CINCINNATI, O.: TEACHERS' CO-OPERATIVE PUBLISHING CO. 1891.

THE EIBRARY OF EDUCATION.

SINGLE NUMBERS, 20 CENTS. SUBSCRIPTION, \$1.50 PER YEAR.

A number will contain from 48 to 96 double-column octavo pages; be well printed with clear type, on good paper. A volume of this is intended to make a complete cyclopædia of education. It is not intended that these numbers shall be the battle-grounds of various hostile theories, but that they shall present such a discussion of the given subject that will satisfy the thinking teacher who is seeking for a consistent and logical system in the bewildering mass of educational literature. The following are now in preparation, and will appear during the coming year.

LITERATURE IN THE PUBLIC SCHOOLS.

A criticism of the present methods of teaching reading, together with the presentation of a new method of using literature, by PROF. F. L. PATTEE, of New Hampshire. Civics.

A study of the various methods of teaching citizenship, together with a method and materials for presenting the subject to classes in graded and ungraded schools, by T. M. GOODKNIGHT, A. M., Kentucky.

ARITHMETIC.

A complete guide for teaching arithmetic so as to develop character, by J. T. GAINES. NATURAL SCIENCE SERIES; | GEOLOGY.

Materials and methods for teaching geology by observation, Prof. W. E. TAYLOR, Prof. Science in the Nebraska State Normal School.

TEACHING OF MORALS IN THE PUBLIC SCHOOLS.

A clear and concise presentation of the discussion between the Churchmen and the Schoolmen, and a review of the conditions necessary for teaching morality, by E. W. WEAVER.

STUDIES IN EDUCATIONAL HISTORY.

Occasional numbers will appear under this head, the first of which is now being prepared by Supt. N. W. HAILMAN, of Indiana.

THE STATE AND EDUCATOR.

A study of the various systems of public education, by State Supt. J. H. Shinn, Arkansas.

MANAGEMENT OF COUNTRY SCHOOLS.

A series of articles by experienced country school teachers. Just the thing teachers need to prepare for examinations on school management, edited by J. B. BATDORF, Penna.

THE SCHOOLS OF PHILADELPHIA.

The ideal system of city schools, by L. L. FORD, of Philadelphia.

TEACHERS' CO-OPERATIVE PUBLISHING CO.,

P. O. Box 287,

CINCINNATI, O.

THE various numbers of the Library of Education are prepared by the Educational Reform Association, an organization which aims to determine whether the science of education can be applied to school work and to form a complete working theory of education. The fundamental principles of the organization are (1) That education should be subject to the control and supervision of the State. (2) That State education should aim only incidentally, to secure intellectual proficiency and commercial results, and, primarily, to develop *character*, which is the true basis of national greatness. (3) That a school system that does not recognize the individual pupil is intolerable.

Under the guidance of these principles, experienced teachers and committees of teachers, representing every shade of educational thought, are investigating the whole field. The investigations are to include the history and present status of educational practices as well as the literature of the subject.

Every number before it is published is subject to the revision of a specially appointed committee of actual teachers, whose endorsement it must have.

EDITORIAL COMMITTEE'S CERTIFICATE.

The undersigned, having been appointed a committee to report on *Principles in Teaching*, by J. T. Gaines, unanimously recommend its publication.

John Burke, R. M. Mitchell, C. G. Hammond, E. W. Weaver.

Preface.

The principles of teaching formulated in the last chapter of this monograph are substantially the same as those announced as postulates in Pedagogics: A New Theory and Practice in Teaching Intellect and Character, published about a year ago by Allen & Gaines.

I wish here to acknowledge obligations to Col. R. D. Allen, of Louisville Millitary Academy, for much assistance he has given me in the preparation of this work.

The illustrative lessons given in the body of the work are faithful descriptions of actual lessons, or series of lessons given in the school room, in so far, as a direction to do, can be a description of something done.

For errors in style or language I must beg the indulgence of my readers. It is impossible to put one's ideas in writing so that they will be understood by a reader, unless both reader and writer have the same motive in looking at the subject discussed, and look at it also from the same point of view. Knowing this and believing that the great majority of my readers would differ with me, perhaps, if I announced my positions in a formal way at the outset, as is usual in such treatises as this, and that, therefore, my task would be less difficult if I should "put the cart before the horse," I have done so, and asked them to experiment under my directions just as a teacher does with children, reaching the conclusion I do with me at the end.

Desiring to get into as confidential relations as possible with my readers, I have written the entire work in the first person.

INTRODUCTION.

This monograph is intended to answer the question, "What is teaching?" in a practical way. It was written to help young teachers to understand how they may interest children in school work, how they may insure development in every one under their charge, and how they may make what they do in giving lessons to children, bear fruit in the characters of those children, which characters are all the time developing under their hands.

But while it is intended primarily as has been stated to benefit young teachers, it is thought that it will also serve to systematize the knowledge derived from years of experience. "We learn to do by doing." Experience is necessary to make a good teacher, but it is not every one who is competent to observe properly the details of his own work, and to make the proper inferences from them for principles to guide his future work.

