

My evidence and circumstantial evidence that COVID-19 is fraud, potential Bio Weapon and the alleged cure as well.

Who is Axel Tillmann?

Born 1954 in post war Germany and was the lucky generation that was taught (based on the bad historic events – WW I and further WW II) not to trust governments and authority without questioning the arguments and facts behind the behavior. We were also taught to disobey when the situation warrants. Besides being able to look over the fence (East Germany and Russia) and see the devastation totalitarian regimes cause, we also were taught in my school system 9 years of History, Geography, Philosophy, all Life Sciences (Math, Physics, Biology, Chemistry, Latin, Arts, Music, Sports, German and English). Comparing these 13 subject matter curricula that I attended for 9 years, 6 days a week with only 5 weeks of vacation gave me the equivalent of a bachelor's degree with emphasis of science.

I followed up with a bachelor in Electrical Engineering and a bachelor in Business Administration.

I am a proud US Citizen, a serial entrepreneur that came to the US for business in 1985 and quickly the US became my destination desire, and finally I received an offer from a company in Nashua, NH enabling to emigrate. When obtaining my US Citizenship, I voluntarily gave up my German Citizenship because I didn't need to play in the area of double loyalty.

I am a startup entrepreneur. I exited several startups here in the US, and at one point in my career I was the US CEO of an eastern European Billion Dollar Fund of Fund and managed in the US \$300M direct investments. In this function I also was the advisor to Maxwell Biotech a Life Science fund. Also was called upon by the US State Department to support the bi-lateral innovation policy between US and Russia.

In 2016 I became active with Pitch Global and international startup presentation platform where I mentor startup companies from many different market verticals. About 30% of these startups are Life Science companies.

The beginning of COVID-19

I first became aware of “strange” news hitting the wires in January of 2020. Quickly I became clear to me that the sequence of events and the mainstream storylines didn’t add up. Neither have I ever seen this level coordinated behavior around the globe. Early on I connected to scientists in the US around the World. A Czech scientist published a paper in February 2020 that testified to the fact the virus was strangely genetically edited. She found the cut points. Similar points were made from other scientific observations.

Definitely the majority agrees that the story line of an escaped bat virus is nonsense. The harmful and not harmful virus within a bat are adopted to bat DNA and not human DNA and virologist agree that through human contact and human virus a mutation has to occur and this mutation is typically estimated to take 10-25 years.

As we today know, the virus is a product of gain of function research. Triggered by a news piece that scientist found that Omicron has the signature of 99.9% common cold corona virus I came to the conclusion that the gene of function research started with the common cold virus. It is scientifically understood that mRNA viruses mutate 2.5 million times faster than DNA viruses, because DNA virus have a “copy protection” build in while mRNA viruses don’t. It is also a scientific belief that genetically edited viruses initial mutate back to their natural “code”, hence Omicron is extremely close to the common cold.

Whether the virus was purposefully or accidentally released will be discussed at the end of this.

But a non-deadly virus by itself (whose impact is similar to a flu infection) in itself wouldn’t have made any major news, or not more that SARS-cov1, MARS, Swine flu, and so on. I remember the “dangerous” bird flu, and I was stupid enough to order TAMIFLU from Switzerland to protect my family in case any symptoms arise. Further research shows, that those type of products only work if you take them before the viral load causes you any problems, but that’s when you don’t have any symptoms.

So what made this more dramatic was a concerted effort around the world to quickly call for an emergency prompted by alleged tests – the dreaded RT-PCR tests. Millions and millions were allegedly infected without any symptoms, and those that had symptoms were mistreated. Yes, avoiding or even withholding treatment, and wrong treatments, such as respirators which turned out to be a death sentence, or now an antiviral drug.

