property of the seizures in the captors, was reprobated as tending to extinguish in the breasts of seamen the principles of patriotism: of national pride and glory; and to substitute in their room, habits of cruelty, of piracy and robbery. But of all parts of this bill, none was so severely condemned as that clause, by which persons, taken on board the American vessels, were indiscriminately compelled to serve as common sailors in British ships of war. This was said to be "a refinement of tyranny worse than death." It was also said, "that no man could be despoiled of his goods as a foreign enemy, and at the same time

obliged to serve as a citizen; and that compelling captives to bear arms, against their families, kindred, friends and country, and, after being plundered themselves, to become accomplices in plundering their brethren, was unexampled, except among pirates, the outlaws and enemies of human society.

To all these high charges the ministry replied, "that the measure was an act of grace and favour; for," said they, "the crews of American vessels, instead of being put to death, the legal punishment of their demerits, as traitors and rebels, are by this law to be rated on the king's books, and treated as if they were on the same footing with a great body of his most useful and faithful subjects." It was also said, "that their pay and emoluments, in the service of their lawful sovereign, would be a compensation for all scruples that might arise from the supposed violation of their principles."

In the progress of the debates on this bill, lord Mansfield declared, "that the questions of original right and wrong were no longer to be considered; that they were engaged in a war, and must use their utmost efforts to obtain the ends proposed by it; that they must either fight or be pursued; and that the justice of the cause must give way to the present situation." Perhaps no speech, in or out of parliament, operated more extensively on the irritated minds of the colonists than this one.

The great abilities and profound legal knowledge of lord Mansfield, were both known and admired in America. That this illustrious oracle of law should declare from the seat of legislation, "that the justice of the cause was no longer to be regarded," excited the astonishment, and cemented the union of the colonists. A number of lords, as usual, entered a spirited protest against the bill; but it was carried by a great majority in both houses of parliament, and, Dec. 21, 1775, received the royal assent.

This law arrived in the colonies in March, 1776. The effects resulting from it were such as had been predicted by its opposers. It not only united the colonies in resisting Great Britain, but produced a favourable opinion of independence in the minds of thousands, who previously reprobated that measure. It was considered from New Hampshire to Georgia, as a legal discharge from allegiance to their native sovereign. What was wanting to produce a decided majority of the party for breaking off all connexion with Great Britain, was speedily obtained from the irritation excited, by the hiring of foreign troops to fight against the colonists. This measure was nearly coincident with the ratification of the prohibitory law just mentioned; and intelligence of both arrived in the colonies about the same time.

The treaties, which had been lately concluded with the landgrave of Hesse Cassel, the duke of Brunswick, and the hereditary prince of Hesse Cassel, for hiring their troops to the king of Great Britain, to be employed in the American service, being laid before the house of commons, a motion was made thereon for referring them to the committee of supply. This occasioned a very interesting debate, on the propriety of employing foreign troops against the Americans. The measure was supported on the necessity of prosecuting the war, and the impracticability of raising a sufficient number of domestic levies. It was also urged, "that foreign troops, inspired with the military maxims, and ideas of implicit submission, would be less apt to be biased by that false lenity, which native soldiers might indulge, at the expense of national interest." It was asked: "are we to sit still and suffer an unprovoked rebellion to terminate in the formation of an independent hostile empire?" "Are we to suffer our colonies, the object of great national expense, and of two bloody wars, to be lost for ever to us; and given away to strangers, from a scruple of employing foreign troops to preserve our just rights over colonies for which we have paid so dear a purchase? As the Americans, by refusing the obedience and taxes of subjects, deny themselves to be a part of the British empire, and make themselves foreigners,

they cannot complain that foreigners are employed against them."

On the other side, the measure was severely condemned. The necessity of the war was denied, and the nation was represented as disgraced by applying to the petty princes of Germany, for succour against her own rebellious subjects. The tendency of the example, to induce the Americans to form alliances with foreign powers, was strongly urged. It was said, "hitherto the colonists have ventured to commit themselves singly in this arduous contest, without having recourse to foreign aid; but it is not to be doubted, that in future they will think themselves fully justified, both by our example, and the laws of self-preservation, to engage foreigners to assist them in opposing those mercenaries, whom we are about to transport for their destruction. Nor is it doubtful, that in case of their application, European powers of a rank far superior to that of those petty princes to whom we have so abjectly sued for aid, will consider themselves to be equally entitled to interfere in the quarrel between us and our colonies."

The supposition of the Americans, receiving aid from France or Spain, was, on this and several other occasions, ridiculed, on the idea that these powers would not dare to set to their own colonies the dangerous example of encouraging those of Great Britain, in opposing their sovereign. It was also supposed, that they would be influenced by considerations of future danger to their American possessions, from the establishment of an independent empire in their vicinity.

In this session of parliament, between the 26th of October, 1775, and the 23d of May 1776, the ultimate plan for reducing the colonies was completely fixed. The Americans were declared out of the royal protection; and 16,000 foreign mercenaries employed by national authority, to effect their subjugation. These measures induced Congress, in the following summer, to declare themselves independent, and to seek for foreign aid: events which shall be hereafter more fully explained.

Parliamentary sanction, for carrying on the war against the colonists, as against alien enemies, being obtained, it became necessary to fix on a commander of the royal forces to be employed on this occasion. This, as a matter of right, was, in the first instance, offered to General Oglethorpe, the founder of Georgia; as being the first on the list of general officers. To the surprise of the minister, that respectable veteran readily accepted the command, on condition of his being properly supported. A numerous, well-appointed army, and a powerful fleet were promised him; to which he replied: "I will undertake the business without a man, or a ship of war, provided you will authorise me to assure the colonists on my arrival among them, that you will do them justice." He added farther: "I know the people of America well, and am satisfied, that his majesty has not in any part of his dominions, more obedient, or more loyal subjects. You may secure their obedience by doing them justice: but you will never subdue them by force of arms."* These opinions, so favourable to the Americans, proved General Oglethorpe to be an improper person for the purpose intended by the British ministry. He was therefore passed over, and the command given to Sir William Howe.

It was resolved to open the campaign, with such a powerful force, as "would look down all opposition, and effectuate submission without bloodshed;" and to direct its operations to the accomplishment of three objects. The first was the relief of Quebec, and the recovery of Canada; which also included a subsequent invasion of the north-western frontiers of the adjacent provinces. The second was, a strong impression on some of the southern colonies. The third and principal, was to take possession of New York, with a force sufficiently

powerful to keep possession of Hudson's river, and form a line of communication with the royal army in Canada, or to overrun the adjacent country.

The partial success of the first part of this plan, has been, in the preceding chapter, explained. The execution of the second part was committed to General Clinton, and sir Peter Parker. The former, with a small force, having called at New York, and also visited in Virginia lord Dunmore, the late royal governor of that colony, and finding that nothing could be done at either place, proceeded to Cape Fear river. At that place, he issued a proclamation from on board the Pallas transport, offering free pardon to all such as should lay down their arms, excepting Cornelius Harnett, and Robert Howe: but the recent defeat of the regulators and Highlanders, restrained even their friends from paying any attention to this act of grace.

At Cape Fear, a junction was formed between sir Henry Clinton and sir Peter Parker; the latter of whom had sailed with his squadron directly from Europe. They concluded to attempt the reduction of Charleston, as being, of all places within the line of their instructions, the objects at which they could strike, with the greatest prospect of advantage. They had 2,800 land forces, which, they hoped, with the co-operation of their shipping, would be fully sufficient.

For some months past, every exertion had been made to put the colony of South Carolina, and especially its capital, Charleston, in a respectable posture of defence. In subserviency to this view, works had been erected on Sullivan's Island, which is situated so near the channel leading up to the town, as to be a convenient post for annoying vessels approaching it.

On the 28th of June, 1775, sir Peter Parker attacked the fort on that island with two fifty gun ships, the Bristol and Experiment; four frigates, the Active, Acteon, Solebay, and Syren, each of 28 guns; the Sphinx of 20 guns, the Friendship armed vessel of 22 guns; Ranger sloop and Thunderbomb, each of 8 guns. On the fort were mounted 26 cannon, 26, 18 and 9 pounders. The attack commenced between ten and eleven in the forenoon, and was continued for upwards of ten hours. The garrison, consisting of 374 regulars and a few militia under the command of Colonel Moultrie, made a most gallant defence. They fired deliberately; for the most part took aim, and seldom missed their object. The ships were torn almost to pieces; and the killed and wounded on board exceeded 200 men. The loss of the garrison was only ten men killed, and 22 wounded. The fort, being built of palmetto, was little damaged. The shot which struck it were ineffectually buried in its soft wood.

General Clinton, had, some time before the engagement, landed with a number of troops on Long Island: and it was expected that he would have co-operated with Sir Peter Parker, by crossing over the narrow passage, which divides the two islands, and attacking the fort in its unfinished rear; but the extreme danger, to which he must unavoidably have exposed his men, induced him to decline the perilous attempt.

Colonel Thompson, with 7 or 800 men, was stationed at the east end of Sullivan's island, to oppose their crossing. No serious attempt was made to land, either from the fleet, or the detachment commanded by sir Henry Clinton. The firing ceased in the evening, and the ships slipped their cables. Before morning, they had retired about two miles from the island. Within a few days more, the troops re-embarked, and the whole sailed for New York. The thanks of Congress were given to General Lee, who had been sent on by Congress to take the command in Carolina; and also to Colonels Moultrie and Thompson, for their good conduct on this memorable day. In compliment to the commanding officer, the fort was from this time called Fort Moultrie.

During this engagement, the inhabitants stood with arms in their hands, at their respective posts, prepared to receive the enemy wherever they might

land; impressed with high ideas of British prowess and bravery, they were apprehensive that the fort would be either silenced or passed, and that they should be called to immediate action. They were cantoned in the various landing places near Charleston, and their resolution was fixed to meet the invaders at the water's edge, and dispute every inch of ground, trusting the event to heaven.

By the repulse of this armament, the southern states obtained a respite from the calamities of war, for two years and a half. The defeat the British met with at Charleston, seemed in some measure to counterbalance the unfavourable impression, made by their subsequent successes, to the northward. Throughout the whole summer, and till the close of the year, Congress had little else than the victory on Sullivan's island, to console them under the various evacuations, retreats, and defeats, to which, as shall hereafter be related, their armies were obliged to submit, in every other part of the union. The event of the expedition contributed greatly to establish the cause, which it was intended to overset. In opposition to the bold assertions of some, and the desponding fears of others, experience proved that America might effectually resist a British fleet and army. Those who, from interested motives, abetted the royal government, ashamed of their opposition to the struggles of an infant people for their dearest rights, retired into obscurity.

The effects of this victory, in animating the Americans, were much greater than could be warranted by the circumstances of the action. As it was the first attack made by the British navy, its unsuccessful issue inspired a confidence, which a more exact knowledge of military calculations would have corrected. The circumstance of its happening in the early part of the war, and in one of the weaker provinces, were happily instrumental in dispelling the gloom which overshadowed the minds of many of the colonists, on hearing of the powerful fleets and numerous armies which were coming against them.

The command of the force, which was designed to operate against New York in this campaign, was given to admiral lord Howe, and his brother sir William, officers who, as well from their personal characters, as the known bravery of their family, stood high in the confidence of the British nation. To this service, was allotted a very powerful army, consisting of about 30,000 men. This force was far superior to any thing that America had hitherto seen. The troops were amply provided with artillery, military stores, and warlike materials of every kind; and were supported by a numerous fleet. The admiral and general, in addition to their military powers, were appointed commissioners for restoring peace to the colonies.

General Howe, having in vain waited two months at Halifax, for his brother, and the expected reinforcements from England, impatient of farther delays, sailed from that harbour, with the force which he had previously commanded in Boston, and directing his course towards New York, arrived in the latter end of June, off Sandy Hook. Admiral lord Howe, with part of the reinforcement from England, arrived at Halifax, soon after his brother's departure. Without dropping anchor, he followed and joined him near Staten Island. The British general, on his approach, found every part of New York island, and the most exposed parts of Long Island, fortified and well defended by artillery. About fifty British transports anchored near Staten Island, which had not been so much the object of attention. The inhabitants thereof, either from fear, policy, or affection, expressed great joy on the arrival of the royal forces. General Howe were there met by Tryon, late governor of the province, and by several of the loyalists, who had taken refuge with him, in an armed vessel. He was also joined by about sixty persons from New Jersey; and 200 of the inhabitants of Staten Island were embodied, as a royal militia. From these appearances, great hopes were indulged that as soon as the army was in a condition to penetrate into the country, and protect the loyal-

* This anecdote was communicated to the author by Henry Laurens, Esq. who received it from general Oglethorpe.

ists, such numbers would flock to their standard, as would facilitate the attainment of the object of the campaign.

On the fourth day after the British transports appeared off Sandy Hook, Congress, though fully informed of the numbers and appointments of the force about to be employed against the colonies, ratified their famous declaration of independence. This was publicly read to the American army, and received by them with unfeigned acclamations of joy. Though it was well known that Great Britain had employed a force of 55,000 men, to war upon the new formed states, and that the continental army was not nearly equal to half that number, and only engaged for a few months, and that Congress was without any assurance of foreign aid; yet both the American officers and privates gave every evidence of their hearty approbation of the decree, which severed the colonies from Great Britain, and submitted to the decision of the sword, whether they should be free states or conquered provinces. "Now," said they, "we know the ground on which we stand. Now we are a nation. No more shall the opprobrious term of rebel, with any appearance of justice, be applied to us. Should the fortune of war throw us into the hands of our enemies, we may expect the treatment of prisoners, and not the punishment of rebels. The prize for which we contend is of such magnitude, that we may freely risk our lives to obtain it."

It had early occurred to General Washington, that the possession of New York would be with the British a favourite object. Its central situation, and contiguity to the ocean, enabled them to carry, with facility, the war to any part of the sea coast. The possession of it was rendered still more valuable, by the ease with which it could be maintained. Surrounded on all sides by water, it was defensible by a small number of British ships, against adversaries, whose whole navy consisted only of a few frigates. Hudson's river, being navigable for ships of the largest size to a great distance, afforded an opportunity of severing the eastern from the more southern states, and of preventing almost any communication between them.

From these well-known advantages, it was presumed by the Americans, that the British would make great exertions to effect the reduction of New York. General Lee, while the British were yet in possession of the capital of Massachusetts, had been detached from Cambridge, to put Long Island and New York into a posture of defence. As the departure of the British from Boston became more certain, the probability of their instantly going to New York increased the necessity of collecting a force for its safety. It had been therefore agreed in a council of war, that five regiments, together with a rifle battalion, should march without delay to New York; and that the states of New York and New Jersey should be requested to furnish, the former two thousand, and the latter one thousand men, for its immediate defence. General Washington soon followed, and early in April fixed his head quarters in that city. A new distribution of the American army took place. Part was left in Massachusetts. Between two and three thousand were ordered to Canada; but the greater part rendezvoused at New York.

Experience had taught the Americans the difficulty of attacking an army, after it had effected a lodgment. They therefore made strenuous exertions to prevent the British from enjoying the advantages in New York, which had resulted from their having been permitted to land and fortify themselves in Boston. The sudden commencement of hostilities in Massachusetts, together with the previous undisturbed landing of the royal army, allowed no time for deliberating on a system of war. A change of circumstances indicated the propriety of fixing on a plan, for conducting the defence of the new formed states. On this occasion, General Washington, after much thought, determined on a war of posts. This mode of conducting military operations gave confidence to the Americans, and it both retarded and alarmed their adversaries. The soldiers in the American army

were new levies, and had not yet learned to stand uncovered before the instruments of death. Habituating them to the sound of fire arms, while they were sheltered from danger, was one step towards inspiring them with a portion of mechanical courage. The British remembered Bunker's hill, and had no small reverence for even slight fortifications, when defended by freemen. With views of this kind, works were erected in and about New York, on Long Island, and the heights of Harlem. These, besides batteries, were field redoubts, formed of earth, with a parapet and ditch. The former were sometimes fringed, and the latter palisaded; but they were in no instance formed to sustain a siege. Slight as they were, the campaign was nearly wasted away, before they were so far reduced, as to permit the royal army to penetrate into the country.

The war having taken a more important turn than in the preceding year had been foreseen, Congress at the opening of the campaign, found themselves destitute of a force sufficient for their defence. They, therefore, in June, determined on a plan to reinforce their continental army, by bringing into the field, a new species of troops, that would be more permanent than the common militia, and yet more easily raised than regulars. With this view they instituted a flying camp, to consist of an intermediate corps, between regular soldiers and militia. Ten thousand men were called for from the states of Pennsylvania, Maryland, and Delaware, to be in constant service to the first day of the ensuing December. Congress at the same time called for 13,800 of the common militia from Massachusetts, Connecticut, New-York, and New Jersey. The men, for forming the flying camp, were generally procured; but there were great deficiencies of the militia; and many of those who obeyed their country's call, so far as to turn out, manifested a reluctance to submit to the necessary discipline.

The difficulty of providing the troops with arms, while before Boston, was exceeded by the superior difficulty of supplying them in their new position. By the returns of the garrison at fort Montgomery, in the Highlands, in April, it appeared that there were 208 privates, and only 41 muskets fit for use. In the garrison at fort Constitution, there were 136 men, and only 68 muskets fit for use. Flints were also much wanted. Lead would have been equally deficient, had not a supply for the musquetry been obtained by stripping dwelling houses.

The uncertainty of the place where the British would commence their operations, added much to the embarrassment of General Washington. Not only each colony, but each sea-port town, supposed itself to be the object of the British, and was ardent in its supplications to the commander in chief, for his peculiar attention. The people of Massachusetts were strongly impressed with an idea, that the evacuation of Boston was only a feint, and that the British army would soon return. They were for that reason very desirous, that the continental troops should not be withdrawn from their state. The inhabitants of Rhode Island urged, in a long petition, that their maritime situation exposed them to uncommon danger, while their great exertions in fitting out armed vessels, had deprived them of many of their citizens. They therefore prayed for a body of continental soldiers, to be stationed for their constant and peculiar defence. So various were the applications for troops, so numerous the calls for arms, that a decided conduct became necessary to prevent the feeble American force, and the deficient stock of public arms, from being divided and subdivided, so as to be unequal to the proper defence of any one place.

In this crisis of particular danger, the people of New York acted with spirit. Though they knew they were to receive the first impressions of the British army, yet their convention resolved, "that all persons, residing within the state of New York, and claiming protection from its laws, owed it allegiance; and that any person owing it allegiance, and levying war against the state, or being an ad-

herent to the king of Great Britain, should be deemed guilty of treason, and suffer death." They also resolved, "that one fourth of the militia of West Chester, Dutchess, and Orange counties, should be forthwith drawn out for the defence of the liberties, property, wives and children of the good people of the state; to be continued in service to the last day of December;" and, "that as the inhabitants of King's county had determined not to oppose the enemy, a committee should be appointed to inquire into the authenticity of these reports, and to disarm and secure the disaffected; to remove or destroy the stock of grain, and, if necessary, to lay the whole country waste."

The two royal commissioners, Admiral and General Howe, thought proper, before they commenced their military operations, to try what might be done in their civil capacity, towards effecting a re-union between Great Britain and the colonies. It was one of the first acts of lord Howe, to send on shore, a circular letter, to several of the royal governors in America, informing them of the late act of parliament, "for restoring peace to the colonies, and granting pardon to such as should deserve mercy;" and desiring them to publish a declaration which accompanied the same. In this, he informed the colonists of the power with which his brother and he were intrusted; of granting general or particular pardons to all those, who, though they had deviated from their allegiance, were willing to return to their duty;" and of declaring, "any colony, province, county or town, port, district or place, to be in the peace of his majesty."* Congress, impressed with a belief, that

* With these circular letters to the governors, lord Howe sent a private one to Dr. Franklin: to which a most interesting answer was returned, worthy of everlasting remembrance. The letter and answer were as follow:

Lord Howe to Dr. Franklin.

"I cannot, my worthy friend, permit the letters and parcels which I have sent, to be landed, without adding a word upon the subject of the injurious extremities in which our unhappy disputes have engaged us.

"You will learn the nature of my mission from the official despatches, which I have recommended to be forwarded by the same conveyance. Retaining all the earnestness I ever expressed, to see our differences accommodated, I shall conceive, if I meet with the disposition in the colonies, which I was once taught to expect, the most flattering hopes of proving servicable in the objects of the king's paternal solicitude, by promoting the establishment of lasting peace and union with the colonies: but, if the deep-rooted prejudices of America, and the necessity of preventing her trade from passing into foreign channels, must keep us still a divided people, I shall, from every private as well as public motive, most heartily lament that this is not the moment wherein those great objects of my ambition are to be attained; and that I am to be longer deprived of an opportunity to assure you, personally, of the regard with which I am," &c.

Dr. Franklin answered—

"I received safe the letters your lordship so kindly forwarded to me, and beg you to accept my thanks.

"The official despatches, to which you refer me, contain nothing more than what we had seen in the act of parliament; 'offers of pardon upon submission;' which I am sorry to find, as it must give your lordship pain, to be sent so far on so hopeless a business.

"Directing pardons to be offered to the colonies, who are the very parties injured, expresses indeed that opinion of our ignorance, baseness, and insensibility, which your uninformed and proud nation has long been pleased to entertain of us; but it can have no other effect than that of increasing our resentments. It is impossible we should think of submission to a government that has, with the most wanton barbarity and cruelty, burned our defenceless towns in the midst of winter, excited the savages to massacre our peaceful farmers, and our slaves to murder their masters; and is even now bringing foreign mercenaries to deluge our settlements with blood. These atrocious injuries have extinguished every spark of affection for that parent country, that we once held so dear; but were it possible for us to forget and forgive them, it is not possible for you, I mean the British nation, to forgive the people you have so heavily injured. You can never confide again in those, as fellow subjects, and permit them to enjoy equal freedom; to whom you know you have given such just causes of lasting enmity; and this must impel you, were we again under your government, to endeavor to break our spirit, by the severest tyranny, and obstructing, by every means in your power, our growing strength and prosperity.

the proposals of the commissioners, instead of uniting the people, would have a contrary effect, ordered them to be speedily published in the several American newspapers. Had a redress of grievances been at this late hour offered, though the honour of the states was involved in supporting their late declaration of independence, yet the love of peace, and the bias of great numbers to their parent state, would in all probability, have made a powerful party for rescinding the act of separation, and for re-uniting with Great Britain; but, when it appeared that the power of the royal commissioners was little more than to grant pardons, Congress appealed to the good sense of the people, for the necessity of adhering to the act of independence. The resolution for publishing the circular letter, and the declaration of the royal commissioners, assigned as a reason thereof, "that the good people of the United States may be informed of what nature are the commissioners, and what the terms, with expectation of which the insidious court of Great Britain had endeavoured to amuse and disarm them; and that the few who still

"Your lordship mentions the 'king's paternal solicitude for promoting the establishment of lasting peace and union with the colonists.' If, by peace, be here meant a peace, to be entered into by distinct states, now at war, and his majesty has given your lordship powers to treat with us, of such a peace, I may venture to say, though without authority, that I think a treaty for that purpose not quite impracticable before we enter into foreign alliances; but I am persuaded you have no such powers. Your nation, though by punishing those American governors, who have fomented the discord; rebuilding our burnt towns; and repairing, as far as possible, the mischiefs done us, she might recover a great share of our regard, and the greatest share of our growing commerce, with all the advantages of that additional strength to be derived from a friendship with us; yet, I know too well her abounding pride and deficient wisdom, to believe she will ever take such salutary measures. Her fondness for conquest, as a warlike nation; her lust of dominion, as an ambitious one; and her thirst for a gainful monopoly, as a commercial one, none of them legitimate causes of war, will join to hide from her eyes every view of her true interest, and continually goad her on, in these ruinous distant expeditions, so destructive both of lives and of treasure, that they must prove as pernicious to her in the end, as the cruelties formerly were to most of the nations of Europe.

"I have not the vanity, my lord, to think of intimidating by thus predicting the effects of this war; for I know that it will in England have the fate of all my former predictions, not to be believed till the event shall verify it.

"Long did I endeavour, with unfeigned and unwearied zeal, to preserve from breaking, that fine and noble porcelain vase, the British empire; for, I knew, that being once broken, the separate parts could not retain even their share of the strength and value that existed in the whole, and that a perfect reunion of those parts could scarce ever be hoped for. Your lordship may possibly remember the tears of joy that wetted my cheeks, when at your good sister's, in London, you once gave me expectation that a reconciliation might take place. I had the misfortune to find these expectations disappointed, and to be treated as the cause of the mischief I was labouring to prevent. My consolation, under that groundless and malevolent treatment, was, that I retained the friendship of many wise and good men, in that country, and among the rest some share in the regard of lord Howe.

"The well-founded esteem, and permit me to say, affection, which I shall always have for your lordship, make it painful to me to see you engaged in conducting a war, the great ground of which, as described in your letter, is, 'the necessity of preventing the American trade from passing into foreign channels. To me, it seems that neither the obtaining or retaining any trade, how valuable soever, is an object for which men may justly spill each other's blood; that the true and sure means of extending and securing commerce are the goodness and cheapness of commodities; and that the profits of no trade can ever be equal to the expense of compelling it, and holding it by fleets and armies. I consider this war against us, therefore, as both unjust and unwise; and I am persuaded that cool and dispassionate posterity will condemn to infamy those who advised it; and that even success will not save from some degree of dishonour those who have voluntarily engaged to conduct it.

"I know your great motive in coming hither was the hope of being instrumental in a reconciliation: and, I believe, when you find that to be impossible, on any terms given you to propose, you will then relinquish so odious a command, and return to a more honourable private station.

"With the greatest and most sincere respect, I have the honour to be" &c.

remain suspended by a hope, founded either in the justice or moderation of their late king, may now at length be convinced, that the valour alone of their country is to save its liberties."

About the same time, flags were sent ashore by lord Howe, with a letter directed to George Washington, Esq. which he refused to receive, as not being addressed to him with the title due to his rank. In his letter to Congress, on this subject, he wrote as follows: "I would not, on any occasion, sacrifice essentials to punctilio: but, in this instance, I deemed it a duty to my country and appointment, to insist on that respect, which, in any other than a public view, I would willingly have waived." Congress applauded his conduct in a public resolution, and at the same time directed that no letter or message should be received, on any occasion whatever, from the enemy, by the commander in chief, or others the commanders of the American army, but such as were directed to them in the characters they severally sustained.

Some time after, Adjutant General Patterson was sent to New York, by General Howe, with a letter addressed to George Washington, &c. &c. On an interview with the adjutant general, Washington declared that he would decline receiving any letter directed to him as a private person, when it related to his public station. A long conference ensued, in which the adjutant general observed, that "the commissioners were armed with great powers, and would be very happy in effecting an accommodation." He received for answer, "that from what appeared, their powers were only to grant pardon; that they who had committed no fault, wanted no pardon." Soon after this interview, a letter from Howe, respecting prisoners, which was properly addressed to Washington, was received.

While the British, by their manifestoes and declarations, were endeavouring to separate those who preferred a reconciliation with Great Britain, from those who were the friends of independence; Congress, by a similar policy, was attempting to detach the foreigners, who had come with the royal troops, from the service of his Britannic majesty. Before hostilities had commenced, the following resolution was adopted and circulated among those on whom it was intended to operate: "Resolved, that these states will receive all such foreigners who shall leave the armies of his Britannic majesty in America, and shall chuse to become members of any of these states; and they shall be protected in the free exercise of their respective religions, and be invested with the rights, privileges, and immunities of natives, as established by the laws of these states: and moreover, that this congress will provide for every such person, fifty acres of unappropriated lands, in some of these states, to be held by him and his heirs, as absolute property."

The numbers which were prepared to oppose the British, when they should disembark, made them for some time cautious of proceeding to their projected land operations: but the superiority of their navy enabled them to go by water whithersoever they pleased.

A British forty gun ship, with some smaller vessels, sailed up the North river, without receiving any damage of consequence, though fired upon from the batteries of New York, Paulus Hook, Red-Bank, and Governor's Island. An attempt was made, with two fire ships, to destroy the British vessels in the North River: but without effecting any thing more than the burning of a tender. They were also attacked with row galleys, with little effect. After some time, the Phoenix and Rose men of war came down the river, and joined the fleet. Every effort of the Americans, from their batteries on land, as well as their exertions on the water, proved ineffectual. The British ships passed with less loss than was generally expected: but, nevertheless, the damage they received was such as deterred them from frequently repeating the experiment. In two or three instances, they ascended North river, and in one or two

East river; but those which sailed up the former speedily returned; and by their return, a free communication was opened through the upper part of the state.

The American army, in and near New York, amounted to 17225 men. These were mostly new troops, and were divided, in many small and unconnected posts, some of which were fifteen miles removed from others. The British force before New York was increasing, by frequent successive arrival from Halifax, South Carolina, Florida, the West Indies and Europe: but so many unforeseen delays had taken place, that the month of August was far advanced, before they were in a condition to open the campaign.

When all things were ready, the British commanders resolved to make their first attempt on Long Island. This was preferred to New York, as it abounded with those supplies which their forces required.

The British landed without opposition, between two small towns, Utrecht, and Gravesend. The American works protected a small peninsula, having Wallabout bay to the left, and stretching over to Red Hook on the right; the East river being in the rear. General Sullivan, with a strong force was encamped within these works at Brooklyn. From the east side of the narrows, runs a ridge of hills covered with thick wood, about five or six miles in length, which terminates near Jamaica. There were three passes through these hills; one near the narrows, a second on the Flatbush road and a third on the Bedford road: and they are all defensible. The Americans had 800 men on each of these roads; and Colonel Miles was placed with his battalion of riflemen, to guard the road from the south of the hills, to Jamaica, and to watch the motions of the British.

General de Heister, with his Hessians, took post at Flatbush, in the evening, August 26, 1776. In the following night, the greater part of the British army, commanded by General Clinton, marched to gain the road leading round the easterly end of the hills to Jamaica, and to turn the left of the Americans. He arrived about two hours before day, with half a mile of this road. One of his parties fell in with a patrol of American officers, and took them all prisoners, which prevented the early transmission of intelligence. Upon the first appearance of day, General Clinton advanced, and took possession of the heights over which the road passed. General Grant, which the left wing, advanced along the coast by the west road, near the narrows; but this was intended chiefly as a feint.

The guard which was stationed at this road, fled without making any resistance. A few of them were afterwards rallied, and lord Stirling advanced with 1500 men, and took possession of a hill, about two miles from the American camp, and in front of General Grant.

An attack was made very early in the morning, August 27, 1776, by the Hessians from Flatbush, under General de Heister, and by General Grant on the coast, and was well supported for a considerable time on both sides. The Americans, who opposed General de Heister, were first informed of the approach of General Clinton, who had come round on their left. They immediately began to retreat to their camp, but were intercepted by the right wing under General Clinton, who got into the rear of their left, and attacked them with his light infantry and dragoons, while returning to their lines. They were driven back till they were met by the Hessians. They were thus alternately chased and intercepted, between General de Heister and General Clinton. Some of their regiments, nevertheless, found their way to the camp. The Americans under lord Stirling, consisting of Colonel Miles's two battalions, Colonel Atlee's, Colonel Smallwood's, and Colonel Hache's regiments, who were engaged with General Grant, fought with great resolution for about six hours. They were uninformed of their movements made by General Clinton, till some of the troops under his command had traversed the whole extent of the country in their rear. Their retreat thus was

intercepted; but several, notwithstanding, broke through and got into the woods. Many threw themselves into the marsh, some were drowned, and others perished in the mud: a considerable number escaped to their lines.

The king's troops displayed great valour throughout the whole day. The variety of the ground occasioned a succession of small engagements, pursuits and slaughter, which lasted for many hours. British discipline, in every instance, triumphed over the native valour of raw troops, who had never been in action, and whose officers were unacquainted with the stratagems of war.

The loss of the British and Hessians was about 450. The killed, wounded and prisoners of the Americans, including those who were drowned, or perished in the woods or mud, considerably exceeded a thousand. Among the prisoners of the latter were two of their general officers, Sullivan and Lord Sterling; 3 colonels, 4 lieutenant colonels, 3 majors, 18 captains, 43 lieutenants, and 11 ensigns. Smallwood's regiment, the officers of which were of the best families in the state of Maryland, sustained a loss of 259 men. The British after their victory were so impetuous, that it was with difficulty they could be restrained from attacking the American lines.

In the time of, and subsequent to, the engagement, General Washington drew over to Long Island, the greatest part of his army. After he had collected his principal force there, it was his wish and hope, that Sir William Howe would attempt to storm the works on the island. These, though insufficient to stand a regular siege, were strong enough to resist a coup de main. The remembrance of Bunker's-hill, and a desire to spare his men, restrained the British General, from making an assault. On the contrary he made demonstrations of proceeding by siege, and broke ground within three hundred yards to the left, at Putnam's redoubt. Though General Washington wished for an assault, yet being certain that his works would be untenable, when the British batteries should be fully opened, he called a council of war, to consult on the measures proper to be taken. It was then determined, that the objects in view were in no degree proportioned to the dangers, to which, by a continuation on the island, they would be exposed. Conformably to this opinion, dispositions were made for an immediate retreat. This commenced soon after it was dark, from two points, the upper and lower ferries on the East river. Gen. M'Dougal regulated the embarkation at one, and Colonel Knox at the other.

The intention of evacuating the island had been so prudently concealed from the Americans, that they knew not whither they were going, but supposed to attack the enemy. The field artillery, tents, baggage, and about 9000 men, were conveyed to the city of New York, over the East river, more than a mile wide, in less than 13 hours, and without the knowledge of the British, though not 600 yards distant. Providence, in a remarkable manner, favoured the retreat. For some time after the Americans began it, the state of the tide, and a strong northeast wind made it impossible for them to make use of their sail boats: and their whole number of row boats were insufficient for completing the business, in the course of the night: but about eleven o'clock, the wind died away, and soon after sprang up at south-east, and blew fresh, which rendered the sail boats of use, and at the same time made the passage from the Island to the city, direct, easy and expeditious.

Towards morning, an extreme thick fog came up, which hovered over Long Island; and, by concealing the Americans, enabled them to complete their retreat without interruption, though the day had begun to dawn some time before it was finished. By a mistake in the transmission of orders, the American lines were evacuated for about three quarters of an hour before the last embarkation took place: but the British, though so near that their working parties could be distinctly heard, being enveloped in the fog, knew nothing of the matter. The lines were repossessed, and held till six o'clock in the morning.

When every thing except some heavy cannon was removed, Gen. Mifflin, who commanded the rear guard, left the lines and under the cover of the fog got off safe. In about half an hour, the fog cleared away, and the British entered the works which had been just relinquished. Had the wind not shifted, the half of the American army could not have crossed; and even as it was, if the fog had not concealed their rear, it must have been discovered, and could hardly have escaped. General Sullivan, who was taken prisoner on Long Island, was immediately sent on parole, with the following verbal message from Lord Howe to congress: "that though he could not at present treat with them in that character, yet he was very desirous of having a conference with some of the members, whom he would consider as private gentlemen; that he, with his brother, the General, had full power to compromise the dispute between Great Britain and America, upon terms advantageous to both; that he wished a compact might be settled, at a time when no decisive blow was struck, and neither party could say it was compelled to enter into such agreement; that were they disposed to treat, many things which they had not yet asked, might and ought to be granted; and that if upon conference they found any probable ground of accommodation, the authority of congress would be afterwards acknowledged to render the treaty complete."

Three days after this message was received, General Sullivan was requested to inform Lord Howe: "that congress, being the representatives of the free and independent states of America, cannot with propriety send any of their members to confer with his lordship in their private characters; but that ever desirous of establishing peace on reasonable terms, they will send a committee of their body, to know whether he has any authority to treat with persons authorised by congress, for that purpose, on behalf of America, and what that authority is: and to hear such propositions as he shall think fit to make respecting the same." They elected Dr. Franklin, John Adams, and Edward Rutledge, their committee for this purpose.

In a few days they met Lord Howe, on Staten Island, and were received with great politeness. On their return they made a report of their conference, which they summed up by saying: it did not appear to your committee that his lordship's commission contained any other authority than that expressed in the act of parliament; namely, that of granting pardons, with such exceptions as the commissioners shall think proper to make, and of declaring America, or any part of it, to be in the king's peace, on submission. For, as to the power of inquiring into the state of America, which his lordship mentioned to us, and of conferring and consulting with any persons the commissioners might think proper, and representing the result of such conversation to the ministry, who, provided the colonies would subject themselves, after all, might, or might not, at their pleasure, make any alterations in the former instructions to governors, or propose in parliament any amendment of the acts complained of: we apprehend any expectation, from the effect of such a power, would have been too uncertain and precarious, to be relied on by America, had she still continued in her state of dependence." Lord Howe had ended the conference on his part, by expressing his regard for America, and the extreme pain he would suffer in being obliged to distress those whom he so much regarded. Dr. Franklin thanked him for his regards, and assured him that the Americans would show their gratitude, by endeavoring to lessen as much as possible, all pain he might feel on their account, by exerting their utmost abilities, in taking good care of themselves.

The committee in every respect, maintained the dignity of congress. Their conduct and sentiments were such as became their character. The friends to independence rejoiced that nothing resulted from this interview, that might disunite the people. Congress, trusting to the good sense of their countrymen, ordered the whole to be printed for their information. All the states would have then

rejoiced at less beneficial terms than they obtained about seven years after: but Great Britain counted on the certainty of their absolute conquest, or unconditional submission. Her officers, therefore, comforted so little with the feelings of America, that they neither caused demur nor disunion, among the new formed states.

The unsuccessful termination of the action on the 27th led to consequences more seriously alarming to the Americans, than the loss of their men. The army was universally dispirited. The militia ran off by companies. Their example infected the regular regiments. The loose footing on which the militia came to camp, made it hazardous to exercise over them that discipline, without which, any army is a mob. To restrain one part of an army, while another claimed and exercised the right of doing as they pleased, was no less impracticable than absurd.

A council of war recommended to act on the defensive, and not to risk the army for the sake of New York. To retreat, subjected the commander in chief to reflections painful to bear, and yet impolitic to refute. To stand his ground, and, by suffering himself to be surrounded, to hazard the fate of America on one decisive engagement, was contrary to every rational plan of defending the wide-extended states committed to his care. A middle line, between abandoning and defending, was therefore for a short time adopted. The public stores were removed to Dobbs's ferry, about twenty-six miles from New York. Twelve thousand men were ordered to the northern extremity of New York island, and 4,500 to remain for the defence of the city; while the remainder occupied the intermediate space, with orders, either to support the city, or Kingsbridge, as exigencies might require.

Before the British landed, it was impossible to tell what place would be first attacked. This made it necessary to erect works for the defence of a variety of places, as well as of New York. Though every thing was abandoned, when the crisis came that either the city must be relinquished, or the army risked for its defence; yet from the delays occasioned by the redoubts and other works, which had been erected on the idea of making the defence of the states a war of posts, a whole campaign was lost to the British, and saved to the Americans. The year began with hopes that Great Britain would recede from her demands, and therefore every plan of defence was on a temporary system. The declaration of independence, which the violence of Great Britain forced the colonies to adopt in July, though neither foreseen nor intended at the commencement of the year, pointed out the necessity of organizing an army, on new terms, correspondent to the enlarged objects for which they had resolved to contend. Congress accordingly determined to raise 88 battalions, to serve during the war.

Under these circumstances, to wear away the campaign, with as little misfortune as possible, and thereby to gain time for raising a permanent army against the next year, was to the Americans a matter of the last importance. Though the commander in chief abandoned those works, which had engrossed much time and attention, yet the advantage resulting from the delays they occasioned, far overbalanced the expense incurred by their erection.

The same short sighted politicians, who had before censured General Washington, for his cautious conduct, in not storming the British lines at Boston, renewed their clamours against him, for adopting this evacuating and retreating system. Supported by a consciousness of his own integrity, and by a full conviction that those measures were best calculated for securing the independence of America, he, for the good of his country, voluntarily subjected his fame to be overshadowed by a temporary cloud.

General Howe, having prepared every thing for a descent on New York island, began to land his men under cover of ships of war, between Kipp's bay and Turtle bay. A breast work had been erected in the vicinity, and a party stationed in it

to oppose the British, in case of their attempting to land. But on the first appearance of danger, they ran off in confusion. The commander in chief came up and in vain attempted to rally them. Though the British in sight did not exceed sixty, he could not, either by example, intreaty, or authority, prevail on a superior force to stand their ground, and face that inconsiderable number.

On the day after this shameful flight of part of the American army, a skirmish took place between two battalions of light infantry and Highlanders, commanded by Brigadier Leslie, and some detachments from the American army, under the command of Lieutenant Colonel Knowlton, of Connecticut, and Major Leitch, of Virginia. The colonel was killed, and the major badly wounded. Their men behaved with great bravery, and fairly beat their adversaries from the field. Most of these were the same men, who had disgraced themselves the day before, by running away. Struck with a sense of shame for their late misbehaviour, they had offered themselves as volunteers, and requested the commander in chief to give them an opportunity to retrieve their honour. Their good conduct, at this second engagement, proved an antidote to the poison of their example on the preceding day. It demonstrated that the Americans only wanted resolution and good officers to be on a footing with the British; and inspired them with hopes, that a little more experience would enable them to assume not only the name and garb, but the spirit and firmness of soldiers.

The Americans, having evacuated the city of New York, a brigade of the British army marched into it. They had been only a few days in possession, when a dreadful fire broke out and consumed about a thousand houses. Dry weather, and a brisk wind, spread the flames to such an extent, that, had it not been for great exertions of the troops and sailors, the whole city must have shared the same fate. After the Americans had evacuated New York, they retired to the north end of the island on which that city is erected. In about four weeks, General Howe began to execute a plan for cutting off General Washington's communication with the eastern states, and enclosing him so as to compel a general engagement on the island. With this view, the greater part of the royal army passed through Hellgate, entered the sound, and landed on Throg's neck, in Westchester county.

Two days after they made this movement, General Lee arrived from his late successful command to the southward. He found that there was a prevailing disposition among the officers in the American army for remaining on New York island. A council of war was called, in which General Lee gave such convincing reasons for quitting it, that they resolved immediately to withdraw the bulk of the army. He also pressed the expediency of evacuating fort Washington; but in this he was opposed by General Greene, who argued that the possession of that post would divert a large body of the enemy, from joining their main force, and, in conjunction with fort Lee, would be of great use in covering the transportation of provisions and stores up the North river, for the service of the American troops. He added farther, that the garrison could be brought off at any time, by boats from the Jersey side of the river. His opinion prevailed. Though the system of evacuating and retreating was in general adopted, an exception was made in favour of fort Washington, and 3000 men were assigned for its defence.

The royal army, after a halt of six days, at Throg's neck, advanced near to New Rochelle. On their march they sustained a considerable loss by a party of Americans whom General Lee posted behind a wall. After three days, General Howe moved the right and centre of his army, two miles to the northward of New Rochelle; on the road to the White Plains: there he received a large reinforcement.

General Washington, while retreating from New York island, was careful to make a front towards the British, from East Chester, almost to White Plains, in order to secure the march of

those who were behind, and to defend the removal of the sick, the cannon, and stores of his army. In this manner his troops made a line of small detached and entrenched camps, on the several heights and strong grounds from Valentine's hill, on the right, to the vicinity of the White Plains, on the left.

The royal army moved in two columns, and took a position with the Bronx in front; upon which the Americans assembled their main force at White Plains behind intrenchments. A general action was hourly expected, and a considerable one took place, in which several hundreds fell. The Americans were commanded by General M'Dougal, and the British by General Leslie. While they were engaged, the American baggage was moved off in full view of the British army. Soon after this, General Washington changed his front, his left wing stood fast, and his right fell back to some hills. In this position, which was an admirable one in a military point of view, he both desired and expected an action; but General Howe declined it, and drew off his forces towards Dobbs's ferry. The Americans afterwards retired to North Castle.

General Washington, with a part of his army, crossed the North river, and took post in the neighbourhood of fort Lee. A force of about 7500 men, was left at North Castle, under General Lee.

The Americans having retired, Sir William Howe determined to improve the opportunity of their absence, for the reduction of fort Washington. This, the only post the Americans then held on New-York island, was under the command of Colonel Magaw. The royal army made four attacks upon it. The first on the north side, was led on by General Kniphausen. The second on the east by General Matthews, supported by lord Cornwallis. The third was under the direction of Lieutenant Colonel Stirling, and the fourth was commanded by lord Percy. The troops under Kniphausen, when advancing to the fort, had to pass through a thick wood, which was occupied by Colonel Rawling's regiment of riflemen, and suffered very much from their well-directed fire.

During the attack, a body of the British light infantry advanced against a party of the Americans, who were annoying them from behind rocks and trees, and obliged them to disperse. Lord Percy carried an advance work on his side; and Lieutenant Colonel Sterling forced his way up a steep height, and took 170 prisoners. Their outworks being carried, the Americans left their lines, and crowded into the fort. Colonel Rahl, who led the right column of Kniphausen's attack, pushed forward, and lodged his column within a hundred yards of the fort, and was there soon joined by the left column; the garrison surrendered on terms of capitulation, by which the men were to be considered as prisoners of war, and the officers to keep their baggage and side arms. The number of prisoners amounted to 2700. The loss of the British, in killed, wounded, and missing, was about 1200. Shortly after fort Washington had surrendered, lord Cornwallis, with a considerable force, passed over to attack fort Lee, on the opposite Jersey shore.

The garrison was saved by an immediate evacuation, but at the expense of their artillery and stores. General Washington, about this time, retreated to Newark. Having abundant reason, from the posture of affairs, to count on the necessity of a farther retreat, he asked Colonel Reed; "should we retreat to the back parts of Pennsylvania, will the Pennsylvanians support us?" The Colonel replied, if the lower counties be subdued, and give up, the back counties will do the same. The General replied: "we must retire to Augusta county in Virginia. Numbers will be obliged to repair to us for safety. We must try what we can do in carrying on a predatory war; and, if overpowered, we must cross the Alleghany mountain."

While a tide of success was flowing in upon General Howe, he and his brother, as royal commissioners, issued a proclamation, in which they

commanded all persons assembled in arms against his majesty's government to disband; and all general or provincial congresses to desist from their treasonable actings, and to relinquish their usurped power." They also declared, "that every person who within sixty days should appear before the governor, lieutenant governor, or commander in chief of any of his majesty's colonies, or before the general or commanding officer of his majesty's forces, and claim the benefit of the proclamation; and testify his obedience to the laws, by subscribing a certain declaration, should obtain a full and free pardon of all treasons by him committed, and of all forfeitures and penalties for the same."

The term of time for which the American soldiers had engaged to serve, ended in November or December; with no other exception, than that of two companies of artillery, belonging to the state of New York, which were engaged for the war. The army had been organized at the close of the preceding year, on the fallacious idea, that an accommodation would take place within a twelve-month. Even the flying camp, though instituted after the prospect of that event had vanished, was enlisted only to the first of December, from a presumption that the campaign would terminate by that time.

When it was expected that the conquerors would retire to winter quarters, they commenced a new plan of operations more alarming than all their previous conquests. The reduction of fort Washington, the evacuation of fort Lee, and the diminution of the American army, by the departure of those whose term of service had expired, encouraged the British, notwithstanding the severity of the winter, and the badness of the roads, to pursue the remaining inconsiderable continental force, with the prospect of annihilating it. By this turn of affairs, the interior country was surprised into confusion, and found an enemy within its bowels, without a sufficient army to oppose it. To retreat was the only expedient left. This having commenced, lord Cornwallis followed, and was close in the rear of General Washington, as he retreated successively to Newark, to Brunswick, to Princeton, to Trenton, and to the Pennsylvania side of the Delaware. The pursuit was urged with so much rapidity, that the rear of the one army, pulling down bridges, was often within sight, and shot of the van of the other, building them up.

This retreat into, and through New Jersey, was attended with almost every circumstance that could occasion embarrassment and depression of spirits. It commenced in a few days after the Americans had lost 2700 men in fort Washington. In fourteen days after that event, the whole flying camp claimed their discharge. This was followed by the almost daily departure of others, whose engagements terminated nearly about the same time. A further disappointment happened to General Washington. Gates had been ordered by congress to send two regiments from Ticonderoga, to reinforce his army. Two Jersey regiments were put under the command of General St. Clair, and forwarded in obedience to this order; but the period for which they were enlisted was expired, and the moment they entered their own state, they went off to a man. A few officers, without a single private, of these two regiments, were all that General St. Clair brought to the aid of the retreating American army. The few, who remained with General Washington, were in a most forlorn condition. They consisted mostly of the troops which had garrisoned fort Lee, and had been compelled to abandon that post so suddenly, that they commenced their retreat without tents or blankets, and without any utensils to dress their provisions. In this situation they performed a march of about ninety miles, and had the address to prolong it to the space of nineteen days.

As the retreating Americans, marched through the country, scarcely one of the inhabitants joined them; while numbers were daily flocking to the royal army, to make their peace, and obtain protection. They saw on the one side a numerous,

well-appointed, and full-clad army, dazzling their eyes with the elegance of uniformity; on the other, a few poor fellows, who, from their shabby clothing, were called ragnuffins, fleeing for their safety. Not only the common people changed sides in this gloomy state of public affairs; but some of the leading men in New Jersey and Pennsylvania adopted the same expedient. Among these Mr. Galloway, and the family of the Allens in Philadelphia, were most distinguished. The former, and one of the latter, had been members of Congress. In this hour of adversity, they came within the British lines, and surrendered themselves to the conquerors, alleging in justification of their conduct, that though they had joined with their countrymen, in seeking for a redress of grievances in a constitutional way, they had never approved of the measures lately adopted, and were in particular, at all times averse to independence.

On the day General Washington retreated over the Delaware, the British took possession of Rhode Island, without any loss, and at the same time blocked up Commodore Hopkins' squadron, and a number of privateers at Providence.

In this period, when the American army was relinquishing its General; the people giving up the cause; some of their leaders going over to the enemy; and the British commanders succeeding in every enterprise, General Lee was taken prisoner at Baskenbridge, by Lieutenant Colonel Harcourt. This caused a depression of spirits among the Americans, far exceeding any real injury done to their essential interests. He had been repeatedly ordered to come forward with his division, and join General Washington; but these orders were not obeyed. This circumstance, and the dangerous crisis of public affairs, together with his being alone, at some distance from the troops which he commanded, begat suspicions that he chose to fall into the hands of the British. Though these apprehensions were without foundation, they produced the same extensive mischief, as if they had been realities. The Americans had reposed extravagant confidence in his military talents, and experience of regular European war. Merely to have lost such an idol of the states, at any time, would have been distressful; but losing him under circumstances, which favoured an opinion that, despairing of the American cause, he chose to be taken prisoner, was to many an extinguishment of every hope.

By the advance of the British into New Jersey, the neighbourhood of Philadelphia became the seat of war. This prevented that undisturbed attention to public business which the deliberations of Congress required. They therefore adjourned themselves to meet in eight days at Baltimore, resolving at the same time, "that General Washington should be possessed of full powers to order and direct all things, relative to the department, and the operations of war."

The activity of the British at the close of the campaign, seemed in some measure to compensate for their tardiness in the beginning of it.

Hitherto they had succeeded in every scheme. They marched up and down the Jersey side of the Delaware, and through the country without any molestation. All opposition to the re-establishment of royal government seemed to be on the point of expiring. The Americans had thus far acted without system, or rather feebly executed what had been injudiciously adopted. Though the war was changed from its first ground, a redress of grievances, to a struggle for sovereignty, yet some considerable time elapsed, before arrangements conformable to this new system, were adopted; and a much longer, before they were carried into execution.

With the year 1776, a retreating, half-naked army was to be dismissed, and the prospect of a new one was both distant and uncertain. The recently assumed independence of the states, was apparently on the verge of dissolution. It was supposed by many, that the record of their existence would have been no more than, that "a tickle people, impatient of the restraints of regular go-

vernment, had in a fit of passion, abolished that of Great Britain, and established in its room, free constitutions of their own; but these new establishments, from want of wisdom in their rulers, or of spirit in their people, were no sooner formed than annihilated. The leading men in their respective governments, and the principal members of Congress, for by this name the insurgents distinguished their supreme council, were hanged, and their estates confiscated. Washington, the gallant leader of their military establishments, worthy of a better fate, deserted by his army, abandoned by his country, rushing on the thickest battalions of the foe, provoked a friendly British bayonet to deliver him from an ignominious death."

To human wisdom it appeared probable, that such a paragraph would have closed some small section in the history of England, treating of the American troubles. There is in human affairs an ultimate point of elevation or depression, beyond which they neither grow better nor worse; but turn back in a contrary course.

In proportion as difficulties increased, Congress redoubled its exertions to oppose them. They addressed the states in animated language, calculated to remove their despondency, renew their hopes, and confirm their resolutions.

They, at the same time, despatched gentlemen of character and influence, to excite the militia to take the field. General Mifflin was, on this occasion, particularly useful. He exerted his great abilities, in arousing his fellow citizens, by animated and affectionate addresses, to turn out in defence of their endangered liberties.

Congress also recommended to each of the United States, "to appoint a day of solemn fasting and humiliation, to implore of Almighty God the forgiveness of their many sins, and to beg the countenance and assistance of his providence, in the prosecution of the present just and necessary war."

In the dangerous situation, in which every thing dear to the friends of independence was reduced, congress transferred extraordinary powers to General Washington, by a resolution expressed in the following words:

"The unjust, but determined purpose of the British court, to enslave these free states, obvious through every delusive insinuation to the contrary, having placed things in such a situation that the very existence of civil liberty now depends on the right execution of military power; and the vigorous, decisive conduct of these being impossible to distant, numerous, and deliberative bodies; this Congress, having maturely considered the present crisis, and having perfect reliance on the wisdom, vigour, and uprightness of General Washington, do hereby—

"Resolve that General Washington shall be, and he is hereby vested with full, ample, and complete powers, to raise and collect together, in the most speedy and effectual manner, from any or all of these United States, sixteen battalions of infantry, in addition to those already voted by Congress; to appoint officers for the said battalions of infantry; to raise, officer, and equip 3000 light horse, three regiments of artillery, and a corps of engineers; to establish their pay; to apply to any of the states for such aid of the militia as he shall judge necessary; to form such magazines of provisions, and in such places as he shall think proper; to displace and appoint all officers under the rank of Brigadier General; and to fill up all vacancies in every other department in the American armies; to take, wherever he may be, whatever he may want for the use of the army, if the inhabitants will not sell it, allowing a reasonable price for the same; to arrest and confine persons who refuse to take the continental currency, or are otherwise disaffected to the American cause; and return to the states of which they are citizens, their names, and the nature of their offences, together with the witnesses to prove them: that the foregoing powers be vested in General Washington, for, and during the term of six months, from the date thereof, unless sooner determined by Congress."

