LAW ENFORCEMENT & MILITARY DIVISION

STUN (Electric-shock) Gloves are developed for Police and Corrections officers that they have to face riots and street violences on any giving duty day, capable of controlling suspects within seconds to arrest.

STUN GLOVES

For easy
arrest control

TELESCOPIC ANTI-RIOT BATON

This anti-riot baton is composed of rod body and electric torch. It is telescopic and it has functions of high voltage shock, LED illumination, etc.

It is small and easy to be carried. The product has the detection report of the ministry of public security inspection center.

Structure: extended length = 915mm
retracted length = 560mm. It has extend-
retract self-locking function.

Pop up times: 15

Weight: $\leq 1800g$ (not include battery)

Surface treatment: the surface of the rod is
treated with QPQ, the surface is matte black.

Vickers hardness: 150

Single electric shock time: 5s

Output Voltage: 40-60kV

Output current: $\leq 2mA$

Illumination function: strong light, weak
light, sharp flash, SOS international distress
signal. Electric shocks can be carried out
simultaneously in lighting mode.

Strong lighting time: $\geq 200min$

Strong light intensity of illumination: $\geq 8000lx$

Operating temperature: $-20^{\circ}C-45^{\circ}C$

Guarantee Period: 1 year.

POLICE ARREST GLOVES

Features

Light and small, no bear load, easily operate, two
seconds to start the engine.

Handshake or grab the Criminal's wrist, the
person will lose attack ability immediately.

Humanized design.

Obvious hidden advantages, easy to melee
combat.

Electronic pulse mode, unmuzzle instantly, no
trauma to the skin surface.

Technical

Stun-Cuffs for Foot, Stun-Cuffs for Hand

Modern electronic technologies resulted in the development of stun-cuffs, of which we offer 2 different versions. **PKI 9355** continuously transmits signals via built-in GPS transmitter which are captured by a receiver (security staff). The receiver is programmable i.e. in case the prisoner leaves certain areas an automatic alarm will be released. The position of the prisoner can be located at any time and he can be arrested immediately if he tries to escape. **PKI 9355** is designed for so-called day-release prisoner.

PKI 9360 stun-cuffs for hands find their application when taking a prisoner to the court or hospital. In case he attempts to escape the stun-cuffs are activated by remote control and transmit an electric shock of 60.000 Volt. Voltage can be adjusted according to demands of staff. You never saw an escaping person stop so quickly!

Specifications:

PKI 9355: GPS-system consisting of transmitter and receiver. Transmitter is fixed to foot-chains and only removable by personnel.

Power supply with rechargeable batteries.

PKI 9360: Handcuffs with built-in receiver are only removable by the security staff. Electric shock will only be released if it is activated by the security personnel with the encoded remote transmitter. Range max. 300 m, voltage 60.000 Volt. Power supply with rechargeable batteries.