I found in the US clinical trial database many Ivermectin trials proving the efficacy of treating the symptoms of COVID infected people. Ivermectin is one of the safest drugs in the pharma industry, the worst thing that could happen – it doesn’t work, but the best thing is what the clinical trials show, it minimizes the symptoms and avoids deaths. So how come that the FDA

My COVID-19 research

and the authorities don't give Ivermectin the EUA for COVID symptom treatment, but issue an EUA for mRNA and DNA injections that have either never produced results in any other medical application field, or have already proven to be highly deadly after longer periods of time.

Authorization for RT-PCR test revoked

The CDC announce in August that the RT-PCR test will no longer be permitted to be used which has done so until then by a separate EUA. Ironically they stated that the permission to use this test would be revoked by December 31st but already recommend alternatives for COVID testing. Why would you actually recognize that something doesn't work, but allow the stockpiles to continue to be used????

And the other point is that if something didn't function why would you not invalidate all previous published data that tried to establish the existence of a Pandemic.

Experts that spoke already up in 2020 and asked to stop using RT-PCR were silenced and shamed. At the end they were right, but we didn't invalidate the wrong conclusions.

What is the theory of mRNA and why doesn't the theory work?

Let's go to the computer world. For computers to function you write software. In order to write software, you need to understand the language and the underlying hardware in order to get results. If something doesn't function the way, it was intended, then you can apply a USB stick with a patch (today we mostly download this). The patch writers need to know every single aspect of the existing software and hardware otherwise the patch can be disastrous.

It is in my viewpoint scientific arrogance to state that we can have patches written for our human body, especially since nobody ever decoded DNA in such a way that it could be represented in a functional program. And beyond DNA the entire functions of the subsystems, ribosomes, enzymes, hormones, and the list goes on. It is a fair statement that the human body is mathematically speaking a chaos system, which means the number of variables far exceed our ability to make correlative statements. Remember the time when we "threw" butter out, and replaced it with Omega-6 fatty acids, just to find out that butter wasn't the culprit and we did more harm with Omega-6 (one of the basic contributors to the obesity problem). As to that chaos system the food you eat, the liquids you drink the time of day, your sleep pattern and you will quickly recognize the mRNA/DNA injections are unpredictable at best.

My COVID-19 research

Compound this with at least 20-25 years of research into this field with ZERO results! Reports even state that while in many initial animal trials antibodies seemed to have improved exposure the subsequent virus seemed to lead to death. In another instance in science, they tried on animal to first make them sick to mimic a rare genetic condition in some humans, and then injected the mRNA correction for it. Initially it seemed to work but then all trial animal died.

The root cause I like to name “targeting” which we will see in the next paragraph.

What did Dr. Fauci say about alternatives to the current vaccination technique?

Dr. Fauci was a panelist in September 2019 at the Milken institute. The moderator asked Dr. Fauci if he sees any new technology on the horizon that could replace the current tried and true method of growing viruses in eggs, and the “sterilizing” these virus to produce out of them a vaccine.

He answered: “Today we know what we have in the tried and true methods. There are many different research attempts going on at this time, but we must demand first the proof that there is any advantage of the tried and true method, that the safety is the same or even better, and there is no long-term harm. This requires extensive testing. From what I can see this is at least 10 years away from being available in the markets”

Fast forward to 9 months later the 10 years had shrunk to 9 months and we started injecting this questionable substance into people.

BioNTech and the real story of the Pfizer co-conspirator

Initially I saw a German TV interview with Uğur Şahin, CEO of BioNTech. Boosting himself as one of the “saviors of mankind” he was asked so how you came up with this “vaccine” (we will later discuss that this is a misnomer).

“I read in January in Lancelot about this mysterious respirator infection in Wuhan, and immediately concluded that this is dangerous and was driven to help. I had to quickly assemble a team and pull them off other projects which took us about 2 months”

My COVID-19 research

While further researching BioNTech, I followed the old saying “follow the money”. Upon my research I found that BioNTech wanted to raise money in the US stock market. As a foreign company they have to file together with their underwriters an F1. They did so at the end of 2019. This F1 shows that BioNTech has been trying to use the delivery vehicle mRNA to treat specific forms of cancer. Why?