The illustrations given in this work are given as a study for all. The old teacher will perhaps recognize in them lessons he has given from time to time. The young teacher if he wishes to read this monograph with profit, must experiment by giving the lessons suggested. In no other way will it be possible to make the observations and comparisons that will be suggested. In no other way can the inexperienced reader put himself in position for assimilating any proper principle for teaching. In accordance with true inductive teaching, the principles advocated will be announced last. In fact the whole work is planned as a series of inductions, by which the reader if he performs the experiments suggested, and gives the lessons incorporated as part of the treatise, will be led to make the assimilations announced as principles in the closing chapter.

PRINCIPLES IN TEACHING.

CHAPTER I.

WHAT IS A PRINCIPLE?

HERE are principles in every science and teaching is now called a science. Is it a science have them take my advice unqueswith you, my reader? Have you tioned. observed your own work and the work of others so well that you tion, let us ascertain if we can know exactly what to do as teacher what a principle is. you are not a scientific teacher, leaves, or its trunk, or its bark? but an experimenter. We are all Did it have these? You are preexperimenters at first, and doubt- pared to say, certainly it had; less all make blunders. He who without doubt you can picture to his methods will become a scien- upright and tall, leaves and branches tific teacher, he who is blind to his swayed by the breezes, and roots mistakes will remain an experi- spreading from the base taking a menter. Young teachers are gen- firm hold in the soil. When I ask erally experimenters; it is to be you why, you are ready with the hoped that all the young teachers answer, "Every tree has leaves, who read this monograph desire to branches, roots, bark and a trunk." become experts and not to remain experimenters.

who, knowing they have faults, and did you learn it by heart, or desire to correct them. Are you did you arrive at it through obserwilling to learn? Then (1) read, vations made by your own senses?

teaching for yourself.

And now to begin at the founda-

ILLUSTRATIVE LESSONS. WORD TEACHING.

PROBLEM: TO TEACH A PUPIL THE PRINCIPLE (HOW) TO RETAIN A NEW WORD.

learning.

Direction 1. a position which appears to you jects. near, (b) beyond, (c) this side of, (d) copied on the slates. record.

- or suggest to the class yourself meaning to the one chosen. John said beyond, because to him it the first word. is that way, Henry said close to, For verbs it is better to present the participial because he sits far back in the form, as striking, leaping, speaking, etc., as this room, etc."
- 3. Move one of the objects into

HE meaning and form of a having regular forms, as boxes, new word are both to be penholders, children, etc. remembered in order to make the the new objects in some of the knowledge available for future positions already recorded. Record the changes suggested as new Suppose the first words. Near is very apt to become word to be opposite, and that its (j) facing and beyond become, (k) form is new. Place two things in behind if children are used as ob-

correct, and ask the pupil (or class) 5. Place two of the changed how one (touching it) is with the objects—as two children—in the other. Whatever answers you get positions, (1) alongside, (m) facing, that are in any way descriptive of (11) OPPOSITE, (0) vis-a-vis, etc., givits position with reference to the ing these terms to describe the other object, write them on the positions as they are arranged in board and have your pupils write tableau, if they are not suggested them on their slates. You will by the children. Add each to the probably get such answers, as: (a) group on the board and have it

to one side of, (e) close to, etc. Use 6. This is thus far the work with your judgment as to which to one word. It will take ten or fifteen minutes to do this well at Inquire as words are given first. It will be noticed that it also as to why the word was selected, teaches other words kindred in why it was used, thus: "Mary said next step is to take another word near because it is not far away, as strikes and do with it as with

is the name form.

7. Continue the teaching with the positions described by the fol- other words, as centers of groups, lowing words, telling the word if until the children show by their the children do not suggest it. habits of work, that they have Write each new word in the group assimilated a rule or method of on the board: (f) upon, (g) under-investigation and observation, for neath, (h) over, (i) below, etc., etc. new words they meet in their 4. Change the objects to others readers and other text books. and reading lessons.

The material for these lessons can be easily selected in advance. The teacher ought to have made full preparation when he comes before the class. Remember that the aim is not to make the child remember the particular words you select, and that come out incidentally, but that it is to fix a good habit of retentiveness. The proper test is not therefore to give him these words to spell, or define, or use in sentences, but to note his changed habits of work. If children form the habits of asking you for the meaning of words they hear you use, or that they meet in their books, if they ask how this or that word that they hear is spelled, and if they are frequently seen consulting the dictionary, you may be sure the leaven is working. They are assimilating, and it is now time to drop the lessons till such time as they need them again to re-establish habits.

EXAMPLE II.

PROBLEM: To teach the principle that every word has a generic and many specific meanings according to eircumstances.

