tracts. The Dominion Fair Wage officer was instructed to make an investigation and from all accounts the report of the Fair Wage officer was in favor of the claims of the employes, and recently information was received that the old rates would be restored. The rates that prevailed prior to November 1st and after the reduction, will be found in the columns of our Journal, April issue.

On March 23rd, I had some matters to attend to with the representative of the men and other matters in connection with this office.

On the 24th I left for Hardisty to investigate a grievance of one of our members employed by the C. P. R. as washout man. On the 25th, I located the member and heard his grievance. He informed me that he had been discharged because of being intoxicated while at work. I took the matter up with the locomotive foreman and learned why it had become necessary for him to discharge this member. The foreman claimed that it had not been the first offense of this nature, and that after satisfying himself personally, that the member was not giving his work the required attention; he informed him that he could consider himself discharged from the service of the company. This member took his discharge papers to the effect that he was intoxicated while on duty, and it seemed difficult for the writer to have him reinstated. However, I urged the foreman to reinstate him to his former position, but the matter was out of his hands, and he could do nothing more, and referred me to the master mechanic at Saskatoon.

On the 26th I left for Moose Jaw, arriving there the same day, and later met with several of the members of Lodge 478. I had expected to meet others, but somehow the letter which I had mailed to the secretary did not reach him in time to inform the members that I would be in town. Members there complained of the slackness of trade, and unemployment. After having a talk with several of the members, I left on the night train for Saskatoon, arriving there the following morning, and later took up the grievance of our brother member at Hardisty, with the master mechanic. The information I received in connection with this grievance was to the effect that the company did not intend to have employes intoxicated while on duty, and that the evidence in the case in dispute was ample for the dismissal of any employe of the company and that since the employe openly violated the rules of the company and had been warned on previous occasions of his actions, the company could not consider his reinstatement.

I left Saskatoon at noon, after calling on several of our members employed by the C. N. R., arriving at Winnipeg the following morning and attended to some correspondence during the day. On the 29th, Monday, I met with Brother Chadburn, sec-

retary-treasurer of District 30, and requested that he take the grievance of the brother at Hardisty before the local officials of the company at his earliest convenience. I supplied him with the necessary information in the matter, so that he could present the grievance. I left that night for Fort William, arriving there the following morning and arranged to meet with the members of Lodge 505 that night. The force at Fort William which had been employed by the C. P. R., had been reduced considerably in all departments and with every boiler maker and helper employed there being a member of the local lodge, the membership would be little more than a quorum. There are three members of Lodge 451 employed at Port Arthur (in the vicinity of Fort William), by the C. N. R., and Lodge 451 has been requested to transfer these members to Lodge 505, so as to enable said members to attend the meetings of the local lodge, and at the same time strengthen the membership of Lodge 505. However, the members of Lodge 451 do not deem it to be in the best interests of these members to be transferred in case some grievance should arise.

On the 31st I left for Hamilton, stopping off at North Bay for a few hours to make train connections during which time I was in a position to meet with several of the officers and members of Lodge 417.

The above will conclude my report to April 1st. Trusting same will meet with your approval and with kindest regards to all, I am,

Yours fraternally,
J. P. MERRIGAN,
Third I. V. P.

REPORT OF FOURTH INTERNATIONAL VICE-PRESIDENT WEYAND.

Dear Sir and Brother:

The following is my report of the organizing campaign carried on in the city of Cleveland, in the interest of Lodge No. 5.

In taking up this work in the months of December, 1914, January, February, March and April, 1915, and before going into details, I may say I believe every one of our members must be aware that the great industrial depression which confronted the workers of the entire country made it almost impossible to make very much progress in the line of organizing work. I found in most cases many of the unorganized were very much backward in declaring themselves, owing to the lack of money on the part of the workers to pay the necessary reinstatement fee. However, we were fortunate enough in this campaign to make some gains in the membership of Lodge No. 5.

My first efforts in line with this work were to make an investigation as to the existing conditions of Lodge No. 5, and found the membership down to about 88 members.

The revenue derived from the small membership was insufficient to meet the salary of the business agent, Mr. George H. Brady, and other lodge expenses. In order to meet this expense I decided to arrange for a drawing so as to meet the additional expenses. With the assistance of Brother George H. Brady, I arranged to send a special communication to all delinquent members of Lodge No. 5 inviting them to a special meeting which we had arranged, and informed all at the same time that a special dispensation would be granted for their reinstatement. Our special meeting was well attended and we had some reinstatements. Vice-President Brother Maher and Vice-President Horn of the blacksmiths were some of the speakers at the special meeting, as they were in Cleveland in connection with the Federated Trades of the Wheeling & Lake Erie Railroad.

Brother Brady and myself also visited all shops and requested all delinquent members to take part in the organizing campaign and become reinstated.

During Vice-President Maher's stay in Cleveland he informed me that he was ordered to Conneout, Ohio, as a gentleman by the name of Plerse was making all efforts to disrupt the organization of the Nickel-Plate Railroad. At the request of Vice-President Maher I made several trips to Conneout, O., and assisted Vice-President Maher and other representatives of labor to keep the legitimate movement intact.

On January 6th I received orders from President Franklin to go to Alliance, O., and endeavor to get an interview with Mr. George Reeves, president of the Reeves Tank Building Industry, relative to a general conference between all the operators in the Oklahoma oil field and our President, Mr. J. Franklin; also local representatives of Lodge No. 592. Mr. Reeves promised me he would bring our request for a general conference before their association and if they granted the request he would arrange with Mr. Franklin personally.

On my return to Cleveland I received orders from President Franklin to come to headquarters and take charge of the office during his absence, as he was compelled to go east on official business. Being detained at headquarters until January 18th, when I returned to Cleveland, I again took up my work.

As our drawing was scheduled to take place on January 21, I arrived in Cleveland to take charge of same. I may say the drawing was very successful from a financial standpoint, and helped to adjust some matters and dispose of some of the back-standing bills. However, it was a foregone conclusion that we had to have greater revenue to meet the general expenses, and also to keep the business agent in the field. Brother Brady and myself went to Lorraine, O., and got several reinstatements and new applications of the B. & O. R. R. Brother Brady and myself also visited many shops and

jobs in the building line and adjusted such grievances that came up from day to day.

By instructions from the members of Lodge No. 5 I assisted a committee to draw up a more specific outside agreement along the lines of the old scale and presented same to all employers with the understanding that same would be enforced on all outside work in the future. Brother Brady and myself visited all employers and talked matters over relative to the agreement, and we found most all the employers opposed to raising their price per hour except on such work which called for strictly union labor. The results are we expect considerable trouble in this line of work in Cleveland.

I also found the local metal trades department in the city of Cleveland in a very weak condition and very few of the organizations taking any interest in the department. This matter was brought to the attention of the business representative, Mr. Thomas Farrall of the Cleveland Federation. Brother Farrall immediately arranged for a conference with the various metal trades representatives, and after several meetings we were able to put new life into the local department. The results were they are now carrying on the campaign against two firms known as the Bishop & Babcock Co., and the Lowe Manufacturing Co. Those two firms do a large amount of brewery work, but were very unfair to organized labor in various departments. If those two firms can be convinced to organize their plants it would mean at least 15 additional members for Lodge No. 5.

I arranged for another open meeting with the endeavor to interest the unorganized, and in order to advertise this meeting, I arranged for over 2,000 hand bills and had them distributed in all boiler shops of the entire city; also had many good speakers from the local building trades department. This meeting was well attended and we received some applications but not the number I expected. Brother Brady and myself also visited the boiler makers and helpers at Lindale roundhouse of the Big Four Railroad, and were successful in getting those men to become reinstated.

On March 27th I received orders from President Franklin to go to Massillon, O., to address a mass meeting on Sunday, March 28. On my arrival in Massillon I met the representatives of the moulders and machinists; also local men of the Central Labor Union and our local members of Lodge No. 600. We had two well attended meetings, one in the afternoon, another in the evening at the city hall at Massillon. Those meetings were arranged by the officers of the Central Labor Union and the officers of the Federated Trades of the Wheeling & Lake Erie R. R. for the purpose of putting new life into the union men of Massillon and have them take more of an interest in organizing the workers who are outside of the fold.

On my return to Cleveland I received

orders from President Franklin to come to headquarters and take charge of the office as President Franklin and Vice-President Hinzman were to attend a hearing before the Industrial Relations Committee in the city of Chicago relative to the Illinois Central and Harriman lines strike. During the absence of President Franklin I was detained at headquarters until April 16, when I returned to Cleveland.

On April 19 I went to Elmira, N. Y., to meet with our members of Lodge No. 225. On my arrival in Elmira I found our members who were employed by the American-LaFrance Fire Apparatus Company had made a request for an increase in wages. I also found the machinists had made a like request. After going over the matter with our members I arranged to meet the management with our committee on Thursday, April 22. After a two hours' conference we were not successful in convincing the management that the men were entitled to an increase. I then offered a compromise in order to settle the matter, but the officials refused to accept the same. As the representatives of the machinists with their committee were to meet the management the following day, we decided to wait until after this meeting and if they were not successful we would appeal to the president of the company and make it a joint proposition. As the machinists were no more successful than the boiler makers, we appealed to President Clarke as a joint committee. Mr. Clarke agreed to meet a committee of his employes, but he absolutely refused to meet the representatives of the organization, stating that if we wished to, we could meet their representative of the Manufacturers Association, located in the city of Chicago. During the conference with Mr. Clarke the committee was not successful in getting concessions and naturally reported back to us. As we did not wish to stand in the way of a conference and a possible settlement, we advised the joint committee to again meet Mr. Clarke and make an effort to bring about a settlement if possible, but Mr. Clarke refused to grant anything whatsoever and requested the men to see their foreman as individuals and if he recommends an increase he would allow the increase, but only as an individual. As President Johnson was coming to Elmira we decided to have a joint meeting that evening and have the joint committee make a report in President Johnson's presence. The report was very unfavorable to the men and the prospects of both crafts will possibly have to suspend work in order to force the company to pay the standard rate of pay.

This concludes my report up to May 1, 1915, and trusting the same is satisfactory, and with best wishes and very kind regards, I am

Yours fraternally,
 LOUIS WEYAND,
 Fourth International Vice-President.

REPORT OF EIGHTH INTERNATIONAL VICE-PRESIDENT RYAN.

Port Arthur, Texas, May 14, 1915.

Since the conclusion of my last report, my time has been spent in connection with the strike in the oil fields of Oklahoma and Texas. On April 16 I was called to Kansas City by President Franklin, in connection with the strike situation, and was instructed to go to Port Arthur, Tex., as a new phase of the situation had presented itself, in the fact that the Gulf Refining Company had taken over some of the work which the Reeves Brothers were erecting and which we have been on strike against since January 18, 1915. Upon instructions from President Franklin, I returned to Cushing, made some arrangements in regard to strike rolls, etc., and left for Port Arthur on the 20th, stopping at Fort Worth and Shreveport enroute in connection with some business I had with Lodges No. 96 and No. 328.

Arriving at Port Arthur, I learned that the Gulf refinery which had at first refused to hire any of the strikers on the Reeves job, had changed its attitude and had placed several to work. A committee arranged for a conference and we met Mr. Tryon, the local manager, and he requested, after talking the matter over, that we await the arrival of some Pittsburgh, Pa., officials of the company. We agreed, and while waiting the arrival, May 1 I made a short visit to Beaumont and Galveston, Tex.

Monday, May 3, a committee of Lodge No. 305, Business Agent T. O. Riley and myself prepared to meet with the Gulf officials again, they having arrived. Mr. Taber of Pittsburgh, Pa., requested that Brother Riley and myself meet with him and Mr. Tryon. Not wishing to be arbitrary in the matter, we agreed and so advised the committee, same being satisfactory to them. We went into the subject of the Reeves Brothers work being taken over by the Gulf Refining Company and endeavored to get Mr. Taber and Mr. Tryon to agree to make that particular job a closed shop, or a strictly union job. We discussed the matter thoroughly with them, but were unable to get them to agree. They maintained that they could not make any distinction between the union men at the refinery and the men who were not members of the organization. They offered to increase the force on this job to the extent of placing fifteen of the remaining strikers on the strike roll to work. Four men they objected to, but would not give their reasons. We adjourned the conference to take the proposition offered us up with the members at a special meeting, which was held on May 4. The committee reported and the proposition was discussed and finally rejected and the committee instructed to continue.

We again met Mr. Tryon on May 10 and went over the proposition with him, this time we enlarged the committee to four members. We advised him that the men had rejected his offer of May 3. We endeavored to get him to adjust the matter

by placing the non-members on the paraffine plant job and using all union men on the Reeves work, which the Gulf Company was erecting. To this he would not agree. We finally made an effort to get the Gulf Refinery to take over all of the Reeves job, dismiss the deputy sheriffs on guard, get rid of the Reeves scabs and foremen and complete the work with their own employes and place the rest of our strikers to work. He agreed to increase the number from fifteen to eighteen, leaving one man whom he objected to. Stated, as final, that they would not make the job a closed shop affair, but that he would take up the question of taking over all of the Reeves work as a means of eliminating the unpleasant conditions existing in the plant and that he would give us a definite reply in a few days' time, after consulting Pittsburgh, Pa., offices.

In the interval between conferences, and in order to be prepared in case of serious trouble on the job, I arranged with Lodge No. 305 to get a grievance blank filled out and mailed to the International President for the approval of the Executive Council, to strike if necessary, secured the official strike ballots and took a strike vote. None but employes at the Gulf Refining Company's plant were allowed to vote. The result of this vote stood 36 to 15, giving us the necessary two-thirds majority. The committee was instructed to continue negotiations and the men remained at work pending the final outcome of the matter. May 11 Mr. Tryon communicated with Business Agent T. O. Riley and wanted to know if the men were going to strike, or if he was to be given time to take up the question of taking over all of the Reeves work, as we agreed in conference. Brother Riley assured Mr. Tryon that there would be no trouble, pending his final reply.

I went to Beaumont to attend a regular meeting of Lodge No. 587 on the 11th, by request. Brother Riley joined me there on the 12th, as we had some matters to look after pertaining to the organization. Upon our return to Port Arthur we were advised that at noon on the 12th the men on the Reeves work being done by Gulf Refinery employes were laid off and told that the Reeves would complete the job. On the 13th we called Mr. Tryon up on the telephone and asked what was the object of this action. He informed Brother Riley that he and Mr. Taber had concluded that inasmuch as the men had rejected their former offer, they had decided to lay off the men and let Reeves Brothers finish the job. This action while not what we were endeavoring to obtain, has partly complied with our request, which was to the effect that the Gulf Company either make a union job of the Reeves work taken over by them, or else lay the men off and let Reeves complete same with their scabs.

The wages which prevail in the field, \$4.50, \$4.75 and \$5.00, are being paid on the work in question; but work conditions and

other working conditions being satisfactory, with the exception that the company wants to work the job under the open shop plan. Our members in Lodge No. 305 feel that after being on strike against the Reeves Brothers Company on this work for nearly four months that they cannot continue on same unless the job is made a strictly union job and will strike to force the Gulf Refinery to make the job a closed shop job, or else let the Reeves Brothers' scales finish the job under scab conditions.

While we enjoy certain working conditions in the shop proper, the Gulf Refinery will sign no agreement with us. This situation also prevails with the kindred trades, machinists, blacksmiths, railway carmen, coopers and bricklayers. This about covers the controversy to date.

The Magnolia Refinery at Beaumont, Tex., is erecting considerable tank work with the shop force. Shop wages prevail on this job. The P. I. W. is erecting scab jobs here at the Texas Company Refinery and at Port Neches, Texas, under guard of deputy sheriffs. Brothers, I would urge upon you to remain away from Port Arthur, Tex. Lodge No. 305 still has a number of strikers on the strike roll here, and there is no work to be had at the trade.

I desire to thank the many officers and members who have so ably assisted me in my work in this section, and I take pleasure in reporting that my efforts in the sale of emblem buttons and watch charms have increased materially since my last report on same. In connection with my report, I am submitting a list of brothers who are now wearing the official emblem of our organization, and I ask you respectfully to help the good work along. "BUY AND WEAR A BUTTON OR A CHARM."

Fraternally yours,

JOS. P. RYAN, 8th I. V. P.

Correspondence.

FROM THE RAILWAY DEPARTMENT.

St. Louis, Mo.

(Continued from last month.)

follow. It is the duty of the members to become acquainted with the action of their respective delegates, and when it is found that they have failed to reflect the sentiment of a majority of the membership, elect delegates who will. In many instances we have witnessed the return of the same delegates year after year, and we believe this to be good policy as long as they fairly represent the members, and in the absence of any proof to the contrary, we must assume that they do, and have fairly represented the sentiment of the members, because of this we believe it to be a waste of time, as well as foolish to either berate or condemn the officers of the American Federation of Labor. Place the responsibility where it properly belongs, it is the duty of the membership to elect as delegates, members who will represent their views and if the American Trade Union Movement is not making the progress you believe it should, it's up to the rank and file to make themselves and their desires fully known. The American Federation of Labor will be just as progressive as is indicated by the expressed wishes of the more than two million members, through the voice and vote of the delegates they elect. If you don't approve of what has been done, or the manner in which it is being done, and you think you have something better, first send and get a copy of the proceedings of the A. F. of L. convention, then after becoming familiar with its contents you will be in a position to know how to proceed, and to what and to whom you are opposed.

We have every faith in the American Trade Union Movement; we believe in it and have confidence in its selected executive officers. We don't agree with everything it does, but we are going to abide by its decisions, because we know that that is the only sensible thing to do.

The men in the railway industry are today facing two concrete examples of how two individuals have decided to promote two different organizations, both presumably in the interest of the railway employees.

P. F. Richardson was president of the new defunct International Association of Car Workers, this organization was affiliated to the American Federation of Labor and at that time had approximately nine thousand members. The Brotherhood of Railway Carmen, with a membership of approximately thirty-five thousand members, sought affiliation to the A. F. of L. and the amalgamation of the two organizations. The following statements are self-explanatory and are also a matter of record:

"The American Federation of Labor, at the convention held in Denver, 1908,

brought the representatives of the two organizations of carmen together; this resulted in a plan of amalgamation being submitted to the membership of the two organizations for ratification. The Brotherhood of Railway Carmen voted for amalgamation by a vote of almost five to one. President Richardson advised that his organization had defeated the proposition.

Another attempt at amalgamation was made by the A. F. of L. in July, 1909. These conferences accomplished nothing, while the representatives of the I. A. of Car Workers pleaded a lack of authority, they (Grand Secretary-Treasurer Gibson and Vice-President Condon) finally agreed to put the matter up to the members and secure the necessary authority, when this proposition was submitted to Richardson, he repudiated the action of Gibson and Condon and declined to submit the proposition to the members of the car workers.

The question was again brought up at the Toronto convention of the A. F. of L. in November, 1909, which convention the officers of the B. of R. C. A. had been authorized to petition the A. F. of L. for a charter. The A. F. of L. convention indorsed the recommendation of the executive council as indorsed and submitted by the Adjustment committee, which was, that President Gompers and a member of the executive council at an early date invite to Washington the representatives of the two organizations for a conference. If this conference failed of amalgamation the executive council was directed to fix the terms of amalgamation. Richardson, as a delegate to the Toronto convention opposed the proposition, but the convention adopted it by an overwhelming vote, 221 delegates representing 12,189 to 42 delegates representing 1,377 votes. This meeting was held in Washington in February, 1910. Richardson, among others representing the I. A. of Car Workers; at the suggestion of President Gompers, the representatives of the two organizations went into and held a number of conferences, Secretary Morrison of the A. F. of L. being present. Because of the action of Richardson, no tangible results obtained from these conferences. President Martin F. Ryan of the Brotherhood of Railway Carmen at this time made the following statement, and while still in conference: "The Brotherhood of Railway Carmen are now willing to submit the entire matter to the President and Secretary of the A. F. of L. agreeing in advance to bind the Brotherhood to accept amalgamation on such terms as they would outline, agreeing to abide by these terms even if it meant the displacement of every present officer of the Grand Lodge of the Brotherhood of Railway Carmen of America." These conferences and negotiations resulted in a disagreement, due to objec-

tions raised by Richardson and after every possible inducement had been offered to bring about amalgamation, the result being that on August 9, 1910, President Gompers of the A. F. of L. issued a charter of affiliation to the Brotherhood of Railway Carmen of America. At the November, 1910, A. F. of L. convention, St. Louis, Mo., Richardson protested the seating of the delegates from the B. of R. C. but later, knowing he would not be sustained, withdrew the protest and the delegates of the Carmen participated in this convention.

At the November A. F. of L. convention, Atlanta, Ga., protest was again made against the seating of the delegates from the B. R. C. A. Delegate Richardson raised a point of order, claiming that charter had been granted the B. R. C. A. in violation of the laws of the A. F. of L. President Gompers ruled the point of order not well taken and cited the action of the Toronto convention, the failure of the conferences to bring about the amalgamation and then said: "The failure to amalgamate the two organizations rested upon the representatives of the organization to which delegate Richardson belongs."

On vote to concur in credential committee recommendation, which was to seat the delegates of the B. of R. C. A. only three negative votes were cast.

Richardson and his co-delegate, Humphries, then introduced resolution No. 122, protesting against the issuance of charter by the A. F. of L. The report of the Resolution Committee was to non-concur, but due to Richardson's statement that amalgamation had failed because the B. R. C. owed its members a large sum of money account of back strike benefits due, recommended a continuance of the efforts on the part of the A. F. of L. officers, to bring about amalgamation. Delegate M. F. Ryan informed the convention that the B. R. C. of A. had liquidated every dollar of its indebtedness.

President Gompers: "Now that the Brotherhood's indebtedness has been liquidated, will there be any difficulty in amalgamating, in the opinion of Delegate Richardson?"

Richardson said: "They wanted their rights and the charter of the Carmen revoked and they would talk on the question."

The vote on the committee's report showed but two votes in the negative.

Richardson then arose to a question of personal privilege, saying: "I want to surrender the charter of the International Association of Car Workers to the American Federation of Labor."

President Gompers: "Will the delegate step to the platform?"

Delegate Richardson: "Here is the charter, Mr. Chairman."

President Gompers: "The chair would like to inquire by what authority Delegate Richardson surrenders this charter?"

Delegate Richardson: "As President of the I. A. of Car Workers."

President Gompers: "The president of the American Federation of Labor places this in the hands of the secretary with the request that he inform the secretary of the International Association of Car Workers that the charter is held by him for transmission to the organization, and that President Richardson, without authority of that organization, surrendered the charter, usurping a position which no presiding officer has a right to assume in the name of a membership who have not spoken on the question."

And thus ended the connection of the I. A. Car Workers with the organized labor movement, and are there any among you who, when reading this all too brief recital of the facts portraying the arrogance and assumed authority, together with such an absolute disregard for the rights of the rank and file as exemplified in the person of Richardson, can say that such a man is either a trustworthy or a capable leader of a movement organized to promote and advance the rights of this entirely humane institution, known as the organized labor movement?

On, or about January 1, 1914, the Railway Employees Department decided to send out a general circular letter for the purpose of furnishing the membership accurate information in relation to P. F. Richardson, and his work. In accord with his previous disregard for the rights of the rank and file, Richardson arranged for a meeting of his most trustworthy lieutenants, while drawing his usual salary and expenses from the I. A. of Car Workers, but without the knowledge or consent of the then few remaining members of the organization he was supposed to be representing, and proceeded to draw up and adopt a constitution for a proposed organization to be known as the American Federation of Railroad Workers. Having called the meeting, he naturally dominated the proceedings and just as naturally selected P. F. Richardson to be president, taking care of his associates by arranging for them to fill the other offices. The first knowledge the rank and file of the I. A. of Car Workers had of this characteristic Richardson manner of procedure, was when we sent out the information contained in the circular herein referred to. After a careful review of this man's record in the labor movement, both orally and verbally, we find from the viewpoint of accomplishment, that his principal achievement and asset has been to assimilate a vocabulary peculiarly adapted to a standard code of ethics designed by him and for the express purpose of poisoning the minds of the rank and file of the bona fide labor organizations against those whom they have elected to occupy executive positions. The object in view being to bring about a loss of confidence in the honesty and integrity of the general officers, dissension among the rank and file, and eventually, the dissolution of these organizations.

The past history, the present standing and the well known honesty and integrity of

the general officers need no defense from the attacks of men of the Richardson type. The general officers are doing business for you and associating with you daily and are proving their worth. The standing and influence of your respective organizations, the standing and influence of the Railway Employees Department, all demonstrate the business capacity and integrity, as well as the untiring efforts being put forth to build up and further strengthen the organizations represented in and being a part of the bona fide labor movement of this continent.

January 1, 1915, witnessed the demise of the International Association of Car Workers, the American Federation of Railroad Workers being launched in its stead, with Richardson as president. It is said (To be continued in next month's Journal.)

METAL TRADES DEPARTMENT,

American Federation of Labor.

Washington, D. C., May 3, 1915.

To the Editor Boiler Makers' Journal, Greeting:

I am inclosing herein a brief article in connection with the Panama Canal, for publication in the June issue of your Journal.

Fraternally yours,

JAS. O'CONNELL,

President.

House Rent on the Panama Canal.

For several years the Metal Trades' Department of the A. F. of L. has busied itself in looking after the welfare of all the employes of the Panama Canal through the various departments at Washington and in communication with Governor Goethals, and without desiring to appear egotistical, we feel that we have accomplished much in the interest of the Panama Canal employes.

First, we succeeded in preventing a reduction of wages going into effect by having a resolution passed in Congress providing that the rates of wages then prevailing should not be changed until the construction work of the canal was finished or at least not before June 1, 1916. The result of this effort saved to the employes on the Panama Canal several hundred thousand dollars in wages.

We felt that there would be no further trouble on the Panama Canal nor would there be any other attempt to reduce the wages of the employes, but to our surprise an executive order was issued by President Wilson in January, 1915, putting into effect the charging for house rent, fuel and light to married men living in government houses, and for room rent to single men occupying government houses. In addition, some changes were made in the privileges allowed in connection with the government hospitals. This meant practically a ten per cent reduction in wages.

We immediately took the matter up with the authorities at Washington, had several conferences with Governor Goethals who

was here during the month of January, and who seemed to be confirmed in his opinion that the executive order should be carried out.

We then had an interview with President Wilson with a view to having the order rescinded or at least held in abeyance until we could make a more thorough investigation of the real conditions existing along the Panama Canal. The President informed us that the order was issued upon the order of the Secretary of War and advised us to call upon him, and that he would give every consideration to any proposal the Secretary of War might, either in abolishing the order or withdrawing it until an investigation could be made by us.

We called upon the Secretary of War and found him thoroughly imbued with the idea that the executive order was a just one and that he had approved of the order before it went to the President upon the recommendation of Governor Goethals, and that unless we could bring some new data that would warrant him in changing his position he could not make any other recommendation to the President other than that the order be carried out.

We then prepared a new statement, setting forth as best we could the position of the employes on the canal in opposition to the charging of rent, fuel and light, and forwarded the same to the Secretary of War, who later informed us that he had not changed his opinion.

A public meeting of the employes on the Panama Canal was held during the month of March; a committee was appointed to come to Washington to see the President with a view to having the order rescinded. This committee was made up of one locomotive engineer, one blacksmith, one plumber, one machinist and one inspector of finished material, who was the chairman of the committee and who was not a member of any organization.

This committee found it impossible to see President Wilson, but two of their members finally succeeded in having an interview with Mr. Tumulty, the President's secretary, and, so far as I know, the matter is still in the hands of the secretary. The committee has returned to the Panama Canal without receiving any further consideration at the hands of the officials of the government.

We, however, kept up the agitation and our Executive Board, upon my recommendation, authorized me to go or to delegate an officer of our department to make a personal investigation of the whole situation on the canal. We requested the Building Trades Department to join with us on this investigation and that department authorized their secretary to make the investigation with us. Later, through efforts made with officials of the government, an arrangement was made whereby Governor Goethals is to be in Washington about May 8 for the purpose of again taking up this

question and we have every reason to hope that we will be able to bring about a reconsideration of the President's order, so that charges for rent, fuel and light will at least not be put into effect on the canal until the construction period has been passed, which we believe was the original intention of Congress when the organic law was enacted.

(Signed) JAMES O'CONNELL,
President Metal Trades Department, A. F.
of L.

To the Editors of the International Journals,
Greeting:

In addition to the letter I wrote you for publication in your June issue in connection with the situation on the Panama Canal, I am pleased to report that at a conference held in Washington with Governor Goethals, Hon. W. B. Wilson, Secretary of Labor, and the Hon. L. M. Garrison, Secretary of War, we succeeded in having a joint request made upon the President to rescind the executive order in connection with the payment of rents, fuel and light and the following was agreed to:

"The two Secretaries will recommend to the President that the Executive Order in question be modified by suspending the operations thereof relating to rent, fuel and lights during the period of actual construction of the Panama Canal but not later than June 30, 1916."

Please add this to the article I have already sent you which I am sure will be pleasing information to our entire membership.

Fraternally yours,

JOS. O'CONNELL,
President.

Long Pine, Neb.

Dear Sir and Brother:

After belonging to the unemployed for the past three months I landed a job in the large city of Lonesome Pine. Never in all my travels did I go through the stunt of playing hide and seek as I did in those three months. I was unlucky enough coming out of Stockton, Cal., to try and ride the Southern Pacific Railway. After eight days of crawling behind bolts and in between cracks of the Brownies I got to Roseville, Cal., very hungry. I braced up enough nerve to try and pass the gunman at the S. P. shops. I made it, found a fellow that I took between the cars and asked him where the boiler maker was. He says, "Come on and I'll show you." He took me up to a great big six-foot nigger and says, "That is the boiler maker." I looked the nigger over and told him I was a machinist, that the man was mistaken so he took me over to the back shop and led me up to a Jap, and said this was the machinist. Well I was sick right then and not hungry. I then asked this cross between a Bohunk and Dago what part he played around there. You could have knocked me down when he said, "Me is the boss." Well I knew I might as well start right there so I got the banner and carried it all night. Never again for yours

truly over a strike bound road. If it had not been for the ladies, I would have been under the daisies at this time. This is what I think of them:

When the creator had made the good things there was still some dirty work to do, so He made the beasts and reptiles and some poisonous insects, and when He had finished He had some scraps that was too bad to put into the rattlesnake, the hyena, the scorpion, and the skunk, so He put all these together, covered it with suspicion, wrapped it with jealousy, marked it with a yellow streak and called it a scab.

This product was so fearful to contemplate that He had to make something to counteract it, so He took a sunbeam and put in it a heart of a child, the brain of a man, wrapped these with civic pride, covered it with brotherly love, gave it a mask of velvet and a grasp of steel and called it a Union Man, made him a lover of field and flowers and manly sports, a believer in equality and justice and ever since these two were, mortal man has had the privilege of choosing his associates.

So brothers, one and all, lets all boost and lay the knocking hammer down.

Yours fraternally,

C. M. BLAIR,
Lonesome Pine Lodge No. 109.

Fort Worth, Texas.

Dear Sir and Brother:

Inclosed please find card picture of scabies on the job that we pulled on the oil field strike at Jacksboro. All men that came off

stayed on the ground for several weeks. After some trouble most of the men got in bad with the minions of the law and had to leave. Soon after they left this bunch of

rats come in. The one seated on still, bare-headed, is C. Comer, a permit man known to most all of the tankers. The fine looking young man in the cap and sweater is one Carlson, known to most of the gang. The remainder of this bunch I am unable to name, but it's possible they are known and if so pass the word along.

Nothing new in this section of the country. Business is rather slow and prospects not very bright. With best wishes, I am
Yours fraternally, L. A. Freeman.

Wichita, Kas.

Dear Sir and Brother:

Please find enclosed my financial report and also Brother Sample's expense report for publication in the next issue of Journal. Sorry we are in debt on this matter of one hundred and twenty-three dollars and thirty-eight cents (\$123.38), due Brother Sample, but any suggestion that you can give to help us rid this bill will be a favor to us. Let me hear from you as I don't know what to do to rid this bill, and Brother Sample surely ought to be paid for his services for us. Of course, we will have to look to the locals that pledged themselves to support a legislature representative on boiler inspection bill, but I think it will be a hard matter to collect from these locals again, as those that did support done very well. I thought that maybe if you would send out another circular letter asking aid from the locals that did not contribute would help us pay this balance of \$123.38 due Brother Sample.

With best wishes, I remain,
Yours fraternally,
J. M. DEVLIN,
S.-T. Legislative Conference.

Financial report, money received from locals: No. 83, \$25.00; No. 518, \$16.00; No. 340, \$21.50; No. 221, \$56.00; No. 523, \$7.50; No. 292, \$43.25; No. 297, \$12.50; No. 543, \$11.50; No. 199, \$18.00. Total collected, \$211.25.

Secretary-Treasurers' expenses:
Postage stamps\$2.00
Money orders65
Stationery and stenographic work.... 3.10

Total.\$5.75

Money paid Brother Sample, our legislative representative, to date, \$205.50, leaving balance of salary and expenses of legislative representative of \$123.38.

As Locals No. 82, 542, 286, 393, 403 and 418 were not in favor of supporting a legislature representative on proposed boiler inspection bill, we will have to look to the locals that did pledge themselves and did contribute support by levying another assessment to make up the balance due Brother Sample, which is \$123.38.

Hoping all secretaries will take this matter up and let us get rid of this bill as Brother Sample did his part and surely should be paid for his services for us. All money to be forwarded to me and be receipted for same.

Hoping to hear from all the locals and that all will contribute what they can afford so we can square up this account, with best wishes and regards to all I remain,
Yours fraternally,
J. M. DEVLIN, Sec'y.-Treas.

Pratt, Kas.

Mr. J. M. Devlin.

S. T. SAMPLE.

A COMMUNICATION FROM THE AMERICAN FEDERATION OF LABOR.

Washington, D. C., April 28, 1915.

To the Officers and Members of the National and International Unions, State and City Central Bodies.

Dear Sirs and Brothers:

At the meeting of the Executive Council of the American Federation of Labor held at headquarters April 19-24, the representatives of the United Garment Workers of America entered a complaint against the Journeymen Tailors' Union of America for using the union label of the Tailors upon ready-made clothing and clothing made by the seceding faction of the United Garment Workers of America. Secretary Tracy of the Union Label Trades' Department of the American Federation of Labor also entered a complaint against the Journeymen Tailors' Union for violation of trade union principles in permitting such an unwarranted use of the union label of that organization.

It was called to the attention of the Executive Council that the official journal

of the Journeymen Tailors officially confirms such improper and illegitimate use of their label by the seceding faction of the Garment Workers, which is contrary to the laws of the Journeymen Tailors' Union, which forbids the use of that label by any person not a member of that organization.

This being the case where the tailors' label has been granted by the Journeymen Tailors' Union and used by the seceders from the United Garment Workers of America in flagrant violation of the declaration and the mandates of the Philadelphia convention of the American Federation of Labor, the Executive Council of the American Federation of Labor hereby cancels and withdraws the endorsement of the label of the Journeymen Tailors' Union of America.

President Gompers was directed to notify the General Secretary of the Journeymen Tailors' Union of America and all central bodies, national and international unions that the endorsement heretofore given to the label of the Journeymen Tailors' Union of America is canceled and withdrawn and shall so stand until the Journeymen Tailors' Union complies fully with the decisions of the Philadelphia convention, to-wit: resume referendum vote their former title, "The Journeymen Tailors' Union of America," and cease to trespass on the jurisdiction of any other union in the clothing industry. Upon proper compliance by the Journeymen Tailors' Union the president of the American Federation of Labor is directed to restore the endorsement of the American Federation of Labor to the label of the Journeymen Tailors' Union of America.

Secretary Morrison was directed to continue to hold in his possession any money forwarded by the Journeymen Tailors' Union and not to credit the same upon the books of the American Federation of Labor until the tailors comply with the direction of the Philadelphia convention to resume by referendum vote their former and proper title, the Journeymen Tailors' Union of America, and cease to trespass on the jurisdiction of any other union, and stop all moral and financial support of, or affiliating with the seceding faction of the United Garment Workers of America, and that upon proper compliance by the Journeymen Tailors' Union all monies be placed to the credit of the Journeymen Tailors' Union without prejudice of any kind whatever.

President Gompers was directed to publish in the Weekly News Letter a copy of the several actions taken by the Executive Council of the conditions existing in the Tailors' Union, also in circular to be sent to each national and international union, state and city central body connected with the American Federation of Labor, and also to each local union of the Journeymen Tailors' Union and United Garment Workers of America.

President Gompers was directed to confer and to meet with the United Hebrew Trades of New York for the purpose of having that body cease its harboring and supporting

seceding garment workers located in New York City, and upon failure of that body to comply with the laws of the American Federation of Labor, the decisions and declarations of the Philadelphia convention of the American Federation of Labor, all international unions having locals in New York represented in the United Hebrew Trades be required to direct such local unions to withdraw from the United Hebrew Trades.

The above is communicated to you as the official and authoritative action of the Executive Council of the American Federation of Labor in regard to the course to be pursued by organized labor in the unfortunate condition in which the tailoring and garment working trades have been plunged by a wilful perversion of trade union principles to the great detriment of the workers in the trade.

The Executive Council aims to be of practical and efficient service to all the toilers of America, and, in this instance, to the workers in the tailoring and garment working industry, and holds itself in readiness to do any and every honorable thing to help the organization disentangle itself from the present intolerable situation.

The officers of the central labor unions will please bring this matter to the attention of their respective unions at the next regular meeting.

Trusting that I may hear from you in regard to the above matter at your convenience, I am,

Fraternally yours,

Attest: **SAML. GOMPERS,**
President American Federation of Labor.
FRANK MORRISON,
Secretary, American Federation of Labor.

New Albany, Ind.

Dear Sir and Brother:

In the journal a few months ago, there were some correspondence in regards to paying sick benefits to sick members in good standing and asking for suggestions on the matter. Now that would be a great thing if some of the worthy brothers over the country would get their heads together and quit their mud slinging, we could build up our organization second to none. I belong to the strongest and only strictly up-to-date beneficial order of the good old U. S. A. Now this is only a suggestion on my part, and I believe it is a good one. Let the dues stay like they are; when a candidate comes in he has to be a member in good standing six months before he is eligible to sick benefits and a reinstated member three months. The sick benefits to be paid such as first week two dollars, the next twelve weeks five dollars and then if he is still unable to work from the same cause, two dollars and fifty cents for one year and the death benefit be the same, about eighty dollars. If a member becomes sick and unable to follow his regular vocation through his own misconduct, he gets no benefits, and have a clause inserted, if a man is unable to follow his regular vocation but is

able to make a living at some other he will not receive benefits. Have it arranged so that the officers of the locals are relief committees and will have to visit the sick once a week, and cut out the death benefit. You now have ranging all the way from fifty dollars to two hundred and fifty dollars, and set it to one figure for all.

Now the order I belong to pays after the first thirteen weeks, two dollars and fifty cents per week as long as you remain sick, even twenty years, and I do honestly believe we are the strongest memberically and financially in the United States. If the brothers at large would stop their talk about amalgamation and use the same amount of energy in this way we would have some organization to be proud of now. Now brothers, I have been a member of the B. M. & I. S. B. & H. of N. A. for thirteen years, and have been a boomer that long. Some of you will know me and you will say that what we need is a sick benefit. Now let us all get our heads together and do something for the good old order. There are several other labor unions that pay sick benefits. I am, for my part, just as close to the machinists as I ever want to be without amalgamation.

Thanking you for giving me your time, I am
Yours fraternally,
EDW. FREEMAN.

Dear Sir and Brother. Richland, Cal.
Please find inclosed resolutions for publication in the Journal.

Yours very respectfully,
GEO. E. BENNETT, R. S. L. 317.

Resolved, That we extend our warmest sympathy to our worthy financial secretary, Brother William Jones, and wife, in the loss of their babe; and that a copy of this be sent to the Journal, and one to the family, and entered on the minutes of Lodge No. 317, Richmond, Cal.

GEO. E. BENNETT, R. S.
FRANK MALLINSON, Pres.

Beaumont, Texas.

Dear Sir and Brother:

As I told you I would make reports on proceedings of Texas Federation of Labor, I will say that union labor never has had such courtesy shown them by the highest officials of any state as was shown us at Austin. We were first welcomed to the city by Mayor Woodman.

Yours fraternally,
T. C. MADDY.

The following is a partial report of the opening ceremonies and addresses:

LABOR WELCOMED.

The convention of the State Federation of Labor was formally opened yesterday morning in the House of Representatives in a session marked by a wonderful enthusiasm. Notable speeches of welcome were made by Governor Ferguson, Mayor Woodriddle, Senator T. H. McGregor, Judge D. A. Gregg and Martin Broderick, with Judge J. D. Moore

presiding as master of ceremonies. Response for the federation was made by President Ed Cunningham.

The delegates arrived at the capitol about an hour before the convention was called to order, and by 10 o'clock had filled every seat in the vast chamber. The appearance of these men representing the labor interests of the state compared well in dignity and bearing with that of the men who occupied the seats a month ago, save the labor men were noticeably more quiet than their distinguished predecessors.

And then, too, every man remained in his seat from the first tap of the gavel in the morning to the final adjournment in the afternoon and gave his undivided attention to the work at hand, there was no "insidious" lobby to influence.

Judge Moore eloquently presided over the opening ceremonies of the morning. He introduced Martin Broaderick, who, on the behalf of the Trades Council of Austin, warmly welcomed the delegates.

"I welcome you to the most beautiful spot in all of Texas," said Mayor Woodriddle in a brilliant speech, in which he emphasized the relative importance of labor in the forces which make up the world. He maintained that labor should have the greater part of wealth because it is the greatest wealth producer. He foretold the early arrival of the time when labor will be more important than capital. He said that when labor fought for shorter hours it fought for greater efficiency.

Governor's Tribute to Labor.

In a valuable, flowery speech Judge Moore introduced Governor Ferguson as a "most distinguished citizen who has arisen from the ranks of labor."

The Governor was greeted with an applause that lasted for several minutes.

"I am glad that John got through," said the Governor amid a roar of laughter. "If he had spoken much longer I wouldn't have had anything left to say.

"I regard this as one of the most auspicious occasions of one of the most important organizations ever held in this state," the Governor continued. "While we know that labor has no better friend in Texas than Mayor Woodriddle, I disagree with him when he says the time will come when labor will be the most important thing in the country, for the time has already come when it is the most important thing in the country."

He pointed out that the delegates hold a position of great responsibility and that there was great danger of them becoming excessive with their demands, although by adhering closely to the rule of justice all of labor's needs would be obtained.

"It is as much the function of government to prevent the prostitution of labor as it is to prevent the confiscation of capital," he said. "I am not filling my office, but I am filling your office, and I trust the federation will co-operate with us in all public matters. While you are here in the city I

want you to come to see me that we may talk over these matters which are near to your fireside and mine. The Governor's Mansion is open to you."

Prolonged applause greeted the Governor's speech, and upon the motion of one of the delegates the Governor was unanimously elected an honorary member.

Governor Treasures Badge.

President Cunningham swore him in and pinned a delegate's badge on his lapel. "I would rather have this than the sword of Napoleon," remarked the Governor.

East Boston, Mass.

Dear Sir and Brother:

Lodge No. 585 is now affiliated with the Boston Metal Trades Council, a central organization of kindred crafts in Boston, that aims to secure fair play and justice for all union men, and to promote a feeling of good will and confidence between employers and employes. Grievances when discovered are considered before an advisory committee consisting of the different business agents of each craft in the council, and such grievances are adjusted with as much expedition as conditions may warrant. Our representative on the advisory board is Business Agent Daniel N. Generson, who is working hard with the assistance of his brother officers and the M. T. C. to put a stop to men of other trades infringing on boiler makers' work in this section of the country. We have six delegates to the Metal Trades Council, viz., Brothers William E. McNabb, Thomas F. Farmer, James A. Vincent, D. N. Generson, John Warnock and Daniel B. McInnes.

Brother Charles F. Scott was present recently at one of our meetings and from his standpoint of an International Organizer of our Brotherhood outlined a very comprehensive campaign for getting new members from the railroad and contract shops in this part of the country.

Our worthy treasurer, Brother Bernard McDonnell, who is constantly endeavoring to have every job that he works on to be as thoroughly "union" as possible, was presented at a regular meeting a handsome gold emblem button of the Brotherhood for selling the most tickets for our recent ball, he having sold \$31 worth.

President McNabb in conferring the button on Brother McDonnell, paid a well-deserved tribute to the ever faithful interest that Barney McDonnell takes in the welfare of Lodge No. 585 and the Brotherhood in general.

Lodge No. 585 regrets to announce the death of one of its best members, Brother John Anderson, who died suddenly at Westfield, Mass. His identity was disclosed by his union card, and Brothers Vincent and Generson worked systematically to see that Brother Anderson was given proper burial. We will miss the pleasant smile and cheery greetings of Brother Anderson, for whom the night came "when he would work no

more," but we hope that after life's fitful fever he sleeps well. Our charter will remain draped for 30 days out of respect to his memory.

Yours fraternally,
DANIEL B. McINNES, L. 585.

Salt Lake City, Utah.

Dear Sir and Brother:

I wish you would publish the following in the next Journal and continue same for two or three months if possible, as this will help to boost for a railroad that is fair to organized labor, and thus help to increase business and consequently to employ more union men. Safety First Boost for the Denver & Rio Grande Railroad, which is a boost for organized labor. Boiler makers, helpers and their friends intending to see the San Francisco Exposition should travel over the D. & R. G. Railroad. If you know of anyone going to travel or ship freight, tell them to go over fair roads, or ship over fair roads. The Denver & Rio Grande is the scenic railroad of the West. All business you can divert from Illinois Central, Harriman Lines and other struck roads means business for a railroad which is fair to organized labor, the only road which has granted the eight-hour day to its employes. Support the road that supports union labor, as more business means more employment of union men and a helping hand to our brothers.

Beauties of the scenery and general attractiveness of the Denver & Rio Grande Railroad are interestingly portrayed in the following description. The Denver & Rio Grande Railroad begins at Denver and runs over, under, through, beside, among and between vast quantities of high grade scenery on its way to Salt Lake City. Scenery is the D. & R. G.'s specialty. It hauls more people who haven't anywhere in particular to go, than any other railroad. Each year thousands of Americans and a few bold Europeans travel over the road from Denver to Salt Lake, and then turn round and go back in order to sit on the other side of the car and get another eye run of the grandeurs of nature. The sale of magazines and other time-killers on this line is exceedingly small.

"The Denver & Rio Grande begins a mile above sea level and never gets much lower. It starts for Salt Lake by going directly away from it 100 miles, and consumes 750 miles to cover 350 in the direction of the flight of an unintoxicated crow. No one minds, however, as it is considerable sport to put one's head out the window and converse with the fireman as the engine comes past on a heavy curve. The D. & R. G. climbs mountains two miles high, wriggles through canyons so narrow that only one coat of paint can be put on the cars, and crosses rivers which look like the Niagara rapids in hysterics. Over 750 miles of its lines are narrow gauge, and the scenery is a tight fit for it at that. It takes three

locomotives to hoist a train to the top of Marshall Pass, and if more than a dozen heavy men are aboard, the fireman draws time and one half."

Remember, to travel over the Missouri Pacific, Denver & Rio Grande and Western Pacific railroads when going to the fair. And when shipping freight, send it over these roads and help organized labor. I am

Yours fraternally,

B. S. R. HARRISON, C. F. S., L. 103.

Tomahawk, Wis., May 7, 1915.

Dear Sir and Brother:

The past few months a great deal of interest has been shown in the welfare of this Brotherhood by the articles in the Journal. I think enough has been said of the proposed amendments, no matter what some of us think of the increase to the salary of the president at this time. I do believe we can do away with machine politics at our conventions and that by the rank and file adopting the referendum and recall system, whereby it would be impossible to increase present officers' salaries without the consent of the rank and file of the Brotherhood.

We have had a trial of the so-called referendum at one time and some officers and members say it was a failure, but, nevertheless, we can profit by past mistakes and adopt a referendum and recall system that will be a credit to organized labor.

I would like to hear the views of more members on the referendum and recall system through the Journal, so we may send delegates to our next convention instructed to adopt the referendum and recall system

and so protect all funds of our Brotherhood and elect all officers. With best wishes I remain,

Yours fraternally,

THOS. J. FARLEY,
Member No. 302.

Portsmouth, Va.

Dear Sir and Brother:

The next State Federation of Labor Convention will be held at Fredericksburg, Va., June 7, 8 and 9. Brother George J. Thomas of Lodge No. 57 and myself, the undersigned, have been elected as delegates from the C. L. U. of Portsmouth, Va., to represent that body at this convention, and as the boiler makers of Portsmouth and Norfolk, Va., have no delegate representing their locals at this convention, but are very much interested in the boiler inspection laws by state and city legislation and as I need some good intelligent advice in this matter, I take this means because I believe in my heart and soul that there never was one individual that did any more for the working class, both organized and unorganized, as you have done when you were with us in the state of Virginia, and, therefore, I do not hesitate in asking you for the advice I seek, because I have everlasting confidence in your ability to give me what I seek for the interest of the boiler makers.

If possible I would like for you to send me a copy of the inspection laws governing state and city, as well as railroads, so I can draft up some kind of bill and take the same before the locals of Portsmouth and Norfolk, Va., for their approval and have the same indorsed by C. L. U., Norfolk, Va.

NIGHT GANG AT MONTPELIER, O. MEMBERS LODGE 581.

Left to Right, Standing—Hudson, Edwards, Lambertson, Collins, Buntain, Fickle, Tehan.
Left to Right, Bottom Row—Calvin, Farley, Emmons, Cashmere, Gumbler, Bislar.

Boiler Makers No. 428 have a committee out who are securing the number of boilers in the city. In Portsmouth we have committee doing the same thing, but are elected by C. L. U. Committee consists of boiler maker as chairman, machinist and steam fitter, so you see we are very much interested in the steam boiler inspection bills. As I have nothing further to say, I will close.

Hoping to hear from you as soon as possible for the best interest of our Brotherhood and your success, I remain

Yours fraternally,
H. E. PHELPS, Lodge 57.

Concord, N. H.

Dear Sir and Brother:

I am sending you an answer I received from my representatives at Congress which I received through my writing to them a short while ago in regards to a circular I received from the metal trades council in the Panama Canal zone.

The letter inclosed is one that I received from United States Senator Henry Hollis which he received from the governor of the Panama Canal. I wish you would publish same in the Journal.

Yours fraternally,
J. BERRYMAN, R. S. 245.
Washington, D. C., April 6, 1915.

Hon H. C. Hollis,
United States Senate,
Washington, D. C.

Sir:—

Referring to your letter of March 8, 1915, with reference to the employment of alien negro labor on the Panama Canal, and the reply from this office of the same date, you will find inclosed herewith a copy of a statement from the Governor of the Panama Canal, dated March 19, 1915, which clearly sets forth the circumstances under which alien negro labor is employed on the canal.

In the absence of the chief of office.

Very respectfully,

A. L. WAINT,

Assistant to the Chief of Office.
THE PANAMA CANAL ZONE.

Balboa Heights, March 19, 1915.

A statement relative to employment of alien labor on the Panama Canal.

In view of the fact that certain labor organizations on the Isthmus and in the United States have been for some time past severely criticising the employment of alien labor on the Panama Canal and have persistently asserted in many letters to members of congress and officers of the United States Government that American workmen were being discharged and their places filled by cheap, negro labor, I have deemed it advisable to make a general statement of the facts.

I wish to be clearly understood in the beginning as stating that there has been no change whatever in the policy of the United States Government and the canal administration which can be construed to be detrimental to the American workmen. The

assertion that American citizens are being discharged to make places for alien negroes is absurd and not true.

From the beginning of the work on the isthmus negro and native workmen have been used for most of the manual labor incident to all the mechanical, building and construction trades. It is customary in these tropical countries for white men to direct the work and negroes to do the harder parts of the manual and semi-skilled labor, partly on account of the effect of the climate on white men and partly on account of the very great preponderance of the colored population over the white population. The relative proportions of the white and black races in these countries fixes to a large extent the division of labor between them.

The powder men in the canal directed the drilling of the power holes, but the negroes ran the drills. The white carpenters bossed the building gangs, but the negroes cut the timbers and drove the nails under their supervision. White mechanics laid out the repair and manufacturing work in the shops and directed the negroes in the execution of the necessary labor. White foremen directed the mixing of the paints and supervised the painting work, but negroes were sent up on the ladders and on the roofs to do the manual labor of painting. White foremen planned and directed the execution of the electric wiring, but negroes climbed the poles and crawled into the corners where it was beneath the dignity of the white man to go. I do not make this statement disparagingly; it is a literal fact that in a country of this kind, where the negroes have always done the manual labor, it is not compatible with the white man's pride of race to do the work which it is traditional and customary for the negroes to do.

The above has been in general the situation for all the years past during the construction of the canal and is the situation today, with the exception that I have taken away from the negroes some few positions where it was pointed out that the positions were not of the class of work generally described above.

The present agitation is the result of an organized effort on the part of labor unions to force the payment of first-class mechanics' wages for all unskilled as well as skilled work in such trades as the machinists, carpenters, blacksmiths, iron workers, copper-smiths, plasterers, etc. When the reduction of force began it was necessary to let men go, and as they very naturally dislike to go, especially in view of the unsettled conditions at present in other parts of the world, they have resorted to this most unfair charge against the Canal administration to force the government to keep them at first-class rates and pay (generally sixty-five cents per hour) to do the work always performed by negroes, and which in the States would be done by helpers at low, day-labor rates of pay and by apprentices.

A committee of the metal trades unions complained that aliens were being sub-

stituted for American mechanics; their statements were general without specific instances. I suggested that the committees of the separate trades get their data and I would investigate. Though I found conditions had not changed, I put some few Americans on work which had been done previously by aliens and stated that I am perfectly willing to give every job on the canal to American citizens if they will accept the work at wages proportionate to the wages paid in the States for similar work and in comparison with the general scale paid here.

This, however, is not what the unions desire; they desire to force the government to pay first-class, skilled workmen's wages to Americans for performing low-grade, practically unskilled work now performed by negroes, as explained above. I can not concede the justice of their demand.

Within the recent past I have discharged many colored yard engineers, most of whom have been employed by the Panama Railroad Company since French times, to make places for American citizens. I have discharged many operators of small cranes to make places for American citizens. I have prohibited the employment of any but American citizens in clerical positions, paying over \$60 per month (no American clerk that is worth anything will accept less than \$75 here). I have made certain concessions to the men with respect to the machines and tools which negro helpers are allowed to use in the shops. I have endeavored to meet every reasonable demand of the men, as I fully sympathize with their desire that our own people should be given any and every job which, on the same proportionate scale as is paid in the United States, will support them and give them contentment.

But right there is the difficulty. We do not have here the great, white unskilled labor class that can be found in every city and town of the United States, and it is extremely doubtful whether with the same wages such labor receives in the States they would be satisfied with the surroundings they would find here.

It certainly is unfair to the taxpayers of the United States and to the government to ask the canal administration to do this class of work with skilled workmen at high pay for the sole and only reason that these workmen need jobs.

A white American carpenter would not be willing to take a saw, a plane and a hammer and put up a pine kitchen shelf at twenty-two cents per hour, which is all such labor is worth, but he asks us to pay him fifty-six cents an hour, which is the wage of a first-class carpenter who generally is able to plan and build a dwelling house. That is the situation in concrete form.

Since the beginning of the work we have maintained a gold and a silver roll of employes; the gold roll is the roll of American employes and the silver roll of aliens. The following table gives the percentage of Americans on the rolls from 1909 to the

present time and it will be readily seen how ridiculous is the charge that American citizens are being replaced by aliens:

Time—	Total force	Silver	Gold	Percent- age of entire force on gold
June, 1909.....	33,493	28,484	5,009	14.9
Dec., 1909.....	34,035	28,827	5,208	15.3
June, 1910.....	35,588	30,313	5,275	14.8
Dec., 1910.....	35,132	29,591	5,541	15.8
June, 1911.....	32,690	27,612	5,078	15.5
Dec., 1911.....	37,826	32,539	5,287	13.9
June, 1912.....	34,957	30,017	4,940	14.1
Dec., 1912.....	34,659	29,397	5,262	15.2
June, 1913.....	38,301	33,214	5,087	13.3
Dec., 1913.....	32,148	27,676	4,472	13.9
June, 1914.....	29,632	25,400	4,232	14.3
Dec., 1914.....	25,171	21,470	3,701	14.7
Jan., 1915.....	24,564	20,863	3,701	15.0
Feb., 1915.....	23,089	19,624	3,465	15.0

Conclusion.

In conclusion, therefore, I wish to state that the charge that there has been a change of policy on the part of the canal administration to the detriment of the American workmen is absolutely false. There could be no justification for such a change of policy. The absurd charge that Americans are being discharged and their places given to aliens is intended by those responsible for it to discredit the canal administration and create for themselves sympathy and thus force the issue.

GEO. W. GOETHALS,
Governor.

Dear Sir and Brother: Brainerd, Minn.

The policy of continuing "trade autonomy," and to segregate it within its own independent jurisdiction, when the process of machine development is inevitably interlocking the trades, when the lines that defined trade jurisdiction are being gradually obliterated, when this is the logical result of "the machine" and nothing can prevent it, is sheer folly. It is an anomaly, and we are paying the penalty in full for persisting in such an unnatural condition.

Since the first introduction of machinery into industry, the workers have been bitterly opposed to it. In the sixteenth and seventeenth centuries, we are told, the workers dreaded the "machines" so much that they destroyed them, how they even secured laws to prevent their being used. Even today we find ourselves unconsciously objecting to further encroachment of modern invention to our trade. However, we are intelligent enough to understand that the development of the machine must go on. Still the old instinct of dread exists, coupled with the knowledge that the machine, instead of lightening our burdens and giving us greater economic security, has subjected us to greater exploitation and enslavement.

In spite of the unprecedented growth of machinery during the last half century, the working class are in a less secure state

than ever before. It has robbed us of our specialized craft skill and driven millions out of employment, destroyed whole crafts (the glass bottle blowers) and eventually it will completely substitute electricity for steam power. It has built up mighty wealth for a few and reduced the masses to a state verging on poverty. As members of society so vitally affected by this evolution going on in the industry from which we derive our sustenance, it behooves us to take heed, to keep pace with this change, to conserve our strength and assets.

The modern railroad plant has a dozen or more different trades which constitute its working force. So far as the company is concerned, the sole aim and motive is to get as much work out of its force as it can, with the smallest possible outlay in return. The "force," or employes, all look alike to it. To keep these workers split up into a dozen or more different organizations, is to divide, not organize them, is to subject them to dissention and jealousies, to render them helpless against a united enemy by keeping them wrangling over insignificant jurisdictional disputes. To make use of the eleven trades in materially assisting in the defeat of one trade when it rebels and strikes. This effect is caused by our independent form of organization. It requires very little study of our "past actions and practices" to discover these outstanding disgraceful features.

Furthermore, to so divide the workers means a tremendous wasteful outlay of finances. See these crafts duplicating the same methods of conducting business as though they were all going in an opposite direction and antagonistic to each other in the struggle against a common enemy. Are they not all struggling alike for the same identical purpose? Is not their aim and motive the same? Most assuredly it is. They all seek a means of existence, better conditions of life, protection of their economic interests. This being an indisputable fact, why then should they all act independently against a solid opposition? Why quarrel over insignificant matters amongst themselves? Is there some great fundamental difference existing between the workers of the metal trade crafts that, in spite of the identity of their interests, prevents them from becoming united into one whole?

Federation does not overcome these inherent evils. It rather aggravates them. At best it is a superficial, numerical unity and greatly increases our already overwhelming waste of finances. To speak of "dropping our substance and seizing a shadow," in view of existing conditions, is illogical. In the last analysis, our treasury is our substance and through our present system of organization, it is being, to a great extent, squandered uselessly. It is idle to talk of our "substance" while we are so divided into fragments. If we had been militant unions like the "Western Federation of Miners" or the "Structural Iron Workers" and fighting for life against such

an unscrupulous foe as they are, our puny organizations would either be completely crushed, or consolidated.

Our recent experience on the Harriman and Illinois Central lines, etc., lead me to think that the big interests are about to pay the railroaders their respects. The same powers that have almost crushed the "Structural Iron Workers" and are so venomously attaching the "Miners" are speedily securing control of the railroads. When they do, beware. It is then we will need "substance." Today we cannot withstand a skirmish.

If this United States were involved in war with some powerful foreign nation, would it be sensible for each state to have its own little navy and army, each acting and fighting independently, and each being defeated in turn? Of course it would not. They would act and fight as one for then they could not be crushed. We are simply pursuing this same senseless course and we simply invite defeat and annihilation. Capitalism is becoming more arrogant, brutal and avaricious and will not quietly submit to our little puny attacks.

What the future will bring, we do not know. Therefore, it is essential that we solidify our forces and conduct our advance along proper channels. The evolution of industry goes on and at every turn it relatively changes the status of those associated with it. We are in the process that is reducing us into lever manipulators for which we will need no brains—mere automatons. So the forces at work will compel us to amalgamate or else we will be smashed.

There are those sincere but timid souls who dread any innovation. They labor under the delusion that "things have always been so and always will be so." They fear some dreadful cataclysm will occur if we attempt to change the established order. At any new proposal they cry, "It will never work." Then when it gets going, they cry, "It will never stop." The question of amalgamation is not a "cut and dried scheme" and to term it "chimerical" and "impractical" is absurd and puerile. The amalgamation of those elements whose material interests are identical is a great and profound principle and a scientific one, and when applied to a working class in its struggle for justice—"human rights versus property rights"—it will place in the hands of labor an instrument that will greatly assist in bringing about that for which we all strive—economic freedom and security. It cannot be smothered with ridicule nor can it be sneered away. It is right in principle and it rests upon us to build a sane and sturdy superstructure upon this solid foundation.

A great scientific truth is, the thoughts and actions of men are determined by the manner in which they obtain their living. This is the compelling force that always keeps us in motion, that creates the feeling within our hearts, that "united we stand, divided we fall," and that our motto must be the "concern of all." We are not called upon

to immediately drop our present organization and form a new one. This thing has got to be studied out in detail and it can only come about by mutual consent. To talk of radicals dominating or seeking to lead us astray is only confusing the issue. We are told that organized labor is in its "infancy here." Very true, and a convincing reason why we should hasten its growth is that capitalism is not only in full manhood, but in its dotage.

Now capitalism is the antithesis of organized labor, and for labor to stand, and successfully defend itself, it should at least be in the advanced stage of manhood. With the injunction, the press and brutal gunmen and thugs, the growth of labor has surely been retarded. When out of almost thirty millions of workers only about three million are organized. We surely are in our infancy, and we will remain in swaddling clothes so long as we child-like continue to lie in the old-fashioned cradle of independent organizations.

Let us stand up and feel like men, equipped with an organization through which we can secure our rights. We have the natural material, why not make use of it? The principle is sound and all that is needed is the logical and carefully worked out details.

Fraternally submitted,

J. G. BROWN,
Lodge No. 116.

Miles City, Mont.

Dear Sir and Brother:

Just a few lines to let the Brotherhood at large know the conditions in the Northwest are not as good as they used to be. The Milwaukee and the Northern Pacific both are working five days a week, eight hours per day. In former years they always worked full time on both these roads and were hiring practically all the boiler makers they could get. In outside work such as pipe lines, gas holders, oil tanks and stand pipes, it seems that the structural iron workers have all this work cornered, and if a boiler maker wants to work at his own trade outside of railroad work, he must pay to the Structural Iron Workers' Union one dollar per day for the privilege of working at his own trade. There have been enough unemployed members through Miles City since spring to build a pipe line from Tacoma to Kansas City, but still the structural iron workers have all this class of work in this section of the country. Surely somebody is not tending to their business which they are being paid to for this organization. Who it is we don't know, but we ought to take steps to find out who is at fault in this matter.

With practically two-fifths of our members unemployed and in search of a job, we think it would have been good policy to secure all this outside work for our members. Brother Callahan visited our lodge recently and he stated that the Milwaukee had laid off boiler makers at several points on the Milwaukee line east of Minne-

apolis, and we think that good times exist only in the minds of the editors of big newspapers, as we have not seen any improvement in business in the past year, nor do we look for any improvement for some time to come.

While we are always glad to see a traveling brother, we can tell him before he starts for the Northwest that it's a mighty poor place to come if he is looking for a job.

Hoping you will receive this in time for the next publication, I am

Yours fraternally,
CHAS. E. COOK, C. S. L. 520.

Note.—In reference to the alleged neglect in connection with this pipe line work, we have made inquiry and find that the first intimation that this work was being done was received at headquarters the latter part of March, and International Vice-President Atkinson was notified and instructed to investigate, which he did, and found the pipe line was about finished; he covered this in his report which appeared in May Journal. We make this statement in justice to those against whom the criticism is directed. If our members will work on jobs for months or otherwise have knowledge that work is being done by other trades that belong to our members and will not make the facts known promptly, it cannot be expected that these matters can be remedied. The members owe it to themselves as well as their organization to cooperate with the officers in matters of this kind.—The Editor.

Dear Sir and Brother: Tulsa, Okla.

Am inclosing a list of members of this Brotherhood who are working on the unfair jobs in the Oklahoma oil fields and the register number and lodge to which they belong to is unknown to us. Will ask you to publish them in the Journal below the list of names that you have with numbers and fines attached and if we are so fortunate to find where these members belong and their numbers we will prefer charges against them. We will appreciate it if any of the members who read this list will let us know of any information that will assist us in any way:

A. Tipton, Tom Reed or Reid, Slim Thompson, Buck Allen, Mike Killian, Red Palmer, Joe Boon, Al Lowry, D. D. Burke, Barney Dublock, L. M. Mullen, Jim Sears, a former member of Big Springs, Tex.; W. S. Quigg, formerly of Chanute, Kas.; James Clemo, who has a card out of some Canadian lodge.

Hoping that this is satisfactory and with best wishes I am,

Fraternally yours,
RICHARD LEAHY, Sec. 592.

Honolulu, H. I.

Dear Sir and Brother:

Inclosed find list of our new officers, as I have no official roster I will have to give them to you on this sheet: President, Frank Esman, Majestic Hotel; vice-president,

James L. McGuire, Honolulu Iron Works; recording secretary, Thomas H. Murray, 1541 King Street; corresponding secretary, W. H. Lane, 900C Kanoa Lane; treasurer, Al Ferge, 1509 Young Street, and inspector, H. W. Doyle, Caton & Neull Foundry.

I will also ask you to find space in the Journal to notify the secretaries of the different lodges through the Journal that when they send raffle tickets to Honolulu that when they receive the money, the least they could do is to send a receipt. We are buying raffle tickets every month from section of the main land, and when I send the money, asking for receipt of same, it is one out of every ten secretaries that sends a receipt and unless the result comes out in the Journal, we hear no more about them.

Kindly place a note in the Journal notifying the secretaries to that effect, and oblige,
W. H. LANE, C. F. S.

Princeton, W. Va.

Dear Sir and Brother:

Inclosed you will find a copy of resolutions which we wish to have published in the next issue of the Journal.

Yours fraternally,
J. J. BOWER, C. S. L. 551.

Whereas, It has pleased the Almighty God in his infinite wisdom to remove from our midst W. C. Wells, brother-in-law of Brother S. Garrett; be it

Resolved, That Local No. 551, Boiler Makers, Iron Ship Builders and Helpers of America, do hereby extend our utmost sympathy to the bereaved family, and a copy of these resolutions be sent to the family, a copy sent to the Journal for publication, and one to the local.

CHAS. MILLER,
W. A. MEADOWS,
W. T. FOSTER,
Committee.

At a regular meeting of Lodge No. 551, the following resolutions were adopted:

Whereas, It has pleased the Almighty God in his infinite wisdom to remove from our midst the brother of our brother, George R. Williams,

Resolved, That we extend to our brother our heartfelt sympathy in his sad hour and pray that the Almighty God may comfort and console him in this hour of sorrow; and be it further

Resolved, That these resolutions be spread on our minutes, a copy sent to our brother and a copy be published in our official Journal; also charter draped.

F. C. McDOWELL,
M. W. RATLIFF,
H. F. CHAMBERS,
Committee.

Wichita Falls, Tex.

Dear Sir and Brother:

At a regular meeting of Lodge No. 576, the following resolutions were adopted:

Whereas, It has pleased the Almighty God in his infinite wisdom to remove from our midst the beloved mother, father, sister and brother of our esteemed brother, Dud King; therefore, be it

Resolved, That we, the members of Lodge No. 576, extend to our worthy brother and family our heartfelt sympathy and condolence, in this their sad hour of bereavement softened only by the confiding hope that their spirits have departed to a better and brighter sphere where sorrow is unknown; and be it further

Resolved, That a copy of these resolutions be sent to our bereaved brother and family and a copy sent to our Journal for publication, and a copy spread upon the minutes of our meeting.

W. O. HOLLIS,
R. A. CAMPBELL,
E. A. MONOHAN,
Committee.

Chicago, Ill.

At a regular meeting of Central Lodge No. 220, I. B. of B. M. and H. of America, the following resolutions were unanimously adopted:

Whereas, It has pleased the Almighty God in his divine wisdom to remove from our midst the dearly beloved brother of our worthy and esteemed brother, Thomas P. Smith; be it

Resolved, That we, his fellow brothers, extend to our fellow brother our heartfelt sympathy in his inconsolable loss, and pray that the Almighty God may comfort and console him in his sad affliction, that he may bear his trial with fortitude; and be it further

Resolved, That a copy of these resolutions be spread on the minutes of our meeting, a copy forwarded to our bereaved brother and a copy sent to our Journal for publication.

LAWRENCE CLEGG,
THOS. KELLY,
A. G. SMITH,
Committee.

Chicago, Ill.

Dear Sir and Brother:

Inclosed you will please find a resolution for publication in our next Journal. I remain,

Yours fraternally,
EDW. OSBORN, S. L. 434.

At the regular meeting of Lodge No. 434, the following resolutions were adopted:

Whereas, It has pleased the Almighty God in his divine wisdom to remove from our midst the beloved father of our brother, Peter Kayden; therefore, be it

Resolved, That we, his fellow brothers, extend to him and family our heartfelt sympathy in this hour of sorrow; and be it further

Resolved, That a copy of these resolutions be spread upon the minutes of this

meeting, a copy be sent to the bereaved family and a copy sent to our Journal for publication.

WM. COOK,
F. CROAKE,
R. SHAW,
P. O'GRADY,
EDW. OSBORN,
Committee.

Peoria, Ill.

At our last regular meeting of Lodge No. 60, Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America, the following resolutions were adopted:

Whereas, It has pleased the Almighty to remove from our midst, by death, our esteemed brother and co-laborer, William Thomas, who has for many years occupied a prominent rank in our midst, maintaining under all circumstances a character untarnished, and a reputation above reproach; therefore,

Resolved, That in the death of William Thomas we have sustained the loss of a brother whose fellowship it was an honor and a pleasure to enjoy; that we bear willing testimony to his many virtues, to his unquestioned probity and stainless life; that we offer to his bereaved family and mourning brothers, over whom sorrow has hung her sable mantle, our heartfelt condolence, and pray that Infinite Goodness may bring speedy relief to their burdened hearts and inspire them with the consolations that hope in futurity and faith in God give even in the show of the tomb;

Resolved, That these resolutions be spread on the records of No. 60, that a copy of them be presented to the bereaved family of the departed, a copy furnished to our official Journal for publication and the Peoria Labor Gazette; also that our charter be draped for the period of sixty days.

WM. MARTIN,
F. HIERSPIEL,
OLIVER VON ALMUN,
Committee.

Big Springs, Texas.

Dear Sir and Brother:

At the last regular meeting of Signal Mt. Lodge No. 423, Big Springs, Texas, the following resolutions were adopted:

Whereas, It has pleased the Almighty God in His divine wisdom to remove from this life the infant daughter of our esteemed brother, J. E. Williams; therefore, be it

Resolved, That while we bow to Him above who doeth all things best, we, his fellow brethren, extend to the bereaved mother and father our sincere sympathy and may Almighty God help them to bear this great sorrow and loss.

Resolved, That a copy of these resolutions be placed on the minutes of our local and a copy sent to our official Journal for publication.

Signed, F. M. PURSER,
EARL UPSHAW,
JAS. G. MARTIN,
Committee.

South Kaukana, Wis.

Dear Sir and Brother:

I hereby trust you will allow a short space in the Journal for these few lines. Mr. Edward Lindsley a highly esteemed and prominent brother who was a resident of Ashland, Wis., died suddenly Monday morning, February 8, 1915, at 2 o'clock, at the home of his parents. Lodge No. 311 of Kaukana held a special meeting and sent a delegation of six brothers who acted as honorary pall bearers, who accompanied the remains to the cathedral and cemetery.

The funeral took place on the 12th, at the Cathedral. Floral designs were sent by Lodge No. 311 and friends. Surviving him are his most devoted and faithful wife and parents. No tribute beyond the good moral life of Mr. Edward Lindsley is necessary to keep his memory forever fresh in the hearts of those who knew him.

Correspondent Lodge No. 311.

Bluefield, W. Va.

At a regular meeting of Bluefield Lodge No. 405, International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America, the following resolutions were unanimously adopted:

Whereas, It has pleased Almighty God in his divine wisdom to remove from our midst the dearly beloved mother of our worthy and esteemed brother, S. J. Jones; therefore, be it

Resolved, That we, his fellow brothers, extend to our brother our heart-felt sympathy in this, his hour of bereavement, and pray that the Almighty God may comfort and console him, and he will bear his trial with fortitude; be it further

Resolved, That a copy of those resolutions be spread on the minutes of our meeting, a copy be forwarded to our bereaved brother, and a copy be forwarded to our official Journal for publication.

Dear Sir and Brother:

At a meeting of Wabash Lodge No. 267, the following resolutions were passed:

Whereas, the Almighty God has removed from our midst and from the ones near and dear to him our worthy brother, William Codner; therefore, be it

Resolved, That we extend to his wife and family our heart-felt sympathy in this their hour of sorrow, and may God comfort and console them; and be it further

Resolved, That a copy of these resolutions be sent to the bereaved wife, a copy to the Journal and a copy spread on the minutes of this meeting.

J. J. CADDAGAN, Pres.
F. R. LEE, Sec'y.

A Compilation of Labor News.

BY THE A F OF L NEWS SERVICE

GRUNDY IS A BITTER LOSER.

Philadelphia.—Furious over his failure to block the child labor bill, President Grundy of the Pennsylvania Manufacturers' Association has issued a public statement denouncing friends of the bill who would not agree to amendments "in some particulars."

The manufacturer declares this to be "a fanatical cruelty," which none will approve or condone when the public comes to appreciate it fully.

President Grundy—who is a mill owner—tells the public that bitter days are coming for those who championed this bill, and he wants it understood that employers cannot be blamed when wreck and ruin overtake this fair state. This is Mr. Grundy's dismal warning:

"The Pennsylvania Manufacturers' Association feels that it should make a final statement regarding its attitude toward the measure in order that the blame for the hardships, the suffering and the serious curtailment of industrial opportunities which it will produce—indeed, is already producing—may be placed upon the shoulders of those who are responsible for it, and not upon the shoulders of the employers of Pennsylvania."

President Grundy deprecates the arrival of January 1, 1916, the day the law goes into effect, for then, declares this mill owner, the doors of the factory and mill "which heretofore have afforded opportunity for livelihood and advancement to juveniles" will be closed against them.

The bill as passed by both houses, and favored by Governor Brumbaugh, provides for a nine-hour day and a fifty-one hour week, but out of these hours there must be eight hours of continuation school work between the hours of 8 a. m. and 5 p. m. This was the feature opposed by the manufacturers. President Grundy says the bill is "not a 51-hour bill, but a 37½-hour bill." He and his colleagues fear the reduction of hours will force other employes to work shorter hours, because these employes de-

pend on what President Grundy terms "juvenile workers."

Philadelphia.—School authorities in this city are preparing to spend \$250,000 and employ 150 public school teachers to establish the continuation schools demanded in the child labor bill, passed by the state legislature and approved by the governor.

MINERS' LONG STRIKE ENDS.

Cleveland, O.—The thirteen months' strike in the Eastern Ohio coal fields has ended with victory for these 15,000 members of the United Mine Workers of America. The strike has been bitterly contested, and its triumphant end is an epoch in American trades unionism, as it again emphasizes the power of economic organization, when backed by determined men.

The cause of the strike was the refusal of operators to accept the Green anti-screen law, which compelled payment for all coal mined before it was screened. Eastern Ohio operators demanded a rate of 44½ cents a ton because of the law. Operators in other sections of the state were paying the union rate, 47 cents, and were accepting the law.

The strike settlement provides for 47 cents, run of mine basis. This has been accepted by the miners' scale committee, subject to ratification by the miners' convention, to be held at Wheeling.

The settlement means that the miners, through their economic organization, have forced recognition of the principle contained in the Green anti-screen law, and which they have urged for the past twenty years. At this writing attempts are being made to repeal the Green law by making it "optional," but some miners say they are now in a position to enforce the run of mine system through their trade unions, without depending on the law.

Other provisions in the eastern Ohio strike settlement call for arbitration of all questions in dispute. This applies to the discharge of miners.

Secretary-Treasurer Wm. Green of the

United Mine Workers' union states that the international union, the miners' state organization, other labor organizations and sympathizers paid \$1,504,500 to the support of the strike, which attracted nation-wide attention because of the tenacity of these loyal unionists during the past winter.

INJUNCTIONS WRONG LABOR.

Springfield, Ill.—In urging the state legislature to pass the pending anti-injunction bill, intended to regulate the issuance of these court orders, officers of the State Federation of Labor say:

"It may be said that because violence sometimes occurs in strikes injunctions are necessary to preserve the peace. Just what does that mean? The use of violence is a crime under the law. If a man commits murder, the law provides certain methods of preferring the charge against him, of arresting him, of providing him with counsel, a trial by an impartial jury, and accords him certain rights with which in the interest of justice, it has been found necessary to clothe even the meanest criminal. It is a well recognized fact that to deny these rights to men charged with crime would result in the conviction of the innocent.

But when a working man goes on strike, judges arbitrarily deprive him of the right of trial by jury, assuming to punish him, not for the commission of the crime forbidden, but for contempt of court. The right accorded to the meanest professional criminal is denied to the working men and women on strike.

"When the court arrogates to itself the power to issue injunctions for the purpose of enforcing criminal law, it sets itself above the statutory law, departs from the domain of property rights in which the injunction process has a legitimate place—and invades that of personal rights in a manner for which there can be no excuse, except that the court thereby becomes the sole judge of the law and the fact, and, if the parties enjoined are declared guilty of contempt, the extent of the punishment. All of which is in direct violation of the law."

R. R. TRIED TO INCITE RIOT.

Washington.—Riot and bloodshed was the purpose of Pennsylvania railroad officials during the Altoona shopmen's strike of 1911 was the sworn testimony of Samuel M. Hoyer, of Altoona, before the federal industrial relations commission. The witness was mayor of Altoona at the time of the strike. General Superintendent G. W. Creighton, he said, had repeatedly urged him to arrest striking employes of the company without cause, and to prevent the employes from parading, even though their parades were conducted in the most orderly manner.

"When I told Mr. Creighton that if I did what he wanted me to do it would cause rioting and bloodshed, he asked, 'what of that?'" said Mr. Hoyer.

The ex-mayor declared the strikers were

conducting themselves with perfect order, and that there was no lawful reason for interfering with their peaceful assemblages or parades, and that to have done so would "precipitate trouble of a serious nature."

The witness told the commission of his efforts to settle the strike. He said: "Creighton did not appear to want to settle the strike. He seemed to want trouble, and apparently, was seeking to cause a riot."

FOLLOWS U. S. SUPREME COURT.

Columbus, O.—The state supreme court has followed the decision of the United States supreme court in setting aside the Kansas law which made it illegal to discharge a worker because of membership in a union. The Ohio court affirmed the judgment of the Hamilton county (Cincinnati) court of appeals in the suit of a member of a union dual to the bona fide Boot and Shoe Workers' union, who asked redress because he was discharged. Both Ohio courts hold with the United States supreme court that a worker can quit for no reason or any reason, and the employer has the right to discharge.

Trade unionists in this state say that even were the law upheld, anti-union employers would find ways to evade it, and these workers point to the fact that hostile employers do not usually make it a practice to give membership in a union as the reason for dismissal.

The decision is used as an argument for the necessity of strong organization among the workers to protect them from being victimized.

The Ohio statute was passed in 1892. The Ohio supreme court was divided on the question.

PROTEST LAWSON'S TRIAL.

Scranton, Pa.—The Evening Times of this city makes vigorous protest on the verdict at Trinidad, Colo., in the case of President Lawson, of the Colorado district, United Mine Workers of America.

The editor says, in part:

"Lawson was charged with the murder of a deputy. Nobody saw Lawson fire the shot that killed the armed deputy. Nobody heard Lawson issue orders to shoot the deputy. Nobody testified that Lawson had anything to do with the incident.

"Lawson was one of hundreds of men, women and children who had been put out of house and home by the operators and lived in tents on the hillsides.

"Because of his position as a union officer, Lawson was recognized by the men as their leader. On the purely theoretical ground that Lawson was the commander of the men, some of whom fought with the deputies, Lawson was accused of the worst crime a man can commit, and put on trial.

Lawson's life was to be the forfeit. A jury found him guilty. The state calls it a great victory for law and order.

"Remembering the massacre of Ludlow, the activity of hired company thugs as

deputies, the wild excesses of the militia, the stupidity and the cowardice of the state, and the conditions imposed upon men, women and children by the operators with the consent of the state and in violation of the law, as has been expressly shown, the conviction of Lawson is a sickening perversion of justice and an outrage that adds another smear to Colorado's mean record."

"SPOTTERS" LAW ILLEGAL.

Boston.—It would be unconstitutional to pass a law in this state compelling railroads, before discharging or disciplining an employe, to permit him to make a statement in the presence of the person giving information.

This is the opinion of the state supreme court, which passed on the question at the request of the state senate, now considering a bill to regulate railroad "spotters."

The opinion, a majority one, answers three questions asked by the senate. The majority say: First, that the legislature may not enact legislation limiting the right of railroad corporations to discharge their employes for cause; second, that the legislature may not give railroad employes, as a class, privileges not enjoyed by the rest of the community; third, that senate bill 537 is unconstitutional.

Justices Loring and Crosby transmitted a dissenting opinion.

UNIONISM PAYS, IS WORLD STORY.

Melbourne, Australia.—Unionism is the best investment a worker can make, declared G. M. Prendergast, in an address before the Cold Storage Employes' Union, which started in 1908 with forty members, and has now enrolled 735. At one time wages were 6d (12 cents). The rates now are 1s 3d (31 cents) and is 4½d (33½ cents), with extra pay for overtime. The speaker showed that the annual dues of 26s (\$6.50) made possible an average increase of \$325 per year, "which was a long way better than any other investment."

ROADS' NEW REVENUE HIGHER.

Washington.—Net revenues per mile on 49,727 miles of Eastern railroads for March amounted to \$474 as against \$425 in March, 1914, according to a statement made by the interstate commerce commission. Railway operating revenues amounted to \$90,212,176 in March, 1915, as compared with \$95,975,347 in March, 1914; railway operating expenses, \$66,643,157, as compared with \$74,879,730; net revenue from railway operations, \$23,569,019, as compared with \$21,095,617; revenue per mile, \$1,814, as compared with \$1,935; expenses per mile, \$1,340, as compared with \$1,510; net revenue per mile, \$474, as compared with \$425.

LONE MINER DEFEATS COMPANY.

Wilkes-Barre, Pa.—Joseph Levanovage of Buck Mountain has won his fight in an arbitration court against the Lehigh Valley

Coal Company, which is ordered to pay him \$75 for time lost because of the dispute. Proceedings were conducted under the conciliation and arbitration agreement between the operators and miners. Judge George Gray of Wilmington, Del., decided the controversy, which had a different ending from the days when miners were unorganized and were discharged if they dared to protest.

CONVICT LABOR TO END.

St. Paul, Minn.—The long agitation against convict labor in the city prison broom making plant is bearing fruit. Commissioner Goss has assured a delegation of unionists he opposes the plan, and if he is supported by the city council it will be discontinued. Nothing definite can be done until the first of the year when council will compile a new budget. In the meantime, agitation will be continued.

PASS PRISON REFORM BILL.

Harrisburg, Pa.—The house of representatives passed without opposition a bill providing that convicts shall be employed in the manufacture of such articles as can be purchased by state and county institutions, thus removing them from direct competition with free labor generally. Provision is also made for the payment to the prisoners of a certain proportion of their wages, while the balance is to go to their dependents.

TO URGE PENSION THEORY.

Washington.—The Federal Retirement Association has been formed by navy yard machinists in this city. The organization will not be partial to any particular form of retirement, but will devote its energies to education, depending on Congress to work out a pension which it thinks best for federal employes.

VIOLATE LABOR LAWS.

Charleston, S. C.—On the complaint of state authorities, manufacturers and merchants in this city have been fined for violating the law regulating hours of labor for females. Sensational developments were expected in one case of women forced to labor more than sixty hours a week, but the accused employer pleaded guilty.

DO UNSKILLED EAT LESS?

Washington.—In her annual report, Constance D. Leupp, president of the Consumers' League of the District of Columbia, favors the creation of boards in each industry "to decide on what the lowest legal wage shall be, not for the untried worker, but for the adult, experienced girl and woman."

GERMAN MILLS USE WIND AND STEAM POWER.

A curious combination of ancient and modern power is seen in some sections of Germany where many of the mills are equip-

ped with windmills, much like those of Holland, as well as with modern engines using superheated steam, one serving as auxiliary to the other. One flour mill, which is typical, is driven by wind power

whenever possible, but is provided with an 80-horsepower engine which assists in furnishing the power when the wind power is lacking or insufficient.—Popular Mechanics.

Among Our Exchanges.

PAYING THE PRICE.

Whatever a man soweth that shall he also reap is a truth that cannot be disputed. Not only does he reap in kind, but he also reaps in proportion. There is no great excellence without great labor, and there is little achievement without self-denial. We must always pay the price. These truths are worthy of deep consideration; indeed, we cannot give them too much thought. They apply in everything that we undertake. Then let us apply them to the labor movement.

When we ask why labor is always at the bottom the answer is, because it has not paid the price. We have not done the things necessary to bring about better conditions. Had we done those things, happier results would have followed with mathematical certainty. It is true that we have done enough, and more than enough, and have suffered enough to have brought us the good times we long for. But our labor and sacrifice have not been devoted to our own advantage. Our time and toil have been given to make others rich.

Hence, we are not poor and destitute because we cannot and do not make enough to meet all of our reasonable needs, but because we do not give proper care to our own interests—to advancing our own cause. We build fine houses, but they are for the occupation or gain of men who have grown fat upon our toil; we erect and operate great enterprises, but the dividends come not to us, and we laboriously give our strength and skill to produce much more than enough to feed, clothe and shelter the whole family of mankind, but the distribution is unequal—somebody else gets the lion's share of what we produce.

Can anybody compel us to submit to this inequality in profit sharing by force or cunning, if we are wise and alert? Certainly not. Most of us would do the same thing if we had the chance. The blame rests solely with us—we are not willing to pay the price of justice.

Eternal vigilance is the price of liberty; it is also the price of justice.

There are a number of things that constitute the price of success in the labor movement, all of which are suggested by common sense and which may be easily done. Among these is the purchase of union made goods. This may not, in many cases, directly benefit you or your craft, and for that reason many union people are not careful about it, but it never fails to help the cause as a whole, and thus help all indirectly. Another thing of importance is the prompt and punctual attendance at union

meetings, especially meetings for the discussion of questions affecting the interests of union labor. Men in other callings never fail to attach great importance to such conferences, and, as a result, they reap the rich reward. The men who succeed in climbing up over our heads never fail to keep in close touch with politics, and they watch and endeavor to influence all legislation bearing upon their interests.

All union institutions, especially the labor press, ought to be liberally and constantly sustained. Look at the numbers, wealth and wide circulation of the publications that are not friendly to the cause of labor. We spend thousands, yes, millions to make them rich and powerful, while we often fail to pay the price of our own publications. What can we expect of the harvest?—The Amalgamated Journal.

REACTIONARY LEGISLATION.

With the exception of the National Congress, a vast majority of the law-making bodies of this country have seemingly gone out of their way in an effort to destroy by repeal the progress made by the enactment of laws during the past few years which had for their intent the betterment of social conditions generally.

In no section of the country has this condition been found to exist so acutely as in New York state, where, under the pressure of the party "whip" legislation of the most reactionary character has been jammed through the legislature regardless of the protests made against this action, by the people.

During the past three years a vast amount of constructive legislation has been enacted which has been of great benefit to the workers of New York state, much of which has aided in bringing the Department of Labor to a very high state of efficiency, and to destroy these laws seems to be the particular job of the Republican party, which is temporarily in power in the legislative and executive branches of the state government.

Not content with nullifying the state fire laws in relation to factories by abolishing the State Fire Marshal's office and other "ripper" legislation of the same character, nor with the amendment to the compensation law which virtually gives complete control to the casualty companies in the adjustment of claims in case of injury, a bill is now before the legislature which to all intents and purposes abolishes the effectiveness of the Department of Labor and the Compensation Commission by combining

these two important branches of the public service.

The sinister motive behind this legislation is receiving condemnation on every hand, and it is being openly charged that the party in power is paying political debts to the casualty companies, manufacturing and real estate interests, who will be the beneficiaries of the "ripper" laws that are being enacted.

The attitude of disrespect toward the wishes of the people which is being exhibited by the governor and the legislature is, to say the least, unbearable, and it is predicted on all sides that when this band of reactionaries again appeals to the people for their suffrage, many of them will be relegated to private life, where they properly belong.

Organized labor, its friends and sympathizers will fight to the last ditch to preserve the laws which have been enacted for the preservation of life and limbs of the workers, and when the day of reckoning comes for those who would destroy these laws with impunity, the hosts of labor will not be found wanting.—The Garment Worker.

A GOOD FIGHTER.

The most abused man in the ranks of organized labor is the one who tries to better the conditions of his fellow workers. It does not matter how sincere he is or whether he is paid for the time he loses, and it is often the case that the man who does the most work in this line is the less thanked, not to say paid. Employers call him an agitator and assert that if it were not for him they could hire help cheaper. Employers do not stop to think that the poorest paid people in the land today are the officers of labor organizations. If some of them had to do the work gratis that is performed by good and true union men they would throw up their hands in holy horror.

The conservative labor agitator is a benefactor. It is through his efforts that fair wages and short hours are granted; it is he who fights the battles of his many fellows, and it is he who is first discharged when occasion requires a laying off or a reduction of expenses. He is a bold man—in the eyes of the employer. And yet this same agitator may have a large family to support, and the time he loses is his own. A labor organization without an agitator might as well not exist.

The men who stump the corridors of the legislative halls looking after legislation are dubbed agitators. What would you call the well paid lawyers who look after the interests of the corporations around the capitol? They must be called legal gentlemen. It is only the man who has the courage to voice the sentiment of the oppressed toiler who is an agitator.

These words are from an exchange and every honest man, whether in the ranks of labor or outside, must acknowledge the truths contained in them. There is one sad fact, however, not contained in the fore-

going, and that is that the laboring man who does the most for the interest of his fellow toilers is frequently the recipient of greater abuse from those same "fellow-toilers" than from the employers. The sincere, honest, unselfish union man, whose thought and time and efforts are devoted to the interests of all, often meets the basest ingratitude. Under such circumstances the progress made by unionism is truly wonderful, but it would have been greater had we always been true to each other and thoroughly sincere and honest in the prosperity of organized labor. If there is any class of men among whom the spirit of true brotherhood should exist that class is organized labor.

Unionism stands for all that is grand and noble in men. Our mutual interests demand that we act the part and be union men in thought and deed as well as in name.—Exchange.

PEACE HATH HER VICTORIES.

May Day paid its annual visit to Rochester this year in comparative peace, and it left behind a heritage of good will in which we all may share.

While other parts of the country have been torn by industrial strife, this city remained practically free from any serious labor disputes.

The cloud of a possible trolley strike was cleared away by an appeal to reason, and the happy ending of the painters' difficulty, under the guiding hand of Mediator McManus, as well as the friendly negotiation of a new agreement between Division 282 and the local railway company, were proof indeed that the principle of "give and take" was uppermost in the minds of both workers and employes on May Day, 1915.

The public is usually well informed on the horrors of war, but hears little about the victories of peace.

Numerous contracts between Labor and Capital, affecting thousands of our people, have been quietly renewed during the past few days, and the benefits involved must in the long run contribute much to the prosperity and progress of the city.

Surely the way of the mutual agreement is the best way after all.—Labor Herald, Rochester, N. Y.

O, YOU KNOCKER, YOU SOREHEAD, READ THIS.

Salt Lake Times: After God had finished the rattlesnake, the toad and the vampire, He had some awful "substance" left with which He made a "knocker." A knocker is a two-legged animal with a corkscrew soul, a water-sogged brain and a combination backbone made of jelly and glue. Where other people have their hearts, he carries a tumor of rotten principles. When the knocker comes down the street honest men turn their backs, the angels weep tears in heaven, and the devil shuts the gates of hell to keep him out. No man has the right to knock as long as there is a pool of water

deep enough to drown his body in, or a rope to hang his carcass with. Judas Iscariot was a gentleman compared to a knocker, for after betraying his Master he had enough character to hang himself, and a knocker has not.

ONE MORE FEATHER IN THE PLUMAGE OF THE I. W. W.

Robert D. Watson has been arrested in Butte, Mont., charged with robbing the Murray bank.

Watson has been the spokesman for the I. W. W., who were largely responsible for the destruction of the Butte Miners' Union Hall nearly a year ago, and was the pal of "Muckie" McDonald and "Joe" Bradley, who are serving time in the penitentiary at Deer Lodge.

After Watson was arrested it was discovered that he was a Burns detective. Watson was the loudest and most violent shouter for the seceders and I. W. W. in Butte, and the fact that he is on the payroll of the Burns agency puts another feather in the plumage of the I. W. W.

The claim is made that Watson is guilty of a number of holdups, and at present his chances are bright to graduate with high honors in the same institution that has been honored with such celebrities as McDonald and Bradley.—Seattle Union Record.

JOHN BUNNY.

In this day and age nearly everyone goes to the "movies."

And throughout this broad land there is weeping tonight among those who go to the "movies," among those who help make the "movies," and among those who manage the motion picture machines that make the "movies" move.

John Bunny, prince of all movie characters, is dead!

He passed away this week, and his legion friends, for his friends were legion, are sad.

John Bunny with his optimistic smile brought gladness to millions of hearts that were otherwise made sad in this mad scramble for existence.

But John Bunny was something more than a "movie" actor.

Many Detroit union men, and particularly the members of the Motion Picture Operators' Union, have good reason to remember this man who made the whole world laugh.

John Bunny became a union man while playing at a theater in this city.

That was one night last year.

It was not a funny occasion for our dead union brother.

The occasion was most solemn for this man, who was paid a higher salary than the president of the United States is paid, for his acting.

He was being initiated into a labor union. Joining that labor union meant something to him.

It was an event in his life.

When he was presented with his membership card in the Motion Picture Operators'

Union, the card being of gold, the man who dried the tears of others himself wept.

He told the Detroit union men who were present his views of unionism.

He told them that their cause was just and that they should stand solidly together because they were members of the world's most progressive organization.

So that while every lover of the "movies" has reason to be sad tonight, Detroit union men and women throughout the land have reason to regret the passing of one who was a brother in this struggle for progress.—The Detroit Labor News.

A SOURCE OF DANGER.

The Massachusetts legislature is engaged in making a peculiarly reactionary record. Even Republican papers are commenting on this, and coupling it with New York. An explanation of the boldness of the reactionary element is offered by the Boston Transcript, a conservative Republican paper. The legislature is controlled by the senate. In the senate are thirty-three Republicans and only seven Democrats. And it takes a one-fifth vote to demand a roll call. According to the Transcript, there has been a gentlemen's agreement not to demand roll calls, which is, says the Transcript further, "the process commonly known as whispering measures to death."

It need not be said that it is a fundamental need of voters that they know the record of their representatives on any important measure. A deal of trading and downright disregard of constituents is possible under the viva voce vote system. For an instance take this from the news report of the Wisconsin assembly's vote on the Hambrecht bill which makes an open attack on the civil service:

"The bill was recommended to be killed by the state affairs committee. But the assembly by a viva voce vote which seemed to be pretty much all one way, ordered it engrossed. Members who uphold the high competitive system seemed to be caught napping and did not even ask for a roll call. The bill will be up for passage next week."

Obviously no Wisconsin constituency has any way of discovering what was the stand of its representative on a matter so important as this effort to weaken the civil service and make it more amenable to the spoils system.

In the face of this, it cannot but seem unfortunate that the assembly should have turned down with so little investigation a system of electrical voting which carried the prestige of having convinced the committee on accounts of the national house of representatives of its desirability, which has been invented by a Milwaukee man, and which would cut down by days the time taken up in each session by roll calls. At the same time, this would make it possible to put every member of either house on record on any measure without a chance for the complaint of wasted time.

Something needs to be done about time wasted in voting. Something needs to be done about the rich possibilities of the viva voce vote for deceiving constituencies.—Milwaukee Journal.

PRIDE AND SENSE.

Fine clothes, fine houses, fine cars may give pleasure, but they are no real cause for pride. Neither are fine intellect and great knowledge; the really great are thankful for what they know rather than proud of it. They realize how small a part of wisdom it is. You may be generous, giving largely to help others, but the feeling that others should admire you for it, that it sets you above anyone is no part of true charity. Beauty is a gift of nature to appreciate and be glad of, but even beauty carries no distinction to make one proud. It amounts to

very little if it is not backed by goodness of heart. Whatever your acquisitions or possessions, do not boast of them; for of all these things circumstances may deprive you. It happens often that "pride leaves home on horseback, but returns on foot."

Proper pride keeps a man from doing a mean act. It moves him to give others their due of profit and of praise. It never thrusts on the notice of others the good qualities one supposes he has or the wealth of which he is possessed. It is a pride that leads him to choose worth while companions, to avoid low things and coarse things, to pay his own way and be independent of others. It is this kind of pride that prompts a man to do his work well and faithfully, to be unwilling to take pay for slipshod work. It makes for uprightness and integrity. It is pride worth having.—Milwaukee Journal.

News of General Interest.

THE RIEGEL FIREBOX ON PACIFIC TYPE LOCOMOTIVE.

By Frank C. Perkins.

The accompanying illustrations, Figs. 1, 2 and 3, show the construction of a modern Pacific type locomotive with a special water tube boiler Riegel firebox, as developed by S. S. Riegel, Mechanical Engineer of the Motive Power and Equipment Department of

the Delaware, Lackawanna & Western Railroad Co., at Scranton, Pa.

The photograph, Fig. 4, shows one of fourteen of these engines built at Lima, Ohio, by the Lima Locomotive Corporation.

This locomotive, however, has a boiler equipped with a special form firebox. The boiler consists of a combination of the standard type of firebox and shell with a water

tube construction, which introduces a definite water circulation system. It has an installation of two nests of water tubes of sixty-six tubes each, placed right and left in the firebox over the grates, thus taking advantage of the water tube method of circulation with the object of providing definite cycles of circulation of water through the zones of greatest heat intensity, and locating the heating surfaces in the best possible manner.

The locomotive was designed for a standard gauge of 4 ft. 8½ in. and the diameter of driving wheels is 69 in., while the tractive power is 43,200 lbs.

The engine has cylinders 25x28 in. and the weight on trucks in working order is 50,000

sons who are already wage earners so as to increase their skill, earning power, and opportunities for advancement has long been a problem with educators and employers, as well as with wage earners themselves. The short unit course is designed for effectively solving this problem for certain groups of workers. It is not a short cut to the trade.

The short unit course is an intensive form of instruction in a limited number of lessons, which is intended to serve a specific need of a particular group. Each course deals with one part of the trade and is complete in itself. The courses include only what has been found to be of practical value in the trade. The material se-

lbs., while the weight on drivers in working order is said to be 189,600 lbs. The weight on trailer truck in working order is 58,000 and total weight of engine in working order is 297,000 lbs., while the coal capacity of tender is 10 tons. The water capacity of tender is 9,000 gals.

It may be stated that the total weight of tender loaded is fully 165,500 lbs, and the total weight of engine and tender combined is 463,000 lbs.

The boiler pressure of this engine is 200 lbs. and the grate area 69 sq. ft. The diameter of boiler is 78 in. and a firebox measures 89x111 in., while factor of adhesion is 4.39.

The heating surface of the water tubes measures 471 sq. ft., and the heating surface of the fire tubes 3,177 sq. ft., while that of the arch tubes is 24 sq. ft., and the total heating surface of firebox is 783 sq. ft. The boiler has a total heating surface of 3,960 sq. ft., of which the superheater heating surface is 740 sq. ft., and the heating surface of firebox and combustion chamber is 288 sq. ft.

U. S. DEPARTMENT OF LABOR BUREAU OF LABOR STATISTICS.

Short Unit Courses for Wage Earners and a Factory School Experiment.

Short unit courses for wage earners and a factory school experiment is the title of Bulletin No. 159, just issued by the Bureau of Labor Statistics of the Department of Labor. The best method of assisting per-

lected is taught by a practical teacher, with references to its adaptability to the trade needs of the particular group. By eliminating all unnecessary preparatory work, the courses economize the time of the pupil.

A common weakness of the courses frequently offered for wage earners is that they are laid out to cover three or four years, and only a few pupils remain in school long enough to complete the course. The short unit course meets the difficulty by dealing with one specific thing in each course and by making the unit so small that the pupil will be able to complete it within the time the school can probably hold him. If the unit course is laid out for ten lessons, the pupil who remains during the course gets all the school has to offer on a specific topic. By offering a series of short unit courses on the same subject, experience goes to show that when one course is completed the pupil is likely to return for the next one, and thus actually remains in the school longer than he would if the same work were laid out in the form of a continuous course. . .

The method of instruction by short unit courses for wage earners has proved successful in many localities. Examples of such successful work are the courses for specialized machine hands in the evening classes of the Newton, Mass., Trade School, those for piano tuners in the Murray Hill Evening Trade School, New York City, those for machine hands in the furniture industry in the Evening Trade School of Grand Rapids, Mich., and those for steam engineers

in the Industrial School at New Bedford, Mass. Numerous detailed examples of the short unit courses in successful use are given in this Bulletin.

One great advantage claimed for the short unit course method is that out of a study of the needs of the worker new courses may be readily developed. Some of the methods already in use, particularly those dealing with the more ambitious, better prepared, and abler workers engaged for the most part in highly skilled trades have long stood the test of experience.

This bulletin also contains a brief study showing the effect upon the earnings of illiterate immigrant girls in a New York City white goods factory as the result of instruction in the elements of English and arithmetic given in an experimental factory school. For the purposes of the comparison the earnings of 10 illiterate girls were studied in comparison with those of 10 literate girls, both groups of which were made up of girls of corresponding ages and of practically the same experience in the work upon which they were engaged. In a period of 32 weeks prior to the opening of the school, the average earnings per hour of the literate girls exceeded those of the illiterates by 3.7 cents, equivalent to \$1.85 per week of 50 hours. Throughout the period of school instruction the illiterate girls showed a steady increase in earnings per hour. At the end of the course of 16 weeks, their earnings had increased 2.7 cents an hour, or \$1.35 per week. During the same period the earnings of the 10 literate girls remained practically unchanged. The experiment was thus regarded as highly successful, both from the standpoint of the employer and of the employe.

DON'T WORRY OVER MISTAKES.

Perfect People Run Errands and Count Columns of Figures for Those Who Take Chances.

(From the Rockford, Ill., Register-Gazette.)

The people who make mistakes lead the world.

The perfect people work for them, running errands and counting columns of figures.

Only trifles are always true. Every great and serious truth has an obverse side which is also true.

Prof. William James was the greatest psychologist of our time, but the best he could do in defining truth was this:

"The truth is simply what will work."

Whatever is may not necessarily be right, in spite of Pope; but whatever is, is. That is the main point. And it is every man's job to accept the is-ness and get down to business.

Most men have the wrong location, have taken up the wrong profession, have failed to improve the opportunities for education they had in youth, have not married the women ideally suited to them, have not

the money, influence and position they need to show what's in them.

And they are of two classes. One class sits around the loafing places and tells its woes, and whistles, and pities itself. The other plucks up, forgets it, takes the situation as it is and makes the best of things.

The genius is not the man who never made mistakes, who had his chance thrust on him, who was endowed and all that; he is the man who had no chance and was not gifted, but who took the raw material of life and fate as he found it and made something fine out of it.

The only perfect person you will ever meet is the perfect fool.

The faultless—they are the biggest frauds of us all.

A KANSAN TABULATES READY REFERENCE FOR PARCEL POST SERVICE.

Merchants who have no rate table for parcel post packages need not worry if they will simply follow the formula given below. An enterprising Kansan who is good at mathematics has figured out the table and test proves it to be absolutely correct. It is: Postage in the first and second parcel post zones would be the number of pounds that the package weighs plus 4 cents.

In the third zone twice the number of pounds the package weighs plus 3 cents; in the fourth zone four times the weight of the package plus 3 cents; in the fifth zone six times the weight of the package plus 2 cents; in the sixth zone eight times the weight of the package plus 1 cent; in the seventh zone ten times the weight of the package plus 1 cent, and in the eighth zone the postage would be twelve times the number of pounds of the package.

CARE OF THE BABIES IN SUMMER.

Nursing the Baby Prevents Summer Diarrhea.

(First of a series of articles on the Care of Babies during Hot Weather, prepared for the Journal by the Children's Bureau, U. S. Department of Labor.)

A mother may shield her baby from suffering and illness in many ways. Her wise and loving care is never so invaluable as in the first year of the baby's life. In this country thousands of babies under one year of age die during the summer because mothers who love them do not know how to take care of them.

No other one thing a mother can do for her baby means more to him than to feed him at her own breast. Babies who are fed entirely at the breast usually do not have diarrhea, unless overfed, but bottle-fed babies are very likely to have this trouble, even if their milk is carefully prepared. This is true at all seasons of the year, but it is especially important in summer when the

heat and flies make bottle feeding so dangerous.

The mother knows that if she gives her baby the breast she is giving him—

1. Pure milk—never sour.
2. Fresh milk, made and used as needed.
3. Milk of the same temperature throughout the feeding.
4. And, most important, milk made especially for and especially adapted to the needs of the baby.

If she feeds him from a bottle, she is not sure of any of these things, for in no way can cows' milk be made as good as breast milk.

A mother can usually nurse her baby if she has been properly cared for before the baby's birth and at the time of birth, and no mother who wants to give her baby a good start will consent to deprive him of breast milk, at least during the first few months of life.

After the mother's milk comes, usually on the third day, the baby may be nursed every three hours, at 6 and 9 a. m., at 12 noon, and at 3, 6, and 9 p. m., with one feeding during the night. On the four-hour plan the nursing will come at 6 and 10 a. m., and 2, 6, and 10 p. m. In the intervals she should give him a little water which has first been boiled and cooled.

When the baby is four months old he should no longer be nursed at night, and at six months the mother should begin to lengthen the time between feedings a quarter of an hour each week until the length of time between nursings is four hours. If the milk is plentiful, the breasts should be nursed alternately, but it may be necessary to give both breasts at one feeding in order to satisfy the baby. The baby requires no other food, save breast milk and drinking water, until he is eight or nine months old.

In some cases the mother may not have enough breast milk to satisfy the baby. It is then necessary to give one or more bottle feedings a day in addition. Later articles will give directions for this kind of feeding, as well as for weaning and artificial feeding.

The nursing mother should have plenty of nutritious food. She should eat what she likes, provided her food causes her no indigestion, for if the mother is well the baby will usually be well. But if the mother has headaches or gas on the stomach or bowels, or has a coated tongue, she is not properly digesting her food, and she should try to find out what is causing the trouble.

Fat, greasy and fried foods, such as doughnuts, pancakes, baked beans, pies, heavy puddings, and dumplings, and insufficiently cooked cereals, are among the foods that may cause indigestion.

Fresh, well-cooked vegetables, good soups, bread and butter, milk, eggs, meat, fish, poultry, and fruits should form the principal part of the diet of a nursing mother. All

good food is milk-making food. It is better to do without tea or coffee, unless the mother has always been accustomed to them. If so, she should cut down the amount to one cup of each drink per day. Cocoa may be used in moderate quantities, but milk, both sweet and buttermilk, and plenty of cold pure water, are the best drinks for the nursing mother.

The nursing mother should have plenty of sleep at night, and should learn to relax and rest whenever the baby nurses. As far as possible she should be relieved of the heaviest part of the household work, because if she is tired and worn the baby will not thrive as he should.

The nursing mother should have a full movement of the bowels every day, but should not use medicine to induce an action unless absolutely necessary. Ripe, raw fruits, stewed rhubarb and prunes and well-cooked oatmeal and other cereals are laxative. Graham and bran breads are most useful in constipation. Bran bread is made as follows:

- 1 cup of cooking molasses.
- 1 teaspoonful of soda.
- 1 small teaspoon of salt.
- 1 pint of sour milk or buttermilk.
- 1 quart of bran.
- 1 pint of flour.

Stir well, and bake for one hour in a moderate oven. It may be baked as a loaf, or in gem pans, as preferred. The bread should be moist and tender, and may be eaten freely, and it will usually have a good effect if used every day for weeks.

To keep the breasts from becoming sore, they should be washed with warm water and good castile soap every night and after each nursing. For a few weeks before the baby is born the nipples should be washed in this way every night, and covered with vaseline.

STANDING OF CANDIDATES IN LOS ANGELES LABOR TEMPLE CONTEST.

The "European Tour" Contest, inaugurated the first of the year by the Los Angeles Union Labor Temple Association, is attracting wide-spread attention, a number of the candidates in the field bearing international reputations as labor leaders.

April 30, George L. Perry, president of the International Printing Pressmen's Union, and Fred C. Wheeler, of the Carpenters' organization, were tied for first place, with A. W. Thomson, of the Printers a close second; Mrs. Frances N. Noel of the Woman's Trade Union League, comes third, and C. F. Grow of the Machinists, fourth. The other candidates and their respective standing follow: J. E. McGlory, Iron Workers; E. J. Brais, Tailors; Robert Hesketh, Cooks; James J. Doherty, Bakers; Thomas E. Burke, Plumbers; Matthew Woll, Photo Engravers, and Margaret Daley, Woman's Union Label League.

By this time it is generally known that this contest was inaugurated the first of the year by the Los Angeles Labor Temple Association for a dual purpose. First to sell sufficient stock to retire mortgages on the Labor Temple property, and second, to send two people to Europe at the close of the war for the purpose of educating the prospective immigrant to the necessity of coming to America in a prepared condition, and the inevitable fate of those who arrive on these shores in an impoverished state.

In the opinion of those who have given the matter serious consideration, now is the time to prepare to meet what will soon prove a serious problem in the industrial centers of the United States, particularly that portion known as the Pacific Slope. That there will be a great influx of foreign immigrants at the close of the European war, by way of the Panama Canal, there can be no question. That this vast horde will be a menace to the future prosperity of the American workingmen, unless some educational steps are taken along the lines of the necessity of coming here in a prepared state, cannot be questioned.

The Board of Directors of the Union Labor Temple Association, believing the time has arrived to make preparation, has inaugurated its "European Tour" Contest with this thought in mind. The Association believes it is up to all organized labor to lend a hand in this praiseworthy undertaking by purchasing Los Angeles Labor Temple stock and voting it in such a manner that the best possible representatives may be selected to carry on the work.

The Los Angeles Labor Temple is a seven-story brick and steel building located right in the heart of the business section of the city, and is valued at \$350,000. Only 94,000 shares have been sold to date. The stock is \$1.50 per share and the voting strength is cumulative—the larger the number of shares the greater the voting strength. For further information address "Contest Committee," Room 203, Labor Temple, Los Angeles, Cal.

DANGER SIGNALS OF TUBERCULOSIS.

In a previous article, it was stated that nearly everybody has tuberculosis at some time or other during his lifetime. Autopsies on people have shown that hardly a single human being reaches mature life without a scar on his lungs or elsewhere showing where tuberculosis had attacked him, and he, by his normal resistance and vitality, had warded off the continuation of the attack.

Because tuberculosis is so wide-spread, every man, woman and child should give the most careful attention to those signs of the disease which point out danger. The treacherous disease germs may enter the body in early childhood and may not cause any serious trouble for ten or fifteen years. Then, all of a sudden, when the body is

weakened by overwork, worry, sickness, or bad living and working conditions, these sleeping germs wake up and become active in the destruction of the lungs or other organs. The working man or woman, therefore, cannot be too careful in the safeguarding of health and in watching out for those symptoms which indicate that the disease of tuberculosis is actually present. What, then, are some of the danger signals and what should be done about them?

(1) First of all, there is a cough that hangs on and will not clear up. If it lasts for a month or longer, it is a red light, a danger signal, which you cannot afford to ignore. It may start with wet feet or some other insignificant circumstance, but no matter how the cough started, if it does not go away, see your doctor at once. Colds frequently weaken the bodily tone and resistance, so that it is easy for the lurking germs to get a foothold.

(2) Loss of weight accompanied by a loss of appetite and a certain amount of "stomach trouble" is another danger signal, which you must not pass unheeded. Sometimes loss of weight may come from some other cause than tuberculosis, but it pays to be on your guard. You may not have a cough, and you may experience very little trouble except a sort of chronic weariness. You ought to know what your normal weight should be. If you begin to lose five, ten, or more pounds without any apparent reason, look for sound medical advice at once. Sometimes with loss of weight goes a loss of appetite, and trouble with bowels and stomach, even running to diarrhea. Whether you are losing much weight or not, look out for this danger signal. It is a warning that something is wrong.

(3) Then there is that run-down, all-the-time-tired feeling. Most people have days when they feel unusually tired, for some reason or other. Such an occasional period of "spring fever" or "lazy liver" may not be at all dangerous. But when every day for two or three weeks you hate to get up and dread to do anything but lie around and be lazy, there is danger ahead. This is Nature's warning to you that some enemy inside your body is sapping your vitality. Don't ignore the warning signal!

(4) Any one of the three symptoms just mentioned may occur singly or all of them may come at one time. When, to any or all, there is added a fever in the late afternoon or during the night, accompanied possibly by sweats, beware of this danger signal. It is a bright red flag which Nature waves before you, cautioning you to give immediate heed. Anyone's temperature may rise at times, some people's more easily than others. But for a week, every afternoon about four or five o'clock you've felt feverish, or when night after night you wake up in a dripping sweat, you may rest assured that there is nothing normal about that. Go to your doctor at once and tell him about it. You may have no cough and no other

sign of disease, and this may be the only warning you'll get. Give heed to it at once.

(5) If you have a cough and in spitting you find streaks of blood in your sputum, you may rest assured that something is wrong. It may not be a direct sign of tuberculosis, but whatever it is, you should attend to it at once. You cannot afford to waste time putting it off. Nature may give you that more emphatic warning of the presence of tuberculosis, a hemorrhage of the lungs. If so, don't be scared unduly. It is a danger signal, and if you heed it, you may be safe.

There are other danger signals, some which you can see and some which only a trained physician can detect. Your safety lies in getting medical attention as early as possible. Tuberculosis can be cured if it is discovered in time. The time to discover it is when the first symptoms show themselves. Don't take chances with Death. You'll lose every time.

Go to a good doctor, if you notice any of these danger signals, and insist that he examine you stripped to the waist. If you can't afford a doctor, go to a free clinic and be examined. It may cost a few dollars to be examined, but it may save you hundreds of dollars, untold suffering, and possibly your life and that of your wife and family.

"SAFETY FIRST" is a motto that applies to tuberculosis, especially when it is first showing itself.

OIL STORAGE TANK FIRE EXTINGUISHING BY A UNIQUE FOAM SYSTEM.

By Frank C. Perkins.

The accompanying illustrations and drawing show a most interesting automatic petroleum fire extinguisher foam system for oil storage tanks. The automatic extinguishing of fires produced by the explosion or combustion of inflammable vapors, gases or oils, has been a subject of study and endless experimentation for over a decade by chemists in Milwaukee, Wis., who demonstrate to the petroleum using world that they have successfully solved the problem.

It is of interest to note that the delegates to the convention of the National Fire Protective Association in Chicago, witnessed a wonderful fire test of these devices. A tank 27 feet in diameter was erected especially for the convenience of the engineers associated with the Underwriters' Laboratory? Sixty gallons of gasoline were floated upon the water contained in the tank. Assistant Fire Marshal Seyferlich, of the Chicago department, stated in referring to this test, "There was a gale from the northwest at the time. In ten and one-half seconds from the dropping of a lighted torch into the tank, the links fused, and the foam burst from the standpipes. In 12 seconds from the appearance of the foam the fire was entirely out."

Another test of the apparatus was made at the Standard Oil Company's Bayonne Refinery. The equipment of the 40 foot diameter tank, roofed, was as follows: Four iron standpipes, 30 inches in diame-

ter the height of the tank, were arranged outside the tank at intervals of 90 degrees of a circumference of same. There was a direct outlet into the tank from the standpipes about 12 inches wide by 8 deep, at the top of the wall of the tank. The standpipes contained about one gallon of chemical solution for every square foot of oil surface.

It may be stated that in the tops of the standpipes were suspended lead-lined thimbles. These contained the acid. The acid containers were suspended by means of a trap. The triggers are controlled by a cable having standard fusible links every two feet beginning at the bottom of the inside of the tank. This cable can be drawn over a pulley operating on a bracket riveted to the tank on the inside wall at the man-head. It inter-connects on the outside and immediately under the roof of the tank with all the standpipes.

It is pointed out that the controlling cables and fusible are so arranged as to permit frequent inspection. Installation is easily and simply made without endangering the lives of employes. The tank was filled with water to within three feet of the top. Three thousand gallons of Mexican crude and some naphtha were floated thereon. A torch was applied. The links soon fused, the acid containers or thimbles dropped into the chemical solution in the standpipes and the foam started instantly in a vast stream into the tank. In nine seconds the fire was automatically and completely extinguished. The fire had been smothered under 14 inches of foam.

Later there was made by the Standard Oil Company, another test on the same tank. The roof and the automatic devices were removed. It was arranged to operate the standpipes by hand from 75 feet of cable attached to the weights at each standpipe, thus releasing the acid containers when necessary. The water in the tank was lowered six feet. It was thought a severe fire might burn up the foam in its descent from the mouth of the inlet and prevent its swift delivery across the surface of the oil. Again 3,000 gallons of Mexican crude and 100 gallons of gasoline were floated upon the water. The torch was thrown into the tank. The flame and smoke from the gasoline were followed by great balloons of thick, black smoke and far-reaching flames from the Mexican crude. A breeze from the Atlantic Ocean soon made the fire look dangerous. There were billows and swirls of fire and smoke. The sight was as though a volcano, from many craters, was vomiting the mess within its confines. Soon the steel plates of the tank were red hot. The paint peeled and scaled in sheets. In just five minutes the chemicals from one standpipe were released. The foam did some extinguishing but it was evident that the other standpipes would soon have to be released. There was scarcely an eye-witness of the awful fire at this time who did not believe that it was beyond Erwin's control and that other means of extinguishing would have to be used.

It is stated that the three remaining stand-

pipes were released thirty seconds later and the fire was immediately and completely put out in just one minute after the order for the release of the standpipes was given by the Standard officials. The test proved the efficiency of the equipment. It demonstrated the completeness of the salvage, the lack of damage to the tank or appliance and that the standpipes needed only to be recharged with chemicals, to be again made ready for fire extinguishing service.

LABOR LEGISLATION OF 1914.

The annual summary of labor legislation in the United States prepared by the Bureau of Labor Statistics, which appears as Bulletin 166 of that Bureau, represents the activities of 17 legislative bodies in this field in the year 1914. Four of these met in extraordinary session, two of them enacting no labor laws. Compared with the current year, for which the work of 49 legislatures will have to be reviewed, this was an "off year" for the majority of state legislatures, so that the volume of output should be compared with that of 1912, though the number of extra sessions brought the total of the law-making bodies meeting that year up to 24. The tendency of this class of laws to increase in bulk that has been in evidence for a number of years is manifested in the fact that the 24 bodies in session in 1912 furnished but 187 pages of bulletin text, while the 17 meetings in 1914 provided approximately 200 pages.

As at other times, the laws relating to the employment of women and children are most numerous, 26 separate enactments affecting 12 jurisdictions falling under this head. One of these was the 8-hour law for women in the District of Columbia, enacted by Congress. If to this number be added the factory regulations that are often indirectly due to the presence of woman and child workers in industrial establishments, the public interest in this class of employes would appear to be great and influential. Occasionally, however, a bit of regressive legislative action is found, as in the Maryland statute reducing the age for children in street trades, or that of Mississippi fixing a lower age for the regulation of the hours of labor of children in cotton and knitting mills than is provided in other industries. But on the whole there is a steady advance in the States named, as well as others, in the direction of better protective legislation for the classes of persons who are, as the Supreme Court has pointed out, in need of special legislation that their rights may be preserved, and on whom the future of the race depends.

Masculine interests were looked after in 1914 in laws requiring frequent wage payments by public-service corporations and the redemption of scrip or coupons in Mississippi, the weighing of coal before screening in Ohio, and regulating the work time

of stationary firemen in Louisiana, and of workers in compressed air in New Jersey. A railroad "full-crew" law was enacted in Mississippi, and one was repealed by referendum in Missouri, these being the only states acting on this subject for the year. The state of Kentucky adopted a new mining code, and the Wisconsin Industrial Commission drew up a set of regulations for the protection of workmen engaged in building operations.

The subject of workmen's compensation received attention from three or four legislatures by way of amending acts, while new laws were enacted in Kentucky, Louisiana and Maryland. In the last named state the law superseded an earlier enactment which had been entirely inoperative, while the Kentucky law was found constitutionally defective before the date when it was to come into operation.

The Bulletin is in effect a supplement to the general compilation found in Bulletin No. 148, and Bulletin No. 126 which contains earlier compensation laws, both of which appeared in 1914. The value and, indeed, the necessity of these continuing publications as aids to anyone desiring to keep in touch with the large and growing body of labor legislation is obvious.

DEVICE KEEPS TRAIN SAFE.

(New York Letter to the Cincinnati Times-Star.)

President Ralph Peters of the Long Island Railroad is conducting elaborate experiments with what seems, up to this time, a marvelous device for the prevention of railroad collisions. It was invented by a telegraph operator in the Hotel Knickerbocker, and Proprietor Regan of that hostelry is financing the development of the device. Guests of President Peters's private car who saw the invention in operation this week could hardly be brought to believe that it was entirely automatic. And you couldn't blame them much, for this is what they saw:

Turned the Engine Loose.

The locomotive attached to the private car was started at twenty-eight miles an hour in pursuit of a freight train. The engineer, after setting his levers for full speed ahead, lighted a cigar and sat at the back of his cab. When a collision seemed about to occur the locomotive's whistle blew, the steam was turned off and the air brakes were thrown on. The "special" came to as quick and timely a stop as if the engineer had foreseen danger and acted to avert it.

The device can be used only where the block system has been installed. But it makes the block system automatically effective. There was no dependence upon human fallibility. At each block junction two short stretches of third rail take the contact of a shoe, attached to the engine. If the block ahead is empty there is no effect from the contact. If a train, moving

or stationary, however, is in the block which the engine is entering, the shoe picks up a current powerful enough to operate three electric devices on the engine. One of them blows the whistle, another throws on the air brakes and the third shuts off the steam. The devices operate with the same effect if there is a broken rail in the block which is being entered or—which is of great importance—if a switch is thrown behind the train. Thus a train may be stopped almost instantly by a switchman after it has passed him.

Invention Has Stood All Tests.

President Peters says that the invention up to the present time, has stood every test to which it has been put. It seems practical in every way. However, there will be no chance of its adoption for actual use until the experiments have continued for some months, both on the Long Island and the Pennsylvania railroads. The inventor is a young Italian, Anthony J. Casale. He has been working for fourteen years to perfect his device, having begun work on his first model while he was still a school boy.

TAKE A LOOK AT YOURSELF.

What is your normal attitude toward yourself? Much depends upon this. When you look at the great, wide, world and then at yourself in your own little center of it, how does it impress you? That is to say, are you a constant source of surprise and wonderment to yourself, which causes you ever and anon to halt in your tracks, look back over the road you came and marvel that you were able to make it?

Or do you take yourself for granted and consider that it is the most natural thing in the world for you to be where you are and doing what you are?

Or have you been so excruciatingly busy trying to get somewhere that you have had no time to take these little mental invoices to discover just where you are and why and for how long?—From Life.

THE IMPORTANCE OF MANNERS.

Manners are of more importance than laws. Upon them, in a great measure, the laws depend. The law touches us but here and there, and now and then. Manners are what vex or soothe, corrupt or purify, exalt or debase, barbarize or refine us, by a constant, steady uniform insensible operation, like that of the air we breathe in. They give their whole form and color to our lives. According to their quality, they aid morals; they supply them or they totally destroy them.—Edmund Burke.

GOVERNMENT AID TO HOME OWNING AND HOUSING OF WORKING PEOPLE IN FOREIGN COUNTRIES.

Government aid to home owning and housing of working people in foreign countries is the subject of Bulletin No. 158, just

issued by the Bureau of Labor Statistics of the United States Department of Labor. The report presents a comprehensive study of the work which has been done in the principal European and Australian countries, a work so important that it has already called for no less than 10 international housing congresses. The activities of foreign official authorities in the aid of housing have grown out of the conviction that private initiative is inadequate to deal with the housing problem and that systematic government regulation, encouragement, and financial aid must be given.

The methods of granting public aid differ greatly in detail in various countries, but the form in which the aid is given usually falls under one of three classes:

1. Building directly, for rental or sale.

- (a) For government's own employes—National, as in Austria, Germany, Hungary and Roumania. State or provincial, as in Germany, Switzerland and Roumania. Municipal, as in Germany, Hungary and Roumania.
- (b) For working people generally, as in France, Germany, Great Britain, Italy, Australia and New Zealand.

2. Making loans of public funds (including also Government guaranty of loans) to—

- (a) Local authorities, as in Austria, Belgium, Denmark, Germany, Great Britain, Hungary, Luxemburg, Sweden and Norway.
- (b) Non-commercial building associations, as in Austria, Belgium (by savings bank whose deposits are guaranteed), Denmark, France, Germany, Great Britain, Italy, Luxemburg, Netherlands, Sweden and Norway.
- (c) Employers, as in Germany, Great Britain and Luxemburg.
- (d) Individuals, as in Germany, Great Britain, Australia, New Zealand and Norway.

3. Granting exemptions from or concessions in taxes or fees or granting some other form of subsidy to building associations or others, as in Austria, Belgium, France, Germany, Italy, Hungary, Roumania, Spain, Switzerland, Australia and New Zealand.

Most important among the loans of public funds are those from the funds of the state accident and sickness-insurance associations in Austria and of the funds of the invalidity and old-age institutes in France and Germany. These loans in Germany represent the most important financial aid to housing anywhere developed, having reached a total of over \$118,000,000.

Most important among the methods of aid are the loans to the so-called public welfare building associations. These are associations in which the dividends which may be paid to the stockholders are limited usually to 4, or at most 5 per cent on the paid-up capital. In many cases it is also required that upon the dissolution of the association any surplus which may exist shall not be divided among stockholders, but must go to some specified public purpose.

In continental European countries, where building associations operating under the various housing laws have attained the greatest growth, as in Belgium, France, Germany, Italy and Austria, their operations are hedged about by many regulations and restrictions whose principal objects are to safeguard the security of the capital and to see that all the dwellings erected with the funds advanced are of a kind designed to carry out the purposes of the law and that they are so managed that their benefits will be received by the class of persons intended to be served.

Probably next in importance in the work for improved housing are clearance schemes which municipalities have been carrying on in Great Britain. In these schemes the municipal authorities have undertaken the purchase and clearance of insanitary slum areas in cities and the laying out of new streets and lots and the erection of sanitary dwellings to rehouse the tenants displaced by the improvements.

One result of the improved housing is the notable reduction of death rates in areas covered when compared with the death rates in the same areas under their former insanitary conditions and with the same groups of tenants. Thus in Liverpool, according to the official report, in some of the slum areas which have been the subject of clearance schemes and where displaced tenants have been rehoused upon the same areas, a death rate ranging from 40 to 60 per 1,000 (with a death rate from tuberculosis of 4 per 1,000) has, by the improved sanitary conditions brought about, been reduced by more than one-half (the death rate from tuberculosis being correspondingly reduced).

The extent of government aid in housing in those countries which have been most active in the movement may be seen from the fact that in Belgium up to the end of 1912 nearly \$20,000,000 had been loaned under government guarantee, resulting in the building of 57,500 workmen's dwellings. The exemptions on housing property used for workmen's dwellings had amounted to over \$7,000,000, applying to over 165,000 houses per year. In France two national institutions had loaned more than \$6,000,000 for housing purposes, while the city of Paris had invested nearly \$3,000,000 in similar work. In Germany an incomplete report of the activities of public authorities showed that more than \$228,

000,000 had been furnished or made available for housing purposes. This represents the activities of the Imperial Government, the individual states, and the municipalities. In England, the London authorities alone have expended more than \$14,000,000 in clearance schemes and the erection of workmen's dwellings, providing housing for over 55,000 persons. Loans amounting to more than \$33,000,000 have been authorized for other municipalities. The general government had made loans in excess of \$25,000,000. In Austria, Hungary, Italy, the Netherlands, Norway and Sweden, millions of public funds have been invested or loaned for the promotion of improved housing, the activities being most marked in the larger cities, notable examples being found in Vienna, Budapest, Rome, Amsterdam, Rotterdam and Stockholm.

The law on model lines which has been passed in Massachusetts as well as in New York compels the employer to post in factories and mercantile establishments where Sunday work is undertaken the rest days of such workers as are employed on Sundays.

Since the enactment of the law in New York and Massachusetts not only have a number of manufacturers expressed satisfaction with the law but representatives of labor have said that the workers were much benefited by it. A labor union in New York City states: "Since the bill is enacted in the state of New York eighty-five of our members have the benefit of it. Formerly the same members had to work seven days a week and the best we had was one day off in a month. Furthermore, we maintained the same wages for six days as we formerly had for seven."

TO PLAY A BIGGER PART.

So many people drift into disappointment and dreariness because they are dissatisfied with the materials of life, and would like to play a bigger part than they are entitled to play. It is all a deep mistake, the worst mistakes a man can make. It is not the impression a man makes on life that matters; it is the impression which life makes upon him.—A. C. Benson, in the North American Review.

STRENGTH RECORD BROKEN BY NEW STEEL CABLE.

All records for cable strength are said to have been surpassed when a 3-inch steel cable withstood a pulling test of 751,600 pounds, or practically 376 tons. This cable is to form part of the longest and strongest hoisting cable in the world, and is to be used in a mine in Cuba. It weighs 15.7 pounds to the foot and is made in lengths of 8,000 feet. This cable has a hemp center around which are wound six strands consisting of nineteen steel wires each.—Popular Mechanics.

Smiles.

THE LAST WORD.

A little girl traveling in a sleeping car with her parents greatly objected to being put in an upper berth. She was assured that papa, mamma and God would watch over her. She was settled in the berth at last and the passengers were quiet for the night, when a small voice piped:

"Mamma!"

"Yes, dear."

"You there?"

"Yes, I'm here. Now go to sleep."

"Papa, you there?"

"Yes, I'm here. Go to sleep like a good girl."

This continued at intervals for some time, until a fellow passenger lost patience and called:

"We're all here! Your father, and mother, and brothers and sisters and uncles and aunts and first cousins. All here. Now go to sleep!"

There was a brief pause after this explosion. Then the tiny voice piped up again, but very softly:

"Mamma!"

"Well?"

"Was that God?"

THE JAMAICAN MIND.

Much trouble as well as much amusement was caused during the early stages of the canal work by the inability of the Jamaican negroes to take any except a strictly literal view of orders. In unloading a vessel at Colon a rope in a pulley at the head of a mast got jammed, and a Jamaican was ordered to climb up and release it. He did as ordered. Some minutes later the boss of the gang missed him, and asked with some impatience where he was. He was pointed out sitting calmly at the masthead.

"What are you doing up there?" roared the boss.

"You told me to come here, sah," the man answered, "but you haven't told me to come down?"—The Youth's Companion.

A RARE BIRD.

"Did I understand you to say that you were a reformer?"

"Yes."

"Well, I must be going."

"What's your hurry?"

"I haven't time this morning to hear a lecture on my shortcomings."

"Don't be alarmed. I'm trying to reform myself before I start in on anything else."

"Your hand, most noble creature! You are the first true reformer I've ever met."—Ex.

PRECAUTION.

Little Ikey, playing pitch-and-toss with his right and left hand in the basement, was disturbed by a heavy form descending

upon him. Extricating himself he ran up stairs.

"Fader!" he cried, "a shentleman's fallen through the coal-hole."

"Den run round an clap de cover on him quick, mine son, vile I go for der perlice. Lest we arrest him for stealing der coals, he'll sue us for damages," said Absalom.

There is nothing like promptness in the hour of trial.

A SERIOUS MATTER.

There is a Scotchman in this country who has made a big pile in the manufacture of dress goods novelties.

One evening he was dining out, an unusual thing for this thrifty soul, when his friend observed him gazing solemnly at the check the waiter had handed him.

"Does it look big enough?" chaffed the friend.

The Scot grinned. "It reminds me of the first days I spent in this country," said he. "When I landed I went with a friend that had been over here six months to the house where he boarded and lodged, and for a sum that today would seem ridiculously small. But then it looked pretty big to me, as it did to my friend.

"When we were in the midst of the dinner that was my first meal Sandy put his mouth close to my ear and whispered:

"Put butter on your pie, Angus. Three dollars a week is no joke!"

A MINORITY REPORT.

A small, meek country negro, who had always lived on one place near Frankfort, Ky., married a big, domineering woman, and very soon afterward moved into town, where the keeper of the local bar met him on the street.

"Hello, Gabe," he said, "what made you move to town? I thought you liked country life."

"Well, Mistah Franklin," explained Gabe, "I uster lak de country. But mah wife she didn't lak it—and I've done got so now dat when she don't lak a thing I jest natchelly hates it."—Saturday Evening Post.

SUCH A POOR MARKSMAN.

Sergeant (disgustedly to Private Jones): "Ugh! don't waste your last bullet. Nineteen are quite enough to blaze away without hitting the target once. Go behind that wall and blow your brains out.

Jones walked quietly away and a few seconds later a shot rang out.

"Great sausages, the fool's done what I told him!" howled the sergeant, running behind the wall. Great was his relief when he saw Private Jones coming toward him.

"Sorry, sergeant," he said apologetically, "another miss."

DOING HIS SHARE.

The teacher wishing to impress on her pupils' minds the vast population of China, said:

"Just think of it, children, two Chinamen die every time you draw your breath!"

A minute later her attention was attracted to little Jimmie James, who stood at the foot of the class puffing vigorously, with his face reddened and his cheeks distended.

"What is the matter, Jimmy?" asked the teacher. "What on earth are you doing?"

"Nothin', Miss Mary," was the indifferent response of Jimmy. "Just killin' Chinamen."

A REASON FOR BEING PROUD.

The eight-year-old son of a Baltimore physician was playing in his father's office with a friend during the absence of the doctor, when suddenly the first lad threw open a closet door and disclosed to the terrified gaze of his little friend an articulated skeleton.

When the visitor had sufficiently recovered from his shock to stand the announcement, the doctor's son explained that his father was extremely proud of that skeleton.

"Is he?" asked the other. "Why?"

"I don't know," was the answer; "maybe it was his first parent."—Harper's Magazine.

UNLIKE LAWYERS.

The Moberly Monitor is telling this little story of a lawyer there:

It happened in Judge Tedford's court, and the witness was a negro woman, whose reply to every query was, "I think so."

Finally the opposing lawyer rose and pounded on the desk. "Now, you look here," he roared, "you cut out that thinking business and answer my questions. Now, talk."

"Mr. Lawyer Man," said the witness, "Mr. Lawyer Man, you all will have to 'scuse me. I ain't like you all 'terneys. I can't talk without thinkin'."—Kansas City Times.

CAT WAS LACKING.

Norah was a new girl in the employ of the Smiths, and hardly had twenty-four hours passed before she had the misfortune to drop a piece of roast beef on the floor. Roast beef that has been used as a mop is gritty eating, so Norah thought it the part of wisdom to consign it to the garbage can.

"I think, Norah," remarked the mistress, rambling into the kitchen later in the day, "that we will have some of that roast beef cut cold for supper."

"Sure, an' it's meself thot's very sorry, ma'am," answered Norah, contritely, "but the cat got it when Oi wasn't lookin'."

"The cat got it!" exclaimed the mistress, with a surprised expression. "What cats?"

"Jay whiz, ma'am," cried Norah concernedly. "Ain't there no cat?"—Ex.

MERCY.

"Why didn't you toot your horn if you saw the man in the road ahead?"

"I figured," replied the chauffeur, "that it would be more merciful if he never knew what struck him."—Judge.

Supper was in progress, and the father was telling about a row which took place in front of his store that morning:

"The first thing I saw was one man deal the other a sounding blow, and then a crowd gathered. The man who was struck ran and grabbed a large shovel he had been using on the street, and rushed back, his eyes blazing fiercely. I thought he'd surely knock the other man's brains out, and I stepped right in between them."

The young son of the family had become so hugely interested in the narrative as it proceeded that he had stopped eating his pudding. So proud was he of his father's valor, his eyes fairly shone, and he cried:

"He couldn't knock any brains out of you, could he father?"

Father looked at him long and earnestly, but the lad's countenance was frank and open.

Father gasped slightly, and resumed his supper.—Philadelphia Public Ledger.

STRICT, ALL RIGHT.

"I understand the Blanks are strict vegetarians."

"Strict! I should say they are. Why, they won't even let their children eat animal crackers."—Boston Transcript.

THE ACID TEST.

She: "Would you leave your home for me?"

He: "I'd leave a baseball game in the ninth inning with the score a tie."

LONDON FOG.

"Talk about a London fog!" said a Yankee just returning from England. "Why, I found that they even had foghorns in the elevators at my hotel!"—Judge.

"Did you strike this man in an excess of irascibility?"

"No, sah; I done hit him in the stum-mick."

HARD TO BELIEVE.

"I was outspoken in my sentiments at the club today," said Mrs. Garrulous to her husband, the other evening.

With a look of astonishment he replied, "I can't believe it. Who outspoke you?"

COMPREHENSIVE IGNORANCE.

Two Irishmen were philosophizing. Said Pat to Mike:

"Did yez iver shtop to think that wan half of the world don't know how the other half gets along?"

"You're right," says Mike, "and neither does the other half."—Evening Post Saturday Magazine.

Poetical Selections.

BEFORE IT IS TOO LATE.

If you have a gray-haired mother
In the old home far away,
Sit down and write the letter
You put off day by day.
Don't wait until her tired steps
Reach Heaven's pearly gates,
But show her that you think of her
Before it is too late.

If you've a tender message
Or a loving word to say,
Don't wait till you forget it,
But whisper it today.
Who knows what bitter memories
May haunt you if you wait?
So make your loved ones happy,
Before it is too late.

We live but in the present,
The future is unknown.
Tomorrow is a mystery,
Today is all our own.
The chance that fortune leads to
May vanish while you wait,
So spend your life's rich pleasures
Before it is too late.

The tender words unspoken,
The letters never sent,
The long-forgotten messages,
The wealth of love unspent.
For these some hearts are breaking,
For these some loved ones wait;
So show them that you care for them
Before it is too late.

—Charles W. Coburn.

OPPORTUNITY.

A word unsaid seems a little thing,
But alas, I may never know
If the coming day to a soul may bring
The truth that I fail to show.

A song unsung seems a little thing,
But the heart that I left today
May pine for the songs that I did not sing.
As it goes on its cheerless way.

A deed undone seems a little thing,
But the burden I might have shared
Has left a heart with a bitter sting,
Of the thought that "nobody cared."

So the little things that we leave undone
Are the things that men hold dear;
Life's battles are reckoned lost or won
By a smile or a falling tear.

'Tis the little things that the burdened heart
In the time of trial needs;
Then let us lighten life's aches and smart
With the sunshine of little deeds.

—Our Little Folks.

SAFETY FIRST.

As we journey through life let us "live" by
the way,
A saying of old that applies well today.
There is nothing so sweet as life after all,
So why take the chances that hasten "your
call?"

You often save time by the "short cuts" you
take,
But whenever you do your life is at stake:
For the time that you save would never re-
pay
For the time you will lose if you "slip" on
the way.

Very often the safety of others depend
On the judgment you use, it may be a
friend;
Or the loved ones at home, remember them,
too.
Their future depends on the things that you
do.

And this is a pretty good world after all,
There are times when our spirits may crum-
ble and fall,
But there's never a time through the night
or the day,
When the chances we take are worth what
we pay.

The "safety first" way may seem longer and
slow,
But it leads you past dangers you never will
know,
So "now" is the time to look well ahead,
"Safety First" cannot help you after you're
dead.

—C. J. Bryne.

THE BRAVEST BATTLE.

The bravest battle that ever was fought
Shall I tell you where and when?
On the maps of the world you'll find it not;
It was fought by the mothers of men.
Nay, not with the cannon or battle shot,
With sword or braver pen;
Nay, not with eloquent word or thought
From the mouths of wonderful men;
But deep in the woman's walled-up heart,
A woman that would not yield,
But patiently, silently, bore her part—
Lo! there is the battlefield.
No marching troops, no bivouac songs,
No banners to gleam and wave;
And, oh! those battles they last so long—
From babyhood to the grave!
Yet faithful still as badge of stars
She fights in her walled-up town—
Fights on and on in the endless wars.
Then silent, unseen—goes down.

—Joaquin Miller.

JOY.

Today whatever may annoy,
 The word for me is Joy, just simple Joy;
 The joy of life;
 The joy of children and of wife;
 The joy of bright blue skies;
 The joy of rain; the glad surprise
 Of twinkling stars that shine at night;
 The joy of winged things upon their flight;
 The joy of noonday, and the tried
 True joyousness of eventide;
 The joy of labor and of mirth;
 The joy of air and sea and earth—
 The countless joys that ever flow from Him
 Whose vast beneficence doth dim
 The lustrous light of day,
 And lavish gifts upon our way.
 Whate'er there be a Sorrow,
 I'll put off till tomorrow,
 And when tomorrow comes; why, then!
 'Twill be today and Joy again!

—John Kendrick Bangs.

THE TRUE ARISTOCRAT.

What are the nobles of the earth,
 The true aristocrats,
 Who need not bow their heads to lords
 Nor doff to kings their hats?
 Who are they but the men of toil,
 The mighty and the free,
 Whose hearts and hands subdue the earth
 And compass all the sea.

Who are they but the men of toil
 Who cleave the forests down
 And plant amid the wilderness
 The hamlets and the towns—
 Who fought the battle, bear the scars
 And give the world its crown
 Of name and fame and history,
 And pomp of old renown.

These claim no gaud of heraldry
 And scorn the knighting rod,
 Their coats of arms are noble deeds;
 Their peerage is from God.
 They take not from ancestral graves
 The glory of their name,
 But win as once their fathers won,
 The laurel wreath of fame.

THE BREAKING PLOW.

I am the plow that turns the sod
 That has lain for a thousand years;
 Where the prairie's wind-tossed flowers nod
 And the wolf her wild cub rears,
 I come, and in my wake, like rain,
 Is scattered the golden seed;
 I change the leagues of lonely plain
 To fruitful gardens and fields of grain
 For men and their hungry breed.

I greet the earth in its rosy morn,
 I am the first to stir the soil,
 I bring the glory of wheat and corn
 For the crowning of those who toll;
 I am civilization's seal and sign,
 Yea, I am the mighty pen
 That writes the sod with a pledge divine,
 A promise to pay with bread and wine
 For the sweat of honest men.

I am the end of things that were,
 And the birth of things to be;
 My coming makes the earth to stir
 With a new and strange decree.
 After its slumbers deep and long,
 I waken the drowsy sod,
 And sow my furrow with lifts of song
 To glad the heart of the mighty throng
 Slow feeling the way to God.

A thousand summers the prairie rose
 Has gladdened the hermit bee;
 A thousand winters the drifting snows
 Have whitened the grassy sea.
 Before me curls the wavering smoke
 Of the Indians' smouldering fire;
 Behind me rise—was it God who spoke?
 At the toil-enchanted hammer's stroke,
 The town and the glittering spire.

I give the soil to the one who does,
 For the joy of him and his;
 I rouse the slumbering world that was
 To the diligent world that is.
 Oh, seer, with vision that looks away
 A thousand years from now,
 The marvelous nation your eyes survey
 Was born of the purpose that here, today,
 Is guiding the breaking-plow.

—Nixon Waterman in the National Magazine

In Memoriam

Members.

Clyde J. Masters, Reg. No. 93855, age 28, of Lodge 556, Oklahoma City, Okla.; born in Iowa, 1856; died April 29, 1915, from otitis media; married, leaving one child; member two and one-half years.

Michael Boskavich, member of Lodge 39, Reg. No. 97610; died March 9, at Whiting, Ind.

Axil Rose, Reg. No. 97015 of Lodge 39, died at Robertsdale, Ind., April 6; born in Illinois.

Relatives of Members.

James F. Clucas, age 63 years, father of Brother Wm. H. Clucas, treasurer of Lodge 227, died April 28, 1915, of old age; he was born in Isle of Man, England, 1852.

Amelia Hentze, age 74, was mother of Brother Chas. Hentze of Lodge 360, died March 23, of acute indigestion; was born in Germany, April 7, 1841.

Mrs. L. J. Frost, age 17, wife of Brother L. J. Frost, of Lodge 587, born in Sands Springs, Okla., died April 18, 1915, from peritonitis.

Lodge Notices

Jno. Fisher—Lodge No. 363.

John Fisher, Reg. No. 8871, is requested to communicate with secretary of Lodge No. 363.

JOHN ROCHE,
Secretary.

McLaughlin Relatives.

Will Boiler Maker Frank McLaughlin, or anyone knowing his whereabouts, correspond with his brother, W. A. McLaughlin, conductor, I. M. & S. R. R., or Tom McCabe, 1320 Madison St., Alexandria, La.

TOM McCABE.

Richea—His Wife.

Anyone knowing the whereabouts of J. D. Richea, boiler maker, formerly a member of Lodge No. 27, St. Louis, Mo., will please notify his wife, Mrs. Julia Richea, 107 N. 10th St., St. Louis, Mo.

C. S. Burk—Lodge No. 82.

Any secretary taking up card of Brother C. S. Burk, Reg. No. 102470, will please hold same and correspond with secretary of Lodge 82, as this brother misrepresented facts to secure transportation to Kansas City, amounting to \$1.25, and we had to pay this bill out of the treasury of the local.

A. G. EVERETT,
Secretary L. 82.

Cooper et al—Lodge No. 491.

The following names are brothers who left Lodge 491 with bills unpaid: C. E. Cooper, boiler maker, left here Sept. 17, 1914, and later worked in Boone, Iowa. Bill to F. C. Krull & Co., for clothing, \$12.35. A. J. Conelly, bill to F. C. Krull & Co., for clothing, \$3.95. John Peters, Reg. No. 80223, to F. C. Krull & Co., for clothing, \$5.50. Last heard from was at Franklin Junction, Mo. Joseph Regan, Reg. No. 95180, F. C. Krull & Co. for clothing, \$2.40, and board and room to Sutton Sisters, \$8.83; total, \$11.23. J. M. Morgan, Reg. No. 91068, borrowed money from Local No. 491, \$2.50. Helpers: W. J. Mills, Reg. No. 98504, withdrawal card out of Local No. 145, owes F. C. Krull & Co. for clothing, \$6.40. C. A. Riley, no card, left for oil fields in Oklahoma, August, 1914. Debtor to F. C. Krull & Co. for clothing, \$4.25. Local No. 491 will have to have good references from brothers wanting credit at this point, or their card will have to show 10 years or more good standing, as this is getting to be a joke, standing good for some of those so-called boomers. All that has not been squared up by July 1, 1915, will be called for again in the August Journal.

J. J. CARROLL,
Secretary 491.

LIST OF MEMBERS PREVIOUSLY ADVERTISED

J. D. Landault, Reg. No. 87363, left Teague, Tex., owing a grocery bill of thirty-nine dollars and ninety-five cents (\$39.95). He is wanted by Mrs. John Cure, Teague, Tex., who stood good for the amount.

Swain—Lodge No. 567.

T. D. Swain, Reg. No. 38826, by Lodge No. 567, for non-payment of a note of seventy-five dollars (\$75.00).

R. L. WRIGHT,
Cor. Secretary Lodge No. 567.

Robertson Lodge No. 173.

H. E. or Earnest Robertson is wanted by Lodge No. 173, for failing to make good some money he borrowed.

J. P. TAYLOR,
Lodge No. 173.

Stewart et al—Lodge No. 66.

Any secretary taking up the card of Edgar Stewart, Reg. No. 21232, or Noble C. Townsend, Reg. No. 62088, will please correspond with the secretary of No. 66, Little Rock, Ark., as these brothers misrepresented facts and secured transportation out of Little Rock and Lodge No. 56 had to pay for same.

E. WORTHSMITH,
Corresponding Secretary No. 66.

E. L. Chafin—Lodge No. 587.

We have suspended Brother E. L. Chafin for not paying dues or honest debts. I, myself, loaned this brother some money to bury his little child, and he will not pay it back. He also owes several bills that he won't pay.

C. C. MADDY,
C. S., L. 587.

W. M. Horstmeyer—Lodge No. 381.

Any secretary taking up the card of Brother W. M. Horstmeyer, Reg. No. 9735, please hold same and correspond with Joe Wilson, secretary Lodge No. 381, Amarillo, Tex., as this brother borrowed some money from this lodge which he has forgot to return.

JOE WILSON,
L. 381.

Trials and Fines.

Roberts—Lodge No. 305.

This is to certify that W. M. Roberts, Reg. No. 101127, was tried and found guilty of violating the laws of the Brotherhood by working on unfair work as riveter for the P. I. W. Co., at Englewood, near Houston, Texas, March 24, 1915, and was fined one thousand (\$1,000.00) dollars, and suspended

for 99 years and is not entitled to recognition in any way from the officers or members of this Brotherhood until such judgments are satisfied.

E. L. Chafin, delinquent member of 587, was also working on this job the same date, but as he is delinquent he cannot be brought up for trial, but we would like to have him advertised in the Journal, as this member received money while in hard luck from both members of Lodge 305 and 587, and is still in debt to Lodge 587. His Reg. No. is 80151.

C. L. BRAGG, President.
T. O. RILEY, Secretary.

E. A. Grimes—Lodge No. 495.

This is to certify that E. A. Grimes, Reg. No. 96087, has been duly tried and found guilty by Lodge No. 495 of obtaining membership in this Brotherhood through fraud and card is revoked.

C. E. DICEY, A. Pres.
D. H. KING, R. S.

Dailey, et al.—Lodge No. 592.

This is to certify that the following members of Lodge No. 592 were tried by that lodge and found guilty of violating the laws of the Brotherhood by working on unfair work in the oil fields around Cushing, Tulsa, and vicinity, of Oklahoma, and were each fined \$1,000.00 and suspended for fifty years: Walter Dailey, Reg. No. 23543; W. R. Dickie, Reg. No. 99266; Frand Adams, Reg. No. 100539; C. Brown, Reg. No. 101953; Earl A. Brown, Reg. No. 100052; Roy Ingalls, Reg. No. 99943; Claude Reed, Reg. No. 100836; Tom Moore, Reg. No. 97864; Chas. Noble, Reg. No. 100832; Frank Williams, Reg. No. 93687; Guy Shriver, Reg. No. 98473; Chas. E. Lindsay, Reg. No. 101098; Ben Noble, Reg. No. 100828; W. L. Armhelm, Reg. No. 98515; J. D. Wilkerson, Reg. No. 102082; J. T. Mullen, Reg. No. 103541; Hugh Ross, Reg. No. 102966; Mike Edwards, Reg. No. 102967; W. C. Blankenship, Reg. No. 99456; James Macho, Reg. No. 68388; Carroll Copeland, Reg. No. 101029; John Copeland, Reg. No. 101026; D. W. Copeland, Reg. No. 88708; Roy Copeland, Reg. No. 77489; Bert Lemaster, Reg. No. 101678; Wm. Clinton, Reg. No. 101667; C. J. Levett, Reg. No. 91441; R. K. Lovett, Reg. No. 92600; C. Brown, Reg. No. 101953; Elmer G. Ankeny, Reg. No. 100335; Albert J. Cameron, Reg. No. 97800; John McPherson, Reg. No. 93676; A. A. Bruce, Reg. No. 100882; A. A. Meyers, Reg. No. 101940; A. A. Dosh, Reg. No. 90967; Chas. D. Cameron, Reg. No. 101354; Mack Miller, Reg. No. 103087; Porter Harris, Reg. No. 27319; Wm. O'Neill, Reg. No. 101222; Warren J. Hill, Reg. No. 31475; Henry LaPointe, Reg. No. 101221; Dick Rutherford, Reg. No. 43047; Ed. L. Ryan, Reg. No. 101027; Tom Burke, Reg. No. 93513; C. W. Huff, Reg. No. 79427; D. B. Askew or Asknee, Reg. No. 102969; Guy Sain, Reg. No. 97930; Charles English, Reg. No. 101861; F. T. Trammell, Reg. No. 101688; and are

not entitled to recognition in any way from the officers or members of this Brotherhood until such judgments are satisfied.

E. DIXON, President.
RICHARD LEAHY, Cor. Sec'y.

Lost and Found.

Lost Due Book—Costa.

Anyone finding the clearance card and due book of Brother Bert Costa, Reg. No. 22233, will please forward to the undersigned. Due book was out of Lodge No. 74, Houston, Texas, and clearance card Lodge No. 32, paid to March 31.

WALTER E. DWYER,
Secretary Lodge No. 32.

Lost Due Book—Busch.

The card and due book of Brother J. C. Busch was lost while on his way from Tacoma, Wash., and Portland, Ore. Anyone finding or having same will please correspond with the undersigned.

WM. POLZING,
Secretary Lodge No. 247.

Lost Due Book—Ivey.

Edw. E. Ivey, Reg. No. 74216, lost his due book and card on the Milwaukee Railroad. Finder please return to Grand Lodge.

EDW. E. IVEY.

Found Due Book—I. S. T.

Found due book and card of Brother Geo. Sullivan, said book and card found in Miami, Ariz., owner may have same by proving property, having same come through the lodge.

F. P. REINEMEYER,
I. S. T.

Walpale—Lodge No. 521.

Any secretary taking up the card of Bro. W. B. Walpale, Reg. No. 63322, will confer a favor by notifying the undersigned, or if Brother Walpale reads this it will be to his interest to write the secretary of Lodge No. 521.

OTTO PYLES.

Notice.

Frank C. Hasse, Reg. No. 27346, has paid fine and reinstatement fee in full and now is entitled to all rights and privileges of our organization.

JOHN S. COGHLAN,
B. A. and C. S., Lodge No. 39.

Thompson—Lodge No. 587.

F. W. Thompson, Reg. No. 20987, has been suspended by this local for non-payment of dues; he also owes about \$40.00 here. I kept after this brother while here; he got \$4.00 per day but could not keep in the clear, nor hold his job for good old booze.

T. C. MADDY,
Secretary Lodge No. 587.

By Insisting Upon Purchasing Union Stamp Shoes

You help better shoemaking conditions.
You get better shoes for the money.
You help your own labor position.
You abolish child labor.

Do not be misled by retailers who say: "This shoe does not bear the union stamp, but is made under union conditions." This is false—no shoe is union made unless it bears the union stamp.

Boot and Shoe Workers' Union

246 SUMMER STREET, BOSTON, MASS.

LAWSON A CONVICT—ROCKEFELLER A SAINT?

By Samuel Gompers, in the American Federationist.

"Guilty of murder in connection with the death of—the words came with a weird shock. They had an appalling fascination because of their unbelievable reality. John Lawson has been found guilty of being an officer of organized labor and sentenced to living death in connection with the man of whose death he knew nothing. Why? Because somebody wants to get John Lawson out of the way. It is a familiar trick of hostile employers to undermine unionism by getting the leaders out of the way by allurement, discharge or jail—some way, any way. John Lawson is a miner; he is one of the strong, courageous, reliable men in the movement to establish industrial justice and freedom for those who work.

That the labor movement is a great evolutionary force, that it brings in its wake a new industrial status, employers fully appreciate. The coal barons of Colorado have been dominated by a man who would sacrifice all of his investments in Colorado rather than recognize the new industrial situation which assures wage-earners a voice in determining conditions under which they work. In the relentless pursuance of this policy John Lawson became a marked man.

But John Lawson was known throughout the state of Colorado as an honorable, just man, a man who had reverence for human life. Because of the world-wide publicity which the strike gained, due to the subversion of civil authority and to the disgraceful civil war that was inaugurated by the coal barons, John Lawson became equally well-known as a responsible, frank, kindly advocate of human justice. The governmental officials and agencies of Colorado have become infamous for facile subservience to the machinations of corporate "vested interests." But the existing agencies could not be trusted to convict John Lawson of a murder that he did not even see. A special tribunal was "made to order."

A new judgeship was created to which was appointed Granby C. Hillyer, formerly corporation attorney for the coal barons. To him could be entrusted trials of union miners indicted during the strike. Jesse Northcutt, the well-known attorney for the coal operators, acted as prosecuting attorney.

When this "machinery of justice" was ready for business the labor "trials" began. The first trial was that of Louis Zancanelli. The machine clogged—careful study revealed defects in the jury. The newspaper of Colorado assert that the jury was "improved" by the injection of three gunmen, a corporation doctor, and a man who was said to have bet on the trial. This time the machine did the trick and was pronounced equal to the work of getting John Lawson out of the way.

Profiting by the first experiment the sheriff provided a hand-picked jury chosen by open venire. The law of Colorado provides that juries shall be chosen by drawing names from the jury box, but as that method was inconvenient for this special judicial machine it was not permitted to interfere. Then the machinery to convict the leader of the miners of Colorado was ready and the formalities of securing legal "sanction" for connecting John R. Lawson with the death of the gunman, John Nimmo, were enacted.

There was not a scintilla of evidence to establish Lawson's guilt. It was not even proved that he was present at the battle. The prosecution simply proved Lawson to be a union official, but failed to establish that he advocated, practiced or even encouraged violence. The employes and gunmen of the coal operators offered testimony to substantiate the company's prosecution.

After long deliberation the hand-picked jury brought in its verdict. In the death-like stillness Lawson was declared guilty of murder in the first degree in connection with the death of John Nimmo, October 25, 1913. A gasp of unbelieving wonder followed this travesty of justice—wonder that grew into indignation and protest as people came to realize the principle involved. That principle is of vital importance to every working man and woman in the country.

To understand the significance of the verdict it is necessary to understand the civil war which has been devastating the coal fields of southern Colorado. In 1913 the coal miners presented grievances to the coal operators. They were trying to organize in order to secure for themselves the industrial right to a voice in determining conditions of work. Their demands were as follows: An eight-hour workday for all men employed in the mines; the right to employ check-weighmen; the right to belong to a labor union; abolition of the truck store and scrip system; a semi-monthly payday;

a 10 per cent increase in wages, and the abolition of the guard system.

Five of these demands were legal rights accorded by statutes enacted by the state legislature. But because the workers lacked the economic power to enforce their legal rights the laws were dead letters. The mine operators treated laws with contempt and yet no official nor court presumed to punish them. Why was not more effort made to establish regard for law and order in the policies of the operators? Were these operators above the law? What then of the boast (or the platitude) that all citizens are equal before the law?

When the demands were under consideration, the mine operators began preparation for war. They began importing arms and ammunition, they borrowed the field artillery that had been used in the coal war in West Virginia; they began shipping in the Baldwin-Feltz gunmen who had served in West Virginia. Did they not deliberately plan a policy of violence?

Before the strike was declared a gunman on the street in Trinidad shot Gerald Lippiatt, a union organizer; that was the first act of physical violence connected with the strike. The men responsible for the presence of that gunman in Trinidad were "guilty of murder in connection with the death" of Gerald Lippiatt—yet not one of them has been convicted, arrested or even indicted. Does the same law apply to miners and mine operators in Colorado?

When the industrial struggle became inevitable the miners knew that they must make some provision for shelter. The homes in which they lived were company houses. In fact, under the feudal conditions that existed no striker had a right even to a space to stand on in the vast holdings of the mine operators. The mine operators own the land where the miners work, the houses in which they live, the stores where they buy necessities of life, the school houses, the churches, the postoffices, the courts, the banks, and the public highways. Eviction always follows strikes—a miner who demands rights has no right on the land of the mine owners. He becomes a "trespasser."

The miners purchased or leased suitable tracts of land for tent colonies. These camps were erected at Ludlow, Forbes, Hastings, Oak Creek, Walsenburg, and other places.

On September 23 the strike was declared. The Baldwin-Feltz men began their usual work, shooting, trying to incite violence. On October 9 they made an attack on Ludlow. Since Ludlow had no police protection the men had to defend their own lives and to maintain order in the tent city. When the militia arrived October 11 the men say that all arms were given up to welcome their arrival. But immediately gunmen were sworn into service in the militia—and thus what was nominally a governmental agency for "law and order" became a private army in the employ of the

mine operators and used for strikebreaking purposes. On October 17 an attack was made on the tent colony at Forbes. The company had an automobile iron-plated, and armed it with a rapid-fire gun shooting 147 times a minute. This automobile was driven up to the Forbes colony by Baldwin-Feltz deputies. One of the men approached the camp and asked if they were union men. Their "confession" was the signal for the withdrawal of "law and order." The men in the automobile open fire on the camp—one miner was killed and a boy was shot nine times in the legs. Those tents, however poor, were the miners' homes and contained women and children. Would men refuse to defend their homes? No one has yet been indicted for "murder in connection with the death" of this man.

A "death special," consisting of a train of three steel cars, was armed with rapid-fire guns to hurl "law and order" into the bodies of the strikers.

On October 24 an attack was made upon the colony at Walsenburg and a number of the miners living in the colony were killed.

On the following day, while the strike benefits were being paid at Ludlow, the gunmen opened fire upon that colony from the heights overlooking the Ludlow plains. The miners arranged a place of safety for the women and children and then prepared to defend them and themselves. The attack upon the colony was led by John Nimmo, who, as those present contend, was shot by his own men. Whatever shooting the miners at Ludlow did was done in self-defense. The "law" even of Colorado permits a man to defend his own life and that of his wife and children.

Isn't it more than passing strange that in a country where the constitution firmly proclaims equal rights for all, that industrial war in one state may become a matter of international information and criticism and yet only wage-earners are indicted for punishment in connection with violence and murder? No one denies that Louis Tikas and other miners were killed, but neither of the John D. Rockefellers nor J. F. Welborne was indicted for their murder. If the leader of the strikers can be held responsible legally for violence alleged to be committed by the strikers, then every mine owner is legally responsible for the deaths of men, women and children killed in the war waged to suppress and prevent miners from securing rights assured them under state laws.

The state of Colorado does not condemn violence or disregard for the law—it condemns only strikes and convicts only strikers. It accords mine operators the right to private police, private armies and to the use of violence "to put down" the demands of wage-earners—in other words, it legalizes violence in the interest of property.

Miners employed by the Colorado Fuel and Iron Company must order their lives, direct their minds and curb their desires as

the company dictates—they have not the right to petition their rulers for redress of grievances. These rulers have officially declared that no grievances exist.

The strike is the final protest that a free worker can make. The law of Colorado accords the workers the right to strike. Yet all of the organized forces of the government were put at the service of the coal operators to deny the miners the normal and lawful opportunity to make their rights effective. When strikebreakers are brought in the strike becomes ineffective. Yet the coal operators were allowed to use violence under the pretense of protecting the strikebreakers. The operators imported the same strikebreakers who had been used in West Virginia, for strikebreaking has become an established interstate business. Strikebreakers are protected by police, militias and the private armies on the lands of feudal employers, backed by a partial judiciary.

The whole country was aroused by the subversion of civil authority in Colorado, by the arrogance with which the mine operators disregarded all attempts by the Congress or by the President of the United States to adjust grievances of employes. So long as private individuals are permitted to control organized physical forces through the right of corporation police, just that long will violence be provoked in industrial disputes.

The coal operators of Colorado employed hirelings to do the physical violence that has so often accompanied Colorado coal strikes; through their political and military servitors they wronged the wage-earners by a subtler form of violence—violence to their constitutional rights, violence to their ideals of freedom, violence to their lives and hearts and minds. Responsibility for this terrible violence to humanity must inevitably fall upon the mine owners—there is not one who can rid his conscience of guilt.

Under present conditions society does not condemn violence—it only restricts the use of violence to a privileged few. Colorado says to the mine operators, you may use guns for offensive and defensive purposes; it says to the miners, you shall be held responsible for complicity in connection with the death of any of these soldiers of the mine operators.

Is this equality before the law? Before whose law?

Back in 1913 a grand jury in Colorado returned indictments against several national and state officials of the United Mine Workers for alleged conspiracy under the Sherman anti-trust law. The grand jury condemned some of the methods of the organization as illegal, but stated that striking miners had been denied protection of the law. The same grand jury further charged the coal barons as follows:

State laws have not been obeyed. Could there be more insidious anarchy?

The coal companies have in many cases

controlled local politics by reprehensible methods, including various forms of discrimination and the changing of precinct boundaries in order to eliminate unfavorable votes.

The scrip system and obligatory trading at company stores, abuses of long standing forbidden by law, still exist and are frequent causes of complaint.

Saloons are maintained by many companies in their camps and they collect from the keepers of such saloons a per capita sum of 25 to 40 cents per month for each person whose name appears upon the company payroll.

Employes have been discharged for insisting upon a system of check-weighing in accordance with state laws.

Not only labor unions but fraternal societies are opposed and discouraged by the coal companies. Thus state laws and elemental rights of citizenship are disregarded.

Constitutional rights of legal procedure have been disregarded by camp marshals whose appointments and salaries are controlled by the coal companies. Many of these petty officials have exercised a system of espionage and has resorted to arbitrary powers of police control, acting in the capacity of judge and jury.

Men who have incurred the enmity of the superintendent of the pit boss for having complained of real grievances have not only been denied hearing but have been given the sentence of "Down the canyon for you," which means that the miner is discharged on the spot and driven from camp. These camp marshals are often guilty of brutal assaults upon miners.

As a result of these and similar conditions, miners generally fear to complain of real grievances because of the danger of their discharge or of their being placed in unfavorable positions in the mines.

Despite this finding by the grand jury—the agency for law and order—no steps were ever taken to punish these malefactors of great wealth for their violations of law. What manner of justice exists in Colorado? How long will the citizens of Colorado endure the rule of the corporation interests? When will they rise in the dignity and the might of free citizens and demand the rights of free men and the constitutional rights of citizens of a republic?

There is a tremendous issue involved in the verdict returned against John R. Lawson—an issue of grave importance to every worker, to every liberty-loving citizen of the United States.

The mine operators have demonstrated that they can secure a conviction of murder against a union leader merely because he is a union leader, even though he is in no way connected with the alleged violence.

The mine operators will now endeavor to have that verdict confirmed by a higher court as a legal precedent. To incorporate that principle into the law of the land is to place in the hands of employers hostile to labor an opportunity for endless prose-

cution and litigation that will not only drain union treasuries, but harass the toilers by diverting them from necessary organizing, protective and beneficent activities. Employers have ever diligently sought methods to force unions to squander funds for unprofitable expenditures.

The trade union is a great evolutionary force seeking to establish in industrial life the rights of human beings to life and to the products of labor. It is a force making for the uplift of humanity and must not be outlawed by legislative enactment, judicial perversion of justice, or by the organized violence of employers and their Hessians.

The labor movement is the hope of the workers.

This attempt to hold John R. Lawson responsible in connection with the death of a man of which he had no knowledge stands out in vivid contrast to the studied efforts of John D. Rockefeller, Jr., to establish his complete ignorance of the Colorado strike and hence his complete irresponsibility. John R. Lawson had nothing to gain by the death of John Nimmo, but John D. Rockefeller had profits at stake in the suppression of the Colorado strike.

At the New York hearing of the Commission on Industrial Relations, John D. Rockefeller calmly disavowed ordinary intelligence as to labor conditions in Colorado; to the House of Representatives' Committee on Mines, he asserted that he accepted the judgment of his agents without question; with regard to the public he sought to establish for himself the reputation of a figurehead.

Chairman Walsh has made public letters written by Mr. Rockefeller which seem to fill up the mental blanks which Mr. Rockefeller has attributed to himself. Mr. Rockefeller has been again subpoenaed to tell what he knows. That hearing may open opportunities for making Mr. Rockefeller assume responsibility which he ought to assume—responsibility for the violence and the injustice that exist in Colorado, responsibility that he seeks to shift upon an officer of organized labor.

Existing law, existing judicial interpretation of law, and existing administration of law are a heritage from past customs, traditions and developments. During the past ages governmental influences and control have been in the hands of men who have considered government an institution for the protection of property. Where the theory of the sacredness of property is not the dominant force it is a background that gives tone and direction to governmental interpretations.

Regard for the welfare of the workers who are the necessary power in the creation of property has been subordinated to regard for property. Holders of property have created a tradition of the paramount importance of property and have exalted and exaggerated the part that property has in production. At the same time they have minimized and detracted from the service

that the laborers render. Through their political influence gained by their economic power they have incorporated this misconception into governmental and legal theory. It is against this inequality, this injustice, that the workers are now directing the power of the labor movement.

Slowly the workers are learning to appreciate their great economic power. As producers they have the world in their grasp. Through their economic power they have been slowly injecting into political and legal thought the conception of the sacredness of human life and the paramount importance of humanity. They are trying to establish a real equality of opportunity in industrial and in political affairs; they are trying to secure equal governmental protection for all human beings. This is the real revolution the labor movement is working.

There can be no equality of opportunity industrially or politically so long as any private citizen is privileged to have control over agencies of force and coercion. All the agencies of government must be representative of all the people and exercised by those responsible to the people. There can be no equality of opportunity so long as all of the coercive agents of organized society can be utilized by employers for tyranny, injustice, greed and profit—for strikebreaking purposes. It is mockery to legalize strikes and then to use every governmental agency to make strikes ineffective. Where there is no equality of opportunity there is no equality, and equal rights to all becomes a platitude.

It is everywhere recognized that the attempt to railroad John R. Lawson to prison is a part of the sinister plan and the vengeance of the subtle power that has directed the policy of the coal operators of Colorado. John D. Rockefeller cannot escape responsibility for his deeds. The spectres of Ludlow have not yet vanished from the memories of men nor have they ceased to haunt him who is responsible.

How long, Mr. Rockefeller, will you persist in your unbridled audacity? How long will you try to conceal under the cloak of private philanthropy your tyrannical denial of the rights of free citizens to those in your employ? When the miners of Colorado ask for justice, you mock them with your hypocritical charity.

The money you give for charity carries with it distrust because of the way it was made. Charity will not buy you freedom from responsibility for "murder in connection with the deaths" in Colorado and in connection with the living death that the courts of Colorado have prepared for John R. Lawson, nor for the human lives that have been warped and embittered through injustice and denial of rights.

The great injustice and wrong already inflicted on Lawson must be undone and righted.

John R. Lawson must be freed!

ORGANIZED LABOR'S EXHIBIT AT THE FRISCO EXPOSITION.

From all reports the exhibit at the Panama-Pacific Exposition, devoted to the cause of organized labor and arranged under the auspices of the American Federation of Labor, is in every way worthy of the great cause it represents and it should be one of the first places to be visited by every loyal member and well wisher of organized labor, who visits the Exposition. The labor exhibit is in a booth at the western end of the Palace of Education and Social Economy. The booth is located on the corner of Sixth Street and Ave. D.

It is 20x55 feet in size.

We are told that one of the most striking features of the booth is the frieze which adorns the side and end of the interior, which represents by human figures and symbols, the work in mines, mills, factories, agriculture and horticulture. An illuminated chart containing the following extract from the Clayton anti-trust act, "The Labor of a Human Being Is Not a Commodity or Article of Commerce," expresses the Central thought of the whole exhibit.

Various charts are exhibited, showing the progress that various organizations have made, in organizing and in securing better conditions and wages for their members. A stereomograph throws upon a screen industrial scenes and the union labels of organizations in affiliation with the Union Label Trades Department of the A. F. of L., and we are told that every exhibit and article of furniture, in fact everything in connection with the exhibition, as far as possible, bears the union label.

We have secured a couple of cuts of this booth, through the courtesy of General Organizer Young of the A. F. of L., which we will reproduce in this issue for the benefit of our members.

AN UNWISE MOVE.

We have been informed that an effort is being made to form a "Panama Gold Employes' Organization" on the Isthmus of Panama, independent of all other organizations.

We do not know just who the Panama Gold Employes are, that is, what trades and callings the term covers, but we have no hesitation in saying such a move would be a serious mistake. We have had fourteen years' experience as a navy yard employe and know something of the conditions under which government employes labor and the handicaps they have to contend with. Mechanics and civilians employed by the Army and Navy Departments are subject more or less to the military discipline which pervades these branches of the government service; it is strict, stern and unyielding, and the only thing that will induce the officials of these departments to change their policy or treatment of civil employes is political influence, and the political influence of a bunch of working men employed and living on the Isthmus is a negligible quantity. What they cannot secure by moral persuasion they must depend on others to get for them, and the logical ones for them to turn to, is their fellow working men in the States. Therefore, instead of the men in the canal service assessing themselves ten per cent of their wages for a month in order to start a new organization, they, to a man, should become affiliated with the legitimate organization of their trades in the United States and in this way be in a position to claim the assistance of their fellow union men here, in their efforts to secure what they think they are entitled to for work in the Canal Zone.

In this way they can secure the assistance and the influence of the whole American labor movement and the help of the officers of the A. F. of L. in its departments at Washington to secure for them a square deal. It is through this influence that all the concessions, these government employes have secured in the past have come and it is their one best bet for the future. The organized employes on the Isthmus could, with propriety and no doubt with advantage, select one of their brainest and most experienced members and send him to Washington to represent them before committees of Congress at its next session. He can, if he uses proper discretion, help put in motion all of labor's influences in behalf of those who sent him.

RICHMOND, VA., UNIONS ARE PROGRESSING.

We are in receipt of a copy of "The Square Deal," a bright, newsy weekly paper, issued under the auspices of the Trades and Labor Council of Richmond, Va. It bears all the earmarks of a well edited, up-to-date paper, that will no doubt do valiant service for the cause of organized labor, not only in Richmond, but the entire state of Virginia.

We congratulate the unions of Richmond on their enterprise and wish every success to their venture into the Journalistic world.

The establishing of a paper, however, is but one of the many enterprising efforts the union men of that city are putting forth, all of which are for the advancement of the interests of the working people of that city.

One of the enterprises now under way is an effort to have a representative in the legislature, a right which the voters of Richmond has recognized for a long time. At a recent meeting of the Trades and Labor Council, Mr.

R. T. Bowden of the Typographical Union, and now vice-president of the Council, was unanimously indorsed as labor's candidate for legislative honors, and have inaugurated a campaign to insure his election.

Mr. Bowden is in every way worthy of the honor and confidence bestowed upon him by the union men of Richmond, and we hope his candidacy will receive the united active support of every working man in that city.

We do not believe it will be necessary to do any urging upon the boiler makers and helpers there to rally to his support. We hope they will not only vote for him, but that they will get out and diligently work in his behalf from now until the primary takes place.

FORD ISSUES AN ENORMOUS AMOUNT OF WATERED STOCK.

The daily papers recently announced that the Ford Motor Company had increased its capital stock from two millions to one hundred millions of dollars, forty-eight millions of which was voted as extra dividends to the stockholders. This is 98 per cent of water and one of the most glaring cases of watered stock issues ever made public. Of course it will be expected that the employes working for this company shall help earn a dividend on all of this inflated stock.

This is the company that made a dramatic announcement of a co-operative plan some time ago and announced five dollars as its minimum rate of pay.

If this company can make money paying this rate and at the same time earn enough to pay dividends of this tremendous, outrageous increase in its stock, then they must be robbing those who buy from them.

It is high time that laws were enacted preventing such shameless stock increases, which is based only on the power of the Company to pay a dividend at the present time. The states must enact laws to regulate the issuing of stocks and bonds, for as it is at present practiced, it is a stench in the nostrils of honest business.

A VOICE FROM THE FORGOTTEN PAST.

Ex-President Taft appeared before the "Eat It With a Spoon" Club of Kansas City recently, and unburdened himself of a lot of criticisms of organized labor and its tendencies, he prefaces his long tirade of criticisms with the statement that "now combination and organization have come to labor as well as capital. By these means the worker, originally at a disadvantage has placed himself on an equality with his employer." It is not necessary to tell our readers that organized labor is far from this desirable goal, thus arguing from false premises it is plainly evident that Mr. Taft reached erroneous conclusions in most of the criticisms he made. He asserts that unionism is tending towards the dead level and that it is discouraging skill and production, because it successfully opposed the efforts of certain inter-

ests and of certain officers to install the Taylor system in the government arsenals and navy yards. Mr. Taft's dense reasoning and illogical conclusions shows he does not know any more about these matters than he did about the affairs of state, and which resulting in his hitting oblivion with a dull thud and in short order.

He throws a fit about the Clayton amendment to the anti-trust laws which exempts labor and farmers' unions from the provisions of these laws, but does not give a single reason based on equity or fairness, why this amendment should not have been made a part of the law, but indulges in aspersions upon the members of organized labor that would do credit to a veritable demagogue, only he inverts the usual order.

In our humble opinion what Mr. Taft needs is to go away back and sit down or confine his speeches to such subjects as he knows something about, for in matters concerning the welfare of the masses he has not a heart throb that beats in unison with them.

His associations, training, past actions and utterances all show plainly he is for the favored few at the expense of the many.

MEMBERS SHOULD FURNISH CHANGES OF ADDRESS.

We would like to again impress upon our members everywhere, the importance of keeping the secretary of their lodge informed of all changes they make in their address, so that when the secretary is preparing new lists to be sent to this office, they will not give the wrong address, which will result in their failure to receive the Journal, for our mailing list is corrected in accordance with the last list received from all lodges, and the postoffice employes will not pay any attention to or deliver second class matter unless the correct address is given.

When the members move from one street to another they should write their name and old as well as new address on a slip of paper and either give or send it to the secretary. They must recognize the fact that the duty of giving this notice to the secretary is theirs and they cannot blame anyone but themselves if they fail to get their Journal. Under no circumstances should they wait for the secretary to ask them for it. They should remember that he has the task of looking after and sending lists of all the members to this office.

Many times members of various lodges notify us direct of changes of their address and we make the necessary changes on our mailing list, providing it is of a local character. However, this does not relieve them of the duty of notifying their secretary of these changes also, for later on the secretary may prepare and send to us another list, using this member's old address. We take it for a change of address and correct accordingly and the consequence is the Journal fails to reach them. If each member will do their duty in this matter, it will greatly aid the secretaries and make sure the Journal is reaching them promptly.

CHAIRMAN WALSH AROUSES THE IRE OF BIG BUSINESS.

From the daily press we learn that the recent examination of John D. Rockefeller, Jr., and some of his satellites and retainers, by Mr. Frank Walsh, chairman of the Federal Industrial Relations Committee, has aroused the resentment of these people. This straightforward, searching, deep probing, investigations and examinations of witnesses breaks all records for commissions, none have heretofore really probed for the facts or asked embarrassing questions. Therefore, the friends of big business and special privilege are resentful towards Chairman Walsh and are clamoring for his dismissal.

Heretofore we have not been in favor of industrial commissions for the reason that they were mere farces. They did not ask any disagreeable questions or seek the true conditions, although many volumes of prepared beforehand testimony was given and put into type, but the only ones who ever read these reports were the printers and proofreaders who put them into print and got so much per day for doing so. However, with the present commission it is different. Labor has a larger representation than ever before, being represented by three able and experienced leaders that enjoys the full confidence of the masses of people. Besides this we are fortunate in having so able and fearless a man for chairman as Mr. Walsh, who from the first has shown broad and humane views and since he has gone deeper into this investigation and seen, at first hand, the real conditions underlying our industrial system, he has shown unmistakable signs that his heart beats in unison with the aspirations of the masses for better conditions, and a higher standard of civilization.

The oppressors of labor may rave at Mr. Walsh if they will, but they cannot harm him. They may clamor all they want for his removal as chairman, but we feel sure President Wilson has no intention of molesting him and dare not do so even if he was so inclined, because of public opinion. The working people appreciate Mr. Walsh's work and brave stand.

REACTIONARY STANDPATTERS AGAIN SEEKING CONTROL.

Every indication points to a renewed and determined effort of the reactionary forces, which were such pliant tools of privilege hunting, boodling corporations, to secure control of the government again. In fact, we find that in several states they have already wormed back into power, the legislatures in these states in the past few months, not only refused to pass any legislation asked for by organized labor, but in many instances hamstrung laws already on the statute books which were previously enacted for the protection of the masses.

Already the forces of the invisible powers of government, the boodling, privilege hunting, corrupt corporations are busying themselves trying to arrange to capture the national government again and if they succeed in their designs, Mr. Taft's standpatting record would not be a circumstance to their

choice for president, and if the working people are wise they will awake to the importance of the matter and earnestly strive to prevent such a result, which would give to the cause of organized labor, a serious set-back.

In New York state, the eight-hour law for women working in canneries was repealed and the time extended so that they and children can be worked twelve hours a day if necessary.

In Washington, the minimum wage law was attacked. In other states it was something else, anything to put the working people on the defensive so that they will have to devote their whole time in defending the laws they already have instead of being free to work for the other needed legislation.

In the last Washington hearing of the Industrial Relations Commission, Chairman Walsh unearthed a letter from L. M. Bowers, former vice-president of the Colorado Fuel and Iron Company, and now a personal representative of Rockefeller, in which he states they will fight the striking miners "until our bones are bleached white as chalk in the Rocky Mountains," and in another letter from the same source to Mr. Rockefeller, this significant statement is made: "I believe the position you so ruggedly maintained will do more for the millions of laboring men than all of the efforts of social reformers in as many years. It will set thousands of faltering employes to thinking. Now for an aggressive warfare to 1916 and beyond for the open shop."

In a speech before the Manufacturers' Association recently, E. H. Gary of the Steel Trust, is quoted as saying: "**The captains of industry will again become popular in the United States.** This sentiment has been brought about by the efforts of business men to satisfy the public in regard to their reasonable demands. The individual, or the nation whose standard of conduct conforms to the golden rule, will obtain the largest pecuniary success. If we conduct our affairs properly, if we make the most of our opportunities, if we co-operate with one another, **if the government and governmental agencies and the business people are allies**, we shall become stronger, richer and more potential in our influence after this war and we shall be able to occupy a position in the van of nations."

These two quotations plainly show what these trust magnates and so-called captains of industry will seek to accomplish by an "aggressive warfare." They will seek to get control of the government again in 1916, and with the invisible powers of government again in working order, to use this force to help them inaugurate universal open shop conditions. Some of our courts seemingly have surrendered to these influences and have dealt organized labor some death dealing blows, and as a consequence it is passing through one of the most important and perilous periods of its existence, and it is important that labor meet these evil influences with united ranks and an active and intelligent campaign to try to neutralize and make abortive the corporations' designs. However, in doing so, we must not allow anything to transpire that would tend to alienate from us the influence and sympathy of public opinion, that great force which make and unmake laws.

U. S. GOVERNMENT RAILROAD BUILDING IN ALASKA A BIG JOB.

From all accounts the road building undertaking of Uncle Sam in Alaska will be a large undertaking, the road which will extend from Seward to Fairbanks, a distance of nearly five hundred miles; the Alaskan Northern has already been built part of the way, but the further the road extends north the more it becomes isolated from the world and difficult the construction. However, American working men and engineers will build this road successfully and in short order. The road will tap a rich section of the country, immense quantities of good coal abounds and we are told that this will be mined and furnished to supply the navy on the Pacific Ocean.

Seward is 1,500 miles nearer to the Philippine Islands bases than is the Mare Island Yard, and it is said the quality of the coal is of the best. While the job of building this road is no doubt a big one, it is not likely to have the difficult engineering feats that the building of the Panama Canal presented.

ARE U. S. SUBMARINES BELOW STANDARD?

The charge is made that our submarine torpedo boats are below standard and that in case of an emergency they would be practically useless. In substantiation of these charges, it is asserted that in the recent fleet maneuvers out of twelve submarines in use, six were put out of commission by breakdowns and had to retire. In connection with this, it will be remembered that one of our torpedo boats sank in the harbor of Honolulu, Hawaiian Islands, and the whole crew drowned. While the efforts to raise this boat has been going on steadily since it sank, at last reports it had not been brought to the surface, so that the cause for this awful disaster may be ascertained; however, the charge is made that this boat was built in Seattle by an unfair ship-building company and that the poor quality of the work done by the unfair men who built it was the cause of this boat sinking. Whether this is so or not may never be known, but every effort possibly should be made to try to find out.

The importance of a rigid investigation is made much more manifest when we come to remember that bids for 26 submarines are to be let at an early date, two of which are to be of the latest and largest sea going type. If after building, any of these vessels fail because of poor workmanship and the crews lose their lives, the responsibility would rest with the contractor, and it would be little short of murder.

The safest and best plan would be for the government to build all of these vessels in the navy yards, thus insuring honest and efficient workmanship, as there would be no incentive to use unfair material or skimp on the work.

If we are to continue to enlarge our navy the only safe plan is to insist on eliminating contractors and having this work done in government yards.

MEMBERS OF AN ORGANIZATION MUST OBEY ITS LAWS.

The Supreme Court of British Columbia, recently decided a suit which upholds the authority of organized labor to enforce, among its members, compliance with its laws.

The suit referred to was a damage suit for \$10,000 instituted by a member of the Printers' Union against his local lodge. This man failed to comply with the laws of this lodge, in reference to making payment of dues we believe, and was suspended and afterwards lost his job because he was not in good standing and instituted suit with the above result. The decision was in accord with sound judgment and fair dealings, no union or any other organization could long exist unless it had the authority to enforce discipline among its members and compel their compliances with laws.

Members in joining, solemnly agree to abide by the will of the majority and lawful authority and are not entitled by any fair code of laws, to do as they please or disobey the laws of the organization they belong to.

CONVENTION OF HATTERS' UNION IGNORE LOEWE & CO. VERDICT.

It will be remembered that some time ago the United States Supreme Court awarded damages to D. Loewe & Company, of Danbury, Connecticut, against the union hatters of that city, and the homes of a number of the members were attached, and now this company threatens to have these attachments executed in order to satisfy this judgment of the court.

Interested parties, including the beneficiaries of this verdict, were hoping and expecting to see the A. F. of L. undertake to raise funds to satisfy this judgment, which with interest and court costs amounted to something like \$300,000. The matter came up at the last convention of the A. F. of L., and was referred to the Executive Council of that body, after mature consideration, the council decided that the Federation neither had the funds or the means of raising so large a sum, and therefore could not undertake the task of satisfying this unjust judgment. They put it up to the Hatters' Union at a recent convention of that body. It was decided to not undertake the task of raising the necessary amount to satisfy this judgment, but that it would endeavor to raise funds for the relief of those who have their homes taken from them. This decision will no doubt be a disappointment to the anti-boy-cott association who were backing the suit, as well as D. Loewe & Company, who, if they can cash such judgments, would make more money in lawsuits than they could making hats.

While the law has been amended since this verdict was rendered, and at present there is no apparent reason for a repetition of this verdict, still no one knows how soon some scheming and unscrupulous lawyer will find some excuse for a biased judge of some court to use in "handing down" another such verdict, and facilitating the cashing of these verdicts would make stronger the incentive to secure others. Let them whistle for the amount.

ANOTHER UNION HATER PASSES AWAY.

The public press recently announced the death of David M. Parry of Indianapolis, and a one-time president of the Manufacturers' Association, and in this capacity he showed his deep seated prejudice and hatred of unions. This is the third former president of this association to pass away recently, all of whom shows much prejudice towards organized labor.

It may be that this feeling of hatred had something to do with their demise, for hatred is a cankerous poison that brings death and destruction, not only to soul but to the body as well, none of these three men, Van Cleave, Post or Parry, were old men and with wiser rules of life might have lived to ripe old age, but the bile of their hatred, like a cancer, ate and destroyed the vitals of their bodies.

This points a moral which all might well bear in mind, which is that the world is not large enough for hatred to exist between the members of the human race, no matter what the cause, none of us should allow the canker of hatred for our fellow men to take root in our breast, for it means decay and death, not to those against whom it is directed, but to ourselves. We do not mean by this that even though we should be unjustly attacked, we should not resent it or try to defend ourselves, not at all; on the contrary, it is the natural instinct of a man to repel such aggressions with all of our power if necessary, and until reparation or apology is given, we are justified in remaining aloof from those seeking our injury, but to hate them, we should not, under any circumstances.

Were this rule of life adopted by all concerned in the industrial field, and all tried to live in accordance with the Golden Rule of doing unto others as we would have others do unto us, it would not be a hard job to solve the problems that confront us, and if we ever do successfully settle all of them it will be along the lines of this rule rather than that of force and the big stick.

In the meantime the union haters among the employers might take these lessons of the past to heart with profit, injustice and hatred leads to death and destruction, while fair dealing, and upright living begets confidence and love.

AMERICAN NEUTRALITY.

From revolutionary days, when American liberty was born, down to the present time, the policy and desires of the United States has been one of peace, peace with ourselves and the world at large, these peaceful desires prompted us to follow the advice of Washington, to avoid entangling alliances with other nations, so that we could continue to pursue this policy indefinitely, and the nations of the world have come to realize our sincerity in this policy.

However, it has not always been possible for us to pursue our way in peace, conditions arose in the past, that made it necessary for us to assume the attitude of warriors so that the rights and liberties of mankind might not be taken from them by the ruthless hand of military despotism. It was in defense of these rights that prompted our Government shortly after coming

into existence to send a fleet of warships against the Buccaneers of the Barbary coast and drive them out of existence because they were preying upon and destroying American ships and commerce; it prompted this nation to declare war against England in 1812 because that nation insisted in taking men from ships flying the American flag and impressing them into service in the English navy. It was this spirit that in 1898, prompted us to take up the task of freeing Cuba from Spanish tyranny. Thus it will be seen that even though our Government and our people have always been peaceably inclined, we have at times, in the past, been forced to assume a different role and we are quite likely to be confronted with like conditions in the future, in fact we are face to face with a serious situation at the present time, due to practices arising from the awful world war that is now raging in Europe, that threatens to destroy the rights and lives of the people of neutral nations, and especially that of our own or at least that portion whose duty or business requires them to travel upon the high seas. While we all hope and expect a peaceable settlement of this matter, still we must recognize the serious aspects of the situation, as well as the impossibility of our surrendering our rights in the matter. There can be no justification for the practice of sinking merchant vessels without notice, a notable case of which was the sinking of the *Lusitania* when thirteen hundred non-combatants, most of whom were women and children, were sent to a watery grave at the bottom of the ocean, and of this number more than one hundred were American citizens.

The United States has demanded of Germany that it cease such warfare in the future and make compensation to the families of those who have already been killed or drowned.

Germany's reply to our first note was very evasive and another note reiterating our position has gone forward. This is the note our erstwhile Secretary of State, Bryan, used as a pretext for resigning his office, and is now busily engaged in advocating a peace at any price campaign. While he was no doubt sincere in his belief, we are convinced his judgment was seriously at fault in resigning at the time and under the circumstances he did; his action, no doubt, considerably embarrassed the Government for the time being, by creating the belief abroad, that the administration as well as the nation was seriously divided in their plans and policies.

However, public opinion has shown unmistakably that the people of the United States stand unitedly behind the President and the Cabinet. The people want peace with honor and not peace at any price, if this government would tamely submit to having the rights of neutrals ruthlessly taken from them and their lives placed in jeopardy by such high handed practices as torpedoing merchantships without notice, then would all the other nations of the world have to submit to this cruel and unjust warfare also. There are also grievances we have against England, because of the methods of holding up and delaying our ships in reaching their destination in neutral ports; our Government must and will insist on these things being righted without delay, and the surest way to have them satisfactorily, speedily and peaceably adjusted, is for the whole nation to show it stands firmly and unitedly behind

the President in the stand he has taken. With most of the nations of the world at war, with millions upon millions of men grappling at each others' throats, Mr. Bryan will find that he is several eons ahead of time, in advocating a peace at any price policy. To all those whose hearts and desires are attuned to peace this policy is pleasing to the ear, however, its practice is not only detrimental but absolutely dangerous to the future peace and liberty of our people for it would destroy all of our weapons of warfare and prevent any preparations of defense against any enemy of the future, and such helpless condition would soon create one, as it did with China only recently. We all must strive for peace, but at the same time neglect none of the precautions of preparation, which prudence and forethought suggests.

QUOTATIONS.

Let us stand by the constitution as it is, and by our country as it is, one united and entire; let it be a truth engraved on our hearts; let it be borne on the flag under which we rally in every exigency, that we have one country, one constitution, one destiny.—Daniel Webster.

Have you ever rightfully considered what the mere ability to read means? That it is the key which admits us to the whole world of thought and fancy and imagination? To the company of saint and sage, of the wisest and wittiest at their wisest and wittiest moment? That it enables us to see with the keenest eyes, hear with the finest ears, and listens to the sweetest voices of all time? More than that, it annihilates time and space for us.—Lowell on Books and Libraries.

Justice is the fundamental and almost only virtue of social life; as it embraces all those actions which are useful to society; and that every virtue, under the name of charity, sincerity, humanity, probity, love of country, generosity, simplicity of manners, and modesty are but varied forms and diversified applications of this axiom. Do unto another only that which thou wouldst he should done unto thee.—Volney.

To dread no eye, to suspect no tongue, is the great prerogative of innocence; an exemption granted only to invariable virtue. But guilt has always its horrors and solitudes; and, to make it yet more shameful and detestable, it is doomed often to stand in awe of those to whom nothing could give influence or weight, but their power to betray.—Dr. S. Johnson..

There is not, in my opinion, anything more mysterious in nature than this instinct in animals, which thus rises above reason and falls infinitely short of it. It cannot be accounted for by any properties in matter, and at the same time works after so odd a manner that one cannot think it the faculty of an intellectual being. For my own part, I look upon it as upon the principle of gravitation in bodies, which is not to be explained by any known qualities inherent in the bodies themselves, nor from the laws of mechanism.

but according to the best motions of the greatest philosophers, is an immediate impression from the first mover, and the Divine energy acting in the creatures.—Addison.

The great high road to human welfare lies along the old highway of steadfast well-doing; and they who are most persistent, and work in the truest spirit, will invariably be the most successful; success treads on the heels of every right effort.—Smiles.

Philosophy has been defined. The science of things, divine and human, and the causes in which they are contained; the science of effects by their causes; the science of sufficient reasons; the science of things possible, inasmuch as they are possible; the science of things evidently deduced from their first principles; the science of truths, sensible and abstract; the application of reason to its legitimate objects; the science of the relations of all knowledge to the necessary ends of human reason; the science of the original form of the ego, or mental self; the science of science; the science of the absolute; the science of the absolute indifference of the ideal and real.—Hamilton.

The surest and most pleasant path to universal esteem and true popularity is to be just, for all men esteem him most who secures most their private interest and protects best their innocence; and all who have any notion of a Deity believe that justice is one of His chief attributes, and that, therefore, whoever is just is next in nature to Him, and the best picture of Him and to be revered and loved.—MacKenzie.

STRIKES NOW IN FORCE.

- Illinois Central R. R. (Federated Trades strike on.)
- Harriman Lines. (Federated Trades strike on.)
- Pere Marquette R. R., Grand Rapids and Saginaw, Mich. (System Federation strike.)