In this hour of extremity, the attention of Congress was employed in devising plans to save the states from sinking under the heavy calamities which were bearing them down. It is remarkable, that, neither in the present condition, though trying and severe, nor in any other since the declaration of independence, was Congress influenced either by force, distress, artifice, or persuasion, to entertain the most distant idea of purchasing peace, by returning to the condition of British subjects. So low were they reduced in the latter end of 1776, that some members distrustful of their ability to resist the power of Great Britain, proposed to authorise their commissioners at the court of France, (whose appointment shall be hereafter explained,) to transfer to that country the same monopoly of their trade, which Great Britain had hitherto enjoyed. On examination, it was found, that concessions of this kind would destroy the force of many arguments heretofore used in favour of independence, and probably disunite their citizens.

It was next proposed to offer a monopoly of certain enumerated articles of produce. To this the variant interests of the different states were so directly opposed, as to occasion a speedy and decided negative. Some proposed offering to France, a league offensive and defensive, in case she would heartily support American independence: but this was also rejected. The more enlightened members of Congress argued: "though the friendship of small states might be purchased, that of France could not." They alleged, that if she would risk a war with Great Britain, by openly espousing their cause, it would not be so much from the prospect of direct advantages, as from a natural desire to lessen the overgrown power of a dangerous rival. It was therefore supposed, that the only inducement, likely to influence France to an interference, was an assurance that the United States were determined to persevere in refusing a return to their former allegiance. Instead of listening to the terms of the royal commissioners, or to any founded on the idea of their resuming the character of British subjects, it was therefore again resolved, to abide by their declared independence, and proffered freedom of trade to every foreign nation; trusting the event to providence, and risking all consequences. Copies of these resolutions were sent to the principal courts of Europe, and proper persons were appointed to solicit their friendship to the new-formed states. These despatches fell into the hands of the British, and were by them published. This was the very thing wished for by Congress. They well knew that an apprehension of their making up all differences with Great Britain was the principal objection to the interference of foreign courts, in what was represented to be no more than a domestic quarrel. A resolution adopted in the deepest distress and the worst of times, that Congress would listen to no terms of re-union with their parent state, convinced those who wished for the dismemberment of the British empire, that it was sound policy to interfere, so far as would prevent the conquest of the United States.

These judicious determinations in the cabinet were accompanied with vigorous exertions in the field. In this crisis of danger 1500 of the Pennsylvania militia embodied, to reinforce the continental army. The merchant, the farmer, the tradesman, and the labourer, cheerfully relinquished the conveniences of home, to perform the duties of private soldiers, in the severity of a winter campaign. Though most of them were accustomed to the habits of a city life, they slept in tents, barns, and sometimes in the open air, during the cold months of December and January. There were, nevertheless, only two instances of sickness, and only one of death, in that large body of men, in the course of six weeks. The delay, so judiciously contrived on the retreat through Jersey, afforded time for these volunteer reinforcements to join General Washington. The number of troops under his command at that time, fluctuated between two and three thousand. To

turn round and face a victorious and numerous foe, with this inconsiderable force, was risking much: but the urgency of the case required that something should be attempted. The recruiting business, for the proposed new continental army, was at a stand, while the British were driving the Americans before them. The present regular soldiers could, as a matter of right, in less than a week, claim their discharge, and scarce a single recruit offered to supply their place. Under these circumstances, the bold resolution was formed, of recrossing into the state of Jersey, and attacking that part of the enemy which was posted at Trenton.

When the Americans retreated over the Delaware, the boats in the vicinity were moved out of the way of their pursuers; this arrested their progress: but the British commanders, in the security of conquest, cantoned their army in Burlington, Bordenton, Trenton, and other towns of New Jersey, in daily expectation of being enabled to cross into Pennsylvania, by means of ice, which is generally formed about that time.

Of all events, none seemed to them more improbable, than that their late retreating, half-naked enemies, should, in this extreme cold season, face about and commence offensive operations. They indulged themselves in a degree of careless inattention to the possibility of a surprise, which, in the vicinity of an enemy, however contemptible, can never be justified. It has been said that Colonel Rahl, the commanding officer in Trenton, being under some apprehension for that frontier post, applied to General Grant for a reinforcement, and that General returned for answer: "Tell the colonel, he is very safe. I will undertake to keep the peace in New Jersey, with a corporal's guard."

In the evening of Christmas day General Washington made arrangements for re-crossing the Delaware in three divisions; at M'Konkey's ferry; at Trenton ferry; and at or near Bordenton. The troops which were to have crossed at the two last places, were commanded by Generals Ewing and Cadwalader, who made every exertion to get over: but the quantity of ice was so great, that they could not effect their purpose. The main body which was commanded by General Washington, crossed at M'Konkey's ferry: but the ice in the river retarded its passage so long, that it was three o'clock in the morning, before the artillery could be gotten over. On landing in Jersey, it was formed into two divisions, commanded by Generals Sullivan and Green, who had under their command Brigadiers Lord Stirling, Mercer and St. Clair. One of the divisions were ordered to proceed on the lower, or river road, the other on the upper, or Pennington road. Colonel Stark, with some light troops, was also directed to advance near to the river, and to possess himself of that part of the town which is beyond the bridge. The divisions having nearly the same distance to march, were ordered, immediately on forcing the out guards, to push directly into Trenton, that they might charge the enemy before they had time to form. Though they marched different roads, yet they arrived at the enemy's advanced post, within three minutes of each other. The out guards of the Hessian troops at Trenton soon fell back; but kept up a constant retreating fire. Their main body, being hard pressed by the Americans, who had already got possession of half their artillery, attempted to file off by a road leading towards Princeton: but were checked by a body of troops thrown in their way. Finding themselves surrounded, they laid down their arms. The number which submitted was 23 officers and 886 men. Between 30 and 40 of the Hessians were killed and wounded. Colonel Rahl was among the former, and seven of his officers among the latter. Captain Washington, of the Virginia troops, and five or six of the Americans, were wounded. Two were killed, and two or three were frozen to death. The detachment in Trenton consisted of the regiments of Rahl, Losberg, and Kuiphausen, amounting in the whole to about 1500 men, and a troop of British light horse. All these were killed or

captured, except about 600, who escaped by the road leading to Bordenton.

The British had a strong battalion of light infantry at Princeton, and a force yet remaining near the Delaware, superior to the American army. General Washington, therefore, in the evening of the same day, thought it most prudent to recross into Pennsylvania with his prisoners.

The effects of this successful enterprise were speedily felt in recruiting the American army. About 1400 regular soldiers, whose time of service was on the point of expiring, agreed to serve six weeks longer, on a promised gratuity of ten paper dollars to each. Men of influence were sent to different parts of the country to rouse the militia. The rapine and impolitic conduct of the British operated more forcibly on the inhabitants, to expel them from the state, than either patriotism, or persuasion to prevent their overrunning it.

The Hessian prisoners taken on the 26th being secured, General Washington re-crossed the Delaware, and took possession of Trenton. The detachments, which had been distributed over New Jersey, previous to the capture of the Hessians, immediately after that event, assembled at Princeton, and were joined by the army from Brunswick, under Lord Cornwallis. From this position, Jan. 2d. 1776, they proceeded towards Trenton in great force, hoping by a vigorous onset to repair the injury their cause had sustained by the late defeat. Truly delicate was the situation of the feeble American army. To retreat was to hazard the city of Philadelphia, and to destroy every ray of hope which had begun to dawn from their late success. To risk an action, with a superior force in front, and a river in rear, was dangerous in the extreme. To get round the advanced party of the British, and, by pushing forwards, to attack in their rear, was deemed preferable to either. The British, on their advance from Princeton, about 4 P. M. attacked a body of Americans posted with four field pieces, a little to the northward of Trenton, and compelled them to retreat. The pursuing British, being checked, at the bridge over Saupink creek, which runs through that town, by some field pieces, posted on the opposite banks of that rivulet, fell back so far as to be out of reach of the cannon, and kindled their fires.

The Americans were drawn up on the other side of the creek, and in that position remained till night, cannonading the enemy and receiving their fire. In this critical hour, two armies, on which the success or failure of the American revolution materially depended, were crowded into the small village of Trenton, and only separated by a creek, in many places fordable. The British, believing they had all the advantages they could wish for, and that they could use them when they pleased, discontinued all farther operations, and kept themselves in readiness to make the attack next morning. Sir William Erskine is reported to have advised an immediate attack, or at least to place a strong guard at a bridge over Saupink creek, which lay in the route the Americans took to Princeton; giving for a reason that, otherwise, Washington, if a good general, would make a move to the left of the royal army, and attack the post at Princeton in the rear.

The next morning presented a scene as brilliant on the one side, as it was unexpected on the other. Soon after it became dark, General Washington ordered all his baggage to be silently removed, and having left guards for the purpose of deception, marched with his whole force, by a circuitous route, to Princeton. This manœuvre was determined upon in a council of war, from a conviction that it would avoid the appearance of a retreat, and at the same time the hazard of an action in a bad position; and that it was the most likely way to preserve the city of Philadelphia, from falling into the hands of the British. General Washington also presumed, that from an eagerness to efface the impressions, made by the late capture of the Hessians at Trenton, the British commanders had pushed forward their principal force, and

that of course the remainder in the rear at Princeton was not more than equal to his own. The event verified this conjecture. The more effectually to disguise the departure of the Americans from Trenton, fires were lighted up in front of their camp. These not only gave appearance of going to rest, but, as flame cannot be seen through, concealed from the British what was transacting behind them. In this relative position they were a pillar of fire to the one army, and a pillar of a cloud to the other.

Providence favoured this movement of the Americans. The weather had been for some time so warm and moist, that the ground was soft, and the roads so deep as to be scarcely passable: but the wind suddenly changed to the north-west, and the ground in a short time was frozen so hard, that when the Americans took up their line of march, they were no more retarded, than if they had been upon a solid pavement.

General Washington reached Princeton early in the morning, January 3, and would have completely surprised the British, had not a party, which was on their way to Trenton, descried his troops when they were two miles distant, and sent back couriers to alarm their unsuspecting fellow soldiers in their rear. These consisted of the 17th, 40th, and 55th regiment of British infantry, some of the royal artillery with two field pieces, and three troops of light dragoons. The centre of the Americans, consisting of the Philadelphia militia, while on their line of march, was briskly charged by a party of the British, and gave way in disorder. The moment was critical. General Washington pushed forward, and placed himself between his own men and the British; with his horse's head fronting the latter. The Americans, encouraged by his example and exhortations, made a stand, and returned the British fire. The general, though between both parties, was providentially uninjured by either.

A party of the British fled into the college, and were there attacked with field pieces which were fired into it. The seat of the muses became for some time the scene of action. The party, which had taken refuge in the college, after receiving a few discharges from the American field pieces, came out and surrendered themselves prisoners of war.

In the course of the engagement sixty of the British were killed, a greater number wounded and about 300 of them taken prisoners. The rest made their escape, some by pushing on towards Trenton, others by returning towards Brunswick. The Americans lost only a few: but Colonels Haslet and Potter, and Captain Neal of the artillery, were among the slain. General Mercer received three bayonet wounds, of which he died in a short time. He was a Scotchman by birth: but from principle and affection had engaged to support the liberties of his adopted country, with a zeal equal to that of any of its native sons. In private life he was amiable, and his character as an officer stood high in the public esteem.

While they were fighting at Princeton, the British in Trenton were under arms, and on the point of making an assault on the evacuated camp of the Americans. With so much address had the movement to Princeton been conducted, that though from the critical situation of the two armies every ear may be supposed to have been open, and every watchfulness to have been employed, yet General Washington moved completely off the ground, with his whole force, stores, baggage and artillery, unknown to, and unsuspected by his adversaries. The British in Trenton, were so entirely deceived, that when they heard the report of the artillery at Princeton, though it was in the depth of winter, they supposed it to be thunder.

That part of the royal army, which, having escaped from Princeton, retreated towards New Brunswick, was pursued for three or four miles. Another party which had advanced as far as Maidenhead, on their way to Trenton, hearing the frequent discharge of fire arms in their rear, wheeled round and marched to the aid of their

companions. The Americans, by destroying bridges, retarded these, though close in their rear, so long as to gain time for themselves to move off, in good order, to Pluckemin.

So great was the consternation of the British at these unexpected movements, that they instantly evacuated both Trenton and Princeton, and retreated with their whole force to New Brunswick. The American militia collected, and, forming themselves into parties, waylaid their enemies, and cut them off whenever an opportunity presented. In a few days they overran the Jerseys. General Maxwell surprised Elizabethtown, and took near 100 prisoners. Newark was abandoned: and the late conquerors were forced to leave Woodbridge. The royal troops were confined to Amboy and Brunswick, which held a water communication with New York. Thus, in the short space of a month, that part of Jersey, which lies between New Brunswick and Delaware, was both overrun by the British, and recovered by the Americans. The retreat of the continental army, the timid policy of the Jersey farmers, who chose rather to secure their property by submission, than defend it by resistance, made the British believe their work was done, and that little else remained, but to reap a harvest of plunder as the reward of their labours. Unrestrained by the terrors of civil law, uncontrolled by the severity of discipline, and elated with their success, the soldiers of the royal army, and particularly the Hessians, gave full scope to the selfish and ferocious passions of human nature. A conquered country and submitting inhabitants presented easy plunder, equal to their unbounded rapacity. Infants, children, old men and women, were stripped of their blankets and clothing. Furniture was burnt or otherwise destroyed. Domestic animals were carried off, and the people robbed of their necessary household provisions. The rapes and brutalities committed on women, and even on very young girls, would shock the ears of modesty if particularly recited. These violences were perpetrated on inhabitants who had remained in their houses, and received printed protections, signed by order of the commander in chief. It was in vain that they produced these protections as a safeguard. The Hessians could not read them; and the British soldiers thought they were entitled to a share of the booty, equally with their foreign associates.

Such, in all ages, has been the complexion of the bulk of armies, that immediate and severe punishments are indispensably necessary, to keep them from flagrant enormities. That discipline, without which an army is a band of armed plunderers, was, as far as respected the inhabitants, either neglected, or but feebly administered in the royal army. The soldiers finding they might take with impunity what they pleased, were more strongly urged by avarice, than checked by policy or fear. Had every citizen been secured in his rights, protected in his property, and paid for his supplies, the consequences might have been fatal to the hopes of those who were attached to independence. What the warm recommendations of Congress, and the ardent applications of General Washington could not effect, took place of its own accord, in consequence of the plunderings and devastations of the royal army.

The whole country became instantly hostile to the invaders. Sufferers of all parties rose, as one man, to revenge their personal injuries. Those, who, from age or infirmities were incapable of bearing arms, kept a strict watch on the movements of the royal army, and, from time to time, communicated information to their countrymen in arms. Those who lately declined all military opposition, though called upon by the sacred tie of honour pledged to each other on the declaration of independence, cheerfully embodied, when they found submission to be unavailing for the security of their estates. This was not done originally in consequence of the victories of Trenton and Princeton. In the very moment of these actions, or before the news of them had circulated, sundry individuals, unknowing of General Washington's

movements, were concerting private insurrections, to revenge themselves on the plunderers. The dispute originated about property, or in other words, about the right of taxation. From the same source, at this time, it received a new and forcible impulse. The farmer, who could not trace the consequences of British taxation, nor of American independence, felt the injuries he sustained from the depredation of licentious troops. The militia of New Jersey, who had hitherto behaved most shamefully, from this time forward redeemed their character, and, throughout a tedious war, performed services with a spirit and discipline, in many respects, equal to that of regular soldiers.

The victories of Trenton and Princeton seemed to be like a resurrection from the dead, to the desponding friends of independence. A melancholy gloom had, in the first twenty-five days of December, overspread the United States; but, from the memorable era of the 26th of the same month, their prospects began to brighten. The recruiting service, which for some time had been at a stand, was successfully renewed: and hopes were soon indulged, that the commander in chief would be enabled to take the field in the spring, with a permanent regular force. General Washington retired to Morristown, that he might afford shelter to his suffering army. The American militia had sundry successful skirmishes with detachments of their adversaries. Within four days after the affair at Princeton, between forty and fifty Waldeckers were killed, wounded, or taken, at Springfield, by an equal number of the same New Jersey militia, which, but a month before, suffered the British to overrun their country without opposition. This enterprise was conducted by Colonel Spencer, whose gallantry, on the occasion, was rewarded with the command of a regiment.

During the winter movements, which have been just related, the soldiers of both armies underwent great hardships; but the Americans suffered by far the greatest. Many of them were without shoes, though marching over frozen ground, which so gashed their naked feet, that each step was marked with blood. There was scarcely a tent in the whole army. The city of Philadelphia had been twice laid under contribution, to provide them with blankets. Officers had been appointed to examine every house, and, after leaving a scanty covering for the family, to bring off the rest, for the use of the troops in the field; but, notwithstanding these exertions, the quantity procured was far short of decency, much less of comfort.

The officers and soldiers of the American army were about this time inoculated in their cantonment at Morristown. As very few of them had ever had the small pox, the inoculation was nearly universal. The disorder had previously spread among them in the natural way, and proved mortal to many; but after inoculation was introduced, though whole regiments were inoculated in a day, there was little or no mortality from the small pox; and the disorder was so slight, that, from the beginning to the end of it, there was not a single day in which they could not, and, if called upon, would not have turned out and fought the British. To induce the inhabitants to accommodate officers and soldiers in their houses, while under the small pox, they and their families were inoculated gratis by the military surgeons. Thus, in a short time, the whole army, and the inhabitants in and near Morristown, were subjected to the small pox, and with very little inconvenience to either.

Three months, which followed the actions of Trenton and Princeton, passed away without any important military enterprise on either side. Maj. Gen. Putnam was directed to take post at Princeton, and cover the country in the vicinity. He had only a few hundred troops, though he was no more than eighteen miles distant from the strong garrison of the British at Brunswick. At one period he had fewer men for duty, than he had miles of frontier to guard. The situation of General Washington at Morristown was not more eligible. His force was trifling, when compared with that of the British; but the enemy, and his own countrymen,

believed the contrary. Their deception was cherished, and artfully continued by the specious parade of a considerable army. The American officers took their station in positions of difficult access, and kept up a constant communication with each other. This secured them from insult and surprise. While they covered the country, they harassed the foraging parties of the British, and often attacked them with success. Of a variety of these, the two following are selected as most worthy of notice. General Dickinson, with four hundred Jersey militia, and fifty of the Pennsylvania riflemen, crossed Millstone river, near Somerset court-house, and attacked a large foraging party of the British, with so much spirit, that they abandoned their convoy and fled. Nine of them were taken prisoners. Forty wagons, and upwards of one hundred horses, with a considerable booty, fell into the hands of the general. While the British were loading their wagons, a single man began to fire on them from the woods. He was soon joined by more of his neighbours, who could not patiently see their property carried away. After the foragers had been annoyed for some time by these unseen marksmen, they fancied, on the appearance of General Dickinson, that they were attacked by a superior force, and began a precipitate flight.

In about a month after the affair at Somerset court-house, Colonel Nelson, of Brunswick, with a detachment of 150 militia men, surprised and captured at Lawrence's Neck, a major and fifty-nine privates of the refugees, who were in British pay.

Throughout the campaign of 1776, an uncommon degree of sickness raged in the American army. Husbandmen, transferred at once from the conveniences of domestic life, to the hardships of a field encampment, could not accommodate themselves to the sudden change. The southern troops sickened from the want of salt provisions. Linen shirts were generally worn, in contact with the skin. The salutary influence of flannel, in preventing the diseases of camps, was either unknown or disregarded. The discipline of the army was too feeble to enforce those regulations which experience has proved to be indispensably necessary, for preserving the health of large bodies of men collected together. Cleanliness was also too much neglected. On the 8th of August, the whole American army before New York, consisting of 17,225 men; but of that number only 10,514 were fit for duty. The numerous sick suffered much from the want of necessaries. Hurry and confusion added much to their distresses. There was besides a real want of the requisites for their relief.

A proper hospital establishment was beyond the abilities of Congress, especially as the previous arrangements were not entered upon till the campaign had begun. Many, perhaps some thousands, of the American army, were swept off in a few months by sickness. The country every where presented the melancholy sight of soldiers suffering poverty and disease, without the aid of medicine or attendance. Those who survived gave such accounts of the sufferings of the sick, as greatly discouraged the recruiting service. A rage for plundering, under the pretence of taking tory property, infected many of the common soldiery, and even some of the officers. The army had been formed on such principles, in some of the states, that commissions were, in several instances, bestowed on persons who had no pretensions to the character of gentlemen. Several of the officers were chosen by their own men; and they often preferred those from whom they expected the greatest indulgences. In other cases, the choice of the men was in favour of those who had consented to throw their pay into a joint stock with the privates, from which officers and men drew equal shares.

The army, consisting mostly of new recruits and inexperienced officers, and being only engaged for a twelvemonth, was very deficient in that mechanism and discipline, which time and expe-

CHAPTER XIII.

Of Independence, State Constitutions, and the Confederation.

rience bestowed on veteran troops. General Washington was unremitting in his representations to Congress, favouring such alterations as promised permanency, order, and discipline in the army; but his judicious opinions on these subjects were slowly adopted. The sentiments of liberty which then generally prevailed, made some distinguished members of Congress so distrustful of the future power and probable designs of a permanent domestic army, that they had well nigh sacrificed their country to their jealousies.

The unbounded freedom of the savage, who roams the woods, must be restrained, when he becomes a citizen of orderly government; and, from the necessity of the case, must be much more so, when he submits to be a soldier. The individuals, composing the army of America, could not at once pass over from the full enjoyment of civil liberty to the discipline of a camp, nor could the leading men in Congress for some time be persuaded to adopt energetic establishments. "God forbid," would such say, "that the citizens should be so far lost in the soldiers of our army, that they should give over longing for the enjoyments of domestic happiness. Let frequent furloughs be granted, rather than the endearments of wives and children should cease to allure the individuals of our army from camps to farms." The amiableness of this principle veiled the error of the sentiment. The minds of the civil leaders in the councils of America were daily occupied, in contemplating the rights of human nature, and investigating arguments on the principles of general liberty, to justify their own opposition to Great Britain.—Warned with these ideas, they trusted too much to the virtue of their countrymen, and were backward to enforce that subordination and order in their army, which, though it intrudes on civil liberty, produces effects in the military line unequalled by the effusions of patriotism, or the exertions of undisciplined valour.

The experience of two campaigns evinced the folly of trusting the defence of the country to militia, or to levies raised only for a few months, and had induced a resolution for recruiting an army for the war. The good effects of this measure will appear in the sequel.

The campaign of 1776 did not end till it had been protracted into the first month of the year 1777. The British had counted on the complete and speedy reduction of their late colonies; but they found the work more difficult of execution, than was supposed. They wholly failed in their designs on the southern states. In Canada, they recovered what, in the preceding year, they had lost; drove the Americans out of their borders, and destroyed their fleet on the lakes; but they failed in making their intended impression on the northwestern frontier of the states. They obtained possession of Rhode Island; but the acquisition was of little service; perhaps was of detriment. For nearly three years, several thousand men stationed thereon, for its security, were lost to every purpose of active co-operation with the royal forces in the field, and the possession of it secured no equivalent advantages. The British completely succeeded against the city of New York, and the adjacent country; but when they pursued their victories into New Jersey, and subdivided their army, the recoiling Americans soon recovered the greatest part of what they had lost.

Sir William Howe, after having nearly reached Philadelphia, was confined to limits so narrow, that the fee simple of all he commanded would not reimburse the expense incurred by its conquest.

The war, on the part of the Americans, was but barely begun. Hitherto they had engaged with temporary forces, for a redress of grievances; but towards the close of this year they made arrangements for raising a permanent army, to contend with Great Britain for the sovereignty of the country. To have thus far stood their ground, with their new levies, was a matter of great importance. To them delay was victory; and not to be conquered was to conquer.

In former ages, it was common for a part of a community to migrate, and to erect themselves into an independent society. Since the earth has been more fully peopled, and especially since the principles of union have been better understood, a different policy has prevailed. A fondness for planting colonies has, for three preceding centuries, given full scope to a disposition for emigration; and, at the same time, the emigrants have been retained in a connexion with their parent state. By these means Europeans have made the riches, both of the east and west, subservient to their avarice and ambition. Though they occupy the smallest portion of the four quarters of the globe, they have contrived to subject the other three to their influence or command.

The circumstances, under which New England was planted, would, a few centuries ago, have entitled them, from their first settlement, to the privileges of independence. They were virtually exiled from their native country, by being denied the rights of men; they set out on their own expense, and, after purchasing the consent of the native proprietors, improved an uncultivated country, to which, in the eye of reason and philosophy, the king of England had no title.

If it be lawful for individuals to relinquish their native soil, and pursue their own happiness in other regions, and under other political associations, the settlers of New England were always so far independent, as to owe no obedience to their parent state, but such as resulted from their voluntary assent. The slavish doctrine of the divine right of kings, and the corruptions of christianity, by undervaluing heathen titles, favoured an opposite system. What, for several centuries after the christian era, would have been called the institution of a new government, was by modern refinement deominated only an extension of the old, in the form of a dependent colony. Though the prevailing ecclesiastical and political creeds tended to degrade the condition of the settlers of New England, yet there was always a party there which believed in their natural right to independence.—They recurred to first principles, and argued, that, as they received from government nothing more than a charter, founded on idle claims of sovereignty, they owed it no other obedience than what was derived from express, or implied contract. It was not till the 18th century had more than half elapsed, that it occurred to any number of the colonists, that they had an interest in being detached from Great Britain. Their attention was first turned to this subject, by the British claim of taxation. This opened a melancholy prospect, boundless in extent, and endless in duration. The Boston port act, and the other acts, passed in 1774 and 1775, which have been already the subject of comment, progressively weakened the attachment of the colonists, to the birth place of their forefathers. The commencement of hostilities on the 19th of April, 1775, exhibited the parent state in an odious point of view, and abated the original dread of separating from it. But nevertheless, at that time, and for a twelvemonth after, a majority of the colonists wished for no more than to be re-established as subjects, in their ancient rights. Had independence been their object, even at the commencement of hostilities, they would have rescinded the associations, which have been already mentioned, and imported more largely than ever. Common sense revolts at the idea, that colonists, unfurnished with military stores, and wanting manufactures of every kind, should, at the time of their intending a serious struggle for independence, by a voluntary agreement, deprive themselves of the obvious means of procuring such foreign supplies as their circumstances might make necessary. Instead of pursuing a line of conduct, which might have been dictated by a wish for independence, they continued their exports for nearly a year af-

ter they ceased to import. This not only lessened the debts they owed to Great Britain, but furnished additional means for carrying on the war against themselves. To aim at independence, and at the same time to transfer their resources to their enemies, could not have been the policy of an enlightened people. It was not till some time in 1776, that the colonists began to take other ground, and contend that it was for their interest to be forever separated from Great Britain. In favour of this opinion, it was said, that, in case of their continuing subjects, the mother country, though she redressed their grievances, might at pleasure repeat similar oppressions; that she ought not to be trusted, having twice resumed the exercise of taxation, after it had been apparently relinquished.—The favourers of separation also urged, that Great Britain was jealous of their increasing numbers, and rising greatness; that she would not exercise government for their benefit, but for her own; and that the only permanent security for American happiness was, to deny her the power of interfering with their government or commerce. To effect this purpose, they were of opinion, that it was necessary to cut the knot, which connected the two countries, by a public renunciation of all political connexions between them.

The Americans about this time began to be influenced by new views. The military arrangements of the preceding year; their unexpected union, and prevailing enthusiasm, expanded the minds of their leaders, and elevated the sentiments of the people. Decisive measures, which would have been lately reprobated, now met with approbation.

The favourers of subordination under the former constitution urged the advantages of a supreme head, to control the disputes of interfering colonies, and also the benefits which flowed from union; that independence was untried ground, and should not be entered upon, but in the last extremity.

They flattered themselves that Great Britain was so fully convinced of the determined spirit of America, that if the present controversy were compromised, she would not, at any future period, resume an injurious exercise of her supremacy. They were therefore for proceeding no further than to defend themselves in the character of subjects, trusting that ere long the present hostile measures would be relinquished, and the harmony of the two countries re-established. The favourers of this system were embarrassed, and all their arguments weakened, by the perseverance of Great Britain in her schemes of coercion. A probable hope of a speedy repeal of a few acts of parliament would have greatly increased the number of those who were advocates for reconciliation; but the certainty of intelligence to the contrary, gave additional force to the arguments of the opposite party. Though new weight was daily thrown into the scale, in which the advantages of independence weighed, yet it did not preponderate till about that time in 1776, when intelligence reached the colonists of the act of parliament passed in December, 1775, for throwing them out of British protection, and of hiring foreign troops to assist in affecting their conquest. Respecting the first it was said, "that protection and allegiance were reciprocal, and that the refusal of the first was a legal ground of justification for withholding the last." They considered themselves to be thereby discharged from their allegiance, and that to declare themselves independent, was no more than to announce to the world the real political state in which Great Britain had placed them.

This act proved that the colonists might constitutionally declare themselves independent; but the hiring of foreign troops to make war upon them, demonstrated the necessity of their doing it immediately. They reasoned that if Great Britain called in the aid of strangers to crush them, they must seek similar relief for their own preservation. They well knew that this could not be expected, while they were in arms against their acknowledged sovereign. They had therefore only a choice of difficulties, and must either seek foreign aid as

independent states, or continue in the awkward and hazardous situation of subjects, carrying on war from their own resources, both against their king, and such mercenaries as he chose to employ for their subjugation. Necessity, not choice, forced them on the decision. Submission without obtaining a redress of their grievances was advocated by none who possessed the public confidence. Some of the popular leaders may have secretly wished for independence from the beginning of the controversy; but their number was small, and their sentiments were not generally known.

While the public mind was balancing on this eventful subject, several writers placed the advantages of independence in various points of view. Among these, Thomas Paine, in a pamphlet under the signature of Common Sense, held the most distinguished rank. The style, manner, and language of this performance were calculated to interest the passions, and to rouse all the active powers of human nature. With the view of operating on the sentiments of a religious people, scripture was pressed into his service; and the powers, and even the name of a king, were rendered odious in the eyes of the numerous colonists, who had read and studied the history of the Jews, as recorded in the Old Testament. The folly of that people in revolting from a government, instituted by heaven itself, and the oppressions to which they were subjected in consequence of their hating after kings to rule over them, afforded an excellent handle for prepossessing the colonists in favour of republican institutions, and prejudicing them against kingly government. Hereditary succession was turned into ridicule. The absurdity of subjecting a great continent to a small island, on the other side of the globe, was represented in such striking language, as to interest the honour and pride of the colonists, in renouncing the government of Great Britain. The necessity, the advantages, and practicability of independence were forcibly demonstrated.

Nothing could be better timed than this performance. It was addressed to freemen, who had just received convincing proof, that Great Britain had thrown them out of her protection, had engaged foreign mercenaries to make war upon them, and seriously designed to compel their unconditional submission to her unlimited power. It found the colonists most thoroughly alarmed for their liberties, and disposed to do and suffer any thing that promised their establishment. In union with the feelings and sentiments of the people, it produced surprising effects. Many thousands were convinced, and were led to approve and long for a separation from the mother country. Though that measure, a few months before, was not only foreign from their wishes, but the object of their abhorrence, the current suddenly became so strong in its favour, that it bore down all opposition. The multitude was hurried down the stream; but some worthy men could not easily reconcile themselves to the idea of an eternal separation from a country, to which they had long been bound by the most endearing ties. They saw the sword drawn; but could not tell when it would be sheathed. They feared that the dispersed individuals of the several colonies would not be brought to coalesce under an efficient government, and that after much anarchy some future Cæsar would grasp their liberties, and confirm himself in a throne of despotism. They doubted the perseverance of their countrymen in effecting their independence, and were also apprehensive that, in case of success, their future condition would be less happy than their past.

Some respectable individuals, whose principles were pure, but whose souls were not of that firm texture which revolutions require, shrunk back from the bold measures proposed by their more adventurous countrymen. To submit without an appeal to heaven, though secretly wished for by some, was not the avowed sentiment of any; but to persevere in petitioning and resisting was the system of some misguided, honest men. The favourers of this opinion were generally wanting in

that decision which grasps at great objects, and influenced by that timid policy, which does its work by halves. Most of them dreaded the power of Britain. A few, on the score of interest or an expectancy of favours from the royal government, refused to concur with the general voice. Some of the natives of the parent state, who, having lately settled in the colonies, had not yet exchanged European for American ideas, together with a few others, conscientiously opposed the measures of Congress: but the great bulk of the people, and especially of the spirited and independent part of the community, came with surprising unanimity to the project of independence.

The eagerness for independence resulted more from feeling than reasoning. The advantages of an unfettered trade, the prospect of honours and emoluments in administering a new government, were of themselves insufficient motives for adopting this bold measure. But what was wanting from considerations of this kind, was made up by the perseverance of Great Britain, in her schemes of coercion and conquest. The determined resolution of the mother country to subdue the colonists, together with the plans she adopted for accomplishing that purpose, and their equally determined resolution to appeal to heaven rather than submit, made a declaration of independence as necessary in 1776, as was the non-importation agreement of 1774, or the assumption of arms in 1775. The last naturally resulted from the first. The revolution was not forced on the people by ambitious leaders grasping at supreme power; but every measure of it was forced on Congress, by the necessity of the case, and the voice of the people. The change of the public mind of America, respecting connexion with Great Britain, is without a parallel. In the short space of two years, nearly three millions of people passed over from the love and duty of loyal subjects, to the hatred and resentment of enemies.

The motion for declaring the colonies free and independent, was first made in Congress, June 7, 1776, by Richard Henry Lee, of Virginia. He was warranted in making this motion by the particular instructions of his immediate constituents, and also by the general voice of the people of all the states. When the time for taking the subject under consideration arrived, much knowledge, ingenuity and eloquence were displayed on both sides of the question. The debates were continued for some time, and with great animation. In these John Adams and John Dickinson took leading and opposite parts. The former began one of his speeches, by an invocation of the god of eloquence, to assist him in defending the claims, and enforcing the duty of his countrymen. He strongly urged the immediate dissolution of all political connexion of the colonies with Great Britain, from the voice of the people, from the necessity of the measure in order to obtain foreign assistance, from a regard to consistency, and from the prospects of glory and happiness, which opened beyond the war, to a free and independent people. Mr. Dickinson replied to this speech. He began by observing, that the member from Massachusetts, Mr. Adams, had introduced his defence of the declaration of independence by invoking a heathen god; but that he should begin his objections to it, by solemnly invoking the Governor of the universe, so to influence the minds of the members of Congress, that if the proposed measure were for the benefit of America, nothing which he should say against it might make the least impression. He then urged that the present time was improper for the declaration of independence; that the war might be conducted with equal vigour without it; that it would divide the Americans, and unite the people of Great Britain against them. He then proposed that some assurance should be obtained of assistance from a foreign power, before they renounced their connexion with Great Britain; and that the declaration of independence should be the condition to be offered for this assistance. He likewise stated the disputes that existed between several of the colonies, and proposed that some

measures for the settlement of them should be determined upon, before they lost sight of that tribunal, which had hitherto been the umpire of all their differences.

After a full discussion, the measure of declaring the colonies free and independent was approved, July 4th, by nearly an unanimous vote. The anniversary of the day, on which this great event took place, has ever since been consecrated by the Americans to religious gratitude, and social pleasures. It is considered by them as the birth-day of their freedom.

The act of the united colonies, for separating themselves from the government of Great Britain, and declaring their independence, was expressed in the following words:

"When in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the laws of nature, and of nature's God entitled them, a decent respect to the opinions of mankind, requires that they should declare the causes which impel them to the separation:

"We hold these truths to be self-evident; that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that whenever any form of government becomes destructive to these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles, and organizing its power in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly, all experience hath shown, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves, by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security. Such has been the patient sufferance of these colonies, and such is now the necessity which constrains them to alter their former systems of government. The history of the present king of Great Britain is a history of repeated injuries and usurpations: all having in direct object the establishment of an absolute tyranny over these states. To prove this, let facts be submitted to a candid world.

"He has refused his assent to laws, the most wholesome and necessary for the public good.

"He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and when so suspended, he has utterly neglected to attend to them.

"He has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the Legislature, a right inestimable to them, and formidable to tyrants only.

"He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures.

"He has dissolved representative houses repeatedly, for opposing, with manly firmness, his invasions on the rights of the people.

"He has refused, for a long time after such dissolutions, to cause others to be elected: whereby the legislative powers, incapable of annihilation, have returned to the people at large for their exercise; the state remaining in the meantime exposed to all the danger of invasion from without, and convulsions within.

"He has endeavoured to prevent the population of these states; for that purpose obstructing the laws of naturalization of foreigners; refusing to pass others to encourage their migration hither; and raising the conditions of new appropriations of lands.

"He has obstructed the administration of justice, by refusing his assent to laws for establishing judiciary powers.

"He has made judges dependent on his will alone, for the tenure of their offices, and the amount and payment of their salaries.

"He has erected a multitude of new offices, and sent hither swarms of officers to harass our people, and eat out their substance.

"He has kept among us, in times of peace, standing armies, without the consent of our legislatures.

"He has affected to render the military independent of, and superior to, the civil power.

"He has combined with others to subject us to a jurisdiction foreign to our constitution, and unacknowledged by our laws; giving his assent to their acts of pretended legislation:

"For quartering large bodies of armed troops among us:

"For protecting them, by a mock trial, from punishment for any murders which they should commit on the inhabitants of these states:

"For cutting off our trade with all parts of the world:

"For imposing taxes on us without our consent:

"For depriving us, in many cases, of the benefits of trial by jury:

"For transporting us beyond seas to be tried for pretended offences:

"For abolishing the free system of English laws in a neighbouring province, establishing therein an arbitrary government, and enlarging its boundaries, so as to render it at once an example and fit instrument for introducing the same absolute rule into these colonies:

"For taking away our charters, abolishing our most valuable laws, and altering fundamentally the forms of our governments:

"For suspending our own legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever.

"He has abdicated government here, by declaring us out of his protection, and waging war against us.

"He has plundered our seas, ravaged our coasts, burnt our towns, and destroyed the lives of our people.

"He is, at this time, transporting large armies of foreign mercenaries, to complete the work of death, desolation and tyranny, already begun with circumstances of cruelty and perfidy, scarcely paralleled in the most barbarous ages, and totally unworthy the head of a civilized nation.

"He has constrained our fellow citizens, taken captive on the high seas, to bear arms against their country; to become the executioners of their friends and brethren, or to fall themselves by their hands.

"He has excited domestic insurrections amongst us, and has endeavoured to bring on the inhabitants of our frontiers the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes and conditions.

"In every stage of these oppressions, we have petitioned for redress in the most humble terms: our repeated petitions have been answered only by repeated injury. A prince, whose character is thus marked by every act which may define a tyrant, is unfit to be the ruler of a free people.

"Nor have we been wanting in attention to our British brethren. We have warned them from time to time of attempts made by their legislature, to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity; and we have conjured them, by the ties of our common kindred, to disavow these usurpations, which would inevitably interrupt our connexions

and correspondence. They too have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity, which denounces our separation, and hold them, as we hold the rest of mankind, enemies in war, in peace, friends.

"We, therefore, the representatives of the United States of America, in general Congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the name, and by authority, of the good people of these colonies, solemnly publish and declare, that these united colonies are, and of right ought to be, FREE and INDEPENDENT STATES: that they are absolved from all allegiance to the British crown: and that all political connexion between them and the state of Great Britain is and ought to be totally dissolved; and that as free and independent states, they have full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent states may of right do. And, for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honour.

JOHN HANCOCK, President.

"NEW HAMPSHIRE, Josiah Bartlett, William Whipple, Matthew Thornton.

"MASSACHUSETTS BAY, Samuel Adams, John Adams.

"MASSACHUSETTS, Robert Treat Paibé, Elbridge Gerry.

"RHODE ISLAND, &c. Stephen Hopkins, William Ellery.

"CONNECTICUT, Roger Sherman, Samuel Huntington, William Williams, Oliver Wolcott.

"NEW YORK, William Floyd, Philip Livingston, Francis Lewis, Lewis Morris.

"NEW JERSEY, Richard Stockton, John Witherspoon, Francis Hopkinson, John Hart, Abraham Clark.

"PENNSYLVANIA, Robert Morris, Benjamin Rush, Benjamin Franklin, John Morton, George Clymer, James Smith, George Taylor, James Wilson, George Ross.

"DELAWARE, Caesar Rodney, Thomas M'Kean, George Read.

"MARYLAND, Samuel Chase, William Pate, Thomas Stone, Charles Carroll of Carrollton.

"VIRGINIA, George Wythe, Richard Henry Lee, Thomas Jefferson, Benjamin Harrison, Thomas Nelson, junr. Francis Lightfoot Lee, Carter Braxton.

"NORTH CAROLINA, William Hooper, Joseph Hewes, John Penn.

"SOUTH CAROLINA, Edward Rutledge, Thomas Heyward, junr. Thomas Lynch, junr. Arthur Middleton.

"GEORGIA, Button Gwinnett, Lyman Hall, George Walton."

From the promulgation of this declaration, every thing assumed a new form. The Americans no longer appeared in the character of sub-

jects in arms against their sovereign, but as an independent people, repelling the attacks of an invading foe. The propositions and supplications for reconciliation were done away. The dispute was brought to a single point, whether the late British colonies should be conquered provinces, or free and independent states.

The declaration of independence was read publicly in all the states, and was welcomed with many demonstrations of joy. The people were encouraged by it to bear up under the calamities of war, and viewed the evils they suffered, only as the thorn that ever accompanies the rose. The army received it with particular satisfaction. As far as it had validity, so far it secured them from suffering as rebels, and held out to their view an object, the attainment of which would be an adequate recompense for the toils and dangers of war. They were animated by the consideration that they were no longer to risk their lives for the trifling purpose of procuring the repeal of a few oppressive acts of parliament; but for a new organization of government, that would for ever put it out of the power of Great Britain to oppress them. The flattering prospects of an extensive commerce, freed from British restrictions, and the honours and emoluments of offices in independent states, now began to glitter before the eyes of the colonists, and reconciled them to the difficulties of their situation. What was supposed in Great Britain to be their primary object, had only a secondary influence. While they were charged with aiming at independence from the impulse of avarice and ambition, they were ardently wishing for a reconciliation. But, after they had been compelled to adopt that measure, those powerful principles of human actions opposed its retraction, and stimulated to its support. That separation which the colonist at first dreaded as an evil, they soon gloried in as a national blessing. While the rulers of Great Britain urged their people to a vigorous prosecution of the American war, on the idea that the colonists were aiming at independence, they imposed on them a necessity of adopting that very measure, and actually effected its accomplishment. By repeatedly charging the Americans with aiming at the erection of a new government, and by proceeding on that idea to subdue them, predictions, which were originally false, eventually became true. When the declaration of independence reached Great Britain, the partisans of ministry triumphed in their sagacity. "The measure," said they, "we have long foreseen, is now come to pass." They inverted the natural order of things. Without reflecting that their own policy had forced a revolution contrary to the original design of the colonists, the declaration of independence, was held out to the people of Great Britain as a justification of those previous violences, which were its efficient cause.

The act of Congress, for disavowing the colonies from their parent state, was the subject of many animadversions.

The colonists were said to have been precipitate in adopting a measure, from which there was no honourable ground of retreating. They replied that, for eleven years, they had been incessantly petitioning the throne for a redress of their grievances: since the year 1765, a continental Congress had, at three sundry times, stated their claims, and prayed for their constitutional rights; that each assembly of the thirteen colonies had also, in its separate capacity, concurred in the same measure; that from the perseverance of Great Britain in her schemes for their coercion, they had no alternative, but a mean submission, or a vigorous resistance; and that, as she was about to invade their coasts with a large body of mercenaries, they were compelled to declare themselves independent, that they might be put into an immediate capacity of soliciting foreign aid.

The virulence, of those who had been in opposition to the claims of the colonists, was increased by their bold act, in breaking off all subordination to the parent state. "Great Britain," said they, "has founded colonies at great expense; has in-

curring a load of debts by wars on their account; has protected their commerce, and raised them to all the consequence they possess; and now, in the insolence of adult years, rather than pay their proportion of the common expenses of government, they ungratefully renounce all connexion with the nurse of their youth, and the protectress of their riper years." The Americans acknowledged that much was due to Great Britain, for the protection which her navy procured to the coasts and the commerce of the colonies; but contended that much was paid by the latter, in consequence of the restrictions imposed on their commerce by the former. "The charge of ingratitude would have been just," said they, "had allegiance been renounced while protection was given; but when the navy, which formerly secured the commerce and seaport towns of America, began to distress the former, and burn the latter, the previous obligations to obey, or be grateful, were no longer in force."

That the colonists paid nothing, and would not pay to the support of government, was confidently asserted: and no credit was given for the sums indirectly levied upon them, in consequence of their being confined to the consumption of British manufactures. By such ill-founded observations, were the people of Great Britain inflamed against their fellow subjects in America. The latter were represented as an ungrateful people, refusing to bear any part of the expenses of a protecting government, or to pay their proportion of a heavy debt, said to be incurred on their account.

Many of the inhabitants of Great Britain, deceived in matters of fact, considered their American brethren as deserving the severity of military coercion. So strongly were the two countries riveted together, that if the whole truth had been known to the people of both, their separation would have been scarcely possible. Any feasible plan, by which subjection to Great Britain could have been reconciled with American safety, would, at any time previous to 1776, have met the approbation of the colonists. But while the lust of power and of gain, blinded the rulers of Great Britain, insisted facts, and uncandid representations brought over the people to second the infatuation. A few honest men, properly authorised, might have devised measures of compromise, which under the influence of truth, humility, and moderation, would have prevented a dismemberment of the empire; but these virtues ceased to influence, and falsehood, haughtiness and blind zeal usurped their places.

Had Great Britain, even after the declaration of independence, adopted the magnanimous resolution of declaring her colonies free and independent states, interest would have prompted them to form such a connexion as would have secured to the mother country the advantages of their commerce, without the expense or trouble of their governments. But misguided politics continued the fatal system of coercion and conquest. Several, on both sides of the Atlantic, have called the declaration of independence, "a bold, and accidentally, a lucky speculation;" but subsequent events proved that it was a wise measure. It is acknowledged, that it detached some timid friends from supporting the Americans in their opposition to Great Britain; but it increased the vigour and union of those, who possessed more fortitude and perseverance. Without it, the colonists would have had no object adequate to the dangers, to which they exposed themselves, in continuing to contend with Great Britain. If the interference of France were necessary to give success to the resistance of the Americans, the declaration of independence was also necessary: for the French expressly founded the propriety of their treaty with Congress on the circumstance, "that they found the United States in possession of independence."

All political connexion between Great Britain and her colonies being dissolved, the institution of new forms of government became unavoidable. The necessity of this was so urgent that Congress,

before the declaration of independence, had recommended to the respective assemblies and conventions of the United States, to adopt such governments as should, in their opinion, best conduce to the happiness and safety of their constituents.

During more than twelve months, the colonists had been held together by the force of ancient habits, and by laws under the simple style of recommendations. The impropriety of proceeding in courts of justice by the authority of a sovereign, against whom the colonies were in arms, was self-evident. The impossibility of governing, for any length of time, three millions of people, by the ties of honour, without the authority of law, was equally apparent. The rejection of British sovereignty therefore drew after it the necessity of fixing on some other principle of government. The genius of the Americans, their republican habits and sentiments, naturally led them to substitute the majesty of the people, in lieu of discarded royalty. The kingly office was dropped; but in most of the subordinate departments of government, ancient forms and names are retained. Such a portion of power had at all times been exercised by the people and their representatives, that the change of sovereignty was hardly perceptible, and the revolution took place without violence or convulsion. Popular elections elevated private citizens to the same offices, which formerly had been conferred by royal appointment. The people felt an uninterrupted continuation of the blessings of law and government under old names, though derived from a new sovereignty, and were scarcely sensible of any change in their political constitution. The checks and balances, which restrained the popular assemblies under the royal government were partly dropped, and partly retained, by substituting something of the same kind. The temper of the people would not permit that any one man however exalted by office, or distinguished by abilities, should have a negative on the declared sense of a majority of their representatives; but the experience of all ages had taught them the danger of lodging all power in one body of men.

A second branch of legislature, consisting of a few select persons, under the name of senate, or council, was therefore constituted in eleven of the thirteen states, and their concurrence made necessary to give the validity of law to the acts of a more numerous branch of popular representatives.

New York and Massachusetts went one step farther. The former constituted a council of revision, consisting of the Governor and the heads of the judicial departments, on whose objections to any proposed law a reconsideration became necessary; unless it was confirmed by two thirds of both houses, it could have no operation. A similar power was given to the Governor of Massachusetts.

Georgia and Pennsylvania were the only states whose legislatures consisted of only one branch.* Though many in these states, and a majority in all the others, saw and acknowledged the propriety of a compounded legislature, yet the mode of creating two branches, out of a homogeneous mass of people, was a matter of difficulty. No distinction of ranks existed in the colonies, and none were entitled to any rights, but such as were common to all. Some possessed more wealth than others; but riches and ability were not always associated. Ten of the eleven states, whose legislatures consisted of two branches, ordained that the members of both should be elected by the people. This rather made two co-ordinate houses of representatives, than a check on a single one, by the moderation of a select few.

Maryland adopted a singular plan for constituting an independent senate. By her constitution the members of that body were elected for five years, while the members of the house of delegates held their seats only for one. The number of senators was only fifteen, and they were all elected indiscriminately from the inhabitants of any part of the state, excepting that nine of them were

* Altered by subsequent conventions; both states have now a senate.

to be residents on the west, and six on the east side of the Chesapeake bay. They were elected not immediately by the people, but by electors, two from each county, appointed by the inhabitants for that sole purpose. By these regulations the senate of Maryland consisted of men of influence, integrity and abilities, and such as were a real and beneficial check on the hasty proceedings of a more numerous branch of popular representatives. The laws of that state were well digested, and its interest steadily pursued with peculiar unity of system, while elsewhere it too often happened, in the fluctuation of public assemblies, and where the legislative department was not sufficiently checked, that passion and party predominated over principles and public good.

Pennsylvania instead of a legislative council or senate, adopted the expedient of publishing bills after the second reading, for the information of the inhabitants. This had its advantages and disadvantages. It prevented the precipitate adoption of new regulations, and gave an opportunity of ascertaining the sense of the people on those laws by which they were to be bound: but it carried the spirit of discussion into every corner, and disturbed the peace and harmony of neighbourhoods. By making the business of government the duty of every man, it drew off the attention of many from the steady pursuit of their respective businesses.

The state of Pennsylvania also adopted another institution peculiar to itself, under the denomination of a council of censors.* These were to be chosen once every seven years, and were authorised to inquire whether the constitution had been preserved; whether the legislative and executive branch of government, had performed their duty, or assumed to themselves, or exercised other or greater powers, than those to which they were constitutionally entitled; to inquire whether the public taxes had been justly laid and collected, and in what manner the public monies had been disposed of; and whether, the laws had been duly executed. However excellent this institution may appear in theory, it is doubtful whether in practice it answered any valuable end. It most certainly opened a door for discord, and furnished abundant matter for periodical altercation. Either from the disposition of its inhabitants, its form of government, or some other cause, the people of Pennsylvania have constantly been in a state of fermentation. The end of one public controversy has been the beginning of another. From the collision of parties, the minds of the citizens were sharpened, and their active powers improved: but internal harmony has been unknown. They who were out of place, so narrowly watched those who were in, that nothing injurious to the public could be easily effected: but from the fluctuation of power, and the total want of permanent system, nothing great or lasting could with safety be undertaken, or prosecuted to effect. Under all these disadvantages, the state flourished, and, from the industry and ingenuity of its inhabitants, acquired an unrivalled ascendancy in arts and manufactures. This must in a great measure be ascribed to the influence of the habits of order and industry that had long prevailed.

The Americans agreed in appointing a supreme executive head to each state, with the title either of governor or president. They also agreed in deriving the whole powers of government, either mediately or immediately, from the people. In the eastern states, and in New York, their governors, were elected by the inhabitants, in their respective towns or counties, and in the other states by the legislatures;† but in no case was the smallest title of power exercised from hereditary right. New York was the only state which invested its governor with executive authority without a council.‡ Such was the extreme jealousy of power

* Abolished by a subsequent convention.

† Pennsylvania has since adopted the popular mode of electing a governor.

‡ Several states have since abolished councils as part of the executive.

which pervaded the American states, that they did not think proper to trust the man of their choice with the power of executing their own determinations, without obliging him in many cases to take the advice of such counsellors as they thought proper to nominate. The disadvantages of this institution far outweighed its advantages. Had the governors succeeded by hereditary right, a counsel would have been often necessary to supply the real want of abilities, but when an individual had been selected by the people, as the fittest person for discharging the duties of this high department, to fetter him with a council was either to lessen his capacity of doing good, or to furnish him with a screen for doing evil. It destroyed the secrecy, vigour and despatch, which the executive power ought to possess; and, by making governmental acts the acts of a body, diminished individual responsibility. In some states it greatly enhanced the expenses of government, and in all retarded its operations, without any equivalent advantages.

New York in another particular, displayed political sagacity, superior to her neighbours. This was in her council of appointment, consisting of one senator from each of her four great election districts, authorised to designate proper persons for filling vacancies in the executive departments of government. Large bodies are far from being the most proper depositories of the power of appointing to offices. The assiduous attention of candidates is too apt to bias the voice of individuals in popular assemblies. Besides, in such appointments, the responsibility for the conduct of the officer is in a great measure annihilated. The concurrence of a select few in the nomination of one seems a more eligible mode, for securing a proper choice, than appointments made either by one, or by a numerous body. In the former case, there would be danger of favouritism; in the latter, that modest unassuming merit would be overlooked, in favour of the forward and obsequious.

