PREFACE.

TEACHERS who have the power of putting themselves in the mental attitude of their pupils possess a most important gift. In the first stages of mental growth, as the mind works unseen, it is hard to realize the difficulties encountered, and to decide what assistance can be judiciously given. There is no royal road to the knowledge of arithmetic, but the steps can be made short and easy. The little learner need not be wearied, if the exercise is not too long continued. He may also have the consciousness of effort, as in learning to walk, and above all, the pleasure of succeeding. This result can be secured only by observing the following fundamental principles :

1. **All elementary teaching of arithmetic must be begun by the pupils observing and handling objects.**

It is surprising that school authorities in many places decline to furnish the money, however small the amount is, to purchase the simple apparatus required for each Primary School. They assert that they got on well enough without such aids when they were children, and they seem to be quite unconscious of the weakness of such an argument. The question is not whether children can do well without the aid of objects, but whether they can do better with them. Our fathers did well enough in travelling on horseback and in coaches, but we do better with our express trains. Children may be able to grasp abstract ideas, after sufficient time, without the aid of concrete examples. It

is certain, however, that they grasp these ideas more firmly and more quickly if they are led to them by easy steps through objects that can be seen and handled.

In the treatment of each number we must rely upon the *sight* of the pupil, and not upon his *hearing*. Furthermore, we must rely upon his *activity*. He must *do* as well as *see*. Listless repetition of 4 and 3 are 7, or the sing-song 4 times 3 are 12, makes no impression upon him. The next day he is quite likely to tell you that 4 and 3 are 6. If he is required to put 4 pegs in one row of the counting-board and 3 in another row, and to learn in this way that 4 and 3 are 7, he will remember it. This method of teaching has the very great advantage of giving to the study of arithmetic the peculiar distinction that the learner can discover for himself, in case of doubt, whether his answer to any question is right or wrong, and can find the true answer, if he has given a wrong one.

2. A knowledge of the processes of arithmetic should be acquired by using small numbers; and each number should be treated in all its variations before the next higher number is considered.

By means of a small number of objects children can easily acquire clear notions of the different processes of arithmetic, and at the outset begin to form the habit of being *independent of rules*. With 6 blocks they can learn to add 4 and 2, to subtract 4 from 6, to multiply 3 by 2, to divide 6 by 2, without suspecting the existence of the fearful rules to be found in our text-books of arithmetic. They can also be taught to find $\frac{1}{2}$ of 6 or $\frac{2}{3}$ of 6, without even hearing of the terms, fraction, numerator or denominator.

Variety is indispensable for securing and maintaining the pupils' interest in number work. This is a sufficient

reason for treating each number in all possible ways before taking up the next higher number. Besides, this method is the natural method, and has stood the test of experience. It is found to be the best method for giving practical mastery of the facts of each number; in short, it secures the greatest interest and the best results.

3. Repetition is to be regular and systematic, combined with suitable variation.

It cannot be too strongly urged that the first requisite of good teaching is repetition, the second requisite is repetition, and the third requisite is repetition. The interest of the pupil must be kept up *by varying the application of the question*. To find the sum of 3 horses and 5 horses is not the same thing to the child as to find the sum of 3 tops and 5 tops. Hence a lesson may be given as many times as may be necessary by properly varying the questions.

A table of different things, given opposite the first page of this book, will be found of great use in suggesting a suitable variety of questions. Care must be exercised to have the variation of a kind to *fix* knowledge. To ask the number of 3 ducks and 4 ducks, of 3 times 4 ducks, and $\frac{1}{3}$ of 12 ducks, *in succession*, is a variation, to be sure, but of a kind to distract the child's mind, as he cannot quickly pass from one conception to the other. The questions in Part I. of this book are specimen questions, which it is expected the Teacher will supplement by a great number and variety of other questions.

4. Lessons should be short, answers required should be simple, and the power to deal with numbers in the abstract should be acquired through concrete examples by regular gradation.

Number work should be discontinued the moment the pupil's attention flags. It is far better to divide the time

daily allotted to arithmetic into two or more lessons. Only simple, direct answers should be required. Of course, if objects are named in the question, they should be named in the answer. The answer to 5 birds + 3 birds should be 8 *birds*, and not simply 8.

A knowledge of numbers in the abstract is obtained only by a comparison of different things. The child learns the number 5, for instance, by seeing and handling 5 familiar objects, by observing number pictures of 5 on the black-board or on cardboard, by answering questions about 5 familiar but unseen objects, and lastly about 5 in the abstract.

5. The child must not be required to read questions that are difficult for him to read, or to solve problems that are difficult for him to analyze.

The intention is to put this book into the hands of young pupils, *but only for them to copy and do the numerical exercises*. The other examples, usually called *clothed* examples by way of distinction, must be read by the Teacher, and *only* the answers be required of pupils. No child can become interested or successful in arithmetic if his mind is *dis-tracted* between the *reading* of a problem and the *numerical calculation* required for its solution. He can learn the simple processes of arithmetic while quite young; he can learn to be accurate and reasonably rapid in these processes; he can learn to be neat and orderly in the arrangement of his work; and his interest will constantly increase, *provided he is kept master of his field of operations*. At this early stage he cannot be exercised in logical analysis, and it is a great mistake to put problems before him that require too great an exercise of the reasoning faculty. Later he will form the habit of close attention, learn the meaning of logical inference, and acquire the power of sustained and

continuous thought. Arithmetic rightly taught furnishes the very essence of intellectual training, and deserves the name of "The Logic of the People."

These principles are recognized and adopted by the best educators everywhere, but for the concise statement of them I am in some measure indebted to a distinguished school-inspector of Australia.

I have to thank many eminent Teachers for valuable suggestions and criticisms. I shall be grateful for further suggestions, and especially for any corrections.

TABLE FOR VARYING QUESTIONS.

Animals	Dog, Puppy, Cat, Kitten, Rabbit, Cow, Calf, Pig, Horse, Colt, Sheep, Lamb, Goat, Kid, Fox, Mouse, Squirrel, Monkey.
Birds	Robin, Sparrow, Swallow, Canary, Parrot, Crow, Bluebird, Kingbird, Hawk, Owl, Jay, Loon, Swan, Pigeon.
Clothes	Hat, Cap, Bonnet, Coat, Vest, Dress, Socks, Boots, Shoes, Collar, Cuffs, Slippers, Rubbers, Mittens, Gloves.
Flowers	Rose, Pink, Daisy, Pansy, Lily, Geranium, Violet, Poppy.
Fowls	Hen, Chicken, Turkey, Duck, Goose, Gosling.
Fruits	Apple, Pear, Quince, Orange, Lemon, Peach, Grape, Fig.
Garden	Peas, Beans, Corn, Potatoes, Carrots, Parsnips.
House	Room, Door, Window, Chair, Table, Picture, Carpet, Cup, Plate, Saucer, Fork, Knife, Spoon, Pitcher, Clock.
Insects	Fly, Spider, Bee, Hornet, Butterfly, Beetle, Cricket.
School	Desk, Slate, Pencil, Pen, Book, Paper, Chair.
Smallwares . .	Buttons, Pins, Needles, Spools of Thread.
Store	Tea, Coffee, Sugar, Starch, Soap, Candles, Matches, Eggs, Axe, Rake, Pail, Spade, Hoe, Saw, Nails.
Toy-Store . . .	Doll, Top, Ball, Whip, Basket, Marbles, Whistle.
Tradesmen . . .	Baker, Butcher, Grocer, Milkman, Blacksmith.
Trees	Apple, Oak, Cherry, Plum, Ash, Birch, Beech.
Vehicles	Train, Car, Coach, Hack, Buggy, Wagon, Gig, Sleigh, Sled, Barge, Bus.

ELEMENTARY ARITHMETIC.

Part I.

Part I. is intended as a guide to teachers in oral and blackboard work for children before they can read. After they can read, a rapid review will help fix their knowledge of simple arithmetical processes.

THINGS NEEDED.

1. **Objects for Counters.** Such as cents, blocks, buttons, spools, pencils, nails, little tin plates, cups and saucers, inch-squares of pasteboard, foot-rules, yard-sticks, a set of tin measures for liquids, a set of wooden measures for dry articles, and a set of weights.

2. **A Counting-Board.** This is of great assistance in teaching arithmetical processes with small numbers. It is simply a smooth board with 100 holes about an inch apart, arranged in 10 rows of 10 holes each. Nails or wooden pins can be used for counters.

Another way of making the counting-board is to drive 100 nails in 10 rows of 10 nails each through a piece of board, at suitable distances from each other, until they project about an inch, and use spools for counters, slipping them on the ends of the nails.

LESSON 1.

THE NUMBER ONE.

Show me *one* finger ; *one* block ; *one* button.

How many suns do we see by day ? How many moons by night ?

We write the figure 1 for one.

NOTE. The introduction of figures may be postponed until after the number six is taught. In that case some variation in the language will be required.

THE NUMBER TWO.

How many fingers are *one* finger and *one* finger ?

Hold up **two** fingers ; **two** hands.

We write the **figure 2** for **two**.

NOTE. Pictures of balls, cups, tops, blocks, etc., are introduced in places where it is expected the Teacher will show objects of some kind.

How many balls are  and  ?

How many cups are  and  ?

How many dolls are 1 doll and 1 doll ?

How many horses are 1 horse and 1 horse ?

How many are 1 and 1 ?

Here are two blocks,  . Take away .

How many are left ?

1 apple from 2 apples leaves how many ?

1 from 2 leaves how many ?

How many more pears are   than  ?

How many more dolls are 2 dolls than 1 doll ?

How many rings must you put with  to have   ?

How many apples must you put with 1 apple to have 2 apples ?

NOTE. The following plan is recommended to the Teacher, for the number-work of Part I.:

1. Show objects, and secure the desired result from them.
2. Draw pictures of blocks, squares, etc., on the board, and obtain the same result from the pictures.
3. Ask the same question on familiar but unseen objects.
4. Finish with abstract numbers.

The Teacher can vary the questions at pleasure by using different objects and different pictures, and by using the table of familiar objects given opposite the first page.

THE NUMBER THREE.

How many fingers are *two* fingers and *one* finger?

Hold up **three** fingers.

We write the **figure 3** for **three**.

* Copy each card below, and write under it the figure for the number of dots in the card :

Count the dots in these cards from left to right.

Count the dots from right to left.

What number follows 1? What number follows 2?

What number comes before 2? before 3?

What number is between 1 and 3?

* Copy these pictures, and write under each group the figure for the number in the group.

How many pears are  and  and ?

How many balls are  and  and ?

How many dogs are 1 dog and 1 dog and 1 dog?

How many boys are 1 boy and 1 boy and 1 boy?

How many are 1 and 1 and 1?

How many stars are * * and * ?

* **NOTE.** In this case and in similar cases the Teacher should put the number pictures on the board, and then require the pupils to follow the directions given. The Teacher should require the attention of the pupils only a few minutes at a time. One of these "Lessons" will make a great many lessons for the children.

How many apples are  and  ?

How many pinks are 1 pink and 2 pinks?

How many are 1 and 2? 2 and 1?

Here are three blocks,   

Take 1 block away, how many will be left?

Take 2 blocks away, how many will be left?

Take 3 blocks away, how many will be left?

How many more blocks are    than  ?

How many more cows are 3 cows than 2 cows?

How many more figs are 3 figs than 1 fig?

How many blocks must be put with  to make   ?

How many baskets must be put with   to make   ?

How many plums must be put with 2 plums to make 3 plums?

How many plums must be put with 1 plum to make 3 plums?

James may take 1 block; then 1 more; and then 1 more.

How many *times* has James taken 1 block? How many blocks has he? Then 3 times 1 block are how many blocks?

How many chairs are 3 times 1 chair?

Here are 3 apples,   . How many boys can each have 1 apple?

Here are 3 dolls. How many girls can each have 1 doll? How many *ones* in 3?

THE NUMBER FOUR.

Three dots and *one* dot make **four** dots

Here are *four* dots, ●●●●

We write the **figure 4** for **four**.

Copy each card below, and write under it the figure for the number of dots in the card :

Count the dots in these cards from left to right.

Count the dots from right to left.

What number follows 2? What number follows 3?

What number comes before 4? before 3?

What number is between 1 and 3? 2 and 4?

Copy these pictures, and write under each group the figure for the number in the group :

If you have six cents, and spend half of your money, how many cents will you have left ?

How many balls in one-half of 6 balls ? in two-halves of 6 balls ?

How many blocks in one-third of 6 blocks ? in two-thirds of 6 blocks ? in three-thirds of 6 blocks ? in three-thirds of 3 blocks ?

If a cook has 6 eggs, and uses one-third of them for cake, how many eggs will be left ?

A little boy had 4 newspapers to sell, and he sold half of them. How many papers had he left ?

How many pears are one-half of 4 pears and one-half of 6 pears together ?

THE NUMBER SEVEN.

Six dots and *one* dot make **seven** dots.

Here are seven dots, 

We write the **figure 7** for seven.

Draw these cards, and write 7 under each card.

How many are 3 and 4? 4 and 3? 1 and 6?
2 and 5? 5 and 2? 6 and 1?

How many are 7 less 3? 7 less 4? 7 less 1? 7
less 2? 7 less 5? 7 less 6? 7 less 7?

How many more are 7 chairs than 3 chairs?
7 balls than 4 balls? 7 kittens than 1 kitten? 7
mice than 5 mice? 7 ladders than 2 ladders?
7 stars than 6 stars?

How many dolls must you put with 3 dolls to
have 7 dolls?

How many cups must you put with 4 cups to
have 7 cups?

How many hats must you put with 1 hat to have
7 hats?

How many cents must you put with 2 cents to
have 7 cents?

How many eggs must you put with 5 eggs to
have 7 eggs?

How many cents must you put with 6 cents to
have 7 cents?

There are 4 pigs in 1 pen and 3 pigs in another pen. How many pigs in both pens?

How many must you add to 5 to make 7?

If you draw 7 stars and rub out 3 of them, how many will be left? How many are 7 less 3?

How many crosses are 6 crosses and 1 cross?

If you have 7 pears and give away 6 of them, how many pears will you have left?

How many are 7 less 6? 7 less 1? 7 less 3? 7 less 5? 7 less 2? 7 less 4?

How many mittens make a *pair* of mittens?

How many boots make a *pair* of boots?

Here are 7 blocks, . Call them horses, and find how many pairs of horses you can have, and how many single horses besides?

NOTE. Show the pupils one-cent, two-cent, and five-cent coins. Let them count out the number of single cents a two-cent piece equals in value, and the number a five-cent piece equals in value. Show the one-cent, two-cent, three-cent, four-cent, and five-cent postage stamps.

At 1 cent apiece, how many apples can you buy for a two-cent piece? for a five-cent piece?

Harry has a two-cent piece and a five-cent piece. How many one-cent postage stamps can he buy?

If you add 1 block to 3 times 2 blocks, how many blocks will you have?

How many are $\square \square$ and $\square \square$ and $\square \square$ and \square ?

How many are $\square \square \square$ and $\square \square \square$ and \square ?

How many are 2 and 2 and 2 and 1?

How many are 3 and 3 and 1?

Alice has a five-cent piece and a two-cent piece, and Harry has six cents. How much more money has Alice than Harry?

How many peaches are 3 peaches and 4 peaches?

A farmer had 7 horses. If he had 3 turned out in the pasture, and the rest in the stable, how many did he have in the stable?

There were 7 windows in a room, and 2 of them were shut. How many were open?

There were 7 eggs in a basket, but the cook used 5 of them. How many were left?

A storekeeper had 7 saws. He sold one saw to a carpenter. How many had he left?

A man had 7 cows to milk. When he had milked 6 cows, how many had he to milk?

If one apple costs 1 cent, how much will 7 apples cost? 5 apples? 3 apples? 6 apples?

If one peach costs 2 cents, how much will 3 peaches cost? 2 peaches?

If you can buy one pencil for 2 cents, how many pencils can you buy for 6 cents? for 4 cents?

How many three-cent stamps can you buy for 3 cents? for 6 cents?

George has 7 cents. How many oranges can he buy at 3 cents each, and how many cents will he have left?

Ellen has 7 cents. How many pears can she buy at 2 cents each, and how many cents will she have left?