- (e) head, (f) flying, etc., etc.
- 2. Supposing the lesson to be are discovered in the examples. upon long, write it upon the board, 6. Continue the lessons with thus: LONG i. e., as a title is writ- other words, such as those given ten, direct the children to copy it under direction (1), as types. upon their slates. Now ask the

- Many groups will have been pre- 3. When they cease giving ausented of which (a) opposite, (b) swers or have given enough for striking, (c) beautiful, (d) calmly, the purpose, set up a comparison (e) fossil, etc., etc., are respectively among the different uses of long. the centers. My observation of Ask for instance, "How long is a word teaching shows that children long rope? How much longer is it need more or less of this drill every than a long string? Would a string year, in order to establish good as long as the ruler be a long habits of study for the spelling string? What are you always thinking about when you use the term long?" Put two pencils together and have some one touch the long one, Now put it with another of greater length, and ask them to select the *long* one. What was *long* has become *short* by the comparison.
 - 4. Having established the relative meaning that always attaches to words of this class, proceed to extend the horizon of specific meanings by such examples, as:

$$\begin{array}{cccc} (a') & & & & & \\ (b') & & & & & \\ (c') & a \ long \end{array} \left(\begin{array}{c} & \text{nose,} \\ & \text{breath,} \\ & \text{time,} \\ & \text{word,} \\ & \text{walk,} \\ & \text{etc.} \end{array} \right)$$

- Set up a comparison among 5. For this series of lessons these meanings, and those of the select words of very general appli- first set in order to bring out the cation and familiar in meaning to resemblance in meaning in all of all in the class, for example; (a) them. The name of this resemlong, (b) good, (c) running, (d) mouth, blance is length, and its name should be given after its elements

children to name for you things that are long, and as answers are given write the phrases below the title, thus:

(a) a long rope.
(b) a long string.
(c) a long ruler.
(d) a long road.

(a) a long road.

(b) a long string.
(c) a long road.

(d) a long road.

(e) a long road.

(f) a long road.

(g) a long road.

(h) a long string.
(g) a long road.

(h) a long road. special meanings given to the italicised words by the genius of the poet.

"Go forth to the windy headland, Where the cypress-trees look down Like giants aged and stricken, Yet wearing the green-wood crown.

Mighty the voices that hail you With the *lore* of olden time, In the chant of the marching billows, And strong boughs' answering chime." (Harper's Magazine.)

There is hardly a word in the whole extract, but is familiar in one meaning to every third reader child; how many of them could realize the stirring picture the poet has drawn? When your pupils readily get the meaning of such readings, it is a sure sign that your work with this principle is bearing fruit.

Example III.

PROBLEM: To teach the principle that words are but signs of ideas.

Much harm is occasionally done by giving children spelling lessons in words that are not symbols of ideas to them. Akin to this in evil effects is the practice of having (B) wants to write his name on the children to recite definitions, and moral maxims, and gems of poetry. Printed lines become to these innocent victims merely representatives of certain vocal sounds. persecuted children rarely ever become readers of anything else than the trashiest books.

or pronounce. formulated above.

what happened and write the an- it, and was telling it. swer on the board, the children copying on slates, thus:

(a) The knife fell.

Substitute a hat for knife and in the same way get:

(b) The hat fell.

By asking "where" the latter becomes:

(c) The hat fell on the table.

- By substitutions and questions other changes can be made, as below, to any extent that may be
 - (d) The hat *lics* on the table.

(c) The ball lies on the table.

- (A) (f) The ball rolls off the table. (g) The ball strikes the floor.
 - (h) The chair strikes the wall.
 - (i) The chair standsnear the wall. etc., etc., etc., etc.
- Another example is given below of a lesson that can be easily improvised with even very voung children.

(a) John is a little boy. (b) He is not much taller than a chair.

- (c) When he stands by the teacher his head just reaches to the teacher's elbow. (d) If he
- roll of honor, he has to stand in a chair. (c) He has curly hair, and blue eyes. (f) His shoes are always blacked, and his clothes brushed when he comes to school, (g) etc., etc., etc., etc.
- 7. Other exercises can be con-A child from the beginning ought trived by an ingenious teacher to to be forced to associate a meaning serve the same end, this for inwith every word he learns to write stance: Let the children go to the Follow the direc- window and look out. Tell them tions below till you have shown to observe everything that is takhim the symbols for the words in ing place. Let them compare obhis speaking vocabulary, and he is servations freely. Help them with pretty sure to think the principle hints yourself. Ask them to resume their seats and then sentence Hold your knife in presence by sentence, record what has been of the class and let it fall, ask seen as if one person had witnessed

"One day at school the teacher let me go to the window. I looked out and saw so many thing. A. (C) would break off. Leaves were what do you call the paper on flying everywhere. Dark heavy act called? etc., etc. clouds were drifting overhead, the rain. etc., etc., etc., etc.

EXAMPLE IV.

To teach the principle move, etc. PROBLEM: (rule for changes produced in mean-

ing) of prefixes and suffixes.

To give the children this knowledge as a working principle, a good many lessons are necessary, and or over. careful outside preparation on the part of the teacher. > In regular practice the next thing in order would be of course to have the children read

(aloud) the lesson, first from the board, and afterwards from their slates, but as that belongs to the work of the next example, it cannot of course be considered as one of these directions.

4. Repeat at different times the same routine, that is, take some object as a boy, a knife, a slate or a basket, and after the same plan used with the "hat," outline a lesson for reading aloud.

5. After three or four repetitions write up a lesson basing it on one of the previous lessons, but changing the idioms considerably, thus:

"One day Mr. Smith brought his hat in. It was a high crowned hat and too big for a boy. When he tried it on Henry Smith it hid his ears and eyes. When he wanted to try Willie Jones with it Willie held back. As the boys did not like that play the teacher put his hat away.'

To this point it must be remembered that the children have been getting the information by using their senses. This direction (5) obliges them to rely on memory, and on their knowledge of the words and idioms before them, for their information. It is the half way step to victory. Direction (5) should never be attempted till the children read the improvised lessons naturally.