A rotation of public officers made a part of most of the American constitutions. Frequent elections were required by all: but several refined still farther, and deprived the electors of the power of continuing the same office in the same hands, after a specified length of time. Young politicians suddenly called from the ordinary walks of life, to make laws and institute forms of government, turned their attention to the histories of ancient republics, and the writings of speculative men on the subject of government. This led them into many errors, and occasioned them to adopt sundry opinions, unsuitable to the state of society in America, and contrary to the genius of real republicanism.

The principle of rotation was carried so far, that in some of the states, public officers in the several departments scarcely knew their official duty, till they were obliged to retire and give place to others as ignorant as they had been on their first appointment. If offices had been instituted for the benefit of the holders, the policy of diffusing those benefits would have been proper: but instituted as they were for the convenience of the public, the end was marred by such frequent changes. By confining the objects of choice, it diminished the privileges of electors, and frequently deprived them of the liberty of choosing the man who, from previous experience, was of all men the most suitable. The favourers of this system of rotation contended for it, as likely to prevent a perpetuity of office and power in the same individual or family, and as a security against hereditary honours. To this it was replied, that free, fair and frequent elections were the most natural and proper securities, for the liberties of the people. It produced a more general diffusion of political knowledge, but made more smatterers than adepts in the science of government.

As a farther security for the continuance of republican principles in the American constitutions, they agreed in prohibiting all hereditary honours and distinction of ranks.

It was one of the peculiarities of these new forms

of government, that all religious establishments were abolished. Some retained a constitutional distinction between Christians and others, with respect to eligibility to office: but the idea of supporting one denomination at the expense of others, or of raising any one sect of Christians to a legal pre-eminence, was universally reprobated. The alliance between church and state was completely broken, and each was left to support itself independent of the other.

The far-famed social compact between the people and their rulers, did not apply to the United States. The sovereignty was in the people. In their sovereign capacity, by their representatives, they agreed on forms of government for their own security, and deputed certain individuals as their agents to serve them in public stations, agreeably to constitutions which they prescribed for their conduct.

The world has not hitherto exhibited so fair an opportunity for promoting social happiness. It is hoped for the honour of human nature, that the result will prove the fallacy of those theories, which suppose that mankind are incapable of self-government. The ancients, not knowing the doctrine of representation, were apt in their public meetings to run into confusion; but in America this mode of taking the sense of the people, is so well understood, and so completely reduced to system, that its most populous states are often peaceably convened in an assembly of deputies, not too large for orderly deliberations, and yet representing the whole in equal proportions. These popular branches of legislature are miniature pictures of the community, and, from the mode of their election, are likely to be influenced by the same interest and feelings with the people whom they represent. As a farther security for their fidelity, they are bound by every law they make for their constituents. The assemblage of these circumstances gives as great a security that laws will be made, and government administered, for the good of the people, as can be expected from the imperfection of human institutions.

In this short view of the formation and establishment of the American constitutions we behold our species in a new situation. In no age before, and in no other country, did man ever possess an election of the kind of government, under which he would choose to live. The constituent parts of the ancient free governments were thrown together by accident. The freedom of modern European governments was, for the most part, obtained by the concessions, or liberality of monarchs or military leaders. In America alone, reason and liberty concurred in the formation of constitutions. It is true, from the infancy of political knowledge in the United States, there were many defects in their forms of government: but in one thing they were all perfect. They left to the people the power of altering and amending them, whenever they pleased. In this happy peculiarity they placed the science of politics on a footing with the other sciences, by opening it to improvements from experience, and the discoveries of future ages. By means of this power of amending American constitutions, the friends of mankind have fondly hoped that oppression will one day be no more; and that political evil will at least be prevented or restrained with as much certainty, by a proper combination or separation of power, as natural evil is lessened or prevented, by the application of the knowledge or ingenuity of man to domestic purposes. No part of the history of ancient or modern Europe can furnish a single fact that militates against this opinion; since, in none of its governments, have the principles of equal representation and checks been applied, for the preservation of freedom. On these two pivots are suspended the liberties of most of the states. Where they are wanting, there can be no security for liberty: where they exist, they render any farther security unnecessary.

From history the citizens of the United States had been taught, that the maxims, adopted by the rulers of the earth, that society was instituted for

the sake of the governors; and that the interests of the many were to be postponed to the convenience of the privileged few, had filled the world with bloodshed and wickedness; while experience had proved, that it is the invariable and natural character of power, whether intrusted or assumed, to exceed its proper limits, and, if unrestrained, to divide the world into masters and slaves. They therefore began upon the opposite maxims, that society was instituted, not for the governors, but the governed; that the interest of the few, should in all cases, give way to that of the many; that exclusive and hereditary privileges were useless and dangerous institutions in society; and that entrusted authorities should be liable to frequent and periodical recalls. With them the sovereignty of the people was more than a mere theory. The characteristic of that sovereignty was displayed by their authority in written constitutions.

The rejection of British sovereignty not only involved a necessity of erecting independent constitutions, but of cementing the whole United States by some common bond of union. The act of independence did not hold out to the world thirteen sovereign states, but a common sovereignty of the whole in their united capacity. It therefore became necessary to run the line of distinction, between the local legislatures, and the assembly of states in Congress. A committee was appointed for digesting articles of confederation, between the states or united colonies, as they were then called, at the time the propriety of declaring independence was under debate, and some weeks previously to the adoption of that measure: but the plan was not for sixteen months after so far digested, as to be ready for communication to the states. Nor was it finally ratified by the accession of all the states, till nearly three years more had elapsed. In discussing its articles, many difficult questions occurred. One was, to ascertain the ratio of contributions from each state. Two principles presented themselves: numbers of people, and the value of lands. The last was preferred, as being the truest barometer of the wealth of nations; but from an apprehended impracticability of carrying it into effect, it was soon relinquished, and recurrence had to the former. That the states should be represented in proportion to their importance, was contended by those who had extensive territory: but those, who were confined to small dimensions, replied, that the states confederated as individuals in a state of nature, and should therefore have equal votes. The large states yielded the point, and consented that each state should have an equal suffrage.

It was not easy to define the power of the state legislatures, so as to prevent a clashing between their jurisdiction, and that of the general government. It was thought proper, that the former should be abridged of the power of forming any other confederation or alliance; of laying on any impost or duties that might interfere with treaties made by Congress, of keeping up any vessels of war, or granting letters of marque or reprisal. The powers of Congress were also defined. Of these the principal were as follow: To have the sole and exclusive right of determining on peace or war; of sending or receiving ambassadors; of entering into treaties and alliances; of granting letters of marque and reprisal in times of peace; to be the last resort on appeal, in disputes between two or more states; to have the sole and exclusive right of regulating the alloy and value of coin; of fixing the standard of weights and measures; regulating the trade and managing all affairs with the Indians; establishing and regulating post offices; to borrow money, or emit bills on the credit of the United States; to build and equip a Navy; to agree upon the number of land forces; and to make requisitions from each state for its quota of men, in proportion to the number of its white inhabitants.

No coercive power was given to the general government, nor was it invested with any legislative power over individuals, but only over states in their corporate capacity. A power to regulate

trade, or to raise a revenue from it, though both were essential to the welfare of the union, made no part of this first federal system. To remedy this and all other defects, a door was left open for introducing further provisions, suited to future circumstances.

The articles of confederation were proposed at a time when the citizens of America were young in the science of politics, and when a commanding sense of duty, enforced by the pressure of a common danger, precluded the necessity of a power of compulsion. The enthusiasm of the day gave such credit and currency to paper emissions, as made the raising of supplies an easy matter. The system of federal government was, therefore, more calculated for what men then were, under those circumstances, than for the languid years of peace, when selfishness usurped the place of public spirit and when credit no longer assisted, in providing for the exigencies of government.

The experience of a few years, after the termination of the war, proved, as will appear in its proper place, that a radical change of the whole system was necessary to the good government of the United States.

CHAPTER XIV.

The Campaign of 1777, in the Middle States.

Soon after the declaration of independence, the authority of Congress was obtained for raising an army, that would be more permanent than the temporary levies, which they had previously brought into the field. It was at first proposed to recruit for the indefinite term of the war; but it being found on experiment, that the habits of the people were averse to engagements for such an uncertain period of service, the recruiting officers were instructed to offer the alternatives of enlisting either for the war, or for three years. Those who engaged on the first condition, were promised a hundred acres of land, in addition to their pay and bounty. The troops raised by Congress, for the service of the United States, were called continentals. Though in September, 1776, it had been resolved to raise 88 battalions, and in December following, authority was given to General Washington to raise 16 more, yet very little progress had been made in the recruiting business, till after the battles of Trenton and Princeton. So much time was necessarily consumed, before these new recruits joined the commander in chief, that his whole force, at Morristown and the several outposts, for some time did not exceed 1500 men.—Yet these 1500 kept many thousands of the British closely pent up in Brunswick. Almost every party, that was sent out by the latter, was successfully opposed by the former, and the adjacent country preserved in a great degree of tranquility.

It was matter of astonishment, that the British suffered the dangerous interval, between the disbanding of one army and the raising of another, to pass away without doing something of consequence, against the remaining shadow of an armed force. Hitherto, there had been a deficiency of arms and ammunition, as well as of men; but in the spring a vessel of 24 guns arrived from France, at Portsmouth, in New Hampshire, with upwards of 11,000 stand of arms, and 1000 barrels of powder. Ten thousand stand of arms arrived about the same time, in another part of the United States.

Before the royal army took the field, in prosecution of the main business of the campaign, two enterprises for the destruction of American stores were undertaken. The first was conducted by Colonel Bird; the second by Major General Tryon. The former landed 23d March with about 500 men at Peekskill, near 50 miles from New York. General Washington had repeatedly cautioned the commissaries, not to suffer large quantities of provisions to be near the water: but his prudent advice had not been regarded. The few

Americans, who were stationed as a guard at Peekskill, on the approach of Colonel Bird, fired the principal store-houses, and retired to a good position, two or three miles distant. The loss of provisions, forage, and other valuable articles, was considerable.

Major General Tryon, with a detachment of 2000 men, embarked at New York, 26th April and passing through the Sound, landed between Fairfield and Norwalk. They advanced through the country without interruption, and arrived in about twenty hours at Danbury. On their approach, the few continentals who were in the town withdrew from it. The British began to burn and destroy: but abstained from injuring the property of such as were reputed Tories. Eighteen houses, 800 barrels of pork and beef, 800 barrels of flour, 2000 bushels of grain, 1700 tents, and some other articles, were lost to the Americans. Generals Wooster, Arnold, and Silliman, having hastily collected a few hundred of the inhabitants, made arrangements for interrupting the march of the royal detachment: but the arms of those who came forward on this emergency were injured by excessive rains, and the men were worn down with a march of thirty miles in the course of a day. Such dispositions were nevertheless made, and such posts were taken, as enabled them to annoy the invaders when returning to their ships. General Arnold, with about 500 men, by a rapid movement, reached Ridge-field in their front, barricaded the road, kept up a brisk fire upon them, and sustained their attack, till they had made a lodgment on a ledge of rocks on his left. After the British had gained this eminence, a whole platoon levelled at General Arnold, not more than thirty yards distant. His horse was killed; but he escaped. While he was extricating himself from his horse, a soldier advanced to run him through with a bayonet: but he shot him dead with his pistol, and afterwards got off safe. The Americans, in several detached parties, harassed the rear of the British, and from various stands kept up a scattering fire upon them, till they reached their shipping.

The British accomplished the object of the expedition: but it cost them dearly. They had, by computation, two or three hundred men killed, wounded, and taken. The loss of the Americans was about twenty killed, and forty wounded.—Among the former was Dr. Atwater, a gentleman of character and influence. Colonel Lamb was among the latter. General Wooster, though seventy years old, behaved with the vigour and spirit of youth. While gloriously defending the liberties of his country he received a mortal wound. Congress resolved, that a monument should be erected to his memory, as an acknowledgment of his merit and services. They also resolved, that a horse, properly caparisoned, should be presented to Gen. Arnold, in their name, as a token of their approbation of his gallant conduct.

Not long after the excursion to Danbury, Colonel Meigs, an enterprising American officer on the 24th of May transported a detachment of about 170 Americans, in whale boats, over the Sound, which separates Long Island from Connecticut; burned twelve brigs and sloops, belonging to the British; destroyed a large quantity of forage and other articles, collected for their use in Sag-harbour, on that Island; killed six of their soldiers, and brought off ninety prisoners, without having a single man either killed or wounded. The Colonel and his party returned to Guilford in twenty-five hours from the time of their departure, having in that short space not only completed the object of their expedition, but traversed by land and water, a space not less than ninety miles. Congress ordered an elegant sword to be presented to Colonel Meigs, for his good conduct in this expedition.

As the season advanced, the American army, in New Jersey, was reinforced by the successive arrivals of recruits; but nevertheless, at the opening of the campaign, it amounted only to 7,272 men,

Great pains had been taken to recruit the British

army with American levies. A commission of Brigadier General had been conferred on Oliver Delancy, a loyalist of great influence in New York, and he was authorised to raise three battalions.—Every effort had been made, to raise the men, both within and without the British lines, and also from among the American prisoners: but with all these exertions, only 597 were procured. Courtland Skinner, a loyalist well known in Jersey, was also appointed a brigadier, and authorised to raise five battalions. Great efforts were made to procure recruits for his command: but their whole number amounted only to 517.

Towards the latter end of May, General Washington quitted his winter encampment at Morristown, and took a strong position at Middlebrook. Soon after this movement, the British marched from Brunswick, and extended their van as far as Somerset court-house; but in a few days returned to their former station. This sudden change was owing to the unexpected opposition which seemed to be collecting from all quarters; for the Jersey militia turned out in a very spirited manner, to oppose them. The same army had lately marched through New Jersey, without being fired upon; and even small parties of them had safely patrolled the country, at a distance from their camp; but experience having proved that British protections were no security for property, the inhabitants generally resolved to try the effects of resistance, in preference to a second submission. A fortunate mistake gave them an opportunity of assembling in great force on this emergency. Signals had been agreed on, and beacons erected on high places, with the view of communicating, over the country, instantaneous intelligence of the approach of the British. A few hours before the royal army began their march, the signal of alarm, on the foundation of a false report, had been hoisted.—The farmers, with arms in their hands, ran to the place of rendezvous, from considerable distances. They had set out at least twelve hours before the British, and on their appearance were collected in formidable numbers. Whether Sir William Howe intended to force his way through the country to the Delaware, and afterwards to Philadelphia, or to attack the American army, is uncertain; but whatever was his design, he suddenly relinquished it, and fell back to Brunswick. The British army, on their retreat, burned and destroyed the farm houses on the road; nor did they spare the buildings dedicated to the worship of the Deity.

Sir William Howe, after his retreat to Brunswick, endeavoured to provoke General Washington to an engagement; and left no manoeuvre untried, that was calculated to induce him to quit his position. At one time, he appeared as if he intended to push on, without regarding the army opposed to him. At another, he accurately examined the situation of the American encampment, hoping that some unguarded part might be found, on which an attack might be made, that would open the way to a general engagement. All these hopes were frustrated. Gen. Washington knew the full value of his situation. He had too much penetration to lose it from the circumvention of military manoeuvres, and too much temper to be provoked to a dereliction of it. He was well apprised that it was not the interest of his country, to commit its fortune to a single action.

Sir William Howe suddenly relinquished his position in front of the Americans, and retired with his whole force to Amboy. The apparently retreating British were pursued by a considerable detachment of the American army, and General Washington advanced from Middlebrook to Quibbletown, to be near at hand for the support of his advanced parties. The British general, on the 24th June, marched his army back from Amboy, with great expedition, hoping to bring on a general action on equal ground: but he was disappointed. General Washington fell back, and posted his army in such an advantageous position, as compensated for the inferiority of his numbers. Sir William Howe was now fully convinced of the impossibility of compelling a general engage-

ment on equal terms, and also satisfied that it would be too hazardous to attempt passing the Delaware, while the country was in arms, and the main American army in full force in his rear. He therefore returned to Amboy, and thence passed over to Staten Island, resolving to prosecute the objects of the campaign by another route.

During the period of these movements, the real designs of General Howe were involved in obscurity. Though the season for military operations was advanced as far as the month of July, yet his determinate object could not be ascertained.—Nothing on his part had hitherto taken place, but alternately advancing and retreating. Washington's embarrassment on this account was increased, by intelligence that Burgoyne was coming in great force towards New York from Canada. Apprehending that Sir William Howe would ultimately move up the North River, and that his movements which looked southwardly were feints, the American general detached a brigade to reinforce the northern division of his army. Successive advices of the advance of Burgoyne favoured the idea, that a junction of the two royal armies near Albany was intended. Some movements were therefore made by Washington towards Peekskill, and on the other side towards Trenton; while the main army was encamped near the Clove, in readiness to march either to the north or south, as the movements of Sir William Howe might require. At length, the main body of the royal army, consisting of thirty-six British and Hessian battalions, with a regiment of light horse, a loyal provincial corps, called the queen's rangers, and a powerful artillery, amounting in the whole to about 16,000 men, departed from Sandy-hook, and were reported to steer southwardly.

About the time of this embarkation, a letter from Sir William Howe to General Burgoyne was intercepted. This contained intelligence, that the British troops were destined to New Hampshire. The intended deception was so superficially veiled, that, in conjunction with the intelligence of the British embarkation, it produced a contrary effect. Within one hour after the reception of the intercepted letter, Washington gave orders to his army to move to the southward; but he was nevertheless so much impressed with a conviction, that it was the true interest of Howe to move towards Burgoyne, that he ordered the American army to halt for some time, at the river Delaware, suspecting that the movement of the royal army to the southward was a feint, calculated to draw him farther from the North River. The British fleet, having sailed from Sandy-hook, was a week at sea before it reached Cape Henlopen. At this time and place, for reasons that do not obviously occur, General Howe gave up the idea of approaching Philadelphia, by ascending the Delaware, and resolved on a circuitous route by the way of the Chesapeake. Perhaps he counted on being joined by large reinforcements, from the numerous Tories in Maryland or Delaware, or perhaps he feared the obstructions which the Pennsylvanians had planted in the Delaware. If these were his reasons, he was mistaken in both. From the Tories he received no advantage: and from the obstructions in the river, his ships could have received no detriment, if he had landed his troops at Newcastle, which was 14 miles nearer Philadelphia, than the head of Chesapeake bay.

The British, after they had left the Capes of the Delaware, had a tedious and uncomfortable passage, being twenty days before they entered the Capes of Virginia. They ascended the bay, with a favourable wind, and on the 25th of August landed at Turkey-point. The circumstance of the British putting out to sea, after they had looked into the Delaware, added to the apprehension before entertained, that the whole was a feint calculated to draw the American army farther from the North River, so as to prevent their being at hand to oppose a junction between Howe and Burgoyne. Washington therefore fell back to such a middle station, as would enable him, either speedily to return to the North River, or advance to the

relief of Philadelphia. The British fleet, after leaving the Capes of the Delaware, was not heard of for nearly three weeks; except that it had once or twice been seen near the coast steering southwardly. A council of officers convened, 21st of August, at Neshaminy, near Philadelphia, unanimously gave it as their opinion, that Charleston, in South Carolina, was most probably their object, and that it would be impossible for the army to march thither in season for its relief. It was therefore concluded, to try to repair the loss of Charleston, which was considered as unavoidable, either by attempting something on New York island, or, by uniting with the northern army, to give more effectual opposition to Burgoyne. A small change of position, conformably to this new system, took place. The day before the above resolution was adopted the British fleet entered the Chesapeake. Intelligence thereof in a few days reached the American army, and dispelled that mist of uncertainty, in which General Howe's movements had heretofore been enveloped. The American troops were put in motion to meet the British army. Their numbers on paper amounted to 14,000; but their real effective force, on which dependence might be placed in the day of battle, did not much exceed 8000 men. Every appearance of confidence was assumed by them as they passed through Philadelphia, that the citizens might be intimidated from joining the British.—About the same time numbers of the principal inhabitants of that city, being suspected of disaffection to the American cause, were taken into custody and sent to Virginia.

Soon after Sir William Howe had landed his troops in Maryland, he put forth a declaration, in which he informed the inhabitants, that he had issued the strictest orders to the troops, "for the preservation of regularity and good discipline, and that the most exemplary punishment would be inflicted upon those who should dare to plunder the property, or molest the persons of any of his majesty's well disposed subjects." He seemed to be fully apprised of the consequences, which had resulted from the indiscriminate plunderings of his army in New Jersey, and determined to adopt a more polite line of conduct. Whatever his lordship's intentions might have been, they were by no means seconded by his troops.

The royal army set out from the eastern heads of the Chesapeake, September 3d, with a spirit which promised to compensate for the various delays, that had hitherto wasted the campaign.—Their tents and baggage were left behind, and they trusted their future accommodation to such quarters as their arms might procure. They advanced with boldness, till they were within two miles of the American army, which was then posted near Newport. Washington soon changed his position, and took post on the high ground near Chadd's ford, on the Brandywine creek, with an intention of disputing the passage. It was the wish, but by no means the interest of the Americans to try their strength in an engagement.—Their regular troops were not only greatly inferior in discipline, but in numbers, to the royal army. The opinion of the inhabitants, though founded on no circumstances more substantial than their wishes, imposed a species of necessity on the American General, to keep his army in front of the enemy, and to risk an action for the security of Philadelphia. Instead of this, had he taken the ridge of high mountains on his right, the British must have respected his numbers, and probably would have followed him up the country.—By this policy the campaign might have been wasted away in a manner fatal to the invaders; but the majority of the American people were so impatient of delays, and had such an overweening conceit of the numbers and prowess of their army, that they could not comprehend the wisdom and policy of manœuvres, to shun a general engagement.

On this occasion necessity dictated, that a sacrifice should be made on the altar of public opinion. A general action was therefore hazarded on the

11th of September. This took place at Chadd's ford, on the Brandywine; a small stream which empties itself into Christiana creek, near its conflux with the river Delaware.

The royal army advanced at day break in two columns, commanded by lieutenant general Kniphausen, and lord Cornwallis. The first took the direct road to Chadd's ford, and made a show of passing it, in front of the main body of the Americans. At the same time, the other column moved up on the west side of the Brandywine to its fork, crossed both its branches, and then marched down on its east side, with the view of turning the right wing of their adversaries. This they effected, and compelled them to retreat with great loss.

General Kniphausen amused the Americans with the appearance of crossing the ford, but did not attempt it until lord Cornwallis, having crossed above, and moved down on the opposite side, had commenced his attack. Kniphausen then crossed the ford, and attacked the troops posted for its defence. These, after a severe conflict, were compelled to give way. The retreat of the Americans soon became general, and was continued to Chester.

The final issue of battles often depends on small circumstances, which human prudence cannot control. One of these occurred here, and prevented General Washington from executing a bold design, to effect which his troops were actually in motion. This was, to cross the Brandywine, and attack Kniphausen, while General Sullivan and lord Stirling should keep Earl Cornwallis in check. In the most critical moment, Washington received intelligence which he was obliged to credit, that the column of lord Cornwallis had been only making a feint, and was returning to join Kniphausen.—This prevented the execution of a plan, which, if carried into effect, would probably have given a different turn to the events of the day.

The killed and wounded, in the royal army, were near six hundred. The loss of the Americans was twice that number. In the list of their wounded were two general officers, the Marquis de la Fayette* and General Woodford.

*As we intend to scatter through this work some biographical notices of those distinguished men who took an active part in the revolutionary war, and who assisted in the councils of our nation, we shall here introduce the great and good La Fayette, from the pen of that eminent statesman and scholar, John Quincy Adams.—The oration was delivered before the congress of the United States, on the 31st of December, 1834, at their request, and exhibits the finest view, that either country has produced, of the patriot and warrior of both hemispheres, whose name is given to immortality on every hour that flies:—Ed.

ORATION.

Fellow-citizens of the Senate and

House of Representatives of the United States:

If the authority by which I am now called to address you is one of the highest honours that could be conferred upon a citizen of this Union by his countrymen, I cannot dissemble to myself that it embraces at the same time one of the most arduous duties that could be imposed. Grateful to you for the honour conferred upon me by your invitation, a sentiment of irrepressible and fearful diffidence absorbs every faculty of my soul in contemplating the magnitude, the difficulties, and the delicacy of the task which it has been your pleasure to assign to me.

I am to speak to the North American states and people, assembled here in the persons of their honoured and confidential lawgivers and representatives. I am to speak to them, by their own appointment, upon the life and character of a man whose life was, for nearly threescore years, the his-

Handwritten text, likely a title or description, written vertically along the left margin of the page.

tory of the civilized world; of a man, of whose character, to say that it is indissolubly identified with the revolution of our independence, is little more than to mark the features of his childhood; of a man, the personified image of self-circumscribed liberty. Nor can it escape the most superficial observation, that, in speaking to the fathers of the land upon the life and character of LAFAYETTE, I cannot forbear to touch upon topics which are yet deeply convulsing the world, both of opinion and of action. I am to walk between burning ploughshares; to tread upon fires which have not yet even collected cinders to cover them.

If, in addressing their countrymen upon their most important interests, the Orators of Antiquity were accustomed to begin by supplication to their gods that nothing unsuitable to be said or unworthy to be heard might escape from their lips, how much more forcible is my obligation to invoke the favour of Him "who touched Isaiah's hallowed lips with fire," not only to extinguish in the mind every conception unadapted to the grandeur and sublimity of the theme, but to draw from the bosom of the deepest conviction thoughts congenial to the merits which it is the duty of the discourse to unfold, and words not unworthy of the dignity of the auditory before whom I appear.

In order to form a just estimate of the life and character of Lafayette, it may be necessary to advert, not only to the circumstances connected with his birth, education, and lineage, but to the political condition of his country and Great Britain, her national rival and adversary, at the time of his birth, and during his years of childhood.

On the sixth day of September, one thousand seven hundred and fifty-seven, the hereditary Monarch of the British Islands was a native of Germany. A rude, illiterate old soldier of the wars for the Spanish succession; little versed even in the language of the nation over which he ruled; educated to the maxims and principles of the feudal law; of openly licentious life, and of moral character far from creditable; he styled himself, by the grace of God, of Great Britain, France, and Ireland, King; but there was another and real king of France, no better, perhaps worse, than himself, and with whom he was then at war. This was Louis, the fifteenth of the name, great grandson of his immediate predecessor, Louis the Fourteenth, sometimes denominated the Great. These two kings held their thrones, by the law of hereditary succession, variously modified, in France by the Roman Catholics, and in Britain by Protestant reformed christianity.

They were at war, chiefly for conflicting claims to the possession of the western wilderness of North America; a prize, the capabilities of which are now unfolding themselves with a grandeur and magnificence unexampled in the history of the world; but of which, if the nominal possession had remained in either of the two princes, who were staking their kingdoms upon the issue of the strife, the buffalo and the beaver, with their hunter, the Indian savage, would, at this day, have been as they then were, the only inhabitants.

In this war, GEORGE WASHINGTON, then at the age of twenty-four, was on the side of the British German King, a youthful, but heroic combatant; and, in the same war, the father of Lafayette was on the opposite side, exposing his life in the heart of Germany, for the cause of the King of France.

On that day, the sixth of September, one thousand seven hundred and fifty-seven was born GILBERT MOTIER DE LAFAYETTE, at the Castle of Chavanac, in Auvergne, and a few months after his birth his father fell in battle at Minden.

Let us here observe the influence of political institutions over the destinies and the characters of men. George the Second was a German Prince; he had been made king of the British Islands by the accident of his birth: that is to say, because his great grandmother had been the daughter of James the First: that great grandmother had been married to the King of Bohemia, and her youngest daughter had been married to the Elector of Hanover. George the Second's father was her son,

and, when James the Second had been expelled from his throne and his country by the indignation of his people, revolted against his tyranny, and when his two daughters, who succeeded him, had died without issue, George the First, the son of the Electress of Hanover, became King of Great Britain, by the settlement of an act of parliament, blending together the principle of hereditary succession with that of Reformed Protestant christianity, and the rites of the Church of England.

The throne of France was occupied by virtue of the same principle of hereditary succession, differently modified, and blended with the christianity of the church of Rome. From this line of succession all females were inflexibly excluded.—Louis the Fifteenth, at the age of six years, had become the absolute sovereign of France, because he was the great grandson of his immediate predecessor. He was of the third generation in descent from the preceding king, and, by the law of primogeniture engrafted upon that of lineal succession, did, by the death of his ancestor, forthwith succeed, though in childhood, to an absolute throne, in preference to numerous descendants from that same ancestor, then in the full vigor of manhood.

The first reflection that must occur to a rational being, in contemplating these two results of the principle of hereditary succession, as resorted to for designating the rulers of nations, is, that two persons more unfit to occupy the thrones of Britain and of France, at the time of their respective accessions, could scarcely have been found upon the face of the Globe; George the Second, a foreigner, the son and grandson of foreigners, born beyond the seas, educated in uncongenial manners, ignorant of the constitution, of the laws, even of the language of the people over whom he was to rule: and Louis the Fifteenth, an infant, incapable of discerning his right hand from his left. Yet, strange as it may sound to the ear of unsophisticated reason, the British nation were wedded to the belief that this act of settlement, fixing their crown upon the heads of this succession of total strangers, was the brightest and most glorious exemplification of their national freedom; and not less strange, if aught in the imperfection of human reason could seem strange, was that deep conviction of the French people, at the same period, that *their* chief glory and happiness consisted in the vehemence of their affection for their king, because he was descended in an unbroken male line of genealogy from St. Louis.

One of the fruits of this line of hereditary succession, modified by sectarian principles of religion, was to make the peace and war, the happiness or misery of the people of the British empire, dependent upon the fortunes of the Electorate of Hanover; the personal domain of their imported king. This was a result calamitous alike to the people of Hanover, of Britain, and of France; but it was one of the two causes of that dreadful war then waging between them; and as the cause, so was this a principle theatre of that disastrous war. It was at Minden, in the heart of the Electorate of Hanover, that the father of Lafayette fell, and left him an orphan, a victim to that war, and to the principle of hereditary succession from which it emanated.

Thus, then, it was on the 6th of September, 1757, the day when Lafayette was born. The kings of France and Britain were seated upon their thrones by virtue of the principle of hereditary succession, variously modified and blended with different forms of religious faith, and they were waging war against each other, and exhausting the blood and treasure of their people for causes in which neither of the nations had any beneficial or lawful interest.

In this war the father of Lafayette fell in the cause of his king, but not of his country. He was an officer of an invading army, the instrument of his sovereign's wanton ambition and lust of conquest. The people of the Electorate of Hanover had done no wrong to him or to his country. When his son came to an age capable of understanding the irreparable loss that he had suf-

fered, and to reflect upon the cause of his father's fate, there was no drop of consolation mingled in the cup from the consideration that he had died for his country. And when the youthful mind was awakened to meditation upon the rights of mankind, the principles of freedom, and theories of government, it cannot be difficult to perceive, in the illustrations of his own family records, the source of that aversion to hereditary rule, perhaps the most distinguishing feature of his political opinions, and to which he adhered through all the vicissitudes of his life.

In the same war, and at the same time, George Washington was armed, a loyal subject, in support of his king; but to him that was also the cause of his country. His commission was not in the army of George the Second, but issued under the authority of the colony of Virginia, the province in which he received his birth. On the borders of that province, the war in its most horrid forms was waged; not a war of mercy, and of courtesy, like that of the civilized embattled legions of Europe; but war to the knife; the war of Indian savages, terrible to man, but more terrible to the tender sex, and most terrible to helpless infancy. In defence of his country against the ravages of such a war, Washington, in the dawn of manhood, had drawn his sword, as if Providence, with deliberate purpose, had sanctified for him the practice of war, all detestable and unhallowed as it is, that he might, in a cause, virtuous and exalted by its motive and its end, be trained and fitted in a congenial school to march in aftertimes the leader of heroes in the war of his country's independence.

At the time of the birth of Lafayette, this war, which was to make him a fatherless child, and in which Washington was laying broad and deep, in the defence and protection of his native land, the foundations of his unrivalled renown, was but in its early stage. It was to continue five years longer, and was to close with the total extinguishment of the colonial dominion of France on the continent of North America. The deep humiliation of France, and the triumphant ascendancy on this continent of her rival, were the first results of this great national conflict. The complete expulsion of France from North America seemed to the superficial vision of men to fix the British power over these extensive regions, on foundations immovable as the everlasting hills.

Let us pass in imagination a period of only twenty years, and alight upon the borders of the river Brandywine. Washington is commander-in-chief of the armies of the United States of America; war is again raging in the heart of his native land; hostile armies of one and the same name, blood, and language, are arrayed for battle on the banks of the stream; and Philadelphia, where the United States are in Congress assembled, and whence their decree of independence has gone forth, is the destined prize to the conflict of the day. Who is that tall, slender youth, of foreign air and aspect, scarcely emerged from the years of boyhood, and fresh from the walls of a college; fighting, a volunteer, at the side of Washington, bleeding, unconsciously to himself, and rallying his men to secure the retreat of the scattered American ranks? It is GILBERT MOTIER DE LAFAYETTE; the son of the victim of Minden; and he is bleeding in the cause of North American independence and of freedom.

We pause one moment to enquire what was this cause of North American independence, and what were the motives and inducements to the youthful stranger to devote himself, his life, and fortune to it.

The people of the British colonies in North America, after a controversy of ten years' duration with their sovereign beyond the seas, upon an attempt by him and his parliament to tax them without their consent, had been constrained by necessity to declare themselves independent; to dissolve the tie of their allegiance to him; to renounce their right to its protection, and to assume their station among the independent civilized nations of the earth. This had been done with a deliberation and solemnity unexampled in the his-

tory of the world; done in the midst of a civil war, differing in character from any of those which for centuries before had desolated Europe. The war had risen upon a question between the rights of the people and the powers of their government. The discussions, in the progress of the controversy, had opened to the contemplations of men the first foundations of civil society and of government. The war of Independence began by litigation upon a petty stamp on paper, and a tax of three pence a pound on tea; but these broke up the fountains of the great deep, and the deluge ensued. Had the British parliament the right to tax the people of the colonies in another hemisphere, not represented in the imperial legislature? They affirmed they had: the people of the colonies insisted they had not. There were ten years of pleading before they came to an issue; and all the legitimate sources of power, and all the primitive elements of freedom were scrutinized, debated, analyzed, and elucidated, before the lighting of the torch of Ate, and her cry of havoc upon letting slip the dogs of war.

When the day of conflict came, the issue of the contest was necessarily changed. The people of the colonies had maintained the contest on the principle of resisting the invasion of chartered rights; first by argument and remonstrance, and, finally, by appeal to the sword. But with the war came the necessary exercise of sovereign powers. The Declaration of Independence justified itself as the only possible remedy for insufferable wrongs. It seated itself upon the first foundations of the law of nature, and the incontestable doctrine of human rights. There was no longer any question of the constitutional powers of the British parliament, or of violated colonial charters. Thenceforward the American nation supported its existence by war; and the British nation by war, was contending for conquest. As, between the two parties, the single question at issue was Independence; but in the confederate existence of the North American Union, liberty; not only their own liberty, but the vital principle of liberty to the whole race of civilized man, was involved.

It was at this stage of the conflict, and immediately after the Declaration of Independence, that it drew the attention, and called into action the moral sensibilities and the intellectual faculties of Lafayette, then in the nineteenth year of his age.

The war was revolutionary. It began by the dissolution of the British government in the colonies; the people of which were by that operation, left without any government whatever. They were then at one and the same time maintaining their independent national existence by war, and forming new social compacts for their own government thenceforward. The construction of civil society; the extent and the limitations of organized power; the establishment of a system of government combining the greatest enlargement of individual liberty with the most perfect preservation of public order, were the continual occupations of every mind. The consequences of this state of things to the history of mankind, and especially of Europe, were foreseen by none. Europe saw nothing but the war; a people struggling for liberty, and against oppression; and the people in every part of Europe sympathized with the people of the American colonies.

With their governments it was not so. The people of the American colonies were insurgents; all governments abhor insurrection: they were revolted colonists. The great maritime powers of Europe had colonies of their own, to which the example of resistance against oppression might be contagious. The American colonies were stigmatized in all the official acts of British government as rebels; and rebellion to the governing part of mankind is as the sin of witchcraft. The governments of Europe, therefore, were, at heart, on the side of the British government in this war, and the people of Europe were on the side of the American people.

Lafayette, by his position, and condition in life, was one of those who, governed by the ordinary

impulses which influence and control the conduct of men, would have sided in sentiment with the British or royal cause.

Lafayette was born a subject of the most absolute and most splendid monarchy of Europe, and in the highest rank of her proud and chivalrous nobility. He had been educated at a college of the University of Paris, founded by the royal munificence of Louis the Fourteenth, or of his minister, Cardinal Richelieu. Left an orphan in early childhood, with the inheritance of a princely fortune, he had been married, at sixteen years of age, to a daughter of the house of Noailles, the most distinguished family of the kingdom, scarcely deemed in public consideration inferior to that which wore the crown. He came into active life, at the change from boy to man, a husband and a father, in the full enjoyment of every thing that avarice could covet, with a certain prospect before him of all that ambition could crave. Happy in his domestic affections, incapable from the benignity of his nature, of envy, hatred, or revenge, a life of "ignoble ease and indolent repose" seemed to be that which nature and fortune had combined to prepare before him. To men of ordinary mould this condition would have led to a life of luxurious apathy and sensual indulgence. Such was the life into which, from the operation of the same causes, Louis the Fifteenth had sunk, with his household and court, while Lafayette was rising to manhood, surrounded by the contamination of their example. Had his natural endowments been even of the higher and nobler order of such as adhere to virtue, even in the lap of prosperity, and in the bosom of temptation, he might have lived and died a pattern of the nobility of France, to be classed, in aftertimes, with the Turennes and the Montausiers of the age of Louis the Fourteenth, or with the Villars or the Lamoignons of the age immediately preceding his own.

But as, in the firmament of heaven that rolls over our heads, there is, among the stars of the first magnitude, one so pre-eminent in splendour, as, in the opinion of astronomers, to constitute a class by itself; so, in the fourteen hundred years of the French monarchy, among the multitudes of great and mighty men which it has evolved, the name of Lafayette stands unrivalled in the solitude of glory.

In entering upon the threshold of life, a career was to open before him. He had the option of the court and the camp. An office was tendered to him in the household of the king's brother, the count de Provence, since successively a royal exile and a reinstated king. The servitude and inaction of a court had no charms for him; he preferred a commission in the army, and, at the time of the declaration of independence, was a captain of dragoons in garrison at Metz.

There, at an entertainment given by his relative, the Marechal de Broglie, the commandant of the place, to the duke of Gloucester, brother to the British king, and then a transient traveller through that part of France, he learns, as an incident of intelligence received that morning by the English prince from London, that the congress of rebels, at Philadelphia, had issued a declaration of independence. A conversation ensues upon the causes which have contributed to produce this event, and upon the consequences which may be expected to flow from it. The imagination of Lafayette has caught across the Atlantic tide the spark emitted from the declaration of independence; his heart has kindled at the shock, and before he slumbers upon his pillow, he has resolved to devote his life and fortune to the cause.

You have before you the cause and the man.—The self-devotion of Lafayette was twofold. First, to the people, maintaining a bold and seemingly desperate struggle against oppression, and for national existence. Secondly, and chiefly, to the principles of his declaration, which then first unfurled before his eyes the consecrated standard of human rights. So that standard, without an instant of hesitation, he repaired. Where it would lead him, it is scarcely probable that he himself

then foresaw. It was then identical with the stars and stripes of the American Union, floating to the breeze from the hall of independence, at Philadelphia. Nor sordid avarice, nor vulgar ambition, could point his footsteps to the pathway leading to that banner. To the love of ease or pleasure nothing could be more repulsive. Something may be allowed to the beatings of the youthful breast, which make ambition virtue, and something to the spirit of military adventure, imbibed from his profession, and of which he felt in common with many others. France, Germany, Poland, furnished to the armies of this union, in our revolutionary struggle no inconsiderable number of officers of high rank and distinguished merit. The name of Pulaski and de Kalb are numbered among the martyrs of our freedom, and their ashes repose in our soil side by side with the canonized bones of Warren and of Montgomery. To the virtues of Lafayette, a more protracted career and happier earthly destinies were reserved. To the moral principle of political action, the sacrifices of no other man were comparable to his. Youth, health, fortune; the favour of his king; the enjoyment of ease and pleasure; even the choicest blessings of domestic felicity; he gave them all for toil and danger in a distant land, and an almost hopeless cause; but it was the cause of justice, and of the rights of human kind.

The resolve is firmly fixed, and it now remains to be carried into execution. On the 7th of December, 1776, Silas Deane, then a secret agent of the American Congress at Paris, stipulates with the Marquis de Lafayette that he shall receive a commission, to date from that day, of major general in the army of the United States; and the Marquis stipulates, in return, to depart when and how Mr. Deane shall judge proper, to serve the United States with all possible zeal, without pay or emolument, reserving to himself only the liberty of returning to Europe if his family or his king should recall him.

Neither his family nor his king were willing that he should depart; nor had Mr. Deane the power, either to conclude this contract, or to furnish the means of his conveyance to America. Difficulties rise up before him only to be dispersed, and obstacles thicken only to be surmounted. The day after the signature of the contract, Mr. Deane's agency is superseded by the arrival of Doctor Benjamin Franklin and Arthur Lee as his colleagues in commission; nor did they think themselves authorized to confirm his engagements, Lafayette is not to be discouraged. The commissioners extenuate nothing of the unpromising condition of their cause. Mr. Deane avows his inability to furnish him with a passage to the United States. "The more desperate the cause," says Lafayette, "the greater need has it of my services; and if Mr. Deane has no vessel for my passage, I shall purchase one myself, and will traverse the ocean with a selected company of my own."

Other impediments arise. His design becomes known to the British ambassador at the court of Versailles, who remonstrates to the French government against it. At his instance, orders are issued for the detention of the vessel purchased by the Marquis, and fitted out at Bordeaux, and for the arrest of his person. To elude the first of these orders the vessel is removed from Bordeaux to the neighbouring port of passage, within the dominion of Spain. The order for his arrest is executed; but, by stratagem and disguise, he escapes from the custody of those who have him in charge, and before a second order can reach him he is safe on the ocean wave, bound to the land of independence and of freedom.

It has been necessary to clear out the vessel for an island for the West Indies; but, once at sea he avails himself of his right as owner of the ship, and compels his captain to steer for the shores of emancipated North America. He lands with his companions, on the 25th of April, 1777, in South Carolina, not far from Charleston, and finds a most cordial reception and hospitable welcome in the house of Major Huger.

Every detail of this adventurous expedition, full of incidents, combining with the simplicity of historical truth all the interest of romance, is so well known, and so familiar to the memory of all who hear me, that I pass them over without farther notice.

From Charleston he proceeded to Philadelphia, where the Congress of the revolution were in session, and where he offered his services in the cause. Here, again, he was met with difficulties, which, to men of ordinary minds, would have been insurmountable. Mr. Deane's contracts were so numerous, and for offices of rank so high, that it was impossible they should be ratified by the Congress. He had stipulated for the appointment of other Major Generals; and, in the same contract with that of Lafayette, for eleven other officers, from the rank of a Colonel to that of Lieutenant. To introduce these officers, strangers, scarcely one of whom could speak the language of the country, into the American army, to take rank and precedence over the native citizens whose ardent patriotism had pointed them to the standard of their country, could not, without great injustice, nor without exciting the most fatal dissensions, have been done; and this answer was necessarily given as well to Lafayette as to the other officers who had accompanied him from Europe. His reply was an offer to serve as a volunteer, and without pay. Magnanimity, thus disinterested, could not be resisted, nor could the sense of it be worthily manifested by a mere acceptance of the offer. On the 31st of July, 1777, therefore, the following resolution and preamble are recorded upon the journals of Congress:

"Whereas, the Marquis de Lafayette, out of his great zeal to the cause of liberty, in which the United States are engaged, has left his family and connexions, and, at his own expense, come over to offer his service to the United States, without pension or particular allowance, and is anxious to risk his life in our cause:

Resolved, That his services be accepted, and that, in consideration of his zeal, illustrious family, and connexions, he have the rank and commission of Major General in the army of the United States."

He had the rank and commission, but no command as a Major General. With this, all personal ambition was gratified; and whatever services he might perform, he could attain no higher rank in the American army. The discontents of officers already in the service, at being superseded in command by a stripling foreigner, were dissipated; nor was the prudence of Congress, perhaps, without its influence in withholding a command, which, but for a judgment premature "beyond the slow advance of years," might have hazarded something of the sacred cause itself, by confidence too hastily bestowed.

The day after the date of his commission, he was introduced to Washington commander-in-chief of the armies of the confederation. It was the critical period of the campaign of 1777. The British army commanded by Lord Howe, was advancing from the head of Elk, to which they had been transported by sea from New York, upon Philadelphia. Washington by a counteracting movement had been approaching from his line of defence, in the Jerseys, toward the city, and arrived there on the 1st of August. It was a meeting of congenial souls. At the close of it, Washington gave the youthful stranger an invitation to make the head-quarters of the commander-in-chief his home: that he should establish himself there at his own time, and consider himself at all times one of his family. It was natural that, in giving this invitation, he should remark the contrast of the situation in which it would place him, with that of ease, and comfort, and luxurious enjoyment, which he had left, at the splendid court of Louis the Sixteenth, and of his beautiful and accomplished, but ill-fated queen, then at the very summit of all which constitutes the common estimate of effluence. How deep and solemn was this contrast! No native American had under-

gone the trial of the same alternative. None of them, save Lafayette, had brought the same tribute, of his life, his fortune, and his honour, to a cause of a country foreign to his own. To Lafayette the soil of freedom was his country. His post of honour was the post of danger. His fire-side was the field of battle. He accepted with joy the invitation of Washington, and repaired forthwith to the camp. The bond of indissoluble friendship; the friendship of heroes, was sealed from the first hour of their meeting, to last throughout their lives, and to live in the memory of mankind for ever.

It was, perhaps, at the suggestion of the American commissioners in France, that this invitation was given by Washington. In a letter from them, of the 25th of May, 1777, to the committee of foreign affairs, they announce that the Marquis had departed for the United States in a ship of his own, accompanied by some officers of distinction, in order to serve in our armies. They observe that he is exceedingly beloved, and that every body's good wishes attend him. They cannot but hope that he will meet with such a reception as will make the country and his expedition agreeable to him. They further say that those who censure it as imprudent in him, do nevertheless applaud his spirit; and they are satisfied that civilities and respect shown to him will be serviceable to our cause in France, as pleasing not only to his powerful relations and to the court, but to the whole French nation. They finally add, that he had left a beautiful young wife, and for her sake, particularly, they hoped that his bravery and ardent desire to distinguish himself would be a little restrained by the general's [Washington's] prudence so as not to permit his being hazarded much, but upon some important occasion.

The head-quarters of Washington, serving as a volunteer, with the rank and commission of a Major General without command, was precisely the station adapted to the development of his character, to his own honour, and that of the army, and to the prudent management of the country's cause. To him it was at once a severe school of experience, and a rigorous test of merit. But it was not the place to restrain him from exposure to danger. The time at which he joined the camp was one of pre-eminent peril. The British government, and the commander in chief of the British forces, had imagined that the possession of Philadelphia, combined with that of the line along the Hudson river, from the Canadian frontier to the city of New York, would be fatal to the American cause. By the capture of Burgoyne and his army, that portion of the project sustained a total defeat. The final issue of the war was indeed sealed with the capitulation of the 17th of October, 1777, at Saratoga; sealed, not with the subjugation, but with the independence of the North American union.

In the southern campaign the British commander was more successful. The fall of Philadelphia was the result of the battle of Brandywine, on the 11th of September. This was the first action in which Lafayette was engaged, and the first lesson of his practical military school was a lesson of misfortune. In the attempt to rally the American troops in their retreat, he received a musket ball in the leg. He was scarcely conscious of the wound till made sensible of it by the loss of blood, and even then ceased not his exertions in the field till he had secured and covered the retreat.

This casualty confined him for some time to his bed at Philadelphia, and afterwards detained him some days at Bethlehem; but within six weeks he rejoined the head-quarters of Washington, near Whitemarsh. He soon became anxious to obtain a command equal to his rank, and, in the short space of time that he had been with the commander-in-chief, had so thoroughly obtained his confidence as to secure an earnest solicitation from him to Congress in his favour. In a letter to Congress, of the 1st of November, 1777, he says: "The Marquis de Lafayette is extremely solicitous of

having a command equal to his rank. I do not know in what light Congress will view the matter, but it appears to me, from a consideration of his illustrious and important connexions, the attachment which he has manifested for our cause, and the consequences which his return in disgust might produce, that it will be advisable to gratify him in his wishes; and the more so, as several gentlemen from France, who came over under some assurances, have gone back disappointed in their expectations. His conduct with respect to them stands in a favourable point of view; having interested himself to remove their uneasiness, and urged the impropriety of their making any unfavourable representations upon their arrival home; and in all his letters he has placed our affairs in the best situation he could. Besides, he is sensible, discreet in his manners; has made great proficiency in our language; and, from the disposition he discovered at the battle of Brandywine, possesses a large share of bravery and military ardour."

Perhaps one of the highest encomiums ever pronounced of a man in public life, is that of a historian eminent for his profound acquaintance with mankind, who, in painting a great character by a single line, says that he was just equal to all the duties of the highest offices which he attained, and never above them. There are in some men qualities which dazzle and consume to little or no valuable purpose. They seldom belong to the great benefactors of mankind. They were not the qualities of Washington, or of Lafayette. The testimonial offered by the American commander to his young friend, after a probation of several months, and after the severe test of the disastrous day of Brandywine, was precisely adapted to the man in whose favour it was given, and to the object which it was to accomplish. What earnestness of purpose! what sincerity of conviction! what energetic simplicity of expression! what thorough delineation of character! The merits of Lafayette, to the eye of Washington, are the candour and generosity of his disposition; the indefatigable industry of application, which in the course of a few months, has already given him the mastery of a foreign language; good sense; discretion of manners, an attribute not only unusual in early years, but doubly rare in alliance with that enthusiasm so signally marked by his self-devotion to the American cause; and, to crown all the rest, the bravery and military ardour so brilliantly manifested at the Brandywine. Here is no random praise; no unmeaning panegyric. This cluster of qualities, all plain and simple, but so seldom found in union together, so generally incompatible with one another, these are the properties eminently trustworthy, in the judgment of Washington; and these are the properties which his discernment has found in Lafayette, and which urge him thus earnestly to advise the gratification of his wish by the assignment of a command equal to the rank which had been granted to his zeal and his illustrious name.

The recommendation of Washington had its immediate effect; and on the first of December, 1777, it was resolved by Congress, that he should be informed it was highly agreeable to Congress, that the Marquis de Lafayette should be appointed to the command of a division in the continental army.

He received accordingly such an appointment; and a plan was organized in Congress for a second invasion of Canada, at the head of which he was placed. This expedition, originally projected without consultation with the commander-in-chief, might be connected with the temporary dissatisfaction in the community and in Congress, at the ill success of his endeavours to defend Philadelphia, which rival and unfriendly partisans were too ready to compare with the splendid termination, by the capture of Burgoyne and his army, of the northern campaign, under the command of General Gates. To foreclose all suspicion of a participation in these views, Lafayette proceeded to the seat of Congress, and, accepting the important

charge which it was proposed to assign to him, obtained at his particular request that he should be considered as an officer detached from the army of Washington, and to remain under his orders. He then repaired in person to Albany, to take command of the troops who were to assemble at that place, in order to cross the lakes on the ice, and attack Montreal; but on arriving at Albany, he found none of the promised preparations in readiness; they were never effected. Congress some time after relinquished the design, and the Marquis was ordered to rejoin the army of Washington.

In the succeeding month of May, his military talent was displayed by the masterly retreat effected in the presence of an overwhelming superiority of the enemy's force from the position at Barren Hill.

He was soon after distinguished at the battle of Monmouth; and in September, 1778, a resolution of Congress declared their high sense of his services, not only in the field, but in his exertions to conciliate and heal dissensions between the officers of the French fleet under the command of Count d'Estaing and some of the native officers of our army. These dissensions had arisen in the first moments of co-operation in the service, and had threatened pernicious consequences.

In the month of April, 1776, the combined wisdom of the Count de Vergennes and of Mr. Turgot, the Prime Minister, and the financier of Louis the Sixteenth, had brought him to the conclusion that the event the most desirable to France, with regard to the controversy between Great Britain and her American colonies, was that the insurrection should be suppressed. This judgment, evincing only the total absence of all moral considerations, in the estimate, by these eminent statesmen, of what was desirable to France, had undergone a great change by the close of the year 1777. The Declaration of Independence had changed the question between the parties. The popular feeling of France was all on the side of the Americans. The daring and romantic movement of Lafayette, in defiance of the government itself, then highly favoured by public opinion, was followed by universal admiration. The spontaneous spirit of the people gradually spread itself even over the rank corruption of the court; a suspicious and deceptive neutrality succeeded to an ostensible exclusion of the insurgents from the ports of France, till the capitulation of Burgoyne satisfied the casuists of international law at Versailles that the suppression of the insurrection was no longer the most desirable of events; but that the United States were, de facto, sovereign and independent; and that France might conclude a treaty of commerce with them, without giving just cause of offence to the step-mother country. On the 6th of February, 1778, a treaty of commerce between France and the United States was concluded, and with it, on the same day, a treaty of eventual defensive alliance, to take effect only in the event of Great Britain's resenting, by war against France, the consummation of the commercial treaty. The war immediately ensued, and in the summer of 1778, a French fleet under the command of Count d'Estaing was sent to co-operate with the forces of the United States for the maintenance of their independence.

By these events the position of the Marquis de Lafayette was essentially changed. It became necessary for him to reinstate himself in the good graces of his sovereign, offended at his absentsing himself from his country without permission, but gratified with the distinction which he had acquired by gallant deeds in a service now become that of France herself. At the close of the campaign of 1778, with the approbation of his friend and patron, the commander-in-chief, he addressed a letter to the president of Congress, representing his then present circumstances with the confidence of affection and gratitude, observing that the sentiments which bound him to his country could never be more properly spoken of than in the presence of men who had done so much for their own.

"As long," continued he, "as I thought I could dispose of myself, I made it my pride and pleasure to fight under American colours, in defence of a cause which I dare more particularly call ours, because I had the good fortune of bleeding for her. Now, sir, that France is involved in a war, I am urged, by a sense of my duty, as well as by the love of my country, to present myself before the king, and know in what manner he judges proper to employ my services. The most agreeable of all will always be such as may enable me to serve the common cause among those whose friendship I had the happiness to obtain, and whose fortune I had the honour to follow in less smiling times. That reason, and others, which I leave to the feelings of Congress, engage me to beg from them the liberty of going home for the next winter.