The underlying theory (not supported by all scientists) is that cancer is foreign to the human body and the immune system should actually take care and destroy cancer cells by itself, yet cancer has a “cloak” that makes it invisible to the cancer cells. So there are two ways to address it, get into the cell and basically tell the cell to stop replicating, or to attach on the outside of the cell and therefore break the “cloak” and the mRNA becomes visible to the immune system.

This theory didn't work for 13+ years at BioNTech, because the F1 clearly states that none of the cancer only treatment vectors ever brought the company beyond clinical phase I, basically close to 1 Billion dollar investment and 13+ years, there is not even an end in sight. But not seeing the internal trial document from BioNTech we can only assume that they have a targeting problem. This means the mRNA methodology is still flawed, and most likely it attached itself not only to cancer cells but to other, healthy cells as well. This assumption is consistent with autopsies of current death of jabbed people, that died subsequently after they were injected with the mRNA product.

Now here it gets very interesting. In June of 2020 BioNTech filed an addendum to the F1 which is basically the same document but expanded on their research target, and an expanded discussion on mRNA COVID injections, and clinical trials. The first major difference is the table in the document showing the research target and the original table was appended with a new category called OTHER. The first entry is Influenza for a product they call BNT 161. The second entry is for COVID and the product was called BNT 162, and the third product target they wrote into the document is AIDS. None of this existed 9 months prior.

If the company believes that influenza “vaccination” is a doable exercise, that they are very bad businessmen, because they tried to address specific cancers with a target market of a 1000th as compared to Influenza prevention, as well as the opportunity for repeated boosters against influenza. So influenza was thrown into the document to “cover up” the isolated COVID BNT 162 prevention attempt together with AIDS, but the company had zero experience in these fields until then.

The documents further reveals that they started with their partner Pfizer research into COVID in April. It also mentioned a successful clinical trial with Pfizer of 45 people. This prompted me to research the clinical trial permission procedure in Germany and found out that before you can file for permission you need a central database entry. BioNTech filed in EuradCT the central database for all of Europe on April 15th the permission for clinical trial which was granted by the RKI (Germany's CDC) already on April 30th. The typical filing time is 6-8 months because the

My COVID-19 research

permission application normally undergoes the biotechnical evaluation and an ethics evaluation. Now how probably is it that you can assemble a Biologic in 2 weeks and start producing it also in 2 weeks with all the other substances put into the mix so that you can trick the human body and its cells to do what you need to do? Given that it is not likely to be able to do this in two weeks (although BioNTech now boasts a rapid product creation), I can only conclude that this process must have been started way before the outbreak news on January 26th in the Lancet that the CEO claimed prompted him to assemble a team.

Of course I have to reiterate that these claims are made by a company that in 13 years didn't produce anything, not a single product in the F1 even clinical phase III.

It is very noteworthy that the life science community (include the German Pharma websites) openly state that any new pharma product is a 10-15 year process until it can come to market. This is also confirmed by all the startup companies I am working with that make the same statement. The normal process starts with animal trials (preclinical studies), and then Phase I to III. A lengthy and expensive process. And less than 1% of product ideas survive this process, meaning less than 1% make it to the market as a permitted drug. Only medical devices can be under certain conditions shorter.

But this was all not done for BNT 162 today known as ComiRNAty. Noteworthy is also that BNT 162 has at least 10 different incarnations called a1, a2, a3, a4, a5, b1, b2, b3, c1, c2 but I saw a few more variations. We don't know what the differences are.

I spoke earlier about the clinical trial of 45 people conducted with their partner Pfizer. EuradCT has only an entry for a trial with 4,500 people but not 45. So I went to the US database and couldn't find the forementioned 45 people trial. I found in the US database many trials for BNT 162 style products including the often cited 45,000 people trial which was the basis of the political push and FDA's emergency authorization (EUA). It is also important to see that all clinical trials are still ongoing with anticipated ending dates of 2025 or later.