- lesson from the board on their means. slates before reading it.
- 7. Repeat with other lessons drill as may be necessary. the work of directions (5) and (6), less, and less the original types.
- directions (1) to (4), containing son that refuses to yield its content. important words in the next lesson Investigation will show in such they are to encounter in their cases that the text is wanting in reader. from a lesson in the second reader, necessary to make the concrete and below is a specimen of what realization complete to a child. may be done with them; tempt, Such extracts as make no mention thrown, spokes, straight, meadow, describe in some way the persons breath.

to-day. He tempted Johnnie with these.

an apple, and had Johnnie chase him. They took pains to swerve just right in turning the corners. When Johnnie was out of breath he let him sit down. He then told us a story about mowers in a meadow. And another about why the spokes in a wheel ought to be made straight.

It is not important that all the words be woven into a consistent narrative. It is sometimes impracticable. The important point is to have the children get a sense impression if possible, for each new word to name before, they open the text in which they are to find it.

9. If the idioms of a new lesson are too difficult, break them up by changes, thus:

"When their arms were full of the new hay, they chased each other round the field till they were both at last out of breath."

They filled their arms with the new hay. And chased each other round and round. At last they were both out of breath.

- When these directions have been faithfully followed, the children can be safely trusted to "get their lessons," and it will be found that their ideas and habits resulting have been altered with refer-6. Let the children copy the ence to what "getting a lesson" But whenever the old habits return, repeat such of the
- 11. When children can and do making the lessons to resemble get information readily from most of the lessons assigned them, it Make up a lesson following often happens that they meet a les-The following are taken some one or more essential element chased, swerve, began, mowers, of the place or time, or that do not mentioned are difficult, because the "The teacher began a new game child has not learned yet to supply

Some children of bright imaginations do not meet this difficulty, and read from the board and slates but with the majority it is a draw-by members of the class. back.

To prepare them for "getting such results as follow: the contents" of such a lesson as has been described, inquire of them side door,' and record in detail.

(a) The time or times, as: "before boy. noon," "after dinner," "the next

day," etc., etc.

(b) The places omitted, "In the the steps," "at the piano," "in the woods," etc., etc.

(c) The descriptions of persons, as, "tall," "about six years old,"

"blue calico apron," etc., etc.

(d) Any other particulars (imagined) necessary to make a good reading over the lesson, pausing to "wonder" how they looked, or unit of utterance. decide.

Example II.

Problem: To teach the principle how to give information by reading aloud. [Rules for reading.]

The directions given below assume that the child has information to give. The teacher must have dealt with him as suggested in Example 1. and have given him an opportunity to "get" his lesson. But it nearly always happens that some have been inattentive or idle while they ought to have been studying, and hence it is better to put into the reading lesson some work designed to perfect the knowledge they have acquired by conning the lesson over. The directions begin at the point where a child has not read at all.

1. Do something and induce some child to tell about it. such sentence as this will result:

(a) "The teacher came into the slates. room."

Have this copied on the slates,

2. Vary the action producing

(b) ." The teacher came in at the

(c) "He came in leading a little

(d) "The boy went to the window and looked out."

(e) "The teacher then took a parlor," on the road to town," "on seat and beckoned to the boy to come to him."

(f) "He whispered to him, and

the boy went rapidly out.

(g) He then pointed to the door, and stamped on the floor three times.

(h) While we were watching he skeleton to study by. This skele- opened the door, and there stood ton can be usually supplied by the boy with four hats on his head.

3. Continue day after day until now and then as you read some- the children have formed the habit thing about Mary or John or mother, of taking a whole sentence as a It must be were dressed, and where they were borne in mind that to this point sitting or standing, and when all the information has come wholly this happened and let the children through the senses. Care must be taken also to make these lessons serve the purpose of bringing into the vocabulary of the children all of the verbs, adjectives, adverbs, and prepositions in every day use.

> 4. When a vocabulary of 200 or 300 words is learned, write up short lessons embracing such scenes as can be described by the words

they know, thus:

" John stood at the window. beckoned to me to come and look out. I looked and saw a man coming rapidly to the front door. When he turned in at the gate we listened and the bell rang loudly."

Let the children copy these care-Some fully, and afterwards read them from the board and from their

The descriptive words The outline given above is based

on a study of objects. It is the Gen. Wallace's "Chariot Race," the following design: and Rider Haggard's battle scenes are modern examples of descriptive writing well worthy of study by a teacher who wishes to outline a course of training, that will educate a class in the art of word painting. Below is given an outline of how I think the work ought to be commenced.

(A.) Decide upon a series of actions to be performed, which are to be described by the class. test of accuracy should be for some one not present at the time to perform the actions after reading the description.

A case is taken from practice

for illustration.

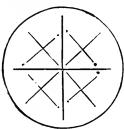

I. The teacher performed the action described, and secured from the children the following:

(a) "The teacher drew a circle

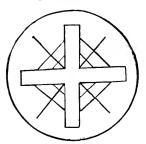

on the board."