Mechanical Department.

TO LAYOUT THE FRUSTUM OF A DIAMOND-SHAPED CONE.

In the accompanying cut, Fig. 1 shows the plan view and Fig. 2 the elevation of a diamond-shaped frustum of a cone, and Fig. 3 shows the layout of template for one side. To layout frustum, make plan view and elevation the desired size and shape. Next erect the angles, Fig. 4; from S erect line $S-O$, at right angles to $R S$; then turn to Fig. 1, and from center f strike a line at right angles to line $f-e$; then take the distance from f to where this line crosses the line $a-b$ at N and transfer distance to Fig. 1, from s to r , and from this point strike line from O to r . Take the distance from

these two points and mark it off from f to n' , Fig. 3; from point n' on this line strike line at right angles to $f-n'$ and parallel to $a-b$, Fig. 1. Take distance from n to b , Fig. 1, and transfer from n' to b' , Fig. 3, and from point b' strike a line to f . Next take distance from n to a , Fig. 1, and transfer from n' to a' , Fig. 3, and from the last point, a' , strike a line to e , Fig. 1. This completes the template for one side, with the exception of adding material for laps, if necessary. All sides being alike, the other three sides can be marked from this one template; however, two will have to be reversed, that is, turn over the template while marking off two sides.

International Officers' Reports.

COMMUNICATION FROM THE INTERNATIONAL SECRETARY-TREASURER.

Kansas City, Kas.

All All Members, Greetings:

We have been notified by several of the lodges of this Brotherhood that when traveling brothers are going over the country they should secure a service letter before leaving their last place of employment, if they intend to receive transportation over railroads, as we have received many complaints stating that the shop committee would not, or could not, vouch for our members who did not have service letters. Therefore, we kindly ask all members to be governed accordingly.

Hoping that you will comply with this request, and with best wishes, I beg to remain,

Yours fraternally,

FRANK P. REINEMEYER,
International Secretary-Treasurer.

COMMUNICATION FROM THE INTERNATIONAL SECRETARY-TREASURER.

June 18, 1915.

To the Officers and Members of All Subordinate Lodges, Greeting:

I desire to say a few words to the members of our organization through the columns of the Journal, and that is that each and every member take an active interest in all of the meetings and see that the officers fulfill their duties to which they are assigned and especially to see that the financial secretary forwards his report promptly each month so the individual members may not be deprived of their good standing in reference to death and disability benefits.

Under the new reporting system, these reports are checked up each month with the cards in the card index system, and it will show at any time the members' standing since we have installed the card index system and the new reporting system. We will be able to notice at any time when a member becomes three months in arrears, so it would be well for each and every member to see that he does not become three months in arrears and see that the secretary forwards his report promptly.

No doubt you are all well aware of the fact that the benefits paid by the organization are in reference to death and disability benefits and I do not believe there is any other organization that pays the benefits this organization does for members to keep themselves in good standing.

I wish to say a few words to the secretaries. We have three hundred forty-three lodges which we consider in good standing and of these three hundred forty-three lodges there are eighty-five per cent of the secretaries who always have their reports to this office in accordance with the constitution under Article 8, Section 4, and I am of the opinion that if eighty-five per

cent of the secretaries can get their reports mailed by the 8th of the following month, the other fifteen per cent should be able to do the same. The majority of the secretaries of this fifteen per cent who fail to get their reports to this office in due time are secretaries of small lodges ranging with a membership from ten to perhaps fifty, and I have noticed this very carefully and the secretaries of our large lodges are always prompt with their reports, so I do not see any reason why a secretary of a small lodge could not be as prompt as a secretary of a large lodge.

I hope that the secretaries who have not been sending their reports in promptly will do so in the future.

I also wish to remind the financial secretaries of this Brotherhood that we desire to have the International Lodge stamp report filled out completely each month, as we are now getting our records in shape so we will be able to tell at any time if the secretaries are purchasing sufficient number of stamps for the members they are reporting. We expect to make an equalization every six months, for the time being, on the stamp account and the members reported. Therefore, I request that each and every secretary give us the exact number of stamps they have on hand the first day of July and immediately upon checking up the June reports with the cards in the card index system, each Lodge will get a statement showing the members reported and the stamps purchased since January 1, 1915, up to and including June 30, 1915. Any lodge that has failed to purchase sufficient number of stamps, according to the members reported, we will have to request that they remit the amount to the International as per capita tax on the membership reported.

Trusting that all secretaries will comply with this request, with best wishes and kind regards, I beg to remain

Yours fraternally,

F. P. REINEMEYER,
International Secretary-Treasurer.

REPORT OF SECOND INTERNATIONAL VICE-PRESIDENT NOLAN.

To the Officers and Members of the Brotherhood, Greeting:

At the conclusion of my last report I was leaving for Rocky Mount, N. C., to take up a grievance for Brother A. J. Dixon, a member of Lodge No. 239, with the Motive Power Department of the Atlantic Coast Line Railroad Company.

Brother Dixon had been an employe in the boiler department for a period of almost four years and was laid off last October with five other boiler makers because of a depression in business as claimed by the company at that time.

Brother Dixon's record while in the employ of the company was excellent, and his work as a mechanic was never questioned; in fact, the shop officials at Rocky Mount so stated on many occasions that Boiler Maker Dixon gave entire satisfaction during his service with the company, and further never had a reason to visit a doctor or lay off on account of illness during his term of service.

January, 1915, there was a vacancy at the Wilmington, N. C., shop. Brother Dixon made application for same, but was turned down by the foreman as an undesirable, and in the face of the above record given him by the officials of the Rocky Mount shops. Which indicates very plain of a nigger in the woodpile somewhere, but later on the position was offered him, but under certain conditions which Brother Dixon could not accept: First, his family was located in Rocky Mount and he had been out of employment since October, 1914, and was not in a position financially to bear the expense of moving. Second, if he accepted the job at the Wilmington shops he would be compelled to give up all committee work in connection with District No. 38, which he was president of at that time. However, he had the absolute right to refuse the position as the Wilmington shops are under the jurisdiction of the master mechanic of the Rocky Mount shops, which entitled him to the first vacancy at the Rocky Mount shops, according to seniority and expected nothing whatever until such vacancy did occur.

On April 27 Brother Dixon received notice from Mr. J. H. Painter, shop superintendent, Rocky Mount, notifying him that there was a vacancy in the boiler shop, and to report to work May 1, providing his medical examination was satisfactory. Brother Dixon reported, as instructed, to the company's doctor, and although an employe of the company for several years, not discharged from the service of the company at any time, was temporarily laid off because of dull business conditions; yet he was disqualified by the medical examiner after a severe blood and urine test.

When Brother Dixon first entered the service of the company he stood a medical examination and passed as physically qualified to perform the work required, but, strange to say, at his last examination, April 27, 1915, Brother Dixon was disqualified from entering the service of the company, on account of being physically unsound, although never unwell in the company's service. See?

On May 3 I arrived in Rocky Mount, N. C., and met Vice-President McCreery of the Brotherhood of Railway Carmen, who was there at that time on business in connection with his organization. We held a meeting with Brother Dixon, also Brother Moore, who is one of the executive board members of the A. C. L. Federation of Shop Trades, going over the entire situation in connection with Brother Dixon's case, and,

realizing from information given that nothing could be accomplished by a local committee, I wired President J. F. Aylward of the A. C. L. Federation of Trades to come to Rocky Mount as soon as possible. He arrived on the 9th inst.; committee meeting was called the same date, and those present were President Aylward, A. C. L. Federation; Brother McCreery, Vice-President of B. R. C. of A.; Brother Moore, executive board member; also Brother Dixon and the writer.

Every detail in connection with the grievance was discussed by the committee and finally agreed that Brothers Aylward and Moore would wait on the superintendent of motive power at the Rocky Mount shops the following morning. The committee did so, but reported to the general committee later that nothing whatever was accomplished with the superintendent of motive power, as that official absolutely refused to place Brother Dixon back to work until a clean bill of health was given by the medical examiner of the A. C. L. Railroad Company.

Brothers Aylward and Moore afterwards called on the medical examiner at Rocky Mount and used every argument and appeal possible to have Brother Dixon returned to work, pending a re-examination, but he refused to take any further action other than what he had already done, and, realizing that nothing could be done either with the local officials or the medical examiner of the Rocky Mount shops, I left for Wilmington, N. C., on the 12th, accompanied by President Aylward and Brother Moore, also Brother Dixon, in order to meet the general superintendent of motive power, Mr. R. E. Smith, arriving there the same date, 10:30 a. m. Brother Aylward mailed him a communication, advising that there was a committee in the city who desired to meet him on Boiler Maker Dixon's grievance—namely, his disqualification for re-employment, by the medical examiner of the company at Rocky Mount, N. C., and later on the committee was notified that he, Mr. Smith, would meet committee at 12 p. m., same date. After a general discussion on the merits of the case by the committee, nothing was done whatever in the way of reinstating Brother Dixon, as the same old argument was put up by the general superintendent of motive power as the local officials put up at Rocky Mount, N. C., nothing whatever against Boiler Maker Dixon, his character good, his workmanship entirely satisfactory, but, nevertheless, he could not return to work unless he passed a satisfactory medical examination, which discussion was final with him, but he had no objection whatever to a re-examination of Brother Dixon by the chief medical examiner at Wilmington, N. C. The committee took advantage of this suggestion and waited on the chief medical examiner, but that official absolutely refused to take any further action, owing to the fact that the company's doctor at Rocky Mount dis-

qualified Boiler Maker Dixon as physically unable to perform the duties as required, but later on if Brother Dixon showed any signs of improvement that he would give the matter consideration.

Before leaving Wilmington, N. C., we got out an explanatory circular covering Brother Dixon's case as near as possible, a copy of which was mailed to each member of the executive board of the A. C. L. Federation of Trades, also one to President Franklin for his information and future action if in his judgment it was deemed necessary. In connection with the explanatory circular of President Aylward let me say that in the interest of justice to the shop employes of the A. C. L. Railroad System, that a concerted move should be made by the Federation to abolish such a weapon of discrimination which can be used successfully against any employe who may be deemed undesirable because of activity in the interest of his fellow men.

A relief association on a railroad system has for its object the protection of the shop men when sick or injured by accident, but used for any other purposes, as in Brother Dixon's case, debarred by a medical examination with no possible means of redress, although in the employ of the company for several years. This system should receive the careful consideration not only of the men employed in the mechanical department, but in the transportation department, paying money into the institution for the privilege of being disqualified when making application for re-entering the service after being laid off on account of a reduction of force, although never sick or requiring a doctor previous to suspension.

It is no wonder that state or national legislation is enacted to curb the efforts of some unfair corporations in their dealings not only with the general public, but their employes also, who would least expect fair consideration at all times for services rendered. There are many corporations whose officials desire to be fair, and many more that are absolutely unfair and to such an extent that their method of dealing with their employes is a blot on the American civilization and American manhood and must be stopped. As every man and every woman who are wage earners must and have the absolute right to organize for their protection against such unfair opposition, all business bodies, as well as professional bodies, organize for mutual protection in securing freedom of thought, freedom of action, according to law, in the regulation of their business for greater profit at every opportunity, and the very men who are the loudest in proclaiming their right to do so according to law when their own particular interests are involved, use every means in their power to crush the legitimate effort of the wage workers of America in securing sufficient wage to maintain a decent standard of living which they are entitled to.

In conclusion and in connection with Brother Dixon's case, I desire to make a

special mention of the active co-operation of Brother McCreery, Vice-President of the Brotherhood of Railway Carmen, in his efforts with me while at Rocky Mount, N. C. Brother McCreery is well known in this section and has the absolute confidence of the railroad shop men in the Southeastern District, as his work in their interest has at all times got results; although a blunt speaker, yet he is conservative, always looking carefully at both sides of a controversy. Justice is his motto. It doesn't make any difference which party is entitled to it, the men or the company, he doesn't hesitate to render justice where justice is due.

May 13, received instructions by wire from First Vice-President Hinzman to proceed to Waycross, Ga., when business at Wilmington, N. C., was finished, and adjust a misunderstanding between Lodges No. 425 and District 38, A. C. L. System, reaching there on the 14th.

Met Brother Schultz, president of Lodge No. 425, as well as other officers and members, same date, and arranged to hold a special meeting on the 14th. Brother Schultz suggested that I wire Brother Ryan, secretary of District No. 38 to come to Waycross to be present at a special meeting, requesting that he bring with him minutes of last district meeting at Savannah, Ga. Brother Ryan complied with request, arriving evening of the 14th.

Meeting was called to order by Brother Schultz, president of No. 425, who explained the object of meeting and the reason why the district secretary was requested to attend meeting, after which he requested the writer to take the chair; there was a fair attendance, considering the extreme hot weather, and much interest was manifested during the entire meeting. On taking the chair I explained the object of my visit to Waycross and my instructions from the International President in connection with Lodge No. 425 and District No. 38, and am pleased to report that after a general heart-to-heart discussion on the part of Brother Schultz, president of No. 425, also Brother Ryan, secretary of District No. 38, as well as many of the members present a satisfactory adjustment was reached, which I am confident will prevent any misunderstanding in the future, as it was agreed that all questions at issue between No. 425 and the district would be taken up at a regular district meeting or with the International President if necessary. I have known Brother Schultz for several years, and he is always on the job and willing to line up at all times according to conditions as he sees and understands them, and if any misunderstanding or mistake was made by Lodge No. 425 in connection with business of District 38, it was done with the absolute impression that their position was correct, as the argument on the night of the 14th fully demonstrated that fact, but when proved otherwise there was very little trouble in adjusting matters satisfactorily, and I desire to thank the officers and mem-

bers of No. 425 for their co-operation on that occasion.

Brother Ryan, secretary of District No. 38, is also secretary of Lodge No. 20, Jacksonville, Fla. and is generally known as the old reliable. You can't get by unless the goods are on you (an up-to-date card), faithful to the duties of the offices he holds and for the interests of the membership at all times. Many traveling brothers who have met him in Jacksonville, Fla., know it, for when Brother Ryan says, "No," there is nothing doing, and when he says, "Yes," he is there with the goods.

Left Waycross, Ga., for Jacksonville, on the 15th, in company with Brother Ryan, to attend a meeting of Lodge No. 20, also to be present at the funeral of Mrs. B. M. Jewell, wife of Brother Jewell, president of District No. 40, Seaboard Air Line Railroad, who was buried at Jacksonville, Fla., on May 16.

There was a large turnout at the funeral, of the members of Lodge No. 20, to pay their last tribute of respect to the departed, and fraternal sympathy to her husband, Brother Jewell. Before the mortal remains of Mrs. Jewell were removed to her last resting place, the officiating clergyman recited the burial service, after which he delivered an impressive address on the duties of Christian life.

The floral offerings were many and beautiful and among them was one from Lodge No. 20. May she rest in peace.

May 17, attended a meeting and smoker of Lodge No. 20, and as usual almost the entire membership was present. Promptly at 8 p. m. President Clarke called the meeting to order; many important questions came up for consideration, which were handled with promptness and in constitutional form. Lodge No. 20 hews right to the line, regardless of opposition, and the result is there is very little kicking when a constitutional decision is made by the chair. After the regular order of business was transacted, a lunch and other hot weather life preservers were served up in good shape, which was appreciated by all present, so much so that several good practical talks were made on the Brotherhood, both local and national, as follows:

Brother Jewell on state laws and also the necessity of an effort having been made through the central body of Jacksonville and the State Federation of Florida for a state boiler inspection law, and other necessary legislation for the protection of the wage workers of the state of Florida.

Brother Cole also made a fine address on the absolute need of co-operative action of organized labor on many vital questions, both city and state that should be carefully considered in the future, and practical methods adopted to push it forward to success, and assured all present that a pull together was the great lever to success.

I had the pleasure of visiting Brother Cole's home the night before leaving Jacksonville. He lives in the suburbs of the

city with his family, and I must say he has a beautiful home. May his years be long and prosperous in the enjoyment of it.

May 19th, left for Savannah, Ga., on my way to Brunswick; on arriving at Savannah I called up Brother Buchhiet who called on me later on in company with Brother Black, formerly of Lodge No. 12, Macon, Ga., afterwards met Brother Dillon of Lodge No. 26.

May 21st, left for Brunswick, Ga., in company with Brother Dillon, arriving there that evening. The following morning started to investigate conditions, shops, and the number of boiler makers employer there. We first visited the shops of Parker-Ensell & Co. Has a fairly well equipped boiler shop but no boiler makers employed, nor did I see any work of any kind on the floor, either new or repair. A small river boat was tied up at the dock with three niggers at work in the fire room, not a white boiler maker employed, and the only contract boiler shop at Brunswick, Ga.

Brother Dillon and I next visited the shops of the Georgia Coast & Piedmont Railroad Co., where I found one boiler maker, one blacksmith, three machinists and seven carmen, all white, which was the entire force of that company. Got the boiler maker to accept an application for membership and later on will be initiated in Lodge No. 26. Returning to Savannah, Ga., on the night of the 22nd. Brunswick, Ga., is now a hundred per cent organized, one white boiler maker in that burg, and later on when business improves a system federation will be formed as all crafts are now organized, some federation, will have a membership of twelve, comprising the four trades.

May 24th, attended a special meeting of Lodge No. 26 with a fair attendance present, Brother Masey in the chair. Brother Tripp, president of the Savannah Trades and Labor Council, was present and made a pretty able address on the benefits of a strong labor movement, and further assured all present he was much pleased with the delegates from Lodge No. 26 and hoped the good work would continue, not only in the Boiler Makers Lodge but all locals in Savannah, as co-operation was one and the only road to success in the labor movement. There was several other short talks made by several members, including Brothers Black and Dillon.

While in Savannah I had the pleasure of meeting a brother whom I have known for several years, Brother Kent, of Lodge No. 26, and always an active, hard worker, not only in the interests of his own organization but the entire labor movement of the Forest City of Savannah, and hope the good Lord in his wise dispensation of earthly favors will give Brother Kent many more years to enjoy a well spent life, for Brother Kent is now in the same class as the writer in his declining years. Before adjourning Brother Kent was requested to make a few remarks in connection with the Brotherhood

and done so, said he was always pleased to speak on the good work of the Brotherhood he was a member of so long. His remarks was given the closest attention by all present, due to the fact of his interest for the boiler makers of Savannah for many years, and his royalty to the principles which the labor movement stands for, and in closing appealed to the members, to get close together so as to protect themselves and families which is the real issue of the movement to make it possible to secure a decent existence.

While in Savannah I was informed there was a certain foreman in the railroad shop who was trying to play horse with some of his men, regardless of the agreement with the company; a word to the wise is sufficient, better stop it, give every man a square deal, conditions being equal, seniority to govern, that's business.

May 25, left Savannah, Ga., for Chattanooga, arriving there morning of the 26th. The object of my visit in Chattanooga was to assist Lodge No. 14 in reinstating their delinquents, as well as organize the unorganized boiler makers there, also to cooperate in a forward labor movement in that city which had been under way for several weeks. Various international representatives were in the city all co-operating with each other, and in the interest of their respective crafts. Among others were Vice President McCreery of the Railway Carmen, Corley of the Machinists, Flanagan of the Blacksmiths, Smith of the Moulders and Swick of the Painters. Had the pleasure of meeting Brother Jack Gribben of Lodge No. 14; hadn't met him since the Baltimore convention of the Brotherhood about fifteen years ago. Brother Gribben is still active as ever, has an eye on business at all times, has given me his experience and co-operation in lining up the delinquents of Lodge No. 14, attending special meetings of Lodge No. 14 as well as other local organizations, even in bad, stormy weather, when younger men who should be there refused to show up.

Brother Evans, secretary of Lodge No. 14, also gave me much information as to conditions, scale of wages and hours worked in the several contract boiler shops in and around the city of Chattanooga, as follows: Casey & Hedges, Walsh & Wagner, Chattanooga Boiler & Tank Co., and the Lockett Boiler Co., all of which are working a ten-hour day, when a nine-hour day could be established without very much trouble if there was a metal trades council there, as Chattanooga is somewhat of a manufacturing city and at present has organized local metal trades sufficient to secure better conditions.

I have noticed there is a lack of practical methods in conducting the affairs of the local organized movement in the mountain city. It is true there is a good central body in Chattanooga and a few live wires affiliated with it, but what is very much needed to get labor forces closer together is a local federation of railroad shop crafts

as well as a local trades council to protect the industrial situation, which is a very important factor and will be more so in the future, as cheap labor and long hours of toil retards the progress of any city and the average business man hasn't foresight enough to see it, as the poor gets poorer year after year, while the manufacturing interests gets theirs. Yet we find mechanics who claim to have good American horse sense, won't organize in order to have the unhuman privilege of competing against each other. Surely there is something out of joint with men of that caliber, willing to be crushed when there is an opportunity to prevent it.

May 28, attended a special meeting of Lodge No. 14, in the C. L. U. Hall, to discuss the question of a greater membership, and before adjourning it was agreed to reinstate all delinquents of Lodge No. 14 on the same basis as all other organizations were doing through a Forward Labor Movement in Chattanooga. Same night attended a meeting of the C. L. U., which was a success, as the large hall was packed and considerable interest was manifested in hearing the different speakers explain the necessity and object of the American labor movement.

May 30, attended another special meeting of Lodge 14 which was an explanatory meeting, each delinquent giving his reasons why he became in arrears; however, three delinquents concluded to make their peace in returning to the Brotherhood and respect the constitution which they took an obligation to do at one time, after which meeting adjourned to hold another later on.

I am very sorry in having to report the untimely death of Brother Robert Rodgers, Reg. No. 72184, initiated in Lodge No. 14, June, 1907. At this writing there is no detailed account of the accident which caused Brother Rodgers' death only that it occurred in the vicinity of New Orleans. The body was shipped to the home of his father in Chattanooga where he was buried on June 1st. The funeral was largely attended by his many friends as well as the members of Lodge No. 14.

The following members of Lodge No. 14 acted as pallbearers: Brother Jack Gribben, J. E. Evans, J. E. Anderson, W. Gribben, Jas. Johnson, William Nash, G. W. Wolfe and John Ruel.

Brother Rodgers leaves a father two sisters and a brother to mourn his sad ending. The writer was present during the funeral service and extended my sincere sympathy to the family in their sorrow for the loss of a son and brother.

In next report will explain result of last special meeting of lodge No. 14, held on June 4th, as well as others matters in connection with the general labor movement in the city of Chattanooga.

With best wishes to the officers and members of the Brotherhood, I am

Faternally yours,

THOS. NOLAN.

REPORT OF FIFTH VICE-PRESIDENT ATKINSON.

Spokane, Wash.

I was in Helena, Montana, on my way to Great Falls when I sent in my last report. Upon my arrival at Great Falls I arranged for a meeting with the members of Lodge 602; also invited all boiler makers and helpers that were employed at the smelter to attend the meeting, and I am pleased to report I was successful in getting 19 applications. Also had a committee appointed to go with me the following Tuesday night to the mill smeltermen's meeting for the purpose of trying to get that organization to release the boiler makers and helpers that were employed at the smelter. Up to the present time all boiler makers and helpers that worked in the smelter had been compelled to pay dues into the mill and smeltermen's organization; as that organization claims jurisdiction over all men employed in and around the mines and smelters.

We have made several attempts to have the mill and smeltermen's organization allow the boiler makers and helpers employed at the smelter to work without paying dues into their organization, as we considered it was an injustice to the boiler makers and helpers to have to pay dues into two organizations. I am very pleased to report we were successful in getting the mill and smeltermen to release all boiler makers and helpers, and hereafter any boiler maker or helper going to work in the smelter can do so without being forced to pay dues into the mill and smeltermen's organization.

The following evening I arranged to hold another meeting with the members of Lodge 602 for the purpose of obligating the new members and electing officers, and I feel sure if the members of Lodge 602 will give the officers the proper support they should that Lodge 602 will be as good a local as we have in our Brotherhood.

I went to Anaconda from Great Falls, and held a meeting with the members of Lodge No. 80, and I am pleased to report that I found the members of Lodge No. 80 all good union men and doing everything they possibly can to hold the conditions they already have. The members of Lodge No. 80 have been having considerable trouble lately on account of the iron workers, claiming work that rightfully belongs to our members; but I feel sure in the future our members will insist on getting all work that rightfully belongs to our members. Also will insist that the agreement we have with the iron workers will be lived up to.

I am glad to report that quite a few of our members have gone to work in Anaconda, but from letters I have received from some of our members since leaving Anaconda, I would not advise any of our I have been informed that they are full-handed at the present time.

From Anaconda I went to Butte City, and had the pleasure of attending a meeting with the members of Lodge No. 130. I also found

the officers and members of Lodge No. 130 all good Union men and doing everything they possibly can to better the conditions of our members.

I went to Deer Lodge from Butte and held a meeting with the members of Lodge No. 528. The members of Lodge 528 all work for the Milwaukee, and I am sorry to report that work is still very slack, and no prospects of any change in the near future, but I am pleased to report that the officers and members of Lodge 528 are all good union men, and are always ready and willing to do their part to assist in bettering the conditions of their fellow men. While in Deer Lodge I had the pleasure of meeting and eating supper with my old friend, C. F. Hoziea.

From Deer Lodge I went to Havre, Montana, and held a meeting with the members of Lodge 367. Also glad to report that I was successful in getting several applications while in Havre. Also found that the members of Lodge 367 were working very short time and prospects of no change in the near future.

From Havre I came to Spokane, stopping off at Whitefish and Troy. Am in Spokane at the present time, trying to get the boiler makers and helpers that are not members of our organization to join, but I am sorry to report prospects are not very encouraging, as the boiler makers and helpers are working very short time in Spokane, and in all my travels I have never seen any boiler makers and helpers that are so easy satisfied as the unorganized boiler makers and helpers in Spokane. All they want is a job and plenty of work; money or conditions cut no figure with them. They are working for from 15 to 18 cents an hour less than union men are receiving at the present time in this section of the country.

There is another thing I would like to call to the attention of our members. I have received complaints lately from our members both in Panama and Honolulu about some of our members accepting employment for less than the standard rate of pay, and I hope in the future if any of our members accepts employment in either Honolulu or Panama they will insist on getting the standard rate of pay, which is 62½c per hour in Honolulu, and 65c per hour in Panama.

Also see that Article X, Sec. 2, of Subordinate Lodge Constitution, is carried out, which plainly says members must deposit clearance cards immediately after receiving employment.

At this time I feel as though I should say a few words in reference to the Harri-man and Illinois Central strikes. I understand that there is considerable agitation on the part of a few individuals to have these strikes declared off. Now, brothers, I believe before any action is taken to declare these strikes off, each and every member should consider well what effect it is going to have on the rank and file of our organization. I for one, consider we have

everything to gain and nothing to lose by continuing these strikes. If I thought for a minute that even ten per cent of the men that came out on strike would be taken back, I then might agree to the declaring off of these strikes. But from past experience I have learned that there is nothing gained by declaring off strikes, and admitting defeat.

I remember well when we declared the Santa Fe strike off. The statement was made on the floor of the convention at St. Paul: "Declare the Santa Fe strike off and we will go back, and inside of one year, we will organize that road." Well, brothers, that has been seven long years ago, and I can assure you that there is very little organization among any of the shop crafts today on the Santa Fe. I will admit that there are a few good union men working on the Santa Fe, but I also know there are men working on the Santa Fe carrying cards for no other purpose than to find out all they can and keep the officials of the company posted in case there is any attempt being made to organize the shop men on that road. I feel sure if the Harriman and Illinois Central strikes were declared off tomorrow the only men that would be taken back is men that would promise the officials of the company that they will never have anything to do with a labor organization as long as they work on the Harriman and Illinois Central, and when the officials of the company pick out what men they want, I feel sure that the road will be a closed road for years to come against any union men. I believe if the strikes are declared off at the present time we will be doing exactly what the officials of the company are hoping and praying we will do, for I am satisfied the condition at the present time on the Harriman and Illinois Central are not at all satisfactory to the officials of the company.

We hear some of our members say: "Look at the number of mechanics we are making by continuing these strikes." I am positive that there has been very few mechanics made on the Harriman or the Illinois Central since the men were forced to go on strike, for the conditions on these roads are so bad that even a scab does not stay very long. I am sure that the officials of the Harriman and Illinois Central have hired more men to work in the shops the past three years and eight months than they hired in fifteen years previous to the strike. These strikes are not costing the different organizations involved very much at the present time, as all organizations have discontinued paying strike benefits some time ago, and I believe that over 90 per cent of the men that came out on strike have secured employment at other places, and in view of these facts I say, let us continue these strikes just as long as the officials of the Harriman and Illinois Central insist on making slaves out of our members.

I know that the men that were forced to go on strike on the Harriman and Illinois Central had a just grievance, as they have

not received any increase in pay for four years on the Southern Pacific, and in many of the shops conditions were very bad, and the agreements the men had were being violated by the officials of the company continually.

Another thing, the men on the Harriman and Illinois Central lines were not asking for anything more than had already been granted the shop men on many other roads in this country. I also know that the men did everything that was possible to be done to prevent these strikes. They were ready and willing at any time to meet the officials of the company more than half way, in order to avoid trouble, but the officials of the company were determined to wipe out organized labor on those lines and in their effort to do so, they have cost the stockholders thousands of dollars, and I, for one, do not consider they have accomplished what they started out to do.

I again say, in justice to the men that were forced to go out on strike on these lines, that each and every one of us do everything that we possibly can to assist them to win these strikes. Let us ask every union man, friend and sympathizer of organized labor not to travel or ship freight over the Harriman or Illinois Central. Remember every time we stop a man from buying a ticket to and from the coast it means very near \$100.00 profit gone, and I believe the best way to win a strike is to hit the fellow's pocket book that is fighting you as hard as you can.

I believe we should advertise these strikes in every labor journal and labor paper in the United States. Also place pickets with a banner in front of the ticket offices in all the principal cities notifying the traveling public that the shop men on the Harriman and Illinois Central are on strike for a living wage and better shop conditions.

Hoping this report will be satisfactory, I will close, with best wishes and kindest regards.

Yours fraternally,
WM. ATKINSON.

REPORT OF INTERNATIONAL DEPUTY ORGANIZER SCOTT.

Boston, Mass.

Dear Sir and Brother:

My last report for the Journal was written in Pottsville, Pa., where I had been assigned to do some work by President Franklin, upon a request of the Central Labor Union of that city. I found upon arriving in Pottsville that it was almost impossible to render any assistance to Lodge No. 256 as a great number of their men employed in the Philadelphia Coal & Iron Company's shop had been laid off recently, and that those that were working were only on half time. I learned while there of a tank that was being erected in one of the breweries by non-union boiler makers, and succeeded, with the assistance of the local committee, in having the job straightened out. Some of our men who were idle were put on the job to finish it.

About this time I received a telegram from President Franklin instructing me to proceed to Green Island, N. Y., to meet there with the representatives of other organizations in order to take up some work in connection with the Railway Department. On arriving in Green Island I met with Brothers Tobin of the Blacksmiths, Davison of the Machinists, and Knight of the Car-men. We held a meeting in the hotel, and after comparing notes found that our instructions were to go over the D. & H. and the O. & W. systems, holding joint meetings at all the principal points for the purpose of building up both federations and in order that the misrepresentation and the misstatements made by the disciples of a new brand of I. W. W.-ism (a bosses' dual union that is trying to tear down the organizations on these systems) might be straightened up and our members enlightened as to the real facts.

I am not going into details in this report about the meetings we held and the success we met with at every point we visited. I have made reports to President Franklin regularly and in detail since I have been assigned to this work. The secretary of our crew, Brother Davison, has also sent weekly reports of our work to President A. O. Wharton of the Railway Department and I believe that it is understood that latter on the department will make a report of our work through the different official journals. I want to say that in this new move of the department, the fight is being brought home to the enemies of organized labor just as it should have been done long ago. In every meeting we held the records of dual unions in the labor movement were gone into thoroughly; their object and their purpose were fully explained, as also the reputation, the purpose and the aim of the fakers and grafters who head these movements, and as a result a large number of men, and in some places whole locals, swung over to where they belonged. The defense put up by these disciples of the "one big stew" in defense of themselves and their dual union didn't ring true, and their battle cry of "Down with Gompers and the American Federation of Labor" proves beyond a reasonable doubt just where they belong.

This cry of theirs, like their form of organization, is anything but new; both originate from the same source—the Employers' Association. That is the cry of Drew, Perry, Taft and all the rest of the labor haters in creation. Post, of ground peanut fame, the greatest enemy of organized labor this or any other country ever produced, used that cry with his dying breath, and yet we find long after he has committed suicide, the American Federation of Labor is stronger than it ever was, and Brother Gompers is still its President, and so it will be when this dual union has run its course and its leaders have taken their places in history, with the other crooks and traitors who were hired from time to time to try and wreck the labor movement.

Long after they are forgotten, the name of President Gompers will be honored, and the American Federation of Labor will continue to prosper.

Shortly before finishing up on the O. & W. we received instructions from President Wharton to proceed to Boston and take up the same line of work on the N. Y., N. H. & H., the B. & M. and the Maine Central. We attended a meeting of the New Haven System Federation, and then left for Portland, Me., where we held two big open meetings; we also held a meeting at Waterville, Me. The boiler makers and their helpers at both these points did belong to the dual union, but since these meetings were held there are a number at both places that have quit paying dues, and I believe that it will be only a question of a short time until these men on the Maine Central are back where they belong.

After the last meeting in Portland, we decided to split up for a while; the other representatives left to take up work at other points, and I went back to Boston to try and build up Lodge No. 515 which was then in real bad shape. I spent nearly five weeks there and in that time succeeded in reinstating over sixty members in that local. A new set of officers was elected, also new shop and other committees. The lodge is now in a prosperous condition, and with the exception of one shop that is working short time we have a hundred per cent organization. The men in this shop are coming in as fast as can be expected, and it won't be long before this point is straightened out, too.

I was called home in the early part of May on account of sickness in my family, and while there received word from Secretary Reinemeyer that Lodge No. 573 at Lansford was in bad shape, as there had been no reports received from them in over three months. I got in touch with the men there as soon as possible, called a meeting of the lodge and discovered that the financial secretary was to blame for this condition of affairs. Upon further investigation I found that he was not only careless, but that he was short in his accounts since taking office, to the extent of \$170. In order to protect the lodge and the international organization, I was compelled to swear out a warrant for his arrest, charging him with embezzlement. The case was finally settled to the satisfaction of all concerned, by his paying back part of the money and having his family, who are real estate owners, sign a note for the balance to be paid within one year. This is another case of the members of a lodge depending too much on their officers. Lodge No. 573 was fortunate in getting the settlement they did, and I believe that they have learned a lesson that will be useful to them in the future.

While working in Boston I made several unsuccessful attempts to organize the men at the navy yard. I believe, however, that there will be a chance to do something with

these men later on. I also gave what assistance I could to Brother Generson, the business agent of Lodge No. 585, in straightening out some trouble our men had with the Bartlett & Haywood firm on a gas holder that was being erected at Marblehead, Mass. It was necessary for us to take the men off this job for a time, in order to get justice. The strike only lasted for a few days, the trouble being adjusted satisfactorily.

On finishing in Lansford, Pa., I returned to New York to join the other representatives and attended a meeting at Van Nest, N. Y., where there is real good prospects of getting the pipe fitters and the electricians there away from the dual union.

From Van Nest we went to New Haven, where we held a very successful meeting of all crafts May 28. While in New Haven my time was taken up pretty well investigating a dispute between the boiler makers and the helpers regarding the funds of the old helpers' local; this money never was turned over at the time of the amalgamation, and some of the former officers of the old helpers' local, who had control of these funds became dissatisfied lately, and, acting on the advice of some of these union busters, decided to draw this money out of the bank and divide it up. The matter is now in the hands of one of the best lawyers in New Haven, and these misguided helpers may learn to their sorrow that while "division and silences" may be all right, and in accord with the principles of the leaders of this dual union, it is not in accord with the laws of Connecticut.

This concludes my report up until June 1. Hoping that it meets with approval, and with kindest regards, I remain

CHAS. F. SCOTT,
International Deputy Organizer.

REPORT OF INTERNATIONAL DEPUTY ORGANIZER REED.

Victoria, B. C.

At the conclusion of my last report I was in Portland, where we had a large number of members working on the government dredge Chinook, which was undergoing extensive alterations. This job I am glad to report was a strict union job and was completed without any trouble whatever, and I wish to take this opportunity of congratulating both the men and the contractors, Messrs. Cornfoot and Rogers, on the perfect harmony that prevailed throughout. At the same time the Willamette Iron Works were busy on the large repair job mentioned in my last report, and this job run along smoothly until Lincoln's birthday, when a controversy arose as to this day being a legal holiday. It had been proclaimed a legal holiday in the state of Oregon in 1913 and Lodge No. 72 recognized it as such. Since that date, however, the firm refused to pay double time and then men took the day off and on reporting for work the following morning every man was

handed his pay check. Unfortunately I had left three days previously for Seattle and was there when I received a wire notifying me of the trouble. I returned to Portland at once and on arrival was informed that Mr. Andrews, the superintendent of the works, had personally visited some of their riveters at their homes and requested them to return to work. I advised these men to go to work until I had a conference with the firm. I met Mr. Andrews at noon that day and requested him to reinstate all the men that had been paid off. This he refused and said that outside of the men who had returned to work that morning not one of them would be taken back. I then told him that if that was the stand he had decided to take, there was no other course left for me but to pull the riveting gang off again, which I did. A special meeting was called and applications sent to Grand Lodge for strike benefits, which was granted, and a strong picket line was maintained. But I am sorry to say that in spite of the splendid work of the pickets, the firm was able to ship scabs in from different points and finish the job, and were assisted greatly by three of our ex-members who probably thought they would get a lifetime job for scabbing for this firm, but will find their mistake out in the near future. The names of these three men are Lester French, John Larsson, or Lawson, and C. Gill, the last named was one time secretary of Lodge No. 72. Having spent five weeks in Portland, and having done all I could I left for Seattle, where Lodges No. 104 and 489 had consolidated and elected Brother Dan Killop as business agent, and I am satisfied that they acted wisely, and I am glad to say that in spite of the continued depressions of trade in this district, Brother McKillop is increasing his membership and doing fine work.

I left Seattle for Vancouver where I had several matters to take up on behalf of Lodge No. 194 and where we are still taking in new members. I again returned to Portland to take up business in connection with a number of tanks to be built for the Shell Company of California in the Northwest, and having made satisfactory arrangements in this direction, I returned to Seattle and in company with Brother McKillop went to Bremerton where the Des Moines Bridge and Iron Works were erecting two large tanks, and had refused to recognize the union or pay the scale of wages. After Brother McKillop and myself had done all we could without success it was decided to strike the job, and as we had seven men on the job we were able to tie it up for the time being, and from last reports received they are making very slow progress. I left Seattle for Victoria, B. C., to try to line up a stand pipe job, and on reaching the job found it had started that morning, and there was a boiler maker, a past members, and a helper on the job pulling the steel into position, but were not being paid the scale. I took the matter up with the man in charge and he agreed to

pay the boiler maker and helper the union scale, and if he required any more help to apply to Brother Stewart, secretary of No. 191. As this was satisfactory I talked to the men on the job and they promised to line up. While I was in Victoria I received a wire requesting that I go to Prince Rupert as our members working on the construction of the dry dock were on strike. I left for Prince Rupert the same day and on my arrival found they were on strike in sympathy with one of the helpers who had been fired and the firm had refused to pay his transportation back to Vancouver, B. C. Now my arrangement with the firm at the start of this job was that first class fare would be paid to the men after they were on the job thirty days, and the return fare would be paid at the completion of the job, and the company reserved the right to discharge a man for incompetency or neglect of work at any time. In this case the company while claiming that this helper was in every way qualified as he had proved by working five months on the job without complaints started to lay down on the job for the purpose of getting fired. However, on I had heard the story for all sides I was of the opinion that the company had good grounds for an argument. However, Mr. Deane, representing the Pool-Deane Co., contractors for the job, agreed to pay the transportation under protest and appeal to the grand lodge. As I considered he had a perfect right to do this and this being acceptable to the men then returned to work, and as Mr. Deane was in favor of having a signed agreement, Brothers Marley and Laurie, stewards on the job, and

myself, drew up one and submitted same to Mr. Deane and the members, and after a few alterations was accepted and signed, so there ought to be no further trouble on the job. I wish to take this opportunity of thanking Brothers Marley and Laurie for their valuable assistance rendered me during my stay in Prince Rupert.

Having no further business in Prince Rupert I returned to Vancouver where I am sorry to say business is very dull at this time. After a few days in Vancouver I went to Victoria where the British cruiser Kent is in for repairs to damages she received in the naval battle off the Falkland Islands and most of our members from Lodge No. 191 are working on this job, and a number of lapsed members who have promised to reinstate. There was a question of overtime in connection with this job. I was requested to take up on behalf of the members of Lodge No. 191, and I am pleased to report had a conference with the chief engineer of the yard, the outcome of which was in every way satisfactory. Through the courtesy of the chief engineer I received an invitation to visit the shop and got a very good idea of the terrible havoc that can be wrought in naval warfare. I could not conclude this report without extending my sincere thanks to Brother Alex Stewart, secretary of No. 191, and his wife, for their kindness in entertaining me on my visit to Victoria. This will conclude my report to date.

Hoping same will be satisfactory, and with best wishes, I remain,

Yours fraternally,

JOE REED, I. D. O.

Correspondence.

FROM THE RAILWAY DEPARTMENT.

St. Louis, Mo.

(Continued from last month.)

by way of comparison, that the leopard cannot change its spots, this is equally true of Richardson and the staff of officers under his supervision. The I. A. of C. went out of existence simply because the great majority of its membership learned that Richardson had, by his own statements, proven himself to be absolutely unreliable; his campaign of vituperation, acting as a boomerang, had brought upon his own head, and justly so, its own reward. What has Richardson accomplished? He has spent thousands of dollars, collected from all sources where money was obtainable, in an effort to disrupt our organizations. He is today, as always, sending his paid emissaries into any locality that appears to offer a field in which they can sow their seed of discontent and dissension. He has absolutely failed to successfully guide the destinies of the International Association of Carworkers, the members of which were, and are now, associating themselves with the Brotherhood of Railway Carmen. The

following charters issued during the past few months represent in whole, or in part, members who left Richardson's organization to become affiliated to the B. R. C. A.: Nos. 209, 355, 387, 392, 446, 463, 474, 480, 515, 533, 543, 559, 560, 561, 563, 564, 565, 567, 568, 569, 575, 576, 577 and 581.

Richardson claimed that none of the men who belonged to his organization have gone over to the Brotherhood of Railway Carmen. The above list is the answer and can be verified by writing the secretaries of any of these locals. On the other hand, we have the proof in his own Journal that one of his organizers, established a lodge on the M., O. & G. Railway, Muskogee, Okla., during the life of the federated strike on this road. This lodge is composed of strikebreakers who took the places of the men on strike. We know what Richardson tried to do on the Illinois Central; we don't know that he has ever been paid for acting in the capacity of a strikebreaker, but we believe he ought to have been; anyone who desires further information can secure the facts by communicating with the editor of the Strike Bulletin, Clinton, Ill.

The American Federation of Railroad Workers is similar to the plan of the I. W. W. and has just about as much to recommend it. This is not Richardson's first attempt along this line, while still acting in the capacity of President of the I. A. Carworkers, and under salary, without the knowledge or consent of the members, he organized and put afloat the now extinct Eastern Federation of Carworkers, and like his latest scheme for exploiting the workers, he took in every workman that could be separated from the price of admission; the life of this organization was a short but stormy one, and those who accepted his promises and became associated with Richardson in this venture, came to grief. If you doubt this, ask the men on the Lehigh Valley and Philadelphia and Reading Railroads.

Now comes along another exponent of how it should be done, in the person of W. H. Pierce; he, too, failed to make good as a salaried representative of one of the transportation organizations, and when he failed to be elected to office, and his salary was discontinued, he started out to build up an organization of his own and, as a matter of course, pronounced himself its President, named his own salary and drafted a constitution—otherwise eminently satisfactory to Pierce, if not to anyone else. He made the term of office four years and so framed the laws that it would be rather difficult to elect anyone to succeed him for at least another four years.

We have not gone into his activities and the disastrous results following his efforts to organize the men on the Pennsylvania Railroad, where he called a strike without any hope of success or means of taking care of those who followed his leadership. Pierce has named his organization the Brotherhood of Federated Railroad Employes and its purpose to be that of organizing all railroad employes into one organization. Both Richardson and Pierce represent that type of trades unionists who refuse to recognize the will of the majority; they have both advocated a similar form of organization as a panacea for all the difficulties coincident to the trades union movement. Both have failed to recognize the necessity of tolerance or respect for those who differ with them, and in this, as in all other respects, they have forfeited the right to have or hold the confidence of their fellow workers. The progress made and the things accomplished by the American labor movement are in themselves proof of the survival of the fittest; we cannot hope for or expect to make progress out of proportion to the standard of intelligence or reasoning powers of the majority, those who think they possess the mental qualifications and ability to point out the way, must be capable of successfully appealing to and convincing at least a majority that they are advocating the thing to be desired.

A labor union represents an organization of workmen who have voluntarily associated

themselves together for the purpose of securing improved working conditions, better opportunities for self improvement and mutual protection, the basic principles necessary to the successful maintenance of such an organization, are that of honesty, tolerance and faith. We will leave it to the judgment of the rank and file as to whether or not it would be either a safe or profitable investment to desert the organizations that have withstood the acid test of time, the combined attacks of organized capital, the insidious machinations of the traitor and which represent a value to their respective members that cannot be measured in dollars and cents, to follow the leadership of men who have demonstrated their incapacity as such, and whose chief claim to distinction lies in their refusal to respect the wishes of, or abide by the will of, the majority.

The bona fide trades unions recognize and obey the laws and rules of procedure which the members adopt for the government of their respective organizations; there can be no argument advanced that will justify the secession of any portion of the membership; any attempt at secession stamps the promoters as being opposed to majority rule, and carried to a logical conclusion, this would mean the disintegration of all organized effort.

The Railway Employes' Department of the American Federation of Labor as now organized places at the disposal of its affiliated membership the opportunity of solidifying the railroad workers as never before; the progress made has got beyond the experimental stage. Over seventy system federations are now organized; a majority of them are working under federated agreements and have justified the expectations of the rank and file; the laws of the department may not meet with the full approval of all, but they can and no doubt will be changed from time to time to suit the ever changing industrial conditions.

We have called to your attention the failure of the Knights of Labor and the American Railway Union; the mere fact that these organizations went out of existence should be sufficient to prove that they were fundamentally lacking in those essentials necessary to the successful performance for which created. The Industrial Workers of the World have but recently added another chapter to the already long list of failures directly chargeable to organizations based upon a theory that has been proven to be fundamentally unsound. We refer to Butte, Mont., where, as a result of the growth and activity of the adherents to the I. W. W. principles, one of the strongest union centers on this continent has all but been disrupted. They succeeded in accomplishing that which the mine owners assisted by the Pinkerton detectives, had been unable to do. The Western Federation of Miners had successfully fought and maintained their organization and union conditions of employment, against every con-

ceivable form of attack promulgated by the mine owners, but they were unable to cope with the I. W. W. If you want the facts, giving in detail just what the I. W. W. succeeded in accomplishing in Butte, Mont., write the Western Federation of Miners, Denver, Colo., and secure a copy of "The Miners' Magazine" issue of November 5, 1914. If you are not in possession of this information, you owe it to yourself, your family and your organization, to become fully acquainted with the attendant results of secession and mob rule as exemplified by the advocates of this one big union.

The American Federation of Railroad Workers (the Richardson organization) and the Brotherhood of Federated Railroad Employes (the Pierce organization), like all other organizations of this kind, attempt to justify their existence by promising immediate results and benefits, out of all proportion to the results and benefits obtained by the members of the organizations which have proven their worth and justified their existence by their record of things actually accomplished. Any organization launched by men who employ tactics so closely resembling the methods used by the paid emissaries of the employers in their efforts to nullify and even destroy the organizations of the workers, certainly cannot gain a permanent following among the earnest workers of this great movement.

Temporarily, Richardson and Pierce may succeed in their campaign of vilification and vituperation, but their own statements will be the means of their undoing; their exaggerated promises cannot be fulfilled and when those who have been induced to follow their leadership awaken to a realization of the fact that they have been unconsciously contributing their support to an organization that is being used as an agency to defeat the organized workers, Richardson and Pierce will be left standing alone and forsaken, as they deserve to be.

Not so long ago, we found Richardson on the Atlantic Coast Line, where in order to retain the semblance of an organization, he sanctioned the signing of an agreement from which the apprenticeship and several other important rules were eliminated by the company, all of which had previously been in the agreement. The majority of the men in the Car Department belong to the Brotherhood of Railway Carmen and are affiliated with the Railway Employes' Department. This is only an example of what may be expected, yet it represents an additional expense to the members of the bona fide organizations, with the employer reaping the benefit.

The Railway Employes' Department represents a form of organization that meets with the approval of a large majority of the members who follow railroad work. It is not a theory, it is not patterned after organizations that have been tried out and found to be impracticable; its laws are made by the representatives of the rank

and file and are the result of years of experience and observation. Its officers are also elected by the representatives of the rank and file and both office and laws are subject to change, by this same authority.

We have but one object in view and that is to perform our duty and put forth our best efforts to strengthen and solidify the organizations of the workers; we are not fighting union men, neither are we trying to tear down and substitute a theory for a certainty; we have a fair conception of our weaknesses and knowing them we endeavor to make due allowances for our shortcomings. The labor movement is too serious a problem and represents too much to the workers, to permit men who have proven their incapacity, to experiment with it. We favor evolution rather than revolution; changes are taking place every day and we are adjusting ourselves to meet them just as rapidly as the majority of the members are ready. We cannot bring ourselves to believe that there is even a single trades unionist who honestly believes that it would be advisable to destroy the bona fide organizations in order to try out an experiment. Yet that is exactly what is being advocated by men of the Richardson and Pierce type. We believe that every sensible man must recognize that agitation and education are the only methods that can be safely relied upon to bring about any desired form of organization, or the amalgamation of kindred crafts, and make such organization or amalgamation permanently effective or successful, when a minority attempts to use force, coercion or intimidation to compel a majority to accept that which they are not prepared to accept, failure is sure to result.

Just remember that a labor organization represents an institution that is composed of men and women who have voluntarily associated themselves together, and to insure its permanency one of its fundamental principles must be based upon the right of the majority to rule.

A. O. WHARTON,

President Railway Employes Dept.

Fort Worth, Tex.

At a regular meeting of Lodge No. 96 the following resolutions were adopted:

Whereas, Our Heavenly Father, whom we believe and know doeth all things well, has in His infinite wisdom, called to His Heavenly Home, the beloved mother of our worthy and esteemed Brother, P. O. Kilander; therefore, be it

Resolved, That we extend to our brother and his family our sincere and heartfelt sympathy in this their hour of sorrow.

As one more tie is broken there will be one more to welcome them when they have reached that land where there is no more parting nor sorrow.

Be it further resolved, that a copy of these resolutions be sent to the family, a

copy spread on our minutes, and a copy sent to our official Journal for publication

Respectfully submitted,
J. M. CRAIG,
LEO. BAUER,
L. A. FREEMAN,
Committee.

Fort Worth, Tex.

Whereas, death has entered the home of our worthy and esteemed Brother, Oscar Henderson, and removed his beloved son to his Heavenly Home above; therefore, be it

Resolved, That Lodge No. 96 extend to Brother Henderson and his family our sincere sympathy and consolation in this, their hour of sorrow.

May they find comfort in the words of Jesus when He said, "Suffer little children to come unto me for such is the kingdom of Heaven."

Be it further resolved, that a copy of these resolutions be sent to the family, a copy spread on our minutes and a copy be furnished our official Journal for publication.

Respectfully submitted,
J. M. CRAIG,
T. M. SMITH,
L. A. FREEMAN.

New Orleans, La.

Dear Sir and Brother:

I have been requested by Lodge No. 205 to mail the enclosed photo to the editor of the Journal for reproduction in July Journal, and hope you can do so as Lodge No.

BRO. D. J. CORCORAN OF LODGE 206,
ALGIERS, LA.

206 is a pretty good one. Brother Corcoran is the oldest member of the Brotherhood, at least in this section.

Yours fraternally,
THOS. NOLAN.

The subject of the above sketch of Brother D. J. Corcoran is one of the old-time school of boiler makers of the good old days now passed, but yet on the job just the same, as a layer-out of the Texas Pacific shops, Algiers, La.

Before any National or International Brotherhood of Boiler Makers were organized Brother Corcoran was an active member of the Boiler Makers' Benevolent Association which was organized in the city of New Orleans in 1870. The late secretary-treasurer of the International, Wm. J. Gilthorpe, was also a member of the New Orleans Benevolent Association of Boiler Makers which cut considerable figure in securing better working conditions and increased wages at that time.

When the International Brotherhood was organized in the city of Chicago, Ill., Brother Corcoran was a charter member of Lodge No. 41, of New Orleans, afterwards Lodge No. 37, when the consolidation of both organizations was effected the National and International at Chicago, Ill., September 1, 1893.

He is at present an active member of Lodge No. 206 and always willing to lend a helping hand to further the interests of the boiler makers and helpers of the port of New Orleans, as well as the International Brotherhood when the occasion requires and trust Brother Corcoran will enjoy life for many years to come, surrounded by his family, is the sincere desire of the boiler makers and helpers of the city of New Orleans.
LODGE No. 206.

Deer Lodge, Mont.

Dear Sir and Brother:

Inclosed please find Journal mailing list. Also wish to notify you of the death of Brother A. Klugman, Reg. No. 32518 and wish you would kindly publish a memorial in the next issue of Journal.

Brother Klugman was elected to the office of sheriff of Mineral County in November, 1914, and at that time took a withdrawal card. On May 24, 1915, after Brother Klugman had retired, someone came in his room and asked him to go to a saloon and quell a disturbance that was going on; he got up and started to dress, when his revolver fell out of his trouser pocket, and when it struck the floor discharged. The bullet struck him in the abdomen and passed clear through his body, killing him instantly. The remains were shipped to Oswego, N. Y., his old home.

Brother Klugman had been employed as a boiler maker at Aberton, Mont., for six years previous to his election, and was well liked by all who knew him, and since taking office had made a fine record. The members of Mt. Powell Lodge No. 528 all join in extending our heartfelt sympathy to the bereaved family.

Yours fraternally,
J. H. THOMAS, S. L. 528.

Newport News, Va.

Dear Sir and Bro.:

As I have received a number of letters from brothers all over the States asking for work and how Newport News is at the present time, Brother Casey, I will try to let you know in as few words as I possibly

can. First, Newport News has not been so busy for many years and at present they have orders and work on hands that run up to something like \$22,000,000. This don't speak of old work that is coming in every week, so that anyone coming this way could find a job, but the wages or rates are not so high here as in other states where it is all tank work or railway work, but it is equal to any other ship building yards in the rates in other states. Much of the work is piece work and contract work, riveters, chippers and caulkers (hand and machine), also drillers are all piece work. Ship fitters and others are contract work (bonus system), all other trades are the same. Fitters get from 25 cents to 32 cents per hour. Riveters, day work, 25 cents per hour. Riveters, piece work, what they make. Chippers and caulkers, day work, 22 cents to 25 cents. Chippers and caulkers, piece work, what they make. Fitters are guaranteed their weeks' wages if they don't make out, and a bonus every week if the job is finished in time. Brother Casey, this is all I can say at present as there is plenty of work but little inducement for any man to come any great distance to here, but any brother in good standing coming this way I can say that the members of No. 55 will do their best for them.

With best wishes, I am

Yours fraternally,

DAVID McARTHUR, C. S. L. 55.

P. S. Will be glad to answer any letters.

Wichita, Kas.

Dear Sir and Brother:

Whereas, We the boiler makers and helpers of the state of Kansas do extend our most heartfull and many thanks to our legislature representative, Brother S. T. Sample, also Brother Jas. B. Casey, for their good work done in our past legislature, and while we did not accomplish our intended boiler inspection bill, the brothers done their best, and we extend them many thanks for their services.

Yours fraternally,

BRO. J. M. DEVLIN,

S-T. Legis. Con. of B. M., State of Kas.

Chicago, Ill.

Dear Sir and Bro.:

At a regular meeting of Garden City Lodge No. 1 of Chicago, Ill., the following resolutions were adopted:

Whereas, It has pleased the Almighty God, to take from our midst, our dearly beloved brother, Jas. Ross.

Resolved, That we extend to his bereaved family our sincerest condolence, in their most sorrowful hour.

Resolved, That our charter be draped and a copy of the above resolutions be spread on our minutes and a copy be sent to the bereaved family.

J. McKIRENAN,

JOS. CROTTY,

JNO. BURKE,

Committee.

Danville, Ill.

Dear Sir and Bro.:

Whereas, It has pleased the Almighty God in his infinite wisdom to remove from our midst Jacob Schroll; be it

Resolved, That Local 22, Boiler Makers, Iron Shipbuilders and Helpers of America do hereby extend our utmost sympathy to the bereaved family, and a copy of these resolutions be sent to the family, a copy sent to the Journal for publication, and one to the Local and our local charter be draped for sixty days.

FRANK JERGENS,

HERMAN POGGENDORF,

WM. J. IRWIN,

Committee.

Birmingham, Ala.

At a regular meeting of Lodge No. 4, International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America, the following resolutions were adopted:

Whereas, God in His infinite wisdom has removed from this world of strife and toil, J. C. Horn, a brother of A. L. Horn of Lodge No. 4.

Resolved, That we, his brothers, extend to the family our heartfelt sympathy and condolence in this sad hour of sorrow and grief; and be it further

Resolved, That a copy of these resolutions be sent to the Journal for publication, a copy sent to the family, and a copy spread on the minutes.

JOHN DOUGLASS,

A. L. CARMACK,

R. D. HOOT,

Committee.

Pittsburg, Kas.

Dear Sir and Brother:

Please insert a notice in the Journal that I would like to locate the following brothers: Deny Callahan, Geo. Stevens, Dan McCarthy, Brodie McDonald and Martin Murphy, all real Irish boys and my friends, and would appreciate a letter from them. Getting old and lonesome.

With best wishes to all.

G. SPRATLEY, Reg. No. 547.

Baton Rouge, La.

Dear Sir and Brother:

Inclosed please find Journal mailing list, also a script which I wish you would publish in the next Journal.

Lodge No. 528 is offering a prize to the member which brings in the most applicants between June 10 and September 10, 1915. Prize, solid gold emblem watch charm.

Hoping this will be satisfactory to you, I beg to remain,

Fraternally,

S. V. ACOSTA.

East Boston, Mass.

Dear Sir and Bro.:

Lodge 585, on Tuesday evening, June 15, participated in the opening up of a vigorous campaign that has been started by the Metal

Trades Council of Boston for the purpose of adding to the numerical strength of the various bodies of organized labor in the metal trades crafts, and of injecting a degree of energy and activity into trade unionists in those crafts which has of late been sadly lacking.

President Frank Tully of Blacksmiths' Union 105, A. F. of L., Boston, who is also president of the Metal Trades Council, presided, briefly stating the object of the open mass meeting, which nearly filled Hibernian Hall.

Our worthy Sixth International Vice-President, Brother John J. Dowd, was the first speaker. He said in part:

"This proposition of the Metal Trades Council to establish a close bond of union among all the workers in the metal industries should be given consideration by all men employed in these different trades. Wherever there is a local branch of the International Metal Trades Council established it means that efforts will be made to protect the interests of all concerned. We should have a good metal trades council in Boston and I am pleased to know that the Boiler Makers of Boston have become affiliated with it, for it means a lot to us. If the metal trade workers at Newport News, Va., had been thoroughly organized and united, it would not have been necessary for the boiler makers there to go on strike for months in a protest against the unjust piecework, nor would it have been necessary for the boiler makers at the Franklin Steam Boiler Works to accept a reduction of fifty cents a day in their pay, if the workers in the various metal industries in the port of New York had been systematically organized. Signs are apparent that prosperity is coming in business in the metal trades and I hope that every man working at any of these trades shall attend and boom these mass meetings which are educational especially for the boiler makers, men of red blood who have proved their courage and intelligence. If the workers in the metal trades are organized we would get speedy recognition from the manufacturers to whom we can reply when they say to us: 'We are the ones who give you men your bread and butter.' Yes, but we (the workmen) are the ones who by the fruit of our labor make it possible for you manufacturers to live in luxury. I hope," continued Brother Dowd, "that those concerned will take this metal trades organization to heart and hope the Boston Metal Trades Council will be soon one of the biggest in the country which it has good prospects of being, for the men having it in charge have been years in the labor movement and are capable of framing propositions to promote the cause, and I hope to be back in Boston soon to help build up your organization."

Brother Dowd's remarks were warmly applauded.

Addresses followed by Business Agent John Connolly of the Machinists' Union; President Michael Birmingham, of the Bos-

ton Electrical Workers' Union; Business Agent Daniel N. Generson, of Boiler Makers' Lodge 585; Herman Cumerford, B. A. of Stationary Engineers' Union 203, all of whom spoke hopefully for the thorough organization of the metal trades in the City of Boston, and pledging themselves to put forth their best efforts to promote the same. Bro. Charles Scott, who has been doing good work in his capacity of deputy organizer for our International Brotherhood among the railroad boiler makers' organizations, which he has put new life into, when introduced, said:

"I am glad to speak here tonight to forward the progressive movement of your Metal Trades Council, and I hope your future meetings will be large that the work that has been started will go on till your aims have been accomplished."

The benefits that have been derived from trade unionism are so plain and visible that it is hardly necessary to enumerate them, for there is hardly a man working at any trade that has not been benefited by a labor organization. The boiler makers of Boston, who have gone through four strikes and have secured reduction in hours of labor and increase of wages can give a fitting answer to those who ask, what has the organization done for "us" and what is true in Boston applies to other cities where real genuine organizations exist in our crafts. None of the material, financial, or hygienic benefits enjoyed by mechanics at the government navy yards and arsenals would be enjoyed today were it not for the influence of trade unionism, which strange to say, is today receiving small support and little encouragement from these men.

Today the labor movement in the United States is passing through one of the most critical periods of its existence, for the National Manufacturers' Association is busy trying to throttle organized labor. Their propaganda we may say is divided into four departments, first the legal department, guided by Elihu Root, and these who are trying hard to have great labor laws declared unconstitutional, second the educational department, which embraces such men as ex-President of the United States Taft, Drew and Perry, who are delivering "lectures" throughout the country poisoning the minds of the public, with their theoretical sophistry in their analysis of trade unionism, third the political department typified by the notorious Penrose of Pennsylvania, who is working hand in hand with Barnes, of New York, who has had the audacity to proclaim that he intends, if possible, to wipe off the statutes every labor law that has been enacted at Albany, and fourth the labor department, the worst of all a lot of grafters, who have been thrown out of their own organizations for their crookedness and who at the behest and with the financial support of the sworn foes of organized labor start "dual" organizations in order to create dissension and to disrupt the real bona fide trade unions so it behooves us to be on our guard and look

forward to the time when every workman will safeguard his own interests by belonging to a true labor organization. Brother Scott's pungent remarks aroused great enthusiasm and among the membership of Lodge 585, who attended this initial meeting to boom the metal trades unionizing movement, were Vice-President Thomas J. Farmer, Business Agent D. M. Generson, Secretary D. B. McInnes, Treasurer Bernard McDonnell, Trustees John Warnock, Patrick Frawley and James J. Kerrigan and Brothers Thomas De Freitas, Austus E. Page, Chas. F. Smith, John J. Kerrigan, Charles Jenkins, John Hankard and Thomas Halsom. President Wm. E. McNabb was unavoidably prevented from attending, but the movement to perfect the Metal Trades Council in this city has no abler advocate than Brother McNabb.

Yours fraternally,
DANIEL B. MCINNES,
Secretary Lodge 585.

Algiers, La.

Dear Sir and Brother:

Lodge No. 206 was honored at their last regular meeting, June 11, 1915, with the presence of our second international vice-president, Thos. Nolan, the grand old man of the Brotherhood. Lodge No. 206 retaliated by giving a little smoker which was enjoyed by all present. Brother Nolan is here for the purpose of assisting our B. A., Brother Wm. J. Smith, in drawing up a new agreement with the contract shops and from all indications they will be successful in their efforts. Brother Nolan spoke on many matters of interest and how much has been accomplished through organization. He also promised to organize the Boiler Makers and Helpers in Algiers and New Orleans, as they have never been before, if permitted to stay. We trust the international president will grant the request.

The wave of slack times has hit Algiers and New Orleans a solar plexus blow. We have 60 per cent of our members idle at present, nevertheless the men are in good spirits and expect business to pick up in the near future. Lodge 206 has 46 members in good standing, something we never had before, which goes to show the members have not lost any of their union spirit. Besides Bro. Nolan and Bro. Smith we had Bro. D. J. Corcoran at the meeting. In spite of his 69 years of usefulness he still displays some of his youthful ambition, always with the bunch.

Hoping to see this in the next issue, I remain,

Yours fraternally,
JOSEPH KOENIG,
P. and C. S., L. 206.

Argenta, Ark.

Dear Sir and Brother:

I wish you would advertise Brother W. C. ShROUT, Reg. No. 32553, in our Journal, as he received a pass from Little Rock to Van Buren on false statements and Lodge No. 66 had to pay for the pass. So any secre-

tary taking up his card will please let me know of his whereabouts and hold card.

Also Brother C. Townsend, Reg. No. 62088. He secured a pass from Little Rock to Wynne, Ark., at the expense of No. 66. No more passes will be given out at Little Rock unless you have a service letter.

I hope you will find space in the Journal for this, and oblige

ED. WORTSMITH, S. L. 66.

Hoisington, Kas.

Dear Sir and Brother:

There appeared in the issue of the Strike Bulletin of May 5 an item stating that Brother E. J. Barrette, Reg. No. 6342, was scaling at Paducah, Ky., which is false. This brother has been working here in Hoisington for three years and is still here. We believe it would pay the editor of the Strike Bulletin to investigate before printing such untruths.

Hoping this contradiction appears in the next issue of the Journal, I remain

Yours fraternally,
C. W. CRAMER, C. S. L. 403.

New Orleans, La.

Dear Sir and Brother:

I am inclosing you small photo of the late Brother Robert Rodgers, Reg. No. 72184. The members of Lodge No. 14, as well as his father, would like very much to have same reproduced in next issue of Journal.

ROBT. RODGERS.

Brother Rodgers was accidentally killed by a railroad train on May 28, somewhere in the vicinity of New Orleans; no details of the accident have been learned yet. He was buried in Chattanooga, Tenn., on June 1. I have mailed May report under separate cover.

Yours fraternally,
THOS. NOLAN.

Savannah, Ga.

Dear Sir and Brother:

I inclose photo of Brother L. J. Flohr, secretary of Lodge No. 424 of Waycross, Ga., which I would like to have reproduced in July issue of Journal.

Brother Flohr is very active and has been

L. J. FLOHR.

since he was initiated as an apprentice about five years ago. The members of No. 425 speak very highly of him and would appreciate very much to see his photo in Journal.

I have just returned from Brunswick, Ga.; will attend a meeting of Lodge No. 26 on the 24th, after which I will wire the office for further instructions. I am

Yours fraternally,

THOS. NOLAN.

Jacksonville, Fla.

Dear Sir and Brother:

I am inclosing a memorial on the death of Brother Jewell's wife. Please have it published in our official Journal.

With best wishes, I am,

Fraternally,

E. S. RYAN.

At a regular meeting of St. John's Lodge No. 20, the following resolutions were adopted:

Whereas, It has pleased the Almighty God in His divine wisdom to remove from our midst the dearly beloved wife of our worthy and esteemed brother, B. M. Jewell, therefore, be it

Resolved, That we, his fellow brothers, extend to him our heartfelt sympathy in this his sad hour of bereavement, and pray that the Almighty God may comfort and console him that he may bear his trial with fortitude; and be it further

Resolved, That our charter be draped in mourning for thirty days, a copy of these resolutions be spread upon the minutes of our meeting and a copy be forwarded to our bereaved brother, also a copy to our official Journal for publication.

J. C. GARVEY,

B. M. COLE,

E. S. RYAN,

Committee.

Jackson, Ohio.

Dear Sir and Brother:

I, Otto Lee Martin, and family wish to give our heartfelt thanks to the Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of Lodge No. 509 and to our foreman, Mr. Frank Kanur, for their kindness in the death of my beloved sister, Mrs. Charles Saluock. I remain,

OTTO LEE MARTIN,

Secy. L. 509.

Kansas City, Mo.

Dear Sir and Brother:

In our last issue of Journal there are several pieces that the members of our organization ought to read and study them over, especially the traveling members. The ones I mean are on pages 438, 440, 445, 468. The time has passed when boiler makers can jump from place to place and leave all things behind them. The future and the past are going to get you into trouble. In a central point like our city, they come and go every day and some traveling members think because they have a card and a book that the poor home guards owe them a living. There are some traveling brothers that are O. K. and square; others are not.

What would you think of a man who got 19 meals on a meal ticket or one that tried to trade a meal ticket to the saloon man for a bucket of beer. Lodge No. 32 has had cases like them.

Brothers, if you have to travel, why not travel clean? Get your clearance card fixed up right, the proper stamps in your book, pay all your bills and remember, don't want the earth, there is someone traveling behind you; and Register Numbers 89812, 99704, 56652, 21642, 28,001, 8986 and 23852. stay away from Kansas City; Lodge No. 32 is not running a free boarding-house.

Business is poor around Kansas City; there are enough boiler makers in town to fill 20 shops.

With best wishes, I am

Yours fraternally,

WALTER E. DWYER, S. L. No. 32.

Brainerd, Minn.

Whereas, It has pleased Almighty God in his infinite wisdom, to remove from our midst the dearly beloved son of our brother,

Charles Torkelson; therefore, be it Resolved, That we, the members of Pine City Lodge No. 116, hereby express our sympathy for Brother Torkelson and his family in their sad hour of bereavement and pray that they may receive strength and fortitude to sustain them in their sorrow; and be it further

Resolved, That a copy of this resolution be sent to our brother, a copy spread upon the minutes and a copy sent to our official Journal for publication.

RALPH HASTINGS,
MARTIN WIKLUND,
WALTER BULK,
Committee.

Albany, N. Y.

Dear Sir and Brother:

Will you kindly put this in your valuable Journal.

Fraternally,
JOS. ARNOLD,
Acting President.

THE DEATH ROLL.

Miss Josephine Leamey.

The funeral of Miss Josephine C. Leamey, the youngest daughter of John J. Leamey and the late Ella Grumbley Leamey, took place from the residence, 68 Livingston Avenue, and later from St. Joseph's Church, where a solemn mass was celebrated by

standing cross, graduating class 1913; spray of flowers, George Hudson; standing wreath, Mrs. B. Degan and Mrs. Pryor; standing wreath, Mr. Joseph A. Hughes. Rensealer; standing wreath, Mrs. Frank J. McGovern; standing wreath, George Hudson; standing wreath, Champion family; casket pieces—Mr. and Mrs. James Smith, Mrs. A. L. Robe, Miss Grumbley, Aquinas Circle of St. Joseph's Academy, Mr. and Mrs. Cyril Cassiday, Margaret Richford, Rhea Helen Conway, Mae E. Halsdorf, Breath Maas, Mr. and Mrs. M. J. Frizel, Mrs. J. C. Merrigan, George J. Baetzhof and Miss S. Pryor, Mrs. Leahy and family of Troy, N. Y., George Gabriel, Mrs. D. Lawloe, Mrs. Trainor, Mrs. Pearsall, Mr. and Mrs. Joseph Matthews, Mrs. Kane, Miss Winifred Dunphy, Mr. and Mrs. John Tracey.

The bearers were Messrs. John Curtis, Joseph Hughes, James Breen, Edward Flynn, Frederick Walsh, James Smith, Cyril Cassiday and Eugene Driscoll. Interment was made in St. Anges' Cemetery. Rev. Father Dunney officiated. Champion & Sons, undertakers.

Lafayette, Ind.

Dear Sir and Bro.:

It has, no doubt, been some time since there has been anything in the Journal from

A GROUP OF SOME OF THE MEMBERS OF LODGE 360, LAFAYETTE, INDIANA.

Rev. Leo Liddane as celebrant, Rev. Francis Kelly as deacon and Rev. Edwin Watson as sub-deacon. Father Liddane delivered the eulogy. The funeral was largely attended by the Children of Mary. Among the many funeral pieces were: Pillow, from father; standing cross, sister and brothers; star and crescent, Aunts Elizabeth and Sarah; wreath, Mr. M. F. Grumbley and wife; standing wreath, Mr. and Mrs. Mark McAvoy; wreath, Grumbley Brothers; standing heart, George and John Hughes; standing lyre, Mr. John Burns;

Local 360, so I have been appointed to correspond with you occasionally.

On Thursday evening, May 20, our regular meeting night, Local 360 gave a lamb roast and smoker for the entertainment of the members, at the Bartenders' hall, corner Third and Ferry Streets.

Meeting was called to order by President Ramp earlier than the usual hour so as to have ample time for the entertainment. The hall was decorated with Jack-o-lanterns and old gold and black, making a very beautiful appearance. About 9 p. m. the commit-

tee had everything in readiness for a good time. Committee: James H. Goldsberry, James A. Peacock and Merel Schoff. The table was very neatly arranged, laden with roast spring lamb and other delicatessen too numerous to mention. With several bouquets of carnations neatly placed about the table making a very appetizing appearance, everybody did justice to the supper. Next Brother Peacock passed some good union made cigars which was followed by a speech by Brother Goldsberry, taking for

us the next ball we have. Everybody had a good time that they will not soon forget.

The photo I am sending you is a flashlight taken by Brothers Montgomery and Peacock. Only about three-fifths of the members that attended lodge that evening are on it. They had left before we got that far.

Work around Lafayette is very slack, working 45 hours per week, about three weeks per month. A new boiler maker is put on occasionally but you have got to

A GROUP OF SOME OF THE MEMBERS OF LODGE 187, MIAMI, ARIZONA.

his text, "The Progress of Local 360 and the Brotherhood at Large," that caused much enthusiasm. It was now Brother Jack Halpin's turn to make his debut. Jack is an able entertainer, making many an otherwise idle moment jolly. He recited some good poetry but received more applause for singing.

By this time the boys began to look for something else to do. Some played cards, but most of us went to the bar-room where Brother "Smokey" Burroughs and Floyd "3/8" Montgomery were always on the job with a big foamy T. & W. while some of the others fed the big electric piano with jitneys and danced. There are several good dancers belonging to Local 360, and watch

have a good card or no work for you here.

As my letter is getting rather long I will have to close, hoping you will have space for our picture and letter. With regards, I remain,

Yours fraternally,
FRANK L. BONGEN.

Miami, Ariz.

Dear Sir and Bro.:

Please find enclosed picture of boiler makers and helpers taken at the Inspiration Mill shop, which I wish you would publish in the next issue of the Journal. Having nothing more to write, I am,

Yours fraternally,

Leo GAYAN.

A Compilation of Labor News.

BY THE A F OF L NEWS SERVICE

"SPEEDING UP" SYSTEMS.

Washington.—"Speeding up" systems are sufficient to upset the mind of an ordinary individual and produce insanity.

This is what the solicitor of the United States department of labor thinks of the stop watch method of production.

The department has sustained this view, which is included in an opinion by its legal adviser that a worker injured because of a strain from working under a "speeding up" system is entitled to relief under the federal workmen's compensation act.

The decision was made in the case of D. C. Manning, sailmaker at the Mare Island navy yard, California, who worked for twenty years without losing a day from illness. A time card system was introduced, and in his plea for compensation, Manning brought out these points:

"Under the time card system you had to give an account of every minute you were on the job, and we were given to understand that the men who did the most work would hold their jobs the longest. Later the Halsey system was introduced. Under this plan a time man, equipped with tablet, lead pencil and stop watch, sat in front of the worker to find out how long it takes to do a certain piece of work. The report to headquarters was your future standard for that class of work.

"The Halsey system is designed to get out of the man employed under it the greatest possible amount of work he can do in a given time, with the fear ever hanging over his head that a failure to keep up to the standard will cause him to lose his job."

Manning was engaged in making coaling bags, which are 42 inches long and eight feet in circumference. It is the hardest work in sailmaking.

Between the physical strength necessary in this work and the mental strain caused by every move being "tabbed," Manning collapsed, and asked for relief under the compensation act because of "a strain from rushing work under the Halsey system." Physicians reported that he would be disabled for life and that he was "suffering from incurable heart condition."

The attending physician reported that Manning was "an unusually vigorous man, as well as an energetic worker."

In indorsing the statement of claimant that he was entitled to compensation, the solicitor of the department of labor declared that the treatment accorded Manning was enough to produce insanity. The official said:

"Here was a strong, hearty, hard working employe who, for about twenty years, had been regularly employed by the government, and whose rating was first class. After putting in all those years of service and retaining his health, strength and vigor, a new system was installed in the government establishment by which the employe was kept under the highest nerve racking tension by reason of the fact that a man sat watching his every movement during every minute of an eight-hour day. In addition to this it will be observed from claimant's letter, above quoted, that the work he was performing was one of the heaviest and hardest kind to be performed in his occupation. Under such circumstances it is not a matter of surprise that his health should be injured and shattered, for it certainly seems that such treatment of a man engaged in heavy manual labor, necessitating also the use of the intellect, would be sufficient to upset the mind of

an ordinary individual and produce insanity."

The ruling of the department of labor is in line with the views of the last Congress, which passed the Deltrick bill, outlawing all forms of "speeding up" in government arsenals and navy yards. The passage of this bill was the result of a long campaign by organized labor. Opponents of the bill insisted that these "speeding up" systems really benefited the employe, who was thereby paid "according to his worth."

AMEND COMPENSATION ACT.

Boston.—The recent state legislature amended the state workmen's compensation act as follows:

In the case of an injury to a minor his future wage increases may be considered in determining damages. Allowing suit to be brought at common law when death results from the negligence of the employer and is preceded by conscious suffering. Providing for payments for injured workmen during the pendency of a bill. Providing for compensation for injuries to workmen employed by the Boston rapid transit commission. Fixing responsibility for the payment of workmen's compensation by the commonwealth and municipalities. Allowing depositions to be taken outside the state. To secure prompt payment of benefits when a foreign insurance company withdraws from this state. Allowing the Employers' Insurance association to write other liability insurance. Regulating the creation of new companies to do business under the insurance acts.

"BREAKING CONTRACTS CAN'T CRUSH UNIONS."

New York.—"You can't destroy unions by breaking agreements. We favor contracts, but we do not depend on them to live," declared President Gompers last week to an audience composed of thousands of members of the International Ladies' Garment Workers' union. It was one of the greatest labor demonstrations this city ever witnessed, and Madison Square Garden was crowded with unionists who listened to vigorous addresses by President Gompers and others on the termination of the protocol by garment manufacturers and the arrest of several officers of the union, which was denounced as "a deliberate assault on our union in particular and on the labor movement in general—an assault engineered by some of our most oppressive and unscrupulous employers in league with a band of professional strikebreakers and a gang of notorious and self-confessed criminals."

President Gompers notified manufacturers that the union's activity would not be lessened because they broke an agreement. He said the trade union movement desires these agreements, but it does not depend upon them for existence, and that it will live and prosper in spite of broken promises by employers.

"I don't know the reason behind the breaking of the protocol," said President Gompers. "Is it that the manufacturers believed the union could be crushed? Did they join in the movement to take the lives and liberties of the cloak makers' union? If it be their purpose to help take the lives and liberties of the men we believe to be innocent, they will be defeated. The killing of the men at Ludlow brings a suspicion that that is what they want to do here.

"In the fight for freedom we are going to stand shoulder to shoulder, not for war, but for peace. Any assault on our ranks or on the meanest among us, will find our ranks ready to fight to maintain the lives of the toilers of our country."

Strong resolutions were adopted in protesting against the action of employers, and these workers professed their trade union faith in the following language:

"We realize more than ever that our only protection against all assaults on the part of our employers and our other enemies lies in our organization; that our union alone will shield us from the inhuman exploitation, maltreatment and persecution to which we had been subjected before the general strike in 1910, and we pledge ourselves with renewed determination and enthusiasm to stand loyally and unflinchingly and by our faithful officers through all the struggles that may come."

INJUNCTION REFUSED, UNION VIEWS UPHOLD.

Stockton, Cal.—This city secured much publicity last year because of an attempt by the Merchants' and Manufacturers' Association to disrupt the trade union movement, and now it is again in the limelight because of the refusal of the superior court of this county to issue an anti-boycott injunction against the Building Trades Council and the Material Teamsters' Union.

In view of last year's events and the antagonistic union sentiment developed at that time, the decision is a remarkable one, and again proves the value of agitation and education by workers in the securing of rights to patronize whom they will.

While the court believes it has the right to issue injunctions even in cases covered by state and city police laws, it makes the interesting ruling that there is no such thing as a "secondary boycott," a theory elaborately defended and explained by ex-President Taft and nonunion associations. The court insists that "the legality of the secondary boycott is vigorously denied by the English courts, the Federal courts and the courts of many of the states of this Union."

The California State Supreme Court is cited in defense of this opinion, and that court is quoted as follows:

"The court recognizes no substantial distinction between the so-called primary and secondary boycott."

The superior court intimates that intimidation is a matter for injunction relief, despite the presence of sufficient police stat-

utes and trial by jury guarantees. The court, however, makes several significant statements that accord with the federal Clayton law. The most prominent is the declaration that mere numbers constitute no wrong and that whatever one man can do alone, he may do in combination with others, "because," says Judge Norton, "it has been definitely settled as a matter of law that the acts which an individual may lawfully do, an organization of individuals may lawfully do."

The decision indicates the changed sentiments on this question, and shows that in the very near future organized workers will no longer be attacked for exercising rights that are accorded others without question—the right to withhold their patronage, singly or in concert, from those who oppose them.

WOMEN UNIONISTS ADJOURN.

New York.—Few changes were made in the executive staff by the biennial convention of the National Women's Trade Union League, which adjourned last week. The next convention will be held in Kansas City, in 1917.

Among the resolutions adopted were the following:

Approving the fearless course of Frank Walsh, chairman of the commission on industrial relations; condemning the arrest and conviction of John Lawson, Colorado miner, and condemning the arrest of members of the International Ladies' Garment Workers' Union. Indorsing the minimum wage for women, the eight-hour day and the abolition of night work. Favoring the extension of public works for the provision of unemployed women; a national system of unemployment insurance, and the establishment of national, state and municipal employment agencies.

For the purpose of extending the knowledge of trade union principles, the convention made three suggestions: Hold frequent shop meetings in union and league headquarters; distribute pamphlets that show the advantages of trades unionism; hold street meetings wherever possible.

The convention indorsed equal suffrage and called on "our brother workers in the states of New York, Pennsylvania, New Jersey and Massachusetts" to support pending equal suffrage proposals.

LAWSON CASE IS DISCUSSED.

San Francisco.—The Evening Bulletin makes this comment on the Lawson verdict:

"Granby Hillyer, judge of the specially-created court which tried Lawson, went to the bench directly from the employ of Lawson's bitter enemies, the coal companies. As a coal company attorney he had helped to manufacture cases against some of the indicted miners. The jury which he allowed to serve in the Lawson case consisted of 'coal company retainers hand-picked by a coal company sheriff.'

"No one said that Lawson killed anybody. He was charged with murder because he was head of the miners' union and because, in a clash between the miners and the mine guards, a guard named John Nimmo had been killed by a bullet from some miner's rifle. If the miners, instead of the mine owners, had been in control of the legal machinery of Las Animas county, the heads of the coal companies, or even the Rockefellers, might have been indicted and the case would have been no more absurd.

"Eleven members of the Lawson jury wanted him hanged. He was let off with life imprisonment because one jurymen gagged at the death penalty.

"Unless the higher courts intervene, Lawson and those of his companions, who are most unpopular with the coal companies will spend the rest of their lives in prison. The influence of this raw capitalistic anarchy in sweetening the relations of capital and labor the country over may be left to the imagination."

WIN INJUNCTION SUIT—STRIKERS MAY PICKET.

Washington.—Justice McCoy of the Supreme Court of the District of Columbia has refused to issue an injunction against striking brewery workers from picketing.

The court ruled that "the proof preponderates in favor of the finding that the picketing is entirely peaceful."

The court said it has been repeatedly held that unionists may peacefully advise the public not to purchase nonunion products. This, together with an absence of threats by the brewery workers, led the justice to this conclusion:

"The defendants, then, having the right to curtail the sale of nonunion beer or to increase the sale of union beer by giving information to others, there is nothing in the present case which warrants them from doing so."

Attorney Ralston called attention to the Clayton law, and summarized the position of the workers as follows:

"These workers have said to the community at large: 'If you will aid us, by discontinuing the purchase and consumption of that beer, we will the sooner be able to gain the benefits which we expect to arise from our organization.' That is what they have said. And what is the essential difference, whether they say that to the employer against whom this strike takes place, or whether they solicit men on the street to do that very same thing? Essentially I say there is no difference between them. They are acts which they have a right to do individually and collectively and they are done for ends which are justifiable, which are legal."

The strike started April 2. It involves brewery workers, engineers, firemen and machinists. The workers asked that former contracts be renewed, with the added provision that work shall be equalized in times of business depression. Last November the

companies discharged fifty-one active trade unionists, and the proviso was intended to check this unfairness. Later the companies demanded that chief engineers withdraw from the Steam Engineers' Union. The strikers have presented their cause to the public in a vigorous manner and are confident of final victory. The failure of the companies to secure an injunction is but one of a long series of attempts to destroy the unions of brewery workers and their allies.

WOMEN IN IRON INDUSTRIES.

New York.—The Sun makes editorial comment on the statement of J. G. Butler, Jr., president of the Bessemer Pig Iron Association, that "it would not be surprising to find thousands of women in mills, blast furnaces, and doing the work of men before the war is over."

The Sun is not startled at the suggestion, for with babelike innocence it asks this question:

"Yet is the work which they might be called on to do in the mills, mines and blast furnaces really harder than the back-breaking occupation of floor scrubbing, which is cheerfully committed to them, or more trying than the farm labor that thousands of women perform year in and year out?"

Despite this cleverly worded defense of women in mines and steel infernos, the editor is awake to the power of labor unions in resisting the proposal, for he warns advocates of the plan.

"These statutes (regulating women workers) could not be ignored in their entirety, and their repeal would necessitate a campaign highly expensive and requiring for its successful issue, assuming the existence of economic conditions that made such repeal possible, a period of time that might easily exceed the span of the shortage of male workers which Mr. Butler believes is to ensue."

These conditions, which the editor believes are insurmountable, forces him to this conclusion:

"A feminine excursion into the mines and blast furnaces is as improbable as it would be undesirable."

The value of Mr. Butler's statement, which the Sun is undoubtedly conscious of, is to weaken further agitation for immigration restriction. "Women in mines" will be the bugaboo to offset the workers' plea to the next Congress that their living standard and education be tests for American citizenship.

ROCKFELLER MILLIONS TAINT PUBLIC PRESS.

New York.—President Gompers told delegates to the National Women's Trade Union league how the Rockefeller foundation and similar organizations possessing untold millions are poisoning the well of intelligence and often give workers the wrong viewpoint on subjects that are vital to labor. The speaker illustrated his point by referring to

the controversy between the Rockefellers and Chairman Walsh, of the commission on industrial relations. He declared he attended every session of the commission when John D. Rockefeller, Jr., was on the stand, and that the stories given out later by Rockefeller and the public press that supports him, were neither fair or honest to Chairman Walsh, who was described as doing a great work for the cause of labor.

"Frank Walsh has no business to give to the newspapers," said the unionist. "He has no secret fund upon which to draw to pay for advertisements; he has no \$200,000,000 foundation with which to corrupt the minds of the people of the country. Our own people have sometimes been misled by reason of the mis-information spread broadcast by the millions of the Rockefeller foundation, and some workers have even criticised the splendid work of Mr. Walsh; some of our own are led to side against us by reason of this false and misleading information. I have personally heard many good men criticise the splendid work of Mr. Walsh in the interest of the workers because they have been misinformed as to the facts," said President Gompers.

The speaker referred to the Clayton law as the Declaration of Industrial Independence, and said this act would undoubtedly be attacked "by the forces that are poisoning the wells of intelligence by conveying misinformation to the people through the medium of the press."

President Gompers urged the delegates to make trade unionism their life's paramount issue, and not permit themselves to let other issues overshadow the one great question of organization, that workers may regulate their lives, may have a voice in regulating wages, hours and conditions. This, the speaker insisted, was of prime importance, all other questions being secondary.

TO ANNUL TREATIES HIT BY SEAMEN'S LAW.

Washington.—The higher labor standards demanded by the LaFollette seamen's bill, passed by the last Congress, will make it impossible for the renewal of several treaties, and this government has instructed its diplomatists abroad to ask for the annulment of those paragraphs in commercial treaties which conflict with the new act.

As the section of the law that applies to foreign vessels does not take effect until March, 1916, there is sufficient time for diplomatic negotiations. While the bill was pending in Congress, Germany, Great Britain, Italy, France, Belgium and other nations made representations to this government that the bill's provisions raising the standards of labor and affecting the equipment of ships which visit American waters conflicted with their rights under treaties. Unionists pointed to these statements as proof that the law would raise the standard of seamen throughout the world, and that the various countries would have to revise their treaties if the law was passed.

ILLNESS A TAX ON WORKERS.

Washington.—The necessity for higher wages and for immediate legislation that will prevent occupational diseases is shown in a report to the federal commission on industrial relations which was prepared jointly by representatives of the commission and the federal public health service.

The report states that the average wage earner in the United States loses approximately nine days every year on account of sickness, much of which is preventable. Illness has been found to be one of the principal causes of unemployment, and a principal factor in recruiting the army of destitute and dependent persons.

Ill health, it is stated, levies an annual toll of \$750,000,000 upon wage workers because of lost wages and expense of sickness.

The greater part of this gigantic tax falls upon those workers who are least able to afford it, since sickness has been found to be much more prevalent among low-paid workers than among those whose incomes are sufficient to provide sanitary housing, adequate food and pleasant surroundings in the home and in the place of work.

The estimate of an annual loss of \$750,000,000 is conservative, it is declared. It is based on a careful examination of the sick records of nearly 1,000,000 workers in this country, and is found to correspond very closely to the figures afforded by the sick records of a long period of years of about 26,000,000 workers in Germany and Great Britain. It includes merely the loss of wages during illness and the expenses of medical attention and does not take into consideration the impairment of the worker's efficiency and vigor or the cost of illness of members of his family.

PENSION STATE EMPLOYEES.

Harrisburg, Pa. — Governor Brumbaugh has signed the bill establishing a retirement system for attaches of departments of the state government. It is to become effective September 1 and will affect all except those whose retirement is provided for. Any employe who shall have served twenty-five years or more or who shall have reached the age of 70 years and served continuously for twenty years as an attache of the state government is to be eligible to retirement on half pay. The governor is to be the authority to determine retirements and attaches must hold themselves in readiness to respond to call for their services. Attaches must make application for retirement, and no additional compensation shall be allowed to those retired for the performance of any duties they may be asked to do.

OPPOSE DANGEROUS LAW.

Phoenix, Ariz.—Trade unionists and the railroad brotherhoods are receiving assistance from citizens in all walks of life in the fight to repeal, by referendum, the law enacted by the last legislature which

provides that all costs in trial cases, including jury costs, shall be first deposited with the clerk of the court.

In opposing the bill, Judge Shamhart says:

"Why not require those who seek legislation from the legislature to pay for it? It is but a co-ordinate branch of the government. Or the governor, for executing the laws?"

"We have even abolished the fee system in the state to secure absolute impartiality of the officers. Why then apply it to jurors?"

GOOD COMPENSATION ACT.

Halifax, Nova Scotia.—John Joy, vice-president of the Canadian Trades and Labor Congress, declares the Nova Scotia compensation act, passed last month, is the best legislation of its kind in the Dominion. He says:

"The act provides for the injured workman during his disability, even if it lasts his lifetime. Under this law, litigation is pushed to one side and the question as to the right of compensation and the amount payable are determined by a board of three members. Compensation is payable in periodical sums, thus providing for continual maintenance of the injured workman or his dependents.

"The act further provides that no agreement between employer and the workman to forego the benefits of the act is valid; no part of the amount payable to the accident fund by the members is to be charged up to the workman, and no compensation can be attached, charged or assigned without the approval of the board."

All workers are included in the new law except casual workers, members of police and fire departments and those engaged in clerical and office work.

ROCKEFELLER AIDE PROTESTS.

Kansas City, Mo.—"Mr. King's charge that I distorted his testimony before the commission on industrial relations would appear to simmer down to a question whether he was boasting or confessing," said Frank Walsh, chairman of the commission, in answer to W. L. Mackenzie King's protest that the following statement made by him in Washington was given a sinister meaning:

Mr. King—"If you are speaking of the immediate force and immediate influence, I think that the conscience of young Mr. John D. Rockefeller, Jr., is more powerful on that and will effect social justice in Colorado quicker than any other single force that you would bring to bear."

The above statement has been given wide publicity, and the Rockefeller aide now realizes he lacked caution in a desire to impress upon the commission Mr. Rockefeller's power. To weaken the attack of labor papers and other publications, Mr. King now declares that wrong interpretations are placed on his statements.

LAUDS A. F. OF L. EXHIBIT.

San Francisco.—The A. F. of L. has one of the most attractive exhibits at the Panama-Pacific exposition, writes Frederick W. Ely, in the Evening Bulletin. He says:

"Taken as a whole, the exhibit is one of which the organized workers may justly feel proud. It is attracting the attention of thousands of visitors daily, many of whom are evidently seeking to know more about the principles, the aims and objects of the trade union movement. Many of these visitors are, apparently, from the leisure class. They ask all sorts of questions concerning the labor movement and frequently express sympathy and friendship for the workers and their cause. They go away armed with labor literature.

"The exhibit should, and doubtless will, arouse much interest in the doings of organized labor.

"Through its exhibit at the exposition the American Federation of Labor is doing a work that will surely be productive of results that will be helpful to the workers in their struggle for justice and liberty."

WORKERS ADVANCE STEADILY.

Racine Wis.—In a speech on "Labor Legislation," before a large crowd of unionists in this city, Congressman Cooper said:

"Sentiment in regard to the workingman has changed entirely, as is evidenced particularly by this clause in the Clayton law: 'The labor power of a human being is not a commodity or article of commerce.' This sentiment will go 'round the world, the same as Thomas Jefferson's declaration that 'all men are created equal and endowed with certain inalienable rights.' This declaration now adorns the walls of many school rooms in Europe, and has even spread to Japan."

The speaker compared present conditions with those of but a few years ago, when men were imprisoned for striking. At that time they could obtain no lien on the property they were working on, and in Massachusetts there is a case on record of a man being imprisoned for a debt of \$4, declared the Congressman.

WALKING LENGTHENS LIFE.

Washington.—The United States public health service has issued a warning that failure to walk shortens life. The medics make this plea for more pedestrians:

"The death rate after the age of 40 is increasing, in spite of more sanitary modes of living. The expectation of life after 40 is less than it was thirty years ago. This is due largely to increased prevalence of the diseases of degeneration.

"Take daily exercise. Have a hobby that gets you out of doors. Walk for the sake of walking. Join a walking club and keep your weekly score of miles. Gymnasium work is good for those who like it and can afford it, but avoid heavy athletics. You may not burn the family carriage, as Benjamin Franklin suggested, but at least, as he advised, walk, walk, walk."

UNIONS SHOULD BE CAUTIOUS.

San Francisco.—“The unions should guard against hasty and irrational moves,” warns the editor of “Organized Labor” in a first page plea to the trade union movement of this city to be cautious, in view of statements from anti-union centers that a fight will be started against San Francisco when the exposition closes.

The editor continues:

“The real danger of the union labor movement of San Francisco and California is the agent provocateur—that is, the hired detectives and sleuths which the manufacturers send into the organization for the sole purpose of promoting and starting trouble.

“There is hardly a union in California, or in any great industrial center of the country, which has not its quota of these dangerous pests, who either insanely or hypocritically mask under the cloak of unionism.

“When they get on their feet and start to ‘orate and propose,’ the union had better investigate.”

WORKERS' PENSION NEEDED.

Washington.—Pensions for government employes is a matter that must be given serious consideration by Congress, says John Skelton Williams, controller of the currency, in an interview published in a local newspaper, which also publishes letters on this subject from civil service employes. One writer says:

“The situation in the government service, from the standpoint of watchman, skilled laborer, fireman and laborer, is one grade above pauperism. These employes receive a monthly wage of \$50 and \$60. Rent takes nearly half, as it costs not less than \$20 to \$25 per month for quarters in the city. Rent in the suburbs is cheaper, but car fare makes up the difference. The cost of table maintenance for a small family in Washington cannot be less than \$1 a day. This means at least \$30, or possibly \$25. Clothing, doctor's bills, medicine, life insurance and a number of other items are to be paid out of the difference.”

PORTO RICAN PROTEST HEARD.

Washington.—President Gompers and Secretary Morrison accompanied Santiago Iglesias and P. R. Martiniz, A. F. of L. representatives at Porto Rico, to the White House last week and presented labor's protest of Porto Rican conditions to President Wilson, through Secretary Tumulty, who promised to bring the matter together with all documents to the attention of the president. The unionists declared conditions in the island are intolerable and that constitutional rights are denied workers when they attempt to better conditions. President Gompers' recent visit to Porto Rico qualified him to speak with a knowledge of affairs, which were discussed at length in the two-hour conference. Secretary Tumulty gave assurances that the protest would be given earnest attention and inquiry.

PRIVATE DETECTIVES SCORED.

Philadelphia.—In dismissing the suit of a private detective, Judge MacNelle, in municipal court, scored the practice of private detectives in seeking to prove charges of wrongdoing against innocent persons.

“This detective,” said the court, “appears to have advised this business house that he was in possession of evidence to prove an employe a thief, whereupon a contract was entered into, using the words, ‘will pay \$300 if employe is proved to be a thief.’

“It appears that, contrary to what the detective said, he did not have the evidence. He then set about to prove the man a thief. This would give rise to all sorts of dangerous consequences, not only to unfortunate employes, but to employers as well, who might easily become involved as a result of the detective's work. This is a practice that is going on entirely too much, and must be broken up.”

WANT WAGE LAW ENFORCED.

Detroit.—In the suit started by the Detroit federation of labor to compel municipal officials to obey the minimum wage law approved at the last city charter election, trade unionists are afforded an opportunity to compare the workings of wage-by-law with methods employed by their labor organizations.

By the largest majority ever given a city charter amendment the people approved a minimum wage and an eight-hour day for municipal laborers. City officials have refused to obey the mandate and the city attorney presents the strange spectacle of defending this violation in a suit started by the unionists, who have secured counsel and are now raising funds to compel the authorities to obey the law.

COMPENSATION NOT LIMITED.

Hartford, Conn.—The supreme court of this state has ruled that the jurisdiction of the Connecticut workmen's compensation act is not limited to Connecticut, even when the contract between employer and employe is entered into within the state.

The ruling was in the case of the wives of two employes of the Thames Towboat company who lost their lives when a tug foundered off the New Jersey coast. The company appealed from the compensation commission's awards, claiming that as the accident happened outside the state the compensation act has no jurisdiction. The supreme court ruled that under the conditions the law is effective.

FAVORS U. S.-OWNED RAILROADS.

New York.—Government ownership of railroads is the only solution of our industrial problems, according to Amos Pinchot, who declared against private ownership and federal regulation in a speech in this city.

The speaker said that railroad rebating “was just getting its second wind,” and that private railroading hampered industry.

ROCKEFELLER IS GENEROUS.

New York.—Colorado miners who have been victimized by company checkweighmen will be interested in the announcement that the general education board, a Rockefeller institution, has appropriated \$596,650 for educational purposes. The board states that several new lines of educational activity have been inaugurated. It has resolved to enter the field of education investigation, research and experiment, by assisting research workers connected with institutions of learning, as well as by suppling independent investigators and experiments.

AMEND COMPENSATION LAW.

Hartford, Conn.—The recent state legislature amended the workmen's compensation law by reducing the waiting period from 14 to 10 days and providing that hereafter an injured employe will receive medical attention during the entire time of his disability, instead of for 30 days, as formerly. For partial incapacity the injured employe shall receive one-half of his weekly wages, but in no case shall it be less than \$5 weekly.

PENSIONS FOR LABORERS.

Boston.—Governor Walsh has signed the bill which provides for pensions for laborers employed by Massachusetts municipalities. The act is optional with cities and towns, and applies to those workers who have reached the age of 60 years and who have been in service not less than 25 years. The act shall be voted on by the cities and towns at the next state election. Boston may retire laborers on pension who have suffered permanent injury and who have been employed not less than fifteen years.

REGULATE PRIVATE AGENCIES.

Harrisburg, Pa.—The bill to regulate employment agencies through the department of labor and industry has been signed by Governor Brumbaugh. Methods of licensing these agencies are also provided for.

TO CHECK STRIKEBREAKERS.

Boston.—The state legislature passed a law empowering the state board of conciliation and arbitration to investigate cases of alleged illegal employment by strikebreakers.

ADOPT "STATE USE" SYSTEM.

Harrisburg, Pa.—One of the reform prison measures passed by the last legislature, and just signed by the governor, introduces the so-called "state use" system in this state. This means that prisoners shall be given an opportunity to manufacture goods for use in state institutions. It is believed this will eventually result in the abolishment of convict labor in competition with free labor.

VIOLATE CONTRACT LABOR ACT.

Wilmington, Del.—Special agents of the federal department of labor have arrested four draughtsmen, following months of investigation of charges that alien workmen were employed in this city. The arrests were made under the alien contract labor law of the United States, violation of which, in event of conviction, is punishable by a fine of \$1,000 on the corporation employing such workmen and the deportation of the workers.

TO INVESTIGATE OFFICIAL.

Vancouver, British Columbia.—Agitation by trade unionists against the retention in office of Thomas Graham, inspector of mines, has been partially successful. This official is charged with concealing information from a jury that investigated the death of nineteen miners who were drowned several months ago. The government has appointed a commission to investigate the charges.

VACATION FOR "LABORERS."

Oklahoma City, Okla.—"Common laborers" employed by the city will hereafter enjoy a fifteen days' vacation with pay. This rule now applies to every department in the city. The question of cost was discussed by the commissioners, but it was finally agreed that a \$2 man is as much entitled to a vacation as anyone else. The resolution was unanimously adopted.

LABOR TEMPLE FOR DALLAS.

Dallas, Tex.—The Labor Temple association has awarded the contract for a home for Dallas unionists. The structure will be a modern three-story, fireproof building. It is hoped to dedicate the building next Labor day, when Governor Ferguson has promised to be present.

Among Our Exchanges.

SMOKER AND CONCERT.

A very successful smoker and concert took place on Monday evening, the 26th inst., in the L. O. L. Hall, under the auspices of the Boiler Makers' Union, for the benefit of a sick member.

The Citizens' Band as usual were to the fore for this good cause. Headed by their genial manager, Mr. C. E. Winters, they marched through the principal streets of

the town, finally coming to a halt at the Hall, where an exceptionally choice programme was in order. Usually at functions of this kind, special mention is made of some particular artist or artists, but on this occasion it was impossible to choose a star, every number being of a very high degree of perfection.

Great credit is due the committee, Messrs. T. Arlein, E. Taylor, E. Cook, J. Cummings,

J. Empey, F. Crowther and J. Nichol for the very able manner in which they arranged and carried out the proceedings. These gentlemen worked most diligently, and it is a pleasure to feel that their labors bore fruit. Something like \$80.00 was realized and handed over to their sick brother as a result of this affair.

The committee desires to express their united thanks to the numerous artists who took part gratuitously; also Mr. J. W. Scott of the Scott Music Store, Main West, for the free use of a splendid piano; as well as Mr. Walker, the pianist, who performed his duties in his usual efficient manner. The programme consisted of selections by the band, instrumental solos, sentimental and comic songs by some of the leading talent in town.

Light refreshments were served during the evening. About eleven o'clock the gathering dispersed, after the singing of the National Anthem. Everyone present on this occasion thoroughly enjoyed themselves, and would gladly welcome a repetition of the programme in the very near future.—The North Bay Booster.

NEW COPPER ALLOY DISCOVERED HERE LEADS TO A BIG INDUSTRY.

A new metal known as Ampco bronze, which is said to possess the strength of steel and can be die-cast in steel molds to a finished state, is being placed on the market by a concern of which Peter Weber, former city chemist, is head. The bronze stands acid tests and can be annealed or softened as other metals. It is 18 per cent lighter than brass. Those who have tested the metal predict that it will be widely used in machine construction and its manufacture may develop into an important Milwaukee industry.

The metal was invented by A. Littman, who worked in a small machine shop on Fond du Lac-av. He began experimenting in 1907. It is 80 per cent copper.—Milwaukee Journal.

WE MUST PROTECT OURSELVES.

The present war in Europe has brought to the front two sets of truly amusing people—each accusing the other of being unpatriotic—the ultra-pacifist and the ultra-militarist.

One would divest the nation of every vestige of military defense in the ridiculous fear that if maintained it would lead to the "man on horseback" and overthrow our democratic institutions; the other would burden the nation with means of warfare and fill the coffers of the armor and ammunition manufacturers with the people's hard earned money.

On the one hand we are warned, and the warning may be well worth taking, to learn a lesson from Belgium and Luxembourg and China. Belgium well armed but small comparison with Germany, defeated but not subservient, holds the respect of the world. Luxembourg, undefended, depended upon

mere treaties of peace to uphold their rights, is now overridden and is an unknown country as far as the consciences of the neutral nations are concerned. China with her 400,000,000 of uneducated and barbarous people has fallen into the hands practically of 40,000,000 Japs through being defenseless and having nothing with which to withstand an armed invasion.

Little Switzerland on the other hand, is prepared, not to invade or violate other countries, but to withstand the invasion of any other power. Switzerland, in the very midst of the war zone, is respected by all nations. Her rights are secure all because she is prepared to protect herself. She has a military system that is almost ideal. It was the Switzerland system that received the endorsement of President Wilson, who recommended to congress that a similar system be worked out in the United States. General Wood recommended the system but hesitated because of the compulsory feature. Victor Berger, in congress, recommended the system unqualifiedly and last but not least Theodore Roosevelt has sanctioned it as being adequate.

Resolutions against war undoubtedly serve their purpose but they are poor material to defend yourself with. The working class who fight the battles of the nation do not want war and no other thinking person in a community will sanction war except as a last resort. Peace has its virtues, but "peace at any price" is too costly. War brings untold profits to a certain breed of "financiers" but so does peace, both at the expense of the working class.

It is well enough to preach and clamour against hideous warfare, but to allow such preaching to blind ourselves to the facts and conditions of present day society is absolute folly.

We all hope and strive for an ideal, but when the heart is allowed to rule the head, disaster usually results. Wars under the present system of society are inevitable and while we should not resign ourselves to fate we should nevertheless be prepared to meet life as it is and not as we would like it to be.—The Labor World, Duluth, Minn.

THE VOICE THAT REACHES.

Cesar boasted a voice whose command to halt or advance was heard by 10,000 soldiers.

But the most far-reaching and commanding voice that can move mankind, is that of a character awakened and developed by a strong sense of responsibility.

A hundred years ago, Henry Clay learned to write by filling a box with sand and tracing letters with a pointed stick.

Young Daniel Webster plucked his pen out of the wing of his mother's pet goose, and made ink out of the soot scraped from the fireplace.

Fired with an overmastering sense of responsibility, these monarchs of mankind, though pinched and pressed by poverty, de-

veloped voices that have moved millions, and will continue to reach and command as long as human intelligence exists.

A Labor Union composed of members fired with such a sense of responsibility would not suffer much from suspicions or dissensions.—The Citizen.

POWER OF ORGANIZED LABOR.

Frequently wild and unreasonable individuals, both on the inside and the outside of the trade union movement, as represented by the American Federation of Labor, make the assertion that labor thus organized is impotent and the system should be changed to meet their ideas. Such opinions, of course, are not held by the intelligent and thinking portion of the American people, but as an indication of what the enemies of organized labor think of the situation with which they are confronted as a result of the manner in which labor is organized, we call attention to an address delivered by Ex-President Taft at the annual dinner of the National Association of Manufacturers in New York City last week. "I fully approve," said the former president, "of the principle of labor unions. But the power their leaders have acquired by the principle of combination in their organization has intoxicated them, and they have exercised a tyranny over society and over their own members that is certainly leading to a reaction and to a restraint of their great powers within proper and lawful limits."

We are not contending that Mr. Taft is competent to pass judgment upon organized labor. We know he is wholly unfit for such a task, because he was born with a silver spoon in his mouth and never did a day's labor in his entire career, and as a consequence knows absolutely nothing about the problems of the men and women of toil.

He is eminently qualified to express opinions concerning the other side of the question, however, and it is this fact that makes the ideas above quoted of particular value as indicating the strength and power of the American Federation of Labor and its subsidiary branches.

No one who possesses intelligence enough to analyze the achievements of the American labor movement during the past half century of its existence doubts for an instant its tremendous influence upon the social welfare of the people, but because of the fact that there are some few persons who may be deceived by the ridiculous statements made by wild-eyed rainbow chasers, it can be but healthful to occasionally see ourselves as others see us.

Mr. Taft knows, as did the manufacturers to whom he was speaking, that there is no agency in the world today so capable of curbing the greed of entrenched capital than the splendid organization of the workers built up under the banner of the American Federation of Labor. They know the labor movement not only has such power, but that it has made judicious use of it, and that because of the manner in which the

worker is wielding his newly-acquired power the door of hope is swinging open and that he will doubtless continue to drag from the hands of the oppressor a constantly-increasing portion of the good things of life, and it is this fear that spreads consternation throughout the ranks of those who have heretofore been accustomed to reap abundant harvests without the necessity of sowing or cultivating.

The labor movement, during its entire existence, has been attacked on the one side by the greedy employer and on the other by the ignorant toiler, but in spite of all opposition it has gone on from one achievement to another, daily lifting some of the burdens off the backs of the toilers and making life a little more worth while for the hewers of wood and drawers of water.

If the ignorant and whining incompetents within the ranks of the workers would put their shoulders to the wheel and become lifters rather than leaners on the overloaded backs of their fellows progress would be much more rapid and the Tafts and their kind would the sooner be compelled to dismount and carry the weight of their own existence instead of being carried through life on the backs of the toilers.

So long have these people been accustomed to the better of the bargain that they now feel that an actual injustice is being done because organized labor is taking away from them some of their highly advantageous special privileges.

Mr. Taft's complaint against the American Federation of Labor is a tribute to its effectiveness as an instrument for advancing the interests of the workers, and some of the pessimists within labor's range are advised to sit up and take notice.—The Labor Clarion, San Francisco, Cal.

INDUSTRIAL AND OTHER UNRESTS.

Frank Walsh, chairman of the federal Commission on Industrial Relations, is an investigator who uses unique, or at least unusual methods. Very likely he has made some mistakes, but he has been steadily digging for facts, and with success.

Hitherto, federal inquiries into industrial unrest have been conducted by judicially-minded people who filed noncommittal reports which were read only by the committee clerks who wrote them and the proof-readers who read proof on them, and which reposed in a quiet nook until they were hauled out and sold for waste paper.

Mr. Walsh's inquiry has been of a different character. While expert investigation, quietly carried on, was given its proper place, the chairman conducted public hearings which in one month gave the public more information as to the causes of industrial unrest than all the previous state or federal hearings put together.

Men who dominate the industrial and financial affairs of the country were put on the stand and quizzed as they had never been quizzed since the days when they were

schoolboys and robbed apple orchards. The commission's agents dug up private records and letter files and men like the Rockefellers heard the bones of their business skeletons rattle, not in the closet, but in the ears of the American people.

The result is that industrial unrest is not the only sort of unrest which we observe. The Rockefellers are noticeably restless and are showing it by protesting and forcing their henchmen to protest against the commission's work. The latest complaint is against Mr. Walsh's audacity in telling the nation how the Rockefellers managed the affairs of Colorado and how the governor of the state let them do it.

The character of the opposition which Mr. Walsh is constantly meeting is one thing in his favor. It indicates that his offense has been his success in putting facts before the people instead of into so safe and inaccessible a repository as a government report. The unrest of Big Business, due to Mr. Walsh's activities, may be very annoying to it, but the situation produces conditions and facts which are giving the people information which they want and which they ought to have.—The Milwaukee Journal.

THE CHAIRMAN OF THE INDUSTRIAL COMMISSION.

Chairman Frank P. Walsh of the United States Commission on Industrial Relations, and John D. Rockefeller, Jr., have recently indulged in a rather spicy controversy concerning Rockefeller's action, knowledge and liability in the Colorado coal miners' strike. A certain portion of the public daily press has given Mr. Rockefeller a shade in the decision. Chairman Walsh has been fearless and outspoken in his defense of labor ever since the commission was created. He is a lawyer and has no connection whatsoever with the organized labor movement. He deserves credit for the manly stand generally speaking, he has taken. The fact that Rockefeller and a hostile press have tried to discredit him should be some assistance to organized working men and women in forming conclusion as to the merits of the controversy, especially as they concern Mr. Walsh. Few men in public life, holding responsible official positions, and who are not connected with the labor movement, have been more outspoken and emphatic in the pleasant things they have said concerning labor than has Mr. Walsh.—Cigarmakers' Official Journal.

THE REAWAKENING OF PENNSYLVANIA.

Workmen's Compensation, accomplished through the seven bills put through both the House and Senate at Harrisburg and assured of signing by Gov. Brumbaugh, means more than the long withheld justice for the workers of this state.

It means the reawakening of Pennsylvania industrially.

Pennsylvania, the nation's greatest industrial state, has seen 24 of her sister states

pass such laws for the protection of workers and their families, while she did nothing.

Pennsylvania for four years has had workmen's compensation before its lawmakers, and all this time until now the great corporations, aided by their political allies, have been able through one form of a delay after another to prevent success.

The lion's share of credit for success now belongs to Gov. Brumbaugh.

People who had dealings with the state Senate at Harrisburg know what it is to get a deserving measure past that body, let alone by the 48 to 0 vote by which the governor's compensation bills were passed Wednesday in the Senate.

With the other labor measures successful in the present legislature—the most progressive legislature in years—the child labor, miners' and other bills, a record in the interest of labor has been made of which Dr. Brumbaugh, his cabinet and the two branches of the lawmaking body at the state capital may well feel proud.

At last, corporation grip on Pennsylvania appears to have been broken.

Let's give three cheers.—The Iron City Trades Journal.

JUDGE LINDSEY'S TRIUMPH.

The complete vindication of Judge Lindsey ought not to pass without record, for it is not alone a vindication of Judge Lindsey, but a victory for decency and the public rights.

Judge Lindsey's real offense has been attacking corruption. Because he spoke out those whom he reached tried again and again to defeat him at the polls, but Denver persisted in believing in him and re-electing him as judge of its juvenile court. Then to his boldness Judge Lindsey added sympathy with the striking miners. The result was a dastardly attempt to ruin his character. Persons were procured to testify to crimes unmentionable. Not content with that, his enemies attacked the character of his wife. And while the grand jury was investigating, his enemies had introduced in the legislature—and to the shame of the legislature passed—measures abolishing Judge Lindsey's court.

The answer has come in no uncertain terms. The grand jury not only completely exonerated Judge Lindsey, but added: "We are, therefore, of the opinion that the attacks made upon Judge Lindsey are unjust and unfair and deserve the severest censure and condemnation." And Governor Carlson, whose own record for independence and courage is none too clear, vetoed the measures abolishing Judge Lindsey's court, adding these words:

"Ever since the juvenile court was created, Judge Ben B. Lindsey has been the judge presiding over it. He has been elected and re-elected several times by the people of Denver. If the people of Denver want him to be the judge of the court they should

have him; if they do not want him they should elect some other person to office."

The vindication of Judge Lindsey is a vindication of Colorado, which already has too great a cloud resting on its justice to have added this other crime of "getting" a just judge.—Milwaukee Journal.

FREIGHT CAR ROAMS.

Grand Trunk freight car No. 30017 has just returned to Canada after a unique itinerary, which began at Chicago last December. From the Grand Trunk it went to the Wash; to the Chicago, Burlington & Quincy; to Wiggins Ferry; to the Mobile & Ohio; to the Atlantic Coast Line; to the Florida East Coast; a ferry to Havana, where it was photographed as a curiosity; returned to the Florida East Coast; to the Atlantic Coast Line; to the Norfolk & Western; to Wiggins Ferry; to the Terminal Railroad Association, St. Louis; to the Chicago & Eastern Illinois; to the Toledo, St. Louis & Western; to New York, Chicago, St. Louis; to Lehigh Valley; to New York, New Haven & Hartford; to Lehigh Valley, and to the Grand Trunk at Niagara Falls.—Railway Age Gazette.

CANADIAN GOVERNMENT TO OPEN ROAD.

The Canadian Government announces that in consequence of the declination of the Grand Trunk Pacific Railway to take a lease of the new government railroad, the government itself will at once proceed to put the line in operation from Moncton, N. B., to Winnipeg, Man. At the same time the government will take over and operate the Lake Superior division of the Grand Trunk Pacific, which is the branch of the National extending to Fort William. The officers of the government railway system, now operating the Intercolonial, will take charge of the operation on the new line. Between Winnipeg and Fort William, where the Grand Trunk Pacific has been running trains for some months, the employes will be taken into the government service. It appears that trains have been run by it in behalf of the contractors on about 300 miles of the line east and west of Cochrane. Cochrane is at the junction of the Temiskaming & Northern Ontario, about 500 miles north of Toronto. The government has for several months been running trains three times a week on the National between Moncton and Levis, opposite Quebec, about 466 miles.—The Railway Conductor.

NEW UNION IS FORMED—CUPID GRANTS CHARTER.

Miss Mae Ryan, daughter of Mr. and Mrs. M. Ryan, pioneers of San Jose, with large land holdings in Santa Clara County, became the bride of M. J. McGuire, labor leader, today, the wedding ceremony taking place in Mission Dolores Church, with the Rev. Father Tobin officiating.

The bride was handsomely gowned in white satin, with long tulle veil and orange blossoms. She carried a bouquet of lilies

of the valley and orchids. The bridesmaid was Estelle Bradbury. Edward A. Brown, connected with the State Housing and Immigration Commission, acted as best man. The altar was prettily decorated in cut flowers and potted ferns and palms.

Immediately after the ceremony the bridal couple left for the South, where they will spend their honeymoon. Upon their return they will reside in a charming home the groom has prepared for his bride in the Richmond district.

McGuire is one of the best known labor men in California. He has held various offices in the San Francisco Labor Council, the California State Federation of Labor, been prominent in many of the American Federation of Labor Conventions, and for some time was employed as investigator by the State Housing and Immigration Commission.—Newspaper Clipping.

DEMOCRATIZING THE NAVY.

Wholesale cribbing by the young men at Annapolis calls attention once more to the artificiality of the personal equation in the navy. By setting aside from the beginning one class of young men as seamen, and another class as officers; and by leaving the selection of the official class to individual Congressmen, who are subject to the various political influences of the district, and who, no matter what their intentions or ability, would be unable to choose from the boys of their districts one fitted for this peculiar life; and then by setting up rules of promotion that make it practically impossible for a man in the ranks to rise to distinction, we have set up all the machinery for the creation of social castes, and the deterioration of the service. The blunt old admiral who said that every man who goes to sea should come aboard through the hawsehole was right. Let every boy begin with actual service on board, where all are admitted who can qualify. Let instruction accompany practical service, with promotions for merit. Those who prove themselves most efficient can then be given special instruction at Annapolis. Such young men will get their point of view from the sea; they will be men picked by naval officers because of their fitness; and, best of all, having enlisted as common seamen, and risen by merit they will feel that the men under them are of the same order of beings; and the men will know that the officers are fellow citizens. Boys who enter Annapolis through the hawsehole of a man-o'-war will have minds less occupied by skylarking and cribbing; and they will have a better appreciation of their opportunities. The criticism of Admiral Winslow that officers in the navy are promoted because of social attainments, rather than seamanship, and the dry rot that has manifested itself in high places, are merely expressions of the class system that has sprung from the arbitrary selection of the officers. More democracy in the navy will be better for the men and better for the navy.—The Public.

News of General Interest.

EXTERIOR VIEW A. F. OF L. BOOTH, PANAMA-PACIFIC EXPOSITION, SAN FRANCISCO, CALIF.

RETAIL PRICES OF FOOD, 1907 TO DECEMBER, 1914.

Bulletin 156, just published by the United States Bureau of Labor Statistics, shows retail prices of the principal articles of food in each of 44 important industrial cities throughout the United States. This bulletin continues the Bureau's series on retail prices, the last preceding bulletin on retail prices having dealt with prices for November and December, 1913. Actual prices for 1913 and 1914 are given, and also summaries of retail prices for the period from 1907 to 1914, inclusive.

The figures show that the highest point during 1914 was reached in September, when the price of all food was 7.1 per cent higher than the average price for 1913, and the lowest point was reached in April, when the price was 3.5 per cent lower than the average price for 1913. Except for lard and such articles as are affected by seasonal changes, the highest price during the year was either in August or September. The price of all food combined was but 2 per cent higher for the year 1914 than 1913.

For the eight years, 1907 to 1914, considering all food combined, the highest price was reached in 1914, while the lowest price prevailed in 1907. This, however, is not true of each article. Flour, for instance, was 5.3 per cent higher in 1909 than in 1914. Sugar, which reached a remarkably high point, 145.3 per cent, in August, 1914, was 7.9 per cent lower for the year 1914 than for the year 1911, and was also lower for the year 1914 than for the years 1910 and 1912. All meats were higher in 1914 than in any of the 7 preceding years.

The cities for which actual prices are shown are Atlanta, Ga.; Baltimore, Md.; Birmingham, Ala.; Boston, Mass.; Buffalo, N. Y.; Charleston, S. C.; Charleston, W. Va.; Chicago, Ill.; Cincinnati, O.; Cleveland, O.; Dallas, Tex.; Denver, Colo.; Detroit, Mich.; El Paso, Tex.; Fall River, Mass.; Indianapolis, Ind.; Jacksonville, Fla.; Kansas City, Mo.; Little Rock, Ark.; Los Angeles, Calif.; Louisville, Ky.; Manchester, N. H.; Memphis, Tenn.; Milwaukee, Wis.; Minneapolis, Minn.; Newark, N. J.; New Haven, Conn.; New Orleans, La.; New York, N. Y.; Omaha,

INTERIOR OF A. F. OF L. BOOTH, PANAMA-PACIFIC EXPOSITION, SAN FRANCISCO, CALIF.

Neb.; Philadelphia, Pa.; Pittsburgh, Pa.; Portland, Ore.; Providence, R. I.; Richmond, Va.; St. Louis, Mo.; St. Paul, Minn.; Salt Lake City, Utah; San Francisco, Calif.; Schenectady, N. Y.; Scranton, Pa.; Seattle, Wash.; Springfield, Ill., and Washington, D. C.

In Appendix A is described in detail the changes in the methods of dealing with the price quotations in constructing relative prices and index numbers and the shiftings of the base period from which price changes are measured in percentages of the average price for the base period.

Formerly changes in the prices of each individual commodity and of all 15 commodities included in the retail price index were expressed in percentages of the average price for each commodity and for all commodities for the period 1890-99. These percentages or relative prices were calculated by averaging relative prices expressing the percentage change in price for individual firms and for each city in a geographical district. The defects and limitations of relative prices and index numbers constructed by thus averaging percentages of prices that

differ greatly in amount are discussed, and the new methods used in this bulletin, by which relative prices and index numbers are calculated from actual money prices, are explained. A retail price index should show percentage changes in the cost of a given list of commodities—the workman's family market basket—rather than an average of the percentage changes in price of the individual articles.

For reasons made clear in this appendix the base period is changed from 1890-99 to the last completed year.

U. S. DEPARTMENT OF LABOR.

Minimum Wage Legislation in the United States and Foreign Countries.

That minimum wage legislation has been a success wherever it has been in effect long enough to show results is one of the conclusions to be drawn from Bulletin No. 167, just issued by the United States Bureau of Labor Statistics of the Department of Labor, covering minimum wage laws in the United States and foreign countries. The movement has apparently benefited em-

ployers and employes. In New Zealand and Australia, where minimum wage laws have been in operation for more than 15 years, industries have grown steadily and minimum wage laws apparently have in no way checked their growth.

The minimum wage study of the Bureau of Labor Statistics covers minimum wage legislation in the United States, the Australian states, and New Zealand, where the idea was originally put into practice, and in Great Britain. The trade boards of Germany and the proposed legislation of France are also included. A historical survey of the movement, reports of progress, analysis of legislation, and the workings of the various laws, together with the full text of the American laws and of the most important foreign laws comprise the Bulletin.

The minimum wage movement in the United States, according to the bureau, is not a sudden development in spite of the fact that no less than nine states enacted minimum wage laws in 1912 and 1913. These laws are the outgrowth of much investigation in this country and of investigation, agitation, and experience in New Zealand, Australia and England, where for more than 20 years remedies to deal with low wage conditions have been sought. In the United States minimum wage legislation was brought about because of disclosures made by official and private investigations, showing that thousands of women wage earners were being paid wages too low to afford them a "reasonable standard of living." A case in point of the many which are cited is that of department and retail stores in New York, Chicago and Philadelphia, where the weekly earnings of 40 per cent were less than \$6, while 74 per cent earned less than \$8 a week. An additional argument advanced for the minimum wage was the fact that in practically all industries employing women, establishments paying a living wage were found to be competing successfully with other establishments paying less than a living wage.

Massachusetts, in June, 1912, passed the first minimum wage law, and Oregon, Utah, Washington, Nebraska, Minnesota, Colorado, California and Wisconsin followed in the order named.

It is noteworthy that the minimum wage laws have been made to apply to men as well as to women and children in every country except the United States, where only women and children are protected.

In Utah the rates are fixed by the statute. In all the other American states the "necessary cost of living" is made the basis for the minimum wage, and the administration of the law is in the hands of appointed commissioners, who act upon the findings and recommendations of wages boards, composed of an equal number of representatives of the employers and of the employes, together with one or more representatives of the public.

All the evidence obtainable from American states which have put in effect the

legal minimum wage goes to confirm the experience of the Australian states, where the prosperity of the working class has been raised, gross "sweating" reduced, and general business conditions have thriven. In Utah, for example, where a minimum wage law became effective early in 1913, the wages of women and girls were raised, pay rolls were not increased more than 5 per cent, wages failed to tend down to the minimum level, efficiency according to many employers increased, and the law tended to equalize the cost of production or sale among manufacturers and merchants.

None of the predictions made about the minimum wage before the passage of the law in Washington State came about to any appreciable extent, according to statements gathered from local authorities. There was no wholesale discharge of women employes, no general leveling of wages, no general replacing of women employes by cheaper help, and no tendency to make the minimum wage the maximum wage. The report quotes a letter written by a Seattle garment manufacturer, who opposed the minimum wage law from the start:

"Personally, I find that my business has been benefited, as the necessity for greater discipline and more rigid enforcement of regular hours of work has become fully apparent. We have raised our average weekly pay roll, I think I am safe in saying, at least \$1 per girl if not more. Some of our help, to be sure, have always done their best and have shown but little change, but those who were satisfied with less, the minimum wage has benefited, as they saw they must earn more or quit.

"I am writing you this personal letter about my personal experience in an individual case. It has been a benefit in this factory in raising the standard of efficiency and in forcing a closer application to duty on the part of the operator and necessarily has been a benefit to the employer. I am not in position to speak for other factories and industries, but, aside from some hardship that the law may work on the less competent, I can not see why it will not give a greater efficiency to our factory forces."

No less significant is the statement of one of the secretaries of the British Board of Trade made to a parliamentary committee, when, after stating that the ultimate effects of the act could not be judged upon the present short experience, he said that the working of the act had thus far been successful beyond what anybody imagined possible and that a large number of applications had come from employers, as well as employes, to have their trades brought under the act.

The bureau is just completing and will publish shortly a study of the effects of the Oregon minimum wage law upon the numbers of girls and adult women employed, upon the rates which they are paid, and upon the labor cost to the employer of the rates established under the minimum wage law.

CARE OF THE BABY IN SUMMER.

(Prepared for the Journal by the Children's Bureau, U. S. Department of Labor.)

A baby must be kept as cool as possible in summer, because overheating is a direct cause of summer diarrhea. Even breast-fed babies find it hard to resist the weakening effects of excessive heat. Records show that thousands of babies, most of whom are bottle-fed, die every year in July and August, because of the direct or indirect effects of the heat. Next in importance to right food in summer are measures for keeping the baby cool and comfortable; frequent baths, light clothing, and the selection of the coolest available place for him to play and sleep.

A baby should have a full tub bath every morning. If he is restless and the weather is very hot, he may have in addition one or two sponge baths a day. A cool bath at bedtime sometimes makes the baby sleep more comfortably. For a young baby the water should be tepid, that is, it should feel neither hot nor cold to the mother's elbow. For an older baby it may be slightly cooler, but should not be cold enough to chill or frighten him.

If the water is very hard a tablespoonful of borax dissolved in a little water may be added to three quarts of water to soften it. Very little soap should be used and that a very bland, simple soap, like castile. Never rub the soap directly on the baby's skin, and be sure that it is thoroughly rinsed off, as a very troublesome skin disease may result if a hard soap is used or if soap is allowed to dry on the skin.

Use a soft wash cloth made from a piece of old table linen, towel, knitted underwear, or any other very soft material, and have two pieces, one for the face and head and one for the body. The towel should be soft and clean, also. Even in summer the baby should be protected from a direct draft when being bathed lest he be too suddenly chilled.

A young baby should be carefully held while in the tub. The mother puts her left hand under the baby's left arm and supports the neck and head with her forearm. But an older baby can sit alone and in summer may be allowed to splash about in the cool water for a few minutes.

When the bath is finished the baby should be patted dry, and the mother should take care to see that the folds and creases of the skin are dry. Use a little pure talcum powder or sifted corn starch under the arms and in the groin to prevent chafing. If any redness, chafing, or eruption like prickly heat, develops on the skin, no soap at all should be used in the bath. Sometimes a starch, or bran, or soda bath will relieve such conditions.

Bran Bath.—Make a little bag of cheese-cloth and put a cupful of ordinary bran in it and sew or tie the top. Let this bag soak in the bath, squeezing it until the water is milky.

Starch Bath.—Use a cupful of ordinary cooked starch to a gallon of water. (If the

laundry starch has had anything added to it, such as salt, lard, oil, bluing, it must not be used for this purpose.)

Soda Bath.—Dissolve a tablespoonful of ordinary baking soda in a little water and add it to four quarts of water.

Clothing.—Do not be afraid to take off the baby's clothes in summer. All he needs in hot weather are the diaper and one other garment. For a young baby this may be a sleeveless band which leaves the arms and chest bare, and for an older baby, only a loose thin cotton slip or apron, or wrapper, made in one piece with short kimono sleeves. Toward nightfall when the day cools, or if the temperature drops when a storm arises, the baby should, of course, be dressed in such a way as to protect him from chill.

Cotton garments are best for the baby in summer. All-wool bands, shirts, and stockings should not be worn at any time of the year, and in hot summer weather only the thinnest, all-cotton clothing should touch the baby's skin, unless he is sick, when a very light part-wool band may be needed. In general, neither wool nor starch should be allowed in the baby's clothing in summer. Wool is too hot and irritating and starched garments scratch the baby's flesh.

The baby should be kept day and night in the coolest place that can be found. The kitchen is usually the hottest room in the house, especially if coal or wood is burned for fuel. While the mother is busy with her work the baby should be kept in another room, or better, out of doors, if he can be protected from flies and mosquitoes.

A play pen, such as is described in *Infant Care*, a booklet published by the Children's Bureau and sent free on request, makes it possible to leave the baby safely by himself on the porch or in the yard, after he is old enough to creep.

A screened porch on the shady side of the house is a boon to every mother, affording a cool, secure place for the baby to play and also to sleep. Let him have his daytime naps on the porch and sleep there at night during the heat.

Do not be afraid of fresh air for the baby. He can not have too much of it. Night air is sometimes even better than day air, because it has been cooled and cleansed of dust by the dew.

The essentials in the summer care of babies are:

1. Proper food, given only at regular intervals.
2. A clean body.
3. Fresh air, day and night.
4. Very little clothing.
5. Cool places to play and sleep in.

Do not give the baby medicine of any sort unless it is ordered by the doctor. Never give him patent remedies which are said to relieve the pain of teething, or to make him sleep, or to cure diarrhea, for such medicines are likely to do the baby much more harm than good, especially in summer when the digestion is so easily disturbed. It is so much easier to keep the baby well, than it is to cure him when he is sick, that wise

mothers try to take such care of the baby that he will not be sick.

Do not fail to give the baby a drink of cool water several times a day in hot weather. Boil the water first, then cool it, and offer it to the baby in a cup, glass, or nursing bottle. Babies and young children sometimes suffer cruelly for lack of drinking water.

Bottle-Feeding.

Nothing is so important to the health of the baby in summer as the right kind of food. When for any reason breast milk can not be had a substitute must be found.

Experience in many thousands of cases has shown that cows' milk is the only food that can take the place of mother's milk with even a fair prospect of having it agree with the baby. Neither condensed milk nor the infant foods sold in the stores are so good as clean cows' milk for the baby who can not have breast milk.

But to have clean milk it is necessary to have clean cows, clean barns, clean milkers, clean pails, and clean handling. Later articles in this series will deal more particularly with the subject of milk. The country mother is often able to see the conditions under which the milk she uses is produced. City mothers, on the other hand, have the protection that is afforded when the city inspects its own milk supply.

In some cities it is possible to buy what is known as "certified" milk. This costs a little more than ordinary milk, but its purity is guaranteed by the authorities. But when certified milk can not be had, and when it is impossible for a mother to see for herself how the milk she uses is produced, she should heat all the milk she uses for the baby, in order to kill the disease germs which it may be carrying. Among the disease germs which thrive in milk are those of tuberculosis, typhoid fever, diphtheria, scarlet fever, and diarrhea.

Germs multiply very rapidly in milk, so rapidly, in fact, that even if it is reasonable clean when drawn it may become dangerous food if left standing in a warm place for some time. These germs may be killed by heating the milk. Boiling it for half an hour is a safe method, and is sometimes advisable in very hot weather; but the method of heating the milk without boiling it called pasteurizing is usually employed. An easy method of home pasteurization is as follows:

Put a gallon of water over the fire in a clean pan or kettle. When the water is boiling hard take the kettle from the fire and allow it to stand on a table for ten minutes uncovered. Then put in the filled and corked nursing bottles and leave them for half an hour, covering the kettle meanwhile with a blanket. At the end of the half hour remove the bottles and cool them as quickly as possible to 50 degrees and put them where they will keep cold until needed.

When it is time to feed the baby take out a bottle and set it in a pail of warm water over the fire to heat. The mother may test the warmth of the milk by sprinkling a few drops on her arm. If it feels just slightly warm it will be right for the baby.

After the baby has finished, the bottle should be emptied, rinsed, and filled with cold water. At some convenient hour in the day the mother will wash all the used bottles with soap and warm water, using a bottle brush to clean the inside of them. She should then rinse them and boil them in the same pan or kettle in which they were pasteurized. This kettle and all the dishes used in preparing the baby's food should be kept for that purpose alone.

The nipples should be washed carefully. A little salt rubbed on the inside will remove the milk. They should then be rinsed and dropped into boiling water for a few moments. They will dry with their own heat when removed. They should then be put away in a dry glass jar that has also been boiled, covered and kept out of the light.

When handling the sterilized nipples take hold of them by the lower rim. Do not touch the part which is to go into the baby's mouth. Never put the nipple into the mouth to test the milk, as the baby might easily be made sick if the mother happened to have a cold or throat trouble.

It will be found convenient to have enough bottles, nipples, and clean bottle corks for the entire twenty-four hours, and it will be a great saving of time if all the feedings are made up at once. This will also insure their being of uniform quality.

A later article will give a few directions for modifying the milk for babies of different ages. Whenever possible, it is best for a mother to have the advice of a good physician in regard to feeding her baby.

Whenever possible the baby's bottles should be kept on ice. A home-made refrigerator which will keep the milk sweet for 24 hours is easily and cheaply made at home. For this purpose procure a lard or candy pail, or a galvanized bucket, or even a wooden box with a cover. In the bottom place a layer of sawdust an inch thick. Inside the box or pail place another smaller receptacle, such as a ten-quart pail (tin), with a cover, and fill all the space around it with sawdust. This inner pail holds the ice and the milk.

The ice will keep longer if it is broken up and inclosed in a small covered pail. Put the little pail in the bottom of the refrigerator and pack the bottles around it, and put the cover on. Then close the outer cover, which for additional protection may be lined with newspapers, or with a cushion stuffed with hay or straw. Where ice can not be had, the bottles may stand in a pail, under a stream of running water.

A bottle baby should be fed with the same regularity as a nursing baby. The bottles may be given at 6 and 9 a. m., at 12 noon, and at 3, 6 and 9 p. m. Up to the age of four months the baby will need one more

night feeding. After that he should sleep all night.

Beginning at the fifth month the time between feedings should be lengthened a quarter of an hour each week until the interval is four hours, when the baby is six months old. Give no other food than the bottle feedings and drinking water in the first few months of the baby's life.

The baby should nurse slowly, but ought to finish his feeding in about 20 minutes. If he is inclined to take his food too greedily, withdraw the nipple from his mouth several times during the feeding and let him rest a moment.

It is especially important in summer not to over-feed the baby. It is far better to keep him on rather a low diet than to bring on an attack of diarrhea by giving him too much food, or that which is unsuitable, or by feeding him at irregular intervals.

FIRELESS LOCOMOTIVES FOR SWITCHING SERVICE.

By Frank C. Perkins.

The accompanying illustration shows one of the three fireless locomotives in use at the N. C. R. yards for switching purposes which were built at Lima, Ohio, and are of

some of the steam is condensed so that when the engine is ready for work, the drum is about three-fourths full of water. The drum is provided with a reducing valve which reduces the pressure to 60 pounds, at which pressure the engine works until the drum pressure has fallen below this.

On account of the large diameter of the cylinder, the engine has as much power at this reduced pressure as an engine of similar size would have with a high boiler pressure. The engine will work when the pressure in the drum is as low as ten pounds.

After the tank is filled, the locomotive weighs about 75,000 pounds and will run from two to three hours on each charge, depending entirely upon the number and weight of the cars handled. There is nothing passing up the stack except the exhaust steam, which makes it safe for use around the lumber yard and buildings where inflammable material is stored. As these engines are used around the office and factory buildings the smokeless feature makes them desirable.

These locomotives are said to be very economical, as the steam is generated in

A FIRELESS LOCOMOTIVE SWITCH ENGINE.

German design. They are the only locomotives of this type in the United States except in the navy yards at Norfolk, Va., but there are a large number used in Germany.

It may be stated that these locomotives differ from the ordinary type of locomotives in being without a boiler or any means of producing fire. They consist essentially of a large tank 13 feet by 6 inches in diameter, having a capacity of 346 cubic feet, and containing no tubes; the engine cylinders are made large in order to operate on low pressure.

This type of engine operates in a very simple manner, the tank is filled about half full of water and steam at 150 pounds is injected from out boiler plant. The steam raises the pressure in the drum to 150 pounds, or boiler pressure, in from twelve to fifteen minutes. It will be seen that

the boiler plant and under the best conditions with high grade water tube boilers and stokers and when the engine is not in use, only three or four pounds pressure per hour is lost by radiation. The locomotive is used for switching purposes on more than two miles of track surrounding the factory and connecting the various buildings.

IS TUBERCULOSIS CURABLE?

Every once in a while, people will ask: "Do you really think consumption can be cured"; and then when they are told that thousands of cases all over the world bear witness to the fact of the curability of this disease, they wonder why their several friends and relatives who died with tuberculosis were not cured.

Tuberculosis is curable, but not everyone is cured, and not everyone can be cured. The chief reason why more consumptives

are not cured is because they have waited too long before they heeded the warning danger signals of the disease, or because some doctor to whom they went did not recognize this deadly plague. In its early stages, consumption can be cured, and the patient can generally resume his normal life within a period ranging from six months to two years, depending on circumstances. As high a percentage of actual recoveries from tuberculosis may be found in really early cases who follow the right course of treatment as in almost any other infectious disease.

What then, is the right course of treatment? This article cannot prescribe for individual cases, but it can and will tell what are the essentials in taking the cure for tuberculosis.

First of all there is a good doctor in whom you can rely and whose advice and inspiration is most valuable to you. He will not give you much medicine, because there isn't any drug or "cure" that he can prescribe that will do more than to relieve some immediate symptom, such as constipation, cough, headache, etc. If your doctor begins to talk of a "marvelous remedy" which will cure you, it is time you looked for another physician. That man is more than likely a quack and is simply after your money. There is no sure or quick "cure" or remedy for tuberculosis that you can buy at a drug store or that a doctor can give you.

The second essential in the cure of tuberculosis is fresh air. To the healthy person the best tonic is fresh air at work, at play, and during sleep. To the consumptive, however, air is medicine. He must take it in as large doses as he can, the more the better. It may not be easy for one who has been accustomed to indoor work to sleep and live outdoors; but since fresh air is vital, he must accustom himself to being outside all he can. At sanatoria for the treatment of tuberculosis, patients are out of doors on porches or elsewhere almost all the time. If one is at home, he can with a little ingenuity arrange devices for outdoor sleeping and sitting. The National Tuberculosis Association, 105 East 22d Street, New York, will send free of charge to anyone a booklet entitled "Directions for Living and Sleeping in the Open Air."

The next essential in the cure of tuberculosis is rest. Like fresh air, rest must be taken as a medicine by the consumptive. The reason for rest is evident, when you stop to think the way the germs of tuberculosis work. As they destroy the tissues of the lungs or other parts of the body, they make a wound or a cavity. This wound, like a cut on your finger, will not heal if it is being opened all the time. To keep the lungs as quiet as possible, rest in bed, or in a reclining chair is absolutely necessary. The dose of rest you must take will depend on your doctor's advice. He will tell you when you can get out of bed and when you can exercise and how much. But first and foremost you must learn to rest in order to give the lungs a chance to heal.

Besides a good doctor, fresh air and rest, the cure for tuberculosis requires good, wholesome food. In normal health, food of the right kind is very necessary, but in tuberculosis it is doubly important. Food is the fuel which heats the body and gives it its energy or you might almost say "steam." In tuberculosis one must pay special attention to food, because he has to provide fuel not only for the ordinary functions of the body, but he must provide an additional supply to meet the waste and damage done by the germs of the disease. This doesn't mean that you must be continually stuffing yourself, for if you do that you will upset your stomach, bowels, and liver, and you will counteract all the good the food might do. Neither does it mean that you must eat just one or two kinds of food, such as milk and eggs, which some people think are a cure for tuberculosis. They are excellent foods for people who can eat and digest them readily, and every consumptive should try to acquire an appetite for them. But meat and potatoes and bread and butter and good vegetables and almost any other nourishing, wholesome food in plenty of variety are needed also. Don't rely on tid-bits and sweets, but stoke your body furnace with food-fuel that will keep it running in the best possible order. Your doctor is the best one to advise on foods.

And, finally, a last essential in the cure of tuberculosis may be summed up in these words: "Don't worry," Keep a hopeful state of mind. If you give up and say "It's no use," you will never get well, no matter how patiently you follow the other essentials of a cure. Getting well depends for the most part on you. Backbone, hopefulness and courage will do more for you than all the doctors in the world.

Just a word as to where to take the cure. If you can go to a sanatorium, do so. There are not enough sanatoria for everyone, however. So you may have to stay at home and fight alone. Remember, tuberculosis can be cured if you take it in time and do your part.

Editor's Note.—This article has been prepared for the Boiler Makers' Journal by the National Association for the Study and Prevention of Tuberculosis. Others will follow, giving more details as to what you should know about tuberculosis.)

THE OPTIMIST.

By Walt Mason.

The optimist is one who knows that life has many kinds of woes; he doesn't say, for our relief, that there is no such thing as grief. He doesn't whoop around and swear that there is no such thing as care.

The "sunshine" fakers talk that way, and bore the world from day to day.

The optimist who says the wood knows life has much that isn't good; he doesn't fool himself with bunk, nor try to gold-plate pewter junk; he doesn't say that black is white, or see a dozen moons at night. He sees conditions as they are, yet ties his wagon to a star.

Progressiveness his watchword is; it animates his life and biz. If times are dull and business slack, he doesn't weep and wail, "Alack!" His mind is stored with useful facts which help and guide him in his acts, and so he knows just what to do, to keep his trade from falling through. A hundred useful hints he's read, and he has kept them in his head, and he can draw on that supply when business seems to wish to die. For knowledge is the stuff that wins; it beats all optimistic grins. Most any gent can smile and smile, when things jog on in splendid style; most any gent can sing and dance when he has roubles in his pants; but when all things are going wrong, the unread

copies in a file, to con them in the after-while. And there he found a thousand thoughts which surely hit a thousand spots; suggestions for that trade of his, and helps for his specific biz. And though the trade may not just hum, these things back to his memory come, and while the other chaps are sore, he's doing better than before.

A COAL STORAGE STEEL TANK.

By Frank C. Perkins.

The accompanying illustration shows a steel tank for coal storage utilized at North East, Pa. This circular steel bin is similar to a circular grain bin. The bin has a height and diameter, each about 40 feet,

A COAL STORAGE TANK.

critter cans his song, and pulls his hair and wags his ears, and says this is a vale of tears.

When things are going doubly wrong, the optimist then looms up strong—the optimist who stores his mind with all the knowledge he can find.

He read the journal of his trade, through every page he liked to wade; he kept his

and rests on a brick foundation about 6 feet high.

It may be stated that the coal is unloaded into the bin and allowed to run from hopper-bottom cars into a pit under the center of the track. There is a bucket conveyor, inclosed in a chute, as shown at the right, and propelled by an electric motor, which carries it to the top of the bin, where it

may be diverted into any one of the six compartments.

It will be seen that as delivery is to be made to a retail customer the driver backs his truck under the gate of the proper compartment. The coal runs from the bin through a chute, the bottom of which is a screen, so that it is cleaned while being loaded.

It is claimed that this method of handling coal is very economical and satisfactory as the expense for labor is small and the proprietor is independent of that uncertain class of help upon which he must depend, and orders can be gotten out very rapidly when desired.

PUNCH PRESS WHEEL GUARDS.

By Frank C. Perkins.

The accompanying illustrations, Figs. 1 and 2, show the proper guarding of punch press wheels for the safety of the operator.

A press only half guarded is a constant source of danger and the employer has made safe not only the most dangerous part of the presses, but the wheels which are covered with screen guards. These guards have easy adjustment, as it is only necessary to remove a pin, and the door swings open, allowing easy access to the belt for repairs and shifting. There is no possibility of the workman getting his hands or clothing into the moving belt or wheel.

THE WESTERN UNION TELEGRAPH CO. BREAKS ITS AGREEMENT.

St. Louis, Mo., June 5, 1915.

Dear Sir and Brother:—

During the week of March 22, 1915, the Western Union Telegraph Co. discharged 48 men in St. Louis for their affiliation with the Commercial Telegraphers' Union of America.

An agreement was entered into, through the intercession of the Commissioner of Conciliation, Mr. Wm. Blackman, of the United States Department of Labor, with the Western Union Telegraph Co., whereby all discharged men were to be reinstated without prejudice. The agreement was repudiated by the Western Union a few days later.

A strike-vote was then taken by our local and carried unanimously. Our International President, S. J. Konenkamp, deferred action at the request of Mr. Wm. B. Wilson, secretary of the U. S. Department of Labor, who again delegated Mr. Wm. Blackman to confer with the Western Union officials, in the hope of averting the strike.

A second agreement was entered into at this conference. General Superintendent T. W. Carroll, of the Western Union Telegraph Company, again assured Mr. Blackman that all former agreements would be fulfilled, and that all discharged men would be reinstated without any discrimination whatsoever.

The Western Union for the second time however, refused to reinstate any of the discharged members unless they would first sever their relations with the Union and promise never again to join a labor organization antagonistic to the company because its policy was opposed to all organized labor, as publicly stated by its own president, Mr. Newcomb Carlton, at a hearing before the Industrial Relations Commission at Chicago in April, 1915.

On May 13 the strike was called and is still in effect. We are making a special ef-

fort to acquaint all members of organized labor and every friend and sympathizer with labor's cause how they can assist us in fighting for justice against this giant octopus whose tentacles reach into every hamlet of our great country.

Baseball tickers in saloons and cafes are the property of the Western Union Telegraph Co. It furnishes the service for \$5.00 weekly.

This revenue comes almost entirely from places frequented by our brother trade unionists and workmen. The receipts of the Western Union from this source alone reaches hundreds of thousands of dollars annually and you can help to cut this down to almost zero.

Prevail upon proprietors of saloons and cafes to discontinue this service. And also ask them to discontinue the clock service of the Western Union Telegraph Company. If you will do this it will help our union's fight against the most unscrupulous employer of labor in this country. The rules of the Western Union Telegraph Company, as proven on sworn testimony before the Industrial Relations Commission, are so inhuman that operators have been denied relief from duty long enough to obey the call of nature. Can you wonder why we have to begin to fight this monster? We appeal to you to help us establish human conditions and living wages for the telegraphers.

This company has planned to substitute girl typists for experienced telegraphers at miserable pay, under worse than sweat shop conditions, by the use of automatic transmission machines. While this method is inaccurate, it has been used effectively by the company as a club over the head of experienced telegraphers to keep them from demanding a living wage and better conditions.

Please don't file this, but act at once and see that committees of your organization canvass saloons and cafes and all others using the Western Union Telegraph Co.'s clock and baseball ticker service and have such committees report to you the results of their efforts.

Yours fraternally,
EXECUTIVE COMMITTEE,
Local No. 2,

Commercial Telegraphers' Union of America.
Per Phil. Schwartz, Secretary.

A NOVEL ELECTRIC WALKING JIB CRANE.

By Frank C. Perkins.

The accompanying illustration shows a 5-ton single rail 3-motor electrically driven walking jib crane developed at Hollinwood, Manchester, England. This electric walking jib crane has an 18-foot radius of hook and it is 15 feet 8 inches from rail level to center of top guide rollers, while a test load of 6¼ tons was utilized in its trial service. The crane has three movements, i. e. hoisting, traveling and slewing, each operated by a separate motor.

It may be stated that all of the motors

are of the slow speed, inclosed, series wound, reversing type, specially constructed for crane work. Each movement is independent of every other, both as to speed and direction, and may be run at will between nearly zero and the maximum for the weight being handled, the speed and direction depending respectively on the distance and direction the controlling lever is moved from its mid-position.

It will be noted that the wheelbox is of box form, constructed of mild steel plates and angles, braced and riveted together, the edges of all plates being planed. The vertical T stiffeners are riveted to the outside webs and it is fitted with two traveling wheels 27 inches in diameter, having cast iron centers hooped with double-flanged steel tires, turned on treads, and keyed on steel axles having double bearings bushed with gun-metal. The wheels are connected by steel shaft, and driven by spur and bevel gearing.

It may be mentioned that the bearings are carried by brackets bolted to the ends of the wheelbox. The motor for longitudinal traveling motion is carried inside the wheelbox. The wheel base is 18 feet and a suitable guard is provided over the roller and gear wheel at each end of the wheelbox. The wheelbox carries a fixed turned steel center post, on which revolves the jib.

It will be seen that the vertical portion of jib is constructed of two steel channels, and the horizontal and diagonal portions are of rolled steel sections, connected by gusset plates and turned bolts. The top of jib is fitted with a steel casting carrying four cast iron guide wheels 10 inches diameter, turned on tread to suit the overhead joists, and running on steel studs having gunmetal bushes. The jib revolves on a Hoffman type ball bearing.

It will be observed that the electric motor for slewing motion is fixed on the top of the wheelbox, and the driving for this motion is by spur and bevel gearing, an adjustable safety ratchet being provided. A mechanical brake is provided for slewing motion, operated by hand lever. The motor for hoisting motion is fixed at the back of the main center post on steel brackets suitably stayed. A treble purchase spur gearing is provided, and the hoisting gear is carried on pedestals attached to upper portion of jib. The barrel is 18 inches diameter, having turned groove for wire rope.

There is a length of one inch diameter flexible plough steel wire rope provided—one end of the rope being secured to the barrel, and the other end provided with counterweight and swivel hook having ball bearing. The outer end of jib is provided with rope guide pulley 18 inches diameter, working on fixed steel shaft. A powerful automatic brake of the self-contained multiple-disc type is used to sustain the load in any position, so arranged that when the current is switched on to the motor it will put into circuit an electromagnet, having sufficient power to raise the brake lever and make it inoperative when the hoisting or

lowering commences, also during the continuation of either movement, the reverse operation being produced when the current is switched off or falls from any cause whatever. If required to lower by gravity, the

feeding is stopped and another food given in its place. It should be done gradually. At first give one bottle instead of one of the breast feedings; after a week or two add another bottle, and then continue add-

brake can be controlled by lever placed in a convenient position.

In order to prevent the possibility of the hook being overwound an arrangement is provided which automatically cuts out the current when the hook is approaching its highest position. Provision is also made to prevent overlowering. All the movements of the crane are worked by three reversing switches or controllers of the tramway type, having metallic resistances, and carried inside the wheelbox, the levers being conveniently placed to enable the attendant to control the various movements either separately or simultaneously as required.

It will be of interest to note that the various speeds of the crane, together with powers of motors are for hoisting 12 feet per minute, using a $7\frac{1}{2}$ horsepower motor, the traveling speed being 150 feet per minute with a six horsepower motor, the slewing being accomplished at a speed of 250 feet per minute, a four horsepower electric motor being utilized.

CARE OF THE BABY IN SUMMER.

(Prepared for the Journal by the Children's Bureau, U. S. Department of Labor).

Weaning and Supplementary Feeding.

Weaning is the process by which breast

ing them until bottle feedings are entirely substituted for the breast.

Never hurry the weaning. Give the baby time to get used to the new food. When it is agreeing with his digestion, there is no belching of gas or spitting up of milk, and the bowel movements are soft, yellow, and smooth. If any disturbance appears, stop the bottle until it is over, giving only the breast milk.

A baby should never be weaned in the heat of summer, if it is possible to avoid it. He is much more likely to be made sick by a strange food when the weather is hot than at other times of the year. Even if the baby has to be fed partly on the bottle the mother should nurse him often enough (three or four times a day) to keep the breast milk from drying up; for if the baby should be attacked by diarrhea, the mother's milk may be the means of saving his life.

Some mothers are able to nurse their babies a full year, but many find that their milk begins to fail by the time the baby is 6 or 8 months old, so that some additional food will be required. Practically all babies should be entirely weaned from the breast by the time they are a year

old, unless that brings the weaning in hot weather.

Babies born in the late summer or early fall should be nursed through the following summer, if the breast milk is sufficient in quantity, in order to carry them past the danger period in July and August. When breast milk lessons in quantity, it does not change in quality. By the addition of a bottle or two, therefore, the deficient quantity can be made up.

It is sometimes quite difficult to wean a baby and great patience is required on the part of the mother, but if the baby has been taught at an early age to take his drinking water from a bottle or from a cup, weaning will be easier. If the baby is nursed until he is ten months old or longer, he should be weaned directly to a cup. Earlier it will probably be easier to use a nursing bottle and nipple; but the bottle should not be used much beyond the end of the first year, save for the bed-time feeding.

Remember when feeding from a cup, that the milk must be taken very slowly, just as slowly as when feeding from a bottle. It is better to feed from a small spoon than to teach the baby to drink from a cup.

The second summer has gained the reputation of being the most critical period of a baby's life largely because mothers are apt to feed the baby many different things after he is weaned. Very much of the food that is given these older babies, is as unfit for them as artificial food is at birth.

These improper foods cause troublesome, dangerous and unnecessary illnesses which are aggravated by the heat. Careful feeding would prevent most of them.

Later articles in this series will deal with the feeding of babies from nine to twelve months, and during the second year.

When a breast-fed baby cries a good deal from hunger, and does not gain in weight, the mother is apt to feel that her milk does not agree with him, and so weans him, often because of the well-meaning advice of some neighbor. This is a mistake. The trouble is not with the quality of her milk, but with the quantity.

Instead of weaning the baby she should increase her own diet, by drinking plenty of milk, eating eggs, meat, bread and fresh vegetables, and by taking moderate exercise in the open air, regular periods of rest, and by avoiding worry and excitement. This will usually increase the milk supply sufficiently; if it does not do so, the baby must be given some additional food.

This additional food, or "supplementary" feeding, as has been said, is given when it is necessary to supplement the mother's milk with one or more bottle feedings, or for the purpose of weaning the baby. Cows' milk is the only supplementary food to use. It should be the best and cleanest milk that it is possible to get, mixed with water and sugar as described in the preceding article. A very much weaker solution than that normally required for a baby of the given age, should be tried at first, increasing the

strength slightly day by day if the baby shows no signs of indigestion, until the full strength food is reached.

To begin with give the baby one bottle feeding in place of one breast feeding. If he shows a gain in weight, this may be enough. If after a week there is no gain, two bottles may be given each day. The mother should meanwhile be doing all she can by rest and increased food to build up the breast milk, but if with all these measures the baby still fails to gain or give evidence of illness, the advice of a good doctor must be sought and followed. Do not delay in securing this advice until the baby is seriously ill.

The preceding article gave directions for the proper amount of milk mixture for babies of given ages. If the mother desires fuller information she may write to the Children's Bureau of the U. S. Department of Labor, at Washington, D. C., for a bulletin called *Infant Care*, which gives simple directions for preparing the baby's feedings and shows what amount will suit the baby of a given age. This book is sent free to everyone who asks for it. A post card request will do. The name and the address of the applicant should be written very plainly.

Weaning from the bottle should begin by the end of the first year, and after the baby is 14 months old he should have the bottle only when he goes to bed at night. Teach him to drink from a cup and eat from a spoon.

To wean a baby from the bottle, begin by giving him a little of his food from a spoon, gradually increasing the amount at each feeding until all of his food is taken in this way.

Artificial Feeding.

When a baby is deprived of his natural food, that is, his mother's milk, and must be fed from a bottle, this method is called artificial feeding. It is fraught with many dangers for the baby and much difficulty for the mother. The baby must learn to digest a food not adapted to his delicate organs, often a hard task for him to accomplish, and because of the strange food, it may take several months for him to adapt himself and begin to grow and develop as he should.

The mother or nurse has also a difficult task. To take proper care of the milk, of the utensils needed in its preparation, and the nipples and bottles, means patient, daily devotion to petty details. It means constant study to see that the milk mixture given is exactly adapted to the baby's condition, and to increase or decrease it in quantity or strength in accordance with the baby's varying needs.

The mother must be continually on guard to see that the milk is clean and fresh when it comes to her, and that it is kept clean, cold and covered while in the house, both before and after the daily feedings are made up.

All this work makes such demands on the time and strength of a busy mother that, for selfish reasons alone, she should be glad to do all in her power to nurse the baby at her own breast, even if breast feeding were not so greatly to the bay's advantage.

If, however, the baby cannot have breast milk, then the best effort possible must be put forth to adapt cow's milk to his uses.

The proper amount of milk for babies of given ages and the way to dilute and sweeten it are matters that cannot be treated completely in an article like this. Whenever possible, artificial feeding of a baby should be under the direction of a competent doctor. But if a mother cannot have such advice, she may be helped by directions given in a number of books on the subject, and in a pamphlet published by the Children's Bureau of the Department of Labor, at Washington, D. C., called *Infant Care*. This pamphlet is sent free to everyone asking for it.

Some of the general rules of artificial feeding are these:

After the first month, the average healthy baby requires $1\frac{1}{2}$ ounces of milk in 24 hours for every pound of weight, diluted with the proper amount of water for his age. Thus a 10-pound baby will probably require 15 ounces of milk, diluted and sweetened as necessary, during 24 hours.

All increases either in the strength or quantity of the food must be made very gradually.

The following directions for feeding the baby have been prepared by a committee of the American Medical Association:

Beginning on the third day, the average baby should be given 3 ounces of milk daily, diluted with 7 ounces of water. To this should be added one tablespoonful of limewater and 2 level teaspoonfuls of sugar. This should be given in seven feedings.

At 1 week the average child requires 5 ounces of milk daily, which should be diluted with 10 ounces of water. To this should be added $1\frac{1}{2}$ even tablespoonfuls of sugar and 1 ounce of limewater. This should be given in seven feedings. The milk should be increased by one-half ounce about every four days. The water should be increased by one-half ounce every eight days.

At 3 months the average child requires 16 ounces of milk daily, which should be diluted with 16 ounces of water. To this should be added 3 tablespoonfuls of sugar and 2 ounces of limewater. This should be given in six feedings. The milk should be increased by one-half ounce every six days. The water should be reduced by one-half ounce about every two weeks.

At 6 months the average child requires 24 ounces of milk daily, which should be diluted with 12 ounces of water. To this should be added 2 ounces of limewater and 3 even tablespoonfuls of sugar. This should be given in five feedings. The amount of milk should be increased by one-half ounce

every week. The milk should be increased only if the child is hungry and digesting his food well. It should not be increased unless he is hungry, nor if he is suffering from indigestion even though he seems hungry.

At 9 months the average child requires 30 ounces of milk daily, which should be diluted with 10 ounces of water. To this should be added two even tablespoonfuls of sugar and 2 ounces of limewater. This should be given in five feedings. The sugar added may be milk sugar or if this can not be obtained cane (granulated) sugar or maltose (malt sugar). At first plain water should be used to dilute the milk.

At 3 months, sometimes earlier, a weak barley water may be used in the place of plain water; it is made of one-half level tablespoonful of barley flour to 16 ounces of water and cooked for 20 minutes.

At 6 months the barley flour may be increased to $1\frac{1}{2}$ even tablespoonfuls cooked in the 12 ounces of water.

At 9 months the barley flour may be increased to 3 level tablespoonfuls cooked in the 8 ounces of water.

Bottle-fed babies are very apt to suffer from overfeeding. They may be overfed because they are fed too much at one time, or because they are fed too often, or because the food is too rich for their digestion. They may also be upset because they are fed at irregular intervals.

A baby is easily taught regular habits and no good habit is of more importance to his healthy development than that of having his food at absolutely regular intervals. He should be given his bottle once in every three hours by the clock, until he is about six months old, and then once in four hours unless the doctor orders that he be fed otherwise.

The hot weather of July and August is the time when the greatest care must be exercised in artificial feeding. The baby has less appetite, and is not as well able to digest his food during the excessive heat. On this account he should have less food than usual and it is often wise to weaken the feeding slightly by pouring out one quarter of the milk and adding the same amount of boiled water to each bottle. If the baby shows any signs of indigestion the time between feeding should be lengthened to 4 hours.

The baby will not gain in weight at such a time, as much as when the weather is cool, but it is far better to feed him less than to induce an attack of diarrhea by giving him more food than he can digest.

Especially during the hot weather, the baby should have plenty of drinking water which has been boiled and cooled. Never give him ice water.

"There's only one time in her life when a woman isn't afraid of a telegram."

"When is that?"

"On her wedding day."

BY UNITED NEWS WRITERS.

New York.—A plan whereby the so-called "business administration" of the city of New York is apparently endeavoring to evade the law which provides that the prevailing rate of wages in an industry must be paid to employes of the municipality, was brought to light by delegates at a meeting of the Central Federated Union, the central labor body of the city.

Delegates pointed out that the administration refuses to pay the prevailing rate to its regularly engaged employes, placing them upon an "annual employes'" list. The

prevailing rate is only paid to those who are engaged in day work.

By forming councils of its "annual employes," sending delegates to a central council which confers with department heads, the Mitchel regime, which is based upon "economy," is endeavoring to eliminate the influence of the unions which have jurisdiction over the city employes.

Delegates pointed out several anti-labor moves made by the Mitchel administration, particularly the discharge of 600 employes of the dock department during the extreme crisis of unemployment in the city last winter.

Smiles.

Cy Warman, author of the song "Sweet Marie," who died a few months ago in Chicago, was a high official of the Grand Trunk Railroad; but he was always modest about his post.

Once he stopped overnight at a little hotel in Northern Michigan, conducted by a man who had previously run a shooting-gallery and later a night-lunch car in New York. The host related his own life story at length. Then he became interested in the biography of the visitor.

"What do you do up in Montreal, Mr. Warman?"

"I work for the Grand Trunk," said Warman.

"What kind of a job have you got—do you sell tickets or handle baggage?"

"Oh, I've got a better job than either of those," said Cy. "You know the man who taps the wheels with a hammer to see that everything is all right? . . . Well, I help him listen."—Everybody's.

SUPPLY CUT OFF.

Weary Walker: "No, mum, I ain't dirty from choice. I'm bound by honor. Yer see I once wrote a testimonial for a soap-maker and promised to use no other."

Madam: "Well, why don't you use that?"

Weary Walker: "Because, mum, the firm failed about five years ago.—Boston Transcript.

He: "I wonder what the name of that picture is? The youth and the maiden are in a tender attitude."

She: "Oh, don't you see? He has just asked her to marry him. How sweet! What does the artist call the picture?"

He (looking about): "Oh, I see. It's written on the card at the bottom, 'sold.'"
—Ex.

HIS MAIN NEED.

Mabel: "How are you getting on at college, Percy?"

Percy: "Oh, all right. I'm trying awfully hard to get ahead, you know."

Mabel: "Well, heaven knows, you need one!"—Judge.

HONORS EVEN.

"Dear May," wrote the young man, "pardon me, but I'm getting so forgetful. I proposed to you last night, but really forget whether you said yes or no."

"Dear Will," she replied by note, "so glad to hear from you. I know I said 'no' to someone last night, but I had forgotten just who it was."

SHE JOINED IN, TOO.

"But why did you leave your last place?" the lady asked the would-be cook.

"To tell the truth, mum, I just couldn't stand the way the master an' the missus used to quarrel, mum."

"Dear me! Do you mean to say that they actually used to quarrel?"

"Yis, mum, all the time. When it wasn't me an' him, it was me an' her."

Hobo: "Yes'm, I wunst had a good job managin' a hand laundry, but it failed on me."

Lady: "Poor man. How did it happen to fail?"

Hobo: "She left me and went home to her folks."

THE COSTLY CAR.

Redd: "Is that your own car?"

Greene: "Oh, yes."

Redd: "I understand it will take no one's dust."

Greene: "Well, it's taken a whole lot of mine."—Yonkers Statesman.

SOME SATISFACTION.

She: "No, Mr. Simpson, I'm sorry; but I wouldn't marry the best man living."

He: "No. Well, at any rate, you will have the satisfaction of knowing that he offered himself."—Boston Transcript.

"I heard you had an execution in your house the other day."

"In a way."

"What do you mean by that?"

"I was hanging some pictures and my wife was killing time."

DIPLOMACY.

A well-known English politician was much annoyed by reporters. One day he was enjoying a chat at a London hotel when a strange young man came up who seemed to have something of importance to communicate, and led him across the room. Arrived in a corner, the stranger whispered, "I am on the staff of an evening paper, and I should like you to tell me what you think of the government's foreign policy."

Mr. Dash looked a little puzzled; then he said, "Follow me." Leading the way, he walked through the reading-room, down some steps into the drawing-room, through a long passage into the dining-room, and drawing his visitor into the corner behind the hatrack, he whispered, "I really don't know anything about it."—*Weekly Telegraph.*

SPOKE TOO SOON.

A party of young women visited an observatory to have a peek through the monster telescope at the new comet. The astronomer conducted them to the instrument, and they looked through in turns.

"Oh, isn't it charming, heavenly, enchanting, wonderful!" etc., ad libitum.

After a while the sly astronomer observed:

"Now, ladies, I shall remove the cover and place the instrument in position, if you will allow me."—*Ex.*

RIGHT BACK AT HIM.

"Look at me!" exclaimed the leading lawyer, warmly. "I never took a drop of medicine in my life, and I'm as strong as any two of your patients put together."

"Well, that's nothing," retorted the physician. "I never went to law in my life, and I'm as rich as any two dozen of your clients put together."—*Tit-Bits.*

END MAN JOCOSITY.

"Sambo, if an aviator, born in Greece and having a German father and a Welsh mother, were to fall out of his machine at a height of 1,000 feet, what nationality would he be when he landed?"

"Ah doan know, Mr. Interlocutor."

"He'd come down a Rushin', Sambo."—*Philadelphia Ledger.*

HIS THREE REASONS.

"Why don't you get married?"

"Well, you see, I am very particular. My wife must be rich, handsome and stupid."

"Why all that?"

"Very simple. She must be rich and handsome, otherwise I would not have her; and she must be stupid, otherwise she would not have me."—*Fliegende Blatter.*

"Because," said the youth, "wars make history, an' I jest hate history."—*Ladies' Home Journal.*

A CHANGE COMING.

In correcting the exercises of her class a teacher recently observed a new name inscribed on one of the papers—Will Evans. She looked round the class, but could see no new boy. Not a little puzzled, she requested Will Evans to stand.

Up jumped Will Jones, and the teacher got more puzzled still.

"Your name's Jones," she said, "not Evans!"

Will looked not a little abashed, and shifted uneasily from one foot to the other.

"Please, ma'am," he said, "it's owing to family trouble. I didn't do it, please, ma'am."

"But," she said, sternly, "I repeat, your name is Jones."

"Please, ma'am," said the boy, "it's changed now. Ma's married the lodger!"—*Red Hen.*

NOW HE IS NEUTRAL.

"Come here, Jim," said Brown. "We want you to settle an argument. What do you think of that submarine business?"

"Nothin' doin', Jake," responded Brown. "It was only yesterday that I went over all that with Bob Green."

"You did, did you?" interestedly returned the other. "What did you arrive at?"

"Well," answered Brown a little sadly, "Bob arrived at the hospital and I arrived at the police station."—*Philadelphia Telegraph.*

A SAFE POSITION.

The Italians bound for Tripoli were boarding a transport.

The colonel was at his post watching the men. As one of them stepped on the gangway his mother clutched him and pulled him to her bosom.

With intense emotion she cried and crooned over him, and then she saw the colonel.

"My boy," she exclaimed, "stick close to the colonel, and you'll never get hurt!"—*Tit-Bits.*

A NEW TROUBLE ON A ROUGH ROAD.

A traveler in the dining car of a Georgia railroad had ordered fried eggs for breakfast. "Can't give you fried eggs, boss," the negro waiter informed him, "lessen you wait till we stop."

"Why, how is that?"

"Well, de cook, he says de road's so rough dat every time he tries to fry aigs dey scrambles."—*Housekeeper.*

A LITTLE GIRL'S IMPORTANCE.

Grandma (impatiently): "Dorothy, I do wish you would keep quiet for a little while!"

Dorothy: "I'll try, grandma; but please don't scold me. Just remember that if it wasn't for me, you wouldn't be a grandma at all."—*Chicago Record-Herald.*

A DOMESTIC WARNING.

Mrs. Gordon was spending some time at Palm Beach, and during her stay she wrote her husband, saying:

"Dear Will: I inclose the hotel bill."

Will wrote back:

"Dear Edith: I inclose check, but please don't buy any more hotels at this price. They are robbing you."

"Nigger," warned one, "dout mess wid me, 'cause when you do you sure is flirtin' wid de hearsee."

"Don't pesticate wid me, nigger," replied the other, shaking his fist; "don't fo'ce me t' press dis upon you', 'cause if I does I'll hit you' so ha'd I'll separate yo' ideas from yo' habits; I'll jes' knock you f'um amazin' grace t' a floatin' opportunity."

"If yo' mess wid me, nigger," continued the other, "I'll jes' make one pass an' dere'll be a man pattin' yo' in de face wid a spade tomorrow mornin'."—Ex.

A "cub" reporter on a New York newspaper was sent to Paterson to write the story of the murder of a rich manufacturer by thieves. He spread himself on the details and naively concluded his account with this sentence:

"Fortunately for the deceased, he had deposited all of his money in the bank the day before, so he lost practically nothing but his life."—Harper's.

CREDIT WHERE DUE.

"My wife made me a success," remarked the man.

"I am glad to hear you say that," declared his pastor.

"Yes, she has always wanted so many things that I've had to hustle."

Prof.: "Pst! Are you looking for German spies?"

"Mais oui?" said the policeman, taking from under his cape his notebook and pencil.

"Then go to the Hotel de Blanc and arrest the proprietor. He's put up at least two concrete beds there. I know, because my wife and I slept in 'em last night."—Washington Star.

A MARVEL OF TRAINING.

Rose had called on her afternoon out to see her friend, Arabella. Arabella's mistress had just purchased a parrot, and Rose was much interested in the bird.

"Birds is shore sensible," she observed.

"You kin learn them anything. I uster work for a lady that had a bird in a clock, an' when it was time to tell de time ob day it uster come out an say 'cuckoo' jest as many times as de time was."

"Go along. Yo' doan' say so," said Arabella, incredulously.

"Shore thing," replied Rose, "and de mos' wonderful part was dat it was only a wooden bird, too."—Harper's.

NOT FOR TEN TIMES AS MUCH.

Marks: "So you saw the woman who dropped the purse, but lost her in the crowd. Did you advertise for her?"

Parks: "Yes; I put this in: 'If the very homely woman of 40; wearing a dress of last year's style and a most unbecoming hat, who lost her purse containing \$3.50 or Boylston Street, Saturday, will apply to —, her property will be returned.' I've had no answer, though."

Marks: "Good Lord! Do you think a woman would own up to that description for \$3.50?"—Boston Evening Transcript.

THANKING THE JUDGE.

An old woman was profuse in her gratitude to a magistrate who had dismissed a charge brought against her.

"I though you wouldn't be 'ard on me, your worship," she remarked as she left the dock. "I know how often a kind 'art beats be'ind a ugly face."—Tit-Bits.

A correspondent sends us this story, evidently from an ironical Swiss paper. A few soldiers belonging to part of a Swiss regiment in garrison at Basel went to a cafe for refreshments. One of them sat down at a table. Later a civilian, a German, joined him and the two began to talk war politics. "Would you shoot on the Germans if they invaded Switzerland?" asked the German.

"Oh, no, never!" exclaimed the soldier.

"Waiter, a pint of beer and a beefsteak with potatoes for this brave man," ordered the civilian.

"And your pals sitting at the next table—would they also not shoot the Germans if they tried to invade this country?"

"Oh, no, never!" retorted the Swiss.

"Waiter, a glass of beer for each of the soldiers at the next table!" ordered the civilian.

And addressing again the soldier, he asked: "Is this generally the view held in the Swiss army in regard to a possible German invasion? Are all the Swiss soldiers so Germanophil?"

"I don't know," replied the soldier.

"But why would you not shoot the Germans?"

"Because we belong to the band."—Manchester Guardian.

HE KNEW.

The "Swanky" One: "I'm smoking a terrible lot of cigars lately."

The Other (with conviction): "You're right, if that's one of them."—Tit-Bits.

IT MUST FOLLOW.

Committee Chairman: "How does the organization of which you are a director make all its money?"

Millionaire Witness: "I have no exact knowledge of the details, but it is an altogether different process from the one they use at the mint."—Baltimore American.

Poetical Selections.

ASHAMED OF YOUR MOTHER!

Ashamed of your mother! whose tresses of silver
Have changed in the years from the wave-lets of gold;
Ashamed of her garments, her poor hands have toiled for,
Ashamed just because they are faded and old.
Ashamed of her tear-drops, her patience, and sorrow,
When you in your anger have been so unkind;
But go where you will, there will not be another—
So soon to forgive as your mother, you'll find.

Ashamed of her form, and the deep sunken furrows,
So long interwoven upon her pale brow;
You loved her back in the days of your youthtime,
Why, then, are you slack in your love for her now?
She sat by your cradle, and soothed you to slumber,
She crooned the sweet songs as she stroked your fair head.
And then in your childhood, she guarded your footsteps—
And covered you up in your wee trundle bed.

O! the pathway of mother is not strewn with roses,
Her heart has been punctured by many a thorn;
Go tell her your faults, and add to her comfort,
She has toiled without rest since the day you were born.
Ashamed of your mother! whose heart is now yearning,
For one fond embrace for the love that she gave;
Her days may be few, and the time is now fleeting,
Love cannot avail when she sleeps in the grave.
—Frederick A. Davies, Cleveland, O.

MEMORIES OF "THE OLD VIRGINIA REEL."

By Adelbert Clark.

In this old Colonial mansion,
Where the ancient ivies climb,
With their slender branches clutching
At the throat of Father Time,
Here tonight the years turn backward,
'Till my youthful days I feel,
And I seem to hear the music
Of "The Old Virginia Reel."

It was here I first met Martha
In her gown of snow-white silk,
With rich amber jewels shining
On her neck and arms of milk.
And 'twas in this quaint, old parlor,
That I found her true as steel,
When we gaily danced together
In "The Old Virginia Reel."

Life was then a dream of Eden,
So we laughed the hours away,
While the stars above grew dimmer,
With the dawning of the day.
How we laughed and sang and chattered,
As she tapped the scarlet heel,
To the merry, merry music
Of "The Old Virginia Reel."
But those youthful days have vanished,
And sweet Martha, she is dead,
And above her breast the roses
Drop their petals white and red.
Was it just the ivy tapping
'Gainst the wall that made me feel
That my soul was all enraptured
With "The Old Virginia Reel"?

No, for when the silv'ry moonbeams
Spread their veil upon the floor,
I can see the beaux and sweethearts
Just as in the years before.
I can hear the jolly fiddler,
And the organ's joyful peal,
And the dancers' changing movements
In "The Old Virginia Reel."

THE VOICELESS.

We count the broken lyres that rest
Where the sweet wailing singers slumber,
But o'er their sister's breast
The wild-flowers who will stoop to number?
A few can touch the magic string,
And noisy fame is proud to win them:—
Alas for those that never sing,
But die with all their music in them.

Nay, grieve not alone for the dead alone
Whose song has told their hearts' sad story,—
Weep for the voiceless who have known
The cross without the crown of glory!
Not where Leucadian breezes sweep
O'er Sappho's memory-haunted billow,
But where the glistening night-dews weep
One nameless sorrows' churchyard pillow.

O hearts that break and give no sign
Save whitening lip and fading tresses,
Till Death pours out his longed-for wine
Slow-dropped from Misery's crushing presses—
If singing breath or echoing chord
To every hidden pang were given,
What endless melodies were poured,
As sad as earth, as sweet as heaven!
—Oliver Wendell Holmes.

THE VOICE OF THE PEOPLE.

(By James G. Clarke, in the American Federationist for May.)

Swing inward, O gates of the future,
Swing outward, ye doors of the past,
For the soul of the people is moving
And rising from slumber at last;
The black forms of night are retreating,
The white peaks have signaled the day,
And freedom her long roll is beating,
And calling her sons to the fray.

And woe to the rule that has plundered
And trod down the wounded and slain,
While the wars of the old time have
thundered,

And men poured their life-tide in vain.
The day of its triumph is ending,
The evening draws near with its doom,
And the star of its strength is descending
To sleep in dishonor and gloom.

Though the tall trees are crowned on the
highlands

With the first gold of rainbow and sun,
While far in the distance below them
The rivers in dark shadows run,
They must fall, and the workmen shall burn
them

Where the lands and the low waters meet,
And the steeds of the new time shall spurn
them

With the soles of their swift-flying feet.

Swing inward, O gates of the future,
Swing outward, ye doors of the past;
A giant is waking from slumber
And rending his fetters at last.
From the dust where his proud tyrants
bound him,

Unhonored and scorned and betrayed,
He shall rise with the sunset around him
And rule in the realm he has made.

WHAT I LIVE FOR.

I live for those who love me,
Whose hearts are kind and true,
For the heaven that smiles above me,
And awaits my spirit, too;
For all human ties that bind me,
For the task by God assigned me,
For the bright hopes left behind me,
And the good that I can do.

I live to learn their story,
Who suffered for my sake,
To emulate their glory,
And follow in their wake;
Bards, patriots, martyrs, sages,
The noble of all ages,
Whose deeds crown history's pages,
And time's great volume make.

I live to hold communion
With all that is divine,
To feel there is a union
'Twixt nature's heart and mine;
To profit by affliction,
Reap truths from fields of fiction,
Grow wiser from conviction,
And fulfill each grand design.

I live to hail that season
By gifted minds foretold.
When men shall live by reason,
And not alone by gold;
When man to man united,
And every wrong thing righted,
The whole world shall be lighted
As Eden was of old.

I live for those who love me,
For those who know me true.
For the heaven that smiles above me,
And awaits my spirit, too;
For the cause that lacks assistance,
For the wrong that needs resistance,
For the future in the distance,
And the good that I can do.

—G. Linnaeus Banks.

In Memoriam

MEMBERS.

William Messersmith, Reg. No. 8638, age 39 years, 2 months, 5 days, of lodge No. 161, Boone, Iowa, born McComb, Ill., March 21, 1876; died May 26, 1915, from nervous breakdown. Married; leaves two daughters of tender age. Length of membership, three years in Local No. 161.

Charles Galvan, Reg. No. 99205, age 52, of Lodge No. 37, New Orleans, La., was born in New Orleans, 1862; died of complicated disease. Married, leaving two children. Member since October, 1914.

RELATIVES OF MEMBERS.

Catharine Norton, age 45, wife of Brother Dan Norton of Lodge No. 227, was born in

Chicago, Ill., October 13, 1870; died May 13, 1915, of pneumonia.

Charles Ottman, age 65, was father of Brother Joseph Ottman of Lodge No. 37, was born in Holland, August 17, 1850; died April 9, 1915, of heart trouble.

James McGowan, age 21 years, was son of Brother A. McGowan of Lodge No. 37; was born in New Orleans, La., 1893; died March 28, 1915, from blood poison.

Jack McGrevy, age 41, brother of Brother William McGrevy of Lodge No. 587, was born in Mason City, Ill.; died May 27, 1915, from tuberculosis.

Lodge Notices

D. J. Fitzgibbons et al.—Lodge No. 99.
Any secretary taking up the card of D. J. Fitzgibbons, Reg. No. 67599, or F. G. Hayes, Reg. No. 21882, will please correspond with the secretary of Lodge No. 99, Newark, Ohio, as these brothers borrowed money from this local which they forgot to return.
CECIL C. ROBERTS,
Secretary Lodge No. 99.

William Varney—Lodge No. 80.
Any secretary taking up the card of Brother William Varney, Reg. No. 57786, will please hold same and correspond with Local No. 80, Anaconda, Mont.
JAMES W. HOGAN,
Corresponding Secretary Lodge No. 80.

Robert Canton—Lodge No. 384.
Anyone knowing the whereabouts of Robert Canton, boiler maker's helper, will please notify the secretary of Lodge No. 384, as this brother left this lodge without paying his bills that the lodge went good for.
H. W. JOHNSON,
Secretary Lodge No. 384.

W. C. Shrout—Lodge No. 82.
Any secretary taking up the card of Brother W. C. Shrout, Reg. No. 52553, will please hold same and correspond with the secretary of Lodge No. 82, Osawatimie, Kas., as this brother left this lodge owing a \$9 board bill to Mrs. G. H. Troxell.
A. G. EVERETT,
Secretary Lodge No. 82.

Shrout—Lodge No. 521.
Any secretary taking up the card of Brother W. C. Shrout, Reg. No. 52553, will please hold same and correspond with secretary of Lodge No. 521, as this brother misrepresented facts to secure transportation from Van Buren, Ark., to Coffeyville, Kas., amounting to \$4.95, and Local No. 521 had to pay same.
OTTY PYLES,
Corresponding Secretary Lodge No. 521.

Douglas et al.—Lodge No. 587.
Lodge No. 587 has suspended M. E. Douglas, Reg. No. 100307, for non-payment of dues. We have also bills aggregating to \$80 against this brother. P. A. Kerr, Reg. No. 91305, also suspended for non-payment of dues and assessments. All locals look out for them.
T. C. MADDY,
Secretary and Treasurer Lodge No. 587.

Shrout—Lodge No. 32.
Any secretary taking up the card of Brother W. C. Shrout, Reg. No. 52553, or the brother himself should he see this, please write to secretary of Local No. 32, Kansas City, Mo.
WALTER E. DWYER,
Secretary Lodge No. 32.

Lost Due Book—Lercher.

Brother Frank Lercher, Reg. No. 98830, has been granted a withdrawal card from Lodge 568, dated March 27, 1914. Said withdrawal card, with his due book, has been lost. Anyone finding this due book and card will kindly forward to this office.
F. P. REINEMEYER,
International Secretary-Treasurer.

Milarn—Lodge No. 447.

Will Brother J. R. Milarn, Reg. No. 63402, please correspond with the secretary of Lodge No. 447, or anyone knowing his whereabouts please notify No. 447?
CHAS. J. YOUNGER,
Secretary Lodge No. 447.

Duson—Tornice.

Anyone knowing the whereabouts of Frank Duson, boiler maker, will please notify Theo. Tornice, Soldiers' Home, Danville, Ill., or William J. Irwin, Corresponding Secretary Lodge No. 22.

LIST OF MEMBERS PREVIOUSLY ADVERTISED

Stewart et al.—Lodge No. 66.

Any secretary taking up the card of Edgar Stewart, Reg. No. 21232, or Noble C. Townsen, Reg. No. 62088, will please correspond with the secretary of No. 66, Little Rock, Ark., as these brothers misrepresented facts and secured transportation out of Little Rock and Lodge No. 56 had to pay for same.
E. WORTHSMITH,

Corresponding Secretary Lodge No. 66.
March Journal.

E. L. Chafin—Lodge No. 587.

We have suspended Brother E. L. Chafin for not paying dues or honest debts. I, myself, loaned this brother some money to bury his little child, and he will not pay it back. He also owes several bills that he won't pay.
C. C. MADDY,

Corresponding Secretary Lodge No. 587.
April Journal.

W. M. Horstmeyer—Lodge No. 381.

Any secretary taking up the card of Brother W. M. Horstmeyer, Reg. No. 9735, please hold same and correspond with Joe Wilson, secretary Lodge No. 381, Amarillo, Tex., as this brother borrowed some money from this lodge which he has forgotten to return.
JOE WILSON,

April Journal. Lodge No. 381.

Thompson—Lodge No. 587.

F. W. Thompson, Reg. No. 20987, has been suspended by this local for non-payment of dues; he also owes about \$40 here.

T. C. MADDY,
June Journal. Secretary Lodge No. 587.

Cooper et al.—Lodge No. 491.

The following names are brothers who left Lodge No. 491 with bills unpaid: C. E. Cooper, boiler maker; bill to F. C. Krull

& Co., for clothing, \$12.35. A. J. Conelly, bill to F. C. Krull & Co., for clothing, \$3.95. John Peters, Reg. No. 80223, to F. C. Krull & Co., for clothing, \$5.50. Joseph Regan, Reg. No. 95180, F. C. Krull & Co., for clothing, \$2.40, and board and room to Sutton Sisters, \$8.83; total, \$11.23. J. M. Morgan, Reg. No. 91068, borrowed money from Local No. 491, \$2.50. Helpers: W. J. Mills, Reg. No. 98504, withdrawal card out of Local No. 145, owes F. C. Krull & Co. for clothing, \$6.40. C. A. Riley, debtor to F. C. Krull & Co., for clothing, \$4.25.

J. J. CARROLL,
Secretary No. 491.
June Journal.

C. S. Burk—Lodge No. 82.

Any secretary taking up card of Brother C. S. Burk, Reg. No. 102470, will please hold same and correspond with secretary of Lodge No. 82, as this brother misrepresented facts to secure transportation to Kansas City, amounting to \$1.25, and we had to pay this bill out of the treasury of the local.

A. G. EVERETT,
Secretary Lodge No. 82.

June Journal.

Trials and Fines

Notice of Correction and Apology of Richard Leahy, Secretary of Local No. 592.

Through an error, Brother W. L. Amrhein, Reg. No. 98515, was published as a scab. This is not true and was caused by me in misinterpreting a name of a member who is scabbing, and I am asking those brothers who read his name in the June Journal to please tell those whom you told he was a scab that he is and has been true and will continue so. I realize that I have wronged this brother grievously, and although he has already accepted my apology and holds no enmity, it will require a great deal of explaining to right this mistake of mine; so you members of Baton Rouge, Port Arthur, Beaumont and Fort Worth who have read or heard that this brother went wrong will know that it is the fault of the secretary of Local No. 592, and I sincerely hope that there is no repetition of such a grievous blunder.

Very regretfully yours,

RICHARD LEAHY,
Corresponding Secretary Lodge No. 592.

E. A. Grimes—Lodge No. 495.

This is to certify that E. A. Grimes, Reg. No. 96087, has been tried by Lodge No. 495 and found guilty by Lodge No. 495, Hattiesburg, Miss., of obtaining membership in this Brotherhood through fraud, and card is revoked.

C. E. DICEY,
President.

A. H. WADDELL,
Corresponding Secretary Lodge No. 495.

Mitchel et al.—Lodge No. 37.

This is to certify that the following members were tried by Lodge No. 37 and found

guilty of scabbing as riveters at Avondale, La., May 12, 1915, and were fined \$150 by Lodge No. 37, New Orleans, La.:

John Mitchel, Reg. No. 96819; Ike Bejerskey, Reg. No. 102006; J. J. Maise, Reg. No. 100198.

WILLIAM J. SMITH,
President.

LEWIS J. COSTELLA,
Corresponding Secretary Lodge No. 37.

This is to certify that Gus Wink, age 34, Lodge No. 39, Reg. No. 26962, has been tried by Lodge No. 39 and found guilty of violating the laws of the Brotherhood by working on unfair work at Gary, Ind., for John Mohr & Sons as boiler maker, and is subject to a fine of \$100 and 99 years' suspension, and is not entitled to recognition in any way from the officers or members of this Brotherhood until such judgments are satisfied.

FRANK BECTON, President.
JOHN COGHLAN.

Belinski et al.—Lodge No. 592.

This is to certify that the following members of Lodge No. 592 were tried by that lodge for violating the laws of the Brotherhood by working on unfair work as boiler makers and helpers in the oil fields of Oklahoma, June 15, 1915, and were each fined one thousand dollars and suspended for fifty years:

Frank S. Belinski, Reg. No. 88571; John D. Brothers, Reg. No. 100682; F. E. Buckley, Reg. No. 102977; C. A. Campbell, Reg. No. 96652; H. Cling, Reg. No. 90571; James Clemmons, Reg. No. 89861; J. M. Dunn, Reg. No. 100317; Leonard East, Reg. No. 64522; Ernest Edwards, Reg. No. 99880; J. Guy Fain, Reg. No. 97030; O. S. Fain, Reg. No. 100339; R. T. Garner, Reg. No. 100324; S. L. Griffin, Reg. No. 100332; William Grubbs, Reg. No. 90808; Cole B. Horner, Reg. No. 100312; Thomas F. Horner, Reg. No. 101349; William J. Hill, Reg. No. 101722; B. F. Holt (Wild Bill), Reg. No. 101228; E. O. Hamilton, Reg. No. 70250 (C. C. from No. 592 in pocket); Ed James, Reg. No. 100687; Harry Kirheart, Reg. No. 101921; Harry Kane, Reg. No. 58103 (White Kane of Chicago); Frank Killian, Reg. No. 100835; John Lyons, Reg. No. 96110; Frank McMullen, Reg. No. 78596; Mack McGee, Reg. No. 99098; W. T. Rogers, Reg. No. 65765; Robert L. Rutherford, Reg. No. 88912; Cleve Rutherford, Reg. No. 65135; Ben Turley, Reg. No. 87705; Sherman Turley, Reg. No. 97032; Ralph Cook, Reg. No. 101672; Jim Harmon, Reg. No. 100164; Joe Stout, Reg. No. 101720; Mack Miller, Reg. No. 89154 (two men of this name); T. W. McNames, Reg. No. 95967; Willard Ellis, Reg. No. 96258.

This is an additional list of members of Local No. 592 who are scabbing on unfair jobs in this vicinity and hope you will have them published in the next issue of the Journal.

ED. L. CLAY,
President.

RICHARD LEAHY,
Corresponding Secretary Lodge No. 592.

By Insisting Upon Purchasing Union Stamp Shoes

You help better shoemaking conditions.
 You get better shoes for the money.
 You help your own labor position.
 You abolish child labor.

Do not be misled by retailers who say: "This shoe does not bear the union stamp, but is made under union conditions." This is false—no shoe is union made unless it bears the union stamp.

No. 8.

LAWSON'S TRIAL—THE INFAMY OF IT.

Some time last year Mr. L. M. Bowers of the board of directors of the Colorado Fuel and Iron Company wrote to John D. Rockefeller Jr.:

"You will be interested to know that we have been able to secure the co-operation of all the bankers of the city, who have had three or four interviews with our little cowboy governor, agreeing to back the state and lend it all the funds necessary to maintain the militia and afford ample protection so that our miners could return to work or give protection to men who are anxious to come up here from Texas, New Mexico and Kansas, together with some states further east. Besides the bankers, the Chamber of Commerce, the Real Estate Exchange, together with a great many of the best business men, have been urging the governor to take steps to drive these vicious agitators out of the state. Another mighty power has been rounded up in behalf of the operators by the gathering together of fourteen of the editors of the most important newspapers in Denver, Pueblo, Trinidad, Walsenburg, Colorado Springs and other of the larger places in the state."

Is it not an indisputable inference from this hilarious statement to the dominating power in Colorado industries that these interests were lined up for a definite purpose? The nature of the purpose became evident in the pressure brought to bear upon the miners, forcing them to return to work for the need of bread without having secured recognition for their rights as free workers.

The purpose became more evident later. The state legislators—among those whom Mr. Bowers had "lined up"—passed a law providing for a special judicial district. Mr. Granby Hillier, who had been attorney for the Colorado Fuel and Iron Company and allied coal companies concerned in the strike, was made judge of the new district. He was to preside at the trials of strikers.

Before this tribunal of justice was brought John R. Lawson, executive board member of the United Mine Workers of America,

charged with the crime of being a leader of the miners who had struck for their rights as free workers and as citizens under the laws of the state of Colorado. Plainly it was not John R. Lawson who was on trial, but organized labor.

Let us see the further actions of some of those whom Mr. Bowers had "lined up" for the Rockefeller interests against the men who dared aid their fellow workers to obtain some consideration for their rights and interests. For instance, in Colorado, Attorney General Fred Farrar boasts that in the case of John R. Lawson he has secured the first conviction of a strike leader on the charge of being directly responsible for the death of a man who had been killed in a strike riot.

Jesse G. Northcutt, the prosecuting attorney, had formerly been attorney for the Colorado Fuel and Iron Company.

The jury, made up of men brought in from the highways and byways, was chosen by open venire instead of drawing names from the jury box. Among those jurors was W. W. Wilson, traveling salesman for the National Biscuit Company. According to general information, Mr. Wilson has exclusive right to sales in the Colorado Fuel and Iron Company district.

The bailiffs in charge of the jury were mine guards.

One of the witnesses against John R. Lawson was Lieutenant K. E. Linderfeldt. Linderfeldt! The man who killed Louis Tikas, who was tried before a military court for the death of the Greek, found guilty of unsoldierly conduct and reprimanded. John R. Lawson was tried before this specially prepared tribunal, found guilty, not of murder or violence, but because he belonged to a labor organization, the members of which were on strike and who defended themselves, their wives and children against wholesale slaughter. He was sentenced to imprisonment for life.

Does not this trial, or rather this persecution, of John R. Lawson verify the statement of Mr. Bowers that steps had been taken "to drive these vicious agitators out of the state?" What more effective method could

have been chosen than to put the leader in prison, aye in prison for life?

Is it not evident that this is part of a deliberately planned and executed scheme to get rid of labor agitators whose agitation would inevitably result in greater freedom and justice to the miners?

The organized labor movement of America will not submit to this manifest injustice and travesty of the rights of free men. And the workers must bear in mind that they will never have the rights of free men nor the opportunities of liberty until they assert their rights and make their demands effective.