DRILL EXERCISE.

NOTE. The Teacher may put the following groups of dots on the board, and call upon the pupils *one by one* to tell the number of dots as she touches the squares at random, with a pointer. *Every child* should be carefully drilled on this exercise until he can name each number of dots instantly.

Name two numbers that together make 4.

Name two numbers that together make 5.

Name three numbers that together make 5.

Name two numbers that together make 6.

Name three numbers that together make 6.

Name two numbers that together make 7.

Name three numbers that together make 7.

Name four numbers that together make 7.

How many more are 6 than 4? than 3?

How many more are 5 than 3? than 2?

How many more are 7 than 4? than 5?

How many more are 7 than 3? than 2?

THE SIGNS = AND +.

The sign = stands for the word **are** or **is**.

Copy, and use the sign that stands for *are* :

- | | | | |
|---------|----|---------|----|
| 1 and 1 | 2. | 5 and 1 | 6. |
| 2 and 1 | 3. | 2 and 5 | 7. |
| 4 and 3 | 7. | 3 and 2 | 5. |
| 2 and 4 | 6. | 2 and 2 | 4. |

The sign + stands for the word **and**.

Copy, and use the sign that stands for *and* :

- | | | | |
|---|--------|---|--------|
| 3 | 1 = 4. | 3 | 3 = 6. |
| 1 | 2 = 3. | 3 | 4 = 7. |
| 4 | 2 = 6. | 5 | 2 = 7. |
| 2 | 3 = 5. | 1 | 5 = 6. |

Copy, and write each answer at the right of the sign = :

- | | | |
|-------------|---------|-------------|
| 1 + 1 = | 1 + 2 = | 3 + 1 = |
| 2 + 4 = | 1 + 4 = | 4 + 1 = |
| 3 + 2 = | 3 + 3 = | 1 + 5 = |
| 1 + 3 = | 5 + 2 = | 3 + 4 = |
| 2 + 2 = | 4 + 2 = | 6 + 1 = |
| 2 + 1 = | 1 + 6 = | 4 + 3 = |
| 1 + 1 + 1 = | | 2 + 2 + 2 = |
| 2 + 1 + 1 = | | 1 + 2 + 3 = |
| 2 + 2 + 1 = | | 2 + 3 + 2 = |
| 3 + 1 + 2 = | | 3 + 3 + 1 = |
| 3 + 2 + 2 = | | 2 + 3 + 1 = |
| 5 + 1 + 1 = | | 4 + 1 + 2 = |

THE SIGNS - AND X.

The sign - stands for the word **minus**.

When we take 3 blocks from 5 blocks, we have 2 blocks left.

We write this,

$$5 \text{ blocks} - 3 \text{ blocks} = 2 \text{ blocks} :$$

and we read this,

5 blocks *minus* 3 blocks are 2 blocks.

Oral and slate exercises :

BLOCKS.	BLOCKS.	BLOCKS.
$3 - 1 =$	$6 - 1 =$	$6 - 4 =$
$2 - 1 =$	$6 - 3 =$	$5 - 4 =$
$4 - 2 =$	$7 - 1 =$	$7 - 5 =$
$5 - 3 =$	$5 - 2 =$	$7 - 3 =$
$3 - 2 =$	$7 - 2 =$	$7 - 4 =$

The sign \times stands for the word **times**.

PEARS.	PEARS.	PEARS.
$3 \times 1 =$	$2 \times 3 =$	$5 \times 1 =$
$2 \times 1 =$	$4 \times 1 =$	$7 \times 1 =$
$2 \times 2 =$	$6 \times 1 =$	$3 \times 2 =$

NOTE. The pupils should copy the above, and similar exercises, on blocks of paper or slates, and write the answer for each example.

Also the Teacher should put these exercises on the blackboard, and with pointer in hand require of *each pupil in turn* quick answers to such examples as she touches with the pointer. One child at a time should give the answers aloud, and the other members of the class should be on the alert to raise their hands when a wrong answer is given. If a child gives a wrong answer, he should be sent to the counting-board to discover the true answer.

THE DAYS OF THE WEEK.

On what day of the week do we go to church ?

The next day we come to school. Who can tell the name of the day that follows Sunday ?

Who can tell the name of the day that follows Monday ?

What day comes after Tuesday ?

What day comes after Wednesday ?

What day comes after Thursday ?

The day that follows Friday we have for a holiday. What is the name of that day ?

We will write the first letter of each day, thus :

S _____,

M _____,

T _____,

W _____,

T _____,

F _____,

S _____.

Repeat with me the days of the week, beginning with Sunday.

Wednesday is the middle day of the week.

What day comes before Wednesday ?

How many days make a week ?

Remember : **7 days make 1 week.**

NOTE. The Teacher should make sure that *all* the pupils of the class give close attention and learn the days of the week, and not be satisfied if *some one* in the class can repeat them. In fact, *this caution applies to all class-work.*

THE NUMBER EIGHT.

Seven dots and one dot make eight dots.

Here are eight dots, 

We write the figure 8 for eight.

Copy these pictures and write under each group the figure for the number in the group :

× × × × × × × × * * * * * * * *

Copy each card below, and write under it the figure for the number of dots in the card.

Count the dots in these cards from left to right.

Count the dots from right to left.

What number follows 5 ? follows 7 ?

What number comes before 8 ? comes before 5 ?

What number is between 5 and 7 ? 6 and 8 ?

Copy, and add dots enough to make 8 dots in each card below :

How many blocks are 5 and 3 ? 6 and 2 ? 4 and 3 ? 4 and 4 ? 2 and 5 ? 2 and 6 ? 7 and 1 ?

How many dots must be put with 5 to make 8 ? with 2 to make 8 ? with 3 to make 8 ? with 4 to make 8 ? with 7 to make 8 ? with 6 to make 8 ?

How many more dots are 8 than 6 ? 8 than 3 ? 8 than 4 ? 8 than 2 ? 8 than 1 ? 8 than 5 ?

Here are 8 blocks, 

If you take away 2 blocks, how many will be left ?

If you take away 6 blocks, how many will be left ?

If you take away 5 blocks, how many will be left ?

If you take away 3 blocks, how many will be left ?

If you take away 4 blocks, how many will be left ?

If you take away 1 block, how many will be left ?

If you take away 7 blocks, how many will be left ?

Ellen may take 2 blocks at a time for 4 times.

How many blocks has she ? How many blocks, then, are 4 times 2 blocks ?

How many cups are 4 times 2 cups ?

How many pears are 4 times 2 pears ?

Erwin may take 4 blocks, and then 4 more.

How many times has he taken 4 blocks ? How many blocks has he ? How many blocks, then, are 2 times 4 blocks ?

How many plums are 2 times 4 plums ?

How many apples are 2 times 4 apples ?

How many are 4 times 2 ? How many are 2 times 4 ? How many 2's in 8 ? How many 4's in 8 ?

How many are 3 times 2 ? How many are 2 times 3 ? How many 2's in 6 ? How many 3's in 6 ?

How many oranges are one-half of 6 oranges ?

How many apples are one-third of 6 apples ?

When we take *one-half* of 6 oranges, into how many *equal parts* do we divide the 6 oranges ?

When we take *one-third* of 6 apples, into how many *equal parts* do we divide the 6 apples ?

Here are 8 blocks, 

How many times must Nora go to bring these blocks to me if she brings just 2 blocks each time? Then 8 blocks divided by 2 blocks = 4 *times*.

But if Nora divides the blocks into two equal parts, how many blocks will there be in each part?

Then 8 blocks divided by 2 = 4 *blocks*.

NOTE. The Teacher must illustrate in many ways the two different meanings of Division. When the divisor is a mere number, as 2, 3, 4, etc., the meaning of division then is the separation of the given number of things into 2, 3, 4, etc., equal parts, and the quotient will signify *a number of things like the dividend*. When the divisor is a *number of things like the dividend*, the quotient will signify *the number of times the divisor is contained in the dividend*; that is, the number of times the divisor can be taken from the dividend.

How many times are 2 cents contained in 6 cents?

How many times are 2 cents contained in 8 cents?

How many times are 4 cents contained in 8 cents?

How many times are 3 cents contained in 6 cents?

What is the answer for

8 cents divided by 4 cents?

8 pears divided by 2 pears?

6 peaches divided by 2 peaches?

6 plums divided by 3 plums?

8 chairs divided by 2 chairs?

8 oranges divided by 4 oranges?

This sign \div stands for the words **divided by**.

4 dogs \div 2 = ?

6 pears \div 3 = ?

4 hens \div 2 = ?

8 cents \div 2 = ?

6 figs \div 2 = ?

8 tops \div 2 = ?

Divide these eight dots thus, ●●/●●/●●/●●

Into how many *equal parts* have you divided them?

If a number of things is divided into **four equal parts**, each part is **one-fourth** of the number.

How many dots in *one-fourth* of 8 dots?

How many dots in *two-fourths* of 8 dots?

How many dots in *three-fourths* of 8 dots?

How many dots in *four-fourths* of 8 dots?

How many dots in *one-half* of 8 dots?

How many dots in *two-halves* of 8 dots?

Fourths are often called quarters.

Find one-quarter of 4 dollars; of 8 cents.

Find two-quarters of 4 dollars; of 8 cents.

Find three-quarters of 4 dollars; of 8 cents.

Find four-quarters of 4 dollars; of 8 cents.

Find one-half of 4 dollars; of 8 cents; of 8 pigs.

What part of 8 blocks are 4 blocks? are 2 blocks?

What part of 8 cents are 2 cents? are 4 cents?

What part of 6 cups are 3 cups? are 2 cups?

Which is greater, one-half of 8 cents or one-fourth of 8 cents? one-half of 8 cents or one-quarter of 8 cents?

Which is greater, one-half of 8 cents or two-fourths of 8 cents? one-half of 8 cents or three-fourths of 8 cents?

Here is a new way of writing one-half, thus, $\frac{1}{2}$; one-third, thus, $\frac{1}{3}$; one-fourth, thus, $\frac{1}{4}$.

We write two-thirds, thus, $\frac{2}{3}$; two-fourths, thus, $\frac{2}{4}$; three-quarters, thus, $\frac{3}{4}$.

Read: $\frac{1}{2}$; $\frac{1}{3}$; $\frac{2}{3}$; $\frac{1}{4}$; $\frac{3}{4}$; $\frac{2}{4}$; $\frac{1}{4}$.

Write in figures: one-half; one-third; two-thirds; one-fourth; three-quarters.

If a melon is cut into four equal parts, what is one of the parts called ?

What are three of the parts called ?

How many quarters of a melon does it take to make a whole melon ?

How many quarters of a melon does it take to make half of a melon ?

How many quarters of a dollar does it take to make a dollar ? to make half of a dollar ?

How many quarters of a dollar does it take to make 2 dollars ?

How many quarters of a dollar does it take to make one dollar and a half ?

How many quarters of a dollar does it take to make one dollar and a quarter ?

If a pie is cut into quarters, and Mary, Tom, and Harry each have a quarter, how many quarters will be left for Alice ?

If half of a pie is cut into two equal parts, what part of the *whole pie* is each piece ?

What part of the whole pie are the two pieces together ?

How many fourths make one-half ?

GILL.

PINT.

QUART.

GALLON.

Which one of these measures is the smallest ?

How many gills will the pint measure hold ? *

Then four gills make one pint.

At 1 cent a gill, what will a pint of milk cost ?

At 2 cents a gill, what will a pint of syrup cost ?

How many gills in a half pint of water ?

How many pints will the quart measure hold ? *

Then two pints make one quart.

At 4 cents a pint, what will a quart of milk cost ?

At 3 cents a pint, what will a quart of oil cost ?

At 6 cents a quart, what will a pint of berries cost ?

What part of a quart is 1 pint ?

How many gills make 1 quart ?

How many quarts will the gallon measure hold ? *

Then four quarts make one gallon.

What part of a gallon is one quart ?

What part of a gallon are 2 quarts ? are 3 quarts ?

At 8 cents a gallon, what will a quart of skim-milk cost ? What will a pint cost ?

NOTE.* Let the pupil discover by trial the answer to this question.

THE NUMBER NINE.

Eight dots and *one* dot make **nine** dots.

Here are *nine* dots,

We write the **figure 9** for **nine**.

Copy these pictures, and write under each group the figure for the number in the group :

Copy these cards, and add dots enough to make 9 dots in each card, and write 9 under each card :

How many dots are 3 and 6? 5 and 4? 7 and 2? 1 and 8? 3 and 3? 2 and 7? 4 and 3? 4 and 5? 4 and 4? 6 and 3? 8 and 1? 5 and 3?

THE FIGURE ZERO.

The figure 0 is called **zero**, **naught**, or **cipher**.

The figure 0 means **none to count**.

Four roses grew on a bush ; 2 were picked ; and then 2 more. Write the figure for the number left.

Write the figure for the number of blocks left when you take away 5 blocks from 5 blocks.

Write the figure for the number of oranges left if you had 4 oranges and gave them all away.

Review of figures :

You have now had *all* the figures used for writing numbers, and have learned the meaning of each separate figure. Thus :

The figure **1** is written for **One**.

The figure **2** is written for **Two**.

The figure **3** is written for **Three**.

The figure **4** is written for **Four**.

The figure **5** is written for **Five**.

The figure **6** is written for **Six**.

The figure **7** is written for **Seven**.

The figure **8** is written for **Eight**.

The figure **9** is written for **Nine**.

The figure **0** is written for **None**.

Draw a square, and write 0 under it : then another square, and write 1 under it ; and so on to 9.

Put in each square the number of dots indicated by the figure written under it.

THE NUMBER TEN.

Nine dots and *one* dot make ten dots.

Here are *ten* dots, 

We write the figures 10 for ten.

Ten ones make 1 ten.

Draw these number pictures of ten, and write under each division the figure for the number of dots in the division :

$9 + 1$

Look at these number cards, and answer the following questions :

How many must you add to 9 to make 10? to 8 to make 10? to 7 to make 10? to 6 to make 10? to 5 to make 10? to 4 to make 10? to 3 to make 10? to 2 to make 10? to 1 to make 10?

How many more are 10 than 2? than 4? than 6? than 8? than 3? than 5? than 7? than 9?

John found 3 eggs on Thursday, and 4 on Friday.
How many eggs did he find ?

There are 7 days in a week. When 2 are gone,
how many are left ?

There were 7 red roses on a rose bush, and 5
white roses on another bush. How many more
red roses were there than white roses ?

Susan had 3 apples, and James had 5 apples.
How many apples had Susan and James together ?

Alice had 8 dolls, and gave away 3 of them.
How many had she left ?

If a window has 4 panes of glass, how many
panes of glass in 2 windows ?

How many feet have 2 dogs ? 4 hens ?

If you take 2 apples 4 times from a dish that
has 8 apples in it, how many apples will be left ?

There were 8 rooms in a house, half of them in
the first story, and half in the second story. How
many were there in each story ?

John had 8 peaches, and gave away a quarter
of them. How many peaches did he give away ?

Frank bought 9 marbles, and gave away 4 of
them. How many had he left ?

There are 9 apples in a dish. How many boys
can have 3 apples apiece ?

At 3 cents apiece, how many oranges can you
buy for 6 cents ? for 9 cents ?

At 2 cents apiece, how many pears can you buy
for 9 cents, and how many cents will be left ?

Part II.

LESSON 1.

Look at the number picture on the right. What do you see over the 2? 2 ones. Over the 1? 1 ten. Then 12 means *one ten and two ones*.

Look at the middle number. What do you see over the 1 at the right? What do you see over the 1 at the left? Then 11 means *one ten and one*.

Look at the number picture on the left. What do you see over the 0? What do you see over the 1? Then 10 means *one ten and no ones*.

NOTE. The Teacher should proceed in Part II. as in Part I.; showing objects, drawing number pictures on the board, and reading all the clothed exercises for the pupils. Pupils should have the books simply to copy and solve the numerical exercises.

John may go to the counting-board. How many holes are there in the top row? Put one nail in one of the holes of the top row.

How many holes are left in the row?

Then how many must we add to 1 to make 10?

Put in one more nail. How many nails are there now? How many holes are left in the row?

Then how many must we add to 2 to make 10?

