COVID-19 Vaccinations and IATA Travel Pass

Priorities for Vaccine Certifications

- Global standard developed for digital vaccine credentials "smart vaccination card" as proof of vaccination need to be accelerated.
- Countries need to ensure that their citizens receive a **digital COVID-19 test/vaccination certificate** when they are tested or vaccinated so they have a verifiable document on their mobile device.
- Border or other agencies needs to accept digital passenger test/vaccination certificates on a passenger's mobile device and not just on paper.