"As long as there were any hopes of an active campaign, I did not think of leaving the field; now that I see a very peaceable and undisturbed moment, I take this opportunity of waiting on congress."

In the remainder of the letter he solicited that, in the event of his request being granted, he might be considered as a soldier on furlough, heartily wishing to regain his colours and his esteemed and beloved fellow-soldiers. And he closes with a tender of any services which he might be enabled to render to the American cause in his own country.

On the receipt of this letter, accompanied by one from General Washington, recommending to congress, in terms most honourable to the Marquis, a compliance with his request, that body immediately passed resolutions granting him an unlimited leave of absence, with permission to return to the United States at his own most convenient time; that the president of Congress should write him a letter returning him the thanks of Congress for that disinterested zeal which had led him to America, and for the services he had rendered to the United States by the exertion of his courage and abilities on many signal occasions; and that the minister plenipotentiary of the United States at the court of Versailles should be directed to cause an elegant sword, with proper devices, to be made, and presented to him in the name of the United States. These resolutions were communicated to him in a letter expressive of the sensibility congenial to them, from the president of Congress, Henry Laurens.

He embarked in January, 1779, in the frigate Alliance, at Boston, and, on the succeeding 12th day of February, presented himself at Versailles. Twelve months had already elapsed since the conclusion of the treaties of commerce and of eventual alliance between France and the United States. They had, during the greater part of that time, been deeply engaged in a war with a common cause against great Britain, and it was the cause in which Lafayette had been shedding his blood: yet, instead of receiving him with open arms, as the pride and ornament of his country, a cold and hollow-hearted order was issued to him not to present himself at court, but to consider himself under arrest, with permission to receive visits only from his relations. This ostensible mark of the royal displeasure was to last eight days, and Lafayette manifested his sense of it only by a letter to the Count de Vergennes, inquiring whether the interdiction upon him to receive visits was to be considered as extending to that of Doctor Franklin. The sentiment of universal admiration which had followed him at his first departure, greatly increased by his splendid career of service during the two years of his absence, indemnified him for the indignity of the courtly rebuke.

He remained in France through the year 1779, and returned to the scene of action early in the ensuing year. He continued in the French service, and was appointed to command the king's own regiment of dragoons, stationed during the year in various parts of the kingdom, and holding an incessant correspondence with the minister of foreign affairs and of war, urging the employment

of a land and naval force in the aid of the American cause. "the Marquis de Lafayette," says Doctor Franklin, in a letter of the 4th of March, 1780, to the president of Congress, "who, during his residence in France, has been extremely zealous in supporting our cause on all occasions, returns again to fight for it. He is infinitely esteemed and beloved here, and I am persuaded will do every thing in his power to merit a continuance of the same affection from America."

Immediately after his arrival in the United States, it was, on the 17th of May, 1780, resolved in Congress, that they consider his return to America to resume his command as a fresh proof of the disinterested zeal and persevering attachment which have justly recommended him to the public confidence and applause, and that they received with pleasure a tender of the farther services of so gallant and meritorious an officer.

From this time until the termination of the campaign of 1781, by the surrender of lord Cornwallis and his army at Yorktown, his service was of incessant activity, always signalized by military talents unsurpassed, and by a spirit never to be subdued. At the time of the treason of Arnold, Lafayette was accompanying his commander-in-chief to an important conference and consultation with the French General, Rochambeau; and then, as in every stage of the war, it seemed as if the position which he occupied, his personal character, his individual relations with Washington, with the officers of both the allied armies, and with the armies themselves, had been specially ordered to promote and secure that harmony and mutual good understanding indispensable to the ultimate success of the common cause. His position, too, as a foreigner by birth, a European, a volunteer in the American service, and a person of high rank in his native country, pointed him out as peculiarly suited to the painful duty of deciding upon the character of the crime, and upon the fate of the British officer, the accomplice and victim of the detested traitor, Arnold.

In the early part of the campaign of 1781 when Cornwallis, with an overwhelming force, was spreading ruin and devastation over the southern portion of the union, we find Lafayette, with means altogether inadequate, charged with the defence of the territory of Virginia. Always equal to the emergencies in which circumstances placed him, his expedients for encountering and surmounting the obstacles which they cast in his way are invariably stamped with the peculiarities of his character. The troops placed under his command for the defence of Virginia, were chiefly taken from the eastern regiments, unseasoned to the climate to the south, and prejudiced against it as unfavourable to the health of the natives of the more rigorous regions of the north. Desertions became frequent, till they threatened the very dissolution of the corps. Instead of resorting to military execution to retain his men, he appeals to the sympathies of honour. He states, in general orders, the great danger and difficulty of the enterprise upon which he is about to embark; represents the only possibility by which it can promise success, the faithful adherence of the soldiers to their chief, and his confidence that they will not abandon him. He then adds, that if, however, any individual of the detachment was unwilling to follow him, a passport to return to his home should be forthwith granted him upon his application. It is to a cause like that of American independence that resources like this are congenial. After these general orders, nothing more was heard of desertion. The very cripples of the army preferred paying for their own transportation, to follow the corps, rather than to ask for the dismissal which had been made so easily accessible to all.

But how shall the deficiencies of the military chest be supplied? The want of money was heavily pressing upon the service in every direction. Where are the sinews of war? How are the troops to march without shoes, linen, clothing of all descriptions, and other necessities of life? Lafayette

has found them all. From the patriotic merchants of Baltimore he obtains, on the pledge of his own personal credit, a loan of money adequate to the purchase of the materials; and from the fair hands of the daughters of the monumental city, even then worthy to be so called, he obtains the toil of making up the needed garments.

The details of the campaign, from its unpromising outset, when Cornwallis, the British commander, exulted in anticipation that the boy could not escape him, till the storming of the twin redoubts, in emulation of gallantry by the valiant Frenchmen of Viomesnil, and the American fellow-soldiers of Lafayette, led him to victory at Yorktown, must be left to the recording pen of history. Both redoubts were carried at the point of the sword, and Cornwallis with averted face surrendered his sword to Washington.

This was the last vital struggle of the war, which, however, lingered through another year rather of negotiation than of action. Immediately after the capitulation at Yorktown, Lafayette asked and obtained again a leave of absence to visit his family and his country, and with this closed his military service in the field during the revolutionary war. But it was not for the individual enjoyment of his renown that he returned to France. The resolutions of Congress accompanying that which gave him a discretionary leave of absence, while honorary in the highest degree to him, were equally marked by a grant of virtual credentials for negotiation, and by the trust of confidential powers, together with a letter of the warmest commendation of the gallant soldier to the favour of his king. The ensuing year was consumed in preparations for a formidable combined French and Spanish expedition against the British Islands in the West Indies, and particularly the Island of Jamaica; thence to recoil upon New York, and to pursue the offensive war into Canada. The fleet destined for this gigantic undertaking was already assembled at Cadiz; and Lafayette, appointed the chief of the staff, was there ready to embark upon this perilous adventure, when, on the 30th of November, 1782, the preliminary treaties of peace were concluded between his Britannic majesty on one part, and the allied powers of France, Spain, and the United States of America, on the other. The first intelligence of this event received by the American Congress was in the communication of a letter from Lafayette.

The war of American Independence is closed. The people of the North American confederation are in union, sovereign and independent. Lafayette, at twenty-five years of age, has lived the life of a patriarch, and illustrated the career of a hero. Had his days upon earth been then numbered, and had he then slept with his fathers, illustrious as for centuries their names had been, his name, to the end of time, would have transcended them all. Fortunate youth! fortunate beyond even the measure of his companions in arms with whom he had achieved the glorious consummation of American independence. His fame was all his own; not cheaply earned; not ignobly won. His fellow-soldiers had been the champions and defenders of their country. They reaped for themselves, for their wives, their children, their posterity to the latest time, the rewards of their dangers and their toils. Lafayette had watched, and laboured, and fought, and bled, not for himself, not for his family, not, in the first instance, even for his country. In the legendary tales of chivalry we read of tournaments at which a foreign and unknown knight, suddenly presents himself, armed in complete steel, and with the vizor down, enters the ring to contend with the assembled flower of knight-hood for the prize of honour, to be awarded by the hand of beauty; bears it in triumph away, and disappears from the astonished multitude of competitors and spectators of the feats of arms. But where in the rolls of history, where, in the fictions of romance, where, but in the life of Lafayette, has been seen the noble stranger, flying with the tribute of his name, his rank, his affluence, his

ease, his domestic bliss, his treasure, his blood, to the relief of a suffering and distant land, in the hour of her deepest calamity; baring his bosom to her foes; and not at the transient pageantry of a tournament, but for a succession of five years sharing all the vicissitudes of her fortunes; always eager to appear at the post of danger; tempering the glow of youthful ardour with the cold caution of a veteran commander; bold and daring in action: prompt in execution; rapid in pursuit; fertile in expedients; unattainable in retreat; often exposed, but never surprised, never disconcerted; eluding his enemy when within his fancied grasp; bearing upon him with irresistible sway when of force to cope with him in the conflict of arms? And what is this but the diary of Lafayette, from the day of his rallying the scattered fugitives of the Brandywine, insensible of the blood flowing from his wound, to the storming of the redoubt at Yorktown?

Henceforth, as a public man, Lafayette is to be considered as a Frenchman, always active and ardent to serve the United States, but no longer in their service as an officer. So transcendent had been his merits in the common cause, that, to reward them, the rule of progressive advancement in the armies of France was set aside for him. He received from the minister of war, a notification that from the day of his retirement from the service of the United States as a Major General, at the close of the war, he should hold the same rank in the armies of France, to date from the day of the capitulation of Lord Cornwallis.

Henceforth he is a Frenchman, destined to perform in the history of his country a part, as peculiarly his own, and not less glorious than that which he had performed in the war of independence. A short period of profound peace followed the great triumph of freedom. The desire of Lafayette once more to see the land of his adoption and the associates of his glory, the fellow-soldiers who had become to him as brothers, and the friend and patron of his youth, who had become to him as a father; sympathizing with their desire once more to see him; to see in their prosperity him who had first come to them in their affliction, induced him, in the year 1784, to pay a visit to the United States.

On the 4th of August, of that year, he landed at New-York, and, in the space of five months from that time, visited his venerable friend at Mount Vernon, where he was then living in retirement, and traversed ten states of the union, receiving every where, from their legislative assemblies, from the municipal bodies of the cities and towns through which he passed, from the officers of the army his late associates, now restored to the virtues and occupations of private life, and even from the recent emigrants from Ireland who had come to adopt for their country the self-emanipated land, addresses of gratulation and of joy, the effusions of hearts grateful in the enjoyment of the blessings for the possession of which they had been so largely indebted to his exertions; and, finally, from the United States of America in Congress assembled at Trenton.

On the 9th of December it was resolved by that body that a committee, to consist of one member from each state, should be appointed to receive, and in the name of Congress take leave of the Marquis. That they should be instructed to assure him that Congress continued to entertain the same high sense of his abilities and zeal to promote the welfare of America, both here and in Europe, which they had frequently expressed and manifested on former occasions, and which the recent marks of his attention to their commercial and other interests had perfectly confirmed. "That, as his uniform and unceasing attachment to this country has resembled that of a patriotic citizen, the United States regard him with particular affection, and will not cease to feel an interest in whatever may concern his honour and prosperity, and that their best and kindest wishes will always attend him."

And it was farther resolved, that a letter be written to his most Christian Majesty, to be signed

by his excellency the president of Congress, expressive of the high sense which the United States in Congress assembled entertain of the zeal, talents, and meritorious services of the Marquis de Lafayette, and recommending him to the favour and patronage of his majesty.

The first of these resolutions was, on the next day carried into execution. At a solemn interview with the committee of Congress, received in their hall, and addressed by the chairman of their committee, John Jay, the purport of these resolutions were communicated to him. He replied in terms of fervent sensibility for the kindness manifested personally to himself; and, with allusions to the situation, the prospects, and the duties of the people of this country, he pointed out the great interests which he believed it indispensable to their welfare that they should cultivate and cherish. In the following memorable sentences the ultimate objects of his solicitude are disclosed in a tone deeply solemn and impressive:

"May this immense temple of freedom," said he, "ever stand, a lesson to oppressors, an example to the oppressed, a sanctuary for the rights of mankind! and may these happy United States attain that complete splendour and prosperity which will illustrate the blessings of their government, and for ages to come rejoice the departed souls of its founders."

Fellow-citizens! Ages have passed away since these words were spoken; but ages are the years of the existence of nations. The founders of this immense temple of freedom have all departed, save here and there a solitary exception, even while I speak, at the point of taking wing. The prayer of Lafayette is not yet consummated.—Ages upon ages are still to pass away before it can have its full accomplishment; and, for its full accomplishment, his spirit, hovering over our heads, in more than echoes talks around these walls. It repeats the prayer, which from his lips fifty years ago was at once a parting blessing and a prophecy; for, were it possible for the whole human race, now breathing the breath of life, to be assembled within this hall, your orator would, in your name, and in that of your constituents, appeal to them to testify for your fathers of the last generation, that, so far as has depended upon them, the blessing of Lafayette has been prophecy. Yes! this immense temple of freedom still stands, a lesson to oppressors, an example to the oppressed, and a sanctuary for the rights of mankind.—Yes! with the smiles of a benignant providence, the splendour and prosperity of these happy United States have illustrated the blessings of their government, and, we may humbly hope, have rejoiced the departed souls of its founders. For the past your fathers and you have been responsible. The charge of the future devolves upon you and upon your children. The vestal fire of freedom is in your custody. May the souls of its departed founders never be called to witness its extinction by neglect, nor a soil upon the purity of its keepers!

With this valedictory, Lafayette took, as he and those who heard him then believed, a final leave of the people of the United States. He returned to France, and arrived at Paris on the 25th of January, 1785.

He continued to take a deep interest in the concerns of the United States, and exerted his influence with the French government to obtain reductions of duties favourable to their commerce and fisheries. In the summer of 1786, he visited several of the German courts, and attended the last great review by Frederic the Second of his veteran army; a review unusually splendid, and specially remarkable by the attendance of many of the most distinguished military commanders of Europe. In the same year the legislature of Virginia manifested the continued recollection of his services rendered to the people of that commonwealth, by a complimentary token of gratitude not less honourable than it was unusual. They resolved that two busts of Lafayette, to be executed by the celebrated sculptor, Houdon, should be

procured at their expense; that one of them should be placed in their own legislative hall, and the other presented, in their name, to the municipal authorities of the city of Paris. It was accordingly presented by Mr. Jefferson, then minister plenipotentiary of the United States in France, and, by the permission of Louis the Sixteenth, was accepted, and, with appropriate solemnity placed in one of the halls of the Hotel de Ville of the metropolis of France.

We have gone through one stage of the life of Lafayette; we are now to see him acting upon another theatre; in a cause still essentially the same, but in the application of its principles to his own country.

The immediately originating question which occasioned the French revolution, was the same with that from which the American revolution had sprung: taxation of the people without their consent. For nearly two centuries the kings of France had been accustomed to levy taxes upon the people by royal ordinances. But it was necessary that these ordinances should be registered in the parliaments or judicial tribunals; and these parliaments claimed the right of remonstrating against them, and sometimes refused the registry of them itself. The members of the parliaments held their offices by purchase, but were appointed by the King, and were subject to banishment or imprisonment, at his pleasure. Louis the Fifteenth, towards the close of his reign, had abolished the parliaments, but they had been restored at the accession of his successor.

The finances of the kingdom were in extreme disorder. The minister, or comptroller general de Calonne, after attempting various projects for obtaining the supplies, the amount and need of which he was with lavish hand daily increasing, bethought himself, at last, of calling for the counsel of others. He prevailed upon the king to convoke, not the states general, but an assembly of notables. There was something ridiculous in the very name by which this meeting was called; but it consisted of a selection from all the *grands* and dignitaries of the kingdom. The two brothers of the king; all the princes of the blood; archbishops and bishops, dukes and peers; the chancellor and presiding members of the parliaments; distinguished members of the noblesse, and the mayors and chief magistrates of a few of the principal cities of the kingdom, constituted this assembly. It was a representation of every interest but that of the people. They were appointed by the king; were members of the highest aristocracy, and were assembled with the design that their deliberations should be confined exclusively to the subjects submitted to their consideration by the minister. These were certain plans devised by him for replenishing the insolvent treasury, by assessments upon the privileged classes, the very princes, nobles, ecclesiastics, and magistrates exclusively represented in the assembly itself.

Of this meeting, the Marquis de Lafayette was a member. It was held in February, 1787, and terminated in the overthrow and banishment of the minister by whom it had been convened. In the fiscal concerns which absorbed the care and attention of others, Lafayette took comparatively little interest. His views were more comprehensive.

The assembly consisted of one hundred and thirty-seven persons, and divided itself into several sections or bureaux, each presided by a prince of the blood. Lafayette was allotted to the division under the presidency of the Count d'Artois, the younger brother of the king, and since known as Charles the Tenth. The propositions made by Lafayette were:

1. The suppression of *lettres de cachet*, and the abolition of all arbitrary imprisonment.

2. The establishment of religious toleration, and the restoration of the protestants to their civil rights.

3. The convocation of a national assembly, representing the people of France; personal liberty;

religious liberty; and a representative assembly of the people. These were his demands.

The first and second of them produced, perhaps, at the time, no deep impression upon the assembly, nor upon the public. Arbitrary imprisonment, and the religious persecution of the protestants had become universally odious. They were worn-out instruments, even in the hands of those who wielded them. There was none to defend them.

But the demand for a national assembly startled the prince at the head of the Bureau. What! said the Count d'Artois, do you ask the states general? Yes, sir, was the answer of Lafayette, and for something yet better. You desire, then, replied the prince, that I should take in writing, and report to the king, that the motion to convoke the states general has been made by the Marquis de Lafayette? "Yes, sir;" and the name of Lafayette was accordingly reported to the king.

The assembly of notables was dissolved.—De Calonne was displaced and banished, and his successor undertook to raise the needed funds, by the authority of royal edicts. The war of litigation with the parliaments recommenced, which terminated only with a positive promise that the states general should be convoked.

From that time a total revolution of government in France was in progress. It has been a solemn, a sublime often a most painful, and yet in the contemplation of great results, a refreshing and cheering contemplation. I cannot follow it in its overwhelming multitude of details, even as connected with the life and character of Lafayette. A second assembly of notables succeeded the first; and then an assembly of the states general, first to deliberate in separate orders of clergy, nobility, and third estate; but, finally constituting itself a national assembly, and forming a constitution of limited monarchy, with an hereditary royal executive, and a legislature in a single assembly representing the people.

Lafayette was a member of the states general first assembled. Their meeting was signalized by a struggle between the several orders of which they were composed, which resulted in breaking them all down into one national assembly.

The convocation of the states general had, in one respect, operated, in the progress of the French revolution, like the declaration of independence in that of North America. It had changed the question in controversy. It was, on the part of the king of France, a concession that he had no lawful power to tax the people without their consent. The states general, therefore, met with this admission already conceded by the king. In the American conflict the British government never yielded the concession. They undertook to maintain their supposed right of arbitrary taxation by force; and then the people of the colonies renounced all community of government, not only with the king and parliament, but with the British nation. They reconstructed the fabric of government for themselves, and held the people of Britain as foreigners; friends in peace; enemies in war.

The concession by Louis the Sixteenth, implied in the convocation of the states general, was a virtual surrender of absolute power; an acknowledgment that, as exercised by himself and his predecessors, it had been usurped. It was, in substance, an abdication of his crown. There was no power which he exercised as king of France, the lawfulness of which was not contestable on the same principle which denied him the right of taxation. When the assembly of the states general met at Versailles, in May, 1789, there was but a shadow of the royal authority left. They felt the power of the nation was in their hands, and they were not sparing in the use of it. The representatives of the third estate, double in numbers to those of the clergy and the nobility, constituted themselves a national assembly, and, as signal for the demolition of all privileged orders refused to deliberate in separate chambers, and thus compelled the representatives of the clergy

and nobility to merge their separate existence in the general mass of the popular representation.

Thus the edifice of society was to be reconstructed in France as it had been in America.—The king made a feeble attempt to overawe the assembly, by calling regiments of troops to Versailles, and surrounding with them the hall of their meeting. But there was defection in the army itself, and even the person of the king soon ceased to be at his own disposal. On the 11th of July, 1789, in the midst of the fermentation which had succeeded the fall of the monarchy, and while the assembly was surrounded by armed soldiers, Lafayette presented to them his declaration of rights; the first declaration of human rights ever proclaimed in Europe. It was adopted, and became the basis of that which the assembly promulgated with their constitution.

It was in this hemisphere, and in our own country, that all its principles had been imbibed. At the very moment when the declaration was presented, the convulsive struggle between the expiring monarchy and the new born but portentous anarchy of the Parisian populace was taking place. The royal palace and the hall of assembly were surrounded with troops, and insurrection was kindling at Paris. In the midst of the popular commotion, a deputation of sixty members, with Lafayette at their head, was sent from the assembly to tranquillize the people of Paris, and that incident was the occasion of the institution of the national guard throughout the realm, and of the appointment, with the approbation of the king, of Lafayette as their general commander-in-chief.

This event, without vacating his seat in the assembly, connected him at once with the military and the popular movement of the revolution. The national guard was the armed militia of the whole kingdom, embodied for the preservation of order, and the protection of persons and property, as well as for the establishment of the liberties of the people. In his double capacity of commander general of this force, and of a representative in the constituent assembly, his career, for a period of more than three years, was beset with the most imminent dangers, and with difficulties beyond all human power to surmount.

The ancient monarchy of France had crumbled into ruins. A national assembly, formed by an irregular representation of clergy, nobles, and third estate, after melting at the fire of a revolution into one body, had transformed itself into a constituent assembly representing the people, had assumed the exercise of all the powers of government, extorted from the hands of the king, and undertaken to form a constitution for the French nation, founded at once upon the theory of human rights, and upon the preservation of a royal hereditary crown upon the head of Louis the Sixteenth. Lafayette sincerely believed that such a system would not be absolutely incompatible with the nature of things. An hereditary monarchy, surrounded by popular institutions, presented itself to his imagination as a practicable form of government; nor is it certain that even to his last days he ever abandoned this persuasion. The element of hereditary monarchy in this constitution was indeed not congenial with it. The prototype from which the whole fabric had been drawn, had no such element in its composition. A feeling of generosity, of compassion, of commiseration with the unfortunate prince then upon the throne, who had been his sovereign, and for his ill-fated family, mingled itself, perhaps unconsciously to himself, with his well-reasoned faith in the abstract principles of a republican creed. The total abolition of the monarchical feature undoubtedly belonged to his theory, but the family of Bourbon had still a strong hold on the affections of the French people; history had not made up a record favourable to the establishment of elective kings; a strong executive head was absolutely necessary to curb the impetuosities of the people of France; and the same doctrine which played upon the fancy, and crept upon the kind-hearted benevolence of Lafayette, was adopted by a large majority of

the national assembly, sanctioned by the suffrages of its most intelligent, virtuous, and patriotic members, and was finally embodied in that royal democracy, the result of their labours, sent forth to the world, under the guaranty of numberless oaths, as the constitution of France for all after-time.

But, during the same period, after the first meeting of the states general, and while they were in actual conflict with the expiring energies of the crown, and with the exclusive privileges of the clergy and nobility, another portentous power had arisen, and entered with terrific activity into the controversies of the time. This was the power of popular insurrection, organized by voluntary associations of clubs, and impelled to action by the municipal authorities of the city of Paris.

The first movements of the people in the state of insurrection took place on the 12th of July, 1789, and issued in the destruction of the Bastille, and in the murder of its governor, and of several other persons, hung up at lamp-posts, or torn to pieces by the frenzied multitude, without form of trial, and without shadow of guilt.

The Bastille had long been odious as the place of confinement of persons arrested by arbitrary orders for offences against the government, and its destruction was hailed by most of the friends of liberty throughout the world as an act of patriotism and magnanimity on the part of the people.—The brutal ferocity of the murders was overlooked or palliated in the glory of the achievement of razing to its foundations the execrated citadel of despotism. But, as the summary justice of insurrection can manifest itself only by destruction, the example once set, became a precedent for a series of years, for scenes so atrocious, and for butcheries so merciless and horrible, that memory revolts at the task of recalling them to the mind.

It would be impossible, within the compass of this discourse, to follow the details of the French revolution to the final dethronement of Louis the Sixteenth, and the extinction of the constitutional monarchy of France, on the 10th of August 1792. During that period, the two distinct powers were in continual operation; sometimes in concert with each other, sometimes at irreconcilable opposition. Of these powers, one was the people of France, represented by the Parisian populace in insurrection; the other was the people of France, represented successively by the constituent assembly, which formed the constitution of 1791, and by the legislative assembly, elected to carry it into execution.

The movements of the insurgent power were occasionally convulsive and cruel, without mitigation or mercy. Guided by secret springs; prompted by vindictive and sanguinary ambition, directed by hands unseen to objects of individual aggrandizement, its agency felt like the thunderbolt, and swept like the whirlwind.

The proceedings of the assemblies were deliberative and intellectual. They began by grasping at the whole power of the monarchy, and they finished by sinking under the dictation of the Parisian populace. The constituent assembly numbered among its members many individuals of great ability, and of pure principles, but they were overawed and domineered by that other representation of the people of France, which, through the instrumentality of the jacobin club, and the municipality of Paris, disconcerted the wisdom of the wise, and scattered to the winds the counsels of the prudent. It was impossible that, under the perturbations of such a controlling power, a constitution suited to the character and circumstances of the nation should be formed.

Through the whole of this period, the part performed by Lafayette was without parallel in history. The annals of the human race exhibit no other instance of a position comparable for its unintermitted perils, its deep responsibilities, and its providential issues, with that which he occupied as commander general of the national guard, and as a leading member of the constituent as-

sembly. In the numerous insurrections of the people, he saved the lives of multitudes devoted as victims, and always at the most imminent hazard of his own. On the 5th and 6th of October, 1789, he saved the lives of Louis the Sixteenth, and of his queen. He escaped, time after time, the daggers sharpened by princely conspiracy on one hand, and by popular frenzy on the other. He witnessed, too, without being able to prevent it, the butchery of Foulon before his eyes, and the reeking heart of Berthier, torn from his lifeless trunk, was held up in exulting triumph before him. On this occasion, and on another, he threw up his commission as commander of the national guards; but who could have succeeded him, even with equal power to restrain these volcanic excesses? At the earnest solicitation of those who well knew that his place could never be supplied, he resumed and continued in the command until the solemn proclamation of the constitution, upon which he definitively laid it down, and retired to private life upon his estate in Auvergne.

As a member of the constituent assembly, it is not in the detailed organization of the government which they prepared, that his spirit and co-operation is to be traced. It is in the principles which he proposed and infused into the system. As, at the first assembly of notables, his voice had been raised for the abolition of arbitrary imprisonment, for the extinction of religious intolerance, and for the representation of the people, so, in the national assembly, besides the declaration of rights, which formed the basis of the constitution itself, he made or supported the motions for the establishment of trial by jury, for the gradual emancipation of slaves, for the freedom of the press, for the abolition of all titles of nobility, and for the declaration of equality of all the citizens, and the suppression of all the privileged orders, without exception of the princes of the royal family. Thus, while as a legislator he was spreading the principles of universal liberty over the whole surface of the state, as commander-in-chief of the armed force of the nation, he was controlling, repressing, and mitigating, as far as it could be effected by human power, the excesses of the people.

The constitution was at length proclaimed, and the constituent national assembly was dissolved. In advance of this event, the sublime spectacle of the federation was exhibited on the 14th of July, 1790, the first anniversary of the destruction of the Bastille. There was an ingenious and fanciful association of ideas in the selection of that day. The Bastille was a state prison, a massive structure, which had stood four hundred years, every stone of which was saturated with sighs and tears, and echoed the groans of four centuries of oppression. It was the very type and emblem of the despotism which had so long weighed upon France. Demolished from its summit to its foundation at the first shout of freedom from the people, what day could be more appropriate than its anniversary for the day of solemn consecration of the new fabric of government, founded upon the rights of man?

I shall not describe the magnificent and melancholy pageant of that day. It has been done by abler hands, and in a style which could only be weakened and diluted by repetition.* The religious solemnity of the mass was performed by a prelate, then eminent among the members of the assembly and the dignitaries of the land; still eminent, after surviving the whole circle of subsequent revolutions. No longer a father of the church, but among the most distinguished laymen and most celebrated statesmen of France, his was the voice to invoke the blessing of heaven upon this new constitution for his liberated country; and he, and Louis the Sixteenth, and Lafayette, and thirty thousand delegates from all the confederated national guards of the kingdom, in the presence of Almighty God, and of five hundred thousand of their countrymen, took the oath of

fidelity of the nation, to the constitution, and all save the monarch himself, to the king. His corresponding oath was, of fidelity to discharge the duties of his high office, and to the people.

Alas! and was it all false and hollow? had these oaths no more substance than the breath that ushered them to the winds? It was impossible to look back upon the short and turbulent existence of this royal democracy, to mark the frequent paroxysms of popular frenzy by which it was assailed, and the catastrophe by which it perished, and to believe that the vows of all who swore to support it were sincere. But, as well might the sculptor of a block of marble, after exhausting his genius and his art in giving it a beautiful human form, call God to witness that it shall perform all the functions of animal life, as the constituent assembly of France could pledge the faith of its members that their royal democracy should work as a permanent organized form of government.—The declaration of rights contained all the principles essential to freedom. The frame of government was radically and irreparably defective. The hereditary royal executive was itself an inconsistency with the declaration of rights. The legislative power, all concentrated in a single assembly, was an incongruity still more glaring. These were both departures from the system of organization which Lafayette had witnessed in the American constitutions: neither of them was approved by Lafayette. In deference to the prevailing opinions and prejudices of the times, he acquiesced in them, and he was destined to incur the most imminent hazards of his life, and to make the sacrifice of all that gives value to life itself, in faithful adherence to that constitution which he had sworn to support.

Shortly after his resignation, as commander general of the national guards, the friends of liberty and order presented him as a candidate for election as mayor of Paris; but he had a competitor in the person of Pethion, more suited to the party, pursuing with inexorable rancour the abolition of the monarchy and the destruction of the king; and, what may seem scarcely credible, the remnant of the party which still adhered to the king, the king himself, and, above all, the queen, favoured the election of the jacobin Pethion, in preference to that of Lafayette. They were, too fatally for themselves, successful.

From the first meeting of the legislative assembly, under the constitution of 1791, the destruction of the king and of the monarchy, and the establishment of a republic, by means of the popular passions and of popular violence, were the deliberate purposes of its leading members. The spirit with which the revolution had been pursued, from the time of the destruction of the Bastille, had caused the emigration of great numbers of the nobility and clergy; and, among them, of the two brothers of Louis the Sixteenth, and of several other princes of his blood. They had applied to all the other great monarchies of Europe for assistance to uphold or restore the crumbling monarchy of France. The French reformers themselves, in the heat of their political fanaticism, avowed, without disguise, the design to revolutionize all Europe, and had emissaries in every country, openly or secretly preaching the doctrine of insurrection against all established governments. Louis the Sixteenth, and his queen, an Austrian princess, sister to the Emperor Leopold, were in secret negotiation with the Austrian government for the rescue of the king and royal family of France from the dangers with which they were so incessantly beset. In the Electorate of Treves, a part of the Germanic empire, the emigrants from France were assembling, with indications of a design to enter France in hostile array, to effect a counter-revolution; and the brothers of the king, assuming a position at Coblenz, on the borders of their country, were holding councils, the object of which was to march in arms to Paris, to release the king from captivity, and to restore the ancient monarchy to the dominion of absolute power.

* In the Address to the young men of Boston, by Edward Everett.

The king, who, even before his forced acceptance of the constitution of 1791, had made an unsuccessful attempt to escape from his palace prison, was, in April, 1792, reduced to the humiliating necessity of declaring war against the very sovereigns who were arming their nations to rescue him from his revolted subjects. Three armies, each of fifty thousand men, were levied to meet the emergencies of this war, and were placed under the command of Luckner, Rochambeau, and Lafayette. As he passed through Paris to go and take the command of his army, he appeared before the legislative assembly, the president of which, in addressing him, said that the nation would oppose to their enemies the constitution and Lafayette.

But the enemies to the constitution were within the walls. At this distance of time, when most of the men, and many of the passions of those days, have passed away, when the French revolution, and its results, should be regarded with the searching eye of philosophical speculation, as lessons of experience to after ages, may it even now be permitted to remark how much the virtues and the crimes of men, in times of political convulsion, are modified and characterized by the circumstances in which they are placed? The great actors of the tremendous scenes of revolution in those times were men educated in schools of high civilization, and in the humane and benevolent precepts of the christian religion. A small portion of them were vicious and depraved; but the great majority were wound up to madness by that war of conflicting interests and absorbing passions, enkindled by a great convulsion of the social system. It has been said by a great master of human nature—

"In peace, there's nothing so becomes a man
As modest stillness and humility;
"But when the blast of war blows in your ears,
"Then imitate the action of the tiger."

Too faithfully did the people of France, and the leaders of their factions, in that war of all the political elements, obey that injunction. Who, that lived in that day, can remember? who, since born, can read, or bear to be told, the horrors of the 20th of June, the 10th of August, the 2d and 3d of September, 1792, of the 31st of May, 1793, and of a multitude of others, during which, in dreadful succession, the murderers of one day were the victims of the next, until that, when the insurgent populace themselves were shot down by thousands, in the very streets of Paris, by the military legions of the convention, and the rising fortune and genius of Napoleon Bonaparte? Who can remember, or read, or hear, of all this, without shuddering at the sight of man, his fellow-creature, in the drunkenness of political frenzy, degrading himself beneath the condition of the cannibal savage? beneath even the condition of the wild beast of the desert? and who, but with a feeling of deep mortification, can reflect, that the rational and immortal being, to the race of which he himself belongs, should, even in his most palmy state of intellectual cultivation, be capable of this self-transformation to brutality?

In this dissolution of all the moral elements which regulate the conduct of men in their social condition; in this monstrous, and scarcely conceivable spectacle of a king, at the head of a mighty nation, in secret league with the enemies against whom he has proclaimed himself at war, and of a legislature conspiring to destroy the king and constitution to which they have sworn allegiance and support, Lafayette alone is seen to preserve his fidelity to the king, to the constitution, and to his country,

"Unshaken, unseduced, unterrified,
"His loyalty he kept, his love, his zeal."

On the 16th of June, 1792, four days before the first violation of the palace of the Tuilleries by the populace of Paris, at the instigation of the jacobins, Lafayette, in a letter to the legislative assembly, had denounced the jacobin club, and called upon the assembly to suppress them. He afterwards repaired to Paris in person, presented himself at the bar of the assembly, repeated his denunciation of the club, and took measures for suppressing their

meetings by force. He proposed also to the king himself to furnish him with means of withdrawing with his family to Compeigne, where he would have been out of the reach of that ferocious and blood-thirsty multitude. The Assembly, by a great majority of votes, sustained the principles of his letter, but the king declined his proffered assistance to enable him to withdraw from Paris; and of those upon whom he called to march with him, and shut up the hall where the jacobins held their meetings, not more than thirteen persons presented themselves at the appointed time.

He returned to his army, and became thenceforth the special object of jacobin resentment and revenge. On the 8th of August, on a preliminary measure to the intended insurrection of the 10th, the question was taken, after several days of debate, upon a formal motion that he should be put in accusation and tried. The last remnant of freedom in that assembly was then seen by the vote upon nominal appeal, or yeas and nays, in which four hundred and forty-six votes were for rejecting the charge, and only two hundred and twenty-four for sustaining it. Two days after, the Tuilleries were stormed by popular insurrection. The unfortunate king was compelled to seek refuge, with his family, in the hall of the legislative assembly, and escaped from being torn to pieces by an infuriated multitude, only to pass from his palace to the prison, in his way to the scaffold.

This revolution thus accomplished, annihilated the constitution, the government, and the cause for which Lafayette had contended. The people of France, by their acquiescence, a great portion of them by direct approval, confirmed and sanctioned the abolition of the monarchy. The armies and their commanders took the same victorious side: not a show of resistance was made to the revolutionary torrent, not an arm was lifted to restore the fallen monarch to his throne, nor even to rescue or protect his person from the fury of his inexorable foes. Lafayette himself would have marched to Paris with his army, for the defence of the constitution, but in this disposition he was not seconded by his troops. After ascertaining that the effort would be vain, and after arresting at Sedan the members of the deputation from the legislative assembly, sent, after their own subjugation, to arrest him, he determined, as the only expedient left him to save his honour and his principles, to withdraw both from the army and the country; to pass into a neutral territory, and thence into these United States, the country of his early adoption and his fond partiality, where he was sure of finding a safe asylum, and of meeting a cordial welcome.

But his destiny had reserved him for other and severer trials. We have seen him struggling for the support of principles, against the violence of raging factions, and the fickleness of the multitude; we are now to behold him in the hands of the hereditary rulers of mankind, and to witness the nature of their tender mercies to him.

It was in the neutral territory of Liege that he, together with his companions, Latour Maubourg, Bureau de Puzy, and Alexander Lameth, was taken by the Austrians, and transferred to Prussian guards. Under the circumstances of the case, he could not, by the principles of the laws of nations, be treated even as a prisoner of war. He was treated as a prisoner of state. Prisoners of state in the monarchies of Europe are always presumed guilty, and are treated as if entitled as little to mercy as to justice. Lafayette was immured in dungeons, first at Wesel, then at Magdeburg, and, finally, at Olmutz, in Moravia. By what right? By none known among men. By what authority? That has never been avowed. For what cause? None has ever been assigned. Taken by Austrian soldiers upon a neutral territory, handed over to Prussian jailors; and, when Frederic William of Prussia abandoned his Austrian ally, and made his separate peace with republican France, he retransferred his illustrious prisoner to the Austrians, from whom he had received him, that he might be deprived of the blessing of regaining his liberty, even from the hands of peace. Five years

was the duration of this imprisonment, aggravated by every indignity that could make oppression bitter. That it was intended as imprisonment for life, was not only freely avowed, but significantly made known to him by his jailors: and while, with affected precaution, the means of terminating his sufferings by his own act were removed from him, the barbarity of ill usage, of unwholesome food, and of pestiferous atmosphere, was applied with inexorable rigour, as if to abridge the days which, at the same time, were rendered as far as possible insupportable to himself.

Neither the generous sympathies of the gallant soldier, General Fitzpatrick, in the British house of commons, nor the personal solicitation of Washington, president of the United States, speaking with the voice of a grateful nation, nor the persuasive accents of domestic and conjugal affection, imploring the monarch of Austria for the release of Lafayette could avail. The unsophisticated feeling of generous nature in the hearts of men, at this outrage upon justice and humanity, was manifested in another form. Two individuals, private citizens, one, of the United States of America, Francis Huger, the other, a native of the Electorate of Hanover, Doctor Erick Bollmann, undertook, at imminent hazard of their lives, to supply means for his escape from prison, and their personal aid to its accomplishment. Their design was formed with great address, pursued with untiring perseverance, and executed with undaunted intrepidity. It was frustrated by accidents beyond the control of human sagacity.

To his persecutions, however, the hand of a wise and just Providence had, in its own time, and in its own way, prepared a termination. The hands of the Emperor Francis, tied by mysterious and invisible bands against the indulgence of mercy to the tears of a more than heroic wife, were loosened by the more prevailing eloquence, or, rather, were severed by the conquering sword of Napoleon Bonaparte, acting under instructions from the executive directory, then swaying the destinies of France.

Lafayette and his fellow-sufferers were still under the sentence of proscription issued by the faction which had destroyed the constitution of 1791, and murdered the ill-fated Louis and his queen.—But revolution had followed upon revolution since the downfall of the monarchy, on the 10th of August, 1792. The federative republicans of the Gironde had been butchered by the jacobin republicans of the mountain. The mountain had been subjected by the municipality of Paris, and the sections of Paris, by the reorganization of parties in the national convention, and with aid from the armies. Brissot and his federal associates, Danton and his party, Robespierre and his subaltern demons, had successively perished, each by the measure applied to themselves which they had meted out to others; and as no experiment of political empiricism was to be omitted in the medley of the French revolutions, the hereditary executive, with a single legislative assembly, was succeeded by a constitution with a legislature in two branches, and a five-headed executive, eligible, annually one-fifth, by their concurrent votes, and bearing the name of a directory. This was the government at whose instance Lafayette was finally liberated from the dungeon of Olmutz.

But, while this directory were shaking to their deepest foundations all the monarchies of Europe; while they were stripping Austria, the most potent of them all, piecemeal of her territories: while they were imposing upon her the most humiliating conditions of peace, and bursting open her dungeons to restore their illustrious countryman to the light of day and the blessing of a personal freedom, they were themselves exploding by internal combustion, divided into two factions, each conspiring the destruction of the other. Lafayette received his freedom, only to see the two members of the directory, who had taken the warmest interest in effecting his liberation, outlawed and proscribed by their colleagues: one of them, Carnot, a fugitive from his country, lurking in banish-

ment to escape pursuit; and the other Barthelemy, deported, with fifty members of the legislative assembly, without form of trial, or even of legal process, to the pestilential climate of Guiana. All this was done with the approbation, expressed in the most unqualified terms, of Napoleon, and with co-operation of his army. Upon being informed of the success of this Pride's purge, he wrote to the directory that he had with him one hundred thousand men, upon whom they might rely to cause to be respected all the measures that they should take to establish liberty upon solid foundations.

Two years afterwards, another revolution, directly accomplished by Napoleon himself, demolished the directory, the constitution of the two councils, and the solid liberty, to the support of which the hundred thousand men had been pledged, and introduced another constitution, with Bonaparte himself for its executive head, as the first of three consuls, for five years.

In the interval between these two revolutions, Lafayette resided for about two years, first in the Danish territory of Holstein, and, afterwards, at Utrecht, in the Batavian republic. Neither of them had been effected by means or in a manner which could possibly meet his approbation. But the consular government commenced with broad professions of republican principles, on the faith of which he returned to France, and for a series of years resided in privacy and retirement upon his estate of La Grange. Here, in the cultivation of his farm, and the enjoyment of domestic felicity, embittered only by the loss, in 1807, of that angel upon earth, the partner of all the vicissitudes of his life, he employed his time, and witnessed the upward flight and downward fall of the soldier and sport of fortune, Napoleon Bonaparte. He had soon perceived the hollowness of the consular professions of pure republican principles, and withheld himself from all participation in the government. In 1802, he was elected a member of the general council of the department of Upper Loire, and, in declining the appointment, took occasion to present a review of his preceding life, and a pledge of his perseverance in the principles which he had previously sustained. "Far," said he, "from the scene of public affairs, and devoting myself at last to the repose of private life, my ardent wishes are, that external peace should soon prove the fruit of those miracles of glory which are even now surpassing the prodigies of the preceding campaigns, and that internal peace should be consolidated upon the essential and invariable foundations of true liberty. Happy that twenty-three years of vicissitudes in my fortune, and of constancy to my principles, authorize me to repeat, that, if a nation, to recover its rights, needs only the will, they can only be preserved by inflexible fidelity to its obligation."

When the first consulate for five years was invented as one of the steps of the ladder of Napoleon's ambition, he suffered Sieyes, the member of the directory whom he had used as an instrument for casting off that worse than worthless institution, to prepare another constitution, of which he took as much as suited his purpose, and consigned the rest to oblivion. One of the wheels of this new political engine was a conservative senate, forming the peerage to sustain the executive head. This body it was the interest and the policy of Napoleon to conciliate, and he filled it with men, who, through all the previous stages of the revolution, had acquired and maintained the highest respectability of character. Lafayette was urged with great earnestness, by Napoleon himself, to take a seat in this senate; but, after several conferences with the first consul, in which he ascertained the extent of his designs, he peremptorily declined. His answer to the minister of war tempered his refusal with a generous and delicate compliment, alluding at the same time to the position which the consistency of his character made it his duty to occupy. To the first consul himself, in terms equally candid and explicit, he said, "that, from the direction which public affairs were

taking, what he already saw, and what it was easy to foresee, it did not seem suitable to his character to enter into an order of things contrary to his principles, and in which he would have to contend without success, as without public utility, against a man to whom he was indebted for great obligations."

Not long afterwards, when all republican principle was so utterly prostrated, that he was summoned to vote on the question whether the citizen Napoleon Bonaparte should be consul for life, Lafayette added to his vote the following comment: "I cannot vote for such a magistracy until the public liberty shall have been sufficiently guaranteed; and in that event I vote for Napoleon Bonaparte."

He wrote at the same time to the first consul a letter explanatory of his vote, which no republican will now read without recognizing the image of inordinate and triumphant ambition cowering under the rebuke of disinterested virtue.

"The 18th of Brumaire, (said this letter) saved France; and I felt myself recalled by the liberal professions to which you had attached your honour. Since then we have seen in the consular power that reparatory dictatorship which, under the auspices of your genius, has achieved so much; yet not so much as will be the restoration of liberty. It is impossible that you, General, the first of that order of men who, to compare and seat themselves, take in the compass of all ages, that you should wish such a revolution; so many victories, so much blood, so many calamities and prodigies, should have for the world and for you no other result than arbitrary government. The French people have too well known their rights ultimately to forget them; but perhaps they are now better prepared, than in the time of their effervescence, to recover them usefully; and you, by the force of your character, and of the public confidence, by the superiority of your talents, of your position, of your fortune, may, by the re-establishment of liberty, surmount every danger, and relieve every anxiety. I have, then, no other than patriotic and personal motives for wishing you this last addition to your glory; a permanent magistracy; but it is due to the principles, the engagements, and the actions of my whole life, to wait, before giving my vote, until liberty shall have been settled upon foundations worthy of the nation and of you. I hope, general, that you will here find, as heretofore, that with the perseverance of my political opinions are united sincere good wishes personally to you, and a profound sentiment of my obligations to you."

The writer of this letter, and he to whom it was addressed, have, each in his appropriate sphere, been instruments of transcendent power, in the hands of Providence, to shape the ends of its wisdom in the wonderful story of the French revolution. In contemplating the part which each of them had acted upon that great theatre of human destiny, before the date of the letter, how strange was at that moment the relative position of the two individuals to each other, and to the world! Lafayette was the founder of the great movement then in progress for the establishment of freedom in France, and in the European world; but his agency had been all intellectual and moral. He had asserted and proclaimed the principles. He had never violated, never betrayed them. Napoleon, a military adventurer, had vapoured in proclamations, and had the froth of jacobinism upon his lips; but his soul was at the point of his sword. The revolution was to Lafayette the cause of human kind; to Napoleon it was a mere ladder of ambition.

Yet, at the time when this letter was written, Lafayette after a series of immense sacrifices and unparalleled sufferings, was a private citizen, called to account to the world for declining to vote for placing Napoleon at the head of the French nation, with arbitrary and indefinite power for life; and Napoleon, amid professions of unbounded devotion to liberty, was, in the face of mankind, ascending the steps of an hereditary imperial and

royal throne. Such was their relative position then; what is it now? Has history a lesson for mankind more instructive than the contrast and the parallel of their fortunes and their fate? Time and chance, and the finger of Providence, which, in every deviation from the path of justice, reserves or opens to itself an avenue of return, has brought each of these mighty men to a close of life, congenial to the character with which he travelled over its scenes. The consul for life, the hereditary emperor and king, expires a captive on a barren rock in the wilderness of a distant ocean; separated from his imperial wife; separated from his son, who survives him only to pine away his existence, and die at the moment of manhood, in the condition of an Austrian prince. The apostle of liberty survives, again to come forward, the ever-consistent champion of her cause, and, finally, to close his career in peace, a republican, without reproach in death, as he had been without fear throughout life.

But Napoleon was to be the artificer of his own fortunes, prosperous and adverse. He was rising by the sword; by the sword he was destined to fall. The counsels of wisdom and of virtue fell forceless upon his ear, or sunk into his heart only to kindle resentment and hatred. He sought no farther personal intercourse with Lafayette; and denied common justice to his son, who had entered and distinguished himself in the army of Italy, and from whom he withheld the promotion justly due to his services.

The career of glory, of fame, and of power, of which the consulate for life was but the first step, was of ten years' continuance, till it had reached its zenith; till the astonished eyes of mankind beheld the charity scholar of Brienne, emperor, king, and protector of the confederation of the Rhine, banqueting at Dresden, surrounded by a circle of tributary crowned heads, among whom was seen that very Francis of Austria, the keeper, in his castle of Olmutz, of the republican Lafayette. And upon that day of the banqueting at Dresden, the star of Napoleon culminated from the equator. Thenceforward it was to descend with motion far more rapid than when rising, till it sank in endless night. Through that long period, Lafayette remained in retirement at La Grange. Silent amidst the deafening shouts of victory from Marengo, and Jena, and Austerlitz, and Friedland, and Wagram, and Borodino; silent at the conflagration of Moscow; at the passage of the Berezina; at the irretrievable discomfiture of Leipzig; at the capitulation at the gates of Paris, and at the first restoration of the Bourbons, under the auspices of the inveterate enemies of France; as little could Lafayette participate in the measures of that restoration, as in the usurpations of Napoleon. Louis the Eighteenth was quartered upon the French nation as the soldiers of the victorious armies were quartered upon the inhabitants of Paris. Yet Louis the Eighteenth, who held his crown as the gift of the conquerors of France, the most humiliating of the conditions imposed upon the vanquished nation, affected to hold it by divine right, and to grant, as a special favour, a charter, or constitution, founded on the avowed principle that all the liberties of the nation were no more than gratuitous donations of the king.

These pretensions, with a corresponding course of policy pursued by the reinstated government of the Bourbons, and the disregard of the national feelings and interests of France, with which Europe was re-modelled at the Congress of Vienna, opened the way for the return of Napoleon from Elba, within a year from the time when he had been relegated there. He landed as a solitary adventurer, and the nation rallied round him with rapture. He came with promises to the nation of freedom as well as of independence. The allies of Vienna proclaimed against him a war of extermination, and re-invaded France with armies exceeding in numbers a million of men. Lafayette had been courted by Napoleon upon his return. He was again urged to take a seat in the house of peers, but peremptorily declined, from aversion to

its hereditary character. He had refused to resume his title of nobility, and protested against the constitution of the empire, and the additional act entailing the imperial hereditary crown upon the family of Napoleon. But he offered himself as a candidate for election as a member of the popular representative chamber of the legislature, and was unanimously chosen by the electoral college of his department to that station.

The battle of Waterloo was the last desperate struggle of Napoleon to recover his fallen fortunes, and its issue fixed his destiny forever. He escaped almost alone from the field, and returned a fugitive to Paris, projecting to dissolve by armed force the legislative assembly, and, assuming a dictatorial power, to levy a new army, and try the desperate chances of another battle. This purpose was defeated by the energy and promptitude of Lafayette. At his instance the assembly adopted three resolutions, one of which declared them in permanent session, and denounced any attempt to dissolve them as a crime of high treason.

After a feeble and fruitless attempt of Napoleon, through his brother Lucien, to obtain from the assembly itself a temporary dictatorial power, he abdicated the imperial crown in favour of his infant son; but his abdication could not relieve France from the deplorable condition to which he had reduced her. France, from the day of the battle of Waterloo, was at the mercy of the allied monarchs; and, as the last act of their revenge, they gave her again to the Bourbons. France was constrained to receive them. It was at the point of the bayonet, and resistance was of no avail. The legislative assembly appointed a provisional council of government, and commissioners, of whom Lafayette was one, to negotiate with the allied armies then rapidly advancing upon Paris.

The allies manifested no disposition to negotiate. They closed the doors of their hall upon the representatives of the people of France. They re-seated Louis the Eighteenth upon his throne. Against these measures Lafayette and the members of the assembly had no means of resistance left, save a fearless protest, to be remembered when the day of freedom should return.

From the time of this second restoration until his death, Lafayette who had declined accepting a seat in the hereditary chamber of peers, and inflexibly refused to resume his title of nobility, though the charter of Louis the Eighteenth had restored them all, was almost constantly a member of the chamber of deputies, the popular branch of the legislature. More than once, however, the influence of the court was successful in defeating his election. At one of these intervals, he employed the leisure afforded him in revisiting the United States.

Forty years had elapsed since he had visited and taken leave of them, at the close of the revolutionary war. The greater part of the generation for and with whom he had fought his first fields, had passed away. Of the two millions of souls to whose rescue from oppression he had crossed the ocean in 1777, not one in ten survived. But their places were supplied by more than five times their numbers, their descendants and successors. The sentiment of gratitude and affection for Lafayette, far from declining with the lapse of time, quickened in spirit as it advanced in years, and seemed to multiply with the increasing numbers of the people. The nation had never ceased to sympathize with his fortunes, and, in every vicissitude of his life, had manifested the deepest interest in his welfare. He had occasionally expressed his intention to visit once more the scene of his early achievements, and the country which had requited his services by a just estimate of their value. In February, 1824, a solemn legislative act, unanimously passed by both houses of Congress, and approved by the president of the United States, charged the chief magistrate of the nation with the duty of communicating to him the assurances of grateful and affectionate attachment still cherished for him by the government and people of the United States, and of tendering to him a national ship with suitable ac-

commodation, for his conveyance to this country.

Ten years have passed away since the occurrence of that event. Since then, the increase of population within the borders of our union exceeds, in numbers, the whole mass of that infant community to whose liberties he had devoted, in early youth, his life and fortune. His companions and fellow soldiers of the war of independence, of whom a scanty remnant still existed to join in the universal shout of welcome with which he landed upon our shores, have been since, in the ordinary course of nature, dropping away: pass but a few short years more, and not an individual of that generation with which he toiled and bled in the cause of human kind, upon his first appearance on the field of human action, will be left. The gallant officer, and distinguished representative of the people, at whose motion, upon this floor, the invitation of the nation was given—the chief magistrate by whom, in compliance with the will of the legislature, it was tendered—the surviving presidents of the United States, and their venerable compeer signers of the declaration of independence, who received him to the arms of private friendship, while mingling their voices in the chorus of public exultation and joy, are no longer here to shed the tear of sorrow upon his departure from this earthly scene. They all preceded him in the translation to another, and, we trust, a happier world. The active, energetic manhood of the nation, of whose infancy he had been the protector and benefactor, and who, by the protracted festivities of more than a year of jubilee, manifested to him their sense of the obligations for which they were indebted to him, are already descending into the vale of years. The children of the public schools, who thronged in double files to pass in review before him to catch a glimpse of his countenance, and a smile from his eye, are now among the men and women of the land, rearing another generation to envy their parents the joy which they can never share, of having seen and contributed to the glorious and triumphant reception of Lafayette.