Put in one more nail. How many nails are there now? How many holes are left in the row?

How many must we add to 3 to make 10?

Put in one more nail. How many nails are there now? How many holes are left in the row?

How many must we add to 4 to make 10?

Put in one more nail. How many nails in the row? How many holes are left in the row?

How many must we add to 5 to make 10?

Put in one more nail. How many nails in the row? How many holes are left in the row?

How many must we add to 6 to make 10?

Put in one more nail. How many nails in the row? How many holes are left in the row?

How many must we add to 7 to make 10?

Put in one more nail. How many nails are there now? How many holes are left in the row?

How many must we add to 8 to make 10?

Put in one more nail. How many nails now in the row? How many holes are left in the row?

How many must we add to 9 to make 10?

Here are ten rings, ○○○○○○○○○○

I will put the end of the pointer between the second and third rings.

How many rings on the left of the pointer ?

How many rings on the right of the pointer ?

How many are 2 and 8 ?

How many are 10 less 2 ? 10 less 8 ?

I will put the end of the pointer between the third and fourth rings.

How many rings on the left of the pointer ?

How many rings on the right of the pointer ?

How many are 3 and 7 ?

How many are 10 less 3 ? 10 less 7 ?

I will put the end of the pointer between the fourth and fifth rings.

How many rings on the left of the pointer ?

How many rings on the right of the pointer ?

How many are 4 and 6 ?

How many are 10 less 4 ? 10 less 6 ?

I will put the end of the pointer between the fifth and sixth rings.

How many rings on the left of the pointer ?

How many rings on the right of the pointer ?

How many are 5 and 5 ?

How many are 10 less 5 ?

How many are 10 less 1 ? 10 less 9 ?

NOTE. Practise this exercise, putting the pointer in different positions, until the pupils can readily name any two parts of 10; and the part left when one part is taken from 10.

In each of the number pictures below, the bundle is a bundle of ten.

Write the figures for the number in each case.

How many figures do you write for each number ?

What does the figure on the left show ?

What does the figure on the right show ?

What is the number 11 called ? Eleven.

What is the number 12 called ? Twelve.

NOTE. It is absolutely necessary for the Teacher to show bundles of ten things (pencils, sticks, etc.) kept distinct by rubber bands, in order to show the compositions of numbers containing tens and ones ; and to show also that the counting of **units of tens** is exactly the same as the counting of single units.

NOTE. The above exercises, and similar exercises, should be worked aloud by *each one* of the class in turn; and on blocks of paper or slates. Thus, the first example should be worked at first, as follows: 12 sheep and 2 sheep are 14 sheep.

If a child makes a mistake, let the child himself correct it by the counting-board or by dots on the blackboard. Care should be taken to have him clearly see that these operations are confined to the *ones*. Thus, in adding 2 to 12, let him fill the top row of holes in the counting-board with nails, and 2 holes more in the next row for the 12, then put two more nails in the row with the 2 nails already there. He will then see that $12 + 2 = 10 + 4 = 14$.

NOTE. When the sum of the ones is more than ten, we proceed as follows: Suppose we have to add 7 to 8. Call upon one of the children to put 8 nails in the top row of the counting-board, and 7 in the second row, and then ask, How many nails are there in the top row? How many holes are left? How many nails must we put in the top row to make ten? Let him take 2 nails from the 7 in the second row and put in the holes left in the top row. How many nails now in the top row? How many in the second row? Then 8 and 7 are 10 and 5, or 15.

Continue this practice, a few minutes at a time, until the children can dispense with the counting-board; then continue it with the intermediate step until they can dispense with that step, and name instantly the sum of any two numbers that are each less than ten.

This method may seem tedious, but it is the only method that gives complete mastery of addition.

NOTE. In Subtraction, the pupils may use the knowledge acquired in Addition. Thus, if 8 is to be subtracted from 15, the answer sought is obtained by discovering the number that must be added to 8 to make 15. But it is better to keep Subtraction distinct from Addition, and at this stage to take two steps, just as we did in Addition.

Suppose we are required to take 8 from 15. Let one of the children put 10 nails in the top row of holes in the counting-board, and 5 in the next row below. We now ask the following questions: How many nails must we take away to leave 10? How many more than 5 are we required to take away? And 3 nails from 10 nails leave? Then $15 - 8 = 10 - 3 = 7$.

THE FOOT-RULE AND THE YARD-STICK.

Measure the yard-stick with the foot-rule. How many feet long is the yard-stick ?

A carpet is a yard wide. How many feet wide is the carpet ?

How many yards in 3 feet ? in 6 feet ? in 9 feet ? in 12 feet ?

How many feet in 2 yards ? in 3 yards ? in 4 yards ? in $\frac{1}{2}$ of a yard ?

If the distance between two windows is 3 yards, how many feet is the distance ?

Your foot-rule is marked off into 12 divisions. What is each division called ? How many inches, then, make a foot ?

How many inches in $\frac{1}{2}$ a foot ? $\frac{1}{3}$ of a foot ? $\frac{1}{4}$ of a foot ? $\frac{1}{5}$ of a foot ? $\frac{1}{6}$ of a foot ?

What part of a foot are 6 inches ? 4 inches ?

How many more inches are 10 inches than 6 inches ? than 5 inches ? than 3 inches ? than 7 inches ? than 2 inches ?

Remember : 12 inches make 1 foot.

3 feet make 1 yard.

If there are 8 yards of wall-paper in a roll, how many yards are there in $\frac{1}{2}$ of a roll ?

If it takes 2 yards of ribbon to trim a hat, how many yards will it take to trim 6 hats ?

Edna's mother had 8 yards of velvet. She used $\frac{1}{2}$ of her velvet. How many yards were left ?

Measure with the foot rule :

1. The length of a page of your reader.
2. The length of the top of your desk.
3. The length of a pane of glass in the window.
4. The width of a pane of glass in the window.
5. The length of your slate.
6. The width of your slate.
7. The length of the face of the blackboard.
8. The width of the face of the blackboard.
9. The length of a page of your copybook.

Measure with the yard stick :

10. The width of the floor of this room.
11. The length of the floor of this room.

Draw on the board a line 12 inches long, as nearly as you can without measuring. Measure this line, and tell me how long it really is.

Draw a line 6 inches long, as nearly as you can. Measure the line, and tell me how long it really is.

Draw a square, one inch on each side.

Draw a square with its sides 2 inches long, and divide it into four smaller squares.

How many square inches in a square, the sides of which are 2 inches long ?

How many square inches in a square, the sides of which are 3 inches long ?

Draw a square with its sides 3 inches long, and divide it into *nine* smaller squares.

NOTE. The Teacher should give exercises in measuring daily.

You have already learned that we write the figure for the number of tens in the *second* place from the right. In what place, counting from the right, do we write the *hundreds* of a number ?

Write on the board the number that contains six hundreds, no tens, and five ones.

If you rub out the 0, what does the number become ?

Two tens and one make twenty-one, 21.

Two tens and two make twenty-two, 22.

Two tens and three make twenty-three, 23.

Two tens and four make twenty-four, 24.

Two tens and five make twenty-five, 25.

Two tens and six make twenty-six, 26.

Two tens and seven make twenty-seven, 27.

Two tens and eight make twenty-eight, 28.

Two tens and nine make twenty-nine, 29.

What are the names of the numbers made up of 3 tens and 1? 3 tens and 2? 3 tens and 3? 3 tens and 4? 3 tens and 5? 3 tens and 6? 3 tens and 7? 3 tens and 8? 3 tens and 9?

TWENTY-ONE. 21.

How many dots in each row of dots marked (a)?

How many rows of dots?

How many dots in the three rows together?

How many dots, then, are 3 times 7 dots?

How many dots in each column of dots?

How many columns of dots?

How many dots in the seven columns?

How many dots, then, are 7 times 3 dots?

How many 3's in 21?

Look at the number picture marked (b).

How many 7's in 21?

$$3 \times 7 = ?$$

$$21 \div 3 = ?$$

$$\frac{1}{3} \text{ of } 21 = ?$$

$$7 \times 3 = ?$$

$$21 \div 7 = ?$$

Count by 4's to 23, beginning 3, 7, etc.

There are 5 plates in a row, and each plate has 5 apples on it. How many apples on the 5 plates ?

If you divide 25 oranges equally among five little girls, how many oranges will each girl have ?

If you have 25 oranges, how many times can you give away oranges if you give 5 each time ?

How many eggs make a dozen ? a half-dozen ?

How many inches make a foot ? How many feet a yard ? How many quarts a gallon ?

TWENTY-SEVEN. 27.

How many dots in each row of dots marked (a)?

How many rows are there?

How many dots in the three rows together?

How many dots, then, are 3 times 9 dots?

How many dots in each column of dots?

How many columns are there?

How many dots in the nine columns?

TWENTY-EIGHT. 28.

How many dots in each row of dots marked (a)?

How many rows are there?

How many dots in the four rows together?

How many dots, then, are 4 times 7 dots?

How many dots in each column?

How many columns of dots are there?

How many dots in the seven columns?

How many dots, then, are 7 times 4 dots?

How many 4's in 28? How many 7's in 28?

$4 \times 7 = ?$ $7 \times 4 = ?$ $28 \div 4 = ?$ $28 \div 7 = ?$

At 4 cents a quart, what will 6 quarts of milk cost? What will 7 quarts cost?

At 6 cents a quart, what will 4 quarts of berries cost? What will 3 quarts cost?

At 7 cents a quart, what will 4 quarts of berries cost? What will 3 quarts cost?

At 7 cents a cake, how many cakes of maple sugar can you buy for 28 cents?

If it takes 4 men 7 days to dig a certain ditch, how long will it take 1 man to dig the ditch?

If it takes a man 28 days to build a certain wall, how many days will it take him to build a quarter of the wall? Three-quarters of the wall?

What part of 28 is 7? What part of 24 is 4? What part of 24 is 8? What part of 27 is 9?

THIRTY. 30.

How many dots in each row of dots marked (a)?

How many rows are there?

How many dots in the five rows?

How many dots, then, are 5 times 6 dots?

How many dots in each column of dots?

How many columns of dots are there?

How many dots in the six columns?

How many dots, then, are 6 times 5 dots?

How many 6's in 30? How many 5's in 30?

What part of 30 is 6? What part of 30 is 5?

$5 \times 6 = ?$ $6 \times 5 = ?$ $30 \div 5 = ?$ $30 \div 6 = ?$

How many cents are 6 five-cent pieces?

How many five-cent stamps can you buy for 30 cents? for 25 cents? for 20 cents?

When berries are 6 cents a quart, how many quarts can you buy for 30 cents? for 24 cents?

How many more is $\frac{1}{2}$ of 30 than $\frac{1}{3}$ of 30?

How many tens in 30? How many fives in $\frac{1}{2}$ of 30? in $\frac{1}{3}$ of 30? in $\frac{1}{4}$ of 30?

How many *sixths* of 30 must you take to have $\frac{1}{2}$ of 30? to have $\frac{1}{3}$ of 30?

How many *sixths* of any number must you take to have $\frac{1}{2}$ of the number? to have $\frac{1}{3}$ of the number?

How many inches in $\frac{1}{2}$ of a foot? in $\frac{2}{3}$ of a foot?

How many inches in $\frac{1}{3}$ of a foot? in $\frac{2}{4}$ of a foot?

SLATE ADDITION.

Add 8 ones to 6 tens and 7 ones.

Write the 6 tens and 7 ones 67

Then write the 8 ones under the 7 ones . . . 8

Add the ones. 75

How many are 8 ones and 7 ones? 15.

How many tens and how many ones in 15?

Write the 5 ones in the **ones'** place under 8.

What shall be done with the 1 ten?

Add it to the 6 tens, and we have 7 tens.

Now write the 7 tens in the **tens'** place.

Read the answer. How many tens and ones in 75?

Add 7 ones to 2 tens and 8 ones.

Add 8 ones to 2 tens and 5 ones.

Add 6 ones to 3 tens and 7 ones.

Add 4 ones to 4 tens and 9 ones.

Add 9 ones to 4 tens and 7 ones.

Add 5 ones to 5 tens and 5 ones.

Add 7 ones to 7 tens and 3 ones.

68	76	47	28	35	24

<u>+7</u>	<u>+8</u>	<u>+7</u>	<u>+9</u>	<u>+9</u>	<u>+9</u>

Add 3 tens and 7 ones to 4 tens and 6 ones.

Write the 4 tens and 6 ones 46
 Then the 3 tens and 7 ones 37
 Add the ones. 83

How many are 7 ones and 6 ones? 13.

How many tens and how many ones in 13?

Write the 3 ones in the **ones'** place under the 7.

What shall be done with the 1 ten in 13?

Add it to the tens.

1 ten and 3 tens are? and 4 tens more?

Write the 8 in the **tens'** place.

Therefore the **sum** of 46 and 37 is 83.

Add 5 tens and 3 ones to 1 ten and 8 ones.

Add 7 tens and 6 ones to 1 ten and 5 ones.

Add 3 tens and 7 ones to 3 tens and 6 ones.

Add 3 tens and 3 ones to 3 tens and 9 ones.

Add 2 tens and 5 ones to 5 tens and 5 ones.

Add 4 tens and 9 ones to 4 tens and 8 ones.

Add 6 tens and 4 ones to 1 ten and 9 ones.

Add 3 tens and 8 ones to 4 tens and 7 ones.

SLATE SUBTRACTION.

The result obtained from subtracting a smaller number from a larger is called the **remainder** or **difference**. The smaller number is called the **subtrahend**; and the larger number, the **minuend**.

From 5 tens and 3 ones take 2 tens and 8 ones.

Write the 5 tens and 3 ones. 53

Write the 2 tens and 8 ones below 28

Draw a line underneath 25

We cannot take 8 ones from 3 ones. We therefore take 1 of the 5 tens and put with the 3 ones.

NOTE. Illustrate this. Let the pupil take a bundle of ten, and slipping off the rubber bands put the ten ones with the three ones.

We now have 13 ones, and 8 ones from 13 ones leave 5 ones. We write the 5 in the **ones'** place.

As we have taken 1 ten from the 5 tens, we have only 4 tens left, and 2 tens from 4 tens leave 2 tens.

We write the 2 in the **tens'** place, and have for the remainder 2 tens and 5 ones; that is, 25.

NOTE. The entire work may be shown as follows:

$$\begin{array}{r} 53 \\ 28 \\ \hline 25 \end{array} \qquad \begin{array}{r} 40 + 13 \\ 20 + 8 \\ \hline 20 + 5 = 25. \end{array}$$

The pupils, however, must be taught from the first to do the work without any change of the figures.

One hundred twenty-nine.	One hundred nine.
Two hundred thirty-six.	Seven hundred eight.
Two hundred twenty-four.	Five hundred six.
Two hundred twenty-two.	Four hundred seven.
Five hundred nineteen.	Three hundred five.
Seven hundred thirteen.	Two hundred four.
Six hundred eighteen.	Four hundred three.
Nine hundred eleven.	Three hundred two.
Three hundred twelve.	Four hundred one.
Three hundred sixteen.	Four hundred ten.

In any number containing hundreds, tens, and ones,

The ones are called **units of the first order**.

The tens are called **units of the second order**.

The hundreds are called **units of the third order**.

Remember that any standard by which we count or measure is called a **unit**.

When we multiply one number by another, the result is called the **product**; the number multiplied is called the **multiplicand**; and the number by which we multiply is called the **multiplier**.

Name two numbers whose product is: 15; 12; 18; 24; 21; 32; 28; 25; 35; 45; 42; 27; 20.

The product of two equal numbers is called a **square number**. With 16 buttons make a square.

Multiply 234 by 2.

Write the **multiplicand** 234

Under the **ones** write the **multiplier** 2

Draw a line below. 468

Multiply in order the *ones, tens, and hundreds*, and write the result at each step: Twice 4 ones are 8 ones, twice 3 tens are 6 tens, twice 2 hundreds are 4 hundreds. The product, therefore, is 468.

Find the products :

When we divide one number by another, the result is called the **quotient**; the number divided is called the **dividend**; and the number by which we divide is called the **divisor**.

Divide 648 by 2.