Redefinition of what constitutes a vaccine

In most literature mRNA and DNA used to be called gen-therapies. And one finds on many online resources still this definition. Only recently. Like here in the US, the definition of vaccine has been changed to allow for mRNA and DNA therapies to be considered "vaccinations". Never in medical history have we injected an activation for the body to produce toxins. Traditionally, as described in the Dr. Fauci section, viruses are grown in eggs, and then neutralized so that the immune system is trained on the shape alone and not on the toxic behavior of virus. The already recorded impact is very bad and the long term impact can only

My COVID-19 research

be imagined, and would have needed to be studied prior to usage, especially since mRNA treatments have never been successful and this dates back 20-25 years at least, some sources say back in the 60s.

Suspicion of plandemic/conspiracy

It has been unprecedented in human history that we had draconian methods effecting the freedom and the health of the entire world population – till today. If we look to Austria the massive new law for forced vaccinations, and Germany is not far behind, will the evidence increase that the harmfulness of these mRNA and DNA products.

This must prompt us to look under the hood, and we find one piece of evidence in the obfuscation of the truth. President Biden addressed the American people with “what are you waiting for get the vaccine, the vaccine is approved by the FDA”. This was a total lie. The FDA had approved the mRNA ComiRNAty which is not available in North America and at the same time reissued the EUA for BioNTech/Pfizer shots. This was stunt to trick people that didn’t the injections to taking a shot. This is criminal.

Another data point is the fact that in 2019 was a “war game” were leaders were brought together to simulate a corona virus outbreak. We can’t believe in those type of coincidence.

Compound this with withholding functional treatment, control of public information by ridiculous censorship of big tech (Google, YouTube, Facebook). They all must be taken down, because they do this on purpose. Point in case type into the best search engine in the world GOOGLE the search for critical COVID related search terms (such as death from vaccination) you will not get any relevant information from GOOGLE, but if you use YANDEX.com you find all the links, and this are not necessarily links from foreign websites, but many US websites whose indexing shows up on Yandex and not on Google.

The attack from Democratic party controlled states (i.e. California, New York,...) onto its citizens vs Republican party controlled states that have no restrictions (Florida, Texas), makes you often question if the virus was only released in democratic states.

We have also seen the news of the assassination of head of states from countries that refused to accept the mRNA and DNA products. There are many coming to mind.

The list of suspicious behavior of authorities (including judges that don’t even look at the evidence and don’t admit the evidence) is mind blowing to say the least.

My COVID-19 research

A last piece of information is a website called Deagel.com. Until mid 2021 it had some radical data there and some very radical information to support why this outcome has to happen. Deagel was undersecretary for defense in the Clinton administration. His website tracks all the military depending in the world. But also had predictions for the population size in 2025 for all countries in the world. It was apparent that in particular the US was supposed to shrink to about 60 million (down from 330 million) and Germany for example down to 15 million (down from 70 million).

As justification he wrote that western countries need to be decimated because we need to take cue worldwide from China, where the people of been trained to obey authority while in the Western world there are too many useless eaters that want freedom.

I have screen shot of some of the predictions. I also have a vast library of documents and videos that support all the statements.

In conclusion, I like to say if any open minded AG in this country would look at the evidence and we build a case in front of the grand jury Dr. Fauci, Pfizer CEO and may others can be tried for murder and aggravated, premediated assault and battery.

Unfortunately most opposing lawyers file on the basis of "my body my choice" and not on the basis of this crime. Long-term we can only win if we:

1. Point out that this is not a vaccine
2. The impossibility of the alleged development
3. The intention of releasing the COVID virus
4. The planning of this entire scenario

The is a criminal case in front of the European court system, we must file similar criminal cases here in the US.

Gdd bless America!