Upon his return to France, Lafayette was received with a welcome by his countrymen scarcely less enthusiastic than that with which he had been greeted in this country. From his landing at Havre till he arrived at his residence at La Grange, it was again one triumphal march, rendered but the more striking by the interruptions and obstacles of an envious and jealous government. Threats were not even spared of arresting him as a criminal, and holding him responsible for the spontaneous and irrepressible feelings manifested by the people in his favour. He was, very soon after his return, again elected a member of the chamber of deputies, and thenceforward, in that honourable and independent station, was the soul of that steadfast and inflexible party which never ceased to defend, and was ultimately destined to vindicate the liberties of France.

The government of the Bourbons, from the time of their restoration, was a perpetual struggle to return to the Saturnian times of absolute power. For them the sun and moon had stood still, not, as in the miracle of ancient story, for about a whole day, but for more than a whole century. Re-seated upon their thrones, not, as the Stuarts had been in the seventeenth century, by the voluntary act of the same people which had expelled them, but by the arms of foreign kings and hostile armies, instead of aiming, by the liberality of their government, and by improving the condition of their people, to make them forget the humiliation of the yoke imposed upon them, they laboured with unyielding tenacity to make it more galling. They disarmed the national guards; they cramped and crippled the right of suffrage in elections; they perverted and travestied the institution of juries; they fettered the freedom of the press, and in their external policy lent themselves, willing instruments to crush the liberties of Spain and Italy. The spirit of the nation was curbed but not subdued. The principles of freedom proclaimed in the declaration of rights of 1789 had taken too deep root to be ex-

tirpated. Charles the Tenth, by a gradual introduction into his councils of the most inveterate adherents to the anti-revolutionary government, was preparing the way for the annihilation of the charter and of the legislative representation of the people. In proportion as this plan approached to its maturity, the resistance of the nation to its accomplishment acquired consistency and organization. The time had been, when, by the restrictions upon the right of suffrage, and the control of the press, and even of the freedom of debate in the legislature, the opposition in the chamber of deputies had dwindled down to not more than thirty members. But, under a rapid succession of incompetent and unpopular administrations, the majority of the house of deputies had passed from the side of the court to that of the people. In August, 1829, the king, confiding in his imaginary strength, reorganized his ministry by the appointment of men whose reputation was itself a pledge of the violent and desperate designs in contemplation. At the first meeting of the legislative assembly, an address to the king, signed by two hundred and twenty-one out of four hundred members, declared to him, in respectful terms, that a concurrence of sentiments between his ministers and the nation was indispensable to the happiness of the people under his government, and that this concurrence did not exist. He replied, that his determination was immovable, and dissolved the assembly. A new election was held; and so odious throughout the nation were the measures of the court, that, of the two hundred and twenty-one members who had signed the address against the ministers, more than two hundred were re-elected. The opposition had also gained an accession of numbers in the remaining part of the deputations, and it was apparent that, upon the meeting of the assembly, the court party could not be sustained.

At this crisis, Charles the Tenth, as if resolved to leave himself not the shadow of a pretext to complain of his expulsion from the throne, in defiance of the charter, to the observance of which he had solemnly sworn, issued, at one and the same time, four ordinances; the first of which suspended the liberty of the press, and prohibited the publication of all the daily newspapers and other periodical journals, but by license, revokable at pleasure, and renewable every three months; the second annulled the elections of deputies, which had just taken place; the third changed the mode of election prescribed by law, and reduced nearly by one-half the numbers of the house of deputies to be elected; and the fourth commanded the new elections to be held, and fixed a day for the meeting of the assembly to be so constituted.

These ordinances were the immediate occasion of the last revolution of the three days, terminating in the final expulsion of Charles the Tenth from the throne, and of himself and his family from the territory of France. This was effected by an insurrection of the people of Paris, which burst forth, by spontaneous and unpremeditated movement, on the very day of the promulgation of the four ordinances. The first of these, the suppression of all the daily newspapers, seemed as if studiously devised to provoke instantaneous resistance, and the conflict of physical force. Had Charles the Tenth issued a decree to shut up all the bakehouses of Paris, it could not have been more fatal to his authority. The conductors of the proscribed journals, by mutual engagement among themselves, determined to consider the ordinance as unlawful, null, and void; and this was to all classes of the people the signal of resistance. The publishers of two of the journals, summoned immediately before the judicial tribunal, were justified in their resistance by the sentence of the court, pronouncing the ordinance null and void. A marshal of France receives the commands of the king to disperse, by force of arms, the population of Paris; but the spontaneous resurrection of the national guard organizes at once an army to defend the liberties of the nation. Lafayette is again called from his retreat at La Grange, and, by the unanimous voice of the people, confirmed by such

deputies of the legislative assembly as were able to meet for common consultation at that trying emergency, is again placed at the head of the national guard as their commander-in-chief. He assumed the command on the second day of the conflict, and on the third Charles the Tenth had ceased to reign. He formally abdicated the crown, and his son, the duke d'Angoulême, renounced his pretensions to the succession. But, humble imitators of Napoleon, even in submitting to their own degradation, they clung to the last gasp of hereditary sway, by transmitting all their claim of dominion to the orphan child of the duke de Berri.

At an early stage of the revolution of 1789, Lafayette had declared it as a principle that insurrection against tyrants was the most sacred of duties. He had borrowed this sentiment, perhaps, from the motto of Jefferson—"Rebellion to tyrants is obedience to God." The principle itself is as sound as its enunciation is daring. Like all general maxims, it is susceptible of very dangerous abuses: the test of its truth is exclusively in the correctness of its application. As forming a part of the political creed of Lafayette, it has not been severely criticised; nor can it be denied that, in the experience of the French revolutions, the cases in which popular insurrection has been resorted to, for the extinction of existing authority, have been so frequent, so unjustifiable in their causes, so atrocious in their execution, so destructive to liberty in their consequences, that the friends of freedom, who know that she can exist only under the supremacy of the law, have sometimes felt themselves constrained to shrink from the development of abstract truth, in the dread of the danger with which she is surrounded.

In the revolution of the three days of 1830, it was the steady, calm, but inflexible adherence of Lafayette to this maxim which decided the fate of the Bourbons. After the struggles of the people had commenced, and even while liberty and power were grappling with each other for life or death, the deputies elect to the legislative assembly, then at Paris, held several meetings at the house of their colleague, Lafitte, and elsewhere, at which the question of resistance against the ordinances was warmly debated, and aversion to that resistance by force was the sentiment predominant in the minds of a majority of the members. The hearts of some of the most ardent patriots quailed within them at the thought of another overthrow of the monarchy. All the horrible recollections of the reign of terror, the massacre of the prisons in September, the butcheries of the guillotine from year to year, the headless trunks of Brissot, and Danton, and Robespierre and last, not least, the iron crown and sceptre of Napoleon himself, rose in hideous succession before them, and haunted their imaginations. They detested the ordinances, but hoped that, by negotiation and remonstrance with the recreant king, it might yet be possible to obtain the revocation of them, and the substitution of a more liberal ministry. This deliberation was not concluded till Lafayette appeared among them. From that moment the die was cast. They had till then no military leader. Louis Philippe of Orleans, had not then been seen among them.

In all the changes of government in France, from the first assembly of notables, to that day, there never had been an act of authority presenting a case for the fair and just application of the duty of resistance against oppression, so clear, so unquestionable, so flagrant as this. The violations of the charter were so gross and palpable, that the most determined royalist could not deny them. The mask had been laid aside. The sword of despotism had been drawn, and the scabbard cast away. A king, openly forsworn, had forfeited every claim to allegiance; and the only resource of the nation against him was resistance by force. This was the opinion of Lafayette, and he declared himself ready to take the command of the National Guard, should the wish of the people, already declared thus to place him at the head of this spontaneous movement, be confirmed by his colleagues of the legislative assembly. The appoint-

ment was accordingly conferred upon him, and the second day afterwards Charles the Tenth and his family were fugitives to a foreign land.

France was without a government. She might then have constituted herself a republic, and such was, undoubtedly, the aspiration of a very large portion of her population. But with another, and yet larger portion of her people, the name of republic was identified with the memory of Robespierre. It was held in execration; there was imminent danger, if not absolute certainty, that the attempt to organize a republic would have been the signal for a new civil war. The name of a republic, too, was hateful to all the neighbours of France; to the confederacy of emperors and kings, which had twice replaced the Bourbons upon the throne, and who might be propitiated under the disappointment and mortification of the result, by the retention of the name of king, and the substitution of the semblance of a Bourbon for the reality.

The people of France, like the Cardinal de Retz, more than two centuries before, wanted a descendant from Henry the Fourth, who could speak the language of the Parisian populace, and who had known what it was to be a plebeian. They found him in the person of Louis Philippe, of Orleans. Lafayette himself was compelled to compromise with his principles, purely and simply republican, and to accept him, first as lieutenant general of the kingdom, and then as hereditary king. There was, perhaps, in this determination, besides the motives which operated upon others, a consideration of disinterested delicacy, which could be applicable only to himself. If the republic should be claimed, he knew that the chief magistracy could be delegated only to himself. It must have been a chief magistracy for life, which at his age, could only have been for a short term of years. Independent of the extreme dangers and difficulties to himself, to his family, and to his country, in which the position which he would have occupied might have involved them, the inquiry could not escape his forecast, who upon his demise, could be his successor? and what must be the position occupied by him? If, at that moment, he had but spoken the word, he might have closed his career with a crown upon his head, and with a withering blast upon his name to the end of time.

With the duke of Orleans himself, he used no concealment or disguise. When the crown was offered to that prince, and he looked to Lafayette for consultation, "you know (said he) that I am of the American school, and partial to the constitution of the United States." So, it seems, was Louis Philippe. "I think with you," said he. "It is impossible to pass two years in the United States, without being convinced that their government is the best in the world. But do you think it suited to our present circumstances and condition?" No, replied Lafayette. "They require a monarchy surrounded by popular institutions." So thought also, Louis Philippe; and he accepted the crown under the conditions upon which it was tendered to him.

Lafayette retained the command of the national guard so long as it was essential to the settlement of the new and old things, on the basis of order and of freedom; so long as it was essential to control the stormy and excited passions of the Parisian people; so long as was necessary to save the ministers of the guilty but fallen monarch from the rash and revengeful resentments of their conquerors. When this was accomplished, and the people had been preserved from the calamity of shedding in peace the blood of war, he once more resigned his command, retired in privacy to La Grange and resumed his post as a deputy in the legislative assembly, which he continued to hold till the close of life.

His station there was still at the head of the phalanx, supporters of liberal principles and of constitutional freedom. In Spain, in Portugal, in Italy, and, above all, in Poland, the cause of liberty has been struggling against the hand of power, and to the last hour of his life, they found in Lafayette a never-failing friend and patron.

In his last illness, the standing which he held

in the hearts of mankind was attested by the formal resolution of the house of deputies, sent to make inquiries concerning his condition; and, dying, as he did, full of years and of glory, never, in the history of mankind, has a private individual departed more universally lamented by the whole generation of men whom he has left behind.

Such, legislators of the North American Confederate Union, was the life of Gilbert Motier de Lafayette, and the record of his life is the delineation of his character. Consider him as one human being of one thousand millions, his contemporaries on the surface of the terraqueous globe.—Among that thousand millions seek for an object of comparison with him; assume for the standard of comparison all the virtues which exalt the character of man above that of the brute creation; take the ideal man, little lower than the angels; mark the qualities of the mind and heart which entitle him to this station of pre-eminence in the scale of created beings, and inquire who, that lived in the eighteenth and nineteenth centuries of the christian æra, combined in himself so many of those qualities, so little alloyed with those which belong to that earthly vesture of decay in which the immortal spirit is enclosed, as Lafayette.

Pronounce him one of the first men of his age, and you have yet not done him justice. Try him by that test to which he sought in vain to stimulate the vulgar and selfish spirit of Napoleon; class him among the men who, to compare and seat themselves, must take in the compass of all ages; turn back your eyes upon the records of time; summon from the creation of the world to this day the mighty dead of every age and every clime; and where, among the race of merely mortal men, shall one be found, who, as the benefactor of his kind, shall claim to take precedence of Lafayette?

There have doubtless been, in all ages, men, whose discoveries or inventions, in the world of matter or of mind, have opened new avenues to the dominion of man over the material creation; have increased his means or his faculties of enjoyment; have raised him in nearer approximation to that higher and happier condition, the object of his hopes and aspirations in his present state of existence.

Lafayette discovered no new principles of politics or of morals. He invented nothing in science. He disclosed no new phenomenon in the laws of nature. Born and educated in the highest order of feudal nobility, under the most absolute monarchy of Europe, in possession of an affluent fortune, and master of himself and of all his capabilities at the moment of attaining manhood, the principle of republican justice and of social equality took possession of his heart and mind, as if by inspiration from above. He devoted himself, his life, his fortune, his hereditary honours, his towering ambition, his splendid hopes, all to the cause of liberty. He came to another hemisphere to defend her. He became one of the most effective champions of our Independence; but, that once achieved, he returned to his own country, and thenceforward took no part in the controversies which have divided us. In the events of our revolution, and in the forms of policy which we have adopted for the establishment and perpetuation of our freedom, Lafayette found the most perfect form of government. He wished to add nothing to it. He would gladly have abstracted nothing from it. Instead of the imaginary republic of Plato, or the Utopia of Sir Thomas More, he took a practical existing model, in actual operation here, and never attempted or wished more than to apply it faithfully to his own country.

It was not given to Moses to enter the promised land; but he saw it from the summit of Pisgah.—It was not given to Lafayette to witness the consummation of his wishes in the establishment of a republic, and the extinction of all hereditary rule in France. His principles were in advance of the age and hemisphere in which he lived. A Bourbon still reigns on the throne of France, and it is

not for us to scrutinize the title by which he reigns. The principles of elective and hereditary power, blended in reluctant union in his person, like the red and white roses of York and Lancaster, may postpone to aftertime the last conflict to which they must ultimately come. The life of the patriarch was not long enough for the development of his whole political system. Its final accomplishment is in the womb of time.

The anticipation of this event is the more certain, from the consideration that all the principles for which Lafayette contended were practical. He never indulged himself in wild and fanciful speculations. The principle of hereditary power was, in his opinion, the bane of all republican liberty in Europe. Unable to extinguish it in the revolution of 1830, so far as concerned the chief magistracy of the nation, Lafayette had the satisfaction of seeing it abolished with reference to the peerage. An hereditary crown, stripped of the support which it may derive from an hereditary peerage, however compatible with Asiatic despotism, is an anomaly in the history of the christian world, and in the theory of free government. There is no argument producible against the existence of an hereditary peerage, but applies with aggravated weight against the transmission, from sire to son, of an hereditary crown. The prejudices and passions of the people of France rejected the principle of inherited power, in every station of public trust excepting the first and highest of them all; but there they clung to it, as did the Israelites of old to the savory deities of Egypt.

This is not the time or the place for a disquisition upon the comparative merits, as a system of government, of a republic, and a monarchy surrounded by republican institutions. Upon this subject there is among us no diversity of opinion; and if it should take the people of France another half century of internal and external war, of dazzling and delusive glories; of unparalleled triumphs, humiliating reverses, and bitter disappointments, to settle it to their satisfaction, the ultimate result can only bring them to the point where we have stood from the day of the declaration of independence; to the point where Lafayette would have brought them, and to which he looked as a consummation devoutly to be wished.

Then, too, and then only, will be the time when the character of Lafayette will be appreciated at its true value throughout the civilized world.—When the principle of hereditary dominion shall be extinguished in all the institutions of France; when government shall no longer be considered as property transmissible from sire to son, but as a trust committed for a limited time, and then to return to the people whence it came; as a burdensome duty to be discharged, and not as a reward to be abused; when a claim, any claim, to political power by inheritance shall, in the estimation of the whole French people, be held as it now is by the whole people of the North American union; then will be the time for contemplating the character of Lafayette, not merely in the events of his life, but, in the full development of his intellectual conceptions, of his fervent aspirations, of the labours and perils and sacrifices of his long and eventful career upon earth; and thenceforward, till the hour when the trump of the archangel shall sound to announce that time shall be no more, the name of Lafayette shall stand enrolled upon the annals of our race, high on the list of the pure and disinterested benefactors of mankind.

Lafayette* was a French nobleman of high rank, who, animated with the love of liberty, had left his native country, and offered his services to Congress. While in France, and only nineteen years of age, he espoused the cause of the Americans, with the most disinterested and generous ardour. Having determined to join them, he communicated his intentions to the American commissioners, at Paris. They justly conceived, that a patron of so much importance would be of service to their cause, and encouraged his design. Before

he had embarked from France, intelligence arrived in Europe, that the American insurgents, reduced to 2000 men, were fleeing through Jersey, before a British force of 30,000. Under these circumstances, the American commissioners at Paris thought it but honest to dissuade him from the present prosecution of his perilous enterprise. It was in vain that they acted so candid a part. His zeal, to serve a distressed country, was not abated by her misfortunes. Having embarked in a vessel, which he purchased for the purpose, he arrived at Charleston, early in 1777, and soon after joined the American army. Congress resolved, that, "in consideration of his zeal, illustrious family and connexions, he should have the rank of major general in their army." Independent of the risk he ran as an American officer, he hazarded his large fortune in consequence of the laws of France, and also the confinement of his person, in case of capture when on his way to the United States, without the chance of being acknowledged by any nation; for his court had forbidden his proceeding to America, and had despatched orders to have him confined in the West Indies if found in that quarter.

This gallant nobleman, who, under all these disadvantages, had demonstrated his good will to the United States, received a wound in his leg at the battle of Brandywine; but he nevertheless continued in the field, and exerted himself both by word and example in rallying the Americans. Other foreigners of distinction also shared in the engagement. Count Pulaski, a Polish nobleman, the same who a few years before carried off king Stanislaus from his capital, though surrounded with a numerous body of guards, and a Russian army, fought with the Americans at Brandywine. He was a thunderbolt of war, and always sought for the post of danger as the post of honour. Soon after this engagement, Congress appointed him commander of horse, with the rank of brigadier.

Howe persevered in his scheme of gaining the right flank of the Americans. This was no less steadily pursued on the one side, than avoided on the other. Washington came forward in a few days with a resolution of risking another action. He accordingly advanced as far as the Warren tavern, on the Lancaster road. Near that place, on the 18th September, both armies were on the point of engaging, with their whole force: but were prevented by a most violent storm of rain, which continued for a whole day and night. When the rain ceased, the Americans found that their ammunition was entirely ruined. Before a proper supply was procured, the British marched from their position near the White Horse tavern, down towards the Swedes' ford. The Americans again took post in their front; but the British, instead of urging an action, began to march up towards Reading. To save the stores which had been deposited in that place, Washington took a new position, and left the British in undisturbed possession of the roads which lead to Philadelphia. His troops were worn down with a succession of severe duties. There was in his army above a thousand men who were barefooted, and who had performed all their late movements in that condition.

About this time, the Americans sustained a considerable loss by a night attack, conducted by General Grey, on a detachment of their troops, which was encamped near the Paoli tavern. The outposts and pickets were forced without noise, about one o'clock in the morning of the 20th of September. The men, when they turned out, unfortunately paraded in the light of their fires. This directed the British how and where to proceed. They rushed in upon them, and put about 300 to death, in a silent manner, by a free and exclusive use of the bayonet. The enterprise was conducted with so much address, that the loss of the assailants did not exceed eight.

Congress, which after a short residence at Baltimore, had returned to Philadelphia, were obliged a second time to consult their safety by flight.—They retired at first to Lancaster, and afterwards to Yorktown.

The bulk of the British army being left in Ger-

mantown, Sir William Howe, with a small party, made his triumphal entry into Philadelphia, on the 26th of September, and was received with the hearty welcome of numerous citizens, who, either from conscience, cowardice, interest, or principle, had hitherto separated themselves from the class of active whigs.

The possession of the largest city in the United States, together with the dispersion of that grand council which had heretofore conducted their public affairs, were reckoned by the short-sighted as decisive of their fate. The submission of countries after the conquest of their capital, had often been a thing of course: but in the great contest for the sovereignty of the United States, the question did not rest with a ruler, or a body of rulers: nor was it to be determined by the possession or loss of any particular place. It was the public mind, the sentiments and opinions of the yeomanry of the country which were to decide. Though Philadelphia had become the residence of the British army, yet as long as the majority of the people of the United States were opposed to their government, the country was unsubdued. Indeed it was presumed by the more discerning politicians, that the luxuries of a great city would so far enervate the British troops, as to dispose them for those active exertions to which they were prompted, while inconveniently encamped in the open country.

To take off the impression the British successes might make in France, to the prejudice of America, Dr. Franklin gave them an ingenious turn, by observing, "that instead of saying Sir William Howe had taken Philadelphia, it would be more proper to say, Philadelphia had taken Sir William Howe."

One of the first objects of the British, after they had gotten possession, was to erect batteries to command the river, and to protect the city from any assault by water. The British shipping were prevented from ascending the Delaware, by obstructions hereafter to be described, which were fixed near Mud-Island. Philadelphia though possessed by the British army, was exposed to danger from the American vessels in the river. The American frigate Delaware of 32 guns, anchored within 500 yards of the unfinished batteries, and, being seconded with some smaller vessels, commenced a heavy cannonade upon the batteries, tower; but upon the falling of the tide, she ran aground. Being briskly fired upon from the town, while in this condition, she was compelled to surrender. The other American vessels, not able to resist the fire from the batteries, after losing one of their number, retired.

General Washington having been reinforced by 2500 men from Peekskill and Virginia; and having been informed, that General Howe had detached a considerable part of his force, for reducing the forts on the Delaware, conceived the design of attacking the British post at Germantown. Their line of encampment crossed the town at right angles near its centre. The left wing extended to the Schuylkill, and was covered in front by the mounted and dismounted chasseurs. The queen's American rangers and a battalion of light infantry were in front of the right. The 40th regiment, with another battalion of light-infantry, were posted on the Chesnut-hill road, three quarters of a mile in advance. Lord Cornwallis lay at Philadelphia with four battalions of grenadiers.

A few of the general officers of the American army, whose advice was requested on the occasion, unanimously recommended an attack; and it was agreed that it should be made in different places, to produce the greater confusion, and to prevent the several parts of the British forces from affording support to each other. From an apprehension, that the Americans, through the want of discipline, would not persevere in a long attack, it was resolved that it should be sudden and vigorous: and if unsuccessful to be followed by an expeditious retreat. The divisions of Sullivan and Wayne, flanked by Conway's brigade, were to enter the town by the way of Chesnut-hill, while General Armstrong with the Pennsyl-

*See page 396.

vania militia should fall down the Manatawny road and gain the left and rear of the British. The divisions of Greene and Stephens, flanked by McDougal's brigade, were to enter by the lime-kiln road. The militia of Maryland and Jersey, under Generals Smallwood and Furman, were to march by the old York road, and to fall upon the rear of their right.

Lord Stirling, with Nash's and Maxwell's brigade, were to form a corps of reserve. The Americans began their attack about sunrise, on the 4th of October, on the 40th regiment, and a battalion of light infantry. These two corps, being obliged to retreat, were pursued into the village. On their retreat, Lieutenant Colonel Musgrove, with six companies, took post in Chew's strong stone house, which lay in front of the Americans. From an adherence to the military maxim of never leaving a fort possessed by an enemy in the rear, it was resolved to attack the party in the house.

In the mean time General Greene got up with his column, and attacked the right wing. Colonel Mathews routed a party of the British opposed to him, killed several, and took 110 prisoners; but from the darkness of the day, lost sight of the brigade to which he belonged; and, having separated from it, was taken prisoner, with his whole regiment: and the prisoners, whom he had previously taken, were released. A number of the troops in Greene's division were stopped by the halt of the party before Chew's house. Near one half of the American army remained for some time at that place inactive. In the mean time, General Grey led on three battalions of the third brigade, and attacked with vigour. A sharp contest followed. Two British regiments attacked at the same time on the opposite side of the town. General Grant moved up the 40th regiment to the aid of those who were engaged with Greene's column.

The morning was foggy. This, by concealing the true situation of the parties, occasioned mistakes, and made so much caution necessary as gave the British time to recover from the effects of their first surprise. From these causes, the early promising appearances on the part of the assailants were speedily reversed. The Americans left the fields hastily, and all efforts to rally them were ineffectual. Lord Cornwallis arrived with a party of light horse, and joined in the pursuit. This was continued for some miles. The loss of the royal army, including the wounded and prisoners, was about 500. Among their slain were Brigadier General Agnew, and Lieutenant Colonel Bird. The loss of the Americans, including 400 prisoners, was about 1000. Among their slain were General Nash and his aid-de-camp Major Witherspoon.

Soon after this battle the British left Germantown, and turned their principal attention towards opening a free communication between their army and their shipping.

Much industry and ingenuity had been exerted for the security of Philadelphia on the water side. Thirteen galleys, two floating batteries, two zebecks, one brig, one ship, besides a number of armed boats, fire ships and rafts, were constructed or employed for this purpose. The Americans also had built a fort on Mud-Island, to which they gave the name of Fort Mifflin, and erected thereon a considerable battery. This island is admirably situated for the erection of works to annoy shipping on their way up the Delaware. It lies near the middle of the river, about seven miles below Philadelphia. No vessels of burden can come up but by the main ship channel, which passes close to Mud-Island, and is very narrow for more than a mile below. Opposite to Fort Mifflin there is a height, called Red-Bank. This overlooks not only the river, but the neighbouring country. On this eminence, a respectable battery was erected. Between these two fortresses, which are half a mile distant from each other, the American naval armament, for the defence of the river Delaware, made its harbour of retreat. Two ranges of chevaux-de-frise were also sunk in the channel. These consisted of large pieces of timber, strongly fram-

ed together, in the manner usual for making the foundation of wharves, in deep water. Several large points of bearded iron projecting down the river, were annexed to the upper parts of the chevaux-de-frise, and the whole was sunk with stones, so as to be about four feet under water at low tide. Their prodigious weight and strength could not fail to effect the destruction of any vessel which came upon them. Thirty of these machines were sunk about three hundred yards below fort Mifflin, so as to stretch in a diagonal line across the channel.

The only open passage left was between two piers lying close to the fort, and that was secured by a strong boom, and could not be approached but in a direct line to the battery. Another fortification was erected on a high bank on the Jersey shore, called Billingsport. And opposite to this, another range of chevaux-de-frise was deposited, leaving only a narrow and shoal channel on the one side. There was also a temporary battery of two heavy cannon, at the mouth of Mantua creek, about half way from Red-Bank to Billingsport.

The British were well apprised, that, without the command of the Delaware, their possession of Philadelphia would be of no advantage. They therefore strained every nerve, to open the navigation of that river. To this end Lord Howe had early taken the most effectual measures for conducting the fleet and transports round, from the Chesapeake to the Delaware, and drew them up on the Pennsylvania shore, from Reedy-Island to Newcastle.

Early in October, a detachment from the British army crossed the Delaware, with a view of dislodging the Americans from Billingsport. On its approach the place was evacuated. As the season advanced, more vigorous measures for removing the obstructions were concerted between the general and the admiral. Batteries were erected on the Pennsylvania shore, to assist in dislodging the Americans from Mud-Island. At the same time, Count Donop with 2000 men, having crossed into New Jersey, opposite to Philadelphia, marched down on the eastern side of the Delaware, to attack the redoubt at Red-Bank, which was defended by about 400 men, under the command of Colonel Greene. The attack immediately commenced by a smart cannonade, under cover of which the count advanced to the redoubt. This place was intended for a much larger garrison than was then in it. It had therefore become necessary to run a line through the middle and evacuate one part of it. That part was easily carried by the assailants, on which they indulged in loud buzzas for their supposed victory. The garrison kept up a severe and well-directed fire on them by which they were compelled to retire. They suffered not only in the assault, but in the approach to, and retreat from the fort. Their whole loss in killed and wounded was about 400. Count Donop was mortally wounded and taken prisoner. Congress resolved, to present Colonel Greene with a sword for his good conduct on this occasion. An attack, made about the same time on Fort Mifflin, by men of war and frigates, was not more successful than the assault on Red-Bank. The Augusta of 64 guns, and the Merlin, two of the vessels which were engaged in it, got around. The former was fired, and blew up. The latter was evacuated.

Though the first attempts of the British, for opening the navigation of the Delaware, were unsuccessful, they carried their point in another way that was unexpected. The chevaux-de-frise, having been sunk some considerable time, the current of the water was diverted by this great bulk into new channels. In consequence thereof, the passage between the islands and the Pennsylvania shore was so deepened as to admit vessels of considerable draught of water. Through this passage, the Vigilant, a large ship, cut down so as to draw but little water, mounted with 24 pounders, made her way to a position from which she might enfilade the works on Mud-Island. This gave the British such an advantage, that the post was no longer tenable. Lieutenant Colonel Smith, who

had with great gallantry defended the fort from the latter end of September, to the 11th of November, being wounded was removed to the main. With in five days after his removal, Major Thayer, who as a volunteer had nobly offered to take charge of this dangerous post, was obliged to evacuate it. This event did not take place till the works were entirely beat down, every piece of cannon dismounted, and one of the British ships so near, that she threw grenades into the fort, and killed the men uncovered in the platform. The troops, who had so bravely defended Fort Mifflin, made a safe retreat to Red-Bank. Congress voted swords to be given to lieutenant colonel Smith and commodore Hazlewood for their gallant defence of the Delaware.

Within three days after Mud-Island was evacuated, the garrison was also withdrawn from Red-Bank, on the approach of Lord Cornwallis, at the head of a large force prepared to assault it. Some of the American galleys and armed vessels, escaped by keeping close in with the Jersey shore, to places of security above Philadelphia; but seventeen of them were abandoned by their crews, and fired. Thus the British gained a free communication between their army and shipping. This event was to them very desirable. They had been previously obliged to draw their provisions from Chester, a distance of fifteen miles at some risk, and a certain great expense. The long protracted defence of the Delaware, deranged the plans of the British, for the remainder of the campaign, and consequently saved the adjacent country.

About this time, the chair of Congress became vacant, by the departure of Mr. Hancock, after he had discharged the duties of that office to great acceptance, two years and five months. Henry Laurens, of South Carolina, was unanimously elected his successor on the 1st of November. He had been in England for some years, antecedent to the hostile determinations of parliament against the colonies; but finding the dispute growing serious, he conceived that honour and duty called him to take part with his native country. He had been warmly solicited to stay in England; and offers were made him not only to secure, but to double his American estate, in case of his continuing to reside there: but these were refused. To a particular friend in London, dissuading him from coming out to America, he replied on the 9th of November 1774, when at Falmouth, on the point of embarking, "I shall never forget your friendly attention to my interest; but I dare not return. Your ministers are deaf to information, and seem bent on provoking unnecessary contest. I think I have acted the part of a faithful subject. I now go resolved still to labour for peace; at the same time determined in the last event to stand or fall with my country."

When Sir William Howe was succeeding in every enterprise in Pennsylvania, intelligence arrived, as shall be related in the next chapter, that General Burgoyne and his whole army had surrendered prisoners of war to the Americans."

General Washington soon afterwards received a considerable reinforcement from the northern army which had accomplished this great event. With this increased force, he took a position at and near Whitemarsh. The royal army, having succeeded in removing the obstructions in the river Delaware, were ready for new enterprises. Sir William Howe, on the 4th of December, marched out of Philadelphia with almost his whole force, expecting to bring on a general engagement. The next morning he appeared on Chestnut Hill in front of, and about three miles distant from, the right wing of the Americans. On the day following, the British changed their ground, and moved to the right. Two days after, they moved still farther to the right, and exhibited every appearance of an intention to attack the American encampment. Some skirmishes took place, and a general action was hourly expected; but instead thereof, on the morning of the next day, December 9th, after various marches and countermarches, the British filed off from the right, by two or three different routes, in full march for Philadelphia.

The position of General Washington, in a military point of view, was admirable. He was so sensible of the advantages of it, that the manœuvres of Sir William Howe for some days could not allure him from it. In consequence of the reinforcement lately received, he had not in any preceding period of the campaign been in an equal condition for a general engagement. Though he evidently wished to be attacked, yet he would not relinquish a position, from which he hoped to repair the misfortunes of the campaign. He could not believe, that General Howe with a victorious army, and that lately reinforced with four thousand men from New York, should come out of Philadelphia, only to return thither again. He therefore presumed, that to avoid the disgrace of such a movement, the British commander would from a sense of military honour, be compelled to attack him, though under great disadvantages.—When he found him cautious of engaging, and inclining to his left, a daring design was formed which would have been executed, had the British either continued in their position, or moved a little farther to the left of the American army. This was to have attempted in the night to surprise Philadelphia. The necessary preparations for this purpose were made; but the retreat of the British prevented its execution.

Soon after these events, General Smallwood with a considerable force, was posted at Wilmington, on the banks of the Delaware; and Washington, with the main army, retired to winter quarters at Valley forge, 16 miles from Philadelphia.—This position was preferred to distant and more comfortable villages, as being calculated to give the most extensive security to the country. The American army might have been tracked, by the blood of their feet, in marching without shoes or stockings over the hard frozen ground, between Whitemarsh and Valley Forge. Some hundreds of them were without blankets. Under these circumstances, they had to sit down in a wood, in the latter end of December, and to build huts for their accommodation. This mode of procuring winter quarters, if not entirely novel, has been rarely, if ever practised in modern war. The cheerfulness with which the general and his army submitted to spend a severe winter, in such circumstances, rather than leave the country exposed, by retiring farther, demonstrated as well their patriotism as their fixed resolution to suffer every inconvenience, in preference to submission.

Thus ended the campaign of 1777. Though Sir William Howe's army had been crowned with the most brilliant success, having gained two considerable victories, and been equally triumphant in many smaller actions, yet the whole amount of this tide of good fortune was no more than a good winter lodging for his troops in Philadelphia whilst the men under his command possessed no more of the adjacent country, than what they immediately commanded with their arms. The Congress, it is true, was compelled to leave the first seat of their deliberations; and the greatest city in the United States changed a number of its whig inhabitants for a numerous royal army; but it is as true that the minds of the Americans were, if possible, more hostile to the claims of Great Britain than ever, and their army had gained as much by discipline and experience, as compensated for its diminution by defeats.

The events of this campaign were adverse to the sanguine hopes, which had been entertained of a speedy conquest of the revolted colonies. Repeated proofs had been given, that though Washington was very forward to engage when he thought it to his advantage, yet it was impossible for the royal commander to bring him to action against his consent. By this mode of conducting the defence of the new formed states, two campaigns had been wasted away, and the work which was originally allotted for one, was still unfinished.

An account of some miscellaneous transactions will close this chapter. Lieutenant Colonel Barton, of a militia regiment of the state of Rhode

Island, accompanied by about forty volunteers, passed by night, on the 9th of July, from Warwick neck to Rhode Island, surprised General Prescott in his quarters, and brought him and one of his aids safe off to the continent. Though they had a passage of ten miles by water, they eluded the ships of war and guard boats, which lay all round the Island. The enterprise was conducted with so much silence and address, that there was no alarm among the British, till the colonel and his party had nearly reached the continent with their prize. Congress soon after resolved, that an elegant sword should be presented to Lieutenant Colonel Barton, as a testimonial of their sense of his gallant behaviour.

It has already been mentioned, that Congress, in the latter end of November, 1775, authorized the capture of vessels, laden with stores or reinforcements for their enemies. On the 23d of March, 1776, they extended this permission so far, as to authorize their inhabitants to fit out armed vessels, to cruise on the enemies of the United colonies. The Americans henceforth devoted themselves to privateering, and were very successful. In the course of the year, they made many valuable captures, particularly of homeward bound West India men. The particulars cannot be enumerated; but good judges have calculated, that within nine months after Congress authorized privateering, the British loss in captures, exclusive of transports and government store ships, exceeded a million sterling. They found no difficulty in selling their prizes. The ports of France were open to them, both in Europe and in the West Indies. In the latter they were sold without any disguise; but in the former a greater regard was paid to appearances. Open sales were not permitted in the harbours of France at particular times; but even then they were made at the entrance, or offing.

In the French West India Islands, the inhabitants not only purchased prizes, brought in by the American cruisers, but fitted out privateers under American colours and commissions, and made captures of British vessels. William Bingham, of Philadelphia, was stationed as the agent of Congress, at Martinico; and he took an early and active part in arming privateers in St. Pierre, to annoy and cruise against British property. The favourable disposition of the inhabitants furnished him with an opportunity, which he successfully improved, not only to distress the British commerce, but to sow the seeds of discord between the French and English. The American privateers also found countenance in some of the ports of Spain; but not so readily nor so universally as in those of France. The British took many of the American vessels. Such of them, as were laden with provisions, proved a seasonable relief to their West India Islands, which otherwise would have suffered from the want of those supplies, that before the war had been usually procured from the neighbouring continent.

The American privateers, in the year 1777, increased in numbers and boldness. They insulted the coasts of Great Britain and Ireland, in a manner that had never before been attempted. Such was their spirit of adventure, that it became necessary to appoint a convoy for the protection of the linen ships from Dublin and Newry. The General Mifflin privateer, after making repeated captures, arrived at Brest, and saluted the French admiral. This was returned in form, as to the vessel of an independent power. Lord Stormont, the British ambassador, at the court of Versailles, irritated at the countenance given to the Americans, threatened to return immediately to London, unless satisfaction were given, and different measures were adopted by France. An order was issued in consequence of his application, requiring all American vessels to leave the ports of his most christian majesty; but though the order was positive, so many evasions were practised, and the execution of it was so relaxed, that it produced no permanent discouragement of the beneficial intercourse.

To effect a free communication between New-York and Canada, and to maintain the navigation of the intermediate lakes, were principal objects with the British, in the campaign of 1777. The Americans presuming on this had been early attentive to their security in that quarter. They had resolved to construct a fort on Mount Independence, an eminence adjoining the strait on which Ticonderoga stands, and nearly opposite to that fortress. They had also resolved, to obstruct the navigation of the strait by caissons, to be sunk in the water, and joined so as to serve at the same time for a bridge, between the fortifications on the east and west sides of it; that, to prevent the British from drawing their small craft over land into Lake George, the passage of that lake should be obstructed; that Fort Schuyler, the same which had formerly been called Fort Stanwix, should be strengthened, and other fortifications erected near the Mohawk river. Requisitions were made, by the commanding officer in the department, for 13,600 men, as necessary for the security of this district. The adjacent states were urged to fill up their recruits, and in all respects to be in readiness for an active campaign.

The British ministry were very sanguine in their calculations, on the consequences of forming a line of communication between New York and Canada. They considered the New England people the soul of the confederacy, and promised themselves much by severing them from all free communication with the neighbouring states. They hoped, when this was accomplished, to be able to surround them so effectually with fleets, armies, and Indian allies, as to compel their submission. Animated with these expectations, they left nothing undone, which bid fair for insuring the success of their plans.

The regular troops, British and German, allotted to this service, were upwards of 7000. As artillery is considered to be particularly useful in an American war, where numerous inhabitants are to be driven out of woods and fastnesses, this part of the service was particularly attended to. The brass train sent out was perhaps the finest, and the most excellently supplied, both as to officers and men, that had ever been allotted to second the operations of an equal force. In addition to the regulars, it was supposed that the Canadians and the loyalists, in the neighbouring states, would add large reinforcements, well calculated for the peculiar nature of the service. Arms and accoutrements, were accordingly provided to supply them. Several nations of savages had also been induced to take up the hatchet, as allies to his Britannic majesty. Not only the humanity, but the policy of employing them was questioned in Great Britain. The opposers of it contended that Indians were capricious, inconstant, and intractable; their rapacity insatiate, and their actions cruel and barbarous. At the same time, their services were represented uncertain, and their engagements without the least claim to confidence. On the other hand, the zeal of British ministers for reducing the revolted colonies was so violent, as to make them, in their excessive wrath, forget that their adversaries were men. They contended, that in their circumstances every appearance of lenity, by inciting to disobedience, and thereby increasing the objects of punishment, was eventually cruelty. In their opinion, partial severity was general mercy, and the only method of speedily crushing the rebellion was to envelop its abettors in such complicated distress, as by rendering their situation intolerable, would make them willing to accept the proffered blessings of peace and security. The sentiments of those who were for employing Indians against the Americans prevailed. Presents were liberally distributed among them. Induced by these, and also by their innate thirst for war and plunder, they poured forth their warriors in such abundance, that their numbers threatened to be an incumbrance.

The vast force destined for this service was put under the command of Lieutenant General Burgoyne, an officer whose abilities were well known, and whose spirit of enterprise and thirst for military fame could not be exceeded. He was supported by Major General Philips of the artillery, who had established a solid reputation by his good conduct during the late war in Germany, and by Major General Reidesel, and Brigadier General Specht, of the German troops, together with the British Generals Frazer, Powell and Hamilton, all officers of distinguished merit.

The British had also undisputed possession of the navigation of Lake Champlain. Their marine force thereon, with which in the preceding campaign they had destroyed the American shipping on the lakes, was not only entire, but unopposed.

A considerable force was left in Canada for its internal security; and Sir Guy Carleton's military command was restricted to the limits of that province. Though the British ministry attributed the preservation of Canada to his abilities in 1775 and 1776, yet, by their arrangements for the year 1777, he was only called upon to act a secondary part, in subserviency to the grand expedition committed to General Burgoyne. His behaviour on this occasion was conformable to the greatness of his mind. Instead of thwarting or retarding a service which was, virtually taken out of his hands, he applied himself to support and forward it in all its parts, with the same diligence as if the arrangement had been entirely his own, and committed to himself for execution.

The plan of the British, for their projected irruption into the north-western frontier of New York, consisted of two parts. General Burgoyne with the main body was to advance by the way of lake Champlain, with positive orders, as has been said, to force his way to Albany, or at least so far as to effect a junction with the royal army from New York. A detachment was to ascend the river St. Lawrence, as far as lake Ontario, and, from that quarter, to penetrate towards Albany, by the way of the Mohawk river. This was put under the command of Lieutenant Colonel St. Leger, and consisted of about two hundred British troops, a regiment of New York loyalists, raised and commanded by Sir John Johnson, and a large body of savages. Lieutenant General Burgoyne arrived in Quebec on the 6th of May, and exerted all diligence to prosecute in due time the objects of the expedition. He proceeded up lake Champlain, and landed near Crown-Point. At this place he met the Indians, 20th June, gave them a war feast, and made a speech to them. This was well calculated to excite them to take part with the royal army; but at the same time to repress their barbarity. He pointedly forbade them to shed blood when not opposed in arms, and commanded that aged men, women, and children, and prisoners should be held sacred from the knife and the hatchet, even in the heat of actual conflict. A reward was promised for prisoners, and a severe inquiry threatened for scalps; though permission was granted to take them from those who were previously killed in fair opposition. These restrictions were not sufficient to restrain their barbarities.—The Indians having decidedly taken part with the British army, General Burgoyne issued a proclamation, calculated to spread terror among the inhabitants. The numbers of his Indian associates were magnified, and their eagerness to be let loose to their prey described in high sounding words. The force of the British armies and fleets, prepared to crush every part of the revolted colonies, was also displayed in pompous language. Encouragement and employment were promised to those who should assist in the re-establishment of legal government, and security held out to the peaceable and industrious, who continued in their habitations. All the calamities of war, arrayed in their most terrific forms, were denounced against those who should persevere in a military opposition to the royal forces.

General Burgoyne advanced with his army, on the 30th of June, to Crown Point. At this place

he issued orders, of which the following words are a part: "The army embarks to-morrow to approach the enemy. The services required on this expedition are critical and conspicuous. During our progress occasions may occur, in which no difficulty, nor labour, nor life, are to be regarded. This army must not retreat." From Crown-Point, the royal army proceeded to invest Ticonderoga. On their approach, they advanced with equal caution and order on both sides the lake, while their naval force kept in its centre. Within a few days, they had surrounded three-fourths of the American works, at Ticonderoga and Mount Independence; and had also advanced a work on Sugar-hill, so far towards completion, that in twenty-four hours it would have been ready to open. In these circumstances, General St. Clair, the commanding officer, resolved to evacuate the post; but conceiving it prudent to take the sentiments of the general officers, he called a council of war on the occasion. It was represented to this council, that their whole numbers were not sufficient to man one half of the works; that, as the whole must be on constant duty, it would be impossible for them to sustain the necessary fatigue for any length of time; and that, as the place would be completely invested on all sides within a day, nothing but an immediate evacuation of the posts could save their troops. The situation of General St. Clair was eminently embarrassing. Such was the confidence of the States in the fancied strength of this post, and in the supposed superiority of force for its defence, that to retreat without risking an action could not fail of drawing on him the execration of the multitude. To stand still, and, by suffering himself to be surrounded, to risk his whole army for a single post, was contrary to the true interests of the States. In this trying situation, with the unanimous approbation of a council of his general officers, he adopted the heroic resolution of sacrificing personal reputation to save his army.

The assumption of confident appearances, by the garrison, had induced their adversaries, to proceed with caution. While from this cause they were awed into respect, the evacuation was completed with so much secrecy and expedition, that a considerable part of the public stores were saved, and the whole would have been embarked, had not a violent gale of wind prevented the boats from reaching their station.

The works, abandoned by the Americans, were chiefly the old French lines constructed in the late war between France and England, which had been repaired the year before, and were in good order. New works were begun on the mount; but there was neither time nor strength of hands to complete them. A great deal of timber had been felled between the east creek and the foot of the mount, to retard the approaches of the British. All the redoubts on the low ground were abandoned, for want of men to occupy them. These works, together with ninety-three pieces of ordnance, and a large collection of provisions, fell into the hands of the British.

The evacuation of Ticonderoga, July 6, was the subject of a severe scrutiny. Congress recalled their general officers in the northern department, and ordered an inquiry into their conduct. They also nominated two gentlemen of eminence in the law, to assist the judge advocate in prosecuting that inquiry, and appointed a committee of their own body to collect evidence in support of the charges, which were on this occasion brought against them, General St. Clair, from the necessity of the case, submitted to this innovation in the mode of conducting courts martial; but in behalf of the army protested against its being drawn into precedent. Charges, of no less magnitude than cowardice, incapacity and treachery, were brought forward in court against him, and believed by many. The public mind, sore with the loss of Ticonderoga, and apprehensive of general distress, sought to ease itself by throwing blame upon the general. When the situation of the army permitted an inquiry into his conduct, he was honourably acquitted. In the course of his trial, it

was made to appear, that, though 13,600 men had been early called for, as necessary to defend the northern posts, yet, on the approach of General Burgoyne, the whole force collected to oppose him was only 2546 continentals, and 900 militia, badly supplied and worse armed. From the insufficiency of their numbers, they could not possess themselves of Sugar-hill, nor of Mount-Hope, though the former commanded the works, both of Ticonderoga, and Mount Independence, and the latter was of great importance for communication with lake George, and had been fortified the year before with that view. To the question which had been repeatedly asked; "why was the evacuation, if really necessary, delayed till the Americans were so nearly surrounded, as to occasion the loss of such valuable stores?" it was answered; that "from various circumstances it was impossible for General St. Clair to get early information of the numbers opposed to him. The savages, whom the British kept in front, deterred small reconnoitering parties from approaching so near as to make any discoveries of their numbers. Large parties, from the nature of the ground, could not have been supported without risking a general action. From the combined operation of these circumstances, the numbers of the approaching royal army were effectually concealed from the garrison, till the van of their force appeared in full view before it."

The retreating army embarked as much of their baggage and stores as they had any prospect of saving, and despatched it under convoy of five armed galleys to Skenesborough. Their main body took its route towards the same place by way of Castleton. The British were no sooner apprized of the retreat of the Americans than they pursued them. General Frazer, at the head of the light troops, advanced on their main body. Major General Reidesel was also ordered, with the greater part of the Brunswick troops, to march in the same direction. General Burgoyne in person conducted the pursuit by water. The obstructions to the navigation, not having been completed, were soon cut through. The two frigates the Royal George and the Inflexible, together with the gun boats, having effected their passage, pursued with so much rapidity, that in the course of a day the gun boats came up with and attacked the American galleys, near Skenesborough Falls. On the approach of the frigates, all opposition ceased. Two of the galleys were taken, and three blown up. The Americans set fire to their works, mills, and batteaux. They were now left in the woods, destitute of provisions. In this forlorn situation, they made their escape up Wood-creek to fort Anne. Brigadier Frazer pursued the retreating Americans, and on the 7th July, came up with and attacked them. They made a gallant resistance, but, after sustaining considerable loss, were obliged to give way.

Lieutenant Colonel Hall, with the 9th British regiment, was detached from Skenesborough by General Burgoyne, to take post near fort Anne. An engagement ensued between this regiment and a few Americans; but the latter, after a conflict of two hours, fired the fort, and retreated to fort Edward. The destruction of the galleys and batteaux of the Americans at Skenesborough, and the defeat of their rear, obliged General St. Clair, in order to avoid being between two fires, to change the route of his main body, and to turn off from Castleton to the left. After a fatiguing and distressing march of seven days, he joined General Schnyler at fort Edward. Their combined forces inclusive of the militia, not exceeding in the whole 4,400 men, were, on the approach of General Burgoyne, compelled to retire farther into the country, bordering on Albany.

Such was the rapid torrent of success, which, in this period of the campaign, swept away all opposition from before the royal army. The officers and men were highly elated with their good fortune. They considered their toils to be nearly at an end; Albany to be within their grasp; and the conquest of the adjacent provinces reduced to a

certainly. In Great Britain, intelligence of the progress of Burgoyne diffused a general joy. As to the Americans, the loss of reputation, which they sustained in the opinion of their European admirers, was greater than their loss of posts, artillery and troops. They were stigmatized as wanting resolution. Their unqualified subjugation, or unconditional submission was considered near at hand. An opinion was diffused, that the war in effect was over, or that the farther resistance of the colonists, would serve only to make the terms of their submission more humiliating. The terror which the loss of Ticonderoga spread throughout the New England states was great; but nevertheless no disposition to purchase safety by submission, appeared in any quarter. They did not sink under the apprehension of danger, but acted with vigour and firmness.

The royal army, after these successes, continued for some days in Skenesborough, waiting for their tents, baggage and provision. In the meantime, General Burgoyne put forth a proclamation, in which he called on the inhabitants of the adjacent towns, to send a deputation of ten or more persons, from their respective townships, to meet Colonel Skene at Castleton, on the 15th of July. The troops were at the same time busily employed in opening a road, and clearing a creek, to favour their advance, and to open a passage for the conveyance of their stores. A party of the royal army, which had been left behind at Ticonderoga, was equally industrious in carrying gun boats, provisions, vessels, and batteaux over land into Lake George. An immensity of labour in every quarter was necessary; but animated as they were with past successes and future hopes, they disregarded toil and danger.

From Skenesborough, Gen. Burgoyne directed his course across the country to Fort Edward, on Hudson's River. Though the distance in a right line from one to the other is but a few miles, yet such is the impracticable nature of the country, and such were the artificial difficulties thrown in his way, that nearly as many days were consumed as the distance passed over in a direct line would have measured in miles. The Americans under the direction of Gen. Schuyler, had cut large trees on both sides of the road, so that they fell across it with their branches interwoven. The face of the country was likewise so broken with creeks and marshes, that they had no less than forty bridges to construct, one of which was a log-work over a morass, two miles in extent. This difficult march might have been avoided, had General Burgoyne fallen back from Skenesborough to Ticonderoga, and thence proceeded by Lake George; but he declined this route, from an apprehension that a retrograde motion on his part would abate the panic of the enemy. He had also a suspicion that some delay might be occasioned by the American garrison at Fort George; as in case of his taking that route, they might safely continue to resist to the last extremity, having open in their rear a place of retreat. On the other hand it was presumed, that as soon as they knew that the royal army was marching in a direction which was likely to cut off their retreat, they would consult their safety by a seasonable evacuation. In addition to these reasons, he had the advice and persuasion of Colonel Skene. That gentleman had been recommended to him as a person proper to be consulted. His land was so situated, that the opening of a road between Fort Edward and Skenesborough, would greatly enhance its value. This circumstance might have made him more urgent in his recommendations of that route, especially since, being the shortest, it bid fair for uniting the royal interest with private convenience.

The opinion formed by General Burgoyne of the effect of his direct movement from Skenesborough to Fort Edward, on the American garrison, was verified by the event; for being apprehensive of having their retreat cut off, they abandoned their fort, and burnt their vessels. The navigation of lake George being thereby left free, provisions and ammunition were brought forward from Fort

George, to the first navigable parts of Hudson's River. This is a distance of 15 miles, and the roads of difficult passage. The intricate combination of land and water carriage, together with the insufficient means of transportation, and excessive rains, caused such delays, that, at the end of fifteen days, there were not more than four days' provision brought forward, nor above ten batteaux in the river. The difficulties of this conveyance, as well as of the march through the wilderness from Skenesborough to Fort Edward, were encountered and overcome by the royal army, with a spirit and alacrity which could not be exceeded. At length, on the 30th of July, after incredible fatigue and labour, General Burgoyne, and an army under his command reached Fort Edward, on Hudson's River. Their exultation, on accomplishing, what for a long time had been the object of their hopes, was unusually great.

While the British were retarded in their advance by the combined difficulties of nature and art, events took place, which proved the wisdom and propriety of the retreat from Ticonderoga.—The army, saved by that means, was between the inhabitants and General Burgoyne. This abated the panic of the people, and became a centre of rendezvous for them to repair to. On the other hand, had they stood their ground at Ticonderoga, they must, in the ordinary course of events, either have been cut to pieces, or surrendered themselves prisoners of war. In either case, as General St. Clair represented in his elegant defence; "Fear and dismay would have seized on the inhabitants from the false opinion that had been formed of the strength of these posts; wringing grief, and moping melancholy, would have filled the habitations of those whose dearest connexions were in that army; and a lawless host of ruffians, set loose from every social principle, would have roamed at large through the defenceless country, while bands of savages would have carried havoc, devastation and terror before them. Great part of the State of New York must have submitted to the conqueror, and in it he would have found the means to prosecute his success. He would have been able effectually to have co-operated with General Howe, and would probably soon have been in the same country with him; that country where the illustrious Washington, with an inferior force, made so glorious a stand, but who must have been obliged to retire, if both armies had come upon him at once; or he might have been forced to a general and decisive action, in unfavourable circumstances, whereby the hopes, the now well-founded hopes of America, of liberty, peace and safety might have been cut off for ever." Such, it was apprehended, would have been the consequences, if the American northern army had not retreated from their post at Ticonderoga. Very different events took place.