Write the **divisor** at the left of the **dividend** with a curved line between them, and draw a line underneath. 2)648

Divide in order the *hundreds, tens, and ones*, and write the result at each step: 2 in 6 hundreds, 3 hundreds; 2 in 4 tens, 2 tens; 2 in 8 ones, 4 ones. The quotient, therefore, is 324. 324

ROMAN NUMERALS.

The Roman method of writing numbers uses these seven capital letters :

$$\begin{array}{llll} \text{I} = 1; & \text{V} = 5; & \text{X} = 10; & \text{L} = 50; \\ \text{C} = 100; & \text{D} = 500; & \text{M} = 1000. & \end{array}$$

Other numbers are written by putting two or more of these letters together.

A letter written **before** another of greater value signifies the **difference** of the values of the letters used.

$$\text{Thus, IV} = 4; \text{ IX} = 9; \text{ XL} = 40; \text{ XC} = 90.$$

A letter written **after** another of the same or greater value signifies the **sum** of the values of the letters used. Thus,

$$\begin{array}{llll} \text{VI} = 6; & \text{XI} = 11; & \text{LX} = 60; & \text{CX} = 110; \\ \text{II} = 2; & \text{III} = 3; & \text{VII} = 7; & \text{VIII} = 8; \\ \text{XX} = 20; & \text{XXX} = 30; & \text{LXX} = 70; & \text{CCC} = 300. \end{array}$$

Numbers from 10 to 20 are written :

$$\begin{array}{ll} 11 = \text{X} + \text{I} = \text{XI}; & 16 = \text{X} + \text{VI} = \text{XVI}; \\ 12 = \text{X} + \text{II} = \text{XII}; & 17 = \text{X} + \text{VII} = \text{XVII}; \\ 13 = \text{X} + \text{III} = \text{XIII}; & 18 = \text{X} + \text{VIII} = \text{XVIII}; \\ 14 = \text{X} + \text{IV} = \text{XIV}; & 19 = \text{X} + \text{IX} = \text{XIX}. \\ 15 = \text{X} + \text{V} = \text{XV}; & \end{array}$$

In like manner :

MEASURE OF TIME.

When the smallest hand of the clock has gone round the little circle, a *minute* has passed.

The little circle has 60 spaces, and the hand goes over one space every *second*. Hence,

Sixty seconds make a minute.

When the longest hand of the clock has gone round the large circle, an *hour* has passed.

How many spaces are marked on the large circle?

The longest hand goes over one space every *minute*. Hence,

Sixty minutes make an hour.

The letters I, II, etc., mark the hour spaces.

How many hours have passed when the hour-hand has gone entirely round the face of the clock?

The hour-hand goes round twice from sunrise to sunrise. Hence,

Twenty-four hours make a day.

How many minutes in a half of an hour? in a quarter of an hour? in a third of an hour? in three-quarters of an hour?

What part of an hour are 30 minutes? 15 minutes? 20 minutes? 10 minutes? 45 minutes?

How many hours in a half of a day? in a quarter of a day? in a third of a day?

What time of day is shown on the clock-face?

What time of day will be shown on the clock-face when the minute-hand reaches I? II? III? IIII? V? VI? VII? VIII? IX? X? XI? XII?

What time of day will be shown on the clock-face when the minute-hand is one minute-space beyond I? II? III? V? VI? VIII? IX? X? XI?

What time of day will be shown on the clock-face when the minute-hand is two minute-spaces beyond I? II? III? IIII? VI? IX? X? XI?

What time of day will be shown on the clock-face when the minute-hand is three minute-spaces beyond I? III? V? VII? IX? X? XI?

What time of day will be shown on the clock-face when the minute-hand is four minute-spaces beyond II? III? V? VI? VII? VIII? IX? X?

What time of day will be shown on the clock-face when the minute-hand is at XII and the hour-hand at I? II? III? V? VI? VII? VIII? IX?

At what letters does the minute-hand point at half-past four? at quarter-past four? at quarter of five? at 20 minutes to five?

If a man works 8 hours a day, what part of the day (24 hours) does he work ?

What part of 24 hours are 4 hours ? 6 hours ? 8 hours ? 12 hours ? 2 hours ?

If a man can dig one-quarter of a certain ditch in 8 hours, how many hours will it take him to dig the whole ditch ?

If 2 men can mow a certain field in 8 days, how many days will it take one man to mow it ?

If one man can mow a certain field in 24 days, how many men will it take to mow the field in 6 days ? in 4 days ? in 8 days ? in 3 days ?

How many minutes are there in 2 hours ? in 3 hours ? in 4 hours ? in 5 hours ? in 6 hours ?

How many seconds are there in 2 minutes ? in 4 minutes ? in 5 minutes ? in 6 minutes ?

What part of a minute are 30 seconds ? 15 seconds ? 12 seconds ? 20 seconds ? 40 seconds ? 45 seconds ? 50 seconds ?

If a man walks a mile in 20 minutes, how many miles at that rate will he walk in an hour ?

If a man walks a mile in 15 minutes, how many miles at that rate will he walk in an hour ?

At the rate of one mile in 10 minutes, how many miles will a horse go in an hour ?

At the rate of one mile in 6 minutes, how many miles will a horse go in one hour ?

At the rate of one mile in 2 minutes, how many miles will a railway train go in an hour ?

At 9 cents a pint, what will 6 pints of sirup cost ? 5 pints ? 4 pints ? 3 pints ? 2 pints ?

If we divide 25 by 4, we have 6 for the quotient and 1 for the remainder.

The quotient and remainder may be written as a complete quotient, thus, $6\frac{1}{4}$.

In this quotient, the part $\frac{1}{4}$ is written by writing the remainder above the divisor with a line between them.

Divide, and write the complete quotient under the dividend in each case :

How many thousands and how many ones in 7,632 ? 50,023 ? 41,701 ? 417,203 ? 500,230 ?

Write in figures and read all the numbers from 4,002 to 4,020 ; from 80,997 to 81,010 ; from 537,091 to 537,102 ; from 748,987 to 749,000.

Read: 5,430 ; 3,072 ; 1,010 ; 45,320 ; 70,045 ; 40,309 ; 36,008 ; 113,079 ; 273,002 ; 182,012 ; 811,200 ; 100,256 ; 500,005 ; 300,023 ; 608,300.

Write in figures :

Four thousand.

Three thousand seven.

Six thousand ten.

Five thousand fifteen.

Eight thousand three.

Nine thousand seven hundred.

Six thousand twenty-eight.

Seventy-four thousand six hundred.

Fifteen thousand five hundred.

Sixty-nine thousand thirty-two.

Seventy-three thousand five hundred forty-six.

Eight hundred thousand seven hundred five.

Ninety-six thousand eight hundred fifty-six.

Two hundred fifty thousand two hundred fifty.

Two hundred five thousand two hundred five.

MILLIONS.

When we write numbers which contain thousands and ones, we generally leave a little space after the last figure of the thousands, and put a comma in this space. Thus, 236 347 is written 236,347.

This comma divides the figures into two periods, the period of thousands and the period of ones.

Forty-eight thousand and thirty-six sheep is written, 48,036 sheep. Here we write 48 for the word *forty-eight*; then put a comma after the 8 for the word *thousand*; then 0, as there are no hundreds, and lastly, 36 for the word *thirty-six*.

The unit for the ones' period is 1 sheep.

The unit for the thousands' period is 1000 sheep.

The unit for the next higher period is a **million**.

A million is 1000 thousands, and is written

1,000,000.

The unit of any period is equal to 1000 units of the next lower period.

Three hundred million two hundred forty-six thousand five hundred dollars is written

\$300,246,500.

Here we put a comma after the 300 for the word *million*, and after the 246 for the word *thousand*.

The left-hand period may have one, two, or three figures, but **every other period must have three figures**, one figure for the hundreds, one for the tens, and one figure for the ones, of that period.

How many millions, thousands, and ones in 50,032,106 ? 41,107,106 ? 500,200,300 ?

Read :

32,027,020	316,106,207
100,370,200	70,000,035
275,701,050	170,202,305
75,017,500	28,028,280
57,207,005	202,170,503
10,987,278	111,798,827
65,371,954	210,007,500
87,250,520	120,052,250
54,054,540	540,504,054
95,720,027	905,059,950

Write in figures :

Thirty million, twenty-seven thousand, one hundred twenty dollars?

Two hundred seven million, seven hundred twenty thousand, three hundred dollars.

Ninety-five million, fifty-nine thousand, one hundred sixty-six dollars.

Five hundred nine million, five hundred four thousand, five hundred forty dollars.

Twenty million, two hundred twenty thousand, three hundred sixty-four dollars.

Nineteen million, nineteen thousand, nine hundred nineteen dollars.

Thirty-seven million, three hundred thirty-seven thousand, seven hundred dollars.

Two hundred twenty million, three hundred thirty thousand, four hundred forty dollars.

THOUSANDTHS AND TEN-THOUSANDTHS.

If a unit is divided into **ten equal parts**, each part is called a **tenth** of the unit; if into a **hundred equal parts**, each part is called a **hundredth**; if into a **thousand equal parts**, each part is called a **thousandth**; if into **ten thousand equal parts**, each part is called a **ten-thousandth**.

NOTE. The Teacher should use the meter stick to show the decimal parts of a unit. The decimeters show the tenths, the centimeters the hundredths, and the millimeters the thousandths, of the meter.

Tenths occupy one decimal place	0.1
Hundredths occupy two decimal places	0.21
Thousandths occupy three decimal places	0.213
Ten-thousandths occupy four decimal places	0.2134

The decimal 0.1 is read one *tenth*; 0.21 twenty-one *hundredths*; 0.213 two hundred thirteen *thousandths*; 0.2134 twenty-one hundred thirty-four *ten-thousandths*; 4.4045 is read four *and* four thousand forty-five *ten-thousandths*.

NOTE. In reading a number, part of which is integral and part decimal, pronounce *and* at the decimal point and omit it in all other places.

Read: 1.09; 23.023; 50.107; 7.0017; 7.0209; 5.5055; 2.3785; 15.0015; 6.2567.

Write in figures: two and five tenths; two and five hundredths; two and five thousandths; two and five ten-thousandths; two and twenty-five hundredths; two and twenty-five thousandths; two and twenty-five ten-thousandths; two and two hundred twenty-five thousandths; two and two hundred twenty-five ten-thousandths.

ADDITION.

To *test* the correctness of the work in addition, we add in a different order. The results should be the same. Thus, if we have added from the bottom to the top, we add from the top to the bottom.

1.	2.	3.	4.	5.	6.	7.
321	615	522	178	312	124	673

SLATE EXERCISES.

1. John Dix deposited in the Third National Bank of Boston \$ 4321, and a week later \$ 13,893. How much did he deposit in all ?

2. The steamer Majestic made on four successive days 503, 504, 505 and 505 miles. How many miles did she make in the four days together ?

3. In 1890 the population of New York was 1,513,501, of Brooklyn 804,377, and of Jersey City 162,317. What was the population of these three cities ?

4. In 1890 St. Louis had 460,357 inhabitants, Boston had 447,720, Baltimore 432,095, and San Francisco 297,990. How many had these four cities together ?

5. In 1890 Chicago had 1,098,576 inhabitants, Milwaukee 206,308, Minneapolis 164,738, St. Paul 133,156. How many had these four cities together ?

6. In 1890 Philadelphia had 1,044,894 inhabitants, Pittsburgh 238,473, Alleghany 104,967, Scranton 83,450. What is the population of the four largest cities of Pennsylvania ?

7. In 1890 Cincinnati had 296,309, Cleveland 261,546, Buffalo 255,543, Detroit 205,669. How many had these four cities together ?

8. In 1890 Washington had 228,160, New Orleans 241,995, Louisville 161,005, and Richmond 80,838. Find the population of these four cities together.

SUBTRACTION.

To *test* the correctness of the work in subtraction, we add the subtrahend and the remainder. The sum should be equal to the minuend.

Subtract 427 from 736.

736 Beginning on the right, subtract 7 from 16, and write 9
 427 below.
 309 Afterwards subtract 2, not from 3, but from 2, and write
 0 below. Then subtract 4 from 7, and write 3 below.

Subtract 7658 from 9000.

9000 Subtract 8 from 10, and write 2; then subtract 5, not
 7658 from 10, but from 9, and write 4; again, subtract 6 from 9,

MULTIPLICATION.

If a product greater than 9 is obtained in multiplying, the figure for the *ones* only is written, and the *tens* are added to the following product.

$$\begin{array}{r} 358 \\ 4 \\ \hline 1432 \end{array}$$
 Thus, in the problem in the margin $4 \times 8 = 32$, we write the 2; then 4×5 tens = 20 tens, and to the 20 tens we add the 3 tens of the last product, obtaining 23 tens or 2 hundreds and three tens; we write the 3; then 4×3 hundreds = 12 hundreds, and to the 12 hundreds we add the 2 hundreds of the last product, obtaining 14 hundreds, which we write. The entire product is therefore 1432.

If the multiplier has two or more figures :

We multiply by each figure separately, taking care to put the first figure of each product directly under the figure of the multiplier used in obtaining it ; and add the products. Thus,

7235	2046	<i>Proof.</i> 2046
2046		7235

		14802810

The multiplicand and multiplier are called *factors* of the product. If either factor is 0, the product is 0. The product of two factors is not changed if the *order* of the factors is changed.

To *prove* multiplication, we change the order of the factors, and multiply again. The products should be the same in both cases.

Multiply :

- | | | |
|----------------|------------------|------------------|
| 1. 114 by 32. | 11. 714 by 48. | 21. 3159 by 507. |
| 2. 112 by 76. | 12. 578 by 97. | 22. 3819 by 206. |
| 3. 365 by 56. | 13. 842 by 86. | 23. 8769 by 517. |
| 4. 372 by 23. | 14. 682 by 69. | 24. 5731 by 475. |
| 5. 283 by 64. | 15. 792 by 79. | 25. 8592 by 486. |

| 10. 736 by 94. | 20. 5983 by 704. | 30. 6897 by 976. |

If the multiplier is 10, 100, 1000, etc., we obtain the product by annexing to the multiplicand as many zeros as there are in the multiplier.

Thus, 100 times 746 is 74,600.

In short, if one or both factors end in zeros, we multiply without regard to the zeros.

Then we annex to the product as many zeros as there are at the ends of the factors together. Thus,

To multiply 74,200 by 230, we first multiply 742 by 23, and obtain 17,066. To this number we annex 3 zeros, and get 17,066,000 for the true result.

20. At 60 cents a yard, what will be the cost of digging a drain 350 yards long ?

If one or both factors have decimal places :

We multiply without regard to the decimal point.

Afterwards we point off in the product as many decimal places as there are decimal places in the two factors together. Thus :

Multiply 20.15 by 0.05:

$$\begin{array}{r} 20.15 \\ 0.05 \\ \hline 1.0075 \end{array}$$

We multiply 20.15 by 0.05 and obtain 10075. As there are 2 decimal places in the multiplicand and 2 in the multiplier, we point off 4 decimal places in the product and have 1.0075, one and seventy-five *ten-thousandths*.

Divide 654 by 3.

Here $6 \div 3 = 2$, and as 6 is in the place of hundreds, we write 2 in the place of hundreds under the 6.

Then $5 \div 3 = 1$, with remainder 2.

We write the 1 in the place of tens, under the 5.

The remainder 2 is 2 tens or 20 ones, and 20 ones put with the 4 ones make 24 ones.

Then $24 \div 3 = 8$, and we write 8 in the place of ones, under the 4.

The quotient, therefore, is 2 hundreds, 1 ten, and 8 ones; that is, 218.

$$\begin{array}{r} 3 \overline{)654} \\ 218 \end{array}$$

Divide 564 by 3.

Here $5 \div 3 = 1$, with remainder 2. We write the 1 in the place of hundreds, under the 5.

The remainder 2 is 2 hundreds, or 20 tens, and 20 tens put with 6 tens make 26 tens.

Then $26 \div 3 = 8$, with remainder 2.

We write the 8 in the place of tens, under the 6.

The remainder 2 is 2 tens, or 20 ones, and 20 ones put with 4 ones make 24 ones.

Then $24 \div 3 = 8$, and we write 8 in the place of ones, under the 4.

