JOB DESCRIPTION

Brief statement of mission/purpose of work group:

The Integrated Systems / Simulation (ISS) Programs Group provides a spectrum of Military Command and Control (C2) and Simulation products as well as integrated systems solutions to a large domestic and International customer base. At our more than 9 geographic sites, we strive to provide a customer centric – positive work environment where people like to work. The ISS Programs Group is seeking to add experienced systems and software engineers to the Joint Precision Strike Demonstration (JPSD) Project Office’s family of Advanced Concept Technology Demonstrations (ACTD). JPSD has demonstrated success at improving Warfighter capability through rapid prototyping and integration of maturing technologies directly into the hands of Warfighting CINCs. JPSD ACTDs also leverage advanced modeling and simulation techniques as key analysis tools. The Joint Intelligence, Surveillance, and Reconnaissance (JISR) ACTD is supported by a multi-company team. This multi-year program is in its second year of development and integration with options for future extension. JISR provides Early Entry Forces and their supporting headquarters with significantly improved situational awareness by means of more effective and timely access, integration, and visualization of relevant multi-service, multi-echelon Intelligence, surveillance and Reconnaissance (IRS) information. The JISR ACTD is integrating web-based and other mature technologies to provide timely ISR information and visualization to the warfighter. The program has developed, deployed, and integrated an initial prototype, and is developing an objective architecture to provide near-real time access to traditional intelligence sensor data, non-traditional sensor data as well as finished intelligence products..

Job Description:

Build GUIs for Web-based Client server application Position includes new GUI development and maintenance of existing system GUI to support additional system capabilities. Develop human computer interface displays and functionality. Create system functional threads. Develop system test plans and procedures.

Required Skills:

Requires 3+ years experience in Java GUI development Protocol experience with HTTP(S), CORBA, IIOP, COM/DCOM. HTTP-based application development using CGI, Java servlets, Java applets, JavaScript. Experience Web based client server GUI development and COTS products used to build and/or develop GUIs.

Desired Skills:

Experience in XML, scripting languages such as Perl. GUI design and development (HTML or Java-based). Systems level experience with networks (internet, intranet, extranet) security in theory and practice. Map package experience. Knowledge of configuration management processes is highly desirable..

Degree Required:

Bachelors.

Major Required:

Computer Science.

Certification Required?

No.