In a few days after the evacuation, General Schuyler issued a proclamation, calling to the minds of the inhabitants the late barbarities and desolations of the royal army in Jersey; warning them that they would be dealt with as traitors, if they joined the British, and requiring them with their arms to repair to the American standard.—Numerous parties were also employed in bringing off public stores, and in felling trees, and throwing obstructions in the way of the advancing royal army. At first, an universal panic intimidated the inhabitants; but they soon recovered. The laws of self-preservation operated in their full force, and diffused a general activity through the adjacent states. The formalities of convening, drafting and officering the militia were in many instances, dispensed with. Hundreds seized their firelocks, and marched on the general call, without waiting for the orders of their immediate commanders.—The inhabitants had no means of security, but to abandon their habitations, and take up arms.—Every individual saw the necessity of becoming a temporary soldier. The terror excited by the Indians, instead of disposing the inhabitants to court British protection, had a contrary effect.

The friends of the royal cause, as well as its enemies, suffered from their indiscriminate barba-

rities. Among other instances, the murder of Miss M'Crea excited an universal horror. This young lady, in the innocence of youth, and the bloom of beauty; the daughter of a steady loyalist, and engaged to be married to a British officer, was, on the very day of her intended nuptials, massacred by the savage auxiliaries, attached to the British army.* Occasion was thereby given to inflame the populace, and to blacken the royal cause.—The cruelties of the Indians, and the cause in which they were engaged, were associated together, and presented in one view to the alarmed inhabitants. They, whose interest it was to draw forth the militia in support of American independence, strongly expressed their execrations of the army, which submitted to accept of Indian aid; and loudly condemned that government which could call such auxiliaries as were calculated not to subdue, but to exterminate a people whom they affected to reclaim as subjects. Their cruel mode of warfare, putting to death, as well the smiling infant and the defenceless female, as the resisting armed man, excited an universal spirit of resistance. In conjunction with other circumstances, it impressed on the minds of the inhabitants a general conviction that a vigorous determined opposition was the only alternative for the preservation of their property, their children and their wives. Could they have indulged the hope of security and protection while they remained peaceably at their homes, they would have found many excuses for declining to assume the profession of soldiers; but when they contrasted the dangers of a manly resistance, with those of a passive inaction, they chose the former, as the least of two unavoidable evils.

All the feeble aid, which the royal army received from their Indian auxiliaries, was infinitely overbalanced by the odium it brought on their cause, and by that determined spirit of opposition which the dread of their savage cruelties excited. While danger was remote, the pressing calls of Congress, and of the general officers, for the inhabitants to be in readiness to oppose a distant foe, were unavailing, or tardily executed: but no sooner had they recovered from the first impression of the general panic, than they turned out with unexampled alacrity. The owners of the soil came forward with that ardour, which the love of dear connexions and of property inspires. An army was speedily poured forth from the woods and mountains. When they who had begun the retreat were nearly wasted away, the spirit of the country immediately supplied their place, with a much more formidable force. In addition to these incitements, it was early conjectured, that the royal army, by pushing forward, would be so entangled as not to be able to advance or retreat on equal terms. Men of abilities and of eloquence, influenced with this expectation, harangued the inhabitants in their several towns, and set forth in high colouring the cruelties of the savage auxiliaries of Great Britain, and the fair prospects of capturing the whole force of their enemies. From the combined influence of these causes, the American army soon amounted to upwards of 13,000 men.

While Burgoyne was forcing his way down towards Albany, St. Leger was co-operating with him in the Mohawk country. He had ascended the River St. Lawrence, crossed Lake Ontario, and commenced the siege of Fort Schuyler. On the

* This, though true, was not premeditated barbarity.—The circumstances were as follow: Mr. Jones, her lover, from an anxiety for her safety, engaged some Indians to remove her from among the Americans, and promised to reward the person who should bring her safe to him, with a barrel of rum. Two of the Indians, who had conveyed her some distance, on the way to her intended husband, disputed, which of them should present her to Mr. Jones. Both were anxious for the reward. One of them killed her with his tomahawk, to prevent the other from receiving it. Burgoyne obliged the Indians to deliver up the murderer, and threatened to put him to death. His life was only spared, upon the Indians agreeing to terms, which the general thought would be more efficacious than an execution, in preventing similar mischiefs.

approach of this detachment of the royal army, on the 3d of August, General Herkimer collected about 800 of the whig militia of the parts adjacent, for the relief of the garrison.

St. Leger, aware of the consequences of being attacked in his trenches, detached Sir John Johnson, with some Tories and Indians, to lie in ambush, and intercept the advancing militia. The stratagem took effect. The general and his militia were surprised on the 6th of August; but several of the Indians were nevertheless killed by their fire. A scene of confusion followed. Some of Herkimer's men ran off; but others posted themselves behind logs, and continued to fight with bravery and success. The loss on the side of the Americans was 160 killed, besides the wounded. Among the former was their gallant leader, General Herkimer. Several of their killed and wounded were principal inhabitants of that part of the country. Colonel St. Leger availed himself of the terror excited on this occasion, and endeavoured by strong representations of Indian barbarity, to intimidate the garrison into an immediate surrender. He sent verbal and written messages, "demanding the surrender of the fort, and stating the impossibility of their obtaining relief, as their friends under General Herkimer were entirely cut off, and as General Burgoyne had forced his way through the country, and was daily receiving the submission of the inhabitants." He represented "the pains he had taken to soften the Indians, and to obtain engagements from them, that in case of an immediate surrender every man in the garrison should be spared; and particularly enlarged on the circumstance, 'that the Indians were determined in case of their meeting with further opposition, to massacre not only the garrison, but every man, woman or child in the Mohawk country.'" Colonel Gansevoort, who commanded the fort, replied, "that being by the United States entrusted with the charge of the garrison, he was determined to defend it to the last extremity, against all enemies whatever, without any concern for the consequences of doing his duty."

It being resolved, maugre the threats of Indian barbarities, to defend the fort, Lieutenant Colonel Willet undertook, in conjunction with Lieutenant Stockwell, to give information to their fellow-citizens, of the state of the garrison. These two adventurous officers passed by night through the besiegers' works, and, at the hazard of falling into the hands of savages, and suffering from them the severity of torture, made their way for fifty miles through dangers and difficulties, in order to procure relief for their besieged associates. In the meantime, the British carried on their operations with such industry, that in less than three weeks they had advanced within 150 yards of the fort.

The brave garrison, in its hour of danger, was not forgotten. General Arnold, with a brigade of continental troops, had been previously detached by General Schuyler for their relief, and was then near at hand. Tost Schuyler, who had been taken up by the Americans, on suspicion of being a spy, was promised his life and his estate, on consideration that he should go on and alarm the Indians, with such representations of the numbers marching against them, as would occasion their retreat. He immediately proceeded to the camp of the Indians, and, being able to converse in their own language, informed them that vast numbers of hostile Americans were near at hand. They were thoroughly frightened, and determined to go off. St. Leger used every art to retain them; but nothing could change their determination. It is the characteristic of these people on a reverse of fortune, to betray irresolution, and a total want of that constancy, which is necessary to struggle with difficulties. They had found the fort stronger and better defended than was expected. They had lost several head men in their engagement with General Herkimer, and had gotten no plunder. These circumstances, added to the certainty of the approach of a reinforcement to their adversaries, which they believed to be much greater than it really was, made them quite intractable. Part

of them instantly decamped, and the remainder threatened to follow, if the British did not immediately retreat. This measure was adopted, and, on the 22d of August, the siege was raised. From the disorder, occasioned by the precipitancy of the Indians, the tents and much of the artillery and stores of the besiegers, fell into the hands of the garrison. The discontented savages, exasperated by their ill fortune, are said, on their retreat, to have robbed their British associates of their baggage and provisions.

While the fate of Fort Schuyler was in suspense, it occurred to General Burgoyne, on hearing of its being besieged, that a sudden and rapid movement forward would be of the utmost consequence. As the principal force of his adversaries was in front between him and Albany, he hoped by advancing on them, to reduce them to the necessity of fighting, or of retreating out of his way to New England. Had they, to avoid an attack, retreated up the Mohawk River, they would, in case of St. Leger's success, have put themselves between two fires. Had they retreated to Albany, it was supposed their situation would have been worse, as a co-operation from New York was expected. Besides, in case of that movement, an opportunity would have been given for a junction of Burgoyne and St. Leger. To have retired from the scene of action by filing off for New England, seemed to be the only opening left for their escape. With such views, General Burgoyne promised himself great advantages, from advancing rapidly towards Albany. The principal objection, against this project, was the difficulty of furnishing provisions to his troops. To keep up a communication with Fort George, so as to obtain from that garrison, regular supplies, at a distance daily increasing, was wholly impracticable. The advantages, which were expected from the proposed measure, were too dazzling to be easily relinquished. Though the impossibility of drawing provisions from the stores in their rear was known and acknowledged, yet a hope was indulged that they might be elsewhere obtained. A plan was therefore formed to open resources from the plentiful farms of Vermont. Every day's account, and particularly the information of Colonel Skene, induced Burgoyne to believe, that one description of the inhabitants in that country were panic struck, and that another, and by far the most numerous, were friends to the British interest, and only wanted the appearance of a protecting power to show themselves. Relying on this intelligence, he detached 500 men, 100 Indians, and two field pieces, which he supposed would be fully sufficient for the expedition. The command of this force was given to Lieutenant Colonel Baum; and it was supposed that with it he would be enabled to seize upon a magazine of supplies which the Americans had collected at Bennington, and which was only guarded by militia. It was also intended to try the temper of the inhabitants, and to mount the dragons.

Lieutenant Colonel Baum was instructed to keep the regular force posted, while the light troops felt their way; and to avoid all danger of being surrounded, or of having his retreat cut off. But he proceeded with less caution than his perilous situation required. Confiding in the numbers and promised aid of those who were depended upon as friends, he presumed too much. On approaching the place of his destination, he found the American militia stronger than had been supposed. He therefore took post in the vicinity, entrenched his party, and despatched an express to General Burgoyne, with an account of his situation. Colonel Breyman was detached to reinforce him. Though every exertion was made to push forward this reinforcement, yet from the impracticable face of the country and defective means of transportation, thirty-two hours elapsed before they had marched twenty-four miles.

General Starke, who commanded the American militia at Bennington, attacked Colonel Baum, before the junction of the two royal detachments could be effected. On this occasion, about 800 undisciplined militia, without bayonets, or a single

piece of artillery, attacked and routed 500 regular troops, advantageously posted behind intrenchments, furnished with the best arms, and defended with two pieces of artillery. The field pieces were taken from the party commanded by Colonel Baum, and the greatest part of his detachment was either killed or captured.

[Major General, JOHN STARKE, the son of Archibald S., a native of Glasgow, who married in Ireland, was born at Londonderry, N. H., Aug. 28, 1728. In 1736 his father removed to Derryfield, now Manchester on the Merrimac. While on a hunting expedition he was taken prisoner by the St. Francis Indians, in 1752, but was soon redeemed at an expense of 103 dollars, paid by Mr. Wheelwright of Boston. To raise this money he repaired on another hunting expedition to the Androscoggin. He afterwards served in a company of rangers with Rogers, being made a captain in 1756. On hearing of the battle of Lexington he repaired to Cambridge, and, receiving a colonel's commission, enlisted in the same day 800 men. He fought in the battle of Breed's hill, June 17, 1775, his regiment forming the left of the line, and repulsing three times by their deadly fire the veteran Welsh fusiliers, who had fought at Minden. His only defence was a rail fence, covered with hay, to resemble a breast-work. In May 1776 he proceeded from New York to Canada. In the attack on Trenton he commanded the van of the right wing. He was also engaged in the battle of Princeton. Displeased at being neglected in a list of promotions, he resigned his commission in March 1777 and retired to his farm. In order to impede the progress of Burgoyne, he proposed to the council of New Hampshire to raise a body of troops, and fall upon his rear. In the battle of Bennington, so called, though fought six miles north west from B., in the borders of New York, Saturday Aug. 10, 1777, he defeated Colonel Baum, killing 207 and making 750 prisoners. The place was near Van Schaack's mills, (denominated by Burgoyne Stanteoick mills,) on a branch of the Hoosuck called by Dr. Holmes Walloon creek; by others Walloomsack, and Wallomschaick, and Looms-chork. This event awakened confidence, and led to the capture of Burgoyne. Of those who fought in this battle, the names of T. Allen, J. Orr, and others are recorded in this volume. In Sept. he enlisted a new and larger force and joined Gates. In 1778 and 1779 he served in Rhode Island, and in 1780 in New Jersey. In 1781 he had the command of the northern department at Saratoga. At the close of the war he bid adieu to public employments. In 1818 Congress voted him a pension of 60 dollars per month. He died May 8, 1822, aged, 93. He was buried on a small hill near the Merrimac; a granite obelisk has the inscription—"Maj. Gen. Starke." A memoir of his life was published, annexed to reminiscences of the French war, 12. 1831.—Allen's Biog.]

Colonel Breyman arrived on the same ground, and on the same day; but not till the action was over. Instead of meeting his friends, as he expected, he found himself briskly attacked. This was begun by Colonel Warner, who, with his continental regiment, having been sent for at Manchester, came opportunely at this time, and was well supported by Starke's militia, which had just defeated the party commanded by Colonel Baum. Breyman's troops, though fatigued with their preceding march, behaved with great resolution; but were at length compelled to abandon their artillery, and retreat.

In these two actions, the Americans took four brass field pieces, twelve brass drums, 250 dragoon swords, 4 ammunition wagons, and about 700 prisoners. Their loss, inclusive of the wounded, was about 100 men.

Congress resolved, "that their thanks be presented to General Starke, of the New Hampshire militia, and the officers and troops under his command, for their brave and successful attack upon, and signal victory over, the enemy, in their lines at Bennington, and also, that Brigadier Starke be

appointed a brigadier general in the army of the United States.* Never were thanks more deservedly bestowed. The overthrow of these detachments was the first link in a grand chain of events, which finally drew down ruin on the whole royal army. The confidence with which the Americans were inspired, on finding themselves able to defeat regular troops, produced surprising effects. It animated their exertions, and filled them with expectation of farther successes.

That military pride which is the soul of an army, was nurtured by the captured artillery, and other trophies of victory. In proportion to the elevation of the Americans, was the depression of their adversaries. Accustomed to success, as they had been in the preceding part of the campaign, they felt unusual mortification from this unexpected check. Though it did not diminish their courage, it abated their confidence. It is not easy to enumerate all the disastrous consequences which resulted to the royal army, from the failure of their expedition to Bennington. These were so extensive, that their loss of men was the least considerable. It deranged every plan for pushing the advantages which had been previously obtained. Among other embarrassments, it reduced General Burgoyne to the alternative of halting, till he brought forward supplies from fort George, or of advancing without them at the risk of being starved. The former being adopted, the royal army was detained from August 16th, to September 13th. This unavoidable delay gave time and opportunity for the Americans to collect in great numbers.

The defeat of Lieutenant Colonel Baum, was the first event which for a long time, had taken place, in favour of the American northern army. From December, 1775, it had experienced one misfortune treading on the heels of another, and defeat succeeding defeat. Every movement had been either retreating or evacuating. The subsequent transactions present a remarkable contrast. Fortune, which, previous to the battle of Bennington, had not for a moment quitted the British standard, seemed after that event, totally to desert it, and go over to the opposite party.

After the evacuation of Ticonderoga the Americans had fallen back from one place to another, till they at last fixed at Vanshaic's Island. Soon after this retreating system was adopted, Congress recalled their general officers, and put General Gates at the head of their northern army. His arrival, on the 19th of August, gave fresh vigour to the exertions of the inhabitants. The militia, flushed with their recent victory at Bennington, collected in great numbers to his standard. They soon began to be animated with a hope of capturing the whole British army. A spirit of adventure burst forth in many different points of direction. While General Burgoyne was urging his preparations for advancing towards Albany, an enterprise was undertaken by General Lincoln to recover Ticonderoga, and the other posts in the rear of the royal army. He detached Colonel Brown with 500 men to the landing at lake George. The colonel conducted his operations with so much address, that on the 13th September, he surprised all the out-posts between the landing at the north end of lake George, and the body of the fortress at Ticonderoga. He also took Mount Defiance

and Mount Hope, the French lines, and a block-house, 200 batteaux, several gun boats, and an armed sloop, together with 290 prisoners, and at the same time released 100 Americans. His own loss was trifling.

Colonels Brown and Johnson, the latter of whom had been detached with 500 men, to attempt Mount Independence, on examination found that the reduction of either that post or of Ticonderoga was beyond their ability. When the necessary stores, for thirty days subsistence, were brought forward, from lake George, General Burgoyne gave up all communication with the magazines in his rear, and, on the 13th and 14th, crossed Hudson's river. This movement was the subject of much discussion. Some charged it on the impetuosity of the general, and alleged that it was premature, before he was sure of aid from the royal forces posted in New York; but he pleaded the peremptory orders of his superiors. The rapid advance of Burgoyne, and especially his passage of the North river, added much to the impracticability of his future retreat; and, in conjunction with subsequent events, made the total ruin of his army in a great degree unavoidable.

Burgoyne, after crossing the Hudson, advanced along its side, and in four days encamped on the heights, about two miles from Gates's camp; which was three miles above Stillwater. The Americans, elated with their success at Bennington and fort Schuyler, thought no more of retreating, but came out to meet the advancing British, and engaged them with firmness and resolution. The attack began a little before mid-day, September 19th, between the scouting parties of the two armies. The commanders on both sides supported and reinforced their respective parties. The conflict, though severe, was only partial for an hour and a half; but after a short pause, it became general, and continued for three hours without any intermission. A constant blaze of fire was kept up, and both armies seemed to be determined on death or victory. The Americans and British alternately drove, and were driven by each other. Men, and particularly officers, dropped every moment, and on every side. Several of the Americans placed themselves in high trees, and, as often as they could distinguish an officer's uniform, took him off by deliberately aiming at his person. Few actions have been characterized by more obstinacy in attack or defence. The British repeatedly tried their bayonets, but without their usual success in the use of that weapon. At length, night put an end to the effusion of blood.

The British lost upwards of 500 men, including their killed, wounded and prisoners. The Americans, inclusive of the missing, lost 319. Thirty-six out of forty-eight British matrosses were killed or wounded. The 62d British regiment, which was 500 strong, when it left Canada, was reduced to 60 men, and 4 or 5 officers.

This hard-fought battle decided nothing; and little else than honour was gained by either army: but nevertheless it was followed by important consequences. Of these, one was the diminution of the zeal and alacrity of the Indians in the British army. The dangerous service, in which they were engaged, was by no means suited to their habits of war. They were disappointed of the plunder they expected, and saw nothing before them but hardships and danger. Fidelity and honour were too feeble motives in the minds of savages, to retain them in such an unproductive service. By deserting in the season when their aid would have been most useful, they furnished a second instance of the impolicy of depending upon them. Very little more perseverance was exhibited by the Canadians, and other British provincials. They also abandoned the British standard, when they found, that, instead of a flying and dispirited enemy, they had a numerous and resolute force opposed to them. These desertions were not the only disappointments which General Burgoyne experienced. From the commencement of the expedition, he had promised himself a strong reinforcement from that part of the British army, which was stationed at New

York. He depended on its being able to force its way to Albany, and to join him there, or in the vicinity. This co-operation, though attempted, failed in the execution, while the expectation of it contributed to involve him in some difficulties, to which he would not otherwise have been exposed.

General Burgoyne, on the 21st of September, received intelligence in cypher, that Sir Henry Clinton, who then commanded in New York, intended to make a diversion in his favour by attacking the fortresses which the Americans had erected on Hudson's river, to obstruct the intercourse between New York and Albany. In answer to this communication, he despatched to Sir Henry Clinton some trusty persons, with a full account of his situation, and with instructions to press the immediate execution of the proposed co-operation; and to assure him, that he was enabled in point of provisions, and fixed in his resolution, to hold his present position till the 12th of October, in the hopes of favourable events. The reasonable expectation of a diversion from New York, founded on this intelligence, made it disgraceful to retreat, and at the same time improper to urge offensive operations. In this posture of affairs, a delay of two or three weeks, in expectation of the promised co-operation from New York, became necessary.

In the meantime, the provisions of the royal army were lessening, and the animation and numbers of the American army increasing. The New England people were fully sensible, that their all was at stake, and at the same time sanguine, that, by vigorous exertions, Burgoyne would be so entangled, that his surrender would be unavoidable. Every moment made the situation of the British more critical. From the uncertainty of receiving further supplies, General Burgoyne on the 1st of October lessened the soldiers' provisions. The 12th of October, the term till which the royal army had agreed to wait for aid from New York, was fast approaching, and no intelligence of the expected co-operation had arrived. In this alarming situation, it was thought proper to make a movement to the left of the Americans. The body of troops employed for this purpose, consisted of 1500 chosen men, and was commanded by Generals Burgoyne, Philips, Reidesel, and Frazer. As they advanced, they were checked by a sudden and impetuous attack, on the 7th of October: but Major Ackland, at the head of the British Grenadiers, sustained it with great firmness.

The Americans extended their attack along the whole front of the German troops, who were posted on the right of the grenadiers; and they also marched a large body round their flank, in order to cut off their retreat. To oppose this bold enterprise, the British light infantry, with a part of the 24th regiment, were directed to form a second line, and to cover the retreat of the troops into the camp. In the mean time, the Americans pushed forward a fresh and strong reinforcement, to renew the action on Burgoyne's left. That part of his army was obliged to give way; but the light infantry, and 24th regiment, by a quick movement came to its succour, and saved it from total ruin.

The British lines being exposed to great danger, the troops which were nearest to them returned for their defence. General Arnold, with a brigade of continental troops, pushed for the works, possessed by lord Balcarras, at the head of the British light infantry; but the brigade, having an abbatis to cross, and many other obstructions to surmount, was compelled to retire. Arnold left his brigade, and came to Jackson's regiment, which he ordered instantly to advance, and attack the lines and redoubt in their front, which were defended by Lieutenant Colonel Breyman at the head of the German grenadiers. The assailants pushed on with rapidity, and carried the works. Arnold was one of the first who entered them. Lieutenant Colonel Breyman was killed. The troops commanded by him retired firing. They gained their tents about 30 or 40 yards from their works; but on finding that the assault was general, they gave one fire, after which some retreated to the British camp, but oth-

* In an arrangement of general officers, made by Congress, in the preceding year, a junior officer had been promoted while Starke was neglected. He had written to Congress on this subject, and his letters were laid on the table. He quitted the army, and retired to his farm: but on the approach of Burgoyne, accepted a brigadier's commission and a separate command from New Hampshire. As their officer he achieved this victory, and transmitted an official account of it to the executive of that state. Congress, hearing of it, inquired, why they were uninformed on the subject? Starke answered, that his correspondence with their body was closed, as they had not attended to his last letters. They took the hint, and promoted him. Starke was too much of a patriot to refuse his services, though his military feelings were hurt; and Congress was too wise to stand on etiquette, when their country's interest was at stake.

ers threw down their arms. The night put an end to the action.

[Major General BENEDICT ARNOLD, in the American army, and infamous for deserting the cause of his country, is supposed to have been a descendant of Benedict Arnold, governor of Rhode Island, who succeeded Roger Williams in that office in 1657. He was bred an apothecary with a Dr. Lathrop, who was so pleased with him, as to give him £500 sterling. From 1763 to 1767 he combined the business of a druggist with that of a bookseller, at New Haven, Con. Being captain of a volunteer company, after hearing of the battle of Lexington he immediately marched with his company for the American head quarters, and reached Cambridge, April 29, 1775. He waited on the Massachusetts committee of safety and informed them of the defenceless state of Ticonderoga. The committee appointed him a colonel, and commissioned him to raise four hundred men, and to take that fortress. He proceeded directly to Vermont, and when he arrived at Castleton was attended by one servant only. Here he joined Col. Allen, and on May 10th the fortress was taken.]

In the fall of 1775 he was sent by the commander in chief to penetrate through the wilderness of the District of Maine into Canada. He commenced his march Sept. 16, with about one thousand men, consisting of New England infantry, some volunteers, a company of artillery, and three companies of riflemen. One division, that of Col. Enos, was obliged to return from Dead river from the want of provisions; had it proceeded the whole party might have perished. The greatest hardships were endured and the most appalling difficulties surmounted in this expedition, of which Major Meigs kept a journal, and Mr. Henry also published an account. The army was in the wilderness, between fort Western at Augusta and the first settlements on the Chaudiere in Canada, about 5 weeks. In the want of provisions Capt. Dearborn's dog was killed, and eaten, even the feet and skin, with good appetite. As the army arrived at the first settlements, Nov. 4th, the intelligence necessarily reached Quebec in one or two days; but a week or fortnight before this, Gov. Cramahé had been apprised of the approach of this army. Arnold had imprudently sent a letter to Schuyler, enclosed to a friend in Quebec, by an Indian, dated Oct. 13, and he was himself convinced, from the preparations made for his reception, that the Indian had betrayed him. Nov. 5th the troops arrived at St. Mary's, 10 or 12 miles from Quebec, and remained there 3 or 4 days. Nov. 9th or 10th they advanced to Point Levi, opposite Quebec. Forty birch canoes having been collected, it was still found necessary to delay crossing the river for 3 nights on the account of a high wind. On the 14th the wind moderated; but this delay was very favourable to the city, for on the 13th Col. M'Lean, an active officer, arrived with 80 men to strengthen the garrison, which already consisted of more than a thousand men, so as to render an assault hopeless. Indeed Arnold himself placed his chief dependence on the co-operation of Montgomery.

On the 14th of Nov. he crossed the St. Lawrence in the night; and, ascending the precipice, which Wolfe had climbed before him, formed his small corps on the height near the plains of Abraham. With only about seven hundred men, one third of whose muskets had been rendered useless in the march through the wilderness, success could not be expected. It is surprising, that the garrison, consisting, Nov. 14th, of 1126 men, did not march out and destroy the small force of Arnold. After parading some days on the heights near the town, and sending 2 flags to summon the inhabitants, he retired to Point aux Trembles, twenty miles above Quebec, and there waited the arrival of Montgomery, who joined him on the first of December. The city was immediately besieged, but the best measures had been taken for its defence. The able Gen. Carleton had entered the city with 60 men Nov. 20th. On the morning of the last day of the year an assault was made on the one

side of the Lower town by Montgomery, who was killed. At the same time Col. Arnold, at the head of about three hundred and fifteen men, made a desperate attack on the opposite side. Advancing with the utmost intrepidity along the St. Charles through a narrow path, exposed to an incessant fire of grape shot and musketry, as he approached the first barrier he received a musket ball in the left leg, which shattered the bone. He was compelled to retire on foot, dragging 'one leg after him,' near a mile to the hospital, having lost 60 men killed and wounded, and three hundred prisoners. Although the attack was unsuccessful, the blockade of Quebec was continued till May 1776, when the army, which was in no condition to risk an assault was removed to a more defensible position. Arnold was compelled to relinquish one post after another, till the 18th of June, when he quitted Canada. After this period he exhibited great bravery in the command of the American fleet on Lake Champlain.

In August 1777 he relieved fort Schuyler under the command of Colonel Gansevoort, which was invested by Colonel St. Leger with an army of from fifteen to eighteen hundred men. In the battle near Stillwater, Sept. 19th, he conducted himself with his usual intrepidity, being engaged incessantly for four hours. In the action of October 7th, after the British had been driven into the lines, Arnold pressed forward and under a tremendous fire assaulted the works throughout their whole extent from right to left. The intrenchments were at length forced, and with a few men he actually entered the works; but his horse being killed, and he himself badly wounded in the leg, he found it necessary to withdraw, and, as it was now almost dark, to desist from the attack. Being rendered unfit for active service in consequence of his wound, after the recovery of Philadelphia he was appointed to the command of the American garrison. When he entered the city, he made the house of Gov. Penn. the best house in the city, his head quarters. This he furnished in a very costly manner, and lived far beyond his income. He had wasted the plunder, which he had seized at Montreal in his retreat from Canada; and at Philadelphia he was determined to make new acquisitions. He laid his hands on every thing in the city, which could be considered as the property of those, who were unfriendly to the cause of his country. He was charged with oppression, extortion, and enormous charges upon the public in his accounts, and with applying the public money and property to his own private use. Such was his conduct, that he drew upon himself the odium of the inhabitants not only of the city, but of the province in general. He was engaged in trading speculations and had shares in several privateers, but, was unsuccessful. From the judgment of the commissioners, who had been appointed to inspect his accounts, and who had rejected above half the amount of his demands, he appealed to Congress, and they appointed a committee of their own body to examine and settle the business. The committee confirmed the report of the commissioners, and thought they had allowed him more than he had any right to expect or demand. By these disappointments he became irritated and he gave full scope to his resentment. His invectives against Congress were not less violent, than those, which he had before thrown out against the commissioners. He was however soon obliged to abide the judgment of a court martial upon the charges, exhibited against him by the executive of Pennsylvania, and he was subjected to the mortification of receiving a reprimand from Washington. His trial commenced in June 1778, but such were the delays occasioned by the movements of the army, that it was not concluded until January 26th, 1779. The sentence of a reprimand was approved by Congress, and was soon afterwards carried into execution.

Such was the humiliation, to which General Arnold was reduced in consequence of yielding to the temptations of pride and vanity, and indulging himself in the pleasures of a sumptuous table and expensive equipage. From this time his proud

spirit revolted from the cause of America. He turned his eyes to West Point as an acquisition which would give value to treason, while its loss would inflict a mortal wound on his former friends. He addressed himself to the delegation of New York, in which state his reputation was peculiarly high and a member of Congress from this state recommended him to Washington for the service, which he desired. The same application to the commander-in-chief was made not long afterwards through Gen. Schuyler. Washington observed, that as there was a prospect of an active campaign he should be gratified with the aid of Arnold in the field; but intimated at the same time, that he should receive the appointment requested, if it should be more pleasing to him. Arnold, without discovering much solicitude, repaired to camp in the beginning of August, and renewed in person the solicitations, which had been before indirectly made. He was now offered the command of the left wing of the army, which was advancing against New York; but he declined it under the pretext, that in consequence of his wounds, he was unable to perform the active duties of the field. Without a suspicion of his patriotism he was invested with the command of West Point. Previously to his soliciting this station, he had in a letter to Colonel Beverly Robinson signified his change of principles and his wish to restore himself to the favour of his prince by some signal proof of his repentance. This letter opened to him a correspondence with Sir Henry Clinton, the object of which was to concert the means of putting the important post, which he commanded, into the possession of the British general. His plan, it is believed, was to have drawn the greater part of his army without the works under the pretext of fighting the enemy in the defiles, and to have left unguarded a designated pass, through which the assailants might securely approach and surprise the fortress. His troops he intended to place, so that they would be compelled to surrender, or be cut in pieces. But just as his scheme was ripe for execution the wise Disposer of events, who so often and so remarkably interposed in favour of the American cause, blasted his designs.

Maj. Andre, after his detection, apprized Arnold of his danger, and the traitor found opportunity to escape on board the *Vulture*, Sept. 25, 1780, a few hours before the return of Washington, who had been absent on a journey to Hartford Con. On the very day of his escape Arnold wrote a letter to Washington, declaring, that the love of his country had governed him in his late conduct, and requesting him to protect Mrs. Arnold. She was conveyed to her husband at New York, and his clothes and baggage, for which he had written, were transmitted to him. During the exertions, which were made to rescue Andre from the destruction, which threatened him, Arnold had the hardihood to interpose. He appealed to the humanity of the commander in chief, and then sought to intimidate him by stating the situation of many of the principal characters of South Carolina, who had forfeited their lives, but had hitherto been spared through the clemency of the British general. This clemency, he said, could no longer in justice be extended to them, should Major Andre suffer.

Arnold was made a brigadier general in the British service; which rank he preserved throughout the war. Yet he must have been held in contempt and detestation by the generous and honourable. It was impossible for men of this description, even when acting with him, to forget that he was a traitor; first the slave of his rage, then purchased with gold, and finally secured by the blood of one of the most accomplished officers in the British army. One would suppose, that his mind could not have been much at ease; but he had proceeded so far in vice, that perhaps his reflections gave him but little trouble. "I am mistaken," says Washington in a private letter, "if at this time Arnold is undergoing the torments of a mental hell. He wants feeling. From some

traits of his character, which have lately come to my knowledge, he seems to have been so hacknied in crime, so lost to all sense of honour and shame, that while his faculties still enable him to continue his sordid pursuits, there will be no time for remorse."

Arnold found it necessary to make some exertions to secure the attachment of his new friends. With the hope of alluring many of the discontented to his standard, he published an address to the inhabitants of America, in which he endeavoured to justify his conduct. He had encountered the dangers of the field, he said, from apprehension, that the rights of his country were in danger. He had acquiesced in the declaration of independence, though he thought it precipitate. But the rejection of the overtures, made by Great Britain in 1778, and the French alliance had opened his eyes to the ambitious views of those, who would sacrifice the happiness of their country to their own aggrandizement, and had made him a confirmed loyalist. He artfully mingled assertions, that the principal members of Congress held the people in sovereign contempt. This was followed in about a fortnight by a proclamation, addressed "to the officers and soldiers of the continental army, who have the real interest of their country at heart, and who are determined to be no longer the tools and dupes of Congress or of France." To induce the American officers and soldiers to desert the cause, which they had embraced, he represented, that the corps of cavalry and infantry, which he was authorized to raise, would be upon the same footing with other troops in the British service; that he should with pleasure advance those, whose valour he might witness; that the private men, who joined him, should receive a bounty of three guineas each, besides payment at the full value for horses, arms, and accoutrements. His object was the peace, liberty, and safety of America. "You are promised liberty," he exclaims, "but is there an individual in the enjoyment of it, saving your oppressors? Who among you dare speak or write what he thinks against the tyranny, which has robbed you of your property, imprisons your persons, drags you to the field of battle, and is deluging your country with your blood?" "What," he exclaims again, "is America now, but a land of widows, orphans, and beggars? As to you, who have been soldiers in the continental army, can you at this day want evidence, that the funds of your country are exhausted, or that the managers have applied them to their private uses? In either case you surely can no longer continue in their service with honour or advantage. Yet you have hitherto been their supporters in that cruelty, which with equal indifference to yours as well as to the labour and blood of others, is devouring a country, that from the moment you quit their colours will be redeemed from their tyranny." These proclamations did not produce the effect designed, and in all the hardships, sufferings, and irritations of the war, Arnold remains the solitary instance of an American officer, who abandoned the side first embraced in the contest, and turned his sword upon his former companions in arms.

He was soon despatched by Sir Henry Clinton to make a diversion in Virginia. With about 1700 men he arrived in the Chesapeake in Jan. 1781, and being supported by such a naval force, as was suited to the nature of the service: he committed extensive ravages on the river and along the unprotected coasts. It is said, that while on this expedition Arnold inquired of an American captain, whom he had taken prisoner, what the Americans would do with him, if he should fall into their hands. The officer replied that they would cut off his lame leg and bury it with the honours of war, and hang the remainder of his body in gibbets. After his recall from Virginia he conducted an expedition against his native state, Connecticut. He took fort Trumbull Sept. 6th with inconsiderable loss. On the other side of the harbour Lieut. Col. Eyre, who commanded another detachment made an assault on fort Griswold, and with the greatest difficulty entered the works. An

officer of the conquering troops, asked, who commanded? "I did," answered Colonel Ledyard, "but you do now," and presented him his sword, which was instantly plunged into his own bosom. A merciless slaughter commenced upon the brave garrison, who had ceased to resist, until the greater part were either killed or wounded. After burning the town and the stores, which were in it, and thus thickening the laurels, with which his brow was adorned, Arnold returned to New York in 8 days.

From the conclusion of the war to his death General Arnold resided chiefly in England. In 1786 he was at St. John's, New Brunswick, engaged in trade and navigation, and again in 1790. For some cause he became very unpopular in 1792 or 1793, was hung in effigy, and the mayor found it necessary to read the riot act, and a company of troops was called to quell the mob. Repairing to the West Indies in 1794, a French fleet anchored at the same island; he became alarmed lest he should be detained by the American allies and past the fleet concealed on a raft of lumber. He died in Gloucester place, London, June 14, 1801. He married Margaret, the daughter of Edward Shippen of Philadelphia, chief justice, and a loyalist. General Green, it is said, was his rival.—She combined fascinating manners with strength of mind. She died at London Aug. 24, 1804, aged 43. His sons were men of property in Canada in 1829. His character presents little to be commended. His daring courage may indeed excite admiration; but it was a courage without reflection and without principle. He fought bravely for his country and he bled in her cause; but his country owed him no returns of gratitude, for his subsequent conduct proved, that he had no honest regard to her interests, but was governed by selfish considerations. His progress from self-indulgence to treason was easy and rapid. He was vain and luxurious, and to gratify his giddy desires he must resort to meanness, dishonesty, and extortion. These vices brought with them disgrace; and the contempt, into which he fell, awakened a spirit of revenge, and left him to the unrestrained influence of his cupidity and passion. Thus from the high fame, to which his bravery had elevated him, he descended into infamy. Thus too he furnished new evidence of the infatuation of the human mind in attaching such value to the reputation of a soldier, which may be obtained, while the heart is unsound and every moral sentiment is entirely depraved.—Allen's Biog. Dic.]

This day was fatal to many brave men. The British officers suffered more than their common proportion. Among their slain, General Frazer, on account of his distinguished merit, was the subject of particular regret. Sir James Clark, Burgoyne's aid-de-camp, was mortally wounded. The general himself had a narrow escape: a shot passed through his hat and another through his waistcoat. Majors Williams and Ackland were taken: the latter wounded.

The loss of the Americans was inconsiderable. General Arnold, to whose impetuosity they were much indebted for the success of the day, was among their wounded. They took more than 200 prisoners, besides 9 pieces of brass artillery, and the encampment of a German brigade, with all their equipage.

The royal troops were under arms the whole of the next day, in expectation of another action; but nothing more than skirmishes took place. At this time, General Lincoln, who reconnoitering, relieved a dangerous wound; an event which was greatly regretted, as he possessed much of the esteem and confidence of the American army.

The position of the British army, after the action of the 7th, was so dangerous, that an immediate and total change became necessary. This hazardous measure was executed without loss or disorder. The British camp, with all its appurtenances, was removed in the course of a single night. The American general now saw a fair prospect of overcoming the army opposed to him, without exposing his own to the dangers of another

battle. His measures were therefore principally calculated to cut off their retreat, and prevent their receiving any farther supplies.

While General Burgoyne was pushing on towards Albany, an unsuccessful attempt to relieve him was made by the British commander in New York. For this purpose, October 5th, Sir Henry Clinton conducted an expedition up Hudson's river. This consisted of about 3000 men, and was accompanied by a suitable naval force. After making many feints, he landed at Stony Point, marched over the mountains to fort Montgomery, and attacked the different redoubts. The garrison, commanded by Governor Clinton, a brave and intelligent officer, made a gallant resistance: but as the post had been designed principally to prevent the passing of ships, the works on the land side were incomplete and untenable. When it began to grow dark on the 6th, the British entered the fort with fixed bayonets. The loss on neither side was great. Governor Clinton, General James Clinton, and most of the officers and men effected their escape under cover of the thick smoke and darkness that suddenly prevailed.

The reduction of this post furnished the British with an opportunity for opening a passage up the North river: but instead of pushing forward to Burgoyne's encampment, or even to Albany, they spent several days in laying waste the adjacent country. The Americans destroyed fort Constitution, and also set fire to two new frigates, and some other vessels. General Tryon at the same time destroyed a settlement called Continental Village, which contained barracks for 1500 men, besides many stores. Sir James Wallace with a flying squadron of light frigates, and General Vaughan with a detachment of land forces, continued on and near the river for several days, desolating the country near its margin. General Vaughan on the 13th October so completely burned Esopus, a fine flourishing village, that a single house was not left standing, though on his approach, the Americans had left the town without making any resistance. Charity would lead us to suppose that these devastations were designed to answer military purposes. Their authors might have hoped to divert the attention of General Gates, and thus indirectly relieve General Burgoyne; but if this were intended, the artifice did not take effect.

The preservation of property was with the Americans only a secondary object. The capturing of Burgoyne promised such important consequences, that they would not suffer any other consideration to interfere with it. General Gates did not make a single movement that lessened the probability of effecting his grand purpose. He wrote an expostulatory letter to Vaughan, part of which was in the following terms; "Is it thus your king's generals think to make converts to the loyal cause? It is no less surprising than true, that the measures they adopt to serve their master have a quite contrary effect. Their cruelty establishes the glorious act of independence upon the broad basis of the resentment of the people." Whether policy or revenge led to this devastation of property is uncertain; but it cannot admit of a doubt, that it was far from being the most effectual method of relieving Burgoyne.

The passage of the North river was made so practicable by the advantages gained on the 6th of October, that Sir Henry Clinton, with his whole force, amounting to 3000 men, might not only have reached Albany, but General Gates's encampment, before the 12th, the day till which Burgoyne had agreed to wait for aid from New York. While the British were doing mischief to individuals, without serving the cause of their royal master, they might, by pushing forward, about 136 miles in six days, have brought Gates's army between two fires, at least twenty-four hours before Burgoyne's necessity compelled his submission to articles of capitulation. Why they neglected this opportunity of relieving their suffering brethren, about 36 miles to the northward of Albany, when they were only about 100 miles below it, has never yet been satisfactorily explained.

Gates posted 1400 men on the heights opposite the fords of Saratoga, and 2000 more in the rear, to prevent a retreat to fort Edward, and 1500 at a ford higher up. Burgoyne, receiving intelligence of these movements, concluded that Gates, meant to turn his right. This, if effected, would have entirely enclosed him. To avoid being hemmed in, he resolved on an immediate retreat to Saratoga. His hospital, with the sick and wounded, were necessarily left behind; but they were recommended to the humanity of General Gates, and received from him every indulgence their situation required. When General Burgoyne arrived at Saratoga, he found that the Americans had posted a considerable force on the opposite heights, to impede his passage at that ford.

[Major General HORATIO GATES, a major general in the army of the United States, was a native of England. In early life he entered the British army, and laid the foundations of his future military excellence. He was aid to Gen. Monkton at the capture of Martinico; and after the peace of Aix la Chappelle he was among the first troops, which landed at Halifax under General Cornwallis. He was with Braddock at the time of his defeat in 1675; and was shot through the body. When peace was concluded, he purchased an estate in Virginia, where he resided until the commencement of the American war in 1775, when he was appointed by Congress adjutant general, with the rank of brigadier general. He accompanied Washington to Cambridge, when he went to take command of the army in that place. In June 1776 Gates was appointed to the command of the army of Canada. He was superseded by General Schuyler in May 1777, but in August following he took the place of the officer in the northern department. The success, which attended his arms to the capture of Burgoyne in October, filled America with joy. Congress passed a vote of thanks and ordered a medal of gold to be presented to him by the president. His conduct towards his conquered enemy was marked by a delicacy, which does him the highest honour. He did not permit his own troops to witness the mortification of the British in depositing their arms. After Gen. Lincoln was taken prisoner, he was appointed June 13, 1780 to the command of the southern department. Aug. 16, he was defeated by Cornwallis at Camden. He was superseded Dec. 3, by Gen. Greene; but was in 1782 restored to his command.]

After the peace he retired to his farm in Berkeley county, Virginia, where he remained until the year 1790, when he went to reside at New York, having first emancipated his slaves, and made a pecuniary provision for such as were not able to provide for themselves. Some of them would not leave him but continued in his family. On his arrival at New York the freedom of the city was presented to him. In 1800 he accepted a seat in the legislature, but he retained it no longer, than he conceived his services might be useful to the cause of liberty, which he never abandoned. His political opinions did not separate him from many respectable citizens, whose views differed widely from his own. He died April 10, 1806, aged 77. His widow died Nov. 20, 1810. A few weeks before his death he wrote to his friend, Dr. Mitchell, then at Washington, on some business, and closed his letter, dated Feb. 27, 1806, with the following words:—"I am very weak, and have evident signs of an approaching dissolution. But I have lived long enough, since I have lived to see a mighty people animated with a spirit to be free, and governed by transcendent abilities and honour." He retained his faculties to the last. He took pleasure in professing his attachment to religion and his firm belief in the doctrines of christianity. The will, which was made not long before his death, exhibited the humility of his faith. In an article, dictated by himself he expressed a sense of his own unworthiness, and his reliance, solely on the intercession and sufferings of the Redeemer. In another paragraph he directed, that his body should be privately buried, which was accordingly done. General Gates was a whig in England and

a republican in America. He was a scholar, well versed in history and the Latin classics. While he was just hospitable, and generous, and possessed a feeling heart, his manners and deportment yet indicated his military character.—

Allen's Biog. Dic.]

To prepare the way for a retreat to lake George, Burgoyne ordered a detachment of artificers, with a strong escort of British and provincials, to repair the bridges, and open the road leading thither. Part of the escort was withdrawn on other duty; and the remainder, on a slight attack of an inconsiderable party of Americans, ran away. The workmen, thus left without support, were unable to effect the business on which they had been sent. The only practicable route of retreat, which now remained, was by a night march to fort Edward. Before this attempt could be made, scouts returned with intelligence, that the Americans were intrenched opposite to those fords on the Hudson's river, over which it was proposed to pass, and that they were also in force on the high ground between fort Edward and fort George. They had at the same time parties down the whole shore, and posts so near as to observe every motion of the royal army. Their position extended nearly round the British, and was by the nature of the ground in a great measure secured from attacks. The royal army could not stand its ground where it was, from the want of the means necessary for subsistence; nor could it advance towards Albany, without attacking a force greatly superior in number; nor could it retreat without making good its way over a river, in the face of a strong party, advantageously posted on the opposite side. In case of either attempt, the Americans were so near as to discover every movement; and by means of their bridge could bring their whole force to operate.

Truly distressing was the condition of the royal army. Abandoned in the most critical moment by their Indian allies, unsupported by their brethren in New York, weakened by the timidity and desertion of the Canadians, worn down by a series of incessant efforts, and greatly reduced in their numbers by repeated battles, they were invested by an army nearly three times their number, without a possibility of retreat, or of replenishing their exhausted stock of provisions. A continual cannonade pervaded their camp, and rifle and grape shot fell in many parts of their lines. They nevertheless retained a great share of fortitude.

In the meantime, the American army was hourly increasing. Volunteers came in from all quarters, eager to share in the glory of destroying or capturing those whom they considered as their most dangerous enemies. The 12th of October at length arrived. The day was spent in anxious expectation of its producing something of consequence. But as no prospect of assistance appeared, and their provisions were nearly expended, the hope of receiving any, in due time for their relief, could not be farther indulged. General Burgoyne thought proper in the evening, to take an account of the provisions left. It was found on inquiry, that they would amount to no more than a scanty subsistence for three days. In this state of distress, a council of war was called, and it was made so general, as to comprehend both the field officers and the captains. Their unanimous opinion was, that their present situation justified a capitulation on honourable terms. A messenger was therefore despatched to begin this business. General Gates in the first instance demanded, that the royal army should surrender prisoners of war. He also proposed, that the British should ground their arms: but General Burgoyne replied, "This article is inadmissible in every extremity; sooner than this army will consent to ground their arms in their encampment, they will rush on the enemy, determined to take no quarters."

After various messages, a convention was settled, by which it was substantially stipulated as follows: "The troops under General Burgoyne, to march out of their camp with the honours of war, and the artillery of the entrenchments to the verge

of the river, where the arms and artillery are to be left. The arms to be piled by word of command from their own officers. A free passage to be granted to the army under Lieutenant General Burgoyne to Great Britain, upon condition of not serving again in North America during the present contest; and the port of Boston to be assigned for the entry of the transports to receive the troops, whenever General Howe shall so order. The army under Lieutenant General Burgoyne to march to Massachusetts Bay, by the easiest route, and to be quartered in or near to Boston. The troops to be provided with provisions by General Gates's orders, at the same rate of rations as the troops of his own army. All officers to retain their carriages, bat-horses, and no baggage to be molested or searched. The officers not to be separated from their men. The officers to be quartered according to their rank. All corps whatever of Lieutenant General Burgoyne's army, to be included in the above articles. All Canadians, and persons belonging to the Canadian establishment, and other followers of the army, to be permitted to return to Canada; to be conducted to the first British post on lake George: to be supplied with provisions as the other troops, and to be bound by the same condition of not serving during the present contest. Passports to be granted to three officers, to carry despatches to Sir William Howe, Sir Guy Carleton, and to Great Britain. The officers to be admitted on their parole, and to be permitted to wear their side arms."

Such were the embarrassments of the royal army, incapable of subsisting where it was, or of making its way to a better situation, that these terms were rather more favourable than they had a right to expect. On the other hand, it would not have been prudent for the American general at the head of an army, which, though numerous, consisted mostly of militia or new levies, to have provoked the despair of even an inferior number of brave, disciplined, regular troops. General Gates rightly judged, that the best way to secure his advantages was to use them with moderation. Soon after the convention was signed, the Americans marched into their lines, and were kept there till the royal army had deposited their arms at the place appointed. The delicacy, with which this business was conducted, reflected honour on the American general. Nor did the politeness of Gates end here. Every circumstance was withheld, that could constitute a triumph in the American army. The captive general was received by his conqueror with respect and kindness. A number of the principal officers, of both armies, met at General Gates's quarters, and for a while seemed to forget, in social and convivial pleasures, that they had been enemies. The conduct of General Burgoyne in this interview with General Gates was truly dignified; and the historian is at a loss whether to admire most, the magnanimity of the victorious, or the fortitude of the vanquished general.

The British troops partook liberally of the plenty that reigned in the American army. It was the more acceptable to them, as they were destitute of bread and flour, and had only as much meat left, as was sufficient for a day's subsistence.

By the convention which has been mentioned, 5790 men were surrendered prisoners. The sick and wounded left in camp, when the British retreated to Saratoga, together with the numbers of the British, German and Canadian troops, who were killed, wounded or taken, and who had deserted in the preceding part of the expedition, were reckoned to be 4689. The whole royal force, exclusive of Indians, was probably about 10,000.—The stores, which the Americans acquired, were considerable. The captured artillery consisted of 35 brass field pieces. There were also 4657 muskets, and a variety of other useful and much wanted articles, which fell into their hands. The Continentals in General Gates's army were nine thousand and ninety-three, the militia four thousand one hundred and twenty-nine; but of the former two thousand one hundred and three were sick, or on

furlough, and five hundred and sixty-two of the latter were in the same situation. The number of the militia was constantly fluctuating.

The general exultation of the Americans, on receiving the agreeable intelligence of the convention of Saratoga, disarmed them of much of their resentment. The burnings and devastations which had taken place were sufficient to have inflamed their minds; but private feelings were in a great measure absorbed by the consideration of the many advantages, which the capture of so large an army promised to the new-formed states.

In a short time after the convention was signed, General Gates moved forward to stop the devastations of the British on the North river; but on hearing of the fate of Burgoyne, Vaughan and Wallace, retired to New York.

About the same time, the British, who had been left in the rear of the royal army, destroyed their cannon, and, abandoning Ticonderoga, retreated to Canada. The whole country, after experiencing for several months, the confusions of war, was in a moment restored to perfect tranquility.

Great was the grief and dejection of Britain, on receiving the intelligence of the fate of Burgoyne. The expedition committed to him had been undertaken with the most confident hopes of success. The quality of the troops he commanded was such, that from their bravery, directed by his zeal, talents and courage it was presumed that all the northern parts of the United States would be subdued before the end of the campaign. The good fortune, which for some time followed him, justified these expectations; but the catastrophe proved the folly of planning distant expeditions, and of projecting remote conquests.

The consequences of these great events vibrated round the world. The capture of Burgoyne was the hinge on which the revolution turned. While it encouraged the perseverance of the Americans, by well-grounded hopes of final success, it increased the embarrassment of that ministry, which had so ineffectually laboured to compel their submission. Opposition to their measures gathered new strength, and formed a stumbling block in the road to conquest. This prevented Great Britain from acting with that collected force, which an union of sentiments and councils would have enabled her to exert. Hitherto the best informed Americans had doubts of success in establishing their independence; but henceforward their language was: "That whatever might be the event of their present struggle, they were for ever lost to Great Britain." Nor were they deceived. The éclat of capturing a large army, of British and German regular troops, soon procured them powerful friends in Europe.

Immediately after the surrender, Burgoyne's troops were marched to the vicinity of Boston. On their arrival, they were quartered in the barracks on Winter and Prospect hills. The general court of Massachusetts passed proper resolutions for procuring suitable accommodations for the prisoners; but from the general unwillingness of the people to oblige them, and from the feebleness of that authority which the republican rulers had at that time over the property of their fellow citizens, it was impossible to provide immediately for so large a number of officers and soldiers, in such a manner as their convenience required, or as from the articles of convention they might reasonably expect. The officers remonstrated to General Burgoyne, that six or seven of them were crowded together in one room, without any regard to their respective ranks, in violation of the seventh article of the convention. Burgoyne, on the 14th of November, forwarded this account to Gates, and added, "the public faith is broken." This letter, being laid before Congress, gave an alarm. It corroborated an apprehension, previously entertained, that the captured troops, on their embarkation, would make a junction with the British garrisons in America. The declaration of the general, that "the public faith was broken," while in the power of Congress, was considered by them as destroying the security which they before had in his personal honour; for in every event he might

adduce his previous notice to justify his future conduct. They therefore resolved; "That the embarkation of Lieutenant General Burgoyne, and the troops under his command, be postponed, till a distinct and explicit ratification of the convention of Saratoga be properly notified by the court of Great Britain to Congress."