Their hope for the future lies in economic organization. When that is attained, opportunity for exercise of rights and necessary activities for self-betterment is made possible.

Even the Rockefeller millions cannot block the irresistible power of free workers who know their rights and have an organization to enforce them.

Organize, miners of Colorado, and you can make effective protest against great injustice done to John R. Lawson. You can rescue this faithful leader from a living death. The labor movement of America is with you, to support your demands by co-operation and affirmation. Liberty-loving men the country over will unite to right this great wrong. Meet, protest and demand that there shall not be one law for Lawson and another for Rockefeller and other Rockefellers even of another name.

Organize for freedom and justice!

SYCOPHANCY AND CALLOUSNESS.

"The most powerful single force to effect social justice in Colorado is the conscience of young Mr. Rockefeller." Thus spake SIR Mackenzie King. And those listening to the words of the smug, self-confident Canadian baronet fairly gasped at the keen shock—an agent of the Rockefeller interests had declared all had surmised. But this self-acclaimed labor expert remained unperturbed.

For days Chairman Walsh of the Commission on Industrial Relations had been probing for the conscience of young Mr. Rockefeller—had been seeking to cut through technicalities, mechanical routine and the impersonal conduct of corporation business, in an effort to touch and establish the personal relations that entail personal responsibility. But young Mr. Rockefeller was evasive, noncommittal, cryptic; he was punctiliously precise as to immaterial details; in phraseology he was as fastidious as a hair-splitting scholastic; he cheerfully endorsed principles but either denied their application or refused to commit himself. Except when compelled by the chairman of the commission, his replies were perfectly true, perfectly general, perfectly meaningless—a finished product of Wall Street diplomacy.

And yet it was in the solution of a great human problem that young Mr. Rockefeller

was asked to co-operate. Though the problem affects the lives and welfare of millions, yet Mr. Rockefeller assumed the attitude of tolerant condescensions which apparently concealed indignation that his motives and his acts should be questioned or that he should be asked to explain. These replies were those of a skillful lawyer careful to evade self-incrimination.

He seems to believe in the impersonal nature of all business relations—capital, wealth, machinery—human beings were only "business agencies" necessary for securing results. The power, the effectiveness, the technical side of business were what interested him. The throbbing hearts of the people, the effect for weal or woe upon countless human lives, were considerations wholly without the impersonal business structure the Rockefeller millions had created. But it is the raw human life material involved that gave Mr. Rockefeller his tremendous power—power that he seeks to disclaim.

He professes that his employes and agents are free to follow their own best judgment—and yet so great is his power that his expressed wish or suggestion becomes a command. As he proved by his testimony, he rarely directed the policy to be adopted or gave a specific order to an agent, but he also proved that he has "suggestions" conveyed by other agents, thus maintaining the impersonal fiction. A suggestion from an industrial imperator is of the same force as a suggestion from a political imperator.

Mr. Rockefeller shrinks from crude human suffering and raw hurts. He testified that he read only the headlines concerning the strike breakers' attack upon unarmed strikers at Roosevelt, New Jersey; that he had not read reports of military hearings in Colorado or of the Zancanelli and Lawson trials. He refused to look at the postcard picture of a little boy killed in the Colorado strike.

Though he shrinks from personal relationships, he cannot escape responsibility for the wrongs, the wounds, the death his system inflicts upon wage earners. Though he close his eyes to the physical, the mental image must haunt him.

Is it ethically right for a man to regard only the large general relations of business and ignore those things that constitute personal relations? Ought great power to be exercised by an individual who lacks the bigness of heart and imagination to see every act illumined with meaning in terms of human life and the tremendous possibilities in even the most humble persons?

Mr. Rockefeller has now within his hands an opportunity as tremendous as was ever offered to any other person, but he will not have that opportunity indefinitely. If he will lay aside other matters of less importance than life and human justice and go to Colorado and make a whole-souled, personal investigation for the purpose of establishing justice and humanity in his re-

lations with employes in the Colorado coal mines and then use for humanity all of the skill and efficiency and power that has formerly been at the service of profits, he will have realized his full opportunity. He has committed a great wrong—his atonement must be equally great.

The well-known agents of his interests are seeking the lives and the liberty of men because they are prominent in labor unions. How can Mr. Rockefeller and his associates in the management of the mines hope justly to escape indictments?

The opportunity is now Mr. Rockefeller's, but it may pass him unheeded, and then? Well, the workers will organize though the machinations of the Rockefeller system oppose and will wrest from the powers that be the right to organize, to establish a better standard of work, of life, of justice, and of humanity.—Federationist.

LABOR'S AMENDMENTS PRESENTED TO THE NEW YORK CONSTITUTIONAL CONVENTION.

A meeting of the executive council of the New York State Federation of Labor was held in Albany, May 24-26, 1915, for the purpose of formulating amendments providing for the protection and the promotion of the interests of the wage earners in the new state constitution. The importance of this work can be appreciated when it is recalled that the group of labor men who formulated these amendments represented directly over 700,000 members of organized labor, and indirectly their families, those dependent upon them and the unorganized wage earners.

Because of their sense of grave responsibility, the executive council had the assistance of many representatives of local unions within the state, representatives of twenty-five international unions, among whom was the president of the American Federation of Labor.

Mindful of the nature of constitutional amendments and yet aware of the importance of safeguarding the fundamental rights of the wage earners, the committee prepared the following amendments. These were presented and argued by Samuel Gompers to the Constitutional Convention Industrial Relations Committee to be considered by that committee and reported upon to the Constitutional Convention.

These amendments are of more than ordinary importance because they conserve that which is of greatest importance to the state—its citizens. The welfare of millions of human beings will be protected and furthered by the incorporation of labor's amendments in the constitution of the state of New York; opportunity for human freedom, industrial and political, will follow their ratification, and human rights will be ac-

corded recognition due their importance. The amendments which constitute labor's bills of rights follow:

1. Resolved, That the constitution contain a provision as follows: "That the labor of a human being is not a commodity or article of commerce, and the Legislature shall not enact a law and the courts shall not construe a law contrary to this declaration."
2. Resolved, That any act which any person may legally and lawfully do shall be held to be legal and lawful when done by two or more in concert.
3. Proposing an amendment to Article 1 (Section 19 and new section), providing that nothing contained in the constitution shall be construed to limit the power of the Legislature to enact laws for the protection of the lives, health, safety, comfort or general welfare of employes.
4. For power to enable the state to insure workers against accidents, sickness, invalidity, old age and unemployment.
5. To provide a state fund, to insure employers against a risk of workmen's compensation, to the exclusion of every other form of compensation insurance.
6. That there shall be a Department of Labor, a Compensation Commission (function separated) provided for in the constitution.
7. Empowering the state and its several political divisions to undertake such public works and engage in such industries as they deem necessary to the public welfare for the purpose of relieving distress from unemployment or other extraordinary emergencies.
8. Abolish the power of the courts to nullify laws regularly passed by the Legislature or the voters of the state by means of referendum on the ground of alleged unconstitutionality.
9. Insure the right to trial by jury in all criminal or quasi-criminal prosecutions where the offense charged is punishable by imprisonment, including all cases of contempt of court.
10. To provide that the writ of habeas corpus shall never be suspended, and that military tribunals shall not exercise civil or criminal jurisdiction over citizens while the regularly constituted state courts are open to administer justice.
11. For the extension of popular rule and control of officials by the initiative, referendum and recall.
12. Favor election of all judges. Election to take place at time no other officer is elected. Ballots to contain no party emblem. Candidates to be grouped under title of office.
13. Resolved, That this special convention of the New York State Federation of Labor declares itself in the interest of the masses

of the citizenship of the state of New York against the abandonment of the annual sessions of the New York State Legislature.

14. Resolved, That the terms of the elective officers of the state of New York shall not be extended.

15. That the terms of the state senators shall be for a period of one year.

16. Resolved, That the delegates to constitutional conventions be elected at a time when no other state officials are to be chosen, and that no party emblems be used at such elections.

17. Resolved, With a view of having the members of the Legislature in a more independent position financially, this conference recommended to the constitutional convention the wisdom of raising the salaries of the members of the Legislature to an adequate amount.

18. To amend procedure necessary to pass a bill (now found in Section 15, Article 3) so as to take from the governor the nullifying of that section by the use of emergency messages.

19. Against the state constabulary and the employment of private armed forces in labor disputes. That the governor of the state be the commander-in-chief of the army and naval forces thereof, and that as such commander he alone be empowered to call out any portion or the whole of said forces or either of them in time of need.

20. Resolved, That this conference of the executive council and representatives of labor of the state of New York go on record in favor of the constitutional amendment as adopted by the Legislature, to be voted upon at the coming election for woman suffrage, and that all are urgently requested to support the ratification thereof.

21. Resolved, That inasmuch as the so-called "short ballot" is a proposition to vest greater powers in the hands of the chief executive of the nation, states and municipalities, it is in violation of the fundamental principles of justice, democracy and freedom. The proposition should therefore not be indorsed but condemned and opposed, and it is hereby condemned.

22. Free speech and free press.

Every person may freely speak, write or publish his sentiments on all subjects, being responsible for the abuse of that right, and no law shall be passed by the Legislature to restrain or abridge the liberty of speech or of the press. Nor shall any officer or court of the state, or officer or court of any political division of the state abridge enjoin or restrain the liberty of speech or of the press. The question as to whether the rights of freedom of speech or of the press have been abused shall be determined by a jury. In all criminal prosecution for libel, no person shall be found guilty and be punished where the matter alleged to be libelous be true unless the alleged matter was

written and published with criminal motives and for wrongful ends.

23. Eight Hours.

In all cases of employment by and on behalf of the state, or any political division thereof, or in any contract for labor or for supplies, by or on behalf of the state, or any political division thereof not more than eight hours in any twenty-four consecutive hours shall constitute a day's work.

24. Capital Punishment.

Capital punishment, that is death penalty for crime, is hereby prohibited.

—American Federationist.

TYPHOID FEVER IN CHICAGO.

An analysis of the typhoid fever situation in Chicago for the first four months of 1915 shows that there were 271 cases during that period. Investigation revealed the source of the disease in 79 cases, or 29 per cent, which was as follows: Imported, 28, or 10.33 per cent; infected by carrier, 5, or 1.85 per cent; contact from typhoid cases, 16, or 5.9 per cent; contracted from unpasteurized milk (one dealer), 30, or 11.07 per cent. The death rate per 10,000 of population during these months was 0.1430. The analysis further shows that the disease prevailed more largely in certain districts getting their water supply from lake stations the water from which shows either constantly or periodically considerable colon contamination. The report of the department laboratory containing the result of four years' examinations of the city water, also referred to in the bulletin from the department, from which the above facts are taken, shows that the water from certain of the lake stations, notably the Lake View Station and the Two-Mile Crib, are contaminated usually above the average of the city supply, although there has been a general improvement at all of the stations. Chemical treatment of the water has been begun at some stations. Sewage from north shore towns seems to be the source of contamination of the water of the north shore, as revealed by a survey made by the department in connection with the North Shore Sanitary Association.—The Journal of the American Medical Association.

FIRST TIME IN HISTORY OF NATION FOR LABOR TO BE SO RECOGNIZED.

There will shortly come from the mints of the United States Government a special gold dollar bearing the image of the face of a laborer, commemorative of the Panama-Pacific Exposition. Twenty-five thousand of the coins will be issued. They will commemorate labor's share in the building of the nation and will be a recognition of the workmen who constructed the Panama Canal. The emblem of labor will be on the obverse side and on the reverse side a representation of two dolphins, typifying the oceans. It is the first time in the history of the nation that labor has been thus recognized.—The Square Deal.

THE BOILER MAKERS' JOURNAL

Official Organ of the International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America.

A Monthly Publication Issued the First of Each Month from Room 8, Law Building, Kansas City, Kansas.

JAMES B. CASEY, Editor and Manager.

Subscription Price.....\$1.00 Per Year in Advance

ADVERTISEMENTS.

Advertising Rates Will be Furnished Upon Application to the Editor-Manager. No Reading Space Will be Sold for Advertising Purposes Under Any Circumstances.

All New Members Must Have Their Name and Address Sent in Through the Secretary of Their Lodge. After That They May Have Changes Made in Their Address by Filling Out Blank Form in Back of Book and Forwarding to the Editor.

All Copy Must be Received by the Editor by the 15th of the Month to Insure Publication in the Following Issue.

All Contributions and Correspondence Relating to the Journal Should be Addressed to J. B. Casey, Editor, Room 8, Law Building, Kansas City, Kansas.

Entered at Postoffice, Kansas City, Kansas, as Second Class Mail Matter.

IDAHO SETS A SPLENDID EXAMPLE.

The State of Idaho has solved the problem of unemployment, and blazed the way for the other states to follow.

The recent session of the Legislature of that State passed an "emergency employment law," which requires that the County Commissioners shall furnish employment to all bona fide citizens who appear and make oath that they cannot obtain employment and that they do not own more than one thousand dollars' worth of property and that they will perform such work as may be assigned them.

This emergency work is limited to sixty days a year to any one person.

With such a law in force in all of our states, there would be a guarantee to every one who was willing to earn his bread by the sweat of his brow, that he would be given the opportunity to provide for his needs and still retain his self respect.

Such a law would have been a boon to hundreds of thousands during the past year, during which time so many sought in vain, far and wide, for work, and many were no doubt brought to the verge of starvation. With such a system in vogue, the panhandler and the moocher would have to disappear, as there would be no excuse for their existence. All who wanted work could get it and those who want to live without work should be given little consideration. Organized, professional charity, too, would cease to be a reality, with all of its defects and deficiencies.

The world is slowly but surely making for better conditions for the masses, as witnessed by the extension of our compensation laws, which are lifting the burden of industrial accidents from their shoulders and putting it on society in general; the extension of female minimum wage laws, which, while possibly not proving so efficient as they might, still have a sentiment behind them that promises better conditions for the female workers of the future, as does also the widows' pension law.

The old age pension plan is gaining in public favor and the time will soon come when it will be made a reality in all of our states. Altogether we can look forward with hope and confidence toward the future for better

conditions. Idaho has just taken a big step forward in the right direction and set a splendid example for the older states to follow.

THE IMPORTANCE OF KEEPING YOUR ADDRESS CORRECT.

As we have already received a large number of requests for back numbers of the Journal, and especially June issue, and as we cannot furnish back numbers, we desire to again try to impress upon all of our members the importance of promptly giving to the secretary of their lodge any change they may make in their address. It is much more important to notify their secretary than the Editor, for the secretaries are supposed to prepare a new list of names and addresses every quarter and unless your address is known to him, your name is liable to be left off or a wrong address given. Often after receiving complete lists from some of our lodges and our mailing list corrected according to this list, we receive a number of journals sent back by the post office officials and postage collected, because we were previously notified that journals were not being delivered to party named with this address, and we find we had a couple of months previously taken these names off the list.

While it is the duty of the secretaries to send in these lists to us, it is the duty of the members to keep him supplied with their correct address and any change they make should be promptly reported, and the best means of doing so is to secure a post card or write a letter to him and give your correct address and request him to notify this office. He may receive a number at the same time and can send all at once, and he will be sure to have your correct address for use in sending complete lists. If you wait for meeting nights you may not be able to attend meeting or forget to give same to the secretary, so it is much better to write. But no matter the way you go about it, don't let it slip your mind for five or six months and want to claim back numbers of journals, when they have been going to your old address all along, and being thrown in the post office waste basket. Act promptly.

STRIKES DECLARED OFF.

Following the action of the Executive Board of the Railway Department in declaring off the strikes on the Harriman Lines, Illinois Central and Pere Marquette railways, effective June 28th, our Executive Council called for another vote of the men involved, with a recommendation that they take a like action. The result of the vote was about four to one to call off the strike, and in accordance with the same, strikes, in so far as they affect our members, were declared at an end on and after Monday, July 5th, 1915.

Thus ended these strikes, which have been on so long and involved all of the shop trades on these roads. These strikes were inaugurated under adverse conditions—dull times, little money in the treasury to sustain the men, etc. However, they were bravely and heroically waged by the men, notwithstanding these handicaps, and many sacrifices were made by them. These efforts were worthy of a better result, and it is hard for many of those who made the heroic efforts and sacrifices to reconcile themselves to the

situation. However, under the circumstances there is nothing to do but to wipe the slate clean and commence over again. We are informed that some of the officials of some of these roads have expressed themselves as desiring to have their old men back, and we hope that as far as possible all the men will be returned to their former positions, and that both sides will forget their difference of the past and turn their faces resolutely to the future. Both sides have learned valuable lessons from these strikes, that, if heeded, will serve a good purpose in the future. The roads have found that the shop mechanics are a big factor in conducting a railroad and that it is almost impossible to secure a full corps of competent men to fill these places when they go on strike, and that it is a very expensive experiment to undertake to do so. The men have found that they have not only got to have a complete organization and a full treasury, but that industrial conditions have got to be favorable in order to win a strike; and furthermore, a strike at best is a two-edged sword that cuts as deep, if not deeper, into the slender means of the men on strike as it does into the dividends of the company. Therefore, we should exhaust every possible means to settle our troubles before engaging in a strike. Furthermore, we should weigh the possibilities of success from every standpoint, and if we find conditions against us, it would be better to work under protest until a more favorable time, than to immediately engage in a disastrous strike.

We believe the officials of the roads have found that the points of difference between themselves and the men were not such bugaboos as they thought; the main point of difference was, we believe, the recognition of the System Federation. Since these strikes have been on all of the roads in the Southeastern States have not only recognized the System Federations, but a federation of federations and all questions of difference between them have been amicably adjusted; with the light of this experience before them we believe the officials of the roads in question would act differently. If by our conduct we can convince the employers that we only ask even handed justice and they will convince us that it is not necessary to engage in strikes in order to secure this, a long advance towards solving the problems of the future will have been made.

Word was received at headquarters on the Fourth of July that Lodge 592, of Tulsa, Okla., had at its meeting the night before declared off the strikes in the oil fields of that state. A large number of men were involved and it seems that depressed industrial conditions had its effect in this strike also, notwithstanding the fact that our organization paid strike benefits to all members as long as they were entitled to them, the strike was not a success.

The difficulties surrounding this strike was worse and harder to reconcile because the contractors, backed by the Erectors' Association, declared for an open shop and terminated all agreements, and as long as they maintain this unjust attitude we cannot reconcile any differences.

However, as times get better and the demand for men increases, they will have to descend from their high position and the men will be in a position to retaliate with interest.

One of the greatest factors in helping to defeat the men sprung from a practice that was indulged in extensively in that field. It was the working of hundreds and hundreds of permit men. Most of these men were farm hands that were permitted to go to work and be broken in driving rivets by the experienced men, when no card men were available. As a kind of a recompense the lodge collected 10 per cent of their wages each week (which was the same as that paid by the experienced men). These men were not organized and did not understand the principles of organized labor, and were therefore ever ready to follow the bidding of the bosses. They got as much under open shop as union conditions, and had no concern for the organization, hardly realizing that it was due to its efforts that they were being paid high wages. These men being broken in were invaluable to the contractors when the contest came. Our members in the future should remember when they break in farm hands to do their work, they are cutting their own throats. With these strikes declared off, we have only a few small affairs left; therefore, it seems to be a good time for us to resolve to devote all our time and efforts for the next couple of years towards organizing and the building up of a strong treasury so that if afterwards we should have to engage in contest, we will have the means of sustaining our members, and the men in our organization where we can control them.

WAS THE McNAMARA GRAND JURY A HAND PICKED ONE?

Evidence has come to light recently which tends very strongly to show that the grand jury which indicted the McNamara brothers, and others in the dynamiting cases in 1910, received the indorsement of the official representative of the Merchants and Manufacturers' Association before they were definitely selected and summoned to act.

It would seem that District Attorney Earl Rodgers submitted a list of the names drawn before they were made public to F. J. Zehandelaar, secretary of the Merchants and Manufacturers' Association of Los Angeles, and the latter answered by letter, which has recently come to light, in which he O. K.'d many of them, as being personal friends, strongly with us, on our side, strongly anti-labor, etc. This letter was produced in court and used as one of the reasons why the indictment against Schmidt and Coplan should be quashed and so far we have seen no denial of its authenticity. It was further charged that District Attorney Rodgers himself was in the employ of the Merchants and Manufacturers' Association, as its attorney, until he was selected as district attorney.

If these charges are authentic, then there was no wonder that indictments were promptly returned. This corruption of the courts of justice should be strongly repudiated and condemned by all who love liberty and even handed justice.

There have been enough victims offered up to satisfy the avaricious and vindictive appetite of this vicious association, and Schmidt and Coplan should be given their liberty.

This farce of selecting a jury and rigging out a court was gone one

better in the Lawson trial in Colorado, where a venal legislature selected the attorney for the mine operators as presiding judge, and most of the jury seemingly were selected because of their supposedly being under the influence of the mine owners. One juror, with some conscience left, held out for acquittal and was finally induced to change his vote by one of the court attaches telling him his wife was dangerously sick, and his only promise of release, so that he might go to her side, was to change to a verdict of guilty. The story of her sickness was false and made to induce him to change his vote.

These detestible pollution of the springs of justice will soon destroy our rights and liberties if allowed to continue. The corruption of our jury system is worse in its effects upon our free institutions than the crime for which the McNamaras were sentenced.

BURLESON AGAIN RECOMMENDS GOVERNMENT OWNERSHIP OF WIRES.

According to a recent Washington dispatch in the daily papers Postmaster General Burleson will again recommend that the government acquire and operate all utilities for the transmission of intelligence and that these be incorporated with the Postoffice Department and be made a part thereof. Mr. Burleson appointed a commission of postoffice officials to investigate this subject and they strongly recommended government ownership, and as a result of this report he recommended in his annual report last year that this course be followed.

The experiences of the European War has greatly emphasized the importance of this matter and we cannot ignore or put off action much longer. In fact, we should have done this many years ago and not allow these companies to build up enormous monopolies at the expense of the people. Ours is the only great nation of the world that permits such slipshod, inefficient methods to exist. All other nations own their telephone and telegraph lines. Furthermore, we have found, since the European War began, that it was necessary, in order to preserve our neutrality, to take over the wireless stations, and the Navy Department is operating these through an agency. Private ownership of wires, in case of war with a foreign nation, would be absolutely dangerous, and these wires would, soon after hostilities commenced, have to be taken over, and we should not wait for a calamity of this kind to overtake us before acting, but we ought to follow promptly Postmaster General Burleson's advice and make this change now.

Such a change would mean a saving to the public of millions upon millions each year, besides a more efficient service both in telephone and telegraph. Furthermore, large amounts could be saved in the present cost of operating these lines by combining them with the postoffice, which could be applied in paying better wages to operators and the other employes.

However, we should not purchase these lines at anything like their capitalization or bonded indebtedness, but at their real value. That is what it would cost to reproduce them. Otherwise we would be saddling upon

posterity an enormous indebtedness that represents no value. Corporation capitalization and bonded indebtedness of the past and present is a stench in the nostrils of honest business.

AMERICAN EXPORTS REACH A HUGE TOTAL.

According to a recent report made by the Department of Commerce our imports for the past eleven months amounted to \$1,516,474,600, and our exports for the same time was \$2,499,592,079, thus leaving a trade balance in favor of the United States of about \$1,000,000,000. In other words, we sold to other nations one thousand million dollars worth more than we bought from them. This is by far the greatest trade balance in the history of American commerce.

Some of the larger items of export responsible for this increase are: Breadstuffs, \$400,000,000; sale of animals (horses, mules, etc.), \$60,000,000; automobiles, \$25,000,000, and increased sale of meats and dairy food products, \$45,000,000. While no statistics in reference to iron and steel products are available these will represent a large proportion of the balance of this amount. With this golden stream of wealth flowing into the lap of American commerce, dull times should pass and the wheels of commerce begin to hum again.

Many of the railroads are still holding back, working short hours with reduced forces, thus putting off making extensive and badly needed repairs. They have had to readjust their finances, large sums borrowed from Europe have fallen due in the past year and much of these obligations have been paid from the earnings; however, the worst of this situation has passed and from now on the roads should be in a position to do more repairs than they have done during the past year.

With the nations at war spending fabulous sums each day and constantly increasing these amounts they bid fair to be bankrupt at the end of hostilities.

The center of the money market of the world has already shifted from London, Paris and Berlin to New York and Washington and for a long time to come the business world will depend upon this country to finance its enterprises.

From all indications this country will enjoy an unprecedented period of prosperity, and at an early date, and an early termination of the European War would hasten it on.

A FEDERAL DISTRICT COURT WHITEWASHES THE STEEL TRUST.

Some time ago the Federal Department of Justice instituted a suit in the district court at Trenton, N. J., to dissolve the United States Steel Company (steel trust), and a vast amount of evidence pro and con was submitted, and the suit was waged under the provisions of the new anti-trust act. The court recently "handed down" a decision in favor of the steel corporation, and had the attorneys for the corporation written this decision

they could not have made it any stronger in favor of the trust than it was. The decision is a distinct disappointment to all those who firmly believe this corporation is an unlawful and vicious corporation in restraint of trade, and should be dissolved in the interests of and for the welfare of the people.

It is capitalized at \$1,402,846,000, and of this enormous amount it is said that \$600,000,000 is nothing but water, and much of the balance is badly diluted with the same kind of a liquid.

Officers of this corporation are responsible for the Gary dinners, where they would sit and eat with the few independent iron manufacturers and set the prices upon all iron and steel products. These dinners have been abandoned since the government has been prying into the affairs of this trust, but no doubt they have found some other means of arranging the price setting as before.

It seems to us this judge had to go a long ways to secure excuses to justify his action in rendering this decision, one of which was to the effect that "There is no evidence to show that a return to the old trade war system of ruinous competition would benefit the public interests." This argument is far-fetched and has nothing to do with the terms or provisions of the anti-trust laws, the intent of which seemingly was overlooked or ignored by this judge.

It is not in the province of a judge to pass upon the merits of different policies of government, but to render a decision in accordance with the terms of the law which is invoked to decide the case before the court.

This decision should be appealed and a fair decision of the matter be secured from the supreme court if necessary. Many other suits of a like nature are pending, all of which will be no doubt abandoned unless a reversal of the decision is secured.

What we need is a constitutional amendment providing for the election of federal judges. If we can secure the enactment of such a measure we will soon do away with such rank decisions. They will be more responsive to public sentiments.

AMERICAN SHIP YARDS TO HUM.

From all accounts American ship yards have before them a long period of activity in ship building. It is estimated that they now have on hand orders amounting to more than one hundred millions of dollars. This amount will likely increase rather than decrease for some time to come. In the past our foreign commerce has been carried in ships flying flags of other nations. Most of these are at war with each other, and since hostilities commenced last August, scores and scores of ships with a total capacity of hundreds of thousands of tons burden have been destroyed or sunk and most of the other ships have been either interned or commandeered by their government.

Therefore, necessity compels us to build a fleet of merchant ships to carry our commerce to the other nations of the world. Now that this period of activity is upon us, the ship builders should arouse and organize if they would reap a fair share of this prosperity. For the past ten or fifteen years

the men in the ship yards have not made much progress in organizing and as a consequence their wages have remained practically stationary during this period and they are not getting any more wages now than they did twenty years ago, notwithstanding the fact that the cost of living has nearly doubled in that time. Therefore, the average wages paid in these yards at the present time must furnish a very poor living for the men and their families.

However, no matter how low the standard of wages or how much higher the cost of living may go, there can be no adequate relief or improvement expected unless the men arouse to the importance of the matter and organize, and they cannot commence too soon for their own good. No doubt many of the old time ship builders were discouraged with the efforts to organize twenty years or so ago, and may hesitate to turn to the movement again, and there is justification for this feeling, for they are still suffering from the efforts of the hasty and ill advised strikes of the past, which not only destroyed their organization, but put the good active members on the bum also. These were in the pioneer days of organization, when too often our members had but a poor idea of the practical working of a union, and a local would no sooner be organized than the members would want to strike to see whether it was effective or not, and too often they would walk out without preparation or money in the treasury to sustain them, and as few of them were more than a couple of weeks from want they were easily defeated.

Should the men organize again it should be on saner and more conservative lines. Their policy should be a peaceable one; to exhaust every peaceable manner and to use the strike only as a court of last resort, and under no condition make any demands until two-thirds or three-fourths of all employes are organized. If they will follow along these lines and become thoroughly organized fair wages and good conditions will soon displace poor conditions and starvation wages.

AN ORGANIZED EFFORT TO EVADE THE SEAMEN'S LAW.

From various sources comes the information that ship owners, shipping interests and the Manufacturers' Association have organized for the purpose of defeating or evading the provisions of the new shipping laws, which requires humane conditions and English speaking seamen to man merchant ships with American registry.

The practice in the past has been to use Chinese to make up their crews. These work for starvation wages and the ship owners are trying by hook or crook to retain these crews, and the president of the Pacific Mail Steamship Company has even threatened to put his company out of business unless it is allowed to use these crews. This company is owned by the Southern Pacific Railway and made the same threat of going out of business when the Interstate Commerce Commission ruled that railroads must give up all ship lines owned or operated in conjunction with railroads, and that such ships could not use the Panama Canal; however, it did not go out

of business even though this order of the commission was not altered.

If American ships cannot use American crews and prosper then they should all perish. We have no sympathy for any enterprise that has to be run on such a low plane. We believe, too, the sentiment of a vast majority of our people are in line with our position.

Ship owners have insisted on the right to have their ships built in foreign ship yards and now want to man them with Chinese coolies. What advantage or benefit could such an enterprise be to our people, built upon such lines? They would be of no advantage except to a few sordid, selfish and greedy individuals that would sell their very soul for profits. Therefore, we say enforce this just and humane law, in the spirit in which it was passed by Congress.

SOME OF THE CONTRACT SHOPS OF ST. LOUIS TRY AN OPEN SHOP STUNT.

For a number of years the members of our organization in St. Louis have had agreements with all the contract shops in that city. This year owing to industrial depressions, it was decided to not ask for any changes in wages or conditions but to let the agreement, which was to expire May 1, continue on indefinitely; however, as agreements contained no continuance clause, some of the employers took advantage of industrial conditions and the Heine Safety Boiler Co., the O'Brien Boiler Co., and the Wangler Sheet Iron Co., declared for the open shop.

The Grand Lodge was appealed to and President Franklin detailed First Vice President Hinzman to assist Lodge 27 in adjusting the matter, and the Executive Council gave its sanction to resist this move, even to the extent of calling out every member of the lodge if necessary. It will be remembered the two industrial lodges in that city consolidated a short time ago and all those working in the contract shops are now in Lodge 27. At a special meeting of the lodge July 2, it was decided to vigorously resist this open shop move, and when the three above named companies tried to change some of the shop conditions, the men refused to accept the new conditions and all of our men in these shops were locked out and the shops have been closed since; however, these firms have repeatedly tried to get our members to go back to work, but without result.

There are eight or nine other shops in that city that have promised to be fair with our members, two firms have already signed up and several others will, no doubt, have done so before this reaches our members. With industrial conditions rapidly improving, the balance of the companies will be forced to sign up with the lodge, as our members there are in good shape and have a hundred per cent organization.

In the meantime all members seeking work should stay away from St. Louis, for under the circumstances there is no chance for work and their presence there would only complicate matters.

Vice President Hinzman remained in St. Louis for some time advising with the members there, interviewing the employers and trying to adjust

the matter, and informs us since his return that the prospects were bright for our members winning out with all shops at an early date.

PRESIDENT FRANKLIN'S SONS SICK.

We regret to have to announce the serious illness of President Franklin's oldest son, Virgil, who has been a clerk in the employ of the Kansas City Southern Railway for several years. A month or so ago he was suddenly seized with severe hemorrhages of the lungs and for a time his life was despaired of; however, he has since rallied and is now able to sit up and get around a little but is still very weak. One of his lungs is affected with tuberculosis and the doctor has ordered his removal to New Mexico.

As the Journal goes to press, Bro. Franklin leaves with him for Albuquerque, where it is confidently expected that he will be entirely restored to good health.

Another son, Harold, while on a visit to Pittsburg, Kansas, recently, was operated on for two or three different local ailments and was laid up for some time, but now has fully recovered and returned home.

Altogether Brother Franklin has had it pretty tough recently. The Journal extends its sympathy and hopes his luck will change for the better soon.

VISITORS AT HEADQUARTERS.

Mr. and Mrs. John Cure of Teague, Tex., and who were on a vacation trip, stopped over in Kansas City and visited headquarters recently. They report having had a fine time during their travels and expressed themselves as being well pleased with their trip. After a short stay in the city they left to visit relatives in Missouri and then to head for home.

They left with the editor, as a memento of their visit, a post card photo, which we reproduce in another part of this issue.

QUOTATIONS.

Envy is a weed that grows in all soils and climates, and is no less luxuriant in the country than in the court; is not confined to any rank of men or extent of fortune, but rages in the breasts of all degrees. Alexander was not prouder than Diogenes; and it may be, if we would endeavor to surprise it in its most gaudy dress and attire and in the exercise of its full empire and tyranny, we should find it in school masters and scholars, or in some country lady, or the knight her husband; all of which ranks of people more despise their neighbors than all the degrees of honor in which courts abound; and it rages as much in a sordid, affected dress as in all the silks and embroideries which the excess of the age and folly of youth delight to be adorned with. Since then it keeps all sorts of company, and wriggles itself into the liking of the most contrary natures and dispositions, and yet carries so much poison and venom with it that it alienates the affections from Heaven, and raises rebellion against God himself; it is worth our utmost care to watch it in all its disguises and approaches, that we may dis-

cover it in its first entrance and dislodge it before it procures a shelter or retiring place to lodge and conceal itself.—Earl of Clarendon.

Whatsoever convenience may be thought to be in falsehood and dissimulation, it is soon over; but the inconvenience of it is perpetual, because it brings a man under everlasting jealousy and suspicion, so that he is not believed when he speaks the truth, nor trusted when perhaps he means honesty. When a man has once forfeited the reputation of his integrity, he is set fast, and nothing will then serve his turn, neither truth nor falsehood.—Tillotson.

Without the permanent union of the sexes there can be no permanent families; the dissolution of nuptial ties involves the dissolution of domestic society. But domestic society is the seminary of social affections, the cradle of sensibility, where the first elements are acquired of that tenderness and humanity which cement mankind together; and were they entirely extinguished the whole fabric of social institutions would be dissolved.

Families are so many centers of attraction, which preserve mankind from being scattered and dissipated by the repulsive powers of selfishness. The order of nature is ever from particulars to general. As in the operations of intellect we proceed from the contemplation of individuals to the formation of general abstractions, so in the development of the passions, in like manner, we advance from private to public affections; from the love of parents, brothers and sisters to those more expanded regards which embrace the immense society of human kind.—Robert Hall.

It carries too great an imputation of ignorance; lightness, or folly, for men to quit and renounce their former tenets presently upon the offer of an argument which they cannot immediately answer.—Locke.

Conscience and the fear of swerving from that which is right maketh them diligent observers of circumstances, the loose regard of which is the nurse of vulgar folly.—Hooker.

STRIKES NOW IN FORCE.

- Atlantic Basin Iron Works (Shields & Moran, New York). (Strike on.)
- Hibbon & Co., contract shop, South Chicago, Ill. (Unfair.)
- Milwaukee Boiler Co., Milwaukee, Wis. (Strike on.)
- Stockton, Calif. (Metal Trades strike.)
- Des Moines Bridge & Iron Works, Des Moines, Iowa. (Erecting work at Bremerton, Wash., Valejo, Calif., and Norfolk, Va., Navy Yards.)

- Wangler Boiler & Sheet Iron Co., of St. Louis, Mo. (Strike on.)
- O'Brien Boiler Co., of St. Louis, Mo. (Strike on.)

Mechanical Department.

TO DEVELOP FRUSTUM OF A SQUARE PYRAMID CUT AT AN ANGLE TOP.

Fig. 1, shows the plan view, Fig. 2, the side elevation, and Fig. 3, the template.

To lay out template, first mark off plan view and side elevation the desired size and height, continue side lines of Fig. 2 on up until they cross each other at A; strike angle d-e at top of frustum and from these points (d-e), strike lines across cone, and at right angles to the center of same, extend lines out beyond side line c-e, next

take dividers and with one point at o, Fig. 1, and the other point at corner 3, strike circular line from 3 to n; from the latter point erect a vertical line parallel with line 2-3; extend line B-c, Fig. 2, until it crosses vertical line; from point from where these two lines cross, strike a line to A; this line will represent one side of template; from points e to d and x, Fig. 3, strike circular lines indefinitely. Take distance from 1 to 2, Fig. 1, and mark it from x to 2', Fig. 3. Next take distance from 2 to 3, Fig. 1, and mark it from 2' to 3, Fig. 3; continue in like manner with the other two sides and from these points strike lines to A; these will be the points for the bending. Strike straight lines from 1' to 2', 2' to 3', 3' to 4', and 4' to 1'. Next draw a line from 1 to y, Fig. 3; then from y to c, from e to e', and from e' to d. This will complete the template, add sufficient lap if desired.

International Officers' Reports.

July 20, 1915.

To the Officers and Members of All Subordinate Lodges, Greeting:

I herewith submit to you the vote taken in reference to the Illinois Central and Hariman lines and the Pere Marquette strikes:

The above tabulation shows the votes cast by the striking members of these roads. It also shows the lodge numbers that the votes came from and the lodge number of which the members were strikers.

All votes were included up to and including July 8th, but votes received after that date are not in this tabulation.

Trusting this will be satisfactory, with best wishes, I beg to remain,
Yours fraternally,

F. P. REINEMEYER, I. S. T.

REPORT OF SECOND INTERNATIONAL VICE-PRESIDENT NOLAN.

Dear Sir and Brother:

My last report for Journal was mailed from Chattanooga, Tenn.; was there in the interest of Lodge No. 14, also co-operating with officers of various organizations in what is known as a forward labor movement, or, in other words, revival of organized labor's interests among those who became delinquent in their respective local organizations, as well as the unorganized, who don't seem to realize that the labor movement, like any other business institution, must be a continual effort, united and unflinching, until justice is secured, through the different federated departments of the American Federation of Labor.

Take, for instance, the railroad shops, operated under what is known as the appropriation plan, compelling the shop crafts

to work under reduced hours of labor, so the stockholders can get theirs, regardless of the employes and their families who must suffer in many ways, which makes it almost impossible to secure the necessities of life, without which the high ideals of American homes as well as American manhood and womanhood is reduced to a condition akin to slavery. That is why a forward labor movement becomes necessary in some sections of the country, in order to arouse the unorganized to the necessity of organization, so that working conditions may be improved and favorable legislation secured, as the men and women who are compelled to toil for a living must be organized and work through their organization to that end. Practical organized methods must be used also in order to cope with an ever elert and well financed opposition, whose methods in dealing with their em-

ployes are as cold as the frozen regions of the North Pole, which must be evident by every man who worked for a daily wage; yet there is still a woeful lack of co-operation existing, due to our negligence in not studying carefully the industrial situation as it confronts us, but still the labor movement is rapidly gaining in membership because some of the wage earners see from past experience the necessity of it.

On June 3 I attended an open meeting of Lodge No. 14, Chattanooga, Tenn., which was called to discuss many matters in connection with the International Brotherhood, as well as getting every boiler maker in the city of Chattanooga to be a member of Lodge No. 14, and I must say that through the co-operation of the officers and members of Lodge No. 14 our efforts have been successful, and trust the same interest will be continued and the good work be carried on according to the International Constitution, for Lodge No. 14 has done good work in the past, and I am confident she will do the same in the future, as we have several good workers in the labor movement of Chattanooga, tried and true to the principles which they have advocated for years, always willing to give the best that's in them for their fellow craftsmen, pleading with them as well as explaining the great necessity of co-operation and I must say that from observation of them while in Chattanooga, their work along that line has convinced many of their mistake, returned to the fold of their organization with a grim determination in the future to royally support their fellow craftsmen in their efforts for at least human conditions under which to work. May the good work go on, which means the political and industrial emancipation of the wage earners of America.

Among the old members who attended open meeting of Lodge No. 14 on June 3 was Brother Jack Gribben, the old-time member and active worker in the labor movement of Chattanooga, as well as the able scribe of Lodge 14 in the years gone by, and trust he may again grace the columns of the Journal with articles from his ever-ready pen on matters of interest to the membership, as there is none more qualified than Brother Jack Gribben of Lodge No. 14, as I have known him for years and know his ability as a writer on history, as well as on questions of interest to the labor movement. There may have been misunderstandings in the past, but they are now sunk into oblivion for the great cause we are all engaged in, the elevation and protection of every member of the Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America.

On June 5, by instruction of the International President, left Chattanooga, Tenn., for New Orleans, La., to assist the business agent, Brother Smith, to straighten out a grievance in Lodge No. 37, and also to secure an international agreement between the proprietors of the various contract boiler shops and Lodge No. 37 of New Orleans,

reaching there on the 6th and found a forward labor movement in full swing, with several officers of the international organizations already on the ground. Either open air meetings or meetings in the halls were held almost every night; in fact, on account of the number of meetings arranged by Brother Faust, the representative of the Trades and Labor Council of New Orleans, the international officers were formed into groups in order to get sufficient speakers at each meeting arranged.

The result of the forward labor movement of New Orleans has been good so far, but before the close, the good work will be plainly visible by increased membership among the local organizations of the Crescent City of the South.

I have advocated on all occasions at the Metal Trades meeting, also Brother Flanagan, Vice-Presidents of the Blacksmiths, the absolute necessity of a local Metal Trades Council in New Orleans for the purpose of securing greater co-operation among the various metal trades through united action when necessary. The result was that a charter has been applied for through Secretary-Treasurer Berres of the Metal Trades Department of the American Federation of Labor. Officers have been elected and much interest seems to be manifested among the delegates who represent the locals affiliated, and trust same will continue, as a Metal Trades Council was badly needed in New Orleans.

Brother William J. Smith, business agent of Lodge No. 37, was elected temporary president of the local Metal Trades Council while the work of organization was in progress, and rendered valuable assistance in visiting locals and securing delegates from local organizations who were eligible to affiliation in the local Metal Trades Council, but found it impossible to serve as permanent president on account of his other duties as business agent of the Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America in New Orleans, but, nevertheless, will render all possible assistance in building up a strong united Metal Trades Council and, further, in connection with the above, I desire to thank Brother Berres, Secretary-Treasurer of the Metal Trades Department, for his prompt attention to my communications, as well as information given which helped very much to organize the local council in this city.

After reaching New Orleans from Chattanooga, Tenn., held a meeting with Brother Smith, business agent of Lodge No. 37, and a committee, Brothers Vellegre and Costelle, relative to conditions in the port of New Orleans, as well as several grievances then pending between Lodge No. 37 and the boiler shop proprietors. At that meeting it was decided to call a meeting of representative delegates from the three lodges, Nos. 37, 442 and 206, which was done, and the following delegates were chosen to represent their respective lodges: Brothers Smith and Vellegre of Lodge No. 37, Broth-

ers Mocklin and Boone of Lodge No. 442, Brothers Kenny and Donewar of Lodge No. 206.

On June 16 a representative delegate meeting of the three lodges in New Orleans was held for the purpose of securing an International agreement between Lodge No. 37 and the various boiler shop proprietors of New Orleans and to abolish through an agreement the several grievances then pending, which had caused considerable trouble and friction in the past. It was, therefore, decided to notify the secretary of the Manufacturers' Association that Lodges No. 37, No. 442 and No. 206 desired a conference with a committee from his association, for the purpose of entering into negotiations for an International agreement, as well as a general discussion of many matters in connection with the shop conditions and the welfare in general of both parties in the port of New Orleans, which was agreed to by the committee, and later indorsed by Lodge No. 37 at regular meeting, and in answer to communication as outlined above, we were notified by the secretary of the Manufacturers' Association that a meeting would be held at the Chamber of Commerce on June 19, between a committee representing the above association and a committee representing the three lodges of New Orleans, Brothers Smith and Vallegre of Lodge No. 37, Brothers Mocklin and Boone of Lodge No. 442 and Brothers Kenny and Donewar of Lodge No. 206.

Conference came off as arranged, June 19, and am pleased to report that an International agreement was secured between the proprietors of the various contract boiler shops and the members of Lodge No. 37 of the International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America, the first agreement in 21 years. Let us hope for the future benefit and recognition of our craft in the port of New Orleans, that no violation of agreement will occur, as the method of handling certain grievances is plain, such as discrimination, change in working conditions, reduction in wage as per the agreement; therefore, there is ample opportunity of adjusting grievances as mentioned under the agreement, for premature strikes will not be tolerated in the future, as the constitution of the Brotherhood, as well as the agreement entered into between the proprietors of the various boiler shops of New Orleans, must be lived up to; but should the proprietors violate it, then the situation entirely changes, which I am confident will not occur. I attended several meetings of Lodge No. 37 and found that all members were absolutely satisfied with late agreement, as well as Brothers Smith, Vallegre, Kenney, Donewar, Mocklin and Boone, who represented the New Orleans lodges during conference with the boiler shop proprietors, June 19, and, further, I desire to thank the committee from the three lodges, No. 37, No. 442 and No. 206,

for their painstaking and active co-operation given me previous to, as well as during, conference with the proprietors of the New Orleans boiler shops, when agreement was secured.

Have attended several meetings of Lodge No. 37, which has a large membership and increasing, but sorry to report that work in the port of New Orleans is pretty dull at present, and many of the members have been idle for some time, but all hope for improved conditions in the fall; let us hope so, as several boiler makers and their families have felt the effects of enforced idleness for several months.

Attended a regular meeting and smoker of Lodge No. 206 on June 11, and, as usual, almost every member was present, with that old faithful worker in the cause of his fellow craftsmen, Brother Koenig, in the chair and his secretaries on the job attending to their respective duties with promptness and dispatch, courteous and willing at all times to help their brother members with any information in order to straighten matters out according to the constitution, but the conditions are never lost sight of in conducting the business affairs of Lodge No. 206. Had the pleasure of meeting one of the real old-timers in the Brotherhood, Brother Corcoran, and despite his advanced years, he is still active in Brotherhood affairs and holds the position of layer out at the Texas Pacific shops, Algiers, La.

Several good talks were made on the past work of the Brotherhood, as well as its future prospects, and all agreed that the International Brotherhood stood at present in the front rank of the metal trades organizations of the American labor movement, both financially and otherwise, and all that is required to make it even still greater is for the entire membership to pull together according to the constitution. The principal speakers on the occasion were Brother Koenig, president of Lodge No. 206; Brother Smith, business agent of Lodge No. 37; Brother Reynolds, corresponding secretary; Brother Corcoran; Brother Berry, the faithful financial watch dog of Local No. 206, and, in conclusion, let me thank the officers and members of the Algiers lodge for the many acts of kindness shown me while in the Screscent City of the South, where hospitality is the password on entering the city, for when a stranger can show the goods, an up-to-date card of the Brotherhood, otherwise nothing doing.

June 15, attended a regular meeting of Lodge No. 442, but owing to sickness, Brother Shea was unable to be present; however, at this writing he has fully recovered and is back in his position as foreman boiler maker of the terminal shops at New Orleans; May he always have good health, is the sincere wish of the men he has been associated with for many years, the boiler makers of New Orleans and vicinity.

Promptly at 8 o'clock, meeting was called to order, with President McCabe in the

chair; several important communications were read and referred to the financial secretary, Brother Mocklin. As Brother Mocklin is from Missouri at all times, you have to show him that a request on the treasury of Lodge No. 442 is a deserving one; in fact, when the question is called on a motion duly seconded in connection with the financial affairs of Lodge No. 442, he is on the floor to find out what it's for and all about it, and if Brother Mocklin is convinced, he is there with the goods, as he is every ready to help any brother who can show him, for he is well known to the traveling brothers who butt into him in New Orleans.

All the members work at the terminal shops, with the exception of a few who work in the contract shops and at outlying points in the vicinity of New Orleans.

In my next report for the Journal, will touch on a very important matter now pending in New Orleans, in the interest of the International Brotherhood, as well as Mobile, Ala., where I spent a few days in the fore part of July.

This finishes my report for June, 1915, and trust same will be satisfactory.

Yours truly and fraternally,

THOMAS NOLAN,
International Vice-President.

REPORT OF THIRD INTERNATIONAL VICE-PRESIDENT MERRIGAN.

At the conclusion of my last report I was on my way to Hamilton to attend a regular meeting of Lodge No. 428, arriving there on the 1st, believing that there would be a meeting the following evening. However, on inquiring later I found that the members had decided to dispense with holding their regular meeting Friday night, owing to that day being Good Friday. As it was not convenient for the members to attend a meeting on short notice, and meeting places could not conveniently be obtained, a meeting was arranged for Monday evening, the 5th. Most all of the members were present, as there were some shop grievances which they desired remedied. After considering their grievances thoroughly and discussing same at length, a satisfactory solution of the difficulty was arrived at, providing same was carried out according to instructions.

April 5th I left for Ottawa to meet with the delegation from the Welland Canal, who waited on the prime minister and other ministers of the cabinet. I also had an interview with the deputy minister of labor regarding a complaint from Lodge No. 134, that members employed at the Canadian Vickers Company were not receiving a fair wage. Upon investigation of this complaint I was informed that there had been no complaint regarding wages, but there had been a complaint about aliens being employed on work being done at the Canadian Vickers Co., and that an investigation was held and later a report was submitted to the Department of Labor advising that the importation of aliens was limited to a certain class

of employment that was not obtainable in Canada. I may say that the report of the committee was correct to a certain extent, but they could have made a more exhaustive report, and should not have been so hasty in arriving at the report they submitted. For it is a fact that hundreds of aliens secured employment in preference to local men who were competent to perform the work.

The delegation, representing the trades and labor unions employed on the Welland Canal, were given a satisfactory hearing in their request that the fair wage be paid to all employes on the job.

April 7th I left for Montreal, intending to leave there within a few days to go over the line of the Intercolonial. However, on my arrival there I was informed from headquarters that Lodge No. 134 had submitted a request for me to be sent to Montreal as early as possible, and requested that I remain indefinitely. I made inquiries as to the communication which was sent to headquarters, and learned that some of the members thought it advisable for me to be in town for some time, owing to the order for ten submarines were to be built, and that there was a number of unorganized men being employed. After further inquiry at the next meeting of Lodge No. 134 I learned that it was not altogether a matter of trying to get the men employed at the Vickers plant to become members, but in general. However, I informed the meeting that if it was their intention that I should start an organizing campaign in the city they were surely requesting me to do something almost impossible, for there were so many out of employment and those who were being employed were getting very little of it. I remained at Montreal until June 10th, during which time I was after delinquents and endeavoring to have them attend open meetings. A special reinstatement fee was granted, and a fairly good number availed themselves of the opportunity. It was difficult to interest a certain element from Quincy, Mass., who are employed at the Fore River Ship Building Co. All they knew about organization was that they had a CLUB at Quincy. Others came from Cleveland, Philadelphia, New York, Brooklyn and other places in the United States where ship building is done. One thing that did not impress the local members was that the members from outside lodges failed to put in an appearance at any of the meetings while working in Montreal, nor did they deposit their cards. However, a good word can be said for those who were members of our organization, no matter where they hailed from—they were popular, and our local members have learned that organized labor will be heard from when matters are not going satisfactory.

While in Montreal I was informed that there was some tanks being built on one of the piers. Later, upon investigation, I found that a number of structural iron workers were employed on the job, and that this

job was being erected by the Petroleum Iron Works of Sharon, Pa. I got in touch with a representative of the Iron Workers' Union and called his attention to the fact that this company was unfair to organized labor, and again that the members of his union had no business placing their members on such work. He was ignorant of the latter, for while I showed him the agreement which had been entered into between their organization and ours, in their constitution and laws members were led to believe that they were justified in working on anything made of iron or steel that did not hold steam. A few gangs of our members had started on the job and I called them all off later. This included iron workers and others. The following day, owing to the representative of the iron workers not having much authority, some of the iron workers resumed work. I called his attention to this and had him get in touch with their officers at Indianapolis and explain the situation to them. I may say here that I don't think the general secretary of the iron workers keeps himself posted as to where there is any disputes which might involve their membership. If he does, then they do not desire to act in conjunction with our organization. However, I made the matter known to I. P. Franklin and had him get in touch with the president of the structural iron workers and also the secretary, with the result that a few days later the representative at Montreal was told to take their members off the job. I had dodgers and stickers printed and placed pickets on the job. Labor was abundant, and it was difficult for our pickets to impress those going to work the necessity of keeping off, as there was a strike on and that the company was unfair. It was also difficult for our pickets to get near the job, as the job was policed. None of our members, I am pleased to say, worked on the job during its erection, whether they were in good standing or delinquents. But the job was finished by those claiming to be structural iron workers and others.

While in Montreal I was called on by one of the members of Lodge No. 134, who was employed by the Canadian Pacific Railway at one of the outside points, informing me that he had been discharged and felt that he was unjustly discharged, and desired that his grievance be investigated. I endeavored to have a committee take his case before the officials of the company, but could not get any. Later I took the case in hand myself. I went to Farnham and had an interview with the locomotive foreman, who explained to me what orders he had received. I then called on the aggrieved member and brought him before the locomotive foreman and the assistant foreman and heard all sides in dispute. Nothing could be done by the locomotive foreman, in the way of reinstating the member. I returned to Montreal, and the following morning I had a meeting with the superintendent of the division, and explained my mission to him, endeavor-

ing to have our member reinstated, but without avail, as this was not the outcome of any hasty action on his part, but had been pending for some time previous. After my interview with the superintendent of the division, I arranged to have the member come to Montreal. He arrived the day following and we called on the superintendent, and had a hearing regarding his discharge. The best that could be done for the member was to transfer him to another point. To this the member consented after having a thorough understanding as to his transfer.

I may say that, apart from the work that was being done at the Canadian Vickers Company, by the Fore River Ship Building Company, that there was very little work in our line being done in Montreal. There was, however, a large order for shells and other war munitions.

During the month of May, Mr. G. N. Barnes, labor M. P., for Glasgow, visited Canada, accompanied by Mr. W. Wyndham, of the Board of Trade, to see what could be done to secure men in Canada for the manufacturing of shells in Great Britain. While in Ottawa, he addressed a big deputation of eastern and western mayors who were there to interview the Government regarding the unemployed. The mechanics required were boiler makers, sheet metal workers, fitters and turners, including others who are skilled in assembling machinery. They hoped to get 2,000 mechanics. The men recruited were to be engaged for six months, and perhaps longer. They would be given second-class passage across, and paid subsistence until they go to work, while if they worked there six months or longer their fares back would be paid by the British Government. The wages would be the standard British union rates in the best shops, so that it would afford an excellent opportunity for good mechanics to pay a visit to the Old Country and make good money at the same time, as their earnings would only be limited by their willingness to work. Messrs. Barnes and Wyndham were to stop off at all the principal cities in the Dominion from Quebec to Vancouver. Reports showed that a large number of skilled mechanics had made application.

After I had done as much as could be expected at Montreal, owing to the slackness of trade, I decided to fulfill my engagement through the Maritime Provinces. Before leaving Montreal, I was asked to call at the office of J. T. Foster, B. A., for the I. A. of M., as there was some matters he would like to discuss with me. Upon inquiry, I met Bro. McLelland, vice-president of the I. A. of M., who explained why I was asked to call at their office. Bro. McLelland, had arranged a meeting with Mr. Miller, general manager of the Canadian Vickers Company, regarding a dispute that existed at the shops. The Labor Department was made aware of this dispute while Bro. McLelland was in Ottawa, and he decided to come to Montreal, for the Labor Department, to in-

investigate the dispute. The dispute was between the company and the men employed as riveters, caulkers, chippers, holders-on, helpers and heaters. On June 7, an element employed there decided to go on strike for fifty cents per hour plus a war bonus, and a number of our members joined without consulting their organization. These men decided on their plan of action in a vacant lot near the works, and returned to work three days later less profitable than where they left off. It was regarding this dispute that I accompanied Brothers Foster and McLelland to the office of Mr. Miller. Brother McLelland explained his mission, and our interview was cordial. We discussed the dispute and the knowledge the company had of same. The company was desirous of paying the highest rate of wages for the work performed, and the conditions would be as good as elsewhere. They intended to work along the same lines as were in operation at their shops and yards in the Old Country. Mr. Miller requested that I get in touch with their shop foreman whenever convenient if I knew of any for our members out of employment as they only intended to employ men who were skilled in such work. This I will do on my return to Montreal, providing I have no other work on hand elsewhere.

After our interview, I left for Moncton, to attend the regular meeting of Lodge 378, arriving there on the 11th. Attended the regular meeting that night and addressed the meeting. There were some laws of our organization that the lodge were not clear on, and I was asked to enlighten them, which was done to their satisfaction. I was given a list of the delinquent members at outside points and advised of others who were members and asked to call on them. I had some other matters to take up with the officers and remained over until the 14th.

From Moncton I went to Truro, arriving there on the evening of the 14th. On the 15th I got in touch with all of the members employed at the roundhouse and explained matters to them. I found that all held membership and some of them complained of not having any due-book, which I took note of and reported to Lodge 378. It was also made clear to me that about all that some of them knew was, that they held membership in lodge 378. It therefore remained for me to enlighten these members on matters in connection with our organization, which was news to them.

On the 15th I left for Halifax, to meet with the men employed at the I. R. C. I found one out of four was a member. I had a talk with two others, one of whom was indifferent to organization, for a while, but later decided to reinstate. The other would fill in an application. The other man was working on the night shift, and whom I saw since and had him fill in an application.

While in Halifax during the evening with the assistance of the member employed by

the I. R. C., I got in touch with some of the men employed in the contract shops. I was fortunate in meeting one of the men, and was informed that the contract shop men had re-organized during the month of April and May, and that he was president of the lodge. He informed me later that there would be a regular meeting on the 23rd. This was good news for me. So I informed him as I had other places to visit, I would do so in the mean time and return in time to attend the meeting.

The following morning, 17th, I left for New Glasgow, to call on the men employed by the I. R. C., at Stellarton. I got in touch with them during the afternoon, and the following day and found that they had been members of Lodge 378, at one time, but claimed they could not get any satisfaction from the officers of the lodge. Their dues had been sent in accompanied by their due-books and had heard no more of them, and that they could not be expected to be members when they were unable to get any information. Later I arranged with Lodge 378 to have these men reinstated which they were quite willing to do. There was also one man who had not been a member and he filled in an application. While in New Glasgow, I endeavored to locate C. C. Dane, whom I was anxious to meet, as he was instrumental in re-organizing the contract shop men in Halifax, but could not conveniently locate him.

On the 19th I left for Sydney, arriving there during the evening, I was met by one of the members employed by the I. R. C. and remained over until the 21st, during which time four new applicants were received. This point also complained of not receiving attention from the officers of Lodge 378. However, this was brought to the attention of Lodge 378, latter on no doubt these men will be given the proper attention in the future.

On the 21st, on my return to Halifax, I stopped off at Mulgrave for a few hours with the intention of meeting a member employed there. Later I found that this member had worked during the night, and owing to the inclement weather and the time at my disposal, it was not convenient for me to meet him.

On the 22nd I left for Halifax, arriving there during the night, and made arrangements for the meeting the following night.

On the 23rd I attended the meeting of Lodge 580. There was a good attendance. I addressed the meeting which was well received. I learned that the men employed at the contract shops had decided to re-organize during the months of April and May, and had sent for new supplies and charter. At one of their meetings previous, it was decided that they would request all employers for an increase in wages, and requested a reply by July 1st. Owing to all replies not being at hand at that meeting it was decided that a committee and myself wait on the various employers the following day for an answer to their request. The fol-

lowing day, I met the committee as arranged, and proceeded to wait on the employers. We received a favorable answer from all except one. That one was at the Halifax Graving Dock. I personally interviewed the general manager. He did not have any desire to have anything to do with unions, and gave his reasons. However, I pointed out to him that the men were uneasy and desired a reply to their letter.

On the 25th I left for Moncton, to attend a meeting of Lodge 378, which I understood would be held on that date. Upon arriving there, I was informed that Lodge 378, had dispensed with one meeting. I had a meeting, however, comprising the officers and a number of members, and the dissatisfaction that existed at several of the outside points where boiler makers and helpers were employed, over which Lodge 378 had jurisdiction, and requested that this state of affairs be attended to at their next regular meeting.

The 26th I returned to Halifax, to attend a special meeting of Lodge 580, which was called for Sunday evening. This meeting was well attended. A number of new applicants were received. The report of the special committee was received. The boiler makers, ship builders and helpers in Halifax at one time were the foremost trades unionists in that city. Unfortunately, like many others, they did not use good judgement at the proper time. Nevertheless, at this time, they claim that they are going to enthuse new life into their ranks and return to where they belong. And if one can judge by the interest that is being displayed in organization at present, they will surely return to where they rightfully belong.

This will conclude my report up to July 1st, I am,

Yours fraternally,
J. P. MERRIGAN,
Third I. V.-P.

REPORT OF FOURTH INTERNATIONAL VICE-PRESIDENT WEYAND.

Cleveland, Ohio.

Dear Sir and Brother:

The following is my report for the months of May and June, 1915:

At the conclusion of my last report I was still detained in Elmira, N. Y., trying to bring about a settlement of the wage question for our members in the LaFrance Engine Company. While we had several conferences with the management of the company, we were unable to convince the management that our members were entitled to an increase in wages. As the machinists had also made their demands for an increase and after several conferences with the management, they were likewise refused any concessions on the wage question. We then decided to make it a joint proposition, and requested a joint conference with the management; the management agreed to meet a joint committee of their employes, but refused to meet the officers of the organization.

During this conference nothing was accomplished by the joint committee. So after a joint meeting of the two trades involved the members of both organizations decided to leave the services of the company on May 6. After arranging matters for our members in regard to strike benefits with the International Lodge, I arranged to go to Baltimore, Md., as per orders from President Franklin.

On May 7 I went to Baltimore. On my arrival in Baltimore I arranged to meet the officers of Lodge No. 193, Saturday, May 8. Brother Shanley, president of Lodge No. 193, and myself went to Fairfield, where I found a large refinery under construction, also a large number of delinquent members were employed. I arranged with some of the card men on the job to assist me in getting the names of all men who were in bad standing, in order that they would be given an opportunity to pay up their dues the following Saturday. I found two firms had the contract for erecting this refinery, namely, the Bartlett & Hayward Company and the Novelty Iron Works of the city of Baltimore.

The following day Brother Shanley and myself went to North Twenty-second Street, where we found a pipe line under construction; also found some delinquent members employed; also made the necessary arrangements to have them reinstated.

The following Tuesday I attended the regular meeting of Lodge No. 193. We had a very good meeting, and will say all officers and members of Lodge No. 193 assured me of their co-operation and assistance in lining up the boiler makers and helpers in the city of Baltimore. I then made regular trips to Fairfield each day to talk to those men employed at the refinery who had never belonged to the organization and gave them applications. The following Tuesday evening we had a special meeting and invited all boiler makers and helpers to attend. We had a very good meeting and received a number of applications. In carrying out this program of organization, we initiated five boiler makers and seven helpers. We also reinstated twelve boiler makers and seven helpers in Lodge No. 193, making a total of 31 members organized for the month of May.

Beginning with the first day of June, I continued to carry on the same organizing campaign by going to Fairfield every day and visiting the pipe line job about twice a week. We again called a special meeting on June 2 and received a number of new applications and some reinstatements for Lodge No. 193.

In the month of June we initiated seven boiler makers and 18 helpers. We also reinstated 12 boiler makers and six helpers, making a total of 43 men organized in Lodge No. 193 in the month of June.

As I was requested by President Franklin to go to Philadelphia and meet Vice-President Johnson of the Iron Workers, relative to some jurisdictional matter, I left

Baltimore on Monday, June 28; at this time I had about 12 more names of men who had paid half of their fees for reinstatement or initiation; this amount of money I turned over to Brother Chaney, financial secretary of Lodge 193; also collected considerable money for dues from the members of Lodge No. 193, which was also turned over to Brother Chaney. While carrying on the organizing campaign in Baltimore, our vice-president, John Schmidt, arrived in Baltimore in company with other organizers who were carrying on a campaign on the B. & O. R. R., and in justice to Brother Schmidt, I may say Brother Schmidt gave me every assistance during his stay in Baltimore.

On my arrival in Philadelphia, I met with the officers of Lodge No. 341 to take up

the complaint of the iron workers. I waited three days for Vice-President Johnson, but he failed to come. I then went to visit the job in dispute. I found the job was more than two-thirds completed and, in fact, a very small job at that. However, I realized at once that the work belonged to the iron workers and told our business agent, Brother Napier, that my decision would be in favor of the iron workers and in the future to avoid putting our members on this kind of work, as it was the intention of our organization to be fair with the iron work.

Trusting this is satisfactory, and with best wishes and regards, I am

Yours fraternally,

LOUIS WEYAND,

Fourth International Vice-President.

Correspondence.

Milwaukee, Wis.

Dear Sir and Brother:

In compliance with your request for a report as to the conditions of our trade in our district, also that the business agents on the various railroads send in a report monthly so as to keep the entire membership informed as to the general working conditions along the line, will state that I heartily approve of this plan, and I believe that this manner of reports should be carried out along the same lines as followed by the Machinist organization, which, I believe, was talked over between ourselves during my last visit to Kansas City.

Conditions along the "Milwaukee" Road are at present very poor; there is very little chance for a boiler maker to secure employment; I have been notified by our superintendent of motive power that a saving of \$35,000 per month must be made, and in order to do this all of the shops on the east end will be put on four days and eight hours, or 32 hours per week; this does not look very promising and just how long this short time will continue is going to be a question. It is predicted that the crops in the Northwest are not going to be what they should be, due to the large amount of rain in the past few months. Whether this has any affect on our working conditions is a big problem.

One of the largest questions before the boiler makers working on the C. M. & St. P. Ry. is the matter of feeding the unemployed boiler makers who are going over the line looking for work; at present there is no work to be had on the line; still there is the constant coming and going of men. Boiler makers have been known to start on the east end of the line and follow it through to the coast, stay there for a few days and then start back again; they are taken care of by the men at the various divisions, which at the present time has got to be a serious matter. The men at most all points are paying \$2 per month dues.

In connection with this, the expense to each one for meal tickets amounts to from \$3.50 to as high as \$8 per month apiece. This is quite an item and the members traveling don't want to forget that at points along the west end that these meals are costing the boiler makers at those points about 50 cents apiece. Sooner or later this will be stopped by the men, as they cannot stand for paying out so much money and also work short time.

Work throughout the Northwest is very slack, and none of the roads are putting on men. The Soo Line laid off about 50 men and the M. & St. L. closed up their shops for three weeks; this took place in Minneapolis. On the west coast there is not a job to be had and I would warn all boiler makers that it is useless to come into the Northwest looking for work, for there are plenty of men that have been laid off at all points to fill any demand that may be had for men. If boiler makers do come into this country looking for work, the boiler makers that are not working will only have to feed them and they have plenty of their own to look out for without having more come in on them.

Hoping that this will prove interesting, I am

Yours fraternally,

JOHN L. CALLAHAN,

Business Agent District No. 26.

Los Angeles, Calif., July 8, 1915.

Dear Sir and Brother:

For some time past I have been thinking of writing a little article for our Journal, to voice my opinion of some of the things that I have seen through the Southwest.

I have traveled through a good many towns in this part of the country during the last year or two, and I must say that there is something wrong with the men there now. A few years ago, the first time that I came this way, they were different. In most of the places that I have been, including Los Angeles, I find that nearly to

a man the boiler makers have been members of our Brotherhood, but now they are suspended, and when asked about it, they do not seem to be a bit interested whether they get squared up or not, and I think that herein lies one, if not the main, reason that this town and those around it have earned a scabby reputation. The towns and the jobs, since the Harriman Lines strike, are far apart, and as it is easier to get a job without a card than with one, most of them when they come to this part of the country let it go by the board, with the expectation that when they get away from here they will get straightened up, and most of them lie like the ——— and say that they did not work at the trade while around here and so could not pay their dues.

I have talked to a great many of them and find that this is almost always the case. Then when I press them to get back in, they put up an awful holler that they are not getting a square deal, that a new member can come in for whatever the local lodge sees fit, generally \$10, but they, some of them have been members in good standing for years, and they must pay \$15 to come back in on the same footing as the new man. Now I think that as these two things seem to be the greatest cause of trouble, at least in this section, that there ought to be some way to remedy both of them. This would include helpers.

I think that there ought to be some way to keep the good, honest member, who is not working and reports regularly to the proper officers, in good standing without making him take stamps that are so much different from the regular working stamp that many look with doubt upon him for keeping his book straight with them; then I think that we should bend every effort to get boiler makers into the organization that have never been in, to take them in under the badge of workers, that they are coming into protect their interests instead of simply to get a job, that every effort should be made to hold them after they get in, and that all should be penalized for dropping out and coming back in as it is convenient; in other words, they should pay this big reinstatement fee. Brother John Dick expressed my idea several years ago when he said, "Take them in for a peanut," but make it expensive to drop out.

Another thing and then I'll let someone else have some space. I think that it is time that the International office sent someone into this part of the country to stay. I do not think that one of our worthy Vice-Presidents has been down through here on anything more than a flying trip for at least 30 months, and the lodge in this city, No. 92, has almost gone out of business; when I think that it could have been a whole lot better if one of them could have been kept here all the time.

One would think, upon first coming here, that there was an incubator for scabs in this city and the Southwest, but I think that most of them come here with cards in their

pockets and then go suspended, and they make the worst enemies that we have. We are trying to bring things together here, and with a little help I think that we will succeed. What we are doing with the other trades is O. K., but not enough of it. Brother John Dick has been through here several times and wanted to stay here, and I think that he understands the fix that we are in, but of course he has been more or less tied up to his work around the bay cities and did not have much time here. I talked the matter over with him and he said that he would be glad to come here for a few months.

As this part of the country is a large place, there must be others that have found things as I have found them, and I hope that they will give their ideas to the Journal, and I for one am going to start to write up the kind that are helping to make the Southwest a breeding place, or a dumping ground for scabs.

Hoping to see this in the next issue, I am
Yours fraternally,
E. J. BUNTLER.

Jersey City, N. J.

Dear Sir and Brother:

At a regular meeting of Lodge No. 16, the following resolutions were adopted:

Whereas, It has pleased the Almighty God in His infinite wisdom to take from this world, to her reward in heaven, the dearly beloved mother, Mrs. Mary Fitzpatrick, of Brother Hugh Fitzpatrick, corresponding secretary of Lodge No. 16;

Resolved, That we, his brothers, extend to the bereaved family our heartfelt sympathy in their most sorrowful hour.

Resolved, That a copy of these resolutions be sent to the bereaved family and a copy for publication in the Boiler Makers' Journal.

THOS. J. LILLIS,
GEORGE HORANE,
JOSEPH HAYES,
Committee.

Lowell, Mass.

At our call meeting of Lodge No. 371, Lowell, Mass., June 16, 1915, the following resolutions were adopted:

Whereas, Almighty God has seen fit to take from our midst our beloved Brother John Flaherty, we realize the loss has been great to his wife and family, but our dear Master knew best. We know the lodge has lost a good, true union man. He was tender and kind, as he always had a word of cheer and comfort for all who knew him, and when killed without a moment's notice he passed away.

Resolved, That we do sincerely sympathize with his family in this their hour of sorrow, and pray that God may comfort and console them in their hour of sadness.

TIMOTHY J. DONAHUE,
WILLIAM WELLS,
ARTHUR P. MORAN,
Committee.

WHO PAYS THE DEBT.

Springfield, Mo.

Now don't it seem really funny
 When you stop and take a look,
 How some brain and lots of money
 Makes a man a political crook?
 Again, don't you feel like cussin' the starter,
 The guy who has lots of dough,
 When he rears up and says, "We want the
 charter;
 It's the thing we need, you know."

Does he stop to think who pays the debt?
 Does he know that workingman's kiddies
 and wife
 Must suffer from the fancies of the political
 vet?
 That it takes what we earn for the neces-
 saries of life?
 And when we must lay off to vote on com-
 mission
 With two Sundays a week and a holiday,
 too,
 Four days' pay has gone to perdition,
 And things like that make a fellow feel
 blue.

Mr. Banker, do you realize what it must
 cost us
 To humbly stand by with only our vote
 While you with your flurry and bobbling
 fuss
 Sweep on down the stream in your political
 boat?
 Are you not satisfied to take half of our
 earnings?
 Do you want the whole thing, you hungry
 hound?
 If you don't, then stop some of your yearn-
 ings
 And let councilmaniac law rule our town.

Now, brother workingman, let's take heed
 And get out to the polls at the next spec-
 ial call
 And do our best to whip this political breed.
 Let's kill the charter bill once and for
 all.
 If moneyed men want it, we don't need it;
 We must never side with them to give
 them a chance
 For the capitalist collar the laborer want
 They are two warring factions like Ger-
 many and France.

Still better, come to think of it, it seems
 to me
 That if we want to change our condition
 We had better let city politics be,
 And start at the head of the nation.
 Let minor affairs go as they may.
 To kill the serpent, we must chop off its
 head.
 In 1916 let's all vote the right way,
 And all such nonsense soon will be dead.
 —J. W. Galloway, Boiler Makers' Local
 No. 70.

Huntington, W. Va.

Dear Sir and Brother:

It is with great pleasure I make a second attempt to write a short article for the Journal, providing our worthy editor allows it to pass the waste basket, and I sincerely trust that the brothers at large will not criticize me as strongly as they have some of the brothers in the past, as I am of the opinion that their criticism goes a little too far at times. While Local 249 has not taken any action on either side, yet it behooves me to disclose my opinion. I hereby really think that in order to prevent all hard feelings to withhold our brotherly love it will be necessary to see that such resolutions are properly endorsed, and then let it come to a referendum vote.

We, the members of Local 249, are still on our feet, fighting harder every day. We have our Saturday afternoons off, and it seems that a number of the brothers delight in grasping the opportunity of crossing the border to obtain a little "spirit" water as one notices them looking a little down-hearted and spitting cobwebs all week.

Now I wish to say a little in regard to the way the Legislature turned down the bills that were proposed by the laboring organizations of Ohio, whereas there were several good ones among them, but as yet have not heard of any being passed which would better the conditions of the laboring class. All that I can ask is justice and "honor to him to whom honor is due," not, as one judge stated, that an employer could organize to protect his rights, but the employe would not be allowed to enjoy the same rights, which is not justice.

In conclusion I regret very much to say that Brother J. A. Kilkullen (better known as Pat), with a current card from Local 322, was very seriously injured while endeavoring to alight from a side-door Pullman at Ironton, Ohio, and his recovery is very doubtful. While the members of Local 249 have done all in their power to assist him in his misfortune, great praise is due J. A. Hannon, mayor of Ironton, Ohio, for his extreme kindness bestowed upon the brother. This shows there is something in the clothes he wears.

With best wishes to the brotherhood, I am
 Fraternally yours,

E. T. BRENNAN,
 S. L. 249.

Chicago, Ill.

Dear Sir and Brother:

Stony Island Lodge No. 17, L. A. to the I. B. of B. M. was instituted June 24 by our Second International Vice President, Mrs. Mollie Geary, with a membership of 11.

The following officers were elected and installed: Mrs Rose Ptok, president, 9015 Houston Avenue; Mrs. Cora V. Kelley, vice-president, 9251 Stony Island Avenue; Mrs. O. M. Diedrich, corresponding and recording secretary, 7436 Evans Avenue; Mrs. Eleanor

Clark, financial secretary and treasurer, 7539 Rhoades Avenue; Mrs. Katherine Murphy, chaplain, 751 East Seventy-third Street; Mrs. Anna Cullerton, conductress and marshal, 749 East Seventy-third Street.

We meet the second and fourth Mondays of each month at Pusely's Hall, corner of Seventy-fifth Street and Drexel Avenue.

While our beginning is small, we feel that a good work has been started and as we have already added one member, that we will soon have a good working lodge.

I see in your last edition of the Journal that you have a list of officers which is entirely incorrect; please correct same.

Yours fraternally,

MRS. O. M. DIEDRICH,
Secretary.

BOOST FOR YOUR FRIENDS—LISTEN!

No doubt some of your Eastern boiler makers intend to visit the fair at San Francisco and San Diego, Calif., or maybe you have a friend, or your grocer, ice man, or coal man, who is intending to make this trip. If so, wouldn't you rather patronize a fair road—the scenic line of the world, where every mile is a picture—the road where working conditions are ideal and the employes are all boosters? Get on the New Scenic Limited at St. Louis, Mo.; ride over the Missouri Pacific to Pueblo, Colo., and the Denver & Rio Grande to Salt Lake City, Utah; then the Western Pacific to San Francisco, Calif. One long grand joy ride without change of cars, over the most beautiful mountain scenery in the world. We are working for this system and would like to have you ride on it and tell your friends about it. When you buy a ticket over this system, you are helping to pay wages to first-class mechanics, as this system does not employ cheap labor or handy men. Think this over when you are taking your vacation; also tell your friends to ship their freight over these lines and help the good cause along. Spend your money on the roads that are fair to us, and boost for your friends.

R. W. SMITH,
ARCHIE ALLISON,
DONALD McIVER,

Boiler Makers' Boosters' Committee.
Local 473, Helper, Utah.

Chattanooga, Tenn.

Dear Sir and Brother:

Just a few words about a labor forward movement just pulled off in Chattanooga; it was very successful in every detail, especially the metal trades, and we attribute major portion of our success to the International Brotherhood of Boiler Makers in sending Second International Vice-President Nolan here at the time. The boiler makers had made no preparations to take any part in the forward movement. Brother Nolan came in and got what few men together that would try to hold a meeting, and got an organizing committee started out, accompanied by himself. He saw every

boiler maker in this vicinity and held several good, enthusiastic meetings; the result was that instead of four or five of the faithful trying to do business, they all turned out. The regular attendance is 30 to 40 every meeting night and every one a booster; several new applications at each meeting. Brother Nolan has laid a foundation for a good Metal Trades Council, which will be organized this month. All metal trades are in a fairly good condition, regardless of the financial depression we have had for over 18 months. Several non-union shops cut wages 10 per cent. The Casew Hedges Boiler Manufacturing Company was the first to cut wages; it is the worst non-union shop in the country. No Union shops have cut wages here and but a very few union men out of work here, but several hundred non-union men are idle and some of them have commenced to wonder, does it pay to organize.

I am glad to note your valuable Journal is keeping pace with the times and would like to urge every man working at the trade to read it through every month and give it to some non-union man to read. We hope to have Brother Nolan with us at every opportunity, as he was beneficial to all metal crafts.

Brother T. J. Garvey, president of District No. 13, paid us a visit last month and addressed a well-attended meeting of boiler makers and machinists and reports things in good shape on the Southern Railroad and along lines from an organized view or standpoint. Fraternally submitted,

TOM HALL,
Local Organizer A. F. of L.

Portsmouth, Va.

Dear Sir and Brother:

The convention of the Virginia State Federation of Labor held at Fredericksburg, Va., June 7, 8, 9, 1915, there were 200 delegates in attendance, including ten ladies representing the garment workers. The feature of this convention was that every delegate that was eligible to become a voter had to qualify himself before he could take part in this convention. Older delegates who have attended these conventions for years claim this was the best one yet. For the first time in the history of the Federation, Norfolk, Portsmouth, Newport News and Roanoke, Va., worked together as a unit, and there is a reason to believe that this convention and the business way that it was conducted has created better feelings and understanding than ever before between the tide water section of organized labor—that is the sentiment of the rank and file.

The boiler inspection bill was unanimously endorsed at the first reading, and we have every reason to believe that it will be a preferred measure at the next session of the Legislature, as we have one boilemaker on the legislative committee, the writer, and I hope that the brothers throughout the

state will appreciate this consideration that was given our craft by electing one boiler-maker out of a committee of five, therefore I hope every boilermaker of organized labor in this state will consider it is his duty to work for the endorsement of this boiler inspection bill, and not only vote for men that will support the measure of organized labor, but use your influence on others to do the same. This boiler inspection bill is the same as the Kansas bill, with a few changes. The Kansas bill reads "labor and industry commissioner;" our bill reads "labor commissioner" of Virginia. Instead of ten years' experience ours reads five years. Instead of bond approved by executive board, ours reads approved by labor commissioners. So you see I have taken your advice so far and have been successful, and if there is anything you can advise me appertaining to the future success of this bill I will appreciate the same, as I would like to get this bill before every local in the state. I have an idea, but I think you have a better one, so if I am not asking too much of your valuable time I will ask you to assist me.

Hoping this will be satisfactory, will close with best wishes for success and the welfare of the brotherhood, I am

Yours fraternally,

H. E. PHELPS, Local 57.

Springfield, Mo.

Editor of Journal,
Dear Sir and Brother:

I will be pleased to be given a little space in the next issue of the Journal, as I have two pictures which I would like to have produced with this article. These pictures show a traction engine after it had exploded on account of no inspection and being allowed to run in an unfit condition.

The accident occurred five miles north of Springfield, Missouri, July 8th. You can see in cut No. 1 that the boiler reared up and fell over on its back. In cut No. 2 you

A VIEW OF A BOILER EXPLOSION.

can see the rest of the boiler laying by the side of a tree, which is two hundred yards from where the remainder of the engine is laying. The water tank was standing to the right of the engine in cut No. 1, and was blown through the end of the house,

knocking dishes from the table, the windows out and knocking the chimney down. The cause of such an explosion is the lack of a state boiler inspection law in the State of Missouri, which would require every owner of a boiler or boilers, to have them inspected to assure the safety of the public. Everybody seems to be taking a hand these days in the "Safety First" move, but for some reason our good legislature loses sight of the state boiler inspection law.

I desire to say a few words relative to conditions in my district. For the last ten months the Frisco has been working very short time; some back shops on five days per week, eight hours per day; others four days per week, eight hours per day. When a man quits, they have not been hiring a new man to take his place. However, I am pleased to say things have taken a slight change for the better. All back shops, with

ANOTHER VIEW OF THE SAME EXPLOSION.

one exception, are on six days per week and eight hours per day. I have heard of only two new boiler makers having been taken on over the entire system, still we should be thankful for small blessings and we all admit six days per week is much better than four. Business looks pretty good, but so far seems to have gotten only to the door, where it seems to have hesitated whether or not to enter. From the present outlook, I trust within a very short time, working conditions on the Frisco will be almost normal again.

I would be glad to hear through the columns of the Journal, reports from representatives in various parts of the country relative to conditions in their territories. I trust if any of you should have explosions similar to the one I have described above, you will send a picture of same to the Journal, which might have a tendency to teach the people the need of an inspection law.

Trusting I have not occupied too much space, and thanking the editor for his kindness in permitting me to converse with the members of the organization through the Journal, I am, with best wishes to all

A. F. BINGHAM,
Pres. & B. A. Dist. No. 23.

Gassaway, W. Va.

Dear Sir and Brother:

Enclosed is a picture of boilermakers and helpers employed at the Gassaway shops, which we hope, "if space permits," to see in the next issue of the Journal. It affords me pleasure to state that each one is a member of Local 135, and stands loyal to his

Take our latest issue "July," not a single article concerning our affairs except three officers' reports and only Brother Nolan's report has any dates, others as a rule are several months behind. Why?

As for your reasons for not printing correspondence concerning our affairs I want to say I have copies of the journal since

A GROUP OF THE BOILER MAKERS AND HELPERS, LODGE No. 153, GASSAWAY, WEST VIRGINIA.

brotherhood. We may not look just as nice as some well-dressed bunch among flowers and shrubbery, but look at our monthly report. That's where we make our showing.

Any one coming this way for work must be sure their card is A No. 1.

With best wishes to all I beg to remain,

Yours fraternally,

S. C. DAVIS,
C. and F. S. 153.

Washington, D. C.

Dear Sir and Brother:

I am writing a few lines in regard to our Journal which seems to be almost useless to our organization on account of the strict censorship of its pages, especially since the recent decision to eliminate all correspondence concerning the affairs of our organization. I would ask how are we to know the views of the membership unless through the pages of our Journal? We cannot communicate them any other way without violating our constitution and to wait until our next convention to exchange views it would be too late to give questions due consideration.

1903, and in many of them our members have abused each other in any but brotherly terms without a word but as soon as the abuse goes higher it is stopped. This is not fair and if such a thing happened in public affairs I don't know what would happen, I for one, and I am sure many others would like to read about the work of our organization, what is being done. I notice in the A. F. of L. report for 1914 our organization won (6) six strikes—I would like to know where they are. I never knew we won a strike, what became of 369 and many more questions I would ask if I may which would be interesting to our readers.

Trusting I may see this in the next issue and you will again open the Journal to our readers, I remain,

Fraternally,
GEO. P. SMITH,
F. S. L. 450.

A Reply by the Editor.

The writer of the above article speaks of the strict censorship maintained over the Journal, and asserts that a recent decision

was made to "eliminate all correspondence concerning the affairs of our organization." This is an erroneous statement, as no such decision was reached; therefore, arguing from false premises, the brother has reached wrong conclusions. What the editor recently decided to reject was muckraking, mud-slinging articles containing personal abuse and fault-finding. Any mutt can knock and find fault, but this does not tend to build up our organization, but, on the contrary, creates bad feeling and tends to disrupt our membership.

The above article could have been rejected, because it came under those prescribed in our recent announcement; still, as most of its criticism seems to be directed against the editor, we are reproducing it with this statement and leave it to our members to judge.

We do not fear criticism; in fact, we believe fair criticism, honestly and conservatively put, sometimes does good, as we are all human and liable to err, and these give us the other side of the question; however, before such is made, we ought to be sure we are right and the object should be to remedy a fault rather than create a disturbance.

The brother asserts that many issues of the Journal since 1903 have contained abusive articles; we fail to see how this can be used as a justification for the continuance of the practice or what can be gained by so doing.

In the latter part of the article he asks a number of questions, which would, no doubt, be promptly answered were they addressed to the executive officers in charge of these matters; however, it looks as if the brother wanted to air his opinions rather than secure the information. What the organization needs more than anything else is to eliminate this spirit of criticism and fault finding and give a helping hand to those who are helping to build it up and extend its sphere of usefulness.

THE EDITOR.

Seattle, Wash.

Dear Sir and Brother:

Brother William Shanlay, Reg. No. 1006, died on June 5. He was buried in Calvary Cemetery on June 9. He had a very nice funeral and it was very well attended by the brothers.

Leonard Parant, father of Brother George L. Parant, died on June 25 and was buried in Calvary Cemetery on June 26.

Mrs. B. Martin, mother of Brothers James and Robert Martin, died on June 22. She was buried in Calvary Cemetery on July 3.

May they all rest in peace. They were all fortified by the rites of the Holy Mother Church.

With sincere good wishes and kindest regards, I remain

Yours fraternally,

DAN P. MCKILLOP.

Chicago, Ill.

Dear Sir and Brother:

Just a few lines to all the locals of the Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America, that the Auxilliary to their Brotherhood is progressing. This letter is written with the hope that every local of the Brotherhood will put their shoulder to the wheel and have the courage and gallantry to say we, too, will have an auxilliary to our local. Brothers, we need you and you need us; just give us the helping hand and see how willing and helpful we can be in your very own struggles.

Local No. 454 deserves special mention and highly commended for their efforts in our behalf. This class of men that value and appreciate the qualification of woman-kind, assumed the initiative work by having a ladies' night at their regular meeting place and thus obtained the names of eligible women and in due course of time had their charter and all other paraphernalia for the women to go right ahead with their part of the work, and on June 24 the members of Stoney Island Lodge No. 17, Ladies Auxilliary to the Brotherhood of Local No. 454, were duly elected and installed by Sister Mollie Geary, Second International Vice-President, and assisted by Sister Rose Green, Conductress of Garfield Park Lodge No. 12. The International officers are more than pleased to see this march forward, and Chicago has an especially large field with eight Brotherhood locals. We ought to have eight auxillaries.

No doubt uninformed brothers will think and say, well, get out and do something. Now, brothers, be honest with yourself; ask and answer this question: Can any one person (with only the wages of a workingman) stand the expense of getting out and organizing? But give us your co-operation and watch our strides; with your continual guidance we can fit ourselves for the many struggles that beset the pathway of our union working people, and the credit will be all yours, and not ours.

Now a few words to the sister lodges; never be discouraged; let each officer set a good example by attending the meetings regularly, and at all times give every member something to do; impress them with an individual importance and that nothing can be well done unless each and every one will do their part to the best of her ability. Remember, sisters, there are no laurels in holding an office; the only honor is when an officer has the love and respect for harmony from every member in her lodge, and thus lighten the burden of responsibility, and when differences of opinion (and that is all it is) come up in the lodge room, remember that is one of our cherished rights to have our own opinion and to think as we please, but to say the things we think would be fatal in the cause of harmony and justice. When a question or argument is being debated, let it be based in sisterly love and

individual rights and privilege, and that majority rules.

Sisters that have had no lodge training and sisters that have should study parliamentary ruling, as the technicality of the law has saved some people from hanging. Follow the constitution and ritual in the spirit they were written; let us be the guiding star to our fellow creatures, by being unselfish and untiring in all our efforts by being charitable in thought, word and deed, to our enemies, as well as our friends, and by practicing the Golden Rule, and thus ennobling ourselves.

With the very best wishes to every brother and sister in our noble order, I remain
Yours fraternally,

MOLLIE GEARY,
Second International Vice-President.

Tacoma, Wash.

Dear Sir and Brother:

Inclosed please find picture of Foreman Strinsky and the apprentice boys of the Milwaukee shops in Tacoma; some of them

far, but there is no reason why at least two yards on the Atlantic Coast and the same number on the Pacific should not be equipped to build any of the ships needed."

"You follow this up by stating that twenty-two or twenty-three years ago some large and powerful vessels were built at the Norfolk Navy Yard, and contend that inasmuch as lots of efficient mechanics abound in that vicinity, and owing to the fact that it has increased its facilities recently argues well for it having a ship on the stocks all the time. Good for New York and Norfolk Navy Yards. All credit to them; may they always have a ship on the way. But, my dear Mr. Editor, why special mention of New York and Norfolk Navy Yards; do you fail to recognize that the navy yard that serves the needs of the country most lies midway between these two? Surely if the other yards have had the benefits for a quarter of a century, don't you think that if you are sincere in lending a helping voice to the development of navy yards you should

FOREMAN AND APPRENTICES, MILWAUKEE SHOPS, TACOMA, WASH.

look rather dark complected, but I assure you that it not their natural color. They have handed me this picture, as they would like to see it in our valuable Journal, so please have it reproduced and put in the next issue if possible.

Yours fraternally,
A. W. RICKETT, S. L. 568.

Philadelphia, Pa.

Dear Sir and Brother:

Referring to your editorial on "A Large Increase in Building Program of Navy" in June issue, we note the following phrasing in your editorial: "New York has got most of the ships built in government yards so

recognize the development of the Philadelphia Navy Yard?"

Can you think of any community that compares to Philadelphia for mechanics on marine work? We can boast of the fact that we can start and complete a ship in its entirety with the natural resources from our own state. Can the other? We think not. Now, Mr. Editor, we want you to print this in the next issue of Journal, and hereafter when the battleship subject arises, you must not fail to recognize that Philadelphia has sent to sea some of the most powerful vessels afloat, and with home labor, too, so we write you these lines to let you know that our section has as many efficient mechanics

and facilities equal to any and better than some.

With best wishes to the Brotherhood at large and especially the navy yard lodges of the country, we remain

Yours fraternally,
 PHILADELPHIA LODGE No. 19,
 R. S. HOPKINS, C. S.

P. S.—We would like to see some communication from the other navy yard lodges so as to keep in touch with one another and in this way we can become more acquainted and educated to one another's needs.—R. S. H.

In writing the article referred to, the editor broke the bounds of his editorial sanctum, and tried to imagine himself as a naval strategist and as such desired to select the two yards which, by location, would be the logical points to locate naval bases; however, he did not want to detract from the merits of Philadelphia as a ship-building center, especially as it is the home of Lodge No. 19, one of the most progressive navy yard lodges in the country. In giving out work, no doubt Legue Island will be cared for.—The Editor.

BUILDING TRADES COUNCIL IN AFFILIATION WITH BUILDING TRADES DEPARTMENT AMERICAN FEDERATION OF LABOR.

Resolution.

The following resolution has been endorsed and adopted by the Milwaukee Building Trades Department of the American Federation of Labor:

Whereas, The B. J. Johnson Soap Co. of Milwaukee, Wis., manufacturers of the following brands of soap to-wit: the Borax, Calumet, Etna, China, Ajex, Galvanic, Badger, Johnson's Naptha, Palmolive Soap, Palmolive Shampoo, Palmolive Cold Cream and the Johnson's Washing Powder, all of which is being manufactured in a building erected and constructed almost entirely by NON-UNION LABOR; and

Whereas, Every proposition to a fair and honorable adjustment of the now existing difficulty has been made by the Milwaukee Building Trades Council to the B. J. Johnson Soap Co. for them to employ UNION LABOR in the erection and construction of their new buildings; and

Whereas, The cardinal principle of ORGANIZED LABOR is that we "patronize those that patronize us;" therefore, be it

Resolved, That the American Federation of Labor and the Building Trades Department and their affiliated International Unions, State Federations of Labor, city central bodies and the membership thereof be made familiar with the true facts and at-

titude of the B. J. Johnson Soap Co., who employed NON-UNION LABOR in the erection and construction of their new buildings.

Endorsed by Boilermakers and Helpers, Local Union No. 107.

Danville, Ill.

Dear Sir and Brother:

We would like to have this notice placed in next month's Journal:

Local No. 360 won the watch that was raffled off by Local No. 22 to get Brother A. Thompson an artificial leg. No. 652 won it. We would like to thank all the lodges and brothers that helped us and this brother to get his leg; the brother gets along fine on it.

Trusting this will be satisfactory, and with best wishes to all, I beg to remain

Fraternally yours,
 WM. J. IRWIN, C. S. L. 22.

MISS GERTRUDE CURE OF DENVER, COLO., AND MR. AND MRS. JOHN CURE OF TEAGUE, TEX.

Kansas City, Mo.

Dear Sir and Brother:

This letter will acknowledge receipt of your letter dated July 9, in regard to contributing an article for the Journal each month. I believe your suggestion is a good one and should be followed up, as it will no doubt take some time to get the men interested in same. While I make a quarterly report to all locals in my district, the other locals do not get the information.

The Machinists' Journal is very progressive along this line. If there ever was a time the laboring class should stand together, it is right now, and unless we are willing to accept another brother's ideas that will benefit the labor movement, I am afraid that we are going to meet with a situation that will prevent us from improving our conditions and wages for some time to come; as I have several important matters that I must look after on my district, I will be unable to send you a report for this month, but will try and have something for the next month's issue.

With best wishes and the interests of our organization at heart, I beg to remain

Yours fraternally,
C. A. McDONALD,
B. A. Dist. No. 5.

Wilkesbarre, Pa.

Dear Sir and Brother:

Having made a study of conditions in the different labor organizations and laws of a few, I cannot help but write a few lines on same. I find in every labor constitution and by-laws a law which reads that the members shall buy goods which are union-made and which have the union label on them.

Now in making a study of this law I find that the brothers do not do their duty. It is a shame to go to some meeting and find only three or four members present which I have found in different union meetings. I think a good many who read this will agree with me that a good many members of labor unions are only what are called card men—just belong to a union for the sake of carrying a card. Never attend a meeting, buy any kind of goods or clothing, and don't care. Now you cannot be a union man at heart and buy scab-made clothing and wear them and not attend your meetings and help keep your union in business.

You are all aware of the fact that it is our duty to try and do away with child labor, sweat shops and prison labor, as true union men, and every time we get the union label on anything we buy it is a point gained, and every time we buy clothing or other articles without the union label we are helping to keep child labor, sweat shops and prison labor. Therefore it is our duty to attend our meetings, buy nothing without the union label, to be a true union man. So be a union man at heart, and not a card man.

Hoping to see this in our next edition of the Journal, I beg to remain,

Fraternally yours,
T. J. CAVAN.

East Boston, Mass.

Dear Sir and Brother:

Lodge No. 585 participated in another of the series of mass meetings held June 28th in East Boston under the auspices of the Metal Trades Council of Boston in the organizing campaign still on. Brother Daniel N. Generson of Lodge No. 585 made a ringing speech in behalf of the legitimate rights of organized labor, and International Organizer Charles Scott pointed out in no uncertain terms the expediency of a well regulated amalgamation of union workmen in the different metal trades crafts.

At our last regular meeting a representative of Boston Central Labor Union presented to the members' attention the case of the department and dry goods store, the girls of Barre, Vermont, who have been out on strike since April 1 in an effort to obtain a minimum weekly salary of \$6. Miss Emma Sevegnay of Barre made a very convincing

appeal for financial assistance for her associates, and Lodge No. 585 voted a substantial donation to the girls who have shown wonderful sagacity in conducting their righteous battle for a living wage. The action of the lodge in so doing was warmly advocated by President William McNabb, Treasurer Bernard McDonnell and Brothers William Clouter, Charles F. Smith and John Warneck.

We are pleased to hear that Brother Edward Scrivins, who has brought many new members into the lodge, is rapidly regaining his usual robust health, which was greatly impaired of late. Ed Scrivins is one of the best boys in the country and one of the most consistent union men in our organization.

Lodge No. 585 has recognized the services of Brother John Dennis on tank jobs by tendering him a rising vote of thanks. Brother Dennis has an able lieutenant in Brother Thomas De Freitas, who is known from Maine to San Francisco as the "popping-off kid." Brother De Freitas may have an elastic tongue, but its principal function consists in telling men "why" they should belong to a trade union, and he enjoys the confidence of many leading lights of our brotherhood, including that true apostle of scientific trade unionism, that chivalric knight of our organization, Sixth International Vice-President John J. Dowd.

Lodge No. 585 has heard with great regret of the passing on to the great beyond of Jeremiah Leary (father of Ex-Alderman Michael J. Leary of Boston), an old-time boilermaker and ship fitter, an old and faithful member of old Lodge No. 9 until his retirement from the business several years ago.

Our statutesque trustee, Brother Augustus E. Page, and his estimable wife are receiving the congratulations of the many friends in Greater Boston over the recent birth of handsome twins, a son and a daughter, and at last accounts mother and children were doing nicely, as the medical fraternity would say.

Our live wire president, Brother McNabb, is constantly on the alert to prevent if possible any non-union boilermakers or helpers from performing any kind of repairs or construction work in breweries which are "right," and in a future article I may have a very interesting story to tell concerning this crusade of Brother McNabb.

It is a pleasure for the writer to state that Brother John J. Farrell, although somewhat past the meridian of life, is still hale and hearty, and working at the business at the flange fire every day.

The "old reliable war horse" of boilermakers' union in this section of Boston is no figure of speech when applied to John Farrell, who has been true blue in storm and sunshine, and who, in an industrial atmosphere permeated with sycophants (who have forgotten the source of their present "revenues" and conditions) is never

ashamed to admit that he is a union man. As on former occasions members of this lodge will be seen in a live Boston Labor Day parade in their capacity as delegates to the Boston Central Labor Union, etc.

Fraternally yours,

DANIEL B. McENNIS,
S. L. No. 585.

Wichita, Kas.

Dear Sir and Brother:

At a special meeting of Lodge No. 518, International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America, the following resolutions were adopted:

Whereas, God in his infinite wisdom has removed from this world of strife and toll J. Devlin, a brother of J. M. Devlin, of Lodge No. 518;

Resolved, That we, his brothers, extend to the family our heartfelt sympathy and condolence in this sad hour of sorrow and grief; and be it further

Resolved, That a copy of these resolutions be sent to the Journal for publication, a copy to the family and a copy spread on the minutes.

W. O. WILBURN,
G. W. THOMPSON,
DICK RAMSEY,
Committee.

Kansas City, Kas.

Dear Sir and Brother:

As it has been some time since Local No. 83 has been in print, I thought I would take this opportunity of letting the brothers know we are still doing business at the same old stand.

I take great pride in informing you that one of our brother members has dropped from the ranks, but to an elevated position. Brother Theo. A. Conroy, boiler-maker, Register No. 68428, has been appointed postmaster at Buckhart, Mo. I am certainly glad to know that some of our fellow members have the progressive spirit, and while I am always sorry to lose the membership of a good brother, I congratulate him on his appointment and take this public means of telling him so and letting the other brothers know.

It is certainly something for Local No. 83 to feel proud of that we can send men to serve Uncle Sam, but I have always known our little bunch, despite their ups and downs, and generally more downs than ups for the last 12 months, would climb somewhere after awhile. I hope to see more of our members get a move on them for the better. Every man that tries to help himself in the right spirit also benefits his fellow man.

We are doing pretty well in our local these rainy days, and I hope to be able to send in some more news of a progressive nature at an early day. Congratulations to Brother Conroy from No. 83, and with best wishes to all our members,

Fraternally and respectfully,

FRANK STOVER, S. L. No. 83.

Post prize is given to Grand Junction anglers, 7 pounds, 5 ounce trout, E. H. Friend, and the prize lochlever trout caught by him in the Gunnison river. The fish weighed 7 pounds and 5 ounces after reaching Denver. A lochlover trout weighing 7

BRO. E. H. FRIEND, OF GRAND JUNCTION, COLO., AND HIS PRIZE FISH.

pounds and 5 ounces has been received by the Denver Post from E. H. Friend of 308 Pitkin avenue, Grand Junction, Colo., who caught it. Friend was awarded a prize of \$25 offered by the Post for every trout weighing over 7 pounds when weighed at Denver.

The trout was caught at Mile Post 303, near Richards' place on the Gunnison river, Saturday evening. According to Friend's statement, it weighed 8 pounds a few minutes after it was landed.

The prize winning fish was caught after a long struggle on a silver doctor fly No. 2 baited with a willow fly. The trout is being frozen in a cake of ice, and will be on exhibition in the business office of the Post within a few days. Friend is a boilermaker in the D. & R. G. shops at Grand Junction, Colo.—Denver Post.

The above clipping is from the Denver (Colorado) Post in reference to the award-

ing of a prize to Brother E. H. Friend of Grand Junction for catching a trout, and the photo shows both Brother Friend and the fish.—The Editor.

Danville, Ill.

Dear Sir and Brother:

Enclosed you will find resolutions we would like to have printed in the next issue of the Journal:

Whereas, It has pleased the Almighty God in his infinite wisdom to remove from our midst Brother Christ. Freese, be it

Resolved, That Local No. 22, Boiler-makers, Iron Shipbuilders and Helpers of America, do hereby extend our utmost sympathy to the bereaved family, and a copy of these resolutions be sent to the family, a copy sent to the local and a copy sent to the Journal for publication, and our charter be draped for 30 days.

FRANK JERGENS,
HERMAN POGGENDORF,
WILLIAM J. IRWIN,

Committee.

Des Moines, Iowa.

Dear Sir and Bro.:

I have been asked many times by traveling brothers why they never see anything in the official Journal as to the conditions on the Rock Island as it would be helpful to them in securing employment should the company be hiring men. Will say that while very few boiler makers are being hired and know of no opening at the present time due to the fact that at many points on the system they have scarcely recovered from the depression in business, which lasted for several months when release came at most points about the first of April. It was quite severe at many points, practically eliminating the shop forces and reducing the force in many round houses. Notwithstanding this fact the Rock Island has worked more boiler makers and helpers and better hours throughout the system for the past year than most roads within its territory and when the business warranted the return of men to work a special effort was made to reach men laid off, advising that their positions were again open if they desired to return, and am pleased to state that only a very few failed to keep the shop committee and officials advised of their address, when away from their local point and promptly returned to work according to their seniority of service.

A few new boiler makers have been employed at Shawnee and Chickasha, Okla. Chickasha has a rush of business at present in addition to regular up-keep of power on account of converting a number of coal burning locomotives into oil burners. We have recently obtained a letter issued by the company dealing definitely with returning men to work after being laid off and which will aid materially in handling the work and eliminating a great deal of

argument as to what is the proper thing to do as to leaving address, who will do the notifying, at a specified time to report for work. The sense of the letter as follows:

In the event of a reduction of forces of any class of shop employes covered by our schedules, the employes laid off will sign a memorandum form in the office of the master mechanic or the foreman at the point employed, giving his address where a letter or notice will reach him in the event of a resumption of work at the point at which he is laid off, the original of the memorandum to be retained by the man and a carbon filed in the office in the senior employing officer, at the point where the man is laid off.

When vacancies are filled or force increased the senior man laid off in any of the crafts will be given the opportunity, seniority be governed. The shop chairman at the point will furnish list of names of senior men desired and he will see to it that they report for duty within two weeks of the time he is served with such notice, or the position will be considered vacant.

You are always privileged to employ temporary men to fill these positions, pending the return of senior men. Men so employed should be notified that the positions are temporary. At minor points where no shop chairman is available, the employing officer will notify the senior men of the craft effected by mail, retaining a copy of the letter. In the event no word is received within fifteen days from date of mailing the letter these positions will be considered vacant.

Working conditions on the Rock Island are fair due to the interest taken by the employes to see that the contract is complied with by both the company and the men. It is not out of the ordinary for some local officials to violate the agreement when it is to their interest to do so and it is up to the men employed at the point to protest against such actions which in most cases is being done. I am very sorry to say that we have some members who do not take enough interest in their own welfare (say nothing of the welfare of others and the organization at large) to work as close to the line as they should for it is very necessary that the men hew to the line in order to be in position to properly deal with any violations that may take place from the official side of the table. The careless attitude by some of the men, I think, is brought about through lack of attending meetings regularly and in so doing they are not familiar with the business of the organization. I find throughout my territory in conversing with boiler makers through other lines that a like condition exists. We have a local federation organized at every point on the system where all crafts are employed which aids materially in handling differences, but in some cases are not attended as they should be in order to have the proper understanding of the differences that arise

and the contract covering same as they arise very frequently.

A few days ago a violation of contracts was inaugurated on the Kansas City, Mexico & Orient at Wichita, Kas. Brother Franklin asked me to investigate the trouble and adjust it if possible. On getting in the matter I found that the boiler makers' special rules in the joint agreement covered drilling of stay bolts and quite a number of new fire boxes are going to be applied at that point.

Since the signing of their agreement, Sept. 1, 1914, the company had installed a radial drill press and they propose now to revise the rule in the boiler maker special rules permitting machinist's helper to do

the drilling of stay bolts for fire boxes where the radial drill can be used, instead of boiler makers doing the work as per agreement. This simply demonstrates what our contracts are worth, not only on the Orient Railroad, but all others, who have contracts, and it is very necessary that all members working under agreements insist that they be complied with, for if we submit to the company compromising on one rule today because it happens to be to their best interest they will seek to either misinterpret, sidestep or compromise two rules tomorrow.

Yours fraternally,
GEO. W. PRING,
Gen. Chairman Boilermakers.

A Compilation of Labor News.

BY THE A F OF L NEWS SERVICE

INJUNCTION RULE IS KINGLY.

Zion City, Ill.—Secretary-Treasurer Olander of the State Federation of Labor addressed a public meeting in the interest of lace makers who have been locked out and enjoined by court orders from calling on employes of the Marshall Field lace factory "for the purpose of inducing them to leave their employment."

Secretary Olander said these injunction judges substitute a form of personal government for government by law. He showed that law courts have invariably held that peaceful picketing during a strike to be lawful, but that regardless of such rulings the equity courts forbid such picketing, and thus virtually set aside the law. The right to combine with others in the exercise of lawful personal rights, and to induce others to do likewise, is upheld in the law courts, but is denied and forbidden in many instances by the equity courts. The right of trial by jury provided by the constitutions of both the nation and the state is never denied in court of law, but the right of trial by jury is seldom, if ever, recognized by judges sitting in equity and assuming the right to themselves to act in the triple capacity of prosecutor, judge and jury. The injunction process as used against working people on strike is based upon the old Roman theory that the citizen has no rights except those accorded him by the government. This is in direct opposition to the Saxon theory, upon which American law is based, that the government may exercise only such rights as are accorded it by the people.

The speaker also pointed out that several of the acts forbidden by the injunction issued against striking lace makers are held by the United States Congress to be entirely proper and right, because these acts are specifically permitted by the Clayton act. The members of the National House of Representatives and Senate, by the passage of a law prohibiting the issuing of such injunctions by the federal courts, have specifically given their approval to the exer-

cise of the various rights which certain judges in state courts undertake to forbid.

COOLIE-MANNED SHIPS SOLD.

San Francisco.—The Dollar Steamship Co. has sold two of its vessels to parties in Vancouver, British Columbia, according to statements by Captain Dollar. This ship owner has sold vessels before, but the seamen's bill is blamed for the present disposal. Lately Captain Dollar has been in the public press almost continuously with threats to change the registry of his ships from American to British because of the seaman's act, and Editor Scharrenberg of the Coast Seaman's Journal makes this comment:

"The one consoling thought in the whole affair is the knowledge of the fact that no American will lose his job because of this transfer. The same coolie crew and the same alien officer who manned the Dollar steamers during their temporary sojourn under the Stars and Stripes will remain on those ships under the Union Jack.

"It so happens there are no Americans on these American (?) ships. So the change in registry will be exceedingly simple. It means a change of flag and nothing else. Yet Captain Dollar will continue to pose as the first shining victim of that horrid, abominable seamen's act. He will continue to tell the simple Simons from Maine to California that he could no longer compete with foreign ships because of the onerous conditions regarding the character and comforts of the crew, etc., imposed upon his ships by an ill-advised Congress.

"Yes, indeed, it is simply awful for Americans to contemplate this awful loss. But our British friends need not rejoice. Captain Dollar will keep them on the jump with frequent threats to change his vessels to Chinese registry.

"Captain Dollar will never be perfectly happy until he finds some nation which permits him to run his ships just as he pleases, without any kind of restrictions or regulations whatever."

JOHN R. LAWSON GIVEN LIFE TERM.

Trinidad, Colo.—“Fresh from the employment of the coal operators of Colorado, including the Rockefellers, who have engineered these prosecutions, yourself a coal company attorney, you were so prejudiced against me that my case in this court was a travesty on justice.”

The above is a portion of the statement read by John R. Lawson when Judge Hillier denied him a new trial and sentenced him to imprisonment for life on the charge of causing the death of John Nimmo, a mine guard, October 25, 1913.

At times Lawson's lips trembled. It was not a physical fear, but a choking emotion as the unionist recalled outrages inflicted on Colorado miners.

Lawson called Judge Hillier's attention to the fact that the state supreme court is now reviewing claims of unjudicial conduct on the part of the ex-coal company attorney.

“You refused to permit the jury,” he said, “to be drawn from the regular jury box provided by law, and you ordered an open venire. This method was exactly adapted to procure what none were surprised to discover, a hand-picked jury of coal company artisans.

“Nothing was to be permitted to stand in the way, and it is significant that even a jury so selected refused to convict me until a bailiff selected by you, according to affidavits on file in this court, tortured a jurymen with manufactured reports of the dangerous illness of the juror's wife, and as a final stroke warned the jury that under your orders that jury would have nothing further to eat until they rendered their verdict.

“Solemnly facing iron bars and prison walls, I assert my love for justice and my faith in its ultimate triumph; not a justice of theory, but of reality, extending to men, women and children, whose proper equality of opportunity it embraces.”

The sentence will be vigorously contested. Lawson's attorneys are now preparing appeal papers.

WOULD JAIL ROCKEFELLERS.

Chicago, Ill.—“If the next Congress represents the people of the United States its first act will be to cite before it John D. Mackenzie King, their tool. And if these Mackenzie King, their tool. And if these men continue to defy the nation they should be indicted for crime against the government and sent to jail.”

Frank P. Walsh, chairman of the commission on industrial relations, made this declaration before several thousand men and women at a mass meeting called to protest the trial and conviction of John R. Lawson.

The demand that the Rockefellers and their press agent be jailed was made in connection with the refusal of these men to answer certain questions put to them

while before the commission on industrial relations at Washington.

“The case of Lawson is the case of the mine operators and the mine workers,” continued the speaker. “The Colorado Fuel and Iron Company, which John D. Rockefeller rules through his son, and of which Lamont M. Bowers, chairman of the executive committee, was local representative on the ground, controls Colorado industrially and politically. Realizing they could not secure the conviction of the miners in any other way, they had a bill passed in the legislature creating a new judicial district; and the newly elected governor appointed to the new judicial position thus created a lawyer who had served in a subordinate capacity on the legal staff of the corporation. With this lawyer as judge, even then it was found necessary to pack the jury in order to obtain conviction for murder.

“In the trial of Lawson the honor and integrity of the United States judiciary is absolutely on trial.”

James Lord, president of the A. F. of L. mining department, and Mother Jones also spoke. The former declared that John D. Rockefeller directed the mine operators, and he should be tried and convicted of murder for the massacre of the innocent women and children at Ludlow and the murdering of the different leaders in the ranks of the strikers who were slain by his gunmen.”

MINERS WANT EIGHT HOURS.

Scranton, Pa.—International President White and officers and members of the United Mine Workers' Union are conducting the most extensive organizing campaign in the history of the anthracite coal fields. The campaign will continue until next Labor Day, when representatives of the three anthracite districts will meet to prepare demands of the miners for presentation to the operators.

The first of next April the present agreement expires and the miners are strengthening their lines for this event. While they are not discussing a strike at this time, the history of the miners is that of every other organization—preparation makes peace possible. President White has taken personal charge of the campaign. He is addressing one and two meetings every day. Monster parades are a feature of these gatherings. It is estimated that there are now 50,000 unaffiliated miners in the anthracite region. On this figure the organizing campaign managers base their hope for a 100 per cent organization, and have adopted as their slogan, “After fifty thousand converts.”

“Organize” is heard from every platform in the three districts. “Those who would be helped must first try to help themselves,” declared President White in one of his speeches. “Operators do not look upon the mine workers' organization as the representative of the non-affiliated miners; they only count the strength of the organization. Consequently the fellow on the outside of the union is the best friend of the operators.”

To show his faith in organization, President White makes this pledge, which is receiving hearty indorsement by the miners who know what trades unionism has accomplished:

"Give your representative a 100 per cent organization and we will secure for the men of the anthracite region the eight-hour day and other ideal conditions for which you have longed for lo these many years."

JOURNEYMEN TAILORS' UNION RESUMES A. F. OF L. AFFILIATION.

Washington.—The Journeymen Tailors' Union is in full affiliation with the bona fide trade union movement, and the label of that organization is again recognized by the American Federation of Labor.

Differences have existed between the Journeymen Tailors' Union and the American Federation of Labor because of the former's assumption of jurisdiction over other garment working trades, contrary to charter guarantees of the interested unions and the constitution of the A. F. of L., which provides for action by the convention in such cases.

As a result of decisions by the last A. F. of L. convention, the Journeymen Tailors' Union held a referendum and decided to assume their original title and jurisdiction.

The following letter from President Gompers to General Secretary Sweeney indicates that this controversy is now happily ended:

"Washington, D. C., July 10, 1915.

"Mr. Thomas Sweeney, General Secretary Journeymen Tailors' Union of America, Corner East Sixty-seventh Street and Stony Island Avenue, Chicago, Ill.:

"Dear Sir and Brother—Your favor of the 8th instant to Secretary Morrison was, by reason of the action of the executive council of the American Federation of Labor, turned over to me for reply, and I cannot adequately convey to you the great gratification which your official announcement gives that by the referendum vote of the membership of your union, the question of amalgamation, jurisdiction, title, etc., has been in full compliance with the decisions and declaration of the Philadelphia convention of the American Federation of Labor, and the direction of the executive council thereon. Therefore, in conformity with the action of the Journeymen Tailors' Union of America, and in compliance with the instructions of the executive council of the American Federation of Labor to the undersigned, the Journeymen Tailors' Union of America is recognized in full affiliation with the A. F. of L., the indorsement of the union label of the Journeymen Tailors' Union America is hereby restored, the monies forwarded by the general secretary of the American Federation of Labor in payment of per capita tax of said organization, and held in abeyance, is hereby directed to be received by the secretary of the A. F. of L. and receipt for the same forwarded to you by Secretary Morrison.

"And now, permit me, not only in my own name but in the name of the executive council and the name of the great labor movement of America, to express the gratification which we must all feel that our former good relations have been re-established, and to express the hope that great benefit shall come to the tailors, to all the workers in the garment trades, as well as to the workers of all trades and callings. Rest assured that every effort will be made by our movement to be helpful to your organization and your members.

"Permit me to say that under instructions of the Philadelphia convention I shall soon take up with you and the officers of the other unions in the garment working industry the subject matter of bringing about more harmonious relations and co-operation in the best interests of the trades in all our great movement.

"With best wishes, and hoping to hear from you often, I am,

"Fraternally yours,

"SAMUEL GOMPERS,

"President American Federation of Labor."

CAN'T COLLECT "DAMAGES."

Fort Smith, Ark.—The non-union Bache-Denman Coal Co. will not collect three times \$427,820.77 from 200 members of the United Mine Workers' Union, and this concern has lost faith in the Sherman anti-trust law as a means to destroy trades unionism.

Several months ago the company declared for the non-union shop. A strike resulted, followed by the suit for damages. International officers of the mine workers were included. Attorneys for the workers asked Judge Youmans of the United States District Court to dismiss the suit on the ground that the ownership, conduct and operation of a coal mine is not interstate commerce, and does not, therefore, come under the jurisdiction of the Sherman anti-trust law.

The judge sustained this position and threw the operators' plea for three-fold damages out of court.

Because of the court's ruling the principles of the Clayton act were not passed upon by Judge Youmans.

MOTHERS' PENSIONS URGED.

San Francisco, Cal.—In an address to the Labor Council of this city on the value of mothers' pensions Judge Henry Neil said:

"The mothers' pension system is not a charity any more than the public school is a charity. We spend money for free education because it is the economical and efficient thing to do. We know we cannot afford to have our children grow up in ignorance. But thousands of children are prevented from obtaining an education because their fathers are dead or for some reason fail to provide. The pension system provides food, clothing, shelter and care by the child's own mother, without which the free public schools cannot do their work.

"Wherever the pension system has been

tried, its results satisfy all classes. Juvenile crime and defectives are decreased at once, because the pensioned mothers are enabled to remain at home and take care of their children. If children have a good home with their own mother, juvenile crime decreases. Children raised in poverty recruit the police stations, jails, courts, penitentiaries, hospitals and asylums, because they did not get a fair start. The spending of ten million dollars this year for mothers' pensions will save the taxpayers a hundred million dollars in the coming years. The cost of courts, prisons and asylums has been increasing by leaps and bounds."

PROTECTING CHILD WORKERS.

Washington.—When a legislature has been induced to place a child labor law on its statute books, the public often assumes that its duty is ended, says the children's bureau of the Federal Department of Labor, in a report on the administration of the child labor certificate system in Connecticut. The bureau says the passage of a child labor law is only a beginning in the task of protecting children from overwork and exploitation, and that the greatest task is to see that the law is carried out. In Connecticut a child cannot go to work until he is 14 years old, and until 16 cannot work unless he has an employment certificate. Under the Connecticut system the State Board of Education dovetails the working of the compulsory education law with the child labor law. Agents of the State Board inspect conditions in the various cities and towns. The bureau announces that other states will be investigated for the purpose of discovering the best system of protecting children at work.

GOMPERS COMPELS PEACE.

New York.—The New York Times gives editorial testimony to the ability of President Gompers in molding a public opinion in behalf of industrial peace.

In the American Federationist, July issue, President Gompers criticised the Cloak, Suit and Skirt Manufacturers' Association for abrogating their agreement with the International Ladies' Garment Workers' Union. The title of the editorial was "Contract Breaking Employers."

The New York Times of July 8 publishes "The Reply to Mr. Gompers." In the editorial a criticism is indulged in of the responsibilities of unions, but the significance of the following quotation is apparent:

"A few days ago Mr. Gompers' statement to the effect that the employers were responsible for the troubles in the needlework trades was widely published. He declared that the 'chief blame' rested upon them 'without question.' No doubt that is the case in his opinion. The effect of his statement upon public opinion was such that the employers have accepted the arbitration which they had refused."

SAYS PICKETING IS LEGAL.

San Diego, Cal.—Mayor Capps has vetoed

an anti-picketing ordinance passed by the city council over a contrary ruling by the city solicitor.

In his veto message the mayor says:

"I disapprove that portion of the above section which reads as follows: 'To loiter—or to picket, act as a picket, or assist or engage in any act of picketing, for the purpose of inducing or influencing any person.'

"I believe the enforcement of the above would be an invasion of the constitutional rights of a citizen.

"The loitering or picketing referred to has been declared by almost all supreme courts in their decision as 'peaceful picketing,' and not unlawful, and it is the opinion of the city attorney that the supreme court of this state would render a like decision.

"The advocates of the passage of this ordinance have offered to defray all expenses in connection with any court proceeding which might be incurred by reason of its enforcement, but I believe it to be a very unwise proceeding for the city to incur obligations of this nature against the advice of the city attorney, which it may later be forced to meet."

MEXICAN WORKERS STRIKE.

Phoenix, Ariz.—State officials and the general public were startled by rumors of a revolt against the United States of America, started by Mexicans, with headquarters at Ray, this state.

Special detectives were loaded into automobiles and rushed to the threatened locality, whose only communication with the outside world is a telegraph line owned by the Ray Consolidated Mining Co. Failure to call for troops to repel the invaders aroused the suspicion of trades unionists, who discovered that 1,000 Mexican employes of the company had organized a temporary union and gone on strike when a wage increase was refused. Phoenix unionists called on Governor Hunt and presented the Mexicans' side of the controversy. The Labor Journal of this city warns workers to keep away from Ray. The paper charges that the company has 25 or 30 men among the strikers and are attempting to persuade them to acts of violence, and in that event "the armed guards can kill off a few Mexicans and thus drive the others back to work with no further thought of organization."

LAND FOR CITY UNEMPLOYED.

Washington.—A committee appointed by Secretary of the Interior Lane and Secretary of Labor Wilson is at work on a plan to relieve unemployment, under which the federal government would finance workers desiring to take up farm land. A complete program, with preliminary drafts of necessary legislation, is to be framed before Congress meets in December, to be proposed in connection with a rural credits bill, which, operating through the Department of Labor, would enable workers in congested cities to take up agricultural land on government

reclamation projects or public lands on easy payment loans. It is suggested that the \$10,000,000 head tax collected from immigrants might be used in financing the unemployment feature of the rural credits plan. Secretary of Labor Wilson has repeatedly called attention to this vast amount of money, which could be loaned to workers on long time and permit them to join in a genuine "back-to-the-land" movement. One of the rural credits plans will doubtless be based on this theory.

LABOR MUST COMBAT LAWSON PRECEDENT.

Worcester, Mass.—At a mass meeting of the trades unionists to protest against the Lawson verdict, Frederick W. Mansfield of Boston, the principal speaker, said:

"No element in the community has more respect for the courts and the law than the labor element. We do not wish this meeting to be misinterpreted as a protest against all law and order. But it is to protest against certain violations of law and against a perversion of justice.

"We do not make the claim that because Lawson was not present he could not be guilty of murder. Lawson might be guilty of the murder of John Mimmo or of any other person even if he were out of the state at the time if it could be proved before a fair jury and a fair trial that he had instigated the murder, if it was a murder. But there was absolutely no evidence of this character.

"There was not the slightest particle of evidence that he had ever said a word or had done any act to incite the strikers to violence. This makes him an absolutely innocent man and is the real reason why the labor men are determined to bring about his release if such a thing is legally possible.

"Labor is loath to believe that there is one kind of law in this country for Lawson, and another kind of law for Rockefeller. Investigations before the committee of which Frank Walsh is chairman, have shown that Rockefeller and his agents knew all about the conditions in Colorado, knew about the packing of the jury and the corruption of officials in high places; knew about the preparations to shoot down the miners, and in fact had guilty knowledge of the deliberate murder of many of the miners and their helpless wives and children.

"Rockefeller is allowed to remain at large. An apparently friendly capitalistic press criticised Mr. Walsh severely because of his righteous indignation exhibited in the questions that he put to Rockefeller.

"The precedent that has been established by the Colorado courts in the Lawson conviction is a most dangerous one and one which evidently is directed against labor unions. If it is allowed to become a universal doctrine in this country it would mean that every officer of a labor union would be criminally and civilly responsible for every act done by the members of the union, whether they had any personal knowl-

edge of the affair or not. It must be resisted to the utmost by organized labor everywhere."

"CLAYTON LAW REVERSES PRINCIPLES OF DECISION IN DANBURY HATTERS' CASE."

(By Ex-United States Attorney General Wickersham.)

Washington.—George W. Wickersham, United States Attorney General during President Taft's administration, agrees with organized labor that the Clayton law removes trade unions from the anti-trust act, and prohibits the issuance of injunctions in certain cases by federal courts.

Mr. Wickersham's opinion appears in the American Federationist, July issue, and is reprinted from the Alumni Register of the University of Pennsylvania with the consent of the author and of the Alumni Register.

The ex-attorney general's reference to President Gompers indicates his views of organized labor, and emphasizes the declaration of this trained lawyer that the American Federation of Labor won the world's greatest legislative victory when Congress declared that: "The labor of a human being is not a commodity or article of commerce."

Mr. Wickersham frankly states that the trade union movement has reversed the legal principles which made the hatters' decision possible, and that, as far as the federal anti-trust laws are concerned, workers can no longer be enjoined for withholding their patronage or advising others to do so. Neither can damages be recovered against them because of such actions. This, Mr. Wickersham terms "the Gompers conception of liberty"—a public notification that he is not in sympathy with declarations by Congress on this subject.

He says in part:

"But these enumerated acts include substantially all of such acts as constituted the cause of action in the Danbury hatters' case, and therefore labor organizations in the future may use the boycott as a weapon in a dispute between employer and employes without danger of interference by injunction or liability in damages by reason of the anti-trust laws of the United States. That is certainly so far as regards employers engaged in a dispute concerning terms or conditions of employment there can no longer exist under the laws of the United States a right of action on their behalf to recover damages suffered by them by reason of any individual or individuals, singly or in concert, recommending, advising or persuading their regular customers, or any other person or persons, by peaceful means, not otherwise unlawful (such for instance as might amount to extortion or libel), to withhold patronage from them.

"It is therefore apparent that the labor organizations have secured a statutory reversal of the principles of decision in the

Danbury hatters' case and the legalization of the boycott as a lawful instrument to insure the dominance of organized labor, thus substituting the Gompers conception of liberty for that of the Declaration of Independence, the Constitution of the United States and Abraham Lincoln."

"AVERAGE WAGE" IS DEFINED.

Helena, Mont.—Attorney General Poindexter has upheld the miners in their point that compensation awards should be based on weekly earnings, computed as follows:

The total wages earned during a certain period, say a year, should be divided by the exact number of days of actual employment. This sum, multiplied by six, would be the weekly wage.

Coal miners work on the piece, or ton, scale, and they do not work continuously for a year. At a conference of mine operators, miners and members of the state accident board, the question of "what is a weekly wage?" was discussed. The new compensation law is vague on the subject. All parties to the conference agreed that the working year of the coal miner averaged 240 days. On this basis the operators insisted that the average weekly wage should be determined by the following process:

Ascertain the total earning capacity of a miner for 240 days and then divide it by 52.

Attorney General Poindexter rejected this claim and supported the miners' position. He ruled:

"There are a number of cases attending the mining of coal where a fixed daily wage is paid. In such cases it would be manifestly idle, if not ridiculous, to contend, because the employment is not continuous throughout the year, that the daily wage received at the time of the injury is not the fixed amount actually paid the workman per day, but the average per diem earned in a calendar year, based upon 240 working days."

After quoting the different plans of compensation, the official concludes:

"I am, therefore, of the opinion that a construction of the law such as is contended for by the operators would be unjust to the employes and inequitable in its consequences."

ENACT CO-OPERATIVE BILL.

Springfield, Ill.—One of the most important bills passed by the recent Legislature, and now awaiting the governor's approval, is the co-operative bill, favored by the State Federation of Labor and the farmers' organizations. This act will safeguard the interests of those involved in a co-operative movement having been paved by the passage mis-use by opponents. Officers of the State Federation of Labor say:

"It is safe to assume now that the road for an effective and far-reaching co-operative movement having been paved by the passage of this act, the organized farmers as well as the trade unionists, will take advantage of the possibilities of the situation, and that

Illinois will soon be far in the lead of other states in the establishment and operation of co-operative enterprises under the direct control and management of working people. The thirty odd stores which are now in operation, and the co-operative institutions of the farmers will, under the new act, be placed upon a substantial legal footing that will mean much for their progress."

REGULATING CHILD LABOR.

Des Moines, Ia.—The new child labor law, passed by the last legislature, is now in effect. Department stores, business offices, telegraph companies, laundries and factories will have to eliminate labor by children under 14. Mines cannot employ boys under 16. Girls under 21 cannot be employed at work which requires them continuously on their feet. Eight hours is the limit for children under 16. Boys between 11 and 16 may work at street trades but must have a badge from the superintendent of schools.

STATE TEXT BOOKS.

Sacramento, Cal.—State officials say California has saved \$275,000 in one year by printing its own school text books, which is one-half the cost charged by eastern manufacturers.

CANADIAN WORKERS TO CONFER.

Ottawa, Ontario.—Officers of the Trades and Labor Congress of Canada have issued a call for the thirty-first annual convention, to be held in Vancouver, British Columbia, beginning Monday, Sept. 20.

Among the subjects scheduled for attention are:

The conditions arising from unemployment in the industrial centers in Canada.

Dominion and provincial legislation affecting labor interests.

Enforcement of the misrepresentation and monetary clauses of the immigration laws all the year around.

The proposed eight-hour labor bill.

Workmen's compensation acts in various provinces.

Amendments to the industrial disputes and investigation acts.

Fortnightly payment of wages on all railways.

Proposed amendments to Dominion elections act, including (a) the abolition of the \$200 deposit now exacted; (b) the making of election day a public holiday.

Old age pensions and all the issues that are therewith connected.

The Trades and Labor Congress is formed by delegates representing unions affiliated with the American Federation of Labor. Its function is remedial legislation in the interests of Dominion of Canada workers.

ONE KIND OF ECONOMY.

Denver, Colo.—Says the Labor Bulletin of this city:

"Governor Carlson abolished the state boiler inspection department Monday for

ninety days. By this action George B. Cossebaum, chief inspector, and deputies Joseph Humphrey and William M. Crowley are automatically fired. Governor Carlson gave as his reason for abolishing the office the administration's promise of economy. He says the work can be done well by the factory inspection department. Under the law he has the right to abolish any office for ninety days. It is understood he will continue to abolish the office every ninety days during his term of office."

RAIL FATALITIES DECREASE.

Washington.—A report by the interstate commerce commission for the first quarter ending March 31 shows that rail accidents have decreased over the like period of last year. The number this year is 65 killed and 1,972 injured. While these figures tell a ghastly story of derailments caused by defective roadways, broken wheels and broken rails, the number of fatalities has been reduced 100 per cent over last year. The number of train accidents decreased 785 during the same period.

TYPHOID TAKES 30,000 YEARLY.

Washington.—Nearly 30,000 persons die from typhoid fever each year, while 400,000 persons are incapacitated, according to a report issued by the federal public health service. In presenting these figures the health service points out that typhoid is a preventable disease, and declares that the United States "is a generation behind the times in respect to the reduction of the typhoid rate."

The health service says that American cities are hard to convince that money spent in typhoid prevention is well invested. Vaccination reduces typhoid danger 75 per cent, but sanitation also is important in the prevention of this disease, says the report.

CONCILIATORS NAMED.

New York.—Mayor Mitchell has named the following as a board of conciliation to adjust differences between the International

Ladies' Garment Workers' unions and their employers.

Felix Adler, Louis D. Brandeis, Henry C. Bruere, city chamberlain; George W. Kirchwey, former dean of Columbia law school; Walter C. Noyes, former judge United States circuit court of appeals, and Charles L. Bernheimer.

It is hoped that another protocol policy will be agreed to. The employers, last May, abrogated an agreement that had existed for five years.

MANY DISPUTES ADJUSTED.

Montreal, Canada.—Organized workers in the ladies' garment industry have been beset with numerous disputes because of discharge cases and new working systems employers would introduce for the purpose of lowering wages. The union has settled these cases satisfactorily and has also conducted a strong agitation campaign. A four days' strike against the Canada Cloak company resulted in an agreement. Another large factory, employing 200 workers, has been unionized.

WAGE BOARDS CAN'T MEET.

Melbourne, Victoria, Australia.—The European war is the reason Sir Alexander Peacock, Minister of Labor, gives for refusing to permit wage boards to meet and transact business as in normal times. These boards consist of representatives of employers and employes who adjust wage scales and working conditions. Workers are demanding that the boards be permitted to convene, as has been done in New Zealand, New South Wales and other states that have removed the embargo. The Minister of Labor refuses to yield, but has given assurance that each individual case will be considered by him, and if the workers can show a change in wage scales is necessary he will permit the board in that industry or calling to consider the same. Because of the government's negative attitude many betterments demanded by the workers will probably be postponed.

Among Our Exchanges.

FLIES AND SICK BABIES.

The Bureau of Public Health and Hygiene of the New York Association for Improving the Condition of the Poor, in cooperation with the Department of Health, has conducted an investigation into the relation between the presence of flies in houses and the occurrence of diarrhea in small children. It was desired to determine whether the house fly is the chief carrier of diarrhea or whether dirt in the home and artificial feeding are more deadly factors in this serious condition. The cases investigated were divided carefully into a fly-protected group and a fly-exposed or control group. These groups were made as similar as it was possible to make them. The infants

were visited every five days by nurses. The fly-exposed or control cases received all the instruction given in child hygiene work, but no special emphasis was laid on eliminating the house fly. In the protected group the greatest emphasis was laid on the absolute protection of the baby as far as possible from contact with flies. For the infant in the cradle, in the go-cart, on the bed and even in the arms the constant use of netting was insisted on. Over a thousand yards of netting were distributed among the protected families. Some of the results of the study are now being published in order to emphasize its lessons for the present summer. It was found that almost twice (1.9) as many infants were attacked by diarrhea among fly-exposed as among the fly-pro-

ected infants. Apart from the influence of flies, it was found that almost twice as many infants were attacked by diarrhea in dirty homes as in the clean homes. The most important factor for child mortality, however, was found to be artificial feeding. Nearly two and a half (2.4) times as many infants were attacked by diarrhea among the artificially fed as among the breast-fed infants. The influence of flies and dirt combined was found to be almost exactly equal to that of artificial feeding, even in reasonably good surroundings. Almost two and a half (2.4) times as many fly-exposed infants in dirty homes were attacked by diarrhea as were fly-protected infants in clean homes. The combination of dirt and artificial feeding made life extremely difficult for the infant. Considerably more than one out of two of them were attacked by diarrhea. Concrete studies of this kind are of great service in impressing the fact that disease among children is not a mysterious dispensation, but the result of common factors, flies, dirt and artificial feeding.—The Journal of the American Medical Association.

ACCOMPLISHING ECONOMY.

Much as has been said and written about economy, more can be said and thought with profit. That one has plenty today is no surety that there will be plenty tomorrow. Emergencies are always coming into everyone's life, and the wise man will endeavor to provide against the day of need. Many who know they should economize have no idea of how to go about it, and do not give the subject the thought it demands. It is not so simple a matter. Every man should study out the subject for himself. What is economical for me may be an extravagance for you. Buying a cheap article is not economy if one has to renew it so often that it costs more than a good, substantial article that would have outlasted three or four of the cheap ones.

Waste is one great factor in the high cost of living. Little leakages are not carefully watched, and a small leak will sink a ship. The Scotch say: "Ask thy purse what thou shouldst buy." One thing is necessary. That is never to spend more than one's income. No one should gauge his expenses by what another has done. The savings bank habit is a good one, for from saving comes having. One's never rich till he begins to keep ahead of his expenses. Carefulness of little things does not mean stinginess or meanness. Generosity is not opposed to economy. The practice of economy means more to be generous with.—The Milwaukee Journal.

MORE OFFICIAL ARROGANCE.

It appears as if government by civil service develops different degrees of tyrants. The men who issue "orders" forbidding navy yard workers from serving as officials of a labor council may be classed as petty tyrants. But the man who transmits these

orders to the victims of official arrogance and uses offensive language in so doing can be classed only as a tyrant who ought to be pitied.

F. M. Bennett, the commandant of the Mare Island navy yard, doubtless qualified as a tyrant who ought to be pitied when he formally advised several trade-unionists that they had shown themselves "unfit for the trust Uncle Sam reposes in his employes" because of their activity in furthering certain constitutional amendments favored by organized labor. The worthy commandant is evidently unable to distinguish between enlisted men serving in the navy and civilians employed in the navy yard. An enlisted man is not supposed to "talk back" when superiors write foolish letters or issue boomerang orders. But the civilian employes of our government are not muzzled—at least not yet. That grand feat has not been accomplished even though desperate attempts along these lines are being made by three political commissioners who think they control the political conscience of some 432,000 men and women classified as Civil Service employes.

Civil service was established primarily to purify politics and to secure for the government competent and efficient employes—i. e., to make appointments upon merit instead of a party basis.

Now it begins to appear as if civil service has been constructed to mean "servile service."

Against this bureaucratic endeavor the workers must protest with all their might. Government ownership has come to stay; in fact, we shall have more and more of it as the years roll by. It behooves all workers, therefore, to pay earnest attention to the case of these Mare Island navy yard workers.

Can we afford to remain silent while our fellow workers are being muzzled?

We can not, and we shall not; for silence in this instance would mean tacit approval. More than that, it would inevitably bring still further aggression upon the political rights of the workers in government service.—Coast Seamen's Journal.

NO GLORY FOR THE DEFEATED HERO.

The Railway Federationist is in receipt of several letters from men on the firing line of the Illinois Central and Harriman roads, severely criticising the officers of the Railway Employes' Department for declaring the strikes on these roads at an end.

One letter is from a local lodge of machinists not directly involved in the strike, but whose members, it is alleged, contributed more than \$10,000 in support of the strikers. In the letter submitted to the Railway Federationist it is charged that the principle of the initiative and referendum has been violated in calling off the strike, and that the officers have arrogated to themselves powers not granted them by the laws of the department.

It has been our uniform policy to make

the Railway Federationist an open forum for the discussion of principles and policies pertaining to the interests of the railway employes of this country and to serve to the best of our ability the cause of those identified with the railway shop crafts and the federated movement.

When the vote to call off these strikes was submitted last fall, we were of the opinion that a grievous mistake had been made, not because we felt the strike should be continued, but because of the manner in which the proposition was submitted.

We can not see how any good can come to the federated movement by prolonging the contest. Judging these strikes by former struggles that were continued for such a long period of time, we are forced to the conclusion that not only would it be wise and proper to discontinue them, but they should have been ended long ago.

Let us no longer deceive ourselves as to the possibility of success. Let us not be carried away by false hopes based upon the idea that something may happen that will change the tide in our favor.

Why continue a hopeless fight? Why inflict still greater suffering upon the loyal men and women who have sacrificed so much in this, the greatest labor struggle in history?

We appreciate fully that those who were most active in this strike will suffer the wrath of corporate greed. They will be victimized. They will be driven from pillar to post by corporate hirelings and even their own class will load them with dispraise. This has been the experience in the past. Those who fought to the last ditch in this conflict will be no exception.

Defeat has its glory as well as victory, but the glory of the defeated is never sung until they have been a long time dead.—Railway Federationist.

IN COLORADO.

The trial for murder and conviction of John Lawson, miner, is very far from reassuring to those who have hoped that Colorado would find a reasonably satisfactory solution of her strike tragedy and make a beginning of restoring the honor of the state. Lawson has been convicted of murder without its being proved that he killed anyone or was even present when mine guards were killed. It is definitely alleged that the whole machinery for trying the accused strikers and strike leaders has been arranged by the mine owning interests and will proceed to make terrible examples of some of them with the object of terrifying the miners into subjection.

Whether it is true or not that the indictment and conviction of Lawson and of other strikers has been framed up, it is clear that no special jury and special court provided for prosecution of cases growing out of the strikes will win any credence if only miners are convicted and the mine guards left untouched. There has been too much testimony to the kind of men employed as mine

guards and the work of terrorism that they were engaged to do for any rational person to believe that guilt was one-sided.

Colorado suffers tremendously, and not least from absentee ownership. Her greatest need is not convictions but justice. There needs no ghost come from the grave of former labor troubles to tell us that conviction of striking miners and amnesty for brutal mine guards will bring neither a solution of the difficulty nor an end of tragedy.—The Milwaukee Journal.

THE LITTLE THINGS.

Use the little things. To great minds there is nothing so small that it is unworthy of notice. Most of the men who have seen an apple fall from a tree saw only that an apple fell. Newton thought about it and discovered a great principle of nature. Many a man has seen steam lift the lid of the teakettle. Watt thought about it and applied a power that revolutionized the machinery of the world. Thinking about what one observes enlarges the mind and often leads to great results. Shakespeare told us there are sermons in stones, and Hugh Miller translated many of them for our benefit. Little differences in the color, position or nature of the rocks gave Miller his great knowledge. Little by little, a thought at a time, a fact added to a fact, made up a sum of knowledge which has been of great benefit to the world years after his death. If you would be useful to yourself and others, store up ideas. Observe what is before your eyes. Think about what you see. Do not pass by any opportunity of gaining a bit of knowledge. Be careful of the little minutes. Men have accomplished much by utilizing odd minutes that are too often wasted by the thoughtless. Blackstone wrote his commentaries in the moments while he waited for dinner. Do not despise the day of small things.—Ex.

PUBLIC SYMPATHY AS AN ASSET.

In the contest of wits that marks the struggle between capital and labor, it would seem to an onlooker that the capitalist had worsted his opponent in the plea for public sympathy. A few years ago capital felt itself so strong that it defied public opinion; while labor, realizing its weakness, appealed to the public for sympathy; and that defiance of capital and appeal of labor won the latter many victories during the growth of the trade union movement. But a change seems to have come over the situation. Capital, realizing its loss of prestige, has undertaken to make friends of the public; while organized labor, confident in its strength, is paying less regard to public opinion. In the earlier days labor pleaded for arbitration; capital declared it had nothing to arbitrate. Now capital appeals to arbitration, while labor seems to view it with distrust. This is not the universal policy of either capital or labor, but it appears to be a growing tendency.—The Public.

News of General Interest.

FINES FOR OFFENDERS FAVOR WELL-TO-DO.

In a report on "The Correctional System of Springfield, Illinois," Zenas L. Potter of the Russell Sage Foundation severely criticizes the petty fining system in general use throughout the country. He brings two main indictments against the system: First, that as a means for dealing with offenders who have confirmed delinquent tendencies fines, since they cannot remove deep-seated causes of lawlessness, are not successful in protecting the community from further law-breaking. Second, that fines are very generally unjust to persons not well-to-do, but of moderate means. On this last point the report has this to say:

"As a means for providing just punishment as between offenders the fining system is open to attack. Where petty fines are much used, as in Springfield, the general tendency is to assess them in large or small amounts in proportion to the serious-

ness of the offense, and not after taking into account the ability of the offender to pay. Speeding, for instance, will usually bring a fine of one size, carrying concealed weapons another, vagrancy another. The offense, not the means of the offender, commonly becomes the measure of the fine. The result is that as a means for punishment fines are extremely unjust. To a man of some means a fine of \$3 or even \$25 is slight punishment. But on the laborer making \$1.75 a day, and perhaps still more on his family, which is already a sufferer, even a fine of \$3 falls heavily. The offense may be the same, and the fine may be the same in two cases, and yet in the payment the poor man may suffer the rich man's penalty many times over. One hundred and sixty-eight persons in Springfield went to jail in 1913 because they were not able to

pay their fines in whole or in part, 44 being unable to meet even a fine of \$3 plus \$1.75 of costs. Many of the largest fines were assessed against vagrants who had no money at all. In such cases fines result in nothing less than sending people to jail for being poor."

A GLENN, FOUR-CYLINDER, COMPOUND LOCOMOTIVE.

By Frank C. Perkins.

The accompanying illustration shows the construction of a four-cylinder passenger engine of the Glenn type, operating on the Prussian State Railway, as designed and constructed at Grafenstadem by the Societe

Alsacienne de Constructions Mechaniques. It measures 4.3 meters in height and 10.6 meters in length and weighs 55,600 kilograms empty and 61,100 kilograms in working order. This locomotive has a water capacity in the boiler and coal on the grate weighing 5,500 kilograms, while the tender has a tank capacity of 16,000 kilograms.

The high pressure cylinders measure 350 millimeters in diameter and the low pressure cylinder 550 millimeters, while the length of stroke is 640 millimeters. The steam is supplied to the high pressure cylinder at a working pressure of 14 atmospheres from a boiler having a mean diameter of 1,464 millimeters and a total heating surface of 139.5 square meters. The boiler has 216 tubes 45 millimeters in diameter and 4.2 meters long, with a heating surface of 128.2 square meters, the heating surface of the firebox being 11.3 square meters. The loco-

motive has 6 coupled wheels 1.75 meters in diameter and a total wheel base of 7.6 meters, it being designed and constructed for a gauge of 145 millimeters.

THE CUBA FERRY.

The final link that will enable a freight car loaded to any part of the United States to be unpacked in Havana is at last completed. It has been possible for several years to send cars through to Key West over the wonderful system of viaducts planned and built by Henry M. Flagler for the Florida East Coast Railroad. Cars at this point are now to be run on board a newly completed ferry-steamer, said to be the largest in the world, and after a hundred-mile ocean trip will be landed at Havana on the Cuban Railroad system. This powerful craft, we learn from an article contributed by Harry Chapin Plummer to *The Scientific American Supplement*, bears Flagler's name and has been specially designed for its task.

Says Mr. Plummer:

"It is in the movement northward from Cuba of grapefruit, oranges, bananas, pineapples, and other products of the 'Pearl of the Antilles,' which are liable to the greatest danger of ruin or injury when transfers are made, that the new vessel must prove her worth at the outset. On her southward runs from Key West she will move trains largely laden with dressed beef and food-stuffs originating in the West and North of this country.

"Equipped with four sets of tracks of standard gage on the car deck which is 360 feet long and provides accommodation for thirty of the largest-size refrigerator-cars, the ferry-steamer is, in addition, fitted with three cargo holds. These can be loaded either direct from the cars themselves or through cargo-ports at the side of the vessel.

"The dry-cargo capacity of the boat is approximately 3,000 tons, with an additional provision in one of the forward ballast-tanks for the shipment of a bulk quantity of molasses. Each cargo-hold is served by an independent double-drum electric cargo-hoist of two tons capacity, and the necessary filling and discharging apparatus has been fitted to the tank intended for molasses.

"Ten water-tight compartments, into which the vessel is subdivided, are used for ballast purposes. These deep tanks have a capacity of 3,000 tons, and the steamer thereby can be brought down to her proper draft when no cargo is carried. A system of pipes connects the tanks, and for emptying them two 12-inch centrifugal pumps have been fitted, which have a capacity capable of clearing all the tanks within an hour and a quarter.

"The voyage of 100 miles (from dock to dock) is to be made in eight hours—at an average speed of 12½ miles per hour.

"A notable feature of the boat is the fine accommodations provided for the officers

and crew. Four individual baths are provided for the officers, while the crew's quarters are equipped with four shower-baths. Running hot and cold water is furnished for each room, and cold salt water for the showers and bath-tubs.

"The steamer, the keel of which was laid April 20 last, was built at Cramp's Ship Building Yard, Philadelphia, and launched September 22. M. C. Furstenau, consulting naval architect for the Florida East Coast Railway, designed the plans and specifications.

"The idea of quick communication with Cuba is not new, for the promoters of the Florida East Coast Railway have had it in view for many years, but the accomplishment has been slow on account of the many difficulties to be overcome. It was no small undertaking to extend the line down the sandy, marshy shore of Florida to Miami, where a long pause was made. Then came that daring engineering feat of carrying a railroad over the swampy tip of Florida, and thence by a remarkable series of embankments and concrete viaducts, using the long, curving series of keys as stepping-stones, to Key West, the outermost accessible point that can be reached in this manner.

"In building this wonderful viaduct, which is 128 miles long from Homestead, at the tip of Florida, to Key West, earth and rock embankments were used wherever the depth of the water permitted, and over fifty miles of this kind of roadbed was constructed; but in many of the intervals between the keys, of which about thirty were linked together by the undertaking, the water was too deep to permit of filling in, and moreover, many of these openings were navigable passages that could not be closed or were in such exposed positions that embankments would not stand. Here a series of massive reinforced-concrete viaducts were placed, being built with arches of 50 or 60-foot spans. Altogether these viaducts have a total length of somewhat over five and three-fourths miles, there being four separate viaducts, from 4,950 to 10,500 feet long.

"At the time the road reached Key West it built a substantial drydock, together with ample wharves, so that it was all ready when the time came to establish the hundred-mile ferry to Havana, as has now been done."—*Coast Seamen's Journal*.

GERMAN EAST AFRICAN LOCOMOTIVES.

By Frank C. Perkins.

On account of the great European war between Germany and Austria on the one side and practically all of the European countries on the other side, the accompanying illustrations, data and drawing of the modern locomotives in use in German East Africa are of special interest.

These engines were built by the Hanoversche Maschinenbau-Actien Gesellschaft, Vormals Georg Egestorff, Hanover-Lindeon. It may be stated that among the

German colonies, German East Africa occupies the premier position, both as regards size and economic importance. Its area, 389,000 square miles, is almost double that of Germany (215,134 square miles) and represents about 37.5 per cent of the entire area of Germany's colonial empire. The outward trade is very considerable and is only exceeded in value among the German colonies by the diamond mining in Southwest Africa. It is of interest to note that in the export of rubber, cotton, fibrous materials, grain, coffee, skins and ivory, East Africa holds pride of place among German protectorates.

The continuously increasing importance of the trade of this colony may be gathered from the diagram. The meter-gauge rail-

ishing colony would thus be provided with an artery of the utmost value.

It is stated that after the section from Dar-es-Salam to Pugu, 13 miles in length, it was felt great headway had been made. On January 1, 1910, the section from Dar-es-Salam to Kilossa (181 miles) was opened. On November 1 of the same year, 108 miles from Kilossa to Dodomma were opened for traffic and on July 1, 1912, 530 miles, as far as Tabora, were completed. The terminal station of Kigoma of the final section, Lake-Tabora-Tanganyika, 250 miles in length, was reached surprisingly quickly by February 1, 1914. The opening of the complete line from Dar-es-Salam to Kigoma was expected about the middle of 1914 and soon after the large steamers of the East African

A GERMAN EAST AFRICA LOCOMOTIVE.

way owned by the East Africa Railway Company and which runs from the Port of Dar-es-Salam to Lake Tanganyika, is a very important factor in opening up this important protectorate.

It is pointed out that the immense value of this colony and its importance to trade will not make themselves fully felt until this magnificent enterprise has been completed. Regions which hold out great promise and will supply important products, such as cotton, coffee, oil seeds, for which Germany now in a large measure allows to go to foreign countries, would then be brought in close touch with the world's markets.

The importance of the Tanganyika Railway is, however, by no means limited to the traffic in the colony itself; it is intended to form a very valuable link in international trade, and when navigation on Lake Tanganyika, now in course of organization, has been opened, its chief task would be to carry on communication between the heart of Africa and the coast.

Before this great European war broke out, plans were made to convey goods from the interior of the Belgian Congo very much more quickly and cheaply than has been possible up to the present, and this flour-

Railway Company were to be plying on Lake Tanganyika.

It is claimed that the increase in the traffic has kept pace steadily with the improved means of communication. The reports of the East African Railway Company give an excellent idea of the continuously increasing importance of this enterprise.

The drawing, Fig. 1, shows that there have been many gradients of 20 to 1,000 to overcome; at Itigi the line reaches its highest point, 4,360 feet above sea-level. A good idea of the length of the Dar-es-Salam-Kigoma line, 781 miles, will be obtained by comparing it with the distance from Berlin to Milan via Bozen, which amounts to 786 miles, and the highest point of which, viz., the Brenner Pass., is only 132 feet higher than the pass at Itigi.

It is pointed out that the Tanganyika Railway had on July 1, 1914, at its disposal, rolling stock, manufactured by German works, which included 63 locomotives, 34 passenger cars, 10 mail and luggage vans, and 380 freight cars.

Of the German builders of locomotives the above-mentioned firm come first, with 24, and they are followed by Henschel & Sohn, with 19; A. Borsig of Tegel-Berlin, with 9, and Orenstein & Koppel A.-G., Berlin, with

7, while J. A. Maffel of Munich furnishes 4. It is stated that the 2-8-0-tank locomotives, of which a fair number were originally procured, rendered good service and could also be employed to great advantage in the construction of the line, but it was not long before they were found insufficient for the growing requirements of the traffic.

Therefore, the Hanover Locomotive Works were instructed to prepare designs or a very much more powerful 2-8-0 mixed train locomotive with separate eight-wheeled tender. In this connection, the first endeavor was to increase the grate area sufficiently, so as to secure adequate evaporation when using purely wood fuel. While adhering to the stipulated maximum axle pressure of 10 tons, it was possible to obtain a heating surface (inside) of 1,372 square feet and a grate surface of 28 square feet. The ratio of grate surface to heating surface, which previously was 1.52, was consequently reduced to 1.49.

It will be seen that the firebox was made broader, extending beyond the frame. The elevated position of the boiler gives ample dept of grate, absolutely necessary with

The Hanover Locomotive Works built and supplied 20 up to the end of 1913; the last three of these engines, apart from the above special equipment, were also fitted with a feed water purifier and feed water heater of the "Schnidt & Wagner" type, fitted above the boiler. With regard to the way in which these locomotives did their work, the railway management at Dar-es-Salam issued on December 6, 1912, the following statement:

"The 2-8-0 trailing locomotives have up to the present proved generally satisfactory in working and have also fulfilled the requirements as to capacity. The simple construction and the practical way in which the moveable parts have been arranged greatly simplify the working of the engine. Its smooth and jerkless running enables the staff to cover long distances (up to 160 miles) without fatigue.

"The locomotive hauls on the level a load of up to 500 tons. Over long gradients, such as, for instance, the rise on the East African 'Graben,' where constant gradients of 16-18 in 1000 are met with on a distance of about 25 miles, the weight of the train amounts

ONE STYLE OF AN ENGLISH DARLINGTON LOCOMOTIVE.

wood-fuel firing. In order to make it possible to negotiate curves of down to 260-foot radius, the second and last coupled axle were given a side play of 13-32 inch and 1 inch, respectively. The play of the Bissel axle, which has a pivoting circle of 27 9-16-inch diameter, amounts on both sides to 3 17-32 inches. It is of interest to note that the latter axle is fitted with centralizing mechanism by means of a central-pendulum support. On any deviation from the central position, a correspondingly increased load is brought to bear on the right or left-hand bearing spring by means of the oscillation of the pendulum on a ball swivel head, which spring, as soon as the curve is left behind, brings the axle back automatically to the central position.

It is said that the special equipment includes a vacuum brake, a speed indicator, sand boxes worked by hand for forward and backward running, a double cab roof, a steam separator, in the steam dome, on the Metzeltin system, a Stollerz spark arrester and a Friedmann injector.

to 260 tons. The sharpest curves met with on this line have a radius of 850 feet."

"Wood-fuel is used almost exclusively throughout the line. The dimensions of the grate and the heating surface are such that sufficient steam can always be generated."

Before the set back due to the present war conditions it was intended that locomotives of considerably greater power would have to be procured later on in addition to the above type. For through train traffic from Dar-es-Salam to Kigoma, express locomotives of larger boiler capacity would have to be adopted.

TWO ENGLISH DARLINGTON LOCOMOTIVES.

By Frank C. Perkins.

The accompanying illustrations, Figs. 1 and 2, show two English Darlington Loco-

The former was designed for a gauge of railway of 5 ft. 6 in., the cylinders being 21½-in. diameter by 26-in. stroke. It has coupled wheels 4 ft. 8 in. in diameter and a fixed wheel base of 16 ft. 0 in.

The bogie wheels are 3 ft. 0 in. in diameter and the engine has a total wheel-base of 24 ft. 2 in. The boiler has a total of 1347.5 sq. ft. of which the heating surface of the tubes is 1191 sq. ft. and of the fire-box 156.5, while the grate area measures 32 sq. ft. and the superheater elements 409.5 sq. ft.

The working pressure is 160 pounds per square inch and the tractive force 25,754 pounds. The weight on the coupled wheels is 57 tons 10 cwt., and the total weight in working order is 16 tons 18 cwt., while the maximum axle load is 14 tons 14 cwt.

The tender has wheels 3 ft. 8 in. diameter and a fixed wheel-base of 13 ft. 0 in., the

The weight in working order is 50 tons 17 cwt., the engine being 89 tons 4 cwt. and the engine and tender combined weighing 140 tons 1 cwt. The total wheel-base of the engine and tender is 56 ft. 11 $\frac{1}{4}$ in. and the length over buffers is 65 ft. 4 $\frac{1}{2}$ in. for the combined engine and tender.

INDUSTRIAL ACCIDENT STATISTICS.

The United States Bureau of Labor Statistics of the Department of Labor has just issued as Bulletin 157 a report on Industrial Accident Statistics, by Frederick L. Hoffman. The adoption of the principle of workmen's compensation by more than half of the states within the last few years em-

ANOTHER TYPE OF AN ENGLISH DARLINGTON LOCOMOTIVE.

total wheel base being 13 ft. 0 in. It has a tank capacity of about 310 cubic feet, while the weight in working order is 41 tons 2 cwt. and that of the engine is 66 tons 18 cwt., the engine and tender having a total weight of 108 tons 0 cwt. The total wheel-base of motives of the Robert Stephenson superheated type, constructed at Darlington, England, for the B. N. R. and S. A. R. respectively.

the engine and tender is 48 ft. 0 in. and the length over buffers is 57 ft. 4 in.

The narrow gauge engine noted in Fig. 2 was designed for a gauge of railway of 3 ft. 6 in. and the cylinders are 22 in. diameter with a 26-inch stroke. The coupled wheels are 4 ft. 0 in. diameter and the fixed wheel-base measures 12 ft. 9 in., while the total wheel-base is 80 ft. 7 in.

The boiler has a heating surface for tubes of 2211.96 sq. ft. and a firebox 149.00 sq. ft., while the total heating surface is 2360.96 sq. ft., the superheated elements 503.04 and the grate area is 36 sq. ft. The working pressure is 190 pounds per square inch and the tractive force 37,358 pounds, while the weight on the coupled wheels is 64 tons 8 cwt. and the total weight in working order is 89 tons 4 cwt., the maximum axle load being 16 tons 3 cwt.

The tender has wheels 2 ft. 9 $\frac{1}{2}$ in. diameter with a fixed wheel-base of 4 ft. 7 in. and a total wheel-base of 16 ft. 9 in. Its tank capacity is 4,250 gallons and its fuel capacity is about 400 cubic feet.

phasizes the importance of the industrial accident problem and foreshadows the time when such compensation for industrial accidents will become universal throughout the United States.

As one method of measuring this importance, the bulletin presents an estimate of the number of fatal and non-fatal industrial accidents occurring among American wage earners in a single year. The conclusion reached is that the number of fatal industrial accidents among American wage earners, including both sexes, may be conservatively estimated at 25,000, and a number of injuries involving a disability of more than four weeks, using the ratio of Austrian experience, at approximately 700,000. These numbers, impressive as they are, fail to indicate fully the number of industrial accidents, for such studies as have already been made show that of the accidents involving disabilities of one day and over at least three-fourths terminate during the first four weeks.

The industries which contribute the greatest number of fatal accidents are railroad employments and agricultural pursuits, each group being responsible for approximately 4,200 fatalities each year. Coal mining contributes more than 2,600, and building and construction work nearly 1,900. General manufacturing, while employing large numbers, produces only about 1,800 fatal accidents. When the fatality rates are considered, metal mining ranks as most hazardous, with a rate of 4.0 per 1,000, coal

mining comes next with a rate of 3.5, and fisheries and navigation following with a rate of 3.0 per 1,000. Manufacturing industries, as a whole, rank lowest, with a rate of 0.25 per 1,000, but the fact should not be overlooked that this low average rate covers manufacturing groups varying widely in hazard, including, on the one hand, boiler making and the various departments of the iron and steel industry, in some of which fatality rates as high as those in metal and coal mining have prevailed, and, on the other hand, the textile and clothing industries, in some of which the risk of fatal accident is practically negligible.

These estimates are derived from the best sources available. At the present time there are no entirely complete and trustworthy industrial accident statistics for even a single important industry in the United States. This lack of trustworthy industrial accident statistics is due to the absence of any uniform requirements in the various states as to the reports of industrial accidents. Prior to the establishment of workmen's compensation systems, no state received reports of all the accidents, or even of all the fatal accidents in its industries. With the coming into force of workmen's compensation laws, with a strong motive for careful reporting, the methods of reporting are being gradually improved, but this applies in only a few of those states where such systems have been introduced, and even in such states there is a regrettable lack of uniformity which stands in the way of comparison and combination of the statistics. Furthermore, very few of the compensation states are yet securing information at all accurate in regard to the number of employes and the period during which they are at work, information which is absolutely essential in the computation of accurate accident frequency rates.

Workmen's compensation legislation will necessarily lead to an increase in the reported number of accidents, particularly those of a less serious character, involving a comparatively short incapacity for work, but compensation legislation may also be expected to bring about notable reductions in the actual number of accidents, for wherever aggressive accident prevention work has been undertaken, it has been found that great reductions in the number of accidents have been effected, often exceeding a saving of one-half.

A large part of the bulletin is devoted to the analysis and discussion of the recent accident statistics of Illinois, Massachusetts, New York and Wisconsin, with reference to the industries in which industrial accidents are most numerous, the duration of the accident disabilities, the nature of injuries, and especially to the causes of the accidents. Much more briefly the accident experience of Great Britain, Norway, Austria and Germany is drawn upon in the effort to analyze the principal features of the industrial ac-

cident problem. Statistics of industrial diseases are also included, but official information in this country is limited to the cases which have been reported under the New York state law.

An important section of the bulletin is devoted to the progress of the movement for the standardization of the reporting, classification and tabulation of industrial accidents in the United States, initiated for the purpose of securing uniformity of practice in order that the reports of the various states may be compared and combined, and thus contribute in the largest degree to the solution of the industrial accident problem for the entire country.

CARE OF THE BABY IN SUMMER.

The Second Summer.

(Prepared by the Children's Bureau, United States Department of Labor.)

A widespread and deep-rooted belief prevails among mothers that the "second summer" is an especially perilous time for the baby, and consequently one to be greatly feared.

The facts, however, do not support this belief. Official figures show that about five times as many babies die in the first year of life as in the second, and that nearly two-thirds of the babies who die in the first year of life die in the first three months. These figures show conclusively, therefore, that the great loss of infant life takes place among very young babies, and that if a baby has survived this early period his chance of living to grow up is greatly increased.

The reason the "second summer" has acquired this partly undeserved reputation for danger lies very largely in the fact that babies are often made sick because mothers make many mistakes in feeding a baby after he is weaned and before his digestion is able to deal with ordinary family meals.

The fear of the second summer results also from the fact that the baby is getting his teeth at this time. Although the teething process sometimes is unjustly blamed for causing illness, babies are no doubt often upset by the pain of teething, and do therefore suffer more readily from mistakes in feeding.

A third reason why the second summer makes babies sick applies equally to the first summer; that is, the excessive heat affects them badly both directly and indirectly. Heat often spoils the milk and makes it unfit for the baby's use. But even a properly-fed baby may be made sick when the weather is very hot.

A long continued spell of extreme heat is very hard on babies of all ages, and the greatest care is needed to avoid other cause of illness at this time and to prevent by every possible means an attack of summer diarrhea.

The greatest safeguard which the mother can throw about her baby in the second sum-

mer is to see that he has proper food at regular intervals in suitable quantities and to keep him cool. A baby who is about 9 or 10 months old at the beginning of summer should, if possible, continue at the breast until September, because even two or three breast feedings a day may be enough to keep his digestion in good order; and in case he becomes ill to save his life. The breast milk should be supplemented with two or three bottles of cows' milk properly prepared, as directed in a former article in this series.

In addition some other food may be given, but it must always be remembered that care in feeding the baby at this age is as important as in early infancy. Changes in the diet in summer should be made very cautiously. Only one new article of food should be added at a time. It should be given at first in very small quantities, and its effect on the baby carefully watched meanwhile.

If the baby vomits, belches gas or shows looseness of the bowels the food should be greatly lessened in quantity or taken away altogether until the disturbance subsides.

For a baby from 9 months to 1 year of age the following food is recommended: Strained orange or prune juice may be given once a day after the baby is 8 or 9 months old unless his bowels have a tendency to looseness. It should be given midway between feedings; for instance, if he is fed every four hours, the juice is given two hours after a bottle feeding or nursing. It is best to begin with small amounts, say two or three teaspoonfuls, and to increase slowly till one to three tablespoonfuls are given daily.

At 9 months he may be given beef juice, beef tea or plain mutton or chicken broth once a day.

At 10 months he may have one to two tablespoonfuls of cereal once a day. Cream of wheat or farina may be used, either of which should be cooked for at least three-quarters of an hour in a double boiler.

At 10 months he may have a small piece of toast or zwieback or a crust of bread to chew immediately after his mid-day feeding.

At 12 months he may have cereal twice a day. If oatmeal is used it must be cooked for three hours and strained.

The following diet may be recommended for a child at 12 or 13 months.

- 6 a. m.—Milk, 8-10 ounces.
- 8 a. m.—Orange juice, 1-3 tablespoonfuls.
- 10 a. m.—Cereal, 1 tablespoonful with milk or stale bread and zwieback with milk, 6 to 8 ounces.
- 2 p. m.—Broth with stale bread or beef juice, 1 ounce with bread crumbs.
- 6 p. m.—Same as 10 a. m.
- 10 p. m. Milk, 8 ounces.

The principal requisite for successful feeding is that only such simple food as mentioned above be given. It is particular-

ly dangerous to give the baby of this age tastes of the family meals, for if this is done the baby is pretty sure to be given food unsuited to his digestive organs, and also to have his taste spoiled for the simple diet which should satisfy him.

Feeding the Baby During the Second Summer.

Nothing is so dangerous to a baby's health as wrong feeding; nothing so important to his healthy development as proper feeding.

For the first nine months breast milk is the only food a baby should have, except a little pure drinking water. If the breast milk is not sufficient, it may need to be supplemented, as directed in a previous article of this series, with properly prepared cows' milk given in a bottle.

For the baby between 9 and 12 months of age certain foods may be carefully added to this diet, a list of which was given in the preceding article.

For a healthy baby at the beginning of its second year the same diet may be used, and as the child grows various foods may be added. He may now take undiluted cows' milk and well-cooked cereals twice a day in addition to fruit juice, broth and dried bread.

At 15 months he may have a little rare beef or well-cooked chicken or mutton. Meat for a baby should be broiled, roasted or boiled, never fried, and should be given to the baby scraped or finely minced.

The following are sample meals for a healthy child from 18 months to 2 years old: (An ounce is two tablespoonfuls.)

- 7 a. m.—Milk, 8 to 10 ounces. Piece of zwieback, toast or dried bread.
- 9 a. m.—Orange juice, 2 ounces.
- 10 a. m.—Cereal, 2 tablespoonfuls. Cup of milk.
- 2 p. m.—Broth, 6 ounces; meat, 1 tablespoonful; vegetable (spinach), 1 tablespoonful; stale bread, 1 piece; baked apple, 1 to 2 tablespoonfuls.
- 6 p. m.—Cereal, 1½ tablespoonful; milk, 6 to 8 ounces; toast or bread.
- 10 p. m.—Milk, 8 ounces in cup (may be omitted).

The following rules for cooking and preparing certain of these articles may be helpful to mothers:

Toast: Bread one day old, cut in very thin slices; slices placed on edge in a toast rack in an oven to dry. Leave oven door partly open.

Broth: Of round steak, 1 pound; of water, 1 pint. Put the meat on in cold water and allow it to come to a boil; then lower the flame so that it barely simmers for three or four hours. Remove the meat and add enough water to make up the original amount of liquid; strain through a wire sieve and set aside to cool. When cold the fat is removed in a solid piece, leaving a clear liquid or jelly. Heat a small portion when it is time to feed the baby. Keep the jelly covered and on ice.

Meat: One tablespoonful. Take meat, round or sirloin steak, scraped with a silver spoon. When you have the desired amount shape into a pat and broil on a hot, dry spider. When done, add a little salt. Or a piece of rare round or sirloin steak, the outer part having been cut away is scraped or shredded with a knife.

Spinach: Cook spinach in salted water until tender. Pour cold water over it and drain. Rub through a fine sieve.

Baked Apple: Apple baked three-fourths of an hour. Skin and core removed; 2 tablespoonfuls of pulp strained through a fine sieve.

Cereal; Flour Preparation: Cereal preparation, three-fourths of a cup, cooked with 1 quart of water for three-fourths of an hour in a double boiler. Add enough water to keep moist.

Oatmeal: Have a pint of water boiling in the top of the double boiler; add one-half teaspoonful of salt and drop in gradually one-half cup of oatmeal flakes, stirring all the while. Cook for three hours and strain through a wire sieve. Pour on one to two ounces of milk.

Never give a baby candy, doughnuts, pastry, fresh bread, griddle cakes, syrup molasses, pork or tough meat of any kind, bananas, overripe fruits, pickles, tea, coffee, soda water, beer or tastes of foods from the family table, especially during hot weather.

Additional directions for feeding older babies and rules for cooking meat and vegetables for their use are given in a bulletin published by the Children's Bureau of the Department of Labor, Washington, D. C. This publication, "Infant Care," is sent free to all who apply for it.

Summer Complaint.

"Summer complaint," or diarrhea, is one of the most dread ills which may befall the baby.

It is the principal symptom of various forms of indigestion, some of them mild and some very serious. But any undue looseness of the baby's bowels should put the mother on guard against illness.

At the appearance of diarrhoea the city mother should take her baby to a good doctor. If she has no doctor she should go to the nearest infant welfare station, where a competent physician will advise her as to the care of the baby, and the nurses in attendance will help her carry out his directions.

In the country, where it is difficult to get the advice of a doctor, the mother has a harder problem. Because she is out of the range of infant welfare stations, hospitals and often of physicians as well, it is most important to prevent every attack of illness possible by careful attention to the baby's food and general care, as already advised in these articles.

A pamphlet which may be of help to the country mother is "Infant Care," sent free to any one mailing a request to the Chief of the Children's Bureau, United States Department of Labor, Washington, D. C. This

pamphlet contains simple directions for the care and feeding of the baby, and suggests some way of dealing with various emergencies.

The healthy baby usually has one or two bowel movements a day. If this number is increased to four or more it is time to take measures against sickness.

It is well to remember, however, that the bowel movements of a baby fed entirely at the breast are normally more frequent than those of a bottle-fed baby, and that a slight increase in the number of movements is not so serious a matter to a baby at the breast as to one artificially fed. A baby fed at the breast does not usually have diarrhea, and when such a baby shows signs of digestive disturbance it is usually because he is overfed—either he is nursed too often or at irregular intervals, or is allowed to nurse too long at one time. When he does have diarrhea the time between nursings should be increased to four hours and the time at the breast reduced to five or ten minutes. If the bowels continue loose, the breast should be withdrawn entirely for several feedings, if necessary, giving the baby instead cool drinking water at frequent intervals. In this case the mother should pump her breasts at the regular nursing times, both to keep them free from drying up and to prevent their caking.

Bottle-fed babies are the most frequent sufferers from summer diarrhea, and this fact furnishes another strong argument in favor of breast feeding. Diarrhea in a bottle-fed baby is also best treated by reducing the amount of food. The bottle should be omitted for 8, 12 or 24 hours, according to the severity of the attack, and in place of the milk should be given as much boiled and cooled water as the baby will take.

Food should not be withheld for more than 24 hours without the advice of a doctor. When the bottle is resumed the food should be much weaker than before; water should be substituted for at least half the milk previously given. The milk should be skimmed and the sugar omitted.

The return to the former feeding should be made gradually by adding a little more milk each day and beginning to add sugar. The more severe the attack has been, the more slowly should changes be made.

If the baby is on "mixed" feeding, that is, partly breast and partly bottle-fed, the bottle feedings should be omitted if diarrhea appears, and the breast given once in four or five hours, with nothing but drinking water between meals.

Diarrhea is much more frequent in July and August than in the cooler months of the year, which fact has earned for it the name of "summer complaint." Accordingly the mother should use every means in her power during the hot weather to keep the baby cool. In the heat of the day the baby should wear only a diaper, with possibly one other thin garment.

Frequent cool spongings and at least one full tub bath each day, plenty of sleep and a constant supply of fresh air will help to protect the baby from the excessive heat and keep him well. Directions for this health care of the baby in summer have already been given in this series of articles.

WHAT TUBERCULOSIS COSTS IN WAGE.

Working men are always aroused when an employer or a group of employers suggest a reduction in wages. How many of the men who read this article ever stop to think of the enormous sums of money they are losing in wages every year due to one preventable disease, TUBERCULOSIS.

A careful study of 500 Boston men who had consumption, and most of whom died with it, has revealed the fact that these 500 men alone lost over \$425,000 in wages as a result of this disease. The investigators in this study were not guessing; they actually looked up the wages that the various men had been getting when they were taken sick, the length of time they were sick, and thus the amount of money they lost could easily be figured up. Each of these men lost on an average in hard cash nearly \$1,000 in wages alone, to say nothing of the enormous loss to his family and the community and the uncomputed suffering that this disease caused. It was found that out of the 500 men, 495 had to give up their work because of tuberculosis, and that the average number of weeks of complete disability when they could do nothing ranged from 58 to 89, depending on whether the men were living or dead at the time of investigation. The average rate of wages was about \$11.50, and the total loss amounted to \$426,039.

A most conservative estimate would place the number of deaths of working men from tuberculosis last year at 50,000. If on an average, every one of them lost \$1,000 in wages, the total wage loss would amount to \$50,000,000 in one year. The actual loss is probably considerably larger than that sum, a number of writers placing it as high as \$150,000,000. It will be plain, however, to every working man from these figures that an attack of tuberculosis means a serious loss in money, happiness and health. How can this disease be warded off? Just a few suggestions may save you money. Read them carefully.

1. Live in the fresh air as much as you can. You may have to work inside, but by keeping a window open and by getting a few deep breaths of outdoor air at frequent intervals you can help to insure your health. If you are at home keep the windows open, and always sleep with plenty of fresh air circulating through the room. Outdoor play and exercise are to be preferred.

2. Eat all the good, plain food you can digest comfortably. Eat a variety of foods, not all meat or all vegetables, but some of various kinds, such as fruit, meats, fish, vegetables, milk, eggs, etc. Your stomach,

bowels, liver and other digestive organs require three things primarily nourishing foods, liquids, particularly water, and bulk. Many things you eat, such as some vegetables, do not nourish the body, but they are needed for bulk in your intestines to prevent constipation. What you eat will determine to a large extent your ability to resist attacks of tuberculosis and other diseases.

3. Rest is as necessary to health as is food or air. Some people require more rest than others, but every working man or woman should try to get at least eight hours of rest every night or day in bed. Besides this, everyone should find opportunity to rest and relax while at work or between periods of work. One may relax without stopping work simply by changing or shifting one's position or task. If you work hard with your hands during the day a certain amount of mental work at night may be a recreation. It is monotony of work, doing the same thing over and over day in and day out in the same way that kills. Anyone can break the monotony if he tries.

4. This leads us to suggest recreation or play or exercise as a part of your daily life. Don't play so that you become all tired out, for then the play is dangerous. Everyone needs some play, but not too much. You cannot work all day and dance and carouse all night and keep your health. Sooner or later the strongest constitution will break and the resistance to disease will become so low that the onset of tuberculosis or other disease cannot be avoided.

5. A hundred more rules and suggestions might be given, but enough has been said to show that the safeguarding of your health against tuberculosis depends to a large extent upon you. If you live a clean, regular life your chances of escaping tuberculosis are far better than those of the man who burns the candle of his life at both ends and who pays no attention to his greatest wealth, his own health.

Editor's Note.—This article has been prepared for the Boilermaker's Journal by the National Association for the Study and Prevention of Tuberculosis. Other articles will follow, giving more details as to what you should know about tuberculosis.

CORRECTIONAL SYSTEM OF SPRINGFIELD, ILLINOIS.

By Zenas L. Potter.

This is the first report of a comprehensive survey of a city's correctional system to be issued. Besides making a careful analysis of the Springfield situation, it contains up-to-date information about the correctional problem which confronts every American city. Judges, police officials, probation officers and those in charge of correctional institutions will find in it much of special professional interest. Lawyers, social workers and the general public will gain from it much information as to most efficient methods for dealing with law-

breakers. It will doubtless become the model for other similar investigations, and consequently is of special interest.

(This is one of nine reports making up the Springfield Survey. Price 25 cents each. Published by Department of Surveys and Exhibits, Russell Sage Foundation, 130 East Twenty-second Street, New York City.)

AN ITALIAN FOUR CYLINDER PRAIRIE LOCOMOTIVE.

By Frank C. Perkins.

A four cylinder compound prairie locomotive shown in the accompanying illustration was constructed at Milan, Italy, at the works of the Societ Italiana Ernesto Breda, and is in use by the Chemins de fer de l'etat italien.

This engine has four cylinders 420 mm.

AN ITALIAN 4-CYLINDER PRAIRIE LOCOMOTIVE.

in diameter, with a stroke of 650 mm. The Diameter of the driving wheel is 1.85 meters and the fixed wheel base measures 1.95 meters, while the total is 8.45 meters.

The boiler has a coal heating surface of 242.8 square meters of which 178.2 square meters represents the heating surface of the tubes and 52.4 square meters the steam super-heater surface, while the area of the grate is 3.5 square meters, the amount utilized being 12 kilograms. This engine develops 1300 horse power and has a maximum traction effort of 10,580 kilograms.

The total weight of the engine and tender combined is 120,400 kilograms, the weight of the tender in service being 49,600 kilograms and of the locomotive 70,800.

THE LATEST AMERICAN SUBMARINES.

(By Frank C. Perkins.)

The accompanying illustration shows one of the latest types of submarine torpedo boats of the United States. It is pointed out by Herbert S. Howard, naval constructor at the United States Navy at Washington, D. C., that submarines in the present European war have come so much to the front that not only navy men, but the laymen throughout the country, have great interest in them.

He shows that submarine boats must be strongly built, as they must withstand the pressure of water when they are submerged, and for this reason the structure of sub-

marines is heavy when compared to surface vessels, and must be made of a shape capable of resisting high pressure.

It is the practice in all countries to design submarines to withstand submergence to depths of 150 to 200 feet, and beyond such depths they must not go. In order to submerge a submarine boat, water is admitted to ballast tanks, thus destroying the reserve buoyancy of the vessel. When it is desired to bring the vessel to the surface, water is pumped or blown by compressed air from these tanks. In some other types the tanks are located outside of the circular section hull, between it and a light exterior hull, more or less ship-shaped.

It may be stated that the United States submarines and those of England are practically all of the first type, while those of

Germany and France are of the latter type. When submerged, submarines ordinarily receive no fresh air, and a submarine may remain submerged for about ten hours before the air becomes too foul for breathing. In many foreign submarines devices for regenerating the air are fitted to permit them to remain submerged a much longer time, and it is worth noting that devices of this nature have been tested and are now under consideration for the submarines of our navy.

The submarine is supplied with one or more periscopes, with which it can see, provided the vessel is only a short distance below the surface. These are optical instruments with lens systems similar to those of a telescope, but with prisms at the top and bottom to turn the rays of light down, and out at the bottom. When completely submerged, however, the submarine is blind, but various forms of searchlights have been suggested for under-water vision, although so far none have promised success. The speed in submarines is a feature much sought after, according to Naval Constructor Howard of the Bureau of Construction and Repair of the United States Navy Department, but due to limitations of electric power, size of battery, the submerged speed cannot at present be brought to a high figure.

In modern submarines this varies from 9

to 11 knots, and this speed can be maintained for only one hour. If a slower speed is used the distance covered will be greater, but the maximum submerged radius of the modern submarine will probably be 100 miles at five knots. The surface speed offers greater possibilities of development and increase, and along these lines all countries are now working. For several years 14 knots has been considered about a maximum, but with development in oil engines greater speeds have been attained. Some of the English submarines in service make

modern torpedoes, speeds of from 35 to 40 knots are obtained, with ranges up to 4,000 yards or more. Submarines, however, usually fire their torpedoes at ranges of from 600 to 2,000 yards. In addition to torpedoes, submarines nowadays generally carry one or two small guns, and the use to which such guns may be put has been brought out clearly in the present war. It is often thought that a submarine is a mass of machinery, and that the life on board is simply existence in a whirl of shafts and levers. A submarine is indeed filled with machinery, and the

U. S. SUBMARINE TORPEDO BOAT E 2.

16 knots, and some German submarines 17 or 18 knots. At the present time, however, both in this country and abroad, there are submarines building of 20 and 21 knots speed. In such vessels steam or Diesel engines are used. None of these fast vessels are in service, so that it remains for the future to show whether they will usurp the place of the torpedo boat destroyer.

The radius of action of a modern submarine on the surface varies from 2,500 to 5,000 miles, so it may be seen that long trips are possible. All modern submarines carry torpedoes as their essential armament. In general it is foreign practice to fit two or more tubes in the bow and two in the stern, while in our navy we have adhered to a bow arrangement with two to four tubes grouped there together. To fire these torpedoes the periscope must, of course, be exposed and the vessel herself pointed at the enemy. It is not always realized, and so may be worth noting, that the torpedo itself is really a small submarine boat with high-powered engines.

The accompanying illustration shows one of the latest United States submarines, the torpedo boats running on the surface. With

crew are mechanical experts, but the quarters provided for the crew are as good as those on a torpedo boat.

All the latest appliances are provided as Naval Constructor Howard points out that electric ranges are installed for cooking food, and everything is done to make these vessels habitable and comfortable as far as possible for comparatively long cruises. For example, fuel, supplies, fresh water, can be carried by modern submarines to make a cruise of 5,000 miles.

CONGRESSMAN BUCHANAN'S VIEW OF WAR.

Since the sinking of the *Lusitania* I have seen grave danger of this country becoming involved in the European war, and whenever and wherever I have had the opportunity I have exercised my influence to create a sentiment against it. I have talked with many trade union officials and others, and find that the people are almost unanimously opposed to war.

I was officially connected with the trade unions until about nine years ago, and I am still a member of the union, associating with union men to some extent, and when I

exert my influence as I have been and am doing in the direction of peace, I feel that I am not only in accord with the sentiments, aspirations and hopes of the great wage-working masses of our country, but am also certain that I am representing their best interests. At one time I had hoped that through labor organizations of an international character there would be a sufficient degree of unity of action and solidarity among the wealth producers of the world to prevent a conflict such as has been going on in Europe for the last ten months, but it would now seem like a ghastly joke to contend that unity, solidarity and brotherly regard exist among the workers of the world. This is not a war of class against class, but of the masses against the masses.

Never before have I been so bitterly disappointed in my hopes. The best that can be said of the wage workers of Europe is that they were taken unawares; that labor organizations had no time to gather their forces and assert their principles to resist the convention prejudices and patriotic enthusiasm born of delusions many generations old. If labor had prevented the war in Europe through means of solidarity it would have won universal applause; its bitterest foes would have eulogized labor. No triumph on the battlefield would have compared with such an achievement. Of all the victories of peace in history, such a victory would have been the greatest. Above the inhumanity of crowned heads, the humanity of labor would have shone like a star. However, the war in Europe makes the idea of unity and solidarity not less desirable and beautiful, but even more appealing. Its failure in this crisis should bring forth a stronger and renewed effort on the part of the workers to meet the trials yet to come, so that the next time they will not be taken by surprise.

It is appalling when one thinks of the magnitude of this terrible conflict in Europe. It is estimated that it has cost \$17,000,000,000, with a loss of life of about 5,000,000 men, to say nothing of the destruction of property, and the loss in the stoppage of production, which no one will be able to estimate. From my point of view, the worst is yet to come, because, when the ravages of disease, due to this terrible slaughter, start running rampant over the war-stricken countries, the awful results are beyond the power of imagination.

I have seen the grave danger of this country becoming involved in war since the Lusitania was sunk and President Wilson sent his note of May 13th to Germany. The loss of innocent lives, among them women and children, appeals to any humane persons' sympathy and disapproval. But there is war in Europe, and such things demonstrate again that as General Sherman said, "War is hell." The action of Germany in the Lusitania case was brutal, but was it any more brutal than is the action of the allies in preventing Germany from securing food-

stuffs for the purpose of causing a condition of hunger and starvation, not confined to men alone, but including women and children, in order to force Germany to surrender? I disapprove of both methods. I repeat that I deply regret the loss of life and the sinking of the Lusitania, but to my way of thinking, it is no greater offense against the flag and the rights of the citizens of this country than the campaign of the Rockefeller system against the mine workers of Colorado. The mine workers were deprived of their right to go to the government post-office for their mail. Their houses were entered and robbed, and their children were beaten when their parents were away from home. Men were jailed because they dared to stand for their legal and constitutional rights. Women and children were killed by guns brought in through the instrumentality of the Colorado Fuel and Iron Company, which was directed by Mr. Rockefeller. Now we have quite a spectacle. Mr. John R. Lawson, leader of the miners, who never harmed any one, has been convicted and sentenced to life imprisonment by a lawyer of the Colorado Fuel and Iron Company, appointed judge evidently for the purpose, and by a framed-up jury consisting of gun-men and other enemies of the Miners' Union, while John D. Rockefeller Jr. is parading as an eminent business man and philanthropist; Lawson the convict—Rockefeller the saint.

I am called an ultra-radical because I denounce such methods as undemocratic and in direct conflict with a republican-democratic form of government, and I plead guilty to the charge that if that is what constitutes ultra-radicalism. I feel that I can realize in some small degree what it would mean for this country to become involved in the European war. It would mean the placing of the flower of the manhood of the working people of this country as targets for the guns and amunition of Europe (perhaps manufactured by the patriotic merchant princes and captains of industry who interpret the "general welfare" to mean the "welfare of the dollar nobility"), and perhaps the slaughtering of the toilers by the tens of thousands, together with the piling up of a war debt of several billions of dollars which would bear heavily upon the backs of the wealth producers of the country, since they would have to pay it. I can see absolutely nothing to be gained by becoming involved in this war. I have never heard anyone say that there is any conflict in Europe between democracy and bureaucracy and autocracy. No one attempts to say that this conflict on either side is being waged for the rights of men. In fact, both sides of the conflict deny responsibility for it. I am strongly convinced that the masses of people on neither side of this war know what they are fighting about.

Since I have been a member of Congress I have exercised my influence, with some degree of success, to have this government manufacture its own war munitions, not

only because it gives the workmen more work and better working conditions, but because the government also secures better supplies by such procedure, and last but not least when we stop the large profits that are now being secured by the "war munitions trust" and the "armor plate ring" we will stop one of the strongest forces that creates and fosters a military spirit, which leads to wars and is largely responsible for the awful conflict that is now on in Europe.

Some say that I am unnecessarily alarmed about the danger of this country becoming involved. I would like to point to the condition that existed last summer in regard to Mexico. War was practically declared because the dignity of a few of our enlisted men and a naval officer had been offended by Huerta. And who was Huerta? So far as this country was concerned, he had never been recognized as being anything except a brutal assassin, representing a band of cutthroats. But Huerta was required to salute the flag, get out of the country or else the United States proposed to wage war on the people of Mexico. At the time the matter was put before the House of Congress it was a question of voting for what was practically a declaration of war or voting to disapprove of the action already taken by order of the President of the United States.

Will the working people of this country, in face of the horrible object lesson being taught them in Europe's war-cursed zone, show the unity of action and solidarity necessary to prevent this country from becoming involved in a similar terrible slaughter, especially when there is nothing to be gained and everything to be lost by engaging in such questionable action? Let all who believe in peace be true to themselves and their fellow workmen, and exercise their influence to crystallize that sentiment in opposition to war, into an active force that cannot be denied and will, when the opportunity offers itself, operate to the preservation of American neutrality and bring about an equitable and peaceful termination of the present war in Europe.

I am not for "peace at any price," but I am opposed to war unless it is to prevent invasion of this country or to fight for the rights of man or democracy against autocracy. I have been and intend to continue to exercise whatever forces I can to prevent this country becoming involved in war until the danger I see has been eliminated, no matter how or by whom I am criticised for it. I feel that I owe this to the labor people of the country.

I have received all the honors that my organization has the power to extend to any one. I have received better support in campaign time from the wage earners than any man who has ever been in politics. I consider that I am only responding to the call of duty when I see grave danger confronting the masses of the people of this country, the wage-workers, and warn them

against such a danger. This I intend to do to the best of my ability, and in doing so I am only following the dictates of my conscience.

To meet the demand of the hour, organized action was essential. Labor being the one element in human society, in an efficient state of organization and in full sympathy with the preservation of peace at home and the establishment of peace abroad, was appealed to for assistance in the establishment of an institution dedicated to the attainment of universal peace. As a result of the pioneer efforts put forth, Labor's Peace Council of Chicago was brought into being and issued a general call for a Peace Congress of labor's forces to be held in the city of Washington, D. C., June 22-23, 1915.

The deliberation of the delegates assembled in the Peace Conference led to the creation of Labor's National Peace Council with the following officers:

President—Congressman Frank Buchanan, former International President of Bridge and Structural Iron Workers' Union.

First Vice-President—Milton Snellings, Washington, D. C., of Stationary and Steam Operating Engineers' International Union.

Second Vice-President—William F. Kramer, Chicago, secretary-treasurer of International Brotherhood of Blacksmiths.

Third Vice-President—Rudolph Modest, New York, Amalgamated Meat Cutters of America.

Fourth Vice-President—Jacob C. Taylor, East Orange, N. J., secretary-treasurer of Federated Central Body of the States of New York and New Jersey.

Secretary—L. P. Straube, Chicago, Ill., Commercial Portrait Artists.

Treasurer—Ernest Bohm, New York City, secretary Central Federated Union.

Sergeant-at-Arms—Fred Lohn, Chicago, Ill., Leather Workers' International Union.

General Counsel—Mr. H. Robert Fowler, Harrisburg, Ill.

The program to govern the council's further activities was based upon Resolution No. 159 adopted by the American Federation of Labor in convention assembled in Philadelphia, 1914, which read as follows:

Resolved, By the American Federation of Labor, in Thirty-fourth Annual Convention assembled, that all patent rights for arms, munitions and other equipment to be used for war purposes should be acquired by the government, and all such equipment should be manufactured in government establishments.

And in addition to the foregoing, further action calling for an extra session of Congress to immediately consider the promotion of universal peace, and the organization of local branches of Labor's National Peace Council, in not only the large metropolitan centers, but in every city, town and village that can muster a sufficient number of peace advocates to establish a local council.

Lack of space forbids going into minute details of the wonderful opportunities confronting organizations of this character in their labor of social reconstruction.

A pamphlet is being prepared that will anticipate every possible question that might arise in the minds of those honestly interested and eager to engage in a work that will earn not only the gratitude of the American nation, but also the fervent, heart-felt commendation of all neutral countries, while to the belligerents engaged in the conflict it will signify a Heaven-sent chance to end a hell-inspired slaughter that offers profit to none but the organized dollar's representative who places wealth above human lives and progress.

If you, dear reader, are interested sufficiently to aid in this work by lending your efforts to establish a local council in your home, write a letter or postal inquiry to LABOR'S NATIONAL PEACE COUNCIL, BRIGGS HOUSE, CHICAGO, ILL., and a reply will follow by return mail.

Remember, actions speak far louder than mere empty words. You are confronted with an opportunity to not only safeguard your own interest and the welfare of those you love and cherish, but also to advance world civilization. Will you help in this work or stand by with folded arms, expecting others to not only do their share, but yours as well?

No one can answer this question but yourself.

You are either for peace or war; declare yourself, for now is the time.

FRANK BUCHANAN,

President Labor's National Peace Council.

THE UNION LABEL AS A MEANS OF REDUCING THE COST OF LIVING.

By John A. Dyche, Former Secy., the Lady Garment Workers' Union.

The progress of the union label idea has been dead slow. Altho the sale of union labeled articles has increased, I doubt very much if that increase has been proportionate to the increase of the membership of the A. F. of L.

The cause of it is not far to seek. The average person in his daily purchases is looking for values rather than for ideals, and the more you talk to him of his duty to buy Union Labeled goods because of loyalty to ideals, the more you are apt to frighten him away from following your advice. The union label at present appeals to the idealist only. This inevitably results in restricted purchases and sales. A restricted sale of any given number of commodities tends to produce the following results:

1. It increases the cost of such merchandise.
2. It restricts one's freedom of selection of the class of goods one cares to purchase.
3. It cuts out a large class of would-be purchasers who happen to live in localities

where there are no stores carrying such goods.

The average unionist who in time of strike is ready to make any sacrifice for the cause, will not take kindly to the propositions which add to his cost of living and restricts his freedom of purchasing the kind of goods he likes best.

It is no wonder, therefore, that in spite of the systematic label agitation, of the strenuous and self-sacrificing effort of the label bodies, of the constant appeals of the labor press, the purchasing power of organized labor which amounts to hundreds of millions of dollars annually, still remains disorganized and scattered, and is helping to build up the fortunes of many of the enemies of union labor.

During the ten years of my secretaryship of the International Ladies' Garment Workers' Union when I was vainly trying to place our label on the market, I have had occasion to give a good deal of time and thought to the union label problem, and I came to the conclusion that the solution lies in turning our energies in the direction of finding ways and means of cheapening the cost of union labeled articles instead of hammering away at the weakness, the want of consistency of the men and women in our ranks.

I am ready to admit that at present there are a very few articles on which the use of the union label can be made the means of reducing the cost to the consumer. But a start can be made, and once you have proven to the laboring people that the label can be used as a means of lowering the cost of commodities, you have laid the foundation for a union manufacturing and trading movement which can outdistance the work of the Rochdale pioneers of England.

For this we need a combination of business abilities, with idealism and loyalty to the cause of organized labor. The men who are to handle such a proposition must understand modern business principles and methods, and must have an intimate knowledge of the class of merchandise they are going to deal with.

Organize and concentrate the purchasing power of our local union and label bodies scattered throughout the country; concentrate your efforts on a few articles, the production of which is more or less unionized, and where there is competition among union employers. Buy in large quantities and pay spot cash. Then use your local organizations as a means of distribution to reduce its cost, and the problem is solved.

From my intimate acquaintance with the women's garment industry, I am convinced that here the conditions are ripe to make a successful experiment along the lines indicated.

The price of every article contains two elements, the cost of making and the cost of distributing; that is, the cost of manufacturing and of selling the article.

What would be the effect on the price if the union label were attached to women's

garments? New York is the center of the woman garment manufacturing in this country. At the same time, at least 75 per cent of this industry in that city is unionized, where employers with the largest up-to-date plants generally run Union shops. It would be a comparatively easy matter to induce them to adopt the label if they could be assured of the purchase of a sufficient quantity of their merchandise. It is evident, therefore, that the addition of the union label in such an industry would not add to the cost of production.

Now as to the cost of distribution. The cost of selling or distributing varies in each industry. In the sale of typewriters, or pianos, for instance, the cost is considerably larger than the manufacturing.

In the woman's garment industry, the cost of distribution is from 75 to 100 per cent of the cost of production. In other words: Of every dollar you spend on a woman's garment, about one-half of it goes for the cost of producing it, and the other half for the selling of it.

It costs the manufacturers about 25 to 35 per cent to reach the retailer, and it costs the retailer (including the profits) an additional 50 or 60 per cent to sell it to the consumer.

The storekeeper spends considerable money in sending high priced buyers to New York. In stores located in large cities the rent of the shopping district and the cost of the display of his goods, the cost of newspaper advertisements, the cost of delivery and other fixed charges are the causes for the enormous cost of distribution.

In the smaller cities the cost of distribution is not less. In fact, the cost to the storekeeper in a small city who sells a smaller volume of goods than the department store proprietor is likely to be greater.