The quotient, therefore, is 1 hundred, 8 tens, and 8 ones; that is, 188.

$$\begin{array}{r} 3 \overline{)564} \\ 188 \end{array}$$

Divide 765 by 9.

Since 7 will not contain 9, we take for the first partial dividend 76. Then $76 \div 9 = 8$ with remainder 4, and as 6, the last figure of this dividend, is in the place of tens, we write the quotient 8 in the place of the tens under the 6.

The remainder 4 is 4 tens or 40 ones, and 40 ones put with the 5 ones make 45 ones.

Then $45 \div 9 = 5$.

The quotient, therefore, is 8 tens and 5 ones; that is, 85.

SHORT DIVISION.

When the divisor is so small that the work can be performed mentally, the process is called **short division**.

Divide 63169 by 7.

WORDING: 7 in 63, 9; in 1, 0; in 16 2; in 29, 4; with rem. 1.

7) 63169

9024 with rem. 1.

EXPLANATION: Since 7 is not contained in 6, we take two figures 63 for the *first partial dividend*, and write the

quotient 9 under the *right-hand figure* 3 of this partial dividend. 7 is not contained in 1, so 0 is written as the second figure of the quotient, and this 1, which is equal to 10 units of the next lower order of units, is joined to the 6, and makes 16 for the next partial dividend. Then 16 is divided by 7; the quotient is 2 and the remainder 2; the remainder 2 is equal to 20 of the next lower order of units, and with the 9 makes 29. Then 29 is divided by 7; the quotient is 4 and the remainder 1. Therefore the quotient is 9024, and the remainder is 1.

To *prove* division, we find the product of the divisor and quotient, and to this product add the remainder. The result should be equal to the dividend.

Proof. 9024

 63168
 1

 63169

The product of the divisor and quotient is 63168.

To this product add the remainder 1, and the result is 63169, the same as the dividend.

Divide \$54322 by \$9.

\$9) \$54322

6035 with \$7 rem.

Divide \$54322 by 9.

9) \$54322

\$6035 with \$7 rem.

In this example we are required to find the *number of times* we can take away \$9 from \$54322. The answer is 6035 *times*, with \$7 over. The complete quotient may be written 6035 $\frac{7}{9}$.

In this example we are required to divide \$54322 into *nine equal parts*, and to find the *number of dollars* in each part. The answer is 6035 *dollars*, with \$7 over. The answer may be written \$6035 $\frac{7}{9}$.

The last two examples illustrate the different meanings of division. *If the divisor and dividend refer to the same kind of units*, the quotient denotes the *number of times* the divisor must be taken to equal the dividend. If the divisor is *an abstract number* as 2, 3, 4, etc., the quotient denotes *a number of units of the same kind as the units of the dividend*.

LONG DIVISION.

The process of Long Division is the same as that of Short Division, except that the work is written in full, and the quotient is written *over* the dividend.

Divide 31864 by 87.

The beginner will find it convenient to form a table of products of the divisor by the numbers 1, 2, 3, ..., as follows:

$1 \times 87 = 87$	$4 \times 87 = 348$	$7 \times 87 = 609$
$2 \times 87 = 174$	$5 \times 87 = 435$	$8 \times 87 = 696$
$3 \times 87 = 261$	$6 \times 87 = 522$	$9 \times 87 = 783$

As 87 is more than 31, it is necessary to take *three* figures of the dividend for the first partial dividend. Of the products in the table

OPERATION.

$$\begin{array}{r}
 366 \\
 87 \overline{) 31864} \\
 \underline{261} \\
 576 \\
 \underline{522} \\
 544 \\
 \underline{522} \\
 22 \text{ rem.}
 \end{array}$$

that do not exceed 318, the greatest is 261; that is, 3×87 . Hence the first quotient figure is 3, and is written over the 8, the *right-hand figure* of the first partial dividend; then 261 is subtracted from 318. To the remainder 57, the next figure 6 of the dividend is annexed. Of the products that do not exceed 576, the greatest is 522; that is, 6×87 . Hence 6 is the next figure of the quotient, and the next remainder is 54, to which the 4 of the dividend is annexed. Of the products that do not exceed

544, the greatest is 522; that is, 6×87 . Hence the next figure of the quotient is 6, and the remainder 22. Therefore the quotient is 366, and the remainder 22.

After a little practice the operation of division can be performed without the aid of a table of products.

If at any step the product is greater than the partial dividend, the number denoted by the quotient-figure is too large and must be diminished; if the remainder is greater than the divisor, the number denoted by the quotient-figure is too small and must be increased.

Divide 1006078 by 247.

The first partial dividend is 1006. We find that 5×247 is 1235, which is greater than 1006, and therefore 5 is too large. We try 4, and find that 4×247 is 988. We write the 4 over the 6, the right-hand figure of the partial dividend, and subtract the 988 from 1006. To the remainder 18 we annex 0, the next figure of the dividend, and have 180. Since 247 is not contained in 180, we write 0 for the next figure of the quotient, and annex to 180 the next figure of the dividend, 7. The next figure of the quotient is not 9, for $9 \times 247 = 2223$, and is not 8, for $8 \times 247 = 1976$, and each of these products is greater than 1807. We try 7, and find the product to be 1729, which is less than 1807. The remainder obtained by subtracting 1729 from 1807 is 78, to which we annex the 8 of the dividend, and have 788. The next figure of the quotient is 3, and the product of 3×247 is 741. Subtracting 741 from 788 we get 47 for the remainder of the division. Hence the quotient is 4073, and the remainder 47.

ORAL EXERCISES.

1. If 3 cords of wood cost \$9, what will 4 cords cost?

NOTE. Require the pupil to analyze this and similar problems by the unitary method. Thus, if 3 cords cost \$9, 1 cord will cost $\frac{1}{3}$ of \$9, or \$3; and 4 cords will cost $4 \times \$3$, or \$12.

2. If 4 men can mow a field in 6 days, how many days will it take 3 men to mow the field?

Analysis. If it takes 4 men 6 days to mow a field, it will take 1 man 4×6 days, or 24 days; if it takes 1 man 24 days to mow a field, it will take 3 men $\frac{1}{3}$ of 24 days, or 8 days.

3. Find the cost of 7 barrels of flour, if 8 barrels cost \$40.

4. Find the cost of 12 oranges, if 5 oranges cost 15 cents.

5. What will 12 lambs cost, if 3 lambs cost \$12?

6. If 12 men can dig a certain ditch in 6 days, how many men will be required to dig the ditch in 8 days?

7. If 8 pounds of sugar cost 40 cents, how many cents will 11 pounds cost?

8. If 3 tons of coal cost \$21, how much will 8 tons cost?

9. If 4 men can build a wall in 5 days, how many men will be required to build it in 4 days?

10. If 3 yards of cloth are worth \$6, how much are 7 yards worth?

11. If 2 lamps cost \$8, what will 5 lamps cost?

12. If 9 yards of muslin cost 63 cents, what will 8 yards cost?

13. If 8 men can do a piece of work in 9 days, how many days will it take 6 men to do it?

14. How many pounds of butter at 20 cents a pound, must be given for 2 pounds of tea at 60 cents a pound?

Part IV.

LESSON 1.

DIVISION OF DECIMALS.

In Division, if the dividend and divisor are both multiplied or both divided by the same number, the quotient is not changed. Thus, $18 \div 6 = 3$, and (when both dividend and divisor are multiplied by 2) $36 \div 12 = 3$. Again (when both dividend and divisor are divided by 2), $9 \div 3 = 3$.

If the divisor is a whole number, and the dividend has decimals: *We divide as in whole numbers, but write the decimal point in the quotient as soon as the decimal point in the dividend is reached.*

Divide 1.29 by 3.

$3 \overline{)1.29}$ Since 3 is not contained in 1, we write 0 under the 1 ;
 0.43 then the decimal point, and afterwards we continue, 3 in
 12, 4 ; 3 in 9, 3. The quotient is 43 hundredths.

Divide :

- | | | |
|----------------|------------------|--------------------|
| 1. 3.27 by 3. | 8. 89.6 by 32. | 15. 416.64 by 112. |
| 2. 4.64 by 4. | 9. 17.92 by 16. | 16. 4089.8 by 121. |
| 3. 5.75 by 5. | 10. 313.6 by 14. | 17. 17.161 by 131. |
| 4. 16.24 by 7. | 11. 375.7 by 17. | 18. 380.48 by 232. |
| 5. 18.66 by 6. | 12. 709.5 by 15. | 19. 140.36 by 116. |
| 6. 18.48 by 8. | 13. 42.12 by 18. | 20. 140.30 by 115. |
| 7. 28.17 by 9. | 14. 8.489 by 13. | 21. 2702.7 by 117. |

If the divisor has decimals, and the dividend is a whole number : *We annex as many zeros to the dividend as there are decimal places in the divisor, and remove the decimal point from the divisor.*

Divide 129 by 0.2.

$$\begin{array}{r} 2 \overline{)1290} \\ \underline{645} \\ \end{array}$$

Here we add 0 to the 129, making 1290, and divide by 2; in other words, we multiply both dividend and divisor by 10.

Divide :

- | | | |
|----------------|-----------------|------------------|
| 1. 129 by 0.3. | 8. 132 by 0.33. | 15. 121 by 0.11. |

| 6. 128 by 0.8. | 13. 318 by 5.3. | 20. 324 by 1.8. |
| 7. 117 by 0.9. | 14. 648 by 7.2. | 21. 585 by 6.5. |

If both the divisor and dividend have decimals : *We remove the decimal point from the divisor, and move the decimal point in the dividend to the right as many places as there are decimals in the divisor.*

Divide 1.29 by 0.3.

$$\begin{array}{r} 3 \overline{)12.9} \\ \underline{4.3} \\ \end{array}$$

Here we carry the decimal point in the dividend one place to the right, and remove it from the divisor. In other words, we multiply both dividend and divisor by 10.

Divide :

- | | | |
|------------------|------------------|-------------------|
| 22. 12.9 by 0.3. | 28. 3.24 by 0.9. | 34. 0.96 by 0.2. |

SLATE EXERCISES.

1. A box contains 1416 eggs. How many dozen eggs are there in the box?
2. If 13 yards of velvet cost \$97.50, what is the price of one yard?
3. If \$38,057 are divided into 19 equal parts, how many dollars will there be in each part?
4. How many times is the sum of \$17 contained in \$2890?
5. There are 320 rods in a mile. How many miles are there in 9280 rods?
6. At \$16.50 a ton, how many tons of hay can be bought for \$280.50?
7. At \$5.75 a ton, how many tons of coal can be bought for \$103.50?
8. At 24 cents a dozen, how many dozen eggs can be bought for \$61.44?
9. I bought 96 shares of railroad stock for \$12,000. How much did the stock cost a share?
10. If a field produces 4905 bushels of corn, producing on the average 45 bushels to the acre, how many acres does the field contain?
11. At \$10.50 a ton, how many tons of plaster can be bought for \$65.625?
12. A man bought a barrel of sugar, weighing 232 pounds, for \$12.76. How many cents a pound did he pay for the sugar?
13. When the price of Messina oranges is \$2.75 a box, how many boxes can be bought for \$77?
14. In how many hours will a cistern holding 4200 gallons be filled by a pipe that discharges into it 175 gallons an hour?

If the divisor is not contained in the dividend without a remainder, zeros may be annexed to the dividend, and the division continued.

Divide 0.39842 by 3.7164 to four decimal places.

OPERATION.

$$\begin{array}{r}
 0.1072 \\
 37164 \overline{) 3984.2} \\
 \underline{37164} \\
 267800 \\
 \underline{260148} \\
 76520 \\
 \underline{74328} \\
 2192
 \end{array}$$

If the divisor is a whole number, and ends in zeros. We cut off the zeros from the divisor, and move the decimal point in the dividend as many places to the left (prefixing zeros if necessary), as there are zeros cut off.

Divide 42.08 by 8000.

OPERATION.

$$\begin{array}{r}
 8 \overline{) 0.04208} \\
 \underline{0.00526}
 \end{array}$$

Here the three zeros are cut off from the divisor, and the decimal point in the dividend is moved three places to the left. In other words, both divisor and dividend are divided by 1000.

1. The production of pig-iron in the United States for the census year of 1890 was 9,579,779 tons, and 3,781,021 tons for the census year of 1880. Find the increase.

2. In 1880 Alabama produced 62,336 tons of pig-iron, and 890,432 tons in 1890. How many times the production of 1880 is the production of 1890?

3. The production of steel rails in the United States in 1880 was 741,475 tons, and 2,036,654 tons in 1890. Find the increase.

4. The value of wool manufactures in the United States for the census year of 1890 was \$337,768,524; of cotton manufactures \$267,981,724; of silk manufactures \$87,298,454. Find the total value of the products of these three industries.

5. Find the difference in value between the wool and the cotton manufactures of the United States in 1890.

6. The total area devoted to the cultivation of cereals in the New England States in 1889 was 580,297 acres, and in 1879 the total area was 746,128 acres. Find the decrease.

7. In 1889 New Hampshire raised 988,806 bushels of Indian corn from 23,746 acres. Find to two places of decimals the average number of bushels per acre.

8. In 1889 Iowa raised 313,130,782 bushels of Indian corn from 7,585,522 acres. Find to the nearest bushel the average number of bushels per acre.

9. In 1889 the United States raised 468,321,424 bushels of wheat from 33,575,898 acres. Find to the nearest bushel the average number of bushels per acre.

COMPOUND QUANTITIES.

A quantity expressed in a *single unit* is called a **simple quantity**; but a quantity expressed in *different units* is called a **compound quantity**.

Thus, $20\frac{1}{2}$ pounds is a simple quantity, but 20 pounds 4 ounces is a compound quantity.

A unit of greater value or measure than another is said to be of a higher denomination than the other.

Thus, the dollar is of a higher denomination than the cent, the pound than the ounce, the yard than the inch, the hour than the minute.

The process of changing the *denomination* in which a quantity is expressed, without changing the *value* of the quantity is called **reduction**.

If the change is from a higher denomination to a lower, it is called **reduction descending**; if from a lower to a higher, it is called **reduction ascending**.

Thus, 1 yard = 36 inches is an example of reduction descending; and 24 inches = 2 feet is an example of reduction ascending.

LIQUID MEASURE.

Liquid Measure is used in measuring liquids, as water, milk, etc.

TABLE.

4 gills (gi.)	= 1 pint (pt.).
2 pints	= 1 quart (qt.).
4 quarts	= 1 gallon (gal.).

Hence, 1 gal. = 4 qts. = 8 pts. = 32 gi.

$31\frac{1}{2}$ gals.	= 1 barrel (bbl.).
63 gals.	= 1 hogshead.

NOTE. Casks holding from 28 gals. to 43 gals. are called barrels, and casks holding from 54 gals. to 63 gals. are called hogsheads. If we say, however, that a cistern holds 100 barrels, we mean barrels of $31\frac{1}{2}$ gals. each; or if we say that a cistern holds 100 hogsheads, we mean hogsheads of 63 gals. each.

Reduce 10 gallons 3 quarts 1 pint to pints.

gals. qts. pts.

$$\begin{array}{r} 10 \quad 3 \quad 1 \\ \quad 4 \\ \hline 43 \\ \quad 2 \\ \hline 87 \end{array}$$

10 gals. = 10×4 qts. = 40 qts., and 40 qts. with the 3 qts. added are 43 qts.

43 qts. = 43×2 pts. = 86 pts., and 86 pts. with the 1 pt. added are 87 pts.

87 pts. *Ans.*

Hence in reduction descending: *We multiply the given number of highest units by the number of the next lower units required to make one of this higher; and add to the product the given number of this lower unit.*

We proceed in this way with each successive result, until the required unit is reached.