Burgoyne explained the intention and construction of the passage objected to in his letter, and pledged himself, that his officers would join with him in signing any instrument that might be thought necessary for confirming the convention; but Congress would not recede from their resolution. They alleged, that it had been often asserted by their adversaries, that 'faith was not to be kept with rebels;' and that therefore they would be deficient in attention to the interests of their constituents, if they did not require an authentic ratification of the convention by national authority, before they parted with the captured troops. They urged farther, that by the law of nations, a compact, broken in one article, was no longer binding in any other. They made a distinction between the suspension and abrogation of the convention, and alleged, that ground to suspect an intention to violate it was a justifying reason for suspending its execution on their part, till it was properly ratified. The desired ratification, if Great Britain was seriously disposed to that measure, might have been obtained in a few months, and Congress uniformly declared themselves willing to carry it into full effect, as soon as they were secured of its observance, by proper authority on the other side.

About eight months afterwards, certain royal commissioners, whose official functions shall be hereafter explained, made a requisition respecting these troops; offered to ratify the convention; and required permission for their embarkation. On inquiry it was found, that they had no authority to do any thing in the matter, which would be obligatory on Great Britain. Congress therefore resolved, "that no ratification of the convention, which may be tendered in consequence of powers, which only reach that case by construction and implication, or which may subject whatever is transacted relative to it, to the future approbation or disapprobation of the parliament of Great Britain, can be accepted by Congress."

Till the capture of Burgoyne, the powers of Europe were only spectators of the war, between Great Britain and her late colonies, but, soon after that event, they were drawn in to be parties. In every period of the controversy, the claims of the Americans were patronized by sundry respectable foreigners. The letters, addresses, and other public acts of Congress were admired by many who had no personal interest in the contest. Liberty is so evidently the undoubted right of mankind, that even they who never possessed it, feel the propriety of contending for it; and whenever a people take up arms, either to defend or to recover it, they are sure of meeting with encouragement or good wishes from the friends of humanity in every part of the world.

From the operation of these principles, the Americans had the esteem and good wishes of multitudes in all parts of Europe. They were reputed to be ill used, and were represented as a resolute and brave people, determined to resist oppression. Being both pitied and applauded, generous and sympathetic sentiments were excited in their favour. These circumstances would have operated in every case; but in the present, the cause of the Americans was patronised from additional motives. An universal jealousy prevailed against Great Britain. Her navy had long tyrannised over the nations of Europe, and demanded, as a matter of right, that the ships of all other powers should strike their sails to her as mistress of the ocean. From her eagerness to prevent supplies going to her rebellious colonists, as she called the Americans, the vessels of foreign powers had for some time past been subjected to searches and other interruptions, when steering towards America, in a manner that could not but be impatiently borne by independent

nations. That pride and insolence which brought on the American war, had long disgusted her neighbours, and made them rejoice at her misfortunes, and especially at the prospect of dismembering her overgrown empire.

CHAPTER XVI.

The Alliance between the France and the United States.
The Campaign of 1778.

Soon after intelligence of the capture of Burgoyne's army reached Europe, the court of France concluded at Paris, treaties of alliance and commerce with the United States. The circumstances, which led to this great event, deserve to be particularly unfolded. The colonists having taken up arms, uninfluenced by the enemies of Great Britain, conducted their opposition for several months after they had raised troops, and emitted money, without any reference to foreign powers. They knew it to be the interest of Europe, to promote a separation between Great Britain and her colonies; but as they began the contest with no other view than to obtain a redress of grievances, they neither wished, in the first period of their opposition to involve Great Britain in a war, nor to procure aid to themselves by paying court to her enemies. The policy of Great Britain, in attempting to deprive the Americans of arms, was the first event which made it necessary for them to seek foreign connexions. At the time she was urging military preparations to compel their submission, she forbade the exportation of arms, and solicited the commercial powers of Europe to co-operate with her by adopting a similar prohibition. To frustrate the views of Great Britain, Congress, besides recommending the domestic manufacture of the materials for military stores, appointed a secret committee, with powers to procure on their account arms and ammunition, and also employed agents in foreign countries for the same purpose. The evident advantage, which France might derive from the continuance of the dispute, and the countenance which individuals of that country daily gave to the Americans, encouraged Congress to send a political and commercial agent to that kingdom, with instructions to solicit its friendship, and to procure military stores. Silas Deane, being chosen for this purpose, sailed for France early in 1776, and was soon after his arrival at Paris instructed to sound Count de Vergennes, the French minister for foreign affairs, on the subject of the American controversy. As the public mind, for reasons which have been mentioned closed against Great Britain, it opened towards other nations.

On the 11th of June, Congress appointed a committee, to prepare a plan of a treaty to be proposed to foreign powers. The discussion of this novel subject engaged their attention till the latter end of September. While Congress was deliberating thereon, Mr. Deane was soliciting a supply of arms, ammunition, and soldier's clothing for their service a sufficiency for lading three vessels was soon procured. What agency the government of France had in furnishing those supplies, or whether they were sold, or given as presents, are questions which have often been asked, but not satisfactorily answered; for the business was so conducted that the transaction might be made to assume a variety of complexions, as circumstances might render expedient.

It was most evidently the interest of France to encourage the Americans, in their opposition to Great Britain; and it was true policy to do this by degrees, and in a private manner, lest Great Britain might take the alarm. Individuals are sometimes influenced by considerations of friendship and generosity; but interest is the pole star by which nations are universally governed. It is certain that Great Britain was amused with declarations of the most pacific dispositions on the part of France, at the time the Americans were liberally supplied with the means of defence; and it is equally certain, that this was the true line of policy

for promoting that dismemberment of the British empire, which France had an interest in accomplishing.

Congress knew, that a diminution of the overgrown power of Britain, could not but be desirable to France. Sore with the loss of her possessions on the continent of North America, by the peace of Paris in 1763, and also by the capture of many thousands of her sailors in 1755, antecedent to a declaration of war, she must have been something more than human, not to have rejoiced at an opportunity of depressing an ancient and formidable rival. Besides the increasing naval superiority of Great Britain, her vast resources, not only in her ancient dominions, but in colonies growing daily in numbers and wealth, added to the haughtiness of her flag, made her the object both of terror and envy. It was the interest of Congress to apply to the court of France, and it was the interest of France to listen to their application.

Congress, having agreed on the plan of the treaty, which they intended to propose to his Most Christian Majesty proceeded to elect commissioners to solicit its acceptance. Dr. Franklin, Silas Deane, and Thomas Jefferson were chosen. The latter declining to serve, Arthur Lee, who was then in London, and had been serviceable to his country, in a variety of ways, was elected in his room. It was resolved, that no member should be at liberty to divulge any thing more of these transactions than "that Congress had taken such steps as they judged necessary for obtaining foreign alliances." The secret committee were directed to make an effectual lodgement in France, of ten thousand pounds sterling, subject to the order of these commissioners. Dr. Franklin, who was employed as agent in the business, and afterwards as minister plenipotentiary at the court of France, was in possession of a greater proportion of foreign fame, than any other native of America. By the dint of superior abilities, and with but few advantages in early life, he had attained the highest eminence among men of learning, and in many instances extended the empire of science. His genius was vast and comprehensive, and with equal ease investigated the mysteries of philosophy, and the labyrinths of politics. His fame as a philosopher had reached as far as human nature is polished or refined. His philanthropy knew no bounds. The prosperity and happiness of the human race were objects which at all times had attracted his attention. Disgusted with Great Britain, and glowing with the most ardent love for the liberties of his oppressed native country, he left London, where he had resided some years in the character of agent for several of the colonies, early in 1775; returned to Philadelphia; and immediately afterwards was elected by the legislature of Pennsylvania, a member of Congress. After his appointment, to solicit the interests of the United States in France, he sailed for that country on the 27th of October, 1776. He was no sooner landed, 13th of December, than universally caressed. His fame had smoothed the way for his reception in a public character.

[BENJAMIN FRANKLIN, a philosopher and statesman, was born in Boston, Massachusetts, January 17, 1706. His father, who was a native of England, was a soap-boiler and tallow-chandler in that town. At the age of eight years, he was sent to a grammar school, but at the age of ten, his father required his services to assist him in his business. Two years afterwards, he was bound an apprentice to his brother, who was a printer. In this employment he made great proficiency, and having a taste for books, he devoted much of his leisure time to reading. So eager was he in the pursuit of knowledge, that he frequently passed the greater part of the night in his studies. He became expert in the Socratic mode of reasoning by asking questions, and thus he sometimes embarrassed persons of understanding superior to his own. In 1721, his brother began to print the New England Courant, which was the third newspaper published in America. The two preceding papers were the Boston News Letter and Boston Gazette. Young

Franklin wrote a number of essays for the Courant which were so well received, as to encourage him to continue his literary labours. To improve his style, he resolved to imitate Addison's Spectator. The method which he took, was to make a summary of a paper, after he had read it, and in a few days, when he had forgotten the expressions of the author, to endeavour to restore it to its original form. By this means he was taught his errors, and perceived the necessity of being more fully acquainted with the synonymous words of the language. He was much assisted also in acquiring a facility and variety of expression by writing poetry.

At this early period the perusal of Shaftsbury and Collins made him completely a sceptic, and he was fond of disputing upon the subject of religion. This circumstance caused him to be regarded by pious men with abhorrence; and on this account, as well as on account of the ill-treatment which he received from his brother, he determined to leave Boston. His departure was facilitated by the possession of his indenture, which his brother had given him about the year 1723, not from friendship, but because the general court had prohibited him from publishing the New England Courant, and in order that it might be conducted under the name of Benjamin Franklin. He privately went on board a sloop, and soon arrived at New York. Finding no employment here, he pursued his way to Philadelphia, and entered the city without a friend, and with only a dollar in his pocket. Purchasing some rolls at a baker's shop, he put one under each arm, and eating a third, walked through several streets in search of a lodging. There were at this time two printers in Philadelphia, Mr. Andrew Bradford, and Mr. Keimer, by the latter of whom he was employed. Sir William Keith, the governor, having been informed that Franklin was a young man of promising talents, invited him to his house, and treated him in the most friendly manner. He advised him to enter into business for himself, and to accomplish this object, to make a visit to London, in order that he might purchase the necessary articles for a printing office. Receiving the promise of assistance, Franklin prepared himself for the voyage, and on applying for letters of recommendation, previously to sailing, he was told, that they would be sent on board. When the letter bag was opened, there was no packet for Franklin; and he now discovered, that the governor was one of those men, who love to oblige every body, and who substitute the most liberal professions and offers in the place of active, substantial kindness. Arriving in London in 1724, he was obliged to seek employment as a journeyman printer. He lived so economically, that he saved a great part of his wages. Instead of drinking six pints of beer in a day, like some of his fellow labourers, he drank only water, and he persuaded some of them to renounce the extravagance of eating bread and cheese for breakfast, and to procure a cheap soup. As his principles at this time were very loose, his zeal to enlighten the world induced him to publish his dissertation on liberty and necessity, in which he contended that virtue and vice were nothing more than vain distinctions. This work procured him the acquaintance of Mandeville, and others of the licentious class.

He returned to Philadelphia in October, 1726, as a clerk to Mr. Denham, a merchant, but the death of that gentleman in the following year, induced him to return to Mr. Keimer, in the capacity of foreman in his office. He was very useful to his employer, for he gave him assistance as a letter founder. He engraved various ornaments, and made printer's ink. He soon began business in partnership with Mr. Meredith, but in 1729, he dissolved the connexion with him. Having purchased of Keimer a paper, which had been conducted in a wretched manner, he now conducted it in a style which attracted much attention. At this time, though destitute of those religious principles, which give stability and elevation to virtue, he yet had discernment enough to be convinced,

that truth, probity, and sincerity, would promote his interest, and be useful to him in the world, and he resolved to respect them in his conduct. The expenses of his establishment in business, notwithstanding his industry and economy, brought him into embarrassments, from which he was relieved by the generous assistance of William Coleman and Robert Grace. In addition to his other employments, he now opened a small stationer's shop. But the claims of business did not extinguish his taste for literature and science. He formed a club, which he called "The Junto," composed of the most intelligent of his acquaintance. Questions of morality, politics, philosophy, were discussed every Friday evening, and the institution was continued almost forty years. As books were frequently quoted in the club, and as the members had brought their books together for mutual advantage, he was led to form the plan of a public library, which was carried into effect in 1731, and became the foundation of that noble institution, the present library company of Philadelphia. In 1732, he began to publish Poor Richard's Almanac, which was enriched with maxims of frugality, temperance, industry, and integrity. So great was its reputation, that he sold ten thousand annually, and it was continued by him about twenty-five years. The maxims were collected in the last almanac in the form of an address called the Way to Wealth, which has appeared in various publications. In 1736, he was appointed clerk of the general assembly of Pennsylvania, and in 1737, postmaster of Philadelphia. The first fire company was formed by him in 1738. When the frontier of Pennsylvania were endangered in 1744, and an ineffectual attempt was made to procure a militia law, he proposed a voluntary association for the defence of the province, and in a short time obtained ten thousand names. In 1747, he was chosen a member of the assembly, and continued in this station ten years. In all important discussions, his presence was considered as indispensable. He seldom spoke, and never exhibited any oratory; but by a single observation he sometimes determined the fate of a question. In the long controversies with the proprietaries or their governors, he took the most active part, and displayed a firm spirit of liberty.

He was now engaged for a number of years in a course of electrical experiments, of which he published an account. His great discovery was the identity of the electric fluid and lightning. This discovery he made in the summer of 1752. To the upright stick of a kite, he attached an iron point; the string was of hemp, excepting the part which he held in his hand, which was of silk; and a key was fastened where the hempen string terminated. With this apparatus, on the approach of a thunder storm, he raised his kite. A cloud passed over it, and no signs of electricity appearing, he began to despair; but observing the loose fibres of his string to move suddenly toward an erect position, he presented his knuckle to the key, and received a strong spark. The success of this experiment completely established his theory. The practical use of this discovery in securing houses from lightning by pointed conductors, is well known in America and Europe. In 1753, he was appointed deputy postmaster general of the British colonies, and in the same year, the academy of Philadelphia, projected by him, was established. In 1754, he was one of the commissioners, who attended the congress at Albany, to devise the best means of defending the country against the French. He drew up a plan of union for defence and general government, which was adopted by the congress. It was however rejected by the board of trade in England, because it gave too much power to the representatives of the people: and it was rejected by the assemblies of the colonies, because it gave too much power to the president general. After the defeat of Braddock he was appointed colonel of a regiment, and he repaired to the frontiers, and built a fort.

Higher employments, however, at length called him from his country, which he was destined to

serve more effectually as its agent in England, whither he was sent in 1757. The stamp act, by which the British ministry wished to familiarize the Americans to pay taxes to the mother country, revived that love of liberty which had led their forefathers to a country at that time a desert; and the colonies formed a Congress, the first idea of which had been communicated to them by Dr. Franklin, at the conferences at Albany, in 1754. The war that was just terminated, and the exertions made by them to support it, had given them a conviction of their strength; they opposed this measure, and the minister gave way, but he reserved the means of renewing the attempt. Once cautioned, however, they remained on their guard; liberty, cherished by their alarms, took deeper root; and the rapid circulation of ideas by means of newspapers, for the introduction of which, they were indebted to the printer of Philadelphia, united them together to resist every fresh enterprise. In the year 1766, this printer, called to the bar of the house of commons, underwent that famous interrogatory, which placed the name of Franklin as high in politics, as in natural philosophy. From that time he defended the cause of America, with a firmness and moderation becoming a great man, pointing out to the ministry all the errors they committed, and the consequences they would produce till the period when, the tax on tea meeting the same opposition as the stamp act had done, England blindly fancied herself capable of subjecting, by force, three million of men determined to be free, at a distance of one thousand leagues.

In 1796, he visited Holland and Germany, and received the greatest marks of attention from men of science. In his passage through Holland, he learned from the waterman, the effect which the diminution of the quantity of water in canals has in impeding the progress of boats. Upon his return to England, he was led to make a number of experiments, all of which tended to confirm the observation.

In the following year, he travelled into France, where he met with no less favourable reception than he had experienced in Germany. He was introduced to a number of literary characters, and to the king, Louis XV.

He returned to America, and arrived in Philadelphia in the beginning of May, 1775, and was received with all those marks of esteem and affection, which his eminent services merited. The day after his arrival he was elected by the legislature of Pennsylvania, a member of Congress.

Almost immediately on his arrival from England, he wrote letters to some of his friends in that country, in a strain fitted to inspire lofty ideas of the virtue, resolution, and resource of the colonies. "All America," said he to Dr. Priestley, "is exasperated, and more firmly united than ever. Great frugality and great industry are become fashionable here. Britain, I conclude, has lost her colonies for ever. She is now giving us such miserable specimens of her government, that we shall ever detest and avoid it, as a complication of robbery, murder, famine, fire, and pestilence. If you flatter yourselves with beating us into submission, you know neither the people nor the country. You will have heard, before this reaches you, of the defeat of a great body of your troops by the country people at Lexington, of the action at Bunker's hill, &c. Enough has happened, one would think, to convince your ministers, that the Americans will fight, and that this is a harder nut to crack than they imagined. Britain, at the expense of three millions, has killed one hundred and fifty Yankees this campaign. During the same time, sixty thousand children have been born in America. From these data, the mathematical head of our dear good friend, Dr. Price, will easily calculate the time and expense necessary to kill us all, and conquer our whole territory. Tell him, as he sometimes has his doubts and despondencies about our firmness, that America is determined and unanimous."

It was in this varied tone of exultation, resent-

ment, and defiance, that he privately communicated with Europe. The strain of the papers respecting the British government and nation, which he prepared for Congress, was deemed by his colleagues too indignant and vituperative; to such a pitch were his feelings excited by the injuries and sufferings of his country, and so anxious was he that the strongest impetus should be given to the national spirit. His anger and his abhorrence were real; they endured without abatement during the whole continuance of the system which provoked them; they wore a complexion which rendered it impossible to mistake them for the offspring of personal pique or constitutional irritability; they had a vindictive power, a corrosive energy, proportioned to the weight of his character, and the dignity of the sentiments from which they sprang.

It was in this year that Dr. Franklin addressed that memorable and laconic epistle to his old friend and companion, Mr. Strahan, then king's printer, and member of the British parliament, of which the following is a correct copy, and of which a fac-simile is given in the last and most correct addition of his works:

Philadelphia, July 5, 1775.

MR. STRAHAN,

You are a member of parliament, and one of that majority which has doomed my country to destruction.—You have begun to burn our towns, and murder our people.—Look upon your hands!—They are stained with the blood of your relations! You and I were long friends!—You are now my enemy, and I am, Yours,

B. FRANKLIN.

In October, 1775, Dr. Franklin was appointed by Congress, jointly with Mr. Harrison and Mr. Lynch, a committee to visit the American camp at Cambridge, and, in conjunction with the commander in chief, (General Washington,) to endeavour to convince the troops, whose term of enlistment was about to expire, of the necessity of their continuing in the field, and persevering in the cause of their country.

He was afterwards sent on a mission to Canada, to endeavour to unite that country to the common cause of liberty. But the Canadians could not be prevailed upon to oppose the measures of the British government.

It was directed that a printing apparatus, and hands competent to print in French and English, should accompany this mission. Two papers were written and circulated very extensively through Canada; but it was not until after the experiment had been tried, that it was found not more than one person in five hundred could read. Dr. Franklin was accustomed to make the best of every occurrence, and suggested, that if it were intended to send another mission, it should be a mission composed of schoolmasters.

He was, in 1776, appointed a committee, with John Adams and Edward Rutledge, to inquire into the powers with which Lord Howe was invested in regard to the adjustment of our differences with Great Britain. When his lordship expressed his concern at being obliged to distress those whom he so much regarded, Dr. Franklin assured him, that the Americans, out of reciprocal regard, would endeavour to lessen, as much as possible, the pain which he might feel on their account, by taking the utmost care of themselves. In the discussion of the great question of independence, he was decidedly in favour of the measure.

In July, 1776, he was called to add to his federal duties, those of president of a convention held at Philadelphia, for the purpose of giving a new constitution to the state of Pennsylvania. The unbounded confidence reposed in his sagacity and wisdom, induced the convention to adopt his favourite theory of a plural executive and single legislature, which the experience of modern times has justly brought into disrepute. It may be said to be the only instance in which he cherished a speculation that experiment would not confirm.

Franklin early conjectured that it would become necessary for America to apply to some foreign power for assistance. To prepare the way for this step, and ascertain the probability of its success, he had, towards the close of 1775, opened, under the sanction of Congress, a correspondence with Holland, which he managed with admirable judgment, as may be perceived by his letter to Mr. Dumas, of Amsterdam of December, 1776, contained in the fifth volume of the American edition of his works. When at the end of 1776, our affairs had assumed so threatening an aspect, the hopes of Congress were naturally turned to Europe, and to France particularly, the inveterate and most powerful rival of England. Every eye rested on Franklin as a providential instrument for sustaining the American cause abroad; and though he had repeatedly signified from London, his determination to revisit Europe no more, yet, having consecrated himself anew to the pursuit of national independence, he accepted without hesitation, in his seventy-first year, the appointment of commissioner plenipotentiary to the court of France.

He wished, partly with a view to protect his person, in case of capture on the voyage across the Atlantic, to carry with him propositions for peace with England, and submitted to the secret committee of Congress, a series of articles, which his grandson has published. We are especially struck with that one of them which asks the cession to the United States, of Canada, Nova Scotia, the Floridas, &c.; and the explanation annexed to the article by this long sighted statesman, is not a little remarkable. "It is worth our while to offer such a sum — for the countries to be ceded, since the vacant lands will in time sell for a great part of what we shall give, if not more; and if we are to obtain them by conquest, after perhaps a long war, they will probably cost us more than that sum. It is absolutely necessary for us to have them for our own security; and though the sum may seem large to the present generation, in less than half the term of years allowed for their payment, it will be to the whole United States a mere trifle." Who does not, on reading this passage, recollect with gratitude, and feel disposed to honour as a master-stroke, the purchase of Louisiana, accomplished by Franklin's successor in the mission to France?

In the month of October, 1776, our philosopher set sail on this eventful mission, having first deposited in the hands of Congress, all the money he could raise, between three and four thousand pounds, as a demonstration of his confidence in their cause, and an incentive for those who might be able to assist it in the same way. His passage to France was short, but extremely boisterous. During some part of the month of December, he remained at the country seat of an opulent friend of America, in the neighbourhood of Nantz, in order to recover from the fatigues of the voyage, and to ascertain the posture of American affairs at Paris, before he approached that capital. With his usual sound discretion he forebore to assume, at the moment, any public character, that he might not embarrass the court which it was his province to conciliate, nor subject the mission to the hazard of a disgraceful repulse.

From the civilities with which he was loaded by the gentry of Nantz, and the surrounding country, and the lively satisfaction with which they appeared to view his supposed errand, he drew auguries that animated him in the discharge of his first duties at Paris. The reception given to him and his colleagues, by M. de Vergennes, the minister for foreign affairs, at the private audience to which they were admitted, towards the end of December, was of a nature to strengthen his patriotic hopes, and eminently to gratify his personal feelings. The particular policy of the French cabinet did not admit, at this period, of a formal recognition of the American commissioners. Franklin abstained from pressing a measure for which circumstances were not ripe, but urged, without delay, in an argumentative memorial, the prayer of Congress for substantial successes.

History presents no other case in which the interests of a people abroad derived so much essential, direct aid from the auspices of an individual; there is no other instance of a concurrence of qualities in a national missionary, so full and opportune. Foreign assistance had become, as it was thought, indispensable for the rescue of the colonies: France was the only sufficient auxiliary; and by her intervention, and the influences of her capital, alone, could any countenance or supplies be expected from any other European power. Her court, though naturally anxious for the dismemberment of the British empire, shrunk from the risks of a war; and could be prevented from stagnating in irresolution only by a strong current of public opinion: Her people, already touched by the causes and motives of the colonial struggle, required, however, some striking, immediate circumstance, to be excited to a clamorous sympathy. It was from Paris, that the impulse necessary to foster and fructify this useful enthusiasm was to be received, as well by the whole European continent, as by the mass of the French nation. At the time when Franklin appeared in Paris, the men of letters and of science possessed a remarkable ascendancy over all movement and judgment: they gave the tone to general opinion, and contributed to decide ministerial policy. Fashion, too, had no inconsiderable share in moulding public sentiment, and regulating events; and at this epoch, beyond any other, it was determined, and liable to be kindled into passion, by anamalous, or fanciful external appearances, however trivial in themselves, and moral associations of an elevated or romantic cast.

Observing the predilection of the people of France for the American cause, the rapid diffusion of a lively sympathy over the whole continent, the devotion of the literary and fashionable circles of Paris to his objects, the diligent preparations for war made daily in France, and the frozen mein of all the continental powers towards Great Britain, Franklin did not allow himself to be discouraged by the reserve of the court of Versailles; and, in order to counteract its natural effect, and that of other adverse appearances upon the resolution of his countrymen, he emphatically detailed those circumstances in his correspondence with America; adding, at the same time, accounts of the domestic embarrassments, and growing despair of the enemy.

When the news of the surrender of Burgoyne reached France in October, 1777, and produced there an explosion of public opinion, he seized upon the auspicious crisis, to make his decisive effort, by urging the most persuasive motives for a formal recognition and alliance. The epoch of the treaty concluded with the court of Versailles, on the 6th of February, 1778, is one of the most splendid in his dazzling career.

In conjunction with Mr. John Adams, Mr. Jay, and Mr. Laurens, he signed the provisional articles of peace, Nov. 30, 1782, and the definitive treaty, September 30, 1783. While he was in France, he was appointed one of the commissioners to examine Mesmer's animal magnetism. In 1781, being desirous of returning to his native country, he requested that an ambassador might be appointed in his place, and on the arrival of his successor, Mr. Jefferson, he immediately sailed for Philadelphia, where he arrived in September, 1785. He was received with universal applause, and was soon appointed president of the supreme executive council. In 1787, he was a delegate to the grand convention, which formed the constitution of the United States. In this convention he had differed in some points from the majority, but when the articles were ultimately decreed, he said to his colleagues, "We ought to have but one opinion; the good of our country requires that the resolution should be unanimous;" and he signed.

On the 17th of April, 1790, in the eighty-fourth year of his age, he expired, in the city of Philadelphia; encountering this last solemn conflict, with the same philosophical tranquility and pious resignation to the will of heaven, which had dis-

tinguished him through all the various events of his life.

He was interred on the 21st of April, and Congress ordered a general mourning for him throughout America, of one month. In France, the expression of public grief was scarcely less enthusiastic. There the event was solemnized, under the direction of the municipality of Paris, by funeral orations, and the national assembly, his death being announced in a very eloquent, and pathetic discourse, decreed, that each of the members should wear mourning for three days, "in commemoration of the event;" and that a letter of condolence, for the irreparable loss they had sustained, should be directed to the American congress. Honours extremely glorious to his memory, and such, it has been remarked, as were never before paid by any public body of one nation, to the citizen of another.

He lies buried in the north-west corner of Christ church-yard; distinguished from the surrounding dead, by the humility of his sepulchre. He is covered by a small marble slab, on a level with the surface of the earth; and bearing the single inscription of his name, with that of his wife. A monument sufficiently corresponding to the plainness of his manners, little suitable to the splendour of his virtues.

He had two children, a son and a daughter, and several grand-children, who survived him. The son, who had been governor of New Jersey, under the British government, adhered, during the revolution, to the royal party, and spent the remainder of his life in England. The daughter married Mr. Bache, of Philadelphia, whose descendants yet reside in that city.

Franklin enjoyed, during the greater part of his life, a healthy constitution, and excelled in exercises of strength and activity. In stature, he was above the middle size, manly, athletic, and well proportioned. His countenance, as it is represented in his portrait, is distinguished by an air of serenity and satisfaction; the natural consequences of a vigorous temperament, of strength of mind, and conscious integrity: It is also marked, in visible characters, by deep thought and inflexible resolution.

The whole life of Franklin, his meditations and his labours, have all been directed to public utility; but the grand object that he had always in view, did not shut his heart against private friendship; he loved his family, and his friends, and was extremely beneficent. In society he was sententious, but not fluent; a listener rather than a talker; an informing rather than a pleasing companion; impatient of interruption, he often mentioned the custom of the Indians, who always remain silent some time before they give an answer to a question, which they have heard attentively; unlike some of the politest societies in Europe, where a sentence can scarcely be finished without interruption. In the midst of his greatest occupations for the liberty of his country, he had some physical experiments always near him in his closet; and the sciences, which he rather discovered than studied, afforded him a continual source of pleasure. He made various bequests and donations to cities, public bodies, and individuals.

The following epitaph was written by Dr. Franklin, for himself, when he was only twenty-three years of age, as appears by the original (with various corrections) found among his papers, and from which this is a faithful copy.

"The body of
BENJAMIN FRANKLIN,
PRINTER,

(Like the cover of an old book.

Its contents torn out,

And stript of its lettering and gilding.)

Lies here, food for worms:

But the work shall not be lost,

For it will (as he believed) appear once more,

In a new, and more elegant edition,

Revised and corrected

by

THE AUTHOR."]

Doctor Franklin, Silas Deane, and Arthur Lee, having rendezvoused at Paris, on the 28th opened their business in a private audience with count de Vergennes. The congress could not have applied to the court of France under more favourable circumstances. The throne was filled by a prince in the flower of his age, and animated with the desire of rendering his reign illustrious. Count de Vergennes was not less remarkable for extensive political knowledge, than for true greatness of mind. He had grown old in the habits of government, and was convinced that conquests are neither the surest nor the shortest way to substantial fame. He knew full well that no success in war, however brilliant, could so effectually promote the security of France, as the emancipation of the colonies of her ancient rival. He had the superior wisdom to discern, that there were no present advantages to be obtained by unequal terms, that would compensate for those lasting benefits which were likely to flow from a kind and generous beginning. Instead of grasping at too much, or taking any advantages of the humble situation of the invaded colonies, he aimed at nothing more than, by kind and generous terms to a distressed country, to perpetuate the separation which had already taken place between the component parts of an empire, from the union of which his sovereign had much to fear.

Truly difficult was the line of conduct, which the real interest of the nation required of the ministers of his Most Christian Majesty. A haughty reserve would have discouraged the Americans. An open reception, or even a legal countenance of their deputies might have alarmed the rulers of Great Britain, and disposed them to a compromise with their colonies, or have brought on an immediate rupture between France and England. A middle line, as preferable to either, was therefore pursued. Whilst the French government (1777) prohibited, threatened, and even punished the Americans; private persons encouraged, supplied, and supported them. Prudence, as well as policy required, that France should not be over-hasty, in openly espousing their cause. She was by no means fit for war. From the state of her navy, and the condition of her foreign trade, she was vulnerable on every side. Her trading people dreaded the thoughts of a war with Great Britain, as they would thereby be exposed to great losses. These considerations were strengthened from another quarter. The peace of Europe was supposed to be unstable, from a prevailing belief, that the speedy death of the elector of Bavaria was an event extremely probable. But the principal reason which induced a delay, was an opinion that the dispute between the mother country and the colonies would be compromised. Within the thirteen years immediately preceding, twice had the contested claims of the two countries brought matters to the verge of extremity. Twice had the guardian genius of both interposed, and reunited them in the bonds of love and affection. It was feared by the sagacious ministry of France, that the present rupture would terminate in the same manner. These wise observers of human nature apprehended, that their too early interference would favour a reconciliation, and that the reconciled parties would direct their united force against the French, as the disturbers of their domestic tranquility. It had not yet entered into the hearts of the French nation, that it was possible for the British American colonists, to join with their ancient enemies against their late friends.

At this period, Congress did not so much expect any direct aid from France, as the indirect relief of a war between that country and Great Britain. To subvert this design, they resolved that "their commissioners at the court of France should be furnished with warrants and commissions, and authorised to arm and fit for war in the French ports, any number of vessels, not exceeding six, at the expense of the United States, to war upon British property; provided they were satisfied this measure would not be disagreeable to the court of France." This resolution was carried into effect; and in the year 1777, marine officers, with Ameri-

can commissions, both sailed out of French ports, and carried prizes of British property into them. They could not procure their condemnation in the courts of France, nor sell them publicly; but they nevertheless found ways and means to turn them into money. The commanders of these vessels were sometimes punished by authority, to please the English; but they were oftener caressed from another quarter, to please the Americans.

While private agents on the part of the United States were endeavouring to embroil the two nations, the American commissioners were urging the ministers of his most Christian Majesty to accept the treaty proposed by Congress. They received assurances of the good wishes of the court of France; but were from time to time informed, that the important transactions required farther consideration, and were enjoined to observe the most profound secrecy. Matters remained in this fluctuating state from December 1776, till December 1777. Private encouragement and public discountenance were alternated; but both varied according to the complexion of news from America. The defeat on Long Island, the reduction of New York, and the train of disastrous events in 1776, which have already been mentioned, sunk the credit of the Americans very low, and abated much of the national ardour for their support. Their subsequent successes at Trenton and Princeton effaced these impressions, and rekindled active zeal in their behalf. The capture of Burgoyne fixed these wavering politics. The success of the Americans, in the campaign of 1777, placed them on high ground. Their enmity had proved itself formidable to Britain, and their friendship became desirable to France. Having helped themselves, they found it less difficult to obtain help from others. The same interest, which hitherto had directed the court of France to a temporising policy, now required decisive conduct. Previous delay had favoured the dismemberment of the empire; but farther procrastination bid fair to promote at least such a federal alliance of the disjointed parts of the British empire, as would be no less hostile to the interests of France, than a re-union of its several parts. The news of the capitulation of Saratoga reached France very early in December, 1777. The American deputies took that opportunity to press for an acceptance of the treaty, which had been under consideration for the preceding twelve months. The capture of Burgoyne's army convinced the French, that the opposition of the Americans to Great Britain was not the work of a few men who had gotten power in their hands, but of the great body of the people; and was likely to be finally successful. It was therefore determined to take them by the hand, and publicly to espouse their cause.

The commissioners of Congress on the 16th December, 1777, were informed by Mr. Gerard, one of the secretaries of the king's council of state "that it was decided to acknowledge the independence of the United States, and to make a treaty with them; that in the treaty no advantage would be taken of their situation, to obtain terms which otherwise, it would not be convenient for them to agree to; that his Most Christian Majesty desired the treaty once made should be durable, and their amity to subsist forever, which could not be expected, if each nation did not find an interest in its continuance, as well as in its commencement. It was therefore intended, that the terms of the treaty should be such as the new formed states would be willing to agree to, if they had been long since established, and in the fullness of strength and power, and such as they should approve when that time should come; that his most christian majesty was fixed in his determination not only to acknowledge, but to support their independence; that in doing this he might probably soon be engaged in a war; yet he should not expect any compensation from the United States on that account. Nor was it pretended that he acted wholly for their sakes, since besides his real good will to them, it was manifestly the interest of France, that the power of England should be diminished,

by the separation of the colonies from its government. The only condition he should require, and rely on, would be, that the United States, in no peace to be made, should give up their independence and return to the obedience of the British government." At any time previously to the 16th of December, 1777, when Mr. Gerard made the foregoing declaration, it was in the power of the British ministry to have ended the American war, and to have established an alliance with the United States, that would have been of great service to both; but from the same haughtiness which for some time had predominated in their councils, and blinded them to their interests, they neglected to improve the favourable opportunity.

Conformably to the preliminaries proposed by Mr. Gerard, his most christian majesty Louis the 16th, on the 6th of February, 1778, entered into treaties of amity, commerce, and alliance with the United States, on the footing of the most perfect equality and reciprocity. By the latter of these, that illustrious monarch became the guarantee of their sovereignty, independence and commerce. On a review of the conduct of the French ministry, to the Americans, the former appear to have acted uniformly from a wise regard to national interest. Any line of conduct, different from that which they adopted, might have overset the measures which they wished to establish. Had they pretended to act from disinterested principles of generosity to the distressed, the known selfishness of human nature would have contradicted the extravagant pretension. By avowing the real motive of their conduct, they furnished such a proof of candour as begat confidence.

The terms of reciprocity, on which they contracted with the United States, were no less recommended by wise policy than dictated by true magnanimity. As there was nothing exclusive in the treaty, an opening was left for Great Britain to close the war when she pleased, with all the advantages for future commerce that France had stipulated for herself. This judicious measure made the establishment of American independence the common cause of all the commercial powers of Europe; for the question then was, whether the trade of the United States should, by the subversion of their independence, be again monopolised by Great Britain, or, by the establishment of it, laid open on equal terms to all the world.

In national events, the public attention is generally fixed on the movements of armies and fleets. Mankind never fail to do homage to the able general, and expert admiral. To this they are justly entitled; but as great a tribute is due to the statesman, who, from a more elevated station, determines on measures in which the general safety and welfare of empires are involved. This glory, in a particular manner, belongs to the count de Vergennes, who, as his Most Christian Majesty's minister for foreign affairs, conducted the conferences which terminated in these treaties. While the ministers of his Britannic Majesty were pleasing themselves with the flattering idea of permanent peace in Europe, they were not less surprised than provoked by hearing of the alliance, which had taken place between his Most Christian Majesty and the United States. This event, though often foretold, was disbelieved. The zeal of the British ministry to reduce the colonies, blinded them to danger from every other quarter. Forgetting that interest governs public bodies, perhaps more than private persons, they supposed that feeble motives would outweigh its all-commanding influence. Intent on carrying into execution the object of their wishes, they fancied that, because France and Spain had colonies of their own, they would refrain from aiding or abetting the revolted British colonies, from the fear of establishing a precedent which at a future day might operate against themselves. Transported with indignation against their late fellow subjects, they were so infatuated with the American war, as to suppose that trifling evils, both distant and uncertain would induce the court of France to neglect an opportunity of securing great and immediate advantages.

How far this interference of the court of France can be justified by the laws of nations, it is not the province of history to decide. Measures of this kind are not determined by abstract reasoning. The present feelings of a nation, and the probable consequences of loss or gain, influence more than the decisions of speculative men. Suffice it to mention, that the French exculpated themselves from the heavy charges brought against them, by this summary mode of reasoning: "We have found," said they, "the late colonies of Great Britain in actual possession of independence, and in the exercise of the prerogatives of sovereignty. It is not our business to inquire, whether they had, or had not, sufficient reason to withdraw themselves from the government of Great Britain, and to erect an independent one of their own. We are to conduct towards nations, agreeably to the political state in which we find them, without investigating how they acquired it. Observing them to be independent in fact, we were bound to suppose they were so of right, and had the same liberty to make treaties with them, as with any other sovereign power." They also alleged, that Great Britain could not complain of their interference, since she had set them the example only a few years before, in supporting the Corsicans in opposition to the court of France. They had besides many well-founded complaints against the British, whose armed vessels had for months past harassed their commerce, on the idea of preventing an illicit trade with the revolted colonies.

The marquis de la Fayette, whose letters to France had a considerable share in preparing the nation to patronise the United States, was among the first in the American army who received the welcome tidings of the treaty. In a transport of joy, mingled with an effusion of tears, he embraced General Washington, exclaiming, "the king my master has acknowledged your independence, and entered into an alliance with you for its establishment." The heart-felt joy, which spread from breast to breast, exceeded description. The several brigades assembled by order of the commander in chief. Their chaplains offered up public thanks to Almighty God, and delivered discourses suitable to the occasion. A feu-de-joie was fired, and, on a proper signal being given, the air resounded with huzzas. "Long live the king of France," poured forth from the breast of every private in the army. The Americans, having in their own strength for three years weathered the storms of war, fancied the port of peace to be in full view. Replete with the sanguine hopes of vigorous youth, they presumed that Britain, whose northern army had been reduced by their sole exertions, would not continue the unequal contest with the combined force of France and America. Overvaluing their own importance and undervaluing the resources of their adversaries, they were tempted to indulge a dangerous confidence. That they might not be lulled into carelessness, Congress made an animated address to them, in which, after reviewing the leading features of the war, they informed them: "They must yet expect a severe conflict; that though foreign alliances secured their independence, they could not secure their country from devastation."

The alliance between France and America had not been concluded three days, before it was known to the British ministry; and in less than five weeks more, March 13th, it was officially communicated to the court of London, in a rescript, delivered by the French ambassador, to lord Weymouth. In this new situation of affairs, there were some in Great Britain who advocated the measure of peace with America, on the footing of independence; but the point of honour, which had before precipitated the nation into the war, predominated over the voice of prudence and interest. The king and parliament of Great Britain resolved to punish the French nation for treating with their subjects, which they termed "an unprovoked aggression on the honour of the crown, and essential interests of the kingdom." And at the same time, a vain hope was indulged, that the alliance

between France and the United States, which was supposed to have originated in passion, might be dissolved. The national prejudices against the French, had been so instilled into the minds of Englishmen, and of their American descendants, that it was supposed practicable, by negotiations and concessions, to detach the United States from their new alliance, and re-unite them to the parent state.

Eleven days after the treaty between France and America had been concluded, 17th February, the British minister introduced into the house of commons a project for conciliation, founded on the idea of obtaining a re-union of the new states with Great Britain. This consisted of two bills, with the following titles: "A bill for declaring the intention of Great Britain, concerning the exercise of the right of imposing taxes within his majesty's colonies, provinces and plantations in North America;" and a bill "to enable his majesty to appoint commissioners with sufficient powers, to treat, consult and agree upon the means of quieting the disorders now subsisting in certain of the colonies, plantations and provinces of North America." These bills were hurried through both houses of parliament, and before they passed into acts, were copied and sent across the Atlantic, to lord and General Howe. On their arrival in America, they were sent by a flag to congress at Yorktown. When they were received, 21st April, congress was uninformed of the treaty which their commissioners had lately concluded at Paris. For upwards of a year, they had not received one line of information from them on any subject whatever. One packet had in that time been received: but all the letters therein were taken out, before it was put on board the vessel which brought it from France, and blank papers put in their stead. A committee of Congress was appointed to examine these bills, and report on them. Their report was brought in the following day, and was unanimously adopted. By it they rejected the proposals of Great Britain.

The vigorous and firm language in which Congress expressed their rejection of these offers considered in connexion with the circumstance of their being wholly ignorant of the late treaty with France, exhibits the glowing serenity of fortitude. While the royal commissioners were industriously circulating these bills in a partial and secret manner, as if they suspected an intention of concealing them from the common people, Congress trusting to the good sense of their constituents, ordered them to be forthwith printed for the public information. Having directed the affairs of their country with an honest reference to its welfare, they had nothing to fear from the people knowing and judging for themselves. They submitted the whole to the public. Their report, after some general remarks, on the bill, concluded as follows:

"From all which it appears evident to your committee, that the said bills were intended to operate upon the hopes and fears of the good people of these states, so as to create divisions among them, and a defection from the common cause, now, by the blessing of Divine Providence, drawing near to a favourable issue; that they are the sequel of that insidious plan, which, from the days of the stamp act, down to the present time, hath involved this country in contention and bloodshed; and that, as in other cases, so in this, although circumstances may force them at times to recede from their unjustifiable claims, there can be no doubt they will, as heretofore, upon the first favourable occasion, again display that lust of domination, which hath rent in twain the mighty empire of Britain.

"Upon the whole matter, the committee beg leave to report it as their opinion, that as the Americans united in this arduous contest upon principles of common interest, for the defence of common rights and privileges, which union hath been cemented by common calamities, and by mutual good offices and affection, so the great cause for which they contend, and in which all mankind are interested must derive its success from the continuance

of that union. Wherefore any man or body of men, who should presume to make any separate or partial convention or agreement with commissioners under the crown of Great Britain, or any of them, ought to be considered and treated as open and avowed enemies of these United States.

"And further, your committee beg leave to report it as their opinion, that these United States cannot, with propriety, hold any conference with any commissioners on the part of Great Britain, unless they shall, as a preliminary thereto, either withdraw their fleets and armies, or else, in positive and express terms, acknowledge the independence of the said states.

"And inasmuch as it appears to be the design of the enemies of these states to lull them into a fatal security; to the end that they may act with a becoming weight and importance, it is the opinion of your committee, that the several states be called upon to use the most strenuous exertions, to have their respective quotas of continental troops in the field as soon as possible, and that all the militia of the said states be held in readiness to act, as occasion may require."

The conciliatory bills were speedily followed by royal commissioners, deputed to solicit their reception. Governor Johnstone, lord Carlisle and Mr. Eden, appointed on this business, attempted to open a negotiation, on the subject. They requested General Washington, on the 9th of June, to furnish a passport for their secretary, Dr. Ferguson, with a letter from them to Congress; but this was refused, and the refusal was unanimously approved by Congress. They then forwarded, in the usual channel of communication, a letter addressed, "To his Excellency Henry Laurens, the president, and other the members of Congress," in which they communicated a copy of their commission, and of the acts of parliament, on which it was founded; and they offered to concur in every satisfactory and just arrangement towards the following among other purposes:—

To consent to a cessation of hostilities, both by sea and land;

To restore free intercourse; to revive mutual affection; and renew the common benefits of naturalization, through the several parts of this empire;

To extend every freedom to trade that our respective interests can require;

To agree that no military forces shall be kept up in the different states of North America, without the consent of the general Congress, or particular assemblies;

To concur in measures calculated to discharge the debts of America, and to raise the credit and value of the paper circulation;

To perpetuate our union by a reciprocal deputation of an agent or agents from the different states, who shall have the privilege of a seat and voice in the parliament of Great Britain; or if sent from Britain, in that case to have a seat and voice in the assemblies of the different states to which they may be deputed respectively, in order to attend the several interests of those by whom they are deputed;

In short, to establish the power of the respective legislatures in each particular state; to settle its revenue, its civil and military establishment; and to exercise a perfect freedom of legislation and internal government, so that the British states throughout North America, acting with us in peace and war under one common sovereign, may have the irrevocable enjoyment of every privilege, that is short of a total separation of interests, or consistent with that union of force, on which the safety of our common religion and liberty depends.

A decided negative having been already given, previous to the arrival of the British commissioners, to the overtures contained in the conciliatory bills, and intelligence of the treaty with France having in the mean time arrived, there was no ground left for farther deliberation. President Laurens, therefore, by order of Congress, on the 27th of June, returned the following answer:

"I have received the letter from your excellen-

cies, of the 9th instant, with the enclosures, and laid them before Congress. Nothing but an earnest desire to spare the farther effusion of human blood could have induced them to read a paper, containing expressions so disrespectful to his Most Christian Majesty, the good and greatly ally of these states; or to consider propositions so derogatory to the honour of an independent nation.

"The acts of the British parliament, the commission from your sovereign, and your letter, suppose the people of these states to be subjects of the crown of Great Britain, and are founded on the idea of dependence, which is utterly inadmissible.

"I am farther directed to inform your excellencies, that Congress are inclined to peace, notwithstanding the unjust claims from which this war originated, and the savage manner in which it hath been conducted. They will, therefore, be ready to enter upon the consideration of a treaty of peace and commerce, not inconsistent with treaties already subsisting, when the king of Great Britain shall demonstrate a sincere disposition for that purpose. The only solid proof of this disposition will be, an explicit acknowledgment of the independence of these states, or the withdrawing his fleets and armies."

Though Congress could not, consistently with national honour, enter on a discussion of the terms proposed by the British commissioners, yet some individuals of their body ably proved the propriety of rejecting them. Among these Gouverneur Morris and William Henry Drayton, with great force of argument and poignancy of wit, justified the decisive measures adopted by their countrymen.

As the British plan for conciliation was wholly founded on the idea of the states returning to their allegiance, it was no sooner known than rejected. In addition to the sacred ties of plighted faith and national engagements, the leaders in Congress and the legislative assemblies in America had tasted the sweets of power, and were in full possession of its blessings, with a fair prospect of retaining them without any foreign control: The war, having originated on the part of Great Britain from a lust of power, had in its progress compelled the Americans in self-defence to assume and exercise its highest prerogatives. The passions of human nature, which induced the former to claim power, operated no less forcibly with the latter, against the relinquishment of it. After the colonies had declared themselves independent states, had repeatedly pledged their honour to abide by that declaration, had under the smiles of heaven maintained it for three campaigns without foreign aid, after the greatest monarch in Europe had entered into a treaty with them, and guaranteed their independence: after all this to expect popular leaders, in the enjoyment of power, voluntarily to retire from the helm of government, to the languid indifference of private life, and while they violated national faith, at the same time to depress their country from the rank of sovereign states to that of dependent provinces, was not more repugnant to universal experience, than to the governing principles of the human heart.

The high-spirited ardour of citizens in the youthful vigour of honour and dignity, did not so much as inquire, whether greater political happiness might be expected from closing with the proposals of Great Britain, or by adhering to their new allies. Honour forbade any balancing on the subject; nor were its dictates disobeyed. Though peace was desirable, and the offers of Great Britain so liberal, that, if proposed in due time, they would have been acceptable; yet for the Americans, after they had declared themselves independent, and at their own solicitation obtained the aid of France, to desert their new allies, and leave them exposed to British resentment, incurred on their account, would have argued a total want of honour and gratitude. The folly of Great Britain, in expecting such conduct from virtuous freemen, could only be exceeded by the baseness of America, had her citizens realised that expectation.

These offers of conciliation in a great measure originated in an opinion that the congress was sup-

ported by a faction, and that the great body of the people was hostile to independence, and well disposed to re-unite with Great Britain. The latter of these assertions was true, till a certain period of the contest: but that period was elapsed. With their new situation, new opinions and attachments had taken place. The political revolution of the government was less extraordinary than that of the style and manner of thinking in the United States. The independent American citizens saw with other eyes, and heard with other ears, than when they were in the condition of British subjects. The narrowness of sentiment, which prevailed in England towards France, no longer existed among the Americans. The British commissioners unapprised of this real change in the public mind, expected to keep a hold on the citizens of the United States, by that illiberality which they inherited from their forefathers. Presuming that the love of peace, and the ancient national antipathy to France would counterbalance all other ties, they flattered themselves that, by perseverance, an impression favourable to Great Britain might yet be made on the mind of America. They therefore renewed their efforts to open a negotiation with Congress in a letter of the 11th of July. As they had been informed, in answer to their preceding letter of the 10th of June, that an explicit acknowledgment of the independence of the United States, or a withdrawing of their fleets and armies, must precede an entrance on the consideration of a treaty of peace, and as neither branch of this alternative had been complied with, it was resolved by Congress that no answer should be given to their reiterated application.

In addition to his public exertions as a commissioner, Governor Johnstone endeavoured to obtain the objects on which he had been sent, by opening a private correspondence with some of the members of Congress, and other Americans of influence. He in particular addressed himself by letter to Henry Laurens, Joseph Reed, and Robert Morris. His letter to Henry Laurens was in these words:

"DEAR SIR,

"I beg to transfer to my friend Dr. Ferguson, the private civilities which my friends Mr. Manning, and Mr. Oswald, request in my behalf. He is a man of the utmost probity, and of the highest esteem in the republic of letters.

"If you should follow the example of Britain, in the hour of her insolence, and send us back without a hearing, I shall hope, from private friendship, that I may be permitted to see the country, and the worthy characters she has exhibited to the world, upon making the request in any way you may point out."

The following answer was immediately written:

"York Town, June 14, 1778.

"DEAR SIR,

"Yesterday, I was honoured with your favour of the 10th, and thank you for the transmission of those from my dear and worthy friends, Mr. Oswald and Mr. Manning. Had Dr. Ferguson been the bearer of these papers, I should have shown that gentleman every degree of respect and attention, that times and circumstances admit of.

"It is, sir, for Great Britain to determine, whether her commissioners shall return unheard by the representatives of the United States, or revive a friendship with the citizens at large, and remain among us as long as they please.

"You are undoubtedly acquainted with the only terms upon which Congress can treat for accomplishing this good end; terms from which, although writing in a private character, I may venture to assert with great assurance, they never will recede, even admitting the continuance of hostile attempts, and that, from the rage of war, the good people of these states shall be driven to commence a treaty westward of yonder mountains. And permit me to add, sir, as my humble opinion, the true interest of Great Britain, in the present advance of our contest, will be found in confirming our independence.

"Congress in no hour have been haughty; but to suppose that their minds are less firm at the present, than they were when destitute of all foreign aid, and even without expectation of an alliance; when upon a day of general public fasting and humiliation in their house of worship, and in presence of God, they resolved, 'to hold no conference or treaty with any commissioners on the part of Great Britain, unless they shall, as a preliminary thereto, either withdraw their fleets and armies, or in positive and express terms acknowledge the independence of these states,' would be irrational.

"At a proper time, sir, I shall think myself highly honoured by a personal attention, and by contributing to render every part of these states agreeable to you; but until the basis of mutual confidence shall be established, I believe, sir, neither former private friendship, nor any other consideration can influence Congress to consent, that even Governor Johnstone, a gentleman who has been so deservedly esteemed in America, shall see the country. I have but one voice, and that shall be against it. But let me intreat you, my dear sir, do not hence conclude that I am deficient in affection to my old friends, through whose kindness I have obtained the honour of the present correspondence, or that I am not, with very great personal respect and esteem,

"Sir, your most obedient,

"And most humble servant,

"HENRY LAURENS.

"The honourable GEO. JOHNSTONE, Esq.

"Philadelphia."

In a letter to Joseph Reed, of April the 11th, Governor Johnstone said, "The man who can be instrumental in bringing us all to act once more in harmony, and to unite together the various powers which this contest has drawn forth, will deserve more from the king and people, from patriotism, humanity, and all the tender ties that are affected by the quarrel and reconciliation, than ever was yet bestowed on human kind." On the 16th of June, he wrote to Robert Morris: "I believe the men who have conducted the affairs of America incapable of being influenced by improper motives; but in all such transactions there is risk. And, I think, that whoever ventures should be secured, at the same time that honour and emolument should naturally follow the fortune of those, who have steered the vessel in the storm, and brought her safely to port. I think Washington and the president have a right to every favour, that grateful nations can bestow, if they could once more unite our interest, and spare the miseries and devastations of war."

To Joseph Reed, private information was communicated, on the 21st June, that it had been intended by Governor Johnstone, to offer him, that in case of his exerting his abilities to promote a re-union of the two countries, if consistent with his principles and judgment, ten thousand pounds sterling, and any office in the colonies, within his majesty's gift. To which Mr. Reed replied: "I am not worth purchasing; but such as I am, the king of Great Britain is not rich enough to do it." Congress on the 9th July, ordered all letters, received by members of Congress from any of the British commissioner, or their agents, or from any subject of the king of Great Britain, of a public nature, to be laid before them. The above letters and information being communicated, Congress resolved; "that the same cannot but be considered, as direct attempts to corrupt their integrity, and that it is incompatible with the honour of Congress, to hold any manner of correspondence or intercourse with the said George Johnstone, Esquire; especially to negotiate with him upon affairs in which the cause of liberty is interested." Their determination, with the reasons, was expressed in the form of a declaration, a copy of which was signed by the president, and sent by a flag to the commissioners at New York. This was answered by Governor Johnstone, by an angry publication, in which he denied, or explained away

what had been alleged against him. Lord Carlisle, sir Henry Clinton, and Mr. Eden denied having any knowledge of the matter charged on Governor Johnstone.