Then comes the new method of selling goods, the mail-order house. Of late the mail-order business in this country has expanded tremendously. The old concerns have grown immensely and new ones are starting up almost every day. Especially is this true in the case of women's garments. Women in this country are finding the buying of goods by mail-order more convenient than running from store to store. By means of the catalog, the store is, in effect, brought to their homes.

The present mail-order houses often give better results to the consumer than the store, which accounts for the rapid growth of the mail-order business. They have not the expense of the rents of the shopping district, no cost for the display of merchandise. Being situated in the center of the women's garment industry, the cost of buying goods in large quantities is much less than that of the storekeeper.

Still, even these mail-order houses must add from 75 to 100 per cent to the cost of their merchandise to enable them to sell at a profit. A suit which the manufacturer sells to a mail-order house for \$10 or \$12

is cataloged from \$18 to \$22. A dress for which the mail-order house pays the manufacturer \$3.25 is cataloged or sold for \$5.98. The overhead charges or the mail-order houses are not less than that of the retail store.

This is due to the heavy cost of procuring a mailing list, that is, a list of names and addresses of prospective customers to whom catalogs may be sent. The cost of printing and advertising alone in connection with the mailing list, adds from 25 to 35 per cent to the cost of the article.

Now, if by enlisting the interest and the co-operation of the various local unions, label bodies and union people generally throughout the country, by adding the label to the merchandise, union made goods could be sold in large quantities at least 35 per cent of the selling expense could be eliminated. In other words, such a plan would give the consumer goods considerably less in price than even the mail-order houses are able to do.

Every union man or woman is morally pledged to buy union made articles. Why, then, should not every local organization furnish a "mailing list" for a union catalog or mail-order house and the label agitator and promoter should become a collector of names and addresses for such a concern, and the labor press should do the advertising. If they will do so the labor union could accomplish the following:

1. A great reduction in the cost of distribution or sale of union made articles. This must result in
2. Lowering the cost of this class of merchandise, which, in its turn, must effect
3. An increase in the sale and production of union label goods.
4. It will enable union people to obtain union labeled products in localities where there are no stores for such goods.
5. By means of the mail-order system you can concentrate the whole purchasing power of the organized labor movement and their sympathizers and thereby effect economies which could not be done otherwise.

There is one other important service which such an undertaking can render. It will tend to unify the interests of the consumer and producer, which at present form two antagonistic elements in the community, neither of which cares to understand the interest of the other.

Even the co-operative societies in Europe have done little in this direction. There the co-operative societies and the unions are distinct and at times antagonistic organizations. Under the proposed plan, the unions instead of being organizations for the protection of the workers as producers only, will also become co-operative consumers' organizations.

As evidence of my faith in the soundness of my plan, I have organized a concern under the name of "standard Union Merchandise Assn., Inc.," to begin a mail-order business of union label women's wearing apparel. I

propose gradually to extend it to other classes of merchandise.

I use the term "gradually" advisedly. I shall not be in a hurry to list union labeled articles in the catalog until I am sure that I can offer better values than non-union concerns.

Just as union wages mean good wages, so union made goods must become synonymous with good values. Once our concern will become known as a large cash purchaser of union made articles, you will find this process much easier than you think.

On the other hand, when the general public will become aware that we give better values, we shall even find patronizers among people who have no love for unions or union labels.

If a sufficient response will come from the various local unions, label organizations and labor people and sympathizers generally; if they will co-operate in sending us the names and addresses of prospective buyers, to whom catalogs may be sent, we shall go to work and put the plan into execution.

The whole plan has been worked out in detail, and I have sufficient backing from union sympathizers to make this proposed undertaking a success.

By mutualizing this company, the labor unions can thus run a subsidiary concern which will do for them the purchasing and distribution of union made articles. We will then be in a position to demonstrate that by means of our organization we are able not only to raise the standard of comfort of the worker, but also lower his cost of living.—Issued by the Standard Union Merchandise Assn., Inc., 200 Fifth Ave., New York, N. Y.

FOREIGN FOOD PRICES AS AFFECTED BY THE WAR.

To show something of the effect of the European war upon cost of living following the outbreak of hostilities in August, 1914, is the purpose of Bulletin No. 170 of the Bureau of Labor Statistics, Department of Labor, just issued under the title, "Foreign Food Prices as Affected by the War." Much of the information of the report was obtained through the consular service of the Department of State, and in the main covers the period from August to December, 1914. Prices are given for 18 countries and represented by reports from over 100 cities, towns and consular districts.

The report shows that the first effect of the war was the same practically throughout Europe. Its outbreak was followed by a sharp rise in prices due mainly to panic and uncertainty. In some countries legislative measures were at once taken to check this rise. In others the governments strictly adhered to a hands-off policy, and trusted to the natural course of events for readjustment. Within a fortnight the first panic was over, and except in the actual war zone

prices began to fall. In most places, however, prices did not drop to the July level, and after an interval again took an upward turn, which has probably not yet reached its climax.

The price figures available are somewhat incomplete, but almost everywhere the upward tendency of prices appears. Potatoes was one of the few articles which showed a fall in prices in most of the more important countries. Meat, also, was another important article, which in many places increased but little in price.

Flour, on the other hand, showed decided changes. Russia is the greatest wheat exporting country of Europe, and the war practically shut off its foreign markets. It is not surprising, therefore, to find that the price of wheat flour had actually fallen in Moscow. In Germany and Austria the rise was marked, prices compared with the July level in Germany showing an increase of 25 per cent by December and 34 per cent by January. In Vienna the increase by December was 73 per cent and by January 82 per cent. In Switzerland, The Netherlands and Great Britain flour prices in December were 13 or 14 per cent above the July level, but later figures show a continued increase in February, reaching 24 per cent in the Netherlands and 33 per cent in Great Britain. Bread prices in most cases followed those of wheat flour. In Germany and Austria, however, the increases in the prices of bread were somewhat less than those in the price of wheat flour.

Sugar prices showed marked differences resulting from the war in different localities. In France the best sugar beet fields lie in the northern parts, which were early invaded, and as a result the price of sugar rose sharply. Germany and Russia are sugar exporting countries, and in Berlin and Moscow sugar showed little change in price. England imports its entire supply, and in London the price rose 70 per cent. Turkey usually imports her sugar from Russia and from Austria. The Russian supply was shut off altogether when Turkey entered the war, and the Austrian supply was reduced to what could be brought through by rail, a very uncertain dependence.

Administrative and legislative measures to check the rise in cost of necessities were very generally taken. Denmark, Egypt, Great Britain, Italy, Russia, Spain and Turkey prohibited the export of practically all food stuffs. France, Norway and Sweden listed certain articles which must not be exported, and Holland placed an embargo on butter and cheese.

Fixing maximum prices, especially for food stuffs, by some government agency was a very common measure. To some extent it was used by every country included in the bureau's report, although in Great Britain and Sweden so little of the sort was done that these countries might almost be excepted.

The methods adopted for fixing prices dif-

ferred considerably. In France, Germany, Greece, Italy, Netherlands, Russia, Spain In all these countries the municipal authorities, either alone or in co-operation with the central or military authorities, might fix maximum rates if they thought best. In most cases this right was of long standing. In all of these countries the municipal authorities have very generally made use of this right. In Bulgaria a special law was passed early in August authorizing local authorities, with the participation of financial authorities, to fix prices, both wholesale and retail. In Egypt a commission was appointed by the central government with power to fix maximum prices. Denmark, Norway and Sweden also resorted to commissions for this purpose. In Serbia the minister of the interior was charged with the duty of fixing maximum prices.

Some governments, while allowing the local authorities to fix prices on most things, issued decrees applicable to their whole territory concerning a few highly important articles. Thus Austria and Germany both prescribed the proportion of wheat or rye flour that should be used in making bread. Later both Austria and Germany fixed the wholesale price of cereals and brought the distribution and consumption of flour and bread under strict control. Turkey fixed prices for petroleum, sugar and flour. In Italy salt,

tobacco and matches are government monopolies, so that their prices were fixed by the central authority. Denmark, Holland and Switzerland limited themselves to controlling the most important breadstuff of each country.

The importance and full significance in the increases in prices which occurred would not be fairly presented without reference to the fact that increased cost of living, and especially the increase in food prices, has for several years been a question of serious concern in practically all of the European countries. The upward movement in prices prior to the war had in fact been world-wide. An inquiry of the British Board of Trade in 1912 showed increases in food prices in various countries over prices in 1900, ranging from 15 per cent in Great Britain and France to 16 per cent in Australia, to 30 per cent in Germany, to 32 per cent in Belgium and 35 per cent in Austria. In Canada and in the United States the increase shown was even greater than the highest of these figures. Thus it will be seen that the increased prices are directly due to the war, coming as the culmination of a long period of increases, are much more serious to the masses of the population than the mere figures indicate. It is obvious, too, that the increases of the first four to six months represented only the beginning of the war's effect on the cost of living.

Smiles.

ALL MADE CLEAR.

A woman missionary in China was taking tea with a mandarin's eight wives. The Chinese ladies examined her clothing, her hair, her teeth, and so on, but her feet especially amazed them.

"Why," cried one, "you can walk and run as well as a man."

"Yes, to be sure," said the missionary.

"Can you ride a horse and swim, too?"

"Yes."

"Then you must be as strong as a man!"

"I am."

"And you wouldn't let a man beat you—not even if he was your husband—would you?"

"Indeed, I wouldn't," the missionary said.

The mandarin's eight wives looked at one another, nodding their heads. Then the oldest said, softly:

"Now I understand why the foreign devil never has more than one wife. He is afraid."—Southern Women's Magazine.

SMALL CHOICE.

Pat: "Yis, sorr, wur-rk is scare, but Oi got a job last Sunday that brought me folve dollars."

Mr. Goodman: "What! you broke the Sabbath?"

Pat (apologetically): "Well, sorr, 'twas wan av us had t' be broke."—Boston Transcript.

Two men were hurrying along, and met at the corner of a street, only to collide and knock their heads.

"Why don't you look where you are going?" said one.

"I was just going to say the same," said the other, "for you made my head ring."

"Your head ring?"

"Yes."

"That shows it's empty."

"Didn't your head ring?" asked the other.

"No," was the reply.

"Then that shows it's cracked."

CATCHING UP.

The war was being discussed from all angles at the regular Saturday night meeting of the Possum Colored Gentlemen's Social Club.

"Yas, suh!" announced Pomp Dawson, with a wise look in his rolling eyes. "Dem Guhmans has got guns dat'll shoot, an shoot tuh kill, at twenty-f' miles."

"Huh?" asked Brother Jackson, cocking his head.

"Yas, suh!" went on Pomp. "Dey not on'y shoot twenty-f' miles, but dey kill at twenty-f' miles."

"Great Lawzy!" gasped Jackson. "Nigger'd run all day an' git killed 'bout supper-time, wouldn't he?"

JOKER DIDN'T COUNT.

When a man charged with disorderly conduct was arraigned by Patrolman Queen before Chief Magistrate Kempner in the Adams Street court, Brooklyn, N. Y., the court asked:

"What's your name?"

"Thomas King," was the answer.

"Ah," said the magistrate, "a Queen captures a King."

"Yes, but it wasn't a straight deal," retorted King.

"Sure it was," interrupted Queen. "This man is a four-flusher."

"What's your business?"

"I dig for a living?" answered King.

"So you are the King of Spades?" laughed the magistrate.

"Yes, but beaten by a club," answered King.

"You can come across with \$2."

"A deuce of a fine," spoke up King, "but I'll see you." He handed over the money and Clerk Hesterberg raked in the pot.

"I see a joker's no good in this game," said King, as he was leaving the court.—Exchange.

KEEPING IT GOING.

An Irish soldier on sentry duty had orders to allow no one to smoke near his post. An officer with a lighted cigar approached, whereupon Pat challenged him and ordered him to put it out at once. The officer, with a gesture of disgust, threw away his cigar, but no sooner was his back turned than Pat picked it up and retired to his sentry box. The officer, happening to look around, observed a cloud of smoke coming from the sentry box. He at once challenged Pat for smoking on duty. "Smoking, is it; sure, Bedad, and I'm only keeping it lit to show the corporal when he comes, as evidence agin you."—Ex.

THE ONLY WAY HE COULD.

A man fearfully addicted to stuttering stepped up to the ticket window at a railroad station and asked what it would cost him to go to New York by freight.

"By freight?" exclaimed the astonished ticket agent. "What in thunder do you want to go by freight for?"

"Be-c-cause," stammered the man, "I c-c-cant exp-p-press myself very w-well, c-can I?"—Suburban Electric Railway Magazine.

A BASHFUL CLERK.

A pretty young woman stepped into a music store the other day. She tripped up to the counter where a new clerk was assorting music, and in her sweetest tones asked:

"Have you 'Kissed Me in the Moonlight?'"

The clerk turned half way around; looked at her and answered:

"It must have been the man at the other counter; I have only been here a week."—National Monthly.

A private, anxious to secure leave of absence, sought his captain with a most convincing tale about a sick wife breaking her heart for his presence. The officer, familiar with the soldier's ways, replied: "I am afraid you are not telling the truth. I have received a letter from your wife urging me not to let you go home, because you get drunk, break up the furniture and maltreat her shamefully."

The private saluted and started to leave the room. He paused at the door, saying, "Sor, may I speak to you, not as an officer, but as mon to mon?"

"Yes; what is it?"

"What I am saying is this," approaching the captain and lowering his voice: "You and I are two of the most illigant liars the Lord ever made. I am not married at all."—Boise (Idaho) Gem Worker.

ORNITHOLOGICAL.

The wife of a Methodist minister in West Virginia has been married three times. Her maiden name was Partridge, her first husband was named Robins, her second Sparrow, the present Quale. There are now two young Robins, one Sparrow and three Quales in the family. One grandfather was a Swan and another a Jay, but he's dead now and a bird of Paradise. They live on Hawk Avenue, Eagleville, Canary Island, and the fellow who wrote this is a Lyre and a relative of the family.—Exchange.

FRUSTRATED.

Marie, who never knew her lessons, was speaking to one of her little schoolmates, who always stood at the head of her classes. "I should like to be the father of such a little girl," said Marie's papa, wishing to point a moral.

"No, you wouldn't, papa," said Marie.

"Why not?" asked her papa.

"Because her father has been dead for two years," said Marie.

PRACTICAL ANSWER.

Teacher: "Now, if I paid one man \$2 a day for seven days, another \$3.50 for ten days, another \$4.75 for six days—"

Reddy Backrow (whose father belongs to the union): "You'd have the durndest strike on your hands you ever saw, teacher."—Puck.

ANY TIME.

Nell: "Eliza went to an astrologer to find out when was the best time to get married."

Stell: "What did he tell her?"

Nell: "He took one look at her and told her to grab her first chance."

TWO METHODS.

"Ferdy says he is unworthy of me."

"My beau doesn't talk that way. He says I am the best girl in the world, and that the best is none too good for him."—Kansas City Journal.

CORRECT TENSE.

The teacher was explaining the tenses. "Now, Willie," she said, "suppose I should say: 'I have a million dollars.' What tense would that be?"

"That'd be pretense," answered Willie.—Boston Transcript.

WISDOM OF FATHER.

"My dad knows mor'n George Washington did," said the small boy.

"How's that?" queried the grocer.

"Las' night," continued the small boy, "when I told dad I hadn't bin skatin' he sed be know'd better, an' gimme a lickin' fer lyin'. George Washington couldn't tell a lie, but dad kin tell one th' minnit he hears it."

"As a matter of fact," said the lawyer for the defendant, trying to be sarcastic, "you were scared half to death, and don't know whether it was a motor car or something resembling a motor car that hit you."

"It resembled one all right," the plaintiff made answer. "I was forcibly struck by the resemblance."

She hung up the receiver and waited. Three times she waited, and then, exasperated, she broke into the conversation.

"Madam, I smell your beans burning," she announced crisply. A horrified scream greeted the remark, and the young lady was able to put in her call.—Christian Endeavor World.

Poetical Selections.

PURE.

A Beggar Man came hungry to my door,
I gave him bread and would have givan
more,

But Charity, astonished, bade me wait
Until her minions should investigate.
"Who knows!" said she. "This may be a
sinner,

His soul may not be worthy of a dinner!
Stay then until we try the Third Degree,
He may not be quite right," said Charity.

So all that day the twin of Gentle Hope
Put my pale beggar 'neath the microscope.
At night Fair Charity emerged aglow—
"He was all right," she said. "He died,
you know." —Exchange.

BE WHAT MOTHER THINKS YOU ARE.

Whilst walking down a crowded city street
the other day,

I heard a little urchin to a comrade turn
and say,

"Say, Chimmey, lemme tell youse, I'd be
happy as a clam

If I only was the feller dat me mudder t'inks
I am.

"She t'inks I am a wonder, an' she knows
her little lad

Could never mix wit nuttin' dat was ugly,
mean or bad.

Oh, lots o' times I sit and t'ink how nice
'twould be—gee whiz!—

If a feller was de feller dat his mudder
t'inks he is."

My friend, be yours a life of toil or un-
dilated joy,

You still can learn a lesson from this small,
unlettered boy.

Don't aim to be an earthly saint with eyes
fixed on the stars;

Just try to be the "fellow that your mother
thinks you are."

EXCELSIOR.

The shades of night were falling fast,
As through an Alpine village passed
A youth, who bore, 'mid snow and ice
A banner with the strange device,
Excelsior!

His brow was sad; his eye beneath
Flashed like a falchion from its sheath,
And like a silver clarion rung
The accents of that unknown tongue,
Excelsior!

In happy homes he saw the light
Of household fires gleam warm and bright;
Above, the spectral glaciers shone,
And from his lips escaped a groan,
Excelsior!

"Try not the pass!" the old man said;
"Dark lowers the tempest overhead,
The roaring torrent is deep and wide!"
And loud the clarion voice replied,
Excelsior!

"O stay," the maiden said, "and rest
Thy weary head upon this breast!"
A tear stood in his bright blue eye,
But still he answered with a sigh,
Excelsior!

"Beware the pine tree's withered branch!
Beware the awful avalanche!"
This was the peasant's last good-night.
A voice replied, far up the height,
Excelsior!

At break of day, as heavenward
The pious monks of Saint Bernard
Uttered the oft-repeated prayer,
A voice cried through the startled air,
Excelsior!

A traveler, by the faithful hound,
Half-buried in the snows was found,
Still grasping in his hand of ice
That banner with the strange device,
Excelsior!

There in the twilight, cold and gray,
Lifeless, but beautiful, he lay,
And from the sky, serene and far,
A voice fell, like a falling star,
Excelsior!

A CALL FOR MEN.

There's a call for men—
Courageous—sincere!
Who hate all pretense—who follow the light
With never a tho't of cringing or fear!
Men who believe in the triumph of right!
Men of conviction, honor, backbone,
Ready to stand if need be—alone!
There's a call for men—for men!

There's a call for men—
Pure-hearted and good!
Too great to be base or sordid or mean,
Who practice spirit or true brotherhood—
Men who are chivalrous, loyal and clean!
Men of principle, purity, pow'r—
True to themselves and God ev'ry hour!
There's a call for men—for men!

There's a call for men—
Large-hearted and wise!
Masters—not slaves of the things they
possess!
Willing to give till it costs sacrifice,
Who know the secret of true happiness!
Men of muscle, of heart and of brain—
Who live not for gold nor greed of gain!
There's a call for men—for men!

There's a call for men—
Far-sighted and keen!
To tackle each task—with cheer—see it
through!
Men who have vision beyond what is
seen!
Men who are eager—to dare and to do—
Men of purpose, of poise, and of pray'r—
Heroes—the burdens of life to bear—
There's a call for men—for men!
—Joseph Henry Ayres.

WHAT'S THE USE?

What's the use to worry,
You've not got long to stay—
Why not take things easy
As you pass along Life's way?
'Twill do no good to worry
If things are going wrong;
You may as well be pleasant—
Meet reverses with a smile and song.

What's the use to criticise,
What's the use to knock;

What's the use to ridicule,
Or at someone throw a rock?
Don't appoint yourself censor,
No matter what you do—
This great big world was never made
For just a chosen few.

There's none of us that's perfect,
There's few of us that stay
And never stray or wander
From the straight and narrow way.
So when you start to hammer
Some poor fool who's gone astray,
'Twill do no harm to pause and think—
You may lose your grip some day..

What's the use to kick one
Who's just about to fall?
If you do not care to help him,
Don't mention him at all.
You'll find, if you take notice,
That what I say is true;
While there may be faults in others—
There's a flaw or two in you.
—Bridgemen's Magazine.

THE MAN OF CHOICE.

Agnes wants a millionaire
With coaches and a car,
Who'll take her all around with him
And travel near and far.

Mabel wants a manly man,
Broad-shouldered, strong and tall,
While Nellie wants a stylish dude,
Who'll come at beck and call.

Sarah wants a publisher,
And lots and lots of space,
And Carrie wants a handsome man,
With a happy, smiling face.

Martha's choice a preacher is,
With hair of glossy jet,
And Nancy says she'll have to take
Whomever she can get.

Mary aims so very high,
She'll never be content
With any man upon this earth
Except the President.

I'm not sure I want to wed,
But if I do, I pray
I'll get a man who's wise enough
To let me have my way.
—Marie C. Jones.

In Memoriam

Members.

F. E. Walters, Reg. No. 101095, age 22, of
Lodge No. 447, Decatur, Ill., died June 21,
1915, of pulmonary hemorrhage. Single,
member eleven months.

of Lodge 241, Washington, Ind., died April
4, 1915, from sarcoma of the neck. Single.

Relatives of Members.

Lemuel Hunt, age —, was father-in-law
of Brother William Springer, of Lodge No.

00; was born in Vernon, N. J., Aug. 4, 1840, died July 5, 1915.

Mrs. Anna B. Hartmann, age 63⁴ years, 10 months and 15 days, was mother of Brother Edward Hahl of Lodge No. 37; was born in

Germany, Aug. 11, 1851, died June 16, 1915, from inflammation of the bowels.

Mrs. Belcher, age 62 years, was mother of Brother James Belcher of Lodge No. 447, died July 1, 1915, from stomach trouble.

Lodge Notices

J. C. Dowd—Lodge No. 199. . . .

Anybody knowing the whereabouts of C. J. Dowd, Reg. No. 96128, helper, left Lodge No. 199 without a card, and also owing a board bill of \$29 and other bills. Last stamp in his book issued by Lodge No. 113. Please notify the undersigned.

E. S. MCGINNIS, S. L. 199.

W. C. Shrout—Lodge No. 82.

Any secretary taking up the card of W. C. Shrout will please hold same and correspond with the undersigned, as this brother secured transportation from Osawatomie, Kansas, to Kansas City on an unsatisfactory service letter and Lodge No. 82 had to pay for same.

A. G. EVERETT,
S. L. No. 82.

C E. Cooper—Lodge No. 528.

Any secretary taking up the card of Brother C. E. Cooper, Reg. No. 41907, will please hold same and correspond with the undersigned, as this brother left here in 1913 and left unpaid bills that Brother Ed Swanson stood good for and had to pay.

J. H. THOMAS, S. L. No. 528.

M. J. Cleary—Father.

M. J. Cleary, last heard from at Kansas City, father is very feeble and would like to hear from him. At Green Bay, Wis.

JOS. A. HAUTZINGER,
S. L. No. 395.

Quinn—McCrone.

Would like to find out address of Brother R. B. Quinn, Reg. No. 9464. Any one knowing same please notify J. McCrone, Trenton, Mo., 1008 Shanklin avenue.

Linden—Lodge No. 582.

Any secretary taking up the card of Brother C. G. Linden, helper, Reg. No. 103719, please hold same and correspond with the undersigned, as this brother left here owing a board bill for the sum of \$19.40 and a tobacco bill for \$1.30. Brother George Will stood good for this brother and got him a job and he worked up to one day before pay day and left. Brother Will will appreciate it very much if he can be located.

S. V. ACOSTA,
C. S. L. No. 582.

Brother Frederick Schultz—Lodge No. 10.

Any secretary taking up the card of Brother Frederick Schultz, Reg. No. 5235, will please hold same and correspond with the secretary of Lodge No. 10, as this brother

er left here owing a board bill of \$3 to a widow woman. WM. S. FROHLIGER,
C. S. L. No. 10.

Lost Due Book—Lakins.

The due book and card of Brother E. J. Lakins, Reg. No. 34645, was lost in Kansas City, Kan., somewhere about the 20th of June, both out of local No. 83. Any one finding same please return them to Frank Stover, Secretary Lodge No. 83.

Return of Tickets—Lodge No. 447.

Lodge No. 447 desires that all lodges that received raffle tickets for the benefit of Brother John Gray please return the tickets or send the amount for same so that No. 447 can get this matter off their hands.

CHAS. J. YOUNGER, S. L. No. 447.

Jas. A. Schofield—Lodge No. 419

Brother James A. Schofield, Reg. No. 53752, left here owing bills to members and merchants. Any secretary taking up card hold same until bills are paid.

J. S. ARNOLD, C. S. L. No. 419.

NOTICE.

Lodge No. 471 Cristobal, C. Z., desires to notify all lodges and members that the rate for boilermakers and shipbuilders in Panama is 65 cents per hour, and ask all lodges to use their best efforts in preventing any of our members from accepting employment of any branch of the trade for less than 65 cents per hour.

LIST OF MEMBERS PREVIOUSLY ADVERTISED

Stewart et al.—Lodge No. 66.

Any secretary taking up the card of Edgar Stewart, Reg. No. 21232, or Noble C. Townsend, Reg. No. 62088, will please correspond with the Secretary of No. 66, Little Rock, Ark., as these brothers misrepresented facts and secured transportation out of Little Rock and Lodge No. 56 had to pay for same.

E. WORTHSMITH,

Corresponding Secretary Lodge No. 66.
March Journal.

E. L. Chafin—Lodge No. 587.

We have suspended Brother E. L. Chafin for not paying dues or honest debts. I, myself, loaned this brother some money to bury his little child, and he will not pay it back. He also owes several bills that he won't pay.

C. C. MADDY,
Corresponding Secretary Lodge No. 587.
April Journal.

W. M. Horstmeyer—Lodge No. 381.

Any secretary taking up the card of Brother W. M. Horstmeyer, Reg. No. 9735, please hold same and correspond with Joe Wilson, secretary Lodge No. 381, Amarillo, Tex., as this brother borrowed some money from this lodge which he has forgotten to return.

JOE WILSON,
Lodge No. 381.

April Journal.

Thompson—Lodge No. 587.

F. W. Thompson, Reg. No. 20987, has been suspended by this local for non-payment of dues. He also owes about \$40 here.

T. C. MADDY,

June Journal. Secretary Lodge No. 587.

Cooper et al.—Lodge No. 491.

The following names are brothers who left Lodge No. 491 with bills unpaid: C. E. Cooper, boiler maker, bill to F. C. Krull & Co. for clothing, \$12.35. A. J. Conelly, bill to F. C. Krull & Co. for clothing, \$3.95. John Peters, Reg. No. 80223, to F. C. Krull & Co. for clothing, \$5.50. Joseph Regan, Reg. No. 95180, to F. C. Krull & Co. for clothing, \$2.40, and board and room to Sutton Sisters, \$8.83; total, \$11.23. J. M. Morgan, Reg. No. 91068, borrowed money from Local No. 491, \$2.50. Helpers: W. J. Mills, Reg. No. 98504, withdrawal card out of Local No. 145, owes F. C. Krull & Co. for clothing, \$6.40. C. A. Riley, debtor to F. C. Krull & Co. for clothing, \$4.25.

J. J. CARROLL,

June Journal. Secretary No. 491.

C. S. Burk—Lodge No. 82.

Any secretary taking up card of Brother C. S. Burk, Reg. No. 102470, will please hold same and correspond with secretary of Lodge No. 82, as this brother misrepresented facts to secure transportation to Kansas City, amounting to \$1.25, and we had to pay this bill out of the treasury of the local.

A. G. EVERETT,

June Journal. Secretary Lodge No. 82.

Robert Canton—Lodge No. 384.

Anyone knowing the whereabouts of Robert Canton, boiler maker's helper, will please notify the secretary of Lodge No. 384, as this brother left this lodge without paying his bills that the lodge went good for.

H. W. JOHNSON,

July Journal. Secretary Lodge No. 384.

W. C. Shrout—Lodge No. 82.

Any secretary taking up the card of Brother W. C. Shrout, Reg. No. 52553, will please hold same and correspond with the Secretary of Lodge No. 82, Osawatimie, Kas., as this brother left this lodge owing a \$9 board bill to Mrs. G. H. Troxell.

A. G. EVERETT,

July Journal. Secretary Lodge No. 82.

Shrout—Lodge No. 521.

Any secretary taking up the card of Brother W. C. Shrout, Reg. No. 52553, will please hold same and correspond with Sec-

retary of Lodge No. 521, as this brother misrepresented facts to secure transportation from Van Buren, Ark., to Coffeyville, Kas., amounting to \$4.95, and Local No. 521 had to pay same.

OTTY PYLES,

Corresponding Secretary Lodge No. 521.
July Journal.

Douglas et al.—Lodge No. 587.

Lodge No. 587 has suspended M. E. Douglas, Reg. No. 100307, for non-payment of dues. We have also bills aggregating to \$80 against this brother. T. C. MADDY, Secretary and Treasurer Lodge No. 587.

July Journal.

D. J. Fitzgibbons et al.—Lodge No. 99.

Any secretary taking up the card of D. J. Fitzgibbons, Reg. No. 67599, or F. G. Hayes, Reg. No. 21882, will please correspond with the Secretary of Lodge No. 99, Newark, Ohio, as these brothers borrowed money from this local which they forgot to return.

CECIL C. ROBERTS,

July Journal. Secretary Lodge No. 99.

Trials and Fines

Sullivan et al.—Lodge No. 284.

This is to certify that the following members were tried and found guilty of violating the laws of the brotherhood by working on unfair work as boiler makers at Freeport and Amboy, Ill., and are subject to a fine of \$100 and suspended, and are not entitled to recognition in any way from the officers or members of this brotherhood until such judgments are satisfied:

C. J. Sullivan, Reg. No. 15676, Lodge 284; Fred J. Cremer, Reg. No. 46438, Lodge 284, age 30; William T. Powell, Reg. No. 81196, age 57, Lodge 284; J. W. Daniels, Reg. No. 15677, age 46, Lodge 284.

CHAS. PONTIUS, Pres.

E. L. MEYERS, Cor. Sec.

Chas. Boland—Lodge No. 113.

This is to certify that Charles Boland, Register No. 13921, about 45 years, of Lodge 113, was tried by that lodge and found guilty of violating the laws of the brotherhood by working on the Illinois Central while the strike was on and was fined \$250 and is not entitled to recognition in any way from the officers or members of this brotherhood until such judgments are satisfied.

CHAS. HALL, Pres.

W. H. SIMS, Cor. Sec.

This is to certify that C. W. Brice, Reg. No. 101768, of Lodge No. 587, was tried by that lodge and found guilty of violating the laws of the brotherhood by working on unfair work as helper at Houston, Texas, July 17, 1915, and is subject to a fine of \$199 and suspended for 99 years, and is not entitled to recognition in any way from the officers or members of this brotherhood until such judgments are satisfied.

By Insisting Upon Purchasing Union Stamp Shoes

You help better shoemaking conditions.
You get better shoes for the money.
You help your own labor position.
You abolish child labor.

Do not be misled by retailers who say: "This shoe does not bear the union stamp, but is made under union conditions." This is false—no shoe is union made unless it bears the union stamp.

THE DEEPER UNPREPAREDNESS.

Editorial by Samuel Gompers in the
Federationist.

Now that men's minds are naturally directed towards national preparedness for self-defense, it is most fitting to consider conditions which concern national health, vigor, and development. There come to all nations, whether suddenly or with warning, those tests which prove the spirit—the power of endurance of the people.

Tests disclose weakness or strength, wisdom or folly, understanding or careless indifference. They test policies and institutions. They disclose along what lines future welfare lies. Those things which constitute preparedness for defense.

No nation can possess endurance whose citizens bear the inevitable consequences of sweat-shop labor, long workdays, low wages, insanitary conditions. Physical health and vigor affect progress along all other lines. Those who toil with their hands constitute the rank and file of the citizenship of the nations—if they are underfed, partly clothed, physically stunted, their condition is a menace to the nation whether in peace or in war. When the citizens deteriorate physically, the nation will decline. War may reveal unsuspected weakness, but that weakness will manifest itself under conditions of peace though somewhat more slowly, or worse still, less observably.

That nation whose industries exploit human workers during times of peace will be burdened by a mass of unemployable, discarded workers, and in times of war will find its existence threatened because of inability to produce supplies and because of death of fit soldiers.

Those policies and those institutions which conserve human life and which afford opportunities for the development of every citizen, constitute the greatest safeguard of the nation. The citizens must be protected, but that protection must come through their own educated initiative, so that the nation shall consist of men and women conscious of their own dignity and importance, aware of their own powers and intelligently following a course of action to promote their best interests.

Individual initiative and resourcefulness are the most valuable qualities of a nation. They must not be subordinated to the outward forms of national welfare but rather must they be the ultimate ideals of all conservation policies.

To realize these ideals the children of the nation must be assured the right to be well-born, to grow and to play. Real educational opportunities must be accessible for all and must meet the needs of all.

When maturity is reached, the individual citizens must have the right to a voice in determining the conditions under which they shall live and work and they must be assured the right to organize, to express their wills in these matters. This means that society and all its agencies must put an end to all tactics that obstruct the progress and welfare of the workers, instead of out-lawing or ostracizing labor organizations or punishing efforts of wage-earners to participate in determining conditions of work.

In war time every nation expects loyal support for its wage-earners. It expects organized co-operation in defense on the battlefield and in making munitions of war, it expects understanding of the national interests and needs. These things are equally necessary in time of peace and must be developed in times of peace; they can not be called into existence suddenly. During times of peace, workers have long demanded that their physical well-being and their labor power should be conserved and that they should be granted real freedom to organize to make these demands effective. There is not a single nation that has generously and unreservedly granted these rights to the wage-earners. By such a policy every nation assumes responsibility for national peril and foregoes its right to full and free patriotic sacrifices from its citizens.

A nation which fails to stimulate and to develop qualities which work for voluntary associated effort for the common welfare, condemns its citizens to stultifying practices and effects of compulsion. Preparedness in national resources, whether for war or peace, is secondary to the development of

national characteristics which underlie fundamental preparedness for life and growth. There must be some strong force dedicated to the cause of humanity that shall compel the incorporation of these truths in national policy—there must be industrial and humanitarian statesmanship as well as political. Even now the great industrial interests are planning to protect themselves in the convulsive shock that will come at the end of the present European war, when present currents of industry and commerce will be suddenly changed.

The citizen wage-earners of our country will be in as great need of protection as industries and commerce. Methods and policies must be devised in advance. The wage-earners are entitled to participate in determining these matters which so vitally concern them.

Will America profit from the experience of other nations and follow the highest wisdom for ensuring national preparedness and welfare?

And the men and women of labor can to a great degree answer and help to solve this vital question. They must organize, unite and federate; they must learn and practice the principles of fraternity and solidarity.

A long pull—a strong pull—a pull all together.

Now for the three million mark!

CHAIRMAN WALSH'S CHICAGO SPEECH ON THE LAWSON TRIAL.

I take the kindly spirit that prompted you to invite me here today, and this most generous and heartening reception, to be not altogether personal, of course. In fact, I hold to my heart the fact that it proceeds from the idea that I am your servant, in common with the balance of the citizens of the United States, temporarily called to fill a position that means much to the thought and welfare of this nation, small as my work may be in attempting to perform my duty in it. (Applause.)

I came here principally because this was a meeting to protest against the conviction to lifelong imprisonment of an American citizen, John R. Lawson (applause), under circumstances which must shock the conscience of every intelligent American citizen.

Many men have been convicted of murder in the first degree in this country prior and subsequent even to the conviction of John R. Lawson. The crime charged is a horrible one, the taking of human life with malice and premeditation. Apparently the courts of the country, or one, at least, has passed upon the character of that conviction, but I stand here today to present the facts in as unimpassioned a manner as the feelings of a man with red blood running through his veins permit, so that the case of John R. Lawson, beginning today, may be presented in its entirety, or as clear as may be, to the American people.

I have an official duty in connection with this matter. It was to inquire into the very heart of the cause of the situation in the State of Colorado. In order to do that, inquiry was made among those men who dug the coal; among the men who led them in their struggle for what they believed to be economic freedom and human liberty. It called upon me to demand the presence of the operators of the coal companies in the State of Colorado. The case of John R. Lawson is the case of the coal miners of Colorado and the case of the working people of America. (Applause.) The personnel of the officials of the Colorado Fuel and Iron Co. (absolute masters of the bituminous situation in the State of Colorado)—I say this advisedly, because it is declared thus over the signature of the manager of that company, L. M. Bowers, who acts for John D. Rockefeller, Jr., that "the Colorado Fuel and Iron Co. fixes the price and condition of labor in the coal mines of Colorado and every other company falls into line." The Colorado Fuel and Iron Co., dominant politically in the State of Colorado, controls not only the local coal fields, which was the theater of this great crime against John Lawson and family, but absolutely controls the votes of a supposedly sovereign people in the State of Colorado. The ruler of the Colorado Fuel and Iron Co. is John D. Rockefeller, Sr., represented by his son, John D. Rockefeller, Jr., said to be the largest investor of industrial stocks and bonds that ever lived in this world; the representative on the ground was Lamont M. Bowers, chairman of the Executive Committee of the Colorado Fuel and Iron Co. On the other side in this struggle, the United Mine Workers of America, represented by its president, Mr. White; Mr. Lord, who sits upon the platform; locally, John R. Lawson, member of the International Board; Edward L. Doyle, the secretary-treasurer in Denver, and Mr. Frank J. Hayes. I am speaking now of the largest personages that have to do with the case of John R. Lawson.

When the Commission on Industrial Relations came to the city of Denver we called upon the representatives of the Mine Workers and the representatives of the operators or presidents of all the coal companies to present to us that data which they believed would best make for a fair, honest and deep investigation of the Colorado situation. We received responses from the president of every mining company in the State of Colorado and from the representatives of the United Mine Workers of America. When Mr. Lawson and Mr. Doyle called upon me, at my hotel, they suggested that they believed that the very heart of the system existed at No. 26 Broadway, New York, and they presented to me, in person, a telegram, taken from the wire by a union operator, from John D. Rockefeller, Jr., to Jesse F. Welborn, the president of the Colorado Fuel and Iron Co., which they claimed contained

conclusive evidence that the statements given by Mr. Rockefeller before the congressional committee was incorrect and that, as a matter of fact, all of the responsibility, to the smallest executive detail, came from 26 Broadway, New York. The original of that telegram, under the power given this commission, was called forth from the manager of the Western Union Telegraph Company, and from that telegram, presented by Mr. Lawson, came the letters which this commission compelled the president of the Colorado Fuel and Iron Co. to produce. Mr. Welborn first refused to produce these letters, but after consultation with counsel they brought forth letters which called for others afterwards submitted at the New York hearing, which, in turn, gave us the data which finally brought forth the letters that told the whole story of Colorado at the last hearing of the Commission on Industrial Relations in Washington.

I believe I might truly say that I am the chief witness to the crimes for which John R. Lawson is condemned to stay in prison until God takes his soul from his body. On the face the charge is murder in the first degree. Let me state what I believe to have been the crime for which this man is convicted. After submitting this telegram he appeared on the witness stand in the city of Denver. At that time the President of our country had appointed a Board of Mediation and Conciliation, and the workers were demanding that the coal companies treat with this official body. Mr. Lawson took the stand and stated, "I have been charged with practically every crime on the calendar, ranging from violation of the Sherman anti-trust act to murder in the first degree. A commission has been appointed by the highest authority of a free people to mediate these questions that caused this deplorable situation in the State of Colorado. I, John R. Lawson, predict that the government will be defied. I have no testimony to give to this commission except this message to the government at Washington: 'Is John D. Rockefeller greater than the government? Is he higher than the law?'" That stands in the record of our Denver hearing. Again he was called to the witness stand in the City of New York. He came while the voice of the late president of Harvard still rang through the room, and for intellectual vigor, for manly conduct and for choice of expression, John R. Lawson suffered none in comparison with President Elliott. We had just heard the testimony of Mr. A. Benton Hepburn, a bank president of New York, who is one of the few men who give out the money for the Rockefeller benefactions, and member of the board of trustees of the Rockefeller Foundations, also a director in the American Agricultural Chemical Co., at that time using hired thugs to crush its workers in New Jersey. Lawson sat there and heard Tony Wiater tell his pitiful story, showing that in an industry that has prospered far

beyond any of late years the same Agricultural Chemical Co., from which perhaps a million dollars of the securities of the Rockefeller Foundations and his benefactions is taken. He heard Wiater tell his pathetic story: That working from early morning until sunset he was unable, by fourteen dollars per month, to earn enough to keep bread and butter in the mouths of his little family and clothing upon their backs. So John R. Lawson testified, perhaps with some heat of feeling. His declaration, epitomized, was this:

"The so-called great foundations of this country are not charitable in their essence. They are not distributing money honestly acquired. They are giving away the withheld wages of the American working class. Twenty thousand of my people are in the wind-swept canyons of Colorado. They have refused to accept the terms laid down by the overlords of industry, who have been testifying before you for the last few days. I have a message for Mr. Rockefeller. When I read of the giving of the \$250,000 for the establishment of a refuge for migratory birds in the South, I say, I wish to God the little children of miners of Colorado were birds. When I see again that the dollars that go to the relief of the stricken in Belgium also furnish machine guns that strike out the life of my people in Ludlow and in other cities of the mountains of Colorado; when I contemplate here, as I must, that the dollars that raise the April toll of death of children from spinal meningitis are also the dollars that bought the bullets that shot between the eyes the child of my friend, William Snyder, while he was caressing his little sister in Ludlow that day, I must cry out in protest. When I read again that an appropriation of half a million dollars is made for the investigation of the hookworm disease in China I might logically wish that my people were Chinamen instead of tolling Americans."

In my opinion, plainly and bluntly spoken, these two brave fundamental statements are the crimes for which John R. Lawson has been convicted, under the guise of a charge of murder in the first degree, in the State of Colorado.

Now, my friends, I will quote freely from the letters, the machinery for the production of which was placed in operation by John R. Lawson. They cut a great figure not only in this contest in Colorado, but as propaganda for better industrial conditions every place in America and upon the earth. I read now the famous Christmas letter of good cheer to the officials of Colorado from Mr. John D. Rockefeller, Sr., through the pen of his son. They had just been informed that non-union miners were being brought in from the East and South—from the South, of course, were the negro miners that were brought in to take the places of those men displaced by the strike in Colorado—and the response came cheerful and warm. On December 26, the day after

Christmas, this son of his father wrote that the letter was received and that he was glad to see that conditions were improving in Colorado; that his father said that he had watched with great interest all the happenings in Colorado and he expressed unusual satisfaction over the way things were going.

Now, what had happened up to that time? Nine thousand of his faithful employes had earned for him, in the comparatively few years that he controlled that company, nine million of dollars. Mark you, John D. Rockefeller, Sr., had never been there in his life and his son had been there but once. In addition to this there was added to the value of his property, according to the testimony of Mr. Rockefeller, twenty millions of dollars, which might be called unearned increment, the Rockefeller share of which would be something like nine millions of dollars. These workers who had heretofore earned for him approximately eighteen millions of dollars were in tents in the cold canyons of Colorado, where I visited with them, their wives and their children, while we were holding our hearings in the city of Denver. Jeff Fair, prior to that Christmas day, had armed a band of 400 men with firearms and explosives and turned them loose among the peaceful citizenry of the State of Colorado. He said before our commission that he didn't know these men. For all he knew, they might be red-handed murderers. Prior to the writing of the letters, Mr. Lipitt had been assassinated upon the streets of Denver, and Lee, whom they claimed to be their faithful servant and the protector of their property, had been shot from his horse while performing his duty. A child had been shot nine times through the legs, and a man killed, in the firing upon tent colonies in the coal fields; yet this man, whose son had testified that he, John D. Rockefeller, Sr., knew nothing of the situation in Colorado, that he was a retired investor that was paying no attention to business whatever, we find was shown to have had the absolute knowledge of everything that happened in Colorado and expressed unusual satisfaction to his employes on the ground.

We proceed a little toward the setting of the scenes for the day that Lawson was tried. The Rockefellers, flushed with what they believe to be their successes in Colorado, are now proceeding to wipe out union labor everywhere. This is a strong statement, but I take it from the letter to Lamont M. Bowers, that "the time is arrived to do that. Let us enlist in the cause and go forward to the campaign for the open shop in 1916, and beyond." Now, I have heard many doctrinaires, professors of political economy and so-called economists discuss the meaning of the term "open shop," but it has a definite and concrete meaning in Colorado. It means that if you are a union man you are told to go up the canyon and if you don't go you are hit over the head with a gun. So there can be no

doubt what the campaign for an open shop means when written by Lamont M. Bowers to Mr. John D. Rockefeller, Jr.

In another letter, which marks well the attitude of the Colorado Fuel and Iron Co. and the other coal companies in Colorado towards John R. Lawson and the entire industrial situation, we find reference to an article written by a Professor Stevenson of the faculty of Columbia University. We didn't go into the source of that article, whether Mr. Stevenson was paid for it or used it to get an old-age pension from the Carnegie fund. When I asked Mr. Carnegie the question as to whether or not he didn't believe that the hope for pensions on the part of the professors might warp their minds toward the economic theories of those who are going to pay the pensions, he cynically and jocularly said: "Why don't you ask Elliot? He gets one of them?" Well, I did happen to ask President Elliot, and Mr. Elliot said: "Oh, yes, they do undoubtedly influence us, but always for good."

Quoting Professor Stevenson:

"It has been said that seven hundred thousand children give up their lives annually on account of the under nourishment of themselves or their parents, due to low wages in industry. I deny," said the professor, "that the figures are correct, but assuming that they are, it proves nothing, except that the deaths of these children are a blessing. They ought never to have been born. He said further that the thing that prevents the onward march of republican institutions is the labor union, in its membership and constituency. That the members are worse than the thugs of India and are usually professional murderers. That was the kindly comment of Professor Stevenson. One month later we have a letter signed by Mr. John D. Rockefeller, Jr., addressed to Fay Lee, his publicity man, enclosing the article of Professor Stevenson and saying, "That is the soundest and most splendid presentation I ever saw of the question of capital and labor." (Laughter and applause.) "You will proceed at once to make use of it, both in the Colorado campaign and in our Union Educational Campaign."

Again, a clergyman named Newell Dwight Hillis, at present occupying Beecher's old pulpit in Brooklyn, who has this very day invited the unspeakable Carlson of Colorado to likewise preach in the Colorado situation, delivered a sermon, which has been denounced for its falsehood, first by every union man connected with the proposition, and second, by the dean of the law school, lately removed, partially on account of that, the able, aggressive and brave Professor Brewster of Colorado (applause), again by the New York Survey, and rublicly called a liar by George Creel in Harper's Weekly. In that sermon he stated that Mr. Rockefeller had offered the unions everything, even to the recognition of their union in Colorado. Mr. Rockefeller, you will re-

member, testified before the congressional commission that he was fighting for the rights of the independent American workman and that he would sacrifice every dollar of his great fortune and that of his father rather than recognize that organization. At least that is in effect what he said. Mr. Rockefeller sent this letter to Ivy Lee and asked him to make use of that in his Union Educational Campaign. Already they had published the so-called "Colorado Bulletin," setting forth the alleged facts in Colorado, which, in the main, were a collection of palpably stupid slanders upon the men that were fighting for economic freedom and the union officers who were leading their cause in the State of Colorado. After many of the lies in them had been exposed, after the president of the company had testified before the commission in Colorado as to the falsity of the bulletins, the publicity agent who wrote them was made a director in the Colorado Fuel and Iron Co., and paid six thousand dollars out of the personal account of John D. Rockefeller, Sr.

And so runs the records in Colorado. Not charged by any person connected with organized labor. Not baselessly charged by me from this platform or elsewhere, but confessed in writing by the owners and operators of the coal companies of Colorado.

Now the proof is indisputable that the Colorado Fuel and Iron Co. hired lawyers, that they controlled courts, that they controlled administrative officials such as Jeff Fair, but I want to say, my friends, that the limit of shame was reached in the Lawson case, because in that case they hired and paid for the witnesses upon whose testimony, mainly, John R. Lawson was convicted.

The chief witness in the attempt to connect John R. Lawson with the crime of murder of the deceased Mr. Nimmo were two men who, upon cross-examination, were compelled by that splendid champion of Colorado workers, Horace U. Hawkins, who is defending these men, to confess that at the time of the alleged occurrence they were pretending to be with the United Mine Workers of America, but as a matter of fact they were spies hired by the Baldwin-Feltz Detective Agency and paid by the Colorado Fuel and Iron Company and other iron companies. At the very time these cases were being prepared and were testifying, they were upon the per diem of the detective agency and were being paid for by the Colorado Fuel and Iron Co. and the other companies.

There are other matters that I might give as a background, but I have already kept you longer than I had expected. Other crimes were committed in the State of Colorado by the Colorado Fuel and Iron Co. The smothering and burning to death of women and children—all of the evidences of that terrible day at Ludlow. Why do I say

so specifically that this is a crime of the coal companies? I would hesitate to do so. Rash judgment is a bad thing. No man, especially one charged with investigatorial duty, should, in advance of his findings, or his own judgment, make such a statement. So I better tell you, as I stated before, that I speak from the letter of Lamont M. Bowers, addressed to John D. Rockefeller, Jr., telling him that they view with satisfaction the creation of another state troop that the state will not have to pay, and that, therefore, the state officials are jubilant about it. That was Troop A, consisting of the mine guards, employes and hired gunmen of the coal companies. That was the troop that, within the same week that the letter was written to John D. Rockefeller, Jr., assailed the peaceable inhabitants of Ludlow colony and committed arson, murder and robbery, and wiped certain of them from the face of the earth. That is the reason I say that that was the crime of the coal companies. Specifically, I have been criticised by Mr. Rockefeller for referring to that as the massacre of Ludlow. He pointed out that these women and children were not shot, but smothered to death. I confess that eleven of them were smothered, likewise burned, but Mr. Snyder's boy, who Monday after next is himself to be tried for murder in the first degree, was shot between the eyes by a bullet from these mine guards, while caressing his little sister; and one of the noblest of whom I have heard testimony given, Louis Likas, was slain like a dog by a hireling of the coal companies of Colorado, masquerading as a lieutenant of the state militia, although he also held a commission—K. E. Linderfelt. I call attention again to the shocking death of James Fyler, an American citizen, shot five times through the back while lying upon the ground; and the sad death of Mr. Borolotte, murdered in the presence of his wife and family, upon that same day.

It is charged, always, when facts are brought out in a field of bitter controversy, such as this contest that is now going on in industrial affairs certainly must be conceded to be, that there is something of self-interest or something of animus on the part of the investigators. God knows there has been no such feeling consciously animating my mind or moving my heart. I can not see the individuals engaged in it. I have for Mr. Rockefeller nothing but sublime pity. I read in the papers a few days ago that upon his 76th birthday he doubled the guard at Pocantico Hill; that he built a new fence inside of the old one and put a double row of barbed wire upon the top of it and proceeded to celebrate his birthday. What a pitiful situation. Another picture: Here, among her fellow citizens, maligned, charged with being a criminal, is an old lady, some 84 years old; whether right or wrong, engaged during practically all of her life in a militant contest for what she con-

scientifically believed to be right, with the love and affection of millions of her fellow citizens, free to come and go whither she will, whilst this most powerful financial potentate that ever lived upon the earth is a prisoner in a prison of his own making. I feel sorry for him, and I illustrate so that you will know that there is nothing personal in anything that has been done in this investigation, but he has been looked upon as representing the system that flouts free government, that intimidates officials, that sneers at the highest authority, as these letters show; that derides the government of a great state, and whose directors boast among themselves that they whip public officials into line and cause them to do their bidding!

I wish to close by a statement that has not been carried by the press of this nation, and that is that John D. Rockefeller, Jr., and McKenzie King, his employe, are today in open defiance of the Government of the United States. At a hearing in the city of Washington, Mr. Rockefeller was asked whether or not he wrote the statement that the press of this country carried as his testimony before the Commission on Industrial Relations. You, as the people of America, were entitled to have his testimony truthful testimony, and not the testimony of another man assuming to speak for him. McKenzie King, who was in the Colorado field, right up to the day almost of the conviction of Lawson, was asked whom he talked to and what he said and what he discovered in Colorado. He boldly refused to answer. He confessed that he had collected much data and evidence covering the situation in Colorado. He refused to tell whether that data was in Washington, New York, or the Dominion of Canada. I pressed him on all of those propositions and he point-blank refused to give that testimony to your instrumentally. We find this lapse in the law, that while the Commission on Industrial Relations has full power to compel attendance of witnesses, that yet we do not have the power to punish for contempt, and must allow these men, accompanied by Star J. Murphy, the personal attorney of Rockefeller, to throw this defiance into the very teeth of the people of the United States.

I am a believer in free institutions; I know the people have the power, if they only exercise it; I know that they have been misrepresented in the past, and you know it. Now we have a square issue made. Is the Congress of the United States representative of a sovereign people of this nation, or are they the tools and hirelings of the industrial overlords? (Applause.) If they represent the people (and I am hopeful and believe they do), then the first action of this Congress will be to cite to the bar of the House of Representatives John D. Rockefeller, Jr., John D. Rockefeller, Sr., and Mr. McKenzie King of Canada. These

questions should again be propounded to these men. They are written in our record; I have them here this afternoon. If the men refuse to answer, then they should be brought before the grand jury of the District of Columbia, as provided by the statutes of the United States, and indicted for a crime against the government and sent to jail. (Applause, shrieking and stamping of feet.)

Now, my friends, as has been said many times, better than I can say it, perhaps, as we look at the concrete case of John R. Lawson, as we read the death of an unfortunate man in one of these conflicts, our heart goes out in pity for the pain and suffering of the individual, for the miseries and woes of the wives and children of the John Lawsons, and Bortolottes and the Zancanellis of the conflict. We see there typified one case, and our attention is drawn to it, but is there not a great, dark background that ought always to loom in the consideration of these questions? Do we, as citizens, as brothers and sisters of a common humanity, do what we ought to bring about conditions from which could arise no Ludlow horror and no conviction of a Lawson? Can I imagine a system of society filled by intelligent people? May I hope, at least, for a society where every man will get what he earns, no less, and just as important, no more? That the heart-destroying, soul-shriveling, idea of production solely for dividends and profits may give way to production for the good of all mankind. (Much applause and shouts of "Hurrah!")

REPORT OF THE U. S. COMMISSION ON INDUSTRIAL RELATIONS.

(The following is a summary of recommendations contained in the first section of the Commissioners' Report, which was prepared by Mr. Basil M. Manly and approved by Commissioners Walsh, Lennon, O'Connell and Garretson.—The Editor.)

Unjust Distribution of Wealth.

The enactment of an inheritance tax so graded that while making generous provision for the support of dependents and the education of minor children, it shall leave no large accumulation of wealth to pass into hands which had no share in its production. The revenue from this tax to be reserved by the Federal Government for three principal purposes:

1. The extension of education.
2. The development of other important social services which should properly be performed by the nation which are discussed in detail elsewhere.
3. Development in co-operation with states and municipalities of great constructive works, such as road building, irrigation and reforestation, which would ma-

terially increase the efficiency and welfare of the entire nation.

There is no legislation which could be passed by Congress, the immediate and ultimate effects of which would be more salutary or would more greatly assist in tempering the existing spirit of unrest.

Unemployment and Denial of Opportunity to Earn a Living.

Certain measures for dealing with these conditions which are discussed elsewhere in the report need to be pushed forward with all possible vigor, but it may be confidently predicted that the unemployment situation will not be appreciably relieved until great advances have been made in the removal of the two prime causes—unjust distribution of wealth and monopolization of land and natural resources.

The most direct methods of dealing with the inequality of wealth have already been briefly discussed and will be considered elsewhere in the report. With respect to the land question, however, the following basic suggestions are submitted:

1. Vigorous and unrelenting prosecution to regain all land, water power and mineral rights secured from the government by fraud.

2. A general revision of our land laws, so as to apply to all future land grants the doctrine of "superior use," as in the case of water rights in California, and provision for forfeiture in case of actual non-use. In its simplest form, the doctrine of "superior use" implies merely that at the time of making the lease the purpose for which the land will be used must be taken into consideration, and the use which is of greatest social value shall be given preference.

3. The forcing of all unused land into use by making the tax on non-productive the same as on productive land of the same kind, and exempting all improvements.

The unemployed have aptly been called "the shifting sands beneath the state." Surely there is no condition which more immediately demands the attention of Congress than that of unemployment, which is annually driving hundreds of thousands of otherwise productive citizens into poverty and bitter despair, sapping the very basis of our national efficiency, and germinating the seeds of revolution.

Denial of Justice.

With full recognition of the gravity of the suggestions it seems necessary to urge the Commission to make the following recommendations:

1. That Congress should forthwith initiate an amendment to the Constitution providing in specific terms for the protection of the personal rights of every person in the United States from encroachment by the federal and state governments and by private individuals, associations and cor-

porations. The principal rights which should be thus specifically protected by the power of the federal government are the privilege of the writ of habeas corpus, the right to jury trial, free speech, peaceful assemblage, to keep and bear arms, to be free from unreasonable searches and seizures, to speedy public trial, to freedom from excessive bail, and from cruel and unusual punishments.

2. That Congress immediately enact by statute or, if deemed necessary, initiate a constitutional amendment specifically prohibiting the courts from declaring legislative acts unconstitutional.

3. That Congress enact that in all federal cases where the trial is by jury, all qualified voters in the district shall be included in the list from which jurors are selected and that they shall be drawn by the use of a wheel or other device designed to promote absolute impartiality.

4. That Congress shall drastically regulate or prohibit private detective agencies and private employment agencies doing business in more than one state, employed by a company doing an interstate business, or using the mails in connection with their business. Such regulation, if it is feasible, should include particularly the limitation of their activities to the bona fide functions of detecting crime, and adequate provision should be made for the rigid supervision of their organization and personnel.

5. That, the militia of the several states being subject to regulation by Congress, carefully drawn rules for their personnel, organization and conduct in the field should be drawn up to insure their impartiality during industrial disputes.

Denial of the Right and Opportunity to Form Effective Organizations.

1. Incorporation among the rights guaranteed by the Constitution of the unlimited right of individuals to form associations, not for the sake of profit, but for the advancement of their individual and collective interests.

2. Enactment of statutes specifically protecting this right and prohibiting the discharge of any person because of his membership in a labor organization.

3. Enactment of a statute providing that action on the part of an association of individuals not organized for profit shall not be held to be unlawful, where such action would not be unlawful in the case of an individual.

4. That the Federal Trade Commission be specifically empowered and directed by Congress in determining unfair methods of competition to take into account and specially investigate the unfair treatment of labor in all respects, with particular reference to the following points:

- (a) Refusal to permit employes to become members of labor organizations.

(b) Refusal to meet or confer with the authorized representatives of employes.

5. That the Department of Labor, through the Secretary of Labor or any other authorized official, be empowered and directed to present to the Federal Trade Commission, and to prosecute before that body, all cases of unfair competition arising out of the treatment of labor which may come to his attention.

6. That such cases, affecting as they do the lives of citizens in the humblest circumstances, as well as the profits of competitors and the peace of the community, be directed by Congress to have precedence over all other cases before the Federal Trade Commission.

Widespread existence of living and working conditions in American industry that menace the nation's welfare by denying proper standards of living to millions of its citizens, and by making them subservient to the wills of employers who control their opportunities for labor, are set forth in the final report of Basil M. Manly, Director of Research and Investigation for the United States Commission on Industrial Relations.

The Commission today made public the first section of the Manly report. The remaining sections will be made public as soon as they leave the hands of the printer, and the report in full will then be transmitted to Congress. It was accepted and ordered printed by resolution of the full Commission, and is signed by Frank P. Walsh, Chairman of the Commission, and by Commissioners John B. Lennon, James O'Connell and Austin B. Garretson.

As a paramount necessity, if the nation is to remedy the evils found to exist by the Commission's staff, the report urges action that will remove the "many existing obstacles which prevent effective organization and co-operation" by wage-earners, and that will thereby bring about a democratic organization of industry along the lines of trade union activity.

The crux of the whole question of industrial relations is declared to be "shall the workers, for the protection of their interests, be organized and represented collectively by their chosen delegates, even as the stockholders are represented by their directors and by the various grades of executive officials and bosses."

Mr. Manly's report is based on the research and field work of members of the staff, whose point of view is that of impartial investigators, and upon testimony at the public hearings conducted by the Commission in fourteen principal cities and industrial centers of the United States. These hearings occupied in all 154 days and a total of 740 witnesses were heard. Of these, 230 were affiliated with employers, 245 with labor and 265 were not affiliated with either group. Where interests are af-

fecting, statements of fact are based entirely on the testimony of those witnesses whose interests might be regarded as adversely affected.

Action Is Imperative.

In an introductory statement, Congress and the public are urged to regard the question of industrial relations as "more fundamental and of greater importance to the welfare of the nation than any other question except that of our government."

"The only hope for the solution of the tremendous problems created by industrial relationship," says the report, "lies in the effective use of our democratic institutions and the rapid extension of the principles of democracy to industry."

The immediate effects of the form and character of industrial organization are held to be "greater and closer to the lives and happiness of all classes of citizens than even the form and character of our political institutions."

"The ordinary man," it is pointed out, "whether employer or worker, has relatively little contact with the government. If he and his family are well-fed, well-housed and well-clothed, and if he can pay for the education of his children, he can exist even under an autocratic monarchy with little concern until some critical situation develops in which his own liberty is interfered with or until he is deprived of life or property by the overwhelming power of his tyrannical ruler. But his industrial relations determine every day what he and his family shall eat, what they shall wear, how many hours of his life he shall labor and in what surroundings. Under certain conditions where his individual or corporate employer owns or controls the community in which he lives, the education of his children, the character and prices of his food, clothing and house, his own actions, speech and opinions, and in some cases even his religion, are controlled and determined, insofar as the interests of the employer make it desirable for him to exercise such control. Such conditions are established and maintained not only through the dictation of all working conditions of employment by the employer, but by his usurpation or control of the functions and machinery of political government in such communities.

"In the available time it has been impossible to ascertain how general such conditions are, but it is clearly indicated by the investigations that in isolated industrial, mining or agricultural communities, which are owned or controlled by single individuals or corporations, and in which the employes are unorganized, industrial feudalism is the rule rather than the exception.

"In such communities democratic government does not as a rule exist, except in name or form, and as a consequence there now exist within the body of our republic petty industrial communities, which are vir-

small principalities, oppressive to those dependent upon them for a livelihood and a dreadful menace to the peace and welfare of the nation.

"Such conditions as these are the direct and inevitable consequence of the industrial relations which exist in such communities. Political freedom can exist only where there is industrial freedom; political democracy only where there is industrial democracy.

"Such industrial democracy has been established in a greater or less degree in certain American industries or for certain classes of employes. But between such conditions of industrial democracy and industrial feudalism, there are almost infinite gradations marking the stages of evolution which have been reached. In every case, however, investigation has shown that the degree of political freedom and democracy which exists is conditioned by the industrial status of the citizens who form the majority of the community."

Political Liberties at Stake.

"The problems of industrial relations, therefore, demand the attention of Congress, not only because they determine the life, security and happiness of the twenty-five million citizens of the United States who occupy the position of wage-earners, but because they affect for good or evil the government of localities and states, and to a smaller degree that of the nation itself. What each of these wage-earners shall eat, what he shall wear, where he shall live, and how long and under what conditions he shall labor are determined by his industrial status and by his relation individually or collectively to the person or corporation employing him. Similarly and almost as directly, this relationship determines whether the machinery of government shall be used for or against his welfare, whether his vote shall count for or against his own interest, whether he shall be tried by a jury of his peers or a jury selected in collusion with the employing company, or, under conditions of so-called martial law, by no jury whatever; whether in fact he shall be a free man or be deprived of every right guaranteed by federal and state constitutions, imprisoned without warrant for the commission of crimes of which he may be innocent, or forcibly deported from the community or state in which he has made his home. For these reasons, it seems desirable at the outset to suggest a recommendation to Congress that these problems of industrial relationship should occupy their due prominence in the deliberations of that Honorable Body, and that the entire machinery of the federal government should be utilized to the greatest possible degree for the correction of such deplorable conditions as have been found to exist.

"The lack of a proper industrial relationship and the existence of bad labor conditions is a matter of the most serious moment

during times of peace, but the events of the past year have demonstrated how enormously their menace to the welfare of a nation is increased during a period of war. The present European war is being fought on the farms and in the factories as much as in the trenches. The effective mobilization of our industrial resources is as important simply from the standpoint of war, as the mobilization of our military and naval forces.

"It is equally important that action should be taken now rather than after war is a reality.

"An attempt is made in the succeeding pages of the report to suggest some of the measures which should be adopted, with a full realization, however, that no action will be effective which does not come through an understanding by the American people of the essential facts regarding industrial conditions. Practically, however, there are only two alternatives for effective action, first, the creation of a huge system of bureaucratic paternalism such as has been developed in Germany; or action which will remove the many existing obstacles which prevent effective organization and co-operation, reserving for performance by the government only those services which cannot be effectively conducted by voluntary organizations, and those which are of such vital importance to the entire nation that they should not be left to the hazard of private enterprise."

The introductory statement closes with the following quotation from Carlyle, the Scotch historian, which, it asserts, "contains in a few eloquent sentences the very heart of the situation in American industry":

"With the working people, again, it is not so well. Unlucky. For there are from twenty to twenty-five millions of them. Whom, however, we lump together into a kind of dim compendious unity * * *, as 'the masses.' Masses indeed; and yet, singular to say, the masses consists all of units, * * *, every unit of whom has his own heart and sorrows; stands covered there with his own skin, and if you prick him he will bleed. Every unit of these masses is a miraculous man, even as thou thyself art; struggling with vision or with blindness for his infinite kingdom (this life which he has got, once only, in the middle of eternities); with a spark of the divinity, what thou callest an immortal soul, in him!

"Clearly a difficult 'point' for government, that of dealing with these masses; if indeed it be not rather the sole point and problem of government, and all other point mere accidental crotchets, superficialities, and beatings of the wind! For let charter-vests, use and wont, law common and special say what they will, the masses count to so many millions of units; made, to all

appearances, by God, whose earth this is declared to be."

That section of the report made public today deals almost entirely with the causes of industrial unrest.

Causes of Unrest.

The report finds that the causes of industrial unrest "group themselves almost without exception under four main sources which include all the others. These four are:

"1. Unjust distribution of wealth and income.

"2. Unemployment and denial of opportunity to earn a living.

"3. Denial of justice in the creation, in the adjudication and in the administration of law.

"4. Denial of the right and opportunity to form effective organizations."

Unjust Distribution.

Discussing the first of these causes, the report summarizes evidence showing that 44 families possess aggregate incomes totaling at the least fifty millions per year, while between one-fourth and one-third of male workers in factories and mines, 18 years of age and over, earn less than \$10.00 per week, and only about one-tenth earn more than \$20 per week.

Inequality in the distribution of wealth and income is set forth as follows:

"First, with regard to the adult workmen, the fathers and potential fathers, from whose earnings according to the 'American standard,' the support of the family is to be derived.

"Between one-fourth and one-third of male workers in factories and mines 18 years of age and over earn less than \$10 per week; from two-thirds to three-fourths earn less than \$15, and only about one-tenth earn more than \$20 a week. This does not take into consideration lost working time for any cause.

"Next are the women, the most portentously growing factor in the labor force, whose wages are important, not only for their own support or as the supplement of the meager earnings of their fathers and husbands, but because through the force of competition in a rapidly extending field, they threaten the whole basis of the wage scale. From two-thirds to three-fourths of women workers in factories, stores, laundries, and in industrial occupations generally, work at wages of less than \$8 a week. Approximately one-fifth earn less than \$4 and nearly one-half earn less than \$6 a week.

Plight of the Underpaid.

"Six dollars a week—what does it mean to many? Three theater tickets, gasoline for the week, or the price of a dinner for two; a pair of shoes, three pairs of gloves, or the cost of an evening at bridge. To the

girl it means that every penny must be counted, every normal desire stifled, and each basic necessity of life barely satisfied by the sacrifice of some other necessity. If more food must be had than is given with 15-cent dinners, it must be bought with what should go for clothes; if there is need for a new waist to replace the old one at which the forewoman has glanced reproachfully, or at which the girls have giggled, there can be no lunches for a week, and dinners must cost five cents less each day. Always too the room must be paid for, and back of it lies the certainty that with slack seasons will come lay-offs and discharges. If the breaking point has come, and she must have some amusement, where can it come from? Surely not out of six dollars a week.

"Last of all are the children, for whose petty addition to the stream of production the nation is paying a heavy toll in ignorance, deformity of body or mind, and premature old age. After all, does it matter much what they are paid, for all experience has shown that in the end the father's wages are reduced by about the amount that the children earn. This is the so-called 'family wage,' and examination of the wages in different industries corroborates the theory that in those industries, such as textiles, where women and children can be largely utilized, the wages of men are extremely low.

"The competitive effect of the employment of women and children upon the wages of men, can scarcely be overestimated. Surely it is hard enough to be forced to put children to work, without having to see the wages of men held down by their employment.

"This is the condition at one end of the social scale; what is at the other?

"Massed in millions, at the other end of the social scale, are fortunes of a size never before dreamt of, whose very owners do not know the extent, nor without the aid of an intelligent clerk, even the sources of their incomes. Incapable of being spent in any legitimate manner, these fortunes are burdens, which can only be squandered, hoarded, put into so-called 'benefactions,' which for the most part constitute a menace to the state, or put back into the industrial machine to pile up ever-increasing mountains of gold.

Rewards Only for Service.

"In many cases, no doubt, these huge fortunes have come in whole or in part, as the rich reward of exceptional service. None would deny or envy him who has performed such service the richest of rewards, although one may question the ideals of a nation which rewards exceptional service only by burdensome fortunes. But such reward can be claimed as a right only by those who have performed service, not by those who through relationship or mere parasitism chance to be designated as heirs.

"Legal right, of course, they have by vir-

tue of the law of inheritance, which, however, runs counter to the whole theory of American society, and which was adopted, with important variations from the English law without any conception of its ultimate results and apparently with the idea that it would prevent exactly the condition which has arisen.

Inheritance Law Condemned.

"In effect the American law of inheritance is as efficient for the establishment and maintenance of families as the English law, which has bulwarked the British aristocracy through the centuries. Every year, indeed, sees this tendency increase, as the creation of 'estates in trust' secures the ends which might be more simply reached, if there were no prohibition of 'entail.'

"According to the income tax returns for ten months of 1914, there are in the United States 1,598 fortunes yielding an income of \$100,000 per year or over. Practically all of these fortunes are so invested and hedged about with restrictions upon expenditure that they are, to all intents and purposes, perpetuities.

"An analysis of fifty of the largest American fortunes shows that nearly half have already passed to the control of heirs or to trustees (their vice regents), and that the remainder will pass to the control of heirs within 20 years upon the deaths of the 'founders.' Already, indeed, these founders have almost without exception retired from active service, leaving the management ostensibly to their heirs, but actually to executive officials upon salary.

Some Striking Figures.

"We have, according to the income tax returns, 44 families with incomes of \$1,000,000 or more, whose members perform little or no useful service, but whose aggregate incomes, totalling at the least fifty millions per year, are equivalent to the earnings of 100,000 wage earners, at the average rate of \$500.

"Between the two extremes of superfluity and poverty is the large middle class, farmers, manufacturers, merchants, professional men, skilled artisans, and salaried officials whose incomes are more or less adequate for their legitimate needs and desires, and who are rewarded more or less exactly in proportion to service. They have problems to meet in adjusting expenses to income, but the pinch of want and hunger is not felt, nor is there the deadening, devitalizing effect of superfluous, unearned wealth.

"From top to bottom of society, however, in all grades of incomes are an innumerable number of parasites of every conceivable type. They perform no useful service, but drain off from the income of the producers a sum whose total cannot be estimated.

"Beside the economic significance of these great inequalities of wealth and income, there is a social aspect which equally merits the attention of congress. It has been shown that the great fortunes of those who have profited by the enormous expansion of American industry have already or will

in a few years pass by right of inheritance to the control of heirs or to trustees who act as their 'vice regents.' They are frequently styled by our newspapers 'monarchs of industry,' and indeed occupy within our republic a position almost exactly analogous to that of feudal lords.

"These heirs, owners only by virtue of the accident of birth, control the livelihoods and have the power to dictate the happiness of more human beings than populated England in the middle ages. Their principalities, it is true, are scattered and, through the medium of stock-ownership, shared in part with others; but they are none the less real. In fact, such scattered, invisible industrial principalities are a greater menace to the welfare of the nation, than would be equal power consolidated into numerous petty kingdoms in different parts of the country. They might then be visualized and guarded against—now their influence invisibly permeates and controls every phase of life and industry.

"'The king can do no wrong' not only because he is above the law, but because every function is either performed or responsibility assumed by his ministers and agents. Similarly, our Rockefellers, Morgans, Fricks, Vanderbilts and Astors can do no industrial wrong, because all effective action and direct responsibility is shifted from them to the executive officials who manage American industry.

Quotes Rockefeller.

"The similitude, indeed, runs even to mental attitude and phase. Compare these two statements:

"John D. Rockefeller, Jr.—'My appreciation of the conditions surrounding wage-earners and my sympathy with every endeavor to better these conditions are as strong as those of any men.'

"Louis XVI.—'There is none but you and me that has the people's interest at heart.' ('Il n'y a que vous et moi qui aimons le peuple.')

"The 'families' of these industrial princes are already well established and are knit together not only by commercial alliances, but by a net work of inter-marriages which assure harmonious action whenever their common interest is threatened.

"Effective action by congress is required, therefore, not only to readjust on a basis commensurate in some measure to the service performed, the existing inequalities in the distribution of wealth and income, but also to check the growth of an hereditary aristocracy, which is not only foreign to every conception of American Government, but menacing to the welfare of the people and the existence of the nation as a democracy.

"The objects to be attained in making this readjustment are: to reduce the swollen, unearned fortunes of those who have a superfluity; to raise the underpaid masses to a level of decent and comfortable living; and at the same time to accomplish this on a basis which will, in some measure, ap-

proximate the just standard of income proportional to service."

Inheritance Tax a Remedy.

As a remedy for the unequal distribution of wealth and income, the report urges "the enactment of an inheritance tax so graded that while making generous provision for the support of dependents and the education of minor children, it shall leave no large accumulation of wealth to pass into hands which had no share in its production. The report suggests that a limit of one million dollars be fixed on the amount that shall pass to the heirs. It recommends that the revenue from this tax be reserved by the federal government for three principal purposes:

1. The extension of education.
2. The development of other important social services which should properly be performed by the nation which are discussed in detail elsewhere.
3. Development in co-operation with states and municipalities of great constructive works, such as road building, irrigation and reforestation, which would materially increase the efficiency and welfare of the entire nation.

"There is no legislation," says the report, "which could be passed by congress, the immediate and ultimate effects of which would be more salutary or would more greatly assist in tempering the existing spirit of unrest."

Denial of Opportunity.

Discussing unemployment and denial of opportunity to earn a living as the second principal cause of industrial unrest, the report makes the following recommendations:

"Certain measures for dealing with these conditions which are discussed elsewhere in the report need to be pushed forward with all possible vigor, but it may be confidently predicted that the unemployment situation will not be appreciably relieved until great advances have been made in the removal of the two prime causes—unjust distribution of wealth and monopolization of land and natural resources.

"The most direct methods of dealing with the inequality of wealth, have already been briefly discussed and will be considered elsewhere in the report. With respect to the land question, however, the following basic suggestions are submitted:

"1. Vigorous and unrelenting prosecution to regain all land, water power and mineral rights secured from the government by fraud.

"2. A general revision of our land laws, so as to apply to all future land grants the doctrine of 'superior use,' as in the case of water rights in California, and provision for forfeiture in case of actual non-use. In its simplest form the doctrine of 'superior use' implies merely that at the time of making the lease the purpose for which the land will be used must be taken into consideration, and the use which is of greatest social value shall be given preference.

"3. The forcing of all unused land into

use by making the tax on non-productive the same as on productive land of the same kind, and exempting all improvements.

"The unemployed have aptly been called 'the shifting sands beneath the state.' Sure'y there is no condition which more immediately demands the attention of congress than that of unemployment, which is annually driving hundreds of thousands of otherwise productive citizens into poverty and bitter despair, sapping the very basis of our national efficiency, and germinating the seeds of revolution."

Denial of Justice.

Under the head "Denial of Justice," found to be the third principal cause of unrest, the report cites numerous typical instances to prove the following charges:

First, with regard to the enactment of laws, it is charged that the workers have been unable to secure legislation to protect them against grievous wrongs except after exhausting struggles against overwhelming odds and against insidious influences.

Second, it is charged that after wholesome and necessary laws are passed, they are in large part nullified by the courts upon technicalities of a character which would not be held to invalidate legislation favorable to the interests of manufacturers, merchants, bankers, and other property owners, or thrown out on the broad ground of unconstitutionality through strained or illogical construction of constitution provisions.

Third, that in the administration of law, both common and statute, there is discrimination by the courts against the poor and in favor of the wealthy and powerful, and that this discrimination arises not only from the economic disabilities of the poor, but also out of the actual bias on the part of the judges in favor of the wealthy and influential.

Fourth, that courts have not only neglected or refused to protect workers in the rights guaranteed by the constitution of the United States, and of the several states, but that sections of the constitution framed primarily to protect human rights have been perverted to protect property rights only, and to deprive workers of the protection of rights secured to them by statutes.

Fifth, that the ordinary legal machinery provides no adequate means whereby laborers and other poor men can secure redress for wrongs inflicted upon them through the non-payment of wages, through overcharges at company stores, through exorbitant hospital and other fees, fines and reductions, through fraud on the part of private employment offices, loan offices and installment houses, and through the "grafting" of foremen and superintendents. The losses to wage earners from these sources are stated to amount each year to millions of dollars and to work untold hardship on a class of men who can ill afford to lose even a penny of their hard won earnings.

Sixth, that the courts, by the unwarranted

extension of their powers in the issuance of injunctions, have not only grievously injured the workers individually and collectively, upon innumerable occasions, but have also, by the contempt procedure consequent upon disobedience to such injunctions, deprived the workers of the right, fundamental to Anglo Saxon institutions, to be tried by jury.

Seventh, that laws designed for the protection of labor in workshops, mines and on railroads are not effectively enforced except in a few states.

Eighth, that in cases involving industrial questions the workers are liable to great injustice by reason of the fact that in many localities they are excluded from juries either by the qualifications prescribed (usually payment of property tax) or by the method of selection.

Ninth, that during strikes, innocent men are in many cases arrested without just cause, charged with fictitious crimes, held under excessive bail, and treated frequently with unexampled brutality for the purpose of injuring the strikers and breaking the strike.

Tenth, that in many localities during strikes not only is one of the greatest functions of the state, that of policing, turned virtually over to employers or arrogantly assumed by them, but criminals employed by detective agencies and strike breaking agencies are clothed by the process of deputization, with arbitrary power and relieved of criminal liability for their acts.

Eleventh, that during strikes in many localities the entire system of civil government is suspended and there is set up in its place a military despotism under so-called martial law.

Twelfth, that in some localities the control by the employers of the entire machinery of government is so great that lawless acts on the part of agents of the employers go unheeded and unpunished, while vindictive action against the leaders of the strike is accomplished by methods unparalleled in civilized countries.

In each instance what Mr. Manly considers convincing proof that these charges are fully justified is cited in the form of testimony before the commission setting forth specific cases, the facts of which are admitted by all concerned. Evidence gathered in the commission's investigation of the Colorado strike is cited in substantiation of the twelfth charge.

The report says regarding remedies:

"In considering the action which needs to be taken it has been urged by some that the end to be achieved is to place personal rights on a parity with property rights. It is necessary to render a firm protest and warning against the acceptance of such an ideal. The establishment of property rights and personal rights on the same level can leave only a constant and ever growing menace to our popular institutions. With the acceptance of such an ideal

our democracy is doomed to ultimate destruction. Personal rights must be recognized as supreme and of unalterable ascendancy over property rights.

"Relief from these grave evils cannot be secured by petty reforms. The action must be drastic and directed at the roots from which these evils spring.

"With full recognition of the gravity of the suggestions it seems necessary to urge the commission to make the following recommendations:

"1. That congress should forthwith initiate an amendment to the Constitution providing in specific terms for the protection of the personal rights of every person in the United States from encroachment by the federal and state governments and by private individuals, associations and corporations. The principal rights which should be thus specifically protected by the power of the federal government are the privilege of the writ of habeas corpus, the right to jury trial, free speech, peaceful assemblage, to keep and bear arms, to be free from unreasonable searches and seizures, to speedy public trial, to freedom from excessive bail, and from cruel and unusual punishments.

22. That congress immediately enact by statute or, if deemed necessary, initiate a constitutional amendment specifically prohibiting the courts from declaring legislative acts unconstitutional.

"3. That congress enact that in all federal cases where the trial is by jury all qualified voters in the district shall be included in the list from which jurors are selected and that they shall be drawn by the use of a wheel or other device designed to promote absolute impartiality.

"4. That congress should drastically regulate or prohibit private detective agencies doing business in more than one state, employed by a company doing an interstate business, or using the mails in connection with their business. Such regulation, if it is feasible, should include particularly the limitation of their activities to the bona fide functions of detecting crime, and adequate provision should be made for the rigid supervision of their organization and personnel.

"5. That, the militia of the several states being subject to regulation by congress, carefully drawn rules for their personnel, organization and conduct in the field should be drawn up to insure their impartiality during industrial disputes."

Right to Organize.

Evidence and testimony are cited showing that many employers refuse to deal with organizations of their employes or to employ men who belong to labor organizations, this denial of the right of organization being discussed as the fourth principal cause of industrial unrest. The report says:

"The previous discussion of the causes of industrial unrest has dealt with the denial of certain fundamental objects to which the workers believe they have natural and in-

alienable rights, namely, a fair distribution of the products of industry, the opportunity to earn a living, free access to unused land and natural resources, and just treatment by legislators, courts and executive officials.

"A more serious and fundamental charge is, however, contained in the allegation by the workers that, in spite of the nominal legal right which has been established by a century-long struggle, almost insurmountable obstacles are placed in the way of their using the only means by which economic and political justice can be secured, namely, by combined action through voluntary organization.

"The workers insist that this right of organization is fundamental and necessary for their freedom, and that it is inherent in the general rights guaranteed every citizen of a democracy. They insist that people can free themselves from oppression only by organized force. No people could gain or maintain their rights or liberties acting singly, and any class of citizens in the state subject to unjust burdens or oppression can gain relief only by combined action."

"The demand for organization and collective action has been misunderstood, it is claimed, because of the belief among a large number of citizens that its purpose was simply to secure better wages and better physical conditions. It has been urged, however, by a large number of witnesses before the commission that this is a complete misconception of the purpose for which workers desire to form organizations.

Not a Material Struggle.

"It has been pointed out with great force and logic that the struggle of labor for organization is not merely an attempt to secure an increased measure of the material comforts of life, but it is a part of the age-long struggle for liberty; that this struggle is sharpened by the pinch of hunger and the exhaustion of body and mind by long hours and improper working conditions; but that even if men were well fed they would still struggle to be free.

"It is not denied that the exceptional individual can secure an economic sufficiency either by the sale of his unusual ability or talent, or by sycophantic subservience to some person in authority, but it is insisted that no individual can achieve freedom by his own efforts. Similarly, while it is admitted that in some cases exceptional employers treat their employes with the greatest justice and liberality, it is held to be a social axiom that no group of workers can become free except by combined action, nor can the mass hope to achieve any material advance in their condition except by collective effort.

"Furthermore, it is urged by the representatives of labor that the efforts of individuals who are bent upon bettering their own condition without reference to their health or to the interests of others, directly injure each of their fellow workers and indirectly weaken the whole fabric of society.

Bargaining Equality Lacking.

"It is also pointed out that the evolution of modern industry has greatly increased the necessity for organization on the part of wage earners, while it is not admitted that the employer who has only one employe is on an economic equality with the person who is employed by him, because of the fact that the employer controls the means of livelihood which gives him an almost incalculable advantage in any bargain, nevertheless this condition of inequality is held to have been enormously increased by the development of corporations controlling the livelihood of hundreds of thousands of employes, and by the growth of employers' associations whose members act as a unit in questions affecting their relations with employes."

The report points out that less than half a dozen employers out of 230 employers or their agents who have testified before the commission, have denied the propriety of collective action on the part of employes, but that many maintained "what they, in accordance with common terminology, called 'open shop.'"

Meaning of "Open Shop."

Of the open shop the report says: "The theory of the 'open shop,' according to these witnesses, is that workers are employed without any reference to their membership or non-membership in trade unions; while, as a matter of fact, it was found upon investigation that these employers did not willingly or knowingly employ union men. Nevertheless, this is deemed to be a minor point. The 'open shop,' even if union men are not discriminated against, is as much a denial of the right of collective action as is the "anti-union shop." In neither is the collective action of employes permitted for the purpose of negotiating with reference to labor conditions. Both in theory and practice, in the absence of legislative regulation, the working conditions are fixed by the employer

"It is evident, therefore, that there can at best be only a benevolent despotism where collective action on the part of employes does not exist."

Discussing the attitude of employers who refuse to deal collectively with their workmen, but who do in fact grant audiences at which the grievances of their workmen may be presented, the report says:

"One is repelled rather than impressed by the insistence with which this idea has been presented. Every tyrant in history has on stated days granted audiences to which his faithful subjects might bring their complaints against his officers and agents. At these audiences, in theory at least, even the poorest widow might be heard by her sovereign in her search for justice. That justice was never secured under such conditions, except at the whim of the tyrant, is sure. It is equally sure that in industry, justice can never be attained by such a method."

The willingness of certain employers to deal with their own employes collectively, while refusing to deal with any national organization, and resenting the intrusion of any persons acting for their employes who are not members of their own labor force, is dealt with in the following:

"In practice these statements have been generally found to be specious. Such employers as a rule oppose any effective form of organization among their own employes as bitterly as they fight the national unions. The underlying motive of such statements seems to be only that as long as organizations are unsupported from outside they are ineffective and can be crushed with ease and impunity by discharging the ringleaders. Similarly, that opposition to the representation of their employes by persons outside their labor force, seems to arise wholly from the knowledge that as long as the workers' representatives are on the payroll they can be controlled, or, if they prove intractable, they can be effectually disposed of by summary dismissal.

Advance Must Be Uniform.

"To suggest that labor unions can be effective if organized on less than a national scale, seems to ignore entirely the facts and trend of present-day American business. There is no line of organized industry in which individual establishments can act independently. Ignoring for the time the centralization of control and ownership, and also the almost universal existence of employers' associations, the mere fact of competition would render any organization of employes which was limited to a single establishment totally ineffective. Advance in labor conditions must proceed with a fair degree of uniformity throughout any line of industry. This does not indeed require that all employes in an industry must belong to a national organization, for experience has shown that wherever even a considerable portion are union members, the advances which they secure are almost invariably granted by competitors, even if they do not employ union men, in order to prevent their own employes from organizing."

That political freedom cannot exist where the right to organize is denied, and that such denial therefore threatens the political institutions of the nation, is charged by Mr. Manly in concluding his discussion of this subject.

The conclusions and recommendations designed not only to prevent denial of the right to organize, but to guarantee this right are set forth as follows:

"The conclusions upon this question, however are not based upon theory, but upon a thorough investigation of typical situations in which the contrast between organization and the denial of the right of organization could best be studied. The commission has held public hearings and has made thorough investigations in such industrial communities as Paterson, New Jersey; Los Angeles, California; Lead, South

Dakota, and Colorado, where the right of collective action on the part of employers is denied. These investigations have shown that under the best possible conditions, and granting the most excellent motives on the part of employers, freedom does not exist either politically, industrially or socially, and that the fiber of manhood will inevitably be destroyed by the continuance of the existing situation.

"Investigations have proved that although the physical and material conditions may be unusually good, as, for example, in Lead, S. D., they were the price paid for the absolute submission of the employes to the will of the employing corporation. Such satisfactory conditions are, however, shown by the hearings of the commission and by the investigations of its staff to be exceptional.

Effect of "Open Shop."

Los Angeles, for example, although exceptionally endowed in location, climate and natural resources, was sharply criticised for the labor conditions which had developed during its 'open shop' regime even by Mr. Walter Drew, representing several of the largest associations which contend for the 'open shop.' It is significant that the only claim ordinarily made for the conditions in such establishments is that 'they are as good as are secured by the union.' As a matter of fact, there are few establishments which make this boast, and in the majority the conditions were found to be far below any acceptable standards.

"The commission has also, through public hearings and the investigations of its staff, made a thorough and searching investigation of the conditions in those industries and establishments where collective action through the medium of trade unions, and joint agreements, exists. It has not been found that the conditions in such industries are ideal and that friction between employers and the unions is unknown; nor has it been found that the employes in such industries have entirely achieved economic, political or industrial freedom, for these ideals cannot be gained until the fundamental changes in our political and economic structure, which have already been referred to, have in some way been accomplished.

Friction Reduced.

"It has been found, however, that the material conditions of the workers in such industries and establishments are on a generally higher plane than where workers are unorganized; that important improvements in such conditions have been achieved as the direct result of organization; that the friction which exists in such industries and establishments has been reduced rather than increased by organization; and that the workers at least have established a basis upon which their political and economic freedom may ultimately be established.

Discusses Union Evils.

"The evils of graft, 'machine politics,' factional fights and false leadership, which

have been found sometimes to exist in such organized industries, are those which are inevitable in any democratic form of organization. They are the same evils which have accompanied the development of the American nation, and of its states and municipalities. Such evils as have been found to exist are indeed to be condemned, but a study of the history of these organizations seems to show clearly that there is a tendency to eradicate them as the organizations become stronger and the membership becomes more familiar with the responsibilities and methods of democratic action.

"Furthermore, there is a fundamental principle which applies in this field as in all other lines of human activity. This principle is contained in the following contrast: In democratic organizations such evils and excesses as may arise tend to disrupt and destroy the organization and are therefore self-eradicating; while in an autocracy, evils and excesses tend inevitably to strengthen the existing autocrat and can be eradicated only in the event of a revolt on the part of those who suffer from such evils. This is the history, not only of every form of artificial association, but also of nations.

"The fundamental question for the nation to decide, for in the end public opinion will control here as elsewhere, is whether the workers shall have an effective means of adjusting their grievances, improving their condition, and securing their liberty, through negotiation with their employers, or whether they shall be driven by necessity and oppression to the extreme of revolt.

"Where men are well organized, and the power of employers and employes is fairly well balanced, agreements are nearly always reached by negotiations; but, even if this fails, the strikes or lockouts which follow are as a rule merely cessations of work until economic necessity forces the parties together again to adopt some form of compromise.

"With the unorganized, there is no hope of achieving anything except by spontaneous revolt. Too often has it been found that during the delay of attempted negotiations, the leaders are discharged, and new men are found ready to take the place of those who protest against conditions. Without strike funds or other financial support, the unorganized must achieve results at once; they cannot afford to wait for reason and compromise to come into play. Lacking strong leaders and definite organization, such revolts can only be expected to change to mob action on the slightest provocation.

Many Strikes Actual Revolutions.

"Looking back over the industrial history of the last quarter century, the industrial disputes which have attracted the attention of the country and which have been accompanied by bloodshed and violence, have been revolutions against industrial oppression, and not mere strikes for the improvement of working conditions.

"Such revolutions in fact were the rail-

way strikes of the late eighties, the Homestead strike, the bituminous coal strike of 1897, the anthracite strikes of 1900 and 1903, the strike at McKees Rocks in 1909, the Bethlehem Steel Co. strike of 1910, the strikes in the textile mills at Lawrence, Paterson and Little Falls, many of the strikes in the mining camps of Idaho and Colorado, the garment workers' strikes in New York and other cities, and the recent strikes in the mining districts of West Virginia, Westmoreland County, Pennsylvania, and Calumet, Michigan.

Action Is Urged.

"As a result, therefore, not only of fundamental considerations, but of practical investigations, the results of which are described in detail hereafter, the Commission is convinced that every means should be used to extend and strengthen organizations throughout the entire industrial field. Much attention has been devoted to the means by which this can best be accomplished, and a large number of suggestions have been received. As a result of careful consideration, it is suggested the Commission recommend the following action:

"1. Incorporation among the rights guaranteed by the Constitution of the unlimited right of individuals to form associations, not for the sake of profit, but for the advancement of their individual and collective interests.

"2. Enactment of statutes specifically protecting this right and prohibiting the discharge of any person because of his membership in a labor organization.

"3. Enactment of a statute providing that action on the part of an association of individuals not organized for profit shall not be held to be unlawful, where such action would not be unlawful in the case of an individual.

"4. That the Federal Trade Commission be specifically empowered and directed by Congress in determining unfair methods of competition to take into account and specially investigate the unfair treatment of labor in all respects, with particular reference to the following points.

"(a) Refusal to permit employes to become members of labor organizations.

"(b) Refusal to meet or confer with the authorized representatives of employes.

"5. That the Department of Labor, through the Secretary of Labor or any other authorized official, be empowered and directed to present to the Federal Trade Commission, and to prosecute before that body, all cases of unfair competition arising out of the treatment of labor which may come to his attention.

"6. That such cases, affecting, as they do, the lives of citizens in the humblest circumstances, as well as the profits of competitors and the peace of the community, be directed by Congress to have precedence over all other cases before the Federal Trade Commission."

THE BOILER MAKERS' JOURNAL

Official Organ of the International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America.

A Monthly Publication Issued the First of Each Month from Room 8, Law Building, Kansas City, Kansas.

JAMES B. CASEY, Editor and Manager.

Subscription Price.....\$1.00 Per Year in Advance

ADVERTISEMENTS.

Advertising Rates Will be Furnished Upon Application to the Editor-Manager. No Reading Space Will be Sold for Advertising Purposes Under Any Circumstances.

All New Members Must Have Their Name and Address Sent in Through the Secretary of Their Lodge. After That They May Have Changes Made in Their Address by Filling Out Blank Form in Back of Book and Forwarding to the Editor.

All Copy Must be Received by the Editor by the 18th of the Month to Insure Publication in the Following Issue.

All Contributions and Correspondence Relating to the Journal Should be Addressed to J. B. Casey, Editor, Room 9, Law Building, Kansas City, Kansas.

Entered at Postoffice, Kansas City, Kansas, as Second Class Mail Matter.

THE EASTLAND DISASTER DUE TO INCOMPETENT INSPECTION.

While many theories have been advanced as to the cause for the awful disaster and loss of life due to the Steamship Eastland overturning along side the wharf at Chicago recently, when more than twelve hundred lives were lost, the real reason is due to the incompetency of the whole inspection system maintained by the federal government for the inspection of hulls and boilers of steamships.

To the uninformed this may sound like a broad statement made in a spirit of captious criticism, but to the more experienced it will be received as a plain statement of facts. At any rate, what we may say can be easily investigated from the records.

The inspector general, the supervising inspectors, as well as the local inspectors, were selected because of their pull and sea service rather than because of their practical knowledge of ship building or boiler making. Most, if not all, of these inspectors, from supervising inspector general down, were taken from the ranks of marine engineers. These have no practical training as ship builder or boiler makers. They start in as oilers and are gradually promoted to engineer.

When the inspection law was enacted in 1871 most of the ships' hulls were made of wood, and the problems surrounding their management were far more simple than they are today, when most of the ships are made of steel. Consequently less importance was attached to their inspection. Steam, too, as a propelling force for merchant ships, was in its infancy.

The marine engineers who were organized at the time this law was enacted helped to get it through Congress so worded that they would be selected to put it into effect. The first supervising inspector general was a marine engineer. He helped to select the supervising inspectors and they together drew up the regulations and the qualifications prescribed for the local inspector, and consequently none but marine engineers are employed. Therefore, this incompetency is fundamental and can only be removed by a com-

plete reorganization of the bureau. Unless those who supervise a service of this kind are thoroughly practical and experienced as ship builders or boiler makers they cannot prepare regulations governing the work of local inspectors or be able to tell whether they are doing the work in a competent manner or not.

An incompetent inspection system is more dangerous and fraught with more serious results than if no inspection laws were enacted, because it lulls the public into a false sense of security; believing all boats and boilers are properly inspected, when as a matter of fact they are not, because of the incompetency of the inspectors.

Had the rules governing the navigation of the ships been drawn up by a board of competent, thoroughly experienced ship builders who have made the problems surrounding the safe navigation of ships a life study, and the enforcement of these rules placed in the hands of experienced practical inspectors, it is a safe bet that the Eastland disaster would never have happened. As it is, this gastly penalty is paid by the traveling public because of this incompetent inspection. Secretary Redfield has sensed the trouble while investigating this disaster, and has, we believe, frankly expressed his belief that the whole system needs a reorganization. But even though he believes this is necessary, will he be able to bring it about or will the political influence that had these men appointed inspectors be powerful enough to effect a whitewash?

Furthermore, should a reorganization be decided on, would he, as head of the department having supervision over this inspection service, select practical ship builders and boiler makers to do this work, or will he simply reorganize with another set of incompetent supervisors and inspectors taken from the same source? We hope for the sake of the lives and limbs of the traveling public that he will decide to reorganize with practical ship builders and boiler makers to fill all of the inspectorships.

At any rate, the public is getting wise to the real cause for this appalling disaster, and it will administer a serious punishment to those responsible for the continuance of this incompetent system of inspection, as well as those responsible for its creation, if they can be found.

It is a coincident that the owners of the Eastland were among those who hollered loudest against the safety sections of the seaman's law which was enacted at the last session of Congress, and these same people will try to have this measure repealed at the next session of Congress.

STRIKE ON IN NEW ORLEANS CONTRACT SHOP.

For some time our members in New Orleans have been trying to thoroughly unionize our crafts in that city. It seems that the greatest stumbling block to the accomplishment of this task has been that some years ago some of the boiler makers there formed a local benevolent association, which is in no way affiliated with the regular labor movement, and is, to all intents and purposes, a dual organization. Our members made every overture pos-

sible to these men to come into the International Brotherhood and all but a few did so, but it seems these few refused to come to any understanding and were backed up by the management of a couple of the shops, notwithstanding the fact that all of these shops, which have an employers' organization known as the "New Orleans Metal Trades Association," recently entered into an agreement with our men.

As our members exhausted every means to settle the matter amicably and believing these dual men were a constant menace to the welfare of themselves and the trade, secured permission of the Council and went on strike July 29 at the New Orleans Boiler Works, Dussell's Boiler Works and Johnson Iron Works of Algiers, La. About forty-eight men are affected. The following firms have refused to employ any but our members, consequently there is no trouble at these places: The New Orleans Machine Works, Ferren Machine Works, Stearn's Foundry and Machine Company and L. C. Coppins. Thus it will be seen that a majority of the shops are fair to our men and we are informed that the struck firms have work upon which a time limit is placed, consequently the prospects of an early settlement looks good at this time. Our members, in seeking work, should give New Orleans a wide berth at this time, and when a settlement is reached prompt notice will be given.

We cannot understand why these dual men persist in such a short sighted, suicidal policy. They are being made cat's paws by these unfair employers, not for the men's sake, but that they may be kept divided, and the employers reap the benefit by keeping wages down to a minimum.

STRIKE AT THE KANSAS CITY TERMINAL SETTLED.

Trouble which has been brewing for some time at the Kansas City Terminal shops and round house culminated into a strike July 29, which involved blacksmiths, boiler makers, carmen, machinists, sheet metal workers and the helpers of the several trades.

The immediate cause of the strike was the failure to take back the men laid off on April 30, on a plea of economy, and the immediate bringing in of a bunch of strike breakers by the Fields Detective Agency of Chicago. This company did not employ many men until after the new Union Station was built in Kansas City, Mo., when on its completion, a new round house was built and it took over the care and repairing of the passenger engines of a number of roads entering the new station. Since that time a larger force has been employed, and last spring the men organized a shop federation and opened negotiations with the management, looking towards the securing of an agreement. The committee was led to believe such would be secured for some time, but finally an order was issued by the management terminating all negotiations, and a large number of men were discharged and strike breakers later employed to take their places.

The International officers of the unions whose members were affected took up the matter, as did also the officers of the railway department, and later on an arbitrator from the Federal Department of Labor was secured

and worked faithfully to settle the matter, but without success, as the president of the company took a very obstinate position in reference to the matter. Then all business agents whose roads run into Kansas City were called into conference, and they took the matter up with the individual directors of their company and the board of directors of the Terminal Company, and while securing promises to help they failed to get the trouble adjusted, and finally on July 29 a strike was declared and all card men at work walked out. After they were out a few days the company officials opened up negotiations with the International officers and in a few days a settlement was reached by the reinstatement of all men who walked out and the immediate reinstatement of ten of those who were previously discharged, and all others so discharged since April 30 are to be reinstated just as fast as positions can be made for them, and the management is to meet representatives of the men within sixty days for the purpose of negotiating an agreement. The men returned to work on the 10th, and we believe a date has already been set to arrange for an agreement. Mr. William Blackman was the United States conciliator, and deserves much credit for the result and the untiring manner in which he worked in helping to bring it about.

THE FEDERAL BUREAU OF LABOR ISSUES A NEW PUBLICATION.

We are in receipt of a copy of Number 1 of Volume 1 of the "Monthly Review," a new publication in magazine form issued by the Federal Bureau of Labor Statistics, and is to be issued monthly and contain results of investigations, current events, notices of labor legislation, court decisions and other matters affecting labor.

This publication will replace the bi-monthly bulletin suspended by the department three years ago.

The initial number has many articles of interest to our members and organized labor in general, and they should write to the "U. S. Bureau of Labor Statistics" and secure a copy. It is quite likely they can have their names placed on the mailing list for future issues.

REACTIONARY STANDPATTERS IN CONTROL.

From all accounts the New York state constitutional convention, which has been in session since last April, is dominated and controlled by reactionaries of the most pronounced type, and they are making an effort to abolish all social welfare laws that have been enacted in that state for the benefit of the masses, such as workmen's compensation, child labor laws, minimum wage, mothers' pension, and employers' liability laws, as well as all restrictions that have been placed on corrupt politicians.

Our members in that state should follow the proceedings of this body very carefully and study the provisions of the constitution it submits so

that they may act intelligently on it when it is presented to the voters for approval or rejection.

It seems to us it would be better for the people of New York state to continue under their present constitution, with all its imperfections, rather than to accept a constitution such as it is reported this reactionary bunch are trying to adopt and lose most of the remedial laws of the state.

PLANS A SUBMARINE BATTLE CRUISER.

From all reports there is likely to be many important and far-reaching changes made in the character of naval warfare and naval vessels, as a result of the experiences of the present war in Europe. One of the latest of these changes that we have heard of is a proposition to build a submarine battle cruiser which would be able to go at high speed on the surface of the water and when necessary could dive and proceed under water.

The daily press informs us that Commander Charles Courtney of the U. S. Navy has planned such a craft and that it has been deemed entirely feasible by those who are informed on matters of this kind.

It is not likely that so many superdreadnaughts will be built, but rather a number of swift battle cruisers, torpedo boats, torpedo boat destroyers and submarines. We believe a large number of these small crafts will be authorized. If these submarine battle cruisers are a success, no doubt others will be built.

STRIKE ON AT HALIFAX, N. S.

A short while ago our members opened up negotiations with the employers at Halifax, Nova Scotia, looking to the securing of an increase in wages. The Executive Council gave its consent for a demand for an increase.

Three firms conceded an increase. These were: A. Cox & Co., N. Evans, Limited, and A. A. Webber & Son.

Two other companies refused to grant an increase and strikes were declared. These are the Halifax Graving Dock Co., and T. Hogan & Co. The strike took effect August 1, and about sixty-five men are involved.

From all reports it is only a question of a short time until these two companies will have to come across, too, as they have failed to secure anyone to take the strikers' places and their shops are closed tight.

The pickets are doing their duty and none can get by them.

Our members everywhere should stay away from Halifax until this trouble is settled, when due notice will be given.

THE BOILER MAKERS SEEK RECOGNITION FROM THE ILLINOIS STATE FEDERATION.

Word has reached us that our members in Danville and other sections of Illinois have enthusiastically indorsed the candidacy of Brother James B.

Keenan of Danville as a member of the Executive Board of the State Federation of Labor in that state, and have decided to leave no stone unturned in their efforts to bring about his election.

Brother Keenan is a man well fitted for the position, as he has had much experience and has held many positions of importance in the labor movement, and will no doubt fill the office with credit and ability if elected. He now occupies the position of president and business agent of District Lodge No. 42.

We are always glad to see those of our members who are competent aspire to positions of prominence in the general labor movement, and we hope all of our members all over the state will rally to Brother Keenan's support and not only vote for him, but get others to do likewise, and that he may be overwhelmingly elected.

AN INDEFENSIBLE PROPOSITION.

As unity is so essential to the success of organized labor, we regret very much to see anything arise to disturb the harmony existing between individual members of the same union or between different unions composing the family of trade unions. For this reason we are slow to criticise the actions of another organization, preferring rather to pass over their shortcomings in silence. However, when the actions of officers or members of other organizations threaten the future peace and rights of our Brotherhood we feel we would not be doing our duty if we did not give notice to our members and enter our protest against such hostile action.

We have a case of this kind in mind at the present time. We refer to a constitutional amendment now before the rank and file of the Machinists for a referendum vote. According to the August issue of their journal, this amendment was proposed by a local of that organization and approved by its law committee. It reads as follows: "In localities where no local of any other metal trade exists, **those engaged in the various metal trades occupations may be organized or admitted into a mixed local of this association** in conformity with the resolutions on amalgamation adopted by referendum vote of the association in July, 1914."

We do not believe the majority of the members of the Machinists are in sympathy with such a proposition or that they will approve of it, for it is an officious and unwarranted intermeddling with the affairs of other trades that would be bound to produce trouble in short order. We have not all of the men working at our trades organized at the present time, but we hope to have them so organized at no far distant date and we believe our members would strongly resent such an unwarranted interference by another organization with those coming under our jurisdiction.

If those over zealous members of the Machinists' Union want to do any organizing they will find there are many thousands of those working at the machinists' trade yet unorganized, and they might devote their efforts to this task rather than intermeddle with the men of other trades.

If the members of the Machinists' Union desire to live at peace with the other metal trades, and we presume they do, they will turn down this vicious

amendment good and hard, as it would be a flagrant and unwarranted invasion of the rights of the other metal trades.

KANSAS FEDERATION OF LABOR HOLDS CONVENTION.

The Kansas State Federation of Labor held its annual convention at Emporia, commencing August 9, and remained in session for three days. A large and enthusiastic convention was held and many measures passed that were for the advancement of the cause of labor in Kansas.

Plans were also perfected for a campaign of organizing throughout the state, and especially in Kansas City and some of the other larger cities of the state. A closer co-operation with the Farmers' Union was decided on, and an effort will be made to have fraternal delegates exchange visits at each other's conventions.

The next session of the federation will be held at Wichita in August, 1916. The boiler makers were recognized by the placing of Brother Eugene Taylor of Wichita on the legislation committee, and the boiler inspection bill was unanimously indorsed.

A SYNOPSIS OF THE REPORT OF THE INDUSTRIAL RELATIONS COMMISSION.

The United States Industrial Relations Commission has been busily engaged in formulating its report recently and from all accounts as published in the daily papers they had a warm time of it trying to reconcile their individual opinions and the various reports submitted for consideration, and it seems they could not all agree on one report and agreed to combine their several reports into one and submit it as one report to Congress.

In the first part of this issue we are reproducing a synopsis of the report prepared by Mr. Basil M. Manly and concurred in by Chairman Walsh and Messrs. Lennon, O'Connell and Garretson. Space would not permit our publishing a synopsis of the others in this issue, but we will do so in other issues, as we believe wide publicity should be given to them and that Congress should publish them verbatim.

It is the only report of its kind so far that has made specific and far reaching recommendations for legislation in behalf of the masses of the people. Even the report written and signed by the three members representing the employers admits the importance and necessity of the working people organizing into unions for their protection.

SEND IN CORRESPONDENCE EARLY.

We would like to impress upon our members, and especially the secretaries, the importance of sending in early in the month correspondence, roster corrections and photos which they desire reproduced in the Journal. All manuscript copy is copied on the typewriter and proofed before turning same over to the printers, and the earlier it reaches us the more time we have to devote to the matter. When they reach us at the last moment before closing

Journal we have to pass upon them with haste and are liable to overlook errors.

We are especially anxious to receive all photos early, as we send them out of town to have cuts made and it requires six or seven days to get them back, so all those who contemplate sending in groups of members, Labor Day parades, etc., will please bear this in mind and, if possible, get them to me by the 14th or 15th of the month, as this is as long as we can wait for them.

THE MINERS DECIDE TO REJECT AMALGAMATION.

Some time ago, we are informed, the United Mine Workers of America and the Western Federation of Miners appointed committees to consider the matter of amalgamating the two organizations, and according to some of our exchanges, these committees recently made their report in which they unanimously recommended that amalgamation be rejected. The following is the report of the joint committee:

"After having made an exhaustive investigation of the question of amalgamation between the United Mine Workers of America and the Western Federation of Miners, and after giving full consideration to the present conditions of each organization, we are forced to the conclusion that because of the many obstacles that now present themselves, and which will be explained in the reports hereafter provided for, that any attempt to consummate an amalgamation at this time would be premature.

"While we jointly agree that to effect an amalgamation of the two organizations at this time would be impracticable, in consideration of the views expressed by the respective committees, we hereby decide that each committee prepare a separate report, stating in detail the result of their findings, and that same be submitted by each committee for the consideration of their respective organizations."

The following statement was made by the committee representing the United Mine Workers of America:

"In behalf of the United Mine Workers we wish to state that the reasons for not agreeing upon a plan for an amalgamation between our organization and the Western Federation of Miners at this time are purely reasons of policy occasioned by present circumstances affecting both organizations.

"The United Mine Workers and the Federation have for many years worked in harmony, and each organization has at all times stood ready and willing to rally to the assistance of the other in times of stress.

"Some years ago an interchange of cards was agreed upon, and a miner bearing a Federation card was accorded the same rights and privileges in the United Mine Workers' organization as though he had been a member of that union and vice versa.

"Every benefit that could accrue from kindred sympathy and unselfish co-operation has been enjoyed in the past by both coal and metal miners' organizations as a result of this policy, and we wish to emphasize the fact that while an official amalgamation has not been consummated, the same

good feeling will continue to exist as in the past, and in behalf of the United Mine Workers we pledge our support in so far as we are able to lend support to the present campaign of organization being conducted by the Western Federation."

The conclusion reached "after an exhaustive investigation" by these committees we believe are wise and will, if followed out, be for the best interests and future welfare of both organizations.

The conclusions of the committee are along the same lines we have held in reference to amalgamation. These two organizations have a Federation and are deriving all benefits of a close affiliation and co-operation, and are avoiding all of the dangers that would follow amalgamation. After an exhaustive investigation it is found unwise for these two, organizations of coal and metal miners to amalgamate, how much more so would it be for widely different trades to amalgamate.

QUOTATIONS.

We may question those learned in the mysteries of the animal and human frame, if we would learn the secret of this strange yearning after salt, which ages have not diminished, nor civilization annihilated. Salt occurs in every part of the human body. It is organized in the solids, and dissolved in the fluids; it creeps into every corner of the frame, and plays a part in all the complicated processes of life, without which the machinery would be arrested in its operation. Thus, all our nutritive food consists either of fibrin, albumen or casein, and neither of these could be assimilated, and used in building up the flesh that walls about our life, unless salt were present; neither being soluble except in a Saline fluid.—Household Words.

It is a lamentable thing that every man is full of complaints and constantly uttering sentences against the fickleness of Fortune, when people generally bring upon themselves all the calamities they fall into, and are constantly heaping up matter for their own sorrow and disappointment. That which produces the greatest part of the delusions of mankind is a false hope which people indulge with so sanguine a flattery to themselves, that their hearts are bent upon fantastical advantages which they have no reason to believe should ever have arrived to them. By this unjust measure of calculating their happiness, they often mourn with real affliction for imaginary losses.—Sir R. Steele.

Civil freedom, gentlemen, is not, as many have endeavored to persuade you, a thing that lies hid in the depth of abstract science. It is a blessing and a benefit, not an abstract speculation, and all the just reasoning that can be upon it is of so coarse a texture as perfectly to suit the ordinary capacities of those who are to enjoy and of those who are to defend it. Far from any resemblance to those propositions in geometry and metaphysics

which admit no medium, but must be true or false in all their latitude, social and civil freedom, like all other things in common life, are variously mixed and modified, enjoyed in very different degree, and shaped into an infinite diversity of forms, according to the temper and circumstances of every community.—Burke.

Tully was the first man who observed that friendship improves happiness and abates misery by the doubling of our joy and dividing our grief; a thought in which he hath been followed by all the essayers upon friendship that have written since his time. Sir Francis Bacon has finely described other advantages, or, as he calls them, fruits of friendship, and indeed there is no subject of morality which has been better handled and more exhausted than this.—Addison.

A man that is fit to make a friend of, must have conduct to manage the engagement, and resolution to maintain it. He must use freedom without roughness, and oblige without design. Cowardice will betray friendship, and covetousness will starve it. Folly will be nauseous, passion is apt to ruffle, and pride will fly out into contumely and neglect.—Jeremy Collier.

Education begins the gentleman, but reading, good company and reflection must finish him.—Locke.

Man without the protection of a superior being is secure of nothing that he enjoys, and uncertain of everything he hopes for.—Tillotson.

STRIKES NOW IN FORCE.

Mechanical Department.

Fig. 2 shows the relative position of the two. Next take a straight edge and place one end on points A and B, Fig. 1, and strike line down until it crosses the center line at T, use this point as a center for one point of the trams, extend the other point to B, Fig 1, and strike line B-G, then extend point to A and strike line A-F.

Take one-half of circumference at top and mark it from A to F, then place the straight edge at points F and T; from F strike a line to G; this will be template for one-half of top section (Sec. 1), add to side and ends the necessary material for laps.

Section two and three are done in like manner; point S is the center for striking curve lines for Sec. 2, and point R is the center for Sec. 3. Sec. 4 is gotten out solid and dished the desired depth. All of the other sections should be also dished to conform to the curve line of the kettle in marking off the size of kettle; the mean diameter should be used, that is from the center of the metal on one side to the center of metal on the opposite side. Allow for laps on each section and also for section four, as this will draw up some in dishing; the amount of shrinkage will vary according to the way it is dished.

TO LAY OUT AN OVAL SHAPED KETTLE IN FOUR SECTIONS.

Fig. 1 shows the side elevation and Fig. 2 the plan view.

First mark off the side elevation and plan view the desired size; take one side of oval line, Fig. 1, from A to E and divide into four equal parts and from these points of division strike horizontal lines at right angles to the vertical center line. The plan view can then be divided according to the divisional lines in the side elevation. The dotted lines extending down from Fig. 1 to

International Officers' Reports.

REPORT OF SECOND INTERNATIONAL VICE-PRESIDENT NOLAN.

My last report was from New Orleans on many questions in connection with Lodge No. 37, also No. 442 and No. 206, as well as general labor conditions in the Crescent City on the Missouri River, and forward labor movement was under way for several weeks. Many well-known labor representatives of National and Internationals were there, for the purpose of organizing the unorganized men and women of New Orleans into the American labor movement and were successful in increasing the membership of many local lodges in that city.

July 1, left New Orleans for Mobile, Ala., to meet the general superintendent of motive power of the N. O. & M. C. Railroad Company, but was surprised to learn on reaching there that no conference had been arranged, nor was there any representative of the federated trades in the city; therefore, nothing could be done along that line, and turned my attention to another proposition of much importance to our craftsmen employed in the contract shops of Mobile, namely, the re-organization of Lodge No. 112; hadn't held a meeting for several months, and the result was, all the former members were delinquent, although several of them tried in every way possible to hold charter but failed, as many others have failed from time to time, due to the neglect of a local officer who should understand that he had a constitutional duty to perform in the protection of the members in the case of death or disability.

July 3, held a meeting with a few of the former active members of Lodge No. 112 and decided to call a special meeting of all boiler makers employed in the contract shops of Mobile for the purpose of re-organizing Lodge No. 112, and place it on the roster of the Brotherhood again; the result was that a number showed up, and a sufficient amount was collected to cover cost of re-organization, and temporary officers were elected and amount mailed to the International Secretary-Treasurer.

Left for New Orleans same date, night of 3rd, to attend to a very important meeting in connection with the Brotherhood, which will be given due consideration in some future report, providing I get the necessary information from Lodge No. 37, which I have failed to get so far.

July 8, left New Orleans for Baton Rouge, La., in company with Brother Smith, business agent of Lodge No. 37, to attend a meeting of Lodge No. 582, all of whose members are employed at the plant of the Standard Oil Company. It was a regular meeting and well attended, due to the fact that Lodge No. 582 has competent and capable officers,

who conduct the business of the lodge according to the constitution, and the result is an up-to-date local, because of actual co-operation of its entire membership. Brother Kidd, the president, and Brother Acosta, the corresponding and financial secretary, are live wires when the interest of the members are at stake, either at Baton Rouge or any other section which requires prompt action through correspondence or otherwise.

July 9, returned to New Orleans with Business Agent Smith to attend to several matters then pending in Lodge No. 37, also a jurisdiction mix-up between the structural iron workers and Lodge No. 37; same was adjusted by the international president by wire.

July 12, left New Orleans for Portsmouth, Va., to take up a grievance for the members of Lodge No. 57 at the Norfolk Navy Yard, but was instructed through the International office to stop over at Mobile and install the newly elected officers of Lodge No. 112, recently re-organized. After installing the officers, left on first train out of Mobile, arriving at Portsmouth, Va., evening of July 15.

July 16, visited the navy yard in order to meet the committee and get a line on the existing grievance in the boiler shop, as well as the general situation; shop committees are Bros. Thomas, Calvert and Mehan, and from information given me by the committee and others employed in the boiler shop, the conditions are not very encouraging, disrating boiler makers who have been on the first class roll, having years of navy yard experience and whose mechanical ability as boiler makers could not be questioned; yet they are disrated just the same; two cases in particular of boiler makers who had grown old in the service, giving the best years of their lives as mechanics at the Norfolk Navy Yard, turned down cold in their declining years. Surely the Navy Department cannot afford to discriminate against old and faithful employes in the service of the government; they should at least receive humane consideration in giving them such light work as they may be able to perform, not disrate or discharge them, when in the judgment of the supervising force they were not able to hit the ball in the fire room of a warship along with the young, active mechanics, and expect them to keep up the pace; surely the great majority of the American people would not approve of such a policy.

The question of disrating mechanics who have had first-class rate for years, many of them, is now before the Secretary of the Navy for investigation and hope it's only a question of time when a bill will be introduced in Congress to abolish all rates in

government navy yards, with the possible exception of first and second classes; when this is done, justice will be given the mechanics, and considerable friction will be eliminated.

July 20, had a meeting with the industrial manager of the Norfolk Navy Yard to arrange for a meeting with the boiler shop committee and secured a meeting for 12 o'clock, noon, the 21st.

At the appointed time the committee, composed of Brothers Thomas, Phelps and Mehan and men disrated, met the industrial manager and at once went into the question of disrating first class boiler makers, many of whom were on the first class roll for years. Every possible argument was used to place the disrated men back on the first class roll, but the industrial manager would not recede from his position, holding that he had the absolute right to disrate any mechanic who couldn't make good for compensation given by the government. Seeing it was absolutely useless to continue the conference, we notified the industrial manager that the matter of disrating first class boiler makers would be taken up with the Secretary of the Navy as soon as an arranged date could be secured.

July 24, attended a meeting of Lodge No. 428, whose membership is composed of boiler makers employed in railroad and contract shops. It was a fairly good meeting. Many questions came up relative to shop conditions and wage, and the writer was instructed to visit the proprietors of all contract shops in Norfolk and Berkley in order to present a new agreement and wage schedule, which was done the following day, the 25th. Brother Murdock, chairman of the wage committee, with me; the object is to get a meeting of all the proprietors and adjust all questions at issue between a committee of the men employed in the contract shops and the bosses, but so far haven't been notified as to the date of meeting.

On July 24th, a funny and somewhat peculiar incident occurred in the boiler shop of the Norfolk Navy Yard. Two more rates were introduced, which would make seven. I often wonder if the men in charge have any practical idea whatever as to the necessary qualifications required in mechanical ability. A seventh class boiler maker is a ninth class blacksmith, and so on down the line, which makes navy yards from a practical viewpoint a joke, pure and simple.

On same afternoon, July 24, a meeting was held at C. L. U. Hall, Portsmouth, Va., for the purpose of voicing their opposition and also taking the necessary steps to protest against the introduction of any additional rates in the boiler shop. The result was that a special meeting was called for Sunday, July 25, and promptly at 2:30 p. m., meeting was called to order, with Brother Phelps in the chair. The hall was packed. Brother Phelps explained the object of special meeting and expressed the hope that

every member present would express his honest opinion as to how to proceed on the grievance that confronted them in the boiler shop, and further trusted that whatever action would be taken would be a unanimous one and backed up by every boiler maker in the Norfolk Navy Yard in their efforts to adjust matters locally if possible, or through negotiations with the Secretary of the Navy if necessary to adjust the pending grievance. Good, practical addresses were made by many of the members present, and all seemed to be of the opinion that a naval federation of trades, under the jurisdiction of their respective International organizations, was absolutely necessary and essential for all navy yards, in securing better working conditions, as well as the enactment of such legislation as may remedy two glaring abuses, namely, too many classes and too many rates, as well as time and one-half time for all time worked over the regular eight-hour day which has been established by Congress. Such legislation is necessary and can be secured if all National and International Organizations co-operate along that line, providing the local organizations in the various navy yards show a little interest and some co-operation themselves. When that's done, the rest is easy; not before.

Among the principal speakers at special meeting were the Hon. Charles T. Bland, a former member of organized labor, now commonwealth attorney for the city of Portsmouth, Va.; also Brothers Thomas, Phelps, Mehan, O'Connor, Dorcey, Schultz and several others whose names I have forgotten. After all had expressed their opinions who desired to do so, a motion was made and carried that shop committees be instructed to see that the rates established by the Secretary of the Navy be carried out, and they did this all right on July 26, after which another special meeting was called to hear the report of the committee, which was all right, as the rate question was adjusted satisfactorily and the report of the committee was unanimously accepted.

July 30 called on industrial manager of Norfolk navy yard, for the purpose of getting data and other information for a committee who will later on call on the secretary of the navy yard to adjust a grievance in the boiler department of the Norfolk navy yard; same was secured and turned over to the shop committee.

This finished my report up to July 31. Hoping same is satisfactory, I am,

Yours fraternally,

THOS. NOLAN, I. V. P.

REPORT OF FOURTH INTERNATIONAL VICE-PRESIDENT WEYAND.

Baltimore, Md., Aug. 1, 1915.

Dear Sir and Brother:

The following is my report for the month of July, 1915. On July 1 I left Philadelphia for my home in Cleveland, as I had been informed in writing by the family physician

that the condition of Mrs. Weyand was serious and he would advise I make arrangements to take her to a hospital for an operation. In making the necessary arrangements in connection with this matter I was detained at my home until July 18.

Several days previous to July 18 I had received orders from headquarters to arrange to go to Elmira, N. Y., as soon as the condition of Mrs. Weyand was sufficiently improved for me to leave Cleveland. On July 19 I started for Elmira, N. Y. On my arrival in Elmira I was just in time to take some part in a conference with the officials of the American LeFrance Engine Company. A representative of the machinists, and a representative of the sheet metal workers organization, to work out a settlement of the strike in that plant. An agreement was arrived at that all men of the various trades who came out on strike would be returned to work within 30 days and that there would be no discrimination against any member who took part in the strike. Second, that the question of an increase of wages was to be taken up by the joint committee and the management of said company as soon as all men were back at work. Should the committee and the management fail to agree the wage question would be submitted to a board of arbitration for a final decision. After handling several matter with our Local Lodge No. 225 in connection with strike rolls and other matter which took several days, I made arrangements to again take up my work in Baltimore in behalf of Lodge No. 193.

July 24 I went to Baltimore to continue the organization campaign, as we have had many reinstatements and initiations the last few months in Baltimore. When I left Baltimore for Philadelphia to take up some matters with iron workers, by orders of President Franklin, I had a number of boiler makers and helpers who had paid part of their fees, so it became my duty to again visit the refinery at Fairfield and endeavor to line up the rest of the unorganized. As the work in the ship yards and dry docks is getting quite brisk we are carrying on a campaign in the city of Baltimore proper to ascertain what can be done for the ship builders and contract shop men. To date I have several more reinstatements and new applications, and hope in the near future to increase the membership in Lodge No. 193. This terminates my report for the month of July, 1915.

Trusting the same is satisfactory and with best wishes and kindest regards to the rank and file of our membership, and hoping for greater success in the interests of the Boiler Makers, Iron Ship Builders and Helpers' Organization of America.

I am yours fraternally,
LOUIS WEYAND, 4th I. V. P.

REPORT OF FIFTH VICE-PRESIDENT ATKINSON.

Billings, Mont., Aug. 14, 1915.

At the conclusion of my last report I was in Spokane, Wash., trying to get the unor-

ganized boiler makers and helpers employed at the Great Northern shops to join our organization, as the conditions the boiler makers and helpers are working under on the Great Northern are something deplorable, and I can't understand why the boiler makers and helpers will continue to work under such conditions, when they know if they will organize and stick together that they can enjoy the same condition and wages the boiler makers and helpers are receiving on other roads in this territory. While in Spokane, I received a telegram from Brother Dan McKillop, business agent of Seattle, requesting that I come to Seattle as soon as possible, as there was a grievance in one of the shops that he wanted me to investigate. A few days after arriving in Seattle, Brother McKillop and myself went over to Bremerton, to find out how the Des Moines Bridge & Iron Co. was getting along with the tanks they were putting up for the Government. Upon our arrival in Bremerton we went down to the navy yard and investigated how the work was getting along, also to find out how many men were at work on the job. As we started to leave the navy yard we were informed by one of the marines that we were under arrest and that he had received instructions to bring us up to the office. While we were being held in the office, Commandant D. W. Blamir came into the office and wanted to know if we were the two representatives of the union, and when we informed him that we were, he asked us if we did not know that we were not allowed in the navy yard. We informed him that we were not aware that we had violated any of the rules, as we had always understood that American citizens had a right to go into the navy yard, so long as he did not interfere with any of the workmen, and it is a positive fact that Brother McKillop or myself never spoke or interfered with anyone up to the time of our arrest. We were informed by Commandant Blamir that the Des Moines Bridge & Iron Co. could employ Japs or other Oriental labor to build those tanks if they saw fit to do so, and that they would be given protection by our government. After a considerable length of time, Commandant Blamir ordered one of the Marine to call up the chief of police at Bremerton and request him to come to the navy yard. After a few minutes conversation with the chief of police, Commandant Blamir informed Brother McKillop and myself that we were released, with the understanding that we would not be allowed in the navy yard again without first obtaining a special permit from the captain of the yard. This Des Moines Bridge & Iron Co. is one of the most unfair firms in the United States to organized labor. When we learned that this company had been awarded the contract to erect nine fuel oil tanks for the government, Brothers McKillop, Reed and myself did everything that was possible to be done to get this company to employ our members and pay the prevailing rate of

wages for this class of work, but without success, as they informed us that they intended to run a strictly open shop job, and I am pleased to report that from information I have received, this company is having considerable trouble in getting those tanks erected, as we have been very successful in keeping men away from the job that know anything about tank building. I have also notified the proper officials in Washington the kind of work that is being done on these tanks, and have requested that competent inspectors go over this work very carefully before it is turned over to our government. I am very pleased to report that Local Lodge No. 104, of Seattle, is getting along fine. Since the first of the year they have reinstated and obligated over one hundred members. Brother McKillop, their business agent, is doing everything he possibly can to get better conditions for the members. At their last regular meeting a motion was made that hereafter any boiler maker, ship builder or helper coming to Seattle would not be allowed to go to work without their card was up to date. So all boiler makers, ship builders and helpers take notice. From Seattle I went to Tacoma, and had the pleasure of meeting with the members of Lodge No. 247 of South Tacoma, and I am pleased to report that business is picking up a little on the N. P. While in Tacoma I also met with the members of Lodge No. 568, and am also glad to report that business is picking up a little on the Milwaukee. Most all of our members that got laid off several months ago have been put back to work. From Tacoma I went to Everett, Wash., and I am sorry to report that Local Lodge No. 500 is not getting along very well, and I am in hopes that the members of Lodge No. 500 will soon see the mistake they are making and that they will soon get back in the organization and take a little more interest in each other's welfare. Upon my return to Seattle I received a telegram from Brother J. W. Hogan, Secretary of Lodge No. 80, Anaconda, Mont., requesting me to come to Anaconda as soon as possible, as they were having trouble with the structural iron workers on account of them claiming the erection of a large stack that was about to be erected by Anaconda Copper Mining Co. I am very pleased to report that after several conferences with the officials of the company we were successful in getting the officials to agree to allow our members to erect the stack, also the foreman agreed to pay every man that works on the stack \$4.25 per day of eight hours. Mr. Mathewson, superintendent of the company, called the foreman into the office and instructed him in the presence of the committee, that hereafter he wanted the agreement we have with the iron workers carried out to the letter, and I feel sure if our members will do their part that they will not have any more trouble with the iron workers. At this time I want to thank the committee, also the president and members of Lodge No. 80, for the assistance they gave me while in Anaconda, also for

the box of cigars and dressing case they presented me with before leaving Anaconda. From Anaconda I went to Butte, met several of the members of Lodge No. 130, but did not have a meeting, as I expect to return to Butte in the very near future. From Butte I went to Livingston and held a meeting with the members of Lodge No. 123, and I am pleased to report that the officers and members of Local No. 123 are all up-to-date and first class union men, doing everything they possibly can to better the condition of their members. From Livingston I came to Billings, Mont., where several of our members are erecting a gas holder, and at this time I want to take the opportunity of thanking Brothers McClusky and Everts, of Lodge No. 123, for the good work they have done for getting this job lined up, also for getting riveters and caulkers \$6.00 per day, heaters and holderons \$5.00 per day of eight hours. This concludes my report for this month, which I hope will be satisfactory.

Will close with best wishes and kindest regards, I am

Yours fraternally,
WM. ATKINSON.

REPORT OF SEVENTH INTERNATIONAL VICE-PRESIDENT MAHER.

At the conclusion of my last report, was in Washington, Ind., where I attended a mass meeting of the B. & O. shop federation of that city and a very good meeting it was also. The meeting was called to take up the very important question of the introduction of the Emmerson efficiency system. It was decided at this meeting to refuse to accept the efficiency slips as the men realized that the introduction of this system was not for the interest of the workers. It was also decided to send a committee to Chillicothe, O., to give the views of the men at Washington on this question and also to use their best efforts to organize a shop federation at Chillicothe, O. I agreed to attend this meeting in Chillicothe with this committee, and a good committee it was, also. From Washington I went to Columbus, O., to meet the men on the Big Four as had been trying to reorganize that system. Met the men in the roundhouse at Columbus with no results.

From Columbus I went to Chillicothe, O., to attend mass meeting of men on B. & O. of that city, and a very good meeting it was, also. The committee from Washington attended this meeting, also, and we were successful in organizing a shop federation, or rather having the boiler makers and machinists agree to organize federation providing we could organize the blacksmiths. I arranged for a meeting of the blacksmiths and found that they were ready to organize and got on the wire with President Kline and Vice-President Horn. Was sent to Chillicothe and organized the blacksmiths and after several visits to Chillicothe Brother Horn and myself were able to install a local federation. Also I found the financial affairs of Local No. 135 in very

bad shape and while there I got the books in good shape and No. 135 is doing nicely and we were able to reinstate 18 members.

From Chillicothe I went to Indianapolis to try and reorganize the Beach Grove shops on the Big Four, but found after several days that the men did not seem to be ready and did not meet with any success. Perhaps later on good results can be attained on this system.

From Indianapolis I went to Lima, O., to take up grievance of Lodge No. 259 with C. H. & D. and was able to adjust matters and get men reinstated. I then worked between Lima and Newark, O., organizing, and was able to reinstate 9 at Lima and 7 at Newark, O. Brother Horn of the blacksmiths also worked those cities and met with success in Lima. While in Lima I received a wire to go to Cleveland at once to try and settle controversy of boiler makers and iron workers. I found that iron workers were doing our work. I protested to the building trades of Cleveland and the next morning met the business agent of the iron workers, also the president, Brother Carlin, of Lodge No. 5, who was also present at this meeting, and we were able to come to an understanding with the iron workers, as the work clearly belonged to us. Brother Carlin and myself then met the local manager of the B. & W. firm who were erecting the boilers in the Schlater brewery of Cleveland, but were unable to get them to agree to any proposition so refused to let our men finish the job. I had arranged a meeting in Newark, O. and went to that city for this meeting and when I returned to Cleveland found that the B. & W. had put a gang of their non-union repair men on the job in Schlater brewery and finished it at night. Brother Carlin and myself had several conferences with the B. & W. manager and the manager of the brewery with no results. I then appealed to the Building Trades and the matter was left in the hands of the grievance committee of the Cleveland Federation of Labor and the Building Trades of the City of Cleveland, and the job tied up in the brewery, also another job the B. & W. were erecting in Cleveland for the Gas company was tied up. I then returned to Newark, O., to take up the work of organizing at Newark and Lima. Myself and Brother Horn of the Blacksmiths held several meetings in the two cities with fair results. From Lima I went to Chicago and met Brother Hinzman and Brother Ryan and we met with a like committee of the Iron Workers and Sheet Metal Workers to take up the question of amalgamation. Resolutions were drawn up to be presented to the next convention of the three organizations. While in Chicago Brother Hinzman and myself went to Gibson, a shop on the C. O. & S., and believe good results will be gotten there in the near future.

From Chicago I went to Toledo, O., to assist lodge 85 in getting an agreement with the McNall Boiler Works of that city. After several conferences with the manage-

ment we were unable to reach any agreement and as I did not consider it an opportune time to enforce our demands and also advised the members of lodge 85, the matter was let drop until business was better. I then returned to Lima to take up unfinished work. From Lima I went to Portsmouth to spend a few days; from Portsmouth I went to Phoenixville, Pa., to try and organize the Heine Safety Boiler Plant but did not meet with any success. From Phoenixville I went to Pittsburgh to take up the work of organizing and found lodge 154 in very good shape with 181 members in good standing, but there are many more who should be members in good standing and I find there is plenty of work to be done here. Lodge 154 has a good live business agent and I think we can do some very good work here in the near future. While in Pittsburgh I heard that there was a chance of organizing a local at Parkersburg, W. Va. I went to Parkersburg and met the men in several shops and arranged a meeting for the next Friday. I then returned to Pittsburgh to take up the work of organizing in that city and expect good results. I again went to Parkersburg and was successful in organizing a local there of eight new members and as there were five members there in good standing we will have a local of thirteen members there with very good prospects of more in the near future. From Parkersburg I went to my home at Portsmouth to spend Sunday, from Portsmouth I went to Galeton, Pa., to try and adjust grievances of lodge 438.

Hoping that this report will meet with the approval of all and with very best wishes and regards, I remain

Fraternally,

M. A. MAHER,
7th, I. V. P.

REPORT OF EIGHTH INTERNATIONAL VICE-PRESIDENT JOSEPH P. RYAN.

New Orleans, La., Aug. 15, 1915.

Editor Journal:

At the conclusion of my last report I was engaged at Port Arthur, Tex., assisting Lodge No. 305 adjust some matters at the Gulf Refinery. The controversy arose over the Gulf Refining Company taking over a certain part of the work being erected by the Reeves Brothers Company of Alliance, O., against whom our members had been on strike for four months. Unable to adjust the proposition as we desired, we were forced to put it up to the Gulf Refining Company to either take over all the work being done for them by Reeves Brothers, or else discontinue working our members on this said work, which had been going along with scab labor. After several conferences, the Gulf Refining Company turned the work back to the Reeves Brothers Company and placed our members who had been taken from the shops, back in the shop. Such members as were hired for the work in question were laid off and at a special meeting held to take action on the matter, Lodge

No. 305 accepted the refining company's action as a solution to the trouble.

Leaving Port Arthur, I visited Houston in connection with the strike rolls of Lodge No. 74, and met with Brother Jackson, their secretary, in regard to same. Also visited Galveston and then went to Thrall, Tex., a new oil field, where the Magnolia Petroleum Company was erecting some tank work. Arriving at Thrall, Tex., I visited the job and found our members from Lodge No. 96 of Fort Worth, Tex., on the job; all members and Brother Lou Hanna as job steward. I also visited a job just completed by the P. I. W. and the site of a Warren City job, but no material had arrived for same.

Enroute from Thrall to Cushing, Okla., I stopped at Fort Worth and at Gainesville, Tex. All our members at Fort Worth I found at work, with two or three crews about to be shipped by the Magnolia Petroleum Company and the Southwestern Mechanical Company to Texas westers.

At Gainesville, Tex., the Cushing Refining Company was laying out the grounds for a new refinery, about one-half mile north of town. I learned from a Mr. Todd that the work would be done by our members, Mr. McCabe, foreman, and that as soon as the steel arrived, a crew would be brought from the Cushing field. I left for Cushing, arriving late that night.

Upon my arrival at Cushing, I was advised that Lodge No. 592 had decided in regular meeting to take a referendum ballot with regard to calling off the strike in the Oklahoma oil fields. I called a special meeting and advised with the men and having done so I remained two days with them, arranging for a complete transfer of the strike rolls, bank arrangements, etc., as Brother Richard Leahy, their secretary, had been bonded during my absence. During my stay at Cushing my attention was called to the fact that our members in Chicago were working for the Treadwell Construction Company of Midland, Pa., one of the firms we had been on strike against since January. I had previously been advised of this at Port Arthur, Tex. I had wired headquarters and was advised by wire, also letter, that our members in Chicago were not working for the Treadwell Construction Company of Midland, Pa., but a different concern, called the M. H. Treadwell Company of Illinois. I was handed a letter in Cushing by Brother Murphy of Lodge No. 592, which I herein incorporate, which he had received from the secretary of state of Illinois, as follows:

Office of Secretary of State,
Springfield, Illinois.

May 12, 1915.

Mr. James Murphy,
Cushing, Oklahoma.

In Re: The Treadwell Engineering Co.

Dear Sir:

I have your inquiry of May 10, in regard to the above company.

In reply, permit me to advise that an examination of the records of this department does not disclose a corporation, either domestic or foreign, under this particular name.

Very truly yours,

LOUIS G. STEVENSON,
Secretary of State.

I read the telegram and letter I had received from headquarters in regard to this matter and agreed to take the matter up in person on my arrival at Kansas City, which I did. I was assured by President Franklin and First International Vice-President, Brother Hinzman, that Lodge No. 39 had made every effort, also the International President's office, to ascertain if there was any relation of these two concerns, and from the information available, that there was no relation, and under this condition Lodge No. 39 was allowed to place its members on the work at the Commonwealth-Edison power plant at Chicago, Ill.

Both Lodges No. 1 and No. 39 had been instructed to remain off this work while this investigation was going on. Lodge No. 39 finally started their members, and owing to a jurisdictional dispute between the two lodges in Chicago, Lodge No. 1, with the assistance of the Chicago Building Trades Council, forced Lodge No. 39's members off the job and same were replaced by Lodge No. 1's members, and the job is being completed by them. There are two smoke stacks and some breeching work to be erected. This action between the two contract lodges of Chicago came about over violations of an agreement signed by both lodges, Lodge No. 1 refusing to allow Lodge No. 39 to do the work, once it was declared fair. The result now is Lodge No. 1's charter has been revoked for violation of the agreement in forcing Lodge No. 39's men off the job mentioned.

Having been on the road five months, I went home for a brief time and not being content with the understanding I had of the matter, I also addressed a communication to the secretary of state of Illinois. I herewith submit same and also his reply:

Chicago, Ill., June 29, 1915.

To the Honorable Secretary of State,
Statehouse, Springfield, Ill.

My Dear Sir:

Will you kindly furnish me with the following information? Is there at the present time incorporated under the laws of the state of Illinois, a firm by the name of the—

Treadwell Engineering Company.
Treadwell Construction Company.
Treadwell Manufacturing Company, or the
M. H. Treadwell Company of Illinois.

My object is to ascertain the relation of this said M. H. Treadwell Company of Illinois, so-called is to the Treadwell Engineering and Construction Company of Midland, Pa.

If there is at this time a firm incorporated under the laws of the state of Illinois, will you kindly furnish me with date of incor-

poration and names of the officers and location of its business address.

Trusting you will favor me and thanking you in advance I am

Very truly yours,

JOS. P. RYAN,

5830 Wentworth avenue, Chicago, Ill.

July 1, 1915.

Secretary of State, State of Illinois,
Springfield.

Mr. Jos. P. Ryan, 5830 Wentworth Ave.,
Chicago.

In Re: M. H. Treadwell Company of Illinois.

Dear Sir:—I have your letter of June 29, in regard to the above company.

In reply, I would advise that this company was incorporated December 5, 1907, with a capitalization of \$5,000, which was increased to \$50,000 January 8, 1908.

The subscribers to the capital stock at the date of organization were: M. H. Treadwell, H. N. Dougherty, Alex. K. Hamilton, C. B. Abbey and K. Jungles.

According to the annual report of 1915, the business address is located at 208 South LaSalle street, Chicago, and the officers are:

Alex. K. Hamilton, president, 5413 Cornell avenue, Chicago.

M. H. Treadwell, secretary, 203 W. 81st street, New York City.

An examination of the records of this office does not disclose a corporation under any of the other names submitted.

Very truly yours,

LOUIS G. STEVENSON,

Secretary of State.

I am submitting these letters, in order to give the members at large and particularly those involved in the oil field's strike, an opportunity of deriving the benefit of the information I have obtained on the case through Mr. Stevenson's hands. I also find that this Mr. Hamilton had charge of all the work formerly erected in Chicago and vicinity by the Treadwell Engineering and Construction Co. of Midland Pa. The Chicago telephone directory gives the firm's name as the Treadwell Const. Co., and it's the same address as given by the Secretary of State. There is not the slightest doubt in my mind, but that they are one and the same and the work in Chicago has been done under subterfuge pure and simple. While at my home, June 8, I was advised by the secretary of Lodge No. 592 that the referendum vote was returned in favor of continuing the strike as the vote stood 208 to continue the strike, 145 to discontinue the strike and 5 ballots were disqualified. Later on, July 6, I was advised by First International Vice-President Hinzman from headquarters that Lodge No. 592 had called the strike off by a vote at a special meeting July 3. The vote being 172 to discontinue the strike and 102 to continue the strike. Later I was advised by the secretary of Lodge No. 592 similar to Brother Hinzman's letter. I have secured a copy of the amounts paid in strike benefits to the lodges involved in the oil fields strike and I am here-

with submitting a statement of the same for the benefit of the rank and file.

To Lodge No., 37, New Orleans,
Brother L. Costella, Sec'y.....\$ 147.00

To Lodge No. 74, Houston, Tex.,
Bro. F. C. Jackson, Sec'y..... 980.00

To Lodge No. 96, Brother L. A.
Freeman, Sec'y. 616.00

To Lodge No. 305, Port Arthur,
Tex., Brother T. O. Riley, Sec'y. 6,076.00

To Lodge No. 592, to Brothers Wm.
Carey, V. P. Ryan and R. Leahy. 34,188.00

Grand total of strike benefits

paid. \$42,007.00

Of the \$34,188.00 paid to Lodge No. 592, Brother Wm. Carey, secretary, received \$2,562.00; Eighth I. V. P. Ryan, received \$29,750.00, and Brother R. Leahy, secretary, received \$1,876.00.

All of the cancelled checks have not as yet been recovered from the banks at Cushing and Tulsa, Okla., and a cash balance remains on deposit at the First National Bank of Cushing, Okla., awaiting my return to that city, at which time same will be returned to the I. S. T. as per instructions of President Franklin.

The strike in the oil fields which became effective in January and which has been terminated by the members on strike, involved about 1,000 members in all five lodges. While seven firms open shopped their work, we had the benefits of five other firms in the fields who worked union men and union wages and conditions. True, we lost a large number of our men but the environment and the conditions of the labor market from January to August in the oil fields and in fact throughout the entire country, were far from favorable in a struggle such as we have had in the fields. The strike is over. One feature of the struggle stands out and of which the writer is proud. Our international financed this strike throughout. When the brothers complied with the laws they received strike benefits. When they failed of the laws, they did not.

Since my departure from the oil fields I have been assigned to some matters pertaining to the organization at Terre Haute, Ind.; Lafayette, Ind., and finally at New Orleans. At Terre Haute I endeavored to assist Lodge No. 246 in lining up the Terre Haute Boiler Works. I met with the men employed at that shop, arranged a special meeting for them but they failed to appear. Having orders to visit LaFayette, Ind., and assist Lodge No. 360 and then proceed to New Orleans, I was forced to leave Terre Haute after a very short visit. At LaFayette I assisted Lodge No. 360 in adjusting a grievance at the Monon Railway shops which terminated satisfactorily without serious trouble.

For the past eight days I have been here in New Orleans assisting Lodges No. 37, 206 and 442 conduct a strike in the Murphy Boiler Works, Johnson Iron Works and the Dusell Boiler Works. The strike occurred July 29, has been sanctioned by the executive council and the members are receiving

regular strike benefits. There is no question of the wages, hours of labor or shop conditions involved direct. Recently our lodges here entered into an agreement with the N. O. Metal Trades Association. There are some twenty-five boiler makers in New Orleans who have an organization known as the Boiler Makers and Iron Ship Builders Benevolent Association of New Orleans. These few men have elected to remain non-union and to work in conjunction with the manufacturers. Our members have offered them every inducement to come over with us and be union men. They have elected otherwise. Our members are on strike to force them to affiliate with our International Brotherhood or get off the job. They are trying to break the present strike by remaining at work while our members are on strike. We have some shops with us and have requested a conference with the N. O. Metal Trades Association. Brothers, remain away from New Orleans while this fight is on. We are meeting daily at 10 a. m. The shops are picketed and the outlook is good. Help the members in New Orleans win this fight by remaining away from Murphy's Boiler Works, the Johnson Iron Works, at Algiers, La., and the Dussell Boiler Works of New Orleans. Riter-Conley Co., of Pittsburgh, Pa., is erecting work at Westwego near here, \$4.00 per day for caulkers. After the strike then comes the cut in wages. Reeves Brothers have a job at Avondale, La., open shop, Oklahoma scale.

Since my last report I have one reinstatement fee to report, Brother William H. Sherman, boiler maker, Reg. No. 46730, lapsed lodge, Jerome, Ariz., money to I. S. T., and I have also the pleasure of reporting

eleven more official emblem buttons sold. I herewith submit a list of the names and amounts:

Brother Sam A. Dugan, B. M., Lodge No. 132,	\$1.00 button.
Brother Major Rising, B. M., Lodge No. 305,	\$1.00 button.
Brother Carl Tezzman, B. M., Lodge No. 360,	\$1.00 button.
Brother Fred Ramp, B. M., Lodge No. 360,	\$1.00 button.
Brother R. E. Aldrich, B. M., Lodge No. 360,	\$1.00 button.
Brother Wm. H. Cassman, Appr., Lodge No. 360,	\$1.00 button.
Brother Frank L. Bongen, Appr., Lodge No. 360,	\$1.00 button.
Brother C. J. Burroughs, B. M., Lodge No. 360,	\$1.00 button.
Brother F. W. Montgomery, helper, Lodge No. 360,	\$1.00 button.
Brother John Halpin, helper, Lodge No. 360,	\$1.00 button.
Brother John Vautier, B. M., Lodge No. 582,	\$1.00 button.
Total buttons,	\$11.00.
Previously reported, buttons and charms	\$69.75
	11.00

Grand total, buttons and charms to date, Aug. 15, 1915.....\$80.75
 Watch this column grow; buy and wear a button or a charm.

Trusting this, my report will prove interesting to the rank and file and with best wishes, I am,

Fraternally yours,
 JOS. P. RYAN,
 Eighth International Vice-Pres.

Correspondence.

Pueblo, Colorado.

Dear Sir and Brother:

I am enclosing you copy of resolutions of condolence, upon the death of Brother John W. Kelley, for many years a member of this lodge. Brother Kelley died on July 9th, after a lingering illness, and was buried on July 12th in Roselawn cemetery. As Brother Kelley was a member of both the Woodmen of the World and the Boiler Makers, members of both lodges acted as flower bearers and pallbearers. Brother Kelley was employed as boiler maker at the Missouri Pacific shops here, since the year 1904. He was highly respected and honored by all who knew him.

Resolutions of Condolence.

Brother John W. Kelley, who has been an esteemed member of Pikes Peak Lodge No. 44, since June, 1904, was summoned to his last reward before the Heavenly Tribunal, Friday, July 9th. His death, while not entirely unexpected, was a severe shock to the members of this local, who will ever cherish his memory with high regard. Therefore,

Be It Resolved, That the members of this order extend to the bereaved widow and children of Brother Kelley our sincere sympathy. And be it further

Resolved, That a copy of these resolutions be sent to the bereaved family of the deceased, and that a copy be sent to the official Journal for publication, and that these resolutions be spread upon the minutes of this lodge.

DAVID WHEATLEY,
 GEORGE S. WARDEN,
 J. J. EVANS,
 Committee.

Beaumont, Texas.

Dear Sir and Brother:

We have suspended Brother Phil H. Ickles, Register No. 103180, for non-payment of dues. Now this brother was initiated January 12, 1915; now when he was initiated he claimed he got hurt, and maybe he did; anyhow the members voted him the amount of \$63.56 and I paid him this money and he paid February and March dues and left here owing Adams & Johnson Grocery

Co. \$32.55, Beaumont Fish & Oyster Co. \$20.05, Hotel Tolle \$25.00, Max Trink \$15.90, Southwestern Hotel \$3.75, Pullman Bar \$4.40.
Suspended—J. E. Ickles, non-payment dues (Register No. 102873; Wallace Burthlott (Register No. 102192); R. W. Roach (Register No. 90,131).

T. C. MADDY,
Secretary, Local 537.

Denison, Tex.

At a regular meeting of Sunset lodge No. 200 of Denison, Texas, the following resolutions were unanimously adopted:

Whereas, It has pleased the Almighty God in His infinite wisdom to remove from our midst our beloved and esteemed brother, A. C. Morgan; therefore, be it

Resolved, That we, his fellow brothers, extend to his bereaved parents our heartfelt sympathy in this their hour of sorrow, and pray that the Almighty God may comfort and console them and that they may bear their sorrow with fortitude, and be reconciled by those sweet words of "Thy will, Oh Lord, and not mine, be done"; and, be it further

Resolved, That our charter we draped for thirty days, and that a copy of these resolutions be sent to the bereaved parents, a copy be spread on our minutes and a copy be sent to our official journal for publication.

S. E. HARRIS,
W. D. RENFRO,
T. J. PRUETT,
Committee.

Hoisington, Kansas.

At a regular meeting of lodge No. 403, the following resolutions were adopted:

Whereas, Our Heavenly Father, whom we know doeth all things well, has in His infinite wisdom called to His heavenly home the beloved wife of our worthy and esteemed brother, Adam Schneider; therefore, be it

Resolved, That we extend to our brother and family our sincere and heartfelt sympathy in this their hour of sorrow.

Be it further resolved, that a copy of these resolutions be sent to the family, a copy spread on our minutes, and a copy sent our official journal for publication.

Respectfully submitted,
J. N. SHIRLEY,
FRANK HUGHES,
C. E. WHEELER,

Committee.

At a regular meeting of Hoisington lodge, No. 403, International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America, the following resolutions were unanimously adopted:

Whereas, It has pleased Almighty God in His divine wisdom to remove from our midst the dearly beloved mother of our worthy and esteemed brother E. J. Barrett; therefore, be it

Resolved, That we, his fellow brothers, extend to our brother our heartfelt sym-

pathy in this, his hour of bereavement, and pray that the Almighty God may comfort and console him, and he will bear his trial with fortitude; be it further

Resolved, That a copy of these resolutions be spread on the minutes of our meeting, a copy be forwarded to our official journal for publication, and a copy be forwarded to our bereaved brother.

J. N. SHIRLEY,
FRANK HUGHES,
C. S. WHEELER,
Committee.

Newport News, Va.

Whereas, It has pleased the Almighty God, in his infinite wisdom and power, to take to His reward our esteemed and beloved brother, William Stevenson; therefore, be it

Resolved, That while we bow to the wish of Him above, we deeply lament the death of our worthy brother.

We, his fellow brethren, extend to his bereaved family our most profound sympathy and ask that the Divine Ruler of the universe, who giveth and taketh all things, give them the strength and Christian fortitude to bear up under this their great sorrow, the loss of the loved husband and father.

And be it further resolved, that a copy of these resolutions be sent to the bereaved family, a copy sent to the official journal for publication, a copy be spread on the minutes at our regular meeting and that our charter be draped for thirty days.

M. A. HICKEY,
W. G. HANNA,
WM. HEALY.

Tulsa, Okla.

To the Officers and Members of All Locals:

We have proof positive that Brother Willard Ellis, Register No. 96,258, who was published in the July Journal as a scab, has been working on strictly fair jobs since the 18th of January; that is, when he did work, and that the brother who reported him erred grievously. We had some trouble locating Brother Ellis, as he is known as "Heavy," hence the tardiness in making this correction.

Fraternally,
RICHARD LEAHY,
Sec. 592.

St. Louis, Mo.

On Wednesday, July 28th, at 9:00 a. m., there passed away at St. Louis, a brother well known to the greater majority of the members of the Brotherhood. This brother William J. Falk, or more familiarly known as "Dutch," had endeared himself to countless numbers of his friends through his sterling qualities, his devotion to the cause of unionism and his tender and kind heart, which was never able to stand a hard luck story of any kind without extending substantial and suitable aid.

For the past few months he was in fail-

ing health, but with the true energy which ever asserted itself in Brother Falk, he insisted on going to Newberg. He did go, but was unable to hold out, owing to his weakened condition. Returning to St. Louis, he spent several weeks at the Frisco hospital, and had only left there five days when death claimed him for its own.

With all the honors of unionism, he was laid to rest in Calvary cemetery. Many and sincere were the expressions of sorrow and regret for this termination of Brother Falk, called away in the prime of life. His union cards and books he had given to a friend, a noticeable fact and one worthy of mention, was that going back five years, each month had a stamp, not one was missing. What a grand example of union principle. Would that there were more supporters of our cause. This fact hardly surprises any one who knew very much about our late brother. This was one of his sterling qualities, of which he had quite a few.

Brother Falk has traveled over the greater part of these United States, Mexico and Panama, while in that respect his life may have been at times somewhat thorny, yet never was he known to complain. With true manhood which was ever a distinguishing feature of our departed brother, when prosperity came to him he never turned a deaf ear to one in need. He always proved a friend indeed, as many of our brothers can testify. His death will come as a shock to his many friends and brothers. We trust the columns of the Journal will publish this so that it may reach all who might not otherwise hear of Brother Falk's death. We brothers of No. 27 feel sure that our expressions of sorrow voice the sentiments of the entire Brotherhood. We mourn because we have lost a true brother, a kind friend, a firm supporter of our cause. On the pages of memory his name will be inscribed. Many there are who will never forget times when Brother Falk helped to make smooth the rocky way of life.

Once again the Silent Reaper,
Comes among us grim and stern,
Gathers in a worthy brother
One of our best union men.

Brother Falk or better still
Known to most as "Dutch",
Endeared to us as Brother Will
E'en tho' we called him such.

For many months with watching eyes
We saw him slowly sink,
Altho' he fain would e'er disguise
And try to make us think—

That he would rally and again
Regain his failing health,
And bid his sturdy manhood claim
Its heritage of wealth.

To New Berg then one sunny day
He went with hopes raised high,
Not dreaming that before the summer went
He would come back here to die.

Returning to St. Louis he rallied bravely
Consulted those with skill
Who only shook their heads gravely,
Which meant no hope for Bill.

On July 28 he passed away,
Him no mortal power could save;
On July 30th we laid him
In the cold and silent grave.

With union honors thus we gave
Him back to Mother Earth,
And as we sadly turned to leave
Paid tribute to his worth.

Altho' from us he's gone away,
In memory we'll retain
Remembrance of his kindly ways,
Until we meet again.

Now, brothers, ere you close this book,
Just stop right here and take a look;
Read these lines before you talk,
Which tells you all of Brother William J
Falk.

Read how this man, this prince of men,
Went from us when the Master called,
And now we hope forever more
Is enjoying his reward.

JAS. CALLAHAN,
Cor. Sec'y. Lodge No. 27,
St. Louis, Mo.

Knoxville, Tenn.

At a regular meeting of Marble City Lodge No. 143, the following resolutions were unanimously adopted:

Whereas, it has pleased the All Wise God to remove from our midst our dear Brother Raymond D. Grooms; and:

Whereas, Brother Grooms was loved and esteemed by all the brothers; therefore, be it

Resolved, That we, his brothers, the members of lodge No. 143, who mourn his loss, take this means of extending to the bereaved family our deepest sympathy, and we pray that the gracious Lord, who doeth all things well, may comfort, console and strengthen them in this their sad hour of sorrow and grief; and be it,

Resolved, That a copy of these resolutions be sent to the family, a copy spread on the minutes of our lodge and a copy sent to our official journal for publication and our charter be draped for ninety days.

JOE GALLOWAY,
J. C. STANSBURY,
R. W. VOGLER.

East Boston, Mass.

Dear Sir and Bro.:

Lodge No. 585 was honored at its last regular meeting on August 15, by the presence of our worthy Sixth International

Vice-President John J. Dowd, who at this writing is in Boston working in conjunction with International Organizer Chas. Scott, in trying to get an agreement with the management of a large contract boiler shop in Boston to use only union men in their brewery tank work.

Our hustling president, Brother Wm. E. McNabb, is lending his best efforts in assisting Brothers Scott and Dowd in the campaign now on in New England, for a thorough unionization of all labor at breweries. Bros. Scott, Dowd and McNabb have demonstrated to the boiler and tank manufacturers of Rhode Island and Massachusetts that the International Brotherhood of Boiler Makers and Iron Ship Builders and Helpers of America is a force to be reckoned with and a force that must be tolerated and respected.

Brother Dowd addressed the members in his usual sincere and attractive manner, again urging the boys to work in harmony with the international representatives who are doing all that human ingenuity can advise to improve the working conditions of the men of our craft in this section of the country.

At this time I feel impelled to pay a tribute of respect and admiration (in which I am sure I voice the opinion of all our members) to the sterling manhood of Brother Charles Scott, as exemplified in the great assistance he has rendered Lodge No. 585 in increasing its membership by paving the way for Brothers McNabb, DeFretis, Dennis and others to bring back delinquents to the folds and to get many out of the fold to join our organization. Conscious of the duties and responsibilities of his position, very mindful of the confidence reposed in him by his superior officer, Brother Jos. A. Franklin (who as well as Brothers Hinzman, Reinemeyer and Casey have the heartfelt appreciation of Lodge No. 585 for their good will). Brother Chas. Scott has made it known to all whom it may concern, that regularity, straightforwardness and a righteous regard and respect for constitutionality must be the maximus and the rules of conduct for all those who desire his association and his co-operation in the legitimate advancement of trade unionism in our craft.

Yours fraternally,

DANIEL B. McINNIS,

C. S. L. 585.

Middletown, N. Y.

Dear Sir and Bro.:

At a regular meeting of Lodge No. 400, International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America, the following resolutions were adopted:

Whereas, God in His infinite wisdom has removed from this world of strife and toil Brother Michael S. Lane, of Lodge No. 400,

Resolved, That we, his fellow brothers, extend to the family our heartfelt sympathy and condolence in this sad hour of sorrow and grief, and be it further

Resolved, That a copy of these resolutions

be sent to the Journal for publication, a copy sent to the family, and a copy spread on the minutes and our charter be draped for thirty days.

CHRIST SMITH,
WM. CHOWN,
WM. E. APPEL,
Committee.

Baton Rouge, La.

Dear Sir and Bro.:

I wish to notify you of the death of Brother Burton H. Carter, Reg. No. 94093, which occurred in Baton Rouge.

Resolved, That Local No. 582, Boiler Makers, Iron Ship Builders and Helpers of America do hereby extend our utmost sympathy to the bereaved family; and be it further

Resolved, That a copy of these resolutions be sent to the family, a copy to the Journal for publication, and a copy spread on the minutes.

Fraternally,
S. V. ACOSTA, L. 582.

Rocky Mount, N. C.

Dear Sir and Bro.:

It is with some reluctance, and after careful consideration, I have decided to dwell upon a question which to my mind presents difficulties of vital importance, and may be counted upon to keep in check or subdue entirely any active effort to promote the universal understanding and guidance so necessary in the work of harmonizing the forces of the mechanical trades upon railroads, into a formidable aggregation.

That of the conniving process of weeding out in times of depression, so-called, the brother who through his zeal or endeavor happens to attract the attention of those intolerant Shylocks, by their relentless "scruples," now in command of the steering gear upon a great many of our railroads, whose favored anticipations to carry out a well-arranged program to make ineffective and defenseless organized labor, is noteworthy. Ensnared by the cunning of organized piracy, their sole inclination is wrapped up in output.

Notwithstanding general adversities, there must be declared the usual dividend, which customarily means the operating expenses must supply the deficiency. So the too well known practice of retrenchment follows, and the real burden reverts to the workers already ground down and staggering under depression. They must further extend the principles of economy, and hand up the lion's share, that there may be made possible those pleasing dividends. But the effects are far reaching and productive, and we may with assurance look forward to a militancy that will challenge those unwarranted and unjustifiable demands upon labor. In this great hue and cry for increased efficiency, the moral status of an issue is hopelessly overshadowed, and in many instances the law of limitations is unknown, subjecting willing and misguided

workers to over-exertion and apathy, which accounts in a large measure for the careless indifference toward the interests of organization, the only "constructive" weapon of defense. This phase of labor's difficulties is voluminous enough to quote indefinitely, though it is not my intention to go into an extensive illustration of this high gear or speed-up system, and its effects, but rather as I see it, to offer a possible preparatory defense to counteract those encroachments upon the principles which band us together.

There is such a well developed impression of fear amongst railroad workers of being dispensed with in times of depression, it is only necessary for some irresponsible narrow gauge to unload some little press article on the question of reduction, and though it may be the other side of the continent, there immediately follows a scurrying for cover that would do credit to a well disciplined understanding. The crust, though meager, is seemingly at stake, and the silent determination to take no chances is strictly observed, resulting very often in sacrificed prestige, otherwise unobtainable, without at least the usual formalities in working a change or departure from the customary shop practices. Now, under the present schedule upon many railroads, there is commendable reason and excuse for this not unnatural fear of the ax swinging in their direction, especially if they have shown a disposition, and still believe in organized labor having a voice in making and maintaining shop conditions, under which they alone must labor. By virtue of the fact that schedules offer scant protection to the brother who may be let down through questionable channels, not always cognizant to the surface observer, and let it be known the railroads according to their options, present practice considered in times of reduction, can so proportion those round-ups they experience little or no difficulty in reaching the desired object.

We are keenly interested in causation and effect, but it is with actualities we must grapple, and the question of relieving men from the inherent means of a livelihood at any time upon the shallow pretext of necessary retrenchment, is a menace that ought not to be tolerated under any consideration. Future schedules should be drawn sufficiently scopeful and elastic in my judgment to make it impossible for the railroads to use this means as a lever to set out undesirables.

I refer, for example, to the Atlantic Coast Line shortly following negotiations with general managers in the Southeast, which by agreement was deferred indefinitely, posting notices of a contemplated reduction, when in order to overcome, the men proposed short time on their part, a mutual sacrifice, and this same proposal being acceptable to local management where offered, was rejected by the general superintendent of motive power upon the flimsy ground the request was not general. Such a lamentable excuse, coming from an official who

brandishes honor and responsibility as a handy defense when the occasion serves, provokes curiosity. Short-sighted policies of this character will do more to close up the ranks than an extended campaign. The transportation organizations have, I believe, incorporated in most of their schedules an article which rules an employe must be out of the service twelve months before he can be returned a new man, and subjected to an examination that would approximately disqualify 35% of their working force, and this is a conservative estimate. Such a rule would in a measure serve to defeat the purposes of railroad companies in unloading the obnoxious or "so-termed" undesirables who happen to observe the line-up and refuse to fall for the bait.

The time is here now and opportune to awaken and lay aside those petty squabbles and jurisdictional differences. It will require a united effort, free from discrepancies, to effectually meet the onslaughts in store for organized labor, and we can at best ill afford to fall fighting one another, especially should we seek to avoid the pitfalls of sectional enmity, an imaginary delusion, distrustful to the core. Ours should be a work of universal co-operation toward a common cause.

The most effective and choice means of progress are employed by the industrial masters. They are at your command: Organization, education and confidence.

We have been masquerading behind the powerful influences of selfishness ingrafting the seed of enmity and distrust. Let us come out, uproot and banish from our midst those abominable oppressors of reason, thus exemplifying in truth and spirit the principle of brotherhood.

With apologies for this extended letter, and best wishes for success, I remain.

Fraternally,

A. J. DIXON,
Cor. Lodge No. 239.

Livingston, Mont.

Just a few words with our traveling brothers from Lodge No. 123, with reference to our pie-card.

Lodge No. 123 having been very liberal in the way of maintaining a pie-card at four different points along the Northern Pacific, namely Butte, Livingston, Laurel and Billings, a distance of two hundred and twenty-five miles. This card has been so conducted that we would be in a position to know who and how many meals every brother would eat at the expense of the lodge. Here are some of the figures: We have traced some of our patrons and have found that they have been our customers for three meals at each point over the road, which has cost us \$4.20. We further find that these same customers make this trip quite frequently, in fact so frequently that it terminated to this step of informing our organization of it. Lodge No. 123 does not mind of helping a brother in distress, but we even have knowledge of where some of

our customers have as much as \$1,000 in the bank on interest, who have the nerve to ask us to buy them a feed on the strength of their nerve. We also have knowledge of others quitting their job with one hundred dollars to the good, and coming right along eating at our expense, with money in their pocket. All right, brothers, keep it up, and you will succeed in putting the kibosh on it for yourselves, and then you will want to go around and talk about the tight bunch of boiler makers in the Northwest.

Up to date you have already been so good and kind that we have seen fit to limit this abuse to strictly only one meal to anyone, no matter who he is or where he comes from. And now if this will not be the solution in reducing this expense, we will just naturally have to eliminate it entirely, and all will share in suffering the consequences.

We here some make the remark that they are paying for the pie-cards; well, perhaps so, but just the same it does not work out right when we have to put on local assessments to purchase due stamps from the grand lodge. Now, brothers, just consider things a little bit and practice economy. Hoping that we will not be forced to take further action, for the best interest of all.

Fraternally submitted,

LODGE No. 123.

BROTHER JOHN KUHN OF LODGE No. 578, HAGERSTOWN, MD.

One of the Pioneer Members of the Brotherhood, Being a Charter Member of Lodge No. 22 of the Old National.

Richmond, Va.

At a regular meeting of Shubrick Lodge No. 170 the following resolutions were adopted:

Whereas: It has pleased the Almighty God in His infinite wisdom to remove from our midst the beloved mother of our esteemed brother, E. T. Truman; therefore be it

Resolved, That we, the members of Lodge No. 170, extend to our worthy brother and family our heartfelt sympathy and con-

dolence in this sad hour of bereavement, softened only by the confiding hope that her spirit departed to a better and brighter sphere where sorrow is unknown and that on the last day we shall be united; be it further

Resolved, That a copy of these resolutions be sent to our bereaved brother, a copy sent to the Journal for publication and a copy spread upon the minutes.

S. P. CRITZER,
J. C. TYLER,
J. H. HANKEY.

Livingston, Mont.

REPORT OF THEO. W. EVERT, MEMBER OF LODGE No. 123, DEPUTIZED TO LOOK AFTER WORK AT BILLINGS, MONT., ON GAS HOLDER.

Our members having become aware of the fact that there was to be erected a gas holder about August 1, at Billings, Mont., lost no time in finding out who the contractors were and giving all the information they had to Lodge No. 123, and also to the International, which terminated in the work being done by members of our organization.

Brothers Jno. Hendershot and Jos. McClosky, members of Lodge No. 123, also Brothers McFadden and DeBrail being on the scene, with the united assistance of the Billings Trades and Labor Assembly, also Mr. Roache, president of the assembly, are the ones in particular responsible and deserve all credit for having secured this work for our organization.

The members on the ground desired to know from Lodge No. 123 what would be done in regard to a steward and business agent for this work, and what the scale of wages would be, etc., and while Lodge No. 123 was not in a position to stand the expense of a representative, I wired to Brother Franklin at Kansas City and received a wire in return instructing me to go to Billings until Brother Atkinson could get to the job.

I at once went to Billings on July 27, and remained until July 31. When I arrived at Billings I found that work had already started and going along nicely, with seven of our members on the job. The scale of wages was fixed at \$6 per day for boiler makers and \$5 for helpers and heaters, eight hours constituting a day's work.

Brother Chas. Biggs was chosen as steward on the job, who is amply competent to fill the bill, while Brother Jos. McClosky was chosen to act as business agent, who is doing his share of the work in a manner unexcelled. No one is hired until they have deposited their C. C. with Brother McClosky. Brother McClosky also collects all dues and secures stamps and cards for the members on the job.

Everything was going along so nicely that I could see no use in me staying around any longer so I returned home July 31. At this writing we have about sixteen members employed on this job, and I hope that our members will have no trouble in com-

pleting the work satisfactory to all concerned.

In conclusion, I might say that it is up to our members to keep a watchful eye for this class of work, and when they know of some job coming up, lose no time in informing the nearest local, also writing to Brother J. A. Franklin, room 15, Law Bldg., Kansas City, Kas., who will only be too glad to assist in securing this class of work for members of our organization, with the undivided support of all of us, we will be more successful in keeping this work from the members of other trades, as they are applying every means possible to do this class of work.

Trusting that this will be of interest to our members, and hoping to hear that we have been successful in securing more work of this nature I beg to remain,

Fraternally yours,
THEO. W. EVERT.

Algiers, Fla.

At a regular meeting of Elmira Lodge No. 206, I. B. of B. M., I. S. B. and H. of A. the following resolutions were adopted:

Whereas, God in His infinite wisdom has removed from this world of strife the beloved wife of our esteemed brother, J. R. Crombie.

Resolved, That we, his brothers, extend to the family our heartfelt sympathy and condolence in this sad hour of sorrow and grief; be it further

Resolved, That a copy of these resolutions be sent to the Journal for publication, a copy sent to the family and a copy spread on the minutes.

C. F. KENNEY,
JNO. DONEWAR,
ED BARRY,
Committee.

Spencer, N. C.

Dear Sir:

As so much talk is going on about the notes to the belligerent nations at war, I want to suggest one thing to the men of this country, especially the organized brothers of the different crafts, quite a few are for war, but I would advise all in this matter to do one thing, namely, to write or wire the President, also all the congressmen, to submit all disagreements to the different nations for arbitration, just as this country forces us to do, namely, accept arbitration.

Why should any of the laboring people want war? Who will be the first and possibly the only ones to be called to the front? The laboring class, of course, and those affiliated with the unions will be first of those if possible, if for no other reason than to break up unionism. So brothers, vote in your lodges to write or wire the President to arbitrate the disagreements this country may have with other countries, instead of having them listening to the lobbyist and newspaper editors and others who want war on one or the other

nations that is now at war. They, the belligerents are like men in a trance. They are not really aware of what they are doing, they think they are only doing harm to their enemies. There are millions of people in this country who would have all questions or difficulties of this country straightened out by arbitration but don't know how to make their wishes known, and quite a few are in our lodges.

So now for our country's sake, for your wife's, father's, mother's, sister's, brother's and all others you love, sake, your own self included, do this as it will help keep this good old U. S. A. out of a conflict which in itself is useless without others getting into it. And now with best wishes all brothers, I am,

Yours fraternally,
WM. H. DREYER.

P. S.: Don't be satisfied with your lodges writing to the President and congressmen, but write letters yourself. It will be for your own interest as well as your Brotherhood's and country's interest.

Yours fraternally,
WM. H. DREYER.

Elkins, W. Va.

Dear Sir and Brother:

At a regular meeting of Lone Tree Lodge No. 278, the following resolutions were adopted:

Whereas, It has pleased the Almighty God in His divine wisdom to take from this world of trials and sorrow, the beloved son of our brother, J. W. Carr; therefore, be it

Resolved, That we, his fellow brothers, extend to him and family our heartfelt sympathy in this hour of sorrow, and be it further

Resolved, That these resolutions be inserted in our official Journal, recorded and transmitted to the family of the deceased.

A GROUP OF THE MEMBERS OF LODGE 384, EMPLOYED AT THE WABASH ROUNDHOUSE AT PERU, IND.

Portsmouth, Va.

Dear Sir and Brother:

At a regular meeting of Lodge No. 298, Portsmouth, Va., the following resolutions were adopted unanimously:

Resolved, That we sympathize with our worthy brother, Robert Young, in the loss he has sustained by the death of his mother, and those of us who have been bereaved of our parents know how severe is the blow, but our Heavenly Father knows and tempers every wind that blows, so that we may look forward to the time when they meet again, and their joy may be great after the disappointment here below, and be it further

Resolved, That a copy of these resolutions be sent to the bereaved brother, a copy be spread on the minutes of this meeting and a copy sent to the Journal for publication.

Fraternally,
ROBT. T. HOWE, C. S. L. 298.

Fairbury, Neb.

On Friday, July 16, 1915, Mrs. B. Z. Millikan passed to the Great Beyond, and at a regular meeting of Fairbury Lodge No. 439, B. of B. M. and I. S. B. and H. of A., held July 28, 1915, the following resolutions were adopted:

Whereas, Our Heavenly Father, whom we believe and know doeth all things well, has, in His infinite wisdom, called to His heavenly home, the beloved wife of our worthy and esteemed brother, B. Z. Millikan; therefore, be it

Resolved, That we extend to our brother and his family, our sincere and heartfelt sympathy in this their hour of sorrow. As the tie is broken here, there will be one to welcome them when they have reached that land where there is no parting or sorrow. Be it further

Resolved, That our character be draped in mourning for thirty days, that a copy of these resolutions be sent to the family, a copy spread on our minutes and a copy sent to our official Journal for publication.

Respectfully submitted,
H. K. LARKINS,
GEO. W. PARKER,
GEO. FRAZIER,
Committee.

Wilkes-Barre, Pa.

Dear Sir and Brother:

Having had a good many traveling brothers calling to see me of late in search of employment, I want to inform them of the conditions in this city. They are very bad at the present, very little work for boiler makers, and small wages. There is only one contract shop organized, McCullem Brothers, and at the present time they only have three boiler makers on their pay roll.

The D. & H. R. R., where organized labor gets a square deal, are not taking on any new men, as we are working short hours. You will find the same conditions in all the railroad shops in this section of the state and along the D. & H. R. R. lines, so if any of our traveling brothers are looking for employment, it is no use stopping off at Wilkes-Barre. Nevertheless, I am always glad to meet a brother and extend a helping hand.

In reading my Journal, month after month, I fail to see anything in it in regard to our local lodge, No. 547, of Carbondale, Pa., so I am going to write a few lines, if nothing more than to let the brothers know that Lodge No. 547 is still in business and I think at the present time we have a lodge we should be proud of, and by the information I received we are still getting new members under our new set of officers, and the lodge is still being run in a successful manner.

Now it only remains with the brothers to do their duty and keep the good work up and it will not be many more months until Local No. 547 will head the list in Pennsylvania.

With best wishes to all the brothers, I beg to remain

Fraternally,
THOS. J. CAVAN,
Wilkes-Barre Rep. L. 547.

Seattle, Wash.

Dear Sir and Brother:

We, the auditing committee of Lodge No. 104, Seattle, Wash., at our last regular meet-

ing on the 5th inst., were instructed to strongly protest through our official Journal, the discontinuation of the support for business agents.

We consider it very poor business methods on the part of our Grand Lodge officers.

At our last convention the receipts to the general fund were raised from 30 to 40 per cent, on the understanding that the increase would be sufficient to support business agents and district organizers. The cash receipts for the last three months were \$38,118.32; take 40 per cent of \$38,118.32 leaves \$15,247.328, which seems sufficient if judiciously handled would maintain our organization. If funds are insufficient as handled at present it would seem the right policy to discontinue the three district organizers.

According to the last quarterly report, the three district organizers have drawn \$2,006.51, while the 19 business agents drew to the amount of \$1,570. Since Local No. 104 has elected a business agent (Brother Dan McKillop), our membership has increased over 100 per cent in less than six months.

Local No. 104 "at the least" expects due stamps to the amount of the allowance for business agent.

BUD NASH.
ARCHIE NAULT.
JESSE HANSEN.

FRED COUNTER, President.

Cushing, Okla.

Dear Sir and Brother:

The Oklahoma oil fields strikes and the mistakes that caused it: .

There were four grave mistakes that caused the strikes in the greatest oil fields in the world; they were drunkenness, ignorance and conceit on the part of our members, and the cut-throat system on the part of the seven companies who were doing work in the field at that time.

Let us take the mistakes separately and quote some of the minor strikes that were brought on by one or the other. Drunkenness caused more trouble about the living and food than any other. Our members would come to eat and if the coffee did not taste good to them, they would rave and tear about the camp and call a strike for bum food, and some of our members who have pride in their low registered number would set by and listen to it all. Another mistake that was caused by the same curse was when some member wanted his time after being drunk for a couple of weeks and if the amount was not there what he thought ought to be on the check, he would walk out to the tank and wave his hand and say, "Come on off; this guy will not give me my right time." If they thought they had a certain amount of hours coming, you could not get that thought out of their heads when they were drunk, and this booze that you get here will make any man see and think some awful things.

Ignorance of our constitution caused a lot of trouble; anybody and everybody would call a strike whenever they chose and there was some of the most foolish grievances brought up that ever a human heard. I could cite thousands of cases, but it would take up too much space. If we wanted anything, we just went after it and considered nothing but what we went after. The strike for more work was the one that brought home the bacon. Just think of it, Mr. Editor, members of our organization going on strike for overtime. The producer was paying for overtime; he was willing to pay it until he got caught up with his storage, and when he wanted to cut it out, we would not let him—a shame and a disgrace to this Brotherhood, and our demands for hours for waiting for water were unreasonable, and bad holes the most damnable piece of foolishness that ever was pulled. Why, if a gang had a few bad holes in a sheet, they would call a strike until they got one hour extra for pining out holes, and who had to pay it? Why, the producer, and this is just the reason the producer was against us during the big strike.

The third mistake on our part was conceit. We heard our members tell the contractor and the producer that they could not build his tanks without us; we heard our members tell the foreman that he would do the riveting or the calking to suit himself, that he, the foreman, was only a figure-head on the job. Mr. Editor, I want to ask if this is justice and how long is any organization going to last that deals out that kind of justice; I claim not very long. The slogan was they have to have the tanks and they can't build them without us, and get what we can; to h— with the Grand Lodge and the constitution, the poor old constitution was pulled to pieces so much so that it is not fit to look at any more. Did they build any tanks without us? Well, you can tell the world they built them without the good fellow who was willing to give what he was looking for—namely, justice—but they did not build the tanks without bad holes, the water, and the big-mouthed, one-hour men, and the county and state officials. Our brave men last summer were working under a deputy last winter and I guess the deputy and his big gun made them do good work.

When we got the goods on the Ritter-Conly Company for bringing men into the state under false pretense, the county attorney told us he could not do anything for us, that the county was bankrupt, and I watched the papers and saw that the county treasurer turned over to his successor in office ninety thousand dollars, and the state labor commissioner's hands were tied. You can guess for yourself the reason. They had money enough to chain one of our members to a stake, all right, and let the scabs taunt him with a rope and guns, for which he is suing the Ritter-Conly Company for twenty-

five thousand dollars, and it looks good for him to collect. Brother David needs the money, but the poor company needs our sympathy; they did nothing, to hear them tell it; they did not tell the state labor commissioner that they had made mistakes; they did not tell him that they bribed heaters by paying them fifty cents more than the scale and a day's pay for moving from one camp to another and had an auto there to move him. They did not tell him that their crooks were selling groceries and meats, putting the cost of the camp up so that they were losing money. They did not tell him that they had autos to take all the farmers out to their jobs, and when the farmers got a good meal or two and a bed would leave the camp and then blame it on the local by saying that they were card men when the company never saw their books. They did not tell him they had men going from job to job calling strikes to get men, but they had, and we can prove it; but they did not give us the chance. They did not tell about putting a green man with an experienced man and discouraging the good man and was willing to collect the permit money for us, something that never should have been done. When the company collected that permit money they were doing the local's business.

Our permit system was very loose. members of our local could bump a permit man whenever he felt like it, and there were some good permit men bumped for members who worked a day or two and blew up. What should have been done was to issue a permit, and make the man pay for it before he went to work and allowed nobody to bump him until pay day. We applied for a charter for Drumright to try and remedy those evils; we were turned down, for what reason I do not know, but God knows we needed a charter.

Our Fourth International Vice-President, Brother Louis Weyand, was here June 1, 1914, and he saw the need of a charter, and let me say right here that our Fourth International Vice-President did not better things any by his actions; he allowed the members at the meeting that night to bluff him, and then went to the Warren City Boiler Works Company officials and told them it was impossible to control the men. Pretty poor, don't you think? We can't go to the company and beg them to eliminate the mistakes. We have learned a great lesson in this strike and we beg of the Grand Lodge and the members at large to eliminate our mistakes of the past and we will do better in the future, even if it comes to the weeding out process.

J. E. DIXON,
Past President Lodge No. 592.

Fort Worth, Tex.

Dear Sir and Brother:

There appeared in the city of Fort Worth very recently an old-time friend of the

writer and one of the old guards that is pretty well known over a good portion of the country. He called on the writer and seemed to be in a very nervous condition, although apparently perfectly sober; wanted to get acquainted with all the county officials, especially the county clerk and justice of the peace.

We led him around and did our part. After a good bit of stalling around, he departed. This morning, while things were pretty busy around the office, said party appeared with a good looking young lady (Miss Mary E. O'Connell of Batesville, Ark.), and requested that we produce a justice of the peace. This was done, and the office force of the county tax assessor witnessed the ceremony that united Miss Mary E. O'Connell and our old friend, Brother J. G. Hill, now of Lodge No. 382, in marriage. After congratulations and best wishes had been extended, the newlyweds departed on a honeymoon, after which they will be at home to their friends at Stamford, Tex., where Brother Hill is employed.

All friends here extend to Mr. and Mrs. Hill their best wishes for a long and happy wedded life.
A FRIEND.

A WORD ABOUT GOVERNMENT INSPECTION.

Why is it that some terrible calamity must happen before the people ask for an investigation? It is always a case of locking the stable after the horse is stolen. Now the clamor is for an investigation of the steamboat inspection bureau on account of its inefficiency. Can anyone expect anything but inefficiency when the manner of appointing the inspectors is considered.

Every bill offered in congress meets with a strong opposition from those who imagine their interests jeopardized. It finally comes up for passage in a compromise form. Generally as far as it goes, if carried out, it is adequate. But when it comes to filling the positions created to make it effective, all sight of the law is lost track of. It is forgotten, or ignored, and politics enter strongly. Incompetent men are appointed to fill the positions of steamboat inspectors. We have pilots or masters as inspectors of hulls and marine engineers as inspectors of boilers. These positions should be filled by practical ship builders and boiler makers.

The same practice exists in all departments of the government. Take the case of the locomotive inspection law. We have as chief inspector a locomotive fireman, and as assistant chief inspectors a locomotive engineer and a mechanical engineer.

Section three of the law reads that there shall be appointed by the president and with the advice and consent of the senate a chief inspector and two assistant chief inspectors of locomotive boilers, who shall have general superintendence of the inspectors hereinafter provided for, direct them in their duties hereby imposed upon

them, and see that the requirements of this act and the rules, regulations and instructions made or given hereunder are observed by common carriers subject hereto.

The said chief inspector and his two assistants shall be selected with reference to their practical knowledge of the construction and repairing of boilers, etc.

Not one of these men have had any practical experience in this line of work, yet they sit on the throne, giving out instructions to the men of actual mechanical experience how to do work, of which they know nothing more about than what they have read in a book. Is it to be wondered at that there is no efficiency in these departments? Still the people pay the bills.

Would anyone who had a watch broken, or wished to have it inspected, take it to the village blacksmith, or would be, if seriously sick, call in the man at the soda fountain in a drug store, or some physician's office girl? The answer is most emphatically no.

The position of inspectors belong to practically trained men in the line of work they are supposed to inspect and pass upon. Then there will be efficiency in their department.

About seventy-five per cent of the district inspectors of locomotive boilers have had no experience and practical knowledge of the construction and repairing of boilers.

If we are to have an investigation of the steamboat service, let us include the locomotive boiler inspection service and other departments, too, in which the positions are filled by men not fitted for their work.

Warren S. Stone, grand chief of the Brotherhood of the Locomotive Engineers, in his plea for the enactment of this law to Secretary Straus of the Bureau of Commerce and Labor, February 10, 1909, on page 15 of the proceedings, stated that "nothing but practical boiler makers would do for inspectors" and that "we do not expect any of our class of men (locomotive engineers) to come into the service."

Mr. Stone never spoke more truth in his life yet. As soon as the law was passed he used every effort to have these engineers appointed. He succeeded, too. This shows that among Mr. Stone's good qualifications, consistency is not included in a political matter like the inspection service law before and after its passage.

Ex-President Taft a short while ago in one of his speeches to college students, stated that the railroads were being ruined by the labor agitators who were dictating to congress. Still he is responsible for the appointment of incompetent men as chief and assistant inspectors of locomotive boilers at the dictation of Warren S. Stone. President Wilson followed directly in Mr. Taft's footsteps.

The inspection is doubtlessly as good as can be expected under the existing conditions but the law is not being carried out as intended (on account of incompetency), the inspectors cannot do well even when they are doing their very best, the Lord

will forgive them, because they know not what they do excepting when the pay check comes.

An amendment to the law will soon go into effect, which covers the inspection of the entire locomotive and tender. We will then have engineers and machinists passing judgment on boilers and boiler makers, doing the same thing on machinery and moving parts of the locomotive, each approving or condemning parts he knows nothing about. Can a bigger farce than this be imagined? If these conditions are to continue as they are, would it not be the greatest wisdom to repeal a law that is carried out in such a farcical way? If we are to have these laws, let us have competent inspectors to enforce them.

How long the people will put up with paying \$300,000 per year for this class of work and the enormous unnecessary expense required of the railroads, is a question.

FAIR PLAY.

Pueblo, Colo.

Dear Sir and Brother:

In compliance with the request made by you, that I give you an article for the Journal, showing the condition of business in this district, I am sending you a brief outline of conditions as I have found them at the various points on this system. At this particular time the D. & R. G. is doing an exceptionally good passenger business, due to the fact that two large expositions are in progress in California at this time. Also a large amount of the traffic may be due to the European war, which has had a tendency to keep the majority of our citizens within the confines of our own country the past summer. The freight business on this road has not made much material gain so far. It has had a tendency to remain quiet and I could not predict when the freight business will resume its normal condition. In the majority of shops on this road large numbers of men were laid off last January and February and in some instances these men have not yet been returned to work. In the larger shops, however, at Denver and Salt Lake City, the full force of men are at work. In further reference to the passenger traffic, which is on in full force at this time, I wish to fully concur the sentiments of Helper Lodge No. 473 and Lodge No. 103, wherein they express their gratification to the members of this Brotherhood who have made use of the "Scenic Line" in their travels to and from the expositions. We fully appreciate this patronage, realizing as we do that the D. & R. G. is the only fair road in the west at this time. It would not be amiss at this time to discuss the conditions relative to the number of hours and men worked now, as compared to a few years back, previous to the construction of the modern up-to-date locomotives. Some few years ago we were working under an agreement that provided a nine-hour work day, and it appears that we had double the number of men working then than we have

now under the eight-hour work day. Now this is not saying anything detrimental towards the eight-hour day, as we shopmen on this road are vastly proud of the fact that this road was the first to sign up with its men for an eight-hour day. I merely emphasize the fact that the large engines of today have put many of our members out of work and they also create havoc among the roadmen by reducing their working force.

We have received numerous letters in the past from our members on other roads, making inquiries regarding the eight-hour day, also in regard to the three shifts in round houses as it is worked on this road, and in answering these letters we have always aimed to boost the eight-hour day, also the three shifts in round houses. We figure that working these shifts in this manner that it should provide more men with work, and it has done so in some instances.

Trusting that I have not intruded upon too much of your valuable space and with kindest regards, I remain,

Yours fraternally,
GEORGE S. WARDEN,
 Pres. Dist. Lodge No. 22.

Clifton Forge, Va.

At the last regular meeting of Mountain Lodge No. 238, I. B. of B. M. & H. of America, the following resolutions were adopted:

Whereas, It has pleased Almighty God in His divine wisdom to remove from our midst the dearly beloved mother of our worthy and esteemed brother, M. Ruark; therefore, be it

Resolved, That we, his fellow brothers, extend to our brother, our heartfelt sympathy in this, his hour of bereavement, and pray that Almighty God may comfort and console him, and that he will bear his sorrow with fortitude; be it further

Resolved, That a copy of these resolutions be spread on the minutes of our meeting, a copy be forwarded to our esteemed brother, and a copy be forwarded to our official Journal for publication.

Kansas City, Mo.

To Officers and Members of all Lodges:
 The time has come when you all must stay awake and do business.

The traveling members and the secretaries that are asleep on the job better

come to time. Some of the former and some of the latter are awful. In connection with this I want to tell a little story. Not long ago a couple of traveling members arrived on the corner, a little more for booze than they ought to be, they didn't care for the brothers that were employed or the secretary of the lodge until they went broke, then they wanted money and transportation out of our city.

They got brave and bold and the chairman of the shop committee refused to leave his work and take them to the M. M. office. Why, the air was blue; then to cap the climax they, or rather one of them, pushed a brother boiler maker in the face. These two brothers names are George Hammer, Reg. No. 84378, and J. D. Dunden, Reg. No. 91850. Things like this should not happen because every time the shop committee visits the office of our M. M. things like that are told to the committee.

Another thing to my brother secretaries:

Answer letters. How long would anybody stay in business if they waited 10 days for an answer to all letters to a city not over 140 miles away? Have written letters to secretaries and business agents and members of boards of trustees this year and haven't received answers to them. Now, brother secretaries, don't let everything sleep; it only takes three or four minutes to answer a letter, unless the party would want a world of information. Do business on business lines and stay ahead of the flag. Traveling members use some judgment, don't expect the committee or the president of the local to stop his labor at any time to talk to you. That's what caused some of these fences to be placed around the different shops.

Hoping I haven't stepped on many toes, and with best wishes for union progress, I remain,

Yours fraternally,

WALTER E. DWYER, S. L. 32.

A Compilation of Labor News.

BY THE A. F. OF L. NEWS SERVICE.

TRIUMPH FOR ARBITRATION.

Chicago.—The Union Leader, official magazine of the local street car men's unions, has this to say of the recent arbitration award:

"The award restores to the street railway men of Chicago a condition they enjoyed practically since the roads started, which was taken from them by the Carter award of 1913—the straight, short-hour night car. Elective not later than January 1, 1916, all night car runs shall be straight, not more than eight hours, and they shall pay \$3 per night for eight hours or less.

"Another feature of the award is the straight Sunday run, not to exceed nine hours.

"The award is a decided victory for arbitration. It demonstrates the power of arbitration to establish just compensation and conditions when administered by fair-minded men. It has restored arbitration to its proper standing as a means of settling industrial disputes, and has given the workers renewed confidence that justice can be realized when men with courage to do the right have the opportunity of passing upon their grievances.

"The Amalgamated members of Chicago have great cause for rejoicing. As an organized body they have been struggling for thirteen years to establish adequate wage and fair working conditions. They have made gradual advances and at times have met with disappointing rebuffs. It has been a hard and long struggle, but through it all our membership has never wavered, and to this loyalty to the principles of the Amalgamated as much as any factor may be attributed the present success."

OHIO UNIONISTS OPPOSE PRIVATE COMPENSATION.

Columbus, O.—State Insurance Commissioner Taggart has ruled that liability insurance companies have a legal right to write workmen's compensation in competition with the state compensation fund.

The decision is a victory for the private insurance companies in their fight with the state industrial commission and the Ohio state federation of labor, which have insisted that the Ohio law barred all private insurance companies.

Under the decision the private companies will furnish employers with the bond they are required to post with the state industrial commission as a guarantee that he will pay the state's schedule of awards. Then the insurance company, for a certain amount, assumes the employers' risks. The industrial commission and the unionists point out that under these circumstances injured workers will not receive the prompt attention given them by the state insurance fund and the purposes of the compensation law are destroyed.

President Voll and Secretary-Treasurer Donnelly of the Ohio state federation of labor have employed counsel and will carry Insurance Commissioner Taggart's decision to the courts. It is possible unionists will initiate a constitutional amendment covering the question.

Thomas J. Duffy, ex-president of the National Brotherhood of Operative Potters, which as member of the state industrial commission, related this incident to show the methods employed by the private companies:

"A Niles man was killed and under the state compensation law, his widow was entitled to \$3,000. The employer had put up the necessary bond with the state commission and was having a liability insurance company carry his compensation for him.

"There was only one thing for the insurance company to do under the law: Pay the widow the \$3,000.

"The commission discovered, however, that agents of the insurance company had talked the widow into 'settling' for \$1,500. The commission promptly forced the company to pay her \$3,000."

THEORY OF COMPENSATION.

Indianapolis.—The state industrial board has started an educational campaign to acquaint employers and employes with the provisions of the new state compensation law. In its first bulletin—No. 1—the board, in showing the advantages of the law, says:

"It secures promptly to the injured workman, and, in case of his death, to his dependents, a certain compensation instead of the often long delayed and very uncertain final result of a lawsuit.

"The compensation, in the first instance, is made to fall upon the employer, not as a punishment, not because he was at fault, but in order to throw the burden ultimately upon those who enjoy the product and who pay the compensation, thereby render to the injured workman what is justly due him and prevent him and his dependents from becoming the objects of a most undesirable charity.

"Under the old system only a small per cent of the injuries resulting from industrial accidents were actually compensated. The premiums paid for liability insurance, and which was considered a legitimate item in the cost of production, were largely expended in defending lawsuits. This system resulted in actual waste.

"Under the compensation system it must be expected that the number of payments will be greatly increased, but the elimination of the waste incurred in the litigation of claims under the old system will certainly have a material effect in keeping the cost of compensation within reasonable limits."

DEFEND SEAMEN'S LAW, NOW.

Racine, Wis.—Says the Racine Call: "How strange it seems to read commendations for the La Follette seamen's bill. One scarcely believes his eyes when he picks up a paper which a week ago was picturing the most disastrous results to American shipping because of the new law, and finds therein strong editorial demands that the La Follette law be enforced and strengthened if need be, or criticism of government officials for not putting it into effect sooner.

"As usual, there is a scurrying for padlocks after the horse has been stolen, a terrific demand for investigation after it is too late to investigate. The probe of the Eastland disaster has shown the cause to be overloading and now comes the horrify-

ing information that federal inspectors had authorized a larger passenger list than even our present archaic laws permitted.

"If the fifteen hundred who went down in this old tub, sacrificed on the altar of personal greed, serve to arouse the nation to a sense of its duty regarding protective navigation laws, they will not have died wholly in vain. But let the dividend pirates who have fought against proper regulation carefully regard the horrible price which they have compelled the Nation to pay for such laws."

