MPE+ MOBILE FORENSICS SOFTWARE SUPPORTS 3500+ PHONES, INCLUDING IPHONE®, IPAD®, ANDROID™ AND BLACKBERRY® DEVICES

WATCH DEMO NOW >

Examiners can purchase MPE+ as a software-only solution or on a preconfigured rugged field tablet for on-scene mobile forensics triage. Mobile Phone Examiner Plus integrates seamlessly with Forensic Toolkit® (FTK®) computer forensics software, allowing you to forensically analyze mobile phone data within the FTK interface. Furthermore, FTK is easily the most stable and user-friendly computer forensics solution on the market, giving investigators a more efficient way to complete their investigative tasks.

FTK is able to recover and document files that no other mobile phone forensics tool on the market can. This integration allows you to correlate phone evidence with computer evidence easily and enables advanced reporting to detail phone data — call history, contacts, messages, photos, voice recordings, video files, calendar, tasks, notes and more.

With support for more than 3500 phones, logical and physical support for iPhone and iPad devices, as well as the ability to seamlessly analyze and correlate multiple phones and computers within the same interface, MPE+ is the must-have mobile phone analysis solution.

NOTE: MPE can be purchased with hardware to include a SIM reader and phone cables. Cable updates are shipped to those who maintain SMS.

"I really like how easy it was to get the logical and physical in *one stop shopping*. No need for passcode either.

XRY needs passcode or jailbreak to get the logical. Compared MPE and XRY logical. MPE won.

Much more information. Worked slick moving into FTK 3.3 and 1.8."

- Bruce D, Canadian Law Enforcement Agency

MPE+ Supported Devices

MPE+ FIELD TABLET FOR MOBILE PHONE FORENSICS

RUGGED, WATERPROOF TOUCH SCREEN TABLET

The MPE+ Field Tablet makes in-depth mobile phone data immediately available during on-scene cell phone investigations, saving time for the examiner back at the lab, and it allows you to immediately secure the digital evidence, unlock locked handsets, preview extracted data and safely create a secure image.

Product Details:

Mobile Phone Examiner Plus Cell Phone Forensics Software

- Supports more than 3500 phones, because MPE+ enables viewing and acquisition of file systems on 80% of all CDMA handsets.
- Physical image acquisition and logical support of iPhone® (both CDMA and GSM), iPad® and iPod Touch®, without jail breaking the iOS device
 - Acquire physical and logical data simultaneously, without the need for iTunes®.
- Logical viewing and image acquisition of Android[™], Windows Mobile® and Blackberry® devices to include device file systems
 - Full User Data Extraction from Rooted Android® Devices
- On-the-Fly Decryption of the Operating System and Logical Data on iOS Devices.
- SIM and USIM support, with Forensic SIM cloner to allow phone processing without altering data.
- Perform data carving for embedded phone-specific data.
- File systems on supported phones are immediately viewable and can be parsed in MPE+ to locate lock code, EXIF and any data contained in the mobile phone's file system.
- Extracted data is stored in AD1 forensic container.
- AD1s can be imported back into MPE+ to view data as if the device is connected.
- New and improved cable kit is also available.

Preconfigured MPE+ Field Tablet

- Instant on-site triage
- Anti-glare screen
- Rugged design
- Shock resistant
- Water resistant
- Touch screen designed to work, even with heavy gloves on
- MPE+ Field Tablet Specifications:
 - CPU: Atom Z530P 1.6Ghz
 - RAM: 2GB DDR2 SDRAM
 - HDD: 120 GB 1.8" SATA
 - Display: 7" TFT WSVGA LCD
 - Battery: 2580mAH Li-Polymer Battery
 - O/S: Windows 7 Tablet PC SP3 Edition

o RF Options: Bluetooth v2.1, WLAN – Intel Wi-Fi Link 5100 802.11 a/b/g/n