The commissioners, failing in their attempts to negotiate with Congress, had no resource left, but to persuade the inhabitants to adopt a line of conduct, counter to that of their representatives. To this purpose they published a manifesto and proclamation addressed to Congress, the assemblies, and all others, the free inhabitants of the colonies, in which they observed; "The policy as well as the benevolence of Great Britain have so far checked the extremes of war, when they tended to distress a people still considered as our fellow subjects, and to desolate a country shortly to become a source of mutual advantage; but when that country professes the unnatural design, not only of estranging herself from us, but of mortgaging herself and her resources to our enemies, the whole contest is changed; and the question is, how far Great Britain may, by every means in her power, destroy, or render useless a connexion contrived for her ruin, and for the aggrandizement of France. Under such circumstances, the laws of self-preservation must direct the conduct of Great Britain; and if the British colonies shall become an accession to France, will direct her to render that accession of as little avail as possible to her enemy."

Congress, upon being informed of the design of the commissioners to circulate these papers, declared that the agents, employed to distribute the manifestos and proclamation of the commissioners, were not entitled to protection from a flag. They also recommended to the several states to secure and keep them in close custody; but that they might not appear to hood-wink their constituents, they ordered the manifestos and proclamation to be printed in the newspapers. The proposals of the commissioners were not more favourably received by the people than they had been by Congress. In some places, the flags containing them were not received, but ordered instantly to depart; in others, they were received and forwarded to Congress, as the only proper tribunal to take cognizance of them. In no one place, not immediately commanded by the British army, was there any attempt to accept, or even to deliberate on the propriety of closing with the offers of Britain.

To deter the British from executing their threats of laying waste the country, Congress, on the 30th of October, published to the world a resolution and manifesto, in which they concluded with these words:

"We, therefore, the Congress of the United States of America, do solemnly declare and proclaim, that, if our enemies presume to execute their threats, or persist in their present career of barbarity, we will take such exemplary vengeance as shall deter others from a like conduct. We appeal to that God who searcheth the hearts of men, for the rectitude of our intentions; and in his holy presence we declare, that, as we are not moved by any light and hasty suggestions of anger and revenge, so, through every possible change of fortune, we will adhere to this our determination."

This was the last effort of Great Britain, in the way of negotiation, to regain her colonies. It originated in folly and ignorance of the real state of affairs in America. She had begun with wrong measures, and had now got into wrong time. Her concessions, on this occasion, were an implied justification of the resistance of the colonists. By offering to concede all that they at first asked for, she virtually acknowledged herself to have been the aggressor in an unjust war. Nothing could be more favourable to the cementing of the friendship of the new allies, than this unsuccessful negotiation. The states had an opportunity of evincing the sincerity of their engagements, and France abundant reason to believe that, by preventing their being conquered, her favourite scheme of lessening the power of Great Britain, would be secured beyond the reach of accident.

CHAPTER XVII.

The Campaign of 1778.

AFTER the termination of the campaign of 1777, the British army retired to winter quarters in Philadelphia, and the American army to Valley Forge. The former enjoyed (1778) all the conveniences which an opulent city afforded, while the latter, not half clothed, and more than once on the point of starving, were enduring the severity of a cold winter in a huttet camp. It was well for them, that the British made no attempt to disturb them, while in this destitute condition.

The winter and spring passed away without any more remarkable events in either army, than a few successful excursions of parties from Philadelphia to the neighbouring country, for the purpose of bringing in supplies, or destroying property. In one of these, a party of the British proceeded to Bordenton, and there burned four store-houses full of useful commodities. Before they returned to Philadelphia, they burned two frigates, nine ships, six privateer sloops, twenty-three brigs, with a number of sloops and schooners.

Soon afterwards, an excursion from Newport was made by 500 British and Hessians, under the command of Lieutenant Colonel Campbell. These, having landed in the night of the 25th of May, marched next morning in two bodies, the one for Warren, the other for Kiekemuit river. They destroyed about 70 flat bottomed boats, and burned a quantity of pitch, tar and plank. They also set fire to the meeting house at Warren, and seven dwelling houses. At Bristol, they burned the church and 22 houses. Several other houses were plundered; and women were stripped of their shoe-buckles, gold rings and handkerchiefs.

A French squadron, consisting of 12 ships of the line and 4 frigates, commanded by Count D'Estaing, sailed from Toulon for America, soon after the treaty had been agreed upon between the United States and the king of France. After a passage of 87 days, the count arrived July 9th, at the entrance of the Delaware. From an apprehension of something of this kind, and from the prospect of greater security, it was resolved in Great Britain, forthwith to evacuate Philadelphia, and to concentrate the royal force in the city and harbour of New York. The commissioners brought out the orders for this movement; but knew nothing of the matter. It had an unfriendly influence on their proposed negotiations; but it was indispensably necessary, for if the French fleet had blocked up the Delaware, and the Americans besieged Philadelphia, the escape of the British from either, would have been scarcely possible.

The royal army, on the 18th of June, passed over the Delaware into New-Jersey. Washington, having penetrated into their design of evacuating Philadelphia, had previously detached General Maxwell's brigade, to co-operate with the Jersey militia, for obstructing their progress. The British were incumbered with an enormous baggage, which, together with the impediments thrown in their way, greatly retarded their march. The American army, having, in pursuit of the British, crossed the Delaware, six hundred men were immediately detached under Colonel Morgan, to reinforce General Maxwell. Washington halted his troops when they had marched to the vicinity of Princeton. The general officers, in the American army, seventeen in number, being asked by the commander in chief: "Will it be advisable to hazard a general action?" fifteen of them answered in the negative; but recommended a detachment of 1500 men, to be immediately sent, to act as occasion might serve, on the enemy's left flank and rear. This was immediately forwarded under General Scott.

When Sir Henry Clinton had advanced to Allentown, he determined, instead of keeping the direct course towards Staten Island, to draw towards the sea coast, and to push on towards Sandy Hook. General Washington, on receiving intelligence

that Sir Henry was proceeding in that direction, towards Monmouth court-house, despatched 1000 men under General Wayne, and sent the Marquis de la Fayette to take command of the whole advanced corps, with orders to seize the first fair opportunity of attacking the enemy's rear. General Lee, who, having been lately exchanged, had joined the army, was offered this command; but he declined it, as he was in principle against hazarding an attack. The whole army followed at a proper distance, for supporting the advanced corps, and reached Cranberry the next morning. Sir Henry Clinton, sensible of the approach of the Americans, placed his grenadiers, light infantry and chasseurs in his rear, and his baggage in his front.

General Washington increased his advanced corps with two brigades, and sent General Lee, who now wished for the command, to take charge of the whole; and followed with the main army to give it support. On the next morning, orders were sent to Lee, to move on and attack, unless there should be powerful reasons to the contrary. When Washington had marched about five miles to support the advanced corps, he found the whole of it retreating by Lee's orders, and without having made any opposition of consequence. Washington rode up to Lee, and proposed certain questions to him, which implied censure. Lee answered with warmth and unsuitable language. The commander in chief ordered Colonel Stewart's and lieutenant colonel Ramsay's battalions to form on a piece of ground, which he judged suitable for giving a check to the advancing enemy. Lee was then asked, if he would command on that ground; to which he consented, and was ordered to take proper measures for checking the enemy: to which he replied, "your orders shall be obeyed, and I will not be the first to leave the field." Washington then rode to the main army, which was formed with the utmost expedition.

[CHARLES LEE, a major general in the army of the United States, was born in Wales and was the son of John Lee, a colonel in the British service. He entered the army at a very early age; but though he possessed a military spirit, he was ardent in the pursuit of knowledge. He acquired a competent skill in Greek and Latin, while his fondness for travelling made him acquainted with the Italian, Spanish, German, and French languages. In 1756 he came to America, and was engaged in the attack upon Ticonderoga in July 1758, when Abercrombie was defeated. In 1762 he bore a colonel's commission, and served under Burgoyne in Portugal, where he much distinguished himself. Not long afterwards he entered into the Polish service. Though he was absent when the stamp act passed, he yet by his letters zealously supported the cause of America. In the years 1771, 1772, and 1773 he rambled over all Europe. During this excursion he was engaged with an officer in Italy in an affair of honour, and he murdered his antagonist, escaping himself with the loss of two fingers. Having lost the favour of the ministry and the hopes of promotion in consequence of his political sentiments, he came to America in Nov. 1773. He travelled through the country, animating the colonies to resistance. In 1774 he was induced by the persuasion of his friend, General Gates, to purchase a valuable tract of land of two or three thousand acres in Berkeley county, Virginia. Here he resided till the following year, when he resigned a commission, which he held in the British service, and accepted a commission from Congress, appointing him major general. He accompanied Washington to the camp at Cambridge, where he arrived, July 2, 1775, and was received with every mark of respect. In the beginning of the following year he was despatched to New York to prevent the British from obtaining possession of the city and the Hudson. This trust he executed with great wisdom and energy. He disarmed all suspicious persons on Long Island, and drew up a test to be offered to every one, whose attachment to the American cause was doubted. His bold measures carried terror wherever he appeared. He seems to

have been very fond of this application of a test; for in a letter to the president of Congress he informs him, that he had taken the liberty at Newport to administer to a number of the tories a very strong oath, one article of which was, that they should take arms in defence of their country, if called upon by Congress, and he recommends, that this measure should be adopted in reference to all the tories in America. Those fanatics, who might refuse to take it he thought should be carried into the interior. Being sent into the southern colonies, as commander of all the forces, which should there be raised, he diffused an ardour among the soldiers, which was attended by the most salutary consequences. In Oct. by the direction of Congress he repaired to the northern army. As he was marching from the Hudson through New Jersey to form a junction with Washington in Pennsylvania, he quitted his camp in Morris county to reconnoitre. In this employment he went to the distance of three miles from the camp and entered a house for breakfast. A British colonel became acquainted with his situation by intercepting a countryman, charged with a letter from him, and was enabled to take him prisoner. He was instantly mounted on a horse without his cloak and hat, and carried safely to New York. He was detained till April or May 1778, when he was exchanged for General Prescott, taken at Newport. He was very soon engaged in the battle of Monmouth. Being detached by the commander in chief to make an attack upon the rear of the enemy, Washington was pressing forward to support him June 28th, when to his astonishment he found him retreating without having made a single effort to maintain his ground. Meeting him in these circumstances, without any previous notice of his plans, Washington addressed him in terms of some warmth. Lee, being ordered to check the enemy, conducted himself with his usual bravery, and, when forced from the ground on which he had been placed, brought off his troops in good order. But his haughty temper could not brook the indignity, which he believed to have been offered him on the field of battle, and he addressed a letter to Washington, requiring reparation for the injury. He was on the 30th arrested for disobedience of orders, for misbehaviour before the enemy, and for disrespect to the commander in chief. Of these charges he was found guilty by a court martial, at which lord Stirling presided, and he was sentenced to be suspended for one year. He defended himself with his accustomed ability, and his retreat seems to be justified from the circumstance of his having advanced upon an enemy, whose strength was much greater, than was apprehended, and from his being in a situation with a morass in his rear, which would preclude him from a retreat, if the British should have proved victorious. But his disrespectful letters to the commander in chief it is not easy to justify. His suspension gave general satisfaction to the army, for he was suspected of aiming himself at the supreme command. After the result of his trial was confirmed by Congress in January 1780, he retired to his estate in Berkeley county, where he lived in a style peculiar to himself. Glass windows and plaster would have been extravagances in his house. Though he had for his companions a few select authors and his dogs; yet, as he found his situation too solitary and irksome, he sold his farm in the fall of 1782, that in a different abode he might enjoy the conversation of mankind. He went to Philadelphia and took lodgings in an inn. After being three or four days in the city he was seized with a fever, which terminated his life Oct. 2, 1782. The last words, which he uttered, were, "stand by me, my brave grenadiers."

In his person General Lee was rather above the middle size, and his remarkable aquiline nose rendered his face somewhat disagreeable. He was master of a most genteel address, but was rude in his manners and excessively negligent in his appearance and behaviour. His appetite was so whimsical, that he was every where a most troublesome guest. Two or three dogs usually

followed him wherever he went. As an officer he was brave and able, and did much towards disciplining the American army. With vigorous powers of mind and a brilliant fancy he was a correct and elegant classical scholar, and he both wrote and spoke his native language with propriety, force, and beauty. His temper was severe. The history of his life, is little else than the history of disputes, quarrels, and duels in every part of the world. He was vindictive, avaricious, immoral, impious, and profane. His principles, as would be expected from his character, were most abandoned, and he ridiculed every tenet of religion. He published about the year 1760 a pamphlet on the importance of retaining Canada. After his death, memoirs of his life, with his essays and letters, were published, 12mo. 1792. Lee's memoirs.]

A warm cannonade immediately commenced between the British and American artillery, and a heavy firing between the advanced troops of the British army, and the two battalions which General Washington had halted. These stood their ground, till they were intermixed with a part of the British army. Lieutenant Colonel Ramsay, the commander of one of them, was wounded and taken prisoner. General Lee continued till the last on the field of battle, and brought off the rear of the retreating troops.

The check the British received gave time to make a disposition of the left wing, and second line of the American army in the wood, and on the eminence to which Lee was retreating. On this, some cannon were placed by Lord Stirling, who commanded the left wing; which, with the co-operation of some parties of infantry, effectually stopped the advance of the British in that quarter. General Greene took a very advantageous position, on the right of Lord Stirling. The British attempted to turn the left flank of the Americans, but were repulsed. They also made a movement to the right, with as little success; for Greene with artillery disappointed their design. Wayne advanced with a body of troops, and kept up so severe and well-directed a fire, that the British were soon compelled to give way. They retired and took the position, which Lee had before occupied. Washington resolved to attack them, and ordered General Poor to move round upon their right and General Woodford to their left; but they could not get within reach, before it was dark. These remained on the ground, which they had been directed to occupy during the night, with an intention of attacking early next morning; and the main body lay on their arms in the field, to be ready for supporting them.

General Washington reposed himself in his cloak, under a tree, in hopes of renewing the action the next day; but these hopes were frustrated. The British troops marched away in the night, in such silence that General Poor, though very near them, knew nothing of their departure. They left behind them, 4 officers, and about 40 privates, all so badly wounded, that they could not be removed. The British, June 30, pursued their march without farther interruption, and soon reached the neighbourhood of Sandy Hook without the loss of either their covering party or baggage. The American general declined all farther pursuit of the royal army, and soon after drew off his troops to the borders of the North river. The loss of the Americans, in killed and wounded, was about 250. The loss of the royal army, inclusive of prisoners, was about 350. Lieut. Colonel Monckton, one of the British slain, on account of his singular merit was universally lamented. Colonel Bonner of Pennsylvania, and Major Dickenson of Virginia, officers highly esteemed by their country, fell in this engagement. The emotions of the mind, added to fatigue in a very hot day, brought on such a fatal suppression of the vital powers, that some of the Americans, and 59 of the British were found dead on the field of battle, without any marks of violence upon their bodies.

It is probable, that Washington intended to take no farther notice of Lee's conduct in the day of action; but the latter could not brook the expres-

sions used by the former at their first meeting, and wrote him two passionate letters. This occasioned his being arrested, and brought to trial. The charges exhibited against him were:

1st. For disobedience of orders, in not attacking the enemy on the 28th of June, agreeable to repeated instructions.

2dly. For misbehaviour before the enemy, on the same day, by making an unnecessary, disorderly, and shameful retreat.

3dly. For disrespect to the commander-in-chief in two letters.

After a tedious hearing before a court martial, Lee was found guilty, and sentenced to be suspended from any command in the armies of the United States, for the term of one year: but the second charge was softened by the court martial who in their award only found him guilty of misbehaviour before the enemy, by making an unnecessary, and in some few instances, a disorderly retreat. Many were displeased with this sentence. They argued, "that by the tenor of Lee's orders it was submitted to his discretion, whether to attack or not; and also, that the time and manner were to be determined by his own judgment: that at one time he intended to attack, but altered his opinion on apparently good grounds; that the propriety of an attack, considering the superiority of the British Cavalry, and the openness of the ground, was very questionable; and that, though it might have distressed the enemy's rear in the first instance, it would probably have brought on a general action, before the advanced corps could have been supported by the main body, which was some miles in the rear." "If," said they, "Lee's judgment were against attacking the enemy, he could not be guilty of disobeying an order for that purpose, which was suspended on the condition of his own approbation of the measure." They also contended, that a suspension from command was not a sufficient punishment for his crimes, it really guilty. They therefore inferred a presumption of his innocence from the lenient sentence of his judges though there was a diversity of opinion relative to the first and second charges, all were agreed in pronouncing him guilty of disrespect to the commander-in-chief. The Americans had formerly idolized General Lee; but some of them now went to the opposite extreme, and without any foundation pronounced him treacherous, or deficient in courage. His temper was violent, and his impatience of subordination had led him often to quarrel with those whom he was bound to respect and obey; but his courage and fidelity could not be questioned.

Soon after the battle of Monmouth, the American army took post at the White Plains, a few miles beyond Kings-bridge; and the British, though only a few miles distant, did not molest them. They remained in this position, from an early day in July, till a late one in the autumn: and then the Americans retired to Middle Brook in Jersey, where they built themselves huts in the same manner as they had done at Valley Forge.

Immediately on the departure of the British from Philadelphia, Congress, after an absence of nine months, returned to the former seat of their deliberations. Soon after their return, 6th, August, they were called upon, to give a public audience to a minister plenipotentiary from the court of France. The person appointed to this office was M. Gerard, the same who had been employed in the negotiations, antecedent to the treaty. The arrival and reception of a minister from France, made a strong impression on the minds of the Americans. They felt the weight and importance, to which they were risen among nations. That the same spot which in less than a century, had been the residence of savages, should become the theatre on which, the representatives of a new, free, and civilized nation, gave a public audience to a minister plenipotentiary, from one of the oldest and most powerful kingdoms of Europe, afforded ample materials for philosophic contemplation. That in less than three years from the day, on which an answer was refused by Great Britain to

the united supplications of the colonists, praying for peace, liberty and safety, they should, as an independent people, be honoured with the residence of a minister from the court of France, exceeded the expectation of the most sanguine Americans. The patriots of the new world revolved in their minds these transactions, with heart-felt satisfaction; while the devout were led to admire that Providence, which had, in so short a space, stationed the United States among the powers of the earth, and clothed them in robes of sovereignty.

The British had barely completed the removal of their fleet and army, from the Delaware and Philadelphia, to the harbour and city of New York, when they received intelligence, that a French fleet was on the coast of America. This was commanded by Count D'Estaing, and consisted of twelve ships of the line and three frigates. Among the former, one carried 90 guns, another, 80, and six 74 guns each. Their first object was the surprise of Lord Howe's fleet in the Delaware; but they arrived too late. In naval history, there are few more narrow escapes, than that of the British fleet, on this occasion. It consisted only of six 64 gun ships, three of 50, and two of 40, with some frigates and sloops. Most of these had been long on service, and were in a bad condition. Their force, when compared with that of the French fleet, was so greatly inferior, that had the latter reached the mouth of the Delaware, in 75 days from its leaving Toulon, their capture, in the ordinary course of events, would have been inevitable. This was prevented by the various hindrances which retarded D'Estaing in his voyage to the term of 87 days: in the last eleven of which Lord Howe's fleet not only quitted the Delaware, but reached the harbour of New York. D'Estaing, disappointed in his first scheme, pursued, and, July 11th, appeared off Sandy Hook. American pilots of the first abilities, provided for the purpose, went on board his fleet. Among them were persons, whose circumstances placed them above the ordinary rank of pilots.

The sight of the French fleet roused all the active passions of their adversaries. Transported with indignation against the French, for interfering in what they called a domestic quarrel, the British displayed a spirit of zeal and bravery which could not be exceeded. A thousand volunteers were despatched from their transports to man their fleet. The masters and mates of the merchantmen and traders at New York, took their stations at the guns with the common sailors. Others put to sea in light vessels, to watch the motions of their enemies. The officers and privates of the British army contended, with so much eagerness, to serve on board the men of war as marines, that it became necessary to decide the point of honour by lot.

The French fleet came to anchor, and continued without the Hook for eleven days. During this time, the British had the mortification of seeing the blockade of their fleet, and the capture of about 20 vessels under English colours. On the 22d, the French fleet appeared under weigh. It was an anxious moment to the British. They supposed that Count D'Estaing would force his way into the harbour, and that an engagement would be the consequence. Every thing with them was at stake. Nothing less than destruction or victory would have ended the contest. If the first had been their lot, the vast fleet of transports and victuallers, and the army, must have fallen. The pilots on board the French fleet, declared it to be impossible to carry the large ships thereof over the bar, on account of their draught of water. D'Estaing, on that account, and by the advice of General Washington, left the Hook and sailed for Newport. By his departure the British fleet had a second escape; for had he remained at the Hook but a few days longer, the fleet of Admiral Byron must have fallen into his hands. That officer had been sent out to relieve Lord Howe, who had solicited to be recalled; and the fleet under his command had been sent to reinforce that which

had been previously on the coast of America. Admiral Byron's squadron had met with bad weather, and was separated in different storms. It now arrived, scattered, broken, dismantled, or otherwise damaged. Within eight days after the departure of the French fleet, the *Renown*, the *Raisonné*, the *Centurion*, and the *Cornwall* arrived singly at Sandy Hook.

The next attempt of Count D'Estaing was against Rhode Island, of which the British had been in possession since December, 1776. A combined attack against it was projected, in which it was agreed that General Sullivan should command the American land forces. Such was the eagerness of the people to co-operate with their new allies, and so confident were they of success, that some thousands of volunteers engaged in the service. The militia of Massachusetts was under the command of General Hancock. The royal troops on the island, having lately been reinforced, were about 6000. Sullivan's force was about 10,000. Lord Howe followed Count D'Estaing, and came within sight of Rhode Island, the day after the French fleet entered the harbour of Newport. The British fleet exceeded the French in point of number, but was inferior in effective force and weight of metal. On the appearance of Lord Howe, the French admiral put out to sea with his whole force to engage him. While the two commanders were exerting their naval skill to gain respectively the advantages of position, a strong gale of wind came on, which greatly damaged the ships on both sides. In this conflict of the elements, two capital French ships were dismantled. The *Languedoc* of 90 guns, D'Estaing's own ship, after losing all her masts and rudder, was attacked by the *Renown* of 50 guns, commanded by Captain Dawson. The same evening, the *Preston* of 50 guns, fell in with the *Tonnant* of 80 guns: with only her mainmast standing, and attacked her with spirit: but night put an end to the engagement. Six sail of the French squadron came up in the night, which saved the disabled ships from any further attack. There was no ship or vessel lost on either side. The British suffered less in the storm than their adversaries; yet enough to make it necessary to return to New-York, for the purpose of refitting. The French fleet came to anchor, on the 20th of August, near to Rhode Island: but sailed on the 22d, to Boston. Before they sailed, General Greene and the Marquis de la Fayette went on board the *Languedoc*, to consult on measures proper to be pursued. They urged D'Estaing to return with his fleet into the harbour; but his principal officers were opposed to the measure, and protested against it. He had been instructed to go to Boston, if his fleet met with any misfortune. His officers insisted on his ceasing to prosecute the expedition against Rhode Island, that he might conform to the orders of their common superiors.

Upon the return of General Greene and the Marquis de la Fayette, and their reporting the determination of Count D'Estaing, a protest was drawn up and sent to him, which was signed by John Sullivan, Nathaniel Greene, John Hancock, J. Glover, Ezekiel Cornell, William Whipple, John Tyler, Solomon Lovell, Jon. Fitconnel. They protested against the count's taking the fleet to Boston, as derogatory to the honour of France, contrary to the intention of his most Christian Majesty, and the interests of his nation, destructive in the highest degree to the welfare of the United States, and highly injurious to the alliance formed between the two nations. Had D'Estaing prosecuted his original plan within the harbour, either before or immediately after the pursuit of Lord Howe, the reduction of the British post on Rhode Island would have been probable: but his departure in the first instance to engage the British fleet, and in the second from Rhode Island to Boston, frustrated the whole. Perhaps Count D'Estaing hoped by something brilliant to efface the impressions made by his late failure at New York. Or he might have thought it imprudent to stake his whole fleet, within an harbour possessed by his enemies.

After his ships had suffered both from battle and the storm, the letter of his instructions, the impotency of his officers, and his anxiety to have his ships speedily refitted, might have weighed with him to sail directly for Boston. Whatever were the reasons which induced him to adopt that measure, the Americans were greatly dissatisfied. They complained that they had incurred great expense and danger, under the prospect of the most effective co-operation; that depending thereon, they had risked their lives on an island, where, without naval protection, they were exposed to particular danger; that in this situation, they were first deserted, and afterwards totally abandoned, at a time, when, by persevering in the original plan, they had well-grounded hopes of speedy success. Under these apprehensions, the discontented militia went home in such crowds, that the regular army which remained, was in danger of being cut off from a retreat. In these embarrassing circumstances, General Sullivan extricated himself with judgment and ability. He began to send off his heavy artillery and baggage on the 26th, and retreated from his lines on the night of the 28th. It had been that day resolved in a council of war, to remove to the north of the island, fortify their camp, secure a communication with the main, and hold the ground till it could be known whether the French fleet would return to their assistance. The Marquis de la Fayette, by desire of his associates, set off for Boston, to request the speedy return of the French fleet. To this Count d'Estaing would not consent; but he made a spirited offer to lead the troops under his command, and co-operate with the American land forces against Rhode Island.

Sullivan retreated with great order; but he had not been five hours at the north end of the Island, when his troops were fired upon by the British, who had pursued them, on discovering their retreat. The pursuit was made by two parties and on two roads; to one was opposed Colonel Henry B. Livingston; to the other John Laurens, aid-de-camp to General Washington, and each of them had a command of light troops. In the first instance these light troops were compelled by superior numbers to give way; but they kept up a retreating fire. On being reinforced, they gave their pursuers a check, and at length repulsed them. By degrees the action became in some respects general, and near 1200 Americans were engaged. The loss on each side was between two and three hundred.

Lord Howe's fleet, with Sir Henry Clinton and about 4000 troops on board, being seen off the coast, General Sullivan concluded immediately to evacuate Rhode Island. As the sentries of both armies were within 400 yards of each other, the greatest caution was necessary. To cover the design of retreating, the show of resistance and continuance on the island was kept up. The retreat was made in the night, and nearly completed by twelve o'clock. Towards the last of it, the Marquis de Lafayette returned from Boston. He had rode thither from Rhode Island, a distance of 70 miles, in seven hours, and returned in six and a half. Anxious to partake in the engagement, his mortification was not little at being absent on the day before. He was in time to bring off the picquets, and other parties that covered the retreat of the American army. This he did in excellent order. Not a man was left behind, nor was the smallest article lost.

The bravery and good conduct which John Laurens displayed on this occasion, were excelled by his republican magnanimity, in declining a military commission, which was conferred on him, by the representatives of his country. Congress resolved, that he should be presented with a continental commission, of lieutenant colonel, in testimony of the sense which they entertained of his patriotic and spirited services, and of his brave conduct in several actions, particularly in that of Rhode Island, on the 29th of August.

On the next day he wrote to Congress a letter, expressing "his gratitude for the unexpected honour which they were pleased to confer him, and the

satisfaction it would have afforded him, could he have accepted it without injuring the rights of the officers in the line of the army, and doing an evident injustice to his colleagues, in the family of the commander in chief. That having been a spectator of the convulsions occasioned in the army by disputes of rank, he held the tranquillity of it too dear, to be instrumental in disturbing it, and therefore intreated Congress to suppress their resolve, ordering him the commission of lieutenant colonel and to accept his sincere thanks for the intended honour."

With the abortive expedition to Rhode Island, there was an end to the plans, which were in this first campaign projected by the allies of Congress for a co-operation. The Americans had been intoxicated with hopes of the most decisive advantages; but in every instance they were disappointed. Lord Howe, with an inferiority of force, not only preserved his own fleet, but counteracted and defeated all the views and attempts of Count D'Estaing. The French fleet gained no direct advantages for the Americans; yet their arrival was of great service to their cause. Besides deranging the plans of the British, it carried conviction to their minds, that his most Christian Majesty was seriously disposed to support them. The good will of their new allies was manifested to the Americans; and though it had failed in producing the effects expected from it, the failure was charged to winds, weather, and unavoidable incidents.—Some censured Count D'Estaing; but while they attempted to console themselves by throwing blame on him, they felt and acknowledged their obligation to the French nation, and were encouraged to persevere in the war, from the hope that better fortune would attend their future co-operation.

Sir Henry Clinton, finding that the Americans had left Rhode Island, returned to New York; but directed General Grey to proceed to Bedford and the neighbourhood, where several American privateers resorted. On reaching the place of their destination, the general's party landed, and in a few hours destroyed about seventy sail of shipping, besides a number of small craft. They also burnt magazines, wharves, stores, warehouses, vessels on the stocks, and a considerable number of dwelling houses. The building burned in Bedford, were estimated to be worth £20,000 sterling. The other articles destroyed were worth much more. The royal troops proceeded to Martha's Vineyard. There they destroyed a few vessels, and made a requisition of the militia arms, the public money, 300 oxen, and 2000 sheep, which was complied with.

A similar expedition, under the command of Captain Ferguson, was about the same time undertaken against Little Egg-Harbour, at which place the Americans had a number of privateers and prizes, and also some salt-works. Several of the vessels got off; but all that were found were destroyed. Previous to the embarkation of the British from Egg-Harbour for New York, Captain Ferguson with 250 men, surprised and put to death about 50 of a party of the Americans, who were posted in the vicinity. The attack being made in the night, little or no quarter was given.

The loss sustained by the British in these several excursions was trifling; but the advantage was considerable, from the supplies they procured, and the check which was given to the American privateers.

One of the most disastrous events, which occurred at this period of the campaign, was the surprise and massacre of an American regiment of light dragoons, commanded by Lieutenant Colonel Baylor. While employed in a detached situation, to intercept and watch a British foraging party, they took up their lodging in a barn near Tappan. The officer who commanded the party which surprised them, was Major General Grey. He acquired the name of the "No flint General," from his common practice of ordering the men under his command to take the flints out of their muskets that they might be confined to the use of their bay-

onets. A party of militia, which had been stationed on the road, by which the British advanced, quitted their posts, without giving any notice to Colonel Baylor. This disorderly conduct was the occasion of the disaster which followed. Grey's men proceeded with such silence and address, that they cut off a sergeant's patrol without noise, and surrounded old Tappan without being discovered. They then rushed in upon Baylor's regiment, while they were in a profound sleep. Incapable of defence or resistance, cut off from every prospect of selling their lives dear, the surprised dragoons sued for quarters. Unmoved by their supplications, their adversaries applied the bayonet, and continued its repeated thrusts, while objects could be found in which any signs of life appeared. A few escaped; and others, after having received from five to eleven bayonet wounds in the trunk of the body, were restored in a course of time, to perfect health. Baylor himself was wounded but not dangerously. He lost in killed, wounded and taken, 67 privates out of 104. About 40 were made prisoners. These were indebted, for their lives, to the humanity of one of Grey's captains, who gave quarters to the whole fourth troop, though contrary to the orders of his superior officers. The circumstance of the attack being made in the night, when neither order nor discipline can be observed, may apologise in some degree with men of a certain description, for this bloody scene. It cannot be maintained that the laws of war require that quarters should be given in similar assaults; but the lovers of mankind must ever contend, that the laws of humanity are of superior obligation to those of war. The truly brave will spare when resistance ceases, and in every case where it can be done with safety. The perpetrators of such actions may justly be denominated the enemies of refined society. As far as their example avails, it tends to arrest the growing humanity of modern times, and to revive the barbarism of Gothic ages. On these principles, the massacre of Colonel Baylor's regiment was the subject of much complaint. The particulars of it were ascertained, by the oaths of sundry credible witnesses, taken before Governor Livingston, of Jersey; and the whole was submitted to the judgment of the public.

In the summer of this year, an expedition was undertaken against East Florida. This was resolved upon, with the double view of protecting the state of Georgia from depredation, and of causing a diversion. General Robert Howe, who conducted it, had under his command about 2000 men, a few hundred of whom were continental troops, and the remainder militia of the states of South Carolina and Georgia. They proceeded as far as St. Mary's river, and without any opposition of consequence. At this place the British had erected a fort, which in compliment to Touny, governor of the province, was called by his name. On the approach of General Howe, they destroyed this fort, and after some slight skirmishing, retreated towards St. Augustine. The season was more fatal to the Americans, than any opposition they experienced from their enemies. Sickness and death raged to such a degree, that an immediate retreat became necessary; but before this was effected, they lost nearly one-fourth of their whole number.

The royal commissioners having failed in their attempts to induce the Americans to resume the character of British subjects, and the successive plans of co-operation between the new allies having also failed, a solemn pause ensued. It would seem as if the commissioners indulged a hope, that the citizens of the United States, on finding a disappointment of their expectations from the French, would re-consider and accept the offers of Great Britain. Full time was given, both for the circulation of their manifesto, and for observing its effects on the public mind: but no overtures were made to them from any quarter. The year was drawing near to a close, before any interesting expedition was undertaken. With this new era, a new system was introduced.

Hitherto the conquest of the states had been at-

tempted by proceeding from north to south but that order was henceforth inverted, and the southern states became the principal theatre, on which the British commenced their offensive operations. Georgia, being one of the weakest states in the union, and at the same time abounding in provisions, was marked out as the first object of renewed warfare. Lieutenant Colonel Campbell, an officer of known courage and ability, embarked from New York for Savannah, 27th November, with a force of about 2000 men, under the convoy of some ships of war, commanded by Commodore Hyde Parker. To make more sure of success in the enterprise, Major General Prevost, who commanded the royal forces in East Florida, was directed to advance with them into the southern extremity of Georgia. The fleet that sailed from New York, in about three weeks effected a landing near the mouth of the river Savannah. From the landing place, a narrow causeway of six hundred yards in length, with a ditch on each side, led through a swamp. A body of the British light infantry moved forward along this causeway. On their advance, they received a heavy fire from a small party under Captain Smith, posted for the purpose of impeding their passage. Captain Cameron was killed; but the British made their way good, and compelled Captain Smith to retreat. General Howe, the American officer to whom the defence of Georgia was committed, took his station on the main road, and posted his little army, consisting of about 600 continentals, and a few hundred militia, between the landing-place and the town of Savannah, with the river on his left and a morass in front. This disposition announced great difficulties to be overcome, before the Americans could be dislodged. While Colonel Campbell was making the necessary arrangements for this purpose, he received intelligence from a negro, of a private path through the swamp, on the right of the Americans which lay in such a situation, that the British troops might march through it unobserved. Sir James Baird, with the light infantry, was directed to avail himself of this path, in order to turn the right wing of the Americans, and attack their rear. As soon as it was supposed that sir James Baird had cleared his passage, the British in front of the Americans, were directed to advance and engage. Howe, finding himself attacked in the rear as well as in the front, ordered an immediate retreat. The British pursued with great execution; their victory was complete. Upwards of 100 of the Americans were killed. Thirty-eight officers, 415 privates, 48 pieces of cannon, 23 mortars, the fort, with its ammunition and stores, the shipping in the river, a large quantity of provisions, with the capital of Georgia, were all, in the space of a few hours, in the possession of the conquerors. The broken remains of the American army retreated up the river Savannah for several miles, and then took shelter by crossing into South Carolina.

Agreeably to instructions, General Prevost had marched from East Florida, about the same time that the embarkation took place from New York. After encountering many difficulties, the king's troops from St. Augustine reached the inhabited parts of Georgia, and there heard the welcome tidings of the arrival and success of Colonel Campbell. Savannah having fallen, the fort at Sunbury surrendered. General Prevost marched to Savannah, and took the command of the combined forces from New York and St. Augustine. Previous to his arrival, a proclamation had been issued, to encourage the inhabitants to come in and submit to the conquerors, with promises of protection, on condition that with their arms they would support royal government.

Lieutenant Colonel Campbell acted with great policy, in securing the submission of the inhabitants. He did more in a short time, and with comparatively a few men, towards the re-establishment of the British interest, than all the general officers who had preceded him. He not only extirpated military opposition, but subverted for some time every trace of republican government, and

paved the way for the re-establishment of a royal legislature. Georgia, soon after the reduction of its capital, exhibited a singular spectacle. It was the only state of the Union, in which, after the declaration of independence, a legislative body was convened under the authority of the crown of Great Britain. The moderation and prudence of Lieutenant Colonel Campbell were more successful in reconciling the minds of the citizens to their former constitution, than the severe measures which had been generally adopted by other British commanders.

The errors of the first years of the war, forced on Congress some useful reforms, in the year 1778. The insufficiency of the provision made for the support of the officers of their army had induced many resignations. From a conviction of the justice and policy of making commissions valuable, and from respect to the warm, but disinterested recommendations of General Washington, Congress resolved: "that half-pay should be allowed to their officers, for the term of seven years, after the expiration of their service." This was, afterwards, extended to the end of their lives: and finally, that was commuted for full pay, for five years. Resignations were afterwards rare; and the states reaped the benefit of experienced officers continuing in service, till the war was ended.

A system of more regular discipline was introduced into the American army, by the industry, abilities, and judicious regulations of Baron de Steuben, a most excellent disciplinarian, who had served under the king of Prussia. A very important reform took place in the medical department, by appointing different officers, to discharge the directing and purveying business of the military hospitals, which had been before united in the same hands. Dr. Rush was principally instrumental in effecting this beneficial alteration. Some regulations, which had been adopted for limiting the prices of commodities, being found not only impracticable, but injurious, were abolished.

The Randolph, an American frigate of 36 guns and three hundred and five men, commanded by Captain Biddle, having sailed on a cruise from Charleston, fell in with the Yarmouth, of 64 guns, and engaged her in the night. In about a quarter of an hour, the Randolph blew up. Four men only were saved, upon a piece of her wreck. These had subsisted four days on nothing but rain water, which they sucked from a piece of blanket. On the 5th day, Captain Vincent of the Yarmouth, though in chase of a ship, on discovering them, suspended the chase, and took them on board. Captain Biddle, who perished on board the Randolph, was universally lamented. He was in the prime of life, and had excited high expectations of future usefulness to his country, as a bold and skillful officer.

[NICHOLAS BIDDLE, captain in the American navy, during the revolutionary war, was born in the city of Philadelphia, in the year 1750. Among the brave men who perished in the glorious struggle for the independence of America, Captain Biddle holds a distinguished rank. His services, and the high expectations raised by his military genius and gallantry, have left a strong impression of his merit, and a profound regret that his early fate should have disappointed, so soon, the hopes of his country.

Very early in life he manifested a partiality for the sea, and before the age of fourteen he had made a voyage to Quebec. In the following year, 1765, he sailed from Philadelphia to Jamaica, and the Bay of Honduras. The vessel left the bay in the latter end of December, 1765, bound to Antigua, and on the second day of January, in a heavy gale of wind, she was cast away on a shoal, called the Northern Triangles. After remaining two nights and a day upon the wreck, the crew took to their yawl, the long-boat having been lost, and, with great difficulty and hazard, landed on one of the small uninhabited islands, about three leagues distant from the reef upon which they struck. Here they staid a few days. Some provisions were procured from the wreck, and their boat was

refitted. As it was too small to carry them all off, they drew lots to determine who should remain, and young Biddle was among the number. He, and his three companions, suffered extreme hardships for want of provisions and good water; and, although various efforts were made for their relief, it was nearly two months before they succeeded.

Such a scene of dangers and suffering in the commencement of his career, would have discouraged a youth of ordinary enterprise and perseverance. On him it produced no such effect. The coolness and promptitude with which he acted, in the midst of perils that alarmed the oldest seamen, gave a sure presage of the force of his character, and after he had returned home, he made several European voyages, in which he acquired a thorough knowledge of seamanship.

In the year 1770, when a war between Great Britain and Spain was expected, in consequence of the dispute relative to Falkland's Island, he went to London, in order to enter the British navy. He took with him letters of recommendation from Thomas Willing, Esq. to his brother-in-law, Capt. Sterling, on board of whose ship he served for some time as a midshipman. The dispute with Spain being accommodated, he intended to leave the navy, but was persuaded by Captain Sterling to remain in the service, promising that he would use all his interest to get him promoted. His ardent mind, however, could not rest satisfied with the inactivity of his situation, which he was impatient to change for one more suited to his disposition.

In the year 1773, a voyage of discovery was undertaken, at the request of the Royal Society in order to ascertain how far navigation was practicable towards the North Pole, to advance the discovery of the north-west passage into the south seas, and to make such astronomical observations as might prove serviceable to navigation.

Two vessels the *Race Horse* and *Carcase*, were fitted out for the expedition, the command of which was given to Captain Phipps, afterwards lord Mulgrave. The peculiar dangers to which such an undertaking was exposed, induced the government to take extraordinary precautions in fitting out and preparing the vessels, and selecting the crews, and a positive order was issued that no boys should be received on board.

To the bold and enterprising spirit of young Biddle, such an expedition had great attractions. Extremely anxious to join it, he endeavoured to procure Captain Sterling's permission for that purpose, but he was unwilling to part with him, and would not consent to let him go. The temptation was, however, irresistible. He resolved to go and laying aside his uniform, he entered on board the *Carcase* before the mast. When he first went on board he was observed by a seaman who had known him before, and was very much attached to him. The honest fellow, thinking that he must have been degraded and turned before the mast in disgrace, was greatly affected at seeing him, but was equally surprised and pleased when he learned the true cause of the young officer's disguise, and he kept his secret, as he was requested to do. Impelled by the same spirit, young Horatio, afterwards lord Nelson, had solicited and obtained permission to enter on board the same vessel. These youthful adventurers are both said to have been appointed cockswains, a station always assigned to the most active and trusty seamen. The particulars of this expedition are well known to the public. These intrepid navigators penetrated as far as the latitude of eighty-one degrees and thirty-nine minutes, and they were, at one time, enclosed with mountains of ice, and their vessels rendered almost immovable for five days at the hazard of instant destruction. Captain Biddle kept a journal of his voyage, which was afterwards lost with him.

The commencement of the revolution gave a new turn to his pursuits, and he repaired without delay to the standard of his country. When a rupture between England and America appeared inevitable, he returned to Philadelphia, and soon after his arrival, he was appointed to the command of the

Camden galley, fitted for the defence of the Delaware. He found this too inactive a service, and when the fleet was preparing, under Commodore Hopkins, for an expedition against New Providence, he applied for a command in the fleet, and was immediately appointed commander of the *Andrew Doria*, a brig of 14 guns and 130 men. Paul Jones, who was then a lieutenant, and was going on the expedition, was distinguished by Captain Biddle, and introduced to his friends as an officer of merit.

Before he sailed from the capes of Delaware, an incident occurred, which marked his personal intrepidity. Hearing that two deserters from his vessel were at Lewistown in prison, an officer was sent on shore for them, but he returned with information that the two men, with some others, had armed themselves barricaded the door, and swore they would not be taken; that the militia of the town had been sent for, but were afraid to open the door, the prisoners threatening to shoot the first man who entered. Captain Biddle immediately went to the prison, accompanied by a midshipman, and calling to one of the deserters, whose name was Green, a stout resolute fellow ordered him to open the door; he replied that he would not, and if attempted to enter, he would shoot him. He then ordered the door to be forced, and entering singly with a pistol in each hand, he called to Green, who was prepared to fire, and said, "now, Green, if you do not take good aim, you are a dead man." Daunted by his manner, their resolution failed, and the militia coming in secured them. They afterwards declared to the officer who furnishes this account, that it was Captain Biddle's look and manner which had awed them into submission, for that they had determined to kill him as soon as he came into the room.

Writing from the capes to his brother, the late Judge Biddle he says, "I know not what may be our fate; be it, however, what it may, you may rest assured, I will never cause a blush in the cheeks of my friends or countrymen." Soon after they sailed, the small-pox broke out and raged with great violence in the fleet, which was manned chiefly by New England seamen. The humanity of Capt. Biddle, always prompt and active, was employed on this occasion to alleviate the general distress, by all the means in its power. His own crew, which was from Philadelphia, being secure against the distemper, he took on board great numbers of the sick from the other vessels. Every part of his vessel was crowded, the long-boat was fitted for their accommodation, and he gave up his own cot to a young midshipman, on whom he bestowed the greatest attention till his death. In the mean while he slept himself upon the lockers, refusing the repeated solicitations of his officers to accept their births. On their arrival at New Providence, it surrendered without opposition. The crew of the *Andrew Doria*, from the crowded situation, became sick, and before she left Providence, there were not men enough capable of doing duty to man the boats; Capt. Biddle visited them every day, and ordered every necessary refreshment, but they continued sickly until they arrived at New London.

After refitting at New London, Captain Biddle received orders to proceed off the Banks of Newfoundland, in order to intercept the transports and storeships bound to Boston. Before he reached the banks, he captured two ships from Scotland, with 400 highland troops on board, destined for Boston. At this time the *Andrew Doria* had not 100 men. Lieutenant Josiah, a brave and excellent officer, was put on board one of the prizes, with all the highland officers, and ordered to make the first port. Unfortunately, about ten days afterwards, he was taken by the *Cerberus* frigate, and on pretence of his being an Englishman, he was ordered to do duty, and extremely ill used. Captain Biddle hearing of the ill treatment of Lieutenant Josiah, wrote to the admiral at New York, that, however disagreeable it was to him, he would treat a young man of family, believed to be son of lord Craston, who was then his prisoner,

in the manner they treated Lieutenant Josiah.

He also applied to his own government in behalf of this injured officer, and by the proceedings of Congress, on the 7th of August, 1776, it appears, "that a letter from Captain Nicholas Biddle to the marine committee, was laid before Congress and read: whereupon, Resolved, That General Washington be directed to propose an exchange of Lieutenant Josiah, for a lieutenant of the navy of Great Britain; that the general remonstrate to lord Howe on the cruel treatment Lieutenant Josiah has met with, of which the congress have received undoubted information." Lieutenant Josiah was exchanged, after an imprisonment of ten months. After the capture of the ships with the highlanders, such was Captain Biddle's activity and success in taking prizes, that when he arrived in the Delaware, he had but five of the crew with which he sailed from New London, the rest having been distributed among the captured vessels, and their places supplied by men who had entered from the prizes. He had a great number of prisoners, that, for some days before he got in, he never left the deck.

While he was thus indefatigably engaged in weakening the enemy's power, and advancing his country's interest, he was disinterested and generous in all that related to his private advantage. The brave and worthy opponent, whom the chance of war had thrown in his power, found in him a patron and friend, who on more than one occasion, was known to restore to the vanquished the fruits of victory.

In the latter end of the year 1776, Capt. Biddle was appointed to the command of the *Randolph*, a frigate of thirty-two guns. With his usual activity, he employed every exertion to get her ready for sea. The difficulty of procuring American seamen at that time, obliged him, in order to man his ship, to take a number of British seamen, who were prisoners of war, and who had requested leave to enter.

The *Randolph* sailed from Philadelphia, in February, 1777. Soon after she got to sea, her lower masts were discovered to be unsound, and, in a heavy gale of wind, all her masts went by the board. While they were bearing away for Charleston, the English sailors, with some others of the crew formed a design to take the ship. When all was ready, they gave three cheers on the gun-deck. By the decided and resolute conduct of Captain Biddle and his officers, the ring-leaders were seized and punished, and the rest submitted without further resistance. After refitting at Charleston, as speedily as possible, he sailed on a cruise, and three days after he left the bar, he fell in with four sail of vessels, bound from Jamaica to London. One of them, called the *True Briton*, mounted twenty guns. The commander of her, who had frequently expressed to his passengers his hopes of falling in with the *Randolph*, as soon as he perceived her, made all the sail he could from her, but finding he could not escape, he hove to, and kept up a constant fire, until the *Randolph* had bore down upon him, and was preparing for a broadside, when he hauled down his colours. By her superior sailing, the *Randolph* was enabled to capture the rest of the vessels, and in one week from the time he sailed from Charleston, Captain Biddle returned there with his prizes, which proved to be very valuable.

Encouraged by his spirit and success, the state of South Carolina made exertions for fitting out an expedition under his command. His name and the personal attachment to him, urged forward a crowd of volunteers to serve with him, and in a short time, the ship *General Moultrie*, the brigs *Fair American*, and *Polly*, and the *Notre Dame*, were prepared for sea. A detachment of fifty men from the first regiment of South Carolina continental infantry, was ordered to act as marines on board the *Randolph*. Such was the attachment which the honourable and amiable deportment of Captain Biddle had impressed during his stay at Charleston, and such the confidence inspired by his professional conduct and valour, that

a general emulation pervaded the corps to have the honour of serving under his command. The tour of duty, after a generous competition among the officers, was decided to Captain Joor, and Lieutenants Grey and Simmonson, whose gallant conduct, and that of their brave detachment, did justice to the high character of the regiment. As soon as the Randolph was refitted, and a new mainmast obtained in place of one which had been struck with lightning, she dropt down to Rebellion Roads with her little squadron. Their intention was to attack the Carysfort frigate, the Perseus twenty-four gun ship, the Hichinbrook of sixteen guns, and a privateer which had been cruising off the bar, and had much annoyed the trade. They were detained a considerable time in Rebellion Roads, after they were ready to sail, by contrary winds, and want of water on the bar for the Randolph. As soon as they got over the bar, they stood to the eastward, in expectation of falling in with the British cruisers. The next day they retook a dismasted ship from New England; as she had no cargo on board, they took out her crew, six light guns, and some stores, and set her on fire. Finding that the British ships had left the coast, they proceeded to the West Indies, and cruised to the eastward, and nearly in the latitude of Barbadoes, for some days, during which time they boarded a number of French and Dutch ships, and took an English schooner from New York, bound to Grenada, which had mistaken the Randolph for a British frigate, and was taken possession of before the mistake was discovered.

On the night of the 7th of March, 1778, the fatal accident occurred, which terminated the life of this excellent officer. For some days previously he had expected an attack. Captain Blake, a brave officer, who commanded a detachment of the second South Carolina regiment, serving as marines on board the General Moultrie, and to whom we are indebted for several of the ensuing particulars, dined on board the Randolph two days before the engagement. At dinner Captain Biddle said, "We have been cruising here for some time, and have spoken a number of vessels, who will no doubt give information of us, and I should not be surprised if my old ship should be out after us. As to any thing that carries her guns upon one deck, I think myself a match for her. About 3. P. M. of the 7th of March, a signal was made from the

Randolph for a sail to windward, in consequence of which the squadron hauled upon a wind, in order to speak her. It was four o'clock before she could be distinctly seen, when she was discovered to be a ship, though as she neared and came before the wind, she had the appearance of a large sloop with only a square sail set. About seven o'clock, the Randolph being to windward, hove to; the Moultrie, being about one hundred and fifty yards astern, and rather to leeward, also hove to. About eight o'clock the British ship fired a shot just ahead of the Moultrie, and hailed her; the answer was, the Polly, of New York; upon which she immediately hauled her wind, and hailed the Randolph. She was then, for the first time, discovered to be a two decker. After several questions asked and answered, as she was ranging up alongside the Randolph, and had got on her weather quarter, Lieutenant Barnes, of that ship called out, "This is the Randolph," and she immediately hoisted her colours and gave the enemy a broadside. Shortly after the action commenced, Capt. Biddle received a wound in the thigh and fell. This occasioned some confusion, as it was first thought that he was killed. He soon, however, ordered a chair to be brought, said that he was only slightly wounded, and being carried forward encouraged the crew. The stern of the enemy's ship being clear of the Randolph, the captain of the Moultrie gave orders to fire, but the enemy having shot ahead, so as to bring the Randolph between them, the last broadside of the Moultrie went into the Randolph, and it was thought by one of the men saved, who was stationed on the quarter-deck near Capt. Biddle, that he was wounded by a shot from the Moultrie. The fire from the Randolph was constant and well directed. She fired nearly three broadsides to the enemy's one, and she appeared, while the battle lasted, to be in a continual blaze. In about twenty minutes after the action began, and while the surgeon was examining Captain Biddle's wound on the quarter deck, the Randolph blew up.

The enemy's vessel was the British ship Yarmouth, of sixty-four guns, commanded by Captain Vincent. So closely were they engaged, that Captain Morgan, of the Fair American, and all his crew, thought that it was the enemy's ship that had blown up. He stood for the Yarmouth, and had a trumpet in his hand to hail and inquire how

Captain Biddle was, when he discovered his mistake. Owing to the disabled condition of the Yarmouth, the other vessels escaped.

The cause of the explosion was never ascertained, but it is remarkable that just before he sailed, after the clerk had copied the signals and orders for the armed vessels that accompanied him, he wrote at the foot of them, "In case of coming to action in the night be very careful of your magazines." The number of persons on board the Randolph was three hundred and fifteen, who all perished except four men, who were tossed about for four days on a piece of the wreck before they were discovered and taken up. From the information of two of these men, who were afterwards in Philadelphia, and of some individuals in the other vessels of the squadron, we have been enabled to state some particulars of this unfortunate event, in addition to the accounts given of it by Dr. Ramsay in his History of the American Revolution, and in his History of the Revolution of South Carolina. In the former work, the historian thus concludes his account of the action: "Captain Biddle, who perished on board the Randolph, was universally lamented. He was in the prime of life, and had excited high expectations of future usefulness to his country, as a bold and skilful naval officer."

Thus prematurely fell, at the age of twenty-seven, as gallant an officer as any country ever boasted of. In the short career which Providence allowed to him, he displayed all those qualities which constitute a great soldier; brave to excess, and consummately skilled in his profession.—*Amer. Biog. Dic.*

Major Talbot took the British schooner Pigot, of 8 twelve pounders, as she lay on the eastern side of Rhode Island. The major, with a number of troops on board a small vessel, made directly for the Pigot in the night, and sustaining the fire of her marines, reserved his own till he had run his jib-boom through her fore shrouds. He then fired some cannon, threw in a volley of musketry, loaded with bullets and buckshot, and immediately boarded her. The captain made a gallant resistance but was not seconded by his crew. Major Talbot soon gained undisturbed possession, and carried off his prize in safety. Congress, as a reward of his merit, presented him with the commission of lieutenant colonel.