ARBITRATION IS URGED.

Boston.—The state board of conciliation and arbitration is conducting a publicity campaign to create a favorable public opinion for its work. It asks: "Why strike or lock-out, unless all legal and peaceful methods to adjust industrial disputes have failed?"

The board possesses no mandatory power, and in urging employers and employes to accept its good offices, says:

"The board will make public its conclusions and recommendations, setting forth what ought to be done or submitted to by either or both parties to adjust the controversy. A decision will be made within three weeks after the date of filing the petition, or within a reasonable time consistent with the duties imposed by a fair and impartial investigation.

"If public sentiment is of value after a strike or lockout, it surely should be respected before either takes place."

MINIMUM WAGE LAW DECLARED INVALID.

Fort Smith, Ark.—Judge Paul Little, of the circuit court, has declared the Arkansas minimum wage law for women unconstitutional.

J. B. Crowe, a laundry proprietor, was found guilty in a justice court of violating the act and on appeal to the circuit court. Judge Little upheld these four contentions of the accused:

That the bill signed by Governor Hays was not the same bill passed by the legislature; that the bill was illegal because it imposed a penalty upon an employe as well as an employer; that the bill is in conflict with section two, article two, of the state constitution; that the bill is in conflict with the fourteenth amendment of the federal constitution.

State officials announce they will appeal the case to the state supreme court.

The law was passed by the last legislature, and was intended "to regulate the hours of labor, safeguard the health and establish a minimum wage for females in the state of Arkansas."

A fifty-four hour week was provided for, and all females who had six months' practical experience in any line of industry or labor should be paid not less than \$1.25 a day. Under six months' experience a rate of not less than \$1 a day should be paid.

The law gives a commission wide powers to reduce rates "if said commission should find, after an investigation, that a lower minimum rate of wages is adequate to supply a woman or minor female worker engaged in any occupation, trade or industry the necessary cost of proper living."

RECORDS BROKEN IN STEEL.

New York.—The announcement that wages of the Bethlehem Steel Company's 17,000 employes has been increased created no surprise to those acquainted with present conditions in this industry. These conditions are most sensational, and it is agreed that concessions are necessary if non-unionism is to continue in this industry.

The remarkable turn in steel, because of war and railroad orders, is shown in the report of the United States Steel corporation for the quarter ending June 30. The earnings for this period were \$27,950,055, and is an advance of \$15,492,246 over the first quarter of the year. It is predicted that the figures for the third quarter will equal, if not exceed, the highest quarter (in 1909) ever registered by the steel corporation.

It is known that trade unionists who are scattered throughout the steel industry are quoting these figures as a reason why workers should organize and demand substantial wage increases and improved working conditions.

NEED NOT TAKE RISK.

Trenton, N. J.—Justice Kalisch of the state supreme court has ruled that a human being is not compelled to take a risk of death, however slight, in order that the money obligations created by law in a workman's favor may be minimized.

This decision was made in the case of a worker who was injured while in the employ of a railroad. A serious case of hernia developed and in the suit for damages the worker was only allowed partial compensation by the lower court, which sustained the company in its claim that an operation would cure the worker in six months.

The case was appealed to the supreme court and the railroad attorneys again quoted medical reports to show that out of 23,000 operations for hernia only 48 have proved fatal. Justice Kalisch dissented from the views of the lower court and rejected the company's position. The court ruled that even though the peril to life seems slight, the worker is not required to submit to an operation to minimize the liability of the company under the employers' liability law.

HAVE A RIGHT TO PICKET.

Jersey City, N. J.—Magistrate Dolan has ruled that strikers have the right to picket and has dismissed several girls and men employes of the Riegel Saek Company. There are about 200 girls among the strikers who have formed a union and are being assisted by A. F. of L. organizers. The work-

ers' grievances include a system of fines, "speeding up," wage reductions, and other poor working conditions. Jersey City trade unionists have joined the strikers in protests against officious police methods which has resulted in numerous arrests. The decision of Magistrate Dolan will tend to check the intimidating tactics of these guardians of the law.

WANT MINERS' MONEY.

Fort Smith, Ark.—Attorneys for the non-union Bache-Denmann Coal Company still insist that their clients are entitled to damages under the Sherman anti-trust law and have filed a second demurrer to Federal Judge Youmans' rulings.

The original suit involved about 200 union miners and their officials, who were asked to hand over three times \$427,820.77, as provided by the Sherman anti-trust law, because of alleged damages following a strike when the company placed its mines on a non-union basis.

When the suit came for trial, the miners' attorneys held that the coal company was not interstate and did not therefore come under the Sherman anti-trust law. Judge Youmans sustained this position. The company presented a demurrer to this decision, but the court refused to concur.

The company then presented a second demurrer, which the court is now considering.

Attorneys for the miners are hopeful that their succession of victories will continue.

OTIS MUST PAY DAMAGES.

Los Angeles, Cal.—After three hours' deliberation a jury awarded Joseph Scott, an attorney in this city, a verdict of \$30,000 damages against Harrison Gray Otis, and the character destroying campaign of this well-known union hater has been temporarily checked.

The attorney conducted his own case, and in pleading to the jury that Otis' attack entitled him to damages, said:

"Has it come to this in this country, that a man can't make a living, that he cannot practice his profession unless, like the serf of old, he bends his back and bows himself before the Los Angeles Times in order that he may have a chance to do it? Has it come to a place in this town that a person outside of authority, without any legal or official title to give orders, shall say to me or to you or to anybody else that we shall not make a living in this community and must go hence?"

WHY SAFETY LAW IS OPPOSED.

Washington.—"Will congress take a back track on the question of safety of life at sea and on the great lakes because greater safety means greater expense to shipowners?" asks the Washington Post, in an editorial entitled "Why Shipowners Do Not Like the Safety Law."

The Post continues:

"Under the La Follette law the Eastland would not have been permitted to carry

more than two-thirds as many passengers as were on board when she capsized. Provision would have been made for lifeboats and liferafts for all on board instead of boats and rafts for 771 out of a total of 2,500 passengers.

"The La Follette law will go into effect in November. If it had been in effect this month, the Eastland would still be afloat."

"THEORETICAL" WAGES.

Palmer, Mass.—"Theoretical" wages is the latest in this age of efficiency and invention of new terms. Superintendent Lauren, of the Wright Wire company, explained the new system to the state board of conciliation while that board was adjusting differences between the company and its striking employes. Lauren told the conciliators that when he took charge of the plant they were different wage schedules. These had now been supplanted by a piece work and bonus system, which would permit the workers to earn—theoretically—from \$15 or \$25 to \$30 a week.

The superintendent acknowledged conditions might arise whereby workers might not make "from \$15 or \$25 to \$30 a week."

In other words, there is a difference between theoretical wages and the actual cash.

ACCIDENT BOARD RULING.

Sacramento, Cal.—The state industrial commission has awarded benefits, under the compensation law, to the heirs of a worker who was suffocated in a tank, even though the worker had contributed nothing to the support of his mother and sisters during the nine months preceding his death. The board held that this was probably due to lack of employment. Benefits were awarded based upon his average contributions for three years prior to his death.

SHOW INCREASED EARNINGS.

Washington.—Railroads of this country continue to increase their earnings despite pleas that higher rates are necessary to give them proper returns.

In June last, 67 of the principal roads reported net revenues of \$406 a mile, according to an interstate commerce commission report. In June, 1914, this revenue was \$357, giving the roads an increase of \$49 a mile this year.

The operating revenues of the companies in June totaled \$105,315,869 and the operating expenses \$69,934,210, leaving net operating revenues of \$35,381,659.

UNIONISTS TO CONFER.

Newark, N. J.—Officers of the New Jersey State Federation of Labor have issued a call for the annual convention to be held in Jersey City, beginning Monday, August 16. Attention is called to the need for a full representation that the increasing activity of the Manufacturers' Association may be resisted. It is stated that this organization "seemed in control" of the last State Senate, "and not a single measure was passed of benefit to the wage earners."

LAWSON VERDICT APPEALED.

Denver.—Attorneys for John R. Lawson have filed an appeal with the state supreme court.

The appeal makes the same allegations of error that were made in the application for a new trial, recently denied by Judge Hillyer. Among the charges is included the affidavit of Grover Hall, a member of the jury, who says that he was induced to consent to a verdict of guilty by coercive measures employed by Frank Gooden, a bailiff.

The supreme court already has before it a petition for a writ of prohibition to bar Judge Granby Hillyer, who sat in the Lawson case, from presiding at future trials growing out of the miners' strike.

LOSSES IN TIMES OF PEACE.

San Francisco.—"While we stand appalled at the enormous loss of life and treasure which has been going on in Europe in the past twelve months, we should not forget the victims of the deadly conflict constantly going on in our own peaceful land," declared President Willet to the National Association of Life Underwriters, in convention in this city. "Statistics tell us that 650,000 lives are annually destroyed in the United States by diseases of the preventable class. The annual economic loss from this source is estimated at \$1,500,000,000, or six times the amount of our fire loss."

LEASE SYSTEM OPPOSED.

Montgomery, Ala.—Trade unionists, railroad brotherhoods, farmers' organizations and associations of business men have joined in an appeal to Alabama citizens to assist in the fight against convict leasing in this state. With this joint appeal is the report of the legislative investigating committee, which depicts the horrors of this system and the working of convicts in mines and in camps for commercial reasons.

LABOR LAW FORCES CHANGE.

Des Moines, Ia.—The new child labor law, which took effect last month, is forcing laundries in this state to change their working systems because of a provision that no girl under 21 years of age shall be employed at any occupation where she will be required to stand on her feet continuously.

METAL TRADES THANKED.

Washington.—Officers of the A. F. of L. metal trades department received a letter from the Panama metal trades expressing the thanks of union labor on the canal zone for assistance in securing a postponement of the order compelling payment of house rent until the canal is completed. The canal unionists ask that publicity be given this letter "so that the various organizations throughout the country may know that the efforts of the metal trades department in behalf of labor on the zone have borne fruit and are appreciated by us."

PICKETING IS LEGAL.

San Diego, Cal.—City Attorney Cosgrove's opinion on the right of workers to picket has checked those members of the city council who favored passing an ordinance that would prohibit all forms of picketing. The city attorney held that it was legal to pass laws stopping crowds from congregating, but an ordinance which attempts more is unquestionably an invasion of private rights.

MINERS "SHORT WEIGHTED."

Boulder, Colo.—Investigations by the state industrial commission again call attention to the practice of "short weighting" miners in this state, one of the causes which led to the recent strike. At one mine the commission found that workers were robbed of from 500 to nearly 1,000 pounds of coal during the first two weeks in June. This amounted to a clear wage reduction of \$13 a month.

LARGE FUND FOR EDUCATION.

Springfield, Ill.—Gov. Dunne has signed the University of Illinois bill carrying the largest sum ever appropriated by a single law to a single institution of higher learning in the United States, amounting in all to an even \$5,000,000 for the two years. The bill was supported by organized labor.

END STRIKE BY FORCE IS HINTED IN CANADA.

Vancouver, B. C.—The British Columbia Federationist, official newspaper of the Trades and Labor Council, this city, raises a warning cry against the plan of compulsory arbitration which, the public press states, is to be urged before the incoming Manitoba legislature, by W. H. Reeve, fair wage officer of that province.

The British Columbia Federationist says: "The opinion of those who have had close experience of similar legislation in Australia does not tally with the glowing approval which we understand Mr. Reeve expressed concerning it.

"We do not think that organized labor in this country will show any enthusiasm to be muzzled with such a measure. We already have on the statutes a law enforcing arbitration of industrial disputes which involve public utility enterprises. But even at that, the findings of the board of investigation cannot be enforced by law. Their acceptance by either party to the dispute is purely optional. With only that element of compulsion in it, the act has met with very strenuous criticism at the annual conventions of the Trades and Labor Congress of Canada, and from the unions separately.

"But when it comes to compelling workmen by law to submit all disputes of an industrial nature to arbitration, we feel certain there will be vigorous opposition. If it should pass, there is still the matter of enforcing the penalties for striking in face of the act. This is not so easy to do where a mass of men is involved as where it is only one or two persons. That difficulty

has already arisen in respect to the industrial disputes investigation act, in cases where the workmen in the employ of a public utility corporation have gone on strike in violation of the law as set forth in the act.

"No proceedings were taken against them by the government, doubtless because political sagacity suggested that in such a case discretion was the better part of valor. One case of this kind locally was the electrical workers in the employ of the British Columbia Telephone Company. They were well organized. They knew exactly what they wanted. And they got it in five days by going on strike."

TRADE UNION METHODS WIN.

Sydney, New South Wales, Australia.—The Newcastle correspondent to the Australian Worker, published in this city, illustrates the value of setting wages by law and by trade union methods.

The Mechanics' union, in the northern part of the country, tried the wages by law plan, and after Judge Edmunds, chairman of the wages board, heard both sides, he ruled that "the time is inopportune for the granting of any increase in pay in and about the mines."

Against this decision, the correspondent places the trade union method, employed by the Miners' union of Maitland, which ignored the wages board, and through direct conferences with employers obtained recognition of the right of the men to be paid on the basis of the price obtained for coal. A later conference paved the way for the improvement of wages of certain off-hand workers.

According to the correspondent, the miners "have expressed the opinion, personally and through their officers, that the wages board system has proved most unsatisfactory to them and that this latest decision (Judge Edmunds') is not such as to make them feel more kindly toward the system."

A STIRRING APPEAL.

Melbourne, Australia.—Under the caption "Be a Unionist, Body and Soul," the Labor Call of this city says:

"If you don't want to be trodden on, join the union.

"Do you want to be well fed, well housed, well clothed and well read? Join the union! Do you want to help your mates along? Join the union! The monopolistic press and the monopolist may tell you that such desires are vicious, but, instead, it is need of things necessary and good that makes men vicious. Where wages are highest, there will be found the most prosperous nation and the most contented people. There will education be the most generally diffused. There will morality be the purest; there will patriotism be the most profound. Help to make your country prosperous; help to liberate mankind. Join the union! Swear by the union! Work for the union!"

A WISE JUDGE.

Sydney, New South Wales, Australia.—Under the arbitration laws courts have the power to order that preference be given unionists by employers. In a recent case Judge Cusen of the arbitration court ruled:

"I give preference to unionists in this case because I am convinced that the man who gives a considerable portion of his time

each week, and a considerable portion of his earnings each week, to try to improve the conditions in which he lives, is justly entitled to more consideration than the man who remains outside and will not give a portion of his time or a fraction of his money to better the conditions of himself and those who are dependent upon his earnings."

Among Our Exchanges.

GRIEVANCES.

Some persons are always in an uncomfortable frame of mind if not downright unhappy. And this even when there is not any real cause for unhappiness or grief, but when small offenses or negligences to which no second thought should be given are magnified. The more one allows his mind to dwell on these things, the greater he finds them. He views himself as being always in the right, and recounts the favors he has bestowed. These so occupy him he forgets favors received. With this disposition, a man seldom stops at nursing his wrong thoughts in his own mind. He talks of them to others, presenting the character of one with whom he is offended in a wrong light, thereby doing an injustice. He is so filled with bitter thought of his grievance that his gloomy face and dismal tone cast gloom on those about him. He becomes so morose that his company is disagreeable. Others, observing his disposition to take offense quickly, feel that it may be their turn next to irritate him. One cannot enjoy freedom of conversation when someone is watching for slights. How much better it would be in the first place to say, "He meant no offense," or "Perhaps he has troubles of his own that make him negligent." Better first look fairly at one's own conduct and see if every work or every act will bear being weighed in the balance. Life is too short and too valuable to be wasted in useless dissension. Think the best and speak the best you can of everyone. You will be the better for it and the happier.—The Milwaukee Journal.

EVIL SPIRITS AT WORK.

A lengthy Washington news story published in several Eastern dailies, under the caption "Amendment of Seamen's Law to be Sought," contains the following significant item:

It is known, by the way, that the Seamen's law is very unpopular in the Commerce Department and, in fact, it was over their protest that the president permitted the bill to become a law.

There are just two men in the Commerce Department who would take genuine delight in spreading the impression that the new Seamen's Act is unpopular. Those two gentlemen are none others than Messrs. Chamberlain and Uhler, presiding respec-

tively over the Bureau of Navigation and the Steamboat Inspection Service.

Throughout the many years when the Seamen's bill was pending in congress these two men have never missed an opportunity to discredit the legislation embodied in the Seamen's bill. Now that the bill has become a law they are evidently unable to rid themselves of their old-time prejudice against this humane and progressive statute.

Really, it does seem unfair to place the interpreting and enforcing of an important epoch-making law of this character into the hands of men whose entire public career shows their utter inability to remain impartial when the seamen's welfare conflicts with the shipowners' interests.

The Seamen's Act is well able to stand upon its own bottom, but we may as well frankly admit that it has an awful load to carry in the persons of Messrs. Chamberlain and Uhler. Our confidence in the fundamental soundness of the Seamen's Act is so deep-seated that we feel certain of its successful operation even with this tremendous handicap. Still, may we not hope and trust that the spirit of fairness so strikingly manifested by practically all the acts of the present national administration will ere long deliver us from these twin evils?—Coast Seamen's Journal.

BUTTERMILK AND BACTERIA.

The popularity of buttermilk as a food and a beverage is attested by its widespread sale. Any drink which can succeed in invading the precincts of the saloon and compete for sale, as buttermilk now does, side by side with alcoholic beverages deserves attention. The plan of allowing milk to undergo fermentation of such a character that the products are not unpleasant or unwholesome for human consumption, yet serve as preservatives to prevent undesirable types of decomposition, is not new. The fermentation product chiefly depended on in such cases is lactic acid, although, in certain types, alcoholic fermentation may also be in evidence. Buttermilk belongs to the acid type; it usually contains from 0.6 to 0.9 per cent of acid. Strictly speaking, buttermilk is a by-product of butter-making; but with the development of the milk industries, the demand for buttermilk has frequently been met by fermenting the skin or separator milk which remains as a by-product

of the cream trade. The fermented product is not literally buttermilk, but it may be indistinguishable from the latter in composition and properties. The use of these fermented milk products has been favored, not alone for their intrinsic food value, but also for accessory reasons. The specific fermentation products have been reputed to have a "tonic" action in the digestive tract. Special virtues have been attributed to the lactic acid bacteria, particularly in relation to putrefactive changes in the alimentary tract. Aside from any alleged therapeutic virtues, there can be no doubt of the nutrient value of the beverages. With the growing attention devoted to the bacteria which milk may harbor, and the recognition of the dangers which they may entail, it is not strange that buttermilk also should demand bacteriologic consideration. Heinemann, of the Department of Bacteriology and Hygiene at the University of Chicago, has demonstrated that the presence of lactic acid in milk will destroy the germs of dysentery, typhoid, diphtheria and cholera. The slower milk sours, the greater is the danger of disease germs surviving. Acids other than lactic acid are frequently present in buttermilk. This beverage, Heinemann reminds us, should therefore be looked on with suspicion, especially if heavily polluted, unless it has been prepared from pasteurized milk. There is, however, a remnant of satisfaction to all lovers of the fermented product to learn that the chances of buttermilk becoming a carrier of infection are small.—The Journal of the American Medical Association.

FOUND THEM OUT.

The promises that the advocates of I. W. W. principles dangle before the mind's eye are like the apples of Sodom, which turned into ashes upon being put to the lips, so do the promises of these radicals become void when their dupes ask for their fulfillment.

These I. W. W. organizations are more mythical than real. They consist chiefly of a lot of hot-air merchants who have no conscience, who stir up trouble and discord for their own personal gain, having no connection whatever with any central organization. They are started by radicals, who have utterly failed in ousting reputable officers of the organization they intend to put out of commission. When they fall as they always must the innocent dupes they induced to join them are the one who suffer most.

The bunch that tried to capture the Whitaker-Glessner plants by what they thought a brilliant exploit of picketing union mills and trying to make the public believe that the real union men were scabs, and that the I. W. W.'s were the real union men have met the same fate that all false leaders must share when their real object has been discovered by those who were duped by their fair promises.

These radical leaders are now being deserted and their followers are petitioning

the Amalgamated Association lodges to reinstate and reobligate them. Yes, some of them are asking for these favors and willing to pledge their future undying fealty to the grand old Amalgamated Association.—The Amalgamated Journal.

A city man recently visited his "country cousin." The man from the city, wishing to explain the joys of metropolitan life, said: "We certainly have been having fun the last few days. Thursday we autoed to the country club and golfed until dark, then trolleyed back to town and danced until morning." The country cousin was not to be stumped in the least and began telling of some of the pleasures of the simple life. "We have had pretty good times here, too. One day we huggied out to Uncle Ned's and went out to the back lot, where we base-balled all the afternoon. In the evening we sneaked up into the attic and poked until morning." A sturdy old farmer who was listening, not to be outdone, took up the conversation at this point and said: "I was having some fun about this time myself. I muled out to the cornfield and gehawed until sundown. Then I suppered until dark and piped until 9 o'clock, after which I bedstedded until the clock fived, after which I breakfasted until it was time to go muleing again."—Montreal Journal of Commerce.

THE MIRROR AND THE WORLD.

"In the glass one sees smiles; another tears.
Same glass—why is it?"

In the same world one sees hopes; another fears.

Same world—why is it?"

The glass reflects the features of him who looks therein. Smile is returned for smile or tears for tears. With the world, as with the glass, one finds what he brings to it. Is a man suspicious and looking for evil? He will meet it on every hand. Does he seek goodness? He will find it all about him, lurking in unexpected places. The traveler intent on watching for obstacles or enemies, misses the wayside flower, the song of the bird, the music of the brook, the smile of a child. If he is on the lookout for evil, it comes to meet him and the good is unseen. Are you possessed by fear? You see danger in every shadow; you hear threats in the wind. Smile on the glass. Smile on the world. Hope and fear not. Believe in good and expect good in others and you will find it. Look for sunshine, look for joy, look for love and kindness. Do not miss the good while repining over wrongs, real or fancied. Be yourself what you would see in the mirror. Be yourself what you would find in the world.—The Milwaukee Journal.

SIGNS OF THE TIMES.

(Mrs. Mary E. Dustin in the Boston Globe.)

True, it does sometimes seem as if the world were going to the bad, if we judge from the daily news. But we must consider

the enormous increase in population, the fact that "many are running to and fro"; that there is no corner of the earth so dark or distant that the searchlight of modern enterprise does not find it out and explore it; that human nature remains unchanged amid all these changing conditions, retaining still its weaknesses and passions as well as its grand and noble impulses.

To sum it all up:

This world is not so bad a world
As some would like to make it,
But, whether good or whether bad,
Depends on how we take it!

And, taking it from the viewpoint of one feminine mind, there was never a generation better worth living in than the generation of today.

SENTENCED MINER CHARGES FRAME-UP.

Trinidad, Colo.—John R. Lawson, labor leader, convicted of murder, was denied a new trial by Judge Granby Hillyer in district court here.

Monday he was sentenced for life at hard labor in the state penitentiary. When asked by the court if he had any statement to make before judgment was pronounced, Lawson read this statement:

"In the name of the courts of my country, which I respect, I protest against your right to pass any judgment on me. It is undenied in this case that you were appointed to the bench this spring for the trial of myself and my associates.

"Fresh from the employment of the coal operators of Colorado, including the Rockefellers, who have engineered these prosecutions, yourself a coal company attorney, you were so prejudiced against me that my case in this court was a travesty on justice.

Scores Judge for Haste.

"Today the supreme court of Colorado in Denver is reviewing your conduct and yet you refuse to wait another twenty-four hours for the guidance of that court's decision. Such unseemingly haste in the exercise of such a jurisdiction to thrust me into prison should not be passed without protest."

Lawson charged that he had been the victim of a hand-picked jury.—Daily Press.

LARKIN'S SILLY PRATTLE.

Last week James Larkin, who styles himself an "Irish labor leader," delivered an address in Dreamland Rink and indulged in the Tom Mann brand of nonsense concerning unionism. His schemes are not only impracticable but are among the most dreary put forth by dreamers. He says:

"In Ireland we are building up a new form of unionism. It is on newer lines of industrial unionism. These unions are broadening their field of work.

"The economical development holds that an unskilled man on a job is entitled to the same wage as a skilled craftsman, because the family of one is just as much en-

titled to the same comforts of life as the other.

"In Ireland all union men employed in the construction of a building belong to the same general union and get the same wage."

Let us see how Larkin's reasoning would work out. He says the unskilled man is entitled to the same wage as the skilled craftsman. The skilled craftsman must spend years in acquiring his knowledge and his skill. He does not gain these things by chance, but as a direct result of application and the exercise of intelligence coupled with patient toil. If there is to be no reward for equipping himself with skill, what inducement is there to urge him on? If the unskilled man is to receive the same wage as the skilled mechanic, will we have any skilled men at all, and what will the consequences be?

We know that Larkin's statements will elicit applause and commendation from the unskilled, but nevertheless his scheme is unsound, unjust and impossible. He might just as well have gone on to state that the lazy, shiftless individual who spends his time loafing at the corner cigarstand and spitting all over the sidewalk is entitled to the same comforts of life as the industrious, busy man who spends every spare moment in equipping himself to be of service to humanity.

The unskilled worker is entitled to far more than he gets anywhere in the world at present, and should receive a wage that will enable him to support his family in comfort, but he is not entitled to the same wage as the skilled craftsman, who also should receive considerably more than he is accorded today.

Men nursing the Larkin brand of hobby do more to retard the progress of the workers than many open enemies of organized labor, because they are listened to seriously by the ignorant and illogical both in the labor movement and out of it, by both employers and employes, and as a result opposition is stirred up, time is wasted and unity is destroyed.

Of course, as the old expression has it, it takes all kinds of people to make a world, including the Larkin kind, but that does not mean that all are beneficial to the world. Some of them cause much pain and suffering and misery, and to this category, we think, James Larkin and Tom Mann and dreamers of their kind properly belong. We are not questioning their sincerity of purpose or their desire to help in lifting the human race upward, but they are laboring under delusions and nursing hobbies that drag men down and hinder progress.

Larkin may make a few converts to his plan, but he can not sway the great American labor movement from its true course. It is too well grounded and its membership too intelligent to be impressed by such irrational arguments.—The Labor Clarion.

News of General Interest.

PIPE WRENCHES WITHOUT SCREWS.

By Frank C. Perkins.

The accompanying illustration, Fig. 1, shows a novel pipe wrench without a screw, as developed at Bloomington, Ill. It will be noted that the pipe wrench operates en-

wrench does, and several things that they do not do.

There has also been designed a third angle wrench, which with its many adjustments takes the place of a quantity of different size solid "S" wrenches. By sim-

A PIPE WRENCH WITHOUT A SCREW.

tirely with the thumb, and, therefore, is quick-acting, doing away entirely with backing away, which, as everyone knows, happens on a wrench where a thumb-screw is used.

It is pointed out that the upper jaw has a much greater forward and back play than in any pipe wrench on the market, thus making it grasp much quicker and re-

ply pressing the thumb on the key, it can be ratcheted one notch at a time or all eight notches at once. The minute one releases the thumb from the key, the handle becomes perfectly solid, so that the nut can be turned either way. This wrench is made with a solid jaw, or with reversible cap, solid feature being for the mechanic, but the reversible cap feature, which makes it

A MONKEY WRENCH WITHOUT A SCREW.

lease instantly. There are less than one-half the number of parts contained in the popular wrenches, there being only six in all in this wrench, and its construction makes it stronger than other pipe wrenches.

A monkey wrench also has been developed with a quick-acting jaw, as noted in photograph, Fig. 2, differing materially from other quick-acting jaws. It is a grip wrench, and the harder one pulls the handle, the tighter it grips the nut. Besides, it is a ratchet wrench. It does not need to be taken off the nut each time, but by merely pushing back on the handle, it automatically ratchets and grips for the next pull. The construction is very simple, and it contains no more parts than the ordinary monkey wrench and will do everything that an ordinary monkey

instantaneously a pipe wrench as well as a monkey wrench, makes it particularly adaptable to automobile owners and householders.

HISTORY OF CONTROVERSY IN THE CLOAK TRADE IN NEW YORK AND ITS SETTLEMENT.

May 20, 1915.—Cloak, Suit and Skirt Manufacturers' Protective Association abrogated Protocol three days before Board of Arbitration was to meet to consider wage increases, review of discharges and other vital disputes.

June 12, 1915.—50,000 Ladies' Garment Workers protest against abrogation of Protocol at mass-meeting at Madison Square Garden and begin preparations for general strike.

June 28, 1915.—Ultimatum sent to manufacturers by International Union and Joint Board of Cloak and Skirt Makers' Unions, demanding immediate settlement of disputes. Union offered to place their case before arbitrators headed by Mayor Mitchel or Louis D. Brandeis.

July 2, 1915.—Bosses agree to air differences before Council of Conciliation.

July 9, 1915.—Dr. Felix Adler, president of the Society of Ethical Culture; Louis D. Brandeis, Boston lawyer and economist; City Chamberlain Henry Bruere; Charles L. Bernheimer, chairman of the Committee on Arbitration of the Chamber of Commerce; George W. Kirchwey, Kent Professor of Law, Columbia University, and Walter C. Noyes, former judge of the United States Circuit Court of Appeals and one of the receivers for Greenhut & Company, named by Mayor Mitchel as Council of Conciliation.

July 23, 1915.—After 23 sessions at which arguments for union were presented by Morris Hillquit and union officers and for the employers by Julius Henry Cohen and many manufacturers, the council sustains union's demands and drafts model agreement to bring peace.

Wages Won by Week Workers.

	New Rate	Old Rate	Rate Asked
Cutters	\$27.50	\$25.00	\$30.00
Jacket Upper Pressers...	25.00	23.50	28.00
Reefer Upper Pressers...	24.00	23.50	28.00
Skirt Upper Pressers...	23.00	21.50	26.00
Skirt Under Pressers....	18.00	16.50	20.00
Jacket Under Pressers...	21.00	19.50	25.00
Reefer Under Pressers...	21.00	19.50	25.00
Sample Makers	23.00	22.00	25.00
Basters	15.00	14.00	16.00
Skirt Finishers	11.00	10.00	12.00

Wages Won by Piece Workers.

Operators granted wage of 70 cents an hour. They asked for 75 cents. The existing rate varies upward from starvation wages.

Finishers granted 50 cents. They asked for 60 cents. Present wages similar to operators.

Buttonhole makers granted prices of 90 cents to \$1.30 per hundred. They asked for \$1 to \$1.40. Present wages like operators and finishers, depending on ability of boss to force workers to accept his low wages.

Union Also Won.

Review of discharges of union members by impartial tribunal. This will protect against discrimination against union members.

Preservation of standards by protocol provisions.

Equal distribution of work during slack seasons to an extent not conflicting with efficient operation of shop.

July 28, 1915.—Bosses refuse to accept agreement without modification.

August 2, 1915.—Union vote 39,337 to 751 in favor of strike if original decision of Council is not accepted.

August 3, 1915.—Council requests union to

participate in final conference to avert general strike.

August 4, 1915.—Employers back down and accept original proposition.

NOVEL SAFETY BOILER APPLIANCES.

(By Frank C. Perkins.)

The accompanying illustration shows interesting and important boiler safety appliances developed at Everett, Wash. In this photograph it will be noted that (A) is a column connected to boiler with both water and steam connection, the same as

any ordinary water column and the ridge cast on column indicates where column is to be set in relation to lowest safe level of water. When water reaches this level in boiler, float in column operates a needle valve, which in turn admits steam to brass-pipe (C) and entering piston operated valve (B) opens valve (B), which admits water and steam through pipe (D) and nozzle into fire box, extinguishing fire almost instantly.

It may be stated that when water in boiler has been brought up to safe level, the needle valve shuts off and valve (B) closes, thereby letting firing be renewed with no damage or danger of any description being wrought. The small one-half inch spring encased relief valve marked (E) is for the purpose of protecting boiler from any increase in pressure. It can be installed directly on boiler shell or in main steam line or steam line to column as shown. It is a spring loaded valve and set for five pound over the set pressure of safety valve on boiler. If, for any cause, the safety valve on boiler sticks and does not release at pressure at which it is set, the valve (E) opens and admits steam to

valve (B) through brass pipe (C) and extinguishes fire in fire box the same as low water had occurred.

It is pointed out that both of these appliances can be tried out each day by simply blowing down column and noting that valve (B) operates. It is not necessary to put fire out with this operation, as valve starts moving slowly and water can be admitted to column before fire is deadened. Simply pulling lever on valve (E) operates valve (B) in the same manner as blowing down column. Valve (E) is set and locked with inspector's seal.

It is stated that when oil is used for fuel, the valve (B) is set in oil line to furnace and closes, shutting off oil supply to burners when boiler is in danger from either low water or overpressure. One of these appliances has been installed on a horizontal return tubular boiler at a plant in Everett, Wash., and is used a great many times. It has been tested out in different ways but in the majority of cases, water has been blown down in the boiler through blow-off valve while boiler was under full load and pressure with a heavy fire.

The appliance is set to operate just as water is going out of sight in water glass and fires have been put out on each occasion almost instantaneously. When appliance is installed on boiler burning fuel oil for fuel, the diaphragms or piston operated valve is then installed in the oil line to burners, and in case of appliances being made to operate from causes such as low water or overpressure the valve simply shuts off the oil to fires and does not admit steam and vapor to fire-box as now installed.

It is stated that questions have arisen as to whether or not the brick work or grates would be damaged by admitting water from boiler on to hot fires and walls. The water used being of the temperature of steam in boiler, when released to atmosphere through nozzles, flies into a heavy vapor, putting fires out and blackening walls. No damage of cracking walls or grates can occur.

It is said that some fear has been expressed that it were dangerous to take water from a boiler whose water level was already dangerously low. The amount of water required to deaden fire and hot brick work is very small and after the first discharge from nozzles it is immaterial whether all the remaining water in boiler is blown out as no damage from burning can result, and at the same time pressure is being reduced as long as valve remains open.

The valve (E) noted on the photograph is a spring encased relief valve set at or about 5 pounds over pressure at which main pop valve releases. If for any cause main pop valve stick or pressure increases so rapidly that said pop valve cannot handle it, the small valve (E) will operate and extinguish fires as in the case of low water. This appliance is superior to fusible plugs and the like, for the reason that operator

can determine at any time as to whether appliance is in working order by simply blowing down column. This is compulsory with water columns and could be made so in this case. Also no shut down of boiler is necessary, as is the case when fusible plugs burn out; for with this appliance fires can be started immediately upon safe water level being attained.

THE BABY'S VACATION.

At this time of the year the trains and boats are carrying thousands of families to the seashore, the mountains, or the farms for their annual vacations from the hot and crowded cities.

Among the host of travelers are many babies and young children. Indeed, it is chiefly on account of them that parents are willing to take all the trouble involved in the annual summer pilgrimage, the weariness of the journey, and the many inconveniences of a temporary home.

They are, however, usually repaid by the increased health of the children, and in the early weeks of September the trains are again filled with returning families of happy children whose sunburned cheeks, arms and legs, and irrepressible spirits show what tonic lingers in mountainside or country spaces.

Unfortunately, this is not always the case. Whether or not this change from city to country life is to be altogether beneficial or not depends upon the sort of living conditions into which the children will come, and upon the character of the milk supply and the drinking water.

In most cities, mothers, whether poor or rich, may have the benefit of carefully inspected milk and drinking water. In the country, it is a wise precaution to look into these matters before selecting the summer home. Flies and mosquitoes are two great enemies of the baby, affecting not merely his comfort, but endangering his health, and possibly his life. In going to the country, the mother should select, if possible, a place where the doors and windows and the porches are screened and one where water closets or some form of sanitary privy is in use. The latter improvements are not, necessarily, very expensive, and should be provided.

The prudent mother will include a bolt of cotton netting in the outfit she takes to the country in order that the baby's crib, at least, may be protected from insects.

In going to a new place with a baby all the drinking water, and the milk, also, should be boiled, if from a strange supply about the cleanliness of which the mother knows nothing.

To travel comfortably with a baby, the first thing to be considered is his food. If the baby is breast fed no trouble will be experienced. For a bottle baby enough feedings must be prepared at home to last throughout the entire journey, unless the trip takes longer than twenty-four hours.

It is best to sterilize the milk for this purpose as follows:

Stand the filled bottles in a kettle over the fire and let the water boil about them for an hour and a half. After cooling, the bottles should be gradually cooled, and then made as cold as possible by standing them in a pail of cracked ice. They may then be packed in a small portable refrigerator. Many types of these have been devised, and may be purchased. A portable ice box may be made at home as follows:

Use two covered tin pails, one an inch or two smaller than the other, so that it may stand inside the larger pail. Fill the space between the two with sawdust; put the bottles with cracked ice in the inner pail and cover both tightly, and make a canvas or flannel cover for the whole.

To warm the bottle for the baby, the mother should provide herself with an enameled ware pitcher holding a pint, which the porter will fill with warm water from the dining car. Set the bottle in it, after the water has cooled a little so that the sudden heat will not be sufficient to break the bottle.

The next most troublesome question on

traveling with children are with respect to their clothes and their food. In the hot summer weather, for a long journey, the little child should be dressed only in the sleeveless gauze shirt and diaper, with one thin outer garment. A sleeveless, low-necked slip of white china silk is best, since it is much cooler than cotton, sheds the dust and can be washed out in the basin when soiled.

It is well to change the baby's clothing as soon as the journey begins, in order to have the regular outfit clean to put on when leaving the train. The little baby may go barefooted but an older child should have barefoot sandals to protect the feet from the cinders scattered over the floor.

Mothers should observe the same regular hours for feeding their children as at home. One of the worst things she can do is to give the baby cakes, candy, bananas, sweet crackers, and the like, as so many mothers do, to keep him quiet in the train. This kind of irregular feeding, with unsuitable foods, together with the heat of the train, and the fatigue and excitement of traveling are very apt to upset the baby and make him irritable and restless.

a long journey with a baby is how to take care of the diapers. A separate bag or basket lined with rubber sheeting should be provided for them, and with them may be packed a small enameled ware chamber.

For a young baby a number of inner pads of soft paper or old cloth which can be destroyed should be provided. When one of these is soiled, wrap it up tightly in a newspaper and throw it away. Wet diapers may be tightly rolled and kept in the rubber bag.

The two most common mistakes made in

A MODERN AMERICAN 20-CUBIC-YARD AIR DUMP CAR.

By Frank C. Perkins.

The accompanying illustration shows the operation of a modern air dump car of 20 cubic yards, which will easily carry a heap load of 28 cubic yards. It is operated by the locomotive; dumping and righting can be controlled from the cab of the locomotive or from the individual cars.

The cars can be dumped either right hand or left hand or alternately right and

left hand and the bodies are automatically unlocked for dumping and re-locked after dumping by compressed air. The car has a length over striking plates of 30 feet 6 inches, and a width over all of 10 feet 5½ inches, while the height top of rail to top of car measures 8 feet 1 inch, while the distance center to center trucks is 19 feet 6 inches.

It will be seen that the doors are of the iron clad type built of straight inside plate and corrugated outside plate, the inside space being filled with yellow pine. This makes a door which has no projections to be caught by the steam shovel; the wood gives the necessary elasticity to prevent buckling.

at the same time from positive means of pulling in and holding the bottom edge of the door when the body is righted. The operating of the car is performed by means of two large air pistons, one mounted on each side of the center sills. The pistons push directly against the members suspended from the floor of the body. The piston on one side dumping the car and the piston on the oppsite side righting the car.

PHOTOGRAPHS IN RAILWAY LOCOMOTIVE SMOKE ABUTMENT.

By Frank C. Perkins.

The accompanying illustrations supplied by Bureau Chief J. W. Henderson of the City of Pittsburgh Bureau of Smoke Regu-

PHOTOS OF RAILWAY LOCOMOTIVE SMOKE ABATEMENT.
(Taken in October.)

The under frame consists of two longitudinal fish belly girders running full length of car while the body bolsters are of heavy built-up type, having solid webs, the end sills being of pressed steel with heavy structural frame work. The brakes are operated by Westinghouse air equipment in addition to being operated by hand brake from one end of car, while the brake mast is provided with drop over hand wheel.

The door operating gear consists of toggle door supports which push out the bottom edge of the door when dumping, considerably increasing the natural opening and

lation, Department of Public Health, give some idea of the smoke nuisance for the abatement of which an ordinance has been enacted producing excellent results by its rigid enforcement.

In this article, the regulation of railroad smoke only is considered, other industrial smoke abatement being considered later. In considering the value of photography in smoke abatement, Mr. Henderson says: "It is unnecessary for us to advise as to how locomotives burning soft coal can smoke, but can say that the taking of pictures has been a great help to this bureau. One set

of these pictures will serve to show just what was possible in the way of smoke emission from locomotives handling a single freight train previous to the railroads realizing that it was the intention to regulate railroad smoke, as well as that of the stationary plants."

"Up to this time, the railroads had abated smoke only with their mouths, but investigations in other cities proved conclusively that it was possible for the railroads to operate entirely within the limits of the ordinance, which would prove eventually to their own advantage by reason of the economy, but strange to say, these same railroads pro-

of our ordinance, which we can say they have done to such an extent that we believe Pittsburgh is as free from objectionable smoke from railroad locomotives as any city in the country, where they use bituminous coal for fuel."

The photographs were used to indicate the smoke nuisance, the later illustrations showing the dense, black smoke, eliminated, only white clouds appearing, which are largely steam and of no detriment. The recent photographs indicate the improvement made in the railroad yards, where they are now even building fires in these locomotives without producing objectionable

PHOTOS IN LOCOMOTIVE SMOKE ABATEMENT.
(Taken in February this year in the the same yard.)

fessed not to know what their own company was doing in this regard in other cities." Mr. Henderson further states that: "Realizing what a hard proposition the railroads are to deal with and finding that our arguments with them were not productive of results, it became necessary for the council of this city to threaten enactment of any ordinance, requiring that the railroads discontinue the use of bituminous coal on their locomotives, within the corporate limits of the city of Pittsburgh.

"Upon realizing that they were up against something, they soon signified a willingness to demonstrate that it was entirely possible for them to meet the requirements

smoke. Further, Bureau Chief Henderson declares that the railroads have all put on inspectors of their own, and each inspector sends a daily report of the operation of all locomotives under his jurisdiction; while some of them send photographs, as well, of locomotive operations.

It is claimed that the elimination of the railroad smoke has been a very material factor in the production of a clearer atmosphere, and is a great help to the Department of Health in Pittsburgh, but the Bureau of Smoke Regulation finds that in order to keep up this good work, it is necessary to keep after the violators relentlessly. Strange to say that the railroads have been

able to do away with their smoke without the addition of any stoking or other appliance. They have simply put it up to the men, holding the engineer equally responsible with the man on the end of the shovel; and a violation of the law means a reprimand in the first instance and a suspension of from 2 to 10 days for both members of the engine crew, for any repetition. The infliction of this penalty a few times had a very wholesome effect on the attitude of the men regarding the violations of the smoke ordinance, but, of course, they did not take to it kindly, at first.

The Pittsburgh ordinance, No. 257, reads as follows:

Section 2. The production or emission within the city, of smoke, the density or

The Ringlemann smoke chart is placed sufficient distance from the eyes to cause the lines to merge similar to appearance of smoke to compare with the density of the smoke under observation. Ordinance No. 257 provides penalties for the production or emission of smoke equal to, or of greater density than, scale number three of the Ringlemann Chart. The lines of the chart merge at from fifteen to twenty feet from the eye.

The recent report of the Pittsburgh Bureau of Smoke Regulation points out that the achievement of smoke regulation is an economic proposition. This is a fact, because smoke and its accompanying products of combustion affect health, cost of cleaning, permanence and appearance of build-

PHOTOS OF RAILWAY LOCOMOTIVE SMOKE ABATEMENT.

shade of which is equal to, or greater than, Number Three of the Ringlemann Chart, from any stack, except that a locomotive or steamboat, for a period or for periods aggregating two minutes or more in any period of fifteen minutes, and the emission of such smoke from any locomotive or steamboat for a period of periods aggregating one minute or more in any period of eight minutes, except for a period not to exceed twenty consecutive minutes, not to exceed once a day, while a new fire is being built therein, is hereby prohibited.

ing and household materials and the growth of vegetation. Its emission from "stacks" is, generally, an indication of inefficiency and an exhibition of fuel waste.

The total of all the items of cost amounts to something like \$20 per year for every man, woman and child in Pittsburgh. A report by the United States government states that smoke causes more than \$500,000,000 damage each year in the destruction to merchandise, the defacement of buildings, tarnishing of metals, injury to human and plant life, the great increased labor and

cost of housekeeping, and the losses to manufacturers, due to imperfect combustion of coal. This means a per capita loss of \$17 to every man, woman and child who lives in the great and middle-sized cities.

The report states that a saving in laundry bills only, of an average of a little less than four cents per week per inhabitant of Pittsburgh, equals more than \$1,100,000 saved per year. It may readily be conceived this has been accomplished. Careful investigation will indicate even more than this. In fact, the proportion of smoke elimination from railroad operations alone might account for a saving of about \$2 per person per year, or \$1,100,000 in the aggregate.

Utility demands abbreviation of reports of this character. Should we disregard this requirement, it would still be difficult to make known, in detail, the elimination of smoke from the "stacks" within the city limits, during the year 1914, alone, as a result of action urged upon the owners and operators of locomotives, boiler furnaces and other furnaces connected with stacks.

In Pittsburgh it is stated that there is scarcely a single case of even one isolated "stack" that has not had, during the year, personal attention with a view of furthering smoke elimination therefrom.

It is pointed out that the regulation of the production and emission of smoke from locomotives operating within the city limits, has been brought about by the railroads and others operating such equipment, to an extent that deserves recognition. The railroads have found it possible to accomplish smokeless operation of locomotives for Pittsburgh, equal to their best performance anywhere, using similar fuel. The most effective change has been in the method of firing. Accompanying this, for smokeless operation, is the selection of the fuel. These two factors, together with keeping the locomotives up to standard otherwise, make smokeless operations possible within the limits provided in the city ordinance.

It is claimed by the bureau chief that brick arches, superheaters and other devices applied to locomotives here do not in themselves constitute the means for compliance with the provisions of the city ordinance. Stokers eliminate the "human element" and make smokeless operation easily possible. Such locomotives, however, with cold boilers, are more difficult to start new fires in without excessive smoke, than is the case without the mechanical stoker.

DECISIONS OF COURTS AFFECTING LABOR.

The United States Bureau of Labor Statistics has just issued its annual review of court decisions affecting labor as its Bulletin No. 169. Approximately 265 decisions are summarized, dealing with the application and construction of the laws, or with the application of the principles of the common law to the rights and relations of the worker.

Decisions of outstanding importance which

are reviewed in this bulletin include the final opinions of the appellate and supreme courts of the United States in the famous Danbury Hatters' Case, holding members of unions personally liable for damage from boycotts; the dissolution of the famous injunction in the case of John Mitchell against the Hitchman Coal & Coke Company of West Virginia, and holding labor unions legal; and the Supreme Court's opinion in the Coppage case, overthrowing the law of Kansas which undertook to protect workmen in their membership in labor organizations. In the last named case, the dissenting opinion, which defended the constitutionality of the act, is also given.

The largest group of cases on a single subject is that relating to the new form of legislation known as workmen's compensation laws. The decisions on this subject range from questions of constitutionality, decided adversely in the case of the Kentucky statute and favorably in other state courts, to the determination of definitions or of single points of dispute. In considering occupational diseases, for instance, the Massachusetts courts hold lead poisoning to be within the state act, providing for compensation for "personal injuries arising out of and in the course of employment," while the Michigan courts, under the provisions of a state law similarly expressed, hold that a case of lead poisoning is not entitled to compensation. An optic neuritis induced by inhaling poisonous gases was also compensated in Massachusetts, while in New Jersey the court disallowed a claim on account of eczema said to be caused by acids used in a bleachery. Other decisions relate to the mode of computing benefits, the definition of the term "casual employment," what constitutes dependency, willful act, incapacity, etc. Taken in connection with an earlier bulletin on the same general subject, the Bureau of Labor Statistics has here presented one of the most complete collections of cases on American compensation laws in existence.

Another important group of decisions in a related field is of those determining the application of the Federal liability statute to different classes of railroad employments. Several cases are found which turn on the nature of the employment of the injured person, i. e., whether in interstate commerce or not. The courts are not uniform in their construction of this statute, but among the employments found to be within the act were those of a blacksmith repairing cars used in interstate commerce, a telegraph lineman engaged in repair work, workmen installing block signal systems, a carpenter building an addition to a freight shed, a laborer carrying coal to heat a shop in which interstate cars were being repaired, etc. Employments, which according to the decisions were excluded, were workmen constructing cut-offs for shortening interstate trackage, a hostler killed by the explosion of the boiler of a loco-

motive whose last run was intrastate, and a switch engine fireman who was at the moment handling only intrastate cars, though his work regularly involved the handling of both classes of commerce indiscriminately.

Other classes of Federal laws that received considerable attention in the court decisions are those limiting the hours of service of railroad employes, and requiring the supply and maintenance of safety appliances.

Other interesting cases are one that grew out of the textile workers' strike in Massachusetts, in which the accountability of the collectors of a fund intended for the relief of strikers' families was affirmed; one connected with the bridge workers' campaign against non-union employers, involving the transportation of explosives in interstate trains; a murder trial growing out of the incitement of a strike leader urging his followers to prevent arrests in the hop pickers' strike in California, and a question of the validity of a sentence of a military court during the disturbance among the miners of Silver Bow County, Mont.

The power of an employers' association to enforce its rules is maintained in a case in which such an association was held by the court to be entitled to recover from one of its members the sum of \$5,000 as damages for his defection in a struggle against closed shop contracts. In connection with this may be mentioned a case deciding the illegality of a combination in restraint of trade undertaken and carried on by an association of retail lumber dealers by blacklisting wholesale dealers who sold directly to the consumer.

The minimum wage law of Oregon is noted in this bulletin as the first law of this class to receive judicial consideration, being upheld by the supreme court of that state. From this decision an appeal has since been taken to the United States Supreme Court.

LABOR ORGANIZATION IN CANADA, 1914.

The fourth annual report on labor organization in Canada, containing 238 pages, embodying statistics, etc., for the calendar year 1914, has been issued by the Department of Labor.

Many will find a special interest in the chapter containing a discussion of the bearing of the European war on various aspects of trade unionism, which includes also the text of deliverances of representative labor organizations in different countries with respect to war in general or having special reference to the present war. Figures are printed showing the number of members of trade unions, who to the close of the year 1914, have as recruits or reservists gone to the front from Canada. The trade unions furnished in all 3,498 recruits and 417 reservists, these figures not including recruits joining the forces since January, 1915.

The standing of the chief cities from this point of view is shown in the following statement:

Cities	No. of Enlistments	No. of Reservists
Toronto	579	89
Winnipeg.	402	52
Montreal.	289	42
Vancouver.	222	22
Calgary.	154	9
Edmonton.	153	2
Victoria.	125	14
Ottawa.	85	7
Regina.	79	8
Quebec.	77	14
Hamilton.	76	8
Saskatoon.	66	10
Moosejaw.	55	3
London.	43	4
St. John.	38	3
Lethbridge.	30	2
Medicine Hat	30	1
Peterborough.	27	
Brandon.	24	2
Halifax.	23	1
New Westminster	22	
St. Catharines	20	1
Fort William	19	5
Kingston.	18	1
All others	842	111
Total.	3,498	417

The effect of the war on Canadian trade union growth is shown in a decrease of membership, the loss being 9,636. The estimated numerical strength of organized labor in Canada at the close of 1914 stood approximately at 166,163. The membership for each of the past four years, as reported to the department, has been as follows:

1911.	133,132
1912.	160,120
1913.	175,799
1914.	166,163

The membership for 1914 of international organizations operating in Canada was 140,482, members of non-international bodies numbered 20,935, and 4,746 belonged to independent unions.

The decrease in international membership was 9,095, and in independent unions of 1,261, while the non-international membership shows a gain of 720. At the close of the year 1914 there were 2,003 local branch unions in Canada, 1,174 owing allegiance to international organizations, 196 affiliated with non-international bodies and 33 independent unions. These figures show a reduction of 18 in local branches of international organizations, a loss of one in dependent units, and a gain of five in non-international branches, making a total decrease of 14 in the number of local union branches in the Dominion.

Organized Labor in Canadian Cities.

In twenty-five of the cities more than one-half of the local unions of the country are located, and among them they comprise nearly 40 per cent of the entire trade union membership in the Dominion. Montreal stands in first place as to the number of local branches, but Toronto reports much

the largest membership. The following summary gives the names of the cities, number of unions in locality, number of unions reporting membership, and the membership reported:

	Number of Unions	Number reporting of Unio's member- in locality ship	Number of Mem's. report'd
Montreal	126	43	8,439
Toronto	123	62	14,781
Winnipeg	80	40	6,693
Vancouver	69	34	5,165
Ottawa	59	33	3,262
Hamilton	53	32	2,684
Edmonton	44	23	2,037
London	43	17	1,587
Calgary	43	26	2,524
Quebec	40	17	2,630
Victoria	40	25	1,589
Fort William	30	14	775
St. John	29	14	980
Saskatoon	28	20	852
Halifax	27	11	1,386
St. Thomas	26	14	1,377
Regina	25	19	955
Moncton	24	12	1,640
Moosejaw	24	13	944
Brandon	23	16	677
Lethbridge	23	17	862
Brantford	22	9	403
Windsor	22	7	178
Peterborough	21	10	427
Nelson	20	9	300
Totals	1,064	537	63,147

Benefits Paid by Central Labor Bodies.

A table is furnished showing the expenditure during the year 1914 on account of operating in Canada. Of the 102 international bodies whose activities extend into the Dominion 79 have benefit features on a varying scale. The total disbursements during 1914 by the various international organizations amounted to \$12,837,987, being divided for each class of benefit as follows:

Death benefits	\$8,864,631
Strike benefits	1,953,350
Sick benefits	963,353
Accident benefits	635,580
Old age pensions	266,395
Unemployed benefits	97,392
Traveling benefits	47,286

Of the non-international bodies three reported having made payments on account of benefits, the total disbursements amounting to \$8,266.75.

General Features of the Report.

The report follows closely along the lines of former reports, the various phases of the general scheme of organization which have been developed being given due consideration.

A chapter is devoted to a discussion of some of the leading features of the organizations composed of workmen employed in the mining industry, including a brief history of their development and difficulties. The report serves as a directory of trade unions for the Dominion for 1915, including as it does particulars not only of every

known local trade union in Canada, but also a list of all international and non-international central organizing bodies, together with the names and addresses of the chief executive officers.

DESTROY THE FLY.

When the modern mother sings "Baby-bye, here's a fly" to her infant, she changes the second line of the old nursery song to read "Let us swat him, you and I." The common house-fly is no longer an object of tolerant interest, but has become an object of hatred and distrust. He is known to be the principal factor in the distribution of the germs of typhoid.

Especially is he regarded as the enemy of the baby, as there is reason to believe that he carries about the germs of summer diarrhea and leaves them behind him, with other filth, when he lights on the nipple of the feeding bottle, or crawls over the saucer of cereal, or falls in the milk. Thus he is a real danger, not only to the baby but to the whole family, and every effort should be made to do away with him.

Flies may be kept out of the house to a considerable extent by using screens at the doors and windows, and those that get inside may be trapped, poisoned, or swatted. But better than any of these methods is to destroy the flies in the larval stage, and thus prevent them from hatching. The following information is furnished by the Department of Agriculture:

"A safe and effective weapon against the typhoid or house-fly has been found in powdered hellebore by scientists of the Department of Agriculture. Flies lay their eggs chiefly in stable manure. Powdered hellebore mixed with water and sprinkled over the manure, will destroy the larvae which are hatched from the eggs. Since powdered hellebore is readily obtainable, this puts in the hands of everyone a remedy for one of the pests that has been found dangerous as well as troublesome. Powdered hellebore, however, will not kill adult flies, which must be swatted or trapped.

"It has long been known that flies breed in manure but previous methods of destroying the larvae there by the use of strong chemicals have been open to the objection that the treatment under some conditions lessened the fertilizing value of the manure or actually injured vegetation. This is not true of powdered hellebore. Government experiments have shown that the hellebore is entirely decomposed in the course of the fermentation of the manure and that even in excessive quantities it does no harm except to the larvae it is intended to destroy. Chickens picking in manure treated with it suffer no ill effects.

"One-half pound of powdered hellebore mixed with 10 gallons of water is sufficient to kill the larvae in 8 bushels, or 10 cubic feet, of manure. The mixture should be sprinkled carefully over the pile, especial attention being paid to the outer edges. In most places hellebore is obtainable in 100-pound lots at a cost of 11 cents a pound.

This makes the cost of the treatment a little less than seven-tenths of a cent per bushel of manure. A liberal estimate of the output of manure is two bushels a day per horse. The money involved is, therefore, trifling in comparison with the benefits to the individual and the community from the practical elimination of the disease-spreading fly.

"Although fresh manure is the favorite breeding spot, flies lay their eggs in other places as well, such as outhouses, refuse piles, etc. In these places, from which no manure is taken to spread on the fields, considerable saving may be effected through the substitution of borax for powdered hellebore. Applied at the rate of 0.62 pounds per 8 bushels of manure, borax is as effective as powdered hellebore in killing the larvae, but costs less than half a cent for each bushel of manure treated. In larger quantities, however, or when the manure itself is spread at a greater rate than 15 tons to the acre, some damage to crops may result. Large quantities of manure are often used by market gardeners and others, and there is always danger of carelessness in applying the borax. The use of the more expensive but safer hellebore is therefore

recommended for the treatment of manure. Borax is recommended for all other refuse in which flies may lay eggs.

"Scientists who have been working for years to eliminate the fly are convinced that the use of one or the other of these simple measures is a public duty wherever manure and refuse exist. Sanitarians, however, strongly advise the removal of refuse heaps or other unnecessary rubbish or breeding places for flies. In breeding places which cannot be thus disposed of—such as manure or stable—the daily use of powdered hellebore will keep the flies from breeding in these favorite breeding grounds. The best results are obtainable in a community where everyone cleans up his premises, traps or kills the flies, and systematically treats the manure and other breeding places with powdered hellebore.

"The fly is not only a nuisance to human beings and live stock; it spreads disease and filth and is a menace to public health which cannot be tolerated in the face of a demonstrated remedy. Details of the experiments with other information on the subject are contained in a professional paper, Bulletin 245 of the United States Department of Agriculture."

Smiles.

A civil engineer, who was building a railway in Mexico, was trying to show a native how much the new railway would benefit the country.

"How long does it take you to carry your produce to market at present?" he said.

"With a mule it takes three days."

"There you are!" exclaimed the engineer. "When the new railway is in operation you will be able to take your produce to market and return home the same day!"

"Very good, señor," was the placid reply, "but what shall I do with the other two days?"—Kansas City Star.

A Texas sheriff, visiting New York to take a prisoner back to the South, was turned over to an inspector who was to be his amusement guide. They wound up at an East Side ball where there were a few dips present.

After a half hour the inspector called one of the crooks to one side and said:

"See that tall man with the sombrero?"

"Yes, what about him?"

"He's a Texas bull I'm showing around and I think it would be a fancy idea if you could nick him for his ticket."

"Nix, you're trying to put me in bad."

"Nothing like it—purely a joke, that's all. To show you I'm on the level I give you my word that you won't get in trouble and I'll give you a \$5 note for his watch."

"All right, here it is."—From the Chicago Post.

WHY SHE WOUDN'T PAY.

"You'll have to pay for that little boy," said the conductor on a Michigan Central train the other day.

"I guess not," said the lady, firmly.

"Have you ever had to buy a ticket for him?"

"No, I have not, and I will not begin now."

"You will have to pay his fare this time."

"No, I shall not pay his fare. That is settled, Mr. Conductor."

"If you don't pay his fare I cannot let him occupy a seat. I will stop the train and put him off."

"Stop the train and put him off if you like. He's not my little boy. I never saw him before."—Detroit News.

The old man in the rear car seemed greatly agitated at not being able to find his ticket when the conductor came through. Finally that official, with a hearty laugh, informed him that he had found it in his mouth, which he seemed surprised to find true, and handed it over. After the conductor had passed into the next car the old fellow's companion started to make fun of him for having the ticket in his mouth and not being able to find it, whereupon he responded:

"He who laughs last, me lad, laughs best. I knew it was in me mouth the whole time, but the ticket was an old one, and I was chewing the date off it."—Ex.

Poetical Selections.

FIVE DOLLARS A WEEK!

Thus it is down on Beelzebub's books;
 "August the seventeenth—Isabel Brooks;
 Home in the country; folks, decent but
 poor;
 Character excellent; morals still pure;
 Came to the city today and found work;
 Wages five dollars; department store
 clerk."

Wages five dollars! To last seven days!
 Three for a miserable hall-room she pays;
 Two nickels daily the subway receives;
 One dollar-forty for eating, that leaves—
 One-forty has such a long way to reach—
 Twenty-one banquets at seven cents each.

There! Every penny of wage has been
 spent—
 Squandered for feasting and riding and
 rent!
 Spendthrift! She doesn't remember life's
 ills.
 How in the world will she pay doctor's
 bills?
 What if she's furloughed (there's always
 a chance);
 Isabel ought to save up in advance.

Hold! We've not mentioned her clothes;
 she must wear
 Dresses, hats, shoes, stockings, ribbons for
 hair—
 How shall she get them? Suppose that we
 stop;
 Perhaps it's as well if we let the thing drop.
 You good mathematicians may figure it
 out
 (It's a matter of figures or figure no doubt).

Carry this picture, it's better, I'm sure;
 "Character excellent; morals still pure."
 What else is written we won't try to see;
 Beelzebub thinks much the same way as
 we.

Why, as I live, there's a tear in his eye!
 Now, what in _____ can make old Satan
 cry?

Surely the Devil is feeling his age;
 Look what he's writing on Isabel's page:
 "Virtue's a luxury hard to afford
 When a girl hasn't money enough for her
 board."

—Herbert Kaufman. From "Poems" by
 Herbert Kaufman.

"THEY SAY"

"They say!"—ah, well, suppose they do!
 But can they prove the story true?
 Why count yourself among the "they"
 Who whisper what they dare not say?
 Suspicion may arise from naught
 But malice, envy, want of thought.

"They say!"—but why the tale rehearse,
 And help to make the matter worse?

No good can possibly accrue
 From telling what may be untrue,
 And is it not a nobler plan
 To speak of all the best you can?

"They say!"—well, if it should be so,
 Why need you tell the tale of woe?
 Will it the bitter wrong redress,
 Or make one pang of sorrow less?
 Will it the erring one restore,
 Henceforth to "go and sin no more"?

"They say!"—Oh, pause and look within,
 See how thy heart inclines to sin;
 And lest in dark temptation's hour
 Thou, too, shouldst sink beneath its power,
 Pity the frail, weep o'er their fall,
 But speak of good or not at all.

—The Pathfinder.

WELCOME.

Let us open wide the portals
 To the men who marched with Lee,
 And followed Stonewall Jackson
 Who bore the tattered banner,
 And waved its folds on high,
 And shed their blood for freedom
 'Neath the starry Southern sky.

We have read in song and story
 Of the heroes who have fought
 To uphold their country's honor
 And the miracles they wrought;
 But the valor of our soldiers
 Who wore Confederate gray
 Will go ringing down the ages,
 Making glorious the day.

See the long, thin line come marching,
 With the proud and martial tread,
 To greet their living comrades
 And bivouac with their dead;
 Strew their path with fragrant roses,
 Hail them with a loud acclaim,
 Battle-scarred and bent and hoary,
 Yet undying is their fame.

For, though lost, our cause is grander;
 Though conquered, we are free;
 We have placed on history's pages
 The name of R. E. Lee;
 And ages yet unborn
 Beneath the Southern stars,
 In the sunny land of Dixie,
 Will revere the Stars and Bars,

Then welcome, yes, thrice welcome
 To the brave old boys in gray;
 They are sacred, they are holy,
 And united we will pray
 That when our country needs us
 We will march as blithe and gay,
 With Old Flory flying o'er us
 As our sires who wore the gray.
 —MARY ROSALIND LE MASURIER.

In Memoriam

Mrs. Lela Ida Blount, age 52 years, mother of Brother E. Y. Blount, president of Lodge No. 222. Deceased was born February 24, 1863, died August 6, 1915, at Mart, Texas.

Mrs. Willie Hammett, age 43 years, mother of Brother J. T. Baggett, of Lodge No. 222. Deceased was born in 1872 and passed from this earthly habitation May 28, 1915, at Mart, Texas.

N. W. Alford, age 77 years, father-in-law of Brother G. M. Johnson of Lodge No. 222. Deceased after having passed the three-quarter century mark of life's pathway, passed away August 7, 1915, at Groesbeck, Texas.

Lost and Found

Lost Due Book—Wehman.

The due book and clearance card of Aug-Wehman, Reg. No. 66160, issued from Lodge No. 592, Tulsa, Okla., was lost some time in June. Anyone finding same please return to the undersigned.

AUG. WEHMAN,
P. O. Box 41, Hebron, Ind.

Lost Due Book—Cory.

Anyone finding due book of Joe Cory, Reg. No. 100848, will confer a favor by returning to the undersigned. Book was issued by Lodge No. 83. Lost between Kansas City and Port Arthur, Tex.

T. O. RILEY, S. L. 305.

Lost Due Book—McDermott.

The due book of Brother John McDermott, Reg. No. 104029, of Lodge No. 16, was lost. Anyone finding same will please return to the undersigned.

HUGH FITZPATRICK, S. L. 16.

Trials and Fines

Adams, et als.—Lodge No. 592.

This is to certify that the following members were tried by Lodge No. 592 and found guilty of violating the laws of the Brotherhood by working on unfair work as boiler makers, riveters and helpers in the Oklahoma oil fields of Oklahoma from January 2 to July 3, 1915, and are subject to a fine of one thousand dollars (\$1,000.00) and suspended for fifty years, and are not entitled to recognition in any way from the officers or members of this Brotherhood until such judgments are satisfied: Frank Adams, Reg. No. 100539; Kelly Breeding, Reg. No. 98043; John Beyers, Reg. No. 98420; John Carlson, Reg. No. 91218; James Doke, Reg. No. 101344; Stephen Gilchrist, Reg. No. 90485; L. R. Galbreath, Reg. No. 96653; Phillip Hartman, Reg. No. 54518; Eddie Hood, Reg. No. 91634, from New Orleans; N. A. Jennings, Reg. No. 97031; W. R. Johnson, Reg. No. 100151; Harry (Whitie) Kain of Chicago, Reg. No. 58103; Sam Lyons, Reg. No. 89152; Al Moon, Reg. No. 14975, has C. C. from 592; Geo. Mason, Reg. No. 100328; Claude Reed, Reg. No. 100836; A. L. Walker, Reg. No. 84079; Geo. Worrall, Reg. No. 69553; Elmer Winstal, Reg. No. 99830; S. C. Delay, Reg. No. 97731; Joe Ledett, Reg. No. 101676; John Willamson, Reg. No. 99450.

ERNEST DIXON, President.
RICHARD LEAHY, Cor. Sec.

Hazlett et al.—Lodge No. 39.

This is to certify that the following members were tried by Lodge No. 39 and found guilty of violating the laws of the Brotherhood by working on unfair work. Hazlett, at Lockport, Ill., before July 3, and Leahy for John Maher & Son, Gary, Ind., both as boiler makers, and are subject to a fine of one hundred dollars and suspended for 99 years, and are not entitled to recognition in any way from the officers or members of this Brotherhood until such judgments are satisfied.

Alex. Hazlett, age 33 years, Reg. No. 42771, and John J. Leahy, Reg. No. 62253, age 45.

FRANK BACTON, President.
JOHN S. COGHLAN, Cor. Sec.

Marosky—Lodge No. 377.

This is to certify that Vorcile Marosky, Reg. No. 94021, about 30 years, of Lodge No. 377, was tried by that lodge and found guilty of violating the laws of the Brotherhood by stealing a wood plane from a brother workman at the C., R. I. & P. R. R. shop, at Silvis, Ill., July 10, 1915, and his card was revoked for 99 years.

By Insisting Upon Purchasing Union Stamp Shoes

You help better shoemaking conditions.
 You get better shoes for the money.
 You help your own labor position.
 You abolish child labor.

Do not be misled by retailers who say: "This shoe does not bear the union stamp, but is made under union conditions." This is false—no shoe is union made unless it bears the union stamp.

No. 10.

SYNOPSIS OF REPORT OF UNITED STATES COMMISSION ON INDUSTRIAL RELATIONS.

Signed by Mrs. Florence J. Harriman and John R. Commons. And with certain exceptions explained in a separate report by Harris Weinstock, S. Thruston Ballard and Richard H. Aishton.

Breakdown of Labor Laws.

The greatest cause of industrial unrest is the breakdown in the administration of labor laws and the distrust of our municipal, state and national governments on the part of a large portion of our people, according to the report signed by Professor John R. Commons and Mrs. J. Borden Harriman of the United States Commission on Industrial Relations and concurred in with some exceptions by Harris Weinstock, S. Thruston Ballard and R. H. Aishton, the employers' representatives on the Commission.

Recommendations for additional legislation would be futile, says the report, until methods are provided for making enforceable the laws now on the statute books, through the creation of administrative machinery that will be entirely removed from political influences.

To remedy the conditions criticised, the report recommends the creation of a Federal Fund for Social Welfare, maintained by an inheritance tax on large fortunes, and administered by a Commission on Industrial Relations aided by an Advisory Council composed of representatives of employers and employes.

Industrial Commission and Advisory Council.

The most important step in the creation of the Commission on Industrial Relations is the formation of the advisory council, which shall advise the Commission on all matters pertaining to the relations between labor and capital. This advisory council would, if the plan is adopted, be composed of ten persons representing the different associations of employers and farmers in the country; ten representing organized labor, and the Secretary of Commerce and the Sec-

retary of Labor to be members ex-officio. The Industrial Commission in addition to the twenty persons thus selected, may appoint ten additional members interested in social legislation and industrial education.

The members of the advisory council are to be appointed by the President from names submitted to him by the associations interested, and they shall serve without compensation other than actual expenses.

The Industrial Commission, it is recommended, shall be composed of three persons, appointed by the President and confirmed by the United States Senate. The Commission shall have full power to administer all labor laws, but shall not interfere with the duties of the Department of Labor in making investigations and recommending legislation.

While the functions of the Industrial Commission are to be solely administrative, it will have power to conduct such investigations as may be necessary to obtain correct information on subjects relating to the laws it is required to enforce. It will co-operate with state industrial commissions and minimum wage boards, with the idea of securing uniformity so far as possible.

Mediation of Industrial Disputes.

One of the most important functions of the proposed Industrial Commission would be to deal with industrial disputes between employers and employes. It would take over all the functions now exercised by the conciliation and mediation bureau of the Department of Labor and also the Mediation Board created under the Newlands Act. The provisions of the Newlands Act, now confined to railroad operation in interstate commerce, would be extended to all industry of an interstate character.

For the purpose of adjusting labor disputes the Industrial Commission is to appoint a chief mediator and such assistant mediators as may be necessary. These mediators and all other employes of the Commission are to be appointed from eligible lists, prepared after civil service examina-

tions. The advisory council is to assist in conducting such examinations, so as to guard against political influence of any kind and assure the selection of the most competent persons.

When a labor dispute arises, the chief mediator personally, or through any of his assistants, shall have power to mediate in all cases where in his judgment the interests of the public are affected. If mediation and conciliation fail, the mediator may suggest arbitration, and if both sides are agreeable he may assist them in naming an arbitration board. If arbitration is rejected and both sides agree, the mediator may assist in naming a joint board of investigation and publish the facts in the controversy. No public investigation or publication of the findings can be made by the mediator, except with the consent of both parties to the dispute.

Boycotts and Damage Suits.

On the question of boycotts and damage suits, the report indorses the provisions of the Clayton act, but in view of the doubtful constitutionality of that measure, it recommends the application of the British Trades Dispute act. The report holds that as employers now have practical immunity from punishment for maintaining blacklists, labor should have the right to institute boycotts, either primary or secondary, without being liable to prosecution.

Federal Fund for Social Welfare.

To provide funds for the maintenance of the Industrial Commission and further social welfare, without increasing taxation of the people, the report recommends an inheritance tax on large fortunes. The rate of the inheritance tax is graduated from 1 per cent on the excess of \$25,000 fortunes left to direct heirs, to 15 per cent on fortunes over \$1,000,000. The tax on estates going to distant heirs is greater.

An inheritance tax proposed would be collected by the federal government through existing machinery that collects the income tax, and a portion would be turned over to each state. The various states now collect a sum equal to about \$25,000,000 in inheritance taxes, but the rate is low in some states. By increasing the rate as proposed, it is estimated that a fund of \$200,000,000 a year would be collected, of which \$50,000,000 would be returned to the various states.

The principal of this fund it is proposed to invest in homes for workingmen, hospitals, rural credits for farmers and such other purposes of a social nature as would insure an income.

The income from the fund, which would be administered by the Industrial Commission, would be used to meet the expenses of the Commission; to promote the social well-being in the shape of establishing sickness and unemployment insurance, old age pensions, the establishments of employment offices, the promotion of industrial education through subsidies paid to the various states

and enabling tenant farmers to acquire possession of their farms.

Employment Offices.

Another recommendation in the report is the establishment of a system of national and state employment offices, under the control of the federal and state industrial commissions, co-operating with employers and labor unions. The various state employment offices would be brought under the Federal Industrial Commission, through subsidies granted them for complying with certain standards which the Commission would establish.

Industrial Education.

On matters pertaining to industrial education, the Industrial Commission would appoint on the advisory council representative educators and persons interested in the promotion of industrial education, so that in fixing standards for the payment of federal subsidies, all interests would be represented.

Immigration.

The report points out the great difficulties which the labor unions have in disciplining the foreign element in their ranks. It points out that the labor unions are the greatest Americanizing agencies in the country, and recommends very substantial restrictions in immigration, in addition to the restrictions now in effect.

In addition to the work of the trade unions in Americanizing immigrants, the report recommends the use of our public schools as social centers and commends the work already accomplished by them as a socializing influence.

As immigration is an important issue between labor and capital, the report recommends that the administration of all immigration laws be turned over to the Industrial Commission. It points out that a trade unionist, holding a political position, was compelled virtually to nullify the law pertaining to the deportation of Chinese, smuggled into the country. This would be impossible, the report says, under the advisory council proposed, whose members would not be dependent on the government for their salaries.

State Industrial Commissions.

Similar recommendations are made in the report for the creation of state industrial commissions in all states where workmen's compensation laws and minimum wage boards are in operation. Such state commissions to have power to issue rules and regulations dealing with standards of safety, sanitation and such matters, under general standards laid down by the various state legislatures. The report indorses workmen's compensation and minimum wage legislation for women and children.

Foundations.

On the question of foundations the report says that while some may warrant investigation and public exposure of methods, still in

many instances they have furnished the national and state governments with the incentive to promote education and other matters for the social welfare. It states that no legislation should be enacted that would abolish privately endowed institutions, unless a substitute is provided. It points out that the proposed Federal Fund for Social Welfare would provide the means for doing many of the things being done, or attempted by endowed foundations, and would be much more social and democratic.

To improve conditions in agricultural communities the report recommends a combination of the Irish and Australasian land laws. Under the plan proposed the government would extend credit to enable tenant farmers to become land owners, after the actual value of the land had been determined by a competent commission. The Federal Fund for Social Welfare would be partially invested in furthering this object.

Corporation Control of Politics and Labor.

On the Colorado situation the report says that a condition of feudalism exists in the mining regions, but it decries any attempt to hold responsible any single individual. It emphasizes the fact that the whole situation in Colorado, West Virginia and other places where industrial warfare has existed, is due to a system which can not be remedied by the public abuse of an individual. It recommends that corporations and labor unions alike be removed from the control of politics and says that the Industrial Commission, with its advisory council and civil service rules; the initiative, referendum and limited recall, proportional representation, direct primaries and anti-lobbying legislation would accomplish this purpose which is essential before any permanent remedy can be effected.

Collective Bargaining.

The report strongly indorses the organization of labor and the principle of collective bargaining and in recommending the application of the British Trades Dispute act urges that the workers of the country be given absolute freedom to organize and work out their own salvation.

Investigations.

In giving reasons for disregarding the reports of investigators for the Commission, the report says that its signers do not consider that the investigations were complete, as they were not submitted to all parties in interest to be checked up as to facts. It points out that the whole idea of the permanent Industrial Commission recommended and the advisory council, is that all parties interested in industrial disputes and the enforcement of labor laws are represented on the council and that it would deal in facts rather than in one-sided conclusions.

Unreliable reports and statistics, it says, are a cause of the feeling of distrust with which employers and employes now view each other, and it proposes to remedy this

condition by having all parties in interest agree on any action to be taken. The Industrial Commission which it is proposed to create can take no official action or make any official publication without first submitting it to the advisory council, with opportunity of any member of the council to publish his dissent along with the published report. This will not only insure accuracy but will remove suspicion and distrust and go far toward establishing a better understanding between employers and employes.

Police and Community Liability.

Among the other recommendations made in the report are that private detective agencies and private employment agencies doing an interstate business be regulated under license from the Industrial Commission; that rules for the conduct of the state militia be drawn up by the War Department and the advisory council of the Commission; that corporations should call upon public authorities for police protection and that local communities should be held liable in damages for the violation of constitutional rights of workers and labor organizers, as well as for failure to protect the property of employers.

Abstract of Report of Commissioners Weinstock, Aishton and Ballard.

We dissent from the recommendation that the secondary boycott should be legalized. We regard the secondary boycott as unjust, inequitable, and vicious, in that it subjects third and innocent parties to injury and, at times, to great loss, if not ruin. We are, therefore, as much opposed to it as we are to the blacklist.

We further dissent from said report in its limitations to public inquiry in labor disputes only to cases where both sides invite such inquiry.

We find that the alleged findings of fact and, in a general way, the comments thereon made in the report of the staff of this Commission, under the direction of Mr. Basil M. Manly, which has been made a part of the records of this Commission, without the indorsement, however, of the Commission, so manifestly partisan and unfair that we cannot give them our indorsement.

Despite the fact that we have been appointed to represent, on this Commission, the employers of the nation, we are free to admit that the investigations made by the Commission, and the testimony brought forth at our public hearings, have made it plain that employers, some of them, have been guilty of much wrongdoing, and have caused the workers to have their fullest grievances against many employers. There has been an abundance of testimony submitted to prove to our satisfaction that some employers have resorted to questionable methods to prevent their workers from organizing in their own self-interest; that they have attempted to defeat democracy by more or less successfully controlling courts and legislatures; that

some have resorted to all sorts of methods to prevent the enactment of remedial industrial legislation; that some have employed gunmen in strikes, who were disreputable characters, and who assaulted innocent people and committed other crimes most reprehensible in character; that some have paid lower wages than competitive conditions warranted, worked their people long hours, and under insanitary and dangerous conditions; that some have exploited prison labor at the expense of free labor; that some have been contract-breakers with labor; that some have at times attempted, through the authorities, to suppress free speech and the right of peaceful assembly, and that some have deliberately, for selfish ends, bribed representatives of labor. All these things, we find, tend to produce industrial unrest, with all its consequent and far-reaching ills.

There is, therefore, no gainsaying the fact that labor has had many grievances, and that it is thoroughly justified in organizing and in spreading organization in order better to protect itself against exploitation and oppression.

On the other hand, in justice to employers generally, it must be said that there has been much evidence to show that there is an awakening among the enlightened employers of the nation, who have taken a deeper personal interest in the welfare of their workers than ever before in industrial history; that such enlightened employers are growing in number and are more and more realizing that, if for no other reason, it is in their own self-interest to seek the welfare of their workers, and earnestly to strive to better their conditions. Employers, on their own initiative, have created sick funds and pension funds; have expended vast sums of money to insure greater safety to their workers; have, as compared with conditions of the past, greatly improved their methods of sanitation, have done much to regularize employment; have increased wages, and in every way have endeavored to lighten the burdens of their workers.

Organized labor points out that there are many employers' associations that are organized not to deal with, but to fight, unionism, and that this, in many instances, and more especially in the larger industrial enterprises, presents a very serious obstacle for organized labor to meet and to overcome.

Representing as we do, on this Commission, the employers' side, we are at one with the other members of our Federal Commission who represent the general public, and also with those representing organized labor, in believing that under modern industrial conditions, collective bargaining, when fairly and properly conducted, is conducive to the best good of the employer, the worker and society. We find that there are many enlightened employers who concur in this

view, who in the past recognized and dealt with organized labor, but who now refuse to do so, and who, under proper conditions, would willingly continue to engage in collective bargaining. With good cause, in our opinion, they place the responsibility for their refusing to do so at the door of organized labor. There is an abundance of available testimony in our records to show that many employers are frightened off from recognizing or dealing with organized labor for fear that to do so means to put their heads in the noose and to invite the probability of seriously injuring, if not ruining, their business.

The prime objections that such employers have to recognizing and dealing with organized labor is the fear of:

- (a) Sympathetic strikes.
- (b) Jurisdictional disputes.
- (c) Labor union politics.
- (d) Contract breaking.
- (e) Restriction of output.
- (f) Prohibition of the use of non-union made tools and materials.
- (g) Closed shop.
- (h) Contest for supremacy between rival unions.
- (i) Acts of violence against non-union workers and the properties of employers.
- (j) Apprenticeship rules.

The employer contends, and we find ourselves in sympathy with his contention, that it is a rank injustice to subject him to a strike of his employes who have absolutely no grievance, to stop work because some other group of workers, possibly at a remote point, have a real or fancied grievance against their own employer, especially when such stoppage of work may not only inflict a very serious loss, but may mean ruin to the enterprise of the innocent employer, thus making it, in violation of all the equities, a clear case of punishing the many innocent for the one or the few who may be guilty, who were party to the original dispute.

The employer further points out that not only is his business liable to be ruined by the sympathetic strike, but more especially in the building trades, is he likely to become an innocent victim of jurisdictional disputes for which he is in no wise responsible, and over which he has absolutely no control.

Labor Union Politics.

The third objection of employers to recognizing and dealing with organized labor is the risk they run, especially in the building trades, where power to declare a strike is concentrated in the hands of a business agent, of finding themselves at the mercy of either a corrupt business agent, or one who, for the sake of union politics, is endeavoring, in order to perpetuate himself in office, to make capital at the expense of

the innocent employer by making unwarranted and unreasonable demands against the employer.

Contract Breaking.

The fourth reason offered by the employers for refusing to recognize or to deal with organized labor, is its increasing unreliability in keeping trade agreements.

Restriction of Output.

Not least among the reasons given by fair-minded employers for refusing to recognize or deal with labor unions, is the fact that many unions stand for a limited output, thus making among their workers for the dead level, and thereby making it impossible for the union employer successfully to compete with the non-union employer, who is not faced with such handicap.

Prohibition of Use of Non-Union Made Tools and Materials.

The sixth reason offered by employers for refusing to recognize or to deal with organized labor, is that when they do so they are often not permitted to use non-union made tools or materials, thus placing upon themselves a burden and a hardship from which non-union employers are free, and thus also laying themselves liable to get into all sorts of controversies with the union, which are vexatious, annoying, time-losing, and, frequently, most costly, as they sometimes lead to grave and serious strikes.

Closed Shop.

The seventh reason why many employers refuse to recognize or to deal with organized labor (and among these may be mentioned the employers of large bodies of workers who have previously had trade agreements with organized labor), is the matter of the closed shop.

It may be held that unionists working under an open shop agreement or understanding, always reserve to themselves the right, for any reason or for no reason, to cease to work alongside of non-union men, and that they further reserve the right to determine the psychological moment at which it is in their interest to cease work or to go on a strike because they will not work alongside of non-union men. It is the fear of the likelihood of their doing this that frightens off many employers from recognizing or dealing with organized labor. They feel that even when they are operating under an open shop agreement or understanding, which does not deny them the right to employ non-union men so long as they work under union conditions, that they are working with a sword suspended over their heads by a slender thread, which may break at any moment, and that they are liable to have a strike on their hands at the most critical time, which may spell ruin for their business. Employers, as a

rule, do not deem it a good business policy to invite such risks.

Contests for Supremacy Between Rival Unions.

Testimony has been given before this Commission indicating, in more than one instance, that contests between rival unions or factions of the same union, have led to strikes causing industrial unrest from which the worker as well as the employer, has suffered harm and loss.

Acts of Violence Against Non-Union Workers and the Properties of the Employer.

The ninth objection raised on the part of employers against unionism, which has been substantiated abundantly by investigation and by testimony taken by the Commission, is the resort on the part of unionists to violence in labor troubles, and to the fact that unionists condone such violence when committed in the alleged interest of labor.

The most notable case, of course, in modern industrial history, is that of the Structural Iron Workers, which resulted in the plea of guilty on the part of the McNamara brothers, for the blowing up of the Los Angeles Times building, killing over twenty innocent people, and which further resulted in Frank Ryan, the President of the Structural Iron Workers' National Union, and a group of other labor union officials, being convicted and sentenced to prison.

In conclusion, it is our desire to point out that organized labor is chargeable with its fullest share of creating causes of industrial unrest, because of its sympathetic strikes, its jurisdictional disputes, its labor union politics, its contract breaking, its resort to violence in time of trouble, its policy of limited output, and its closed shop policy.

These various policies have brought about their fullest share among the workers, to say nothing of the injury inflicted on employers and on society, of poverty, suffering, wretchedness, misery, discontent, and crime. Organized labor will never come into its own, and will indefinitely postpone the day when its many commendable objects will be achieved in the broadest sense, until it will cut out of its program sympathetic strikes, until it can prevent cessation of work in jurisdictional disputes, until it can more successfully prevent labor union politics, until it can teach many in its rank and file to regard more sacredly their trade agreements, until it can penalize its members for resorting to violence in labor disputes, and can make it a labor union offense to limit output.

If these evils are eliminated by organized labor from its program, much will have been done to stimulate collective bargaining and to minimize the existing causes of industrial unrest. The remedies for all these evils do not lie with the employer; they rest wholly and solely with unionists. The responsibility for the growth of these evils, in

our opinion, rests primarily with unionists who neglect their union duties, and who are as unmindful of their duties as union men, as are many voters of their civic duty who remain at home on election day.

We say frankly that if we were wage earners we would be unionists, and as unionists we would feel the keen responsibility of giving the same attention to our trade union duties as to our civic duties.

The ideal day in the industrial world will be reached when all labor disputes will be settled as a result of reason, and not as a result of force. This ideal day can be hastened if the employers, on the one hand, will earnestly strive to place themselves in the position of the worker, and look at the conditions not only through the eye of the employer, but also through the eye of the worker; and if the worker will strive to place himself in the position of the employer, and look at the conditions not only through the eye of the worker, but also through the eye of the employer.

This, of course, means the strongest kind of organization on both sides. It means that employers must drive out of the ranks of their associations the law breaker, the labor contract breaker, and the exploiters of labor. It also means that, in the interest of fairness, every Board of Directors of an industrial enterprise should have within its organization a committee for the special purpose of keeping the Board of Directors advised as to the condition of their workers. And it finally means that trade unions must, in order to minimize the causes of industrial unrest, among other things remove the weak spots in unionism set forth herein, thereby hastening the day when employers will not longer fear to recognize and deal with unions, and when collective bargaining shall thus become the common condition.

Press abstract of second section of report of Basil M. Manly, director of research and investigation, containing findings of fact and recommendations of the staff.

Report in full accepted and ordered printed by resolution of Commission. Adopted by Commissioners Frank P. Walsh, John B. Lennon, James O'Connell and Austin B. Garretson.

Also full copy of supplemental findings and recommendations by Commissioners John B. Lennon and James O'Connell.

For the convenience of editors the following summary of recommendations contained in the second section of this report has been prepared by the Commission:

The second section of the final report of Director Basil M. Manly, embodying the findings of fact and conclusions of the staff of the United States Commission on Industrial Relations, was made public by the Commission today.

Its principal feature is a vivid portrayal of living and working conditions that prevail

in American industry today. Evidence is presented at great length in support of the report's findings to the effect that industrial unrest is caused by the payment of wages too low to provide a decent standard of living, and in support of the report's further conclusion that this situation is a direct result of the lack of strong labor organizations by which wage earners could force the payment of living wages.

The section made public today also recommends many remedial measures.

Among the recommendations is a strong argument urging equal political rights for women as one of the means by which women in industry may obtain living wages.

Other parts of the report deal with women and children in industry, with conditions of employment in the telephone service, the telegraph service, the Pullman Company, and the railroads.

One of the most striking findings presented today concerns the existence of many typical industrial communities that are declared to present every aspect of a state of feudalism, with employers controlling the social and political life and abridging the fundamental rights of citizens.

Past Conditions No Criterion.

Discussing the question of whether or not labor conditions in the country's principal industries are satisfactory, the report repudiates the view that these conditions should be judged by comparison with the past. It asserts that conditions should be judged "only by comparing conditions as they actually exist with what knowledge and experience show that they might easily be made during the immediate future, if proper action were taken to utilize the resources of our nation sufficiently and distribute the products equitably."

"The crux of the question," says the report, "is: Have the workers received a fair share of the enormous increase in wealth which has taken place in this country during the past quarter century as a result largely of their labors? The answer is emphatically—No!

"The wealth of the country between 1890 and 1912 increased from 65 to 187 billions, or 188 per cent, whereas the aggregate income of wage earners in manufacturing, mining and transportation has risen between 1889 and 1909 only 95 per cent, from 2,516 millions in 1889 to 4,916 millions in 1909. Furthermore, the wage earners' share of the net product of industry in the case of manufacturers was only 40.2 per cent in 1909, as compared with 44.9 per cent in 1889.

Foreign Conditions Not Pertinent.

"Similarly, the attempt to dismiss deplorable labor conditions in the United States by arguments that they are better than in

European countries is repugnant. To say that conditions are better than in Great Britain, for example, is simply to say that somewhat less than one-third of the population are in a state of absolute poverty, for that was the condition reported by the last British Commission. It should be a matter of shame also to boast that the condition of American laborers is better than that of laborers in the 'black bread belt' of Germany.

"That they are, as a matter of fact, but little better is proved conclusively by the almost complete cessation of immigration from Germany, England and France. No better proof of miserable condition of the mass of American workers can be sought than the fact that in recent years laborers in large numbers have come to this country only from Russia, Italy, Austria-Hungary and the backward and impoverished nations of Southern and Eastern Europe.

"With the inexhaustible natural resources of the United States, her tremendous mechanical achievements, and the genius of her people for organization and industry, there can be no natural reason to prevent every able bodied man of our present population from being well fed, well housed, comfortably clothed, and from rearing a family of moderate size in comfort, health and security. How far this ideal is actually achieved is discussed in some detail in the following pages.

"It is evident both from the investigations of this Commission and from the reports of all recent governmental bodies that a large part of our industrial population are, as a result of the combination of low wages and unemployment, living in a condition of actual poverty."

At Least One-third in Poverty.

How large this proportion is cannot be exactly determined, but it is certain that at least one-third and possibly one-half of the families of wage earners employed in manufacturing and mining earn in the course of the year less than enough to support them in anything like a comfortable and decent condition. The detailed evidence is presented in a separate report which is submitted for transmittal to Congress. At this point it is sufficient to call attention to the results of the most exhaustive and sweeping official investigation of recent years, that of the Immigration Commission, which reported to Congress in 1909. This investigation secured detailed information regarding the daily or weekly earnings of 619,595 employes of all classes in our basic manufacturing industries and in coal mining, and information regarding income and living conditions for 15,726 families.

"It was found that the annual incomes of almost two-thirds of these families (64 per cent) were less than \$750 per year and for almost one-third (31 per cent) were less

than \$500, the average for all being \$721. The average size of these families was 5.6 members. Elaborate studies of the cost of living made in all parts of the country at the same time have shown that the very least that a family of five persons can live upon in anything approaching decency is \$700. It is probable that owing to the fact that the families investigated by the Immigration Commission were, to a large extent, foreign born, the incomes are lower than for the average of the entire working population; nevertheless, even when every allowance is made for that fact, the figures show conclusively that between one-half and two-thirds of these families were living below the standards of decent subsistence, while about one-third were living in a state which can be described only as abject poverty.

"American society was founded and for a long period existed upon the theory that the family should derive its support from the earnings of the fathers. How far we have departed from this condition is shown by the fact that 78 per cent of the fathers of these families earned less than \$700 per year. In brief, only one-fourth of these fathers could have supported their families on the barest subsistence level without the earnings of other members of the family or income from outside sources.

"Other facts collected in this investigation show conclusively that a very large proportion of these families did not live in decency and comfort. Thirty per cent kept boarders and lodgers, a condition repugnant to every ideal of American family life, especially in the crowded tenements or tiny cottages in which the wage earners of America characteristically live. Furthermore, in 77 per cent of the families two or more persons occupied each sleeping room, in 37 per cent three or more persons, and in 15 per cent 4 or more persons."

Pauper Burials.

"The most striking evidence of poverty is the proportion of pauper burials. The repugnance of all classes of wage earners of all races to pauper burial is such that everything will be sacrificed and heavy debts incurred rather than permit any member of the family to lie in the 'potters' field'; nevertheless, in New York City one out of every twelve corpses is buried at the expense of the city or turned over to physicians for dissection.

"The terrible effects of such poverty may be outlined in a few paragraphs, but their far-reaching consequences could not be adequately shown in a volume.

"Children are the basis of the state; as they live or die, as they thrive or are ill-nourished, as they are intelligent or ignorant, so fares the state. How do the children of American workers fare?

"It has been proved by studies here and abroad that there is a direct relation between poverty and the death rate of babies; but the frightful rate at which poverty kills was not known, at least for this country, until last year, when through a study made by the Federal Children's Bureau in Johnstown, Pa., it was shown that the babies whose fathers earned less than \$10 per week died during the first year at the appalling rate of 256 per 1,000. On the other hand, those whose fathers earned \$25 per week or more died at the rate of only 84 per 1,000. The babies of the poor died three times as fast as those who were in fairly well-to-do families. The tremendous significance of these figures will be appreciated when it is known that one-third of all the adult workmen reported by the Immigration Commission earned less than \$10 per week. On the showing of Johnstown these workmen may expect one out of four of their babies to die during the first year of life."

Children Go Hungry.

"The last of the family to go hungry are the children, yet statistics show that in six of our largest cities from 12 to 20 per cent of the children are noticeably underfed and ill-nourished.

"The minimum amount of education which any child should receive is certainly the grammar school course, yet statistics show that only one-third of the children in our public schools complete the grammar school course, and only 10 per cent finish high school. Those who leave are almost entirely the children of the workers, who, as soon as they reach working age, are thrown, immature, ill-trained and with no practical knowledge, into the complexities of industrial life. In four industrial towns studied by the Bureau of Labor Statistics 75 per cent of the children quit school before reaching the seventh grade.

"The great seriousness of this condition is even more acutely realized when it is known that in the families of the workers 37 per cent of the mothers are at work and consequently unable to give the children more than scant attention. Of these mothers 30 per cent keep boarders and lodgers and 7 per cent work outside the home.

"As a picture of American industry, this presentation is undeniably gloomy and depressing, but as a diagnosis of what is wrong with American labor conditions it is true and exact. There are of course many bright spots in American industry, where workmen are well paid and regularly employed under good working conditions in the determination of which they have some share. But, even as the physician pays little attention to the good eyes and sound teeth of a patient whose vital organs are diseased, so impressive is the need for attention to the diseased spots in industry, it is felt unnecessary to waste time in word pictures

of conditions which are all right or which may be depended upon to right themselves."

Farm Workers Also.

"In agriculture, there is no array of exact figures which can be quoted to show the condition of labor. But, speaking generally, the available evidence indicates clearly that while in some sections agricultural laborers are well paid and fairly treated, the condition of the mass is very much like that of the industrial workers.

"Moreover, there is a peculiar condition in agriculture, which merits a brief but strong statement at this point as a preface to a more detailed discussion later. The most alarming fact in American agriculture is the rapid growth of tenancy. In 1910 there were 37 tenant-operated farms out of each 100 farms in the United States as compared with 28 in 1890, an increase of 32 per cent during 20 years. No nation-wide investigation of the condition of tenant farmers has ever been made, but in Texas where the investigations of this Commission were thorough and conclusive, it was found not only that the economic condition of the tenant was extremely bad, but also that he was far from being free, whereas his future was regarded as hopeless. Badly housed, ill-nourished, uneducated, and hopeless, these tenants continue year after year to eke out a bare living, moving frequently from one farm to another in the hope that something will turn up.

"Without a large family, the tenant cannot hope to succeed or break even, so in each tenant family numerous children are being reared to a future which under present conditions will be no better, if as good, as that of their parents. The wife of a typical tenant farmer, the mother of eleven children, stated in her testimony before the Commission that in addition to the rearing of children and the work of the house, she always helped with the crops, and during all the years of her married life she had had no ready-made dresses and only three hats.

"The investigations of this Commission in that rich and generally prosperous section of the country only confirm and accentuate the statements of the Federal Industrial Commission which reported in 1902: 'The result of this system (share tenancy) is that the renters rarely ever succeed in laying by a surplus. On the contrary, their experiences are so discouraging that they seldom remain on the same farm for more than a year. They are not only unable to lay by any money, but their children remain uneducated and half clothed. The system is apparently one of the most undesirable, so far as its effect on the community is concerned.'"

Corporations and Wage Earners.

Discussing existing relations between em-

ployers and employes, the report points out that the typical form of industrial organization is the corporation.

"In transportation," says Mr. Manly, "approximately 100 per cent of the wage earners are employed by corporations; in mining, 90 per cent, and in manufacturing, 75 per cent. Moreover, it is under this form that the great problems of industrial relations have developed."

After analyzing the elements that go to make up a typical corporation Mr. Manly says:

"The ordinary stockholder in a large corporation actually occupies a less direct relationship to the corporation in which he is interested, has less knowledge of its actual operations, and less control over its management than the ordinary citizen has over local, state and national governments.

"Boards of directors in theory are responsible for and would naturally be expected to maintain supervision over every phase of the corporation's management, but, as a matter of fact, we know that such supervision is maintained only over the financial phase of the business, controlling the acquisition of money to operate the business, and distributing the profits. Actual direction generally exists only through the removal of executive officials who fail to deliver the expected profits, and through the appointment of their successors.

"Upon the testimony of financiers representing, as directors, hundreds of corporations, the typical director of large corporations is not only totally ignorant of the actual operation of such corporations, whose properties he seldom, if ever, visits, but feels and exercises no responsibility for anything beyond the financial condition and the selection of executive officials. Upon their own statements, these directors know nothing and care nothing about the quality of the product, the condition and treatment of the workers from whose labor they derive their income, or the general management of the business.

"So far as operation and actual management are concerned, the executive officials are practically supreme. Upon their orders production is increased or decreased, plants are operated or shut down, and upon their recommendations wages are raised or lowered. But even they have little direct contact with the actual establishment of working conditions, and no relation at all with the rank and file of the workers. They act upon the recommendations of superintendents, whose information comes from their assistants and foremen and from the elaborate statistics of modern business, which account for every piece of material and product, show the disposition of every penny that comes and goes, but ignore, as though they did not exist, the men and women

whose labor drives the whole mechanism of business."

The Big Question.

"Here, then, is the field of industrial relations: Masses of workers on the one side dealing in some manner with foremen and superintendents on the other, behind whom is an organization of executive officials, representing in turn the board of directors, who are chosen representatives of the stockholders.

"The crux of the whole question of industrial relations is: Shall the workers for the protection of their interests be organized and represented collectively by their chosen delegates, even as the stockholders are represented by their directors and by the various grades of executive officials and bosses?

"In considering this issue the first question that presents itself is: Why should such representation be demanded as a necessity? The executive officials, superintendents and bosses, some witnesses have urged before the Commission, are not only for the most part humane and well-intentioned men, but they know that the interests of the business depend upon the welfare of the workers, and, if unhindered, will pay the best wages and create the best working conditions that the business can afford. Organization and representation are therefore argued to be unnecessary and tending only to promote friction and interfere with the management of the business.

"Let us grant the higher character and good intentions of officials, and consider the statement of the workers in reply. They say that in modern corporate business the actions of officials are governed not by their personal intentions, but by the inexorable demands for interest and dividends, and are driven not by their desire to create a permanently successful business with a contented labor force, but by the never-relaxed spur of the comparative cost-sheet.

Managers Cannot Effect Reforms.

"The constant demand is for high production at low cost, not through improvements and good conditions which might give them next year, but this very month. In the high pressure of business, every superintendent knows that if his plant is at the bottom of the comparative scale for two months his position topples, and, if for three months, it is virtually gone. He cannot afford to experiment with changes that will not give immediate results. If he were his own master he might take a chance, knowing that the loss of this year would be compensated by gains under better conditions next year, but the monthly cost-sheet does not wait for next year; it demands results now.

"But it may be said that, if he cannot improve conditions himself, he can at least

recommend them to his superiors to be transmitted to the board of directors for approval. This might indeed be done, and with the extension of an understanding among managers that low production costs may be secured with high wages, probably would be to an increasing extent, except that boards of directors scorn such abstractions as the high-wage-low-cost theory, and habitually insist that managers shall buy labor, as they buy material, in the cheapest market.

As to Directors.

"Moreover, raising wages is traditionally unpopular among stockholders and directors, and recommendations for better conditions, particularly if they involve new capital, are frowned upon. Neither the stockholders nor the directors have to live on wages or work in the existing surroundings, and profits deferred are considered profits lost.

"The workers, therefore, deny the potency of even good intentions on the part of managers, and point to labor history which they allege shows that at best only isolated cases can be pointed out where marked improvements have taken place except in response to repeated demands from the workers, or to forestall the growth of threatened organization. They point also to such facts as that children of 12 years or younger were not only kept in the factories (as they still are in some states where there has been little aggressive agitation), but almost without exception they were insisted upon by the employers as a necessity.

Organization Required.

"The evidence of this character, which is summarized elsewhere, seems to be conclusive of the necessity for organization and representation under modern business conditions. But even if it were not necessary, it is difficult to see any reason why what is demanded and required by stockholders should be denied to workers. It would be as illogical for stockholders individually to attempt to deal with the representatives of the unions, as it is for the individual worker to attempt to deal with executive officials, representing the organized stockholders."

Conclusions and recommendations relating to living and working conditions of labor are stated as follows:

Wages.

"As a result of the investigations which have been made the following conclusions are justified:

1. The welfare of the state demands that the useful labor of every able-bodied workman should as a minimum be compensated by sufficient income to support in comfort

himself, a wife, and at least three minor children, and in addition to provide for sickness, old age and disability. Under no other conditions can a strong, contented and efficient citizenship be developed.

2. Under existing conditions such an income is not received by fully one-half of the wage earners employed in industry.

3. The natural resources of the United States are such that an industrial population properly educated and efficiently organized can produce enough to achieve this standard of living.

4. It is probable that even at present the national agricultural and industrial output is sufficient to permit the establishment of such a standard.

5. The problem is therefore essentially one of distribution.

6. The fixing of the wages of adult workmen by legal enactment is not practicable nor desirable as a general policy, except for public employes.

7. A just standard of wages in any industry or occupation can best be reached by collective bargaining between employers and employes for the purpose of forming voluntary joint agreements. The success and justice of such joint agreements is, however, dependent upon the essential equality of the two parties and cannot be attained unless effective organization exists.

"It is suggested that the Commission make the following recommendations:

1. In order that the public may be kept fully informed with regard to labor conditions, and that a proper basis of facts should exist for negotiation and arbitration, the federal government should enact the necessary legislation to provide for the collection, through the Bureau of Labor Statistics or otherwise, of the full and exact facts regarding wages, hours of labor, and extent of unemployment for every industry. Every employer should be required by law to file with the proper authority a sworn statement of these facts according to a prescribed form. These statistics should be published annually, and the full data regarding any industry or plant should be accessible to any mediator or any other responsible citizen.

2. Uniform statutes should be passed by the legislatures of all states requiring that wages be paid at least semi-monthly and in cash, except where by joint agreement other methods are agreed upon."

Hours of Labor.

"As a result of investigation the following conclusions are justified:

1. The physical well-being, mental development and recreational needs of every

class of population demand that under normal circumstances the working day should not exceed eight hours.

2. A very large percentage of the workmen in manufactures, transportation and mining work more than eight hours per day.

3. This is in marked contrast to the condition of those whose economic position enables them to define the length of their own working days.

4. Practical experience has shown that the reduction of working hours is in the interest not only of the worker and the community generally, but of the employer.

5. The regulation by legal enactment of working hours of adult workmen is not generally practicable nor desirable, except for public employes.

It is suggested that the Commission recommend:

1. That in the so-called continuous occupations, other than the movement of trains, requiring work during both the day and the night for six or seven days per week, the state and federal governments should directly intervene, so that the working hours should not exceed eight per day nor extend to more than six days per week."

Safety and Sanitation.

"The investigations which have been made warrant the following conclusions:

1. Great progress has been made during recent years in promoting safety and sanitation in manufacturing, mining and transportation.

2. The progress has been most rapid in direction of safeguarding workers from industrial accidents.

3. Progress in safety has been in part the result of continued agitation and education, but has proceeded most rapidly and satisfactorily since the enactment of workmen's compensation laws which render unsafe working conditions expensive to the employer.

4. The movement has also been largely promoted by the formation of safety committees composed of officials and workmen, and by the creation of joint conferences of employers and employes to assist and advise state officials in the administration of the law and in the formulation of safety rules.

5. The campaign for safety needs, however, to be greatly extended as rapidly as possible. The annual list of accidents, approximately 35,000 fatalities and 700,000 injuries involving disability of over four weeks, can not be regarded complacently. From one-third to one-half of these accidents have been estimated by competent authorities to be preventable by proper safeguards, inspection and control.

6. The advance in the sanitation of work shops has been less rapid, because not only are the dangers less obvious, but there is no financial liability for disease or deaths occurring as the result of improper sanitation. Future progress in sanitation demands attention not only to cleanliness and ventilation, but to occupational diseases.

7. The most direct incentive for the promotion of sanitation would be the adoption of a proper system of sickness insurance.

It is suggested that the Commission recommend:

1. The creation of a bureau of industrial safety (except that the section providing a museum of safety is not indorsed). Proper steps should be taken to provide for the co-ordination of the work of all federal bureaus whose work is concerned with industrial safety.

2. The appropriations of the public health service for the investigation and promotion of industrial sanitation should be increased."

Housing.

"It has been found in the course of the Commission's investigations:

1. The present provisions for the housing of workmen are generally bad, not only in the large cities, but in industrial communities of every size and in rural districts.

2. Not only are the houses and tenements which are available for workers largely insanitary and unfit for habitation, but they are inadequate, resulting in high rents, overcrowding and congestion.

3. Such conditions make not only for discomfort and unhappiness, but for disease and degeneration.

4. The ordinary method of supplying houses through their erection by private capitalists for investment and speculation has rarely if ever been adequate.

5. Excellent plans for the housing of workmen have been put into effect by a number of firms and corporations, but such measures have not at all affected the general situation, and being dependent upon the volition of individuals can not be regarded as likely to greatly influence progress.

6. The tenement-house acts, as well as the health ordinances and building regulations of municipalities, while generally productive of good effects, are at best surface remedies and can never cure the evils of the present housing situation.

7. In every important European country government aid and direct intervention to curb speculation have proved to be necessary for the promotion of any real progress.

8. Governmental action in Europe has chiefly taken the following forms:

a. Extension of credit to voluntary non-profit-making associations.

b. Construction by the Government of buildings which are leased for long periods on easy terms.

c. Exemption from taxation and other subsidies for homes constructed for occupancy by their owners.

d. Legislation designed to prevent the holding of land out of use and to secure for the government a part of the "unearned increment."

It is suggested that the Commission recommend:

1. The Federal and State Governments should institute investigations directed not so much to ascertaining existing housing conditions, as to formulating constructive methods by which direct support and encouragement to the promotion of improved housing can be given. Actual experiment in the promotion of housing should proceed as rapidly as proper plans can be drafted.

2. Special attention should be given to taxation, in order that land should as far as possible be forced into use and the burden of taxation be removed from home owners.

3. The municipalities should be relieved from all state restrictions which now prevent them from undertaking the operation of adequate housing schemes and from engaging in other necessary municipal enterprises."

Women and Children in Industry.

"The investigations and hearings of the Commission justify the conclusions:

1. As a result of their unprotected condition, women and children are exploited in industry, trade, domestic service, and agriculture, to an extent which threatens their health and welfare and menaces the well-being of future generations.

2. The competition of women and children is a direct menace to the wage and salary standards of men.

3. Under present conditions, children are permitted by their parents to go to work largely because their earnings are necessary for the support of the rest of the family. The restrictive legislation of the past quarter-century, although admirable in purpose and ultimate results, has thrown a heavy burden upon their fathers and mothers, who, at existing wages, have been barely able to support their families. The evidence shows that the burden of child labor legislation has rested upon the wage earners rather than upon the employers. It is the testimony of enlightened employers that the employment of children is unprofitable, and that the effect of excluding children from factories has been to increase rather than decrease profits. In the interests of society as a whole, further restrictions on the employment of immature children are neces-

sary, but it is important that they should be made with an understanding that the burden will rest primarily upon the wage earners, whose self-sacrifice should be fully recognized.

4. The increasing employment of women has been due to two primary causes: First, the low wages of men, which have made the earnings of women necessary for the support of the family, and, second, the inducement to employers to substitute women for men because they will accept lower wages and are less likely to protest against conditions. The substitution of women for men has been greatly assisted by the introduction of improved machinery, which makes strength and technical skill unnecessary.

5. The increased employment of women, under present working conditions, is a serious menace to their own health and well-being, to the wages of their husbands and brothers, and to the ideals of family life upon which American civilization has been established.

6. The conditions under which women are employed in domestic service and in agriculture, merit the attention of the Nation no less than does their employment in manufacturing and trade. Not only is the economic condition of women employed in agriculture and domestic service a matter of grave concern, but they are subject to overwork, unreasonable hours, and personal abuse of various kinds, from which they have been largely relieved in factories and stores through agitation and legislation.

7. The position of women in industry has been rendered doubly hard by reason of their lack of training for industrial work, by the oversupply of such labor and the consequent competition, by their traditional position of their dependence and by their disfranchisement.

8. A very thorough investigation in the New England states failed to show a single manufacturer who had left a state as a result of restrictive factory legislation. On the contrary, the majority of manufacturers expressed the opinion that the legislation regulating conditions for women and children had been advantageous to the industry as a whole, particularly because it placed all competitors upon the same footing. Similarly, an investigation of the effects of minimum-wage legislation failed to show any calculable effects upon the cost of production, or upon the employment of women, after a sufficient period had elapsed to allow the necessary readjustments to be made.

9. Nevertheless, there is a strong and increasing demand on the part of manufacturers in the most progressive states that regulation of factory conditions should be undertaken by the federal government, in order that competitors in all parts of the country should be placed upon an equal footing in this respect. The same demand comes

also from the representatives of labor,⁶ not only because the argument of "interstate competition" is creating strong opposition to progressive legislation, but because of the great economy of effort which would result from having to make the fight for better legislation only at the National Capital instead of in 45 states."

"It is suggested that the Commission recommend:

1. The recognition both by public opinion and in such legislation as may be enacted, of the principle that women should receive the same compensation as men for the same service.

2. Until this principle is recognized, and women are accorded equal political rights, the extension of state protection of women through legislation regulating working conditions, hours of service, and minimum wages, is highly desirable.

3. The increased organization of working women for self-protection and the improvement of their industrial conditions.

4. The inclusion of all women working for wages, whether in industry, trade, domestic service, or agriculture, under future legislation regulating their wages, hours, or working conditions.

5. The extension of the principle of state protection of children and the rapid increase of facilities for their education as outlined elsewhere.

6. The enactment by Congress of legislation embodying the principles contained in the so-called Palmer-Owen bill, which was before Congress at the last session."

Public Utilities.

The report discusses conditions of employment in the two principal telegraph companies, in the telephone service, in the service of the Pullman Company and on the railroads. It says:

"The investigations of the Commission show:

1. The scope of the Newlands Act, which applies only to employes engaged in the operation of interstate railroads, is too narrow and leaves the public service in the transmission of intelligence and in the handling of interstate commerce likely to be interrupted by labor disputes without any adequate legal provision either for mediation and conciliation or for making the facts involved in the dispute known to the public.

2. Even as applied to train service employes, the Newlands Act provides no means of bringing the facts before the public, except when both sides agree to arbitration.

3. The selection of impartial members of arbitration boards has almost without exception devolved upon the Board of Mediation and Conciliation, owing to the inability of the parties to agree. This not only imposes an unpleasant and burdensome task upon the Board of Mediation and Conciliation, but tends greatly to weaken its influence. The experience in Great Britain shows that agreement can be reached by joint conference of employers and employes during a period of industrial peace for the selection of a panel of impartial persons from which arbitrators can be selected when they are needed, and seems to indicate that in the United States the inability of the parties to agree upon impartial arbitrators is due in part at least to the fact that they are always selected during the heat of the conflict.

"It is suggested that the Commission recommend:

1. The extension of the Newlands Act to cover not only all classes of railroad employes, but all employes of public service corporations which are engaged in interstate commerce.

2. The functions of the Board of Mediation and Conciliation under the Newlands Act should be extended to provide for the creation of Boards of Investigation, to be formed only by consent of both parties and to make a report of facts and recommendations which will not be binding upon either side.

3. The Board of Mediation and Conciliation should be authorized by Congress to create an advisory council, composed of equal numbers of employers and employes, for the purpose of creating a panel of names from which impartial arbitrators may be chosen by the Board of Mediation and Conciliation."

Telegraph.

"The investigations and hearings of the Commission justify the following conclusions:

1. The workers employed by the two principal telegraph companies (the Western Union Telegraph and the Postal Telegraph-Cable), are not only underpaid, as admitted by the highest officials in their testimony before the Commission,⁷ but subject to many abuses, such as the denial of proper periods of relief while on duty, the establishment of arbitrary speed rates, which frequently result in overstrain, the arbitrary discharge of employes without notice for any cause or no cause, the employment of young boys for messenger service under conditions which result only in their moral corruption, and the employment of women for telegraph service at night.

⁶Mr. Newcomb Carlton, president of the Western Union Telegraph Company, testified as follows:

"I do not cite any of these things as a substitute for wages, because there is no substitute for proper pay. I believe that the telegraphers are underpaid."

2. Such conditions have existed practically without change at least since 1884, in spite of the facts having been made public by three government investigations.

3. The workers are practically unable to improve their condition because these two companies, which control practically the entire industry, deny them the right of organization. The suppression of organization is effectively carried out by the discharge of all known to be union men or union sympathizers, by the use of spies who fraudulently secure the confidence of employees and report all known to be union members or sympathizers, by the use of an effective system of blacklisting, and by the control even of the personnel of the operators upon leased wires in the offices of brokers and other private individuals.

4. The two companies have a monopoly of the transmission of telegrams, and no effective competition exists between them. These companies are performing a service in the transmission of intelligence which has been held by the Federal Supreme Court to have been reserved by the constitution specifically to the Federal Government.

5. The telegraph companies are enormously overcapitalized, and their rates, which are graded to pay dividends upon large amounts of stock which do not represent investment of cash, are very much higher than the cost of service warrants.

6. Owing to the duplication of offices on the part of the two companies and the maintenance of branch offices which are idle for a large part of the time, this service is being performed inefficiently and at an unusually high cost in spite of the low wages paid the operators.

"It is suggested that the Commission recommend:

1. The property of the telegraph companies or such part of their equipment as may be necessary for the efficient operation of a National telegraph system, should be purchased by the federal government after proper valuation and placed under the general jurisdiction of the post office department for operation. In transferring the service to the federal government all employees, including officials and other persons, necessary for successful operation, should be retained, and those whom the elimination of the duplicate service of the two companies renders unnecessary for the national system, should be absorbed into other branches of the federal service as far as practicable.

2. At the time of the transfer to the federal service a special commission should be appointed to revise the salary ratings and other working conditions and place them upon a proper basis."

Telephone.

"The investigations of the Commission are the basis for the following statements:

1. The condition of the telephone operators in both interstate and local service is subject to grave criticism. The wages paid even in the cities having the highest standards are insufficient to provide decently for women who have no other means of support. The requirements and nervous strain incident to the service are so very severe that experienced physicians have testified that operators should work not more than five hours per day, whereas the regular working hours are from seven to nine per day. The operators, who are principally girls and young women, are required to work at night, going to and returning from their work at hours when they are subject to grave menace. The policy of the companies in general provides for sanitary and reasonably comfortable working places, and for attention to the recreation and physical needs of the operators, but in a number of cities the conditions even in these respects are subject to severe criticism.

2. The telephone operators are unable to secure reasonable conditions for themselves, because of their youth and the fact that they ordinarily remain in the service only a short time.

3. The organization of employees for their own protection is effectively resisted by the employing companies.

4. The American Telephone and Telegraph Company, with its subsidiary and affiliated corporations, controls more than 70 per cent of the total telephone business of the country. The American Telephone and Telegraph Company has been enormously profitable and is well able to afford the necessary improvements in working conditions. The American Telephone and Telegraph Company has increased its capitalization enormously without the investment of new capital.

5. The transaction by which the American Telephone and Telegraph Company, which had been a subsidiary of the American Bell Telephone Company, absorbed the parent company in 1899 was not only designed to evade the legal limitations contained in the Massachusetts charter of the American Bell Telephone Company, but resulted in the increase of the capitalization of the combination from \$25,886,300 to \$75,276,600 without the addition of any new capital.

6. The transmission of intelligence is a function which is specially reserved by the constitution to the federal government, but which in the telephone field has been permitted to become the practical monopoly of a single corporation.

"It is suggested that the Commission recommend:

1. The purchase by the federal government, after proper valuation, of the property of the interstate and local telephone companies, or such part of their equipment

as may be necessary for the efficient operation of a National telephone system.

2. The transfer of all employes, including officials, necessary for the efficient operation of the National telephone system, to the federal service as far as possible, and the absorption, as far as practicable, of all employes who are not necessary for the telephone system into other branches of the federal service.

3. When such employes are transferred to the federal service, the creation of a special commission to establish salary ratings and other working conditions on a proper basis.

4. In the meantime provision should be made by Congress for the creation of a minimum wage board to fix minimum wage standards for women employes who are engaged in the transmission of messages in interstate commerce. The board should be authorized to differentiate between localities in fixing minima; if on due consideration such differential rates should be deemed advisable.

5. The creation of minimum wage boards in the several states to fix minimum wages for all women employes engaged in service within the state."

The Pullman Company.

"The investigations and hearings of the Commission developed the following facts:

1. The conductors and porters employed in the car service of the Pullman Company are employed under conditions which seem to require radical readjustment. Both classes of employes are admitted by officials of the company to be underpaid.

The standard salary of the porters (\$27.50 per month) is such that the porters are obliged to secure tips from the public in order to live. The Pullman Company is admitted by the chairman of the Board of Directors to be the direct beneficiary of the tips from the public to the extent of the difference between a fair wage and that which is now paid.

The hours of service are extremely long, the regulations of the company allowing porters and conductors when in service only four hours' sleep per night and penalizing them severely if they sleep while on duty. Employes of the Pullman Company are subject to many other abuses, among which may be mentioned the arbitrary deduction from their salaries for such time as they may not be needed for the actual service of the company, although they are required to report at the office each morning and are sometimes compelled to wait the greater part of the day without compensation; the requirement that porters shall furnish blacking although they are not permitted to charge passengers for the service of shoe cleaning; the system of arbitrary penalties for the infraction of multitudinous rules; the requirement that all employes shall purchase

their uniforms from one mercantile establishment, the owners of which are largely interested in the Pullman Company; and the lack of proper provision of sleeping quarters for employes when away from their home stations.

2. The Pullman Company has a bonus system, by which employes who have a "clean record" for the year receive an extra month's salary. This system serves to increase the earnings of those who receive the bonus, and is unquestionably appreciated by them. Nevertheless, it is inequitable in penalizing with extra severity any infractions of rules which occur during the latter half of the year, and puts into the hands of officials and inspectors a means of discrimination which can be arbitrarily exercised.

3. The effect of the tipping system is not only to degrade those who are obliged by their economic conditions to accept tips, but to promote discrimination in the service of the public.

4. The employes of the Pullman Company are unable to improve their condition through organization, as employes known to be members of labor unions are discharged and through the means of an effective system of espionage employes are deterred from affiliating with labor unions.

5. The company is tremendously overcapitalized, having increased its capitalization from \$36,000,000 in 1893 to \$120,000,000 in 1915, without the investment of a single dollar on the part of the stockholders. Upon the basis of actual cash paid in, the annual dividends of the company are not less than twenty-nine per cent. During the history of the company the stockholders have received cash dividends amounting to at least \$167,000,000 and special stock dividends of \$64,000,000, making a total of \$231,000,000 on an actual investment of \$32,601,238.

6. The company enjoys a practical monopoly of the sleeping car service.

"It is suggested that the Commission recommend:

1. The enactment by Congress of a statute prohibiting the tipping of any employe of a public service corporation engaged in interstate commerce, and providing a proper fine for both the giver and the recipient of the tip.

2. The amendment of the existing law regulating the hours of service of train employes to include the employes engaged in the Pullman service.

3. The extension of the Newlands Act, as already suggested, to cover the Pullman Company."

Railroads.

"The investigations of the Commission with regard to railroads have been too limited to permit of general findings or recommendations. Enough evidence has, however, come before the Commission with regard to three points to warrant attention.

1. The railroad construction camps are largely insanitary, overcrowded and improperly equipped for the health and comfort of the employes. In addition there are many abuses, such as overcharging at the commissary and grafting by foremen.

2. The so-called voluntary benefit associations of a number of the railroads constitute, under the present system of management, a great injustice to employes. These funds, which are contributed almost entirely by the employes, the management as a rule paying only the cost of administration, until recently were generally used to relieve the companies from liability for accident, employes being required to sign a release in favor of the company at the time that they become members of the benefit association. In some cases, even, the membership is compulsory. Nevertheless the employes have no voice in the management and receive no equity when they are discharged. Finally, such associations, under their present management, serve to exert an undue influence over employes, since the members, if they quit the service for any period or for any cause, sacrifice to the company all that has been paid in.

3. Under the authority granted by the several states the railroads maintain a force of police, and some, at least, have established large arsenals of arms and ammunition. This armed force, when augmented by recruits from detective agencies and employment agencies, as seems to be the general practice during industrial disputes, constitutes a private army clothed with a degree of authority which should be exercised only by public officials; these armed bodies, usurping the supreme functions of the state and oftentimes encroaching on the rights of the citizens, are a distinct menace to public welfare.

"It is suggested that the Commission recommend:

1. Thorough investigation by the public health service of railroad construction camps as well as other labor camps, and the preparation of definite plans for such camps and a standard code of sanitary regulations.

2. The enactment by Congress of a statute expressly prohibiting corporations engaged in interstate commerce from inducing or compelling their employes to sign releases of liability for accidents.

3. Congress should enact a statute prohibiting interstate employers from requiring their employes to contribute to benefit funds, and providing for the participation of employes engaged in interstate commerce in the management of all benefit funds and other funds to which they contribute.

4. The regulation by federal statute of the employment of police on interstate railroads. The statute should not only provide for the organization, personnel and powers of such police, but should definitely provide that dur-

ing labor disputes such police should be subject to the proper civil authorities and paid out of the public treasury. The statute should also provide that such corporations should be permitted to have firearms only under license, requiring that a definite record be maintained showing the character of each firearm and to whom it is issued.

5. The assumption by the states of full responsibility and definite provision not only for protecting the property of railroads, but for preventing trespass upon their property."

Industrial Conditions in Isolated Communities.

One of the most striking features of the report is the finding that many typical industrial communities present every aspect of state of feudalism. The report says:

"The investigations and hearings of the Commission are the basis for the following statements:

1. The conditions existing in typical industrial communities which are either wholly or in large part owned or controlled by a single corporation or individual employer, present every aspect of a state of feudalism except the recognition of specific duties on the part of the employer. The employes in such communities are dependent on a single corporation, or employer, for their livelihood. Furthermore, the employer in many cases controls the social and political life of such communities, either by the complete absorption of local political powers or by domination of the local authorities.

2. The fundamental rights of citizens in such communities are, as a general rule, seriously abridged if not actually denied. Among the rights most seriously violated are the right of free speech and assemblage and the right of public highways.

In some cases, as for example in Colorado, employers in such communities have assumed to usurp the functions of the federal government itself in the issuance of money orders, and have not only denied employes access to the post office when located in their company stores but have opened and otherwise interfered with the mail directed to the employes.

Such feudalistic conditions tend to develop principally in connection with the private exploitation of natural resources, being most frequently found in mining camps, lumber camps (including turpentine camps) and large plantations. There are, however, striking examples even in the case of manufacturers, as, for example, the textile towns and steel towns.

3. The most extreme form of domination and control exists in what are known as "closed camps," where the employer owns all the land upon which such camps are located and, because of this private ownership, not only exercises control over the local government, but dictates arbitrarily

who shall be permitted to come into or pass through such communities. It has frequently been argued that such communities are simply the inevitable accompaniment of the development of new country and will be eliminated with time. This is not true, however, as the Commission's investigations have disclosed a large number of "closed camps" which have been in existence for more than a generation.

"It is suggested that the Commission recommend:

1. The enactment of appropriate state legislation providing that where communities develop, even upon privately owned land, the powers of the civil government shall not be interfered with, nor shall the rights of access to the residence of any person be restricted, nor shall the rights of persons to come and go unmolested, to speak freely and to assemble peacefully, be interfered with or considered to stand upon a different basis from the rights of persons in other communities.

2. In the case of public lands containing timber or minerals, which are now or may hereafter come into the possession of the federal government, it should be provided by statute that neither the lands nor the mineral rights should under any circumstances be sold, but should be used only upon lease for a limited term, such lease to contain as a part of the contract the conditions with regard to the rights of inhabitants as recited above and such lease to be forfeitable without recourse in case of the infraction of said conditions.

3. The Post Office Department should be directed to report to Congress all communities in which the post office is in any company's store or other building operated by an employer or in which the postmaster is a private employer or the agent of an employer. The report should show the facts separately for those communities in which the employer or corporation operates an industry upon which any large number of inhabitants are dependent.

4. Congress and the state legislatures should enact statutes providing that any attempt on the part of an employer to influence his employes either directly or indirectly in connection with any federal election either for or against any particular candidate, shall constitute intimidation; and further specifying that it shall constitute intimidation for any employer to give notice to his workmen that in the event of the election of any particular candidate, the establishment will not be operated."

Agriculture.

Today's section also urges action to improve the condition of farm labor and to stop the increase in farm tenancy by aiding farm owners. It says:

"It was obviously impossible for the Commission to attempt a detailed investigation of agricultural conditions; but, because of

the very immediate bearing of the land question on industrial unrest, it was felt necessary to make as thorough investigation as possible of the phases which seemed to have the most direct bearing on our general problem. The phases selected for discussion were first, the concentration of land ownership as shown by existing statistics; second, the problem of seasonal and casual agricultural labor; third, the increase and change in the character of farm tenancy; and fourth, the introduction of industrial methods into agriculture through the development of corporations operating large tracts of land. The findings and recommendations with reference to the concentration of ownership and the problems of seasonal labor are set forth elsewhere. At this point, it is desired to present the results of the investigations of tenancy and agricultural corporations.

"The investigation of these problems was confined practically to the Southwest, because it is in this region that the systems have become most fully developed and their results in the form of the acute unrest of a militant tenant movement are most easily studied. The investigations in this region, however, were very thorough, consisting of detailed studies and reports by field investigators, which were later confirmed by a public hearing.

"As a result of these investigations the following conclusions are fully justified:

1. Tenancy in the Southwestern states is already the prevailing method of cultivation and is increasing at a very rapid rate. In 1880, Texas had 65,468 tenant families, comprising 37.6 per cent of all farms in the state. In 1910, tenant farmers had increased to 219,571, and operated 53 per cent of all farms in the state. Reckoning on the same ratio of increase that was maintained between 1900 and 1910, there should be in Texas in the present year (1915) at least 236,000 tenant farmers. A more intensive study of the field, however, shows that in the eighty-two counties of the state where tenancy is highest, the average percentage of tenants will approximate sixty.

For Oklahoma we have not adequate census figures so far back, but at the present time the percentage of farm tenancy in the state is 54.8 and for the 47 counties where the tenancy is highest the percentage of tenancy is 68.13.

2. Tenancy, while inferior in every way to farm ownership from a social standpoint, is not necessarily an evil if conducted under a system which protects the tenants and assures cultivation of the soil under proper and economical methods, but where tenancy exists under such conditions as are prevalent in the Southwest, its increase can be regarded only as a menace to the Nation.

3. The prevailing system of tenancy in Southwest is share-tenancy, under which the tenant furnishes his own seed, tools and teams, and pays to the landlord one-third of

the grain and one-fourth of the cotton. There is, however, a constant tendency to increase the landlord's share, through the payment either of cash bonuses or of a higher percentage of the product. Under this system tenants as a class earn only a bare living through the work of themselves and their entire families. Few of the tenants ever succeed in laying by a surplus. On the contrary, their experiences are so discouraging that they seldom remain on the same farm for more than a year, and they move from one farm to the next in the constant hope of being able to better their condition. Without the labor of the entire family the tenant farmer is helpless. As a result, not only is his wife prematurely broken down, but the children remain uneducated and without the hope of any condition better than that of their parents. The tenants having no interest in the results beyond the crops of a single year, the soil is being rapidly exhausted, and the conditions therefore tend to become steadily worse. Even at present a very large proportion of the tenants' families are insufficiently clothed, badly housed, and underfed. Practically all of the white tenants are native born. As a result of these conditions, however, they are deteriorating rapidly, each generation being less efficient and more hopeless than the one preceding.

4. A very large proportion of the tenants are hopelessly in debt and are charged exorbitant rates of interest. Over ninety-five per cent of the tenants borrow from some source and about seventy-five per cent borrow regularly year after year. The average interest rate on all farm loans is 10 per cent, while small tenants in Texas pay 15 per cent or more. In Oklahoma the conditions are even worse, in spite of the enactment of laws against usury. Furthermore, over eighty per cent of the tenants are regularly in debt to the stores from which they secure their supplies, and pay exorbitantly for this credit. The average rate of interest on store credit is conservatively put at 20 per cent and in many cases ranges as high as 60 per cent.

5. The leases are largely in the form of oral contracts which run for only one year and which make no provision for compensation to the tenant for any improvements which may be made upon the property. As a result, tenants are restrained from making improvements and in many cases do not properly provide for the upkeep of the property.

6. Furthermore, the tenants are in some instances the victims of oppression on the part of landlords. This oppression takes the form of dictation of character and amount of crops, eviction without due notice, and discrimination because of personal and political convictions. The existing law provides no recourse against such abuses.

7. As a result both of the evils inherent in the tenant system and of the occasional oppression by landlords, a state of acute

unrest is developing among the tenants and there are clear indications of the beginning of organized resistance which may result in civil disturbances of a serious character.

8. The situation is being accentuated by the increasing tendency of the landlords to move to the towns and cities, relieving themselves of not only from all productive labor but from direct responsibility for the conditions which develop. Furthermore, as a result of the increasing expenses incident to urban life, there is a marked tendency to demand from the tenant a greater share of the products of his labor.

9. The responsibility for the existing conditions rests not upon the landlords, but upon the system itself. The principal causes are to be found in the system of short leases, the system of private credit at exorbitant rates, the lack of a proper system of marketing, the absence of educational facilities, and last, but not least, the prevalence of land speculation.

10. A new factor is being introduced into the agricultural situation through the development of huge estates, owned by corporations and operated by salaried managers upon a purely industrial system. The labor conditions on such estates are subject to grave criticism. The wages are extremely low, 80 cents per day being the prevailing rate on one large estate which was thoroughly investigated; arbitrary deductions from wages are made for various purposes; and a considerable part of the wages themselves are paid in the form of coupons, which are, in all essential particulars, the same as "scrip" which has been the source of such great abuse. Furthermore, the communities existing on these large estates are subject to the complete control of the land-owning corporation, which may regulate the lives of citizens to almost any extent. There is an apparent tendency toward the increase of these large estates and the greatest abuses may be expected if they are allowed to develop unchecked.

11. Prompt and effective action on the part of the states and the nation is necessary if any alleviation of the conditions which have been described is to be achieved.

"It is suggested that the Commission recommend:

1. The development through legislation of a system of long-time leases, providing that the tenant shall be compensated for all improvements made upon the property, and also providing for cropping systems which will maintain the fertility of the soil.

2. The establishment of national and state farm bureaus for the following purposes:

a. To act as an agent between landlords and tenants in the distribution of tenant labor.

b. To act as an agent between landlords and tenants in the preparation of equitable contracts.

c. To act as an information agency to assist homeseeking farmers.

d. To assist in the distribution of seasoned labor.

3. The development of better credit facilities through the assistance of the government and co-operative organization of farmers and tenants. No single measure can be recommended; the results must be achieved through the development of a sound rural credit system, the development of land banks, mortgage associations and credit unions. Foreign experience shows that through these means the rate of interest can be greatly reduced and the security of both borrower and the lender can be increased.

4. The general introduction of modernized rural schools and compulsory education of children. The functions of the school system should extend beyond education to the social service of the entire rural community, assisting in the organization of farmers and tenants for co-operative purposes, and promoting other measures looking to the community's welfare.

5. The revision of the taxation system so as to exempt from taxation all improvements and tax unused land at its full rental value."

Supplemental Findings and Recommendations of Commissioners Lennon and O'Connell.

The Commission on Industrial Relations today made public the supplemental findings and recommendations by Commissioners John B. Lennon and James O'Connell.

The Commissioners protest against the claim that the faults that may exist in trade union organizations can properly be considered among the causes of industrial unrest, and assert that such faults disappear as soon as trade unions are recognized and permitted to grow strong.

They urge strong labor organizations as the paramount remedy for industrial unrest.

The supplemental report dissents from the recommendation that a new federal industrial commission be created for the administration of all labor laws. It urges that instead of creating new machinery, the Department of Labor be developed and given ample funds for carrying on its work.

The supplemental report is signed by Commissioners A. B. Garretson and Frank Walsh, chairman of the Commission.

"Our signatures are appended to the report of Mr. Basil M. Manly, director of Research and Investigation of the United States Commission on Industrial Relations submitted to the Commission at its session held in Chicago during the months of July and August, 1915, except that portion of the report recommending a system of mediation, conciliation, investigation and arbitration, applicable to both state and nation, which proposes to create a commission of three mem-

bers, together with an advisory council of 20 members, 10 representing employers and 10 representing employes. The entire plan is set forth in the report of the staff as submitted to the Commission on Industrial Relations; also in a report to the Commission by Professor George E. Barnett, and in the report of Commissioner John C. Commons. From these recommendations we dissent for reasons assigned in this statement.

"The evidence submitted to the Commission at public hearings, together with the evidence secured by special investigators, has been fairly set forth in Mr. Manly's report and with even justice to all, whether employers, employes or the public.

Criticisms Not Justified.

"Our fellow Commissioners who are representative of the employers, contend in their statement that the report of Mr. Basil M. Manly for the staff is deficient in that it does not properly present an indictment against labor on the grounds of fostering and promoting violence in trade disputes, jurisdictional disputes accompanied by strikes, limitation of output, sympathetic strikes, contract breaking, apprenticeship rules, refusal to use non-union materials, alleged graft and so forth, and that it does not include these things among the fundamental causes of industrial unrest. All the evidence submitted to the Commission, as we understand and interpret it, proves that these things in so far as they do exist are in no sense causes of industrial unrest, but, on the contrary, are evidences of existing industrial unrest and are evils that are incidental to a situation wherein labor has at times been forced to fight with such weapons as it could command for advantages and rights that in justice should be freely accorded to the wage earners. So long as labor organizations are forced by employers to fight for the mere right to exist, and so long as wages paid to labor are so low that the unorganized wage earner often sees no choice except that between resorting to such weapons or seeing himself and his family sink below the poverty line, just so long will these evils at times manifest themselves as symptoms of the worker's desperation. The union, fighting for its right to live, is sometimes forced to tolerate acts would not be countenanced if its entity were secure and its energies were not absorbed in fighting for existence.

Strong Organizations the Cure.

"Experience shows that the evils complained of rapidly disappear in labor organizations as soon as the organization prevails over the opposition of the employers and establishes its right to organize. Strong unions mean decent wages, and decent wages raise wage earners to a plane of thought and action where all their acts and mental processes must no longer be directed toward a desperate struggle for the very right of themselves and families to live.

"Organized labor fully realizes how unfortunate it is that labor in its struggle for existence has occasionally been driven to consider its immediate advantage at the expense of the true economic principles that must govern in the long run. All the energies of organized labor's representatives have been exerted to minimize or eliminate any tendency toward limitation of output or jurisdictional disputes, but, at the same times organized labor insists that these tendencies where they exist are the logical and inevitable outgrowths of evils in industry that can be removed only by trade union action by the wage earners. We could cite evidence at great length to show that the tendencies complained of so far as they exist at all have grown out of the hard necessities with which labor has been confronted. It is enough here to quote briefly from the testimony of the distinguished economist, Professor Jacob H. Hollander of Johns Hopkins University, given before this Commission in New York City on January 20, 1915. Professor Hollander in discussing the limitation of output said:

"We lose sight of the fact that trade unions and unionists are not soldiering in the matter, but they are animated by a very high degree of fraternity in the matter, that they are willing to adopt the same principle if it is a matter of piece work instead of time work, that the endeavor of society should be to bring back industrial conditions from that unwholesome mess into which they have slumped, from this abnormal disproportionate allotment of workers to particular fields in excess of the requirements in those fields. We must without deviating one iota from the proposition which you have stated that it is socially unsound that workmen should do less than they properly could—society should seek to bring about conditions where they will do what they can without involving displacement and unemployment on the part of their fellow workmen."

"We hold that the report of Mr. Manly contains no statement that is unworthy of credence and that will not bear careful investigation. The conclusions and recommendations are warranted by the statement of facts and the accumulated evidence in the hands of the Commission."

The Evidence.

"All evidence accumulated, whether by special investigators or at public hearings, will be submitted to Congress, and we trust the people of our country will demand that it be published in full, particularly the following, which are well worth the most careful study by all persons interested in human uplift. The reports cited below have been prepared by competent investigators and were submitted to the Commission after careful investigation and verification by Director Basil M. Manly and by members of the Commission, and are the latest informa-

tion upon the various subjects covered by them.

Evidence Taken at All Public Hearings.

"Causes of Industrial Unrest, by W. J. Lauck.

Violence in Labor Disputes, by Mr. Luke Grant.

"Structural Iron Workers, by Mr. Luke Grant.

"Sickness Prevention and Insurance, by Dr. B. S. Warren.

Mediation, Arbitration and Investigation, by Prof. George E. Barnett.

"Condition of Labor in Principal Industries, by Mr. Edgar Sydenstriker.

"Efficiency Systems in Industry, by Prof. Robert F. Hoxie, Mr. John P. Frey and Mr. Robert G. Valentine.

"Industrial Education, by Commissioner John B. Lennon.

"Labor Complaints and Claims, by Mr. P. A. Speak.

"Trade Union Law, by Mr. J. W. Bryan.

"Colorado Situation, by Mr. George P. West.

"The Telephone and Telegraph Industry, by Mr. Christopher T. Chenery.

"Labor Conditions in Porto Rico, by Mr. Christopher T. Chenery.

"Labor Conditions in the Black Hills, by Mr. William P. Harvey.

"Labor Conditions in Los Angeles, by Mr. William P. Harvey.

"Preliminary Report on the Land Question, by Mr. Charles W. Holman.

"Agricultural Labor and Tenancy, by Mr. John L. Coulter.

"Unemployment, by Mr. William M. Leiserson.

"Extent and Growth of Labor Organizations, by Mr. Lee Wolman.

"Injunctions in Labor Disputes, by Mr. Edwin E. Witte.

"The Inferior Courts and Police of Paterson, N. J., by Mr. Redmond S. Brennan and Mr. Patrick F. Gill.

"Chinese Exclusion, by Mr. Edward A. Fitzpatrick.

Extent of Unrest.

"The principal duty imposed, under the law creating the Commission, was to seek to ascertain the causes of industrial unrest and offer such recommendations as we believe might alleviate that unrest. There can be no question but that unrest exists, in some instances, to an alarming extent. Thousands and tens of thousands of our people feel that they are deprived, under existing conditions in industry, of an opportunity to secure for themselves and their families a standard of living commensurate with the best ideals of manhood, womanhood and childhood. They resent the fact that the existing system of the distribution

of wealth which creates at one end of our industrial scale a few multi-millionaires and at the other end thousands and tens of thousands of men, women and children who are at all times in a situation where they are uncertain as to where their next meal will come from. Hungry, poorly clothed and without the opportunities that a fully rounded life requires, they become filled with a sullen resentment that bodes no good for the future of our republic.

"We have found men and women who are inclined to ascribe this condition to the fact that the government exercises no power of mandatory character to prevent strikes and lockouts. Many have been the propositions submitted to us for compulsory arbitration or, at least, compulsory investigation with power to recommend a settlement. Some have proposed an elaborate machinery to be set up by the general government, and of a similar character by the states, providing for conciliation, mediation, arbitration and investigation, all of which, while without definite compulsory features, establish a legal machinery that must of necessity exercise an influence in that direction.

"The plan for the creation of an industrial commission, both national and state, proposes to assign to a commission of three members the administration of all labor laws of either state or nation, giving to them powers far in excess of those exercised by the President of the United States, or the governor of any state. This we believe to be bureaucracy run mad, and a subversion of democracy dangerous to the civil and social liberty of all citizens. We hold that all power should be in the final analysis with the people, and we, therefore, dissent from any such plan."

New Governmental Machinery Unwise.

"The activities of such a Commission supplemented by the proposed advisory committees of employers and labor representatives would be so balanced as to prevent substantial progress, and tend to perpetuate present conditions. Such a plan conceives of labor and capital as static forces and of the relations between them as always to remain unchanging.

"We believe that the work now being done by the Department of Labor in industry generally, and by the Board of Mediation and Conciliation, dealing with interstate public utilities, is better than any that could be expected of any additional board that has been suggested to this Commission. We believe that the Department of Labor, with further experience and larger appropriations, will develop a high state of efficiency in adjusting labor disputes that are capable of being adjusted by any one other than the parties directly interested, and will adequately carry on the work provided by the law creating the Department of Labor, to-wit:

"Section 1. The purpose of the Department of Labor shall be to foster, promote and develop the welfare of the wage earners in the United States, to improve their working conditions and to advance their opportunities for profitable employment.

"Section 8. The Secretary of Labor shall have power to act as mediator and to appoint commissioners of conciliation in labor disputes whenever in his judgment the interests of industrial peace require it to be done."

"We favor the extension of the Newlands Act to cover all employes engaged in interstate commerce, such as the railroad telegraphers, the shop and track men employed by railroads, the employes of express companies, of the Pullman Company, of commercial telegraph and telephone companies, and other public utilities performing interstate service that, in the interest of the nation, must be continuous.

"The evidence submitted to this Commission is substantially to the effect that where trade union organization exists among the workers, there, at the same time, exists the least amount of industrial unrest of a character that is dangerous to the peace and welfare of our nation. It is true that the union men and women are not satisfied with their conditions; they are not, however, despondent as to the possibility of securing better conditions; they know what the unions have accomplished, and they have an abiding faith that their further desires can be attained.

"Instead of any elaborate machinery for the prevention of strikes or lockouts we are convinced, from the testimony gathered by this Commission, that the most effectual course that can be pursued to bring about general contentment among our people, based upon a human standard of living, is the promotion of labor organization. The most casual investigator will soon discover that in those lines of industry where organization of labor is the strongest, there is the least danger of industrial revolt that would endanger the fundamental principles of our government and the maintenance of a nation with respect for law and order. Where organization is lacking, dangerous discontent is found on every hand; low wages and long hours prevail; exploitation in every direction is practiced; the people become sullen, have no regard for law or government and are, in reality, a latent volcano, as dangerous to society as are the volcanoes of nature to the landscape surrounding them.

The One True Remedy.

We, therefore, urge as the great remedy for such unnecessary industrial unrest as we have found, more, and more, and still more, organization of labor and of the employers in each industry as well. The education of

the trade unions has been conducive to a higher and better citizenship. In recent years there have come to our assistance scores and hundreds and thousands of people outside the ranks of unionists—ministers, professors, journalists, professional men of all kinds—who have reached the conclusion that is herein stated, that the most efficient cure for such industrial unrest as should be cured, is union organization.

"We hold that efforts to stay the organization of labor or to restrict the right of employes to organize should not be tolerated, but that the opposite policy should prevail and the organization of the trade unions and of the employers' organizations should be promoted, not, however, for the sole purpose of fighting each other, but for the commendable purpose of collective bargaining and the establishing of industrial good will. Organizations of employers that have no object in view except to prevent labor having a voice in fixing the conditions of industry under which it is employed, have no excuse for existence, as they are a bar to social tranquility and a detriment to the economic progress of our country. The evidence before the Commission shows that organized labor has no desire, nor has it attempted, to control the business of the employer. It insists that it has a right to a voice, and a potent voice, in determining the conditions under which it shall work. This attitude, we are sure, will be continued in spite of the opposition of any so-called employers' organizations. This country is no longer a field for slavery, and where men and women are compelled, in order that they may live, to work under conditions in determining which they have no voice, they are not far removed from a condition existing under feudalism or slavery.

"In emphasizing with all the force at our command the necessity of collective action by wage earners through strong organizations, if the problem of industrial unrest is to be solved, we wish again to quote from testimony of Professor Hollander. He undertook to sum up for this Commission those conclusions regarding the solution of this problem that have been reached not only by himself, but by the great body of economists in this country and abroad. He said:

"The opinion of political economists insofar as I can voice it is that social unrest, which is manifest not only in this country but in every industrial country, is due to the existence of economic want or poverty, if by that we understand not on the one hand pauperism or on the other economic inequality. By poverty I mean the existence of large areas of industrial society in receipt of incomes less than enough to maintain themselves and those dependent upon them in decent existence. We believe that is the consequence, not of any absolute dearth—that the world produces enough to go around, that it is therefore not a question of insufficient production, but of defects

in distribution. * * * There is a view among economists that there is nothing in any current theory of wages that precludes the laborer from obtaining a sufficient wage, and that if he fails it must be in consequence of the fact that he enters into the wage contract on a plane of inequality. The wage contract, in short, is the result of a bargain between the employer and the employe, and if the employer is in a superior competitive position by reason of combination and the laborer is unorganized, he is at a bargaining disadvantage which is certain to redound to his hurt.

"I think political economists accordingly then are in agreement that trade unionism is essential as a means of bringing the workmen into industrial bargaining on a plane of equality.

* * *

"You have asked specifically what the remedy (for poverty) is. It means a very decided revulsion of opinion as to trade unionism. The general attitude among employers of labor is often open and decided opposition to organized labor. Until society recognizes the unwisdom of that attitude and demands that the laborer must enter into his wage bargain on a plane of competitive equality, society has not lifted its finger to remedy that evil."

The Public's Duty.

"We submit the report of Mr. Basil M. Manly as our report, asking for it the fullest possible consideration by the men and women of our country who are interested in the social and moral uplift of humanity.

"Labor must work out its own salvation. Wage workers can attain that degree of well-being to which they are entitled only by their own efforts. The general public can not be expected to do for them what they fail to do for themselves, nor would it be desirable that those rights and benefits to which they are entitled should be handed down to them by the government or by organized society as grace from above. But the general public is vitally interested in the efforts of wage workers to win for themselves equal justice and such a degree of material well-being as will enable them to maintain themselves and their families in comfort, security and health. Society's interest in the triumph of labor's cause should spring not only from the love of justice and the human sympathy that animates every good citizen, but from a realization that industrial and social evils menacing large groups of the population can not continue without eventually bringing disaster to society as a whole. While inviting the aid of every good citizen, we, as representatives of organized labor, urge that this aid be directed not solely to seeking new legislation or new governmental machinery designed as a cure-all, but to giving moral support to labor's own efforts, and insisting that trade unions be fostered and encouraged as the most effective agencies making for the wage workers' progress.

THE BOILER MAKERS' JOURNAL

Official Organ of the International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America.

A Monthly Publication Issued the First of Each Month from Room 8, Law Building, Kansas City, Kansas.

JAMES B. CASEY, Editor and Manager.

Subscription Price.....\$1.00 Per Year in Advance

ADVERTISEMENTS.

Advertising Rates Will be Furnished Upon Application to the Editor-Manager. No Reading Space Will be Sold for Advertising Purposes Under Any Circumstances.

All New Members Must Have Their Name and Address Sent in Through the Secretary of Their Lodge. After That They May Have Changes Made in Their Address by Filling Out Blank Form in Back of Book and Forwarding to the Editor.

All Copy Must be Received by the Editor by the 15th of the Month to Insure Publication in the Following Issue.

All Contributions and Correspondence Relating to the Journal Should be Addressed to J. B. Casey, Editor, Room 8, Law Building, Kansas City, Kansas.

Entered at Postoffice, Kansas City, Kansas, as Second Class Mail Matter.

LEGAL NOTICE REQUIRED BY LAW.

Statement of the ownership, management, circulation, etc., of the Boiler Makers' Journal, published monthly at Kansas City, Kas., required by the Act of August 24, 1912.

Names of Stockholders: None.

Name of editor, James B. Casey. Postoffice address, Kansas City, Kas. Business manager, James B. Casey, Kansas City, Kas. Publisher, International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America. Names of owners, The International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America.

(Signed)

JAMES B. CASEY,
Editor and Business Manager.

Sworn and subscribed before me this 20th day of March, 1915.

(Seal)

A. G. DENGEL,
Notary Public.

(My commission expires March 20, 1916.)

LABOR DAY UNIVERSALLY CELEBRATED.

From all reports Labor Day was more generally and enthusiastically celebrated this year than ever before.

While in many cities the usual parade was dispensed with, in many others long lines of enthusiastic union men paraded in honor of the day.

Picnics, speaking and athletic sports were almost universally indulged in. In some cities rain interfered with the festivities of the day, in fact this holiday is becoming known as a decidedly wet one. Here in Kansas City it has rained five out of six past Labor Days. It interfered this year with the Central Labor Union celebration at City Park. The speaking, which was to have taken place from a large band wagon placed at the foot of a shady, grass covered hill side, had to be abandoned because of the rain. However,

dancing, racing and other amusements were indulged in by a good sized crowd during the afternoon and evening.

The working people in common with all other citizens of the United States have much to celebrate and rejoice over. First we are at peace with the world, while the whole of Europe is aflame with war, as it has been for more than a year. Again we should be thankful that we have at last passed through one of the worst industrial depressions this country ever witnessed and that we are now entering into a period of prosperity. Let us hope that ere another Labor Day comes around the European war will have ceased, so that the workers of Europe, too, may be able to join with us in celebrating labor's greatest holiday and the blessings of peace.

PRESIDENT GOMPERS ADVISES THAT STRIKES BE USED SPARINGLY.

In addressing a gathering of union men in the East not long ago, President Gompers is reported as having advised his hearers to use the strike sparingly and to remember that employers also have rights, however, he insisted that our free and untrammled right to strike is a paramount one.

We fully agree with President Gompers in the wisdom of sparingly using the strike as a weapon of offense. With organized labor it should be a court of last resort when all other means of redressing wrongs or grievances are tried and fail.

It is the reverse of wisdom for any one or body of men to "go around with a chip on their shoulder"; the strong man, confident of his strength, is willing to work temporarily under unjust conditions so that he may use all means at his command to effect a peaceable adjustment of the matter.

The real strength and advantage of labor is not gained by the actual participation in a strike, but by their being fully organized and equipped with men and finances to engage in a strike if necessary. This unused, stored up strength and resources, is what counts and secures a respectful hearing and generally a satisfactory adjustment. One of the requisites of preparedness is the thorough organization of all men working at the trade, so that we may control the supply of competent men and prevent them from taking the place of those who may be called out.

Suppose we had all the men working at boiler making and ship building in this country in our organization and that we had sufficient money in our treasury to pay each member two weeks' strike benefit. We would have more than 100,000 members and somewheres near \$1,500,000. With such a body of men thoroughly trained to discipline, ready and willing to respond to the call of their chosen leaders and backed by the above resources, it would not be necessary to strike in order to secure fair conditions and wages.

Under such conditions, instead of our members going on strike, they would remain at work and their representatives would go forth and speedily adjust grievances and make agreements. Shall we strive to reach this goal? It is no idle dream or impossible proposition. The necessary number of

men are available if we can only arouse them to their own interests and their duty towards organized labor.

As for resources, they would be easy to raise if we had anything like the membership mentioned. The boiler makers and ship builders of Great Britain and Ireland have fully as much in their treasury now, and with scarcely more than half of the number of members mentioned.

What we need is the arousing of our members to a proper sense of their duty to their organization so that they may go forth and help preach the gospel of trade unionism to the unorganized. They cannot expect the few salaried men to be able to effectively accomplish this task, besides adjusting the countless grievances, large and small, that are continually arising.

In years gone by every member was an active organizer and we should endeavor to revive this practical exemplification of trade unionism so that we may reach the goal of a complete organization, and then we can with ease and profit follow President Gompers' advice to use the strike sparingly and at the same time secure even handed justice for all working at our trades.

PHYSICAL EXAMINATIONS AN UNJUST REQUIREMENT FOR EMPLOYMENT.

The question of physical examinations is becoming a serious one to many of our members, as some employers, from one pretext or another, have adopted it. One of the principal excuses offered for it is that the company has inaugurated some kind of sick or disability benefit scheme. The motive for the inauguration of all such is supposed to be for the benefit of the employes, but if it is to be in reality a bar to employment for all those who are unfortunate enough to fall a victim to some disease, which was quite likely contracted through long years of employment at the work, which physical examinations would bar them, then these beneficent schemes are of a questionable merit.

Nearly every trade or calling tend to develop some diseases or ailment in all those who follow the same class of work for a long period of time.

The earnings of the average employe in the industrial world is little if any above that which is required to purchase the necessaries of life for himself and family, even if they are constantly employed, which is the exception instead of the rule, and we submit that it is unjust to require a physical examination and refuse work to those who may have contracted some ailment. They have not been able to accumulate enough to live on for the balance of their lives, and if they have contracted any ailment or disease work becomes more necessary than ever. To refuse men employment because of physical defects is to be far more cruel to a fellow being than is the average owner of an old worn out horse. When a horse becomes too old to work it is given pasturage, food and shelter from the winter's blast and allowed to take it easy because of its past usefulness. Humanity and christianity demands that at least as good treatment will be accorded to those who, through old age or disease, have ceased to be able to earn a

living. Society in general should provide for their wants in their declining days.

There is only one excuse for physical examinations and that is when they are used by the health authorities as a preliminary for furnishing medicine and expert treatment by the state or municipality for the purpose of eradicating disease.

However, the most serious objection to physical examination as a condition to employment, is that it is often used by the employer as a form of black list to reject or get rid of those they may hold a grudge against because of their activity in behalf of their trade union and their fellow employe.

Organized labor will continue to fight physical examinations as a condition to employment until it is banished forever from the industrial field. These sick and accident benefits, used as a pretext for these examinations, should be administered by the state.

The only requirement an employer should ask of an applicant for employment is the ability to make good at the employment sought.

WILL THE SHIP BUILDERS AWAKE?

While some of our oldest, most zealous and hard working members are ship builders and a number of our lodges are composed almost, if not entirely, of those working in the ship yards, still the number of organized ship builders in the United States compared to the number of unorganized men is very small. It seems that the great mass of ship builders in this country have been taking a Rip Van Winkle sleep for the past twenty years, and during this period have made little if any progress or even effort to improve their condition. In some places wages or conditions for the ship builders are not as good as they were two decades ago. The average rate of wages paid in some yards is not sufficient to provide the necessities of life according to our American standards of living, even though the most rigid economy is practiced, and it will not compare favorably with hod carriers and other laborers in communities where the latter are organized.

For the past several months the ship yards have been very busy, a long era of prosperity has opened for them, hundreds of millions of dollars worth of contracts have been booked and the prospects are that this activity will continue for a number of years.

With this promising condition before us we are curious to know if the men on the ways are going to make an effort to share in this prosperity beyond mere employment at such wages as the employers choose to give? If so then it is time they awoke from their sleep and took council with themselves. If they really desire to improve their conditions, there are no great problems to solve, or difficulties to overcome. All they have got to do is to organize and pool their interests, and resolve to stand unitedly and determinedly for a fair share of the wealth they produce. If they will set about this task in an intelligent business-like way, under the banner of this brotherhood, and with its assistance, the task will be easy of accomplishment.

Already we see signs of this awakening, which promises better things

for the men who build the great leviathan of sea, the tran-Atlantic lines, battleship, cruisers, freighters, tugs and yachts. We extend these men a hearty welcome into our ranks and promise them every assistance possible for our organization to give in helping them organize and march onward to better conditions.

THE COLORADO SUPREME COURT REPUDIATES JUDGE HILLYER.

Judge Hillyer, formerly counsel for the coal trust of Colorado and a specially appointed judge to try the striking mine workers of that state, and who shamelessly helped to railroad John R. Lawson, the union mine workers' official, to a sentence of life imprisonment, has been completely repudiated by the Supreme Court of that state. It granted a review of the case as well as a writ of supersedeas and barred Judge Hillyer from presiding at any other trial of mine workers. The trial and conviction of Lawson was one of the most shameless perversions of justice that has ever been witnessed in this country. Justice was outraged and the fair name of Colorado put to shame, however, the recent action of the Supreme Court is a good start towards removing this stain and it promises a complete reversal of this farce trial and conviction of a man that was unquestionably innocent of the crime trumped up against him.

We must, however, continue to fight for Lawson's complete vindication, for to allow any part of this diabolical conspiracy to stand as a precedent for other venal judges to seize hold of as an excuse to railroad other representatives of labor to prison in the future would endanger the whole labor movement.

ARE RAILROAD EMPLOYEES PAYING THE FREIGHT?

According to a recent report of the Interstate Commerce Commission, the revenue of the railroads of the United States, during the month of June, was seven dollars per mile less than it was for June, 1914, but the operating expenses for June were fifty-nine dollars per mile less than for the same month of 1914, making a net increase for the month of fifty-two dollars.

For the first six months of this year the operating revenues were eight hundred and forty-two dollars per mile less than for the same period, still the net revenues increased sixty-five dollars per mile over that for the first half of 1914 because the operating expenses were reduced nine hundred and seven dollars per mile below what they were for the first half of 1914.

The largest item of saving was taken from wages that would ordinarily have been paid to employes, therefore to accomplish this saving many thousands of employes were discharged and most of those remaining were put on short hours.

Therefore it would seem that as far as most of the railroads are concerned the employes have had to bear the whole burden of dull times.

TO USE ELECTRICITY FOR PROPELLING BATTLESHIPS.

An important and far reaching experiment in connection with the motive power of battleships, has been decided upon by the Navy Department. It has been decided to use electricity as motive power on the new Battleship California and contracts has been let for the necessary machinery.

We are told that if this proves to be a success that all future ships built will be so equipped.

It is claimed that electricity is more economical of fuel and that it will take up less room on the ships and the weight will be very much less.

The experiment will be watched with interest, for if successful, it will revolutionize motive power on warships and eventually all classes of merchant ships. Electricity is a strong competitor against the boiler in all industrial pursuits and is even invading the railroads to a marked extent, several roads having started using it to a limited extent. However, the steam locomotive has not by any means survived its usefulness, but will be with us for a long time yet.

THE EXECUTIVE COUNCIL TO CONVENE.

President Franklin has issued a call for the regular annual meeting of the Executive Council of our Brotherhood, and the members are requested to assemble at headquarters Monday morning, October 4.

While no great or momentous matters are pending still a large number of routine matters of more or less importance to our members accumulate during the year and will have to be acted upon by the council and it is usually in session for two weeks or more.

SOUVENIR PUBLICATIONS.

We are in receipt of copy of a souvenir publication entitled picturesque Honolulu and Hawaii. It is profusely illustrated with views of beautiful scenery of the Islands and of palatial and imposing buildings which shows the great progress and prosperity of the people of those beautiful mid-Pacific Islands. The book is a fine specimen of the printers' and engravers' art.

Many special editions of labor papers and souvenir programs of Labor Day celebrations have reached our table so far and they are in many respects more elaborate than ever before.

One of the nicest and most elaborate souvenir programs that we have so far seen this year was gotten out by the trade unions of St. Joseph, Mo. It is a 72-page magazine, artistically gotten up; it is profusely illustrated with photos of the union men and officers of that city and has a large number of historical sketches of the organizations having locals there and much other information of value to the union men of that city. This souvenir reflects much credit on the enterprise and push of those having charge of the matter.

PERSONAL MENTION.

Mr. and Mrs. R. A. Lines and daughter of Springfield, Mo., were recent visitors to headquarters.

Brother Lines was on his way to the Missouri State Federation of Labor convention at Moberly as a delegate from the Central Body of Springfield. Among other matters of interest to our members, he had a boiler inspection bill under his arm which he anticipates having the convention endorse and present to the next session of the Legislature of Missouri for adoption.

WITH OUR ADVERTISERS.

We desire to call the attention of our members to the advertisements that appear in the Journal each issue. These advertisers show by their patronage their friendliness towards our organization, and our members should show their appreciation by patronizing their goods whenever possible and says a good word in their behalf when the opportunity presents itself.

The first of our advertisers that we see on opening the Journal is that of Larned, Carter & Co., manufacturers of the celebrated "Headlight" brand of union made overalls that are worn by working men in all parts of America. This company is our oldest advertiser, having had its ad in the Journal for several years.

Next is the ad of the American Arch Co. This Company inaugurated a reform in arch brick making that was a life saver for our members; its bricks are made in small hollow sections that are easily handled and placed in position.

Twenty-five years ago the use of these bricks was a new idea and they were made in heavy, large sections and it was an awful job handling and placing them in position.

This reform is no doubt appreciated by our members who have the handling and placing of arch brick.

The next advertiser is that of J. L. Stifel & Sons, manufacturers of the well-known brand of Stifels Indigo union made overalls. This is one of the pioneer companies to engage extensively in overall making.

The next ad is that of the label of the Shoe Workers' Union. Our members should insist on this label being stamped on the soles of all shoes they purchase, as a matter of principle; it is a guarantee of the shoe being made under fair conditions and by union labor. It calls for no sacrifice on the part of the purchaser and means much to the shoe workers.

Next comes the Commercial National Bank of this city, one of the largest financial institutions in Kansas, and it is the bank where all of our financial affairs are transacted and the surplus funds of our Brotherhood kept. Our members are invited to transact their banking business with this bank.

The next advertiser is "The Boiler Maker," one of the very few magazines devoted to the boiler making industry in this country. It furnishes drawings and various other matters of a technical nature.

Most, if not all, of our members are familiar with it. It is published at its office in New York City. The last ad appearing on the back cover page is that of Mr. J. L. Eckert, foreman boiler maker of Chattanooga, Tenn. Mr. Eckert

is the author of a new book on inspection called "The Boiler Inspector." It is gotten up to aid those who are contemplating fitting themselves as inspectors. It contains many practical questions and answers on this subject, which has become a very important one.

Those of our members who desire more information should write to Mr. Eckert in reference to the contents of his book. We believe they will find the information it contains is well worth the amount asked for it.

QUOTATIONS.

To be thrown upon one's own resources is to be cast in the very lap of fortune, for our faculties then undergo a development, and display an energy, of which they were previously unsusceptible.—B. Franklin.

True courage has so little to do with anger, that there lies always the strongest suspicion against it, where this passion is highest. True courage is cool and calm. The bravest of men have the least of brutal bullying insolence, and in the very time of danger are found the most serene, pleasant and free. Rage, we know, can make a coward forget himself and fight. But what is done in fury or anger can never be placed to the account of courage.—Shaftesbury.

He that can only converse upon questions about which only a small part of mankind has knowledge sufficient to make them curious, must lose his days in unsocial silence, and live in the crowd of life without companion. He that can only be useful on great occasions, may die without exerting his abilities, and stand a helpless inspector of a thousand vexations which fret away happiness, and which nothing is required to remove but a little dexterity of conduct and readiness of expedients.—Dr. S. Johnson.

STRIKES NOW IN FORCE.

- Atlantic Basin Iron Works (Shields & Moran, New York). (Strike on.)
- Hibbon & Co., contract shop, South Chicago, Ill. (Unfair.)
- Milwaukee Boiler Co., Milwaukee, Wis. (Strike on.)
- Stockton, Calif. (Metal Trades strike.)
- Des Moines Bridge & Iron Works, Des Moines, Iowa. (Erecting work in Bremerton, Wash., Valejo, Calif., and Norfolk, Va., Navy Yards.)
- Heinie Safety Boiler Co., of St. Louis, Mo. (Strike on.)
- Wangler Boiler & Sheet Iron Co., of St. Louis, Mo. (Strike on.)
- O'Brien Boiler Co., St. Louis, Mo. (Strike on.)
- Halifax Graving Dock Co., Halifax, N. S., Can. (Strike on.)
- T. Hogan & Co., Halifax, N. S., Can. (Strike on.)

Mechanical Department.

TO LAY OUT A CONICAL SHAPED SECTION WITH AN OGEE TOP AND BOTTOM.

Fig. 1 shows the side elevation and Fig. 2 shows one-half of plan view. First produce Figs. 1 and 2 the desired size, place straight edge on side line of Fig. 1, from points 2 to 3 and strike a line down until it cuts the center line at *o*, with this as a center for one point of dividers, strike circular

lines for template. Allow a little for loss by stretch out at top.

Take distance from *a* to *b*, Fig. 1, as a diameter and calculate circumference, mark this on the largest circular line from *b* to *d*, from *d* strike a line to *o*, this will complete the template, when using heavy iron use the mean diameter, when calculating the diameter.

After the template is rolled up and seam riveted the top will have to be flared out and the bottom worked in to suit the ogee.

International Officers' Reports.

REPORT OF SECOND INTERNATIONAL VICE-PRESIDENT NOLAN.

Portsmouth, Virginia.

The following is my report for August, 1915, in connection with many matters in the Southeast District:

August 1st, left Portsmouth, Va., for Washington, D. C., to meet Senator Martin also Mr. Berres of the Metal Trades Department, in connection with an arranged conference with the Secretary of the Navy on a grievance in the boiler shop at the Norfolk Navy Yard.

Meeting came off as arranged August 3rd, but nothing much was accomplished in the way of restoring the former rates to the boilermakers who had been disrated, only to assure the committee that the question at issue would be given a full investigation of the Department, but at this writing haven't heard of any investigation, at least the committee have not been notified, although I inquired at the Department, latter part of August, to find out if any investigation had taken place.

August 4th by instruction of Vice-President Hinzman left for Savannah, Ga., to investigate and settle if possible a controversy between the boilermakers and blacksmiths over the jurisdiction of Angle Iron work in one of the contract shops in Savannah. Arriving there August 5th, same date met a committee from Lodge 26, composed of Brothers Black, Howle and Dillon, who fully explained cause of grievance on the part of the blacksmiths' committee, claiming all Angle Iron work formerly done by boilermakers. A special meeting of Lodge 26 was called and an invitation was extended to the blacksmiths' committee to be present in order to meet a similar committee representing the boilermakers of Savannah so as to settle for once and for all any jurisdictional controversy between the two organizations, but the blacksmiths' committee failed to respond although, invited to do so.

Therefore the committee representing Lodge 26 were instructed to take up pending grievance with Mr. Wilkinson, proprietor of shop, the following morning, August 6th, which was carried out, as the committee Brothers Black, Howle, also the writer with them at 10:00 a. m. and after a short controversy lasting about an hour the jurisdictional squabble was settled satisfactory, as a letter on the boilermakers' jurisdiction over all Angle Iron works required in the construction and repairing of boilers and the other work generally done by boilermakers, with the exception of welding which belongs to blacksmiths was handed the committee by Mr. Wilkinson over his signature, a copy of which was mailed the International office, and desire to thank the committee, Brothers Black and Howle, as they were on the job all right, but absolutely fair on the jurisdiction of blacksmiths' work.

August 7th, left Savannah for Charleston, S. C., to look over general conditions there, contract shops and navy yard, and on arriving there found that a convention of the South Carolina State Federation of Labor would convene at the Isle of Palms, August 9th, at 10 a. m.

August 9th, attended the above convention as a guest, with other International officers, the convention was the first held in the state of South Carolina, and I must say was largely represented by delegates from almost every section of that state. The American Federation of Labor and also several International organizations were represented by officers who were representing their respective organizations and show their appreciation of the onward march of the organized labor movement of South Carolina as well as the uniting efforts of the men of labor of the state to secure a state convention, the first in its history. Many able addresses were made and several prominent public men who have been friendly to organized labor were present on the occasion as invited guests.

During convention many important questions were introduced and discussed in the interests of the wage earners of South Carolina, as well as necessary legislation required for their future protection, which the legislative committee were instructed to present to the next legislature.

In conclusion let me say that the convention was a credit to the officers and delegates, not a particle of friction, all working together with one object in view, the betterment of the wage workers of the old state of South Carolina, which has a brilliant record, past and present, in the vital affairs of the Nation.

August 11th, visited the Charleston Navy Yard and talked with several of the members of Lodge No. 50 on questions affecting local conditions there, among others were Brother Clair, secretary of Lodge No. 50, and arranged for future work in that city providing the officers and members deem it necessary or conditions would justify it.

While at the Navy Yard, I called on the Commandant, Captain Bryan, formerly director of U. S. Navy Yards with headquarters at Washington, D. C., was sorry to see him leave Washington as there was many matters coming up from time to time that Captain Bryan could give the desired information without having to call on the Secretary of the Navy.

On the night of August 11th, left Charleston, S. C., for Portsmouth, Va., reaching there the following morning. Attended a meeting on the 12th of the Navy Yard Federation of trades at which many existing grievances were discussed. Among others, was the question of too many rates in Uncle Sam's workshop for any practical mechanic knows from experience that all rates over

first and second class rates is an injustice to the government and the men also, it's unnecessary to waste time and paper discussing the fallacy, or in other words the foolish mismanagement under such a rate system and a concerted effort should be made by all Internationals to bring about a change as there are too many classes now in vogue and should be abolished by an act of Congress if necessary.

August 13th, attended a meeting of Lodge 428, the question of an increase in wage, also an agreement is still pending, awaiting a conference with the shop proprietors at this writing; if some of the boilermakers employed in the contract shops of Norfolk would only realize their position and become members of the International Brotherhood, there wouldn't be much trouble in securing an increase in wage, or recognition in the shape of an agreement, but no, they want the other fellow to get results and allow him to pay the cost. Brothers Halstead and Murdock with a few others does all the work in the interest of the contract shop boilermakers of the city of Norfolk, Va., while the balance sits on the fence and looks wise and then we claim to be intelligent American citizens. Same date August 13th, called on the Industrial Manager Norfolk Navy Yard to secure necessary data, which was turned over to chairman of committee Brother Phillips for future reference and use before the Department, is necessary.

August 14th, by instructions of Vice-President Hinzman left Portsmouth for Gassaway, West Va., on a grievance existing at the shops of the Coal & Coke Railroad Company, arriving there on the 16th; on reaching Gassaway I at once went to the shops of the company in order to get a line on grievance among the federated crafts. Had the pleasure of meeting Brother Davis who was a delegate to the St. Louis Convention of the International Brotherhood, same day, 16th, a representative of the Labor Department from Washington, D. C., arrived on the ground to co-operate with the Federated Trades in bringing about a settlement of pending trouble. As no officer of the affiliated crafts was present the commissioner of conciliation, Brother A. L. Faulkner, and I discussed the situation at Gassaway from every angle in hopes of bringing about a satisfactory adjustment of grievance for the Federated Trades at the Coal & Coke Company shops at Gassaway. That night, 16th, held a meeting with the Executive Board of the Federation on the system; Brother Faulkner, the commissioner put a proposition before them to accept, which he believed would bring about a satisfactory settlement pending improved conditions on the system; there was quite a long discussion on the part of the federated committee on proposition suggested by the commissioner; however, a vote was taken and the proposition as suggested was adopted (which was in part as follows): "Company agreed to meet Federated Trades on or about August 19th, to take up question of better shop conditions,

also an increase in wage will be considered when conditions of county and Coal & Coke railroad justify it, which was signed later on by I. K. Dye, general manager, Coal & Coke Railroad Company, also commissioner of conciliation, Brother A. L. Faulkner.

August 18th, left Gassaway, W. Va., for Portsmouth, Va., arriving there following day, attended a meeting of Navy Yard Federation same night.

August 20th, received instructions by wire from First Vice-President Hinzman to proceed to Wilmington, Del., as there was an opportunity of organizing a lodge of the brotherhood in that city; on arriving there I called on the official representative of the machinists, Brother Ago, who gave me all possible information and co-operation in getting a meeting of the boilermakers and shipbuilders.

August 22nd, attended an open meeting of the machinists who were on strike for the eight hour day, and prospects look bright for a victory in all machine shops at Wilmington, Del.

August 23rd, attended an open meeting of shipbuilders employed at the Harlin & Hollinsworth shipbuilding plant; no organization was effected at that meeting; however, a motion was made and carried to call another meeting on August 30th.

August 24th, left Washington, D. C., to meet President Franklin on a question then pending before the Metal Trades Department, in connection with the Federation of Navy Yards and Arsenal employes. Returning to Wilmington, Del., on the 26th to attend an open meeting of shipbuilders there as previously arranged at which some progress was made to organize a lodge, but adjourned for final action until August 31st.

August 27th, left for Philadelphia in company with President Franklin, whom I met on train at Wilmington, en route for Philadelphia. Attended a meeting of Lodge 19 with Brother Franklin which was without doubt well attended and the way matters were handled during meeting reflects much credit on the officers and members of Lodge 19. Under the head of new business Brother Franklin delivered an address on matter in general connection with the International Brotherhood, also on a Navy Yard question of much importance to the members at this particular time, giving his opinion as how to proceed in order to get what rightfully belongs to them, granted by one authorized representative body of the Navy Department and refused by another; Lodge 19 desires to place the proposition before the Secretary of the Navy through a committee believing that case is a just one, and therefore are confident that the wage increase which was granted them by the wage board will be approved by the Secretary of the Navy, when conference takes place at Washington, D. C.

August 29th, left Philadelphia, Pa., for Wilmington, Del., to attend open meeting of boilermakers, shipbuilders and helpers on the 31st, and am pleased to report that the

old Wilmington local was reorganized, while not a large one numerically, yet there is a good prospect for a large lodge later on when the local gets in running shape, as there are at least four hundred craftsmen eligible to become members of the Brotherhood in Wilmington, Del., and why such a condition exists is a puzzle, and among craftsmen who should know better as there never was a better opportunity to secure conditions all around than in that particular industry at this time. When every ship yard is over run with contracts and more signed up almost every day.

Those who know the absolute necessity of organization and the benefits derived from it yet and then look at the awful conditions existing in many industrial centers, from lack of organization it should be an object lesson. It's strange in these times, when progress and co-operation should be the watch-word, in order that the high ideals of American manhood and citizenship may be not only protected but advanced through organization, so as to prepare for a new era predicted by many great economists in which justice will be the dominant force only and secured through intelligent co-operation of organized labor forces, so that the toilers of America can stand erect as American trades unionists, no longer stooping in cringing fear for the future, but on the contrary, with American courage coupled with honest hopes and ambition as well as eyes unclouded by many blighting memories of the past, which have been forced on the organized workers from time to time in their efforts to uphold human rights and justice and that effort will go on and on regardless of pin-headed oppressions of honest labor, until justice is re-enthroned in the land of the free for this world is filled with men of curious notions who think they know it all, even in a hovel and always on the throne with nice deceiving explanations that unionism is wrong—of course ideas for reasons of their own and the more we get to know them, their true colors we will find, for shining under cover, is that old familiar sucker, a personal axe to grind.

Fraternally,

THOS. NOLAN, I. V. P.

A Correction.

In writing my report for August issue of the official journal on matters then under investigation in the Boiler Department, Norfolk Navy Yard, I failed through oversight on my part to give full credit to Brother Harry E. Phillips who is an active member of the shop committee, as well as chairman of it, also the Navy Yard Federation of Trades.

REPORT OF THIRD INTERNATIONAL VICE-PRESIDENT MERRIGAN.

June 30 I left Halifax to attend the semi-annual meeting of New Brunswick Federation of Labor, which was held at Moncton, July 1 and 2 in the W. C. T. U. Hall.

The following is a synopsis of the meeting: The meeting opened promptly at 11

a. m., with Brother D. J. McGillivray in the chair. His worship, Mayor L. W. McAnn, in the course of a splendid address, welcomed the delegates to the city, which is an especially suitable place in view of the large number of union men resident and working there. Dr. O. B. Price, M. P. P., also addressed the delegates at some length, referring to the recent dispute between the C. B. of R. E., and the international unions. He pointed out that the only way in which progress can be made is in working together so far as possible.

The convention then opened for business with Brother J. L. Sugrue in the chair. Brothers Kemp, Smith, McGee, Hughes and McGillivray were appointed a committee on credentials.

The following committees were appointed by the convention: Resolutions, ways and means, audit, constitution and law, union label and officers' reports.

President Sugrue and Secretary Ayer submitted lengthy reports, showing a most encouraging rally of the labor unionists of the province to the support of the federation.

Brother J. A. McLelland of the I. A. of M., and the writer addressed the convention briefly at the opening. Brother Scott of the painters and decorators addressed the convention later.

Brother J. L. Sugrue, the president, who was also the lobbyist at the session of the N. B. legislature, submitted a lengthy report, covering his activities during the past six months, which resulted in the adoption by the government of a number of desirable amendments to existing legislation so far as labor is concerned. The president also reported having obtained a promise from the government to introduce an improved Workmen's Compensation Act at its next session. It is hoped that an act will be obtained in line with that now in force in Nova Scotia or Ontario.

Brother P. D. Ayer, the secretary of the federation, presented his report, which showed nineteen organizations at present affiliated with the federation, representing a membership of 1,620 organized men. In this report it was noted with satisfaction that while the province has not suffered to nearly as great an extent from unemployment as some of the sister provinces in the western section of the Dominion that considerable was to be met with, particularly in the city of St. John, where conditions brought about through the war had caused a number of locals to fall behind in membership. In many cases the heavy enlistment of union men for overseas service has had the effect of seriously depleting the ranks of organized labor and impairing the efficiency of the unions.

The following delegates were present: George Crawford, Fredricton Labor Council; J. L. Sugrue, St. John Trades and Labor Council; D. J. McGillivray and M. Hourihan, Moncton Trades and Labor Council;

Charles E. Fox and G. B. Wallace, Local 460, I. B. Blacksmiths and Helpers, Moncton; J. J. Hughes, U. A. Plumbers and Steam Fitters, St. John; Seymour Powell and John Delay, I. B. Boiler Makers and Helpers, Moncton; S. Mackay, N. B. Brick Layers, Masons and Plasterers, Fredricton; J. C. Smith and R. J. Baxter, U. B. Carpenters and Joiners, Fredricton; C. H. Stevens and John Kemp Cigar Makers, St. John; B. Haines, U. A. Plumbers and Steam Fitters, Moncton; H. W. Chapman, Iron Moulders Union, Sackville; John J. McGillivray, I. B. Maintenance of Way Employes, St. John; W. M. Halliday, Painters and Decorators, St. John; C. H. Cameron, S. Gordon, William McNavin and C. A. Melanson, I. A. of Machinists, Moncton; D. Magee, I. B. Maintenance of Way Employes, Moncton.

On Thursday evening the delegates were entertained at a "smoker" by the local Trades and Labor Council.

The following officers were elected: President, J. L. Sugrue (re-elected); vice-president, C. M. Melanson, Moncton; recorder, M. Hourihan, Moncton; secretary, P. D. Ayer, Moncton (re-elected); vice-president for Moncton, B. Haines; vice-president for St. John, C. H. Stevens; vice-president for Sackville, H. W. Chapman; vice-president for Fredricton, R. J. Baxter. Executive will select the next meeting place.

On July 3 I returned to Halifax and remained until August 30, in the interest of Lodge No. 580, who had made a request for an increase in wages of the five employers at Halifax and Dartmouth. The increase requested was from 28 to 35 cents per hour and 20 to 25 cents per hour for boiler makers and ship builders and helpers respectively. At a regular meeting July 7 the members of Lodge No. 580 decided to modify their request and reduced the rates to 32 cents for boiler makers and ship builders and helpers 23 cents per hour, same to go into effect August 1. The employers were notified of this change, and a reply was requested for July 20. Replies were received from three of the employers up to the 21st, meeting night. The writer and Brother T. M. Burns, president Lodge No. 580, waited on the employers and received a favorable reply from four of them. Later the writer waited on four of the employers personally regarding the agreement and rates of pay, and explained the demands of the men.

On July 19 a special meeting was called, owing to the discharge of one of the members employed at the Halifax Graving Dock for being an agent of the union, as they put it. The member who had been discharged for his activities did not care to have the lodge take any drastic action at the time. However, ample precaution was taken in case another member should be discharged under the same circumstances.

On July 21, at the regular meeting, the report of the committee and the writer was heard. As the replies were not quite satis-

factory to the members, the writer interviewed four of the employers regarding the increase.

Owing to August 1 not being far distant a special meeting of Lodge 580 was held later to ascertain whether or not the members would continue or discontinue work under the former rules and rates. At the meeting it was decided almost unanimous that the members of Lodge 580 would discontinue work at midnight July 31 if their request was not acceded. Committees were appointed for each shop to wait on the employers for a final reply. The T. Hogan & Co. informed us that they could not meet our request in any way. The Halifax Graving Dock Company informed the committee to get out of the yard and to get their money. In the meantime the foremen had a busy time going about the works consulting those employed at our line of work, whether they were members, and to their great surprise found that 95 per cent of them were members. The company endeavored to enlighten the public that there was a lockout and later when a lockout did not sound good, the public was informed that a few men had been laid off, owing to slackness of work. Up to Saturday evening the following firms agreed to our request: A. Cox & Co., N. Evans, Ltd., and A. A. Webber & Son.

On Monday, August 2, there were about three men working at the Halifax Graving Dock, and none at the T. Hogan & Co. shops.

The first meeting of the members on strike was held at 10 a. m., Monday, August 2. Officers were elected and the necessary pickets appointed. An effective system of picketing was established, and good results were accomplished. The strikers held meetings daily, which were enthusiastic and orderly. Every member conducted himself as a member should, and was commended on all sides on the manner in which the strike was being conducted.

The Halifax Graving Dock Company made several attempts to induce some of the men back to work. But these same men have learned sufficient not to be led astray. Past experience is sufficient for them. No question but what the T. Hogan & Co. are a tool for the Halifax Graving Dock Company. Up to the eleventh hour this firm was agreeable to our request, and suddenly changed. However, the T. Hogan & Co. is not receiving the support that they expected from the Halifax Graving Dock Company. The Halifax Graving Dock Company has long since been hostile to organized labor, and this was evident to all who were employed from time to time. An open shop without a doubt. The members on strike know that this fight has got to be won, and will do everything in their power for a victory. Unless the latter is accomplished there will be little hope for the man working at the trade ever receiving what has been long due to them—a fair wage and

better conditions. The members of Lodge 580 who are on strike are receiving strike benefits weekly. They have not the obstacle that many others had to face, such as unemployment and the importation of strike breakers. Everything seems to be in their favor, and by displaying the same enthusiasm through the strike there is no doubt but what victory will crown their efforts.

I remained in Halifax until August 30, rendering as much assistance as possible, and then I found it difficult to keep other engagements.

On August 30 I left for Moncton to meet with Brother D. J. McGillivray, president System Federation I. R. C., regarding the federated agreement and other matters pertaining to the welfare of the movement. I left later for Quebec to meet with the members of Lodge 601. Arriving there on Tuesday afternoon I arranged with the officers to hold a meeting on September 2. During my visit to Quebec I met with a former member of Lodge 604, who had made use of the funds of the lodge for his own purpose, and who was given a certain length of time to repay the amount. On investigation I found that our friend had not made good his former promise. He had paid part of it and possibly was of the belief that nothing more would be mentioned about the balance. However, this ex-member was informed of his past actions, and will now repay the balance in monthly payments or no work.

On the 3rd I left for Montreal, arriving the following morning. Attended meeting of Lodge 134. Preparations for Labor Day parade were being attended to and other matters of importance. From the 4th to the 10th I remained in Montreal on work in connection with this office. Trade is slack, and no immediate prospects of anything better. Railroad employes on short time and contract shops doing very little work. With the result that a number of our members are idle.

Organized labor was well represented in the Labor Day parade at Montreal. During the current year several new crafts had been organized, which lengthened the line of the parade on Labor Day. Fine weather prevailed throughout the day, and the picnics and games were well patronized.

On the 10th I went to Joliette to have a meeting with the members of Lodge 604, as there were some matters in connection with the lodge that had to be attended to. From Joliette I returned to Montreal, and from the latter place I went to Ottawa to take up some matters with the Departments of Railways and Canals and the Naval Department.

September 15 finds me in Ottawa and leaving for Hamilton, and other points west thereof. I am,

Yours fraternally,

J. P. MERRIGAN,

Third International Vice-President.

REPORT OF FOURTH INTERNATIONAL VICE-PRESIDENT WEYAND.

Dear Sir and Brother:

The following is my report for the month of August:

At the conclusion of my last report I was in Baltimore, Md., carrying on an organizing campaign in the interest of Lodge No. 193. On Sunday morning August 1, I received a call by phone to come at once to the home of Mr. E. Crowe, No. 1645 Belt Avenue, City of Baltimore. On my arrival I was informed that a brother member by the name of J. A. Kilcullen had died at the home of Mr. Crowe. After getting whatever data I could in connection with his standing from Mr. and Mrs. Crowe I went to the home of Secretary Chaney of Lodge No. 193, and advised him to get in touch with the officers of Lodge No. 193 and arrange for a committee to assist in arranging for the burial of the deceased brother, also had considerable correspondence in connection with the death claim, and made many trips to the home of Mr. Crowe.

On August 4th, I attended the regular meeting of Lodge No. 193, and requested the co-operation of our members in order to get the unorganized boiler makers and helpers of the contract shops and ship yards organized. I also continued my trips to Fairfield to keep in touch with the work being erected at the refinery. Made several trips to the Curtis Bay as we have information that a large distillery is about to be erected within the next few weeks which will mean considerable work for our members. About August 12th, I received a telegram from the International President's office that the system federation of shop trades with their representatives were going to meet the management on August 16th, and for me to arrange my work in Baltimore so that I can be in Albany to assist the men on the Delaware & Hudson Railroad with a new agreement. On August 15th, I went to Albany, N. Y. The following week we had regular meetings with delegates representing the shop trades on the D. & H. R. R. and drew up a new agreement, presented same to the management and went into conference with the superintendent of motive power on Wednesday, August 18. We found from the beginning of our conference with the officials that they were opposed to giving an increase in wages at this time and had prepared a great amount of data to prove that the D. & H. was paying better wages than the roads running parallel with them. After several days in conference with Mr. Manning, superintendent of motive power, on the wage question, Mr. Manning informed us that unless the men on the system withdrew their demands for an increase in wages that he could not go any further in the matter and that we had a right to appeal to their general manager, Mr. Sims. The question of an increase was then submitted to the delegates of the federation and discussed and taking into consideration all data and facts in connection with the money question on

the D. & H. R. R., the delegates decided to drop the money question for the time being. Owing to the fact that they had received an increase in wages every year the last four years it would be good policy to use good judgment and endeavor to get a good set of working rules at this time. On August 20th I was requested to attend the regular meeting of the machinists of Green Island and explain the situation on the D. & H. R. R., relative to the wage question. Had a very large meeting and in the absence of their representative who had to leave for a few days on other business, I endeavored to explain to them the situation as I saw it, and gave them all the information necessary to convince them that it was good policy to drop the wage question at this time. We then went back to Mr. Manning and informed him that the men would agree to drop the wage question, provided they could get satisfactory shop conditions. After a great deal of discussion on the working conditions, I feel the men got a very good working agreement and will have a better opportunity to get an increase in wages one year hence. We signed up with the management the following Monday, which was August 23. The same evening I attended a special meeting of Lodge No. 173 of Green Island and the largest point on the system, and I may say the boiler makers and helpers have one hundred per cent organization. We had a very good meeting and I explained in detail the settlement made on the system which was satisfactory to the men. The following day I returned to Baltimore to again take up the organizing work in the interest of Lodge No. 193. August 30 I went to Fairfield to look up several delinquent members and arrange to send five card men to a job which was reported to me.

Before closing my report for this month I may say there is lots of work to be done in this part of the country and I trust in due time our Brotherhood will be in a position to put more organizers in the field in order to build up a very large membership in the near future.

Trusting this is satisfactory and with best wishes and kindest regards, I am,

Yours fraternally,

LOUIS WEYAND,
Fourth Int. V.-P.

REPORT OF SIXTH INTERNATIONAL VICE-PRESIDENT DOWD.

To the Officers and Members of the Brotherhood, Greetings.

Following is my report from April 15th to September 12th. In Port of New York attending to matters in the interest of the Brothers of District No. 2. Visiting the various shops and work under erection in the buildings and in the fields. I visited the Edison Co. plants seeking information in regard to some tanks this company was having erected at Birmingham, Ala. I did not get this information requested by Brother Carmack of Lodge No. 4 as it was impossible to get same. Also had conferences

with Mr. Hunter, representative of the Metal Trades Association, in regards to getting an agreement with his association.

Also visited work under construction at 59th St. Power House and the B. R. T. Power House at Brooklyn, N. Y.

Visited Iron Steamboat shops and got promise from some of the men employed there that they would get re-instated in Lodge No. 21.

Also made visits to Newark, N. J., and visited the boiler shops in that city.

Went to Waverly, N. J., to look up some tank work there.

Attended meetings of Lodge No. 176 at Elizabeth, N. J.

Also visited tank job being erected by the R. D. Wood Co. at the Standard Oil plant at Bayonne, N. J.

After talking with the foreman in charge of this work, trying to get him to pay the prevailing scale of wages and grant an eight hour day, as this work was being erected under open shop conditions, nine hour day and wages from \$2.25 to \$3.75 per day. The foreman requested me to visit their home office at Camden, N. J., which I did but could not see the general manager as he was out of the city.

Also located a big tank job at the sugar house in Brooklyn which was to be done by the Lebanon Steel Works, also located a tank job this company was erecting at Shadyside, N. J., with non-union men and working nine hours and a half a day, paying \$2.75 for boilermakers, \$2.00 for holder-ons, and helpers. I stopped these men and after a conference with the foreman placed members of our organization on this job at \$4.25 for boilermakers, \$3.50 for holder-ons, and helpers, and eight hours a day.

I had a conference with Seemon and Wenzell Welding Company in regards to men in their employment who were members of Lodge No. 163 and who were in arrears for dues. Mr. Seemon assured me he would attend to this matter.

I made a trip to the Northport Power House at Long Island and located a large steel stock which was to be erected by the Connery Boiler Works of Philadelphia, Pa.

I also had a conference with the management of the Mexican Petroleum Company at their office in New York. This company is to erect a new plant at Warners, N. J., which is expected to start next fall and several tanks and stills and condensers are to be erected as from the information I have this is to be a new refinery.

I also attended meetings of Lodges 16, 21, 45, 163, 176 and 200.

May 16th—June 15th.

Visited the office of District No. 2 daily.

Visited a job at the power house at Marion, N. J., also Tiejn and Langs dry dock at Hoboken, N. J., and Fletcher Boiler Works and visited several buildings looking up work that belonged to our organization and placing our members on same.

May 24th. Left New York for Albany, attended a conference of the Executive

Board of the New York State Federation of Labor, by orders of Vice-President Hinzman. President Gompers was also present at this conference. The purpose of this conference was to get the views of the various organizations as to the changes desired in the State Constitution.

May 25th. Left Albany for New York.

Visited the office of Bartlett, Haywood Company in regards to repair work in Brooklyn.

Visited McWilliams dry dock at Staten Island and the Verdons ship yard, Staten Island Shipbuilding Company, and talked to the men employed in these shops in regards to getting re-instated in their respective lodges. Also attended regular meeting of District No. 2.

I also visited various shops in the City of New York, Brooklyn, Greenpoint, Hoboken, Newark, N. J., and Jersey City, talking to the delinquent members in regards to them being reinstated. I also collected some reinstatement and initiation fees and held a meeting of boilermakers and helpers employed at the Standard Oil Company at Bayonne, N. J., in regards to organizing the men of our craft employed by the above company.

June 14th. Left New York for Boston, Mass., at the request of Lodge No. 585 and attended a mass meeting held by the Metal Trades Council of that city for the purpose of trying to organize the unorganized men who are employed in the metal trades industry.

They had a very nice meeting for the first one and I believe meetings of this kind will do some good. The following speakers addressed the meeting: John Connolly, B. 9 of the Machinists, Frank Tully, president of the Metal Trades, Representatives of the Engineers and the Sheet Metal Workers, Brother Dan Generson of Lodge No. 585, Brother Scott, I. D. O., and myself.

June 16th. Left Boston for Providence, R. I., in company with Brother Chas. Scott, I. D. O., we visited the P. I. W. tank job and talked with the men working there and informed them that we would arrange a meeting for them. Also talked with the foreman in charge of this work, Mr. Jack Weaver, then returned to Boston.

June 17th. Went to Providence and visited the jobs being erected by the P. I. W. Company and requested all the men to attend meeting which was held on this date. Brother Scott and myself addressed the meeting which was attended by twenty-eight boilermakers and helpers, some of these men had paid up cards and some were suspended members. After talking the situation over with them and giving them the full particulars of the battle members of our Brotherhood were fighting against this company in the Oklahoma oil fields we got them to strike the two jobs being erected by this company that night. We then returned to Boston.

June 18th. Attended a conference at Boston with the representatives of the Railway

Department of the A. F. of L., who were at Boston. We talked over matters pertaining to the N. Y. N. H. and H. R. R., Boston and Maine and the Maine Central Railroads.

In the evening I left for New York.

June 19-20. In New York. Visited office of District No. 2 and some of the shops.

June 21st. Left New York for Middletown, N. Y. Attended a meeting of the N. Y. Q. and W. Federation. Vice-President Conlen of the Machinists, Vice-President Tobin of the Blacksmiths and I. O. D. Brother Collins Brotherhood of Carmen were present at this meeting. After this meeting we had a conference with the following officials: Mr. Florie, superintendent of Motive Power, Mr. Pohlman, M. M. and Mr. Mitchell, M. M., and opened up negotiations for a new agreement and a general increase of 5c per hour for all crafts.

Brother Chas. Pollock of Lodge No. 400 and Brother Julius Schraft of Lodge No. 396 and myself represented our Brotherhood.

After going over the agreement of the machinists, blacksmiths and boilermakers, Mr. Florie refused to consider the agreement of the Brotherhood of Carmen claiming he had just signed up an agreement with the railroad workers covering the car department, but we got him to agree that if we could show him that the Brotherhood of Carmen represented the majority of men employed in the car department that he would repudiate the agreement signed with the railroad workers. After these conferences we held a meeting of the Federation and decided that the delegates return home to their respective points and canvass the men in the car department to ascertain if the Brotherhood of Carmen had the majority of members.

June 23rd. Left Middletown for New York.

June 24th to July 2nd. Found me at New York visiting the office of District No. 2 daily visiting the shops and works under erection. Also attended meeting of Lodge No. 163; visited sugar house job in Brooklyn where the Lebanon Steel Works are erecting sixteen crystalizers. Talked with men on the job also foreman, Mr. Joe Roberts of Baltimore. Also visited shops at Newark, N. J.