2. Continuing with the actions agreed upon, the teacher recorded the sentences as they were evolved.

"She then drew a cross within the circle. (c) Next she drew short lines within the angles of the cross. (d) Lastly she bisected the lines last drawn, and placed dots at the ends of the short bisecting lines." The figure they had drawn was this:

3. The drawing was erased from beginning point of description, but one slate, and the owner was sent this art extends much farther. A with the description to another scene in nature, a process in manu-room. He was charged to request facture, an account of a fire or of a the other teacher to produce the battle, and compositions of like drawing from the description. After character belong to description, a short interval he returned with

This was placed on the board near the other, and a comparison was made of the two. All agreed after a short discussion, that the other teacher had not violated instructions.

5. Correcting the description then began, and ended with the following amended description.

(a) "The teacher drew a circle on the board, which was six inches in diameter. She then drew one horizontal and one vertical line, each passing through the center, and terminating near the circumference. Next she drew a single line bisecting each angle of the cross, but not reaching to the center or circumference. Lastly she bisected these lines, and placed dots at the ends of the short bisecting line."

This description was then sent to the other teacher. figure she returned was so near like the original one that no further amendments were necessary.

(B) These directions embrace a single lesson in description. Many repetitions are necessary before the pupils will be able to do creditable repeated, but a new process or nar-stanza almost is a lively picture. rative must be used at each suc- Our school readers have many

ceeding lesson.

advised under (\bar{A}) and (B) above, find that he can easily get children selections of good descriptions to appreciate these extracts. ought to be read by the class, and The following poem by Bret the guidance of the teacher. Long-kind of extract suitable for this fellow's "Village Blacksmith," has work:

No lesson ought to be no superfluous words in it. Every

fine examples of description. Any (C) Alternating with the lessons one who tries it will be pleased to '

examined critically by them under Harte, is a fine specimen of the

- 1. Above the pines the moon was slowly drifting, The river sang below; The dim Sierras, far beyond, uplifting Their minarets of snow.
- 2. The waving camp-fire, with rude humor, painted The ruddy tints of health On haggard face and form that dropped and fainted In the fierce race for wealth;
- 3. Till one arose and from his pack's scant treasure A hoarded volume drew, And cards were dropped from hands of listless leisure To hear the tale anew.
- 4. And then, while round them shadows gathered faster, And as the fire-light fell, He read aloud the book wherein the Master Had writ of "Little Nell."
- 5. Perhaps 't was boyish fancy—for the reader Was youngest of them all-But as he read from clustering pine and cedar A silence seemed to fall.
- 6. The fir-trees, gathering closer in the shadows, Listened in every spray, While the whole camp with Nell on English meadows Wandered and lost their way.
- 7. And so in mountain solitudes—o'ertaken As by some spell divine-Their cares dropped from them like the needles shaken From out the gusty pine.
- 8. Lost is that camp, and wasted all its fire; And he who wrought that spell? Ah! towering pine and stately Kentish spire, Ye have one tale to tell!
- 9. Lost is that camp! but let its fragrant story Blend with the breath that thrills With hop-vines' incense all the pensive glory That fills the Kentish hills.
- 10. And on that grave where English oak and holly And laurer wreatns carrier.

 Deem it not all a too presumptuous folly,

 BRET HARTE.

Example VI.

PROBLEM: To teach the principle of making an abstract or synopsis of a story.

Read the story to the class.

After the reading call for the names of the characters (actors) in the story.

Make a list of these as they

are given by individuals.

4. Make a list also of the acts performed by each of the char-

And a list of the times men-5.

tioned in the story.

Also make a list of the places mentioned.

7. As these items of actions, times, places, etc., etc., are given pause to ask "why" each is suggested.

8. Compare the actions to determine the order, the place, and the time of each. are now ready to write the story.

If the story selected is wanting in any of the details noted above, supply them by assuming reasonable times, places, etc., for the happenings. These assumptions must be drawn out from the children not dietated by the teacher. As a rule, I think such selections, as leave many of the essentials to be supplied by the imagination of the learner, will be found to be most improving.

Below is a lesson taken from McGuffey's Alternate Third Reader, which is especially fine for this series of lessons. It will be noticed that the characters are not named specifically, or described particularly. The time is left out, and the place barely suggested.

THE BEAUTIFUL HAND.

There was a dispute among three rial for lessons. beautiful hands.

One of them sat by a stream and washed her hands in the water; another picked strawberries until the ends of her fingers were of a pink color; and another gathered violets until her hands were fragrant with their perfume.

An old woman passing by asked, "Who will give me a gift?" All three shook their heads; but another who sat near, unwashed by the stream, unstained by fruit, unadorned with flowers, gave her a

gift.

The poor woman then asked them what they were disputing about. They told her, and held up their hands.

"Beautiful indeed," said she, when she saw them; "but the hand that gives to the poor is more beautiful than one that is washed in the clear stream, stained by fruit, or The children garlanded with fragrant flowers.'

 Let each child select a character and tell the story as if it were written by the personage he selects. Thus, in the lesson above one might tell it giving the impressions of the beggar woman, another giving the probable version of the woman who gave the gift, while others might record the story as told by one or another of the ladies who were disputing.

10. Repeat the exercise using a different selection each time, until the children can write a consistent account in their own language of anything they read. Poems of a certain character afford good mate-The following ladies as to which had the most taken from Butler's Fifth Reader is particularly fine for the purpose.

