^{*} The corrections for the observed altitude of a Star or Planet involves the dip and the refraction; and for the observed altitude of the Sun's lower limb, the dip, refraction, parallax, and mean semidiameter, which is taken as 16°. A supplementary correction taking account of the variation of the Sun's semidiameter in the different months of the year is given at the foot of the main table.

	Day of Month.	Jan.	Feb.	Mar.	Apr.	May.	June.	July.	Aug.	Sept.	10.5	Nov.	Dec.
Additional Corr.	1st to 15th	+18	+15	+8	0 -4	- 8	-13	-14	-11	-5	+3	-11	+16
For Sun's Alt.	16th to 31st	+17	+12	+4		-11	-14	-13	- 9	-1	+7	+1	18

^{*} The corrections for the observed altitude of a Star or Planet involves the dip and the refraction; and for the observed altitude of the Sun's lower lime, the out, retraction, parallax, and mean semidameter, which is taken as 16°. A supplementary contaction taking account of the variation of the Sun's semidiameter in the different months of the year is given at the foot of the main which

^{*} The corrections for the observed all timbe of a Star or Planet involves the dip and the refraction; and for the observed all timbe of the Sun's lower limb, the dip refraction, parallax, and mean semidiameter, which is taken as it? A supplementary correction taking account of the variation of the Sun's condigmeter in the different months of the year is given at the foot of the main table.

FOR SUN'S ALT.	1st to 15th 16th to 31st						-13			-5 -1			

^{*} The corrections for the observed altitude of a Star or Planet involves the dip and the refraction; and for the observed altitude of the Sun's lower limb, the dip, refraction, parallax, and mean semidiameter, which is taken as 10%. A supplementary correction taking account of the variation of the Sun's semidiameter in the different months of the year is given at the foot of the main table.

^{*} The corrections for the observed altitude of a Star or Planet involves the dip and the refraction; and for the observed altitude of the Sun's lower limb, the dip, refraction, parallax, and mean semidiameter, which is taken as 16'. A supplementary correction taking account of the variation of the Sun's Semidiameter in the different months of the year is print at the foot of the main table.

# Page 932]

#### TABLE 46.

Corrections* to be Applied to the Observed Altitude of a Star or of the Sun's Lower Limb, to Find the True Altitude—Continued.

The corrections for the observed attitude dia Star or Planet involves the dip and the refraction; and for the observed altitude of the Sun's lower into, the dip, refraction, parallax, and mean semidiancier, which is taken as lot. A supplementary correction taking account of the variable of othe Sun's semidiancier in the efficient monitable they are to evident at the foot of the main table.

### Page 934]

#### TABLE 46.

79 Feet.

Corrections* to be Applied to the Observed Altitude of a Star or of the Sun's Lower Limb, to Find the True Altitude—Continued.

^{*} The corrections for the observed altitude of a Star or Planet involves the dip and the refraction; and for the observed altitude of the Sun's lower limb, the dip, refraction, parallax, and mean semidiameter, which is taken as 16°. A supplementary correction taking account of the variation of the Sun's Semidiameter in the different months of the year is given to the lost of tho main table.

^{*} The corrections for the observed altitude of a Star or Planet involves the dip and the refraction; and for the observed altitude of the Sun's lower limb, the dip, refraction, perallax, and mean semulameter, which is taken as bd. A supplementary correction taking account of the variation of the Sun's semulameter in the different months of the year is given at the loot of the main table.