Reduce:

- | | |
|----------------------------|-----------------------------|
| 1. 5 qts. 3 pts. to pints. | 5. 8 gals. 1 pt. to pints. |
| 2. 3 qts. 1 pt. to pints. | 6. 11 gals. 1 qt. to pints. |
| 3. 7 gals. 1 pt. to pints. | 7. 2 bbls. to quarts. |
| 4. 1 gal. 1 pt. to gills. | 8. 3 hhds. to pints. |

Reduce 129 pints to higher units.

$$\begin{array}{r} 2 \overline{)129} \text{ pts.} \\ \underline{4} \quad 64 \text{ qts.} \dots 1 \text{ pt.} \\ \quad 16 \text{ gals.} \dots 0 \text{ qts.} \end{array} \quad \begin{array}{l} 129 \text{ pts.} = 1\frac{1}{2}^2 \text{ qts.} = 64 \text{ qts. and 1 pt. over.} \\ 64 \text{ qts.} = 2\frac{1}{4}^4 \text{ gals.} = 16 \text{ gals. and no qts. over.} \\ 16 \text{ gals. 0 qts. 1 pt. } \textit{Ans.} \end{array}$$

Hence in reduction ascending: *We divide by the given number of units required to make one of the next higher.*

We divide this quotient, and each successive quotient in like manner, until the required unit is reached.

The last quotient and the several remainders arranged in order is the answer sought.

Reduce to higher units:

- | | | |
|---------------|----------------|-----------------|
| 9. 229 pints. | 11. 365 pints. | 13. 1052 pints. |
| 10. 51 pints. | 12. 442 pints. | 14. 1727 gills. |

Add 4 gals. 3 qts. 1 pt.; 11 gals. 1 qt.; 3 qts. 1 pt.; and 25 gals. 2 qts. 1 pt.

gals. qts. pts. Write the quantities so that units of the same name shall be in the same column.

11 1 0 The sum of the pints is 3. Divide the 3 pts. by 2 (2 pts. = 1 qt.). The result is 1 qt. and 1 pt. Write the 1 pt. under the column of pints.

25 2 1

 42 2 1 The sum of the quarts, including 1 qt. from the 3 pts., is 10. Divide the 10 qts. by 4 (4 qts. = 1 gal.). The result is 2 gals. and 2 qts. Write the 2 qts. under the column of quarts, and add the 2 gals. to the gallons in the column of gallons.

42 gals. 2 qts. 1 pt. *Ans.*

From 4 gals. 2 qts. 1 pt. take 2 gals. 3 qts. 1 pt.

gals. qts. pts. Since 1 pt. - 1 pt. is 0 pt., write 0 under the column of pints.

4 2 1
 2 3 1

 1 3 0 Since 3 qts. are more than 2 qts., take 1 gal. from the 4 gals., reduce it to quarts, and add them to the 2 qts., making 6 qts. Then, 6 qts. - 3 qts. = 3 qts.

Write 3 under the column of quarts. Then 3 gals. - 2 gals. = 1 gal. 1 gal. 3 qts. *Ans.*

7. From a barrel that held just 40 gals. and 2 qts. of vinegar there were drawn 19 gals. and 1 pt. How much vinegar was left in the barrel?

Multiply 27 gals. 3 qts. 1 pt. by 5.

gals.	qts.	pts.	$5 \times 1 \text{ pt.} = 5 \text{ pts.} = 2 \text{ qts. } 1 \text{ pt.}$
27	3	1	Write the 1 pt. under the pints, and reserve the 2 qts. to be added to the product of $5 \times 3 \text{ qts.}$
		5	
139	1	1	$5 \times 3 \text{ qts.} = 15 \text{ qts.},$ and $15 \text{ qts.} + 2 \text{ qts.} = 17 \text{ qts.}$ $= 4 \text{ gals. } 1 \text{ qt.}$

Write the 1 qt. under the quarts and add the 4 gals. to $5 \times 27 \text{ gals.}$

139 gals. 1 qt. 1 pt. *Ans.*

Divide 113 gals. 2 qts. by 4.

gals.	qts.	pts.	The quotient from dividing 113 gals. by 4 is 28 gals., and the remainder is 1 gal.
4)113	2	0	
	28	1 1	Reduce the 1 gal. to quarts, and add them to the 2 qts. The sum is 6 qts.

The quotient from dividing 6 qts. by 4 is 1 qt., and the remainder is 2 qts.

Reduce the 2 qts. to pints, and we have 4 pts. Then $4 \text{ pts.} \div 4 = 1 \text{ pt.}$

28 gals. 1 qt. 1 pt. *Ans.*

Divide 12 gals. 1 qt. by 3 qts. 1 pt.

$$\begin{aligned} 12 \text{ gals. } 1 \text{ qt.} &= 49 \text{ qts.} = 98 \text{ pts.} \\ 3 \text{ qts. } 1 \text{ pt.} &= 7 \text{ pts.} \\ \text{and } 98 \div 7 &= 14. \text{ } \textit{Ans.} \end{aligned}$$

Multiply :

1. 7 gals. 3 qts. 1 pt. by 9.
2. 31 gals. 2 qts. by 7.
3. 3 qts. 1 pt. 3 gi. by 8.

Divide :

4. 126 gals. 3 qts. 1 pt. by 6.
5. 110 gals. 1 qt. by 7.
6. 131 gals. by 8.

NOTE. Methods precisely similar to the preceding are employed for the reduction, addition, subtraction, multiplication, and division of *all* compound quantities.

DRY MEASURE.

Dry Measure is used in measuring dry articles, as grain, seeds, fruit, vegetables.

TABLE.

2 pints (pt.)	= 1 quart (qt.).
8 quarts	= 1 peck (pk.).
4 pecks	= 1 bushel (bu.).

Hence 1 bu. = 4 pks. = 32 qts.

NOTE 1. The gallon of liquid measure contains 231 cubic inches. Therefore the quart of liquid measure contains $57\frac{3}{4}$ cu. in. The bushel of dry measure contains 2150.42 cubic inches. Therefore, the quart of dry measure contains $67\frac{1}{2}$ cu. in.

NOTE 2. In measuring grain, seeds, and small fruits, the measure must be *even* full. In measuring apples, potatoes, and other large articles, the measure must be *heaping* full.

1. Reduce 5 bu. 3 pks. 4 qts. to quarts.
2. Reduce 4056 pts. to higher denominations.
3. Multiply 7 bu. 2 pks. 7 qts. by 9.
4. Divide 25 bu. 3 pks. 2 qts. by 7.
5. How many 4-quart measures will 2 bu. 2 pks. 4 qts. fill?
6. Divide 20 bu. 2 pks. by 8.

AVOIRDUPOIS WEIGHT:

Avoirdupois Weight is used in weighing all articles except gold, silver, and precious stones.

TABLE.

16 ounces (oz.)	= 1 pound (lb.).
2000 pounds	= 1 ton (t.).

The long ton is used in the United States Custom Houses and in wholesale transactions in iron and coal.

112 pounds Avoirdupois	= 1 long hundredweight (cwt.).
2240 pounds Avoirdupois	= 1 long ton.

1 pound Avoirdupois = 7000 grains.

NOTE. Many articles are sold by weight, as follows:

1 bu. of wheat or beans	= 60 lbs.	1 bu. of potatoes	= 60 lbs.
1 bu. of corn or rye	= 56 lbs.	1 barrel of flour	= 196 lbs.
1 bu. of corn or rye } meal or cr'ked corn }	= 50 lbs.	1 barrel of beef or pork	= 200 lbs.
1 bu. of oats	= 32 lbs.	1 cask of lime	= 240 lbs.
1 bu. of barley	= 48 lbs.	1 quintal of fish	= 100 lbs.
1 bu. of timothy seed	= 45 lbs.	1 stone of iron or lead	= 14 lbs.
		1 pig of iron or lead	= 300 lbs.

1. Reduce 3 long tons 12 cwt. 110 lbs. to pounds.
2. Reduce 87,956 lbs. of coal to long tons.
3. Multiply 3 t. 1200 lbs. of hay by 5.
4. Divide 8 t. 1500 lbs. of hay by 7.
5. Add 1 t. 1326 lbs., 1 t. 1560 lbs., 1 t. 1728 lbs.
6. From 2 t. 1015 lbs. take 1 t. 515 lbs.
7. From a firkin of butter containing 42 lbs. there were sold 13 lbs. 10 oz. How much was left?
8. At 23 cents a pound, what will 3.5 lbs. of steak cost?
9. At \$15 a ton, what will 3.75 tons of hay cost?

TROY WEIGHT.

Troy Weight is used in weighing gold, silver, and precious stones.

TABLE.

24 grains (grs.)	= 1 pennyweight (dwt.).
20 pennyweights	= 1 ounce (oz.).
12 ounces	= 1 pound (lb.).

The pound Troy contains 5760 grs.

1. How many more grains does a pound Avoirdupois contain than a pound Troy?
2. Reduce 8 oz. 12 dwt. to pennyweights.
3. Reduce 1760 dwt. to higher denominations.
4. How many grains are there in an ounce of silver?
5. From 1 lb. Troy take 5 oz. 5 dwt.
6. If 1 dwt. of silver is worth 4 cents, find the value of an ounce.
7. How many spoons weighing 1 oz. 5 dwt. each can be made from 30 oz. of silver?
8. How many table-spoons weighing 2 oz. 17 dwt. each can be made from 310 oz. 13 dwt. of silver?
9. Divide 373 oz. 2 dwt. by 7.
10. Multiply 27 oz. 13 dwt. by 6.
11. Add 11 oz. 11 dwt. 15 grs.; 7 oz. 12 dwt. 19 grs.; 10 oz. 13 dwt. 17 grs.
12. From 7 oz. 19 dwt. take 3 oz. 19 dwt.

NOTE. Apothecaries, in compounding medicines, use the following :

APOTHECARIES' MEASURE.

60 minims (℥)	= 1 dram (℥ lx.).
8 drams	= 1 ounce (fl. dr̄m. viij.).
16 ounces	= 1 pint (fl. oz. xvj.).

TIME MEASURE.

Time Measure is used in measuring duration.

TABLE.

60 seconds (sec.)	= 1 minute (min.).
60 minutes	= 1 hour (hr.).
24 hours	= 1 day (dy.).
7 days	= 1 week (wk.).
365 days (or 52 wks. 1 dy.)	= 1 common year (yr.).
366 days	= 1 leap-year.
100 years	= 1 century.

1. Reduce 3 dys. 11 hrs. 32 min. to minutes.
2. Reduce 7 hrs. 30 min. 50 sec. to seconds.
3. Reduce 20,400 min. to higher denominations.
4. Reduce 481,200 sec. to higher denominations.
5. From 3 yrs. 15 dys. take 2 yrs. 12 dys. 23 hrs. 30 min. 40 sec.
6. Divide 10 wks. 5 dys. 9 hrs. by 9.
7. Multiply 2 dys. 7 hrs. 15 min. by 8.
8. From 6 dys. 5 hrs. 48 min. 43 sec. take 13 hrs. 30 min. 40 sec.
9. Divide 31 dys. 2 hrs. 54 min. by 7.

COUNTING.

PAPER.	VARIOUS.
24 sheets = 1 quire.	12 things = 1 dozen.
20 quires = 1 ream.	12 dozen = 1 gross.
2 reams = 1 bundle.	12 gross = 1 great gross.
5 bundles = 1 bale.	20 things = 1 score.

How many sheets make a ream ?

How many pens make a gross ?

How many buttons make a great gross ?

How many years are 3 score and ten ?

LONG MEASURE.

Long Measure is used in measuring lines or distances.

TABLE.

12 inches (in.)	= 1 foot (ft.).
3 feet	= 1 yard (yd.).
5½ yards, or 16½ feet	= 1 rod (rd.).
320 rods	= 1 mile (mi.).

1 mi. = 320 rds. = 1760 yds. = 5280 ft.

NOTE. A line = ½ in. ; a barleycorn = ⅓ in. ; a hand (used in measuring the height of horses) = 4 in. ; a palm = 3 in. ; a span = 9 in. ; a cubit = 18 in. ; a military pace = 2½ ft. ; a chain = 4 rds. ; a link = ⅓ chain ; a furlong = ¼ mi. ; a knot (used in navigation) = 6086 ft. ; a league = 3 knots ; a fathom (used in measuring depths at sea) = 6 ft. ; a cable length = 120 fathoms.

NOTE. Lengths measured by yards are generally expressed in yards and fractions of a yard ; and distances of 160 rds. and 80 rds. are called *half-miles* and *quarter-miles* respectively.

Reduce 283 inches to higher denominations.

$$\begin{array}{r} 12 \overline{) 283} \\ 3 \overline{) 23} \dots 7 \\ 7 \dots 2 \end{array}$$

7 yds. 2 ft. 7 in. *Ans.*

Since it takes 5½ yards, or 11 half-yards, to make a rod, reduce the 328 yards to *half-yards* and divide by 11. The quotient is 59 rods, and the remainder is 7 half-yards. The 7 half-yards are equal to 3½ yards.

59 rds. 3½ yds. *Ans.*

What part of a yard are 9 in. ? 18 in. ?

What part of a mile are 160 rds. ? 80 rds. ?

PERIMETERS.

The **Perimeter** of any surface bounded by straight lines is the sum of the lengths of the bounding lines.

Draw rectangles of the following dimensions and *measure* their perimeters :

2 in. by 3 in. 2 in. by 4 in.

3 in. by 3 in. 3 in. by 5 in.

3 in. by 4 in. 4 in. by 6 in.

RECTANGLE.

Find the perimeter of

1. A rectangular floor 15 ft. by 15 ft.

2. A rectangular ceiling 22 ft. by 20 ft.

3. A rectangular room 16 ft. by 18 ft.

4. A rectangular room 24 ft. by 21 ft.

5. Find the cost of fencing a rectangular field 30 rds. by 20 rds., at \$1.20 a rod.

The length of the circumference of a circle is found by multiplying the length of the diameter by 22 and dividing the result by 7.

Find the length of the circumference of a circle :

6. If the length of the diameter is 21 in. ; 28 in. ; 7 ft. .

The length of the diameter of a circle is found by multiplying the length of the circumference by 7 and dividing the result by 22.

Find the length of the diameter of a circle :

7. If the length of the circumference is 11 in.

8. If the length of the circumference is 2 ft. 9 in.

SQUARE MEASURE.

Square Measure is used in measuring surfaces.

The units of square measure are squares having *units of length* for the lengths of their sides.

TABLE.

144 square inches (sq. in.)	= 1 square foot (sq. ft.).
9 square feet	= 1 square yard (sq. yd.).
30 $\frac{1}{4}$ square yards, or } 272 $\frac{1}{4}$ square feet	= 1 square rod (sq. rd.).
160 square rods, or } 10 square chains	= 1 acre (A.).
640 acres	= 1 square mile (sq. mi.).

Hence, 1 A. = 160 sq. rds. = 4840 sq. yds. = 43,560 sq. ft.

A square of flooring or roofing	= 100 sq. ft.
A section of land	= 1 mile square.
A township	= 36 sq. mi.

The units of square measure are obtained by squaring the units of long measure. Thus,

$$144 = 12^2; 9 = 3^2; 30\frac{1}{4} = (5\frac{1}{4})^2; 272\frac{1}{4} = (16\frac{1}{4})^2.$$

12² is read the square of 12 and means 12 \times 12.

1. Reduce 507 sq. yds. 7 sq. ft. to square feet.
2. Reduce 50 sq. chains to acres.
3. Reduce 3 A. 90 sq. rds. to square rods.
4. Reduce 44,996 sq. in. to square feet.
5. Reduce 67,760 sq. yds. to acres.
6. Reduce 85,316 sq. rds. to acres.
7. Add: 3 A. 116 sq. rds.; 2 A. 120 sq. rds.; 5 A. 119 sq. rds.; 1 A. 40 sq. rds.
8. From 13 sq. yds. 7 sq. ft. 12 sq. in. take 3 sq. yds. 8 sq. ft. 136 sq. in.
9. Multiply 2 A. 20 sq. rds. by 9.

AREAS.

The area of any surface is the number of units of area the given surface contains.

The unit of area is a square, the side of which is some given *unit of length*.

Find the area of a rectangle 2 ft. 3 in. by 1 ft. 8 in. :

$$2 \text{ ft. } 3 \text{ in.} = 24 \text{ in.} + 3 \text{ in.} = 27 \text{ in.}$$

$$1 \text{ ft. } 8 \text{ in.} = 12 \text{ in.} + 8 \text{ in.} = 20 \text{ in.}$$

Therefore the area required is $20 \times 27 = 540$ sq. in.

Hence, in finding the area of a rectangle :

We express the length and breadth in units of the same denomination, and multiply the number of units in the length by the number of units in the breadth ; this product will be the number of square units of that denomination.