> 1. On the road, the lonely road, Under the cold, white moon: Under the rugged trees he strode, Whistled and shifted his heavy load-Whistled a foolish tune.

- 2. There was a step timed with his own, A figure that stooped and bowed; A cold white blade that flashed and shone, Like a splinter of daylight downward thrown-And the moon went behind a cloud.
- 3. But the moon came out so broad and good The barn-fowl woke and crowed, Then roughed his feathers in drowsy mood; And the brown owl called to his mate in the wood That a man lay dead in the road.

W. W. HARNEY.

Example VII.

To teach the principle PROBLEM: of written composition. Rules for

facility in expression.

Two things are necessary to make a ready writer. First, he must have something to say; second, he must be able to say it. Composition writing to children is often an irksome task. Those of us who "had our turn" a generation ago, can remember with what dread we heard the announcement, "Bring compositions to-morrow."

But methods have changed; now in many schools to write a composition is one of the agreeable tasks. And there is no reason why it should not be in all schools.

Children, like their elders love to talk, and when left free to entertain each other, will prattle hour after

The series of lessons outlined below are based on the theory, that anyone having the power to think correct the mistake before the class is allowed —and that includes every same to copy it. human being—can be taught to put in writing whatever desires, at the next lesson. Induce some opinions, requests, etc., he may be one to take the lead in the convercalled on to put into spoken words. sation. Select one pupil, and while the others give attention, conduct a conversation with him in writing on the board. The class must copy the whole work on their slates or writing pads. A probable conversation is appended below.

"Well Mary, that is a pretty dress you have; who selected it?"

"I told mamma what kind of a dress I wanted, and she bought it.'

"Did she buy it ready made; or did she get the material and have it made by a dressmaker?

"Neither; she bought the material, and we made it at home."

"Who are we? Do you mean to say that you had anything to do with making that dress?"

"Certainly I did. I sewed on the buttons, hemmed the skirt, and ran some of the seams. Mamma and sister did the rest. Sister cut it out and fitted it."

In conducting this conversation when your pupil misspells a word or fails to punctuate,

When they can diagram readily, gradually drop that work, and have them tell the analysis; in writing, at first, to secure correct forms of expression and consecutive habits of observing, and, afterwards, orally.

A specimen of written analysis

is given below.

" Chair is the subject, it is modified by the, a first class adjective modifier, and by with a torn scat, an adjective modifier of the second The noun *scat* is modified by a and torn, modifiers of the first Was taken is the predicate; class. it is modified by out of the room, an adverbial modifier of the second class. The noun room is modified by the."

6. Continue analysis (oral,) gradually changing the nature of the sentences, until the class can readily analyze stanzas from poetry, and such extracts as were quoted

on page 43:

I have given under the directions all of the work that belongs to the process of learning analysis. But it is not intended that the pupil shall do this before anything else is learned. I had to put it all together, in order to show the

relations of one part to the others

relations of one part to the others.

There is a necessity for technical names, which are used for brevity in the oral analysis. And that the judgment of the pupil may act uneringly a formal study of definitions, a development of them is also necessary. These studies and in fact the whole work would be better done in alternation with the other examples of principle development illustrated below.

Example II.

PROBLEM: To teach the principles that determine classification. (How to define and use definitions of

parts of speech.)

- Develop a series of sentences from the pupils' experiences, after the manner indicated in the last example, in which several words belonging to the class you have in mind to teach are used. Question upon the office of each word in turn, till each has been perceived. Write out the statements describing each, and by comparison of these statements, noting their resemblances get a general statement which includes the several specific This statement constatements. stitutes the law for the definition. For instance:
 - (a) An old man needs a stout
- (b) That tall chimney overlooks a wide space.
- (c) Green apples are not usually sweet.

etc. etc., etc.. etc..

Specific Statements

Old describes a man. Stout describes a cane. Tall describes a chimney. *Wide* describes a space. *Green* describes certain apples. Sweet describes other apples.

General: objects.

These words are now perceived discovered. the class is born.

Many words describe Adjective, they are ready to define it by the general law they have Another group may by the pupils to belong to a class, be developed to include uses of i. e., a resemblance is discovered in several definitive adjectives. From them; the demand for a name for this series specific statements can When the be questioned out, which will comteacher gives the name, Descriptive bine into the general law: Many

words are used to point out which to the country. object or objects are meant. Using this law to guide them, the pupils was. will be able to define, Definitive Adjective.

When both classes of adjectives are clearly established in mind, the pupils can be led to discover the resemblance between them,

follows:

Develop sentences such expressions as

(a) rich man,

(b) that man.

(c) lame horse.

(d) this house,

(e) six men,

(f) open windows.

extent of meaning of the whole "Many words are used to restrict the sentence, when man, horse, house, meaning of others. etc., stand alone, and when they are *the house.* So for the other.

When the comparison has been actions, qualities, etc. made in all the examples, separate A new species has been discovstatements of the facts perceived, ered, a new name is wanted. Adcan be questioned out from which verb is given, and the pupils can the general law. Many words are define it. used to restrict the meaning of others,

can be derived.

tives. tained.

boy advaneed.

(c) Very describes how swent the apple is.

(e) Quite tells how sick the baby

(f) Lately tells when the fever

prevailed.