July 3rd. Left New York for Philadelphia, Pa., to meet Vice-President Johnson of the Structural Iron Workers. I met Brother Napier, B. A. of Lodge No. 341, and he gave me full particulars of the work the iron workers were claiming and also informed me that Vice-President Weyand had been in Philadelphia, Pa., trying to locate Vice-President Johnson. I had a talk with Brother M. Canaan, B. A. of the Structural Iron Workers and he did not know where I could locate Vice-President Johnson. I then returned to New York.

July 6th, 7th and 8th. Visited office of District No. 2. Made a visit to Orange, N. J., also Patterson, N. J., in company with Brother Kenneally of Lodge No. 16 trying to locate some work that we were informed was being

erected in both cities. I also attended a regular meeting of District No. 2, and owing to the condition of the various lodges in the district the delegates decided to disband the district lodge temporary, which was done.

July 9th. Left New York for Middletown, N. Y. Attended conference with the officials of the O. & W. Railroad and the vice-presidents who participated in the former conference for the new agreement. After we had Mr. Florie approve of the agreements with the exception of the increase of wages asked for and he also agreed to repudiate the agreement he had with the Richardson's organization and post a set of shop rules which would govern all men employed in the car department. We then requested him to arrange a conference for our committee with Mr. Kerr, president of the O. & W. Railroad, which he did, and we took up the question of increase in wages with Mr. Kerr at his office, New York City.

July 12th. Mr. Canfield, general superintendent of Motive Power, was with Mr. Kerr when we met him and after we had discussed the question of an increase in wages for the men the best we could get Mr. Kerr to do was to agree to have Mr. Florie adjust the rates of wages of the men of the various crafts at the different points this proposition we informed Mr. Kerr we would put up to the men and if they accepted it we would then notify Mr. Florie and arrange for the adjustment of rates.

July 13th. Left New York for Norwich, N. Y., with other officers. Held a joint meeting. Vice-President Tobin who was chairman of our committee placed Mr. Kerr's proposition of an adjustment of rates with some changes in the agreement before the men and the proposition was accepted unanimously.

July 14th. Left Norwich, N. Y., for Middletown, N. Y. Held a joint meeting same as we held at Norwich, N. Y., and Mr. Kerr's proposition was accepted by the men employed at the Middletown shops. We met the officials in conference July 16th.

Those who were present were Mr. Florie, superintendent of Motive Power; Mr. Daly, M. M., Norwich, N. Y.; Mr. Berry, M. M., Mayfield, Pa.; Mr. Mitchell and Mr. Pohlman, M. M., at Middletown, N. Y. After discussing the adjustments in wages which some members of our organization were benefited by an increase in wages from 2c an hour and 3c an hour. Members of the other organization affiliated with the Federation were also benefited. Each committee signed up agreements for one year with the understanding that if conditions warranted a general increase in wages within ninety days that we could serve notice on Mr. Kerr who would gladly open up agreements. Copy of this agreement will be found in this issue of our Journal. While at Middletown I attended a regular meeting of Lodge No. 400. I also visited the O. & W. shops and talked to a boilermaker employed there in regards

to him becoming a member of Lodge No. 400, which he promised me he would.

In the evening of the 16th left Middletown for New York.

July 17th-31st. Found me working in and around District No. 2, Port of New York, visiting the shops and tank jobs under erection and visiting the buildings where our men are employed. Also visited the office of District No. 2 daily. Made several trips to Bayonne, N. J., where the employes of the Standard Oil Company were on strike for a general increase of fifteen per cent. There were about three hundred boilermakers involved in this strike. I tried to organize these men but because of the striking employes returning to work and accepting the companies proposition of an increase from five to twelve per cent, it was impossible to organize these men but some of them, I am glad to say, became members of Lodge No. 607. On July 23rd I installed the officers and obligated members of Lodge No. 607 of Bayonne, N. J., with a membership of thirty-eight, twenty-seven boilermakers and eleven boilermakers' helpers. While holding meetings with the above members of No. 607 we elected temporary officers at one of the meetings and these brothers were all employed by the Standard Oil Company at Bayonne, and am sorry to say they were all discharged, but what else could be expected from the officials of this corporation; and I am glad to report that these brothers secured employment in other shops in this district, and were elected permanent officers of this lodge and there is a great deal of credit due to these brothers for the way they worked to organize Lodge No. 607 in the city of Bayonne.

I also want to thank the members of Lodge No. 176 of Elizabethport, N. J., who assisted me in the installation of officers. I also visited the Warren City tank job at Edgewater, N. J., also visited the shops at Newark, N. J. Attended a meeting at Van Ness, N. Y., of the Electrical Workers at the request of Brother Henderson of Lodge No. 281. Attended meeting of Lodge No. 21. Visited Bartlett, Heywood Company's jobs at 45th St., 65th St. and 207th St.

August 1st. Left New York for Boston, Mass., by request of I. D. O. Brother Chas. Scott.

August 2nd-6th. Found me at Boston assisting Brother Scott and our members who have a tank job tied up at the Boylston Brewery at Jamaica Plains. This Brewery is owned by a Mr. Heffenreifer and the brewer's architect gave a contract for a large tank to the Daniel Russell Boiler Company, who did not employ any members of our organization and who is considered an absolutely unfair shop and Brother Scott refused to permit this company to install this tank in the above named brewery. We had a conference with Mr. Smith, attorney for Mr. Russell, but got no satisfaction from him. We also had conference with Mr. Heffenreifer. We made the following proposition to the Daniel Russell Boiler Company, that

if he would sign an agreement for one year to hire members of our Brotherhood, we would then arrange to adjust the trouble on the Brewery job. I also talked this matter over with Brother Thos. R. Keenan, president of Lodge No. 431 and Brother Hansen, treasurer of Lodge No. 431. I also attended a regular meeting of Lodge No. 585 with Brother Scott and discussed this situation with the members of this lodge. Nine new members were obligated at this meeting and Lodge No. 585 is progressing. Brother William McNabb is B. A. for this lodge and is doing very good work. On the evening of the 6th, left Boston for New York.

August 7th-11th. Found me at New York visiting the shops in District No. 2. Also visited tank job being erected by the Graver Tank Company at Jersey City. This was a strictly union job. Mr. Schumacher was foreman of this work. Also made a trip to Dunnellen, N. J., with a brother member to look up a tank job that I was informed was to be erected at this city. We located a small job that had recently been finished by a Philadelphia company.

On the evening of the 11th, left New York for Boston for the purpose of attending a regular meeting of Lodge No. 431, which was held on August 12th. Brother Scott, I. O. D., also attended this meeting. We discussed the tank job at the Heffenreifer Brewery and the members of this lodge promised us they would not work on this tank. While at Boston Brother Scott, Brother McNabb, B. A. and myself done everything within our power to try and straighten out this situation and inasmuch as Brother Scott has been in charge of situation in Boston I left this matter in his hands.

On the evening of the 17th I left Boston for New York.

August 18th-31st. Found me in Port of New York visiting the various tank jobs under erection and the various shops both marine and contract, talking to delinquent members, prevailing on them to get reinstated in the lodges they were former members of, and I got the promise from several that they would get reinstated, and I am also glad to report that all the members of the various lodges in the Port of New York are working full time and I hope that this will continue as our members have lost considerable time during the past winter. Also visited Public Service power house job at Harrison, N. J., and arranged with the companies who employ our men to pay 20c a day car fare to our members who come from New York, and 10c a day who come from Newark, N. J. Also visited Thompson Press Company at Long Island and stopped four men who were working there for the W. and A. Fletcher Company of Hoboken, N. J., on a repair job. These men were receiving \$3.25 a day for boilermakers and \$1.75 a day for helpers. I had a conference with Mr. Andrew Fletcher and after talking the matter over he agreed to pay these men the outside scale of \$4.25 for boilermakers and \$3.50 for helpers, from the time they started

on the job. I then informed the men to this effect and they returned to work the following morning. I also went to Empire Oil Company plant at Long Island, the P. I. W. Company have one tank to erect there but the iron is not there yet. Also made a visit to Peekskill, N. Y., to try and locate a pipe line job, but was unable to do so as the brother who informed me of this job must have been misinformed himself. I also attended a regular meeting of Lodges No. 45, No. 163 and No. 176.

Also met President Franklin and Brother Scott, I. O. D., at the Continental Hotel and we discussed the situation of the New England states in regards to our Brotherhood. I also visited tank job at the Texas Oil Company at the request of Lodge No. 607, and talked to Superintendent Mr. Wissner, in regards to the grievance the members had and were on strike. Mr. Wissner wanted the men to work all day on Saturday. The rules of this District are that if our members work on Saturday afternoon they must receive double time. This Mr. Wissner would not pay. Brother Martin Gallagher of Lodge No. 607 is the steward on this job and after he, Mr. Wissner and myself had a conference, superintendent agreed to wire office of Ryder Conley Company, Pittsburgh, Pa., who is doing the work and on receiving reply promised to advise us.

On the 31st, President Franklin and myself went to New Haven, Conn., and addressed an open meeting of Lodge No. 61, which was well attended, and I am satisfied that the members of Lodge No. 61 were well pleased with our visit.

September 1st. Returned to New York. Went to Bayonne, N. J., to the Texas Oil Company. Met Mr. Wissner of the Ryder Conley Company and informed me that he was going to grant the half holiday on Saturday and advised all men to return to work.

September 2nd. Received wire from President Franklin to return to New Haven, Conn., which I did and attend a Federation meeting of the N. Y. N. H. & H. R. R. shop employes. The committee had a conference with Mr. Weldon of the Mechanical Department. Mr. Wiley, vice-president of the N. Y. N. H. & H. R. R. At the meeting held after the conference the committee reported that Mr. Weldon and Mr. Wiley requested them to wait a few days and after they had made an investigation they would write Brother Henderson, secretary of Federation, and advise him as to what date they would hold their next conference. The following Vice-Presidents, Conlon of the Machinists; Ryan, Sheet Metal Workers; Bolon, Blacksmiths; Knight, Brotherhood of Carmen, and myself attended the Federation meeting. In the evening left New Haven for New York.

September 3rd to 12th. Within this time I visited several shops in District No. 2, Port of New York, trying to organize the unorganized men employed in these shops and I am glad to say I am making some progress and expect to do better. Visited Power House job at Harrison, N. J., and appointed

Brother John Doyle steward of this job. I also attended special meeting of Lodge No. 16 and Lodge No. 21. Visited tank job Empire State Dairy Company. Also visited office of District No. 2 daily. Visited Bartlett Haywood job at Flushing, L. I., where they have a one million gas holder to build. I placed two stewards on this job at once. Also visited B. & H. Company jobs at W. 65th St. and W. 45th St., and appointed stewards to look after the interests of our Brotherhood on this work. Also attended meeting of the Hudson County Central Labor Union in company with Brother Kenneally. Also attended regular meeting of Lodge No. 607 at Bayonne, N. J. This lodge is progressing nicely; seven new members were initiated. I also wish to report that Standard Oil Company has posted notices in all of their refineries in New Jersey that on September 15th all employes will be given eight hour work day without any reduction in pay. This proves that the recent strike in Bayonne, N. J., at the Standard Oil Company plant was a great help in bringing about the above concessions. The Bartlett Haywood Company are also erecting a gas holder at Hempstead, L. I. and the Dover Boiler Works have several tanks to erect in Park Place, Newark, N. J., this work will start the latter part of this month. The Mexican Petroleum Company's new plant at Warner, N. J. There are several tanks to be erected here as above stated in my report. I am advised that this work will start about the 15th of October. There is, at the present time, quite some work in the marine and contract shops in the Port of New York and we are doing everything to take advantage of this trying to build up and strengthen our organization in this district.

This concludes my report to September 12th, and trust it will be interesting to the rank and file of our Brotherhood. With best wishes and kindest regards to one and all, I remain,

Yours Fraternally,
JOHN J. DOWD,
Sixth I. V. P.

REPORT OF EIGHTH INTERNATIONAL VICE-PRESIDENT JOS. P. RYAN.

Editor Journal:

At the conclusion of my last report, I was engaged in assisting our members on strike at New Orleans, La., in the contract shops, which has been in effect since July 29, 1915. From August 16 to 31 my time was spent in assisting our members on strike, attending meetings daily, also regular meetings of Lodges No. 37, 206 and 442, Metal Trades Council and Central Trades and Labor Council. In connection with above assisted by the local officers, I made several attempts to secure a conference with the New Orleans, Metal Trades Association through communications, to which I received one reply of an evasive nature, and unsatisfactory. Owing to the fact that the president of the N. O. M. T. Association has been out of the city, I am advised no definite action was taken

in regard to our requests for a conference.

August 31, I received two telegrams requesting me to come to Baton Rouge, La., at once. I wired Brother Hinzman for instructions as the newspapers reported a strike of our members at Baton Rouge, La. On that date Brother Hinzman wired me to go at once to Baton Rouge, La., and take charge of the situation. I done so, arriving there Wednesday, September 1. I found that the boiler maker foreman had discharged four of our members claiming they were laying down on their work. He was demanding 275 seven-eights machine drove rivets for a day's work. The work in question was being done on stills under day work arrangement. Two men on a riveting machine. I am advised that our members are handicapped in performing this class of work, as they must build their own scaffold and considerable time is consumed in so doing. Also in fitting up, laying up the iron and preparing the work for riveting. The four men in question have been employed at the refinery for a long time. The youngest in service being six months, the oldest in service five and one-half years. All members of Lodge No. 582.

The four men were discharged Tuesday morning, August 31, shortly after 7 a. m. A committee took the matter up with the officials and the general manager, Mr. Weller, requested two days' time to adjust same. This reply was not in accord with the demands of the men who wanted the four discharged brothers returned to work at once and at 10:30 all of the men walked off the plant, 312 all told. Of this number 100 are members of Lodge No. 582. I attended a special meeting of the strikers Wednesday evening, September 1, at the city hall. Open session, owing to the fact that two-thirds of the men involved were not members of our organization. I arranged with the men for a joint committee and after adjournment I held a regular meeting with our members of Lodge No. 582.

Thursday morning, September 2, the joint committee and myself made arrangements for a conference with General Manager Mr. Weller. He declined to meet with me and in order to place no obstacle in the way of a settlement I agreed to remain off the committee when in conference. The company issued a statement that if the men were not at work Thursday morning, September 2, the plant would be closed. This was not done, however. Thursday evening the joint committee met General Manager Weller, Secretary-Treasurer Gordon and Mr. Moreno, attorney for the company, at the Istrouma Hotel, but were unable to make a satisfactory adjustment. Upon reporting to me of their efforts and being divided as to opinion, I dictated in writing a question as to the four discharged members being returned to work.

Two members of the committee returned to Mr. Weller, but his reply was not satisfactory, as he took the position that their

STRIKE ADJUSTMENT COMMITTEE, BATON ROUGE, LA.
Standing, left to right—C. D. Wolff, C. J. Rupp, Geo. A. Wills,
Sitting, left to right—Robt. Phillipa, Dudley L. Weber, Chairman, E. V. Acosta.

cases was a matter that must be left to the company for adjustment. In connection with this he requested that the committee be given full power to act as he had full power to act for the company. On Friday, September 3, at an open meeting the committee reported and their being a sentiment in favor of returning to work, a secret ballot was taken, after considerable discussion. Mr. Weber argued for the return of the men, myself arguing for a rejection of the company's proposition, which I claimed unconditional surrender, and that better concessions would be secured by remaining firm and continuing the strike.

I am pleased to state there were 216 votes cast. We agreed that plain majority would govern. Open meeting, all strikers having equal voting power, organized and unorganized. Tellers and a judge were selected. President Kidd of Lodge No. 582 as judge. Mr. Weber and myself as tellers. The result of the vote was 76 in favor of returning to work under the company's proposition and 140 against and in favor of remaining on strike until more satisfactory concessions were granted. I then submitted in writing two propositions for settlement and the committee returned to Mr. Weller with same and having full power to settle on either proposition. Friday night, or rather 1 o'clock a. m. Saturday, the company posted a notice that beginning September 15, 1915, the refinery would be placed on the eight hour basis with no reduction in wages. The process men to work three shifts, 7 to 3, 3 to 11 and 11 to 7 o'clock, instead of 12 hours as is the present custom. Just prior to this notice being posted a meeting of the process men were held and I addressed them on organization. Tentative plans were agreed on to bring this about. I had also wired machinists' and blacksmiths' headquarters and Brothers Flanagan of the Blacksmiths and McMahon of the Machinists were enroute to Baton Rouge.

On Saturday, September 4, the joint committee again met with General Manager Weller and proposed to discuss the two propositions for settlement. He asked the committee if they had full power to act. They advised him they had as far as they were instructed. Mr. Weller declined to discuss the matter further unless committee were fully empowered to settle the trouble. Again the committee endeavored to get Mr. Weller to permit me to be present, calling his attention to the fact that the company was represented by legal counsel. Mr. Weller refused to meet with me, but agreed to omit Mr. Moreno from the conference, or to allow the committee to have legal counsel with them. At Saturday's meeting, committee reported and in order to remove all obstacles, I recommended to the meeting that committee be given full power to settle with Mr. Weller, inasmuch as he had full power to act for the company. This was done. Nothing was done Sunday and on Labor Day the committee again met with Mr. Weller and Mr. Gordon at the Istroma

Hotel and were in conference three hours. I had previously instructed the committee to stand firm on the four discharged men, as all other grievances were to be adjusted upon the return of the men to work as agreed by Mr. Weller and the committee.

At this conference it was agreed that the cases of the four men would be given thorough investigation by Mr. Weller and that they would be given a chance to appear before him and state their side of the trouble. All other grievances to be taken up after the men returned to work. The committee presented to Mr. Weller copies of agreements which our members enjoy at the Standard Oil refineries at Sugar Creek, Mo., and at Casper, Wyo. Mr. Weller has agreed to investigate same and we are of the opinion that similar agreements can be secured with Mr. Weller at Baton Rouge. Labor Day evening we again met at the city hall in open meeting. On motion the newspaper men were allowed to remain. The committee reported and I was asked to state my views as to accepting or rejecting the committee's report. Realizing the conditions under which the strike occurred and the fact that Mr. Weller had requested two days' time to make adjustment, which was refused him by the men, also the fact that our members had acted hastily and not in accordance with the laws of the Brotherhood in walking off the job, without due process in regard to strikes and owing to the fact that out of 312 men on strike only 109 were members of our organization and taking into consideration the concession granted by the company as to the four men discharged and the granting of the eight-hour work day with nine hours' pay, I recommended to the meeting that the committee's report be concurred in and that all men return to work Tuesday morning, September 7, 1915, and that all grievances be then taken up for adjustment with General Manager Weller.

This was unanimously concurred in and all men returned to work on Tuesday, September 7, 1915. I remained at Baton Rouge until Friday morning. On that date the four discharged members were returned to work by Mr. Weller. On Thursday evening, September 9, I attended a regular meeting of Lodge No. 582 and had the pleasure of obligating twelve new members. Prospects are good for one hundred new members and reinstatements. I requested a special dispensation from the Executive Council for a period of 30 days. Same has been granted Lodge No. 582. Here is what we have gained: Eight hours with nine hours' pay, making the hourly rate 53½ cents for boiler makers, 50 cents for riveters and 37½ cents for helpers. All grievances to be adjusted. Prospects of an agreement similar to Sugar Creek and Casper, Wyo., plants, and a greater organization at Baton Rouge, La. The strike was in effect six calendar days. Went into effect August 31, 1915. Settled Labor Day, September 6, 1915.

I desire at this time to express my appreciation through the Journal, to the men

at Baton Rouge, both members and unorganized, for the manly way they conducted their strike, and for their co-operation with me. I have never met a finer class of men. I also wish to thank the press of Baton Rouge, La., who have been unusually fair in presenting both sides of the strike to the public. I wish to thank Mayor Grouchy and his associate officials for the many courtesies extended, including the use of the city hall for our meetings. The Istrouma Hotel for the courtesy of the conference room, etc. Mr. Weber, who was chairman of the committee deserves the thanks of our entire Brotherhood for the manly and straightforward manner he co-operated with your International vice-president in bringing this to a successful termination. To him and his committee, I extend the thanks of the entire organization.

Brothers, in reading this report, I trust you will see the unusual circumstance. We have been engaged in many strikes during the life of our grand organization. Has there ever been a time when the union men of our movement have received such loyal support from the unorganized worker? The odds being two to one. Yet the unorganized men who struck August 31, at Baton Rouge, La., stood shoulder to shoulder with our members of Lodge No. 582 to right a wrong done four of our brothers, remained on strike with us and returned to work with us, united, bonded together to secure just treatment for union men, unjustly dealt with, firmly united in a COMMON CAUSE. Truly, organized labor's slogan—UNITED WE STAND, DIVIDED WE FALL, was made manifest at Baton Rouge, La., on last LABOR DAY.

On Friday, September 10, I returned to New Orleans and have been engaged assisting our members here since that time. With Brothers Flanagan of the Blacksmiths and McMahon of the Machinists, I have interviewed Mr. Stevans of the New Orleans Metal Trades Association as to securing a conference. We have also seen Mr. Dussell of the Dussell Iron Works. Prospects are that we will soon be granted a conference with the New Orleans Metal Trades Association to discuss terms for a settlement of the present strike here in New Orleans.

There have been NO DESERTIONS from our ranks since my last report and our meetings are well attended and enthusiastic. The members on strike are receiving regular strike benefits and the pickets are doing good work. One of our pickets was recently shot by one of the scabes, but not seriously wounded. We have notified some forty local lodges and district lodges by letter of our trouble here and we again ask that you assist the brothers of Lodges 37, 206 and 442 by keeping our members away from New Orleans and the contract shops. The strike is still on at Murphy's, Dussell's and the Johnson Iron Works in Algiers, La.

In conclusion, I desire to thank the Metal Trades Council, Central Labor Union and Brothers Flanagan of the Blacksmiths and McMahon of the Machinists for their assist-

ance and co-operation tendered your international vice-president, and trusting that my report will prove interesting to the rank and file and with best wishes, I am,

Fraternally yours,

JOS. P. RYAN,

Eighth I. V.-P.

New Orleans, La., Sept. 13, 1915.

REPORT OF NINTH INTERNATIONAL VICE-PRESIDENT SCHMITT.

Herewith submit a general resume of my work:

On March 1 left Louisville for Indianapolis, where I met Brother Frohlinger, and we took up with the officials of the iron workers the question of their members doing the tank work on the Ford Building, also an office building. We were informed that the men had been instructed to get off of the job, but refused to obey the orders, and we were informed that charges would be preferred against the local for insubordination, and seeing that there was nothing that could be done at this time in regard to this work, left for Lima, O., to take up organization work there with the men in the Lima Locomotive Works. After several efforts failed to get the men interested, on Sunday had a meeting of Lodge 259, at which several of the members who were delinquent agreed to pay up.

On the 8th left for Louisville, Ky., to attend a meeting of the Central Labor Council, at which the report of the executive board was to be made as to their findings of the charges against the business agent, who had advised a proprietor of a brewery that it would be all right for him to have boilers built by the Voght Machine Company, providing the same would be erected and installed by union men at the plant. I had secured an affidavit to this effect from the proprietor of the brewery, and other positive evidence, but in the face of this the business agent was exonerated by the executive board and was sustained by the council. The Voght Machine Company being one of the most unfair firms in the city of Louisville.

I then left for Alton, Ill., where I attended a meeting of Lodge 483. At this meeting the question of an agreement with the Wood River Refinery was taken up, and arrangements for a conference with the superintendent. At this conference a working schedule was agreed to, the same to be put into effect by letter from the superintendent to Lodge 483, effective April 1. Owing to the business conditions throughout the country we were unable to get an increase in wages, but were assured that just as soon as the business conditions warranted this would be taken up.

On the 18th left for Detroit, Mich., to join an organizing crew of the railway department to start to work to try to organize and federate the shop crafts on the Michigan Central Railroad. On my arrival met Vice-President Ames of the machinists, Vice-President Van Dornes of the black-

smiths, and Vice-President Ronemus of the railway carmen. We exercised every honorable means possible to get the men interested, and after endeavoring to hold several meetings in Detroit and Jackson we found that it was useless any further. The tactics employed by the company in getting the piece work installed caused distrust and dissension among the men, most of the men falling for the old game for which in time they will pay for dearly, and in the meantime the company will reap the benefit. The organizing crew, therefore, recommended that we be withdrawn from this system, it being the opinion of the organizing crew that from information at hand that the time was opportune to try and organize the B. & O. and B. & O. S. W. system. This recommendation was made to the department, and we received instructions to take up the work on this system. During our time at Detroit we learned that there was introduced in the state legislature a bill to increase the passenger rates. We had several conferences with Attorney Attenza, who agreed to get us a conference with Receiver King of the Pere Marquette R. R., who was the prime mover behind the railroad increase rate bill. We went to Lansing, Mich., the capital of the state, and through the efforts of Attorney Attenza we were promised a conference with General Manager Alfred. We returned to Detroit and prepared for this conference, which was to take place at 2 p. m. April 2, at noon, in an extra edition of a Detroit paper appeared an interview by Receiver King, vilifying us to the limit, which proved to us that we had been double-crossed by Mr. King. We then got out a circular letter to the public and one to all the Central Bodies and locals in the state, urging them to write and wire their respective senators and representatives to oppose the railroad rate increase bill. The letters were indorsed by the Detroit Federation of Labor, and through our efforts the bill was defeated by eight votes, which in figures given out by the officials of the Pere Marquette meant a loss of \$600,000 per year to this unfair road.

On the 9th I left for my home, and on the 12th received instructions to attend a meeting of the Nickel Plate R. R. shopmen at Conneaut, O., on the 13th. Vice-President Horn of the Blacksmiths, Vice-President Ronemus of the Carmen and Deputy Organizer Malloy of the Machinists also were present at this meeting, in which much interest was displayed by the men. I then left for Baltimore, Vice-President Van Dorne having preceded me there, where a meeting that had been arranged by the local men of the Mt. Clare shops had been arranged for the 12th. Vice-President Weyand being in Baltimore attended this meeting; also Vice-President Anderson of the Machinists, a call having been sent out for a meeting of the districts of machinists and boiler makers to be held in Baltimore, to take up

the Emerson system, which was being introduced in some of the shops on the system.

We held a joint meeting and informed the brothers of our plans of work on this system as to organizing a system federation, which met with their approval and assured us of their co-operation, and at this meeting formed a temporary federation. Brother Ronemus of the Carmen also was present at these meetings, and we endeavored to get in touch with the men of the various departments of the Mt. Clare shops, and in spite of the deplorable working conditions, the men did not have the moral courage to exercise their rights as American citizens, and we were unable to do anything in Baltimore, as hirelings of the company went among the men and threatened to discharge men who would attend a meeting, and spotters were around the hotel continually, and men would not come near us, and we decided to work the west end of the system and then return to the east end with an organization, if possible. In a few days we left for Cumberland, Md., to start work there.

While in Baltimore I attended meeting of Lodge No. 193 and assisted Vice-President Weyand in his work of organizing the men at Fairfield, where a new refinery is being built, and quite a number were added to the membership of Lodge No. 193.

On our arrival at Cumberland we proceeded to get in touch with the secretaries of all the locals on the system, sending them forms to fill out for information as to the number of organized men at each point; also the names of the unorganized. The brothers were prompt in getting this information to us, and as we received the lists of names we would send them literature explaining the workings of the Railway Department, and through this plan several lodges increased their membership, as well as new lodges being formed of the various crafts. Through our efforts, we were able to increase the general organization of the shopmen at Cumberland from 15 per cent to about 90 per cent in the face of the strenuous opposition of the company officials, the local of No. 332 being increased from 16 members to 46 members, there being five in the organizing crew, and we at times divided up and held meetings at Conneville, Pa., and Keyser, W. Va., and members were added to all the locals at these points, and as we had sufficient organization at Cumberland we organized a local federation, and we then moved to Keyser, where the largest car repairing shops on the system are located, and on account of the attitude of the company hirelings we were unable to hold any open meetings and were compelled to do work among the men individually and holding meetings with a few men outside of the shops in some vacant space, and special efforts on the part of the company were to keep the carmen from organizing, but the work is being

pushed as rapidly as conditions will permit, and soon hope to be able to visit all points on the system. We also held meetings with the men employed on the Western Maryland R. R.; also attended their system federation meeting and advised with them.

On August 19 I received instructions that if it was possible to proceed to Rocky Mount, N. C., to look after some affairs concerning Local No. 239, without jeopardizing our interests on the B. & O. for days, and as our work was in such shape I left for Rocky Mount after holding two meetings and seeing most all the brothers individually, was able to get the affairs of the local straightened out, and believe that the local will, under the guidance of its officers, do good business.

On the 21st received instructions to attend a mass meeting of the navy yard employes on the 22nd. I left Rocky Mount, Sunday morning, and attended this meeting, which was held in the opera house, and while the band played the house began to fill, and a fair representation of the 3,000 navy yard employes was in attendance. The following crafts had representatives present: Blacksmiths, machinists, boiler makers, carpenters, electricians, plumbers and Sec.-Treas. Berres of the Metal Trades Department. Brother Wilson presided over the meeting. He, in his able manner, introduced Mayor Hope of Portsmouth and the various representatives in turn, who addressed the meeting. Too much praise cannot be given the brothers of the various crafts for their untiring efforts in making this meeting a success, and the results of that meeting in arousing the spirit of organization that for many moons has lain dormant. Since this meeting the ship carpenters, asbestos workers, blacksmiths, riggers and two federal labor locals have been organized, besides added membership to the already organized locals. A meeting of the helpers in the boiler shop was held on last Monday evening, the 13th, and 18 applications were filled out and several more have been secured since, which will mean quite an increase to the membership of 57.

Attended meetings of Lodges No. 57 and No. 428, and pleased to note the progressiveness of the brothers and the manner in which they conduct their business. On account of the Norfolk Southern Federation meeting, did not get to attend a meeting of Lodge No. 298. On Labor Day the three lodges turned out in the Labor Day parade in Norfolk, each lodge having a float, and they made a fine showing and did themselves proud, and was very much pleased to be in line with them.

Upon instructions, I took up work in behalf of Lodge No. 428 that had some few weeks previous presented an agreement to the shop owners of the water front, with Brother Halstead visited all the employers and arranged for a meeting, which was arranged for Thursday afternoon. At the time

set for this meeting only four of the employers were present, and they would not enter into a conference unless all were present. It was agreed that they arrange a meeting, which they did for Friday evening. At this meeting not all were present, but those absent agreed to abide by what was done, and all that they would grant was an increase of 25 cents per day and to continue the present system of working double time for overtime, including holidays and Sundays. On account of having less than half of the shops organized, we were not in a position to force the issue, and the brothers accepted the increase with the intention of trying to organize these shops thoroughly so they will be better fortified the next time they go after an agreement. Also held meetings with men of the chippers, caulkers and fitters of the navy yard, endeavoring to get them interested in organization, and it is to be hoped that in the near future these departments will be thoroughly organized.

There is another feature that I feel I must not neglect saying something about, and that is the commissariat that is being conducted by members of organized labor of Portsmouth. This has been in operation for some time and has proven to be all that is claimed for it, and only members in good standing in their respective organizations can be served, and from information that I have been given, the brothers are able to save about 20 per cent on all purchases made, which amounts to more than twice the amount of dues paid per month in savings, and, further, they are able to get any line of goods that are manufactured bearing the label. If this feature was given more attention, it would be the means of reducing the cost of living, and further would be the means of maintaining and increasing the membership of organized labor.

This concludes my report up to September 16, and having completed my work here, will leave for my home, when I will again take up the work with other representatives on the B. & O.

Respectfully submitted,

J. F. SCHMITT,

International Vice-President.

REPORT OF INTERNATIONAL DEPUTY ORGANIZER JOHN DICK.

Dear Sir and Brother:

I am sending you a report for publication in our official Journal to give the rank and file an idea of the conditions in the Western country as I find them. I am very sorry to say that work has been very slack in California for nine months, and am glad to say it is getting better but very slowly, the only job of importance that has been going on has been at Martinez, where the Dutch Shell Company is building a new oil refinery. There are four companies doing the tank work at present—Lacy Brothers; Lewellen from Los Angeles; the Western Pipe and Steel from Richmond, working

nine hours, and the P. I. W. from Pennsylvania, who are working eight hours. It is very hard to get conditions that we ought to have, as there have been so many idle men around willing to do almost anything the boss wants them to do.

It was reported that I was going to cause a strike on all jobs and in a few days the scabs were coming in on all trains ready for the fray. I thought it would be very foolish to have any trouble, as I knew it would be only throwing a good many of our members out of work and have the scabs take their places. The jobs are wide open for men that will do a good day's work and then some, but you must not talk about the conditions; the boss will allow you to say, "I have a good job, also a good boarding house and the boss is a good fellow." He likes his men so well that he puts up beautiful sleeping quarters; he charges \$1.00 per day for board, and all he will ask you is to have your own blankets. I have seen as many as fifty of our members in Martinez out of work at one time; most of them broke, no place to go to look for work with any chance to get a job at anything; raining every day for weeks at a time. The men who had work were lucky if they had enough to get a shave after the boss got his board money. Lodge No. 317 was very good to the homeless brothers, as they spent \$50 on jungle feeds, also have a meal ticket at Tom Kenny's Hotel, the friend of the boiler makers. Any traveling brother can get a few meals, also one drink, if in good standing; all are made welcome.

Conditions in San Francisco are very bad, also, but picking up. Brother Bowser had his hands full looking after the traveling brothers. From what I hear, he has done good work. I find him a man who is willing to do all he can. I have known him to go out of the city when he thought he could do any good, and pay his own expenses.

Los Angeles is the worst place I have seen in regard to organized labor; all crafts much the same. There are a few good men in Lodge No. 92, doing all they can to better the conditions, but it's a hard proposition, as the workmen are in a peaceful slumber. I don't know if the German army could wake them up. The boss must be throwing gas in their faces when they leave the shops when their day's work is done, to keep them from thinking about their conditions until the whistle blows in the morning. It is very hard to get them interested in unionism.

I was ordered to go to Miami, Ariz., as Lodge No. 187 had considerable trouble with the structural iron workers. When I arrived in Miami I attended a meeting and I am glad to report the trouble was settled in favor of the B. M. & H. Before the meeting was over, the president wanted to know what my expenses were. I didn't know what they meant, but they soon gave me an education on unionism. They claimed as they sent for me they should pay the bill. I could

not see it that way, but I thanked them for their kind offer. I stayed in town a few days, investigating the work that had been done by the structural iron workers. I found they had done a good deal of our work; they had erected two large smokestacks; breeching for a battery of boilers; one water tower; also a few tanks; all of which should be done by members of our organization. I took the grievance up with their acting business agent and he agreed with me, and if the members will do as he thought they should, I look for more harmony between both organizations. It's hard enough to be fighting the boss, but when you have to fight your fellow man we might as well join the trenches and forget it until we are at peace with one another.

The members of Lodge No. 187 were very anxious that I should make a trip to all the mining camps to try and get the men interested in our organization. I went to all the places where I knew there were any boiler makers or helpers employed, and I found a good many ex-members who were only too willing to get reinstated; also a few young boiler makers who were very anxious to join our organization. I did good business and the trip was very successful. I received all the help I needed from the members, also the ex-members. I found conditions good, but I also found in some of the camps that the bosses are very bitter towards organized labor; therefore, I had to be very careful in what I did do. In one place the Mexican miners went out on strike for a raise in wages; the company promised to give them the raise if they didn't organize in that camp.

While in Arizona I found a good many boiler makers on the water wagon. I never saw one take a drink; never saw one throwing distress signals—something unusual for me. One old timer had two bank books. He told me he never had one before; another one told me that a few days after pay day were legal holidays for him, but now he has worked a few months, seven days a week, without missing one day, but at that I would not care to bring them in from Arizona into a wet state to work on a brewery if I was in a hurry to get the job finished, as they can tell some very interesting stories about the capacity they had for beer. I don't want anyone to think that I am preaching temperance, but what I saw in Arizona. I must say the dry proposition is a grand success for the working class.

I received a telegram from Brother Hinzman, advising me to go to Honolulu, as there was considerable work going on and having trouble on all jobs. The Standard Oil Company had built a few tanks, but were finished when I arrived. The company had sent four men from San Francisco, members of Lodge No. 317. They failed to get a C. C. when leaving Richmond; a committee from lodge 204 went to see if they were union

men and when told they were, they wanted to know if they had their C. C. with them. The men, or a couple of them, told the committee they didn't have time to get C. C. The members of Lodge No. 204 didn't think it was right for them to come to Honolulu the way they did. No one can blame them, for that; they are old timers and know better. Two of them were looking for me one day before they sailed to get due stamps. I wasn't in town. They started to see Brother Jones, secretary of Lodge No. 317, but I guess they made a few stops on the way—a boiler maker's fault—and failed to see him. Their intentions were all right. There was some trouble when the job started, as the boss wanted to pay them \$4, when the scale is \$5. It seems the boss told them he would pay the scale, the boss being a member of No. 317. The members thought there would not be any trouble in regard to the conditions. After working a couple of weeks he paid them at the \$4 rate. Brothers John Stack and Fred Douglas quit, but later went back to work at the \$5 rate; in the meantime they had sent for their C. C. and are still members of Lodge No. 204, as they got another job at Hillo, two months' work, \$5 per day. There is one thing I want to let all concerned know: That it's no fault of Brother Jones, secretary of No. 317, as some of them sent him money and he sent it back. At this writing everything is satisfactory.

The government is building a navy yard, including a large dry dock, a good deal of our work going on, but none of our members working on the job. A committee from No. 204 waited on the superintendent, and he told them he would give them the work and pay the scale. There wasn't any boiler makers idle, so it was impossible for No. 204 to furnish the men. The superintendent started to hire anyone that came along. At this time has seven gangs of machine riveters and one caulker. An organizer for the Structural Iron Workers has been here for a few months trying to get control of his work; they have built a few large buildings, including a boiler shop, machine and molding shop, etc., all up-to-date machinery. It looks to me as if there will be a few boiler makers employed when ready, but I think it will be some time before the shop will be running. Most of these shops were put up with cheap labor. A good many Japs were employed. The organizer for the Structural Iron Workers got busy and organized a good many of the handy men and claimed some of our work. The superintendent refused to deal with them. Now the job is unfair. This all happened before I arrived. Brother Lane and myself waited on the foreman, also the superintendent, to see if he would put some of the men to work, as there were a few idle. The superintendent told us to come back in a few days. The next day there was trouble; one of the unfair men got hit. They arrested the or-

ganizer. If they can put him away, I guess they will; but they haven't proved it yet. I and Brother Lane met the superintendent again and he was very angry on account of the trouble. He told us it was impossible for him to do anything until the case was settled.

The conditions for boiler makers are very good; as for the helpers, they are very bad, mostly natives; I find them a quiet race of people; some of them are very bright. What they need is education in unionism. I am trying to get the best of them in our organization, and the boiler makers in the shops are talking to them, so at the next meeting I am satisfied there will be a few for initiation.

I want to say for the benefit of the brothers in the States that the members of No. 204 are willing and doing all they can to get the helpers organized, also they are doing all they can to get control of the outside work in all its branches. It is very hard to get the men to fill up a job when it starts up such as a tank job, but I think No. 204 will be able to overcome it in the future. Brother Lane spent two weeks with me; every day he did all in his power to help me and give me some good information. I got here in time to attend a meeting where they had refreshments. Brother Tommy Murry thought he was making so much money that he invested in a house and lot, also a partner for life; he bought the beer, not in kegs but in bags. I thought it was coal they were bringing in. We all had a nice time. I wish them all the happiness, etc., but I hope he doesn't raise his boy to be a boiler maker.

The boys are getting ready to have a good time Labor Day and I believe it will be a grand affair, as at this writing there are eight boiler makers from San Francisco who were shipped down under very good conditions, first class passage, traveling time both ways; expect to be here a few months; all had clearance cards. They are a fine bunch of fellows and are having a good time.

I want to thank the officers and members of Lodge No. 204 for the good treatment I have received; also the brothers I have met in Arizona, also California.

Just a few words about myself. I am very glad to say I am a member of our organization for twenty-five years. I have paid all dues and assessments and I know it's the best investment I have ever made. I was always an organizer and I hope and intend to be one as long as I am able to get around. I would like to see more organizers in the rank and file; if the members would only do a little bit it would not take very long before we would have all the boiler makers, iron ship builders and helpers organized. Then we would be able to get what belonged to us.

With best wishes, I remain
Yours fraternally,

JOHN DICK.

Agreements

AGREEMENT BETWEEN THE SAVANNAH & NORTHWESTERN RAILROAD COMPANY AND ITS BOILER MAKERS AND APPRENTICES, MACHINISTS AND APPRENTICES, CARMEN AND APPRENTICES.

Rule No. 1. Nine hours shall constitute a standard day's work.

Rule No. 2. All time worked in excess of nine hours shall be paid for at the rate of time and one half. Sundays and legal holidays shall be paid for at time and one-half, when men are required to work. Legal holidays shall consist of New Year's, Washington's Birthday, Memorial Day, July Fourth, Labor Day, Thanksgiving Day and Christmas. When the shops are working short time the men will be paid time and one-half if required to work after bulletin hours.

Rule No. 3. If a mechanic is called to work overtime, he shall be paid not less than five hours, equal to three hours and twenty minutes straight time and shall only be required to do the job for which he was called.

Rule No. 4. Apprentices will not be sent out on the road to work unless accompanied by a mechanic of his craft.

Rule No. 5. When overtime work is required and the work is such that some mechanic of that craft is regularly assigned thereto or has commenced work thereon, this same man shall continue at or be called for this work when available.

Rule No. 6. General overtime will be divided as nearly equally as possible among the mechanics of that craft.

Rule No. 7. No mechanic will be laid off any hour of the regular time to equalize time on account of having worked overtime.

Rule No. 8. In case overtime work is required, the foreman in charge will give due consideration to men who may have sickness or important engagements and in such cases will try to afford relief.

Rule No. 9. When mechanics are sent out on the road to work they shall be paid at the rate of time and one-half from the time they are due to leave their home station until they return. They shall pay their own expenses. Wreck crew shall receive day's wages and expenses.

Rule No. 10. Mechanics attending court for the company will be paid a standard day's wage for each day away from their work and including Sundays and holidays and will be allowed \$1.50 per day for expenses.

Rule No. 11. Any mechanic or apprentice believing himself to have been unfairly treated shall first make an effort to have his grievance corrected by personal appeal to his foreman. Failing in this, he may present his case through the local representative to the master mechanic. Failing in this, he may have his case handled by a committee with the highest officials of the company.

Rule No. 12. No mechanic shall be discriminated against who from time to time represented the men on investigating committees or shop committees when duly authorized by the men.

Rule No. 13. There will be no objection to the committee, when adjusting a grievance, having present their chairman of Adjusting Board with the master mechanic, said chairman being an acceptable representative to the company. There will also be no objection to the chairman of the committee having a few minutes' conversation with the foreman or master mechanic in regards to the shop management.

Rule No. 14. There may be one apprentice in each craft for the shop and not more than one for each five mechanics employed.

Rule No. 15—Ice water shall be furnished during the entire day during such parts of the year as may be necessary.

Rule No. 16. Should a vacancy in a foremanship occur, it shall be filled by seniority from among the employes if competent.

Rule No. 17. Should a mechanic be discharged and afterward found to have been unjustly discharged he shall be reinstated and paid for all time lost.

Rule No. 18. Should it become necessary to reduce expenses, the time will be reduced until forty hours per week are reached. Any further reduction that may be necessary will be made by reducing the force, in which case the last man employed shall be the first one laid off. Men laid off shall be given preference in re-employment. When reduction is made the working hours will be reduced from the last hour in the work day. Vacancies occurring when working under reduced time may be filled by re-employing men laid off. Apprentices will be laid off to preserve the ratio.

Rule No. 19. Helpers will not be allowed to do mechanics' work.

Rule No. 20. Boilers will only be inspected by boiler makers.

Rule No. 21. Rates of pay shall be as follows:

	Per Hour
Boiler Makers	\$0.32½
Machinist35
Coach Carpenters27½
Car Inspectors27½
Car Repairers22½
Car Repairers17½

Rule No. 22. Above rules and regulations affecting shop mechanics effective March 15, 1915, and in vogue until September 15, 1915, a period of six months.

Signed: C. E. GAY, JR.,
V. M. P. & G. M., For Savannah & Northwestern Railway.

Signed: H. L. MORSE,
Chairman,
C. W. HODGE,
J. DARNSDORFF,
Committee.

AGREEMENT BETWEEN I. A. OF MACHINISTS AND HELPERS, B. OF BLACKSMITHS AND HELPERS, I. B. OF BOILERMAKERS, THEIR HELPERS AND APPRENTICES, AND THE NEW YORK, ONTARIO AND WESTERN RAILWAY.

Article I.

Nine hours shall constitute a day or night's work for all men covered by this agreement, except roundhouse men.

Article II.

Section 1. All overtime shall be paid for at the rate of time and one-half, this to include Sundays and all National holidays. National holidays to consist of New Year's Day, Washington's Birthday, Decoration Day, Christmas, and all those holidays in Pennsylvania observed heretofore shall be observed in future.

When a holiday falls on Sunday, the following day to be observed, this to include men working at night. Men detained one and one-half hours during the week (excepting Saturday) and on Saturday one hour after regular working hours, shall receive not less than five (5) hours for time worked up to three hours and twenty minutes. Men called after regular working hours shall receive not less than five (5) hours for all time worked up to three hours and twenty minutes.

Twelve (12) hours shall constitute a night's work for all roundhouse men. Men shall not be compelled to lose time to equalize overtime.

Sec. 2. An employees' bulletin board shall be erected in each department.

Article III.

There may be one apprentice to each shop regardless of the number of journeymen mechanics and not more than one apprentice to each five journeymen mechanics. The ages of apprentices shall be between the ages of sixteen and twenty-one years of age. The railroad company shall furnish proper opportunities for apprentices to serve varied and complete experience during their apprenticeship.

Article IV.

All employees and those depending on them for support will enjoy the same privileges in connection with free transportation that are granted to the Transportation Department.

Article V.

The company will in no way discriminate against any committeemen who from time to time are elected to represent them.

Article VI.

Sec. 1. Should it become necessary to reduce expenses, the present men shall be retained and reduction made in working hours until the hours have reached forty hours per

week. Should any further reduction become necessary, the forces shall be reduced and the last men employed shall be the first laid off. Laid off men shall be given preference of re-employment. Seniority to prevail. The company will not increase hours until all men laid off are re-employed, if available, same ratio of apprentices to be maintained. The company shall not increase the force until schedule of working hours are restored.

Sec. 2. Twenty-four (24) hours notice will be posted in shops and roundhouses of the company before any reduction in the force or hours become effective.

Article VII.

The mechanics sent out on the road shall receive full time and overtime according to regular hours at home stations, and in addition all necessary expenses.

Article VIII.

If circumstances require that the company shall reduce the regular working hours, overtime shall commence at the expiration of the hours designated by the company.

Article IX.

Sec. 1. A suitable place shall be provided in each department for drinking purposes and sufficient ice shall be provided for cooling same. All closets and pits shall be kept in a clean and sanitary condition. Also to have an opening at some convenient place to allow men to go to and from work.

Sec. 2. Five minutes shall be allowed previous to quitting time for purpose of making out time cards.

Article X.

It is understood that all the crafts at any back shop shall commence work at the same time, and all the crafts at the roundhouse shall commence work at the same time, but it is not necessary that the back shop and roundhouse start at the same time. This to apply to day and night shifts.

Article XI.

All men placed on a job paying a higher rate than his regular job for ten (10) days or longer shall receive the rate of pay of the higher rated job from the time of starting.

BOILERMAKERS' SHOP RULES.

Article XII.

Sec. 1. All work such as cutting apart, marking off, or laying out any work pertaining to steam, air, water and oil tight boilers and tanks, laying out and building up any sheet iron or steel gauge No. 16 and upwards, boiler inspection and testing, flanging, patching, riveting, chipping, caulking, electric and acetylene cutting and welding, putting in and taking out flues, taking out, tapping and putting staybolts and driving them, run all pneumatic hammers and do all drilling for patches, repair ashpan, remove and replace caps on flexible staybolts, ex-

cept the hoppers and cast iron work on ash-pans to remain the same as before; all the above work to be performed by boilermakers or apprentices. Spark arrestors to remain the same.

Sec. 2. One boilermaker and one apprentice or helper shall propel each long stroke pneumatic hammer in all riveting of rivets and bolts $\frac{1}{4}$ stock and upwards, on steam, air, water and oil tight work.

Sec. 3. All road work shall be done by boilermakers or flue rollers.

Article XIII.

The company shall not discriminate against any boilermaker or helper who from time to time represent other boilermakers or helpers as committeemen, and will grant them leave of absence, and will furnish them transportation over its lines should they be delegated to go before the management to adjust grievance. In the event of a workman having a grievance, he shall make an effort on his own part to adjust the same with his foreman, and in the event this decision is unsatisfactory, an appeal will be made through the shop committee to the succeeding higher official.

Article XIV.

An apprentice engaging himself to learn the boilermaker's trade must be between the ages of sixteen and twenty-one (21) years (except helper apprentices and their ages will be between sixteen and thirty) and shall serve a term of four (4) years of two hundred and ninety (290) days per year, and shall be given an opportunity to learn branches of the trade, and shall not be kept on any one class of work more than six months at any one time. At the expiration of this time, he shall receive the minimum rate of pay at the place of employment.

Boilermakers having served in the company's service three (3) months, or more upon leaving the service shall be given a clearance. Boilermakers' apprentices, completing a full term, or leaving the service by reduction of forces, shall be given a clearance. If within the first six (6) months an apprentice shows no aptitude to learn the trade, the company shall have the privilege of dismissing him.

Article XV.

Should a boilermaker, helper or apprentice believe he has been unjustly suspended or dismissed, he shall within five (5) days, in proper order, present his case to the company and if it is then found that he has been unjustly dealt with, he shall be reinstated and allowed full pay for time lost; grievances to be adjusted on the company's time.

Article XVI.

Sec. 1. Overtime to be divided equally between boilermakers and helpers, and a list to be placed in foreman's office. Men to take their turn in rotation as far as possible.

Sec. 2. Boilermakers working overtime shall retain their regular helpers.

Article XVII.

Fifty per cent (50%) of the apprentices are to be taken from the helpers who have been employed in the boiler shop for two (2) years or more. Helpers promoted to apprenticeship shall receive helper's pay for the first six (6) months, and if he shows no aptitude to learn, he shall be placed back in his former position. If retained as an apprentice, he shall receive two cents (2c) per hour increase for the following six (6) months, and be advanced each year two cents (2c) per hour until the end of four (4) years, and if retained in the service of the company, shall receive the minimum rate of wages.

Article XVIII.

Helpers and laborers shall not be permitted to do boilermaker's work or to be advanced to the detriment of the apprentice or boilermaker. Roundhouse boilermaker's helpers shall receive minimum rate of wages that is received by helpers in the boiler department.

Article XIX.

The apprentices rate per hour shall be as follows:

First year, 12c	Third year, 17c
Second year, 14c	Fourth year, 21c

After the expiration of four (4) years, they will receive the minimum rate of wages.

Article XX.

If any changes should occur in shop forces, the oldest men are to have the preference.

Article XXI.

Boilermakers who, by their long and faithful service in the employ of this company, have become unable to handle the heavy work to advantage, shall be given preference of such light work as they are competent to handle.

Article XXII.

These rules and regulations shall take effect July 16, 1915, and remain in force until revised. Should any change be desired by either the management or mechanics, thirty (30) days' written notice is to be given.

Article XXIII.

The minimum rate of wages for boilermakers shall be not less than 31c; no boilermaker to be employed for the minimum rate of wages. The minimum rate of wages for boilermaker's helpers shall be not less than 19c per hour.

Article XXIV.

The Representative of the International Brotherhood of Boilermakers, Iron Shipbuilders, and Helpers of America, will be recognized as committees by the officials of the New York, Ontario & Western Railway Company.

Correspondence.

Springfield, Mo.

Dear Sir and Brother:

I wish to write a few lines for publication in the Journal, on account of having been asked, with other districts and locals that have been receiving support from the Grand Lodge, by Local Lodge No. 25 of San Francisco, Calif., to contribute an article for this month's Journal, protesting against the way in which the Grand Lodge is using our money.

I am glad and take great pleasure in writing this article on the manner in which our International officers are handling the financial part of their business and keeping things moving along smoothly and nicely, regardless of the depressing conditions generally throughout the country. But I am afraid No. 25 will be disappointed in the few words I am saying, as I have no complaint or protest to make, as I and District No. 23 believe in living up to and abiding by our Grand Lodge constitution and by-laws, just as our International officers, by their actions, prove they do.

When you take into consideration the conditions of the country now and a year ago; see what our membership is now and what it was a year ago; also take note of the number of out of work stamps that have been purchased within the past year; the number of strikes that have been prevented by our Grand Lodge officers at points where there never has been a business agent, it seems to me we cannot help but take our hats off to our worthy International officers and congratulate them upon their ability to do the most good possible with the funds obtainable. I will also ask Lodge No. 25 to kindly look into the number of reinstatements that the International Deputy Organizers have received, as well as the number of agreements they have signed up, and the many grievances they have settled.

I believe in all of us living up to the constitution and by-laws that were made and adopted by delegates to the convention until we hold another convention, and I hardly think it practical, just because some individual or local is dissatisfied over the failure of getting some resolution through at the convention, that the whole organization should be disrupted, the Grand Lodge officers taken off their jobs, and the whole thing reorganized and rearranged, to please those who voted the minority vote at the convention. I am sorry No. 25 looks at this inconvenience to the few districts whose support from the Grand Lodge has been discontinued for two months, in such a light as to deem it necessary to write letters to all districts thus affected, asking for remonstrances. While District No. 23 appreciates the support coming from the Grand Lodge, we feel that our International offi-

cers are conscientiously using all moneys in a manner which they deem will do the most good to the largest number of the members of our Brotherhood, and we appreciate their position at the present time when funds are getting low, and will do everything within our power to help along the good work which they have been and are doing. We realize the fact that one good "boost" is worth a dozen "kicks" and District No. 23 would much prefer being placed in the ranks of the boosters than the knockers.

I will close by saying that my district intends to stand back of the Grand Lodge officers and give them every little boost they can, so long as they continue in the way they have been going, and I trust No. 25, after thinking over the question and considering it from every angle, will reconsider and come over and join the "boosters" ranks and help build up our organization and encourage our worthy superior officers.

Thanking you for the space you have given me, I am

Yours fraternally,
A. F. BINGHAM,
Pres. & B. A. Dist. No. 23.

Vinita, Okla.

Dear Sir and Brother:

In regard to the oil field strike in Cushing, Okla., last winter and the reasons that Brother Dixon gave in regard to drink being one of the causes for a whole lot of the trouble: That part is all so, but in regard to ignorance I might say that we had a bunch of brothers for officers that were supposed not to be drinking men. They made a new law every time they had a meeting, and in two weeks' time turned around and did the opposite and then, of course, the drink was the blame for the whole thing.

Now in regard to us drunks, myself included, I will say that when these men that don't call themselves drinking men were in Chicago and St. Louis working for about \$3.75 to \$4 per day, we drunks were riding from Oklahoma to Louisiana on freight trains, trying to get the wages up to where they are now, and what was the outcome? They got just as much benefit out of it as we did and are doing so now, which, of course, is their privilege.

Now let us take the mistake in regard to the coffee and food. If the coffee and food didn't suit, there would be a strike, and, of course, the drunks would have to do it, for the men that didn't drink were afraid to say a word, but when it was all over they would come and pat the drunks on the shoulder and say, "Good for you; we are getting better grub since we pulled the strike."

Now take it on the hand in regard to going on strike for overtime on a job. When

that would be done and they got it, we drunks didn't get any benefit out of it. We got fired and made it good for the brothers from elsewhere that don't drink at all. Now, Mr. Editor, I know just what I am talking about, for I was running a crew all last summer and have one now, and all good card brothers on it, too, and one more thing about them—they are all A No. 1 good boozehisters.

Hoping to see this in your next month's Journal, I beg to remain

Fraternally,

GEO. O'BRIEN, L. 592.

The barbecue consisted of 1,500 pounds of roast beef, one ox roasted on the grounds. The Fairbury Tea and Coffee Company served the coffee, using two hundred fifty pounds.

The speakers of the day were George W. Pring of Dea Moines, Ia., president and business agent of District Lodge No. 10, who spoke on labor to a crowd of 6,000 people. Brother Pring was also one of the judges of the floats and was instrumental in awarding the boiler makers first prize on the best mechanical float.

S. R. McKelvie, ex-lieutenant governor and

FLOAT AND GROUP OF THE MEMBERS OF LODGE NO. 439, FAIRBURY, NEB., LABOR DAY, 1915, WHICH CAPTURED FIRST PRIZE IN THE PARADE.

Fairbury, Neb.

Editor Boiler Makers' Journal,
Kansas City, Kas.

Dear Sir and Brother:

Inclosed you will find the picture of boiler makers' and helpers' float which captured first prize at the Labor and Fraternal Picnic, Labor Day, September 6, 1915.

The members of No. 439 all feel proud of the float and worked hard in the building and decorating of it.

The following members shown on the picture from left to right are: O. W. Newkirk, Floyd Ellsworth, Fred Cutbirth, P. F. Mad-den and B. Z. Millikan.

The fellow with the dog and cart shown in the picture has a sign on his back representing the machinists of Fairbury.

The parade was like a circus parade, a little late in starting and well worth seeing, with numbers of mechanical and fraternal floats, including horseback riders, clowns and funny stunts, extended for a distance of several blocks and was headed by the Fairbury Band.

publisher of the Nebraska Farmer, was the speaker for the evening program.

Hoping you will have space to publish this in the Journal, with kind regards, I beg leave to remain

Yours fraternally,

B. Z. MILLIKAN,
Secretary Lodge No. 439.

Deer Lodge, Mont.

Dear Sir and Brother: This is to inform you that our Vice-President Brother Frank Brown, received the sad news of the death of his dear mother who resided in San Luis Obispo, Cal. The death of Brother Brown's mother was a shock to him I am sure, as I am informed it was rather unexpected. The officers and members of Mount Powell Lodge No. 528 extend to Brother Brown their heartfelt sympathy in this his hour of sorrow.

Fraternally,

C. P. HOZIEA,
LAWRENCE DE PORTER,
Committee.

Shawnee, Okla.

Dear Sir and Brother: Allow me to present you some pictures of our Labor Day celebration in Shawnee, Okla., for the Journal. The pictures were taken by Brother Ira J. Hunt. The boilermakers, helpers and ap-

the boilermakers made a noise is putting it mild, they surely woke up the town. Next in line came the brothers in line of march in uniforms of dark pants, white shirts and black hats with badges and canes and they made a grand appearance.

A GROUP OF MEMBERS OF LODGE NO. 293, SHAWNEE, OKLA., IN LABOR DAY PARADE.

prentices with our Worthy President Floyd Ott, as marshal and Brothers E. C. Hall, L. W. Hanna, E. J. Vandever and Charlie Siler, as committee on arrangements. Our division consisted of Brother Warren Davis and G. C. Cooper, carrying Lodge No. 293 banner.

The night force of boilermakers and helpers followed in automobiles decorated with flags and bunting with Brother Ike Pasley at the wheel. The parade was a grand success.

After dinner we went to Benson Park

NIGHT BOILER MAKERS' LODGE NO. 293, SHAWNEE, OKLA., IN LABOR DAY PARADE.

Float with Brothers E. C. Hall, A. D. Ross, Jessie Logan, James Millet, Lew Hanna, Victor Perry, Harry Lindsay and Rivet Boy.

We had two gangs of riveters and one gang of caulkers, and Brother E. C. Hall operating actelyene welder and forge. A regular boiler shop on the float and to say

where there was all kinds of amusements and a basket picnic and fireworks at night and a sham naval battle on the river and all our members and families enjoyed the good time. After supper we gave a jitney ball at Chrisney Hall, which was something new for Shawnee and was a fitting and

novel entertainment to end Labor Day. The dance was participated in by many of the brothers, their families, sweethearts and friends. Each dance cost five cents and there was 30 dances and almost every dance called for an encore. Mrs. Brown at the piano and Mr. Cunningham, drummer furnished music for the evening. Much credit was due for the success of the affair to the entertainment committee, Brothers E. C. Hall, L. G. Hanna, Jas. Vandever, A. L. Horne and Floyd Ott. The brothers of Lodge No. 293 feel justly proud of the showing we all made in the day's celebration. United we stand and united we march in honor of Labor Day.

With best wishes, for our present and future success, I am,

Fraternally yours,
A. D. ROSS, S. 293.

San Francisco, Cal.

Dear Sirs and Brothers: At a regular meeting of Lodge No. 25, I. B. B. M. & I. S. B. of A., the following resolution was unanimously adopted; and an order was made that a copy of the same be sent to the Editor of the Journal, so that the same can be published in our Official Journal.

Whereas, our Executive Council has withdrawn the support of the Business Agents of the nineteen cities that had these Business Agents; and,

Whereas, in summarizing the expense account of the Second Quarter, 1915, we find that our International Officers, excluding the International Secretary-Treasurer has received the total of \$6,983.47, or an average of \$232.78 per month for each International Officer; and the International Deputy Organizers have received \$2,006.51, an average of \$222.95 per month each; and the Special Deputy Organizers have received \$375.49, making a full total of \$9,365.47 paid to these Officers in (3) three months; and,

Whereas, we find that the nineteen Business Agents received \$1,570.00 for three months, or an average of \$27.54 per month; and,

Whereas, these Business Agents can accomplish 100 per cent better results in their own locality, than any International Officer can accomplish; and,

Whereas, the money paid to International Officers as shown above, would pay the sum of \$50.00 per month to sixty-two Business Agents, and would therefore increase our membership 300 per cent; and,

Whereas, San Francisco has 525 Organized Members, and our Executive Council has seen fit to withdraw the \$50.00 per month support to our Business Agent, which only amounts to \$.095 per month on the whole membership of San Francisco; therefore, be it resolved, by San Francisco Lodge No. 25, I. B. B. M. & I. S. B. & H. of A. that if our Executive Council does not curtail its expenses, and if they do not restore the support of the Business Agent, and pay the money that is due to us, that we shall invoke the Referendum, and endeavor to

abolish some of the International Officers, and then pay Business Agents in cities having 200 or more members, and thereby build up our Organization.

Anxiously awaiting this publication in the Journal, we remain,

Yours fraternally,

THOS. J. SHERIDAN,
Secretary-Treasurer.

San Francisco Lodge No. 25.

A PROMISING YOUNG SON OF BRO. A. E. STRODE, COR. SEC'Y OF LODGE NO. 150, CHAMPAIGN, ILL.

Pueblo, Colo.

Whereas, It has pleased the Heavenly Father, in His infinite wisdom, to remove from our midst, the dearly beloved mother of our worthy and esteemed brother, Peter Winters; therefore, be it

Resolved, That we, his fellow brothers, extend to our worthy brother our heartfelt sympathy in this sad hour of bereavement, and pray that God may sustain him under this heavy affliction; and be it further

Resolved, That a copy of these resolutions be spread on the minutes of our meeting and a copy be sent to our bereaved brother, and a copy be forwarded to our official Journal for publication.

GEORGE S. WARDEN,
GEORGE D. HILBERT,
GEORGE R. HICKS,
Committee.

Kansas City, Kas.

Dear Sir and Brother:

This is to inform the brothers of the locals over the country that contributed to the raffle held for the benefit of Brother Albert Stone that the drawing took place in our lodge room September 14. The lucky number was 1253, held by a member of Lodge 340 of Herington, Kas. His name is Harry Sanguin. We congratulate the brother, as the watch is a good one. We also tender a vote of thanks to every local who contributed to this cause, and also the brothers at large. With many thanks to all and with best wishes, I am,

Fraternally,

FRANK STOVER,
C. F. S., L. 83.

make out a report, every month as to conditions in his territory, how business is, as we have nine international vice-presidents and not half of them send in reports to the Journal, every month which I think they ought to do, as they are on a salary and it would not take much of their time.

I don't know how many business agents there are throughout the country, if just half of them would send a report to the Journal about the conditions as they are in their jurisdiction once in a while it would be better for all of us, and especially to the traveling brothers to keep them posted about the conditions as they are. All the railroads that are organized have a business agent, and if they send a report to the Journal once every two months it would be a great help

A GROUP OF THE MEMBERS OF LODGE NO. 384, PERU, IND., IN LABOR DAY PARADE, SEPT. 6, 1915.

Grand Rapids, Michigan.

The following resolutions were adopted by Grand River Lodge No. 84:

Whereas, it has pleased Almighty God, in His Divine wisdom, to remove from our midst the beloved Husband, Father and Brother, Frank Zindal.

Resolved, that we, his fellow brethren, extend our heartfelt sympathy in their sad hour of bereavement, and pray that God may comfort and console them.

Resolved, that a copy be sent to the family, one to the Journal for publication, and one be spread on our minutes of our meetings.

NELSON M. WARREN,
FRANK LEMKE,
JOS. SUTCLIFFE,

Committee.

Atchison, Kans.

Dear Sir and Brother: I thought I would write a few words in regard to our Journal. I think that each vice-president should

to traveling brothers, as I think the boomers are a great help to get conditions all over the country, but the home-guards have to hold them, so give them both their rights, as it is said a setting hen never gets fat and a rolling stone never gathers no moss.

The boomer jumps out of a box car one day and the next day he is talking seniority in the shop, that is if he lands a job, it is a round table but a square game. I am on the Missouri Pacific here at Atchison, and business is poor, four B. M. and five B. M. helpers at this point, have been on 7 hours per day for the last two years with poor prospects for anything better very soon, but a loaf is better than no bread at all as there are a great many brothers worse off than we are here, so let us be thankful for what we have. I remain,

Yours fraternally,

JOHN J. FREIBOTT,
C. S. L. 507.

Fairbury, Neb.

Dear Sir and Brother:

Will you please have the attached newspaper clipping in regard to Brother George W. Pring's speech Labor Day published in the Journal, and oblige,

Yours fraternally,

B. Z. MILLIKAN, S. L. 439.

Mr. Pring's Speech.

The speech of George W. Pring, Vice-President of the Railway Department of the American Federation of Labor, at the tabernacle on Labor Day, has been the subject of considerable comment among the large number of Rock Island employes, as well as others, who were fortunate enough to hear his talk. For the past six or seven years, Mr. Pring, in the capacity of general chairman of the Rock Island boiler makers, has been a frequent visitor at the Rock Island shops at Fairbury and, therefore, he had a large circle of acquaintances who looked forward to his talk with great interest.

Mr. Pring devoted his speech to labor and told of the benefit of organization and the advancement and dignity of labor in the last few years. He brought out a number of remarkable facts, which his listeners have been discussing this week.

Mr. Pring made a favorable impression here. The Rock Island boiler makers and helpers are strong for Mr. Pring, as they realize he is their friend and champion in every just cause and has won a great many victories for organized labor. He was formerly a boiler maker in the Rock Island shops at Valley Junction, Ia., but now confines his entire time and attention to looking after committee work for the Rock Island boiler makers and helpers. Mr. Pring is clean, energetic and absolutely fearless in his cause.

The Rock Island boiler makers and helpers had the distinction of walking away with the \$5 prize for the best mechanical float exhibited in the Labor Day parade. The miniature boiler shown on the float was a dandy.

Decatur, Ill.

Dear Sir and Brother: Lodge No. 447 would like space enough for a few words in the Journal lest our brothers might think we are out of business, but they will find No. 447 doing business at the same old stand, Decatur, Ill., and if you don't believe it, come this way with a bad card and book and you will sure be up against it.

We held our regular meeting September 7th, without president in the chair, after spending the summer in the mountains of Colorado, looking for bears and fishing for crappie. We have a loyal bunch of members as there is in the country anywhere; Brother McLaughlin was present, his first meeting since convalescent from a serious operation for stomach trouble, in the month of June. While recuperating he spent part of his time at his parents' home in Pennsylvania from where he has just returned. He

gave us a good talk on the assurance of the appreciation of assistance the brothers had given himself and family and their attention given him while in the hospital. We are very sorry to state, one of our oldest boilermakers is seriously ill in the hospital and is expected to pass away any time. When our meeting was well under way the information was conveyed to the lodge room that the Ladies' Auxiliary No. 16 were in the dining room and wished the lodge to adjourn. Their request was complied with as soon as possible and we found the ladies had taken the lodge by surprise and slipped in with well filled baskets and the tables loaded with plenty to eat and drink. All sure had an enjoyable time and when one stops to think the affair reminds one of the piece of poetry that reads something like this:

If with pleasure you are viewing any work
a woman is doing,
If you like her, tell her now
Don't withhold your approbation, till the
parson makes oration
As she lies with snowy lillies on her brow;
For no matter how loud you shout it, she
won't really care about it,
And she won't know how many tear drops
you have shed;
If you think some praise is due her, now is
the time to tell her,
For she cannot read her tombstone when
she is dead.

More than fame, and more than money are
these comments kind and sunny,
And the hearty warm approval of a friend.
And it gives her heart and spirit to the end;
If she earns your praise bestow; if you like
her let her know it,
Do not wait until life is over, and she is
underneath the clover,
For she cannot read her tombstone when
she is dead.

In conclusion, we all retired to our homes at a late hour hoping that a repetition of the same thing will happen in the near future and we feel that after all organized labor is worth while even if the pessimist and fault-finder don't see fit to come to lodge and enjoy themselves.

CHAS. J. YOUNGER,
Secretary 447.

Spencer, N. C.

Dear Sir and Brother: I thank you for promising to publish in the columns of our good "Official Organ," our Journal, the advice and requests I sent you last month.

Now in conclusion, I ask that you publish the following:

To all members of the International Brotherhood of Boiler Makers, Iron Ship Builders and all other members of the American Federation of Labor.

Brothers in the September Journal I asked that all of the trades write to President Wilson of U. S. A., and demand that the questions of Submarine Warfare and other questions that has caused trouble for this coun-

try between England and Germany and the other belligerents be settled by arbitration as our troubles are forced to be done.

Now after this is done we should do one other thing, that is to find out if we want war or if this country as a whole wants war or just the capitalists who shout to us to be patriotic which means nothing more than for us to be "idiotic." What good does a war do the laboring class? Whether it is with our country or not, that can be answered with one word. "None or No." But again what good does it do for our real enemies, the capitalists? It also can be answered with the one word, everything. It helps them and hurts by thinning out our ranks by death from want as well as bullets and shells, leaving less of us to fight our own cause here for our right, for home and happiness which we have now only moderately. So again I ask do we want war, or not. If not find out who is right by international arbitration and then ascertain who and how many want war by vote. Each man wanting war vote for war signing his name with address attached and those who do not want war vote against war, signing his name with their addresses attached. Then if two-thirds want war then let it be war, and those wanting war be called to the front first, they having signed their names and addresses to the vote for war. Then you will see that the papers, editors and others who want war will soon dry up and will not find so much trouble as they see now. Also the capitalists once and for all, will be more or less quieted on the question of wanting war so that they can get rid of us, and gain more territory to be used to enrich them, and given them, and give them more power to fight us with where as it is they are losing what they have now and fast at that.

If all the congressmen, legislators and other law makers were only honest and true to both sides, capitalists and labor alike would never dream of trouble. But the capitalists want more land, more ports, more money, more poor people to compel them to do their bidding for little or nothing and they get behind the law makers and cause some of them to be law breakers of the worse kind. The capitalists want war to get the aforementioned things and more. They will tell the law makers so and back it up with a lot of what they won't give us for honest work, namely, money, then Mr. Law Maker turns to Mr. Law Breaker and says he, too, thinks war would be best. Why? Because he won't, as a so-called law maker, have to go to the front to fight, neither will Mr. Capitalist, he will have to stay back and gobble up all the needful things for himself. That is why I say make "those who want war" go first. So now brothers now is the time, a little later may be too late to act. We as a whole do not want war with any of the European belligerents, not with Mexico nor any other place in the world. No not even with our own enemies the capitalists, and would not have any if they would only be "fair with laboring people." Now let's all

not only ask for arbitration of questions and the rights to decide whether there should be war by vote, but let us singly and in our lodges draw up resolutions demanding a right to vote for the answers of whether we want war or not.

And now hoping all brothers will understand this important question of who is to go to war if there is any, and why there should be a vote to determine whether there is to be war or not.

I beg to remain,

Yours fraternally,

WM. H. DREYER.

Shawnee, Okla.

Dear Sir and Brother: Enclosed please find set of resolutions on Railroad Educational Bureau of Omaha, Nebr., which was unanimously passed at our regular meeting, September, 13, 1915, and I was instructed by vote of the lodge to send you a copy for publication in the Boiler Makers' Journal.

With best wishes, I remain,

Fraternally,

A. D. ROSS,

S. L. 293.

Shawnee, Okla., Sept, 13, 1915.

Mr. T. H. Beacom, General Manager,
Third District, Rock Island Lines,
Oklahoma City, Okla.

Dear Sir: We wish to express our appreciation of your having made arrangements with the Railway Educational Bureau, of Omaha, Nebraska, to extend the privileges of the Bureau to the members of the International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America who are employes of the Chicago, Rock Island & Pacific Railway Co.

The fact that the courses of study are not difficult nor complicated and that the Bureau is furnishing the service on a fair and square plan and at a reasonable price has caused a large majority of our members to sign up for this service.

It has always been the policy of the International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America to encourage any movement that will give its members an opportunity to increase their efficiency and to further their knowledge of practical railroad work.

Respectfully,

International Brotherhood of Boiler Makers,
Iron Ship Builders and Helpers of America.

FLOYD OTT, President,

ALEX. D. ROSS, C. Secretary.

Kickapoo Local No. 293.

ROCK ISLAND LINES.

H. U. Mudge, Jacob M. Dickinson, Receivers
of the Chicago, Rock Island & Pacific
Railway Company.

To All Employes—First, Second and Third
Districts:

Arrangements have been made with The
Railway Educational Bureau, of Omaha, Ne-
braska, to extend the privileges of the

Bureau to our employes. The aim of this Educational Bureau is to offer those who may care to take up the course and apply themselves to the study of the lessons, an opportunity to increase their knowledge with reference to railroad operation, to fit themselves to assume greater responsibilities, and to place themselves in line for promotion.

This announcement is being printed in one of the Railway Educational Bureau's Progress Bulletins. A careful reading of this Progress Bulletin will give you a better idea of the merits and the benefits to be derived from a study of the courses put out by the Bureau. The cost per year will not exceed \$12.00, and payments can be made to suit the employe.

The courses of study are not difficult nor complicated and any employe can, with comparatively little effort or expense, make himself more competent and fit himself for a better position, in addition to securing a better knowledge of practical railroad work.

Authorized representatives of the Bureau will be permitted to solicit business among our employes.

Employes can either pay the tuition fee in cash or have it deducted from their wages. Collections will be made in favor of the Bureau in accordance with written deduction orders.

This work is in charge of Mr. D. C. Buell of Omaha, Nebraska, and Mr. Buell will be

In the morning, the members together with thousands of other good men, showed their firm faith in the labor movement by participating in the record parade, under the auspices of the Lowell Trades & Labor Council. Under the direction of Bro. Moran, the Boiler Makers and Helpers marched like a crack organization of well drilled men.

Lodge 371 appreciated the highest honor of having President Franklin march in our ranks, and the pleasure of having him speak to us in the hall after the parade. We realize our good fortune, and we hope that in the future we may be favored again and under such happy circumstances.

Words cannot express our pleasure and gladness at the presence of Deputy Organizer Brother Charles Scott in our parade and open meeting. Brother Scott has done sterling work in this section and we are always glad to see him.

A very welcome addition to our ranks on that day was President Parks and eight brothers from Lodge 515, a true group of union men and we were favored by their coming.

After the parade refreshments were served at the old Odd Fellows' hall. We then listened to some splendid and appropriate remarks by President Franklin, which were greeted with much applause and rousing cheers. In the same manner we received good words of cheer from Organizer Brother Chas. Scott, District President Brother Wil-

A GROUP OF THE MEMBERS OF LODGE NO. 371, LOWELL, MASS., LABOR DAY, 1915.

very glad to furnish any further information desired.

C. W. JONES,
General Manager, First District.
A. E. SWEET,
General Manager, Second District.
T. H. BEACOM,
General Manager, Third District.

Lowell, Mass.

Dear Sir and Brother:

The observance of Labor Day, 1915, will go down as the most successful in the history of Lodge 371.

William H. Wells and President Parks of Lodge 515.

Musical numbers by Brothers James Crawley, James Crown, George Nichols and J. Shaughnessy were rendered in their usual high manner and were much appreciated.

The thanks of the members of Lodge 371 is extended our committee, Brothers Slatery and Ward, for their untiring efforts to make the day a success.

Under separate cover, please find a picture which we should be glad to have you print in the Journal. Brother Qualey, ban-

ner bearer, stands in the center, and on one side of him can be seen President Franklin and on the other side Brother Charles Scott.
J. J. CUNNINGHAM, C. S.

Milwaukee, Wis.

Dear Sir and Brother:

Since my last report as to the conditions in District 26 there has been a wonderful improvement. The hours in the Minneapolis and Dubuque shops have been increased to 9 hours per day, formerly working 32 hours per week. Boiler makers have been put on at these points also at the Milwaukee shop and in the round houses along the line, the hours have been increased from 32 to 48 hours and has done wonders towards putting a different feeling in our members. All points have been on short time for over two years, there has also been a number of reductions in force. This has also gone a long way towards discouraging men. It is hoped that with this increase in time that our members will also adopt a little of that "get together" spirit that the roads are trying to promote and use towards bettering our conditions.

In the West everything is in good working order. All points are working eight hours per day, six days a week. Men have been put on in some of the round houses, also in the shops at Miles City, Deer Lodge and Tacoma. The railroads are looking to a large year, and it's expected that this fall will be the best that the "Milwaukee" has yet known. The grain crop in the West is the best in years and if it is moved it will mean good business for our craft in that country.

In my trips over the line, I find considerable interest displayed by members over various articles sent by members of our organization to the Journal. One in particular was the report of Vice-President Nolan in referring to Brother A. C. Dixon of Rocky Mount, N. C., who was laid off and later refused employment because he could not come up to the physical test required by the road. Numbers of our members have asked as to what was done for Brother Dixon and whether he was reinstated, also as to some means to overcome this examination as required by the various roads. I was informed recently that Brother Dixon has been placed back at his former position, but am not sure, it would be better for some of our members to write up this case so that members of roads making this examination may know what was done, and also what to expect.

In going over the rules and by-laws of what is known as the Milwaukee Hospital Association I find that they have a law in their constitution compelling an examination, but to date I have no knowledge on one being made of any one, but we can never tell when it is liable to be put into effect.

My attention has been called at times by our members to the poor mechanics that are going to work and calling themselves boiler makers. Some action should be taken by the entire membership towards taking the

men into our organization and "wishing a card on them." It seems that we are losing sight of the fact that "a man's card proves his qualification." Let us bear this in mind and the next time we have an application for membership into our organization as a boiler maker, investigate it in the manner it should be. This will bring our organization to a higher standard, character, reputation and ability should be thoroughly considered.

The article published by J. E. Dixon, past president of Lodge 592, in the September Journal, is a very worthy article and is one that should be given considerable study and thought by every member of the organization. What is wanted is a little more harmony and good fellowship among our members. We have got to cut out the rough stuff if we are to succeed.

Hoping that this will be of interest and with best wishes, I am,

Yours Fraternaly,

JOHN L. CALLAHAN,
R. A., District 26.

New Castle, Australia.

August 20, 1915.

To Jas. B. Casey, Esq., Editor-Manager International Brotherhood Boiler Makers, Etc., of America.

Dear Sir and Brother:

I am in receipt of your letter dated July 7, which reached me on the 18 inst., and I note that you received our emblem and badge in good order and I note your kind remarks on the matter presented in the emblem.

I also desire to acknowledge, with thanks, the badge of your Brotherhood which you were kind enough to send me. I regard it as being a beautiful emblem and I must admit that it is far in advance of ours. I had no gold ones on hand when I sent you the badge but I shall forward you one at an early date for yourself. I shall take a pride in treasuring your badge as a remembrance of our short friendship which has been established between our kindred organizations.

Your Journals have reached me regularly, the last issue being that of July.

I forwarded you a copy of our second issue of report which is somewhat in advance of its predecessor. I hope to continue improving it as we go along. I get the whole thing out myself and as I have had no journalistic training it may be full of faults, but it seems to meet with the approval of our members and after all that is all that counts.

I shall avail myself of your kind offer to allow me to reproduce articles from your Journal as opportunity permits.

I have read your Journals with keen interest and have noted your difficulties in keeping the strikes going successfully in view of the slackness of trade generally throughout America. We have not felt the pinch at all so far, except at the very inception of the war, when a little panic was shown, but this soon quietened and matters have gone along with a swing ever since. In all probability the pinch will come after

the war when the financial markets will be "tight" with their loan moneys which we are compelled to resort to in this country to carry on our large public works.

I notice the proposal to amalgamate your organization with the bridge and structural iron workers and with the sheet metal workers. This combination, should it be brought to a successful issue, should be something to be reckoned with in the Industrial world. In this country the boiler makers do all the structural work which, of course, has not reached the dimensions that it has done in America. The sheet metal workers have an organization here but the boiler makers have certain arrangements with them whereby we do all work over 10 gauge of iron, or approximately one-eighth of an inch in thickness, so that we get along with them O. K.

I shall reproduce your letter in our next Journal and will be glad at all times to hear from you on trade matters in America.

Again thanking you for your courtesy at all times and with fraternal greetings from Australia, I am,

Yours fraternally,
JNO. O'TOOLE,
Federal Council Sec'y.

St. Louis, Mo.

Dear Sir and Bro.:

Inclosed you will find roster change of Brother Jas. Callahan's address, also partly filled list with names for Journal.

Well, brother, the strike in St. Louis is about the same; three shops are still holding out but expect to get them soon; the men are doing good picket duty and we have not lost a man, except two former members that were foremen, and they are now taking our place, one of them by the name of Thos. McBride, and the other by the name of Chas. Riddleman, but we expect to win and then those two men, or rather two snakes, will be out in the cold.

Now I don't know of anything more I could write at this time but will send you a report the latter part of this week in regards to the strike, so I will close, with best wishes and kindest regards from all the boys of No. 27, I beg to remain

Fraternally yours,
HENRY SIEKMAN, F. S. L. 27.

East St. Louis, Ill.

Dear Sir and Bro.:

Whereas, it has pleased the Almighty God in his wisdom to remove from this earthly sphere our late brother and fellow worker, Adam Mahes.

Resolved, That Lodge 363 of the International Brotherhood of B. M. I. S. B. & H. of America having learned of the sad event in session on this date is filled with sorrow at the announcement, and tenders to his bereaved widow and relatives their heartfelt sympathy in their day of sorrow; and be it

Resolved, That while we realize that it is destined for all that live to die, and while all must submit to the decree of Him who we are told "doeth all things for the best,"

it is with regret that we realize that never, on this worldly abode can we clasp his hand in honest friendship, or hear again the sound of his cheerful voice; be it

Resolved, That out of respect to our late brother, our charter remain draped for the space of thirty days and while we realize that he has gone from our midst, entering into that eternal slumber that men call death, the secrets of which remain encased in the awful mysteries of divine wisdom.

Resolved, That it is our hope based on the consoling precepts of Christianity that tell us that the body may fade away, but the soul of man as an emanation of the divine essence must live forever, that some day in God's own time, parted ties and severed friendships will be reunited when all those who have followed the guidance of Him who in the resurrection in the Kingdom of God elect.

JAS. WITHMORE,
O. C. MASSEY,
JNO. ROCHE,
Committee.

East Boston, Mass.

Dear Sir and Bro.:

Lodge 585 held an open mass meeting on the night of September 1, at Armory Hall, East Boston, for the purpose of endeavoring to induce former members to come back to the fold, and to give the boys a chance to pay their respects to our worthy International President, Brother Jos. A. Franklin, who was in Boston at the time.

The president of Lodge 585, Brother Wm. E. McNabb, in introducing Brother Franklin, stated it gave him great pleasure to present to the assemblage the honored head of our organization, who is trying hard to build up the Brotherhood in Massachusetts.

President Franklin gave a lengthy and interesting talk, touching upon every phase of the labor question, pointing out the necessity of organization and the absolute helpless condition of the worker without organization and dwelling particularly upon the conditions existing in Boston and vicinity, showing the comparison between conditions in the union shop and under the so-called "open shop policy."

President Franklin impressed upon the minds of those present the fact that any organization will be just what the membership makes it and the degree of success of an organization will depend upon the support and loyalty of its members.

In closing, President Franklin assured us that if the members of the organization and the men employed at our trade in Boston and vicinity desired to advance their conditions and would manifest an honest desire to help themselves, that he would assure us that he would do all in his power to be helpful.

Brother Franklin's pointed remarks were warmly applauded and created a profound impression on his auditors, who felt that he, as a true exponent of the life essence of trade unionism, had expounded to them

the sound doctrine of organization, in a manner that left no room for misunderstanding or equivocation.

International Organizer Brother Chas. F. Scott heartily indorsed the remarks of Brother Franklin, saying in part:

"You men of Boston have been accorded an unusual opportunity to receive advice from the head of our organization whose life work is striving to advance, socially, intelligently and financially, the men working at our craft. Ponder well on what he has told you. He has uttered great truths, which you men will know. I don't believe there is a lodge in the country in a worse condition than Lodge 515 when we took hold of it some months ago, but today it is booming and the railroad shops over which "515" has jurisdiction are 100 per cent organized. There must be some mysterious reason why Lodge 585 is in the condition it now presents, and it is our mission to try to find out what is the trouble and try to settle it. Our organization has with the assistance of kindred trades, etc., in Boston made the D. Russell boiler concern feel that our organization amounts to something after all, so help us along by increasing your membership and thereby further your own interests."

Brother Scott who since he came to Boston has gained a reputation for honesty and straightforwardness of the "Omega" standard, gave way to Brother Wm. E. McNabb, the live wire president of Lodge 585, who announced that he was ready to receive applications and render all assistance in his power to all those who wished to be enrolled under the banner of our Brotherhood. After which the meeting adjourned.

Among the members of Lodge 585 present were President Wm. E. McNabb, Vice-President Thos. J. Farmer, Secretary D. B. McInnes, Treasurer Bernard McDonnell, Trustee James J. Kerrigan and Bros. Thos. Carns, John J. Farrell, Augustus Page, Harry Hegan, Wm. Clouter, John A. Hankard, Wm. Hankard, Thos. Defretas, Thos. Jordon, Chas. Jenkins, Chas. F. Smith, Joe Cameron, Martin J. Nolan, Wm. Warnock, Jno. J. Kerrigan and Lodge 515 was represented by President Geo. Parks and Bro. John F. Brady.

Another of the old-time boiler makers of this city, John Leahy, has joined the silent majority, and although sickness and lack of work caused his suspension, he was always a good union man at heart and was never found wanting when the test came, and the old reliable war horse of Lodge No. 585, Brother John J. Farrell made up his mind that "Jack" Leahy, who left no insurance, would receive proper Christian burial. Brother Farrell did noble work in collecting the necessary funds, ably assisted by the president of Lodge No. 585, Brother William E. McNabb, and those two brothers along with Brothers Thomas Cairns and John B. Gahen represented Lodge No. 585 at poor Jack's funeral.

It is with exceeding regret that I announce that Brother John Warnock, one of our most faithful members, is at the eye and ear infirmary, as a result of an injury to one of his eyes, which was terribly bruised some weeks ago by being struck by a flying fragment of a pin. The injured optic has been operated on three times and the surgeons are doing all they can to save the eye, and we hope they will succeed, for a "whiter" man than John Warnock (who suffered torments of pain with admirable patience) never lived.

I also regret to announce that Brother Bernard McDonnell, who has, in his official capacity as treasurer, been faithful to every trust imposed and has been a veritable watch dog of the treasury, has after three years of efficient service resigned as treasurer. Brother Thomas J. Farmer has been elected treasurer in his stead, and Brother Thomas DeFreitas has been elected as vice-president to succeed Brother Farmer. Both of these boys are good workers and their hundreds of friends all over the country will be glad to hear of their advancement.

Brother Augustus E. Page and his estimable wife have the sympathy of all the members of Lodge No. 585 in the recent death of their infant son, Leslie Linnell Page.

Brother Joseph Schadraver also has the sincere sympathy of all the members in the recent death of his wife. A beautiful floral tribute was sent by the lodge which was represented at the funeral by a delegation of our members.

Lodge No. 585 was represented in Boston Labor Day parade, by Brothers Bernard McDonnell, D. B. McInnes and Charles McDonnell, who appeared in line as delegates of the Boston Central Labor Union.

Yours fraternally,
DANIEL B. MCINNES, C. S. L. 585.

Salt Lake City, Utah.

Dear Sir and Brother:

The gold watch raffle for the benefit of brother boiler makers, H. P. Pratt and R. P. Wilkinson: Drawing took place at regular meeting of Lodge No. 103, Wednesday, September 15, 1915. Number of ticket winning the watch was 2838, won by E. E. Dunham, Lodge No. 602, Great Falls, Mont. Winner, communicate with B. S. R. Harrison.

Secretary Lodge No. 103.

Danville, Ill.

Dear Sir and Brother:

At a regular meeting of Buffalo Lodge No. 7, I. B. B. M., I. S. B. & H. of America, the following resolutions were unanimously adopted:

Whereas, It has pleased the Almighty God in His divine wisdom, to remove from our midst the dearly beloved father of our worthy and esteemed brother, George F. Muir; therefore be it

Resolved, That we, his fellow brothers, extend to our brother our heartfelt sym-

1—Frank H. Bolt. 2—Wm. Dehlinger. 3—Thos. O'Connors. 4—Otto Hintze. 5—Harry Still. 6—Pres. F. E. Perry. 7—Johnnie Lauders. 8—J. M. Morgan. 9—Fred Butterfield. 10—Thos. J. Cotter.

pathy in this his hour of bereavement, and pray that the Almighty God may comfort and console him, that he will bear this trial with fortitude; be is further

Resolved, That a copy of these resolutions be spread on the minutes of our meeting and a copy be forwarded to our bereaved brother, and a copy forwarded to our official Journal for publication.

JOSEPH ERNST,
THOMAS J. KING,
BENJAMIN GAU,
Committee.

Chicago, Ill.

Dear Sir and Brother: Resolutions of Lodge No. 25, San Francisco, Cal., was unanimously endorsed by Lodge No. 39 regarding certain International Officers expense and restoring support to Business Agents, with pay for back months due to us. Otherwise provisions of resolutions of Lodge 25 be carried into effect.

Hoping this will appear with resolutions of Lodge No. 25 in next issue of Journal, and with best wishes for the success of our Organization.

Fraternally yours,
JOHN S. COGLAN.

Newport News Va.

Dear Sir and Bro.:

I have been instructed to write you and ask you to have it published in the Journal that E. Stewart who was published through the Journal by Lodge 66 and asking for his card to be held by the secretary of any lodge that had it. Brother E. Stewart, Reg. No. 21232, deposited his card with Lodge 55 and was with us until the charge was made against him and as he was only helping here at that time he had to find other employment and at present he is in Washington, D. C., and he sent a check to Brother W. Healy to clear all his accounts which has been done. I would like to say that the members of Lodge 55 had every good faith in Brother E. Stewart. The debt claimed by Lodge 66 for the railway company has been sent on to Brother E. Wortsmith (\$2.90). Brother E. Stewart has asked for a clearance card and his due book which has been sent to him in Washington, D. C., as we find no debt standing against him and all his debts have been paid.

With best wishes, I am,

Yours fraternally,
DAVID McARTHUR, C. S.

Brainard, Minn.

Dear Sir and Brother: At the regular meeting of Pine City Lodge No. 116, the following resolutions were adopted:

Whereas, it has pleased the Almighty God in His Divine wisdom to remove from our midst our dearly beloved Brother, Andrew Wilmar;

Therefore be it Resolved, that we extend our heartfelt sympathy to his beloved ones and pray that God Almighty will console them in their bereavement;

Resolved, that a copy of these resolutions be placed in the minutes and a copy be sent to the bereaved ones, also a copy sent to our Journal for publication.

MARTIN KICKLAND,
WALTER BUTKA,
RALPH HASTINGS,

Note.—The death of Brother Wilmar took place in Norway, where he went some time ago for his health. The Secretary of Lodge No. 116, in reporting his death speaks in high praise of his record as a union man. His brother John Wilmar, is still a member of Lodge No. 116.

THE EDITOR.

Denison, Tex.

At a regular meeting of Sunset Lodge No. 209, of Denison, Tex., the following resolutions were adopted:

Whereas, It has pleased the Almighty God in His infinite wisdom to take unto Himself the little infant boy and also the little six-year-old girl, Bulah, the son and daughter of our worthy and esteemed brother, J. H. Gee; therefore, be it

Resolved, That we, his fellow brothers, extend to him our heartfelt sympathy in this his sad hour of bereavement, and pray that the Almighty God may comfort and console him, that he may be able to bear this double burden with fortitude; and be it further

Resolved, That we drape our character for thirty days, that a copy of these resolutions be sent to our worthy brother, a copy be sent to our official Journal, and a copy be spread on our minutes.

S. E. HARRIS,
CHAS. F. PETET,
O. O. MATTHEWS,
Committee.

Tulsa, Okla.

Dear Sir and Brother:

Please publish in the next Journal issue the following:

On September 1 we received a telegram from Mr. S. H. Crane of Hornell, N. Y., that Brother Albert Seaquist, Reg. No. 10299, was killed by a train enroute from Chicago to

New York City. On September 9 we were in receipt of a letter from Brother James McGeney that the Loyal Order of Moose had laid Brother Seaquist in his last resting place. Lodge No. 592 is sincere in extending its sympathies to the bereaved brothers of Brother Seaquist, as we found him true to the beliefs and principles that we have all promised to uphold. We found him a thoroughly good fellow and a man among men. We again extend our heartfelt sympathies and pray that our brother members may be spared a like tragic death that was visited upon Brother Albert Seaquist.

C. DIXON, President.

RICHARD LEAHY, C. & F. S.
Lodge No. 592.

Portsmouth, Va.

Dear Sir and Brother:

At a regular meeting of Lodge 298 the following resolutions were adopted:

Whereas, It has pleased the Almighty God in His infinite wisdom to remove from our midst the beloved father-in-law of our esteemed brother, George Miller; therefore, be it

Resolved, That we, the members of Lodge 298, extend to our worthy brother and family our heartfelt sympathy and condolence, in their sad hour of bereavement softened only by the confiding hope that his spirit has departed to a better and brighter sphere where sorrow is unknown; and be it further

Resolved, That a copy of these resolutions be sent to our bereaved brother and a copy to our official Journal for publication, and a copy be spread on the minutes of our meeting.

Fraternally,

ROBT T. HOWE.

Newport News, Va.

Dear Sir and Bro.:

Will you have the following resolutions inserted in the Journal:

Whereas, It has pleased the Almighty God in his divine wisdom to remove from our midst the dearly beloved wife of our worthy and esteemed brother, Robert Anderson; therefore, be it

Resolved, That we, his fellow brothers, extend to him our heartfelt sympathy in his sad hour of bereavement and pray that the Almighty God may comfort and console him, that he may bear his trial with fortitude; and be it further

Resolved, That our charter be draped for thirty days, a copy of these resolutions be spread on the minutes of our meeting, and a copy be forwarded to our bereaved brother, also a copy to our official Journal for publication.

Yours fraternally,

DAVID McARTHUR, C. S.

A Compilation of Labor News.

BY THE A. F. OF L. NEWS SERVICE.

HOPE OF U. S. IS EDUCATION.

San Francisco.—"I was neither judge nor jurymen. A man who is endeavoring to develop the truth from some witnesses—some unwilling—is not a judicial officer. That is what I mean when I say so frequently that 'judicial poise' has no place in my field," said Frank P. Walsh, ex-chairman of the Commission on Industrial Relations, to a representative of the Evening Bulletin.

"The facts which were assembled by the Commission and by me as chairman must stand for themselves—and let this sink in—every fact presented in the report is undisputed. Only those were presented which were agreed upon as truth by both the workers and the employers," said the ex-federal prober.

"When I accepted the appointment I conceived that the duty and the task set before me was to obtain undisputed facts for all the people, for the man who has invested his millions and for the man who has invested his labor and his life. I saw the great working, hoping, striving millions of men and women, God's creatures, in every avenue of industry. The act of Congress which created the Commission declared that there was unrest and bitterness in the land. There were clashes between the men who labored—and those who hired them. There were hatred and outbursts of passion, strikes, lockouts, injunctions, gunmen, militia and riots.

"The people asked why. For the people paid. They paid in the cost of the things they ate and wore. They paid in taxes for the burden of government—and the people meant not the laborer nor the capitalist, but both of these, and all others, all the people, not a part.

"I went to this Commission as a lawyer, determined to bring out all the facts, to present only the undisputed facts to the people so that they may judge—and find the remedy.

"I am not a doctrinaire, not a political economist. I have no panacea for the ills. I have no bottled justice which may be taken at a dose.

"The remedies proposed have been offered to Congress for what they are worth. No one could have a panacea for industrial ills. The inquiry, in its essence, involves the study of life itself. You cannot card-index the hopes, aspirations, happiness, miseries, laughter and tears of the human family. I construed my job to be an assembling of the facts as they actually existed.

"The hope of right conditions is through education. The circle of knowledge is widening. The people are learning to de-

fect sham. They are fooled less by those who exploit them. More and more men with good minds and ideals of justice are working for the common good.

"The people—the jury—now have the facts. They now observe how capital is becoming more highly concentrated daily; how the natural resources of the country, the heritage of all of us, have been seized by a few, and are exploited to the hurt of the rest of us. The people have a growing sense of their power to overthrow this injustice over night if they but will it so.

"When enough of us get the idea, it may be done between days."

LOCOMOTIVE INSPECTION RULES.

Washington, D. C.—At a recent conference held in the office of the Chief Inspector of Locomotive Boilers, working rules were adopted in behalf of safe and suitable operation of locomotives and tenders engaged in interstate commerce. All of the largest railroad systems were represented by their superintendents and master mechanics.

The organizations of labor were represented by Herman E. Wills of the Brotherhood of Locomotive Engineers; A. O. Wharton, President of the Railway Employees' Department of the American Federation of Labor; William H. Johnston, President and the members of the Executive Board of the International Association of Machinists, and Arthur E. Holder, Legislative Committee of the American Federation of Labor.

The rules agreed to at this conference and the proposed rules contested by the carriers are now in the hands of the members of the Interstate Commerce Commission for final disposition. The new law governing locomotive inspection went into effect September 4.

ALTGELD'S MEMORY HONORED IN CHICAGO.

Chicago.—Organized labor joined with federal and state officials, Labor Day, in paying honor to the memory of John Peter Altgeld, former governor of Illinois, by unveiling a statue of this champion of common rights.

"Altgeld was a friend of the common people and never feared to take a stand with them," Governor Dunne said. "Pre-eminently he had the courage of his convictions. He upheld the right and denounced the wrong at all times, under all circumstances, and in every place.

"He believed the conviction of the anarchists was the result of the mob's demand, although the mob was clothed in purple and fine linen. When he was elected governor he had the courage to do what was a most

unpopular thing at that time—to pardon the anarchists then confined at Joliet. In so doing he gave his reasons, and the doing startled the whole community.

"His moral courage was again displayed when President Cleveland, without request from governor, legislature, or mayor, sent federal troops into this city for the purpose of suppressing riot. He protested, and protested vigorously.

"Devotion to public interest compelled him to neglect his private business and during his term of office he became seriously embarrassed financially. But in spite of this, this man had the resolute honesty and iron-like integrity which made him refuse a bribe of half a million dollars. I know of no man who was more devoted to the cause of human liberty, whether it was in his own land or in the land of strangers."

VICTORIOUS LONGSHOREMEN.

New York.—General Organizer Hugh Frayne reports that the International Longshoremen's Association, through President O'Connor, has secured the first agreement that has ever been made with any of the steamship agents or the stevedores in the port of New York City. They have succeeded in writing union shop agreements with practically every one of the employing longshoremen in the port of New York and as a result, 3,000 additional members have been taken into the locals of the International Longshoremen's Association. One of the oldest independent longshoremen's organizations has gone out of existence and affiliated its members with the international. Conditions in the agreement call for 35 cents per hour, day work; 50 cents per hour, night work; 50 cents per hour for ordinary holidays, and 60 cents per hour for Sundays, Christmas Day and Fourth of July. When longshoremen are required to work on Good Friday on the Jersey shore, 60 cents per hour will be the rate. Double time will be paid for men handling explosives and munitions of war. Standard methods of voluntary arbitration were included in the agreement for the settling of minor grievances that may arise.

PREFERENCE TO UNIONISTS.

Brisbane, Queensland, Australia.—Preference to unionists in Australia is necessary to encourage organization of workers, that the compulsory arbitration laws and wages boards declarations may be enforced, declares the Worker, of this city, in a leading editorial.

Many employers are opposing the theory that unionists should be given preference, and the Worker says:

"Preference to unionists!

"To Australia's employing class the phrase is like unto a rag to a bull. Thus it is not surprising that during the debate on the address-in-reply in the legislative council several crusted Tories should jump hurriedly to their feet and express horror at its

proposed advent in the Queensland statute book.

"Our national parliament and every state legislature have passed laws for the settlement of industrial disputes by, in some cases, compulsory arbitration, in others by wages boards and industrial courts. Individuals can do nothing in such tribunals. Without organization by the workers, the laws and courts should be meaningless and valueless, since there would be nothing and no one to set the machinery of arbitration in motion.

"Unionism is an absolute essential to the working of such legislation, be it state or commonwealth. Since this is so, it should be a natural correlation that members of unions should be given the preference."

RAILROAD'S VAST EARNINGS.

Philadelphia.—Last winter the Pennsylvania Railroad led the fight to repeal this state's full crew law, which is intended to protect the lives of trainmen. Legislators were assured that railroads in this state are nearly at the "breaking point" because of such "unnecessary legislation."

The bill was repealed, but the repealer was vetoed by the governor.

With these facts in mind, trade unionists are pointing to this announcement, made recently:

"For July the operating profits of the Pennsylvania Railroad System show an increase of \$1,905,036. That increase nearly equals the gain for the whole first half of the year, which was \$2,102,089.

"For July the railway operating income, or, stated otherwise, the profit on operations, was \$9,797,177. For seven months of the year it was \$38,546,492.

"The Pennsylvania Railroad System is now doing a gross business at the rate of \$400,000,000 per annum. The greatest system gross earnings were for 1913, being for that year \$392,436,000. For July the total revenue was \$33,197,016, or \$1,132,382 more than for that month last year."

ROCKEFELLER REDUCES HOURS.

New York.—Mr. Rockefeller, philanthropist and benefactor, announces a reduction of working hours from ten to eight in his refineries at Bayonne, N. J., and elsewhere.

The announcement says:

"In accordance with the policies of this company to keep its wages and working conditions equal to, or in advance of, the wages and working conditions of other men doing a similar class of work, it has been decided to adopt the eight-hour day. This change will be made without loss to the men."

This decision is received with much pleasure by Bayonne workers, who now agree with trade unionists that "no strike was ever lost."

The decision benefits Mr. Rockefeller, also, as it will weaken contrary claims as to his

company's policies at Bayonne, made by the Commission on Industrial Relations, and it will check any agitation toward further investigation of the bad conditions under which oil refinery workers labor.

TESTING DISPUTES ACT.

Vancouver, B. C.—The Canadian Industrial Disputes Act is undergoing a practical test in Vancouver. The electrical workers are determined to see whether any justice can be obtained for the workers under it. The working agreement the electrical workers had with the British Columbia Electrical Company expired June 30. The men requested a renewal of the old agreement. The company offered 10 per cent reduction and unsatisfactory working conditions. Pending the negotiations, the company discharged a number of electricians and the men believe that Section 56 of the Industrial Disputes Act has therefore been violated, in which it provides that it shall be unlawful for any employer to declare or cause a lockout on account of any dispute prior to or during the reference of such dispute to a board of conciliation under the provisions of the act." Judge Shaw of Vancouver dismissed the case in favor of the company. The electricians will carry the case to a higher court.

UNCLE SAM'S FREE LAND.

Washington.—The annual report of the General Land Office will show that the government owns 279,544,400 acres of land "unappropriated and unreserved, of which 172,987,912 acres are surveyed and the rest unsurveyed."

All this is in the twenty-five public land states and in addition to this enormous area there are approximately 300,000,000 acres in Alaska which will be available to American citizens.

Nevada is shown to have the most public land, 55,417,745 acres, of which almost 30,000,000 acres are already surveyed, and Missouri, with only 923 acres, reports the least. Michigan has 76,030 acres subject to entry; Kansas, 75,214 acres; North Dakota, 493,667 acres, and South Dakota 2,880,828 acres surveyed and 53,781 unsurveyed.

More than 11,200,000 acres of land were eliminated from the public domain during the last fiscal year by homestead and other entries and sales to individuals.

TO DISTRIBUTE EASTLAND FUND.

Chicago.—The Eastland relief fund, contributed by Chicago citizens, is now being distributed. The fund approximates \$360,000. It was found that the funeral expenses alone of the 816 victims totaled about \$200,000. In one case a funeral director, who had a bill for \$2,100, cut off \$700 at the suggestion of the committee. The relief funds of the Western Electric Company cut the amount expended for funerals more than half.

The distribution of the remaining fund will affect 3,500 persons, including nearly 200 widows. It was found that twenty-five families were entirely wiped out in the disaster—mother, father and children drowned. In some cases where a young wife was left absolutely penniless and helpless, with two or three small children, the largest allotments will be made. In the case of widows and minor children the fund will be held in trust or investment and paid out in installments, both principal and interest.

WANT RIGHT OF APPEAL.

San Francisco.—A civil service court of appeals is urged in a resolution passed by the convention of the National Federation of Postoffice Clerks, which has been in session this week. At the present time a postal employe has no appeal from wrongful discharge, except to those who caused his dismissal. The clerks will ask the American Federation of Labor, with whom they are affiliated, to assist in securing the right to have appeal cases heard by an unbiased tribunal, the details to be worked out by congress when it passes the proposed legislation.

The convention also declared for the following additional legislation: Retirement for aged postal clerks, a higher salary classification, an adequate compensation-for-injury law and elimination of the stop watch in speeding the clerks to more work.

IMMENSE SHIP PROFITS.

New York.—A statement issued by the bondholders' committee of the International Mercantile Marine Company shows that for the six months ending June 30 last the profits were in excess of \$11,000,000, after deducting depreciation charges of about \$2,750,000.

A subsidiary of this concern recently purchased five steamships of the Pacific Mail. The immense profits of the Mercantile Marine, if thoroughly understood by the American people, would weaken the claims of vessel owners that the seamen's law "will drive the American flag off the seas."

MACHINISTS' NEW EDITOR.

Washington.—Mr. Fred Hewitt, formerly assistant secretary of the International Association of Machinists, has been elected under the referendum, as editor of the Machinists' Journal to succeed the late D. Douglas Wilson. His opponent was Thomas L. Wilson, a former vice-president of the international association.

SCORE ORGANIZED CHARITY.

Spokane, Wash.—Organized charity opposes mothers' pensions and has found a way to hamstring this legislation was the charge made by Judge Henry Neil of Chicago in a speech to churchmen in this city. Judge Neil is known as the originator of mothers' pension law. He said:

"In New York, Illinois, Minnesota and nearly all the other mothers' pension states," said the speaker, "organized charity has induced the legislatures to prevent deserted mothers getting pensions on the plea that pensions to such mothers would increase desertions.

"It is a well demonstrated fact that charity gets most of its funds by appeals based on the destitution and suffering of innocent children, so if all poor children were taken care of by the mothers' pension system, publicly administered, there would be little suffering left.

"Now, when a mother and her children are deserted, organized charity sends out begging letters telling of their great distress and asking rich people to send money to help relieve the distress, deploring the fact that these mothers cannot get a pension, when charity itself went to the legislature and prevented her getting a pension.

"Surely, charity does not claim that it provides the same amount as the pensions, for then there would be no reason for charity preventing the destitute deserted mother and her children getting the pension, except to get the 75 per cent rake-off. I ask, why pauperize the deserted mother? Will some expert please answer why?"

AUSTRALIAN UNIONS GAIN.

Melbourne, Victoria.—In a report by the commonwealth statistician it is shown that the number of Australian unions in 1914 was 712, compared with 700 at the end of 1913, while the membership increased from

497,925 to 523,271. The figures for the previous year (1912) were 621 unions with 433,224 members.

UNIONISM MOST EFFECTIVE.

Little Rock, Ark.—"We do not wish to decry the importance of unions trying to secure all of the labor legislation possible," says the Union Labor Bulletin, "but we do warn them against placing too much dependence upon reform by law and too little upon organization.

"It is as true today as ever, 'that those who live by the sword shall die by the sword.' Those who seek and gain legislative victories today will hold them only so long as they maintain their political strength, and tomorrow may see their power wane and an opposing influence repeal previous legislation.

"Of course this does not hold good with laws that greatly benefit the general public, but it does apply to legislation that benefits more directly only one class of people, even where the indirect benefit extends to many others."

MERCHANT MARINE INCREASES.

Washington.—Figures issued by the federal department of commerce do not support the claim that "the American flag is disappearing from the seas." It is stated that 363 ships, with a gross tonnage of 737,623 tons, were added to United States registry during the past fiscal year, and that this is three times the gain made in any previous year.

Among Our Exchanges.

MISLEADING ISSUES.

The parrot cry for "industrial unionism" is, as a general rule, misleading, calculated to divert attention of the organized workers from the issues which are the most pressing. This catch-word is re-echoed in variations and for various reasons, some of which could not stand the test of investigation and publicity by an impartial trades union tribunal. So-called leaders clamoring for applause and popularity are constantly on the lookout for catchwords which are likely to appeal to the imagination of the inexperienced and emotional worker. Some hail "industrial unionism" as the panacea for failures in strikes; other clamor for a "general strike" in all industries as an infallible remedy for lost strikes in the past. The advocates of these specific remedies are very closely related, and are inspired by the same motives—the minimizing of all past achievements of the trade union movement. Both are anxious to put the history of the movement in a bad light, and to create doubts in the minds of the masses in reference to action based upon past experience.

The advocates of "industrial unionism" and the "general strike" have so far failed to prove their contention; they failed to

prove the advantages to be gained by a change of system and tactics; they failed to offer convincing arguments in favor of a new departure.

"Industrial unionism," so-called, is not a new experiment by any means. It has been known in Great Britain for over sixty years under the name of "amalgamation." The Amalgamated Society of Engineers, organized in 1851, is a so-called industrial union, composed of machinists, millwrights, patternmakers, laborers, etc. This society had as many failures in the shape of strikes and lockouts as the unions organized on craft lines.

The so-called "industrial unionist" and the champion of a "general strike" in all industries, ignore the most pressing issue which confronts the American trade union movement. The problem of financing protracted strikes and lockouts is of more importance than all other issues which might be helpful in wage disputes.

It is true we need a more complete organization, a better discipline and a loyal devotion to trade union laws and regulation. But the financial question, the ability to render assistance if necessary to the bitter end, overshadows all other issues in importance.

Constant appeals for voluntary contributions are at the best, uncertain and cannot be depended upon when mostly needed and the clamor for support is the loudest. It is the guarantee of the weekly pay which inspires confidence and helps to strengthen the backbone of the timid worker.

The most powerful weapon of a corporation is to hold out until the employes are starved into submission. When a corporation knows that the trade union funds cannot be exhausted and that the workers cannot be starved into submission, this powerful weapon is rendered absolutely useless. The corporation is then compelled to arbitrate the difference, and the recognition of the union follows as a matter of fact. We again reiterate the most important and pressing issue is the solution of the financial problem in the near future. All other issues are insignificant in comparison and should not be countenanced for a moment.—George W. Perkins, in *Cigarmakers' Journal*.

TREACHERY UNMASKED.

Every body, organization or group of men has had its Judas. Somehow, this sort of person prefers deceit, duplicity, treachery, treason, to honesty and the love of his fellows. Aside from a money consideration, such natures love the work of the double-crosser. Not always does he work openly where an honest enemy can meet and conquer him and his devilish schemes. His methods are insidious and various; he drops mysterious hints of ambiguous meaning against his people or class; he plays his cards under the table, and carries in his sleeve a duplicate ace; he stacks them against his friends. All these things have been uncovered and noted previously, but, behold this class of person has developed a new attack on his people.

In the labor movement, the latest attempt, apparently, to discredit the leaders is to proclaim openly and maliciously that they are not worth their salary paid by the different organizations to represent them—or that they are receiving princely salaries and belittling the work they give in return for same.

The Labor Tribune was asked about this the past week, and we desire to say here that there is no princely salary connected with the labor movement. Men now in this field are competent workers in their crafts, and could earn more by merely working at their trade and be with their families at night, instead of traveling about over the country, meeting all sorts of calumny and slander in the work of uplifting the masses. And it ill becomes a man supposedly in the labor movement to stab him in the back.

We believe this belittling of head officers of any organization or body by one in the ranks is about the foulest method yet devised to destroy the foundation of the labor movement. The bird that befouls its own nest is hardly worth while, however.—The Joplin (Mo.) Labor Tribune.

UNIONS AND WAGES.

The packing house testimony before the Industrial Commission, to the effect that 20,000 employes of one company average \$500 to \$650 a year, or \$9 to \$12 a week, makes it easy to understand the pronounced objection of this company's president to unionism. He asserts that a company handling perishable products cannot tolerate the vicious delays of unionism, which would endanger the sale of products in good condition. Big Business magnates, whether they deal in metal products or perishable meats, usually find an excuse for fighting the organization of workmen.

Contrast the recent fight of Chicago carpenters for an increase from 60 to 70 cents an hour with the non-union packing wage of 15 to 20 cents an hour. And carpenter contractors are just as commercial, no doubt, as the packing chiefs. If the carpenters could have been kept down they would be receiving 15 to 20 cents an hour, but now these men are getting \$5 to \$6 a day.

The truth is that as a general rule in the mechanical trade men get the wages that they can extract from reluctant employers. An employer very rarely "feels able" to pay higher wages until forced to, even if the company's treasury is bulging with a surplus of millions. It is no wonder that Big Business in the United States is very largely lined up against the unions. Wherever the unions have flourished the men have prospered and the employer has been compelled to pay a living wage. Granted that unions have been unreasonable; in the long run, the good that guilty of excesses, that they are sometimes they do far outbalances the harm. A little union treatment of the packing wage would have prevented the disgraceful \$9 and \$12 weekly wages. It is not hard to understand why packing heads refuse to discuss the justice of the \$12 wage. It is past defense. A discussion of it in 1915 is sadly out of place.—The Milwaukee Journal.

THE SAVING HABIT.

There is a grand army of fools in this country who seem to be forever thinking of easy money. A certain percentage of these people go out after some of that easy money and as a rule they land in the penitentiary. Sooner or later they are found out, and that easy money becomes the hardest kind of money.

There is but one kind of real easy money, and that is the money that is honestly earned by honest labor of muscle or of brain.

But for the very many of those who get it honestly, there is great difficulty in keeping a little of it for the rainy day, which is sure to come. Some never learn it. And some begin only late in life to learn the art of living on a little less than they earn. When, however, the man or woman who has the habit begins to lay aside some of the earnings in a safe place and then watches it grow there is a legitimate pleasure in that

operation which well repays them for so-called pleasures or extravagances which have to be foregone.

While it is not good that economy should be pursued to the point of parsimony, it is sure to be rewarded by the riches of peace, prosperity and perhaps plenty.

Get the habit; it soon becomes a genuine pleasure.—*Labor Advocate, El Paso, Tex.*

WEARINESS.

You are weary, you say. What has wearied you? Is it the rush and struggle of business? The fight for gain? Pause a moment. Why should you so strive for wealth that you lose the ability to enjoy? Why feed your mind on one topic only? Why let your soul shrivel till you know not what happiness means? Every man wishes a competence, provision for himself and family against accident, sickness and age. More than that is likely to be dearly bought. Are you weary with hard toil? Be glad that you have work and are able to do it. Work is one of the blessings of life. You are working for a purpose. Keep that in view. Do your work worthily and it will bring a certain satisfaction to you. But do not degrade your work into drudgery. Are you weary of the hollowness of artificial life? The posing for effect? The mockery of a conventional society, where glitter and show count for more than character? Why strive for place among those who have souls no higher than to seek these things? This strife to keep up appearances make you distrustful of sincerity in man. Be sincere yourself and you will have reason to believe in the sincerity of others. Seek your pleasure in real things. The more you seek the true and kind, the more you will find, and the more joy will enter your heart—joy that glitter cannot give.—*The Milwaukee Journal.*

A MARE ISLAND INDICTMENT OF THE SPEEDING-UP SYSTEM.

"Speeding-up" systems are sufficient to upset the mind of an ordinary individual and produce insanity.

This is what the solicitor of the United States Department of Labor at Washington thinks of the stop-watch system of production.

The department has sustained this view, which is included in an opinion by its legal adviser that a worker injured because of a strain from working under a "speeding-up" system is entitled to relief under the Federal workmen's compensation act.

The decision was made in the case of D. C. Manning, sailmaker at the Mare Island Yard, who worked for twenty years without losing a day from illness. A time-card system was introduced, and his plea for compensation Manning brought out these points:

"Under this time-card system you had to give an account of every minute you were on the job, and we were given to understand that the men who did the most work should

hold their jobs the longest. Later the Halsey system was introduced. Under this plan a time man, equipped with tablet, lead pencil and stop-watch, sat in front of the worker to find out how long it takes to do a certain piece of work. The report to headquarters was your future standard for that class of work.

"The Halsey system is designed to get out of the man employed under it the greatest amount of work he can do in a given time, with the fear ever hanging over his head that a failure to keep up the standard will cause him to lose his job."

Manning was engaged in making coaling bags, which are 42 inches long and 8 feet in circumference. It is the hardest work in sail-making.

Between the physical strength necessary in this work and the mental strain caused by every move being "tabbed," Manning collapsed, and asked for relief under the compensation act because of "a strain from rushing work under the Halsey system." Physicians reported that he would be disabled for life and that he was "suffering from incurable heart condition."

The attending physician reported that Manning was "an unusually vigorous man, as well as an energetic workman."

In endorsing the statement of claimant that he was entitled to compensation, the solicitor of the Department of Labor declared that the treatment accorded Manning was enough to produce insanity. The official said:

"Here is a strong, hearty, hard-working employe, who, for about twenty years, had been regularly employed by the government, and whose rating was first class. After putting in all these years of service and retaining his health, strength and vigor, a new system was installed in the government establishment by which the employe was kept under the highest nerve-racking tension by reason of the fact that a man sat watching his every movement during every minute of an eight-hour day. In addition to this it will be observed from claimant's letter, above quoted, that the work he was performing was one of the heaviest and hardest kind to be performed in his occupation. Under such circumstances it is not a matter of surprise that his health should be injured and shattered, for it certainly seems that such treatment of a man engaged in heavy manual labor necessitating also the use of the intellect, would be sufficient to upset the mind of an ordinary individual and produce insanity."

The ruling of the Department of Labor is in line with the views of the last Congress, which passed the Detrick bill, outlawing all forms of "speeding-up" in government arsenals and navy yards. The passage of this bill was the result of a long campaign by union labor. Opponents of the bill insisted that these "speeding-up" systems really benefited the employe, who was thereby paid "according to his worth."—*Alameda County Workman.*

News of General Interest.

THE "AEROTUG" DRIVEN BY AN ENGLISH CRUDE OIL ENGINE.

By Frank C. Perkins.

The accompanying illustration shows the design and construction of the "Aerotug,"

tor instead of an air hammer. It was devised by F. W. Frank of Rocky Mount, N. C. The expanding elements are of the usual prosser type, which are forced out against the tube wall by a tapered mandrel. Instead

"A NOVEL MOTOR TUG."

a novel craft, which recently successfully underwent her trials on the River Thames.

The Aerotug was built by James Pollock, Sons & Co., Ltd., and was equipped with one of Bolinder's crude oil engines. It has a length of 30 feet and a breadth of 8 feet molded with a draft fore and aft of 8½ inches. It is a light draft punt with flat bottom and upright sides, constructed throughout of Siemens Martin steel. The internal combustion motor used for propulsion by driving an air propeller is a 15 B. H.P., single cylinder, Bolinder crude oil, direct reversible engine. This "Aerotug" was designed and engined for service in British Guiana, where it will be employed in towing.

A NOVEL SAFETY SECTIONAL BOILER FLUE EXPANDER.

By Frank C. Perkins.

The accompanying drawing shows a unique safety sectional boiler flue expander, which is operated with a reversible air mo-

tor instead of an air hammer. It was devised by F. W. Frank of Rocky Mount, N. C. The expanding elements are of the usual prosser type, which are forced out against the tube wall by a tapered mandrel. Instead

"A SELF-FEEDING SECTIONAL FLUE EXPANDER."

is forced into the expander by a threaded sleeve, which is turned by a reversible motor.

There is a shoulder on the end of the mandrel, which engages with a shoulder on the threaded sleeve and serves to extricate the mandrel when the motor is reversed. With this tool only one man is required for

expanding the flues, and all the flues are expanded exactly alike. The danger of flying steel by the breakage of the mandrel is eliminated, while it is maintained that the work is much more easily performed than is the case with a long-stroke air hammer.

ELECTRIC SPOT WELDERS.

By Frank C. Perkins.

The accompanying drawing, Fig. 1. shows some special electric welding die points used with the electric spot welder noted in photograph, Fig. 2, as developed at Cincinnati, O.

This electric welder was designed to rivet without punching holes or using rivets and spot welding, as indicated by the name, is the method they used in joining metal sheets electrically together at any desired point by a "spot" the size of a rivet. It is done by fusing or melting the metal at the point desired, and at the same instant applying sufficient pressure to force the particles of molten metal together. The theory

SPECIAL ELECTRICAL WELDING DIE POINTS.

is as simple as its application; it is a well-known principle that a poor conductor of electricity will offer so much resistance to the flow of the current that it will heat, the degree of heat depending on the amount of current and the resistance of the conductor.

It may be stated that the copper conductors carry the current with very little resistance and by placing a piece of iron in the circuit, not being so good a conductor as the copper, it will heat. If the volume of current is large and the iron conductor much smaller in diameter than the copper, the iron will quickly become hot enough to melt. An incandescent lamp offers a good illustration of this principle. The copper wires leading to the lamp are good conductors and remain cool. The carbon filament, being a poor conductor, becomes white hot and reaches a state of incandescence.

It is pointed out that in "spot" welding, a large volume of current at such low voltage or pressure that it cannot be felt by the bare hand passes through a pair of copper die-points; two or more pieces of sheet steel are placed between these die-points which press firmly on the stock. The current is turned "on" and the steel offers so much resistance to the flow of the current that it instantly begins to heat. The hotter the steel becomes the greater is the resistance to the passage of the electric current.

When the welding temperature is reached, the current is switched "off" and at the same time pressure is applied to force the molecules of molten metal together, and the pieces are perfectly united. The operations of turning the current "on" and "off" and getting the final squeeze to force the melted stock together after the current is switched "off" is done automatically with electric welding machines.

It will be noted that there is a limit to the thickness of sheet metal that it is ordinarily practicable to spot weld, due to two causes. First, the fact that the copper rods which conduct the electric current can only carry a certain quantity of current without excessive heating. When sufficient current is carried over these copper rods, or die-points, to bring very heavy bodies of metal up to the welding temperature, the copper rods will become so hot they will soften, and the points will wear away quite rapidly. Second, it is necessary to have the two pieces of sheet steel touch each other at the point where the weld is made. With very heavy stock, a slight kink or buckling of the metal will prevent the flat surfaces from touching each other and making good contact.

It may be stated that special machines have been designed, however, to overcome the difficulties referred to, but they were necessarily more expensive than the ordinary type of welding machines. Light gauges of sheet steel can be welded to heavy gauges or to solid bars of steel. It is not possible to weld two pieces of cast-iron, owing to the crystalline structure of the metal. Sheet steel can be welded to cast-iron, but can easily be pulled apart, the sheet steel tearing out small particles of cast-iron.

It is claimed that malleable iron of good quality can be welded to sheet steel, but will not stand as much strain as rolled steel or iron. Galvanized iron can be welded, although it will burn off the zinc at the spot where the weld is made. We do not advise electric welding for the very light gauges of galvanized iron, as there is no body of metal to work on. By the time the zinc is burned off there is nothing left. Twenty-eight gauge galvanized and heavier can be welded without any difficulty. Tin can be welded to tin or to sheet iron, but the stock will be discolored at the weld. Welding of crossed wires is an ideal job for a welding machine.

It is maintained that sheet brass and bronze can be welded to sheet brass or to sheet steel, but there is a little "knack" in work of this kind, and it takes a little experimenting to get just the right heat and pressure. German silver, Monel metal, zinc, nickel and alloys of many kinds are easily welded. Some grades of sheet aluminum can be spot-welded, although it will leave a slightly roughened and pitted surface where the die-points come together. It is more difficult to weld sheet copper to sheet copper, as this metal is such a good conductor

of the electric current that there is practically no resistance offered by the metal.

It is of interest to note that rivets of any size can be heated after the rivet is set in the rivet hole, and headed and pressed in place at one operation by the use of a welder. This process can be used to advantage in many places. Heat has no effect on the electric weld, and for this reason the welding process is largely used by stove manufacturers in making sheet-steel ranges and similar work. Regarding the current required, it is pointed out that a single-phase alternating current must be used in electric welding. This can usually be obtained from the local lighting company. If not, a 220-volt A. C. belted generator, or a motor gen-

FIG. 1.
AN ELECTRICAL SPOT WELDING
MACHINE.

erator set, can be installed to operate the welding machine, and where 2 or 3-phase current is available, only 1 phase of the multiphase system is used. Any voltage from 110 to 600 can be utilized, but 220 or 440 is preferred. Any frequency from 25-cycle to 60-cycle can be used. Inside the welder, and part of it, is a special transformer to reduce this outside current to the 3 to 5 volts used in making the welds. This is so low it cannot be felt by the bare hand, and explains why it is absolutely safe for the operator, as he cannot by any possibility feel the current at the welding points.

The foot-operated machines shown in the illustration, Fig. 2, was designed for welding comparatively light stock. The regulator shown on the side of the machine allows the operator to adjust the amount of current, or the "heat," to the work he is doing. It doesn't require as much heat to weld two pieces of 30-gauge as it does to weld two pieces of 10-gauge, and he has this heat absolutely under his control. Once adjusted, it will never vary, so that he will always get uniform results with no danger of burning or overheating the stock. The operation of the machine is practically automatic. The operator places the stock between the copper die-points and presses on the foot treadle; that brings the points firmly down on the work, and then the current is automatically turned on.

It may be stated that the stock is instantly brought up to the welding temperature; the foot treadle is pushed down a little further, the current is cut off and the pressure given immediately after the current is shut off forces the semi-molten metal together and it "sets" by the time the pressure is released. It's all done automatically with a special switch, without any attention from the operator. Releasing the foot pressure and the die-points open and the switch sets itself ready for the next weld. In welding heavy gauges of stock where it is badly buckled, the adjacent surfaces will not touch. In cases of this kind, the foot pressure used to force the uneven surfaces together would trip the switch before a weld could be made. To take care of this condition, a hand-operated switch-closing push rod is placed on the side of the machines.

A locking device on the upper part of the back bar is quickly pushed in position—this prevents the spring and switch from acting, but allows a direct foot leverage on the work. When sufficient pressure is applied to force the parts together, the current is turned "on" by pressing the push rod with the hand, and turned "off" when the rod is released. With this device, it is possible to do work that could not be done with the regular foot-operated machine. The machines are so simple any girl or boy can operate them, and they are absolutely safe. The operator can't get the slightest shock if he tries.

Another type of electric welder has been designed for welding iron and steel up to $\frac{1}{2}$ -inch round; also copper $\frac{1}{4}$ -inch, and brass $\frac{3}{8}$ -inch round. This machine occupies a floor space 18 inches by 21 inches and is 50 $\frac{1}{4}$ inches high. The height to center of clamping jaws is 42 inches and the distance from frame to center of dies is 1 $\frac{1}{4}$ inches. The maximum die opening is 1 inch high, 1 $\frac{1}{4}$ inches wide with solid copper dies, 1 $\frac{1}{4}$ inches wide and 1 $\frac{1}{2}$ inches long, and 1 inch deep. The maximum power required is 8 K. W. (12 K. V. A.), 12 H. P., and it has a weight of 800 pounds. The regulator is mounted on side of welder and it has water cooled dies.

FIG. 1.
THE STERN WHEEL PUSH AND PULL MOTOR TUG "TABASQUENA."

This electric welder is mounted on legs and the clamping jaws are operated by a foot treadle, that makes it more convenient to operate. The output of the machine is only limited by the number of pieces an operator can handle in a day. The expense for current stops the instant the weld is made and the operator can weld wire frames at the rate of 3,800 per day.

THE UNIQUE STERN WHEEL PUSH AND PULL MOTOR TUG "TABASQUENA."

By Frank C. Perkins.

The accompanying illustrations show the design of a peculiar gasoline stern wheel push and pull motor tug, "Tabasquena," placed in service by Engineer Percy Stout of Frontera, Mexico. It has a length of hull of fifty feet and a length over all of sixty feet, the beam molded being twelve feet and the beam over all measuring 12 feet, 7 inches.

The shoal depth is 2 feet, 9 inches, and the draft even keel is 20 inches, while the running draft forward is 22 inches, the running draft aft being 18 inches. The displacement on working draft is 20½ tons, approximately. The power plant consists of a 6-cylinder Buffalo gasoline engine, with air starting and dual high tension ignition of Bosch & Delco type. The transmission consists of bevel gears running in oil-tight case and chain and sprocket, the ration of reduction being 13 3-10 to 1.

The paddle wheel consists of a 10-arm wheel, split with 20 buckets, the outside diameter of wheel being 8 feet, six inches, and the wheel speed being 35 R. P. M. The fuel is gasoline and is carried in two tanks below deck in sealed compartment. The

capacity of tanks is 400 gallons, which supplies the necessary fuel for 50 hours' continuous running at full speed, which is 12

FIG. 2.
"THE TABASQUENA ON THE STOCKS."

statute miles per hour. This boat is operated by the Atlantic Fruit Company on the Grijalva, Tacotalpa, Mexcalapa and Sierra Rivers in the state of Tabasco, Mexico. Its work is to handle fruit barges against a 3¼-

mile current, making 21-mile trips in 5 hours flat.

It is stated that the 6-cylinder, 7 by 7-inch gasoline engine at 375 R. P. M. consumed 6 8-10 gallons per hour, and at full speed, 500 R. P. M., taking 7 6-10 gallons. This is decidedly economic in comparison with other tugs of the same power in this district.

CONVENTION CALL. Labor Omnia Vincit.

American Federation of Labor Headquarters,
801-809 G Street N. W., Wash-
ington, D. C.

September 13, 1915.

To All Affiliated Unions, Greeting:

You are hereby notified that, in pursuance of the Constitution of the American Federation of Labor, the thirty-fifth annual convention of the American Federation of Labor will be held at Eagles' Hall, San Francisco, Cal., beginning 10 o'clock, Monday morning, November 8, 1915, and will continue in session from day to day until the business of the convention has been completed.

Representation.

Representation in the convention will be on the following basis: From National or International Unions, for less than 4,000 members, one delegate; 4,000 or more, two delegates; 8,000 or more, three delegates; 16,000 or more, four delegates; 32,000 or more, five delegates; 64,000 or more, six delegates; 128,000 or more, seven delegates, and so on; and from Central Bodies and State Federations, and from local trade unions not having a National or International Union, and from Federal Labor Unions, one delegate.

Organizations to be entitled to representation must have obtained a certificate of affiliation (charter), at least one month prior to the convention; and no person will be recognized as a delegate who is not a member in good standing of the organization he is elected to represent.

Only bona fide wage-workers, who are not members, of, or eligible to membership in other trade unions, are eligible as delegates from Federal Labor Unions.

Delegates must be selected at least two weeks previous to the convention, and their names forwarded to the Secretary of the American Federation of Labor immediately after their election.

Delegates are not entitled to seats in the convention unless the tax of their organization has been paid in full to September 30, 1915.

It is, of course, entirely unnecessary here to enumerate the important subjects with which our forthcoming convention will concern itself, but the reminder is not at all amiss that every effort must be made to broaden the field and means for the organization of the yet unorganized workers, to strive to bring about more effectually than ever a better day in the lives and homes of the toilers, to defend and maintain by

every honorable means in our power the right to organize for our common defense and advancement, for the exercise of our normal and constitutional activities to protect and promote the rights and interests of the workers; and to assert at any risk the freedom of speech and of the press and the equal rights before the law of every worker with every other citizen; the tremendous conflict now being waged in Europe and its possible consequences and results, not only upon the people of European countries but upon the people of America, as well as on the whole civilized world, must of necessity receive the deepest solicitous consideration of the working people of America. How and what further action can be taken by the American labor movement to help bring about an early peace among the warring nations of Europe; how that peace can be secured with the establishment and maintenance of justice, freedom, and brotherhood the world over. These and other great questions of equal importance will, of necessity, occupy the attention of the San Francisco convention.

Therefore the importance of our movement, the duty of the hour and for the future, demand that every organization entitled to representation shall send its full quota of delegates to the San Francisco convention, November 8, 1915.

Do not allow favoritism to influence you in selecting your delegates. Be fully represented.

Be represented by your ablest, best, most experienced and faithful members.

Credentials.

Credentials in duplicate are forwarded to all affiliated unions. The original credential must be given to the delegate-elect and the duplicate forwarded to the American Federation of Labor office, 801-809 G Street Northwest, Washington, D. C.

The Committee on Credentials will meet at the headquarters of the American Federation of Labor six days previous to the opening of the convention, and will report immediately upon the opening thereof at San Francisco; hence secretaries will observe the necessity of mailing the duplicate credentials of their respective delegates at the earliest possible moment to Washington, D. C.

Grievances.

Under the law no grievance can be considered by the convention which has been decided by a previous convention, except upon the recommendation of the Executive Council, nor will any grievance be considered where the parties thereto have not themselves previously held conference and attempted to adjust the same.

Railroad Rates.

Application was made for a reduced railroad rate on account of our convention, and in answer to same, we were advised of the special excursion fares to the Pacific Coast in connection with the Exposition that obtain for 1915, these being the best rates that could be granted.

Hotel Rates.

Hotel Sutter, corner Kearny and Sutter streets—56 rooms without bath, single, \$1.50 per day; double, \$2.00 per day.

Seven rooms with bath, single, \$2.00 per day; double, \$2.50 per day.

Thirty-six rooms with bath—Single, \$3.00 per day; double \$4.00 per day, European plan.

Ninety-eight rooms with bath, single, \$2.50 per day; double, \$3.50 per day.

Twenty-one rooms with bath—Single, \$2.00 per day; double, \$3.00 per day.

Hotel Argonaut, Fourth street, near Market—\$1.00 to \$4.00 per day for each person, European plan.

Hotel Lankershim, Fifth street, near Market—Single, \$1.00 per day, up; double, \$1.50 per day, up, European plan; single, with bath, \$1.50 per day, up; double, with bath, \$2.00 per day, up, European plan.

Reservations in any of the above hotels may be made by addressing Mr. John A. O'Connell, secretary of the San Francisco Labor Council, Labor Temple, Sixteenth and Capp streets, San Francisco.

Headquarters of Executive Council will be Hotel Sutter.

Delegates should notify John A. O'Connell, in advance, of the time of their arrival in San Francisco, and over which road they will travel.

If there be any further information regarding the convention, or arrangements for the convenience of the delegates, it will be communicated in a later circular or through the American Federationist.

Faternally yours,

SAML. GOMPERS,

President.

Attest:

FRANK MORRISON,

Secretary.

JAMES DUNCAN, 1st Vice-Pres.

JAMES O'CONNELL, 2nd Vice-Pres.

D. A. MAYES, 3rd Vice-Pres.

JOS. F. VALENTINE, 4th Vice-Pres.

JOHN R. ALPINE, 5th Vice-Pres.

H. B. PERHAM, 6th Vice-Pres.

FRANK DUFFY, 7th Vice-Pres.

WILLIAM GREEN, 8th Vice-Pres.

JOHN B. LENNON, Treasurer.

Executive Council, American Federation of Labor.

Secretaries will please read this call at first meeting of their organization. Labor and reform press please copy.

Poetical Selections.

THE SECRET.

The way to reach the man who toils
Amid the dingy workings
Is not by stratagems and spoils
Or oily smiles and smirking.
You give him model homes and such,
Or clubs in which to revel.
You still will find yourself in "Dutch,"
Unless you're on the level.

It isn't coddling that he likes,
Or lordly condescension;
Such methods will not stop his strikes
Or banish all contention.
You must be fair and square and just,
A man among your brothers,
Before old doubtings turn to trust
Or ancient hatred smother.

Whatever motives yours may be,
In times be sure to find it.
He looks through every deed to see
The spirit that's behind it.
And though he may misunderstand,
Repel, at first, and doubt you,
He'd warmly grasp the proffered hand
When he is sure about you.

The boys within the breaker shed,
The miners deep below them,
Are slow of faith and hard of head;
You've simply got to show them,
And prove your varied aims and ends
Are not those of the devil—
For man and master can be friends—
If both are on the level.

—Selected.

THE OTHER FELLOW'S JOB.

The farmer looks discouraged,
He hates the rake and hoe;
He wants to try the city,
Where money seems to grow.
The other fellow gets the grain,
And leaves for him the cob,
So in his heart he covets
The other fellow's job.

The business man is worried,
Both ends will scarcely meet;
Last month he lost a million
Upon a deal in wheat.
He looks with longing to the farm,
And drops a tearful sob;
It seems to him like heaven—
The other fellow's job.

The doctor notes with envy
The lawyer's bouncing roll,
And wishes he had studied
With Blackstone as his goal.
The clerk is far from satisfied,
He sees the artist's daub,
And cries, "Oh, how much better!
The other fellow's job."

'Tis quite the style to grumble
And sigh for other stars,
To wish we were transported
To somewhere, even Mars;
And if we reach the Happy Land
This though the joy will rob,
For some will surely covet
The other fellow's job.

Wm. H. King, age 82, father of Brothers N. A. and E. B. King, of Lodge No. 100. Was born in Washington Parish, La., March 28, 1836, died August 9, 1915, from inflammation of stomach, at Marshall, Texas.

Lodge Notices

Sheldon—Lodge No. 493.

Any secretary taking up the card of Ben B. Sheldon, Reg. No. 52579, will please hold same and correspond with the undersigned, as this brother's card mysteriously disappeared from here some time ago.

DAVID LEWIS, S. L. 493.

Seigler—Lodge No. 549.

Any secretary taking up the card of Brother E. R. Seigler, Reg. No. 68353, please hold same and correspond with secretary of Lodge No. 549, as this brother left here owing a bill of \$3.00, which a brother stood for.

PERRY COOPER, S. L. 549.

McGrath and Steinhaus—Lodge No. 302.

Brothers Wm. McGrath, Reg. No. 17382, and August Steinhaus, Reg. No. 81321, are requested to correspond with the secretary of Lodge No. 302 and explain how they secured certain meal tickets. They are accused by members of Lodge No. 302, with forgery of them.

HUGH J. FULLER, S. L. 302.

Walsh—Lodge No. 209.

If Brother M. D. Walsh, Reg. No. 48400, will correspond with the secretary of Lodge No. 209 he will learn something of value to himself.

S. E. HARRIS, S. L. 209.

Looney—Lodge No. 209.

Any secretary taking up the card of Brother Robt. T. Looney, Reg. No. 85224, will please hold same and correspond with the secretary of Lodge No. 209.

S. E. HARRIS, Sec'y.

Notice.

To Whom It May Concern:

Harry Hand, unfair boiler maker, from Pere Marquette shop of Grand Rapids, Mich., whose register number was 72040, is now working as demonstrator for Prestolite Welding Co. This man went back to work and worked during entire length of strike. All organized labor, especially in closed shops, should watch out for this man and try to have him prevented from doing any demonstrating or any work of any kind in connection with it.

J. B. BEENEN,
JOS. W. SUTCLIFFE,
NELSON M. WARREN,

Heath—Daughter.

Anyone knowing the whereabouts of James H. Heath, once of Ottumwa, Ia., will

please notify the undersigned, his daughter.
EDITH M. HEATH,
Ft. Benton, Mont.

Ennis—Lodge No. 346.

Any secretary taking up the clearance card of J. J. Ennis, Reg. No. 24751, will please hold same and correspond with the secretary of Lodge No. 346, as this brother left here owing some bills he misrepresented.

GEO. W. SINGER, S. L. 346.

Hiell—Lodge No. 588.

Any secretary taking up the card of Brother F. S. Hiell, Reg. No. 43811, will please hold same and correspond with the secretary of Lodge No. 588, as this brother borrowed money. Last stamps and clearance card issued by Lodge No. 70.

JOHN McNANEY, S. L. 588.

Kelley—Lodge No. 222.

Any secretary taking up the card of Brother J. R. Kelley, boiler maker helper, Reg. No. 102852, will please hold same and notify secretary of Lodge No. 222, account debt due lodge.

G. W. COATES, Sec'y. 222.

Jeffries—Magoon.

Anyone knowing the whereabouts of W. J. Jeffries, formerly of Cedar Rapids, Ia., will please notify the undersigned. His wife is dangerously ill.

C. H. MAGOON,
610 Sixth Avenue East, Cedar Rapids, Ia.
Care Mrs. Munn.

Farley—O'Neil.

Anyone knowing the whereabouts of Frank Farley, recently from Mexico, between 35 and 40 years of age, who speaks fluent Spanish, please notify me at once.

J. P. O'NEIL,
708 E. Rusk St., Marshall, Tex.

LIST OF MEMBERS PREVIOUSLY ADVERTISED

E. L. Chaffin—Lodge No. 587.

We have suspended Brother E. L. Chaffin for not paying dues or honest debts. I, myself, loaned this brother some money to bury his little child, and he will not pay it back. He also owes several bills that he won't pay.

C. C. MADDY,
Corresponding Secretary Lodge No. 587.
April Journal.

W. M. Horstmeyer—Lodge No. 381.

Any secretary taking up the card of Brother W. M. Horstmeyer, Reg. No. 9735, please hold same and correspond with Joe Wilson, secretary Lodge No. 381, Amarillo, Tex., as this brother borrowed some money from this lodge which he has forgotten to return.

JOE WILSON,
April Journal. Lodge No. 381.

Thompson—Lodge No. 587.

F. W. Thompson, Reg. No. 20987, has been suspended by this local for non-payment of dues. He also owes about \$40 here.

T. C. MADDY,
June Journal. Secretary Lodge No. 587.

Cooper et al.—Lodge No. 491.

The following names are brothers who left Lodge No. 491 with bills unpaid: C. E. Cooper, boiler maker, bill to F. C. Krull & Co. for clothing, \$12.35. A. J. Conelly, bill to F. C. Krull & Co. for clothing, \$3.95. John Peters, Reg. No. 80223, to F. C. Krull & Co. for clothing, \$5.50. Joseph Regan, Reg. No. 95180, to F. C. Krull & Co. for clothing, \$2.40, and board and room to Sutton Sisters, \$8.83; total, \$11.23. J. M. Morgan, Reg. No. 91068, borrowed money from Local No. 491, \$2.50. Helpers: W. J. Mills, Reg. No. 98504, withdrawal card out of Local No. 145, owes F. C. Krull & Co. for clothing, \$6.40. C. A. Riley, debtor to F. C. Krull & Co. for clothing, \$4.25.

J. J. CARROLL,
June Journal. Secretary No. 491.

C. S. Burk—Lodge No. 82.

Any secretary taking up card of Brother C. S. Burk, Reg. No. 102470, will please hold same and correspond with secretary of Lodge No. 82, as this brother misrepresented facts to secure transportation to Kansas City, amounting to \$1.25, and we had to pay this bill out of the treasury of the local.

A. G. EVERETT,
June Journal. Secretary Lodge No. 82.

Robert Canton—Lodge No. 384.

Anyone knowing the whereabouts of Robert Canton, boiler maker's helper, will please notify the secretary of Lodge No. 384, as this brother left this lodge without paying his bills that the lodge went good for.

H. W. JOHNSON,
July Journal. Secretary Lodge No. 384.

W. C. Shrout—Lodge No. 82.

Any secretary taking up the card of Brother W. C. Shrout, Reg. No. 52553, will please hold same and correspond with the Secretary of Lodge No. 82, Osawatomie, Kas., as this brother left this lodge owing a \$9 board bill to Mrs. G. H. Troxell,

A. G. EVERETT,
July Journal. Secretary Lodge No. 82.

Shrout—Lodge No. 521.

Any secretary taking up the card of Brother W. C. Shrout, Reg. No. 52553, will please hold same and correspond with secretary of Lodge No. 521, as this brother misrepresented facts to secure transportation from Van Buren, Ark., to Coffeyville, Kas., amounting to \$4.95, and Local No. 521 had to pay same.

OTTY PYLES,
Corresponding Secretary Lodge No. 521.
July Journal.

Douglas et al.—Lodge No. 587.

Lodge No. 587 has suspended M. E. Douglas, Reg. No. 100307, for non-payment of dues. We have also bills aggregating to

\$80 against this brother. T. C. MADDY,
Secretary and Treasurer Lodge No. 587.
July Journal.

D. J. Fitzgibbons et al.—Lodge No. 99.

Any secretary taking up the card of D. J. Fitzgibbons, Reg. No. 67599, or F. G. Hayes, Reg. No. 21882, will please correspond with the secretary of Lodge No. 99, Newark, Ohio, as these brothers borrowed money from this local which they forgot to return.

CECIL C. ROBERTS,
July Journal. Secretary Lodge No. 99.

C. J. Dowd—Lodge No. 199.

Anybody knowing the whereabouts of C. J. Dowd, Reg. No. 96128, helper, left Lodge No. 199 without a card, and also owing a board bill of \$29 and other bills. Last stamp in his book issued by Lodge No. 113. Please notify the undersigned.

Aug. Journal. E. S. MCGINNIS, S. L. 199.

W. C. Shrout—Lodge No. 82.

Any secretary taking up the card of W. C. Shrout will please hold same and correspond with the undersigned, as this brother secured transportation from Osawatomie, Kas., to Kansas City on an unsatisfactory service letter and Lodge No. 82 had to pay for some.

A. G. EVERETT,
Aug. Journal. S. L. No. 82.

C. E. Cooper—Lodge No. 528.

Any secretary taking up the card of Brother C. E. Cooper, Reg. No. 41907, will please hold same and correspond with the undersigned, as this brother left here in 1913 and left unpaid bills that Brother Ed Swanson stood good for and had to pay.

J. H. THOMAS, S. L. No. 528.
Aug. Journal.

Linden—Lodge No. 582.

Any secretary taking up the card of Brother C. G. Linden, helper, Reg. No. 103719, please hold same and correspond with the undersigned, as this brother left here owing a board bill for the sum of \$19.40 and a tobacco bill for \$1.30. Brother George Will stood good for this brother and got him a job and he worked up to one day before pay day and left. Brother Will will appreciate it very much if he can be located.

S. V. ACOSTA, C. S. L. No. 582.
August Journal.

Brother Frederick Schultz—Lodge No. 10.

Any secretary taking up the card of Brother Frederick Schultz, Reg. No. 5235, will please hold same and correspond with the secretary of Lodge No. 10.

Aug. Journal.

Jas. A. Schofield—Lodge No. 419.

Brother James A. Schofield, Reg. No. 53752, left here owing bills to members and merchants. Any secretary taking up card hold same until bills are paid.

J. S. ARNOLD, C. S. L. No. 419.

KANSAS CITY, KAS., NOVEMBER, 1915.

No. 11.

THIRD SECTION OF REPORT OF BASIL M. MANLY, DIRECTOR OF RESEARCH AND INVESTIGATION, CONTAINING FINDINGS OF FACT AND RECOMMENDATIONS OF THE STAFF.

Report in full accepted and ordered printed by resolution of commission. Adopted by Commissioners Frank P. Walsh, John B. Lennon, James O'Connell and Austin B. Garretson.

Evidence in support of the statement that the lives of millions of wage earners are subject to the dictation of a relatively small number of men, is cited at length in the third and final section, made public today, of the report of Basil M. Manly, director of Research and Investigation for the United States Commission on Industrial Relations.

The following allegations are made as statements of fact based on the testimony and evidence in the hands of the commission.

"Except, perhaps, for improvements in safety and sanitation, the labor conditions of corporation-controlled industries are subject to grave criticism and are a menace to the welfare of the nation.

"In order to prevent the organization of employees for the improvement of working conditions, elaborate systems of espionage are maintained by the larger corporations which refuse to deal with labor unions, and employees suspected of union affiliation are discharged.

"The domination by the men in whose hands the final control of a large part of American industry rests is not limited to their employes, but is being rapidly extended to control the education and 'social service' of the Nation.

"This control is being extended largely through the creation of enormous privately managed funds for indefinite purposes, hereinafter designated 'foundations,' by the endowment of colleges and universities, by the creation of funds for the pensioning of teachers, by contributions to private charities as well as through controlling or influencing the public press."

The Rockefeller Foundation's entrance into the field of industrial relations, through the creation of a special division, it is declared, "constitutes a menace to the national

welfare to which the attention not only of Congress, but of the entire country, should be directed. Backed by the \$100,000,000 of the Rockefeller Foundation, this movement has the power to influence the entire country in the determination of its most vital policy."

Mr. Rockefeller is charged with planning to utilize literature which was known to him at the time to be untrue and misleading in a so-called "Union educational campaign."

There is developing, says the report, a degree of control over the teaching of professors in our colleges and universities, which constitutes a most serious menace.

Urges Congress to Act.

Congress is urged to enact a statute providing that all incorporated non-profit-making bodies, whose present charters empower them to perform more than a single specific function and whose funds exceed \$100,000,000, shall be compelled to secure a Federal charter.

The charter, it is urged, should contain provision limiting the funds, definitely and exactly specifying the powers, providing rigid inspection of finance, providing complete publicity, and providing that no line of work not specifically mentioned in the articles of incorporation shall be entered upon without the unanimous consent and approval of the Board of Trustees nor unless Congress is directly informed of such intention.

Congress is further urged to make provision for a thorough investigation of all endowed institutions both secular and religious, whose property holdings or income exceeds a moderate amount.

The third recommendation touching upon the work of foundations is that Governmental activity along the lines of education and social service should be increased as the only effective means of counteracting the influence of the foundations as long as they are permitted to exist.

The report says in full regarding concentration of wealth:

"The evidence developed by the hearings and investigations of the Commission is the basis for the following statements:

1. The control of manufacturing, mining and transportation industries is to an in-

creasing degree passing into the hands of great corporations through stock ownership, and control of credit is centralized in a comparatively small number of enormously powerful financial institutions. These financial institutions are in turn dominated by a very small number of powerful financiers.

2. The final control of American industry rests, therefore, in the hands of a small number of wealthy and powerful financiers.

3. The concentration of ownership and control is greatest in the basic industries upon which the welfare of the country must finally rest.

4. With few exceptions each of the great basic industries is dominated by a single large corporation, and where this is not true, the control of the industry through stock ownership is supposedly independent corporations and through credit is almost, if not quite, as potent.

5. In such corporations, in spite of the large number of stockholders, the control through actual stock ownership rests with a very small number of persons. For example, in the United States Steel Corporation, which had in 1911 approximately 100,000 shareholders, 1.5 per cent of the stockholders held 57 per cent of the stock, while the final control rested with a simple private banking house.

Similarly in the American Tobacco Co., before the dissolution, 10 stockholders owned 60 per cent of the stock.

6. Almost without exception the employes of the large corporations are unorganized, as a result of the active and aggressive "nonunion" policy of the corporation managements.

Furthermore, the labor policy of the large corporations almost inevitably determines the labor policy of the entire industry."

Extent of Control.

7. "A careful and conservative study shows that the corporations controlled by six financial groups and affiliated interests employ 2,651,684 wage earners and have a total capitalization of \$19,875,200,000. These six financial groups control 28 per cent of the total number of wage earners engaged in the industries covered by the report of our investigation. The Morgan-First National Bank group alone controls corporations employing 785,499 wage earners. That this control is effective is shown by the following telegram from J. P. Morgan to E. H. Gary:

Aix les Bains.

E. H. Gary, New York.

Have received your cable of yesterday. My own views are in accordance with those of the financial committee in New York. Certainly until question of wages has been settled by the coal and railroads, which still in abeyance but settlement seems imminent. Whole question wages should be settled simultaneously by all interests is possible. Going Paris Wednesday. Will see there H. C. F., P. A. B. W., and will cable you result of interview. If possible and meets your approval, think better wait until after inter-

view. Perfectly delightful here. Weather superb.

J. P. M.

8. The lives of millions of wage earners are, therefore, subject to the dictation of a relatively small number of men.

9. These industrial dictators for the most part are totally ignorant of every aspect of the industries which they control, except the finances, and are totally unconcerned with regard to the working and living conditions of the employes in those industries. Even if they were deeply concerned, the position of the employes would be merely that of the subjects of benevolent industrial despots.

10. Except, perhaps, for improvements in safety and sanitation, the labor conditions of these corporation-controlled industries are subject to grave criticism, and are a menace to the welfare of the Nation.

11. In order to prevent the organization of employes for the improvement of working conditions, elaborate systems of espionage are maintained by the large corporations which refuse to deal with labor unions, and employes suspected of union affiliation are discharged.

12. The domination by the men in whose hands the final control of a large part of American industry rests is not limited to their employes, but is being rapidly extended to control the education and "social service" of the Nation.

13. This control is being extended largely through the creation of enormous privately managed funds for indefinite purposes, hereinafter designated "foundations," by the endowment of colleges and universities, by the creation of funds for the pensioning of teachers, by contributions to private charities, as well as through controlling or influencing the public press.

14. Two groups of the "foundations", namely, the Rockefeller and Carnegie Foundations, together have funds amounting to at least \$250,000,000, yielding an annual revenue of at least \$13,500,000, which is at least twice as great as the appropriations of the Federal Government for similar purposes, namely, education and social service.

15. The funds of these foundations are exempt from taxation, yet during the lives of the founders are subject to their dictation for any purpose other than commercial profit. In the case of the Rockefeller group of foundations, the absolute control of the funds and of the activities of the institutions now and in perpetuity rests with Mr. Rockefeller, his son, and whomsoever they may appoint as their successors."

The Rockefeller Foundation.

16. "The control of these funds has been widely published as being in the hands of eminent educators and public-spirited citizens. In the case of the Rockefeller foundations, however, not only is the control in the hands of Mr. John D. Rockefeller, Jr., and two of the members of the personal staff of Mr. John D. Rockefeller, Sr., who

constitute the finance committee, but the majority of the trustees of the fund are salaried employes of Mr. Rockefeller or the foundations, who are subject to personal dictation and may be removed at any moment.

17. The funds of these foundations are largely invested in securities of corporations dominant in American industry, whose position has been analyzed under the early headings of this section. The policies of these foundations must inevitably be colored, if not controlled, to conform to the policies of such corporations.

18. The funds of the foundations represent largely the results either of the exploitation of American workers through the payment of low wages or of the exploitation of the American public through the exaction of high prices. The funds, therefore, by every right, belong to the American people.

19. The powers of these foundations are practically unlimited, except that they may not directly engage in business for profit. In the words of President Schurman of Cornell, himself a trustee of the Carnegie Foundation:

20. The charters of these foundations, with their almost unlimited powers, were granted under conditions of such laxity that it has been testified by an eminent legal authority who made an extensive investigation that those granted by New York State are legally defective and unconstitutional. Furthermore, evidence developed by the hearings of the Commission showed that in increasing the number of its trustees without complying with the requirements of the law governing corporations, the Rockefeller Foundation has already been guilty of a breach of the law.

21. These foundations are subject to no public control, and their powers can be curbed only by the difficult process of amending or revoking their charters. Past experience, as, for example, in the case of the insurance companies, indicates that the public can be aroused only when the abuses have become so great as to constitute a scandal.

22. The entrance of the foundations into the field of industrial relations, through the creation of a special division by the Rockefeller Foundation, constitutes a menace to the national welfare to which the attention not only of Congress but of the entire country should be directed. Backed by the \$100,000,000 of the Rockefeller Foundation, this movement has the power to influence the entire country in the determination of its most vital policy."

Basis Not Social.

23. "The documentary evidence in the possession of the Commission indicates:

(a) That the so-called "investigation of industrial relations" has not, as is claimed, either a scientific or a social basis, but originated to promote the industrial interests of Mr. Rockefeller. The original letter inviting Mr. W. L. Mackenzie King to asso-

ciate himself with the Rockefellers stated that Mr. Rockefeller and Mr. Greene in "their purely corporate capacity as owners and directors of large industries" desired his aid.

(b) That the investigation forms part of what Mr. Rockefeller, in a letter to Mr. Ivy L. Lee (the press agent of the Colorado operators), called the "union educational campaign", which is referred to by Mr. Bowers as "the fight for the open shop", the results of which are clearly manifested in the conditions existing in the camps of the Colorado Fuel & Iron Company, conducted on the "open shop" principle.

(c) That Mr. Rockefeller planned to utilize in this campaign literature containing statements which were known to him at the time to be untrue and misleading (as for example the numerous misstatements in the "Sermon to Young Men" of Dr. Newell Dwight Hillis, including the statement that the Colorado operators offered to recognize the miners' union), and also literature containing statements which constituted a malicious libel upon a large body of American citizens—for example, the following statement of Prof. John J. Stevenson: "Labor unions defy the law but are every ready to demand its protection; their principles are no better than those of the India Thugs, who practiced robbery and murder in the name of the goddess Cal."

(d) That the investigation of industrial relations is not being made in good faith, inasmuch as its director states that he will not now nor hereafter make public his findings regarding a most important part of his investigation, namely, the investigation in Colorado.

24. The purpose of Mr. Rockefeller to influence the public press is clearly shown by the employment of an experienced publicity expert as a member of his personal staff, and is indicated by his evident interest in the ownership or control of a number of publications, of which we have records dating from the inquiry of his secretary regarding the Pueblo Star Journal in May, 1913, to the extensive conferences regarding a loan of \$125,000 to finance The Nation's Business, the organ of the National Chamber of Commerce, which was established and given a semi-official status through the instrumentalities of the Secretary of Commerce and Labor with the sanction of a former president of the United States."

Extent of Influence.

25. "The extent of the possible influence of these foundations and private endowments of institutions for education and public service is shown by a large amount of evidence in the possession of the Commission. The following examples may be cited:

(a) The adoption of a definite line of policy by the Bureau of Municipal Research of New York to meet the conditions imposed by Mr. Rockefeller in connection with proposed contributions.

(b) The abandonment by several colleges and universities of sectarian affiliations and charter clauses relating to religion in order to secure endowments from the Carnegie Corporation and pensions for professors from the Carnegie Foundation for the Advancement of Teaching. It would seem conclusive that if an institution will willingly abandon its religious affiliations through the influence of these foundations, it will even more easily conform to their will any other part of its organization or teaching."

Control of Colleges.

26. "Apart from these foundations there is developing a degree of control over the teachings of professors in our colleges and universities which constitutes a most serious menace. In June of this year two professors, known throughout their professions as men of great talent and high character, were dropped from the positions they had occupied and no valid reason for such action was made public. Both were witnesses before the Commission, and made statements based upon their own expert knowledge and experience which were given wide publicity. One was a professor of law in a state university, who had acted as counsel for the strikers in Colorado; the other a professor of economics, who had not only been active in fights in behalf of child labor legislation and other progressive measures but had recently published a work comparing the income paid for property ownership with the income paid for all classes of service.

In the case of the state university we know that the coal operators in conjunction with other business interests had gained the ascendancy and exercised a great degree of control over the former Governor of the State, that the coal operators were bitterly opposed to the professor in question, and that the dismissal of the professor had been publicly urged by the operators upon numerous occasions, and we have the uncontroverted statement of the professor that he had been warned that if he testified before the Commission he would not be reappointed. In the case of the professor in the other university (which, though privately endowed, receives large appropriations from the State) we know that its trustees are interested in corporations which have bitterly opposed progressive legislation, and are men whose incomes are derived from property ownership and not from service.

In the face of such an enormous problem one can only frankly confess inability to suggest measures which will protect the Nation from the grave dangers described. It is believed, however, that if Congress will enact the measures already recommended, providing for a heavy tax on large inheritances with a rigid limitation on the total amount of the bequest, for the reclamation by the Federal Government of all parts of the public domain (including mineral rights) which have been secured by fraud, and for

a tax on nonproductive land and natural resources, a great step in the right direction will have been taken.

As regards the "foundations" created for unlimited general purposes and endowed with enormous resources, their ultimate possibilities are so grave a menace, not only as regards their own activities and influence but also the benumbing effect which they have on private citizens and public bodies, that if they could be clearly differentiated from other forms of voluntary altruistic effort, it would be desirable to recommend their abolition. It is not possible, however, at this time to devise any clear-cut definition upon which they can be differentiated."

Recommendations.

"As the basis for effective action, it is suggested that the Commission recommend:

1. The enactment by Congress of a statute providing that all incorporated non-profit-making bodies whose present charters empower them to perform more than a single specific function and whose funds exceed one million dollars, shall be required to secure a Federal charter.

The Federal charter should contain the following provisions:

- (a) Definite limitation of the funds to be held by any organization, at least not to exceed the largest amount held by any at the time of the passage of the act.

- (b) Definite and exact specifications of the powers and functions which the organization is empowered to exercise, with provision for heavy penalties if its corporate powers are exceeded.

- (c) Specific provision against the accumulation of funds by the compounding of unexpended income, and against the expenditure in any one year of more than 10 per cent of the principal.

- (d) Rigid inspection of the finances as regards both investment and expenditure of funds.

- (e) Complete publicity through open reports to the proper government officials.

- (f) Provision that no line of work which is not specifically and directly mentioned in the articles of incorporation, shall be entered upon without the unanimous consent and approval of the board of trustees, nor unless Congress is directly informed of such intention through communication to the Clerk of the House and the Clerk of the Senate, which shall be duly published in the Congressional Record, nor until six months after such intention has been declared.

2. Provision by Congress for the thorough investigation, by a special Committee or Commission, of all endowed institutions, both secular and religious, whose property holdings or income exceeds a moderate amount. The Committee or Commission should be given full power to compel the production of books and papers and the attendance and testimony of witnesses. It should be authorized and directed to investigate not only the finances of such institu-

tions, but all their activities and affiliations.

3. As the only effective means of counteracting the influence of the foundations, as long as they are permitted to exist, consists in the activities of Governmental agencies along similar lines, the appropriations of the Federal Government for education and social service should be correspondingly increased."

Discussing the difficulties that confront wage earners in collecting labor claims and securing redress for minor grievances, the report recommends the establishment either by states or municipalities of industrial courts similar to those which have proved to be successful in European countries.

It also recommends that commissioners of labor or the industrial commissions of the several states should be directed to prosecute such claims vigorously.

Unions and the Law.

Discussing the legal status of trade unions and the law relating to industrial disputes, the report says:

2. "The general effect of the decisions of American courts, has been to restrict the activities of labor organizations and deprive them of their most effective weapons, namely, the boycott and the power of picketing, while on the other hand the weapons of employers, namely, the power of arbitrary discharge, of blacklisting, and of bringing in strikebreakers, have been maintained and legislative attempts to restrict the employers' powers have generally been declared unconstitutional by the courts. Furthermore, an additional weapon has been placed in the hands of the employers by many courts in the form of sweeping injunctions, which render punishable acts which would otherwise be legal, and also result in effect in depriving the workers of the right to jury trial.

3. Important steps have been taken to deal with this situation by the enactment of the Clayton Act, applying to the Federal jurisdiction, and by the passage of laws in Massachusetts and New York which define the rights of parties engaged in industrial disputes. The actual effect of the Clayton Act can not be ascertained until it has been tested in the courts, but eminent legal authorities have expressed grave doubts that it will accomplish the desired results. At any rate, it does not seem to remove the root of the existing injustice, and, furthermore, in all the states except New York and Massachusetts the grave and uncertain situation already described exists. This situation must be corrected."

Urges English Act.

4. "There are, apparently, only two lines of action possible: First, to restrict the rights and powers of the employers to correspond in substance to the powers and rights now allowed to trade unions, and, second, to remove all restrictions which now prevent the freedom of action of both parties to industrial disputes, retaining only the ordinary civil and criminal restraints for the

preservation of life, property, and the public peace. The first method has been tried repeatedly and has failed absolutely, not only because of the intervention of the courts but because the very nature of the acts complained of on the part of employers (blacklisting and arbitrary discharge) makes it impossible to prevent them effectively by any form of legislation or administration. The only method, therefore, seems to be the removal of all restrictions upon both parties, thus legalizing the strike, the lockout, the boycott, the blacklist, the bringing in of strikebreakers, and peaceful picketing. This has been most successfully accomplished by the British Trades Disputes Act, which is the result of fifty years of legal evolution, and in its present form seems to work as successfully as could possibly be expected.

"It is suggested, therefore, that the Commission recommend:

1. The enactment by Congress and the states of legislation embodying the principles contained in the British Trades Disputes Act."

Violence.

Of violence in labor disputes the report says:

2. "Violence is seldom, if ever, spontaneous, but arises from a conviction that fundamental rights are denied and that peaceful methods of adjustment cannot be used. The sole exception seems to lie in the situation where, intoxicated with power, the stronger party to the dispute relies upon force to suppress the weaker.

3. The arbitrary suppression of violence by force produces only resentment which will rekindle into greater violence when opportunity offers. Violence can be prevented only by removing the causes of violence; industrial peace can rest only upon industrial justice.

4. The origin of violence in connection with industrial disputes can usually be traced to the conditions prevailing in the particular industry in times of peace, or to arbitrary action on the part of governmental officials which infringes on what are conceived to be fundamental rights. Violence and disorder during actual outbreaks usually result from oppressive conditions that have obtained in a particular shop or factory or in a particular industry. Throughout history where a people or a group have been arbitrarily denied rights which they conceived to be theirs, reactions has been inevitable. Violence is a natural form of protest against injustice.

5. Violence in industrial disputes is not immediately the product of industrial conditions, but of the attitude of the parties to the dispute after grievances or demands have been presented. The principal sources of an attitude leading to violence are:

(a) Arrogance on the part of the stronger party. This may result immediately in violence through the use of force for the suppression of the weaker party. The force

used may be physical or industrial. Physical force may be and is used by both employers and employes, through intimidation, assaults or attacks on property. Such physical aggression is seldom used by employes, as they are strategically the weaker party and the results are negative; only under exceptional circumstances can an employer be coerced by the use of force or intimidation. The exceptions seem to lie in the use of secret means, such as dynamite, with the object of weakening the employer's resistance.

The use of force by workers is normally directed not against the person or property of the employer, but against strikebreakers and guards. Many instances of the use of physical force by the agents of employers have, however, come before the Commission, indicating a relatively wide use, particularly in isolated communities. Such acts of violence usually take the form of assaults upon the leaders of the workers or upon organizers.

The instruments of industrial force belong chiefly to the employer because of his control of the job of the worker. Their use is more common and more effective than any other form of violence at the command of the employer. The most powerful weapon is the power of discharge, which may be used indiscriminately upon mere suspicion, which under certain conditions may be almost as potent, either in use or threat, as the power of life and death. It is the avowed policy of many employers to discharge any man who gives any sign of dissatisfaction on the theory that he may become a trouble maker or agitator.

The only corresponding weapon in the hands of the workers is sabotage, in the form either of malicious destruction of property or of interference with production. The field of its use is much more restricted in practice than in theory and its results at best are negative and produce in the employer only a blind resentment and indiscriminating hate. Sabotage as a policy shows no signs of developing in American industry.

(b) Equally productive of an attitude leading to violence in the denial of the use of peaceful methods of adjusting grievances, or the creation of a situation in which their use becomes impossible.

On the part of the employer the arbitrary acts which may be classed under this general head are:

Denial of the right to organize.

Refusal to consider the complaints of workers.

Refusal to meet the authorized representatives of workers.

Under modern industrial conditions any one of these acts makes peaceful negotiation and settlement impossible. Without organization of the workers their collective claims cannot be considered; without the right to appoint such representatives as they choose, workers are at the mercy of the em-

ployer's power of discharge and are usually unequal to the task of presenting and arguing their claims; while the refusal to consider grievances leaves only the alternative of the strike.

On the part of the workers, the possibility of peaceful settlement may be destroyed by refusal to discuss claims, by internal dissensions which render collective and definite action looking to a settlement impossible, and by the issuance of ultimatums which allow no time for consideration and negotiation. In any one of these situations the employer has only the choice between tame submission or absolute resistance to the demands of the workers."

Violence and Strikebreakers.

(c) "The immediate cause of violence in connection with industrial disputes is almost without exception the attempt to introduce strikebreakers to take the place of the workers who have struck or who are locked out. The entire problem of policing industrial disputes grows out of the problem of the strikebreaker and the attitude of the state toward him.

All experience shows that if no attempt is made to operate the plant, violence and disturbances requiring the police are practically unknown, whereas the attempt of strikebreakers to reach the plant, particularly where strikers are enjoined or prevented from using reasonable means to inform them of the existence of the strike and to use persuasive methods to keep them from entering the plant, is invariably accompanied by disorder and sometimes by active violence.

The plea of the workers for the assumption of a new attitude in relation to strikebreakers is based not only upon the negative character of the rights of the employer and the strikebreaker, but upon a positive though somewhat undefinable demand for recognition that strikers have a right to the jobs which they have left until their grievances are in some way adjusted. The argument is not only that when workers are willing to strike and sacrifice their livelihood, the conditions again which they protest must be assumed to be socially injurious, but, even more, that the worker who has struck in support of his demand for better conditions has not abandoned his job, but, in fact, has a keener interest in it than when quietly submitting to distasteful conditions.

At the very basis of the workers' contentions, however, lies the realization that working conditions can be improved only by strikes and that no strike can be won if the employer can operate his plant without difficulty. This is becoming increasingly true with every step in the nation's industrial development. During more primitive periods, if workers struck their places could not be filled except through the existence of a surplus of qualified labor in the community or by enticing workers from other employers. Now, the development of transportation, the establishment of specialized

agencies for supplying strikebreakers, and the growth of large corporations which can shift employes from one plant to another, have given each employer a command of the labor market of the entire country. There are agencies in every large city which will contract to supply any kind of labor on short notice, while almost any of the large industrial corporations can either supply the normal demand with one-half or three-quarters of their plants, or recruit from the surplus labor around their various plants a skeleton organization which can resume operations in a short time.

(d) The greatest disorders and most acute outbreaks of violence in connection with industrial disputes arise from the violation of what are considered to be fundamental rights, and from the perversion or subversion of governmental institutions."

State Constabulary.

"The Commission devoted a great deal of attention to the question of a state constabulary as a method of policing industry. Extensive investigations of the organization, personnel, and activities of the Pennsylvania State Constabulary were made and a number of witnesses were heard at length. The findings with regard to this particular police organization may be briefly stated: It is an extremely efficient force for crushing strikes, but it is not successful in preventing violence in connection with strikes, in maintaining the legal and civil rights of the parties to the dispute, nor in protecting the public. On the contrary, violence seems to increase rather than diminish when the constabulary is brought into an industrial dispute; the legal and civil rights of the workers have on numerous occasions been violated by the constabulary; and citizens not in any way connected with the dispute and innocent of any interference with the constabulary have been brutally treated and in one case shot down by members of the constabulary, who have escaped punishment for their acts. Organized upon a strictly military basis, it appears to assume in taking the field in connection with a strike, that the strikers are its enemies and the enemies of the state, and that a campaign should be waged against them as such.

There are certain features of the state police system, however, which seem to be preferable to the present haphazard methods of policing strikes. It is desirable, first, that all kinds of police should receive their entire compensation from the state; second, an organized force, whose records are known, is preferable both to the private police of corporations and to the deputies ordinarily sworn in by sheriffs; third, it is desirable that the force should be strictly disciplined and subject to definite orders; fourth, it is desirable that those in command of any police force should have a reasonably secure tenure of office and should have had previous experience under similar circumstances, as an inexperienced person is likely to become panic stricken by the

mere presence of crowds, regardless of their actions.

If these desirable features could be combined with other features which would insure their impartiality during industrial disputes, and raise their ideals from the present militaristic basis to the police basis of preserving the peace and protecting the rights of both parties and the public, the establishment of state police systems for use in connection with industrial disputes might be recommended. But under present conditions, it seems desirable rather to leave the state policing of industrial disputes to the sheriffs and the militia if the restrictions hereinafter suggested are rigidly enforced so as to protect both the organization and the personnel from partisanship."

Free Speech.

7. "One of the greatest sources of social unrest and bitterness has been the attitude of the police toward public speaking. On numerous occasions in every part of the country, the police of cities and towns have either arbitrarily or under the cloak of a traffic ordinance, interfered with or prohibited public speaking, both in the open and in halls, by persons connected with organizations of which the police or those from whom they received their orders did not approve. In many instances such interference has been carried out with a degree of brutality which would be incredible if it were not vouched for by reliable witnesses. Bloody riots frequently have accompanied such interference and large numbers of persons have been arrested for acts of which they were innocent or which were committed under the extreme provocation of brutal treatment of police or private citizens.

In some cases this suppression of free speech seems to have been the result of sheer brutality and wanton mischief, but in the majority of cases it undoubtedly is the result of a belief by the police or their superiors that they were "supporting and defending the government" by such an invasion of personal rights. There could be no greater error. Such action strikes at the very foundations of government. It is axiomatic that a government which can be maintained only by the suppression of criticism should not be maintained. Furthermore, it is the lesson of history that attempts to suppress ideas results only in their more rapid propagation.

Not only should every barrier to the freedom of speech be removed, as long as it is kept within the bounds of decency and as long as the penalties for libel can be invoked, but every reasonable opportunity should be afforded for the expression of ideas and the public criticism of social institutions. The experience of Police Commissioner Woods of New York City, as contained in his testimony before this Commission, is convincing evidence of the good results which follow such a policy. Mr. Woods testified that when he became Commissioner of Police, the found in force a

policy of rigid suppression of radical street meetings, with the result that riots were frequent and bitter hatred of the police was widespread. He adopted a policy of not only permitting public meetings at all places where traffic and the public convenience would not be interfered with, but instructing the police to protect speakers from molestation; as a result, the rioting entirely ceased, the street meetings became more orderly and the speakers were more restrained in their utterances."

To remove the causes which lead to violence and to promote the impartial and effective action of police during disputes, the following recommendations are made:

1. "The enactment by Congress of a statute prohibiting, under severe penalties, the transportation of men from state to state either under arms or for the purpose of arming them as guards or as agents either of employers or of employees.

2. The enactment by Congress of a statute prohibiting the shipment in interstate commerce of cannon, gatling guns, and other guns of similar character, which are not capable of personal use, when consigned to anyone except military agencies of the state or federal governments.

3. The regulation or prohibition of private detective agencies and private employment agencies as hereinbefore suggested.

4. The strict enforcement in all public and private employment offices of the rules requiring full notice of the existence of a strike.

5. The complete assumption by the States and municipalities of the responsibility for policing, and the prohibition of the maintenance of any private police (except a limited number of watchmen without police power except on premises).

6. The definition by statute, by the States, of the conditions under which sheriffs may deputize, such regulations to include provisions that a deputy must be a bona fide resident of the State, that a sworn statement of the complete activities of each deputy covering a period of ten years immediately preceding his deputization shall be filed with the Secretary of State, that no person who shall have been convicted of any misdemeanor or who shall have been imprisoned in any State shall be deputized, and that no deputy shall receive any money or any other thing of value from any person connected with an industrial dispute during his period of service or in connection therewith.

7. The enactment of statutes, by the States, providing a uniform code governing the militia and embodying the following principles:

(a) A proclamation of martial law or a state of war, insurrection or rebellion, by the Governor of a State, as the result of an industrial dispute, shall have no effect upon the continuance of the constitutional guarantees of the State and Federal constitutions, nor upon the law and statutes, nor

upon the jurisdiction of the courts, nor upon other civil authorities.

(b) The writ of habeas corpus or other process of the courts can not be suspended, interfered with nor disregarded by the military. It is part of the duty of the military to assist in enforcing the process and decrees of the civil courts.

(c) The ordinary courts shall have exclusive jurisdiction for the punishment of crime, and in all cases where the same act constitutes an indictable offense under both military and criminal law, court-martials shall have no jurisdiction nor authority to try officers or soldiers accused thereof, but the offender shall be turned over to the civil magistrate for trial.

(d) The military may not hold, detain, nor imprison persons arrested by them any longer than is necessary to hand them over to the civil authorities. No person arrested by the militia shall be detained after noon of the following day, without being brought before a committing magistrate.

(e) The military may not forcibly enter nor search a private house in order to seize arms or other property concealed therein without a search warrant.

(f) The military shall have no authority to establish a censorship over the press nor to interfere with the publication of newspapers, pamphlets, hand bills, or the exercise of the right of free speech, except under process of the courts.

(g) The military shall not limit, restrict, nor interfere with the freedom of movement of peaceable citizens or the rights of public meetings, assemblage, or parades in streets and public highways or elsewhere, except under due process of law.

(h) Every military officer under whose orders a civilian is asserted shall within twenty-four hours thereafter report in writing to the commanding officer the name of the prisoner, the offense with which he is charged, and what disposition has been made of him. Failing, he shall be liable to such punishment as a court-martial may direct.

(i) In times of industrial disputes no private guards, detectives, nor employes of either of the contending parties shall be enlisted or employed as members of the militia, and all persons found by the commanding officer to be in the employment of either party to a dispute or actuated by animosity or personal ill-will toward either of the contending parties, shall be forthwith released from active service.

(j) The Governor may, in times of disturbance, by proclamation forbid the sale or transportation of firearms, ammunition, and intoxicating liquors, and may require all firearms and other weapons to be deposited with the military at certain places, receipts being given therefor. Proper search warrants may be issued to discover concealed weapons.

8. That the States and municipalities should provide by law for the fullest use

of schools and other public buildings for public meetings and lectures and for other similar purposes."

Migratory Workers.

One important part of the report deals with the problem presented by large numbers of migratory laborers, many of whom find difficulty in obtaining employment during several months in the year.

The following recommendations to improve their condition are made:

1. "The Interstate Commerce Commission should be directed by Congress to investigate and report, the most feasible plan of providing for the transportation of workers at the lowest reasonable rates and, at the same time, measures necessary to eliminate the stealing of rides on railways.

If special transportation rates for workers are provided, tickets may be issued only to those who secure employment through public employment exchanges.

2. The establishment by States, municipalities and, through the Department of Labor, the Federal Government, of sanitary workingmen's hotels in which the prices for accommodation shall be adjusted to the cost of operation. If such workingmen's hotels are established, the Post Office Department should establish branch Postal Savings Banks in connection therewith.

3. The establishment by the municipal, State and Federal Governments of colonies or farms for "down-and-outs" in order to rehabilitate them by means of proper food, regular habits of living, and regular work that will train them for lives of usefulness. Such colonies should provide for hospital treatment of cases which require it."

Other subjects treated at length by the report are: Unemployment; organization, methods and policies of trade unions; methods and policies of employers' associations; joint agreements; agencies of mediation, investigation and arbitration; sickness insurance; scientific management; prison labor; immigration; labor conditions in colonial possessions; and Chinese exclusion.

Labor conditions in Porto Rico are severely criticized by the report. Wages are declared to be too low; housing and sanitary conditions bad; adequate protective laws and administrative agencies lacking; and the police and municipal authorities are charged with having denied workmen their rights. A full Congressional investigation is urged of labor conditions in Porto Rico and other possessions.

Methods of Trade Unions.

Discussing methods and policies of trade unions the report says:

"The investigations of the Commission, conducted under the direction of Dr. George E. Barnett, are the basis of the following conclusions:

1. The number of trade unionists relative to the working population is steadily increasing, although in certain industries, on account of the opposition of the great corporations and hostile employers' associations,

trade unionism is practically nonexistent. At present it may be roughly estimated that in manufacturing, mining, transportation and the building industries, if the proprietary, supervisory, official and clerical classes are excluded, twenty-five per cent of the workers twenty-one years of age and over are trade unionists.

2. The effects of trade unionism on wages are undoubted. Without some form of combination the wage workers can not bargain on equal terms with their employers. During the past fifteen years, a period of rapidly rising prices, wages in well organized trades have kept pace with the rising cost of living, in contrast to the relative decline of the purchasing power of the wages received by labor generally.

3. In the well organized trades, the hours of labor have been steadily reduced until at present eight hours is the normal working day for at least one-half of American trade unionists. It is significant of the influence of trade unionism on the length of the working day that it is exactly in those trades in which the trade unionists are a relatively small part of the total working force that they work long hours relatively to other trade unionists.

4. As the unit of industry grows larger, and the natural relation which exists between the small employer and his workmen disappears, the opportunity for unjustifiable discharges and petty tyrannies enlarges. The result is distrust and enmity among the employes. The effective remedy is the organization of the workers and the establishment of a system of trade boards in which the workers are equally represented with power to deal with such questions.

5. By means of mutual insurance in case of death, sickness, accident, old age and unemployment, many trade unions have greatly improved the conditions of their members. The extension of such systems appears to be highly desirable.

6. The trade union is a democratic institution, and faces the same problems in securing efficient government that other democratic institutions face. The theory of government which the American trade unions have adopted is the centralization of power in the national trade union as against the local unions. The successful carrying out of this plan of organization will eliminate the chief defects in trade union government. The control by the national union over strikes and the system of mutual insurance is already thoroughly established in the more important unions; it should be established in all other unions.

7. Unwarranted sympathetic strikes have undoubtedly been the cause of great annoyance and considerable economic loss to employers. The annoyance in such cases is particularly great, because no direct action by the employer can be taken; at best he can only use his influence with his associates or competitors. With the increasing control of the national officers over the local

unions, this kind of strike seems to be decreasing both in extent and frequency. Such sympathetic action is deep rooted in the sense of brotherhood which to a greater or less degree pervades and will not be completely eliminated until substantial justice exists throughout industry.

8. A few trade unions exclude qualified persons from membership by high initiation fees or other devices. This policy is condemned by the more important unions and is prohibited by their rules. The evidence presented to the Commission shows clearly that the policy of exclusion is anti-social and monopolistic, and should be given up by those unions which practice it.

9. In many trades, the efficiency of the union depends upon the maintenance of the rule that all those working at the trade shall become members of the union. Where the union admits all qualified workers to membership under reasonable conditions, such a rule cannot become the basis of monopoly and neither the rights of the individual nor the public interest are infringed by its enforcement.

10. In some trades there are a considerable number of union rules which restrict the productivity of the worker. Some of these rules can be justified on the ground that they are necessary to the protection of the health of the worker. There are some, however, which cannot be defended; these rules are anti-social and should be given up. Experience has shown that where industry is regulated by well organized systems of joint agreements, such rules either disappear or greatly decrease in number and importance. These limitations of output should not, however, be considered as standing alone. The limitations of output by associations of employers and by individual corporations are equally anti-social and have far greater consequences.

11. Jurisdictional disputes are the occasion of frequent and costly strikes. The disputes of this character which have caused most injury are in the building trades. Up to the present, the effort to lessen these disputes by action of the national unions involved have largely failed. It is suggested that the Commission recommend to the American Federation of Labor and to the national unions that renewed and more effective efforts be made to prevent such disputes.

12. The essential condition for trade union graft is the placing of the authority to call strikes or to levy boycotts in the hands of one person without adequate provision for supervision. This condition does not exist in many unions. There is abundant evidence to show that in very many cases it originates with employers who desire to secure an advantage over their competitors. The reason that graft is more prevalent in the building trades is that power is conferred on the business agent to call strikes without reference either to the rank and file or to the national officers. It has been

testified by employers who have given much attention to this problem that any well organized association of employers can eliminate graft whenever its members desire to do so. As far as the unions are concerned the solution seems to lie in the increased participation of the rank and file in the activities of the organization and increased provisions for fixing responsibility upon their business agents."

Joint agreements between employers and labor organizations representing their employes are urged as having proven the most satisfactory method of fixing conditions of employment.

A detailed plan for a permanent national mediation commission to be appointed by the President in disputes involving interstate commerce is outlined and urged upon Congress. Members, the number of which is not named, would be appointed for six years. Where official mediation of a strike fails, a board of mediation would be appointed consisting of three persons, one to be selected by the Commission and one by each of the parties. No power to compel arbitration should be given to such a Commission, says the report. The proposed Commission would have jurisdiction in all strikes where an establishment, except public service establishments, is engaged in interstate commerce or sends its products in interstate commerce. The plan provides for permanent advisory councils of employers and unionists, who would work with the Commission.

Discussing immigration, the report urges restriction based upon the general provisions of the so-called Burnett-Dillingham bill. It recommends:

1. "The enactment of legislation providing for the restriction of immigration based upon the general provisions contained in the so-called Burnett-Dillingham bill, which has received the approval of two successive Congresses. With a full realization of the many theoretical objections which have been urged against the literacy test, the consensus of evidence is so strong that its practical workings would be to restrict immigration to those who are likely to make the most desirable citizens, to regulate immigration in some degree in proportion to the actual needs of American industry, and finally to promote education in Europe, that it seems necessary at least to urge that this plan be given a practical test.

2. The enactment of legislation providing that within six months from the time of entry all immigrants shall be required, under penalty of deportation, either to declare their intention to become citizens by taking out their first papers or to definitely register themselves with the proper authority as alien tourists, and further providing that all immigrants who have failed to take out their first papers at the end of two years shall be deported, as shall all who fail to take out their second papers when

they become eligible, deportation in each case to act as a bar to future entry.

3. The provision by the state and municipalities, with the assistance of the federal government, if necessary, for the education of all adult persons who are unable to speak, read or write the English language. In order to accomplish this it may be necessary to provide that employers shall grant certain definite periods of leisure for such instruction."

PRESS ABSTRACT OF REPORT OF THE COLORADO STRIKE.

By George P. West.

Ordered Printed by Resolution of the Commission.

The responsibility of the strike of coal miners in Colorado in 1913 and 1914 for the disorder and suffering that followed is placed squarely on the shoulders of operators in a report by George P. West, made public today by the Commission on Industrial Relations.

The Colorado Fuel & Iron Company, controlled by John D. Rockefeller, is declared to have been the leader in formulating and carrying out strike policies. Mr. Rockefeller and his son, John D. Rockefeller, Jr., are charged, first, with the selection of incompetent and reactionary agents to serve as executive officials in this company, and, second, with giving their heartiest indorsement and support to these officials after they had taken action that precipitated the worst of the troubles.

Mr. Rockefeller, Jr., is charged with having approved measures to coerce the state government of Colorado and with having flouted the will of the President of the United States.

The report says:

"During all the seven tragic and bitter months that preceded Ludlow, Mr. Rockefeller wrote letter after letter in enthusiastic praise of men whose acts during this period had precipitated a reign of terror and bloodshed. It was only when the Ludlow massacre filled the press of the nation with editorial denunciation, when mourners in black silently paraded in front of his New York office, when cartoons in the conservative press pilloried him and his father before an angry public, that at last complacency gives way to concern in his letters and telegrams to Denver."

Of Mr. Rockefeller's responsibility the report says:

"Mr. Rockefeller's responsibility has a significance beyond even the sinister results of his policy in Colorado. The perversion of and contempt for government, the disregard of public welfare, and the defiance of public opinion during the Colorado strike must be considered as only one manifestation of the autocratic and anti-social spirit of a man whose enormous wealth gives him infinite opportunity to act in similar fashion in broader fields. Mr. Rockefeller writes to Mr. Bowers: 'You are fighting a good fight, which is not only in the interests of

your own company, but of the other companies of Colorado and of the business interests of the entire country.'

"And Mr. Bowers, with whom Mr. Rockefeller obviously is in full sympathy and agreement, writes letter after letter picturing the growth of trade unionism as a national menace against which the business men of the nation must combine. 'Now for the campaign of 1916 and beyond,' is the slogan with which one of these letters closes, and Mr. Bowers is unsparing in criticism of a President who would tolerate a former official of a labor union in his cabinet.

"The nation-wide significance and importance of the Colorado conflict and the company's ruthless policy of suppression are emphasized again and again. By June, 1914, Mr. Rockefeller has formulated something like a definite plan for a nation-wide campaign. The most highly paid publicity expert in the country has been borrowed from a great eastern railway, to be taken over later as a permanent member of Mr. Rockefeller's staff. A 'union educational campaign' is to be conducted, and the country is to be flooded with articles by college professors and others bitterly denouncing trade unions. And at the very time when he prepares to circulate Prof. Stevenson's intemperate and amazing defense of industrial absolutism and tirade against trades unions, Mr. Rockefeller enlists the aid of Mr. W. L. Mackenzie King, expert on industrial relations, to devise specious substitutes for trade unions that will deceive, mollify and soothe the public opinion while bulwarking the employers' arbitrary control.

"Yet it is important to remember that Mr. Rockefeller's character and policies are important only as showing the possibilities inherent in an economic and industrial situation that permits one man or a group of men to wield such enormous economic power, and through that power not only to control the destinies and dictate the circumstances of life for millions of wage earners and for entire communities, but to subsidize and control to a large degree those agencies that mold the public opinion of a nation. Even should Mr. Rockefeller change overnight, these possibilities of evil would remain inherent in our economic and industrial situation, as a menace to freedom and democracy.

Every important statement of fact contained in the report, it is said, is established by quotations from the correspondence or testimony of responsible executive officials of the Colorado Fuel & Iron Company or of Mr. Rockefeller and members of his personal staff. The report contains copious extracts from the testimony and correspondence of Mr. Rockefeller, Jr., and Starr J. Murphy, his personal attorney in New York; J. F. Welborn, president of the Colorado Fuel & Iron Company; L. M. Bowers, chairman of the executive department of the Colorado Fuel & Iron Company; the Rev.

Eugene S. Gaddis, superintendent of the company's sociological department, during the strike and until February, 1915, and others.

The report in discussing the company's rejection of President Wilson's plan for a settlement of the strike, says:

"Mr. Rockefeller not only rebuffed the President by denying his earnest request, but, if the letters of his agents may be relied upon, he apparently deceived the President and the public by means of the company's letter of rejection. This letter was written by President Welborn in collaboration with Mr. Ivy L. Lee, a member of Mr. Rockefeller's personal staff, whom he had sent to Colorado for the purpose. Mr. Rockefeller's personal staff in New York had become impressed with the strong public sentiment supporting the President's proposal, and in drafting their letter of rejection to the President. Messrs. Welborn and Lee inserted the following:

"A plan to secure harmonious relations in some industries or sections of the country would not necessarily apply to our peculiar conditions. We are not developing an even more comprehensive plan, embodying the results of our practical experience, which will, we feel confident, result in a closer understanding between ourselves and our men. This plan contemplates not only provision for the redress of grievances, but for a continuous effort to promote the welfare and the good will of our employes."

"This letter was signed by Mr. Welborn and was dispatched on September 18, 1914. On the following day, September 19, Mr. Welborn wrote to Mr. Murphy, Mr. Rockefeller's personal attorney in New York:

"I appreciate your very thoughtful letter of the 16th inst., with suggestions for consideration IN THE EVENT OF ITS BEING NECESSARY TO PROPOSE SOME PLAN TO TAKE THE PLACE OF THAT PRESENTED TO US BY THE PRESIDENT."

The political influence of the Rockefeller Company and its associates is declared to be greater today than ever before, as a result of the failure of the strike. The report says:

"The Commission is told by Mr. W. L. Mackenzie King, expert on industrial relations for Mr. Rockefeller, Jr., that Mr. Rockefeller's will and conscience are today the most potent factor to be considered in any effort to bring about an improvement of conditions. While physical and material conditions in the coal camps may be improved to some extent as a result of the publicity given to existing abuses, these improvements, if they come, will be granted as a charity, and there is as yet no indication that the inhabitants of the coal camps are nearer the achievement of industrial and political democracy than they were when the strike began. On the other hand, the arrest, persecution and conviction of union officials and strikers, with the aid of

attorneys and detectives in the employ of the Colorado Fuel & Iron Company, and by direction of public officials placed in office largely through the company's influence, indicate plainly that the reverse is true. How the Colorado Fuel & Iron Company obtained the new lease of political power by which it procured these prosecutions is well shown by the following extract from the testimony of Mr. L. M. Bowers, chairman of the executive department of the company, given before the Commission in Washington on May 24. Mr. Bowers had testified that the company turned 150 men out of its offices on election day to work for prohibition, which was bound up with the candidacies of Mr. Carlson for governor and Mr. Farrar for attorney general. Both these candidacies were successful.

Mr. Bowers: Let me explain. I don't mean we turned them out to carry the election. It was on election day, but we were out on the campaign and had a fight on and had practically no funds to carry on the campaign, and they wanted men to do the work, to do the ward work and distribute literature and all that sort of thing; and the coal operators, not only the coal operators but everybody that was interested in the question of prohibition at the election turned out their office men, and I had been — by the way, I had nothing to do with picking out that one hundred and fifty men, and I did not know it until the next day after they had been out.

Chairman Walsh: Didn't you use the prohibition sentiment that was strong in the state to get support for what you called the law and order platform, that was, for the Colorado Fuel & Iron Company and the others to aid in the ruthless prosecution of the strikers and the union officers, and a relentless policy of suppressing those men?

Mr. Bowers: It was all interlinking and locked together.

The company's deep interest in prohibition quite slips President Welborn's mind when he writes to Mr. Rockefeller the following exultant letter, dated November 6, 1914:

"My Dear Mr. Rockefeller:

"According to the figures received today, which are practically complete, the plurality of Carlson, Republican candidate for governor, over Patterson, is approximately 33,000. The plurality of Farrar, Democratic candidate for attorney general, over his next opponent, the Republican, is almost 38,000.

"Farrar is the present incumbent in the office to which he has just been elected, and has been about the only reliable force for law and order in the state house. His re-election serves to emphasize the sentiment in favor of law and order, expressed in the election of the main part of the Republican ticket.

"Mr. Farrar has been very actively engaged for several months in connection with the work of grand juries in various coal counties, where indictments have been

brought against those who participated in the rioting.

"Very truly yours,
(Signed) "J. F. WELBORN."

"Mr. Rockefeller also forgets the prohibition cause, on account of which Mr. Bowers says 150 men were turned out of the company's office as election workers. He writes:

"Dear Mr. Welborn:

"I have just returned to the city, after an absence of several weeks in the South with my wife, and find your letter of November 26 regarding the gratifying plurality for Carlson for governor and Farrar for attorney general. It would seem that the election of this Republican governor and the re-election of this Democratic attorney general, both of whom have established clear records as to their strong stand for law and order, would indicate that the sentiment of the people of Colorado is for law and order, quite irrespective of party lines.

"Very cordially,

(Signed)

"JOHN D. ROCKEFELLER, Jr."