Find the area of a rectangle :

1. 8 in. by 5 in. 4. 11 in. by 10 in. 7. 3 ft. by 2 ft.

2. 9 in. by 6 in. 5. 15 in. by 6 in. 8. 4 ft. by 2 ft.

3. 8 in. by 7 in. 6. 16 in. by 4 in. 9. 8 ft. by 2 ft.

10. How many square feet in a floor 21 ft. by 20 ft. ?

11. How many square feet in a floor 18 ft. by 15 ft. ?

12. How many square feet in a blackboard 12 ft. long, and 3 ft. wide ?

13. How many square yards in a roll of wall-paper $\frac{1}{2}$ yd. wide and 8 yds. long ?

14. Find the number of square yards in a house-lot 87 ft. front and 102 ft. deep.

15. Find the number of square rods in a house-lot 8 rods front and 10 rods deep.

16. Find the total area of the *four walls* of a room 18 ft. long, 15 ft. wide, and 9 ft. high.

1. Find the total area of the four walls and the ceiling of a room 16 ft. long, 15 ft. wide, and 10 ft. high.
2. Find the total area in square yards of the ceiling of a room 18 ft. long, and 15 ft. wide.
3. Find the area in square yards of the four walls of a room 19 ft. long, 17 ft. wide, and 9 ft. high.
4. Find the number of acres in a field 40 rds. square.
5. Find the number of square yards in a flower bed that is 12 ft. square.
6. Find the number of square yards in a poppy bed that is 24 ft. long, and 12 ft. wide.
7. Find the number of square inches in the surface of a slate 8 in. by 14 in.
8. Find the number of square inches in the surface of a crayon-box 7 in. by 4 in. by 3 in.
9. Find the number of square feet in the surface of a cube 3 ft. by 3 ft. by 3 ft.

The area of a circle is found by multiplying the area of the square on its radius by 22 and dividing the result by 7.

Find the area of a circle :

10. If the length of the radius is 10 in.; 16 in.; 20 in.

11. If the length of the radius is 1 ft. 4 in.; 1 ft. 6 in.

12. If the length of the diameter is 1 ft. 10 in.; 2 ft. 4 in.

13. If the length of the diameter is 2 ft. 6 in.; 3 ft. 4 in.; 3 ft. 8 in.; 3 ft. 10 in.

14. If the length of the diameter is 4 ft. 2 in.

CARPETING FLOORS.

In carpeting floors, decide whether the strips shall run lengthwise of the room or across it, and find the number of strips required by dividing the width of the room by the width of the carpet, if the strips are to run lengthwise of the room; and the length of the room by the width of the carpet, if the strips are to run across it. A fraction of a width of carpeting required is reckoned a full width, and enough is turned under to make the carpet fit the room.

The number of yards in the length of the strip required multiplied by the number of strips will give the number of yards of carpeting required.

In determining the length of the strip, *allowance must be made for matching the patterns.*

Ex. Find the number of strips of carpeting 27 in. wide required for a room 18 ft. by 17 ft., if the strips run lengthwise.

SOLUTION.

$$17 \text{ ft.} = 17 \times 12 \text{ in.} = 204 \text{ in.}$$

$$204 \text{ in.} \div 27 \text{ in.} = 7\frac{1}{3}.$$

Therefore 8 strips are required.

1. Find the number of strips of carpeting 1 yd. wide required for a room 17 ft. by 15 ft., if the strips run lengthwise.

2. Find the number of strips of carpeting 27 in. wide required for a room 20 ft. by 22 ft. 6 in., if the strips run across the room.

3. Find the number of yards of carpeting 1 yd. wide required for a room 17 ft. 6 in. by 17 ft., if the strips run lengthwise. What width will be turned under?

PAPERING ROOMS.

Wall-paper is made in strips 18 in. wide. Single rolls are 8 yds. long, and double rolls are 16 yds. long.

To find the number of rolls required to paper a room of common height :

We find the number of feet in the perimeter of the room, omitting the width of the doors and windows ; and allow a double roll, or two single rolls, for every 7 feet of the perimeter.

Find the number of rolls required for a room of ordinary height, 17 ft. by 15 ft., having 1 door and 3 windows each 4 ft. wide.

$$\text{Perimeter of the room} = 2 \times 17 \text{ ft.} + 2 \times 15 \text{ ft.} = 64 \text{ ft.}$$

$$\text{Width of door and windows} \qquad \qquad \qquad = \underline{16 \text{ ft.}}$$

$$\text{Deducting, we have} \qquad \qquad \qquad \qquad \qquad \qquad 48 \text{ ft.}$$

$$48 \div 7 = 6\frac{6}{7}.$$

Ans. 7 double rolls.

1. How many double rolls of paper will be required for a room 20 ft. by 18 ft., with 2 doors and 3 windows, each 4 ft. wide?

2. Find the cost of paper at 50 cents a single roll for a room 21 ft. by 19 ft., with 2 doors and 4 windows, each 4 ft. 2 in. wide.

3. Find the cost of paper at 30 cents a single roll for a room 16 ft. by 15 ft., with 1 door and 2 windows, each 4 ft. wide.

4. How many double rolls of paper will be required for a room the perimeter of which is 68 ft., after allowance is made for doors and windows ?

5. How many double rolls of paper will be required for a room the perimeter of which is 60 ft., after allowance is made for doors and windows ?

CUBIC MEASURE.

Cubic Measure is used in measuring solids.

The units of cubic measure are cubes having units of length for the lengths of their edges.

TABLE.

1728 cubic inches (cu. in.)	= 1 cubic foot (cu. ft.).
27 cubic feet	= 1 cubic yard (cu. yd.).

The units of cubic measure are cubes of the units of long measure.

Thus, $1728 = 12^3$; $27 = 3^3$.

12^3 is read the cube of 12 and means $12 \times 12 \times 12$.

WOOD MEASURE.

TABLE.

16 cubic feet	= 1 cord foot (cd. ft.).
8 cord feet	= 1 cord (cd.).

Therefore, 128 cubic feet = 1 cord.

1. Reduce 13 cu. yds. 21 cu. ft. to cubic feet.
2. Reduce 600 cu. ft. to cubic yards.
3. From 58 cu. yds. 24 cu. ft. take 34 cu. yds. 26 cu. ft.
4. Multiply 13 cu. yds. 13 cu. ft. by 13.
5. Divide 17 cu. yds. 14 cu. ft. by 11.
6. Add: 34 cu. yds. 11 cu. ft.; 13 cu. yds. 10 cu. ft.; 17 cu. yds. 4 cu. ft.
7. How many cords of wood in 1280 cu. ft.?
8. How many cords of wood in a pile 42 ft. long, 8 ft. wide, and 6 ft. high?

NOTE. Divide the product of the *numbers* expressing the length, width, and height by 128.

9. How many cubic yards in a cord of wood?
10. At \$4 a cord, find the value of a pile of wood 18 ft. long, 4 ft. wide, and 4 ft. high.

VOLUMES.

The **volume** of any solid is the **number of units of volume** the given solid contains.

The **unit of volume** is a cube, the edge of which is some given *unit of length*.

In finding the volume of a rectangular solid :

We express the length, breadth, and thickness in units of the same denomination ; then we multiply the number of units in the length by the number of units in the breadth, and this product by the number of units in the thickness ; the result will be the number of cubic units of that denomination.

Find the volume of a rectangular solid:

1. 8 in. \times 4 in. \times 3 in.

4. 7 in. \times 3 in. \times 4 in.

2. 4 in. \times 4 in. \times 3 in.

5. 10 in. \times 8 in. \times 4 in.

3. 4 in. \times 4 in. \times 4 in.

6. 3 in. \times 3 in. \times 3 in.

7. Find the number of cubic feet in a stick of square timber 30 ft. long, 1 ft. square at the end.

8. Find the number of cubic yards in an excavation for a cellar 42 ft. by 33 ft. by 9 ft.

9. Find the number of cubic yards in an excavation for a cellar 33 ft. by 24 ft. by 9 ft.

Any standard used in counting or in measuring is called a unit.

In 3 quarters of a yard the unit is a *quarter of a yard*. But a quarter of a yard is a *fractional part* of the whole unit, a yard.

A unit which is a fractional part of another unit is called a **fractional unit**, and the unit of which it is a part is called its **whole unit**.

Numbers that count whole units are called **whole numbers**. Numbers that count fractional units are called **fractional numbers**, or **fractions**.

NOTE. The Teacher must explain that the words *whole* and *fractional*, though applied to numbers, refer only to the units counted by the numbers.

Name the fractional unit and the integral unit in :

3 quarters of an inch.

1 half of an hour.

4 fifths of a pound.

6 sevenths of a week.

2 thirds of a yard.

5 twelfths of a foot.

3 eighths of a bushel.

3 sixteenths of a ton.

9 tenths of a dollar.

5 sixths of an acre.

Express :

$\frac{1}{2}$ of a yard in inches.

$\frac{1}{2}$ of a pound in ounces.

$\frac{2}{3}$ of a yard in inches.

$\frac{3}{4}$ of a pound in ounces.

$\frac{3}{4}$ of a yard in inches.

$\frac{3}{8}$ of a pound in ounces.

$\frac{5}{6}$ of a yard in inches.

$\frac{5}{8}$ of a pound in ounces.

Every common fraction is written in figures by means of two whole numbers, which are called the **terms** of the fraction.

One of these gives the *name* of the parts, and is called the **denominator** ; and the other gives the *number* of the parts taken, and is called the **numerator**.

To write a common fraction, write the denominator under the numerator with a line between them.

To write 5 *sevenths*, for example, we write the numerator 5, draw a line under it, and under the line we write the denominator 7; thus, $\frac{5}{7}$.

To read a common fraction, read the numerator and then the denominator.

Thus, $\frac{2}{3}$, $\frac{1}{2}$, $\frac{3}{5}$, $\frac{7}{8}$, $\frac{9}{11}$, are read two-thirds, one-half, three-fifths, seven-eighths, nine-elevenths. $\frac{3}{4}$ is read three-fourths or three-quarters.

Write in figures :

one third.

one quarter.

two fifths.

five sixths.

five eighths.

seven twelfths.

three sixteenths.

nine fourteenths.

nine twentieths.

four twenty-fifths.

seven twentieths.

thirteen twenty-fifths.

five sevenths.

nine thirteenths.

eleven twelfths.

four twenty-firsts.

seventeen eighteenths.

thirty thirty-seconds.

thirteen twenty-fourths.

fifteen nineteenths.

Read : $\frac{3}{8}$, $\frac{5}{13}$, $\frac{4}{9}$, $\frac{11}{21}$, $\frac{9}{22}$, $\frac{3}{17}$, $\frac{4}{19}$, $\frac{12}{23}$, $\frac{19}{25}$, $\frac{11}{27}$.

If the numerator is smaller than the denominator, the fraction is called a *proper fraction*; as $\frac{7}{8}$.

If the numerator is equal to the denominator, or greater than the denominator, the fraction is called an *improper fraction*; as $\frac{8}{8}$, $\frac{15}{8}$.

A *mixed number* is a whole number and a fraction; as $5\frac{2}{7}$, read five *and* two-sevenths.

Every whole number may be regarded as a fraction having 1 for the denominator.

Thus, 8 may be written $\frac{8}{1}$.

To change an improper fraction to a whole or mixed number :

We divide the numerator by the denominator.

The quotient will be a whole number or a mixed number. If a mixed number, the fractional part will have for numerator *the remainder of the division*, and for denominator *the divisor*.

Change to whole or mixed numbers the following :

- | | | | |
|----------------------|-----------------------|----------------------|-----------------------|
| 1. $\frac{15}{5}$. | 7. $\frac{18}{5}$. | 13. $\frac{35}{2}$. | 19. $\frac{70}{16}$. |
| 2. $\frac{18}{3}$. | 8. $\frac{29}{3}$. | 14. $\frac{23}{6}$. | 20. $\frac{80}{25}$. |
| 3. $\frac{24}{12}$. | 9. $\frac{24}{7}$. | 15. $\frac{25}{8}$. | 21. $\frac{51}{14}$. |

| 6. $\frac{63}{7}$. | 12. $\frac{63}{11}$. | 18. $\frac{40}{2}$. | 24. $\frac{91}{16}$. |

To reduce a fraction to lower terms :

We divide both terms by any number that will divide each term without a remainder.

Thus by dividing both terms of $\frac{8}{10}$ by 2 we get $\frac{4}{5}$.

NOTE. The Teacher must illustrate this example, and other examples until the pupils understand fully that the reduction of a fraction to lower terms does not alter its value.

Reduce to lowest terms :

MULTIPLICATION OF FRACTIONS.

If we take $\frac{1}{2}$ of $\frac{1}{4}$ of an apple, we have $\frac{1}{8}$ of an apple, and if we take $\frac{1}{2}$ of $\frac{3}{4}$ of an apple, we have $\frac{3}{8}$ of an apple.

NOTE. The Teacher should illustrate this by actually dividing an apple into quarters and then each quarter into halves.

That is, $\frac{1}{2}$ of $\frac{1}{4} = \frac{1}{8}$, and $\frac{1}{2}$ of $\frac{3}{4} = \frac{3}{8}$. Hence,

To multiply one fraction by another :

We take the product of the numerators for the required numerator, and of the denominators for the denominator.

Mixed numbers and whole numbers may be written as improper fractions, and thus brought under the rule.

The work of multiplying fractions may be much shortened by **cancellation**; that is, by first dividing out every number that is contained in a numerator and a denominator without remainder.

Find the product of $\frac{6}{7}$, $2\frac{2}{5}$, and 3.

Now $2\frac{2}{5} = \frac{12}{5}$, and 3 may be written $\frac{3}{1}$.

Hence the product is $\frac{6 \times 12 \times 3}{7 \times 5 \times 1} = \frac{216}{35} = 7\frac{1}{5}$.

Cancel the 7 from the denominator and from the 14 in the numerator, and then multiply; we have $2\frac{2}{5}$, or $7\frac{1}{5}$.

To multiply a mixed number by a whole number :

We multiply the fraction first, and then the integral part of the mixed number, and add the results.

Find the products of :

1. $2 \times 2\frac{1}{2}$.

8. $4 \times 2\frac{1}{3}$.

15. $5 \times 2\frac{1}{5}$.

2. $2 \times 3\frac{1}{2}$.

21. $5 \times 3\frac{2}{10}$.

To multiply a whole number by a mixed number :

We multiply the whole number by the fraction first, and then by the integral part of the mixed number, and add the results.

Multiply 8 by $2\frac{1}{3}$.

Here we multiply 8 by $\frac{1}{3}$ and get $2\frac{2}{3}$.

Then we multiply 8 by 2 and get 16.

By adding the $2\frac{2}{3}$ and the 16 we obtain $18\frac{2}{3}$.

$$\begin{array}{r} 8 \\ 2\frac{1}{3} \\ \hline 2\frac{2}{3} \\ 16 \\ \hline 18\frac{2}{3} \end{array}$$

Find the products :

1. $2\frac{1}{2} \times 6$.

6. $2\frac{1}{2} \times 12$.

11. $7\frac{1}{5} \times 21$.

2. $2\frac{1}{3} \times 6$.

7. $2\frac{2}{3} \times 8$.

12. $8\frac{2}{3} \times 22$.

3. $3\frac{1}{3} \times 6$.

8. $2\frac{2}{3} \times 9$.

13. $2\frac{1}{2} \times 6\frac{1}{5}$.

4. $3\frac{1}{2} \times 6$.

9. $3\frac{1}{2} \times 20$.

14. $3\frac{1}{3} \times 8\frac{1}{4}$.

5. $4\frac{1}{5} \times 6$.

10. $3\frac{5}{8} \times 12$.

15. $3\frac{1}{2} \times 6\frac{2}{3}$.

DIVISION OF FRACTIONS.

To divide $\frac{1}{2}$ of a dollar by $\frac{1}{4}$ of a dollar is to find the *number of quarters* of a dollar it is necessary to take in order to have half a dollar. It is obvious the number is 2. Hence,

$$\frac{1}{2} \div \frac{1}{4} = 2.$$

$$\text{But } \frac{1}{2} \times \frac{4}{1} = 2.$$

Therefore, to divide by $\frac{1}{4}$ gives the same result as to multiply by $\frac{4}{1}$.