(g) Yonder tells where John lives. etc., etc., etc., etc., etc.

By comparing the words italicas ised, as was illustrated under adjectives, two general laws may be containing discovered, viz.

(A) Some words are used to describe actions.

(B) Some words are used to

describe qualities.

As in the other case the resemblance between the words under each law, can be shown, that is, Set up a comparison as to the that they all come under the law:

The difference between *adjectives* modified by rich, that, lame, etc. and the new class can be easily Thus it is apparent that, Six men shown by a group containing both entered the house, cannot be thought kinds. One restricts the meaning to include as many as, Men entered of names of objects the other restricts the meaning of names of

3. In teaching noun, verb, preposition, pronoun and conjunction, 2. carry.

Here is exactly a parrallel case for you to consider, in order to understand why I ask you to give the lessons embraced by the directions I shall presently present; the case is this, A man can walk all day and not feel fatigued from carrying his head on his shoulders, but he soon tires if a *book* weighing much less than his head lies on his shoulders; why is it?

Make a list of all the nouns from a reading lesson. Let the pupils select them. Take only those that they name, for it is these only that they are competent to

compare.

It may happen that a class are not good use, or in concrete realization. For Number.

horse, oxen, house, whips, tree, stoves, etc., etc.,

For Gender. man, house, girl's, lion, garden, cow, sun's, vard, woman, etc., etc., etc.,

For Case. desk, hat, dog's, cow, lion, girl's, ets.,

It is apparent that the same word will appear

Repeat this work of classifying with other lessons, until the children do it readily.

The demand for names for the classes having been established, deduce general principles, thus:

Some nouns are used to name single things.

(B) Some nouns are used to name more than one.

(C) Some nouns are used to name male beings.

etc., etc., etc. etc.,

culine Gender, Neuter Gender, Singu- less work done in it in many lar Number, Nominative Case, etc., schools, is a healthful exercise if as you name his classes. By compare enough of it is done.

readers; in that case it would be better to begin the work by taking the list from sentences descriptive of their own experiences.

ples underlying the various proper-

ties as they appear in the objects

named by the noun, or in the use

to which the noun is applied. This

you can readily do by questioning,

thus; Man names one person; what does women name? Horse

is the name of a male animal;

what is cow the name of? Stove is

used as the subject in this sentence;

how is *house* used in that one? etc.,

words for the differences which your

scheme of properties (accidents)

embraces, write the types as below,

requiring the pupils to classify all

the nouns selected under the types

by their resemblances to them in

When you have found type

Lead the pupils to recognize

stoves, house, sun's, etc., ing the laws for his separate cases' as many times as there are properties in your scheme. The attention of the pupils must be unumbers, genders, etc., (under your drawn to this fact. guidance,) he will be able to perceive their resemblances, and thus arrive at the generalizations underlying Case, Number, Person, etc.

> Proceed in exactly the same manner to the development in the pupil's mind of a knowledge of the accidents belonging to Verb, Adverb, Pronoun, Adjective, etc.

Example IV.

To teach the principle Problem:

(how) for parsing.

Parsing notwithstanding From these laws as a guide the abuse it is receiving from critics, pupil will be able to define, Mas- and notwithstanding the purposeto cause the definitions and other on the tablets. Question thus: laws of grammar to sink into the What part of speech is the? What automatic. To produce this effect kind of an adjective? a great deal of parsing must be does it limit the meaning of? done by the pupil. The pupil who Below is shown how the parsing is proficient in the art, can parse a of the sentence would appear when sentence as he reads it, at a glance. completed.

Unless a teacher intends to give his classes this proficiency, he ought not to have them parse at all, for it is not the ability to solve points in dispute among grammarians that we should seek to give our pupils, but the power to see rapidly the points upon which all grammarians are agreed.

The following directions are based on the theory that written parsing should be used till exact- suitable abbreviation, as it does not often hapness is secured, and forms made automatic, and then oral parsing takes its place. When analysis has been learned so well that the pupils are about prepared to drop the diagrams, and when the definitions have been presented, (not necessarily learned,) is the time to commence parsing lessons.

Diagram the sentence you wish to parse, the pupils copying,

The object in directing this to be done is to utilize the knowledge which the pupils have of on slates or tablets. Have these rerelations from the analysis, which relations are cited orally. Direct them to omit the same in the parsing lesson.

cal column on the board. Have cannot parse. Question out the the pupils do the same on their parsing of these omitted words at tablets. Question out from indi- the recitation. viduals the points you intend your parsing lesson to notice. Record bring their lessons without misthe answers on a line with the takes, drop the written lesson, and word, using abbreviated forms of continue parsing orally. It is well

Its purpose as I apprehend it, is made on the board, have it copied What noun

paign, an administration, or any definite portion of the text, which in itself constitutes a complex unit of the whole narrative, is finished, conduct a review of it as follows: Write the title on the board and ask the children to name other events, persons, places, etc., that are associated with it in their minds. Write these also on the board, and when the associations are all recorded, have the whole story repeated as these associations recall it.

A specimen of what might be the board work of a portion of Polk's Administration, reviewed is

given below.

WAR WITH MEXICO.