"In pursuance of the 'law and order' policy on which they were elected, Governor Carlson and Attorney General Farrar have proceeded vigorously with the prosecution of union officials and strikers. Their most conspicuous success came with the conviction on a charge of murder in the first degree of Mr. John R. Lawson, member of the executive board of the United Mine Workers of America and the most conspicuous Colorado official of that organization. Mr. Lawson is an old resident of Colorado. He had worked his way from breaker boy to a position where he commands the respect and friendship of large numbers of the state's best citizens. He has appeared twice before the Commission, and members of the Commission and its agents have investigated carefully his record and character. As a consequence, he is believed to be a man of exceptionally high character and a good citizen in every sense of the term. The judge before whom he was tried was appointed by Governor Carlson after serving the Colorado Fuel & Iron Company as attorney and assisting in the preparation of cases against strikers. The panel from which the jury was drawn was selected by the sheriff of Las Animas County, an official whose sympathies have been with the mine owners from the beginning. Much of the evidence on which he was convicted came from men in the employ of a detective agency retained by the coal companies. The killing of John Nimmo, a mine guard, by the strikers during one of the many skirmishes between them and the deputies was the crime for which Mr. Lawson was convicted. No effort was made to prove that he fired the fatal shot. He was held responsible for the death of Nimmo because he was leading the strike and was at the Ludlow tent colony on the day of the battle. Nimmo was one of a small army of

deputy sheriffs, employed and paid by the coal companies and deputized by subservient sheriffs who made little or no effort to investigate their records. Thus Sheriff Jefferson Farr of Huerfano County testified before this Commission that the men to whom he gave deputies' commissions might have been, so far as he knew, red-handed murderers fresh from the scene of their crimes. That many guards deputized in this illegal fashion and paid by the Colorado Fuel & Iron Company were men of the lowest and most vicious character has been clearly established. That their function was to intimidate and harass the strikers had been demonstrated in the strike of 1903-1904 and had been made apparent early in the present strike by the shooting to death of Gerald Lipplatt, a union organizer, in the streets of Trinidad immediately after the calling of the strike, by a Baldwin-Felts detective employed by the Colorado Fuel & Iron Company and its associates and deputized by the sheriff of Las Animas County. In fact, it was to these deputies, then masquerading as national guardsmen, that national guard officers attempted to attribute the murder, looting and pillage that accompanied the destruction of the Ludlow tent colony of strikers later in the strike.

"On August 17 the Supreme Court of Colorado issued an order prohibiting Judge Granby Hillyer, who presided at Mr. Lawson's trial, from presiding at other trials of strikers or strike leaders, on the ground that he had been, just prior to his appointment, an attorney for the Colorado Fuel & Iron Company and the other operators. The court also issued a writ of supersedas permitting the Lawson case to come before it on its merits.

"The prosecution and conviction of Mr. Lawson under these circumstances, and his sentence to life imprisonment at hard labor, marked the lowest depths of the prostitution of Colorado's government to the will of the Colorado Fuel & Iron Company and its associates. It is the crowning infamy of all the infamous record in Colorado of American institutions perverted and debauched by selfish private interests. It is anarchism stripped of every pretense of even the chimerical idealism that fires the unbalanced mind of the bomb thrower. It is anarchism for profits and revenge, and it menaces the security and integrity of American institutions as they seldom have been menaced before.

"Attorney General Farrar's bias in favor of the owners and his conception of fairness is well shown by his comment on the grand jury which met in Trinidad in August, 1914, and which under his direction returned indictments against 124 strikers and strike leaders. Of this jury, Mr. Farrar testified before the Commission in Denver:

"I desire to say here that regardless of the reports which have been made, I have never seen a more fair-minded body of men gathered together under conditions such as

prevailed there than were the twelve men who constituted that grand jury, and the charges which were made that they were absolutely one-sided and partisan are absolutely without foundation whatever.'

"Following is the composition of this grand jury as reported by Mr. John A. Fitch of the staff of the Survey, an investigator of established reliability and fairness:

"J. S. Caldwell, proprietor of a shoe store. Formerly with the Colorado Supply Company, the company store department of the Colorado Fuel & Iron Company.

"James Roberts, public trustee. Secretary to F. R. Wood, president of the Temple Fuel Company.

"Charles Rapp, assistant cashier of Trinidad National Bank, of which W. J. Murray, general manager of the Victor-American Fuel Company is stockholder and director. Formerly with Colorado Supply Company.

"Henry C. Cossam, rancher. Deputy sheriff since April 25, 1914. Participated in one of the so-called battles.

"J. H. Wilson, real estate and insurance agent. Deputy sheriff since September 30, 1909. In charge of the deputies who attacked the Forbes tent colony October 17, 1913.

"William C. Riggs, rancher, whose son, W. E. Riggs, has been a deputy sheriff since January 20, 1911, and was in some of the battles in the fall of 1913.

"J. W. Davis, a Trinidad barber.

"D. J. Herron, life insurance agent in Trinidad.

"E. E. Phillips, rancher, Hoehne, Colo.

"John Webber, a Trinidad merchant.

"Frank Godden, proprietor Hotel S. Elmo, Trinidad.

"David West, justice of the peace, Aguilar, Colo.'

"Mr. Farrar's bias is further indicated by these additional extracts from his testimony at Denver:

"Chairman Walsh: What steps, if any, did you take to ascertain whether or not the military authorities and other authorities of the strike down there were acting in conformity with the constitution and statutes of the state, and whether or not the civil authorities were being deprived in any way of their powers?

"General Farrar: Very little. During the time the militia was there, I was not in touch with the situation in an official capacity, except as it came to me through the governor, with the exception of one or two instances. General Chase and I did not have any conference. He was at Trinidad, and during the time the militia was in the field I was not at Trinidad although on two occasions I sent my deputy down to Trinidad, in order to be able to assist along certain lines which were then under discussion. And I therefore say that my relationship with the military authorities was largely indirectly through the governor. I did, of course, know in a general way what was

being done down there, and what lines were being followed; but it was not a definite daily report or information coming to me. I will say further in that respect that there were a number of attorneys in the national guard, and that some of these were advising General Chase as to the local situation. My advice was, of course, of a more general nature and was always to the governor, with the exception of the two occasions when General Chase and I met in conference here.

"Chairman Walsh: Do you know whether or not the testimony taken before the Military Commission, of which Major Broughton was the head, was preserved?

"General Farrar: No, I know nothing of it. I have never seen the testimony and cannot answer your questions.

"Chairman Walsh: Did your office make any effort to ascertain whether or not the civil rights of any person had been violated or abused?

"General Farrar: You mean by this Military Commission?

"Chairman Walsh: Yes, by the Military Commission.

"General Farrar: Yes.

"Chairman Walsh: Was there any such abuse or violation?

"General Farrar: Not that I was able to learn. Now I must qualify that by saying that I have not seen the testimony and my information concerning it is of a general nature. * * *

"Asked by Chairman Walsh: "Have you ever gone over the list (of national guardsmen) to ascertain whether or not the law had been violated in reference to the enrollment of the men in the mine?" he replied: "Only through consulting the officers in charge of that matter."

"Chairman Walsh: What steps, if any, have been taken by your office to investigate the occurrence at Ludlow of April 20, 1914?

"General Farrar: I have taken every opportunity or every step which opportunity afforded me. As stated before, I did not have and have not seen the testimony—the evidence taken by the Military Court Martial, relative to that question. * * *

"Chairman Walsh: I am asked to inquire of you if you know about the looting of saloons and the destruction and confiscating of liquors in the Snodgrass store at Ludlow, also the complete destruction of bakeries, rooming houses and private residences at Ludlow by the militia?

"General Farrar: I know nothing of it."

"General Farrar did give his attention to the question of whether or not the state troops acted legally under Governor Ammon's original orders, prohibiting them from acting as escorts for imported strikebreakers. He testified before this Commission that he went to Governor Ammons and advised him that such a policy was not justified by law and should be abandoned.

"The same authorities who conducted this and other successful prosecutions of strikers

have taken no steps to prosecute Lieutenant K. E. Linderfelt of the Colorado National Guard, or other members of the guard who took part in the wanton slaughter of three unarmed strikers held prisoners at Ludlow, and in the burning of the Ludlow tent colony which resulted in the death by suffocation and burning of thirteen women and children. Yet at the coroner's inquest a doctor who examined the body of Louis Tikas, one of the slain strikers, testified that a blow on the head, dealt by Lieutenant Linderfelt with the stock of his rifle, was so severe that it might have caused death even had Tikas not been shot three times through the body as he lay prostrate on the ground, by men under Linderfelt's command. It is true that Lieutenant Linderfelt and other members of the guard were tried by a court martial composed of their fellow officers, and that trifling demotions in rank were assessed as punishment. Nor have the same authorities taken steps to prosecute officials and directors of the Colorado Fuel & Iron Company, in spite of evidence gathered by the Commission, and which has become common knowledge, that these officials through their agents and subordinates created a private army of armed guards and later procured the enlistment of these gunmen in the militia, and of well-substantiated charges that these disreputable agents of the company in the guise of militiamen committed various crimes from robbery, burglary and arson to murder.

"The prosecution of Mr. Lawson and many other strikers and union officials was undertaken and conducted in compliance with the stand taken by the present governor and the present attorney general during their campaign for election in favor of 'law and order.' Their conduct since taking office must be considered a confirmation of the charge made by their political opponents during the campaign that in standing for 'law and order' they were in reality standing for the coal operators against the strikers, for industrial absolutism against industrial democracy, and that their conception of maintaining law and order was the ruthless suppression of the strike and imprisonment or execution of the men who dared to lead it, this to serve as an object lesson to others who might attempt to lead a similar revolt in the future."

Discussing the causes of the strike, the report says:

Causes of the Strike.

"The Colorado strike was a revolt by whole communities against arbitrary economic, political and social domination by the Colorado Fuel & Iron Company and the smaller coal mining companies that followed its lead. This domination has been carried to such an extreme that two entire counties of southern Colorado for years have been deprived of popular government, while large groups of their citizens have been stripped of their liberties, robbed of portions of their earnings, subjected to ruthless perse-

cution and abuse, and reduced to a state of economic and political serfdom. Not only the government of these counties, but of the state, has been brought under this domination and forced or induced to do the companies' bidding, and the same companies have even flouted the will of the people of the nation as expressed by the President of the United States.

"Economic domination was achieved by the Colorado Fuel & Iron Company and its followers through the ruthless suppression of unionism, accomplished by the use of the power of summary discharge, the black list, armed guards, and spies, and by the active aid of venal state, county and town officials, who placed the entire machinery of the law at the disposal of the companies in their persecution of organizers and union members.

"This economic domination was maintained by the companies in order that they might be free to obey or disregard state laws governing coal mining as they pleased; arbitrarily determine wages and working conditions; and retain arbitrary power to discharge without stated cause. The power to discharge was in turn used as a club to force employes and their families to submit to company control of every activity in the mining communities, from the selling of liquor and groceries to the choice of teachers, ministers of the gospel, election judges, and town and county officials. In the cases of several companies, the suppression of unionism was used also to deny checkweighmen to the men in order that the miners might be cheated of part of their earnings.

"Political domination was achieved by the companies by the use of their monopoly of employment to suppress free speech, free press and free assembly, by the appointment of company officials as election judges, by the formation of a political partnership with the liquor interests, and, in the case of the Colorado Fuel & Iron Company, also by the expenditure of large sums of money to influence votes during campaigns and by resort to other forms of fraud and corruption. Where a public official refused to do their bidding, he was whipped into line through pressure from interests that responded to the economic power of the Colorado Fuel & Iron Company and its followers.

"This political domination was maintained by the companies in order that they might ignore or defy state laws enacted to safeguard the interests of their employes, prevent legislation by state or county unfavorable to their interests and obtain such legislation as they wished, control coroners and judges and thus prevent injured employes from collecting damages; and flagrantly disregard the constitutional and statutory guarantees that otherwise would have prevented them from procuring the imprisonment, deportation or killing of union organizers and strikers.

"The policies and acts of the executive

officials of the Colorado Fuel & Iron Company, and of the other companies that acted with them, had the hearty support and indorsement of the greatest and most powerful financial interest in America, that of John D. Rockefeller, and his son, John D. Rockefeller, Jr., who controlled the company through ownership of approximately 40 per cent of its stocks and bonds. Letters from Mr. Rockefeller, Jr., heartily approving his company's refusal to meet representatives of the strikers, of the measures taken to suppress the strike, and of the coercion of the governor that resulted in throwing the state troops on the side of the owners, were shown not only to executive officers of his company, but to other operators who followed its lead and his support contributed largely to the unyielding and lawless policy that finally resulted in the horrors of the Ludlow massacre and the intervention of the federal government.

"After the system of political and economic absolutism outlined above had driven the miners to revolt, the owners not only obstinately refused to admit the possibility of any grievance, but at a time when they could have prevented a strike by merely granting a conference to the union officials, they chose instead to refuse the conference and in doing so made themselves responsible for the disasters and tragedy that followed. Letters from the president and chairman of the executive board of the Colorado Fuel & Iron Company to Mr. Rockefeller's office show that these officers fully realized the gravity of the situation before the strike, and also that they believed a strike could have been averted by the mere granting of a conference. Yet their refusal even to meet representatives of the union had from the beginning the warm approval and indorsement of Mr. John D. Rockefeller, Jr.

"The refusal of the operators to accede to any plan for settlement involving a personal meeting between themselves and the strike leaders or any slightest recession from their original attitude continued throughout the strike, and eventually took the form of a rejection, amounting to rebuff, of a plan that was urged upon them by the President of the United States and that was supported by the public opinion of the nation. This continued and persistent defiance of the public interest, as that interest was urged upon them by the highest representative of the people, continued to have the support and indorsement of Mr. Rockefeller, without which there is doubt that it could have been sustained.

Discussing the situation in Colorado today, the report says:

"The defeat of the strike by the methods that have been described left the Colorado operators free to operate their properties exactly as they saw fit. The United Mine Workers have, at least temporarily, abandoned their effort to organize the miners, and the large operators other than the Colorado Fuel & Iron Company are as deter-

mined as ever that there shall be no democratic organization of the industry which they control.

"At the mines of the Colorado Fuel & Iron Company a plan purporting to provide the miners with easy access to Company officials, and with other advantages of collective bargaining, has been announced by Mr. Rockefeller and his subordinates, and has been widely heralded by them as evidence that, the strike having been defeated, they are now willing to grant of their own free will and accord what they stubbornly refused to give under the duress of the strike. Before considering the merits of this plan it must be pointed out that the spirit actuating those who conceived and executed it was the spirit of men who give as a charity or a favor that which they had denied when demanded as a right. Even if we grant that the concession has substantial value, it must still be characterized not as a concession to democratic principles, but as an instance of that handing down of favors in which autocrats and despots always have delighted.

"But after a study of the plan as disclosed in the testimony of Mr. Rockefeller and Reverend Mr. Gaddis, and in the public announcements of President Welborn, it is found that it embodies none of the principles of effectual collective bargaining and instead is a hypocritical pretense of granting what is in reality withheld.

"The testimony and correspondence not only prove this, but they contain indisputable evidence that the plan was conceived and carried out, not for the purpose of aiding the Company's employes in Colorado, but for the purpose of ameliorating or removing the unfavorable criticism of Mr. Rockefeller which had arisen throughout the country following his rejection of President Wilson's plan of settlement, and which had found utterance even in those conservative circles and newspapers in Eastern cities where Mr. Rockefeller's self-esteem could not escape injury by such criticism.

"In considering the correspondence and testimony that will here be quoted, it must be borne in mind that Mr. Welborn is still the president of the company and the dominating executive official on the ground in Colorado. If it appears that Mr. Welborn's spirit and attitude toward the new plan, as disclosed in his correspondence while this plan was being formulated, were such as to convince the recipient of his letters that he was temperamentally and by conviction unfitted for the carrying out of any plan for real collective bargaining, then Mr. Rockefeller's retention and continued support of Mr. Welborn must be taken as a measure of his own sincerity regarding the plan.

Mr. Welborn's conception of collective bargaining and of an ideal arrangement for safeguarding the wage earners' interests is expressed in the following sentence in his letter of October 9, 1914:

I am impressed with the importance

of so composing whatever committees are found advisable as to make it appear that they all represent one interest; in other words, that there is but one interest which is in every sense of the word common, yet having it understood that the committee is as free to consider any complaints or grievances of men as though it were one actually of their own selection.

"This notion that the interests of the employer and employe are common when applied to distribution of product is a fallacy that can hardly be advanced with sincerity by a man of intelligence. Yet it apparently animates Mr. Rockefeller's attitude, and he even considers it consistent with the existence of a system of collective bargaining. It need scarcely be pointed out, first, that the plan outlined by the letters and testimony here quoted does not provide an effective organization of the Company's own employes, and, second, that if it did these employes would still be unable to maintain bargaining equality without the support of a nation-wide organization such as only the United Mine Workers can give.

"The correspondence and statements already quoted show that so far from being a plan that provides for collective bargaining, it is a plan conceived and executed by men who were determined that no element of real collective bargaining should enter into it.

"The effectiveness of such a plan lies wholly in its tendency to deceive the public and lull criticism, while permitting the company to maintain its absolute power.

"Reverend Mr. Gaddis continued to serve the company as superintendent of its Sociological Department until February, 1915, or several weeks after the date on which the new plan became operative. Testifying before this Commission at Washington, he said:

"Of the much advertised welfare agent, 'as mediator between the company and its employes,' we believe his work will only tend to intensify the despicable oppressiveness of the past few years. One super at least has already been informed, *sub rosa*, that there need be no undue concern about this new officer limiting their suzerainty. He had been in the field but a few weeks when he effected the discharge of a man with a family to support, on the word of a woman of questionable character. The evicted employe was given no opportunity to present his side of the case.

"It is almost farce to presume that a pet appointee would fearlessly and impartially bring things to the surface, that would disturb the imperturbable equanimity of the one who must O. K. his monthly salary account.

"The assembling of camp delegates in Bower's old office on January 19th, in which complaints were solicited; and a generally blumpty good time with free auto rides, banquet and theater party as a part of the program; in addition all expenses being

paid to and from their respective camps, was a decided hit.

"A good square kick could hardly be expected from such sources.

"Again the remembrance of so many of their former comrades being 'canned,' for squealing would not be forgotten amidst the grandeur and informality of their temporary environment.

"A few weeks after this meeting a representative from headquarters inquired of a super if 'the men thought we were trying to put one over on them?' There is room for suspicion that 'one is being put over on the public and that the various investigating committees are having dust thrown into their eyes; for Presto, the lion has been changed into the lamb.

"If the investigating committees can be kept out of Colorado for the next six months or a year the old shackles of oppression will have received so many new rivets, that it will take the hellish fires of another strike to loosen them."

The report charges that no plan of any sort for hearing grievances and giving the men even a pretense of representation was favorably considered by the company until, in rejecting President Wilson's plan of settlement it became necessary to propose some counter plan in order to appease public criticism.

The report charges that Mr. Rockefeller made no effort to disclaim full responsibility as the controlling influence behind the operators until after the so-called Ludlow massacre. Discussing this point the report says:

"The evidence shows that the Colorado Fuel & Iron Company played a master hand in determining the policy of the operators, and in maintaining that policy after it was announced. This company mined from thirty-five to forty per cent of the coal produced in Colorado and employed nearly three times as many miners as the second largest company. For more than ten years its largest stockholder and dominating director had been John D. Rockefeller, and since 1907 a personal representative of Mr. Rockefeller had been in active charge of its management as chairman of the board of directors, vice-president and treasurer. This official was Mr. L. M. Bowers, a man sixty-nine years of age, who had been employed by Mr. Rockefeller to manage various industries for twenty years, and whose deep seated opposition and animosity toward labor unions and the practice of collective bargaining must have been well known to his employer when he was sent to Colorado to represent the Rockefeller interest.

"From first to last Mr. Bowers, as shown by his letters to Mr. Rockefeller's office, saw nothing in the struggle of the miners for the right to organize for collective bargaining except a plot by 'socialists,' 'anarchists' and 'political demagogues' to wrest the control of the mines from their owners. His letters to Mr. Rockefeller, Jr., early in the strike show him to have been bitter and prejudiced in the extreme, with

an adherence to the individualistic economic doctrines of a century ago that was almost grotesque in its intensity.

"Back of Mr. Bowers and President Welborn in determining and maintaining the operators' policies stood John D. Rockefeller, Jr., whose enthusiastic approval and indorsement of these policies gave incalculable moral and material support to both his own subordinates and to the executive officials of other companies. Mr. Rockefeller's indorsement and approval was accorded promptly at the beginning of the strike in the form of personal letters to Mr. Bowers, which were shown not only to the executive officers of the company but to the heads of other companies as well. It is greatly to be doubted if the Colorado operators could have maintained their unyielding and defiant attitude of opposition to the enlightened public opinion of the entire nation had they not been bulwarked by the material and moral power wielded by the possessor of the hugest private fortune in the world.

"Mr. Rockefeller's power to direct the policies of his own company is admitted and needs no discussion. But it is alleged that the Colorado Fuel & Iron Company was but one of many, and by itself unable to control the situation.

"Examination of the evidence shows that Mr. Rockefeller's agents admitted the company's leadership in the counsels of the operators during the first seven months of the strike.

"It was not until the horror of the Ludlow massacre had shocked and outraged the nation and brought upon its perpetrators the wrath and loathing of every decent citizen that Mr. Rockefeller, for the first time, makes the point that his company was but one of many, and that Mr. Bowers in Denver, his supreme self-complacency staggered for the minute, writes his employer 'we have been given altogether too prominent a place in this trouble.'

"Mr. Bowers used this phrase five days after the Ludlow massacre. The same sudden desire to minimize his part in the affair, apparently animated Mr. Rockefeller in New York at about the same time. Telegraphing to Mr. Bowers on April 26, while the tide of the nation's anger still rose about him, Mr. Rockefeller asked:

"How many coal companies are involved in the strike. What proportion of their normal total output does your company represent? Answer 10 West Fifty-fourth Street.'

"Contrast Mr. Bowers' modesty after Ludlow with his early boastfulness. On November 18 he wrote Mr. Rockefeller:

"Personally, the strain has been very great on Mr. Welborn, who has been the recognized leader among the operators.'

"While Mr. Rockefeller may have fully believed that conditions in the Colorado mines had been greatly improved since Mr. Bowers was sent there, and were as good or better than conditions prevailing in other fields, it

is submitted that even a cursory reading of Mr. Bowers' letters should have revealed to his employer that here was a man temperamentally and intellectually incapable of dealing wisely and fairly with a strike involving the vital rights and interests of thousands of employes and their families, and seriously menacing the peace and well being of a state. Mr. Bowers' letters alone should have been sufficient to convince Mr. Rockefeller that the writer was irritable, arbitrary and obstinate to an exceptional degree; that he was a survival of the dark age of theory and practice regarding industrial relations; that he was ignorant of the characters and records of the men whom he opposed; and that finally his attitude toward the government of the state and nation was contemptuous, hostile and defiant.

"Nor could Mr. Rockefeller be acquitted even had Mr. Bowers concealed these qualities in his correspondence with 26 Broadway. From the day, seven days before the strike began, when he avoided an interview sought by a mediator of the federal government, Mr. Rockefeller refused to enter upon any independent investigation in order to determine for himself the true situation in Colorado, before he threw all the enormous power of his personal support behind the men who had set themselves to the task of crushing the revolt of 8,000 miners.

"Yet the men whose unsupported word he accepted were almost strangers to him. They were men who could not have admitted the grievances complained of without admitting themselves guilty of crimes against society. But their denial was all that Mr. Rockefeller required before projecting himself into the situation as a decisive factor.

"That Mr. Rockefeller's support of his Colorado officials became a factor of tremendous importance, if not a decisive factor, in preventing a peaceful settlement is made clear by a study of the testimony and correspondence.

"On May 13, 1913, Mr. Bowers wrote to Mr. Rockefeller's secretary: "It is well known that the Rockefeller interests are managing the affairs of the Colorado Fuel & Iron Company.' Business men, ministers, college professors, editors, and the general public knew that Mr. Bowers and Mr. Welborn represented the greatest financial interest in the world. They represented this interest in a comparatively new state, where dependence on 'eastern capital' and the habit of sedulously cultivating the friendship of eastern investors still held. They represented the world's greatest investor in a community of small business men newly-arrived in the charmed circle of wealth and power and actually sensitive to the glamor that surrounds the world's financially powerful.

"In the business community of Denver, Mr. Rockefeller's agents had a prestige comparable to that of those strong men of Rome sent out from the world's capital to carry its grandeur into distant provinces. Three newspaper publishers, preachers of the gos-

pel, obscure officers of the militia, looked to Mr. Rockefeller, a stranger in distant New York, for succor in their financial distress. When the United States government, warned of the discontent and the impending revolt in the coal fields, moved to prevent a disastrous strike, it was to Mr. Rockefeller's office in New York that this government sent its mediator. It was to Mr. Rockefeller that a cabinet officer appealed early in the strike, and Mr. Rockefeller's answer then, in contrast with his attitude after Ludlow, carried no denial or repudiation of his supreme authority and power."

There are submitted many extracts from the correspondence between Messrs. Bowers and Rockefeller in Denver and Mr. Rockefeller, or members of his personal staff, at 26 Broadway, all bearing on the question of Mr. Rockefeller's responsibility.

The report continues:

"But Mr. Rockefeller's part in the Colorado conflict was not confined to these letters of praise and indorsement which so heartened and sustained the Colorado operators. Prior to the massacre at Ludlow on April 20, the letters proved quite sufficient for Mr. Rockefeller's purpose. But the storm of popular wrath that rose after Ludlow demanded more active participation. It was then that Mr. Rockefeller initiated the nation-wide publicity campaign by which he hoped to convince the country that the strikers, not his company's mine-guard-militiamen, were responsible for the deaths of thirteen women and children who perished at Ludlow, and that the strike itself, instead of a struggle for freedom, was a revolt by blood-thirsty and anarchistic foreigners, led by men who obtained huge incomes from organized agitation and lawlessness.

"Still hiding behind his executive officials in Denver, Mr. Rockefeller employed a publicity expert and advanced him money from his personal funds to begin the campaign. He chose for the purpose Mr. Ivy M. Lee, publicity agent for the Pennsylvania Railroad. The President of that railroad consented that Mr. Lee should devote a part of his time to Mr. Rockefeller's service, and the pamphlets and bulletins were to be dispatched in bulk from Mr. Lee's Philadelphia office to Denver, for distribution from the office of the Colorado Fuel & Iron Company. They were to go forth under the name of the operators' committee, as correct information gathered and written on the scene by men familiar at first hand with the facts.

"Early in the summer of 1914 there began that remarkable publicity campaign by which Mr. Rockefeller flooded the nation with bulletin after bulletin, defending the coal operators and denouncing the strikers and their leaders. These bulletins contained false and deceptive statements. Salaries paid to officials of the United Mine Workers in Colorado for the year ending November, 1913, were conspicuously displayed as salaries for the nine weeks ending in that month. This gross and palpable slander was

mailed to thousands of congressmen, editors, ministers of the gospel, school teachers, public officials, business and professional men, whose names appeared on Mr. Lee's carefully prepared mailing lists. No correction was made until it had been exposed by this Commission during the hearing in Denver in December, 1914.

"The preparation and distribution of these bulletins was carried on with the greatest secrecy as to the authorship of Mr. Lee and as to his employment by Mr. Rockefeller. When this Commission demanded the name of the writers of the bulletins of Mr. Welborn, during the hearing in December, Mr. Welborn refused to answer until he had consulted his attorney. Even then he carefully refrained from revealing the fact that the publicity campaign had been initiated and paid for by Mr. Rockefeller.

"Has the Colorado strike opened the eyes of Mr. Rockefeller and his associates to necessity, wisdom or moral obligation pointing toward radical concessions and changes in Colorado? The evidence justifying an affirmative answer is lacking.

"The Rev. Mr. Gaddis visited all the camps of the Colorado Fuel & Iron Company and had exceptional opportunity to meet the miners and superintendents and to ascertain the actual conditions. Testifying in May, 1915, he summed up his judgment of the situation existing in these camps in the following language:

"I have never seen a situation to my mind more despicable and damnable. * * * It is an oligarchy that is controlling everything."

The direct cause of the strike, says the report, was the refusal of the mine owners, led by the Rockefeller Company, to grant a conference to representatives of the strikers. The report says, after relating at length efforts of the union officials to obtain a conference during the summer of 1913 and prior to the strike:

"Spies and local officials had kept the operators fully informed of the unrest existing in the coal camps. That this unrest was of long standing is shown by Mr. Bowers' letter of September 19, 1913, to Mr. Murphy, in which he tells of the steps taken within the preceding year or two to forestall agitation. Before the strike began, Mr. Welborn wrote to a director in New York, Mr. J. H. Clements, expressing the writers anxiety and predicting that most of the men would go out if a strike were called.

"In his letter of September 19 to Mr. Rockefeller's office, Mr. Bowers makes the significant admission that the operators believed they could avoid the strike by merely granting a conference to the union officials. He writes:

"The strike is called for the 23rd, but it is thought on the part of a good many operators that the officials, anticipating being whipped, will undertake to sneak out if they can secure even an interview with the operators, which so far as they have been

unable to do, thus boasting before the public that they have secured the principal point, namely, recognition of the union.'

"It was three days before the date of this letter that Mr. Rockefeller in New York had declined to see Mr. Ethelbert Stewart of the United States Department of Labor, and instead had directed his attorney, Mr. Murphy, to receive Mr. Stewart and to refer him to the executive officials in Colorado.

"In the light of Mr. Bowers' admission that a mere conference would have prevented the strike, the operators' refusal to grant such a conference must be regarded as making them responsible for all the disasters that followed. For it was a policy opposed to the spirit and the practice of the times, and the state of mind which dictated it can only be explained on the theory that the habit of arbitrary power had fastened itself on the men who ruled the coal mining counties from their offices in Denver."

The report charges Mr. Rockefeller and other operators with misrepresenting the facts regarding a conference with striking employes held in Governor Ammons' office on November 26, 1913. This conference led to the plan of settlement contained in Governor Ammons' letter of November 27. The report says:

"The effort is made to convince the public that in meeting their men and accepting the governor's proposition, the operators conceded all that reasonable men could ask, and that the strikers in rejecting it became responsible for an unjustifiable continuance of the strike. Therefore, it is important to arrive at a correct conclusion regarding the validity of the operators' action as an effort in good faith to meet the strikers half way and as a modification of their previous arbitrary refusal to yield an inch.

"But the most conclusive evidence regarding the bad faith of the operators in this alleged consent to meet their men is contained in the following extract from the examination of Mr. Ivy L. Lee at Washington, in May, 1915. Mr. Lee had visited Colorado and had become, since the strike, a director representing Mr. Rockefeller in the Colorado Fuel & Iron Company:

"'Commissioner Weinstock: Are you aware of the fact, Mr. Lee, that it was brought out in the testimony here, that the operators did meet with representatives of the strikers in the office of the governor some two months after the strike took place?"

"'Mr. Lee: Yes, that has been brought out, Mr. Weinstock; but I cannot say that I have been impressed with the fact that the representatives of the men who met the operators were truly representative.

"'Commissioner Weinstock: Now, will you explain in what way they did and did not represent the men?"

"'Mr. Lee: Well, I just give you my impression. I have not been impressed with the representative character of that committee.

"'Commissioner Weinstock: Do you recall who the members were?"

"'Mr. Lee: I do not. I simply give you a general impression. My feeling is that that was one serious mistake.

"'Commissioner Weinstock: Meeting these men in the office of the governor?"

"'Mr. Lee: It was the failure to meet the real representatives and talk it over with them.

"'Commissioner Weinstock: You don't know how these men were chosen that met in the governor's office?"

"'Mr. Lee: No; I simply give you my impression as to their general standing."

Discussing the company's rejection of President Wilson's plan of settlement, the report quotes a letter from Mr. Murphy, Mr. Rockefeller's attorney, to President Welborn, as follows:

"The fact that the President of the United States has suggested a plan of settlement and has given it out to the public produces a delicate situation which we have no doubt you gentlemen in the west will handle in the same careful and diplomatic way in which you have handled the whole situation thus far, avoiding on the one hand any entanglement with the labor union and on the other an attitude which would arouse a hostile public opinion. We are, of course, greatly interested, and if you think we can be of any service in helping you to prepare a reply we shall be most happy to collaborate on any draft of one which you may send us."

And the report adds:

"Mr. Rockefeller here sends his instruction that there be no entanglement with the labor union, which, it apparently was feared, might grow out of an acceptance of the president's plan. The letter of Mr. Murphy clearly conveys Mr. Rockefeller's wish that his Colorado officials shall not be unduly impressed or swayed from their course merely by a request from the President of the United States."

"Enough has been told to prove that a spirit of accommodation or conciliation at no time actuated either the Colorado operators or Mr. Rockefeller. The evidence is conclusive that such a spirit, if manifested, would have prevented the strike and all the disastrous events that accompanied it."

Discussing violence, the report states that the first act of violence in connection with the strike was the killing of Gerald Lippiatt, an organizer for the union, by a Baldwin-Felts detective in the employ of the Colorado Fuel & Iron Company. It adds:

"But the question as to who committed the first act of violence is of minor importance. Conditions in the coal mining district were such that violence was inevitable. The testimony of Sheriff Jefferson Farr and former Undersheriff John McQuarrie proves that men accustomed to the ready use of a revolver or rifle had been imported into the district in large numbers from Texas, New Mexico, West Virginia and

other sections by the Colorado Fuel & Iron Company and its associates. These mercenary adventurers had been employed and armed by the coal companies prior to the strike, and had been given deputy sheriffs' commissions by the sheriffs of Las Animas and Huerfano Counties, who were political partners and agents of the coal companies.

"When the miners left their homes on company property and established tent colonies on land leased by the United Mine Workers, they knew that they could expect no protection from officers of the law. A sheriff who at the company's behest would deputize hundreds of men whom he had never seen, and who, for all he knew, might be red-handed murderers fresh from the scenes of their crimes, could not be counted upon to safeguard the rights of striking employes of a company that was his partner in the liquor business and his political master. Mr. Lawson, the most prominent Colorado official of the United Mine Workers, knew from bitter experience how low the sheriff of Huerfano County would stoop to aid the operators and to crush the strike. The scene was set, so far as the operators were concerned, for a repetition of 1903 and 1904, when every constitutional right of the strikers had been violated and they had been deported, imprisoned and assaulted.

"At the inception of the strike it seems clear that the union officials and the strikers determined that 1903 was not to be repeated; that at the first attempt of the operators' private army to override their rights, there should be resistance. But it is clearly established that the operators had employed 326 armed mine guards in Huerfano County alone prior to September 1, and that no step to arm the strikers was taken by union officials until twelve days after that date. Mr. Welborn gives September 12 as the first date when, it is alleged by the operators, arms were purchased of a Pueblo hardware dealer by agents of the union.

"In addition to the presence of large numbers of armed guards and the absence of honest and impartial public officials to control them, there existed the elements of violence that are common to all large strikes. The strikers had established tent colonies at strategic positions near the mouths of the canyons in which the mines were situated, so that strikebreakers going from the railroad stations to the mines were forced to pass near them. The history of strikes shows that workmen on strike feel that they have a property interest in their jobs, and that other workmen who take their places and thus aid their employers to defeat the strike are fit subjects for abuse, ridicule and violence.

"It is only by ostracizing and intimidating strike breakers that organized workmen can hope to discourage the practice and thereby win in a struggle for higher wages or for industrial democracy. For after negotiation fails, their only means of exerting a compelling influence on the employer is to stop

production by quitting work and to prevent a resumption of operations by keeping out strikebreakers. And society, if it wishes to prevent violence in industrial disputes, has only two courses open: To prohibit strikes, and in so doing to establish involuntary servitude; or to prohibit the importation of strikebreakers at least until the employers consent to meet officials of the strikers' union."

The report gives an account of the various riots and disorders and says:

"In all discussion and thought regarding violence in connection with the strike, the seeker after truth must remember that government existed in Southern Colorado only as an instrument of tyranny and oppression in the hands of the operators; that, once having dared to oppose that tyranny in a strike, the miners' only protection for themselves and their families lay in the physical force which they could muster.

"It remains to be seen how even the supreme authority of the state failed to protect them in their struggle for the right to work and live as free men and to bring up their children in an atmosphere where law and order was not synonymous with the anarchistic will of a lawless corporation."

One chapter of the report is devoted to the part played in policing the strike by the Colorado militia. It states that Governor Ammons when he called out the militia issued orders that they should not be used to escort imported strikebreakers from the railroad station to the mines. The report says:

"That this policy of Governor Ammons was not out of line with the correct theory of policing strikes is indicated by the fact that when the federal troops entered the field seven months later similar orders were issued to them by the Secretary of War.

"The wisdom of prohibiting the importation of strikebreakers as a means of maintaining order has been amply demonstrated, but this policy rests on a firmer basis than its mere expediency. The record in Colorado shows that in 1903 and 1904, and again during the strike under discussion, the coal operators had no scruples in taking steps to displace men who for years had been attached to the mining communities by ties of family, friendships and love of state, with homeless and penniless immigrant workmen from distant states.

"The record shows that strikebreakers were imported in carload lots under the guard of private detectives who recruited them in distant cities, and that both on the train and after their arrival in Colorado they were treated more as chattels than as free men. Contracts in the possession of the Commission made by detective agencies engaged in such work show that these agencies guarantee against the escape of strikebreakers enroute by providing guards for the front and rear entrances of the railway coaches. So extensive are the organizations of such agencies that strikebreakers

can be supplied within a short time in any numbers.

"If employers and strikebreaking agencies are to be permitted to operate in this fashion without let or hindrance, it means that entire communities of home-making and home-loving citizens can be displaced almost over night by an army of homeless vagabonds, drawn from the scum of the labor markets of widely scattered cities. This practice makes wanderers of hard-working and home-loving men whose only offense is that they have taken part in a strike. It fills strikers with hatred and leads inevitably to violence and finally it has a disastrous effect on the community and the state by working a deterioration in the quality of the citizenship."

The report charges that several weeks after the troops entered the field, the mine owners coerced Governor Ammons into countermanding his orders and permitting the use of the militia to escort strikebreakers. On this point the report says:

"In spite of the occasional acts of violence, the strike zone remained comparatively quiet so long as Governor Ammons' orders against the use of troops to escort imported strikebreakers remained in effect. The governor's policy in this respect had been vigorously opposed by the operators, and immediately after the calling out of the troops they began a campaign to coerce the governor into withdrawing his original orders and directing the troops to act as escorts for imported strikebreakers. Letters already quoted from Mr. Bowers, the highest executive official of the Colorado Fuel & Iron Company, to Mr. Rockefeller in New York show the methods pursued by the large companies. On November 18, 1913, he wrote:

"You will be interested to know that we have been able to secure the co-operation of all the bankers of the city, who have had three or four interviews with our little cowboy governor, agreeing to back the state and lend it all the funds necessary to maintain the militia and afford ample protection so that our miners could return to work, or give protection to men who are anxious to come up here from Texas, New Mexico and Kansas, together with some from states farthest east. Besides the bankers, the Chamber of Commerce, the Real Estate Exchange, together with a great many of the best business men, have been urging the governor to take steps to drive these vicious agitators out of the state. Another mighty power has been rounded up in behalf of the operators by the gathering together of fourteen of the editors of the most important newspapers in Denver, Pueblo, Trinidad, Walsenburg, Colorado Springs and other of the larger places in the state. They passed resolutions demanding that the governor bring this strike to an end, as they found, upon most careful examination, that the real issue was the demand for recognition of the union, which they told the governor would never be conceded by the operators, as 90 per cent of the miners themselves were

non-union men, and therefore that issue should be dropped.

"Still the governor hobnobs with Hayes, Lawson, McLennan and the rest of the gang, and either refuses or begs for more time to bring the strike to an end or to amply protect the operators in bringing in outsiders to take the places of those who have left the state and those engaged in these murderous assaults whom we refuse to take back under any circumstances. Yet we are making a little headway.

"There probably has never been such pressure brought to bear upon any governor of this state by the strongest men in it as has been brought to bear upon Governor Ammons."

"On December 22, 1913," says the report, "Mr. Bowers announced the success of this campaign of coercion in the following letter to Mr. Rockefeller:

"If the governor had acted on September 23 as he has been forced to act during the past few weeks, the strike would have never existed ten days.

"We used every possible weapon to drive him into action, but he was glove-in-hand with the labor leaders and is today, but the big men of affairs have helped the operators in whipping the agitators, including the governor.

"Now these fellows are cursing him without regard for common decency, so everybody is giving him more or less taffy to keep him from backsliding. The inclosed is a sample of the resolutions being sent to him, besides any number of personal letters."

The testimony of former United States Senator Thomas M. Patterson is quoted to show that the countermanding of this order by Governor Ammons resulted in throwing the militia entirely on the side of the operators and that very soon after the original order had been rescinded the state troops, under General Chase, began to disregard the civil rights of the miners by imprisoning them without a hearing and by exercising arbitrary power in controlling their movements.

The report states that the economic dependence of the state troops on the Colorado Fuel & Iron Company and other operators has been fully established. President Welborn testified that his company had paid militiamen from \$75,000 to \$80,000 on certificates of indebtedness.

Mine guards and company employes were enlisted by the militia and paid by the companies and the troops became, in every sense, allies of the operators against the strikers. One troop of mine guards and company employes which took a prominent part in the so-called Ludlow massacre was enlisted with the knowledge and approval of the Colorado Fuel & Iron Company and of Mr. Rockefeller only a week before the massacre.

The report describes the destruction of the Ludlow tent colony with the deaths of thirteen women and children and five strikers, three of whom were murdered by

the militiamen and mine guards while being held as defenseless prisoners. It describes the virtual rebellion that followed.

In closing its discussion of the militia, the report says:

"It seems of vast importance that it should be understood how nearly the situation in Colorado approached a condition of absolute prostration of government and of actual revolution. This is apparent not so much in the record of battles and skirmishes fought and lives lost, as in the evidences given above of the state of public feeling. It was apparent in the frankness with which strike leaders admitted that they were gathering and distributing arms, in the open admissions made by many strikers that they or others whom they named had taken part in one or the other of the various attacks, and in the refusal of the district attorney of Las Animas County to take official notice of the killings which followed Ludlow. The rules of 'civilized warfare' formed the only criterion for public criticism of acts on either side during this period.

"Enlightened public sentiment existing in Denver and other Colorado communities found itself helpless of effective expression. That expression, of course, should have come through the state. This leads to the direct causes of the failure of government and of all the horrors that resulted from it. Their consideration is vitally important because there is no guarantee that the same cause may not operate again in Colorado or other states, and that some day they may produce a situation far more serious even than that under discussion.

"The state of Colorado through its military arm was rendered helpless to maintain law and order because that military arm had acted, not as an agent of the commonwealth, but as an agent of the parties in interest, as an agent, that is, of the coal operators, as against the strikers.

"Only those who hope and pray for bloody revolution can contemplate the record of the Colorado National Guard and fail to see the need of measures that will make this branch of the government as representative of the people and as subservient to the people's will as other governmental agencies. Today there is ample evidence in Colorado to prove that the national guard is an instrument of oppression maintained for the purpose of intimidating and crushing workmen who go on strike in an effort to improve the conditions of life for themselves, their women and their children, and to secure for themselves a larger measure of freedom from arbitrary power."

The report quotes at length from the testimony of the Rev. Eugene S. Gaddis, superintendent of the Sociological Department of the Colorado Fuel & Iron Company, to show that the company's store system; its method of renting property to liquor dealers, and its hospital system, contributed to the unrest of the miners, and to the intolerable situation existing in the camps.

The companies are scored for their use of political power to control coroners' juries and other officials dealing with cases of personal injuries in the mines, in order to prevent miners from recovering damages for personal injuries in the courts.

The testimony of a former under-sheriff is quoted to show that the mine superintendent is always consulted in making up a coroner's jury, and that the sheriff of Huerfano County boasted of being a Colorado Fuel & Iron Company man.

Records are quoted to show that personal injury suits against the companies are practically unknown.

Testimony and letters by officials of the Colorado Fuel & Iron Company are quoted to show that the companies control the churches in its camps and exercise a censorship over the sermons of the ministers.

On the subject of permitting the miners to employ checkweighmen, the report says:

"No more substantial cause for resentment could be imagined than this denial to the miners of any means to insure honest payment of wages. And in denying the right to organize, the companies must be convicted of doing just this. It is impossible to conceive of the citrus fruit growers in California sending their oranges and lemons to the eastern market unweighed or unnumbered, and accepting the figures of the jobbers in the East as a basis for payment. Yet the situation would be analagous to that endured by the Colorado miners."

The reasons assigned by the operators for refusing to deal with the United Mine Workers are discussed at length. None of these reasons are declared to have been sufficient to justify the operators' refusal, and the animating reason is declared to have been merely the operators' unwillingness to brook any interference with their power.

Discussing concessions granted to the men, prior to the strike, by the Colorado Fuel & Iron Company, the report points out that all of these consist of rights already required by the laws of the state, several of which the company had previously violated. It declares that the company, in granting concessions, was animated not by respect for law or by desire to improve the conditions of their employes, but by the wish to forestall agitation by union organizers, and thus minimize the danger of a successful revolt. Letters from Mr. Bowers, Mr. Rockefeller's agent in Colorado, are quoted to substantiate this charge.

Mr. Bowers is also quoted at length to prove that political activity and domination by the Colorado Fuel & Iron Company still exist in the mining communities. It calls attention to Mr. Bowers' admission that men, whom he himself characterized as cut-throats, were employed by the company as spies on their employes.

Discussing the use of political power, the report says:

"Most important of all benefits enjoyed by the companies as a result of their polit-

ical control was the aid of subservient public officials in denying agitators or union officials access to the camps, during peace, and in intimidating, arresting, imprisoning and killing strikers and their leaders during strikes. This use of political control by the companies is more important than their use of it to ignore mining laws or to prevent the collection of damages for personal injuries, for the reason that it has effectually prevented the unionization of the mines. This unionization would have given the miners an economic weapon with which they themselves could have forced compliance with the law and by which they could have speedily broken the hold of the companies on government, by limiting the power of discharge, and thus establishing free speech, a free press and free assembly, and encouraging healthy discussion and agitation."

The report takes up at great length the five causes of the strike as set forth by the strikers, as follows:

1. Ignorance of the owners of the great coal producing properties concerning actual conditions under which their employes live and labor.

2. The lack of any proper sense of personal responsibility on the part of those owners, for what is wrong in those conditions.

3. The maintenance by the coal-mining operators of a modern system of monopolistic feudalism, with many of the evil features of the old feudalism, but without many of those features which made it somewhat beneficent.

4. Insistence by the operators upon their right to conduct a vast coal-producing business—a business in reality affected with a public interest—regardless of how their conduct may affect society at large, and as if it were a small private business.

5. The unwillingness on the part of the operators to concede to their employes the right of effective organization, while themselves maintaining a complete combination and organization.

Testimony and letters are quoted at length to support the report's conclusion that each of these charges is fully justified by the facts.

Regarding the claim of the operators that their employes did not belong to the union and that the strike was forced by a minority, the report says:

"On September 15 the convention of miners was held at Trinidad. Whether or not the men who sat in this convention and who voted for the strike, were representatives of the great body of miners, is a subject of controversy. It is regarded as relatively unimportant, in its bearing on the state of mind of the mining communities, and their attitude toward a strike.

"Spies, camp marshals, and armed guards infested the mining camp of the city of Trinidad, and the miner who might wish to attend such a convention, or to attend local meetings for the selection of delegates, knew that to do so would be to incur prompt discharge and expulsion from the town.

"In Huerfano County alone, 326 men, many imported from other states, had been commissioned as deputy sheriffs by Sheriff Jefferson Farr prior to September 1. Sheriff Farr admitted, before this Commission, that for all he knew they might have been red-handed murderers, fresh from the scenes of their crimes, and that they were employed, armed and paid by the Colorado Fuel & Iron Company and the other large companies. The first violence had already occurred in the killing of Gerald Lippiatt, a union organizer, who was shot down on a street in Trinidad by a detective in the employ of the operators.

The convention voted to call a strike for September 25, 1913. On that day, from 8,000 to 10,000 miners, comprising from 40 to 100 per cent of the employes at the various camps, packed their meager household belongings on carts and wagons, and, accompanied by their women and children, moved down the canyons through a drenching fall of snow, sleet and rain, to the tent colonies that had been established by the union officials. This sudden exodus became necessary because, in a majority of the coal camps, the companies owned every house and every foot of ground. No more eloquent proof could be given of the intense discontent of the miners and their families, and of their determination to endure any hardship rather than remain at work under existing conditions.

Dealing with the character of the men employed in the coal camps, the report says:

"Coming as amazing evidence of the repudiation of American principles by certain small but powerful groups, is the allegation frequently heard during the Colorado controversy that the inhabitants of the coal camps, being largely of foreign birth and speech, were incapable of either political self-government or of exercising a voice in determining their working conditions. Such an acceptance of the political philosophy that justified slavery half a century ago hardly needs serious consideration. Granting that social and political conditions in the coal camps could be worse than those which existed under coal company domination, and granting that they actually would be worse under a truly democratic control, the nation even then could not complacently tolerate a benevolent despotism. But no such concession can be made. There is ample testimony to prove the capacity for civic and social progress inherent in the populations of coal mining camps composed just as were those of southern Colorado—of a small minority of English-speaking miners and their families and a majority of recently-arrived Europeans. Besides the testimony of officials of the United Mine Workers who have studied the needs of the foreign-born miners and who have watched their progress, the Commission has the significant testimony from Francis S. Peabody of Chicago, a mine owner who operates on a scale larger than that of any of the Colorado companies."

THE BOILER MAKERS' JOURNAL

Official Organ of the International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America.

A Monthly Publication Issued the First of Each Month from Room 8, Law Building, Kansas City, Kansas.

JAMES B. CASEY, Editor and Manager.

Subscription Price.....\$1.00 Per Year in Advance

ADVERTISEMENTS.

Advertising Rates Will be Furnished Upon Application to the Editor-Manager. No Reading Space Will be Sold for Advertising Purposes Under Any Circumstances.

All New Members Must Have Their Name and Address Sent in Through the Secretary of Their Lodge. After That They May Have Changes Made in Their Address by Filling Out Blank Form in Back of Book and Forwarding to the Editor.

All Copy Must be Received by the Editor by the 18th of the Month to Insure Publication in the Following Issue.

All Contributions and Correspondence Relating to the Journal Should be Addressed to J. B. Casey, Editor, Room 8, Law Building, Kansas City, Kansas.

Entered at Postoffice, Kansas City, Kansas, as Second Class Mail Matter.

MAKING A FARCE OF BOILER INSPECTION IN OHIO.

Word has come to us recently that Governor Willis of Ohio has appointed as chief inspector of boilers for that state a man totally inexperienced and incompetent for this position. It seems that he was first appointed as chief examiner of engineers, but as the engineers and others of that state made such a howl about it, he was removed from that position and made chief inspector of boilers, thus making a farce of boiler inspection in that state. However, our members in Ohio should not allow this matter to pass without a lively protest on their part, in fact they should not only protest themselves but take the matter up with the various central bodies and the State Federation of Labor and have them protest against this move that may result in such serious consequences in the future if allowed to continue.

Furthermore, our members in Ohio should seriously consider the fact that they have neglected the matter of securing proper boiler inspection laws for that state in the past and that others took advantage of this neglect or indifference and secured the enactment of spurious boiler inspection laws that practically eliminates boiler makers as boiler inspectors. They may design, build, repair and keep in good safe condition, but cannot inspect their own handiwork. This is an intolerable condition that our members should not allow to continue. It does a serious injustice to those who are thrown in close proximity to boilers in operation, because of the danger due to faulty inspection and it is an outrageous imposition on boiler makers. However, mere condemnation of the law will be of no avail. What the boiler makers in Ohio (and many other states, for that matter) should do is to wake up, get together and lay systematic plans for having the law changed so that a safe and efficient system of boiler inspection, with experienced boiler makers as inspectors, may be inaugurated.

This matter should receive the serious consideration of our members in a number of states unless they wish to abandon all claims to boiler inspection. However, the first thing for our lodges in Ohio to do is to draw up

resolutions of protest and send them to Governor Willis at Columbus, also take the matter up with other organizations and central bodies and have them send in protests also. Don't neglect or put off. Do it at once.

MOULDERS OVERWHELMINGLY REJECT AMALGAMATION.

The question of amalgamating all metal trades has been agitated and discussed pro and con by the members of the International Iron Moulders' Union for some time and a few lodges of that organization joined in requesting a referendum vote on the question. This was finally done and the vote closed with the ending of September and in the last issue of the International Moulders' Journal we find the result of that vote was 1,946 votes in favor of amalgamating and 10,758 votes against amalgamating, thus a majority of 8,812 were against amalgamation, more than five and a half to one.

This result should convince the most ardent advocate of amalgamation in the moulders' ranks that a large majority of the members of the moulders' union are against this proposition, in fact we believe this represents the general sentiment of the members of the trades that would be affected by amalgamation.

The members of these trades have too much at stake to sacrifice their organization and jeopardize the future of the labor movement by adopting any of these short cut, hazardous schemes of organization in place of their trade union. The various metal trade unions can secure all the advantages of consolidation through federating, like they are now doing, through the Metal Trades Council, and at the same time avoid all the disadvantages and dangers of a promiscuous organization.

A ROCKEFELLER "MODEL UNION" PUT IN FORCE IN COLORADO.

John D. Rockefeller, Jr., during his recent trip to the mines of Colorado, sprung a plan for settling all labor disputes and establishing harmony between the miners and the management. It is to be accomplished through his "model union," a creation of the brain of Mr. Rockefeller and his industrial managers. The mine workers had nothing to do with its plans or provisions.

The plan does not contemplate recognizing any organization of the miners, in fact an open shop is insisted on. Instead the men from each mine elects two of their number. These are supposed to look after the interests of the men. An arbitrator or industrial representative is to be selected, whose duties are to investigate grievances and render decisions; however, appeals may be taken from his decisions and carried on up.

The plan will no doubt receive a fair trial, and while it might be the part of wisdom to withhold criticism in the meantime, still we cannot help

expressing our belief that it will prove a failure in so far as protecting the full rights of the men are concerned, for on the one hand we find a thoroughly organized, rich, influential and powerful organization, and on the other poor, needy and helpless individuals entirely dependent on the good will of this corporation for the opportunity to earn a living. Should it become displeased with any of them and withdraw this opportunity to toil, they would soon be driven to want and suffering. Under this one-sided condition it is not probable that the men will secure a fair share of the wealth they produce.

In fact, it looks like a well thought out plan to prevent real organization among the miners that would deal with the company on more of an equal footing and would be in a better position to secure even handed justice for the miners.

While we believe this plan is foredoomed to failure, still we believe the trial of it will show the men a need for a real organization and in the end it will be created by them, in spite of the company's efforts to the contrary.

THE EXECUTIVE COUNCIL INDORSES MOVEMENT TO ERECT MONUMENT TO THE MEMORY OF BROTHER GILTHORPE.

One of the many matters acted upon by the Executive Council of our organization, while in session recently, was that of a resolution adopted by Lodge 25 of San Francisco which provides for the raising of voluntary contributions to a fund to erect a monument to the memory of our late International Secretary-Treasurer Gilthorpe. A copy of these resolutions appear in another part of this Journal.

The council unanimously indorsed the proposition and will issue an appeal to the lodges for contributions at an early date.

We hope that a generous response will be made to this move and that a sufficient amount with which to purchase a monument commensurate with the memory of the departed brother and the dignity and generosity of our members will be raised, and there is little doubt but that it will.

It will be a fitting service to the memory of a brother who served so long and faithfully as an International officer of our organization.

We believe the council accurately voiced the sentiments of the rank and file of our membership in indorsing this matter and that our members will respond generously to the appeal for funds.

THE STRIKE AT NEW ORLEANS SETTLED.

We are glad to state that the recent strike of our members employed in the contract shops of New Orleans and vicinity is a thing of the past. A satisfactory settlement has been reached between the men and the New Orleans Metal Trades' Association.

The conditions are, we believe, that the former agreement be restored and all men returned to work. Minor changes, we believe, were made in the agreement in reference to settlement of grievances and the manner of the termination of the agreement. The settlement was secured through the efforts of First Vice-President Hinzman and Eighth Vice-President Ryan, assisted by local members.

The underlying cause of the strike was, we believe, the existence of a benevolent organization composed of a part of the men in New Orleans, who supported this rather than the Brotherhood. However, these men are now seriously considering the matter of uniting with the balance of the boiler makers of that city, so that there will be but one organization of boiler makers there, united, harmonious and indestructible, working for the advancement and benefit of our trades. Let us hope this desirable goal will be reached at an early date.

MORE FUTURE CHANGES TO BE MADE IN THE JOURNAL.

While the council was in session we took up with them the matter of publishing the official roster but once each quarter, and in this way gain ten pages each, for eight issues during the year, or a total of eighty additional pages of reading matter each volume or year.

The matter was discussed at considerable length and from various angles, and it was shown that a large majority of the trades unions had completely abandoned the policy of printing a roster of their locals in their journal, and the discussion turned to the advisability of discontinuing the printing of roster in our journal and issuing it in pamphlet form in a suitable size to carry in the pocket. Several good reasons were advanced why this change should be made, among which was that in localities where only a portion of the men are organized or a new local is being instituted members are sometimes discharged because of their names being published as officers. Another reason advanced was that the change would tend to prevent so many outside appeals for aid from our lodges and members. The council finally decided to have this change made, therefore, this issue will be the last that the roster will appear for the present. It would not appear any more this year anyway, as we have for the past four or five years compiled an index for the year and run it in the December issue.

We believe this change will prove satisfactory to our members after they get used to the idea, and that it will be beneficial to our organization as well as our members. At any rate it is worthy of a fair trial.

Another change decided upon was to cut out the publication in the Journal of those found guilty of scabbing. Instead these names will be furnished the lodges at frequent intervals through circular letters or pamphlets in convenient form so they can be kept on file in systematic form. It was asserted that the publication of these names in the Journal gave valuable in-

formation to the strike breaking agencies, through which they did their recruiting. We believe this change will also be beneficial alike to our members and the organization.

Another change decided on was that instead of the international officers reporting through the Journal bi-monthly or less frequently, that each would be expected to report each month, and that in the event that any of them were working on confidential matters which it was not deemed advisable to make public at the time, they should at least write a short article on other matters, preferably on questions affecting the welfare of the members in their district.

No doubt this change will give much satisfaction to our members and prove of much benefit to our brotherhood by arousing an increased interest in its affairs among the rank and file.

TRYING TO CREATE SENTIMENT FOR A TARIFF COMMISSION.

An organization known as the "Tariff Commission League," with headquarters in Chicago, has been formed for the purpose of creating public sentiment in favor of a tariff commission, whose alleged duty would be to place the tariff on a "scientific basis," as if there was any science in robbing the masses of the people for the benefit of a few who have already waxed fat on this humbug in the past.

This move is supposed to be a non-partisan one. However that may be, it bears all of the earmarks of the movement inaugurated by Mr. Emory a few years ago in behalf of the manufacturers' association, with all of its corrupting influences on Congress and which was exposed by a Congressional investigation.

The country is being flooded with literature by this league and its representatives are touring the country trying to manufacture sentiment for this commission and no doubt it will be boosted before the coming session of Congress.

However, we hope the people will not be fooled into lending their support, for we believe it nothing more or less than an effort to get control of the tariff-making powers of the government and boost the tariff in behalf of special interests. It has been fully proven that high tariff is but an added tax on the consumer without any return. The industries receiving the highest protection in the past paid the lowest wages and gave the worst conditions to its employees.

And even if there was merit in a high tariff this is no time, with the disturbed conditions in the world's commerce, due to the European War, to open up the question of a revision, and it is to be hoped that this large expenditure of money, literature and time of this tariff league will have no effect on the public.

THE DANGERS ARISING FROM OIL TANK CARS.

The terrible and destructive explosion of a tank car containing gasoline at Ardmore, Okla., a short while ago should arouse railroad employes generally to the danger of these explosions which are liable to occur at any time and with such frightful results.

This car which exploded was loaded with 3,000 gallons of gasoline, and had in some way sprung a leak. One newspaper account says a car inspector mounted the car, unscrewed the cap and peered in when the explosion took place, tearing to pieces everybody and everything within a hundred yards. The leak in the tank had no doubt left an empty space at the top and in this condition was much more dangerous than if full—in the latter case there would be no room for generating gas.

In most places our members are called upon to make repairs on these tanks and they should use the utmost care in entering or going around them with fire and under no circumstances should they enter an empty with a lighted torch or a hot rivet until the tank has been thoroughly cleaned, no matter whether it previously contained gasoline, benzine or crude oil. In either case it will generate gas and explode if fire is brought within range.

About eighteen months ago, Brother Houston of Portsmouth, Va., lost his life through the explosion of gas in an empty, by dropping a hot rivet in the tank while he was inside.

Our members should take nothing for granted, when it becomes their duty to work on these tank cars. They do not get paid to take unnecessary risks and no reasonable official will ask them to place their lives in jeopardy. Let safety first be the watch word.

THE PANAMA CANAL CLOSED BY LAND SLIDES.

Owing to enormous land slides recently the Panama Canal has been closed indefinitely. It is estimated that it will take from forty-five to sixty days to clear away the loose earth, and open the channel again. It is hoped that sufficient earth will be removed this time to prevent a repetition of these slides.

The growing importance of this canal can be seen by the fact that 95 ships were held up by this slide, many departed to take another route when they found it would not be possible to use the canal for some time; others transferred their cargoes to the canal zone railroad, and others will wait until they can pass through.

It is to be hoped the trouble will be definitely removed this time and that no further interruptions of traffic will take place.

Ten or fifteen years from now if such an interruption for so long a period should take place it would be little short of a calamity and would disarrange the commerce of the world as by that time a large percentage of the world's

commerce will pass through this canal. No doubt it will not be very long until the Panama exceeds in importance and business done, that of the Suez Canal.

ORGANIZED LABOR IN NEW YORK WILL OPPOSE NEW CONSTITUTION.

In our September issue we mentioned the fact that deep, died in the wool reactionary standpatters were in control of the New York State Constitutional Convention and urged our members to scan carefully the changes proposed, so they might intelligently act on the matter.

Since that time the Convention has completed a draft of a New Constitution and adjourned.

After this proposed constitution was made public, it did not take the union men of New York state long to arrive at the conclusion that to adopt this constitution would be a long step backward. Representatives of Labor throughout the State recently held a conference in Albany, under the auspices of the State Federation of Labor and unanimously decided to do every- in their power to defeat it. It is to be hoped that our members in the State of New York will actively co-operate with the balance of the labor movement in helping to decisively defeat this constitution.

It is said that of the 168 members of the convention that 134 of them were lawyers. No doubt a large proportion of these are fully versed in all the wiles and wickedness of corporate greed and evasions of the law.

This overwhelming preponderance of lawyers is no doubt responsible for the bad result achieved.

In all representative legislative bodies it is not only desirable but necessary for successful results, that the members composing the body should be selected from among all elements that go to make up the citizenship of the state, in this way only can a thoroughly representative constitution be enacted.

The good people of New York should repudiate this new draft of a constitution and retain the one they have until a more favorable time when more representative delegation may be elected and an equitable progressive constitution formulated.

INTERNATIONAL OFFICERS VISIT FEDERAL PRISONERS.

A short while ago a bunch of International Officers from the Railway Carmen, Sheet Metal Workers and Boiler makers joined in paying a visit to the Iron Workers detained in the Federal prison at Leavenworth. The trip was made from Kansas City on a Saturday afternoon, arrangements had previously been made with the Officials, so the delegation was promptly admitted and all the Iron Workers given liberty and all repaired to a large reception room and an hour was very pleasantly spent in getting acquainted, chatting, etc.

The delegation brought along a basket of fruit and a couple of boxes of cigars which were thoroughly enjoyed by the imprisoned men.

We were agreeably surprised to see how well all were looking, showing the effect of good and humane treatment.

As the closing hour arrived, the delegation were forced to leave after hand shaking all around and a promise to return again at an early date.

OUR NATIONAL BANKING LAWS STILL NEED AMENDING.

While our National Banking laws were recently amended to a very radical extent and the whole management and control of our currency placed in the hands of national banks, still it would seem as if the laws governing these banks are anything but perfect and that the only restrictions placed upon their interest charges are their conscience and the urgency of the borrowers needs.

In addressing the State Bankers' Association of Kentucky recently Hon. John S. Williams, comptroller of the currency is reported as saying, "reports are on file in the office of the Comptroller at Washington, showing that National Banks admit having charged rates of interest as high as 40 per cent; 60 per cent, and even 1,000 per cent; and in one instance that is on record a National Bank charged a woman \$1 for the use of \$3.50 for six days." Continuing Mr. Williams stated that of the 7,615 National Banks in this country 1,020 have sent in detailed reports showing they have received an average of 10 per cent or more on their loans. While it is generally believed that some state banks, trust companies and private bankers at times charge an excessive rate of interest, we did not know that any National Bank was guilty of charging usurious rates of interest too.

As National Banks collectively have some of the choicest privileges of the Government itself conferred on them and are practically guaranteed against loss, their rates of interest should be rigidly regulated by law. No business or individual making extensive use of borrowed capital can prosper if they have to pay ten or more per cent interest for the money they borrow.

Comptroller Williams compiled a list of National Banks, whose average rate of interest amounted to over ten per cent, and they are located as follows: 2 in Illinois, 6 in Minensota, 2 in Missouri, 23 in Georgia, 6 in Florida, 21 in Alabama, 2 in Louisiana, 315 in Texas, 17 in Arkansas, 2 in Tennessee, 90 in North Dakota, 25 in South Dakota, 18 in Nebraska, 5 in Kansas, 38 in Montana, 14 in Wyoming, 37 in Colorado, 25 in New Mexico, 300 in Oklahoma, 12 in Washington, 10 in Oregon, 13 in California, 2 in Utah, 1 in Nevada and 33 in Idaho. This list discloses an extensive field of operations and points to the small farmer as being the chief sufferer. Let us hope that Congress will back up Comptroller Williams' efforts to establish an equitable rate and enact a law on the subject. It should, however, be said as a matter of justice that a majority of National banks do not charge such rates as are

complained of, still a law is necessary to restrain the greedy and unscrupulous ones.

FACILITIES FOR A TECHNICAL EDUCATION ARE INCREASING.

We have occasions, from time to time, to congratulate the mechanic of today, upon the ever increasing facilities for securing a technical education.

Twenty-five years ago it was difficult to secure a technical education unless a regular student of some college or university; to learn the art of laying out work, was a very difficult matter, those who knew how, generally kept their knowledge to themselves. Since that time the correspondence school has developed and grown until they place the means of a technical education within the reach of all.

A new idea in correspondence school, devoted entirely to those engaged in railroading has been established in Omaha, Nebr. It is "The Railway Educational Bureau" and it has received the endorsement of a number of railroads and arrangements made whereby their employes may have the advantage of its service.

We are told the real purpose for creating this bureau was not to make money, but to furnish means to all railroad men to increase their knowledge of their chosen work, thus opening the door of opportunity to advance those who will study.

While most correspondence schools have a stereotyped course of study, we are told The Railway Educational Bureau furnishes special studies to suit the needs of the individual.

The service is furnished at a nominal cost and where arrangements have been made with a railroad system, it can be paid for monthly or otherwise to suit.

Among other railroads, The Rock Island system recently had this service extended to its employes. No doubt the idea will grow and expand until it or a similar service is in vogue on all railroads in America.

Our members should take advantage of these opportunities to advance their education and increase their information concerning the technical side of their trade.

Every Boiler maker and Shipbuilder should strive to be a first class mechanic, and in order to do so they should learn to lay out. If these correspondence schools are not available or do not appeal to any of our members they should secure books on laying out, a few drawing instruments and a board and practice at home. Any one who will persevere in their study of the subject can become proficient.

GENERAL PRESIDENT KIRBY OF THE CARPENTERS DEAD.

Word was received at Headquarters recently announcing the sudden death of Mr. James Kirby, General President of the Brotherhood of Carpenters and Joiners, at Indianapolis, Ind., following swiftly on the heels of a surgical operation.

Mr. Kirby's death came as a distinct shock and surprise to union labor circles generally, and is a real loss to the Brotherhood of Carpenters and Joiners, as well as the general labor movement, as he was an able and untiring worker in the cause of unionism.

QUOTATIONS.

A combination of the ideas of a certain figure, with a power of motion and reasoning joined to substance, make the ordinary idea of a man.—Locke.

Seeming wise men may make shift to get opinion, but let no man choose them for employment, for certainly you had better take for business a man somewhat absurd than over formal.—Lord Bacon.

A man may think, if he will, that two eyes see no more than one; or that a gamester seeth always more than a looker on—but when all is done, the help of good counsel is that which setteth business straight.—Lord Bacon.

He is good that does good to others. If he suffers for the good he does, he is better still, and if he suffers from them to whom he did good, he has arrived to that height of goodness, that nothing but an increase of his sufferings can add to it; if it proves his death, his virtue is at its summit—it is heroism complete.—La Bruyere.

Ambition is to the mind what the cap is to the falcon; it blinds us at first, and then compels us to tower by reason of our blindness. But, alas, when we are at the summit of a vain ambition we are also at the depth of real misery. We are placed where time cannot improve, but must impair us; where chance and change cannot befriend, but may betray us; in short, by attaining all we wish, and gaining all we want, we have only reached a pinnacle where we have nothing to hope, but everything to fear.—Colton.

STRIKES NOW IN FORCE.

- Atlantic Basin Iron Works (Shields & Moran, New York). (Strike on.)
- Hibbon & Co., contract shop, South Chicago, Ill. (Unfair.)
- Milwaukee Boiler Co., Milwaukee, Wis. (Strike on.)
- Des Moines Bridge & Iron Works, Des Moines, Iowa, (Erecting work in Bremerton, Wash., Valejo, Calif., and Norfolk, Va., Navy Yards.)
- Heinie Safety Boiler Co., of St. Louis, Mo. (Strike on.)
- Wangler Boiler & Sheet Iron Co., of St. Louis, Mo. (Strike on.)
- O'Brien Boiler Co., St. Louis, Mo. (Strike on.)
- Halifax Graving Dock Co., Halifax, N. S., Can. (Strike on.)
- T. Hogan & Co., Halifax, N. S., Can. (Strike on.)
- The Arizona Copper Co., Clifton, Ariz. (Strike on.)

- A. & N. M. Railroad. (Strike on.)

Mechanical Department.

TO LAY OUT A SCOOP.

Fig. 1 shows the side elevation; fig. 2 shows a cross section of scoop at center (B D), and fig. 3 shows the lay-out of template for one-half of scoop.

First mark off side elevation the desired size and shape, draw center line B D, extend line D C to F with F as a center, erect vertical line F G, at right angles to D C F, mark radius of cross section from F to center O and with this as a center strike circular line E F G. The height of this segment will be determined by striking a line from B and parallel to line D C F until it cuts circle at E and G. Divide this circular line into eight equal parts, numbering points of division from one to nine, draw lines through these points parallel with base line D C F, extending them until they strike line B D fig. 1. From points D, I, J, K, L,

M, N, P, C draw line at right angles with the sectional lines extending from fig. 2, to line B D fig. 1. Next strike line D C fig. 3, parallel with line D C fig. 1, and sufficient distance from it to allow for lay-out of one-half of template; take dividers set the same distance as used in dividing circular line fig. 2, and mark off on each side of line, D C fig. 3, the same number of spaces as there are on each side of center line G F fig. 2. From these draw lines parallel with center line D C. It will be noticed that these lines shorten up one space on each end for each line distant from the center line until they cut but one line at 1, these points are points in the outline of the template for one-half of scoop, and a line traced through these points will show the full outline of template.

If a lap joint is desired the necessary material should be added.

International Officers' Reports.

REPORT OF SECOND INTERNATIONAL VICE-PRESIDENT NOLAN.

The following is my report for September on places visited, by instructions from headquarters, and work done as result of same from September 1st to 30th, inclusive.

September 1st, by instructions of Vice-President Hinzman, left Wilmington, Del., for Washington, D. C., to arrange a date of conference at the navy department, for a committee representing Lodge No. 19.

September 2nd, called on Brother Berres, secretary-treasurer metal trades department, and in company with him called at the navy department, as he had several matters to take up with the assistant secretary in connection with the Norfolk and Philadelphia navy yards which was referred to him to adjust if possible. During conference I requested a meeting for a committee from Lodge No. 19 on the wage question then pending, which was agreed to, but no date given, unless to say sometime in the latter part of September, when Brother Berres would be officially notified as to date, and he in turn would notify Brother Hopkins, secretary of Lodge No. 19.

The reason for requesting such a conference was because of an increase in wage recommended by the wage board at the Philadelphia navy yard in 1914 for the boiler makers employed there, which was not carried out, although the committee who appeared before the board presented wage data according to naval regulations which showed a higher rate paid boiler makers by outside firms at Philadelphia and vicinity. Surely the navy department should not hesitate when a question of justice to the mechanics is involved as the wage board would absolutely refuse to recommend unless the proper evidence was presented before the board which entitled the boiler makers to the increase as recommend at that time.

September 3rd, returned to Wilmington, Del., to attend an open meeting, and other matters which required attention in connection with the reorganization of Lodge No. 494, remaining there until September 7th. Held several meetings during that time after which the reorganization of Lodge No. 494 was effected and the necessary amount was mailed to the International secretary to cover cost of same.

September 8th, left Wilmington, Del., for Norfolk, Va., as Brother Schmitt, international vice-president, had several important matters on hand in that locality for Lodges No. 57 and 428, namely, wage increase and agreement for Lodge No. 428; the question of organization in the Norfolk navy yard for Lodge No. 57; also a grievance with the Norfolk Southern Railroad Co., on a local shop proposition which the federated crafts on the system were opposed to.

September 9th, in company with Vice-President Schmitt, also Vice-President Van

Dorens of the Brotherhood of Blacksmiths and Helpers and the Executive Board of System Federation, held an arranged meeting with the general manager of the Norfolk Southern Railroad Co., Mr. Stack, also superintendent of motive power and master mechanic on system at the general offices of the company, union station, Norfolk, Va. Pleased to report that grievance was satisfactorily adjusted and trust the same pleasant relations will continue in the future between the federated crafts and the officials of the motive power department of the Norfolk Southern Railroad Co. Brother Jolliff of the blacksmiths is chairman of the federation; Brother Callahan of No. 428 represented the boiler makers at Berkley shops during conference on September 9th.

September 10th, in company with Vice-President Schmitt and Brother Phillips of Lodge No. 57 attended a regular meeting of Lodge No. 428, which was fairly well attended, might be better, as a very important proposition was then pending between the bosses of the various contract shops and the members of Lodge No. 428, namely, an agreement, also a twenty-five cent increase per diem. Brothers Schmitt and Halstead made quite a lengthy report of what had been done in an effort to secure a joint meeting between the bosses and a committee representing Local No. 428, and hoped to be successful in arranging matters later on.

September 13th, attended an open meeting of the boiler makers' helpers employed at the Norfolk navy yard, which was called through the efforts of Brother Smith and the active co-operation of the boiler makers, including Brothers Thomas, Phillips, Parish, Dorsey and others who were present to render all possible assistance in organizing the helpers. The meeting was a success as every helper present accepted an application for membership as well as expressing a desire to co-operate with the boiler makers in building up a strong local organization at the Norfolk navy yard.

Brother Schmitt made a strong appeal on the absolute necessity of organization among the helpers, and related many experiences of his travels through different sections of the country of the improved conditions of the helpers where organized both in railroad and contract shops or in government navy yards, where the importance of organization was equally essential to improve conditions as outside corporations and in closing urged all present to become members of the brotherhood. Several of the officers of Lodge No. 57 who were present, made short talks also on the benefits of organization. It is fully expected that Lodge No. 57 will have an increased membership after regular meeting October 7th, as the result of open meeting September 13th. May the good work continue as organization is needed bad in government navy yards

among our craftsmen in the hull department.

September 14th, left Portsmouth, Va., for Wilmington, Del., to initiate the members and install the officers of Lodge No. 494. On reaching there met the temporary officers to arrange several matters then pending.

September 15th, attended an open meeting of ship builders and helpers at which several applications for membership were received and before adjourning a committee was appointed to see every non-union boiler maker and ship builder and helper in order to hand them an application for membership in Lodge No. 494, Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America.

September 16th, a special called meeting was held at which the members of Lodge No. 494 were initiated and officers installed, after which short talks were made by many brothers present, all realizing that an organization was an absolute necessity at Wilmington, Del., as conditions in boiler shops and ship yards are not what they should be, all due to the lack of organization in that city, just like all others where a ship yards are located.

It seems strange in this age when organization is just as essential as the air we breathe to sustain life that men are so blinded to their individual and collective interests which they can't fail to observe, that every line of human activity, whether labor, professional, or others, all are compelled to get together for protection. Yet in the face of such evidence, which is as clear as the noon-day sun, we find thousands working under conditions which is akin to slavery but no efforts made whatever through organized efforts to change those conditions, even absolutely refuse, seem to be satisfied; surely intelligent American citizens should at least have some say under what conditions they shall work for an employer, and the compensation they shall receive for their labor, to preserve life and comfort for themselves and families, for the greatest of nature's laws is self-preservation, but when wage earners allow their God-given rights to be tampered with and often destroyed by some employers who sacrifice principle in their greed for dollars, aided and abetted by scabs, thugs and bulls, who prey like a buzzard on honest labor, surely legislation is badly needed to prevent such a state of affairs, as organized labor asks for nothing but a square deal, like any other business, and trust that Lodge No. 494, which lapsed several years ago, but now on the roster of the Brotherhood again, will be a success as there is every prospect of a large membership in the near future. In the past Lodge No. 494 was active and always had a delegate to conventions of the Brotherhood, and hope so again.

September 21st, left Wilmington, Del., for Philadelphia by invitation of Lodge No. 19, to confer with committee on a future conference with the assistant secretary of the navy, a very important proposition to the boiler makers employed at the Philadelphia

navy yard, namely, the wage question, which is always important. On reaching Philadelphia called on committee, Brothers Goodfellow, Hopkins and Higgs, and a satisfactory arrangement agreed on, relative to conference; in fact I had the pleasure of meeting all the officers and many members of Lodge No. 19 during my short stay there. Was very much pleased while in the navy yard to meet one of the old time members of the International Brotherhood in the Quaker City, Brother Manus McFadden, who is well and favorably known to many of the old members and hope he will enjoy many more years of activity both in health and in the interests of the Brotherhood in the future as in the past is the sincere wish of the writer.

September 22nd, attended a meeting of the navy yard federation of trades, Portsmouth, Va., the following were represented by delegates: Boiler makers, machinists, blacksmiths, boat builders and ship rights, painters, moulders, carpenters, joiners, asbestos workers, plumbers, sheet metal workers, also two federal unions. Many important questions came up for consideration during the meeting and referred to the proper committees. Brother Phillips of Lodge No. 57 and one of the ex-board members of the naval federation, made a practical explanation as to the question of rates in the government navy yards, and how same should be regulated in order to bring about favorable results, both to the employes and the navy department. His plan for a change in rating mechanics employed in government navy yards made a favorable impression on the delegates present representing the above organizations, and will be taken up through the proper channel at the first favorable opportunity as the question of rating and the proper regulations of overtime in government navy yards needs adjustment, at least to conform to co-operation located in the vicinity, as the American people regard the government as a model employer, taking no undue advantage whatever, only expecting a fair day's work for compensation given, nothing more or nothing less. But when navy yard mechanics are tied up as well as blocked in their efforts to produce results by continued introduction of so-called efficiencyisms, cost of operations are increased and generally the responsibility of increase cost of production is charged up to the wrong side of the ledger again; what about the old faithful employes who have given long and continued service in the navy yard? Some provision should be made in such cases, either pension them or give them such light work as they can perform, which all old employes of the navy yard would prefer, but the present policy of dumping them on the scrap heap is cruel in the extreme, and in direct contradiction to the human principles of the American government.

September 23rd, was notified by Brother Phillips of Lodge No. 57, that a tank was about to be erected for the Consumer's Brewing Company at Norfolk, Va. While

the writer was at Wilmington, Del., Brother Philips, also Brother Halstead, visited the job to secure the work for the members of the International, and was given to understand that the job would be done under fair conditions and by members of the International. On September 25th I had a conference with the president of the company, who also assured me that bids would be submitted to fair shops only.

September 27th, visited Newport News, Va., to look over the situation in the ship yard. Met Brother Healey, president of Lodge No. 55, also Brother Arthur, corresponding secretary, who gave me all necessary information, as it was several months since I had been there and of course lost track of conditions only through communications received. While there had a meeting with the general manager relative to a member of Lodge No. 55 who came out on strike October 13, 1913, but for some reason was not returned to work according to terms of settlement between the management and a committee representing Lodge No. 55, but was assured the brother's case would be investigated at once, and put to work. While in Newport News I secured the necessary data to present to wage board for a special rate at the Norfolk navy yard in the boiler department, and turned same over to Brother Howe of Lodge No. 298.

September 30th, attended a meeting of the chippers and caulkers employed at the Norfolk navy yards. Brother Philips of Lodge No. 57 was also present to encourage the organization of them. Another meeting will be held later on and have hopes that an organization will be perfected, not only among the chippers and caulkers, but also the riveters who need organization bad, as the conditions in the hull department call for prompt action all around on the part of the caulkers, riveters and drillers; also attended a meeting same night, September 30th, of the riggers, by request of Brother Wilson, local organizer of the A. F. of L. at the C. L. U. hall, Portsmouth, Va. Brother Wilson initiated the members, and installed the officers of the first riggers' local at Portsmouth, Va., with every prospect of a large increase in membership later on. Brother Wilson, the local organizer, also Brother Philips of Lodge No. 57, made a lengthy address on the benefits of the labor movement as well as the duties of the officers and members in order that the riggers employed at the Norfolk navy yard as well as in the vicinity, would be in a position through the co-operation of the organized labor movement to better their conditions. Like all other crafts who have done so through organized affiliation with these respective internationals, may the great work of the organized labor movement go on and on to success, for its mission is a noble and humane one, the emancipation of the wage earners of America, moreover the results that has been accomplished in the past for the betterment of the toilers stand as a living monument to the unselfish devotions and

self-denials in the cause of men and women in the great battle for human rights.

The year of 1915 has been a successful one for the labor movement when we take into consideration the industrial depression labor has been up against, which gives promise of final success in the future, for all of us realize that never in our history has organized labor been fought so hard by organized capital to disrupt it, but failed as the many bitter lessons of the past has, and is bringing labor closer together for the labor movement and its efforts for human liberty depends the peace, prosperity and power of the republic.

Hoping this is satisfactory to the officers and members of the B. I. S. & H. of America.

Yours fraternally,
THOS. NOLAN, 2nd V. P.

REPORT OF EIGHTH INTERNATIONAL VICE-PRESIDENT JOS. P. RYAN.

From September 14 to October 15, 1915, inclusive.

At the conclusion of my last report I was in New Orleans, La., assisting Lodges No. 37, No. 206 and No. 442 with their strike at the New Orleans Boiler Works, Johnson Iron Works and Dusell Iron Works. On September 18, myself and a committee were preparing a written proposition for a settlement of the trouble, which we had agreed to present to Mr. John H. Murphy, president of the N. O. Metal Trades Association. On that date I received a wire from First International Vice-President Hinzman, from Memphis, Tenn., stating that he would arrive in New Orleans, September 19, enroute to Beaumont, Tex. I decided to await his arrival, and committee and myself met Brother Hinzman, Sunday, September 19, upon his arrival. We extended him an invitation to remain over a few days and assist us in negotiating a settlement. He agreed and we proceeded to make arrangements for a meeting with the officers of the Benevolent Association. A committee was appointed to meet a committee of the Benevolent Association. Brothers Andrew McGowan, Charles F. Kenney, James Ensault, Hinzman and myself met with a committee from the Benevolent Association on Wednesday evening, September 22, at the Monteleone Hotel. At this meeting it was agreed to try and secure a settlement with the shop owners and then bring about amalgamation of the Benevolent Association with the International Brotherhood.

Thursday, September 23, we secured a meeting with President John H. Murphy and Secretary Henry Stearns of the N. O. Metal Trades Association. Mr. James Reed of the Benevolent Association, Brother Hinzman and myself discussed the strike situation over with Messrs. Murphy and Sears and proposed to them a settlement of the strike, providing all men would be returned to work and the agreement restored. A change in the article governing the settlement of griev-

ances, also termination clause, was suggested by our committee and agreed upon. Messrs. Murphy and Stearns agreed to call a meeting of the N. O. Metal Trades Association and place our proposition before them for their approval. I requested that Brother Hinzman, Mr. Reed and myself be permitted to appear before the Metal Trades Association to personally place our proposition before them. This was agreed on.

On Friday, September 24, Brother Hinzman, Mr. Reed of the Benevolent Association and myself appeared at the meeting of the N. O. M. T. Association and personally placed our proposition before them, also asking that they give us a written reply, signed by President John H. Murphy, president of their association.

After so doing we retired to await their action on our proposition for settlement of the strike. We met with the members on strike, Saturday afternoon, but did not receive a reply from the N. O. M. T. Association until after the meeting adjourned. Late Saturday evening we received a reply, stating that our proposition had been accepted. We held a special meeting Sunday morning, September 26, read the letter from the Metal Trades Association and a vote was taken to declare the strike off and return to work. The result of the vote: A roll call vote stood 17 in favor and 2 against. The secretary was instructed to so notify Mr. Stearns, secretary of the N. O. M. T. Association, that the strike was officially over.

Brother Hinzman and myself, having an appointment to attend the meeting of the Benevolent Association, left our meeting to attend same. Arriving late, we found 18 of their members present. Mr. Reed called the meeting to order and Brother Hinzman and myself both spoke to the men on amalgamation. Owing to the small attendance, it was agreed that I remain over another week in New Orleans and attend the following meeting of the Benevolent Association. Brother Hinzman having business at Beaumont, Tex., in connection with Lodge No. 587, he left for that city, September 27, 1915.

At this time I wish to state that Brother Hinzman and myself attended a joint picnic given by Lodges No. 37 and No. 206 on Saturday evening, September 25, and it was all that could be asked for in the way of a success. The crowd attending entered into the spirit of the occasion and all had a rousing good time. As a token of their esteem, Lodges No. 37 and No. 206 presented Brother Hinzman and myself with a beautiful badge. I have many remembrances from various parts of the country, but the badge from New Orleans takes first place in my collection, and I shall always recall with pleasure the 25th of September, 1915, at New Orleans, La.

From September 27 to Sunday, October 3, I remained in New Orleans, in connection with the affairs of Lodge No. 37. The officers of the lodges, including the trustees and myself, had a meeting arranged for

Wednesday, September 29, when the city was visited by a tropical hurricane which demoralized business and left the famous Crescent City in a mass of wreckage. Railroads, street car lines and river traffic were at a standstill and the storm left a streak of wreckage in its wake. I am pleased to state that our members were fortunate. As a result of the storm, our members have been employed as fast as they could report for work, and several crews were shipped out of the city for repair jobs. All of the shops became suddenly brisk with work after the storm, and we were tasked to the limit, furnishing same.

Sunday, October 3, I attended another meeting of the Benevolent Association. I again took up the question of amalgamation. Owing to the effects of the storm and small attendance, no definite action was taken. I agreed to resume negotiations later.

As the council meeting was to convene, I left New Orleans for headquarters. Enroute, I stopped at Beaumont and paid a short visit to the Magnolia Refinery, where a large job is in course of erection.

After a short visit with our members at Beaumont and Business Agent T. O. Riley of Port Arthur, Tex., I left for Fort Worth, arriving there Thursday, October 7. I met with Secretary Freeman and left that night for Cushing, Okla., arriving at Cushing, Friday, October 8, 1915.

On my arrival at Cushing, I went to the First National Bank and secured the remainder of the canceled strike pay checks, issued during the oil fields' strike, and closed up the account. I am pleased to report that we had a balance of \$441 on deposit. I had the cashier issue a bank draft for that amount in favor of our International Secretary-Treasurer, Brother F. P. Reine-meyer, and after finishing my business at Cushing, I left for headquarters, arriving late Friday night, October 8, 1915.

Upon my arrival at headquarters, I made a brief report to the executive council, in session, and turned over to Brother Reine-meyer the bank draft for \$441, taking his receipt for same. This was in compliance with President Franklin's instructions, and this refund reverts back to the strike benefit fund. The refund of this amount, \$441, gives Lodge No. 592 of Tulsa, Okla., a total of \$33,747 in strike benefits paid, instead of \$34,188, as shown in my former report in September issue of the Journal.

I am advised that field work is on the gain, as there is a large job under way at the Healdton, Okla., field. While there are some open jobs, I would advise our traveling brothers who are going into the oil fields to have your dues book stamped up to date and a clearance card with you.

Since October 8 and up to October 15, my time has been taken up at headquarters, attending the meeting of the Executive Council. I expect to again return to my work in the South, unless otherwise ordered by the International President in a very short

time. Trusting my report will prove interesting to the rank and file, I remain, with best wishes,

Fraternally yours,

JOS. P. RYAN.

Kansas City, Oct. 15, 1915.

**A COMMUNICATION FROM INT. SEC'Y.-
TREAS. REINEMEYER.**

Kansas City, Kas.

To the Officers and Members of Subordinate Lodges, Greetings:

Will the following lodges: 2, 3, 4, 5, 8, 12, 14, 22, 26, 27, 30, 31, 40, 41, 45, 46, 48, 50, 55, 64, 65, 66, 72, 73, 74, 82, 83, 84, 85, 86, 91, 92, 93, 104, 106, 108, 109, 111, 113, 129, 130, 132, 133, 134, 135, 137, 143, 149, 150, 154, 169, 170, 179, 193, 194, 197, 200, 204, 205, 207, 226, 229, 233, 236, 237, 238, 239, 241, 243, 247, 250, 259, 267, 279, 284, 286, 287, 293, 298, 301, 306, 309, 311, 315, 318, 320, 323, 328, 332, 339, 341, 344, 354, 367, 369, 379, 381, 382, 390, 391, 393, 396, 398, 403, 415, 417, 418, 421, 422, 424, 428, 430, 431, 434, 435, 436, 437, 438, 439, 440, 444, 447, 448, 449, 450, 453, 458, 463, 466, 467, 469, 475, 476, 478, 479, 486, 493, 496, 500, 502, 503, 504, 510, 517, 522, 525, 529, 530, 531, 546, 548, 551, 565, 567, 571, 573, 575, 578, 579, 580, 581, 582, 583, 584, 585, 588, 590, 591, 594, 595, 596, 597, 598, 599, 601, 603, 604, kindly make returns for the raffle tickets which were sent to all lodges for the benefit of Brother Barkdale, by either returning the tickets or return the stubs and make remittance for the tickets that were sold, at the earliest date possible, so that the matter can be closed up?

Trusting I may hear from the lodges as above mentioned at their most earliest convenience, with best wishes, I beg to remain

Yours fraternally,

F. P. REINEMEYER, I. S. T.

**REPORT OF INTERNATIONAL DEPUTY
ORGANIZER REED.**

Portland, Ore.

Brothers, Greeting:

At the time of writing my last report for the Journal, I was in Victoria, B. C., and glad to report that we met with a great deal of success in getting new members and re-instating old ones. At a regular meeting of Lodge No. 191, held on June 22, we increased the membership by 21, and I cannot thank Brother Stewart too much for the great assistance rendered to me during my several visits to Victoria. I am glad to take this opportunity of congratulating the members of Lodge No. 191 as a body in the manner in which they are conducting their business, and boosting the organization along, and a continuance of the energy displayed by each and every member cannot fail to

meet with success, in spite of the fact that no less than 27 of the members of this lodge have gone to the British Isles to work on government work, we still have a good membership. Most of the brothers that left Victoria and Vancouver took withdrawal cards, and I have been informed that the Boiler Makers' Society of Great Britain has recognized them, and they are now members of that organization.

A great deal of my time has been spent in and around the city of Portland, where there has been considerable tank work under construction; tanks being erected for the Associated Oil Company and a large plant for the Shell Oil Company; these were absolutely fair jobs, and am glad to report they were completed without any trouble at all. The contractors for the erection were the firm of Gabriel & Reed, who have, I believe, and always will prefer union men on their work. There have also been several smaller jobs in this district and our members have been fairly well employed during the past few months, but at this writing, I am sorry to say, there is very little doing.

I also spent some time in Vancouver, B. C., where there is a very large number of men employed on the construction of a number of submarines for some of the European nations. While this is by no means an absolutely union job, I am glad to say that we have a large number of our members on it, and I personally have had the privilege of sending men to the jobs, and we fully expect to get a large number of new members from this work. Now, brothers, I could write at considerable length concerning this submarine proposition, but I am satisfied if I write just as I would like to; it would not be to the best interest of our cause at this time, however, for the benefit of those interested will state the conditions under which the work is being carried out. The yard is situated at Barnett, some nine miles from the city of Vancouver, and the C. P. R. runs a train to the job, charging 35 cents the round trip. The men are working two eleven-hour shifts, wages being paid from 47 to 50 cents per hour to shipfitters, riveters and caulkers, and from 33 1-3 to 40 cents to drillers and helpers, time and one-half paid after nine hours and double time for Sunday work. During my last visit to Vancouver the Canadian Trades and Labor Congress were in session, and I had the pleasure of attending several sessions, as a guest. Our organizations were represented by Brother R. C. McCutcheon, representing the International, and Brother Pettigrew from Lodge No. 191 and Brother A. Fraser of Lodge No. 194. As I expect Brother McCutcheon will make a report on the convention, it will be unnecessary to take up any space in this direction.

Hoping this meets with the approval of all, and with best wishes, I remain

Yours fraternally,

JOE REED, I. D. O.

Agreements

FEDERATED AGREEMENT BETWEEN THE DELAWARE AND HUDSON COM- PANY AND THE FOLLOWING EMPLOYES:

The International Brotherhood of Blacksmiths and Helpers, The International Brotherhood of Boiler Makers, Iron Ship Builders and their Helpers of America, International Association of Machinists and their Helpers, International Brotherhood of Electrical Workers and Helpers, The Amalgamated Sheet Metal Workers, International Alliance and Helpers, Brotherhood of Railway Carmen of America and their Helpers, Also Pipe Fitters and Helpers, including the Apprentices of all organizations.

Article 1.

Nine hours shall constitute a day's work and in the event of the company running less than nine hours, time and one-half shall be paid for all time worked after shop hours. Ten hours to constitute a day's work in all round houses and car shops and in the event of the company running less than ten hours, time and one-half shall be paid for all time worked after round house and car shop hours.

Article 2.

Time worked Sundays and legal holidays shall be paid for at the rate of time and one-half, and in the event of men being called after shop hours, such work being three hours and twenty minutes or less, will receive five hours pay; and if more than three hours and twenty minutes time and one-half shall be paid. When a legal holiday falls on Sunday the day designated by the state or nation will be observed.

Article 3.

All employes and those dependent on them for support will enjoy the same privileges of free transportation as that granted to other departments.

Article 4.

The company will in no way discriminate against any committee or any one that may be selected from time to time to represent the men.

Article 5.

Should it become necessary to reduce expenses, the working hours shall be first reduced one (1) hour per day. Should further reductions be necessary, the day shall be reduced one (1) day per week. If further reductions are necessary and men are laid off, the last man hired shall be the first laid off. When the force is again increased, men who have been laid off will be given preference for re-employment, if available, within ten (10) days, seniority to govern. No overtime will be worked except when absolutely necessary and will be distributed among the men as far as practicable. Com-

pany agrees not to hire new men while the shops are working short time unless to fill vacancies or emergency cases to balance shops.

Article 6.

If circumstances require that the company must reduce the working hours overtime shall commence at the expiration of the hour designated by the company as the quitting time, local conditions to govern the starting time. All employes covered by this agreement to start at the same time with the exception of round houses and car shops. No lap will pertain where men will be required to start work after 8 a. m. or 8 p. m.

Article 7.

When men are sent out on the road they shall receive all living expenses and to be paid for all time while traveling, shop hours at home stations to govern all conditions. Receipts to be attached to executive vouchers.

Article 8.

No employe shall be dismissed or suspended without good and sufficient cause. If, after investigation, an employe has been found to have been unjustly discharged or suspended, he shall be reinstated and receive his pay for all time lost. All cases to be investigated within five days after discharge or suspension, a stenographic report of the investigation will be taken and the chairman of the Shop Committee will be furnished a copy of same, if requested.

Article 9.

There will be no extension of piece work in any of the shops of this company. This not to include Car Department.

Article 10.

In the event of a workman having a grievance he shall first make an effort on his own part to adjust it with the foreman, failing to do so the shop committee taking it up with the general foreman. If no adjustment is reached between the shop committee and the general foreman, the matter may be referred to the shop superintendent or master mechanic. Failing in this the matter to be referred to a representative of the trade who will take up with the shop superintendent or master mechanic. If no agreement is then reached the matter to be referred to the superintendent of motive power. In case of a disagreement over interpretation of any clause of this agreement, there will be no cessation of work until all negotiations between the highest representatives of both parties shall have failed.

Article 11.

In transferring men from day to night shifts or from night shifts to day shifts,

overtime rates will be paid for the first night or day of the new shift except where transfer is made at the man's own request.

Article 12.

When vacancies occur or new jobs are created the oldest man in point of service shall have preference to such jobs, if proficient. If not the next oldest man in point of service shall have preference for the job, if proficient.

Article 13.

No one covered by this agreement shall be laid off any hours of the regular working hours to equalize time on account of having worked overtime.

Article 14.

Twenty-four (24) hours notice of any change in the working hours shall be posted on the Bulletin Board.

Article 15.

Any employe when laid off on account of reduction of force will be furnished a pass to any point on the system desired, upon application, provided the man asks for the pass at the time of his dismissal.

Article 16.

All men covered by this agreement in the service of the company for a period of thirty (30) days shall be considered competent.

Article 17.

If a mechanic or helper is placed in a higher rated position he shall receive the higher rate of pay, when employed continually for fifteen (15) days or over.

Article 18.

Mechanics and helpers who by long and faithful service in the employ of the company and become unable to handle heavy work to advantage, will be given preference of such light work as they are capable of handling.

Shop Rules to Govern Boiler Makers, Apprentices and Helpers.

Rule 1. All work such as cutting apart, marking off or laying out any work pertaining to steam, air, water or oil tight boilers and tenders, laying out and building up

of any sheet iron gauge No. 16 and upwards, boiler inspecting, testing, flanging, patching, riveting, chipping and calking, taking out and putting in flues, taking out and putting in staybolts, shearing and punching, operating electric and acetylene welding machines, welding tubes, bending of arch tubes and operating pneumatic hammers, in connection with this work, shall be performed by boiler makers and their apprentices.

Above in no way to effect present practice as they have existed for the past year.

Rule 2. When long stroke pneumatic hammers are used there shall be two boiler makers or a boiler maker and an apprentice operate the hammer. When apprentices are required to run pneumatic hammers they shall have at least one year's experience at the trade before being allowed to operate the long stroke hammer.

Rule 3. Ten hours shall constitute a day's work in all round houses and overtime rates shall be paid after bulletin hours.

Rule 4. Tank and truck frame riveting shall be done by boiler makers or apprentices.

Rule 5. All hot work to be done by two boiler makers and a suitable place be provided by the company for hot work men to change their wet garments when the day's or night's work is completed.

Rule 6. When engines are brought to the shop or round house for repairs, grates will be properly cleaned.

Rule 7. Boiler makers sent out on the road to perform work shall be accompanied by an experienced helper.

Rule 8. An apprentice engaging to learn the boiler maker's trade shall be not less than 16 years of age and not more than 40 years. He shall serve a term of four years at shop hours and shall be given an opportunity to learn all branches of the trade and at the expiration of said term he shall receive the minimum rate of pay. He shall not in any case leave the service of the company without just and sufficient cause until his apprenticeship has been served. There shall be one apprentice to each shop and one to every five boiler makers employed thereafter. Fifty per cent of apprentices may be taken from the ranks of helpers. When helper engages as an apprentice his rate of pay shall not be reduced to the rate of boys provided for in this agreement.

Rule 9. Apprentice rates for boys shall be as follows:

First year	13½c
Second year	15c
Third year	19c
Fourth year	24c

Rule 10. This agreement to remain in effect until a new one is signed. If either party desires to change they will give thirty (30) days' notice to the other party.

A MOVEMENT TO BUILD A MONUMENT IN MEMORY OF BROTHER GILTHORPE.

Note: The following resolutions were adopted by Lodge 25 of San Francisco, Calif., and on being placed before our Executive Council by document, was endorsed by that body and at its recent meeting definite plans were adopted for carrying in effect the purpose of the resolutions and a letter of appeal will be issued to the lodges later.—The Editor.

San Francisco, Calif, July 28, 1915.

Jos. A. Franklin, Esq.,
International President.

Dear Sir and Brother:

San Francisco Lodge No. 25, I. B. B. M. & I. S. B. and H. of A., at its last regular meeting, unanimously adopted the following resolution:

"Whereas, In the demise of our Worthy Brother, and our Past International Secretary-Treasurer, 'Wm. J. Gilthrope,' the Trade Union movement, and especially the International Boiler Makers, Iron Ship Builders and Helpers of America, lost one of the ablest and most energetic brothers that was ever known; his integrity and his honesty was above reproach, and he was without fear of contradiction, the Father of this Organization; for through his years of hard toil and self-denial, he laid the Corner Stone of this International, and was always ready to give a helping hand to any brother in need or to any charitable cause; and he gave his life for the uplifting of our members; and

"Whereas, In view of this it would be fitting and just to erect a suitable monument over his last resting place, and do an honor to the memory of one who befriended us all;

Therefore be it Resolved, That San Francisco Lodge No. 25, subscribe the sum of \$10.00 to start a fund, to be known as the Wm. J. Gilthorpe Monument Fund; and be it further resolved;

That we request all the subordinate lodges to contribute whatever amounts that they can to this fund, so that a suitable monument shall be erected to the memory of our Grand Old Veteran; and be it further resolved; that our Executive Council be the custodian of this fund, and they in their judgment, procure the best monument that can be secured for whatever amount that may be realized; and be it further resolved; that this resolution be published in our Official Journal for a period of 90 days, and that all subordinate lodges be notified by circular letter about this proposed monument fund. We remain,

Yours fraternlly,

JOHN J. KANE,
President.

THOS. J. SHERIDAN,
Secretary-Treasurer.

EXECUTIVE COUNCIL'S ACTION.

The resolution from Lodge No. 25 was concurred in by the Executive Council and the date of closing the subscription set for April 1st, 1916. President Franklin, First Vice-President Hinzman, International Secretary-Treasurer Reinemeyer and Editor-Manager Casey were authorized as a committee to take charge of the fund.—Extract from the Executive Council Proceedings.

Correspondence.

Wilkes Barre, Pa.

Dear Sir and Brother:

I wish to inform the brothers of the quiet and unexpected wedding in this city on September 29 of Mrs. Annie Tyson and Brother E. T. Dickenson, both of Carbon-dale, Pa., was an agreeable surprise to their many friends and brothers of both cities.

Brother Dickenson is president of the Delaware & Hudson Federation of shop

Resolved, That we, the members of Lodge 176, extend to our worthy brother's family our heartfelt sympathy and condolence, in their sad hour of bereavement softened by the confiding hope that his spirit has departed to a better and brighter sphere where sorrow is unknown; and be it further

Resolved, That a copy of these resolutions be sent to the bereaved family, and to our official Journal for publication and a

MEMBERS OF LODGE No. 592, EMPLOYED ON THE KENNECUT JOB, CUSHING, OKLA.

trades and also secretary and treasurer of Local 547, and is a great favorite among the brothers who heartily congratulate and wish him luck.

Brother Dickenson remembered the brothers of all trades by giving around good union label cigars.

Again wishing Brother Dickenson and wife good luck, and hoping to see this in the next issue of the Journal, I remain,

Yours fraternally,
THOS. J. CAVAN,
Rep. L. 547.

Elizabeth, N. Y.

Dear Sir and Brother:

At a regular meeting of Lodge 176, the following resolutions were adopted:

Whereas, It has pleased the Almighty God in His infinite wisdom, to remove from our midst our esteemed brother, George Clayton, a charter member of this lodge.

copy be spread on the minutes of our meeting.

Fraternally,
SAMUEL M. RANKIN,
Secretary L. 176.

AS THEY CONFRONT US.

Portsmouth, Va.

The worker, the thinker, the student, the statesman and the capitalist are all forced by pressure of events to consider the labor problem, all are witnesses of the power of combination for good or evil, all may know that systems of industry change by slow evolving processes and that these processes of growth culminate in crisis of mighty import.

The capitalist seeking profit or gain and workers seeking better and easier conditions may work as partners with common interests, or wage unrelenting war for the

mastery that the victory will come to the side of justice and equity, is certain prophecy of history.

The history of the labor movement is the history of civilization, it has manifested itself in all times and under all conditions of life, owing to vast territory and variety of our pursuits and the form of government have tended to lead us to overlook and underestimate the importance of the labor movement and so long as outward evidence of aggregate prosperity are present we are apt to forget or neglect to know the condition of those who contribute to the results.

Past experience has taught us that no relief can be expected from those elected by the polluted channels of party politics to

out organization the American working class would be brutally compelled to compete with each other individually for a bare existence, and they would be so outrageously imposed upon by short sighted, ignorant and avaricious employers, that they would rapidly sink to the same low level and degradations as the Moufiks of Russia, the Fellahs of Egypt and Turkey, the Peons of Mexico, the Pariahs of India and the Coolies of China. No enlightening trade unions exist among those poor creatures. They have an unlimited privilege to work for what and for whom they please as independent workers, make your own comparisons fellow American working men, and then if you draw sensible conclusions hasten to be more active in your organization and place

A GROUP OF THE MEMBERS OF LODGE No. 382, CHILDRESS, TEXAS, LABOR DAY, 1915.. THIS LODGE WAS AWARDED THIRD PRIZE IN THE LABOR DAY PARADE.

positions that should be held by patriotic and enlighten statesmen, or the stilted ignorance of political economy as usually taught in the schools and even the philanthropist is more or less blinded by the glamour and misrepresentations promulgated by concentrated wealth if even relief is had or simple justice secured to the workers it will have to come through the efforts of themselves alone. The labor organization is not an experiment any longer, it is to stay, it has survived one hundred years of terrific opposition and in spite of that it becomes more necessary and popular year by year, it provides protection for rainy day, sickness, accident, old age and death, it brings sunshine in the home, displaces gloom and discontent.

Labor organization is the only salvation for the worker of the present day for with-

it on a higher plane, by doing so you can be a benefit and credit to the course of humanity by organization.

Step by step the longest march can be won. Single stones will form an arch one by one, and by unions what we will can be accomplished, still, drops of water turn a mill singly none, singly none.

H. E. PHELPS,
Lodge 57.

Columbus, Ga.

Dear Sir and Brother:

At the last regular meeting of Kennesaw Lodge No. 436, the following resolutions were adopted:

Whereas, It has pleased the Almighty God to remove from this world of trials and sorrow, our beloved brother, V. D. Randall; therefore, be it

Resolved, That we, his fellow brothers, extend to his family our heartfelt sympathy in this sad hour of bereavement, and be it further

Resolved, That a copy of these resolutions be sent to the family of Brother Randall, a copy sent to the Journal for publication and a copy spread upon the minutes of our meeting.

Fraternally in sympathy,
E. W. McMICHAEL,
J. D. MILFORD,
B. E. DOLAN,
Committee.

Kelley Lake, Minn.

Dear Sir and Brother:

Please publish this in the Boiler Makers' Journal among the poetical selections, if convenient, and oblige.

PEDER M. PETERSON.

"AS YE WOULD."

If I should see
A brother languishing in sore distress,
And I should turn and leave him comfortless,
When I might be
A messenger of hope and happiness—
How could I ask to have what I denied
In my own hour of bitterness supplied?

If I might share
A brother's load along the dusty way,
And I should turn and walk alone that day,
How could I dare,
When in the evening watch I knelt to pray,
To ask for help to bear my pain and loss,
If I heeded not my brother's cross?

If I might sing
A little song to cheer a fainting heart,
And I should seal my lips and sit apart,
When I might bring
A bit of sunshine for life's ache and smart—
How could I hope to have my grief relieved,
If I kept silent when my brother grieved?

And so I know
That day is lost wherein I fail to lend
A helping hand to some wayfaring friend;
But if it show
A burden lightening by the cheer I sent;
Then do I hold the golden hours well spent,
And lay me down to sleep in sweet content.
—Christian Advocate.

Big Springs, Tex.

Dear Sir and Brother:

Whereas, An all wise father has in His infinite wisdom seen fit to remove from our midst Brother J. W. McMahon, we the members of Signal Mt. Lodge 423, do bow to the will of Him who knows best and ask that He comfort and sustain those who are parted from one held most dear to them; we further

Resolve, That in the death of this good brother our lodge is deprived of a most worthy and loyal member and each of us has lost a true friend; be it further

Resolved, That we condole with the bereaved wife and other relations in this hour of sadness; be it further

Resolved, That these resolutions be spread on our minutes and a copy sent to our Journal and the bereaved ones.

H. F. INKMAN,
J. E. WILLIAMS,
T. H. CARDWELL,
Committee.

Carbondale, Pa.

Dear Sir and Brother:

At the last regular meeting of the Int. B. of B. M. & I. S. Builders of America, the following resolutions were adopted:

Whereas, It has pleased the Almighty God in His divine wisdom, to remove from our midst the dearly beloved wife of our esteemed brother, George W. Jones; therefore, be it

Resolved, That we, his fellow brothers, extend our heartfelt sympathy in his hour of bereavement, and may God help him to bear his sorrow and loss.

Hoping to see a copy of this in the next issue of the Journal, I remain,

Yours fraternally,
THOS. J. NEWCOMB, R. S.

Portsmouth, Va.

Dear Sir and Brother:

There is at present considerable dissatisfaction among all the mechanics employed in the government navy yards, owing to the number of ratings which is the cause of more friction than all other working regulations combined, as many of the so-called efficiencyisms has been abolished by an act of Congress, yet an effort has been made to increase the number of ratings, which is not only an injustice to the mechanics but to the navy department as well, as under the system of many ratings men are employed as mechanics who are only first class helpers when employed by outside corporations.

There are only two classes of mechanics, first and second, and perhaps a special skilled class in some trades, such as boiler making, which requires a special skilled boiler maker as flanger and layerout, all others are imposition on the mechanics of the above named classes also the navy department, from the standpoint of economy. As the greatest results are always secured from mechanics of skill and experience on any job, either construction or repair which has been established beyond a reasonable doubt by corporations who are in business for the profit on capital invested. And why the navy department continue such a unbusinesslike policy, practical mechanics cannot understand, as quality and safety first should be the first consideration on the part of the navy department, don't cost more, but on the contrary cost less, which can be proven very easily by any skilled mechanic, if the proper investigation is made by sensible men who will listen to

reason and understand a good thing when they hear it.

"NAVY YARD MECHANIC."

Portsmouth, Va.

Dear Sir and Brother:

Enclosed, please find pictures of part of Labor Day parade that was held in Norfolk.

A SNAP SHOT OF MEMBERS IN LABOR DAY PARADE, NORFOLK, VA., SEPT. 6, 1915.

Our Lodge 298 and Lodge 57 of Portsmouth joined Lodge 428 of Norfolk and we had altogether about eighty boiler makers in line.

FLOAT—LABOR DAY PARADE, NORFOLK, VA., SEPT. 6, 1915.

Enclosed you will find three pictures of our lodge.

One picture is of Brother Balleratine and Brother Nee, who drove rivets. They are standing with their hammers crossed. The second picture is of our float with Brother Doughty and Brother Young in the rear

LABOR DAY COMMITTEE FROM PORTSMOUTH, VA.

seated on gray mules. The third picture is of our committee, naming from left to right: Brothers Cooke, Haywood, Garriss, Howe, Ford, Nee and Pendleton.

Hoping that you may find space in the Journal to publish this, I beg to remain,
Yours fraternally,

ROBT. T. HOWE.

Bay City, Mich.

Dear Sir and Brother:

At the last regular meeting of Bay Lodge No. 67, I. B. of B. M. & H. of America, the following resolutions were adopted:

Whereas, It has pleased the Almighty God in His divine wisdom, to remove from our midst the dearly beloved wife of our worthy and esteemed brother, A. C. Thompson.

Resolved, That we, his fellow brothers, extend to our brother our heartfelt sympathy in this, his hour of bereavement, and pray that the Almighty God may comfort him and console him and that he will bear his sorrow with fortitude; be it further

Resolved, That a copy of these resolutions be spread on the minutes of our meeting and a copy be forwarded to our esteemed brother and a copy be forwarded to our official Journal for publication.

W. H. BENEDICT,
N. HEGLUND,
Committee.

Raleigh, N. C.

Dear Sir and Brother:

At the regular meeting of Lodge 173 the following resolutions were adopted and the secretary was instructed to send a copy to

the editor of the Journal to be published:

Whereas, It has pleased the Almighty God in His divine wisdom, to remove from this life the beloved wife of our worthy and esteemed brother, R. F. Duval; therefore, be it

Resolved, That we, his brothers, extend to Brother Duval, and his family our heartfelt sympathy in this, their sad hour of bereavement, and pray that the Almighty God may comfort and console them that they may bear their trial with Christian patience as she was a loving wife and mother and dearly beloved by all who knew her. She is survived by an infant son.

Resolved, That these resolutions be spread on the minutes of Lodge 173 and that a copy be sent to our bereaved brother and that a copy be sent to the official Journal for publication therein.

R. A. FERRIS,
J. N. DAVIS,
J. P. TAYLOR,
Committee.

Am sending photo of boiler makers and helpers employed at the Standard Oil Company boiler shop.

Trusting this will be of interest to the readers of the Journal and that you will have space for the photo and letter, I remain,

Fraternally yours,
RAY FREEMAN,
Secretary Lodge 596.

Memphis, Tenn.

Dear Sir and Brother:

Lodge 180 held an open meeting to try and get some of our delinquents back with us, and we have had some success. We had our worthy vice-president, Brother Hinzman, and also that hustling business agent of the Frisco, Brother A. F. Bingham. Brothers Hinzman and Bingham made the boys take notice on their talk on organization and the benefits that they would derive from the Brotherhood by building up a good, strong order. Mr. A. R. Hodges, foreman

A GROUP OF MEMBERS OF LODGE No. 596, EMPLOYED BY THE STANDARD OIL COMPANY AT CASPER, WYO.

Casper, Wyo.

Dear Sir and Brother:

Just a few lines from Local 596, Casper, Wyo., to let you know we are still in business.

On September 14, Local 596 got an A No. 1 agreement signed by the Wyoming Iron Works, a company recently organized by local men, R. W. McDonald, president; C. E. Starr, vice-president; A. Doornbos, secretary-treasurer. These brothers are a trio of winners and there is no doubt as to their success. They employ about 25 card men at present. This local also has an agreement with the Standard Oil Company, The Hammond Iron Works job at Greybull, Wyo., is held unfair by Local 596. Traveling brothers take notice. More card men here than can be employed.

boiler maker at the Frisco, and Brother Theo. Hoffman, local business agent of the machinists, made some good talks on co-operation.

Well I think that Brothers Hinzman and Bingham enjoyed their visit to Memphis. The committee had an automobile at their service and took them around our beautiful speedway and through the Memphis park system, which is the best in the Southland.

After the meeting all retired to the ante-room and refreshments was served by Brother H. P. Pratt, who had an abundance of soft drinks. That is all that is allowed in Memphis as every one knows that Memphis is dry. Also had some good singing with Brother Murray performing and Broth-

er Lew Haynes accompaniment with the banjo on which he is some expert.

Hoping to see this letter in the Journal at some early date and you will hear from No. 180 again, I remain,

Yours fraternally,

EDW. O'BRIEN,
Secretary Lodge 180.

P. S.—Hope to see Brother Hinzman again in Memphis soon, as all the brothers here got stuck on him.

Philadelphia, Pa.

Dear Sir and Brother:

I am enclosing you a copy of a letter of

Chickasha, Okla.

Dear Sir and Brother:

At a regular meeting of Lodge 323, the following resolutions were adopted:

Whereas, It has pleased the Almighty God in His divine wisdom to remove from our midst the dearly beloved wife of our worthy and esteemed brother, Harry B. White; therefore, be it

Resolved, That we, his fellow brothers, extend to him our heartfelt sympathy in his sad hour of bereavement, and pray that the Almighty God may comfort and console him that he may bear his trial with fortitude; and be it further

A GROUP OF MEMBERS OF LODGE No. 568, TACOMA, WASH., IN LABOR DAY PARADE, SEPT. 6, 1915.

thanks from Lodge 19 to Vice-President Nolan. I hope you can arrange to have same published in your next issue of the Journal.

Thanking you very much, I am,

Fraternally yours,

ROBT. S. HOPKINS, S. 19.

(Copy.)

Philadelphia, Pa., Oct. 9, 1915.

Mr. Thos. Nolan,

Second International Vice-President.

Dear Sir and Brother:

At a regular stated meeting of Lodge 19, Boiler Makers, Iron Ship Builders and Helpers of America, held last evening, October 8th, 1915, it was unanimously agreed that a vote of thanks be extended to you. We fully appreciate your untiring efforts and the interest manifested in our behalf at the recent conference between Assistant Secretary of Navy, Mr. Roosevelt. Now, Brother Nolan, we want you to accept our heartfelt thanks, as we feel, that it was through your kindly advice and assistance to our committee that made the conference the grand success it was. In conclusion, we all wish you good health, a long and prosperous career.

Fraternally,

ROBT. S. HOPKINS,
Secretary Lodge 19.

Resolved, That our charter be draped for thirty days, a copy of these resolutions be spread on the minutes of our meeting and a copy be forwarded to our bereaved brother, also a copy to our official Journal for publication.

Yours fraternally,

W. L. HARKINS,

Corresponding Secretary Lodge 323.

Memphis, Tenn.

Dear Sir and Brother:

Enclosed you will find some resolutions that we would like to have published in our Journal:

Whereas, It has pleased the Almighty God to remove from her loved ones the mother of Brother August Sullivan.

Resolved, That Local 180, Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America, do hereby extend our utmost sympathy to Brother Sullivan and family in their bereavement; also a copy of these resolutions be placed on the minutes of this meeting, a copy sent to the Journal for publication, and one sent to the family:

E. C. POORE,

M. O'NEILL,

E. LUFTENBURG,

Committee.

Princeton, W. Va.

Dear Sir and Brother:

The Stewart Studio has informed us that our Labor Day photo has been mailed to you on a recent date.

Labor Day, 1915, was a day long to be remembered by all citizens of this city, and neighboring communities. It was a success in every detail. Every branch of mechanical and transportation departments were well represented by a goodly turnout by the men and by appropriate floats. The parade being fully a mile and a half long.

and out, but during that month Brother Charles Scott, our International Organizer, made his appearance, especially to find out where the trouble was; and, finding it out, I can assure you Brother Scott made one dive to reorganize the members of No. 515, of which he accomplished 75 per cent before he left us, and since then the committees of each roundhouse and shops have worked hard to make a success of a hundred per cent, of which we have accomplished both in boiler making and helpers; and I would say further that Brother Charles Scott ac-

A GROUP OF MEMBERS OF LODGE No. 551, PRINCETON, W. VA., LABOR DAY, 1915.

Old Glory led the way with our federation banner following. We think the photo well shows the type of the boiler makers and helpers that go to make 551 a hustling and clean local; a star in our International association.

The afternoon was spent in an admirable field meet, climaxed by our second federation ball, one of the best our town has ever had.

You will confer a favor on Local 551 by printing this photo in the next issue of the Journal.

Yours fraternally,

A. A. WILLIAMS,
Member of Local 551.

Boston, Mass.

Dear Sir and Brother:

Lodge No. 515 would like space enough for a few words in the Journal. Some few months ago, as far back as the month of April, Lodge No. 515 was pretty well down

complished a great many more things in Boston and its suburbs besides Lodge No. 515, and also giving Brother Scott the name of being the busiest brother than ever entered the city of Boston, of which we have titled him "Busy Scott," and I will say that one of our past presidents, Brother Johnson, has been attending the meeting regularly, which has also helped to make Lodge No. 515 a success and can surely say that at the present time No. 515 was never equaled in the history of Boston, hoping it will always continue as it is at present and I can tell you our newly appointed financial secretary, Brother John Grant, has had an awful pile of work to do transferring the names from the old books to the new ones and also the making out of new cards, hoping it will be much easier for him the coming year and going as far back as Labor Day myself and a few more members of Lodge No. 515 helped to make the parade in Lowell, for Lodge No. 371 a success, which was accomplished, and to make the parade look better. We had Brother J.

Franklin, our International President, and Brother Charles Scott, our International Organizer.

Yours fraternally,
GEORGE PARKES, President.

Portsmouth, Va.

Dear Sir and Brother:

The labor and industrial organizations of Norfolk, Va., celebrated the morning part of Labor Day with a great street pageant, one of the best that has ever been staged in this part of the country, the line of march being fourteen squares long. There was another feature of this event and was

A GROUP OF MEMBERS OF LODGE No. 57, PORTSMOUTH, VA., LABOR DAY, 1915.

that of awarding prizes to the different participants, one for the best float, another for the best uniformed men, another for the largest percentage of men in line, but I am sorry to say that no labor organization received the first prize. Lodge 57 and Lodge 298 of Portsmouth participated as the guests of No. 428 of Norfolk; No. 428's men were uniformed and had a large return tubular boiler on a wagon, drawn by four horses.

Lodge 298 was uniformed with a boiler and a gang of riveters driving rivets and following up in the rear were two white mules representing two boiler makers whom had passed to the other world. No. 57's float had a small battleship mounted on a float with a member dressed up in Uncle Sam's uniform.

If you can find space for write-up in the Journal the members of No. 57 will appreciate the same. Enclosed find cut of the boys after the parade.

Thanking you for your past favors, I remain,

Yours fraternally,
H. E. PHELPS,
Chairman Arrangements Committee.

Little Rock, Ark.

Dear Sir and Brother:

Enclosed you will find announcement of Brother John Mitchell, president of Lodge 69, for representative of Pulaski County, in the Legislature, taken from the Labor Bulletin of Little Rock.

Organized labor has always found Brother Mitchell a staunch union man, a man that's always ready to support any move that will help the cause. Brother Mitchell has been indorsed by the Typographical Union No. 92, Boiler Makers No. 66 and No. 69, Central Labor Council and Arkansas State Federation of Labor, of which Brother Mitchell is first vice-president, Rock Island Local Federation, Carmen No. 424, and from all indications will be indorsed by several more this month.

Organized labor has several candidates in the field for officers this election and we firmly believe we will be able to put them over, and if ever a state needed good, sound legislation for the laboring man this is one. We find one great fault of a move of this kind that is lots of our members fail to pay their poll tax and when election comes we lose lots of votes. Another is they are always too ready to listen to the knocker, bringing in religious questions. I don't care what a man may be if he has been tried and found true to his obligations as a union man, we should vote for him and give him all the support we possibly can. Our members ought to get busy on the political question. We need men in our state bodies and Washington, D. C. There is no reason on earth why we should not, if we only get together.

Hoping this will be satisfactory, will close with best wishes to the Brotherhood.

Fraternally,
W. A. ROOKSBERY,
Secretary Lodge 69.

Printers Indorse Brother Mitchell's Candidacy.

Resolution No. 2, taken from the minutes of a recent meeting of the above organization:

Whereas, The Little Rock Central Trades and Labor Council has indorsed the candidacy of John Mitchell, first vice-president of the State Federation of Labor for the nomination for representative from Pulaski County, in the Democratic primary; and

Whereas, Mr. Mitchell's name has been placed upon the ticket, and he has decided to make the race; and

Whereas, We have confidence in his ability and faith in his unionism; therefore, be it

Resolved, That the Little Rock Typographical Union go on record as indorsing his candidacy, and urge our members and

all members of organized labor to vote for and support him in every way possible; be it further

Resolved, That a copy of these resolutions be spread upon the minutes of this body and a copy furnished the newspapers for publication.

Introduced by G. B. McCarty, E. G. Shoffner and J. H. Beerstecher, delegates to Central Trades and Labor Council.

(Signed) J. H. BEERSTECHEER,
President Typographical Union No. 92.

Attest:

HY. T. SMITH,
Recording Secretary.

There being no further business union adjourned till the first Sunday in November.

To the Committees Representing the Former Employees of the Arizona Copper Company, Ltd., Detroit Copper Mining Company of Arizona, Shannon Copper Company—Gentlemen:

In answer to your representations we beg to call your attention to the fact that these companies have seen their properties closed down and their operations tied up completely by a strike called by the Western Federation of Miners and this without any presentation of grievances. Our former employes have been persuaded by agitators of the Western Federation of Miners coming from outside of this district that the past pleasant relations and the present rate of wages should be radically changed.

A GROUP OF MEMBERS AND THEIR FAMILIES, LODGE No. 105, CINCINNATI, OHIO AT THEIR ANNUAL PICNIC, JULY 24, 1915.

Decatur, Ill.

Dear Sir and Brother:

Please give No. 447 space enough in the Journal for the following:

This is to inform our members at large that the watch that Lodge No. 447 raffled off for the benefit of Brother John Gray, Reg. No. 93500, to purchase an artificial limb, was drawn by Fred Kirk, a pipe-fitter employed by the Wabash R. R. at Decatur, Ill. This lodge also takes this means of thanking the Brotherhood for purchasing tickets and making it possible for No. 447 to purchase this artificial limb for Brother Gray.

CHAS. J. YOUNGER, S. L. 447.

Clifton, Ariz.

The following is a copy of a circular issued by the Arizona Copper Company and allied copper companies of Arizona and published on request of Lodge 593. A communication from that lodge follows after circular.—The Editor.

In view of these facts and notwithstanding that the companies are convinced that a large number of their old employes desire to continue to work under the conditions formerly existing in this district, they realize that any attempt to recommence under such conditions would be to invite violence and intimidation. Therefore, the management of the Arizona Copper Company, Ltd., Detroit Copper Mining Company and Shannon Copper Company desire to notify the committees and the people of the Clifton-Morenci Metcalf district that their mines and plant will remain idle indefinitely.

When it shall appear that conditions in this section warrant it and the companies are satisfied that the general sentiment of the community and their former employes is unanimously in favor of a resumption of operations on the basis of wages and conditions that have prevailed heretofore in this district, the companies reserve to themselves the right to decide whether or not they will again start up their plants.

Our attitude in the matter is based solely on the dominant influence of the Western Federation of Miners in this district at the present time, and when this influence is dissipated we may take a different view of the situation.

THE ARIZONA COPPER CO., LTD.,
By Norman Carmichael,
General Manager.

THE DETROIT COPPER CO. OF ARIZ.,

General Manager.

SHANNON COPPER CO.,
By J. W. Bennie,
General Manager.

Clifton, Ariz.

Dear Sir and Brother:

Yours of September 29th at hand, and will say that I forwarded you a letter yesterday, but did not go into detail as to what caused the trouble here, but will do so at

32½ cents as copper went up in price, but to make things worse the rates were on a basis of 13 cent copper and if copper went lower than that we did not know what they might do. Objections were raised and conferences asked for, but the reply was that any man who had a grievance would be received, but no committees would be received. Several men placed their grievances and were discharged. More meetings were held and the situation was talked over. There were many union men here but no locals, so it was decided to organize the camp in the district. Everything went along nicely as long as we did not go outside of the mechanical crafts, but the fun started when the Western Federation of Miners came into the district. As we had agreed to all stand together, we gave them our support in getting organized, but the companies fought the movement from the start and went so far as to hire men from all

MEMBERS OF LODGE No. 204, HONOLULU, H. I., LABOR DAY, SEPT. 6, 1915.

this time. To start with will say that wage conditions here for years have been from ten to fifty per cent below the standard paid in other parts of this country. In August, 1914, the company made a cut of 10 per cent with the understanding that same would be restored as soon as conditions would permit. About February 1 of this year things were looking better and meetings were held by the employees of the different companies of the district to get the managers to restore the 10 per cent. Before the men could call for a conference the managers put into effect a sliding scale that was the most unfair proposition that was ever written. Men who had been getting 50 cents per hour before the cut were raised at this time to 49½ cents per hour, others were cut still lower to 40 and 44 cents per hour. Men who had been getting 28 and 30 cents before the cut were put down to 22½ to 25 cents and put on a scale where they might be raised to 30 and

over Arizona to come here and speak against organized labor, but this had little or no effect. They told men that if they joined the union they would be discharged and at that 95 per cent of the workers of this district are now members of some labor organization, but they were not contented with that. They also went through the mines, mills and smelters with lists asking men to sign them in case that a strike was called, the men would keep on working. To make this effective they also had a time check at hand, and if they refused to sign they were given their time. This we could not stand and a conference was asked for with the different managers, two of them answered but denied a conference. The others did not even extend the courtesy to answer our letter for some days. This brings us up to September 9, 1915, when meetings of all the different mines, when the strike vote was taken and all men came out on September 10 and 11 and not a wheel has been

turned to this time. The rest will be strike history of which I will write you later, as things are now, I am of the opinion that a new kind of history will be written of this industrial war, but I cannot make these things public at this time and would like if this could be in our next Journal.

Hoping this will be satisfactory, I beg to remain,

Faternally yours,
H. HALTER,
F. and C. S. Lodge 593.

Oswatomie, Kas.

At a regular meeting of Crown Bar Lodge No. 82, the following resolutions were adopted:

Whereas, It has pleased Almighty God to take from our midst our beloved brother, A. A. Miller; therefore be it

Resolved, That the bereaved family have lost a loving husband and father, and we have lost a true and worthy member of our organization; be it further

Resolved, That our heartfelt sympathy be extended to the family and relatives of our departed brother and that a copy of this be sent to the sorrowful family, a copy be spread on the minutes of our lodge and a copy sent to our official Journal for publication.

M. P. CHURCHILL,
A. G. EVERETT,
HARRY SHANNON.

Newcastle, Pa.

Dear Sir and Brother:

I am enclosing picture of the B. & O. bunch, boiler makers and machinists, taken in the midst of their good time at Dewey

A GROUP OF THE BOILER MAKERS AND MACHINISTS EMPLOYED BY THE B. & O. R. R. AT NEW CASTLE, PA.

Park, Saturday, September 18. Refreshments, ball games and other athletic events were the order of the day. I am sorry to say the boiler makers lost the game by a narrow margin through a costly error by one W. J. Southern, better known as "Jaggers," who was the crowning feature of the game up until he refused to get up and chase a long fly hammered out by one of

his opponents which resulted in a home run and the winning of the day for the machinists. It also must be handed to M. B.

ANOTHER VIEW OF THE B. & O. BOILER MAKERS AND MACHINISTS, ON THEIR RECENT OUTING.

Cunningham, better known as "Mark," the "Million Dollar Kid." He was on the mound for the machinists and twirled a game that will go down in history. This is their first

PHOTO OF BRO. W. J. SOUTHERN (on left), KNOWN TO HIS FRIENDS AS JAGGERS.

gathering of this kind and it was unanimously adopted to make it an annual affair. All departed for their homes at a respectable

hour feeling as free as split silk after their day at Dewey Park.

Hoping that I have not taken too much of your valuable space and also that this item and photo will appear in the Journal at some early date. I will close, with best wishes. I am,

Yours fraternally,
DAVID LEWIS,
 C. F. S., Lodge 493.

brothers. Perhaps after they have done so they will better understand and why and just where their duty to their poor unfortunate brothers lie. Those brothers, whether their own or somebody else's fault are without means to help themselves. True unionism is not only to shout for the right and wrongs of labor, it must lighten, brighten the road of hardship which is oft-times felt and seen. If now and then our

BOILERMAKERS AND THEIR FRIENDS, LODGE No. 204, HONOLULU, H. I., LABOR DAY, SEPT. 6, 1915.

St. Louis, Mo.

Dear Sir and Brother:

In the September number of the Journal on pages 681 and 682, there appeared a letter dated Livingston, Mont., and signed "Fraternally submitted, Lodge 123." Kindly allow me space in your next issue to ask the writer whether he knows the meaning of the word, "fraternal." Judging from his letter I think not. "Fraternal," as Webster's latest improved dictionary gives it means "Pertaining to becoming or like brothers." If this is true then in the name of all that is good, why the necessity of publishing in the Journal a letter such as this? The tone and manner which served no other purpose than to antagonize and stir up discord and criticisms. In the class of men the writer refers to are to be found the noblest and best and if they did occasionally ask the use of his pie card it should be cheerfully given for the man is indeed fortunate who has a steady job. As far as having \$1,000, we, who have read the story, think this is only the writer's imagination, as for being customers, the letter itself will show just how welcome the needy ones are. I would ask the writer to please read the enclosed poem and also the writer of the letter on pages 688 and 689. He, I see on looking through the Journal criticises our traveling

Western brothers meet an undeserving one I would impress on them the fact that to err is human, to forgive and help divine. In every heart there is some good and even though his pockets be lined with \$100 bills which he perhaps does not or could not get change for, just accept him as a guest for believe me the greater majority of those brothers make good at some time. Who knows you might be in the same fix and they never forget a kindness or an insult. Better be a little generous with that pie card. Don't eliminate it as it is surely hard to hear that a prosperous brother refuses to help another for whom the sun of prosperity has not shone so brightly. Get in the class of cheerful givers, who give not because they have to, but because they like to.

The Others.

How did you meet him, brother,
 He of the sad slow pace?
 What did you for the others,
 Who lost in life's fitful race?

He was a boiler maker,
 His card was up-to-date.
 When good jobs were a giving
 He simply came too late.

Ask not of him the reason,
As he enters the shop at morn,
No matter what's the reason,
Give him a welcome warm.

Place in his hand a ticket
Tell him across the way
Over to old Dad Wickets'
There he can eat and stay.

Stay there, friend, till you are rested,
Look around a bit,
I can offer you no sure thing,
Yet a job you may hit.

He tells you in the evening
He has heard in town today
Over the border
Boiler makers get good pay.

Scarce are they and always wanted,
For this job then he will try.
Now he tells you on the morrow,
He to you must say good-bye.

When you shake his hand at parting,
Call him then aside;
Tell him with old Billy Wharton,
You for him have got a ride.

He is gone, the one befriended
Him you never met before.
You perhaps may never meet
This side of the Eternal shore.

Your good deed is recorded,
By the angels up above,
Where all good deeds are rewarded
In the Father's home of love.

When you both have crossed the river,
Gone beyond the Great Divide.
He who loves the cheerful giver,
Will give you a grand reward.

Help them then, our needy brothers,
Gently on their onward way,
Kindly cheer the weary others,
Then the Lord will say:

Welcome to thee, boiler maker,
Well on earth my work thou did'st.
Come right in, good faithful servant,
Thou are welcome to our midst.

JAS. CALLAHAN,
C. S., Lodge 27.

Wilkes Barre, Pa.

Dear Sir and Brother:

While reading September Journal of B. R. C., I came across an article requesting the brothers of organized labor to purchase union-made collars so as to keep the only union labor collar company supplied with work.

Now, brothers of organized labor, this is a shame that the only union label collar company in the United States should have to appeal to the different unions for aid. If

all unions now would only do their duty, this company would work day and night.

Now, brothers, make it a point when purchasing your next collars to see that the union label is on them; do not let the merchant put you off by saying these collars do not have the label on, but are just as good, for they are not. Hoping that all brothers of organized labor will do their duty of purchasing union label collars and helping to keep this one union firm running day and night.

It is your duty not only to purchase union made collars, but everything you wear should have the union label on them.

Hoping you are all doing your duty by purchasing nothing that has not the union label on it, I remain, yours always looking for the union label,

Fraternally,
T. J. CAVAN.

Seattle, Wash.

Dear Sir and Brother:

Inclosed find resolutions and affidavit for publication in our official Journal. Resolution is self-explanatory. Affidavit is to refute report of Inspector Larmer and reason of resolution. Inspector Larmer made the following report to Captain of Navy Yard Bremerton:

"After investigating trouble on tanks, I find the men employed were labor union men; they demanded that their members only be employed. This, Mr. England refused to do; they quit work and their places were taken by other men; wages paid were good, \$2.50 and \$3.50 per day." (Mr. England is foreman for Des Moines Bridge & Iron Company.)

This statement is absolutely false and misleading; if there was an investigation (which I doubt very much), why were some of the men that worked on the job, or I, not asked to state our side of the case?

The men employed were not union men, at least not all of them. The day we pulled out, four of them were non-union men, but they came out and stayed with the union men. As to wages being \$2.50 and \$3.50, that also is false; some men were paid as low as \$7 a week, and the highest wage was \$3.20.

At no time did we ever ask them to employ union men only. All we asked was that the prevailing rate of wages be paid, which is boiler makers and ship builders, 50 cents per hour, or \$4 a day; helpers, 37½ cents per hour, or \$3 a day, on such class of work around Seattle and vicinity.

Mr. England absolutely refused to pay our scale of wages. He informed Brother Atkinson and myself that it he "could get men to work for \$1.50 a day that would be all that he would pay them, and these hard times they should be glad to take that amount. It was better than to starve.

If the inclosed resolution meets with the approval of our lodges throughout the country, I sincerely hope they will write their

Senators and Congressmen, urging them to pass laws compelling contractors to pay the prevailing wages in that territory where work is being done, or, better still, a minimum wage.

With sincere good wishes and kindest regards, I remain

Yours fraternally,
DAN P. McKILLOP,
S. & B. A. L. 104.

Text of Resolutions.

Following is the text of the resolutions:

"Whereas, It always has been, and still is, the policy of the American Federation of Labor to uphold and elevate the high American standard of living; and

Whereas, A great many American government officials are aiding and abetting unscrupulous and un-American contractors and employers of labor to lower the American standard of living; and

"Whereas, Many government officials are giving preference in employment to irresponsible foreigners, while good, loyal American citizens are starving; and

Whereas, The American Congress has refused to vote funds with which to allow anything like adequate immigration protection, notwithstanding the fact that surplus millions of dollars have been collected from this source; and

Chairman Edes Quoted.

"Whereas, Chairman W. C. Edes of the Alaska Railroad Commission, recently in a newspaper interview stated that the Commission is successfully evading the government eight-hour law in building the Alaska railroad by letting the work out to foreign station men; and

"Whereas, An official of the Puget Sound Navy Yard, located at Bremerton, Wash., recently informed a member of this council that it was his right and his privilege to employ Japanese or any other foreigner he chose on government work in preference to American citizens; and

"Whereas It is well within the range of possibility that the United States government may call upon us to defend the flag against the very foreigners who are taking our living away from us; now, therefore, be it

"Resolved, That we, the delegates to the Metal Trades Council of Seattle and Vicinity, as citizens of the United States of America, protest most vehemently against the continuation of such a policy on the part of our government in giving contracts to outside firms who do business below the American standard; and further, be it

"Resolved, That we condemn the language of the navy yard official as detrimental to the best interests of this country, which would, should it follow out his suggestion, invite the inspection and spying of our government establishments by the Japanese, who some day we may have to face in war; and further, be it

Effect in Case of War.

"Resolved, That in the event of international complications, our response to a call to the government service will depend wholly on the extent to which such unfair and un-American policies are modified by our government officials; and further, be it

"Resolved, That we hereby demand that American citizens and heads of families be given the preference on all federal public works and that the current standard rate of wages and working conditions be given them for their services; and further, be it

"Resolved, That a copy of this resolution be forwarded to his honor, President Woodrow Wilson, and copies to each member of his cabinet; and further, be it

"Resolved, That we request those men representing us in Congress to see to it that this resolution is read on the floor of both houses of the American Congress; and, also, be it

"Resolved, That copies of this resolution be spread throughout the ranks of organized labor in America through the medium of the labor press."

(Copy.)

Bremerton, Washington,
July 29, 1915.

TO WHOM IT MAY CONCERN:

State of Washington, County of Kitsap, ss.

I, A. R. Larkin, being nineteen years of age, do upon my oath say that I worked twenty-one days, eight hours per day, at fifteen cents per hour, for the Des Moines Bridge & Iron Works, of Des Moines, Iowa; I. B. England, foreman. During the month of April, 1915, that said work was performed, erecting fuel oil tanks for the U. S. Government at Bremerton, Wash., in the U. S. Navy Yards.

(Signed) A. R. LARKIN.

Subscribed in my presence and sworn to before me this the 29th day of July, A. D. 1915.

(Signed) JAMES O. BOYLE,
Notary Public within and for the State of
Washington, residing at Bremerton, Wash.
(Seal.)

Argenta, Ark.

Dear Sir and Brother:

Please publish the following in the next issue of Journal:

Arkansas had her first state-wide Labor Day celebration on the sixth day of September. A celebration that the great state of Arkansas was very much proud; special trains were run into Little Rock to accommodate the union visitors from all points in the state. About twenty thousand visitors were estimated by the press, and parade of thirteen thousand union men of various trades marched the streets. The boiler makers and helpers with their float of quality and members, young and old, uniformed for the occasion, marched for the good cause of labor.

We did not land first prize, although in competition with thirty-seven others we did receive second honors.

Labor Day in Arkansas has proven by this gigantic celebration to be one of the most important national days. Our only hope is that next year it will be larger and better.

I am inclosing picture of our float, and Lodge No. 66 would be glad to have it shown in the next issue of Journal.

I also wish to mention that the added attraction was the show of Carnival Company. The allied trades were interested in this adventure and about one thousand dollars was netted, clear profit, which is to be appropriated for the Labor Temple. The day was a grand success, both from labor's standpoint and financially.

Yours fraternally,

E. WORTSMITH, S. 66.

LABOR DAY FLORAL AND GROUP OF MEMBERS OF LODGE NO. 66, LITTLE ROCK, ARK., LABOR DAY, SEPT. 6, 1915.

A Compilation of Labor News.

(By The A. F. of L. News Service.)

WOULD REVISE "PEN" METHODS.

Little Rock, Ark.—A special committee appointed by Governor Hays to investigate the Arkansas penal system has made a report in which is included several important recommendations. It is urged that a reasonable amount of stationery and postage be furnished each prisoner; that bedding be more closely looked after; that more soap and towels be supplied; that bake ovens be built at each convict camp; that the cooking and serving of food be carefully watched; that the supply of home-grown food stuffs be increased and that prisoners be worked no longer than ten hours a day. It was found that but one physician looks after 1,300 men and women at seven camps, and the committee recommends that a complete hospital be maintained at administration headquarters, with emergency hospitals at each camp. Bath houses in each camp of 200 prisoners is favored, and it is urged that stockades or bunk houses erected in the future should be of masonry high enough for three stories of bunks, which should be

made of steel pipe, and all structural parts of stockades should be fire proof and vermin proof.

MUST PAY FOR POLICE.

Fort Wayne, Ind.—City officials have notified the Fort Wayne and Northern Traction Company that if it wants police to protect its property and its employes from "anticipated violence" against striking street car men, it must pay for same. The company requested the city to detail special policemen around its property and on each car during the noon and evening hours.

In a letter signed jointly by the major, chief of police and the board of public safety, the company is notified that:

"The mayor has sought your co-operation to make a final attempt to have your difficulties settled for the benefit of the traveling public who are entitled to adequate street car service as provided in your franchise, for the benefit of business men of our city so that there shall not be a continuation of business depression produced by this

controversy and for the benefit of our taxpayers that they may receive the adequate and normal police protection of which they are now being deprived by using the same mostly for your benefit. But you did not see fit, when it involved the interest and right of our public, to co-operate. You now ask us to assist you by the expenditure of the public's money after you refused to co-operate for the benefit of the public, and we feel that we are not justified in so doing, when the statute provides that in this character of difficulties you should pay the additional police service you request."

RAILROADS ACT TOGETHER.

St. Louis, Mo.—Included in a circular issued by President Perham of the Order of Railroad Telegraphers is a record of recent co-operative agreements between several railroads and the brotherhoods of engineers, firemen, conductors, trainmen and telegraphers.

President Perham says:

"Similar agreements are being arranged on many other railroads.

"Unwritten co-operative agreements have been entered into upon still other railroad systems, all of which shows an increased spirit of fraternalism and an inclination towards mutual helpfulness that is extremely gratifying.

"It is by such means that we expect to arrive at a better understanding with the train and enginemen about handling train orders by telephone, also head off various employers who are trying to institute a plan of annual physical examinations, which may have disastrous results in weeding out representative employes."

EXPLAINS COMPENSATION LAW.

Philadelphia.—In an address on the new state compensation law Prof. Bohlen, of the University of Pennsylvania law school, said predictions regarding the large number of law suits that would result were greatly overestimated. In explaining the law, he said there were three forms of insurance: The state fund, mutual associations and stock companies. The speaker insisted that the state fund will give sufficient protection.

LAWSON RELEASED ON BAIL.

Denver, Colo.—The Colorado state supreme court has admitted John R. Lawson to bail in the sum of \$35,000. Later the court will consider Lawson's appeal for a new trial. Several weeks ago the court issued an order delaying further proceedings in this case until the evidence could be reviewed. At the same time Judge Hillyer was debarred from further consideration of pending cases against other miners.

Lawson has been in jail at Trinidad since he was convicted and sentenced to life imprisonment in Judge Hillyer's court for the alleged killing of John Nimmo, a strike deputy, October 25, 1913.

MEDICS STAND BY WAGE SCALE.

Kokomo, Ind.—The "union" of doctors in this city, known as the Kokomo Medical Association, protests against a lowering of wages by compensation insurance companies. The doctors insist on the right to set their own wage and have passed the following resolution:

"We will not sign nor subscribe to any schedule of fees of any kind or nature whatsoever as has been or may hereafter be prepared by said liability insurance companies."

The doctors further declare:

"Such interference by the said insurance companies would be unbecoming and detrimental to the medical profession and grossly unjust to the public at large to whom the said insurance companies owe no liability."

FAR WESTERN UNIONISTS MEET.

Santa Rosa, Cal.—Organized labor is in favor of the vocational school, but such schools must not be used by industry for exploitation purposes, declared President Haggerty in his report to the state federation of labor convention.

Referring to the commission on industrial relations, Secretary Scharrenberg said:

"If trade-unionism needed vindication it was secured in full and plenty in the reports issued by the commission. And if some of us are inclined to become complacent the big outstanding facts about industrial conditions in our country ought to furnish a rude awakening. It is the first time that an official report has been made to the United States government on the labor question which does not hesitate to present the real remedy for economic evils."

ASSOCIATED PRESS DENIES.

Washington.—Officers of the Associated Press in this city have written a letter to A. F. of L. officials against the inference that the Associated Press is a party to an alleged plan intended to weaken work being done by the federal department of labor, and also the statement that the railroad brotherhoods accept that portion of the Commons' report to the commission on industrial relations which favors a commission to enforce labor laws.

Associated Press officials say they did not send out this story, which was printed in the A. F. of L. Weekly News letter, issue of September 25, but that it was published by newspapers that had received this information in the form of a circular, issued by an information bureau in this city.

UNIONISM THE KEY.

Denver.—"Unionism, living up to its ideal, is the key to the so-called labor question, and, therefore, constantly increasing organization should be the aim of union men," declared James M. Brewster in an address before the state federation of labor convention. The speaker was recently dismissed from the law faculty of the Colorado state university because of his avowed sympathy for the striking coal miners.

DEFENDS TAX ON RICH.

Washington.—The government has filed a brief with the United States supreme court in which the income tax is defended. The government says that "congress has, in its discretion, determined that the heavier burden can be carried more easily by the larger income and it is not for the courts to say that such classification is outrageous."

"The ordinary system of indirect taxation upon consumption places upon the poor person a disproportionate share of the burden of government support," says the brief.

UNION POLICIES CONTRASTED.

Indianapolis.—Writing in the official journal of the Brotherhood of Teamsters, Secretary Solem, of Minneapolis Milk Wagon Drivers' union, contrasts the policy of that organization and a former local in the same calling at St. Paul. Both unions were organized about three years ago. After six months St. Paul demanded wage increases that averaged \$1 a day per member and refused to compromise. In another six months the union disappeared and since then these drivers have suffered a \$5 per month reduction and are now working for \$50 and \$55 per month with no vacation.

The Minneapolis drivers adopted a more cautious plan. By thorough organization they put all employers on the same competitive basis and then began improving working conditions and raising wages. Their present rates are \$75 a month with two weeks' vacation.

SUSPEND SHIP INSPECTORS.

Washington.—George Uhler, supervising inspector general of the United States steamboat inspection service, announces that Robert Reid and Charles S. Eckliffe, the two inspectors who gave the Eastland, Chicago excursion steamboat, her last license, have been suspended pending the outcome of indictments returned against them.

DEATH ON THE RAIL.

Washington.—For the three months ending with June 30, 2,056 persons were killed and 30,336 injured on railroads in this country, according to a statement issued by the interstate commerce commission. As compared with the corresponding quarter of 1914, these figures show a decrease of 166 in the number killed and 4,392 injured.

JUDGE SUPPORTS UNIONISTS.

New York.—Opposition to the New York state constitution, which will be voted on next month, is recorded by former Chief Judge Edgar M. Cullen of the court of errors and appeals, the highest court in this state. Judge Cullen supports the trade union movement in its opposition to some sections of the new constitution and shows that in the present constitution the safety of the civilian population is protected, as it is in the constitution of the United States, by a provision in the bill of rights that "no military tribunal shall exercise jurisdiction over a civilian unless engaged in military or naval service while the regularly constituted state courts are open to administer justice."

This clause is eliminated from the new constitution, which, however, carefully continues all the old powers and provisions for the declaration of martial law in case of riots or disorders which the civil authorities are deemed powerless to curb.

Judge Cullen shows that under the proposed constitution it would not be sufficient excuse for an accused man to show that he had been absent from the scene of rioting if the military powers merely proved that he had "aided and abetted those guilty of violence."

"Under these rules of law," says Judge Cullen, "in case of a riot in Buffalo, a man may be taken from Brooklyn or New York before a military commission on the charge that he has aided the rioters and shot if the commission sees fit to order it."

The claim that the new constitution will provide greater efficiency in the conduct of state affairs is answered by Judge Cullen with the claim that "efficiency may be bought at too great a price, and such is the case when it is purchased at the expense of civil liberty."

TO VOTE ON COMPENSATION.

Philadelphia.—The voters of this state will vote on a constitutional amendment at the coming election which provides for compulsory compensation. The present law, effective January 1, is optional and may be rejected at will by employers if they prefer a lawsuit to paying injured workers.

Among Our Exchanges.

FROM "REVOLUTION" TO INJUNCTION.

In 1905 a great noise was heard in the industrial world—heralding the advent of a new savior of Labor. This savior yearned after big deeds and dreamed great dreams and proclaimed greater reforms. Everything connected with this new idea was "big"—the industrial workers of all lands were to be organized upon a world scale.

"One Big Union" was to encompass all industry—one big union, mighty to do and dare.

But the idea was so big and so vague and so intangible that harnessing it to practical uses was very much akin to trying to use a rainbow for a dyepot. The spokes of the "big wheel" were tangled in the machinery for adjusting industrial relations and be-

came an unmanageable buzzsaw in the evolution of industrial welfare.

The industrial revolutionists scorned simple, methodical policies and proclaimed direct action as the only method. They sang of that glorious free spirit which took that of which it had need—took regardless of let or hindrance. Direct actionists avowed the morals and the methods of primitive, uncomplex life. They gloried in their power and their freedom from conventional regulations or standards.

These things they avowed. What they have done is well illustrated by an incident that recently happened in Boston.

The "Industrial Workers of the World" sought to gather the common laborers under their wing in one big union—the "I. W. W." has always presented as the greatest justification for its existence effective work in organizing the unskilled.

But the unskilled of Boston did not heed the allurements of the one big union—they made evident their preference for the International Hodcarriers and Common Laborers' Union of America, an international that had developed such skill in organization that it secured for unskilled workers wages larger than those received by unorganized skilled workers and some members of professions.

When the I. W. W. found themselves powerless before this local difficulty in Boston, did they take the "short cut," apply direct action and triumph gloriously over great difficulties? Did they give reality to the inspiring ideal of universal brotherhood? Did they center their united forces upon the one objective, each for all, and all for each?

The I. W. W. sought a pettifogging lawyer who consented to take their case for a consideration, and after the manner of D. E. Loewe Company, Hitchman Coal & Coke Company of West Virginia, the Anti-Boycott Association, instituted legal proceedings against Union No. 205 of the International Hodcarriers and Common Laborers on the ground that they constituted an illegal conspiracy and asked a friendly judge to please give them an injunction restraining their fellow-workers of the universal brotherhood!

These industrial workers boasted like industrial Don Quixotes—they proclaimed an industrial spirit akin to that of the chivalrous ideals when knighthood was in flower.

They boasted deeds—they besought the court for an injunction—yes, a real, genuine, dyed in the wool injunction.

They proclaimed themselves the saviors of the workers, were like the mountain of old that travelled in great pain and brought forth a mouse. The injunction was applied for and later denied, and the Boston Laborers' Union is now on its road for better protection and the promotion of the rights and interests of the workers. Now, the I. W. W. will go on howling for another "One Big

Union," then "bust" it and later appeal to the "capitalistic" courts for more injunctions. And there you are!—American Federationist.

SHIP BUILDING.

Sixty sea-going steel ships, aggregating 288,701 gross tons, are now being built in American shipyards. This is the heaviest tonnage ever under construction in this country at one time.

There is no reason to suppose that American shipyards will go out of business when the war closes. If we bring to ship building the same genius and energy we have taken into other lines of business, we can hold our own with any competitors; and the destruction of merchant ships in this war is so great that there will be a good demand for such vessels for a long time to come.—Plumbers', Gas and Steam Fitters' Journal.

THE LOVE OF HEALTH.

If anyone doubts that this is an era of health propaganda he must, indeed, be oblivious of what is going on about him. Municipal, state and national agencies are using forces and funds at their disposal to further the interests of public hygiene. Educational influences are directing their energies to the spread of the lessons of procurable health in public print and in documents of both official and unofficial character. Novels and short stories, the literature of biography and travel, the platform and even the pulpit are proclaiming the gospel of health far and wide. The medical profession, more enthusiastic if not more vitally interested than any other group in the promotion and outcome of the modern hygienic movement, may well stop from time to time to inquire about the sanity of the methods of the propaganda. The religious doctrine of past ages involved the threat of harm; it inculcated a fear of the destruction or danger that was sure to follow the violation of the law. This dismal attitude has long since been replaced by a religion of love, of uplift and joyous anticipation. In the health propaganda, likewise, much of the pessimistic attitude, unconsciously perhaps, has been introduced in the past. The fear of disease has been held over the heads of the people. Rarely have we seen the more appropriate spirit of the modern "better health" movement better expressed than in a recent pamphlet of the Life Extension Institute. "It is not a fear of illness or of death that we should encourage, but a love of health, a sense of responsibility for the care of our bodies, a desire for bodily endurance and efficiency and full achievement. If the mind is fixed on these ideals, and the already known means of approaching them are utilized, the needless miseries that embitter the lives of so many may be left to take care of themselves. It is not so much necessary to fight disease as to cultivate health

for the happiness, contentment and moral gain that it brings." There is something unusually optimistic and buoyant in such words. They embody the psychologic cue to comfort and happiness for many a patient, without implying that "man is incapable of sin, sickness, and death," or that "health is not a condition of matter, but of mind." To inspire a love of health does not mean to exclude the great body of scientific knowledge which is the best that science can offer today regarding disease, or to replace medicine by crude metaphysics. The ardent love of health insures a mind receptive to the lessons of modern medicine.—The Journal of the American Medical Association.

WHAT WOULD THEY DO?

A lot of politicians are talking about protecting American labor. They don't seem able to say just how they would do it beyond the fact that they would increase the tariff. But that is too flimsy. The most highly protected industries have been the most notorious for bad treatment of labor, and furthermore they have employed as little American labor as they could. The New Republic recently made a very good and a wholly practicable suggestion, viz., that the men who come to Congress asking a higher tariff should be asked to make good. Talk has been plenty, but just what will they do? Will they increase wages? And how much? Will they split up with labor, and just how much do they think ought to be labor's share of the increased burden they ask the consumer to bear? In other words, it's time to stop smiling and talk turkey.

Of course, we don't expect Governor Philipp or Senator Harding of Ohio or the other politicians to talk turkey, but the men in whose name the protection is asked, the manufacturers who pull the strings—certainly it doesn't seem too much to ask a man who comes begging you to increase his profits to tell you what he is really going to do.—Milwaukee Journal.

THE SHIP-PURCHASE BILL.

The decision of the Interstate Commerce Commission to enter upon an immediate and thorough inquiry into the transportation facilities and rates between the United States and other countries must be interpreted to mean that the President is gathering fresh data to be used by him in pressing to passage a Ship-Purchase bill similar—if somewhat modified—to that which failed of passage in the last session of Congress. The results of this investigation are to be in hand, it is understood, before the assembling of the Sixty-fourth Congress in December.

The investigation will cover all phases of the ocean commerce of the United States, with particular reference to trade with South and Central America. All American shippers have been asked by the Treasury

Department to enter at once into active co-operation with the Commission in the carrying on of this work, and it is believed that the data thus secured will effectively silence some of the most strenuous opposition manifested at the former session.

That the next session of Congress will find President Wilson in a stronger position to carry the Ship-Purchase bill is evident. The Democratic majority in the Senate will be six greater than it was in the last Congress, there being three less Republican votes and there more Democratic votes. With this increase in their voting strength, it ought to be possible for the Democrats to carry out the President's recommendation in this respect and thereby enable the government to demonstrate to the American people that it is possible and profitable to operate American ships in the off-shore trade without coolie crews.—Coast Seamen's Journal.

RAILROAD FINANCE.

The Rock Island was a magnificent property whose stock sold in 1901 at \$200 per share, and after deals, manipulations and reorganizations, was depressed to \$20 and a receivership in 1915. And still Congress has refused to give the Commerce Commission control of the stock and bond issues of railroads.

Actual Rock Island losses of some \$20,000,000 are computed by the Interstate Commerce Commission, but as a company with decreased earning power and decreased ability to pay dividends, the loss is far greater. The Rock Island has larger gross earnings than ever before, but because of financial mismanagement, the company is almost worthless from the stockholder's viewpoint.

A use of power through which stockholders lose scores of millions certainly should be amenable to law. Yet by some peculiar, devious turn in the American standard of morals, the milking of corporation property is at least condoned by the American public. A few persons perhaps wax wroth over ruthless railroad losses, but the great mass of public sentiment, outside of the persons immediately defrauded, remains stolidly indifferent to the injustice inflicted.

The carrying of worthless bonds on the books for millions of fictitious values, the unwise purchase of interests in other companies and the silencing of those who would make trouble were instances of a long record of irregular transactions that would not stand the light.

A little stress on common honesty, stock regulation, jail penalties and insistence on real railroad directors instead of "dummies," are some of the lessons of the history of the Rock Island road. If Congress does not give the Commerce Commission the power to stop such episodes, it will be grossly negligent of a plain duty.—Milwaukee Journal.

News of General Interest.

CONTINUOUS-RAIL CROSSING FOR TRACK INTERSECTIONS.

(By Frank C. Perkins.)

The accompanying illustration shows a unique continuous crossing for interlocking and high speed points, as developed at Springfield, Ohio. It is pointed out that on account of the extraordinary wear and high repair cost of track intersections under modern heavy railway equipment, it was very desirable to substitute a continuous-rail crossing frog for the ordinary frog.

It is of interest to note that the devices so far designed are of two types, having sliding and revolving blocks at the rail intersections. A continuous-rail crossing

It is stated that the operating rods are cranked horizontally at each end, and this part of the rod passes through a sliding cam in the base of the crossing block. Thus a longitudinal movement of the rod shifts the blocks in a direction laterally to that of the rod and diagonally to the center lines of the tracks. Turnbuckles on the rods permit of adjustment of the throw.

As noted in the photograph, the crossing is set to give continuous rails for the track running from left to right. When the other track is to be cleared, the throw of the lever gives a stroke to the flat, operating rods and the blocks move in a diagonal direction upward and outward. This move-

A NEW DEVICE FOR A CONTINUOUS RAIL AT RAILWAY CROSSINGS.

which is now being tried in service is of the sliding type, each corner of the crossing having a movable block whose lateral motion gives a continuous rail for one or other track. The construction and the operating mechanism are very simple.

In this equipment there are two sliding blocks moved by an operating rod, while two blocks are moved by another rod. The rods are connected for simultaneous movement, and if the crossing is equipped with signal interlocking plant, they are connected up with the interlocking mechanism. The two smaller rods at each block are the bolt blocks for locking the blocks in which ever position they are set.

ment clears the flangeways of this second track and closes those of the right and left track. The two round rods behind each sliding block are those of the locking mechanism and they partly conceal the ends of the operating rods.

The crossing illustrated is at the intersection of the main track and Sandusky branch of the Toledo division of the Pennsylvania lines, at Carrothers, Ohio, and was built to conform to the 85-lb. rails of the Am. Soc. C. E. section, with a flangeway or throat width of $1\frac{1}{4}$ -in. The entire crossing is of manganese steel, and is built in four sections, as shown. There are 28 trains daily on the Toledo branch and 32 trains on

the Sandusky branch, and the crossing is thrown at least once for each of these trains. Besides this, Carrothers is a setting-off point, so that nearly every train switching there passes over the crossing at least twice in addition to the regular movements.

A HALF-MILLION GALLON WATER TANK AND TOWER.

(By Frank C. Perkins.)

The Appleton tank shown in the accompanying illustration has a capacity of 500,000 gallons. This elevated tower and tank was constructed by the city of Appleton, Wis., and was erected to procure a reserve

A GIANT TOWER TANK.

supply of domestic water and at the same time to secure a constant pressure. It is an elliptical bottom tank with a large diameter and small height of shell supported upon an eight-foot three-panel tower, with an elevation of 102 ft. 8 in. to the bottom and 140 ft. to the high water line, giving a water pressure of 60 pounds per square inch at the base.

It will be seen that this tank has an elliptical bottom, made of plates, consisting of two courses, besides a circular bottom plate,

to which is riveted a steel riser pipe five feet in diameter. The tank is 51 ft. in diameter by 24 ft. 3 in. high, consisting of two courses of plates. The roof is constructed of 3-16 in. metal, having a bevel of 4½ in. to one foot and is supported by a roof framing of channel rafters and angle purlins. The posts are built-up members of two channels with cover plate on their back and double-laced on their front side.

The riser pipe was built of 7 ft. 6 in. sections of rolled steel plates. A spiral stairway winds around the riser pipe to the top of the second panel of tower. It then runs across to and around a post, and again spirally connects to the balcony, which encircles the tank at the spring line. In the valve pit in the center pier, under the riser pipe, is a 16 in. valve, which is opened and closed by an electrical device, worked by throwing a switch at the pumping station. In case of fire this valve is closed so that the pressure in the mains can be raised considerably above that which would overflow the tank if the valve was left open.

It is stated that the 16 in. outlet pipe projects down four feet into the bottom of the cylinder above and any dirt settling in the cylinder can be blown out by hydraulic pressure through 6 in. blow-off valve, which is flush with the bottom. This blow-off valve is opened and closed by turning a lever on the outside of the riser pipe. Besides building this large tank the city has rehabilitated the entire waterworks system. It has laid many miles of new pipe, added a great many new hydrants and valves and in addition to this an entire new pumping plant has been built.

Diesel oil engines and triplex pumps are so arranged as to interchange pumps and engines. This plant is said to be the most economical fuel using pumping plant of any city of the United States.

A REMARKABLE 75-TON FREIGHT CAR OF UNIQUE DESIGN.

(By Frank C. Perkins.)

The accompanying illustration shows a unique car of great capacity, utilized by the Westinghouse Electric and Manufacturing Company of East Pittsburgh for transporting large transformers completely assembled and ready for installation immediately on arrival at their destination. It is stated that the great increase in capacity size and weight of these transformers rendered it necessary to provide special "cut out" steel cars, with strong central floors suspended at about axle height from heavy side frames. These cars had a capacity in the well of 70,000 pounds, but even they were inadequate for the dimensions of 2,000 kva. tubular transformers and three heavy cars of the type shown in the photograph were designed and constructed at Cleveland. This car is entirely of steel and measured 35 ft. 5 in. long, with a capacity of 150,000 pounds or 75 tons in the well. For a load that can be spread over the entire car on the end

platforms as well, the capacity over 100 tons.

The surface of the floor in the well is about 2 ft. 2 in. above the top of the rails, giving a maximum amount of clearance under bridges. The car frame is of heavy built up steel guides. The trucks are of 205,000 capacity with 6 in. XII in. journals,

a reasonable number of dies to cover the range of work, it is preferable to install a machine which is adapted to any shape or dimension and for which but few dies are required.

The boiler flanging press noted in the accompanying photograph and drawings does its large work more slowly than a four-

A SPECIAL DESIGNED FREIGHT CAR.

33 in. wheels and M. C. B. requirements and springs of extra large capacity. It may be stated that the center plates are wrought steel and primal boxes, riders and brasses, all conform to M. C. B. requirements for 100-ton capacity journals. Each car is equipped with Westinghouse air brakes, Westinghouse friction draft gear and M. C. B. automatic couplers. The car weight is 53,000 pounds. It may be mentioned that transformers of the oil-insulated, tubular self-cooling type with a capacity of 2,000 kva. have been built for the Southern Power Company's station at Newberry, S. C., and as loaded on car, the extreme part of the transformer stood 16 ft. above the tops of the rails.

It is said that on account of limitations, tunnels in the Allegheny mountains and at Baltimore, it was shipped via Olean, Belmer and Cape Charles City to Puiner's Point near Norfolk.

A GIANT SECTIONAL BOILER FLANGING PRESS.

By Frank C. Perkins.

The accompanying illustration, Fig. 1, and drawings, Figs. 2, 3, 4, 5, show a 150-ton flanging press, its design and method of operation in flanging a large boiler head sectionally; for flanging the entire head at one operation and flanging a blue hole as well as a boiler flue.

These drawings indicate how to flange steel either sectionally or in one piece, as suggested by the engineers of R. D. Wood & Company of Philadelphia, Pa. It is pointed out that except in shops where standard sizes of a boiler fronts and if the other work can be rigidly adhered to, enabling

column press, yet on small work, for which dies can be carried, it is equally rapid. The outer ram is used as a clamp, while the inner vertical ram, having a plow-shaped die at its lower end, turns down from two to

A GIANT BOILER FLANGING PRESS.

three feet of flange at one heat. The action of the horizontal rams follows the plow and smoothes and squares up the flanges around

the plow and horizontal ram. When used on small heads, both of the vertical rams are attached to a male die, and the plate is clamped against the latter by a supplementary ram moving upwards from below. The supplementary ram is carried in a cylinder hung in the lower jaw of the frame, and located centrally between the two upper rams.

the die block upon which the plate is clamped. There is an interlocking device used to prevent any possible foul between

In Memoriam

Members.

Leslie C. Carden, Reg. No. 99240, age 24 years, of Lodge No. 557, Williamson, W. Va., was born in Hampton, Tenn., 1891, died October 12, 1915, from typhoid fever; single. Was a member one year and 9 months.

Geo. E. Smith, Reg. No. 46881; age 36, Lodge No. 389, Sour Lake, Tex.; was born in Titusville, Pa., 1879, died September 26, 1915, from dysentery; single; member 10 years.

W. Skelland, Reg. No. 3824; age 57; of Lodge No. 194, Vancouver, B. C.; was born in England; died September 25, 1915, from cancer; married, one child; member one year from reinstatement.

RELATIVES OF MEMBERS.

Mrs. Annie Hannon, age 88 years, was mother of Brother John Hannon, of Lodge No. 191; she was born at West Maine, 1827; died October 11, 1915.

Lodge Notices

Feeney—Lauderback.

Anyone knowing the whereabouts of Brother Thomas Feeney, Reg. No. 48088, boiler maker, please have same correspond with Brother E. G. Lauderback, 810 Lamar Avenue, Wichita Falls, Tex.

Franks—Maley.

Anyone knowing the whereabouts of Brother John Franks, helper, Reg. No. 65361, please have same correspond with Brother J. A. Maley, 810 Lamar Avenue, Wichita Falls, Tex.

Sullivan—Mother.

Anyone knowing the whereabouts of J. P. Sullivan, last heard from while at work for Standard Oil Co., of Indiana, doing work at Casper, Wyo., as his mother and sister would like to hear from him very much. I think that he was a member of Local No. 90 at the time the agreement was signed up with this company. Anyone knowing where he is, have him write his mother and sister or please notify me at once.

NELSON HEGLUND, S. L. 67.

Kerus—Lodge No. 32.

Anyone knowing the whereabouts of Wm. Kerus, Reg. No. 78648, will please let Lodge No. 32 know. This brother's card is out of Lodge No. 403 of Hoisington, Kas.

WALTER E. DWYER, S. L. 32.

O'Brien—Lodge No. 39.

Anyone knowing the whereabouts of Edw. O'Brien, better known as Mickey O'Brien, Reg. No. 101118, be on the lookout for him and tell him if he does not correspond with the undersigned that the check he forged here for \$15 will be put into the proper hands to prosecute him. One of the brothers went good for the check and had to make it good, another brother loaned him \$15 more that he also forgot to pay. This is the same Edw. nee Mickey O'Brien that ran for mayor of Cushing, Okla.

JOHN COGHLAN, B. A. & C. S. L. 39.

Cooper et als.—Lodge No. 491.

Any secretary taking up the books or cards of any of the following brothers will please hold same and notify the secretary of Lodge No. 491, as they left town owing the amounts placed after their names. C. E. Cooper, Reg. No. 41907, \$12.35; A. J. Conley, Reg. No. 39115, \$3.95; John Crawford, Reg. No. 62321, \$34.70; W. J. Mills, Reg. No. 98504, \$6.40; John Peters, Reg. No. 80223, \$5.50.

Fraternally,
J. C. CARROLL, S. L. 491.

Kellett—Lodge No. 132.

Anyone knowing the whereabouts of Brother A. Kellett, Reg. No. 49101, boiler maker, will please notify the secretary of Lodge No. 132. E. T. CHESTER, Sec'y.

LIST OF MEMBERS PREVIOUSLY ADVERTISED

Thompson—Lodge No. 587.

F. W. Thompson, Reg. No. 20987, has been suspended by this local for non-payment of dues. He also owes about \$40 here.

T. C. MADDY,
June Journal. Secretary Lodge No. 587.

C. S. Burk—Lodge No. 82.

Any secretary taking up card of Brother C. S. Burk, Reg. No. 102470, will please hold same and correspond with secretary of Lodge No. 82, as this brother misrepresented facts to secure transportation to Kansas City, amounting to \$1.25, and we had to pay this bill out of the treasury of the local.

A. G. EVERETT,
June Journal. Secretary Lodge No. 82.

Robert Canton—Lodge No. 384.

Anyone knowing the whereabouts of Robert Canton, boiler maker's helper, will please notify the secretary of Lodge No. 384,

as this brother left this lodge without paying his bills that the lodge went good for.

A. W. JOHNSON,
July Journal. Secretary Lodge No. 384.

Douglas et al.—Lodge No. 587.

Lodge No. 587 has suspended M. E. Douglas, Reg. No. 100307, for non-payment of dues. We have also bills aggregating to \$80 against this brother. T. C. MADDY,

Secretary and Treasurer Lodge No. 587.
July Journal.

D. J. Fitzgibbons et al.—Lodge No. 99.

Any secretary taking up the card of D. J. Fitzgibbons, Reg. No. 67599, or F. G. Hayes, Reg. No. 21882, will please correspond with the secretary of Lodge No. 99, Newark, Ohio, as these brothers borrowed money from this local which they forgot to return.

CECIL C. ROBERTS,
July Journal. Secretary Lodge No. 99.

C. J. Dowd—Lodge No. 199.

Anybody knowing the whereabouts of C. J. Dowd, Reg. No. 96128, helper, left Lodge No. 199 without a card, and also owing a board bill of \$29 and other bills. Last stamp in his book issued by Lodge No. 113. Please notify the undersigned.

Aug. Journal. E. S. MCGINNIS, S. L. 199.

C. E. Cooper—Lodge No. 528.

Any secretary taking up the card of Brother C. E. Cooper, Reg. No. 41907, will please hold same and correspond with the undersigned, as this brother left here in 1913 and left unpaid bills that Brother Ed Swanson stood good for and had to pay.

J. H. THOMAS, S. L. No. 528.
Aug. Journal.

Seigler—Lodge No. 549.

Any secretary taking up the card of Brother E. R. Seigler, Reg. No. 68353, please hold same and correspond with secretary of Lodge No. 549, as this brother left here owing a bill of \$3.00, which a brother stood for.

PERRY COOPER, S. L. 549.
Oct. Journal.

Ennis—Lodge No. 346.

Any secretary taking up the clearance card of J. J. Ennis, Reg. No. 24751, will please hold same and correspond with the secretary of Lodge No. 346, as this brother left here owing some bills he misrepresented.

GEO. W. SINGER, S. L. 346.
Oct. Journal.

Hell—Lodge No. 588.

Any secretary taking up the card of Brother F. S. Hell, Reg. No. 43811, will please hold same and correspond with the secretary of Lodge No. 588, as this brother borrowed money. Last stamps and clearance card issued by Lodge No. 70.

JOHN McNANEY, S. L. 588.
Oct. Journal.

Extend Your Education

Every railway employe should devote a part of their spare time in improving their education and knowledge of the technical side of their trade or calling as well as that of the practical side. There is no position in the whole field of railroading that any employe may not aspire to if they will only take advantage of the educational facilities now available, and devote their spare time to study.

The Railway Educational Bureau is the medium through which all may satisfy their desire for knowledge. It is the last thought in correspondence schools, with a personal service attached, and it is furnished at such a small cost that all may avail themselves of its service. The Railway Educational Bureau has been inaugurated on a number of railway systems already and it is rapidly being extended to other railroads.

If it is not yet on the system that you are employed on and you want to learn more about it write for information and it will be promptly furnished.

No. 12.

EXTRACTS FROM THE REPORT OF A. F. OF L. EXECUTIVE COUNCIL.

San Francisco, Calif., Nov. 8, 1915.

To the Officers and Delegates of the Thirty-fifth Annual Convention of the American Federation of Labor, Greeting:

The past year has been one of particular stress for the labor movement, testing its power and its practical efficiency. Like every other organization, the labor movement has found itself confronted in its various relationships by war conditions and war difficulties. At the outbreak of the war there came a great catastrophic upheaval, when the activities and policies of peace were suddenly sundered and Europe was plunged into an atmosphere of fighting and destruction.

Men's thought and efforts had been centered upon progress, upon the development of civilization and upon the conservation of human life and the enlargement of opportunities for human development. With the declaration of war, almost in an instant everything was changed, the course and purpose of organized society were changed to further the purpose of destruction and to serve war needs. Skill of men's minds and muscles, knowledge and scientific invention, progress of all the ages, were put at the service of the armies and navies engaged in the terrific conflict, destroying human life with unparalleled effectiveness. It seemed as though Europe had suddenly gone mad; all of the agencies to which had been entrusted the welfare and the progress of humanity were suddenly made helpless. But after the period of almost paralyzed horror passed, we began to devise ways by which we could control the convulsion following the war and utilize even war conditions for human betterment. The period of readjustment enabled us as a nation to adapt ourselves so as to organize upon a basis that would enable us to protect the citizens of our own nation.

The working people have been those who have suffered most from these changes. During that period of wonder and horror that followed the beginning of the war, many of the workers were suddenly left without

the means of earning a livelihood; left to struggle on as best they could for themselves and those dependent upon them, although they had not been able to provide out of their scanty wages to meet such an emergency. Industries throughout the country struggled on for a time in a halting sort of fashion and some stopped. The commerce that was prepared to meet the needs of peace was wasted in the war situation. There followed a period of depression which meant to the workers of our country unemployment of such a serious nature that thousands were facing starvation. Yet, in the midst of all this confusion, this turmoil, uncertainty and even despair, there was one agency upon which the workers fixed their trust and hope, the one agency that was appealed to by the toilers and the oppressed, not only of this but of the nations that were suddenly submerged in the European war.

The labor movement has done much in the crisis of the European war, but it has been hampered by lack of funds. The same obstacle is felt in carrying out ideals and plans for greater helpfulness in all international relations.

This agency remained because it was founded for an unselfish purpose, because it did not exist for the hope of gain, because all its efforts were bent upon the protection and assistance of human beings. The labor movement owes its existence to the needs of men. It expresses their hope for the future. It continues because it meets the needs of the people, and it maintains its power and its vigor in proportion as it keeps itself free from the agencies of greed and of selfish interest that would use it to further their own purposes or would weaken it to eliminate its opposition. In this country as the desires of men increase and are more urgent, the need for the labor movement becomes greater. In the period of distress and disruption that followed, men's thoughts and men's hopes were turned to the labor movement of America. Whether organized or unorganized, they knew they could depend upon that organization to help them in their time of need.

In the time of peace, the labor movement

is the constructive force in the industrial world which brings system, organization and opportunity for progress into industrial relations between employers and employes. It is the democratic medium by which the toilers can work out their problems, remedy wrongs and secure for themselves ever increasing opportunity for better living.

Industrial organization is now upon too large a scale to permit of haphazard methods and disorganized conditions in any of its relations. Employers have found that their interests in industry must be very highly systematized if they are to survive in the struggle with their competitors. Employes cannot remain a helpless disorganized mass with inarticulate wants and needs if they are not to be crushed and maimed by the strong organized forces in industry. Such inhumane and unwise policy would result in reducing the workers to a condition for which only industrial revolutions and rebellions would secure betterment, protection or justice. Such a policy is not worthy of an enlightened nation. It is subversive to all ideals of industrial progress or industrial statesmanship.

It has become a generally accepted fact that all relations of life must be so organized that there shall be in existence agencies for constructive development and gradual and natural progress—agencies whereby the problems arising in these various relationships can be worked out without upheavals or unnecessary disturbances. It is now recognized that policies and principles of statesmanship must be applied to industrial relations as well as to political relations. In truth, industrial relations are now of greater consequence than political relations because they touch the lives of the people more intimately and with greater power for good or evil than do political relationships. Furthermore, it is now recognized throughout the civilized world that the agency necessary for the existence of regulation, system and progress in relations between workers and their employers is the trade union, which is founded upon the highest ideals for associated effort of any kind. It is a simple democratic organization which meets the needs of the workers and enables them to protect themselves and make such progress that they shall become of increasing value and importance to the nation.

The labor movement of America was the great steadying force in the period of upheaval and transition that followed the outbreak of the war. It was the force that insisted upon the maintenance of existing standards that protected the workers against all efforts to throw upon them the full burden of the war. It was the force that demanded for the workers an opportunity to work in order to earn a daily living. It was the force that held true and tided things over.

When employers had readjusted to meet the changing conditions and to meet the de-

mands of European nations that had grown out of the conduct of the war, the labor movement of the country was the agency that enabled the workers to share more equitably the results of the industrial impetus given by the war. The workers soon realized that the employers intended to keep to themselves all of their vastly increased profits. The organized workers made demands through their regular representatives, and many unorganized workers caught the spirit of the day and organized in order that they, too, might make their demands effective. Thus there came in many industries a great labor forward campaign. It was recognized that the organized economic power of the workers was their main dependence under all conditions and all necessities, whether for protection or for opportunity to share in prosperity.

In the meanwhile the workers of the warring nations were constantly turning to the labor movement of America for assurance that the influence and power of our own workers of this country would be exerted upon international relations for the maintenance of the cause and rights of humanity. Appeals came from the workers of desolated lands for assistance and in all and through it all the spirit of fraternity, the spirit of fellowship among industrial workers survived, even when the outward physical ties of organization were temporarily lost in the stress of war.

Even though of late there has been increasing difficulty in maintaining intercourse with the labor movements of some foreign countries, yet there still remain the spirit of fraternity and the confidence that the American labor movement will stand for the rights of humanity, of the workers in all of the countries, and will insist upon the paramount importance of humanity. Yet to maintain the force of our labor movement straight and unerring, has not been an easy task. There have been innumerable influences that have sought to fasten themselves upon the labor movement of this country because they recognized its power, and because they desired to use it to serve their own purposes.

It has been due to the integrity, the honor and manhood of the wage-earners that many efforts to embroil our country in the present international complications have failed. They have held their ideals too dear to be sacrificed to personal gain, and they have not deviated from the determination to make all forces and all conditions contribute to the progress of the labor movement which is the well-being of the wage-earners. In every trade they have sought to obtain higher wages, shorter hours of work, and better working conditions. They have used their influence to secure not personal benefits, but something that would lift the labor movement upon a higher plane with greater opportunities. These efforts to use the labor movement have come in all manner of

guises. They have come as humanitarian efforts; they have come as patriotic appeals; they have come as promoting the highest ideals which human beings have conceived. But the trade union movement of America has steadfastly refused to be moved from the principles upon which it has built up its present power and effectiveness. The trade union movement, the powerful militant organization in industry for the protection of the rights of the workers and for the maintenance of industrial justice, has refused to give its sanction to any political movement in furtherance of peace at any price. While the trade union movement recognizes that peace is absolutely necessary for normal, consecutive development and progress, yet it refuses to secure this peace at the sacrifice of ideals and standards of justice. It maintains that a necessary assurance of peace is power for self-protection and readiness to maintain rights. The principles of statesmanship that hold true in the industrial world hold true in the political world.

The trade union movement holds that peace in any relationship can be secured only when justice prevails and that peace follows because men are accorded their rights and are assured opportunities for necessary progress. The trade union movement is founded upon democratic principles; therefore, it holds that people have a right to work out their own salvation according to their own ideals. In accord with this ideal, it refuses to sanction any effort to interfere with others who are working out their own problems. Further, it holds that it ought to take advantage of every opportunity to plan for peace in a constructive way. At the Philadelphia convention, the trade union movement indorsed a proposal that when the nations shall meet to determine upon conditions of peace at the conclusion of the present war, that representatives of the wage-earners—the great masses of all the nations—ought to be present in order to present and insist upon conditions and declarations that shall provide for the safety and the advancement of human welfare and shall maintain human rights as of greater importance than any other consideration. The trade union movement insists that a human being is of greater importance than the product of his toil. The human being is the creator and in him lies that infinitely valuable thing—creative genius. Creative genius is the thing that civilization and the agencies of civilization ought to protect. This is the principle which the trade union movement has indorsed, and which it proposes to further in all of the councils of state.

As we have said again and again, the trade union movement is as wide and as deep as human life. There is nothing that concerns human life that is foreign to the labor movement. While the efforts of the

trade union movement are directed first of all to secure certain material benefits, these benefits are for the purpose of promoting and advancing human life. It has been demonstrated that the shorter workday lengthens the lives of the workers. It gives them opportunities for better living. It is indisputable that higher wages provide the workers with the necessities for better living, and therefore make better men and women. Improved conditions of work protect the health of the workers, conserve their productive power and make them of greater value to themselves and the nation.

From this it is evident that the work of the trade union movement is of tremendous importance to the workers themselves and to the nation, and it is also evident how serious is the duty and obligation that develops upon us as the members of this Executive Council. The seriousness of that duty and obligation has been ever present to our members, and we have tried to do what we could and make the following report of our year's work.

We have had four meetings during the years, as follows:

January 11-16, 1915; April 19-24, 1915; September 20-25, 1915, and November 6, 1915.

There were submitted to us during the year 162 documents. The most important of the matters to which we have given attention and consideration during the year are included in this report.

Secretary Morrison's Report.

To the Officers and Delegates to the Thirty-fifth Annual Convention of the American Federation of Labor:

Fellow Unionists: I have the honor to submit a report to you of the receipts and expenditures for the past twelve (12) months, beginning October 1, 1914, and ending September 30, 1915.

It is with satisfaction I report at the close of the fiscal year a balance on hand of \$110,632.39—\$70,132.39 in cash and \$40,500 advanced from the defense fund for local trade and federal labor unions on account of \$50,000 loan to erect American Federation of Labor office building. Of the total amount on hand, \$97,887.83 is in the defense fund for the local trade and federal labor unions and can be used to pay benefits only in case of a strike or lockout of the members of these local unions. The balance, \$12,744.56, is in the general fund. Of that fund only \$8,683.16 is available for the general expenses of the American Federation of Labor. The balance, \$4,061.40, is in the fund created by the one-cent assessment levied December 17, 1914, to defray expenses of appeals in the United Hatters' contempt cases and for the organization of women workers.

The total receipts from all sources are \$271,625.53, the total expenses are \$303,985.95, which includes the \$40,500 advanced on office building loan, leaving the actual expenses amounting to \$263,485.95. Deduct-

ing the actual expenses from the receipts shows an excess of the receipts over the expenditures of \$8,139.58.

The following are the receipts and expenses for the twelve months ending September 30, 1915:

RECEIPTS.	
Balance on hand September 30, 1914.....	\$102,492.81
Per capita tax.....	\$176,372.31
Supplies.....	8,028.54
Interest on funds on deposit.....	2,340.00
American Federationist.....	36,731.27
One-cent assessment to defray expenses in the United Hatters' case...	15,777.24
One-cent assessment to organize women workers.....	5,373.95
Defense fund for local trade and federal labor unions.....	14,257.98
Disbanded and suspended unions and fees for charters not issued.....	890.53
Reinstatement and initiation fees.....	5,804.47
Money received and not receipted for.....	858.50
Premiums on bonds of officers of affiliated unions.....	5,190.74
	271,625.53
Total.....	\$374,118.34
EXPENSES.	
General.....	\$193,595.26
Defense fund:	
Local trade and federal labor unions.....	\$ 8,223.57
*On account of amount advanced on office building loan ...	40,500.00
	48,723.57
American Federationist.....	35,294.06
Premiums on bonds of officers of affiliated unions.....	5,052.66
One-cent assessment to defray expenses in the United Hatters' case...	11,982.43
One-cent assessment to organize women workers.....	9,192.62
Reinstatement and initiation fees.....	145.35
	303,985.95
Cash balance on hand September 30, 1915.....	\$ 70,132.39
RECAPITULATION.	
In general fund.....	\$ 12,744.56
In defense fund for local and federal labor unions.....	57,387.83
	\$ 70,132.39
*On account of amount advanced on office building loan from defense fund.....	40,500.00
Balance on hand September 30, 1915, including building loan.....	\$110,632.39
The following is the grouping under their respective heads of the detailed monthly expenses:	
Appropriations:	
Trades and Labor Congress of Canada.....	\$500.00
National Women's Trade Union League of America.....	450.00
Union Label Trades Department.....	52.25
Rent.....	5,924.50
Refunds of premiums on bonds and supplies returned.....	139.36
Premiums:	
Bonds, local unions.....	5,052.66
Treasurer's bond.....	125.00
Secretary's bond.....	20.00
Fire insurance.....	14.45
Expressage, freight and drayage.....	1,173.00
Legislative expenses.....	7,068.75
Newspapers, magazines and books.....	241.24
Office fixtures.....	83.90
Postage stamps.....	4,501.02
Printing and binding proceedings of the Philadelphia Convention.....	2,669.50
Stamped envelopes.....	1,011.84
Supplies and printing.....	18,377.03

Defense fund:	
Strike benefits	8,190.90
On account of amount advanced on office building loan	40,500.00
Refund of overpayment of per capita tax received from local trade and federal labor unions	
	32.67
Assessment:	
One-cent assessment to defray expenses in the United Hatters' case	11,982.44
One-cent assessment to organize women workers	9,192.62
Organizing expenses	72,342.90
Printing and publishing American Federationist	35,294.06
Printing American Federation of Labor Weekly News Letter for organizing and legislative purposes	3,648.00
Printing American Federation of Labor Weekly News Letter	1,404.00
Postage on American Federation of Labor Weekly News Letter	381.15
Legal expenses	25.00
Expenses attending Louis Kemper's funeral	91.00
Expenses relative to erecting of booth and American Federation of Labor exhibit at Panama Exposition	3,885.75
Refund of reinstatement at initiation fees received from local trade and federal labor unions	133.10
Total	\$303,985.95

ONE-CENT ASSESSMENTS.

Assessments levied on the membership of affiliated organizations August 4, 1913, and December 17, 1914, were to defray expenses of appeals in the United Hatters' case, and the contempt case, and after all expenses were paid in these cases the balance to be used to organize women workers.

The following is a statement of the receipts and expenses for this fiscal year, ending September 30, 1915:

RECEIPTS.

Balance on hand September 30, 1914	\$266.59
Receipts from October 1, 1914, to and including September 30, 1915	15,777.24
Total	\$16,043.83

EXPENSES.

On account of attorney fees and expenses relative to the United Hatters' case:	
Alton B. Parker	\$7,500.00
Frank L. Mulholland	1,368.61
Printing brief in Lawlor vs. Loewe case, Alton B. Parker	376.25
On account of stenographic work, Hatters' case, J. H. Ralston	71.70
On account attorney fees preparing bill to be introduced in Legislature, J. H. Ralston	100.00
Organizing expenses, S. A. Conboy	720.04
Organizing expenses, M. Kelleher	940.15
Organizing expenses, Wm. Collins	449.01
Organizing expenses, M. Scully	456.67
Total	\$11,982.43

RECAPITULATION.

Receipts	\$16,043.83
Expenses	11,982.43

Balance on hand September 30, 1915 4,061.40

*All expenses incurred in the Buck Stove and Range, Contempt and United Hatters Case have been paid, and there is a balance of \$4,061.40 in this fund to be used for the organization of women workers.

* * * *

Cash balance on hand September 30, 1915 \$70,132.39
 On account of amount advanced on Office Building loan 40,500.00

Balance on hand September 30, 1915, including building loan \$110,632.39

Charters issued.

During the twelve months ending September 30, 1915, there have been issued 212 charters to National and International, Central, Local Trade and Federal Labor Unions.

Of this numbers, one was granted to the following International:

International Brotherhood of Steam Shovel and Dredgmen.

One State Branch: South Carolina State Federation of Labor.

- Trade unions, 126.
- Federal Labor Unions, 40.
- Forty-four Central bodies, as follows:
- Alabama—Tuscaloosa.
- California—Santa Barbara.
- Canada—Sherbrooke.
- Illinois—Carlyle, Gillespie, Oglesby, Royalton, Sandoval, Westville.
- Indiana—Dunkirk.

- Iowa—Iowa City.
- Kansas—Hutchinson.
- Massachusetts—Gardner.
- Mississippi—Jackson.
- North Carolina—Charlotte, Durham.
- New York—Mt. Kisco, Tonawanda.
- New Jersey—Atlantic City.
- Nevada—Tonopah.
- Oklahoma—Sapulpa.
- Pennsylvania—Harrisburg, Johnstown, Mt. Carmel, Nanticoke, New Kensington, Shamokin.
- Porto Rico—Bayamon.
- South Carolina—Greenville, Spartanburg.
- South Dakota—Aberdeen.
- Tennessee—Bristol.
- Texas—Ablene, Amarillo, Brownwood, Cleburne, Commerce, Strawn, Texas City.
- Vermont—Wilder.
- West Virginia—Clarksburg, Wheeling.
- Washington—Bremerton, Chehalis.

**National and International Organizations
Formed From American Federation of
Labor Local Unions.**

The American Federation of Labor in the past nineteen years has formed out of directly chartered local unions, the following seventy-five national and international organizations:

1896.

Mineral Mine Workers' Progressive, Northern.

Actors' National Protective.
National Union of Textile Workers.
Boiler Makers' and Iron Ship Builders' Union.

Brickmakers' Alliance, National.
Federated Association of Wire Drawers.

1897.

Bicycle Workers' International Union.
Gold Beaters' National Union.
Steam Engineers' National Union.
Core Makers' International Union.
Blacksmiths, International Brotherhood of.
Brotherhood of Paper Makers.
Meat Cutters and Butcher Workmen's National Union.

1898.

Mosaic and Encaustic Tile Layers' and Helpers' International Union.

Building Laborers' International Protective Union of America.

Trunk and Bag Workers' International Union.

1899.

International Brotherhood of Stationary Firemen.

National Association of Steam and Hot Water Fitters and Helpers.

Brotherhood of Coal Hoisting Engineers.
Tin Plate Workers' International Protective Association.

Team Drivers' International Union.

1900.

Chain Makers' National Union of the United States of America.

Glass Workers' National Union.
International Jewelry Workers' Union of America.

International Union of Wood, Wire and Metal Lathers.

Building Laborers' International Protective Union.

International Brotherhood of Oil and Gas Well Workers.

United Metal Workers' International Union.

Upholsterers' International Union of North America.

1901.

Shirt Waist and Laundry Workers' International Union.

Amalgamated Leather Workers' Union of America.

International Watch Case Makers.
International Association of Car Workers.
Paving Cutters' Union of the United States of America.

National Association of Blast Furnace Workers and Smelters of America.

1902.

United Cloth Hat and Cap Makers' Union of North America.

Sawsmiths' Union of North America.

Piano and Organ Workers' International Union of America.

National Association of Machine Printers and Color Mixers of the United States.

United Powder and High Explosive Workers of America.

International Association of Tube Workers.

International Association of Marble Workers.

Window Glass Snappers' National Protective Association of America.

1903.

Quarrymen's International Union of North America.

American Brotherhood of Cement Workers.

International Brotherhood of Tip Printers.

International Union of Slate Quarrymen, Splitters and Cutters.

International Slate and Tile Roofers' Union of America.

Brotherhood of Railway Expressmen of America.

International Hodcarriers and Building Laborers' Union of America.

International Shingle Weavers' Union of America.

Bill Posters and Billers of America, National Alliance of.

International Association of Glass House Employes.

International Handlers and Warehousemen's Union of America.

Glove Workers' International Union of America.

Order of Commercial Telegraphers.

Amalgamated Rubber Workers' Union of America.

National Union of Shipwrights, Joiners and Caulkers of America.

International Union of Flour and Cereal Mill Employes.

1904.

Asbestos Workers of America, National Association of Heat, Frost, General Insulators and.

International Association of Fur Workers of the United States and Canada.

Mattress, Spring and Bedding Workers' International Union.

Brushmakers' International Union.

International Brotherhood of Foundry Employes.

International Union of Building Employes of America.

International Union of Paper Box Makers.

Tack Makers' International Union.

1905.

National Brotherhood of Woodsmen and Saw Mill Workers.

International Union of Pavers and Rammermen.

1906.

Steel Plate Transferrers' Association of America.

1907.

International Brotherhood of Composition Roofers, Damp and Waterproof Workers of United States and Canada.

Postoffice Clerks, National Federation of. Lobster Fishermen's National Protective Association.

1910.

Tunnel and Subway Constructors' International Union.

1913.

International Fur Workers' Union of United States and Canada (second time chartered).

* * * *

Protection of American Citizens' Rights.

As a result of the developments during the months that the European war has been in progress, it is plain that under present conditions protection for the American citizens is inadequate, and not what any sovereign world power ought to give to its citizens. Native-born citizens of alien parentage and naturalized citizens have been forced by foreign countries into the military service for the present European war. In this way naturalized citizens have been forced to participate in war in defiance of their rights as citizens of the United States.

We, therefore, recommend that this convention in the name of the citizenship of our country urge upon the government of the United States to enter into negotiations with foreign countries for the formulation of treaties that shall guarantee protection of American citizens whether native born or naturalized, and specifically had recognized the fact that no country on the face of the globe has any right to claim any act of allegiance of any native born or naturalized citizen; that no country or government ought to have, and can have any legal claim upon them for their service.

We hold that an American citizen whether native-born or naturalized, is a citizen of the United States, owes no allegiance to any foreign country, yet as the result of the developments during the European war, now in progress, it is plain that the assertion of this principle has been questioned and controverted. In other words, native born citizens of the United States of alien parentage, and naturalized citizens of the United States, have been forced into the military service of foreign countries against their will, and compelled to engage actively in the present European war. We hold that no country or government other than the United States is to be permitted to lay claim upon American citizens or for their services, military or otherwise.

* * * *

Organizers.

It was not so many years ago that an organizer for the labor movement was regarded as a dangerous man in a community. He was a marked man, blacklisted, denied op-

portunities for any kind of work, starved and persecuted, but since the labor movement has grown in power, and has been recognized as a movement for humanity, it now is regarded as a great constructive agency of the community. In industrial clashes and in periods of industrial unrest, labor organizers are recognized as representatives of a movement that stands for justice and for the general human welfare. In many cases during late years employers and the community have welcomed the appearance of an organizer of the American Federation of Labor, for they know that these representatives stand for constructive, practical policies. Formerly one of the indispensable qualities of an organizer was ability for physical self-defense and protection. While the organizer of the present day does not lack physical power or courage, he must possess, he must have, sincerity and devotion to the rights and interests of the workers whom he represents, and, in addition, power of leadership and ability to educate. This change marks the tremendous forward progress of the trade union movement since the organization of the A. F. of L.