Now $\frac{4}{1}$ is $\frac{1}{4}$ *inverted*. Therefore,

To divide by a fraction :

We invert the fraction and multiply.

Mixed numbers and whole numbers may be written as improper fractions, and thus brought under the rule.

SIMILAR FRACTIONS.

If both terms of a fraction are multiplied by the same number, the value of the fraction is not altered.

By this operation the *number* of parts is increased, and the *size* of the parts is decreased, at the same rate.

Fractions that have a common denominator are called *similar fractions*.

Reduce $\frac{1}{2}$, $\frac{2}{3}$, $\frac{3}{4}$ to similar fractions, having 12 for their common denominator.

We find the required numerators by dividing 12 by the denominator of the first fraction and multiplying the result by the numerator of the first fraction; and so proceed with each of the given fractions. Thus,

$$12 \div 2 = 6, \text{ and } 1 \times 6 = 6. \text{ Therefore } \frac{1}{2} = \frac{6}{12}.$$

$$12 \div 3 = 4, \text{ and } 2 \times 4 = 8. \text{ Therefore } \frac{2}{3} = \frac{8}{12}.$$

$$12 \div 4 = 3, \text{ and } 3 \times 3 = 9. \text{ Therefore } \frac{3}{4} = \frac{9}{12}.$$

Hence the required fractions are $\frac{6}{12}$, $\frac{8}{12}$, $\frac{9}{12}$. Therefore,

To reduce fractions to similar fractions with a given common denominator :

We divide the given common denominator by the denominator of the first fraction, and multiply the quotient by its numerator, and this will be the required numerator of the first fraction. In the same way we find the numerator of each of the other fractions.

Reduce to similar fractions having for denominator the number given in parenthesis for each problem :

- | | | |
|---|--|---|
| 1. $\frac{1}{3}, \frac{2}{4}, \frac{5}{6}$ (12). | 6. $\frac{2}{3}, \frac{3}{8}, \frac{5}{24}$ (24). | 11. $\frac{5}{8}, \frac{5}{6}, \frac{5}{24}$ (24). |
| 2. $\frac{1}{4}, \frac{1}{6}, \frac{1}{12}$ (12). | 7. $\frac{1}{2}, \frac{5}{7}, \frac{3}{14}$ (14). | 12. $\frac{3}{4}, \frac{1}{12}, \frac{2}{3}$ (28). |

ADDITION OF FRACTIONS.

Add $\frac{1}{6}$, $\frac{1}{8}$, $\frac{3}{4}$.

These fractions changed to similar fractions with denominator 12 become $\frac{2}{12}$, $\frac{1}{12}$, $\frac{9}{12}$, and $\frac{2}{12} + \frac{1}{12} + \frac{9}{12} = 1\frac{1}{2}$.

But $1\frac{1}{2} = \frac{3}{2} = 1\frac{1}{2}$. Therefore,

To add fractions :

We change the fractions to similar fractions (if they are not similar), and write the sum of the numerators of the similar fractions over the common denominator.

We reduce the resulting fraction to its lowest terms ; and if it is an improper fraction, we reduce it to a whole or mixed number.

Change to similar fractions and add :

SUBTRACTION OF FRACTIONS.

Subtract $\frac{1}{4}$ from $\frac{3}{4}$.

These fractions changed to similar fractions having 12 for a denominator become $\frac{9}{12}$, $\frac{3}{12}$; and $\frac{9}{12} - \frac{3}{12} = \frac{6}{12}$. Hence,

To subtract one fraction from another :

We change the fractions to similar fractions (if they are not similar); then subtract the numerator of the subtrahend from that of the minuend, and write the remainder over the common denominator.

We reduce the resulting fraction to its lowest terms.

Change to similar fractions and subtract :

CONVERSION OF FRACTIONS.

A decimal fraction is a common fraction whose denominator is one of the numbers 10, 100, 1000, etc.

Thus, 0.4 is the same as $\frac{4}{10}$.

To convert a decimal fraction to a common fraction :

We take for the numerator the entire number obtained after removing the decimal point, and for the denominator, 1 followed by as many zeros as there are decimal places in the original fraction ; and reduce the resulting fraction to its lowest terms.

Thus, $3.25 = \frac{325}{100} = \frac{13}{4} = 3\frac{1}{4}$.

To convert a common fraction to a decimal fraction :

We divide the numerator by the denominator.

Thus, $\frac{1}{8} = \frac{1.000}{8} = 0.125$.
 $\frac{4}{7} = \frac{4.000}{7} = 0.571\bar{4}$.
 $\frac{2}{3} = \frac{2.000}{3} = 0.666\bar{6}$.

NOTE. If the division does not terminate at the third decimal place, three decimal places will be sufficiently accurate for most problems. If the number at the *fourth* decimal place is greater than 5, we add 1 to the third decimal figure ; if it is equal to 5, we carry the decimal to four places. Thus, $\frac{4}{7} = 0.571$, $\frac{2}{3} = 0.667$, and $\frac{1}{7} = 0.4375$.

17. How many miles will a man walk in 2 hours at the rate of $3\frac{1}{2}$ miles an hour?
18. How many miles will a man walk in $2\frac{1}{2}$ hours at the rate of 3 miles an hour?
19. How many miles will a man walk in 3 hours at the rate of $3\frac{1}{2}$ miles an hour?
20. Express 2 ft. 6 in. as the fraction of a yard.
21. At $\$7$ a ton what is the cost of $\frac{3}{4}$ of a ton of coal?
22. At $\$6$ a cord what is the cost of $\frac{7}{8}$ of a cord of wood?
23. At 80 cents a bushel what is the cost of $2\frac{1}{4}$ bushels of Baldwin apples?

SLATE EXERCISES.

Find the cost, reckoning every fraction of a cent as a cent:

1. $3\frac{3}{4}$ doz. of eggs at 24 cents a dozen.
2. $3\frac{1}{2}$ lbs. of steak at 23 cents a pound.
3. $2\frac{1}{2}$ lbs. of tea at 65 cents a pound.
4. $17\frac{3}{4}$ yds. of muslin at 10 cents a yard.
5. 50 cans of tomatoes at \$1.25 a dozen.
6. $2\frac{3}{4}$ bu. of potatoes at 18 cents a peck.
7. 16 bu. of oats at $37\frac{1}{2}$ cents a bushel.
8. 24 bags of corn at $\$1.12\frac{1}{2}$ a bag.
9. 36 bu. of wheat at $87\frac{1}{2}$ cents a bushel.
10. 4 lbs. and 12 oz. of butter at 20 cents a pound.
11. 8 lbs. and 10 oz. of mutton at 12 cents a pound.
12. 6 qts. of molasses at 56 cents a gallon.
13. $43\frac{1}{2}$ yds. of cotton cloth at 7 cents a yard.
14. 14 lbs. 6 oz. of ham at 14 cents a pound.
15. 6 bu. and 3 pks. of wheat at 92 cents a bushel.
16. 2680 lbs. of hay at \$22 a ton.
17. 2 t. 8 cwt. of coal at \$5.60 a ton.
18. $3\frac{1}{2}$ bbls. of flour at \$5.50 a barrel.
19. $2\frac{3}{4}$ bu. of cranberries at 7 cents a quart.
20. 3 pks. and 4 qts. of cranberries at \$2.56 a bushel.
21. 2 cds. and 6 cu. ft. of wood at \$3.50 a cord.
22. A pile of wood 26 ft. long, 4 ft. wide, and 5 ft. high at \$3.84 a cord.
23. 4 doz. and 8 eggs at 30 cents a dozen.
24. 75000 bricks at \$6.75 a thousand.
25. 9 shares of stock at $\$98\frac{1}{4}$ a share.

BILLS.

A **Bill of Goods** is a written statement of goods sold, and of payments, if any, received for them.

A **Bill of Services** is a written statement of services rendered, or of labor performed.

A **Statement of Account** is a statement of the sum due according to the accounts already rendered. Thus,

<i>Mr. Jones,</i>	To BROWN & CO., Dr.
June 1 To Account rendered	\$60

The **Creditor** is the person who sells the goods, or who performs the labor.

The **Debtor** is the person who buys the goods, or who pays for the services rendered.

The **Debit Side of the Account** consists of the items due to the person who renders the account.

The **Credit Side** consists of the amounts received by the person who renders the account.

The **Balance of an Account** is the difference between the amounts of the Debit and Credit Sides.

NOTE. When a bill is paid, it should be receipted by writing at the bottom of the bill the date of payment and the words *Received payment*, and under these words the creditor should sign his name and deliver the receipt to the debtor.

If a clerk has authority to sign his employer's name, he should write under his employer's name his own name preceded by the word **by** or **per**.

Make out bills, and receipt for them the first day of the month that follows the purchase :

PERCENTAGE.

A **percentage** of a number is the result obtained by taking a stated number of **hundredths** of it.

One **hundredth** of a number is called one **per cent** of it; two **hundredths**, two **per cent**; three **hundredths**, three **per cent**; and so on.

This sign $\%$ stands for the words **per cent**.

Thus, 5 % of 300 means 0.05 of 300.

$15\frac{1}{2}$ % of 300 means $0.15\frac{1}{2}$ of 300.

$\frac{1}{4}$ % of 300 means $0.00\frac{1}{4}$ of 300.

When the per cent can be expressed as a common fraction in *small terms*, it is better to write it as a common fraction.

50 % of a number is $\frac{50}{100}$ or $\frac{1}{2}$ the number.

25 % of a number is $\frac{25}{100}$ or $\frac{1}{4}$ the number.

75 % of a number is $\frac{75}{100}$ or $\frac{3}{4}$ the number.

$12\frac{1}{2}$ % of a number is $\frac{12\frac{1}{2}}{100}$ or $\frac{1}{8}$ the number.

$8\frac{1}{3}$ % of a number is $\frac{8\frac{1}{3}}{100}$ or $\frac{1}{12}$ the number.

$16\frac{2}{3}$ % of a number is $\frac{16\frac{2}{3}}{100}$ or $\frac{1}{6}$ the number.

$33\frac{1}{3}$ % of a number is $\frac{33\frac{1}{3}}{100}$ or $\frac{1}{3}$ the number.

$66\frac{2}{3}$ % of a number is $\frac{66\frac{2}{3}}{100}$ or $\frac{2}{3}$ the number.

20 % of a number is $\frac{20}{100}$ or $\frac{1}{5}$ the number.

125 % of a number is $\frac{125}{100}$ or $\frac{5}{4}$ the number.

Express as per cent:

$\frac{1}{2}$ $\frac{1}{4}$ $\frac{1}{6}$ $\frac{2}{3}$ $\frac{5}{6}$ $\frac{3}{8}$ $\frac{1}{10}$ $\frac{7}{50}$

$\frac{1}{3}$ $\frac{1}{5}$ $\frac{3}{4}$ $\frac{4}{5}$ $\frac{1}{8}$ $\frac{5}{8}$ $\frac{1}{12}$ $\frac{3}{25}$

Find $16\frac{1}{3}\%$ of 336.

$$\begin{array}{r} 336 \\ 0.16\bar{3} \\ \hline 112 \\ 2016 \\ 336 \\ \hline 54.88 \end{array}$$

54.88. *Ans.*Find $16\frac{2}{3}\%$ of 336.

$$16\frac{2}{3}\% = \frac{1}{3}.$$

$$\frac{1}{3} \text{ of } 336 = 56.$$

56. *Ans.*

Hence,

To find a per cent of a number :*We multiply the number by the given per cent.*

Find :

- | | |
|-----------------------------------|-----------------------------------|
| 1. 6% of 175. | 6. $33\frac{1}{3}\%$ of \$840. |
| 2. 25% of 300. | 7. 50% of 1216 oz. |
| 3. $16\frac{2}{3}\%$ of 480 men. | 8. $66\frac{2}{3}\%$ of 1518 lbs. |
| 4. $5\frac{1}{3}\%$ of 675 sheep. | 9. 75% of 2040 ft. |
| 5. 10% of 1560 dys. | 10. $12\frac{1}{2}\%$ of 1648 mi. |

To find the per cent one given number is of another.

What per cent of 9 is 3?

Since 1 is $\frac{1}{3}$ of 9, 3 is $3 \times \frac{1}{3} = \frac{3}{3} = 1$; and $\frac{1}{3} = 3 \overline{)1.00}$

$$0.33\bar{3} = 33\frac{1}{3}\%.$$

The same result is obtained if we divide 3 by 9. $9 \overline{)3.00}$

$$0.33\bar{3} = 33\frac{1}{3}\%.$$

Hence,

To find the per cent one number is of another :*We divide the number which represents the percentage by the other number, carrying the division to hundredths.*

What per cent of

- | | |
|---------------------|------------------------------|
| 1. 90 is 30? | 6. 2740 mi. are 548 mi.? |
| 2. 960 is 24? | 7. 36 in. are 27 in.? |
| 3. 30 is 90? | 8. \$2.75 are \$0.35? |
| 4. 24 is 960? | 9. 2240 lbs. are 2000 lbs.? |
| 5. 4108.5 is 821.7? | 10. 7000 grs. are 5760 grs.? |

INTEREST.

Money paid for the use of money is called **Interest**.

The money at interest is called the **Principal**.

The sum of the interest and principal is called the **Amount**.

To find interest for a given number of months at 6% :

We put the decimal point two places to the left in the principal, and multiply by one-half the number of months.

Find the interest on \$630 for 4 mos. at 6% :

\$6.30	Here we put the decimal point <i>two places to the left</i> in the principal, and multiply by 2 ; that is, by $\frac{1}{2}$ of 4.
2	
\$12.60	

If we wished to find the interest at $4\frac{1}{2}\%$, we should divide the \$12.60 by 6, and multiply the quotient by $4\frac{1}{2}$.

Find the interest on :

1. \$1220.40 for 3 mos. at 6%.
2. \$2512.80 for 4 mos. at 5%.
3. \$2084.20 for 1 mo. at $4\frac{1}{2}\%$.
4. \$4500.60 for 5 mos. at $5\frac{1}{2}\%$.
5. \$7508.50 for 6 mos. at $3\frac{1}{2}\%$.
6. \$8501.20 for 3 mos. at 5%.
7. \$9056.75 for 7 mos. at 6%.

To find the amount :

We find the interest and add it to the principal.

Find the amount of :

8. \$1000 for 4 mos. at 6%.
9. \$1500 for 6 mos. at 4%.
10. \$75.50 for 4 mos. at 5%.

To find interest for a given number of days at 6% :

We put the decimal point three places to the left in the principal, and multiply by one-sixth of the number of days.

Find the interest on \$7260 for 90 dys. at 6%.

\$7.260	Here we put the decimal point <i>three</i> places to the
15	left in the principal, and multiply by 15 ; that is, by $\frac{1}{6}$
\$108.900	of 90.

To find the interest for any other rate than 6 per cent :

We find the interest at 6 %, divide the result by 6, and multiply the quotient by the given rate.

If the time is given in months and days ; or in years, months, and days ; reduce the time to days, reckoning 30 days for a month, and 360 days for a year.

Find the interest on :

1. \$3600 for 30 dys. at 6%.
2. \$4500 for 33 dys. at 6%.
3. \$8000 for 93 dys. at 6%.
4. \$9875 for 60 dys. at 5%.
5. \$2525 for 63 dys. at $4\frac{1}{2}\%$.
6. \$3750 for 90 dys. at $3\frac{1}{3}\%$.
7. \$15.80 for 63 dys. at 4%.
8. \$256.40 for 45 dys. at $5\frac{1}{2}\%$.
9. \$645.25 for 123 dys. at 3%.
10. \$950.50 for 2 yrs. 4 mos. 6 dys. at 6%.
11. \$20,000 for 1 yr. 7 mos. at 4%.
12. \$515.25 for 1 yr. 9 mos. 8 dys. at $4\frac{1}{2}\%$.
13. \$1000 for 2 yrs. 1 mo. 19 dys. at 5%.
14. \$216.75 for 2 yrs. 2 mos. 21 dys. at $5\frac{1}{2}\%$.
15. \$927.35 for 1 yr. 8 mos. 28 dys. at 3%.