Gen. Taylor-Gen. Scott-Santa Anna-Rio Grande--Palo Alto-Monterey-Capt. May-Buena Vista-Capt. Bragg-Vera Cruz-Cerro Gor-

do-Puebla, etc., etc.

(C) Reviews of larger devisions of the text can be based upon the prominent men mentioned, or upon historical places. The associations for the review work can be gathered in the same manner outlined under direction (B). Below are appended specimen topics for reviews of this character: Washington; Grant; Jackson; Richmond; Washington City; New Orleans; Slavery; Texas; Paper Money; etc., etc.

The effect of giving the lessons as directed under (A), is to cultivate a habit in the child's mind, of demanding complete and correct concepts from his reading. This demand will form in him the habits of investigation and inquiry. The effect of the reviews (B) and (C) will be to cause him to know that all details are connected in a historical parrative, and this knowledge

DATES. PLACES. PERSONS.

March 29, 1847; Vera Cruz; Gen. Scott;
April 18, 1847; Cerro Gordo; Sauta Anna;
Aug. 7, 1847; Pueblo; Scott; Sarmy;
Aug. 19, 1847; Contreras; Scott, Santa Anna
Sept. 8, 1847; Chapultepec; American Army;
Sept. 14, 1847; City of Mex.; American Army;

will form the habit in him of reflecting upon each isolated statement, considering it both as effect and cause; it tends to cultivate in him the power of making correct judgments upon the credibility of opinions advanced by the author.

EXAMPLE IV.

PROBLEM: To teach the principles of retention and recollection. (Rules for remembering and recalling.)

That one remembers and recalls faces, names, and events by rule, I feel sure. But because the rule is applied automatically, many people are unconscious of its existence. In the directions given below, I follow the theory that a time, a place, a person, and a thing, (action) being associated, there is formed a concept, which is more apt to be recollected than if it wants one or more of these essen-Moreover such concepts being complete, attract the retentive faculty and are put away carefully, just as a child under a natural impulse picks up the prettiest pebbles.

These associations every mind makes unconsciously, more or less as his experiences have developed the principle with him. It will make the principle conscious with him after a while, if the associations are voluntarily suggested by his teacher.

1. Have the children fill out such tables as are presented below, you supplying the dates at first, and at repetitions supplying the places, the persons, or the events. The work for some time ought to be conducted as a class exercise.

As the power *to do* develops, it may be changed to a seat exercise.

PERSONS. EVENTS.

Gen. Scott; Capture of Vera Cruz;
D; Sauta Anna; Defeat of Mexicans;
Scott; Sarny; Resumed march to Mexico;
Scott, Santa Anna; Battle 14 miles from Mexico.
S; American Army; Storming and capture of Fortress;
G; American Army; Occupation of City.

Repeat the work till the habit readiness the children display in is formed of making associations supplying the data for the reviews naturally in reading. The growth recommended under (A) and (B) of the habit will be shown by the in the last example.

CHAPTER IX.

ADVERTISEMENTS.

THE NEW AMERICAN TEACHERS' AGENCY.

ANNOUNCEMENT.

The undersigned, having had nearly twenty-five years experience and business acquaintance with Teachers and Educators, and the Educational Institutions in the U.S. both public and private, proposes to establish

THE NEW AMERICAN TEACHERS' AGENCY.

The endeavor of this Agency will be to furnish teachers and educators with accurate information, as to vacancies and positions to be filled; also, to furnish Boards of Education, Private Schools, Colleges and Employers of teachers, accurate and reliable information as to the merits of applicants for positions, always endeavoring to recommend the right teacher to the right place.

This new Teachers' Agency will have the advantage of new names, and be able to serve teachers applying to it, more promptly than those Agencies, which have many applicants of long standing on their registers.

Its location near the center of population of the U. S., the long acquaintance of its manager with the wants of teachers and employers all over the country, and the confidence manifested in its success, by hundreds of letters of endorsement, already received, lead the undersigned to hope for a liberal patronage from the Educational Public.

PEDAGOGICS,

By ALLEN and CAINES.

J. W. McDONALD, Principal High School, Stoneham, Mass., Author of Geometry for Secondary Schools, Etc., Says:

A PURPOSE AND PLAN IN TEACHING: What, perhaps, more than all things else, makes the results of schooling so flimsy is because ninety-nine out of a hundred teachers (possibly one more) have no conception of any purpose in the branch they are teaching, save that it is something to be learned. To say to them that each branch of study has a purpose beyond the mere information it imparts, and that the method of teaching by which this purpose is attained is, as affecting the mental furnishing of the pupil, a thousand times more valuable than the information itself, is to talk Sanskril to them. It is refreshing, therefore, to find in the profession the rara axis that has ideas, and plans consistent with his ideas. I have such ideas and plans in a little monograph entitled Pedagogics, a book hardly known here at the North, but which I am persuaded ought to be better known.

H. H. SEERLEY, President Iowa State Normal Schools, Cedar Falls, Iowa, Says:

I read the monograph, Pedagogics, as soon as received, and was much pleased with it as well as interested in it. I believe that you have here prepared one of the best if not the best statement of applied psychology and philosophy for the science and practice of teaching; and I believe you can afford to develop the work, farther expanding it as well as illustrating it so that it can be used as a class book on pedagogies to a greater extent than this permits.