To be sure, that progress is not uniform. There are still localities where the forces of property and private gain are so powerful that the workers are denied the right to organize, and where attempt to exercise that right is contested by violence and by warfare. But in those sections of the country where the greatest industrial progress has been made and where the broadest ideals of human liberty prevail, organization is recognized as an essential element of industry. Where industrial statesmanship has been developed to a degree that co-operation with the organized labor movement is sought, there the work of the organizers of the labor movement becomes largely administrative and educational. Recognition of this fact has led during the past year to increased efforts to render necessary assistance and information to the organizers of the A. F. of L. This has been referred to in another section of this report.

The labor movement can be no greater than the people that compose the labor movement. It can make progress no faster nor no more definitely than the wisdom and the experience of the members of the labor movement direct. This emphasizes the importance of educational ability among the organizers, because it emphasizes the necessity for giving to the rank and file of the labor movement information that will prevent them from making mistakes in directing their course, and enable them to decide upon the wisest plans.

The organizers of the A. F. of L. are in daily contact with the wage-earners. They have, through conferences, conversations, public addresses, as well as in all of their activities of an official character, innumerable opportunities to disseminate information, and to make suggestions that will give form and direction to opinion in the labor

movement, and will be of infinite power in determining its ultimate destiny. The success of all efforts depends in a large degree upon those to whom is entrusted administration. The duties of organizers and members of unions may often seem commonplace and unimportant, but this seemingly routine or obscure work that has been necessary, has brought the labor movement to its present high degree of power and effectiveness.

There are, in the labor movement of America, many organizers who serve without pay, who give to the labor movement whatever of time and of energy they have left when the day's work is done. The work of these faithful men and women has been one of the instrumentalities that has brought the trade union movement beyond the two million mark, and is steadily urging it up to the three million. Though their services may never receive full recognition, yet the value of their services will be felt throughout all of the ages as the labor movement brings greater freedom and greater opportunity to all.

Because many of these unpaid organizers contribute not only their time and energy, but often do so at an expense to themselves, during the past year a special offer has been made to reimburse them for their activities by paying a certain sum for every new organization added to the A. F. L. through their efforts. A great measure of credit and appreciation is due to the organizers of national and international unions, and organizing committees of central bodies for the growth and progress of the labor movement during the past year.

As a result of the financial depression of the past year, which affected the labor movement as well as all other organizations connected with industry, we have been hampered in our work of organization. It has been necessary to discontinue some paid organizers and thereby curtail many plans that have been made. This condition made the work of unpaid organizers of even greater importance in determining the growth of the A. F. of L.

It is our sincere hope that we shall soon be able to increase the number of paid workers in the field. There have been during the past year 1,754 organizers of the A. F. of L.

* * * *

Public Versus Private Construction of Naval and Other Vessels.

Several of our conventions in the past have given instructions to encourage legislation in behalf of public versus private construction of vessels for the United States government and for all repairs to government vessels to be made at government navy yards. In co-operation with the Metal Trades unionists we have continued our efforts along the lines of those instructions and report that the proportion of repairs to government vessels is much greater in government navy yards than in private ship yards. The Naval Appropriation Acts for 1914 and 1915

provided for the construction of a naval supply ship in the Charleston Navy Yard at Boston, and a transport vessel for the government at the League Island Navy Yard, Philadelphia, Pa. The 1915 appropriations carried with them a sum of \$148,000 for better equipment of new construction work for the Charleston Navy Yard, and \$200,000 for the Philadelphia Navy Yard. Through our united efforts we also secured a valuable clause in the interests of the metal and ship building trades in this year's Naval Appropriations Acts, which states that:

"No part of the sums appropriated by this act shall be used to procure through purchase or contract any vessels, armament, articles or materials which the navy yards, gun factories or other industrial plants operated by the Navy Department are equipped to supply, unless such government plants are operated approximately at their full capacity for not less than one regular shift each working day."

Several bills introduced in Congress provided for governmental construction and ownership of a merchant marine.

* * * *

Piecework—Taylor System—In Government Service.

Resolutions Nos. 20, 139 and 156, adopted by the Philadelphia convention, reiterated protests against the Taylor system, piecework, premium, bonus and stop-watch schemes of shop management in government departments. Resolution No. 139 made particular reference to the intimidation of railway mail clerks by Alexander H. Stephens, General Superintendent of the Postal Railway mail service, who had been tyrannical in his efforts to prevent railway mail clerks from signing petitions and sending them to Senator Borah in behalf of the bill, S. 5826, which he had introduced and championed in Congress. An overwhelming number of protests against Superintendent Stephens were sent to Senator Borah and other members of Congress. The Postoffice Department, and particularly its chief administrative officials were severely criticised and fearlessly denounced by Senator Borah in two speeches which he made in the Senate. Stephens afterwards denied that he had attempted to coerce or intimidate the railway mail clerks, and that he had not discharged any of the clerks because they had signed the petitions for the abolition of the stop-watch, Taylor scheme foisted upon the service by him. Not long after Senator Borah had excoriated Stephens and our combined protests had been reviewed, Stephens was removed from the superintendency of the railway mail service. Since that time, the complaints against the speeding-up system of railway mail clerks have not been so numerous.

During the consideration of the legislative, executive and judicial appropriation bill in the second session of the Sixty-third Congress, Representatives Buchanan, Nolan and others succeeded in having a system of piece-

work abolished in one division of the Post-office Department at Washington, D. C. The piecework system which had been in existence there for some time had become intolerable to the men and women employes.

We continued our efforts in co-operation with the metal trades to abolish the Taylor system which had become partially established in some government navy yards and arsenals. Finding it impossible to secure direct legislation upon the subject by the enactment of the Deitrick bill, H. R. 17800, we had recourse to other methods of securing congressional action upon the bill, and in response to our continued efforts, Mr. Deitrick offered his bill as an amendment to the Army Appropriation bill on January 22, 1915. The chairman of the Military Affairs Committee, which had the bill in charge, promptly made a point of order against it, using the old subterfuge "that it was new legislation." Ample congressional precedents proved to the satisfaction of the members of the House that contractual relations and industrial working conditions can be legitimately defined and included in an appropriation bill. Representatives Buchanan, Nolan, Keating and others of the labor group vigorously supported Mr. Deitrick's amendment. The chairman of the committee withdrew his point of order, and the House, by a unanimous vote, in committee of the whole adopted the Deitrick anti-stop-watch, anti-speeding-up, anti-premium system proviso in the bill.

It is worthy of special note in this record that Brigadier General William Crozier, Chief of the Ordnance Bureau in the War Department, a most insistent advocate and promoter of the Taylor system in the government arsenals, immediately after above recorded action of the House, wired to his subordinate officials at Watertown, Mass.; Watervliet, N. Y.; Frankford, Pa., and Rock Island, Ill., for them immediately to stop the stop-watch Taylor system in their several departments, but this did not deter him from exercising every possible resource with the members of the Senate Committee on Military Affairs to defeat the Deitrick amendment. When the Senate Committee on Military Affairs reported the Army Appropriation bill to the Senate they had stricken out the Deitrick amendment. On February 23, 1915, when the army bill was brought up in the Senate a vigorous debate ensued. Senators Lippitt of Rhode Island, Thomas of Colorado, Warren of Wyoming, Weeks of Massachusetts, Oliver of Pennsylvania and Root of New York vigorously supported the Taylor system and complimented the committee for striking the amendment from the bill. Senators Hughes and Martine of New Jersey were emphatic in their protests against the committee for striking it out. They urged the retention of the Deitrick proviso in the bill. After extended

debate, three ballots were taken and the Senate struck out of the bill the anti-Taylor system proviso. Nevertheless, we did not allow this apparent set-back to stop our efforts. We succeeded on February 8, 1915, in securing the addition of the Deitrick bill of the Naval Appropriation bill when it was before the House of Representatives. The Senate Committee on Naval Affairs being informed on industrial questions and more sympathetic towards the interests of Labor than the Committee on Military Affairs, kept it in the naval bill, and so reported it to the Senate. On February 25, 1915, when the naval bill came up in the Senate, Senators Warren of Wyoming and Oliver of Pennsylvania, members of the Committee on Military Affairs, who had shown opposition two days before in the Senate to the Deitrick bill in the army appropriation bill, raised points of order against the anti-Taylor system proviso in the naval bill. The point of order was sustained by the Vice-President, and again it looked as though we were out-generated. The army and naval appropriation bills were sent to conference and on March 2, 1915, when the conferees reported to the Senate that the House would not recede, the Senate agreed to permit the anti-Taylor system proviso to remain in the naval bill. The only protesting votes against it were those of Senator Oliver of Pennsylvania, Lippitt of Rhode Island and Weeks of Massachusetts. At a late hour, on the same day, the Senate conferees on the army bill reported that they had agreed with the House conferees to retain the anti-Taylor system Deitrick amendment in the army bill, and it was agreed to with the exception of Senators Oliver of Pennsylvania and Bristow of Kansas, who registered their bitter opposition to the last moment.

We are pleased to report in detail this successful outcome of our united endeavors and believe that now we have succeeded in adding these meritorious provisos to the naval and army appropriation bills it will be less difficult to obtain positive, clear-cut legislation, which will permanently prohibit the objectionable stop-watch, speeding-up, premium bonus, Taylor system, of driving and intimidating employes in federal departments.

* * * *

Industrial Education—Vocational Training.

It is impossible for us to give any substantial report at this time concerning the progress of federal legislation in behalf of industrial education—vocational training. The short session of Congress last year was too crowded with other matters for consideration of this subject.

The Philadelphia convention recommended that the matter be left with us to take such further action as will cause the greatest benefit to Labor in the development of industrial education, vocational and trade training. We hope to be able to give further

attention to this very important subject during next Congress.

We have, however, co-operated to the fullest extent of our ability in localities such as Richmond, Va.; New York City; Minneapolis and St. Paul, Minn.; Cleveland and Cincinnati, O., and other cities where local efforts have been undertaken to study or install improved systems of industrial education. Other local surveys have been made at Albany, N. Y.; Pittsburgh, Pa.; New Orleans, La.; Peoria, Chicago and other cities in Illinois; Grand Rapids, Mich.; Buffalo, N. Y.; various localities in Wisconsin under the jurisdiction of the university of that state. In Indiana also some activity has been noted. Taking it all in all, the past year has been an important one in the sphere of local activities to obtain professional technical instructors and in stimulating interest and action to promote vocational education.

The Department of Labor and the Bureau of Education of the United States Department of the Interior must be credited with giving a measure of assistance and encouragement to local efforts in behalf of improved systems of vocational and trade education.

During the second session of the Sixty-third Congress an increase in the appropriations for the Bureau of Education was obtained, and from those funds the position of a specialist in vocational education was established. Mr. William T. Bawden was appointed to fill the duties.

In connection with the subject of industrial education and vocational training, we submit that the federal government should afford generous financial aid to this matter fraught with so much value to the workers, to the people generally, and to the stability of our country. In our judgment, there can be no better preparation of the United States than intelligent understanding and effective work in industry. Our movement has already established the system of educating the men and women engaged in agriculture and horticulture, and affording the best opportunity for the sons and daughters of the farmers of our country so that they may become more intelligent and efficient workers in agriculture. We submit that an introduction of that system, so that it will apply to the mechanic, artisan and laborers of the United States is the opportunity of wisdom, foresight, economy and broad-minded self-interest and betterment to extend the federal plan of operation to industrial education, vocational training, civic rights, duties and responsibilities.

Locomotive Inspectors.

The Locomotive Inspection bill, H. R. 17894, by Representative Goeke of Ohio, which passed the House, January 4, 1915, extended the inspection service formerly restricted to locomotive boilers to the engines

and tenders of locomotives used in interstate commerce.

In accordance with the requirements of Resolution No. 141, passed by the Philadelphia convention, we urged Congress to embody the legislation proposed, requiring inspectors of locomotive boilers and locomotive engines to possess practical shop experience, and submitted a draft of a substitute bill for the proposed Goeke measure. The officers of the Railroad Employes' Department, the Boiler Makers, the Machinists and the Metal Trades Department co-operated with us in these endeavors, particularly before the Senate Committee on Interstate and Foreign Commerce, which had the bill in charge. Nevertheless, the Senate disregarded the suggestions made, and on March 4, 1915, the House bill was passed without material change.

In the month of August, a conference was held at Washington in the office of the chief locomotive inspector, at which the officials of the Railroad Employes' Department, the International Association of Machinists, the Brotherhood of Locomotive Engineers, and the Brotherhood of Locomotive Firemen and Enginemen, together with superintendents of motive power of the largest railroad systems, agreed in part to certain rules to govern the inspection of locomotive engines and tenders, same to be later submitted (September 28, 29) for approval to the Interstate Commerce Commission.

* * * *

Agricultural Credit Legislation.

The Philadelphia convention indorsed certain resolutions recommended by the Farmers' National Congress relative to specific beneficial features to be incorporated in such farm credit legislation as may be enacted by Congress. We were directed to continue efforts to secure the enactment of such remedial legislation in behalf of the farmers. Strenuous efforts were made by Senator Fletcher of Florida and by several Senators and Representatives to secure the passage of farm credit legislation during the last session of Congress, but on account of the divergent views entertained by Representatives and Senators on this subject it was impossible to reach any conclusion, but a joint committee on rural credits, composed of the following Senators and Representatives was appointed to examine into the question and report to the next session of Congress not later than January 1, 1916:

Representative Carter Glass, Virginia, chairman.

Senator R. L. Owen, Oklahoma.

Senator Henry F. Hollis, New Hampshire.

Senator Thomas P. Gore, Oklahoma.

Senator Hoke Smith, Georgia.

Senator Knute Nelson, Minnesota.

Senator James H. Brady, Idaho.

Representative Michael Phelan, Massachusetts.

Representative Asbury F. Lever, South Carolina.

Representative Ralph W. Moss, Indiana.
Representative Everis A. Hayes, California.
Representative Willis C. Hawley, Oregon.

As soon as practical, after the above action had been taken by Congress, a letter was addressed to each member of the Joint Rural Credits Committee, in harmony with the instruction of the last convention, asking the members of the committee to give consideration to the following:

• "Resolved, That any farm credit plan which does not include a direct reduction of the 'prevailing rates' of interest, as well as a long term of small annual payments upon farm mortgages, will not meet agricultural credit requirements.

"Resolved, That the government of the United States should borrow money at a rate of interest not to exceed 3½ per cent and lend the money at a rate not to exceed 4½ per cent to the farmers upon long time farm land mortgages with such restrictions as many be necessary to make the government perfectly secure and the profit to the government to be expended in road improvement or for some other object that will benefit the whole people."

Replies have been received from Chairman Carter Glass; Representatives E. A. Hayes, A. F. Lever, Michael F. Phelan, W. C. Hawley; Senators T. P. Gore, Hoke Smith and Knute Nelson to the effect that the measure will be given careful consideration.

In addition to the views expressed in the resolution communicated to the committee, we submit for your careful consideration as to whether another system of farm credit should be inaugurated—a system based upon individual ownership with community credit and community guarantee. Elsewhere than in the United States such a system is in vogue, and where it prevails no securities are held with greater confidence. This proposition, with such other improvements as time and experience have demonstrated might well be considered, is suggested to our fellow workers in agriculture.

* * * * *
Labor Press.

Unquestionably the newspaper is the chief literature of Americans. In form, in method and in spirit, it is adapted to the needs of the times. The paper habit has become so firmly established as a national custom that every cause must have the means of publicity. It is the only way to get the news quickly and surely to those who must be reached. The policy of the paper depends usually upon the motives in the managing room. The ordinary daily paper is published for profit. There may be ideals in the editorial room and scattered among the reporters, but these may be checkmated at any time by the decisions from the managing room, based upon the balance sheet.

These conditions mean that the cause of

the people is often neglected to make room for the special interests of those who can afford to pay. They mean that news will be edited, suppressed, perverted—for those who will pay. The cause of the toilers, the wronged of humanity, fails to secure space if its publication affects profits.

These conditions made labor papers necessary and they have struggled against tremendous obstacles—hampered by lack of appreciation, friends, facilities and opportunities.

Each year brings increases in the power and the number of the labor papers of the land. They are tremendous dynamic forces giving publicity to the cause of human welfare and the struggle of the workers for justice and a better life. They herald abroad the news of labor—the ideals that touch the things of daily life and make them to glow with the glory of humanity. They tell the facts of the workers' lives and of the struggles for a better life.

Usually in a secluded office, work the labor editors who dedicate their lives to the cause of publicity for labor. Their reward has been frequently but a meager living and the satisfaction of a great work done. The labor movement stands for fair wages—an ideal that must be extended to labor editors. Yet, on the other hand, great care must be exercised lest the power that comes through a labor paper should fall into the hands of those unfit to use it. Labor papers must be kept clean, free from outside or political partisan domination.

The labor papers by bringing about understanding of conditions, are a powerful element in helping to unify and give direction to the labor movement. They journey throughout the length and breadth of the land, entering into the mental life of each reader, expanding in some way his thought, and consequently his acts. They are an incalculable power in the labor movement and ought to be supported financially and morally by all the workers, and those who genuinely sympathize with the great cause of labor.

THE ROCKEFELLER INDUSTRIAL REPRESENTATION PLAN.

By John R. Lawson.

(Courtesy of the Survey.)

My opinion concerning the plan of representation of employes of the Colorado Fuel & Iron Company announced by Mr. Rockefeller is practically the same as that expressed to him by the representatives of the United Mine Workers during our conversation on this subject with Mr. Rockefeller in New York City in January last, while we were attending the sessions of the United States Commission on Industrial Relations. On that occasion I expressed serious doubts of the practicability of his proposal,

although the details were not then fully known or perhaps even determined. The reasons why the failure of the plan may be predicted were apparent then, as they are now, and no one regrets more than we of Colorado that Mr. Rockefeller was unwilling, in the interests of permanent industrial peace, to concede their fundamental soundness.

The most interesting and suggestive part of Mr. Rockefeller's proposal is the evidence it presents of the concessions in principle which the miners have at last wrung from him and his associates at an immeasurable cost in lives and human suffering during the long struggle against economic and political feudalism in Colorado. Bearing in mind that these concessions are only in principle, we find that Mr. Rockefeller has, nonetheless, acknowledge the following demands, for which the miners of Colorado have long contended:

First, the right of labor to organize in unions without discrimination on that account.

Second, the right to improve working conditions.

Third, the right of the workers to elect representatives to present their grievances to the employers, with the allowance of appeal from unjust decisions.

Fourth, the justice of the workers' claim to an eight-hour day and check-weighman, long guaranteed by Colorado law.

Fifth, a willingness of the employers to pay a wage scale to be advanced proportionately when the wage scales of competitive companies advance.

Such concessions are, of course, valuable theoretically, but the trouble all along has been, and I fear even under Mr. Rockefeller's plan will continue to be, that principle and practice, in the economic field, do not often coincide. Because of inherent weaknesses, the plan will almost surely fail on trial. Unfortunately, it is monopolistic and paternalistic, whereas for anything more than temporary success any proposed improvement in the lot of the workers must rest in the democratization of industry, either through partnership in control, or through the collective bargaining of employees meeting in the fellowship of mutual respect, on the plane of organized equality. The coal miners of Colorado are not seeking charity; they ask simple justice. They seek that which the officials of the Colorado Fuel & Iron Company claim for themselves—the right to join an organization of their choice; as sanctioned by law. The propriety of such organization being conceded, the workers insist on the privilege of selling the labor which is their one commodity through the medium of collective bargaining. They are convinced that in the present stage of industry only by the meeting of collective capital with collective labor, each governed by a sense of equity and similar

in strength, may fair contracts, binding on both, be made and maintained.

Under Mr. Rockefeller's plan, the wealth and power of industry are massed on one side, while on the other are grouped, in the absence of strong organization, scattered employes, without any real force, authority or opportunity for community of opinion or expression.

It should be clear that under Mr. Rockefeller's outwardly benevolent plan it will be possible for his subordinates to renew their long-continued and unforgotten exploitation, and that it will be a hopeless task to seek real representatives for the workers under conditions of absentee landlordism. The immediate interest and profit of Mr. Rockefeller's "representatives of the workers," who are without organization to protect them, lead directly to the side of the employers. This foredooms the plan and makes manifest to every intelligent person familiar with the practice of modern industry that what is offered is a mere subterfuge. The workers have asked for bread and are again given a stone.

The great defects in Mr. Rockefeller's suggestions, therefore, are that they strip the workers of the natural protection of organization (which, as stated, cannot successfully exist within and wholly subordinate to the employers' organization), and substitute paternalism for democracy in industry. It should be remembered that the workers have found organization far more important as a shield than as a sword. Its value is far more protective than offensive. And the democracy of union organization has made it at once the free school, the independent church, and the fraternal society of the workers.

Mr. Rockefeller has offered no substitute for these vital, social, economic and political factors. He and his associates assume—in the face of a record so near that men cannot forget, and so appalling that it alarms—that the workers are ready to take the employers' word as to their fatherly interest and concern in their employes. The workers of Colorado have read with pleasure that Mr. Rockefeller, on his recent trip to Colorado, discovered that the children of the coal camps were not dissimilar to his own. They also have received in friendly spirit Mr. Rockefeller's various statements. But at the same time, they have not found it possible entirely to turn their eyes from the hopeless, pitiless, remediless and one-sided tragedies of Southern Colorado in the last two years; and they have found it necessary to remember the life-long struggles that culminated in Ludlow. Is it any wonder that paternalism advances slowly in such an environment?

As to the democracy of Mr. Rockefeller's proposal, it should be remembered that he mistakenly assumes that employes sitting at a table with him will find themselves free and equal. They will, on one condition

only—if men trained in the labor movement, who know its problem from practical experience, and who have the confidence of their fellows, are backed by the freedom, equality and power of organization. Otherwise, the individual worker is weak, indeed, against the representative of collective capital. Standing alone, the worker is neither able to complain, equipped to compete, nor free to advance.

Mr. Rockefeller's experiment, therefore, while interesting, impresses me as largely academic. It is to be deplored that the suggested solution of our industrial problems has not been inspired by a wider vision of just human relations. It appears difficult for the masters of industry to separate themselves from the notion of their divine right to govern benevolently or otherwise, according to the temper of those who have the power. The United Mine Workers appeal from that view, not only to the good sense and conscience of mankind, but to the long record of industrial peace where contractual relations based on mutual self-respect have existed between them and the coal operators of the United States.

The other plan—Mr. Rockefeller's plan in essence—has been tried, and has failed again and again, not only in Colorado, but in many other fields. Partnership in industry through state control or sound contractual relations based on collective buying appears to be indispensable to industrial peace, economic progress, social happiness, and even political freedom.

ROBBERY AND OPPRESSION LEGALIZED.

(By A. A. Graham, Topeka, Kas.)

John D. Rockefeller, Jr., in an address at Denver, has recently said that his father, whom he represents, has never received any dividends or income on his stock in the Colorado Fuel and Iron Company.

Neither should he. This company is bonded away beyond its physical value or the original outlay, so that the excess of bonds should never pay any interest or income either.

Up to the physical valuation of the property, or the original cost, there should be a fair return on the capital invested as represented by the bonds; but beyond that, neither bonds nor stock should ever be issued, or, if issued, should ever pay any interest or income.

The almost universal way, however, to handle corporate property is, to issue all the bonds the market value of the property will float, and as far beyond this as the public will buy; and then to issue stock of a face value equal to all the bonds. Up to this point, the issue of stock, under present business methods, is regarded as legitimate, because it is assumed the public will not buy bonds beyond the market value of the property; but in practice, all the bonds that

will sell on a fictitious value of the property are usually disposed of.

After the issue of stock of face value equal to the face value of the bonds, the issue of more stock is a most common practice. This is what we call watered stock. The law should not permit this, but it ordinarily does.

Illustration: A plant costing one million to erect may be bonded for two million. This requires an earning capacity at this point to pay interest on twice the original cost. Stock is now issued for two million, and this is supposed to pay dividends at least equal to the interest rate on the bonds, and this now requires an earning of four times the original cost or outlay. Watered stock may now be issued for two million more, and this requires an earning on an amount six times the original cost, and the owners are making a fair rate of interest on six dollars where they spent but one.

Granting an income of ten per cent as fair on the original cost, by a system of bonding and stocking, the interest rate is increased to sixty per cent annually.

This increase is all made out of labor.

Physically the property has remained the same, and the enormous income has been made out of labor. Labor has made it all, yet labor gets no part of this increased income; but, on the other hand, is ordinarily cut down in rate of pay as the business becomes more remunerative, and the more profitable the business, the less the wages, as a rule.

Surely labor is not getting a square deal! The income from property may become so great and the exactions of labor so severe that ROBBERY and OPPRESSION are the only terms to fit the case.

Specifically in the present case, the reason Rockefeller has never received any dividends on this stock is because the employes have not yet been able to earn six times the normal income.

New York.—Little Old Manhattan is flat-footed, wears poor shoes and stands up at its work, according to figures compiled by Captain Frank E. Evans of the local recruiting office of the United States Marine Corps.

Captain Evans is authority for the statement that approximately 18 per cent of all applicants who applied for enlistment in the Marine Corps at its Twenty-third Street office during the past year, were rejected for "pes planus," or flat-foot. He puts the blame on the cheaply constructed, poorly made shoes the average toiler wears at his work for the epidemic of falling arch, and on the fact that the majority of victims claimed they were forced to stand on their feet for long stretches while at their employment.

Motormen, conductors, subway guards, policemen, machinists, waiters and clerks are the principal sufferers from "pes planus," Captain Evans says.

A MOVEMENT TO BUILD A MONUMENT IN MEMORY OF BROTHER GILTHORPE.

NOTE—The following resolutions were adopted by Lodge 25 of San Francisco, Calif., and on being placed before our Executive Council by document, was indorsed by that body and at its recent meeting definite plans were adopted for carrying in effect the purpose of the resolutions and a letter of appeal will be issued to the lodges later.—The Editor.

San Francisco, Calif., July 28, 1915.

Jos. A. Franklin, Esq.,
International President.

Dear Sir and Brother:

San Francisco Lodge No. 25, I. B. B. M. & I. S. B. and H. of A., at its last regular meeting, unanimously adopted the following resolution:

"Whereas, In the demise of our Worthy Brother, and our Past International Secretary-Treasurer, 'Wm. J. Gilthorpe,' the Trade Union movement, and especially the International Boiler Makers, Iron Ship Builders and Helpers of America, lost one of the ablest and most energetic brothers that was ever known; his integrity and his honesty was above reproach, and he was without fear of contradiction, the Father of this Organization; for through his years of hard toil and self-denial, he laid the Corner Stone of this International, and was always ready to give a helping hand to any brother in need or to any charitable cause; and he gave his life for the uplifting of our members; and

"Whereas, In view of this it would be fitting and just to erect a suitable monument over his last resting place, and do an honor to the memory of one who befriended us all;

"Therefore Be It Resolved, That San Francisco Lodge No. 25, subscribe the sum of \$10.00 to start a fund, to be known as the Wm. J. Gilthorpe Monument Fund; and be it further

"Resolved, That we request all the subordinate lodges to contribute whatever amounts that they can to this fund, so that a suitable monument shall be erected to the memory of our Grand Old Veteran; and be it further resolved; that our Executive Council be the custodian of this fund, and they in their judgment, procure the best monument that can be secured for whatever amount that may be realized; and be it further resolved; that this resolution be published in our Official Journal for a period of 90 days, and that all subordinate lodges be notified by circular letter about this proposed monument fund. We remain,

"Yours fraternally,

"JOHN J. KANE, President.

"THOS. J. SHERIDAN,
"Secretary-Treasurer."

EXECUTIVE COUNCIL'S ACTION.

The resolution from Lodge No. 25 was concurred in by the Executive Council and the date of closing the subscription set for April 1, 1916. President Franklin, First Vice-President Hinzman, International Secretary-Treasurer Reinemeyer and Editor-Manager Casey were authorized as a committee to take charge of the fund.—Extract from the Executive Council Proceedings.

THE BOILER MAKERS' JOURNAL

Official Organ of the International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America.

A Monthly Publication Issued the First of Each Month from Room 8, Law Building, Kansas City, Kansas.

JAMES B. CASEY, Editor and Manager.

Subscription Price.....\$1.00 Per Year in Advance

ADVERTISEMENTS.

Advertising Rates Will be Furnished Upon Application to the Editor-Manager. No Reading Space Will be Sold for Advertising Purposes Under Any Circumstances.

All New Members Must Have Their Name and Address Sent in Through the Secretary of Their Lodge. After That They May Have Changes Made in Their Address by Filling Out Blank Form in Back of Book and Forwarding to the Editor.

All Copy Must be Received by the Editor by the 18th of the Month to Insure Publication in the Following Issue.

All Contributions and Correspondence Relating to the Journal Should be Addressed to J. B. Casey, Editor, Room 8, Law Building, Kansas City, Kansas.

Entered at Postoffice, Kansas City, Kansas, as Second Class Mail Matter.

CHRISTMAS GREETING.

As this will be our last issue until after the great festival of Christmas has come and gone, we desire to extend to all of our readers, our very best wishes, for a Happy and Joyous Christmas for themselves and their families; may they have all the good things that go to make the day an enjoyable one.

May that Divine Spirit of "Peace on earth, good will toward men," universally prevail throughout the world, and especially among our members; may this spirit enter the hearts and minds of those who are directing the dreadful carnage of death and destruction in Europe and prompt them to seek some just grounds for an early settlement.

While the year 1915 has been a very dull one, and for a part of the year a large percentage of our members were idle, still all have reasons for rejoicing and thankfulness at the present time.

We were told some time ago that as a result of the war in Europe, fifteen millions have been either killed or permanently crippled and still the dreadful carnage goes on—thousands and tens of thousands are being added each day to this enormous total. That our country is at peace with all the world is sufficient grounds alone for all of us to rejoice and as the long period of industrial depressions has passed and there is seemingly enough of work to go around, this fact should prompt us to still greater rejoicing. However, as we rejoice and make merry we should not overlook those less fortunate than ourselves; we should do all we can to bring sunshine and happiness into their lives, too, and especially the little ones. This day is especially devoted to their pleasure. In helping to make pleasure for them we create for ourselves a keener sense of pleasure and happiness than can come to us in any other way.

Here is wishing health, prosperity and happiness to all.

THE EXECUTIVE COUNCIL ADOPTS REPORT FORMS.

At the recent meeting of the Executive Council the matter of requiring a copy of all reports of trustees of local lodges to be forwarded to the Inter-

national President's office, was taken up and it was decided that a copy of all such reports must hereafter be forwarded to headquarters and a very elaborate report form for this work was adopted and copies of same have been sent to all lodges.

The trustees should secure copies of this report form and study it so that when the time comes for making out their next report they can use these forms accurately. In assuming the work of bonding all local lodge and district officers, the Grand Lodge has taken upon itself a large task, and the only way it can prove successful is to run it upon a strictly business basis. All bonding companies require prompt and accurate audits and reports on the accounts of those under bond, and to be successful with the bonding department of our brotherhood, our audits and reports must also be made promptly and carefully.

PRIVATE AMMUNITION AND ARMOR MAKERS SHOULD BE ELIMINATED FROM GOVERNMENT CONTRACTS.

No doubt the question of preparedness will be a big one during the next session of Congress, which opens this month, and it is quite likely that a material increase in our army and navy will be authorized. However, there should not be a dollar appropriated until it is definitely and unequivocally decided to eliminate the private contractor in everything that the government departments themselves can supply—from superdreadnaughts to common black powder. If any of the departments have not enough facilities, let them provide for them and with the very latest machines and appliances, so that the contractor will be eliminated from government work entirely. They have overcharged and gouged it long enough, and it is high time the government took hold of this matter seriously. The people are getting tired of seeing their money squandered in this way.

To eliminate the contractor entirely and have the government owned plants furnish these supplies would save millions and millions of dollars each year.

One of the most shameless and outrageous cases of gouging occurs in armor plate contract. If the government had an armor making plant in operation, it could save enough on the armor for two dreadnaughts to pay for the plant, and why it does not build a plant is beyond the reckoning of the human mind unless it is that these fat contractors have sufficient influence to stifle any such effort. Secretary of the Navy Daniels made a bluff some time ago along this line, by asking an appropriation from Congress, but nothing came of it. Now, however, that increased appropriations are wanted, this do-nothing policy should be changed before any more money is appropriated for the army or navy.

Congressman Tavenor has effectively shown up the robbery of these ammunition and supply men and he will no doubt continue the fight on them, and organized labor will support his efforts to stop this robbery of the people's money.

FORMS A PERMANENT INDUSTRIAL RELATIONS COMMISSION.

Former chairman of the Federal Industrial Relations Commission, Frank P. Walsh, and three other former members of the commission, James O'Connell, John Lennon and Austin Garretson, met recently with a number of labor leaders and sympathizers in New York and organized a permanent Industrial Relations Commission. The first efforts of this new body will be directed towards securing congressional action favorable to printing for free distribution the full reports, hearings, etc., of the former Federal Industrial Relations Commission, and headquarters will be established in Washington to aid in the work.

Some of the investigators who were on the former commission's staff, including Basil M. Maley, who wrote the main report of the commission, will be on the staff of the permanent commission.

The platform of work mapped out by this body at its initial meeting is a splendid one and worthy of the support of all trade unions. Here is the program as given out:

1. To secure the printing by Congress, for free distribution, of the report of the commission.
2. To secure the publication by Congress, for free distribution, of all the testimony taken by the commission and all the special reports.
3. To secure the passage by Congress or, if necessary, the initiation of a constitutional amendment, providing specifically that the courts shall exercise only the powers granted by the constitution, and shall not be permitted to declare laws unconstitutional.
4. To secure the passage of laws providing for the selection of juries by an impartial method from a list containing the names of all qualified voters.
5. To secure the passage of an act requiring the Federal Trade Commission to consider as unfair competition the exploitation of labor through long hours, low wages, unsafe or insanitary conditions, or through the refusal to meet and deal with the authorized representative of employees.
6. To secure the enactment by Congress of laws prohibiting the shipment of armed guards and of cannon, machine guns and other similar weapons in interstate commerce, except when consigned to the military authorities of the state or nation.
7. To provide that all programs for national defense shall be upon a democratic basis, properly designed to safeguard the rights of the private soldier and the rights of the workers during industrial disturbances.
8. To urge that, if additional revenue is required for the needs of the government, it shall be secured by the passage of an inheritance tax, as outlined in the report of the commission, and not by taxes upon necessities.
9. To fight the repeal of all salutary legislation, such, for example, as the Seaman's Bill.
10. To see that the grievances of unorganized workers, such as the

Pullman, Western Union and Postal employes, which are brought to light by the commission, shall be kept before the officials and directors of those companies and before the public until they are redressed.

One of the most important items of this program, as well as one of the most important subjects confronting the American people, is in reference to curbing the powers of the courts and prevent them in the future from assuming the authority of saying whether laws are valid or not. The framers of the Constitution of the United States did not provide such powers for the courts and for many years after the constitution went into effect they did not presume or dare to take upon themselves such power, but gradually, by hook and by crook, and all legerdemain known only to the slyster lawyers, they have usurped absolute and tyrannical powers that threaten to destroy the temple of American liberty unless these autocratic and unlawful powers are taken from them and restored to the people. The masses of the people will, no doubt, co-operate with the commission in its praiseworthy efforts to bring about reforms affecting the future welfare of our nation and its citizens. It might not be a bad idea to raise funds with which to purchase permanent headquarters for this and similar bodies working for the good of mankind.

A FAST BOAT RECORD.

While the mania for speed continues to develop in all means of travel, in no branch is it making greater headway than in ship building. We thought that when torpedo boat destroyers began to make 34 and 36 miles an hour records, the limit of speed had been reached. However, immense battle cruisers are being built with this speed, which is about the average for express trains.

Now comes the record for a racing boat recently built in Chicago, and known as Disturber IV, with a record of 62 miles an hour.

It is a forty-foot hydroplane, equipped with 24 cylinders, 1,800 horse power engines. This is a greater horse power than some of the large cargo-carrying ships have and it is no doubt the fastest boat so far built. One can scarcely conceive of a boat traveling through water at the rate of a mile in less than a minute.

A CLOSER CO-OPERATION BETWEEN THE FARMER AND LABOR UNIONS.

We are glad to notice that here lately there is a better understanding between the members of the farmers' unions and that of organized labor. Each are coming to understand that their interests are similar and that those who are exploiting one are also exploiting the other.

Owing to the poison of prejudice that was sown among the farmers in the past by those interested in keeping the toilers apart, the farmers entertained more or less prejudice against organized labor, but now they are beginning to see most forcibly that the interests of the toiler on the farm are

closely linked with those of the toiler in workshop, mine and factory, and that the closer they get together and the more they co-operate with each other the better it will be for both.

At the recent convention of the A. F. of L. at San Francisco the Farmers' Union had a fraternal delegate present by name of J. H. Patten, who in addressing the convention, among other things, stated that while the United States government had done much toward developing the science of farming, that it had done absolutely nothing towards developing the science marketing farm products. This statement seems to be well founded and there is no valid reason why such should be the case, unless it is because of the influence of the commission merchants and produce dealers, who stand upon the highway of commerce, and like Robin Hood, and levy tribute upon all who pass. In this way they absorb most of the profits of the farmer and secure most of the wages of the working men. It has been fully established that farm products more than double from the time they leave the farm until they reach the consumer.

This difference is the profit that goes into the hands of the middle man for receiving these products from the farmer and turning them over to the consumer and collecting the money.

There is no reason for this unfair condition to exist and still less for the government's failure to try to help improve the selling end of the farming industry.

If direct trading between the farmer and the consumer was developed to its full possibilities, it would mean a great deal to both.

The Parcel Post has unlimited possibilities in this respect and there is no reason why it should not be used.

If the consumer knew where to secure fresh produce at a saving of 25 per cent he would gladly avail himself of the information and buy them from that source. At the same time, if the farmer knew where he could find purchasers of his produce and had a reasonable guarantee that prompt payment would be made on all shipments he made, he would gladly sell them direct to the consumer at 25 per cent below the retail market price, as it would mean an increased profit to him from 25 to 50 per cent over what he is now getting. All that is necessary then is to bring about this mutually beneficial condition is to get the producer and consumer in touch with each other and arrange some system of guarantee to the producer that prompt returns would be made, and the robber middle man will be eliminated. The solution of this problem can be solved by the Farmers' Union and organized labor, if they will only set their minds to the task. Let us hope they will.

THE AMERICAN FEDERATION OF LABOR'S HEADQUARTERS BUILDING.

Agitation for the building of a permanent headquarters for the A. F. of L. has been going on for a number of years and this agitation has been especially strong during the A. F. of L. conventions in recent years, and even

as far back as the Boston convention of 1903, a resolution was adopted instructing the executive council to investigate the cost, and finally at the Philadelphia convention last year the executive council was authorized and directed to proceed to purchase a lot and have a suitable building erected. A lot has been purchased on the corner of Massachusetts Avenue and Ninth Street Northwest at a cost of \$40,000, and a five-story and basement building has been contracted for at a cost of \$90,450, and is to be ready by April 7, 1916. The executive council selected Samuel Gompers, James O'Connell and Frank Morrison as trustees, to hold title and have the management of the building on behalf of the federation. This is a good move and one that will tend to give stability and permanency to the headquarters of organized labor in America.

This example should stimulate the building of permanent homes for national and international trade unions and for the central bodies. There is no reason why each international union should not have a home of its own. It would be beneficial in many ways, and it would save much in the way of rents.

A building dedicated to the cause and use of organized labor in each city and town throughout the country is almost an absolute necessity for the proper carrying on of the business of organized labor.

Let us hope that an impetus will now be given to this work and that rapid progress will be made in the next few years.

OUR ADVERTISERS.

We desire to bring to the favorable notice of our readers, the advertisements appearing in the Journal. These advertisers, in this particular way, show their friendliness towards your official journal, and our members. We should show our appreciation by patronizing them when possible.

Utilizing a part of our space for advertisements produces a revenue that helps to bear the cost of publishing the Journal, and in this way we may look forward to the time when we may enlarge still further the size of the Journal and utilize the added space for new features helpful and beneficial to our members.

In seeking to build up our advertising we have had many difficulties to overcome. We have had to depend on our personal efforts to secure ads, as the solicitors who usually do this work want to absorb about all profits for their work, so we are determined to continue our personal efforts, and if our members will give their co-operation we will place the Journal's advertising business on a par with that of any of the labor journals.

Advertising is a business proposition. Advertisers have something to sell and they seek those who want to buy. If a publication proves to be an effective medium through which to connect the seller and buyer, then its advertising becomes a success. We have had many evidences of the co-operation of our members in the past, which has become of much help to us

in this work, and we hope all will continue to lend their co-operation and assistance.

We carry several new ads this issue and are promised others for the next issue and those to follow, with the active help of our readers, it will not be long until we have secured a volume of business commensurate with the importance of our journal as an advertising medium.

ORGANIZED LABOR OVERWHELMS REACTIONARY CONSTITUTION.

In our last issue we referred to organized labor's opposition to the reactionary constitution adopted by the "stand pat" constitutional convention of New York after many months' efforts. How effectively organized labor worked against this proposed constitution may be judged from the fact that about a half million majority was piled up against it.

The people of New York are to be congratulated upon their decisive defeat of this vicious and reactionary draft of a constitution. They are better off under the old one, faulty though it may be, than they would have been under the one just buried out of sight. We believe there was only one or two union men members of this constitutional convention, and that of the 168 members, 134 of them were lawyers. Just think of such a large proportion of members taken from one calling. No wonder the result was so bad. There should have been at least forty or fifty members of organized labor in this body and a like number of farmers, and the balance taken from all the other walks of life, and if the lawyers had been left out altogether the result would have been good. Lawyers could have been hired for so much per day to put into proper shape all laws that the convention adopted. Let us hope when the question of holding another convention is decided on that organized labor will secure a fair representation.

STRIKES NOW IN FORCE.

Mechanical Department.

J.B.C.

TO LAY OUT A HAND SCOOP.

Last month we showed how to develop a scale scoop, and this issue we will proceed to show how to lay out a hand scoop.

Fig. 1 shows the side elevation. First, extend top line *e-f* out indefinitely and parallel with the base line *h-g*; strike vertical line from *H* up and at right angles with base line *h-g*. Divide into two parts line from *h*, to top line *e-f*, with one point

of dividers at center of division strike half circle. Divide this into eight equal parts and number the points of division from 1 to 9; from these points of division draw lines parallel with top and bottom lines, and where these lines across the edge of scoop, strike down and at right angles to the sides of scoop. Continue these indefinitely and mark off the circumference of scoop and divide into twice the number of parts as there

are division spares in the semi-circle, and from these points, strike lines at right angles to the vertical lines. Commencing at the center line, number these lines from one to nine on each side of center line.

Next, starting at center line, trace a line through points where these vertical and horizontal lines cross each other, as shown in Fig. 2. This will complete template for the circular part of scoop, which when cut out and trimmed will be rolled into a circle; the end for this will be a plain, circular head, large enough to put a small flange on it and fit into the circle end of scoop.

We will next proceed to develop handle and the tapering handle connection. The handle is but a plain straight tube. Fig. 3 shows template for this section. All it is necessary to do is to roll this round; the handle connection is the shape of the frustum of a cone cut at a slant on the large end. Extend line a-b to x one end and to d on the other, making distance from x to d equal from x to c. Strike a line from d to c, divide this into two equal parts and from the center strike semi-circle from d to c; divide this semi-circle into 6 equal parts and from these points of division strike

lines to center line and at right angles to same.

Note.—An error appears in the above cut with reference to this. The lines show direct from points of division to point X, when they should run parallel with the center line of cone until they cut line D-C and then from where they cut line d-c direct to point x. This was overlooked until tracing was sent engravers.

Next take dividers and set them distance from x to c and with one point at O, Fig. 4, strike circular line; divide this into 12 parts, using dividers as set for dividing half circle. Next take the length of the other division lines from x to where they strike end of scoop and with one point at O, Fig. 4, strike the other smaller circular lines in Fig. 4, and through points where these division lines and circular lines cross, trace a line on each side of center as shown. Next, the distance from x to b and with one point at O strike small circular line b-b, Fig. 4.

This will complete template for handle connection; roll this up into a circular form, allowing sufficient material on each end for lap and flange to connect with head of scoop.

International Officers' Reports.

REPORT OF INTERNATIONAL VICE-PRESIDENT NOLAN.

Cumberland, Md., November, 1915.

Dear Sir and Brother:

Just a short report for the official Journal and desire to say that conditions have somewhat improved in the Southeast District; therefore, will report progress. Let us hope for greater activity in the near future, as the railroad shop men for some time past have been up against it sure.

October 1, by instructions from the International President, I left for Washington, D. C., to meet a committee from Lodges No. 450 and No. 19. October 7 left for Washington to meet the above committees, and also to have an opportunity of conferring with Brother Berres of the Metal Trades Department on matters pending in connection with navy yard business.

On reaching Washington, D. C., met committee of Lodge No. 450, Brothers Evans, Kilroy and Kelchner, who explained cause of grievance in the boiler department. October 3, in company with the above committee, called on the Secretary of Navy to secure a conference, but found that the secretary had agreed to meet a committee from all trades employed in the Washington yard a 5 p. m., October 5. In the meantime Brother Berres of the Metal Trades Department had a previously arranged conference with the Assistant Secretary of the Navy for a committee representing Lodge No. 19

of Philadelphia, Brothers Higgs and Goodfellow, who reached Washington on the evening of October 3, when both committees from Lodges No. 19 and No. 450 held joint meetings at the Atlantic Hotel to discuss matters in connection with the Washington and Philadelphia navy yards, and both committees were unanimous in their opinion for the boiler makers naval district was an absolute necessity.

In order that matters of general interest to the boiler makers employed in government navy yard could be taken up with the Department in Washington by a duly authorized representative of such district and under the jurisdiction of the International Brotherhood. October 4, in company with committee of Lodge No. 19, also Brother Berres, held the arranged conference with the Hon. Franklin D. Roosevelt, Assistant Secretary of the Navy, in connection with wage increase as recommended by the wage board at the Philadelphia Navy Yard in 1914. The meeting was entirely satisfactory to the committee, who left same evening for their homes, with the knowledge and assurance that much had been accomplished for the men employed in the boiler shop at the Philadelphia yards.

Before closing report in connection with the above meeting, I desire to say that considerable credit is due the committee from Lodge No. 19 for their practical explanation before the Secretary of Navy relative to the class of work done at the Philadelphia Navy

Yard, as well as producing many statements from reliable firms in Philadelphia and vicinity which showed a much higher rate paid their boiler makers than paid by the government.

The Assistant Secretary, Mr. Roosevelt, questioned the committee very closely on wage conditions at Philadelphia, Pa., as well as the number of boiler makers employed by these firms, which was answered in a straightforward, satisfactory manner, leaving no room for doubt whatever that the boiler makers employed at the Philadelphia Navy Yards were entitled to generous consideration, wage increase included, and trust the earnest appeal of committee will bring about the desired results.

Lodge No. 19, through the official Journal, desires to thank Brother Berres for kindness shown our committee while in Washington, as well as our sincere appreciation for advice while in conference with Mr. Roosevelt in our behalf on the wage proposition. Same date, October 4, at 5 p. m., each trade affected by wage increase at the Washington yard had a separate meeting with the Hon. Secretary of the Navy, giving each ample time to fully explain their grievance. The Assistant Secretary of the Navy was present at meeting, also Brother Berres, representing the Metal Trades Department during the entire conference of all the trades.

At 5:30 p. m., the committee representing Lodge No. 450 were introduced to the Secretary. Brother Evans as chairman at once proceeded to explain to Secretary Daniels why the grievance of the boiler makers at the Washington yards was a just one and founded on data in compliance with instructions from wage board secured at a considerable expense to the men employed in the boiler department; therefore, sufficient evidence had been placed before the wage board to at least justify an increase according to data presented them; also there should be a more equal distribution of increase so that all boiler makers would receive an equal pro rata.

Brother Evans read a carefully prepared paper which was a concise statement of conditions in the boiler department, as well as the high grade of work constructed there, using clean cut, mechanical illustrations of the difficult work done by mechanics in that department who have been trained by long experience in that particular class of work and giving entire satisfaction at all times to the foremen and higher officials in charge for the successful prosecution of the work at all times under construction. Many questions were asked Brother Evans by the Secretary of the Navy, which were answered satisfactorily to all present in the Secretary's office.

The committee's appeal for the men they

represented was a splendid effort and to the point, never losing sight of one important fact, that they were there in the interests of every boiler maker employed in the Washington yard, and concluded in the hope that the Hon. Secretary of the Navy would give their appeal his most earnest consideration. The writer desires to say that Lodges No. 57, No. 450 and No. 19 have committees that are fully able to cope with and handle any grievance before the Navy Department, as the committees representing the above lodges are fair in the discussion of grievances and well posted on naval regulations as to conditions and wages.

October 5, left Washington, D. C., to attend council meeting of the Brotherhood at Kansas City, Kas., remaining there until the 15th, when, by instructions of Brother Franklin, I left for Portsmouth, Va., to represent the Brotherhood at convention of the Southeastern Consolidated Federation of Railroad Shop Trades, reaching there on the night of the 17th. October 19, at 10 a. m., President Garvey called the convention to order and in a neat and forcible address reminded the delegates of the importance of the session at that time and he hoped the convention would be a repetition of previous ones, where absolute harmony, as well as beneficial laws, were enacted for the protection of the railroad shop men, which was applauded by the entire convention.

The convention was an exceptionally large one, which naturally indicated the interest manifested by the shop employes in the Southeast District, and the following railroads were represented by delegates, as well as presidents of federated systems, also Grand Lodge officers representing Brotherhood Railway Carmen, International Association of Machinists, Brotherhood of Electrical Workers, Brotherhood of Blacksmiths and Helpers, Sheet Metal Workers, Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America and a representative of the Plumbers, who attended the session. Roads represented were: S. A. L.; N. & W., C. & O.; A. C. L.; Virginian Railway; Southern & Allied Lines; Central of Georgia, and Norfolk Southern Railroad.

The following speakers were introduced by President Garvey, who are well known in Tide Water, Va., as advocates of the labor movement, namely: The Hon. Frank Hope Mayor of Portsmouth, Va.; Mr. Robert E. Glover, sheriff—by the way, Sheriff Glover was a charter member of Lodge No. 57, Brotherhood of Boiler Makers, Iron Ship Builders and Helpers, organized many years ago, when labor organizations were few and far between in the Old Dominion; Mr. Charles T. Bland, who was at one time a member of the Painters' Union, but now a member of the legal fraternity and attorney for the city of Portsmouth, Va.

The last speaker, but not the least, was Mr. Anderson, collector of the port, who de-

livered a pleasing address and as a representative of the government, closing by extending an invitation to the delegates and their friends for a trip around the harbor on the ocean-going tug Memphis, which gave them and their friends, many of whom were present, an opportunity of seeing the Norfolk Navy Yard, also many other points of interest, including Old Point Comfort and the famous Rip-raps.

After these distinguished visitors had completed their addresses, Brother A. O. Wharton, President of the Railway Employees' Department of the American Federation of Labor delivered a very able address in connection with the department, outlining its policy and future possibilities through the co-operation of the railroad shop men, impressing on the delegates that such an organization was an absolute necessity for economic justice and later on the second day of the convention a unanimous vote was cast to affiliate with the Railway Employees' Department of the American Federation of Labor, bringing about a splendid force of organized shop men who understand what the labor movement means, yet conservative and loyal when put to the test in defense of its principles.

The next convention of the Southeastern Consolidated Federation will convene at Cincinnati, O. 1917. May the good work continue in the interest of the railroad shop trades until justice is fairly established on a foundation which will be impossible to shatter. The following officers were elected to represent the Southeastern Consolidated Federation: Thomas J. Garvey, President; J. Peyton, Vice-President, and Arthur Gladhill, Secretary-Treasurer. Brother Thomas of Lodge No. 238 was elected Boiler Makers' Executive Board member, who is also President of District No. 41, C. & O. Railway System, is a young, active worker and I am confident that he will make a success if given the proper support.

The following boiler makers were representatives as delegates to convention: Brother Garvey, Southern Railway; Jewell, S. A. L.; Barksdale, M. & O.; Thomas, C. & O. Railway; Moore, A. C. L. Railway; Horgen, N. & W. Railway; Buchheit, Central of Georgia, and Blackwell of the Virginia Railway.

After convention adjourned there was a little mix-up at the S. A. L. shops, Portsmouth, Va., which was adjusted satisfactorily on the 24th.

October 24th, received instructions from President Franklin to proceed to Washington, D. C., on a grievance between Lodge No. 450 and the Navy Department; met Brother Evans on the 26th, and arranged a meeting with the Assistant Secretary of the Navy on the 27th. Same date, 26th, in company with Brother Evans, called on the proprietors of two contract shops at Wash-

ington, D. C.—Boswells, also Webber & Thomas, both of whom signed an agreement with the International Brotherhood, making agreements complete with every contract shop in that city. Lodge No. 450 deserves considerable credit, as the active members worked hard to line up all the contract shops in the capitol city and have accomplished it after several years of continual plugging, and Lodge No. 450 desires to serve notice on all boiler makers and helpers coming that way: "No card, no work."

Same date, afternoon, called on the mechanical superintendent of the government printing office on the possibility of maintaining a permanent force of boiler makers employed in his department, and he informed me that he would be pleased to meet a committee from our local lodge or give him the names of a committee, but arranged to have a committee meet him, Brothers Evans and Kilroy, which meeting took place also on the 27th, but I am not aware of the result, as I had to leave Washington same evening to attend a meeting of Lodge No. 494. On the same afternoon, with the committee from Lodge No. 450, Brothers Evans and Kilroy held an arranged meeting with the Assistant Secretary of the Navy relative to late increase by the wage board, also late recommendation by the commandant of the yard, but nothing was accomplished, unless a change of rating is recommended and was so informed by the Assistant Secretary, which I trust will materialize in the interests of the men.

Have just received a communication from the Secretary and Assistant Secretary of the Navy in reference to the above, which has been mailed to the secretary of Lodge No. 450, in which the Secretary of the Navy has approved the findings of the wage board for 1915 and 1916, both special and general increase; therefore, comments are unnecessary. On night of October 27, attended a regular meeting of Lodge No. 494, which is a ship builders' local, and desire to say some very active work has been done by the officers and members, having succeeded in building up a large membership and increasing very rapidly. It is only a question of a short time when Lodge No. 494 will have a membership of two hundred or over. Every ship yard in the country should do likewise, as there never was a better opportunity to secure better working conditions, as well as a possibility of getting agreements between the ship builders and ship building firms. The only reason why they are not in a position to do so at present is due to the lack of organization.

At a regular meeting mentioned above, the hall was packed and 26 new members initiated, while several applications for membership are pending. In fact, a special meeting was arranged for November 2, to initiate a number of candidates in order to give the lodge an opportunity to transact its business at regular meeting. October

28, left Wilmington, Del., for Philadelphia, Pa., to meet the officers of Lodge No. 19, in connection with business now pending before the Navy Department and wage board at the Philadelphia Navy Yard; met Brothers Goodfellow and Hopkins and discussed the situation at issue, agreeing on a certain line of action if necessary; while at Philadelphia, had the pleasure of meeting Brother Scott, General Organizer of the International, who was there on business with Brother Napeir, business agent of Philadelphia, Pa. While in Philadelphia, a peculiar incident occurred, a strike of unorganized boiler makers and helpers at the B. & O. shop on account of the foreman, who saw his opportunity to drive them beyond the speed limit generally used in unorganized shops.

The men at one time were organized and had pretty fair conditions, which should be an object lesson to them as well as every other unorganized boiler maker and helper in Philadelphia, that without organization they are at the mercy of the bosses, who in many cases know no principle or honor in dealing with their fellow men; yet the men know this and still won't organize. If all wage workers were organized, the industrial situation of today would be far different, for every wage earner would then get a fair share for his labor. If organized, there wouldn't be any industrial battlefield which has been fought on many occasions for the last thirty years or more. We have all heard of the slaughter of labor's heroes in their legitimate fight for human rights. We have many times heard the crack of rifles in the hands of uniformed soldiers, pouring their missiles of death into the ranks of the wage earners, and in spite of this fact a large majority do not realize the necessity of organization.

The soil of our country many times has been washed with the blood of honest labor in the interests of financial greed, yet the workers fail to heed; but the time will come when conditions will force them together to correct their mistakes of the past, so as to be in a position to join hands with the American labor movement, which has a grand and great mission to fill. In order to sweep from the industrial field every form of corporate injustice to the American wage earner and establish a civilization that makes extreme poverty unknown and war impossible.

October 30, left Philadelphia for Rocky Mount, N. C., according to instructions received October 20, while the Southeastern Consolidated Federation was in convention at Portsmouth, Va., to work in co-operation with Brother McCreery of the Carmen and Brother Alyward, President of the federation on the Coast Line Railway.

Hoping this report is satisfactory to the

officers and members of the International Brotherhood, I remain

Yours fraternally,

THOS. NOLAN,
International Vice-President.

P. S.—Owing to being very busy at this time, my report was written through the courtesy of Brother Nolte, Vice-President of the Carmen.
T. N.

A COMMUNICATION FROM INTERNATIONAL VICE-PRESIDENT HINZMAN.

Kansas City, Kas., Oct. 26, 1915.

Dear Sir and Brother:

This is to advise that the Executive Council in their regular session October 12, revoked the card of H. C. Rawlings, Reg. No. 63397, for non-payment of a note executed in the International President's office, November 10, 1914, for the sum of \$17.25; \$9.25 of this amount was a clothing bill stood good for by the members of Lodge No. 521 of Van Buren, Ark., and the balance, \$8, was borrowed money from one of the members of Lodge No. 521.

This bill had been standing for more than four years. Brother Rawlings had deposited his due book with the members of No. 521 for the borrowed money, and the latter, through misrepresentation, obtained a duplicate due book from the International Secretary-Treasurer. The duplicate issued by the International Secretary-Treasurer was held up November, 1914, and Brother Rawlings was permitted to go on his way after executing a note to cover the amount of \$17.25, to promise to pay same within 60 days. Nearly 11 months have elapsed, and no payment having been made upon same, the Executive Council ordered that his membership be revoked and he be expelled from the Brotherhood until such time as he takes up the note executed in this office. It was ordered by the Executive Council that this action be published in the official Journal and all secretaries be notified of same. Any secretary taking up the card and book of Brother Rawlings will please forward same to the International President's office.

Yours fraternally,

AL HINZMAN,
First International Vice-President.

REPORT OF VICE-PRESIDENT MERRIGAN.

From the 15th of September to the 15th of November, I visited the following places: Hamilton, Fort William, Winnipeg, Medicine Hat, Calgary, Edmonton, Kansas City and Halifax.

While in Hamilton, I attended initial meeting of the shop trades employed by the

T. H. & B. R. R., who had made application to the Railway Department of the A. F. of L. for a charter. The following trades were represented on the charter: Carmen, Blacksmiths, Boiler Makers and Helpers and Machinists. Officers were elected, and charter fee forwarded to the Railway Department. The meeting was interesting, and all delegates voiced the approval of the members they represented towards system federation. All crafts employed, or rather mentioned above, are practically one hundred per cent organized, and no doubt will make a success of their new undertaking.

I also attended meeting of Lodge 421, and explained some matters in which the members were not versed. A proposed schedule had been submitted and approved. Lodge 421

that every attention would be given them by Lodge 392.

At Calgary I had a special meeting of the members of Lodge No. 392. Many matters were discussed pertaining to organization, and the necessity of keeping in touch with men at outlying points. Report of trade was fairly good.

At Edmonton I attended a meeting of Lodge No. 279 and found that the officers and members are greatly interested in organization. This lodge was organized during the month of February of the present year, and from their reports it is evident that they have not been idle in making it known to men at outside points, that there was a lodge of our Brotherhood in Edmonton. They are to be commended on the in-

Original.

THE ABOVE IS A CONDENSED REPRODUCTION OF THE REPORT BLANK ADOPTED BY THE EXECUTIVE COUNCIL, AT ITS RECENT MEETING, FOR THE USE OF MEMBERS WORKING AT ISOLATED POINTS.

reported trade brisk. Overtime had been resorted to, and trade in general was good, considering the slackness they had experienced.

At Ft. William I had a special meeting of the members that were endeavoring to hold the charter of Lodge No. 505. Trade at that point had become so dull that it employed, and vacancies for boiler makers and helpers.

At Medicine Hat, I found that a number of members there had allowed themselves to go in arrears, who were members of Lodge No. 392. I had an understanding with these men, as to the cause of their delinquency and had them to agree to be reinstated, and

terest taken in organization. I had been requested to visit some points under the jurisdiction of Lodge No. 279, but owing to the time at my disposal, before attending the executive council meeting, I was unable to comply with the request, and made arrangements with the lodge that were satisfactory. Trade in and around Edmonton was good, and the outlook encouraging for some time to come. Boiler makers and helpers were in demand, and few applications.

In the November issue of the official Journal, many of the more important matters that the executive council had to deal with are explained, and as the minutes of the

meeting are now on file in all lodges, it is hardly necessary for me to repeat what has been reported, other than to confirm what has been stated through the columns of the Journal.

There is one subject that I would like to enlighten the members on and that is the "Supply Blank Book" that the writer introduced and has adopted. This book is for the benefit of our members who are working at outlying points, and where there is not sufficient members to carry on the business of a lodge successfully, and thereby have to forward their monthly dues to the secretary of the nearest lodge, and make application for other supplies that they may require from time to time. This book is now being used at many outlying points in Canada, and good results have been obtained as a consequence of the use of this book. I believe a fac-simile of one of the blanks taken from the book will appear in the December issue of the Journal, and the members will get familiar with this form without much trouble. The local lodge can arrange with some member at the outlying point to collect dues from the members at that point, and have same entered on the looked to the members as though it would be necessary to return the charter to headquarters as the membership had dropped to a quorum, owing to the lay-off of members, who had to seek employment elsewhere. However, I arranged with the members to hold their charter, and that I would endeavor to have several suspended members reinstated at the earliest possible date, and if possible to have some other members employed in the vicinity transferred to Lodge No. 505, so that they would be in a position to hold meetings and maintain their lodge until such time as trade again picked up, and would then be able to carry on their business as in the past.

While in Winnipeg, I had a special meeting with Lodge No. 529, and met with the several officers and members of Lodges Nos. 126 and 451. I found that Lodge 529 had practically a new set of officers, and they were doing good work towards building up their lodge and operating same on a business basis. The members of Lodge No. 529 are now employes of the government railway, and were anxious to have all men employed organized at least between Winnipeg and Cochrane. The government is now operating the shops formerly occupied by the G. T. P. at Transcona, which is under new management. The members of Lodge No. 126 reported trade slack and no immediate prospect of conditions becoming more active. Lodge 451 reported trade good. Overtime being worked, with night and day forces blank and forwarded to the secretary of the local lodge, who will cancel said stamps and return same to the member who ordered same, who will then place stamps on the members' books who paid for same. This method will have a better effect towards keeping our members in good standing, and

a protection to our members at the outside points, should at any time all not go well at the local lodge. It will save the individual members at outlying points, the necessity of letter writing and save them from being suspended, etc. These books may be purchased from the I. S. T. I don't know what the price of the book will be, but it will not cost very much. I would ask that all lodges having members at outside points purchase one of these books and give it a trial. It works out satisfactory.

At this writing I am at Halifax, in the interests of the members of Lodge No. 580, who have been on strike since August 1, against the Halifax Graving Dock Co. and the T. Hogan & Co. The men have the situation well in hand and are optimistic as to the future. Pickets are doing good work, and the strike is proving effective and the men are more determined than ever to win this strike.

As this will be my last report of the year, I wish you all a Merry Christmas and a Happy New Year. I am,

J. P. MERRIGAN,
Third I. V. P.

REPORT OF FOURTH INTERNATIONAL VICE-PRESIDENT WEYAND.

Kansas City, Kas., Nov. 1, 1915.

Mr. J. A. Franklin,
International President.

Dear Sir and Brother:

The following is my report for the months of September and October, 1915:

At the conclusion of my last report I was stationed in the city of Baltimore, Md., on an organizing mission in the interest of Lodge No. 193.

On Saturday, September 4, I was requested to visit the Maryland Elevator, by one of the members of Lodge No. 193. The boiler makers reported to me that the iron workers were using every method to drive them off the work, which was beyond dispute boiler makers' work. In accordance with the agreement between the two organizations. On my arrival at the plant, I met the business agent of the iron workers of Baltimore. After a great deal of argument, we were able to adjust the matter, and our members remained on the work. In the evening I left Baltimore for Cleveland to spend Labor Day at home with my family.

Tuesday, September 7, I returned to Baltimore to again take up the organizing work. On my arrival in Baltimore I visited Fairfield and Curtis Bay, where a refinery and other new plants were under construction, and I found that a number of tanks were to be built in those plants.

On September 9 I received orders by wire from Vice-President Hinzman to go to Elmira, N. Y., at once, as the boiler makers of Lodge No. 225 had a grievance at the La France Engine Company's plant. On my ar-

rival in Elmira I found that Brother Stevenson, president of Lodge No. 225, had been discharged. I met with Brother Stevenson and went over the circumstances in connection with the case, and took the necessary data to present to the management and endeavor to prove that he was unjustly dismissed and should be reinstated.

In the evening we had a special meeting with the Metal Trades Council, to discuss the merits of the case with the delegates of the several trades. It was decided to appoint a Metal Trades committee to wait on the management the following morning and arrange for a conference that evening after quitting time, with Mr. Mason, superintendent of the shop. Brother Stevenson and myself were to be present at the conference in order to present our side of the case. At the appointed time Brother Stevenson and myself were at the office to meet with the committee and the management of the company. Mr. Mason was at the office door, waiting my arrival, and requested me to come into the office to discuss the case. To my surprise, I found that Mr. Mason had called the committee into his office that afternoon and had gone over the matter with the committee without myself or Brother Stevenson being present. I asked Mr. Mason what his reason was for calling in the committee without myself and Brother Stevenson being present.

Mr. Mason's answer to me was that he would not meet Brother Stevenson in reference to the matter, but that he was willing to meet me without the committee and hear my side of the case, but would not agree to have me meet with the committee and give me an opportunity to question his foreman as to whether they were discriminating against Brother Stevenson, owing to the part he took in the late strike. This was the main point at issue, as I had considerable data to prove that this was the case. I informed Mr. Mason that I insisted I meet him and his foreman with the committee and be given an opportunity to defend Brother Stevenson, by all means. But Mr. Mason refused to grant me that privilege.

I then insisted that he meet Brother Stevenson and in the presence of Brother Stevenson state to me what the charges were against him. Mr. Mason agreed to this and called Stevenson in the office and stated before Stevenson that he was discharged because he interfered with other departments. I told Mr. Mason that the charge he just stated was incorrect, and I was in a position to prove my statement, if he would give me the opportunity to meet with the committee and question his foreman in the presence of the committee. But Mr. Mason would not agree to my proposition.

The same evening we again had a special meeting of the Metal Trades Council. At the meeting, the committee appointed to

handle the case reported that they had made the arrangements for a conference that evening with Mr. Mason, as instructed by the Council. But at 3 o'clock that afternoon he, Mr. Mason, sent for the committee and told them that he did not have time to meet the committee that evening and preferred to discuss the case at that time. The committee fell for Mr. Mason's game and discussed the case without myself or Brother Stevenson being present.

It was also reported at the meeting that one of the machinists had reported to his foreman that Brother Stevenson was interfering with other departments and from this report came the foundation for the charges against Brother Stevenson. It was brought out that on one or two occasions Brother Stevenson had visited the erecting department and found some of the machinists driving rivets on truck frames. Brother Stevenson, passing by those men, did not interfere with them, but merrily said, "You ought to cut that work out, as it is boiler makers' work." Hence the charge against Brother Stevenson.

The Council against instructed the committee to see Mr. Mason the following morning and arrange for another conference and endeavor to have Mr. Mason to agree to have myself and Brother Stevenson present. The following evening we had another special meeting of the Council, and the committee reported that Mr. Mason would not meet Vice-President Weyand with the committee, but that he was willing that the matter be submitted to a board of arbitration, consisting of six men, three from the several trades and three from the company, and, if necessary, they to appoint the seventh man, and Brother Stevenson could appear before this board and present his side of the case. I told the committee and the Council that I did not think much of Mr. Mason's proposition, as I did not believe Brother Stevenson would get a square deal. But the Council concurred in the committee's report and accepted Mr. Mason's proposition. Their action convinced me that we would not have the united support of all the trades, if it came to calling a strike to force the reinstatement of Brother Stevenson; consequently, the case went before the board of arbitration.

The trial took place the following day. In justice to the three men appointed from the several trades, I may say they were good, strong union men and used every argument and method within reason to convince the other side that Brother Stevenson should be reinstated. But it was understood that the men from the company's side were for conviction and our only salvation was in the seventh man. The seventh man agreed upon was a carpenter-contractor, who employed union carpenters. But in rendering his decision he was found on the company's side, and Brother Stevenson lost his job.

On Thursday, Septemebr 23, I returned to Baltimore to again take up my unfinished work, as I had some matters to take up in connection with the death claim of our late Brother Kilcullen, who died in Baltimore, August 1, 1915; also visited Fairfield and Curtis Bay to keep in touch with the work to be erected in those plants. I find there is going to be considerable work in and around the vicinity of Baltimore in the contract ship yards and a large amount of field work.

While I have had very good success in lining up our delinquent members in that part of the country, but to continue this work it will require someone on the job continually, owing to the fact that when the local men who are employed on the job are found talking to those who are not members, by the officials in many cases, they are confronted with discrimination and in many instances lose their jobs and are being classed as agitators.

As I had been notified by the International President that the Council would meet in Kansas City on October 4, I left Baltimore on September 30 for Cleveland. On October 2 I left Cleveland for Kansas City and arrived in Kansas City on Sunday evening, October 3. As the Council was in session three weeks, adjourned October 24. This time was spent in regular session of the Council, in going over the many subject matters brought to the attention of the Council.

After adjournment of the Council, I was requested by President Franklin to remain at headquarters to take charge of the International President's office, owing to the fact that President Franklin and First Vice-President Hinzman were to start for San Francisco to attend the convention of the American Federation of Labor and other departments.

This concludes my report for the two months ending November 1, 1915. Trusting the same is satisfactory, and with best wishes and kindest regards, I am

Yours fraternally,

LOUIS WEYAND,

Fourth International Vice-President.

A COMMUNICATION FROM INTERNATIONAL VICE-PRESIDENT WEYAND.

Kansas City, Kas., Nov. 10, 1915.

Dear Sir and Brother:

Owing to the adoption of the Fidelity Department in this International Brotherhood, and in compliance with the laws of our constitution including the provisions in application pertaining to the accounts of the local financial officers and submitting a copy of the trustees' report to the International office of the Fidelity Department, the Executive Council, at their recent session, took

up the proposition of adopting a uniform Local Trustees Report Sheet, in order to assist the local trustees in filing a uniform report of their audit to the International office, in accordance with the laws of the Fidelity Department. We respectfully request that all subordinate lodge officers and trustees will make a special effort to put this system into effect in our Brotherhood and endeavor to fill out the various items of business handled by their local lodge officers. By complying with this system of reporting to the International lodge, you will protect your local in any just claim your lodge may have against the Fidelity Department in the future, and we sincerely trust you will comply with the same.

With best wishes, I am,

Yours fraternally,

LOUIS WEYAND,

Fourth International Vice-President.

A COMMUNICATION FROM NINTH INTERNATIONAL VICE-PRESIDENT SCHMITT.

Columbus, Ohio.

Dear Sir and Brother:

You will find enclosed copies of letters that I have mailed our lodges, and letters that I am mailing out to organized labor in general.

This letter of protest which was endorsed by the Columbus Federation of Labor, and published in the press, has caused considerable comment among the politicians, and since then the administration has been trying to square itself as to these appointments, and if these letters of protest are sent in as requested it is more than likely that these appointments will be recalled.

And you can see by the letter sent to our lodges I have urged them to get on the job, which I trust they will so that there will be an eligible list in case these appointments are recalled, so that boiler makers may have an opportunity to fill these positions in the Boiler Inspection Department, which rightfully belongs to them.

With best wishes and kindest regards, I am,

Fraternally yours,

J. F. SCHMITT.

Columbus, Ohio, Nov. 13, 1915.

To Organized Labor—Greeting:

The following resolution was adopted by the Ohio State Federation of Labor at the convention held at Mansfield, Ohio, October 11-16, 1915:

Whereas, It has come to the attention of this convention that the appointment of state employes in departments affecting labor are not in conformity with the best interests of the wage earners and the effi-

ciency that should prevail in the duties devolving upon these men; and,

Whereas, In this method of making appointments the safety and health of the wage earners is placed in jeopardy; therefore, be it

Resolved, That we, the delegates to the thirty-second annual convention of the Ohio State Federation of Labor, go on record as being opposed to the appointment of men not qualified under the law and known enemies of labor to positions in departments that labor has created, and depends upon organized labor to see that justice is administered, and we are further opposed to these inefficient servants displacing men who have proven their qualifications and efficiency.

In accordance with the above resolutions I am inclosing you two letters of protest against appointments of unfair men in the Boiler Inspection Department, one of which it is requested be forwarded to Hon. Frank B. Willis, Governor, State Capital, Columbus, Ohio, and one to Mr. George Stoughton, Secretary of the Industrial Commission, Majestic Bldg., Columbus, Ohio.

Trusting that the above request will be given immediate attention, as the time to prevent the present appointments from becoming permanent appointments is limited.

Fraternally yours,

J. F. SCHMITT,
Ninth International Vice-President.

COMMUNICATION FROM INTERNATIONAL SECRETARY-TREASURER.

October 27, 1915.

To the Officers and Members of All Subordinate Lodges, Greeting:

My attention has been called to several errors in the expense accounts of some of the Vice-Presidents and Organizers in the Third Quarterly Report of 1915. Immediately upon receipt of these complaints, I investigated the matter through Russell Printing Company, who had printed the quarterly reports, as I was under the impression that after we had proof-read the quarterly report that they made the corrections that we instructed them to make. So the Russell Printing Company investigated this matter with the Western Typesetting Company, who does the linotyping for the Russell Company. Upon investigation they found that they were responsible for the errors, and I am reproducing a copy of the letter signed by Henry C. Alwes of this company, which, no doubt, will be self-explanatory:

"Kansas City, Mo., Oct. 13, 1915.

"Mr. F. P. Reinemeyer,
Secy. I. B. of B. M., I. S. B. & H. of A.

"Dear Sir:—In the rush due to the shortness of time in composing the last quarterly report, there were several errors, all of

which appear to be material unless satisfactorily explained.

"On page 16, in the expense account of J. P. Merrigan, in the period from July 1 to July 16, the miscellaneous expenses should be 35c, instead of \$3.35.

"On page 19, the signature to the report of John J. Dowd should be that of John J. Dowd, instead of Chas. F. Scott.

"On page 22, the signature of Chas. F. Scott's report should be that of Chas. F. Scott, instead of John J. Dowd, and the salary of Chas. F. Scott for the period of September 1 to September 15 should be \$50.00 instead of \$62.50.

"There errors were all made by us and were incident to the shifting of forces at 4 o'clock in the afternoon.

"Anything we can do to correct this report and make it public to your membership will be gladly done by us. The Russell Printing Company are in no way responsible for these errors, as we assume responsibility and furnish them with O. K. matter.

"Sincerely yours,

"WESTERN TYPESETTING CO.,
(Signed) "Henry C. Alwes."

Trusting that the above letter will make this clear to each and every members of the Brotherhood, with best wishes and kindest regards, I beg to remain

Yours fraternally,

F. P. REINEMEYER,
International Secretary-Treasurer.

COMMUNICATION FROM INTERNATIONAL SECRETARY-TREASURER.

October 27, 1915.

To the Officers and Members of All Subordinate Lodges, Greeting:

In the past few months we have had several traveling members of this organization call at this office, applying for duplicate due books and stating that the subordinate lodge secretaries, as well as some of the members, advised these traveling brothers who had the misfortune to lose their due books to come to Kansas City and they could secure duplicate due books.

Now, I wish to state to each and every secretary, as well as the members, that it must be distinctly understood that the International Secretary-Treasurer does not issue duplicate due books to anyone, except by a sworn affidavit coming through the secretary of the lodge to which the member last belonged.

Therefore, I am publishing this at this time to notify all members when they have the misfortune to lose or have their due books stolen, that they must fill out one of the official affidavits and send to the local secretary who issued the last stamp, and he must forward the affidavit to this office,

with 25 cents to cover the cost of the duplicate due book.

I trust that all secretaries and members will take notice of this letter and give it due consideration.

Assuring you of my best wishes, I beg to remain

Yours fraternally,

F. P. REINEMEYER,
International Secretary-Treasurer.

REPORT OF R. C. McCUTCHEON,

International Delegate of the B. of B. M., I. S. B. and H. to Thirty-first Annual Convention of the Trades and Labor Congress of Canada, Held in the Labor Temple in Vancouver, B. C., September 20 to 26, Inclusive.

To the Officers and Members of our Organization:

In making a report of this kind it will be necessary to curtail and in some cases eliminate some of the proceedings of minor importance, but in so doing I will try and report at some length on those propositions which will be of the most interest to our membership.

The convention was opened with a short talk by Brother McVety, President of the Vancouver Trade Council, who was followed by President Watchman of the British Columbia Federation of Labor; W. C. Bowser, Attorney General of British Columbia, Dominion Minister of Labor; H. J. Conway, fraternal delegate from the American Federation of Labor, and Andrew Furseuth, Secretary of the Sailors' Union, all giving short opening addresses, after which the chair was turned over to President Watters.

The substance of Attorney General Bowser's talk was that the British Columbia Provincial Government was forming a committee for the purpose of investigating the different workman's compensation acts throughout the United States and Canada. The committee to consist of three persons, one to be appointed by the Manufacturers' Association, one by the Trades Congress and one by the Provincial Government, their expenses to be paid by the government and upon whose report would be based the proposed Workmen's Compensation Act of British Columbia.

The talks of the other speakers will be dealt with later.

That the convention would reflect, through a thin attendance of delegates, the serious extent to which organized labor in Canada had been affected by the prevailing economic conditions and the drainage of trade unionists from industrial to military pursuits was anticipated by all. It was, therefore, a source of deep gratification to find that about 180 delegates were present. Such a number of representatives gathered in the

extreme West from every part of Canada, including Moncton in the extreme East, indicates the determination of the trade unionists in this country to exercise an alert interest in the affairs affecting them in spite of the heavy handicaps under which they labor at present. It proved that the spirit of trade unionism was capable of responding to the extremity of the situation in a degree that surprised even those who were best qualified to estimate probabilities.

Another surprising and agreeable feature was that this was the first time that the Congress has been able to hold its convention in a building owned and controlled exclusively by organized labor. Not only did the delegates feel proud that they were thus privileged, but the facilities afforded for conducting the business of the convention were perfectly satisfactory and the accommodation provided much more adequate than is usually the case. The handsome temple of labor erected by our comrades on the Pacific Coast creditably reflects their enthusiasm for and faith in the labor movement; while their pride of possession in the most comfortable and palatial edifice of its kind in the Dominion is too readily manifested to be overlooked. The fact that the convention was housed within the walls of a labor temple added materially to the comfort and general satisfaction of the delegates.

A sensation of relief was also felt when the report of Secretary-Treasurer Draper was submitted, showing that the leakage was less than had been anticipated. The Congress commenced the year with a per capita paying membership of 80,094. This number has been reduced during the year by 8,675, leaving the membership at 71,419. The secretary estimated that this reduction represented about the number of trade unionists who had enlisted. Assuming this to be correct, trade conditions in the East must be considerably better than in the West, where the falling off in membership, particularly in the building trades, has been enormous.

The finances of the Congress are unexpectedly satisfactory. In spite of the reduced membership the administration of the funds has been so economical that the receipts exceeded the expenditures by \$1,063.14. The year began with a balance in hand of \$10,951.05, and ended with a balance of \$12,014.18.

It is quite safe to say that never before in the history of the Congress have the delegates met under such impressive circumstances. The whole mental atmosphere was charged with serious consideration of what attitude would be taken with regard to the war. The problem overshadowed all others, and obsessed the mind of every delegate until disposed of. At the St. John convention the war was in its early stages. Its tremendous import had not been realized. There was hope that its duration might be

short. At Vancouver all this had changed. In spite of the economic drainage of the nations and the nameless horrors resulting from the war, peace seemed farther away than ever, and the seriousness of the situation was infinitely more impressive. For years, the Congress had declared that war was waged purely in the interest of capitalism, and that as the capitalists made the war they should do the fighting. Would this pious resolution stand the tremendous test that was now being applied to it.

The War Debate.

At the St. John convention, the question had been somewhat judiciously disposed of with a complete abdication, by language which evaded the challenge, and speculation was rife as to the effect which another year's experience had wrought in the minds of the delegates—or, at least, in the expression of their minds. In addition, the convention last year had been held in the far East where the workers were supposed to be conservative in their views. This year it was held in the far West, in the home of revolutionary socialism and ultra radicalism. This fact undoubtedly contributed greatly to the speculative aspect of the situation. The submission of the report of the Executive Council effectually dispelled any idea that might have been harbored that diplomatic methods would be adopted in dealing with the question. Without reserve, the report threw down the gauntlet to the school of thought that maintained the war was no business of the working class, and that it was a matter of indifference to the workers which side won. Not only did the executive regard it as a fact that the interests of the working class were bound up with the way in which the war terminated, but regarded those interests as inseparably bound up in the triumph of the Allies, and specifically declared that it was the duty of labor to lend every assistance to the cause of the Allies.

What has been described as the most intense and brainiest discussion that ever took place on the floor of the Congress, followed the submission of a motion to delete the following paragraph from the executive report:

"Under existing conditions it becomes the duty of the labor world to lend every assistance possible to the Allies of Great Britain, and, for us in Canada, more especially to the Empire of which we form a part, in a mighty endeavor to secure early and final victory for the cause of freedom and democracy."

For four hours a hot debate raged around the resolution to delete this section of the report after which it was defeated by a standing vote of 104 to 29.

Declaring that conscription is antagonistic to the labor interests and at variance with the fundamental principles of constitutional freedom, the report went on to state that

"the Trades and Labor Congress of Canada cannot too emphatically register its disapproval of even the remotest attempt at enforced enlistment." This section was adopted without comment. All other sections of the report were passed without contention and the whole report finally approved.

Next in importance to the war was the subject of the "Lemieux Act," sometimes called the "Lemon Act," but commonly known as the "Industrial Disputes Act," which arose out of the proposed amendments offered by the Minister of Labor, Crothers, to the above act and out of the following:

Resolution of Division 101, A. A. of S. and E. O. E. of A., Vancouver, B. C., asking the Congress to exert all its power for the repeal of the Lemieux Act, as we have found once more to our cost it is no just remedy for settling disputes between capital and labor. Lodge 484, Machinists, of Transcona, Man., also had the same resolution.

This matter occupied the attention of the convention for the greater part of three sessions.

It was arranged that we should hear the speech from Hon. T. W. Crothers, Minister of Labor, first before discussing the amendments. He believed that some were in favor of the repeal of the act. Imperfect as all legislation is, the Industrial Disputes Act does not pretend to be perfect, but he believed that it would be one of the best acts passed in many years. It was meant to avoid as far as possible industrial war. The working people and wage earners are the people that suffer most in war and also in industrial war. The act was passed to prevent industrial war. He had only known two awards that were against the contentions of the men, and had only made one mistake in four years by the appointment of a chairman. He did not know the men, but he generally appoints a judge.

Under the new bill a strike cannot take place until a secret vote has been taken. The object is to give the men a chance to think over the matter properly, and to allow the public to think it over after reading the award.

In any public utility the minister can grant a board even if company employes or city commissioners do not apply for one. During his speech the minister remarked that every working man should be a member of a trade union, and that a man had no right to enjoy the benefits which are gained by the work of a trade union if he does not help sustain such union. The minister left a better impression after his speech than he did last convention at St. John's, when he made himself scarce as soon as finished.

A feature of the discussion on this subject was the indication that the miners are far from forgiving the Minister of Labor for his actions in connection with the strike at Vancouver Island and the incidents preced-

ing it. Their delegates hotly attacked him on the ground that had he acted in accordance with the spirit of the act the strike would probably have been averted, and incompetent Orientals would not have been employed in the Vancouver Island mines, taking the jobs of men who were now thrown out of work.

A sinister looking feature of the proposed bill is that it seeks to enact that in case of strike any person who is not an employe in the employment in which the strike takes place, but who has ordered or encouraged such strike, shall be liable to a fine of not less than \$100, nor more than \$2,000, or to imprisonment for any period not exceeding six months. This section appears to be framed to hit trade union officials, whose duties bring them directly in touch with employments in which they are not engaged.

Your delegate pointed out how we and the machinists had fared under the existing act in our strike on the Grand Trunk Pacific, when in trying to comply with the conditions of the present act, it gave the officials of above road time (which was about nine months) to discharge many of the active members of the unions, to locate a bunch of scabs and do other things that would better prepare them, "the company," to fight a strike, also pointing out that we would be better without any legal interference on the part of the government, if we were in a position to strike and if we were not the law would be of no use to us anyway. A special committee that had been struck off to deal with this subject reported unfavorably on the resolutions in favor of the repeal of the act, and that the matter be referred to the incoming executive council, they to oppose any objectionable and support any favorable amendments.

Delegate Rees, of the United Mine Workers, Gladstone Local 2314, District 18, spoke for a considerable time against the report of the committee. He pointed out that Mackenzie King, who is in the employ of Rockefeller, is working hard to have a similar act passed in the states of Colorado and West Virginia. If it was beneficial to the workers would the Rockefeller corporation want to get legislation of a similar kind on the statute books. Certainly not.

The Minister of Labor being given the last words at the end of the discussion who stated that he would rather resign office than have the act repealed and as was to be expected, a lot of the delegates fell for the bluff and the report of the committee carried on a standing vote of 97 to 55.

Efforts That Failed.

That there are still trade unionists who are not satisfied to have the Congress retain its present function as only the legislative mouthpiece of Canadian organized labor was shown in the submission of one

resolution asking that the Congress be established as the parent body of a Labor Party, and another urging that the Congress exercise its power to secure direct labor representation on all administrative bodies by immediately commencing a propaganda with the object of accomplishing this end. Fortunately the overwhelming majority of the delegates realize the perils and difficulties that such a policy would beset the Congress with, and the resolutions were negatived.

Two resolutions were submitted by the Guelph Trades Council. First, asking that alien enemies working in Canada be dismissed and placed in detention camps. This was turned down. Second, that at the close of the present war all aliens interned be deported to their own countries to provide work for the returned soldiers and British subjects that will surely troop into Canada. This was referred to the committee on officers' reports, who brought in a recommendation of non-concurrence, as a great many of these men were members of trade unions interned through no fault of their own. The same view was taken by the convention, which adopted the report of the committee.

A resolution was passed urging that all local affiliated unions subscribe for its entire membership to the official labor paper published in its immediate vicinity, to the end that these papers may take their proper place as the means of communication and mouthpieces of the labor movement.

W. S. Burns, of the Vancouver branch of the Sailors' Union, submitted a resolution dealing with the laws governing seamen which deny them the equal freedom enjoyed by other workers. The United States have lately adopted laws that gives such freedom to all seamen that come under the jurisdiction of the United States, and he asked that these laws be submitted to the government and the people of the Dominion for their serious consideration, and also that copies of these resolutions be forwarded to the Dominion Government and to the government of Great Britain. Andrew Fursueth, Secretary of the Pacific Coast Sailors' Union, was given the platform to speak to the delegates in support of the above resolution. He made a profound impression upon the delegates. The theme of his discourse was that unless better laws were devised for the protection of the white seamen they would continue to leave the sea. He said that unless Britain awoke to that fact, sea power would pass from her, and with its passing would vanish her paramount place in the maritime nations of the world. It was by the blood of British men that the empire was built, and it can only be maintained by the same means. The shipowners are so organized that if you touch an owner on the Pacific Coast a shipowner on the Mediterranean feels it. The whole white race are leaving the sea, and leaving it to the yellow and

colored race. What is to become of Great Britain under these conditions? I come to you to say that we are blood of your blood and bone of your bone. I appeal to you as men and women of Canada and the British Empire to bring before your governments the claim that the seamen shall be free and that the slavery of the sea shall cease. The resolution was adopted by a standing vote which was unanimous.

After a lengthy discussion, in which some of the arguments were delivered red-hot, the Congress decided to sever its affiliation with the Social Service Council of Canada by a vote of 72 to 66. This action was taken while the report of the Ways and Means Committee was under discussion.

Resolution by J. W. Bruce of Toronto, asking that the fair wage clause be inserted in all contracts for the making of war supplies, and the rights of the workers be protected by that means, as a great many firms are exploiting their employes and paying miserable wages in a great many industries. Delegate Bruce and also Delegate O'Dell spoke in support of this resolution. Hon. T. W. Crothers said that the government had no authority to deal with the question of war supplies, it was the British government; but spoke of a few instances where he was able to get a raise in wages at some factories through his influence and through threats to do all in his power to stop said factories from getting more work. Left to the executive council to take it to the British government if the home government did not do anything. A special representative to be dispatched to Great Britain.

Following are some extracts from the Committee on Immigration and Unemployment report, all were adopted by the convention:

That the executive council and the provincial executive urge upon their respective governments the necessity for the adoption of a six-hour-day law covering the workers in all industries in their several jurisdictions.

And that the federal and provincial governments be requested to begin without delay any buildings or other public works contemplated or necessary in order to assist in relieving the congestion of the labor market.

Also that the present system of home-steading is useless as a solution of unemployment difficulties. To avail himself of it the applicant must have sufficient to maintain himself, purchase implements, etc., and is in most cases further and finally handicapped by a complete lack of agricultural knowledge or experience. Temporary sustenance, shelter and tuition must be provided, for the thousands of unemployed which will immediately follow the declaration of peace and the return to the open market of thousands of soldiers, munition workers and others.

While it must be fully recognized that those men who have enlisted from the Dominion of Canada have every right to return to the labor market untrammelled by any restrictions other than those created by changed conditions; it will be just as readily recognized that the conditions will be so changed as to render the outlook of those thrown on the labor market following the war as anything but desirable. So far, indeed, as the cities are concerned that outlook will be well nigh hopeless for the great mass of applicants.

It is therefore recommended that the government should select such land as may be necessary for the proper carrying out of a scheme which will meet the abnormal conditions which confront the Dominion, which land should not be privately owned; and that the federal government be requested to offer, as an option to discharge from the army, further enlistment for a period of five years of such men as would be willing to undertake agricultural work under the direction of qualified experts from experimental farms and agricultural colleges. That such men should receive the regular army pay, allowances and rations on same basis. Suitable accommodation to be provided, with married quarters for men with families. After such period of enlistment had expired, the men who have thus served should have the option of settlement upon suitably sized allowances of the land so improved, the same to be held on leasehold terms from the Dominion Government.

H. J. Conway, secretary of the International Association of Retail Clerks, who was present as the fraternal delegate from the American Federation of Labor, delivered a stimulating address, urging the Congress to give more attention to organizing and helping to raise the standard of the female workers.

Election of officers resulted as follows:

J. C. Watters, re-elected president.

J. Watchman, for vice-president.

P. M. Draper, re-elected secretary and treasurer.

Fred Bancroft, fraternal delegate to American Federation of Labor.

J. Simpson, fraternal delegate to British Trades Congress.

In conclusion I wish to mention that two local lodges were represented at the Congress, Brother Pettigrew from Lodge 191, and Brother A. Fraser of Lodge 194, also had the pleasure while in Vancouver of meeting International Organizer Hos. Reed, who was in attendance at the convention some of the time.

Hoping the above report meets with the approval of all, and any one desiring the complete minutes of the convention can secure a copy by dropping a card to Secretary P. M. Draper, P. O. Box 515, Ottawa, Canada.

A GROUP OF THE INTERNATIONAL OFFICERS OF OUR BROTHERHOOD.

Agreements

Agreement entered into between the Chicago Junction Railway and the Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America:

ARTICLE I.

Nine hours shall constitute a day's work; eight men will work ten hours. All time worked after bulletin hours shall be paid for at the rate of time and one-half. All overtime to be divided equally as far as possible. No employe shall be laid off any regular working hours to equalize time on account of having worked overtime.

ARTICLE II.

To all boiler makers and helpers working night as well as day, time and one-half shall be paid for Sundays and legal holidays as follows: New Year's, Decoration Day, July Fourth, Labor Day, Thanksgiving Day and Christmas Day.

ARTICLE III.

If any of the holidays mentioned in this schedule fall on Sunday, then the day to be observed by the state or nation or by proclamation, shall be considered a holiday and paid for as such.

ARTICLE IV.

All work, such as cutting, repairing, fitting up, any work pertaining to air, oil or water-tight tanks, cutting off, or drilling stay bolts, drilling of mud rings or radials when renewed, steel tank frames, all iron and steel from 1-16 inch up in thickness, pertaining to boilers or tanks, laying out, flanging, patching, caulking, riveting, chipping, all round house work, testing and all flue work, is to be done by boiler makers.

ARTICLE V.

When boiler makers and helpers are sent on outside work, they shall receive not less than ten (10) hours' pay. When sent outside of city limits, they shall be paid from time of leaving home station until time of return to same.

ARTICLE VI.

All boiler makers sent on outside work shall be furnished with a helper. This also applies to roundhouse men and night men.

ARTICLE VII.

When a general reduction in expenses is necessary, working hours shall be reduced to eight (8) hours per day before laying off men. If further reduction is necessary, the last man hired shall be the first laid off, seniority to govern.

ARTICLE VIII.

When long-stroke hammer is being used, two boiler makers will operate same.

ARTICLE IX.

Boiler makers doing general running repairs in roundhouse will not be asked to remove or replace staybolts.

ARTICLE X.

The rate of wages shall be for boiler

makers 42 cents per hour and helpers 28 cents per hour.

ARTICLE XI.

All engines coming into shops for general overhauling shall have front end and fire-box washed out.

ARTICLE XII.

All boiler makers and helpers called to work overtime shall receive five hours' pay for three (3) hours and twenty minutes' work, or less; after three hours and twenty minutes' work, shall receive time and one-half.

ARTICLE XIII.

When an employe is transferred from day to night, or night to day shift, he shall be paid at the rate of time and one half for the first day or night's work.

ARTICLE XIV.

Boiler makers and helpers shall receive one hour off on Saturdays with pay, same as other roads.

ARTICLE XV.

Boiler makers and helpers wishing to be absent after two days from service must obtain leave of absence from foreman.

ARTICLE XVI.

Boiler makers and helpers to be allowed the same privileges with regard to transportation as any other employes.

ARTICLE XVII.

No boiler maker or helper shall be discharged without a just and sufficient cause. If after proper investigation it shall be found that any such person was unjustly discharged, he shall be reinstated with full pay for the time lost by such discharge, provided he submits his grievance to the company and to the committee within five days.

ARTICLE XVIII.

In case of any grievance, same shall be presented by committee, to the proper officials of the company. The course of procedure will be: First, to present the matter to the master mechanic, and in case a satisfactory adjustment cannot be made, to present same to the superintendent. Grievances presented as above will be promptly acted upon and remedied, and no discrimination will be permitted against anyone on account of service on any committee.

ARTICLE XIX.

This schedule and rules will be in force from November 1, 1915, and will supersede all other schedules and rules contrary thereto, and will remain in effect until changed, subject to 30 days' notice from either party of their desire to change it.

(Signed)

JAMES FITZMORRIS,
Master Mechanic.

H. McMAHON,
THOS. P. SMITH,

Com. for Bro. B. M., I. S. B. & H. of A.

Correspondence.

A CRITICISM OF NAVAL CONSTRUCTION.

(Printed by Request.)

Our Navy Department has always been an object of criticism by some of the magazines and newspapers of this country as regards the design and construction of our warships, and also the system employed in the management of this department.

I have held the position of overseer and inspector of warships that were under construction in several of our Navy yards both on the Atlantic and the Pacific coast, and also positions in private shipyards where such work was also being done, and can state with authority that there is good and sufficient cause for the criticism that our Navy Department has had heaped upon it, for it is nothing short of criminal on the part of our naval officers to allow such work to go on, and just as much so for anyone who is familiar with these facts not to inform the public of the criminal negligence that our Navy Department is guilty of, for, as the laws says, "It is a fraud to conceal a fraud."

There was some excuse fifteen or twenty years ago for making mistakes in the building of warships, but at the present time there is absolutely no excuse for the mistakes of twenty years ago, for thirty years of practical experience in that line of work should give any man of ordinary intelligence a thorough knowledge of the design and construction of any kind of ship.

The people of this country have been put to the expense of many millions of dollars for the building of warships, and it is high time that they should receive something for this enormous expenditure.

Not only has an immense amount of money been expended, but a great sacrifice of human life has been the result of this faulty construction of our warships, and I can safely say that 75 per cent of the so-called accidents would be a conservative estimate of the number that could have been avoided had the proper care been taken in the construction of our warships.

These are broad statements to make, but nevertheless they are cold facts, and I will state that 40 per cent of our warships in commission at the present time are unsafe and unseaworthy, and it is almost impossible to believe that a country like ours would allow such a state of affairs to exist, when one considers the number of men on board one of them when equipped for sea duty. The Dreadnoughts carry nearly one thousand officers and men when the enlistment is up to the standard, all picked men having no physical defects and there is no finer looking or more efficient body of men in any navy than that of the United States.

I have never been able to understand why those in charge of work of construction of

our warships were so careless and negligent in the work, the homes of our enlisted men of the navy, and as I stated before there is no excuse for this faulty construction at all. The people of this nation are paying 25 per cent more for these ships than they are worth, thereby not only paying an excessive charge for these ships, but getting defective ships in the bargain.

One might ask the reason why this state of affairs is allowed to exist, and for answer I will say that there is too much incompetency on the part of those in charge of the work, and those actually doing the work, the result of dirty politics, as all have secured their positions through political influence or some other influence equally as bad, and the method of doing the work by these incompetents is so crude and out of date that it costs 25 per cent more than it would with efficient men and methods up to date.

The cost of construction in the New York Navy Yard has increased since the Connecticut was built very materially, the time required to do the same amount of work has also increased, but the fact that wages have increased some should be more than offset by the improvement in machinery and tools.

We are told that the navy yards are operated under civil service rule, but I will try to explain navy yard civil service. A Board of Labor, composed of one or more naval officers, convenes once a month at the present time and decides upon the men needed of those who have applied for positions, their names being on file in the office. These names are supposed to be chosen from the top of the list, a notice being sent to each one, notifying them when to report for work.

Application is made by writing to the Board of Labor of the Navy Yard, where the applicant desires to be employed, stating that he wishes to apply for a position, and he will receive, from the board, application blanks which he must fill out according to instructions given with the blanks, comprising a history of his life if true, but untrue if it best suits his purpose; three or four references, and a doctor's certificate as to the applicant's physical ability makes everything complete, after which the application must be delivered in person to the navy yard where the applicant desires a position, but should a word be misspelled in the application or the applicant forget to remove his hat when entering the office, the application may be rejected, and another one have to be filled out.

This method of selecting the applicants for the positions seems to be fair enough, though there is a great deal of red tape about it, but this is not all. When an applicant files his application he may stand close to the top of the list, say No. 4, and

four men are called for the position No. 4 applied for, but No. 4 is not called, but upon going to the Labor Board to find the reason is informed that he is 14 on the list, it being a small matter to put a 1 in front of a 4, making 14, and should No. 4 argue the matter, he is told by these honorable gentlemen that they will not discuss the matter further, and if he is not satisfied with this decision a marine is called and No. 4 is escorted from the navy yard.

The above method is used by a favored politician or Representative for the benefit of a friend. Any man who stands in with the naval officers is able to put a friend to work at any time that he wishes to do so, as these naval officers are looking for favors themselves, and if they have no political influence are liable to find themselves in Cuba or the Philippines. This is how Admiral Dewey became a hero, for had there been any prospect of war when he took command of the Pacific fleet, I doubt very much if he would have had the chance to become a hero.

The selection of foremen, or masters as they are called in our navy yards, is by special examination, which is supposed to be advertised in the postoffices, though this is not always done, and should not be allowed as it is another case of deceiving the public. The men are picked for the position before the examination takes place. I have known men to go to a great deal of trouble, studying for weeks and looking up references, etc., when it was all prearranged for someone else to have the position. Some of the applicants travel for hundreds of miles to try for these positions, but those living near the navy yards seldom try for these positions, being aware of the deception practiced, and I know positively that 75 per cent of these positions were given out in this manner.

One might ask the object in selecting certain men for these positions, and if it would not be better to let the best men win in the examinations. It surely would produce greater efficiency in the work of construction, but a naval officer in charge of construction work being incompetent, and not being able to make good without practical men for these positions, who will do as the officer commands, whether it is right or wrong, and is willing to shoulder the blame should things go amiss, picks such men for these good qualities. Such a master mechanic is little more than a messenger boy, and has very little to say in the work of construction. A really efficient mechanic would not accept such a position if it were offered him under such conditions.

This civil service, as it is called, does not come under the jurisdiction of the Civil Service Commission and will not hold good in a court of law; it is only a navy yard order and is a clear case of fraud, and this method of choosing employes of the navy

yard keeps the best mechanics out of our navy yards.

When the Connecticut was about to be built some ten or twelve years ago at the New York yard, there were no mechanics who understood the laying out of the work by modern methods, so the naval constructor in charge of the work, knowing that he would be ridiculed if the old method were used, had the chief draftsman look up a number of men who understood the modern method in use at that time, promising them special pay if they would go to the New York yard and help in the work at hand. Some of these men accepted the proffered offer and the work progressed under their supervision for about nine months, but the old crowd of mechanics being strongly entrenched through political influence put every obstacle in the way of these new men and otherwise making life under such conditions almost unbearable, even going so far as to spoil some of the work, quite a number of steel plates weighing over a ton and worth about \$50 each being consigned to the scrap heap, followed by the resignation of these efficient mechanics, causing the work to fall off 50 per cent. Up to that time the navy yard was ahead of the private that was building a sister ship to the Connecticut, and anyone who is interested in shipbuilding will remember the race that took place between the navy yard and the private yard.

The time consumed in building these two ships was reduced from 36 months to 25 months, or nearly one-third, but even that is a poor record, for some of the Dreadnoughts can be built in 18 months without the expenditure of any extra amount of energy, but with competent mechanics under the supervision of efficient constructors.

The difference in the cost of these two ships, according to the figures given out by the Navy Department, was that the ship built at the navy yard cost \$330,000 more than the one built by the private concern. This difference in cost is easily accounted for by the "dead wood" as it is called in shipyards, and would more than make up for the difference. Men were doing helpers' work and receiving for their services mechanics' wages; helpers doing boys' work and receiving helpers' pay; mechanics working day work receiving piece work prices; in fact, there was a waste of money everywhere.

Three ships have been built at the New York Navy Yard since the battleship Connecticut was built, and they cost nearly \$800,000 more than the same class of ships cost in the private yards, the time consumed in their building being longer, as well, while the workmanship was of the poorest possible kind, and I know positively from personal inspections of the last product of the New York yard, the battleship New York, that the same work done on this ship would not pass inspection as a repair job on a

tramp steamer under the supervision of the Lloyds.

Figures do not lie, but liars will figure, as is shown by the figures given out at different times by some of our bureau chiefs, as to the cost of construction of battleships in our own navy yards, and why the cost is greater than that of the individual builders.

Prior to the enforcement of the eight-hour law, calling for an eight-hour work day on all government work, these gentlemen, for the reason that the work day was two hours shorter in the navy yards than the work day in the private yards, and the wages were 50 per cent higher, figured that the cost of constructing a ship in the navy yard of New York would cost 50 per cent more than the cost of construction by a private yard. This seemed to be very plausible, but there are other facts to be taken into consideration. Let me explain. There never was a ship yard in the country that the workmen worked ten hours a day; true, they stayed in the yard ten hours, but as for working, during my experience in handling men I was well satisfied if I could get the men to work eight hours per day. Also in private yards there are 50 per cent of the men working piece work and they do not average more than seven hours a day. Another item not taken into consideration by our navy experts, and that is the class of workmen. It makes a great difference in doing any kind of work if one has skilled workmen to deal with, and it is "working safe" to say that one man in four, only, is skilled. This will apply to any line of work from common laborer to draftsman. This is why the ship yards that pay the highest wages and have the shorter working day are able to secure the cream of the workmen.

Here are some facts to substantiate the foregoing statements: The Quincy yard in Massachusetts worked nine hours for years, and figured against yards working ten hours per day. The wages in the Quincy yard were 15 per cent higher than the wages in other yards; they also have to pay more for material, as they are farther from the rolling mills. Still the fact remains that the Quincy yard figured as low as the other yards and managed to get their share of the work.

Our bureau chiefs figured that in building ships under the eight-hour day it would cost \$224 per ton as against \$176 per ton for a ten-hour day, making a difference of \$48 per ton. Apparently the ship builders have taken advantage of these figures, as they have figured accordingly. Now if these figures are correct, the yards working nine hours a day figuring against the yards working ten hours a day would be at a disadvantage, as the difference of two hours a day, according to the bureau chiefs' figures, being equal to \$48, one hour a day would make a difference of one-half of \$48, or \$24, and figuring this in a contract of \$7,000,000 would be quite an item. Let us see. A ship

of 32,000 tons at a saving of \$24 per ton is \$768,000. If these bureau chiefs' figures are correct, the navy yard should save the people more than \$1,000,000 in building a Dreadnought. Before the eight-hour day in private yards, the cost of construction of a Dreadnought was \$500,000 more in the navy yard than in the private yards; now by adding the \$48 per ton more would give the navy yards an advantage of \$1,536,000.

The contracts for three dreadnoughts have been recently awarded, one to Newport News, one to the New York ship yard, Camden, N. J., and one to the New York navy yard. Four private firms figured on these ships, the fact of the matter is there are only four yards with the proper facilities for doing this class of work, exclusive of the navy yards.

The following are the estimates of the different yards as they were published in the marine newspapers. These figures are not always to be had as there are only one or two marine papers that publish these figures. Newport News Shipbuilding and Dry Dock Co., \$7,116,000; New York Shipbuilding Co., Camden, N. J., \$7,175,000; Fall River Ship and Engine Building Co., Massachusetts, \$7,440,000, and the Cramp Shipbuilding Co., Philadelphia, Pa., \$7,625,000. The difference between the highest and the lowest bid is \$509,000, and this difference is sufficient to build a submarine, complete.

Bids for destroyer were as follows: Newport News Shipbuilding and Dry Dock Co., 2 vessels, class 2, \$885,000 each; two vessels same class, Curtiss Turbines, \$875,000 each. Union Iron Works, San Francisco, Cal., 2 vessels class 1, \$880,000 each. Bath Iron Works, Bath, Maine, one vessel, class 2, \$884,000; two vessels, same class, \$850,000; three vessels, same class, \$850,000. Seattle Construction and Dry Dock Co., Seattle, Wash., 1 vessel, class 2, \$873,000; 2 vessels, same class, \$860,000. Fall River Shipbuilding Corporation, Quincy, Mass., 1 vessel, class 1, \$872,000; two vessels, same class, \$852,000; one vessel, class 2, \$889,000; 2 vessels, same class, \$852,000; 1 vessel, modification, \$815,000; 2 vessels, same class, \$795,000. William Cramp & Sons Ship and Engine Building Co., Philadelphia, Pa., 1 vessel, class 1, \$859,000; 2 vessels, same class, \$847,000; 3 vessels, same class, \$834,000; 1 vessel, class 2, \$853,000; 2 vessels, same class, \$841,000; 3 vessels, same class, \$834,000; 1 vessel, same class, \$845,000; 2 vessels, same class, \$834,000; 3 vessels, same class, \$825,000.

These figures have all been copied from one of the leading Marine Journals which stated that Mare Island also had a bid in for two of these dreadnoughts, and their bid was \$200,000 lower than the private yards. Mare Island yard is the highest-paid navy yard in this country, the rate of wages being 75 per cent higher than some of the private shipyards that figured against them. Mare Island is also at a disadvantage in getting material, as it is shipped from Pittsburgh. The boilers are built in

East New Jersey, transportation by way of the Panama Canal is about \$12.00 per ton, \$16.00 by rail.

Some more figures from these experts undoubtedly shows that they are wrong somewhere. Our bureau chiefs claim that it costs 50 per cent more to build ships in the navy yards than in private yards, and the construction in the navy yard figures 25 per cent less.

Here are some more figures, the main features of these destroyers:

Displacement, 1,100 tons.
 Turbine arrangement, twin screws.
 Shaft horsepower, 1,700.
 Revolutions per minute, 450.
 Steam pressure at turbine gauge pressure, 250 pounds.
 Cooling surface, condenser 11,000 square feet.
 Number of boilers, 4.
 Steam pressure at boiler, 265 pounds.
 Total heating surface of boilers, 21,500 square feet.

It will be seen that 4 boilers with 21,500 square feet of heating surface, shaft horsepower 17,000, as compared with some of the boilers, according to an article published in this same paper, on the Japanese battleship cruisers, 27,000 tons' displacement, have a horsepower of 70,000, and a speed of 28 knots, or about 2.5 horsepower for every 1,000 tons of displacement. These destroyers will have 17,000 horsepower for every 1,100 tons' displacement; the speed calls for 29½ knots per hour, and it seems just possible to attain a speed of 30 knots per hour with 17,000 horsepower.

The fact of the matter is that these figures are juggled to fool the people, as you will note was done in the bids, as the bid with modifications is much lower than the others, and then what is meant by "modifications"?

The work of building ships has always been distributed among the different ship yards; the ships are, as a rule, constructed on the same lines, and it would necessitate quite a saving to the people if the ships were built in one yard, for if the yard makes a specialty of a certain class of work they cannot only do it cheaper, but with better results as to workmanship, as a mechanic working on the same class of work all the time becomes more and more expert in that line.

These vessels can be built at a fair profit for \$600,000. The ship builders in this country have always had the sympathy of the American people, for they called that they could not build ships in competition with the ship builders of foreign countries on account of the high cost of labor.

(To be continued next month.)

Jacksonville, Fla.

Dear Sir and Brother:

The second annual convention of District No. 38 was held in Savannah, Ga., October 18 and 19, 1915. Delegates were present

from all points on the Atlantic Coast Line System. It was a harmonious meeting; in fact, it was the best meeting I have attended in years. Business was carried on with promptness and dispatch. Delegates from various points on the system were there, with one object in view, the betterment of the brothers on the system. I wish to congratulate Brother Bolton, our presiding officer, and the delegates for the able manner in which this meeting was conducted, and I sincerely hope that this will be a prosperous year for the brothers on the system.

The following officers were elected for the ensuing term: President, H. J. Bolton, Rocky Mount, N. C.; vice-president, C. M. Schultz, Waycross, Ga.; secretary-treasurer, E. S. Ryan, Jacksonville, Fla.; trustees—George Randall, Sanford, Fla.; C. M. Schultz, Waycross, Ga.; C. D. Miller, High Springs, Fla.

Yours fraternally,

E. S. RYAN,
 Secretary-Treasurer.

Salida, Colo.

At a regular meeting of Narrow Gauge Lodge No. 427 of Salida, Colo., the following resolutions were adopted:

Whereas, It has pleased our Heavenly Father, in His infinite wisdom, to call from this earth to her home above, the beloved wife of our brother, Vice-President J. M. Campbell; therefore, be it

Resolved, That we, his brother workers, extend to him our most heartfelt sympathy in this his sad hour of bereavement; be it further

Resolved, That to the invalid daughter we pray that our Heavenly Father may so console and comfort her in her bereavement that she may be able to bear her double burden with fortitude; be it further

Resolved, That a copy of these resolutions be spread upon the minutes of our lodge and a copy presented to our brother, J. M. Campbell.

EDWARD SCHILTHUIS,
 H. F. JONES,
 WM. DARGAVEL,
 Committee.

North Bay, Ont., Can.

Dear Sir and Brother:

At the last regular meeting of Nipissing Lodge No. 417, the following resolutions were adopted:

Whereas, Our Heavenly Father, whom we believe and know doeth all things well, has in His infinite wisdom, called to His heavenly home, the beloved father of our worthy and esteemed brother, T. J. Wilson.

Resolved, That we extend to our brother and his family our sincere and heartfelt sympathy in their hour of sorrow, as the tie is broken here there will be one to welcome

them when they reach that land where there is no parting or sorrow.

Resolved, That a copy of these resolutions be sent to our esteemed brother, a copy sent to his family, a copy spread over the minutes and a copy sent to our Journal for publication.

A. L. LYE,
E. COOK,
F. GARDNER,
Committee.

Esquimalt, B. C., Oct. 27, 1915.

The boiler makers, iron ship builders and helpers of Local No. 191, Victoria, B. C., had a very enjoyable picnic at Deep Cove, 23 miles distant, on Labor Day. It is to be an annual event. A splendid program of

Atkinson, Fifth I. V. P., with us, but better luck next time.

Enclosed please find photo of the picnic party at the Deep Cove grounds, which we hope you will publish full size in the next issue of our Journal, also this letter.

Yours fraternally,

A. STEWART,
Secretary Lodge 191.

Rocky Mount, N. C.

Dear Sir and Brother:

In September issue of the Journal I read with much interest that article from the pen of Brother A. J. Dixon of Lodge No. 239 on conditions in many railroad shops, as well as discrimination practiced by many railroad officials, against fair-minded as

A GROUP OF MEMBERS OF LODGE No. 191, ESQUIMALT, B. C., CAN., AND THEIR FAMILIES ON A PICNIC, LABOR DAY, SEPTEMBER 6, 1915.

sports was carried out, the principal events being baseball, football, tug of war and 100 yard foot race for the championship of the local. The baseball and tug of war went to the Helpers, the 100 yard race to Brother Percy Peters, riveter, and the football game was declared a tie after 10 minutes of extra play.

Everybody enjoyed themselves to the utmost and special credit is due the committee who had the arrangements in hand from the start, not only for the efficient manner in which the transportation, program of sports, prizes, etc., were arranged, but also for the pleasant way in which they looked after the welfare of the wives and children of the members and their friends.

The thanks of the local are also due the many merchants of the district who so generously contributed to the prize list. We were very much disappointed in not having Brother J. Reed, I. D. O., and Brother. W.

well as active members of the various organizations employed in railroad shops. A copy of that article should be framed and hung up in the home of every mechanic employed in the railroad shops of America, for its good things, to ponder over by men who expect to get a square deal in the future.

Many railroad officials try to be fair, and are fair, while others are a standing disgrace to American manhood, as well as a menace to the peace and welfare of the industrial future, but they don't realize it, as their desire and ambition is to grind out dividends at the expense of the shop men, and are doing it right along.

Their weapon is discrimination against any employe who has enough of red blood in his veins to stand like a man, and declare himself. Such tactics should be stopped, as it doesn't seem possible that men who claim to be free men will continue to

submit to conditions almost akin to slavery. Men will fight to uphold the honor and dignity of their country; will leave father, mother, wife of children to shed their blood in defense of it, which is their duty to do; otherwise we would be a nation of slaves. If such is the case and cannot be contradicted, then why is it possible that we tolerate our industrial rights to be trampled on and in many cases without even a protest. For industrial discrimination is nothing but slavery under another name, a system which drives thousands of children out of the schools into the factory in their tender years. At a time when they require at least some education as well as moral training to fit them for the duties of American citizenship, both men and women. We hope the day is not far distant when votes for women will be forgotten, only when they are depositing their ballot for honest government.

Every man and woman who toils for a living should carefully read the report of the Industrial Commission on conditions existing among the wage workers of our country, both in some railroad shops and many industrial plants. It is impossible that such a state of affairs would be tolerated in the land of the brave and the supposed home of justice to all the American people, not any particular class of people.

If we would only read matters of real interest or economic subjects, something that would show us the road to at least economic justice through the co-operation and intelligent action of organized labor forces, instead of filthy publications used and financed by organized capital, with only one purpose in view, to destroy and prevent any possible opportunity of the emancipation of the wage workers of America, which is patent to all who have eyes to see or ears to hear, such a blind policy of description would be impossible. If we would only study the Sermon on the Mount, but what awful mistakes we make, and sometimes in the name of justice, for personal advancement, and Brother Dixon, late of Lodge No. 238, was one of the real victims.

A ROCKY MOUNT, N. C., BOILER MAKER.

Denver, Colo.

Dear Sir and Brother:

In memorial of Mrs. Frank Brinkley, who died October 10, 1915:

Whereas, The finis to all life is death; relentless death going hither and there, non-respector of persons, laying his cold, irony hand upon the aged today, then snatching the suckling babe from its mother's arms or stilling the heart in the blithesome youth on the morrow. So death entered into the home of our brother, Frank Brinkley, and took from our midst his loving wife, more sad it seems because of youth, her years being thirty. She had graced our brother's home less than a year, and as the months passed on, the hands of the expectant mother

deftly turned and stitched the little garments that would never be used; so we grieve with our brother in his dark hour of sorrow; therefore, be it

Resolved, That Local No. 179, I. B. of B. M., I. S. B. & H. of America extend our hearts in sympathy to him.

We greet the heartless death,
As with uncovered head,
We saw thy cruel triumph
In the calm silence of our brother's dead.

How silently she lies in death's embrace,
And yet the while, "to us it seems"
'Tis not death we look upon,
But some unnatural midnight dream.

But the pallid face and weeping friends
And the flowers upon your bier
Dispel the thought of flitting dreams,
Proclaim to us cold death is here.

We leave thee, sister, to thy last long sleep.
We cannot bring you back to life;
We bid you now a last farewell.
Farewell, to thee, our brother's wife.

F. S. KIDNIEGH,
Committee.

Dalhart, Texas.

At a regular meeting of Dalhart Lodge No. 476, the following resolutions were adopted:

Whereas, It has pleased Almighty God to take from our midst the beloved father of Brother Michel Burke; therefore, be it

Resolved, That the bereaved family have lost a loving father; and be it further

Resolved, That our heartfelt sympathy be extended to the family and relatives of our departed brother's father and that a copy of this be sent to the sorrowful family, a copy be spread on the minutes of our lodge and a copy sent to our official Journal for publication.

WALTER KEYS,
E. BETTS,
T. P. NELSON.

East St. Louis, Ill.

A few words to the brothers at large in regard to our Labor Day celebration, as the majority of our members work seven days a week (as we are in a round house district). It is hard for us to make the showing we should in a line of march.

With the able assistance of the terminal brothers (Lodge No. 276), our parade was a grand success. As we differ with the actions of our city officials in regard to what craft should hold the position of city boiler inspector, we endeavored to make quite a showing. We were successful by out-numbering our union engineers by 5 to 1.

Their motto seems to be "Grab all," regardless of whom it belongs to. They claim they are combination of all trades, which must mean master of none.

At present they have control of the position of city boiler inspector. We distributed the above "Safety First" cards along the line of march, and they answered the purpose.

As it was something new, the public endeavored to find out what it meant. As we have the best of the argument, we have all the confidence in the world that a boiler maker will be on the job at an early date.

Your humble servant had the honor to hand our honorable mayor our card before we started on our line of march. So it would remind him to take particular attention to see which craft was the best represented.

After we made our little three-mile walk to our place of amusement, we found one of our members had taken up the art of photography; although new at the business, you will agree with me he made a very nice picture. Our banner was placed a little

the dearly beloved mother of our worthy and esteemed brother, Henry B. Berge; therefore, be it

Resolved, That we, his fellow brothers, extend to our brother our heartfelt sympathy in this his hour of bereavement, and pray that the Almighty God may comfort and console him, and that he will bear his trial with fortitude; be it further

Resolved, That a copy of these resolutions be spread on the minutes of our meeting, a copy to be forwarded to our official Journal for publication.

FRED OLSON,
JOHN AMUNDSON,
E. A. CONLIN,
Committee.

Chicago, Ill.

Dear Sir and Brother:

At the last regular meeting of Central Lodge No. 220, I. B. of B. M. & H. of Amer-

A GROUP OF MEMBERS OF LODGE No. 363, EAST ST. LOUIS, ILL., LABOR DAY, 1915.

high and the name of the Boiler Maker does not show. Our marshal, Brother James Whitmore, at the right a little back of the banners, overlooked that part. As he was successful in landing us at the park safe and sound, we will forgive him. Your humble servant had to excuse himself a short distance from the park to take care of our visiting brothers on the return to the hall.

"Safety First. Have a Boiler Maker for City Boiler Inspector."

Fraternally yours,
JOHN ROCHE, C. S. No. 366.

Minneapolis, Minn.

Dear Sir and Brother:

At a regular meeting of Flour City Lodge No. 11, the following resolutions were adopted:

Whereas, It has pleased Almighty God in His divine wisdom to remove from our midst

ica, the following resolutions were adopted:

Whereas, It has pleased the Almighty God in His divine wisdom to remove from our midst, the dearly beloved Father of our worthy and esteemed brother, Patrick Lowe; therefore, be it

Resolved, That a copy of these resolutions be spread on the minutes of our meeting, a copy be forwarded to our esteemed brother, and a copy be forwarded to our Journal for publication.

P. CASSIDY,

A. G. SMITH,
Committee.

St. Paul, Minn.

Dear Sir and Brother:

At a regular meeting of Capitol City Lodge No. 3, I. B. B. M. & I. S. B. of A., the following resolutions were unanimously adopted and an order was made that a copy of

the same be sent to the editor of the Journal so that the same can be published in our official Journal:

Whereas, Our Executive Council has withdrawn the support of the business agents of the 19 cities and districts that had these business agents; and

Whereas, In summarizing the expense accounts of the second quarter, we find that the report as shown by Lodge No. 25 of San Francisco in the October Journal is correct; and

Whereas, Our Executive Council has gone on record at their annual meeting held October 22, as being in favor of non-concurring in the request of Capitol City Lodge No. 3 to restore financial assistance to business agents; and

Whereas, Our Executive Council took no further action to curtail expenses than to dispense with the services of the said 19 business agents indefinitely; therefore, be it

Resolved by Capitol City Lodge No. 3, I. B. B. M. & I. S. B. of A., That if our Executive Council does not restore financial aid to our business agents and pay the money that is due to the support of our business agents, that we go on record as being in favor of taking some action that will force our Executive Council to give us a more business-like administration; and be it further

Resolved, That we heartily approve of the resolutions of San Francisco Lodge No. 25, which were printed in our official Journal, October, 1915, issue.

WM. JOHNSON,
G. L. COX,
J. J. GALLINO,
P. WELSH,
Committee.

Lafayette, Ind.

Dear Friend and Brother:

It has been a long time since I hit the trail; those days riding on the cushions made my feet sore. It is different now, Jim; I don't think I would know how to ride a brownie now, but joke with me if I had to.

I am taking a vacation for a couple of months. When I left Deer Lodge everything was working fine, but the hours, 40 per week, and living so high. I have compared the cost there and the East—over 25 per cent difference in favor of the home team, Montana, by heck! It has been several years since I was in this territory. Will say Brother Maher, Seventh International Vice-President, has accomplished a lot of good in this section of the country.

I stopped off at St. Paul, Minneapolis, Milwaukee and Chicago, taking a rest here with my friend, Dick Aldrich, and wife, going to Chicago next Saturday; will spend Thanksgiving with my friends in Elkhart, Ind.; from there will go to Cleveland and Detroit for a while, then back to the mountains.

I had a nice time in Milwaukee, met some friends I worked with 30 years ago, and

Mrs. Callahan, the mother of our representative of District No. 26, gave me a royal reception, and Brother Jack is some worker and a good fellow with it, the right man in the right place.

I think the movement to build a monument in memory of Brother Gilthorpe is all right, for he was a grand old veteran and one we ought to be proud of.

Give my regards to Brother Joe Franklin and Hinzman, also Brother Reinemeyer.

Wishing you good luck, I remain

Yours fraternally,

JACK CUMMINGS.

Philadelphia, Pa.

Dear Sir and Brother:

I am inclosing you a photograph of Brother Robert J. Hanna, who has been honored

Photo of Brother Robt. J. Hanna, of Lodge No. 19, Philadelphia, Pa., and an Aide-de-Camp, on the Staff of the Commander-in-Chief of the United Spanish War Veterans.

with the appointment as an aide de camp on the staff of the commander-in-chief of the United Spanish War Veterans. Brother Hanna is well deserving of this recognition, having faithfully served during the Spanish-American War, and after being honorably discharged worked hard to bring about the inception of the United Spanish Veterans. To Lodge No. 19 Brother Hanna has been a valuable member, always willing to render assistance whenever possible, and we always

A LARGE OCEAN-GOING STEAMER, BLOWN FOUR AND ONE-HALF MILES FROM THE CHANNEL DURING THE STORM SOME TIME AGO AT GALVESTON, TEXAS.

felt assured the committee that he was a member of would be successful.

Believing that the type of Brother Hanna is a credit to both the Spanish War Veterans and our own Brotherhood, I am

Fraternally yours,
ROBT. S. HOPKINS, C. S. L. 19.

Galveston, Tex.

Dear Sir and Brother:

I am sending you two views; one is a large steamer that was blown ashore in our last storm, and the other one is a gang of

boiler makers and helpers that did quite a lot of work on her after she was dredged afloat. The steamer was blown about four and a half miles over a shoal mud bank, and a channel had to be dug up to her and a large hole around her so that the bank underneath would give way before she would float.

We would like to have you put the views in our Journal, if you would not mind doing so for us.

Hoping this will be satisfactory, I remain

Yours fraternally,

E. T. CHESTER.

A GROUP OF MEMBERS OF LODGE No. 132, GALVESTON, TEXAS, WHO MADE EXTENSIVE REPAIRS TO THE STEAMER BLOWN ASHORE IN THAT HARBOR SOME TIME AGO.

 Mr. C. W. Leigen, Secretary Lodge No. 207,
 Walnut Springs, Tex.
 Mr. Guy Hooper, Secretary Lodge No. 265,
 Smithville, Tex.

Gentleman and Brothers:

This is to inform you that you and the entire membership of your respective lodges, and their families, are urgently requested to be present with us at our next regular meeting, November 25, 1915.

We are going to have a little music, a little singing, a little dancing, a little something to eat and a BIG, jolly good time. Come, one; come, all. At least see that your local is represented.

Yours fraternally,

S. E. HARRIS,

Corresponding and Financial Secretary.

P. S.—Try and let me know by the 22nd, inst., the number we may expect from your local, and oblige.

S. E. HARRIS.

P. S. No. 2:

Mr. F. P. Reinemeyer, International Secretary-Treasurer, Kansas City, Kas.

Dear Sir and Brother:

The above invitation also includes all of our International officers.

See to it that you are represented.

S. E. HARRIS.

Minneapolis, Minn.

At a regular meeting of Flour City Lodge No. 11, the following resolutions were adopted:

Whereas, It has pleased the Almighty God in His divine wisdom to remove from our midst the dearly beloved son of our worthy and esteemed brother, Nels Ostram; therefore, be it

Resolved, That we, his fellow brothers, extend to our brother our heartfelt sympathy in this hour of bereavement, and pray that the Almighty God may comfort and console him and that he will bear his trial with fortitude; be it further

Resolved, That a copy of these resolutions be spread on the minutes of our meeting, a copy be forwarded to our official Journal for publication.

FRED OLSON,
 JNO. AMUNDSON,
 E. A. CONLIN,
 Committee.

Alton, Ill.

Dear Sir and Brother:

Whereas, It has pleased the Almighty God in His wisdom to remove from our midst our late brother and fellow worker, Phillip Doyle,

Resolved, That Lodge No. 483 of the International Brotherhood of B. M., I. S. B. &

H. of America, having learned of the sad event in session on this date, is filled with sorrow at the announcement, and tender to his bereaved relatives our heartfelt sympathy in their day of sorrow, and be it further

Resolved, That while we realize that it is destined for all that live to die, and while all must submit to the decree of Him who, we are told, "doeth all things for the best," it is with regret that we realize that never on this worldly abode can we clasp his hand in honest friendship or hear again the sound of his cheerful voice.

Resolved, That our charter be draped for the space of 30 days. The members of Lodge No. 483 also request that this be published in the next issue of Journal.

R. J. FITZGERALD,
 Chairman of Committee.
 E. A. NELSON.
 JOSEPH DEGAN.

East St. Louis, Ill.

Dear Sir and Brother:

Please publish the working rules, having been approved by Local No. 363:

Working rules of Local No. 363 of the International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America:

KNOWN AS TRANSIENT WORK.

The following rules shall govern all members of the International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of East St. Louis, Ill., and vicinity:

1. Eight hours shall constitute a day's work, between 8 a. m. and 5 p. m., except Saturday. Double time shall be paid for all overtime and the following holidays: All Sundays, New Year's Day, Independence Day, Thanksgiving Day and Christmas Day; also Saturday afternoon, and no member is permitted to work on Labor Day.

2. The minimum rate of pay for boiler makers shall be 60 cents per hour; for helpers and rivet heaters, 42½ cents per hour on all work.

3. The following shall be considered boiler makers' and helpers' work: All boiler work, breeching, stacks, up-takes, iron and steel ship building, all iron and steel tanks (pontoons, air, oil and water-tight), purifying boxes, stand pipes, smoke consumers, brewery vats, water towers, all work in and around blast furnaces and rolling mills, coal hoppers, ash chutes, coal bunkers, pans and tanks of all descriptions, superheaters, evaporators, condensers, gasometers, and all air, steam, gas water-tight work, all grain bins, grain tanks and steel grain elevators, the putting in of all flues or tubes, steel, brass or copper.

4. On all tight work a gang shall consist of four (4) men, namely: One (1) rivet heater, one (1) holder on, and two (2) boiler makers.

5. Saturday noon shall be pay day.

6. Each member shall be governed by

these rules and the constitution and by-laws of this organization.

JNO. ROCHE, S. L. 363.

Concord, N. H.

Dear Sir and Brother:

Inclosed please find a picture of a group of members who took part in the Labor Day parade, September 6, 1915. For the past five or six years there have been all kinds of parades in Concord, N. H., but never a Labor Day parade. To hear some of the people talk here, you wouldn't think there were enough union men to make a parade, but I wish to state that we not only had a parade, but we had one that we can feel

ing so, to voice his own and the lodge's appreciation of the faithful stewardship and good work rendered by Brother McDonnell, who accepted the token of good will from his associates with gratitude and assurance that he would continue to do all that he could to advance the interests of Lodge No. 585.

It was with profound regret that Lodge No. 585 heard of the temporary retirement from his sphere of activity of that prince of good fellows, that implacable opponent of corruption and dark cellar methods in trade unionism in our craft, International Deputy Organizer Charles F. Scott, for during his sojourn in Boston and vicinity he

A GROUP OF THE MEMBERS OF LODGE No. 245, CONCORD, N. H., LABOR DAY, 1915.

justly proud of. Good men were put on the committee for Labor Day, and they certainly did it up in good shape. Will also state that we carried off second prize (which is not so bad). After the parade, everybody beat it for Capitol Hall, where we had something on ice. Brother George Hudson took the picture.

Hoping you will find room for this in the Journal, I remain

Yours fraternally,
JAMES J. BERRYMAN, R. S.

Editor of Journal: East Boston, Mass.
Lodge No. 585 at a recent meeting showed its appreciation of its retiring treasurer, Brother Bernard McDonnell, by presenting him a pair of handsome gold cuff links. President William McNabb (who with Brothers Thomas J. Farmer and D. B. McInnes arranged the affair), in presenting the links to "Barney," stated he took pleasure in do-

ing so, to voice his own and the lodge's appreciation of the faithful stewardship and good work rendered by Brother McDonnell, who accepted the token of good will from his associates with gratitude and assurance that he would continue to do all that he could to advance the interests of Lodge No. 585.

It was with profound regret that Lodge No. 585 heard of the temporary retirement from his sphere of activity of that prince of good fellows, that implacable opponent of corruption and dark cellar methods in trade unionism in our craft, International Deputy Organizer Charles F. Scott, for during his sojourn in Boston and vicinity he

has been a great help to Lodge No. 585 in adding to its membership, rounding up delinquents, smoothing over in his practical common sense way many difficulties that have beset us; in fact, assisting us in every conceivable manner, and we hope conditions may soon warrant his re-entry into the arena of activity again.

Brother Robert Mills is still on the disabled list, but we hope he will soon be O. K. again.

We regret to state that efforts of the surgeons to the sore eye of Brother John Warrnock were unavailing and he is still suffering considerably from the terrible injury he received to his optic organ in August last.

Brother McNabb, our live-wire president, with our other active members, is doing all he can to build up the lodge.

Yours fraternally,
DANIEL B. MCINNES, C. S. L. 585.

Philadelphia, Pa.

Dear Sir and Brother:

The following is a copy of Mrs. Anderson's letter to the employes of boiler shop, Philadelphia Navy Yard:

To the employes of the boiler shop, Philadelphia Navy Yard, who have so generously contributed to a fund that was presented to me by your committee in the hour of need: I do not know how to express my appreciation of your thoughtfulness of this grand act of charity, which will be a memorial of your Christian character and will never be forgotten by me.

Mr. Anderson well understood in the last days of his illness what you were doing for him, and expressed a wish to shake hands with all in token of his appreciation, but his physical condition would not permit him.

Thanking all and may God's blessing ever remain with you,

Sincerely yours,

EMMA ANDERSON.

In connection with Mrs. Anderson's letter of thanks to the employes of the boiler shop, Philadelphia Navy Yard, permit me to add on behalf of the members of Lodge No. 19 a word of praise to which they are entitled. During Brother Anderson's long illness, our members never hesitated to visit him daily and console him, and in his hour of need arranged a drawing for his benefit; in six days' time realized the magnificent sum of \$190. The day of his funeral nearly every man in the shop (all members of Lodge No. 19) attended to pay their last respects and show the loyalty which we believe should be shown every shopmate.

Hoping you can arrange to publish this, as well as the others I am sending you, in December Journal, I am

Fraternally yours,

ROBT. S. HOPKINS, C. S. L. 19.

Portsmouth, Va.

Dear Sir and Brother:

The problem of today, as of yesterday and tomorrow, is how to establish equity between men. The worker who is forced to sell his day's labor today, or starve tomorrow, is not in equitable relations with the employer, who can wait to buy labor until starvation fixes the rate of wages and hours of time.

The labor movement is the natural effort of readjustment, and ever-continued attempt of organized workers, so that they may withhold their labor until the diminished interest or profit or capital of the employer shall compel him to agree to such terms as shall be for the time measurably equitable. These are the forceful methods of all times, and may continue to develop manhood and womanhood by forceful revolution as workers advance these lines or may cause social earthquakes, and become destructive by the the organized oppression of labor's rights.

Before the solution of the labor problem

can be reached, the nature of the complaint must be understood; primarily, the responsibility for strikes and outbreaks rests upon the wage labor system, a system that encourages cunning above conscience, that robs the worker and enriches the employer; a system that shortens life, engenders disease, enfeebles the mind, corrupts the morals and thus propagates misery, vice and crime; a system, like a serpent, pushes itself along wherever those bonds of commercial iron and steel are laid, carrying discontent in its train.

A system which enables a few men to sit at their desks in any of our large industrial centers without any thought of the welfare of the country and issue imperial mandates which direct the movement of the whole industrial population; a system which makes every industrial department head an autocrat at whose nod or beck the poor, unrequited horse whose labors must bow their head and bend their knees in suppliance. We should not war with man for being what we make him, but strike a powerful, telling blow at the base of the system so long as the present order of things exists. Just so long will the attempt to make peace between the man who sells and the man who buys labor be fruitless, but are prepared to lay seige to this bulwark of oppression.

Remember, it has been with us for centuries; it has slowly yet steadily been making new and deeper inroads day by day, year by year, until today it stands so well established and powerful than even the staunchest heart in the ranks of labor defenders almost sinks in despair at the thought of breaking down the barriers of dear ignorance and superstition to which its existence has given him birth. The toiler must educate himself so that presentations of facts that are before him are not to be remedied through suicidal strikes, but it lies only through effective organization.

Without organization, we are helpless, through it we can forever banish that curse of modern civilization, wage-slavery.

Fraternally,

H. E. PHELPS, Lodge No. 57.

North Bay, Ont., Can.

Dear Sir and Brother:

At the last regular meeting of Nipissing Lodge No. 417, the following resolutions were adopted:

Whereas, Our Heavenly Father, whom we believe and know doeth all things well, has, in His infinite wisdom, called to his heavenly home the beloved father of our worthy and esteemed brother, T. J. Arlien,

Resolved, That we extend to our brother and his family our sincere and heartfelt sympathy, in this their hour of sorrow, as the tide is broken here, there will be one to welcome them when they reach that land where there is no parting or sorrow.

Resolved, That a copy of these resolutions be sent to our esteemed brother, a copy sent

to his family, a copy spread over our minutes and a copy sent to our Journal for publication.

A. L. LYE,
E. COOK,
F. GARDNER,
Committee.

St. Louis, Mo.

Dear Sir and Brother:

It again becomes my painful duty to inform my brothers through the columns of the Journal of the sad and untimely death of a good and true member of this local (No. 27). This brother, Albert J. Savagnac, was a member of the Brotherhood since 1908. He was employed at the John O'Brien Boiler Works up to the time said firm with two others refused to sign the agreement. True to his union principles, this brother walked out on strike with the rest.

Naturally interested in the place therein, he, in passing by, the night of September 30, saw a light burning, approached closer, intent on seeing what was taking place; heard not the stealthy steps of the watchman paid to guard the property. What transpired between our brother and his assailants will never be known, as dead men tell no tales. Suffice to say that those foes of unionism, after beating our brother, shot him; yes, my brothers, shot him. He was taken to the City Hospital, where he died at 1:30 p. m. the next day.

The watchman (John Tolin) was exonerated; even though his shot deprived a wife of a husband, a little boy of his father, he went free. What a sad travesty on justice. On the pages of our history, the name of Brother Savagnac must ever remain an honored one, since he died a union martyr in the prime of his early manhood. Our brother was called away. The shock was a severe one, and the incidents surrounding his death cast a gloom over the beautiful October day on which our martyred brother was borne to his last resting place. Our local, No. 27, with the true sympathy and ever ready help and comfort for which our local it noted, turned out in large numbers. On every side could be heard expressions of sorrow and regret for the sad, sudden ending to a young life.

Too much cannot be said in condemnation of such treatment at the hands of those monsters of humanity. Our heartfelt sympathy and, I feel sure, the sympathy of all his brother members of the Brotherhood, go out to his loved ones. May He, the dispenser of all consolation, help and comfort them in their hour of sorrow in his taking away. We know we have lost a firm supporter of unionism, but we are proud of our deceased brother. Proud and devoted to the principles which made him a martyr. The principles which mean the right to earn a living, the right to be a union man and to stand for the right to uphold and keep to the letter our honored place in the field of labor,

even in the awful opposition we are meeting with.

Fraternally,
JAS. REDMON,
JAS. DONNELLY,
JAS. CALLAHAN,
Committee.

Little Rock, Ark.

Dear Sir and Brother:

At our last regular meeting of Local No. 69, the following resolutions were adopted:

Whereas, It has pleased the Almighty God in His divine wisdom to remove from this life the infant son of our worthy and esteemed brother, G. D. McLeod; therefore, be it

Resolved, That we, his brothers, extend to Brother McLeod and his wife our heartfelt sympathy in this his sad hour of bereavement and pray that God may comfort and console them that they may bear their sorrow with Christian patience.

Resolved, That these resolutions be spread on the minutes of Local No. 69, and a copy be sent to the bereaved parents, also a copy be sent to the Journal for publication.

At a regular meeting of Flour City Lodge No. 11, the following resolutions were adopted:

Whereas, It has pleased Almighty God in His divine wisdom, to remove from our midst the dearly beloved son of our worthy and esteemed brother, William M. Teague; therefore, be it

Resolved, That we, his fellow brothers, extend to our brother our heartfelt sympathy in this hour of bereavement, and pray that the Almighty God may comfort and con-

sole him, and that he will bear his trial with fortitude; be it further

Resolved, That a copy of these resolutions be spread on the minutes of our meeting, a copy be forwarded to our official Journal for publication.

FRED OLSON,
JOHN AMUNDSON,
E. A. CONLIN,
Committee.

Madison, Wis.

Dear Sir and Brother:

I am inclosing under separate cover a photo of our second annual Labor Day float, which I would like to see published in Journal.

Our float this year was a decided change from that of last year, as it did not so

mobile, are Brothers Stevens, Forrest, Hagan, Froney, in car front seat; Hartner and Westover at wheel, with his baby boy as mascot, seated on windshield; back seat, Magarvio and McCann. I am very sorry that Brothers Dixon and Driscoll were not able to attend.

The revival of Labor Day parades in this city is not meeting with the success or cooperation that was expected. I firmly believe that this is not only a waste of money, but a waste of time and energy for the little results accomplished. If the money we spend on Labor Day were properly spent on giving legal education to some of our young men and women of the labor movement of this country, the results would be of greater nature and have a deeper effect on the labor movement in general. Why?

The one man who is considered the greatest legal mind of this country by our friend,

FLOAT OF THE BOILER MAKERS AT MADISON, WIS., LABOR DAY, SEPTEMBER 6, 1915.

forcibly impress on the minds of those who were curbstome spectators, the element that goes to make up the average boiler shops. I am safe in saying that the average person, or over sixty per cent of the people, does not know under what trying conditions we have to work; if it were possible to awaken in every person of society that slumbering element of human feelings, boiler makers included as well, how soon would the condition of labor be righted, and placed on a more human basis.

Brother Westover donated the services of his automobile for the day. The boiler that is mounted on the hood of the car was constructed out of time by Brother Hartnett and Brother Westover, and same decorated by Mrs. Westover. The Madison Federation of Labor, Carpenters and Teamsters also had floats in the parade, and about seven hundred local union men turned out.

Reading from left to right, leading auto-

mobile, are Brothers Stevens, Forrest, Hagan, Froney, in car front seat; Hartner and Westover at wheel, with his baby boy as mascot, seated on windshield; back seat, Magarvio and McCann. I am very sorry that Brothers Dixon and Driscoll were not able to attend.

Possibly if we would follow this mode of legal procedure, we would have less lawyers and court fees to pay, and possibly a case like the Danbury Hatters would have been avoided. It is a foregone conclusion, if the workers are to be successful, they must adopt some of the methods used by the corporation, but the greatest weapon in the hands of labor is education of the masses. Violence will only react on us. Therefore, brothers, we must build the future society on the bedrock of education. Let our motto be: Education first, last and all the time.

Sincerely yours,

W. L. FOREST.

Minneapolis, Minn.

At the last regular meeting of Flour City Lodge No. 11, the following resolutions were adopted:

Whereas, It has pleased the Almighty God in His divine wisdom to remove from our midst the dearly beloved daughter of our worthy and esteemed brother, T. B. Coleman; therefore, be it

Resolved, That we, his fellow brothers, extend to our brother our heartfelt sympathy in this his sad hour of bereavement, and pray that the Almighty God may comfort and console him, and that he will bear his trial with fortitude; be it further

Resolved, That a copy of these resolutions be spread on the minutes of our meeting, a copy be forwarded to our official Journal for publication.

FRED OLSON,
JNO. AMUNDSON,

A Compilation of Labor News.

(By The A. F. of L. News Service.)

SOUTHERN NEWSPAPERS FAVORS TRADE UNIONS.

Columbia, S. C.—The Columbia State has again shown it is in the forefront of thoughtful Southern newspapers by a defense of the workers' right to organize. Manufacturers are called upon to reckon with the spirit of the times, and in referring to the discharge of several cotton operatives in Greenville, because they joined the United Textile Workers' Union, the editor says:

"Collective bargaining by labor is recognized nearly everywhere in the United States, and in opposing it is no more wisdom than would be opposing movements of the tides or the march of the seasons."

"To say that textile workers of the South," continues this paper, "are peculiarly situated, that they and their work differ from other laboring men and their employment, so that unionizing they would not help them, is to challenge the plain facts of labor's history.

"If the mill workers of South Carolina have in politics flocked together, if they have sometimes stopped their ears to the appeals of their real friends, if they have fallen an easy prey to demagogues opposed to every reform designed for their betterment, the explanation is not hard to find. They have felt that they were neglected and forgotten. A sense of helplessness and hopelessness has depressed them and they have groped for and grasped at anything that has promised relief and strength. Why should anyone oppose their unionizing? Why should they not join forces? Let them do so, and as sure as day comes after night, they will become self-reliant and gain freedom from a

demagogic domination. They will learn and know that fellow citizens engaged in other work are not their enemies and oppressors.

"The mill workers have the right to unionize. Their unionizing cannot and ought not be prevented. It will make them better citizens and better men. It will in time make them freer and stronger. That is enough for The State."

BANKS WARNED AGAINST USURY.

Washington.—Comptroller of the Currency Williams has mailed a letter to all national banks calling attention to the law against usury.

"This office," says the letter, "regrets to report that the sworn statement of condition of a great many national banks show that Section 5197, U. S. Revised Statutes, against usury, has been grossly violated by these banks.

"You are respectfully advised and admonished that this provision of the national bank act should be faithfully observed by all national banks, their officers and directors, in accordance with the solemn oaths taken by directors.

"You are requested to read this letter at the next meeting of your board of directors, and to have it inscribed upon the minutes, and to send a copy of this letter to every member of your board who may not be present at such meeting."

In a speech last month the federal bank official called attention to the usurious practices of certain national banks, which charged, in some cases, as high as 2,400 per cent.

"Here in this country," he said, "We find bankers, men in business who should be the most respectable, as it is the most responsible of all secular avocations, literally crushing the faces of their neighbors, deliberately fastening their fangs in the very heart of poverty."

SPECIAL PRIVILEGE SURPRISED.

New York.—Special privilege in this state has not recovered from its smashing defeat when the people rejected the new constitution at the last election.

The majority of nearly half a million against surprised the most optimistic opponent of the proposed organic act. Trade unionists were a unit in their opposition and the campaign carried on by the organized workers made it possible for every citizen in the state to become acquainted with those sections in the constitution that were designed to place the military above civil authority. As the convention that framed this constitution rejected the numerous suggestions made by labor, it is quite possible that the next convention will recall labor's demonstration of solidity on the first Tuesday in November. Other objections to the new constitution were: Governor could appoint officials without confirmation by the state senate; governor would have unrestricted authority to remove officials and his power over appropriations would be extended.

REJECT ALLEGED "M. O."

Detroit.—Trade unionists succeeded, at the last election, in defeating the proposed municipal ownership plan by an actual majority of 2,399. It was necessary to secure 60 per cent of the total vote cast. This means that the plan was rejected by about 10,000 votes.

Unionists opposed the plan because it made no provision for arbitrating grievances workers might present. It was proposed to make the commission that would run the street cars absolute dictators, beyond the control of the city council or other representatives of the people. The powerful street car men's union showed that if this plan was adopted it would be impossible to enforce contractual relations similar to those now existing between them and the present company, and that they were in danger of losing every advance it has taken years to secure. The unionists attempted to have the proposal amended so that the workers' rights would be protected. In this they failed, so they defeated the plan.

By the small majority of 167 an amendment was carried which empowers the city to adopt the plan. It is claimed that under this amendment the defeated proposal can be resubmitted to the people.

EVILS OF CHILD LABOR SHOWN.

Berkeley, Cal.—There are just 1,990,225 children less than 15 years old working for wages in the United States, said Miss Jose-

phine J. Eschenbrenner, of the national child labor committee. This is a ratio of one child in six, she said, who are kept out of school to make American dollars under fearful industrial conditions. In New York there are 10,000 houses in which sweatshop labor is carried on. This means 120,000 families engaged in this kind of labor in the shadow of the statue of liberty. Other Eastern cities are also hotbeds of this sort of industry, while in Southern cotton mills conditions are appalling. The morale of whole states full of pure Americans has been lowered through child labor, she declared.

NEW PACIFIC BOAT LINE.

New York.—The Pacific and Eastern Steamship Company, a \$2,000,000 corporation, has been organized with offices in this city, for the purpose of replacing the Pacific Mail Steamship Company. The new line will operate under the American flag.

The Pacific Mail recently sold its vessels to an Eastern company and stated that it was forced out of business by the new seamen's law. Secretary of Commerce Redfield replied that a profit of \$1,000,000 might have been a factor in the transaction.

The new company supports the claim of defenders of the seamen's law that the American flag will continue to fly with profit over vessels in the Oriental service doing business under humane conditions.

LABOR'S TWO ASSETS.

Pueblo, Colo.—"Organized labor cannot advance by the commission of crime," said John R. Lawson, in a speech in this city. "Education and moral courage are the two great assets of our cause. As yet, all laboring men have not the moral courage to stand up and demand that their rights be considered. But a new era is dawning, and through these two assets we will win."

A large crowd welcomed the miners' official who visited this city for the first time since his unjust conviction in Judge Hillyer's court. He made but one reference to his imprisonment, and then in a humorous manner.

LARGE EARNINGS OF U. S. STEEL.

New York.—Earnings of the United States Steel Corporation for the last quarter total \$38,710,644, an increase of \$10,760,589 over the preceding quarter. The report states that the three months embraced in the quarter show a steady growth. September's earnings of \$14,569,652 exceeded those of August by \$922,000, while August made a gain of \$1,736,762 over July.

EXPORTS MAKE RECORD.

Washington.—September was a record-breaker for United States exports, the figures being the largest in the history of the bureau, according to a statement made by the bureau of foreign and domestic commerce. The exports for September, this year, totalled \$300,676,822, compared with

\$156,052,333 for the same month last year. The imports also showed an increase in September of this year, the first time an increase has been shown for many months. The figures indicate that \$151,236,026 worth of materials were imported into the country in September, 1915, as compared with \$139,710,611 for the same month of last year.

RECORD FOR R. R. EARNINGS.

Philadelphia.—A report covering the net earnings of the Pennsylvania railroad lines east of Pittsburgh should furnish a clue to those well-meaning citizens who marvel at the "unrest and discontent of working people." The report shows that the net earnings for September amounted to \$7,282,021, and is the largest for any one month in the railroad's history. The gross earnings of \$20,817,361 have been exceeded only twice, the figures for the months of August and October, 1913, being slightly higher.

BUYS 175,000 TONS OF RAILS.

Philadelphia.—The Pennsylvania railroad has placed orders for 175,000 tons of steel rails, which is said to cover the requirements of this system. An order for 75 heavy

freight locomotives for immediate delivery has also been placed. These locomotives are to be used on lines east of Pittsburgh.

SUSPEND STEAMBOAT PROBE.

Washington.—Secretary of Commerce Redfield has ordered that the investigation of the steamboat inspection service of the Great Lakes be suspended. Steamboat inspectors who were conducting this probe have been ordered to their respective stations. It is stated that this order was issued as a result of the seamen's law, which became effective on American vessels November 4. The investigation started shortly after the Eastland disaster.

ADOPT MINIMUM WAGE LAW.

Cleveland.—A minimum wage amendment to the city charter was adopted at the recent election by a majority approximating 50,000. The act applies to all work done by the municipality and provides that where a craft is organized, the rates of that union must prevail. In trades and callings where no unions exist a minimum of \$2.50 per day shall be the rule.

Among Our Exchanges.

LABOR IN PROTEST TO THE GOVERNOR.

Protesting against the appointment to state departments of men termed inefficient and "unqualified under the law," the Columbus Federation of Labor last night authorized the sending of a letter to Governor Willis, signed by President George S. Compson and Secretary A. L. Leavitt, in which the recall of certain appointments is asked.

Men who jeopardize the efficiency of these departments have been appointed to replace men who have proven their qualifications and efficiency, the letter states. Particular objection is voiced against J. C. Callery of Hamilton, recently appointed chief state boiler inspector, and C. A. Karnell of Toledo, deputy boiler inspector.

"Enemies of Labor."

The letter follows:

We desire to call your (Governor Willis) attention, as part and parcel of the labor movement of the state of Ohio to appointments being made in various departments, created by and through the efforts of organized labor, of men who will jeopardize the efficiency of these departments, by substituting incompetent men, such as J. C. Callery for chief boiler inspector, of Hamilton, Ohio, and C. A. Karnell as deputy boiler inspector, of Toledo, Ohio, who are incompetent for the positions; besides the above-named are well known scabs, they being appointed to fill the positions which were held by efficient union men.

We protest the appointment of men not qualified under the law and known enemies

of organized labor, to positions in departments created through the influence of organized labor.

And we further protest to these inefficient servants displacing men who have proven their qualifications and efficiency, for the reason that members of organized labor are better qualified for the positions.

We therefore urge and request that these and similar appointments be recalled, and that in departments affecting labor, where appointments are to be made, members of organized labor be appointed, that the interests of labor may be justly administered.—Ohio State Journal.

SHIP BUILDING IN JAPAN.

Great activity is being shown at all Japanese shipyards, even the smallest keeping their employes at work day and night. At the Mitsu Bishi yard in Nagasaki four ships with a tonnage of 7,300 each and two of 3,700 tons each are under construction. At the Kobe yards of the same company one 1,800-ton and two 5,300-ton vessels are on the ways. In the last named city the Kawasaki yards are building one 1,700-ton, and one 3,000-ton, two 4,000-ton, and three 7,300-ton boats. Other important orders being executed at the different shipyards are: Osaka Iron Foundry, Osaka—six 7,300-ton, one 5,000-ton, twelve 3,200-ton, one 1,100-ton; Uraga Dockyard Co., Uraga—four 2,200-ton vessels; Fuji Nagata yard—one 2,000-ton ship; Harima yards, Kobe—two 1,100-ton vessels.

This is a total of 43 ships, and there are

said to be many still being negotiated for between builders and owners. The Mitsui Bussan Kaisha is negotiating for the building of two cargo boats of 5,000 tons each. Builders are now reluctant to accept orders in anticipation of a scarcity of materials.—Coast Seamen's Journal.

ARE WE FAILING?

"In Boston recently out of 600 applicants for the navy only thirty were accepted. This is an example of the proportion of our fit young men in the large cities." This is a statement attributed to Rear Admiral Ross.

It is time for us to stop and think a bit. We have been hearing that some nations are degenerate; perhaps we have been thinking so, too. Undoubtedly we have had a comfortable glow as we reflected: "Well in this new land, where there is still room and air for everyone, with our constant infusion of new and vigorous blood, we are the finest race the world has ever seen." But are we? If only 5 per cent of our young men are fit for the navy, then certainly we are in a bad position. We could not have fought the Civil war on that basis.

Of course we must make some allowances. Not anything like all of our abler young men were included in this test, not many of those who would be ready to serve at need. Again, probably many of those rejected could be used in time of real need. Still, one thing is perfectly plain. With all our clubs and gymnasiums and playgrounds and school athletics, we have not begun in the cities to overcome the harm to health and efficiency that is done when a great city comes into being.

Now we need these young men, all of them, not merely because defense calls first and last and always for men, but because we need efficient men for peace and nation-building far more than for war. Manifestly our cities have still a mighty and a fearsome problem. There is no ground for the man to stand on who begins to argue that "We have done enough." With Boston's record at 5 per cent, we are down at the bottom, and we cannot move too fast.—The Milwaukee Journal.

WHY HAS CO-OPERATION BEEN A FAILURE IN AMERICA?

Why have the workmen of America failed to develop the co-operative movement which has proven to be a marked success in many other countries?

Recently in reading the correspondence columns of the official journal of another trade we were impressed with a statement which was made to account for the lack of vigor in one of the local unions.

"The local membership," the writer said, "have lost all of their vitality because they were unsuccessful in their endeavor to establish a co-operative shop. Furthermore, they foolishly lost several hundred dollars; thus they became financially broke, and mentally, if I may say, static."

Why did their co-operative shop fail? Why have the co-operative foundries established by our members failed? Why has practically every productive co-operative enterprise launched in America failed?

The true answer might enable us to better understand some of the problems our movement must solve if it is to be the force for good which it should be.

The workmen's co-operative societies of Europe have been in existence for many years, and have given most splendid returns to their members. The total amount of business which these societies transact is startling to the American worker.

One co-operative association in Great Britain, the Co-operative Wholesale Society of Great Britain, had 1,510 local branches with a membership of 3,188,140 in 1914, and during that year it transacted business to the amount of \$673,666,411.62. In addition to this the society has a banking department, the total transactions of which for 1914 footed up to about \$900,000,000.00. Equally remarkable figures are submitted from the workmen's co-operative movements in Belgium, Germany and the Scandinavian countries.

Why have no such movements proven successful in America?

Robert Owen, the great English co-operator, spent many years in America preaching the doctrine of co-operation and founding co-operative societies. Union and non-union workmen have become co-operators. The leaders of the trade-union movement, immediately following the Civil War, preached co-operation, our own Wm. H. Sylvius being a leader in the movement. In our earlier conventions co-operation was one of the most prominent questions and it met with the hearty support of the officers and members. With all of the encouragement which International Union could give co-operative foundries were started in a number of cities and finally a \$100,000.00 co-operative enterprise was launched in Pittsburgh, Pa., under the direct supervision of the International Union, yet all of these failed, most of them finally passing into the hands of business men who made them profitable to themselves. Our experience has been that of practically every other trade in this respect.

What has been the reason for these failures in America of methods which have proven successful in Europe?

The students and thinkers who can discover the causes will confer a great benefit to the workers, for through co-operation the workers can make their resources go much farther than they can without.—International Molders' Journal.

STARTLING, IF TRUE.

One of the "features" in the agreement arrived at between the Rockefeller coal miners' union and the Rockefeller coal mining company is the declaration that "the com-

pany agrees to abide hereafter" by the mining and labor laws of Colorado. Such magnanimity is indeed touching. Of the many "concessions" voluntarily made by Mr. Rockefeller, this one is really almost too

good to be true. Think of it. Brethren, Rockefeller has "voluntarily" agreed to "hereafter" abide by the law. Goodness gracious, call the police!—Coast Seamen's Journal.

News of General Interest.

THE RUSSIAN STATE RAILWAYS LOCOMOTIVE.

(By Frank C. Perkins.)

The accompanying illustration shows one of the 250 locomotives of the Decapod (2-10-0) type built for the Russian State Railways at Philadelphia, Pa. Apart from the magnitude of the order, these engines are of interest because of their design and the urgency with which they are being constructed. Although the axle loads are light, as compared with American practice, they should be able to do easily, while working at fairly economical cut-off. While special materials and equipment are used to a considerable extent in the

rows of expansion stays, which are of a new design recently introduced by the builders. The nut on the upper end of the radial stay is seated in a dis-forged stirrup, which is screwed into the roof-sheet. After the nut has been adjusted to give the proper tension, the thread on the stay is set into the nut with a punch. This is a simple arrangement, which has ample flexibility and utilizes ordinary stay-belt taps in the boiler and firebox sheets; while the water space above the crown is not obstructed, as is the case where T-iron stays are used. These locomotives are equipped with Schmidt superheaters and outside steam pipes. The superheater is composed of 28 elements,

A LOCOMOTIVE BUILT FOR THE RUSSIAN STATE RAILWAYS.

construction of these engines, the design is generally in accordance with the practice of the builders. The fuel used is a most inferior grade of bituminous coal, and this is burned on a rocking and drop grate with an tice, the locomotives are of considerable capacity, as they exert a tractive force of 51,500 pounds. The ratio of adhesion, however, is unusually low.

It is of interest to note that these locomotives are designed to haul 1,000 metric tons up a straight grade of 0.8 per cent, at a speed of approximately 8 to 10 miles per area of 64.5 square feet. The fibre box is placed above the driving wheels, and is equipped with a sectional brick-arch supported on water tubes. The fire-doors are pneumatically operated. The inside firebox is of copper, and copper stays are used in the water legs.

It may be stated that the front end of the firebox crown is supported by three

with a superheating surface of 563 sq. ft. The steam distribution is controlled by 12-inch piston valves, which are arranged for inside admission and driven by Walscherts motion. The Rushton power reverse mechanism is applied. This device is operated by a small rotary air engine. It is exceedingly compact, and if necessary can be arranged, without difficulty, for manual operations.

It will be seen that the cylinders, frames and running gear closely follow American practice in design. Forty per cent of the weight of the reciprocating parts is balanced, and careful attention has been given to making these parts as light as is consistent with the required strength. The pistons have rolled steel heads, with cast iron rings sprung in, and extended rods. The guides and crossheads are of the single bar type, following Russian practice in design. The front and back driving wheels have a total

lateral play in the boxes of 7-16 inch and the knuckle pins in the front and back side rods are fitted into spherical bushings to provide for lateral motion.

The main driving-wheels have plain tires. This construction is necessary as the engines will be required to traverse curves of 350 feet radius. In accordance with Russian practice, these locomotives have a wide running board with a railing around the outer edge. There is also a railing around the front bumper. The cab is of steel, and the front end of the tender is enclosed, to protect the engine crew from the weather. The equipment includes Russian-Westinghouse automatic air brakes.

The couplers and buffers are of course arranged in accordance with Russian practice. The tender is carried on two four-wheeled trucks, which are of the arch-bar type, with rolled steel wheels. The frame longitudinal sills consist of 12-inch channels. The tender is of light construction, as it was important to reduce the weight where possible.

This locomotive built for Russian State Railways has a gauge of 5'0", the cylinders measuring 25x28 inches and the valves are of piston type 12 inch in diam.

The boiler has a diameter of 70", the thickness of sheets being $\frac{5}{8}$ " and the working pressure is 180 lbs. The fuel is low grade soft coal and the firebox has a length of 108 $\frac{1}{8}$ " and a width of 86" and the thickness of sheets, sides $\frac{1}{2}$ " and the back being $\frac{1}{2}$ " and the tube 1 $\frac{1}{8}$ ".

This locomotive is equipped with Schmidt superheater, having a superheating surface of 563 sq. ft. The total heating surface is 2,601 sq. ft. and the grate area is 64.5 sq. ft. The weight on driving wheels is 176,000 lbs. and on truck 22,000 lbs. while the total weight of engine and tender is 330,000 lbs.

MODERN ELECTRIC ARC WELDING.

(By Frank C. Perkins.)

The accompanying illustration shows the electric motor generator set, switchboard and apparatus for welding with the electric arc as developed at Cleveland, Ohio. In welding with the electric arc as with ordinary welding the two pieces of metal when heated to the proper temperature and brought in close contact may be united into one solid piece. The foundation of the whole process of welding lies in bringing the pieces of metal to the proper heat.

This has been done in various ways, the most familiar being the forge fire, in which the blacksmith heats the ends of the two pieces of metal he wishes to weld. More modern methods include the oxy-acetylene torch which burns gas to produce the heat. The thermit process depends upon the chemical combination of two substances to produce great heat and lastly the electric arc, which transforms electrical energy into heat for welding purposes.

It is pointed out that the only purpose of electricity in welding is to supply the heat.

Thorough understanding of this simple fact will do away with most of the mystery with which this subject has been surrounded. The idea has been prevalent that electricity possesses some mysterious characteristic which makes it especially effective in welding work, but nothing could be further from the truth.

It is clear that the blacksmith's forge fire, the acetylene torch, the thermit process or any of the other methods of producing great heat will heat pieces for welding equally as well as electric arc. The advantages which the electric arc enjoys are, first: The production of greater heat at lower cost, and second, the convenience in applying this heat where it is needed for welding purposes.

It is of interest to note that the anvil weld is applied to welding processes where the two pieces of metal after being heated are forced together by pressure in order to complete the weld. Again the familiar example of this is the weld which the blacksmith makes by first heating on his anvil. In regard to butt and spot welding, it may be stated that an application of this is the spot or butt welding process in which two pieces of metal are heated by electric means, and then pressed together to complete the weld.

Autogenous welding is a process where the metals are raised to such a temperature that they will fuse together on contact without pressure being applied. The main difference between the two processes is one of the temperature of metal at the weld.

In electric arc welding the electric arc is a gap in an electric circuit and the current "jumps" or "arcs" across this gap. It does this against great resistance because electric current does not pass easily through the atmosphere. Because of this resistance great heat is produced and the ends of the gap in the circuit become very hot. This process of course much refined, as a matter of fact the metal which is to be welded usually forms one end of the gap, or one electrode and a stick of carbon or a rod of metal forms the other electrode. The heat produced by the electric arc has never been measured, but it is variously estimated at a temperature of 6,500 to 7,000 degrees Fahrenheit, and is the highest temperature which can be produced at the present time.

It is claimed that the principal advantage of the electric arc for welding is the fact that it produces heat at lower cost. Compared for instance with the oxy-acetylene torch, the electric arc will produce effective welding heat at from ten to thirty per cent of the cost of the other method. There are two methods of arc welding, one where a carbon electrode is used, and one where a metal electrode is used. With the carbon electrode the heat which can be obtained is practically unlimited, and metal can therefore be melted very rapidly; in fact, faster than with any other possible method, applicable to welding.

In welding, there is used a rod or wire of metal for the electrode in place of the carbon. This electrode is gradually melted, and furnishes the molten metal for joining the welded parts. The electric arc may be used for welding practically all metals. There are several practical difficulties, however, which are always encountered in welding work. These limit the use of the process for commercial purposes somewhat.

It is maintained that the first difficulty is the expansion and contraction which results from heating a certain part of a piece of metal or how the heating of the rim of a

intimate contact and a perfect weld cannot result. The welded surfaces, however, may be kept clean by floating the oxide on top of the molten metal.

In considering the subject of welding of iron and steel, it is pointed out that the difference in welding of metals is best understood by studying some of the practical applications of electric arc welding and the simplest of these is the welding of cast steel.

It is well known that steel castings are produced by melting the steel, pouring it in a mold and allowing it to cool in the de-

MODERN ELECTRIC ARC WELDING.

metal wheel and the subsequent cooling off that part would set up strains in different parts of the wheel. This difficulty can be overcome by different methods. The whole piece is often heated before the welding operation begins or it may be annealed by heating afterwards.

In the matter of expansion and contraction, the electric arc has a distinct advantage over the oxy-acetylene flame, due to the fact that the intense heat of the arc is confined to a very small area. The oxy-acetylene flame always heats up a large area around the weld. The second difficulty in welding is due to the formation of oxides. Metals at high heat combine with oxygen, the oxides thus formed on the parts of the metal to be welded will prevent the metals coming in

sired shape. Now if there is a place in this casting which is not filled out as it should be, it is a simple matter to melt steel in the electric arc, and weld it into this low spot, because the material which is added is the same as that of the original casting—simply steel which has been melted and has cooled again. By adding metal of exactly the same chemical composition as the casting the weld can be made identical with the rest.

In order to do this the casting is connected to one end of the electric circuit so that it forms one of the electrodes. The operator handling the other electrode brings it in contact with the surface of the casting, then quickly withdraws it a short distance, causing the electric arc to form between the carbon and the casting. After heating

the surface around the low spot and melting the steel he places a rod of steel in the flame of the arc and allows the metal to run into the low spot until it is filled.

In the electric welding rolled steel, it is well to note that steel when rolled or worked is changed somewhat in its nature. It is made more compact, tough and elastic. The steel sheets, structural steel shapes, steel rails, and various other products are produced by this rolling or working process. When two pieces of such material are welded the work is done by melting the steel at the point of weld, and allowing it to cool again, usually adding some metal from an outside source.

Of course the metal will not be the same as the other metal. It will be cast steel because the melting has taken away all the effects of working or rolling. This is a most important fact to remember in electric arc welding of rolled stock. The material in the weld can never have exactly the same properties as that in the original piece. It may have the same tensile strength but it will never have the same degree of elasticity. This is a limitation of any welding process. The nature of the weld can be controlled of course, by the kind of metal that is added.

It is claimed that low carbon steel will make the weld more ductile; high carbon steel will make it higher in tensile strength. Welds can be assured in rolled stock which are stronger than it is possible to produce by the methods of riveting. This is readily seen when it is remembered that the efficiency of the quadruple riveted double strapped joint is not greater than 85 per cent, while the arc welded joint may be made with an efficiency of 90 per cent without particular difficulty.

It may be stated that the process by which wrought iron is manufactured leaves a certain amount of slag in the metal. In welding, care is taken to float this slag out of the weld. Otherwise wrought iron is treated in exactly the same manner in arc welding as rolled steel. Either carbon or metal electrode is used depending on the size or shape of the pieces to be welded.

It may be mentioned that the current for electric arc welding must be direct current, and the voltage required is from ten to fifty volts, depending on whether a metal or carbon electrode is used and upon the kind of work being done. Alternating current is not practical for use in electric arc welding. The alternating current arc is difficult to control and the heat is not so easily applied as with the direct current arc. A large part of the heat generated in the electric arc is liberated at the positive electrode, that is, at the electrode from which the current flows. In an alternating current arc the polarity of the electrodes changes with each alternation of the current, that is a certain electrode will be positive one instant and negative the next, so that the heat is divided equally between the two electrodes. With the direct current one electrode re-

mains positive, and the heat is generated at this point, thus making it easily controlled.

As to the direct supply current, it may be stated that where the current on the power line is continuous or "direct" it can be used for welding purposes simply by cutting it down to the proper voltage. This can be done by putting a resistance in the circuit which means that the extra power not needed for welding is simply wasted in the heat passing through the resistance. If the direct current supply is 220 volts and it is cut down to 30 volts for electric welding purposes, the ratio of power used to power taken from the line is as 30 is to 220. More than six times as much power is wasted as is actually used for the welding operation. With an alternating supply current this must be changed to direct current, and must also be cut down to the proper voltage for welding.

The electric welding equipment is simple and efficient. The purpose of all electric arc welding machinery is to take the available supply current and deliver it in proper form for welding work. The simplest form of machine is a motor (either alternating or direct current, depending on the supply). This motor is turned by the current from the supply line and the motor in turn drives a generator which is made to deliver direct current at a voltage more nearly suitable for welding.

In one type of motor generator offered for welding service, the current is delivered at a constant voltage of 75 volts. In order to do welding work this 75 volts must be cut down to from 10 to 50 volts, depending on the work, so that there is still from 30 to 80 per cent waste owing to the use of resistance. However, some saving results from the use of such a "constant voltage" machine because it lessens the amount of current wasted by resistance.

It is claimed that the variable voltage machine is better adapted to welding work as it is so made that the generator delivers just the voltage required by the arc. For instance, in welding at the time the electrode touches the piece to be welded the voltage is nearly zero, and as the electrode is drawn away the voltage increases with the length of the arc. It will be seen, therefore, that the voltage is constantly varying. A machine, which will give exactly the voltage required will make a great saving. With this type of machine no resistance whatever is necessary, and no power is wasted in this way. The only object of welding equipment is saving of power and this type of machine gives the greatest possible saving.

Comparing the cost of various forms of welding, suppose the arc uses 150 amperes current, the voltage of the supply line is 250 volts, and the voltage really necessary at the arc for welding purposes averages 25 volts and assume that the current will cost 2 cents per kilowatt hour. Then comparing the cost of electric power first, when welding with simply a resistance in the cir-

cut; second, when welding with a 75 volt constant voltage motor generator; and third, when welding with a motor generator which will deliver just the voltage required. Where the motor generator is used approximately 25 per cent must be added for loss in the two machines.

Taking the system utilizing the 250 volt lines with resistance and 150 amp. using 37.5 kilowatt hours per hour welding, the cost of power per hour of welding would be 75 cents. Now with the motor generator 75 volts constant with resistance using 14.06 kilowatt hours per hour welding, the cost of power per hour of welding would be 28 cents, while with the motor generator variable voltages average 25 and no resistance using 4.69 kilowatt hours per hour welding, the cost of power per hour of welding would be 9.4 cents.

The arc welder shown in the photograph is so constructed that it generates at all times exactly the voltage required by the arc and at the same time gives a current which is practically constant. On this account no resistance is ever necessary in the circuit to cut down the voltage and therefore no power is wasted. This feature is due to special windings in the generator.

It is claimed that the method of control is much simplified by this elimination of resistances and any reasonably intelligent man can learn to operate the welder in one or two days' time. This is of great importance, because most welding machines are operated by men who are neither electricians or mechanics. Labor is a great factor in the cost of welding, and the welder should be so simple that it is not necessary to have a highly skilled man to do the work. Emergency service is frequently demanded in arc welding plants, and for that reason these arc welders are designed to stand long heavy duty, and to carry overload without damage to the machine.

Individual units are sometimes installed of two or more arc welders and one may be in use, the other idle for the time being, but is not consuming any current as would be the case if the installations were made up of one large welder. Where there is sufficient work to require more than one operator, a separate unit is installed for each man. The advantages of this plan are obvious. The user of the arc welding process can in this way do the work at the lowest cost and with the smallest initial investment.

It is held that by installing individual units, the money invested in welding equipment may always be kept proportional to the amount of work done. The arc welder operates at the lowest possible power cost, due to the fact that no resistance is necessary. In addition to this fact, the use of an individual plant for each operator makes it possible to operate each plant only when there is use for it, and then at maximum efficiency. Owing to the fact that no power is wasted in resistance banks by the wel-

der, the actual power required to do welding is small. This welder for ordinary service (with the exception of large steel casting work and heavy cutting) can be operated on any power line large enough to carry a 10 h. p. motor. This advantage permits the installation of the plant at almost any point in the shop where there is a power line or it may be made portable and connected where needed.

It is claimed that in large railway shops and other plants where the time allowed to do the work is limited and a shut-down of the welding plant holds up the rest of the organization, the installation of individual welders is the only insurance against great loss due to a total shut-down. Arc welders are flexible in their operation. Any number of the plants may be operated individually or in parallel. For instance, the operator can, without the service of an electrician connect three 150 ampere plants in parallel to get 450 amperes for heavy carbon electrode work. He can then individualize the plants again in a few minutes.

AN EMERY WHEEL SAFETY FIRST EYE GUARD.

(By Frank C. Perkins.)

The accompanying illustration shows an emery wheel safety first eye guard for the protection of the workmen of the Portland

A GLASS EMERY WHEEL GUARD.

Railway, Light and Power Co., at Portland, Oregon.

This safety first device was designed for preventing particles of emery wheel from flying in the eyes of employes using wheel. For a number of years, employes were urged to wear glasses while using emery wheel, but they would not use them, and every once in a while someone would have an eye in-

jured and in some instances lose the eye, so the idea was advanced of putting the glasses on the emery wheel, and this has been a perfect solution of the problem. Every effort is being put forth to eliminate all forms of accidents.

A GIANT HYDRAULIC FORGING PRESS.

(By Frank C. Perkins.)

The accompanying illustration shows the construction of an enormous tool in operation at Montreal, Canada, and largely utilized in Canadian shops in the manufacture of

A GIANT HYDRAULIC PRESS.

munitions of war for the English and French armies. This 350 ton inverted hydraulic forging press is employed for piercing and drawing the 4.5 shells and is entirely of steel construction. Its great size is clearly indicated by comparison with the workman standing at the left of this giant hydraulic machine.

EFFECT OF MINIMUM-WAGE DETERMINATIONS IN OREGON.

In Bulletin 176 of the U. S. Bureau of Labor Statistics, just issued, is presented an interesting study of the effect of minimum-wage determinations in Oregon, as shown by a comparison of the records of 40 departments, dry goods, 5 and 10-cent, specialty and neighborhood stores for the two spring months, March and April, in 1913, and the same two months in 1914—periods ending five months before and beginning five months after the date on which the first minimum-wage determinations went into ef-

fect and at the same time nearly one month after the date on which the last retail store determinations took effect. These stores employed in the selected period before the determinations went into effect 1,930 women and girls and 974 men; and in the period after the determinations went into effect 1,642 women and girls and 902 men. All records were copied from store books by agents of the Bureau. In addition 443 women were personally visited, and a record was obtained, showing their age, experience, place of employment, occupation, rate of pay, earnings, and hours of work, before and after the minimum-wage determinations.

The first of the Oregon awards fixed a minimum of \$1.00 a day for girls under 18 and took effect October 4, 1913; the second taking effect November 23, 1913, fixed a minimum of \$9.25 a week for experienced adult women in Portland; and two taking effect February 7, 1914, fixed a minimum of \$8.25 a week for experienced adult women outside of Portland, and of \$6.00 a week for inexperienced adult women throughout the state.

Since the awards came into effect the rates of pay for women as a whole have increased, but the wages of three groups (girls under 18, adult inexperienced women, and adult experienced women), have been differently affected. Girls under 18 were benefited, the proportion receiving under \$6.00 a week decreasing from 26 per cent before the determinations to less than 1 per cent after the determinations; the proportion getting \$6.00 a week was 53 per cent before and 79 per cent after the determinations, while the proportion getting more than \$6.00 was practically the same both before and after. In the period before the determinations the average rate for the whole group under 18 was \$5.93 while afterwards it was \$6.24.

For adult inexperienced women the results were not so favorable. The average rate per week decreased slightly, falling from \$6.88 to \$6.84. Before the determinations 59 per cent and after the determinations only 50 per cent of this group received more than \$6.00. The old employees did not suffer a reduction of wages but the place of a \$28 or a \$30 a month girl was filled by a \$26 girl.

For adult experienced women the wage determinations brought an improvement of conditions. There was an increase not only in the proportion receiving \$9.25 a week (the legal minimum in Portland), but also in the proportion receiving more than \$9.25. The proportion of the force getting \$12 and over a week also increased, although the actual number decreased. The average weekly rate of pay for the whole group in Portland was \$11.74 before and \$11.97 after the determinations. Some experienced women in Portland were still receiving rates below the minimum to which determinations entitled them, but the number receiving these lower rates had decreased under the determinations from 344 to 102.

Thus the net result seems to be an advance for the women as a whole. There has been no leveling down of wages to a mini-

num. Some women upon reinstatement after an absence were compelled to accept only the rate to which they were legally entitled, although it was lower than they received during their earlier service, but whenever the wage rates of old employes have been changed since the minimum-wage rulings, the employes were benefited.

In studying the effect of the fixing of minimum-wage rates, it should be borne in mind that regardless of minimum-wage determinations there are constant changes in business organization from year to year which have a material bearing upon the opportunities and conditions of employment. In the period considered a general business

depression was felt by Portland mercantile establishments which complicated somewhat the problem of determining the effect of the minimum wage. The effect of this depression was to reduce the numbers employed, and this reduction affected men as well as women, though to a less degree, as the non-selling male force is not as adjustable as the non-selling female force. The wage determinations have not put men in positions vacated by women. All the changes arising from decreased business, reorganization of departments, and increased rates of pay resulted in an increase in the female labor cost and also in the total labor cost of 3 mills per dollar of sales.

DEPARTMENT OF COMMERCE.

Bureau of Foreign and Domestic Commerce, Washington—September Trade Analysis by Principal Articles.

November 10, 1915.

A new export level of \$300,000,000, reached for the first time in September, 1915, gives special interest to the statistics of foreign trade for that month, just published. To enable the Bureau of Foreign and Domestic Commerce, Department of Commerce, to comply with the numerous requests for advance information as to the articles making up that trade, the following condensation of tables shortly to appear in the "Summary of Foreign Commerce" for September has been prepared:

Articles and Classes Exported.	September		Nine Months Ending With September	
	1914	1915 (In millions of dollars)	1914	1915

Increased arrivals of raw materials and diminished purchases of manufactures are the leading facts disclosed by an examination of the import statistics for September, 1915. The following table, prepared by the Bureau of Foreign and Domestic Commerce shows the principal articles and groups of articles imported during September and the nine months ending with September, compared with corresponding periods of earlier years:

Articles and Classes Imported.	September		Nine Months	
	1914	1915	Ending With September 1914	1915
	(In millions of dollars)

FAULTY INSPECTION.

The Journal has for years contended that the United States Steamboat Inspection Service could not be depended upon to give a square deal to the public. To repeat that accusation at this time would seem a waste of effort. Numerous investigations upon the latest slaughter of the innocents are now proceeding. Let us hope that the present investigation will prove different from similar affairs in the past. Let us also hope that Secretary Redfield of the Department of Commerce will begin looking about for competent and qualified successors to at least two of his unfaithful, time-serving be-

reau chiefs. Public interest has long demanded such a change. Unfortunately, the public has been aroused to its own interest only because of the notorious, self-evident inefficiency of our Inspection Service as witnessed in the "Eastland" tragedy. But the public should be made to understand that, to bring about this desirable change, a great deal more is required than a mere fleeting protest or a gasp of indignation. This is not intended as a reflection upon the Secretary of Commerce, but rather upon the system which has made possible a retention of such men for so many, many years. —The Coast Seamen's Journal.

Smiles.

A COOL STAND.

Apropos of a railroad wreck due to a defective bridge, Jerome S. McWade, the Duluth sociologist, said the other day:

"The railroad's cool stand about this bridge reminds me of a worse case—a case about a toll bridge in the South.

"The toll bridge was rotten, and a woman fell through a hole in it, and was drowned. Her indignant townspeople held a mass meeting, and in response to their resolution of protest the company wrote:

"Gentlemen: Your resolution about our bridge has been duly received. It will be laid before the board at our annual meeting, eleven months hence. In the meanwhile, to prevent, if possible, a recurrence of the small accident to which said resolution refers, would it not be better if all your citizens used the company's other bridge, three miles to the north of town? The water there is scarcely deep enough to drown a man of full height.'"—New York Tribune.

A MUCH MIXED RELATIONSHIP.

Last leap year I did not want to embarrass my best girl to make her propose to me, so I asked her to be my wife, and she said, "I would rather be excused," and I, like an idiot, excused her. But I got even with the girl. I married her mother. Then my father married the girl. Now I don't know who I am.

When I married the girl's mother the girl became my daughter, and when my father married my daughter he is my son. When my father married my daughter she was my mother. If my father is my son and my daughter is my mother, who in thunder am I? My mother's mother (which is my wife) must be my grandmother, and I being my grandmother's husband, I am my own grandfather.—National Monthly.

A HERO'S CHOICE.

The bugle sounded. Into the barrack square marched the regiment, then formed a hollow square, and waited.

For it was an important occasion. Patrick Dolan, a scarred and sunburnt warrior, was

to receive some little token of his country's gratitude. A particularly notable act of bravery had brought Patrick into the limelight.

"Men," said the officer commanding, "I am proud to pin this medal on the breast of Patrick Dolan—a Briton and a hero! And, under the special order, I shall also place a \$20 bill to his credit in the bank, as some little reward for his gallant conduct."

Patrick stepped forward, and, as heroes do, looked uncomfortable. Still, there was one request he wanted to make.

"If—if it's all the same to you, sorr," he blurted out, "I'd rather ye'd pin the \$20 note on me chist, and place the medal to me credit at the bank, sorr!"—Answers, London.

BUMP, BUMP, BUMP!

A South Dakota railroad is noted for its excreable roadbed. A new brakeman was making his first run over the road at night and was standing in the center of the car, grimly clutching the seats to keep erect.

Suddenly the train struck a smooth piece of track and slid along without a sound. Seizing his lantern, the brakeman ran for the door.

"Jump for your lives!" he shouted. "She's off the track."—Ex.

NOT HEADED THAT WAY.

A good many years ago a steamer was sailing down the river, with a shrewd old Yankee captain in command. Suddenly the engines stopped, and there was nothing doing for several minutes. The passengers began to talk it over among themselves, and one of them, a portly, persistent sort of person, advanced pompously to the captain.

"What seems to be the trouble, cap?" he inquired. "Why have we stopped?"

"To much fog," answered the skipper curtly. "We can't see up the river."

"But I can see the stars overhead quite plainly," argued the persistent party.

"Mebbe ye can," admitted the captain, grimly, "but unless the bilers bust we ain't goin' that way."—National Monthly.

Poetical Selections.

FORGET IT.

Forget the slander you have heard,
Forget the hasty, unkind word;
Forget the quarrel and the cause,
Forget the whole affair, because
Forgetting is the only way.
Forget the storm of yesterday,
Forget the chap whose sour face
Forgets to smile in any place;
Forget the trials you have had,
Forget the weather if it's bad,

Forget the knocker, he's a freak,
Forget him seven days a week.
Forget you're not a millionaire,
Forget the gray streaks in your hair;
Forget the home team lost the game,
Forget the pitcher was to blame.
Forget the coffee when it's cold,
Forget to kick; forget to scold,
Forget the plumber's awful charge,
Forget the iceman's bill is large,
Forget the coal man's awful ("weights")

Forget the heat in summer days.
 Forget wherever you may roam,
 Forget the duck who wrote this poem;
 Forget that he in social bliss,
 Forgot himself when he wrote this.
 Forget to ever get the blues,
 But don't forget to pay your dues.

—Exchange.

NOT AFRAID OF PA.

Us boys ain't scared o' pa so much;
 He only makes a noise,
 An' says he never did see such
 Onmanageable boys.
 But when ma loks around I see
 Just somethin' long an' flat,
 An' always make a point to be
 Some better after that.

Pa promises an' promises,
 But never does a thing;
 But what ma says she does she does;
 An' when I go an' bring
 Her slipper or her hairbrush when
 She says she'll dust my pants,
 I think I would be better then
 If I had one more chance.

Pa always says nex' time 'at he
 Will have a word to say,
 But ma she is more apt to be
 A-doin' it right away;
 Pa turns around at us an' glares
 As fierce as he can look,
 But when we're out of sight, upstairs,
 He goes back to his book.

Ma doesn't glare as much as pa
 Or make as big a fuss,
 But what she says is law is law,
 And when she speaks to us
 She's lookin' carelessly around
 F'r somethin' long and flat,
 And when we notice it, we're bound
 To be good after that.

So we ain't scared o' pa at all,
 Although he thinks we are;
 But when we hear ma come and call,
 No difference how far
 We are away we answer quick,
 An' tell her where we're at,
 When she stoops down and starts to pick
 Up somethin' long and flat.

—James W. Foley.

In Memoriam

MEMBERS.

Mr. Philip Doyle, Reg. No. 61626, age 24, of Lodge No. 483, Alton, Ill., was born at Grafton, Ill., 11th of May, 1891, died Sept. 27th, from burns caused by lamp explosion. Single. Member for eight years.

Wm. C. Suakenburg, Reg. No. 99212, age 31, of Lodge No. 37, New Orleans, La., was born in New Orleans, 1884, died 1 A. M. Oct. 20, 1915, from poison. Single. Member two years.

Joe Roberts, Reg. No. 80330, age 23 of Lodge No. 74, Houston, Tex., was born in

Houston, Tex. Died Oct. 20, 1915, from Typhoid Fever. Single. Member for four years and ten months.

RELATIVES OF MEMBERS.

Mrs. Pauline Munsch Laine, age 65 years was mother of Bro. Geo. Munsch of Lodge No. 37. Was born in Germany, March 25, 1850, died Oct. 26, 1915, from complication.

Y. Grimland, age 83, father of Bro. Bob Grimland of Lodge No. 74. Was born in Norway, March 11, 1833. Died Oct. 4, 1915, from old age.

Lodge Notices

Elmore—Young.

Would like to know the whereabouts of Brother Bert Elmore, as his old side partner would like to hear from him.

B. A. YOUNG,
 1618 Caperton St.,
 Shreveport, La.

Siegler—Dundon.

Anyone knowing the whereabouts of E. R. Seigler will confer a favor by notifying the undersigned or having the brother communicate with me.

J. D. DUNDON,
 529 Second St.,
 Pittsburgh, Pa.

Chollar—Lodge 576.

Any secretary taking up the card of Broth-

er R. F. Chollar, Reg. No. 48759, will please hold same and correspond with the secretary of Lodge 576, Wichita Falls, Texas., as this brother left here owing a bill.

R. A. CAMPBELL, C. S., L. 576.

Parkinson—More.

Will A. K. Parkinson please communicate with J. W. More, U. S. S. Macheis, care New York postmaster?

Grimes—Lodge 312.

Anyone knowing the whereabouts of Brother E. A. Grimes, Reg. No. 96087, boiler maker, will please notify the secretary of Lodge 312, as this brother left here owing several bills.

W. P. FAWCETT, S. 312.

McGovern—His Brother.

Anyone knowing the whereabouts of Broth-

er Peter McGovern will please notify the undersigned, as there is business of importance to transact.

T. B. MCGOVERN,
2716 Franklin St.,
Omaha, Neb.

Lower—Postmaster.

Brother F. A. Lower, Reg. No. 81123, communicate with the postmaster at Parsons, Kansas. He wishes to get in touch with you.

E. P. BUTLER, S. L. 292.

LIST OF MEMBERS PREVIOUSLY ADVERTISED

Thompson—Lodge No. 587.

F. W. Thompson, Reg. No. 20987, has been suspended by this local for non-payment of dues. He also owes about \$40 here.

T. C. MADDY,
June Journal. Secretary Lodge No. 587.

C. S. Burk—Lodge No. 82.

Any secretary taking up card of Brother C. S. Burk, Reg. No. 102470, will please hold same and correspond with secretary of Lodge No. 82, as this brother misrepresented facts to secure transportation to Kansas City, amounting to \$1.25, and we had to pay this bill out of the treasury of the local.

A. G. EVERETT,
June Journal. Secretary Lodge No. 82.

Robert Canton—Lodge No. 384.

Anyone knowing the whereabouts of Robert Canton, boiler maker's helper, will please notify the secretary of Lodge No. 384, as this brother left this lodge without paying his bills that the lodge went good for.

A. W. JOHNSON,
July Journal. Secretary Lodge No. 384.

Douglas et al.—Lodge No. 587.

Lodge No. 587 has suspended M. E. Douglas, Reg. No. 100307, for non-payment of dues. We have also bills aggregating to \$80 against this brother. T. C. MADDY, Secretary and Treasurer Lodge No. 587.
July Journal.

D. J. Fitzgibbons et al.—Lodge No. 99.

Any secretary taking up the card of D. J. Fitzgibbons, Reg. No. 67599, or F. G. Hayes, Reg. No. 21882, will please correspond with the secretary of Lodge No. 99, Newark, Ohio, as these brothers borrowed money from this local which they forgot to return.

CECIL C. ROBERTS,
July Journal. Secretary Lodge No. 99.

Cooper et al.—Lodge No. 491.

And secretary taking up the books or cards of any of the following brothers will please hold same and notify the secretary of Lodge No. 491, as they left town owing the amounts placed after their names. C. E. Cooper, Reg. No. 41907, \$12.35; A. J.

Conley, Reg. No. 39115, \$3.95; John Crawford, Reg. No. 62321, \$34.70; W. J. Mills, Reg. No. 98504, \$6.40; John Peters, Reg. No. 80223, \$5.50.

Fraternally,
J. C. CARROLL, S. L. 491.
June Journal.

C. J. Dowd—Lodge No. 199.

Anybody knowing the whereabouts of C. J. Dowd, Reg. No. 96128, helper, left Lodge No. 199 without a card, and also owing a board bill of \$29 and other bills. Last stamp in his book issued by Lodge No. 113. Please notify the undersigned.

E. S. MCGINNIS, S. L. 199.
August Journal.

C. E. Cooper—Lodge No. 528.

Any secretary taking up the card of Brother C. E. Cooper, Reg. No. 41907, will please hold same and correspond with the undersigned, as this brother left here in 1913 and left unpaid bills that Brother Ed Swanson stood good for and had to pay.

J. H. THOMAS, S. L. No. 528.
August Journal.

Seigler—Lodge No. 549.

Any secretary taking up the card of Brother E. R. Seigler, Reg. No. 68353, please hold same and correspond with secretary of Lodge No. 549, as this brother left here owing a bill of \$3.00, which a brother stood for.

PERRY COOPER, S. L. 549.
October Journal.

Ennis—Lodge No. 346.

Any secretary taking up the clearance card of J. J. Ennis, Reg. No. 24751, will please hold same and correspond with the secretary of Lodge No. 346, as this brother left here owing some bills he misrepresented.

GEO. W. SINGER, S. L. 346.
October Journal.

Hiehl—Lodge No. 588.

Any secretary taking up the card of Brother F. S. Hiehl, Reg. No. 43811, will please hold same and correspond with the secretary of Lodge No. 588, as this brother borrowed money. Last stamps and clearance card issued by Lodge No. 70.

JOHN McNANEY, S. L. 588.
October Journal.

LOST AND FOUND.

Lost Due Book—Hicks.

Brother W. F. Hicks, Reg. No. 82422, lost his due book while in Norfolk, Va.; anyone finding same please return it to the undersigned.

M. W. RATTIFF, C. F. S., L. 551.

Lost Due Book—Granberger.

Anyone finding the due book of John Granberger, Reg. No. 69358, paid up to August 31, 1915, issued out of Lodge 32, will confer a favor by returning same to the undersigned. WAITER E. DWYER, S. L. 32.

Oxweld Railroad Service Company

RAILWAY EXCHANGE BUILDING

80 E. Jackson Boulevard

Chicago, Ill.

By Insisting Upon Purchasing Union Stamp Shoes

You help better shoemaking conditions.
You get better shoes for the money.
You help your own labor position.
You abolish child labor.

Do not be misled by retailers who say: "This shoe does not bear the union stamp, but is made under union conditions." This is false—no shoe is union made unless it bears the union stamp.

Boot and Shoe Workers' Union

246 SUMMER STREET, BOSTON, MASS.

JOHN F. TOBIN, President.

CHAS. L. BAINE, Sec.-Treas.

THE COMMERCIAL NATIONAL BANK OF KANSAS CITY, KANSAS

Capital, Surplus and Undivided Profits, \$725,000.00. Deposits, \$5,500,000.00.

We cordially invite the Boiler Makers and Ship Builders of the United States who desire to transact banking business with us (which can be done readily by mail) to write to any of their officers and ask any questions they may desire to ask about our reliability and standing.

P. W. GOEBEL, President
G. J. BISHOP, Asst. Cashier

C. L. BROKAW, Vice-President and Cashier
H. L. LARSON, Asst. Cashier

You Will Eventually

Purchase a copy of "Laying Out for Boilermakers"

Why Not Now?

And devote a part of the long winter evenings to improving your knowledge of laying out so that when the opportunity of a better position presents itself you will be prepared to accept it. We receive many appreciative letters from satisfied purchasers of this book and we know you will be, too.

Price, \$5.00

Don't delay any longer, but send in your order to

J. B. Casey, Room 9, Law Bldg., Kansas City, Kansas

Fill in the coupon below, mail it to us and we will send you a copy FREE.

THE BOILER MAKER
17 BATTERY PLACE NEW YORK

COUPON

The Boiler Maker,
17 Battery Place, New York City.

Gentlemen:

Please send me a copy of THE BOILER MAKER FREE.

Name.....

Address.....

Occupation.....

NO. 401 WITH SHIELD.

No. 401—Champion Steel Rivet Forge is used by the great majority of railroads, bridge builders, boiler and structural iron workers of the world. Constructed from structural steel, making it strong and durable. Its gearing is the 400 Champion "Patented" high-speed spiral gearing. It runs noiseless. Highest grade adjustable ball bearings. It is quickly taken apart and assembled. Produces blasts to weld 3/2 to 4-inch iron in ten minutes. Crank turns either way.

Champion Blower & Forge Co.
Lancaster, Pa., U. S. A.

Just the Information We Need

**WEBSTER'S

The Burlington SMASHES ALL WATCH PRICES

Look!

- ☞ 19 Ruby and Sapphire Jewels—
- ☞ Adjusted to the second—
- ☞ Adjusted to temperature—
- ☞ Adjusted to isochronism—
- ☞ 25-year gold strata case—
- ☞ Genuine Montgomery Railroad Dial—
- ☞ New Ideas in Thin Cases.

**Only
\$2.50
A Month**

And all of this for \$2.50—only \$2.50 per month—a great reduction in watch prices—direct to you—positively the exact prices the wholesale dealer would have to pay. We do not care to quote these prices here, but write—write before you buy. Think of the high grade, guaranteed watch we offer here at such a remarkable price. Indeed, the days of exorbitant watch prices have passed.

See It First

You don't pay a cent to anybody until you see the watch. We won't let you buy a Burlington Watch without seeing it. Look at the splendid beauty of the watch itself. Thin model, handsomely shaped—aristocratic in every line. Then look at the works. There you see the pinnacle of watch making. You understand how this wonder timepiece is adjusted to the very second.

Every fighting vessel in the U. S. Navy has the Burlington Watch aboard. This includes every torpedo boat—every submarine as well as the big Dreadnaughts.

Send Your Name on This Free Coupon

Get the Burlington Watch Book by sending this coupon now. You will know a lot more about watch buying when you read it. You will be able to "steer clear" of the double-priced watches which are no better. Send the coupon today for the watch book and our offer.
